1982–Production of soybeans in Japan this year is 226,300 tonnes, and soybean imports are 4,344,000 tonnes–which is only 5% self sufficiency.

1982–Per capita consumption of soy oil rises to 5.1 kg, topping 5 kg for the first time. It is 3 times higher than it was 3 years ago.

1982–Production of defatted soybean meal reaches 2,800,000 tonnes–up 38% over the last 10 years.

1983–Production of soymilk in Japan rises to 116,724 tonnes, topping 100,000 tonnes for the first time. It has risen 71% during the past year.

1983–Per capita consumption of soybeans in Japan is 5.8 kg, up 3.6% during the past year.

1984–The use of soymilk as a beverage is declining in Japan. The movement to use more soymilk as an ingredient in foods (such as noodles, breads, ice creams, and creamy soups) is becoming more active.

1984–Soybean yields in Japan reach 1,770 kg/ha, an all-time record. The old record was 1,540 kg/ha in 1982. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

8210. Shurtleff, William; Aoyagi, Akiko. comps. 1984. Soyfoods labels, posters & other graphics: 4. Soymilk and soymilk products. Lafayette, California: Soyfoods Center. 148 p. 28 cm.
• ***Summary:*** This book is a collection of black-and-white photocopies of materials ranging in date from 1975 to 1984. The books in this series, each a unique collection of graphic materials, are designed for a number of purposes: (1) To serve as a source of ideas, ingredients, inspiration, legal specifications, and basic guidelines for companies in the process of designing graphics for their own soyfoods company. (2) To document the tremendous diversity of soyfoods products and ways of introducing them to the public. (3) To document, through this, the rise and history of the soyfoods industry and market in the Western World.

Contents: Soymilk: Labels and packages, posters, recipes. Second generation soymilk products.

Note 1. All labels, posters, and other graphics relating to soymilk ice cream are in our book titled *Tofutti & Other Soy Ice Creams.* Most of these contain isolated soy proteins or tofu as the major ingredients.

Note 2. This book contains photocopies of Japanese soymilk packages (the most popular brands in Japan). Translations and analyses of the contents of each of these labels are given in Chapter 25 of Soymilk Industry and Market. Translation includes analysis of ingredients, nutritional composition, percent solids, package type, and shelf life. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

8211. Soybeans and soybean products. Quick & easy nutritious Japanese cooking no. 1. 1984. Chiyoda-ku, Tokyo: Joie, Inc. 116 p. Illust. No index. 27 cm.
• ***Summary:*** A beautiful cookbook, in which every recipe is illustrated with a color photo. Contents: Preparation tips. Metric tables. Soybeans with meat. Soybeans with eggs. Soybeans with fish. Soybeans with vegetables. Soybeans with seaweed. Yuba. Unohana [okara]. Natto. Koya-dofu. Ganmodoki. Aburage. Atsuage. Grilled tofu. Tofu salads. Deep-fried tofu. Tofu with oysters or kelp. Tofu with shrimps. Tofu with fish. Tofu with meat. Tofu with vegetables. Tofu soups. Tofu. Preparatory techniques for tofu. Information: Glossary, basic recipes.

Note: The publisher is also listed as Japan Publications, Inc. Address: Joie, 1-8-3 Hirakawa-cho, Chiyoda-ku, Tokyo 102, Japan.

8212. Wood, B.J.B. 1984. Progress in soy sauce and related fermentations. *Progress in Industrial Microbiology* 19:373-409. M.E. Bushell, ed. Modern Applications for Traditional Biotechnologies. [100 ref]
• ***Summary:*** Contents: Introduction. Soy sauce: Introduction, raw materials and koji, the *unami* taste, defatted soybean meal, microbiological considerations, moromi stage of fermentation, refining of and properties of shoyu, patents, work with Japan. Miso. Tempeh. Conclusions.

Tables show: (1) Glossary of terms used in soy sauce and similar fermentations: *Koji, miso* (*hatcho, mame, mugi, genmai, kome*)*, moromi, shoyu* (*koikuchi, usukuchi, tamari, shiro, saishikomi*)*, tamari, teriyaki.* (2) Recently published national standards for soy sauce, miso, etc. (cites 8 standards, 5 from Taiwan and 1 each from Thailand, Malaysia and USA). (3) Recent patents relating to shoyu and miso production and processing: Japanese 1980 shoyu (13 patents), Japanese 1981 shoyu (11), USA 1979 (2), USA 1980 (2), Japanese 1979-1981 miso (8), USA tempeh 1979-1980 (3 patents). (4) Japanese journal titles and their English translations (11 journal frequently cited in FSTA–Food Science and Technology Abstracts). Address: Applied Microbiology Div., Dep. of Bioscience and Biotechnol, Univ. of Strathclyde, Glasgow, G1 1XW, Scotland.

8213. Yamaoka, Masako 1984. A first book of Japanese cooking. Tokyo: Kodansha International. 156 p. Illust. (Photos by Tamihisa Ejiri, some color). Index. 27 cm.
• ***Summary:*** An excellent introduction to Japanese home-style cooking. A color photo (p. 23) shows: Freeze-dried tofu [dried frozen tofu] and the box in which it is sold, thick deep-fried tofu [atsuage, tofu cutlets], thin deep-fried tofu [aburaage, tofu pouches], "silk" tofu, "cotton" tofu, okara in a clear glass bowl, a box of House Hon Tofu Mix [instant homemade silken tofu].

The chapter titled "Ingredients" (p. 25-33) is an excellent glossary Japanese ingredients. Entries include: Agar-agar (kanten). Ginger, fresh (shoga). Ginger, red

© Copyright Soyinfo Center 2014

vinegared (beni-shoga), Ginger, sweet vinegared (amazu-shoga). Kelp, dried (konbu). Miso (fermented soybean paste). Nori seaweed (nori). Pickled plum (umeboshi). Sesame seeds (goma). Soy sauce (shoyu). Tofu (tofu; bean curd), incl. okara and the various types shown on page 23. Wakame seaweed (wakame).

Okara is mentioned throughout this book.

A recipe for Homemade tofu (p. 79-80) ("Ultimate freshness and flavor." Making tofu at home also yields a high-protein byproduct known as okara, or tofu pulp, an almost flavorless food substance that absorbs other flavors extremely well and supplies bulk and roughage).

Note. This is the earliest English-language document seen (June 2013) that uses the term "tofu pulp" to refer to okara.

A recipe featuring okara (p. 86) is Okara and vegetable melange (Iriokara, with "1½ cups fresh okara {tofu pulp}, about 9 oz {250 gm"}). A recipe for Simmered soybeans and vegetables (*Gomoku nimame*) (p. 93-94) calls for "1½ cups dry soybeans."

On pages 151-52 is a directory of "Oriental food shops in the United States," arranged alphabetically by state, and within each state by company name. Address: Teacher of home-style Japanese cooking, Japan.

8214. American Soybean Assoc. 1984?. Soybean meal places cost first, tradition second for Japanese hog producers. *Checkoff Successfile.* Japan #108. 2 p. Undated. Address: St. Louis, Missouri.

8215. **Product Name:** [Fuji-Nikku].
Manufacturer's Name: Fuji Oil Co. Ltd. (Fuji Seiyu).
Manufacturer's Address: Nissei Midosuji Hachimancho Building, 6-1 Hachimancho, Minami-ku, Osaka 542, Japan.
Date of Introduction: 1984?
New Product–Documentation: Toyo Shinpo. 1984. June 1. Fuji Seiyu now has a corner called the Soy Protein Foods Corner (Daizu Tanpaku Shokuhin Konaa) in an Osaka Department store.

8216. *Toyo Shinpo* (*Soyfoods News*). 1985. Ninki no aru tôfu ryôri-ten [Popular new tofu restaurants in Japan]. Jan. 1. p. 48. [Jap; eng+]

8217. American Miso Co., Inc. 1985. The secret of Japanese miso comes to America (Ad). *East West Journal.* Jan. 4.
• ***Summary:*** This full-page, black-and-white ad begins: "At last! The ancient traditions of the Japanese miso-making art have been carefully and lovingly carried to America by the American Miso Company, the proud now caretaker of traditions passed down from Master to Miso-Master for many centuries." This miso is made from the finest ingredients, including organic rice, barley, and soybeans. "Last and perhaps most important, our miso is unpasteurized, unlike so many other misos. This leaves intact the beneficial lacto-bacillus and enzymes so essential for proper health and food digestion, and imparts the savory aroma, outstanding character, and mellow taste so prized in unpasteurized miso. The American Miso Company logo, crossed sheaths of grain in a circle, is at the bottom center of the ad.

Photos show: (1) A 1-lb package of the company's barley miso in a plastic bag with a one-way pressure release valve. (2) Jan Belleme, with a baby (Justin) on her back, mixing koji–her hands up to the wrists. (3) A bearded employee [Bob Zullo] moving a huge wooden vat of miso using an hydraulic dolly. Address: Box 541, Route 3, Rutherfordton, North Carolina 28139. Phone: (704) 287-2940.

8218. Fabricant, Florence. 1985. Sushi to go takes off in New York. *New York Times.* Jan. 6. p. C3.
• ***Summary:*** "Japanese restaurants with sushi bars have become commonplace throughout New York City, but now people can have sushi to go, delivered to the door or for pickup."

Review's four restaurants offering such sushi, including Obento Delight (152 Seventh Ave. South). "Inari sushi, consisting of deep-fried bean curd wrappers enclosing vinegared rice, is an interesting change of pace."

8219. Fabricant, Florence. 1985. Biblical name and Japanese food: Dining out. *New York Times.* Jan. 20. p. L_I_19.
• ***Summary:*** This is a review of the two-star Japanese restaurant Naomi (Great Neck, New York). "The list of sushi preparations is one of the most complete you are likely to find and it includes some of the less typical items such as... inari sushi puffs of deep-fried beancurd filled with vinegared rice..."

Note: This is the earliest English-language document seen (April 2013) that contains the term "deep-fried beancurd" (regardless of hyphenation).

8220. **Product Name:** Natural Soya Chips. Low Sodium [Zesty Miso, or Chili Vegetable].
Manufacturer's Name: Edward & Sons Trading Co. (Importer). Made in Japan.
Manufacturer's Address: P.O. Box 3150, Union, NJ 07083.
Date of Introduction: 1985 January.
Ingredients: Incl. okara.
Wt/Vol., Packaging, Price: Bag. Retails for $1.59.
How Stored: Shelf stable.
New Product–Documentation: Ad in Vegetarian Times. 1985. June. Inside front cover. "Crisp & Delicious soybean snacks. The soyfoods revolution marches on with Soya Chips... Natural Soybean Snacks in two scrumptious flavors."

8221. Fukushima, Danji. 1985. Fermented vegetable protein and related foods of Japan and China. *Food Reviews International* 1(1):149-209. [99 ref]
• ***Summary:*** Introduction. Historical aspects of soy sauce and miso. General description of fermented vegetable protein foods: Soy sauce (varieties, manufacturing, flavor components and quality evaluation), miso, natto, sufu (fermented product of tofu), fermented soy milk. Microbiology, biochemistry and nutrition: Role of koji as enzyme source (unique sources of enzymes, peptidases in koji, role of proteinases and peptidases in koji during protein digestion, role of glutaminase in koji in formation of glutamic acid during protein digestion), effect of heat treatment of soybean proteins on their digestibility and nutritive value (enzyme digestibility and yield of soy sauce, enzyme digestibility and nutritive value of protein), basic mechanisms for protein coagulation, microorganisms during brine fermentation in soy sauce and miso (change of microflora during brine fermentation, properties of *P. halophilus,* properties of *S. rouxii,* properties of *Torulopsis* species), nutritive value, safety and anticarcinogenicity of fermented foods. Future of traditional vegetable protein foods made through fermentation. References. Address: Food Science Research Lab., Kikkoman Corp., Noda-shi, Chiba-ken, Japan.

8222. Harayama, Fuminori; Yasuhira, Hitomi. 1985. Rhizopus-zoku ni yoru miso jôzô ni tsuite. I. [Application of the genus *Rhizopus* for miso manufacturing. I. Studies on fermented soybean food manufacture using various molds]. *Nippon Jozo Kyokai Zasshi* (*J. of the Brewing Society of Japan*) 80(4):281-86. [17 ref. Jap; eng]
• ***Summary:*** Two strains of *Rhizopus* with high protease activity and low spore-forming capacity, *R. oryzae* IFO 5418 and *R. japanicus* IAM 6002 were used instead of *Aspergillus oryzae.* Miso obtained had more lactic acid and lower pyroglutamic acid contents, less creaminess, harder consistency, more clear color, and flavor with unique aroma compared with ordinary miso. Address: Shinshu-Miso Research Inst., 469-6 Nakagosho, Nagano-shi, Nagano-ken 380, Japan.

8223. Saito, Akio. 1985. Daizu bunka-shi nenpyô [Chronology of soybeans, 122 B.C. to 1984]. *Daizu Geppo* (*Soybean Monthly News*). Jan. p. 12-16; Feb. p. 10-18. 28 cm. [Jap; eng+]
• ***Summary:*** This very interesting, well-researched, and detailed chronology, which is full of new information, focuses on the development of soybeans and soyfoods in Japan. We have divided the contents of the chronology into 9 separate records; the date of each corresponds to the last year in that part of the chronology: 1292, 1599, 1699, 1868, 1899, 1926, 1949, 1969, and 1984. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

8224. Shirakawa, Takeshi. 1985. Tôfu no hozonsei no kôjô ni kansuru kenkyû. I. Tôfu no hensei henpai ni tsuite [Studies on improving the storability of tofu. I. On the slimy spoilage of tofu (soybean curd)]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 32(1):1-6. Jan. [8 ref. Jap; eng]
• ***Summary:*** *Acinetobacter calcoaceticus* was isolated as the causative organism, secreting viscous polypeptides into the water surrounding the tofu. Address: Takamatsu Branch, Kagawa Prefectural Fermentation & Food Exp. Station, Gohto-cho 587-1, Takamatsu-shi, Kagawa 761, Japan.

8225. Chen, Shi-Jue. 1985. [A breakthrough in flavor! Soynut snacks are delicious and nutritious]. *Min-Sheng Daily News* (*Taiwan*). Feb. 1. [Chi]
• ***Summary:*** "Nutritionists have long agreed on the nutritional value of soybeans, and countless processed soy products are now available. In the last few years, chemists and nutritionists have recommended simpler processing methods which utilize the whole bean. Recently, an American foods firm brought out a new line of whole-bean soy products called 'Soynut Snacks.' The product is beautifully packaged, and reminds one that in progressive food companies, new products are developed with the awareness that nutrition and flavor are equally important. Business firms and manufacturers are also realizing that they can capitalize on this generation's unprecedented emphasis on nutrition.

"Soynut Snacks, much like chocolate candies, are packed in sectioned boxes. There is one compartment for each of the seven flavors of soynuts, including: two candy-coated flavors, carob and butter toffee; and five other flavors: salted, unsalted, onion-garlic, barbecue, and yogurt. The boxes come in three sizes: 327 grams, 623 grams, and 1846 grams, selling at US$ 6.95, $9.95, and $15.25.

"Loose-packed soynuts come in a 25-lb. (11.35 kg) size at US$23.70, and a 5-lb. (2.27 kg) size at us $5.00. Suitable for consumers is a small package weighing 36 grams and selling at 17 cents.

Six or seven years ago, American firms were already marketing Soynut Snacks in two flavors, carob-coated and salted. This apparently novel idea was actually inspired by peanut products. Nevertheless, Soynut Snacks, which use the whole soybean, have even more selling points. Besides being cheaper, they are lower in calories. Their fat content is less than that of egg white. Most importantly, this product has been well received by the public.

"Just before Christmas of 1983, the full line of Soynut Snacks finally appeared. Their largest market was Illinois, as this state is America's principle producer of soybeans. Last year [1984], sales of Soynut Snacks exceeded those of the year before. Last November, Soynut Snacks somewhat unexpectedly sold out during a shopping rush at Tokyo's

© Copyright Soyinfo Center 2014

major department store!

"For this generation, nutrition is a primary consideration when choosing snacks and desserts. Accordingly, besides serving as snack food, Soynut Snacks also appear at restaurant salad bars. Sprinkled with a few soynuts, salads are even more delicious and nutritious. Soynuts also add flavor on top of ice cream and in desserts. In Chinese-style breakfasts, soynuts can substitute for peanuts in congee (rice gruel) for a great new taste." An overhead photo shows a round sampler of confection coated soynuts.

8232. Boyer, Robert A. 1985. Reminiscences: Automotive design–Oral history project. Dearborn, Michigan: Henry Ford Museum and Greenfield Village. 130 p. Accession #1673.
• ***Summary:*** This is the transcript of an interviews conducted by Dave Crippen of the Henry Ford Museum on 7 Feb. 1985 at Mr. Boyer's home in Dunedin, Florida. It covers all aspects of Boyer's work with soybeans at the Ford Motor Co., including: Growing up in Royal Oak, Michigan; his father worked in the accounting department of the Ford Motor Co. at Highland Park, Michigan (p. 1). Boyer's first meeting with Frank Campsall (p. 2). Growing up at the Wayside Inn (the oldest hotel in America, in South Sudbury, Massachusetts, p. 1-6). Attending high school in Framingham, Massachusetts (p. 6). First meeting with Henry Ford when the two ice skated together on the mill pond behind the Wayside Inn (p. 7). Moving to Dearborn in Sept. 1927 to attend Ford's Trade School (p. 7-11). Early work at the chemical plant (quarter-size model of Iron Mountain plant) in Greenfield Village (p. 12-13). Ford's trip to Germany [Peace Ship to Europe, in 1915 during World War I?] crystallized a lot of his thinking. The Great Depression and the origins of his chemurgic thinking. In 1934 the first National Chemurgic Conference was held at Dearborn Inn; Boyer was in charge of the program. Mr. Irenee DuPont attended and Mr. Ford spent a lot of time with him. Before that, the DuPonts and the big banks did not trust Ford. (p. 14). Opening of Greenfield Village in late 1929 on the 50th anniversary of Edison's first successful light bulb (p. 15). Chemical experiments on truckloads of farm crops using a retort; Frank Calvert (p. 16-19).

Experiments starting in about 1933 using hexane as a solvent to extract the oil from soybeans; the Ford Extractor (p. 20-23). Boyer's group wanted to get pure protein from soybeans. So "in the lab we developed our own process for extracting the oil... We used hexane solvent, like dry cleaning. We'd flake the beans and run them through a pipe that was full of hexane on an angle with a screw in it." Hexane solvent is "distilled out of petroleum. It has a very narrow boiling point–66º centigrade. The Ford extractor... got quite a lot of attention. We built it across the street from the chemical plant. It was about 150 feet away. Mounted it all by itself because everybody was afraid of fire." A roof was built over it but no walls. It was probably built in about 1933.

In 1933 at the World's Fair [sic, the Ford Exposition of Progress] in New York City, Boyer's group had a glass model (on a table) of this extractor that used hexane solvent.

Note: Ford boycotted Chicago's A Century of Progress Exposition which opened in 1933, in part to call attention to the company's 30th anniversary; he held his own "industrial fair," first in Detroit and then in New York, in late 1933. *Business Week* described it as "the greatest industrial show ever held." Some 2.3 million people attended the two-week

© Copyright Soyinfo Center 2014

show in New York.

A working model of the Ford extractor, using hexane solvent, was at the Chicago World's Fair, starting in mid-1934, in the Ford Industrial Barn. "They would never let you do that today. Too dangerous."

Research on purified soy protein and soy plastics with formaldehyde; Bakelite (p. 24-25). Use of soy oil for foundry core binders for casting the Ford V-8 engine block; thus, the soy experiments are now commercialized. Building a 50 ton/day extractor (p. 26-27). Spinning soy protein fiber like rayon, based on spinning milk protein in Italy. Using the fibers to make wrinkle resistant synthetic wool, a suit of clothes for Henry Ford and others, overcoats, neckties, felt hats. "We also found that these fibers blended in very well with rabbit fur for making men's felt hats. So the Hat Corporation of America took all the fiber we could make. It wasn't very much and they would blend it in with rabbit fur. And they actually had them [the men's felt hats] on the market." Rabbit fur is very expensive (p. 29-36). Ford's suit of clothes contained 65% wool and 35% soy fiber. Boyer leaves Ford Motor Co. in 1943. Problem with fiber was tensile strength, especially wet strength. Ford's interest in this fiber work, and his fitness at age 75 (p. 37-38). Ford "was not a true vegetarian but he was pretty close" (p. 38). Edsel Ruddiman's work with foods (p. 39-47). Boyer and Ruddiman attend American Soybean Assoc. soybean conference in Washington, DC [in Sept. 1932] where they saw "leather-like products that the Chinese make" [yuba]. Boyer tried unsuccessfully to use the idea to make "synthetic leather." USDA's experimental farm in Holgate, Ohio, where many soybeans sent back by W.J. Morse were tested (p. 40-42). Work with soybean milk (p. 43-46). The executive dining room in the Engineering Laboratory. Henry Ford invited Boyer to lunch there about 6 times (p. 45). Development of soy ice cream; lipoxidase enzyme inactivation (p. 45-46).

Visits to Battle Creek, Michigan and Dr. John Harvey Kellogg (p. 47). Boyer's work was with industrial products; the plastic car and structural plastics with hemp, flax, and phenol formaldehyde (soya protein Bakelite resin) (p. 47-64, 70). Making trunk lids using a hydraulic press (p. 50). Ford's famous axe demonstration on a trunk lid (p. 50-52). Lowell Overly and Joe Stewart (p. 53-56, 61, 78-79). Boyer drives the plastic car home (p. 63). Ford's aim with the plastic car: to provide industrial markets for farmers (p. 65). World War II stops plastic car development (p. 65-66). Contract to build an airplane wing of plastic (p. 66-70). The plastic lid and car contain little or no soy (p. 70). Fiberglass and the Chevrolet Corvette (p. 71). Plexiglas and the B-24 bomber made at Willow Run (p. 72). Edsel Ford's death of stomach cancer in the spring of 1943 and its effect on his father, Henry (p. 73-74). Ending work with soy fiber (p. 74).

Boyer leaves Ford in 1943 and goes to work for Drackett Co. in Cincinnati, Ohio. Wife needs to leave Detroit. After 1943 Boyer's career really takes off. Dr. Gangloff (p. 75-77). Use of soy fiber by Drackett in felt hats. "We sold them a lot of fiber and we decided to build a bigger plant." Building a protein plant and a fiber plant in Cincinnati big enough to supply the hat company's demands and larger "than we needed just to supply our fiber operation." They also had a big operation in Cincinnati for high-impact (not structural) plastic (p. 78-80). Drackett's marketing people knew how to market Windex and Drano "but they had no feeling for the soybean operation. So when Mr. Drackett died, they sold the whole soybean plant to Archer-Daniels-Midland (ADM, p. 81-83). Before Mr. Drackett died, Boyer's division had developed commercial soy products, and Drackett was making money on the plastic (phenol formaldehyde plus hemp) and the fiber (p. 81). Use of soy protein as a paper coating (p. 83). ADM finally closes the old Drackett protein plant and sells it to Central Soya, which used the million bushel elevator capacity for storage (p. 83-84).

Shortly after Mr. Drackett died, Boyer left Drackett to work on his edible soy fiber, where he owned patents. "If we can make a fiber from soy protein that resembles the outside of a sheep, why not make a fiber that will resemble the inside (p. 84-86). Idea of building an edible soy protein plant is in Cincinnati, with Mr. Drackett's approval (p. 87). Boyer tries to find companies to license rights to his landmark patent: Virginia Carolina Chemical (Taftville, Connecticut, p. 88); Swift & Co. (p. 89-92); Unilever, which was interested in peanut protein in Africa and at Port Sunlight near Liverpool (p. 92-94, 112-13); General Foods and Nabisco (Fairmont, New Jersey research lab) (p. 94, 99). Unilever and Swift pay licensing fees of $20,000 a year plus consulting fees. General Mills and Ralston Purina (p. 94-95). Why Swift dropped its interest (p. 95-96). General Mills and Bacos (p. 96). Patent expires in 1971 after 17 years (p. 96). Worthington Foods (p. 97). Ralston Purina was getting into protein. In about 1956-58 they "had bought Procter & Gamble's protein plant in Louisville [Kentucky], which was making industrial protein for paper coating" (p. 98). Worthington Foods was too small to make their own soy protein fibers, so Ralston Purina made it for them (p. 78-80). Ralston Purina's great success with edible soy protein and their small conflict: pet food vs. human food (p. 100-01). From 1961 to 1971 Boyer was receiving licensing fees / patent royalties from Ralston Purina, Worthington, and General Mills (p. 102). General Mills and Bacos (p. 103-04). Ralston Purina's patent lawsuit against Far-Mar-Co. Ralston won $8 million. Boyer testified as an expert witness (p. 104-05).

Boyer remarries and retires in 1971 (p. 102, 105, 107). Subsequent work with Miles and Worthington; the Morningstar Farms line (p. 105-08). Companies now spinning soy protein fiber (two in the Netherlands, one in Japan, one in Australia). Ford Foundation was not interested in his work with soy protein for Third World nations (p. 110). Central Soya bought the ADM plant that was located in

© Copyright Soyinfo Center 2014

Chicago (p. 113-14). Kellogg's Corn Soya breakfast cereal (p. 114-15). Worthington's Soyloin Steaks; all early Kellogg and Worthington vegetarian products based on wheat gluten (p. 119). When Worthington bought Battle Creek they got their lady research director; she worked at Worthington until she was quite elderly. Boyer visited her in her lab at Battle Creek several times (p. 119-20. Note: Josephine F. Williams was in charge of the lab and product development at Battle Creek, where she worked closely with Dr. John H. Kellogg. She kept similar positions at Worthington Foods, according to Ron McDermott). Henry Ford as a soybean pioneer and visionary. The soybean is now America's No. 2 cash crop and also our second largest earner of foreign exchange. "That really started from Ford. When we first started in 1931, hardly anybody ever heard of the soybean, and Henry Ford's penchant for publicity publicized the soybean... He certainly made it popular and made people become aware of it. Today it's darned important." He should be remembered as the "Father of the Soybean." "I always thought it would be nice if they would rebuild the [Soybean] laboratory [in Greenfield Village] or restore it like it was when we were doing the soybean work and give it the real credit that it deserves..." (p. 120). After Henry Ford died in 1947 his family wanted no part of any of his pet projects. They completely eradicated the old Ford company (p. 121). Henry Ford was deeply interested in the welfare of American farmers. His tractors and Model T were of great use to them (p. 121). Origins of Ford's interest in chemurgy; William Hale and Dow Chemical Co. in Midland, Michigan; the first three chemurgic conferences in Dearborn, Michigan, in May 1935, 1936, and 1937 (p. 122-27). Ford and Ruddiman establish a complete canning line for good-tasting green soybeans on the outskirts of the Ford estate. The equipment was quite expensive. When World War II threatened, Ford gave it to Michigan State University to teach canning to students. (p. 129-30). Boyer's personal impressions of Henry Ford (p. 128-30). Address: 632 Edgewater Dr. #731, Dunedin, Florida 33528.

8237. Ochiai-Yanagi, Sonoe; Galeazzi, Maria A.; Saio, Kyoko. 1985. Properties of soybeans in model storage studies. *Agricultural and Biological Chemistry* 49(2):525-28. Feb. [6 ref]
• ***Summary:*** Various studies have found that the storage conditions are very important for soybeans that will be used to make food products. Low humidity is especially important, even if the temperature is high, in preserving the original soybean properties, including some enzyme activities.

The acid value of soybeans is determined by grinding the dry soybeans, extracting the oil with petroleum ether, then measuring the amount of potassium hydroxide (KOH) needed to neutralize it.

The varieties Enrei and Koganedaizu were studied. Enrei had large seeds (weighing 35 gm per 100 seeds) and high protein content (78.8 mg of nitrogen per gm of dry weight). When stored under the various conditions tested, the moisture content of Enrei gradually decreased for the first 6 months, then remained constant after that. Address: 1&3. 8239. Shedlin, Michael. 1985. Tofu: That chameleon of the food world. *Monterey Life* (*Monterey, California*). Feb. p. 12.
• ***Summary:*** Buck and Leslie Patton, owners of Jack and the Beanstalk, make tofu in Carmel Valley Village. They do all the work themselves with the help of one part-time assistant. The Pattons bought the compact production facility in 1983 from the previous owner, who had studied with a Japanese tofu master and passed the techniques on to the new owners. The company has about 60 accounts, delivering to local Japanese restaurants, and to retail food shops and supermarkets, including Safeway. They also distribute in San Francisco, Big Sur, Salinas, Santa Cruz and Tassajara. They make 1,700 lb/week of nigari tofu. A nice 3.5 by 4.5 inch black-and-white photo shows Buck and Leslie Patton in their tofu shop in front of equipment (hydraulic press and pressure cooker), showing Pure-Pak type tofu cartons.

8240. Shurtleff, William; Aoyagi, Akiko. 1985. Tofutti & other soy ice creams: Non-dairy frozen dessert industry and market. 2 vols. Lafayette, California: Soyfoods Center. Vol. 1, 144 p. Vol. 2, 214 p. Index. Feb. 28 cm. [129 ref]
• ***Summary:*** The first study of the rapidly emerging soy ice cream market, based on historical principles. Contents: Volume I. 1. Introduction. 2. What are non-dairy frozen desserts? Standards, terminology, and labeling laws. 3. History of non-dairy frozen desserts. United States and Canada (1918–present), History of Tofu Time Inc. and Tofutti, East Asia (1936-), Europe (1946-), Third World countries (1970-), Australasia and the Middle East.

Pages 75-92, titled "The Tofutti Era and Tofutti Clones, contain histories and descriptions of four categories of non-dairy ice cream companies. Within each category, the companies are listed in the sequence that their products appeared: (1) Small soyfoods companies: Penguino's Inc. (New York), Green World (Idaho), Garden of Eatin' (California), Soy City Foods (Ontario, Canada), The Soy Shop (Georgia), Metta Tofu Co. (British Columbia, Canada), Island Spring (Washington state), Evolutionary Foods (Arizona), Midwest Tofu & Sprouts Co. (Nebraska), Cream of the Bean (Illinois). (2) Soyfoods companies that used a mixture of tofu or soymilk and soy protein isolates to make Tofutti-type products: Brightsong Light Foods (California), Farm Foods (Tennessee), White Wave (Colorado). (3) Dairy companies (or non-soyfoods companies) that launched Tofutti-style products: Presto Food Products (California), Colombo, Inc. (Massachusetts), Honey Hill Farms (California), Continental Yogurt (California), Gloria Vanderbilt / Frusen Gladje Ltd. (New York), Barricini Foods Inc. (New York), Parvelle Corp. (New York), Carvel Corp. (New York), Tuscan Dairy Farm (New Jersey), Golden Seal Riviera Ice Cream Co. (New York). (4) Innovative makers of non-dairy frozen desserts that are not soy-based: Olympus Industries (Washington, Yodolo), and Imagine Foods (Arkansas, Rice Dream).

4. The soy ice cream industry and market in the U.S. and worldwide. 5. Nutritional value of soy ice cream. 6. Directory of people, organizations, and publications connected with non-dairy frozen desserts. 7. Tofu standards and soy ice cream. 8. Technical information on soy ice cream production. Ingredients and sample ingredient listings; Formulas and processing techniques. 9. How to calculate the amount of tofu in a tofu ice cream. 10. Bibliography (129 entries). 11. Index. About The Soyfoods Center.

Volume II. Documents and Graphics Related to Soy Ice Cream. This volume contains early historical and current popular articles, product labels, posters, graphics, and corporate brochures. A rich source of information for marketing and product development, these also document the rapid growth of soy ice creams worldwide. The publication is not paginated. Contents: 12. Early history (1918-1969). 13. Farm Foods and Ice Bean (1974-). 14. Tofu Time and Tofutti (1980-). 15. Other Soy Ice Creams and General (1976-). 16. Technical information on soy ice cream production. This last section lists ingredients and recipes, and discusses regulations, labeling, production processes, and quality of soy-based frozen desserts–largely ice cream, but also popsicles, sherbets, custards, etc. Fermented or cultured soymilks are also discussed briefly.

As of Jan. 1998, both volumes are bound as one.

Note 1. This is the earliest document seen (Oct. 2001) that contains industry or market statistics for soy ice cream by geographical region.

Note 2. This is the earliest English-language document seen (Sept. 2013) that discusses the etymology of soy ice creams and non-dairy frozen desserts.

Note: The story of "The man who introduced David Mintz to tofu and soy ice cream: Pesach Lazaroff," does not appear in this book. The story was not uncovered until Oct. 1986. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

8241. Shurtleff, William; Aoyagi, Akiko. 1985. Brief history of Presto Food Products and Mocha Mix (Document part). In: Shurtleff and Aoyagi. 1985. Tofutti & Other Soy Ice Creams: The Non-Dairy Frozen Dessert Industry and Market. Vol. 1. 145 p. See p. 30, 49, 103, 108-09, 113, 117, 131. [2 ref]
• ***Summary:*** Presto Food Products was a pioneer in using isolated soy proteins in non-dairy products. Founded in June 1936 by Melvin S. Morse in Kansas City, Missouri,

© Copyright Soyinfo Center 2014

the company acquired a franchise from the Instant Whip Company in Columbus, Ohio to make Instant Whip, an aerosol dairy whipped cream. Sold to the restaurant trade, this was Presto's sole product until 1949. In 1937 Morse started a second plant in Los Angeles. The years of World War II were hard ones, with dairy products in short supply. When the price of butterfat skyrocketed right after the war, Morse asked Dick Borne, an employee in Los Angeles with a background in pharmacy, to develop a line of non-dairy products. Borne and Morse started RGB Laboratories in Kansas City, Missouri, and Borne set to work. A key early innovation was a method (still secret) of reducing soy off-flavors. In 1949-50 Presto in Kansas City introduced the company's first non-dairy product, an aerosol whip topping sold to the restaurant trade in a returnable pint can. In 1950 they brought out Mocha Mix Coffee Creamer, America's first such commercial non-dairy cream replacer, and in 1951 D-Zert Whip Topping. In 1951 Rich Products won a lawsuit in California allowing them to sell Rich's Whip Topping in that state; Morse was in the audience at the suit. Shortly thereafter Presto/California began to make the same products as its Kansas City Division was making. In 1957-58 Presto stopped producing dairy products, focusing only on non-dairy.

In 1964, after 9 years of R&D by RGB Laboratories, Presto Foods launched America's second commercial soy ice cream. Called Affair, it was a delicious product made for Presto by Swift & Co. at their kosher supervised ice cream plant, using soy protein from Central Soya and coconut fat. Targeted primarily to the kosher Jewish market in New York, it was kosher pareve and came in chocolate, vanilla, and strawberry flavors. The demand for the product was there but Presto had great difficulty getting it distributed. The ice cream distributors wouldn't touch it and Presto did not have their own distribution. So it failed and was withdrawn after about a year. In 1965 Presto licensed Nissei Co. in Osaka, Japan to make their soy ice cream, which Nissei was still doing in 1985, although at some point they changed the protein source from isolated soy proteins to casein. It was not until 1981 that Presto Foods tried to introduce a frozen dessert again, this time with Mocha Mix Non-Dairy Frozen Dessert (Borne 1985, personal communication).

In 1959 RGB Laboratories had licensed a small company named Nutritional Food Industries in Wallington, New Jersey, to manufacture Mocha Mix Non-Dairy Creamer and D-zert Whip Topping, using a concentrate produced by RGB Labs. The company was owned by three men, one of whom was named Seymour Heller. The franchise with Nutritional Foods did not work out, so RGB Labs bought the company in the early 1960s, took it over, and lost a lot of money on the deal. Heller signed a five-year non-compete agreement. Thereafter, in 1970, he formed a new company, Heller Enterprises, and launched a line of similar, competing products.

In October 1981 Presto Food Products of Los Angeles introduced Mocha Mix Non-Dairy Frozen Dessert. Now one of America's leading makers of pre-whipped non-dairy toppings, Presto also made the popular Mocha Mix Non-Dairy Creamer, a cream substitute based on soy protein. Mocha Mix Non-Dairy Frozen Dessert, which was free of milk products and cholesterol, and low in saturated fats, was not targeted to the natural food trade since it contained a number of artificial ingredients. Now Presto had its own distribution system and the product's cholesterol-free, polyunsaturated attributes were widely recognized as a nutritional plus. It sold well from the outset, primarily in supermarkets in California and Arizona; it was the first product of its type to become widely available in West Coast supers. While the company does not disclose sales or production figures, and distribution is confined to only two states, Mocha Mix may well be second only to Tofutti in total volume nationwide. Sales are thought to be 2-3 times larger than Ice Bean, and are in the millions of dollars per year.

The main soy ingredient in Mocha Mix is isolated soy proteins. The price of a hard pack quart of Mocha Mix, made in Los Angeles and sold in California supermarkets in 1984 averaged $1.99, which was twice as expensive as the least expensive dairy ice cream, but only 40% as expensive as Tofutti. In terms of nutritional composition, Mocha Mix was very low in protein (less than 1 gm per 4 fluid ounce serving), and fairly low in fat (7 gm per serving; 48% of calories from fat).

Note: This is the earliest document seen (Jan. 1999) that uses the term "cream replacer."

8242. Sugawara, Etsuko; Ito, T.; Odagiri, S.; Kubota, K.; Kobayashi, K. 1985. Comparison of compositions of odor components of natto and cooked soybeans. *Agricultural and Biological Chemistry* 49(2):311-17. Feb. [22 ref]
• ***Summary:*** The authors found nine alkylpyrazines including tetramethylpyrazine in natto at a total level of 24.07 mg/kg. The pyrazines were detected only after the cooked soybeans were inoculated with the natto bacterium, *Bacillus natto.* No beany odor was detected for natto. The authors concluded that pyrazines and sulfur-containing compounds were important contributors to the characteristic odor of natto, and that they may mask the beany odor. Address: 1. foolhardy show of bravado, he ordered something called natto sengyo ae, having no idea what it was.

"'Maybe you not like fish guts so much?' she warned discreetly." He left her a large tip.

The word "tofu" appears several times in the review, without its translation "bean curd."

8244. NHK of Japan. 1985. Tôfuyô [Tofuyo, Okinawan fermented tofu]. Television broadcast / documentary. Friday, March 8. [Jap; eng+]

• ***Summary:*** A person from NHK went to Okinawa on 19 Feb. 1985 and visited the market located in Makishi, near the center of Naha city. It was on the last day of the year, the day before New Year's day (*o-misoka*), as celebrated according to the ancient lunar calendar. The market was very crowded since many Okinawans still use the lunar calendar.

Cakes of Okinawan tofu are large and very firm. Tofu is called *rikuni agatta o-tofu,* which means "tofu landed on a shore."

There are about 300 shops in the market but only one shop, Saburô-ya, that sells tofuyo and only about 10% of the customers buy tofuyo. It is sold in a box. Its color is a pretty red. Red koji (*aka-koji, beni-koji*) is used to make it. It is very difficult and time consuming to make at home. Tofuyo is not the most popular food in Okinawa among regular people. In the old days, the royal family treasured it as a special delicacy (*chinmi*) that was largely reserved for them. During the Okinawa dynasty, the royal family lived in the city Shuri, which is today a district in the highlands of Naha, at the southern part of Okinawa island. It was formerly a separate city unto itself and the royal capital of the Ryukyu Kingdom, the site of Shuri Castle. It is believed that the idea for tofuyo came from Chinese fermented tofu. It is difficult to make good tofuyo, and the ageing process takes 3-4 months. Today there are very few people who can still make tofuyo–even in Shuri.

8245. Tokai, Akinori. 1985. Nebari mo nioi mo nai nattô: Tenpe [The natto that has neither stickiness nor smell: Tempeh]. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo, Evening ed.*). March 19. p. 3. [Jap]

• ***Summary:*** A photo shows trays of tempeh being made by a Marusan worker. Address: Japan.

8246. Ballard, Bob. 1985. Ah-Soy! and Great Eastern Sun (Interview). *SoyaScan Notes.* March 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ah-Soy was launched at the NNFA show in Atlanta, Georgia, in the summer of 1984. Initial flavors were vanilla, chocolate, and original (plain). It was made by Saniku Foods in Japan and imported via Mitoku. Carob flavor was introduced in the fall of 1984. Vanilla is now the best seller because it is the most unique. The product is a "fantastic success." The four flavors account for 15-20% of Great Eastern Sun's total sales from 1,100 products. GES only sells to distributors [i.e. it is a master distributor].

Sales reports for the period 1 Nov. 1984 to 25 Feb. 1985 show the following number of units sold (there are 30 units/per case): Vanilla 210,000 units. Original/plain 110,000. Carob 105,000. Chocolate 100,000.

Other GES soyfoods that sell well: Mellow white miso (made by American Miso Co.), 35 lb tub, #9 best seller by dollar volume. Onozaki rice miso, 11 lb tub, #20 best. Mellow white miso, 15 lb tub, #20 best. Instant miso soup from Japan (ranking unknown). This month's sales are annualized. The company is now doing $4 million/year in sales. They used to import freeze-dried tofu; the FDA forced them to change the name to "dried tofu." Shurtleff notes that he prefers the term "dried-frozen tofu."

Another best seller (about #3-5) is their White Cloud Rice Syrup It is made from rice with sprouted barley for malt. Address: Great Eastern Sun, 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730 or 704 252-3090.

8249. Australian Department of Immigration and Ethnic Affairs. 1985. A land of immigrants. Australia. 16 p. 28 cm.

• ***Summary:*** Human beings first set foot on the Australian landmass at least 40,000 years ago. Probably originating in Southeast Asia, they were the ancestors of today's Australian Aborigines.

European discovery: The first European visitors to Australia were the Dutch, who explored the Gulf of Carpentaria in 1606 and landed in 1642. In 1642 the Dutchman Abel Tasman discovered Tasmania. In 1688 the English buccaneer, William Dampier, in a stolen vessel, the Cygnet, visited Australia's northwest coast. In 1699 he returned in command of the Royal Navy Ship, Roebuck, to continue his exploration of New Holland, the name the Dutch had given the continent after Tasman's voyages. In 1770 navigator James Cook claimed the eastern part of Australia for Britain; he discovered Botany Bay and named the land New South Wales; it did not come to be called Australia until the 19th century.

A colony is born: "Loss of her North American colonies following the Declaration of Independence on 1776 prompted Britain to seek a new land suitable for penal settlement... Before the revolt of the American colonists

© Copyright Soyinfo Center 2014

(1775-83), Britain had been transporting about 1,000 convicts a year, mainly to Virginia and Maryland. Between 1717 and the War of Independence (1775-83), at least 50,000 English convicts were shipped to America. In 1779 Sir Joseph Banks, a botanist with Capt. Cook, first suggested the establishment of British penal colony at Botany Bay, New Holland (Australia). In 1783 an American suggested that American colonists loyal to Britain be resettled in New Holland; actually, most moved to Canada. On 26 Jan. 1788 the first group of 736 British convicts plus several hundred non-convicts arrived at Sydney Cove, Port Jackson, New South Wales, and Governor Phillip founded the settlement at Sydney Cove–a date that is still celebrated each year as "Australia Day" (prior to 1932 called "Foundation Day"). The first party of free immigrants arrived in 1793. The country was first named Australia in 1817 and the entire continent was claimed by Britain in 1829. By the late 18th century, when the first European settlers arrived, an estimated 250,000 to 300,000 Aborigines were living in Australia. Shipping of convicts to eastern Australia was abolished in 1840, but it continued until 1853 in Tasmania and until 1868 in Western Australia. By that time, some 160,000 of them had been sent to Australia.

The Australian Gold Rush: The discovery of gold at Bathurst, about 100 miles northwest of Sydney, New South Wales, in 1851 (3 years after it was discovered in California), and later at Ballarat and Bendigo, north of Melbourne, Victoria, brought a flood of fortune seekers from around the world–including China. The Chinese population on the goldfields increased rapidly, reaching 17,000 by 1855, at which time an act to restrict Chinese entry was passed, thus beginning the policy of "White Australia." In the gold rush decade, more than 600,000 immigrants arrived. [Note that the early gold fields were located in southwest Australia, the same area where soybeans were most widely grown after 1980.] From 1850 to 1860, Australia's non-Aboriginal population grew from 405,356 to 1,145,585. In 1861 there were 40,000 Chinese in Australia. Japanese began to arrive in the late 1800s.

In the second half of the 19th century, gold mining led to the establishment of many coastal and inland centres in Queensland (in northeastern Australia; separated from New South Wales in 1859). Gold drew thousands of miners to fields such as Gympie, Charters Towers and the Palmer River valley; the Mount Morgan mine was established in 1882. Gold also brought people to Western Australia, where the famous goldfields, Coolgardie and Kalgoorlie, were discovered in the second gold rush of 1892-1983. In 10 years Western Australia's population rose from 93,000 (in 1886) to 138,000 (in 1896). From 1851 to 1891, some 1,390,000 were attracted to Australia by the discovery of gold and the subsequent rapid development of agriculture. The 1891 population of 3,174,400 included 46,600 from Asia.

White Australia: In 1901 the Commonwealth of Australia was established, with Canberra as its capital. The Commonwealth Government passed a policy restricting Asian immigration in general. In 1901 Australia's population was 3,773,801–not including Aborigines whose numbers had fallen to about 95,000. Some 77% of the population were born in Australia and 18% in Britain. Roughly 32,000 were Chinese and 3,593 were Japanese-born. This so-called "White Australia" policy that began officially in 1901 prevented the immigration of non-Europeans from more than 50 years. "In 1901 Japanese-born residents of Australia totalled 3,593 but as a result of the Immigration Restriction Act of that year, their numbers declined. During World War II, most returned to Japan or were interned. By 1981, with a non-discriminatory immigration policy, Japanese-born residents of Australia had increased to 8,060.

On 26 Jan. 1949 ("Australia Day") it first became possible for a person to become a citizen of Australia, as the Australian Citizenship Act went into effect. Before that, the nationality status for Australians was simply "British subject."

Starting in the late 1940s, the "White Australia" policy was gradually and increasingly relaxed; it was finally abolished in 1973. Since World War II, immigration has included more than 400,000 refugees. The largest single group has been the 88,112 Indo-Chinese (including 68,000 Vietnamese, many of them "boat people") who arrived between April 1975 [when the USA was defeated in Vietnam] and June 1984. As of 1981, 9.3% of Australia's overseas-born residents had been born in Asia.

Note: These Asians must have brought soybeans and soyfoods to Australia before 1900, but we have yet to see anything published documenting this pioneering work. Indeed, no one knows when and how soybeans first arrived in Australia. Address: Australia.

8250. **Product Name:** [Emile Soymilk Ice Cream (9 flavors)].
Foreign Name: Emiiru.
Manufacturer's Name: Biological Science Laboratory K.K.
Manufacturer's Address: Sano-cho 14, Seigoin, Sakyo-ku, Kyoto, Japan. Phone: 075-751-1633.
Date of Introduction: 1985 March.
How Stored: Frozen.
New Product–Documentation: Toyo Shinpo. 1985. April 11. "New Soymilk Ice Cream in Japan." Made from soymilk and safflower oil, it has 12% overrun and costs 1,000 yen for 470 ml. The product name is like the French name Emile. There are 150 calories per 100 gm. The soy ice cream is made and served in 9 flavors at the shop & restaurant named Veldian, starting March 1985. The capacity of the shop is 2,000 liters/day. The president of the company is Mr. Kichizo Kaneda, age 43.

8251. Byrne, Maureen. 1985. The future for soyfoods. The first European Soyfoods Workshop was held in Amsterdam by the American Soybean Association, and papers covered subjects from marketing to microbiological standards. *Food Manufacture* (*London*) 60(3):49, 51, 53. March.
• ***Summary:*** This workshop was held on 27-28 Sept. 1984 at the Krasnapolski Hotel, Amsterdam, the Netherlands–organized by the American Soybean Association. Gives a brief summary of each paper presented.

Contains an interesting full-page table (p. 51) in which Oriental soyfoods are classified into two types: Non-fermented and fermented. For each non-fermented food is given the local names, description, and uses. The non-fermented soyfoods are: Fresh green soybeans, soybean sprouts (huang tou ya, Chinese), soynuts (hueh huang tou, Chinese; iri-mame, Japanese), soymilk (tou chiang or tounai, Chinese; tonyu, Japanese; kongkuk, Korean), [roasted] soy flour (huang tou fen, Chinese), soy protein-lipid film (yuba, tou-fu-pi), soybean curd (tofu).

For each fermented soyfood is given the local names, organisms used, description, and uses.

The fermented soyfoods are: Soy sauce, miso, tempeh, natto, fermented tofu, and fermented black soybeans.

Soy sauce includes chiang-yu from China, shoyu from Japan, ketjap from Indonesia, kanjang from Korea, toyo and see-ieu from Southeast Asia.

Fermented black soybeans include tau-shih from China, tao-si from the Philippines, tau-cheo from Malaysia, tauco from Indonesia, and Hamanatto from Japan.

• ***Summary:*** Tofuyo. Even if you can imagine, from its name, that it is a food made from tofu, very few people know what tofuyo is. It tastes like a cheese and there is a similar product in China named *funyu* [fermented tofu]. It is a special delicacy in Okinawa, made from tofu which is fermented in red rice koji and *awamori* (millet brandy). However tofu made in Okinawa is firmer (it contains less water) than regular tofu (*momen-goshi*) made in Japan. And each cake of tofu is large, weighing about 900 gm. Also the method of selling the tofu is a little different; it is not immersed in water but a large piece (containing about 5 cakes) is placed on a wooden cutting board and covered with a kitchen cloth (*fukin*)**.** The tofu seller cuts each cake of tofu according to the customer's desire.

Tofu is essential, as is pork, in the diet and food culture of Okinawans. The most popular dish prepared at home in Okinawa is *chanpurû* [*champuru*] which means "something mixed." It is made from tofu and seasonal vegetables stir fried (or sautéed) together, often with a little meat or fish. Tofuyo, by contrast, is a delicacy most suited for drinking with saké.

Photos show: (1) The inside of a Okinawan shop that makes the island's most popular distilled alcoholic beverage, awamori (millet brandy), in large earthenware vats. There are ten or more old makers of awamori in Naha city (formerly named Shuri). (2) The process for fermenting rice. (3) Freshly made tofu; it is carried to the store in a wooden frame. (4) Wooden presses with heavy weights on top. Soymilk curds are being pressed. (5) To make tofuyo, soak rice koji in awamori for about 10 days. After it becomes soft, grind it in a suribachi. If you have red koji (*beni-koji*)**,** put it in too, and season with salt and sugar. Cut firm tofu into cubes about 3 cm on a side. Sprinkle salt over them. Dry them on a flat woven-bamboo tray in a shady place. When the tofu becomes yellowish, wash them in awamori 2-3 times. Place them in a jar of the seasoned sweet koji and cover. Place the jar in a refrigerator and allow to ferment for 3-6 months. (6) Tofuyo in the jar in which it is ripening. (7) Kôsetsu Shijo (huge indoor market) near Heiwa-dori in Naha city, Okinawa. It is regarded as "the kitchen of Okinawa." (8) In Okinawa, all parts of slaughtered pigs (intestines, ears, legs, etc.) are sold as food in Kosetsu market; nothing is wasted. (8) There are tofu shops in Kosetsu market. They cut tofu into one cake (*cho*) pieces at the request of customers. (9) For more information contact Naha-shi Kankô Kyôkai (Tourist's Bureau), Phone: 0988-68-4887. Senzaki 1-1, Naha city 900, Okinawa.

Note: The NHK TV broadcast on tofuyo was on Friday 8 March 1985.

• ***Summary:*** Karl Sera (a native of Japan) is ASA's associate country director for Japan–a modern country of 121 million

© Copyright Soyinfo Center 2014

people [127.3 million as of April 2013]. A country of limited natural resources, Japan has only 12 million acres of land that can be farmed–and most of that land is planted in rice. But rice is declining in popularity as Japanese tastes, undergoing Westernization, have shifted to meat and meat products.

"The Japanese market for soybeans has increased from 120 million bushels in 1970 to 170 million bushels in 1984." Japan imports 96% of those soybeans from the USA and about 3% from China, Brazil, and Canada."

Sera wishes that Japan had a system for transferring workable, practical knowledge to farmers. He says: "Unfortunately we don't have the land grant university research and extension you have. I believe that's what made agriculture so great in your country" [USA].

Mr. Takahashi, Sera's colleague, recently devised another way to convince hog producers that soybean meal is a better buy than locally produced fish meal.

Takahashi developed microcomputer programs written in Japanese giving that exact cost of hog feed ingredients. At a series of seminars, he showed these programs to the producers. The farmers quickly understood how replacing their traditional fish meal with soybean meal would lead to higher profits. "Now five least-cost ration programs are available in Japan."

Sera believes the big opportunity market for U.S. soybeans in Japan is poultry and dairy feed.

Two photos show Karl Sera: (1) Teaching Indiana farmers how Japanese uses U.S. soybeans. (2) Explaining to Japanese farmers how soybeans can improve livestock feed efficiency–producing faster weight gain at lower cost.

8264. Belleme, John. 1985. New developments at American Miso Co. (Interview). *SoyaScan Notes.* April 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Feb. 1984 (actually 1 Oct. 1983) John sold his ownership in the American Miso Co. to Barry Evans. Originally, John, Sandy Pukel, and Barry each owned one-third of the business. Before that, it had 6-7 owners. First Sandy (under pressure from Barry) sold his one-third to Barry, which made Barry the majority shareholder. After that, Barry let John run the company, which is doing very well in terms of productivity and profitability. They are selling all the miso they can possibly make.

At the time John sold his stock, he set up a new corporation named Just In Foods, Inc. (named after his son, Justin) to make second-generation miso products. John recently sold Just In Foods (which makes Miso Master brand products) to Barry Evans, because John doesn't own a miso plant. John is now a paid consultant for American Miso Co.

Miso Master is a marketing company for miso and miso products, and also a brand name. Chick Peaso is a mellow miso made with chick-peas instead of soybeans; it contains no soy. Introduced in May 1984, it was first sold in bulk from Great Eastern Sun but is now sold in 1-pound plastic bags.

Two tofu-miso dips were introduced in Nov. 1984; they are made by Nasoya using John's miso. They are both selling well, under the Miso Master label. Another new product is a delicious spaghetti sauce produced by Ventrillos in New York; it is made with a very mellow miso, low in salt. John sells John Troy about 35,000 lb/year of mellow miso; that's all Troy uses but Belleme does not make much money on this. Troy's miso mustard has 3-month amakuchi miso in it. John first saw this product in Fukuoka, Japan, made by Toshi Shiroozu, a man who makes mellow white miso for Eden Foods; it was in 1-pound packages, exported by Muso Shokuhin. John had a product named Mellow Ebony Miso, made with black soybeans. It was delicious but the color was grotesque, so he phased it out.

Another new non-profit organization is the Institute for Fermented Foods. Its logo is a pickle barrel with a rock on it borrowed from the book *Miso Daigaku.*

Pretty soon John is going to stop making miso. He is now training Don DeBona, who Barry sent to be trained. After that, John plans to run Barry's Just In Foods full time. John's wife, Jan, is writing a book on Japanese foods. John plans to go back to Japan for a while. Address: North Carolina.

8265. Meyer, Edwin W. 1985. Details on work with The Glidden Company (Interview). Conducted by William Shurtleff of Soyfoods Center, April 8. 4 p. transcript.
• ***Summary:*** Discusses: ADM's solvent extraction plant in Chicago, Norm Witte, Central Soya's Miracle Meal (the world's first dehulled soybean meal made with a desolventizer-toaster; launched in 1952, it revolutionized the poultry industry), Central Soya's first desolventizer-toaster started operation in Decatur in May 1950, Central Soya's soy protein concentrate plants, Robert Boyer and Frank Calvert, Norman F. Kruse [pronounced Cruze], Endre F. Sipos. Elmer B. Oberg.

Say Calumet Harbor, not Calumet River; Ed thinks they acquired the 2 country elevators on the rivers but may have added on something. Ed Wilhelm might know.

Promine was used mostly by a large sausage manufacturer in Detroit, Michigan, for its functional properties. It was looked at but never used by John Morrell & Co., Armour, Swift, or Kraft–which had an all-meat image and mentality; "they never touched it.

Glidden sold Morrell a lot of soybean grits for dog food, for years during the 1930s; Morrell had a dog food company in Iowa, which made a popular canned product.

Ed had to make a rapid exodus from the Glidden Co. on Laramie after ADM bought it. They wanted to get in quickly; he left some important documents behind.

ADM did sell their lecithin through the American Lecithin Co. in the early days, just like Glidden. Ask Joseph Eichberg about the exact nature of the agreement.

Ed wouldn't say that Glidden soy operations Chicago was struggling, but their profits were not up to Glidden's expectations so they were considered a weak division. World War II helped a lot financially, especially since the industrial protein was requisitioned by the U.S. Navy through NFS. Toward the end of the war Glidden was supplying soy flour for the relief programs to the liberated areas, especially Italy.

Oberg is too gracious to say that Central Soya bought Glidden largely for its research team. The main reason was the price was cheap; the whole works for $14 million, including all the elevators. Central got a great deal. Some years later they sold the Calumet Harbor elevators to Cargill for $8 million. At that time Central Soya had only a small development group under Sipos, who is still with them. He reported to Norm Kruse, starting in 1953. True, they basically had no research team. It was of equal importance to

© Copyright Soyinfo Center 2014

many others.

Steroids: After 1953 they had a major contract with Charles Pfizer Co. to process steroids and to sell them an intermediate for making corticoid steroids / hormones. That was the main business. They also had a little business with Charles Strauss in Montreal, Canada. "After 1953 we toll processed for Pfizer alone (that means for a given sum you process material for a certain party) so we remained in the steroids business."

Ed was an Abbott–Glidden–Upjohn fellow at Northwestern University. Abbott Labs and Upjohn were very interested in Glidden's work; they were involved in an informal joint research operation. General Mills got into making soy sterols at their Kankakee plant. Glidden put them into the business in a way. Upjohn was buying sterols from General Mills for many years. Upjohn is still using soybeans for their corticoid hormones. General Mills sold that plant to Henkel A.G., a German company.

The forerunner of Promosoy (Central Soya's soy protein concentrate) was Protein 70 (also called Pro-70), developed by E.B. Oberg. The pilot plant was built in 1959 and the full commercial plant later at the Gibson City plant. Pro-70 was developed at Glidden by Sidney Circle. He started working on the concentrate after the soy protein isolate, in about 1953-54. Pro-70 was not commercialized until after Central Soya bought Glidden's Chemurgy Div. in 1958. It was commercialized under the name Pro-70. The term Promosoy was introduced in about 1960 [sic, 1962] with the Gibson City plant. Both were exactly the same product–a soy protein concentrated. Response, their textured soy protein concentrate, was developed later under Ed Meyer's supervision.

The first formula for Rich Freeze was developed by Jim Liggett in about 1963-64; Ed was director of research at the time. It was developed partly for the Japanese market. "We [Central Soya] had an affiliate, Dai Nippon pharmaceutical, which was selling our granular phosphatides in Japan. Dai Nippon also had a few food ingredients, principally plant gums. They thought they might sell Rich Freeze, but they bombed out" [failed].

The Cone and Brown patent which was the basis for Alpha Protein. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

8268. Jones, Terril. 1985. The Pacific Rim. *Los Angeles Times*. April 19. p. OC C3.
• ***Summary:*** Although the USA is the world leader in serious biotechnology, Japan is now making a serious effort to become the most serious competitor and eventually take the lead. Biotechnology describes the new techniques, developed in the 1970s, to manipulate genes and proteins. For centuries, Japan has been skilled in fermentation technology, a vital process in biotechnology.

"Importance of fermentation: According to the Ministry of International Trade and Industry (MITI), Japan in 1983 had 2,600 breweries [of alcoholic beverages such as sake and beer], 1,187 *miso* bean paste companies, and 2,927 soy sauce manufacturers–more than 7,400 enterprises using fermentation."

The larger companies are in an excellent position to diversify into sophisticated areas of biotechnology. Yamasa Soy Sauce, founded in 1645, "has been able to produce beta interferon by using antibodies–proteins that adhere only to certain substances–that are specific for beta interferon, causing the interferon to precipitate out of solution. Yamasa is the world's first company to make and market these antibodies.

MITI's budget for biotech in fiscal 1985 is $4.23 billion yen ($17 million), up 18% from 1984 and up 40% from fiscal 1983.

8270. Kass, Monica. 1985. High-tech soymilk pouch creates market success: Stand-up retortable pouches for soymilk boom in natural-food stores, break into supermarkets. *Packaging*. April. p. 36-37.
• ***Summary:*** On the cover of the magazine and the first page of the article is a large color photo of Westbrae Natural Cocoa-Mint Malted. On the second page is a color photo of ten brands of soymilk in stand-up gussetted retort pouches, the type of soymilk packaging now most popular in America. "Marusan Ai and San-iku Foods are two Japanese companies currently processing and retort packaging soymilk for export to the USA. Marusan forms the retort pouch from multilaminate rollstock supplied by Toyo Seikan Kaisha Co. (Toyo Seikan is licensed by Doy-n-pak [Doypack] to produce the material.) And San-iku Foods retorts soymilk in preformed pouches, also made from the Doy-n-pak patented lamination.

"Sources say the fact that Doy-n-pak's design patent on the stand-up, gusseted pouch runs out this fall has prompted some scrambling among American materials suppliers who

© Copyright Soyinfo Center 2014

see the potential of the stand-up pouch and want to establish market position with the pouch.

"American companies importing soymilk in the preformed retort pouch include Westbrae Natural Foods and Great Eastern Sun. Eden Foods Inc. was the first company out with soymilk in the rollstock formed pouch. Structural differences between the two pouch varieties are minimal. The rollstock-formed square-cornered pouch must be opened with a scissors and is somewhat narrower in shape than the round-cornered preformed pouch which has an easy-open feature.

"Lamination for both pouch types consists of an outer layer of PET laminated to nylon, aluminum and an inner layer of polyolefin film that meets FDA food contact material requirements.

"Processing methods Marusan and San-iku use to adapt soymilk to American tastes differ, but both companies retort pouches up to 250ºF giving them an unlimited shelf life.

"Graphics reflect positioning: The real difference between the various retorted soymilks is in positioning. Eden Foods is strictly interested in promoting the product for its nutritional benefits. Great Eastern Sun's soymilk appeals to health-conscious consumers with an eye on trends. And Westbrae has two soymilk varieties. One is a plain soymilk, targeted for the health-conscious crowd. The other is a line of dessert-type malted drinks–'fun' products the company is targeting at younger consumers."

Note: This is the earliest document seen (Sept. 2011) with the term "high-tech" (or "high tech") in the title in connection with soyfoods–in this case soymilk, historically a low-tech product.

In February 1977 a Gallup poll in America showed a remarkable shift in the public's awareness of and attitudes toward soyfoods. The sampling of 1,543 adults across the nation found that: 33% believe that soybeans will be the most important source of protein in the future–ahead of fish at 24% and meat at 21%. 55% believe that "soy products have a nutritional value equal or superior to that of meat." 54% reported that they "had eaten foods containing soy protein as a prime ingredient within the past 12 months." Younger age groups living in large cities and those with college or university educations had the most favorable attitudes toward soy protein, indicating that support for soyfoods is likely to grow in the future. Source: Norin Suisansho Shokuhin Yushi-ka; or Sorifu no Kakei Chosa, Tokei Kyokyoku 1983.

These figures show that natto production in Japan, from 1958 to 1982, has grown at the average compound rate of 6.2% a year. This is impressive, especially when we consider that per capita consumption of Japan's two other major fermented soyfoods, shoyu (soy sauce) and miso, have declined during this period. Equally promising, the second-largest annual production increase in postwar history took place in the most recent year (1982), an increase of 16,000 tonnes, or 10.4%. Major reasons for this increase were (1) The growing reevaluation in Japan of the nutritional value of traditional soyfoods; (2) The growing interest in natural foods; and (3) the expansion of natto consumption in western Japan.

Nevertheless, per capita natto consumption is still relatively small, only 1.4 kg a year in 1982, compared with about 12 kg for shoyu and 6 kg for miso.

• ***Summary:*** "In the Middle Ages, the Black Death [bubonic plague] earned its reputation by killing about one-third of the population of Europe. Today, cardiovascular disease claims

© Copyright Soyinfo Center 2014

the lives of over 50 percent of the people in the United States and in many other advanced industrial societies... heart disease is more deadly than all other modern scourges combined, including cancer and loss of life from car accidents, crime, and war...

"One out of every five men in this country will have a heart attack by age sixty... This year, according to the American Heart Association, 1.5 million Americans will have a heart attack, and 550,000 of them will die."

According to Marstow and Page (1978. *National Food Review.* Dec. p. 28-33. "Nutrient content of national food supply), the fat in the American diet comes from the following sources:

43% cooking and baking fat, salad oils, butter, and margarine.

34% red meat, poultry, and fish.

12% dairy products, not including butter.

4% beans, peas, nuts, soy flour, grits.

4% grains, vegetables, fruits.

3% eggs.

The authors believe that a macrobiotic diet based on natural foods (including miso soup and tofu) can largely prevent heart disease.

A color cover photo, by Robert Kaufman, shows Michio Kushi, dressed in a white apron with a red heart on it, slicing a carrot in a kitchen.

• ***Summary:*** Continued. "William Shurtleff and Akiko Aoyagi of The Soyfoods Center in California were also active in helping to introduce tempeh to America. They first became aware of and interested in tempeh in March 1975 in Tokyo after reading *The Farm Vegetarian Cookbook.* In their *Book of Tofu* (1975), they included a recipe for homemade tempeh and seven Indonesian-style tempeh recipes (learned from an Indonesian tempeh maker in Tokyo), the first such recipes ever published in English. This whole section was published in *Mother Earth News* in May 1976. In late 1976, during a two-week visit to The Farm in Tennessee, they wrote (with Cynthia Bates) a 4-page pamphlet titled 'What is Tempeh?' which they enlarged and published in early 1977. In May 1977 they spent a month in Indonesia studying tempeh, and in June their article "Favorite Tempeh Recipes" was published in *Organic Gardening* magazine. In January

© Copyright Soyinfo Center 2014

1978 William Shurtleff presented a paper and demonstration on how to make tempeh from winged beans at an International Seminar on Winged Beans in the Philippines.

"In July 1979 Harper & Row published their *Book of Tempeh,* the first book in the world devoted entirely on tempeh. It contained the first sizeable collection of American-style and Indonesian tempeh recipes (130 in all), the first illustrated descriptions of making tempeh, tempeh starter, and onchom (ontjom / oncom) on various scales in Indonesian tempeh shops, the first history of tempeh, detailed discussion of tempeh in Indonesian culture and of the many varieties of Indonesian tempeh, and the first recommendations for commercial names for the more than 30 types of tempeh that could easily be made in the West. It also contained chapters and reviews of the literature on tempeh nutrition and the microbiology and biochemistry of tempeh fermentation, plus the largest bibliography on tempeh to date (including many new Indonesian references), an annotated listing of 61 people and organizations around the world connected with tempeh, and the first list of tempeh companies in the West. By early 1984 16,600 copies of the paperback edition and 960 copies of the enlarged professional hardcover edition had been sold. Between 1976 and 1982 they wrote eight articles on tempeh for popular and trade magazines.

"In March 1980 The Soyfoods Center published *Tempeh Production,* the first book describing how to start and run a commercial tempeh plant in industrialized or Third World countries. In 1981 Shurtleff and Aoyagi wrote a book on tofu, miso, and tempeh that was published in Mexico in Spanish, and in 1982 they published books containing bulk tempeh recipes and tempeh labels. Starting in 1982 Shurtleff did extensive annual surveys of the tempeh industry and market in the USA, which were published yearly by The Soyfoods Center in *Soyfoods Industry and Market: Directory and Databook.* The Center also developed and sold color slide sets on "Tempeh," "Tempeh Production in the USA," and "Tempeh Production in Indonesia." In 1985 The Book of Tempeh will be published in German as *Das Tempeh Buch.*

"Another early pioneer of tempeh in America was Rodale Press in Emmaus, Pennsylvania, best known as the publisher of *Organic Gardening* and *Prevention* magazines. In the spring of 1975 Rodale's R&D department decided to follow up on the work with tempeh done by Hesseltine and Wang at Peoria. In early 1976 R&D food technologist Mark Schwartz began to work with Dr. Wang in Peoria to develop a simple, inexpensive way to make tempeh at home. They devised a tempeh kit including an incubator made from an inexpensive Styrofoam picnic cooler heated by a light bulb. For a Reader's Research Project, they sent the kit with instructions and a questionnaire to 60 readers across the country, and asked for feedback. The unanimous response was that people found the new food easy to make and delicious (Podems 1976). This R&D work led to five major articles in 1976 and 1977. In March 1976 Brenda Bortz in 'The Joys of Soy' introduced tempeh and Rodale's tempeh research to readers of *Organic Gardening* (OG). In January 1977 *OG* ran 'Tempeh Keeps 'em Coming for More Soybeans.' Jack Ruttle, a Rodale staffer, summarized the results of Rodale's research on tempeh to date and gave detailed instructions for making tempeh at home. This was the first major popular article on tempeh published in America. In June *Prevention,* the largest health-food magazine in America, ran a cover story and editorial by Robert Rodale titled 'Tempeh, a New Health Food Opportunity.' He visited America's first Caucasian-owned tempeh shop (run by Gale Randall), encouraged others to start tempeh shops and to 'get in on the ground floor of a new industry,' and predicted that tempeh might well become America's most popular way of using soybeans as part of the 'coming soy boom.' 'Tempeh is on its way up,' he wrote. 'Before long it will be eaten widely and lovingly across this land of ours.' Also in June *OG* published Shurtleff and Aoyagi's 'Favorite Tempeh Recipes' and Wang, Swain, and Hesseltine's 'Calling all Tempeh Lovers.' In addition Rodale Press published books with extensive information on tempeh: *Home Soyfood Equipment* (Wolf 1981) and *Tofu, Tempeh, & Other Soy Delights* (Cusumano 1984). Wolf's book included a new method for making tempeh at home using unsalted soynuts, which took less time and cost only about 28% (10 cents) more per pound than the traditional method. Detailed plans for making a home tempeh incubator were given. *Organic Gardening* (March 1982) summarized Wolf's quick tempeh method.

"Starting in 1971, the American media first began to take an interest in tempeh, when Food Processing magazine, in its 'Foods of Tomorrow' section did an article on 'Specialty Fermented Foods,' discussing their potential acceptability in the American market. It concluded: 'But of all fermented foods, tempeh, with its high ratings in taste, nutritional benefits, and simple, low cost processing techniques, appears to be the most likely candidate for Americanization . . . Tempeh may be one of the next to appear in the US market place.' In May 1976 *Mother Earth News* (Issue #39) ran a long excerpt on tempeh from *The Book of Tofu* by Shurtleff and Aoyagi. Media coverage expanded significantly in 1977. First came the three major Rodale Press articles mentioned above. In September *Mother Earth News* featured 'How we Make and Eat Tempeh Down on the Farm,' and in November *Vegetarian Times* ran 'Tempeh,' In July 1978 *East West Journal* ran its first tempeh story, 'Make Your Own Soyburger' about the Farm's tempeh. These many articles contained recipes and detailed instructions for home preparation, and some gave the address of the NRRC in Peoria, Illinois as a source of free tempeh starter. In less than 18 months, over 25,000 people requested starter and began making tempeh at home. This early media coverage for tempeh was a veritable blitz for a largely unknown food, and

© Copyright Soyinfo Center 2014

most of the publications had large circulations. In addition descriptions of tempeh began to appear in popular books, such as Beatrice Hunter's *Fermented Foods and Beverages* (1973).

"The first commercial Caucasian American tempeh shop was started in the winter of 1975 by Mr. Gale Randall in Unadilla, Nebraska." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

8293. Tsujimura, Katsura. 1985. Re: Thinking about tempeh, salted koji, and natto. Letter to William Shurtleff at Soyfoods Center, June 12. 2 p. Typed, with signature. [Eng]
• ***Summary:*** He thanks Mr. and Mrs. Shurtleff for their present of the new edition of 'The Book of Tempeh,' and makes a few observations about the symposium "Non-Salted Soybean Fermentation" to be held July 15-18 at Tsukuba Science City.

He is interested in understanding the connection between the microorganisms of kinema, thua-nao, natto, and onchom merah of Indonesia (*Neurospora*).

"You have mentioned a food named 'Tou Chiah Ping (soy bean fried cake),' reported and photographed at Beijing [China] in 1931. (p. 155)" Is its Chinese characters [three handwritten characters]?

"Unfortunately you could not get new information by asking 10 Chinese. None of them knew about it. This means that the food was lost or was eaten only by lower classes.

"You have referred to the relation of tou ching ping and tempe. I also imagine tou-chiah-ping was one of the original types of the consumption of soybean-koji, before it was used for enzyme reaction, as in the case of miso production. Salted soybean koji (in Japan it is known variously as Tera-natto, Daitokuji-natto, Hama-natto or Shiokara-natto) is another type of consumption. It improves preservation and serves as an appetizer of boiled rice. From it miso and soya sauce were developed.

"At present grain-koji (made of rice or wheat) is usually used for miso and soya-sauce production. Soybean protein is hydrolyzed by grain-koji. Grain-koji itself is never eaten directly. It is also used as enzyme preparation to hydrolyze starch to make 'Amasake' or as the raw material for 'Sake' making. Whether grain-koji was eaten in ancient time or not, I have no information.

"Natto and 'Oncom merah' are unique products utilizing *Bacillus* and *Neurospora* respectively. I suppose both might developed from failed production of molding.

"There are two kinds of onchom, black onchom and red onchom; the former is made using *Rhizopus,* and is the analogue of tempeh. You have classified this as a type of tempe..."

"Natto resulted from the failure of soybean-koji production, I suppose. Natto developed in northeast Japan, where the climate was cooler than in southeast. One must maintain warm temperature to grow *Aspergillus* to get koji. So they packed the cooked soybean in the straw parcel, and this resulted in the growth of *Bacillus* instead of *Aspergillus*. The wet condition on the surface of boiled soybean may benefit to the Bacillus (unfortunately I have no experimental evidence).

"I am interested that the process of the development of natto and onchom (red onchom), which seem to be resemble each other. Sincerely yours,..." Address: Prof. of Nutrition,

8294. Torii, Yasuko. 1985. Re: New developments with soyfoods Japan. Letter to William Shurtleff at Soyfoods Center, June 13. 2 p. Handwritten.
• ***Summary:*** Discusses the Soybean Symposium in Tsukuba, The Book of Tempeh, History of Tempeh in Japan, Bruce Walker (who is doing soba research). Marusan's tempeh is not selling very well at Mitsukoshi or other department stores (more and more Japanese like instant foods). Article in Hikari. Two natural foods restaurants named Alicia and Healthy-Kan are doing lots with tempeh on their daily menus. She learned a new method for making homemade soymilk from Miyazaki Gakusha: Drop 200 gm clean whole soybeans into 400 cc boiling water. Allow to return to the boil, then boil for 4 to 4½ minutes; this inactivates lipoxygenase. Turn off the heat and add 700 cc water. Soak for 5-6 hours. Blend until smooth in a blender. Bring to a boil and simmer for 8 minutes, Strain and serve. Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

8295. Hosaka, Yaoji. Assignor to Toyu Food Co-Operative Corp. (Saitama, Japan). 1985. Process for manufacturing flavored and patterned tofu. *U.S. Patent* 4,525,373. June 25. 6 p. Application filed 1 June 1983. 11 drawings. [5 ref]
• ***Summary:*** This is an invention for "tofu steak," which is a flavored and patterned cake of tofu. It is grilled on a steel plate like beefsteak. The pattern comes from the bottom of the forming box. Address: Yashio, Japan.

8296. Takamine, Kazuhiro. 1985. Re: Thanks for new edition of book. Glad to see history of tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, June 25. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "I was delighted to hear from you and received your kind complimentary copy of new edition, *The Book of Tempeh.*

"I felt so happy to know that what I talked with you in Lafayette was introduced" in the history section of this book [p. 153-54]. That section "reminded me of the time I spent in your house and many ideas of promotion of tempeh in Japan given through Akiko-San's cooking and talks with your friends.

"I have some additional information on our tempeh factory. Torigoe started to make tempeh at new factory from July 1984. This factory has a capacity of l00 tonnes of a plain tempeh a month. Torigoe determined to build a new factory at the end of 1983 in order to meet the expectation of demand in the future. We designed the fermentation room to be controlled automatically, direct shock freezing system and also purification facility for sewerage disposal controlled under microbes and so on.

"We hope tempeh business will grow steadily year by year and your activity will spread out all over the world through tempeh.

"Please give my best regards to Akiko-San. Sincerely yours,..." Address: Torigoe Flour Milling Co., Ltd., Yoshii-machi, Fukuoka-ken 839-13, Kyushu, Japan. Phone: 094375-3121.

• ***Summary:*** Index entries include: Miso 61, Tofu 50, Tamari 19, Tempeh 17, Whole dry soybeans 6, Natto 3, Soymilk 3, Yuba 1. This book calls ganmodoki "Tofu Croquettes" and further states that "*Gan* means 'crane' and *modoki* means 'looks like.'" Among the 31 chapters are ones titled Beans (incl. basic black soybeans, and brown rice with black soybeans); Tofu, Tempeh, and Natto (including yuba); Sea Vegetables; Condiments and Garnishes (incl. miso), and Fish and Seafood.

Under "Black Soybeans" (p. 257) we read: "These nice shiny beans are also called Japanese black beans. They have a strong, delicious taste. Their juice is said to make the voice clear and beautiful. Throughout Japan, mothers prepare their children for music tests and singing lessons with this dish. Black soybeans are also used medicinally to help discharge animal toxins from the body." Note: This is the earliest macrobiotic cookbook seen that uses the term "Black soybeans" in a recipe title. All previous macrobiotic cookbooks called them "Black beans."

Contains recipes for homemade tofu, tempeh, and natto. Address: Brookline, Massachusetts.

• ***Summary:*** This ice cream is made using soymilk. Kyuto Bussan is inviting large tofu manufacturers to start producing it in Kyushu. Raw materials are provided by Showa Sangyo, equipment by Mitsubishi Juko, marketing by Kyuto Bussan.

8304. *Toyo Shinpo* (*Soyfoods News*). 1985. '85 Ajia "muen Hakko Daizu" Kaigi 7/15-16 oite Tsukuba Kenkyû Gakuen Tosh Kôryû Sentaa [1985 No-Salt Fermented Soybean Conference, July 15-16 at Tsukuba Research Center]. July 21. p. 9. [Jap; eng+]
• ***Summary:*** Representatives from 15 overseas countries attended. Natto and tempeh's "International Symposium" opens. 350 people attended; they had active discussions. Thua-nao (*chuana*) from Thailand was discussed.

8305. *Toyo Shinpo* (*Soyfoods News*). 1985. Nyûjô kyaku 5,000 nin ni apuroochi [Nearly 5,000 people attended]. July 21. p. 8. [Jap; eng+]
• ***Summary:*** About the 1985 No-Salt Fermented Soybean Conference, July 15-16 at Tsukuba Research Center. Natto products were exhibited at a vegetable protein fair. It was sponsored by the Dep. of Agriculture and Forestry (*Nôsuisho*), from Aug. 26 to Sept. 7 at their building. Vegetable protein is a basic part of our daily life. At that time the Japanese Natto Association introduced tempeh, and they took a poll of 140 people. 4.9% of women were aware of tempeh. Mr. Kanasugi introduced tempeh foods to people. Samples of tekka miso, croquettes, fried tempeh, and tempeh burger were served. People like the flavor of these.

8306. *Toyo Shinpo* (*Soyfoods News*). 1985. Tônyû dezaato shin meniyuu ni [Adding soymilk dessert to their new menu]. July 21. p. 53. [Jap; eng+]
• ***Summary:*** The famous Kyoto tofu restaurant Junsei added a soymilk dessert to their menu. There are four flavors (like a custard cup): peppermint, matcha (green tea), ao-ume (green plum), and aka-ume (red plum).

This is a sign of Junsei's internationalization.

8307. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo, Evening ed.*). 1985. "Nattô"–sekai ni shinshutsu ["Natto" is spreading out across the world]. July 24. [Jap]
• ***Summary:*** About the international symposium on non-salted fermented soybean foods held in Tsukuba, Japan. Discusses tempeh as well as natto. Photos show: (1) A man making tempeh in Indonesia. (2) A Japanese woman holding a plate of tempeh snacks. Address: Japan.

Irimamé (dry-roasted soybeans): The earliest document

© Copyright Soyinfo Center 2014

seen by the authors that mentions *irimame* is the *Shin Saru Gakki* [New and Funny Lewd Stories], a book published in Japan during the Heian period in about A.D. 1058-1065. *Sarugaku* (*Saru* means "monkey") is a kind of comedy containing some obscene stories that make it especially entertaining; *Sarugaku Kyôgen* is a comedy within a Noh play. It is found in the collected works titled *Gunsho Ruiju no Sarugakki* which states (volume 136, p. 344) "Sakana wa Irimame," which means that irimame is used as a food to serve with saké (*o-tsumami*). The story is about a woman who loved saké.

The second earliest document seen that mentioned *irimame* is the *Sezoku Ritsu Yoshu* published in the *Gunsho Ruiji* (p. 762) during the Kamakura period (1185-1333). Address: 1. Nôgaku Hakase, Shusai, Ryori Genten Kenkyukai; 2. Daizu Geppo Staff.

8312. Kawakami, Kozo; Kimura, Eiichi. 1985. Daizu ryôri kotoba no rekishi: Edamamé [History of soyfoods terminology in Japan: Edamamé (Document part)]. *Daizu Geppo* (*Soybean Monthly News*). July. p. 34-39. [2 ref. Jap]
• ***Summary:*** A full-page table (p. 39) lists all of the major Japanese soyfoods and gives a citation for each of their early names.

Edamamé: The term *Edamamé* is unexpectedly old, dating from at least the Kamakura period (1185-1333). The oldest document seen by the authors is a letter written in the year 1275 by Saint Nichiren (*Nichiren Shônin*). At the time he was living at Mount Minobu (*Minobu-san;* the headquarters of the Nichiren sect). He received many gifts from his followers or devotees. He wrote down the name of each gift and the amount given, the sent a very courteous thank you letter to each of the gift givers. These letters are published in a book titled *Nichiren Shonin Gosho Zenshu* (*The Collected Writings of Saint Nichiren*). In the letter dated 26 July 1275 he wrote to a Mr. Takahashi: "Thank you for the edamamé." This book of Nichren's writings is very hard to find. It might be available from the Sokagakkai. Address: 1. Nôgaku Hakase, Shusai, Ryori Genten Kenkyukai; 2. Daizu Geppo Staff.

8313. Kawakami, Kozo; Kimura, Eiichi. 1985. Daizu ryôri kotoba no rekishi [History of soyfoods terminology in Japan: Tera natto / shiokara natto (fermented black soybeans) (Document part)]. *Daizu Geppo* (*Soybean Monthly News*). July. p. 34-39. [2 ref. Jap]
• ***Summary:*** A full-page table (p. 39) lists all of the major Japanese soyfoods and gives a citation for each of their early names.

Tera Natto: The term *shiokara natto* ("salty natto") appears in the work titled *Gunsho Ruiju* (*Katsuji-hon,* page 344, lower section, line 5). The authors think that this is the earliest document seen that mentions *tera natto* or non-stringy natto [fermented black soybeans]. But after that time, the same food appears to be called *ko no daizu* or *kaori no daizu* ("fragrant soybeans"), and that term first appeared in the *Hôchô Kikigaki,* a cookbook that was published about 1560-1580 and that is part of the *Gunsho Ruiju* (*Katsuji-hon,* page 800, upper section, line 6). The term *ko no daizu* or *kaori no daizu* also appeared in the *Sotan Chakai Kondate Nikki* (*Master Sotan's Tea Ceremony Cookery Menu Diary*), in the morning menu for 19 March 1588. Address: 1. Nôgaku Hakase, Shusai, Ryori Genten Kenkyukai; 2. Daizu Geppo Staff.

8314. Kawakami, Kozo; Kimura, Eiichi. 1985. Daizu ryôri kotoba no rekishi [History of soyfoods terminology in Japan: Itohiki natto (stringy natto) (Document part)]. *Daizu Geppo* (*Soybean Monthly News*). July. p. 34-39. [2 ref. Jap]
• ***Summary:*** A full-page table (p. 39) lists all of the major Japanese soyfoods and gives a citation for each of their early names.

Itohiki natto: What we now call natto (*itohiki-natto*) was written as *itohiki daizu* ("string-pulling soybeans") in the old days. It was written like that in the entry for 19 Dec. 1405 in the *Noritoki-kyo ki* (*Diary of Noritoki Fujiwara*), which is the earliest document seen that mentions natto. The author's name was FUJIWARA Noritoki, but he was usually called Yamashina Noritoki because this nobleman's family, which lived on land they owned in Yamashina near Kyoto, kept their diary for five generations. This Yamashina family was in charge of the supplies department for the Imperial Court (*Chotei*), and all supplies that went to the Court had to pass through this family, which recorded them in detail. Another diary was kept by the family's manager (*banto*), and it is even more detailed, containing all of the prices of the goods ordered, and including wages paid to laborers, carpenters, etc. Therefore it is also a very useful book. In those days people used natto in natto soup (*natto-jiru*), which was quite popular. The earliest document seen that mentions *natto-jiru* is the *Matsuya Hisamasa Chakai-ki* (*Diary of the Hisamasa Matsuya Tea Ceremony Group*); *natto-jiru* was mentioned in the entry for 5 Sept. 1561. Mr. Matsuya was a rich merchant in the Nara area. His family kept their diary for three generations. Address: 1. Nôgaku Hakase, Shusai, Ryori Genten Kenkyukai; 2. Daizu Geppo Staff.

8315. Kawakami, Kozo; Kimura, Eiichi. 1985. Daizu ryôri kotoba no rekishi: Mamenoko and kinako [History of soyfoods terminology in Japan: Roasted whole soy flour (Document part)]. *Daizu Geppo* (*Soybean Monthly News*). July. p. 34-39. [2 ref. Jap]
• ***Summary:*** A full-page table (p. 39) lists all of the major Japanese soyfoods and gives a citation for each of their early names.

Mamenoko appears in the *Onna no shitsukegaki* (ca. 1540). Mameno ko appears again in the *Tamon-in Nikki* (menu of 1 Jan. 1542). Kinako appears in the *Sotan Chakai*

Kondate Nikki (19 June 1587, morning menu).

Each of these works is cited previously and more details are given there. Address: 1. Nôgaku Hakase, Shusai, Ryori Genten Kenkyukai; 2. Daizu Geppo Staff.

8316. **Product Name:** [Soyette (Soy Ice Cream)].
Foreign Name: Daizuetto Aisukuriimu.
Manufacturer's Name: KBL-sha.
Manufacturer's Address: Main office: Tokyo, Japan.
Date of Introduction: 1985 July.
Ingredients: Incl. Soy protein, safflower oil.
How Stored: Frozen.
New Product–Documentation: Yukan Yomiuri Shinbun. 1985. July 26. This all vegetable product has half the calories of regular ice cream and almost twice as much calcium. In Japanese, "Daizu" means soybean. No address for the manufacturer is given. See also EMUL (1987).

8317. Shurtleff, William. 1985. Re: Computerizing card catalog. Thank you for tempeh materials. Letter to Yasuko Torii, Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan, Aug. 1. 1 p. Typed, without signature (carbon copy).
• ***Summary:*** "Dear Torii-san. We are right in the middle of computerizing our Soyfoods Center library card catalog. Already this summer we have keyed in 7,000 cards into the computer. A very talented Stanford student is doing the actual data entry and I am preparing and then proofing every card as it is printed out. It keeps me working 12 hours a day, 7 days a week just to keep up with him. So, this will have to be brief.

"Above all I want to thank you for all of the wonderful things that you have sent me, the letters about the conference, the symposium brochures, the clippings, and your good letters. They are very, very interesting to me. I also look forward to hearing whatever tapes you send. I'll return the *Tofuyo* [Okinawan fermented tofu] video cassette and the tapes to you by the end of September, and write more at that time when I'm a little more free. I'm also sending you $20 to (hopefully) cover expenses (postage, etc.).* You are such a *kichinto-shita hito!* [accurate, precise, punctual, neat and tidy person]. Both Akiko and I greatly appreciate this! Sincerely,...

"* To make it as easy as possible for you (though it doesn't seem as much like a real gift or money), we are deducting the $20 from your invoice. Akiko said if we sent you a $20 bill it would at be *mendokusai* [a nuisance] to go to the bank to cash it. I hope that's okay." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

• ***Summary:*** Prof. Kazuo Murakami and Prof. Isao Kusakabe have found two special enzymes that works well in coagulating soymilk. Both have a molecular weight of about 24,000 and are proteins. The enzymes were found in soil bacteria on a small island near Shikoku. If you add this enzyme to soymilk heated to 70ºC, it coagulates into a yogurt-like product in about 2 minutes. This yogurt-like curd is mostly protein, does not have any sourness or bitterness, and has a smooth texture and mouthfeel–all of which make it well suited for use as a raw material in food manufacturing. The researchers hope to use the curds to make a fermented non-dairy soy cheese by removing excess water from the curd, adding lactic acid and salt, then letting it ferment.
Address: Tsukuba Univ., Japan.

200 ml) and 25% more protein (8 gm per 200 ml) that Mitsubishi's former Mapuron product. And it is specially processed to remove the beany flavor.

8325. Johnson, Dale. 1985. Statistics on production and prices of soy protein products (Interview). *SoyaScan Notes.* Aug. 27. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.

• ***Summary:*** Dale has just contacted industry experts and compiled the following figures. Estimates of soy protein production and wholesale prices: Defatted soy flour and grits: 150,000 tonnes (metric tons) = 330 million lb at 18-20 cents/kg = 8.2-9.1 cents/lb. Soy protein concentrates: 50,000 tonnes (metric tons) = 110 million lb at 77-132 cents/kg = 35-60 cents/lb. Soy protein isolates: 70,000 tonnes (metric tons) = 154 million lb at 220-243 cents/kg = 100-110 cents/lb. Textured soy flours + concentrates: 75,000 tonnes (metric tons) = 165 million lb. Textured soy flours sell for at 55-66 cents/kg = 25-30 cents/lb. Textured soy protein concentrates sell for at 154-176 cents/kg = 70-80 cents/lb. Spun soy protein fibers (Ralston Purina isolate product) sell for at 330 cents/kg = 150 cents/lb. Soy protein hydrolysates (Gunther product) sell for at 550-600 cents/kg = 250-273 cents/lb.

Exports (U.S. Dept. of Commerce data, 1984): Vegetable flours and grits, defatted: 7,170 tonnes. Vegetable flours and grits, not defatted: 197 tonnes. Concentrates, hydrolysates, textured and spun fibers: 9,545 tonnes. Isolates: 2,300 tonnes.

Johnson will be in Japan to address the Japanese Vegetable Protein Food Association at the end of September. His trip is sponsored by Miss Kojima and American Soybean Association. Address: Food Ingredients (Minnesota), Inc., 2121 Toledo Ave. North, Golden Valley, Minnesota 55422.

Address: Higashi-Osaka, Japan.

8327. Hesseltine, C.W. 1985. Fungi, people, and soybeans. *Mycologia* 77(4):505-25. July/Aug. [92 ref]

• ***Summary:*** In this Mycological Society of America Annual Lecture, presented on 7 Aug. 1984 at Colorado State University (Fort Collins, Colorado), Dr. Hesseltine gives a nice history of the research conducted by him and others at the Northern Regional Research Center (NRRC) on Asian soybean fermentations, including fermented tofu (Frank Meyer, early USDA plant explorer, in a letter dated 21 Nov. 1916, states: "Parcel No. 125c contains first quality Chinese soybean cheese: please taste a little on the point of a knife; it is extremely appetizing."), sufu, shoyu, miso, tempeh, Chinese black beans (fermented black soybeans), natto, and "the use of lactic acid bacteria to produce a yogurt product from soybeans." He also studied non-fermented tofu.

Dr. Hesseltine pays a nice tribute to the work of Dr. A.K. Smith of the NRRC (p. 506-07). After his trip to East Asia shortly after World War II, Dr. Smith (a protein chemist) made great efforts to promote cooperation between the USDA, particularly the NRRC, and Japan in conducting research to understand how our exported soybeans were used for food. He had the foresight to recognize the importance of studying soybeans used in such huge quantities for processing into human food. Dr. Smith was instrumental in arranging for two Japanese scientists (Dr. Tokuji Watanabe and Dr. Kazuo Shibasaki) to come to the NRRC to do research on tofu and miso. "This really began a new era of research on use of Oriental methods to produce foods from soybeans" (p. 507).

"My first real involvement in fermentation of soybeans was the arrival [in Oct. 1958] of Professor K. Shibasaki of Tohoku University to study the miso fermentation. He was sponsored by the American Soybean Association and USDA's Foreign Agricultural Service. When he arrived, I was told that since I was curator of the mold collection and since the *Aspergillus oryzae* strains used in the miso process were in my charge, I would be the person he would work with. I had no background and no interest in soybean fermentations, but this was a fortuitous happening because it acquainted me with Oriental food fermentations. All my background was in conventional liquid agitated pure culture fermentation. The miso fermentation introduced me to two new concepts in fermentation: (1) solid state fermentation, and (2) use of mixed pure culture inoculum" (p. 510).

"Probably my interest in fermented foods would have abated had it not been for the acceptance of Mr. Ko Swan Djien of Indonesia, who came to us in 1960 for practical training. In my first discussion with him, we talked about the kind of work he would do. Since I knew that a fermentation was conducted in Indonesia using soybeans and reportedly the fermentation organism was a species of *Rhizopus,* I asked him if he was familiar with the product; his answer was yes, that he often ate it, but he knew nothing about how the fermentation was conducted. It was decided that during his 6 months at Peoria this might be an interesting subject to study, especially since he could obtain samples of the tempeh cake from his wife, who was in Java and could tell good tempeh from bad. Dried samples were quickly obtained; from these cakes, four species of *Rhizopus* were isolated" (p. 514-15). Eventually many strains of *Rhizopus* were isolated and investigations showed that *Rhizopus oligosporus* strain NRRL 2710 produced especially good tempeh.

Photos show four famous Japanese scientists who studied fermented foods: (1) Prof. Teizo Takahashi. (2) Ryoji Nakazawa. (3) Kin-ichiro Sakaguchi. (4) Kendo Saito.

Address: NRRC, ARS/USDA, Peoria, Illinois.

• ***Summary:*** Includes a discussion (p. 141) of traditional Chinese cold-extraction of soymilk and more modern hot-extraction methods. In cold extraction, the mixture of ground soybeans and water (slurry) is poured into a filter sack, which is pressed in order to extract the cold soymilk. The okara remaining in the sack is often washed with water then pressed again to give a second extraction of soymilk. The two extractions of soymilk are mixed, then cooked in a caldron.

In hot extraction, the slurry is first cooked, then run into a filter sack, which is pressed to extract the hot soymilk. The okara in the sack is usually discarded. Hot extraction takes less time, probably gives soymilk with a less beany flavor (since the lipoxygenase enzymes are inactivated during cooking), and may give a slightly higher yield of soymilk. However the cold extraction probably uses less fuel to heat the soymilk.

• ***Summary:*** One American who thought he could eat anything was not prepared for "his confrontation with *natto*. That fermented soybean product proved to be 'gooey and flesh-colored.' It 'sort of smelled like peanut butter that had been out in the sun for a month.' The appearance was vile, 'just the sort of stuff you imagine when you hear the word "ooze."'

"Worst of all was the taste. The American struggled, vainly, to swallow." Veteran expatriates and Japanese proclaim with near unanimity: "Foreigners can't stand natto.

"Japanese await with smiling anticipation the horrified reaction of a foreigner trying natto for the first time, starting with the first whiff, and then the daunting sight of the whitish, cobweb-like trails that the sticky beans form between bowl and chopsticks."

But now ethnologist Shuji Yoshida of Osaka's national museum has developed a "natto triangle" theory, which says that similar fermented soybean products are eaten inside a triangle having as its corners Japan, Indonesia, and the India-Burma border. *Pe-bout* is eaten in the Shan states of Burma, *akuni* in India's Nagaland, and *kinema* in Eastern Nepal. He theorizes that all of these products trace their roots to a fermented soybean product developed in southern China in ancient times. The folk history of natto in Japan is then discussed.

Note 1. This is the earliest document seen (Dec. 2012) that mentions "akuni," a close relative of Nepalese kinema and Japanese natto.

Note 2. This is the earliest document seen (Jan. 2012) that mentions "Pe-bout" and says that in the Shan states of Burma it is the name for a local food which is a close relative of Japanese natto. The source of his information is Japanese ethnologist Shuji Yoshida.

8338. Puzo, Daniel P. 1985. Food briefs: Getting cotton in. *Los Angeles Times*. Sept. 26. p. H26.
• ***Summary:*** California glandless cottonseed is in demand in Japan "because Japanese researchers are using the unusual ingredient in food products. The work centers on the creation of a cottonseed ice cream, a chocolate and *natto*, a traditional Japanese food, according to *California Farmer* magazine."
Address: Times staff writer.

8339. *Florida Grocer* (*Miami, Florida*). 1985. Morinaga Tofu for U.S. market. Sept. Also in: Food Distributors Magazine (Sept.). Economic World (NY, Nov.).
• ***Summary:*** A photo shows a package of "Mori-Nu Fresh Regular Tofu."

"Morinaga Milk Industry Co., Japan's leading manufacturer of dairy products, has announced the creation of a U.S. subsidiary, Morinaga Nutritional Foods. The new company, headquartered in Los Angeles, will market Mori-Nu brand tofu in the United States."

"Unlike other tofu, Mori-Nu is manufactured by a patented process which assures freshness and long shelf life without the use of preservatives, the parent company says."

"Because Mori-Nu Tofu is actually made inside its hermetically-sealed aseptic package, no hands come in contact with the product. This exclusive packaging process permits the company to offer an unqualified guarantee of freshness to the consumer, Morinaga reports."

"Morinaga plans to introduce a 'regular' firmer style tofu to supplement the Soft Tofu which is currently being sold in limited areas."

"With worldwide sales of $1,300 million, Morinaga today markets tofu in more than 30 countries. The company's move into the U.S. coincides with expanding consumer interest in diet and health, according to Morinaga president, Akira Ohno. 'Our research tells us that there is an increasing trend towards health foods in general and a growing need for non-cholesterol products among U.S. consumers.' Mr. Ohno stated."

"The company's initial sales efforts will be directed to selected markets, beginning with Los Angeles and other West Cost cities, then expanding nationwide. Sales for the U.S. are

© Copyright Soyinfo Center 2014

projected at seven million packages in the first year."

"Morinaga sees the launching of Mori-Nu as the beginning of a "long-term involvement" in the U.S."

8340. Fruin, W. Mark. 1985. Soy sauce from A to Z: The beginning and the end of shoyu? *Japan Society Newsletter.* Aug/Sept. p. 5-7.
Address: Prof. of History, California State Univ., Hayward.

8341. Johnson, L.A. 1985. Soy protein: Chemistry, processing and food applications. Presented at the 70th Annual Meeting of the American Assoc. of Cereal Chemists. Held Sept. 22-26, 1985 in Orlando, Florida. *
• ***Summary:*** It is estimated that in the U.S. only about 2.1% of the average daily intake of protein comes from soy, compared to about 13% for the Japanese.

8342. Kikkoman International Inc. 1985. Teriyaki anytime. In almost no time. Kikkoman Teriyaki Baste and Glaze (Ad). *New Age Journal* (*Boston, Massachusetts*). Sept. p. 71.
• ***Summary:*** At the bottom of this full-page color ad is a brush next to a bottle of Kikkoman Teriyaki Baste & Glaze. Above it are four horizontal rows of cooked foods: Steak, fish, meat loaf, and chicken legs.

8343. Kotzsch, Ronald E. 1985. Macrobiotics: Yesterday and today. Tokyo and New York: Japan Publications Inc. 292 p. Sept. Illust. Index. 26 cm. [144* ref]
• ***Summary:*** The best and most objective book available to date (April 2011) on the origins and history of macrobiotics, worldwide. Includes detailed information on central ideas and practices of macrobiotics, its leaders, organizations, applications, and aspirations. Carefully researched and well written.

Contents: 1. Ekken Kaibara: The grandfather of macrobiotics. 2. Sagen Ishizuka: The founder of modern macrobiotics. 3. George Ohsawa: The early years (1893-1929; Yukikazu Sakurazawa, later known as George Ohsawa was born on 18 Oct. 1893 in a western suburb of Kyoto, Japan, the family's eldest child). 4. George Ohsawa: The first sojourn in the west (1929-1936). 5. George Ohsawa: Return to Japan in crisis (1936-1939).

Photographic interlude for *Macrobiotics Yesterday.* Illustration (line drawing) of Ekken Kaibara. Photos of Ishizuka, Nishibata, Ohsawa's parents, George Ohsawa (many from 1901-1966). 6. George Ohsawa: The war years (1940-1945). 7. George Ohsawa: Hope for a new Japan and a new world (1945-1953). 8. George Ohsawa: The world journey of the penniless samurai (1953-1966; George and Lima visited India [Nov. 1953-July 1955]; Africa [Aug. 1955-Feb. 1956, incl. Kenya, and 3½ months with Albert Schweitzer at Lambarene, Gabon]; Paris, France and Brussels, Belgium; New York City, USA [late 1959-Oct. 1961]; France [around 1961 he met Louis Kervran]; Tokyo [most of 1963-64]; Vietnam 1965; Tokyo, where he died on 23 April 1966 [24 April Japan time], probably of filarial parasites contracted in Lambarene, and smoking). 9. George Ohsawa: The man and the legacy. 10. After the master: Part one: America.

Photographic interlude for *Macrobiotics Today.* Photos are given of Toshi Kawaguchi, Michi Ogawa, Hiroshi Maruyama, Kaoru Yoshimi, Francoise Riviere, Cecile Levin, Dr. Kikuo Chishima, Dr. Moriyasu Ushio, Michio and Aveline Kushi, Herman and Cornellia Aihara, the Kushis, Aiharas, and Shizuko Yamamoto, William Dufty, Bill Tara, Aveline Kushi and Wendy Esko, Alex Jack, Dr. Marc van Cauwenberghe, Edward Esko, Murray Snyder, Noboru Muramoto, Jacques and Yvette de Langre [DeLangre], Jerome Carty, Duncan Sim, Lima Ohsawa, Shuzo Okada, Hideo Ohmori, First European Congress of Macrobiotics in London, Nov. 1978, Lenk summer camp, Switzerland, July 1984, Jan Lansloot, Peter Doggen, Rik Vermuyten, Georges Van Wesenbeeck, Roland Keijser, Mayli Lao Shun, Tomio Kikuchi (in Brazil).

11. After the master: Part two: Japan. 12. After the master: Part three: Europe and elsewhere. 13. The gospel according to Kushi. 14. Macrobiotics in western culture. 15. Prospects for the future. Bibliography.

The author, an excellent historian and writer, with a delightful sense of humor and light touch, began his study and practice of macrobiotics under Michio Kushi in Boston in Jan. 1967. A photo of Ronald E. Kotzsch appears on the rear cover. This book is based on his doctoral dissertation titled "Georges Ohsawa and the Japanese Religious Tradition," submitted on 1 April 1981 for a PhD degree in History of Religions from Harvard University. Pages 185-86 discuss briefly the role of the macrobiotic movement in introducing soyfoods (especially miso, shoyu, and tofu) and natural foods to America. Address: PhD, Hanover, New Hampshire; The New North Church, Hingham, Massachusetts (18 Mar 1985).

8344. Kotzsch, Ronald E. 1985. The Morinaga Incident (Document part). In: R.E. Kotzsch. 1985. Macrobiotics: Yesterday and Today. Tokyo and New York: Japan Publications Inc. 292 p. See p. 213. 26 cm. [144* ref]
• ***Summary:*** "In 1953 Japan was shocked by the 'Morinaga Incident.' The Morinaga Milk Company was using arsenic in the production of dried milk, and a batch became lethally contaminated. One hundred and eighty-six infants died of poisoning. A furor arose and the company passed the incident off as a freak occurrence. [George] Ohsawa contacted his long time associate, Keishi Amano, a biologist then working in the research laboratory of the National Fisheries Ministry. He urged Amano to write a book exposing the company and the dangers inherent in its processing techniques. The scientist did so and later published other books on the dangers of food processing and of chemical additives."

Address: The New North Church, Hingham, Massachusetts (18 Mar 1985).

8345. Kotzsch, Ronald E. 1985. Noboru Muramoto (Document part). In: R.E. Kotzsch. 1985. Macrobiotics: Yesterday and Today. Tokyo and New York: Japan Publications Inc. 292 p. See p. 180-1, 187. 26 cm. [1 ref]
• ***Summary:*** Noboru Muramoto, who has helped to promote macrobiotics on the West Coast of the USA, arrived in California in 1971. An associate of George Ohsawa from Japan and an expert on medicinal herbs, his popular book titled *Healing Ourselves* was published in 1973 by Michel Abehsera's Swan House Press; it introduced many therapeutic uses of food. A student of traditional Japanese food production, Muramoto now lives in southern California, where he produces high quality sea salt, miso, umeboshi, and plum vinegar. Address: The New North Church, Hingham, Massachusetts (18 Mar 1985).

8346. Lippert/Whitehead Inc. 1985. Tofu Time Inc. enters into agreement with largest Japanese retailer [Daiei, Inc.] (News release). 136 East 57th St., New York, NY 10022. 2 p. Sept.
• ***Summary:*** The initial order for export to Japan is for $350,000. Daiei also plans to open three Tofutti Shops in Tokyo within the next 6 months. Daiei owns over 300 ice cream shops. Address: New York. Phone: 212-838-3777.

8347. **Product Name:** [Big Dream Time Powdered Tempeh].
Foreign Name: Taimu Taimu.
Manufacturer's Name: Nakasho Bussan.
Manufacturer's Address: Japan.
Date of Introduction: 1985 September.
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Toyo Shinpo (Soyfoods News). 1985. Sept. 21. p. 8. "New tempeh product announced. Nakasho Bussan to sell it [powdered tempeh]." This new product called Taimu Taimu (Time + Big Dream) was developed by the Japan Natto Assoc. It is their first commercial product. A 450 gm (1 lb) bottle sells for 6,000 yen ($26.67). Use it in miso soup, milk, juices or just mix with hot or cold water.

8348. Tani, Tadato; Katsuki, T.; Kubo, M.; Arichi, S.; Kitagawa, I. 1985. Histochemistry. V. Soyasaponins in soybean. *Chemical and Pharmaceutical Bulletin* 33(9):3829-33. Sept. [12 ref]
• ***Summary:*** Using high-performance liquid chromatography, the authors conducted histochemical analysis to clarify the distribution of "soyasaponins, which are the bioactive constituents of the seeds" of the soybean. Soyasaponin I [later named Saponin A] was found to reside mainly in the plumule, hypocotyl, and radicle of the soybean seed. Note: Saponins, especially soyasaponin I, are responsible for the bitter taste of soymilk. Address: 1-4. The Research Inst. of Oriental Medicine, Kinki Univ.

8349. Tani, Tadato; Katsuki, T.; Kubo, M.; Arichi, S.; Kitagawa, I. 1985. Histochemistry. VI. Tocopherols and isoflavones in soybeans (*Glycine max* Merrill, seeds). *Chemical and Pharmaceutical Bulletin* 33(9):3834-37. Sept. [5 ref]
• ***Summary:*** Tocopherols and isoflavones are bioactive substances. A high concentration of tocopherols was found in the soybean cotyledon, while isoflavones (including daidzin, genistin, and daidzein) were localized mainly in the plumule, hypocotyl, and radicle, which subsequently grow to form the adult plant. Address: 1-4. The Research Inst. of Oriental Medicine, Kinki Univ.

8350. Torii, Yasuko. 1985. Book review: *The Book of Tempeh,* 2nd ed. Revised & updated, by W. Shurtleff & A. Aoyagi. *Hikari.* Aug/Sept. p. 46. [1 ref. Eng]
• ***Summary:*** A substantial, positive review, showing the cover of the book and one recipe. In a box below the review we read:

"Several natural food restaurants in the Tokyo area offer tempeh on their menus. Among them are Healthy Kan (see this month's restaurant review); Alicia, at Daini Suzuki Biru, Kitazawa 2-9-23, Setagaya Ku, tel. 03-485-3681; and Mamenoko at 2-24 Nakamachi, Omiya Shi, Saitama Ken, tel. 0486-44-1323.

"Prepared tempeh is sold at the Aoyama and Kichijoji Natural Houses, and Nihonbashi Mitsukoshi Dept. Store, frozen foods section.

"*The Book of Tempeh* and Tempeh starter is available from Y. Torii, who can answer any questions on availability or manufacture of tempeh. Call her at 0467-76-0811, or contact her at 324 Kamitsu- chidana Ayase, Kanagawa 252."

Note: On page 41 is a review of Healthy-Kan (*Herushi-kan*) natural foods, which was started in Nov. 1984 by Ikuyo Imuta, who says her mother was an excellent cook. "She chose to include tempeh on her menu not only because of its nutritional qualities, but because it's such a versatile protein source which can be used to make anything from cake to curry." Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

8351. *Daily Leader* (*Stuttgart, Arkansas*). 1985. Teamwork: Researchers, marketers join forces to make Hartz efforts successful. Oct. 2. p. 4C. Insert.
• ***Summary:*** Genetic research and development of plant varieties today requires teamwork. Dan Lamberth, chief operating officer, says that Hartz is involved in a never-ending quest for excellence. The Plant Variety Protection Act of 1971, which protects a breeder's patent on a new variety for 17 years, set the stage for Hartz's current efforts. Until

© Copyright Soyinfo Center 2014

then, a plant breeder had no protection for his work and there was little incentive for private industry to develop research programs. Most plant breeding was done by state and federal government programs.

Since 1971 Hartz has developed nine varieties. "The main emphasis of Hartz Seed Company has been and remains the Southern soybean market... Hartz has also developed a program of food bean production for the Far East, which is an important, but not dominating, percentage of its business. Hartz 936X soybeans, grown in the United States and shipped to Japan and Korea, have been subject to substantial increases in sales during the past six to seven years... Hartz 936X soybeans have captured the best-quality, higher-priced natto market." Hartz is also involved in both farm management and real estate. A photo shows Dan Lamberth seated at his desk.

8352. *Wall Street Journal.* 1985. U.S. company to export tofu dessert to Japan. Oct. 3. p. 34.
• ***Summary:*** "Tofu Time Inc. of Rahway, New Jersey, has agreed to supply Japan's largest retailer, Daiei Inc., with Tofutti, a non-dairy, ice cream-like dessert made from tofu, or bean curd.

"Daiei initially will distribute Tofutti through its existing food-service outlets, but has agreed to open three Tofutti Shops in Tokyo over the next six months. If it catches on, Daiei may begin producing Tofutti in Japan and expand the chain of shops."

This story also ran in Asian Wall Street Journal (Hong Kong). Oct. 4.

8353. S&S Public Relations, Inc. 1985. Miso–Japan's 1,000 year old health and flavor secret now in America (News release). 40 Skokie Blvd., Suite 430, Northbrook, IL 60062. 3 p. + photo. Oct. 6.
• ***Summary:*** About miso, American Natural Foods, and their new line of four products. A black-and-white photo shows a bottle of The Works. An attachment, titled "Cooking with miso–General principles," was developed by Just In Foods [American Miso Co.] in 1984. Note: This news release generated widespread publicity for ANF. Address: Northbrook, Illinois. Phone: 312/291-1616.

8354. Jenkins, Nancy Harmon. 1985. Food notes: A fashion for Japan [Japanese order $350,000 of Tofutti]. *New York Times.* Oct. 9. p. C9.
• ***Summary:*** Taking tofu to Japan is like carrying coals to Newcastle. "The first order is for $350,000 worth of such flavors as vanilla, chocolate, banana pecan, and vanilla almond bark, to be distributed through Daiei, a large retailer."

8355. Yasuda, Masaaki. 1985. Re: Tofuyo, Okinawan fermented tofu. Letter to William Shurtleff at Soyfoods Center, Oct. 9–in reply to inquiry of Sept. 15. 1 p. Typed, with signature on letterhead. [4 ref. Eng]
• ***Summary:*** "I want to help you on this subject heartily. I will answer your questions and send you some good documents."

The earliest written document that I know of is "Gyozen Honso" (1832) by Tsukan Tokashiki Peichin (Tsukan is his given name. Tokashiki is his family name. Peichin is his title, meaning a high-ranking officer).

There are some companies making Tofu-yo in Okinawa. I do not know how many kilograms they make each year because such statistics are not included in *Kogyo Tokei Hyo* (statistics) in Okinawa-ken. Address: PhD, Assoc. Prof. of Agricultural Chemistry, Dep. of Agricultural Chemistry, Univ. of the Ryukyus, 1 Senbaru, Nishihara-cho, Okinawa 903-01, Japan. Phone: 09889-2221.

8356. *Toyo Shinpo* (*Soyfoods News*). 1985. Nattô no peeji: Tenpe no jidai. Tenpe wa ayumi chakujitsu-ni [The natto page: The age of tempeh. Tempeh makes progress very steadily]. Oct. 21. p. 6. [Jap; eng+]
• ***Summary:*** An interview with Goro Kanasugi about tempeh and the Japanese Natto Association. Small photos show: (1) Portrait photo of Mr. Kanasugi. (2) Pieces of tempeh.

8357. Belleme, John. 1985. Shedding light on the miso story. *MacroMuse.* Autumn. p. 29-31.
• ***Summary:*** A discussion of what factors influence the taste, medicinal qualities, and nutritional value of different types of miso. By far the most important influences on all three are the manufacturing methods and the quality of the ingredients. Basically there are three methods of making miso. In descending order of quality they are: traditionally made, naturally aged, and temperature controlled. The author estimates that less than 1% of Japanese miso is traditionally made–that is, using handmade koji in a unheated koji room. "In this uniquely constructed room, heat and humidity naturally generated by the fermenting grain are carefully monitored for 48 hours until the mature koji, covered with a fluffy, white, glistening mycelium, is sweet and loaded with powerful enzymes." Making koji in this way is a labor-intensive process requiring much skill and stamina.

The second type of miso, "naturally aged," is actually commercial miso that was especially developed for the American natural foods market. The process is usually automated and every effort is made to keep out wild microorganisms. The soybeans are rapidly cooked and cooled, while the koji is made automatically in large, stainless steel rooms. Hand labor is kept to a minimum to reduce costs and the need for experienced workers. The finished miso has a "uniform taste, color, and texture and is usually sold pasteurized in one-pound plastic bags which need no refrigeration."

The lowest quality miso, temperature controlled

© Copyright Soyinfo Center 2014

commercial miso, accounts for 99% of the miso made in Japan.

With few exceptions, miso can be divided into two large groups based on color and taste. Sweet miso is usually light in color, while salty miso is usually dark in color. "When considering miso quality, some macrobiotic teachers insist on using miso aged at least two years. Miso aged less than this is considered 'unnatural.'" But the author believes that people who say this are unknowingly comparing temperature controlled to naturally aged miso, for "there is no evidence, either traditional or scientific, that sweet, light miso is inferior to dark, salty miso. In fact, miso that is aged too long, regardless of the type, rapidly deteriorates in taste, color, aroma, enzymatic activity, and nutritional value."

"My point is simple: what actually determines the color, taste, and overall quality of miso is not aging but proper aging. And what determines proper aging is recipe and climate." Each type of miso has its own use. "While dark, long-aged miso is excellent for hearty winter cooking, sweet light miso is great in summer soups, dips, sauces, and salad dressings." In short: "When choosing miso, look for organic, traditionally made, unpasteurized miso."

Photos show: (1) Jan Belleme (with baby Justin on her back) and Bob Zullo inoculate steamed barley with *Aspergillus* mold to make barley koji at the American Miso Co. (2) Jan checks the finished barley koji in wooden trays. (3) Bob Zullo prepares to empty 8,000 lb of two-year barley miso from a large wooden vat.

"John Belleme lives with his wife Jan in Rutherfordton, North Carolina, where they have been involved with the American Miso Company." He is president of Just In Foods, producer of miso products. Address: Rutherfordton, North Carolina.

8358. Fuke, Yoko; Sekiguchi, M.; Matsuoka, Hiroatsu. 1985. Nature of stem bromelain treatments on the aggregation and gelation of soybean proteins. *J. of Food Science* 50(5):1283-1288. Sept/Oct. [19 ref]
• ***Summary:*** It is well known that proteolytic enzymes such as chymosin, pepsin, papain, ficin, bromelain, and several proteases produced by microorganisms are able to coagulate cow's milk, and some are widely used in making dairy cheese. Researchers have found that some plant proteolytic enzymes, such as ficin and stem bromelain, can coagulate soymilk. Address: Dep. of Food and Nutrition, Lab. of Food Chemistry, Tachikawa College of Tokyo, Akishima, Tokyo 196, Japan.

Address: Lab. of Nutrition Chemistry, Kyushu Univ. School of Agriculture 46-09, Fukuoka 812, Japan.

8367. *Toyo Shinpo* (*Soyfoods News*). 1985. Jûnigatsu kara tôfu aisu o yunyû. Daiei kei kigyô [Daiei Group's Captain Cook to import tofu ice cream starting in December]. Nov. 1. p. 1. [Jap; eng+]
• ***Summary:*** Daiei in Japan has decided to sell Tofutti ice cream in their 14 ice cream stores before Christmas, and they plan to open three Tofutti specialty shops in early 1986. Sixteen flavors will be available, at about 180 to 200 yen per serving.

8368. Levey, Robert. 1985. There's nothing fishy about sushi. *Boston Globe*. Nov. 7. p. 4.
• ***Summary:*** During the past few years a number of excellent Japanese restaurants have opened in the Greater Boston area. Good Japanese restaurants often have a sushi bar. Cafe Sushi, which opened in May on the outskirts of Harvard square, is the closest thing in Boston to a pure sushi restaurant.

"One night there was an appetizer of boiled "edamame," which turned out to be a bowl of whole soybeans cooked in their green skins and then salted. The vegetable looks like a lumpy peapod and you eat it by pulling the pod through your teeth to make the beans pop out. Lovely little finger food."

Note: This is the earliest article seen in the America's Newspapers database that contains the word "edamame." A surprising 2,679 articles in this database now (as of 15 June 2009) contain the word "edamame." Address: Globe staff.

Nov. [6 ref. Jap; eng]

• ***Summary:*** Tofu-gels [slices / kiji] prepared from moderately heated soybean milk, expanded about 3-fold after deep-frying in oil, but one slice made from excessively heated soymilk did not expand. The mechanism of this expansion was investigated: (1) The minimum temperature for Tofu-gel expansion was 85ºC, which is the same temperature for denaturation of 11S protein. (2) The failure of tofu slices to expand was due to the decrease of the air content of soybean milk caused by excess heating of the milk. The air in soybean milk was transferred into tofu slices; it accelerated the vaporizing and resulted in proper expansion. (3) When soybean milk was coagulated at high temperatures, less expansion of tofu slices was observed.

Nov. [14 ref. Jap; eng]

• ***Summary:*** It was found that excess heating of the soymilk used for making aburaage resulted in less expansion of the tofu slices (tofu-gels). Why? (1) The expansion of tofu slices was inhibited by blocking or oxidising reagents for SH groups in soybean proteins, whereas it was accelerated by reducing reagents for S-S bonds. These facts suggests that SH bonds play an important role in the expansion of tofu slices. (2) The tofu slices could not expand significantly when prepared from soybean protein solutions where either SH groups were oxidized into S-S bonds or S-S bonds were reduced into SH groups. However tofu slices prepared by mixing two protein solutions expanded well. This suggests that SH and S-S exchange reactions are certainly involved in the mechanism of the expansion of tofu slices into aburaage. (3) The expansion rate of tofu slices was markedly decreased by heating soybean protein solutions under the conditions where the proteins easily associated or aggregated. On the contrary, the expansion rate was rapidly increased by mercaptoethanol or high urea concentration due to protein dissociation. This suggests that the association or aggregation of proteins by excess heating may prevent tofu slices from expanding when making aburaage.

Jozo Kyokai Zasshi (*J. of the Brewing Society of Japan*) 80(11):786-89. Nov.; 80(12):838-842. Dec. [33 ref. Jap]
• ***Summary:*** In 1868, the first year of the Meiji Period, the first 153 Japanese immigrants arrived in Hawaii on board the three-masted sailing ship Scioto (Saioto-go). They brought with them miso and shoyu. During the 1880s, because of the shortage of laborers to harvest sugar cane, the governments of Japan and Hawaii signed a contract allowing Japanese to immigrate to Hawaii. The first boatload of 944 Japanese arrived on 8 Feb. 1885. These two groups and their descendants introduced sake and soyfoods to Hawaiian culture. A photo shows the "Honolulu Japanese Sake Brewing Co." in 1908.

Note: This document contains the earliest date seen for soybean products (miso and shoyu) in Hawaii (1868); soybeans as such had not yet been reported by that date. Address: Honolulu Shuzo Seihyo Gaisha.

• ***Summary:*** "Identification tests were performed on those bacteria which were isolated from Indonesian tempeh and produced more than 10 nanograms/(cells in 5 ml of culture) of vitamin B-12. Thirteen out of 33 isolates were identified as *Klebsiella pneumoniae.* Two isolates were identified as *K. pneumoniae* subspecies *ozaenae* and *Enterobacter cloacae.* Twelve isolates closely resembled either *K. terrigena* or *K. planticola.* Others included gram-positive rods (4 isolates), Gram-negative, oxidase-positive rod (1 isolate) and Gram-negative, oxidase-negative rod (1 isolate)." This work was sponsored by the Joint Japan-Indonesia Project on the Development of Tropical/Subtropical Microbial Resources, under the direction of the Science and Technology Agency of Japan and BPPT of Indonesia.

Note: A gram-positive bacterium is one that holds the purple dye when stained by Gram's stain. Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

8389. Ozora, Colleen. 1985. Of Granum and macrobiotics: A visit with Blake Rankin. *Macrobiotics Today* (*Oroville, California*). Nov. p. 3-7.
• ***Summary:*** In 1969, while a student at UCLA, Blake Rankin came in contact with Erewhon–Los Angeles. After graduation from UCLA he and several friends set up a small health food store in Victoria, BC, Canada. Then he spent 3 months in Boston living in a Kushi study house and working in an Erewhon warehouse. Back in Seattle, he worked at Spiral Foods, an offshoot of Chico-San. Shortly after that he and George Gearhart, the proprietor, closed the store and in 1972 opened a wholesale company, Janus Foods. It was successful. [Note: Miso and shoyu, imported from Japan, were among the company's best-selling products.] After 2 years Rankin left and went to Japan for 6 months, where he traveled with Mitoku and Muso. Mr. Kazama, a friend of Aveline Kushi's brother, had not been in the food business before starting Mitoku. Then he went to Nepal and India on a spiritual search. In late 1973 he returned to Seattle and worked for Janus. Then he returned to Japan where he worked for Mitoku and studied calligraphy. In Japan he met his future wife, Yoko. Returning to Seattle, Rankin started Granum in 1981 as a distributor and importer for Mitoku products from Japan. Now the import company has a small retail store and a 10,000 square foot warehouse. Expected 1985 gross is more than $500,000.

This article contains numerous photos of Blake and Yoko Rankin, and their two children. Address: GOMF, Box 426, Oroville, California 95965.

8399. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Document part IV. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]

• ***Summary:*** Continued: "In 1977, Laurie visited her home town in California. She went to visit her favorite Japanese tofu shop and ran into Bill Shurtleff and Akiko Aoyagi outside the closed shop. They were delivering a copy of their *Book of Tofu* to the owner and tofu maker of the shop. Bill took Laurie to the tofu makers' home and helped arrange for Laurie to observe in his shop for one day. Upon returning to the Farm, Laurie immediately set up the Farm's first tofu shop in a small corner of the soy dairy. She set up a very simple shop using one of their cooking kettles and designating it for cooking milk only for tofu. A wash tub was mounted on a stand with a simple lever for pressing out the milk. The tub was lined with a coarsely-woven bag, and a sawed-off whiskey barrel was placed underneath to catch the milk. A finer nylon cloth was stretched over the top to strain out the finer pulp [okara]. Hot milk was bucketed into the press, the bag twisted shut, and a heavy wooden press plate placed on top. The original wooden tofu box was finally in use as well as two additional round stainless boxes made by Michael Lovett. The tofu was pressed with cement blocks or buckets of water. Tofu was made in the whiskey barrel and a 20 gal [gallon] aluminum Hobart bread bowl. The tofu shop's capacity was 200 lb of tofu on a production day. In total, about 600 lb/wk in addition to 800 to 1000 gal/wk of soymilk. Most of the tofu went to people with special dietary needs.

"It seemed very energy inefficient to run a separate tofu and soymilk operation, so technicians started designing a separator that could service both operations. Michael Halpin, one of the Farm's equipment technicians, designed a hydraulic press which cost less than $1500 to build. This was the first large amount of money spent by the dairy for equipment. The inspiration for the money came from the delicious tofu produced in the small shop. Once everyone realized how good it was, the decision to invest community money for improved nutrition followed. The idea of the press was good, but all of the bugs were never worked out. It was supposed to require no bag. The milk was pumped into a stainless cylinder that was drilled with holes and set inside another stainless holding tank. Then with press plate and gasket, the hydraulic ram came down from above, squeezing out the milk. When pressed, there was a trap door at the bottom that was opened, and the pulp pressed right out into a container. The trap door shut, and the press was ready for another batch. The system was supposed to work easily and efficiently. It never did. Gasket failures were a problem, spewing hot soymilk and pulp all over the dairy. In addition, the trap door never worked easily. In an expedient measure to get the dairy back in operation, Laurie removed the cylinder and replaced it with a Japanese pressing sack. The hot soymilk and pulp pumped into the bag which was set down in the stainless holding tank. There was a stainless rack on the bottom to keep the bag off the hole and a stainless plate was set on top of the bag after it was filled. The hydraulic ram came down and pressed the bag. This worked all right, but the bag had to be lifted out by hand, and the position was very awkward and left many sore backs. The milk went directly into a curding barrel or was pumped through the tubular heat exchanger. The capacity jumped to 300 gal of milk and 250 lb of tofu approximately 4 days/wk. At this time, the dairy had concrete floors and was starting to get sheetrocked. Soy yogurt production became unsuccessful because of the close proximity of the cannery, and vegetable contamination was airborne. Tempeh was also in the cannery and experiencing the same difficulties. Ice cream was very popular and being produced in large commercial soft-serve machines. Production of ice cream was varied, but its popularity was unquestionable.

"While the Farm was piecing together its operation, a small settlement of Farm members began in Northern California. In 1976, they opened a small commercial soy deli in California under the management of Robert Dolgin. To supply the deli, a small soy dairy and tempeh shop was set up in the back room. This consisted of Japanese equipment specifically designed for the purpose of making soymilk and tofu. They had a Japanese grinder, 45-gallon pressure cooker, and a small, efficient hydraulic press. It was a nice small kit which they took out a loan to buy. The deli's business was excellent and lasted over one year before it closed and relocated to San Francisco (SF) in order to expand production and market products throughout the health food store industry in California. So with more investment and loans and a warehouse in SF, Farm Foods re-opened. The building was fixed up to meet all the strict California codes, and the equipment was improved for increased output. They continued cooking with the 45-gallon pressure cooker but went for a continuous separator. This was a Brown, an orange juice extractor, and a vibrating screen to remove the finer pulp. They got a plate heat exchanger to cool the milk and a state-of-the-art Mark 25 continuous ice cream maker. They were running an extremely sophisticated operation complete with walk-in coolers and freezers. The Farm management council sent many of the Farm's trained technicians, business managers, and distributors out to SF to operate the business. In total, 60 Farm residents moved to support the growing business, which was under the direction of Robert Tepper and Daniel Lloyd. They started the first commercial soy ice cream company that marketed Soy Ice Bean. Laurie Praskin and her husband were sent to help run the shop and perfect the ice cream recipe. In April 1979, they left to work on the Guatemala soy program and were

© Copyright Soyinfo Center 2014

replaced by Michael and Deborah Lovett and Bobby and Michael Bonnickson. Because of the high cost of operating a business in downtown SF and the increased interest of Ice Bean nationwide, Farm Foods decided to move the Ice Bean production to Tennessee. The Farm Soy Dairy purchased the continuous extractor from the SF Soy Dairy and once installed, it immediately increased the production to 1500 lb/day of tofu and 300 gal/day of soymilk–enough for everyone.

"The soy dairy is now under the management of Michael Lee and Ron Maxin and consists of a 400 gallon bean soak tank and a one-and-a-half horse-powered Japanese grinder. Beans are ground with hot water, and the resulting slurry is pumped into one of three 60 gallon stainless kettles. Direct steam injection cooks this milk. When done, it is pumped into the brown extractor. It flows over a second vibrating-screen filter and is gravity-fed to a 45 gal stainless holding tank where it is tapped off into curding barrels or pumped through the same heat exchanger which now has chilled water running through it for more efficient cooling. A chilled water system also provides cold water to cool and store our tofu. When cooled, the tofu is transferred to 40 gal plastic tubs and wheeled into a walk-in cooler where it awaits distribution. (For more information on the Farm Soy Dairy as it is today, contact Ron Maxin or Michael Lee.)" Address: 17969 Oak Dr., Los Gatos, California 95030.

8401. Yasuda, Masaaki. 1985. Re: History of fermented tofu in China. Letter to William Shurtleff at Soyfoods Center, Dec. 9–in reply to inquiry. 1 p. Typed, with signature on letterhead. [1 ref. Eng]
• ***Summary:*** "I think the origin of fermented tofu in China is very uncertain. I believe the time of origin of *doufu-ru* is later than the *Pen-ts'ao Kang-mu* compiled by Li Shih-chen (1578-1597; Ming dynasty). The *'nyu-fu'* in that book is not fermented tofu, but rather cow's milk protein coagulated with acetic acid. Therefore, I think Yamazaki's Nyu-fu (in the 'Gyoku Hen') is also a dairy product. Yamazaki's Nyu-fu in my article was cited from Ohta's article (*Nippon Jozo Kyokai Zasshi,* 1965, July and August)." Address: Dep. of Agricultural Chemistry, Univ. of the Ryukyus, 1 Senbaru, Nishihara-cho, Okinawa 903-01, Japan. Phone: 09889-2221.

8402. *Asahi Shinbun* (*Evening Ed., Japan*). 1985. Hiekomu tônyû ninki [Popularity of soymilk in Japan cools down]. Dec. 25. p. 10. [Jap]
• ***Summary:*** Soymilk gets no reward for all the efforts made to remove its beany flavor. and now it has fallen behind Japan's beverage industry competition. At one time there were more than 100 companies making soymilk in Japan; now there are about half that many.

Kibun: During the past year Kibun had soymilk sales of about 7,000 million yen. But at its peak in Sept. 1982 its sales were about 11,000 million yen.

8404. *SoyaScan Notes.* 1985. Chronology of soybeans, soyfoods and natural foods in the United States 1985 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 2. The soybean crushing industry begins a year of major restructuring as the big get bigger and two pioneers drop out. Ralston Purina announces that it has sold six of its soybean crushing plants to Cargill, Inc. A seventh at Memphis was closed. This removed the company from the soybean commodity business. With this transaction Cargill passes ADM to become America's largest soybean crusher.

Jan. 3. "Myth or Miracle: Debunking the Tofutti Fad," by Mark Medoff published in *Whole Life Times.* The first exposé of Tofutti, which contains very little tofu. Jan. 13 Medoff appears on the Gary Null Show, Natural Living, to discuss his findings for 1 hour on prime time radio.

Jan. 12. A.E. Staley Manufacturing Co. announces that it is basically getting out of the soybean crushing business. It has sold five of its six soybean plants (having a combined crushing capacity of some 275,000 bushels daily) to Independent Soy Processors Co., which is closely affiliated with Archer Daniels Midland. Staley was unable to sell its Decatur facility, which ceased operations indefinitely in Jan. 1984. With this transaction ADM has probably regained a slight lead as America's largest soybean crusher.

Jan. 14-26. Soybean Utilization Workshop held at Soyafoods Research Center in Gannoruwa, Peradeniya, Sri Lanka, sponsored by the Sri Lanka Soybean Project and INTSOY. 24 representatives from 12 developing countries participate. The world's first event of its kind (*Soyanews,* Dec. 1985).

Jan. 25-27. Natural Foods Expo at Anaheim. Soy ice creams steal the show. Tofu standards are debated heatedly at Soyfoods Association board of directors meeting on Jan. 28, especially by Ralston Purina attorney. Board decides funds are too limited to try to hire an executive director for SAA. Jan. 31. Paul Obis, founder and editor of *Vegetarian Times,* is seriously considering buying *Soyfoods* magazine from Doug Fiske. He makes a firm offer in late March.

Feb. "Designer Beans," an excellent overview of the

U.S. soyfoods movement and its gourmet connections by Sandy MacDonald, published in *New Age* magazine.

Jan. American Soybean Association introduces SIS (Soybean Information Service), a computerized database focusing on soybean production and marketing, and oil and meal. The earliest record is 1958.

Feb. 21. *Tofutti and Other Soy Ice Creams: Non-Dairy Frozen Dessert Industry and Market,* by Shurtleff and Aoyagi published by The Soyfoods Center. Two volumes, 352 pages. This is the first study of the rapidly emerging soy ice cream market, and of Tofutti.

Feb. 27. "Tofu Products May Be In, but Its Fans Wonder if There's Tofu in the Products" by Trish Hall published in *The Wall Street Journal.* Second major exposé on so-called "tofu ice creams" (such as Tofutti and Gloria Vanderbilt Glace), which contain only a token amount of tofu, as a marketing gimmick.

March 13-14. The theme of the Feb. 27 *Wall Street Journal* article picked up by the NBC evening news and the Today Show. Very positive coverage for tofu. Gary Barat of Legume, David Mintz of Tofu Time, and Gloria Vanderbilt each speak about tofu.

March 22. *The Book of Tempeh,* extensively revised second edition by Shurtleff and Aoyagi, published by Harper & Row. New bibliography (374 entries), history chapter, and list of tempeh producers.

March 26. Soyfoods Association's Tofu Standards (7th draft) presented to eight senior officials at the U.S. Food and Drug Administration's Center for Food Safety and Applied Nutrition, in Washington, DC, by Tom Timmins (Head of SAA Standards Committee), Gary Barat (President of SAA), Steve McNamara and Tom Donegan (SAA Food & Drug attorneys). The FDA group hears an hour long presentation on tofu, the standards, and the Soyfoods Association of America.

March. Soyarella (later renamed Soy Mozzarella), a tofu-based cheese, is introduced. It becomes an instant hit. Distributed by Neshaminy Valley Natural Foods of Huntingdon Valley, Pennsylvania, it is labeled as "non-dairy," yet it melts, and it tastes like cheese. Shrouded in secrecy, its manufacturer is unknown and the ingredients are questionable. It is sold in large blocks and labeled at individual stores.

March. American Soybean Assoc. launches a campaign among its members to write USAID and encourage them to cancel support for U.S. programs (such as INTSOY) aiding soybean production in Third World nations. The campaign is successful.

April 1. INTSOY signs a new cooperative agreement with USAID. Their work will henceforth focus on soybean utilization. The shift toward utilization began in 1983 and all work on soybean production and varietal development stopped in Aug. 1986.

April. *Tempe: An Annotated Bibliography,* compiled by Siagian and Sofia in Indonesia. Containing 273 references, it is the first bibliography to introduce the extensive Indonesian-language research on tempeh, the majority of which has been published since 1980.

April 15-16. International Symposium on Tempeh held in Jakarta, sponsored by the Indonesian Ministry of Health. 113 people attend.

April. Central Soya buys Griffith Laboratories' line of protein products.

May 31. Barricini Foods acquires Farm Foods, which then becomes a trade name for Barricini's natural / health foods line of non-dairy frozen desserts, including the pioneering product, Ice Bean, and Barricini Tofulite.

May. Morinaga, one of Japan's largest dairy companies, establishes Morinaga Nutritional Foods, Inc., a subsidiary with offices in Los Angeles, to focus on promoting their long-life silken tofu in America.

May. At the 6th Annual Natural Foods Merchandiser Merchandising Awards, soyfoods do well. Miso Mustard by American Natural Foods and Malteds by Westbrae win gold medals. Ah Soy by Great Eastern Sun wins a silver.

May. Soft Tofu Cheese, a non-dairy cream cheese cultured in miso, launched by Simply Natural, Inc.

June. Tofu Topper launched by Worthington Foods.

June. Ralston Purina publishes its 1985 Consumer Attitudes Monitor. Soy Protein in Foods, based on a nationwide survey of 628 adults. Indicates positive attitudes toward soy protein and soyfoods.

July 19. Shamrock Capital, a private company headed by Roy Disney, buys Central Soya, a publicly owned corporation. Agreement to buy was announced April 2.

July. Soy Supreme, spray-dried tofu powder, launched by Oberg Foods Div. of St. Peter Creamery.

July. Asian Symposium on Non-Salted Soybean Fermentation held at Tsukuba, Japan.

July 31. Tofu Time's sales of Tofutti increased more than sevenfold last year to $17,114,886 as compared with $2,361,391 for the previous year. Net income increased nearly 100-fold to $2,006,451.

July. New Gallup survey on vegetarianism of 1,033 Americans shows that millions are eating less meat and tens of millions agree with the move away from meat. 72% disagree with what used to be the standard notion: "The vegetarian diet is just a fad that will pass." A majority (52%) believe that "no one really needs to eat meat more than once or twice a week."

Aug. The DE-VAU-GE soymilk plant in West Germany starts production. Built by STS, with 4,000 liters/hour of soymilk capacity, they make Granose and GranoVita brands of soymilk.

Aug. Lightlife Meatless Tofu Pups (hot dogs) introduced by Tempehworks / Lightlife Foods of Greenfield, Massachusetts. The product sold nearly $250,000 in the next 10 months.

© Copyright Soyinfo Center 2014

Sept. Soyfoods Center introduces SOYA, a computerized bibliographic database on soybean utilization, history, nutrition, processing, marketing, and production. Contains 18,500 references from 1100 B.C. to the present.

Sept. 30. Fearn Natural Foods in Illinois sold by Louis Richard to Modern Products, Inc. in Milwaukee.

Sept. 30 to Oct. 4. Tropical Soybean Workshop held at the International Institute of Tropical Agriculture (IITA), Ibadan, Nigeria. Proceedings are published in 1987 as Soybeans for the Tropics. Also this year IITA established a soybean utilization unit.

Sept. Tofulicious, a tofu-based non-dairy ice cream launched by Eastern Food products of Minneapolis. It was developed in conjunction with the University of Minnesota and funded by the Minnesota Soybean Research and Promotion Council. By 1986 it has become the first soyfood product in recent times to be actively promoted by state soybean associations, who sell it at many state and county fairs... where it is a big hit. Through Tofulicious many soybean growers begin to warm up to soyfoods.

Oct. 8th Draft of the Tofu Standards finished, incorporating extensive suggestions from FDA. Compiled by William Shurtleff.

Oct. Mori-Nu brand aseptically packaged tofu introduced by Morinaga Nutritional Foods.

Oct. Cream of the Bean Soygurt, a cultured soymilk yogurt, launched by Cream of the Bean, Inc.

Nov. Kikkoman introduces a long-life tofu in a foil retort pouch, imported from Japan. Poor quality causes the product to be withdrawn. It was re-introduced later.

Dec. Tofu Time starts exporting Tofutti to Japan. The first order by Daiei (a large retailer) of tubs for their parlors, is $350,000. This may be the first major export of a soyfood product (not including ingredients such as soy protein isolates) to Japan.

* The International Institute of Tropical Agriculture (IITA) in Ibadan, Nigeria, starts a program to promote processing and utilization of soybeans in Nigeria and throughout Africa. Continued.

8405. *SoyaScan Notes.* 1985. Chronology of soybeans, soyfoods and natural foods in the United States 1985 (Continued) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. 1985 New Trends:

Dramatic Rise of Tofutti and Other Soy Ice Creams. 1985 will go down in the soyfoods history books as the "Year of Tofutti." Never before in history of the United States has any soyfood product achieved such widespread and sudden popularity or notoriety.

During 1985 at least 50 brands of soy ice cream (many with "Tofu" on the label) were on the market worldwide, most in the USA. And many were made by America's biggest dairy companies. An estimated 2.5% of all frozen desserts except novelties (popsicles, bars, etc.) sold in supermarkets were soy-based nondairy. The result of all this was to introduce tofu and isolated soy proteins to millions of people in a very positive context.

But many of the companies that sold so-called "tofu ice creams," while emphasizing tofu in their product names and marketing programs, actually had surprisingly little (if any) tofu in their products. In fact they contain so little that this marketing gimmick might be misbranding and a deliberate deception of the consuming public.

Rise of Soyfoods in Europe. Thanks to the Belgian Office of the American Soybean Association (ASA), and specifically to the efforts of Michael Martin, Europe's growing soyfoods movement is starting to become organized and active. In March 1984 Martin launched Europe's earliest known soyfoods newsletter, *Soya Foods,* and in September organized the First European Soyfoods Workshop, for which bound proceedings were published. This is the first time in recent decades that ASA has promoted soyfoods (other than soy oil) in the Western World. The strong U.S. dollar has led to a recent dramatic decline in imports of soybeans and soybean meal to Europe for feed and oil use (European rapeseed and sunflowerseed are being substituted), so the ASA is exploring new outlets where soy is unique.

The launching of tofu production and marketing by Switzerland's biggest supermarket chain, Migros, and by Galactina, a large and respected maker of dietetic and pharmaceutical products (including soymilk) is a landmark for tofu in Europe. In early January, *Tages Anzeiger,* one of Switzerland's biggest newspapers, had a special report on tofu, followed on Jan. 9 by a 30-minute TV feature on tofu.

The total number of soyfoods companies in Europe continues to show a steady increase. Many of these are being founded by people interested in macrobiotics. By Jan. 1985 there were 1,113 names on The Soyfoods Center's computerized mailing list of people actively involved with soyfoods in Europe.

At the 1984 ASA soyfoods workshop, Martin reported the following estimates of annual European soyfoods consumption: A table with three columns shows: Soyfood name, consumption, percentage of U.S. consumption.

Soy oil–1.7 million metric tons–38%
Modern soy protein products–40 million kg–28%
Soymilk–9 to 10 million liters–7%*
Tofu–5 to 6 million kg–22%
Tempeh–400,000 to 500,000 kg–50%
Miso–250,000 to 300,000 kg–11%

* U.S. figure includes soy based infant formulas. European figure is not clear on this point.

Note that the population of the USA is about 234 million compared with 489 million for all of Europe (not including the USSR), but 237 million for Northern and Western Europe, where most of these products are consumed.

Rapid Growth of Second Generation Soyfoods. In the

© Copyright Soyinfo Center 2014

1984 edition of this book, we stated that the three fastest growing soyfoods in the USA (in terms of production increases) were tempeh (33% a year compound annual growth rate), tofu (15%), and soy sauce (14%). But now the picture has changed. In 1984 the fastest growing category was second generation products, ready-to-eat, all-American preparations, especially those based on tofu. The leader in this group is clearly soy ice creams (led by Tofutti), with a production growth rate of roughly 600% a year for the past 1-2 years. Then comes convenience tofu-based entrees such as Legume's products, tofu burgers and tofu burger mixes, and the like. This is the number one way that soyfoods are now entering the mainstream American diet. And the biggest gains are being made by marketing companies, rather than manufacturers. The second fastest growing category may now be imported soymilks, growing at about 40-60% a year.
Major New Capital Influx. The following is a brief summary of new capital influx to the soyfoods industry: A table with four columns shows: Company name, date of offering, $ amount, equity or debt; use.

Legume–Oct. 1982–$100,000 net–Equity. For tofu frozen entrees

Legume–Oct. 1982–$100,000–Debt. For tofu frozen entrees

Legume–Nov. 1983–$400,000 net–*Equity. For tofu frozen entrees

Legume–Nov. 1983–$200,000–Debt. For tofu Frozen entrees

Hinode Tofu–Nov. 1983–$2,500,000–Equity For general expansion

Tofu Time–Dec. 1983 $2,760,000 net–Equity. For soy ice cream

Tempehworks–July 1984–$265,000–Debt. For tempeh expansion

Legume–Feb. 1984–$200,000–Debt. For tofu frozen entrees

Legume–Aug. 1984–$1,248,000 net–Equity. For tofu frozen entrees

Brightsong–Dec. 1984–$500,000–Equity. For tofu products

Legume–April 1985–Expecting lots more. For tofu frozen entrees

White Wave–Expecting.

Note: Equity = Sale of equity ownership in the company via stock in a public offering or in a private placement. Debt = Debt financing by taking out a private loan.

How have these companies fared? Tofu Time has done spectacularly well. The value of the company has increased more than five-fold since Dec. 1983, and profits are excellent. Legume, a marketer of low-calorie, cholesterol-free frozen entrees featuring tofu, has had the hardest sledding. A preliminary prospectus by Huberman Margaretten & Straus dated 5 June 1984 stated that from its inception through 31 March 1984, the company incurred aggregate losses of $709,773, including a loss of $18,465 in 1982, then $225,302 in 1983, increasing again to roughly $486,500 in 1984. Legume's common stock had a negative book value; 1984 sales were "a little less than $1 million." Yet the company has excellent products and in early 1985 landed some foods big chains, which could help its bottom line considerably.

Growing International Interest in Tempeh. During 1983-84 Japan became a major tempeh producer. By May 1984 the world's largest tempeh producing company was Marusan-Ai (of Japan), which made 15,150 lb. a week. New marketing and production techniques were pioneered. The full story was described by Shurtleff and Aoyagi in Tempeh Production (1984).

Three Major International Symposia Featuring Tempeh were held: 15-16 April 1984 in Jakarta, Indonesia; 15-17 July 1984 in Tsukuba, Japan; and May 1986 in Honolulu. A special 13-day group study tour on Japanese Food Fermentations, led by Dr. Keith H. Steinkraus, has been organized by the Japanese-run, New York-based Technology Transfer Institute. Tempeh continues to be one of the fastest-growing soyfoods in the USA.

Growing Interest in Spray-Dried Tofu. Eleven articles were published this year on a product that promises to revolutionize the tofu industry. The first and largest manufacturers (St. Peters Creamery and Clofine) are both dairy companies. Spray dried tofu should appeal to the food industry, since it is easy to ship, store, and process.

Dairy Magazines Publishing Many Positive Articles About Soy-Based Dairylike Products. Traditionally the dairy industry has seen dairy analogs as a threat and fought to oppose them. The decades-long struggle against margarine is a good example of this. But now, many small dairies, struggling to survive, are looking for new products. A number (such as St. Peter Creamery and Clofine) have gained a new lease on life by starting production of soyfoods.

Major Changes in the U.S. Soybean Crushing Industry. Narrow crushing margins, a depressed export market for U.S. soybean meal, and poor profitability have led two of America's biggest soybean crushers, the A.E. Staley Manufacturing Company and Ralston Purina, to decide to get out of the soybean crushing business in Jan. 1985. Clearly they view poor profitability as a long term problem, and plan to diversify away from unpredictable agricultural commodities toward the "value added," retail end of the nation's food supply. Staley, in effect, sold its plants to ADM and Ralston Purina sold its to Cargill. In Nov. 1984 Staley acquired CFS Continental, Inc., the nation's second largest supplier to the foodservice industry. Staley, previously the oldest existing soybean crusher in America (since 1922), now relinquishes that honor to ADM. ADM is now the largest soybean crusher in America, but Cargill (which has many overseas plants) is the biggest in the world. These changes have led to a concentration of control in the U.S.

© Copyright Soyinfo Center 2014

soybean crushing industry. Both Staley and Ralston Purina plan to keep their edible soy protein (isolates, concentrates, etc.) operations.

Biotechnology is Emerging as a Major, Promising Factor in future soybean breeding development. Some agricultural experts are predicting that it could usher in the latest agricultural revolution, following the agrichemical revolution of the 1940s and the Green Revolution of the 1960s and 1970s.

The "Calcium Craze" Starts in America, aiding sales of tofu (curded with calcium sulfate), which is one of the best non-dairy sources of calcium.

8406. Hara, T.; Fujio, Y.; Ueda, S. 1985. Bacillus subtilis (natto) plasmid responsible for polyglutamate production encoding gamma-glutamyltranspeptidase. *J. of the Faculty of Agriculture Kyushu University* 30(2/3):95-105. Dec. [Eng]* Address: Kyushu Univ.

Occurrence of breast cancer in relation to diet and reproductive history: A case-control study in Fukuoka, Japan. *National Cancer Institute Monograph* No. 69. p. 187-90. Dec. Fourth Symposium on Epidemiology and Cancer Registries in the Pacific Basin. [7 ref]
• ***Summary:*** This study was designed to examine the effects of high-fat, high-protein diets on breast cancer risk. The authors compared dietary intake among 212 women with breast cancer in Japan with equal numbers of hospitalized and neighborhood controls. The found that "overnutrition (a high-fat and high-animal protein diet) was not statistically associated with breast cancer. Older ages at menarche were associated with decreasing risk for the disease.

They also found no association between fat consumption from soyfoods and breast cancer risk. However neither specific information on actual intake or types of "soybean products," nor fat intake from specific soy products was given. Address: 1. Dep. of Public Health, School of Medicine, Univ. of Kurume, Kurume, Japan.

• ***Summary:*** In Japan, marketing depends more on personal relations than it does in America. Kikkoman tries to be a good neighbor by localizing its operations. It has a firm commitment to employ as many local people as possible, participate in local activities, avoid the so-called "Japanese village" by advising its people from Japan not to live together but to spread out and live among Americans, to do business with American rather than Japanese companies, and to delegate most authority to local management. Address: Managing Director, Kikkoman Corp., Tokyo.

8410. **Product Name:** [Tofu Gelato (Non-Dairy Soy Ice Cream)].
Foreign Name: Tôfu Geraato.
Manufacturer's Name: Pappy Monro.
Manufacturer's Address: Jiyugaoka, Tokyo, Japan.
Date of Introduction: 1985 December.
How Stored: Frozen.
New Product–Documentation: Asahi Shinbun. 1985. Dec. 5. Tofu gelato, Italian style ice cream, is sold at a specialty store or restaurant named "Pappy Monro" in Jiyugaoka, Tokyo. Flavors are plain, mocha, matcha (green tea), maron (chestnut), and okura. Prices: single scoop of 100 gm is 180 yen, double scoop of 200 gm is 300 yen, and pint takeout is 800 yen. There is a choice of 6 toppings, including almond and chocolate. Color brochure. 1986, undated. "Everyday Gelato. Pappy Monro." The product was developed by an Italian named Maurizio Curati (born 7 Dec. 1953), a color photo of whom is shown. He has restaurants at Jiyugaoka and Shibuya.

8411. Tofu Time, Inc. 1985. Tofutti. Annual report. Rahway, New Jersey. 20 p. Dec.
• ***Summary:*** In fiscal 1985 sales skyrocketed to $17,114,886, up sevenfold over 1984. Net earnings after taxes were $2,006,451. The company moved into a new 30,000 square foot corporate headquarters in Rahway, New Jersey, with state of the art R&D facilities. Tofu is now sold in Japan, Australia, Canada, and Hong Kong.

This artfully designed glossy report includes color photos of Tofutti All Rootie TV ads. Address: 1098 Randolph Ave., Rahway, New Jersey 07065.

8412. Zenkoku Natto Rengokai, Tenpei Fukyukai [Japan National Natto Association, Tempeh Popularization Group]. 1985. 21 seiki no kenko shokuhin wa kore da! [This is the health food of the 21st century (Leaflet)]. Japan: Zenkoku Natto Kyodo Kumiai Rengokai. 3 panels each side. Each panel: 22 x 9 cm. [Jap]
• ***Summary:*** See next 2 pages. A color leaflet. "Tempeh is a distant relative of natto." Contains recipes (with tempeh) for: Curry rice. Gyoza (Pot stickers). Tempeh kabayaki domburi. Tempeh banana donuts. Happosai. Potato croquettes. Seafood salad.

A nice chart compares the nutrients in tempeh and beef.

テンペの使用法はごくかんたん。

- 揚げても、炊めても、煮てもおいしい
- フライ・カレー・から揚げ・シチュー・テンプラ・スパゲッティ・サラダ・和えもの おつまみ・ケーキ……何でもOK!
- テンペは万能の料理素材なのです。

■ギョウザ（4人分）

〈材料〉
ギョウザの皮…2袋
テンペ…100g ネギ…中1本
キャベツ…100g
A ニラ…80g シイタケ(もどしたもの)…4枚 とろけるチーズ…50g しょうが…1かけ にんにく…1かけ
B 塩…小½ 砂糖…小2 正油…小1 胡麻油…小1 コショウ…少々
サラダ油…焼き油として

〈作り方〉
①Aの材料を全部みじん切りにしてよく手でまぜ合わせ日の調味料を加えて更によくまぜ合わせる。
②①をギョウザの皮でつつみ焼き上げる。

■カレーライス（4人分）

〈材料〉
ご飯…800g テンペ…150g マグロツナ缶詰…1缶
玉ネギ…中2コ にんじん…100g じゃがいも…2コ
しょうが(みじん切り)…1かけ
A カレー粉…大1½ 小麦粉…大2
スープ……3½カップ
B 塩…小½ ハチミツ…小3 ウスターソース、ケチャップ、しょうゆ各大1
バター…大1
サラダ油
植物性生クリーム又はヨーグルト適量

〈作り方〉
①テンペは1.5cm角に切って油で揚げておく。
②にんじんはいちょう切り、じゃが芋は1cm角切り玉ネギは薄切りにしておく。
③厚手鍋にサラダ油2を熱し、しょうが、玉ネギが色づくまで炊め、野菜を加え更に炊め、Aを加える。
④スープを加えて日の調味料を加え煮込む。
⑤最後にバターを入れ、ツナ缶をほぐして③と共に入れ混ぜご飯にかけ、上に生クリームかヨーグルトをかける
(クリームをかけたら、まろやかな味になる)

■テンペ蒲焼丼（4人分）

〈材料〉
テンペ…100g
小麦粉
水……大2
油
正油…大5
砂糖…大4
A （砂糖はできるだけ三温糖を使用）
みりん…大2
水
ダシの素…少々
焼き海苔…少々
木の芽又は粉サンショ
ご飯

〈作り方〉
①テンペは5mmの厚さに切る。
②小麦粉、水で衣を作りフライパンに少し多めの油を入れ、少し焼き色がつくまで焼く。
③鍋にAの調味料を入れ、ほんの少し煮つめ2を入れて、一煮立ちしたらすぐ火をとめる。
④器にご飯を盛りちぎった焼き海苔をかけ、蒲焼テンペをのせ、粉サンショをかける。
★木の芽が手に入ったら、葉を手でたたいて香りを出して上に飾るとよい。

■テンペバナナドーナツ

〈材料〉
A テンペ…(100g・荒みじん切り) 卵…1 ホットケーキの素…½箱(225g) 牛乳又は水 バナナ…2本(つぶしてレモン汁をかけておく)
揚げ油

〈作り方〉
①Aの材料を混ぜる。牛乳又は水を加える量は普通のドーナツより柔かくなる程度入れる。
②中火よりややよわい油(150)でスプーンに油をつけて、①をすくっておとしながら、ゆっくりと色がつくまで揚げる。

Address: 1. Dep. of Food Science, Univ. of Georgia, Agric. Exp. Station, Experiment, GA 30212, USA.

8416. **Product Name:** [Tofu (from Organically Grown Soybeans, or Non-Organic), and Silken Tofu].
Foreign Name: Tofu: Pate de soja, Kinugoshi-dôfu.
Manufacturer's Name: Daizou SARL.
Manufacturer's Address: 883 Rue de Bernau–Z.I., 94500 Champigny sur Marne, France. Phone: 48 82 39 90 or 47.06.33.71.
Date of Introduction: 1985.
Ingredients: Water, yellow soybeans, sea salt. * Some organically grown.
Wt/Vol., Packaging, Price: 360 gm.
How Stored: Refrigerated.
New Product–Documentation: Form filled out by Anthony Marrese based on an interview with Mr. Hirayama. 1989. Nov. Mr. Sakaguchi is the owner of Daizou and Mr. Takatoshi Hirayama is the tofu production manager. Le Bol en Bois started in the 1970s as probably the first macrobiotic restaurant in Paris. They made tofu for their own use and their outside business grew slowly. In 1985 Tama (an importer and distributor of Japanese natural foods) and Daizou (a food manufacturing company) were made separate business divisions of Le Bol en Bois restaurant and health food store. The three companies employ about 50 people, 6-7 in food production. In 1985 the company introduced three types of tofu: Present production amounts are as follows: Non-organic 4,500 kg/month, organic 500 kg/month, and silken 150 kg/month. Also in 1985 the company started making konnyaku and shirataki [thin konnyaku noodles], and in 1987 they launched mochi.

Talk with David de Korsak. 1990. Jan. 31. David, a Frenchman, worked for this company in Sept. 1987. He did an internship with them, setting up a computer system. The manager was Takatoshi Hirayama. Daizou has about 8 employees total. The tofu company was formerly in the basement of Le Bol en Bois in Paris. They moved when they outgrew that space. They sell mostly to Japanese (in water pack tubs), and their main outlet is at Le Bol en Bois. They use 100-125 kg/day of soybeans to make about 300-375 kg of tofu. They also sell some vacuum packed tofu, made with organically grown soybeans, to 1-2 health food shops in Paris.

Letter from Bernard Storup of Société Soy. 1989. March 3. Daizou was founded by Le Bol en Bois (Paris) in 1985. Mr. Sakaguchi was the first to make tofu in France [Actually, Li Yu-ying was probably the first, in 1911].

8417. **Product Name:** [Soy Flour].

North Carolina 28806.
Date of Introduction: 1985.
Ingredients: Rice koji, soybeans, sea salt, well water.
Wt/Vol., Packaging, Price: 1 lb plastic bag with pressure-release valve.
How Stored: Refrigerated.
New Product–Documentation: This miso is imported in bulk from Onozaki Kojiten in Yaita, Japan. It is packaged by American Miso Co., Rutherfordton, North Carolina. Label sent by John Belleme. 1985. 3 by 3.5 inches. Gold and red on black–very stylish. Pressure sensitive on plastic bag with pressure release valve at top. Front panel text: "Handmade miso. Do not block valve. Non-pasteurized. No preservatives." Back panel text (black letters on white): "Onozaki miso is much more than just a great tasting miso. Its deep, rich flavor and subtle character is a vivid reminder of a vanishing Japanese tradition. And with good reason.

"For like Japan's ancient feudal miso masters, Takamichi Onozaki begins by personally growing, and carefully processing his own organic rice.

"Then, the Onozakis perform each time-proven step of old world miso-making in accordance with their own long family traditions. Finally, long aging in huge seasoned wood vats guarantees the superlative quality of their natural miso.

"Use Mr. Onozaki's wonderfully delicious miso to enhance the flavor and nutrition of soups, spreads, dressings and sauces.

"For more about the unique family and their work, see East West Journal, 'The Miso-Master's Apprentice,' April, 1981."

8437. **Product Name:** [Yakult Soymilk (Pineapple, Passion Fruit, Chocolate, and Apple)].
Foreign Name: Tohnyu (Abacaxi, Maracuja, Chocolate, Maca).
Manufacturer's Name: Yakult S/A Ind. e Com.
Manufacturer's Address: Via Anchieta, Km 31–Sao Bernardo do Campo, Sao Paulo, Brazil.
Date of Introduction: 1985.
Ingredients: Chocolate: Extract of soybeans, chocolate powder, corn oil, sugar.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Labels. 1988. May. Chocolate is Brown, yellow, orange, and black on white. Abstract illustration of two cocoa beans on front panel. "Natural. Vegetable protein. Tohnyu is a natural liquid food based on an extract of soybeans in various flavors. Contains all the riches of the soybean: Vegetable protein, vitamins, minerals, and linoleic acid. Tohnyu is free of cholesterol. Tohnyu is healthful and delicious. Keep refrigerated." By 1988, this was one of the most successful soyfoods in Brazil, with sales apparently growing rapidly. Total sales of Yakult beverages in Brazil (their fermented cow's milk and soymilk) grew from $13 million in 1984 to $46.2 million in 1987. Profits grew from a large loss in 1984 to 12% on sales net. Color brochure. 1988. Ta Com Tohnyu Ta Com Todo. "You get everything with soymilk."

Address: Higashimaru Shoyu K.K., Japan.

8439. Andoh, Elizabeth. 1985. An American taste of Japan. New York, NY: William Morrow and Co. 334 p. + [8] pages of color plates. Illust. by Susan Blubaugh. Color photos by Aaron Rezny). Index. 25 cm.
• ***Summary:*** This is a beautiful, remarkable book by a perfectionist with an intensely curious mind, a woman who really understands (is indeed an authority on) Japanese foods, cookery, language and culture. The illustrations and photos are likewise exquisite.

Contents: A note on the romanization and pronunciation of Japanese. Acknowledgments. An introduction to cross-cultural cooking (including a brief autobiography). At the market, in the kitchen ("A guide to buying and storing Japanese foodstuffs and equipment, plus an explanation of certain Japanese cooking terms and techniques"). The recipes: Soups, appetizers, sushi (in the lingo of the sushi bar, rice is known as *shari* and soy sauce as *murasaki*– literally "purple"), main dishes, side dishes, desserts. Setting the cross-cultural table. Photography credits. Mail-order and shopping guide.

Soyfoods [and sea vegetables] are so abundantly represented that we will only refer the reader to the glossary plus ("At the market, in the kitchen," p. 19-44) and index. In the glossary: Abura agé (fried bean curd). Ao nori (sea herb flakes). Kanten (agar). Kombu (kelp). Miso (fermented bean paste). Miso shiru (also called *omi-otsuke* [a woman's word]). Neri miso (glossy bean-paste sauce). Nori (laver). Soy sauce (The subtle, full-bodied aroma of soy sauce "does fade after several months. Keep opened bottles tightly capped on a dark shelf in your kitchen"). Tofu (bean curd; kinugoshi, momen, yaki-dofu). Usukuchi shoyu. Yaki-zushi nori.

An American who traveled to Japan in 1966 to study Japanese, Andoh married (in 1969) into the Japanese family she visited there. She enrolled in a class at the Yanagihara School of Classical Japanese Cooking, where she studied for six years.

Each recipe has two titles: (1) A long, descriptive title in English with large, bold typeface and title-style capitalization. (2) Under a hairline, the actual Japanese title, in regular capital letters. The modern Hepburn system of romanization is used throughout the book, so that diacritical marks are used consistently with the appropriate words. Page 52: "Light Bean Soup with Slender White Mushrooms and Bean Curd: Enokidaké no Miso Shiru." Page 183: "Bean Curd Tempura with Spicy Scallion Sauce: Agé Dashi-Dôfu."

Note: Use of the terms "bean curd" and "bean sauce" (instead of the now more widely used "tofu" and "miso") in recipe titles, text, and index makes these parts of the book seem slightly imperfect. Address: Japan.

8440. Bennett, Joan W. 1985. Taxonomy of fungi and

biology of the aspergilli. In: Arnold D. Demain and Nadine A. Solomon, eds. 1985. Biology of Industrial Microorganisms. Menlo Park, California: Benjamin / Cummings Pub. Co., Advanced Book Program. xviii + 573 p. See p. 359-406. Chap. 12. 25 cm. [232* ref]

• ***Summary:*** This article is so clearly written that even a beginner can understand it.

Contents: Introduction. Some systematics for the nonmycologist: What is systematics? (classification, nomenclature, identification), what is a fungus? (general overview). The genus *Aspergillus:* Morphology, sexual stages (teleomorphs). Genetics: Introduction to *A. nidulans,* the parasexual cycle. Economic aspects: Secondary metabolites, *Aspergillus* metabolites used in food processing, Oriental food fermentations (soy sauce, sake, miso, koji). Conclusion.

Table 12.1 (p. 360) lists "Historical landmarks in mycology and biotechnology involving the genus *Aspergillus."* 1729–P.A. Micheli: Publication of *Nova plantarum genera,* name *Aspergillus* given to group of molds with characteristic spore head. 1827–J. Schilling: First continuous observation of the growth of a fungus from spore to spore, *A. glaucus.* 1854–A. deBary: First association of a perfect state (*Eurotium herbariorum*) and an imperfect state (*A. glaucus*). 1867–P. Van Tiegham: First to establish importance of Aspergilli in biochemical field with identification of *A. niger* in gallic acid fermentation. 1869–J. Raulin: First defined medium for a microorganism *A. niger.* 1894–J. Takamine: First patent for a commercial enzyme form fungus, "Takadiastase" from *A. flavus-oryzae.* 1917–J.N. Currie: Commercial citric acid production from *A. niger* demonstrated as feasible. 1952–J.A. Roper: Parasexual cycle discovered in *A. nidulans.* 1961–Sergeant et al.: Identification of *A. flavus* as mold association with Turkey-X disease; "mycotoxin revolution" begins. The name "aflatoxin" was given in 1962. 1983–Ballance et al.: Transformation system described in *A. nidulans,* the second transformation system elucidated for a mold. Table 12.3 (p. 378-79) is a "Glossary of morphological terms encountered in descriptions of the Aspergilli."

Table 12.6 (p. 392) lists "*Aspergillus*-derived metabolites used in food processing" (after Beuchat 1978, *Food & Beverage Mycology,* see p. 368-96). These fall into three broad categories: Acids, enzymes, and miscellaneous. Acids: Citric acid, from *A. niger,* is used in soft drinks, dairy products, jams, jellies, candies, frozen foods, fats and canned goods. Gluconic acid, from *A. niger,* is used in baking powder, bread mixes, desserts, bottle-washing formulations. Itaconic acid, from *A. itaconicus* or *A. terreus* is used in shortenings, or resin coatings in contact with food. Malic acid, from various *Aspergillus* species is used in beverages, jam, jellies, syrups, candy, and sour dough. Oxalic, from *A. niger,* is used in hydrolysis of starch to glucose. Tartaric acid, from *A. niger* or *A. griseus* is used in carbonated beverages, desserts, jellies.

Enzymes: α-amylase, from *A. oryzae* or *A. niger* is used in corn syrup, dextrose, baking, food dextrins, chocolate syrups. Glucoamylase, from *A. awamori* or *A. niger* is used in dextrose, dextrose syrup, baking. Glucose oxidase or catalase, from *A. niger* is used in powdered egg products, brewing, wines, mayonnaise. Lactase, from *A. niger* is used in dairy products. Naringinase, from *A. niger* is used in debittering grapefruit juice. Pectinase, from *A. niger* is used in clarifying fruit juice and wine. Protease, from *A. oryzae* is used in tenderizing meat, soy sauce, brewing, baking.

Miscellaneous: Mannitol, from *A. candidus* is used as a bulking agent, or humectant.

Illustrations show: (1) "Schematic representation of an *Aspergillus* conidial apparatus" showing metula (primary sterigmata), conidia, vesicule, phialide (secondary sterigmata), conidiophore, and foot cell (p. 377). Address: Prof., Dep. of Biology, Biology, Tulane Univ., New Orleans, Louisiana 70118.

• ***Summary:*** Contents: Introduction. Scope in India. Production potential. Soybean in India. Returns to farmers. Place in cropping systems. Research. Constraints and strategies. Acknowledgements.

Tables show: (1) Increase or decrease in total hectarage, mean yield, and total production of soybean in Asia in 1983 (base year 1974-76). Source: Shanmugasundaram 1984. After each country listed in the table are figures. The 1st is change in hectarage (1,000 ha), the 2nd is change in yield (kg/ha), and the 3rd is change in production (1,000 metric tons). Burma (6, 144, 8). China (900, 153, 2,133), India (610, 235, 623). Indonesia (-25, 64, 24). Iran (-2, 564, 26). Japan (55, 68, 87). Kampuchea [Cambodia] (-3, 0, -3). Korea DPR [north] (19, 227, 90). Korea Rep. [south] (-64, -7, -75). Laos (2, 206, 1). Malaysia (-, 171, -). Philippines (4, 347, 7). Sri Lanka (1, 12, 1). Taiwan (based on 1982 data) (-39, 12, -48). Thailand (22, -76, 13). Turkey (25, 497, 52). Vietnam (65, 526, 88). Asia–total (1,647, 141, 3,080). USA (4,334, -40, 6,659). Brazil (2,342, 125, 4,927). World (11,272, 49, 19,741).

(2) Oil yields of the mail oilseeds as field crops. Source: FAO Production Yearbook (1972). In total yield worldwide in 1,000 tones the ranking is: 1. Soybean 8,749. 2. Groundnut (in hulls) 5,066. 3. Cotton 4,339. 4. Sunflower 3,308. 5. Rapeseed 2,525. 6. Sesame 965. 7. Flax 964. 8. Castor 385. 9. Safflower (N). Yet in terms of oil yield in kg/ha, the top three are: 1. Sunflower 376. 2. Safflower 280. 3. Castor 278. And... 6. Soybean 216.

3. Estimated area potentially available for soybean in

Madhya Pradesh and Uttar Pradesh. Source: Williams 1974.

4. Targetted and actual cultivation (ha) as well as production (tonnes) in India under the centrally sponsored scheme for soybean development, from 1978-79 to 1983-84. The soybean states are Madhya Pradesh, Uttar Pradesh, Karnataka, Bihar, Himchal Pradesh, Rajasthan, Gujarat.

5. Identified / released varieties of soybean for different agro-climatic zones. The four zones are: Northern hill zone. Northern plain zone. Central zone. Southern zone.

6. The salient production technology of soybean for different agro-climatic zones in India.

7. Performance of some promising advanced breeding lines of soybean developed in India. 8. Composition of defatted soy flour. Address: Project Co-ordinator, All India Co-ordinated Research Project on Soybean (ICAR), G.B. Pant Univ. of Agriculture and Technology, Pantnagar (Nainital), Uttar Pradesh, India.

8442. Bull, S.M.; Yong, F.M.; Wong, H.A. 1985. The production of aroma by *Aspergillus oryzae* during the preparation of soy sauce koji. *Food Chemistry* 17(4):251-64. [14 ref]

• ***Summary:*** The manufacture of most soy sauce involves two fermentation stages–the koji stage and the moromi stage. Koji is a Japanese word that describes the preparation in which select species of mold are grown on cooked cereals and/or soybeans. Koji serves as a source of enzymes that break down or hydrolyze natural plant constituents into simpler compounds. Koji for Chinese soy sauce is made from steamed soybeans enrobed in wheat flour, with strains of *Aspergillus oryzae* or *Aspergillus soyae* used as the koji starter. However koji for Japanese soy sauce is made from a mixture of steamed defatted soybean meal and roasted wheat inoculated with similar but slightly different strains of *Aspergillus.*

Soy sauce koji is dark-green in color, with a pleasant aroma and sweet taste having a slightly bitter note.

A study of the volatiles produced during koji preparation and a comparison with uninoculated soy flour mixture shows that the growth and sporulation of *Aspergillus oryzae* is related to the production of various volatiles. "The volatiles present at the mycelial stage are different from the volatiles of sporulated koji." Capillary GLC (gas-liquid chromatography) was used to analyze extracts. Ten chromatograms are given to show how koji extracts change at various pH values and with time. Volatiles are present at all stages of koji production. Koji has distinctly different aromas at the mycelial and sporulated stages. This difference "supports the practice of soy sauce manufacturers in using well-sporulated koji for the production of soy sauce" (p. 263). Address: Dep. of Biochemistry, National Univ. of Singapore, Lower Kent Ridge, Singapore 0511.

• ***Summary:*** A history of miso, miso cookery, shoyu, and shoyu cookery. "Tsuketari shoyu miso bunken shiryo shusei" (p. 297-346). Masaaki Hirano was born in 1931. Address: Japan.

8444. Hume, D.J.; Shanmugasundaram, S.; Beversdorf, W.D. 1985. Soyabean (*Glycine max* (L.) Merrill). In: R.J. Summerfield and E.H. Roberts, eds. 1985. Grain Legume Crops. London: Collins. xvi + 859 p. See p. 391-432. Illust. Index. 24 cm. [192 ref]

• ***Summary:*** Contents: Introduction: History, current status and future projections. Principal economic yield and uses of crop products. Principal farming systems. Botanical and agronomic features: Symbiotic nitrogen fixation potential. Principal limitations to production and yield: Developing countries, developed countries. Fertiliser requirements. Quality of seed constituents. Germplasm resources. Principal breeding strategies: Adaptation to new geographic areas, breeding methodology, breeding objectives, seed quality, pest and disease tolerances, current trends in soyabean breeding. Avenues of communication among researchers (INTSOY, AVDRC, IITA, FAO). Prospects for larger and more stable yields.

Tables: (1) Area (1000 ha), yield (kg per ha), and production (1000 tonnes) of soyabeans from 1969-71 to 1982. (2) Maturity durations and productivity potentials of soyabeans in selected countries. (3) *Glycine* species collections around the world. (4) Sources of resistance among soyabeans to selected insect pests. (5) Sources of resistance among soyabeans to selected diseases.

Table 9 shows that there are soybean germplasm collections in 15 countries. This table has 4 columns: Country, location (city), curator, and number of accessions. AVRDC in Taiwan has the largest germplasm collection in one location (10,400 accessions, Tainan), followed by USA (9,648, Illinois and Mississippi), India (4,000, Pantnagar; 1,800 Amravati), Japan (3,541, Tsukuba; 200, Morioka), USSR (3,000, Leningrad), China (3,000 Jilin; 3,000 Hubei; 2,930 Shadong [sic, Shandong {W.-G. Shantung}]; 2,500 Beijing; 960 Heilungjiang [Heilongjiang]). Also: Australia 400, France 500, Nigeria 1,300, Indonesia 600, South Korea 2,833, North Korea 300, South Africa 600, Sweden 1,200, and Thailand 1,686. Address: 1&3. Univ. of Guelph, Dep. of Crop Science, Guelph, Ontario N1G 2W1, Canada; 2. Asian Vegetable Research and Development Centre (AVRDC), PO Box 42, Shanhua, Tainan 741, Taiwan, Republic of China.

• ***Summary:*** Soybean germplasm collections worldwide are listed (with address and number of accessions) in the following countries: Argentina, Australia, Austria, Bangladesh, Bolivia, Brazil (2 collections), Bulgaria, Canada, China (14 collections), Taiwan (3), Colombia, Czechoslovakia (2), France (4), Germany (East), Germany (West), Greece, Hungary (2), India (8), Indonesia (3), Italy, Japan (5), Korea (South, 2), Malaysia, Nepal, Nigeria, Papua New Guinea, Paraguay, Philippines, Poland, Portugal, Romania, Spain, Sri Lanka, Thailand (2), Turkey, USSR, United Kingdom, USA (5), Uruguay, Venezuela, Vietnam (2), Yugoslavia, Zambia, Zimbabwe.

The world's largest soybean germplasm collections are as follows: AVRDC, Tainan, Taiwan (12,200 accessions), National Seed Storage Laboratory (NSSL), Fort Collins, Colorado, USA (10,880), Univ. of Illinois, Urbana, IL, USA (8,368), Jilin Academy of Agricultural Sciences, Jilin, China (4,800), N.I. Vavilov All-Union Institute of Plant Industry (VIR), Leningrad, Moscow (4,700), All-India Coordinated Research Project on Soybean, G.B. Pant Univ. of Agriculture and Technology, Pantnagar, India (4,022), Suweon, South Korea (4,020), Tsukuba, Japan (3,741). USDA, Stoneville, Mississippi, USA (3,000).

A world map (p. 9-10) shows (1) The sites of all soybean germplasm collections, (2) the range of ancient cultivation of the soyabean (East and Southeast Asia), (3) range of the wild soybean (Glycine soja; in China and Japan), and (4) range of perennial Glycine (Australia, Papua New Guinea, Philippines, Taiwan, Melanesia, and Micronesia).

This document is "Available free to developing countries, but restricted distribution to developed countries." Address: 1&3. INTSOY, Univ. of Illinois at Urbana-Champaign; 2. USDA-ARS, Dep. of Agronomy.

8446. Kushi, Aveline; Esko, Wendy. 1985. The changing seasons macrobiotic cookbook. Wayne, New Jersey: Avery Publishing Group, Inc. xii + 265 p. Illust. Index. 28 cm. [43 ref]

• ***Summary:*** The recipes are arranged by the four seasons. The index contains 43 entries for miso, 39 for tofu, 35 for tamari, 18 each for seitan and tempeh, 3 for natto, and 1 each for Japanese black [soy] beans, and for soybeans (dry).

Also contains entries for amazake, amazake pudding, azuki beans, brown rice, hiziki [hijiki], kuzu, mochi, and sea vegetables. Address: Brookline, Massachusetts.

8447. Kushi, Aveline; Kushi, Michio. 1985. Macrobiotic diet. Edited by Alex Jack. Tokyo and New York: Japan Publications. 288 p. Illust. Index. 26 cm. [74 ref]

• ***Summary:*** This is perhaps the best, most comprehensive

book seen to date by Aveline and Michio Kushi about the macrobiotic diet. The rear cover states:

"Humanity has been continuously degenerating in spite of scientific and technological achievements. This degeneration is reflected in physical disorders, psychological disorders, and general distrust in human relations. Since diet affects our physical and psychological functions, macrobiotics strives to change our health and behavior through a proper diet in harmony with the environment in which we live.

"This book is a basic and readable presentation of the principles behind the macrobiotic diet. It explains the foodstuffs that comprise the diet, appropriate cooking techniques, proper attitudes toward food and its preparation, and applications of the diet for weight loss, increased energy, relief from and prevention of sickness, and encouragement of psychological health, spiritual development and social stability. Dietary adjustments and modifications are given for men, women, and children, as well as differing climates, levels of activity, and ages."

Macrobiotics, which originated in Japan, has done much to introduce Westerners to soyfoods. This book is an excellent example: The chapter on "Soup" has a long section on miso soup (p. 99-101, 104-05) and the main varieties of miso: Barley miso, soybean miso (Hatcho miso), brown rice miso, light misos, and natto miso (a spicy condiment not usually used in soups).

In the chapter on "Vegetables," the section on "Pickling" has subsections (p. 118-19) on "Tamari soy sauce pickles" and "Miso pickles."

In the chapter on "Beans and bean products" is a long section on "Soybeans" (p. 141-49) which includes an introduction (discusses the "vegetable soybean" vs. "field soybean") and descriptions of miso, natto, okara, soy flour, soy grits, soy milk, soy oil, tamari soy sauce, tempeh, tofu (incl. nigari, oden, Yu-dofu, aburage, inari-zushi), viilia

© Copyright Soyinfo Center 2014

(somewhat like soy yogurt from Finland), and yuba.

The subsection on "Soybeans" (for example, p. 147) states: "Yellow soybeans are hard and require thorough cooking. They should be soaked overnight with a strip of kombu and then pressure-cooked for a short time prior to boiling. Properly cooked, yellow soybeans are very soft and delicious and give no problems with gas. A delicious dish called Colorful Soybean Casserole is made from yellow soybeans, kombu, shiitake mushroom, lotus root, dried tofu, daikon, carrot, burdock, and celery. The yellow variety also goes very well served with hijiki sea vegetables. Black soybeans, also known as Japanese black beans, have a strong, delicious taste. They may be prepared plain or cooked with rice. To sweeten black soybeans, a little barley malt, rice syrup, or mirin is often added. Black soybeans are usually cleaned by rubbing with a damp towel to prevent their skins from falling off under water. During cooking, some of the skins from these beans may float to the surface and should be skimmed off. Foam also arises and needs to be discarded. Yellow soybeans are nice seasoned during cooking with a little tamari soy sauce or miso. Black soybeans are usually seasoned with tamari soy sauce."

The chapter on "Snacks and desserts" has a good section on Amazaké (p. 190, 196) and also notes: "In the West, the introduction of tofu has resulted in the creation of many tofu-based desserts such as tofu cheesecake, tofu ice cream, and tofu whip topping. In the Far East, however, tofu is not traditionally combined with barley malt, rice syrup, or other sweetener. It is recognized that tofu's cooling qualities are naturally balanced by a salty taste, not a sweet one. As a result, tofu is customarily cooked and served warm, rather than prepared raw and eaten cold, except in special cases for cooling and refreshment, usually in the hot summer. The macrobiotic diet does not encourage the use of tofu in sweetened desserts except for those in transition from dishes made with dairy food and sugar."

The chapter on "Salt, oil, and other seasonings" includes sections on tamari soy sauce (p. 203-04, 209), miso (p. 204, 210-11), and soybean oil (p. 207).

The chapter on "Dressings, sauces, garnishes, and condiments" includes sections on "Dressings" (p. 215-16, with tamari soy sauce dressings, umeboshi dressings, miso dressings, tofu dressings, sesame dressings), "Condiments" (p. 216-17, with gomashio or sesame salt, sea vegetable powders, tekka, umeboshi plums, miso with scallions or onions, etc.).

The chapter on "Beverages" has sections on amazake and soy milk (if naturally processed, good for those in transition from cow's milk and other dairy foods).

This book also contains a wealth of information (see the index) on such varied foods as azuki beans, barley malt, brown rice, kuzu, sea vegetables (many species), sesame seeds and sesame oil, umeboshi, etc.

Note: The macrobiotic diet is not vegetarian; it allows the inclusion of fish and seafood (see index). Address: Brookline and Becket, Massachusetts.

8448. Lukes, Timothy J.; Okihiro, Gary Y. 1985. Japanese legacy: Farming and community life in California's Santa Clara Valley. Cupertino, California: De Anza College, California History Center Foundation. 156 p. Foreword by Norman Y. Mineta. 22 x 26 cm. 60 photos. Series: Local History Studies Vol. 31. California History Center, Cupertino, California. [175* ref]

• ***Summary:*** A comprehensive work about a Japanese farming community in California from 1895 to 1945. This book was the winner of the Association for Asian American Studies 1987 Book Award "for having made a most significant contribution to the study of the Asian American experience." Pages 23-24 contain a map and legend of San Jose Nihonmachi (Japantown) from 1910 to 1920. Nomitsu Tofu was located on Sixth Street, four doors from Taylor Street.

Japanese farmers first arrived in California's Santa Clara Valley in about 1895. The major theme of this book is their constant struggle. The ideas of inclusion and exclusion, oppression and resistance (the search for self-determination) of this minority group are carefully examined. The inside front cover notes: "Around the turn of the century, clusters of Japanese farms sprang up throughout the Santa Clara Valley, at Alviso, Agnew, Trimble Road, Berryessa, and the West Side (Santa Clara, Saratoga, Los Gatos). Each cluster built a Japanese language school, held picnics and observed Japanese festivals such as New Year's Day, and shared wells, tools, horses, and laborers. Peddlers from Nihonmachi visited those outlying clusters selling Japanese foodstuffs like tofu, miso, and seaweed, and in turn, the farmers took occasional trips to Nihonmachi for entertainment, funerals, and other social gatherings."

Note: A good source of information on farming by Asian-Americans on the Pacific Coast is the periodical *Pacific Rural Press.* Address: 1. Asst. Prof. of Political Science; 2. Director of the Ethnic Studies Program and Assoc. Prof. of History. Both: Univ. of Santa Clara.

8449. Matsuura, M. 1985. [Improvement of chalkiness present in soy milk]. In: Development of New Protein Foods. Yokohama: Tekunoai Press. See p. 315-24. [Jap]*

• ***Summary:*** A bell-shaped graph shows the effect of the pH during soaking on the activities of Beta-glucosidase. The activities are highest at pH 6, and lowest at the extreme pH values of 3.5 and 8.5.

There are two types of Beta-glucosidases in soybeans, and they tend to produce chalky flavors. Beta-glucosidase A is active in the pH range 4-7, has an optimum pH of 5.0, has an optimum temperature of 40-45ºC, and is inactivated by heating at pH 5.0 at 60ºC for 5 minutes.

Beta-glucosidase B is active in the pH range 4-7, has an

© Copyright Soyinfo Center 2014

optimum pH of 5.0, has an optimum temperature of 45-50ºC, and is inactivated by heating at pH 5.0 at 60ºC for 5 minutes.

8450. Noh, Chin-hwa. 1985. Traditional Korean cooking: Snacks & basic side dishes. Elizabeth, New Jersey; Seoul Korea: Hollym Corporation. 78 p. Illust. (color). Index (general). Index of Korean recipe titles. 27 cm. [Eng; kor]
• ***Summary:*** This is an excellent cookbook of authentic Korean recipes, each with its Korean name (romanized and in Korean characters). Each recipe is accompanied by numerous useful color photos. The front matter contains an Introduction, Preparation tips, and 2 pages about the healthy Korean diet. Soy related recipes include: Soft bean curd soup (*Sundubutchigae,* p. 10). Seasoned fermented soybean soup (*Ch'onggukchangtchigae,* with 1 cake bean curd and 6-8 tablespoons seasoned fermented soybeans, p. 11 [ch'onggukchang is Korean style natto]). Royal soybean paste soup (*Kungjungdoenjangtchigae,* with 2 tablespoons soybean paste [Korean miso], p. 12). Bean curd casserole (*Tubu Chon-gol,* p. 13). Wrapped bean curd (*Tubussamtchim,* p. 15). Stuffed bean curd (*Tubusobagi,* p. 16). Steamed bean curd (*Tubuson,* p. 16-17). Bean curd in soy sauce (*Tubut'wigimjorim,* p. 18). Salted bean curd and beef (*Tubu Soemgogijorim,* p. 18). Salted beans (*K'ongjorim,* with 1 cup black beans plus soy sauce, sugar, sesame seeds, and sesame oil, p. 19). Cold cooked bean curd (*Tubu Naengch'ae,* p. 22). Bean sprout rice (*K'ongnamulpap,* with 2/3 lb. [soy] bean sprouts, p. 24). Dried radish strips in soy sauce (*Muumallaengijangatchi,* p. 54). Cucumbers in soy sauce (*Oijangatchi,* p. 55). Sesame leaves in soy sauce (*Kkaennipchangatchi,* p. 56). Todok in red sauce (*Todokchangatchi,* with 1 cup soy sauce, p. 56). Fermented soybean lumps (*Meju,* with 18 lb. dried yellow soybeans, p. 62-63). Soy sauce (*Kanjang,* homemade, p. 62-63). Soybean paste (*Toenjang,* homemade, p. 63). Red pepper paste (*Koch'ujang,* homemade, with 2 lb. fermented soybean powder, 6 lb glutinous rice powder, p. 64).

Note 1. This is the earliest English-language document seen (Jan. 2012) that uses the word "ch'onggukchang" to refer to Korean-style natto.

Note 2. This is the earliest English-language document seen (March 2009) that uses the word "Toenjang" to refer to Korean-style soybean paste (miso), or the word "Koch'ujang" to refer to Korean-style fermented red pepper and soybean paste (miso).

The useful Glossary (p. 73-75) contains definitions of: Bean curd (*tubu*). Beans, incl. yellow soybeans (*huink'ong*) which are used to make [soybean] sprouts (*k'ongnamul*), bean curd (*tubu*), soft bean curd (*sundubu*), bean paste (*toenjang*), fermented soybeans for making soy sauce (*meju*), seasoned fermented soybeans (*ch'onggukchang* [*Korean natto*]), soybean flour (*k'ongkaru*), soy sauce (*kanjang*).

Brown soybeans (*pamk'ong*–literally "chestnut beans") are a chestnut brown color and have a smooth chestnut-like texture when cooked.

Black soybeans (*komunk'ong*) are served as a side dish.

Mung beans (*noktu*), used to make mung bean sprouts (*sukchu namul*), etc. Red kidney beans [azuki] (*kangnamk'ong*).

Bean sprouts (*k'ongnamul*) may be grown at home or purchased in the vegetable section of most grocery stores. The large sprouts are from the yellow soybean; the smaller, more delicate sprouts are from the green mung bean.

"Soybean paste (*toenjang*) is a thick brown paste made from a mixture of mashed fermented soybean lumps [soybean koji] (left from making the soy sauce), powdered red pepper seeds and salt. It is used as a thickener for soups and stews and will keep well in the refrigerator.

"Soy sauce (*kanjang*) is a brownish-black salty liquid made by cooking fermented soybean cakes with water and salt. Each household in Korea used to make their own soy sauce in the spring; some still do. These are mild and add good flavor to most any food." Soy sauce is used in cooking and at the table. Japanese "soy sauce is less salty but sweeter than Korean soy sauce.

"Sweet red beans (*p'at*) are small and round and used widely in Korean confections. When cooked and mashed they are sweet and soft textured. This sweet bean puree [Japanese *an*] is used as filling in rice cakes [mochi] and also now in donuts and rolls."

The Glossary also mentions laver (*kim*), a sea vegetable called "nori" in Japan, that is widely used in recipes in this book. No other sea vegetables are mentioned. Address: Munhwa Cooking School.

8451. Odo, Franklin; Sinoto, Kazuko. 1985. Zusetsu Hawai Nihonjin-shi 1885-1924 [A pictorial history of the Japanese in Hawaii, 1885-1924]. Hawaii Immigrant Heritage Preservation Center, Dept. of Anthropology, Bernice Pauahi Bishop Museum, 1525 Bernice St., P.O. Box 19000A, Honolulu, Hawaii 96817-0916. See p. 166. [Jap; Eng]
• ***Summary:*** Commemorating the centennial of the first arrival of government contracted Japanese laborers in Hawaii. Note that both English-language and Japanese-language editions of this book were published. Throughout the English-language edition, the word Hawaii is spelled "Hawai'i."

A photo (p. 166) shows the inside of the Hawaii Shoyu Co. (Hawaii Shoyu Kaisha) on King Street in Palama, Honolulu, taken in about 1914. The caption reads: "The Japanese is Hawaii depended upon shoyu imported from Japan until Nobuyuki Yamashiro started making shoyu in 1904. His company was established as Hawaii Shoyu Co. in 1906. American Shoyu Co. was established in Honolulu in 1912.

The same page shows a 1906 advertisement for Takakuwa Store, Nu'uanu, Honolulu, reprinted from *Hawaii Shinpo,* 1906. The store sells shoyu. Address: Hawaii.

8453. Ontario Soya-Bean Growers' Marketing Board. 1985. Soybeans: Nature's miracle–teaching unit. Chatham, Ontario, Canada: OSGMB. 33 p. Undated. 28 cm.

• ***Summary:*** This interesting portfolio of materials is designed to teach children in Ontario, Canada, about the growth development of a soybean from seed to mature plant, soybean cultivation, soybean processing and products, the importance of soybeans to Ontario's economy, and the Ontario Soya-Bean Growers' Marketing Board.

Contents: Introduction to teacher's unit. 1. From seed to pod: A brief history of soybeans in Canada, biology of the soybean seed, its germination and seedling growth, soybean nodules and rhizobia bacteria, parts of a young soybean plant, reproductive stages from flowering to maturity, corn heat units, tillage, word scramble.

2. Soybeans–Nature's miracle: A brief history of soybean utilization, ways that soybeans are used, soy oil, meal and soyfoods, recipes, word search. 3. Imports and exports: Importance of soybeans to the economy of Canada and Ontario, how soybeans get to market, The Ontario Soya-Bean Growers' Marketing Board.

A table on page 20 shows "Soymeal consumption by Ontario's livestock and poultry." Hogs consume 45% of the total (the total is 503,000 tonnes), poultry 34%, dairy cattle 20%, and beef cattle 1%. Page 22 notes that the bulk of Ontario's soybean exports (77%) are sold to East Asia–especially Japan, Hong Kong, Singapore, Malaysia, Indonesia, and Korea. Soyfoods are listed and discussed in a positive way, with recipes for: Bran muffins (with soy flour and soy oil). Tofamole (tofu guacamole). Tofu fruit pudding. Tofu shake.

Note: This is the earliest English-language document seen (Dec. 2003) that contains the term "Tofu shake."

The three largest farm crops in Ontario in terms of total area are hay (1,050,000 ha), grain corn (902,000 ha), and soybeans (425,000 ha). Address: Chatham, ONT, Canada.

8454. Pelto, Gretel H.; Pelto, Pertti J. 1985. Diet and delocalization: Dietary changes since 1750. In: R.I. Rotberg and T.K. Rabb, eds. 1985. Hunger and History: The Impact of Changing Food Production and Consumption Patterns on Society. New York and London: Cambridge Univ. Press. 336 p. See p. 309-30. [25 ref]

• ***Summary:*** There have been four major changes in food resources and distribution over the past 250 years: First, the increasingly rapid "delocalization" and corresponding internationalization of food production and distribution. There has also been a world-wide dissemination of domesticated plant and animal varieties. These trends lead to a worldwide network of increasing socio-economic and political interdependency. "From the point of view of individuals and families at any one place on the globe, delocalization means that an increasing portion of the daily diet comes from distant places usually through commercial channels. Second, in the industrialized nations, delocalization has been associated with an increase in the diversity of available foods and the quantity of food imports, and, therefore, with improved diets... Third, in the less industrialized countries of the world, the same processes of delocalization have tended to produce opposite effects on dietary quality, except for the elite."

And fourth, the migration of people from rural to urban centers, and from one continent to another, on a hitherto unprecedented scale, with a resulting exchange of culinary and dietary techniques and preferences.

In 1833 in England, based on a large study related to the effects of child labor, working boys aged ten years averaged 121 cm in height compared with 140 cm today (a 15.7% increase); those aged 18 years averaged 160 cm compared with 175 cm today (a 9.4% increase). "The recent trends in Japan from 1950 to 1970 show a nearly 3 cm. increase per decade among seven year olds, and a 5 cm. per decade increase in twelve year olds." The main factor affecting this increased growth seems to be improved nutrition, although improved sanitary conditions have also played a role.

"Age at menarche is another measure frequently cited in connection with the overall improved nutrition levels of Europeans, North Americans, and other industrialized populations. Tanner (1978) has demonstrated that the average age at menarche for girls in Finland, Norway, and Sweden was between sixteen and seventeen years in the middle of the nineteenth century, from which there has been a progressive decline to the present day. Now, the averages hover around thirteen years...

"One of the more obvious, yet infrequently noted, results of the delocalization of food products in the industrialized world is the elimination, except during wartime, of disastrous famines... Famines still occur in isolated parts of India... but mortality from famines was not an important force in slowing India's population growth after 1921. Thus, the forces of delocalization–the spread of transportation systems and food distribution networks, plus governmental communications and food relief systems–have effectively eliminated most (but not all) of the impacts of regional crop failures and other disasters that in the past led to severe periodic famine conditions...

"We suggest that the poorer populations in developing countries, especially in rural areas, have experienced declines in total caloric consumption (per capita) and in dietary diversity as traditional subsistence systems have been severely disrupted by the forces of modernization, especially

© Copyright Soyinfo Center 2014

delocalization." Address: 1. Assoc. Prof. of Nutritional Sciences; 2. Prof. of Anthropology and Community Medicine. Both: Univ. of Connecticut.

8455. Richie, Donald. 1985. A taste of Japan: food fact and fable. What the people eat. Customs and etiquette. Tokyo, New York, San Francisco: Kodansha International. 112 p. Illust. (some color photos). Index. 27 cm.
• ***Summary:*** This book contains a nice chapter titled "Tofu" (p. 34-41) in which the different types are described including *momengoshi-dofu* ("cotton" tofu) and *kinugoshi-dofu* ("silk" tofu). It also discusses okara, noting: "Now mainly used as livestock feed, it once also nourished one of Japan's greatest scholars. Arai Hakuseki, who lived during the Edo period (1615-1868), proudly related that in his impoverished student days he lived almost entirely on *okara* and that in gratitude he later, rich and famous, gave large sums of money to his charitable tofu maker."

On pages 38-39 are color photos of: "(1) Atsu-age. (2) Koya-dofu. (3) Ganmodoki. (4) Unohana or okara. In Kyoto, this humble food is rounded into balls and sold. (5) *Yudofu* course in a Kyoto restaurant. The course includes yuba tempura, simmered *hiryozu* (known as ganmodoki in the Kanto [Tokyo] area) and *goma* (sesame) tofu. (6) Aburage (two sizes).

Even today, Chinese and Japanese view tofu in very different ways: "... Chinese cooking tends to regard tofu as an additive, as something which enhances something else. The Japanese, on the other hand, relish the taste of tofu itself..." for example as *Hiyayakko* [chilled tofu; summer] or *Yudôfu* [simmering tofu; winter]. Each is seasoned with soy sauce or a soy-based dipping sauce. The names of various popular Japanese tofu recipes are given (p. 40).

"Freeze-dried tofu" is said to have originated one cold night in a temple at the summit of Mount Koya [*Kôya-san*] when a forgetful acolyte left the tofu offering of the day on the altar. The next morning it was found frozen. It was also found that this tofu had a completely different texture from ordinary tofu and it could be kept for a long dried since it contained very little water. This tofu has at least four different names: (1) Koya-dofu. (2) Misuzu-dofu. (3) Shimi-dofu. (4) Kori-dofu.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *shimi-dofu* to refer to dried-frozen tofu.

A large illustration (p. 40-41) shows tofu being made from the *Kinsei Shokuhin Zukushi Ekotoba* (1805). The basic process has not changed to this day.

The copyright page notes: "The text of this book is based on a series of articles that appeared in *Winds* magazine, 1981-83." "In this book, all twentieth-century Japanese names appear in Western order, and all earlier names appear in traditional order, surname first."

Note 2. There are also chapters on sushi, sukiyaki, tempura, menrui (noodles), onigiri, mochi, tsukemono (pickles), okashi (Japanese sweets, confections). Saké. Ocha (tea). Address: Japan.

• ***Summary:*** The body of this book consists of bibliographic records sorted alphabetically by author, printed on a dot-matrix printer. None of the records has a summary or abstract. The last 12 pages consist of 130 early records (770 B.C. to 1903) sorted chronologically. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

8459. The first macrobiotic cookbook: Formerly *Zen Cookery.* Revised edition. 1985. Oroville, California: George Ohsawa Macrobiotic Foundation. 134 p. Topical index. General index. 22 cm. Copyright 1984, 1985 [11 ref]
• ***Summary:*** Edited by Cornellia and Herman Aihara, this is a revised and expanded edition of *Zen Cookery,* which was first published in 1964 by the Ohsawa Foundation of Chico, California. "Includes 296 recipes updated for the 1980's." Each recipe is numbered and the numbers are almost the same as in the original edition though some of the names have been changed slightly, and ingredients have been adjusted. Much less salt has been used.

There is an interesting preface followed by 4 pages of

© Copyright Soyinfo Center 2014

photos titled "Recollections of the early 1960s"–related to Chico-San, Inc. and followers of macrobiotics.

Contents: Preface. Photo recollections. 1. Grains. 2. Noodles. 3. Vegetables. 4. Beans and sea vegetables. 5. Soups. 6. Sauces. 7. Salads and pickles. 8. Special dishes. 9. Miso and soy sauce dishes. 10. Breads and snacks. 11. Desserts. 12. Beverages. Seasonings. Cutting styles. Glossary.

"Soon after George Ohsawa came to the United States as a missionary of macrobiotics in 1959, he published *Zen Macrobiotics* in 1960. This book in its original form included recipes for macrobiotic cooking. Although the number of macrobiotic students increased rapidly because of his interesting lectures and charisma, the much needed editing of the recipes for clearer instructions and measurements was not realized until later.

"In 1961, on Ohsawa's advice, thirteen macrobiotic families, numbering thirty-six [sic, 34] people, left New York City and moved to a small town in Northern California named Chico. The following year, all the adult members of the group started the first macrobiotic food distributing company, Chico-San, Inc.

"Since nobody on the West Coast had heard of macrobiotic foods, one of the first jobs for the Chico-San founders was educating people in the macrobiotic philosophy, diet and cooking. A committee for the teaching of macrobiotic cooking was formed by the women of the group who began by separating the cooking section from *Zen Macrobiotics* and gathering recipes among themselves. Thus, Chico-San, under the name of the Ohsawa Foundation of Chico, published the first macrobiotic cookbook, *Zen Cookery,* in 1964.

"The book sold very well for eleven years. It was out of print from 1975 until 1984, when the George Ohsawa Macrobiotic Foundation published the book under its new title, *The First Macrobiotic Cookbook.* The 1985 edition has been completely revised and corrected; however, the original outline and numbering system have been retained."

The photos have these captions: "(1) Bill Salant, Al Bauman [both standing by a car], and Herman Aihara (not in picture) stop for refreshment on their exploration of the Sacramento Valley area prior to the cross country move. (2) On the road, Cornellia Aihara preparing breakfast for 36 hungry people at a scenic spot near Lincoln, Nebraska, on the way to California. (3) CBS News is on hand to greet the travelers upon their arrival in Chico. Later a 'Welcome to Chico' dinner was sponsored by the town. (4) Joanne Hirsch (left) with Teal Nichols (center), editor of the first edition of *Zen Cookery* [both are seated at a formal dining table with several other people]. (5) Shayne Oles, editor of *The New Zen Cookery,* with husband Lou (left) and Junsei Yamazaki.

"(6) Jacques deLangre, Tommy Nakayama, Lou Oles, and Bob Kennedy relaxing in front of Herman and Cornellia Aihara's home [in Chico]. (7) Herman Aihara rings up a sale at the first 'Chico-San'–the tailgate of his car. (8) Irv Hirsh getting a workout on the first rice cake machine (modified) in the United States. (9) Construction underway on a koji room at the Chico-San facility in Chico. (10) Bob Kennedy (right), president of Chico-San at its sale in 1985, standing in front of a new shipment of organic rice. (11) Meal time at the premier Chico picnic; still held annually at Hooker Oak Park. (12) Herman and Cornellia Aihara, hosting the 1964 New Year's Day celebration." Address: George Ohsawa Macrobiotic Foundation, 1511 Robinson St., Oroville, California 95965.

Address: Dep. of Food Science, Kagawa Univ., Ikenobe, Miki-cho, Kagawa 761-07, Japan.

8464. Yokotsuka, Tamotsu. 1985. Fermented protein foods in the Orient, with emphasis on shoyu and miso in Japan. In: B.J.B. Wood, ed. 1985. Microbiology of Fermented Foods. Vol. 1. Essex, England: Elsevier Science Publishing Co. xx + 371 + 14 p. See p. 197-247. [146 ref]
• ***Summary:*** This book chapter is very similar to Yokotsuka (1982), "Industrial application of proteinous fermented foods." However it contains some new, additional, and very interesting information, especially concerning history, on pages 198-209 as follows: Introductory definitions of

© Copyright Soyinfo Center 2014

enzymatic hydrolysis, *Aspergillus* molds, miso (whose per capita consumption in Japan is about half that of shoyu by weight), saké, mirin, amasaké. Table 1 shows "Per capita annual consumption of fermented foods prepared from *Aspergillus* moulds in Japan (1981)." Shoyu 10.1 litres. Miso 4.9 kg, sake 12.3 litres, mirin 0.6 litres, shochu 2.2 litres, rice vinegar 0.25 litres, (vinegar) 2.5 litres. Note: Beer 39.5 litres. Whiskey and other foreign alcoholic beverages 3.7 litres. Japanese population 117.85 million on 1 Oct. 1981.

Introduction (p. 197): There is a basic difference between the saccharification process used in Western countries and that of East Asia. In the West, the amylolytic enzymes that break down / hydrolyze starches into sugars are derived from malt, whereas in East Asia *Aspergillus* and *Rhizopus* molds have long been used as the source of these enzymes.

History: History of fermented proteinous foods in China: Chu (koji), chiang, shi or tou-shi [fermented black soybeans], chiang-yu (soysauce), shi-tche (the extracted juice of fermented black soybeans). History of shoyu and miso in Japan: Hishio, sho, soya or soy, miso or misho, tamari, miso-damari, tare-miso and usudare, shoyu, miso of today.

Shu [Qu; koji] was first mentioned in the *Shu-Ching* [pinyin: *Shujing*] written 3,000 years ago during the Chou [Zhou] dynasty (1121-256 BC), which stated that chu is essential for making alcoholic beverages. Two different colors of chu were described: yellow and white. "The most popular one, which had a yellow colour indicating perhaps *Aspergillus oryzae,* was called yellow robe. The white one is presumed to be *Rhizopus* or *Mucor* and was called white robe." Originally, chu was made in granular form and called *san-chu.* But by about AD 947-79 chu was developed in cake form called *ping-chu.*

Page 205: The difference between tamari, miso-damari, tare-miso, and usudare was not always clear, however in early documents they generally refer to the liquid obtained during the fermentation of miso or *sho* [*hishio*]. "Literally, Tamari or Miso-damari, or Tare-miso" means the liquid separated from the top of miso. "or drained off from the bottom of the kegs in which the miso or sho was stored, or filtered into a bamboo cage which is put into miso or sho. But according to such books as the *Honcho-bunsho* (AD 1487), *Shijoryu-hochosho* (AD 1489) and others (AD 1504, 1537), Taremiso or Usudare seems to have been the name for the liquid drained off or press-filtered from the boiled mixture of miso or *sho* [*hishio*] and salt water." But the word *shoyu* (written with the same characters as *chiang-yu* [*jiangyou*] in Chinese) did not appear in any of these books.

Shoyu: The word "shoyu," written with the same Chinese characters with which it is written today [these characters are pronounced chiang-yu / jiangyou, and mean "soy sauce"] in Chinese, first appeared in the *Ekirinbon Setsuyoshu* (AD 1598). The word shoyu literally meant the liquid obtained from *sho / hishio.* However, to confuse matters, the liquid obtained from miso or tamari (soybean koji fermented in salt water) was also called "shoyu" in these early days. Moreover, in the book *Yoshu-fushi* (AD 1686) shoyu was defined as *shi-ju* (*shi-tche* in Chinese), the liquid obtained from salted, fermented black soybeans. In yet another book, shoyu was defined as wheat sho. All these descriptions suggest that the word "shoyu" had a broad meaning in the beginning, and only later acquired the more specific meaning it has today–the liquid obtained from the mash [moromi] in which a moulded mixture of soybeans and wheat or barley was fermented in water in the presence of salt water with a high salt concentration. This gradually became clearly differentiated from tamari or a shi-tche like product made almost entirely from soybeans [plus salt and water].

During Japan's Edo period (1603-1867), great progress was made in the technology of making shoyu, and the scale of its production was enlarged. Many books from this period describe the manufacture of shoyu: *Ryori monogatari yorozu kikigaku* (1643), *Yoshufushi* (1686), *Honcho shokukan* (1692), *Wakan sansaizue* (1715), *Mankin sangyo bukuri* (1731), *Zoshu seiho* (1716), *Sake shoyu denjuki* (1785), and *Koeki Kokusanko* (1844).

The following is a summary of what these books say about how typical Japanese shoyu (*koikuchi shoyu*) was made at that time–about 300 years ago. As basic raw materials use 1 part soybeans and one part wheat kernels or dehulled barley. Gradually it was recognized that wheat gave better quality shoyu than barley. Soak the soybeans, then boil them. Roast the wheat kernels or barley, then crack into pieces. Mix the two main ingredients well, then place them between straw mats or in wooden trays where they will be naturally inoculated and, after 2-3 days, cultured with molds. The mold cultured materials were called *koji,* a word written with the same character as its Chinese counterpart, *chu / qu.* Judge the quality of the finished koji by its color: white, yellow or brown are good, while blue or black are bad. This suggests that *Aspergillus oryzae* or *Aspergillus sojae* were already recognized as the best molds for making shoyu. Set aside a small portion of good koji to use as a starter culture for making the next batch of koji.

To make the moromi mash: Mix the koji made from a mixture of 1 part whole dry soybeans and 1 part wheat kernels with 2.2 parts of water and 1.1 parts of salt. Store this mash for about 70 days in summer or 100 days in winter. Summer was thought to be the best season for making koji and moromi. Amazake was sometimes added to the shoyu mash to add natural sweetness to the salty taste.

The total population of Japan at that time was about 30 million; of these about 1.2 million lived in Edo (today's Tokyo) and these Edo dwellers consumed much more shoyu per person per year than is the case today. One typical wooden keg of shoyu at that time contained 14.4 liters [3.80 gallons or 15.22 quarts] which was said to be enough to

last one person one year (*Chohoroku* 1856, from *Shoyu-monogatari,* p. 5, written by N. Matsumoto, published by Kikkoman Shoyu Co. Ltd., 1976).

The two main centers of shoyu production in Japan were in Noda city and Choshi city, both of which were not far from Edo / Tokyo. Shoyu manufacture began in Noda and Choshi in 1561 and 1616, respectively. About 1.6 million kegs of shoyu were consumed in Edo, of which 1.5 million kegs were transported from the above two cities and the 0.1 million from places in Japan southwest of Tokyo, mainly Kishu [Wakayama prefecture], Tatsuno [a city in Hyogo prefecture, where light-colored shoyu {usukuchi shoyu} was invented in 1666], and Shodo-shima [an island in Kagawa prefecture in the Inland Sea of Japan]. Address: Kikkoman Corp., Noda-shi, Chiba-ken, Japan.

8468. Cook, Anne. 1986. Soybean farms look East for big profits from shrimp. *News-Gazette* (*Champaign, Illinois*). Jan. 11.
• ***Summary:*** Karl Sera, a native of Japan, has managed the American Soybean Association's Tokyo office for 15 years. Japan now imports about 174 million bushels of soybeans, 88% of them from the USA. Ten million cakes of tofu are sold each day in Japan. Sera believes the biggest growth area for soybean use in Japan is in feeding livestock. Japanese poultry and dairy cows are not presently getting the optimum amount of protein; the poultry need the protein from 20 million more bushels of soybeans and the dairy cows from 11 million more bushels. Though fish presently accounts for less than 1% of the feed industry, Sera thinks it has huge potential–especially in feeding shrimp. Dan Akiyama, a native of Hawaii and recent Texas A&M graduate, will soon leave for Singapore to tell industry representatives about a better, faster way to grow shrimp. Akiyama said the high cost of shrimp is linked to 4 main factors: low survival rates in the wild (less than 1%), increasing demand, decreasing supplies, and the expensive diet shrimp farmers now feed their 'livestock.' The current feed now costs $1,000 to $4,000 per ton; with more soy it will cost $400 to $600 a ton. It takes about 100 days for a crop of shrimp to mature for market. Akiyama stresses that raising shrimp is just like any other livestock business, but its under water.

In Asia and South America, where shrimp farming is growing the most rapidly, producers use about 7,500 tonnes/ year of soybean meal for shrimp feed. Akiyama believes that when industry leaders see the advantages of feeding more soy, that market is likely to expand to 375,000 tonnes.

In Japan, it takes longer for new agricultural ideas to be put into practice because they do not have an agricultural extension system as we do in the USA. Address: Staff writer.

• ***Summary:*** Miso, a product that has little or no recognition in the Triangle area, is the key to the success of American Natural Foods in Chapel Hill. John Troy is president of the fledgling company, Carol Rego is a major shareholder, and Larry Sarling is operations manager. The company's miso based line of natural condiments are now available in over 3,000 specialty food stores and supermarkets across America.

Troy started his company (named Linden's Elfworks) 8 years ago out of his home in the Triangle. He began by marketing a nutritious candy bar. A few years later the company moved to its present quarters at Suite 21, The Courtyard, in Chapel Hill and began developing Wizard Baldour's Hot Stuff. The company now has four products: Miso Mustard, Wizard Baldour's Hot Stuff, The Works, and Smoky Mountain Miso Sauce. Two more are under development: Sea Sauce (a condiment for seafood) and Spark! (a spicy powder condiment). The Miso Mustard is produced in Emeryville, California; the other three are made in Winston-Salem at Mrs. Campbell's Canning company. A photo shows John Troy at his desk talking on the telephone. On the wall behind him is a framed painting of a wizard; on his desk is a bottle of The Works.

• ***Summary:*** Eden Foods has a joint venture with Marusan (Japan), building a soymilk plant in Saline, Michigan. Some Marusan technicians are now working with them in Saline, building the plant. Its about half done and should be on stream by June or July 1986. They plan a big plant opening. The new Edensoy will be packed in Tetra Pak, which has a lower packaging cost.

In the last 2 months sales of Edensoy have been 40,000 cases of 30 packs per case. This is 600,000 packs/month. Each pack is 6.0 U.S. fluid ounces or 0.1875 quarts. So this is 28,125 gallons/month, or 337,500 gallons/year. Note: This is the first news of this exciting new venture. Edensoy soon became America's leading brand of soymilk and a very famous and profitable soy product. Address: Vice president, Eden Foods Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 800-248-0301 or 517-456-7424.

8490. Alpine, Lisa. 1986. Tofu business is down to earth. *Fax* (*The*) (*Fairfax, California*). March 18-31. p. 9.
• ***Summary:*** This is an interview with Paul Orbuch and Bill Bramblett, who run Wildwood Natural Foods. Paul and Bill are described as "super business people" who love Fairfax–which is why they have kept their business there, even though it has recently expanded and lower rents can be found in the industrial section of San Rafael. Wildwood, which put Fairfax on the map as the "Tofu capital of the world," has its roots in Fairfax. "Around 1978, the Good Earth health food store on Bolinas Rd. wanted to start selling their own sandwiches. So Paul Duchesne of Fairfax began making them in the Sleeping Lady Cafe kitchen. He created the brown rice and tofu sandwich which was his best seller and is still tops on the Wildwood orders today. As an offshoot to that success, Paul D. expanded his orders to include the other health food stores in the area.

"Bill Bramblett was the breakfast cook at the Lady and sampled many of Paul's sandwiches. He suggested that they join forces and start aggressively selling them in other parts of the Bay Area. Bill wasn't fooling around. He invested money and rented the space at 135 Bolinas Rd. with the idea of also manufacturing Tofu.

"Meanwhile Paul D. went to Boston [Massachusetts] to study macrobiotics with Michio Kushi, and Chris Smith took over his sandwich delivery business. Chris came up with the name Wildwood and Bill looked in the dictionary to see if it fit. Wildwood: 'a wood lane in its natural state.' Everyone decided it worked.

"Chris then went off to Boston to study and Paul D. returned to operate the sandwich making and get the Tofu production off the ground with Bill.

"After reading 'The Book of Tofu,' Bill and Paul D. realized it was no minor venture and in order to buy the equipment they would need more capital. Paul Orbuch and Frank Rosenmayr joined as investors and plans were drawn up to change the building to fit their needs. There was a lot of opposition from the town planning commission and private areas that held things up for four months. The permit complications and the necessary approval of the town planning commission pushed Bill to an impassioned plea in front of the town council that 'making sandwiches is a quiet business and bread is soft and acoustic.'

"During the first six months they lost money and the partners started taking an even more active interest in the business. Paul Duchesne stepped back and Bill took over the books and got a computer. Paul O. focused on production, distribution, product development and the graphics while Frank remodeled the facilities and put his management skills to work. Slowly, through organization, they formed a solid foundation for their business.

"The delivery routes grew and other fresh food companies started using Wildwood for their distribution. Today, outside distribution accounts for a healthy percentage of their business. They deliver to over 200 wholesale customers, three to six times a week. Wildwood has grown tremendously in the seven years since its conception and now includes two manufacturing locations for their wholesale business and a retail deli, all located in Fairfax."

"Why did they expand from a wholesale business to a retail Deli? 'The Deli is the lab where we can find out what is going to be popular in health food,' explained Bill."

"'The Deli gives us a chance to create new products and a way to serve them in other locations,' added Paul."

The Japan Natto Assoc. Tempeh Popularization Group has published many pamphlets]. March 21. p. 10. [Jap; eng+]
• ***Summary:*** Pamphlet title is "This is the health food of the 21st century." Goro Kanasugi is head of the Tempeh Popularization Group. Address: Kyoto, Japan.

8492. *Toyo Shinpo* (*Soyfoods News*). 1986. Tenpe no jidai. Daizu hakkô shokuhin "tenpe" ni tsuite. Jiaru-san e no teikôsei tsuyoshi [The age of tempeh. About this fermented soyfood. It has a strong resistance to thiosulphuric? acid]. March 21. p. 10. [1 ref. Jap; eng+]

8493. Noble Soya House Limited. 1986. Display ad: Soya. In Hong Kong, soya drinks outsell Coca-Cola. *Times of India* (*The*) (*Bombay*). March 23. p. 15.
• ***Summary:*** One of the most interesting, creative, well researched and well designed ads for soya foods ever seen in India. A full page ad interspersed with illustrations and logos.

© Copyright Soyinfo Center 2014

The text continues: "In the USA, they put soya into burgers. In the UK, soya foods earn millions every year.

"In Sri Lanka, soya flour has been added to bakery flour. And all over Europe, soya yogurt is already a rage.

"Enter Noble Soya House. A company that is getting into the exciting world of soya foods and beverages. With an investment of Rs. 11.8 crores [118 million rupees]. A company that is managed by some of the most experienced people in the foods industry. And is financially supported by two of the larger business houses in the country. Godrej. And Bhiwandiwalla, of Great Eastern Shipping fame. Both will participate in the equity and have Board representation.

"The other names: Beverage technology for the project is being supplied by Kibun of Japan, acknowledged international leaders in the field.

"Plant and equipment for beverages will be supplied by Alfa-Laval of Sweden, one of the world's largest suppliers of this equipment.

"Equipment and know-how for extruded soya foods will be supplied by Simon Food Engineers of the U.K., a major name in extruded foods.

"Distribution of products will be handled by Godrej Soaps Pvt. Ltd., who reach over 200,000 retail outlets countrywide. And by an established multinational firm that is a major force in specialised healthcare markets.

Engineered food: The technology that Noble House will be using is unlike anything presently available in India... Technology that makes soya possibly the single most versatile food source known to man. A food source that can be engineered into soft drinks, health foods, infant formulations, bakery products, meat analogues, dairy product analogues and more. Much more.

"And what makes all this particularly exciting is the fact that soya is actually a better food source than many of the foods that it is replacing.

"The richest vegetable protein source known: Soya protein is the only known vegetable protein that comes animal protein in quality. But that's not all. he soya bean has an exceptionally high protein content. As high as 40%... And that's why, worldwide, governments and health organizations have backed the development of soya all the way.

"The time has come: Noble Soya House could not have been timed better. Soya bean production in India has just crossed the 1 million tonne mark. By 1990, annual production of the crop is expected to have risen to 2½ million tonnes.

What's more, the processed foods industry of India has finally reached the take-off stage. The growing pace of urbanization, changes in social norms and changes in attitudes towards foods have all combined to create a truly large market for processed foods." "Ad Noble Soya House... looks set to lead the take-off.

"The idea is taking root: Land for the project has already been acquired near Bhopal, the heart of soya country. [Note: The Bhopal gas disaster was on 3 Dec. 1984–only about 15 months earlier]. Civil work has already begun. Plant and equipment have already been ordered, and installation will start by the middle of the year. Products specially formulated by Kibun using Indian raw materials have been tested with consumers in four cities, with a very favourable response.

"Commercial production of the first products will begin before the end of the year... To change forever the face of the processed foods industry." Address: Administrative building: Godrej Soaps Pvt. Ltd., Eastern Express Highway, Vikhroli East, Bombay 400 079.

8495. American Miso Co. 1986. Hand-crafted organic miso: Made in the USA (Ad). *East West.* March. p. 10.
• ***Summary:*** This one-third page vertical black-and-white ad begins: "Near the Smoky Mountains in the green, rolling country of western North Carolina, the Miso Master continues a centuries-old tradition of hand-crafted miso."

"Containing living cultures, they are truly a living food. Look for Miso Master in the refrigerated section of finer natural foods stores everywhere.

"With its velvety, creamy texture and its superb flavor, Miso Master miso is perfect for soups, dressings, dips, spreads and sauces. For free recipes using Miso Master miso, send a self-addressed, stamped envelope to: Great Eastern Sun, P.O. Box 327, Dept. H, Enka, NC 28728. From our kitchen to yours–traditional Japanese miso, made for you, in the USA."

At the top of the ad is an illustration (line drawing) of a traditional Japanese miso shop, with thatched straw roof and several wooden kegs and barrels outside. Near the bottom of the ad is the Miso Master logo, an illustration showing the head and shoulders of a Japanese miso master, with a knotted headband, in front of a large wooden vat of miso. Below it: "Distributed by Great Eastern Sun, 92 McIntosh Rd., Asheville, North Carolina 28806."

• ***Summary:*** George Horlings' book [report] on soybeans in Bangladesh–summarizing his work and that of others on soybean utilization and production–should be published within 2 months.

A Japanese nutritionist, Dr. Yoshimiko Kobayashi (a soyfoods expert), is now helping MCC; she is with a volunteer organization of Japanese doctors.

Bob Burns got 9 large seeded vegetable type soybeans for "edamame." He planted them and got a second generation of quite a few more. Both Bob and Slater make tempeh regularly. Several immigrants from Hong Kong are making tofu in Dhaka. Address: c/o MCC, P.O. Box 5, Maijdi Court, Noakhali, Bangladesh. Phone: 317065 or 316461.

8510. Sturgeon, Bruce. 1986. Great Eastern Sun, soymilk, and St. Peter Creamery (Interview). *SoyaScan Notes*. April 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** GES presently imports 3 containers a month of Ah-Soy. There are 3,000 cases/container and 30 packages/case. Each package is 180 ml. So this is 270,000 packages/month or 48,600 liters/month or 12,840 gallons/month or 154,081 gallons/year. Percentage of sales by flavor are vanilla 35%, original 30%, chocolate 18%, carob 17%. Sales have been flat for the last year due to increasing costs due to the poor exchange rate. They will soon make the product in the USA in Tetra Pak, but also continue to import some from Japan.

St. Peter Creamery in Minnesota has bought/licensed the Oberg patent. Their biggest customer is Ice Bean (soy ice cream). They are a dairy company that also makes cheese for Kraft. They have three plants and will soon move to or start a new one in South Dakota. Address: Director of Marketing, Great Eastern Sun, 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730.

8518. Maeda, Toshiie. 1986. Miso no furusato [The homeland of miso]. Tokyo: Kokon Shoin. 258 p. April. Illust. 20 cm. [124 ref. Jap]
• ***Summary:*** Contents. 1. The homeland of miso: The birthplace of miso. Cultural factors that gave birth to miso. 2. The paths of dissemination of miso: Southern and northern paths in China. The arrival of miso in Japan and its spread there. History of miso in Japan. 3. The taste and nutritional value of miso: Theories of change in miso. Miso in our lifestyle. 4. Miso as a commercial product: The movement of miso from producer to consumer. The price of miso. Future prospects for miso culture. Present status of changes in miso culture. Explore these new miso products from the principles of changes in miso culture. Proposal for the future of miso culture.

This creative book discusses miso's history, the present status of the Japanese miso industry, the future of miso in the westernized Japanese diet, and the fact that the use of miso mainly in miso soup presents a big problem. The first solution to the problem is to use miso in thick ketchup-like sauces. The second is to return to the non-salted fermented foods such as Japanese natto, Nepalese kinema, Indonesian tempeh, and Chinese fermented black soybeans (shi), which are the ancestors of miso. He emphasizes tempeh, which he feels is a wonderful food that can be used in various ways, and is nutritious and healthy. He explains that tempeh is becoming popular in the USA and Europe, and concludes that tempeh alone can be used to start a food industry. Address: Sozosei Kaihatsu Kenkyusho Shusai.

8519. **Product Name:** [Marusan Tempeh & Shrimp Crackers].
Foreign Name: Marusan Tenpe Ebi Senbei.
Manufacturer's Name: Marusan-Ai Co., Ltd.
Manufacturer's Address: Aza-Arashita, 1 Jungi-cho, Okazaki city, Aichi prefecture 444-21, Japan.
Date of Introduction: 1986 April.
Ingredients: Potato powder, sweet potato powder, tempeh, shrimp, kombu (seaweed), shoyu (soy sauce).
Wt/Vol., Packaging, Price: Poly bag, with window.
How Stored: Shelf stable.
Nutrition: Per 100 gm: Moisture 4.4%, protein 6.5%, fat 0.9%, carbohydrates 83.5%, ash 4.7%, calories 368, calcium 193 mg, iron 2.9 mg.
New Product–Documentation: Label. 1986, undated. 4.5 by 9.5 inches. Red, dark brown, and orange on white. Contains 10 crackers.

8520. **Product Name:** ["Big Bean" (Soymilk)].
Foreign Name: Dekamame.
Manufacturer's Name: Marusan-Ai Co., Ltd.
Manufacturer's Address: 1 Aza Arashita, Niki-cho, Okazaki-shi, Aichi-ken 444-21, Japan.

© Copyright Soyinfo Center 2014

Date of Introduction: 1986 April.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Shurtleff & Aoyagi. 1986. Soymilk Industry & Market. Update. "Marusan, Japan's second largest soymilk maker, as part of a diversification into health drinks to compensate for decreasing soymilk sales, introduces Dekamame ("big bean"), a soymilk in a liter Tetra Brik carton, made entirely from soybeans grown in Japan." Soya Bluebook. 1987. p. 90.

8521. Medoff, Marc. 1986. A guide to the best tofu "cheesecakes" in New York. *Whole Life.* April. p. 52-61.
• ***Summary:*** "Over the past few years there has literally been a tofu cheesecake revolution going on in New York City's natural foods restaurants, as top local chefs have been working overtime to come up with the perfect tofu cheesecake." Thirteen restaurants now offer them. "In terms of nutritional quality, all are far superior to any real cheesecake, although some are healthier than others. All of the cakes we rated were completely free of animal products. No dairy or eggs at all. None used sugar, white flour or any artificial or highly processed ingredients. The tofu cheesecake rated tops was made by Tokyo-born Keiko Ikeda (a woman; a large photo shows her holding her winner) at *Shojin,* 23 Commerce St. Phone: 989-3530. There wasn't even a close second. Keiko makes five varieties of toppings on one standard tofu cheesecake: strawberry, strawberry grape, strawberry kiwi, blueberry, and raspberry. The pies are baked fresh each day that the restaurant is open and are sold by the slice ($2.75 plain, $3.00 with topping) or by the pie ($17.00, eight slices, orders must be placed one day in advance). Keiko says one key is spending a lot of time squeezing the water out of the tofu before using it. The ingredients are: Tofu (nigari, firm), lemon juice, corn oil, vanilla, maple syrup, sea salt, organic whole wheat flour, organic whole wheat pastry flour, water, cinnamon, fresh fruit.

The second prize went to the two types of tofu cheesecake baked by Ricardo Williams at *Whole Grain* (7 West 19th St. Phone: 206-7518). The plain variety is probably the closest in taste to real cheesecake out of all the ones sampled. Ingredients: Tofu (fresh, firm), lemon juice, vanilla extract, almond extract, agar, maple syrup, toasted almonds, rolled oats, apple juice, blueberry kanten [agar].

Pretty much tied for second was the exceptionally good Tofu Pie made by master chef Alan Hoffman at the downtown *Souen* (pronounced SUE-en; 210 6th Ave. Phone: 807-7421). Ingredients: Tofu (firm, made by The Bridge), maple syrup, rice syrup, tahini, lemon juice, salt, vanilla, whole wheat pastry flour, whole wheat flour, whole fruit, agar, fruit juice. Louis Fellman, now president of Soy Delites (P.O. Box 56, Matawan, New Jersey 07747. Phone: 201-583-8907) developed an early tofu cheesecake at Spruce Tree Bakery. For more than a year Soy Delights "has been producing six varieties of the best commercially available tofu cheesecake we've seen. Fellman's Tofu Cream Pies are sold throughout New York by the slice (about $1.65 for 5 oz.) and by the pie (about $4.50 for 20 oz.) in natural food stores, supermarkets, and many restaurants. Photos show: Fellman with two of his Tofu Cream Pies. Alan Hoffman of Souen with a fresh batch of tofu pies. Margaret Bullard, the tofu cheesecake queen at Country Life. A rare photo shows two men preparing the late great "Tofu Teasecake" at *Angelica Kitchen.*

A half-page sidebar (p. 60) is titled "Tofu Cheesecakes–Gone But Not Forgotten." "The first commercially available (on a large scale) tofu cheesecake sold in the United States was put out by the *Sprucetree Baking Company* of Baltimore, Maryland. Sprucetree began marketing their two varieties of non-dairy tofu cheesecakes (strawberry and blueberry) way back in 1976. The product was sold in stores along the east coast and as far west as West Virginia, and enjoyed a good deal of popularity. Sprucetree founder and current President Howard Grundland recalled that his product was a first, and attracted a faithful following. But in 1983 a number of technical problems arose (including the fact that Sprucetree could not get a dependable supply of kosher tofu) and the company had to suspend its cheesecake production." Grundland says he would like to re-introduce his tofu cheesecake. "Anyone interested in buying into *Sprucetree* or just buying one of their original recipe tofu cheesecakes, can contact: Sprucetree Baking Company, 4200 Mortimer Avenue, Baltimore, Maryland 21215. Phone: (301) 358-8040.

"Another great tofu cheesecake that hasn't been around for a while is the Tofu Teasecake" that use to be a dessert favorite at *Angelica Kitchen* (42 St. Mark's Place. Phone: 228-2909)." Angelica owner Leslie McEachern and her staff stopped making it a couple of years back, feeling that it was too hard to digest and a bad food combination.

"And finally, the recently-gone-out-of-business *Cauldron* [Caldron] had a very good tofu cheesecake with fruit kanten topping..." Address: Editor and Publisher of Whole Life magazine.

8522. **Product Name:** Meridian Shoyu, and Tamari.
Manufacturer's Name: Meridian Foods Ltd. (Importer). Made in Japan.
Manufacturer's Address: Corwen, Clywd, LL21 9RR, Wales, UK. Phone: 0490 3151.
Date of Introduction: 1986 April.
Wt/Vol., Packaging, Price: 500 ml plastic bottles with twist-off lid.
How Stored: Shelf stable.
New Product–Documentation: Simon Bailey. 1988. Natural Choice. Aug. 15. "Soya-Based Products." A photo

8524. Shurtleff, William. 1986. Chronology and analysis of the U.S. tofu standards: One viewpoint. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 15 p. April. Unpublished manuscript. [1 ref]
• ***Summary:*** Chronology of key early dates: 1979 Feb. 9– Judith Rubenstein, acting as Institutional Consultant for the New England Soy Dairy, initiates a correspondence with Carol Tucker Foreman, Director of Child Nutrition Programs, USDA, on the subjects of tofu standards and acceptance of tofu in USDA Child Nutrition Programs, including the School Lunch Program. Four letters are exchanged between February and August 1979.

1979 June 29–FDA headquarters personnel draft an internal memorandum in which the agency's views on tofu and its attributes are set forth. Publication of a "pull date" on tofu packages is encouraged.

1979 July 23–Judith Rubenstein (see above) writes the Commissioner of the U.S. Food and Drug Administration (FDA) requesting that the FDA establish a standard of identity for tofu. She notes that Audrey Maretzski, Director of Nutrition and Technical Services for USDA, suggested that FDA give top priority to this issue. Issues of imitation tofu products and bacterial contamination are raised.

1979 July 25–In *Tofu and Soymilk Production,* Shurtleff and Aoyagi, directors of The Soyfoods Center, attempt to define the basic types of tofu and their composition.

1981 Jan. 20–Ronald Reagan is inaugurated as president of the United States. The regulatory climate in Washington, DC, begins to shift toward less federal regulation, and more encouragement for industries to regulate themselves.

1981 April–The USDA decides to establish tofu standards and to publish them in *Federal Register,* but this plan is dropped in September, amid controversy over changes in the school lunch program.

1982 July 19–In *Soyfoods Industry and Market: Directory and Databook,* Shurtleff and Aoyagi include a 5-page section titled "Soyfoods Terminology and Standards," which contains detailed information on tofu.

1983 March 14–The Connecticut Agricultural Experiment Station, in Bulletin No. 810, titled "Quality of Tofu and Other Soy Products," reports high bacterial and coliform counts. A virtual expose revealing the tofu industry's poor quality control and concomitant vulnerability, the report gets widespread media coverage and hurts sales of New England and New York tofu companies.

1983 July 25–Tom Timmins, president of Tomsun Foods Inc., having seen the need for tofu standards in the aftermath of the Connecticut report and as a prerequisite for acceptance of tofu in school lunch programs, speaks to the Soyfoods Association of America's board of directors at Denver, Colorado, about problems with sour and often undated tofu in America. The board asks Timmins to be head of a Soyfoods Association Standards Committee, and to appoint people to work with him in the development of standards.

1983 October 12–Timmins sends a 4-page survey letter concerning soyfoods standards to the 18-person Soyfoods Association Standards Committee that he has appointed.

1983 November–Various members of the Soyfoods Association discover that David Mintz, CEO of Tofu Time, Inc. and maker of Tofutti brand soy ice cream, is using *no tofu* in his product, although he has repeatedly appeared on national TV and radio programs displaying and talking at length about tofu, thus implying that his product uses it as a major ingredient. On Nov. 11 Shurtleff writes Mintz and strongly-worded letter threatening to report the matter to the FDA and the Securities and Exchange Commission (Mintz is about to launch his first public stock offering) if Mintz fails to stop such deceptive practices. Mintz's attorneys quickly notify Shurtleff that Mintz promises to put tofu back into Tofutti. Shurtleff, seeing the need for tofu standards to stop this sort of consumer deception, becomes active in the standards development.

1984 March 2–Based on responses to his October 1983 survey, Timmins drafts preliminary 3-page tofu standards (2 pages of which are microbiological standards), that he circulates to the Soyfoods Standards Committee, inviting comments. March 6, William Shurtleff expands these, keys them into The Soyfoods Center word processor, and returns them promptly to Timmins.

1984 Feb.–Timmins and Shurtleff draw up a ten-step set of procedures and a time line for appointment of a Tofu Standards Committee, development of two drafts of tofu standards, and final approval by the Soyfoods Association Board of Directors in July 1984.

1984 March 29–*First Draft of Tofu Standards,* 15 pages and double spaced, is compiled by Shurtleff on his word processor. As is inevitable with a document of this type, a basic philosophy that shapes the standards has begun to emerge. Essentially it attempts to balance the varied (and often conflicting) commercial interests of the various groups involved with the standards in a way that is as fair as possible to all, considers existing historical precedents

© Copyright Soyinfo Center 2014

and FDA laws, and allows tofu to develop and modernize in the way that it has been since the 1930s. One of the major questions that arises at the outset is whether or not the use of isolated soy proteins (isolates) should be allowed in tofu and, if so, under what conditions and with what labeling requirements. Readers of the first draft are polled on this question and the response is 17 to 4 in favor of allowing isolates, as long as each product is appropriately labeled.

In this first draft, the term "second generation" is first applied to soyfoods in the section titled "Naming Second Generation Commercial Food Products Containing Tofu."

By this time, Stephen H. McNamara, a food and drug specialist with the Washington, DC, law firm of Hyman, Phelps & McNamara is actively serving as an advisor on the standards, reviewing each draft, and making many helpful suggestions. Tom Donegan, of the same law firm, is also helping.

Subsequent drafts of the standards: 1984 June 16–Second draft. Nov. 1–Fourth draft. 1985 March 6–Sixth draft. March 20–Seventh draft, which is submitted to the FDA for comments. Then begins a serious inter-industry conflict over the standards which is documented throughout the rest of this document. Initiated by Ron Ishida, an attorney hired by Azumaya, this conflict ended up destroying the standards and preventing their adoption and implementation. 1985 Oct. 3–Eighth draft, incorporating all FDA suggestions.

A 2-page appendix to this document, titled "The Modernization of Tofu in Japan," gives a brief chronology of the many changes in the way of manufacturing "traditional tofu" from the 1930s to the present. It challenges the idea that "traditional tofu" is widely made today. Address: Soyfoods Center, Lafayette, California.

8525. Soppe, Fennie. 1986. Jonathan, Histoire d'un boucher reconverti. Interview de Jos Van De Ponseele [Jonathan. History of a reconverted butcher. Interview with Jos Van De Ponseele]. *Compas* (*Le*) (*France*) No. 26. p. 14-16. March/April. [Fre]

• ***Summary:*** It all started in 1974, when Jos's wife experienced serious health problems. There were suspicions of lung cancer. She went to Switzerland for care, and had a fever of 38-40ºC for 6 months without improvement. One day someone gave them a small book about natural foods. She then began to eat macrobiotically and her fever disappeared after 3 months.

At the beginning, this diet was not at all attractive. The food was very poor, and Jos began to ask himself questions and to read books on the subject. He learned that it wasn't a bad diet at all. Not wanting to have to prepare two types of food, he started to eat the same diet as his wife. His health did not improve much, but he found he had the capacity to work much more, and a need for less sleep. His days started at 6:00 A.M. and ended between 11:00 P.M. and midnight.

Upon seeing the results, he began to think and live differently. In the long run, the work at the butcher shop worried him. He no longer ate meat, but he was still selling it. That wasn't logical. He then decided to sell organic meat products at the butcher shop, and they sold very well. However that was a form of hypocrisy.

You must understand that at that time, macrobiotic people in the area were very fanatical. Meat was considered bad, in fact a poison. A more moderate viewpoint was needed; a bit of meat in itself is not bad, but its consumption in large quantities can present problems.

Jos opened two natural food shops in succession, and they were a success in part because he had experience in running a business. He tried to sell his butcher shop, which was very large. Through his new shops he met people who wanted to stop eating animal proteins, but they knew of no replacement. Back then, you could not find any tofu, or seitan, just beans. When a person decides to change her diet, she cannot fully benefit from the proteins in beans: the process is too slow. This made it hard for a person to change his or her diet.

Jos attended a seminar conducted by Michio Kushi at Drogen (Germany). They talked about these problems. Michio spoke to Jos about miso and tamari, and advised him to come to Boston, Massachusetts, where he could learn and see everything for himself. He did. Indeed miso and tamari were available, but they were made in a foreign country. He was somewhat deceived in the early days. Most of the products came from Japan. At the same time, he worked at the famous macrobiotic restaurant The Seventh Inn. He became friends with a Japanese person and they worked together making seitan. Finally, he started commercial production with two Americans.

Tofu was very well known, but it was made in [Boston's] Chinatown. The Chinese did not want to show others how to make it, but they were allowed to look. This interested him very much.

Upon returning to Belgium, after his studies in Boston, Jos began commercial production of seitan. At the beginning people were very closed. They thought that one should consume only beans. Their fanaticism seemed very natural to them, but that made it very difficult for Jos to survive economically by making only seitan. He started by producing 500 gm a week of seitan for Souen, a macrobiotic restaurant in Gent [Gand]. He urged the restaurant to serve seitan to each customer so that it would become well known. That was successful. After several months, the natural food stores began to order seitan from him; that was his goal. Subsequently he began to make fresh organic tofu. He encountered new opposition when he suggesting sterilizing the tofu, which would cause loss of vitamin C, etc.

People got to know seitan but they were getting tired of it, so now he has the seitan burger between two buns, with onion and lettuce. They are also thinking about introducing seitan brochettes and seitan in sauces. The starch left over

© Copyright Soyinfo Center 2014

from making large quantities is used in making soups, spreads for bread, goulash, etc.

How did his customers react initially to all this? They thought he was crazy–in 3 ways. (1) They thought macrobiotics was folly; (2) Who but a fool would sell a butcher shop that was doing so well, employed 16 persons, and was the first to sell organic meat with great success. They thought that America had made him lose his head; (3) They thought artificial meat was absurd and would not sell. But these people have changed their opinions as things have developed.

His best invention is seitan sold sterilized in jars; it is now a very successful product. He is also very proud of his tofu burgers (*les beignets, les ganmos;* made from tofu, sesame seeds, onions, mushrooms, and arrowroot), his sauces, and his mushroom tarts. Neither his soy croquettes nor his carob products sell well. His basic products are seitan, tofu, and mochi (made according to a traditional Japanese recipe). The company will soon focus more on exporting it products, especially to Germany, followed by France (starting in 1987) and Austria. He has created a company in France named Jonathan France (La Comba 24620, Les Eyzies. Phone 53.06.94.68), directed by Frenchmen, because it is very difficult to export to France; he has been trying for 2 years.

Black-and-white photos show: (1) A portrait shows Jonathan, with a large beard, rimless glasses, and thinning hair. (2) Twenty-three of his sterilized products in jars, which have a shelf-life of 2 years. Among these are Sojapastei, Sojaboont Jes, Azukiboont [Azuki bean] Jes, Brown Rice Casserole with Seitan, and Tofu Salade. The company is studying a tempeh spread for bread. The company now has 16 employees, including 3 in stores an a representative. Most of the employees like this food. Not all are macrobiotic but most have changed their diet, usually without fanaticism.

The company's name Jonathan comes from the name of the book *Jonathan Livingston Seagull* (Jonathan Le Goëland), about a seagull who wants to live differently. Jos believes that vegetable proteins can play an important role in world hunger. His dream, which he hopes to realize, is to establish small food companies in Zaire, Rwanda, and all of southern Africa. "For example, a small tofu machine can produce 800 to 1,000 cakes of tofu/day. I would like these people in poor countries to be able to make tofu themselves."

Jos is not a vegetarian. He still likes meat and eats it in small quantities, often fish or organic meat. He has 3 children. Address: Pays-Bas (Netherlands).

8526. **Product Name:** [Soy Sprout Tofu].
Foreign Name: Haiga Tôfu.
Manufacturer's Name: Taisei Sangyo.
Manufacturer's Address: Okayama Prefecture, Japan.
Date of Introduction: 1986 April.
New Product–Documentation: Toyo Shinpo (Soyfoods News). 1986. April 1. p. 5. The product, invented by Katsushi Oguchi, President of Taisei Sangyo, of Okayama prefecture, is produced and marketed by three companies now. Taisei makes the sprouting machine. The product is easier to digest than regular tofu.

• ***Summary:*** Contains three photos. Address: Kyoto, Japan.

8529. Gupta, Rajendra ("Raj") P. 1986. Re: Selling tofu in Kanpur, India, and soymilk equipment to developing countries. Letter to William Shurtleff at Soyfoods Center, May 9. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "It is not even one year since we started selling tofu to consumers in Kanpur [India] and suddenly every one seems to be interested in soyfoods in India.

"There is a great deal of interest here in our process, and it is likely that we would have a tie up with a few companies for the use of our process. APV Crepaco (USA), APV Texmaco (India) and Kurihara (Japan) have begun making soymilk equipment based on our process. Some companies here are also interested in no-beany soymeal. I am hopeful that my extended stay here (up to the end of Aug. 1986) will help move things at a reasonable pace.

"Godrej, a large business house here, is setting up a 4000 liter/hour soymilk plant with know-how from Kibun and equipment from Alfa-Laval. Kalyan Solvent Extraction Limited is expected to setup a similar size plant with process and know-how from us and equipment considering to go into large scale soymilk production. In addition, we have enquiries from 50 companies keenly interested in setting up small scale tofu and soymilk operations similar to ours in Kanpur. Several of them have made deposits with us of up to

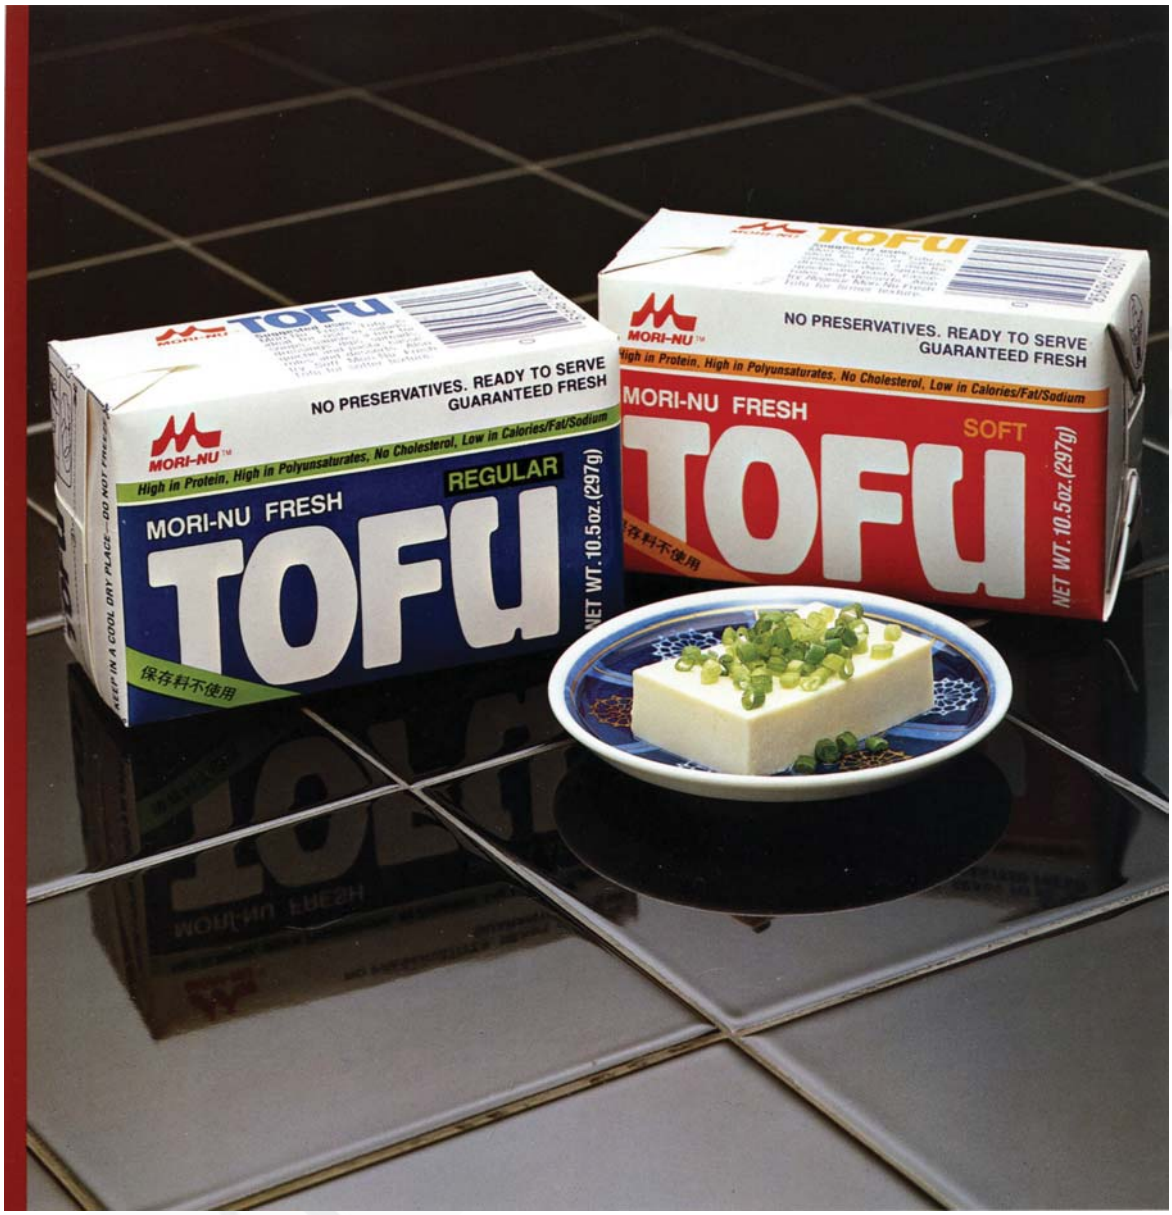
[Separation and gas chromatography of esterified and free organic acids in miso]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 60(5):385-87. May. [12 ref. Jap; eng]
• ***Summary:*** A method for extraction of lipids from miso and successive detection of ethyl esters, total glycerides and free organic acids was developed. The yield of the first diethyl ether extract obtained by this method was about twice that of the conventional celite filtration method. This procedure is rapid and reliable. Address: Dep. of Home Making, Iida Women's Junior College, Matsuo 610, Iida-shi, Nagano 395, Japan.

8539. Miller, Susan. 1986. Tempted by tempeh: This Indonesian specialty tantalizes Western palates. *East West.* May. p. 18-19. [1 ref]
• ***Summary:*** A good introduction to tempeh. The article starts: "Fragrant, delicious, and versatile, tempeh (pronounced TEM-pay) has become one of the most important protein foods in America's move toward a meatless, natural, and nourishing diet. It joins such notables as camembert, Brie, and Roquefort cheeses, classic Japanese misos, and naturally brewed soy sauce in the panoply of mold-cultured foods that have found acceptance in an evolving American cuisine."

It concludes: "*The Book of Tempeh* contains many recipes, as well as detailed instructions for making tempeh at home and sources of tempeh starter.

© Copyright Soyinfo Center 2014



"Whether you make your own or purchase it from a natural foods store, tempeh is sure to become a favorite in your household. As you come to know its qualities of versatility and convenience, you may even begin to find it indispensible." Address: Freelance writer, New York City.

8540. Morinaga Nutritional Foods, Inc. 1986. The freshest tofu you can buy... Guaranteed! (Portfolio). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. Ten inserts. 30 cm.

• ***Summary:*** This glossy color portfolio, which is both a manufacturer's catalog and a press/buyer's kit, contains 10 separate information sheets, most in color. Mori-Nu tofu comes in a newly-redesigned package; the word "silken" no longer appears on the front panel.

The main inserts are: (1) Mori-Nu Fresh Tofu consumer benefits: Freshness, convenience. (2) Merchandising objectives. Location: Next to water-pack tofu in the produce section. Facings: A minimum of 2 facings of regular and 1 facing of soft. (3) Mori-Nu Fresh Tofu trade benefits: More profits, customer satisfaction.

(4) Morinaga Nutritional Foods, Inc. introduces Mori-Nu Fresh Tofu: The only tofu that's guaranteed fresh everytime. (5) What is tofu?

(6) Who makes the freshest tofu you can buy? Morinaga Milk Industry Co, Ltd., located in Tokyo, Japan. Established in 1917, the company is one of the world's largest dairy food manufacturers, with 1984 sales of $1.3 billion.

(7) American tofu market. At the end of 1983 there were: 191 U.S. tofu manufacturers. 54 million pounds of tofu produced (Plus 1.26 million pounds imported). $53 million retail sales–and growing at 15% per year. Address: Los

• ***Summary:*** Questions and answers about this soymilk. The shelf life is 1-2 years. It is sweetened with barley malt made from sprouted barley. It contains less than 1% added oil. Other soydrinks seasoned with seaweed averaged 144 mg of sodium per serving vs. 125 mg for WestSoy. Address: Emeryville, California.

8545. Forman, Gail. 1986. Where's the beef? Just substitute bean curd skin. *Washington Post.* June 15. p. K1, K6.
• ***Summary:*** Special to the Washington Post: Bean curd has a 2,000 year history [sic] as a dietary staple all over East Asia and recently it has developed a following in the United States. Less well known is a relative of bean curd called "bean curd skins."

Before the coagulant is added to hot soy milk to make bean curd, "a thin skin forms on top, much like the skin that forms when cow's milk or cream is heated... This very thin skin, carefully lifted off and hung up to dry, is called tiem jook [sweet dried yuba] by the Chinese, yuba by the Japanese. In English it goes by the various names of bean curd skin or tofu skin, bean curd sheets and bean curd robes."

Note: This is the earliest English-language document seen (Oct. 2012) that uses the word "robes" or the term "bean curd robes" to refer to yuba.

The thinner the bean curd sheets, the better. Oriental groceries stock them in various dried forms: flat sheets, rolls, folded sticks, strips, circles, and small triangles. They are brittle and break easily, but last almost indefinitely without refrigeration. Some grocery stores now also sell fresh and frozen bean curd skins, which are easier to handle and more flavorful than dried.

Bean curd skins first became widely used millennia ago in Chinese Buddhist vegetarian cuisine, where they were used in place of meat–as in mock Peking duck. They are widely used as wrappers of almost any small packet of tasty ingredients. Steamed bean curd sticks [dried yuba sticks], made of rolled or folded sheets, add substance to a bowl of vegetable broth.

Contains the following recipes, from various restaurants, for using bean curd skins: China Harbor lobster roll (a good way to stretch a small amount of lobster). Meat stuffed bean curd skins (calls for "2½-inch square pressed bean curd"). Yellow birds (vegetarian). Mock Peking duck (vegetarian). Bean stick soup. Steamed fish with bean curd sticks (calls for "2 ounces bean curd sticks, broken into 2-inch sections"). Fukien stuffed shrimp in bean curd skins. Buddha's delight (vegetarian).

Note: This very creative article is the first to mention the word "yuba" in a major American newspaper. Address: Japan.

project development report from Japan Natto Association. To make the industry more versatile and active. Second generation products are hoped for]. June 21. p. 9. [Jap; eng+]
• ***Summary:*** The techniques of making tempeh are already well established. The water content and cracking/dehulling the beans are the two key subjects. This report was presented to Japan's Department of Agriculture (*Nosuisho*) in April 1985 by the Japan Natto Assoc. The total budget was 18.1 million yen ($80,000). The project was done at Takashin Shokuhin Ltd. in Tokyo. Members of the research project were Goro KANASUGI and Haruo NITTA (President of Teito Shokuhin KK), Mitsuaki YAMANAKA (Head of Takashin Research Lab.). Head researcher was Makio TAKATO (President, Takashin). Address: Kyoto, Japan.

8550. *Toronto Star* (*Ontario, Canada*). 1986. Try the Kiku platter: Table for Two. June 24. p. H5.
• ***Summary:*** "Table for Two" is the Star's daily restaurant review. This is a review of the Japanese restaurant Kiku located at 1560 Yonge St. (at St. Clair Ave. Phone: 920-9922).

You are the chef at this recently opened restaurant, which is nearly identical to the first Kiku on King St. West. A as barbecue is sunk in the middle of each table.

"The menu offers several entrees that come with miso soup (containing soybean curd with [sic] tofu and green onion), steamed rice, three vegetables or salad, and green tea."

Note: Tofu is the same as soybean curd.

8551. *Los Angeles Times.* 1986. Packaging breakthrough extends life of tofu. June 26. p. L35.
• ***Summary:*** About Mori-Nu Tofu, recently introduced by Morinaga Nutritional Foods Inc. of Los Angeles. A photo shows two tofu packages. Gives a recipe for tofu meat loaves with ground beef. Address: California.

8552. Belleme, Jan; Belleme, John. 1986. Cooking with Japanese foods: A guide to the traditional natural foods of Japan. East West Health Books, 17 Station St., Brookline, MA 02146. xi + 220 p. Illust. Index. 25 cm. [45 ref]
• ***Summary:*** A good study from a macrobiotic viewpoint, with more than 200 macrobiotic recipes. The authors studied in Japan and speak Japanese. Contents: Foreword. Acknowledgements. Introduction. Fermented Foods: miso, shoyu, tamari, brown rice vinegar, sake, mirin, koji, amazake, pickles, umeboshi, ume su, medicinal teas, ume extract, bonito flakes, natto. Noodles: cooking noodles, udon, soba, somen, clear noodles. Grains, incl. rice, mochi, seitan, fu gluten cakes, hato mugi [*hatomugi*] (Job's tears), rice syrup, rice bran. Vegetables: shiitake, daikon, Hokkaido pumpkin, Chinese cabbage, burdock, jinenjo, lotus root. Sea vegetables: kombu, nori, wakame, hijiki and arame, kanten (agar). Beans: azuki beans, black soybeans, tofu. Condiments: kuzu, dark (toasted) sesame oil, goma (sesame seeds), tekka, shiso momiji (shiso leaf condiment), wasabi. Teas. Cooking utensils. Appendix: Composing meals, pronunciation guide, suppliers. Bibliography.

Amazake (p. 39-45). Contains a ½ page description plus good instructions for making basic amazake (thick "pudding" and thinner beverage), both from glutinous ("sweet") rice. Also recipes for Vanilla Amazake Pudding, Amazake Cream Puffs, Neapolitan Parfait, Carob Amazake Brownies, Bob's Coconut Amazake Macaroons, Amazake Bread (yeasted), and Unyeasted Amazake Bread. Perhaps the most lengthy information on amazake available in English up to this time.

Hato mugi ("Job's tears," p. 93) "resembles barley, but it is actually a member of the rice family. An easily digestible whole grain with only the tough outer husk removed, hato mugi contains less vitamin B-1 than brown rice but approximately twice as much protein, iron, vitamin B-2, fat, and slightly more calcium." It has long been used in China and Japan as a medicinal food, "for strengthening the stomach, purifying the blood, and restoring health. Since it is so effective in helping the body to discharge toxins, people who are sick and weak, and women who are pregnant, nursing a baby, or menstruating should eat it sparingly." Address: Rutherfordton, North Carolina.

8567. West, Janet. 1986. San Jose firm makes tofu the old fashioned way [Kenny Nozaki of San Jose Tofu Co.]. *San Jose Business Journal* (*California*). July 28. p. 1, 18.
• ***Summary:*** Chester Nozaki, age 29, is waiting anxiously to replace his father, Ken Nozaki, age 53, as the owner of the San Jose Tofu Co. A photo shows Ken Nozaki in the foreground ladling curds in to a tofu pressing box while Chester stands in the background tasting tofu. Ken Nozaki has been running one of the only hand-made tofu operations in the Bay Area for almost 40 years. Last year Nozaki's company sold $80,000 in tofu and Japanese retail food products. Nozaki makes about 420 blocks of tofu a day at $1 a block, while competitor Azumaya makes 24,000 a day for as low as 53 cents a block. A major competitor is Fuji Tofu Co., owned by Mr. Kake, located just one block away. Fuji started out making tofu by hand 25 years ago, but they switched to a four-step automation process when "the manual way became too time consuming." Fuji also sells its tofu for $1 a block. Cheser Nozaki plans to modernize and partially automate the store's equipment and marketing strategy. He also intends to improve his Japanese so he can communicate with the majority of the store's customers.

8569. American Soybean Association. 1986. Soya Bluebook '86. St. Louis, Missouri: American Soybean Assoc. 278 p. July. Index (bold face type indicates advertiser). 22 cm.
• ***Summary:*** Contents: Index of advertisers (p. 4). Soybeans: Your profit opportunity, by Dr. Kenneth L. Bader, CEO, ASA (p. 5). Organizations (by country, within each country alphabetically): For each gives the name, address, contact person, year founded, number of members, objectives and activities, publications. Countries are: USA, Australia, Austria, Bangladesh, Belgium, Brazil, Canada, England, Germany (Federal Republic of), Finland, France, Hungary, India, Indonesia, Italy, Ivory Coast, Japan, Malaysia, Mexico, Netherlands, Norway, Philippines, Portugal, Senegal, Spain, Sweden, Taiwan, Turkey, Yugoslavia, Zaire, Zimbabwe. U.S. agricultural education, research & extension (by state; mainly state agricultural / land-grant colleges), ASA international offices and world regions (colored world map and photo of each country director), government trading agencies.

Soy directory: Oil extraction plants / refineries (alphabetically by state in USA, then by country), soyfoods / edible soy products manufacturers (lecithin, soy flour, soy grits, soy protein concentrates & isolates, textured soy protein, binders, extenders, simulated meat products, soy oil products {margarine, shortening, cooking / salad oil, salad dressings}, soyfoods–beverages [soymilk], frozen desserts, soy sauce, tempeh, tofu, whole soybean snacks {soynuts}, other soy-based foods), within each product by country, producers of soy products for industrial manufacturers (by products, etc.): Industrial lecithin, industrial soy flour / soy protein, industrial soy oil, soy sterols and tocopherols, soybean fatty acids.

Soybean manufacturing support industries: Manufacturing equipment & supplies, soybean processing equipment & supplies, manufacturing services. Marketing and auxiliary services: Brokers, financial services, forwarding agents, marketing consultants, trading companies, transportation, warehousing–export / import.

Soy statistics (tables & graphs): Soya conversions [weights & measures], metric conversions, temperature conversions. U.S. soybean planting and harvesting dates (by state). U.S. soybean acreage, yield and production, 1925–1985 (by year). U.S. soybean planted acreage by state (1970–1985). U.S. soybean harvested acreage by state (1970–1985). U.S. soybean yield by state (1970–1985). U.S. soybean production by state (1970–1985). U.S. soybean production major crops (1920–1985): One graph each for soybeans, corn, wheat, and cotton. U.S. harvested acreage of major crops (1920–1985): One graph each for the big 4. U.S. yield per acre of major crops (1920–1985): One graph each for the big 4. Argentine soybean area, yield and production by province (1975-1986). Brazilian soybean area, yield and production by province (1975-1986). Canadian soybean production: Acreage, yield, production, farm price and value (1950-51–1984-85). Canadian soybean production and utilization (1950-1984, year beginning Aug. 1): Production, imports, supplies, exports of beans, processed for oil and meal, soy oil produced, soybean oilcake produced. World soybean production: Area and production in specified countries and the world total (1980/81–1985/86). Soybean production by major countries (one graph, 1925-1985): U.S., Brazil, PRC [China], Argentina. Share of world soybean

production [percentage] by major countries (one graph, 1925-1985): Big 4. Soybean acreage by major countries (one graph, 1925-1985): Big 4. Share of world soybean acreage [percentage] by major countries (one graph, 1925-1985): Big 4. U.S. soybeans: Supply, disposition, acreage, yield and price (1970–1986). Soybean usage in the U.S. for crush and exports (one graph, 1925-1985, million bushels). U.S. soybean exports: Percent of total usage (one graph, 1925-1985). Argentine soybeans and products (oil and meal): Supply and disposition (1975/76–1986/87). Brazilian soybeans and products (oil and meal): Supply and disposition (1975/76–1986/87). Prices of U.S. soybeans, No. 1 yellow: Average price per bushel, Illinois country shipping points (by year and month, 1950–1984, dollars). Prices of U.S. soybeans received by farmers: Average price per bushel (by year and month, 1950–1984, dollars). U.S. soybean price support operations (1945-1985, incl. CCC). U.S. soybean crop value: U.S. and major producing states (1925-1985): Illinois, Iowa, Indiana, Ohio, Missouri, Minnesota, Arkansas. Fold-out color map of U.S. soybean acreage by county. U.S. farm marketings of soybeans: Percent of open market farm sales by month (1975/76–1984/85). Map of U.S. soybean processing plants. Value of U.S. soybean products per bushel and crush margin (1950-1984): Soy oil, soybean meal, soybean price (received by farmers, No. 1 yellow Illinois), margin (ditto). U.S. soybean meal: Prices paid by farmers–44% protein, dollars per 100 lbs, by year and month (1950-1984). U.S. soybean meal: Average wholesale price–44% protein, dollars per ton, bulk Decatur, Illinois, by year and month (1950–1984). U.S. soybean meal: Beginning stocks, production, exports and domestic disappearance, by year and month, thousand short tons (1978/79–1984/85). U.S. soybean cake and meals: Supply, disposition and price (1977-1985): Soybean, cottonseed, linseed, peanut. Major world protein meals: Supply and utilization (1981/82–1985/86; Production, exports, imports, consumption, ending stocks): Soybean, cottonseed, rapeseed, sunflowerseed, fish, peanut, copra, linseed, palm kernel. World major oilseeds: Supply and utilization (1981/82–1985/86). World major vegetable and marine oils: Supply and utilization (1981/82–1985/86). Prices of U.S. soybean oil: Soy oil, domestic crude, average cents per pound in tank cars at Midwestern mills, by year and month (1950/51–1984/85). U.S. soybean utilization, by year (1960-1984): Food–Shortening, margarine, cooking and salad oils, other edible, total. Nonfood–Paint and varnish, resins and plastics, fatty acids, other inedible (incl. soap), total. Total domestic utilization. U.S. soybean oil value as percent of total soybean value (1930–1985). Note: Peaked at about 55% in 1930, fell to about 32% in 1980-81. U.S. soybean oil: Supply, disposition and price (1960-1985). U.S. edible fats and oils: Supply and disappearance (1978-1985): Coconut, corn, cottonseed, lard, palm, peanut, soybean, sunflower, tallow (edible). U.S. exports of soybeans, by year and month (1953–1984). U.S. soybean exports by port and country of destination (Sept. 1984–Aug. 1985): Ports are–St. Lawrence Seaway, Lakes, Atlantic, Gulf (by far the largest), Pacific, Interior. U.S. exports: Soybeans–Volume of exports by country of destination (in metric tons) and total value (1981–1985). U.S. exports: Soybean oil–Volume of exports by country of destination (in metric tons) and total value (1981–1985). U.S. exports: Soybean oilseed cake and meal–Volume of exports by country of destination (in metric tons) and total value (1981–1985). Map of U.S. soybean exports by port areas: Sept. 1984–Aug. 1985 (1,000 bushels). U.S. exports of soybean, cottonseed and sunflowerseed oils: U.S. commercial and P.L. 480 exports–Volume of exports by region and country of destination (in metric tons) and total value (1979/80–1984/85; year beginning in October). U.S. exports: Soybean oil–P.L. 480, Title I and III, volume (in metric tons) and value (in $1,000) by country of destination (FY 1981–1985). U.S. exports of soybean and cottonseed oils: U.S. commercial and P.L. 480 exports (1950–1984, million lbs; incl. P.L. 480 as a percentage of the whole). Brazilian exports of soybeans and products to major countries (1,000 metric tons; 1976-1984). Graph of soybean & product exports by major countries (U.S., Brazil, Argentina) (soybean equivalent; 1970-1985). Graph of world share of soybean & product exports by major countries (U.S., Brazil, Argentina) (1970-1985). Note: U.S. share has fallen from 95% in 1970 to about 50% in 1984.

Glossary: General terms, soy protein terms. Standards & specifications: NSPA, Association of American Feed Control Officials (AAFCO), USDA (definitions and grades). Index. Address: P.O. Box 27300, St. Louis, Missouri 63141.

• ***Summary:*** Japan's second largest soymilk maker, after Kibun, is Marusan-ai K.K. (Head office: Araki 1 banchi, Nikimachi Aza, Okazaki-shi, Aichi-ken, Japan. President: Koji Sato). They have recently established a joint stock company to produce soymilk in Saline, Michigan. Production is scheduled to start at the end of August, 1986.

The new company's name is American Soy Products. The start-up capital is $200,000. There are 4 Japanese companies and one U.S. company involved. Their respective percentage ownerships are: Marusan-Ai (25%, soymilk and miso maker from Okazaki), Kawatetsu Shoji (25%, the New York based company that was previously in charge of exporting soymilk to Eden Foods from Japan), Eden Foods Inc. (25%, natural foods distributor and importer from Clinton, Michigan), Muso Shokuhin (15%, macrobiotic and natural foods exporter from Japan), and Seikensha (10%, soymilk equipment maker from Tokyo).

The chairman of the board is Mr. Michael Potter of Eden Foods Co. and the president is Mr. Hiroyasu Iwatsuki. As before, Eden Foods will continue to distribute the soymilk. The head plant is located in Saline, Michigan (50 km west from Detroit) on a site of 15,000 square meters. The main facilities are 1 Soymilk Line and 2 Tetra packaging lines. The initial run is scheduled to produce 100,000 packages of 250 ml equivalent. They are actually going to make both 250 ml and 1-liter packages. The company's first year sales goal is $5,000,000. Address: Kyoto, Japan.

8581. Torii, Yasuko. 1986. New developments with tofuyo in Japan (Interview). Conducted by William Shurtleff of Soyfoods Center, Aug. 9. 4 p. transcript.
• ***Summary:*** This interview was conducted during a visit by Mrs. Torii to Soyfoods Center in Lafayette, California. She brings tofuyo made in Okinawa. Dr. Masaaki Yasuda in Okinawa says this is the "real thing," made my a good company that uses awamori. It is very expensive: 2,500 yen for a small container. It does not have a sharp flavor; it reminds Akiko of sea urchin (*uni*). She says it is a "delicacy" (*chinmi*).

The other maker is Urizun, which is also a restaurant; they are bigger and more modern, and they use raw alcohol instead of awamori.

The small number of makers of this traditional food belong to a trade association (*kyodo kumiai*) named *Okinawa Dento Shokuhin Jigyo Kyodo Kumiai,* located in Naha, the capital of Okinawa. It is now widely available via the *yoi shokuhin o tsukuru kai* (the society for making good foods). They are very strict about quality, and starting 5-6 years ago they have had a corner in Matsuzakaya and Sogo department stores.

Tofuyo is eaten a tiny bit at a time on the point of a sort of toothpick (*yôji,* or with chopsticks) while people are drinking saké and eating.

Mrs. Torii's parents were born in Okinawa. Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

at the UN University Workshop on "Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies." Held June 1983 at CFTRI, Mysore, India. [7 ref]
• ***Summary:*** Contents: Introduction (ways of classifying traditional foods). Structural characteristics of traditional food industries in Japan. Traditional food processing technologies. Problems and reevaluation of traditional foods. New food processing technologies applied to traditional foods. Technologies applicable to traditional foods. Assessment in modernization of traditional food production. Some activities related to traditional foods. Conclusion.

Traditional foods can be classified as staple or non-staple, fresh or processed (processing technologies include fermentation [e.g. miso, soy sauce, natto], salting, acidifying, drying after freezing [kori-tofu], sun-drying, fractionation [tofu], fabrication [ganmodoki], simulation of animal foods [soy milk, ganmodoki, su-ho-tai made from yuba in China]), animal or vegetable origin, and region or national production.

In Japan, rice consumption is decreasing year after year. It is thus not surprising that consumption of traditional foods closely associated with rice production are also decreasing. The reevaluation of traditional foods and their advantages and disadvantages are discussed. New food processing and packaging technologies are being applied to traditional foods, including tofu, miso, natto, and koji. Recently a method has been found to extend the shelf life of natto beyond the traditional 1-2 day period. Miso has been freeze-dried.

"Another application of a new process for the traditional foods is the emulsion curd which is a semi-solid mixture with definite proportion of soybean protein, oil and water. It keeps its form without flow. Even the dried or frozen product recovers its original texture by hydration or thawing. Therefore, it is used as a substitute in dried or frozen *Tofu.* Regular *Tofu* cannot recover its texture once it is frozen or dried...

Miso can be enriched with vitamin B-2 and calcium, and its salt content lowered. Since 1980 the Laboratory of Food Science at Kyoritsu Women's University has been conducting a research survey on traditional foods and dishes in Japan in cooperation with the Cooking Research Laboratory. "This project consists of three components: (a) survey of the present status of traditional foods on local basis at respective regions by visiting prefectural research organisations–universities and colleges; (b) sending questionnaires to students for seeking information on the position of the traditional foods in the dietary patterns of individual homes and also to obtain their comments on the future prospects of the local traditional foods; (c) and documentation regarding local traditional foods, followed by classification according to preparation or cooking method for analysis. On the basis of the collected data, the relationship between each local traditional food and its natural, cultural and historical background has been studied and published in the university's journals. More efforts are being made to identify the reasons as to why and how some traditional foods have survived in certain regions, while the others have disappeared or reached the verge of extinction.

"Another related activity is the one carried out by Ajinomoto Company, a major food manufacturer in Japan, which has got the modern audio-visual media, video-tapes and 36 mm-films. Their team has been documenting the processing of some selected traditional foods like *Tofu, Yuba, Fu* and such other foods as demonstrated by professionals by using the old traditional methods and facilities. This would help in the documentation of traditional technologies before they disappear in the event of modernisation of such foods. Such tapes and films have been made available by the company...

"Traditional foods, especially those of plant origin, are prepared by such complex multi-step processes as to be called 'products of human wisdom.' Therefore there is so much to learn from such products if serious attention be paid. Indeed they have great potential for developing new food industries." Address: Kyoritsu Women's Univ., Tokyo, Japan.

Postfach 10 41 07, D-2000 Hamburg 1, West Germany. 17 p. Held on 24 Sept. 1986 at the Sheraton Hotel, Arabellastr. 6, Munich, Germany. [Ger]
• ***Summary:*** Held in Munich with 100 attendees, the conference was sponsored by Bernd Lehmann, International Consultants on the occasion of the IKOFA conference. It featured three speakers, a soy product exhibit (samples were flown in from around the world), and a tofu-based delicatessen buffet at which 24 recipes (12 warm and 12 cold) and were served. Many of these were prepared from Galactina or USA tofu or soy products. The proceedings list all recipe names and ingredients (in German).

The one day program (11:00 AM to 2:30 PM) was as follows: 1. Introduction by Dr. Siegfried Domin. 2. "Tofu: Production, characteristics, and advantages" by Dr. Peter Speck of Galactina. 3. Presentation of products for sampling from the USA, Japan, and Switzerland. 4. Tofu Buffet Lunch. 5. "The most interesting tofu new product developments from America" by Domin. 6. "European tofu products" by Speck. 7. "Development of the tofu market in Switzerland" by Ulrich Bringold of Galactina (see translation). 8. Discussion. Address: Munich, West Germany.

8601. Chandler, William U. 1986. The changing role of the market in national economies. *Worldwatch Paper* No. 72. 57 p. Sept. 22 cm. [71* ref]
• ***Summary:*** Contents: Introduction. Efficiency in Agriculture. Efficiency in energy use. The equity question. Changing reliance on markets. Conclusion.

"From the end of World War II until recently, centralized state-planning served as a model for almost half the world. Newly independent Third World countries faced with the choice between centralized control and market orientation usually chose the former. That their foreign rulers had been capitalists turned them against market systems...

"The world today is poised at a turning point in economic management. The abrupt Chinese shift to market mechanisms is the most dramatic example, not only because of the vast population affected, but because of the reform's spectacular early successes. Many African nations, plagued with agricultural decline, have begun to extend market incentives of agriculture. Latin American nations, plagued with debt, have moved to sell off state-owned companies. The World Bank has helped spur this movement by

© Copyright Soyinfo Center 2014

providing technical advice and financial assistance."

In terms of grain productivity, the countries with the highest land productivity are the UK (6.6 tonnes/ha), France (6.0), Hungary (5.4), East Germany (4.5), and the USA (4.4). The countries with the highest labor productivity (in metric tons per worker per year) are the USA (160.3), the UK (57.3), France (34.2), West Germany (29.2), and Hungary (23.6). All of these countries (including Hungary, but excepting East Germany) have market-oriented economies. Countries with a centrally planned agricultural sector generally fall far behind in these two crucial measures. The leaders are East Germany (4.5 / 14.9), Soviet Union (1.4 / 8.5), and Yugoslavia (4.2 / 5.2). "Agricultural productivity has fallen in virtually every centrally planned nation over the last 20 years. Farm productivity continues to increase in market-oriented nations.

"The Hungarian model holds important lessons for the rest of the world, for it shows that market economics can work even in the absence of private land ownership, as long as the producers effectively control their work. It was the Hungarian experiment, moreover, that paved the way for the Chinese reforms."

"Hungary, the most market-oriented country in Eastern Europe, and possibly the most responsive to quality-of-life issues, developed an alternative to central planning called the New Economic Mechanism. Initiated in 1968 by János Kádár, it resembled both in name and substance the New Economic Policy of Lenin who, in frustration with the failure of centralization, introduced some market mechanisms in the Soviet Union just before his death. Stalin later abolished these... three-fourths of Hungarian agricultural land is state- or cooperative-owned... Hungarian farms are run mainly by cooperatives... the cooperatives 'are real cooperatives,' meaning that they are self-managing. The cooperatives, not the central state apparatus, decide what they will grow and how they will grow it."

"The two Germanies make an interesting comparison of market-oriented and centrally planned agriculture... West German land and labor productivity,... exceed East Germany's by 20 percent and 100 percent, respectively."

"Post-Mao China provides a rare and vast laboratory for testing the effect of greater reliance on market mechanisms in agriculture. China before 1978 typified Soviet-style agriculture. But in December 1978, the Chinese decided to switch to market-oriented agriculture. The shift boosted grain output by a third between 1978 and 1985, and provided improvements in per capita consumption that stand in marked contrast to Soviet trends. The shift also doubled oilseed production and raised meat production 80 percent. Significantly, this growth was achieved along with a 4 percent reduction in cultivated area, as highly erosive land was idled, and a decline in water and pesticide use. Shifting to the market spurred a dramatic increase in fertilizer use, a near doubling within the eight-year span. The increases in output and efficiency translated into higher rural incomes, which have grown as much during the eight years since 1978 as in the previous 30 years" (p. 13).

The USA, Japan, and the Common Market countries subsidize agriculture heavily. In the USA taxpayer subsidies are projected to exceed $30 billion in 1986. Japanese farm price policies cost consumers and taxpayers 62% of the value of Japan's agricultural output in 1982. In Japan the price of rice paid to producers is 330% the world price, and wheat is 380%. Subsidies in the EEC aim to preserve the farm sector and its way of life. "But this goal could be equally well served without the damage caused by price distortions if governments substituted agricultural price supports with direct income transfers... When policies such as minimum price supports are provided in order to ensure food security and stabilize markets–that is, when supports are set below international market levels–they can be useful. When supports exceed world market levels, however, they interfere with trade, stimulate environmentally disruptive overproduction, and waste taxpayers' and consumers' money" (p. 16).

In terms of energy efficiency, measured by megajoules of energy per dollar of GNP, the top 8 countries are all market-oriented: France (8.6), Sweden (8.6), Japan (9.7), Spain (11.8), West Germany (11.8), Italy (12.9), UK (17.2), and USA (19.3). Energy consumption per unit of output is highest in centrally planned economies.

In terms of life expectancy (years at birth), in 1983, the top 8 countries were all market oriented: Sweden (77), Japan (77), Spain (76), USA (75), France (75), West Germany (74), UK (74), Italy (74).

Case studies in centrally planned and more market oriented economies are given for China (p. 34-36), Brazil and Mexico (p. 37), Tanzania, Zimbabwe, and Egypt (p. 39).

Markets have at least two advantages over central planning. First, they are largely self-administering. The price mechanism brings demand more or less automatically into equilibrium with supply. Second, prices are meaningful reflecting real scarcity when high. Address: Worldwatch Inst., 1776 Massachusetts Ave., N.W., Washington, DC 20036.

• ***Summary:*** About the Aseptipak '86 convention in Atlanta, Georgia–the fourth annual aseptic packaging conference.

In the section titled "Aseptic tofu" Art Mio discusses Morinaga Nutritional Foods. It wasn't until 1984 that Morinaga began investigating the possibilities of setting up an office in the USA. Morinaga Nutritional Foods, Inc. was formed as a subsidiary of the Japanese dairy products manufacturer, Morinaga Milk Industry Co., and established a base office in Los Angeles (California) in May 1985. In October 1985 the company began to roll-out its aseptic tofu in the USA. The Produce Marketing Association (PMA) helped Mio to meet face to face with tofu buyers across the nation. He discovered the tofu had reached every corner of the U.S. supermarket industry, but that buyers "all had handling and spoilage problems with the plastic tub, water-packed, poly film-sealed tofu. All indicated an interest in a non-spoilable, refrigeration-not-required tofu. Of course, most couldn't believe it."

Mio concluded by noting that although most of Morinaga's sales are still with their Asian trade, supermarket sales as a percentage of total sales are steadily growing. A photo shows Art Mio.

• ***Summary:*** In 1985 the average household bought 88.5 cakes of tofu costing 7,337 yen. The average price/cake was 79.6 yen. Compared with 1970 the number of cakes rose 0.5%, the amount spent rose 3.05-fold, and the cost of one cake rose 2.88 fold. In 1985, of the total money spent on soyfoods per household (13,435 yen), 58% was spent on regular tofu, 30.2% on fried tofu (pouches and burgers), 12.3% on natto, and 2.8% on other soyfoods. Cities with the highest consumption of tofu per household are Morioka (122.7 cakes), Toyama (115.7), Kagoshima (105.1), Kokushima (105.0), Tottori (102.3). Tokyo is in 29th place with 87.5 cakes.

In 1985, foods with the fastest growing consumption per household compared with 1970 were: coffee and cocoa +116.6%, prepared foods +63.9%, processed meats 47.0%, raw meats 35.4%, foods eaten away from home +34.6% and oils/fats +34.5%. Those decreasing the most rapidly are: rice -34.3%, processed seafoods (e.g. kamaboko) -29.0%, fresh fish and shellfish -21.1%, eggs -13.4%, milk -10%, soyfoods -3.7%.

8616. Kotzsch, R.E. 1986. The pioneering spirit of Ohsawa-Japan: Japan's first macrobiotic company puts principles before profits. *East West*. Oct. p. 72, 74-75.
• ***Summary:*** In 1953 George Ohsawa "left Japan to teach the principles of macrobiotics in other lands. Several years later, after sojourns in India, Africa, Europe, and America, he returned to his homeland for a visit. When he saw that it had become almost impossible to procure traditional-quality foods in his own country, he urged some of his followers to become involved in farming and in food processing. He encouraged others to set up a company that would seek out existing producers of high-quality items and market their products in Japan and abroad. Thus was born Ohsawa-Japan, staffed by loyal disciples of Ohsawa and headed by his sister-in-law Flora Tanaka.

"From its inception Ohsawa-Japan was a company rich in ideals and slim in capital. As Yoshi Nanabayashi, its export manager, told me, 'We have always been, above all, a macrobiotic company. So our first concern has been to distribute only the highest-quality food, made according to strict standards. Considerations of cost and profit have always been secondary. Mr. Ohsawa taught that proper food is the key to the health and happiness of humanity. Our main aim has been to promote the health of individuals and of society, not to make a lot of money. And,' he added with a laugh, 'we have been fairly successful.'"

What the Tokyo-based company lacks in professionalism it makes up for in dedication to its ideals. From several score of traditional Japanese food producers (mostly small and family-run) around Japan, it gathers more than 100 products (including miso from Yamaki Miso Co., shoyu, and tamari), packages them, and distributes them to the small but strong network of macrobiotic stores and centers throughout Japan.

For years Ohsawa-Japan's "exclusive North American distributor was Chico-San, the natural foods company located in Chico, California. In 1984 Chico-San, which

© Copyright Soyinfo Center 2014

had thrived on its rice cake business, was sold to the H.J. Heinz Corporation. Six months later the import rights to the Ohsawa-Japan products were sold back to Chico-San's original owners, Herman Aihara and Bob Kennedy. At that point a new company, Ohsawa America, was set up to import and distribute the products of Ohsawa-Japan. Today that company, based in Chico, handles about seventy basic Japanese macrobiotic items...

"The main difficulty facing Ohsawa America is the high prices it must ask for its products. The cost of living in Japan is one of the steepest in the world... In addition, the value of the yen has increased dramatically." Lane Seiger is operations manager of Ohsawa America. As Joel Wollner notes, "Like Ohsawa-Japan, Ohsawa America is a philosophy-driven company." Address: Staff.

8619. **Product Name:** Shree Akita Miso, Akadashi Miso. Renamed Akita Miso.
Manufacturer's Name: Nepal Soya Industries.
Manufacturer's Address: 9/374 Bhedashing, Jamguthi, Kathmandu, Nepal. Phone: 229130.
Date of Introduction: 1986 October.
Ingredients: Akita miso: Soybean, rice, koji starter, water, salt.
Wt/Vol., Packaging, Price: 1 kg plastic bag.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Mr. Achutananda Vaidya of Nepal Soya Industries. 1992. Dec. 26. He started making tofu in Kathmandu in 1974. "In 1979-80 I was invited to Japan for 9 months training at the Akita Prefecture Brewing Laboratory. During that time I also learned in detail the processes for making soy sauce, miso, and soyamilk. During that period I also got a chance to read *The Book of Tofu, The Book of Miso, Miso Production,* and *The Book of Tempeh* all of which helped me very much. I still have all those books. In 1985 I was invited by the Rotarians of Akita-Aomori to return to Japan for 1 month to receive further technical training in making tofu, miso, soy sauce, soyamilk, moyashi (sprouts), koji, fruit fermentations for wine, etc. Today I produce tofu, soy sauce, and miso in my small factory in Kathmandu." His business card notes: "Food Technology in Brewing from Japan. Products & Suppliers: Tofu (Vita), Soyamilk (Vitabean milk), Soya Curd, Soya Sauce, & Miso."

Letter from Mr. Achutananda Vaidya of Nepal Soya Industries. 2002. April 12. He started to make this make this miso and to sell it in Japanese hotels and restaurants. It is now named Akita Miso. A label sent in April 2002 is for "Akita-Miso: Naturally fermented..."

8621. *SoyaScan Notes.* 1986. What are barley, pearl barley, and Job's tears? (Overview). Nov. 1. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Note: Barley was one of the first grains cultivated to provide food for both humans and animals. Because it has two hard, inedible husks, most barley is milled to some degree to make it more edible. The word "pearling" is used to describe the refining of barley down to the grain's endosperm (starch) layer. After the husks, bran and germ are removed, the remaining grain resembles a pearl. For the highest protein, fiber, vitamins, and mineral content, look for barley kernels that have been pearled enough only to remove the tough outer layers.

Barley comes in many forms and degrees of refinement. Hulled (also called whole) barley, has only the tough outer husks removed; it still contains the nutrient-rich germ and bran. Scotch or pot barley is husked and coarsely ground. Barley grits are husked and ground into medium-coarse pieces. Pearled barley has the husk and bran removed and has been steamed and polished; it comes in coarse, medium (the most commonly packaged), and fine sizes.

A new barley hybrid, high beta-glucan hulless, does not require pearling, contains more soluble fiber, and contains starch that is more stable during freezing and thawing.

Job's tears (*Coix lachryma-jobi*), used as an ingredient in some varieties of soymilk (such as Edensoy) and known as *Hato Mugi* in Japan, are the seed kernels of an annual grass long prized in the Orient for its health giving and nutritional properties. The term *Hato Mugi* is translated in some Japanese dictionaries as "pearl barley," but this is not correct; *hato* means "dove or pigeon" and *mugi* means "barley."

8623. Yoshinaga, George. 1986. Horse's mouth: Remember tofu. *Kashu Mainichi* (*Los Angeles*). Nov. 3. p. 1. [Eng]
• ***Summary:*** The Hinoichi plant near Little Tokyo was previously owned by Ken Osaki, who sold it to the Yamauchi family from Hawaii, who used their experience from the Hawaii operation in mechanizing the making of tofu. According to a news release just received from Hinoichi, "the one big change in the tofu industry came in the way it was dispensed at the retail level.

"Remember how they used to leave tofu in a large can filled with water and everyone who wanted to buy tofu used to stick their hands into the water to grab the cakes of tofu? There was no facility to wash one's hands before dipping into the can and no other way to grab the tofu without the use of one's hands. I wrote a column about it one day, commenting on how unsanitary it was that a food product which was generally eaten raw could be handled in such a fashion. Somehow the article was read by someone from the city's health department and a new regulation was passed requiring tofu to be packaged in individual containers... I recall the manufacturer of tofu was not too happy with the extra expenses required to not only buy the packaging material but also in setting up machinery to package it." Address: 915 E. First St., Los Angeles, California 90012-4083. Phone: 213-628-4686.

8625. Seminar on Traditional Foods and Their Processing in Japan. 1986. Tokyo: NODAI Research Institute, Tokyo Univ. of Agriculture. 4 p. Held on 13-25 Nov. 1986 at Tokyo University of Agriculture, Tokyo, Japan.
• ***Summary:*** This document, which is an announcement of the seminar, contains two parts: (1) The 1-page introductory letter (28 cm), and (2) The 3-page Agenda (26 cm). The proceedings were published in 1987, edited by Fujiharu Yanagida.

The Agenda gives the opening session (Room A): Chairman I. Uritani. 11:00–11:30. Opening address by the chairman of organizing committee, Dr. Izuru Yamamoto, Director, Nodai Research Inst. Welcoming address by Dr. Takao Suzuki, President, Tokyo University of Agriculture. Address by representative of Japan Society for the Promotion of Science. (JSPS). Address by the president of the Society for Agricultural Education–Research Development Abroad (SAEDA), Dr. Jiro Sugi, Emeritus Professor, Tokyo Univ. of Agriculture.

11:30–11:45. Keynote address, Dr. Hiroyasu Fukuba, Professor, Ochanomizu University.

The following soy-related papers, which were published in the 1987 proceedings, are cited separately: Onchom, by Dedi Fardiaz. Miso, by Hisao Yoshii. Tofu, by Tokuji Watanabe. Indigenous fermented foods in Nepal, by Tika Karki. Improvement in traditional soy sauce fermentation, by Sri Hartadi. Address: Tokyo, Japan.

8626. Potter, Michael. 1986. History of Eden Foods and development of American Soy Products joint venture and Edensoy–1971 to 1986 (Interview). *SoyaScan Notes.* Nov. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Michael Potter joined Eden Foods in Oct. 1971, and by Aug. 1973 he and Tim Redmond each owned 50% of the shares. Under their leadership the company grew steadily until 26 Nov. 1979, when a fire destroyed the Eden warehouse and $800,000 inventory. The firm with 100 employees and 2,400 products struggled for its life. After the fire, Redmond sold his stock back to the corporation and resigned. Thereafter the company moved to rural Clinton, Michigan, decreased its size and number of products, while switching its emphasis to manufacturing and marketing carefully selected imports.

A major reason for Eden's recovery after the fire can be traced to support from Muso, Eden's export partner in Japan. In the mid-1970s Muso had about 12 importers in America but by 1979 many of these had gone out of business. Each bankruptcy dealt Muso a painful blow, as had the fact that many of the natural food products that Muso had pioneered in Japan were now being imitated and launched by other, bigger companies in mainstream Japanese markets. Muso was hurting.

In July 1983 Eden Foods surprised the American natural foods industry by launching two designed-for-America long-life soymilks named Edensoy in plain and carob flavors. Made in Okazaki, Japan by Marusan Ai, packaged in stand-up retort pouches, and exported by Muso, the product was the result of a 15-month process involving trips to Japan to visit Marusan and consultations with the U.S. Food and Drug Administration in Washington, DC. [Note: Individual 6-ounce pouches retail for $0.69-79, making Edensoy the most expensive soymilk on the U.S. market, selling for 12.3 cents per ounce, or more than 5 times the price of cow's milk.]

Eden was the first Caucasian-American company to import soymilk, and their gamble paid off; sales skyrocketed sparked by extensive magazine advertising. Between September and December over 1 million 6-ounce packs had been sold. Now a host of competitors rushed to follow Eden's lead, and many of them went to Muso to ask for a similar product made by Marusan. Eden strongly objected. The result was that in January 1984 Eden became Muso's exclusive import agent in the United States, not only for

© Copyright Soyinfo Center 2014

soymilk but for all products. Both companies considered the agreement beneficial.

Just as Edensoy was getting into high gear, the product had its first serious encounter with the U.S. Food and Drug Administration, which on 2 March 1984 sent Eden Foods a strongly worded letter citing eleven claims in Eden's pamphlets that the agency considered erroneous. FDA expressed concern about the company's apparent endorsement of Edensoy as an infant formula; FDA asked Eden Foods to stop distributing the pamphlet in which Edensoy was promoted as "Good for Babies." Despite the hassle that followed, Edensoy performed much better that year than Eden had dared to hope: 1984 sales were 11 million units (individual pouches), 70% above target, and Potter began to dream about a Marusan soymilk plant in America.

By 1985 privately owned Eden Foods had about 50 employees and annual national sales of about $12 million. Sales that year were 10.25 million units, down 7% compared with 1984. By 1986 Potter estimated that Eden Foods had 38-40% of the $50 million a year of the soymilk retail consumer market in the US. Edensoy accounted for 20% of Eden Foods' sales, and Edensoy plain was selling better than any other brand in a small-sized carton. But the market was getting crowded. Yuppies were buying Edensoy. The macrobiotic market was only a small segment for Edensoy.

See also interview with Potter (Nov. 1986) on "History of Eden Foods: Building a soymilk plant in America." Address: President, Eden Foods Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 800-248-0301 or 517-456-7424.

8627. Tanikawa, Harry. 1986. Recent developments at House Foods and Yamauchi Inc. (Interview). *SoyaScan Notes.* Nov. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Their soymilk was launched in April 1986 in Pure Pak, named Hinoichi Soy Drink, in 4 flavors: Plain, original (with fructose and oil added), mocha, and chocolate. It is sold only in the Los Angeles area in Asian-American food stores. It will never be sold in natural food stores. Pure Pak limits geographical distribution.

House Foods and Mr. Yamauchi now each own 50% of the company. It seems like a happy marriage. Mr. Yamauchi is still very involved in the daily operation of the business. They dropped the parfait before the partnership. Address: Los Angeles, California.

8634. Kawabata, Makoto; Taguchi, Kuniko; Ohtsuki, Kozo. 1986. Okara o shokuryo toshita nattô oyobi tenpe no shokuhin kagaku [Food chemical evaluation of fermented okara products, okara-natto and okara-tempeh]. *Kyoto Furitsu Daigaku Gakujutsu Hokoku* (*The Scientific Reports of the Kyoto Prefectural University* (*Natural Science and Living Science*)) 37(Series B):9-15. Nov. (Chem. Abst. 107:38312). [13 ref. Jap; eng]
• ***Summary:*** Okara, a residue of water-extracted ground soybeans, is produced in large amounts as a by-product of commercial production of tofu and soymilk. Although it contains a large amount of dietary fiber plus 4.8% high quality protein, it has a poor taste and rough texture, and is relatively indigestible.

In this study, natto and tempeh were prepared from okara by fermentation with *Bacillus subtilis* (*natto*) and *Rhizopus oligosporus* (or *R. oryzae*).

Natto is a sticky paste with the characteristic flavor and odor of natto. Okara tempeh has a sausage-like texture, bound together by the fragrant white Rhizopus mycelium, which also covers its surface. Because of its good, bland flavor and because of its high content of dietary fiber, it can be fried in oil and used as a fiber-rich food; powdered or minced tempeh can be used to add fiber to cookies, bread, muffins, etc.

The riboflavin content of both products rose dramatically during fermentation; 33.1 times for okara natto and 32.7 times for okara tempeh. Vitamin B-6 also increased in both foods. Address: Lab. of Food Chemistry, Dep. of Food Science, Kyoto Prefectural Univ. [Japan].

8635. **Product Name:** [Kikkoman Instant Wakame Soup (Seaweed Soup with Miso)].
Manufacturer's Name: Kikkoman Corporation.
Manufacturer's Address: Noda 278, Chiba-ken, Japan.
Date of Introduction: 1986 November.
New Product–Documentation: Spot in Food & Beverage Marketing. 1986. Nov. p. 12, 60.

Each packet contains 3-4 individual servings and retails for $1.19 to $1.39.

8637. **Product Name:** [Soymilk Bread].
Foreign Name: Tônyû pan.
Manufacturer's Name: Mitsubishi Chemical (Kasei) Foods Co.
Manufacturer's Address: 5-13-12 Ginza, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1986 November.
Ingredients: Incl. flour and soymilk.
New Product–Documentation: Toyo Shinpo (Soyfoods News). 1986. Nov. 21. p. 1. "Hyoban no yoi tonyu pan. Mitsubishi Kasei Shokuhin ga hatsubai [Good response to soymilk bread. Mitsubishi Kasei Foods has started to sell it]." Soymilk has replaced egg, nonfat dry milk, and water in the bread formula.

8638. Nanba, Kazuyoshi; Nagasawa, Taro. 1986. Tônyû no __ jôteki anteisei ni oyobosu Ca^{2+} tenka no eikyô ni tsuite [Effects of the addition of calcium ion on the colloidal stability of soymilk]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 33(11):745-51. Nov. [16 ref. Jap; eng]
• ***Summary:*** In order to prepare soymilk with a high calcium content equivalent to cow's milk (25mM), the effects of the addition of calcium salts on the colloidal stability of solutions containing 7S or 11S globulins and commercial soymilk were investigated by determining relative viscosity, soluble nitrogen (protein), and pH. When various calcium salts, such as calcium chloride ($CaCl_2$), calcium sulfate ($CaSo_4$), calcium citrate, and calcium phosphate were added to a solution containing 0.1% of 7S or 15S globulins, or to soymilk, calcium chloride affected the stability more than calcium sulfate, calcium citrate, and calcium phosphate, in decreasing order of sensitivity. Colloidal stability of the solutions was increased with an increase in pH in the

© Copyright Soyinfo Center 2014

buffer solution. Soymilk containing disodium hydrogen phosphate (20mM) or sodium citrate (20mM) did not show any precipitation, even when 19mM of calcium chloride was added to the soymilk. Stability of soymilk in the presence of calcium salts increased with increasing chain length of the phosphates. Calcium fortified soymilk (19mM Calcium chloride added) containing sodium citrate (20mM), disodium hydrogen phosphate (20mM), sodium pyrophosphate (15mM), or sodium tripolyphosphate (10mM) were highly stable without any signs of precipitation and coagulation at 4ºC for 7 days. Address: Dep. of Agricultural Chemistry, Faculty of Agriculture, Tamagawa Univ., 6-1-1, Tamagawagakuen, Machida-shi, Tokyo 194, Japan.

8639. Swientek, Robert J. 1986. Merging of two technologies produces aseptic soy milk: East meets West. *Food Processing* (*Chicago*) 47(12):128-29. Nov.
• ***Summary:*** In July 1983, Eden Foods introduced Edensoy soymilk into the U.S. market. Made by Marusan Co., Ltd. in Japan, the product is packed in retortable pouches. Today the product is distributed nationwide and sold in about 20 supermarket chains, including Kroger in the Detroit area and Tops in Buffalo. "According to Michael Potter, President of Eden Foods and C.E.O. of American Soy Products, Edensoy holds a 38-40% market share of the $20 million/year soy milk retail consumer market."

Construction of the Edensoy plant began in October 1985 and was completed in August 1986. It was officially dedicated on September 9. Address: Associate Editorial Director.

8640. Taira, Harue; Tanaka, Hiromi; Okano, Hirobumi. 1986. [Quality of soybean seeds grown in Japan. XII. Influence of seeding time and planting density on yield, weight of 100 seeds, and chemical composition of soybean seeds]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 49. p. 29-38. Nov. [13 ref. Jap; eng]
• ***Summary:*** In 1981 three soybean cultivars / varieties were grown at the Ibaraki Experiment Station. Yield, weight of 100 seeds, and chemical composition differed among the varieties by planting time. A high plant density significantly increased the yield and decreased the ash content. Address: 1-2. National Food Research Inst.; 3. Ibaraki Agric. Exp. Station, Mito, Ibaraki. All: Japan.

8641. Tanaka, Yoshikazu; Azuma, Keiko; Hirata, Takashi. 1986. [Studies on quality index of aseptic soymilk on preservation]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 49. p. 135-40. Nov. [20 ref. Jap; eng]
• ***Summary:*** Reprinted from *Nihon Shokuhin Kogyo Gakkai Shi* (*J. of Food Science and Technology*) 32(7):457-62 (1985). Soymilk prepared commercially using an aseptic packaging system was stored at 5, 25, or 37ºC for 2 months. The quality of this soymilk was then evaluated by determining the microbial count, oxidation-reduction potential (ORP), chemiluminescence, and free amino acid contents. The soymilk was also subjected the a Color Test and organoleptic evaluation.

No microorganisms were detected in the stored soymilk at any temperature, indicating the effectiveness of the process. Organoleptically, however, the soymilk deteriorated during storage, at 25ºC for 2 months or at 37ºC for half a month. The color also changed from yellowish to whitish or faded. The pH of the soymilk decreased [it became more acidic] almost immediately after storage. The ORP decreased and the chemiluminescence increased during storage. No change was observed in the composition or content of free amino acids. However the ammonia content increased during storage and was found to be closely correlated with storage period and temperature. Therefore, ammonia content can be used as a good index of the quality of aseptically packed soymilk. Address: National Food Research Inst., 2-1-2 Kannondai, Yatabe, Ibaraki, Japan.

8642. Potter, Michael. 1986. Re: History of Eden Foods. Letter to William Shurtleff at Soyfoods Center, Dec. 2–in reply to inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** In July 1967 the name "Eden Organic Foods, Inc." started to be used as the name of this company. This was changed to "Eden Foods, Inc." in November of 1969.

In Feb. 1972 Eden Foods began to import foods from Japan, and in June 1972 Muso Shokuhin in Japan became their supplier.

"In Oct. 1971, after providing effective services to Eden Foods, Inc., 13.5% of the common stock of Eden Foods, Inc. was given to Michael Potter by the corporation. At this point the common stock ownership of Eden was: Between William and Judith Bolduc 43.25%, Timothy Redmond 43.25% and Michael Potter 13.5%.

In Feb. 1972 Eden began to import foods from Japan, and in June 1972 Eden began to import foods from Muso Shokuhin.

"In August of 1973 the Bolducs offered to sell their stock in Eden to Michael Potter. Michael Potter accepted this offer and purchased their stock. Because of Tim Redmond's dedication to Eden, Mr. Potter gave enough of this common stock to Mr. Redmond so that the common stock ownership of Eden Foods, Inc. became 50% M. Potter and 50% T. Redmond.

"This situation remained the same until January 1980 when, after a fire destroyed our offices and warehouse, Mr. Redmond sold his stock back to the corporation and resigned, the corporation awarded common stock to its management and Mr. Clifford Adler purchased a significant block of this common stock."

In Jan. 1984 Eden Foods became Muso Shokuhin's

© Copyright Soyinfo Center 2014

exclusive American import agent. In June 1985 American Soy Products was founded. Presently the suggested retail price of Edensoy is $0.59 per 250 ml pack and $1.99 per liter pack. They are selling for less in some places, i.e. $0.49 and $1.65, respectively.

11,000,000 individual units (6 fl. oz. = 180 ml retort pouches) of Edensoy were sold in 1984 (Jan.–Dec.) and 10,250,000 were sold in 1985 (Jan.–Dec.). This is equivalent to 515,633 gallons or 1,980,190 liters in 1984, and 480,476 gallons or 1,845,018 liters in 1985. Address: President, Eden Foods Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: (517) 456-7424 or (313) 973-9400.

8643. Potter, Michael. 1986. History of Eden Foods: Building a soymilk plant in America (Interview). *SoyaScan Notes.* Dec. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** On 1 August 1986 it was announced that a major new joint stock company, named American Soy Products, had been established to produce Edensoy soymilk in Saline, Michigan, 30 miles west of Detroit, at a new state-of-the-art manufacturing and packaging facility. Michael Potter played a major role in conceiving and pulling together this innovative, exciting, and promising new venture. In July 1983 Eden Foods launched their first Edensoy soymilk, made by Marusan Ai in Okazaki, Japan. It soon proved to be a great success. When Potter began to talk with Marusan Ai about building a soymilk plant in the USA, he found that they were wary. In 1982-83 Marusan had had extensive discussions with Hinode Tofu Co. in Los Angeles, California, about a soymilk joint venture, but the talks eventually broke down over small points; Marusan felt they had wasted a lot of time and money to no avail. So Potter focused on Muso. With competition eating into their domestic Japanese health food market, a venture in America looked promising. Yet neither Eden nor Muso had the capital to build a soymilk plant in America. Enter Kawatetsu Shoji, better known as Kawasho International. A big New York based firm with money, influence, power, and experience in international business and joint ventures, they were looking to diversify out of coal, steel, and other commodities, into branded foods. They already knew Eden Foods (they had been financing their growing Edensoy imports and inventories from Japan) and they liked the fact that Eden knew Japan and seemed to have a solid, growing product. Kawasho's endorsement of the project was enough to overcome Marusan's reluctance. And with Marusan came Seikensha, the Tokyo based company that had built Marusan's state-of-the-art soymilk equipment. The historic joint venture package, called American Soy Products, was officially founded in June 1985.

Gross investment in the new company was $10 million. Percentage ownership was Marusan Ai 25%, Kawatetsu Shoji (Kawasho Intl.) 25%, Muso 15%, Seikensha 10%, and Eden Foods Inc. 25%. The chairman of the board was Michael Potter of Eden Foods and the president was Mr. Hiroyasu Iwatsuki, Marusan's soymilk manager, who soon moved to Michigan to go to work.

Each partner had a unique and valuable set of skills to offer. As before, Eden Foods would continue to be responsible for marketing, selling, and distributing all soymilk made by the new company. Kawasho would oversee administration and financing. Marusan would take care of soymilk production. And Muso would coordinate international sales. Seikensha, which has patents on key pieces of soymilk manufacturing equipment, would supply the plant equipment.

Open houses in mid-September were attended by the media and a host of state dignitaries, including the Director of Michigan's Department of Agriculture, who called the new plant "a perfect marriage of high technology and the area's farming." These events, and additional promotion done by a newly-hired, local marketing and advertising firm named Group 243, gave the project extensive, very positive publicity. Widespread color print media advertising, focusing on Edensoy's new larger size package, was also started.

In late October 1986 the sparkling new 22,000 square foot stainless steel plant at Saline (12 miles northeast of Clinton and just south of Ann Arbor, in the southeast corner of Michigan) started test runs, which were carefully monitored by the FDA for 6 weeks. Both the Japanese soymilk equipment and the Swedish low-acid Tetra Brik packaging lines were said to be the most modern of their kind in the world. The company had spared no expense to "do it right." Japanese technicians now living in Saline were training American counterparts.

The factory and land had cost $2.3 million and equipment cost $4.3 million. The company committed $700,000 for startup costs, $1.8 million for marketing funds, and $700,000 for working capital. By November 1986 most of this money had been spent.

The new Edensoy was packaged in both regular (250 ml or 8.45 fl. oz. for $0.59) and large (1 liter for $1.99) Tetra Brik cartons, in plain, carob, and vanilla flavors. The new prices were significantly lower than before. For example, in 1984 (when it was historically least expensive) Edensoy in a 6-ounce retort pouch had retailed for $0.69 to $0.79, or an average of 12.3 cents per ounce. The new 250 ml (8.45 fl. oz.) pack retailed for only 7.0 cents per ounce (down 43%), while the liter size (33.8 fl. oz.) retailed for only 5.9 cents per ounce (less than half the retort pouch, and 16% less than the 250 ml pack). Yet compared with cow's milk at 54 cents per quart (32 fl. oz.) or 1.7 cents per ounce, the Edensoy products are still 3.5 to 4.1 times as expensive per ounce; a much lower ratio than in 1984 but still quite high.

A cornerstone of Eden's food procurement policy since 1973 was the support of local farmers. And Saline was in the heart of Michigan's soybean country. The estimated 85,000 bushels a year of soybeans used to make Edensoy will all be

© Copyright Soyinfo Center 2014

grown on contract with individual Michigan farmers located within a 10-mile radius of the plant. Beeson variety soybeans will be used; though low yielding for farmers, they have a low-oil, high-solids composition and give excellent soymilk. Numerous standard grade parameters will also be specified. Growers will typically receive premiums of 15-30% over conventional markets. By mid-1987 American Soy Products (ASP) hopes to start using organically grown soybeans.

One nice by-product of the new ASP plant was the fact that it was the only plant and Tetra Brik line located in that part of the USA especially designed to package low-acid foods; there were only two others in the entire country, both on the West Coast, and used mostly to pack milk. Thus a host of other companies, wishing to have their own low-acid products packed on Tetra Brik machines, started to line up to use ASP's equipment. This sort of contract packing would serve as an important source of income and keep the packaging operation running 24 hours a day.

ASP's initial run is scheduled to produce 100,000 packages of 250 ml equivalent. The company's first year sales goal is $5,000,000 produced on 2 shifts. But the first problem is to fill the 20 truckloads that were back ordered.

In November Eden Foods decided that on 1 Jan. 1987 they will stop serving as a wholesale distributor to retail stores in the Midwest (10% of their total business), drop 150 products, and serve as a master distributor, selling only through other distributors. This will allow additional attention to be paid to American Soy Products. Still big marketing and distribution questions remain: Will ASP use brokers? Go direct? Go through grocery distributors? Who does ASP see as their stiffest soymilk competition? Vitasoy and Sunsoy?

What about future plans? A French label for the Canadian market. Organic soybeans. The use of a grain (such as brown rice, barley, etc.) in the Edensoy formula. A cautious attempt to break into the mass market via super markets, but only after careful test marketing in specific areas. Eventually other similar plants in other parts of the United States.

American Soy Products and the new Edensoy are the most exciting soymilk ventures of 1986, and ones that the industry will be watching closely. Address: President, Eden Foods Inc., Clinton, Michigan.

8644. Hughes Markets. 1986. Merry Christmas! (Ad). *Los Angeles Times.* Dec. 21. p. I20-21.
• ***Summary:*** The section titled "Foods of the Orient holiday specials" includes: Kikkoman soy sauce, gallon can–$4.99. Hinoichi age 1.5 oz pg. 79¢. Misuzu Koya Dofu 3.5 oz. box Wheat cake [sic, Dried frozen tofu]–$1.55. Shirakiku kuro mame, Black [soy] beans–85¢.

Also includes: Frozen Umeya mochi. Fresh gobo. Shirakiku bamboo tips. Ozeki sake. Kokuho rice. Miyako kizami shoga–Sliced pickled ginger. Miyako shiitake–Dried mushrooms Kezuka kampyo [kanpyo]–Dried gourd strip. Shehiro kombu maki–Rolled kelp [konbu].

8645. *Soybean Update.* 1986. China buys U.S. soybeans. Dec. 22.
• ***Summary:*** China has made its' first purchase of U.S. soybeans in this year–an estimated 100,000 tonnes or about 3.7 million bushels. China bought 219,000 tonnes of U.S. beans last year, the first purchase from the U.S. in several years. Export sources say China sells the beans they produce at a premium to Japan for food, while importing less-expensive U.S. beans for their domestic crushing.

8646. Tsuchiya, Kanji. 1986. Re: Soymilk and new soymilk plants in China. The soymilk market in Japan. Letter to William Shurtleff at Soyfoods Center, Dec. 25.–in reply to inquiry. 6 p. Typed, with signature.
• ***Summary:*** All soymilk plants in China are run by provincial governments. Private companies are not allowed to start them. All soymilk made in China is for domestic consumption; none is exported. During the past three years, 14 soymilk plants have been constructed in China under the leadership of Seikensha, with cooperation from Marusan. Seikensha built the plants and Marusan taught the Chinese how to use them to make quality soymilk. Mr. Tsuchiya supervised all aspects. There are no additional orders at present, probably because of the high yen exchange rate, but perhaps because (according to rumors) the Chinese are trying to develop their own soymilk plants.

In terms of the management of Chinese soymilk plants, one person is in charge of construction, one is in charge of running the plant, and then there is always a third person from the Communist party. It is difficult to know who is really responsible, and there is frequent personnel turnover. The Chinese use a lot more sugar in their soymilk than Japanese (often twice as much) and they prefer not to add oil. The soybean solids content is about 6%. Pure/plain soymilk, with nothing added, has a good reputation in China.

I am enclosing the names and addresses of the 13 Chinese soymilk plants that I supervised. They started operation from Aug. 1984 to Aug. 1986. Nine have a capacity of 350 liters/hour, and four have a capacity of 2,000 liters/hour in Beijing, Qingdao (Shandong), Liuzhou (Guangxi), and Jamusi (Heilongjiang). In Feb. 1986 Hong Kong Soya Bean Products Co. Ltd., makers of Vitasoy, bought a dehulling machine, lipoxidase inactivator, and micro-pulverizer from Seikensha. Capacity: 2 tons/hour.

Soymilk production in Japan peaked in 1983, then dropped sharply. Production in tonnes was 17,280 in 1981, 68,245 in 1982, 116,724 in 1983, 84,013 in 1984, 55,356 in 1985, and 44,400 in 1986 (est.). Thus the 1986 level is only 38% of the 1983 peak. As I see it, the main reasons for this drop are: 1. The image of poor flavor (Japanese did not traditionally drink soymilk), or actual poor flavor. 2. The

© Copyright Soyinfo Center 2014

three major manufacturers (Kibun, Marusan, Mitsubishi) all position soymilk as a health food or specialty food for the old and sick, keeping it away from mass market soft drinks. 3. Soymilk is a sideline for each of the three major manufacturers. Kibun focuses on seafood products, Marusan on miso, and Mitsubishi Kasei on chemical products. 4. Product managers have taken a short-run profit-oriented approach, rather than building for the future. Address: Kamiogi 3-1-1, Suginami-ku, Tokyo 167, Japan. Phone: 03-312-0775.

8647. *Soybean Update.* 1986. Soyoil equivalent of 5.8 million bushels was sold in Japan as a result of a promotion campaign sponsored by the ASA and Nisshin Oil Mills. Dec. 27.
• ***Summary:*** ... Nisshin used ASA's (American Soybean Assoc.) Soyasign to identify its cooking oil on the label as 100% soyoil, and attached a flier promoting soyoil to each container. More than 2 million consumers bought the soybean cooking oil during the promotion. Based on its success, Nisshin plans to continue aggressively marketing soyoil.

8648. James, Leslie. 1986. Twas a dear year, all stuffed with gustatory glories. *San Diego Union* (*California*). Dec. 28. p. D-3.
• ***Summary:*** These bests of the year's restaurant dishes include: "Upscale junk food:... 'edamame' at Sushi on the Rock." Address: Restaurant reviewer.

8649. Morohoshi, Yozo. Assignor to Hidekatsu Kuroyanagi (Kanagawa, Japan). 1986. Process for manufacturing soymilk products with wheat germs. *U.S. Patent* 4,632,839. Dec. 30. 4 p. Application filed 5 Aug. 1985. See also Japanese Patent 84-239,688 (FSTA 84-11-14). Application also filed in Japan on 3 Sept. 1984. [7 ref]
• ***Summary:*** Nigari or magnesium chloride, a natural coagulant used in the preparation of tofu, gives very rapid coagulation. Other coagulants such as calcium sulfate and glucono-delta lactone give less rapid coagulation, easier mixing, and a softer curd, but have inferior flavor. If soymilk is mixed with a wheat germ dispersion (which has been prepared from fresh wheat germ homogenized at 95ºC) before addition of the nigari or magnesium chloride, the wheat germ slows the speed of the coagulation and allows sufficient time for the curd to mature into a delicious product of even texture. Variations in the ratio of soybean to wheat germ in the suspensions allow different products to be made, e.g., tofu or bean curd, "a dessert pudding" or a "dressing or yogurt substitute." Address: Hiratsuka, Japan.

8650. *SoyaScan Notes.* 1986. Chronology of soybeans, soyfoods and natural foods in the United States 1986 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. Ron Ishida, an attorney with no previous knowledge of tofu, working for Azumaya Inc. (South San Francisco, California), rewrites the Tofu Standards without authorization. They have already gone through 8 drafts. This creates a crisis.

Jan. Soymage, the first casein-free soy cheese, is introduced by Soyco Foods.

Jan. *Soyfoods: The Journal of the European Soyfoods Association* (*ESFA*) begins publication from Paris. Philippe Vandemoortele of Alpro is president of the association and Guy Coudert is editor of the periodical. The association plans to organize a soyfoods conference every 2 years. But the journal is discontinued after 3 issues.

Jan. Tomsun Foods is reorganized, changing its name (for the fourth time) to Tomsun Foods International. The firm's new chairman is Juan Metzger, founder of Dannon Yogurt. The company produces nearly 3 million lb. of tofu a year.

Jan. First Tofutti Shop opened in Japan by Daiei Co. Inc, Japan's largest retailer. Shop sells non-dairy soy-based ice cream and related snacks.

Feb. 7. Fire destroys Island Spring tofu plant in Vashon, Washington, with an estimated $1 million loss.

Feb. Soya Kaas, an imitation cheese containing soymilk and casein, launched by American Natural Snacks, a marketer. The manufacturer is Swan Gardens of Georgia.

Feb. Jofu, a tofu-based, non-dairy, nonfermented, yogurt-like product, sweetened with fruits, launched by Tomsun Foods International of Greenfield, Massachusetts. The product is a hit, grossing nearly $400,000 in its first 32 weeks on the market.

Feb. Barricini Foods has its first public stock offering. Raises $1.5 million, gross to use in marketing Tofulite and Ice Bean soy ice creams.

Feb. Central Soya purchases Staley's protein line, including Mira-Tex, Procon [soy protein concentrate], and Textured Procon brands.

Feb. ASA hires Jim Guinn as technical director of soybean quality programs. Soybean quality is an area of growing interest, with two parts: 1. The traditional area of soybean condition, concerning grades, damage, foreign material, etc. 2. The newly emerging area of soybean composition and its relation to grades. New measurement technologies make it likely that soybeans may soon be sold based on their composition of oil and protein. Both effect exports and price.

March 5. Pesticide control now tops the Environmental Protection Agency's list of most pressing problems, announces *The New York Times* (and *Soybean Digest,* June/July). Stricter pesticide laws are enacted.

March 7. Richard E. Lyng of California becomes U.S. Secretary of Agriculture, replacing John R. Block. Policies remain unchanged.

© Copyright Soyinfo Center 2014

April 18. Wm. Shurtleff, in charge of compiling the original tofu standards, submits a strong criticism of the illegitimate Ishida draft in the form of a detailed chronology of the development of the tofu standards.

April. Tofu cheesecake revolution in New York City profiled by *Whole Life.* Thirteen restaurants now offer them.

May. Tofutti Love Drops (chocolate covered graham cookie drops) launched by Tofutti Brands with much fanfare.

May. Nasoya's new million-dollar automatic tofu-making system, imported from Sato Shoji in Japan, begins operation.

June. Increasing consumer deception by "soy cheese" manufacturers. Whole Life publishes "Whole Frauds in the News: Will the Real Soy Mozzarella Please Stand Up (That is, If There is One)," an exposé of mislabeling involving Soyarella, Tofu Mozzarella, and Soya Kaas (though the latter brand is not at fault). Argues that it is deceptive for health food stores to call a product "non-dairy" if it contains casein (milk protein), even though FDA rules allows such a designation. In Oct. Whole Life shows that "Independent lab tests prove Soyarella hoax; Large quantities of casein [19.6%] found in so-called soy cheese." Soyarella had previously been marketed as casein free.

July. Ralston Purina Co. starts publication of Nutrition Overview, a newsletter focusing on soy protein and fiber.

July. Soyfoods win big in 7th Annual Natural Foods Merchandiser merchandising awards: Gold: San-J tamari and shoyu. Silver: Fantastic Foods' Tofu Scrambler and Tofu Burger, Westbrae Natural miso soups. Honorable mention: Walker & Wilks frozen entrees, White Wave boxed tofu.

July. Vitasoy reintroduces its line of reformulated and repackaged soymilk products, originally launched in 1984. They contain more solids and nutrients, and are sweetened with barley malt instead of maple syrup.

July. A Roper poll in the U.S. finds that tofu is the "most hated" food. 35% of a sample of 2,000 adults checked it on a list of foods said to be disliked, ahead of liver (34%), yogurt (29%), Brussels sprouts (28%), and prunes (24%). Results do not vary significantly by age, but tofu dislike is somewhat less among those with higher incomes. The poll results are very widely publicized, and are even the subject of a question on the TV program Jeopardy (in early 1988)–and its rerun! These findings suggest both a widespread awareness of tofu and a split image: Some like it and others don't.

Aug. Kikkoman's new shoyu plant starts operation in Chitose, Hokkaido, in northern Japan. The first product was shipped on 30 Jan. 1987.

Sept. 9. American Soy Products Inc. plant dedicated in Clinton, Michigan. A $10 million joint venture between Eden Foods and four Japanese companies (Kawasho, Marusan, Muso, Seikensha), construction on the plant began in Oct. 1985. It will make Edensoy soymilk in Tetra Brik cartons. The first products are shipped in November.

Sept. 19. Tofu standards passed by Tofu Standards Committee in San Francisco, after all committee members except Shurtleff agree to start with a blank slate in drafting new standards–thus erasing years of work by hundreds of people. Shurtleff resigns in protest, arguing that this is a violation due process. Shortly thereafter Barricini and Ralston Purina also refuse to give final approval. Tofu standards are stalled indefinitely after many years of hard work.

Sept. 24. First International Tofu Products Expo, Seminar, and Soyfoods Buffet, held in Munich, West Germany. Sponsored by Bernd Lehmann International Consultants. 100 people attend.

Oct. Supersoy brand soymilk introduced to America by Mitoku USA. It is made by Kibun Health Foods Co. in Japan.

Oct. Ralston Purina sells its domestic agricultural products business, Purina Mills. Total sales for 1986 were $5.5 billion.

Nov. Island Spring announces $6.5 million investment from Edward Lynch Co. to finance an expansion plan. Construction of a new 30,000 square foot factory is now underway on Vashon Island.

Dec. 1. White Wave of Boulder, Colorado, acquires Soyfoods Unlimited, a tempeh manufacturer of San Leandro, California. This makes White Wave America's largest tempeh manufacturer.

Dec. 8. Central Soya purchases 7 of 9 Bunge processing plants. ADM is now estimated to control 30% of U.S. crushing capacity followed by Cargill (25%), Central Soya (20%), and other (25%).

Dec. Tomsun Foods International nets about $3.45 million in its first public stock offering. Most of the funds will be used for sales and marketing of Jofu, and to repay $800,000 in debts. Total Tomsun sales in 1986 were about $3.1 million.

Dec. Haagen-Dazs will drop Tofutti and start distributing Barricini Tofulite, a non-dairy frozen dessert.

Dec. Brightsong Foods is named as one of the top ten food innovators for 1986 by Food & Beverage Marketing magazine. In fact, Brightsong is listed first!

Dec. Tofruzen Inc., a soy ice cream marketer from Englewood, Colorado, raises $1.6 million in a public stock offering. Sales of Tofruzen in fiscal 1986 were $91,000, rising to $158,000 in 1987, and $213,000 in the first quarter of 1988.

Dec. Edible Soy Products in Hudson Iowa is sold to Solnuts of Tilburg, The Netherlands, and renamed Solnuts, Inc. The Hudson and Tilburg plants are the only ones in the world that dry roast soybeans to make soynuts.

Dec. More than 60,000 Italian farmers harvested nearly 25,000 hectares (61,700 acres) of soybeans this year. Italy is now Europe's largest soybean producing country, followed by France. Five years ago, Italy produced virtually no soybeans. The Ferruzzi Group is the leading promoter,

© Copyright Soyinfo Center 2014

helped by hefty subsidies from the EEC.

1986 New Trends:

So Called Tofu Cheeses. Eight new soy cheeses were launched during 1986, many with the term "Tofu" in the product name. Many have been shrouded in mystery, with the names of the manufacturer and ingredients often not disclosed. There has been much consumer deception, mislabeling, and several attempts to conceal the fact that they usually contain casein, the protein in cow's milk.

Soy Yogurts and Yogurt-Style Products. The leader in this exciting new category is Jofu from Tomsun Foods. The two basic types are fermented soymilk products (e.g. Cream of the Bean, Soy-O), and non-fermented tofu-fruit blends (e.g. Jofu).

Move to Manufacturing Soymilk in America. The rising cost of soymilk imports is making them unprofitable. Domestic production, which obviates shipping U.S. soybeans to Japan, then shipping the beans and water back, will have major, beneficial long-term Edensoy, Ah Soy, and Westbrae Malteds. Still imported are Vitasoy (from Hong Kong, whose exchange rate is tied to the dollar) and Sunsoy (from Belgium).

The declining value of the dollar against the yen starting in late 1985 led to a steady rise in soymilk prices. But the combination of domestic production and larger size packages (see below) has led to a drop in soymilk prices during 1986. For example, Edensoy, selling for 6 times the price of dairy milk per unit volume in early 1984, was selling for only 3.5 to 4.1 times as much in late 1986, a drop of about 37%.

Soymilk Switches to Tetra Brik Cartons and Liters or Quarts. Edensoy, Westsoy, and Ah Soy have all switched to Tetra Brik cartons this year. Lower total manufacturing and shipping cost is the main reason. The liter/quart size was pioneered in the U.S. by Alpro/Vamo Foods/Sunsoy, and followed by Edensoy, Ah Soy, and Vitasoy. These counterparts of dairy milk in quarts suit the needs of regular soymilk users by offering a more economical price per unit volume plus greater convenience. Soymilk may be the first liter-size Tetra Brik product to succeed in America.

INTSOY is doing outstanding, pioneering work with soyfoods and soybean utilization in the Third World and America. Research is focusing on extrusion cooking, extruder-expeller processing for small-scale oil expression, and fresh green soybeans. Since April 1987 the INTSOY Newsletter has become one of the best soy-related publications available.

Morinaga Long-life Silken Tofu becomes a major force in the U.S. tofu market. Traditional manufacturers consider the product a major threat to their markets. Azumaya has hired an attorney who spends considerable time causing troubles for Morinaga.

• ***Summary:*** Tables and figures in English include: Properties of Bacillus natto Sawamura. Mucilage produced from various beans. Mucilage produced from parts of soybean. Separation of natto mucilage. Analysis of natto mucilage. Effect of nitrogen on the growth and mucilage formation by B. natto. Effect of amino acid on growth and stringy slimy production. Effect of nitrogen source on slime composition. Amino acid composition per 100 gm edible portion of pulses. Hydrolytic products of polyamine derivatives of gamma and alpha linked peptides. Possible scheme for origin of PGA by enzymes found in *B. subtilis.* Effect of optical isomers of glutamine and glutamic acid on transamidase obtained from B. natto. Phage host range against the parental and cured strains, and representative transformants. Levan synthesis by levansucrase of *Aerobacter levanicum.*

Effect of medium composition of viscosity of mucilage. Viscosity of polyglutamate and levan. Soybean carbohydrates. Effect of sucrose on mucilage stability. Detection of phage from natto products. Inhibition of natto mucilage formation by added phage. PGA-digesting activity of phage lysate. Change of nitrogen compounds during fermentation. Liberation percentage of amino acids in raw and steamed soybeans, and products fermented 8 or 16 hours. Distribution of Tetramethylpyrazine (TMP) in Japanese fermented foodstuffs (miso is highest). Address: Fukuoka Joshi Daigaku.

8660. Kariya, Tetsu; Hanasaki, Akira. 1986. Daizu to nigari [Soybeans and nigari]. *Oishinbo* No. 7. p. 105-30. Dec. [1 ref. Jap]
• ***Summary:*** Adult comic books are very popular in Japan. The title of this 28-issue series, *Oishimbo* (ISBN 4-09-180757-7 CO379 P500E), is a made-up word, which means something like "People who love delicious things." It is a play on the word *Kuishimbo,* which means "glutton." This story is about Henry James Black who comes from Los Angeles, California, to study tofu in Japan. He visits a famous tofu restaurant, which has been in business for 300 years [Sasa-no-yuki], and complains that the tofu they make is not very good. The owner, getting upset, asks "How do you know?" He answers, "I studied tofu in America," then shows the owner a copy of *The Book of Tofu* (p. 116). Later he visits a traditional Japanese tofu shop that makes nigari tofu; here he becomes an apprentice. Details of the traditional process for making nigari tofu are shown in detail in cartoon form.

Note: This appears to be a take-off on the tofu research of William Shurtleff in Japan during the early 1970s. Shurtleff wrote *The Book of Tofu.* Address: Tokyo, Japan.

8661. Karki, Tika. 1986. Microbiology of kinema. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 39-49. Held July 1985 at Tsukuba, Japan. [Eng; Jap]

• ***Summary:*** The best publication seen on Kinema up to this time. Kinema is a traditional, non-salted fermented soybean food product widely consumed by the Kirat ethnic population of the eastern hills of Nepal, and into Darjeeling and Sikkim. This product, thought to have originated in Nepal, greatly resembles natto of Japan and thua-nao of Thailand. It is usually produced during the winter; dried kinema is used mainly for flavoring purposes. It is consumed in soup along with green vegetables. There is good potential for expanding the production of soybeans in Nepal. In most of the hilly areas, soybeans are grown as a mixed crop with maize, yet it is only in the far eastern part of Nepal that they are used to make kinema. The dominant organism in this fermentation was found to be *Bacillus subtilis.*

To make kinema in the traditional way, soybeans are washed, soaked overnight, boiled until softened, cracked by pounding lightly, and mixed thoroughly by hand with about 0.5% ash. It is then fermented overnight in bamboo baskets covered with banana leaves at about 25ºC. The fresh kinema is then sun dried for about 3 days and stored for 6 months to yield dried kinema. The typical composition is moisture 8.9%, protein 46.2%, fat 18.1%, ash 5.2%. Kinema is less sticky than natto and possesses some acidity.

Tables: (1) Different types of kinema collected from different localities in Nepal. (2) Chemical composition of Kinema.

Figures: (1) An excellent map of Nepal shows the "Kinema producing area of Nepal"–which is in the northeastern part of the country. (2) Flow chart–Traditional process for making kinema. (3) Flow chart–Preparation of kinema starter. (4) Flow chart–Preparation of kinema using selected strains. (5) Bar chart–Distribution of 4 types of bacteria in 4 samples of traditional kinema. (6) Graph–Change in cell propagules, temperature and moisture during the fermentation of kinema. (7) Graph–Change in the growth rate of selected microbes during kinema fermentation.

The paper is followed by 3 pages of discussion, in Japanese. Address: Central Food Research Lab., Babar Mahal, Kathmandu, Nepal.

Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 246-48. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts, p. 72. [2 ref. Jap]

• ***Summary:*** "In the traditional Natto making, cooked soybeans were wrapped in rice straw and kept in a warm environment until viscous material was formed by fermentation. The rice straw functioned as a natural donor of Natto starter bacterium. The rice straw was not only the donor of the starter responsible for Natto fermentation but it also played an important role in adjusting temperature, humidity and aeration as well as absorbing unpleasant ammoniac odor, which was essential for Natto manufacture using traditional technology. Nevertheless, rice straw was often contaminated with soil-borne microbes, and it was rather difficult to maintain good control of the process in the traditional method of Natto making.

"Dr. Shin Sawamura, in 1905, first isolated Natto Bacillus and characterized the isolates, which opened the way for pure cultures of the starter...

"The fermentation of Natto takes about 18 hours, starting at 40ºC and rising to 50ºC. The temperature in the fermentation chambers was maintained by a charcoal fire, electric heater or steam pipings, carefully watched by experienced technicians overnight." Address: Meiji Daigaku, Japan.

8663. Kato, Takeo; Shiga, I.; Terasawa, K. 1986. Nyûsan hakkô o riyô shita okara no hozon-sei no kaizen [Preservation of okara (soybean residue from soy mash) by lactic acid fermentation]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 33(12):837-38. Dec. [11 ref. Jap; eng]

• ***Summary:*** Lactic acid bacteria were used as starter cultures in order to prevent microbiological deterioration of okara. It was difficult to prevent spoilage of okara in aerobic conditions. In facultatively anaerobic conditions such as packing in a polyethylene film bag or a screw-cap bottle, okara was fermented by lactic acid bacteria, lowering its pH value to less than 4.2 and resulting in inhibition of growth of spoilage bacteria for greater than or equal to 4 days at 37ºC. Address: Food Research Inst., Aichi Prefectural Gov., 2-1, Shinpukuji-cho, Nishi-ku, Nagoya 451, Japan.

Japan: Takeshima Shigeru. 319 p. See p. 186-98. Held July 1985 at Tsukuba, Japan. English summary in conference abstracts. [10 ref. Eng]
• ***Summary:*** Contents: Introduction. Preparation of tempe in our laboratory. Discovery of antioxidants in tempe. Effect of isoflavone Factor 2 in vitro and in vivo. Increase of B vitamins and free amino acids.

Why did Dr. Murata start work on the antihemolytic and antioxidative factors during her study at Dr. P. Gyorgy's laboratory in Philadelphia, Pennsylvania? The United Nations Protein Advisory Group (PAG) and FAO had chosen tempe as one of the best soybean foods for use as a vegetable protein source. When she visited Dr. Gyorgy's laboratory, rat feeding tests on stored tempe and unfermented soybean powder were underway. The tempeh in their laboratory was made using a modification of the pilot plant process described by Steinkraus, Van Buren, Hackler and Hand (1965).

Contains 5 tables and 15 figures (mostly graphs). Most of these appeared in previous publications. Address: Teikoku Gakuen, Moriguchi City, Japan.

English-language summary in Symposium Abstracts, p. 64. [Jap]
• ***Summary:*** In 1962 the author was first introduced to kinema, a non-salted fermented soybean food, in eastern Nepal. Before that time on trips he had noticed that soybeans were commonly planted on the levees of paddy fields in Nepal, Sikkim, and Bhutan. In 1972 he proposed the hypothesis of the "triangular distribution" of non-salted fermented soybean foods, also known as the "natto triangle." Since proposal of the hypothesis, many other examples of non-salted fermented soybean foods in the area have been reported. They are "Soeda" of Bhutan, "Pe-Boutsu" of Burma, "Thua-nao" of northern Thailand and many other examples in China proper (PRC) and in the Miao Tribe of Kweichow (Guizhou) Province of China. "In these examples, the local names are much different and no common word is found. This may suggest that the existence of fermented soybeans is not the result of recent dispersals from a central place of origin, but may have happened in rather ancient times. Then I came to the further assumption that within the triangular area there may have been a complex common human culture from olden times.

"In processing the non-salted fermented soybean, the artificial inoculation of the boiled soybean is sometimes practiced like in tempe. In Bhutan it is reported that the starter for fermentation is the same one which is prepared for the fermentation of alcoholic beverages. The fundamental method of making alcoholic beverages in the Himalaya and southeastern Asia is to inoculate the boiled cereals with the starter and then the main fermentation takes place in solid state, not in water. The process in making the non-salted fermented soybean and the alcoholic beverages can be understood to be a similar one. So they must have originated from the similar culture complex."

Note: This is the earliest document seen (Jan. 2012) concerning "Soeda" of Bhutan, or "Pe-Boutsu" of Burma, both non-salted fermented soyfoods. Address: Professor Emeritus, Osaka Prefectural University.

English-language summary in Symposium Abstracts. p. 52. [Jap]
• ***Summary:*** "Natto in Japan generally means Itohiki-Natto, which is a unique product in this country. A very small amount of Shio-Natto derived from China is also manufactured in some limited localities.

"The first description of Natto bacterium was by Dr. Kikuji Yabe in 1894, who isolated three *Micrococci* and one *Bacillus* from Natto, but was unable to determine that those isolates were responsible for Natto fermentation. In 1905, Dr. Shin Sawamura first isolated a bacterium that could produce good Natto by its single inoculation, and named the isolate *Bacillus natto* Sawamura, a novum species. This was the discovery of Natto Bacillus.

"Subsequently, Prof. S. Muramatsu of Morioka Agricultural Academy, and Prof. Jun Hanzawa of Hokkaido University did research and extension / education on natto manufacture with pure starter cultures of Natto Bacillus, and it was Prof. Hanzawa's great contribution that the natto technology which is widely used in the nation today was firmly established and disseminated.

"The traditional manufacture of Natto, namely wrapping of cooked soy in rice straw to ferment the beans, depended on natural inoculum from straw, but that process had problems with sanitation and did not guarantee a consistent quality of products. Prof. Hanzawa introduced not only good starter cultures, but also a new method, to use a container in place of straw. He organized in 1919 an association of natto container improvement, started to publish a journal 'Natto' and was greatly committed to the education of Natto manufacturers. Mr. Jirô Miura, The First President of National Natto Manufacturer's Association (presently National Federation of Natto Manufacturers' Cooperatives) established in 1940, was among those who were directly guided by Prof. Hanzawa.

"The new technology rapidly disseminated in the nation and even in the Japanese communities on the Chinese mainland and Latin America. This fact reflects the excellence of the new technology developed under the guidance of Prof. Hanzawa.

"In microbiological research on Natto Bacillus, a great number of reports were published on taxonomy, nutrient requirements, formation of mucous materials, enzymes, antibiotic activities and phage infection. *Bacillus natto* named by Dr. Sawamura was included in *Bacillus subtilis* in Bergey's Manual of Determinative Bacteriology 6th Edition (1948), and has not been recognized as an independent species since then. However, Natto Bacillus has many different properties from *Bacillus subtilis,* and still maintains its naming at present, especially in the Natto manufacture."

Contains numerous photos, including: 1920 post card from the Society for the Improvement of the Natto Container. Ad for the first pure-culture natto bacteria cultured by Dr. Hanzawa. Dr. Jun Hanzawa. Address: Hokkaido Univ., Nôgaku-bu.

8676. Toyoda, Motoo. 1986. Jiba sangyô to shite no nattô to sono eisei kanri [Natto manufacture as a rural agro-industry and its sanitary management]. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 263-67. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts, p. 75. [4 ref. Jap]

• ***Summary:*** "Natto is one of the most efficient nutritious foods and first appeared in food history more than 2,000 years ago. There are two types of Natto, 'Shiokara-natto (salted)' and 'Itohiki-natto (non-salted)'... Ibaraki prefecture is one of the largest producers of 'Itohiki-natto' and the best place to maintain their high quality in Japan. The 'Itohiki-natto' in Ibaraki prefecture is also known as 'Mito-natto' and is one of the major genuine products in Ibaraki prefecture. There are 34,000 tons of 'Mito-natto' produced annually, comprising 20% of all products in Japan (1984).

"There are several reasons why 'Mito-natto' is so popular with consumers. 'Mito-natto' is made from small grain soybeans. Therefore, the taste of 'Mito-natto' is very mild and soft. Due to the Kanto loam, only small grain soybeans can grow in Ibaraki prefecture. From the Tokugawa Era (200 years ago), these small grain soybeans have been harvested before the typhoon season due to their early-ripening character... The small grain soybeans are difficult to use for making Tofu and Miso... Interestingly, *Bacillus natto* can grow better on small grain soybeans than large ones. This feature allows 'Mito-natto' to have unique stickiness with special flavor.

"The container of 'Mito-natto' is quite unique. More than 96% of manufactured 'Mito-natto' is packed in PSP (polystyrene paper) containers. This Natto is distributed widely through grocery stores. The remaining 4% of 'Mito-natto' is packed in a traditional container called 'Tsuto-natto' made of straw. Ibaraki is the only place where 'Tsuto-natto' is permitted to be used as a Natto container. Historically, 'Mito-natto' was first sold at Mito station in 1889. Since then, this type of Natto is mainly sold in souvenir shops, especially Kiosks, located on major JNR (Japan National Railway) stations...

"In 1961, Ibaraki prefecture established the standard methods for inspecting the quality of Natto. In Ibaraki, three organizations, Ibaraki prefectural Institute of Health, Environmental Sanitation Section of Ibaraki Government and Ibaraki Natto Maker's Association, have been working closely to prevent any possible safety problems associated with the manufacturing and marketing of Natto." Address: Technical advisor of Ibaraki prefecture, and Purima Hamu K.K. (Prima Ham).

8677. Tsubaki, K. 1986. Historical survey of the studies on Mucorales in Asia. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 28-30. Held July 1985 at Tsukuba, Japan. [Eng]

• ***Summary:*** This is a survey of the major species of mucorales which are useful in applied microbiology. Taxonomically, they are classified in the sub-division Zygomycotia of the division Eumycota. Names of the genera include *Absidia, Mucor,* and *Rhizopus.* They are included in the Phycomycetes in older textbooks. "So far as I know, the first investigation of Mucorales from Asia was made by a French mycologist, Calmette, who first described an interesting species, *Amylomyces rouxii*, in 1882... His isolates came from the Chinese yeast. This species has been called *Mucor rouxii* in most textbooks so far." Two years later, in 1884, Eijkman considered this fungus to be a species of *Mucor,* but used a trinomial name, *Mucor amylomyces rouxii.* "Then many other important species of *Mucor* have been published including, *M. javanicus, M. praini,* etc. In the case of *Rhizopus,* the first species from Asia is *Rhizopus japonicus* so far which was isolated by Vuillemin in 1902. In Japan, studies of the mucoraceous fungi started by Saito in 1904. After that, Hanzawa reported a taxonomic study of *Rhizopus* in 1912 and 1914 describing twelve species. Hanzawa's work was continued by many mycologists." Address: Dep. of Biological Science, Univ. of Tsukuba, Japan.

8678. Ueda, Seinosuke. 1986. Nattô-kin no "purasumido" kaiseki [Analysis of natto bacillus plasmids]. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 81-91. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts. p. 55. [Jap]

• ***Summary:*** "The unique feature of Japanese natto, a traditional fermented food, is the formation of mucous materials by the Bacillus, namely levan-like polysaccharides and gamma-polyglutamic acid, the latter being the chemical principle of mucous appearance of natto. It was discovered that the gene that is responsible for the formation of gamma-polyglutamic acid can be transferred into *Bacillus subtilis* Marburg strains that are incapable of forming gamma-polyglutamic acid, by means of genetic transformation technique at high frequencies...

"The isolation of this small plasmid from more than ten starter strains of natto *Bacillus* was conducted in order to assess the homology of the plasmid isolation... In order to look further into the function of the small plasmid of natto *Bacilli,* many spore-forming aerobic rods that are recognized as natto *Bacillus*-like microorganisms were isolated from Japanese natto-like fermented soybean foods that are popular in the daily diet of East Asia, namely Chinese To-chi, Nepalese Kinema and Thai Thua-nao, and plasmids of each

© Copyright Soyinfo Center 2014

isolate were compared. Every isolate tested contained small plasmids of 5.7-9.6 kb [kilobase molecular weight] all of which demonstrated quite a high degree of homology with natto *Bacilli* plasmid pUHl of 5.7 kb, which codes gamma-glutamyl transpeptidase gene controlling the formation of gamma-polyglutamic acid.

"The comparative studies on these plasmids derived from natto *Bacilli* and *Bacilli* from natto-like fermented foods of East Asia may reveal the origin and evolution of natto *Bacillus* plasmid and may ultimately clarify the history of dissemination of such fermentation technologies." Address: Kumamoto Kogyo Daigaku [Kyushu Univ.].

8679. Yasuda, Masaaki. 1986. Preparation of tofuyo (fermented tofu) using *Monascus* fungus. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 312. Poster session. Held July 1985 at Tsukuba, Japan. [Eng]

• ***Summary:*** Tofuyo is a delectable creamy soft fermented tofu product made in Okinawa. "Tofuyo is a cheese-type product from tofu (soybean curd) by the action of microorganisms in Okinawa, Japan. It is a creamy cheese type product which has a mild flavor, suitable elasticity, fine texture and good for tastes. The product using Monascus fungus is unique and highly esteemed for the table. As the method of making Tofuyo has been a secret, there is little knowledge on the preparation of the product. Here the author reports about the preparation of a Tofuyo using *Monascus* fungus.

"Methods: Three steps are involved in making Tofuyo: making koji, preparing tofu and dehydrated tofu, and ripening. Tofuyo was prepared as follows; dehydrated tofu was soaked into a soak containing Beni koji prepared by growing *Monascus* on steamed rice, a small amount of salt and awamori (distilled liquor) and then, it was matured at 25-35ºC for 4.5 months.

"Results: Optimum incubation period of the Beni koji making was from 150 to 160 hr after inoculation of the seed. The highest production of enzymes (protease, alpha, and glucoamylases) activities and pigment of the koji was obtained by employing autoclaved non-glutinous rice. alpha-amylase and glucoamylase of the koji were alcohol tolerant, but protease was not. The best conditions of tofu making for Tofuyo were as follows; the final concentration of calcium sulfate: 20mM, final pressure: 38 gm per cubic centimeter. The curd was characterized as follows; hardness: 10-11 x 10,000 dyne per square centimeter, moisture: about 76%, and texture: suitable elasticity and fine texture. Tofuyo prepared with the dehydrated curd by enforced drying, e.g., by warm wind, in oven or under vacuum, was not good for taste. The best quality of Tofuyo was obtained with the curd (hardness: 2O-3O x 10,000 dyne per square centimeter) which was gradually dehydrated at room temperature, and a hardness of the product was 14-18 x 10,000 dyne per square centimeter.

"Ripening changes in a Tofuyo were also investigated. Crude protein content of the product decreased with ripening period, while that of the soak increased. Decrease of some protein bands of the product was confirmed by the method of disc-gel electrophoresis. Hardness of the product was decreased. Protease activity decreased and the activity depended on the presence of ethyl alcohol concentration of awamori (from 20 to 25%), but alpha or glucoamylase had high activities from early to late in maturing. Reducing sugar (as glucose) of the product increased during ripening period. Chemical compositions of Tofuyo using *Monascus* fungus is as follows; 59.99% of moisture, 31.80% of crude protein, 25.58% of crude fat, 8.50% of crude ash, and 34.12% of nitrogen free extract on a dry basis except moisture." Address: Dep. of Agricultural Chemistry, Univ. of the Ryukyus, Nishihara-cho, Okinawa 903-01, Japan.

8680. Yoshida, Shuji. 1986. Minzokugaku kara mita muen hakkô daizu to sono shûhen [The origin of non-salted fermented soybeans from the viewpoint of ethnology]. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 166-78. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts, p. 62-62. [20 ref. Jap]

• ***Summary:*** "Two of the earliest kinds of fermented soybeans were *shì* and *dòu-jiàng.* The former antedates the latter, because *shì* can be traced to the Han Dynasty (206 BC-A.D. 200), whereas *dòu-jiàng* does not emerge until the description in *Qimin Yaoshu* (A.D. 536-550). Good descriptions of *shì* and *dòu-jiàng* are given in *Qimin Yaoshu. Shì* is made as follows: A yellow mold is permitted to grow on boiled beans, which are then washed and wetted, after which they are fermented in a cellar for 10-12 days. *Shì* was eaten as a condiment.

"However, *shì* as a food would have appeared prior to *shì* as a condiment. *Sake* which was made from grain through mold fermentation, was originally not for drinking, but rather for eating. Such a primitive *Sake* is still used in Yúnnán. I suppose that a primitive *shì* also was eaten, and that the place of origin of *shì* was South China, according to the description in *Bencao Gangmu* (*shì* was commonly made in South China), and *Bówùzhì* (*shì* was exotic).

"*Dòu-jiàng,* which may have been first mentioned in *Bencao Gangmu* (1596), was a simple mold bean and was technologically more primitive than *shì,* although the existence of *dòu-jiàng* or a similar substance cannot be traced in the literature before *Qimin Yaoshu.* It seems that the first product of fermented beans would be *dòu-jiàng,* or a similar substance, and that its making would have been influenced by *sake* production. Later, *shì* as a food would have appeared and then *shì* as a condiment was produced, as we see from the *Qimin Yaoshu.*

© Copyright Soyinfo Center 2014

"On the other hand, *dòu-jiàng* was developed from *ròu-jiáng,* preserved meat... *Natto, kinema* and *tempeh* would be identified as a substance similar to *dòu-jiàng,* which was a primitive fermented soybean product. Boiled beans became *dòu-jiàng* if they were covered by *Imperata cylindrica* grass, *kinema* if covered by certain leaves, *tempeh* if covered by leaves of *Hibiscus tiliaceus* or banana leaves, and *natto* if covered by ricestraw.

"We know that various kinds of plants are used for making *sake* or mold bran. The species used varies by place. Fermented soybeans occur within the *sake*-making area and only at the margin of the distribution. That means several new fermented soybean products like *shì* and *dòu-jiàng* were made in the center of the fermented soybean distribution, and the area gradually expanded toward the margins. They were accepted in areas close to the center, but the most primitive forms would have remained only in the marginal places, where new ones were not accepted."

A large chart (p. 169) shows the relatives and development of fermented black soybeans (*shi*)*;* it includes the names of various unsalted fermented soyfoods and soy condiments (with their geographical area in parentheses). Relatives (fermented soyfoods made from yellow soybeans): Akuni (Sema Naga, in the Himalayas in northeast India), kinema (Limbu, in eastern Nepal), pe-bout (Shan, in eastern Burma), itohiki natto (Japan), and tempeh (Indonesia). Stage 1. Itohiki natto became Chon Kujjiang [perhaps *chungkuk jang,* Korean-style natto] of the Zhanguo Warring States period (475-221 BC) in China. Stage 2A: Unsalted fermented black soybeans were originally used as a food, rather than as a seasoning. To these unsalted fermented black soybeans, koji was added to create homemade unsalted fermented black soybeans (*doushi,* of China), Stage 2B: Salt was added to the unsalted fermented black soybeans to make various salted foods (each with a firm texture like raisins): Daitokuji natto (Japan; with wheat flour added), *pe-ngapi* (upper Burma), and *seang* (Cambodia). Stage 3. Unsalted fermented black soybeans (*doushi*) developed into closely related danshi. Koji was added to danshi to make *rul-kre* (of Bhutan). Cooked soybeans were shaped into balls and fermented naturally to make miso-dama ("unsalted miso balls" [meju], Korea and Japan). Then salt was added to the miso-dama to make various seasonings (each with a consistency like applesauce or paste / miso): Korean soybean jang (*doen jang*), Korean soy sauce (*kan jang*), or soybean miso (*mamé miso,* Hatcho miso, Japan). Stage 4. Salt was added to unsalted fermented black soybeans (*shi*) to make salted fermented black soybeans, from which developed inyu (a fermented soy sauce made with black soy beans, in Taiwan), *inshi* (meaning unclear, of Taiwan), and taucho (*tauco,* of Indonesia). Stage 5. Koji was added to salted fermented black soybeans to make *shi* for food use, and *doushi* (of Sichuan, China). Stage 6. Flour was added to salted fermented black soybeans to make red pepper jang (*kochu jang,* Korea) and spicy fermented black soybeans (*doubanshi,* China).

Note: This chart may be easier to understand when viewed in chart form, however the logic and some of the products seem a bit unclear. It is also unclear which products are fermented with bacteria (like natto). Soyfoods Center has an English-language translation of this chart. Address: National Museum of Ethnology, Osaka (Kokuritsu Minzokugaku Hakubutsukan).

8681. **Product Name:** [Toniku {Textured Soy Protein}].
Manufacturer's Name: Ajinomoto Co. Inc.
Manufacturer's Address: Kyobashi 1-5-8, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1986.
New Product–Documentation: Soya Bluebook. 1986. p. 92.

8682. Fujiwara, S.; Inoue, K.; Hirota, T.; Kawanishi, G. 1986. [Studies on hydrolysis of soybean phytate by phytase from *Rhizopus sp.* EF-78]. *Reports of Research Laboratory, Snow Brand Milk Products Co.* No. 83. p. 31-41. [25 ref. Jap; eng]*
• ***Summary:*** Optimal conditions for the operation of phytase, isolated from *Rhizopus* species, on phytate from soybeans were determined. The improvement in digestibility of soymilk exposed to this phytase was also quantified. Address: Technical Research Inst., Snow Brank Milk Products Co. Ltd., 1-1-2 Minami-dai, Kawagoe, Saitama 350, Japan.

8688. Nakagawa, A.; Murasawa, H. Assignors to Asahi Foods Company Ltd. 1986. Process of manufacturing bean curd and bean milk. *European Patent Application* 170,507 A2. [Eng]*
• ***Summary:*** For soymilk, the soybeans are dried at room temperature, crushed and dehulled. The resulting particles are soaked, ground, then boiled with steam in a closed container. Foam is removed by application of a jet of steam to the surface. The okara is separated from the soymilk. To make tofu, a coagulant (such as glucono lactone, nigari/bittern, or calcium sulfate) is added to the soymilk.

• ***Summary:*** "William Saunders first planted soja [sic] bean on the Central Experimental Farm in 1897. Because all available varieties were long-seasoned and would not mature sufficiently to produce ripe seed, the soybean was harvested as hay when pods were about half filled. As recently as the late 1930s no variety was available that would reliably mature seed when grown in Canada...

"The first effort to improve soybean for Canadian conditions was in 1923 when F. Dimmock organized extensive variety trials at Harrow. He transferred to the Forage Crops Division, Ottawa, in 1927 but continued to manage the Harrow soybean trials until C.W. Owen was appointed in 1929. Dimmock inaugurated a selection program within the Manchu variety to find earlier maturing varieties for southwestern Ontario. The first selection, A.K. (Harrow), was released in 1931. It was not until 1943, however, that Harosoy was released from the crossbreeding program started in 1936. The introduction of Harosoy from the Experimental Station, Harrow, marked the beginning of the commercial soybean industry in Canada. By 1959 Harosoy was the most important variety in Canada, occupying about 70,800 ha (75 percent of the soybean) in Ontario and about 1,620,000 ha (15 percent) in the United States.

"Dimmock at Ottawa and Owen at Harrow used germ plasm obtained from Harbin, China, to develop early varieties. They also freely exchanged parental material with the University of Minnesota; consequently the three programs produced similar varieties.

"The objectives of the Harrow and Ottawa programs were to develop varieties that would mature sufficiently early for all seed to ripen before harvest (125-130 days) and to have strong upright branches that held seed pods well above the ground for ease in harvesting...

"The Ottawa program emphasized production of early varieties because the growing season in the northern part of Ontario, Quebec, and Manitoba was about 10 days shorter than at Harrow. In 1961 L.S. Donovan assumed responsibility for the Ottawa soybean (and corn) breeding programs. His objective was to develop varieties of soybean that would mature in the Ottawa River valley of Quebec and Ontario and in southern Manitoba. To achieve this goal he turned to Sweden, which had obtained early maturing, day-neutral varieties from the Sakalin [sic, Sakhalin] Islands of northern Japan. By using this new germ plasm in combination with material from Germany, Donovan widened the genetic base of his breeding program and made outstanding progress... From this program came Maple Arrow (1976), Maple Amber (1981), and Maple Presto (1982). At the time of introduction, Maple Presto was the earliest maturing soybean licensed in Canada...

"Recently H.D. Voldeng of the Ottawa Research Station developed two edible varieties grown specifically for the Japanese market. To obtain the needed small seeds Voldeng turned to wild soybean from China, which has black seeds in small pods...

"In 1978, in cooperation with the Alberta Department of Agriculture, a soybean breeding program was initiated at Lethbridge. H.-H. Mündel was appointed to develop varieties suitable for irrigated lands." Address: Canada.

• ***Summary:*** We can sell this book to tofu makers for only 200 yen. Lots of new okara recipes. Address: Tokyo, Japan.

8703. Chung, Yong-kyu. 1986. The development of multi-cropping systems and soybean production in the Asian-Pacific region. In: S. Shanmugasundaram and E.W. Sulzberger, eds. 1986. Soybean in Tropical and Subtropical Cropping Systems. Shanhua, Taiwan: Asian Vegetable Research and Development Center. xv + 471 p. See p. 409-16. [10 ref]
• ***Summary:*** A major reason for slow production growth is the low net income. In U.S. dollars it was only $65/ha in Taiwan, but minus $100/ha in Japan and minus $200/ha in Korea.

"The need to develop multi-cropping systems for Asian and Pacific countries is widely recognized... Rice is the dominant crop in the region, and there may be a regional surplus by the late 1980s. Japan and Taiwan have already instituted rice reduction programs..."

"A case study in Korea revealed that the income elasticity for soybean demand, including induced demand, was 1.2851, while the value in relation to soybean used for human consumption was 9.8418... This means that a 10% increase in real per capita income will result in a 12.9% increase in aggregate soybean demand and an 8.4% increase in direct consumption."

"World soybean production increased by 5.7% per annum during the last decade... Soybean production in the Asian and Pacific region, however, increased at a rate of only 4.8% during this period. Japan and Korea had small production increases, mainly because of higher yields. Production in Taiwan decreased from 65,000 tonnes in 1970 to 26,000 tonnes in 1980."

"The prospects for soybean production in Taiwan, Japan, and Korea are poor considering recent decreases in production and strong price supports for other crops. The ratio of the farm household sale price to the imported price (1981) in Taiwan, Japan, and Korea was 1.7, 3.7, and 3.1, respectively. This was primarily due to differences in production costs. For example, the production cost for 10 kg of soybean in the USA (1979) was estimated at US $1.34 (Pan 1980) compared with U.S. $3.82 in Taiwan, and US $12.78 in Japan. A dramatic increase in soybean production in the region is therefore unlikely."

"Most governments in the region have already established strong price supports for soybean." Address: Agricultural Economist, Food and Fertilizer Technology Center for the Asian and Pacific Region, 5th Floor, 14 Wenchow St., Taipei, Taiwan.

8704. Colbin, Annemarie. 1986. Food and healing. New York, NY: Ballantine Books. 351 p. Foreword by Robert S. Mendelsohn, M.D. Index. 23 cm. [207* ref]
• ***Summary:*** A very interesting, wholistic look at food trips and philosophies–with a preference for macrobiotics. Discusses miso, natto, tempeh, and tofu. Pages 169-72 discuss beans, including soybeans. Beans are said to be contractive, acid-forming, warming, and a buildup food. "Folklore has it that appreciable quantities of soybeans and their products, especially tofu, can lower, or cool, sexual energy. Research done at the universities of Illinois and Kansas has shown that soybeans may interfere with the absorption of zinc. As zinc is one of the minerals most strongly associated with the healthy functioning of the sex glands, this bit of folk wisdom appears realistic."

Chapter 12, titled "Food as Medicine," discusses healing foods and tells how to prepare them, including miso soup (p. 253; contractive, alkalinizing, warming, breakdown). Miso soup is considered a good food to help cure the common cold, to neutralize the negative effects of excess sugar consumption, and to combat problems of inflammation of the digestive tract (ulcers, colitis, spastic colon, etc.); ulcers are problems of excess acidity.

Chapter 14, titled "The Effects of Food on Sex," notes that "Scientific studies have found that individual foodstuffs have an effect on sexuality via their chemical constituents... soybeans (including tofu) contain traces of antithyroid factors; as the thyroid regulates sexual desire, activity, and fertility, when consumed in large enough quantities these foods could possibly inhibit sexuality by lowering thyroid energy. Oriental folk rumor, which I've been unable to verify, has it that tofu 'cools the sex organs' and is used by monks for the specific purpose of aiding them in maintaining celibacy. In this light, it's interesting to note that the traditional Japanese diet, high in thyroid-depressing soybean products, also contains appreciable amounts of seaweeds, rich in thyroid-stimulating iodine."

In the Foreword, Dr. Mendelsohn writes: "Coming from

© Copyright Soyinfo Center 2014

a background of modern medicine, I, as well as hundreds of thousands of other M.D.s, was carefully educated in nutritional ignorance–indeed in disdain for food. The hospital 'dietician' was not–and is not even today–a teacher of physicians. The dietician's traditional purpose in life has always been to serve as a 'referral' for a patient who bothered the physician with too many questions about food. The very title of this book *Food and Healing* represents a joining of two concepts that most doctors regard as unrelated."

A photo (p. 351) shows Annemarie, who was born in Holland and brought up in Argentina on a European vegetarian diet. After her arrival in the United States in 1961, she was introduced to macrobiotics. She lives in New York City with her two daughters, and directs the Natural Gourmet Cookery School there. Address: 365 West End Ave., New York City, NY 10024. Phone: 212-580-7121.

8705. Deming, William Edwards. 1986. Out of the crisis. Cambridge, Massachusetts: MIT Center for Advanced Engineering Study. xiii + 507 p. 22 cm.

• ***Summary:*** Dr. Deming (who is age 90 in 1991), a renowned statistician, was a pioneer in introducing statistical quality control to Japan, starting in 1950. This in turn transformed the image of Japanese products worldwide from shoddy and cheap to superior in quality. The various Japanese national standards, such as the Japanese Agricultural Standard (JAS), grew out of his work. An Appendix to this book, titled "Transformation in Japan," tells how this transformation was made, with details on key Japanese organizations such as JUSE (Union of Japanese Science and Engineering), Japan Management Assoc., Keidan-ren (Federated Economic Societies), quality control circles, etc.

8706. Durston, Diane. 1986. Old Kyoto: a guide to traditional shops, restaurants, and inns. Tokyo, San Francisco: Kodansha International. 240 p. Foreword by Donald Richie. Illust. (photos by Lucy Birmingham). Indexes (by type of shop; alphabetical list of shops). 19 cm. [17 ref]

• ***Summary:*** "A completely revised version of the classic guidebook to Kyoto, with a foreword by Donald Richie. Down the cobbled paths and behind the tranquil noren curtains of Kyoto, the old way of life goes on, nurtured in the restrained furnishings of the traditional inns and in the old shops where fine handmade items still add a touch of quality to life. Since the first edition appeared in 1986, this lovingly written travelogue-cum-guidebook has become de rigueur for knowledgeable travelers seeking to find 'the real Kyoto.' With 51 maps and over 120 photos of the living heart of this ancient capital–and a vanishing way of life. Each shop featured in the book is accompanied by a photo showing its front and a map showing its location" (from the publisher).

Tofu is mentioned on pages 9, 30, 53, 55, 116, 121 (Okutan), 123, 147, 158, 193, 201, 234, 239.

Miso is mentioned on pages 53, 100, 123 (dengaku), 147, 179, 213, and 233.

Yuba is mentioned on pages 30, 59, 61, 147, and 234. Natto is mentioned on pages 49, 183, 233, and 239.

Shôjin ryôri, the vegetarian [actually vegan] food served in Buddhist temples, was also developed in Kyoto from its prototype, fucha ryôri, brought from China by priests. Yuba, uncooked wheat gluten (nama-fu), and tofu are all part of shojin ryori (p. 30).

Fuka (p. 50-52) is a shop that specializes in making wheat gluten, including *nama-fu,* the chewy variety, that is made from half regular wheat gluten and half glutinous rice flour (*mochi-gome*). Wheat gluten is an important part of the vegetarian diet of Zen monks.

Iriyama Tofu (p. 53-55) makes tofu (*momen-dôfu*) in the traditional way, using nigari as a coagulant. The owners (Mr. and Mrs. Iriyama) are 9th generation tofu makers, working in a 120 year old building. Using a charcoal fire they make grilled tofu (yaki-dôfu). They also make deep-fried tofu pouches (*o-age*) and tofu balls (*hiryôzu*).

Note: This is the earliest English-language document seen (April 2013) that contains the term *hiryôzu;* it refers to Kyoto-style deep-fried tofu treasure balls.

Yubahan (p. 59-61) makes yuba in the traditional way using a wood fire and soybeans cooked over an old clay *kamado* stove. "No clocks or timers are involved." Tomizo Asana is the 9th generation yuba maker. "Yubahan started making yuba in 1716, but all family records were destroyed in the huge fire of 1864 that destroyed much of the city."

Takasebune (p. 98-100) specializes in tempura, with a tempura dinner (*tenpura teishoku*) including a "generous bowl of miso soup."

Tamatomi (p. 116-17) offers teppin-age (a fry it yourself tempura meal) and oden stew (with tofu).

Okutan (p. 120-23), inside the north gate of famous Nanzen-ji temple, is famous for its tofu cookery. It has served *yudofu* (fresh tofu simmered in a big ceramic pot over a charcoal fire, with a shoyu dipping sauce) for 12 generations and 300 years. Side dishes include vegetable tempura and tofu dengaku.

Nakamura-ro (p. 136-38) is famous for its tofu dengaku (with miso).

Bunnosuke-jaya (p. 142-44) specializes in amazake.

Ikkyû-an (Ikkyu-an, p. 145-47) serves fucha ryori (Chinese-style vegetarian temple food, including sesame tofu, tofu dengaku. It is named after the famous Zen monk and priest Ikkyû Sôjun {Ikkyu Sojun}).

Takocho (p. 158), 100 years old with 15 seats at the counter, features oden stew with tofu.

Ichiwa (p. 178-80) which makes rice cakes (mochi) and abura mochi (cakes of glutinous rice flour dough that are charcoal grilled on green bamboo skewers then dipped into a

© Copyright Soyinfo Center 2014

sweet miso sauce).

Isoda (p. 181-83, 41 Shimomonzen-cho, Murasakino, Kita-ku, southeast of Daitoku-ji. Phone: 075-491-7617) is said to be the best and oldest maker of Daitokuji natto in Kyoto; their fermented black soybeans are sold in a small wooden box. After Daitoku-ji "was destroyed in the Onin Wars (1467-77), an eccentric Zen priest named Ikkyû supervised the reconstruction of the temple and became its 47th (and most celebrated) abbot. According to legend it was Ikkyu who introduced the Chinese Buddhist recipe for this compact, high-protein treat" for mendicant Zen monks. The original recipe, which is still used at Isoda, is described. Because warm weather and natural sunlight are necessary, Daitoku-ji natto can only be made during the summer months, most often in August after the rainy season has abated. Even Sen no Rikyu, the famous Japanese tea master, is said to have been an ardent fan of the salty morsels–which are still served with ceremonial tea. Chûgo Isoda, the present owner, is a 17th generation maker of Daitokuji natto. He and his wife work together during the hot summer making the fermented black soybeans. A full-page photo shows Mr. Isoda mixing a shallow tub of the dark fermenting beans. Daitoku-ji natto are also mentioned on page 49.

Nishiki (p. 197-99) is famous for its kaiseki ryori. "Every month the ingredients are completely changed to match the season." One dish is karashi-dôfu ("mustard tofu").

Sagano (p. 201-02) serves simmering tofu (*yudôfu*) in the bamboo forest just south of Tenryu-ji temple.

The excellent "Glossary" (p. 230-32) includes entries for: Amazake, fu (wheat gluten), kaiseki, miso, mochi, nattô (fermented soybeans), oden, o-hagi, shôjin ryôri, sukiyaki, tofu, yuba, yûdofu. Address: Kyoto, Japan.

8707. Ebine, H. 1986. Miso. In: N.R. Reddy, M.D. Pierson, and D.K. Salunkhe, eds. 1986. Legume-Based Fermented Foods. Boca Raton, FL: CRC Press. [viii] + 254 p. See p. 47-68. Chap. 3. [66 ref]

• ***Summary:*** Contents: Introduction: History, consumption patterns and production. Preparation. Composition: Chemical composition, physical properties, organoleptic qualities, other characteristics. Nutritional quality. Toxicology. Miso-like products: Kinzanji miso, hama-natto (tera-natto), doenjang (soybean paste) and kochujang (red pepper soybean paste), tauco. Conclusions. Address: Central Miso Research Inst., Tokyo, Japan.

8708. Frost, G.M. 1986. Commercial production of enzymes. *Developments in Food Proteins* 4:57-134. Chap. 3. (B.J.F. Hudson, ed. London and Englewood, New Jersey: Applied Science Publishers). [197* ref]

• ***Summary:*** The production of isolated enzymes on an industrial scale began less than 100 years ago. However the action of enzymes (fermentation) for changing and preserving foods has been exploited for thousands of years. Many traditional fermentations involve digestion by extracellular enzymes prior to fermentation by whole organisms. Enzymes are sold mainly to the food, beverage, and detergent industries. The present world market is valued at approximately £200 million. Most applications now involve hydrolytic enzymes, but future growth of other types seems probable. Most commercial enzymes are made by submerged cultivation of highly developed strains of microorganisms using specially optimized processes. Industrial enzymes, though rarely highly purified, are manufactured to exacting microbiological specifications. Enzymes for diagnostic and pharmaceutical use require more sophisticated purification methods.

The first artificial use of an enzyme was probably the addition of calf stomach extract to milk to cause coagulation when making cheese. In the West, the main use of fermentation is in making alcoholic beverages–wine, beer, etc. In East Asia, traditional fermentations are more concerned with improving the nutritional value, flavor, and texture of various foods–such as tempeh.

During the past century Asian and Western applications have been merged. For example, in 1894 Takamine in Japan used *Aspergillus oryzae,* the main organism in the soy sauce fermentation, to make Takadiastase, "an amylolytic enzyme which was first used for human consumption as a digestive aid." Takamine also established a business in the USA and new applications for his enzymes were found. His company still exists (though under a different name) and is still marketing essentially the same enzyme preparations.

Includes a long section on "Enzymes used in food." Address: John & E. Sturge Ltd., Selby, North Yorkshire, UK.

8709. Furuta, Kenji. 1986. Shoyu making in Japan. *Farming Japan* 20(2):58-61. Special issue: Processed foods of soybeans. [Eng]

• ***Summary:*** "From April 1980 to April 1982, I stayed in Nepal as a member of the Japan Overseas Cooperation Volunteers (JOCV). In these months, I was engaged in the study, trial production and diffusion of processed foods at the country's Central Food Research Laboratory, Food Research Section.

"Soon after I arrived at my post, I began studies on shoyu production. In my office at the Laboratory, there was a staffer named Baidya [sic, Achutananda Vaidya]. Mr. Baidya had just returned from Japan, where he received training, chiefly on the production of miso (soybean paste) and shoyu (soy), at the Prefectural Experiment Station of Shoyu and Miso in Akita for about nine months. He was much interested in the processing of soybeans; he had learned the technique of making tofu (bean curd) from my predecessor and operated a business for making and selling tofu. He was very eager to adapt the technique he learned in Japan to the situation in Nepal and to introduce it to his country. I felt

© Copyright Soyinfo Center 2014

sympathy with his enthusiasm and decided to cooperated with him.

"There were three types of soybeans, whose appearance differed from one another, found in Nepali markets: white, brown and black and small-grained ones... These soybeans are planted on footpaths between rice and dry fields or on fields alternately with corn. Nepalis eat several kinds of beans, but as to soybeans, they take them roasted with corn only between meals."

In July 1980 the author and Mr. Vaidya began experimental production of soy sauce in Nepal using 4 different methods. The best results were obtained using hand-made koji and whole soybeans. The resulting shoyu was very favorably received. Soon they increased the scale of their experiment so that they could make about 100 liters of shoyu per batch.

They also conducted a survey to try to estimated the demand for shoyu in Nepal. Some of the Japanese and Chinese restaurants in Kathmandu used soy sauce imported from Japan or India. Indian soy sauce tastes entirely different from Japanese shoyu; it is probably unfermented HVP soy sauce. When asked to try Japanese-made shoyu, restaurant owners always preferred it to Indian-made soy sauce. From their survey they estimated that there was a demand for at least 20,000 liters of shoyu per year in Nepal–the actual demand, they felt, might be several times or even many times this amount.

"A Nepali, who heard of our shoyu making experiment, visited us to see the work. This man later wrote a letter to me and said that he began a shoyu making business on a small scale. I helped my Nepali friend making shoyu in Pokra. He owns a hotel there, a tourist resort about 110 kilometers west of Kathmandu. And after one year since then (I had returned home already) Mr. Baidya helped him with the final process of shoyu making in my place." In March 1985 Mr. Vaidya came to Japan, invited by the Rotary Club in Akita and Aomori, to receive further training in soybean processing. The author an Mr. Baidya met in Japan and renewed their friendship. Address: Ex-member of the Japan Overseas Cooperation Volunteers (JOCV).

8710. Hirayama, Takeshi. 1986. A large scale cohort study on cancer risks by diet–with special reference to the risk reducing effects of green-yellow vegetable consumption. In: Yuzo Hayashi, et al., eds. 1986. Diet, Nutrition and Cancer: Proceedings of the 16th International Symposium of the Princess Takamatsu Cancer Research Fund, Tokyo, 1985. Tokyo: Japan Scientific Societies Press; Utrecht, Netherlands: VNU Science Press. xvi + 345 p. See p. 41-53. [13 ref]
• ***Summary:*** Breast cancer: In a prospective study of 142,857 women in Japan followed for 17 years, the author found a significant graded inverse relationship between consumption of miso soup and subsequent risk of breast cancer (p. 48). Note: This is the earliest document seen (June 1999) which suggests that soy might reduce one's risk of prostate cancer.

Stomach cancer: The author found a significant graded inverse association between the consumption of miso and green/leafy vegetables and gastric cancer risk among 122,261 men and 142,857 women followed for 13 years.

Japanese who consumed meat daily had much higher mortality from breast cancer and colon cancer than those who ate little or no meat.

"Daily consumption of green-yellow vegetables (GYV) rich in beta-carotene, vitamin C, calcium, and dietary fiber was observed to lower risks for selected cancers such as lung, stomach, prostate, and cervix. The risk reducing effect appeared more striking in cigarette smokers.

"Risks for cancer of the stomach in males and females and cancer of the breast in females were observed to be lower with the increase in frequency of soybean paste soup consumption which frequently contains GYV." Address: Inst. of Preventive Oncology, Tokyo 162, Japan.

pursuit of food: Japanese recipes for American cooks. New York, NY: Clarkson N. Potter. 296 p. Illust. by Etienne Delessert. Index. 25 cm.
• ***Summary:*** A very artistic, attractive, and authentic book with superb (imaginative and lyrical) illustrations. The section titled "Staple foods you will need" (p. 17-20) discusses soy sauce, konbu and nori seaweeds, sesame seed paste (*atari-goma;* "Most Americans may be more familiar with the Middle Eastern version called tahini paste... Used in making salad dressings and dips"), miso, and sesame seeds. Soy-related recipes include: Grilled tofu with miso (Dengaku; p. 37). Sesame tofu (p. 38; no soy). Tuna sashimi and green onions with miso (p. 40). Daikon radish with lemon miso (p. 42). Cauliflower florets with miso (p. 42). Basic miso soup (p. 51). Clam miso soup (p. 51). Daikon radish miso soup (p. 52). Vegetable and chicken miso soup (p. 52). Tofu and wakame seaweed suimono (p. 53). Fried rice with tofu and vegetables (p. 89).

Chapter 7, titled "Tofu & egg dishes" includes (p. 103-17): Tofu in Kamakura. Description of different types of tofu: Silken, firm, grilled, pouches, deep-fried, fritters (*ganmodoki*), freeze-dried (*koya-dofu*), how to press tofu. Chilled tofu with ginger sauce. Braised koya-dofu with pea pods. Cold-day tofu. Vegetarian "chicken" tofu (with frozen tofu). Dragon's head (*hiryozu*). Tofu from the sea (*Kenchin-mushi*). Tofu gratinée. Stuffed tofu. Scrambled tofu. Tofu treasure bags. Vegetarian "burger." Egg tofu delight (*tamago-dofu;* no soy).

Beans for breakfast (*natto;* p. 125). Braised konbu seaweed, soybeans, and konnyaku (p. 128). Hijiki seaweed with tofu (p. 129). Stuffed tofu sushi (*Inari-zushi;* p. 157). Snapper tempura with asparagus and miso (p. 174). Marinated cod in miso sauce (p. 179). Seaweed, chicken, and vegetables with creamy miso (p. 185). Steak miso (p. 190). Sukiyaki (p. 206). Shabu shabu (p. 208). Vegetarian nabe (with tofu, p. 211). Sea and mountain (with miso sauce, p. 212-23). Winter nabe (with tofu, p. 214). Udon-suki (with tofu, p. 216). Tofu apple cake (p. 244). Chapter 15 (p. 260-71) is menu plans, by season and time of day.

The glossary (p. 272-82) includes: Agar-agar, azuki beans, konbu seaweed, kuzu, miso paste, nori seaweed, rice cakes (*mochi*), sesame seed oil, sesame seeds, soybeans–fermented (*natto*), soy sauce, tofu, tonkatsu sauce (with dark soy sauce), wakame seaweed. Address: Los Angeles, California.

8717. Morinaga Milk Industry Co. Ltd. 1986. Morinaga. Shiba 5-33-1, Minato-ku, Tokyo 108, Japan. 22 p. Undated. 28 cm. [Eng]
• ***Summary:*** This glossy color manufacturer's catalog contains an interesting 2-page chronology of the company titled "Briefing history of Morinaga Milk." The company was founded in 1917. The first commercial product was Morinaga Drymilk–whole milk powder with sucrose. In 1953 the Morinaga Central Research Laboratory was founded–the same year as the "Morinaga Incident" in which 186 infants died after consuming Morinaga infant formula accidentally contaminated with arsenic.

The section titled "Exporting long life tofu–Owing to the technology of aseptic packaging" states: "The first long life tofu was exported in 1978 and in the following year, the Ministry of Science and Technology Prize was awarded to Morinaga's outstanding aseptic manufacturing technology. Since then, long life tofu has been exported to 32 countries and has received a fine reputation. Patents were granted in the U.S., the biggest export market. And in [May] 1985, for the rapidly growing American market, Morinaga Nutritional Foods, Inc. was established in Los Angeles. In 1977, Beech Nut California Corporation, a joint venture with Beech-Nut Foods Corporation was founded.

Note: This is the earliest English-language document seen (April 2013) that uses the term "long life tofu" to refer to aseptically packaged lactone silken tofu. Address: Tokyo, Japan.

8721. Nunomura, N.; Sasaki, M. 1986. Soy sauce. In: N.R. Reddy, M.D. Pierson, and D.K. Salunkhe, eds. 1986. Legume-Based Fermented Foods. Boca Raton, FL: CRC Press. [viii] + 254 p. See p. 5-46. Chap. 2. [111 ref]
• ***Summary:*** Contents: Introduction. Types of soy sauce. Preparation of shoyu: Raw materials, preparation (treatment of raw materials, koji making, mash [moromi] production and aging, pressing, refining and pasteurization), production of chemical and semichemical shoyu. Composition: Chemical composition, flavor compounds (Japanese shoyu flavor components, oxidative products of HEMF, flavor components of koji, matured mash, and shoyu oil, quantitative analysis of flavor compounds, change in flavor components during pasteurization, flavor components of various soy sauces in the world), organoleptic quality. Safety: Mycotoxins, long term effects of shoyu consumption, mutagens. Conclusions.

HEMF is 4-hydroxy-2 (or 5)-ethyl-5 (or 2)-methyl-3(2H)-furanone. First isolated in 1976, it possesses a shoyu-like and a strong caramel-like flavor. The addition of 0.1 ppm of HEMF to shoyu makes the taste milder.

Table 5 lists the 271 flavor components that have been found in Japanese shoyu to date. They include 37 hydrocarbons, 30 alcohols, 41 esters, 15 aldehydes, 5 acetals, 17 ketones, 24 acids, 16 furans, 4 lactones, 4 furanones, 5 pyrones, 25 pyrazines, 7 pyridines, 6 miscellaneous nitrogen compounds, 11 sulfur compounds, 3 thiazoles, 3 terpenes, and 2 miscellaneous compounds. Address: Soy Sauce Science Research Lab., Kikkoman Corp., Noda, Chiba, Japan.

8722. Ohta, Teruo. 1986. Natto. In: N.R. Reddy, M.D. Pierson, and D.K. Salunkhe, eds. 1986. Legume-Based Fermented Foods. Boca Raton, FL: CRC Press. [viii] + 254 p. See p. 85-93. Chap. 5. [25 ref]
• ***Summary:*** Contents: Introduction: Types of natto, production and consumption. Method of preparation: raw materials, preparation of itohiki natto (soaking and cooking of soybeans, inoculation and packaging, fermentation, maturation and stabilization), preparation of yukiwari natto and hama-natto, fermentation microorganisms. Composition and physical properties: Chemical composition, physical properties (mucous material, spots on natto, organoleptic properties). Nutritional quality. Toxicology. Conclusions.

The three major types made in Japan are itohiki natto, yukiwari natto, and hama-natto; each has its own method of preparation. Itohiki natto (sticky natto) is made by fermenting whole cooked soybeans with *Bacillus natto;* it is made in large quantities and, in Japan, accounts for more than the total production of the other two types. Yukiwari natto is made by mixing itohiki natto with rice koji and salt, then aging the mixture. Hama-natto is made by inoculating cooked soybeans with the koji mold, *Aspergillus oryzae.* Hama-natto is made in and around only two small parts of Japan: the cities of Hamamatsu and Kyoto, where it is sold as a local souvenir food item.

The earliest document known to have mentioned the word "natto" is the *Shin Sarugaku Shiyu,* written by A. Fujiwara [Fujiwara no Akihira] in 1068; yet no description was given of the method for making this natto. Itohiki natto has long been used as a feed for livestock by village farmers

© Copyright Soyinfo Center 2014

and as a food in Buddhist temples during the winter. During its early history, natto was prepared by simply wrapping warm, cooked soybeans in rice-straw bundles, and leaving the wrapped soybeans at ambient temperature. Modern techniques involved the use of starter cultures such as *Bacillus natto* developed after the 1920s.

Production and consumption in Japan: In 1982 the production of itohiki natto was about 170,000 metric tons (tonnes), requiring the use of about 85,000 tonnes of soybeans. [So from 1 kg of soybeans one gets about 2 kg of finished natto]. This amount is nearly a 10% increase over 1980. This large increase, in only two years, which is extraordinary among Japanese traditional fermented foods, may be due to: (1) the growing concern of the Japanese public over the relationship between diet and health, and over the excess intake of animal fats and salt. (2) The fact that natto contains no salt. (3) The high and uniform quality of commercial natto and its long shelf life, which has been extended by the use of refrigerated distribution from natto factories to households.

The majority of natto makers in Japan are small family businesses that make about 300 kg of natto a day. These companies distribute their fresh natto locally. However, there is a growing number of large factories that make more than 3,000 kg per day.

Annual consumption of natto in Japan is 760 gm per person. Until the 1950s, natto was made and consumed mostly in the northeastern region of Japan. This localization has recently changed due to the acceptability of natto in the rest of Japan.

In Japan, natto is eaten with thinly sliced leeks (*negi*), nori (a black, paper-thin sheet made of a sea vegetable), and mustard mixed together with a small amount of soy sauce, as a side dish for a bowl of cooked rice–typically for breakfast and/or dinner. Natto is also used as one ingredient in nori-wrapped sushi and in noodle soup. Address: Director, Applied Microbiology Div., National Food Research Inst., Ministry of Agriculture, Forestry, and Fisheries, Tsukuba, Ibaraki, Japan.

8723. Shanmugasundaram, S.; Sulzberger, E.W. eds. 1986. Soybean in tropical and subtropical cropping systems: Proceedings of a symposium, Tsukuba, Japan, 26 September–1 October 1983. Revised ed. Shanhua, Taiwan: Asian Vegetable Research and Development Center. xv + 471 p. Illust. Index. 26 cm. [500+ ref. Eng]

• ***Summary:*** Note: The first edition, hardcover, published Oct. 1985, was recalled and discarded, due to errors in the text. Contents: Section 1. Cropping systems. 2. Plant breeding. 3. Management. 4. Diseases and insects. 5. Plant nutrition. 6. Physiology. 7. Economics. 8. Related topics. 59 chapters total. Symposium participants. Author index. Subject index.

In the Foreword, G.W. Sellek, Director General of AVRDC, notes that the proceedings of this symposium were published in two sections. The proceedings of the first section, recently published by the Tropical Agricultural Research Center of Japan (TARC), cover country reports and special research projects. These proceedings cover cropping systems. “In the recent past, research was aimed almost exclusively at raising soybean yields rather than developing cropping systems that provide the stability needed to grow soybeans under high-risk conditions. There also seems to be a greater sense of urgency to integrate cropping systems research with disciplines such as plant breeding, crop management, pest control, and plant nutrition.” There is a strong “need to ensure that scientists from a variety of disciplines and backgrounds work together so that their research efforts are well coordinated.” Address: AVRDC, Taiwan.

8724. Takahashi, Kuwako. 1986. The joy of Japanese cooking. Tokyo: Shufunotomo Company, Ltd. 311 p. Illust. (some color photos). Index. 27 cm.

• ***Summary:*** An excellent book with especially good descriptions of Japanese ingredients. Contents: Dedication. Foreword. Introduction. Part I. Japanese ingredients. Seasonings in Japanese cooking. Utensils and equipment. Tableware. Measurements and equivalents. Basic techniques: Making soup stock (*dashi*), cooking rice, preparing fish, boning chicken, cutting vegetables, broiling, poaching, steaming.

Part II. Seafood. Chicken. Eggs. Beef. Pork. *Tofu* (bean curd). Vegetables, dried and manufactured foods.

Part III. Appetizers (*zensai*). Soups. Salads (*aemono*). Casseroles (*nabemono*). Rice. Pickles. Desserts and Japanese sweets.

Part IV. Menu planning. Sample menus with preparation schedules. Part V. Making tea. Serving sake.

A color photo (p. 15) shows six different soyfoods made from soymilk: 1. Deep-fried soybean puffs (*age* or *aburage*). 2. Fried tofu cutlet (*atsu-age* or *nama-age*). 3. Tofu patties (*ganmodoki*). 4. Soymilk film, dried (*yuba*). 5. Bean curd cake (*tofu*). 6. Freeze-dried tofu (*Kôya dofu*).

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *Kôya dofu* to refer to dried-frozen tofu.

The section titled “Japanese ingredients” (a superb glossary, with many entries accompanied by an illustration {line drawing}, p. 17-32) includes: Bean curd cake (*tofu*), incl. regular tofu (*momen dofu*), soft tofu (*kinugoshi dofu*), Ever-Fresh Silken Tofu (aseptically packaged), instant tofu, firm tofu (Chinese style). Tofu products: Deep-fried soybean puffs (*agé* or *aburage*), fried tofu cutlet (*atsu agé* or *name agé*), freeze-dried tofu (*Kôya dofu*), grilled tofu (*yaki dofu*), tofu patties (*ganmodoki*). Beans: Red beans, dried (*azuki*), soybeans, dried (*daizu*), soybeans, fresh (*eda mamé*). Bean pastes: Bean paste, fermented (*miso*), sweet bean paste (*azuki*

© Copyright Soyinfo Center 2014

an). Soymilk film, dried (*yuba*). Soy sauce (*shoyu*).

The glossary also discusses: Horseradish, Japanese (*wasabi*), konnyaku, kombu, umeboshi, kabocha, daikon (4 forms), glutinous rice (*mochi gome*), red bean rice (*sekihan*), pounded rice cake (*mochi*), rice wine lees (*sakekasu*), rice wine lees pickles (*narazuke*), perilla (*shiso*), seaweeds (*hijiki, nori, yakinori, small sized nori, wakame, ao nori*), sesame seeds (*goma*), sweet rice wine for cooking (*mirin*), wheat gluten cake (*fu,* incl. *nama fu, yaki fu, and matsutake fu*).

The section titled "Seasonings in Japanese cooking (another superb glossary, p. 33-37) discusses: Soy sauce, incl. Regular soy sauce (*koikuchi shôyu*), light soy sauce (*usukuchi shôyu*), tamari soy sauce (darker and thicker, made from fermented soybean and brine in the Nagoya area. "It is not saltier than regular soy sauce but has a richer flavor, thicker taste, and some people prefer tamari as the dipping sauce for sashimi... Note 2. In the USA the name 'tamari' is mistakenly used for natural soy sauce which is not tamari"), white soy sauce (*shiro shôyu*), milder soy sauce (contains less salt). A table showing the nutritional composition of five different types of Japanese soy sauce is given. Combinations of soy sauce and mirin: Teriyaki. Miso (incl. *kome miso, mugi miso, mame miso,* mixing of miso types).

Use the good index to see how each of the ingredients mentioned above are used in recipes.

A good biography of the author is appears in the Foreword and on the inside rear dust jacket (with portrait photo). The author was also very active in introducing ikebana (Japanese flower arranging) to the Bay Area and the USA. Address: Japan and Berkeley, California.

8727. Tsuji, Shizuo; Hata, Koichiro. 1986. Practical Japanese cooking: Easy and elegant. Tokyo, New York & San Francisco: Kodansha International. 151 p. Illust. (color photos by Yoshikatsu Saeki). Index. 31 cm.
• ***Summary:*** A beautiful, elegant book. M.F.K. Fisher says of this book (rear dust jacket): "The recipes are clear and easy to follow, and the illustrations are especially delightful, truly top high-style Japanese simplicity. Messrs. Tsuji and Hata have given us the best of the old and the new."

The Preface, by Shizuo Tsuji (born in 1948) notes that the many-faceted Japanese "cooking tradition relies heavily on two primary ingredients–delicate bonito stock (*dashi*) and, not unexpectedly, soy sauce. Most, if not all, dishes call for one or both." The recipes generally call for either "dark soy sauce" [koikuchi] or "light soy sauce" [usukuchi].

Soy related: Squid and asparagus with mustard miso sauce (*... karashi su miso ae,* with "5 Tbsps nonsweet white miso paste," p. 19). Tofu, pork, and vegetable soup (*Kenchin jiru,* with "1 block regular {'cotton'} tofu, about 10 oz {300 gm}, p. 24). Pureed corn soup (with "2 Tbsps nonsweet white miso paste," p. 24). Miso soup with pork and vegetables (*Buta jiru,* p. 25). Yellowtail teriyaki (*Buri teriyaki,* p. 35). Simmered mackerel in miso (*Saba miso-ni,* p. 37). Tofu as a possible ingredient (p. 38). Deep-fried trout in vegetable sauce (Tofu can be added to the sauce to give the dish more volume, or tofu can easily be substituted for the trout, p. 39). Stuffed spiny lobster ("In place of egg, softened miso can be used in the filling," p. 40-41). Squid teriyaki (*Ika teriyaki;* the teriyaki sauce includes mirin, sake, dark soy sauce, and tamari soy sauce, p. 44). Shrimp and leeks with mustard-miso sauce (*... karashi-su-miso kake,* p. 48). Grilled beef (with tamari soy sauce in Lemon-soy dipping sauce {Ponzu}, and dark soy sauce in sesame dipping sauce, p. 50-51). Grilled beef with miso (*Gyuniku miso-yaki,* with "4 Tbsps Red Miso Sauce {p. 85}," p. 54). Nagasaki-style braised pork (*Buta kaku-ni,* with "1 cup {250 gm} unpacked okara {tofu pulp} or milk, optional," p. 58).

The section titled "Tofu" includes: Simmered tofu (*Yudofu,* with "2 blocks tofu, about 20 oz {600 gm} total," p. 71). Night-dried tofu with chicken sauce (*Ichiya-dofu tori soboro ankake;* regular tofu is allowed to freeze overnight to give it a different texture, p. 72). Simmered tofu dumplings (*Ganmodoki uma-ni,* p. 73-74). Deep-fried tofu (*Agedashi-dofu,* p. 75). Scrambled tofu (*Iri-dofu,* p. 76). White salad (*Shira-ae,* p. 77). Tofu sandwiches (*Tofu hakata-ni,* p. 78-79). Tofu hamburger steak (with miso, p. 80). Freeze-dried tofu with egg (*Koya-dofu tama-jime,* p. 81).

Grilled eggplant (*Taki-nasu,* with Soy-ginger sauce, p. 84). Deep-fried eggplant with miso sauce (*Nasu dengaku,* with Red Miso Sauce, p. 85). Turnip with ginger-miso sauce (*Furo-fuki kabura,* with 1 cup Red Miso Sauce, p. 88). Chinese cabbage and deep-fried tofu (*Hakusai usuage uma-ni,* with "4 pieces thin deep-fried tofu {*usuage*}, about 3 oz (80 gm) total," p. 90). Deep-fried and simmered acorn squash (*Eikon sukasshu no age-ni,* with "2 blocks thick deep-fried tofu {*atsuage*}, about 5 oz {150 gm} total," p. 93). Simmered soybeans (*Nimame,* with "1 cup {120 gm} dried soybeans;" "The real secret... is to allow the beans a long pre-soak before beginning to cook," p. 94). Vegetables with white sesame dressing (*Goshiki yasai gomashirasu-ae,* with 1 block regular tofu, p. 96). Mixed rice (*Kayaku gohan,*

© Copyright Soyinfo Center 2014

has "thin deep-fried tofu" as an alternative ingredient, p. 100). Scattered sushi (*Bara sushi,* with "1 cake freeze-dried tofu {*Koya-dofu*}, about ½ oz {15 gm}," and "2 Tbsp dark soy sauce," p. 106-07). Thick roll sushi (*Futo-maki-zushi,* with "2 cakes freeze-dried tofu {Koya-dofu}, about 1 oz {30 gm} total," p. 113). Inari sushi (*Inari-zushi,* with "10 pieces thin deep-fried tofu {*usuage*}, each about 3 inches {8 cm} square, p. 114-15). Udon noodles with deep-fried tofu (*Kitsune udon,* with 4 pieces thin deep-fried tofu, p. 120). Sukiyaki ("... actually only appeared on the horizon of Japanese cuisine some one hundred years ago," with "½ block regular {'cotton'} tofu," p. 122-23). Oden stew (*Oden nabe,* with "4 blocks thick deep-fried tofu," p. 124-25). Seafood pot (*Yose nabe,* with 1 block regular tofu," p. 126-27). Deep-fried mixed kebabs (*Kushi-katsu,* with 1/3 cup Worcestershire sauce in the Dipping sauce, p. 132-33).

The section titled "Ingredients" (p. 144-49) has a photo and excellent description for each entry, including: Ginger (fresh). Ginger (red vinegared). Ginger (sweet vinegared). Green seaweed flakes (*ao-nori*). Hot yellow mustard (*karashi*). Kelp (*konbu*). Kelp (salted) (*shio-konbu*). Mirin. Miso paste (Sweet white miso, nonsweet white miso, red miso). Nori seaweed. Pickled plums (*umeboshi*). Rice cakes (*mochi*). Rice vinegar. Saké. Sesame seeds (white, black, or brown). Seven-spice pepper. Shiitake mushrooms. Shiso leaves. Soba noodles. Somen noodles. Soybeans (fresh young) (*edamame*). Soy sauce (dark, light, tamari). Tofu (freeze-dried) (*Koya-dofu, kori-dofu, or shimi-dofu*). Tofu (fresh). Tofu (thick deep-fried). Tofu (thin deep-fried). Udon noodles. Wakame seaweed. Wasabi horseradish ("has a tingling hotness that goes straight to the nose").

About the authors (inside rear dust jacket, with small color portrait photos of each): "Shizuo Tsuji is president of the Ecole Technique Hôtelière Tsuji, the largest culinary school in Japan. It comprises three divisions, whose total enrollment currently exceeds three thousand. At the main school, which offers intensive courses in Japanese, French, Italian, and Chinese cooking, aspiring chefs receive the training necessary to become professionals. At the Ecole Supérieure de Pâtisserie Tsuji students may perfect their confectionery techniques. The Centre de Perfectionnement in Liergues, France, accepts those desirous of completing their education with firsthand experience in Europe." All classes are conducted in Japanese. He is author of the classic book *Japanese Cooking: A Simple Art* (1980, in English). Address: Tsuji Professional Culinary Inst., Osaka, Japan.

• ***Summary:*** This extensive review of the subject by one of the world's foremost authorities focuses on the Japanese product, shoyu. Contents: Introduction: Japanese shoyu, the soy sauce produced in other Oriental countries. Manufacture (of the five types of Japanese shoyu): Koikuchi, usukuchi, tamari, shiro, and saishikomi shoyu. Recent research and technological advances in shoyu manufacturing: Comparison between whole and defatted soybeans as raw materials, treatment of raw materials, koji molds, koji making, control of mash (moromi), refining. Color of shoyu: Color compounds of shoyu, measurement of shoyu color, browning mechanism of shoyu. Flavor evaluation of koikuchi shoyu. Volatile flavor ingredients of koikuchi shoyu: Organic acids, alcohols, esters, carbonyls and related compounds, phenolic compounds (incl. 4-Ethylguaiacol (4EG) and *p*-ethylphenol, vanillin, ferulic acid, vanillic acid), lactones (incl. aliphatic lactones, 4-8 kinds of gamma lactones identified in Japanese fermented shoyu), pyrazines, sulfur-containing compounds, terpenes, flavor constituents of the topnote aroma of pasteurized shoyu, methods of quantitative analysis of the volatile flavor constituents of shoyu, contribution of volatile flavor constituents to overall flavor evaluation. Safety problems of shoyu: Nonproductivity of mycotoxins by Japanese industrial molds, fluorescent compounds produced by *Aspergillus* molds with R_f values resembling those of aflatoxins, mycotoxins other than aflatoxins, mutagenic substances in shoyu, bactericidal action of shoyu, biological tests of shoyu. Research needs: Raw materials, koji molds, reduction of fermentation period of mash, application of enzyme preparations, refining and pasteurization, flavor, color. References. Address: Kikkoman Corp., Noda-shi, Chiba-ken 278, Japan.

Mr. Chôbei Kanô. Photos in the leaflet show the ancient shoyu equipment including a lever press (*shime-ki*) used to press shoyu from the moromi mash during the Edo period (1600-1868), up until the Meiji period. a wooden ladle (*shoyu kasuri*), a wooden shoyu vat with bamboo hoops, cloth money collecting bags, and a pedal-powered wooden cog-wheel device for cracking wheat. A re-drawn line (the original was from early Meiji period) drawing shows the exterior of a row of shoyu plants along the street in downtown Yuasa. And a photo shows the inside and exterior of the present K.K. Kadocho, where shoyu is still made by traditional methods.

"The history of Yuasa shoyu: Shoyu, the world famous seasoning, was originally produced in Yuasa from Kinzanji-miso or soy bean paste, which was brought from China in the early 13th century by Hotokokushi of Kokokuji Temple of Yura. In those days, Shoyu was only for use at home and not for sale because of poor traffic facilities. But about 400 years ago, in Azuchi-Momoyama era, Shoyu was first shipped to other parts of Japan as a commodity here in Yuasa.

"Since then, Shoyu industry developed a great deal, thanks to the protection of the Lord of Kishu, and it is said that in the Bunka-Bunsei [Bunka (1804)–Bunsei (1818)?] era, there were 92 Shoyu-ya or Shoyu-makers in about one thousand houses of Yuasa.

"In the meantime, people in Yuasa showed how to make Shoyu to the people in some parts of Japan, such as Choshi near Tokyo. Today the Shoyu industry in Yuasa is dwindling, chiefly owing to the promotion of some major Shoyu companies. But we still have the traditional method of making that Yuasa Shoyu once called Yuasa Tamari in Kamakura era."

"The origin of shokunin-gura or shoyu workshop: In Yuasa, the birthplace of Soy Sauce, there still remain some old workshops with very thick and crumbling walls here and there. Some workshops are now converted to the residences. With the disappearance of Shoyu makers, we can no longer see craftsmen who used to toil and moil here, and traditional Shoyu things, the fruits of their wisdom and efforts. (Today we have several museums of folk craft throughout Japan. But I feel responsible, as one of the Shoyu craftsmen, for collecting and preserving these old Shoyu things as well as 'the taste of old days.')

"Kadocho Shokunin-gura, with the size of 80 square meters, was one of the fermenting houses built in Keio era [in Keio 2, 1866]. All these Shoyu things kept here are the tools used for making Shoyu and each of them has sweat and pains in it of the craftsmen of those days. I welcome you to my Shoyu workshops of about 100 years old." Address: K.K. Kadocho, Kitamachi 7, Yuasa-cho, Arita-gun, Wakayama-ken, Japan. Phone: 0737-62-2035.

8736. *Toyo Shinpo* (*Soyfoods News*). 1987. Gyôkai saidai no nandai okara o kangaeru. Urisaki ga kadai ni [Manufacturers' biggest problem is okara. The problem is where to sell it, dry it, and the expense of doing so]. Jan. 1. p. 7-8. [Jap; eng+]
• ***Summary:*** Is okara waste matter or can it be put to use? If it is useful, can it be used inexpensively? Tofu manufacturers in Japan who deal with okara are trying to use twin screw-extruders to put okara to good use. Dried okara is useful, but drying okara is a very expensive operation. Okara has recently been used in dog, cat, and fish foods, etc. The dairy industry also consumes some.

They are even using it as compost in Aichi-Ken. This has had some good results. They started to use it as fertilizer in July 1986, and they produced nice melons and watermelons. In addition, the okara seemed to ward off insects. Because of results such as these, okara now sells for ¥5,000 a ton. There have been good results in using okara as fertilizer in the production of cucumbers and tomatoes in Hokkaido. In Nagano, they are trying to cultivate shimeji mushrooms using okara.

Okara is also being used in miso for miso pickles (misozuke). This research is still in the preliminary stages however. In Kagawa-ken, a frozen food company is making tofu croquettes using okara. In Fukuoka-ken, they use dried okara for food products, growing mushrooms, and

© Copyright Soyinfo Center 2014

as fertilizer. It is also used in croquettes and hamburgers–3 manufacturers are actually making these foods now.

8737. Matsuura, Masaru. Assignor to Kikkoman Corp. 1987. Process for production of sterilized packed tofu. *U.S. Patent* 4,636,398. Jan. 13. 4 p. Application filed 2 Jan. 1985. Application also filed in Japan on 13 Jan. 1984. [5 ref]
• ***Summary:*** Process for production of sterilized packaged tofu. Soymilk is mixed with coagulant, filled into the container, sealed, and heated to simultaneously effect sterilization and coagulation. Address: Noda, Japan.

8738. Probber, Jonathan. 1987. Food and fitness: Soy sauce and diet. *New York Times.* Jan. 21. p. C2.
• ***Summary:*** The Chinese invented soy sauce. The Japanese use a great deal of soy sauce, but theirs is "lighter than Chinese soy sauce." Many households in Korea still prepare their own soy sauce each fall.

There has been a proliferation of soy sauce brands in the USA. Old favorites such as Kikkoman and Ka-me [Kame], which are sold in supermarkets, are now also sold in lower-sodium versions. There is also a brand named Sushi Chef for those who like to make sushi at home.

Regardless of brand, soy sauces contain large amounts of sodium–even the "lite" versions. Kikkoman's "lite," for example, contains 160 milligrams per half teaspoon, which (multiplied by 6) translates into 960 milligrams per tablespoon.

For those on a low-sodium diet–which allows about 1,600 mg of sodium per day–the writer recommends a spray bottle dispenser, with the nozzle adjusted for a fine, misty spray.

Address: Shôda Shôyu KK, Japan.

8743. **Product Name:** [Glace D'or].
Foreign Name: Guraasu dôoru.
Manufacturer's Name: Kinki Reinetsu K.K. Subsidiary of Osaka Gas Co.
Manufacturer's Address: Osaka, Japan.
Date of Introduction: 1987 January.
Ingredients: Incl. soy protein isolate.
How Stored: Frozen.
New Product–Documentation: Talk with Laszlo Somogyi, food technologist at SRI (Stanford Research Inst., California). SRI developed this soy isolate-based non-dairy ice cream for Osaka Gas. It was introduced in early 1987 or late 1986. Osaka Gas has a food division, based on their cryogenics with liquid nitrogen. The product was marketed as low cholesterol, low calorie, and natural. One problem with creating a vanilla flavor is that soy protein absorbs and cancels vanilla flavor. Osaka Gas is now looking to do a joint venture with the product in the USA.

Leaflet sent by Dr. Somogyi. 1989. 7.25 by 10 inches. Color photo shows a scoop of the frozen dessert (chocolate, strawberry & vanilla) with a golden spoon against a blue background. Note the spelling of the product name, not Glace d'Or as it would be in French. "Vegetable ice cream (*shokubutsu-sei aisu*). Refreshing feeling. New feeling. Glace D'or. It's refreshing (*sawayaka*) and therefore it's delicious. The original frozen dessert from Kinrei (Kinki Reinetsu K.K.; a food company that was 100% funded by Osaka Gas). Very little cholesterol. All natural ingredients. Good for health and beauty. A new type of feeling."

8744. *Putnam County Vidette* (*Columbus Grove, Ohio*). 1987. SRM Seeds, Inc. leading "new wave." Local soybeans heading for Japan. Jan.
• ***Summary:*** This company packages and exports identity preserved soybeans to Japan. Mainly Beeson and Keller varieties.

8745. *SoyaScan Notes.* 1987. New Trend: Increase in breeding of soybeans for specialized uses, including special food uses such as tofu, miso, and soy sprouts (Overview).

© Copyright Soyinfo Center 2014

Jan. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This is part of the larger trend toward value added products and toward tailoring soybeans for export to food manufacturers in Japan. The new breeding work is being done by various countries (such as Canada and the USA), and by many universities, agricultural experiment stations, and private seed breeding companies within the USA. U.S. soyfoods companies will definitely benefit for this trend and should keep close track of new developments.

8746. *Successful Farming.* 1987. Tofu-quality beans earn 40¢ premium for Illinois growers. 85(2):18. Jan.
• ***Summary:*** "Tom Pearcy has been paying northern Illinois soybean growers as much as 40¢ a bushel premium over the Chicago Board of Trade soybean price... He's contracting with approximately 300 growers to produce high-quality, identity-preserved beans which he cleans and exports directly to Japan.

"These beans are used to make tofu–and are sold to major manufacturers in Japan." Address: Des Moines, Iowa.

8747. *Toyo Shinpo* (*Soyfoods News*). 1987. 90 byô Nama C M o 13 Kai. Zennôren ichi oku en senden jigyô [The National Natto Association's ¥100,000,000 advertising campaign included thirteen live, 90-second television commercials]. Feb. 1. p. 3. [Jap; eng+]
• ***Summary:*** The Japanese National Natto Association has been conducting a big advertising campaign since August 1986. From October 3 to December 26, 1986, they ran commercials on TV in the mornings showing nutritional value comparisons between soybeans and natto, health and physical fitness benefits, recipes, etc. They have also been distributing 3 booklets: 1. Daisuki Natto (all-color, 16 pages, ¥100, NHK Enterprises K.K.), which contains natto recipes; 2. Natto Man (like Superman) (all-color, 16 pages, ¥15/copy); 3. A picture book for kids. Free, but you have to order 100 or more. Information on natto that had been displayed on the NHK Good Morning Health Special has also been distributed in flyer form.

8748. *Toyo Shinpo* (*Soyfoods News*). 1987. Kôji-kin baiyô okara aji, kaori, shokkan ryôkô. Okara shori ni idomu. Okara hanbaagu tanpaku na aji de katasa yoshi (ryo) [Culturing okara with koji molds. The taste, fragrance, and texture are good. Processing okara by chilling. Okara hamburger–light taste and good firmness]. Feb. 2. p. 2. [Jap; eng+]
• ***Summary:*** In this experiment, raw okara, white rice, bran, and konnyaku powder were cultured with koji molds (*Aspergillus oryzae*), *Rhizopus* molds (*kumonosu kabi*), and one other type. Afterwards, the mixture was used in deep-fried tofu burgers (*ganmo*), croquettes, and hamburgers. The best results occurred when ground pork was mixed in to make a hamburger. The end product had a light taste and a nice firm texture.

8749. Nihon Nogei Kagaku Kai. 1987. Nogei kagaku no 100 nen [Centennial of agricultural chemistry in Japan]. Tokyo. iv + 304 + 50 + [2] p. Feb. 15. [Jap]
• ***Summary:*** A history of this important agricultural subject in Japan, and of the Japanese Society for Agricultural Chemistry. Contains numerous chapters by various Japanese authors; a portrait photo of each appears on the first page of his or her chapter. The first appendix gives a detailed chronology of the Japanese Society for Agricultural Chemistry from its founding on 1924 to 1983.

8750. B.P.; C.R. 1987. L'irrésistible poussée des produits de substitution: Dossier produits laitiers [The irresistible push of substitute products: Dossier on dairy products]. *Marches Agricoles.* Feb. 16. p. 14. [Fre]
• ***Summary:*** Part 1 by B.P. is titled "The debate is launched concerning substitute dairy products." A table lists the following countries: Austria, Belgium, Canada, Denmark, UK, Finland, Japan, Netherlands, Switzerland, and the USA. Column 2 lists substitute products (such as cheese, cream, milk, melorine). Column 3 lists the market share of these products in 1983. And column 4 compares the price of the substitute with the real dairy product. For example, in the USA: imitation cream (non-dairy creamer) has 50% of the market and is less expensive. Imitation cheese has 5% of the market and is 30% less expensive. Flavored milklike drinks have 15% of the market and are 25% less expensive. No imitation products are shown to have a significant market share in Europe.

Part II by C.R. is about CAC in Colmar, its Cacoja subsidiary founded in Jan. 1987, and its Bioforme line of soymilks and soymilk desserts. Address: France.

• ***Summary:*** The Kikkoman Corporation has built a 4-story, 273,000 square meter plant at Chitose, in Hokkaido. In August 1986, they started fermentation processes there, and on January 30, 1987, the first shoyu produced at the plant was shipped to market. Capital expenditure for the plant was about 700 million yen. The production capacity is 20,000 kl/year, enough to supply the shoyu demand in the Hokkaido region. The plant mainly produces "Kikkoman Shoyu," "Kikkoman Amakuchi Shoyu," and "Kikkoman Menmi." This is the corporation's third plant in Japan; it uses the latest technology and has the highest capacity of production of any of their plants.

8752. Sugisawa, Ko; Matsumura, Y.; Taga, K.; Sengoku, K.; Nagatome, Y. Assignors to House Food Industrial Company Ltd. (Higahsi-Osaka, Japan). 1987. Process for preparing tofu. *U.S. Patent* 4,645,681. Feb. 24. 5 p. Application filed

© Copyright Soyinfo Center 2014

27 Feb. 1985. [2 ref]
• ***Summary:*** Example 1. Soymilk containing 10.5% solids was charged into a reserve tank and 0.25% by weight of GDL (glucono delta-lactone) was added as a coagulant after the milk was boiled for 1-2 minutes. The mixture was allowed to stand for 20 minutes to form a curd. A similar type of curd weighing 3 times as much was then added to this tank, and the mixture was agitated to crush it into small pieces. The mixture of the pieces of curd and milk was then charged into heat-resistant plastic containers, sealed, and heated in water at 85ºC for 40 minutes. The resulting tofu resembled Momen Tofu. The process allows for the use of isolated soy protein as an option. Address: 1-2, 4-5. Nara, Japan; 3. Neyagawa, Japan.

8753. Bosshart, R.P.; Uexkull, H.R. von. 1987. Maximum yield research on soybean: A new approach to overcoming yield limiting factors. *CGPRT* No. 10. p. 439-50. Feb. J.W.T. Bottema, F. Dauphin, and G. Gijsbers, eds. Soybean Research and Development in Indonesia. [27 ref]
• ***Summary:*** "In its childhood in North America, Europe, and Japan, newborn in China and the Philippines, and in gestation in Malaysia and Thailand, maximum yield research (MYR) has not yet been conceived in Indonesia. A relatively new approach to agronomic research, MYR aims to maximize crop yield by simultaneously overcoming all factors limiting yield. To be successful, MYR must promote positive multiple interaction among all factors affecting yield. After the maximum yield has been determined, economic analyses must identify the optimum input rates and other practices to produce the maximum economic yields (MEY) which gives farmers the highest net profit per hectare...

"Traditionally, Justis Von Liebig's 'Law of the Minimum,' or single-limiting-factor concept, has guided researchers in increasing crop yield. Using the analogy of the water level in a barrel representing crop yield and the staves of the barrel the limiting factors, the single-limiting factor concept dictates that the water level or yield is controlled by the height of the shortest stave or the level of the most limiting factor. After the limitations caused by one factor, such as N fertilizer rate, are overcome, another factor is studied... Liebig's law, though applicable at the low end of the yield curve, has shortcomings in high-yield agriculture: multiple interaction among nutrients, water, and management practices may not be recognized... The MYR concept attempts both to increase the size of the barrel and to raise the water level to the top of the barrel in one step by increasing the height of all staves simultaneously... To achieve the maximum crop research yield for a given location, an intensive multidisciplinary effort is required to optimize all controllable factors..." Address: Deputy Director and Director, East and Southeast Asia programme of the Potash and Phosphate Inst. and the International Potash Inst., 126 Watte Estate Rd., Singapore 1128.

8754. Goto, Torao. 1987. Joint soybean research project between JICA and CRIFC. *CGPRT* No. 10. p. 113-16. Feb. J.W.T. Bottema, F. Dauphin, and G. Gijsbers, eds. Soybean Research and Development in Indonesia. [3 ref]
• ***Summary:*** The Japan-Indonesian Joint Food Crop Research Programme started on October 23, 1970. The project terminated its activity on October 22, 1978, after the initial 5-year term and 3-year extension. The new project which followed, Strengthening of Legumes in Relation to Cropping Systems Research Project (ATA-218), started on October 23, 1978. In the ATA- 218, the main effort focused on soybean as the most important element in the cropping system. ATA-218, originally planned to last 5 years, was further extended for 2 years, at the request of Central Research Institute for Food Crops (CRIFC). The project terminated successfully on October 22, 1985. During the follow-up period of ATA-218, a request for a new project, Strengthening of Pioneering Research for Palawija Crop Production, was proposed by the Indonesian side. An agreement was reached on the new project after negotiation between Indonesia and Japan.

On April 1, 1986, the new project, Strengthening of Pioneering Research for Palawija Crop Production Project (ATA-378), started. It is scheduled to continue for 5 years, until March 31, 1991. This project is being implemented at the Bogor Institute for Food Crops (under CRIFC). Soybean is the major protein source and the most important palawija crop in Indonesia. Address: Team leader of Japanese experts (ATA-378).

8755. Hayasaka, Chieko. 1987. Chôri-men kara mita misoshiru no tokusei. I. Miso to dashi no kanten ni tsuite [Cooking characteristics of miso soup. I. Relationships between miso and soup stock]. *Nippon Jozo Kyokai Zasshi* (*J. of the Brewing Society of Japan*) 82(2):99-104. Feb. [Jap]

Tofu Kyokai, Senmu Riji.

8757. **Product Name:** [Cheese Tofu, Curry Tofu, Peanut Tofu, Sesame Tofu].
Manufacturer's Name: Kobayashi Shokuhin.
Manufacturer's Address: Okubomi 2025, Kitahara-cho, Owari Asahi-shi, Aichi-ken, Japan. Phone: 05615-3-2714.
Date of Introduction: 1987 February.
New Product–Documentation: Toyo Shinpo. 1987. Feb. 11. p. 3. President Masakazu Kobayashi has started test marketing these 4 innovative varieties of tofu.

8758. **Product Name:** [Nigari Filled Silken Tofu Made with Cold-Pressed Soymilk].
Foreign Name: Namashibori Jûten-dôfu.
Manufacturer's Name: Marutsune.
Manufacturer's Address: Urashingiri 2-3, Ushida-cho, Aichi-ken, Japan. Phone: 0566-81-1141.
Date of Introduction: 1987 February.
New Product–Documentation: Toyo Shinpo. 1987. Feb. 11. p. 3. To make this tofu, unsoaked soybeans are ground with water, then the soy slurry is pressed before cooking, while it is still cold, to separate the soymilk from the okara. No defoamer is used in cooking, and the resulting filled silken tofu is coagulated only with nigari. None of the typical GDL is used. The president, Mr. Kondo, went to China to study the cold pressing technique. "The tofu is delicious."

8759. *Monthly New Food Products in Japan.* 1987. Puddings: "Tonyu Pudding" from Taishi Shokuhin Kogyo in Japan is a soymilk based pudding. 12(2):15. Feb. *
• ***Summary:*** Free from soybean odors. Address: Japan.

8760. *Monthly New Food Products in Japan.* 1987. Dessert Mixes. Tofu or soy protein based dessert mixes are new from Morinaga Co. in Japan. 12(2):14. Feb. *

• ***Summary:*** 17 proteinases from microorganisms, plants, and animals were tested as coagulants for soymilk. Those which did coagulate soymilk were bromelain, papain, trypsin and proteinases from *Bacillus amyloliquefaciens, B. subtilis, B. polymyxa, Streptomyces griseus, S. caespitosus, Aspergillus oryzae, A. sojae, Endothia parasitica, Rhizopus* species, and *Mucor miehei.* Ineffective were rennin, pepsin, and proteinases from *Aspergillus saitoi.* Soymilk clotting activity fell as the pH rose from 5.9 to 6.7. Temperature optima for the enzymes varied from about 50ºC for *Rhizopus sp.* to 85ºC for *Bacillus subtilis* and *B. thermoproteolyticus* and as high as 95ºC for papain. Address: Research Development Sect., Kibun Food Chemifa Co. Ltd., Takinogawa 7-38-15, Kita-ku, Tokyo 114, Japan.

• ***Summary:*** Techniques include electrodialysis, ultrafiltration, reverse osmosis, and extrusion. Address: Kikkoman, Jôzô Kagaku Kenkyû-jo, Japan.

8763. Odani, Shoji; Koide, T.; Ono, T.; Seto, Y.; Tanaka, T. 1987. Soybean hydrophobic protein: Isolation, partial characterization and the complete primary structure. *European J. of Biochemistry* 162(3):485-91. Feb. [32 ref]
• ***Summary:*** Plant seeds contain a large number of proteins of known and unknown physiological function. Those which are very hydrophobic can be extracted by aqueous organic solvents. A 9000-Mr protein isolated from a 60% ethanolic extract of soybean seeds has been characterized and fully sequenced. Address: 1-3. Dep. of Biochemistry, Niigata Univ. School of Medicine, Niigata 951, Japan; 4. Peptide Inst. (the Protein Research Foundation), Minoh, Osaka, Japan; 5. Dep. of Biochemistry, Yamagata Univ. School of Medicine, Yamagata, Japan.

8764. Sakai, K.; Tachiki, T.; Kumagai, H.; Tochikura, T. 1987. Hydrolysis of α-D-galactosyl oligosaccharides in soymilk by α-D-galactosidase of *Bifidobacterium breve* 203. *Agricultural and Biological Chemistry* 51(2):315-22. Feb. [41 ref]
• ***Summary:*** The bacterium *Bifidobacterium breve,* isolated from human feces, grew well on soymilk, assimilating the oligosaccharides stachyose and raffinose in preference to sucrose, and causing the pH to fall to 4.0 resulting in solidification of the soymilk medium. Alpha-D-galactosidase was isolated from *B. breve,* which had pH and temperature optima at 5.5 and 50ºC, respectively and was capable of hydrolyzing all the galactosyl compounds present in soymilk. Address: Dep. of Food Science & Technology, Kyoto Univ., Kyoto 606, Japan.

8765. Sato, Hisayasu. 1987. Hokkaidô no daizu [Hokkaido's soybeans]. *Daizu Geppo* (*Soybean Monthly News*). Feb. p. 16-22. [Jap]
• ***Summary:*** Gives detailed information on production, yield, and varieties from the 1950s to the present. In 1955, Hokkaido produced 20% of Japan's soybeans, rising to 27% in 1975, and about 24% at present. The absolute figure peaked at 108,200 tonnes in 1960. In 1986 it was 51,700 tonnes, or less than half of the peak. Address: Hokkaido Ritsu Chuo Nogyo Shikensho, Inasaku-bu, Shunin Senmon Gijutsu-in.

8777. **Product Name:** [Long Life Tofu].
Foreign Name: LL Tôfu.
Manufacturer's Name: Kyoto Tanpaku K.K.
Manufacturer's Address: Senryo Matsu-cho 200 banchi, Yoko Oji, Fushimi-ku, Kyoto-shi, Japan. Phone: 075-622-3161.
Date of Introduction: 1987 March.
New Product–Documentation: Toyo Shinpo. 1987. March 21. p. 1. *LL Tofu: Gessan 40 man cho o mokuhyo* [Long Life Tofu: Kyoto Tanpaku plans to produce 400,000 cakes a month]. They are distributing the tofu through one of the largest Japanese publishers, a company related to Nihon Shûpan. The tofu sells for ¥100 per 250 gm cake. The tofu can last 6 months without refrigeration, at room temperature, and up to a year with refrigeration. It is aseptically packed so it can be fed to babies and to those who are ill. The tofu has a nice sweet taste and comes in a microwavable container. The company is planning to produce a mini-size cake of tofu (150 gm) and natural nigari tofu in the same long life packages. Shows a black-and-white photo of the front panel of the label.

Talk with Yoshimasa Yamashita, president of Kyoto Food Corp. USA. 1991. Jan. 24. This tofu company was founded in 1966 (Showa 41) in Kyoto by Mr. Yasuo Hachijin (who is still the active owner), but they were doing something with tofu 10-15 years before that. Their main products have always been fresh tofu and agé. They started as a small company making tofu by hand. They grew big by making delicious tofu. Their original address was different from their present one. They have no financial or other connection with Kyoto Food Corp. USA. [Yet note: 1. Interview with Wataru Takai of 9 Oct. 1989. 2. Yasuo Hachijin, founder of Kyoto Tanpaku, is an investor in Kyoto Food Corp. USA].

8778. Marty, Denise. 1987. Les dérivés de soja, un marché pour les Pme [Products derived from soya, a market for the small- and medium-sized companies]. *Agro Industries* No. 26. p. 40-41. March. [Fre]
• ***Summary:*** "At SIAL this year, 5 soyfoods companies will present their products. For a sector this small, this is important, and it indicates that the sector is in full growth." Four companies are Soy, Sojadoc, Daizou, and Lima N.V. Daizou was created in 1985 by the Japanese restaurant Le Bol en Bois, one of the first to sell tofu in France. Daizou makes only 50-100 tonnes/year of specifically Japanese products. The Société Soy, founded in 1980 [sic, actually 1982], is busy transforming tofu into new foods. This year it launched the new tofu yogurt-like dessert Soyeux. Its new plant at St. Chamond (Loire) has a capacity of 7 tonnes/day of tofu, or 1,500 tonnes/year. In June 1986 the society Sojadoc in Albi took the same step, changing from an artisans production of 10 tons/year of tofu to large scale (1,500 tonnes/year) production of tofu and soymilk over the next 3 years from an investment of 12.5 million French francs. Lima-France, affiliate of a Belgian company, is at Lot-et-Garonne. Jan Kerremans is their miso master, making about 70 tonnes a year.

In 1983 about 10 million liters of soymilk were consumed in Europe, compared with 30,000 million liters of dairy milk. Guy Coudert of the European Soyfoods Association estimates that by the year 2000 some 25,000 tonnes/year will be consumed in France. Address: France.

• ***Summary:*** Compound feed production in the world continues to increase significantly. The average world production over the years 1974-76 was 290 million tonnes. By 1981, this had risen to 377 million tonnes, an annual growth rate of 4.5%. The increase per year was particularly significant in the developing countries, where it averaged 13.4%. Between 1975 and 1981, in the developing countries, compound production more than doubled, from 20 million tonnes to 43 million tonnes. In Indonesia, construction began in 1986 on a 1,000 to 1,500 tonne/day soybean facility, with operation set to begin in late 1987 or early 1988. Thus, the

© Copyright Soyinfo Center 2014

outlook for U.S. Soybean exports to Indonesia is bright. However, in the Philippines, a soybean processing plant that opened in August 1983 closed in February 1984, and all soybean imports have virtually ended.

China has displaced the U.S. as the principal soybean supplier to Malaysia's expanding processing industry, with China's share growing from 7% of Malaysia's soybean meal market in 1980/81 to 73% in 1984/85; during the same period, the U.S. share dropped from 52% to zero. Taiwan, the top pork-producing country in East Asia is also expanding soybean consumption. China exported 280,000 tonnes of soybeans to Japan last year. China needs the foreign exchange. Japan's import tariffs are some of the lowest tariffs in the world. However, the mark-up within Japan is very high. Food costs are at least three time, and sometimes as much as seven times, higher than in the U.S. Japan's goals of being 99% self-sufficient in egg production and 96% in broiler production by 1990 offer potential marketing opportunities for soybean meal. Specific American Soybean Assoc. goals in Japan include increasing the crude protein level 1% in layer/broiler feed and replacing 1% of the fish meal with soy meal. Another is to increase dairy crude protein feed levels for a total of 556,000 tonnes of additional soy meal usage.

The European Economic Community (EEC) generally imports about 80% of the Brazilian and Argentine soybean crops plus soybeans from China. During the 1970s, the EEC increased protein in feed rations, helping to expand soybean meal use, but has since limited milk production and cut animal numbers. Address: President, FEFAC (European Assoc. of Animal Feed Manufacturers).

Effect of seeding time on seed weight and chemical composition of cultivars of the same ecotype]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 50. p. 22-29. March. [19 ref. Jap; eng]
• ***Summary:*** The four planting / seeding times were June 24, July 4, July 14, and July 24. Five soybean varieties / cultivars and one line belonging to the same ecotype (IIIc according to the Fukui classification) were cultivated at the Chugoku Agric. Exp. Station in 1980. The weight of 100 seeds and the yield decreased significantly in the crops planted at the 3rd and 4th dates.

In the seeds planted at the 3rd date, the protein content decreased, while the oil, carbohydrate and ash contents increased. In the seeds planted at the 4th date, the oil content decreased and the protein content increased. While the changes in chemical composition were similar among the different varieties, there were significant differences in the weight of 100 seeds. Address: 1-2. National Food Research Inst.; 3. Chugoku National Agric. Exp. Station, Fukuyama, Hiroshima; 4. Kyushu National Agric. Exp. Station, Chikugo, Fukuoka. All: Japan.

8786. Azumaya Inc. 1987. Introducing the yogurt of the future... (its not yogurt) [Stir Fruity] (News release). 1575 Burke Ave., San Francisco, CA 94124. 11 p. April 23. Press kit.
• ***Summary:*** The news release (from Torme & Co.) announcing Stir Fruity is titled: "Next generation yogurt isn't yogurt at all. Nutritious tofu finally breaks through Western taste barriers." 86% of yogurt users who tried the product expressed "high purchase intent" and 65% of non-yogurt users said they would buy Stir Fruity. "Stir Fruity will begin reaching Northern California dairy cases starting April 1987. The company is supporting the Stir Fruity introduction with an ad campaign, "California's Answer to Yogurt," that concentrates on radio in three California markets: San Francisco, Fresno and Sacramento." Stir fruity, after 8 years of testing and tasting, represents a true "flavor breakthrough." It is lower in calories (160 vs. 200-300 for even low-fat yogurts), low in saturated fats, contains no cholesterol, and is an excellent source of calcium. Azumaya, founded in 1937 and now America's "largest producer of tofu and Oriental pastas," with annual sales are over $6 million, has over 80 employees and produces over 30,000 pounds of tofu a day in its modern 40,000 square foot plant. Includes biographies of Bill Mizono (president) and Travis Burgeson (V.P., marketing). Mizono is given credit for the company's rapid growth. Azumaya went national in the 1980s after starting to pasteurize their tofu. Their products are now found in 6 of the 8 largest U.S. supermarket chains, including Safeway, Lucky Stores, Jewel, Kroger, and Stop & Shop. Address: San Francisco, California.

8788. **Product Name:** [Okara cookie].
Foreign Name: Unohana Kukkii.
Manufacturer's Name: Ikeda Bussan K.K.
Manufacturer's Address: Shinto Building, Marunouchi 3-311, Chiyoda-ku, Tokyo, Japan. Phone: 03-212-8791.
Date of Introduction: 1987 April.
Ingredients: Incl. soy germ, sugar, tofu fiber.
Wt/Vol., Packaging, Price: 120 gm bag for ¥250 or 130 gm bag for ¥300.
How Stored: Shelf stable.
New Product–Documentation: Toyo Shinpo (Soyfoods News). April 21. p. 2. Ikeda Bussan K.K. daikohyo okara cookie [Ikeda Bussan puts out a very good okara cookie]. They use a special type of okara called tofu fiber (*tofu faiba*). It comes in a paste form. It was invented at the Japanese Vegetable Protein Research Assoc. (Zenkoku Shokubutsu Tanpaku Kyokai). The process of making the cookie involves the use of enzymes. These cookies have soy germ, sugar (furakutorigo to), and tofu fiber (okara). The cookies, which taste very good, are called Unohana Cookie (Kukki) and are sold in Kinkado stores in Ikebukuro, Kamio, and Tokorozawa. At ¥250/120g and ¥300/130g, they are about the same price as regular cookies. The manufacturers want to sell these in tofu shops as well, not only in confectionery stores. The people who tasted these cookies agreed that they are tasty.

8789. Kuwahara, M.; Nakano, H. 1987. Soybean in Japan. *Eurosoya* No. 5. p. 5-7. April. [1 ref. Eng]
• ***Summary:*** In 1984 Japan consumed 4,810,000 tons of soybeans. Of the total, 82% is used for oil and meal production, 17% for foods, and the rest (1%) as feed for livestock. 95% of the soybeans used are imported, mainly from the USA (92%) and China (7%). The soybeans from China and Japan, which are higher in protein and lower in oil, are used for traditional foods. Domestic production is small and these soybeans are expensive. They are processed to make tofu (38%), miso (24%), natto (10%), and other foods (11%), while the remaining 17% is used for home cooking.

Soybean breeding started in 1910 in Japan; pure line selection from many local varieties was the main method. After about 1930 cross-breeding became the main method. In 1935 soybean breeding started at the experiment stations of the Ministry of Agriculture, Forestry, and Fisheries (Norinsho). Today there are 5 such stations with a soybean breeding laboratory and 3-5 breeders per lab. From north to south they are Chuo and Tokachi in Hokkaido, Kariwano in Tohoku, Chushin in Nagano, and Kumamoto in Kyushu. Yet from 1950 to 1980 soybean yield increased only slightly, to 1.5 tonnes/ha from 1.3 tonnes. Japan's largest seeded soybean is Tanbaguro; 100 seeds weigh 70 gm. It is preferred for cooking. The smallest is Nattoshoryo; 100 seeds weigh 8-10 gm. It is traded at high prices for natto production.

For decades the Japanese government, for political reasons, has subsidized rice production. But after the late 1970s, when production far exceeded domestic consumption, the government decided to reduce rice acreage and promote the cultivation of other crops, especially soybeans, barley, and wheat in the drained paddy fields (converted upland fields), which accounted for 62% of the soybean cultivated area in 1985, totaling 134,000 ha. Address: Lab. of Soybean Physiology, National Agriculture Research Center, Tsukuba, Ibaraki 305, Japan.

• ***Summary:*** This breeding system was studied to develop more desirable koji molds for the production of shoyu, with special attention to their enzyme producing activities. Address: Soy Sauce Research Lab., Kikkoman Corp., Noda 278, Japan.

8797. *Toyo Shinpo* (*Soyfoods News*). 1987. Miete kita tenpe buumu [Tempeh boom becoming more noticeable in Japan]. May 1. p. 7. [Jap; eng+]
• ***Summary:*** In Tokyo, Marusan Ai's tempeh is sold in the Mitsukoshi department store. There has been no tempeh sold in the Kyoto-Osaka (*Kansai*) area before January of this year. After the 1985 Asian Symposium on Non-Salted Soybean Fermentation, professor Murata went to the Mitsukoshi department store in Osaka, which is 314 years old and one of the biggest department stores in Japan. With Murata's strong persuasion, the manager of the Mitsukoshi food department decided to sell tempeh in their freezer case starting in January of 1987. It is currently selling in small numbers, but has attracted some regular customers. The manager said, "Even if we don't sell many of them [tempeh cakes], we would like to carry them just for the few regular customers." He wants the manufacturers to promote tempeh more forcefully. Mitsukoshi sells tempeh for ¥250/250g in a special film-package designed for frozen foods. The Marusan Ai tempeh is made in their main plant and is shipped to the Mitsukoshi store by frozen transportation.

8799. Yan, Huang Y.; Peng, Wang D. Assignors to Taishi Foods Company, Ltd. (Aomori, Japan). 1987. Method of producing lactic-acid fermented soy milk. *U.S. Patent* 4,664,919. May 12. 4 p. Application filed 28 Dec. 1984.
• ***Summary:*** The author has found a new lactic acid bacterium, called *Streptococcus sojalactis,* which grows well in soy milk to give a fermented product very similar to yogurt and free from the characteristic soymilk odor. Its bacteriological properties are described in detail. In classification it falls under Streptococcus, Lactobacillaceae, Eubacteriales. It is quite similar to *Streptococcus cremoris, Streptococcus lactis, and Streptococcus mitis.* But a table shows its basic differences. It gives soy yoghurt with a low pH (4.25) after 16 hours of culture. The curd is very firm, there is almost so soybean odor, there is a strong smell of acetone and diacetyl, and no unpleasant smell. Note: See also U.S. Patent 687,238 (FSTA 84-12-28). Address: Beijing, China.

May. [17 ref. Jap; eng]
• ***Summary:*** Soybean glycosides (saponin A group, B group, daizin [daidzin], and genistin), which give an undesirable bitter or astringent taste, are found in the soybean hypocotyl. The effects on the quality of tofu of removing the seed coat and hypocotyl, and pressing the tofu without heating, to remove the glycosides, were studied using texture profile analysis, scanning electron microscopy, transmission electron microscopy, and sensory evaluation. Tofu made only from cotyledons was firmer than that made from whole soybeans. Oil droplets were evenly dispersed in cotyledon tofu, whereas they cohered in whole soybean tofu and seemed to impart an oily taste. The saponin fractions were analysed by thin layer chromatography and high performance liquid chromatography. The most undesirable component (saponin A group) was less in cotyledon tofu than in whole soybean tofu. Cotyledon tofu received a higher sensory evaluation score (based on color, taste, and texture) than whole soybean tofu. Therefore tofu makers should consider removing the soybean hypocotyl before making tofu. Address: Faculty of Agriculture, Tohoku Univ., Amamiya-machi, Tsutsumi-dori, Sendai-shi, Miyagi 980, Japan.

8802. Chikaarashi, Shigeru. 1987. Tônyû seizô ni kôteki na shokuhin no seihô to seizô sôchi [The process and equipment used for making an ideal foodstuff for use in producing tofu]. *Japanese Patent* 61-48900. 1,378,742. 3 p. [Jap]
• ***Summary:*** A patent for making whole (non-defatted) soy flakes, which can then be used in making soymilk or tofu. The last page contains a detailed diagram of the equipment. Address: Shin-Kotoni 6-jô, 2-6-17, Kita-ku, Sapporo, Japan.

8803. Duxbury, Dean D. 1987. Soy sauce: Distinctive fermented ingredient combines sweet, salty, tart flavors. *Food Processing* (*Chicago*) 48(5):70-72. May.
• ***Summary:*** Since the 17th century Kikkoman has continuously been the world's major supplier of soy sauce. The process is still as much an art as a science. Kikkoman's plant at Walworth, Wisconsin, produces 7 million gallons a year in 300,000 square feet with 94 operating employees. The shoyu making process is described; the slow aging of the moromi mash takes 5-6 months, during which time some 20 amino acids and lactic acid, alcohol, and a variety of other flavoring compounds result. Different fermentation cultures are added at various stages in the fermentation process.

Food processors using liquid soy sauce in their formulations can choose from 3 forms of soy sauce or teriyaki sauce: (1) Regular (Traditional) Soy Sauce, which contains sodium benzoate as a preservative and 13.5% sodium chloride (w/w). (2) Lite Soy Sauce, which also contains the preservative but only about one-half the sodium content. (3) Less Salt Soy Sauce, which contains no preservatives. Salt reduction is accomplished using dialysis. Soy sauce is also available in dehydrated form. Regular and reduced salt forms are spray dried onto a dextrin carrier.

Color photos show: (1) A typical Oriental-style stir-fried dish in a wok; the flavor and aroma comes from added soy sauce or teriyaki sauce. (2) A large, rectangular automated koji room. (3) Kikkoman's newly introduced consumer line of high viscosity sauces includes Teriyaki Baste & Glaze, Stir Fry Sauce, Steak Sauce, Sweet & Sour Sauce, and Tonkatsu Sauce. (4) An aerial view of the Kikkoman plant in Walworth. Address: Associate Editor.

• ***Summary:*** Contents: Introduction. Processing (how commercial wheat gluten, gum gluten, and vital wheat gluten is made and dried). Milling and flour fortification. Bakery products. Breakfast cereals. Meat, fish and poultry products (incl. meatlike products or meat analogs and soy/wheat gluten textured meat extender). Pasta. Cheese analogs and pizza. Nutritional snacks (incl. gluten balls in Europe, vegetarian items in the U.S., Yachi-fu and Yachiyo-fu in Japan, fried gluten items in China, and wafers of 30-45% wheat gluten content in Australia). Breadings, batter mixes, coatings and flavorings (incl. gluten-based HVP). Pet food. Aquaculture. Non-food applications. Modified glutens. Acknowledgement.

"Wheat gluten is the water insoluble complex protein fraction separated from wheat flours. It is, primarily, a mixture of two types of protein from the wheat kernel–glutenin and gliadin. Gliadin is highly extensible, less elastic, soluble in alcohols, low molecular weight (less than 100,000), and has intramolecular bonds. Glutenin is less extensible, highly elastic, insoluble in alcohols, high molecular weight (greater than 100,000), and has intra and intermolecular bonds. These two major protein components of wheat gluten interact in an aqueous system to produce a unique property known as viscoelasticity... The major use of wheat gluten has traditionally been and continues to be in bakery products."

The International Wheat Gluten Association, chartered in 1979, consists of 18 members in 11 countries. The primary objective of the IWGA is to promote the common interests of its members and the general welfare of the international wheat gluten industry. Address: Executive Director, International Wheat Gluten Assoc., 4510 West 89th St., Prairie Village, Kansas 66207. Phone: 913-341-1155.

8806. Jacobs, Barbara; Jacobs, Leonard. 1987. Cooking with seitan: Delicious natural foods from whole grains. New York, NY: Japan Publications. 256 p. Foreword by Aveline Kushi. Index. 26 cm. [16 ref]

• ***Summary:*** "Seitan is cooked and flavored gluten that has been extracted from [high-gluten] wheat flour. It is very rich in protein, while being extremely low in fat and calories... The traditional Japanese way of seasoning seitan is to cook it in a broth using kombu sea vegetable, natural soy sauce, and fresh ginger root. This... is the one taken for granted as the 'standard seitan flavor' by commercial seitan makers and most people who are familiar with seitan. Many other mixtures of seasonings can be added to the basic seitan broth. Several earlier books on wheat gluten have been written, generally by Mormons.

This book offers you the history, nutritional information, a variety of preparation techniques, and hundreds of recipes that will allow you to convert wheat into a delicious and nutritious food. Especially suited for vegetarians who are interested in high-protein substitutes for animal foods.

Contents: Acknowledgments. Introduction: About wheat gluten, gluten, commonly asked questions about seitan. Getting started. Creating seitan from wheat flour (at home in 30-40 minutes). Using the seasonings. Additional methods of cooking. Appetizers. Soups. Main dishes and casseroles. Side dishes. Salads. Sauces, dressings and marinades. Condiments. Sandwiches. Desserts. From the pantry. Sample lunch and dinner menus. Appendix: 1. All about saving and using wheat starch. 2. Storing uncooked seitan. Storing cooked seitan. 4. Commonly encountered problems and some solutions. Nutritional information. Questionnaire for readers. About our ingredients (discusses natural soy sauce, and soymilk). Glossary (includes fu [dried gluten], miso, natural soy sauce or shoyu, soymilk, tamari, tofu). Bibliography.

Recipes containing soyfoods include: Miso soup with fu and wakame (p. 79). Miso-lemon dressing (p. 171). Tangy miso-tahini sauce (p. 180). Tofu spread with variations (p. 181). Seitan-tofu paté (p. 181-82). Tofu "feta cheese" (p. 192-93). Miso-tahini sauce or spread (p. 209).

When Michio and Aveline Kushi started the Seventh Inn Restaurant in Boston in 1971, they introduced seitan, a food that George Ohsawa had popularized in Japan, especially among macrobiotic people. Yumie Kono taught the chefs, one of whom was Lenny Jacobs, how to make seitan (p. 5).

The Introduction (p. 17-18) states: "Seitan is a food with a long history. Although not widely known in the West, it was traditionally eaten in China, Korea, Japan, Russia, the Middle East, and probably many other countries that grew wheat. In America, the Mormons and the Seventh Day Adventists made gluten and used it on a regular basis... The name *seitan* comes to us from the Japanese, who have prepared cooked wheat gluten for hundreds of years... Some natural foods industry insiders think seitan will become the 'tofu of the '80s.'

"Seitan was introduced to the U.S. natural foods industry about sixteen years ago [1970] when a Japanese variety, shrink-wrapped and quite dry and salty, was first imported. There had been several other varieties available from vegetarian groups, primarily the Seventh Day Adventists and the Mormons. Chinese restaurants have also been preparing wheat gluten for many years. The Chinese call it *mien ching,* or *yu mien ching.* Chinese restaurants often refer to it as 'Buddha Food,' claiming that it was developed by Buddhist monks as a meat substitute. There is also a dried wheat gluten available in Oriental food markets called *fu* by the Japanese and *k'ao fu* or *kofu* by the Chinese."

© Copyright Soyinfo Center 2014

In the USA, about 130,000 pounds of seitan are made each year. The market is growing rapidly. Current U.S. seitan manufacturers are: 1. Upcountry Seitan in Lenox, Massachusetts, the largest known producer in America, which makes about 600 lb/week and distributes it in 6 states. The company, started about 3½ years ago (counting from Jan. 1987, i.e. founded in about mid-1983) by Win Donovan, is now owned and operated by Wendy Rowe and Sandy Chianfoni. They get a yield of 1.33 (i.e. 90 pounds of flour result in 120 pounds of seitan). 2. Rising Tide Natural Market in Long Island, New York. Michael Vitti has been making seitan for 6 years. About 1/3 of his production is bought by another company for use in making sandwiches. 3. Grain Dance in San Francisco, California. Ron Harris has been making seitan for 8 years and is currently selling 250 lb/week in 8 oz. packages. 4. Creative Kitchens in Miami, Florida. Yaron Yemini has been making seitan for 3 years. and has seen a 5-fold increase during this time. He now makes 120 lb/week. His yield is 0.7. 5. The Bridge in Middletown, Massachusetts. The company was founded in March 1981 by Roberto Marrocchesi and Bill Spear. They were making seitan by Oct. 1982. Steve Lepenta now makes 400 lb of cooked seitan each week and claims that sales have doubled in the past two years. 6. Maritime Foods in Portland, Maine. Rosemary Whittaker makes 50 lb/week of seitan. 7. Real Foods of Towson, Maryland. Sharon Warren has been making seitan for 6 years and now makes 150 lb/week.

Reviewed by Linda Elliot in East West. June 1987, p. 94. Note: Talk with Lenny Jacobs. 1990. Sept. 10. There has been little growth in the U.S. seitan industry since the book was published in May 1987. Problems with price and quality. If seitan is frozen, after defrosting it can become spongy and soggy. Address: Massachusetts. Phone: 617-232-1000.

8807. Kanno, Akishige; Takamatsu, Haruki. 1987. [Studies on natto. IV. Changes in the volatile components of natto during manufacture and storage]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 34(5):330-35. May. (Chem. Abst. 107:114495). [17 ref. Eng; jap]

• ***Summary:*** Acetoin and 2,3-butanediol were found to accumulate and reach a maximum in natto after 12 hours of fermentation, after which time these amounts decreased as a result of the action of microorganisms. Prior to this period, the level of citric acid, the major organic acid of soybeans, and glucose released from sucrose, decreased noticeably. Acetic acid increased gradually during the latter half of fermentation and showed irregular variations during storage. Propionic acid was detected from the middle of fermentation and its increase was affected by storage temperature. 3 branched-chain fatty acids (iso-butyric, 2 methylbutyric, and 3-methylbutyric acids) were detected after 12 hours of fermentation and increased thereafter. During storage at 25 degree C, contents of these acids increased markedly. However no such change was observed during storage at 5 or 15 degree C. Address: Asahi Shokuhin Co. Ltd., 180-2 Wado, Ushibori-machi, Namekata-gun, Ibaraki, 311-24, Japan.

[Determination of esterified and free carboxylic acids in the various kinds of natto by gas chromatography]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 34(5):305-08. May. (Chem. Abst. 107:174685). [9 ref. Jap; eng]

• ***Summary:*** Free and esterified fatty and organic acids in various samples of natto (9 types of itohiki-natto and 6 types of tera-natto [fermented black soybeans]) were determined by a modified standard method and compared with those of common miso. Ethyl esters of fatty acids present in large quantities in miso were not detected in itohiki-natto, but found in small quantities in tera-natto. Lactic acid was the dominant organic acid in hama-natto, (470.1 mg/100 gm) and in tera-natto (26.2 mg/100 g) and was not detected in either itohiki- or hoshi-natto. Average contents of the major volatile organic acids in itohiki-natto were (mg/100 gm): acetic acid, 124.7; propionic acid, 28.4; iso-butyric acid, 44.1; and iso-valeric acid, 46.7. The last 2 acids, which gave unfavorable odor at higher concentrations, were found in small amounts in hama-natto and tera-natto. Address: Dep. of Domestic Science, Iida Women's Junior College, Matsuo 610, Iida-shi, Nagano 395, Japan.

8812. Smith, Keith J.; Huyser, Wipada. 1987. World distribution and significance of soybean. In: J.R. Wilcox, ed. 1987. Soybeans: Improvement, Production, and Uses. 2nd ed. Madison, Wisconsin: American Society of Agronomy. xxii + 888 p. See p. 1-22. Chap. 1. [13 ref]
• ***Summary:*** Contents. 1. World soybean production: United States, Brazil, Argentina. 2. World trade in soybean. 3. Importance of soybean meal and oil. 4. World production trends.

In the first paragraph of this chapter, the authors state: "Probst and Judd (1973) presented an extensive review of the origin and early history of this crop with highlighted references to soybean in books written over about 4500 years. The early Chinese history is particularly interesting."

Note: This passage, later quoted by other writers, is unfortunate because it perpetuates the myth that the soybean has a documented history dating back 4,500 years. Hymowitz (1970), the first person to do scholarly, critical research on the early history of the soybean in China, has shown that the earliest reference seen to the soybean is in the *Book of Odes,* from roughly the 11th century BC. Thus the soybean has a documented history of about 3,000 years. Address: 1. American Soybean Assoc., St. Louis, Missouri; 2. Development Planning & Research Assocs., Inc., Manhattan, Kansas.

• ***Summary:*** A table on p. 14 shows soybean imports to Japan by source country, 1986. USA 4,332,000 tonnes (89.9% of total), China (PRC) 323,000 tonnes (6.7%), Brazil 128,000 tonnes (2.7%), Other 34,000 tonnes (0.7%). Total: 4,817,000 tonnes. Compared with 1985 the percentages increased for USA and China, decreased for Brazil and other. Source: Nihon Boeki Geppo. Address: Daizu Kyokyu Antei Kyokai, Senmu Riji.

8814. Kuwata, Tamotsu; Suginaka, Yutaka; Ohtomo, Hideo. Assignors to Meiji Milk Products Company Ltd. (Tokyo, Japan). 1987. Method of producing calcium-enriched aseptic soy bean curd. *U.S. Patent* 4,673,583. June 16. 7 p. Application filed 21 Feb. 1986.
• ***Summary:*** Note: This is Japanese Patent 85-069105. In this new coagulation system, the coagulant is introduced in the pre-sterilization process and results in a calcium enriched aseptic tofu. The new coagulant is a $Ca(OH)_2$-sucrose addition compound named calcium saccharate. It serves as an alternative to glucono delta lactone (GDL) or bittern (magnesium chloride and magnesium sulfate). It allows aseptic processing of the curd without flavor loss or texture deterioration. In a given sample, 30-100 mg per 100 gm calcium saccharate is added to soymilk, the resulting curd is sterilized and the pH adjusted to 5.7–5.9 with citric or ascorbic acid. The curd is then filled into containers, which are sealed and heated for 20-60 minutes at 75-95ºC. Address: Japan.

8815. Ebine, Hideo. 1987. Re: Can miso prevent or cure cancer? Letter to William Shurtleff at Soyfoods Center, June 29–in reply to inquiry. 2 p. Typed, with signature. [Eng]
• ***Summary:*** Summarizes the research conducted to date. In 1981, early research was conducted separately by Prof. Kimura and Dr. Hirayama. He believes that it is very difficult to conclude that there is solid evidence showing that miso can either prevent or cure cancer. Address: Director, Central Miso Research Inst., Shinkawa 1-26-19, Chuo-ku, Tokyo, Japan.

8816. Ebine, Hideo. 1987. Studies on the effect of miso or miso soup to reduce cancer risk. Tokyo, Japan. 2 p. Unpublished typescript. June 29. [Eng]
• ***Summary:*** "Hirayama first presented a paper to the 40th Annual Meeting, Japan Cancer Association, 1981. Since miso soup is one of the most important foods for Japanese food life, the presentation attracted keen interest of the newspaper, *Asahi Shinbun* and was reported as the top news at the first page of September 27, 1981."

Hirayama pointed out that the observed benefits could come from selected nutrients in the miso. Prof. Kimura and his colleagues found that miso contained some antimutagenic substances such as the ethylester of linolenic acid. Several other studies are now underway.

"As stated by Hirayama, the effect of miso soup is possibly supported by some other substances closely associated with the intake of miso soup such as green-yellow vegetables, Michioka (1985), Akita University, published a paper on the anti-mutagen included in green-yellow vegetables which are often supplied with miso soup in large amount easily." Address: Director, Central Miso Research Inst., Shinkawa 1-26-19, Chuo-ku, Tokyo, Japan.

8817. Kitamura, Keisuke. Assignor to Taishi Foods Company Ltd. (Aomori, Japan). 1987. Process for producing new variety of odorless soybeans. *U.S. Patent* 4,677,247. June 30.

4 p. Application filed 26 Aug. 1985. [3 ref]
• ***Summary:*** The new soybean has a little or no lipoxygenase, an enzyme which creates the grassy flavor peculiar to soybeans. The normal soybean seed has 3 types of lipoxygenase: L-1, L-2, and L-3. The new variety lacks L-2 and L-3. Address: Tsukamoto + 1991, p. 51.

8818. *Business Japan.* 1987. Japan's oldest biotechnology lays foundation for 21st century. June. p. 116-17.
• ***Summary:*** Yamasa Shoyu Co. was established in 1645 and has over 340 years of tradition in brewing soy sauce. Michio Hamaguchi is the president. Building on its background in the traditional biotechnology used to make shoyu, Yamasa has invented a technique to manufacture two flavor enhancers, Inosine 5'-monophosphate (IMP) and Guanosine 5'-monophosphate (GMP), by breaking down the ribonucleic acid (RNA) with a special microbial enzyme (nuclease P1).

Yamasa also discovered a synergistic action between L-glutamate and the flavor nucleotides (IMP and GMP), which established the new nucleotide industry. Mixing equal amounts of IMP and GMP made by Yamasa, a product registered as Yamasa IG is provided to the rest of the world. It is used as a flavor base for food processing, as an alternative to meat extract.

Yamasa is also working on DNA synthesis, in vitro diagnosis, and immunology. In the latter area, Yamasa began to work seriously on cell fusion technology in 1978. Fusing a mouse spleen cell and myeloma in 1981, Yamasa successfully developed a monoclonal antibody for the first time in Japan.

Photos show: (1) Michio Hamaguchi, President, Yamasa Shoyu Co., Ltd. (2) An aerial view of Yamasa's main shoyu plant in Choshi, Chiba prefecture, Japan. (3) Two views of working on new biotechnology R&D at Yamasa research laboratories. (4) Bottling Yamasa shoyu at the main plant. (5) Computer monitoring of RNA degradation. (6) Part of the central control room at the Choshi plant. (7) Yamasa syclic AMP and GMP assay kits. (8) Bottles of commercial Yamasa monoclonal antibodies.

8819. *Harvard Medical School Health Letter.* 1987. Nitrates and cancer. June. p. 2. [1 ref]
• ***Summary:*** "Since the mid-1970s, nitrate–a relatively common substance in food and water–has been under suspicion as a cause of cancer, especially cancer of the stomach. When nitrate enters the body, or even when it is present in foods left at room temperature, bacteria may convert the compound to nitrite. Nitrite, in turn, can become attached to common organic substances to produce *nitrosamines,* which are carcinogenic...

"The main source of nitrate in contemporary diets is vegetables, which pick it up from fertilizer in the soil. Drinking water may also contain a fair amount of nitrate (much of it, again, originating in fertilizer applied to soil in the run-off-region)...

"In regions of the world where food preservation is inadequate, bacteria contaminating the food supply may generate high levels of nitrosamine, and this may account for the high rates of stomach cancer in less developed parts of the world. Also, certain relatively uncommon foods contain substances favoring formation of nitrosamines. Among them are some types of preserved fish, certain varieties of Japanese soy sauce."

British Medical Journal, February 28, 1987.

8827. *Soya Newsletter* (*Bar Harbor, Maine*). 1987. Nasoya Foods' investment in new machinery pays off with increased sales. May/June. p. 8-9.
• ***Summary:*** Nasoya recently acquired a modern 22,500 foot facility and invested over $1 million in new, large-scale automatic tofu making equipment from Sato Shoji Co. in Japan. In June 1985 partners Paino and Bergwall journeyed to Japan in search of a new system. The system arrived in Feb. 1986 and was operational by May. The company's sales of tofu jumped nearly 50% from 1985 to 1986, and first quarter sales in 1987 are 60% higher than for the same period in 1986. Annual tofu production (in pounds): 1980 (600,000 lb), 1981 (625,000), 1982 (950,000), 1983 (1,144,000), 1984 (1,300,000), 1985 (1,560,000), 1986 (2,080,000), 1987 (3,400,000). The latter figure is 65,300 lb/week.

June. [24 ref. Jap; eng]
• ***Summary:*** Investigates changes in the composition, oxidative activity, sugar, and lipid components of commercial barley-koji miso during 3 months storage at -10, 4, 20, and 37ºC. Address: Tokyo Dietitian Academy, 2-23-11 Ikejiri, Tokyo 154, Japan.

8830. **Product Name:** [Tofu with Lactic Acid Calcium].
Manufacturer's Name: Yazaki Shokuhin, Ltd.
Manufacturer's Address: Tomioka 1432, Tomiaka-shi, Gunma-ken, Japan. Phone: 02746-2-0009.
Date of Introduction: 1987 June.
New Product–Documentation: Toyo Shinpo. 1987. June 18. p. 11. Tofu containing lactic acid calcium is being targeted at the children's market by Yazaki Shokuhin of Tomioka, Gunma-ken, Japan. Mr. Kazuo Yazaki is the president of Yazaki Shokuhin, Ltd. Includes photos of the packaging and store front.

8831. Torii, Yasuko. 1987. New developments with tempeh in Japan (Interview). Conducted by William Shurtleff of Soyfoods Center, July 1. 2 p. transcript.
• ***Summary:*** Torigoe-Seifun stopped making tempeh in mid-1987. They had a hard time popularizing it. Marusan's tempeh is not selling well. They, too, are thinking of stopping. Mr. Kanasugi and the Natto Assoc. are trying to cooperate with Marusan. They suggest selling "tempeh miso," made as follows: Mix 10 kg tempeh, 10 kg barley koji or rice koji, and 1 kg salt. Grind in a meat grinder and let stand at room temperature in the summer for 1 month. The result is a sort of Finger Lickin' Miso. Barley koji works best, and the resulting tamari is delicious. Mr. Kanasugu hopes some miso maker will make this. Only Mr. Kanasugi is doing tempeh research. He makes this miso in his restaurant daily. He also makes a spread like peanut butter. Mr. Ose is still making tempeh but his business, Udai, is not doing well. No one is left at the Ministry of Agriculture with an interest in tempeh: Mr. Katoh went to work with FAO in Rome and Ohta went to Showa Seiyu.

Why did tempeh fail to catch on in Japan? 1. It was poorly marketed. 2. The ads and Torigoe aimed at the older generation who still know how to deep fry foods. 3. It is not clear whether the attempted tie-in with natto was helpful or harmful. Natto is a convenient fast food. Now tempeh is not even sold at Natural House, the natural foods supermarket. Organic soybeans from Living Farms are now widely used in Japanese miso and natto. Address: Kamitsuchidana 324,

8832. Ishizuka, Waichi; Aoki, Ryochi. Assignors to Taiyo Yushi K.K. (Yokohama, Japan). 1987. Method of producing cheese-like emulsified food. *U.S. Patent* 4,678,676. July 7. 5 p. Application filed 4 Oct. 1984. Application also filed in Japan on 4 Oct. 1983. Corresponds to Japanese Patent 83-185697. [5 ref]
• ***Summary:*** Tofu (3-30%) made from deodorized soymilk is mixed with 5-40% animal/vegetable oils or fats, 0.1-10% of heat coagulable protein (such as egg whites), and 0.1-5% of stabilizer (such as carrageenan, gelatin, guar gum, pectin, locust bean gum, xanthan gum, dextrin, or starch). The mixture is blended and deaerated, then heated for protein gelation and sterilization. The product is an imitation cheese (spread-type soft, semi-hard, or hard) with good body and texture. Address: Yokohama, Japan.

8833. Sugisawa, Ko; Matsumura, Y.; Sengoku, K.; Nagatome, Y. Assignors to House Food Industrial Company Ltd. (Higahsi-Osaka, Japan). 1987. Process for preparing tofu charged into a container. *U.S. Patent* 4,678,677. July 7. 5 p. Application filed 3 June 1985. [4 ref]
• ***Summary:*** Note: This is Japanese patent 84-138481. Soymilk is prepared in the conventional way and a fast-acting coagulant (magnesium chloride) or a slow-acting coagulant (GDL) is added. However, in order to delay coagulation of the soymilk until after it has been charged into containers, a coagulation delaying compound (e.g. sodium pyrophosphate, hexametaphosphate, or polyphosphate) is added and the mixture subjected to high pressure homogenization at 30 kg/sq. cm., between 2 and 30 minutes after addition of coagulant. The homogenized soymilk is subsequently filled into containers and allowed to set. The resulting tofu has a good taste and texture. Address: Nara, Japan.

8834. *Toyo Shinpo* (*Soyfoods News*). 1987. Pari de mitsuketa honmono no tôfu. Munôyaku daizu tsukai parikko ni apiiru [Real tofu made in Paris with organically-grown soybeans and it appeals to the Parisians]. July 31. p. 13. [Jap; eng+]
• ***Summary:*** Mr. Noboru Sakaguchi, age 59, has a tofu shop located in Champaigny–only 20 minutes away from Paris. The shop opened 3 years ago and is called Daizou. The majority of the employees are French. Sakaguchi employs a Japanese plant manager, Mr. Takatashi Hiroyama, age 39. Mr. Sakaguchi also has a health foods store and restaurant, Le Bal en Bois. This is the parent company of Daizou. They produce about 1,000 cakes of tofu (1 cake = 380 gm) a day. Of these, 200 are made with organically grown soybeans and are vacuum packed. The company also uses regular soybeans from Canada and organically grown ones from the U.S. They use nigari in their tofu manufacturing process. They have been experimenting with silken tofu (kinugoshi) and have done market studies with some newly developed soymilk mayonnaise. Their tofu sells for 7 French francs per cake wholesale, and 9-12 francs retail. They sell their organic tofu for the same price as the regular cakes as a method of introducing it into the market. Right now, their big enemy is water that is too alkaline.

8835. American Soybean Association. 1987. Soya Bluebook '87. St. Louis, Missouri: American Soybean Assoc. 270 p. July. Index (bold face type indicates advertiser). 22 cm.
• ***Summary:*** This is the last issue of the *Soya Bluebook* published by the American Soybean Association.

Contents: Organization: International associations, government trading agencies. Soy Directory: Oil extraction plants/refineries, manufacturers of edible grade soy products & soyfoods, manufacturers of industrial grade soy products. Soybean manufacturing support industries: Category listings, product handling equipment & supplies, soybean processing equipment & supplies, manufacturing services, alphabetical company listings. Marketing & auxiliary services: Marketing services, commercial services & suppliers, exporters of soybeans & soybean products, importers of soybeans & soybean products. Soy statistics: Metric conversions, tables, charts, graphs. Glossary. Standards and Specifications. Indexes: Alphabetical company listings, Soya Bluebook sections and categories, advertisers. Maps.

The section titled "Soy statistics (tables, charts, graphs) (p. 185-244) is a rich source of information, worldwide. Contents: Soybean production–Area planted / harvested and yield: U.S. soybean planting and harvesting dates. U.S. soybean acreage, yield, and production. U.S. soybean planted acreage by state. U.S. soybean harvested acreage by state. U.S. soybean yield by state. U.S. soybean production by state.

U.S. production of major crops: Soybeans, corn, wheat, cotton (graph). U.S. harvested acreage of major crops: Soybeans, corn, wheat, cotton (graph). U.S. yield per acre of major crops: Soybeans, corn, wheat, cotton (graph). Argentine soybean area, yield and production by province. Brazilian soybean area, yield and production by state. Canadian soybean production. Canadian soybean production and utilization.

Soybean production by major countries (graph). Share of world soybean production by major countries (graph). World soybean production. Soybean acreage by major countries (graph). Share of world soybean acreage by major countries (graph).

Soybeans and soybean products: Supply and disposition: U.S. soybeans: Supply, disposition, acreage / yield and price. U.S. soybean meal and oil: Supply and disposition. Soybean usage in the U.S. (graph). U.S. soybean exports–percent of total usage (graph). Argentine soybeans: Supply and disposition. Argentine soybean meal and oil: Supply and disposition. Brazilian soybeans: Supply and disposition.

© Copyright Soyinfo Center 2014

Brazilian soybean meal and oil: Supply and disposition.

U.S. soybean prices, crop value, farm marketings: Prices of U.S. soybeans: No.1 yellow. Prices of U.S. soybeans: Received by farmers. U.S. soybean price support operations. U.S. soybean crop value. U.S. farm marketings of soybeans.

Soybean processing and products–processing facilities and product value: U.S. soybean processing plants (map). Value of U.S. soybean products and crush margin.

Meal: U.S. soybean meal: Prices paid by farmers. U.S. soybean meal: Average wholesale price, Decatur [Illinois]. U.S. soybean meal: Beginning stocks, production, exports and domestic disappearance. U.S. oilseed cake and meals: Supply, disposition, and price. World major protein meals: Supply and utilization.

Fat and Oils: World major oilseeds: Supply and utilization. World major vegetable and marine oils: Supply and utilization. Prices of U.S. soybean oil. U.S. soybean oil utilization. U.S. soybean oil value as percent of total soybean value (graph). U.S. soybean oil: Supply, disposition, and price. U.S. edible fats and oils: Supply and disappearance.

Exports and imports–U.S. exports of soybeans by month. U.S. soybean exports by port and country of destination. U.S. exports: Soybeans by country of destination. U.S. soybean exports by port areas (map). U.S. exports: Soybean oilseed cake and meal by country of destination. U.S. exports: Soybean oil by country of destination. U.S. exports: Soybean oil, P.L. 480, title I and III by country of destination. U.S. exports: Soybean, cottonseed and sunflowerseed oils by country of destination. U.S. exports: Soybean and cottonseed oils by year. Brazilian exports of soybeans and products to major countries. Soybean and product exports by major countries (graph). World share of soybean and product exports (graph).

Before page 199 are two fold-out color maps (color coded by county): U.S. soybean production 1985, and U.S. soybean acreage 1985. Two other maps are: American Soybean Association international offices / world regions, U.S. soybean processing plants, and U.S. soybean exports by port areas.

A full-page table (p. 235) shows U.S. exports of whole soybeans, 1982-1986–Volume of exports (in metric tons) by country of destination and total value each year. Region and country of destination: North America: Canada, Mexico, other, total. South America: Brazil, Colombia, Ecuador, Peru, Venezuela, other, total. Europe and Russia: Belgium & Luxembourg, Czechoslovakia, Denmark, France, Germany (West), Germany (East), Greece, Ireland, Italy, Netherlands, Norway, Portugal, Romania, Soviet Union, Spain, Switzerland, United Kingdom, Yugoslavia, other, total. Middle East. Africa. Asia: China–PRC, China–Taiwan, India, Indonesia, Japan, Korea (South), Pakistan, other, total. Australia & Oceania. Other unidentified. Grand total. Value of exports–total (million $). Address: P.O. Box 27300, St. Louis, Missouri 63141.

8836. *Corporate Report Wisconsin* (*Milwaukee, Wisconsin*). 1987. Kikkoman brews up super soy sauce. July.
• ***Summary:*** The plant on the Big Foot Prairie, 3 miles northwest of Walworth, is operated by Kikkoman Foods Inc., a unit of Kikkoman Shoyu Co. Ltd. of Japan. Production is now about 8 million gallons a year compared to about 1.7 million gallons in the plant's first year of operation. In 1977 Kikkoman became the leader in the U.S. soy sauce market. Presently U.S. retail market shares are Kikkoman 47%, La Choy 37%, and Chun King a distant third. "Kikkoman is one of the few Japanese companies to succeed in the U.S. with a traditional Japanese product. It has done so in part by promoting its sweet and salty sauce as an all-purpose and all-American product."

8837. Hapgood, Fred. 1987. The prodigious soybean. *National Geographic* 172(1):66-91. July.
• ***Summary:*** Superb photos and an interesting original color painting done by artist James Gurney, in the style of Norman Rockwell, shows more than 60 products containing soybean ingredients (both food and industrial). But, except for the first 2 pages, the text of this far-ranging article is mediocre to embarrassingly erroneous; even the *National Geographic* editors didn't like it, but Hapgood refused to correct his many errors. For example, large bold print at the top of the first page reads: "For centuries Chinese have called the Soybean 'Yellow Jewel' or 'Great Treasure.' Now this prodigious bean is seen by some as a weapon against world hunger." Note: This is the earliest English-language document seen (July 2007) that uses the term "Yellow Jewel" or "Great Treasure" to refer to the soybean.

Superb photos by Chris Johns show: (1) Selling tofu in China. (2) Harvesting soybeans with combines. (3) A tractor suspended high over the hold of a cargo ship loaded with soybeans. (4) Making koji at Kikkoman. (4) 42 different colors and shapes of soybean seeds. (5) Henry Ford on 2 Nov. 1940 wielding an ax against a car trunk lid made from a highly resilient soybean-derived plastic. (6) Yuba drying over pans of soymilk. (7) A Japanese woman with her dried-frozen tofu drying under the farmhouse eaves. (8) Favorite Japanese soyfoods dishes: Dengaku, Simmering tofu, yuba, and miso dumplings. (9) Hatcho miso in vats with stones piled high on each in an earthquake-proof pyramid shape. (10) *Mame-maki* (bean-throwing ceremony) at Setsubun, held each February in Japan; the beans are thrown from small wooden measuring boxes (*masu*). (11) The *hari-kuyo* ceremony for broken needles in Tokyo. (12) A martial arts master and former Shaolin temple monk in China testing his strength by plunging his arm elbow-deep into a soybean-packed barrel. Address: Boston.

8838. Otsuka, Shigeru. 1987. Shôyu sekai e no tabi [A journey into the world of shoyu]. Tokyo: Toyo Keizai

© Copyright Soyinfo Center 2014

Shinpo-sha. 230 p. Illust. No index. 20 cm. [22 ref. Jap]
• ***Summary:*** Contents: A pedigree of shoyu (p. 11). The road to shoyu (p. 35). Shoyu and the world (p. 67). A friend of meat cookery (p. 103). Shoyu... make in the USA (p. 115). Shoyu as a forerunner of Japanese culture (p. 129). A visit to the real centers of the Japanese food boom (p. 159). Shoyu recipe contest (p. 209). Mini-science on shoyu (p. 213). Conclusion (p. 219). Postscript (p. 225).

In the section on "Shoyu and the World," subsection "Exports during the Edo Period" (p. 67-79) it is noted that: "In a book-keeping book under the date Man-en 1 (1860), Aug. 16 it is stated that 4 ceramic bottles of Japanese shoyu were shipped to Jakarta (Java), Indonesia. The shoyu that was exported to Europe was sent via Jakarta, Indonesia, to Holland. It was shipped in ceramic bottles each containing a volume of 3 gô (540 ml, or about 1 pint). On each bottle, in roman letters, was written the fact that the bottle contained Japanese shoyu. Terms such as "Japansch Zoya" or "JapanschZoya" or "Jap. Soya" appeared on the bottles.

One photo (p. 76) shows four (another shows three) of these bottles. Below this name, near the base of many bottles was written the brand "CPD" which is thought to have stood for stood for "Comprador." During the Kan-ei period (1624-1630) some rich merchants in Nagasaki established a company named *Konpura-sha.* The merchants who ran it were called Comprador. [Note: They are now (Oct. 2007) generally known in English as the "Comprador Merchant Guild;" Japanese: *Konpura Nakama*].

It is recorded in the *Kôka Nisshi,* the diary of a voyage by Tôsei? Yanakawa in 1860 (Ansei 7) from Japan to the USA by boat, that "after we landed in Washington state, we didn't have any miso or shoyu, so we had nothing but salt with which to season our meals."

In 1765 the French enclycopedist Denis Diderot (lived 1713-1784) wrote a section in his Encyclopedie titled "soui ou soi" about Japanese soy sauce. Note that the first term, pronounced soy, is today's French word for soy sauce. The second term, pronounced "swa" apparently no longer exists.

Two black-and-white photos (p. 47) show the outside and inside of the Goyo-Gura in Noda. Page 93 shows a typical shoyu section in a Japanese supermarket. Address: Toyonaka-shi, Osaka-fu, Japan.

8839. **Product Name:** [Flower-Shaped Tofu (Salt Plum, Beefsteak Leaf, Wakame, Sesame Seed)].
Foreign Name: Hanagata Tôfu (Ume, Shiso, Wakame, Goma).
Manufacturer's Name: Yamaguchi Tofu-Ten.
Manufacturer's Address: Royal Center, Sone-machi 2475-1, Takasago-shi, Hyogo-ken, Japan.
Date of Introduction: 1987 July.
How Stored: Refrigerated.
New Product–Documentation: Toyo Shinpo. 1987. July 1. p. 6. This tofu shop's innovative products are getting popular.

8840. Yamazaki, Junsei. 1987. The Junsei Yamazaki miso and umeboshi story (Brochure). Route 1, Box 1333, Orland, CA 95963. 6 p.
• ***Summary:*** Junsei arrived at Chico-San in May 1963. His wife, Kazuko, came in 1968. Later that year he went to New York to help Michio Kushi with his restaurant. He returned to Chico-San the following spring (1963?) where he started to make traditional miso and soy sauce. He had learned how while growing up on his family's farm in Chiba prefecture. He had attended Tokyo Agricultural University and majored in organic chemistry. Also at Chico-San he made rice syrup, called Yinnies. Now he and Kazuko live on their 5-acre farm in Orland, California. He makes organic miso (brown rice, rice, and barley) and she umeboshi salt plums with shiso. Both farm. Address: Orland, California. Phone: 916-865-5979.

8841. Motai, Hiroshi; Fukushima, Yaichi; Ishiyama, Takashi. Assignors to Kikkoman Corp. 1987. Process for producing seasoning. *U.S. Patent* 4,684,527. Aug. 4. 4 p. Application filed 1 April 1986. [6 ref]
• ***Summary:*** A process is described for producing a seasoning by contacting a hydrolysate of soy sauce koji with an immobilized glutaminase or peptidase in the presence of sodium chloride. Address: 1-2. Noda, Japan; 3. Saitama, Japan.

8842. *Quill* (*Stronghurst, Illinois*). 1987. U.S. farm program

© Copyright Soyinfo Center 2014

spending no match for European Community or Japan. Aug. 5.
• ***Summary:*** The Congressional Budget Office recently completed a study requested by U.S. Senator John Danforth. It found that European farm subsidies were the highest of any major trading nation, except Japan. According to AgraEurope, in U.S. dollars, Japan spent $4,928 per hectare, compared with $580 for the EC and $69 for the USA. Thus the EC spent 8.3 times as much per hectare as the U.S.

8843. Crosby, Ann. 1987. Japanese cooking the tofu way [Kobayashi's Tofu in Ontario, Oregon]. *Argus Observer* (*Ontario, Oregon*). Aug. 17.
• ***Summary:*** Kuni and Vickie Kobayashi have been operating this tofu company for 5 years. Formerly J. Kanetomi was the longtime proprietor. Kuni now makes 600-800 lb/week of tofu.

8844. Bernard, Richard L.; Juvik, Gail A.; Nelson, Randall L. 1987. USDA soybean germplasm collection inventory [1898-1944]. Vol. 1. *INTSOY Series* No. 30. vi + 80 p. Aug. [20 ref]
• ***Summary:*** The title page states: "Information on the origins of soybean and wild soybean germplasm including introduced and old United States and Canadian domestic varieties and foreign and domestic strains identified by FC and PI numbers up to PI 150.000 acquired through 1944 and maintained by the United States Department of Agriculture." Note: PI can stand for either "Plant Inventory" or "Plant Introduction."

Contents: Foreword. Curator staff. The USDA soybean germplasm collection: Introduction, history, PI numbers, divisions of the collection, maintenance of the collection, statistical summaries, United States and Canadian varieties, foreign introductions, appendixes, abbreviations (EAS, ARS, ES, INTSOY, USDA, and USRSL).

Statistical tables: 1. Number of strains by maturity group (MG, p. 4). This table is divided vertically into north (MG 000 to IV), south (MG V to X), and wild soybeans. There are columns for: Old domestic varieties (before 1946), FC strains (mostly from USA), PI strains to 150,000, and total. The three maturity groups with the greatest number of strains are III (479), II (436), and IV (376)–all in the north.

2. Number of strains by country of origin (p. 5). This table is divided vertically into old domestic varieties (before 1946), FC strains, PI strains to 150,000, grand total, and wild soybeans to PI 150,000. The countries that have contributed the most strains to the U.S. collection are: China 871, Korea 335, and Japan 288.

3. Number of PI strains by year from 1898 to 1945 (p. 6). Columns show: Year. Plant Inventory volume. Initial PI designation for all crops. Number of soybean PI designations plus number of domestic varieties derived from them. Number of strains in collection each year. Accumulative total. A total of 7,867 PI soybean strains were introduced out of a total 150,209 plant introductions (about 5.2% of the total was soybeans). 413 domestic varieties were derived from these soybean introductions. The most active years for soybean introduction were 1926-1932. In 1954 there were 1,524 soybeans in the collection, or only 19.4% of those introduced with PI numbers. The rest were lost or discarded.

4. Historical summary of soybean introduction, in four time periods (p. 7): 1898-1923 (26 years, 40 strains/year). 1924-1928 (5 years, 375 strains/year). 1929-1932 (4 years, 1,193 strains/year). 1933-1944 (12 years, 14 strains/year).

5. Soybean instructions from major collecting expeditions (p. 7). Frank N. Meyer in China, Korea, and USSR from 1906 to 1917 collected 114 soybean PI strains–including 1 wild soybean in 1913. P.H. Dorsett in China from 1924 to 1927 collected 969 PI strains–including 5 wild soybeans in 1925. P.H. Dorsett and W.J. Morse in China, Korea, and Japan from 1929 to 1932 collected 4,451 PI strains.

6. Source and identification of individual strains: Old domestic varieties (p. 8-19). 7. Source and identification of individual strains: FC [Forage Crop] strains (p. 20-23). 8. Source and identification of individual strains: PI strains (by year, 1907-1944, to PI 150.000; p. 24-59). A sample entry (p. 34) states: Collected in Japan by P.H. Dorsett and W.J. Morse, USDA Agricultural Explorers, in April to June 1929. Obtained at Nishigahara, Tokyo, on April 15. PI 80.466. Maturity Group V. 32 seeds. 'Okura Maru Daizu,' originally from Hokushu, used candied and the product is called 'Mimame' [sic, Nimame]. Note: Right below this is PI 80.468. Tsurunoko Daizu.

Source and identification of individual strains: Wild soybean strains (by year, 1925-1940, to PI 150.000).

Appendixes: 1. PI strains from which old domestic varieties were derived. 2. Old domestic varieties introduced without PI designation. 3. Old domestic varieties of hybrid or unknown origin. 4. FC strains summarized by country and year. 5. PI strains summarized by country and year: 1898 to 1944 (PI 1 to PI 150.000). 6. Chinese location names. 7. Korean location names.

The source, date, maturity group, and other information for the following 191 old domestic varieties (all of which are still in the USDA soybean germplasm collection) is given (p. 8-19): Acadian, Agate, A.K. [FC 30.761], A.K. [Kansas], A.K. (Harrow), Aksarben, Aoda, Arisoy, Arksoy, Arlington, Armredo, Austin, Avoyelles, Bansei, Bansei [Ames], Barchet, Bavender Special A, B, C, Biloxi, Blackeye, Black Eyebrow, Boone, Burwell, Capital, Cayuga, Charlee, Cherokee, Chestnut, Chief, Chusei, Clemson (from Nanjing, China in 1927; released in 1939), Cloud, CNS, Columbia, Creole, Delsoy, Delsta, Dixie, Dunfield, Earlyana, Early White Eyebrow, Easycook, Ebony, Elton, Emperor, Etum, Flambeau, Fuji, Funk Delicious, Funman, Gatan, Georgian, Giant Green, Gibson, Boku, Goldsoy, Granger,

© Copyright Soyinfo Center 2014

Green and Black, Guelph (from Japan in 1889 by Prof. W.P. Brooks, Massachusetts AES; called 'Medium Green' from 1903 to 1907), Habaro, Haberlandt, Hahto, Hahto [Michigan], Hakote, Harbinsoy, Harman, Harrel, Hayseed, Hidatsa, Higan, Hokkaido, Hollybrook, Hongkong, Hoosier, Hurrelbrink, Illington, Illini, Ilsoy, Imperial, Improved Pelican, Jefferson, J.E.W. 45, Jogun, Jogun [Ames], Kabott, Kagon, Kanro, Kanum, Kingston, Kingwa, Korean, Kura, Laredo, Lexington, Lincoln, Linman 533, Louisiana Green, Luthy, Macoupin, Magnolia, Mamloxi, Mammoth Yellow, Mamotan 6640, Mamredo, Manchu, Manchu [Lafayette], Manchu [Lafayette] B, Manchu [Madison], Manchu–Hudson, Manchu–Montreal, Manchu 3, Manchu 606, Manchu 2204, Manchukota, Manchuria, Manchuria 13177, Manchuria 20173, Mandarin, Mandarin (Ottawa), Mandarin 507, Mandell, Manitoba Brown, Mansoy, Medium Green, Mendota, Midwest, Miller 67, Mingo, Minsoy, Missoy, Monetta, Morse, Mukden, Nanda, Nansemond, Nela, Norredo, Norsoy, OAC 211, Ogden, Ogemaw, Old Dominion, Ontario, Osaya, Otootan, Pagoda, Palmetto, Pando, Patoka, Patterson, Peking, Peking S, Pennsoy, Pine Dell Perfection, Pluto, Pocahontas, Poland Yellow, Portugal, Ralsoy, Richland, Roanoke, Rokusun, Rose Non Pop, S-100, Sac, Sanga, Sato, Scioto, Seminole, Seneca, Shingto, Shiro, Sioux, Sooty, Sousei, Soysota, Tanner, Tarheel Black, Tastee, Tennessee Non Pop, Toku, Tokyo, Tortoise Egg, Viking, Virginia, Virginia S, Volstate, Waseda, Wea, White Biloxi, Willomi, Willomi B, Wilson, Wilson B, Wilson-Five, Wilson-Five B, Wilson-6, Wing Jet, Wisconsin Black, Wolverine, Woods Yellow, Yellow Marvel, Yelredo.

For each of these 191 varieties, a table gives the following information: Variety name, maturity group, source and other information [such as country of origin and year of introduction to the USA], prior designation [usually a P.I. number], year named or released, developer or sponsor, literature. The last column refers to a list of 20 bibliographic references in chronological order (from 1907 to 1977) on p. 18-19. Address: Univ. of Illinois.

8845. Chon, Deson. 1987. Chôsen daizu ryôri [Korean soyfoods recipes]. *Daizu Geppo* (*Soybean Monthly News*). July/Aug. p. 32-37. [2 ref. Jap]
• ***Summary:*** Gives numerous popular recipes for using whole dry soybeans, soy sprouts, and tofu. Address: Moranbon Aji no Kenkyujo Shocho, Rigaku Hakase.

8846. Honma, Nobuo. 1987. Miso no kôki to kôki seibun ni tsuite. II. [Odor and odor components of miso. II.]. *Nippon Jozo Kyokai Zasshi* (*J. of the Brewing Society of Japan*) 82(8):547-53. Aug. [56 ref. Jap]
• ***Summary:*** Components include carbonyl compounds and esters. Address: Kenritsu Niigata Joshi Tanki Daigaku.

8847. Ito, Hiroshi. 1987. Tenpe no nihon ni okeru kenkyû no ayumi. III. Tenpe to onchomu no chigai [The progress of tempeh research in Japan. III. Differences between tempeh and onchom]. *Daizu Geppo* (*Soybean Monthly News*). July/Aug. p. 26-30. [2 ref. Jap]
• ***Summary:*** Describes how to make onchom from okara, peanuts, and velvet beans, and discusses its biochemistry and fermentation, cookery, digestion, and nutritional composition. Address: Tokyu Nogyo Daigaku Kyoju, Jozo-ka, Chomi Shokuhin Kenkyushitsu.

8848. Ito, Tetsuo; Sugawara, E.; Sakurai, Y.; Takeyama, S.; Uchizawa, H.; Odagiri, S. 1987. Nattô-kin ni yoru pirajin-rui seisei no baichi sosei ni tsuite [Cultural media for production of pyrazines by a commercial natto bacillus (*B. natto*)]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 61(8):963-65. Aug. [9 ref. Jap; eng]
• ***Summary:*** When natto bacillus was cultured on extracts of cooked soybeans (basal medium), traces of pyrazines were produced, though cell propagation proceeded moderately. A considerable quantity of pyrazines (403 µg/L of alkylpyrazines) was produced on a basal medium containing 1% glucose + 1% sodium glutamate, versus 26 µg/L of pyrazines in media containing only glucose. When 0.5% urea was used as the source of nitrogen, only 51 µg/L of pyrazines were detected in spite of rather high cell propagation levels. Thus urea inhibited pyrazine production. Address: 1&3-6. Dep. of Agricultural Chemistry, Iwate Univ., Ueda; 2. Iwate Prefectural Morioka Junior College, Sumiyoshi. All: Morioka 020, Japan.

8849. *J. of the American Oil Chemists' Society.* 1987. Japan update [oils and fats]. 64(8):1094. Aug.
• ***Summary:*** Fats and oils demand in Japan during 1986 totaled 2,896,000 tons, up 7% from 1985. Of this, vegetable oils totaled 2,020,000 tons while animal fats totaled 876,000 tons. Nisshin Oil Mills Ltd. and Fuji Oil Co. are two Japanese oil companies. Nisshin noted net sales of 121,000 million yen (U.S. $865 million), net income increased by 2,900 million yen (U.S. $20 million). Fuji had net sales of 72,800 million yen (U.S. $520 million) while net income increased by 3,300 million yen (U.S. $23 million).

8850. *J. of the American Oil Chemists' Society.* 1987. World fats & oils report: Higher oil prices predicted. 64(8):1058-59, 1062, 1064, 1066-78, 1080-85. Aug. [1 ref]
• ***Summary:*** Statistics and general information on vegetable oil production, consumption, and trends in the following countries is given: Australia, Austria, Brazil, Canada, China, Czechoslovakia, Egypt, Finland, France, West Germany, East Germany, Hungary, India, Indonesia, Italy, Ivory Coast, Japan, Korea, Malaysia, Mexico, the Netherlands, Nigeria, Norway, Pakistan, Peru, the Philippines, Poland, Soviet Union, Spain, Sweden, Turkey, Uruguay, Venezuela, and Yugoslavia.

Tables include: 1. World production and consumption of major vegetable and marine oils. 2. Top 10 producers of major vegetable oils (USA, EEC 12 countries, Malaysia, China, Brazil, USSR, Indonesia, East Europe, Argentina, India. The oils: soybean, cottonseed, sunflowerseed, rapeseed, coconut, palm kernel, and palm oil). 3. Top 8 exporters of major edible oils (Malaysia, EEC 12 countries, Argentina, Philippines, USA, Singapore, Brazil, Indonesia). 4. Top 8 importers of major edible oils (EEC 12 countries, Africa, India, USA, Singapore, USSR, China, Pakistan). 5. Margarine, compound fat/shortening, and salad oil production for selected countries (USA, USSR, Japan, India, Pakistan, Netherlands, West Germany, UK, Canada, Poland, Brazil).

8851. Mans, Jack. 1987. Azumaya Inc. Old line soy processor introduces new desserts. This 50-year-old soy processor produces a variety of Oriental products, including a newly introduced soy-based frozen dessert. *Prepared Foods*. Aug. p. 58-60.
• ***Summary:*** Azumaya products are selling in six of the nation's largest supermarket chains. They began to look at a yogurt-like product 12 years ago. The plant has 3 soymilk lines that process about 1,100 lb/hour of soybeans. Stir Fruity is made from silken tofu, which is heated, cooled, blended then pumped into a refrigerated tank in an antiseptic room. Fruit (15% of the product) is filled first, followed by the flavored tofu. Address: Chicago, Illinois.

8852. San-J International, Inc. 1987. Tamari [Tamari (Poster)]. 2880 Sprouse Dr., Richmond, VA 23231. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. [Jap; Eng]
• ***Summary:*** "On Thursday, September 24th, 1987, San-J International of Richmond, Virginia will become the United States' first brewer of genuine tamari. You are invited to join us for the brewery dedication... Tamari–a premium wheat-free soy sauce had its beginnings in 7th century Japan. The Sato family founded San Jirushi in 1806 and began brewing genuine tamari." A 12-step illustrated description of the tamari-making process says (incorrectly), "The cooked beans are molded into one-inch nuggets. The nuggets, called "koji nuggets," are dusted with a microbiological culture called "koji" (aspergillus oryzae)." Note: This is incorrect. The cooked soybean nuggets are dusted with spores of the mold *Aspergillus oryzae* the resulting fermented product is called "koji." Address: Richmond, Virginia. Phone: 800-446-5500.

8853. Shibazaki, Yoshiyuki. 1987. Soren no yuryô shushi zôsan taisaku [The Soviet program to increase oilseed production]. *Daizu Geppo* (*Soybean Monthly News*). July/Aug. p. 12-15. [Jap]
• ***Summary:*** Production changes from 1971 to 1986 (tonnes). Sunflower: 5,974,000 to 5,260,000. Cottonseed: 4,295,000 to 4,530,000. Soybeans: 471,000 to 703,000. Thus the fastest growth rate has been for soybeans. Soybean production (in million tonnes) was: 1971-1975, 471; 1976-1980, 529; 1981-1985, 504; 1981, 491; 1982, 536; 1983, 560; 1984, 469; 1985, 465; 1986, 703 tonnes. Address: Nogyo Sogo Kenkyujo. Kaigai Bucho.

8854. Shurtleff, William; Aoyagi, Akiko. comps. 1987. Bibliography of soy sauce, shoyu and tamari: 535 A.D. to the 1980s. 1775 references in chronological order, partially annotated with index. Lafayette, California: Soyfoods Center. 155 p. Aug. Index. 28 cm. [1775 ref]
• ***Summary:*** The most comprehensive bibliography on this subject. Note: This is the earliest bibliography seen (Jan. 2014) published by Soyfoods Center. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

8855. **Product Name:** [Soyastern Shoyu].
Foreign Name: Soyastern Shoyu.
Manufacturer's Name: Soyastern Naturkost GmbH (Importer/Distributor). Made in Japan.
Manufacturer's Address: Osteratherstr. 26, 5000 Koeln 60, West Germany.
Date of Introduction: 1987 August.
Ingredients: Pure spring water (Reines Brunnenwasser), soybeans (Soyabohnen), wheat, sea salt (Meersalz).
Wt/Vol., Packaging, Price: 700 ml glass bottle.
How Stored: Shelf stable.
New Product–Documentation: Label. 1987, undated. Black, grey, and yellow on beige. "Traditional Soyasauce, aged 2 years in oak vats. The universal seasoning. In daily cooking and at the table; it rounds off the aroma of your foods and enhances their indwelling flavors–making salt superfluous." Letter from Thomas Karas. 1989. April 21. "Soyastern Shoyu is a Japanese product. We import it from Muso in bulk and fill it in bottles at our company. We started with it in August 1987."

8856. Taguchi, Hiroshi; Yamada, H.; Ishihara, N.; Okumura, K.; Shimabayashi, Y. 1987. Nikochin-san mechirutoransu fueraaze no bunpu to kihon-teki seishitsu [Distribution and fundamental properties of nicotinate methyltransferase]. *Bitamin* (*Vitamins, Kyoto*) 61(8):355-60. Aug. [14 ref. Jap; eng]
• ***Summary:*** High specific activities of this enzyme were found in "soybean young sprout, green soybean and corn (all are edible parts)." Green soybean probably refers to green vegetable soybeans. Address: Dep. of Agricultural Chemistry, Mie Univ., Tsu-shi, Mie 514, Japan.

8857. Utsumi, Shigeru; Nakamura, T.; Harada, K.; Mori, T. 1987. Occurrence of dissociable and undissociable soybean glycinin. *Agricultural and Biological Chemistry* 51(8):2139-

© Copyright Soyinfo Center 2014

44. Aug. [18 ref]
• ***Summary:*** Glycinin, 11S globulin, which is one of the main storage proteins in soybean seeds, is composed of 6 acidic and 6 basic subunits. Results show that there are two molecular species of glycinin, one being dissociable and the other undissociable at low ionic strength. Address: Research Inst. for Food Science, Kyoto Univ., Uji, Kyoto 611, Japan; 2. Hohnen Oil Co., Ltd., 1-2-3, Otemachi, Chiyoda-ku, Tokyo 100, Japan; 3. National Inst. of Agrobiological Resources, Yatabe, Tsukuba, Ibaraki 305, Japan.

8858. Roller, Ron. 1987. Job's tears, San-J plant, Edensoy (Interview). *SoyaScan Notes.* Sept. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Edensoy contains Job's tears, the hard, pearly-white to tan seeds of an Asian grass (*Coix lacryma-jobi*), also known as "pearl barley" (easily confused with pearled barley), and called *hatomugi* in Japanese. Note: The large Kenkyusha dictionary (1954) translates *hatomugi* as "pearl barley." A Muso Shokuhin soymilk label gives the scientific name of hatomugi as *Semen coicis.* The grains are about the size of a mung bean but slightly oblong, and with a very prominent sunken tan line running from end to end, as with barley. Eden Foods has tested the growing of Job's tears in the southern USA, and now sells the grain in a 1-lb bag. San-J will be the first company to make natural shoyu in the USA. Eden has been negotiating with them for 4-5 years. Startup costs were $10-15 million. They will make both tamari and shoyu from both defatted soybean meal and whole soybeans. It is an institutional factory, no wooden vats, all stainless steel. Offices will move to the plant site. Edensoy sales are on target. Estimates are that 25-30% of people who go into health food stores have never tasted soymilk. Address: Eden Foods, Clinton, Michigan.

8859. Sakai, Tadaaki. 1987. Method of freezing foods. *U.S. Patent* 4,689,963. Sept. 1. 5 p. Application filed 2 July 1986. 2 drawings. [8 ref]
• ***Summary:*** Describes a relatively simple and inexpensive method for freezing perishable foods such as tofu, so that weight loss and quality deterioration are minimized. A refrigerant passes through pipes in the bottom of a tank, which contains a shallow layer of brine. Articles to be frozen are placed (but not submerged) in the cooled brine, whereupon freezing begins from contact with the cold base of the tank via the brine. The frozen foods do not stick to the base of the tank because of the presence of the brine. Address: 39-8 Yamadanishi 3-chome, Suita-shi, Osaka, Japan.

8860. *Toyo Shinpo* (*Soyfoods News*). 1987. 61 nendo no tôfu shôhi tôkei [Tofu consumption figure in 1986 is 5.29% lower than last year. Natto consumption is up]. Sept. 11. p. 4. [Jap; eng+]
• ***Summary:*** This is the first time in 23 years that tofu consumption per family per year has gone down 2 years in a row. In 1987, the Japanese people bought the least amount of tofu in 10 years. Naha (Okinawa, Japan) was first in the amount of household income spent on tofu, while Morioka was the top in the number of cakes sold per family (118 cho). The top selling location for deep-fried tofu pouches and burgers (*aburage* and *ganmo*) was Fukui while sales dropped in Kobe.

Natto, on the other hand, reached the highest number of packets bought per family in history. In Mito, families spent an average of ¥5700 on natto in 1987–a new record. Included in the article are two graphs giving figures of how much tofu per family per year was bought in the period 1977-1987, and how much tofu was bought per family per month in the period 1985-1987.

8861. *Toyo Shinpo* (*Soyfoods News*). 1987. Zenkoku shuyô toshi issetai atari no nenkan kônyû kingaku oyobi sûryô (1986–Showa 61 nen) [Quantities of soyfoods purchased per household in major Japanese cities in 1986]. Sept. 11. p. 5. [Jap; eng+]
• ***Summary:*** The top ten cities for tofu consumption and the number of cakes (*cho*) sold per household in 1986: 1. Morioka 117.94; Toyama 113.10; Fukushima 109.30; Tokushima 104.82; Tottori 102.93; Matsue 100.36; Yamaguchi 99.26; Aomori 98.87; Kagoshima 98.40; Matsuyama 96.68.

The top ten cities for natto and the amount spent per capita in 1986: Mito, ¥5,705; Fukushima, ¥4,168; Utsunomiya, ¥4,040; Aomori, ¥3,874; Morioka, ¥3,742; Sendai, ¥3,372; Akita, ¥3,335; Maebashi, ¥3,197; Yamagata, ¥2,775; Nagano, ¥2,650.

8862. Aoki, Hiroshi. 1987. Kôri-dôfu to kenkô [Dried-frozen tofu and health]. *Daizu Geppo* (*Soybean Monthly News*). Sept. p. 14-17. [3 ref. Jap]
• ***Summary:*** Gives a brief history of dried-frozen tofu. Discusses tests showing that it lowers serum cholesterol in humans. Address: Nagano-ken Kori-dofu Kogyo Kyodo Kumiai, Senmuriji.

8863. Gauger & Silva, Inc. 1987. Ancient Japanese technology comes to the U.S. (News release). 129 Hyde St., San Francisco, CA 94102. 2 p. Sept.
• ***Summary:*** "After 4 years of research and planning, a technology known in Japan since the 8th century has created a new industry for this country. On September 24th, the first tamari brewery ever built outside Japan will be dedicated by San-J International of Richmond, Virginia... San-J Tamari is the most widely used fermented soy sauce in the U.S. food processing industry. Major food companies, including Campbell's, Hunt Wesson, Stouffer's and General Mills, have discovered the same advantages as consumers–tamari

tastes better, extends further, is heat stable, reduces sodium, and is a natural product."

Photos show: (1) A front outside view of the new San-J plant in Richmond, Virginia. (2) The presses inside the plant where the tamari (liquid) is pressed from the moromi (mash). Address: San-J: 2880 Sprouse Dr., Richmond, Virginia 23231. Phone: 800-446-5500 or in VA 804-226-8333.

8864. House Foods & Yamauchi Inc. 1987. Hinoichi tofu recipe cards. It happens all the time. 526 Stanford Ave., Los Angeles, CA 90013. 7 recipe cards.
• ***Summary:*** Recipes include: Tofu Mexican Vegetable Dip, Hot-Tofu Spinach Salad, Tofu Pizza, Tofu Broccoli-Corn Casserole, Tofu-Topped Baked Potatoes, Tofu Mexican Casserole, Tofu Tartar Sauce. Address: Los Angeles, California.

8865. Hymowitz, Theodore. 1987. The soybean comes to Illinois. *Illinois Research* 29(2/3):5. Summer/Fall.
• ***Summary:*** Domestication is a process of trial and error and not an event. In the case of the soybean, this process probably took place during the Shang dynasty (ca. 1700-1100 B.C.) or perhaps earlier. Samuel Bowen brought soybeans from China to Greenwich, his residence in Savannah, the Colony of Georgia. The 450 acres of Greenwich became the center of his farming and manufacturing enterprises. On July 1, 1767, Bowen received patent number 878 for his invention of methods to prepare and make sago powder, vermicelli, and soy sauce from plants grown in America. The soy sauce that he made in Georgia was exported to London.

"In 1851, the soybean was introduced to Illinois by Benjamin Franklin Edwards, the youngest brother of the first territorial governor of Illinois, Ninian Edwards... He obtained the seeds from Japanese fishermen who were rescued at sea by the *Aukland,* which was bringing sugar from Hong Kong to San Francisco, California. Edwards gave the seeds to John H. Lea, of Alton [Illinois], who planted them in his garden in the summer of 1851." Address: Prof. of plant genetics, Dep. of Agronomy, Univ. of Illinois, Urbana, IL 61801.

8866. *Ie no Hikari.* 1987. Mamenoko osusume no nattô ryôri [Natto dishes recommended by the Mamenoko restaurant]. Sept. p. 68-70. [Jap]
• ***Summary:*** This restaurant, specializing in natto and tempeh cookery, is run by Mr. Goro Kanasugi of the Japan Natto Assoc. The restaurant's cute name means "Child of the Bean."

8867. Kimura, Eiichi. 1987. Gendai gokoku ko. Daizu wa "gokoku no hitotsu" to iwareru ga [Thoughts on China's "Five Grains" today. It is said that soybeans were one of these, but were they?]. *Daizu Geppo* (*Soybean Monthly News*). Sept. p. 34-35. [3 ref. Jap]
• ***Summary:*** Early Chinese works that mention the Gokoku or Five Grains are the Chou li (1122 B.C.?; mentions simply "beans." Note: Most western scholars date this work as 3rd century B.C.); ? (330 B.C.; mentions "beans"); Daihinrei (about 50 B.C.; mentions "shu"); Soko (221 B.C.–220 A.D.; mentions soybeans).

In Japanese works, the soybean is specifically mentioned as being one of China's "Five Grains" in the *Kojiki* (712 A.D.), probably in the *Nihonshoki* (720 A.D.), which said "large and small beans," i.e., soybeans and azuki, and in the *Honcho Shokukan* (1695). Address: Daizu Kyokyu Antei Kyokai.

8868. Mangold, Grant. 1987. As world competition heightens–Can the U.S. win the market marathon. *Soybean Digest.* Aug/Sept. p. 14-17.
• ***Summary:*** A key article explaining why, from 1981 to 1987, the U.S. world market share of soybeans and products fell from 68% to 49%. The key competitors are Brazil and Argentina. "Observers attribute this decline to a strong dollar, weak world economy, enhanced competitiveness of other countries, increased trade agreements and price supports that allow other countries to undersell the U.S." Production costs per bushel for Argentina, Brazil, and the U.S. are $4.05, $5.40, and $6.62, respectively. Landed costs in Tokyo are $5.92, $7.51, and $7.99.

8869. Miyamoto, Taku; Hirata, N.; Nakae, T. 1987. Isolation from soy milk of a growth-stimulating substance for lactic acid bacteria. *Nippon Chikusan Gakkaiho* (*Japanese J. of Zootechnical Science*) 58(9):754-63. Sept. [21 ref. Eng]
• ***Summary:*** The substance, considered to be a peptide with a molecular weight of 1150 daltons, stimulated the growth of *Lactobacillus casei* and *L. acidophilus.* Address: Lab. of Animal Products Technology, Faculty of Agriculture, Okayama Univ., Okayama-shi 700, Japan.

© Copyright Soyinfo Center 2014

Sept. p. 106-10. [Jap]
• ***Summary:*** Kyoko and her American husband, who live in Tempe, Arizona, use soymilk, amazake (which they make from Cold Mountain koji), tofu, and various flavorings to make what they call Royce (Rice + Soy + Ice) Cream frozen dessert for use at home. She also makes yuba. One of the longest articles seen up to this time on amazake. Contains three pages with 11 color photos showing how to make amazake and soymilk. Letter from Kyoko Saegusa. 1988. March 21. Her current address: 2040 S. Forest Ave., Tempe, AZ 85282. Phone shown above. Address: 2025 S. Forest Ave. #3, Tempe, Arizona 85282. Phone: 602-966-8397.

8872. Unnevehr, Laurian J.; Gleason, Jane E.; Kauffman, Harold E. 1987. Soybeans in international agriculture. *Illinois Research* 29(2/3):24-26. Summer/Fall.
• ***Summary:*** Soybean cultivation originated in the North China Plain. Today, China is still a major producer of soybean, accounting for about 10% of world production. Other countries in Asia produce only minor quantities. Since 1970, production of soybeans has expanded significantly in four Latin American countries: Argentina, Brazil, Paraguay, and Uruguay. Among the major producers, the U.S. and Argentina have the highest average yields of about 2 tonnes/ha (30 bushels/acre). Lowest average yields, about 1 tonne/ha (15 bushels/acre), are found in China. Over 80% of world soybean production is crushed to provide meal and oil. The soybean is the single largest source of supply in both protein meal and edible oil markets, providing 30% of the world's edible oil and 50% of world supply of protein meal for animal feeds. Its ratio of protein to oil is highest among all oilseeds. The soybean also has high-quality protein compared to other oilseeds.

Because income is a major determinant of soybean meal and oil consumption, it is not surprising that high-income industrial countries are the largest consumers. The European Economic Community (EEC), Japan, and the U.S. account for two-thirds of world soybean meal consumption and one-half of world soybean oil consumption. Recent growth in demand for soybean products has been greatest in less developed countries because incomes are growing most rapidly there. From 1960 to 1980, per capita income in South Korea tripled from $500 to $1,500.

As a result, meat consumption increased from 12 to 40 kilograms per capita. To satisfy increased meat demand, livestock production and feed use also increased rapidly, causing soybean meal consumption to increase from 0 to 300,000 tons in only 20 years. The use of soybeans for food products is a very small part of total use in most countries, but there are some exceptions. For instance, from 1983 to 1985, Indonesia used 92.9% as food; China, 73.8%; and South Korea, 35.9%. Japan protects its domestic soybean processors by confining imports to whole beans. Address: 1. Asst. Prof. of Agricultural Economics; 2. INTSOY agricultural economist; 3. Director, INTSOY, and Prof. of International Agriculture. All: Univ. of Illinois, Urbana, IL 61801.

8873. Gatins, Joseph. 1987. Varina brewing plant typifies foreign firm sought by Baliles [San-J tamari]. *Times-Dispatch* (*Richmond, Virginia*). Oct. 5. p. 1, 13.
• ***Summary:*** The 40,000 square foot soy sauce brewing plant, located on a 9 acre property in the Eastgate Industrial Park in Varina, is run by San-J International, the U.S. subsidiary of 183-year-old San-Jirushi Corp. located near Nagoya, Japan. When the company was founded in 1804, the Shogun still governed Japan and Thomas Jefferson was President of the United States. Nobuyoshi Sato, Chairman of the Board, and Takayoshi Sato, Senior Vice President, are 7th generation heirs of the founding family.

The sauce is fermented in 10,000 gallon tanks for 6-12 months under strict temperature and humidity controls. The company uses Virginia soybeans and meal from the Midwest. The current strength of the yen against the dollar played a big role in the decision to invest in a U.S. plant according to John D. McLaughlin, the retired Army general who is president of San-J, and Takayoshi Sato, the company's senior vice president. The plant will run at peak capacity with only 20 employees. Top management will be American. A photo shows John McLaughlin and Takayoshi Sato with product.

8874. *Rafu Shimpo* (*Los Angeles, California*). 1987. Tofu Festival Oct. 10 [in Los Angeles sponsored by Hinoichi]. Oct. 8.
• ***Summary:*** The Tofu Festival will be held at Japanese Village Plaza in Little Tokyo. Other sponsors include Numano Shoji Ltd. and Yatai Sushi Inc. An improvisation theater group called "Cold Tofu" will present Charlie Chan Blues Band and demonstrate tofu cooking. Los Angeles artists will also demonstrate Hinoichi tofu sculpturing.

8875. *Toyo Shinpo* (*Soyfoods News*). 1987. Ichi nichi 1000 shoku mo deru nattô ryôri. Nattô ryôri senmon ten "Mamenoko" [One thousand natto dishes sold daily. Natto cookery specialty shop–Mamenoko]. Oct. 11. p. 2. [Jap; eng+]
• ***Summary:*** Goro Kanasugi is president of Kanasugi Shokuhin Kogyo Ltd. at Shimomachi 3-6, Omiya-shi, Saitama-ken, Japan. Phone 0486-41-1425. He opened this restaurant, Mamenoko, in 1975. His son is currently running the business. The natto menu consists of natto croquettes, natto gyoza (pot stickers), tororo natto soup, yamaimo no natto age (fried natto with glutinous yam), maguro no natto kake (with tuna) and ika natto (natto with squid). He serves 1,000 of these dishes a day at the restaurant. He also has a health foods shop next to the restaurant and sells second generation tempeh products such as brown rice bread with tempeh, dango, croquettes and kabayaki teishoku. About 10

© Copyright Soyinfo Center 2014

of these items are sold daily. His tempeh saka manju, which sells 500-600 (sometimes 1,000) cakes a day, goes for 60 yen per cake. The article includes a photo of the shop.

8876. *Telegraph-Forum* (*Bucyrus, Ohio*). 1987. Tofu trade team from Japan visits. Oct. 13.
• ***Summary:*** The 21 member team representing the Japan Tofu Assoc. was told by ASA that they could ship high-quality Ohio soybeans to Japan in the hundreds of containers that now return to Japan empty after bringing parts to Ohio's Japanese auto makers. The containers would assure high quality soybeans for human food use and assure farmers a premium price for their soybeans.

8877. Sumi, Hiroyuki; Hamada, H.; Tsushima, H.; Mihara, H.; Muraki, H. 1987. A novel fibrinolytic enzyme (nattokinase) in the vegetable cheese Natto: a typical and popular soybean food in the Japanese diet. *Experientia* 43(10):1110-11. Oct. 15. [16 ref. Eng]
• ***Summary:*** A study of protease activity in natto showed that it contained an enzyme that hydrolyzed fibrin, a white insoluble fibrous protein formed from fibrinogen (a globulin produced in the liver) by the action of thrombin, esp. in the clotting of blood. The novel enzyme, extracted by saline solution, was named nattokinase (pronounced not-toe-KAI-nase). The use of natto as a folk remedy for heart and vascular diseases is discussed with reference to the strong fibrinolytic activity it contains, and the potential of nattokinase for oral fibrinolytic therapy is considered.

Note 1. This is the earliest English-language document seen (Jan. 2012) that contains the word "nattokinase" or the word "fibrinolytic." Nattokinase is a strong fibrinolytic enzyme found in natto. Fibrin is a fibrous protein involved in the clotting of blood. It is a fibrillar protein that is polymerised to form a "mesh" that forms a hemostatic plug or clot (in conjunction with platelets) over a wound site (Source: Wikipedia March 2009). According to www.askdrgarland.com (accessed Dec. 2011):

"Nattokinase was discovered in 1980, by Dr Hiroyuki Sumi, who was working at the Chicago University Medical School. He was testing 172 different foods for their ability to promote healthy circulation, and Nattokinase did the job better than any other substance he was testing.

"Since then, additional research has been done on Nattokinase, including 17 published studies in Japan and here in the U.S. The results have been dramatic to say the least.

"But to fully understand the significance of Nattokinase, you need to first understand 'blood clotting.' Blood clotting is a normal and necessary process, it's what stops the bleeding if you cut your finger for instance.

"Our body produces compounds that make blood clots, one of the most important is called 'Fibrin'. Fibrin is made up of sticky protein fibers which look like a tangled spider's web.

"Fibrin's job is to stick to the blood vessel walls and act like a net, form a lump or plug that stops the bleeding. Fibrin is also what determines the viscosity, or thickness of blood throughout our entire circulatory system.

"Normal Fibrin levels will give you normal blood flow.

"There is only one enzyme that breaks down Fibrin–an enzyme called 'Plasmin.'

"Remember, Fibrin is what's forming a 'web' that stops blood from flowing–so by breaking down Fibrin, Plasmin dramatically increases blood flow and thus brings down blood pressure.

"Unfortunately, Plasmin production declines rapidly as we age. If the drug companies could 'bottle' Plasmin, they would have a staggering gold mine in their hands. They can't. But Mother Nature can.

"Nattokinase is 'Mother Nature's Plasmin' and works dramatically to support healthy circulation in two distinct ways.

"First, Nattokinase is identical to Plasmin, so it can break down Fibrin!

"Second, Nattokinase enhances your body's natural production of Plasmin, further helping to break down the Fibrin." Address: Dep. of Physiology, Miyazaki Medical College, Miyazaki 889-16, Japan.

8878. Shurtleff, William. 1987. The transformation of soymilk (Overview). *SoyaScan Notes.* Oct. 20.
• ***Summary:*** Soymilk is a traditional Asian low-tech soyfood / soy beverage that was transformed during the period 1966-86 into a modern high-tech dairy alternative.

The key scientific breakthroughs were made in the USA at Cornell University, but applied in Japan. The key packaging breakthrough was made by Tetra Pak. Address: Soyfoods Center, Lafayette, California 94549.

8879. Lindner, Anders. 1987. The world soymilk market and Soya Technology Systems (STS) (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 7 p. transcript.
• ***Summary:*** "On 21 Oct. l987 Anders Lindner, on a trip of the USA, visited the Soyfoods Center (SC). The following interview was conducted by William Shurtleff.

"SC: STS started five years ago, and in that time you have traveled the world, visiting every potential customer, and sold four soymilk plants. What major changes or trends have you seen in the world soymilk market during that time?

"STS: You must look at one region at a time. In the United States there is definitely an increased interest in and awareness of soymilk. Soyfoods are relatively well known. In Europe there has been a big increase in the number of enquiries about soymilk from all countries. The number of larger companies that have contacted us has also increased.

"Africa is still a dark continent as far as soymilk goes,

© Copyright Soyinfo Center 2014

with the possible exception of Nigeria, where we have a number of quotations pending, awaiting approval for foreign currency. This could take time.

"Looking at Asia, in India there was almost a frenzy of interest several years ago and we still get enquiries every week. The government gave permission to build many new soybean crushing plants. Soybean production is now over a million tons, and it is still not enough. So the price of soybeans is rising, which raises soymilk prices. But I'm not as optimistic about the future of soymilk in India today as I was 6 months ago. India's first major soymilk plant, established by the Noble Soya House group in Bhopal, has not been as successful as everyone had hoped it would be. Two of India's best known companies, the Great Eastern Shipping Company (also called the Bhiwandiwalla Group) and Godrej, backed the new company, which greatly bolstered public confidence in the project. Each owned 24% of the private limited company and the rest was publicly owned. Great Eastern provided financing and put a number of their very best people in the top management positions. Godrej, which is *the* marketing company in India par excellence, provided distribution and marketing. They specialize in soaps. Alfa-Laval supplied the plant and Kibun sold their technology know how. Production began in January 1987 and it had all the signs of being a very, very good project. Their soymilk, named Noble House Great Shake, comes in four flavors (chocolate, strawberry, mango, and American ice cream flavor, basically a vanilla) in 200 ml Tetra Brik cartons. I have heard it said that the products were not well formulated, the timing was poor, the prices were too high, and the products were marketed as a clearly Western-style of foreign product. The project got lots of big media publicity, but much of it was not favorable, we are sorry to say. Today the plant runs only about 2 hours a day.

"We have sold a plant to Amrit Soya and Protein Foods Ltd., owned by the Amrit Company, an old company. They are in Ghaziabad, Uttar Pradesh, on the outskirts of New Delhi and are expected to start production in mid-l988. This will be India's largest soymilk plant with a capacity of 6,000 liters/hour.

"Back to Asia, when we established STS we located ourselves in Southeast Asia, thinking that with the large consumption of soybean drinks there it would be quite simple to sell plants to make soybean milk as well. But that has not been the case. I find the food processing companies there extremely conservative. Our strategy now is to show the companies in East Asia that our concept works in the USA and Europe.

"China has been a disappointment. They seemed to be more interested in soymilk plants a few years ago.

"So generally speaking, the climate has gotten better, especially in Europe and the United States.

"SC: Has your strategy or basic approach for selling STS soymilk plants changed during this period?

"STS: Yes, it is changing now. We are expanding our product range by offering processes for other soymilk-based foods. Formerly we thought of ourselves as selling primarily liquid soymilk. Now we are offering process lines for tofu, ice cream, dressings, dips, spreads and other dairy analogs, plus what we call 'semi-products.' These are non-consumer, industrial food type products such as concentrated soymilk or curds for use as ingredients by food processors. We are investing in R&D on these. I think we will find new uses for our soymilk base, including new ways of making traditional products, dairy analogs, powdered products, and truly new products.

"SC: Have you made any major technological developments?

"STS: Yes. we are now offering an ultrafiltration system as part of our soymilk system. This is an important technological innovation. It allows you to concentrate soymilk by removing water without adding heat (thus preserving the good flavor of the product) or to remove certain components from the soymilk, such as oligosaccharides or perhaps trypsin inhibitors or lipoxygenase enzymes, using membranes. More important, it can help in automating tofu production. The soymilk base goes into the ultrafiltration plant, where it is concentrated. Coagulant is injected into the line and mixed. Rectangular cakes of tofu are chopped off as they come out the exit end. Luke Lukoskie at Island Spring has been a pioneer in developing these processes using a pilot plant, with an ultrafiltration unit, that we loaned him. This technology seems to have a very promising future for processing soymilk in the West, and for making soya panir (fresh curds) in India. There is not enough cow's milk in India to go around, and most of it is sold in the cities. I think soya panir will undersell dairy panir in India.

"SC: Which company do you feel is your strongest competitor?

"STS: Our main competitor everywhere is Alfa-Laval. After that, but much less, some of the Japanese companies such as Marusan-Seikensha and Mitsubishi. Given that we had just installed the largest soymilk plant in the Western world for De-Vau-Ge in Germany, I was surprised to note that Eden Foods in America chose Marusan-Seikensha without ever contacting us at all. Marusan seems to have only one English speaking person in the entire company, Mr. Tominaga. Mitsubishi competed with us selling systems in India and Nepal. Takai never seems to be in competition with us. Vandemoortele is no longer supplying systems, though the huge plant they built in Ambatolampy, Madagascar (35 million liters/year capacity) is still in operation. The company, Lalasoa SA (Societe Anonym) is run by a woman named Regina.

"SC: Could you tell us a little about the four plants that you have sold?

"STS: Our biggest and most successful plant was sold

© Copyright Soyinfo Center 2014

to De-Vau-Ge, a Seventh-day Adventist food company in Lueneburg (near Hamburg), Germany. They started production in August 1985 and make Granose and Granovita brands soymilk, sold mainly in the UK and West Germany, but also in Scandinavia and France. The plant is running at full capacity, which is 3,000 liters per hour of soymilk base (4.7% protein). This is 4,000 liters per hour of finished soymilk (3.5% protein), or 50,000 liters a day. They currently only make two products. Labels for the UK market read Granose Soya Milk (4 flavors) and Granose Soya Dessert (3 flavors of custard puddings gelled with natural carrageenan, a seaweed extract). Both products are packed in half liter or liter aseptic Tetra Brik cartons. The plant is doing very well, selling all it can make. This is the only one of the four that has started operation. we have also sold a plant to Island Spring (Vashon, WA), which may be the next to start production. The capacity is also 3,000 liters/hour of soymilk base. Amrit in India should be in production by mid-1988. Their plant has the same basic capacity as the plant in Germany, but since their soymilk will contain only 2.25% protein, the actual output will be 6,000 liters per hour which is larger than Germany. They will make both beverages and foods, mainly a panir type cheese. The beverages will contain Indian flavorings." (Continued). Address: STS, Singapore.

8880. *SoyaScan Notes.* 1987. Soymilk and dairy milk prices in California, October 1987 (Overview). Oct. 23. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Lafayette, California, whole milk sells for $0.55/quart. Soymilk sells for $1.99/liter, which is the equivalent of $1.88/quart. Thus soymilk in a liter pack is 3.42 times as expensive as dairy milk per unit volume. In Dec. 1983 a comparison with pint quantities was made. Cow's milk cost $0.39. The least expensive fluid soymilk was Vitasoy, sold to the Asian market in 8.4 oz pack for $0.35; it was 1.72 times as expensive as cow's milk per pint. The average price of all 6 brands surveyed was 3.53 times as expensive as cow's milk per unit volume. Thus, soymilk prices have dropped only 3.2% in relation to cow's milk prices since Dec. 1983. The main reason that the drop has not been larger lies in the decline in the value of the U.S. dollar from late 1985 on; this led to a steady rise in the price of imported soymilks.

During 1986 two major changes took place in soymilk packaging in the USA. Both helped to reduce costs. (1) Edensoy, Westsoy, and Ah Soy switched to Tetra Brik cartons; Vitasoy had always been in Tetra Brik. (2) Liter and quart Tetra Brik cartons were introduced. This larger size was pioneered by the Alpro/Vamo Foods Sunsoy brand, followed by Edensoy, Ah Soy, Westsoy, and Vitasoy. Soymilk became the first liter-sized Tetra Brik product to succeed in the USA.

8881. *Farm & Country* (*Toronto, ONT, Canada*). 1987. Asians buying plenty: Soy. Oct. 27.
• ***Summary:*** Ontario has captured 66% of Singapore's 41,000-tonne market (soybean). Yet out of Japan's 500,000-tonne annual imports for tofu manufacture, Ontario supplies less than 3,000 tonnes. Canada applies more rigorous grade standards than the U.S., but Canada needs better beans, not just better grading. Buyers believe that American beans are higher in protein. Address: Ontario, Canada.

8882. American Miso Co. 1987. A living art: The American Miso story (Ad). *East West.* Oct. p. 8.
• ***Summary:*** This one-third page vertical black-and-white ad begins: "These days, even in Japan, 99% of the miso is commercially made. Mass production and high technology characterize today's miso. The timeless art of handmade miso is dying.

"However, near the Smoky Mountains in the green, rolling country of western North Carolina, the American Miso Company continues a centuries old tradition of hand-crafted miso." The Miso Master logo shows a Japanese miso master, with a knotted headband, in front of a large wooden vat of miso. Address: Rutherfordton, North Carolina 28139. Phone: 704/287-2940.

8883. Bradner, Norman. 1987. Soybeans for the food market. *Seed World* (*Des Plaines, Illinois*). Oct. p. 44.
• ***Summary:*** Thailand imports nearly 100,000 tonnes/year of soybeans for food use. Japan imports 65,000 to 70,000 tonnes of small beans to make natto. Natto beans can be less than 5 mm in diameter and have a yellow cotyledon and hilum. For tofu, soymilk and miso, importers want high protein, low oil, maximum water soluble proteins, low phytate, high 11S protein fraction, large seed size and high sugar content. But a variety judged good one year can be deemed unsuitable the next. Environmental conditions during seed development play a significant role in determining the final chemical composition. Address: Pulse Breeder, King Agro, Inc., Chatham, Ontario, Canada.

8884. *East West.* 1987. Natural Foods: The best and worst. 2nd annual awards. Oct. p. 32-36.
• ***Summary:*** Only packaged natural foods with nationwide distribution are judged. Best soymilk: Edensoy, but the Tetra Brik package doesn't biodegrade, burn, or recycle. Best sandwich spread: Nasoyanaise by Nasoya Foods. Worst shoyu: Natural shoyu from Erewhon. So heavy it is best dispensed with an eye dropper. Best Tamari: San-J. Worst line of fake meat products: Worthington Foods. Worst beans: Honey Baked Style Vegetarian Beans with Miso from Health Valley. Best Miso: Miso Master Mellow White Miso by American Miso Co. for Great Eastern Sun.

8885. Haumann, Barbara. 1987. Expanding soybean markets,

© Copyright Soyinfo Center 2014

uses. *J. of the American Oil Chemists' Society* 64(10):1369, 1372-79. Oct.

• ***Summary:*** Value-added products and soybean varieties tailored to produce specific end products are among the promising developments envisioned to expand markets for U.S. soybeans. Keith Smith, staff vice president of research for the American Soybean Association (ASA) said, "Aquaculture–raising fish such as shrimp, catfish and trout–is a growing industry in the U.S. and abroad." Smith went on to say that the switch from mainly production research to more utilization research occurred eight to nine years ago, and that 60% of ASA's total research money in the past 6 years has gone for utilization research.

Genetic research is working to improve the fatty acid content of soybean oil. Work is also under way to develop a quick, low-cost method to determine oil and protein content. Other work includes trying to lower levels of linolenic acid in the oil. At Purdue Univ. in Indiana, research geneticist Niels Nielsen of the USDA's Agricultural Research Service (ARS) is trying to develop soybean lines free of lipoxygenase enzymes. Soymilk and flours produced from the new seeds are rated significantly better in flavor and aroma. Professor Nielsen and his research group are trying to "improve the nutritional quality of the major soy storage proteins by increasing sulfur amino acid content." He noted that the methodology has resulted in doubling and tripling the methionine content. At the University of Kentucky, David Hildebrand is also working on genetic engineering of soybeans.

Brazil, the second largest producer of soybeans, has evolved as the largest exporter of soybean meal and oil. The other top producers are China, in third place; Argentina, in fourth; and India, which recently made the top five. Indonesia is in 6th. Italy's production has grown substantially in recent years to make it the most important soybean-producing area in Europe. Other European producers include France and Spain. According to Oil World Annual published by ISTA Mielke, West Germany, the top 10 soybean oil producers for 1986/87 (in tonnes) were the following: U.S. 5,430,000; Brazil 2,538,000; Argentina 780,000; Japan 715,000; China 679,000; West Germany 521,000; The Netherlands 488,000; Spain 421,000; Italy 350,000; and Mexico 336,000.

ANPA (American Newspaper Publisher's Association) began seeking alternative sources to petroleum for ink seven years ago due to problems with petroleum supplies. Four years ago, with fluctuations in supplies and price, ANPA began considering the use of soybean oil ink. ANPA has filed a soy ink patent application and has begun licensing major ink manufacturers to make it. The first ink manufacturer to produce the ink, colored and black, is General Printing Ink, a division of Sun Chemical Corp., located in Carlstadt, New Jersey. One advantage of soy oil ink is that it is environmentally nonhazardous, which could reduce waste disposal problems. It also eliminates dependence on petroleum. There is less "ruboff" and the same amount of ink will print more pages. One drawback is that black ink made from soybean oil costs more than traditional black ink. Oil content in newspaper ink averages about 70%.

In the March 4, 1987 *Federal Register,* the U.S. Federal Grain Inspection Service (FGIS) ruled that soybean and other edible oils may be used to control grain dust in elevators. A U.S. Patent, licensed to Industrial Fumigant Co., is held jointly by Harold N. Barham and Harold N. Barham Jr. of Seed Technology of Texas. The patent was filed in 1978. Kinsella, director of the Institute of Food Science at Cornell Univ. said that another research interest was in the area of omega-3 fatty acids. It may desirable to develop soybean cultivars with high omega-3 fatty acid levels. John W. Erdman Jr. of the Univ. of Illinois' Dep. of Food Science and co-worker Angela Poneros want to nail down the factors that lower zinc bioavailability. He said, "We want to find out why this happens and if we can increase it."

Meanwhile, at INTSOY, team member Sing-Wood Yeh and others are working in the field of soybean dairy analogs. Tofulicious, a non-dairy frozen dessert, was developed through research coordinated by University of Minnesota food scientist William Breene and funded by the Minnesota Soybean Research and Promotion Council. Abroad, ASA has been promoting soy-fortified foods. For instance, in Venezuela three years ago, ASA launched an education program for consumer groups and government agencies on the benefits of soy protein. As a result, soy-fortified foods are available in Venezuela's major supermarkets, and demand for soy protein has increased to more than 48,000 pounds per month.

Soybean researchers are also working on standardization of NIR (near-infrared spectroscopy) as a measure of protein and oil content in soybeans. NIR already is successfully used to measure grain and forage composition. If NIR were adopted as a standard by the industry, soybeans eventually could be purchased based on protein and oil content.

8886. Kingma, Sharyn. 1987. San-J International opens first U.S. tamari brewery. *Soya Newsletter* (*Bar Harbor, Maine*). Sept/Oct. p. 9. See also Natural Foods Merchandiser. 1988. Jan. p. 3.

• ***Summary:*** On September 24 San-J opened the doors to its new $10 million tamari brewery in Richmond, Virginia. The 40,000 square foot plant, which has a capacity of 1 million gallons a year, is the first to produce tamari outside of Japan. The plant will produce San-J Tamari, Tamari Lite, Shoyu, and Teriyaki and Szechuan Sauces. San-J tamari was first imported and introduced to the U.S. market in 1979. The plant will employ 20 people. Perelman notes that the U.S. soy sauce market is the second largest in the world (after Japan) having expanded at 24% a year between 1974 and 1984. Manufacturer sales are estimated at $85 million in

© Copyright Soyinfo Center 2014

1984 and $91 million in 1985, estimated to grow to $220 million by 1994. With current sales of nearly $100 million, soy sauce is the largest category of soyfoods in the U.S. While Kikkoman has 44% of the U.S. soy sauce market, San-J maintains 75% of the industrial market.

8887. Morinaga Nutritional Foods, Inc. 1987. Mori-Nu Tofu. The "miracle food" in a miracle package (Leaflet). Los Angeles, California. 2 p. Jan. [2 ref]
• ***Summary:*** Contains a large table comparing the amino acid composition (g/100 g amino acid for 18 amino acids) for Mori-Nu Tofu (soft and firm), whole chicken eggs, whole cow milk, beef, tuna, and white bread. Also contains recipes for Strawberry Pudding Fluff (using gelatin) and Honey Lemon Un-Cheesecake. Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040.

8888. Ontario Ministry of Agriculture and Food. 1987. Soybean buyers mission from Japan, Hong Kong, Malaysia, Singapore, October 10-20, 1987. Toronto, Ontario, Canada: Ontario Ministry of Agriculture and Food. 23 p. 30 cm. Saddle stitched. [Eng]
• ***Summary:*** Contents: Mission members (with a photo of each). Itinerary. Japanese market for edible soybeans. General uses of edible soybeans in Hong Kong, Malaysia and Singapore. List of major importers in Asia (by country). Ontario soybean suppliers. Role of the Ontario Soya-Bean Growers Marketing Board (Chatham, Ontario).

This conference, which took place in Toronto, Chatham, and Harrow, Ontario, Canada, was sponsored by OMAF in Toronto. On the mission were 6 buyers from Japan (Takeya Miso Co., Asahi Industries [tofu maker], Takano Foods Co. [natto maker], Dah Cong Hong, Wako Shokuryo Co., and Gomei Shoji Co. [the last 3 is each an importer and wholesaler]), 2 from Hong Kong (Amoy Industries Ltd., and Chung Hing Co.), 3 from Malaysia (Sin Yong Huat Enterprises Sdn. Ltd, Yeo Hiap Seng (Malaysia) Ltd., and Chop Lee Kit Heng), and 2 buyers from Singapore (Eng Huat (S) Ltd. and Chop Hin Leong). Mike Hojo of OMAF/ Tokyo was the mission leader.

The Japanese soybean market is about 5 million tons a year. Of this: Oil crushing 4,036,000 tons. Food 849,000 tons (17% of total), and feed (not crushed) 70,000 tons. From 1982 to 1986 domestic Japanese soybean production has decreased from 168,000 tons to 147,000 tons, while imports have increased from 4,344,000 tons to 4,857,000 tons. Demand for food soybeans has increased from 803,000 tons to 849,000 tons. Tofu, miso, and natto account for more than 94% of the total utilization of edible soybeans, roughly as follows: Tofu 500,000 tons, miso 200,000 tons, natto 100,000 tons.

In 1986 some 89.9% of Japan's soybean imports came from the USA, followed by China (6.7%), and Brazil (2.65%). That year the least expensive soybeans came from Brazil (US$219.86/ton), followed by USA ($221.36), China ($236.06), and Canada ($277.50). Note that Canadian soybeans are 25.3% more expensive than those from the USA. Chinese and Canadian soybeans are most widely used to make foods. Large Chinese soybeans are used to make tofu, medium sized for miso, and small for natto. Of the soybeans imported from the USA, 80-85% are imported from oil crushing because of their high oil content. The remaining 10-15%, or approximately 700,000 tons are food soybeans from Iowa, Ohio, or Michigan. Called "IOM" soybeans, they are used mainly to make tofu. Brazilian soybeans have a high oil content and are used for oil crushing only. The ocean freight cost for a 20-foot container shipped to Tokyo is as follows: USA west coast $1,000. Toronto, Canada $1,800. USA East Coast $2,000. Brazil $2,100. Argentina $2,500. But a large percentage of regular soybeans are loaded directly into ships, and travel at lower freight rates. Exports of food soybeans from Canada to Japan rose from 10,000 tons in 1979 to 26,000 tons in 1986, while those from China rose from 267,000 tons in 1979 to 323,000 tons in 1986.

Very detailed preferred characteristics are given for soybeans to make miso (6 characteristics), natto (5), and tofu (5). Canadian soybeans are recognized as superior to Chinese and American soybeans for food use. This is one reason they command a relatively higher price.

Hong Kong imports 28,100 tons/year of soybeans, and 63% of these come from Canada, followed by China (35%), and the USA (1.8%). Malaysia and Singapore import 124,800 tons/year, and 53% of these come from the USA, followed by Canada (31.7%), and China (8.2%). Most of the food soybeans in Malaysia and Singapore are used to make soymilk and tofu.

Soymilk: Vitasoy dominates the market in Hong Kong, whereas in Malaysia and Singapore the leading manufacturers are Yeo Hiap Seng, Cold Storage, Lam Soon, and Nestle. Soymilk consumption is increasing in these 3 countries, and in neighboring countries. Soymilk makers believe there are four requirements for their products' success: It must taste good, must be priced competitively with soft drinks, must be perceived as a health food, and must be marketed properly.

Bean curd sheets and sticks [yuba] are very common snacks and dishes in Hong Kong, Malaysia, and Singapore. Manufacturers consider only Chinese and Canadian soybeans for these products. Canadian soybeans produce whiter soymilk and thus whiter yuba. However the larger size of Chinese soybeans results in a larger yield. Manufacturers normally blend 60% of Canadian soybeans with 40% of Chinese soybeans to obtain a higher output of whiter sheets.

Major Japanese soybean importers include: Da Chong Hong (Japan) Ltd., Gomei Shoji Co. Ltd., C. Itoh & Co. Ltd., Mitsubishi Corp., Kanematsu-Gosho Ltd., Nichimen Corp., Marubeni Corp., Mitsui & Co. Ltd., Nissho Iwai Corp., Okura & Co. Ltd., Toyo Menka Kaisha Ltd., Wako Shokuryo

Co. Ltd. Address: Ontario, Canada.

8889. Pandey, R.K.; Sumarno, -; Potan, Nark; Navarro, R.; Dharmasena, C.; Beg, Akhtar. 1987. Asia's shortfall in production of soybeans and the response of national programmes. In: S.R. Singh, K.O. Rachie, and K.E. Dashiell. eds. 1987. Soybeans for the Tropics. New York: John Wiley & Sons. xx + 230 p. See p. 101-09.

• ***Summary:*** Contents: Introduction. Constraints. National research programmes: Varietal improvement, cultural practices. Cooperative research: A new dimension.

Demand for soybeans and products in the region is about twice the regional production. By the year 2000, if current trends continue, Asia's demand for soybeans is projected to be more than three times the amount produced.

The leading soybean producers in Asia, in descending order of tonnes produced in 1983, are China, India, Indonesia, Korea, and Thailand. In Indonesia, soybean production during the past 10 years has been constant at about 700,000 tonnes (metric tons) per year; soybeans are produced mainly in Java.

In 1984 Thailand produced 284,000 tonnes, which was far below its demand of about 350,000 to 450,000 tonnes. A national program set a goal of producing 390,000 tonnes by 1986.

In the Philippines, Mindanao, located in the south, is the leading soybean producer. During the last 10 years, producing has gradually increased, however in 1983 only 8,320 ha were planted to soybeans; that year, imports totaled 261,000 tonnes of soybean meal and 31,000 tonne of whole soybeans.

In Pakistan, commercial soybean production began in 1970 and is concentrated in the North Frontier Province, Sind and Punjab. The area planted to soybeans is small (4,300 ha) but the potential for expansion is very large.

Vietnam produces only about 1% of Asia's soybeans, however the amount is increasing.

The following countries started research programs on soybean breeding and production at an early date: China, Indonesia, Thailand, India, Philippines, Korea, and Sri Lanka; these programs have made great progress during the past few years. China has large and well-run germplasm collections.

Since 1967, the Indian Council of Agricultural Research has had an interdisciplinary team working on soybeans. The project's headquarters are currently at Pantnagar, and a network of 19 centers throughout India tests varieties and production techniques.

In Indonesia, soybean research is coordinated by the Central Research Institute for Food Crops in Bogor, and conducted by five research institutions.

In Thailand, soybean research is coordinated by the Field Crop Research Center at Chiangmai.

In Sri Lanka, in 1973, the government initiated soybean research, with technical assistance from the International Soybean Program (INTSOY), to promote soybean production and utilization in the country.

In 1984 the Asian Soybean Improvement Network (ASIN) was launched in a cooperative effort to extend the resources devoted to research by national programs, IITA, IRRI, AVRDC, INTSOY, the Australian Centre for International Agricultural Research (ACIAR), and the United Nations Economic and Social Council for Asia and the Pacific. The network is coordinated by representatives of AVRDC and IITA.

Figures show: (1) Pie charts–Asia's proportion of world area and production of soybeans. Concerning world production, Asia has about 15.7% of the total, compared with 57.3% for North and Central America, 24.6% for South America, and 2.4% for others. Within Asia, China has 79.1% of Asia's total soybean production, followed by India (5.9%), Indonesia (4.5%), Korea (3.0%), Others (incl. Japan; 7.2%).

(2) Pie charts–Trade in soybeans, soybean meal and oil in Asia and the world. For soybean oil imports, Asia is the leader (37.9% of the world total), followed by Europe (24.5%), Africa (13.9%), South America (12.5%) ad Others (9.2%). For soymeal imports, Europe is the leader (73.0% of the world total), followed by USSR (10.2%), Asia (8.2%), and Others (8.6%). For whole soybean imports, Europe is the leader (58.0% of the world total), followed by Asia (30.6%), North & Central America (6.4%), USSR (5.0%), and Others (0.0%). Within Asia, for soybean oil imports, India is the leader (36.4%), followed by Iran (22.9%), Pakistan (19.3%), Turkey (6.4%), Bangladesh (3.57%), and Others (11.4%). For soymeal imports, Korea is the leader (15.2%), followed by Philippines (14.7%), Iran (12.9%), Japan (12.5%), Thailand (10.0%), Malaysia (8.0%), Others (26.7%). For whole soybean imports, Japan is the leader (61.2%), followed by China (17.5%), Korea (6.6%), Israel (6.6%), Indonesia (2.7%), and Others (3.9%).

(3) Changes in the area planted to soybean over the past 15 years (1965-1983) in selected Asian countries. Graphs of India, Thailand, Indonesia (which have increased, with India's graph increasing dramatically), Asia, China, and Korea (which have decreased somewhat).

(4) Soybean production, consumption, and projected demand in Asia by the year 2000 (Source FAO, 1960-83; IFPRI, 1977). Asia will have to steadily increase its imports of edible oils, since consumption (production + imports) of soybeans is falling behind demand. Address: 1. 8890. Tsuji, R.F.; Hamano, M.; Koshiyama, I.; Fukushima, D. 1987. Conditioning of meat with raw soy sauce and its proteinases: Their effects on the quality of beef. *J. of Food Science* 52(5):1177-79, 1185. Sept/Oct. [22 ref. Eng]
• ***Summary:*** Raw soy sauce added to beef during tenderization improved its sensory quality. A serine proteinase was most involved in the degradation of both myofibrils and collagen. Address: Food Science Research Lab., Kikkoman Corp., 399 Noda City, Chiba 278, Japan.

8891. Ushijima, Shigeomi; Nakadai, T.; Uchida, K. 1987. Improvement of enzyme productivities through mutation or haploidization of heterozygous diploids obtained by protoplast-fusion of *Aspergillus sojae*. *Agricultural and Biological Chemistry* 51(10):2781-86. Oct. [31 ref. Eng]
• ***Summary:*** A new breeding process for *Aspergillus sojae* involving protoplast fusion was undertaken to obtain desirable koji moulds with better enzyme productivity for soy sauce production. A pair of double marker mutants derived from genealogically unrelated *A. sojae* cultures were fused. Ultraviolet treated and stable heterozygous diploids were obtained. Address: Soy Sauce Research Lab., Kikkoman Corp., Noda 278, Japan.

8892. Thompson, Keith. 1987. Jacob Hartz Seed Co. (Interview). *SoyaScan Notes*. Nov. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Hartz was purchased by Monsanto in April 1983. They have been doing research on soybeans suited for soyfoods for 10 years. The director of research Curtis Williams (formerly at Louisiana State Univ. for 6 years) began in the mid-1970s to develop a very popular natto variety, that was released in 1980. Proprietary varieties for seed were first released in 1984. Univ. of Illinois and Iowa State are also doing food bean research. Soybean production in the South has shrunk 46% in the last 6 years, to 12 million acres from 22 million. A soybean containing no trypsin inhibitor was developed 2-3 years ago but there has not been much interest in it.

There are three lipoxygenase enzymes: L1, L2, and L3. There is a Japanese patented process for removing both L2 and L3, using backcrossing. Hartz has lines that are free of L1 or L2 or L3 or L1 + L3. Lipoxygenase removal seems to offer big promise for improved soymilk and tofu beans. Hartz is the only commercial seed breeder in the U.S. doing work on maturity group IX and X, now that Hinson has closed down his tropical variety development in Florida. Hartz has a global outlook. He is sorry that INTSOY is no longer doing varietal development; they were a great source of information. Daylight insensitive is also called "juvenile characteristic." It takes 1 bushel of seed to plant an acre of soybeans. Address: Food and Export Manager, P.O. Box 946, Stuttgart, Arkansas 72160.

8893. *Toyo Shinpo* (*Soyfoods News*). 1987. Tônyû inryô nado hanbai. Marusan Herusu Saabisu eiyô hojo shokuhin 5 shu o [Selling soymilk etc. Marusan Health Service sells 5 nutritional aids]. Nov. 11. p. 2. [Jap; eng+]
• ***Summary:*** Marusan Herusu Sabisu (health service), the daughter company of the large miso and soymilk producer, Marusan Ai, has started to market 5 nutritional aids collectively called the "Doctor Series". One of these 5 foods is the "Soymilk Doctor Big Beans" (500 ml of soymilk for 200 yen). The other 4 aids are not soyfoods.

8894. *Toyo Shinpo* (*Soyfoods News*). 1987. Shôyu no teien-ka junchô. Kadai wa fûmi no sonshitsu kaizen [The change over to lower salt shoyu is going smoothly. The task is to keep it from losing its flavor]. Nov. 11. p. 13. [Jap; eng+]
• ***Summary:*** In 1984, 1,200,000 kl (kiloliters) of shoyu were produced (0.5% more than in 1983). But in the past 5 years, shoyu production has averaged between 1,180,000 kl and 1,200,000 kl, meaning that production has stabilized. Low salt shoyu (called variously usujio, amajio, or asajio) has 5-8% lower salt content than regular shoyu (about 17%). The production of low salt shoyu in Japan over the last 5 years was as follows: 1980, 4,000 kl; 1981, 11,000 kl; 1982, 14,000 kl; 1983, 15,000 kl; 1984, 17,000 kl. Comparing the 1984 amount per capita with the 1980 one, one finds that shoyu consumption has decreased by 8% (although in 1984, the figure increased 2.4% from 1983). Also, the percentage of the family expenses for seasonings (chomiryo) spent on shoyu decreased from 11.1% in 1980 to 9.5% in 1984.

A comparison study revealed that in 1975 the average salt content of shoyu in Japan was 17.6%. This decreased to 17.1% in 1979 and to 16.6% in 1984. The same study showed that shoyu containing 16% salt held 10% of the market in 1975, increasing its hold to 23% in 1979, and rose to 31% in 1984. Shoyu with 17% salt had 28% of the market in 1975, 35% in 1979, and 34% in 1984. High-salt shoyu (18%) had 41% of the market in 1975 but fell to 26% in 1979, and to 14% in 1984. The reasons for this trend include health concerns and the fact that the Japanese people are eating a lot of instant or prepared foods, meaning that they are eating less home cooked foods and therefore are using less shoyu.

Sales have changed from regular shoyu used in home cooking to the second generation shoyu products like tsuyu & tare. It is a a difficult task to make low-salt shoyu without having the shoyu lose its flavor. If the flavor is lost, people will use shoyu even less than the present rate. The 2 techniques used to remove some salt from the shoyu both have the problem of causing the loss of flavor or balance of flavor.

8895. *Toyo Shinpo* (*Soyfoods News*). 1987. Tônyû aisu o FC tenkai. Nihon Shokuhin Seisan Giken ga chakushu [Nihon Shokuhin Seisan Giken is franchising soymilk ice cream].

Nov. 11. p. 2. [Jap; eng+]
• ***Summary:*** Nihon Shokuhin Seisan Gijutsu Kenkyusho, which researches and develops various soyfoods, has decided to franchise soymilk ice cream. This company is run by Kiyomatsu Nagasawa of Nagasawa Kikai Seisakujo Kaicho (main office in Kawaguchi-shi). They are going to open one shop in Ikebukuro, Tokyo, and are later planning to franchise 10 a year. They use the Nagasawa system of production so that only 3.3 square meters of space are needed to open a shop.

8896. *Toyo Shinpo* (*Soyfoods News*). 1987. Okara kara jinzô niku tsukuru. Nihon Powder Kankoku de gôben seisan kaishi. Yasukute fûmi batsugun. Gyôkai no chûmoku atsumeru shin shôhin [Making an artificial meat from okara. Nihon Powder starts a joint company in Korea. The meat is inexpensive and tastes great. It is the new food which is getting the attention of the industry]. Nov. 11. p. 2. [Jap; eng+]
• ***Summary:*** Mr. Koichi Yoshida is the president of Nihon Powder, Uchikanda, Chiyoda-ku, Tokyo, Japan. Phone 03-256-7931. Nihon Powder has decided to produce artificial meat made from okara on a large scale in Korea starting in January 1988. They established a joint company with Hoko Shokuhin (a protein food company in Korea). Nihon Powder has ¥36,000,000 invested in the new joint company or 49% of the control. Together they make a product which is better tasting than any artificial meat made from soy. The new product has a better texture and flavor than other such products. They process okara by adding calcium chloride to it and tofu coagulants to make a fresh tofu chunk. The tofu undergoes an ice-cold temperature ripening process, and is then processed using 2 screw-extruders to make a meatlike product. Before this process can be used though, soybean hulls must be removed to produce a good texture soy imitation meat. Fortunately, the manufacturers use an enzyme which breaks down the bean hulls, allowing them to use okara in their processing.

Okara is such a big problem in Japan that the phrase okara pollution (*okara kogai*) was invented. Some of the tofu makers are very concerned about the build-up of this okara waste. The Nihon Powder company has also invested another ¥180,000,000 to make a plant (320 square meters of space) on 16,500 square meters of land which is scheduled for completion in November of 1987.

8897. Cottingham, Mark A. 1987. Soybean group [ASA] works to create foreign markets. *Indiana Agri-News* (*Indianapolis, Indiana*). Nov. 20.
• ***Summary:*** The American Soybean Association supports about 250 projects in 84 countries and operates 11 foreign offices that manage the activities. Japan is expected to import 176 million bu of soybeans this year; 92% will be grown in the USA. In China, ASA's goal is to popularize soybean meal in livestock feeds, first to get China off the export market, and second to create a demand for U.S. soybeans. We lost the Soviet market due to the Afghanistan embargo. Three of the biggest potential markets for U.S. soybeans are the USSR, China, and India. With federal Targeted Export Assistance (TEA) funds totaling up to $17 million ASA has entered a full blown soy oil awareness campaign relying on soy oil identification. It is conducting advertising campaigns in 6 European countries. Resulting from the project, 20 different cooking oil brands in England are now identified as 100% soy oil.

• ***Summary:*** "Near infrared reflectance spectroscopy (NIRS) is a technique which is a technique which is being increasingly used for rapid compositional analysis of foods. The method was developed to replace slow, tedious, conventional methods such as the Kjeldahl method for protein analysis." Address: National Food Research Inst., 2-1-2 Kannondai, Yatabe, Tsukuba, Ibaraki, Japan 305.

8903. **Product Name:** Shoyu Soy Sauce.
Manufacturer's Name: Community Foods Ltd. (Importer). Made in Japan.
Manufacturer's Address: Micross, Brent Terrace, London NW2 1LT, England. Phone: 01-450-9411.
Date of Introduction: 1987 November.
New Product–Documentation: Simon Bailey. 1988. Natural Choice. Aug. 15. "Soya-Based Products." A photo shows the Label.

8904. Eden Foods, Inc. 1987. Product description: Eden Foods quality natural foods. 701 Tecumseh Rd., Clinton, MI 49236. 21 p. Plus 6 pages of inserts. Catalog.
• ***Summary:*** The catalog lists the following soyfoods: Edensoy (Original, Vanilla, Carob; shown on page 1. "Edensoy is the best tasting, best selling, best made natural soymilk on the market"), black soybeans (they "have a hearty yet sweet taste. In Japan, black soybeans are always prepared for the New Year's celebration as they are a symbol of health."), organically grown soybeans (usually Corsoy or Amsoy), Eden tekka ("a hearty, nutritious condiment made from hacho miso, carrots, burdock, ginger root, and unrefined sesame oil; 2.8 oz), dried tofu (actually dried-frozen; 5.8 oz), barley (mugi) miso, brown rice (genmai) miso, buckwheat (soba) miso, light (shiro) miso, rice (kome) miso, hacho (100% soybean) miso, natto miso "Kinzanji," shoyu, organic shoyu, low-sodium shoyu, wheat-free tamari, tamari-roasted nuts and seeds wheat free (pumpkin seeds, sunnies [sunflower seeds], almonds, cashews, mixed nuts), and Lima Tempeh.

Some interesting non-soy foods listed in the catalog include quinoa (16.2% protein), kudzu-kiri, kudzu root starch, adzuki beans, mochi (100% brown rice, with mugwort, or with millet), sea vegetables, organic amazake, barley malt syrup, and Lima seitan.

In the spring of 1986, Eden Foods became General Agent for North America for the Lima Company of Belgium. Lima soyfood products include Lima Tempeh. Note: This catalog was still in use in Jan. 1989. Address: Clinton, Michigan. Phone: 517/456-7424 or 800/248-0301.

8905. Hasegawa, Kiyozo; Mukai, K.; Gotoh, M.; Honjo, S.; Matoba, T. 1987. Determination of the lysinoalanine content in commercial foods by gas chromatography-selected ion monitoring. *Agricultural and Biological Chemistry* 51(11):2889-94. Nov. [21 ref]
• ***Summary:*** Table 1 (p. 2892), titled "Lysinoalanine content in foods," includes values for various soybean products: The lysinoalanine (LAL) content (in mg per 16 gm of nitrogen) was measured by two methods: GC-SIM (gas chromatography–selected ion monitoring) and HPLC (high performance liquid chromatography). The two values for the soy products are: Soy milk A (0/0), soy milk B (6/14), soy milk C (6/18), wet soybean film (fresh / nama yuba) A (0/0), fresh yuba B (13/16), dry yuba (18/11), fried soybean curd (abura-age = tofu pouches) A (8/6), fried soybean curd B (9/trace).

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "soybean film" or the term "wet soybean film" to refer to yuba.

Of the samples analyzed, the lysinoalanine content was highest in pidan (fermented egg). Wheat flour-based products (Chinese noodles, pretzels and crackers) and milk products (condensed milk and lactic acid beverages) also contained a significant amount of LAL. Cow's milk, soy milk, soy protein isolate and meat products (ham and Hamburg steak) contained a low amount of LAL. Results confirmed that the low-level LAL formation was possible in foods cooked at home without any alkaline treatment.

Note: The three types of soymilk were purchased from retail stores in Nara, Japan. Address: Dep. of Food Science & Nutrition, Nara Women's Univ., Nara 630, Japan.

8906. Iwane, Atsuko; Yasui, Takeshi; Tsutsumi, Chuichi. 1987. [Changes in low molecular weight carbohydrates in yuba (soymilk skin) during yuba-film formation]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 51. p. 115-17. Nov. [6 ref. Jap; eng]
• ***Summary:*** Fourteen yuba films, successively produced by a yuba manufacturer in Kyoto, were purchased and grouped into 8 fractions in order of film formation, from first to last. The carbohydrate composition of each of the 8 fractions was determined by gas-liquid chromatography. Sucrose and stachyose were the major sugars in the skins, followed by raffinose. The sucrose, raffinose, and stachyose contents of the first and last formed films were 1.42% and 8.03% [5.65 times as much], 0.21% and 0.35%, and 1.97% and 7.17%

© Copyright Soyinfo Center 2014

on a dry basis, respectively. Because of these high solubility of those sugars, they are increasingly concentrated in the residual soymilk, and their content in the films increased gradually as the film formation process proceeded.

Effect of soybean cooking conditions on SDS-PAGE pattern of water-insoluble proteins of miso]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 34(11):731-37. [24 ref. Jap; eng]*
• ***Summary:*** Six miso samples were prepared from soybeans autoclaved under 1 kg/square cm steam pressure for different lengths of time (0, 1, 10, 20 and 60 minutes). There were no significant differences in water-soluble nitrogen contents and in SDS-PAGE (Sodium dodecyl sulphate–Polyacrylamide Gel Electrophoresis) patterns of miso samples prepared from soybeans autoclaved for greater than or equal to 1 minute. However, texture of miso samples prepared from soybeans autoclaved for 1 minute was inferior to that from soybeans autoclaved for greater than or equal to 10 minutes. Address: National Food Research Inst., Ministry of Agriculture, Forestry & Fisheries, Yatabe, Ibaraki 305, Japan.

8911. Ogawa, Ikuo; Saio, Kyoko. 1987. [Processing properties of domestic Japanese soybeans]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 51. p. 15-22. Nov. [6 ref. Jap; eng]
• ***Summary:*** Domestic Japanese soybeans were analyzed for their suitability for making "packed silken tofu," crude protein solubility and yield of acid-precipitated protein from defatted soy flour and reactability with calcium.

The protein content was high in Akishirome and Fukuyutaka varieties. The fat content was high in Tamahomare, Akishirome, and Akiyoshi varieties. And the total sugar content was high in Tsukuizairai, Tamahomare and Akiyoshi varieties.

"For packed silken tofu coagulated with glucono delta lactone, hard gels were obtained with the Fukuyutaka, Okushirome, Akishirome, and Toyosuzu varieties." Crude protein content in soy milk was highly correlated with the hardness of the resulting tofu. Address: 1. Nippon Beans Co., Ltd. Research Lab., 4-18 Shinmachi-1, Hoya-shi, Tokyo 202, Japan; 2. National Food Research Inst.

8912. Omura, Yoshimasu; Akiyama, Yoshinobu; Saio, Kyoko. 1987. [Distribution and varietal differences of lipoxygenase in soybean seeds]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 51. p. 103-08. Nov. [13 ref. Jap; eng]
• ***Summary:*** There are three different types of lipoxygenase: L-1, L-2, L-3. The distribution of lipoxygenase activity in the hypocotyl, cotyledon, seed coat, and whole bean were measure and found to be very uneven. The activities of all 3 types were lowest in the seed coat. Distinct differences in lipoxygenase activity were found in different soybean varieties. The amount of volatile components was greatest in the cotyledon, followed by the hypocotyl, and least in the seed coat. Positive correlations existed between beany flavor and the activities of L-1 and L-2, and also between beany flavor and the amount of *n*-hexanal.

• ***Summary:*** For the year 1983, 1,701 miso manufacturers produced 574,000 tonnes of miso, and 2,692 shoyu manufacturers produced 1,194,000 kiloliters of shoyu. Miso production for recent years was: 1980 579,000 tonnes, 1981 576,000 tonnes, 1982 572,000 tonnes, 1983 574,000 tonnes, 1984 581,000 tonnes, 1985 573,000 tonnes, 1986 581,000 tonnes. Most of Japan's miso plants are still small: 1,513 plants (88.5% of all plants) produced 375 tonnes or less a year, but this accounted for only about 12% of all production. Yet eight plants produced 11,251 tonnes or more a year, and this accounted for 26.7% of all production.

Shoyu production for recent years was: 1980 1,189,000 kl, 1981 1,191,000 kl, 1982 1,187,000 kl, 1983, 1,194,000 kl, 1984, 1,200,000 kl, 1985, 1,186,000 kl, and 1986 1,201,000 kl. Address: Shokuryô-chô Kakô Shokuhin-ka, Miso Shôyu Kakari-chô.

8917. *Taste* (*Kikkoman, Japan*). 1987. Goyogura: A tale of two families. 1(1):8. Nov.
• ***Summary:*** In these buildings across the scarlet bridge over the moat, Kikkoman makes soy sauce for the imperial family. "Soy sauce for the emperor (which is also available at select stores) is made entirely from wheat and soybeans grown in Japan, and the fermentation process takes place completely naturally, without any temperature control, so that the soy sauce takes almost twice as long to mature. The huge vat room, painted in scarlet from floor to ceiling, contains ten vats, some bubbling softly, others still dormant." Near the entrance is a small museum room filled with artifacts: old sales records, large soy sauce jars shaped like vases, and sepia photographs.

The Goyogura was completed in 1939 to mark the 20th anniversary of the modern company's founding or merging. For it was in 1917 that the soy sauce concerns of the eight branches of two families–Mogi and Takanishi–were united to form Noda Shoyu Company, renamed Kikkoman Corporation in 1980. Noda is 20 miles northeast of Tokyo and the center of Japanese soy sauce production since the mid-seventeenth century.

Photos show: (1) The bridge leading to the Goyo Gura. (2) Moromi fermenting in vats; the orange floor is just below the lip of the vats.

Paris. There were soymilk desserts, vanilla and chocolate, and Cacoja's soymilk, Soja, received a lot of attention at the event.

8920. *Toyo Shinpo* (*Soyfoods News*). 1987. Ooshû demo tôfu buumu. Pari no kenkô shokuhin ten o mite [After a health foods exposition in Paris, will there be a tofu boom in Europe?]. Dec. 1. p. 5. [Jap; eng+]
• ***Summary:*** The expo was held in Paris from Nov. 7-9. Tofu and second generation tofu products were creating a lot of interest among people who came to the expo. Two French companies producing soymilk are Cacoja and Lima Foods. Their products are labelled Soja and Soya, respectively. Both companies plan to start marketing soymilk ice creams before summer, 1988. Lima Foods is making an effort to produce other soyfoods besides their soymilk such as soy hamburgers, desserts, salads, paté, and terine.

8921. Central Soya Co., Inc. 1987. Central Soya signs feed technology pact (News release). Fort Wayne, Indiana. 2 p. Dec. 4.
• ***Summary:*** Central Soya has signed a five-year technology licensing agreement and technical service agreement with Great Wall Enterprises Co., a leading food and feed manufacturer, in Taiwan. The contract is the third such Central Soya technology agreement reached with an Asian firm in the past 18 months. In early 1986, and agreement was reached with Marubeni Shiryo Company, Ltd., a large Japanese feed manufacturer. And last fall a technology agreement was signed with the Cheil Sugar & Co., Ltd., a large Korean firm engaged in feed manufacturing and oilseed processing. "This is a continuation of our strategy to become a larger part of the Asian market," said Thomas G. Hauenstein, Vice President-International Feed. Address: Fort Wayne, Indiana.

8922. Mio, Art. 1987. Mori-Nu tofu doing well (Interview). *SoyaScan Notes.* Dec. 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** More-Nu sales are good. The former package reminded too many people of a bar of soap. The new package is now out and widely advertised. Mori-Nu is now ready to enter the health foods market. The package no longer lists monoglycerides, which are still used but not required since they are a processing aid.

8923. Jacobsen, Ces. 1987. Low in calories [Tofu]. *Lahontan Valley News* (*Fallon, Nevada*). Dec. 9. p. 7. [2 ref]
• ***Summary:*** Suddenly she has been hearing a lot about tofu–serendipity. In *Women of China* she read about a book their staff had compiled titled *200 Recipes for the Tofu Devotee.* She wrote these women and they sent her a copy.

When she returned home from Japan and Korea last July, she read a long article about soybean foods titled "The Prodigious Soybean" in *National Geographic.*

When she returned from Israel, where the Kosher Chinese restaurants use tofu extensively, in her mail was a set of tofu recipes from Azumaya, Inc. She presents one of these–"Tofu with vegetables and sauce."

8924. Tsuchiya, Kanji. 1987. [Re: Lectures on soymilk in China]. Letter to William Shurtleff at Soyfoods Center, Dec. 17. 1 p. [Jap; eng+]
• ***Summary:*** Mr. Tsuchiya went to China at the invitation of the Chinese government for 20 days to give lectures on soymilk production and technology at a convention held by the Chinese Food Industry Assoc. Forty people attended, and they were considered the top people in the field in China, but Mr. Tsuchiya felt that their knowledge of the subject was 20-30 years behind the times. Address: Kamiogi 3-1-1, Suginami-ku, Tokyo 167, Japan. Phone: 03-312-0775.

8925. *Toyo Shinpo* (*Soyfoods News*). 1987. Kenko shokuhin toshite dô kôken suruka. Murata Kiku kyôju o kakonde [How does tempeh contribute as a health food?]. Dec. 21. p. 3. [Jap; eng+]
• ***Summary:*** This article discusses the 5th Japan tempeh conference that was held in Hyogo-ken on December 19, 1987. The following topics were discussed: 1. Tempeh's anti-mutagenic properties (*kohenigen-sei*). Kyoko Ebata gave a lecture on current experiments which focused on tempeh's resistance to the salmonella bacterium; 2. How the Japanese people are accepting tempeh and foods made from it. Lecture given by Goro Kanasugi and Makio Takato; 3. Hyojo High School's experiments on cooking with tempeh, tempeh recipes, and tempeh's acceptance. Lecture by Kojima.

8926. *Toyo Shinpo* (*Soyfoods News*). 1987. Tenpe de "Mura Okoshi" jigyô [Development of a village–using tempeh]. Dec. 21. p. 1. [Jap; eng+]
• ***Summary:*** The 5th tempeh meeting and study group, held in Kasuga-cho, Hyogo-ken on December 19, 1987, drew 40 people, including Dr. Tadao Watanabe and Mr. Goro Kanasugi. The inhabitants of one village are trying to revitalize their village using tempeh. In Kenritsu Hyojo High School (Food Processing Dept.) experiments are being done with various foods made from/with tempeh, including breads, cookies, rice crackers, and jams. This high school was formerly an agricultural high school and they are very interested in making a product that might make their village famous.

• ***Summary:*** Jan. Westbrae moves the production of Malteds to California from Japan.

© Copyright Soyinfo Center 2014

Jan. The Soy Plant, a tofu cooperative in Ann Arbor, Michigan, files for Chapter 7 bankruptcy. It is soon purchased by Bruce Rose of Rosewood Products, Inc.

Feb. *Soya Newsletter,* a 12-page, bimonthly publication costing $96/year, is launched by Soyatech of Bar Harbor, Maine. Publishers are Peter Golbitz and Sharyn Kingma, former owners of Island Tofu Works. The publication quickly proves itself to be the world's best English-language publication on soyfoods. By October, paid circulation tops 900 in 20 countries.

Feb. American Soybean Association petitions the U.S. Food and Drug Administration to require food manufacturers to be more specific in labeling food products that contain highly saturated imported tropical fats (palm, palm kernel, and coconut oils). The petition includes results of a supermarket survey of 1,555 foods containing vegetable oils. 43% of the labels list multiple choice or generic vegetable oil ingredients which hides from the consumer the fact that the products contain highly saturated tropical fats. Imported tropical fats displace the equivalent of oil derived from 171 million bushels of soybeans. Herewith begin the great "Fat Wars" of 1987-88.

Feb. Lite Lite Tofutti introduced by Tofutti Brands, Inc. This non-dairy frozen dessert contains only 90 calories per 4-ounce serving. It soon becomes a big hit.

Feb. Ah Soy in Tetra Brik cartons launched by great Eastern Sun.

Feb. Options trading on futures for soybean oil and meal opened on Chicago Board of Trade.

March 4. The Federal Grain Inspection Service rules that soybean oil may be used to control grain dust in elevators. This voids the Barnham patent and opens up a large potential new market for soy oil, which is in surplus.

March. Great Shake soymilk launched by Noble Soya in India. Sold in Tetra Brik cartons in mango, strawberry, and chocolate favors, it is the country's most heavily promoted soymilk to date, but gets off to a slow start.

March 16-18. First International Congress on Vegetarian Nutrition held in Washington, D.C., sponsored by eight Seventh-day Adventist universities and health care organizations, and three SDA food companies, plus S.E. Rykoff/Sexton.

March. *Vitasoy Vitabrations,* a newsletter, starts being published by Vitasoy USA.

March 31. Hong Kong Soya Bean Products Co. Ltd., makers of Vitasoy, move into a large new plant (370,000 square feet costing $20 million) in the New Territories. Sales of Vitasoy in 1987 is projected to be 126 million packs.

April 1. Tempehworks, Inc., America's first major tempeh producer from Greenfield, Massachusetts, changes its name to Lightlife Foods, Inc. In recent years, Tofu Pups have become the company's bestselling product.

April. Stir Fruity, a non-dairy, nonfermented, soy-based yogurt, is introduced by Azumaya Inc. of San Francisco. Shelf life problems cause the product to be withdrawn, causing Azumaya to set aside plans for an $800,000 radio ad campaign in northern California. The product is soon back on the market, but in limited distribution and with little promotion. Yet during this year, Azumaya probably passed House Foods & Yamauchi to become America's largest tofu producer.

April. *Healthy Times,* a bimonthly newsletter, starts being published by Morinaga Nutritional Foods of Los Angeles, makers of Mori-Nu long-life silken tofu, for members of the Mori-Nu Health for Life Club. By Aug. 1988 circulation is up to 10,000; A subscription costs $3 a year.

May 26. Tofutti Brands Inc. and Coca-Cola launch Cheater's Delite, a major joint promotion featuring a 90-calorie scoop of Lite Lite Tofutti and a 1-calorie glass of Diet Coke, special labeling and couponing on 3 million bottles of Diet Coke, 5 weeks of heavy advertising in New York, New Jersey and Connecticut, and a Caribbean cruise sweepstakes.

June. Dr. Jane Gleason of the University of Illinois goes to Sri Lanka to spend a year studying its soybean and soyfoods industries.

July 1. Ralston Purina Co. of St. Louis, Missouri, establishes Protein Technologies International as a wholly-owned subsidiary to focus on sales of soy protein for food uses. The company's sales of soy protein products were $139.8 million in 1986.

July. Victor Food Products in Toronto, Canada's largest tofu manufacturer, declares bankruptcy. The main cause: Overexpansion, trying to grow too fast.

Aug. The Barat Bar, an upscale chocolate bar containing spray-dried tofu instead of dairy products, is launched by Legume Inc. and extensively promoted. It soon becomes a big hit.

Aug. Brightsong Foods of Petaluma, California, ceases operations. Richard and Sharon Rose resign to found a new company, Rose International, which will be a tofu development, marketing, and consulting company, rather than a manufacturer.

Sept. 24. San-J International of Richmond, Virginia, dedicates the first tamari brewery ever built outside of Japan. The 40,000 square foot facility with a capacity of 1 million gallons a year is located in Varina, Virginia. San-J tamari was first imported to America in 1979.

Sept. 28. Plenty Soya Centre, run by Plenty Canada, opens in Kandy, Sri Lanka. They will sell as many soyfood products as possible at a reasonable cost.

Oct. 6. Anti-cholesterol campaign starts. The U.S. Federal Government and more than 20 health organizations issue the nation's first detailed guidelines for identifying and treating people whose blood cholesterol levels are more than 200 mg per deciliter. The guidelines signal the beginning of a nationwide health promotion campaign designed to reduce blood cholesterol to safer levels. This signals exciting

© Copyright Soyinfo Center 2014

new opportunities to market cholesterol-free soy-based alternatives to meat.

Nov. *Kikkoman Taste,* a stylish full-color "quarterly intercultural forum for the exchange of ideas on food," published by Kikkoman Corp. in Tokyo. Its focus is on shoyu in international cuisine.

* During this year of the great vegetable oil wars, the ASA launched an all-out no-holds-barred campaign to educate Americans of the health dangers of tropical fats (palm and coconut oil; which succeeded) and to require such products to be clearly labeled (which failed).

* This year the world's population passed 5 billion. It is increasing by a record 80 million people a year, so that every 3 years the equivalent of one United States' full of people is added to the population of planet Earth. Continued.

8928. *SoyaScan Notes.* 1987. Chronology of soybeans, soyfoods and natural foods in the United States 1987 (Continued) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. 1987 New Trends:

Rapid Rise in the Number of New Products in America. During 1987 more than 735 new soyfood products were launched worldwide, including at least 380 in the USA. Many of the most successful products are all-American and fun to eat: Ice creams, burgers, hot dogs, salad dressings, chocolate bars. This is part of the larger trend of the Americanization of soyfoods. Most of the growth has been in the traditional low-tech sector, including tofu, tempeh, soymilk, miso, soy sauce, soynuts, plus modern dairylike products such as soy ice creams, soy yogurts, and soy cheeses, all developed by the soyfoods movement. A growing percentage of these products are second generation products, which could also be called convenience prepared or value added products.

Growth of Consumer Awareness of Soyfoods in America. Ten years ago, perhaps 1% of Americans had heard of tofu, soymilk, tempeh, or miso. Today, probably 50% of Americans are aware of these foods. In 1987, for example, the Soyfoods Assoc. clipping service received a total of 1,587 clips on soyfoods. That is 132 articles a month, way up from 5 years ago.

Increasingly Positive Image of Soyfoods in the Western World. Generally speaking, from about 1945 through the 1960s, soy had a negative image in foods. The became neutral during the early 1970s. During the late 1970s and early 1980s, with the rise of the soyfoods movement and the growing sophistication of modern soy protein products (isolates, concentrates) soyfoods gradually developed a positive image. The Gallup Poll of 1977 was an early indicator of this. By the mid-1980s tofu had become a "hot ingredient." Companies deliberately added it to a product (or at least to the label) to help sell the product. Yet the Roper poll of late 1986, which found tofu to be America's most hated food, may indicate a tarnishing of this image.

Growing Interest of Larger Food Companies in Soyfoods. One indication of this trend is that *Soya Newsletter,* targeted at these companies and selling for $96/year, has over 900 paid subscribers.

Continued Decline of Red Meat. This year consumption of poultry in America passed that of beef for the first time in history. Beef had been king for 3 decades. Before that, pork was king. A pound of chicken has one-fourth as much saturated fat as beef and takes much less grain, water, and energy to produce.

INTSOY Becomes a Major Force Worldwide Developing and Promoting Soyfoods. Working with other international (IITA, AVRDC) and national soybean programs, and doing pioneering research on fresh green soybeans, extrusion cooking, and use of expellers for small-scale oil expression etc., INTSOY has become as effective in its new role (since 1985) of focusing on soybean utilization as it was before that when its major emphasis was on variety development and production.

The Competitive Position of the U.S. Soybean Industry is Slipping. Farmers in Brazil and Argentina can now produce soybeans at much lower cost than their American counterparts. This plus extensive subsidies have led to a dramatic drop in U.S. exports of soybeans and products since their peak in 1981. A major part of the problem is linked to the Latin American debt crisis, which surfaced in the early 1980s and forced debtor nations to export at all costs. This debt crisis (especially by Brazil, Argentina, Mexico, and Venezuela) is now being called the most serious problem facing U.S. agriculture.

Soybean Research Increasingly Shifts from Production to Utilization. Traditionally research focused on increasing production and yields. New efforts are designed to develop new markets instead of larger surpluses.

Big Increase in Breeding Soybeans for Food Uses. This is part of a larger trend toward value added products and toward finding new market niches for American soybeans, especially for foods in Japan.

Revival of Interest in Industrial Uses of Soybeans. The main interest is in new ways to use soy oil, of which there is a large surplus that depresses soybean prices. Promising applications include soy oil for printing inks, dust suppressants, and diesel fuels. The largest interest in industrial uses occurred during 1932-42, when the Chemurgic movement and Henry Ford sought to find industrial uses for all farm crops. Hence, there is a rebirth of interest in Henry Ford's work with soy.

Major Growth of Interest in Soybeans and Soyfoods in Africa. Excellent work by IITA in Nigeria and various national soybean programs (as in Egypt, Zimbabwe, and Zambia) have allowed this relatively new crop to reach the takeoff stage. Decreasing per capita food supplies and growing understanding of the nutritional benefits of soyfoods

© Copyright Soyinfo Center 2014

are sparking new interest.

Continued Rise of Soybean Production in Europe. The largest producer, Italy, which produced almost no soybeans as recently as 1983, harvested a record 1.3 million tons in 1987. France is second largest. All production is heavily subsidized.

Omega-3 Fatty Acids Hit the Headlines. Soy oil is a rich vegetable source of these fatty acids which are thought to have a beneficial effect on the cardiovascular system.

Nutritional Spotlight Increasingly Shifted onto Fats, Away from Proteins. During the past few years fats (and especially cholesterol and saturated fats) have come to be seen as the leading problem nutrient, the bad guy, in the American diet. There is a new respect for complex carbohydrates (especially whole grains), which used to be called "starches" and were considered fattening.

New, More Complex View of Oils and Fats Becomes Popular. High cholesterol levels are considered more dangerous than ever, but equally important are the various cholesterol-carrying proteins in the blood. Two kinds (low and very low density lipoproteins) promote cholesterol deposits in the blood, while high density lipoproteins (HDLs) cleanse the blood vessels of fatty deposits. Moreover, saturated fats are considered at least as much of a problem as cholesterol.

So-Called Antinutritional Factors in Soybeans are Increasingly Seen as Having Benefits as Well. Trypsin has been shown to help prevent cancer. Saponins help reduce serum cholesterol. Isoflavones have antioxidant activity that may suppress breast cancer. This indicates that we may need a new term to categorize these substances that offer both benefits and disadvantages.

The Link Between Diet and Health Continues to Grow Stronger, among both scientists and the general public.

Interest in Exercise and Health Still Strong. Several years ago some experts saw this trend waning, but it now seems to be rebounding. For example, there were 21,244 finishers in the New York Marathon (including 3,689 women). Compare this with 12,512 finishers (1,621 women) in 1980 and 55 finishers (no women) in 1970.

Books on Tofu. Since 1974, at least 60 books on tofu (having the term "tofu" in the title) have been published in North America and Europe. Peak publication years were 1981 and 1982. By language, 46 of the books were in English, 7 in French, 4 in German, and 1 each in Italian, Portuguese, and Swedish.

Inactivity of the Soyfoods Association of America now becoming a major constraint on growth of soyfoods in the USA, at a time when interest is at an all-time high. Leadership is needed.

Rise of Canola (Rapeseed) Oil. It looks as if soy oil may have another serious competitor (in addition to palm oil) in future years. Canola contains less saturated fat than any other popular vegetable oil. Only 6%, versus 9% for safflower oil and 15% for soy oil. Lard has 41%, palm oil 51%, and butterfat 66%.

8929. American Miso Co. 1987. A miso primer: The American Miso story (Ad). *Vegetarian Times.* Dec. p. 18.
• ***Summary:*** This one-third page vertical black-and-white ad explains: "Generally, there are three types of miso: Sweet, Mellow, and the darker, Traditional misos. They differ in color, salt content, fermentation time, and the soybean/grain (koji) ratio." The company describes each of the misos it makes as one of these three types. Near the bottom of the ad is the Miso Master logo, an illustration showing the head and shoulders of a Japanese miso master, with a knotted headband, in front of a large wooden vat of miso. Below "Miso Master is produced by the American Miso Co. for Great Eastern Sun."

This ad also appeared in the April 1989 issue (p. 6) of this magazine. Address: Rutherfordton, North Carolina.

8930. Arai, Soichi; Kimura, Hiroko. 1987. Comparative nutritional value for amino acids, oligopeptides and soybean protein. *J. of the American Oil Chemists' Society* 64(12):1692-96. Dec. [25 ref]
• ***Summary:*** "In recent years our view on the absorption of protein digestion products has undergone a radical change. We now believe that intralumen hydrolysis of intake proteins to free amino acids is only partial. It has thus been hypothesized that partial protein hydrolysates or oligopeptide mixtures are nutritionally superior to corresponding amino acid mixtures.

It is now believed that dipeptides and tripeptides formed by intralumen hydrolysis of intake proteins are mostly absorbed prior to further hydrolysis to free amino acids (Adibi 1971, 1973; Matthews 1976, 1977). Presumably, therefore, supplementation of low-quality proteins is more effective when essential amino acids are used as peptides rather than as free amino acids.

These experiments show that the recovery of protein-malnourished rats was significantly more effective when they consumed enzymatically modified proteins containing a peptide-bound methionine at the 3% level. Address: 1. Dep. of Agricultural Chemistry, Univ. of Tokyo, Bunkyo-ku, Tokyo 113, Japan; 2. Kagawa Nutrition College, Toshima-ku, Tokyo 171, Japan.

8931. *ASA Member Letter.* 1987. Soybean buyers confer on quality. Nov/Dec.
• ***Summary:*** Soybean buyers in Japan and Korea are learning about U.S. soybean quality from Jim Guinn, American Soybean Association soybean quality director, at soybean quality outlook conferences in Tokyo and Seoul this week. Last year Japan imported 151 million bu of U.S. soybeans; Korea imported almost 38 million bu.

8932. Carter, Thomas E., Jr. 1987. Genetic alteration of seed size: Breeding strategies and market potential. In: Dolores Wilkinson, ed. 1987. Proceedings of the 17th Soybean Seed Research Conference 1987. Washington, DC: American Seed Trade Association. vii + 114 p. See p. 33-45. Held 9-10 Dec. 1987 in Chicago, Illinois. [21 ref]
• ***Summary:*** Contents: Introduction. Soyfood market size. Soyfood market trends–short and long range. Premiums and acreage, the breeder's perspective. Breeding special varieties. Future breeding goals. Conclusions.

"The expanding soyfood markets in Japan and the U.S. have generated considerable interest among American soybean producers in recent years. More than 60% of the soybeans used in these markets are grown in the U.S."

Table 1 (p. 34) shows "Soybean consumption as soyfoods in Japan and the U.S." In Japan about 851,000 metric tons of soybeans are used to make soyfoods such as tofu (532,000), miso (180,000), natto (99,000), soymilk (12,000), and soy sauce (5,000 [plus large amounts of defatted soybean meal]). Large-seeded soybeans grow in the U.S. have found acceptance in making tofu and soymilk, capturing 81 and 100% of the raw soybean sales respectively for these products.

"In survey results, 39 of 43 public breeders and 44 or 67 private breeders responded to questions regarding the breeding of specialty varieties. Twenty-four breeders reported that they are maintaining 36 separate projects for large- and small-seeded varieties (Table 3). Public and private breeders are represented equally in this effort with the majority of these projects underway in the Midwest. Eight public and eight private programs are developing varieties specifically for tofu while 13 public and 7 private programs are developing varieties for natto. One public breeder was interested in soy milk varieties but considered varieties for tofu and soymilk as the same. One private and two public breeders are interested in large-seeded garden types for the fresh market in urban areas with large oriental populations. One public and one private breeder expressed interest in small-seeded varieties for sprouts. Soybean sprouts are primarily a Korean soyfood; and, Koreans buy U.S. soybeans for making sprouts in some years." Address: Research Geneticist, USDA-ARS, North Carolina State Univ., Raleigh, NC. Phone: 919-737-2734.

8933. *Dairy Foods.* 1987. Something new from the soybean: Tofu maker [Azumaya] hopes Stir Fruity will be the 'yogurt of the future.' 88(13):27. Dec.
• ***Summary:*** Stir Fruity, a "tofu-based yogurt-like product," is made from a soymilk base in a proprietary process that Azumaya spent 4 years and $500,000 perfecting, explained marketing director Jill Mizono. Azumaya introduced Stir Fruity in February 1987 and quickly gained distribution in Safeway and Lucky supermarkets in northern California. Soon after introduction, however, shelflife problems forced Azumaya to pull the product from both chains. The problem was traced to Azumaya's recently installed clean room, and fixed. The product now is back to a 40-day shelflife. Production was never completely discontinued.

Azumaya is now selling Stir Fruity to foodservice operators in and outside of California and test marketing it at grocery stores throughout the USA. Customers give Stir Fruity high marks for its custard-like texture and non-beany taste; 75% of San Francisco area consumers who sampled Stir Fruity said they would buy it. Most soy-based yogurts, except Stir Fruity and Jofu, are targeted to the health-food market. Photos show Stir Fruity in packages (cups) and a parfait glass, surrounded by fruits. Address: Chicago, Illinois.

8934. Hiyoshi, Hideaki. 1987. Nattô borantia hôkoku. Naijeria de nattô suupu ga kohyô datta [Report of a natto volunteer. In Nigeria, natto soup was popular]. *Daizu Geppo* (*Soybean Monthly News*). Dec. p. 26-29. [4 ref. Jap]
• ***Summary:*** This sophomore man at Rikkyo University went to Nigeria and taught the people about natto. Address: Rikkyo Daigaku, Ninen-sei.

8935. Ikegami, Shoei. 1987. Chugoku ni okeru daizu no seisan dôkô [Trends in Chinese soybean production]. *Daizu Geppo* (*Soybean Monthly News*). Dec. p. 4-10. [4 ref. Jap]
• ***Summary:*** Production (in million tonnes) and yields (in tonnes/ha) by year are: 1978 (7.57/1.06), 1979 (7.46/1.03), 1980 (7.94/1.10), 1981 (9.33/1.16), 1982 (9.03/1.07), 1983 (9.76/1.29), 1984 (9.70/1.33), 1985 (10.50/1.36), 1986 (11.71/1.41). Thus in 1986 China produced 11.71 million tonnes of soybeans; the yield was 1.41 tonnes/ha.

The top ten soybean producing provinces in China in 1986 were: 1. Heilongjiang (3,880,000 tonnes, 33% of total). 2. Shandong (947,000 tonnes). 3. Jilin (837,000). 4. Anhui (819,000). 5. Henan (749,000). 6. Jiangsu (719,000). 7. Liaoning (635,000). 8. Heibei (412,000). 9. Nei Mongol (Inner Mongolia) (410,000). 10. Sichuan (346,000). Production for all other provinces in 1986 and 1985 is also given. Address: Norin Suisan-sho, Nogyo Sogo Kenkyusho.

They are printed in a color ink on a pastel background, and were found displayed in a small plastic rack near the Yves meat alternatives at Safeway supermarket in Lafayette, California.

The recipes are: BBQ burger kebabs. Mushroom caps. Mexican burritos. Shepherd's pie. Veggie lasagna. Veggie sloppy joes. Address: Los Angeles, California.

8938. Nihei, Takao. 1987. [Barbeque shoyu, a Hawaii creation (Food series, part VI)]. *Kokiku* (*Honolulu, Hawaii*). Dec. p. 29. [Jap; Eng]
• ***Summary:*** Hawaii's barbeque shoyu consists of shoyu, sugar, garlic, ginger, and round onions in which the meat is marinated and broiled over charcoal. The term barbeque shoyu was already known and being sold commercially before World War II. Barbeque shoyu has changed to teriyaki sauce. Teriyaki is now an international term and enjoyed the world over, a sauce which is Hawaii's own creation.

8939. *SoyaScan Notes.* 1987. New Trend: Rebirth of interest in research on industrial utilization of soybeans–based on the early concept of chemurgy (Overview). Dec. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** As early as 980 A.D. the Chinese were using soy oil, mixed with tung oil, for caulking boats. It was widely used as an illuminant in homes and temples lit with wicked oil lamps, until the 1920s, when it was replaced by kerosene. By the 1920s it was widely used in China to make soft soaps (that were known for their ability to give a good lather in hard water), lacquers, paints, printing inks, and waterproof cloths and umbrellas.

By the 1500s, soybean cake began to be widely used in China as a fertilizer, primarily as a source of nitrogen and organic matter, but also for its content of phosphorus and potassium.

The earliest document seen that mentions industrial uses of soybeans in the West appeared in 1880, when L.C. Bryan, an American, noted that soy oil could be used as a substitute for linseed oil in paints, or be burned in lamps. In 1909 soybeans were first imported in significant quantities to Europe; they were purchased solely for their oil, most of which was made into soap. The world's first use of soy oil to make soap was in 1909 in England or Sweden. Manchuria was also soon using large amounts of soy oil in soaps. In 1909 Goessel, a German, developed and patented the first rubber substitute from soy oil. That same year, Henry A. Gardner of the Paint Manufacturers Assoc. of the U.S. began extensive research on the use of soy oil to partially replace linseed oil in paints and varnishes. In 1912 Beltzer, a Frenchman, developed a soy protein plastic, Sojalithe, which he soon produced commercially on a large scale. By 1916 the main use of soy oil in America was in soaps, where it replaced cottonseed oil. In 1917 Satow, a Japanese, published the first of many articles from that country on the use of soybean proteins to make plastics.

The heyday of interest in industrial utilization of soybeans took place in America during the 1930s and Great Depression, spurred largely by the work of Henry Ford (who began focusing on soybean research in Dec. 1931), the Farm Chemurgic Council (founded in 1935), the Chemurgic movement, and the U.S. Regional Soybean Industrial Products Laboratory (founded 1936 at the University of Illinois). The goal was to make industrial products from farm crops to help depressed farmers. The soybean was one of the great success stories of the Chemurgic movement. In 1933, the peak year percentage-wise, a remarkable 70% of all soy oil in the USA went into industrial, non-food uses–primarily paints and varnishes, followed by soaps, linoleum, and oilcloth. Large amounts of soy flour were made into plywood glue, especially by the I.F. Laucks Co. In 1936, the peak year for publications, some 59 publications on industrial uses appeared. In 1935 the Glidden Co. in Chicago built the first small plant for production of industrial grade soy protein isolate, which they called "Alpha" protein.

Active work in this field accelerated during World War II, when soybeans were used to make products that were in short supply. In 1941, after imports of tropical oils from Southeast Asia had been suddenly cut off by the Japanese military, use of soy oil in industrial products skyrocketed to its historical peak in absolute terms; 74.25 million lb were used that year. Of this, 56% was used in paint and varnish, and 33% in soap. But by 1944 industrial uses of soy oil had fallen to only 17 million lb. During the 1950s, a period of huge surpluses for most U.S. farm crops (and of predicted soybean surpluses... which never materialized), research focused on industrial products that could alleviate the surpluses. During the 1960s, as surpluses disappeared, the concern for world hunger and protein shortages grew, and petroleum came to dominate industrial utilization, research switched from utilization to production.

This focus continued until the mid-1980s, when foreign soybean competition, largely from Latin America, and huge surpluses of soy oil led to a rebirth of interest in research on soybean utilization, especially industrial utilization, that could lead to new value-added products for new markets. Promising applications included soy oil for printing inks, dust suppressants, diesel fuels, and the like.

There was little interest, however, in food utilization research (other than soy oil) in the U.S. since the total amount of soybeans used in foods was still quite small, and soybean farmers feared that the resulting products would compete with meat and dairy products, which require the use of more soybeans.

8940. Takahashi, Akira. ed. 1987. Shun no tôfu zukushi [Tofu cookery throughout the four seasons: Encyclopedia of tofu]. Tokyo: CBS Sony. 144 p. Illust. Index. 26 cm. [Jap]*

restaurant in Kawasaki City, Japan. Toyo Shinpo (1 May 1988, p. 4) described this as one of the most artistically done cookbooks ever seen. There are many Japanese tofu recipes and some western style. A true work of art in full color!

In part I, 4-5 recipes are given for each of the four seasons. Address: Ogawa-cho 3-3, Kawasaki-ku, Kawasaki-shi, Kanagawa-ken, Japan. Phone: 044-244-6845.

8941. *Tetra Pak Age.* 1987. Mori-Nu gives tofu a new look. Thanks to Morinaga Nutritional Foods Inc., American consumers are taking a second look at tofu. 5(3):6. Fall/Winter.
• ***Summary:*** In October 1985 Mori-Nu tofu was introduced in the Tetra Brik Aseptic carton; it is easy to include in the convenience oriented American diet. A large color photo shows Mori-Nu silken firm and silken soft tofu on a wood table in front of fruits and vegetables. Address: Tetra Pak Inc., 889 Bridgeport Ave., Shelton, Connecticut 06484. Phone: 203-929-3200.

8942. Tsuchiya, Kunio. 1987. Daizu shôhin-ka no genryû o saguru. Manshû daizu hatten shôshi. I. [Searching for the roots of soybean commercialization. A short history of soybean development in Manchuria. I.]. *Daizu Geppo* (*Soybean Monthly News*). Dec. p. 11-25. [4 ref. Jap]
• ***Summary:*** Contains numerous interesting graphs, maps, and tables, plus a 1-page chronology of major political and soybean-related events from 1931 to 1945.

1931 Sept. 18–The Manchurian Incident (*Manshujihen*) started the war between Japan and Manchuria.

1932 March 1–Announcement of the founding of a Japanese state, Manchuoko, in Manchuria.

1933 July–Manchurian immigration plan announced.

1935 July–Manchurian Special Products Central Committee (*Manshu Tokusan Chuokai*) founded.

1936 April–Trade agreements between Manchuria and Germany were inaugurated. Manchuria guaranteed to export soybeans to Germany worth 100 million yen a year.

1937 July–The war between Japan and China started when Japan invaded China.

1941 Aug.–Dissolution of the Manchurian Special Products Central Committee. Establishment of the Manchurian Agricultural Public Product Corporation (*Manshu Nosan Kosha*).

1945 Aug. 15–The emperor of Japan announces Japan's surrender, ending World War II. Address: Daizu Kyokyu Antei Kyokai.

8943. **Product Name:** [Soymilk with Okara Mixed In, Tofu with Okara Mixed In].
Foreign Name: Okara o mazete tônyû, Maiyuki.
Manufacturer's Name: World Foods. Affiliate of Chujitsu-ya.
Manufacturer's Address: Kabuki-cho 2-1-11, Shinjuku-ku, Tokyo, Japan. Phone: 03-209-2121.
Date of Introduction: 1987 December.
New Product–Documentation: Toyo Shinpo (Soyfoods News). Nov. 1. p. 1. Okara o mazeta tonyu [Soymilk with okara mixed in. World Foods, the affiliate company of Chujitsuya, received a patent for their production method in making health foods from raw materials]. Mr. Kichitomo Tagaki is president of Chujitsuya, and Mr. Hatsuo Suki is president of World Foods, Hamura-cho, Tokyo, Japan. The patent is called "Shokubutsu seni shoka tonyu no seizo-ho" (Vegetable fiber enriched soymilk production method). The process works by creating high pressure (400-1000 kg per square cm) to break the soybeans into 50 micron diameter granules. They boil the soybean granules (karyu) to make soymilk. Then 100,000 volts of electricity is used force the protein in the soybeans to coagulate and to whiten the soymilk. Using this process, the manufacturer can get a milder tasting and more stable soymilk. This company already has a product, Maiyuki, which has okara in the tofu.

8944. Chang, Norma. 1987. My students' favorite Chinese recipes: A collection of classroom-tested popular recipes. Wappingers Falls, New York: The Travelling Gourmet. 191 p. Updated edition in 2001. *
• ***Summary:*** The section titled "About tofu" (p. 72) describes how to freeze tofu at home: "Fresh tofu, in any form. can be frozen. Once frozen, fresh tofu changes from white to pale yellow. Thawed, it has a sponge-like texture.

"To freeze tofu: Drain, place in a freezer bag. Label, date and freeze. Allow to freeze at least 24 hours before using. Frozen tofu will keep up to 6 months.

"To thaw frozen tofu: Thaw in the refrigerator or place frozen tofu in a heat-proof container, cover with boiling water. Let stand until thawed, 15 or more minutes depending on the thickness of the frozen tofu. Gently press out the excess water. Use as directed in recipes."

Asian markets sell deep fried tofu, also known as tofu puffs, abura-age or atsu-age. Golden brown in color, they come in various shapes and weights, but are generally very light in weight.

Deep fried tofu is fresh tofu that has been deep fried. During deep-frying, most of the water in the fresh tofu evaporates and the interior become somewhat hollow and porous. Describes how to make deep fried tofu at home.

• ***Summary:*** Raw soy sauce (a filtrate of aged mash) is

© Copyright Soyinfo Center 2014

heated at 70-85ºC at the final stage of fermentation to inhibit microbial and enzymic reactions. During heating, sediment is gradually formed, comprising 10% of the volume. The sediment decreases the yield and commercial value of soy sauce. More sediment is formed and it forms faster at 60ºC than at 85ºC, suggesting that raw soy sauce contains a factor or factor that accelerates sediment formation at the lower temperature and/or inhibits it at the higher. Traditional Foods and Their Processing in Asia. Tokyo: NODAI Research Institute, Tokyo Univ. of Agriculture. vii + 235 p. See p. 219-33. [15 ref]
• ***Summary:*** Contents: Abstract. Introduction. Materials and methods: Mold selection, soy sauce inoculum preparation (laboratory scale, then commercial scale). Results and discussion. Conclusions.

From a survey of soy sauce manufacturers in Java and laboratory studies the authors conclude that practically none of the soy sauce manufacturers in Java, except for one modern manufacturer in Jakarta, use special inoculum in the soy sauce fermentation process. The source of active microorganisms is mainly the previously used fermentation containers. Most of the soy sauce processing is not carried out in aseptic conditions, so many kinds of molds, yeast, and bacteria can be isolated from the fermented materials. The authors isolated a suitable mold for soy sauce fermentation, and found that the use of 1% of fresh inoculum is adequate for the fermentation of soy sauce. Address: Faculty of Agriculture, Gadjah Mada Univ., Indonesia.

[7 ref. Jap; eng]
• ***Summary:*** Spanish mackerel is *Scomberomorus niphonius.* Pickling time required to obtain the most favorable products were 72 hours for soybean miso and 48 hours for mixed soybean miso. A decrease in trimethylamine in the early stage of pickling suggests that soybean miso decreases the fishy odor. Address: Faculty of Education, Tokyo Gakugei Univ., Koganei, Tokyo 184, Japan.

8984. Karki, Tika. 1987. Indigenous fermented foods in Nepal. In: Fujiharu Yanagida, ed. 1987. Traditional Foods and Their Processing in Asia. Tokyo: NODAI Research Institute, Tokyo Univ. of Agriculture. vii + 235 p. See p. 122-40. [5 ref]
• ***Summary:*** Of Nepal's population of 16 million, 90% are involved in agriculture. A conservative estimate calculates the production of kinema to be 300 tonnes/year. Kinema is a traditional non-salted soybean fermented food product widely and popularly consumed by the Kirat ethnic population of the eastern hills of Nepal, Darjeeling, and Sikkim. This product greatly resembles natto of Japan and thua-nao of Thailand, and is usually produced in the winter season. Kinema is consumed both as a soup, with other green vegetables, and as a curry. A *Bacillus subtilis* strain has been found to be the dominant microflora of kinema fermentation (Karki, 1985). Production figures of kinema are not available, but a conservative estimate would be around 300 tonnes. The obvious reason for the limited kinema production is the virtual ignorance of this product. Even researchers have little knowledge of it. Another plausible explanatory factor is the typical ammonia-like odour which many people living in other parts of the country are not partial to.

Preparation of kinema: Soybeans are washed, soaked overnight, cooked at boiling temperatures till softened and then mashed by light pounding. About 0.5% ash is added and mixed in thoroughly by hand. The mixture is then fermented overnight in a bamboo basket surrounded by banana leaves, at a temperature of around 25ºC. After fermentation, the fresh kinema is dried in the sun for about 3 days and then stored for six months. Reducing sugar is drastically reduced in kinema, compared to natto. A higher ash content in kinema may be due to the addition of ash during processing.

© Copyright Soyinfo Center 2014

It is very important to maintain a balance between acid, reducing sugar, the ammonia odour, stickiness, and textural characteristics, in order to improve the kinema processing technology.

Chemical composition of kinema, averages: Moisture (8.9%), protein (46.2%), fat (18.1%), total sugar (21.2%), reducing sugar (2.1%), crude fiber (7.1%), ash (5.2%), acidity (1.52%). Address: Central Food Research Lab., Nepal.

8987. Kawamura, Yojiro; Kare, Morley R. eds. 1987. Umami–a basic taste: physiology, biochemistry, nutrition, food science. New York, NY: Marcel Dekker. xiv + 649 p. Proceedings of the First International Symposium on Umami, held Oct. 7-10, 1985, Lihue, Kauai, Hawaii. Illust. Illust. Index. 24 cm. [1400* ref]
• ***Summary:*** Contains 28 papers by 48 different authors, quite a few of them from the Ajinomoto Company, Inc. (Kawasaki, Kanagawa prefecture, Japan). The basic message of this book is the same as its title: Umami is a basic taste, just like the traditional four–sweet, sour, salty, and bitter, which were advanced before modern taste physiology had developed. The term "monosodium glutamate (MSG)" appears many times in the index, but the word "Ajinomoto" ("a tradename for a mixture of MSG and ribonucleotides") does not. At the end of each paper are many references.

The taste of MSG is unique: In Japanese it is called "umami" (p. 83). "Glutamic acid (Glu) elicits a unique taste (*umami*) in human sensations..." (p. 3). "Umami" is also found in basic traditional, natural foods widely used in Japanese cookery: *kombu / konbu* (*Laminaria japonica,* a sea vegetable), *katsuobushi* (dried bonito flakes), and *shiitake* mushrooms (p. 86). However MSG is derived naturally from konbu whereas GMP (guanosine 5'-monophosphate) is derived from shiitake. These substances were previously thought to "enhance taste intensity" (p. 35, 256). The "Chinese restaurant syndrome" is discussed on pages 309-14. Although "soy" is not mentioned in the index, it does appear several times in the book: soy sauce (p. 257), soy (p. 265, 267, 268).

Contents (in 8 parts): I: General concepts (3 papers. "Recent progress in the taste receptor mechanism." "Fundamental properties of umami in human taste sensation." "The umami taste concept: Implications for the dogma of the four basic tastes" (sweet, sour, salty, bitter)). II. Developmental aspects (3). III: Receptor mechanisms (5). IV: Psychometric analysis (7). V: Physiology and behavior (3). VI: Brain mechanisms (3). VII: Nutrition and behavior (3). VIII: Overview. Address: 1. Faculty of Nutrition, Koshien Univ., Takarazuko, Japan; 2. Director, Monell Chemical Senses Center and Dep. of Physiology, Univ. of Pennsylvania, Philadelphia, PA.

8988. Kuramochi, Toshiyuki. 1987. The tofu maker. In: Saga, Junichi. 1987. Memories of Silk and Straw: A Self-Portrait of Small-Town Japan. Tokyo, New York: Kodansha International. 258 p. See p. 121-23. Illust. (some color). May. 22 cm.
• ***Summary:*** This chapter appears in section 3, "Shopkeepers and tradesmen." "We kept early hours in my father's day. Now almost everything's done by machine, so even if you don't get up till after five you've still plenty of time to make tofu, but back then we used to get up before two in the morning–more in the middle of the nigh really!

"Let me see if I can remember how ours was made... First we used a treadmill to grind the two sackfuls of soybeans that had been left to [soak and] cool the night before. This job was always done by my uncle, and if he started just before two o'clock, it usually took him until five to grind them up completely. The thick mash that resulted was known as *go.*

"This was tipped into a large cauldron of water, thoroughly boiled, and then poured into the special double bag, four feet long by two feet wide, used for squeezing the soymilk from the bean solids. The double bag full of boiling *go* was extremely hot and heavy, so heavy in fact that the women could barely even lift it off the ground. You heaved this bag up on top of a tub and started wringing it–we didn't have any mechanical presses or anything, it was all done by hand. Several pine boards, tied together with straw rope, were fixed over the tub that was going to catch the liquid. The wringing bag was folded in two and you pressed down hard on it with a heavy wooden pole, about five inches thick and six feet long: one end of the pole was stuck into a hole in a wooden pillar, the middle of it rested on the bag, and you sat on the other end and squeezed the bag down using your whole body weight. But if you just sat on it without moving, the stuff wouldn't be pressed hard enough, so you had to jiggle up and down as vigorously as possible. The liquid would drip down into the tub and the bag would gradually empty. You then had to fold it in four and start squeezing again; eventually all that was left in the sack was the lees.

© Copyright Soyinfo Center 2014

"When the bag had been completely squeezed out, you added bittern to the milk in the tub to make it set. Nowadays they use calcium sulphate, but back then we went along regularly to the pickle shop and got the water left at the bottom of barrels of brine-pickled vegetables.

"When the soy milk had set, it was scooped out of the tub with a special ladle known as a *bozu* ["a Buddhist priest"] and put into wooden molds; the molds were made of cypress wood, I remember. From one you could get ten slices of tofu. But you could only make two molds, twenty pieces, at a time. Mind you, the slices used to be much bigger than they are now–they were so big in fact you couldn't have held one on the flat of your hand–about seven and a half inches long and at least three inches deep. And to turn the two sacks of soybeans into tofu, we had to complete the same process again seventeen or eighteen times. But once we'd got started and had the water on the boil, everything went smoothly, with everyone doing their particular jobs, and we'd get all of it done by just after five.

"Once we'd finished making the stuff, we had some breakfast and then went out selling it from two wooden buckets attached to a pole balanced on your shoulder. Each bucket held fifteen pieces so, with a total of thirty, plus a certain amount of water, the pole bent right down on either side with the weight. We also put a box of various types of fried tofu on top of each bucket; it took a fair bit of skill and strength to balance that lot. The buckets weren't round but slightly oval shaped, three feet wide at the longest point and two foot six at the shortest, and maybe about seven inches deep.

"In those days, tofu sellers didn't blow a horn to tell customers they'd arrived as they do now; they walked around ringing a little bell. You had to take the strain of the pole with one hand and ring the bell with the other. What's more, if we'd sold the tofu only in the town we'd never have made much of a profit, so we used to go all the way out to Manabe, and then on to the area around Hojo. Well, people back then had good strong legs–we thought nothing of going as far as Oda or Hojo. I can't see anyone doing that nowadays, eh?

"There used to be tofu shops dotted about all over town and in the surrounding villages. There was a sort of unwritten rule that you couldn't sell your stock in front of, or seven houses either side of, another tofu shop, but you could sell anywhere else.

"Fried tofu cost one sen for as much as a woman could hold in one hand; plain tofu was two and a half sen in 1915, but by the 1920s it had gone up to five sen a piece.

"The men got back at about two or three in the afternoon–dog tired–after carrying their loads twenty-five miles or more with nothing but straw sandals on their feet. My father and the others had a bath as soon as they got in, with a meal straight afterward. And, God, did they eat: one man could easily get through four or five large bowls of rice. There were ten people working in the shop in one day–for breakfast, lunch, and dinner–they put away a good sixty pounds of rice between them."

A small illustration shows a "tofu seller," from the rear, with a pole on his shoulder.

Note: A splendid book, the winner of both awards and high praise. The compiler (Saga) was born in 1941 and the writer (Kuramochi) was born in 1929. A map (p. 8) shows that the small town is Tsuchiura, in Ibaraki prefecture, just northeast of Tokyo. Address: PhD, Japan.

8989. Lin, Bi-Fong; Miyawaki, O.; Torikata, Y.; Yano, T. 1987. Energy saving in the extraction-denaturation stage of kori-tofu production and its optimization. *J. of Food Engineering* (*UK*) 6(5):333-44. [11 ref]

• ***Summary:*** "Production of kori-tofu (freeze-denatured soybean gel) involves 13 unit operations and is highly energy intensive. The previous energy analysis of a kori-tofu manufacturing process (Iibuchi et al. 1982) disclosed that the extraction-denaturation stage of this process consumed twice as much thermal energy as the succeeding drying stage. The key to energy saving in the extraction-denaturation stage was to reduce the amount of water to be heated without reducing the extraction yield. Four methods were investigated for their feasibility as alternatives... The double extraction was the most effective method so far for saving energy." Address: Dep. of Agricultural Chemistry, Faculty of Agriculture, The Univ. of Tokyo, Bunkyo-ku, Tokyo 113, Japan.

8990. Lundblad, Birgitta. 1987. Soy–The world's biggest protein reserve. *Food Focus* (*Alfa-Laval, Sweden*) No. 2. p. 14-15.

• ***Summary:*** Color photos show: (1) Several Tetra Brik cartons of soymilk made in China. (2) The soymilk plant in the Guangdong Cannery in Canton. Up until the 1960s there the major problem with soymilk was its unpleasant "beany" smell and taste. During the 1960s researchers at Cornell University "managed to control the enzyme activation by hot grinding of the beans. Alfa-Laval came up with a commercial solution on the basis of these findings in the 1970s. But it was found that the primary soaking stage was the cause of tangible loss of flavour.

"The next achievement in this field was made at the University of Illinois where they eliminated the presoaking of the beans and instead boiled them directly to kill the enzyme [lipoxygenase].

"The bean flavour was gone alright, but since the fibre residue was not removed, the product resembled porridge in consistency, which the market would never swallow. On the other hand this fibre problem was solved by the Japanese, who included a decanter centrifuge in the process. This was an important step forward which resulted in increased sales of soy milk in Japan by 85% a year for seven years.

"The drawback of this production method was that half of the protein was lost in the process. Evidently, it was not a

© Copyright Soyinfo Center 2014

solution that most of the world could afford.

"Combined the advantages: In 1982 Alfa-Laval introduced a soy milk production process that combined all the advantages of earlier achievements. The process has a simple technology and is very economical because of a high extraction efficiency.

"In the process, soybeans are cleaned without the use of water and then ground with hot water to make a slurry. After centrifugal separation of the slurry to remove fibre residue, the clarified soy base that has been extracted is passed on to deactivation of residual enzymes and trypsin inhibitor, followed by deodorization.

"Now the soy base is ready for processing into different kinds of soy products. In the blending section, sugar, fat, flavouring, colouring, etc. can be added to give the product its character and final composition. After UHT treatment, which includes homogenization, the product is finally packaged, ready for distribution. To date Alfa-Laval has signed contracts for more than ten soy base lines in Asia, Europe, Africa and South America. Most of these plants are already in operation or under construction.

"Back where it started–in China: Guangdong Cannery in Guangzhou (Canton) in the Peoples' Republic of China is a big production plant for different kinds of beverages. Their output includes ready-to-drink juices of kiwi, guava, orange and sugar cane concentrate and a chrysanthemum tea...

"Today this plant also produces approx. 20,000 liters per day of high quality, plain and flavoured soy milk. In fact, Guangdong Cannery was the first in the world to install Alfa-Laval's new soy milk line... The soy plant is now working at full speed in two shifts, normally 6 days a week."

8994. Passmore, Jacki. 1987. Asia: The beautiful cookbook. Los Angeles, California: Knapp Press. 256 p. Illust. (color). Index. 37 cm.
• ***Summary:*** This is a stunningly beautiful, oversized book–a feast for the eyes, filled with elegant color photos (many full page), authentic recipes and many insights about Asian cookery. Each recipe is accompanied by one or more photos, Contents: Japan: Simplicity and elegance. Korea: Warm and sustaining. China: From the beginning of time. Philippines: East meets West. Thailand: Titillating, tantalizing. Laos and Kampuchea: Unforgettable foods. Vietnam: Herbaceous overtones. Singapore and Malaysia: A blending of cultures. India: Southern fire, northern serenity. Burma: Exotic offerings. Indonesia: Symphony of flavors. Sri Lanka: Gems from an enchanted isle. Glossary. Acknowledgments.

Japan: Yudofu (Simmered bean curd, with 3 cakes tofu {bean curd}, p. 31). Tofu dengaku (Grilled bean curd on skewers, with 2 lb {1 kg} momen tofu and white miso, p. 31). Ton-negu no teriyaki (Teriyaki pork rolls, p. 38). Miso-shiru (Miso-flavored soup with bean curd).

Singapore and Malaysia: Popiah (with ¼ cup (about 2 oz / 60 gm) compressed bean curd cake, shredded, p. 155, 148-49). Tempe lemak (Tempe in coconut milk, p. 166). Hokkien mie (Hokkien style noodles, with 2 cakes compressed bean curd, p. 168). Laksa ayam (Chicken with laksa noodles in coconut sauce, with 2 squares / cakes compressed bean curd, p. 169).

Indonesia: Kecap manis is a sweetish soy and chili sauce (p. 218). Babi kecap (Pork in sweet soy sauce, p. 227).

Glossary (p. 252-54) includes short definitions of: Azuki beans. Bean curd. Bean pastes and sauces. Kecap manis ("based on dark soy sauce, sugar and spices"). Kombu. Nori. Paneer (India). Sesam. Wakame.

8995. Pick, Daniel Hugo. 1987. Macroeconomics and agriculture: The case of soybeans. PhD thesis, University of California, Davis. 153 p. Page 707 in volume 48/03-A of Dissertation Abstracts International.
• ***Summary:*** Contents: Abstract. Acknowledgement. List of tables. List of figures. 1. Introduction. 2. The U.S. soybean crushing industry: General characteristics. 3. Econometric model of the soybean complex: Theory, estimation, results. 4. The macroeconomic model, specification and estimation. 5. Policy scenarios and summaries. 6. Summary and conclusion. References. Appendix A–The almost ideal demand system (AIDS).

Some 50-60% of the soybeans produced in the USA between 1977 and 1982 were exported. The volume of U.S. soybean exports tripled during the last 15 years, while

© Copyright Soyinfo Center 2014

the value of exports of soybeans and soybean products increased sevenfold. Soybean production is concentrated in 5 countries: China, Paraguay, USA, Brazil, and Argentina, with the latter 3 countries being the exporters. Until 1979, U.S. soybean production accounted for 75% of the world's production, but due to rising competition from Brazil and Argentina, its share decreased to 50% in the late 1970s. In the same period, Brazil's share rose from 3.6% to about 18%. Similar trends hold for Argentina.

During this time, changes in the world's economy have led to unstable international trade. This was magnified by the collapse of the Bretton-Woods agreement [signed in 1944 in New Hampshire, it created the World Bank]. Address: Univ. of California, Davis.

8996. Shimomura, Michiko; Matsumoto, Juichiro J. 1987. [Changes in proteins of fish meat during cooking and processing. V. Changes in proteins of Spanish mackerel meat cured in miso]. *Nihon Suisan Gakkai shi* (*Bulletin of the Japanese Society of Scientific Fisheries*) 53(4):627-32. [11 ref. Jap; eng]
• ***Summary:*** Misozuke of fish flesh is a traditional processing method whereby fish are cured in miso (fermented soybean paste) in order to preserve the fish and improve its eating quality. The meat becomes more tender and fragile. It becomes harder for the first 7 days, then softer until day 21 due to the enzymes in miso. Address: Dep. of Food Science & Nutrition, Otsuma Women's Univ., Sanbancho 12, Chiyoda, Tokyo 102, Japan.

8997. Shimoura, Michiko; Takahashi, Y.; Yoshimatsu, F.; Matsumoto, J.J. 1987. Kamasu sawara niku no misozuke shori ni okeru tekusuchaa to tanpakushitsu no henka [Changes in texture and proteins of wahoo (*Acanthocybium solanderi*) fish meat cured in miso]. *Kaseigaku Zasshi* (*J. of Home Economics of Japan*) 38(1):13-21. [11 ref. Jap; eng]
• ***Summary:*** Frozen wahoo fillets were cured in miso at 4ºC for 28 days. The meat was very hard after 3 days of curing, but became tender after 21 days. Decomposition was attributed to the proteolytic enzymes of miso acting on the fish meat proteins. Address: 1&3. Faculty of Domestic Sciences, Otsuma Women's Univ., Chiyoda-ku, Tokyo 102, Japan.

• ***Summary:*** A good overview of soybeans in Chinese agriculture today, and of early history in China. "World soybean acreage has doubled during the past twenty years. This represents a greater expansion than for any other major crop. Wang Jinling of the Northeastern Agricultural College at Harbin and others have studied the photoperiodic responses of wild soybeans from the northern part of the Heilongjiang Province to the southern part of Hunan Province. They found that, among the wild soybeans of the Yangzi River valley, there are typical short-day types of

© Copyright Soyinfo Center 2014

primitive characteristics. It was concluded that the Yangzi River valley of South China was the site of origin for the cultivated soybean. Soybeans with moderate short-day behavior, when moved from that region, were found suitable for North China. But the Yellow River valley also has a large number of wild and semi-wild soybeans of many types and cultivars. Here the cultivated soybeans may have originated from the wild soybeans through selection. Lui Shilin has suggested that the cultivated soybean may have originated from many different places in China.

Soybeans were first called "shu," a word which appears repeatedly in the Shijing [The Book of Songs], which is one of the five Chinese classics dating from 1,100-771 B.C. The Chinese name for the soybean, dadou, first appeared in the book of Shen Nong from the third to fifth centuries B.C. In the "Xiao Ya" section of the Book of Songs it is mentioned that "... in Central China there was the soybean and farmers collected it." Another song, "Guofen" (1,000 B.C.) states that "in October, rice and soybeans are collected." A book by Zuo Zhuan (351 B.C.) reports that "the King of Zhou has a brother who was unable to tell soybeans from wheat." In the Mo Zi (400 B.C.) it is stated that, "relating to farming and forestry, if soybeans and millet were plentiful, the people had enough to eat."

Archaeological findings: In 1959, in Houma County, Shanxi Province, archaeologists unearthed soybean grains now found in the Natural Museum in Beijing. According to carbon-14 determinations, they are 2,300 years old [c.a. 300 B.C.]. The seed coats have a yellow color, and the weight of a hundred grains is about 20 gm. These are the earliest and oldest of archaeological soybean seed relics in the world.

Distribution of the cultivated soybean: During the Zhou Dynasty, the soybean was grown mainly in the Yellow River valley as a main food staple. It was reported that "people eat soybean grain and soybean leaf soup." During the Han Dynasty, in Central China, the people suffered one calamity after another. It was then that large numbers of peasants migrated to the northeast and carried soybeans with them, (see Book of Fan Senzhi, 100 B.C.). At that time, the area for soybean culture was 40% of all crops.

In Shandong, Henan and Hebei provinces, soybeans are used primarily as a staple food. Soybean flour (10-20%) is added to wheat flour and the flour of miscellaneous other crops for noodles, steamed bread and buns. In North China and the Liaoning Province, soybean flour is added to milk to produce a milk powder substitute. Heilongjiang and Jilin provinces are taking the initiative in transforming soybeans into a variety of meat analogs. In northeast and northern China, soybean oil is the most important cooking oil.

Soybeans for industrial uses: The soybean has many industrial uses in China. One of the most important is in the production of high grade industrial enamels. It is also used extensively in the manufacture of varnishes and alkyl resin paints, and in inks and stains, pharmaceuticals, oilcloth, linoleum, and synthetic rubber. Soybean protein is used in adhesives, paper coatings, water-thinned paints, plastics, printing inks, and textile fibers. The soybean is widely used in the production of lecithin, hormones, vitamins, furfural, bakelite, and monosodium glutamate.

Historically, soybeans, tea, and silk have been China's three largest agricultural exports. A moderate percentage (10-20%) of the soybeans produced in China are used directly as human food in the form of sprouts or immature beans in the pod and as many products derived directly from the beans. There has been a surplus of soybeans in recent years in China, and exports to the USSR and Japan have been increasing. Utilization of soybeans in China will vary with the province. In Heilongjiang, the leading producer with 30% of China's soybeans for 1984, 40% were exported to the USSR and Japan, 35% went for human consumption, 10% went for seed purposes, and 15% were exported to other provinces in China. In Jiangsu Province, 80% of the soybeans produced go directly for human consumption.

Note: This document contains the earliest date seen for an archaeological dating of soybeans in China or East Asia or the world.

9008. Tanikawa, Harry. 1988. Recent developments at House Foods and Yamauchi Inc. (Interview). *SoyaScan Notes.* Jan. 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** HF&Y has never made tempeh. The listing in Soya Bluebook was incorrect. Fuji is a separate company owned by Mr. Shoan Yamauchi. It specializes in sprouts (mung, alfalfa, and "spice" sprouts). Fuji bought Unicorn Village (Arizona), which was mostly an alfalfa sprout producer. Mr. Yamauchi is half owner of HF&Y, which is a partnership. They have had a hard time recently. First, at the end of 1985 and in early 1986 there was a lot of dumping of imported tofu by Morinaga, which had a "buy one, get one free" offer. The FDA made them change their labeling and gave them 3-4 months to deplete their old stocks. This problem is no longer serious. Second, they are now in the 6th week of a strike. The Hispanic workers are the most discontent. The local Chinese tofu makers sell at a pretty low price. HF&Y no longer even tries to compete with them in the Asian-American market; since 1981 they have become a company that sells primarily to supermarkets.

They are unionized and offer their employees a fair wage and benefit package; many smaller competitors are not unionized. HF&Y was unionized in 1981, before House Foods entered in 1983. That led to a big loss of ability to compete. That is why they have had to take such a strong stance during the current strike; what the union was asking for would have priced the company out of the market. House Foods has definitely not taken profits from the company, which raised prices; it all went to labor. Still House is very happy with its partnership. Azumaya may have passed HF&Y as America's largest tofu maker. They have taken a more aggressive attitude (especially outside California), and less red tape. He is not aware of any agreement between Azumaya and HF&Y not to compete in out-of-state markets. For decades, they have not competed inside the state. Address: Sales Manager, House Foods & Yamauchi, Inc., Los Angeles.

9009. Miyazawa, Mitsuo. 1988. [Re: History of Sendai Miso Shoyu Co. Ltd.]. Letter to William Shurtleff at Soyfoods Center, Jan. 14. 2 p. Handwritten. [Jap; eng+]
• ***Summary:*** Although this company was founded in 1919, its roots go back to the late 1500s. In March 1593 (Bunroku 2) 3,000 soldiers of Idate Han (the former feudal domain in northeast Japan where Sendai is now located) went to Korea, led by Daté Masamuné (DAH-tay Mah-sah-MU-nay) in the army of Toyotomi Hideyoshi. It was found during the summer battles that the miso brought by the soldiers from most other Hans started to spoil; only that from Idate Han (Sendai) remained tasty, and it was shared with the other soldiers. From this time the fame of Sendai Miso began to spread throughout Japan.

During the Genroku Period (1688-1703) the miso makers in the Sendai area formed a trade group named Miso Nakama. "Nakama" means "colleague, fellow worker, comrade, or associate." They established rules and made miso under the motto "Examine the quality first." During the Kyoho Period (1716-1735) they started selling shoyu and the group changed its name to Miso Shoyu Nakama." Sasa Ju (Sasaki Jubei) joined this group in the year 1834 (Tempo 5) and worked to protect its quality and tradition. During the Taisho Period (1912-1916) the Japanese economy was strong and demand for miso and shoyu from the Sendai area increased. So in 1919 the members of the Miso Shoyu Nakama formed Sendai Miso Shoyu K.K., headed by a descendant of Sasaki Jubei with the same name. The current president of Sendai Miso Shoyu K.K. is the 8th generation named Sasaki Jubei.

Since the mid-1970s the company has exported quite a bit of its naturally fermented miso and shoyu to macrobiotic and natural foods companies in the USA and Europe. Address: Sendai Miso Shoyu Co. Ltd., Furujiro 1-5-1, Sendai 982, Japan.

9010. Pritchard, Roxanne. 1988. New developments with Azumaya's Stir Fruity non-dairy yogurt (Interview). *SoyaScan Notes.* Jan. 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The initial problems were shelf life and wheying off. Now both have been solved. The product has a creamier consistency; it is not chunky when stirred. During the initial launch, the product was sold in the dairy section of supermarkets. But that would have required a long-term commitment to a very expensive advertising program. Now they sell it in the produce section and do in-store demos to promote it. In many cases it is stored in a closed cabinet, which has a lower temperature. Azumaya makes all the tofu they use in their Stir Fruity. Jill Mizono is now sales manager. Address: Azumaya, S. San Francisco, California.

• ***Summary:*** Experiments showed that tempeh controlled the mutagenic activities of AF2, a powerful carcinogen, used during the 1970s in Japan as a tofu preservative. Address: Prof., Faculty of Science of Living, Osaka City Univ. Sugimoto 3-3-138, Sumiyoshi-ku, Osaka 558, Japan. Phone: 06-605-2811.

9012. *Soybean Update.* 1988. Taiwan, the world's third largest importer of U.S. soybeans, is considering raising its duty on soybeans from 3% to 5%. Jan. 25.
• ***Summary:*** In July of last year, the Taiwanese government lowered the duty from 7.5% to 3.5%. The duty was dropped to 3% at the beginning of the year. The money generated from the move would subsidize fruit producers in Taiwan. Taiwan imports 99% of its soybeans from the U.S. Japan is the largest importer of U.S. soybeans.

9013. Kagiyama, Shogo; Aiba, T.; Kadowaki, K.; Mogi, K. 1988. New killer toxins of halophilic *Hansenula anomala.* *Agricultural and Biological Chemistry* 52(1):1-7. Jan. [23 ref]
• ***Summary:*** Two strains of killer yeasts, both identified as *Hansenula anomala,* were isolated from shoyu moromi. Both killer yeasts showed killer activity toward *Zygosaccharomyces rouxii* EA under high NaCl concentration conditions. Both toxins were glycoproteins. The killer activities of both toxins increased with increasing NaCl concentration. The killer activities of these strains were not abolished by cycloheximide treatment or by cultivation at 37ºC. No plasmid was detected in either killer yeast. Address: Research Lab., Higeta Shoyu Co. Ltd., Choshi-shi, Chiba 288, Japan.

9014. Miyao, Shigeo; Yamamoto, Atsuyoshi. 1988. Chômi moyashi no kakô to bisei-butsu [Processing of, and microorganisms in, seasoned soybean sprouts]. *Nyu Fudo Indasutori* (*New Food Industry*) 30(1):27-29. Jan. [Jap]
• ***Summary:*** Focuses on the level of Bacillus in seasoned soy sprouts. In dry soybeans the number of microorganism strains is: Bacillus 19, Micrococcus 13, Coryneforms 7, Molds 3. In soybean sprouts the number of strains is: Pseudomonas 58, Enterobacteriaceae 38, Acinetobacter & Moraxella 23, Flavobacterium 16, Xanthomonas 3, Alcaligenes 3, Micrococcus 3. Address: 1. Tokyô-to Nôgyô Shikenjô (Tokyo Metropolitan Agric. Exp. Station, Tokyo, Japan); 2. Kaneka Shokuhin K.K., Shokuhin Kenkyûshitsu (Food REsearch Lab.).

9015. Ohnishi, K. 1988. Miso jôzô ni okeru α-ka mai no riyô [Utilization of pre-gelatinized rice in the production of rice miso]. *Nippon Jozo Kyokai Zasshi* (*J. of the Brewing Society of Japan*) 83(1):30-36. Jan. [25 ref. Jap]
Address: Takeya-miso, Suwa, Nagano-ken 392, Japan.

9020. Sturgeon, Bruce. 1988. Great Eastern Sun and the U.S. soymilk industry (Interview). *SoyaScan Notes.* Feb. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** "Both Great Eastern Sun and Mitoku still import soymilk from Japan. Barry Evans (president) okayed my releasing our sales in terms of gallons of soymilk. Each of the following is our fiscal year from September 1 to August 31 the next year."

Year Gallons sold Percent Increase
1985-86 100,000 -
1986-87 106,000 6% New quart introduced
1987-88 148,000 40% Based on 5 months, annualized

The big increase in the current year is due almost entirely to the American soymilk. In the first 5 months of this year we've sold as much American-made soymilk as we sold in all of last year. We only make quarts in America. In New England, the low-price area, it retails for $1.59/quart average. A lot is sold in truckload quantities. During some sales, it goes for as little as $1.29/qt. On the West Coast it is typically $1.99 to $2.19. By comparison, the imported 6 oz product retails for $1.09 to $1.19, which is 3.8 times as much per fluid ounce, and this is not even a full margin. The product is made in Minnesota at St. Peter Creamery (which also makes spray-dried soymilk) then shipped in a stainless steel dairy tanker to Borden's in Pennsylvania. If that freight could be eliminated, it would allow significant reduction of the retail price. They are actively talking with St. Peter about getting a Tetra Pak machine there and sharing it. Edensoy's price is also high because of depreciation, and Sunsoy's because of exchange rate. There is considerable pressure on Vitasoy to float their currency. It will be interesting to see what happens to Vitasoy prices if that happens. Vitasoy has low overhead and plenty of excess capacity. Tetra Pak's sales of all products are way below their expectations; the main activity is in juices. Soymilk is doing well for them. Milk has not gotten off the ground, but it could with *Lysteria* scares and deaths. GES holds 1% of their product run for quality control. There are three routes of possible bacterial contamination in Tetra Pak cartons. 1. The spores that are not killed by the temperature/time combination. 2. Bacteria entering through a poorly sealed seam. 3. Bacteria entering through a failed steam seal in the 40-foot pipe from the UHT unit and the packaging machine. The packages explode. Address: Director of Marketing, Great Eastern Sun, 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730.

9021. Kainuma, Teisuke. 1988. Honolulu Sake Brewery Co. Ltd. (Interview). *SoyaScan Notes.* Feb. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Honolulu Sake Brewery Co. Ltd, 2150 Booth Rd., Honolulu, HI 96813. Phone: 808-537-9069. It was founded about 80 years ago by Mr. Sumida, who is no longer living. His grandson, Mr. Sumida, is retired and lives in Honolulu. The company used to be called Honolulu Sake and Ice Co. It was recently purchased by Takara Sake Co. (Nihon Takara Shuzo Kaisha). They presently make soy sauce, sake, nigori (thick white sake) and mirin. Good contacts are Ron Sumida and Mr. Kimura, an engineer. Mr. Takao Nihei, who is retired in Honolulu, is the best man on the history. Phone: 808-537-1369. He wrote a history of the company and of sake in America, which was published in *Nippon Jozo Kyokai Zasshi* (1978, 1985). He might know if there was any amazake produced commercially in Hawaii. Mr. Kainuma has Mr. Nihei's articles on the history of sake, miso, and shoyu in Hawaii, which he will send. Takara makes sake in America. It contains 16% alcohol, by volume. In 1983 Takara purchased Numano Sake Co., which was founded in 1978 by Mr. Numano at 708 Addison St. in Berkeley, California. Address: V.P., Director of Production, Takara Sake USA Inc., 708 Addison St., Berkeley, California 94710. Phone: 415-540-8250.

9022. Nihei, Takao. 1988. History of amazake, sake, shoyu, and miso in Hawaii (Interview). *SoyaScan Notes.* Feb. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Phone interview followed by a letter dated Feb. 18. He has written a history of sake, miso, and shoyu in Hawaii and America (5 installments), which he will send. Sake was first made in Hawaii in 1908 by Honolulu Shuzo Seizo Gaisha; the brand was Takara Masamune. Mr. Nihei did research on shoyu and miso at the National Fermentation Lab (Jozo Shikenjo) in Japan with Dr. Nakano and knows our work. From there he got into sake. He doesn't know much about amazake but thinks that there are no publications on it and there was never a commercial amazake company in Hawaii. The reason for that is that since long ago everybody there has made amazake from sake lees, perhaps since 1908, and not from koji, though koji was sold before World War II. He moved to Hawaii in 1950 and many people were making amazake from sake lees at that time. They mix the sake lees with hot water, plus sugar and a little grated ginger. His wife's method is his favorite.

Recipe #1, Hawaiian Style Amazake from Glutinous Rice and Sake Lees: Cook 1 cup glutinous rice (incorrectly called "sweet rice" or "mochi rice") with 3 cups water to make a porridge or gruel (*okayu*). Turn off heat and leave in covered pan for 10 minutes. When it is still fairly hot (50-55ºC; 122-131ºF), mix in 1 lb sake lees (sake kasu, which still contain some enzymes). Wrap the pot with towels or a blanket to keep the heat at about 130-140ºF (this is important) and allow to incubate in a warm place for about 2-3 hours. When the mixture becomes soft, add 1 cup sugar and 3 cups hot water, then bring to a boil over low heat. To serve, mix 1 part of this base with 2 parts water; Enjoy hot or cold. Refrigerate leftovers in a sealed glass jar.

Recipe #2, Quick and Easy Hawaiian Style Amazake from Sake Lees (without Glutinous Rice). Mix 3 cups hot

© Copyright Soyinfo Center 2014

water with ¼ pound (about 3/4 cup) sake lees. Let it stand for a while until the lees become soft. Heat on low heat, stirring gently until lumps dissolve. Stir in ½ to 3/4 cup sugar and ¼ teaspoon salt. When it comes to a boil, add a little grated ginger juice immediately, and serve. Address: 422 Uhini Place, Honolulu, HI 96813. Phone: 808-537-1369.

9023. *Herald-Journal* (*Clarinda, Iowa*). 1988. Iowa completes Japanese soybean market. Feb. 18. Also in Herald-Patriot (Chariton, IA). Feb. 25. "Goal is Soybean Japanese Prefer."
• ***Summary:*** Iowa farmers are trying to be more competitive in producing special soybeans for the Japanese. The Vinton and Pride soybeans, special varieties used in tofu, are large-seed, high protein. They have a yellow seed coat and a clear hilum. Other types of soybeans known as Prize and Iowasoy L5301 are used in preparing miso. In Iowa, out of 7,000 soybean farmers, only 100 farmers grow the special soybeans. There are no more than 100,000 acres in Iowa for producing special soybeans, which is a small amount. A farmer takes some gamble because these special varieties of soybeans don't yield as much as regular soybeans. However, a farmer receives a premium for high quality special soybeans. The market is changing, becoming more specialized. To sell the special soybeans a farmer has to contract with one of the eight soybean exporters in Iowa. During the 1960s Japan received it's food soybeans from the IOM, which stands for Indiana, Ohio, and Michigan.

9024. Kauffman, Harold. 1988. Possible workshop & conference on small scale soybean processing for developing countries (Interview). *SoyaScan Notes.* Feb. 18 and 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Chinese in Jilin are interested in hosting the conference on 22 Aug. to 3 Sept. 1988 or 1989, but the research center is in a rural village with accommodations for only about 50-60 people. The two key questions are (1) whether to hold it in 1988 or 1989, and (2) sources of funding. Dr. Kauffman has gotten a verbal commitment from USAID, who may want to tie it in with their opening an office in China. Japanese sources (Ministry of Agriculture, National Food Research Inst. at Tsukuba) have shown interest but they cannot act quickly. I suggest (1) Make this the first of an annual or biannual conference, each on a different continent, (2) Have a combination conference and expo, with low-tech equipment, (3) Have multiple tracks in the conference for varying interests (LECs, tofu production, nutrition), (4) Invite Tokuji Watanabe as a speaker on modernization of the tofu industry in Japan, (5) Publish a book titled "Soyfoods Success Stories from Developing Countries."

Note: This workshop was cancelled following the massacre in Tiananmen Square, Beijing, China on 4 June 1989. Address: Director, INTSOY, Univ. of Illinois, Urbana, IL.

9025. Erb, Gene. 1988. Soybean research sprouts products. *Des Moines Register* (*Iowa*). Feb. 21.
• ***Summary:*** Lawrence Johnson is the professor in charge of the Food Crops Processing Research Center at Iowa State University. By the 1930's and 1940's, scientists were earnestly working to find new products and ways to use the soybean. "Utilization research" flourished during those decades. Johnson said, "In this country, we have not aggressively sought export markets for value-added products. We have concentrated on exporting low-value commodities. The major utilization research projects from the 1930's and 1940's ceased in the 1950's because we thought we were headed toward a world food crisis. We shifted to production research and away from utilization. We have to go back to some of the old ideas that have been neglected since the late 1940's. Current research projects at ISU's Food Crops Processing Research Center are directed at improving food and feed processing operations and profitability,"

Several projects are aiming at finding faster, cheaper ways to extract oil from soybeans. The university's Vinton bean is preferred by the Japanese for the production of tofu. Researchers Walter Fehr and Earl Hammond have developed a soybean low in linolenic acid. A small-seeded soybean developed at ISU should be ideal for making soybean sprouts for use in salads. The goal is to develop specialty strains for unique uses.

9026. Belleme, John. 1988. Update on miso in America. How about amazake as a soymilk sweetener? (Interview). *SoyaScan Notes.* Feb. 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mitoku (Mr. Kazama and Chris Dawson) is considering a joint venture with Sendai Miso Shoyu of a miso plant on the West Coast of the USA. This is still very tentative. They are also considering making amazake. But about 2 years ago Miyako Oriental Foods increased their miso production capacity. They can probably make over 1 million pounds a year now. It was about 600,000 lb/year. Fujiwara Brewing Co. in Okayama, which makes equipment for miso and soy sauce companies, supplied the equipment to Miyako. The company San-J finally used to build their tamari plant and supply the equipment was Fujiwara's competitor, Nagata. Steve Earle said this was the same company that had just helped expand the Miyako plant. According to the people at Ohsawa-America, Mr. Kitani, the Japanese man who makes Yamaki Shoyu, and Bob Kennedy, formerly of Chico-San are planning a miso plant in the USA, probably with automatic koji equipment.

John feels that sales of miso in America have slowed down and that if new companies enter the market, it will be oversupplied. At American Miso Co. his maximum capacity was about 400,000 lb/year. The volume hasn't changed

© Copyright Soyinfo Center 2014

much in the past few years. Christian Elwell at South River Miso Co. has a capacity for about 60,000 lb/year, which he hasn't reached. Both these are more expensive than Miyako ($4.49 for American Miso white miso, Christian's is more, and Miyako's is about $2.85/lb, or only 63% as much). He suggests: How about amazake as a sweetener for soymilk? It would replace barley malt and give the soymilk more body, kind of like a shake. Then you can put rice on the label. Great idea! Address: Route 5, Box 258, Rutherfordton, North Carolina 28139. Phone: 704-749-9537.

9027. Roller, Ron. 1988. Edensoy and the U.S. soymilk market (Interview). *SoyaScan Notes.* Feb. 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron estimates the size of the U.S. soymilk market to be about 2.1 million gallons a year (not including infant formulas, or small fresh local manufacturers). The largest companies, in descending order of size, are: American Soy Products (Eden Foods; 55-65% market share), Vitasoy, Sunsoy, Westbrae, and Great Eastern Sun. The trend is definitely up. Vitasoy's aggressiveness in the marketplace from early 1987 slowed down Edensoy's progress. Then Vitasoy had big programs and in the last 4 months they seem to have cooled out quite a bit. A Dun & Bradstreet report shows that they lost $700,000 last year selling soymilk.

All is going very well in the joint venture with the various Japanese companies. The relationships are generally harmonious, and they are on target in terms of their volume goals and expectations. They hope to increase volume to cut down overhead expenses. The plant can make 65-70,000 cases/month. During the last 2 months there have been 15 enquiries for export, some of which will soon be signed agreements with France, New Zealand, Australia, etc. They have approval for 190 Kroger stores and are cautiously optimistic on this. Mr. Iwazuki from Marusan runs the ASP plant. They now have 6 soymilk products which are Eden Foods' top six best-sellers: three flavors (carob, vanilla, original) in two sizes (liter and 250 ml). By volume, the liter outsells the 250 ml by more than 3 to 1. Next: an organic soymilk (They now use non-organic Beeson soybeans. The organic market now seems to be growing rapidly), some new flavors, and some totally new soy products, such as tofu. Eden no longer imports soymilk. Soymilk is pretty price sensitive; whenever they put it on sale, it moves. They just started a case-stack program that Sunsoy has had for years. When they started the plant they stopped wholesaling, and dropped over $1 million of wholesale business. But they made that up this past year, plus some.

Concerning oil in soymilk: The label on their Japanese imported product was not correct. Oil was added in Japan but Eden was not told. It was not listed on the label. When their U.S. product was launched, it contained less than 1% added oil. Eden got so many complaints about this small amount that they now no longer add oil, except to the carob, and that will be discontinued as soon as their present labels are reprinted.

Concerning other grains, they are importing Job's tears, which is now recommended by macro teachers for cancer patients. They brought the price from $8.50 down to $2.00/lb and sell lots. Also involved with quinoa, they used to be the master distributor for Quinoa Corp. but are now importing lots from Andean countries; expect to reduce the retail price by 40%. They are thinking of using quinoa in soymilk. Their present sweetener is "malted cereal sweetener" which is made by mixing sprouted barley with corn grits, the adjunct. Rice is too expensive. You can get a higher sugar content with corn than with barley. Rice is still higher in sugar. Corn converts the fastest; rice is slow. It is specially made by a malting house, and they use almost a tanker load every 10 days. They helped develop the product and intend to come out with a line of malted grain sweeteners using malted barley plus different grains. "There is a lot of funny business in the malting arena." They did not like the use of commercial enzymes by California Natural Products. He thinks most people do not realize how their rice syrup is made. Address: Director of Purchasing, Eden Foods, Clinton, Michigan.

9028. Kushi, Aveline. 1988. Early imported amazake and miso in America (Interview). *SoyaScan Notes.* Feb. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Aveline recalls that she first saw amazake in America in Los Angeles in about 1970. She bought some at the time. It was a white rice amazake imported from Japan, probably in a plastic bag. She came to America in 1951 and by 1952 recalls seeing Hatcho miso being imported to the East Coast from Japan by Japan Foods. Address: Brookline, Massachusetts.

9029. *Los Angeles Times.* 1988. Runners to receive Mori-Nu Tofu. Feb. 25.
• ***Summary:*** An anticipated 15,000 Los Angeles Marathon runners will get something different in their pre-race "goodie bags" this year–tofu.

Samples of recipes made with tofu will be offered to the public as well during the marathon's four day Health and Fitness Expo and race-day Finish Line Festival.

9030. Archer Daniels Midland Co. 1988. Second quarter report to stockholders. Box 1470, Decatur, IL 62525. 8 p.
• ***Summary:*** On 19 Jan. 1988 ADM common stock began trading on the Tokyo Stock Exchange. ADM was the 62nd U.S. company and the 90th foreign company accorded listing privileges by the Tokyo Exchange. Tracing its history to the establishment of the Tokyo Stock Exchange Co., Ltd. in 1878, the Tokyo Stock Exchange in its present form was founded in 1949. It is now one of the most active and influential markets in the financial world.

© Copyright Soyinfo Center 2014

ADM is now actively developing degradable plastic bags from corn starch. Address: Decatur, Illinois.

9031. Asanuma, Shuichi. 1988. Naijeria ni okeru daizu no saibai to konryûkin [Cultivation of soybeans and root nodule bacteria in Nigeria]. *Daizu Geppo* (*Soybean Monthly News*). Jan/Feb. p. 4-11. [10 ref. Jap]
Address: Nôgaku Hakase, Nôrin Suisanshô, Hokkaidô Nôgyô Shikenjô, Shunin Kenkyû-kan.

9032. Breene, William M.; Harrigan, Kathleen A. 1988. Sucrose esters: Their impact on soybean oil utilization. In: L. McCann, ed. 1988. Soybean Utilization Alternatives. St. Paul, MN: Univ. of Minnesota Center for Alternative Crops and Products. vi + 429 p. See p. 367-80. [32 ref]
• ***Summary:*** Discusses: Nature of sucrose esters. History of sucrose esters. How sucrose esters are made. Uses and potential uses of sucrose esters. Regulatory status of sucrose esters. The future of olestra. Impact of olestra on soybean utilization. Sucrose polyesters (SPE) are not the newest class of food additives on the market, but they may well prove to be among the most versatile and controversial. The concept of sucrose polyester production in the U.S. was probably initiated in 1952 when Dr. Henry B. Haas, then president of the Sugar Research Foundation, urged Dr. Foster D. Snell to investigate the possibility of "hanging a fat tail" on sucrose to make detergents.

The original patent for "Low Calorie Fat-Containing Food Compositions" was granted to Procter & Gamble Co. in 1971 for products developed in their laboratories by Fred H. Mattson and Robert A. Volpenhein. The patent expires in August of 1988. The company has proposed "olestra" as the generic name for these products. The Japanese market is dominated by Ryoto Co. Ltd. which was formed in 1972 as a result of the joint venture between a Japanese chemical supplier, Mitsubishi Chemical Industry Ltd. (MCI) and the Dainippon Sugar Manufacturing Co. Ltd., licensee of the Snell process since 1958. MCI is the world's largest producer of sucrose esters, with 70% of the world's sales.

The history of SPE approval as a food additive began in Japan in 1959. In 1969, the Joint Food and Agriculture / World Health Organization (FAO/WHO) Expert Committee on Food Additives approved usage. Originally SPE was the product of research to determine which fats might be easily digested by premature infants. The research resulted in an "180 degree turn" when it was discovered that SPE were less, rather than more, digestible than triglycerides. Procter & Gamble has requested that the FDA allow olestra to be used as a replacement for up to 35% of the fat in cooking oils and shortenings used in homes and restaurants, and up to 75% of the oils and shortenings used in the deep-frying of snack foods. The reduction in calories for each of these products was at least 32% and ranged as high as 56%. Address: Dep. of Food Science & Nutrition, Univ. of Minnesota.

9033. *Harvard Medical School Health Letter.* 1988. Follow-up and feedback: Soy sauce and fish (Substances favoring nitrosamine formation). 13:8. Feb. [1 ref]
• ***Summary:*** "Our article on nitrates and cancer (June 1987) mentioned that 'some types of preserved fish and certain varieties of Japanese soy sauce' are among the foodstuffs containing substances that favor formation of nitrosamines. Nitrosamines have been implicated in carcinogenesis, and it has been suggested that a high dietary exposure to them might promote cancer of the stomach (which is increasingly rare in the United States, but very common in Japan). It has also been suggested that their formation from nitrites can be inhibited by the actions of vitamin C and vitamin E.

"Several readers, understandably, wrote to ask *which* soy sauces and fish have this characteristic. In the case of soy sauces, we don't know. The Japanese researchers who reported the finding identified the products they studied only by country and state of origin. Several soy sauces produced in the state of Chiba, Japan, and one from the state of Mie, converted nitrite to nitrosamine at a high rate, and the resulting material had a high score on a laboratory test of bacterial mutation (a version of the Ames test), which is believed to correlate with carcinogenic potential. Soy sauces produced in other Japanese states and Hawaii, and most produced in the United States, yielded less nitrosamine and had much lower scores. One exception, from Wisconsin, was very high on both counts. But it was only identified as 'soy sauce M.'"

• ***Summary:*** Morinaga announced that it will joins the Soyfoods Association, which was organized in 1984.

9035. Kikkoman International Inc. 1988. Kikkoman stands on ceremony (Ad). *Prepared Foods* 157(2):3. Feb.
• ***Summary:*** This full-page color ad shows two shallow shoyu tasting cups on a tray. "We would consider it an honor to perform Soy Ceremony for you personally. To see, smell and taste the Kikkoman difference contact Kaz Takei, Kikkoman International, Inc.," San Francisco.

"Choose from: Regular Brewed Soy, Reduced Salt Soy, Preservative Free, and dehydrated Soy Sauces. Kikkoman provides technical advice and prompt service from over 20 U.S. distribution centers."

Across bottom of ad: "Since 1630. Kikkoman. Good taste is our business."

9036. Morinaga Nutritional Foods, Inc. 1988. Lessons in tofu (Ad). *Vegetarian Times.* Feb. p. 7.
• ***Summary:*** This striking full-page color ad contains the following sections: Not all tofu are created equal. Eat everything your heart desires. Mori-Nu makes delicious

© Copyright Soyinfo Center 2014

Lessons in Tofu.

Not all tofu are created equal.

Mori-Nu Tofu is different. It's the only tofu that's actually made right inside an aseptic package. While most other tofu are made first, then packed in water, losing freshness daily, Mori-Nu's exclusive package locks in the delicious flavor of just-made tofu with every box and protects it until you open it. Guaranteed. No preservatives, no irradiation. Just silken-smooth tofu in a convenient revolutionary package.

Eat everything your heart desires.

Mori-Nu is a cholesterol-free, low-calorie protein source. It is also low in sodium and adapts easily to your favorite recipes, often letting you eliminate milk and eggs entirely. Make everything from drinks, dips and dressings to hearty main courses and desserts. Scramble it, broil it, bake it—even fry it. Or slice it into soups and salads. Just about any meal you prepare can benefit from this simple, natural, healthy and versatile food.

Mori-Nu makes delicious fun.

Blend the sweetness of strawberries into beautiful nutrition. Here's an easy, elegant dessert that everyone will love.

Strawberry Pudding Fluff

1 envelope unflavored gelatin.
1/4 cup boiling water.
1-10.5 oz. package **Mori-Nu Tofu (Silken/Soft),** drained, at room temperature.
3 Tbsp. honey, light color.*
2 cups whole fresh strawberries, if frozen use unsweetened, thaw, and drain.
1/2 cup additional strawberries.

1. Dissolve gelatin in boiling water. Stir until crystals disappear. Allow to cool.
2. In a blender or food processor, combine tofu, honey and gelatin mixture. Add 2 cups strawberries, a cup at a time. Blend on low. Allow some berries to remain in chunks.
3. Place the remaining berries in bottom of each serving glass. Add strawberry tofu mixture. Chill until set and serve cold.

*To sweeten, add more honey as desired.

Makes 4 servings of 6 oz. each. Per serving 126 calories, 5.8g protein, 2.8g fat, 23g carbohydrates, 8mg sodium, 0mg cholesterol.

Healthy Times focuses on today's heart-healthy lifestyles. Meet interesting people, learn about nutrition, and discover exciting, original tofu recipes.

Join the Mori-Nu Health for Life Club.

Learn more about this miracle food. Receive bi-monthly mailings of the **Healthy Times**, Mori-Nu's own newsletter, 15¢ coupons (2 per mailing) and full color tofu recipe series. For a one-year membership, send $2 check or money order to: Morinaga Nutritional Foods, Inc., Box 50, Dept. B 388, Pico Rivera, CA 90665.

Look for Mori-Nu's miracle package.

You'll find Mori-Nu in the Produce, Deli or Oriental food section of your store. Ask for it by name.

Always tastes just made. MORI-NU

9037. *Natural Foods Merchandiser.* 1988. Soyfoods import costs rise as dollar declines. Feb. p. 32.
• ***Summary:*** Discusses techniques used by Westbrae, Edward and Sons Trading Co., Eden Foods, and San-J International to try to deal with the falling value of the dollar against the yen. The dollar began its fall in September 1985. In the past 18 months, the dollar has been devalued almost 40% against the yen, making Japanese imports about 40% more expensive. To try to keep consumer prices as low as possible, some companies try to absorb the cost increases themselves, some ask Japanese manufacturers to help, and some (such as Eden Foods, Westbrae, and San-J) start to make products in the USA.

9041. Sipos, Endre F. 1988. Edible uses of soybean protein. In: L. McCann, ed. 1988. Soybean Utilization Alternatives. St. Paul, MN: Univ. of Minnesota Center for Alternative Crops and Products. vi + 429 p. See p. 57-93. [107 ref]
• ***Summary:*** Discusses: Definitions and methods of preparation. Nutritional and health aspects of soy proteins: Nutritional value of soy protein ingredients, amino acid profile, digestibility, amino acid requirements, nutritional value of soy proteins in food systems, meat, poultry, and fish, dairy products, cereal grains, health and soy protein products. Functionality: General properties, functionality of soy protein ingredients, soy flours/grits (untextured), soy protein concentrates (untextured), soy protein isolates, soy albumens, textured/structured soy protein products, flavor and texture. Uses in food systems: Meat food products, emulsified meats, coarsely-chopped meats, canned meats, whole muscle meats, poultry products, seafood products, analogs, pet foods, dairy-type products, bakery products–cereals–pastas, bread and rolls, specialty breads, cakes and cake mixes, doughnuts, breakfast cereals, pasta products, misc. baking applications, misc. foods. Consumption trends. Future considerations. Summary.

Soy protein concentrates are preferred in milk replacers for baby animals such as calves, lambs, and pigs because of their low soluble carbohydrate content (i.e. less gastrointestinal disturbance problems) and lower immunogenicity. The industry producing edible soy protein products for human consumption has grown enormously since the late 1950's. Yearly world production is estimated to be approximately 1,500,000 tonnes (metric tons or 3,300 million lb; Note: Text figure of 1,500 tonnes is an error) of soy flour, 90,000 tonnes (200 million lb) of soy protein concentrate, and 70,000 tonnes (170 million lb) of soy protein isolate, which amounts to about 3,700 million pounds/year of edible protein for human consumption. Since soy flour is used in many developing countries where statistical records are incomplete, the figure for this

© Copyright Soyinfo Center 2014

ingredient could be higher than given here. The demand for soy protein concentrates appears to be growing at the fastest rate.

Note: Dr. Dale Johnson, in a personal communication to Dr. Walter Wolf at the USDA Northern Regional Research Center in Peoria, Illinois, estimated the 1985 production of isolated soy proteins in the USA to be 70,000 tonnes. Sipos here gives that same figure as the world total. Yet isolate production has increased worldwide since 1985 and it is produced outside the USA in Japan, in Belgium (by Ralston Purina), and in China. Address: Sipos & Associates, Inc. Fort Wayne, Indiana.

9042. *Southern Supermarketing* (*Birmingham, Alabama*). 1988. Kikkoman International–After more than 300 years, the success continues. Feb. p. 6-7.
• ***Summary:*** In the last two years, the South has shown the strongest growth record for Kikkoman products as compared to all other regions of the country. The Kikkoman method of production is a six-month process as compared to about a week required for the blended mixture (HVP). Kikkoman is not only the world's oldest brand of naturally-brewed soy sauce–it is also the world's largest selling soy sauce. In Japan, the average person consumes approximately 2.6 gallons of soy sauce a year. Kikkoman's share of this huge market, where there are about 3,000 soy manufacturers, is approximately 30%. In 1957, Tom Yoshinaga pioneered Kikkoman International Inc. in the U.S. and began opening regional offices like stepping stones.

Today, Kikkoman International has five regional offices in San Francisco, Los Angeles, New York, Chicago, and Atlanta. When Kikkoman first entered the U.S. market in the 1950s, the product was very unique in terms of its positioning because it had "All Purpose" printed on the label. Those two words were an important factor contributing to the success of the brand. In 1961, Kikkoman pioneered the bottled teriyaki sauce market in the U.S. Kikkoman introduced Teriyaki Baste & Glaze in 1984. Baste & Glaze is a thick and richly flavored teriyaki sauce. In 1982 Kikkoman developed Lite Soy Sauce with 40% less salt. This product represents about 20+% of Kikkoman's total soy sauce volume. Similarly, in 1986 Kikkoman introduced Stir-Fry Sauce.

• ***Summary:*** Quality traits include aroma and flavor. Address: Faculty of Home Economics, Gifu Women's College, Gifu, Japan.

9045. Wood, Rebecca T. 1988. All-American miso. *Bestways.* Feb. p. 27.
• ***Summary:*** Prior to the 1970's, miso was an unknown word–and taste experience–to most Americans. Today this traditional Japanese food, is fast becoming an important staple for the health conscious. Address: Crestone, Colorado 81131.

9046. Earle, Steve. 1988. Re: Answers to questions about the history of San Jirushi. Letter to William Shurtleff at Soyfoods Center, March 7. 3 p. Typed, without signature on letterhead.
• ***Summary:*** No history per se of San-Jirushi has ever been written, however the Sato family has many records of historical interest. The original company, named Minato-ya ("Harbor Company"), was a trading house that traded up and down the rivers that empty into the Bay of Ise at Kuwana. Among the wares traded were salt, miso, and tamari. The miso and tamari were brewed in one of their warehouses (*kura*). Later this became Minato-ya's principal business as the shipping trade moved north to Nagoya.

"There are indications that Minato-ya was already in operation at the beginning of the Edo period (1601), however it is not clear when it began producing miso and tamari as the earliest records were lost when the Minato-ya kuras were burned due to fire bombings in the Second World War...

"The company name was changed in 1909 from 'Minato-ya' to 'Sato Shinnosuke Shoten' and finally to 'San-Jirushi Brewing Corporation' in 1963.

"The original address was Ise-no-kuni, Kuwana-gun, Kuwana-cho Ooaza Senba.

"The original brand/trade name was Yamasan. The name and mark [three horizontal lines with a roof-like mountain

© Copyright Soyinfo Center 2014

over the top] symbolized Mount Tado (upriver just northwest of Kuwana) and the three rivers, Kiso, Ibi and Nagara...

"The mountain was dropped from the mark and the name changed to San-Jirushi in 1909. This name was officially registered in 1912.

"The original products were called 'miso' and 'tamari' (not 'tamari-shoyu'). The original ingredients of Minato-ya's miso and tamari were soybeans, water and salt. No wheat was used. There was also originally no *kosen* (roasted barley flour) used with the seed koji. This koji was called 'tomo-koji' and was made by obtaining koji-dama (half-fist sized balls of compressed, cooked soybeans) which were then hung in straw sacks over the rafters in the kura loft to incubate. In these days there were apparently tradesmen, much like the 'toujishi' in sake brewing, who made a circuit of miso and tamari brewers, bringing with them tomo-koji. There is still one employee of San-Jirushi who can recall making koji by this method in the old San-Jirushi kura.

"San-Jirushi began using seed koji [koji starter] in 1933. Koji-ya Sanzaemon, the koji house that still supplies San Jirushi today, has been in operation continuously since the Muromachi period supplying seed koji for sake manufacture, however this technology was not applied to miso and shoyu manufacture until quite late (Kikkoman and the four major shoyu brand makers began using seed koji at about this same time)." Address: UN Park Building, 7th Floor, Ebisu-Nishi 1-19-6, Shibuya-ku, Tokyo 150, Japan. Phone: 03-780-5933.

9047. Shapiro, Margaret. 1988. Japanese outpace the world in life expectancy: Experts credit their low-meat diet. *Washington Post.* March 8. p. HE11.
• ***Summary:*** A table shows that a baby born today in Japan will live 80.9 years (for women) or 75.2 years (for men). In the United States these figures are 77.6 years for women (3.3 years less) and 70.1 years for men (5.1 years less). These Japanese numbers "represent one of the most dramatic increases in life expectancy of any nation since the end of World War II,..." Since the 1970s, the Japanese have been living longer than the Americans, but only in the 1980s did they pass the Swedes. The main reasons for Japan's postwar gains in life expectancy are: (1) Elimination of many deadly diseases, including dysentery and tuberculosis. (2) Major advances in medical care, including a universal system of medical coverage. (3) The lowest infant death rate in the world. (4) A healthy diet that is low in fat and cholesterol, low in total caloric intake, and high in fiber, soybean curd, seaweed, and vegetables. "As a result, the Japanese have one of the lowest levels of cholesterol and heart disease in the world." But Japanese a very high salt intake, which has resulted in one of the world's highest death rates from strokes–blood vessel hemorrhages in the brain. Address: Washington Post Foreign Service.

9048. Ballard, Bob. 1988. History of Great Eastern Sun (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The company was founded in March 1982 by Barry Evans (who is now the sole owner and lives in Los Angeles). He may have been joined by Martin Roth and John Belleme. The original purpose was to be a distributor for the miso made by American Miso Company. But it soon decided to import Japanese macrobiotic products from Mitoku (the first order was placed in Jan. 1982) and later became a manufacturer. Address: 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730 or 704 252-3090.

9049. DeBona, Don. 1988. Re: History of The American Miso Co. Letter to Bob Carr at Cleveland East West Center, March 13. 6 p. Handwritten.
• ***Summary:*** "The American Miso Co. was begun in 1979 by Barry Evans, Sandy Pukel, Joe Carpenter, John Belleme, Michio Kushi, James Kenney, and several other partners. It was arranged for John Belleme and his wife to travel to Japan and study for 7-8 months with the Onozaki family of traditional miso makers. John Belleme returned and began making traditional miso for the then named Oak Feed Miso, Inc., previously called the Erewhon Miso Co., and presently the American Miso Co.

"Meanwhile, Barry Evans began a new company in order to distribute our miso. This company was, and still is, called The Great Eastern Sun Trading Co., located in nearby Asheville, North Carolina. Barry Evans eventually became the sole owner of the American Miso Co. I came to work for Great Eastern Sun in 1983. Prior to this I had worked for several years for Laurelbrook Foods, a large natural foods distributor in Maryland, and then on a Permaculture farm along the Maryland/Virginia border for two years growing organic winter wheat, barley, soybeans and summer produce according to the principles set forth in Masanobu Fukuoka's classic, *The One Straw Revolution*... We still do some farming and quite a bit of gardening on our 100 acres here at American Miso Co., in the foothills of the Blue Ridge Escarpment. I met my wife at a macrobiotic study house in 1980.

"We arrived at American Miso Co. in February 1985 and I took over the position of miso maker after John Belleme's departure in December 1985 [Note: Belleme was fired by Barry Evans.] I was trained to make miso by Akinori Takei, my Japanese teacher and friend, who had also studied with the Onozaki family in Japan. Takei-san remained with me for approximately another year; since then I have been on my own. We are a small enterprise and make approx. 250,000 lb of miso a year with only 3 employees and myself. We make all of our own koji (both barley and rice) by hand in a centuries-old fashion." Address: Route 3, Box 541, Rutherfordton, North Carolina 28139.

9050. *Toyo Shinpo* (*Soyfoods News*). 1988. Takai seisakusho

© Copyright Soyinfo Center 2014

honsha, kôjô o kensetsu [Takai is going to rebuild their main offices and production plant]. March 21. p. 1. [Jap; eng+]
• ***Summary:*** The total construction is going to cost ¥300,000,000. They are going to start building at the end of April, 1988. The first floor of the new headquarters will have a laboratory for testing the chemistry of foods. The second floor will be management, and the third floor will be the planning or design area. The company is planning to finish building in the end of July and start moving in at the beginning of August. Address: Tokyo, Japan.

9051. Sugisawa, Ko; Matsumura, Y.; Sengoku, K.; Nagatome, Y. Assignors to House Food Industrial Company Ltd. (Higashi-Osaka, Japan). 1988. Process for preparing tofu charged into a container. *U.S. Patent* 4,732,774. March 22. 5 p. Application filed 3 Feb. 1987. Application also filed in Japan on 4 July 1984. [7 ref]
• ***Summary:*** Soymilk (containing 10-13% solids by weight) is combined and mixed with a polyphosphate and casein or a casein salt, then homogenized under high pressure. "The combination of the addition of said polyphosphate and caseins with said homogenizing treatment synergistically heightens the delayed coagulation effect and results in the production of tofu of excellent quality." The coagulant used in this invention can be of any type including the delayed acting type (GDL) and the rapid acting type (magnesium chloride or calcium sulfate, used alone or with GDL). A fast-acting type should be added to cooled soymilk. The mixture is charged into a package and coagulated by heating after the package is sealed. Thus, this the tofu is made in the container.

Example 1. 2 kg of soybean milk having a dry solids concentration of 11% is prepared. "0.5% of sodium caseinate (relative to the weight of soybean milk; hereinafter the same) was added to the soybean milk after 0.084% of anhydrous sodium pyrophosphate, 0.058% of sodium tripolyphosphate and 0.058% of sodium hexametaphosphate had been added thereto, whereafter, the mixture was mixed and solubilized using high-speed mixer. Said mixture was homogenized under a pressure of 150 kg/square cm by a homogenizer and then cooled below 10ºC, whereafter 0.5% of magnesium chloride was added to and mixed therewith. Thereafter, the mixture was charged into heat-resistant plastic containers in amounts of 300 gm each and sealed. The mixture was then coagulated by heating in hot water at a temperature of 85ºC for 60 minutes, whereby tofu charged into containers was obtained." See also Japanese Patent 84-138,480 (July 1984), and a 1987 patent with the same title by the same company. Address: Nara, Japan.

9052. DeBona, Don. 1988. Developments at American Miso Co. since 1985 (Interview). *SoyaScan Notes.* March 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Don left his job as general manager at Great Eastern Sun and began to work at American Miso Co. (AMC) in February 1985. He took over management of the company in December 1985 after John Belleme left. It was a difficult transition, as Belleme and Barry Evans (an absentee owner) did not get along well. Since then, production of miso has roughly doubled, from 9 to 20 large miso vats. His miso teacher, Akinori Takei, stayed until October 1986. Since then Don has run the company. Not much of their miso is used any more in second generation products; they used to sell some mellow white and red miso to Nasoya and Simply Natural. Now 95-98% is sold for kitchen use in plastic tubs. The tubs replaced plastic bags 2 years ago. He also sells in bulk: 35 or 50 lb. He has always used all natural, organic ingredients, which makes his miso about twice as expensive as Cold Mountain. So they lost all their sales to food processors. But total volume has increased due to good sales work. His best-sellers are mellow white miso and traditional country (long-term) barley miso, followed by mellow barley, traditional red rice miso, and sweet white miso. He has ordered his koji starter through Mitoku for the last few years. Now he hopes to buy direct from Kojiya Sansanaemon in Aichi-ken. Don has studied macrobiotics for 12 years. AMC originally had 6 owners; Barry Evans now owns about 95%. Barry originally paid for John Belleme to study miso in Japan. Address: Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

9053. Nordquist, Ted. 1988. New developments with tofu and soymilk in Sweden. Alfa-Laval in China (Interview). *SoyaScan Notes.* March 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** One of Ted's next major projects is a Tetra Pak tofu; Morinaga does not have a patent in Europe. Also, Ted skips two of steps in Morinaga's patent. He intends to flood Europe with an aseptic tofu. His firm tofu will use ultrafiltration instead of isolates to get the firm texture. No that isolates can also be made using ultrafiltration, without hexane solvent. He has used calcium sulfate, which gives a better flavor, but it is difficult because it is not water soluble. This is where the Combibloc carton comes in. He can made Jofu-style soy yogurt with whole berries in it in an aseptic Combibloc carton.

Alfa-Laval is talking with the Chinese about selling them a plant to make continuous process tofu using ultrafiltration. A man who works for Alfa-Laval and works with Ted at Trensums has told him this, in confidence. He was in China for 6 months setting up Alfa-Laval's first plant there. The idea was that when this plant was proved successful, two additional plants would be installed. Ted does not think the latter two have been installed yet. He told Ted about all of the problems that Alfa-Laval has been having there in scaling up pilot plants. This is very confidential. If it is true, it could be grounds for a lawsuit.

Ted's idea for using ultrafiltration to make an aseptic

© Copyright Soyinfo Center 2014

tofu is partially Luke's idea. But it also an idea that is tied in with using a bland soy base. For the last 5 years 90% of Ted's research energy has gone into getting a bland soy base. When that is ready he will make an aseptic tofu. Ted could possibly have an aseptic tofu packaged in Combibloc on the market by mid-1989 that would use a combination of GDL and calcium sulfate coagulants, and use ultrafiltration to concentrate it. Address: President, Aros Sojaprodukter, Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

9054. Nordquist, Ted. 1988. Comparing Tetra Pak and Combibloc as aseptic packaging systems. The Morinaga aseptic tofu patent (Interview). *SoyaScan Notes.* March 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In the Tetra Pak system, the laminated packaging film that comes on a roll, is run through hydrogen peroxide to sterilize the surface then folded into the shape of a tube around a stainless steel tube filled with UHT sterilized soymilk, inside a sterile chamber. The packaging material is seamed longitudinally. The packaging tube, which is always filled with soymilk, is crimped, sealed and cut below the soymilk level, so that they contain no air.

In the Combibloc system, the laminated packaging material comes in the form of individual flattened sections of a tube. These are fed into an chamber made aseptic by either nitrogen or steam, containing no air. The flat sheets are fed in two at a time and the bottom of each is sealed to form a box. These are then filled with food material, which may contain particles or chunks, such as diced vegetables; Tetra Pak cannot handle such pieces which interfere with sealing of the tube. Finally the top is sealed; some nitrogen gas remains atop the food. A Combibloc machine can be 4 times the size of a Tetra Pak machine, but it can handle various length cartons having the same bottom size (200-500 ml, or 1 liter), whereas Tetra Pak needs one machine for each package size. The Combibloc unit can seal at a much higher temperature than Tetra Pak.

A sterile/aseptic filter, which is very expensive, is used to feed in things (such as volatile flavors) which are heat sensitive and thus should not be run through the UHT unit. The filter eliminates bacteria. Morinaga's 4-step process (1) sterilizes the soymilk with a UHT unit, (2) cools it to 20-25ºC, (3) introduces GDL and calcium chloride coagulants through an aseptic filter, then runs the mixture into Tetra Pak cartons, which are sealed and (4) reheated by immersion in a hot water bath to cause coagulation, which is finally cooled. Morinaga does not have a patent on their Tetra Pak tofu process in Europe. Address: President, Aros Sojaprodukter, Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

9055. Mio, Art. 1988. Update on Morinaga (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Morinaga not only has a patent on their aseptic tofu process, they also have proprietary rights to the film. This special film was developed jointly by Morinaga (Japan) and Tetra Pak, and the latter cannot sell it to any other company. This may not be mentioned in the patent.

Concerning promotion in the USA, for the first few years Morinaga targeted their sales to Asian-American consumers. They got little results. Then Art Mio heard that supermarkets were having problems with spoilage, so he changed his focus to supers. Stage 3 has been the recent targeting of the natural and health foods industries. The new package design and absence of monoglycerides on the label have helped sales in this market. Sales could increase 50-100% this year. Headquarters may have decided to build a plant in America. The Japan plant may only be running one shift. Susan Bucher's company (Buchér & Russell, 3801 Wilshire Blvd., Suite 1403, Los Angeles, California 90010. Phone: 213-738-5300; Susan is Japanese-American) has done the recent set of ads.

Tree of life private label tofu sold 5,000 units a week in 1986. Art does not know who makes it. Address: Morinaga Nutritional Foods, Inc., 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9056. Bertrand, Jean-Pierre; et al. 1988. Soja [Soya]. Zurich, Switzerland: Unionsverlag. 130 p.. March. [Ger]*
• ***Summary:*** This book gives a very good overview of the development of the soybean plant in the context of world agriculture.

9057. Demi-Tasse. 1988. March. New soyfoods restaurant or deli. Mishiki-cho 6-7, Okayama-shi, Okayama-ken, Japan.
• ***Summary:*** Toyo Shinpo. 1988. March 11. p. 9. "Restaurant serves tofu dishes with a homestyle feel." The restaurant, Demitasse serves original Japanese and Western tofu dishes–even tofu steak and ice cream!! They are closed on Tuesdays, and open every other day of the week from 11:00 a.m. to 8:00 p.m.

9058. **Product Name:** [Tofu, Tempeh, Natto, Okara Croquettes].
Foreign Name: Tofu, Tempeh, Natto, Croquettes d'Okara.
Manufacturer's Name: Gaïa Enterprise. Officially registered in Jan. 1992.
Manufacturer's Address: Rue Principale, 66130 Corbere, France. Phone: 68.84.86.28.
Date of Introduction: 1988 March.
New Product–Documentation: Form filled out for Anthony Marrese. 1989. Nov. These three products were introduced in March 1988 by Odile Corbel & Dan Ludington. The following amounts are presently produced: Tofu 3 kg/week (sold fresh), tempeh 3 kg/week (non-pasteurized), natto 2 kg/month, and okara croquettes 2 kg/month. Odile started

© Copyright Soyinfo Center 2014

making her own tofu for 2 people each week, then for friends. A friend (Pauline Schaft) supplied her with tempeh, natto, and koji for amazake. In 1986 she went to the Kushi Institute in the USA. She returned to France at the end of 1987 with Dan and began her own small production daily.

Letter from Daniel S. Ludington. 1992. Feb. 7. He has been making tofu, tempeh, and miso for sale for 3½ years. He learned to make them using books by Shurtleff and Aoyagi. Now he would like to order their books *Miso Production,* and *Tofu & Soymilk Production.*

Letter from Dan Ludington. 1992. March 3. "Gaïa Enterprise was officially registered with the Chambre de Metiers of the Pyrenees Orientales in Jan. 1992. (She had been unofficially in existence using the same name for nearly four years)." Dan's father was a 20-year career cook in the U.S. submarine service. He died instantly of a heart attack at age 54. Dan is the oldest of 4 boys. He received a degree in chemical engineering from MIT in 1977, then worked for Intel Corp. in their factory making silicon chips for 5 years, then for Toshiba USA for another year. When his father died, he kept a 10-year promise to himself to hitch-hike around America. In or about about Loveland, Iowa, his chemical engineer's eyes saw how chlorinated hydrocarbons enter the food chain; he decided to stop eating meat. About 6 months later he was introduced to macrobiotics. 2½ years later he went to the Kushi Institute in Boston, Massachusetts, to see if he could find a better balance in his diet. There he met Odile Corbel, a French woman with a 12 year-old son named Xavier and 10 years of macrobiotic experience. They were married, and returned to France. 18 months later Dan got a Green Card. While Odile was in the USA, Pauline Schaft had stopped making tempeh, and a weekly, organically grown products market had started in Perpignan. So he and Odile started making tofu, tempeh, and macrobiotic British pasties and selling them at this market. The business has grown until today sales are $400/week. He and Odile are still married with 2 children of their own. Pauline Schaft now goes by her maiden name of Van Marle; she is now more involved with her yoga practice than with making food. The company now sells 12-15 kg/week of tofu, 3-5 kg/week of tempeh, and 4 kg/week of miso, all direct and without the use of labels, marketing, or distribution.

9059. Hara, Kazuo. 1988. Arugin-san geru [Utilization of the properties of stabilizers. Alginic acid gels (used in tofu)]. *Shokuhin Kogyo* (*Food Industry*) 31(6):76-85. March. Tokushû: Zônen anteizai no seishitsu to riyô. [8 ref. Jap]
• ***Summary:*** Alginic acid gels are used in tofu, meat products, fish gels, bread, and fabricated foods.

9060. Hasegawa, Yoshie; Inuta, Toru; Obata, Hitoshi; Tokuyama, Tai. 1988. [Introduction of a high vitamin B-12 productive natto strain through protoplast fusion]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 35(3):154-59. March. [12 ref. Jap]*
• ***Summary:*** To breed a high vitamin B-12 producible natto strain, protoplast fusion was done between *Bacillus natto,* Takahashi No.2 (Arg-mutant), and a vitamin B-12 productive strain, *Bacillus megaterium* IAM 1166 (Try-mutant). Lysozyme of 250 mcg/ml and 500 mcg/ml was adopted for the protoplast preparation of *B. natto* Takahashi No. 2 and *B. megaterium* IAM1166, respectively, with 10% sucrose at 42ºC for 30 minutes. Protoplast fusion was carried out with 40% polyethyleneglycol 6000, and the regeneration was performed on Sucrose Glutamate (SG) minimal medium containing 10% sucrose and 3% polyvinylpyrolidon. Preservation of the stringiness and vitamin B-12 productivity of the protoplast strains were deeply affected by the concentrations of lysozyme and sucrose. Three fusants which were capable of producing stringiness and vitamin B-12 were isolated on SG medium, and the strong stringiness on a steamed soybean by them were also observed in a similar manner as *B. natto.* (From online abstract at http://www.journalarchive.jst.go.jp/english/). Address: 1, 3-4. Faculty of Engineering, Kansai University [near Oksaka, Japan].

9061. Hashizume, Kazumune. 1988. Aburaage [Deep-fried tofu pouches]. *Daizu Geppo* (*Soybean Monthly News*). March. p. 12-17. [4 ref. Jap]
Address: Toyama-ken Shokuhin Kenkyujo.

kotonaru tane kôji-kin ni yoru miso no shijô. III. Tane kôji-kin to miso hinshitsu no kankei [Fermentation of miso using various koji molds. III. Effect of koji mold on the quality of miso]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 29. p. 14-19. [14 ref. Jap; eng]
• ***Summary:*** Koji variants used to produce rice miso, barley miso, soybean miso, sake, shochu, soy sauce, etc. (*Aspergillus oryzae* and *A. Sojae*) were evaluated, as regards such attributes as growth rate, fermentation products, enzymic activity and sensory quality.

9065. Imai, Manabu; Osawa, Y.; Nakamura, M.; Yasuhira, H. 1988. Chakushoku o yokusei-suru koen-sei nyûsan-kin no kensaku. II. [Selection and use of decolorizing strains of *Pediococcus halophilus* (in miso production). II.]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 29. p. 37-41. [3 ref. Jap; eng]

9066. Ito, Kimio; Yasuhira, Hitomi. 1988. Kônôdo shokuen, gurukoosu sonzaika ni okeru *Bacillus subtilis* no dôtai [Behavior of *Bacillus subtilis* at high concentrations of NaCl and/or dextrose (in miso)]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 29. p. 25-32. [16 ref. Jap; eng]
• ***Summary:*** Behavior of *Bacillus subtilis* at high NaCl and/or dextrose concentrate was examined, to evaluate the hygiene of miso. Growth, germination and sporulation were completely inhibited by 20% NaCl alone, 10% NaCl/20% dextrose or 15% NaCl/10% dextrose. Critical water activity for growth was 0.88.

9067. Kakiwara, Kenjiro. 1988. Tônyû gyôkai no genjô [Present status of the soymilk industry in Japan]. *Daizu Geppo* (*Soybean Monthly News*). March. p. 18-24. [Jap]
• ***Summary:*** In Japan, 1977 was the first year that a significant amount of soymilk was produced, according to statistics from the Nosuisho Shokuhin Yushi-ka. Production then rose steadily and rapidly each year to a peak of 116,724 tonnes in 1983. Thereafter it fell for the next three years, dropping to 84,103 tonnes in 1984, 55,354 tonnes in 1985 and 43,392 tonnes in 1986 (only 37% of the peak 1983 figure). About 99% of the products are packed in paper cartons and most are long-life (aseptic).

During the peak years of 1983 about 50 companies made soymilk in Japan; that number has now shrunk to ten. The top three manufacturers (Kibun, Mitsubishi, and Marusan-Ai) had 71% of the market in 1983 and 76% in 1987. The top five companies (including Meiji Nyugyo and Nisshin Seiyu) now have 85% of the market. Production (in 1,000 tonnes) and market shares (in parentheses), estimated by the author, for the top 5 manufacturers in 1983/1987 are as follows: Kibun 41/14 (35%/37%); Mitsubishi Kasei 20/10 (17%/26%); Marusan-Ai 20/5 (17%/13%); Meiji Nyugyo 10/2 (9%/5%); Nisshin Seiyu 7/1 (6%/3%); Other 19/5 (16%/16%).

According to the Japanese Agricultural Standards (JAS) there are 4 types of soymilk. (1) "Soymilk" (*Tonyu*), must be made from whole soybeans, and contain 8% or more solids and 3.8% soy protein; It has a 3% market share. (2) "Adjusted soymilk (*chosei tonyu*), made from whole or defatted soybeans plus added vegetable oil and sweeteners, with 6%+ solids and 3%+ soy protein has a 52% market share. (3) "Soymilk drinks" (*tonyu inryo*), similar to (2) but with 4-6% solids and 1.8%+ soy protein, have a 44% market share. (4) "Soy protein drinks" (*daizu tanpaku inryo*), made with isolated soy proteins, must have 1.8% protein. It has only a 1% market share.

The author then gives three reasons for the boom and bust, shows graphs of who is buying, how often, and at what age. Those over age 40 buy more soymilk that those in their teens. Still, many Japanese have never tried soymilk. Education is necessary to re-popularize it. Address: Mitsubishi Kasei Shokuhin K.K., Tonyu Hanbai Honbu.

9068. Kimura, Eiichi. 1988. Gendai gokoku kô. Kan-dai kunkô no gaku to daizu [Modern thoughts on China's ancient "Five Grains"; Soybeans in the Han dynasty]. *Daizu Geppo* (*Soybean Monthly News*). March. p. 35-36. [2 ref. Jap] Address: Daizu Kyokyu Antei Kyokai.

9069. **Product Name:** [Freeze-dried Natto].
Manufacturer's Name: Koishiya Shokuhin K.K.
Manufacturer's Address: Tochigi-ken, Japan. Phone: 0286-82-2220.
Date of Introduction: 1988 March.
New Product–Documentation: Toyo Shinpo. 1988. March 21. p. 19. "Koishiya Shokuhin, the 'One hundred year old beans of rare taste' company has recently released freeze-dried natto as part of their product line." Mr. Eiichi Koike is president of the company. The firm started to market the new product on March 1. Aluminum packaged, 30 gm of freeze dried natto sells for ¥280 at retail stores. People can use this as a snack–somewhat like peanuts. They are hoping that this type of natto will get people used to the real natto taste.

9070. **Product Name:** [Matcha Tofu (Containing Powdered Green Tea)].
Foreign Name: Matcha Tôfu.
Manufacturer's Name: Matsui Shoten Ltd.
Manufacturer's Address: Myoraku 49, Uji-shi, Kyoto, Japan. Phone: 0774-21-2412.
Date of Introduction: 1988 March.
Ingredients: Incl. Tofu, powdered green tea (matcha).
Wt/Vol., Packaging, Price: A cake sells for 200 yen.
How Stored: Refrigerated.
New Product–Documentation: Toyo Shinpo. 1988. Sept. 1. p. 4. Match Tofu kido ni noru. Koko nara dewa... no kanban-

[Selection and use of decolorizing strains of *Pediococcus halophilus* (in miso production). I.]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 29. p. 33-36. [2 ref. Jap; eng]
• ***Summary:*** These bacteria belong to the family Lactobacillaceae.

9074. Sakai, Sonoko. 1988. Tofu: Meat of the fields. *Bestways.* March. p. 18, 21, 24, 54, 64. Reprinted from Palate Pleasers of Japan. 1986. Spring/Summer. p. 59-61. [2 ref]
• ***Summary:*** An overview, based largely on material from the works of Shurtleff and Aoyagi. Today the tofu man with his bicycle is an increasingly rare sight in Japan, but Americans do not have the luxury of walking out on the street to buy tofu.

9075. Sato, Masashi; Yasuhira, Hitomi. 1988. Kôon jukusei miso ni tsuite [Studies on miso fermented at high temperature]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 29. p. 20-24. [2 ref. Jap; eng]
• ***Summary:*** Miso containing 50% koji and 0-6% NaCl was fermented at 47, 50 and 53ºC and evaluated for pH, microbial flora, acidity, color, sugar concentrate, free amino acid levels, etc. Higher temperature favoured acidity development due to bacterial action. Color of miso fermented for 3 days at 50ºC was equivalent to that of miso fermented at 30ºC for 30 days, but free amino acid concentrate in the former was lower than that in the latter. Fermenting 3% NaCl miso at 50ºC for 3-5 days, followed by 30ºC for 10-12 days, produced an acceptable miso.

9076. Sode, Akio; Nakamura, M.; Takeda, S.; Ito, K.; Imai, M.; Yasuhira, H. 1988. [Jap; eng]

9077. *SoyaScan Notes.* 1988. New Trend: "Big Food" enters the U.S. tofu market, but in an unexpected way–Via Japan (Overview). March. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** For the past 5 years or so, U.S. tofu companies and industry watchers have been speculating as to when "Big Food" would jump into the U.S. tofu market. They had in mind big U.S. food companies such as General Foods, Kraft, etc. But at the start of this year, 1988, Morinaga, Japan's third largest manufacturer of dairy products (FY 1982 sales were $1,171 million dollars) began the largest promotional campaign for tofu ever conducted in America, with attractive, full-page color adds for at least 3 months in a row in major natural foods magazines. The product is now showing up in many natural food stores and sales are skyrocketing. And Kikkoman, the world's largest maker of soy sauce and one of Japan's biggest food companies, is now also aggressively selling tofu. Both companies make their tofu in Japan. The big question now is when they will establish U.S. plants.

9078. *Soybean Digest.* 1988. Seed for thought: Salute to farmers. Mid-March. p. 4.
• ***Summary:*** 2.2 million U.S. farmers provide food and fiber for 251 million people here and abroad. One American farmer produces enough food and fiber for 114 people. Compare that with farmers from other countries–11 people in the Soviet Union, 8 in Argentina, 4 in Brazil, 3.5 in China, and 3 in Japan. The average American spends only 14.4% of his after-tax income on food. That's down nearly 20% since the early 1960s. The ag industry employs 21 million people (nearly one in five) and accounts for 17% of the

© Copyright Soyinfo Center 2014

nation's gross national product. One hour of farm labor today produces 16 times as much food and other crops as it did from 1919-21. U.S. farmers can produce more than 80% more crop output on an acre of land than did their fathers. Farmers get $0.25 of the consumers' food dollar spent for domestically grown products, down from $0.32 cents in 1968. Americans spend $6,000 million a year on cat and dog food.

9079. *Taste* (*Kikkoman, Japan*). 1988. New frontiers in Hokkaido [Kikkoman's new shoyu plant in Chitose]. 2(1):8. March.
• ***Summary:*** The Kikkoman's third, and newest, domestic soy sauce factory is in Hokkaido. The new plant was finished in early 1987, over half a century after the construction of the second Takasago plant near Osaka. Just as Kikkoman's first plant near Noda City was located amid wheat and soybean fields, the choice of this plant near Chitose was partly influenced by the ready supplies of wheat nearby. (The soybeans are imported from the U.S.) The factory is 27,300-square meters with four stories. Only fifty employees are on hand to man two large control rooms. They have also applied high technology to microorganisms used in the fermentation. The Chitose plant was singled out for a national award by the Nihon Keizai Shinbun last October. Kikkoman, one of Japan's leaders in biotechnology, demonstrated the results of its latest research on bioreactors, designed to reduce the time needed to produce soy sauce. Other companies promoted the versatility of their soybean-related food products, such as cheese-flavored tofu and tofu ice cream.

9080. *Taste* (*Kikkoman, Japan*). 1988. Secrets of sukiyaki. 2(1):6-7. March.
• ***Summary:*** Historically, meat eating in Japan tended to fluctuate with the religious climate of the times. Before the introduction of Buddhism into the country (in A.D. 676) mountain-dwellers hunted for their food just as fishermen relied on fish for their meals. However, the arrival of the new faith soon banished meat from the daily diet. (The nobility, however, continued to consume meat under the guise of medicine.) Today, sukiyaki is prepared in two distinct regional styles; in Kanto (Toko-Yokohama) and in Kansai (Osaka-Kyoto). In Kansai, the ritualistic order of the meal is emphasized.

9081. Tochikura, Tatsurokuro. comp. and ed. 1988. Shôyu no kagaku to gijutsu [The food science and technology of shoyu]. Brewing Society of Japan, Takinogawa 2-6-30, Kita-ku, Tokyo, Japan. 571 p. Illust. Index. 21 cm. [1067 ref. Jap]
• ***Summary:*** The best book of its kind seen up to this time. Contents: 1. Raw materials and their processing. 2. Making koji. 3. Brewing. 4. Microorganisms. 5. Making products and processing. 6. Components. 7. Browning reaction. 8. Preventing infestation and mold. 9. Product quality control. 10. Nutrition and food sanitation. 11. Various types of shoyu. 12. HVP (Amino acid liquid). 13. Seasoning processes. 14. Bottling and packaging. 15. New technology. 16. Waste water treatment and environment preservation. 17. JAS and other laws and regulations. 18. Shoyu around the world. Address: Prof. of Food Science, Kyoto Univ., Japan.

9082. Yokota, Y.; Yasuhira, H. 1988. Miso no kokeibun ryûshi ni tsuite. II. [Studies on solid particles in miso. II.]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 29. p. 42-47. [7 ref. Jap; eng]*
• ***Summary:*** Effects of solid particle size distribution and level in soybean miso on sensory quality of miso soup were examined. Particles less than 170 mesh sieve size had most influence on soup attributes.

9083. Yokota, Yoshiko; Taguchi, T.; Nakamura, M.; et al. 1988. Shihan miso no bunseki kekka ni tsuite [Analytical results of miso on the market]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 29. p. 48-57. [3 ref. Jap; eng]
• ***Summary:*** The 25th study meeting of miso on the market was held. 189 miso samples of various types sold at retail stores were evaluated for sensory quality; 120 of these were analyzed for physicochemical characteristics. Total sugar concentration averaged 17.5%. Rate of protein hydrolysis was related to NaCl and sugar concentration, and affected miso texture. Moisture, nitrogen, pH, acidity and color were also examined.

9084. *High Plains Journal* (*Dodge City, Kansas*). 1988. Farmers in Asia, U.S. gain from soy fish feeds. April 18. Also in Soybean Update. March 21. p. 3.
• ***Summary:*** Dr. Dean Akiyama, who heads up the American Soybean Association's aquaculture programs in Japan, Korea, Taiwan and southern China, says U.S. soybean meal and science could push shrimp production to all-time highs. "Shrimp culture in Southeast Asia is booming," Akiyama said. He also noted that feed trials have shown shrimp feeds can use up to 40% soymeal [mixed with fish meal] with no substantial loss in overall production. In the past, only fish meal has been used to feed shrimp.

"Soymeal is cost effective," Akiyama said, "The basic nutritional principles found in fish meal are also found in soymeal. The only difference is, soymeal is cheaper. We have proven soymeal mixed with fish meal can save a farmer up to 45% on his feeds costs." A shrimp farmer spends about $4 to $8 to raise a pound of shrimp, then sells it for $15 a pound. A typical farm can have up to a tonne of shrimp per acre, per crop. Producing 2.5 tonnes/acre on an average year, the farmer makes $18,000 for every acre farmed.

9085. *Rocky Mountain News* (*Denver, Colorado*). 1988. Tofu company gets blessing [Denver To-Fu Co.]. April 23.
• ***Summary:*** "The Denver To-Fu Co., in honor of moving from Adams County to new offices in Denver, flew in three Shinto priests from Tokyo for 'blessing of the company' ceremonies yesterday afternoon. The company, owned by Haruhisa Yamamoto, a Tokyo native, manufactures tofu sold in Denver-area grocery stores. To-Fu, now at 3825 Blake St., employs 10 people. Mayor Peña also attended the ceremonies."

9086. Green, Rand. 1988. Packaging keeps Mori-Nu tofu fresher. *Produce News* (*Fort Lee, New Jersey*). April 30.
• ***Summary:*** According to Art Mio, national sales manager for Morinaga Nutritional Foods, there are two basic reasons people are turned off by tofu. First, they don't know what to do with it and may not even by quite sure what it is. The solution is education. Second, many people who have tried it don't like the sour taste. The U.S. Food & Drug Administration recommends that tofu core temperatures be kept below 45 degrees, while the USDA "strongly recommends no higher than 41 degrees." Tom McReynolds is the newly appointed marketing manager at Morinaga Nutritional Foods. Mio mentioned 2 diet books that have been published recently with tofu recipes that specifically recommend Mori-Nu Tofu. *The Calcium Connection* (1988), by Dr. Cedric Garland and Dr. Frank Garland is one such book. *Diet Recipes from Doris' Kitchen,* by Doris Cross is the other.

9087. Mori, Haruhiko. 1988. Re: Noda Industrial Scientific Laboratories / Noda Institute for Scientific Research. Letter to William Shurtleff at Soyfoods Center, April 30. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Noda Industrial Scientific Laboratories (also known as Noda Industrial and Scientific Laboratory, Noda Sangyo Kagaku Kenkyusho) is now generally known as Noda Institute for Scientific Research. It is referred to as NISL in the culture collection list of the Institute of Fermentation, Osaka (IFO).

The institute, which is still active, was founded in 1942 by Kikkoman Corporation, and exists to do basic investigation in the fields of food science and the life sciences, especially microbiology, enzymology, biochemistry, genetic engineering, etc. Address: Noda Inst. for Scientific Research, 399 Noda, Noda-Shi, Chiba-ken 278, Japan. Phone: 0471-23-5568.

9088. Business Trend Analysts, Inc. 1988. The market for salad dressings, sauces and condiments. 2171 Jericho Turnpike, Commack, NY 11725. 260 p. Price: $750.
• ***Summary:*** Sauces include the following table sauces: Ketchup, meat (incl. steak, worcestershire, vegetable, and seafood sauces), barbecue, Mexican (incl. chili, taco, enchilada, etc.), prepared mustard, and soy and teriyaki. Gravies, dips, and dry sauce mixes are not included. Ketchup is the largest segment, about 40% of the total. It has grown at 4.6% annually from 1982-87, but growing faster during the same time are soy and teriyaki sauce (10.3%), barbecue sauce (11.4%), and Mexican sauce (9.2%). In 1977 soy and teriyaki revenues represented 3.1% of total sauce sales, compared to 6.7% in 1987. BTA expects the market to grow at 8.9% annually reaching $280 million in 1997. Kikkoman, the leading producer of soy sauce in the U.S. sells most of its product is the western portion of the country. In 1987 it launched a national ad campaign to expand to the rest of the country.

According to U.S. Dept. of Commerce statistics, sales of soy and teriyaki sauce (in million dollars) and market percentage have grown from $7.7 and 1.8% in 1972, to $25.0 and 3.1% in 1977, to $50.1 and 4.9% in 1980, to $98.1 and 6.0% in 1985, and to an estimated $132.0 and 7.0% in 1988. Other estimated market shares in 1988 were ketchup 39.2%, meat 19.6%, barbecue 14.4%, Mexican 12.1%, and prepared mustard 7.8%. Thus soy and teriyaki have the smallest share.

But the growth rate for soy and teriyaki sales have been slowing, in part due to lower inflation rates. The rate was 26.6% in 1972-77, 24.2% in 1977-82, 10.3% in 1982-87, and a projected 8.9% in 1987-97. In this latter period the growth rate is higher than for any other sauce category.

In 1987 for leading U.S. soy sauce producers, sales and market share were: Kikkoman Foods Inc. $49 million and 41% market share; La Choy Food Products (Subsidiary Beatrice/Hunt-Wesson) $43 million and 36%; Nabisco Brands Inc. (Subsidiary RJR Nabisco), maker of Chun King, $12 million and 10%. All others, $16 million and 13%. Note: Chun King Frozen Foods line was sold to ConAgra, Inc. (Omaha, Nebraska) in 1987. Nabisco still owns the soy sauce and other packaged goods. the U.S. soy and teriyaki market, an estimated 41%., with 1987 sales of $49 million.

According to Department of commerce statistics, U.S. imports of "thin" soy sauce have grown steadily from 13.3 million lb in 1978, to 15.9 in 1980, to 29.6 in 1985, and an estimated 40.0 in 1987. In 1986 roughly 38.9% of this came from Japan, followed by 26.9% from Hong Kong, 12.8% from China, 12.0% from Taiwan, and 9.3% from Others (incl. South Korea, Canada, and Philippines). These imports of 32.5 million lb in 1986 were worth $13.9 million. Between 1980 and 1986 roughly 2,500 lb/year of soy sauce have been exported, a negligible amount. The main destinations were West Germany, Canada, and Mexico. Address: Commack, New York.

9089. DiStasio, Daniel. 1988. Spotlight on David Mintz. *Spotlight on Rockland/Bergen* (*Mamaroneck, New York*). April. p. 72-73.
• ***Summary:*** The quest for the perfect dessert began in 1972. Mintz's career in the food industry had begun in the Catskills

with a small business called Mintz's Knishes. He attracted help with a sign which read, "Grandmothers Wanted." Thus began the catering business that finally brought him to Manhattan. "I was reading a health food magazine," Mr. Mintz recalls, "when I read that tofu looks like cheese but is not." From 1972 until 1981, Mr. Mintz was like a man possessed. In May 1982, he hand-delivered five gallons of Tofutti ice cream to a Manhattan health-food store.

Even the strict USSR State Committee for Inventions and Discoveries allowed Tofutti to be registered, a coup of sorts in that the Russians usually eschew any "frilly products." The Japanese went crazy: Every month, 100,000 gallons are delivered there, that's 3.2 million four-ounce servings. "Some people call me a kosher ham," quips Mintz. Though his enthusiasm for the spotlight takes up much of his time, workaholic Mintz enjoys his home in Alpine, New Jersey. He is also a talented painter. What's next on the list? Burgers, sausages, hot dogs, more main course foods.

9090. Golbitz, Peter. 1988. Tofu packaging: To water pack or vacuum pack–That is the question. *Soya Newsletter* (*Bar Harbor, Maine*). March/April. p. 1, 3, 6-7, 13.

• ***Summary:*** In traditional countries like Japan, where tofu is consumed daily by a large portion of the population, packaging is used more for the conveyance of the product than it is to preserve it. By far the most popular method in modern times is the water-packed tub, heat sealed with a multi-laminant plastic film. The other popular method is vacuum-packing–placing the tofu in a multi-laminant plastic bag, or in a form-fill-seal machine which makes its own package from the roll stock, drawing off air in the package and heat sealing it.

Water-filled tubs are made of high density polyethylene (HDPE). The sides are fluted to add rigidity. The lidding stock is usually a multi-laminant film composed of a combination of Mylar, Saran, polypropylene or other appropriate material, with at least one layer of polyethylene on the bottom. There are three companies that supply tofu trays to the industry in the U.S. These are: Airtight Container, Inc., Los Angeles, California; Fabri-Kal Corp., Kalamazoo, Michigan; and Gage Containers, Lake Oswego, Oregon. Prices run from around 3.5 cents to 7.0 cents each.

Kawanishi-Shoko, Los Angeles, CA, Bean Machines, San Francisco, CA, and T.R.I. Systems, Rancho Cordova, CA are three leading suppliers of this type of tofu packaging machinery in the U.S. All of these companies import their packaging equipment from Japan.

Most vacuum packing of tofu is done with bags, where the tofu is put in a multi-laminant bag, placed in a vacuum chamber, the lid is closed and the air drawn out. A good operator can pack 720 packages per hour. Vacuum bags can cost from 4 cents to 12 cents per package. Roll stock vacuum machines can run as high as 50 to 200 packages per minute. Popular chamber models are the SuperVac line, sold by Smith Equipment Co. in Clifton, New Jersey, and the Turbovac line sold by Hantover Inc. in Kansas City, Missouri. Roll stock vacuum machines are also available through these companies.

There is a question as to whether or not vacuum packaging can extend the shelf-life of freshly produced tofu. Steve Demos of White Wave, Boulder, CO, reports that "we get a longer shelf-life with our vacuum-packed tofu than we do with our water-packed tofu." White Wave sells vacuum-packed tofu, packaged on a roll stock vacuum machine, both with and without an outer box. "The outer box adds to the cost of the product, but the box can become a vehicle for recipes, cross merchandising, couponing and solicitation for special sales," states Demos.

Ben Lee, company spokesperson for Quong Hop [San Francisco, CA] reports that they get a longer shelf-life with their vacuum-packed tofu as well. Lee said, "One of the major advantages of vacuum packing for us, is the ability to ship the product less expensively. A typical case of water-packed tofu can weigh up to 50% more than a comparable case of vacuum-packed tofu." However, water packing is much quicker and easier.

Swan Gardens, Decatur, Georgia, is a company which uses vacuum packing exclusively. Swan Gardens puts some of their vacuum-packed tofu in a box, similar to White Wave. Swan Garden's tofu is pasteurized and has a 4 to 6 week shelf-life.

Nasoya Foods, Leominster, Massachusetts, uses water packaging exclusively. At one time, the company used a roll stock vacuum machine for packing, but gave it up after years of problems. "On a scale of 1 to 10 for difficulty," says company vice president Bob Bergwall, "vacuum packing was a 10, and water packing is a 1." Nasoya achieves a shelf-life of better than 8 weeks.

Package of the future. Right now, only silken tofu can be packaged aseptically. The biggest improvement in tofu packaging in the near future will not be the result of a new package per se, but rather the result of better attention to in-house sanitation, pasteurization, and the temperature that tofu is being stored and sold at. Address: Soyatech, Bar Harbor, Maine.

9091. Golbitz, Peter. 1988. Long life tofu: Wave of the future? *Soya Newsletter* (*Bar Harbor, Maine*). March/April. p. 7, 12.

• ***Summary:*** Morinaga Nutritional Foods, Inc., Los Angeles, California, and Kikkoman International Inc. of San Francisco, California, are both marketing long-life tofu, produced in Japan exclusively for export to the U.S. and other countries. (A Japanese governmental agency has forbidden the companies to market these products in Japan for fear that they threaten the existence of the fresh tofu industry, which consists of at least 30,000, small and localized, tofu shops.)

© Copyright Soyinfo Center 2014

Kikkoman's product, Kikkoman Tofu, is also produced using a patented, though different process, packed in a foil retort pack. The product is produced by Kikkoman Corporation, at their Noda, Japan plant. The principle behind both products is really very simple. Cooled liquid soymilk is mixed with a heat reactive coagulant, packaged in a container, heated to activate the coagulant and then cooled. The major difference between Kikkoman's and Morinaga's product is when and where the sterilization of the package and product occurs.

Morinaga's process consists of: sterilizing the soymilk with UHT processing, cooling, adding coagulants glucono delta-lactone (GDL) and calcium chloride, filling into a sterile Tetra Pak, sealing, heating the package with water just hot enough to activate the GDL, and then cooling.

With the Kikkoman Tofu, the sterilization of the product is achieved after packaging. Coagulants GDL and calcium chloride are added. It is then filled into a retort pack, sealed, and heated at temperatures high enough to activate the coagulant and sterilize the finished product. Both the Kikkoman and the Morinaga tofus tend to be slightly more expensive than regular tofu. Silken (unpressed) tofu is unfamiliar in the U.S., and no company has yet come out with a pressed tofu that doesn't require any refrigeration.

Sales of Mori-Nu are up between 40 and 50% over last year, and unit sales of the product put Morinaga among the top five tofu companies in the U.S. Kikkoman's product has been on the market for more than a year and is also reportedly making healthy sales gains. Morinaga's product is currently being shipped to 36 countries world-wide, with the U.S. being the largest consumer by far. Kikkoman also reports that they are shipping their product to Europe, Australia and Canada, but again, the biggest volume is in the U.S. Address: Soyatech, Bar Harbor, Maine.

9092. Kikkoman International Inc. 1988. Kikkoman. Ahead of its time for 358 years (Ad). *Prepared Foods* 157(4):119. April.
• ***Summary:*** This 8.5 by 11-inch, color photo ad shows a large (20 fl oz) bottle of Kikkoman naturally brewed soy sauce against a black and purple background. Green, computer-graphics circles are superimposed on the bottle. "Since 1630, Kikkoman has produced premium, naturally brewed soy sauce that has yet to be equaled." Available from over 20 distribution centers in the U.S. and Canada.

This ad also appeared in the March 1989 issue (p. 5) of this magazine. Address: P.O. Box 784, San Francisco, California 94101. Phone: 415-956-7750.

9093. Lingle, Rick. 1988. Kikkoman: Painstaking process marks unique operation. Kikkoman knows that 20th century technology can't hasten the centuries old method of making shoyu, or soy sauce. *Prepared Foods* 157(4):62-64. April.
• ***Summary:*** Describes the preparation of shoyu by Kikkoman at Walworth, Wisconsin. The koji is now made in both 100-foot-long koji beds and in a new circular koji room (installed in Feb. 1987), which has the output of 1.5 of the 100-foot units. The 6-month fermentation process is claimed to bring out flavors and aromas involving about 20 amino acids, lactic and acetic acid, and various other flavor compounds. The Kikkoman plant in Walworth, Wisconsin presently produces 7,000,000 gallons of soy sauce a year. Four photos show the inside of the plant.

9103. Yeutter, Clayton. 1988. Challenge to world agricultural trade. *International Agriculture Newsletter* (*Univ. of Illinois*). April. No. 119. p. 1-2.
• ***Summary:*** "The emergency situation in agriculture is not a domestic problem, it is an international problem. We should avoid the temptation of trying to solve it with domestic solutions."

"Cutbacks in production did not work even in the 1950's and 1960's when our market was primarily domestic. How can they possibly work in the 1980's when the orientation in agriculture is so much more global?

"The Reagan administration's program for expanding U.S. agricultural trade is based on the realities of the modern world. Its 4 major components are to change economic policies that discourage U.S. exports, use U.S. farm programs to restore our competitiveness, move aggressively against unfair foreign trade practices, and improve international rules governing trade in agriculture.

"In the early 1980's the strength of the dollar made it extremely difficult to export U.S. agricultural products, and our market share declined dramatically. Slow growth in the economies of our trading partners also contributed to the trade imbalance by diminishing foreign demand for U.S. exports."

"During the past 2 years, our policies have led to a significant decline in the value of the dollar against the yen and major European currencies. This decline is making the price of U.S. agricultural products more competitive."

"The 1985 farm bill represents a significant effort to adjust our agricultural programs... A key element of the farm bill is the Export Enhancement Program (EEP). Although we dislike export subsidies, we are now using them in self-defense... As a victim of export subsidies, we are determined to regain markets lost to subsidizers over the past 5 or 6 years and rid the world of all export subsidies."

"The final element of our strategy [is to] strengthen the trade system... GATT rules [are] essentially non-existent for agriculture... We called for a total phase-out by the year 2000 of all policies that distort trade in agriculture. We include all export subsidies, import barriers, and domestic subsidies that affect trade. We exclude bona fide food aid programs and payments to farmers that do not affect pricing or production decisions. Finally, our proposal calls for instituting uniform health regulations for food around the world to make sure that such regulations do not become barriers to agricultural trade."

"U.S. agriculture ought to benefit in a major way from

© Copyright Soyinfo Center 2014

the shift to a more free and open trading system. The future of U.S. agriculture lies in exports; there is not much room for expansion in the domestic market. It is essential that we neutralize the government intervention that has so disrupted world agricultural trade."

Ambassador Clayton Yeutter is the United States Trade Representative. Address: U.S. Trade Representative.

9104. *Toyo Shinpo* (*Soyfoods News*). 1988. Ima Taiwan no tôfugyôkai wa? Daizu shohiryô wa nihon no 3 bai nimo [What's happening with the tofu industry in Taiwan? Soybean consumption is 3 times as large as Japan]. May 1. p. 1. [Jap; eng+]

• ***Summary:*** Taiwan's total exports were much larger than her imports this last year. Since the population is small, the per capita ratio of income is high. They produce a lot of second generation tofu products, and some say that Taiwan is producing more tofu products than mainland China. The demand for these foods is always steady. They produce 10,000 tons of soybeans and import 2,000,000 tons of U.S. soybeans. Their per capita consumption of soybeans is 3 times that of Japan.

9105. Pirello, Christina Hayes. 1988. Brief history of Simply Natural, Inc. (Interview). *SoyaScan Notes*. May 11 and June 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In December 1984 Robert Pirello started Simply Natural, a natural foods vegetarian catering company. In 1984 Christina had sold her design company in Florida and moved to Philadelphia, where she worked as a freelance designer. Her mother had died recently and she had been diagnosed as having cancer. She was a vegetarian when she met Robert, a macro, who introduced her to the macrobiotic diet. Christina joined Robert's company while recovering from cancer. She left the advertising field completely to concentrate on getting well and running Simply Natural.

One of the catering company's first products was tofu cheese, made by wrapping a firm cake of tofu in cheesecloth, embedding it in sweet white miso, and allowing it to ferment at a controlled temperature for several days. This product was made using the traditional Japanese process for *Tofu no Misozuké* (Tofu Pickled in Miso), which they learned from *The Book of Tofu* (page 110) by Shurtleff and Aoyagi. These firm little bricks, served as a cheese with crackers, became their showcase item. (Note: A similar product, called Tofurin, had been developed by Nov. 1983 by Manna in the Netherlands). But they also made many other tofu dishes such as various types of stuffed agé (tofu pouches), tofu dips, quiches, stuffed loaves, pates. You name it, they did it. They purchased their tofu from a company named Fresh Tofu in Easton, Pennsylvania.

In December 1984 a group for whom they were planning to cater a Christmas party requested a non-dairy cream cheese dip. Robert tried pureeing their tofu cheese in a blender and discovered a revolutionary new product–A non-dairy tofu-based cream cheese. To this they could add flavors, such as garlic powder, onions & chives, or herbs. This soft tofu cheese, served as a non-dairy party dip, became their second showcase product. In the spring of 1985, Cynthia Schwartz, a friend who owned Center Foods, a leading natural/health food store in Philadelphia, asked if she could try to sell their soft tofu cheese. Bearing the label Simply Natural Soft Tofu Cheese, their first commercial product sold very well. Soon they were selling it in several stores, delivering it out of the back of the car. Within 4 months, they had distributors in Pennsylvania competing with one another to sell the product. Finally in October 1985 they signed an 6-months exclusive distribution agreement with Jerry Schwartz and Earthy Organics, a Delaware Valley natural foods distributor. Sales grew rapidly and by year's end other major East Coast distributors were clamoring for the product. Jerry kindly let go of his exclusive and Soft Tofu Cheese was soon being carried by Cornucopia (Rhode Island, from Dec. 1985), Stow Mills (Vermont, Dec. 1985), and Tree of Life (Florida, Jan. 1986). In January 1986 Jerry Schwartz introduced them to their first West Coast Broker, Roberta Fleischer, of California. Distribution began there in March. Now sales began to skyrocket. Robert and Christina soon realized that they were in the wrong business. In May 1986 they dropped the catering business and transformed it into a tofu product development and marketing company. But problems also began to grow. As the warm weather of spring came, the Soft Tofu Cheese, made by people with a limited knowledge of microbiology and plant sanitation and now sold throughout the East Coast, began to spoil. Sales plummeted. By hiring food specialists took and obtaining help from Dr. H.L. Wang of the USDA Northern Regional Research Center at Peoria, Illinois, they were able, largely by trial and error to finally get the problem under control.

In August 1986 they moved from their plant in Philadelphia into a larger facility in Norma, New Jersey. The plant's owner, Bill Schroeder, wanted to buy into their company. So they incorporated, he let them use the plant rent free, and he invested a little capital, which they used the funds to pay off past debts incurred because of the spoilage problems. The next challenge was to develop and manufacture a line of second-generation tofu products using their Soft Tofu Cheese. Continuing to buy their tofu from Fresh Tofu, they launched Antonio's Simply Natural Tofu Pasta (Oct. 1986, fresh pasta products stuffed with their Soft Tofu Cheese) and a line of Creamy Miso Dressings (Dec. 1986, made with the sweet white miso in which the tofu had been ripened). In October 1986 they started advertising the new line in Vegetarian Times. In October 1987 they were granted a patent on the process for their Soft Tofu Cheese, and in April 1988 a second patent on the end product. Also in October they repositioned and repackaged their product line to cross over into mainstream markets. Soft Tofu

© Copyright Soyinfo Center 2014

Cheese was renamed Soft Soyalite and Antonio's Pasta was renamed Pasta Lite. Christina and Robert were married on 31 December 1987.

In mid-1988 Nasoya Foods in Leominster, Massachusetts, began tests on making and pasteurizing Simply Natural's Soft Soyalite. In early 1987 they had discussed the possibility of a merger with Nasoya, but they were not as interested in this as Nasoya was, in part because Nasoya could not solve key pasteurization and product flow problems. They are now negotiating their first real outside financing with Leo Blank, who would like to buy Bill Schroeder's stock, and give them substantial capital. They will soon be closing their plant in Norma, New Jersey. Christina and Robert will be out of manufacturing, able to focus their full attention on marketing and product development. Their pasta products are now made at Mays Landing, south New Jersey and their miso dressings by Alpha-Pak in San Pedro, California (using both Cold Mountain Miso and miso recycled from the Soyalite). The future looks very bright.

Richard Rose. 1988. May 13. Adds: He was told by Wally Rogers and Tim Huang that in the late 1970s The Soy Plant in Ann Arbor, Michigan, developed a "Tofu Cream Cheese," similar to Simply Natural's original firm Tofu Cheese (unblended, in a block) and sold it in their deli. A guy from West Virginia showed them how to make it. Christina confirms this: A tall, thin bearded man [not Steve Fiering] tasted their Soyalite at Anaheim in April 1988. He said that he or someone he knew had sold a similar product in a firm brick form. But he was never able to develop a good flavor and the product never sold well [See 1988 interview with Steve Fiering]. July 28 update: Nasoya appears to have solved the pasteurization and hot-pack problem. Christina enjoys working with Nasoya, a company with very similar principles and beliefs about food.

Update: 1998 Sept. 20. Christina Pirello now has a cooking and food show on PBS-TV. Her latest book is titled "Cooking the Whole Foods Way." Address: P.O. Box 295 (Evelyn & Gershel Aves.), Norma, New Jersey 08347. Phone: 609-691-5866.

9106. Lyen, Donald. 1988. Brief history of Dragon & Phoenix Ltd. (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Donald came to England from Hong Kong during the 1950s to study electronics. He founded Dragon & Phoenix Ltd. in London about 22 years ago (in about 1965-66), in order to make tofu, because he liked it and yearned for it. The original location was at [?] Balse Street, Kings Cross, London N1. Later (when?) it was moved to 172 Pentonville Rd., London N1. He also made mung bean sprouts. In both cases, he developed equipment to mechanize the process. He used a liquidizer/blender instead of the traditional stone mill, and a centrifuge to separate the soymilk. He was a pioneer in this area, before Japanese companies did the same thing. At the time there were no other commercial tofu makers in England. However during the mid- to late 1950s there was a small Chinese-run operation in Liverpool (it had no name, and wasn't really a company) that made and sold very small amounts of very hard tofu, probably coagulated with a nigari-type coagulant, not calcium sulfate. It was very expensive, more than 2 shillings sixpence, so it didn't take off. In about 1978 Dragon & Phoenix began making soymilk and selling it mostly to Chinese restaurants. He notes that there is still not much of a market for it, perhaps because the weather in England is not warm enough for it to be served as a refreshing soft drink.

Today, he is sure that Dragon & Phoenix is still the largest tofu manufacturer in England. Yet the market is very small, and he does not advertise or promote his products. He sells only to Chinese restaurants and food stores, not to the health food trade. One reason for the small demand, he feels, is that tofu has so little flavor of its own; you have to know how to cook it to make it tasty. Dragon & Phoenix is only one of Donald Lyen's many businesses. He is still involved with electronics and is the sole agent for a Chinese word processor in the U.K. He is working to convert his tofu plant from a mechanized to an automated one. He was a founder and is presently a member of the European Soyfoods Association. He feels strongly that tofu should not be promoted as a health food but as a basic food for everyone. "Once you classify it as a health food, then you limit your market." Address: 15-18 White Lyon St., London N1 9PD, London, England. Phone: 01-837-0146.

9107. Burgeson, Travis. 1988. Recent developments at Azumaya: Stir Fruity and tofu (Interview). *SoyaScan Notes.* May 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In making Stir Fruity, the hot ingredients are homogenized then run into the filler. The product sets up in the cup, but it is basically gelled by gelatin upon cooling; there are small amounts of a calcium coagulant but it plays a secondary role. Travis is upset by the way they treat their employees. They basically fired Travis. He and Ron Ishida left because they saw no future in the company for themselves. Bill brought them in to reorganize the management of the company, i.e. to get Jack under control or to get him to step down as president. Travis was in charge of quality control. Jack was unaware of this and he did not want to step down. Jack was in charge of production, but as president he had final say, largely because he was the older brother. He had little appreciation for marketing, which was Bill's forte. Bill saved the company at the time they expanded into their current building by developing contacts with top Safeway produce people. The key is who you know.

Jack stepped down in late 1985 or early 1986. His son, Bruce, became production manager. Bill's daughter, Jill,

© Copyright Soyinfo Center 2014

is in sales and marketing. Bill would be president and Ron CEO. Travis was production manager for the next 6 months, and he installed quality control measures that increased shelf life. But then Bill's wife, Dorothy, the bookkeeper, threatened to leave him if he let the reorganization go through. She was paranoid. This showdown was in Nov-Dec. 1986. The restructuring–reorganization never happened. At that point the top consultant left. Bill brought in a top level consultant and he initiated discussions with Kraft about Kraft's licensing Stir Fruity, but it fell through. All agreed to withdraw Stir Fruity, but they kept making it for the Air Force commissary in Travis Air Force Base and a few other local places. Bill had freaked and gone to Hawaii. They had to cut back. They considered it Travis' fault. So he left in late May or early June 1987, and shortly thereafter Ron Ishida left. That year they didn't lose money, despite Stir Fruity. The ad guy who developed the ads ate $10,000 of production expenses and never got paid for his time. Now they sell quite a bit of Stir Fruity in Hawaii and Massachusetts. They put preservatives in all Stir Fruity now. They may not be listed on the label. Azumaya's biggest accounts are Safeway, Lucky, Kroger, Stop & Shop, and Gemco.

Travis has never heard of cash payoffs to produce people. It may be more subtle, such as gift giving, entry to Olympic Club to play golf, wine and dine them, gifts of wine, entertainment. Azumaya was very scared of Morinaga, since Morinaga was the first company to make inroads into Safeway; their broker sold tofu very cheaply. Connections are everything for brokers. You buy your way onto the shelf; slotting allowances, paid above board to the company. Having a good product is not nearly enough. Bill had such high level contacts that he could get Stir Fruity into the dairy case without paying any slotting allowances. You may be able to do it if you have a very strong advertising and promotional allowance.

Azumaya has never made much money. Maybe 2-3% of sales is profit. They have thought seriously about setting up an East Coast tofu plant, but the company is very short on business/management skills.

Most of the time Travis was there, Hinode (Hinoichi) had higher tofu production volume. Then Hinode started losing lots of business to small Chinese companies. The four Azumaya brothers: George is the oldest. Jack is #2, but he got out some time ago. John is #3. He doesn't do much, makes fresh konnyaku. Bill is the youngest. Dorothy feels that Shurtleff came into the company, learned a lot, then published it in his books. He ripped us off for all this information. Dorothy harbors a grudge. Bill Mizono will always be polite. He will never say something unpleasant directly to a person. Address: Central Health Network. Phone: 415-763-9785 (HM) or 548-6769 (OF).

9108. *Graphic* (*Brooklyn, New York*). 1988. The "scoop" on David Mintz, the father of Tofutti. May 25.

• ***Summary:*** David Mintz, a successful kosher caterer from Brooklyn, never believed tofu could change his life, but it has. In 1972, while searching for a milk substitute for kosher desserts, pastries, pies and sauces, he discovered tofu. In 1981, he introduced Tofutti ice cream to the world. More than 38,000 outlets in all 50 states–including supermarkets, health food stores, groceries, gourmet shops and department stores–carry the product. Tofutti is also available in Canada, Japan, Australia, Korea, Hong Kong, and the U.S. Virgin Islands.

9109. Brandel, Amy Jo. 1988. Minnesota soybeans go to Japan for tofu: Growers eye permanent market for production. *Agri News* (*Rochester, Minnesota*). May 26.
• ***Summary:*** Southwest Trading, Ltd. and other members of the Worthington-based, non-profit agricultural product marketing group are filling Japanese tofu manufacturers needs with a locally grown soybean variety. Last week, 25,000 bushels of southwestern Minnesota and northeastern Iowa soybeans headed for Japan. Farmers received 37½ cents a bushel over May 2 local prices for a total of $6.89 cents a bushel, said Jim Wychor of Southwest Trading, Ltd. The soybeans are imperfect hilums. That means the tiny black dot where seeds and pods attach is nonexistent. The variety also has a high protein content. Once in Japan, the soybeans go to many small tofu manufacturers. Each firm uses only about 300 pounds weekly, but there are over 7,000 such facilities in Tokyo alone. Address: Minnesota.

9110. Belleme, John. 1988. The great Japanese foods face-off: Are natural brands a better buy? *East West.* May. p. 26, 28-35.
• ***Summary:*** Contents: Introduction. Shiitake mushrooms. Wakame (sea vegetable). Udon. Toasted sesame oil. Complex fermented foods: Rice miso, rice vinegar. Sea salt. The Oriental foods industry in the USA dwarfs the Japanese natural foods industry. Annual sales of JFC International Inc. [affiliate of Kikkoman] alone, about $180 million, is about ten times that of the entire Japanese natural foods industry in the United States. Oriental foods sell for about half the price of natural foods. Mitoku's special quality miso is made by Takamichi Onozaki of Yaita, Japan. Eden Foods' miso is made by Toshi Shiroozu of Fukuoka, Japan. Also discusses rice vinegar quality.

Note: This article is a thinly disguised advertorial for Mitoku products.

Oil Chemists' Society 65(5):702-04, 706, 708, 710-13. May.
• ***Summary:*** Dramatic changes have occurred in the worlds' fats and oils industry during the past 25 years. U.S. soybeans, the major factor in world fats and oils trade in 1961, have encountered increasing competition from soybeans produced in South America as well as from palm oil, sunflowerseed and rapeseed. U.S. soybean dominance of world oilseed trade during the 1950s and 1960s began to crack in the 1970s. U.S. embargoes on soybean exports in 1973 and 1980 led Europeans, the Soviets and the Japanese to look for alternate sources of supply. They found Brazil and Argentina willing to learn how to grow soybeans for the export market. Ohio State University researcher Norman Rask has estimated total costs of producing a bushel of soybeans at $6.62 in the U.S., $5.39 in Brazil and $4.06 in Argentina.

In the world soybean market, Brazil's share of international trade has grown from 3% in 1981/82 to 14% in 1984/85; in the same time span, Argentina's market share rose from 6% to 13%. Meanwhile, the U.S. share declined from 82% to 65%. In world soybean oil markets, Argentina's share has grown from 3% in 1981/82 to 14% in 1984/85. Brazil's share has increased from 24% to 27%; the U.S. share has fallen from 27% to 20%. U.S. soybean growing area peaked in 1980 at 70 million acres. In recent years, it has declined, with only 56.4 million acres harvested in 1987. U.S. soybean accounted for 65.9% of all world oilseed trade volume in 1979/80. By 1986/87, its share had dropped to 55%. The 1982 Census of Manufactures counted 243 vegetable oil mills operating in the U.S. in 1982. Of these, soybean oil mills had increased to 137 establishments, versus 121 in 1977.

The U.S. Food and Drug Administration (FDA) in 1985 ruled that low erucic acid rapeseed oil could be used in food products in the U.S. The first company to act on this was Procter & Gamble, which in 1986 reformulated its Puritan cooking oil to contain 100% canola oil. The phenomenal increase in corn oil production has been due to enzymatic processes for high fructose corn syrup and a gas tax subsidy on fuel alcohol. Consolidation, mergers, buyouts, and restructurings have led to increasing concentration of capacity in the hands of a few international companies whose operations range from seed cultivation through shipping and export to complete processing. This has led to fewer locations that process larger quantities of oilseeds.

U.S. based soybean processors are expanding their foreign investments in an attempt to escape relatively high U.S. soybean prices as well as to circumvent trade barriers. These include Archer Daniels Midland Co. (ADM), Bunge, Cargill, and Continental Grain. Since 1982, ADM also has held a 45% interest in Alfred C. Toepfer International, a large commodities trading firm with headquarters in Hamburg, West Germany. In 1984, a National Institutes of Health panel recommended that Americans limit their cholesterol intake to less than 300 mg/day, fat intake to 30% of total calories in their diet, saturated fat intake to less than 10% of calories, and polyunsaturated fat intake to a maximum of 10% of calories.

There are a number of possible developments to watch during the next 20 years, including: Soybeans with low or zero linolenic acid; soybeans with higher yields (possibly hybrids) with broader adaptability to increase overall production; increased consolidation of oilseed processing. As world markets for oilseeds and oilseed products increase, market shares for soybeans and soybean products will decline. Address: JAOCS.

9113. Kotzsch, Ronald E. 1988. Soyfoods; A growing industry is revolutionizing the way Americans eat (Special Advertising Supplement). *East West.* May. p. 1A-11A. Also in Vegetarian Times. May. p. 49-59.
• ***Summary:*** A well-done "advertorial" as part of America's first Soyfoods Month. Sponsored by Nasoya, Morinaga, Legume, Simply Natural, Vitasoy USA, Westbrae Natural, and Farm Foods. Each company also ran an ad in this section. Henry Ford played a key role in introducing Americans to soyfoods as with his 16-course meal at the 1934 World's Fair. Interest remained strong through World War II, then dissipated quickly. By the time Ford died in 1947, soyfoods were all but forgotten. Interest was revived and advanced from the mid-1970s on by Shurtleff and Aoyagi of the Soyfoods Center in California. Today through the efforts of many growing companies, the industry is booming.

9114. Morinaga Nutritional Foods, Inc. 1988. Shake off cholesterol: With the prefect blend of Mori-Nu and your favorite fruit (Tear-off recipe pad). 2050 W. 190th St., Suite 110, Torrance, California 90504.
• ***Summary:*** This color tear-off recipe pad (6½ by 4 inches), developed by Susan Bucher of Bucher & Russell in Los Angeles, was introduced in May 1988. On the front is a color photo of a strawberry shake and a package of Mori-Nu Silken Soft Tofu, surrounded by strawberries, a cut pineapple and other fresh fruit. On the back are 2 recipes (Mori-Nu's Wake-Up Shake, Tangy Orange Cinnamon Custard) and "Mori-Nu Tofu Facts." Address: Torrance, California. Phone: 1-800-669-8638.

9115. Murata, K. 1988. Antioxidative stability of tempeh. *J. of the American Oil Chemists' Society* 65(5):799-800. May. [7 ref]
• ***Summary:*** Discusses the antioxidant activities of 6,7,4-trihydroxyisoflavone, an isoflavone isolated from tempeh. Fatty acids liberated from soybeans during the fermentation of tempeh promote rapid decomposition of peroxide. Address: Research Inst. for Education, Teikoku Gakuen, Moriguchi City, Osaka 570, Japan.

9116. Murata, Katsumi; Kusakabe, I.; Kobayashi, H.; Kiuchi, H.; Murakami, K. 1988. Functional properties of three soymilk curds prepared with an enzyme, calcium salt and acid. *Agricultural and Biological Chemistry* 52(5):1135-39. May. [15 ref. Eng]
• ***Summary:*** Soybean curds prepared with an enzyme showed high emulsion stability over a wide range of pH (2-10) and temperature (20-80ºC) whereas calcium–and acid curds were stable only at pH 4-6, and temperature greater than 40ºC. Though foam stability of each curd was low, the enzyme-curd had higher values than others over wide pH and temperature range. Lyophilised enzyme-curd showed higher solubility in water than others, although its water-holding capacity was lower than the others. No gelation was observed in any of the soymilk curds. These results indicate the high potential enzyme-curd has over the others in application to various kinds of food products. Address: 1&4. Research Development Section, Kibun Food Chemifa Co. Malaysia. Soybean imports 1984, 1985, 1986. Visits: Ace Canning (owned by Lam Soon). Yeo Hiap Seng (Malaysia) Berhad (soymilk), Cheong Chuan (Hup Kee) Sdn. Bhd. (traditional fermented soysauce), Sin Yong Huat Enterprises Sdn. Bhd. (soybean importers), Syarikat Perniagaan Cheon Fatt (tofu manufacturer).

Singapore. Soybean imports (1983-1986). Visits: Sin Seng Lee Trading Co. (Pte.) Ltd. (claims to import 60% of soybeans to Singapore). Conclusions for each country. Recommendations for future action. Future export development missions. Accomplishments. Competition.

In Japan, 842,000 tonnes soybeans are used to make foods, as follows (in tonnes, p. 1): Tofu 456,000, miso 180,000, natto 90,000, dried-frozen tofu 30,000, boiled soybeans 23,000, soybean powder [probably kinako] 10,000, soymilk, 7,000, soysauce 5,000, other 41,000. The suppliers of these edible soybeans are (in tonnes): USA 400,000, China 280,000, Japanese domestic 280,000, Canada 24,000. Total Japanese soybean imports: 5,000,000 tonnes. Of this 4,036,000 tonnes (81%) are used for crushing, 842,000 tonnes for food, and 70,000 tonnes for feed (not crushed). The Japanese market for soybeans is very large for both crushing and food use, but is not growing. The beans for crushing come mostly from the USA and South America.

Preferred characteristics of soybeans for each type of soyfood are given. For example, for miso: Low oil, high protein, high sugar, white hilum. For tofu: High sugars (glucose, sucrose), moisture content 10-12.5%, new crop preferred to old, protein 40%, oil 19-20%, hilum color is not very important but white is preferred, varietal consistency; preferred varieties are Beeson, Amsoy, Corsoy. Natto: Most important is small size, 5.5 mm or less, clean beans free of foreign material, high sugar content (saccharose, stachyose, which bacillus needs to work), less oil, must absorb water well. Soymilk: Good flavor, low moisture (10%), low percentage of splits (too high can cause rancidity), low oil, high protein.

In Japan, vegetable oil consumption has increased 2.5 times in the past 20 years to 45.17 gm/capita/day in 1986. Soyoil and canola oil together account for 85% of production. Canola is replacing soybean oil. If the oil market is strong, the 30 Japanese crushers crush more canola, but if protein is strong they crush more soybeans. U.S. soybeans have too much foreign material; new contracts have a penalty for > 2% FM.

In Hong Kong, 6,000,000 cases of Vitasoy brand soymilk are produced annually. The company uses 2,500 tonnes/year of soybeans, 80% of which are grown in Canada. It uses 100 to 200 tonnes of organic soybeans for Vitasoy exported to U.S. health food stores. Using 15 Tetra Pak machines, production takes place 24 hours/day (3 shifts), 6 days a week. Contacts: Patrick Cheung (marketing manager), and Raymond Yuen (commercial manager).

Amoy Industries, the largest maker of soy sauce in this part of the world, produces 6,000 tonnes/year. The company was established 80 years ago in Amoy, eastern China, moved to Hong Kong in 1949; 50% was purchased by Pillsbury in 1983. Uses 2 containers of soybeans/week, 100% from Ontario for the past 5 years.

Malaysia soybean imports rose from 174,400 tonnes in 1984 to 255,200 tonnes in 1986. The main suppliers in 1986 were China (56.2% of total), Vietnam (15.8%), and Argentina (14.3%). Ace Canning uses ton tonnes/month of

© Copyright Soyinfo Center 2014

soybeans (presently all from China) to make soymilk. They have 7 Tetra Pak machines. Yeo Hiap Seng (Malaysia) is the largest soymilk producer in Malaysia, making 25,000 liters/year using 9 Tetra Pak machines. They use 1,250 tonnes of soybeans (80 containers) per year, all Canadian.

In Singapore, soybean imports rose from 28,287 tonnes in 1983 to 41,571 tonnes in 1986. In 1986, some 66% came from Canada, 16.6% from China, and the rest from others.

The major competition for food quality soybeans in these four countries at present comes from China. The Chinese have improved their soybean quality and appear to be actively seeking to increase their market share. In the long run, however, China may choose to reduce its soybean exports in order to increase meat consumption in China. This could lead to new market opportunities for Canada in these four countries. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

• ***Summary:*** The first natto taste test in Nigeria was in Lagos. 7 women, ages 30-40, at the Department of Agriculture tried plain, unheated natto. They disliked the sticky/slimy texture, saying that it reminded them of rotten food. But the strong smell of natto was not foreign to them, since they knew dawa-dawa.

The next taste test was in the village of Zonkwa, located 50 km southeast of Kaduna. It had 200 inhabitants of which 10 tasted natto, but the village head tasted first and his response may have influenced that of the other villagers. These people know and consume dawa dawa soup, so the natto was used in a similar soup in place of dawa dawa. The result looked like a thick porridge. In this form, the natto was liked very much. A table compares natto and dawa dawa for appearance, smell, texture, and taste–on 5 levels of like and dislike. In each characteristic dawa dawa scored only slightly higher than natto. Natto received the highest score for its taste (very tasty: 8 vs. 9 for dawa dawa) and the lowest for its mouthfeel (4 vs. 9). All tasters said that natto soup was more "sticky" or mucilaginous (*nebatte-iru*) than dawa dawa soup, and that it reminds them of okra soup with corn.

Then at Zonkwa natto was served Japanese-style on white rice (probably seasoned with shoyu and thinly sliced leeks (*negi*)). The "brave young people who ate it said it as very tasty."

The last taste test was in the village of Osegere, located about 20 km east of Ibadan. A tempeh experiment had been conducted there by the Denmark Ministry of Development starting in 1981. This time the local people (who did not speak much English) were asked to make natto soup using freeze-dried natto, plus the usual palm oil, pepe, etc. About 10-12 people tasted it and 90% said they liked it very much; 40% said they found it "sticky." Address: Tsukuba Univ., Shushi Katei Kankyo Kagaku Kenkyu-ka.

9124. Maeda, Toshiie. 1988. Mura okoshi–Tenpe sonjuku [Revitalizing a village–the tempeh village school. I.]. *Toyo Shinpo* (*Soyfoods News*). June 1. [Jap; eng+]
• ***Summary:*** The author, a representative of the school, wrote a book titled Homeland of Miso (*Miso no Furusato*). He discussed the fact that the use of miso mainly in miso soup presents a big problem. The first solution to the problem is to use miso in thick ketchup-like sauces. The second is to return to the non-salted fermented foods such as Japanese natto, Nepalese kinema, Indonesian tempeh, and Chinese

© Copyright Soyinfo Center 2014

fermented black soybeans (shi), which are the ancestors of miso. He emphasized tempeh, which he feels is a wonderful food that can be used in various ways, and is nutritious and healthy. He explained that tempeh is becoming popular in the USA and Europe, and concluded that tempeh alone can be used to start a food industry.

"Because of this book, I received a visit from 2 people from the "Vitalizing Village Committee" of Kasuga-cho, Hyojo-gun, Hyogo-ken. They asked me to give a lecture on tempeh, for they wanted to consider whether tempeh could be used to help vitalize the village. I accepted the offer, but realized I needed more information on the subject. So I contacted Murata sensei, professor emeritus at Osaka Shiritsu Daigaku, who played a key role in organizing the first international Asian Symposium on Non-Salted Soybean Fermentation in Japan. She and others at the university sent me an encouraging letter, four articles on tempeh, and information on tempeh cookery from the university.

"In late August 1987 I used these material to give a 40 minute lecture on tempeh followed by 20 minutes of questions. It was decided to have a follow-up meeting for tempeh tasting. Through Dr. Murata's introduction I received 2 kg of free tempeh from a maker in Aichi-ken. The sampling was a big success and was written up in the newspaper in a big way. The local Hyojo prefecture high school food processing department started to experiment with tempeh, and a women's group, the Kasuga-cho Commerce and Industry Group, began to experiment with tempeh cookery. At the end of Sept. 1987 one of the teachers at the high school succeeded in making tempeh, which made the news. Then they started to make second generation tempeh products, such as confections and breads. At their local school festival in October 1987 he presented the products and gained a good reputation."

9125. *Toyo Shinpo* (*Soyfoods News*). 1988. Hyakkaten deno tôfu jitsuen hanbai hajimaru [Tofu is being made and sold in a department store in Korea]. June 1. p. 11. [Jap; eng+]
• ***Summary:*** In Seoul, Korea, there is a newly built department store, "Lotte World." In it there is a traditional tofu shop which uses a stone grinder to crush their soybeans. They had to get special permission to use a stone grinder, as they are generally considered unsanitary. Their shop is arranged so that shoppers can get a good look at how the tofu is being made, unlike the equivalent store in the Ikebukuro department store in Japan. There is also a counter where customers can eat their tofu. The store does not put the tofu in a water tank. The tofu is very firm.

9126. *Farmers' Advance* (*Camden, Michigan*). 1988. Indiana seeks tofu connection. June 8.
• ***Summary:*** Special soybean varieties for processing Japanese tofu will be developed through a $14,050 value added research grant to the Purdue University Agronomy Department, Lt. Governor John Mutz has announced. "We're also working to develop a special state certification program for exported food soybeans in order to ensure quality and identity," Mutz said. The research project will evaluate production characteristics of seven Japanese soybean varieties.

9127. Fruin, W. Mark. 1988. Kikkoman archives and history (Interview). *SoyaScan Notes.* June 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Kikkoman has many documents written before 1900 in the Kikkoman Archives, which are located in a kura on the grounds of the administrative office building at Noda. Before 1980 they used to be in a sales office upstairs in the main building. Many early documents, often in shoji brush script, are very hard to read. There are also said to be many early documents in the personal homes of the families who owned the family businesses that became Noda Shoyu in 1917. They are mostly sales and accounting records. The Takanashi family is said to have many old documents in their mansion near the center of Noda. In Noda Shoyu Keizai Shiryo, Ichiyama Morio has taken some of the older documents and written them in a more easily readable form.

Concerning the relationship between Choshi Shoyu, Kikkoman, and Yamasa. The Choshi and Yamasa founders were two brothers who both came from Wakayama. They split apart during the Tokugawa period. In 1914 the Choshi Shoyu Co. Ltd. was formed from 3 previously independent shoyu brewers from Chôshi in Chiba prefecture. The three were Yoshiuemon Hamaguchi, Yoshibei Fukai, and Genba Tanaka. From the 1860s until this time, the main figure in Choshi Shoyu was Tanaka Genba, owner of the largest brewery there. During Meiji and Taisho periods the Choshi side got into financial trouble and asked Yamasa for help. Yamasa declined so Noda Shoyu (later Kikkoman) Kikkoman stepped in and bought 80% of the Higeta Shoyu Company's stock in 1937. But during the occupation after World War II, Kikkoman was forced to divest Choshi/Higeta Shoyu. However Choshi still does most of its marketing through Kikkoman even though the ownership is separate. Choshi/Higeta uses the Kikkoman fermentation recipe and until recently the Kikkoman sold in Hokkaido was made by Choshi/Higeta Shoyu.

Choshi/Higeta Shoyu and Yamasa have many more early documents than Kikkoman does. Reiko Hayashi is a female professor of economic history (formerly at Tokyo Univ., now retired) who has done extensive research on those records and compiled bibliographies. One of her students, Hiroko Aburai, has also done a lot.

Kikkoman International is a private company in charge of soy sauce in North America. Kikkoman Corporation, the parent company, is publicly owned, but is only traded on the Tokyo stock exchange. It has annual reports. Address: Palo Alto, California.

9128. Maeda, Toshiie. 1988. Mura okoshi–Tenpe sonjuku: Tenpe zukuri ga hajimaru [Revitalizing a village–the tempeh village school: Tempeh production gets started. II.]. *Toyo Shinpo* (*Soyfoods News*). June 11. [Jap; eng+]
• ***Summary:*** In Nov. 1987 there was serious discussion of having an international tempeh symposium in the town of Kasuga-cho. This was the idea of Prof. Dr. Tadao Watanabe of Kyushu Univ. Though the idea eventually had to be dropped for lack of funding, the Fifth Tempeh Meeting was held in the village of Kasuga-cho on 19 Dec. 1987. Many prominent tempeh experts attended: Dr. T. Watanabe, Dr. Murata, Mr. Kanasugi, and Mr. Takato. The latter two are also involved with natto. After this meeting, some people wanted to start making tempeh in the village. Taking the initiative were Mr. Kenji Takami (a potter), Mr. Kazumasa Takami (a wood sculptor), and later another Mr. Takami (a horticulturist). They wanted to include tempeh in their lunch program. They started to build a tempeh factory on part of T. Takami's pre-school, Meitoku Hoiku-en. Dr. Nishira Hiroshi of Kobe University, Dept. of Agric. Chemistry, advised on how to make tempeh starter. Experiments were conducted at Kyoto Tanki Daigaku (Junior College).

In mid-January 1988 the group started to call itself Tenpe Sonjuku: Kenko Shokuhin Tenpe Kenkyu Sakuru (Tempeh Village School: Health Food Tempeh Study Circle). They bought the best equipment for making tempeh starter. Because of limited capital, they built the plant simply and improvised. For dehulling, they used a tofu shop mill. For separating the hulls by aspiration, a *tomi* developed during the Edo period. For the incubation room, an inexpensive rice sprouting room. For dewatering the beans, a used washing machine centrifuge. For mixing in the tempeh starter, a tofu burger (ganmo) mixer. For incubation trays, used rice sprouting boxes. Address: Kobe Women's Junior College, food processing.

9129. *Toyo Shinpo* (*Soyfoods News*). 1988. Tôfu ga eizu ni kiku! Eizu nimo kôka ga aru tônyû no naka no saponin, Okubo Ichiro hakase ga happyô [Tofu works against AIDS! Dr. Ichiro Okubo's publication shows saponin in soymilk is even effective in treating AIDS]. June 11. p. 11. [1 ref. Jap; eng+]
• ***Summary:*** Dr. Okubo, assistant professor at Tohoku University in Japan, published an article in *Asahi Graph* (3 June 1988) stating that tofu and soymilk work against AIDS. This created a sensation in Japan. There are many types of saponins, but they can be divided into 2 types, A and B. Group, B can control growth of the HIV virus, which is also a cause of leukemia and breast cancer. Group A, which only exists in the soybean hypocotyl (sprout/germ, *haijuku*), is a cause of the soybean's bitter flavor. Thus, removing the hulls and germ from soybeans gives better tasting soymilk and tofu. Address: Asst. Prof., Tohoku Univ., Japan.

9130. *Farmer's Exchange* (*New Paris, Indiana*). 1988. Research to start on soybeans for tofu. June 17.
• ***Summary:*** Special soybean varieties for processing Japanese tofu will be developed through a $14,050 value-added research grant to the Purdue University agronomy department. This project is a key step in our effort to help Hoosier farmers access premium food soybean markets in the Far East. The research project will evaluate production characteristics of seven Japanese soybean varieties and their adaptability to Indiana's climatic conditions and management techniques.

9131. Belleme, John. 1988. Tamari: Reborn in the U.S.A. [San-J International begins production in America]. *East West*. June. p. 14, 16-18.
• ***Summary:*** In 1804, almost half a century before Commodore Perry's ships forced open Japan's ports to American trade, the Sato family's fleet of small boats began ferrying their homemade tamari and other goods up the Kiso, Ibi, and Nagara Rivers. From the port city of Kuwana in the Bay of Ise on the Pacific Coast, the Satos received goods from larger ships and delivered them to communities upriver. Takayoshi Sato is currently the president of San-J International, the remnant company, almost eighty years since the Satos closed their maritime business. Faced with the loss of livelihood, the Satos turned to making tamari and soybean miso on a large scale in 1909.

With the dollar at an all-time low against the Japanese yen, and 100% of all natural shoyu and tamari sold in the U.S. being imported from Japan, the opening of the San-J International tamari plant could not be more timely. American importers of Japanese foods have seen a 50% increase in the price of shoyu and tamari in the past eighteen months. There are just a few companies in Japan still making genuine tamari. San-Jirushi at Kuwana is the largest, producing roughly half of the country's annual production of 6,000 kiloliters (1,500,000 gallons).

William Shurtleff first proposed exporting San-J tamari to the U.S. in 1977. Shurtleff gave a sample of San-J tamari to the president of Mitoku, which supplied Erewhon with Japanese foods. Shortly thereafter, Erewhon began importing San-J tamari in five gallon tins. Next John McLaughlin, a Richmond businessman, tasted San-J tamari and was impressed enough to go to Japan and talk to the Sato brothers. The meeting led to the founding of San-J International in December 1978, a Japanese-American joint venture to market San-J tamari and eventually build the Richmond plant.

Today, industrial giants such as Stouffer's and Campbell's use San-J tamari exclusively in all their frozen food lines. San-J makes the point in their ads: "One teaspoon of tamari–which contains just a pinch of salt–is the seasoning equivalent of a full tablespoon of salt. Tamari seasons with

© Copyright Soyinfo Center 2014

protein, not sodium." In the manufacture of tamari, the mixture of koji and brine, called moromi, is left to ferment for about six months. Tamari is pasteurized (2% ethyl alcohol is added to prevent the growth of yeasts and molds). The Richmond plant can make about 1 million gallons of tamari and tamari shoyu (tamari with 20% wheat added) a year, about two times the current annual sales of the imported product.

The Richmond process will differ from that used to make tamari in Kuwana. First, in Japan, San-J tamari is aged for at least 12 months at room temperature. In Richmond, fermentation is accelerated to approximately 6 months by heating the fermentation vats with electric coils. Second, the San-J tamari from Japan is aged in old cedar vats while the Richmond plant is using fiberglass vats lined with epoxy resin. Every major importer of natural Japanese foods has expressed interest in bottling San-J tamari in their private label. However, only Eden Foods Clinton, Michigan, has negotiated a contract with San-J.

9132. Cooper, Jack. 1988. Miso: The mother's touch. *Palate Pleasers of Japan* (*Los Angeles, Calif.*) 6:31-37. June.
• ***Summary:*** The "mountain made" miso commercial turned a small, local miso manufacturer in the Japan Alps, Miyasaka Jozo Co., Ltd., into the second largest miso producer in all of Japan. To Japanese everywhere, the "chop, chop, chop" sounds of mom dicing tofu and scallions in the kitchen, mixed with the savory, pungent fragrance of hot miso broth and the clean, sweet smell of steaming rice are as much a symbol of the dawning of the day as the aroma of fresh coffee and the sizzling sounds of bacon and eggs are to Americans. William Shurtleff and Akiko Aoyagi explain [the bewildering 'vintages' of miso] in their massive volume, *The Book of Miso.* All traditional miso contains salt and soybeans to which a mold culture, or "friendly agent," usually *Aspergillus oryzae,* has been added.

A 1965 study conducted by Dr. Takeshi Hirayama at Japan's prestigious National Cancer Center, people who eat miso soup daily are 32% less likely to develop cancer than those who never eat miso soup. Undiluted, miso contains on average about 12% salt, six times the salt content of cheddar cheese. Most miso sold in America is imported and sold under Japanese brand names like Maruman, Marukome, Shinshu-ichi, Yamabuki, Hanamaruki, etc. One reason for this may be Japan's stringent new laws requiring producers to list all ingredients and additives (mainly MSG, artificial coloring and preservatives), making the natural products more attractive to America's health-conscious consumers.

The Japanese National Miso Association estimates that there are over 2500 miso manufacturers in Japan, many of which are small, family-owned operations. Color photos show: (1) Miko-chan, the little kneeling girl who is the Miyazaka Jozo logo. (2) Three types and colors of miso in white bowls, next to an iris. (3) The historic old Shinshu Ichi miso and shoyu plant. (4) A bowl of white miso soup with crab and tofu. (5) An assortment of traditional miso dishes. (6) The ultra-modern computerized control panel, motorized conveyors, and the modern packaging facility at the Miyazaka Jozo factory (3 small photos). (7) A shop in Japan retailing Japanese miso in traditional small wooden kegs. (8) Five views of the South River Miso Co., Conway, Massachusetts (including an exterior view of the home and miso shop, Christian Elwell at work in the temperature-controlled koji room).

Note: According to *The Book of Miso,* by Shurtleff & Aoyagi (1976, p. 257; based on 1974 statistics) *Mayasaka Jozo* (*Shinshu Ichi*) is Japan's largest miso factory. The company's Tokyo factory produces about 15,000 tons/year; the Nagano and Yamanashi plants produce 9,300 tons and 3,300 tons respectively. All make Shinshu-type light-yellow miso. As of 1983, the Tokyo factory also made freeze-dried miso. Address: Editor, Palate Pleasers.

9133. Fujinuma, Kenji; Saito, K.; Nakazato, M.; Kikuchi, Y.; Ibe, A.; Nishima, T. 1988. Shokuhin-chû no gurichirurichin-san no bunseki-hô [Determination of glycyrrhizic acid in foods]. *Shokuhin Eiseigaku Zasshi* (*J. of the Food Hygienic Society of Japan*) 29(3):210-15. June. [9 ref. Jap; eng]
• ***Summary:*** High performance liquid chromatography was used to determine the glycyrrhizic acid (GA) content of Japanese soy sauce and miso. In a survey of commercial foods, GA was detected at levels of 2 to 224 micrograms/gm in 16 out of 56 samples.

Glycyrrhizin is $C_{42}H_{62}O_{16}$. Glucoside contained in *Glycyrrhiza glabra* L. at the level of 6-14%, with strong sweetness, which is hydrolyzed with acid into glucuronic acid and glycyrrhetinic acid ($C_{30}H_{46}O_4$). Address: Tokyo Metropolitan Research Lab. of Public Health, 3-24-1 Hyakunin-cho, Shinjuku-ku, Osaka, Japan.

9134. **Product Name:** [Soymilk Ice Cream].
Foreign Name: Tônyû Sofuto Kuriimu.
Manufacturer's Name: Iimura Shoji.
Manufacturer's Address: Ebisu Nishi 2-12-13, Shibuya-ku, Tokyo, Japan. Phone: 03-463-1896.
Date of Introduction: 1988 June.
How Stored: Frozen.
New Product–Documentation: Toyo Shinpo. 1988. June 1. p. 6. "Hit product of the summer is the soft-serve soymilk ice cream machine from Iimura Shoji." Iimura Shoji, a company which sells materials for the tofu industry, is trying hard to make this product popular. Ten companies have already bought the soft-serve ice cream machine, and Iimura Shoji anticipates that it will have sold 100 machines by the end of the year. The company has been promoting the product on T.V. just in time for the summer heat. The ice cream comes in two flavors–vanilla and custard. The company is also trying to sell the ice cream machines to local tofu shops.

9135. Kay, Theodore; Kimura, M.; Nishing, K.; Itokawa, Y. 1988. Soyabean, goitre, and prevention. *J. of Tropical Pediatrics* 34(3):110-113. June. [Eng]
• ***Summary:*** Contents: Introduction. Nutritional value of soya bean Nigerian foods prepared with soya bean paste: Soya bean paste (soaked, ground soybeans without the "husk" removed), kosei (akara ball), panke (puff-puff). Nigerian foods prepared with soya bean milk: how to make the basic milk, wara (milk curd), and alele (moin-moin, made with soya milk residue [okara]). Note: "The above five recipes have been fully accepted in many parts of Nigeria. The taste and the preparation procedure of these traditional Nigerian foods made from soya beans worked out to be almost the same or very similar to the foods traditionally made from cow peas (white beans) for kosei and alele, wheat flour only for panke, and cow milk for wara."

Nigerian foods made with soya bean flour (pre-cooked): How to make the basic flour, protein enriched pap (with akamu), and protein-enriched fu-fu (with gari or cassava flour). Discussion.

"Soya bean is being successfully established in Nigeria, but it has been very difficult to cook in a traditional West African way so it has never become popular in this country. Most soya bean produced in Nigeria has been exported as cash crop except a little for animal consumption."

Kosai, alele, panke, and awara are traditional foods in Northern Nigeria, while akara ball, moin-moin and puff-puff are traditional foods in Southern Nigeria. Discussion: "Why do we need soya bean in Nigeria?" Five reasons are given. The first two are: "(1) It has higher protein content and net protein utilisation (NPU) than cowpeas, groundnut and other legumes. Moreover, soya bean is much cheaper than other legumes in Nigeria. (2) Soya bean flour and soya bean milk have little taste and can therefore be incorporated into traditional foods such as pap and fu-fu without changing the appearance, taste and texture." Address: Dep. of Hygiene, Faculty of Medicine, Kyoto Univ., Kyoto 606, Japan.

9136. Kirazu (Okara Club). 1988. June. New soyfoods restaurant or deli. Imperial Roppongi Forum 2F, Roppongi 5-16-5, Minato-ku, Tokyo, Japan.
• ***Summary:*** Toyo Shinpo. 1988. June 1. p. 9. "The Okara Club, 'Kirazu', helped to open up an okara restaurant in Roppongi. The 60 worldwide dishes are served with wine." The Sapporo Beer Company wanted people to drink a lot of wine. They also wanted to have an outlet restaurant. They came up with the new and unusual idea of having an okara restaurant. It is located in a high class area in Roppongi. They serve okara in 60 different ways, Western and Japanese, and with every meal comes an ample portion of wine. Address: Tokyo, Japan. Phone: 03-582-4469.

9137. **Product Name:** [Maruman Miso].
Foreign Name: Maruman Miso.
Manufacturer's Name: Maruman Jozo Co. Ltd. (Importer). Made in Japan.
Manufacturer's Address: USA
Date of Introduction: 1988 June
Wt/Vol., Packaging, Price: Tubs and plastic bags.
How Stored: Shelf stable.
New Product–Documentation: Ad in Palate Pleasers. 1988. Vol 6. June. p. 33. "Natural Goodness. Miso." The product is distributed in the USA by Oriental Trading Co., South San Francisco, CA 94080; Daiei Trading Co., Inc., Woodside, New York; and Crown Trading Co. Ltd., Kobe, Hyogo prefecture 651, Japan.

9138. **Product Name:** Meridian Teriyaki (Soya Sauce).
Manufacturer's Name: Meridian Foods Ltd. (Importer). Made in Japan.
Manufacturer's Address: Corwen, Clwyd, LL21 9RR, Wales, UK. Phone: 0490 3151.
Date of Introduction: 1988 June.
New Product–Documentation: Simon Bailey. 1988. Natural Choice. Aug. 15. "Soya-Based Products." A photo shows the Labels. Each has an illustration on the front panel. The tamari shows Mt. Fuji and the ocean, the teriyaki a soybean plant, and the shoyu some Japanese-style trees. CSP form filled out by Simon Bailey. 1988. Sept. 28.

9139. Morinaga Nutritional Foods, Inc. 1988. Revolutionary tofu (Ad). *Palate Pleasers of Japan* (*Los Angeles, Calif.*) 6:61. June.
• ***Summary:*** This full-page color ad begins: "Let Mori-Nu technology solve the problem of tofu freshness." "To find out more... Join the Mori-Nu Health For Life Club. Receive newsletters, coupons, and recipes..." A half-page color photo shows aseptic packages of silken firm and soft Mori-Nu tofu on a wooden table in front of fruits and vegetables.

An "advertising supplement" on pages 76-77 of this issue is titled "The miracle food in a miracle package." It contains two recipes: Chinese unchicken salad, and Pumpkin pie (with tofu). Color photos show each of the two recipes, plus the front page of an issue of *Mori-Nu Healthy Times* newsletter (edited by Susan Buchér), and the front of a color recipe pad titled "Light & Easy Mori-Nu-Recipes." Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9140. Nihei, Takao. 1988. [The history of shoyu in Hawaii. (Food series, part XII)]. *Kokiku* (*Honolulu, Hawaii*). June. p. 32. [Jap; Eng]
• ***Summary:*** "Yo o sutete yama ni iru tomo miso, shoyu, sake no kayoiji nakute kanawaji." "Forsaking all worldly things, still, one can't do without these: Miso, shoyu, and sake." As in the ancient waka poem written by Shokusanjin (during the Edo period), no matter where the Japanese went, miso

© Copyright Soyinfo Center 2014

and shoyu were necessities of life. Hawaii's first miso and shoyu were recorded in Meiji Gannen (1868), the year of the first Japanese immigrants' arrival. Ikuma Yonekichi, who came on the ship "Scioto" (Saioto-go), noted in his diary, "Yokohama departure. Provisions of rice, miso, shoyu."

In 1887, as the Japanese immigrant population increased, Japanese goods began to be imported, but there were many instances where miso and shoyu were insufficient. In Hawaii, shoyu was manufactured earlier than sake by Shimada Jihachi in 1891, but he gave it up due to financial difficulties. Later, Yamagami Nobuyuki, who came from San Francisco, California, started a shoyu factory which prospered. With the advent of World War II, imported goods from Japan were cut off, which gave rise to the start of miso and shoyu companies here. Barbeque shoyu is Hawaii's own discovery. The locally made miso and shoyu are less salty than the Japanese products.

• ***Summary:*** Morinaga Nutritional Foods, Inc., recently announced a multifaceted consumer education program designed to answer the questions "What is tofu?" and "What do you do with it?"

Coordinated by Danielle Lin, talk show host for KFOX Radio, Los Angeles, California, "the campaign will use a variety of mediums, including in-store promotions and media advertising.

"These new consumer education activities are an extension of Morinaga's marketing activities which include their *Health for Life* club and the *Healthy Times* newsletter."

9144. SunShine Tofu House. 1988. June. New soyfoods restaurant or deli. 5091-C Buford Highway, Atlanta, GA 30340.
• ***Summary:*** Atlanta Daily World. 1988. June 21. "New Tofu Restaurant Opens." Mayor Andrew Young joined other dignitaries (incl. Japanese Consul General Takayuki Kimura) and supporters at the formal opening in northeast Atlanta. The proprietor is Seiho Tajiri, a prominent local Japanese businessman. "The restaurant, the first of its kind in the Southeast, will not only provide a full menu of tofu dishes, but also manufactures the tofu and soymilk in the restaurant." Address: Atlanta, Georgia. Phone: 404-451-2054.

9145. Udesky, James. 1988. The book of soba. Tokyo and New York: Kodansha International. 166 p. Foreword by William Shurtleff. Illust. Index. 27 cm. [50* ref]
• ***Summary:*** Contents. Foreword. Introduction. I. Making soba. Homemade soba noodles. Broth. Noodle dishes. Country cooking. Groat cooking. Variations and desserts. Ingredients. II. About soba. Nutrition. Buckwheat: From seed to table. History. III. Appendices. The soba dining experience. Selected soba restaurants in Japan. Oriental, natural, and specialty food stores in the United States and Canada. Bibliography.

Soy-related recipes include: Cold soba noodles with natto and sesame (with "2/3 oz natto," p. 59). "Fox Soba" (*Kitsune soba,* with "4 pieces thin deep-fried tofu {*abura-age* or *usu-age*}, p. 63). Soba noodles in miso stew (*Kenchin soba,* Ibaragi prefecture, with "4-5 tablespoons miso," p. 70). Soy-Soba noodles (with "4 oz soybeans" [whole dry soybeans], p. 71). Broiled soba dumpling with miso sauce (with "3-4 tablespoons sweet white miso," p. 81-82). Soba pasty (with "1½ oz natto, p. 85). Soy sauce is used in many recipes.

The excellent "Ingredients" section (p. 91-98), gives definitions of several soyfoods, including miso, natto, okara, soy sauce, tofu, and tofu–thin deep-fried (abura-age, usu-age).

The definition of "natto" is especially good: "Natto: This rich soybean product with a cheeselike flavor is still underestimated, unappreciated, and misunderstood, mainly because the sticky 'threads' resulting from its special fermentation process are strong and stubborn, making it pretty tricky for beginners to eat. Natto can be made easily at home with soy beans, 'natto spore' (now available at major health-food dealers on both coasts), a pot, and a box... If allowed to sit too long on store shelves, the beans become overripe. Although you cannot check the quality until you open up the package at home, the best natto should have a light, tannish color and still be moist and a little puffy. Too dark a color indicates overripening and a correspondingly bitter taste. To remedy this situation somewhat, stir the

© Copyright Soyinfo Center 2014

beans together with chopsticks or a spoon and combine with chopped onions, wasabi horseradish, and soy sauce. Since this food is the result of bacterial action, no preservative can be used. Thus, natto should be eaten as soon as possible."

Mr. Udesky had a chance to prepare homemade soy sauce while living with Mr. Noboru Muramoto (author of *Healing Ourselves*) from 1971 to 1975. In the Appendix titled "Oriental, natural, and specialty food stores" is an entry (p. 153, col. 3.8) for: "Foods for Life, 504 E. Broadway, Glendale, California, 91025." Note: This pioneering natural and organic food store is still in business in 1988.

For a complementary review, see Jean Pearce. 1991. Nov. 10. *Japan Times.*

Letter from James Udesky. 1997. April 21. The hardcover edition of *The Book of Soba* has now sold 12,000 copies in Japan and abroad, and 3,000 copies of a new soft-cover pocketbook edition (246 p.; 18.2 cm) were published by Kodansha International in Dec. 1995. An article on soba titled "The Art of Noodles," by Udesky appeared in *Japan Quarterly* (April-June 1997, p. 32-42; it contains a large color photo of him rolling out soba dough). Udesky is living in Tokyo, has lived in Japan (except for a 3-month break in 1988) since 1988, married a Japanese woman in 1990, for the last 2 years has worked for a medical equipment importer and taught English part-time at Dentsu Inc. to survive financially, has established a company named Udesky Communications, and continues his practice of making traditional Japanese soba. He has plans for a new book titled "Basic Techniques of Udon Making. " Address: Heim R1 #103, Meguro Honcho 6-18-3, Meguro-ku, Tokyo 152, Japan. Or: The Soba Center, P.O. Box 72, Winnetka, Illinois 60093-0072.

9146. Maeda, Toshiie. 1988. Mura okoshi–Tenpe sonjuku: Mura okoshi was kore kara da [Revitalizing a village–the tempeh village school: Now begins the village development. III.]. *Toyo Shinpo* (*Soyfoods News*). July 1. p. 4. [Jap; eng+]
• ***Summary:*** On 31 Jan. 1988 the group held the first formal meeting of its members. In February work on the equipment began, and by Feb. 20 the tempeh starter room were finished. In March, after many failures and trials, good tempeh starter was produced, and from it the first good tempeh. Big success! By mid-April the tempeh plant, with a production capacity of 2 tonnes a month, was completed.

The purposes of the group: 1. To provide real good foods to the household table. 2. Especially to provide nutritious tempeh for the table to change people's food life. And to popularize tempeh as a food to maintain a healthy food life. Therefore they are collecting information on nutrition and trying to develop second generation tempeh products. Mr. Maeda works as a food technology technician. Cooking experiments are done by the wives of the members. They use organically grown soybeans from Mr. Otsuki, a tofu shop owner. Address: Kobe Women's Junior College, food processing.

9147. *Toyo Shinpo* (*Soyfoods News*). 1988. Shinseihin to tônyû no dezain o kairyô, Mausan-Ai [Marusan-Ai comes out with a new product and they are also changing their soymilk packaging]. July 1. p. 3. [Jap; eng+]
• ***Summary:*** The new product is not soymilk, but green tea. However, Marusan-Ai has redesigned parts of their soymilk package so that nutritional information can be clearly read.

9148. *Toyo Shinpo* (*Soyfoods News*). 1988. Kibu, tezukuri tôfu setto. "Kangaeru Kai" to teikei, hatsubai [The Kibun company is producing a kit to make tofu at home in conjunction with Kangaeru Kai ("Thinking Society")]. July 1. p. 3. [Jap; eng+]
• ***Summary:*** The Kibun company, which makes the soymilk for the kit, is located at Ginza 7-14-13, Chuo-ku, Tokyo-to, Japan. The soymilk comes in special long-life, 1 liter bottles that has a 60-day shelf life at room temperature. They use special, domestic Hokkaido beans and water to make this soymilk. They also put natural nigari in the kit. One liter of the soymilk can produce 3 regular size kinugoshi (silken) tofu cakes. The kit, Tofu No Moto, contains 6 liters of the soymilk and costs 8100 yen.

9149. Bulkley, Kate. 1988. Soy products' new flavor spices Denver Tofu. *Denver Business Journal.* July 11.
• ***Summary:*** Denver Tofu Inc. started business in 1925, and by 1973, they were making 150 pieces (one-pound each) a day. "Now," says Denver Tofu Inc. owner and president, Haru Yamamoto, "we make 2,000 to 3,000 pieces a day." In fact, the company's sales doubled annually from 1982 to 1987. The King Soopers grocery store reports that in the 1970s they had tofu in the produce section, but nobody knew what it was. In the early 1980s, they moved it into the dairy case and they "sold an awful lot of it". Denver Tofu makes five different kinds, ranging from extra hard to kinugoshi, or soft, silken tofu. The company also deep-fries some tofu into something called age (pronounced ah-gay). The softer tofu has always been the best seller at the Asian markets. The harder tofu has generally been a better seller in the supermarkets.

Denver Tofu employs 11 people. In the summer, the plant churns out an average of 2,000 pounds of tofu a day. In the winter, production increases to an average 3,000 pounds a day to meet demand. The company also produces 70 gallons of soy milk for sale, as well as many pounds of agé. The production room is filled with about $300,000 worth of big, steel tofu-making machines, all of which are manufactured in Japan. Yamamoto, 49, came to Denver in 1970 from Japan where he had worked in the sales and accounting branch of Dainippon Food Co. He purchased Denver Tofu Inc. in 1973 from its previous owners for an undisclosed amount. In April, 1988, the company doubled its production space

© Copyright Soyinfo Center 2014

to 8,500 square feet when it moved to 3825 Blake St. form its former site on Federal Boulevard. The firm had sales of about $500,000 last year, and Yamamoto projected sales to rise to $750,000 this year. Address: Colorado. Phone: 303-295-6848.

9150. Green, Rand. 1988. Mori-Nu takes to the health and fitness circuit. *Produce News* (*Fort Lee, New Jersey*). July 16.
• ***Summary:*** When you have a product that is enthusiastically endorsed by body builders and cardiologists alike, participating in health and fitness events is a sound, sensible way to get the word out. And that is the approach being used by Morinaga. Thomas McReynolds was recently name marketing consultant for Mori-Nu. Tofu is a cholesterol-free protein source, low in sodium, high in calcium, free of saturated fats, and is "darn close to a perfect food," McReynolds stated. People are, for example, participating in the Mr. and Ms. California bodybuilding finals in July and in "all of the health and fitness expos". There is the "Heart Healthy Golf Classic" in Westlake Village, California in September which is being co-sponsored exclusively by Mori-Nu for heart patients who want to lead active lives in spite of their heart disease. And there is a new publication called Heartcorps. McReynolds said that the company is working with the American Heart Association in the development of a brochure called "Holidays a la Heart," which provides heart-healthy recipes.

9151. *Toyo Shinpo* (*Soyfoods News*). 1988. [A study of the amount of money spent on tofu, aburaage, and natto]. July 21. p. 3. [Jap; eng+]
• ***Summary:*** From Jan. to April 1988, a total of 25.99 cakes/household were sold, which is 98.8% of last year's figure over the same amount of time. During the same period, however, natto consumption rose, 8% in January (over last year at the same time), and 15.8% in April. Aburaage consumption was slightly down, only 95.1% of last year's total in January, and 94.3% in April.

9152. *Toyo Shinpo* (*Soyfoods News*). 1988. Okara peesuto de shokupan. Kôso shori de seihin o kaihatsu [The National Vegetable Protein Association is making bread with an okara paste, developed from a specially-treated enzyme]. July 21. p. 3. [Jap; eng+]
• ***Summary:*** Mr. Ryoji Sekiguchi is president of Zenkoku Shokubutsu Tanpaku Kyodo Kumiai located at Sendagi-2-48-8, Bunkyo-ku, Tokyo, Japan. For the past ten years, the National Vegetable Protein Association has been conducting research with okara and has developed an okara paste made by treating regular okara with a special enzyme. This paste can be used in noodles, mayonnaise, miso, ketchup, croquettes, hamburgers, confectionery, tofu, ice cream, etc. One of the products that can be made from this paste is bread. It has 2% less water than a regular loaf and contains 20% okara paste. It stays fresh for twice as long as a regular loaf of bread. The okara paste has the following characteristics: It has no taste or smell, it is low in calories and has some protein, it has an improved texture over plain okara because of the action of the enzyme, it has vegetable fiber, and it is a health food.

9153. *Toyo Shinpo* (*Soyfoods News*). 1988. Tôfu aburaage gyôshasû, zenkoku de 559 ken heru 62 nendo kôseishô shirabe [1987 Public Welfare study shows that there are 559 less tofu and aburaage manufacturers in Japan]. July 21. p. 2. [Jap; eng+]
• ***Summary:*** However, the rate of decrease has slowed a little. In December, 1987, there was a total of 24,262 tofu and aburaage makers. Only Tokyo and Osaka have over 1,000 tofu shops. The rate of decrease has been about 2% a year. The reasons for this steady decline include the fact that it is difficult to find someone to carry on the business and because the price of land is getting so expensive.

9154. *Toyo Shinpo* (*Soyfoods News*). 1988. Heri tsuzukeru nattô seizô shisetsu sû: Tsuini 900 no ôdaiware [The number of natto manufacturers in Japan continues to decrease: It finally dropped below 900]. July 21. p. 35. [Jap; eng+]
• ***Summary:*** There are now less than 900 natto manufacturers in Japan, the lowest it has ever been. In December of 1987, there were 898 natto manufacturers in the country. The number has been steadily dropping by about 2% per year. The problem is that natto manufacturers cannot find anyone interested in taking over the business.

9155. Bubny, Paul. 1988. Venerable soybean sprouts new uses. *Health Foods Business* 34(7):72, 74, 76, 108. July.
• ***Summary:*** Lonnie Stromnes, national sales manager of White Wave Soyfoods in Boulder, Colorado, reports that White Wave recently "upscaled" the packaging on its tempeh products; the new graphics depict tempeh in use, so that customers do not have to bring a thorough knowledge of the food into the store with them. Mitoku-USA, based in Albany, New York, imports some 20 varieties of miso. At least one manufacturer, the Asheville, North Carolina-based Great Eastern Sun, saw its miso sales increase by 20% last year. Bruce Sturgeon, the company's vice president, said Great Eastern Sun's volume on miso alone was $400,000 in 1987. Shoyu and tamari are frequently aimed at the gourmet market as well as the natural foods / specialty foods market. Owner Dale Kamibayshi of Alfalfa's Market in Boulder, Colorado said, "I think many people are still intimidated by (soyfood's) preparation." To help overcome the intimidation factor, Alfalfa's has scheduled a soyfood tasting fair for July 16; the first such fair which the store has devoted to soy.

Gary Barat, chairman of Legume, Inc. said, "I see the natural foods and gourmet markets coming together," said

© Copyright Soyinfo Center 2014

Barat. "And the smart marketers are realizing that." People who shop specialty stores have both eyes turned toward quality. Soy companies are increasingly making use of organically grown soybeans. There is also a trend toward using specific soybeans for specific products, a sign of a maturing industry. The trend is more prevalent in the U.S. than in Far East Asia. Westbrae, for example, uses Vinton beans for its Westsoy soy beverage. As the currency in Japan remains strong against the dollar, you're going to see more and more (soy) products produced in America. Also there will be greater growth in so-called "second-generation" soy products–dairy analogs with soymilk, soy cheese, soy ice cream and soy yogurt. Address: Associate Editor.

9156. DeSilver, Drew. 1988. Japanese eat better, but there's a catch. *Vegetarian Times.* July. p. 8-9.
• ***Summary:*** Japanese people have the greatest longevity on the planet. A Japanese boy born in 1987 can expect to live more than 75 years, and a Japanese girl more than 80; the American figures are 70.1 and 77.6, respectively. The traditional Japanese diet–based on rice, tofu, seaweed, vegetables and fish–is assumed to be the reason Japan has one of the lowest levels of cholesterol and heart disease. But with the westernization of the Japanese diet, the average Japanese man's blood cholesterol level has risen from 180 mg% in 1973 to almost 200 mg% today. The Japanese have drastically cut their daily salt consumption–13 grams vs. 10 grams (10 grams of salt = about 2 teaspoons).

9157. **Product Name:** [Okara Doughnuts].
Foreign Name: Okara Doonatsu.
Manufacturer's Name: Ebara Shokuhin.
Manufacturer's Address: Shinta 366-1, Sasakubo, Iwaki-shi, Japan. Phone: 0487-98-1241.
Date of Introduction: 1988 July.
New Product–Documentation: Toyo Shinpo. 1988. July 11. p. 4. "Ebara Shokuhin's okara donuts: Is it a problem that they are selling too many?" They are selling okara donuts like crazy. The donuts have a nice taste and have received good coverage on radio and in newspapers. The message is out that okara is a good fiber source. They receive 200 orders a day for the donuts just from postcards. One package contains 5 donuts for ¥200 (soon to be ¥300). In their Tokyo outlet they sell 200-300 packages a day. They are finding it difficult to keep up with the demand.

9158. **Product Name:** [Dessert Tofu (Yogurt-like Product in a Yogurt Cup)].
Manufacturer's Name: Izumi Shokuhin.
Manufacturer's Address: Akimoto Building, Minamidai 5-27-32, Nakano-ku, Tokyo, Japan. Phone: 03-384-6991.
Date of Introduction: 1988 July.
New Product–Documentation: Toyo Shinpo. 1988. July 21. p. 12. "Izumi Shokuhin Inc. (Tokyo) has a new product, a dessert tofu which is refreshingly sweet." Mr. Aoyama is the president of the firm. His company is selling a yogurt-like tofu dessert in a yogurt cup. It is not a dairy product and it is easy to digest. The name, "Dessert Tofu" is designed to cause no confusion about what the product really is. Everyone will know exactly what it is and what it can be used for.

9159. Kotzsch, Ronald E. 1988. Macrobiotics beyond food: A guide to health and well-being. Tokyo and New York: Japan Publications, Inc. 242 p. Index. 22 cm. [10 ref]
• ***Summary:*** This is a wise, insightful and wonderful book, with much to teach everyone. In the Dedication (p. 8) we learn: Ron's mother is "Martha Koetzsch." He is active in the New North Church in Hingham, Massachusetts. He learned much from his "professors and fellow students at the Center for the Study of World Religions, Harvard University." He thanks his "students and fellow instructors at Outward Bound, where he learned to treasure challenge and the outdoors."

Contents: Foreword. Introduction. 1. The heart of the macrobiotic artichoke. 2. Edible shampoo, organic undershorts, and other necessities. 3. Feasting with the senses. 4. Secrets of the laughing Buddha. 5. Mind does matter. 6. Life is with others. 7. Twinkle, twinkle little star. 8. Into the arms of the infinite. 9. Illness and healing. Conclusion. Bibliography.

Page 48 states that soybeans are an important part of the "standard Macrobiotic diet." A Macrobiotic person who wants to reduce or give up smoking might want to "Reduce consumption of pressure-cooked rice, miso, and other contractive or salty foods."

Please read the "Conclusion" of this book (p. 233+). Address: Ph.D., Hingham, Massachusetts.

9160. Mitoku. 1988. Spotlight on Johsen Shoyu: The world's leading natural soy sauce (Ad). *East West.* July. p. 1-3.
• ***Summary:*** Johsen Shoyu is certified to meet the uncompromising standards of Macrobiotic Quality by Michio and Aveline Kushi. It is bottled under the labels of more than a dozen leading natural food companies on four continents. In February of this year, premium quality Johsen Shoyu was awarded the Japan Ministry of Agriculture's prestigious first place award, "The highest quality soy sauce in Japan." It was selected from over 200 entries by a panel of the world's foremost soy sauce experts. Johsen Shoyu is kept in large cedar aging casks. Johsen Shoyu is aged slowly for more than one and one-half years, protected only from the outside weather by the wood frame building. Over five seasons, including two full summers, the fermentation continues. Johsen is aged over 5 seasons, including 2 summers, for a total of 18-24 months at natural seasonal temperatures. It is aged in well-seasoned cedar casks, and it is packed without additives or preservatives. Address: Tokyo, Japan.

9161. Morinaga Nutritional Foods Inc. 1988. Mori-Nu's revolutionary tofu (Color videotape). 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. 5 minutes. VHS. July.

• ***Summary:*** This video, targeted at the employees of food stores who buy food, introduces and promotes Mori-Nu Tofu. The presentation is extremely professional, informative, colorful, and 100% American. American tastes have changed to lighter foods. "The tastes of America are changing. Where the foods we desired were once rich and creamy, now they are low in cholesterol, low in saturated fat. Counting calories has become a national pastime. In our quest for better health and a slimmer waistline, must we now say good-bye to flavor? Good-bye to scrumptious? Good-bye to mouth-watering? Not on your life! America, say hello to every delicious dish you see here. Say hello to Mori-Nu Tofu. Who says you can't have it all? A new revolutionary packaging process developed by Morinaga Foods, one of Japan's largest food and dairy concerns, has enabled tofu to become widely accessible, and more compatible with American tastes. Rich in protein, no cholesterol, low in calories, saturated fats and sodium, tofu is a mainstay of the Oriental diet. However it has yet to enjoy a similar popularity in America. There are several reasons for this. It is often not fresh when sold. And the hygienic standards of many tofu manufacturers are questionable at best. Tofu's moist, protein-rich makeup is a perfect medium for rapid bacterial growth, leading to quick deterioration and spoilage. Its traditional packaging of a gelatinous white curd cake floating in water is unappealing to the average American consumer. The subtle taste of tofu is just plain tasteless for American palates used to burgers, pizzas, and Coke. And because it's such a healthy, nutritious food, tofu has wrongly become associated with trendy fad foods fit only for health nuts. But with one revolutionary process, Morinaga Foods has solved all these problems. Using ultra-hygienic state of the art technology, Morinaga has developed a process where soymilk, the prime ingredient of tofu, is pasteurized then immediately put into an aseptic package and hermetically sealed. The soymilk transforms into tofu right in the package. And because that package has locked out all microorganisms, light, and oxygen, there is no deterioration and spoilage. Without refrigeration, without preservatives, without irradiation, Mori-Nu is guaranteed to be first-day fresh for up to 10 months. Because of Mori-Nu, tofu is finally ready for the American market, and the American market, hungry for the perfect high-protein low-calorie food, is more than ready for Mori-Nu. Realizing this, Morinaga Foods is creating a major push to present Mori-Nu properly to Americans."

The modern Morinaga tofu plant in Japan, the production process, and the aseptic packaging are described. The two styles of Mori-Nu Tofu are shown, and their use in many colorful dishes and drinks. Morinaga has published numerous recipes and created the Health for Life Club.

The end shows an address and phone number for buyers to contact in order to order Mori-Nu Tofu.

Note: Talk with Art Mio. 1990. Feb. 16. Although it typically costs $1,000 per minute of final video to produce a good quality video, this one and its 5-minute counterpart, produced by a Salt Lake City, Utah, company, cost more than $50,000 to make. It is a good idea to finish all the basics (scripting, recipe development, etc.) before scheduling the production time. Address: Los Angeles, California. Phone: 213-728-4325.

9162. Morinaga Nutritional Foods Inc. 1988. Mori-Nu's tofu magic (Color videotape). 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. 30 minutes. VHS. July. Price: $9.95.

• ***Summary:*** Step by step advice on cooking with Mori-Nu Tofu. Julia Weinberg and Jonelle Goddard show how to prepare 6 recipes using "the miracle food of our modern times." As each recipe is introduced, the ingredients and instructions are shown in clear white letters against an blue background, accompanied by music. The emphasis is on recipes that are healthful, quick and easy to prepare, stylish and colorful, and free of or low in cholesterol and calories.

The recipes are: (1) Honey Lemon Un-Cheesecake (dairy free) contains no cholesterol and only 260 calories per slice versus 460 for a typical dairy-based cheesecake. Topped with a little Mori-Nu Tofu whipped from a pastry tube, Jonelle concludes: "That is wonderful. You've got to try it." (2) Thick & Creamy Tarragon Salad Dressing. Free of cholesterol and low in calories, it is made with fresh herbs. Place in the fridge for 1 hour to let the herbs and flavors blend. After a description of Mori-Nu Tofu itself, the varieties, packaging, and shelf life we have... (3) Herb Pinwheel Quiche. It uses less eggs and cheese (Swiss and Parmesan) than a regular quiche, replacing them with Mori-Nu Tofu, yet with no sacrifice in taste. After baking for 35 minutes, it is decorates with sliced veggies and rebaked for 10 minutes. (4) Eggless Egg Salad. With no cholesterol and turmeric for color, it is rolled up in a chapati with lettuce and tomato. (5) Creamy Banana Date Shake. Dairy- and cholesterol free, it uses 1 package of soft Mori-Nu Tofu with 1 cup apple juice, 4 dates, and a ripe medium banana–all whipped together. (6) Crunchy Peanut Butter Pops. Tofu, peanut butter, honey, etc. are blended and poured into ice cube trays or popsicle molds. Dip in graham cracker crumbs or chopped peanuts. Kids love 'em.

The cooks conclude that they have barely scratched surface of the possibilities. One could also make pastas, enchiladas, blintzes, burgers, ice creams, etc. The recipes are given in Julia's new Mori-Nu cookbook titled *Tofu Magic.* Viewers are also invited to join the Health for Life Club, to receive 6 issues of the newsletter per year, with 6 series of recipes and coupons.

9163. Nihei, Takao. 1988. [The history of Japanese sake in Hawaii. (Food series, part XIII)]. *Kokiku* (*Honolulu, Hawaii*). July. p. 32. [Jap; Eng]
• ***Summary:*** The first Japanese immigrants who made a mark in Hawaii were the "Gannenmono" who crossed the ocean on the ship "Scioto" (Saioto-go) in 1868. Miso and shoyu had been loaded on that boat, but there is no record of any sake. Later on, due to a shortage of labor in the sugarcane fields, Hawaii's largest industry, immigrants from Japan were brought in as a result of a contract between the Hawaiian Kingdom and the Japanese Government. On Feb. 8, 1885, the Japanese immigrants arrived in Hawaii on the ship "City of Tokio." On this trip, Japanese sake had been put on board. Ten barrels of sake were offered as a gift to King Kalakaua. Sake began to be imported from 1888 on, increasing in volume each year.

9164. *Watashi no Kenko* (*My Health*). 1988. Atarashii nattô tenpe wa kôshite taberu. Indonesia no kusakunai nattô [Here's how you eat the new natto, tempeh. Indonesia's natto that doesn't smell]. July. p. 147-62. [Jap]
• ***Summary:*** A popular introduction to tempeh containing nutritional information and recipes.

9165. Brush, Christopher. 1988. Tofu gaining popularity in West. Program presented to planning council. *News* (*Wapakoneta, Ohio*). Aug. 6.
• ***Summary:*** Dr. Lun-Shin Wei, who came to the U.S. in 1953 and is now a professor at the University of Illinois, and Dr. Takeichi Kusaka of Shikoku, Japan, presented a special program on tofu prior to Thursday's meeting of the Mid-Western Ohio Joint Planning Council. MWOJPC, for some time, has been selling an ice cream made form tofu at various fairs. Kusaka, a graduate of the Osaka University, Japan, is regarded as "the master tofu manufacturer worldwide." He has devoted the last 42 years to research on improving processes to manufacture tofu from soybeans.

9166. Thiel, Elizabeth. 1988. Soy sauce: Tamari comes to the capital. *Virginian Pilot* (*Norfolk, Virginia*). Aug. 21. p. H1, H4.
• ***Summary:*** Mark Givens, London native and chief officer of a Japanese factory in Richmond, was drawn to American because of tamari, an upscale soy sauce produced by the year-old Virginia company. The young company already produces 40% of the world's tamari, exported to 25 foreign countries and sold to major food processors such as Campbell's Soup Co. The tamari sauce has 30% more protein than soy made under such labels as Kikkoman and La Choy, which add wheat to the mixture to speed up fermentation. Tamari Lite has about 25% less sodium. The catch is the price. A bottle of tamari costs about a dollar more than a bottle of Kikkoman soy sauce. Fermentation takes as long as six months.

In 1979 San-Jirushi incorporated in California to take advantage of the booming Oriental food market in America. The American venture included a warehouse and 4-5 full-time employees. San-J employs 25 in the Richmond plant, and there are three workers at the warehouse in California, compared to 200 in Japan. San-J bottles tamari in 55 and 5 gallon containers for use by restaurants and food processors. "Sales are up 30% this year," Givens says.

Photos show: (1) Yuji Yamamoto, vice president of production at San-J's new tamari plant in Richmond, Virginia. (2) Stephen Earle, vice president of San-J, wearing a hard-hat and protective glasses, with machinery in the background.

Also contains a sidebar with recipes by Regina Schrambling titled "Upscale Oriental sidekick is vegetarian Worcestershire." Tamari is Mollie Katzen's "vegetarian variation on Worcestershire." Address: Staff writer.

9167. Tachihata, Chieko. 1988. Re: Early tofu making in Hawaii. Letter to William Shurtleff at Soyfoods Center, Aug. 22. 1 p.
• ***Summary:*** "In the 'old days' tofu was made locally for just one 'village' or sugar plantation. I know of at least one plantation where a woman made enough for one plantation on a daily basis, and sold the tofu from her home location for the consumption of the Japanese community." Address: Librarian, Special Collections, Thomas Hale Hamilton Library, 255o The Mall, Univ. of Hawaii at Manoa, Honolulu, Hawaii 96822.

9168. *Register-Mail* (*Galesburg, Illinois*). 1988. Breeders aim for vegetable crop from soybeans. Aug. 30.
• ***Summary:*** One of plant geneticist, Richard L. Bernard's newest projects is breeding a soybean variety that is tasty, nutritious and suitable for large-scale commercial vegetable production. "... picked green, the soybean has a nice taste, firm texture and attractive, bright green color–much like English peas. And in my household, soybeans passed the acid test: My children loved them better than anything else. When they were small, we'd have to leave the bowl of soybeans in the kitchen until mid-meal so that they would eat the other foods, too."

In Bernard's home, fresh, green soybean pods are cooked in boiling, salted water. The soybeans are squeezed from the pods before serving. In Japan, he said, green soybeans are served in the pods, and people squeeze the beans out at the table.

Increasing seed size without losing yield potential is one of the first problems to be solved. It may be possible to

© Copyright Soyinfo Center 2014

increase protein and also improve the oil by making it more unsaturated. Breeders also will research the desirability of reducing lipoxygenase. They also may attempt to reduce trypsin inhibitor. Taste will be all important in a soybean line intended for human consumption.

9169. *ASA Member Letter.* 1988. Kojima spends 32 years working for U.S. soybeans. Aug. p. 2.
• ***Summary:*** Yoshiko Kojima, who was the associate country director of human nutrition for the American Soybean Association (ASA) in Japan for 32 years, was awarded with ASA's Honorary Life Membership Award at Soybean Expo in Denver, Colorado. Kojima officially left her post March 31, and is now adjusting to retirement.

"'The most gratifying thing about it all is improving the health of the Japanese people,' Kojima explained." "Miss Kojima is a real missionary for soy foods," he said. "Over the years she has developed many key contacts in the Japanese food industry that has helped ASA get its message across." A photo shows Miss Kojima receiving the award, a wooden plaque, from ASA President James Lee Adams, who said he would be missed.

9170. **Product Name:** Clearspring Sendai Genmai Miso, and Hagoromo Mugi Miso.

9171. *J. of the American Oil Chemists' Society.* 1988. Soy protein plant. 65(8):1272. Aug.
• ***Summary:*** "Central Soya Co. Inc. will build a soy protein concentrate facility in Europe to meet the expanding protein needs of that market... Fuji Oil Co. of Japan has announced plans to build a facility to produce origo peptide from soy protein, the first such commercial-scale facility in Japan.

"The peptide product will be used for beverages, nutritional foods, cosmetics and as a fermentation enhancer and stabilizer. Production capacity is expected to be 40 to 50 tons per day, with total annual production about 5,000 tons."

9172. Kiri Bue Ro. 1988. August. New soyfoods restaurant or deli. Sonezaki 2-B-4, Kita-ku, Osaka-shi, Japan.
• ***Summary:*** Toyo Shinpo. 1988. Aug. 1. p. 6. "Kiri Bue Ro restaurant captures the romantic theme of the floating Meiji period, serving 30 new and traditional tofu dishes". Mr. Okamoto is the manager of the Kiri Bue Ro restaurant. They are open from 5-12 p.m. every night. They use 100% nigari tofu made from Japanese soybeans. They also play background music by the Beatles.

9173. Kitagawa, Isao; Taniyama, T.; Nagahama, Y.; Okubo, K.; Yamauchi, F.; Yoshikawa, M. 1988. Saponin and sapogenol. XLII. Structures of acetyl-soyasaponins A_1, A_2, and A_3, astringent partially acetylated bisdesmosides of soyasapogenol A, from American Soybean, the seeds of *Glycine max* Merrill. *Chemical and Pharmaceutical Bulletin* 36(8):2819-28. Aug. [17 ref]
• ***Summary:*** "By means of high performance liquid chromatography and other methods, three new partially acetylated soyasponins, named acetyl-soyasaponin A-1 (6a), acetyl-soyasaponin A-2 (7a), and acetyl-soyasaponin A-3 (8a), were isolated from American soybeans." These 3 acetyl-saponins are noteworthy due to their bitter and astringent tastes, even though their parent saponins, soyasaponin A-1 (6), soyasaponin A-2 (7), and soyasaponin A-3 (8), do not show such tastes. Address: Faculty of Pharmaceutical Sciences, Osaka Univ., Japan.

9174. Morinaga Nutritional Foods, Inc. 1988. Shake up profits! (Ad). *Natural Foods Merchandiser.* Aug. p. 65.
• ***Summary:*** This attractive full-page color ad begins: "Interested in building a healthier profit? As one of the fines and most sought-after tofu products on the market today, Mori-Nu delivers a powerful blend of quality products and trade support. A simple recipe to whip up sales. Why is Mori-Nu capturing an increasing share of the tofu market? Stimulates cross-promotional opportunities. Guaranteed quality and taste. Convenient FDA approved long-life package. No preservatives, no irradiation. National advertising program. Consumer education and support. Complete in-store demo program. Free and exciting color P.O.P. [point of purchase materials].

A large color photo shows a pink strawberry tofu & fruit shake in tall glass with two straws, surrounded by a pineapple sliced lengthwise into halves, plus bananas, apricots, a peach and an orange. Small color photos show two packages of Mori-Nu tofu (soft and firm), plus two recipe pads ("Mori-Nu's Tempting Tofu Desserts," "Exotic! Chinese Unchicken Salad"), coupons (15 cents off Mori-Nu Tofu), a video ("Revolutionary Tofu"), and the front page of two issues of "Mori-Nu Healthy Times" newsletter. "Order now. Call Danielle Lin, National Sales Manager, Natural Foods Division at (213) 728-4325."

This ad also appeared in: Natural Foods Merchandiser (Sept. p. 94; 1989. Feb. p. 15), and Whole Foods (Sept. p. 13, Oct. p. 41). Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9175. Morinaga Nutritional Foods, Inc. 1988. Shake up your day with Mori-Nu! (Brochure). Los Angeles, California. 4 p. Undated. 28 cm.
• ***Summary:*** On the front page of this four-page color brochure is a blender with pink tofu-strawberry shake sloshing out the top. On the two-page centerfold are three tofu-fruit shakes, with whole and cut fruits and a package of Mori-Nu silken soft tofu. The headline reads: "Whip up delicious nutrition with cholesterol-free Mori-Nu Tofu and your favorite fruit." On the back page is the full-page color ad "Lessons in Tofu" (first published in Feb. 1988). Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9176. **Product Name:** Nikken Fermented Soy Sauce Powders [#5300 standard type, #5301 standard without MSG, #5302 standard without caramel color, #5303 fine mesh type, #5304 roast type].
Manufacturer's Name: Nikken Foods Company Ltd.
Manufacturer's Address: 37-7, 1-chome, Komaba, Meguro-ku, Tokyo 153, Japan.
Date of Introduction: 1988 August.
Wt/Vol., Packaging, Price: 22 lb or 110 lb boxes.
How Stored: Shelf stable.
New Product–Documentation: Soya Newsletter. 1988. July/Aug. p. 8. Imported to the USA by The J.F. Kelly Co., 150 River Road, A-3, Montville, New Jersey 07045. Phone: 201-299-9100. Contact: Mike Kelly. Spot in Food Technology. 1989. Jan. Nikken is now imported and represented by Zonner, Inc. The U.S. distribution center is in St. Louis, Missouri. Talk with Zonner. 1990. Jan. 23. The importer is now G.S. Suppliger in Missouri. Phone: 314-436-5050.

9177. Taniyama, Toshio; Nagahama, Y.; Yoshikawa, M.; Kitagawa, I. 1988. Saponin and sapogenol. XLIII. Acetyl-soyasaponins A_4, A_5, and A_6, new astringent bisdesmosides of soyasapogenol A, from Japanese soybean, the seeds of *Glycine max* Merrill. *Chemical and Pharmaceutical Bulletin* 36(8):2829-39. Aug. [16 ref]
• ***Summary:*** "In addition to soyasaponins I, II, and III, three new bitter and astringent bidesmosides named acetyl-soyasaponin A-4 (2), acetyl-soyasaponin A-5 (3), acetyl-soyasaponin A-6 (4), which are characterized by having a fully acetylated terminal xylosyl moiety, have been isolated from a Japanese species of soybean"–the Tamanishiki strain. The structures of these three have been elucidated. Address: Faculty of Pharmaceutical Sciences, Osaka Univ., Japan.

9178. Sturgeon, Bruce. 1988. Early history of Great Eastern Sun, Oak Feed Miso, Inc., and American Miso Co. (Interview). *SoyaScan Notes*. Sept. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bruce is looking at documents from the company archives. Great Eastern Sun was founded in March 1982 by Barry Evans. He was the only principal/owner at the time. American Miso Co. was founded in March 1979 as the Oak Feed Miso, Inc. The principals were Sandy Pukel, John Belleme, and Barry Evans, but it is not clear who owned how much stock. It started doing business in 1981 as the American Miso Co. and officially became The American Miso Co. by law in May 1982. The principals of the American Miso Co. were John Belleme and Barry Evans. Sandy Pukel was somehow bought out and left and joined Oak Feed Co.; It seems to have become his. Barry Evans may have been the original president of Oak Feed Co. It was a store, probably a restaurant, and an import and distribution company. Barry and John went on to do the miso company. Great Eastern Sun was founded as a way to market and distribute the miso. They also became an importer and distributor of Mitoku products at about that same time. Don DeBona was the first or second company president, after Marty Roth. Today Barry owns all the stock of both American Miso and GES. Barry treasures his privacy. Bob Ballard and Bruce run GES. Even they do not know Barry's address or phone number. He checks in about once a quarter to see how things are going.

Ah Soy now has about 5% of the U.S. soymilk market, and is trying desperately to hang onto that. The competition is fierce, but they have many loyal consumers. Their 6 oz size is still their best seller, even after introduction of the quart, and even with a price increase last Feb. to above $1.00. Sales are up compared with last year.

In 1984 Bruce was in Boulder, Colorado as a buyer for Pearl Street Market. They had been buying from GES at that time for about a year. Oak Feed came to Pearl Street Market with imports to sell. Address: 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730 or 704 252-3090.

9179. Mahoney, Louis. 1988. In the best East-Meets-West style, Japan's oldest soy sauce is about to become Richmond's newest flavor booster. *News-Leader* (*Richmond, Virginia*). Sept. 7. p. 29, 37.
• ***Summary:*** "From a cook's standpoint, the exciting thing about tamari is the versatility, depending on where you're using it," says Judie Cohen. She and chefs at the Butlery Ltd., where she is vice president and director of the catering division, have developed recipes to show home cooks the versatility of this Japanese staple. The first bottles rolled off the production line in eastern Henrico County in August. Tamari is brewed for 6 to 8 months. Since it doesn't have the alcohol that other soy sauces do, the flavor doesn't burn off during cooking. Address: New Leader food editor.

9180. Nagata, Zenji. Assignor to Sanyo Shokuhin Kabushiki Kaisha (Nara, Japan). 1988. Coagulating box for use in making bean curd [from soy milk]. *U.S. Patent* 4,770,319.

© Copyright Soyinfo Center 2014

Sept. 13. 4 p. Application filed 1 April 1987. 5 drawings. Application also filed in Japan on 8 July 1986. [5 ref]
• ***Summary:*** See also U.S. Patent 4,771,681, and Japanese Patent JP 86-104629 (July 1986). Address: Yamatotakada, Japan.

9181. Lin, Danielle. 1988. New developments at Morinaga (Interview). *SoyaScan Notes.* Sept. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In the last 6 months, Morinaga has gone from having 3 natural food distributors to having 31 now. They now sell tofu in 36 countries.

Danielle entered the natural foods industry in 1981. She started a company named Laughing Moon, making veggie turnovers containing tofu. She has played an important role in getting Morinaga to enter the natural foods market. She has a natural-foods talk show in Los Angeles. Address: c/o Morinaga Nutritional Foods, 5800 South Eastern Ave. #270, Los Angeles, California 90040. Phone: 213-728-4325.

9182. Fass, Bill. 1988. Brief history of Macrobiotic Wholesale Co. of Asheville, North Carolina (Interview). *SoyaScan Notes.* Sept. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This company was originally founded by Great Eastern Sun. In 1986 GES sold it to Kurt Schmitz [or Schmidt]; it was then located at 503 Haywood Rd. in Asheville. Schmitz in turn sold it to Bill Fass in August 1986. The company does not import. They distribute only macrobiotic products. Some 90% of the products they sell are imported from Japan, and 90% of these they buy from Great Eastern Sun, the importer. They also buy a few imported products from Eden Foods. Soyfood products they distribute include miso, shoyu, tamari, and koji. Address: 799 Old Leicester Hwy., Asheville, North Carolina 28806. Phone: 800-438-4730 or 704-252-1221.

9183. Nagata, Zenji; Takada, Yamato. Assignor to Sanyo Shokuhin Kabushiki Kaisha (Nara, Japan). 1988. Automatic bean curd manufacturing apparatus. *U.S. Patent* 4,771,681. Sept. 20. 10 p. Application filed 2 July 1987. 6 drawings. Application also filed in Japan on 30 Aug. 1986. [6 ref]
• ***Summary:*** Describes an apparatus for automatically manufacturing bean curd, wherein a hot water tank and a means of water supply keep a coagulated soybean milk continuously covered with hot water to maintain its integrity and to prevent introduction of germs. Address: Japan.

9184. Murata, Kiku. 1988. Re: New Tempeh Study Group planned in Japan. Letter to William Shurtleff at Soyfoods Center, Sept. 24. 1 p. Typed, with signature. [Eng]
• ***Summary:*** "After the Asian Symposium on Non-Salted Soybean in 1985, we had the 4th and 5th Tempeh Conferences (*Danwakai*). We are going to start a Tempeh Study Group (*Kenkyukai*) soon in Japan. At some meetings reports will be presented. Membership is ¥2,000/year. The first meeting of the Study Group will correspond to the 6th Danwakai. We will be sending announcements to about 200 people, and hope that 25-50% will join." Address: 608 Honyakushi, Nara City 630, Japan.

9185. *Japan Times.* 1988. Miso shows promise as treatment for radiation: Researchers say soybeans flush isotopes from rats' organs, muscles. Sept. 27. p. 3. [Eng]
• ***Summary:*** "A team studying atomic bomb radioactivity has found that miso–a traditional Japanese condiment–is effective in helping remove radioactive elements from the body and controlling inflammation of organs caused by radioactivity, it was reported recently."

"This is the first time its effectiveness has been proven scientifically, according to a study team at Hiroshima University's medical research center on atomic bomb radioactivity."

"The experiment was conducted on male and female rats 4 weeks after birth. They were divided into 2 groups, one group fed with feed mixed with dried red miso and the other fed with regular feed. After a week, radioisotopes of iodine-131 and cesium-134 were injected into the stomachs of the rats.

"Both isotopes are secondary radioactive elements, which are produced in such cases as nuclear reactor accidents. The iodine-131 isotope is absorbed in the thyroid gland and mostly remains there. The cesium-134 isotope is accumulated in muscles and the intestines.

"Researchers measured the amounts of the isotopes left in such places as the blood and thyroid gland 3, 6, 12, and 34 hours after the injection. They found there were no differences between the groups of rats in the amount of isotopes in the thyroid gland. But there was only half the amount of iodine-131 in the blood of the group fed with miso compared to the other group, 3 and 6 hours after the experiment. The effect of the miso was also seen in the kidneys, liver, and spleen. Although there was no difference in the amount of cesium in such places as the blood, a high amount of cesium was removed from the muscles of the group fed with miso, the researchers said.

"In another experiment, rats from both groups were exposed to half a lethal dose of radiation to test the effect of miso on victims of a nuclear explosion. Although more than 80% of the rats from both groups died within one week of the exposure, the inflammation of organs usually seen in cases of exposure to radiation was less for the miso-fed rats. This showed that miso stimulates the body's circulatory and metabolic system, the researchers said.

"In a book called 'Food and Predispositions,' Dr. Shinichiro Akizuki of St. Francisco Hospital in Nagasaki says the reason why doctors who attended to atomic bomb victims showed no after effects of the bomb is that they

© Copyright Soyinfo Center 2014

drank miso soup with seaweed. After the nuclear reactor accident in Chernobyl [on 26 April 1986 in the Ukranian SSR], a translation of the book was popular in Europe, causing a rush of European countries to import miso from Japan. This prompted a miso research group... to ask Ito's team to study the relationship of miso and radioactivity.

"Akihiro Sawada of Hiroshima University said... the results may also involve the effect of seaweed, which contains iodine, and that further research on how miso helps excretion of radioactive particles is necessary." Address: Tokyo.

9186. *Atencion San Miguel* (*San Miguel de Allende, Gto., Mexico*). 1988. Tofu comes to town. Sept. 30. p. 6. [Eng]
• ***Summary:*** Nicole Black has built a factory which will soon make this inexpensive and nutritious food–tofu–available to all. Already soy "chorizo" (a spicy sausage) is successfully being turned out, made from the fibrous part of the bean. Outside of a small tofu factory in Mexico City which supplies Japanese restaurants and a few special markets, the San Miguel factory is the first in Mexico. Mrs. Black's book containing more than 200 recipes for tofu, many of them designed for the Mexican taste, is soon to be published.

9188. Lowes, Robert. 1988. The U.S. foreign aid/trade dilemma. II. Will cutting off cash cut competition? *Soybean Digest.* Aug/Sept. p. 18-21. [1 ref]
• ***Summary:*** Direct U.S. aid for agricultural development overseas amounts to about $1,000 million a year. The U.S. also contributes an average of $1,500 million a year to multilateral development agencies like the World Bank, International Development Assoc., and Asian Development Bank. These agencies lend more than $20,000 million a year to developing countries. Between one-fifth and one-fourth of that amount is targeted for agriculture.

Lowell Grant, chief of the International Trade Commission's (ITC) agricultural crops and products branch, discounts agricultural aid as a major reason for declining U.S. exports. He and other analysts largely lay the blame on factors, such as: A faltering world economy in the early 1980s; a strong U.S. dollar in the early and mid-80s; a foreign debt crisis that forces debtor nations to pay foreign exchange on interest payments, not on imports; surging farm exports from European countries, and a corresponding drop in European farm imports; high prices, which brought more players into the soybean market; U.S. embargoes that shook our customers' confidence.

High world prices arose from price support subsidies in the U.S.–proof, according to some, that our farm economy is as rigged as those we criticize in Latin America and Asia. Indeed, the U.S. spent $26,000 million in subsidizing its own agricultural sector in fiscal 1986. When the U.S. stopped soybean shipments to Japan in 1973, the Japanese signed 15-year contracts with Brazilian producers–and invested $2,000 million in the Brazilian soybean industry in the process. Japanese banks account for the vast majority of investments in soybeans in Brazil.

9189. Morinaga Nutritional Foods, Inc. 1988. Shake off cholesterol (Ad). *Vegetarian Times.* Sept. p. 3.
• ***Summary:*** This full-page color ad shows a strawberry shake in front of various fruits (sliced pineapple, strawberries, apricots, bananas, peach, orange) and next to a pack of Mori-Nu Silken Soft Tofu. Contains a general recipe for "Mori-Nu's wake-up shake." Slogan at bottom right: "Tofu for the American taste."

This classy ad also appeared in this magazine as late as 1992. Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9195. *Toyo Shinpo* (*Soyfoods News*). 1988. Kankoku tônyû saisei choki e. Nihon no tônyû gyôkai wa teimei [Korean soymilk market starts to grow again. Japanese soymilk industry is in a low state]. Oct. 1. p. 14. [Jap; eng+]
• ***Summary:*** The Korean soymilk market, which rose and then fell like the Japanese soymilk market, is now re-entering a period of growth. According to a recent Korean newspaper, domestic soymilk sales from January to August, 1988 were 42,000 million won, up 20% over last year's figure. Sales are expected to increase during the winter at the end of this year, so total sales for the year are expected to reach 72,000 million won. The won is the Korean unit of currency.

9196. San-J International, Inc. 1988. Ancient Japanese seasoning now brewed in the U.S. (News release). 2880 Sprouse Drive, Richmond, VA 23231. 3 p. Oct. 6.
• ***Summary:*** San-J International announced October 6, 1988 that tamari has been successfully brewed for the first time outside of Japan. The domestic tamari was bottled at the company's new Richmond, Virginia brewery after months of careful aging. "Major food producers, including Campbell, Hunt-Wesson, Stouffer and Heinz, use San-J tamari in their packaged foods because of its purity, stability and superior flavor enhancing properties." San-J sent The Soyfoods Center an individually numbered commemorative bottle of their tamari.

Tamari compared to soy sauce "has 30% more organic protein than conventional soy sauce... The most prevalent amino acid in tamari is glutamic acid, which is the natural counterpart of monosodium glutamate (MSG)" San-J tamari is available in 5, 10 and 20 ounce bottles. Seven recipes are given including: Tamari Coconut Freeze, Tamari Mustard Sauce, Tamari Ginger Vinaigrette, Tamari Brown Sugar Bourbon Glaze, Tamari Hollandaise, Szechuan Sausage Cornbread, and Tamari Macadamia Nut Ice Cream. Address: Richmond, Virginia.

9197. San-J International, Inc. 1988. Facts about San-J's Richmond facility (News release). 2880 Sprouse Drive, Richmond, VA 23231. 1 p. Oct. 6.
• ***Summary:*** (1) San-J's facility in Richmond, Virginia is the only tamari brewery outside of Japan, breaking a 1,200 year old tradition. (2) San-J has the capacity to produce one million gallons/year of tamari. (3) 900,000 pounds of soybeans and 500,000 pounds of soybean meal are purchased per year. (4) Projected sales for 1988 are $3.5 million. Projected sales for 1989 are $5 million. (5) Twenty-five people are employed, four of which are Japanese. (6) The annual payroll is $500,000. (7) Montague Farms is the sole Virginia supplier of soybeans to San-J (William Taliffero). Contact: Mark Givens, Chief Operating Officer; Steve Earle, Senior Vice President. Address: Richmond, Virginia.

9198. Duchesne, Paul. 1988. Development of the Brown Rice & Tofu Sandwich, and early history of Wildwood Natural Foods (Interview). *SoyaScan Notes.* Oct. 8 and Aug. 16, 1989. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Paul Duchesne developed the world's first "Fried Rice & Tofu Sandwich" in Fairfax, California. Duchesne's sandwich was one of America's early second generation tofu products. He deliberately called it a sandwich, even though it was made in a chapati, to make it sound more American. Today there are a surprisingly large number of U.S. companies making a Brown Rice & Tofu Sandwich. Duchesne started 3 of these companies and gave the basic recipe and production methods to the people who started most of the others. All descendants of the original BRTS have also been made in a chapati.

In late October or early November 1977, Duchesne sold the first 200 of them to participants at a macrobiotic seminar led by Michio Kushi in Marin County. Donna Gayle helped him make them. They were very popular; the key secret ingredient was a miso-sesame butter spread which Paul had learned of from George Ohsawa's book *Zen Cookery* (Miso Spread #203).

In Jan. 1978 he started making these sandwiches at the Sleeping Lady Cafe (a co-op started in about 1975 in Fairfax, Marin County) and selling them at the Good Earth Natural Food Store in Fairfax. He bought his tofu, made by Quong Hop & Co. off the shelf at the Good Earth. In Feb. 1978 he began to distribute them to many natural food stores throughout Marin County. Note: Billy Bramblett says (July 1998) that Paul was not licensed to make or sell food and had no business name.

While in California in 1978 Duchesne gave his recipe and production techniques to Roy Steevensz in Los Angeles. Roy was making Fried Rice & Tofu Sandwiches by May 1978 on a big table in his living room. He continued until about 1984. Roy is now claiming that he created the idea. Paul and others were bringing Roy to the Bay Area as a macrobiotic teacher in 1977. Originally Roy was making seitan in Los Angeles.

In September 1978 Paul went to Boston to study

© Copyright Soyinfo Center 2014

macrobiotics, so he gave his Fairfax sandwich business (which still had no name) to Chris Smith. A month later, in October 1978, Chris stopped frying the brown rice and renamed the product, coining the now-famous name "Brown Rice & Tofu Sandwich." At the same time he named his business Wildwood Natural Foods. In late 1978 Chris Smith taught Joe Nixdorff, who started the company City Samurai in Berkeley and made the Samurai Hero from 1978-1982. In Boston, Duchesne lived in The Garvey House, a macrobiotic study house. There he started to make his brown rice and tofu sandwiches. The operation soon grew into a business, which he named Rice House. He also taught his process to Marty Roth and Barbara Svenning Garvey Roth, who lived in the Garvey house; several years later Marty and Barbara moved to Santa Fe, New Mexico, where they started a business making the BRTS. Later Barbara made it near Asheville, North Carolina. Marty and Barbara in turn taught the sandwich to Jeff Fairhall, who started Essential Foods in Seattle and built it into a thriving business.

In May 1979 Duchesne and Chris Smith traded places and companies. Thus Chris took over Rice House in Boston, making the transition without missing a day of production and delivery to Brookline, Cambridge, and Boston. He renamed the product Brown Rice & Tofu Sandwich. Chris ran the company until 1981, when he sold it. It is still in operation and named Rice House. Paul left Boston for California, and took over the company he had started originally (now named Wildwood Natural Foods) in Fairfax.

In Oct. 1979 Bill Bramblett (a monied rock musician and part owner of the Sleeping Lady co-op) approached Duchesne and proposed that he invest in the company and expand the sandwich business, including distribution to Sacramento. The company was making only about 100 sandwiches a day at the time. Duchesne declined, saying he wanted to build a traditional, cauldron-style tofu shop around the sandwich operation–an idea that he had conceived while in Boston. Bill said he couldn't afford that so Paul found two more people with money to invest. In May 1980 Duchesne, a sole proprietor, incorporated Wildwood. He gifted shares to Bill Bramblett, Paul Orbuch, and Frank Rosenmayr. Then they invested money so that of the 4 people so that ended up owning 25% of the stock. In Sept. 1980 the company moved out of The Sleeping Lady and down the road to 139 Bolinas Rd. They set up a tofu shop and started to make their own tofu. Duchesne's business plan showed that the operation would open in July. Instead opening was delayed until September 1980, which was the slower rainy season.

In late 1980 Richard Leviton visited Duchesne and Wildwood. In the Winter (Feb.) 1981 issue of *Soyfoods* magazine, in an article titled "Putting tofu in the lunch boxes of America" (p. 61), Leviton gave a detailed description of the shop: "which appears to fulfill the dreams of many soyfoods proprietors by combining both light tofu manufacture with light sandwich production in a clean, efficient, and industrious little shop. Mr. Duchesne designed his shop as a tofu showcase with broad wall-to-wall front windows so that passers-by may glimpse tofu production during the days. Wildwood produces a line of eight packaged vegetarian sandwiches including Brown Rice and Tofu Sandwich (with vegetables in a whole wheat bun), Tofu Vegetable Salad,..."

In late 1980 the business was operating in the red. Bramblett, Orbuch, and Rosenmayr attributed the delay to poor management and in Dec. they, controlling the board of directors, demoted Duchesne (who was working long hours) from general manager to president and sales manager, with a salary cut. There were bad feelings. The board then acted as general manager and met each Tuesday night. There were frequent conflicts between Duchesne and the other three. They wanted to expand faster than did Duchesne. By Feb. 1981 the business was operating at a profit. In Dec. 1981 Duchesne proposed that Wildwood start a distribution company (which he would head) to distribute products made by Wildwood and others. The other three disliked the idea, so a week later Duchesne quit (but kept all his Wildwood stock), bought a big new refrigerated truck, and in January 1982 started his own natural foods distribution company named Cauldron Express; it distributed products made by companies other than Wildwood–such as Brightsong Tofu, Pacific Tempeh, and Grain Dance Seitan. The Wildwood owners felt that Duchesne was competing with them so they repeatedly made life difficult for him, and they were a major factor in his bankruptcy 9 months later in September. (Later, Wildwood got into the business of distributing products made by other companies–with a fervor.) In April 1983 in bankruptcy court, Duchesne signed a covenant not to compete with Wildwood for 5 years and sold all his stock and rights to the other three; he ended up getting $5,000.

In about 1981, at the heyday of the brown rice and tofu sandwich, there were 5 companies in the San Francisco Bay area making 1,000 of them each day. Then the California Health Department began to wake up. When they realized that tofu was a perishable protein food that should be refrigerated, they decreed that all BRTSs be taken off the front counter of stores and sold out of the refrigerator. Sales dropped.

In Oct. 1988, after 5 long years, Duchesne returned to the soyfoods business making a BRTS and doing business as Bert's Place (Best Ever Rice & Tofu Sandwich). Wildwood challenged him for breach of the non-compete clause. The earlier agreement was not clearly written and The judge basically favored Duchesne in the arbitration. He had to rename his company to Paul's Place, which ended up in March 1989 as Paul's Organic Food Works. In early 1989 Duchesne developed a chronology of events relating to Wildwood's history, a chart showing the progeny of the original Fried Rice & Tofu Sandwich, and a collection of labels for these progeny.

© Copyright Soyinfo Center 2014

Articles on Wildwood have been published in the *Pacific Sun* (16-22 Jan. 1981, Food & Drink Section by Linda Xiques, pronounced Zirksus), *Independent Journal* (San Rafael; about 1985-87), *The Fax* (Fairfax, Jan. or Feb. 1986, written by Lisa Alpine, who wrote an earlier article about Wildwood in about 1983-84). Duchesne has been married for 24 years to a nurse; they have 2 children. Address: Fairfax, California. Phone: 415-453-2360.

9199. Bolduc, Bill. 1988. The founding of Eden Food Co. (Interview). *SoyaScan Notes.* Oct. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bill founded Eden Foods Inc. as a macrobiotic/natural foods retail store in Ann Arbor, Michigan, in Nov. 1969. He was the original incorporator. About 8 months later, a proposal was made to Bolduc by a woman to expand Eden in a new location at 211 South State Street. After that, Bolduc invited Tim Redmond to join him, which he did. Redmond became a 50% owner in 1970, about 9 months after the company was founded. Tim was in Boston at the time, studying with Michio Kushi and working at Sanae. He was interested in the restaurant business. Bill and Tim had been in college together at the Univ. of Michigan. Both later became interested in macrobiotics. Bill wishes now he had not sold his stock.

About 18 months ago, Tim and his wife, Patty, and Bill sat down and talked through the history for the first 2-3 years month by month. They should have tape recorded it. They will try to do it again. His older cousin is David Bolduc.

Tim Redmond is thinking of doing a consumer study on soymilk. He uses Dialog a lot, doing mostly food research now. Address: ELI Research Corp., 660 Northland Blvd., Suite 28, Cincinnati, Ohio 45240. Phone: 513-851-0330 or 751-9090.

9200. Meyer, Amy. 1988. U.S. soy sauce imports (Interview). *SoyaScan Notes.* Oct. 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The basic source of information is U.S. General Imports. Schedule A. Commodity by Country. U.S. Dept. of Commerce, Bureau of Census. Monthly statistics are published and totals for each year are given in the December issue. The term "Thin Soy Sauce" refers to typical soy sauce, such as Japanese shoyu. The other thicker Chinese types (black soy sauce, etc.) do not have separate figures kept for them. The SIC code for Edible Foods is #098, and thin soy sauce is 098-0420.

After World War II, U.S. soy sauce imports began in about 1947-50. In 1972 they reached a peak of 23.098 million lb., worth US$3.1 million. They dropped sharply for the next to years after Kikkoman opened its U.S. plant, but by 1981 were back up to 19.613 million lb., worth US$7.444 million. One gallon of soy sauce weighs 9.8 lb; 1,000 lb of soy sauce is 102 gallons.

Talk with Amy Meyer. 1989. Dec. 3. She had wanted to publish her extensive research on the soy sauce market in a scholarly journal, such as the *Journal of International Marketing.* She submitted several proposals but they all found the subject too narrow and boring. So nothing was ever published and probably never will be. All the documents are now filed in a large box. Address: 21 Beacon St. #10A, Boston, Massachusetts 02108. Phone: 617-523-3780.

9201. Sugarman, Carole; Hitchcock, Tyler. 1988. A sense of direction: Finding a place for novel products in the Old Dominion. *Washington Post.* Oct. 19. p. E1.
• ***Summary:*** The section titled "Soy sauce savvy" notes that Takayoshi Sato, the president of San-Jirushi Corp. (the world's largest brewer of tamari soy sauce) has invested $10 million to build the company's first factory outside Japan in Richmond, Virginia; it opened last year. Tamari is made entirely from fermented soybeans. Most Japanese sauces (such as Kikkoman) are made by fermenting both soybeans and wheat. It takes seven months to make tamari, using modern, sanitary equipment and computers. A detailed description of the process is given.

He chose Richmond for several reasons: (1) The cold Virginia winters and humid summers approximate those of Kuwano where Sato and his ancestors have been making tamari for the past 184 years. (2) The supply of pure water from the Appalachian mountains is quite similar to that from the Suzuka Mountains, a range of seven mountains in running through Mie Prefecture in central Japan. (3) A reliable supply of soybeans is available in the USA; they must be imported to Japan. (4) The Virginia location gives San-J better access to the growing American and European markets for tamari.

The San-J plant is will be located in an Industrial park off I-64; it will be clean and scentless. Sato's office shows a blend of American and Japanese cultures. Once a week, American staffers are offered Japanese language classes; Japanese employees takes English classes.

The first batches of tamari are now ready, and have been sold to industrial users only–food makers such as Campbell, Heinz, and Stouffers. Tamari "is more heat stable and has a richer flavor than other soy sauces, so not as much has to be used per portion.

San-J hopes to supply their bottled tamari to retailers by Jan. 1989. Yet many Americans don't know what tamari is. So a program of education will be needed if San-J wants to hit the big time.

9202. Yamauchi, Shoan. 1988. The Los Angeles tofu market (Interview). *SoyaScan Notes.* Oct. 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Los Angeles tofu market has become extremely competitive in recent years. There are at least 9 tofu manufacturers in the greater Los Angeles area, all run

© Copyright Soyinfo Center 2014

by Asian-Americans. The Japanese-American companies, ranked in descending order of size are: House Foods & Yamauchi Inc., Aloha Products (Culver City), and Meiji Tofu. The Chinese-American companies, ranked by size, are American Food Co. (Mr. Jackson Wu), Mighty Soy, Soyfoods of America (Ken Lee), Wy Ky, and Visoy. The only Korean company is Obok in Orange County. Address: House Foods & Yamauchi Inc., 526 S. Stanford Ave., Los Angeles, California 90013. Phone: 213-624-3615.

9203. Yamauchi, Shoan. 1988. The origins of packaging tofu in America and Japan (Interview). *SoyaScan Notes.* Oct. 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mr. Yamauchi believes that he was the first person to package tofu in America or Japan... perhaps in the world. In 1958, while his Matsuda Hinode Tofu Co. was located at 4th and Towne Streets, he conceived of the idea of putting individual cakes of tofu each in a plastic bag with water, sealing the bag with a heat sealer, placing the bag in a stiff paper deli carton with a wire handle, then folding over the top. The process was labor intensive. This happened at about the same time that a letter from journalist George Yoshinaga (see Yoshinaga 1986) had led the city to pass a new regulation requiring tofu to be packaged in individual containers.

Shortly after this innovation, later in 1958, Mr. Yamauchi began to sell his packaged tofu at the Boys Market supermarket chain (which had about 12 stores at the time) in Los Angeles. He believes that this was the first time tofu was ever sold in a U.S. supermarket.

In about 1961-62 Mr. Yamauchi became the first to package his tofu in plastic trays/tubs, the type so widely used today. He went to the company that made Sealright trays and asked them to make a waterproof tray for his tofu; none of their trays were waterproof at the time. He gave Sealright the money to make the molds and he retained exclusive rights to buy all trays made from those molds. Sealright was a huge company and this line of plastic trays represented a very small item for them. In about 1969 Yamauchi first met Jack Mizono of Azumaya and helped him to mechanize his tofu plant and package his tofu in Sealright trays. They soon became good friends. In July 1975 Yamauchi, Jack Mizono, Milton Taise, and Chuck Garbor each invested one-fourth to start Airtight Container Inc. (in Los Angeles), which tried to make high density plastic tofu packaging trays (similar to the ones they had formerly bought from Sealright). This was not successful because they had the wrong piece of equipment, so they met Ken Merrill of Merrill's Packaging in Burlingame, and he began to make the trays for Airtight. He also became a shareholder in Airtight.

In Japan, Mr. Yukio Sato developed the first tofu packaging in plastic trays. He had lost his parents when he was very young, but he worked his way through business school, and his first business after he graduated was making simple packaging machines for tofu in plastic trays, starting in 1962 or 1963. Address: Part owner, House Foods & Yamauchi Inc., 526 S. Stanford Ave., Los Angeles, California 90013. Phone: 213-624-3615.

9204. Merrill, Ken. 1988. Early packaging of tofu and Merrill's Packaging (Interview). *SoyaScan Notes.* Oct. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In mid-1976 Ken Merrill met Mr. Yamauchi who, with Jack Mizono (of Azumaya), Milton Taise, and Chuck Garbor already had a company named Airtight Container Inc. Airtight was using its own machine (which it had purchased from the Midwest) at the Airtight plant in Los Angeles to make tofu packaging trays from plastic roll stock. But the operation was not successful because they had the wrong machine for that job. They had purchased it in about mid-1975. So Airtight asked Ken Merrill if his company, which was in the thermo-forming business making plastic containers and trays, could make their tofu trays. In August 1976 Merrill ordered tooling to make the trays on his equipment at Merrill's Packaging in Burlingame, and then became a shareholder in Airtight. He made the trays and sold them to Airtight, which became a marketing and distribution company.

Airtight Container was soon selling tofu trays to tofu manufacturers across America, in competition with Sealright. This took away most of Sealright's business for that line of waterproof containers, so in about 1981-82 Sealright retired it. Their equipment was put up for a closed bid and Airtight bought all of it for two reasons: (1) To get the used extrusion equipment (which ran from pallets of resin, eliminating the need to buy roll stock), and (2) so another company would not buy it and become a competitor. Airtight kept the extruder in Merrill's plant, and cut up the rest and disposed of it.

Merrill thinks Airtight was founded in about 1974, but check with Caroline Taise at Airtight in Los Angeles to be sure [Caroline said mid-1975]. Sealright in Los Angeles agreed to make high-density poly trays. They had long made trays from waterproof materials but the fact that they held in the water in which the tofu was immersed stems from the method that Mr. Yamauchi developed to seal the trays, using a lid stock of a similar material that is heat sealed to the flange of the tray. This was an original idea, in part because few American foods are sold floating in water. Address: President, Merrill's Packaging, 1353 Marston Rd., Burlingame, California 94010. Phone: 415-348-7658.

9205. Peifer, Ray. 1988. Early tofu packaging and Sealright Company Inc. (Interview). *SoyaScan Notes.* Oct. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ray, who was with Sealright when Mr. Yamauchi first came to them, believes that Sealright started to make trays for packaging tofu in about 1966, and almost

© Copyright Soyinfo Center 2014

certainly between 1965 and 1967. Mr. Yamauchi created three early innovations with tray packaging. First, a very deep tray. Sealright made shallow plastic trays at the time, but they had never made a tray nearly as deep a tray as the one Mr. Yamauchi wanted to hold 26-28 ounces. Second, a method for heat sealing a plastic film to the flange of a tray which had cold water flooding over the flange. A faucet in his plant ran cold water directly into each tray. Other companies had heat sealed a film to a tray for a product with liquid inside, but it was never overflowing. Third, he spent a great deal of money (perhaps $45-50,000) to develop and have built high-speed sealing machines to pack and seal the tofu in his plant. Many in the packaging industry "thought he was kind of goofy, but his idea, though radical in its time, turned out to be a pretty good one."

Sealright made Mr. Yamauchi's containers for about 10 years. But they are a volume producer and Mr. Yamauchi was the only user of that sort of package, and he required a relatively small volume of about 20 different custom sizes. So Sealright sold him the tray forming machinery in the mid-1970s. Sealright did co-op ads/stories in trade magazines and newspapers for him nationwide, which led to his first widespread tofu distribution (Buffalo, New York or Charleston, South Carolina). He also sold small quantities (2-3 facings) of tofu in other Caucasian food markets in Los Angeles, such as the Hughes chain and maybe even Dale's. Address: Manager of Sales Administration, Sealright Company Inc., 4209 Noakes St., Los Angeles, California 90023. Phone: 213-269-0151.

9206. Taise, Caroline. 1988. Early tofu packaging and Airtight Container Inc. (Interview). *SoyaScan Notes.* Oct. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Her records show that Airtight Container Inc. started in July 1975. The owners were Shoan Yamauchi, Jack Mizono, Milton Taise, and Varnich Nimsrisakkul (a Thai man). Ken Merrill of Merrill's Packaging in Burlingame joined later. On 22 Nov. 1989 Caroline recalled that Chuck Garbor was also involved. Address: Airtight Container Inc., 519 Gladys Ave., Los Angeles, California 90013. Phone: 2131-624-4349.

9207. Yoshinaga, George. 1988. Early history of tofu packaging in Los Angeles (Interview). *SoyaScan Notes.* Oct. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** As a newspaper editor, he wrote a letter in *Kashu Mainichi* in about 1953 arguing that it was unsanitary to sell tofu in bulk immersed in water. In about 1956-57 a law was passed by the City of Los Angeles prohibiting this means of sale, and requiring individual packaging for all tofu. George got a lot of flack from the local tofu makers, since the new law increased their cost of making tofu. He believes there were only two tofu makers in Los Angeles at that time (he does not recall their names), and he heard from both of them, but he did not hear from Mr. Yamauchi. He thinks Mr. Yamauchi was not making tofu at that time. His newspaper is not indexed, but all back issues do exist. Address: Kashu Mainichi, 915 E. First St., Los Angeles, California 90012-4083. Phone: 213-628-4686.

• ***Summary:*** The present Wakayama prefecture is one part of the earlier Kishu Han. The latter place name was used during the Edo period until the start of the Meiji period. In this "Illustrated History of Wakayama Prefecture," in the chapter cited above, there is one section titled "Yuasa–The home of shoyu" (*Shoyu no furusato–Yuasa*). The entire book is 333 p. Address: Osaka Sangyo Daigaku, Osaka, Japan.

9209. Bernard, Richard L.; Juvik, Gail A.; Hartwig, Edgar E.; Edwards, Calton J., Jr. 1988. Origins and pedigrees of public soybean varieties in the United States and Canada. *USDA Technical Bulletin* No. 1746. 68 p. Oct. [20 ref]
• ***Summary:*** Contents: Old domestic varieties. Modern domestic varieties from public institutions. Germplasm resources information network. Tables: 1. Number of U.S. and Canadian soybean varieties by maturity group. 2. Number of U.S. and Canadian soybean varieties by country of origin. 3. Origins and pedigrees of old domestic soybean varieties. 4. Lost old domestic soybean varieties. 5. Literature on old domestic soybean varieties in chronological order. 6. Origins and pedigrees of modern domestic soybean varieties from public institutions. 7. Genetic information on backcross-derived public soybean varieties. 8. Genetic information on backcross-derived soybean parental lines. 9. Public soybean variety registrations and licenses. 10. Corrections to published pedigree information.

Abstract: "In this report are described the origins of the 440 U.S. and Canadian soybean varieties that are maintained in the USDA Germplasm Collection at Urbana, Illinois, and Stoneville, Mississippi. Varieties in commercial use before the mid-1940's were mostly introductions, and this report includes for each the geographic place of origin, the person or institution that provided the seeds, the foreign variety name (if any), as well as information about when it was released and who released it in the United States or Canada. Modern varieties have been developed by hybridization and selection. In this bulletin, the pedigree is specified and where and when each variety was developed and released. This information allows researchers and breeders to trace modern soybean varieties back to their introduced ancestors and facilitates breeding plans and evaluation of the germplasm base of the current commercial soybean crop."

Talk with Dr. Richard Bernard. 1998. July 12. He considers this to be his best publication on this subject, but it is quite similar to *INTSOY Series* No. 30 titled "USDA soybean germplasm collection inventory. Vol. 1," published in August 1987. Address: 1-2. Urbana, Illinois; 3-4. Stoneville, Mississippi.

9210. *East West.* 1988. East West presents: Best & worst awards. 3rd annual. 100% natural. Oct. p. 65-72.
• ***Summary:*** Best Natural Soy Sauce: Lima Nama Shoyu from Ohsawa-Japan, imported by Ohsawa America of Chico, California. Twice brewed, lower in salt, and aged four years. "It is unique among shoyus, with exceptional smoothness and flavor."

Better Than It Sounds Award:" Tofu chocolate? Yes, Barat Bars by Legume Inc. of Montville, New Jersey, use tofu instead of dairy and no hydrogenated or fractionated palm kernel oil. Carob candies move over!"

Best Tasting Flavored Soy Drinks: "The Westbrae Malteds won this contest going away. Creamy, thick, and delicious, they are more of a dessert than a drink. Some devotees eat them frozen."

Least Healthful Line of Soy Drinks: "The Westbrae Malteds. The flip side of their great taste is their almost 400 calories and 15 grams of fat per 8 ounces."

Most Healthful Line of Soy Drinks: Edensoy. They are the only producers making a totally oil-free drink.

Worst Tasting Flavored Soy Drinks: "Vitasoys from San Francisco, Calif., seem to have few fans and finished last in our blind taste test."

Most Questionable Beverage Label Claim: "3 grams of fat per 6 ounces of Carob and Chocolate Ah Soy, by Great Eastern Sun of Enka, North Carolina. These soymilks are rich and creamy, yet 3 grams is a lower fat content than even Edensoys, made without oil. How is that possible guys?"

That's Progress? Award: "Mori-Nu Tofu by Morinaga Nutritional Foods of Los Angeles. Aseptic Tetrapacked tofu that has indefinite shelf life and can be shipped anywhere. Good for backpackers maybe but can't compare to fresh and local."

Best Fake Hot Dog: SoyBoy Tofu Not Dogs by Northern Soy of Rochester, N.Y. "Nice smoky flavor and smooth texture, almost as good as the real thing."

Worst Fake Hot Dog: Tofu Pups of Lightlife Foods of Greenfield, Massachusetts. "Dry and crumbly on the inside, with a lack of distinctive flavor. Won't fool anybody at the neighborhood cookout."

Best Tamari: San-J Traditionally Brewed Tamari from San-J International of Colonial Heights, Virginia. "No one else even came close. Question: Will they be able to retain their appeal when the first U.S.-brewed batch hits the shelves?"

Advances in New Crops: Proceedings of the First National Symposium New Crops: Research, Development, Economics. Portland, Oregon: Timber Press. xxii + 560 p. See p. 159-63. Held 23-26 Oct. 1988 at Indianapolis, Indiana. [10 ref]
• ***Summary:*** Perhaps the best brief history seen on the origin and dissemination of the soybean, its introduction to America, and the reasons for its success. Contents: Introduction. Paths of dissemination–Old World. Paths of dissemination North America (Early Period [1765-1859]). Paths of dissemination North America (Middle Period [1878-1898]). Paths of dissemination North America (Late Period [1907-1920]). Success [due to the development of new cultivars and the rise of a processing industry]. Summation.

This paper notes that in 1804 soybeans were planted near Dubrovnik, Yugoslavia [Note: Dubrovnic has been in Croatia since 1991]. They were "harvested, cooked, mixed with cereal grain and then fed to chickens for increased egg production."

"In 1878, while in Europe, Dr. George H. Cook and James Neilson of the New Jersey Agricultural Experiment Station obtained soybean seed at the Bavarian Agricultural Experiment Station and at the Vienna Exposition. The seeds were planted at the College Farm in May 1879 and harvested in October. The results were encouraging. This is the first report of soybeans having been tested at a land grant institution in the United States. Within a short time, soybean seeds were introduced from Japan by McBryde (Tennessee), Sturtevant (Cornell Univ., New York), Brooks, (Hatch, Massachusetts), and Georgeson (Kansas)."

The article is dedicated to the memory of the author's friend and colleague Prof. dr. Bogdan Belic [pronounced BEL-itch], Novi Sad, Yugoslavia.

Note: Dr. Hymowitz, in a letter to William Shurtleff of Soyfoods Center dated 22 Dec. 1984, states: "A colleague of mine [Belic], while meandering through a library in a monastery in Yugoslavia, came across an early 1800s citation of soybeans in that area. Apparently the beans were brought to the Zagreb area by a ship captain from China."

Talk with Ted Hymowitz. 1993. April 25. Ted has a copy of the 1804 document by Buconjic that mentions soybeans being planted near Dubrovnik. It was sent to him by his friend and colleague Prof. Dr. Bogdan Belic of Novi Sad, Croatia, Yugoslavia. Dr. Belic, who knew that Ted was interested in the early history of the soybean, photocopied the document and translated that portion which dealt with

the soybean. Ted does not have an 1826 article by Simic that cites the 1804 document by Buconjic. Address: Dep. of Agronomy, Univ. of Illinois, Urbana, Illinois.

9212. Karta, Susani K. 1988. Market trends in the development of traditional soyfood. Paper presented at the ASEAN Food Conference '88: Food Science and Technology in Industrial Development. 18 p. Held 24-26 Oct. 1988 at Bangkok, Thailand.
• ***Summary:*** Contents: Introduction. Traditional soyfood. Market situation and trends. Indonesia. Singapore. Malaysia. Thailand. Constraints in the market development of soyfood (in each of the above 4 nations). Major trends in the development of traditional soyfoods. Marketing strategy of soyfood. Tables: 1. Traditional non-fermented soyfood products. 2. Nutritional composition of traditional non-fermented soyfoods. 3. Description and uses of traditional fermented soyfood products. 4. Nutritional composition of traditional fermented soyfoods.

5. 1987 estimated consumption of soybeans as foods in the Far East [total and per capita in East Asia]. China, 1,062 million population, 7,325,000 tonnes, 6.9 kg/capita. Japan, 122 million population, 1,141,000 tonnes, 9.3 kg/capita. South Korea, 42.1 million population, 330,000 tonnes, 7.8 kg/capita. Taiwan, 19.6 million population, 260,000 tonnes, 13.3 kg/capita.

6. Southeast Asia soybean consumption for food. From 1983 to 1989 the increase in 1,000 metric tons was: Indonesia 927 to 1,600. Singapore 14 to 26. Malaysia 32 to 70. Thailand 40 to 150. Philippines 9 to 24. Total 1,022 to 1,870 (increase of 82.9% in 7 years).

7. Per capita soybean consumption for food in Southeast Asia. From 1983 to 1989 the increase in kg/person was: Indonesia 6.0 to 8.8. Singapore 5.6 to 10.5. Malaysia 2.1 to 3.7. Thailand 0.8 to 2.6. Philippines 0.2 to 0.5. Average total: 3.8 to 5.9 (increase of 55.3% in 7 years).

8. 1987 estimated consumption of soybeans as foods in Southeast Asia [total and per capita]. Indonesia, 175 million population, 1,575,000 tonnes, 9.0 kg/capita. Thailand, 53.6 million population, 118,000 tonnes, 2.2 kg/capita. Malaysia, 16.1 million population, 55,000 tonnes, 3.4 kg/capita. Singapore, 2.6 million population, 20,000 tonnes, 7.7 kg/capita. Philippines, 61.5 million population, 18,000 tonnes, 0.3 kg/capita.

9. Indonesian soybean production, imports, and consumption as food (in tonnes). From 1983 to 1989, production rose from 536,000 to 1,250,000, imports decreased from 391,000 to 350,000, and the amount consumed as food increased from 927,000 to 1,600,000. About 50% of the soybeans used for foods in Indonesia go to make tempeh, and 40% are used to make tofu.

10. Singapore soybean consumption as food. From 1983 to 1989 the amount increased from 14,000 tonnes to 26,000 tonnes. Most of these soybeans are used to make tofu and soymilk. 11. Malaysia soybean imports and consumption as food (in tonnes). From 1983 to 1989, production rose from 182,000 to 440,000, and the amount consumed as food increased from 32,000 to 70,000. 12. Thailand soybean production, and consumption as food (in tonnes). From 1983 to 1989, production rose from 113,000 to 490,000, and the amount consumed as food increased from 40,000 to 150,000. Only in 1988 were soybeans imported–40,000 tonnes. This growth of soyfood consumption is due partially to the Government of Thailand's interest in promoting the awareness and utilization of soyfood products. The Thailand Agricultural Extension Service program and other institutions have been actively advocating of soyfoods into the food industry and the human diet, especially in rural areas. The government controls soybean imports by issuing licenses.

In summary: The soybeans with the highest per capita soybean consumption for soyfoods are: Taiwan 13.3 kg, Japan 9.3 kg, Indonesia 9.0 kg, Singapore 7.7 kg, South Korea 7.3 kg, and China 6.9 kg. The greatest potential for growth lies in China, where it is very common to find markets running out of soyfoods early in the morning. There is also great potential for growth in Malaysia, Thailand, and the Philippines. Address: American Soybean Assoc., 541 Orchard Rd., #11-03 Liat Towers, Singapore 0923, Republic of Singapore.

9213. **Product Name:** [Tofu Dressing (Plain, Thousand Onion Flavor, and Thousand Tomato Flavor)].
Foreign Name: Otofu Doresshing (Pureen, Sauzan Onion Fûmi, Sauzan Tomato Fûmi).
Manufacturer's Name: Nihon Beans.
Manufacturer's Address: Nakamachi 2-4-5, Musashino-shi, Tokyo, Japan. Phone: 0422-54-4030.
Date of Introduction: 1988 October.
Wt/Vol., Packaging, Price: 160 ml plastic bottle retails for 160 yen.
New Product–Documentation: Toyo Shinpo. 1988. Nov. 11. p. 4. Otofu doresshingu wakai josei no ninki dokusen: Nihon Biinzu [Tofu dressings capture young women's favor: Nihon Beans]. Tofu-based dressings are becoming very popular in Japan. Nihon Beans (president Tetsuya KOFUSE) started to sell 3 varieties in Oct. 1988. Their target is the women's market. They developed their products and design by studying many women's groups. They decided that a product containing 40% and 40% tofu has the best flavor. With more tofu, the flavor is too plain, although the product would be healthier.

9214. Shurtleff, William; Aoyagi, Akiko. 1988. Das Miso-Buch: Hersetllung, Sorten, Kochen mit Miso, Rezepte [The book of miso: Production, varieties, cooking with miso, recipes]. Munich, West Germany: Goldmann Verlag GmbH. 414 p. Oct. Illust. by Akiko Aoyagi Shurtleff. Index. 23 cm.

Pocket book edition. [Ger]
• ***Summary:*** A pocket book edition of the original 1980 German edition of *The Book of Miso.* Contains 350 recipes.

Contents: Foreword. What is miso? Part I. Varieties, preparation, and production of miso. Part II. Cooking with miso (recipes). Glossary. Acknowledgments. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

9215. Morinaga Nutritional Foods. 1988. Mori-Nu Tofu promotes healthy eating through November (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Nov. 4.
• ***Summary:*** This month, Mori-Nu Tofu will participate in 3 special health-related events to educate individuals on the latest advances in healthy eating: (1) The International Dance-Exercise Assoc. (IDEA) Educational Conference Nov. 6-8 in Washington, DC. IDEA consists of 18,000 dance exercise professionals from 50 states and 38 countries. Mori-Nu will distribute recipes and brochures to members of IDWA and serve fresh Mori-Nu strawberry fruit shakes to the expected 1,500 conference attendees. (2) Danielle Lin will serve all-natural strawberry fruit shakes at the Soyfoods Pavilion, Nov. 4-7, at the Natural Foods Expo in Baltimore. (3). Lin will provide delicious low-fat, low-cholesterol, and low-sodium cooking ideas using Mori-Nu Tofu at the First National Cholesterol Conference (sponsored by the National Heart, Lung and Blood Inst.), Nov. 9-11, Crystal City, Virginia. Address: Los Angeles, California. Phone: 213-728-4325.

9216. Bolduc, Bill. 1988. Re: Early history of Eden Foods, Inc. to 1973. Part I. Letter to William Shurtleff at Soyfoods Center, Nov. 5. 2 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** The following account is based on hours of discussion between Bill Bolduc, the Redmonds, and the Silvers between 1988 and 1991. Bill is not familiar with the details of the history of the food co-op in Ann Arbor prior to 1969. But Ronnie Teeguarden says that in about July 1967 he and Gloria Dunn started a loosely-organized food buying co-op–which had no name–in Ann Arbor, Michigan. Within a few weeks, a number of their friends and acquaintances (a group of eclectic pathfinders, students, graduates, macrobiotics, dropouts, musicians) informally joined the group. These included Tim Redmond, Mark and Nancy Retzloff, Linda Succop, Iona Teeguarden, and Bob Thorson. From time to time, they collectively ordered macrobiotic staples from Erewhon in Boston using the Erewhon catalog. When the foods arrived, the food co-op members got together and divided them up at the Teeguarden-Leabu General Store, located a half flight below street level at 209 South State Street, below the Herb David Guitar Studio in Ann Arbor. Run by Ronnie Teeguarden, with help from Gloria, this store's main business was selling local art, second hand clothes and records, etc.

Bill Bolduc and Judy Succop [Linda Succop's sister], were married in June 1969 in Ann Arbor. They were not yet members of the co-op at that time. A few days later, they went to Berkeley for the summer. When they returned to Ann Arbor at the end of that summer, they lived in Saline, Michigan, 12 miles outside of town with Mark & Nancy Retzloff, Linda Succop, and Tim Redmond. Bill, who wasn't working or going to college, was trying to figure out what to do next. By September 1969, Bill and Judy Bolduc joined the food co-op. They also joined the Zen Macrobiotic Supper Club; all of its members were also members of the food co-op.

In the fall of 1969 the Teeguarden-Leabu second-hand store looked like it was about to close, which would leave the food co-op without a home. The group (especially Ronnie) convinced Bill Bolduc to take charge of the food co-op and find it a permanent home, which he did.

On 4 Nov. 1969 Bill Bolduc incorporated Eden Organic Foods, Inc. as a non-profit corporation in the state of Michigan. The name "Eden," which stood for Environmental Defense Energy Network, was coined at this time by Bob Thorson during a discussion between, Bill Bolduc, and Gloria Dunn at a coffee shop. Thus, the term "Eden" was first used in connection with this co-op or business in Nov. 1969.

Eden was born under a good star. The date Nov. 4 was carefully chosen to be astrologically propitious. At the time, Bill was an intense student of astrology with Michael Erlewine–who is now world famous in the field, and the owner of Circle Books, an astrological publishing company. In 1970 Michael also designed the Eden logo of the 4 sprouts in a circle. Eventually Michael became one of Bill Bolduc's students in macrobiotics.

Bill was president of Eden Organic Foods and his wife Judy (who was working as a secretary at the University of Michigan School of Music) was secretary. Bolduc used $200 of his own money to rent a converted apartment above the bicycle store at 514 East William St. in Ann Arbor, near campus. People from the community loaned $1,500 to help stock the co-op store and buy an 8-inch Meadows stone mill to grind flour.

The question arises: When was Eden Foods established? Bill Bolduc and Tim Redmond believe that the founding should be dated from Nov. 1969, when the company was first named; before Nov. 1969 the food co-op was not even a business. It was dead and had disappeared for about a month until Bill resurrected it by placing an order to Erewhon using his own money.

Eden Organic Foods first began selling soyfoods commercially in November 1969, starting with their first order from Erewhon in Boston. They would buy "tamari" (actually shoyu) and miso (kome = rice, mugi = barley, and

© Copyright Soyinfo Center 2014

Hacho varieties) in bulk from Erewhon (which imported them from Japan). At their store, Linda Succop (Bill's wife's sister) would repackage the products, putting the shoyu into bottles and the miso into plastic bags. They were labeled using plain white pressure-sensitive gummed labels with a rubber stamp. One stamp contained the name and ingredients for each product, and another, that was stamped below it, gave the company name and address. They wrote in the weight or volume by hand. Also at William St. a tiny Meadows Mill was used to grind grains and seeds into flour. Continued. Address: ELI Research Corp., 660 Northland Blvd., Suite 28, Cincinnati, Ohio 45240. Phone: 513-851-0330 or 513-751-9090.

9217. Bolduc, Bill. 1988. Re: Early history of Eden Foods, Inc. to 1973. Part II. Letter to William Shurtleff at Soyfoods Center, Nov. 5. 2 p. Revised 4 Dec. 1991 by Bill Bolduc, Ron Teeguarden, and James Silver.

• ***Summary:*** In Sept. 1970 the fledgling company had an offer to move into a newly-redecorated mini-mall [at 211 South State St.] on the main street of campus. New personnel and financing would be needed. Bolduc called Tim Redmond, who had been studying and working at the Sanae macrobiotic restaurant in Boston, to ask for help. Tim returned to Ann Arbor and joined Bolduc in the expansion effort. To raise money for the move, the two approached Tim Redmond's father, who said he would help finance the expansion only if the business was reorganized as a for-profit corporation with Tim having equal ownership. They agreed and in about Oct. 1970 Eden was reorganized as a for-profit corporation with Bolduc and Redmond each owning 50%. At that time the partners shortened the company name to Eden Foods Inc. Bolduc and Redmond then borrowed a 4-figure sum from Tim's dad, had the new store remodeled, and entered the big time. After the new store was opened and running, Redmond returned to Boston and the Sanae restaurant, where he completed his studies. But with this move they fell from the graces of the political co-opers. In November 1970 they did a "Brown rice, seaweed, and dirty hot dog" Bob Dylan commercial on a local radio station; it was a big hit. They bought a 15-inch Meadows Mill and a rotary-drum roaster, then milled flour and baked granola in the back of the store.

In 1970 Bill had located Tom Vreeland, an organic farmer in Ypsilanti, Michigan. An Eden Foods Wholesale Pricelist dated 26 July 1971 shows that the Eden store at 211 South State St. was wholesaling soybeans, soft wheat, corn, and rye, all grown organically in Michigan. Eden was also selling organic flours that they ground from these grains.

In the spring of 1971, after realizing they were the only "natural food" store in the area, and having some other "health food" store owners in Detroit express an interest in carrying more food, they decided to wholesale foods out of the back of their retail store at 211 South State Street. Bill flew to Boston to meet Tim Redmond. They visited Erewhon (they wanted to convince Erewhon to let Eden be their distributor at lower prices), then Bill flew to Arrowhead Mills in Deaf Smith County, Texas, to make arrangements buying in bulk at wholesale prices. In the summer of 1971 they ordered their first 20-foot trailer load of organic foods from Arrowhead Mills, and ran an ad in *East West Journal*. Soon they started to distribute their foods to 4-5 accounts in Detroit. They bought a 1964 16-foot green Dodge van and a dry weight weigher/dumper machine. Their two main brands were Arrowhead Mills and Erewhon, but soon they developed the Eden brand with printed labels, onto which they would rubber-stamp the product name (such as bottled tamari and packaged miso). Soon they added other brands: Celestial Seasonings, After the Fall, Timbercrest, etc.

The wholesale operation quickly outgrew the back of the retail store, so they borrowed more money and rented a 5,000 square foot Quonset hut (resembling an airplane hanger) down on Main Street by the Huron River. Tim Redmond, Mark Retzloff, and Bill Bolduc ran the wholesale operation. Retzloff later co-founded Alfalfa's, a natural foods supermarket chain based in Boulder, Colorado.

In October 1971 Bolduc hired Michael Potter, who was living in Detroit, to run the store. Just before this, Potter had managed a natural foods store named Joyous Revival in nearby Birmingham, Michigan. Prior to this time, the company had been owned by Bill and Judy Bolduc (50%) and by Timothy Redmond (50%). Potter was given 13.5% of the stock and the other principals' share reduced proportionally.

In the late summer or fall of 1973 the Bolducs sold their shares back to the corporation, which then gave a portion of these to Tim Redmond and Michael Potter so that these two men now owned 51% and 49% respectively.

The Bolducs then left Ann Arbor, moving to Cincinnati, then to Illinois, then back to Ann Arbor. Bill is certain that when he left Eden Foods, the company was not importing any products from Japan. He would guess that it was not until about 1975 that Eden started to import a line of foods from Japan. Their first supplier in Japan was Muso Shokuhin, a leading macrobiotic and natural foods exporter in Osaka. Initially, all of their imported products were required to bear the Erewhon brand. Imported soyfoods included miso and shoyu. Sales hit $175,000 in 1973.

Note: Eden was the first of the many macrobiotic distributors based on the Erewhon model to open in America. Others that soon followed included Food for Life in Chicago (1970), Janus in Seattle, Washington (1972 Jan.), Essene in Philadelphia (by 1971 Feb.), Laurelbrook in Maryland (1971 Aug. 23), Ceres in Colorado Springs (by 1973), and The Well in San Jose, California (1973). Address: ELI Research Corp., 660 Northland Blvd., Suite 28, Cincinnati, Ohio 45240. Phone: 513-851-0330 or 513-751-9090.

9218. Morinaga Nutritional Foods. 1988. Mori-Nu Tofu promotes drug-free bodybuilding at the 1988 Annual Mr./Mrs. International (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Nov. 14.
• ***Summary:*** "Mori-Nu Tofu will co-sponsor the 1988 Annual Natural Drug-Free Bodybuilding Contest on Nov. 20 in Redondo Beach, California. Bodybuilders from all over the world will compete for the title of Mr./Ms. Natural, which is only open to men and women who have passed a drug test one week prior to the event.

"Participants are tested by the American Bodybuilders Coordination Committee (A.B.C.C.), the oldest and most widely recognized drug-free association in the country, which utilizes the standard urine test as well as a lie-detector test to determine previous or present use of steroids or other muscle-building drugs...

"Mori-Nu Tofu, which began sponsoring natural bodybuilding contests earlier this year, offers bodybuilders a low-calorie, high-protein addition to their diets." Address: Los Angeles, California.

9219. Harris, Ron. 1988. A history of Grain Dance, one of America's earliest seitan manufacturers (Interview). *SoyaScan Notes.* Nov. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron arrived in San Francisco in about 1975, having studied macrobiotics previously in Ohio from 1974. As far as he knows, he was the first person to make seitan commercially as a real business in America. Before he started, a woman in Marin made seitan at home and sold it at 1-2 stores for a few months. She had no business name. She had learned how to make seitan from Roy Steevensz, a macrobiotic teacher in Los Angeles who also made and sold tempeh. Lima Foods in Belgium started to import a small bottled seitan product long after Ron started. He never had any competition from other seitan makers on the West Coast. When he began, no one had ever heard of seitan. The Kushis and the Aiharas both made and taught others how to make seitan on a home scale.

Ron first learned about and tasted seitan in Key West, Florida, in 1975. A woman named Martha, who was a macrobiotic (originally from Los Gatos, California) was giving a cooking class. His ex-wife Shiwa took the class, then Ron tasted the seitan from the bottom of the pot. He loved it. Shiwa then taught Ron the basic process for making seitan, then he ended up developing some variations on that process and recipe. Shiwa had a small business making pastries (such as date bars) out of her home in San Francisco and selling them at Rising Sun, a macrobiotic food store on Judah St. in San Francisco, owned by Mr. Noboru Muramoto. She suggested that Ron start making seitan to expand the family's line of foods. Ron first began to make seitan out of their home at 187 Downey St. (in the upper Haight-Ashbury district), San Francisco. He sold the first product in bulk at Rising Sun. It was in small dark brown chunks (about 6 pieces/chunks per pound), stored refrigerated in a 5-gallon plastic bucket or earthenware crock. On the bulk container was written the word "seitan" followed by the ingredients. After about a year he started to sell it in individual packages. To the label he added the pronunciation "SAY-tahn" and the phrase "A high-protein food made from wheat." He always sold only one product in one flavor. The ingredients were organic hard red winter whole wheat (always freshly ground), spring water, tamari (actually shoyu), ginger, and onions. He was one of the few seitan makers to use whole wheat; most others used unbleached white flour, which gave a higher seitan yield. Initially he ground the wheat by hand using a French Samap mill that he bought from Jacques DeLangre's son, Tom. Later he bought his wheat from Joe Schwinn of Deaf Smith–Vital Vittles, who milled his own wheat fresh each day.

Originally Ron's seitan company had no name. He coined the company name "Grain Dance" at about the time he began packaging in individual containers–round plastic deli containers with a snap-on lid. First he sold it by the pound, then in 8 oz packs. Later the name was expanded to Grain Dance Natural Foods. The company was never incorporated. From his first address, Ron moved to another home-based kitchen, then in about 1980 he subleted his first legal commercial space mornings in the kitchen of the Real Good Karma Cafe on Dolores St. in the Mission district. Finally in about 1982 he moved into a commercial space at 422 Haight St. between Fillmore and Webster in the lower Haight Ashbury. By 1987 he was selling seitan to about 100 stores in the greater San Francisco Bay Area. They made seitan 3 or 4 days a week, making 80 pounds of finished seitan each day. Grain Dance introduced seitan to thousands of Californians who were looking for an alternative to meat. At fairs he served deep-fried seitan; it was dipped in a spiced wheat-flour batter and breaded with cornmeal. People loved its meaty texture and savory flavor. Ron's personal favorite was freshly cooked seitan, right out of the pot in his unique broth.

Initially Ron distributed the product himself, then Paul Duchesne distributed it after he was pushed out of Wildwood and started his own distribution company, then when he went out of business, Wildwood distributed it; Wildwood also used seitan in some of their sandwiches. Later David "Devo" Knepler came is as a partner (Devo now works with Wildwood Natural Foods). They had one employee.

For ten years Ron made seitan by hand. He really enjoyed the hand kneading, putting handmade energy into the food, and focusing on quality. By 1987 the business was growing, rents in San Francisco were skyrocketing, and he would have to mechanize the shop in order to expand. The business never made much money. "It was a labor of love, and it really enjoyed making seitan and turning people on to good food and helping them in any way I could." So in

© Copyright Soyinfo Center 2014

1987 Ron began to phase out the business. He started doing attorney service work (which he is still doing) several days a week, then made seitan on several other days. Initially Wildwood wanted to continue it, so Ron went there and taught a few people how to make seitan. They did it for a while, but found it too labor intensive, and gave it up. There has never been another seitan maker on the West Coast. Address: San Mateo, California. Phone: 415-347-1378.

9220. *Register* (*Whitewater, Wisconsin*). 1988. Noon Kiwanis [U.S. trade and Japan]. Nov. 17.
• ***Summary:*** "In the five years from 1982 to 1987, the United States went from the world's largest creditor nation, owed $150,000 million by the rest of the world, to the world's largest debtor nation, owing $400,000 million to the rest of the world. Our role as the largest creditor nation was inherited by Japan."

9221. Morinaga Nutritional Foods. 1988. Mori-Nu Tofu educates seniors on reducing cholesterol (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Nov. 18.
• ***Summary:*** Nov. 18, 1988. "Recently, Mori-Nu participated in the Golden Times Senior Citizen Show in Anaheim, California... Seniors attending the Show received information on the health and nutritional benefits of eating tofu as well as tips on creating delicious recipes using tofu. In addition, seniors got a chance to taste Mori-Nu in all-natural fruit shakes made fresh using strawberries, bananas and Mori-Nu Tofu." Address: Los Angeles, California. Phone: 213-728-4325.

9222. *Packer* (*The*). 1988. Tofu earns Good Housekeeping Seal of Approval. Nov. 19.
• ***Summary:*** Mori-Nu Tofu is the first and only tofu manufacturer in the United States to receive the Good Housekeeping Seal of Approval, according to Tom McReynolds, marketing manager for Morinaga. Based on a news release dated 11 Nov. 1988 and titled "Mori-Nu Tofu receives the Good Housekeeping Seal of Approval." Also in Whole Foods. 1989. Feb. p. 19. Address: Kansas.

9223. Sheraton, Mimi. 1988. Cookbooks to give thanks for: An autumn harvest of American standards, Asian flavors and universal inspiration. *Time.* Nov. 28.
• ***Summary:*** *An Ocean of Flavor* (Morrow, $20.95) is by Elizabeth Andoh, an American who married a Japanese and has spent many years in Japan studying the country's food and culture. This fine guide shows how to enhance the flavor of seafood without destroying it. "Fried soft-shell crabs in a spicy sauce, cold poached tilefish with mustard-miso sauce and fiddlehead ferns, and a careful, simple tempura recipe are among the enticements."

Another new Asian food book is *Asian Ingredients* (Morrow; $22.95) by Bruce Cost. It includes a discussion of the "soy sauces that so many chefs are now using to accent European dishes."

9224. Archer Daniels Midland Co. 1988. First quarter report to shareholders. Box 1470, Decatur, IL 62525. 16 p.
• ***Summary:*** President Randall's Report–stated that the greatest concern of Americans in the 1990s will be the environment. 1. ADM now has in operation eleven large fluid bed boilers for cogeneration of power and process steam. 2. Worldwide technology has been licensed for using a special grade of starch to render disposable plastics degradable. 3. Ethanol is a third contribution to clean environment. Ethanol fuels have a high oxygen content, a major factor in reducing carbon monoxide poisoning of the atmosphere.

"There is a tremendous demand all over the world for soy protein products to replace subsidized milk powder. Our soy protein concentrate plant is completed and is now operational. We will double its size in early 1989 and are making plans to double it again before 1990, in response to the new demand.

"We are also doubling the size of our edible soy protein isolate plant, with plans for further increases in 1989 and beyond. We are constructing a plant for industrial isolates for the paper industry, to be sold in conjunction with our corn starches.

ADM now produces soybean flour, grits, TVP, concentrate and isolate, the most complete line of edible soy products of any producer.

Chairman Andreas' Report–The U.S. Government has more control over what the farmers plan and the prices they receive today than they have ever had in history.

Government imposed embargoes cause massive restructuring of world trade and processing. Examples: Immediately after the 1980 embargo, the following fundamental permanent adjustments in world trade occurred: 1. The EEC, in emergency meetings, alarmed that the U.S. would cut off exports for political reasons, resolved to become self-sufficient, particularly in oilseeds, with the result that they increased production of wheat and have become a large surplus producer of wheat. 2. Japan, equally alarmed, immediately made $1,000 million available to Brazil to expand soybean production 300%. 3. The Soviet Union took its order book to Brazil, Canada, Argentina, Australia, and the EEC, cutting the U.S. from a 75% supplier to a 25% supplier. 4. Canada and Australia responded with 20% increases in production. Address: Decatur, Illinois.

Dec. [40 ref. Jap]
• ***Summary:*** Undesirable sensory properties are found in isoflavin [isoflavones] which has an objectionable, bitter, astringent, and weak phenol-like taste; daidzin and genistin, which have a bitter, astringent taste; and saponins, which have a bitter taste. Group A saponins are found mostly in the soybean hypocotyl, whereas Group B saponins are found in the whole soybean seed. All these are glycosides.

The glycosides with the lowest stimulus thresholds (in ascending order) are soyasapogenol E, soyasapogenol B, genistin, genistein, soyasapogenol A, daidzin, daidzein, saponin B, saponin E, and saponin A. Those with the lowest thresholds are most easily detected by taste panelists. Address: Faculty of Agriculture, Tohoku Univ., Amamiya-machi, Tsutsumi-dori, Sendai-shi, Miyagi 980, Japan.

9247. Tenpe Kenkyu-kai. 1988. Tempe Kenkyû-kai: Kaiin meibo [Tempeh Research Society: Directory of members (Brochure)]. Japan. 3 p. [Jap]
• ***Summary:*** On 31 Dec. 1988 there were 58 members, each with his or her address listed, but no phone numbers. An appended sheet shows that by 10 Feb. 1989 the number of members had increased to 72.

9248. *U.S. Imports for Consumption, Schedule A: Report IM146.* 1988. U.S. imports of soy sauce during 1988. p. 872-74.
• ***Summary:*** Total U.S. imports of soy sauce (called "soy sauce, thin" by the report) during 1988 were 37,971,804 lb. This is almost double the figure of 19,613,000 lb in 1981. The value of this FOB at foreign ports of export was $15,095,348. The duty collected by the U.S. was $315,115. Countries from which more than 1 million lb were imported, ranked in descending order of amount, were: Japan 12,709,008 lb (33.5% of the total), Hong Kong 9,220,737 lb, China 7,760,972 lb, Taiwan 4,806,452 lb, and Thailand 1,423,150 lb. Address: U.S. International Trade Commission, Washington, DC.

9256. **Product Name:** Tuffy Hi-Protein Soymilk [Malt, Orange, Banana, Mango, Strawberry, or Chocolate].
Manufacturer's Name: Premier Industries (India) Ltd.
Manufacturer's Address: Chetak Centre, R.N.T. Marg, Indore, Madhya Pradesh, India.
Date of Introduction: 1988.
Ingredients: Malt: Soymilk, sugar, malt extract, minerals, edible vegetable oil, vitamin C. Contains permitted colours and flavors.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Mahesh Khaitan. 1989. Aug. 6. This soymilk was introduced in Indore in 1988 in a Tetra Brik carton. Photocopy of Labels for Malt, Orange, and Banana. Sent by Anders Lindner. 1989. "The taste is a knockout. Drink ice cold. In collaboration with Mitsubishi, Japan." An illustration (line drawing) on the front panel shows a Superman-like character with cape flexing his biceps.

© Copyright Soyinfo Center 2014

Investigation, Supplement 48(Suppl. 190):190.
• ***Summary:*** "Epidemiological studies have revealed low incidence of hormone dependent cancer in Japanese consuming a traditional Japanese diet. One possible mechanism is the low content of fat and the low fat/fiber ratio of the diet, which are known to reduce plasma sex hormone levels. In addition such a diet may be protective with regard to cancer due to its content of lignans and isoflavonic phytoestrogens, which seem to affect estrogen production, metabolism and biological action." Lignans and especially isoflavonic phytoestrogens are excreted in large amounts by Japanese consuming a traditional Japanese diet, mainly due to intake of beans and pulses [soy products]. Address: Dep. of Clinical Chemistry, Univ. of Helsinki, Meilahti Hospital, SF-00290 Helsinki, Finland; and Dep. of Obstetrics and Gynecology, The Kyoto Prefectural Univ. of Medicine, Kawaramachi, Hirokoji, Kamikyo-ku, Kyoto 602, Japan.

9262. Boxer, Charles R. 1988. Dutch merchants and mariners in Asia, 1602-1795. London: Variorum Reprints. 350 p. in various pagings Illust. Maps. 1 portrait. Index. 23 cm. *
• ***Summary:*** Hymowitz (2007/06) wrote: "Boxer points out that the Dutch East India Company exported soy sauce [from Japan] as early as 1673-1674. In 1673, the ship *In Laeren* (p. 333) carried 12 tubs of soy sauce as cargo and in 1674 the ship *In Hasenburg* (p. 334) had an unlisted amount of soy."

Note 1. These two ships loaded their soy sauce at Deshima, Nagasaki, Japan. The ship In Laeren sailed to Batavia. There is no record that either of the ships transported this soy sauce to Holland; they were used in the intra-Asiatic shipping route. Note 2. Charles Ralph Boxer was born in 1904.

9263. Cost, Bruce. 1988. Asian ingredients: Buying and cooking the staple foods of China, Japan and Southwest Asia. New York, NY: William Morrow & Co. 333 p. Illust. Index. 27 cm. [39 ref]
• ***Summary:*** Soy related: Soybean sprouts and recipe (p. 86). Beans, incl. soybeans (p. 146-50). Asian "dairy" (p. 186-87): The soybean and the coconut (incl. bean curd, doufu-nao, fermented bean curd / fu-ru, molded bean curd / chou dou-fu, dried bean curd / dou-fu gan, and bean curd skin [yuba]. Soybean milk.

Soybean sauces, condiments and pastes (p. 195-211): Salted and fermented black beans with recipes for "Roast chicken with black beans stuffed under the skin," and "Soft-shell crabs with ginger, lemon, and black beans" ("Fermented black beans, often flavored with bits of ginger and sometimes orange peel, are usually sold in 8-ounce plastic bags." Acceptable brands: Mee Chun or Koon Chun Sauce Factory. "Earthier and probably more classic are the Yang Jiang Preserved Beans (with ginger) from Kwangtung, China), bean sauce (other names: Yellow bean sauce, brown beans sauce, bean paste, jiang; two types are with the beans whole or ground), hot bean sauce / paste with recipe, hoisin sauce, sweet bean sauce (made with soybeans [probably tian mian jiang, p. 202], Taiwan), soy sauce (Chinese, Japanese, tamari; Highly recommended light soy sauce: Pearl River Bridge. Highly recommended dark: Pearl River Bridge Mushroom Soy, flavored with straw mushrooms), Java's ketjap and other soy sauces miso with recipe, yellow miso (*Shinshu miso*), white miso (*shiro miso, Kyoto shiro miso,* sweet white miso), red miso (*aka miso*), Hatcho miso [soybean miso], barley miso (*mugi miso*), fermented bean curd (white or red; also called preserved bean curd, wet bean curd, bean cheese, dou-fu ru or fu-ru {Mandarin}, fu yu {Cantonese}) with two recipes).

"Red fermented bean curd" is described on pages 210 (also called "red bean cheese"), 211, and 283 (together with "red rice").

Concerning ketjap (p. 206): Tomato ketchup, although it may seem to be of Asian origin, may or may not come from a family of Asian pickled products. But the word "ketchup" is clearly of Asian origin. [Note: The modern Indonesian word for soy sauce is *kecap / ketjap / kechap.*] "It comes from the Malay *kechap,* which apparently derives from the *kôe-chiap* of a southern Chinese dialect (Amoy); both of these refer to the kind of briny liquid preserves that include fish and soy sauces." Throughout most of Southeast Asia, fish sauces are the standard condiment, in Indonesia (incl. Java) soy sauce is more widely used. Sweet Indonesian soy sauce (*ketjap manis*), which is very widely used, is traditionally sweetened with palm syrup and seasoned with garlic, star anise, salam leaves, and galangal.

Also discusses: Seaweed (p. 165-70): Kelp (Laminaria), laver (Porphyra), wakame, dashi, hair vegetable / black moss / hairlike vegetable (China; Gracilaria verrucosa), agar-agar. Monosodium glutamate (p. 247)

Bruce Cost was born in 1945. A photo and brief biography appears on the inside rear dust jacket. Address: [San Francisco, California].

Supplemented with a thoroughly revised and expanded index. And edited by Katherine and Eckhart Dege. Berlin, Heidelberg, New York, London, Paris, Tokyo: Springer-Verlag. xvii + 598 p. See p. 20, 160, 174, 180-81, 201, 203, 229, 420-21, 452, 476, 482, 488. Illust. Maps (some color). 26 cm. [936* ref]
• ***Summary:*** "With 42 photographs, 95 diagrams, 46 tables and a [larger color] map." This classic was first published 40 years ago (a few months before the end of World War II) and the field work was done 50 years ago, when Japan still ruled Korea and all place names were Japanese; these names have all been updated.

Vavilov classes soybeans among the plants that originated in the East Asian grain gene pool, and he includes Korea in the gene pool. Thus it is "quite possible" that soybeans were domesticated in Korea itself. Hulbert (1902) includes among the non-Chinese crops black soybeans, two of the three kinds of kaoliang, wild sesame (Perilla), and buckwheat (p. 20).

On page 21 is a very interesting "Chronological table of Korean history. Comparison with Chinese and Japanese history." A major change took place in 680 AD when the Three Hans [Three kingdoms] (Tribal Leagues; Koguryo [Gouryeo, in the north], Paekche [Baekje, in the southwest], and Shilla [Silla, in the central and south east]) merged into one, named Silla. In 918-925 it became Koryô [Kingdom of Goryeo; Wang Dynasty], which in July 1392 became Chosôn [Joseon Dynasty; Yi Dynasty], that lasted until August 1910 when the Japan-Korea Annexation Treaty was enforced by the Empire of Japan.

Chapter 6, titled "The anthropogeographical character of ancient Korea" (p. 149+) contains extensive information about agriculture and food. Page 160: In wealthier sites, the farm buildings enclose a courtyard, to which an entrance gate gives access (Fig. 37c, p. 158). Some enclosures are so complete that a square courtyard results. "In some corner or other of the courtyard stand the huge brown earthenware jars, in which soy sauce (Jap. *shoyu,* Kor. *kanjang*) is prepared and stored."

Nature and traditional culture: Plants found between the subtropical zone and the temperate zone include soybeans, foxtail millet, maize, and hemp. Since ancient times, rice has been Korea's most important cereal crop. The great majority of it is grown in irrigated paddies. Paddy rice (an aquatic plant) has a different name in Korea from upland rice. Hubert (1902, p. 108) mentioned eight varieties of rice grown in traditional Korea, including glutinous rice, whose flour is made into rice cakes by mixing it with water and spicy herbs, then beating the cold mass for a long time with wooden hammers (p. 174).

Page 180: In East Asia, after cereal grains, pulses / legumes are the next most important crop. In Korea, by far the most important is the soybean (Kor. *k'ong*), which makes few demands on the soil. Korea's climate is ideal for soybeans (Tanaka 1931, p. 18); it is even better than Manchuria's climate, because of the large amount of precipitation during the summer. Today, soybeans are an indispensable part of the various dry-field crop rotations. After planting of the paddies has finished, soybeans are planted on the ridges too; there they grow extremely well without being fertilized. Soybeans are grown throughout Korea, but least in the Kaema upland because of the warmth they require. In northern Korea, on dry fields, they are planted between the end of March and beginning of May. Toward the south, planting is delayed until the end of June. They are generally harvested in October, except in Chejudo, where they are not harvested until early November. Soybeans are the crop that is left standing the longest, and they are not harvested until their leaves have turned brown and started to fall.

Soybeans are used as a very nutritious food for both humans and horses. Also, cooked soybeans are used as a fertilizer for the rice paddies. "Above all, though, the hot brown soy sauce, which is never lacking on any Korean or Japanese table, is made of them, using salt and pepper and a process of fermentation. Bean curd (Kor. *tubu,* Jap. *tofu*) and soybean paste (Kor. *toenjang,* Jap. *miso*) are also made of them."

Adzuki beans, cotton and hemp are discussed on p. 181.

The Korean regions: On the forest slopes, which were deforested but the Japanese are energetically reforesting, one can find various lianas [climbing vines] such as *Pueraria hirsuta* [Jap. kudzu]. In the northern part of the coastal fringe, soybeans are grown on the ridges between paddies (p. 200-01).

Namyang is a link in the shortest connection between Tokyo and Harbin, which includes the ship passage between Tsuruga or Niigata and Ch'ongjin. "For this reason, this section has been operated by the South Manchurian Railway since 1 October 1933." The northernmost bays and harbors, especially Unggi, Najin, and Ch'ongjin, and their cities, are developing at an usually rapid rate. "They have become the export harbors for central Manchuria, particularly for soybeans" (p. 203).

In the Kaema upland we find "fire-field farming" and soybean fields in the valley bottoms or basins. "The most important fire-field crops at lower elevations are foxtail and barnyard millet, barley, soybeans, kidney beans, hemp and sesame." "The Japanese forestry commission has taken over

© Copyright Soyinfo Center 2014

management of the remaining forests. In the natural forests, wood is cut selectively and only as much as grows back" (p. 229).

Korea as a Japanese possession [colony]: "In southern Korea, barley has replaced rice as the principal staple food under the influence of Japanese economic policy." A large portion of the rice is sold to Japan.

Table 37 (p. 420), titled "Cultivated area, harvested amounts and yields per acre of the most important crops, 1935," includes: Soybeans: 785,000 ha. 7.9 hectoliters of weight. Worth: 60.2 million yen. Yield: 10.1 hectoliters per ha. Adzuki beans: 235,000 ha. 1.7 hectoliters of weight. Worth: 14.3 million yen. Yield: 7.3 hectoliters per ha. The table also includes paddy rice, upland rice, barley, naked barley, wheat, foxtail millet, barnyard millet, broomcorn millet, kaoliang, maize, oats, buckwheat, potatoes, sweet potatoes, mung beans, etc.

"The soybean vies with foxtail for the third place in the order of crops, by cultivated area. Its is a very profitable, undemanding crop that does not fail even in meteorologically abnormal years. Therefore its harvest curve does not have the ups and downs that are characteristic of many other crops, particularly paddy rice (Fig. 84). Acreage and yield per hectare have not increased nearly as much during the Japanese period, however, as for many other crops. Nevertheless, soybeans are the third most important item of agricultural export today, and the quality is supervised by the state. Approximately one-fourth of the harvest is exported. The most important export markets are Unggi, Ch'ongjin, Songjin, Wonsan, Shinuiju, P'yong-yang, Kumch'on and Ch'olsan (T. Tanaka 1931). They are located without exception in the northern half of the country" (p. 421). Note: Since 1948, the northern half of Korea has been a separate nation, North Korea.

"The Korean adzuki bean, particularly that from the northeastern coast, is highly priced in the Japanese market because of its high quality." By acreage it is the sixth most important crop in Korea (p. 421).

The soybean mills that process Manchurian soybeans in to oil and meal lie on the Japan Sea coast of Hamgyongbuk-do (p. 452).

Table 43 (p. 476), titled "Korea's most important import and export goods, 1939," shows that "Beans" were the No. 7 export item to Japan, worth 23 million yen. The leading export was rice (149 million yen) followed by fertilizer (53), copper (52), fish etc. (32). "Of the beans exported to Japan... soybean take first place. Soybean exports to Japan had a weight of 1.3 to 1.9 million q" [1 quintal = 100 kg] in the ears 1934-1938. "In contrast, from the northeastern ports Manchurian beans were shipped to Germany and England." In addition, large amounts of soybeans were imported by Korea itself from Manchuria (0.29 to 1.02 million q). Large amounts of soybean products made in Korea were also shipped to Japan (incl. soybean oil as much as 11.500 q, bean curd [tofu] up to 1.2 million q). Moreover soybean oil (up to 3,210 q) and bean curd (as much as 1.3 million q) were imported from Manchuria (p. 476).

Considerable amounts of dried seaweed and laver [nori] were also exported to Japan (p. 477).

Pages 482-83 try to characterize Korea's significance in 1938 for the economy of Greater Japan (pan-Japan) in general and Japan proper in particular. Pan-Japanese production included that of Korea, Manchuria, and Formosa. "The Korean rice crop in 1938 (44.8 million q) amounted to 23.4% of the pan-Japanese crop and 36.6% of that of Japan proper; 63.2% of Japan's rice imports came from Korea. The soybean crop in 1938 amounted to 6.4% of the pan-Japanese crop, 68.7% of the crop of Japan proper; 17.8% of the soybean imports of Japan proper came from Korea. The relationship was that of a master country to a dominated colony. For example, the Japanese forced the Koreans to eat barley so that the Japanese could import and enjoy the rice grown in Korea.

Soybean production on steep slopes and at high altitudes is mentioned (p. 488).

Hermann Lautensach lived 1886-1971. This book was first published in 1945 in German. Address: Prof., Dr.

9268. McEachern, B. 1988. Sushi–In this most celebrated of Japanese foods, the skill of the chef is as important as the freshness of the fish. *Taste* 2(2):6-7.

• ***Summary:*** When nigiri-zushi, or hand-shaped sushi, first appeared around the 1810s, the fish and shellfish were preserved in vinegar, with the exception of tuna, which was preserved in soy sauce. Soy sauce is the basic seasoning for sushi. Two other soy sauce-based seasonings are nitsume, a thick, sweetish sauce brushed over conger eel, mantis shrimp, and cooked octopus, and nikiri, found today only in the best establishments. Wasabi is the grated root of Japanese horseradish, a native plant that grows in the beds of mountain streams. The biting, yet cleansing taste of wasabi 'unlocks' the subtle flavors of uncooked fish. Pickled ginger (*gari*), which refreshes the palate between mouthfuls, is made by preserving sliced ginger in salt, vinegar, and sugar for about a week. The ginger naturally turns pink during the process.

• ***Summary:*** With its mud-and-straw walls, long refectory tables, and wooden flooring, Kirazu, a new restaurant in Tokyo's Roppongi district, combines original food and healthy dining in a relaxed atmosphere. All the dishes on the menu contain okara, the by-product of tofu, as a main ingredient.

9276. Watanabe, Michiko; Arai, Soichi. 1988. The plastein reaction and its applications. *Developments in Food Proteins* 6:179-217. Chap. 5. (B.J.F. Hudson, ed. London and Englewood, New Jersey: Applied Science Publishers). [107 ref]
• ***Summary:*** "It has long been known that when a protein is hydrolyzed with a protease and allowed to stand, it is sometimes transformed into a gel-like product. Surprisingly, this phenomenon was first discovered a century ago (by Danielwski; cited in 1911). The product was then named 'plastein' and was thought to be formed through a reverse reaction catalyzed by the protease. It is now known that the substance 'plastein' does exist. Also, the term 'plastein reaction' is commonly used to refer to a protease-catalyzed process" involving the formation of a gel-like product from an oligopeptide mixture or a partial protein hydrolyzate.

"In recent studies, conducted in order to develop the plastein reaction for various practical purposes, plastein is often defined as a precipitate formed when an entire plastein-reaction product is treated with a typical protein denaturant like trichloracetic acid (TCA)."

Soy protein is often hydrolyzed with proteinases. Table 1 shows "Optimum pH values for hydrolysis of soy protein with proteinases and for plastein synthesis from a peptic hydrolyzate of soy protein with the same proteinases" (From Yamashita et al. 1971). Soy protein was first improved by incorporating methionine ethyl ester (Yamashita et al. 1979), since methionine is the first limiting amino acid of soy protein. However, the current practice of adding methionine leads to two problems: it has an undesirable flavor, and it is chemically unstable. Address: Dep. of Agricultural Chemistry, Univ. of Tokyo, Bunkyo-ku, Tokyo 113, Japan.

9278. *Toyo Shinpo* (*Soyfoods News*). 1989. Zenkoku heikin 102.6 en, tôfu icho no kourine [Japanese national average retail price of a cake of tofu (average weight: 425.8 gm) is 102.6 yen]. Jan. 1. p. 21. [Jap; eng+]
• ***Summary:*** The average wholesale price is 79.2 yen/cake. The average national retail price is 0.238 yen/gram, and the corresponding wholesale price is 0.184 yen/gram. At this time there are about 140 yen/U.S. dollar. So the average price of tofu in Japan is about $0.78/lb. The highest price per gram is in Saitama prefecture. The lowest price is in Tokushima, Toyama, and Mie prefectures.

9279. Willner, Ken. 1989. Hakuhodo is Morinaga's marketing and advertising agency in California and Japan (Interview). *SoyaScan Notes.* Jan. 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Hakuhodo has been the agency in Japan for many years. They started with Morinaga in California a little more than 2 years ago. During 1989 they plan to focus on the West Coast market, as with local radio and newspapers. Less national. Address: Los Angeles.

9280. Bechman, Tom. 1989. Tapping the Japanese food market with specialty soybeans. *Indiana Prairie Farmer* (*Lombard, Illinois*). Jan. 17. p. 14-15.
• ***Summary:*** Purdue University agronomist Marvin Swearingin believes the time has come to produce specialized soybeans for the Japanese tofu market, which consumes 37,000,000 bushels a year. Do do this America must: 1. Develop a specialized product which provides traits the Japanese can't get from bulk shipments. 2. Find a company that can ship to the tofu maker in Japan. 3. Find an economical way to ship the beans from elevators to rail shipping points and thence to ports–perhaps using the Japanese freight cars that bring auto parts to the Midwest and return empty to the ports. 4. Find elevators with suitable facilities receive, size, condition to specifications, and bad the specialized soybeans. 5. Get a third party, such as the Indiana Crop Improvement Assoc., to inspect the fields and certify that the beans are what they are supposed to be. 6. Have farmers to grow the beans under contract.

At Indiana, Jim Wilcox and Swearingin are screening varieties and lines to uncover the traits that the Japanese need to produce premium tofu. Funds for the project were provided through the Value-Added Center established by the Indiana legislature in 1988. Generally the Japanese prefer large-seeded (1,500 to 1,700 seeds/lb) varieties with a clear hylum for tofu production.

Also at Purdue, Niels Nielsen, a USDA researcher, heads up a team of researchers who have tried for years to develop soybeans that don't contain lipoxygenase enzymes. They have succeeded in producing soy beans free of the lipoxygenase-2 isozyme.

9281. *Food & Beverage Marketing.* 1989. Tamari comes to the states. Jan. p. 38.
• ***Summary:*** The company is already selling a bulk product, mainly to food processors. The consumer product should hit supermarkets in February. New filtering technologies have given the product a brighter appearance. The U.S. plant will produce tamari from both whole soybeans and defatted soybean meal, whereas the Japan plant uses only whole soybeans. The tamari made from whole soybeans will retail for about $2.39 for a 10 oz bottle bearing a gold label. The tamari made from defatted soybean meal will retail for about $1.99 for the same size bottle and will bear a black label. The latter product is expected to be sold more in supermarkets and the former in natural food stores. The company is focusing on magazine advertising, as in *Bon Appetit* and *Cooking Light,* among others. Address: New York, NY.

9282. *Food Engineering.* 1989. Naturally brewed soybeans yield tamari: With 30% more protein than conventional soy sauces, tamari retains its full flavor when used in processed foods. 61(1):55-56. Jan.
• ***Summary:*** The San-J plant in Richmond, Virginia, which uses 900,000 lb of soybeans and 500,000 lb of defatted soybean meal a year, has the capacity to produce 1,000,000 gallons of tamari a year. The production process is described. In the last step, blended tamari is pasteurized then filtered using ultrafiltration. A color photo shows San-J's brewmaster, Mr. Yamamoto, and tamari vats.

9283. Morinaga Nutritional Foods, Inc. 1989. Exercise your right to eat better with Mori-Nu (Ad). *Vegetarian Times.* Jan. p. 7.
• ***Summary:*** This full-page color ad for Mori-Nu tofu shows a healthy looking, elderly man in a sweat suit on an exercycle. A little girl and her mother are seated on the floor nearby next to a bowl of "Fabulous Strawberry Fluff" (recipe given), topped with strawberries. The little girl is offer the man her spoon. Mori-Nu tofu (2 types are shown) is promoted as having no cholesterol, being low in saturated fats ad calories, and being a versatile source of protein. "Children love the way Mori-Nu blends with favorite foods to make good tasting meals and snacks." The Mori-Nu logo says "Tofu for the American taste." At the bottom of the ad: "Mori-Nu reminds you to 'Dance for Heart'" followed by the American Heart Assoc. logo.

This ad also appeared in the April issue (p. 5) of this magazine. Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9284. San-J International, Inc. 1989. Information on San-J's new U.S. produced tamari (Leaflet). Richmond, Virginia. 3 p.

© Copyright Soyinfo Center 2014

28 cm. Jan.
• ***Summary:*** A detailed, step by step description of exactly how San-J makes its new tamari in America. Contents: Raw materials: The soybeans are grown in Virginia. The solar dried sea salt comes from Baja, California [Mexico]. Note: No mention is made of defatted soybean meal. Muro and koji making: Incubation of the nuggets in the climate controlled chamber takes 2 days. Moromi: That made in America uses a higher proportion of brine to koji so that the resulting moromi can be pressed mechanically. Fermentation: The moromi is fermented for 6-7 months in temperature, fiber reinforced plastic tanks, which are more sanitary, less aerobic, and can be made larger than the traditional open wooden vats used in Japan. "One of the reasons that San-J chose Virginia as the site for its U.S. factory is that its climate is probably the most similar of anywhere in the U.S. to that of Virginia."

Press: Here the solids are removed. The resulting liquid is raw tamari. Blending: "The raw tamari is analyzed and blended to yield a consistent protein and salt content. Alcohol is added at this point. Alcohol: San-J adds natural, food grade grain alcohol (made from corn and certified Kosher) to bring the alcohol level up to 2% to inhibit the growth of aerobic yeasts. Pasteurization and filtration: Pasteurization arrests the fermentation and kills bacteria. Filtration removes fine, non-soluble solids. The filtration system used at San-J is a first. Commonly both tamari and shoyu are filtered through cellite (made from diatomaceous earth). The filter we use is a microfilter. This is both more efficient and more effective." Gold Label / Black Label. The Gold Label product is made from soybeans and is wheat free. The Black Label is made with soy grits, which "are made by removing the oil from whole soybeans by a process called hexane extraction. Hexane is a volatile liquid not unlike alcohol [actually it is a petroleum fraction], and is used to facilitate this mechanical [actually chemical] separation." No traces of hexane left in the grits. Address: 2880 Sprouse Dr., Richmond, Virginia 23231. Phone: 804-226-8333. Fax 804-226-8383.

• ***Summary:*** From Jan. to Oct. 1988 the average Japanese family spent 5,632 yen to purchase 70.53 cakes of tofu. The corresponding figures for 1987 were 5,758 yen and 71.93 cakes.

9290. Chowning, Larry S. 1989. Soybean marketing efforts in Japan earn state honor for local farming operation. *Southside Sentinel* (*Urbanna, Virginia*). Feb. 2.
• ***Summary:*** Recently, Montague Farms (owned by Bill Taliaferro of Center Cross in Essex County) introduced VANATTO (which stands for Virginia Natto), a brand of Virginia-grown soybeans for the specific purpose of making natto. Because of the firm's efforts to establish a new international market for Virginia soybeans, Montague Farms was recently honored and awarded a plaque by the Virginia Agribusiness Council. For nearly 5 years, the Taliaferros worked to develop the market in Japan, knocking on doors. "Since establishing the market in Japan, the Taliaferros have over 40 growers in Maryland and Virginia growing the small variety of soybean used to make natto. 'It's really a statewide project,' said Taliaferro. 'We weren't able to grow enough ourselves so we went to other growers across the state.'"

9291. Kendall, Charles. 1989. The natto market in the USA is growing fast (Interview). *SoyaScan Notes.* Feb. 6. Conducted by William Shurtleff of Soyfoods Center.

© Copyright Soyinfo Center 2014

• ***Summary:*** Charles makes natto and sells about 350 to 400 cases per week–specially to Japanese housewives during the cold months. Each case contains 25 x 7 oz. packages of natto. He sells it only by the case, so the minimum order (which keeps shipping costs down) is 25 packages.

Mountain Ark (in Arkansas) used to have a natto maker who made the natto they sold. Address: Owner, Kendall Food Co., Worthington, Massachusetts 01098-9550.

9292. Inoue, Kojiro; Sugarman, Carole. 1989. I made at least 1,000 pieces of sushi a day. Now I have sushi elbow. *Washington Post.* Feb. 26. p. I22.
• ***Summary:*** The moving and humorous story of Mr. Inoue, age 45, (as skillfully told by Carole Sugarman), who survived the ten-year process of becoming a sushi chef in Japan, then came to America determined to introduce Americans to sushi and raw fish.

After working in sushi restaurants in Japan for 8 years (and getting married) he heard that Japanese restaurants were getting popular in the United States. In 1971 he came to the USA to run a small (5-stool) sushi bar at Sakura Palace in Silver Spring, Maryland. Sushi wasn't yet popular in America and the customers were surprised that anyone would eat raw fish, squid, octopus, eel, etc. They were also scared to try it themselves. Yet ten months later Mr. Inoue asked his wife and young child to join him. He had a hard time finding good quality, fresh fish. Americans told him, "A fish is a fish." Sometimes he brought frozen fish from Japan or California. After 5 years the owner of his restaurant retired and he now wanted to start and own a restaurant for himself. He started as a sandwich shop, then remodeled. It was hard. He had to explain what sushi was and how to eat to potential customers. Many customers asked for a knife and fork; some still do. He also explained about wasabi and soy sauce.

In 1977, the McGovern Report was released. It said that 500,00 Americans died of heart attacks and that Japanese food was low in cholesterol. Because of that, all Japanese restaurants became popular.

Today sushi has become part of American food culture. His customers are now 80% Americans and 20% Japanese. Fresh fish is easy to buy. Mr. Inoue, who was now making 1,000 pieces of sushi day, developed sushi elbow–just like tennis elbow. He had a cast on his elbow for one year.

"Tokyo people love *natto* (fermented soybeans) or miso soup. I eat bread. American bread. Sometimes cereal." Today Americanized sushi is all over Japan. He is still married, but his wife lives in Japan with his three kids. His kids eat American hamburgers, Kentucky Fried Chicken and pizzas in Japan. He operates a sushi restaurant in Washington, DC.

9293. Alvarez Britos, E.R. 1989. La soja en el Paraguay–Retrospectiva y perspectiva [The soybean in Paraguay–Retrospective and perspective]. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 551-63. [6 ref. Spa; eng]
• ***Summary:*** Contents: Introduction. History of soya in Paraguay. Production of soybeans in Paraguay (from 1964-1988, and distribution by state). Soils used for the cultivation of soybeans. Preparation of the soil. Fertilization of the soil. Crop rotation. Soybean varieties. The most important weeds and their control. The most important insect pests and their control. Diseases of soybeans. Cultural practices. Outlook for soybeans in Paraguay.

The soybean was introduced at the beginning of this century, in the National School of Agriculture, in Trinidad, and in the Agronomic Station, situated in Puerto Bertoni, Alto Parana, when the two institutions were under the direction of Dr. Moises S. Bertoni. In 1921, Dr. Pedro N. Ciancio, considered the apostle of soybean cultivation in Paraguay, introduced the varieties Hollybrook, Manouth [Mammoth?], Pekin [Peking], and Shanghai, from Argentina, the USA, and Japan. Paraguayan soybeans originated from mechanical mixes and natural crosses between these varieties; they were cultivated for a long time in the zone of Caazapa.

In 1936, with one of the first immigrations of Japanese to Paraguay, the variety Abura [the term means "oil" in Japanese] was introduced. Its area of cultivation lies in la Colonia la Colmena. In about 1938 the Ministry of Economics, undertook a plan of soybean production through the Agricultural Bank of Paraguay. At the start of 1943, in the National Institute of Agronomy, soybean lines and varieties from different countries were introduced and evaluated. The current Japanese immigrants, who settled in the south of the country in 1958, introduced the variety Lee. Later, in 1961, the enterprise Agro-Soya S.r.l. introduced new lots of seeds of the varieties Lee and Hill. With private initiative and that of the Ministry of Agriculture and Cattle, an expansion of soybean cultivation took place. At the same time new introductions were made by the IAN, the Regional Center for Agricultural Research (CRIA), the Capitan Miranda, and the Campo Experimental de la Cooperacion Publica del Servicio Migratorio del Japon, at Pirapo.

New varieties from Brazil were introduced in 1967, and tested at Faculty of Agronomy and Veterinary, IAN, and CRIA. Again in late 1968, numerous lines were introduced from Brazil. In 1970 the Ministry of Agriculture and Cattle (MAG) initiated the Program of Soybean Research to solve various problems.

Production of soybeans in Paraguay grew from 10,000 tonnes in 1964, to 51,000 tones in 1970, to 220,000 tonnes in 1975, to 540,000 tonnes in 1980, to 1,172,400 tonnes in 1985, and a record 1,417,500 tonnes in 1988. Yields grew from 1.61 tonnes/ha in 1964 to 1.85 in 1988. Soybean product is concentrated in the departments of southeastern Paraguay, especially Alto Parana (40.37% of the total), Itapua (33.5%), and Canindeyu.

© Copyright Soyinfo Center 2014

Note 1. This document contains the earliest date seen for soybeans in Paraguay, or the cultivation of soybeans in Paraguay (1921; One of two documents). The source of these soybeans was Argentina, the USA, and Japan.

Note 2. From Alto Parana, most of the exported soybeans are trucked eastward to the port of Paranagua (which was given to Paraguay by Brazil) on the Atlantic Ocean. Some of the soybeans exported from Itapua are shipped southward down the Parana River to the ports of Rosario or Buenos Aires. Address: Instituto Agronomico Nacional, Ruta 2, Km 48, Caacupe, Paraguay.

9294. Ando, Seiichi. 1989. Wakayama no shoku to sono haikei [The foods of Wakayama prefecture and their background]. In: S. Ando, ed. 1989. Kikigaki Wakayama no Shokuji. Tokyo: Nosan Gyosan Bunka Kyokai. See p. 344-53. For shoyu, see p. 345-46. [Jap]*
• ***Summary:*** Discusses the foods of Wakayama prefecture, how they are made and interesting highlights, during the time from the end of the Taisho period to the beginning of the Showa period, thus from about 1920-1930. Address: Osaka, Japan.

9295. Carrao-Panizzi, Mercedes C. 1989. Breeding soybean for human consumption. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 1101-05. [6 ref. Eng]
• ***Summary:*** In 1985 a breeding program was initiated at the National Soybean Research Center of EMBRAPA to improve the flavor of soybeans for human consumption. 'Late Giant,' a vegetable type soybean introduced from Japan, is the source of this quality. It was crossed with other vegetable type soybeans, and used to introduce flavor into high-protein and into small-seeded lines. This program includes teaching Brazilians about the utilization and nutritional value of soybeans. To help make soybeans more acceptable, they were added to traditional Brazilian recipes as a complemental ingredient for improving nutritional value. As a result of this work, a soybean cookbook with 140 recipes was published, and courses on using soybeans are being taught to nutritional leaders. The goal is to increase interest in and consumption of soybeans as food in Brazil. Address: Centro Nacional de Pesquisa de Soja (CNPSo), Empresa Brasileira de Pesquisa Agropecuária (EMBRAPA), Caixa Postal 1061, 86001 Londrina, Parana, Brazil.

9296. Collins, R. 1989. Re: Request for information on traditionally brewed low-salt varieties of shoyu. *East West.* Feb. p. 24. Letter.
• ***Summary:*** Most shoyu contains 16-18% salt. "Since salt is a natural preservative, however, any reduction must be compensated for by the addition of preservatives such as sodium benzoate or ethyl alcohol, as in high-tech varieties, or special handling, as in traditionally-made varieties.

"Traditionally-made lower salt shoyus, such as Ohsawa America Lima Nama Shoyu and Mitoku Macrobiotic Johsen Double Brew Dipping Sauce, are made by a complex process involving two fermentation periods, each lasting eighteen months to two years! First, the usual whole soybean moromi is prepared by mixing koji and a brine solution. After the traditional aging period, the moromi is pressed and the raw shoyu extracted. Next, additional koji and, in some cases, additional brine, is added to the mature raw shoyu and fermented again. The thick, double-brewed moromi is then pressed and the shoyu extracted. The addition of extra koji dilutes the final salt content to 13-14%.

"A few double-brewed shoyu varieties, such as Eden Low Sodium Shoyu and Westbrae Mild Shoyu, have been further diluted with water, reducing the salt content to 8-9% (80-90 mg sodium per half-teaspoon). These lowest salt varieties must be pasteurized, since they have no added preservatives. All low-salt shoyus should be refrigerated after opening."

9297. Eden Foods, Inc. 1989. A soy sauce for all seasoning... (Ad). *Natural Foods Merchandiser.* Feb. p. 14; April. p. 34.
• ***Summary:*** This 5 inch square ad with a color photo shows 5 bottled Eden soy sauces. Four bottles bear the Japanese character for "Hon" or genuine. These four are labeled shoyu soy sauce (including low sodium, and organic) and one is labeled tamari soy sauce (wheat free). "Our Low Sodium Shoyu is double-brewed, requiring three years to mature. Eden certified organically grown crops, aged to perfection, create our Organic Shoyu. Each soy sauce is a masterpiece."

An explanation on page 14 notes that two of these sauces are domestically made [by San-J in Virginia] (naturally brewed shoyu and wheat free tamari). Eden's popular soy sauce line has also been introduced: Traditional Japanese, low-sodium, and organic. "All five items are available in new, convenient sizes–5, 10- and 20 oz glass jars and bulk 4.75- and 55-gallon containers."

Also published in Let's Live. 1989. March. p. 45. And in East West. 1989. April. p. 9. Address: Clinton, Michigan.

9298. Erewhon. 1989. Erewhon... Macrobiotic foods you can recommend with confidence (Ad). *Natural Foods Merchandiser.* Feb. p. 25.
• ***Summary:*** This color ad (7.5 by 13 inches) shows colorful packages of five types of Erewhon products: Misos, seaweeds, ramen, rice crackers, and sweets. In the center is a gold plaque that reads: "Recommended by Michio Kushi. Macrobiotic quality." This same endorsement is in the upper left corner of each package. Erewhon now has four 4 varieties of miso under its brand: Hatcho (note new correct spelling), genmai, kome, and mugi. Note that all still use the esoteric Japanese names. Plastic bag packages are colorful and attractive. Slogan at the bottom of the ad: "Our great taste comes naturally." Address: [Massachusetts].

9299. *Florida Grocer* (*Miami*). 1989. Kikkoman says–Start the (Chinese) New Year off right! Feb. [1 ref]
• ***Summary:*** Kikkoman has just published a new 96-page cookbook [titled *Kikkoman Oriental Cooking*]. The article outlines Kikkoman's extensive TV and print ad campaign including (1) inserts in leading women's magazines to reach 35 million households, (2) sponsorship of 26 shows in the Yan Can Cook Show series on PBSTV broadcast in 150 markets, (3) sponsorship of Yue Sai-Kan's cable TV series 'Looking East' in Feb.-April, 875 30-second spots featured in a Chinese New Year flight and a fall flight, (4) 72 insertions in 22 magazines to reach 528 million readers, 6 times a year.

Kikkoman soy sauce "has always been made naturally, without any artificial ingredients" [How about preservatives?]. Kikkoman Soy Sauce is the market leader, with over 50% of the market share. With a 25% annual growth rate, Soy Lite is the fastest growing product in the Kikkoman family. Teriyaki Baste & Glaze dominates the category with a 75% market share; Stir-Fry Sauce has over 80% market share. Sweet & Sour Sauce is also doing well.

9300. *Mori-Nu Healthy Life* (*Los Angeles*). 1989--. Serial/periodical. Morinaga Nutritional Foods, Inc., 5800 S. Eastern Ave. #270, Los Angeles, CA 90040. Bimonthly. Susan Bucher, editor. Vol. 1, No. 1. Jan/Feb. 1989. Published for the members of the Mori-Nu "Health for Life" Club.
• ***Summary:*** Formerly titled *Healthy Times*. Each issue, typically 6 pages, discusses the merits of tofu and Mori-Nu silken tofu. Recipes and coupons are now included in the magazine. "Published for members of the Mori-Nu 'Health for Life' Club." Address: Los Angeles, California.

9301. Ontario Soybean Growers' Marketing Board. 1989. 40 years of progress: Fortieth anniversary, 1949-1999. Chatham, Ontario, Canada: OSGMB. 49 p. 22 x 28 cm.
• ***Summary:*** Contents: A message from the Ontario Minister of Agriculture and Food (Jack Riddell). Chairman's message (Ted McGrail). History of soybeans in Ontario (p. 3). Year by year: 1948-1989–One page is devoted to each year. The 3-element / column format is the same for most years and pages, except when there is a photo of the new staff person or a special photo is added: (a) A portrait photo of the chairman for that year. (b) Brief statement of important developments that year (mostly soybean price, production, acreage, yield, support price or deficiency payments). (c) Names of the director(s) from each of the six districts–1. Elgin. 2. Essex. 3. Pelee Island. 4. Kent. 5. Lambton. 6. Middlesex. Page 47 briefly summarizes 40 years of progress.

Four graphs (p. 48-49) show changes related to Ontario soybeans from 1949 to 1989: (1) Soybean acreage grew from 104,000 acres to 1,290,000 acres; the most rapid growth occurred after 1976. Annual average yields and 5-year average yields have increased steadily–the 5-year average from about 18 bushels/acre in 1949 to about 36 bushels in 1989. Soybean production grew from about 3 million bushels in 1949 to a peak of about 45 million bushels in 1987. The soybean crop value (farm cash receipts) grew from almost nothing in 1949 to over $351 million in 1988; rapid growth began after 1971 and 1976.

Chronology of some important events extracted mainly from individual years.

"1949–The Ontario Soya-Bean Growers' Marketing Board was established under the Farm Products Marketing Act. Under the provisions of the new regulations eleven soybean growers were elected as directors to the board. Together they represented some 6,000 soybean producers in six Ontario districts. The first office of the board was located in the office of the Agricultural Representative in Essex, and Angus McKinney was the first secretary. K.A. Standing acted as assistant on a part-time basis. Board operations were financed during the 1949-50 crop year by one half cent per bushel license fee [like the later U.S. checkoff fee].

"1950–The license fee was increased [doubled] from one-half cent to one cent per bushel, the level at which it remained until 1959.

"1951–The first annual convention of soybean growers was held Feb. 15-16, 1951 at the Community Hall, Chatham [County of Kent]. Imports from the U.S. were totalling about 5 million bushels annually.

1952–K.A. Standing became general manager (with portrait photo). The board established its office in Chatham sharing facilities and staff of one secretary with the Ontario Seed Corn Marketing Board on Market Street. The first task was to set up a complete grower records system.

"1953–Expansion of office requirements resulted in a move to new quarters on Fourth Street in Chatham.

1954–The OSGMB organized the first export of Canadian soybeans. The shipment was made from Port Stanley [Ontario] to interests in the United Kingdom. Initiated to generate competition in the domestic market, exports were to continue in every succeeding year. Some 1,492,000 bushels of soybeans were exported during the 1954-55 crop year.

1956–The number of elected directors increased to 14 from 11.

1957–The average price of soybeans paid to growers dropped to $1.95 per bushel–the lowest since World War II. The board pressed for legislation to stabilize returns to growers.

"1958–The board was successful in having soybeans brought under the Agricultural Stabilization Act. The crop was supported at $2.10 per bushel. The average price paid to growers was $1.90, resulting in a deficiency payment of 19.6 cents per bushel for a total of $1,200,000 paid to growers. The office was moved from Fourth Street to Wellington Street West in Chatham. Otis McGregor became assistant

© Copyright Soyinfo Center 2014

secretary-manager (with portrait photo).

Note. Letter (e-mail) from Kim Cooper formerly of OSGMB. 2010. Feb. 18. The growers always had to pay a premium to take part in income stabilization programs. So it was not simply a government subsidy. At first, the premiums had to be paid up front, but after a few years, the premiums were deducted from the payout, if there was any payout.

1960–L.R. Addeman became information officer for both the soybean and wheat boards.

1963–The ban on coloured margarine is lifted in Ontario.

"1964–Increased emphasis was put on [soybean] research when federal and provincial programs were brought under a coordinated plan.

"1965–Domestic crushings reached a 16-year high at 20.8 million bushels, as did soybean imports at 16.5 million. There was no price support in 1965 and succeeding crops, the last having been applied to the 1964 crop at $2.15 per bushel."

1970–Canadian soybean production first tops 10 million bushels.

1973–The first shipment of Ontario soybeans (Harsoy variety) was made to Japan. The Ontario Soybean Symposium was held at Ridgetown College of Agricultural Technology, sponsored by the Board, the Ministry of Agriculture, and Food and Agriculture Canada. K.A. Standing became general manager of both the soybean and wheat boards and Otis McGregor was appointed marketing manager of both boards.

1974–D. Sanderson became secretary to the Ontario soybean and wheat boards.

1975–The Soybean Board established its own separate office in a rented building on Kell Drive in Chatham. Otis McGregor became secretary manager of the Soybean Board.

1977–The metric system started to be used in agriculture in Canada; metric ton (tonne) officially replaced bushel. "An Advance Payment Program was established for soybeans under the federal Advance Payments for Crops Act. The program provided interest free loans to producers who stored their soybean crop at harvest for future sale." A record high yield average of 39 bushels per acre was set. Mario Baletto became market information coordinator.

"1979–The Board initiated a program to promote soybeans as a food product and hired home economist Linda Lantz to manage the program. Soybeans were the featured crop at the Royal Agricultural Winter Fair.

"1980–Soybeans began trading duty free between Canada and the United States following the elimination of a 60 cent per bushel tariff, via the General Agreement on Tariffs and Trade" (GATT). Fred Brandenburg became assistant secretary manager.

"1982–The Board participated in a soybean export market development mission to Japan, Hong Kong, Malaysia, Singapore, and Korea; it was organized by the Ontario Ministry of Agriculture and Food. Continued low prices trigger stabilization payments of 38 cents per bushel federally and 37 cents per bushel provincially."

1983–Two new districts were formed, bringing the total to 8. District 7 ran east to the Quebec border reflecting the advance of soybean production to the north and east from its traditional area.

1984–A new office for the Board was erected at 180 Riverside Drive in Chatham. "A two-day conference–the Ontario Soybean Symposium–and an incoming mission of soybean buyers from the Far East [East Asia] and Europe were sponsored jointly" by OSGMB and OMAF. "Prices dropped again making a provincial stabilization payment of 36 cents per bushel necessary." Note: Stabilization support prices are based on an average of market prices for the past five years.

1985–Fred Brandenburg became secretary manager of the board and John Davidse became executive assistant to the board. "Ontario became self-sufficient in soybean production for the first time as the 37,000,000 bushel crop exceeded the 33,165,000 bushel crush. Low prices continued as did stabilization payments–42 cents per bushel from the federal program and 39 cents from the provincial program."

1986–"Ontario's single biggest soybean export sale of 50,000 tonnes was made to the USSR." Low soybean prices paid to producers continued. In addition to federal and provincial stabilization payments, "the Special Canadian Grains Program paid soybean growers on the basis of 18 cents per bushel."

1987–Tino Breuer became marketing specialist. Districts were again redistributed to reflect the average soybean production in each.

1989–The Board celebrates its 40th birthday with a new logo and a change in the spelling of its name from "Soya-Bean" to "Soybean." 15 directors now represent 24,000 growers in 8 districts across the province. 1,280,000 acres of soybeans were grown in 1988–more than 14 times as many as in 1948. Soybeans are Ontario's #1 cash crop, worth over $350 million in farm cash receipts in 1988. Address: P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8. Phone: 519-352-7730.

9302. Shanmugasundaram, S. 1989. Global cooperation for the improvement of soybean research and development. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 1939-47. [17 ref]

• ***Summary:*** "Soybeans became a global crop after its introduction and adoption as an industrial crop in the U.S.A. The collaboration between China and the U.S.A. on soybean germplasm collection marked the beginning of global cooperation for soybean research and development. A number of international agricultural research centers such as AVRDC, UN/ESCAP CGPRT Centre, IBPGR,

© Copyright Soyinfo Center 2014

IITA, INTSOY, and IRRI presently conduct worldwide research and development activities on soybean... Their problem-oriented research activities with an interdisciplinary approach should be continued to help improve soybean production, processing, marketing and utilization particularly in the densely populated, developing countries in Asia and Africa. At least 400 to 600 million children in the world's 60 poorest countries suffer from chronic malnutrition and more than one fourth of the world's population suffer from hunger during some part of each year. Soybeans with 40% protein and 20% oil could help alleviate protein and caloric malnutrition. FAO/UNDP, USAID, ACIAR, IDRC, Winrock International and World Bank, among others, are the major funding agencies which encourage and support the research and development activities of soybean. The global cooperation includes regional networking, germplasm exchange, specific research activities, manpower training, workshops, conferences and information exchange. A consolidation of such support for integrating various forces is being proposed to further promote the research and development effort on soybeans...

"INTSOY initiated the International Soybean Variety Experiment (ISVEX trials). From 1973 to 1985, more than 2,000 ISVEX trials were distributed to 132 countries around the world. INTSOY also received a number of breeding lines from cooperators in 34 countries and included them in a preliminary screening program called "The Soybean International Experimental Variety Evaluation (SIEVE) and Soybean Preliminary Observation Trial (SPOT). India, Sri Lanka, Peru, Egypt, Turkey, Ecuador, Costa Rica, Nepal and Guatemala are among the more than 20 countries now commercially growing soybean varieties introduced through INTSOY trials...

"Institutions and agencies involved in soybean: Category I. Production and utilization research: Asian Vegetable Research and Development Center (AVRDC), International Board for Plant Genetic Resources (IBPGR), International Food Policy Research Institute (IFPRI), International Institute of Tropical Agriculture (IITA), International Soybean Program (INTSOY), International Rice Research Institute (IRRI), United Nations Economic Social Commission for Asia and the Pacific's Coarse Grains, Pulses, Root and Tuber Crops Centre (UN ESCAP/CGPRT Centre), European Cooperative Research Network on Soybean (ECNS).

"Category II. Marketing research: American Soybean Associations in various countries, ESCAP CGPRT Centre, Food and Agriculture Organization of the United Nations (FAO), IFPRI, Soyfoods Center.

"Category III. Funding agencies: United Nations Development Programme (UNDP), Food and Agriculture Organization of the United Nations (FAO), United States Agency for International Development (USAID), Australian Centre for International Agricultural Research (ACIAR), International Development Research Centre (IDRC), Canadian International Development Agency (CIDA), Winrock International, World Bank, Asian Development Bank, Japan International Cooperation Agency (JICA), Institut de Recherches Agronomiques Tropicales et des Cultures Vivrieres (IRAT), Agency for Technical Cooperation (GTZ).

"The AVRDC commenced its soybean research with the goal of developing stable, high yielding soybeans for the tropics and subtropics. Since 1973, AVRDC has accumulated more than 11,000 accessions of soybean. The Center has provided more than 31,000 breeding lines and varieties to 164 scientists in 56 countries. AVRDC Soybean Evaluation Trial Network (ASET) was initiated in 1980." Address: Asian Vegetable R&D Center, P.O. Box 205, Taipei 10099 Taiwan.

9303. Shanmugasundaram, S.; Tsou, S.C.S.; Cheng, S.H. 1989. Vegetable soybeans in the East. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 1979-86. [12 ref]

• ***Summary:*** "Soybeans harvested and used green, between the R6 and R7 growth stages are termed vegetable soybeans. Japan, Korea, China, Thailand and Nepal currently grow and consume vegetable soybeans... For the Japanese consumer, vegetable soybeans have two or more seeded pods, bright green pod wall after blanching or cooking, large seed, gray pubescence, colorless hilum, specific pod length and width and no more than 175 pods per 500 gm. The outer pod coat should be devoid of any blemishes. After boiling, the taste should be slightly sweet and not oily. A number of seed companies, especially in Japan breed vegetable soybeans. AVRDC is currently developing vegetable soybeans that are adapted to the tropics and subtropics...

"The whole plant is harvested and the leaves are stripped; the stems with pods are bundled and sold in Japan and Thailand. In Taiwan, Nepal, China and Korea, the pods are stripped from the plant and marketed... The majority of the vegetable soybeans in Taiwan are frozen in the pod and exported to Japan...

"In terms of nutrient content, the vegetable soybean can be considered as an excellent source of thiamine, a good source of protein, riboflavin, iron and phosphorus. It has adequate vitamin C; it is fair in calcium, but poor in vitamin A.

"In Japan, the area devoted to vegetable soybean increased from 6,980 hectares in 1967 to 14,000 hectares in 1986 including those planted in vinyl houses... The total vegetable soybean requirement in Japan is about 130,000 to 150,000 tons of green pod per annum. The production in Japan varies from 110,000 to 120,000 tons. To meet the domestic demand, Japan imports about 30,000 to 50,000 tons... The amount of frozen vegetable soybeans exported

© Copyright Soyinfo Center 2014

from Taiwan in 1981 was worth US $21 million and reached almost US $63 million in 1987. The domestic Taiwanese consumption of vegetable soybean also steadily increased from 4,700 tons in 1984 to more than 13,000 tons in 1987...

"At present, there are 27 frozen food processing companies in Taiwan which process frozen vegetable soybeans... Five major processors handle 2,713 tons to 11,552 tons per annum...

"In Japan, vegetable soybean varietal development is conducted by the private seed companies. During the past 30 years the seed companies in Japan developed more than 50 new vegetable soybean varieties. Currently, the most popular ones to name a few are: Tsurunoko, Ryokkoh, Kegon, Hatsutaka, Taisho shiroge, Nakate Kaori, Suzumo, Enrei, Fukuda, Raityo, Shirobato, Tamasudare, Hakutyo and Shiratsuyu." Address: 1-2. Asian Vegetable R&D Center, P.O. Box 205, Taipei 10099, Taiwan; 3. Council of Agriculture, 37 Nan-Hai Rd., Taipei 10728, Taiwan.

9304. Shurtleff, William; Aoyagi, Akiko. comps. 1989. Bibliography of soymilk and soymilk products: 2,612 references from A.D. 1500 to 1989. Lafayette, California: Soyfoods Center. 323 p. Subject/geographical index. Author/company index. Extensively annotated. Printed Feb. 6. 28 cm. [2612 ref]

• ***Summary:*** This is the most comprehensive bibliography ever published on soymilk. It is also the single most current and useful source of information on this subject available today, since 64% of all references (and most of the current ones) contain a summary/abstract averaging 80 words in length.

One of more than 40 bibliographies on soybeans and soyfoods being published by the Soyfoods Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 37 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 15 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 577 commercial soymilk products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, and a bibliometric analysis of the composition of the book (by language, document type, year, leading countries, states, and related subjects) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

9305. Tenpe Kenkyushu-kai. 1989. Dai ikkai Tenpe Kenkyû shûkai: Kôen yôshi [Tempeh Research Society: First meeting lecture outline]. Kobe Park City 2-1110, 6-2-1 Minatojima, Chuo-ku, Kobe 650, Japan. 5 p. [Jap]

• ***Summary:*** The first meeting took place on 25 Feb. 1989 at the offices of the Yuki-jirushi (Snow Brand) Milk Co. in Shinjuku, Tokyo. Three talks on tempeh were presented: Yasuko Torii, a natural foods expert, presented "Report on the Natural Foods Expo: Soyfoods in America and Australia," focusing on the Anaheim Expo (April 1988) with its Soyfoods Pavilion and tempeh. Noriyuki Okada of the National Food Research Inst. (Tsukuba) discussed "Searching for the origin of useful genes." And Toshiie Maeda of Hyogo prefecture talked about "Revitalizing a village with a tempeh industry."

The second meeting took place on 24 June 1989 in Osaka. Masahiko Terajima of Fuji Oil Co. Research Dept. spoke on "The present status of soy protein and soy protein foods in Japan." Eihachiro Kato of Meiji Univ. discussed "Low-pressure frying of tempeh." And Nobu Kawabata of Kyoto City Univ. spoke on the "Okara tempeh and its usage." Address: Kobe, Japan. Phone: 078-302-7065.

9306. Wilson, J.C. 1989. The commercial utilization of soybeans, soymilk and soymilk derivatives. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 1750-61.

• ***Summary:*** Abstract. Introduction. Philosophy of preparing soybase: The enzyme lipoxygenase acts as a catalyst, inducing the oxidation of fats to create aldehydes and ketones–"beany" flavour and aroma. The enzyme lipoxygenase can be inactivated in hot water by exposure to temperatures exceeding 80ºC and destroyed by a temperature of 85ºC for two minutes. Excessive heat causes protein insolubility. Ancient method for processing of soymilk.

Dehulling. Cornell hot grind method to control bean flavor: this is the "landmark development of the modern soymilk industry." Blanching (University of Illinois method; steaming dehulled cotyledons before grinding, with no removal of fibre / okara). Problem of "chalky mouth feel [and throat-drying effect]. Removal of fiber (The "Japanese soymilk industry has followed the Illinois method but solved the chalkiness problem by a fibre removal step"). But 2

© Copyright Soyinfo Center 2014

new problems: protein insolubility and protein instability in aseptically filled UHT soymilk. From 1978 to 1983 the Japanese soymilk market grew at about 85% a year, however the price of soymilk exceeded that of cow's milk.

Alfa-Laval's soybase extraction line Soyal. Alfa-Laval does no dehulling and double grinding in hot water in an air-free environment. One goal is to inactivate 85% of the trypsin inhibitor (see Fig. 5). Market trends. Future expectations: Soybeans without lipoxygenase, growing acceptance of soymilk and products made from soymilk, strong growth of tofu (especially of aseptically packed tofu with spices), realisation of the importance of quality soy foods in school lunch programs. Address: Alfa-Laval Food & Dairy International AB, Postbox 72, 221 00 Lund, Sweden.

9307. Xu, Bao; Lu, Qinhua; Zhuang, Bingchang. 1989. Analysis of ecotypes and their geographical distribution of wild soybean (G. soja) in the world. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 98-103. [8 ref. Eng]
• ***Summary:*** "The analytical data show 343 germplasm lines (China 292, Japan 32, South Korea 14, and USSR 5), seven ecotypes and their geographical regions and 13 sub-regions were divided... Typical wild soybean is an annual herb, twining around companion plants. Its main stem and branches are almost identical. The leaflets are ovate, oblong or lineolate in shape. The flowers are dark, light or reddish purple. The pods are about 2 cm in length, containing 1-5 seeds. The seeds are black with brown or black bloom. The weight of 100 seeds is about 1-3 gm... Since 1978, about 5,000 accessions of wild soybean have been collected in China. Characters as high protein content, good adaptability are considered superior." Address: Soybean Inst., Jilin Academy of Agricultural Sciences, Gongzhuling, Jilin province, China.

9308. Messinger, Lisa. 1989. Food of the future has rich past. *Antelope Valley Press* (*Palmdale, California*). March 1.
• ***Summary:*** A brief history of tofu. The author is now writing "The Tofu Book" for Avery Publishing Group due out in November. Address: Health/Nutrition Staff Writer.

9309. Kitamura, Yasunori. 1989. Re: Shinshu-Miso Research Institute. Letter to William Shurtleff at Soyfoods Center, March 22–in reply to inquiry. 1 p. [Eng]
• ***Summary:*** The Institute was founded in May 1959. Its annual report, initially titled *Reports of the Shinshu-Miso Research Institute* but now titled *Report of the Shinshu-Miso Research Institute* (*Shinshu-Miso Kenkyusho Kenkyu Hokoku*) was first published in 1960. It is published in March each year, and in 1987 it started to include English abstracts for most of the articles. The 1989 issue is number 30. A 1-year subscription sent by surface mail costs US$8.00. A former director of the Institute, Dr. Tsutomu Mochizuki, retired in 1982. Address: Shinshu Miso Kenkyusho, 469-6 Nakagosho, Nagano-shi 380, Japan. Phone: 0262-28-1221.

9310. Akwarius Almere. 1989. Akwarius prijs en bestelboek: Natuurvoedingsprodukten, Januari-Februari-Maart [Catalog and price list: Natural food products, January-March]. P.O. Box 50070, 1305 AL Almere, The Netherlands. 77 p. [Dut]
• ***Summary:*** For details, see entry for the April-June 1989 catalog. Address: Almere, Netherlands. Phone: 03240-20800.

9311. Daizu Kyokyu Antei Kyokai (Soybean Supply Stabilization Assoc.). 1989. Kaigai genryô kyôkyû dôkô nado kihon chôsa: (Daizu) itaku jigyô hôkoku-sho [A basic survey of the trends in supplying raw materials from overseas: Report on consigned enterprises of soybeans]. #2 Makoto Building 5th Floor, Tora-no-mon 1-4-4, Minato-ku, Tokyo 105, Japan. 327 p. 26 cm. [Jap]
• ***Summary:*** Contents: Trends concerning the demand and supply of oilseeds and oilseed products: 1. Worldwide. 2. In the USA. 3. In Brazil. 4. In China. 5. Various trends in the quality of imported raw materials (soybeans). Address: Tokyo, Japan. Phone: 03-591-3879.

9312. Daizu Kyokyu Antei Kyokai (Soybean Supply Stabilization Assoc.). 1989. Daizu no kakô, ryûtsû nado ni kansuru chôsa hôkoku-sho [Report on a survey of processing and distribution of soybeans]. #2 Makoto Building 5th Floor, Tora-no-mon 1-4-4, Minato-ku, Tokyo 105, Japan. 106 p. March. 26 cm. [Jap]
• ***Summary:*** Contents: 1. General conditions of the productions of domestic soybeans. 2. Trends in the production in the producing districts. 3. Trends in harvesting, drying and processing. 4. Trends in collections of cargo, storing, and shipping. 5. Trends in the promotion of improvement of the commodity and the quality of domestic soybeans. 6. Trends in the promotion of improvement of the collections of cargo, storing and shipping. 7. Some studies on the subject of the stages of harvesting, collections of cargo and shipping for promoting the usage of domestic soybeans. Appendixes: 1. General conditions of inspections. 2. The actual results of the collection cargo by the collection cargo groups. Address: Tokyo, Japan. Phone: 03-591-3879.

• ***Summary:*** The 26th study meeting to evaluate commercial miso was held. 233 samples of miso were studied 131 samples were analyzed for physicochemical characteristics. Salt concentration averaged 11.9% and total sugar 18.0%. Miso with high levels of lactic acid was preferred. Address: Nagano, Japan.

9319. Mangold, Grant. 1989. Are U.S. soybeans losing their luster? Here's what you can do at planting to outshine your competitors. *Soybean Digest.* Mid-March. p. 8-10, 12-13.
• ***Summary:*** "Put this near the top of your 'to-do' list before planting: Check the protein and oil levels of the soybean varieties you plan to plant." The reason? Protein and oil content in U.S. soybeans has been slipping for the past few years, while their levels in South American soybeans has increased. "Hot, dry conditions in the U.S. the past two years had a major effect in lowering protein levels and raising oil content in U.S. soybeans... The market is moving towards paying on the basis of protein and oil composition." Charles Hurburgh, Iowa State Univ. (ISU) ag engineer who has compiled reams of soybean composition data notes that "The U.S. soybeans received by Japan in 1988 had a $0.50 per bushel deficiency in protein and oil compared with the competition. Fifty cents a bushel will lose a lot of customers."

"The U.S. share of Japanese soybean imports peaked at 97.3% in 1978. By 1987 it had dropped to 85.5%, and in 1988 the U.S. share was 80.4%. The decline has been the result of increased imports of good quality soybeans from South America, particularly from Brazil, due to the lowered quality of soybeans from the U.S. in recent years."

In general, soybeans grown in the southern and eastern U.S. contain more protein (36.4%) and less oil (18.7%) than those from the western Corn Belt states (34.9% protein, 19% oil). Beginning on 4 Sept. 1989, the Federal Grain Inspection Service (FGIS) will list protein and oil composition data on domestic and export inspection certificates as requested by the customer.

9320. Nakamura, Masaaki; Imai, M.; Yasuhira, H. 1989. Karubon san bunseki kei ni yoru miso chû no yûkisan bunseki ni tsuite [Analysis of organic acids in miso using carboxylic acid analyzer]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 30. p. 68-73. [14 ref. Jap; eng]
Address: Nagano, Japan.

9321. Okada, Noriyuki. 1989. Role of microorganisms in tempeh manufacture–Isolation of vitamin B-12 producing bacteria. *JARQ* (*Japan Agricultural Research Quarterly*) 22(4):310-16. March. [12 ref. Eng]
• ***Summary:*** The vitamin B-12 content of tempeh made in Indonesia was found to be 4.6 micrograms (mcg) per 100 gm fresh weight, much higher than any other vegetarian food tested. But this was based on one sample transported slowly from Indonesia to Japan and its smell was no good when the value was measured. A sample brought quickly from Indonesia with good smell contained 0.7 mcg/100 gm. A sample prepared in Japan with tempeh starter from Indonesia contained only 0.05 mcg. And tempeh prepared in Japan with *Rhizopus oligosporus* NRRL 2710 contained 0.03 to 0.06 mcg/100 gm. Other vegetarian foods containing significant amounts of vitamin B-12 were thua-nao (Thailand) 1.5 mcg and fermented tofu (Singapore, also called Sufu) 1.1 mcg. Flesh-based foods with a high B-12 content included Ka-pi shrimp paste (Thailand) 5.3 mcg, fermented shrimp (Thailand) 2.5 mcg, and fish sauce, 3 month fermentation

© Copyright Soyinfo Center 2014

(Thailand) 2.4 mcg. The vitamin B-12 in vegetarian foods is produced by the fermentation process and it increases during fermentation. Flesh foods contain their own B-12. The daily requirement of vitamin B-12 for adults is estimated to be 3 mcg.

Bacteria that produced vitamin B-12 in tempeh were isolated and identified. The most prolific producer was *Klebsiella pneumoniae,* which had a maximum relative B-12 productivity of 1350. All prolific producers were members of the genus *Klebsiella* but some *Bacillus* species also produced B-12. The author suggests that intraspecific cell fusion techniques might be used to transfer this ability to *Bacillus natto,* the natto bacterium, which is presently unable to produce vitamin B-12. Address: Dep. of Applied Microbiology, National Food Research Inst., Tsukuba, Ibaraki 305, Japan.

9322. Osawa, Yoshiaki; Yasuhira, Hitomi. 1989. Pentoosu hakkô-sei nyûsan-kin no sentaku [Selection of pentose fermentable halophilic Pediococci]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 30. p. 14-17. [13 ref. Jap; eng]
Address: Nagano, Japan.

9323. San-J International, Inc. 1989. The gold standard (Ad). *Natural Foods Merchandiser.* March p. 54; April. p. 89.
• ***Summary:*** This full-page color ad refers to "San-J Whole Soybean Tamari: Wheat Free Soy Sauce," and specifically to the new product, which bears a gold label, that is made in America. A large 10-oz. bottle of the tamari is shown against a background of whole soybeans. A small inset of Black Label Tamari and Tamari Lite are also shown. "This extraordinary seasoning establishes a new standard for the other varieties of San-J Tamari. Try our new Black Label soymeal tamari–brewed here for the first time–and Tamari Lite, which offers a 25% sodium reduction. San-J Tamari. Pure soybean. Pure gold."

Also published in Vegetarian Times. 1989. April. p. 3. and May p. 2. And in East West. April. p. 47. Address: Virginia.

9324. Sato, Masashi; Yasuhira, Hitomi. 1989. Kome no seihaku budomari to kôji, miso no hinshitsu [The effect of polishing rate of rice on the quality of koji and miso]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 30. p. 1-2. [Jap; eng]
• ***Summary:*** Unpolished rice koji had the least amylase activity. Koji from rice polished to 66% had the least protease activity. Miso from 90% polished rice was preferred, whereas that made from 66% polished rice with the hulls/bran added back was disliked.

9325. Sato, Masashi; Yasuhira, Hitomi. 1989. Hasaimai? (Tayôto riyômai henkei kakôhin) no ryûdo to kôji, miso no hinshitsu [The effect of grain/particle size of crushed rice on the quality of koji and miso]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 30. p. 3-6. [Jap; eng]
• ***Summary:*** The particle size of crushed rice was found to have a negligible effect on the sensory properties of koji and miso.

9326. Sode, Akio; Nakamura, Masaaki; Takeda, Shigeru; Ito, Kimio; Imai, Manabu; Yasuhira, Hitomi. 1989. Miso no burendo kôka [Effects of blending miso]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 30. p. 7-13. [2 ref. Jap; eng]
• ***Summary:*** Misos made with various levels of koji and sodium chloride (salt) were mixed in varying proportions for several periods of time. The final products were evaluated for sensory quality.

9327. Takeda, Shigeru; Imai, Manabu; Yasuhira, Hitomi. 1989. Candida-zoku kôbo o riyô shita miso no kôki [Flavor of miso fermented by genus *Candida*]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 30. p. 29-32. [3 ref. Jap; eng]
• ***Summary:*** Miso was produced by 8 strains of *Candida* and by *Zygosaccharomyces rouxii* Y7 (control). Flavor was studied by sensory evaluation. Address: Nagano, Japan.

9328. Takeda, Shigeru; Imai, Manabu; Yasuhira, Hitomi. 1989. Candida-zoku kôbo no bôyû? shiken [Antiswelling of miso fermented by Candida sp.]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 30. p. 64-67. [5 ref. Jap; eng]
• ***Summary:*** The amount of extra ethanol required to prevent miso swelling (because of gas production) was lower for miso produced by the yeast *Candida etchellsii* S7-1 than for that produced by the yeast *Zygosaccharomyces rouxii.*
Address: Nagano, Japan.

9329. *Whole Foods.* 1989. Bios: U.S. Mills. March. p. 110.
• ***Summary:*** U.S. Mills, established in 1908, specializes in 100% natural products. Our Erewhon cereals, granolas and nut butters are produced in our facility in Omaha, Nebraska. We also import a complete line of macrobiotic products from Japan, including shoyu tamari. In addition, we are the exclusive importer of Kentaur cereals from Switzerland. When the name Erewhon or U.S. Mills appears on the package, be assured your customers are getting the very best. U.S. Mills Inc., 395 Elliot St., Newton Upper Falls, Massachusetts 02164; (617) 969-5400.

Address: Nagano, Japan.

9331. Yokota, Yoshiko; Yasuhira, Hitomi. 1989. Miso bunseki e no kinsekigai bunkôhô no riyô [Application of near-infrared reflectance analysis in miso]. *Shinshu Miso Kenkyusho Kenkyu Hokoku* (*Report of the Shinshu-Miso Research Inst.*) No. 30. p. 33-42. [10 ref. Jap; eng]
• ***Summary:*** Near-IR reflectance analysis was applied to the detection of the physicochemical properties of miso. Sample temperature had little effect on the accuracy of the analysis. Moisture, sodium chloride, total nitrogen, lipid, ash, total sugar, and reducing sugar concentration of miso could be adequately measured by this procedure. Address: Nagano, Japan.

9332. Severson, Richard K.; Nomura, A.M.Y.; Grove, J.S.; Stemmermann, G.N. 1989. A prospective study of demographics, diet, and prostate cancer among men of Japanese ancestry in Hawaii. *Cancer Research* 49(7):1857-60. April 1. [34 ref]
• ***Summary:*** This study of 7,999 Japanese Hawaiians, followed for 18-21 years, found that tofu consumption lowered the risk of prostate cancer more than any other dietary factor studied. Men who consumed tofu five or more times per week were 65% less likely to develop prostate cancer compared to men who consumed tofu once per week or less.

Note: This is the earliest document seen indicating that consumption of tofu lowers the risk of prostate cancer. Address: Japan-Hawaii Cancer Study, Kuakini Medical Center, Honolulu, Hawaii 96817.

9333. Chikaarashi, Shigeru. Assignor to Nichii Company, Ltd., Osaka, Japan. 1989. Apparatus for manufacturing a foodstuff suitable for soybean milk production. *U.S. Patent* 4,817,516. April 4. 4 p. Application filed 9 Oct. 1987. [5 ref. Eng]
• ***Summary:*** "The apparatus includes a brushing machine for removing earth matter and earth-born germs deposited on soybean material, a band dryer for adjusting the water content of the soybean material so as to facilitate separation of the material into skin and flesh portions, a skin remover for separating the skin portion from the flesh portion and for dividing the flesh portion of each piece of soybean into four to eight parts, and flat pressing rollers for converting the resulting powdery masses into uniformly distributed flaky masses."

Note: The resulting soy flakes are used by Nichii to make tofu in Japan. The compact tofu plants are located in supermarkets or department stores. Address: Sapporo, Japan.

9334. Thompson, Martha Gifford. 1989. Early work with tofu at Rochester Zen Center (Interview). *SoyaScan Notes.* April 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The staff of 30-50 people in the Zen Center kitchen prepared strictly vegetarian meals. Kapleau roshi at that point had a dairy allergy, so very few dairy products were used in the meals. The diet was almost a vegan one. The Toronto Zen Center, was an affiliate group nearby in Canada. In Toronto, which has a large Asian population, were at least three tofu shops: one very small family-run Korean shop on Baldwin Street (which is no longer there), one on Avenue Road (perhaps Chinese run), and a third on Dundas Road. A member of the kitchen staff would make the 2½ hour trip to Toronto, go the shop on Baldwin Street (which had no name) to buy tofu. "The first room was stacked to the ceiling with soybeans. Down in the basement were many people slogging around making tofu. It was quite a scene, and nobody spoke any English. At that point we realized that we could make tofu ourselves. The trip to Toronto was always a hassle. You always got stopped at the border; they always thought you were smuggling something. Jay Thompson took the lead in setting up tofu making facilities. Kapleau roshi was very excited about and supportive of the project, in part because he had practiced for so long in Japan, and in part because he likes projects, right livelihood, and soyfoods. Once the shop was set up in the basement, we also made a lot of soymilk, yuba, and soy yogurt, and served spicy curds; we tried everything! The tofu shop of course never received any financial support from Zen Center." Address: Rochester, New York. Phone: 716-461-5388 Home.

9335. Asano, Mitsuo; Okubo, K.; Yamauchi, F. 1989. Tônyû no hinshitsu ni oyobosu nama shibori ondo no eikyô [Effects of squeezing temperature on the quality of soymilk]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 36(4):318-24. April. [16 ref. Jap; eng]
• ***Summary:*** Traditionally soymilk was pressed from the ground soybean slurry at a low temperature, but today this step is usually eliminated when making tofu. Yet tofu prepared in this traditional way was thought to be preferable to that made in the modern way. "In order to make optimum temperature clear, the effects of squeezing temperature on yield, viscosity, glycoside content, lipoxygenase activity and n-hexanal level of soymilk from the cotyledon and the whole bean were examined. A yield as solid was maximum in soymilk squeezed over 30ºC from the cotyledon and at 60ºC from the whole bean. Viscosity of soymilk significantly decreased with increasing temperature and showed a minimum value at 60ºC. A glycoside content as solid increased in soymilk squeezed above 50ºC and was approximately 2.6 times higher in soymilk at 95ºC than at 20ºC. The lipoxygenase activity, which is the major cause of undesirable flavor of soymilk, decreased in soymilk squeezed over 70ºC. n-Hexanal, which was produced by lipoxygenase,

© Copyright Soyinfo Center 2014

was about half in soymilk squeezed at 60ºC as compared with 20ºC. Accordingly, optimum squeezing temperature on soymilk and tofu processing was recommended in range of 50-60ºC." Address: Faculty of Agriculture, Tohoku Univ., Amamiya-machi, Tsutsumi-dori, Sendai-shi, Miyagi 980, Japan.

9336. *Crop Science.* 1989. Theodore Hymowitz: Frank N. Meyer Memorial Award. 29(2):522-23. March/April.
• ***Summary:*** "Theodore Hymowitz was born 16 Feb. 1934 in New York City. His parents Ethel and Bernard emigrated to the USA in their youth from Poland. Theodore graduated from the Crown Heights Yeshivah and Boys High School, Brooklyn, New York, in 1948 and 1951, respectively. As a young boy he often visited nearby Prospect Park, the botanical gardens, zoo and museum and developed a lifelong interest in plants and animals.

"He received the B.S. degree in agriculture from Cornell Univ. in 1955 and M.S. degree in agricultural chemistry and soils from the Univ. of Arizona in 1957. Thereafter he was drafted into the U.S. Army for 2 years. Following basic training at Fort Benning, Georgia, he was stationed at the Quartermaster Research and Engineering Center, Natick, Massachusetts, where he worked as a chemist in a microbiology laboratory.

"Upon discharge from the Army in 1959, he enrolled at Oklahoma State Univ. where he received his Ph.D. in genetics and plant breeding in 1963. At Oklahoma State he was greatly influenced by the potential of plant introductions by his advisor, Dr. Ralph S. Matlock, and by Dr. Jack R. Harlan, a Frank N. Meyer Medalist. As a graduate student he was a Loeb Foundation Scholar and a Fulbright Scholar in India. At the Indian Agricultural Research Institute, New Delhi, in the laboratory of Dr. M.S. Swaminathan, he conducted cytological research on the genus *Cyamopsis* [which includes guar] and under the tutelage of Prof. H.B. Singh, the father of plant introductions in India, he collected guar germplasm. The entire guar collection was sent to the USA and placed in the PI [Plant Introduction] system. The guar research conducted at Oklahoma State Univ. and in India was incorporated into a book coauthored with Dr. R.L. Whistler, published by Purdue Univ. Press in 1979.

"The development of the transdomestication concept was the main feature of Dr. Hymowitz's research on guar. The transdomestication concept is defined as the movement by humans of a wild species from its indigenous area to another region where it subsequently is domesticated. Guar and the tomato are examples of possible transdomesticates.

"From 1964 through 1966, Dr. Hymowitz was employed as an agronomist by the IRI Research Institute, Campinas, Brazil. In Brazil he spent 2 years collecting, identifying and maintaining legumes having potential forage value and sent a collection of about 750 accessions to the USA to be placed in the PI system. Dr. Hymowitz was also a technical advisor to the Brazilian National Soybean Commission.

"Upon joining the faculty at the Univ. of Illinois in early 1967, he was immediately sent to India for 6 months to initiate soybean production experiments at the Uttar Pradesh Agricultural Univ., Pantnagar and J. Nehru Agricultural Univ., Jabalpur. His final report and published research papers become the model for the establishment of the International Soybean Program (INTSOY) at the Univ. of Illinois. In addition he collected soybean in the Kumaon Hills of Uttar Pradesh, a physically demanding expedition since the soybean were collected from fields on mountain terraces from 1100 to 2500 meters above sea level. The soybean collected were incorporated into the PI system.

"Upon his return to the Univ. of Illinois, Dr. Hymowitz initiated a project to investigate the variation in and genetics of antinutritional and biologically active components of soybean seed. Under his direction, his graduate students and colleagues were able to elucidate the mode of inheritance of soybean seed lacking or having very low amounts of the Kunitz trypsin inhibitor, lectin, Beta-amylase, lipoxygenase-1 and urease...

"In 1974, Dr. Hymowitz and colleagues were the first to report the use of a near-infrared light reflectance instrument to estimate simultaneously the oil and protein concentration in corn, soybean, and oat seed...

"From 1972 through 1976, Dr. Hymowitz visited major herbaria in Asia, Africa and Europe in order to examine their *Glycine* specimens. During these years he also worked in the Univ. of Illinois library, examining floras, monographs, maps, historical documents, floral check lists, and plate tectonic and island biogeographical literature in order to determine the most promising exploration sites and time of year to collect wild botanical relatives of the soybean. From January to March, 1977 he made his first of three exploration trips to Australia. Since then, he or his colleagues have made *Glycine* exploration trips to Fiji, Tonga, Vanuatu, New Caledonia, Papua New Guinea, Philippines, Taiwan and the nearby Pescadores Islands, Marianas and Ryukyu Islands, and Japan. Thus far, the genomic relationships of 11 out of 14 currently recognized species in the genus *Glycine* have been elucidated by utilizing cytogenetic, morphological, isozyme and RFLP (Restriction Fragment Length Polymorphisms; see definition below) approaches...

"In 1982, Dr. Hymowitz reported the first successful interspecific hybrid between the soybean and a wild perennial species from Australia, *G. tomentella*... Dr. Hymowitz is the curator of the USDA wild perennial *Glycine* collection at the Univ. of Illinois... Dr. Hymowitz has also taken a keen interest in the history of the soybean and this has led to the discovery of the first introduction of the soybean into North America by Samuel Bowen in 1765. In further historical research he documented that the soybean was first planted in Illinois by John H. Lea in 1851. Subsequently these seeds were disseminated throughout the

© Copyright Soyinfo Center 2014

Corn Belt.

"Dr. Hymowitz has advised 11 students for the M.S. degree and eight students for the Ph.D...

"In 1974-1975 he was a visiting professor at the Hebrew Univ. of Jerusalem, Rehovot, Israel. In 1981 he received the outstanding research award from the Land of Lincoln Soybean Assoc. He is the author or coauthor of more than 200 research articles or chapters in books. The research conducted by Dr. Hymowitz is interdisciplinary, spanning the broad areas of chemistry, genetics, taxonomy, cytogenetics, plant breeding, and history of the genus *Glycine* and many other legumes."

9337. Garrett, Lynn J. 1989. Commodity feature: Soybean and soybean meal update for East Asia. *World Oilseed Situation and Market Highlights.* April. p. 40-45.
• ***Summary:*** In this excellent report, the most recent import figures are for crop year 1988-89. Countries discussed are Japan, Taiwan, Republic of Korea, Indonesia, and Philippines. Address: Agricultural Economist, USDA Foreign Agricultural Service (FAS). Phone: 202-720-2852.

9338. Kikkoman Foods. 1989. How to go lite on the salt (Ad). *New Choices for the Best Years* (*New York, NY*). April.
• ***Summary:*** This 2½ by 9½-inch, color photo ad shows a lady's index finger holding up a bottle of Kikkoman Lite Soy Sauce, which contains 40% less salt. "100% Kikkoman taste. But very light in salt. Far lighter than other brands. So now you can add the Kikkoman touch and still go Lite on the salt. Kikkoman Lite. In the oriental section of your favorite market."

9339. Mitoku Co. Ltd. 1989. Food is medicine: Mitoku macrobiotic (Ad). *East West.* April. p. 33.
• ***Summary:*** The top half of this full-page ad contains a large square red seal with four Chinese characters, read *"Ishoku Dogen,* which literally means 'medicine and food (have the) same source.' It is an old traditional saying in Japan, and its not only Oriental philosophy. In the 4th and 5th centuries BC, a Greek physician spoke of letting food be our medicine. Hippocrates taught that the effects of occupation, climate and food, were where much of the cause of illness lay. Today, modern science and medicine have begun to agree with this ancient wisdom."

"Mitoku Macrobiotic products are a selection of some of the highest quality foods in the world; Miso, Tamari and Shoyu, premium seaweeds,... mochi."

USA wholesale distribution: Granum, Seattle, Washington 98105 (206) 525-0051. Spiral Foods Inc., Asheville, North Carolina 28814 (800) 633-2156. Address: CPO Box 780, Tokyo, Japan 100-91.

9340. Morinaga Nutritional Foods Inc. 1989. The importance of packaging (Ad). *Produce News* (*Fort Lee, New Jersey*). April. Insert.
• ***Summary:*** This full-page color ad shows a well-built (well packaged), lovely smiling woman, Marcia Levine, dressed in a chartreuse, two-piece knit workout suit with an open midriff. Her left hand is behind her head, holding her hair, and her right hand is holding a carton of Mori-Nu tofu next to her right temple. The pose and angle emphasize that she has large breasts. Marcia is featured in Gold's Gym Personal Trainer Workout videos, one of which is shown beside her photo with a carton of Mori-Nu tofu. "And now Mori-Nu is proud to sponsor a new two-tape video package for the world famous Gold's Gym. These exercise tapes will give health-conscious people everywhere first-hand instruction on how tofu blends deliciously into a total fitness program.

"Stock up on the tofu that combines trade support, national advertising, consumer education and guaranteed customer satisfaction into one profitable package. Call 1-800-NOW-TOFU for Mori-Nu today."

On the back of this ad is a trade produce ad titled "How does your tofu stack up?" It shows cartons of each of the three types of Mori-Nu Tofu stacked one atop the other. The "stack up" was intended to have 2 meanings. First, can you stack up water packed tofu this neatly. Second, how does it stack up or compare on a number of key points.

According to Art Mio (1990 March 9), the two appeared as an insert in Produce News, and made a big hit. Art notes: "I love the ad myself. We got produce buyers all over the country with the ads tacked up on their bulletin boards." Danielle Lin needed an insert for several of her health food distributors. But when she sent them this back-to-back ad they would not insert it into their monthly flyer–creating a minor scandal. This ad may have also appeared as an insert in *The Packer.* Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9341. Shurtleff, William; Aoyagi, Akiko. comps. 1989. Bibliography of miso and soybean chiang: 1,604 references from A.D. 535 to 1989. Lafayette, California: Soyfoods Center. 227 p. Subject/geographical index. Author/company index. Extensively annotated. Printed April 28. 28 cm. [1604 ref]
• ***Summary:*** This is the most comprehensive bibliography ever published on miso and soybean chiang. It is also the single most current and useful source of information on this subject available today, since 54% of all references (and most of the current ones) contain a summary/abstract.

One of more than 40 bibliographies on soybeans and soyfoods being published by the Soyfoods Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 37 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject from its

© Copyright Soyinfo Center 2014

earliest beginnings to the present, worldwide.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, and a bibliometric analysis of the composition of the book (by language, document type, year, leading countries, states, and related subjects) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

9342. Taguchi, Takeko; Sato, M.; Yasuhira, H.; Sekiguchi, J.I. 1989. Taiensei kokyû kesson kôbo no riyô ni kansuru kenkyû [Studies on utilization of halotolerant respiratory-deficient yeast]. *Nippon Jozo Kyokai Zasshi* (*J. of the Brewing Society of Japan*) 84(4):264-69. April. [7 ref. Jap; eng]

• ***Summary:*** A respiratory-deficient yeast mutant induced from *Zygosaccharomyces rouxii* did not absorb oxygen. It fermented miso with a 13% higher fermentation efficiency and less sugar consumption that its parent strain. In a taste panel test of the two miso types, some recognized no difference and the rest considered the miso made with the mutant to be superior. Address: 1-2. The Shinshu Miso Research Inst., 469-6 Nakagosho, Nagano-shi 380; 3. Dep. of Applied Biology, Shinshu Univ., 3-15-1, Tokida Ueda-shi 386. All: Japan.

9343. Toriano, Peter. 1989. Japanese food firms cook up new strategies for U.S. consumers. *Economic World.* April. p. 22-26.

• ***Summary:*** "Riding the success of tasty, low-priced food products, the Japanese eye a bigger helping of the U.S. grocery mart." Two of the most popular Japanese food products have been soy sauce, ramen noodles, and tofu. "Nissin sold more Cup O'Noodles in the United States last year than McDonald's sold hamburgers nationally... Japanese food companies and food products are slipping under America's door unnoticed... The Japanese start selling their food products in the U.S. to a small, very concentrated ethnic market... While Kikkoman can trace exports of soy sauce to the U.S. as far back as 1869, most Japanese food companies did not export to or manufacture products in the United States in significant quantities until the 1970s...

"American food product companies focus on their competitors, whereas the Japanese tend to focus on what the customer wants...

"Kikkoman, one of Japan's largest food-related companies, is involved with wines and liquors, pharmaceuticals, health foods and a chain of restaurants. In addition to its other products, Kikkoman has introduced a shelf-stable tofu, instant miso soup and a rice wine for use in cooking.

"Kenzaburo Mogi, planning manager of Kikkoman's foreign operations department, says tofu could become as big a market as soy sauce for Kikkoman in the U.S. in the years to come. In the U.S., Kikkoman also owns 80% share of JFC (Japan Food Corp.), a major distributor of oriental food products... Consumption of Kikkoman's soy sauce has increased fivefold since 1972... On average, each Japanese consumes about 2.5 gallons of soy sauce every year; the average American consumes less than 10 oz...

"Almost a quarter of Kikkoman's total business now is outside Japan: two-thirds in the U.S. and most of the rest in Southeast Asia. The company also is targeting production in Europe, Australia and China...

"Ajinomoto Co, Japan's largest food processor, has been selling abroad since 1909, when its first overseas office opened in New York... Until the 1960s, Ajinomoto's main product was MSG (monosodium glutamate). Today, it has a more diversified line-up, with about 41% of sales coming from processed foods, and 26% from seasonings... The predominant products the firm manufactures in the U.S. are amino acids for pharmaceutical use...

"Kibun Products International Inc., a subsidiary of Kibun Company Ltd. Japan, is a major manufacturer of surimi in the U.S... Kibun is a multi-billion-dollar, 50-year-old food products company with worldwide operations totalling $2,000 million annually...

"Morinaga Nutritional Foods Inc., a subsidiary of Morinaga Milk Industry Co. Ltd., the Borden of Japan, is selling its tofu in air-tight containers that prolong freshness, eliminate water changes and is bacteria-free...

"'This could be the food of the future, replacing dairy and meat as major sources of nutrition," says Kent Cooper, spokesman for Hakuhodo Advertising America Inc. in Los Angeles, which handles Morinaga's account...

"Faith Popcorn, chairman of BrainReserve Inc., a marketing consulting company to Fortune 500 companies says America is eating healthier and is more and more concerned with where food products originate and what that does to the Earth, known as the graining/greening of America. 'Vegetarianism is growing like crazy. Americans are changing from flesh food to health food.'"

9344. PTI. 1989. Indian trade tariffs offend U.S. *Times of India* (*The*) (*Bombay*). May 1. p. 20.

• ***Summary:*** "India is described along with Japan, South Korea, Brazil, Canada and the European community as among the 'worst offenders' in putting up unfair trade barriers in a national trade estimate report (NTER) released by Mrs. Carla Hills, the U.S. president's trade representative yesterday." The president is George Bush.

Subsidies by the European community are said to deny $1.5 billion in sales of American soyabeans to Europe.

9345. Doi, Shuji; Ishige, K.; Ishida, N.; Irie, E.; Matsumoto, Y.; Hatabe, Y.; Takahashi, A.; Inoue, N.; Deguchi, N.; Ozaki, H. Assignors to Meiji Seika Kaisha, Ltd. (Tokyo); Kyushu Nyugyo Company, Ltd. (Ohita); Izumi Food Machinery

Company, Ltd. (Osaka). 1989. Process for the manufacture of packaged aseptic soybean curd. *U.S. Patent* 4,828,869. May 9. 13 p. Application filed 8 May 1987. 4 drawings. Application also filed in Japan on 27 Sept. 1986. [8 ref]
• ***Summary:*** A packaged aseptic tofu is prepared by sterilizing dehulled and hypocotyl-removed soybeans with superheated steam, grinding the soybeans in the presence of heated water to prepare a green slurry, filtering the slurry to separate out the soy milk, heating the soy milk to sterilize it and denature the protein content, aseptically adding a coagulant, filling and sealing in an aseptic container, and then heating to effect coagulation in the container. Address: 1-2. Kawasaki; 3-4. Tokyo; 5-8. Ohita; 9-10. Hyogo. All: Japan.

9346. Demos, Steve. 1989. New developments at White Wave, Inc. (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** White Wave has just purchased a meat packing house with 23,000 square feet of processing space, fully refrigerated and built for food production, on 2.2 acres on the eastern outskirts of Boulder, on 61st Street, 7 blocks from their present plant. They are paying only $600,000 for the plant plus land; the land alone is valued at $500,000. They will take possession on May 15 and the deal is expected to close in June. They will retain their current 10,000 square foot plant for making ice cream and some new products. So they will be manufacturing in 2 places. Most offices will be at the new facility. In July, they will install an automated tofu system. During Steve's last 2 trips to Japan he has put it together, mainly from Kawanishi Shoko, which is acting as the broker but with a Masuko cooker and processing system (which do not have a heavy dependence on electronics) and Takai roller extractors. The high cost of Japanese yen prevents importation of a turnkey Japanese plant. Within the last 3 months White Wave built its own conveyorized pasteurizer and is now pasteurizing tofu sent long distance.

White Wave's sales for 1988 were up close to 30% over 1987. After-tax profits were down a little due to extensive product development and expansion. On May 15 White Wave will close on a 504 limited placement equity stock offering for $500,000, which will be used solely for new product introduction and development. The banks loaned an additional $500,000 for equipment and also financed the land and building ($600,000).

The company's new soy cheeses (private labeled TofuRella) are well accepted but have had quality control problems; the shelf life is not good. They are made by another company. White Wave's many new products and the upcoming Meatless Healthy Franks and Links are deluging buyers. White Wave products are also being distributed by Wildwood in California. Steve believes Wildwood will come to a point fairly soon where they will have to choose between being a distributor and a multi-product manufacturer. Its too complex and expensive to try to do both.

White Wave is doing well but the stress is enormous on everyone. Their business strategy is to focus on the mass market in their area, with saturation of in-store demos. They will go through the King Soopers warehouse, with no slotting allowance. He will not pay those. "Its cheaper to get your product pulled onto the market by consumer demand from a big PR campaign, than to pay slotting allowances. I have an ethical problem paying $10,000 per facing of slotting allowances. If the product doesn't move within 60 days you've lost all that money." Address: White Wave, Boulder, Colorado.

9347. Camire, Dennis. 1989. U.S., Japan join hands to put tofu on the table. *Detroit News.* May 21. p. A-7, col. 1.
• ***Summary:*** West Lafayette, Indiana. Purdue University's School of Agriculture, Mitsubishi International Corp. and the USDA are working together to create a soybean variety that will make better tofu. Mitsubishi donated about $350,000 for the study. Niels Nielsen, an agricultural geneticist at Purdue, has worked 12 years to develop a soybean whose protein does not have the characteristic off-flavor. It will be crossed with other varieties to come up with the best taste, texture, and color for tofu production. The new soybean is being developed for the Japanese market–not for Americans. This year, Indiana farmers will grow about 5,000 acres of the experimental variety.

In addition, a small tofu manufacturing plant is being established at Purdue, where production is expected to begin next month. The resulting tofu will be taste-tested by Asian students at school and by Japanese managers from a nearby Subaru-Isuzu auto plant. Address: Gannett News Service.

9348. Rickman, Phyllis C. 1989. Tokyo Rose just wants to have fun. *Washington Post.* May 21. p. M35.
• ***Summary:*** This is a review of the restaurant Tokyo Rose (2427 18th St., NW, Washington, DC). This popular Adams-Morgan Japanese restaurant, a place to have fun, "serves four tofu appetizers, one of them *hasamiage,* which two different waiters said 'tastes scary.'" The reviewer accepted the challenge and was broad-minded enough to like it, although it looked like "blintzes in a tofu wrapper."

"Cold tofu, mashed with avocado and raw quail egg, and grilled tofu with natto turned out to be only weird rather than frightening. Tofu almond fry (which seems to be broiled, rather than fried, almond-crusted bean-curd triangles) is, I'm relieved to say, delicious."

Grilled clams or oysters were served with a "sweetened soy glaze." And "sea trout or seafood brochettes are brushed with sweetened soy and caramelized under the grill so the flesh is moist and crunchy."

9349. Duggan, Patrice. 1989. Jungle road to Tokyo. *Forbes* 143:96. May 29.

© Copyright Soyinfo Center 2014

• ***Summary:*** U.S. soybean growers are concerned over the impact that the Brazilian highway BR-364 will have on Brazil's soybean trade with Japan. The highway now runs from Mato Grosso 1,240 miles northwest to Rio Branco. Pushed another 1,000 miles westward, it would reach the Pacific Ocean at Lima, Peru. This could cut the shipping time to Japan by 7 days.

9350. Renner, Michael. 1989. National security: The economic and environmental dimensions. *Worldwatch Paper* No. 89. 78 p. May. No index. 22 cm. [114* ref]
• ***Summary:*** Contents: Introduction. A world at war [the cold war]. The drain of a permanent war economy. Armaments and underdevelopment. Environment and security. From military to environmental alliances. From national to global security. Conclusion. Notes.

"Over the course of history, national security has come to be defined almost exclusively in military terms–the ability to deter or repel outside aggression... It is becoming clear, however, that this growing reliance on force is actually reducing national security... Competitive national security policies have yielded international insecurity.

"The pursuit of military power is undermining the economies of rich and poor countries alike... It can be said that Japan is the true victor in the cold war, partly a result of the fact that since 1945 it has invested a meager 1 percent of its gross national product in the military while the superpowers were engaged in an all-out arms race.

"Perhaps worst, governments preoccupied with security threats of military origin have ignored the perils of environmental degradation. But national security is a meaningless concept if it does not include the preservation of livable conditions within a country–or on the planet as a whole... On a global scale, climate change, ozone depletion, deterioration of the agricultural base, and deforestation are formidable challenges to the safety and well-being of the entire race. Environmental threats with the potential to erode the habitability of the planet from beneath us are forcing humanity to consider national security in far broader terms than that guaranteed solely by force of arms...

"Among industrialized countries, the detrimental effects of maintaining a permanent war economy are most pronounced in the Soviet Union and the United States. Both superpowers have spent enough on their armed forces to undermine their infrastructure, retard civilian research and development, and diminish economic competitiveness...

"The share of public R&D outlays that goes to the military is as high as 70 percent in the United States and an estimated 60 percent in the Soviet Union... Loans acquired for the purchase of military equipment have strongly contributed to Third World indebtedness...

"Ultimately, national security depends on *all* countries becoming part of a global environmental coalition... Reversing environmental degradation confronts the global community with an unprecedented need for stepped-up international cooperation. This monumental task cannot be accomplished without putting an end to the arms race, which claims so much of decision makers' attention and devours so much of the resources needed to halt the danger to the planet...

"The best hope for impartial conflict resolution rests with the United Nations... In many crucial respects, nations are no longer the sole masters of their destinies... Nations have 'outgrown' their borders, but the structures of nation-states remain firmly in place... 'Environmental security' offers a more fruitful basis for cooperation and security among nations than military security because it is both a positive and inclusive concept." Address: Worldwatch Inst., 1776 Massachusetts Ave. N.W., Washington, DC 20036. Phone: 202-452-1999.

9351. Smith, Keith J.; Thompson, James. 1989. History of industrial use of soybeans. In: L.A. Johnson, ed. 1989. New Technologies for Value-Added Products from Protein and Co-Products: Symposium Proceedings. Ames, Iowa: Center for Crops Utilization Research. 312 p. See p. 1-8. Unnumbered.
• ***Summary:*** This history starts in the 1920s and focuses on the USA, with several mentions of Japan. Discusses: Henry Ford (whose soybean suit woven of soy fibers cost an estimated $39,000), soy fiber production in Japan (in 1939 the Japanese produced 900,000 to 1,200,000 lb of it), soybean plastics, Azlon made of soy protein fiber [by The Drackett Co., Cincinnati, Ohio], the Northern Regional Laboratory (at Peoria, Illinois), soy flour adhesives for plywood, soy adhesives used in fiberboard boxes and shotgun shells, soy oil as a drying agent in paints (especially alkyd paints) and linoleum, soy protein paper coating, soy oil in fire fighting foams, as a rubber substitute (Norepol), as an anti-foaming agent, in fuels, printing inks, as a carrier for agricultural chemicals (with probable environmental advantages over petroleum-based carriers), and for control of explosive grain dust (at reasonably cool temperatures, it doesn't readily go rancid).

One of the first major thrusts of the U.S. Regional Soybean Industrial Products Laboratory, established in 1936, was development of soybean plastics. "Isolated soybean plastic was first attempted, then abandoned. The Laboratory had difficulties increasing its water resistance. But the intractable problem was that the protein isolate plastic didn't flow well enough to allow molding in injection dies.

"So they tried plastic made from soy meal instead. But it was even less water resistant than the protein isolate plastics, and had to be expensively treated to remove sugars and salts as well as heat-treated to denature the protein...

Today over 100 million lb of epoxodized soy oil is used as a plasticizer and stabilizer for vinyl plastics. "Soy oil is an anti-foaming agent in the aerated fermentation of

© Copyright Soyinfo Center 2014

penicillin, streptomycin and tetracyclines. An added plus is that soy oil provides nutrients to markedly increase the yield of antibiotic... Soy oil is not nearly so good a fuel as it is an anti-foaming agent. For one thing, it is too viscous for good fuel injection. It must be converted to simple alkyl esters." But these form varnish deposits on cylinder walls and fuel inlets.

"Soy oil is coming into its own as a printing ink, relatively cheaper than the soy protein dispersions that proved too expensive in the 1940s. Soybean oil is clear so that pigment shows through better than in petroleum based inks, and soy oil ink doesn't smudge onto your fingers like regular newsprint.

"And the use of soy ink in rural newspapers, and soy oil in agricultural chemicals and grain elevators brings an immeasurable public relations benefit to people who do business with farmers. This public relations benefit frequently offsets any additional cost of using soy oil. For instance, over 1,000 newspapers now print with slightly more expensive soy oil.

"Possibly the major factor in charting the soybean's course was the discovery of vitamin B-12 not long after World War II. No longer was animal protein needed in poultry and swine rations. It could simply be inserted into formulations of only corn and soybean meal. Demand for soybean meal skyrocketed, and became the chief soybean product." Address: American Soybean Assoc., St. Louis, Missouri. Phone: 314-432-1600.

9352. Westbrae Natural Foods. 1989. Distributor catalog: FOB West pricing. Spring 1989. P.O. Box 91-1181, Commerce, CA 90091. [6] + 19 p. 22 x 28 cm.
• ***Summary:*** Has a black on yellow cover. Address: Commerce, California. Phone: (213) 722-1692.

9353. Thornbury, Barbara E. 1989. A feast of tofu in Tokyo and Kyoto. *New York Times.* June 11. p. XX6, XX37. Late edition (East Coast).
• ***Summary:*** Describes three Japanese restaurants that feature tofu, one of the key ingredients in Japanese cooking: (1) Sasanoyuki in Tokyo has a history of more than 300 years. Its name means "snow on bamboo leaves." (2) Goemon in Tokyo. (3) Okutan–best known for its simmering pots of yu-dofu–in Kyoto.

Note: These restaurants are also described in *The Book of Tofu,* by Shurtleff and Aoyagi, however the present description has updated prices. Address: Princeton, New Jersey.

9354. *SoyaScan Notes.* 1989. What are soybean saponins? Can they reduce human blood cholesterol levels? (Overview). June 28. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** *Webster's Dictionary* (1983) defines saponin (derived from the French *saponine,* which is from the Latin *sapon-, sapo* = soap, and first used in 1831) as "any of various mostly toxic glucosides that occur in plants (as soapwort or soapbark) and are characterized by the property of producing a soapy lather; esp: a hygroscopic amorphous saponin mixture used esp. as a foaming and emulsifying agent and detergent."

Thus it may be the saponins (carbohydrates, water soluble sugars) in the whey which is a by-product of the tofu-making process that causes that whey to foam.

Webster's Dictionary defines glucoside (a term first used in 1857) as a glycoside that yields glucose on hydrolysis. A glycoside (first used in 1930) is defined as "any of numerous sugar derivatives that contain a nonsugar group attached through an oxygen or nitrogen bond and that on hydrolysis yield a sugar (as glucose)."

Birk and Peri (1980, p. 161) state: "The saponins are glycosides that occur in a wide variety of plants. They are generally characterized by their bitter taste, foaming in aqueous solutions, and their ability to hemolyze [break down] red blood cells."

The earliest document seen (Jan. 2005) that mentions soybean saponins was published in 1931 by E. Walz in German. In early 1979 a team of Australian researchers (led by Potter, Topping, and Oakenfull) at the CSIRO Division of Human Nutrition in Adelaide found that the cholesterol-lowering effect of soybean products was attributable to the presence of saponins rather than proteins or amino acids. Subsequent research by this group and others seemed to verify this hypothesis. Note that saponins impart an unpleasant, bitter taste to most soyfoods (e.g. tofu or soymilk) in which they are present.

In 1990 Japanese scientists from the Department of Food Chemistry at Tohoku University found that soybean saponins could control reproduction of the HIV virus which is associated with Acquired Immune Deficiency Syndrome or AIDS. These saponins showed inhibitory effects against HIV infection in vitro.

9355. Akwarius Almere. 1989. Akwarius prijs en bestelboek: Natuurvoedingsprodukten [Catalog and price list. April-June]. P.O. Box 50070, 1305 AL Almere, The Netherlands. 77 p. [Dut]
• ***Summary:*** Akwarius is a larger importer and distributor of natural food products. They have worked in this field since 1971, and have a strong interest in macrobiotic and anthroposophical foods. Contents (p. 2). Philosophy and function (p. 3). Beverages (p. 7): Sojamelk naturel and Bonsoy, Provamel Sojadrink (4 flavors in 500 ml and 4 flavors in 1 liter sizes), Provamel Soja dessert (puddings; 5 flavors in 525 gm and 1 flavor in 1050 gm).

Manna sweeteners (p. 12): Amasake drink in 350 and 700 gm sizes, and rice koji. Note that Akwarius imports and distributes large line of Manna-brand macrobiotic products

from Muso in Japan. Manna vegetable protein products (p. 21): Dried tofu (non-organic). Bonsoy soymilk, Seitan, and three types of dried wheat gluten (fu). Manna Soy Sauces (Sojasausen, p. 21): shoyu (B = biological or organically grown, and NB = not biological, i.e. non-organic), and tamari (non-organic).

Witte Wonder (p. 22): Seitan, Tofu Spread (in paprika, garlic, celery, dill, mushroom, and pepper flavors, 220 gm sizes, all organic), Tofu in Sauces (peanut, curry-pineapple, and tomato flavors, 340 gm, organic), Tofunaise (plain and lemon flavors), Tofu Dressing (Italian, garden herbs, Mexican, and plain flavors).

Yakso (p. 23): Seitan, Tempeh Spreads (in Indonesian poesta and doeloe flavors), Temmo (round tempeh burger, deep fried then marinated, ¼ inch thick, sold 5 in a glass jar), Soyaroma (tempeh spread like butter), Sweet Indonesian-style soy sauce (Ketjap manis), Tofu Spreads (cream cheese consistency, in salsa, dill, green, shallot, and pommodore [apple?] flavors), Tofu Mayonnaise (Sojanaise), Smoked tofu (paprika, mushroom, and celery flavors in 170 gm wide mouth glass jars).

Akwarius soybeans and soybean meal/flour (p. 27-28, 35, organic). Manna Pasta (p. 28): Soya macaroni. Manna black soybeans from Hokkaido (p. 35; 350 gm, non-organic). Manna Tekka Condiment (p. 44), Manna soynuts (*Sojanootjes,* p. 45, 3 flavors). Lima soyadrink (p. 47).

Manna Miso (Sojapasta; p. 48): Brown rice miso (organic and non-organic), young rice miso (non-organic), barley miso (organic and non-organic), natto miso (non-organic), soybean miso (non-organic), instant miso soup (with and without fish, non-organic), instant miso soup with tofu. Manna sea vegetables (p. 49).

Note 1. This is the earliest Dutch-language document seen that mentions soynuts, which it calls *Sojanootjes.*

Note 2. This is the earliest Dutch-language document seen (Sept. 2013) that mentions soy cream cheese. Address: Almere, Netherlands. Phone: 03240-20800.

9364. Ebata, Junko. 1989. History of Japan's Tempeh Discussion Society and Tempeh Research Society (Interview). *SoyaScan Notes.* July 3. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The first meeting of the Tempeh Discussion Society (*Tenpe Danwa-kai*) was held on 30 Jan. 1984 at Kyushu University. The most active founding members in the following years were Dr. Tadao Watanabe and Dr. Kiku Murata.

The purpose of the society was to establish a platform for discussion of matters related to tempeh. The first meeting was held at Kyushu University, the second in Tokyo, the third at Osaka Teikoku Joshi Daigaku, the fourth at Marusan-Ai in Okazaki, and the fifth at *Kasuga-cho Shoko-kai* (Hikami-gun, Kasuga-cho, Kuroi, Hyogo-ken). Most of the group's members were affiliated with a university, a food manufacturing company, or a government research laboratory. In 1988 the group changed its name to Tempeh Research Society (*Tenpe Kenkyu-kai*) in order to establish a more formal, research-oriented feeling and to attract new members. The 16 founding members of the new society were: Goro Kanasugi (Takuma-kai), Makio Takato (Takashin Shokuhin), Yasuko Torii (Shizen Shoku Hyoron-ka), Masaharu Horii (Norinsho Sogo Kenkyujo), Teruo Ohta (Fuji Seiyu K.K.), Eiichi Kimura (Daizu Kyokyu Antei Kyokai), Gyo Nikaido and Mikitoshi Iwatsuki (Marusan-Ai K.K.), Hajime Kashio (Nagoya Eiyo Senmon Gakko), Kiku Murata (Teikoku Gaku-en, Kyoiku-ken, Moriguchi City, Osaka), Toshiie Maeda (Tempeh Sonjuku), Machiko Asano (Teikoku Joshi Daigaku), Teijiro Miyamoto (Osaka Shidai), Tadao Watanabe (Torigoe Seifun and Kyushu Univ.), Kazuko Noguchi (Saga Joshi Tandai), Asao Matsuoka (Kassui? Joshi Tandai), and Naokazu Ohta (Kumamoto Joshi Daigaku).

The first meeting under the new name was held on 25 Feb. 1989 in Tokyo. Talks on tempeh were presented by Yasuko Torii, Nobuyuki Okada, and Toshiie Maeda. On 31 Dec. 1988 the Society had 58 members, increasing to 77 by Feb. 1989. During 1989 meetings are planned on June 24 at Osaka City Univ. and on September 1 at Teikoku Joshi Daigaku (Moriguchi city, Osaka prefecture). The group will attend the Second Asian Non-Salt Fermented Soybean Symposium at Jakarta, Indonesia. Address: Prof., Faculty of Science of Living, Osaka City Univ. Sugimoto 3-3-138, Sumiyoshi-ku, Osaka 558, Japan. Phone: 06-605-2811.

9365. Perez Baez, Oswaldo. 1989. Re: New developments with soyfoods in Venezuela. Letter to William Shurtleff at Soyfoods Center, July 10. 3 p. Typed, with signature on letterhead. [Eng]

• ***Summary:*** "In my last visit to Caracas I contacted: Prof. Makie Kodaira and Prof. Amaury Martinez of the 'Instituto de Ciencia y Tecnología de Alimentos, Facultad de Ciencias, U.C.V.' (Universidad Central de Venezuela) who are very interested in offering a theoretical and practical course about soyfoods, using their pilot plant (the second of importance in Venezuela). Prof. Kodaira studied in Hiroshima, Japan in 1977 and she is a specialist on seafoods. They would like the 'Centro de Alimentos de soya de Venezuela' to organize this course.

"I think this is the time to offer in Venezuela a complete course about soyfoods and I have thought to invite you to come to Venezuela. I am thinking about 2 courses:

"(a) One oriented to Institutional level (Instituto Nacional de Nutrición, Fundación Polar, CIEPE, Universidades, Industry, etc.) for professional people. This course could be in Caracas, Instituto de Ciencia y Tecnología de Alimentos, U.C.V.

"(b) Another one oriented to the general public (not necessarily professional level). This course could be here in La Azulita which is a rural and beautiful place, epicenter of the Venezuelan movement for alternative lifestyles.

"I have thought of the following content for these courses: (1) Soymilk. (2) Tofu. (3) Tofu and soy milk ice cream. (4) Miso. (5) Tempeh. (6) Shoyu.

"I am working on a book about soyfoods, and am enclosing an outline of the contents: I. Introduction. II. Agronomic aspects. III. Soya and food security. IV. The most important soyfoods. V. Industrial potential of the soybean. VI. Bibliography. VII. Index." Address: Ing., Centro de Alimentos de Soya de Venezuela, Granja Tierra Nueva, Aldea San Luis, La Azulita, Estado Merida, C.P. 5102, Venezuela.

9366. Morinaga Nutritional Foods. 1989. Mori-Nu Tofu: The therapeutic health food (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 3 p. July 12.

• ***Summary:*** "Tofu, most often considered a 'weird' California health food, is becoming a 'therapeutic' form of nutrition for cancer and AIDS patients across the country, according to Marsha Brook, clinical dietitian and food service director at Ventura Estates Retirement Home in Agoura Hills, Calif.

"According to Brook, many cancer and AIDS patients are unable to tolerate the foods and prepared supplements they are being served, because of nausea and/or digestion problems. The result is patients aren't getting the proper nutrients they need to become stronger and more healthy. To counteract this problem, Brook, along with many other registered dietitians, has begun incorporating Mori-Nu Tofu into her meal plans.

"She now uses tofu in creamed soups, quiche, enchiladas, lasagna, and other dishes... The patients like tofu because it tastes good, and it's very easy to digest...

"High-protein and low-price, however, are not the only reasons Brook serves tofu to the elderly. She has learned, through her studies, that animal protein high in cholesterol will wear down the kidneys over time. 'Tofu, which is a

© Copyright Soyinfo Center 2014

vegetable protein with zero cholesterol, can help extend the use of the kidney, plus it's very gentle on the system,' says Brook.

"According to Carol Kirshenbaum, registered dietitian and manager of clinical nutrition at St. Johns Hospital in Los Angeles, they too are now including tofu dishes on their hospital and cafeteria menus. 'We have found that tofu is particularly good for people that have high-cholesterol and are lactose intolerant,' said Kirshenbaum." Address: Los Angeles, California.

9367. Mio, Art. 1989. Update on Morinaga (Interview). *SoyaScan Notes.* July 19. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Morinaga sales, in terms of number of units sold, increased 30% last year. Presently sales are 60% to Caucasian Americans and 40% to Asian Americans. The main outlet is supermarkets, but about 10% is sold through natural foods stores and Diet Center outlets also sell a lot. In Feb. of 1989 Lucky Stores finally started buying Mori-Nu Tofu, and they have even promoted it with a color ad and $0.79/package price. Safeway started carrying Mori-Nu Tofu about 2 years ago, then they dropped it for a while, but started carrying it again in the fall of 1988. Address: Morinaga Nutritional Foods Inc., 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9368. Welters, Sjon. 1989. Re: Brief history of Manna Natural Foods. Letter to William Shurtleff at Soyfoods Center, July 24. 1 p. With follow-up talk on 2 Dec. 1989.

• ***Summary:*** This company was founded in about 1973 by Adelbert Nelissen and his wife Wieke Nelissen, plus Hugo van Seenus, among others. Adelbert is Sjon's brother in law (his wife's brother). Manna got started in the Rozenstraat in Amsterdam, in an abandoned house that was taken over by so-called "krakers" (counter-culture or hippie squatters). The store called "de Rozemaryn" (Rosemarin) was the first of a chain of stores which, at its peak, contained ten stores total. Hugo now owns and operates Hugo's Market in Washington, DC.

Manna was originally a foundation named Stichting Natuurvoeding Amsterdam. It kept this name until 1982. Manna started the first tofu shop in Europe that was owned and operated by non-Orientals. Opened in Amsterdam in 1977, Manna was a macrobiotic manufacturer, distributor, and retailer run by a non-profit foundation. Soon after opening, Manna was visited by entrepreneurs from Germany, England, Portugal, Denmark, France, Sweden, Austria, and Italy, hoping to learn about making tofu.

In 1975 Manna started importing miso and shoyu from Japan, initially via Muso Foods, and later also via Mitoku. But Muso was always their main supplier.

Manna filed for Chapter 11 bankruptcy or reorganization 2 or 3 times. The first time was a bankruptcy in March 1982. All their property was sold at an auction, but was bought back by a new foundation owned by basically the same people and the same foundation at one-third the value. It was probably at this time that Manna's name was changed from Stichting Natuurvoeding Amsterdam to Manna Natuurvoeding B.V. The company was back on its feet by 1983 but then things didn't work out again. At the last moment before declaring bankruptcy, they got financing. But this time the bank took the Foundation out of the picture, so that the foundation was not giving the collateral for loans. The person behind the foundation, Adelbert Nelissen, became the director/president of the holding company. He probably did not have majority ownership. But at this time (May 1983) Sjon and most of the management left.

In about late 1983 or early 1984 Manna moved all operations from Meeuwenlaan in Amsterdam to Zwanenburg. The former section of Amsterdam was torn down by the city. The third time was in 1987, when the company was disbanded. At that time Adelbert became inactive. The government-appointed curator tried to get as much as possible for the assets. The macrobiotic Manna brand name and the inventory of imported Japanese foods was purchased by Akwarius, which was located in Almere in a building constructed along anthroposophic guidelines (before about 1986 they had been located in the province of Utrecht). The production facility at Zwanenburg and its equipment was purchased (mainly for the bakery) by a conglomerate of 3 natural food companies, including Akwarius and Loverendale (the largest baker of natural yeasted breads in the Netherlands). They made Manna tofu for a year or two, then facing stiff competition, sold off the tofu equipment piecemeal. They ran the Manna sourdough bakery there until 1988, then moved it to Loverendale headquarters, and closed down the Zwanenburg production facility.

Akwarius is a company based on the anthroposophical philosophy of Rudolf Steiner. They were founded in about 1974. In Holland there were 4 types or philosophies of natural foods distributors: (1) Anthroposophical (Akwarius); (2) Macrobiotic and natural foods (Manna); (3) Ecological (Kleine Aarde [Small Earth; inspired by E.F. Schumacher's book *Small is Beautiful*] and De Nieuwe Lelie [The New Lily]); and (4) Reform movement/vegetarian (VNR: Vereniging van Nederlandse Reformhuizen = Union of Dutch Reform Houses, and Scholten [which was also the exclusive importer of Lima products from Belgium]).

Talk with Sjon Welters. 1994. April 4. Manna and Lima sold only vegetarian foods; they did not sell any fish, poultry, or meat. All these early Dutch natural foods companies were this way because no natural food store would sell fish or other flesh products; they were just not acceptable. Some years after they started they used eggs in a few products but they were always vegetarian. The only people who

© Copyright Soyinfo Center 2014

ever got involved in flesh foods in the early stages were the Anthroposophic / Biodynamic people because its part of their philosophy, but even in the beginning they didn't sell meat to the stores because customers didn't want it. 9369. Business Trend Analysts, Inc. 1989. The health and natural food market: A product-by-product marketing analysis and competitor profile. 2171 Jericho Turnpike #342, Commack, NY 11725. 280 p. Price $950.00. *
• ***Summary:*** Section 6 of this report is titled "The Market for Soyfoods" (24 pages). It projects 6.2% growth for the soyfoods industry, and contains the following (much of it provided by Soyatech, Inc. and Soyfoods Center): Analysis and summary. Manufacturers' sales of soyfoods. Manufacturers' sales of soyfoods to major outlets. Manufacturers' sales of soyfoods, by type of outlet. The top six soymilk producers in the U.S. U.S. per capita consumption of soymilk. Retail sales of soyfoods. Retail sales of soyfoods at major outlets. Retail sales of soyfoods, by type of outlet. Graph: Product mix of U.S. soyfood sales. Estimated mix of distribution channels used to market various soyfoods. U.S. soybean production. Characteristics of women's use of soy sauce. Quick Tamari tips. Selected 1988/89 new product introductions: Soyfoods.

Under "Report Highlights and Special Features" we read: "Soyfoods continue to gain popularity with mainstream consumers, as sales are expected to top the $380 million mark, at the wholesale level, by year-end. At the retail level, sales of tofu alone are currently pegged at $77 million, with supermarkets capturing close to 60% of dollar volume."

Overall report Contents: 1. Executive summary. 2. The overall market for health and natural foods (including Soyfoods 1979-1988, with forecast to 1998). 3. The market for health and natural dairy foods. 4. The market for health and natural grocery products. 5. The market for health and natural snack food products. 6. The market for soyfoods. 7. The market for health and natural grains and cereals. 8. The market for health and natural frozen foods. 9. The market for herbal products. 10. Distribution channels. 11. Factors affecting demand. 12. Trends in organic farming. 13. Competitor profiles: Alta-Dena Certified Dairy, Arrowhead Mills, Barbara's Bakery, Celestial Seasonings, Golden Temple, San-J International, Thompson Kitchens. Tivall U.S.A./Garden Gourmet, U.S. Mills (partial list). 14. Directory of more than 200 health and natural food producers. Address: Commack, New York. Phone: 516-462-2410.

Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 341-52. Contains 8 tables and 9 diagrams. [41 ref]
• ***Summary:*** Contents: Development & history of soymilk (based on *Soymilk Industry and Market* by Shurtleff & Aoyagi). Problems of soymilk production: beany flavor, trypsin inhibitors, flatulence factors. Basic steps in soymilk production. Methods of soymilk production. Yields of soymilk: Typically 70-80% of the protein and 55-60% of the solids from soybeans are recovered in the soymilk. Soymilk standards and quality control. Cost and price of soymilk production. Soymilk utilization and types. Nutrition of soymilk. A photo shows Steve Chen. Address: American Soybean Assoc., P.O. Box 3512, Taipei, Taiwan ROC 10099.

9371. Coffey, Rory. 1989. Lupins as an energy-rich protein source for feed and food. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 410-14.
• ***Summary:*** Contents: Abstract. Introduction. Lupin consumption and usage. Dehulled lupin. Human consumption: Lupin concentrate, miso soup, lupin tempeh, lupin flour.

Miso soup: Although about 200,000 tons of soybeans are used each year in Japan to make miso soup, there is a problem with oxidation, which causes discoloring. The Shinshu Research Institute has investigated the use of lupins as a substitute for soybeans in an attempt to solve this problem. Oxidation does not occur with lupins and to date results have been encouraging. Table 8 shows a sensory evaluation of the two types of miso (high score is more favorable): Color–Lupin 12, soy 0; Taste–Lupin 10, soy 2; Aroma–Lupin 7, soy 5; Texture–Lupin 6, soy 6.

Lupin tempeh: In 1986 an Indonesian company began to investigate the feasibility of using lupins as a substitute for soybeans in making tempeh–with the assistance of the Grain Pool of Western Australia and R. Yu of the Victorian Food Research Institute. Despite some problems at the beginning, the efforts by all 3 parties have proved successful and the Indonesian company is now using a significant tonnage of lupins to make tempeh.

Lupin flour: In 1987, the Grain Pool initiated an evaluation of lupin flour in human food products.

Lupins have been grown and used in Western Australia for over 30 years. After extensive genetic engineering, the composition of the present day varieties is far superior to those grown originally. Over 90% of the lupins grown in Western Australia, and all that are available for export, are varieties from the species *Lupinus angustifolius,* a sweet, white, narrow leaf lupin.

In terms of world lupin production in 1985, Australia has the largest area (606,000 ha), followed by the USSR (280,000), and Europe (148,000). In the USSR and Eastern

© Copyright Soyinfo Center 2014

Europe much of the lupins are grown for forage or green manure; not much grain is harvested. A photo shows R. Coffey. Address: Grain Pool of Western Australia, Grain Pool Bldg., 172 St. George's Terrace, Perth 6000, Western Australia, Australia.

9372. Dawson, R.J. 1989. Concerns in regulating vegetable food proteins. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 230-33.
• ***Summary:*** "Vegetable food proteins, being nutrients and not additives in most countries are subject to general food legislation, which is based on quality protection, safety, nutritive value and organoleptic criteria. In addition they are subject to regulation for use as food ingredients. There are many countries in the world, e.g., Belgium, Canada, Denmark, Finland, France, Federal Republic of Germany, India, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Peru, Sweden, U.K., U.S.A. and EEC, which have established national and group regulations for the use of vegetable proteins in food.

Contents: Assessment of the present situation. Codex Alimentarius Commission: It was established as an intergovernmental body in 1962 by FAO and WHO to ensure fair practices in international trade and protect the health of the consumer; It has established more than 200 individual commodity standards. Creation of a Codex Committee on Vegetable Proteins (CCVP) in 1978. Activities of the CCVP: Elaboration of international standards for vegetable protein foods. Codex criteria applicable to commodities: Regulation of the use of vegetable proteins in food, use of VPP [vegetable protein products] for their functional properties, use of VPP to increase content of utilizable protein, use of VPP in partial or complete substitution of the animal protein in foods, use of VPP as sole protein source in products with new identities, quantitative methods for the differentiation of vegetable and animal protein. Address: Food and Agriculture Organization of the United Nations, Via Delle Terme di Caracalla, 00100 Rome, Italy.

9373. deKieffer, Donald E. 1989. Government-imposed restrictions on international trade in proteins. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 17-24.
• ***Summary:*** Contents: Abstract. Introduction (Theory of competitive advantage, cartelization, deregulation). The problem: World oversupply of protein products. Government interventions in oilseeds: The European Community (proposed EC consumption tax, European import barriers, EC policy on rapeseed, Spain's domestic consumption quota, Spain's export subsidies, Portugal's domestic consumption quota), Brazil (differential export taxes, preferential export financing, tax exemptions and deductions, minimum price system), Argentina (the Reembolso, the differential export tax system, price support system), Malaysia (differential export duty system), Japan, the United States (the guaranteed loan program, PL-480 and GSM credit programs, tropical oils bill, the drought bill, import barriers), Canada. Government interventions in dairy trade: European Community, United States, Canada. Government interventions in dairy trade. Discussion.

"Japan is a major importer of oilseeds and oilseed products... Imports of U.S. soybeans for crushing alone amounted to $784 million last year." However Japan "maintains a monopolistic import regime that combines high tariffs and nontariff trade barriers designed to protect Japan's processing industries." Japan's government "requires that formula feed contain specific amounts of domestic cornmeal and 2% fish meal for on-farm mixing intended for resale. These requirements limit the incorporation of alternative products in the mixture. The U.S., for example, has been able to export soybeans to Japan, but not soymeal. If Japanese farmers were able to eliminate expensive fish meal from the feed, exporters argue, they could replace it with imported soybean meal."

A photo shows Donald deKieffer. Address: Pillsbury, Madison & Sutro, Suite 1100, 1667 K St. N.W., Washington, DC 20006.

Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 369-74. Contains 4 tables and 4 figures. [27 ref]
• ***Summary:*** "The prototype of miso was introduced to Japan from Korea at least 1,300 years ago. Misho (the original type of miso) was first cited in Taihouryou in 701 A.D. Although the production method for misho was not described, it probably resembled soybean miso today. In the northeast district of China, it was called 'misun,' and in Korai (located in north Korea 935 to 1392 A.D.) 'misso' and in south Korea 'mijo.' The process includes pounding and mashing of cooked soybeans, shaping into balls, wrapping in rice straw, hanging the wrapped materials under the eaves and mixing with salt and water and often was seen at farmhouses in prewar Japan... Miso originally was made at Buddhist monasteries for internal and use in aristocratic circles.

"Another route of introduction was from China to Japan by Buddhists and envoys who produced fermented soybean foods such as Kinzanji-miso. The difference of this process from the Korean process was to make koji from cooked whole soybeans with barley or wheat without pounding.

"The industrial production of soybean miso was started in Aichi prefecture in 1625 and that of rice miso in 1645 at

© Copyright Soyinfo Center 2014

Sendai as the original of Sendai miso today... Thereafter, the number of miso factories increased gradually in the Tokugawa period (1600-1867) and rapidly up to about 5,000 at the end of World War II. Recently, miso factories introduced many advanced facilities and equipment for economical and hygienic production. The number of miso factories was reduced to about 1,700, amalgamating to large scale factories of which capacity was over 3751 tons in 1984. They produced 353,000 tons equivalent to 59% of total industrial production. Employing 182,000 tons of soybeans, 104,000 tons of rice, 23,000 tons of barley and 72,000 tons of salt, *ca.* 568,000 tons of miso were produced by all factories in 1985. In addition, the amount of home-made miso is roughly estimated as 60,000 tons. The amount of miso supplied per capita was 4.9 kg in 1987...

"Ninety per cent or more of miso is used as an ingredient of soup in Japan... Daily per capita consumption was 28 to 30 g during the years from 1951 to 1959. From that time until 1985, it gradually decreased to the level of 16 g which is enough to prepare one bowl of miso soup." Address: Hanamaruki Inc., 4-22-10 Himonya, Meguro-ku, Tokyo 152, Japan.

Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 116-22. Contains 2 pictures and 12 tables. [11 ref]

• ***Summary:*** Contents: Abstract. Introduction: Functional properties: Composition and general properties, Codex Alimentarius International Standard for vital wheat gluten, viscoelasticity, water absorption, pH effects, flavor, nutritional properties, Protein Efficiency Ratio of wheat gluten blended with soy flour in various ratios.

Applications: Milling and flour fortification, bakery products, breakfast cereals, meat, fish and poultry products, pasta, cheese analogs and pizza, nutritional snacks, breadings, batter mixes, coatings and flavorings, pet foods, aquaculture feeds. New applications.

World production, consumption and capacity: Comparison of wheat gluten production by major geographical areas–1980 and 1987, 1987 EEC wheat gluten capacity and production by country, worldwide end uses for wheat gluten in 1980 and 1987. World market: Overview of 1987 supply and trade by major geographical regions, Australian, European and North American wheat gluten consumption by end-use amount (in 1,000 tons) and percent, Argentine wheat gluten demand by end-use, Japanese wheat gluten demand by end-use. Product quality. Acknowledgment. A photo shows J.M. Hesser.

The Protein Efficiency Ratio of wheat gluten is low (only 0.8), compared with 2.0 for soy flour; but a 30:70 blend has a PER of 2.4.

The world's major wheat gluten producing areas in tons (1980 / 1987) are: Europe 29,500 / 132,300 (89% of this is produced in EEC countries), North America (USA, Canada, and Mexico) 30,000 / 54,000, Australia 24,000 / 45,000, South America 2,000 / 7,000, Japan 3,000 / 6,700.

1987 EEC wheat gluten production by country: Netherlands 24,000, United Kingdom 22,500, Germany 22,000, France 20,000, Others 11,800: Total: 118,300.

Changes in worldwide end-use patterns for wheat gluten 1980 / 1987 (percent): Baking 77 / 63, milling (flour fortification) 4 / 14, meats 0 / 5, pet foods 10 / 8, cereals 3 / 2, other 6 / 8.

Overview of 1987 wheat gluten production / net imports / consumption by major geographical regions (tons): Europe (EEC) 118,300 / -20,000 / 98,300, North America 54,000 / 35,600 / 89,600, Australia 45,000 / -26,900 / 18,100, Japan 6,700 / 3,300 / 10,000, South America 7,000 / -2,500 / 4,500. Address: International Wheat Gluten Assoc., 4510 W. 89th St., Prairie Village, Kansas 66207. Phone: 913-341-1155 or 1156.

• ***Summary:*** Contents: Abstract. Introduction. Variables in manufacturing tofu: Soybean variable, processing variable, maceration and extraction (soaking and grinding) stages, filtration and heating stages, coagulation stages, types and concentration of coagulants used in tofu manufacturing. Tofu products.

Tables: (1) Chinese nonfermented soy food products. Five columns show: Food items, Chinese names, organisms used, description, uses. The soy foods are: Fresh green soybeans (*mao-tou*). Toasted soy powder (*tou-fen*) (Description: "Ground toasted dry soybeans, nutty flavor"). Soy sprouts (*huang-tou-ya*). Soy milk (*tou-chiang*). Soy milk film / yuba (*tou-fu-pi*). Soybean curd (*tou-fu*).

(2) Chinese fermented soy food products. Five columns (same as table 1) The soy foods are: Fermented whole soybeans (*tou-shih*). Soy sauce (*chiang-yu*). Soy paste (*chiang*). Fermented tofu (*so-fu* [*sic*]). Actinomucor or Mucor molds are used. Description: Creamy cheese, mild flavor, salty. Uses: Relish, also cooked with meat or vegetable.

(3) 1987 consumption of soybeans as foods in Asian countries. The results are presented here in descending order of per capita consumption: Per capita soybean consumption, country (population), total soybean consumption in 1,000 tonnes. 13.3 kg/capita, Taiwan (19.6 million), 260,000 tonnes. 9.3 kg/capita, Japan (122.2 million), 1,141,000 tonnes. 9.0 kg/capita, Indonesia (175 million), 1,575,000 tonnes. 7.8 kg/capita, South Korea (42.1 million), 330,000 tonnes. 7.7 kg/capita, Singapore (2.6 million), 20,000 tonnes. 6.9 kg/capita, China (1,062 million), 7,325,000 tonnes. 3.4 kg/capita, Malaysia (55 million), 55,000 tonnes. 2.2 kg/capita, Thailand (53.6 million), 118,000 tonnes. 0.3 kg/capita, Philippines (61.5 million), 18,000 tonnes. (4) Nutritional composition of traditional nonfermented foods: Fresh green soybeans, toasted soy powder, soy sprouts–raw, soy milk, soy milk film / yuba, tofu (Source: *Food Composition Table for Use in East Asia,* 1978). (5) Nutritional composition of traditional fermented foods: Fermented soybeans [tou-shih], soy sauce, soy paste [doujiang], fermented tofu (Source *Food Composition Table for Use in East Asia,* 1978).

In China, fried tofu is called Tou-Pok. Address: American Soybean Assoc., 541 Orchard Rd., #11-03 Liat Towers, Singapore 0923, Republic of Singapore.

9379. Kumoda, Yasuo. 1989. Re: Tofu as a potentially hazardous food. Mori-Nu Tofu does not require refrigeration. Letter to Mr. Maurice Guerrette, New York State Dept., Division of Food Inspection Services, One Winners Circle, Albany, NY 12235. 2 p. [1 ref]
• ***Summary:*** This is one of the first letters sent by Morinaga to the department of health in each of the continental 48 states as a result of health inspectors in upstate New York wrongly removing Mori-Nu Tofu from several stores. "We have been informed of recent efforts on the part of health department officials to impact and cite stores that are not conforming to the FDA Model Food Sanitation Code regarding water-packed tofu (soybean curd). We commend this action but seek your advice on the following:

"* The Retail Food Protection Information Manual Interpretations on 'Soy Protein Products Considered to be Potentially Hazardous Food' clearly state that any soy protein products, including tofu, are to be considered potentially hazardous foods and must be maintained at safe food temperatures of at least 45ºF or below.

"* We know of some instances where water-packed tofu was ordered relocated to dairy or deli cases due to the inability of produce department refrigeration units to maintain temperatures within the FDA guidelines."

The letter then explains that aseptically packaged Mori-Nu tofu does not need to be refrigerated, yet that some inspectors, unaware of this, have erroneously ordered it to be moved out of the produce section and into refrigerated dairy or deli cases. It asks if the state would be willing to issue a memorandum concerning Mori-Nu's exemption, or provide Morinaga with a list of local food inspection offices so that Morinaga might contact them directly. Address: General Manager, Morinaga Nutritional Foods, Inc., 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

granulation of wet okara for making "Tenpei" and culture media for mushroom. A photo shows one of the authors.

Figure 1 shows Japanese production of vegetable protein products (ingredients made from wheat or soy protein) in 1975, and yearly from 1983 to 1987. It increased from 37,000 tonnes in 1975 to 60,000 tonnes in 1987, but growth was static from 1983 to 1987. In 1987 59% of the total was soy protein and 41% was wheat protein.

Figure 2 shows Japanese 1987 production of four types of vegetable protein ingredients: Soy flour 18,000 tonnes, Soy fiber or granules (90% is frozen) 17,000 tonnes; Wheat fiber or granule (2% is frozen) 15,000 tonnes; wheat protein flour 8,000 tonnes. Address: Food Engineering Lab., National Food Research Inst., 2-1-2, Kannondai, Tsukuba, Ibaraki 305 Japan.

Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 28-30. Contains 4 charts and graphs.
• ***Summary:*** Figure 1 shows the protein content of soybeans imported into Japan from 1969 to 1988. The protein content of the soybeans has declined constantly for the three types shown. U.S. I.O.M. soybeans have dropped the most, followed by ordinary U.S. soybeans, then Chinese soybeans. I.O.M. soybeans are still the highest at 36% protein. Japan wants soybeans with a high protein content.

Figure 2, world consumption of agrochemicals, shows that it is rising faster than production of grains and soybeans. Figure 3 shows that the region of greatest agrochemical use is Western Europe, followed by East Asia, and the USA. Agrochemicals account for 7% of the cost of soybeans, higher than any other commodity–followed by cotton, sugar, corn, rice, and wheat. This will "naturally result in higher risks of contamination." A photo shows T. Takebe. Address: Oils and Fats Dep., Mitsubishi Corp., 5-2 Marunouchi 2-chome, Chiyoda-ku, Tokyo 100, Japan.

Aug. 6. p. E1.
• ***Summary:*** She first arrived in Japan 15 years ago, and when she is away, her thoughts begin to dwell on all the treats that she is missing. "But one of the greatest gustatory challenges of Japan comes in the form of beans: the little red [azuki] beans that are boiled, mashed, sugared and turn up with regularity in traditional Japanese sweets; and the soybeans that are fermented until they are slimy and odoriferous and then served–sometimes whipped up with raw egg, mustard and onion–and poured over hot rice. The latter are called *natto.* When you say that you are a devotee of Japanese food, you will invariably be asked, 'But do you like *natto?* Answer honestly. Many Japanese people don't care for *natto* either.'"

9387. *Toyo Shinpo* (*Soyfoods News*). 1989. Tôfu no kakei shôhi was teichô: Natsu no hiyayakko juyô ni kitai [Tofu's domestic consumption is low: Expecting the demand for chilled tofu in summer]. Aug. 11. p. 7. [Jap]
• ***Summary:*** In 1988 Jan. to April, per household national average tofu consumption, ¥2008 (97.5% of the same period in 1987). 24.75 cakes (95.2% of 1987).

Number of cakes of tofu per year per household:
1979 87.02.
1980 86.89. 1981 86.91. 1982 87.54. 1983 90.43. 1984 89.16. 1985 88.48.
1986 85.40. 1987 86.43. 1988 85.07.

9388. Morinaga Nutritional Foods. 1989. Mori-Nu Tofu sponsors internationally-famous Gold's Gym personal workout video (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Aug. 14.
• ***Summary:*** "Morinaga Nutritional Foods... has announced that it will officially sponsor the first-ever personal workout video series from the internationally-famous Gold's Gym.

"The Gold's Gym Personal Trainer Series includes one 46-minute beginners exercise video and a 55-minute intermediate tape. The two-tape package features Gold's Gym personal fitness instructors Marcia Levine and Christian Duffy as well as a variety of drop-in guest celebrities, top athletes and physique stars...

"'We thought getting behind Gold's was a natural because fitness without nutrition is self-defeating,' said Arthur Mio, national sales manager for Mori-Nu Tofu. Mori-Nu will feature an instructional commercial spot starring Levine introducing the Mori-Nu Tofu Shake...

"Scheduled for release in early October, the Gold's Gym Personal Trainer Series will be available at a variety of consumer retail outlets nationwide. Suggested retail price is $24.95 including a free two-week membership to Gold's Gym, worth approximately $50." Address: Los Angeles, California. Phone: 213-728-4325.

9389. Welters, Sjon. 1989. Early involvement with soyfoods and Manna in the Netherlands (Interview). *SoyaScan Notes.* Aug. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sjon was born in 1955. He completed high school plus one year at the National Academy of Fine Arts. Then he dropped out to pursue his interest in the natural foods movement. He got involved with soyfoods when he became a vegetarian in 1973. In Sept. 1975 he started to work for Manna. During 1975-76 he did a lot of experimentation with soyfoods production while working at Manna, and he was involved in selling the shoyu and miso that Manna had been importing from Muso in Japan since 1975. In Sept. 1977 Sjon left Manna and started his non-profit natural foods foundation (Stichting Natuurvoeding Alkmaar) and his own natural foods store, both at Alkmaar (pronounced AL-ek-mayr), the Netherlands, based on the model established by Manna. During 1980-81 Sjon's foundation merged with Manna's foundation and Sjon started to work as director of operations at Manna, and he first became involved with the production of tofu and seitan. During the early 1980s Sjon was an editor of the *Manna Bulletin.* Address: Craft International Consultants, 21 Wetherbee St., Acton, Massachusetts 01720. Phone: 508-264-4011.

9390. Morinaga Nutritional Foods. 1989. Mori-Nu Tofu introduces new in-store display stand (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Aug. 17.
• ***Summary:*** "Morinaga Nutritional Foods has introduced a new in-store display unit, which will enable Mori-Nu Tofu to be merchandised in the refrigerated or non-refrigerated section of health food stores nationwide.

"The new stand will allow aseptically packaged Mori-Nu Tofu to be positioned in either the deli or produce section in contrast to water-packed tofu, which must be refrigerated." Address: Los Angeles, California. Phone: 213-728-4325.

9391. Roth, Martin. 1989. Early history of Great Eastern Sun and subsequent work with soyfoods (Interview). *SoyaScan Notes.* Aug. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Other records describe in detail Martin's pioneering work with commercial production of Brown Rice & Tofu Sandwiches, Sweet White Miso, Amasake, Amasake Shakes, and America's first Amasake Ice Cream. In 1982 he and his very close friend Barbara Svenning Garvey (they were never officially married) moved from Boulder, Colorado, to Miami, Florida, then to North Carolina. Martin met Barry Evens in Florida and Barry commissioned Martin to go to North Carolina and set up a macrobiotic distribution and import company near the American Miso Co., of which Barry was then the principal owner. "The beginning of that company was a wonderful experience. Everybody was

© Copyright Soyinfo Center 2014

thrilled. We were the first ones to actually take a full line of Japanese foods and present it to the health food stores in a big way. At that time Erewhon still had a much more limited selection of Japanese imports, such as miso, tamari, soba, etc. We had only imports, 200 to 300 esoteric items that many people never heard. We put together a nationwide sales force and went store to store, introducing the concept of a macrobiotic section. We put that on the map. We had great success, opening hundreds of accounts. I left in about 1984 because I got an opportunity to work for Westbrae as sales and marketing manager, and North Carolina was not my favorite place to live." Martin developed the concept, the name, and the graphics for the Westbrae Malteds and for Mitoku's Supersoy. Address: Berkeley, California. Phone: 415-527-7066.

9392. Ebine, Hideo. 1989. Re: Retirement dates of soyfoods researchers from the National Foods Research Institute, Japan. Letter to William Shurtleff at Soyfoods Center, Aug. 28. 1 p. [Eng]
• ***Summary:*** Masahiro Nakano retired in 1967, Watanabe Tokuji in 1977, and Hideo Ebine in 1982. The National Food Research Institute moved from Tokyo to Tsukuba in Feb. 1989. Address: Central Miso Research Inst., Shinkawa 1-24-19, Chuo-ku, Tokyo 104, Japan. Phone: 03-551-7161.

9393. Morinaga Nutritional Foods, Inc. 1989. Water hazard. Life preserver (Ad). *Supermarket News.* Aug. 28. p. 24.
• ***Summary:*** This controversial ad, the first one in which one tofu manufacturer publicly (but only in trade publications) criticized typical water-packed tofu, infuriated most larger tofu makers in America. It also appeared in *Produce Business* (Aug. p. 16-17) and in *Natural Foods Merchandiser* (Sept. p. 74-75), but by October it was withdrawn.

Color photos show two packages of tofu. On one side, by a typical container of water-packed tofu is the bold text "Water Hazard. Old-style water packed tofu can leak all over and create a mess. Then there's the shrink, with a shelf life of mere days. And once your customer gets it home, the water must be changed daily." Next to a package of Mori-Nu is the bold text "Life Preserver. Mori-Nu Tofu, on the other hand, is aseptically packaged. Airtight. Bacteria tight. And water tight. With a shelf life of 10 months without refrigeration or preservatives. Very safe. Very convenient."

On 8 Sept. 1989 William S. Freeman of the law firm Cooley Godward Castro Huddleson & Tatum in San Francisco wrote a 3-page letter to Morinaga on behalf of their client, Azumaya, citing what they considered to be four malicious and untrue statements in the ad and demanding that Mori-Nu immediately cease running the ads. Freeman argued that (1) not all water pack tofu presents a potential health hazard, (2) water pack tofu that is pasteurized does not have "a shelf life of mere days," (3) water pack tofu is no more likely than Mori-Nu's to "leak all over and create a mess," and (4) the water in water pack tofu does not need to be changed daily while it is refrigerated. Morinaga's legal counsel, Jorge Arciniega of Whitman & Ransom in Los Angeles, responded with a 4-page letter to Freeman on Sept. 22. Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9394. Belleme, John. 1989. Natural soy sauce: A brewing controversy. *Solstice* No. 37. Summer. p. 10-12. [1 ref]
• ***Summary:*** "A San-J placard [shelf talker] sent to thousands of retail stores [about 6 months before this article] says: 'You will notice that all San-J soy sauce has alcohol as an ingredient. As a result of fermentation, there is a small amount of naturally occurring alcohol in all soy sauces. We add a little more alcohol in order to inhibit the growth of naturally occurring aerobic yeast. While the addition of alcohol as a natural preservative is common practice for traditional soy sauce, often it is not listed on the label.'" The author contacted the three major suppliers of traditional imported soy sauce, they were unanimous is denying San-J's accusations. Likewise, the brewmasters of these products denied that any alcohol was added. (Note: Johsen shoyu is bottled under the Tree of Life, Koyo, Mitoku Macrobiotic, Emperor's Kitchen, and Westbrae labels. Marushima Shoyu supplies Eden Traditional Shoyu and Organic Shoyu). However Mansan Brewing Co. of Handa, Japan, adds 4% Mikawa Mirin (rice brandy) to its Mansan Tamari, which is marketed under the Mitoku Macrobiotic label. When Belleme asked San-J vice president Steve Zoller which brands of soy sauce have unlisted alcohol, Zoller could not give any specifics. "The soy sauce San-J imported until their domestic product became available last fall was labeled 'no artificial additives or preservatives.' When we asked Steve Zoller if this shoyu and tamari contained added alcohol and tamari, he replied, 'No comment.'"

Belleme was also concerned that San-J tamari made with hexane-extracted soybean meal using a modern temperature-controlled process would be called "traditionally brewed." Note: Belleme later admitted that the statement in this article about benzene being used by ADM to make food grade ethanol was incorrect. Address: P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

9395. Ebata, Junko. 1989. Antimutagenicity of tempe (Abstract). Abstract of a lecture presented at the 14th International Congress of Nutrition of Nutrition, Seoul, Korea. 1 p. Held 20 Aug. 1989. [1 ref. Eng]
• ***Summary:*** "The antimutagenicity of tempe toward AF2 was examined using the streptomycin-dependent strain SD100 of *Salmonella typhimurium.* Tempe in the process of fermentation was antimutagenic as the number of spontaneously reverted colonies on the tempe-test plate was fewer than that on the tempe-free control plate. The same inhibitory effect was also found in both pan-fried and deep

© Copyright Soyinfo Center 2014

fat-fried tempe-samples... The antimutagenic activity... increased with fermenting time and reached a maximum at 20 hours, then decreased."

Note: In July 1989 Prof. Ebata traveled the USA to attend several symposia on Mutagens & Carcinogens in Diet, and on Genetic Toxicology in Developing Countries. She is now preparing a paper on antimutagenetic activity in tempeh to present at the 14th International Congress of Nutrition in Seoul, Korea (20-25 Aug. 1989). Address: Faculty of Science of Living, Osaka City Univ., Osaka, Japan.

9396. **Product Name:** [Miso].
Foreign Name: Miso.
Manufacturer's Name: Gaïa Enterprise. Officially registered in Jan. 1992.
Manufacturer's Address: Rue Principale, 66130 Corbere, France. Phone: 68.84.86.28.
Date of Introduction: 1989 August.
New Product–Documentation: Form filled out for Anthony Marrese. 1989. Nov. This product was introduced in Aug. 1989. Dan makes 100 kg/year of miso aged for a longer time and 5 kg/month of young miso. Both are not pasteurized.

Letter (handwritten) from Daniel S. Ludington. 1992. Feb. 7. He has been making tofu, tempeh, and miso for sale for 3½ years. He learned to make them using books by Shurtleff and Aoyagi. Now he would like to order their books Miso Production, and Tofu & Soymilk Production.

Letter (handwritten) from Dan Ludington. 1992. March 3. "Gaïa Enterprise was officially registered with the Chambre de Metiers of the Pyrenees Orientales in Jan. 1992. (She had been unofficially in existence using the same name for nearly four years)." Dan's father was a 20-year career cook in the U.S. submarine service. He died instantly of a heart attack at age 54. Dan is the oldest of 4 boys. He received a degree in chemical engineering from MIT in 1977, then worked for Intel Corp. in their factory making silicon chips for 5 years, then for Toshiba USA for another year. When his father died, he kept a 10-year promise to himself to hitch-hike around America. In about Loveland, Iowa, his chemical engineer's eyes saw how chlorinated hydrocarbons enter the food chain, and decided to stop eating meat. About 6 months later he was introduced to macrobiotics. 2½ years later he went to the Kushi Institute in Boston, Massachusetts, to see if he could find a better balance in his diet. There he met Odile Corbel, a French woman with a 12 year-old son named Xavier and 10 years of macrobiotic experience. They were married, and returned to France. 18 months later Dan got a Green Card. While Odile was in the USA, Pauline Schaft had stopped making tempeh, and a weekly, organically grown products market had started in Perpignan. So he and Odile started making tofu, tempeh, and macrobiotic pasties and selling them at this market. The business has grown until today sales are $400/week. He and Odile are still married with 2 children of their own. Pauline Schaft now goes by her maiden name of Van Marle; she is now more involved with her yoga practice than with making food. The company now sells 4 kg/week of miso, all direct and without the use of labels, marketing, or distribution.

9397. Golbitz, Peter. 1989. State of Maine bans aseptic packaging: Law will prohibit sales of aseptic soymilk. *Soya Newsletter* (*Bar Harbor, Maine*). July/Aug. p. 1-3. [1 ref]
• ***Summary:*** Maine's new landmark solid waste bill, L.D. 1431, which goes into effect on 1 Sept. 1990, prohibits the sale of all aseptically packaged beverages and of any other beverage container that cannot be recycled. In section 8. MRSA 1868 titled "Prohibition on certain types of containers and holders, the bill states, 'No beverage may be sold or offered for sale to consumers in this State... In a container composed of aseptic packaging composed of aluminum, paper, and plastic in combination, where those materials are for practical reasons inseparable and commonly referred to as a 'brick-pack.'" Exempted from this legislation are "milk and dairy-derived products," whose containers need not be recyclable nor carry a deposit. The bill hopes to reduce Maine's solid waste by 50% by 1994. Many health food stores in Maine reported that aseptically packaged soymilk is one of their ten best-selling products. The only soymilk presently available in the state is aseptically packaged. It is estimated that far less than 1% of all Tetra Pak cartons sold in Maine contain soymilk. Many other states are now in the process of drafting similar bills for reducing solid wastes. If they follow Maine's policies on aseptic packaging, it could be a major blow for soymilk (and Mori-Nu Tofu) in America. "As Maine goes, so goes the nation." Address: Soyatech, Bar Harbor, Maine.

9398. Newman, Jacqueline M. 1989. Tofu comes of age. *Foodtalk* 12(2):7-8. [7 ref]
• ***Summary:*** A brief history of tofu worldwide. Tofu is a culinary chameleon. The early mentions of tofu by John Saris (1613), Friar Domingo [Fernández] Navarrete (1665), and Benjamin Franklin (1779), each referred to Japanese (rather than Chinese) tofu. "In the United States, commercially tofu was first manufactured by the Chinese in 1915 [sic, in 1878 or before]. It was made by the Quong Hop Company, located in San Francisco. This company, founded in 1906, still exists today."

"While bean curd may not be in the culinary mainstream, there is an amazing increase in its use among non-Asians. Its popularity, which recognizes the nutritional qualities of tofu, may be credited in large part to William Shurtleff and his wife, Akiko Aoyagi. Together they helped make the Western world appreciate tofu, thus increasing the use of this inexpensive and versatile protein food. They are the authors of *The Book of Tofu* detailing its history and background and giving several hundred recipes for its use."

After noting the growing popularity of Tofutti and other

© Copyright Soyinfo Center 2014

soy ice creams, Newman reflects: "The idea of freezing bean curd, however, is not new. Iced Bean Curd is one of Yuan Mei's recipes from the *Xi Yuan Cookery Book* written near the end of the 18th century. This book by a poet, government official and author, is a very comprehensive volume of over 300 recipes; only some are about tofu. One difference is that the Iced Bean Curd recipe is meant to be served hot, the doufu in it is first frozen then prepared for use." Address: Prof. at Queens College, New York.

9399. Shurtleff, William; Aoyagi, Akiko. comps. 1989. Bibliography of industrial utilization of soybeans: 1,587 references from A.D. 980 to 1989. Lafayette, California: Soyfoods Center. 238 p. Subject/geographical index. Author/company index. Extensively annotated. Printed Aug. 20. 28 cm. [1587 ref]

• ***Summary:*** This is the most comprehensive bibliography ever published on industrial utilization of soybeans. It is also the single most current and useful source of information on this subject available today, since 55% of all references (and most of the current ones) contain a summary/abstract averaging 105 words in length.

One of more than 40 bibliographies on soybeans and soyfoods being published by the Soyfoods Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 37 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, and a bibliometric analysis of the composition of the book (by language, document type, year, leading countries, states, and related subjects) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

9400. Phipps, Bob. 1989. Sun Youth and Calco: Tofu and bean sprout equipment from Taiwan (Interview). *SoyaScan Notes.* Sept. 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Sun Youth Machinery Co. Ltd. has been making bean sprout equipment in Taiwan since 1973, and selling tofu equipment since 1979. Bob has been using their all-stainless steel tofu system for about 6 months and it is excellent. The price was 30-40% below Takai's price and their roller extractor was especially low priced. But their support is terrible. The manual that comes with the system is worthless. When he faxed them asking for details on the tofu making process, their response seemed to indicate that they didn't know much about the tofu-making process. Bob could write a 6-page manual on the problems he had getting started. The main one was their thermometer was off by 20ºC, which caused him to burn his soymilk for 2 weeks and it refused to coagulate.

Sun Youth is a very large maker of bean sprout equipment. They have many sprout systems installed in the USA. Bob does not know of any other tofu systems of theirs installed in the USA.

About 10 years ago there was a falling out among makers of bean sprout equipment in Taiwan. At that time the head salesman for Sun Youth, C.P. Wu, left and started Calco, which means "California Company." Kent Wang is head of Calco in the USA and in Houston. He started making bean sprouts in Houston about 10 years ago. He calls *The Book of Tofu* "The Bible." Calco is a large Taiwanese company that makes bean sprout equipment and is in direct competition with Sun Youth. Calco has about 50 installations all over the USA and they are growing fast. Originally they all made bean sprouts. They often sell bean sprouts at one-third the going price. But they have found that tofu is a good product to sell with bean sprouts so now many (10-12) also make tofu. Kent Wang (Phone 713-699-4420) would know these companies but he tends to be secretive about everything. Kent owns and represents a continuous tofu system from Kosan Shoji Co., Ltd. in Japan. It is quite expensive and quite automated. Kosan Shoji has an attractive catalog but it is all in Japanese. Address: Energy Sprouts, 3602 High Point, San Antonio, Texas. Phone: 512-654-3963.

9401. *SoyaScan Notes.* 1989. Sixty-five books on tofu have been published in the Western World since 1970 (Overview). Sept. 17. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Definition: The work must be more than 48 pages long, must have the word "tofu" or its equivalent in the title, and must be written in a non-Asian language. It may be either a popular or a professional/technical work.

By country of publication, 40 of these books (61% of the total) have been published in the USA, 6 in Canada, 5 in Switzerland, 5 in Japan (but written in English for sale primarily outside of Japan), 3 in West Germany, 3 in France (but 2 of these were published simultaneously and primarily in Quebec, Canada), 2 in England, and 1 each in Italy, Sweden, and Brazil. By region of publication: North America 46 (71% of the total), Europe 15, East Asia 5, and Latin America 1.

By language, 49 of these books (75%) have been published in English, 7 in French, 6 in German, and 1 each in Italian, Portuguese, and Swedish.

By year of publication, the first of these books was published in 1974; eleven (17% of the total) were published from 1974 to 1979, forty (62%) from 1980 to 1984, and fourteen (22%) from 1985 to 1989. The peak years of publication were 1981 and 1982, when 12 books on tofu were published each year.

© Copyright Soyinfo Center 2014

The best sellers among these books have been *The Book of Tofu* by Shurtleff & Aoyagi (1975, Ballantine Books, Autumn Press, and Ten Speed Press, about 450,000 copies sold in English editions and 9,000 in foreign editions), *Tofu Cookery* by Louis Hagler (1982, The Book Publishing Co., about 175,000 copies sold), *The Tofu Cookbook* by Cathy Bauer and Juel Andersen (1979, Rodale Press, 105,500 copies sold, still in print), *Cook with Tofu* by Christina Clarke (1981, Avon Books, 57,500 copies printed; still in print), and *Tofu, Tempeh, & Other Soy Delights* by Camille Cusumano (1984, Rodale Press, 25,688 copies sold; out of print). These best-sellers have sold a combined total of 822,700 copies, and all tofu books have probably sold over 1 million copies.

9402. Morinaga Nutritional Foods. 1989. Morinaga Nutritional Foods to sponsor the 1989 World Cup of Natural Bodybuilding (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Sept. 20.
• ***Summary:*** "Morinaga Nutritional Foods will present the first Mori-Nu Tofu World Cup of Natural Bodybuilding on Nov. 19 at 6 p.m. at Aviation Auditorium, 1935 Manhattan Beach Blvd., Redondo Beach. Top male and female natural athletes from all over the world who have tested steroid-free for one year, will compete for possession of the World Cup.

"The invitational meet... requires participants to take a lie-detector test prior to competing to determine previous or present use of steroids or other muscle-building drugs. The day of the event random urine testing of participants will also take place.

"'Drug-free bodybuilding has been popular for about ten years now,' according to Pete Samra, former Mr. Natural U.S.A. and the promoter of the competition." Address: Los Angeles, California.

9403. Mizono, Bill. 1989. Selling pasteurized tofu in the produce case versus the dairy case (Interview). *SoyaScan Notes.* Sept. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bill strongly prefers to have Azumaya tofu sold in the produce case as long as the temperature is okay, which it usually is (42-48ºF). Even dairy cases sometimes rise above 45ºF, as on their defrost cycle. Sales are much better in produce. Tofu is an impulse item and there is more impulse buying in the produce section than in the dairy section. It gets lost among the dairy products. Also there is more space and space flexibility of produce, as caused by seasonal vegetables. Produce is a commodity area. A lot of Safeway stores are switching tofu back to the produce case from dairy, since it sells better in produce. But in stores that moved tofu to dairy, it took a year for sales to rebound to their pre-move level. During that time, many customers started going to Lucky supermarkets for their tofu. Lucky sells tofu only in the produce case. Some divisions of Safeway have never moved tofu out of produce. Each store decides its own location. Most produce departments at Safeway sell the Azumaya tofu in a vertical "juice case" which is cooler. They buy it directly from the Richmond produce warehouse.

The FDA is incorrect in saying that tofu is a "hazardous product." That is not true for pasteurized tofu. Azumaya had tests done in 1983 after *Yersinia* was found in tofu in Illinois and the state clamped down on tofu. Azumaya had a laboratory inoculate tofu with the four potentially toxic microorganisms (*Yersinia, Staphylococcus, Salmonella,* and *Clostridium Botulinum*) then pasteurize it like Azumaya does. They found that these organisms start growing only after 6 weeks at 69ºF, and by that time the tofu was too sour and smelled too bad to eat, and the water was very cloudy. These tests showed that *pasteurized* tofu is not potentially hazardous. But the FDA does not distinguish between pasteurized and non-pasteurized tofu.

If health inspectors required all tofu to be moved out of the produce case, the produce buying division of each chain would decide where to relocate it. There are many considerations, and the main one to the produce division accounting department is that they get tofu sales credited to them no matter where it is sold. They have spent more than a decade to build the sales of this product and they are not about to give that up to the dairy department. They will put tofu into a refrigerated case where the temperature is at 45ºF or below. Even when tofu is sold in the dairy case at Safeway, it still has a produce department label on it! Other than the produce case, Bill would like to see the tofu sold right next to the produce case, in a metal juice case. The produce department likes tofu with the vegetables because they feel that when people buy tofu they also tend to buy vegetables; so tofu sells vegetables. So the produce department does not like tofu to be sold in the dairy case. Another problem with an isolated glass case is that the tofu does not get as much attention as it should, and may be allowed to go out of date. But Bill feels it doesn't matter that much where the tofu case is located, as long as the consumer knows where it is. Moreover, Azumaya sells Kikkoman tofu, which can be sold in the produce case.

Azumaya dates their tofu for a 30-day shelf life, but that is very conservative to allow for mishandling. Under typical good conditions it will stay fresh for up to 50 days. But he feels it would be a mistake to date the tofu for 50 days and to use that as a selling tool, as Nasoya does. Azumaya has almost no problems with spoilage, puffing or souring. If there is a problem, the company investigates it. It is generally caused by a refrigeration problem, or letting the product stand for a long time in the back room, unrefrigerated, because people are too busy to get to it. Safeway now sells Azumaya tofu in Hawaii, at far below Hawaii tofu prices. On the East Coast Azumaya undersells Nasoya. Bill is too busy with Stir Fruity (tofu yogurt) to start a tofu plant on the East Coast.

The new Mori-Nu ad about water disaster and life

© Copyright Soyinfo Center 2014

preserver is incorrect in saying that water-pack tofu has a shelf life of "mere days."

Azumaya distributes Kikkoman aseptically packed tofu. He strongly prefers the flavor of his own product. Conclusion: FDA should have different temperature standards and "potentially hazardous" definitions for pasteurized and unpasteurized tofu. Azumaya and the Soyfoods Association should take the lead in educating FDA on these points. Address: President, Azumaya Inc., 1575 Burke Ave., San Francisco, California 94124. Phone: 415-285-8500.

9404. Mizono, Bill. 1989. The comeback of Stir Fruity soy yogurt (Interview). *SoyaScan Notes.* Sept. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bill is too busy with Stir Fruity to start a tofu plant on the East Coast of the USA. First Azumaya did a direct store delivery with Stir Fruity to prove that it was a good product. Lucky stores have just started this week ordering it through their warehouse. It will be in the Safeway system in several weeks. At Safeway it started in the produce section, but now dairy wants it back. Azumaya has their own trucks, which can also take tofu if a store wants it. They get more volume if they go direct, but they cannot service the product in the store because they are not a union shop. Jofu is now in Safeway, but (as Soyfoods Center taste tests also noticed) it is watery, because after it comes off refrigeration and rises above the temperature where it starts to break down, it will not re-set because of the gelatin solidifier it contains. Stir Fruity will re-set. Stir Fruity is dated for a 40-day shelf life, but under typical conditions it will stay fresh for 60 days. It contains potassium sorbate as a preservative. Its future looks very promising. Address: President, Azumaya Inc., 1575 Burke Ave., San Francisco, California 94124. Phone: 415-285-8500.

9405. *Guardian* (*England*). 1989. Nabisco sells off Del Monte to ease its debt burden. Sept. 26. p. 11.
• ***Summary:*** American food giant RJR Nabisco has just sold its worldwide Del Monte processed food operations for $1.5 billion. "Kikkoman will take over some of Del Monte's businesses in the Far East" [East Asia].

Note: RJR Nabisco, Inc., was an American conglomerate formed in 1985 by the merger of Nabisco Brands and R.J. Reynolds Tobacco Company. RJR Nabisco was purchased in 1988 by Kohlberg Kravis Roberts & Co. in the second largest leveraged buyout in history, adjusted for inflation (Source: Wikipedia, Sept. 2008).

9406. Channel 26. 1989. Tofu in Thailand. Television broadcast. Sept. 9. California.
• ***Summary:*** This Japanese documentary on Thailand shows a tribe in northern Thailand coagulating soymilk by simmering a plant or herb (named *yaukane* in the Japanese katakana transliteration) in water then using the resulting liquid as the coagulant. The curds are eaten as such rather than being pressed to make tofu.

Address: Kikkoman Foods Inc., P.O. Box 69, Walworth, Wisconsin 53184.

9413. Schwarz, Thomas L. 1989. Memorandum: Mori-Nu brand tofu is not a potentially hazardous food. Letter to Dennis L. Eastin, Regional Food Specialist, HFR-SW16, Oct. 4. 2 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** "Your memo of September 27, 1989 sought clarification of FDA's position regarding the storage temperature of Mori-Nu brand tofu." In the model code interpretations for "potentially hazardous food... five exceptions were delineated including: 'Foods that have been adequately commercially processed and remain in their unopened hermetically sealed container.' Mori-Nu brand tofu–soft, regular, and firm–are packaged using the Tetra Pak TBA-3 aseptic packaging system...

"A food Canning Establishment (FCE) number of 07905 has been assigned to the Morinaga Milk Industry Co., Ltd., 33-1, 5 Chome Shiba, Minato-Ku, Tokyo 108, Japan, which produces these products. Intact packages of Mori-Nu brand tofu, like other shelf-stable foods in hermetically sealed containers, are not potentially hazardous and do not require temperature control for safety. We know of no other tofu manufacturer currently using this technology and no other canned food process filing forms have been submitted for moist soy protein products." Address: Asst. Director for Program Development, FDA Center for Food Safety and Applied Nutrition, Retail Food Protection Branch, 200 C St., S.W., HFF-342, Washington, DC 20204. Phone: 202-485-0140.

9414. Lo, K.S. 1989. New developments with Vitasoy and Hong Kong Soya Bean Products Co. Ltd. (Interview). *SoyaScan Notes.* Oct. 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The main new development is the company's launch of what it calls the "American Version" of Vitasoy, a new formulation. It is sold throughout the United States.

The company has exported quite a lot of soymilk to China, but it was all made and packaged in Hong Kong. Earlier in 1989 they signed a joint venture project with the Guangming Overseas Chinese Farm, a dairy cooperative with whom they have been doing dairy farming, to build a factory right across the border to serve southeast China. They bought the land, had the ground leveled, and were about to put up the building when the Tiananmen Square massacre took place on 4 June 1989. So they put the project on hold and are waiting to see what happens now in China. If the political and financial environment improves, Lo hopes to have the project back on track within the next 1-2 years.

Also, they have been talking with one party in Beijing that is very interested. A letter of intent has been signed. Lo has visited 2 of the soymilk plants that the Chinese have imported from Japan. Both were sitting idle. Apparently the Chinese have never been taught how to use the equipment to make a proper soybean milk. Address: HKSBPC Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong. Phone: 5-528211.

9415. Morinaga Nutritional Foods. 1989. Tofu manufacturer contacts health departments nationwide to clarify aseptic packaging dilemma (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Oct. 6.
• ***Summary:*** "In an effort to keep supermarkets from inappropriately moving its product from the produce department, Morinaga Nutritional Foods Inc... has released an official statement to all U.S. health departments clarifying the difference between aseptic and water-packed tofu...

"'Most tofu in America is sold in produce 'wet racks' where oftentimes the temperature does not conform with the FDA requirements,' said Art Mio, national sales manager for Mori-Nu. 'We commend the action on the part of the state health department officials for cracking down on inadequately refrigerated water-pack tofu.'...

"Developed by Morinaga Nutritional Foods Inc. in 1972, the aseptic packaging technology of tofu is designed to combat spoilage and eliminate bacterial growth.

© Copyright Soyinfo Center 2014

Coincidentally, the concept of aseptic packaging was voted the top food/science innovation of the past 50 years by the Institute of Food Technology in 1989... According to Mio, Morinaga decided to inform all state health departments about the confusion between storage of aseptically packaged Mori-Nu and water-packed tofu after its product was removed from the produce section of Bell's supermarkets in Rochester, New York." Address: Los Angeles, California. Phone: 213-728-4325.

9416. Takai, Wataru. 1989. Re: Kyoto Tanpaku, a large Japanese tofu manufacturer from Osaka, will build a tofu plant in Indiana. Letter to William Shurtleff at Soyfoods Center, Oct. 9. 1 p.
• ***Summary:*** The company will use Takai equipment in the plant. The man in charge at the company is Mr. Hachijin.

Note: Luke Lukoskie has heard that this plant will cost $4.5 million to construct. Address: Takai Tofu & Soymilk Equipment Co., 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. Phone: 011-81-0762-48-1355.

9417. Ebner, Guenter. 1989. Re: Brief history of Sojarei Ebner-Prosl. Letter to William Shurtleff at Soyfoods Center, Oct. 17. Followed by two talks in May 1990. 1 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** "Our company was founded in 1984 in Baden and we started with 6 kinds of products. I had my first contact with tofu in Germany, where I learned the basic work in 1978 from a person named Axel in Frankfurt. The second contact was in Japan during 2 months of Zen training, and then a lot during the years before starting the company by trying all kinds of Tofu-products following your books and ideas.

"We now process 30 tonnes (metric tons) of soybeans (Austrian grown) each year. That is ten times more than we used during our first year, and we plan to increase 5-10 times during the next years... If you are in Austria, we invite you to visit us."

Accompanying this letter was a packet of information about the company including all labels (each with the month and year of introduction), color ads run in two Austrian magazines (Das Gruene Haus, and Natur und Gesundheit No. 8; the slogan reads: "Sojarei Ebner-Prosl, your specialist in fresh soyfoods, brings you fresh tofu daily"), and two catalog/price lists (one for food processors and one for retail stores) for Jan. 1989; products made by the company have been marked by the author with an "S." The retail catalog contains 20 fresh products, 3 books, and 30 non-fresh products. Details of the catalogs are given in a separate record. Address: Augasse 2, A-2500 Baden bei Wien (near Vienna), Austria. Phone: 02252/85101, 45505.

9418. Marrese, Anthony. 1989. Re: Soyfoods in France. Letter to William Shurtleff at Soyfoods Center, Oct. 28. 2 p. Handwritten. [Eng]
• ***Summary:*** The author conducted a soyfoods market study in France for William Shurtleff of Soyfoods Center, sending out forms which were filled out by 12 companies, visiting or interviewing 9 companies, and visiting 5 companies at the Diet Expo '89 held 21-23 Oct. 1989 in Paris. It seems like there are four types of companies working with soya in France:

1. Independents, both large and small, mainly in primary soymilk, tofu, or tempeh production, or in second generation burgers, smoked products, or desserts production, with either organic (biological) or non-organically grown products. Examples: Le Ferme du Jas, Innoval/Sojalpe, Société Soy, Le Bol en Bois / Tama / Daizou, La Maison du Tofu, Les 7 Marches, Boulangerie Artisinale des Maures, Odile Corbel & Dan Ludington [named Gaia Enterprises by Feb. 1992], Communauté de la Lix (United Macrobiotic Company), Tofu Kuehn.

2. Non-Independents owned by large companies or agricultural co-ops: Gerblé, Bonneterre / Triballat, Sojadoc, Cacoja (C.A.C.), Renaitre.

3. Bean or cereal (agricultural) companies: Celnat.

4. Specialty manufacturers for the Asian-European (Japanese, Chinese, Korean, etc.) markets: Yamato.

"I had some very good talks with Bernard Storup of Société Soy, the Bol en Bois people, Celnat, Bonneterre, Gerblé and others. In general the market and usage seem to be going nowhere but up and it is still in the very early stages of 'real consumer' type foods, not just health store specialties. Some French soybeans are used but a lot are imported... Real quantity information is not available since it is changing so fast (mainly in an upward direction and mostly with secondary processed products which use tofu or soya in them)." Address: c/o Terre Nouvelle, Eourres, 26560 Séderon, France. Phone: 92.65.10.95.

9419. Belleme, John. 1989. Natural soy sauce: A brewing controversy. Part II. *Solstice* No. 37. p. 25-26, 28-30. Sept/Oct. [1 ref]
• ***Summary:*** Discusses the differences between HVP unfermented soy sauce (such as La Choy, Chun King, and Kame) and fermented soy sauce, then between modern high-tech fermented soy sauce (such as that made by Kikkoman from hexane defatted soybean meal and fermented for less than 7 months in fiber glass or stainless steel temperature controlled tanks) and "traditionally brewed" soy sauce (such as the macrobiotic brands "made from whole soybeans and aged in wood for at least 4 seasons at the natural temperature of the region"). Manufacturers of modern-high tech soy sauce often refer to their product as naturally brewed to distinguish it from "synthetic" HVP sauces. Now Kikkoman and San-J have succeeded in placing their high-tech products in some natural foods stores. Belleme discusses the objections that can be raised against these

© Copyright Soyinfo Center 2014

products: (1) Substitution of hexane defatted soy meal for whole soybeans. "The FDA and solvent extraction industry have set acceptable limits for hexane in soy meal at 25 parts per million (ppm)." San-J and Kikkoman assert that their products test negative for hexane residues. "San-J brewmaster Yuji Yamamoto said that using soy meal rather than whole soy beans is more efficient because fermentation is faster, nitrogen yields are higher, and there is no crude soy oil to dispense with, as in whole soy bean soy sauce." Belleme thinks that this oil can be used for soap. Because of the greater efficiency, soy meal soy sauce can be produced and sold less expensively than whole bean soy sauce.

(2) Heated non-wood vats. "San-J brewmaster Yamamoto says that their closed heated system is easier to clean, more efficient, and produces a clearer, milder, and better balanced soy sauce than the traditional method." Jubei Sasaki of Sendai Shoyu Co. disagrees, arguing that the effect of seasonal changes and the wooden vats improve the shoyu flavor. Wooden vats may also give a product with more vitamin B-12.

"Although whole soybeans are always proudly listed as such, soy meal is usually referred to as 'soybeans.' Ironically, San-J's black label soy meal tamari says 'traditionally brewed,' and makes no mention of defatted soybeans, thus making it difficult for the consumer to make an informed choice." Address: P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

9420. Belleme, John. 1989. Snow-dried tofu: The original convenience food offers flavor an nutrition. *East West.* Oct. p. 30-32.
• ***Summary:*** Each winter, high in the mountains of central Japan, Aki Takagi's small family is busy making snow-dried tofu [dried frozen tofu] for the world's natural foods stores.

Note. This is the earliest English-language document seen (April 2013) that uses the term "snow-dried tofu" to refer to traditionally-made dried-frozen tofu. Address: P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

9421. **Product Name:** Tofu Burgers, Teriyaki Burgers, Miso Burgers, Tofu Nuggets [Plain, or Barbeque].
Manufacturer's Name: La Soyarie.
Manufacturer's Address: 25 rue St. Etienee, Hull, QUE, J8X 1H5, Canada. Phone: 613-235-5356.
Date of Introduction: 1989 October.
Ingredients: Incl. tofu, soy sauce.
How Stored: Refrigerated.
New Product–Documentation: Soya Bluebook. 1989. p. 102-03. Contact: Koichi Watanabe, President.

SoyaCow Newsletter. 1994. July/Sept. Mr. Koichi Watanabe is president of La Soyarie in Hull, Quebec.

9422. Lima N.V. 1989. Lima: Tarif détaillant [Lima Foods catalog and price list]. Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium. 9 p. [Fre]
• ***Summary:*** This macrobiotic food catalog was bound into the back of the Bonneterre catalog at a 1989 food expo in Paris. Lima sells the following soyfoods, each proceeded by its product category: Fresh products: Skewered seitan/tofu, Presto natural tofu, Presto tofu legumes/vegetables, Presto tofu cheese. Legumes: Yellow soybeans. Sprouts: Green soy/mung (500 gm or 5 kg). Flours: Roasted soy flour. Vegetarian preparations: Lima soy sauce (500 ml or 1 liter), tofu, natural tempeh, tempeh with shoyu. Dressings: Salad dressing with soy and tomato, Salad dressing with soya herb. Specialties: Organic miso (1 month), Hatcho miso, Barley miso (organic or regular), Rice miso (organic or regular), Heiwa brand Instant miso soup (regular or red, From Japan), Tamari (250 ml, 1 liter, 18 liters), Mansan Tamari from Japan, Shoyu (250 ml, 1 liter, 18 liters), Sakai shoyu from Japan. They also carry one book titled "Tofu dans le Cuisine Macrobiotique" (Eddie Hara, 1982).

Accompanying the catalog is a packet of individual full-color sheets with of photos of products in a folder titled Lima: Quality is our passion." There are sheets titled "Vegetable products rich in protein," "Tamari and shoyu," "Japanese specialties (incl. Heiwa brand shoyu and tamari), and a brochure titled "Lima: 30 years as a producer of organically grown (biological) foods." It describes the life and work of Edgar Gevaert (poet, artist-painter, ecologist, and a leader of the European peace movement). Address: Sint-Martens-Latem, Belgium.

9423. Mogi, Yuzaburo. 1989. The new yippies. *Look Japan* (*Tokyo*). Oct. p. 14-16.
• ***Summary:*** In this section on "Economy: Overseas investment," Prof. Shôichi Rôyama interviews Yûzaburo Mogi, Executive Managing Director of Kikkoman Corp. Born in 1935, he graduated from Keio University, then rejoined Kikkoman. In 1961 he earned his MBA from Columbia University in New York City. His publications include *How to Make an Overseas Plant* and *Introduction to International Business.* Mogi is an excellent example of a Japanese business leader who thinks big, who sees the big picture, and realizes that the actions of each Japanese company or person overseas can affect all the others. Thus, the need to develop standards of good behavior on various levels.

Mogi is now chairman of the Association of Overseas Organizations of Japan's Committee on the Development of Internationally-Oriented Personnel, and a key figure in the development of the recently released "Frictionless International Strategy." Mogi believes the Japanese corporations with overseas operations need to become internationalized and globally oriented. Employees sent overseas need to learn the local language, become friends and work well with their local colleagues, and make

© Copyright Soyinfo Center 2014

contributions to the local community. Returnees and their children should be treated better when they return to Japan–in an effort to minimize international friction.

Corporations should try to localize management and to see themselves "as an integral part of and dependent on the local community. The most important part of localization is having dealings with local corporations. Assuming all other factors are equal, local corporations should be favored over Japanese corporations. And among local corporations, emphasis should be placed on those closest to your plant and the community you are in"–to minimize investment friction. All Japanese companies should work together to minimize international friction trade friction. A photo shows Yûzaburo Mogi.

9424. Nakamura, Hiroshi; Takasawa, M.; Kashara, S.; et al. 1989. Effects of acute protein loads of different sources on renal function of patients with diabetic nephropathy. *Tohoku J. of Experimental Medicine* 159(2):153-62. Oct. [27 ref]
• ***Summary:*** Discusses glomerular filtration rate (GFR), albumin excretion rate (AER), and concentrations of plasma amino acids. "In diabetes with macroalbuminuria, GFR decreased after ingestion of tuna fish meal and did not significantly change after intake of bean curd. In both normal subjects and diabetic patients, urinary AER did not increase after each kind of protein loading. Plasma concentrations of alanine, glycine, and arginine, known to induce glomerular hyperfiltration, increased to a greater degree after ingestion of tuna fish meal than after administration of bean curd." Address: First Dep. of Internal Medicine, Niigata Univ. School of Medicine, Japan.

9425. NHK of Japan. 1989. [Japanese researchers discover that cancer patients have high levels of nitrosamines in their genes]. Television broadcast. Oct. 23. Evening news. [Jap]
• ***Summary:*** Medical researchers from Tokyo University announced experimental results showing that cancer patients have 5 to 10 times as much nitrosamines in their genes as healthy patients. Nitrosamines, known as carcinogens for some time, are thought to cause mutations, which can cause cancer. This may be a key discovery in cancer research.

Note: Four records in the SoyaScan database list nitrosamines, all in connection with soy sauce, and all as known carcinogens.

9426. Levey, Robert. 1989. Japanese restaurant better than ever. *Boston Globe.* Nov. 2. p. 4.
• ***Summary:*** A review of the Japanese restaurant Roka on Massachusetts Ave. near Harvard Square. "You may meander around on the appetizer menu with some satisfying results. Under the 'offbeat category,' consider the edamame, a bowl of Japanese green soy beans blanched in salted water and served cool. You pick up the whole pod, squeeze out the round soy beans and munch them like a party snack."

A salmon entree with teriyaki sauce was also served, as was grilled eel seasoned with a "traditional slightly sweet, thickened soy sauce..." Address: Globe staff.

9427. Robinson, Dick. 1989. Japanese firm seeking site for food plant. *Tribune-Star* (*Terre Haute, Indiana*) 7(173):1. Nov. 4.
• ***Summary:*** Representatives of a specialty food firm (Kyoto Foods, whose name is not mentioned in the article), will be in Terre Haute next week "to start what could be the final negotiations for a new manufacturing plant for Vigo County, a source close to the situation said.

"The company is seeking a site to manufacture tofu, a creamy white food made from soybean flour [sic] and used in Oriental cooking...

"The source said the upcoming negotiations could finalize more than five years of planning that have gone into getting the project to its current status. It has been five years of ups and downs, 'a real roller coaster,' the source said.

"The major principals in the company are Japanese from the area of Tajimi and Kyoto. The relationship between Terre Haute citizens and that part of Japan date back 25 years to the time when the city and Tajimi became sister cities...

"The ties are especially strong between William and Toni Roach of West Terre Haute and Juichi Iida and his wife. Iida is a Japanese businessman.

"When Iida's son came here to study at Indiana University, the Roach family looked after the youth...

"If Vigo County is selected as the plant site, it would become the center for a sales area with a 300-mile radius. The marketing area would include cities such as St. Louis [Missouri], Louisville [Kentucky], Indianapolis [Indiana], Columbus, Ohio, and Chicago [Illinois]."

9428. Reed, M.H. 1989. Sushi and starters featured in Harrison. *New York Times.* Nov. 5. p. WC41.
• ***Summary:*** This is a review of the Japanese restaurant Momiji (261 Halstead Ave., south of the railroad station, Harrison, Westchester County, New York).

Dishes included: "Agedashi-tofu, golden cubes of bean curd moistened by a thin, somewhat sweet dipping sauce sprinkled with green onion.

"Skillfully made, firm tofu-dengaku brought small bars of grilled bean curd on sticks; the intense miso (fermented bean paste) toppings slathered on the bean curd gave the dish the seasoning it needed, but we found the concentrated miso somewhat salty."

9429. Morinaga Nutritional Foods. 1989. Morinaga Nutritional Foods appoints World Variety Produce as its chief distributor for Mori-Nu Tofu (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Nov. 8.
• ***Summary:*** "Morinaga Nutritional Foods, makers of the only aseptically packaged tofu, has appointed Los Angeles-

© Copyright Soyinfo Center 2014

based World Variety Produce Inc. to coordinate its national distribution.

"World Variety Produce, one of the largest wholesalers of exotic and unusual produce items, are experts in the area of specialty fruits and vegetables...

"'Due to recent health inspector scrutiny of improper refrigeration temperatures for water-pack tofu in produce departments, Mori-Nu has become the tofu of choice for many produce buyers who prefer its convenience and guaranteed quality,' said Joe Hernandez, president of World Variety." Address: Los Angeles, California.

9430. Frey, Harry. 1989. Kyoto Food Corporation, U.S.A. (News release). Administrative Asst., City of Terre Haute, 103 City Hall, 17 Harding Ave., Terre Haute, IN 47807. 1 p. Nov. 10.
• ***Summary:*** This news release was issued by the city of Terre Haute. See published story in Nov. 11 *Star-Tribune* (Terre Haute, Indiana). Address: Terre Haute, Indiana.

9431. Mio, Art. 1989. Recent developments at Morinaga (Interview). *SoyaScan Notes.* Nov. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Zurkoff, a Morinaga food broker in the Milwaukee area, was in communication with the State of Wisconsin Dep. of Agriculture, Trade & Consumer Protection as early as May 1986 concerning the bacterial condition and handling of tofu. Art thinks that there are very few stores in the state of Wisconsin that still carry water-packed tofu in the produce section, but that might have happened 2 years ago. Wisconsin was one of the earlier states to take action on this point, as was Illinois.

Morinaga's "Water Hazard" ad did run for 1-2 months in natural/health food trade magazines starting in about Oct. 1989. It probably ran in *Natural Foods Merchandiser,* and others. Now they have dropped that ad for various reasons: (1) They want to announce their new extra firm tofu; (2) They got a lot of "flack" and ill will from others in the tofu industry, and they didn't want to ruffle any more feathers; (3) Azumaya threatened a lawsuit. Morinaga feels they would win such a suit if it should ever got to court, based on "generalities rather than specifics." Address: Morinaga Nutritional Foods Inc., 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9432. Robinson, Dick. 1989. Japanese firm announces plans for local food plant. *Tribune-Star* (*Terre Haute, Indiana*) 7(180):1. Nov. 11.
• ***Summary:*** "Kyoto Food Corp. USA announced plans Friday to build a production plant in Terre Haute for tofu, a food product made from soybeans. Construction on the $4.5 million plant is slated to begin early in 1990.

"Kyoto Food's five primary investors, Kiyoyaki Hirono, Yoshamasa [Yoshimasa] Yamashita, Yasuo Hatchijin [Hachijin, of Kyoto Tanpaku in Fushimi-ku, Kyoto, Japan] and Wataru Takai of Kyoto, Japan, and Juichi Iida of Tajimi, Japan, announced the planned project at a news conference in the Vigo County Annex and Security Center.

"The 25,000-square-foot plant will be on a 25-acre tract along Johnson Avenue between U.S. 41 and Indiana 63, south of the city. The company will buy the land from Morgan's Honey Creek Commercial Properties.

"The plant, which will be able to produce 2.5 tons of tofu daily, is expected to start with 30 to 50 employees and increase to 100 during the first year.

"The plan is to produce the product in 1-pound packages. The firm's marketing area will be in a 300-mile radius of Terre Haute...

"Plans for the tofu plant are an outgrowth of the 25-year-old sister-city relationship between Terre Haute and Tajimi, said Mayor P. Pete Chalos.

"The company will be an Indiana corporation and not a subsidiary of any other firm. The other four investors are reported to be presidents of medium-size companies in Japan.

"Yamashita will serve as president of the company and move to Terre Haute... After the plant is operating, Yamashita may be the only Japanese employee at the plant. When production begins, the operation is expected to have practically all American personnel...

"The plant is expected each day to use a ton of soybeans provided by area farmers... Tofu is reported to be the world's No. 1 health food."

Note: This is the earliest document seen (March 2013) concerning Kyoto Food Corp. in the USA.

9433. Dickinson, Donald W. 1989. Re: A company named Azumaya cannot be located in San Francisco from 1920 to 1937. Questions answered on Soyfoods Center letterhead (dated 10 Nov. 1989) and returned to SC, Nov. 20. 1 p. Stamped with signature.
• ***Summary:*** On 10 Nov. 1989, after a preliminary call, William Shurtleff wrote the County Clerk requesting that he search San Francisco's fictitious names records for businesses, and the business license records for the years 1920-1923 to try to locate a company named Azumaya, probably owned by a Mr. Teranishi. Shurtleff enclosed the required $18.50 in fees. The clerk searched the indexes of the records from 1920 to 1937 wrote back that he could find no mention of Azumaya.

Attached are: (1) Stamped envelope from County Clerk. (2) Receipt. Address: County Clerk, Superior Court, 400 Van Ness Ave., Room 317, San Francisco, California 94102.

9434. Kikkoman Oriental cooking. 1989. Publications International Ltd., 7373 North Cicero Ave., Lincolnwood, IL 60646. 96 p. Illust. Index. 28 cm.
• ***Summary:*** This full-color cookbook features 125 recipes

© Copyright Soyinfo Center 2014

using Kikkoman's full line of Oriental sauces. The book was published in two formats. The first was a small magazine format published in Jan. 1989, for sale at supermarkets during Chinese New Year. The second, published in Nov. 1989, was a larger size (28 cm tall), spiral bound on glossy paper with many color photos, for sale at bookstores. Both were 96 pages. Kikkoman supplied all the recipes.

Contents: Kikkoman brings the Orient home. Appetizers. Beef. Pork. Poultry. Seafood. Side dishes.

A color photo shows the following products, and they are used with their brand names in the recipes: Kikkoman Soy Sauce, Lite Soy Sauce, Teriyaki Sauce, Teriyaki Baste & Glaze, Stir-Fry Sauce, and Sweet & Sour Sauce. Tofu is used in one recipe (p. 46).

9435. Morinaga Nutritional Foods, Inc. 1989. Lessons in tofu (Leaflet). Los Angeles, California. 4 panels each side. Each panel: 22 x 9 cm.

• ***Summary:*** This 8-panel full-color leaflet shows the three types of Mori-Nu tofu stacked one atop the other on the front. It contains 4 lessons about tofu, a $0.15 coupon for the tofu, an order form for a 1-year membership in the Health for Life Club, Tofu Magic Cookbook, and Tofu Magic VHS Video (30 min, 6 recipes). On the back are five recipes: Piña colada. Strawberry banana shake. Zesty cilantro, chili, pea dip. Tofu rice stir fry. Creamy tomato onion soup. Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9436. News Weekly. 1989. [Edible paper made from okara in Japan]. Television broadcast. Channel 26. California. Nov. 3. 4 minutes. [Jap; eng+]

• ***Summary:*** In Japan, according to statistics from the Ministry of Agriculture, Forestry & Fisheries (*Norinsho*), 700,000 tons of okara are produced each year. It has become a major environmental pollutant. Dr. Sakai Mitsuro of the Sakai Rikagaku Kenkyusho (Sakai Physics and Chemistry Research Institute, Imadate-cho, Fukui prefecture, Japan) explains and shows how he has developed an edible paper made from okara. First the okara is mixed with water. Two enzymes are added, one to hydrolyze fat and one for protein. Then "kansho-eki" is added to stabilize the process. The mixture is kept at 40ºC for 5-6 hours, then strained. The resulting fibers are dried, reimmersed in water with a binder (such as glutinous yam, yama-imo), and refiltered. The resultant film is then ironed to form a thin paper-like substance. Its main use will be as the soluble wrapper for the soup stock in cup noodles, replacing the small plastic bag currently used. This saves the consumer the trouble of having to open the bag before eating the noodles, and also saves plastic pollution. When hot water is added to the noodles, the paper dissolves. The okara paper can also be used to make capsules for drugs or nutritional supplements, or in biotechnology applications. The research institute has received 500-600 enquiries from interested people and organizations.

9437. Shurtleff, William; Aoyagi, Akiko. 1989. Tofu as a potentially hazardous food: Crisis or opportunity? Lafayette, California: Soyfoods Center. 67 p. Nov. 16. Index. 28 cm. [54 ref]

• ***Summary:*** Introduction and historical perspective. Major changes loom on the horizon for the tofu industry throughout the Western world. Consider the following facts:

* The U.S. Food and Drug Administration has classified tofu (both fresh and pasteurized tofu) as a "Potentially Hazardous Food."

* Every "Potentially Hazardous Food" must be kept refrigerated at 45ºF (7.2ºC) or below in food stores, restaurants, and vending operations.

* Roughly 90% of the tofu in America is sold in the produce section, where FDA estimates the average temperature to be about 50ºF (10ºC).

* Therefore most of the tofu in America is now sold in violation of federal and state laws governing potentially hazardous foods.

* Attempts to demonstrate to FDA that pasteurized tofu is a safe product with a long shelf life completely miss the point and would be a waste of time and money, according to FDA.

* The FDA person who drafted the original document classifying tofu as a potentially hazardous food thinks "there is a good chance within the next year or two that there will be a crackdown, and that most or all fresh and pasteurized tofu will be moved out of the produce case.

Question 1. Should the removal of tofu from the produce case to a colder location be viewed by the tofu industry as a setback or an opportunity? Question 2. Will the tofu industry be smart enough to turn a short term setback into a long-term gain? Question 3. All things considered, where is the best place for tofu to be sold? (1) In the dairy/deli case between the yogurts and cheeses, and the sliced meats? (2) In a special refrigerated case, built like a dairy case but marked "Tofu" or "Cholesterol-Free Protein Foods"? (3) In a special refrigerated enclosed glass case with other natural foods such as juices? (4) In the meat case next to the hamburger (and perhaps the hamburger / tofu blends, and the meat & tofu hot dogs and sausages)?

Since its invention more than 1,000 years ago, tofu, a moist protein food, has always offered an excellent substrate for multiplication of bacteria.

The earliest document seen (Jan. 2002) reflecting this concern, titled "Ptomaine poisoning from tofu," dates from 1892 in Japan. In 1953 in Japan the first general microbiological study was published, with counts of coli bacteria in winter and summer. And in 1958 the first book on tofu sanitation was published, also in Japan.

In the Western world, the first scientific study on the

© Copyright Soyinfo Center 2014

microbiological quality of tofu was published in 1977 at the University of Hawaii. It showed that as tofu spoiled and soured, the optical density (cloudiness) of the surrounding water increased.

Prior to January 1982, all this was of minor interest to the U.S. Food and Drug Administration (FDA), and tofu was still a relatively unknown product. But in that month there was an outbreak of yersiniosis (caused by the bacterium *Yersinia enterocolitica* in tofu) in the state of Washington. About 24 people were affected with diarrhea and severe stomach cramps; half were hospitalized. This was the earliest known outbreak of tofu-caused illness in the USA.

The Seattle branch of the FDA did a careful study of this increasingly popular moist protein foods and on 23 May 1984 classified it (like milk, meat, poultry, fish, etc.) as a "potentially hazardous food" which must be stored at 45ºF or below.

But only a few state health departments or supermarket chains paid much attention, and moved tofu out of the produce case to a colder location. Exceptions were some Safeway divisions on the West Coast, and the states of Wisconsin, Illinois, and eventually New York.

Meanwhile, other scientific studies of the microbiological quality of tofu (e.g. Hankin & Hanna 1983; Rehberger, Wilson & Glatz 1984; van Kooij & de Boer 1985) all showed many brands to have unacceptably high bacterial counts. Some of these (such as Hankin & Hanna, published in Connecticut in March 1983) got widespread negative media coverage, forcing tofu makers to become much more conscious of sanitation. It is interesting that the issue of tofu as a "potentially hazardous food" was not raised in these studies or the ensuing media coverage. In part because of that, most tofu continued to be sold in the produce section; some larger manufacturers responded by starting to pasteurize their tofu. But basically, business continued as usual.

Then in early 1987, health inspectors in Wisconsin pulled Mori-Nu Tofu out of several stores there, saying that it had to be stored at 45ºF or below. In February, Morinaga Nutritional Foods in Los Angeles, the importer and marketer of this aseptically packed tofu, responded with documents showing that their product, because it was aseptically packaged and had an FCE (Food Canning Establishment) number, was exempt from this temperature requirement. During the ensuing exchange of letters with the FDA in Washington, DC, Morinaga first learned (on 3 March 1987) that the FDA had classified tofu as a "potentially hazardous food" which had to be refrigerated at 45ºF or below. The documents show that Morinaga's only concern at that time was to get their product back into the stores. But Morinaga began to realize that, quite by accident, they had stumbled upon a powerful tool for expanding their market share–one of which most of the tofu industry was completely unaware. Yet they decided not to use it for awhile.

During 1988 Morinaga conducted a two-pronged marketing program. On the one hand, they ran the most extensive, positive advertising campaign ever conducted for tofu in America Full-page color ads such as "Lessons in tofu," "Shake up profits!," and "A healthy market" ran all year in numerous national magazines. On the other they began to confront water-packed tofu, promoting their product as having a longer shelf life and less spoilage.

In mid-1989 health inspectors in New York erroneously began to remove Mori-Nu Tofu from produce cases. To try to prevent that from happening nationwide, Morinaga began a campaign in mid-July to write a letter to the health departments in each of the 48 continental states reminding them that tofu had been classified by the FDA as a "potentially hazardous food," and that all water-packed tofu therefore had to be refrigerated at 45ºF or below. Aseptically packaged Mori-Nu Tofu did not require such refrigeration. This part was preemptive. But now Morinaga took the offensive: "We have been informed of recent efforts on the part of the health department officials to inspect and cite stores that are not conforming to the FDA Model Food Sanitation Code regarding water-packed tofu (soybean curd). We commend this action... We know of some instances where water-packed tofu was ordered relocated to dairy or deli cases due to the inability of produce department refrigeration units to maintain temperatures with the FDA guidelines."

Morinaga's campaign of letter writing and phone calls prompted the FDA, and state and local health officials to start enforcing federal and state regulations concerning tofu as a potentially hazardous food, which was required by law to be stored at 45ºF or below.

At the same time, Morinaga appealed to supermarkets and natural/health food stores (using their strongly worded "Water Hazard" ad in trade publications, plus their sales representatives) to carry their aseptic tofu, which could be legally stored in the produce section and which (being pre-dated with a "best used by" date of 10 months) would not cause any problems with souring or spoilage, with returns or "shrink," or with leakage.

A separate campaign of news releases to the popular media attributed the sour, bad-taste image of water-packed tofu to the traditional way of making and packaging it, plus the fact that it was usually stored, inadequately refrigerated, in produce departments.

By late 1989 Morinaga's campaign seemed to be working. In Wisconsin, most (if not all) water packed tofu had been moved out of the produce case; Mori-Nu Tofu had taken its place there. A number of chains nationwide were also relocating their tofu. But where would they put it?

And how should the tofu manufacturers whose tofu was being relocated respond? Should they welcome the change or try to fight it?

This book attempts to study and answer these difficult

© Copyright Soyinfo Center 2014

questions, which are crucial ones for the survival and growth of the tofu industry. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

9438. *Geschaeftsidee* (*Die*)**.** 1989. Tofu-Herstellung: Unternehmenskonzept Nr. 164 [Tofu production: Enterprise idea no. 164]. 14(6):4, 25-54. Dec. 5. [4 ref. Ger]
• ***Summary:*** An in-depth look at the German tofu industry and the economics of tofu production, encouraging entrepreneurs to start their own tofu shops. According to a study by Dr. Ulrich Hamm from the University of Stuttgart-Hohenheim, use of tofu in West Germany is expected to reach 4,000 tonnes/year by 1992. In 1986 it was only 800 tons. The industry has grown greatly in the past 4 years. There are presently 25 manufacturers (often called Tofureien) in the country and they make 200 to 4,000 kg/week of the healthful food, which they sell for 5-18 DM/kg at natural food stores (Naturkostläden), Reform Houses (*Reformhäuser* and *Bioläden*), vegetarian- and even popular restaurants. Larger business have gross monthly income of 90,000 DM of which 40% may be profit. Minimum startup capital is 2,000 DM, and average is 50,000 DM. A history is given of Ruediger Urban, who started W. Germany's first tofu shop in 1979, cooking with firewood. He now runs a much larger tofu shop in Denning, a suburb of Munich, near the airport.

Klaus Gaiser (with photo and interview), a former student of Sinology and Japanology, started Yamato Tofuhaus in 1983 in Tuebingen, making about 150 kg/week. He learned to make tofu in Japan, where he lived for a year. He now makes 3.5 tonnes/week of tofu (up 35% during the past year) and is West Germany's most successful company.

Albert Hess began to make tofu in 1983, starting with a DM 2,000 investment. He now makes 1.5 tonnes/week of tofu. A brief sketch of numerous other companies, their histories and owners, and their present tofu output is given. Company names are given sporadically, without addresses.

Photos show: (1) Klaus Gaiser. (2) Dr. Ulrich Hamm. (3) A "Vollwert Restaurant / Cafe." (4) Rüdiger Urban. (5) The front of Taifun Tofurei. (6) Lothar Stassen holding a bag of soybeans. Address: Bonn, West Germany.

9439. Oka, Seizo. 1989. Early history of Azumaya (Interview). *SoyaScan Notes***.** Dec. 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** According to: Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan* (*Directory of Japanese in the USA***.** p. 50-51; also called the *New World Directory*) a company named Azumaya Shoten was located at 1636 Post Street in San Francisco. They made Japanese-style pickles, and also sold vegetables and other foodstuffs.

Mr. Oka notes that "Azuma" (written with a different character?) is the old Japanese name for the Kanto area of eastern Japan. According to a legend, the warrior? Yamato Takero no Mikoto went to conquer this wild area. But after a while he got homesick and longed for his wife saying "A tsuma" (Oh, my wife). From this expression the area became known as Azuma.

Mr. Oka and William Shurtleff talked with Mrs. Kazue Teranishi who lives in Hinode Tower, San Francisco (phone: 567-8636). She came to America in 1932 and that same year she married Kôichi Teranishi in 1932. Right after the marriage he took over ownership of Azumaya, a company which had been run by his father, Eijiro Teranishi, and which she believes Eijiro founded in Stockton 5-6 years prior to the marriage, i.e. in about 1926-27. She thinks that Eijiro first made tofu at this company in Stockton, then decided to move the company to San Francisco. She had never heard about Azumaya or Eijiro being located in Oakland–but she is not sure about anything that happened before 1932.

Mr. Oka, whose lifelong work is writing a history of Japanese in America, has not been able to find any reference to Azumaya in Stockton. According to the 1922 Shin Sekai Directory of Japanese in the USA (p. 409) there were two tofu companies in Stockton, Eto Tofu-ten and Yonekura Tofu-ten.

Mr. Teranishi sold Azumaya to Mr. Francis Sueji Sakamaki. Francis was born in Matsumoto-shi, Nagano prefecture, Japan. His name at birth was Sueji Kusama. Just before coming to the USA, Sueji was baptized as a Catholic and given his Christian name, Francis. He was adopted by Kôsa Sakamaki, who was from Tsu-shi, Mie prefecture, Japan. Kôsa had arrived in the USA before 1900 and was well known as the "Alaska Boss," since he recruited Japanese to work in the Alaska salmon cannery. Francis had 4 children: Joseph Koji Sakamaki, Marie Sakamaki, Stephen Motoji Sakamaki, and Timothy Masaji Sakamaki. Francis later took over his father's recruiting business. But since the Alaska salmon canning business was strongly seasonal, Francis wanted another side business. So he bought Azumaya from Kôichi Teranishi in about 1935. However he found that tofu making was tough work so he sold the business in about 1936 or 1937 to Saichi Mizono, who bought it for his son, George.

The 1922 Shin Sekai-sha directory (p. 19?) shows that Mr. Saichi Mizono was a native of Kannon Mura, Saeki-gun, Hiroshima-ken, Japan. He arrived in the USA in 1896. For 5 years he ran a farm. Where? In 1912 (Taisho 1) he started a cleaning and dying company? (*sensen-sho*) in San Francisco? He returned to Japan temporarily, then came back to the USA in 1915. In 1922 his family consisted of his wife, Matsuyo, his first son Akira (George), his second son Kiyoshi (Jack), and his first daughter Shizuko. Address: Head and Founder, History Room, Japanese Cultural and Community Center, 1840 Sutter St. #206, San Francisco, California 94115. Phone: 415-921-1485.

9440. Oka, Seizo. 1989. Early Japanese tofu production in

© Copyright Soyinfo Center 2014

America (Interview). *SoyaScan Notes.* Dec. 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In the early 1900s, most of the tofu in America was made by the Chinese. The Japanese bought it from them. However when the Japanese started communities in rural areas where there were no Chinese, they started their own tofu companies. Those who did make tofu usually did it as a side business. Thus many early Japanese tofu manufacturers may not have had a company name associated with their activity. The Hayashi and Oye tofu making operations may not have had company names when they started.

It is the Japanese way to refine things, making them more delicate. They did this with Chinese chopsticks and with tofu, making it softer. Some of America's early tofu was probably made by Japanese restaurants. Address: Head and Founder, History Room, Japanese Cultural and Community Center, 1840 Sutter St. #206, San Francisco, California 94115. Phone: 415-921-1485.

9441. Morinaga Nutritional Foods. 1989. Mori-Nu Tofu successfully sponsors the first-ever World Cup of Natural Bodybuilding (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Dec. 6.
• ***Summary:*** "Top male and female bodybuilders from across the country recently competed in the first-ever Mori-Nu Tofu World Cup of Natural Bodybuilding, a steroid-free invitational meet held in Redondo Beach, California...

"'These athletes are dedicated to bodybuilding without using anything artificial,' said Art Mio, national sales manager for Mori-Nu Tofu... Mori-Nu Tofu provided free all-natural fruit shakes made with strawberries, bananas and tofu to the event's spectators and participants. According to Mio, tofu is very popular with bodybuilders because it is a rich source of protein, which is very low in saturated fats, sodium and calories with zero cholesterol. He added that tofu is an excellent addition for anyone wanting to eat healthy." Address: Los Angeles, California. Phone: 213-728-4325.

9442. *Tribune-Star* (*Terre Haute, Indiana*). 1989. Morgans sell land for tofu facility. Dec. 10.
• ***Summary:*** "Fred and Jo Ellen Morgan on Wednesday signed a deed transferring ownership of Morgan's Honey Creek Commercial Park, along Johnson Avenue, to Kyoto Food Group of Japan. Kyoto has announced it will construct a tofu manufacturing facility on the property. The company acquired 25 of the 27 acres in the tract, once a commercial tree farm, located between U.S. 41 and Indiana 63, Morgan said. The buyers originally only wanted four acres, but after seeing the great number of trees on the tract the decision was made to purchase all the available land, he said.

"Kyoto did not purchase the two acres belonging to Tim Morgan, which is the site of his feed business. The feed business will continue its operation, Morgan said. The Morgans spent 18 months developing the area for commercial use... The property has numerous evergreens, oak and white birch trees."

9443. Morinaga Nutritional Foods. 1989. TEAMM House drug rehabilitation center receives $10,000 donation from Mori-Nu Tofu (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Dec. 13.
• ***Summary:*** "Actor/political activist Martin Sheen recently accepted a $10,000 donation from Los Angeles-based Mori-Nu Tofu on behalf of TEAMM House, a Malibu-California-based non-profit organization dedicated to helping drug and alcohol abusing adolescents free their lives of chemical dependencies.

"Sheen accepted the check at the Mori-Nu Tofu World Cup of Natural Bodybuilding, an invitational drug-free athletic event held in Redondo Beach, Calif." Address: Los Angeles, California. Phone: 213-728-4325.

9444. *Produce News* (*Fort Lee, New Jersey*). 1989. Mori-Nu sponsors competition. Dec. 16.
• ***Summary:*** Mori-Nu has sponsored the World Cup of Natural Bodybuilding. The photo above the article shows a lovely, well-muscled, bosomy lady in a scant two-piece swimsuit flanked by two men in suits humorously flexing their muscles. The caption reads: "Actor Martin Sheen (left) shows his best bodybuilding stance alongside Marcia Levine, star of Gold Gym's Personal Trainer Video Series, and Yasuo Kumoda, executive vice president of Mori-Nu, at the recent Mori-Nu Tofu World Cup of Natural Bodybuilding." For details, see Morinaga news release (12/89).

9445. *Ag Biotechnology News.* 1989. Better soybean planned at new tofu center. Dec.
• ***Summary:*** "Scientists at a new research center at Purdue University are trying to breed a better quality and better tasting soybean in making tofu for the Orient and to make no-cholesterol tofu more palatable for U.S. consumers.

"Researchers will work directly with the Japanese sponsor of the center, Mitsubishi International Corp. Geneticist Niels Nielsen said removal of the beany taste may promote better acceptance of tofu in the U.S. and of U.S. soybeans in the Orient.

"The Purdue Research Foundation holds a patent on a less-beany tasting experimental variety developed by Nielsen. About 5,000 acres of the new bean are being grown this year by Indiana growers under contract with Central Soya Inc." Address: Cedar Falls, Iowa.

9446. Morinaga Nutritional Foods. 1989. Yasuo Kumoda, vice president, general manager (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 1 p. Undated.
• ***Summary:*** "Kumoda supervised the opening Morinaga Nutritional Foods Inc. in Los Angeles in October, 1985, for

© Copyright Soyinfo Center 2014

the marketing and distribution of Mori-Nu Tofu. Prior to 1985, Mori-Nu Tofu was distributed by Mutual Trading Co. of Los Angeles with sales targeted to the Asian market. After the opening of Morinaga Nutritional Foods, sales of Mori-Nu Tofu increased from 60,000 to 400,000 cases in less than four years...

"Kumoda has been instrumental in the implementation of Mori-Nu's 10,000 member Health For Life Club as well as Mori-Nu's 'Healthy Life' newsletter."

Note: Talk with Art Mio. 1990. Feb. 6. It now looks like sales of Mori-Nu Tofu for fiscal year 1989-90, which ends in March 1990, will be about 375,000 cases. Each case contains 25 x 10.5 ounce packs of tofu. This represents 5,906,250 lb/year of tofu, or 113,582 lb/week of tofu. This makes Morinaga one of the top four tofu sellers in the USA, along with House Foods and Yamauchi, Azumaya, and Nasoya Foods. Address: Los Angeles, California. Phone: 213-728-4325.

9447. Sakai, Miyoko; Abe, Motoko. 1989. Quick & easy Japanese cooking for everyone. Tokyo: The Japan Times. xvii + 128 p. Illust. (line drawings, photos). No index. 18 cm.
• ***Summary:*** "The purpose of this book is to introduce foreign residents in Japan to the pleasures of Japanese home cooking." Contains 77 typical Japanese recipes, with an English translation of the recipe name plus the Romanized Japanese name and that same name written in Japanese characters.

One chapter (p. 65-77) is titled "Egg and tofu." Soy related recipes include: Miso soup (p. 6). Pork miso soup (*Ton-jiru,* p. 7). Vinegared rice wrapped in thin fried tofu (*Inari-zushi,* p. 11).

Note: This is the earliest English-language document seen (April 2013) that contains the term "thin fried tofu." It refers to deep-fried tofu pouches.

Broiled pork with miso (p. 43). Fresh tofu (Hiya-yakko, p. 72). Tofu salad (p. 73). Tofu with vegetables (p. 74). Tofu steak (p. 76). Fried tofu (Agedashi-dofu, p. 77).

Other soy related recipes: Eggplant with miso (*Nasu no dengaku miso ae,* p. 88). Eggplant and green pepper with miso (*Nasu to piiman no miso itame,* p. 89). Soybeans with vegetables (*Gomoku mame,* p. 92-93). Sukiyaki (with "1 block broiled tofu {*yakidofu*}," p. 96). Address: 1. Teaches Japanese cuisines for foreigners and That dishes for Japanese in Tokyo, Japan.

9448. *Soya Newsletter* (*Bar Harbor, Maine*). 1989. Soy powder plant to be built in Minnesota. Sept/Dec. p. 8.
• ***Summary:*** "The Upper Minnesota Valley Regional Development Commission (UMVRDC) along with PdT, a Minnesota-based specialty soybean supplier, has announced that they will soon be signing an agreement that will result in the building of a soy powder plant sometime in the Spring of 1990. The plant, being built in conjunction with Showa Boeki of Osaka, Japan, will produce Neo Soya Powder (NSP), made through a proprietary dry process. The Minnesota group plans to buy, dismantle and install Showa Boeki's soy powder system in Madison, Minnesota. Showa Boeki will have a five year agreement with the group to buy their NSP. The powder will be shipped to Japan and used in producing tofu and other products."

9449. *Soya Newsletter* (*Bar Harbor, Maine*). 1989. 'Soymilk cheese' to be sold in Japan. Sept/Dec. p. 13.
• ***Summary:*** "Nisshin Biodeveloping Research Laboratory, a subsidiary of Nisshin Confectionery Company of Japan, has announced plans to sell a 'soymilk cheese' made from soymilk. The product will be similar in appearance to margarine and will be sold through department stores."

9450. *Soya Newsletter* (*Bar Harbor, Maine*). 1989. Japanese seek better beans. Sept/Dec. p. 13.
• ***Summary:*** "Fourteen representatives from major Japanese oilseed processing companies met September 22 in Washington, D.C., with top USDA and other government officials to urge the U.S. to produce soybeans with improved oil and protein content. Japan imported approximately 3.66 million tons of soybeans from the U.S. in 1988, compared to 4.65 million tons five years ago. Japanese imports from South America were about 720,000 tons in 1988, compared to 140,000 in 1986. Among Japanese officials participating in the mission were M. Shima of Hohnen and M. Fukawa of Nisshin."

9451. *SoyaScan Notes.* 1989. Major soy-related company acquisitions and mergers worldwide 1970-1989 (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1970 March–Miles Laboratories of Elkhart, Indiana (most famous as the maker of Alka-Seltzer) acquires Worthington Foods of Worthington, Ohio (most famous for its Morningstar Farms line of meat alternatives), making it a wholly owned subsidiary.

1973 Jan. 15–ADM acquires 50% of British Arkady Holdings Ltd. and its subsidiary British Arkady Co. Ltd. of Old Trafford, Manchester, England.

1977 (late)–Bayer A.G. of Germany (makers of Aspirin) acquires Miles Laboratories of Elkhart, Indiana; as part of the deal they Worthington Foods, a subsidiary of Miles.

1979–Bunge Corp. acquires Lauhoff Grain Co. of Danville, Illinois.

1982 Oct. 15–Worthington Foods is repurchased from Miles Laboratories by a group of three Seventh-day Adventist investors in a leveraged buyout. During the 12 years under Miles, sales increased five-fold. Sales volume in 1983 was an all-time high. The company employed 250 people.

1983 April 21–Hybritech Seed International, Inc., a wholly-owned subsidiary of Monsanto Company, purchases

© Copyright Soyinfo Center 2014

the Jacob Hartz Seed Co. of Stuttgart, Arkansas.

1983–House Food Industrial Co., Ltd. of Japan purchases 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company is renamed House Foods & Yamauchi, Inc.

1985 May 31–Barricini Foods Inc. acquires Farm Foods (makers of Ice Bean soy ice cream) of Summertown, Tennessee.

1985 March–British Arkady acquires Direct Foods Ltd.

1986 Feb.–British Arkady acquires Vegetarian Feasts Ltd.

1986 Dec. 1–White Wave acquires Soyfoods Unlimited, Inc. of San Leandro, California. It is White Wave's first acquisition.

1987 Aug.–British Arkady acquires Haldane Foods Ltd. and Regular Tofu Co. Ltd. It also acquires Vegetarian Cuisine Ltd. in 1987.

1987 Oct.–The Ferruzzi Group in Ravenna, Italy, acquires Central Soya Co. in Ft. Wayne, Indiana.

1987 Dec. 31–ADM acquires the rest of British Arkady Holdings Ltd. so that it now owned 100%.

1988 Jan.–The British Arkady Group acquires Haldane Foods.

1988 Feb.–Westbrae Natural Foods (of Berkeley, California, maker of soymilk) is merged with and becomes a wholly-owned subsidiary of Vestro Foods, a publicly traded company in City of Commerce, Southern California. Most of Westbrae's top management decides not to stay with the company.

1988 Sept.–Haldane Foods Group acquires Realeat Foods Ltd.

1989 Feb.–Haldane Foods Group acquires Saucemasters Ltd. It also acquires Genice Foods Ltd. in March 1989.

1989 Feb. 16–Edward Lowe of Michigan, the inventor of Kitty Litter, purchases the majority of shares in INARI Ltd. from Len and Irene Stuttman; but they. kept a minority ownership in the company.

1989 April–Huegli Naehrmittel A.G. acquires Yamato Tofuhaus Sojaprodukte of Tuebingen, Hirschau, West Germany. Note: This is the earliest record seen (Feb. 2013) that mentions Huegli in connection with soy.

1989 April 22–Lima Foods of Belgium acquires Jonathan P.V.B.A. of Belgium.

1989 Sept.–Lima Foods of Belgium is purchased from Vibec by Euronature (pronounced as in French, YU-ro na-TYUR), a large international food company headquartered in Paris, France.

9461. Kumar, P.S.; Hymowitz, T. 1989. Where are the diploid (2n = 2x = 20) genome donors of Glycine Willd. (Leguminosae, Papilionoideae)? *Euphytica* 40:221-26. [21 ref]
• ***Summary:*** "There are about 16 genera in the subtribe Glycininae, tribe Phaseoleae, family Leguminosae. The overwhelming reason for the economic importance of the subtribe Glycininae is due to the cultivated soybean, Glycine max (L.) Merrill. The soybean, its wild annual counterpart and most of wild perennial members of the genus Glycine carry 2n = 40 chromosomes. It is reasonable to assume that the base number of the genus is x = 10. However Glycine plants carrying 2n = 20 have not been reported. Herein we report on the 2n chromosome situation of the remaining 15 genera in the subtribe Glycininae and two genera (*Galactia, Ophrestia*) once thought to be allied with Glycine. Certain species in *Dumasia, Galactia* and *Ophrestia* were found to carry 2n = 20 chromosomes. All the other genera carry 2n = 22, 28 or 44 chromosomes. The 2n chromosome number of *Teyleria* (44) and *Pseudeminia* (22) is being reported for the first time."

The subgenus *Glycine* contains 12 wild perennial species. Ten of the species are "indigenous to Australia and carry 2n = 40 chromosomes. *Glycine tabacina* (Labell.) Benth. with 2n = 40, 80 chromosomes, has been found in Australia, Taiwan, South Pacific Islands (New Caledonia, Fiji, Tonga, Vanuatu) and West Central Pacific Islands (Mariana, Ryukyu [southern Japan]). All accessions of *G. tabacina* collected outside of Australia are tetraploid (2n = 80) and even within Australia, tetraploids predominate over the diploid forms. *Glycine tomentella* has been found in Australia (2n = 38, 40, 78, 80), Papua New Guinea (2n = 40, 78, 80), Philippines (2n = 80), and Taiwan (2n = 80). Singh et al. (1987) demonstrated that the complexes of *G. tabacina* and *G. tomentella* evolved through allopolyploidization." Address: Dep. of Agronomy, Univ. of Illinois, 1102 S. 9471. Fukushima, Danji. 1989. Historical development of soy sauce and fermented black soybeans in China (Document part). In: K. Steinkraus, ed. 1989. Industrialization of Indigenous Fermented Foods. New York and Basel: Marcel Dekker, Inc. xii + 439 p. See p. 2-8.
• ***Summary:*** "1. Chiang. In 1979, Kinichiro Sakaguchi proposed a unique hypothesis regarding the origin of soy sauce and miso as a result of historical biochemical investigations, and this hypothesis was later introduced by this author in English (Fukushima, 1985a, 1986b). However, new literature on the origin of soy sauce and miso appeared based on more detailed historical evidence (Pao 1982a, 1982b; 1984a, 1984b). According to these papers, soy sauce was derived from a Chinese food called 'chiang' ('hishio' in Japanese).

"Chiang is a tasty mash product and does not come in a liquid form. Therefore chiang belongs in the category of 'miso' in Japan. The first record of chiang can be found in the book entitled *Chou-li* (*Shurai* in Japanese) by Chou-kung (*Shuko* in Japanese), which was published around 1,000 B.C. in the Chou (*Shu* in Japanese) dynasty (1,222 BC to 249 BC). This book covers the matters on the early years of the Chou dynasty in ancient China (about 3,000 years ago). According to this document, chiang was made by the following procedure. First, yellow aspergilli were grown on millet. (Such mold-grown cereals are called 'koji' in Japanese.) Then the millet koji and the meat of fish, flesh, or fowl and salt were mixed with a good liquor in a bottle and kept for 100 days. Soybeans were not used in this chiang. The first literature in which soybeans appeared as a substitute for meat in chiang was the *Ch'i-min Yao-shu* (*Saimin-Yojutsu* in Japanese) by Chia Ssu-hsieh (Ka Shikyo in Japanese), the world's oldest encyclopedia of agriculture, published in 535 AD in China. This indicates that the chiang in which soybeans was used originated sometime between the Chou and Han dynasties, when the cultivation of soybeans prevailed. The meats in the chiang described in *Chou-li* were gradually replaced by soybeans in the course of time and further cereals such as wheat, barley, and rice came to be used instead of millet, resulting in the production of many types of chiang. In the process of making chiang during these periods, soybeans were not used as a raw material in koji; rather they were added to the harvested koji prepared from the other cereals. The soybeans were digested by the enzymes of the koji. This digestion mixture was the final product, which was in the form of a mash. The liquid products which belong to the category of soy sauce did not appear in the literature before the later Han dynasty (about 25-220 A.D.).

"There is a description of the liquid product which was made by separating the liquid portion from the chiang in *Ssu-ming Yueh-ling* (*Shimin-Getsurei* in Japanese), published by Ts'ui Shih (Sai Shoku in Japanese) in the later Han dynasty. This liquid was called chiang ch'ing which means 'clear chiang.' The manufacturing processes of chiang and chiang ch'ing are shown in Figs. 1 and 2. Chiang ch'ing is a prototype of soy sauce but it differs from 'chiang-yu' which means literally shoyu or soy sauce in the Chinese characters. The first appearance of the name of chiang-yu was in *Shan-chia Ch'ing-kung* (*Sanya-Seikyo* in Japanese) by Lin Hung (Rin Ko in Japanese) in the Sung dynasty (960-1127 AD).

"The first record indicating use of all the raw materials to prepare koji for soybean chiang appeared in the *Nung-sung I-shin Ts'o-yao* (*Noso-Ishoku-Satsuyo* in Japanese) by Lu Ming-Shan (Ro Meizen in Japanese), published in the Yuan (Gen in Japanese) dynasty (1271-1368 AD). The flow sheet of this soybean chiang is shown in Fig. 3." (In this process, soybeans are roasted, dehulled, cooked, then mixed with wheat flour and spontaneously molded to form koji. The koji is dried in the shade, winnowed, and pounded, then mixed with spices and salt water to form a mash. which is insulated and aged to make the soybean chiang.) The chiang-

© Copyright Soyinfo Center 2014

yu described in *Pen-ts'ao Kang-mu* (*Honso-Komoku* in Japanese), published in 1590 by Li Shih-chen (Ri Jichin in Japanese) in the Ming (Min in Japanese) dynasty, was also made with koji manufactured by using soybeans and cereals (Fig. 4). (In this process soybeans were cooked in water, mixed with wheat, and spontaneously molded to form koji. Salt water was mixed in with a paddle, then the mash was insulated and aged. Finally it was filtered to make chiang-yu). The ratio of soybeans to wheat in the koji making was 3:2. This ratio is very close to that used in making regular Japanese shoyu, which is made by using equal amounts of soybeans and wheat, as will be described later. The general manufacturing methods of soy sauce in the Ch'ing (Shin in Japanese) dynasty are recorded in *Ch'ing-yuan Lu* (*Seienroku* in Japanese), written by Li Hua-nan (Ri Kanan in Japanese). Cooked soybeans and uncooked wheat were the raw materials used in koji making. The resultant koji was mixed with brine. After aging, the soy sauce was collected by pressing a deep bamboo colander into the aged mash and ladling out the liquid which had accumulated.

"The original chiang was a mash-type product made with a koji that had been prepared from wheat, barley, rice, etc., and not from soybeans. Therefore, the soybean constituents were only changed through the in vitro biochemical reaction by the enzymes from the mold grown on the cereals. Accordingly, the degree of change of the soybean constituents was not very great and most of the soybean proteins were partially hydrolyzed into polypeptides through the in vitro enzyme action. The degree of liquefaction was not very large and the flavor was not as strong. In the case of chiang-yu, however, mold is grown on both the soybeans and cereals and, as a result, the soybean constituents are changed largely through the biochemical reaction both in vivo and in vitro by the mold throughout the entire process of manufacturing. Accordingly, much of the soybean constituents can be liquefied. The soybean proteins are hydrolyzed to single amino acids and, therefore, the flavor is sharp and strong in chiang-yu. Thus, it can be concluded that (a) the progenitor of miso is chiang, originated in China about 3,000 years ago; (b) the progenitor of soy sauce is chiang ch'ing, originated in China about 2,000 years ago; (c) chiang ch'ing had developed into chiang-yu in China and the regular type of shoyu called koikuchi in Japan at least 1,000 years ago.

"It is an amazing fact that the Chinese had utilized the enzyme action of mold in food manufacturing as early as 3,000 years ago. They deliberately selected yellow aspergilli from many types of aspergilli because they best facilitated the manufacture of chiang. If the definition of 'biotechnology' is to make the products necessary for the welfare of humans by using life phenomena, it can be said that people in ancient China had already produced foods by biotechnology as early as several thousand years ago. In this sense, it is not an exaggeration to say that soy sauce was a pioneer of the actual application of biotechnology.

"2. Shih. Shih is a fermentation product of soybeans, the form of which is a tasty nugget with or without salt. Shih is classified into five types by the kind of microorganism used in its manufacture. Those are *Aspergillus* type (called shih in the areas of Pei-ching, Hu-nan sheng, and Taiwan; and called hamanatto in Japan), *Mucor* type (shih in the area of Shan-tung sheng and natto in Japan), *Rhizopus* type (tempeh in Indonesia), *Bacillus* type (shih in the area of Shan-tung sheng and natto in Japan), and *Neurospora* type (oncom in Indonesia). The shih described here is the shih of *Aspergillus* type, which relates to soy sauce.

"The earliest literature in which shih appeared is *Shih-chi* (*Shiki* in Japanese) by Ssu-ma Ch'ien (Shiba Sen in Japanese), which was published in 85 BC. Shih is also described along with chiang in *Shuo-wen Chie-tzu* (*Setsubun-kaiji* in Japanese) by Hsu Shen (Kyoshin in Japanese), the oldest dictionary in China published in 121 AD in the later Han dynasty. The raw material of the shih is soybeans as shown in Fig. 5. (In the process described in the *Shi-ching* by Hsie Feng (which survives only in the *Ch'i-min yao shu*), soybeans are washed, soaked, drained, and steamed. The cooked soybeans are cooled, then spread, furrowed, and piled. The last 3 steps are repeated 3 times a day for 3 days until the beans have become spontaneously molded. The resulting soybean koji is mixed with soybean cooking liquid, barley koji, and salt, put into an earthen pot, sealed, and insulated. It is then dried in the shade, mixed with a mulberry leaf extract, and steamed. The last 3 steps are repeated 3 times, resulting in salted soybean shih. In the second process described in the *Ch'i-min yao-shu,* soybeans are winnowed, cooked, drained, and cooled. They are piled, the temperature is measured, and then they are stirred. The last 3 steps are repeated 3 times until they are spontaneously molded. They are then spread and furrowed to make soybean koji. This is winnowed, washed, drained, dried, moistened, piled, fermented, and dried to give unsalted soybean shih.) Therefore the resultant shih (soybean nugget) contains a high amount of protein. In shih, much of the soybean constituents are present in a liquid state. The soybean proteins are hydrolyzed to single amino acids and, therefore, the flavor is sharp and strong. The flavor constituents of shih can be extracted easily by a salt solution. The original shih was served as nuggets; the brine extract came to be used as a seasoning gradually. In *Chi-min Yao-shu* (535 AD), there is a description of about 70 kinds of cookeries using shih extracts. It should be mentioned that shih and its brine extract developed into today's tamari shoyu in Japan." Address: Managing Director, Kikkoman Corp., Chiyoda-ku, Tokyo, Japan.

and Basel: Marcel Dekker, Inc. xii + 439 p. See p. 9-10.
• ***Summary:*** "There is no literature on the exact time chiang and shih (fermented black soybeans) were introduced into Japan. In 702 AD, however, the Hishiotsukasa, the Bureau for the Regulation of Production, Trade and Taxation of Hishio, was established by the Taiho-Ritsuryo, one of Japan's earliest constitutions. This bureau was located at the imperial palace and produced various kinds of hishio (chiang) which was consumed by the imperial household. Among these products, the word 'misho' is found with the words 'chiang' and 'shih.' It should be noted that the word 'misho,' which is very close to the present word 'miso,' is found as one of the products in the bureau. Misho is also found in *Engishiki,* the enforcement regulation of the statutes, which was completed in 927 AD and became effective in 967 Japan. The first appearance of the present word 'miso,' was in *Nihon-Sandai-Jitsuroku,* a Japanese dictionary published in 1597 during the Muromachi period. In the Edo period (1603-1867), several pieces of literature describing miso and shoyu were written, such as *Wakan Sansai Zue* (Narushima, 1712), *Honcho Shokkan* (Hitomi, 1695), *Mankin Sangyotai* (Miake, 1732), *Yoshu Fushi* (Kurokawa, 1682), and the like. The manufacturing processes described in these works are close to the present methods for producing miso and koikuchi-shoyu, thus it is presumed that the basic manufacturing processes of today's Japanese soy sauce had been formed by the early 17th century.

"In the second half of the 17th century, large-scale, industrial production of soy sauce began for consumption in large cities such as Edo (now Tokyo). Surprisingly enough, there are written records that soy sauce had been exported to India, southeast Asia, and Europe as early as the middle of the Edo period [the Edo Period was from 1600 to 1868] (Noda Shoyu Co. 1953). According to documents of the Dutch East India Company stored in the Archives in the Hague, Holland, soy sauce was exported [by Dutch merchants] from Nagasaki in the Kyushu district of Japan to several parts of India: Coromandel in 1668 and 1716, Ceylon in 1670 and 1699, Surat in 1717, Bengal in 1699, and Nagappattinam [Nagapattinam] in 1699. Carl Thunberg, a ship's doctor for the Dutch East India Company who stayed in Japan for a year and a half from 1775 to 1776, published a book of travels in 1796 (Thunberg, 1796). According to his book, a large quantity of soy sauce was shipped to Batavia (the former name for Djakarta [and Dutch capital of the East Indies]), India, and European countries." Address: Managing Director, Kikkoman Corp., Chiyoda-ku, Tokyo, Japan.

9473. Kono, M. 1989. Edamame [Green vegetable soybeans]. In: Nobunkyo, ed. 1989. Encyclopedia of Vegetables and Horticulture. Tokyo: Nosan Gyoson Bunka Kyokai. See p. 413-29. [Jap]*

9474. Maruo, Bunji; Yoshikawa, Hiroshi. eds. 1989. *Bacillus subtilis:* Molecular biology and industrial application. Tokyo: Kodansha; Amsterdam and New York: Elsevier Press. xv + 267 p. Illust. Index. 24 cm. Series: Topics in secondary metabolism 1, [1182 ref]
• ***Summary:*** The nine chapters in this very interesting book are written by 26 different Japanese contributors. Contents: List of contributors. Preface. 1. Introduction. 2. Taxonomic position of *B. subtilis.* 3. Metabolic and cell growth regulation of *B. subtilis.* 4. Sporulation of *B. subtilis.* 5. Plasmid cloning vectors in *B. subtilis.* 6. Phages of *B. subtilis* and their uses in genetic engineering. 7. DNases involved in restriction and recombination in *B. subtilis* and its relatives. 8. Industrial application of *B. subtilis:* Utilization of soybean as natto, a traditional Japanese food, extracellular enzymes of *B. subtilis,* production of primary metabolites, possible use of *B. subtilis* as a host-vector system for production of biologically active molecules such as hormones and antibiotics, insecticidal proteins from *B. thuringiensis.* 9. Use of *B. subtilis* for re-assay of genotoxic substances.

In the Preface, Maruo observes that a novel method of constructing a genetic map by DNA mediated transformation was established by H. Yoshikawa and N. Sueoka. Thereafter, use of this bacterium in molecular genetics has been increasing rapidly and extending into many fields. "The use of *B. subtilis* has contributed greatly to basic research in genetics, biochemistry, and enzymology. *B. subtilis,* unlike *Escherichia coli,* has the remarkable distinction of becoming competent for DNA uptake and of forming spores, a primitive mode of cell differentiation." Address: 1. Nihon Univ., Tokyo, Japan; 2. Osaka Univ., Osaka, Japan.

9475. Morinaga Nutritional Foods. 1989. Morinaga Milk Industry (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 3 p. Undated.
• ***Summary:*** "Morinaga Milk Industry, the parent company of Morinaga Nutritional Foods, is one of the world's largest food manufacturers." It was founded in 1917. Milk products have been the mainstay of Morinaga in Japan. "A significant product for Morinaga has been its infant formula, with a nutritional level equivalent to mother's milk." Other products marketed by Morinaga include tofu, orange juice, tea and baby food.

"In order to diversify its interests, Morinaga has developed affiliations with such international companies as Unilever, Kraft, Beech-Nut, Lipton and Sunkist, thereby bringing many foods from around the world to the Japanese market." Morinaga has also become involved in the pharmaceutical field with the research of anti-tumor agents. Morinaga Nutritional Foods Inc. was established in 1985 in Los Angeles. "The first long-life tofu was exported from Japan to the United States in 1978 and in the following year, Morinaga received the Minister of Science and Technology Agency Prize for its outstanding aseptic manufacturing technology." Address: Los Angeles, California. Phone: 213-

9476. Nichii Co. Ltd. 1989. Annual report 1989. Awajimachi 2-2-9, Chuo-ku, Osaka 541, Japan. 42 p. [Eng]
• ***Summary:*** Nichii is a major Japanese retailer. In 1989 the company, including its 35 consolidated subsidiaries, had revenues of 1.039 trillion yen (1,039,968 million yen; US$8,200 million), and net income of 13,500 million yen (US$106 million). Headquartered in Osaka, it is Japan's fifth largest publicly held retailing group. The company's gross profit margin in 1989 was 29.3%. One of Nichii's most important retailing strategies is targeting young and "young minded" consumers. In fiscal 1989, Nichii and its subsidiaries became the MYCAL Group. MYCAL is derived from Nichii's "Young-Minded Casual Amenity Life" concept, which reflects the lifestyle that the group helps furnish to its customers. A new concept is the "urban resort," exemplified by the MYCAL Honmoku, which opened in Yokohama in April 1989 and about which a TV program was aired on 19 May 1990, in California on Channel 26 at 9:30 P.M. Mr. Toshimine Kobayashi is President of Nichii. Mr. Shinozaki is President of International Operations, and therefore oversees the soyflake operation in the USA; he is Terry Tanaka's boss. This annual report is beautifully designed. Note: The company is planning to start a plant in Iowa to make soy flakes for use in making tofu.

Update: Talk with Terry Tanaka of Nichii Company of America, Inc. 1992. Nov. 24. In Japan the Nichii name has been used for about 30 years in connection with a supermarket chain. Now the company is trying to phase it out in favor of names like Vivre and Saty. The umbrella group for all of these companies is the MYCAL Group. After Nichii becomes MYCAL Corp., Terry's company will become MYCAL Corp. of America. Address: Osaka, Japan.

9477. Schmidt, Vera. 1989. Die Sieboldiana-Sammlung der Ruhr-Universitaet Bochum, beschrieben von Vera Schmidt [The Siebold collection of the Ruhr University in Bochum, described by Vera Schmidt]. Wiesbaden, Germany: Otto Harrassowitz. xiii + 461 p. Index. 24 cm. Series: Acta Sieboldiana, vol. 3; Veroeffintlichen des Ostasien-Instituts der Ruhr-Universitaet Bochum, vol. 33. [Ger]
• ***Summary:*** This is a catalog of the collection of Philipp Franz von Siebold (lived 1796-1866) at the Ruhr University. Facing the title page is a large oval color portrait of Philipp Franz von Siebold (1848) in a military uniform. Address: Germany.

9478. Simpson, J.A.; Weiner, E.S.C. 1989. The Oxford English dictionary. 2nd ed.: Tofu. Oxford, England: Clarendon Press. [6 ref]
• ***Summary:*** Etymology: From the Japanese word *tôfu,* which is derived from the Chinese word doufu, from dou = beans + fû = rotten. "A curd made in Japan and China from mashed soya beans; bean curd."

The first entry is: Kinch, Edward. 1880. "Contributions to the agricultural chemistry of Japan." *Transactions of the Asiatic Society of Japan* 8(Part 3):369-415. Oct. See p. 399. There are 5 subsequent entries from 1905 to 1981.

Note: No other entries for words meaning "tofu" but with variant spellings (such as dowfu, tahoo, tahu, etc.) appear in this 1989 edition. Address: England.

9479. Steinkraus, Keith H. ed. 1989. Industrialization of indigenous fermented foods. New York, NY: Marcel Dekker. xii + 439 p. 24 cm.
• ***Summary:*** This book contains the following chapters on soyfoods: 1. Industrialization of fermented soy sauce production centering around Japanese shoyu, by Danji Fukushima. 2. Industrialization of Japanese miso fermentation, by Hideo Ebine. It also contains chapters on the industrialization of the production of sake, tapai, African beers, magehu, ogi, and gari. The final chapter is titled "Industrialization of indigenous fermented food processes: Biotechnological aspects."

The book is dedicated "To the memory of Prof. Andre G. van Veen, a pioneer in the study of indigenous fermented foods." Address: Inst. of Food Science, Cornell Univ., Geneva, New York.

9480. The legacy of the Japanese in Hawaii: cuisine. 1989. [Honolulu, Hawaii]: Japanese Cultural Center of Hawaii. 248 p. Illust. (some color). Index. 26 cm.
• ***Summary:*** A spiral bound book. "The simple elegance of Japanese cuisine sets it apart from other ethnic foods of Hawaii." It is a "culinary art."

"The first group of Japanese, the Gannen-Mono, came to Hawaii as laborers in 1868. The S.S. City of Tokio brought a group of 944 contracted laborers, Kanyaku Imin, on February 8, 1885; and by 1924, 220,000 workers had arrived to become residents of these islands. Thus began the legacy of Japanese in Hawaii" (p. 21).

One chapter, titled "Tofu ryori (Bean curd dishes)" (p. 177-92) contains the following recipes: *Hiya yakko* (Cold tofu, with "2 blocks 'kinu' tofu). *Arare tofu* (Fried tofu cubes). *Agedashi tofu* (Deep fried tofu). *Takigawa tofu* (Jellied tofu strips). *Soba dofu* (Buckwheat soybean curd). *Ken chu / Ken cho* (Meatless or shojin food). *Iri dofu* (Sauteed tofu). *Papaya chanpuru* (Tofu stir-fry with vegetables). *Moyashi chanpuru* (Tofu with bean sprouts). *Gan modoki / Hiryozu* (Deep fried tofu balls). Tofu loaf. Tofu patties. *Okara / Unohana iri* (Seasoned soybean lees [okara]). *Shira ae* (Vegetables with tofu dressing). *Yudofu* (Simmered soybean curd).

For kinako (roasted whole soy flour) see: Rice ball with kinako (variation of Ohagi, p. 230). *Kinako mochi* (variation of mochi, p. 232).

9481. Ueda, Seinosuke. 1989. Industrial application of *Bacillus subtilis:* Utilization of soybean as natto, a traditional Japanese food. In: Bunji Maruo and Hiroshi Yoshikawa, eds. 1989. *Bacillus subtilis:* Molecular Biology and Industrial Application. Tokyo: Kodansha; Amsterdam and New York: Elsevier Press. xv + 267 p. See p. 143-62. [60 ref]
• ***Summary:*** Contents: Introduction. *B. subtilis* (*natto*)*:* Conditions for growth of *B. subtilis* (*natto*) (temperature, pH, oxygen, biotin), plasmid of *B. subtilis* (*natto*), bacteriophage of natto. Natto manufacturing process: Introduction, outline of the manufacture of natto, soybeans as raw material, soaking, cooking, inoculation, weighing and packing, fermentation. Biochemical aspects of natto: Change of components of soybeans during natto processing, slime of natto, enzymes of *B. subtilis* (*natto*), flavor of natto, nutritional value of natto, effect of natto as medicine (antibiotics, elimination of [pathogenic] microflora in intestine, anticancer activity, effect on blood pressure, vitamin K content in human milk).

In Japan, natto is sometimes *itohiki natto* to distinguish it from salted, fermented whole soybeans made from steamed soybeans and roasted wheat powder using the koji mold, *Aspergillus oryzae.*

There are various theories concerning the origin of *itohiki natto,* however it is clear that natto was made and sold in Japan during the Edo period (1600-1867–about 400 years ago). It originated in the northern part of Honshu, Japan's main island. Modern mass production of natto using pure culture *Bacillus subtilis* started in about 1919.

Today in Japan there are about 700 natto factories using about 95,000 tons of soybeans a year. Natto is most often eaten for breakfast in Japan, with boiled rice, often with soy sauce and mustard.

In 1906 the natto bacterium was first named *Bacillus natto* Sawamura by Sawamura; he considered it a new species. In 1974 *Bergey's Manual of Determinative Bacteriology* (8th ed.) included *Bacillus natto* within *Bacillus subtilis.* "However Amaha et al. (1952) and Kida et al. (1956) reported that *B. subtilis* and *B. natto* can be classified separately based on whether biotin is essential for growth." Biotin is essential for the growth of *B. natto,* but not for the growth of *B. subtilis.* Table 8.1.1 lists the "Properties of *Bacillus subtilis* (*natto*)*."* The optimum temperature for natto growth is about 40ºC. Its spores are heat resistant. Address: Dep. of Applied Microbial Technology, Kumamoto Inst. of Technology, Kumamoto-shi, Kumamoto 860, Japan.

9482. **Product Name:** [CookDo Mabo-dofu Sauce Dry Mix].
Foreign Name: Mabô-dôfu no Moto.
Manufacturer's Name: Ajinomoto Co. Inc.
Manufacturer's Address: Kyobashi 1-5-8, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1989?
Wt/Vol., Packaging, Price: Sealed foil pack.
How Stored: Shelf stable.
New Product–Documentation: Television Ad. 1989. Saturday, Sept. 16. 7:10 P.M. California. Channel 26. 30 seconds. Color. Japanese and French language. An intelligent and healthful looking young French couple are talking in Paris at Rue de La Vie, 18eme, apparently a high class part of the city. The wife is holding a cake of tofu in a glass bowl, and explaining in French that she likes tofu, it is not expensive, and she loves Mabo-dofu (a Chinese-style dish with cubed tofu, red pepper sauce, and usually ground pork or beef). She shows how she dices the tofu. The ad notes that "These two are a little particular about Mabo-dofu. They only make the real thing." It closes with a close-up of the colorful package.

9483. *Tribune-Star* (*Terre Haute, Indiana*). 1990. Kyoto [Food Corp. U.S.A.] seeks lot approval. Jan. 3.
• ***Summary:*** "Kyoto Food Corp. U.S.A. is seeking approval of a one-lot commercial subdivision for the $4.5 million tofu plant it plans to build along Johnson Avenue between U.S. 41 and Indiana 63." The company bought 25 acres and wants to subdivide 2.5 acres of that for the production plant. "Negotiations are now under way to get other food-related plants to build on the rest of the 25 acres... The 25,000 square-foot plant, which will be able to produce 2.5 tons of tofu daily, is expected to start with 30 to 50 employees and increase to 100 during the first year. Tofu is a food

9485. *Mountain Eagle* (*Jasper, Alabama*). 1990. Soybeans may lower breast cancer rate by half, UAB [Univ. of Alabama at Birmingham] study shows. Jan. 14. Also published in the Daily (Decatur, Alabama). Jan. 4.
• ***Summary:*** At University Hospitals in Birmingham, more than 250 rats were injected with a breast cancer-causing agent. The rate of appearance of tumors in those rats that received a diet rich in unprocessed (unheated) soybeans was about 50% slower than the rats that received no soybeans. Head researcher Stephen Barnes (shown in photo) is an associate professor of pharmacology and biochemistry at Univ. of Alabama at Birmingham. He also is a scientist in UAB's Comprehensive Cancer Center and assistant professor of public health. He is convinced that there is something in unprocessed soybeans that offers protection against breast cancer. "We approached this by looking at those countries which have very low rates of breast cancer, like Japan and other Asian nations, and found almost all had one dietary common denominator–soybeans." Barnes noted that soybeans contain a substance that mimics the principal human estrogen called estradiol. "When we looked at the estrogen-like substance in soybeans, we found some remarkable similarities between it and tamoxifen, a drug which is widely used in the successful treatment of hormone-dependent breast cancer in humans," Barnes said. "If we apply our animal findings to women in this country, then we're talking about protecting around 67,000 women against the disease."

9486. Porter, Kelly. 1990. A taste of tofu: Samplers find food different, but delicious. *Tribune-Star* (*Terre Haute, Indiana*). Jan. 21.
• ***Summary:*** "I have to admit I was apprehensive from the start. Curious, but apprehensive. 'You are cordially invited to attend a tofu luncheon.'... The invitation was signed by Mayor P. Pete Chalos. I figured it he was the one doing the asking, the stuff couldn't be all that bad. I was right. Actually, some of the food prepared was downright delicious. Different, but delicious.

"Last week's luncheon was at the Royal Mandarin Restaurant... courtesy of the Alliance for Growth and Progress. Arrangements for the meal at the southside Chinese eatery were made by the Terre Haute Department of Redevelopment...

"'Family Tofu' was my favorite–it was marinated chunks of deep-fried tofu served with rice and all kinds of Chinese vegetables. Tofu tastes a lot like the foods with which it's prepared, but its consistency is difficult to describe. It's a food that's chewy, yet it melts in your mouth at the same time. It's also kind of creamy, but then again it's not.

"The best way to find out is to try it. Kyoto Food Corp. officials are probably hoping you will."

9487. Chikaarashi, Shigeru. Assignor to Nichii Company, Ltd., Osaka, Japan. 1990. Method for manufacturing a foodstuff suitable for soybean milk production. *U.S. Patent* 4,895,730. Jan. 23. 4 p. Application filed 28 Oct. 1988. [2 ref]
• ***Summary:*** "The apparatus includes a brushing machine for removing earth matter and earth-born germs deposited on soybean material, a band dryer for adjusting the water content of the soybean material so as to facilitate separation of the material into skin and flesh portions, a skin remover for separating the skin portion from the flesh portion and for dividing the flesh portion of each piece of soybean into four to eight parts, and flat pressing rollers for converting the resulting powdery masses into uniformly distributed flaky masses."

Note: The resulting soy flakes are used by Nichii to make tofu in Japan. The compact tofu plants are located in supermarkets or department stores. Address: Sapporo, Japan.

9488. *Journal of Commerce & Commercial* (*New York, NY*). 1990. Japan's Nichii plans to build U.S. soy plant. Jan. 23.
• ***Summary:*** "Nichii Co., a major supermarket chain operator, plans to build a 500-million-yen soybean-processing plant in the U.S. to produce flaked soybean, starting in October, company officials said Monday. The project is designed to ensure a stable supply of the flakes, the raw materials for 'tofu' and soybean milk, they said. Nichii is now considering a site for the plant, possibly somewhere in Iowa. The company plans to import [to Japan] half the plant's product for the production of tofu and for direct sale at its stores, the officials said."

9489. Morinaga Nutritional Foods. 1990. Morinaga challenges Soyfoods Association to take stand on FDA temperature requirements for tofu products (News release). 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. 2 p. Jan. 23. [1 ref]
• ***Summary:*** Morinaga has informed the Association that "it will cancel its membership if this important subject is not addressed. The two-page document, addressed to Gordon Bennett, president of the Soyfoods Association, asks that the organization respond to the May 1984 FDA classification of tofu as 'Potentially Hazardous' food. The FDA's Retail Food Protection Program Information Manual states that

© Copyright Soyinfo Center 2014

all potentially hazardous foods must be maintained at temperatures of 45ºF or below, (or over 140ºF). A copy of the letter to Bennett is attached." Address: Los Angeles, California.

9490. Johnson, Lawrence. 1990. New developments at the Center for Crops Utilization Research at Iowa State University (Interview). *SoyaScan Notes.* Jan. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The name of the center was officially changed to this name from Food Crops Processing Research Center in May 1989, and a new booklet was published. The total budget for 1989 is $2.8 million of real spendable money, including $1.4 million in outside contracts from industry and USDA, etc. plus some money from the state–not including allocation of existing faculty salaries. Things are moving fast.

Lester Wilson, Pat Murphy, and an economist went to Japan last summer. They are now finishing their lengthy report, which includes many original translations of Japanese documents by a Japanese student. [Note: As of Oct. 1990, this report was not yet finished.] They are thinking of holding a workshop after that on the status of soyfoods industry in Japan and the potential for identity preserved soybeans from Iowa going into that market. Address: Director, Center for Crops Utilization Research, Iowa State Univ., Dairy Industry Building, Ames, IA 50011. Phone: 515-294-4365.

9491. Perelman, John. 1990. San Jirushi shoyu and tamari (Interview). *SoyaScan Notes.* Jan. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The shoyu made at the Richmond, Virginia, plant (which contains only 20-30% wheat) became available for sale in Jan. 1990. San-J does not promote this product; the company sees its identity as a tamari brewer, where they are the world's biggest company. The gold label and the black label first became available during the 4th week of February 1990. The Szechuan Sauce and Teriyaki Sauce, reformulated using American-made tamari, became available in April 1989. Tamari Lite is still imported from Japan in drums and bottled in Richmond; the company has not yet installed its desalinization equipment in America, and probably won't until at least 1991.

The tamari now brewed in America is much different in character and taste than the one particular tamari that they imported previously from Japan. They make numerous varieties of tamari in Japan, and the one imported to America had a very high solids content and is thus thicker and darker (closer to back than red), and has a much stronger flavor. After the moromi has finished aging, it has to be shoveled out of the vats; it is too thick to be sucked out. When the milder U.S.-made tamari was introduced, some of the many consumers who had been using the thicker imported product were upset. Therefore San-J is re-introducing the imported product under the name "Imported Whole Soybean Tamari: Wheat-free Soy Sauce." It will only be sold in a 20-ounce bottle. It will be a really strange looking bottle and label. The big red dot is not on the label. It will available the third week of March 1990.

San-J is vigilant about keeping their Gold Label out of supermarkets. A little of the Black Label (made with hexane defatted soybean meal) is sold in natural food stores to any store that wants to carry it. Concerning the waste oil from making tamari from whole soybeans, San-J needs a special license to dispose of it.

San-J has gotten three types of feedback on their U.S. made products, though much less feedback than they had expected (maybe one letter every 2 weeks): (1) Some people liked the imported, thicker better than the Gold Label. (2) Some were upset that San-J would make tamari with hexane-defatted soybean meal. (3) Tree of Life now sells a real wheat-free tamari that they are probably buying from Mansan or Marusan. They are promoting it as the "real" thing, rather than a new American-made product. (4) Some are upset that grain alcohol (from corn) is being added to all San-J products as a preservative. Tamari Lite has the most since it contains less salt. The brewmaster, Mr. Yamamoto, has worked in shoyu breweries as well.

The major brands of imported traditional shoyu are Tree of Life, then Westbrae or Eden (Marushima). Address: San Francisco, California. Phone: 415-821-4040.

9492. Belleme, John. 1990. Controversy concerning San-J tamari (Interview). *SoyaScan Notes.* Jan. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John recently wrote 2 articles about San-J tamari in *Solstice* magazine. After San-J was in operation he visited the plant and wrote a nice story about them. Then San-J came out with a shelf talker accusing most other soy sauce manufacturers of having alcohol in their products. They instigated this debate. They also sent literature to distributors in which they called their product "traditionally fermented," the same term they used on their imported product from Japan. They erased the line about "not made with chemically processed soybean meal." John started to get calls from retailers, so he contacted the other importers and asked them if they added alcohol to their soy sauce; all said they did not. So John published the results of his survey. He feels San-J was not clear about starting to sell tamari made with defatted soybean meal to companies that specialize in macrobiotic products. The ingredient listing on the label says simply "soybeans," which is deceptive. Moreover, when San-J used to import tamari from Japan, it contained added alcohol which was not listed on the label. This is illegal. John respects San-J and their products. Address: P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

I. *Tôfu Hyakuchin* saigen. II. Tôzai tôfu ryôri-ten shôyû [I. A new look at the *Tofu Hyakuchin.* II. In praise of tofu restaurants East and West]. *Asahi Gurafu.* Jan. 26. p. 36-49. [Jap]
• ***Summary:*** The first author introduces and prepares a number of recipes from the *Tofu Hyakuchin,* a famous Japanese cookbook written in 1782 and containing one hundred favorite Japanese tofu recipes. Contains many large color photos of tofu in recipes. A different author wrote each section of the article. Address: Japan.

9494. Korsak, David de. 1990. Work at Daizou SARL and Le Bol en Bois in France, and at Paul's in England (Interview). *SoyaScan Notes.* Jan. 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** David, a Frenchman who speaks excellent English, has a degree in Food Technology. He is now taking a 1-year course to earn a Certificate in Business Studies at Cal State, Hayward. From Aug. to Sept. 1987 he worked on weekends for Daizou, located in an industrial zone just southeast of Paris, France. It was his first experience with tofu, but he did not make tofu himself. He did an internship with them, setting up a computer system. The manager was Takatoshi Hirayama. Daizou had about 8 employees total: 2 full-time tofu makers, 2 men frying tofu, 1 manager, 2 drivers who deliver products, and 1 secretary. The tofu company was formerly in the basement of Le Bol en Bois in Paris. They moved when they outgrew that space. They sell mostly to Japanese (in water pack tubs), and their main outlet is at Le Bol en Bois. They use 100-125 kg/day of soybeans to make about 300-375 kg of tofu. They also sell some vacuum packed tofu, made with organically grown soybeans, to 1-2 health food shops in Paris. One of the company's big problems is employee turnover.

After working at Daizou, from Oct. to Dec. 1987, David worked at Paul's Tofu in England. Paul's had recently won a contest that allowed them to move into a small industrial part in Melton Mobray (a city that was looking for employers), Leicestershire, for several years without paying rent. He renamed the company Soyfoods Ltd. The company made tofu only 3 days a week. He was one of the tofu makers. The company used about 5 x 60 lb bags of soybeans a day to make about 2,400 lb/week of tofu. The other days they made second generation products. This company also had big problems with employee turnover, and was unable to grow.

In the future, he wants to work with tofu in France. He will work as an intern at Wildwood Natural Foods in California from Sept-Dec. 1990, then with Société Soy in France selling their products in England. Address: Hayward State Univ., Hayward, California. Phone: 415-886-0867.

9495. Morinaga Nutritional Foods, Inc. 1990. Our new extra-firm tofu creates quite a stir (Ad). *Natural Foods Merchandiser.* Jan. p. 25.
• ***Summary:*** A full-page color ad shows stir-fried tofu and vegetables in a wok. At the lower right is a color photo of a box of Mori-Nu Extra-Firm Silken Tofu. "Mori-Nu: Tofu for the American taste." Address: 5800 South Eastern Ave., Suite 270, Los Angeles, CA 90040. Phone: 1-800-NOW-TOFU or 310-787-0200.

9496. Shimoyamada, Makoto; Kudo, S.; Okubo, K.; Yamauchi, F.; Harada, K. 1990. Distribution of saponin constituents in some varieties of soybean plant. *Agricultural and Biological Chemistry* 54(1):77-81. Jan. [18 ref. Eng]
• ***Summary:*** Soybean seeds contain many types of glycosides, such as saponins (called soyasaponins) and isoflavonoids. Saponins are bioactive substances with bitter taste. Two types occur only in the seed hypocotyls of soybeans. Address: 1,3-4. Dep. of Food Chemistry, Faculty of Agriculture, Tohoku Univ., 1-1 Tsutsumidori-Amamiyamachi, Aoba-ku, Sendai 981; 2. Kanesa Miso Co., Ltd., 202 Tamagawa Hamada Aomori 030; 5. National Inst. of Agrobiological Resources, 2-1-2 Kannondai, Tsukuba 305. All: Japan.

9497. Smith, Preston. 1990. Agriculture's free trade advocate: How Aussies deal with fewer subsidies. *Soybean Digest.* Jan. p. 28d-e.
• ***Summary:*** "At this Senate confirmation hearing, Secretary of Agriculture Clayton Yeutter, who might consider himself the epitome of free-traders, said, 'We need to break the bonds between government and agriculture.'...

"During his last three years as U.S. Trade Representative, Yeutter headed up the U.S. proposal to the General Agreement on Tariffs and Trade (GATT) to phase out all trade-distorting agricultural subsidies worldwide. But no matter how bold this proposal is, Yeutter has reiterated that the U.S. will not 'unilaterally disarm' its agricultural subsidies until everybody else does.

"If the U.S. were looking for a model of free enterprise and trade–and one that shows a unilateral phase-out of subsidies–it could easily look to Australia. In 1982, the Australian government decided to deregulate its industries, such as banking, shipping and agriculture. In short, Australia has decided not only to speak free trade, but also to phase out farm subsidies, regardless if any other country does...

"A 1987 Economic Research Service study says Australia had one of the lowest producer subsidy equivalents (PSE) in the world. PSE is the portion of farmers' gross income that comes from government assistance... During 1982 to 1986, Japan had an average PSE of 72%, the European Community was at 35%, Canada 31%, the U.S. and New Zealand each 25% and Australia 11%...

"In 1901, Australia gained independence from Britain... Unlike the U.S., where programs date from the 1930s and have grown in the 1980s, the Australian key farm programs started in the late 1950s and faded in the 1970s."

9498. Nielsen, Niels C. 1990. The Tofu Center at Purdue University and research on food uses of soybeans (Interview). *SoyaScan Notes.* Feb. 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Nielsen, a member of the USDA Agricultural Research Service, is more a molecular biologist than a soybean breeder. He did post-doctoral research and taught in the biochemistry department at the University of California at Davis. The Tofu Center, established in about Feb. 1989, is a corner of the pilot plant in the Food Science Department at Purdue. They have accumulated the equipment they need to make tofu, and they have had people from Taishi Foods (Taishi Shokuhin Kogyo K.K.) a large tofu manufacturer in Aomori prefecture, Japan come to help them make tofu that meets Japanese quality standards. Funding for the Tofu Center and his closely related Soybean Protein Improvement Project comes from Central Soya, Taishi Foods, Mitsubishi, and state grants to support value added research (about $15,000)–plus his USDA/ARS funds. Total funding is still small.

The purpose of the Center is to ask 2 kinds of questions: (1) What is the effect of the way soybeans are stored while being shipped to Japan on the quality for the final tofu? (2) What kind of very small scale tofu preparation techniques can be used in conjunction with soybean breeding programs designed to incorporate into American soybeans traits that will make them more suited for food uses in the USA and abroad. Nothing has been published by the Tofu Center about its goals and activities except for 1-2 news releases from the Purdue Information Office, plus a little video on that was shown at halftime during a recent Purdue basketball game. Suzanne Nielsen (no relation), a food chemist, is also active in the program. The lipoxygenase program is only a very small part of his lab. The major thrust of the whole program is to try to convert the soybean into an edible food, and to make it more acceptable. This will open a whole new market in the West. Most of the effort is aimed at changing the quality characteristics of soy protein by genetic engineering. The major problems they are looking at now are flavor, protein quality, sedimentation value ratios, and flatulence. Concerning flavor, they have made major advances by removing lipoxygenase. Nielsen believes that this is their most important advance to date and that it may have a major effect in improving the acceptability of soybeans for food use. They used backcrossing into Century soybeans (a good-yielding, maturity group 2, field type soybean) to get near isogenic lines. Soybeans missing the L-2 and L-3 lipoxygenase isozymes make a very bland tofu and soymilk, which is much more acceptable to American taste panels. The absence of L-2 alone gives somewhat less bland products. L-1, which has a high pH optimum, plays little role in generating off flavors. Last year about 4,500 acres of soybeans missing the L-2 isozyme were grown in Indiana. The lines lacking lipoxygenase yield the same as Century, but Century no longer yields nearly as well as the best-yielding varieties today. A lot of private and public soybean breeders are now using this germplasm. Concerning protein quality, they have learned how to change the sulfur amino acid content (to increase methionine) and now they are working to get it into a soybean variety.

Being able to change the ratio of 7S to 11S protein sedimentation values (the S stands for Svedberg, who was an early Swedish researcher on the subject) will be important in adjusting the hardness or softness of tofu. But Japanese tofu makers have no clear idea of what ratio they want. Concerning elimination of flatulence factors, that work is just starting.

The Japanese have learned to like soyfoods made from large-seeded vegetable-type (LSVT) soybeans, but American's have not yet learned that. Tofu makers are most concerned about taste and tofu yield, and they prefer LSVT soybeans for their flavor. But they prefer American soybeans for their swelling characteristics during soaking, and this gives a more uniform product. Many Japanese tofu makers plan to have LSVT soybeans grown in America under special contract, but they cannot do that economically due to (1) their poor yield due to problems of shattering during mechanical harvesting, and (2) their thin seedcoat, which leads to more damage during mechanical harvesting. The way the Japanese have traditionally harvested their soybeans, cutting the plants early by hand and hanging them upside down on racks, shattering is an advantage, allowing the beans to be manually threshed from the pods with a minimum of effort. The thin seedcoat, which does not effect shattering, does aid uniform swelling during soaking. Yet he has heard that new-crop LSVT soybeans do not swell as well as year-old ones. Nielsen feels it may not be necessary to start with a vegetable-type soybean to produce the characteristics that they want.

Nielsen believes that the program on food uses of soybeans at Purdue will expand in the coming years. Soybean breeders will be working much more closely than ever before with food scientists. Other key people are Phil Nelson (the department head in the food science department) and Marv Phillips (the department head in agronomy). There have already been 9-10 PhD theses in his soybean protein improvement program. A few of his graduates now doing important work in the area are Nilgen Tumer (from Turkey) at Monsanto (working with cross protection by putting the proteins of a virus into a plant to immunize it against infection) and Paul Staswick at Univ. of Nebraska (working with vegetative storage proteins).

Keith Smith of the American Soybean Assoc. has been very supportive of Nielsen's work. The early work on preparing the low-lipoxygenase lines and modifying the nutritional quality of the soy protein was all funded by ASA. In Dec. 1989, at a meeting at ASA in St. Louis, he first heard

© Copyright Soyinfo Center 2014

expressed concern with the quantity of protein in soybeans, for the crushing industry. This seems like a major change of attitude. They are not yet very concerned with the various components of the seed and how those effect quality. At the ASA board meeting, he pointed out that in the coming years, especially because of the development of biotechnology, we will be seeing the developing of niche markets. That will fragment the soybean industry as a commodity crop. A value-added market will emerge, and this will be a major change in the market. So ASA needs to establish better quality standards. He is already working with Central Soya toward component pricing. Indiana has a value-added program with grants to specific projects; it does not have a Center as exists in Iowa and Illinois.

Nielsen's father was a plant breeder at the Univ. of Wisconsin. He was personally more interested in biochemistry and chemistry. So it was very apparent to him due to the environment in which he was raised that there was not enough of a connection between the basic sciences and the applied sciences. The problem was to learn how to establish those bridges. He, who does cutting and splicing of DNA, now has developed close ties with the food science department. The real question will turn out to be whether or not we can find new places to put the improved soy proteins, for example as extenders. Central Soya thinks that these new soybeans will increase the use of isolates and concentrates in foods. Gary Felger (Phone: 219-425-5403) is Nielsen's contact at Central Soya. David Swanson, the CEO, is also very interested in this work. Address: Purdue Univ., West Lafayette, Indiana 47907. Phone: 317-494-8057.

9499. Levey, Robert. 1990. Daring delights at Icarus; Fresh, attractive fare at Cafe Sushi. *Boston Globe.* Feb. 9. p. 71.
• ***Summary:*** This updated review of Cafe Sushi (1105 Massachusetts Ave., Cambridge) states: "There was an appetizer of boiled "edamame," which turned out to be a bowl of whole soybeans cooked in their green skins. The vegetable looks like a lumpy peapod, and you eat it by pulling the pod through your teeth. Lovely little finger food.

"Another offbeat treat was a roasted quail appetizer, a single well-cooked small whole bird served with a few edamame on the side." Address: Globe staff.

9500. Fabricant, Florence. 1990. Food notes: Quick, Hot Sichuan. *New York Times.* Feb. 14. p. C7.
• ***Summary:*** San-J International (the American division of San-Jirushi) has just launched a Sichuan Sauce, which is hot and spicy. San-J specializes in tamari, which it has been making in Virginia for a year. In 1804 the company was founded in Japan.

9501. *Indonesia Times.* 1990. Prospect of non-salted soybean fermentation is good. Feb. 14.
• ***Summary:*** This article is about the Second Asian Symposium on Non-Salted Soybean Fermentation, held 13-15 Feb. 1990 in Jakarta, Indonesia. It covers lectures or papers presented by Prof. Darwin Karyadi (chairman of the symposium), M. Adhyatma (Indonesia's Health Minister), etc.

Moreover: "In Japan, Dr. Kiku Murata, together with a number of scientists and industrialists, have established the Tempeh Club, to encourage research on tempe and to popularize it there."

9502. Smith, Keith J. 1990. American Soybean Association: Recent developments (Interview). *SoyaScan Notes.* Feb. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Kenneth Bader became ASA's chief executive on 1 Oct. 1976. He worked in Hudson, Iowa, for about 2 years, then he supervised ASA's move to St. Louis from Hudson, Iowa, in Dec. 1978.

ASA now has a research references program. From a database search via Washington University, they obtain and supply to certain researchers and coworkers about 200-250 research references every 3 months, mostly on soybean production.

ASA presently uses these following four terms interchangeably: soybean oil, soy oil, soya oil, and soyoil. Smith thinks that "soy oil" will eventually become the standard; the term "bean" is a negative when used with foods. However "soybean meal" will probably be used in preference to soymeal, primarily because there are soybean meal standards used by the feed trade and NSPA. However, if they eventually propose soybean meal with higher protein content they may call it "soymeal," to distinguish it from 44% meal, since protein is where they have the real advantage.

Concerning component pricing, Smith has spent about a third of his time on this subject during the past year. It is very frustrating. ASA encourages and funds soybean breeders to increase protein and oil levels, and it is almost certain that breeders will be paying increased attention to composition. But whether farmers will ever be officially paid on the basis of protein and oil is highly questionable. Many farmers in the north and northwest will be discounted on the basis of composition today, so they are really being paid on the basis of average component pricing. Smith anticipates that nothing will be done to change soybean trading and marketing rules, but there will be continued pressure on soybean breeders to at least consider composition as they release new varieties. Foreign matter is a major problem in the export markets. USDA's Federal Grain Inspection Service (FGIS) has proposed changing foreign matter requirements over the last several years but U.S. exporters and crushers have effectively opposed this (as well as blending of soybeans), and also oppose component pricing. The Japanese indicate that they are going to start purchasing based on component pricing; this may be a force accelerating pricing. FGIS

© Copyright Soyinfo Center 2014

only has to give information on oil and protein levels if the exporter requests it. In the original proposed ruling it was supposed to go from optional to mandatory in 1991, but the latter provision was deleted. ASA has repeatedly supported component pricing, so that soybeans are traded on their inherent quality characteristics, which is their true value. U.S. soybean crushers go out in early fall and analyze the composition of soybeans from counties in many geographical areas. They buy based on this data, and therefore are already doing a form of component pricing, on the average rather than by the individual load. They may not feel it is worth the extra price of getting the data on each load.

There is a lot of interest in value-added products in Washington, DC, nowadays. But ASA's main market is for soybean meal that becomes meat, milk, and eggs. Every state now has a program on breeding specialty soybeans (as for natto or tofu), and most are very optimistic that the program will benefit their state, but the market will soon get saturated. ASA promotes niche markets and encourages breeders to breed soybeans for those markets. The future of low-lipoxygenase soybeans looks good. The main reason ASA has not done much with the soyfoods market is because it is so small. ASA will support the use of soy proteins as meat extenders (a niche market) as long as the red meat industry doesn't complain too much. In the future, this market could be much more important.

A number of state soybean associations such as Minnesota, North Carolina, South Dakota, and Illinois are promoting soyfoods such as soy ice cream and soynuts within the state in order to get growers involved and increase membership. They have found that in order to sell memberships and develop leadership, farmers have to do something. Farmers like to dip ice cream. ASA is supportive of anything that will increase membership and leadership in the states.

Concerning areas of potential cooperation between ASA and the U.S. soyfoods industry / association, ASA is concerned about the perception of soyfoods and would be interested in cooperating in any way possible to give soyfoods a more positive image, and to put them in the mainstream of consumer attitudes and foods. Talk to Gunnar Lynum, who is in domestic promotion.

ASA probably could put together graphs of membership and funding. He suggests that Soyfoods Center write a letter to Ken Bader, Steve Drake, and Marlyn Jorgensen (ASA President) offering to work with ASA in developing a history of ASA. ASA has a history of ASA that was partially done (by Kent Pellett) while they were still in Hudson. It has been dormant for the past 10 years. It is a low priority and will probably never be published, unless I volunteer to write it.

The next World Soybean Research Conference (WSRC) will probably be held in China (PRC), or Brazil (less likely). In recent years there has been a decrease in the number of people working on soybean utilization. So there is not much new to report at the world conferences. The people on the WSRC continuing committee are mostly soybean production people and breeders. Maybe the soyfoods industry and ASA (Gunnar Lynum, who is mainly into soy oil and industrial uses) could cooperative to have the soyfoods industry better represented in these conference speeches.

ASA will put Soyfoods Center on its news release list. Address: Staff Vice President, Research and Utilization, American Soybean Assoc., P.O. Box 27300, St. Louis, Missouri 63141. Phone: 314-432-1600.

9503. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo, English ed.*). 1990. Zambian learns of tricks of tofu trade. Feb. 19. [Eng]

• ***Summary:*** A Zambian man, Stanislas Chisembe, a 38-year-old veterinarian is studying tofu production at a tofu shop owned by Yasuo Tominari in Matsumoto city, Nagano prefecture. He wants to teach the process to his countrymen. In Zambia, where farmers have recently begun to cultivate soybeans, most are exported as cooking oil and feed. He thinks tofu can be mixed with traditional Zambian food, based on cassava and corn, to help relieve protein deficiencies and infant mortality. Chisembe first learned of tofu when he visited Japan 2 years ago. This is the second in a series of articles on an international cultural exchange program called "30 Days in Japan."

"Now he has returned as one of 15 foreigners on a 30-day program in which participants pursue individual projects in Japan. He plans to use his new knowledge about the protein-rich soybean to alleviate malnutrition in Zambia.

"When he returns home, Chisembe will rely on television and other methods to teach tofu-making. The Japan International Cooperation Agency, based in Tokyo, has promised to help him encourage the continued cultivation of soybeans in Zambia...

"At an agricultural center in Toyoshina-machi, Nagano-ken, housewives helped him perfect his technique for making tofu and miso by hand." Address: Tokyo, Japan.

9504. Steinkraus, Keith H. 1990. Re: Current work with fermented foods and biological control/IPM. Letter to William Shurtleff at Soyfoods Center, Feb. 25. 1 p. Typed, with signature.

• ***Summary:*** Dr. Steinkraus retired on 1 July 1989 (not by choice but by law) but is still busy in the area of indigenous fermented foods. He and wife Maxine have 5 children. In Oct. 1988 they moved from Geneva, New York, to Ithaca. Keith moved his laboratory equipment to the Dyce Laboratory at Ithaca, in the Department of Entomology. He has worked on biological control of insects since 1952, so the Department welcomed him. He has also been doing some work on African fermented foods for Nestlé, and will teach this year at Gadjah Mada University in Bogor, Indonesia (which is offering a workshop on Indigenous Fermented

Foods). Also discusses his activities last year in Japan, Thailand, Wales, and Czechoslovakia. Address: 15 Cornell St., Ithaca, NY 14850; and Cornell Univ., Geneva, New York. Phone: 607-273-6736.

9505. Hesseltine, C.W. 1990. Margaret B. Church, 1889-1976. *Mycologia* 82(1):144-47. Jan/Feb. [20 ref]
• ***Summary:*** "Dr. Margaret Brooks Church was a distinguished mycologist and a charter member of the Mycological Society who has been neglected in the history of mycology. She made several noteworthy contributions to systematic and applied mycology. She, along with Dr. Charles Thom, wrote the first manual on the genus *Aspergillus.* The first authoritative treatment of oriental fermented foods in the West was written by her. It remains an accurate account of these fermentation processes. Dr. Church also conducted laboratory experiments on soy fermentations and collaborated with Japanese workers, especially Professor K. Oshima; Hokkaido Imperial University, Sapporo, Japan...

"Dr. Church was born in Providence, Rhode Island, on March 13, 1899. She received an A.B. in 1912, an A.M. in 1914, and a Ph.D. in 1918, all from Brown University.

"One of her most important contributions was the USDA Department Bulletin 1152 entitled, 'Soy and Related Fermentations,' published in 1923. At that time there was interest in establishing soybean production in the United States because soybeans were being imported into the U.S. from the Orient. This publication had many photographs of the industrial processes of making koji and soy sauce in Japan. Research in soy sauce production began in 1918 and continued for several years. Soy sauce, miso, molded [fermented] tofu, and natto were also described...

"Dr. Church's research dealt extensively with koji, and it is surprising that she knew even then that tane koji (koji inoculum) consisted of several selected mold strains of *Aspergillus oryzae.* The fact that yellow-green *Aspergillus* strains were employed in these fermentations undoubtedly led both Thom and Church to publish the taxonomic relationships of this group of molds in 1921. Her research on koji was a likely catalyst for her study of industrial enzymes...

"In 1938-1939, Dr. Church served as an indexer and abstractor for Biological Abstracts. Upon her retirement, presumably in 1939, she moved to Lyndon, Vermont." A large photo shows Dr. Church. Address: 5407 Isabell, Peoria, Illinois 61614.

9506. Horii, Masaharu; Ide, T.; Kawashima, K.; Yamamoto, T. 1990. Hypocholesterolemic activity of desalted miso in rats fed an atherogenic diet. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 37(2):148-53. Feb. [19 ref. Eng; jap]
• ***Summary:*** "Effect of dietary miso on the cholesterol metabolism was examined in rats fed the diet containing 0.5% cholesterol and 0.15% sodium cholate. The inclusion of 20% desalted miso to the atherogenic diet significantly decreased the concentration of serum cholesterol hepatic lipid concentrations at the time of sacrifice (30 days) were in no way affected by dietary miso. The ingestion of the miso preparation doubled the fecal excretion of acidic steroids, while it increased only slightly that of neutral steroids. The dietary miso appeared to exert the potent hypocholesterolemic activity primarily through the enhancement of the catabolism of cholesterol to bile acids in rats fed an atherogenic diet." 9507. Karta, Susani K. 1990. The market prospective for tempe in the year 2000. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 94-104. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [11 ref. Eng]
• ***Summary:*** A very interesting paper. Contents: Introduction. Market situation for tempe in Indonesia. Health and nutritional significance of tempe. Tempe for weaning food. Constraints and trends in the market development of tempe. Recommended guidelines and strategies. Ideas for the diversification of tempe utilization (Tempe as a food ingredient, new tempe food opportunities).

Tempe "is a key protein source in the rice-diet of the people of Indonesia. It is consumed by millions of people of various ages and socio-economic status. It has gained popularity in the Netherlands, Japan, Malaysia, Singapore and other areas where Indonesians have settled. It has also slowly been making its way into the American diet, particularly, in the vegetarian, cholesterol-free and low-fat food product markets."

"Indonesia with a population of 177 million people (in 1988) and an annual population growth rate of 2%, is the largest tempe producer in the world and has the largest soyfood market in the region. In 1983, Indonesians consumed about 0.9 million MT [metric tons] of soybeans as food, which increased to about 1.5 million MT in 1988 (Table 1). About 50 percent of the total soybeans consumed was in the form of tempe, 40% as tofu and the remaining 10% was used for making soy sauce and tauco (a fermented whole soybean condiment). In 1988, the estimated soybean consumption for tempe was around 764,000 MT which amounted to an average per capita consumption of 6.45 kg of tempe (equivalent to 4.3 kg soybeans). In the past five years the consumption of soyfood has increased by an average of

© Copyright Soyinfo Center 2014

10% annually."

"Acute diarrheal disease is one of the leading causes of childhood mortality and morbidity in developing countries and is a major contributor of malnutrition. Approximately 25% of the growth differential between children in selected developing countries can be explained by diarrhea. The mortality and morbidity data from a total of 193 surveys carried out in 49 countries since 1981 by WHO (1986) indicate that, on average, a child under 5 years of age suffer 3.5 episodes of diarrhea per year and that about one-third of deaths in this age group are diarrhea associated.

"Investigations worldwide have found diarrhea incidence peaking between the ages of 6 months to 3 years."

Tables: (1) Indonesian soybean production, imports, and consumption as food, 1983-1988. Soybean production increased from 536,000 tonnes (metric tons) in 1983 to 1,179,000 tonnes in 1988–more than double. Soybean imports, which were 391,000 tonnes in 1983, rose to a peak of 400,000 tonnes in 1984, then decreased to 350,000 tonnes in 1988. Consumption of soybeans as food increased from 927,000 tonnes in 1983 to 1,528,000 tonnes in 1988. Per-capita consumption figures are not given. Source: ASA estimates and BULOG statistics. (2) Nutritional composition of tempe (100 gm edible portion). (3) The essential amino-acid composition of tempe compared with the FAO/WHO reference pattern (expressed in milligrams per gram of nitrogen). (4) Fatty acids in soy tempe. (5) Global and regional population in 1980 and estimated number (millions) and distribution of diarrheal diseases. (6) Household Health Survey illness data by different age groups in Indonesia. (7) Potential demand for tempe flour in weaning food in the year 2000, Indonesia. (8) Demographic estimates for Asian developing countries. (9) Estimated number (millions) of children under age 5 in Asian developing countries. (10) Projected potential use of tempe flour in weaning food in Asian developing countries in the year 2010. Address: American Soybean Assoc., Singapore.

9508. Kelley, Bill. 1990. Little big men: Good things often come from small packaged good companies. *Food & Beverage Marketing.* Feb. p. 12-13.

• ***Summary:*** This major cover story, with a photo of Morinaga's national sales manager Art Mio against a background of 76 packs of Mori-Nu Tofu, starts its profile of four smaller but successful food companies with a section titled "Bean curd for the masses."

"Art Mio doesn't have an easy job. He has to convince Americans to try tofu. 'It has a tremendous negative image,' says the national sales manager for Morinaga Nutritional Foods, marketer of Mori-Nu tofu. 'People who haven't even tried it think they don't like it.'"... Morinaga does roughly $7 million in sales, says Mio. "Like other tofu marketers, Mori-Nu positions its product as a health food... The only problem is its taste. When fresh, it doesn't have much of one. But, says Mio, it is often bought spoiled and tastes sour. 'Consumers get inconsistent quality. They eat some, it's bad, and they run to the sink and spit it out.' Tofu often spoils because it is improperly refrigerated... While most consumers know tofu as the white, blobby stuff floating in a milky liquid in the supermarket's deli section, Mori-Nu has elevated the oriental bean curd to packaged good status in attractive boxes and displays. Along with offering a longer shelf life, each package contains a recipe for the product. 'Few people eat tofu plain,' says Mio. 'We position it as a healthy ingredient'...

"The package also invites customers to join the company's 'Healthy Life' club... So far, 10,000 people have taken Mori-Nu up on the offer... 'Our strategy is to get people to use tofu as many ways as they can...

"Recently, the company began marketing its tofu through the Diet Center, a chain of weight-loss centers with more than 2,400 stores across the country. 'That has been doing particularly well,' he says. In addition, the company's tofu was mentioned in 40 recipes in a cookbook sold through the centers."

Note: In Sept. 1990, Art Mio told the *Los Angeles Times* that Mori-Nu's sales for last year were $5 million.

• ***Summary:*** This attractive booklet, written in both Japanese and English (but with no Japanese title), and containing many color photos, describes Morinaga's new state-of-the-art Research and Information and Research Center, opened in

© Copyright Soyinfo Center 2014

late 1989 on the outskirts of Tokyo. It evens contains a gym and tennis courts. The center contains the following sections, each of which is described: Food research and development laboratory, Nutritional science laboratory, Biochemical research laboratory, Analytical research laboratory, Product evaluation center, Management information systems department. In Feb. 1990 Morinaga Nutritional Foods in Los Angeles issued a news release about the new facility. "Mori-Nu Tofu's safety, convenience, and consistent quality are backed by years of Morinaga's food science know-how, and not just words. No other tofu company comes close."

Note: Art Mio (2/90) thinks that it cost about $10 million to build this lab. Address: Tokyo, Japan.

9511. Murata, Kiku; Asano, Machiko; Fukakura, Noriko. 1990. Activities of Tempe Study Group and popularity of tempe in Japan. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 1-3. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [13 ref. Eng]

• ***Summary:*** In 1985 the First Asian Symposium on Non-Salted Soybean Fermentation was held in Tsukuba, Japan. In 1988 the Tempe Study Group was started in Japan by various people interested in tempe. "Seventy seven people became regular members (for a membership one has to pay ¥2,000/fiscal year) and 12 supporting members. In 1989 fiscal year there are 85 regular and 10 supporting members (who have to pay at least ¥10,000/fiscal year).

"The Tempe Study Group had the first Tempe Study Meeting at a lecture hall of Yukijirushi Milk Co. Ltd. in Tokyo, Feb. '89. The second Meeting was held at Kenkyu Koryu Center of Osaka City University in Osaka, in June 1989. The third Meeting was held at Teikoku Gakuen, together with the regular meeting of Kansai Cereal Science Study Group in September 1989, having party serving various tempe dishes. Each time there were 70-100 participants from all over Japan who were very active in discussions. The subjects and speakers were as follows:

"For the first meeting, 1. Y. Torii; About her visit to Natural Foods Expo at Los Angeles, California, in April 1988. 2. K. Okada; Studies on Isolation of Specific Gene from Tempe. 3. T. Maeda; Works on Tempe in our Village.

"For the second Meeting, 1. M. Terashima; The Status quo on Soyprotein and its Foods in Japan. 2. E. Katoh; On Frying Tempe in Reduced pressure. 3. S. Kawabata; Tempe made of Tofu Residue [Okara] and Its Utilization. 4. M. Matsuo; High Fiber Biscuit Adding Tempe made of Tofu Residue.

"For the third Meeting, 1. T. Watanabe; Science of Tempe. 2. K. Murata; Chemistry of Tempe and Its Edible Value. 3. M. Iwatsuki; Problem on Production and Selling Tempe on the Market.

"However, according to our survey of 3,000 people in 27 groups on 10% knew tempe. Among them, in 7 groups, 20-25% of the people liked tempe, as shown in Table 1. Therefore, I feel that we need more efforts to let people know tempe and how to handle or eat tempe." A table shows the results of the survey of 3,000 people as described above. In the 7 groups, 50% knew about tempeh, but only 20-25% of the total said they liked it. Address: 1. Research Inst. for Education, Teikoku Gakuen; 2. Teikoku Women's Univ., Moriguchi City. All: Osaka, Japan.

• ***Summary:*** In this cohort study, the authors did not find a significant association between consumption of miso soup or tofu and gastric cancer risk among 7,990 American men of Japanese ancestry in Hawaii, although a trend toward a protective effect of tofu was present. Address: Japan-Hawaii Cancer Study, Kuakini Medical Center, Honolulu, Hawaii 96817.

9513. Soejono, Irlan; Kagatsume, Masaru. 1990. Shifts and development in trade of various food crops in East Asia, 1960-1984. *CGPRT Working Paper* No. 5. xviii + 168 p. Feb. 28 cm.

• ***Summary:*** For each country discussed, this book gives information on: Production and supply of coarse grains, pulses, and root and tuber crops. Consumption and demand. Trade and trade elasticities. Forecast and policy implications: Prediction on import demand, indication of policy implications.

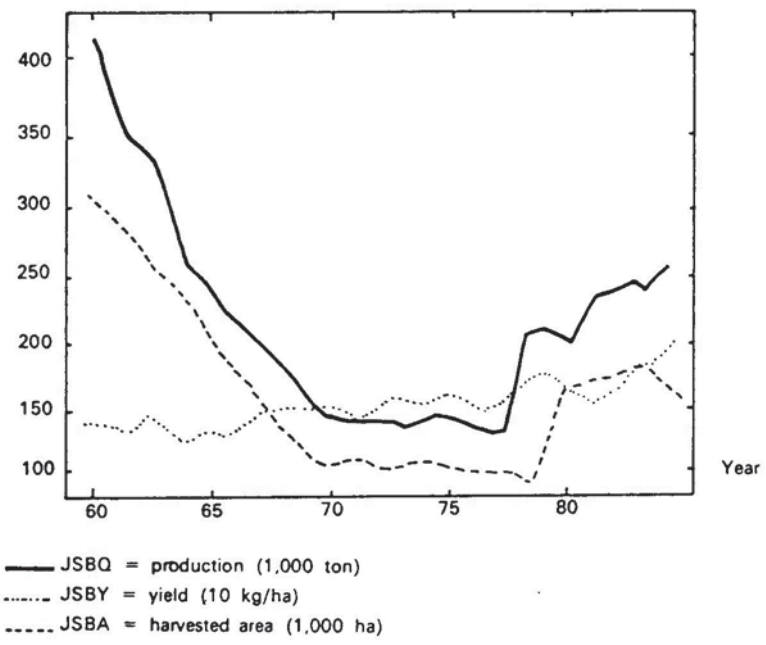
The countries are: Japan (p. 1-28). People's Republic of China (p. 29-42). Republic of Korea (p. 43-62). Taiwan (p. 63-79). The Territory of Hong Kong (p. 81-92). Appendixes (p. 95-165). References (p. 167-68).

Summary: As people in the East Asia subregion become more affluent and westernized, they consume less food grains directly and more livestock products.

Japan: Japanese rice production peaked in 1963 at 13.42 million tons, but surpluses have continued to grow. The government has tried various schemes to induce farmers to switch from rice other crops, including soybeans. Graphs show: (1-6, p. 6) "Soybean production, area and yield, 1960-1984." Soybean production in Japan dropped from 418,000 tonnes in 1960 to 100,000 tonnes in 1976. Because of the Rice Farming Diversification Policy, soybean production since 1976 has increased, rising to 238,000 tonnes in 1984. The graph also shows harvested area and yield during this period.

(1-13a+b, p. 13, 14) "Total demand for soybeans its components [in Japan], 1960-1984." The total demand has increased steadily from 1.517 million tonnes in 1960 to

© Copyright Soyinfo Center 2014



Soybean Production, Area and Yield, 1960-1984

4.814 million tonnes in 1984. About 80% of this demand (3.952 million tonnes in 1984) was for soybeans to be processed. About 90% of these (3.765 million tons in 1984) were crushed into oil and meal. Small and relatively static amounts were processed to make miso (182,000 tonnes) and soy sauce (5,000 tonnes) in 1984. Address: 1. Senior Agricultural Economist, CGPRT Centre, Jl. Merdeka 145, Bogor 16111, Indonesia; 2. National Research Inst. of Agricultural Economics and the Ministry of Agriculture, Forestry and Fisheries of Japan.

9514. Zoller, Stephen; Belleme, John. 1990. Soy sauce: A brewing controversy. *Solstice* No. 39. p. 4-5. Feb. [1 ref]
• ***Summary:*** First Zoller responds to Belleme's two articles about San-J tamari in recent issues of Solstice. Then Belleme responds to Zoller.

Zoller contents that (1) San-J adds food grain alcohol (manufactured by Grain Processing Corp. and certified as kosher) to bring the level up to 2% to inhibit the growth of aerobic yeasts. No benzene is used in the production of this alcohol. (2) San-J's shoyu is made with approximately 80% whole soybeans and 20% whole wheat. No wheat flour is used. (3) Soy grits are of two types: Food grade (which San-J uses) and ordinary (which is used for animal feed). San-J's soy grits are certified as Kosher. (4) Traditionally brewed. The essential parts have not changed.

Belleme responds to each point, then concludes: "San-J cannot have it both ways. When they were marketing only whole soybean tamari in the U.S., their promotional literature referred to soy sauce made with soy grits as 'modern' and 'conventional.' San-J Tamari (black label) and Shoyu (blue label) proudly said, 'traditionally brewed,' 'aged in four seasons,' and 'made with whole soybeans, not chemically treated soy grits.' When San-J began marketing their soy meal product in the U.S., the 'modern' process suddenly became traditional and hexane-extracted soy grits became Kosher. San-J's soy grits may be Kosher, but the confusion they have caused in the natural foods market is not.

"Judging food based on flavor is a matter of personal preference, but natural food shoppers need more accurate labelling to make an educated choice." Address: 1. Vice President and General Manager, San-J International, Richmond, Virginia; 2. Saluda, North Carolina.

9515. *Toyo Shinpo* (*Soyfoods News*). 1990. Chinpin gojutten sorou: Zenkoku tôfu kakô shokuhinten-kai [Fifty second generation tofu products from the Japanese National Processed Tofu Exhibit in Aichi prefecture]. March 1. p. 5-6. No. 1016. [Jap]
Address: Japan.

9516. *SoyaScan Notes.* 1990. The isolation of Japan, trade with Holland, and shoyu (Overview). March 5. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Oda Nobunaga (1534-1582) was the first of the great unifiers of Japan. He eliminated the military power of the Buddhist church, destroying monasteries and killing monks. His bitter opposition to the Buddhists inclined him to favor the Christians, who thrived during his reign. Nobunaga was followed by Hideyoshi (1536-1598), his best general, who completed his work of unifying Japan after 250 years of political disunity. In 1587 Hideyoshi suddenly ordered all Christian missionaries banished from Japan, and he subsequently confiscated their "sub-fief" in Nagasaki. He began persecuting Christians in 1597.

In 1603 Tokugawa Ieyasu (1542-1616) founded the Tokugawa shogunate. He was intensely interested in seeing that his heirs continued his rule–a feat that had eluded Nobunaga and Hideyoshi. He regarded Christianity as a menace, and he stamped it out, though it survived longest in Nagasaki. But he was eager for foreign trade apart from religion. In the second half of the 1500s, trade with Portugal and Holland had thrived. But in 1639 the Portuguese were expelled from Japan for suspected complicity in the Shimabara Revolt. In 1641 the Dutch were moved from Hirado to Nagasaki, where they were kept almost like prisoners on Dejima (also spelled Deshima), a small artificial island in the harbor. All Japanese were prohibited on pain of death from traveling abroad. By these steps Japan succeeded in blocking off most of the channels of foreign contact.

During Japan's 215-year-long period of national

© Copyright Soyinfo Center 2014

isolation (1639-1854), the island of Dejima in Nagasaki Bay was the country's only port open to foreign trade.

But Japan's self-imposed isolation was by no means complete. In fact trade increased, though the Japanese were more selective about what they imported. The Dutch had a monopoly on trade between Japan and Europe. One of the items exported by Japan to Europe via Dutch traders was shoyu, is grey pottery jars with blue writing on them. On the jars was written "Jap. Soya" or "Japansch Zoya."

9517. Fehlberg, Eric C. 1990. Thoughts on Loma Linda Foods, its acquisition by Worthington Foods, and the health foods industry in America (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Worthington Foods purchased Loma Linda Foods (LLF) from the Seventh-day Adventist Church in Jan. 1990. Loma Linda Foods, unlike most other Seventh-day Adventist companies worldwide, tended historically to target its products to Seventh-day Adventists. Within North America there are very, very few respectable SDA businessmen. That is the problem. "Loma Linda has been working since 1906 with their eyes blindfolded. Too often, instead of using a businessman to head the program, the men in their wisdom have elected to install a broken down minister, and expected him to make a roaring success of it."

A very good businessman, George T. Chapman from Australia, ran LLF from 1938 to 1963. The company did very well financially under his leadership. Since 1963 the company has had a series of managers who lacked business experience; the result was ongoing financial problems. In June 1984 Mr. Fehlberg went from his position at the General Conference to Loma Linda where he turned the company around. Fehlberg ran LLF for about 2 years, during which time it went from a substantial loss to a very profitable company. Mr. Pizzaro was brought in Nov. 1984 and has kept it profitable. He is a very conservative man with a background in banking. He was able to hold LLF together but was not inclined to take the risks to make it really take off.

The church first wanted to sell off the infant formula part of the company because of the high cost of liability insurance. The FDA are really down on infant formula foods. If anything goes wrong, there is no end to the strife. LLF had one small recall due to a small shortage of vitamin A–from dissipation. It was very expensive. Fehlberg understands that but does not understand at all and strongly disagreed with the sale of LLF. "I talked myself hoarse on the committee opposing the sale but I didn't win. I am not happy that it ended up in the hands of Worthington Foods. Their financial report over the past 5 years is not that strong. The last year has not been a healthy year. I hope they can survive. Loma Linda will definitely help them survive by giving them a lot of extra new sales with no extra administration or marketing costs. Now that they have a monopoly, they may relax their standards. I believe that once the 5-year non-compete term expires, you'll get an influx of products into the United States from Adventist companies overseas that will make it very difficult for Worthington to operate–unless they can improve things. Fehlberg prefers the flavor the Australian meat analogs, which are less highly flavored and easier to digest.

Fehlberg feels that the USA is 20 years behind many other countries (Australia, West Germany, Japan) in food processing and storage techniques, largely because of Food and Drug Administration (FDA) restrictions. One area where the USA lags behind is in retorting of food products in plastic film containers. We tend to retort foods too long, and do not have foods retorted in sausage-type pouches (e.g., tofu sausages), which require no refrigeration. The FDA is afraid of botulism in such protein foods, so they require that the foods be frozen. In Australia, West Germany, and Japan these foods are refrigerated, but Adventist tests show they can be stored at room temperature for 6-12 months, or more. If Worthington's frozen meatlike products could put in plastic containers made of this special film (which is available in America) there would be major cost savings in factory storage, transportation, and retail storage. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

9518. Mio, Art. 1990. Hinoichi tofu is of excellent quality because it is refrigerated properly (Interview). *SoyaScan Notes.* March 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Hinoichi tofu is good quality because it is stored under dairy refrigeration temperatures from the time it is made until it is sold. Southern California is the only area in America that merchandises tofu properly, in the dairy case–even though most people think it sells better in produce. Mr. Yamauchi of Hinoichi insists that any tofu of his sold in Los Angeles be sold in the dairy case. When Hinoichi makes tofu, as for Frieda's Finest, they pack it in a wax coated case and put ice on top of it, so when it gets on the truck going out across America it is in good shape. Address: National Sales Manager, Morinaga Nutritional Foods. Phone: 213-728-4325.

9519. Porter, Kelly. 1990. Kyoto to sink shovels at plant site March 24. *Tribune-Star* (*Terre Haute, Indiana*). March 11.

• ***Summary:*** Describes the proposed ground breaking for the company's new tofu plant at Terre Haute.

9520. *SoyaScan Notes.* 1990. Use of *Bifidobacterium* species in dairylike soymilk products (Overview). March 15. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** A growing number of soy yogurts, dairy milks,

© Copyright Soyinfo Center 2014

and cultured milks (such as Yakult) in Europe, Japan, and Canada are being promoted as containing species "Bifido" (pronounced BIF-uh-doe) or "Bifidus" bacteria. Keum et al. (1984) used *Bifidobacterium bifidum* as a starter for soymilk yogurt with good results. Sakai et al. (1987) showed that *Bifidobacterium breve* grown on soymilk assimilates the flatulence-causing oligosaccharides stachyose and raffinose in preference to sucrose, and hydrolyzes galactosyl compounds.

Talk with Brian Quigley of Canada. 1990. March 15. These bacteria are found in the large/lower intestine of newborn infants, but they gradually disappear a few months after birth. If these bacteria are ingested by adults, they supposedly go into the digestive tract, where they survive and kill bad bacteria. By eating a food containing these bacteria, an adult is replenishing his/her digestive tract with a bacteria found there at birth but lost. Some studies ascribe amazing benefits (anti-carcinogen, etc.) to this organism. Chris Hansen's Lab. in Milwaukee, Wisconsin, has done extensive work on this organism in Europe and the USA. They have worked with Yoplait in France and other companies to develop good strains. Products now containing the bacterium are often labeled "BA" or "Bifido Active." In Japan, the bacteria are sold in pill form. Researchers at Laval University in Quebec, Canada, have also done considerable research on these bacteria.

Bergey's Manual of Systematic Bacteriology (1984) lists 32 species of *Bifidobacterium,* including the species *bifidum* and *breve* (p. 1424). "Distinction of two serovars have been made. Serovar A predominates in the feces of human adults, while B predominates in that of neonates (Reuter 1963)."

A search for the term "Bifidobacterium" the MEDLINE database from 1986 to the present lists 78 publications.

9521. Sellars, Bob. 1990. The health benefits *Bifidobacterium* species in dairy products (Interview). *SoyaScan Notes.* March 16. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** Chris Hansen's Lab was founded in Denmark in 1874. Mr. Sellars has been interested in *Lactobacillus acidophilus* and *Bifidobacterium* since 1964, and has done many experiments on himself. His lab has supplied acidophilus to the health food industry since 1962. The single best source of information on *Bifidobacterium* (pronounced BIF-uh-doe-, and called "Bifido" for short) is a 1983 book by Rasic and Kurmann titled *Bifidobacteria and Their Role.* It cites most of the important studies.

The main benefit of Bifido is that it produces some very beneficial enzymes that help to inhibit the formation of pro-carcinogens. But acidophilus also produces an enzyme/compound which reduces or inhibits the azo-reductase and nitro-reductase enzymes in the human body. Those enzymes can produce carcinogens, such nitrosamines (pronounced nai-TROE-suh-meens).

The species of *Bifidobacterium* used by most people are *bifidum, longum, adolscenpis,* and *infantis.* His Lab. makes a mixed culture product named Nu-Trish a/B which contains the longum and the bifidum. The "a" stands for acidophilus, which resides primarily in the small intestine; the B stands for Bifido, which resides primarily in the large intestine. This culture is not used for making yogurt. In the USA the standard for yogurt requires it to contain live *Streptococcus thermophilus* (pronounced ther-MOPH-uh-lus) and *Lactobacillus bulgaricus* organisms. So Nu-Trish a/B (which contains whole cells) is usually added to sweetened pasteurized fluid milk, which is not fermented, but is sold in many supermarkets. In a fermented yogurt, the 3 organisms in Nu-Trish would be antagonistic to the 2 yogurt organisms, so it wouldn't work well. The acidophilus and the bifidum found in newborn infants come primarily from the colostrum in mother's milk, but some may be found in the fetus at birth. Both organisms are found in both intestines of the infant, but (as noted above) acidophilus predominates in the small intestine and *Bifidobacterium infantis* in the large. Infants gradually loose these bacteria as they mature. The Japanese are very interested in these organisms for health reasons because of the Yakult company, and Japanese consume more of these bacteria per capita than any other nation. In Japan, it is legal to promote the health benefits of these organisms, and say that they help cure cancer, that they are good for lactose intolerance (the bacteria produce an enzyme that breaks down lactose in both the milk and in the stomach and small intestine), or that they cure gastroenteritis infections; in the USA, this is illegal. In Europe and Japan extensive clinical research shows the benefits to humans, but in this country the American Medical Assoc. and the Food and Drug Administration have refused to recognize the research done here because the sample size was too small to make it statistically valid. Now Dairy Research Incorporated, the National Dairy Council in Chicago, the National Dairy Research and Promotion Board, the Wisconsin Milk Marketing Board, and the North Carolina Dairy Foundation, Chris Hansen's Lab., and Miles Lab. are all supporting one large scale study in 3 locations. The results, expected in June 1990, if promising will be published in *New England Journal of Medicine* or *Lancet.*

The key to the rapid growth of interest in Bifido was the discovery in Japan a few years ago of the "Bifido factor," i.e. that Bifido need the sugar lactulose for rapid sustained growth. Dairy milk contains small, irregular amounts of this sugar. Hansen's Lab. is interested in dairy milk, and NOT in soymilk.

Al Huggins, president of Huggins International in Chicago has a database on dairy cultures such as acidophilus (Phone: 312-477-0014). Address: Senior V.P. of technology, Chris Hansen's Laboratory, 9015 W. Maple St., Milwaukee, WI 52315. Phone: 414-476-3630.

9522. Storup, Bernard. 1990. The tofu industry and market in France (Interview). *SoyaScan Notes.* March 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The largest tofu manufacturers in France are: (1) Société Soy makes 12,500 kg/week (12.5 tonnes/week) of their basic tofu, much of which is made into second generation products. In fact, regular tofu counts for only about 15% of their tofu sales, whereas Tofu Burgers (*Croque Tofu*) account for 45% and Tofu Sausages (*Tofinelle*) account for 20%. These figures do not include their soymilk, which is more but which is sold as soymilk. They sell to the mainstream market. Société Soy's market for tofu and tofu product has been growing at the rate of about 40% a year over the past few years.

(2) Daizou SARL (related to Le Bol en Bois, in Champigny sur Marne) makes an estimated 500-600 kg/week. They sell tofu from the shop and deliver to several Japanese retail outlets. Their customers are mostly Japanese. Their production seems to have remained static during the past 2-4 years. There are 2-3 small companies that make about 200 kg/week. Innoval (pronounced EEN-oh-val) no longer makes tofu in France. Cacoja (pronounced KA-ko-jah) in the east of France makes what they call their "soy base," to be mixed with meats. It is ultrafiltered, concentrated soymilk with a high solids content but it is quite different from regular tofu. Presently, they may not be selling any tofu in France, and their program to sell the soy base seems weak.

Thus the total size of the tofu market in France is about 14,000 kg/week or 728,000 kg/year. It is growing at about 35% a year.

Update: 12 July 1990. Société Soy has been planning a major export program to the UK. Now they have decided to drop that and export instead to Italy. Address: Founder and Owner, Société Soy, 1 rue du Crêt de la Perdrix, 42400 St.-Chamond, France. Phone: 77.31.23.66 OF.

9523. Ontario Soybean Growers' Marketing Board. 1990. A profile of the Canadian soyfoods market–Characteristics and potential. Box 1199, Chatham, ONT N7M 5L8, Canada. vi + 40 p. March. 28 cm. Spiral bound.

• ***Summary:*** Contents: 1. Introduction: Background, study objectives. 2. Research procedures: Data limitations, data collection (data sources). 3. The soyfood market: Soyfood production and utilization, domestic production, imports and exports (introduction, whole soybeans, soy flours and meals, soy oil, soy sauce, protein substances, cream and other substances, bran & soy hulls, soy meal oil cake), balance, conclusions regarding opportunities.

4. Soybeans for food purposes: Natto beans (background, market characteristics, market potential), whole bean soyfoods (introduction, soynuts, full fatted soy flours, soymilk, tofu, soy sprouts, tempeh, miso, natto, soy sauce), foods from soy ingredients (introduction, defatted soy flakes, soy protein concentrate, soy protein isolates, textured soy protein, consumption and imports). 5. Organic soyfoods: Introduction, organizations (major players, labelling requirements, certification), organic soybeans, organic soyfoods, market opportunities, recommendations.

6. Market estimates: Introduction, conversion rates, market characteristics (introduction, ethnic characteristics, immigration trends, implications), soyfood consumption (production). 7. Soyfood products: Introduction, new products (whole bean products, products from soy components), existing products (products with potential for growth). 8. Marketing strategy: Introduction, respondent requests (background), market opportunities (traditional soyfoods, new products), systems development (system information needs, human resources, production research), institutional needs.

This study was commissioned by the Ontario Soybean Growers' Marketing Board to provide a description of the Ontario soyfood industry. "Production and utilization: In the 1988 crop year, approximately 1.12 million tonnes of soybeans were produced on 1.28 million acres in Ontario. Approximately 86% of the soybeans were sold through the Board, with the remainder being fed or retained on the farms where they were grown. In 1988, 860 thousand tonnes of soybeans were crushed in Canada to produce soybean meal and soy oil, and 272 thousand tonnes were exported.

"Imports and Exports: Canada had a negative balance, a deficit, of almost $190 million in the value of soybeans and soy products traded. This is just over half a million dollars per day. Our largest single area of exports is whole soybeans for human foods. The percentage of these beans going to the major markets in 1988 were: USA, 37%; Pacific Rim Countries, 34%; and Europe and other 29%. Our greatest imbalance in exports and imports is in soybean meal or oil cake. Canadian crushers are unable to maximize their sales of oil cake because of difficulties in selling surplus soybean oil in the US. Soy oil being sold into the US presently faces a tariff of 18% which is decreasing at the rate of 2.25% per year as per the Canada United States Trade Agreement...

"Institutional development: We suggest the Board initiate the establishment of a Soyfood Development Association similar in structure and function to the Canola Council of Canada... There is a need to begin to bring all industry stakeholders together to systematically identify problems, information and research needs; develop data bases; and cooperatively promote the soyfood industry."

Soybeans for food purposes: The total volume of soybeans consumed as soyfoods in Vancouver (BC), Toronto (Ontario), and Montreal (Quebec) was estimated at about 6,000 tonnes, and imports were estimated to be equivalent to 8,000 tonnes of soyfoods.

Miso: One large Vancouver producer and one Toronto producer estimated that the volume of soybeans used to make miso in Canada is only about 35 tonnes/year.

Modern Soy Protein Products: Soy flour, concentrates,

© Copyright Soyinfo Center 2014

isolates, and textured soy protein products. Roughly 2,400 tonnes of soybeans are used in Canada for the production of these products, and 5,600 tonnes of soybeans are used to make the imported products (only bakery flour and extruded flour are made in Canada). Almost 1,000 tonnes of soy protein concentrates and isolates, and 400 texture soy proteins were imported, 83% from the USA. Total exports were 800 tonnes, of which 578 tonnes went to the USA. Soy flour (full-fat): The term "flour" generally signifies that the material has been ground finely enough to pass through a 100-mesh screen. Only relatively small volumes of full-fat soy flours are used directly as human foods. Some are used in bread, crackers, and pastry products. 5 companies in Canada make 1,538 tonnes of soy flour worth $495,000.

Natto: Canadians sell roughly 8 to 10 thousand tonnes of natto beans in Japan each year. Natto-type beans are "created by screening out the small beans from among regular food grade soybeans which have white hilums" (p. 15). In Japan about 100,000 tons/year of soybeans are used to make natto. Recently, Canada (via 3 companies–First Line Seeds, W.G. Thompson, and King Grain) has supplied about 10% of this market. Ontario produces about 8,000 to 10,000 tonnes of natto beans. Competition is expected to increase from U.S. seed breeders.

Soymilk: There are presently no large Canadian soymilk manufacturers. A plant is being built by an international trading company near Vancouver (YHS Pacific Fruit Concentrates Ltd., owned by Yeo Hiap Seng). It will supply both the local market and the Western U.S. market when it goes on stream later this year. A high proportion of imported soymilk is organic. Two brands account for 3/4 of all imports: Edensoy and Vitasoy. A high proportion of all soymilk imports are certified organic. This emphasis makes it difficult for Canadian producers to compete because of the shortage of organic soybeans in Canada. Consumption of soymilk is increasing at about 10% a year. Prices range from $1.50 to $2.75 per liter, with the organic product commanding the higher prices. Just under 100 tonnes of soybeans are used to produce soymilk in Canada: Vancouver 42 tonnes, Toronto 30 tonnes, Montreal 25 tonnes, plus imports 240 tonnes. 1 kg of soybeans produces 16.5 kg of soymilk.

Soynuts: The volume of soynuts made in Canada is quite small. One Toronto company [Grove Country Foods Canada, Inc.; they were in business 1-2 years, but were out of business by Jan. 1991], which began operation in Nov. 1988, sells a line of roasted nuts, which are roasted in the USA and chocolate-dipped in Ontario. Production was only a few tonnes in 1989 and is estimated to be about 10 tonnes in 1990.

Soy sauce: In 1986, according to Statistics Canada data, 2,503 tonnes of soy sauce were produced by 6 firms. The value was $2,161 per tonne for a total of $5,411,000. In 1988 Canada imported 5,680 tonnes of soy sauce valued at $4 million, primarily from China, the United States, Hong Kong, and Japan. Exports were 58 tonnes valued at $65,000. The major Canadian producers are China Lily and Sun Fresh in Toronto, Wong Wing and VH in Montreal, and Golden Dragon in Vancouver. The value of Toronto production is currently estimated to be about $5 million.

Soy sprouts: One Toronto manufacturer uses 20-25 tonnes of soybeans per year.

Tofu: About 3,300 tonnes of soybeans are used to produce tofu in Canada, more than any other soyfood. The volume of soybeans used is estimated at 1,400 tonnes in Toronto, 1,200 tonnes in Quebec (when a relatively large operation in Hull [La Soyarie, Inc.], near Ottawa, which exports to Ontario is included), 625-700 tonnes in Vancouver, and 125 tonnes for imported tofu. 1 kg of soybeans produces 2.4 kg of tofu.

Tempeh: Only about 33 tonnes of soybeans are used to make tempeh in Canada, and an estimated 15-20 tonnes in Ontario. Imports are relatively small. 1 kg of soybeans produces 1.6 kg of tempeh. Very few firms produce tempeh in Canada. One producer claims to have over half the Ontario market. A major distributor suggested they sold 4-5 times as much tofu as tempeh.

Soybean crushing: Since 1986 the number of firms crushing soybeans and producing soy oil has decreased from 3 to 2 [Central Soya owns two plants; in 1990 they bought the Canadian Vegetable Oil Processing (CVOP) plant in Hamilton, Ontario, formerly owned by Canada Packers Inc. They purchased Victory Soya Mills in Toronto in early 1985. So now 2 firms own 3 plants]. In 1986 the three plants made 95,108 tonnes of crude soy oil worth $57,271,000. Two firms made deodorized soy oil, but the volume and value were confidential. Less than $2 million of any type of soy oil is imported.

Consumption of soyfoods in Canada is strongly linked to Asian-Canadians. A table (p. 32) shows that according to the 1986 census, there were about 444,000 people of East- and Southeast Asian origin living in three major Canadian cities: Vancouver (155,105 people comprised 11.2% of the city's population), Toronto (234,325 people comprised 6.8%), and Montreal (55,585 people comprised 2.4%). Thus Toronto was by far the largest market, but Vancouver had the highest density of Asian-Canadians. A similar table (p. 33) updates the previous table to 1988. Immigration has increased sharply since then.

Note: This is the earliest document seen (Feb. 2002) that uses the term "food grade" (or "food-grade") in connection with Canadian soybeans (see p. 15). Address: Chatham, ONT, Canada.

9524. Taira, Harue; Tanaka, Hiromi; Saito, Masayoshi; Saito, Masataka. 1990. Daizu no zentô, yûri tôrui ganryô ni oyobosu hinshu, ryûdai saibai nenji no eikyô [Effect of cultivar, seed size and crop year on total and free sugar

contents of domestic soybeans]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 37(3):203-13. [17 ref. Jap; eng]
• ***Summary:*** As seed size decreases, total sugar, total free sugar, raffinose and stachyose all increase (102-116%), however sucrose decreases slightly.

Table 1-1 shows the relationship, for 13 Japanese varieties, between sugar contents, seed size, and crop year. The varieties (for 1970) are: Kitamishiro, Toyosuzu, Kitamusume, Koganejiro, Tokachinagaha, Isuzu, Oyachi 2, Karikachi, Shinsei, Hokkaihadaka, Okuhara 1, Harosoy, Shika 4. Address: 1-3. National Food Research Inst., Ministry of Agriculture, Forestry and Fisheries, 2-1-2 Kannondai, Tsukuba, Ibaraki 305, Japan.

9525. *SoyaScan Notes.* 1990. U.S. trade deficit with Japan, and changing attitudes and relations between the USA and Japan (Overview). April 6. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The U.S. trade deficit with Japan was about $5,000 million in 1975. It rose steadily until 1983, then rose dramatically to a peak of $60,000 million in 1987. Thereafter it began to decline, falling to $49,000 million in 1989. A recent poll (*San Francisco Chronicle,* 2 April 1990, p. 1) found that "68 percent of Americans fear the threat from Japan's economy more than the Soviet military... 49 percent of Japanese and 48 percent of Americans believe the United States is in decline as a world power."

9526. Nichols, David. 1990. Re: Asia Protein Co. and their soy flakes. Letter to William Shurtleff at Soyfoods Center, April 8–in reply to inquiry. 2 p. Typed, without signature on letterhead. [1 ref. Eng]
• ***Summary:*** Asia Protein Company was established in 1977, and they began soy flake production in 1980. Their process and product is based on Japanese patent 1,378,742. The average annual output is 2,500 is 2,500 metric tons per year. The company's three main customers for the flakes are Tengu (the largest), Sanyo Shokuhin, and Marufuku Shokuhin manufacturing. Each is a large tofu manufacturer and each uses about 30% of the total production. These companies sell their tofu to large chains such as Daiei and Ito Yokado. Another large customer is the Kuge shops started about 4 years ago inside Nichii department stores, as part of the "Shop within a Shop" retailing concept. Kuge uses 4 tonnes/month of flakes, and has plans to add 7 new shops during 1990. A total of about 50 companies in Japan have switched from using whole soybeans to using soy flakes.

The main reasons these tofu manufacturers have switched to soy flakes are: (1) It takes less time to make tofu using the flakes, and this saves labor costs. (2) The flakes are a high quality product. (3) A company does not need to soak beans overnight and thus can adjust the amount of tofu made during the day with no lead time.

A company named Suehiro makes a push-button tofu making machine that costs about $23,000 and uses the soy flakes. It was designed by Mr. Chikaarashi. Address: Nichii Company of America, Inc., 23440 Hawthorne Blvd., Skypark 2, Suite 140, Torrance, California 90505. Phone: 213-791-0010.

9527. *Jefferson Bee* (*Jefferson, Iowa*). 1990. Nichii Company executives visit Jefferson [Iowa]; seek soyflake plant site. April 17. p. 1, 3.
• ***Summary:*** "The executives were guests of the West Central Cooperative, and were visiting several communities where West Central facilities are located... Pictured during the business meeting are Mr. Shigeru (Sam) Chikaarashi (center), executive vice president for soy flake development with the Nichii Company of America; Mr. Itaru (Terry) Tanaka (right), director and general manager of the Nichii Company of America; and Mr. David Nichols, head of product development of the company. Mr. Chikaarashi developed the process of flaking soybeans that would be used in the new plant... The Nichii Company of America Inc. is headquartered in Torrance, California."

9528. Mio, Art. 1990. In defense of Mori-Nu's negative publicity about tofu, and praise for Hinoichi (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** (1) The industry had the problem of sour tofu, and tofu had developed a bad image long before Morinaga ever began making an issue about it. How many clippings have you read that say, "Tofu needs a good PR agent." (2). Except for rare, accidental slips, the negative publicity and advertising generated by Mori-Nu has been directed only to the food trade (such as supermarket produce and natural foods business publications) and not to consumers. The matte release is the only thing that was voluntarily sent to consumer publications.

It is too bad more tofu manufacturers are not as careful with sanitation as House Foods & Yamauchi, Inc. (Hinoichi). "When I was working at JFK, Hinoichi was packing ice in the case with their tofu. I believe that Hinoichi has the best quality tofu in America. I have confidence in the cleanliness of their manufacturing operation, their refrigeration systems are all state of the art, they ship the tofu to the refrigerated deli warehouse. It goes out on a refrigerated deli truck, and it is sold in Los Angeles stores in the dairy case, which is kept below 45ºF. In Los Angeles, he refuses to let his product be sold anywhere except the dairy or deli cases. He won't sell it in the produce case in Los Angeles." Mr. Yamauchi would like Mori-Nu to private label their tofu for Hinoichi; this would ensure freshness in outlying areas over which he has little control of the storage conditions. Address: Morinaga Nutritional Foods Inc., 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9537. *Jefferson Bee* (*Jefferson, Iowa*). 1990. Nichii Company will build plant in Jefferson [Iowa]. April 24. p. 1-2.
• ***Summary:*** "Nichii Company of America Inc. will construct a $2 million soyflake processing plant in Jefferson adjacent to the West Central Cooperative (WCC) elevator facility. Governor Terry Branstad made the announcement at his morning press conference at the state capitol in Des Moines...

"The plant will begin production this fall with an output of 1,000 tons of soyflakes per month. The company's plans call for the eventual production of 3,000 tons per month, with three shifts in operation on a round-the-clock basis.

"Employment initially will be about seven people, with the work force expected to rise to more than 15 when all three shifts go into production. When round-the-clock operation is achieved, the Nichii plant will process soybeans at the level of 1.5 million bushels per year...

"Mr. Toshimine Kobayashi, president of Nichii Co. Ltd. of Osaka, Japan, plans to come to Iowa in November to open officially the new plant.

"Mr. Kobayashi explained, 'Due to its topographical characteristics, proximity to a suitable soybean supplier, rail and road access, and the economic incentives offered by the city of Jefferson, this site was judged to best suit Nichii's needs. Representatives of Nichii Co. Ltd. also appreciated the civic spirit and friendliness of the citizens of Jefferson

© Copyright Soyinfo Center 2014

which seems to be characteristic of all Iowans.

"Nichii Company hopes to procure eventually for the Jefferson plant 'organically grown or chemical residue free soybeans, which are going to be in larger demand as our society is increasingly concerned with health and a cleaner environment.'

"The new plant in Jefferson will process a flake which allows tofu makers to prepare the product within a few minutes of its purchase, therefore actually making the tofu product in the store. Nichii Company is currently using that process in several of its stores in Japan."

A large photo shows four Nichii executives, incl. Itaru (Terry) Tanaka, David Nichols, Shigetaka Hamai, and Shigeru Chikaarashi.

9538. *Shukan Asahi* (*Japan*). 1990. Nattô wa sekai o sukuu ["Natto saves the world"]. April 27. p. 16. [Jap]
• ***Summary:*** Contains four frames of cartoons. A natto symposium was held in Akita city, Japan.

9539. **Product Name:** Stir-Fry Sauce, Stir Fry Spicy Sauce for Seafood, Chinese BBQ Sauce, and Steak Sauce.
Manufacturer's Name: Merrychef Foods SDN BHD.
Manufacturer's Address: 118A Jalan Burhanuddin Helmi, Taman Tun Dr., Ismail, 6000 Kuala Lumpur, Malaysia. Phone: 03 719-7540.
Date of Introduction: 1990 April.
Wt/Vol., Packaging, Price: 250 gm glass bottles.
How Stored: Shelf stable.
New Product–Documentation: Spot in SoyaFoods. 1991. Spring. p. 4. "Stir fry sauces from Merrychef." "Merrychef Foods produces a whole range of sauces for Western and Oriental cooking, most of which are exported. Their 'Chinese' range of 'stir fry,' 'BBQ,' and steak sauces are mainly based on soya and have been available in the UK for about a year and in Australia, Japan and Germany for a few months. Merrychef hopes to export to the U.S. this year as well as to supply the home market... Varieties include stir fry for meat, vegetables, sea food, Chinese BBQ and steak sauce."

9540. Muso Co. Ltd. 1990. Muso product manual: Foods from Japan. Tanimachi 2-5-5, Chuo-ku, Osaka 540, Japan. 62 p. Catalog. April. 30 cm. [Eng]
• ***Summary:*** This English-language catalog describes Muso's natural-food macrobiotic products that are exported to the West. There are 8 pages of color photos at the front, and many flowcharts and recipes in the body of the catalog. Interesting color photos include: Shoyu fermentation room. Spreading moromi before pressing to make shoyu. Hatcho miso aging room. Drying kombu and cultivating nori on nets. Umeboshi and brown-rice vinegar. Shiitake mushrooms growing on logs and huge kudzu roots.

Contents: Shoyu (organic, low salt), tamari (wheat-free soy sauce), miso (Hatcho, barley, rice, white miso, brown-rice miso, awase miso [mixed miso], buckwheat miso, unpasteurized miso [nama miso]), seaweeds, Japanese pasta, wheat free pasta (incl. kudzu noodles), Japanese tea, other beverages, soymilk, amazake, ume/plum products (incl. umeboshi), Japanese pickles, dried foods (incl. kudzu root starch, shiitake mushrooms, koya tofu, fu [gluten cake]), condiments (incl. tekka miso, *nori no tsukudani,* natto miso [miso condiment]), seasonings, instant foods (incl. brown rice mochi, yomogi mochi, kibi mochi, yaki mochi, abekawa mochi with kinako, cooked brown rice, ramen [Chinese style noodles], instant miso soup), crackers and chips, barley malt syrup and rice malt syrup, food supplements (plum balls, kombu balls), adzuki beans, black soybeans, nigari. Address: Osaka, Japan. Phone: 06-942-0343.

9541. Wolff, David. 1990. The Manchurian soya bean and the development of Northeast Asia, 1899-1922. *Asiatic Society of Japan, Bulletin* (*Tokyo*) No. 4. p. 2-4. April.
• ***Summary:*** The soybean was introduced into Manchuria at the end of the 1800s and by 1899 constituted 79% of the region's total exports. The resulting prosperity made the area a theater of conflict between China, Russia and Japan. "By 1922, almost all bean shipments had been diverted from Vladivostok to Japanese-controlled Dairen, making such 'typically Japanese' foodstuffs as tofu and shoyu generally affordable for the first time... Thus the soya bean played an integral part in the history of Manchuria, bringing first wealth, then strife, and ultimately subjugation." Address: PhD candidate in Russian and Chinese history at the Univ. of California at Berkeley.

9542. *Asahi Shinbun* (*Evening Ed., Japan*). 1990. Sekai ni itohiku? "Nattowaaku." Nattô fan-ra ga kokusai taikai keikaku, 11 gatsu [Natto-work (natto network) stretches and connects its strings to the world. Natto fans are planning to have an international gathering (symposium) in November]. May 2. [Jap]

9543. Igo, Becky. 1990. Kyoto owners, officials agree tofu positive for all. *Tribune-Star* (*Terre Haute, Indiana*). May 6.
• ***Summary:*** Describes the groundbreaking ceremony for Kyoto Food Corp. USA's new tofu plant in Terre Haute. The chairman of the board of Kyoto Food is Kumaharu Shimobo, the president is Yoshimasa Yamashita, and the vice president is Bill Roach. Mr. Roach's wife, Toni, convinced Kyoto Foods to buy the land. Construction of the plant will start in May and full production is expected by November. "Roach said that although Kyoto has purchased 25 acres, the actual plant will sit on only 2.5 acres. The company, he revealed, is looking for other firms to locate at that property." The company hopes to begin by making tofu and later expand into other Japanese health-related food products.

9544. *Toyo Shinpo* (*Soyfoods News*). 1990. 89 nen shinkoku shotoku rankingu [1989 ranking of tofu, natto, and konnyaku companies in Japan, based on reported income to the tax bureau]. May 21. p. 1. [Jap]

• ***Summary:*** Rank–Company name (Food type)–Prefecture–Reported income in million yen, ranking among all Japanese industries. For food types: T = Tofu, DFT = Dried-frozen Tofu, A = Aburagé (deep-fried tofu pouches), N = Natto, K = Konnyaku:

1. Asahimatsu Shokuhin (DFT, A)–Nagano–843–5,504
2. Takano Foods (N)–Tochigi–445–10,464
3. Asahi Kôgyô (T + other foods)–Tokyo–444–10,490
4. San Shokuhin (T)–Kagoshima–417–11,204
5. Okay Shokuhin Kôgyô (A)–Fukuoka–362–12,867
6. Tajimaya Shokuhin (T, N, A)–Hyôgo–322–14,419
7. Azuma Shokuhin (T)–Tochigi–320–14,516
8. Misuzu Tôfu (DFT, A)–Nagano–307–15,128
9. Fujita Shokuhin (T)–Hyôgo–243–19,082
10. Sekigoe Bussan (K)–Tokyo–189–24,470
11. Tochigi-ken Natto Seisan (N)–Tochigi–174–26,477
12. Santeiri (T)–Aichi–140–32,840
13. Sankô Shokuhin (T, Cow's milk)–Yamagata–136–33,679
14. Saga Tôfu Morika (T)–Kyoto–121–37,484
15. Tengu (T, N, A)–Ibaraki–119–38,342
16. Fuji Kiyo Konnyaku (K)–Kyôto–113–40,160
17. Nihon Tanpaku Kôgyô (T, A)–Tokyo–110–41,156
18. Yashima Shokuhin (T, A)–Kanagawa–107–42,410
19. Yama Shoku (T)–Nara–95–47,272
20. Nagai Sôgo Shokuhin (T, A)–Hyôgo–83–53,659
21. Asahiya Shokuhin (T)–Kanagawa–78–56,956
22. Tsujikane Shokuhin Kôgyô (K, A)–Gifu–77–57,789
23. Marukawa Shokuhin (T)–Hokkaidô–76–58,061
24. Kyôto Tanpaku (T)–Kyôto–71–61,805
25. Niihama Seitô (T)–Ehime–58–73,954
26. Kakumitsu Kudô Shokuhin (T)–Aomori–55–78,339
27. Matsuyama Tanpaku (T)–Ehime–50–84,444
28. Tôkô Shokuhin (T, N)–Tokyo–46–91,698
29. Tokyo Minato (T)–Ibaraki–41–99,618
30. Ebara Shokuhin (T)–Tokyo–40–101,982

Explanation: Number 1, Asahimatsu Shokuhin, makes dried-frozen tofu and aburagé. In 1989 the company reported its income to be 843 million yen. It was the 5,504th largest company in Japan. Note: A number of large manufacturers of dried-frozen tofu, perhaps because of slow sales, are now diversifying into deep-fried tofu pouches.

9545. *Spa!* (*Japan*). 1990. Tsuini "Sekai Nattô taikai" kaisai e! Nattô wa sekai o sukuu ka!? Kessen ni kiku, boke ni, kôketsuatu ni, gan-ni [Zoom up: Finally the opening of the "International Nattô Symposium"! Can nattô save the world? It helps to prevent coronary thrombosis, senility, high blood pressure, and cancer...]. May 23. p. 20-21. [Jap]

• ***Summary:*** Photos show: (1) A person holding chopsticks lifting natto, connected by many strings, up from atop a bowl of rice. (2) A pile of about 15-20 different natto packages.

9546. Andersen, Thomas. 1990. Urtekraemmeren and Urtekram in Denmark (Interview). *SoyaScan Notes.* May 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** These two companies were originally one. Urtekram means "herb" in Danish. The original company started in the 1960s, inspired by macrobiotics and natural foods, then it split into two in the 1970s. Both companies now import foods (including soyfoods) from Japan and distribute them in Denmark. Urtekram, located in Mareager, Jutland, is larger and doing a lot better financially than Urtekraemmeren. Urtekraemmeren owns Urten's Tofu and its distribution of imported macrobiotic products is limited mostly to Copenhagen. Address: Urten's Tofu, Hoeje Gladsaxe Torv 2, DK-2860 Soeborg, Denmark. Phone: 31 67 41 90.

9547. Fehlberg, Eric C. 1990. Re: List and activities of Seventh-day Adventist health food companies worldwide. Letter to William Shurtleff at Soyfoods Center, May 24. 6 p. Typed, with signature on letterhead.

• ***Summary:*** For each for the following companies is given the date of founding, date manufacturing started, and the soy products presently manufactured: Granovita, Spain. Nutana, Holland. Nutana, Norway. Nutana name changes. Austrian Food Company. DE-VAU-GE, West Germany. Sahm Yook Foods, Korea. Sanitarium Health Food Company, Australia (3 pages).

Lists (with addresses) the following companies: Sanitarium Health Food Company in Wahroonga, NSW, Australia; DE-VAU-GE Gesundkostwerk GmbH in Lueneburg, West Germany; San-iku Foods in Sodegaura-machi, Kimitsu-gun, Chiba-ken, Japan; Korean Food Factory (Sahm Yook Foods) in Choongchungnam-do, South Korea; Alimentos Integronaturales y Panificadora la Carlota in Montemorelos, N.L., Mexico; Produtos Alimenticios Superbom Industria e Comercio Ltda. in Sao Paulo, Brazil; Alimentos Granix in Florida, Buenos Aires, Argentina; Nutana Health Food Company in Bjaeverskov, Denmark; AB Svenska Nutana in Rimbo, Sweden; Granose Foods Ltd. in Newport Pagnell, Bucks, England; Pur-Aliment Food Factory in Clichy–Cedex, France; PHAG Food Factory in Gland, Switzerland (Note: PHAG is an acronym for Produits Hygièniques Alimentaires Gland); Egypt Food Factory in Heliopolis, Cairo, Egypt; Glaxo India Limited in Bombay, India; Westico Foods Ltd. in Mandeville, Jamaica; Industrias Covac S.A. in Alajuela, Costa Rica; South China Island Union Mission in Hong Kong (3 pages). Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

• ***Summary:*** On page 404 is a flow chart for making tofuyo from whole soybeans. The article contains 3 tables and 4 figures; two of the latter are graphs and one is a photo. Address: Dep. of Agricultural Chemistry, College of Agriculture, Univ. of the Ryukyus, Nishihara-cho, Okinawa-ken 903-01.

9550. Levey, Robert. 1990. Japanese, Spanish treats in Cambridge. *Boston Globe.* June 1. p. 40.
• ***Summary:*** This updated review of the Japanese restaurant Roka states: "You may meander around on the appetizer menu with some satisfying results. Under the 'offbeat' category, consider the edamame, a bowl of Japanese green soybeans blanched in salted water and served cool. You pick up the whole pod, squeeze out the round soybeans and munch them like a party snack." Address: Globe staff.

9551. Oka, Seizo. 1990. Early Japanese immigrants to Hawaii (Interview). *SoyaScan Notes.* June 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The first contracted labor immigrants from Japan arrived in Hawaii in 1868 aboard the ship Scioto. They took with them miso and shoyu. Before that time, some Japanese drifted ashore or were shipwrecked on Hawaii. A number of groups were supposed to follow the first group, but there was a dispute in the contract so the program was terminated with the first group.

The ship Scioto (pronounced sai-OH-tuh) was apparently named after a river in Ohio that flows 237 miles southward through Columbus and empties into the Ohio River in Scioto County. It belonged to the Pacific Mail Steamship Co. of the USA. In Japanese the ship's name is usually romanized in katakana as *Saioto-go* (or less commonly as *Shiotto-go*), where "go" (the Japanese character for "number") is a suffix widely used with the names of ships, trains, and other vehicles. "Go" is not a counter for ships–the counter is "seki," such as isseki, niseki.

Robert W. Irwin, an American who became an agent in Yokohama for the Pacific Mail Steamship Co., played a key role in both the 1868 and 1885 contracts. The first group consisted of 148 Japanese. They were under a contract made between the Japanese government and the Hawaiian kingdom. But because of a dispute in the contract, 40 members of the group returned to Japan without fulfilling the contract; 108 remained in Hawaii and fulfilled the contract. Since they left in 1868, the first year of Meiji, they are often referred to as "Gannen mono" which means "Fellows of the first." In 1885 the contracted labor was resumed, and continued on for several years. The second group of contracted labor immigrants was carried from Japan to Hawaii on the ship named City of Tokio. Address: Founder and former Head, History Room, Japanese Cultural and Community Center, 1840 Sutter St. #206, San Francisco, California 94115. Phone: 415-751-5951.

9552. Stachura, Irena. 1990. About the ship Scioto (Interview). *SoyaScan Notes.* June 9. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** In the book titled *Merchant Sail* by William Armstrong Fairburn two vessels named Scioto are listed. The first was built in 1831. Tonnage: 141 tons. Length: 81 feet. Beam/width: 23 feet. Depth: 9 feet. Rigging: Schooner (with triangular sails, pointed at the top). It was probably not built on the West Coast since there is very little information about it in the files of the National Maritime Museum. It was probably built on the East Coast. It is not listed as a Gold Rush vessel.

The second vessel named Scioto was built in the Skolfield yard. It was a ship, with 3 masts or more. For more information contact the Mystic Seaport in Mystic, Connecticut. Address: Research Librarian, National Maritime Museum Library, Bldg. e, Third Floor, Fort Mason Center, San Francisco, California 94123. Phone: 415-556-9870.

9553. Sakaguchi, Noboru. 1990. Early history of making tofu at Le Bol en Bois (Interview). *SoyaScan Notes.* June 14. Conducted by David de Korsak in France.
• ***Summary:*** In 1969 Mr. Sakaguchi made his first trip to Paris from his homeland, Japan. He returned to Paris in March 1974, and became aware of the possibility of buying a macrobiotic restaurant from a friend who at the time was a cook in that restaurant. From April-Aug. 1974 he returned to Japan to finalize a deal with Japanese investors and to study tofu making. While he was in Paris touring vegetarian restaurants, Mr. Sakaguchi had been struck by the lack of

© Copyright Soyinfo Center 2014

protein in the foods he saw. Tofu naturally came to his mind as the food that would ideally supplement (and complement) that vegetarian cuisine. "Tofu was missing... I thought of this as my mission."

On 2 Sept. 1974 Mr. Sakaguchi opened Le Bol en Bois. He had expanded it to include a natural foods retail store located directly across the street. In the last quarter of 1975 he began trials making tofu using calcium sulfate as a coagulant. In about Nov. or Dec. 1975 he began commercial production of tofu, using real nigari as a coagulant. He sold this tofu only at Le Bol en Bois natural foods store and served it in his restaurant. An invoice dated 26 Dec. 1975 from Mitoku Company Ltd. in Japan shows that he imported 40 kg of nigari ($17.34), 50 x 150 gm packets of nigari ($33.27), a grinder for making tofu ($562), other pieces of tofu making equipment ($450.35), as well as 1,800 liters of Sakae Tamari-Shoyu, 900 liters of Johsen Tamari-Shoyu, and 200 kg of brown rice miso. Production remained limited (two days a week, 40 cakes per day) until the end of 1976. Mr. Sakaguchi made the tofu himself, helped by some Japanese students. One evening in the winter of 1976 an unusually large number of people came to the store to buy tofu. This corresponded to the end of a conference held by Michio Kushi in Paris. The store became the focus of a lot of interest and activity. Production jumped to roughly 240 cakes per day, two days a week. By the end of 1976 Mr. Sakaguchi had hired his first employee to help him make tofu.

In 1985 the tofu production activity was set up as a separate company named Daizou, located outside of Paris at Champigny sur Marne. At that time production was about 300 cakes per day, two days a week. Mr. Sakaguchi now began to make tofu more than twice a week and to sell this tofu at other retail outlets in addition to his own. Address: 883 Rue de Bernau–Z.I., 94500 Champigny Sur Marne, France. Phone: 48 82 39 90 or 47.06.33.71.

9554. Sakaguchi, Noboru. 1990. Early history of making tofu at Alimentation Japonais and Etablissements Takanami (Interview). *SoyaScan Notes.* June 14. Conducted by David de Korsak in France.
• ***Summary:*** Mr. Mikiyo Yamanaka, a Japanese who came to Paris as a tourist guide, started making tofu at the end of 1968. He made it alone, and not as part of any business, in his bathroom at night using calcium sulfate as a coagulant. He sold the tofu to Japanese embassy personnel. In about 1971-72 he established Alimentation Japonais Osaka, a Japanese restaurant in Paris. He moved his tofu shop into the basement of his restaurant, where it stayed until the end of 1985, when production stopped. A key tofu maker in the early days was Mr. Suzuki, who now owns Ramen Tei Restaurant in Paris (Phone: 1-42 60 64 29). Mr. Yamanaka made quite a bit of money in his business, but he failed to declare it and pay taxes. Instead of facing a lawsuit for this, he decided to return to Japan. His company, now a chain of Japanese restaurants, is presently run by Mr. Nakajima.

Mr. ? Takanami founded Etablissements Takanami in Belgium. But before he set up his company in Belgium, he spent 6-12 months in Paris and during that time he made some tofu, although it is not clear whether or not he did so on a commercial basis. He is now in Brussels (Phone: 2 522 8192). Address: 883 Rue de Bernau–Z.I., 94500 Champigny Sur Marne, France. Phone: 48 82 39 90 or 47.06.33.71.

9555. Kumoda, Yasuo. 1990. Recent developments at Morinaga (Interview). *SoyaScan Notes.* June 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The minimum print run for one Tetra Brik product is 300,000 cartons. There are now 15 companies in America that want Morinaga to private label aseptic tofu for them. Mr. Ono in Japan is opposed to private labeling. he wants to build the Mori-Nu brand. Mori-Nu tofu is in 13% of the supermarkets in America but has reached a plateau.

These are the main problems/questions now: 1. Should Morinaga develop a joint venture with Pacific Foods of Oregon to make Mori-Nu Tofu in their low-beany-flavor STS plant, or build their own plant? 2. Should Mori-Nu private label their aseptic tofu for other companies. 3. Should they develop a seasoned/flavored tofu or work on second generation tofu products? 4. Should Morinaga start to make water-packed tofu. 5. What will they do if Tetra Brik cartons are outlawed in many U.S. states and no new acceptable carton is developed by Tetra Pak International? Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9556. Uruma, Masao. 1990. Re: History of San-iku Foods' work with soy in Japan. Please wait. Letter to William Shurtleff at Soyfoods Center, June 22. 1 p. Typed, with signature on letterhead.
• ***Summary:*** He will be gone for several weeks, attending the SDA General Conference in Indianapolis, Indiana, and will return to Japan on July 18. Then he will have time to check through the company's soy product history so that he can provide more accurate information. He has talked with a co-worker who used to associate with Dr. Harry Miller a long time ago. He will also provide historical information. Address: San-iku Foods, Sodegaura Machi, Chiba Ken 299-02, Japan.

9557. Davies, Joy. 1990. Rice bowl rituals: Japanese cooking. *Guardian* (*England*). June 23. p. A19. Illustrated by Nicola Heindl.
• ***Summary:*** The writer, with Atsuko, a private interpreter and guide, sets off into the Tokyo suburbs for a culinary adventure. Their first stop was a "tofu shop where snowy white cakes of fresh bean curd were fished out of a large stainless steel tank [filled with cold water]. Atsuko explained the difference between cotton or 'momen' tofu where the

© Copyright Soyinfo Center 2014

curds are drained on a piece of cotton cloth and *kinu-goshi* or silk tofu, which is not drained and so has a far more delicate custard texture... We also bought two flat honey-gold pouches of fried tofu."

9558. Wollner, Joel. 1990. Re: History of early work with amazake, koji, and Rice Dream in America. Letter to Jan Belleme, Saluda, North Carolina, June 23. 3 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** "Starting in the early 1970s, Erewhon imported scant supplies of a highly perishable, fresh rice koji along with its regular line of Japanese products. Most often, this koji was spoiled or worm-infested by the time it arrived in Boston, Massachusetts. But on those few occasions when a usable amount arrived intact, we had the rare pleasure of attempting to make amazaké at home." One attempt was made on Thanksgiving of 1973. In spring 1977 the Erewhon flagship store on Newbury Street in Boston began to sell Cold Mountain Misos, then Cold Mountain Koji. The misos sold well but not the koji, so Joel and his wife, Wendy, developed a simple method for making amazake at home.

Mona Schwartz in Florida began to order koji from Joel and developed a good recipe for making it into amazake. Joel learned and perfected the process, then described it in detail in the 10-16 April 1978 edition of his newsletter *Erewhon News* (*Newbury Street*) under the title "Overnight Amazake." "You can imagine my surprise–no, shock–when, later that spring Charles Kendall, macrobiotic aficionado, keeper of the Erewhon Company store, and supplier to our store of 'homemade' organic sauerkraut (his own), approached me one day in the store and asked if I would consider selling the refrigerated amazaké drink he had developed." The rest is history.

In about the spring of 1985, Joel and Sjon Welters drove to Moniteau Farm where Robert Nissenbaum and Dave Carlson, calling themselves Imagine Foods, were making a frozen confection from amazaké. "This new incarnation of an old Boston study-house favorite, was actually made from a mixture of amazaké, which they first made from Cold Mountain koji and Chico-San brown rice, combined with Chico-San rice syrup and various natural flavorings, and run through a soft-serve ice cream machine. (A frozen dessert made in several flavors from rice kayu sweetened with rice syrup and/or barley malt syrup was sold at Erewhon Newbury Street in 1977-78.)"

But Imagine Foods was having technical and flavor problems with its product. In Fayetteville, Arkansas, Joel and Sjon had developed a "series of amazaké-like beverages and desserts made by enzyme conversion from whole grains, including brown rice... Of course, our work was top secret, since, at the time, enzyme processing was virtually unknown in the natural food industry, and used for little more than processing corn syrup in the conventional food industry. Robert and Dave had no knowledge of it at all.

"Sjon and I confirmed (to ourselves) the rightness of our enzyme process for use in Rice Dream to make a single brown rice base ingredient for the mix. This development alone would solve the technical and flavor problems to make a commercially feasible product with a broadly appealing taste and texture. We decided to invite Robert and Dave to relocate to Fayetteville and purchase the base ingredient, which would be made in our plant, from us. Months of negotiations would pass before the enzyme process solution was finally revealed to Imagine Foods [by whom?] at the next NNFA show. But then, through a series of twists and turns, Sjon and I lost control, and the enzyme process project was 'diverted' to California Natural Products. More than this, I am not prepared to discuss at this time." Address: 19 Pepper Hollow Drive, Clifton Park, New York 12065. Phone: 518-383-0299.

9559. Brown, Peter J. 1990. Nichii sets its sights on Iowa. *Soya International* (*Bar Harbor, Maine*). April/June. p. 13.

9560. Esaki, Hideo.; Nohara, Y.; Onozaki, H.; Osawa, T. 1990. [Antioxidative activity of natto]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 37(6):474-77. (Chem. Abst. 114:22641). [Jap]*

9561. Harvey, Carol. 1990. Zenfully delicious: Dessert entrepreneur [Miyoko Nishimoto of Now & Zen]. *City Sports* (*San Francisco, California*). June. p. 66, 68.
• ***Summary:*** The 32-year old woman entrepreneur spends 3 days a week making tofu pound cake. The Now & Zen concept started in Japan in the early 1980s when she had returned from America after attending high school in Mill Valley and majoring in philosophy at a small college in Maryland. In Tokyo she started Madame Miyoko's Bakery making 2 flavors of healthy tofu pound cake. Their placement in the health food section of department stores was virtually a death sentence. She worked at it for 5 years, and turned her energy to running, bodybuilding, and performing as a jazz vocalist. In 1988 she moved back to the Bay Area, and in late 1989 she started Now & Zen. Tofu is a key ingredient in her nutritionally balanced Lemon Almond Mousse Cake, Carob Walnut Torte, and Zesty Orange Cream Cake. "The less-than-glamorous image of tofu is one stumbling block... Sounds like a perfect item for a gourmet vegetarian restaurant, but according to Miyoko, some won't touch the cakes because of the tofu–'they're afraid people will be turned off by it.'"

9562. Hymowitz, T.; Singh, R.J.; Larkin, R.P. 1990. Long distance dispersal: The case for the allopolyploid *Glycine tabacina* (Labill.) Benth. and *G. tomentella* Hayata in the

© Copyright Soyinfo Center 2014

West-Central Pacific. *Micronesica* (*Guam*) 23(1):5-13. June. [39 ref]

• ***Summary:*** The subgenus *Glycine* currently contains 15 inbreeding wild perennial relatives of the soybean. These are *Glycine albicans, G. arenaria, G. argyrea, G. canescens, G. clandestina, G. curvata, G. cyrtoloba, G. falcata, G. hirticaulis, G. lactovirens, G. latifolia, G. latrobeana, G. microphylla, G. tabacina,* and *G. tomentella.*

Fourteen of these are diploids (2n = 40) and endemic to the Australian region. However the allopolyploid types (2n = 80) of *G. tabacina* and *G. tomentella* have a wider distribution. *G. tabacina* contains both diploid and tetraploid (2n = 80) members. The diploid forms of *G. tabacina* are found only in Australia, however the tetraploid members of *G. tabacina* have a wider distribution. They are found in the Pescadores Archipelago (Taiwan), the islands of Quemoy and Amoy just off the cost of Fujian Province (China), Ryukyu Islands (Japan), and the Mariana Islands of Tinian and Saipan in the West-Central Pacific. The tetraploid forms of *G. tabacina* are also found in Australia and the South Pacific Islands of New Caledonia, Vanuatu, Fiji, Tonga, and Niue.

G. tomentella is composed of four cytotypes: 2n = 38, 40, 78 and 80. Only the 38-chromosome form is found in Australia. The 40- and 78-chromosomes are found both in Australia and in nearby Papua New Guinea. The tetraploid forms of *G. tomentella* occur in Australia, Papua New Guinea, the Philippines, and Taiwan.

No diploid perennial *Glycine* species have been found outside of Australia. This the questions arises concerning the origin of the allopolyploid forms of both *G. tabacina* and *G. tomentella* in the West-Central Pacific. The seed of wild perennial *Glycine* do not float on water nor do they possess any mechanism for long distance dispersal by air currents. They do not stick to the coats of animals and it is unlikely they were transported by humans because the literature makes no mention of uses of wild perennial *Glycine* species by humans.

"Plate tectonics and biogeography: After the breakup of Pangaea, the universal land mass, Australia, New Zealand and Antarctica were united with South America and with India-Madagascar-Africa, forming Gondawanaland (100 m.y. BP [100 million years before the present]), a Southern Hemisphere land mass. The West-Central Pacific is associated with Laurasia, a Northern Hemisphere land mass.

"New Zealand and New Caledonia separated from Australia and Antarctica about 80 m.y. BP and moved north-eastward reaching their present position about 60 m.y. BP. Australia and Antarctica separated about 49 m.y. BP. As Australia moved northward it entered a zone of reduced precipitation and increased aridity. The Australian plate collided with the Asian plate 10 to 12 m.y. BP. Most probably during this epoch, Miocene, some legumes entered Australia directly from Asia. At that time, Australia was widely separated from South America, India, Madagascar and Africa...

"According to Lackey (1977, p. 85) both 'the subgenus *Glycine* and the subgenus *Soja* are probably derived from *Pueraria*-like ancestors in tropical Asia. From this tropical center, species in the subgenus *Glycine* have successfully invaded Australia and associated areas, and the wild form in the subgenus *Soja* has invaded central and northern Asia.' *Glycine* species (2n = 40) are diploidized polyploids with x = 10."

It has been demonstrated that the allopolyploidization of *Glycine* species (2n = 80) took place only in Australia. "Thus, perennial *Glycine* found a niche in tropical and subtropical Australia. Radiation of *Glycine* species, followed by allopolyploidization of the species, resulted in the *G. tabacina* and *G. tomentella species complexes."*

Long-distance dispersal of *Glycine* seeds from Australia across the equator was probably performed by migratory birds–with shorebirds being the most promising candidates. It has been shown that seeds such as *Glycine* larger than 1 mm and having a hard seedcoat can be retained in the digestive tract of some shorebirds for more than 100 hours then excreted in viable form. With flight speeds of 30-60 miles per hour, the seeds could be transported 3,000 to 6,000 miles per flight. The birds may also pick up small, light seeds in mud adhering to their feet.

For comments on this paper see the March 1995 interview with Prof. Hymowitz titled "Plate tectonics and the dissemination of the soybean." Address: 1-2. Dep. of Agronomy, Univ. of Illinois, Urbana, IL 61801; 3. State of Illinois Natural History Survey, Section of Wildlife Research, Urbana, IL 61801.

9563. Morinaga Nutritional Foods, Inc. 1990. Chocolate Pie, au natural! Dairy-free, low-fat pie made with Mori-Nu Lite Tofu (Tear-off recipe pad). 2050 W. 190th St., Suite 110, Torrance, California 90504.

• ***Summary:*** This color tear-off recipe pad (6½ by 4 inches), developed by Susan Bucher of Bucher & Russell in Los Angeles, was introduced in June 1990. On the front is a color photo of a chocolate pie topped with sliced banana rounds. To the upper left are whole bananas, to the upper right is a package of Mori-Nu Lite extra-firm silken tofu (only 1% fat), and to the right is a bowl of almonds.

On the back are recipes for Chocolate Dream Pie/ Pudding, and Fast Lane Low-Fat Tofu Brownies, plus nutritional analyses and an offer for additional Mori-Nu free recipes.

A hole through the pad in the top center, and a horizontal adhesive strip on the back, aids in hanging the recipes in a store. Address: Torrance, California. Phone: 1-800-669-8638.

9564. Shiraiwa, Masakazu; Yamauchi, F.; Harada, K.; Okubo, K. 1990. Inheritance of "group A saponin" in

© Copyright Soyinfo Center 2014

soybean seed. *Agricultural and Biological Chemistry* 54(6):1347-52. June. [16 ref. Eng]
• ***Summary:*** Six kinds of saponins have been isolated from soybean seeds and characterized. Two kinds of "group A saponin" are present as the main constituent in soybeans. This type of saponin is absent in some wild soybean lines. Address: 1,2&4. Dep. of Food Chemistry, Faculty of Agriculture, Tohoku Univ., 1-1 Tsutsumidori, Amamiya-machi, Aoba-ku, Sendai, Miyagi 981; 3. National Inst. of Agrobiological Resources, Ministry of Agriculture, Forestry and Fisheries, 2-1-2 Tsukuba, Ibaraki 305. All: Japan.

9565. Tenpe Kenkyushu-kai. 1990. Tenpe Kenkyûshû-kai: Koen yoshi [Tempeh Research Society: Highlights of the year's first meeting]. Kobe Park City 2-1110, 6-2-1 Minatojima, Chuo-ku, Kobe 650, Japan. 18 p. [Jap]
• ***Summary:*** The forth or fifth meeting of this group, and the first in 1990, was held at Meiji University in Tokyo. An insert announces that Mr. Goro Kanasugi, a tempeh pioneer in Japan, died on 5 June 1990. Address: Kobe, Japan. Phone: 078-302-7065.

9566. Muso Shokuhin. 1990. [Pure heart: Muso general catalogue]. Otedori 2-2-7, Chuo-ku, Osaka 540, Japan. 88 p. Printed 1 July 1990. 30 cm. [Jap]
• ***Summary:*** This strikingly beautiful, full-color catalog, pictures and describes Muso's natural-food macrobiotic products in Japanese for the Japanese market–although the title is written only in English. Includes many kinds of miso, shoyu (incl. Marushima Shoyu), black soybeans, yellow soybeans, kinako [roasted soy flour], seitan (in a jar from Marushima, p. 41; the product name is written as "Seitan" in large roman letters, then in smaller letters in katakana), San-Iku Foods canned products (Gluten Burger, Gluten Meat, Linketts, Soyees, Snack Joe; p. 41), yuba, gomoku nimame (cooked whole soybeans), many kinds of sea vegetables and related products, San-Iku Soyalac (8 different products), Marusan soymilk (5 different products; 3 are named mineral tou-jyan; the latter is the Chinese term for soymilk), macrobiotic books. Address: Osaka, Japan. Phone: 06-942-0343.

9567. Tabuchi, Ichiro. 1990. [Re: History of Soyalac soymilk production by San-iku Foods in Japan]. Letter to William Shurtleff at Soyfoods Center, July 4. 1 p. Handwritten, with signature on letterhead. [Jap; eng+]
• ***Summary:*** In 1948 Mr. Tabuchi visited Dr. Harry W. Miller and studied at his soymilk plant in Mt. Vernon, Ohio. During this period, Dr. Miller visited Nihon San-iku Gakuin (a Seventh-day Adventist school located at Chiba prefecture, Sodegaura-cho) almost every year and earnestly advised the people there to make soymilk. In about 1957-58 they started to make soymilk at a tofu plant that was owned by Mr. Ueda. They bottled it in 180 ml dairy milk bottles, which they sold with their tofu. It was a small scale operation and it didn't last long.

In 1959 at the Food Department of Nihon San-iku Gakuin, they set up a tofu manufacturing plant and started to make soymilk in 180 ml milk bottles for the school's lunch program. Several years later they started to make canned soymilk for general consumers. In order to help introduce the soymilk to the school, Dr. Miller lived on the school campus for 2 months. He taught and gave orientation to the students.

In 1970 San-iku Foods became independent from the San-iku Gakuin Food Department and started to make and sell infant formula. Address: San-iku Foods, Japan.

9568. Miller, Bryan. 1990. Restaurants:... Sushisay, basic and raw. *New York Times.* July 6. p. C18.
• ***Summary:*** This is a review of the Japanese restaurant Sushisay (38 East 51st St.), the only American outlet of a 26-restaurant chain in Japan. It specializes in raw and marinated seafood. One of the few cooked items, an appetizer, "is grilled squid legs. Bite-size pieces of crispy squid dipped in soy sauce are as addictive as popcorn." Another of its starters is "maguro natto, tuna in fermented soy beans, which had a texture and highly fermented flavor that was off-putting to some tastes." A soup the reviewer liked was "asari wan, a light miso broth with little-neck clams in the shell,..."

9569. Carver, Nancy. 1990. Ground broken for soybean plant: West Central co-op marks 'landmark day.' *Fort Dodge Messenger* (*Iowa*). July 10. p. 1-2.
• ***Summary:*** "Amid pouring rain, ground was broken for a soy-flaking facility to be constructed by Nichii Company of America...

"This flaking facility is described as "state-of-the-art, push button, high tech"–by Seaman. It will process an estimated 1.5 million bushels of soybeans annually.

"The plant, which will cost an estimated $2 million to build, will initially employ between seven and eight persons, and possibly employ as many as 21 persons when operations expand to several shifts...

"The volume of beans to be used by Nichii will use up most of the 1,800,000 bushels that pass through the Jefferson branch of West Central annually. Tom Feldmann, marketing manager for the co-op, said most of the soybeans will come from Greene County.

"Iowa Secretary of Agriculture Dale Cochran, who said the plant is a step toward developing one of the state's 'most pressing needs'–adding value to raw commodities.

"'I think we are almost on the threshold of an industrial revolution in value–added products...'

"'A few years ago we wouldn't have thought of such a thing as the plant we are now breaking ground for,' Cochran said.

"Another speaker was Dick Timmerman, director of the

© Copyright Soyinfo Center 2014

Iowa Department of Economic Development, who said 17 major Japanese companies now have operations in Iowa...

"Jefferson received a $50,000 forgivable Community Economic Betterment Account loan on behalf of Nichii...

"Of the 264 partnerships created last year between companies and communities, the one between Nichii and Jefferson is the strongest, Timmerman said...

"Feldmann and Seaman made a trip to Japan to learn what Nichii was looking for in terms of facilities. Originally the plant was slated to be operational by November. Seaman said there have been delays caused by rain, plant design and the fact that some of the equipment is being shipped from Japan.

"Only one other plant of this type is operational and it is located in the Hokkaido region of Japan. Nichii holds patent rights for the flaking process both in this country and in Japan."

9570. *Jefferson Herald* (*Jefferson, Iowa*). 1990. Ground is broken for new Nichii plant. July 12. p. 1, 7.
• ***Summary:*** The groundbreaking ceremony for the new soyflake production plant took place on Monday, July 9. The plant will Nichii's first overseas production facility. The flake product will be marketed under the trademark "MicroSoy Flakes." The plant will have a capacity of 6 tons of flakes per hour. "Initially, Nichii plans to export 500 tons of soyflakes to Japan per month, and also sell an equal amount in the U.S. market... The process will take whole soybeans from the adjacent West Central elevator, de-hull, crack, and press the beans into flakes."

"Nichii Company of America, a wholly owned subsidiary of Nichii Company Ltd. of Japan, is incorporated in California, with headquarters at Torrance in that state. Its primary business is the export of U.S. products to Japan, including about $6 million per year of Iowa pork. In fiscal year 1989 Nichii Company Ltd. and its subsidiaries [of which there are now 35] became the Mycal Group, with about 300 stores throughout Japan with annual sales of over $8 billion. The Mycal Group is Japan's fifth largest publicly held retailing group.

The event is also a landmark for West Central Cooperative, being its first attempt at both a joint venture and at involvement with production of human foods. Mr. Kobayashi, the president of Nichii Co. and Iowa governor Terry Branstad signed a letter of intent for the plant to be built in Iowa on 20 Jan. 1990. This plant in Greene County will be the 17th major Japanese plant in Iowa.

Note: The plant is expected to be operational by Feb. 1991.

9571. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo, English ed.*). 1990. Miso protects against radiation. July 16. [Eng]
• ***Summary:*** "People who eat miso regularly may be up to five times more resistant to radiation than people not eating miso. This is the conclusion of scientific studies conducted by Kazumitsu Watanabe, professor of cancer and radiation at Hiroshima University's atomic bomb radiation research center."

"Forty-nine-week-old mice were given miso as 10 percent of their food for seven days prior to exposure to radiation. Mice were exposed to full body X-rays 1400 to 2400 times stronger than a regular medical X-ray (7-10 curies). Three days later their cells were examined. The loss of cells was less severe in the miso-eating mice than in regular mice. When 9 curies were administered, the gap between miso-eating and regular mice's loss of cells became greater. Ten curies is a lethal dose for humans. When 10 curies were given to miso-eating mice, 60 percent survived, compared to only 9 percent of the mice which did not eat miso.

"'I don't know specifically what element in miso is effective,' Professor Watanabe told the South Western Japan Conference on the Effects of Radiation. 'The small intestines of mice and humans are quite similar. Therefore this study indicates that miso is a preventive measure against radiation.'" Address: Tokyo, Japan.

9572. Oka, Seizo. 1990. Finding Shinzaburo Mogi and his soy sauce company in Denver (Interview). *SoyaScan Notes.* July 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mr. Oka has made great efforts to collect copies of the early *Directory of Japanese in the USA* (*Zaibei Nippon-jin Kan*). These are vastly better sources of information on Japanese people and businesses in America than early American City Directories published by Caucasians. The first such directory was published in 1905, and Mr. Oka has it. It contains no reference to Shinzaburo Mogi, Kikkoman, or soy sauce in Denver. However Mr. Oka cautions that these directories were published in San Francisco, and information on Japanese outside of California was quite incomplete. The next directory Mr. Oka owns, and the 6th one published, was for 1910. Most, if not all of the directories for the years 1906-1909 were lost in the great San Francisco earthquake of 1909, and later in the internment of West Coast Japanese during World War II. The earthquake shut down the *Nichibei Times* newspaper and caused it to relocate to Oakland, where it was short staffed. Thus, even if Mr. Mogi did start a short-lived shoyu company in Denver in 1907, we will probably never be able to find it in a *Directory of Japanese in the USA.* Better give up looking. Address: Head and Founder, History Room, Japanese Cultural and Community Center, 1840 Sutter St. #206, San Francisco, California 94115. Phone: 415-921-1485.

9573. *SoyaScan Notes.* 1990. Update on Kyoto Food Corp. USA in Terre Haute, Indiana (Interviews with various people). July 26. Conducted by William Shurtleff of Soyfoods Center.

© Copyright Soyinfo Center 2014

• ***Summary:*** Kyoto Foods is planning to open a big tofu plant in Terre Haute, Indiana. Ground breaking for the plant was on 3 May 1990. Mr. Yamashita is the person in charge and on July 24 he talked about the plant starting with 15-20 employees. They have 30,000 tsubo of land. Note: 1 tsubo is 6 shaku (1 shaku = 0.995 feet, so 6 shaku = 5.97 feet) on a side or 35.64 square feet. One acre is 43,560 square feet, so there are about 1,222 tsubo/acre. Thus 30,000 tsubo is about 25 acres.

Kyoto Foods plans to make only tofu initially, and they apparently would like to knock off Hinoichi on the East Coast and Midwest. They have support from Marubeni, which makes them potentially very powerful. John Morrell & Co. has done some research using tofu or concentrated soymilk. Kyoto Foods is considering getting this from Pacific Foods of Oregon, then shipping it to Cincinnati, Ohio.

The opening ceremony for the new plant was held on 24 Oct. 1990 in Terre Haute. Local television station covered the event but the print media showed little interest. Wataru Takai came from Japan to attend the ceremony. As of 15 Nov. 1990 the company plans to make water pack firm tofu (not aseptic tofu), but production has not yet begun. They plan to play down the fact that they have a parent company in Japan. They are billing themselves as "the largest tofu company in America." Production is expected to begin in November. The Asian-American population in the Midwest is much larger than most people realize. Some of the tofu will be sold to institutions. Supermarkets seem to be anxiously awaiting the product.

9574. *SoyaScan Notes.* 1990. The Food and Agribusiness Management Program in Illinois (Overview). July 30. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This program was started in June 1989. It is looking, among other things, at "alternative marketing channels" and "specialty markets" including "specialty export markets" for major crops, such as tofu beans for Japan. James Dunn has a specialty export company. Most farmers think there is a big risk associated with growing specialty soybeans but actually the contract virtually eliminates that risk. One student is studying alternative contracts for specialty crops. Address: Univ. if Illinois.

9575. Yoshikawa, Koichi. 1990. [Re: Yoshikawa's sales of nigari]. Letter to William Shurtleff at Soyfoods Center, July 30. 1 p. Handwritten, with signature on letterhead. [Jap; eng+]
• ***Summary:*** Yoshikawa's current sales of nigari are about 7,000 tonnes (metric tons) per year. Of this, about 3,000 tonnes is used by tofu makers. The latter amount has not changed much during the last 3 years. A small amount of this nigari for tofu use is sold overseas.

The letterhead states that Yoshikawa is the oldest maker of nigari in Japan, established 100 years ago. Brands include Thruzen and Maruzen. The company's factory is on the seashore at Kurashiki, Okayama, Japan. Address: President, Yoshikawa Shoji K.K., Honmachi Wako Bldg. Kita Kyuhoji-cho 2-1-7, Osaka, Higashi-ku, Japan. Phone: 06-261-6767.

9576. *Healthy Talk* (*Japanese Monthly Magazine*)**.** 1990. Nattô wa ningen to chikyû o sukuu! Nattô Shinpojiumu [I love natto. Natto can save human beings and the Earth: Natto symposium]. July. No. 58. p. 17-20. Cover story. [Jap]
• ***Summary:*** Coverage of the Second Asian Symposium on Non-Salted Soybean Fermentation held 13-15 Feb. 1990 in Jakarta, Indonesia.

Photos show: (1-2) Speakers on the platform, with the name of each written in large characters on white paper attached to the front of each table. (3) Natto being sold in a retail store in Japan. (4) A bowl of rice topped with natto. (5-8) prepared natto dishes; the name of each is given. (9) A person standing behind a podium.

A cartoon character of a stylized globe, with longitude and latitude lines, eyes, nose, and mouth, eating natto from a bowl, appears several times. Note: This magazine is published and printed by Tokyo Fuji Seihan Printing Co., Ltd.

9577. Loh, Michael. 1990. An overview of export opportunities in the new markets. In: Ontario Ministry of Agriculture and Food, ed. 1990. Soybean Buyers Mission from New Markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. July. See p. 10-12. [Eng]
• ***Summary:*** It has been almost 20 years since the first container load of soybeans grown in Ontario was shipped to Japan. By the end of 1989, Ontario was exporting more than $25 million worth of soybeans to Japan, Hong Kong, Malaysia, and Singapore. Now the new markets for Ontario soybeans are Korea, Taiwan, the Philippines, and Indonesia.

In Korea, trade restrictions have eased on soybeans and other agricultural products. With hefty trade surpluses, Korea is under pressure to balance trade. Korea soybean imports jumped from only 428,000 tons in 1979 to 1,100,000 tons in 1989. About 120,000 tons of the imported soybeans are for food use, as follows: Tofu 100,000 tons (83% of the total), soymilk 17,000 tons, and soy sprouts 2,000 tons. Nearly all of Korea's soybean imports come from the USA.

© Copyright Soyinfo Center 2014

Taiwan ranks second, after Japan, in terms of best prospects for agricultural exports. The strong Taiwanese currency has made exports less expensive. Burgeoning trade surpluses have led to increasing pressures from trading partners, like the USA, to balance trade. So Taiwan has liberalized imports by lowering tariffs and eliminating non-tariff barriers. "U.S. soybean exporters took advantage of their dominant market position in Taiwan to expand sales. Backed by aggressive trade negotiators, the American soybean industry has enhanced its competitive position by securing a 5-year supply agreement contract with the Government of Taiwan. The agreement calls for the purchase of 5.7 million tons of U.S. soybeans over a five-year period from July 1, 1986 to June 30, 1991. As a result the United States has over 75% of the market share. Taiwan's annual requirements of food soybeans are estimated at 250,000–300,000 tons. With recent market opening measures announced by the Taiwanese government, direct sales of food soybeans to end-users are now permitted."

Philippines: In Feb. 1987 Michael led a mission to the Philippines, and contacted a buyer. Ontario soybeans were first shipped to that country later in 1987. The Philippines import about 10,000 to 15,000 tons/year of soybeans for food use, and this is expected to increase in the near future. Filipro, Inc., which is the Philippines' licensee for Nestle S.A., reported increasing market acceptance of its re-launched powdered soya milk product Vita (chocolate flavor), and a soy-based baby cereal named Ceresoy.

Indonesia: Ontario soybeans (worth $4.2 million) were first sold to Indonesia in 1980 after Canada's first mission there that year. 90% of the 1.7 to 2.0 million tons of soybeans required by Indonesia are used for food. Tempeh is a delicious Indonesian food and Indonesia requires over 750,000 tons/year of soybeans to make tempeh. Address: Senior Representative, Asia/Pacific Region, Ontario Ministry of Agriculture and Food (OMAF), Tokyo, Japan.

9578. Matsumoto, Isao; Imai, Seiichi. 1990. Tenpe seizô n okeru daizu shori [Processing of soybeans for manufacture of *tempe*]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 37(7):497-504. July. 4 fig. 6 tables. [16 ref. Jap; eng]
• ***Summary:*** To obtain the best quality tempeh: Dehull the soybeans, then soak in a 0.2% solution of acetic acid for 3-4 hours to reduce their load of microflora. Drain, then allow to stand and dry (*étuver*) for 3-7 minutes. Address: Food Research Inst., Niigata prefecture, Kamo-shi, Niigata, Japan.

9579. Matsuo, Masako. 1990. Okara tenpe no seishitsu ni oyobosu komenuka no eikyô [Effects of rice bran on properties of "okara tempe"]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 64(7):1237-39. July. [6 ref. Jap; eng]
• ***Summary:*** The addition of 10% rice bran to okara which is then fermented by *Rhizopus oligosporus* modifies the enzymatic activity, the vitamin content, and the physicochemical properties of the resulting product. The emulsifying capacity and the taste of the fermented product are improved. The addition of rice bran also improves the nutritive value of okara tempeh.

Okara tempeh has a texture that is harder and less elastic than that of white bread. The capacity for water retention and the absorbability of oil, and the emulsifying properties are greater than those of wheat flour. The antioxidant activity is equivalent to that of soybean miso. Address: Lab. of Chemistry, Faculty of General Education, Gifu Women's Univ., Taromaru, Gifu 501-25, Japan.

• ***Summary:*** A large photo shows a New York chef who cooks with natto.

9586. *East* (*The–Higashi*). 1990. The history of tofu. 26(2):25-31. July/Aug.
• ***Summary:*** This article appears is the section of the magazine titled "The Taste of Japan." Contents: Introduction. The transformation to tofu, The birth of tofu. The popularization of tofu. Transformation of tofu [by further processing]. Tofu dressed up. Tofu coming to Japan from overseas.

Fermented tofu is common in China, but rare in Japan. "Fermented tofu, *furu* in Chinese, can be regarded as a cheese made from tofu." In Japan, fermented tofu is found only "in Okinawa prefecture, which because of its proximity to China, developed a unique culture under Chinese influence. "The Japanese word for fermented tofu is 'tôfuyo' [tofuyo].

Some dishes are made from the byproducts of tofu manufacture. "One byproduct from which dishes are made is okara, the dregs extracted from tônyû" [soymilk].

9587. *Happy Endo* (*Happy End–Japanese Monthly Magazine*). 1990. Indonesia no daidokoro: Dentô-shoku tenpe o tsukuru sato, jawatô soro [The kitchen of Indonesia: The homeland of traditional tempeh making, Solo on the island of Java]. Aug. p. 10-17. [Jap]
• ***Summary:*** Ten photos show traditional Indonesian kitchens and markets, and tempeh making in Indonesia. Five illustrations show traditional Indonesian kitchen tools and utensils.

9588. Morinaga Nutritional Foods, Inc. 1990. We look great on paper... but wait 'til you taste Mori-Nu Tofu (Ad). *J. of the American Dietetic Association* 90(8):1149. Aug.
• ***Summary:*** A table at the top of the ad compares 6 different protein sources, with each portion containing 90 calories. They are: Mori-Nu Extra Firm tofu, cottage cheese, chicken, beef (lean ground), cheddar cheese, and whole milk. Compared with the tofu, all contain a higher percentage of calories from far, more grams of fat, saturated fat, and cholesterol–and less grams of protein.

"Everyone knows tofu is healthy. But too few know about the fresh taste of Mori-Nu Tofu.

"Nutrition: Mori-Nu tofu is much lower in fat and cholesterol than other protein foods. It is also lactose-free and one of the highest sources of vegetable protein.

"Food safety: Mori-Nu's aseptic package locks in fresh flavor and healthy nutrients and also protects against premature spoilage and possible bacterial contamination.

"Easy: With a guaranteed 10-month shelf-life, Mori-Nu is readily available at your fingertips. No special daily rinsing or draining necessary. Easy to blend, cook and serve. Call 1-800 NOWTOFU (669-8638) for more information. Mori-Nu tofu. You never knew nutrition could taste so good." Address: 5800 South Eastern Ave., Suite 270, Los Angeles, California 90040. Phone: 213-728-4325.

9589. Takai Seisaku-sho. 1990. [Takai 1991 systems catalog]. 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 62 p. 30 cm. [Jap]
• ***Summary:*** Photos show the company's many pieces of equipment and systems for manufacturing tofu and soymilk. The catalog is divided into 6 sections: 1. Transportation and soaking systems. 2. Soymilk production systems. 3. Curding and forming systems; Poached tofu systems. 4. Cooling systems; Hot-pack systems. 5. Curding & forming systems. 6. Deep-frying systems.

Letter (fax) from Wataru Takai. 1990. Sept. 29. Two years ago the company rebuilt its factory and installed CAD (Computer Assisted Design) systems. This year they acquired two computer networks: IBM AS/4000 and IBM 5550. Address: Ishikawa-ken, Japan. Phone: 0762-48-1355.

9590. Torii, Yasuko. 1990. [Re: New developments with tempeh and natto in Japan]. Letters to William Shurtleff at Soyfoods Center, Sept. 2 and 23. 2 p. Handwritten and typed, with signature. [Jap; eng+]
• ***Summary:*** In Japan, tempeh has not become popular. Marusan-Ai has stopped making tempeh. What a shame that Mr. Kanasugi, who was so enthusiastic about tempeh, has just passed away. The Tempeh Study Group (Kenkyukai) is still meeting 2-3 times a year and trying to popularize tempeh.

On the other hand, natto is becoming very popular and production is increasing rapidly. Natto groups are sponsoring various events to help popularize natto outside Japan.

© Copyright Soyinfo Center 2014

Mrs. Torii traveled to Budapest, Hungary in early September to attend an IFOAM Conference on organic farming, which is spreading in Eastern Europe. There she enjoyed tasty chilled tofu (*Hiya-yakko*) and met a person who knows a lot about tofu. At an international agricultural fair, she found that soyfoods were becoming popular. The booths offering roasted soybean snacks and soya burgers were crowded. She saw an attractive soy cookbook containing color photos, and met a man who is translating *The Book of Tofu* into Hungarian. The Kombinat was doing a lot to develop and popularize soyfoods.

In Feb. she went to Indonesia with other members of the Tempeh Study Group to attend a symposium on soybean fermentation. It was very interesting. Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

9591. American Soybean Assoc., China. 1990. Re: The soymilk industry and market in China. Letter to William Shurtleff at Soyfoods Center, Sept. 13. 3 p. [Eng]
• ***Summary:*** There are more than 100 soymilk processing lines in China, of which 34 have been imported from Sweden, Japan, etc. Each year China produces about 100,000 tonnes of soymilk. (Processing capacity is even larger.) Of this total, 60,000 tonnes are produced in the provinces of Guangdong (Kwangtung), Fujian (Fukien), and Guangxi (Kwangsi), all in southern China.

The five largest soymilk manufacturers in China, in descending order of capacity, are: 1. Wuhan Guan Sheng Yuan Foodstuff Factory (20,000 liters/hour capacity); 2. Fuoshan Foodstuff Factory (12,000 liters/hour; Product name: Vita Milk); 3. Guangzhou Cannery (2,000 liters/hour; Product name: Hong Bao; Equipment from Alfa-Laval); 4. Jiangmen Foodstuff Factory (2,000 liters/hour); 5. Jin Jiang Foodstuff Factory (2,000 liters/hour).

All of the soymilk made by large companies in China is sold in bottles; none is sold in aseptic packages, plastic bags, or by street vendors. Most of this soymilk is consumed in China, but 5,000 to 10,000 tonnes (5-10%) is exported to Japan and Southeast Asia each year. A new trend is to develop instant soybean powder [probably powdered soymilk] for the people of northern China, who do not like soymilk. Address: Citic International Building, 25th Floor, Room 4, 19 Jianguomenwai Street, Beijing 100004, China. Phone: 512-7125.

9592. Applegate, Jane. 1990. Tokyo tofu firm's 'bacteria free' sales pitch irks U.S. companies. *Los Angeles Times.* Sept. 17. p. D3. [1 ref]
• ***Summary:*** "The aggressive approach taken by Tokyo-based Morinaga Milk Industry Ltd., one of Japan's largest dairy companies, has angered many U.S. tofu makers...

"'They are hurting the whole industry with their ads,' said Bill Mizono, president of Azumaya, a San Francisco maker. 'There is room for Mori-Nu's product side by side with water-packed tofu...'

"Mori-Nu... offers $5 memberships in its 'Health for Life' club. Members receive a quarterly newsletter featuring recipes, coupons and nutritional information. So far, about 10,000 people have signed up...

"Hinoichi Tofu, a manufacturer in downtown Los Angeles, is working with Jackie Olden, a radio and television personality, to help take some of the mystery out of cooking with tofu.

"Hinoichi's goal is to gain greater trial and repeat purchase of tofu among mainstream American consumers."

9593. McReynolds, Thomas. 1990. Morinaga decides to introduce private labeling and a Fresh Fruit Shakemate (Interview). *SoyaScan Notes.* Sept. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Morinaga will aggressively offer to provide their aseptic tofu, on a private label basis, to other companies in the soy and natural foods industries. To print the package directly, the buyer must commit to ordering at least 500,000 cartons/year, but with affixed pressure-sensitive labels, they can get the minimum down to 25,000 to 50,000 pieces. They will make all three textures available (red = soft, blue = firm, yellow = extra firm). Projected price is about $10/case. Some potential clients are Vitasoy/Nasoya, Frieda's, Eden Foods, Tree of Life.

Next summer, Morinaga will be introducing their first second generation product, called (and trademarked) Fresh Fruit Shakemate. It will be like their soft tofu but with a lower bean profile and perhaps with vanilla added. They will sell/position it in the fruit section of food stores. It will be packaged in a 3-pack, with no printing on individual packages in order to (1) get a bigger face, (2) Put brochures in the back. The theme: Shake up your day 8 days a week. Tom wants to do more second generation products.

There are rumors that Nasoya has secured aseptic packaging equipment from Tetra-Pak (an AB-3 machine for the purpose of manufacturing a 250 ml aseptic tofu) and that Vitasoy in Hong Kong is, or in the near future will be producing an aseptic pack tofu. They may be using a 3-layer laminate to get around the Morinaga 5-layer process with the polyurethane lining. Tom held some kind of an aseptic tofu package in Hong Kong about 18 months ago, but he is not sure who made it. When he talked with Yvonne Lo recently, she hinted that they were developing such a product. But Morinaga has no solid evidence.

Update: Nov. 5. Morinaga will initially offer the private label to only 1 company in each of 3 market categories: Eden in the natural foods market, Vitasoy in the ethnic market, and Frieda's Finest in the national produce market. Address: Marketing Consultant, Morinaga Nutritional Foods, Los Angeles, California 90040. Phone: 213-728-4325.

9594. Shindler, Merrill. 1990. Affordable feasts: If you knew sushi like they know sushi, you'd try it. *Daily News of Los Angeles* (*California*). Sept. 27. p. L33.
• ***Summary:*** This review of the Japanese sushi bar Miya Sushi in north Hollywood, San Fernando Valley, states: "They also serve plates of edamame ($1.95), boiled salted soy beans, which you squeeze gently, until they pop out of their shells and into your mouth. They're far more addictive than pistachio nuts."

9595. *INTSOY Newsletter* (*Urbana, Illinois*). 1990. Processing and utilization conference sparks interest in soybeans as food. No. 42. p. 1-2. Sept.
• ***Summary:*** The conference, which was co-sponsored by INTSOY, took place in Gongzhuling, Jilin Province, China from June 25 to 29, 1990. The various working sessions and exhibits attracted almost 250 soybean scientist and development officials from 27 countries.

"Besides INTSOY, other sponsors of the conference were the Jilin Academy of Agricultural Sciences; the Chinese Academy of Agricultural Sciences; the Japanese Agriculture, Forestry, and Fisheries Research Council Secretariat; the Scientific Research Institute of Foods and Fermentation Industry; and the International Institute of Tropical Agriculture...

"Some 80 presented papers covered topics ranging from reports on soybean utilization efforts in specific countries to sophisticated medical studies on the health effects of soybean use.

"One especially important paper reported on the potential of soybean components known as saponins to control reproduction of the HIV virus which is associated with Acquired Immune Deficiency Syndrome or AIDS. The report from Japanese scientists in the Department of Food Chemistry at Tohoku University indicated that one class of saponins showed inhibitory effects against HIV infection in vitro.

"Besides attending the working sessions, participants viewed some 37 demonstrations and exhibits from all over China...

"The conference organizers also provided a number of local tours of interest to participants. These included visits to a modern tofu plant, the Soybean Research Institute of the Jilin Academy of Agricultural Sciences, the labs and pilot plant of the Scientific Research Institute of Foods and Fermentation Industries, and the headquarters and gene bank of the Chinese Academy of Agricultural Sciences...

"The general recommendations from the final report called for holding the conference on a regular basis every three or four years. The report suggested Brazil and Africa as potential sites for the next conference."

9596. Vandemoortele, Philippe. 1990. Soymilk, a traditional milk substitute. Paper presented at the Eurosoya Conference. 5 p. Held 5-7 Sept. 1990 at Strasbourg, France.
• ***Summary:*** Contents: Tradition. Milk imitation or substitute? (It is a substitute). New process for making soymilk (giving improved taste and nutritional value). New products (such as dairylike products). Standards (a protein content of at least 3.6% should be guaranteed). Terminology (The terms "soya milk" and "soy-bean milk" have been used in published materials since 1897. Because of the protection of the word "milk," most soymilks in Europe are labeled "soya drink," except in the UK where the term "soymilk" has been legalized). Soymilk imitation (Soymilk made from soy protein isolates, fats, sugar, etc. is neither a natural nor a traditional product). The market. Producers. Future of soya milk. Negative perspectives. Conclusion.

"It is difficult to determine the amount of soymilk produced and consumed in Europe. In 1986-87 a number of enthusiastic reports drastically overestimated the European soymilk market. Some publications, for example, estimated that the market in the UK totalled about 30,000 metric tons (tonnes; i.e. about 30 million liters). The latest reports (1989) however seem to provide more reliable and realistic information. *Agrarwirtschaft* has recently [March 1989, 38(3):74-83] published figures stating that the market grew from 16,000 tonnes in 1986 to a projected 28,500 tonnes in 1992. There is no question however that soymilk consumption has risen substantially in the last 5 years. Yet soymilk remains a marginal market and accounts for less than 0.1% of the total dairy market. The U.S. market on the other hand is estimated at 16,000 tonnes for 1989.

"Today there are more than 14 commercial soymilk producers in Europe, producing and packaging soymilk in more than 200 different packages. Their total capacity is estimated at approximately 60,000 tonnes a year..."

Presently the two main disadvantages with soymilk are its taste, and its high price compared with cow's milk. Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8560 Wevelgem, Belgium. Phone: (056) 43 22 11.

9597. McReynolds, Thomas. 1990. Mitsubishi grant to Purdue Univ. to develop aseptic tofu (Interview). *SoyaScan Notes.* Oct. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tom has heard that Mitsubishi (Japan), more than a year ago, made a $300,000 grant to Purdue University to develop aseptically packaged tofu.

Note 1. See long SoyaScan interview with Niels Nielsen (Feb. 1990), who is the key man on this project at Purdue.

Note 2. Talk with Larry Johnson at Iowa State University. 1990. Oct. 4. People from Purdue came to Iowa State Univ. about a year ago and spent a day learning how to make tofu from Lester Wilson. The key man on the project is probably Niels Nielsen. Larry knew that Purdue and Mitsubishi were working together but he did not know that such a large scale amount of money was involved. A

major component of the work is development of a bland, lipoxygenase-free line of soybeans for use in soyfoods. Address: Marketing Consultant, Morinaga Nutritional Foods, Los Angeles, California 90040. Phone: 213-728-4325.

9598. Shurtleff, William. 1990. America's earliest known tofu manufacturer discovered: Wo Sing & Co. was making tofu in San Francisco in 1878 (News release). Soyfoods Center, P.O. Box 234. Lafayette, CA 94549. 2 p. Oct. 29. [2 ref]

• ***Summary:*** "In Jan. 1848 gold was discovered in California. By 1850 there were still only a few hundred Chinese in California. Then in 1852 the Chinese joined the Gold Rush. They called California the 'Golden Mountain.' By 1852 there were 20-25,000 Chinese in the golden state, and by 1860 there were 30-50,000. The 1880 census found 75,132 Chinese in California, comprising 8.6% of the state's population.

"These Chinese immigrants, mostly young men from Kwangtung province in southern China, and more specifically from the area around Canton, almost certainly brought soybeans with them to America, and they probably made tofu (which they called *daufu, dow-foo, or doufu*) using those soybeans. But, until now, no one has been able to prove the existence of any Chinese manufacturers of tofu or other soyfoods in America before 1899. During this year Walter C. Blasdale, an instructor in chemistry at the University of California, Berkeley, reported in the *USDA Office of Experiment Stations, Bulletin* No. 68 that Chinese in San Francisco were making 'bean cheese,' both fresh and fried, as well as fresh curds.

"After years of searching, William Shurtleff, Director of the Soyfoods Center in Lafayette, California, has discovered a tofu manufacturer in San Francisco, California, in 1878. According to the Wells Fargo and Co. *Directory of Chinese Business Houses,* published in San Francisco in 1878, Wo Sing & Co. was making fermented tofu and regular (non-fermented) tofu at 708½ Dupont St. in San Francisco. The name of the company and its products were written in both Chinese and English. Tofu was translated as 'Bean Cakes.' This was the earliest known tofu shop in the western world (as of Oct. 1990).

"In the same Wells Fargo directory published in 1882, a second Chinese tofu manufacturer appeared. Sam Sing was making fermented and regular tofu at 615 Dupont St., basement, in San Francisco. Wo Sing was still in business at the address given above.

"The earliest known Japanese-run tofu manufacturer in America was Hirata Co. in Sacramento, California. They began making tofu in 1895.

The oldest existing tofu maker in America today is Quong Hop & Co. of South San Francisco. Founded and still run by the same Chinese-American family, they began making tofu in 1906 in San Francisco.

"The two oldest existing Japanese-American tofu companies are probably House Foods & Yamauchi Inc. of Los Angeles and Aala Tofu Co. of Honolulu. Both trace their origins back to 1923 in Hawaii...

"The first five Caucasian-run tofu companies in the western world were all run by Seventh-day Adventists in America. In Nov. 1929, T.A. Van Gundy of La Sierra Industries in Arlington, California (near Riverside), introduced his La Sierra Soya Cheese...

"The sixth Caucasian-run tofu company in America, and the first of the new wave of Caucasian tofu makers, was the Welcome Home Bakery and Tofu Shop in Corvallis, Oregon, founded by Alec Evans. In March 1975 he started making 'Tofu.'

"The earliest document seen (Oct. 1990), written by an American, that mentions tofu appeared in 1770 when the famous Benjamin Franklin wrote a letter on Jan. 11 from London to John Bartram in Philadelphia...

"The Soyfoods Center would like to offer a $100 reward to anyone who can find a tofu manufacturer in North America or Europe before 1878."

Reprinted in Soya International (July/Sept. p. 3). Address: Lafayette, California.

9599. Azumaya, Inc.; et al. 1990. Tofu: Made in the USA... The tradition continues (Ad). *Produce Business.* Oct.

• ***Summary:*** With this anti-Mori-Nu ad, run by "the largest tofu manufacturers and distributors in America," the U.S. tofu wars escalate. The four manufacturers are Azumaya, Hinoichi, Nasoya, and Kikkoman. All make pasteurized tofu. The three distributors are Hanmi Inc. in Seattle, Frieda's Finest in Los Angeles, and Fuji Natural Foods in Ontario, California. "It has come to the attention of produce procurement officers throughout the United States that a foreign (Japan) producer of an aseptically packed tofu has chosen to confuse the trade and general public with claims that their product is superior to traditional water pack tofu. The following addresses the various issues as we see them." These issues are: 1. Water packed tofu has superior taste. Sales of aseptic tofu are virtually nonexistent in Japan. 2. Consumers prefer fresh produce. 3. The assurance of our pasteurization. "An independent study revealed bacterium was unable to grow in pasteurized tofu held at 59 degrees Fahrenheit and below for six weeks." 4. A clear environmental choice. The aseptic package is ecologically unsound, whereas "water packed tofu is packaged in 100% recyclable plastic."

barbecue, Mexican (incl. chili, taco, enchilada, etc.), prepared mustard, and soy and teriyaki. Gravies, dips, and dry sauce mixes are not included. Ketchup is the largest segment. Address: Commack, New York.

9601. MacNeil/Lehrer Newshour. 1990. Infant mortality, worldwide and in the United States. Television broadcast. PBS. Oct. 3. *

• ***Summary:*** On average, 40,000 children under the age of 5 die each day worldwide, mostly from preventable illnesses and diseases, and from malnutrition. In America every year some 40,000 babies die before the age of 1. The main cause is low birth weight, but a major cause is maternal drug abuse, especially cocaine and crack cocaine. 30% of the pregnant women in America do not have adequate access to prenatal care. The USA is 20th from the top on a ranking of countries by infant mortality rate. Japan has the world's lowest (i.e. best) infant mortality rate, followed by Sweden, Finland, Switzerland, Canada, Ireland, Netherlands, France, Denmark, and East Germany. Below the USA are Israel and Greece.

9602. *Vegeta* (*Japanese Monthly Magazine*). 1990. Nattô toraianguru: Tenpe was Indonesia no dentôshoku desu [The natto triangle: Tempeh is a traditional food of Indonesia]. Oct. p. 30-32. [Jap]

• ***Summary:*** A map shows the "natto triangle" in east and southeast Asia. Fifteen photos show various aspects of tempeh in Indonesia, including the finished product wrapped in banana leaves, tempeh being sold by a woman in a traditional market, six steps in the production of tempeh, and six views of cooking with tempeh.

9603. Yu, Angie Elinon Yu. 1990. Re: Cherry Food Industry, APY Food Processing, and promoting tofu in the Philippines. Letter to William and Akiko Shurtleff at Soyfoods Center, Nov. 14. 2 p.

• ***Summary:*** "Sometime in the late 70's, you visited my parents-in-laws Tofu factory, then known as Cherry Food Industry here in the Philippines. I am married to their second, Jerry Joseph.

"The tofu business of my parents-in-law is still active but now registered under a new name, APY Food Processing, but located in the same address (74 Speaker Perez St., Santa Mesa Heights, Metro Manila). The plastic container of the Nippon Tofu (silken tofu), however, still carries the old name."

She and her husband operate a computer services firm. One of their business clients is Shoemart, a big chain of supermarkets, which is selling Nippon Tofu and other tofu products made by APT Food Processing. Shoemart has asked Angie and her husband to operate a portion of their Gourmet Shop (which presently has a salad bar and a Japanese sushi bar) located in the middle of their newest supermarket. They have agreed to do this

"I personally feel that the level of market awareness of what tofu really is, is relatively low. I have always suggested to my in-laws to invest in educating the market about it since five years ago. However not much has been done. By presenting our products in this Gourmet Shop we have found a vehicle to do exactly this."

She asks Shurtleff for ideas on promoting the use of tofu, and for updated materials. And she invites him to visit them any time.

"Our store will start operating on November 28 of this year. All information materials that I release to the public will be based on your Book of Tofu (1979). I bought a copy of it when I was in your country (New York) in 1988. I learned from my husband that you gave his parents an autographed original copy of the same book." Address: Elinon Yu EDP Services, International Corporation, 61 West Capitol Drive Bo, Kapitolyo, Pasig, Metro Manila, Philippines. Phone: 631-9451.

9604. Cohen, Karen J. 1990. Terre Haute firm hopes Americans take a liking to tofu. *Indianapolis Star* (*Indiana*). Nov. 20. p. B-2.

• ***Summary:*** Kyoto Food Corp. expects to begin tofu production at the end of November. "The $4.5 million plant is a joint venture between four Japanese investors and the husband and wife team of William and Setsuko Roach. The 15,000-square-foot factory will be the largest tofu manufacturer in the country, capable of producing 9,800 12-ounce cakes per day, according to Roach.

"The Indiana Department of Commerce awarded a $46,117 grant to the plant for infrastructure needs and $25,000 for employee training. Kyoto Foods employs 19 people.

"'If things go right we hope that will double within a year,' said Roach, who is retired from the construction business and was a Democratic state representative for 12 years...

Mary Beth Thomas, marketing director, said "Kyoto plans to unveil its product in grocery stores, hospitals and universities in and around Terre Haute in the near future. The company doesn't have any contracts yet but Roach said it has had discussions with Kroger Co., Marsh Supermarkets Inc., and Dominick's Finer Foods Inc., a Chicago-based grocery chain." Because the company's marketing director, Thomas, feels that Americans "have a negative image about tofu," the company is developing recipes for sloppy joes, cookies, and tacos, which are taste-tested by employees. Tofu doesn't sell very well in Indianapolis. The Kroger supermarkets sell about 240 packages/week in the central Indiana region. They also sell Tofutti, a soy ice cream. Peter Golbitz of *Soya International* estimates that 5 to 10% of the 69.5 million lb of tofu produced in the USA is used in secondary products. "Americans like the idea of tofu, but they don't like this white cake floating around in a tub of water." Kyoto Foods

9607. *AURI News* (*Minnesota*). 1990. Minnesota takes a bite out of Japanese snack food market. 1(3):1, 5.
• ***Summary:*** It all started with a call from Rico Westin [Reiko Weston], owner of Fuji-Ya, a former Japanese restaurant in the Twin Cities. She wanted to grow a crop called Edamame rather than paying the costs of importing it. "The same business savvy that enabled her to once carry the titles of U.S. and Minnesota 'Businesswoman of the Year' sparked research in 1987 by the Jameson-Williams Company into the viability of raising this new crop. Unfortunately, Westin died shortly before the first year's crop was harvested."

"Presently the Jameson-Williams is the only commercial producer of Edamame in the U.S. 'We've experimented with hundreds of varieties including vegetable and tofu varieties,' said Jim Lambert, President of the Jameson-Williams Company. 'We produce a smaller pod than Taiwan, but the taste and color of our Edamame is better because we allow only one hour between the time it is harvested and the time it is processed so not as many sugars convert to starches within the soybean."

Bob Luedtke, Senior Consultant to the Edamame Project, calls edamame "the ultimate alternate crop." Yields average 58-62 bushels per acre, compared to regular soybean yields of 45-50 bushels per acre.

"Jameson-Williams contracts with local farmers to grow the Edamame. The company pays for the seed and the harvesting. The contract with local farmers this year was for a net profit of $0.06 per pound or a minimum of $240.00 per acre." The profit from regular soybeans is about $230.00 per acre not including the costs of seed and harvesting. "Generally, farmers producing Edamame net approximately $75.00 more per acre. Quick calculations show a value added agricultural product for Minnesota."

AURI has given the project a lot of expert help in the area of processing. Modification of harvesting equipment reduced field losses to 20%, from 30%. "Jameson-Williams has been steadily increasing their production of Edamame from 7,000 pounds in 1988 to the 350,000 pounds they harvested this year. The product moves directly from the field to the processing facility, Tony Downs Foods in St. James. The Edamame moves over shaker tables, onto a visual inspection line, through a pressure wash, into a continuous blancher, through a hydro-cooler and over a de-watering table. The product then enters an IQF (individual quick freezing) freezer and is finally loaded into tote boxes for temporary storage prior to packaging. Jameson-Williams sells the Edamame in bulk to a trading company who repackages it for the consumer."

The next step for Jameson-Williams is to shell the soybeans to make *mukimame.* The company is currently requesting funding from AURI for expertise to develop the shelling process.

"'The overall objective of our partnership with Jameson-Williams,' says Virgil Smail, AURI Executive Director, 'is to make the crop economically feasible, to provide an alternative crop for farmers with minimal risks, and to promote new uses of soybeans for both domestic and export consumption." Future plans: Use genetic engineering and cross breeding to allow the pod to be more easily removed from the plant, and to increase the size of the pod relative to the size of the beans.

Note: This is the earliest document seen (Oct. 2001) that gives industry or market statistics on green vegetable soybeans for individual companies.

A close-up shows the 750 ml bottle and its colorful label, orange, blue, and green on yellow. One bottle costs the equivalent of about 300 yen. Address: Japan.

9612. *SoyaScan Notes.* 1990. Rich Freeze: Central Soya's soy protein isolate-based ice cream mix that was never commercialized (Overview). Dec. 1. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** In *Tofutti & Other Soy Ice Creams* (1985, p. 31), Shurtleff and Aoyagi note: "By 1963 Central Soya had begun development of a soy ice cream based on their Promine-brand isolated soy proteins. A memo dated 21 April 1964 referred to a pilot-plant run to produce dry mix for the product. In 1965 the innovative new non-dairy frozen dessert was granted a registered trademark: Rich Freeze. Research and development work on Rich Freeze continued throughout the late 1960s. In 1966 Central Soya opened an isolate plant with a capacity of 30 million pounds (1,360 metric tons) a year. Central Soya's line of promine isolates was considered the state of the art."

The first publicity for Central Soya's ice cream appeared in 1966. On July 8, *Time* magazine, in an article titled "Commotion in the bean pit" (p. 77-78), reported that "Central Soya has developed an ice cream-like frozen dessert made of soybeans... this month Central Soya will begin mass production of Promine, an isolated soybean protein, at a new Chicago plant."

Then on July 23, *Business Week,* in "Soybeans move up on the menu" (p. 82-87), noted that "Central Soya makes an isolated soy protein binder called Promine... Sales of the binder at $0.35/lb... are so promising that production will be doubled to 2.5 million lb monthly when a new plant opens in Chicago next month... In addition the company this fall hopes to start exporting a frozen soy dessert to tropical countries with no dairy industries."

Shurtleff and Aoyagi (1985, p. 35-36) continue: "In 1970 Central Soya's Rich Freeze, first developed in 1964, began to become well known. The *Soybean Digest* (Aug. 1970) gave this as the year when 'Soy protein isolate replaces milk solids in Central Soya's frozen all-vegetable dessert. Industrial research increases.' The product was initially developed in the form of a dry mix for a company in Japan, a country then facing a shortage of dairy products. The main ingredients were coconut oil, sugar, corn syrup solids, soy protein isolate, and a stabilizer. But many problems arose during the development process. For example, Central Soya had to remove all sugar from the mix to avoid huge import duties. Rich Freeze was a good product, and an outstanding non-dairy ice cream by the standards of the day. But eventually the whole concept fell through before the product was even test marketed in Japan. Yet Central Soya kept the idea alive. In the U.S. they called it an 'all-vegetable frozen dessert,' carefully skirting the term 'non-dairy' which might offend the dairy industry, one of their biggest customers for mixed feeds and feed concentrates. There were negotiations with the navy to use Rich Freeze on ships at sea. In about 1970, using a Taylor soft-serve machine, Central Soya prepared and gave out samples in Japan, at a big international food convention in Washington, DC, at an Institute of Food Technologists's convention on the West Coast, and finally at the huge ANUGA food fair in Europe. There, served spiked with brandy, it was a real hit. Yet Rich Freeze was an idea born before its time; it was never commercialized... not even for the kosher market, which would probably have welcomed it (Rakosky 1985, personal communication)."

9613. Sanger, David E. 1990. A Japanese innovation: The space antihero. *New York Times.* Dec. 8. p. 1.
• ***Summary:*** Mr. Toyohiro Akiyama, age 48, a Japanese television reporter and the first Japanese (and the first journalist) in space, is now on board the Russian space station Mir. Tokyo Broadcasting System, seeking a large boost in ratings, is reported to have paid the Soviet Union $12 million to have him taken on board–after 18 months of rigorous training with Soviet astronauts. A chain smoker who has admitted having withdrawal problems, Mr. Akiyama mused at dinnertime "'I wish I had brought along some natto,' the smelly fermented soybeans that even many Japanese say they cannot bring themselves to swallow." A photo shows Akiyama as his spacecraft docked with Mir. Address: Tokyo.

9614. Levey, Robert. 1990. Urban treats: Good grazing, pure sushi. *Boston Globe.* Dec. 14. p. 66.
• ***Summary:*** This updated review of the Japanese restaurant Cafe Sushi (1105 Massachusetts Ave., Cambridge) states: "Though the general menu, beyond sushi and sashimi, is limited, there were a couple of diverting specials. There was an appetizer of boiled 'edamame,' which turned out to be a bowl of whole soybeans cooked in their green skins. The vegetable looks like a lumpy peapod, and you eat it by pulling the pod through your teeth. Lovely little finger food.

"Another offbeat treat was a roasted quail appetizer, a single well-cooked small whole bird served with a few edamame on the side." Address: Globe staff.

9615. Kubota, Brad. 1990. A history of tofu in Fresno and surrounding towns (Interview). *SoyaScan Notes.* Nov. 28 and Dec. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following information is based on Brad's personal recollections and interviews he conducted with various Japanese-American old-timers in Fresno. Brad now owns and runs Fresno Tofu Co. The lineage of his company is as follows:

He has heard from many people that there were two tofu shops in Fresno before World War II, but one went out of business. Also before World War II there was a company in Fresno named Tokubo Tofu, run by a Mr. Tokubo. Mr. Tokubo is said to have brought his company to Fresno from the countryside (from Fowler?) and it is not clear if he was part of the Fresno Tofu Company lineage or to whom he sold the company.

Mr. Sasaki may have owned a tofu company that was an early member of the Fresno Tofu Co. lineage. He sold it to Mr. Fukamoto, who renamed it Fukamoto Tofu.

Mr. Fukamoto sold his shop to Mr. Joe Hashimoto (a nisei or second generation Japanese American, who still lives in Fresno), who renamed the company Hashimoto Tofu in about 1947.

Joe Hashimoto sold his company to a Dr. Wilkinson, a Caucasian/American, who moved it away from Fresno, out into the country. He discontinued production of tofu, but started to make a type of soy cheese and soymilk. Dr. Wilkinson is no longer living.

It was probably Mr. Hashimoto who sold his company in about 1970 to Mr. Tokubo or David Goto, who renamed it Star Tofu Shop. David asked his younger brother, Nagaki, to come to America from Japan to help him make tofu. After a while, Nagaki took over the company. David left the business and started farming. Nagaki Goto renamed the company Goto Bean Factory in 1975.

Nagaki Goto sold his company to Brad Kubota, who renamed it Fresno Tofu Co. in Nov. 1982. Brad started by making the same two tofu products that Mr. Goto had made, medium-firm Japanese-style momen tofu, and agé (deep-fried tofu pouches).

After World War II there were at least two other tofu companies in Fresno: Nagahama Tofu, and Yokota Tofu-ya (which was in business in 1922). Before World War II there were at least two tofu companies in Fowler, California (located about 10 miles southeast of Fresno): Soga Tofu and Harada Tofu. Mr. Hashimoto says that after the war, Mr. Tokubo also used have his tofu shop there in Fowler, whence he moved it to Fresno. In Dinuba (pronounced dai-NU-bah, and located about 30 miles southeast of Fresno) a tofu shop named Nii-Tofu was in business after World War II. Address: Fresno Tofu Co., Fresno, California.

9616. Araki, A.M. 1990. [Re: A brief history of tofu shops in Fresno, California]. Letter to William Shurtleff at Soyfoods Center, Dec. 31. 2 p. Handwritten. Followed by phone interview on 8 Jan. 1991. [Jap; eng+]
• ***Summary:*** "It was difficult for me to collect this information. For some people I talked to it was a sensitive issue, like coming out of the internment camps after World War II back into white society. Since the generations have changed, I had to talk with many people. I came to the USA in Aug. 1920 and settled in Fresno that month. At the time in Fresno there were two tofu shops in Japantown: Yokota Tofu-ten (run by Yuichi Yokota, located on Fargan Alley, which was back-to-back with E Street; Yokota's postal address was on E Street), and Nakaoka Tofu-ten (run by Mr. Nakaoka on Kern St.). He is not sure of the shops were named "Tofu-ten" or "Tofu-ya," but he prefers "Tofu-ten because it has a higher class sound (more *jôhin*).

The owner of Nakaoka Tofu-ten died in about 1922. His wife re-married to Mr. Zenkichi Nagahama, who took over the company, renamed it Nagahama Tofu-ten, and ran it at the same location for about 20 years until 1942, when he was sent to an internment camp. He did not re-start the company after the war; he was too old.

Right after World War II, in about 1945, the first tofu shop in Fresno was started by a man who came from the

© Copyright Soyinfo Center 2014

Los Angeles area; although he was a Japanese, he had a big body and blue eyes. But he didn't last for long. After that he company was run consecutively, at the same location, by Joe Hashimoto, Sakae Tôkubo, Dr. Wilkinson (an M.D. and Seventh-day Adventist; he was a very famous surgeon and he made tofu himself at his shop on E Street), and then the two Goto brothers. After the war, the younger Goto brother immigrated to the U.S. from Japan. (Sometimes we call those new first-generation Japanese shin-issei). The same shop on E Street, which has been in business the longest, is now in its third generation, run by Musashi [Brad] Kubota."

He is not sure when the first tofu shops started in Fresno. However his father arrived in Fresno in 1911 and had a shop across the street from the Nagaoka tofu shop on Kern Street. He thinks Yokota was there at the same time, since the house in which Mr. Yokota lived in 1920 (he built it himself) was quite old, dating from about that period. His tofu shop was in the front of his house, facing the street.

There were some Chinese-run tofu shops in Fresno during this period but he does not remember any details concerning them. Address: Nichi Bei Times, Fresno Branch, P.O. Box 11489, Fresno, California 93773. Phone: 209-237-6779.

9617. Bureau of the Census, U.S. Department of Commerce. 1990. The Asian population of the United States in 1990 (Overview). *SoyaScan Notes.* Compiled by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** According to the 1990 census, the population of the United States was 248.7 million, up 9.8% from 1980. The Asian population is as follows: Total Asian and Pacific Islander 7.273 million (2.9% of the total, up 107.8% from 1980). Total Asian from traditional soy-consuming nations 5.524 million (2.2% of total, up about 100% from 1980!). Chinese 1.645 million (0.7%, up 104.1%). Filipino 1.407 million (0.6%, up 81.6%). Japanese 847,562 (0.3%, up 20.9%). Korean 798,849 (0.3%, up 125.3%). Vietnamese 614,547 (0.2%, up 134.8%). Hawaiian 211,014 (0.1%, up 26.5%).

Representing 7 manufacturers of soyafoods in France (the logo represents a 7 in Japanese) its aims are to standardise, develop and promote soyafoods... The current members of SOJAXA are Innoval S.A. Ligne, S. Formoja, Prolait, Soja Biostar, Sojadoc, Sojasun [Triballat] and [Société] Soy. Their activities this year include a major promotion of soyafoods at motorway restaurants and also a national competition for Chefs to create their own original dishes based on tofu. For further information please contact SOJAXA, 5 Bd de la Mediterrane, 31400 Toulouse, France."

9623. Taira, Harue. 1990. Quality of soybeans for processed foods in Japan. *JARQ* (*Japan Agricultural Research Quarterly*) 24(3):224-30. Dec. [7 ref. Eng]
• ***Summary:*** Contents: Abstract. Introduction. Quality for food processing: Tofu, miso, natto. Variation of bean quality and suitability for processing. Factors inducing variations in the chemical composition and suitabilities for processing.

Figures show: (1) Consumption of soybeans in Japan in

© Copyright Soyinfo Center 2014

1988 (1,000 tonnes): Total: 4,663 tonnes. Oil and meal 77%. Food 19%. Other 4%. Food products: 886 tonnes. Tofu and abura-age 57%. Kori-tofu 3%. Miso 20%. Natto: 11%. Other 9%. Individual food products (* An additional 69,000 tonnes are consumed in the form of cooked whole soybeans, yuba, kinako, moyashi {sprouts}, and others). Tofu and abura-age 505 tonnes. IOM and other USA 83%. Japan 11%. China 6%. Kori-tofu 29 tonnes. IOM and other USA 72%. China 28%. Natto 100 tonnes. China 50%. USA and Canada 30%. Japan 20%. Miso 179 tonnes. China 86%. Japan 11%. IOM 3%. Soy sauce: Defatted soybean flakes 183 tonnes (97%) and whole soybeans 5 tonnes (3%).

(2) Frequency distribution of solid matter extractability in soybean milk (105 samples; 60 cultivars and 7 lines)–for varieties Enrei, Fukuyutaka, Akishirome, Akiyoshi, Tamahomare, Fujimijiro, Hyuuga, Shirosenari. Average value of U.S. soybeans. Mode: 79%. Range 70-82%.

(3) Correlation between protein and sucrose content in soybeans. Inversely correlated. The more protein, the less sucrose. (4) Correlation between hardness of steamed seeds and ammonia nitrogen content in natto. Directly correlated. The harder the steamed seeds, the more ammonia nitrogen in the finished natto.

(5) Variation in chemical composition and suitabilities of soybeans for processing: Raw soybeans for processing, soybean milk for tofu, steamed seeds for miso, natto, cooked soybeans.

Tables: (1) Relationship between soybeans and processed foods in raw soybeans, soybean milk, and steamed seeds. (2) Chemical composition and suitability of soybeans from USA, China, and Japan for processing into tofu, miso, natto, cooked soybeans. Varieties: Enrei, Fukuyutaka, IOM (USA; low protein, high oil), Tamahomare, Kitamusume, Miyagishirome (large seeded), Nattoshoryu (small seeded), Chinese (low protein, high carbohydrate). Address: Dep. of Utilization, National Food Research Inst., Ministry of Agriculture & Forestry, Koto-ku, Tokyo.

9624. USDA Foreign Agricultural Service, Information Systems Management Div., Database Administration Branch. 1990. The world's leading soybean crushing countries: Statistics by country, 1964-1990. FAS USDA Oilseeds/ Products, Room 5638 South, 14th and Independence Ave. S.W., Washington, DC 20250-1000. 9 p. 28 x 38 cm computer printout.

• ***Summary:*** A search by Debby Pumphrey of the FACTS (Foreign Agricultural Commodity and Trade Statistics) database, for the amount of soybeans [commodity code: 2222000] crushed for domestic consumption by various countries worldwide, gives the following results, with all countries that crushed more than 500,000 tonnes ranked in descending order of amount of soybeans crushed. All figures are in metric tons (tonnes):

For the year 1990: USA 32,523,000, Brazil 13,700,000, Argentina 7,250,000, China 4,400,000, Japan 3,550,000, Netherlands 2,760,000, Germany, 2,550,000, Spain 2,300,000, Italy 2,025,000, India 1,785,000, Mexico 1,670,000, Taiwan 1,650,000, USSR 1,445,000, Belgium-Luxembourg 1,180,000, Canada 1,100,000, South Korea 840,000, Romania 789,000, Portugal 610,000, and United Kingdom 605,000.

In 1990 a total of 88,515,000 tonnes of soybeans were crushed worldwide. Of this total, the USA crushed 36.7%, Brazil crushed 15.5%, and Argentina crushed 8.2%.

For the year 1964/65: USA 13,036,000, Japan 1,460,000, China 1,304,000, West Germany 1,290,000, Canada 528,000. In 1964/65 a total of 21,357,000 tonnes of soybeans were crushed worldwide. Of this total, the USA crushed 61.0%, Japan crushed 6.8%, China crushed 6.1%, Brazil crushed 1.3%, and Argentina crushed 0.02%.

Note: At the top of the computer report is printed: Global Economic Data Exchange System [GEDES]. CP [Commodity Program] Subsystem–Commodity/Attribute Model. Crushing statistics are given for 175 countries from 1964/65 to 1990. Address: Washington, DC. Phone: 202-382-8232 or 202-447-4989.

9625. Watanabe, Iwao; Nagasawa, Tsugio. 1990. Waga kuni ga shoyû suru daizu iden shigen no gaikan-teki tokusei to kagaku seibun ganyû ritsu. I. Tsubudai, shuhishoku, ? iro oyobi kagaku seibun ganyû ritsu no hindo bunpu to torito-sei jibetsu ni mita tokushoku [Appearance and chemical composition of soybean seeds in germplasm collection of Japan. I. Frequency distribution of grain size, seed coat color, hilum color, and content of chemical components, with special reference to collection site]. *Nippon Sakumotsu Gakkai Kiji* (*Japanese J. of Crop Science*) 59(4):649-60. Dec. [14 ref. Jap; eng]

• ***Summary:*** The soybean seeds in the germplasm collection, which contains about 4,400 samples, were surveyed and analysed by near infrared spectroscopy. The exotic collection from Asia, where soybean has been one of the traditional crops, accounted for only about 18% of all samples, which suggested the need for additional collection.

Seed size was classified based on The Evaluation Standard for Soybean Cultivars; 16% of the seeds were small, 63% medium, and 21% large. In the Asian collection, seed size tended to become smaller as the latitude of the collection site approached the equator (i.e., became lower).

About 26% of the seeds had so-called "coloured" seed coats (green, brown, black, or mottled); the remaining 74% was pale yellow or yellow.

The most frequent hilum color was brown (32%), followed by yellow, black, dark brown, pale brown, pale black and green in descending order.

In the collection from Asia, the protein percentage tended to increase as the latitude of collection site decreased (i.e., moved closer to the equator), while the lipid percentage

© Copyright Soyinfo Center 2014

was the opposite.

The protein percentage tended to increase as the seed size got smaller, which the lipid percentage was the opposite. The cultivars with a black seed-coat and extremely small seed size were closest in chemical composition to that of wild soybeans (*Glycine soja* Sieb. & Zucc.).

The domestic Japanese collection was characterized as large-seeded, a little lower in both protein and lipid percentage, and higher in carbohydrate percentage. Address: Tohoku National Agricultural Experiment Station, Kariwano, Akita 019-21, Japan.

9626. Watanabe, Iwao; Nagasawa, Tsugio. 1990. Waga kuni ga shoyû suru daizu iden shigen no gaikan-teki tokusei to kagaku seibun ganyû ritsu. II. Tanpakushitsu, shibô, tansui kabutsu ganyû ritsukan no sôkan [Appearance and chemical composition of soybean seeds in germplasm collections in Japan. II. Correlation among protein, lipid, and carbohydrate percentage. Reference to collection site]. *Nippon Sakumotsu Gakkai Kiji* (*Japanese J. of Crop Science*) 59(4):661-66. Dec. [7 ref. Jap; eng]
• ***Summary:*** The chemical composition of about 4,400 soybean seeds in the germplasm collection of Japan was analyzed by near infrared spectroscopy to obtain various correlations among protein, lipid, and carbohydrate percentages. Protein and lipid had a highly negative correlation (r=-0.594). Carbohydrate and lipid also had a highly negative correlation (r=-.561). Carbohydrate and protein had a weak negative correlation (r=-.117). Correlations were different depending on grain/seed size. Protein-lipid correlation was higher in smaller seeded varieties. Carbohydrate-lipid correlation was higher in medium or large seeded varieties and lower in small seeded ones. Address: Tohoku National Agricultural Experiment Station, Kariwano, Akita 019-21, Japan.

9631. **Product Name:** [Nagatani-En Misogura Instant Miso Soup {Fresh Miso Type} (Spinach, or White Miso with Wakame)].

© Copyright Soyinfo Center 2014

Foreign Name: Nagatani-En Misogura {Nama-miso taipu} (Hôrenso, Shiromiso).
Manufacturer's Name: Nagatani En.
Manufacturer's Address: Nishi-shinbashi 2-36-1, Minato-ku, Tokyo, Japan.
Date of Introduction: 1990.
Ingredients: Spinach: Packet #1: Fresh seasoned miso [chômi miso] (soybeans, rice, salt, alcohol), kombu extract, alcohol. Packet #2. Natural seasoning powder (monosodium glutamate, bonito powder, etc.), dried spinach, dried [frozen] soybean curd, dried wakame seaweed, dried wheat gluten.
Wt/Vol., Packaging, Price: 2.43 oz: Three 69-gram pairs of packets (3 servings) in a large foil pouch. Retails for $2.25 (1/91, California).
How Stored: Shelf stable.
New Product–Documentation: Product with Label purchased at Diablo Foods, Walnut Creek, California. 1991. Jan. 17. 6 by 8.25 inches. Black, brown, red, blue, and white on light blue. Color photo of a wooden bowl of miso soup on front panel. Color illustration of a traditional Japanese treasure house and a nearby house with overhanging wooden eaves. To prepare, place the contents of each of a pair of foil packets in a soup bowl, add 1¼ cup boiling water, mix well, cover with a lid, and allow to stand for 3-4 minutes. Nagatani-En is an old and very famous Japanese company. Their main business has always been making ochazuke mix.

Soyfoods Center product evaluation. Very nice flavor for an instant miso soup; lots of wakame. Excellent package design. But certain ingredients on the Japanese label are not listed on the English label (e.g. bonito flakes).

• ***Summary:*** This book first appeared in 1690 in Japan. Details are given at the original 1690 edition. Address: Japan.

9641. Hammer, K.; Esquivel, M. 1990. East Asian influences in Cuban agriculture. *Plant Genetic Resources Newsletter* (*FAO/IBPGR*) No. 77. p. 9-16. [15 ref. Eng]
• ***Summary:*** "Virtually the entire aboriginal population of Cuba was wiped out in the first years of the Conquest. The introduction of African slaves supplied the alternative labour needed to develop agriculture in Cuba. Thus by 1861 nearly 60% of the Cuban population was either black or mulatto. By then, slave revolts had become increasingly common, jeopardizing the economic stability of Cuban agriculture. From its founding in 1794, the Junta Real de Fomento, Agricultura y Comercio (Royal Board of Development, Agriculture, and Trade) tried to boost the numbers of non-Africans in Cuba, which led to the traffic in Asiatics in 1847 and Yucatecan Indians in 1849.

"After 1842, large numbers of Chinese were sent to the English colonies of Barbados, Jamaica and Trinidad. The Real Junta de Fomento, noting this, sent a representative to China in 1844 to negotiate the introduction of Chinese settlers into Cuba. A contracting agency for coolies destined for Cuba was set up, operating in Macao, Among, Swataw [Swatow], Hong Kong, and Wompoa. The coolies travelled through Manila in the Philippines. On 1 January 1847, the first lot of 1,073 Chinese immigrants docked in the port of Havana. They consisted, *inter alia*, of farmers, artisans and tradespeople. By 1861, there were already over 60,000

© Copyright Soyinfo Center 2014

Chinese from Shanghai and Canton, and it is estimated that between 1853 and 1873 alone, 132,435 Chinese entered Cuba. Basically, these people worked in the agricultural sector. Many tradespeople and artisans remained in Havana, creating a little Chinatown in the Zanja Street neighbourhood, while on the outskirts of Havana, a place known as Cienaga in the Cerro district was settled by farmers who came to grow almost all the vegetables for the capital. A major settlement of Asian vegetable farmers also developed south of Havana, in Batabanó province.

"The Japanese were only a small minority among the Asiatic immigrants to Cuba, concentrated in a few places such as the Isla de la Juventud (formerly Isla de Pinos), where they have played a major role in the development of local fruit and vegetable cultivation. We have no detailed information on their arrival in Cuba, but their presence on the Isla de la Juventud goes back at least three generations, according to our information."

According to Roig (1975), the soybean was introduced to Cuba in 1904 by the EEA (*Estación Experimental Agronómica de Santiago de Las Vegas,* currently INIFAT, the Experimental Agronomical Station) from the USA, but it was possibly already found in the Isla de la Juventud, used by the Japanese to prepare a kind of cheese called 'tofu.' (dau phu in Vietnamese).

9642. Hesseltine, C.W. 1990. UJNR panel on toxic microorganisms. In: Albert E. Pohland, V.R. Dowell, Jr., and J.L. Richard, eds. 1990. Microbial Toxins in Foods and Feeds: Cellular and Molecular Modes of Action. New York: Plenum Press. xvii + 617 p. See p. 1-15. From a Symposium on Cellular and Molecular Mode of Action of Selected Microbial Toxins in Foods and Foods. Held 1988. Illust. 26 cm.
• ***Summary:*** The UJNR (United States–Japan Cooperative Program on Natural Resources) was established in May 1964. There were 7 original panels, one of which was Toxic Microorganisms. The initial emphasis was on botulism, soon followed by aflatoxins. The Panel consisted of 7 Japanese and 7 Americans; they comprised a mix a people who were experts on fungal mycotoxins and bacterial toxins. The Panel conducted many activities including joint panel meetings and study tours, exchange of mutual interest items, publication of 6 books, symposia, development of regulations, and interaction with other societies.

The 1966 study tours in Japan were longer than usual because of the review of 4 projects supported by the USA involving the use of soybeans in foods. These 1966 tours included visits to the following Japanese organizations working with soybeans: (1) Universities: Nagoya Univ. (Mycotoxins and soybean fermentations), Tohoku Univ., Faculty of Agriculture (Miso fermentation), Kyoto Univ. (Fermented soybean foods), and Tokyo Univ. of Education (Soybean cheese). (2) Japanese government laboratories: Noda Institute of Research, Chiba (Shoyu fermentation), Institute for fermentation, Osaka (Culture collection and fermentation in General).

(3) Trade association laboratories (each in Tokyo): Japanese Tofu Assoc., Japanese Shoyu Institute, Central Miso Institute. (4) Companies: Sendai Miso Shoyu Co., Sendai (Miso production), Koji Sanzaemon Roho, Kyoto (Koji starter production), Takeda Chemical Industry, Osaka (Antibiotic & flavor fermentations), Kikkoman Shoyu Co., Chiba (Shoyu production).

Talk with Dr. Walter Wolf of Peoria, Illinois. 2000. Aug. 14. He was on the UJNR Protein Panel, which met for about 10-12 years, on alternating years in Japan and the USA. Thus he went to Japan 5-6 times–the last time being in about 1988. The purpose of the panel was exchange of information about protein. They met with their counterparts at the NFRI (National Food Research Institute, Tsukuba). At a typical meeting there would be formal presentations by members of both teams, followed by a field trip to numerous facilities. Address: NRRC, Peoria, Illinois.

9648. Titsingh, Isaac. 1990. The private correspondence of Isaac Titsingh. Vol. 1 (1785-1811). Introduced and edited by Frank Lequin. Amsterdam, Netherlands: J.C. Giebon. Index. 24 cm. Series: Japonica Neerlandica vol. 4. [3 soy ref. Dut; Eng]
• ***Summary:*** Text chiefly in Dutch, with some correspondence in English. Isaac Titsingh was born on 10 Jan. 1745 in Amsterdam, and died on 2 Feb. 1812 in Paris. He was buried in Père-Lachaise cemetery. The inscription on his gravestone, written in French, states: Here lies Isaac Titsingh, formerly a councillor of the Dutch East India Company, Ambassador to China and to Japan. Died at Paris the 2nd of February 1812, aged 68 years.

This book, dedicated warmly to Prof. C.R. Boxer, begins with a 17-page "General introduction," by the author, in English. It discusses: Titsingh's life and work, the nature and content of his correspondence, the manuscripts, and notes on the text. This introduction shows Titsingh as a truly remarkable man, 50-100 years ahead of his time, and a pioneer at the dawn of understanding between Japan and Europe. Titsingh loved Japan, and that love opened doors to him that were closed to mere merchants.

Brief biography (p. xv-xxii): Titsingh was born in 1745 into an affluent, "well-educated patrician family in Amsterdam which counted a number of well-known surgeons among its members. Isaac Titsingh first qualified as a surgeon in Amsterdam, then obtained a doctorate in law at Leiden. In 1765, at age 20, he set sail for Asia as an *Onderkoopman* (Junior Merchant) with the Dutch East India Company (*Verenigde Oostindische Compagnie,* VOC). In Asia, he first worked as an administrator in Batavia (today's Jakarta, head of VOC's Asian operations), then he spent a total of 3½ years in Japan, divided over three separate stays from Aug. 1779 to Nov. 1784, as *Opperhoofd* or *Kapitan,* Director of the VOC trade there. At this time, Holland was the only Western nation allowed to enter or trade with Japan; the VOC was confined to the tiny man-made island of Deshima in the Bay of Nagasaki on the southern Japanese island of Kyushu–where they could be constantly watched and their actions tightly controlled by Japanese authorities. While in Japan, Titsingh paid two official visits to the Shogun's Court at far-away Edo (today's Tokyo). He also visited the Emperor's Court at Kyoto. From 1775 to 1792 he was Director of VOC's trade in Bengal; he resided at Chinsurah, near Calcutta. "In that period he [learned to speak English] and made many good English friends, who later proved a great asset to him." From 1792 to 1793 he returned to Batavia, this time as *Raad-Extraordinaris* (Councillor Extraordinary) of the Indies. From 1794 to 1795 he served as ambassador to the Imperial Court at Peking; he attended the 60th anniversary of the reign of the Qianlong Emperor. In 1796, Titsingh finally returned to Europe after a brilliant stay of 31½ years in Asia. After a brief stay in London, he spent the last years of his life as a largely unknown recluse in Paris.

"Titsingh had a brilliant career, but he was not a typical careerist. He was one of the top VOC officials in the Orient, but he was not a typical VOC employee. He was deeply interested European-Japanese academic and cultural relations. "Titsingh's position was unique." The Enlightenment (ca. 1650-1750) was now well established in Europe and he helped to foster the interests of a number of Japanese pioneers who were interested in learning more about Holland (*Rangakusha*) and about European culture, and in opening up Japan to the outside world. Titsingh took an equally deep interest in learning more about Japan–but in a systematic and objective way, trying to eliminate the many Western prejudices about Japan. "Titsingh taught a number of Japanese to read and write Dutch, and he himself learned Japanese"–he was a prodigy at learning languages. He helped supply Dutch books in the fields of medicine, science, the arts, etc. to the *Rangakusha* and with some of them he became lifelong friends and correspondents. He developed a large collection of Japanese objects; he was granted the rare permission to take these (and a map of Japan) back to Europe. Charles Boxer described Titsingh as "the most learned of all the Hollanders who visited that country [Japan] during the two centuries and a half in which" the VOC was active there. George Sansom, the great Japanologist, described Titsingh as "a man of all-around accomplishment." For much more about Titsingh, read this General Introduction.

Volume I of book contains 215 letters relating to the period 1785-1811. Of these, three mention soy [sauce]. but only in passing. (1) Letter no. 5 of 24 Nov. 1785 (p. 9) ("... *een provisie van sacky, soya en andere Japansche producted toetezended,...*).

(2) Letter no. 16 of 21 June 1786 (p. 27) (*"295 kruyken Zooija. 100 kruyken Zackij..."*).

(3) Letter no. 55 of 19 June 1789 (p. 124) ("*...en kon gen balij zakij or zooija na boord krijgen"*).

Note: Engelbert Kaempfer (1651-1716) traveled and worked in Japan for two years from Sept. 1690 to Nov. 1692 as chief surgeon to the Dutch East India Co. (VOC). While in Japan, he twice visited Edo and the Shogun Tokugawa Tsunayoshi there. His tact, diplomacy and medical skill overcame the cultural reserve of the Japanese, and enabled him to elicit much valuable information.

9653. Kane, Marion. 1991. The cutting edge. *Toronto Star* (*Ontario, Canada*). Jan. 2. p. D8.
• ***Summary:*** In Japan, people are now enjoying foods made from soybeans bred and grown in Canada.

Plant breeders at Agriculture Canada have developed two soybean varieties for specialized markets in East Asia. Harovinton is a large-seeded variety used to make tofu. Nattosan is a small-seeded variety used to make natto, a popular fermented Japanese soy food.

"Let's take a cue from the Japanese and start finding tasty ways to prepare tofu here on home turf. After all, its the perfect protein alternative to meat."

9654. Hellekson, Diane. 1991. Origami turns seafood dishes into an art form. *St. Paul Pioneer Press* (*Minnesota*). Jan. 4. p. 4C.
• ***Summary:*** This is a review of the Japanese-French restaurant Origami, which opened recently on the edge of the Minneapolis Warehouse district (30 First St. N., Minneapolis). "The most miraculous, yet restrained, Japanese seafood preparation is, of course, sushi and sashimi. Origami offers a pleasant bar in the rear of the restaurant, where dexterous chefs cut, roll and arrange the raw fish, rice and vegetables... If you sit at the sushi bar, be sure to ask for a nibble of edamame, young green soy beans cooked in their shells."

The tempura lunch is satisfying: "Cradle the warm bowl of miso soup in your hands, watch the bits of seaweed and silky miso swirl, then think spiritual thoughts as you sip." Address: Staff writer.

tôfu kôjô shinshutsu o kimeru. Kyoto Tanpaku kôkyû tôfu o seizô [Kyoto Tanpaku plans to open a tofu plant in New York to produce high quality tofu]. Jan. 21. p. 3. [Jap]
• ***Summary:*** Kyoto Tanpaku is the largest tofu maker in Kyoto, Japan. The president is Yasuo Hachijin (whose photo is shown). The company's address is 200 Senryômatsu-cho, Yoko-ôji, Fushimi-ku, Kyoto-shi, Japan. Phone: 075-622-3161. The new company, which has already been founded in New York, is named Global Protein Foods. Located in the town of Valley Cottage on the outskirts of New York City about 1 hour from Manhattan, the company plans to produce delicious high-class tofu to meet the needs of the area. They plan to use a new type of tofu package. The tofu plant will be 300 tsubo (10,692 square feet) in size and will use a Takai fully automatic tofu production line with a capacity of 3 hyo (1 hyo = a 60 kg sack, so 180 kg or 396 lb) of dry soybeans per hour. The new company plans to produce nigari tofu, packaged lactone silken tofu (*jûten-dofu*), deep-fried tofu cutlets, deep-fried tofu pouches, and American-style second generation tofu products.

Note: This is the earliest document seen (April 2001) concerning Global Protein Foods in Valley Cottage, New York. As of this date the company is located at 707E Executive Blvd., Valley Cottage, NY 10989. Phone: 914-268-8100. Contact: Anson Wong.

9656. Yamashita, Yoshimasa. 1991. History and future of Kyoto Food Corp. USA (Interview). *SoyaScan Notes.* Jan. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** His company presently has no connection with Kyoto Tanpaku K.K. in Japan. But they learned how to make tofu from Kyoto Tanpaku. Kyoto Food Corp. has the very latest state-of-the art equipment. The parent company of Kyoto Food Corp. USA is a Kyoto supermarket named Kyoto Koseikai; the latter is the major stockholder in Kyoto Food Corp. USA. Kyoto Koseikai's only relationship with Kyoto Tanpaku in Japan is that they buy their tofu to sell in the supermarket.

The reason his company located in the midwest is because Terre Haute and Tajimi city in Gifu prefecture have been sister cities for 25 years. The connection was established when Mr. William Roach contacted his friend Mr. Juichi Iida in Tajimi. Mr. Iida contacted his friend Mr. Yamashita, who worked at the time for Kyoto Koseikai. Kyoto Koseikai decided to join in founding the company, as a major stockholder. Kyoto Food Corp. USA has no connection with any Japanese trading company such as Marubeni or Mitsubishi. They know of the tofu project at Purdue University and are cooperating with it, but have no financial involvement. He feels that they can sell tofu in the Midwest. He feels that the tofu companies who previously tried to sell tofu in the Midwest and failed were too early and too small. The timing is now right. The water he uses is very good and the soybeans are a premium grade, high in protein. He presently has no plans to private label tofu, although there have been four requests for private label brands. The company now has two products: regular tofu, and tofu with a sauce packet. Their next product will be agé. After that they plan to make fresh Japanese noodles (udon) and second generation tofu products (such as meatloaf). Address: President, Kyoto Food Corp. USA, 1050 W. 35th Drive, Terre Haute, Indiana 47802. Phone: 812-235-9505.

9657. Agriculture Canada, Oilseeds Division, Grain Marketing Bureau, Grains and Oilseeds Branch, 1991. Oilseed sector profile. Ottawa, Ontario, Canada. 18 + 1 + 8 p. Jan. 28 cm. Spiral bound. [3 ref]
• ***Summary:*** Contents: Foreword. 1. Introduction. 2. The seed production subsector: Canola, soybeans, flaxseed, sunflower, mustard, composition, subsector performance. 3. The processing subsector: Background, processes, industry structure, production, subsector performance. 4. The marketing subsector: Oilseeds marketing, hedging, processed oilseed products marketing. 5. The marketing environment: Domestic, international markets.

Appendix A: Role of the federal government in the Canadian oilseed industry. Appendix B. Oilseed industry directory.

Table 7 shows that Canada can be divided into three regions: The Maritimes, Central Canada (Ontario, Quebec), and Western Canada.

Table 8 shows soybean exports by major markets. Canada exports more soybeans to the USA by far than to any other country. No. 2 is Japan.

A very important association is the Ontario Oilseed Industry Association, 1185 Eglinton Ave. E, Suite 101, Don Mills, Ontario M3C 3C6. Phone: (416) 429-1073. Address: 930 Carling Ave., Ottawa, ONT K1A 0C5, Canada. Phone: (613) 995-8324.

9658. Fowler Brothers. 1991. Catalog: January 1991. P.O. Box 2324, San Rafael, CA 94912. 79 p. 28 cm.
• ***Summary:*** The company is a "distributor of natural foods." The following makers, distributors, and brands of soyfood products are listed: I. Bulk Products: Miso (American Miso, 8 products), Soy foods (Turtle Island tempeh and Soy Deli tofu burger). Soy Sauce & tamari (San-J domestic shoyu and tamari, Westbrae Johsen shoyu), Tofu (Quong Hop, 6 products).

II. Packaged products: Ah Soy (Westbrae, 7 soy drinks), Eden Foods (Edensoy, 6 soy drinks), Pacific Soyfoods (6 types of soysage), Pacific Tempeh (4 products), Quong Hop (11 soymilk and 4 tofu products), San-J (tamari crackers, 14 soy sauce & tamari products), Soy Deli (Quong Hop, 5 soy foods, 8 vacuum pack tofu), Sweet Earth (3 vegeburgers), Turtle Island (10 tempeh products), Vitasoy (7 soy drinks), Westbrae (2 instant miso soups, 14 soy drinks, 14 types of soy sauce and tamari). Address: San Rafael, California.

9662. **Product Name:** Tofu (soybean curd) special variety pack. Contains one package each of Mori-Nu Silken Tofu, Soft, Firm, Extra Firm. Seven day menu plan inside.
Manufacturer's Name: Morinaga Nutritional Foods, Inc.
Manufacturer's Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638.
Date of Introduction: 1991 January.
Ingredients: Water, soybeans, isolated soy protein, gluconolactone, calcium chloride.
Wt/Vol., Packaging, Price: 31.25 oz (884 gm).
How Stored: Refrigerate after opening.
New Product–Documentation: A sampler of three different types of Mori-Nu Tofu in one pack. On the glossy color paperboard cover of the outer pack the word "Tofu" is written in bold white capital letters, each against a black square. Behind the letters are three color photos of Mori-Nu tofu in ready to eat dishes. Net weight 31.25 oz (884 gm).

The dated "Mori-Nu Seven Day Healthy Eating Plan" is in a glossy color 12-page brochure (each page 18.5 x 9.5 cm) featuring 9 delicious Mori-Nu Tofu recipes. The daily meal plan is low in fat, high in fiber.

9663. Nichii Company of America, Inc. Mycal Group. 1991. Are you tired of soaking overnight? (Ad). *Natural Foods Merchandiser.* Jan. p. 64.
• ***Summary:*** This is an ad for "revolutionary new MicroSoy flakes," an alternative to whole soybeans in making tofu or soymilk. They eliminate all washing and rinsing, all soaking water and time, waste water disposal, grinding, and save considerable floor space. You can save up to 2,400 lb of water per ton of soybeans. Call or fax for a free sample.

9664. *Toyo Shinpo* (*Soyfoods News*). 1991. Origotô iri no tôfu Zenshokutan ga juyô kakudai e [Japan Vegetable Protein Assoc. tries to expand the demand for tofu that contains oligosaccharides]. Feb. 1. p. 4. [Jap]
• ***Summary:*** Mr. Sekiguchi Riôji is head of the Association (Zenkoku Shokubutsu Tanpaku Kyôdô Kumiai, Sendagi 2-48-8, Bunkyô-ku, Tokyo. Phone: 03-3828-1040) which got a patent for their tofu that contains oligosaccharides. Oligosaccharides have vegetable fiber and encourage the growth of Bifidus bacteria, which help the intestines. As of Oct. 1989 one chain of restaurants sells tofu pudding that contains oligosaccharides for ¥250. They sell about 3,000 puddings a day total in their 100 shops. Tokyu department stores have also started to sell tofu with oligosaccharides. Address: Japan.

9665. *Toyo Shinpo* (*Soyfoods News*). 1991. Kaihatsu susumu kinôsei shokuhin. Kenko iji ni kônô was aru ka? Yûbô na kinôsei inshi [Developments in foods that aid vital functions. Do they offer benefits in maintaining health? Promising factors]. Feb. 1. p. 4. [Jap]
• ***Summary:*** The functions of oligosaccharides: There are various types of oligosaccharides. They serve as a nutrient that promotes the growth of Bifidus bacteria, which make lactic acid and acetic acid, which in turn kill bad bacteria in the intestines. Oligosaccharides help relieve constipation and diarrhea, they activate the intestines, and reduce the risk of and may help cure cancer of the large intestine. There are various foods which contain oligosaccharides, including drinks and biscuits. Calpis Food Co. has developed a technique for extracting large amounts of oligosaccharides from soybeans, and in Feb. 1990 they started to sell the resulting products, Bifidus Activation Drinks Oligo-Cc (*Bifizu Kassei Inryô Origo Cc;* ¥100).

Meiji Seika started to produce oligosaccharides even earlier. They make a product named Furakuto Oligosaccharides, derived from cane sugar, that as used as a sweetener, as in candies or drinks. Address: Japan.

9667. Tetra Pak Inc. 1991. Use of UHT/Aseptic white dairy milk in Europe and other countries, 1989. 889 Bridgeport Ave., Shelton, CT 06489. 2 p. Feb. 5. Unpublished manuscript.
• ***Summary:*** The following statistics are from Tetra Pak Statistics in Lausanne, Switzerland. In western Europe, 27,896 million liters of milk are consumed in total. Of this, 24,108 million liters are consumed in the eleven EEC countries. Countries not in the EEC are Austria, Cyprus, Finland, Iceland, Norway, Sweden, Switzerland, and Turkey. The four countries with the largest total milk consumption are the UK (6,687 million liters), France (3,735), Spain (3,624), and Germany (3,470). Of the all the milk consumed in Europe, 9,660 million liters (35% of the total) is packaged in UHT/Aseptic cartons. Of the all the milk consumed in the EEC, 9,376 million liters (39% of the EEC total) is packaged in UHT/Aseptic cartons. The four countries in which UHT/Aseptic packaging is most widely used are France (3,000 million liters; 80% of all milk in France), Spain (2,125; 59%), Germany (1,578; 45%), and Italy (1,497; 52%).

Outside of Europe, the world's biggest dairy milk consumers are: USA (24,429 million liters; 0.2% UHT/Aseptic), India (5,001; 0.4%), Japan (4,803; 4%), Mexico (2,895; 8%), and Canada (2,504; 0%). Countries with the highest percentage of UHT packaging are Yemen (39 million liters of milk consumed; 95% in UHT), Pakistan (97; 92%), Saudi Arabia (158; 82%), Thailand (34; 70%), Singapore (28; 64%), and Chile (151; 61%). Address: Shelton, Connecticut.

9668. *Toyo Shinpo* (*Soyfoods News*). 1991. Beikoku no ôte ryôhanten ni genchi seizô no tôfu nônyû: Kyôto Kôseikai no genchi kogaisha [Supplying American-made tofu to big supermarket chain: Kyôto Koseikai's subsidiary is on the scene]. Feb. 21. p. 13. [Jap]
• ***Summary:*** Kyoto Koseikai is a company that runs supermarkets in and around Kyoto, Japan. The president is Mr. Kumaji Shimobo. It is located at Nishino Ume-honcho 117-3, Yamashina-ku, Kyoto-shi, Japan. Phone: 075-581-8111. This company established Kyoto Foods Corp. USA, whose president is Mr. Yoshimasa Yamashita, in Terre Haute, Indiana. Kyoto Foods, which has begun production of tofu, has signed a contract with Kroger, a big supermarket chain, which has 117 stores in the Midwest. Kroger has decided to sell Kyoto Foods' tofu in all of their 117 stores. Kyoto Foods' production capacity is presently 10,000 cakes/day of tofu. Mr. Yasushi Yamamoto, the managing director, wants to decide the definite amount of supply and production line expansion.

Kyoto Foods was looking for a large market in which to sell their tofu and Kroger was looking for a company that could provide stable tofu production and supply. The needs of both have been well met. Address: Japan.

9669. *Toyo Shinpo* (*Soyfoods News*). 1991. Beikoku de daizu origo-to. Karupisu, Mitsubishi Shôji to kyôdô [Soybean oligosaccharides in the USA. Calpis and Mitsubishi joint venture with Central Soya]. Feb. 21. p. 13. [Jap]
• ***Summary:*** It has been announced that Calpis Food Co. (Shokuhin Kogyo; maker of a very popular Japanese non-alcoholic beverage) and Mitsubishi Shoji are going to establish a jointly owned company with Central Soya (Indiana) to produce and sell soybean oligosaccharides in 3 of Central Soya's plants in America. Oligosaccharides, which have the ability to condition the intestines, have been produced by several food companies in Japan. But Calpis got safety approval from the U.S. Food and Drug Administration as the first company in Japan. They are planning to sell the product aggressively overseas, to Unilever in Europe, and also in Korea. They are trying to capture the growing awareness of health. They are hoping to reach 5,000 million yen [about $39.3 million] sales during the first three years, selling mainly to confectionery manufacturers as a sweetener. They hope to begin shipping to Unilever this year for use in boosting the nutrition of infant formulas.

In Korea, they plan to supply the largest tofu maker and food manufacturer, Purumuwon in Seoul, with a powdered soy oligosaccharide sweetener, private labeled.

Oligosaccharides promote the growth of Bifidus (Bifidobacterium; beneficial bacteria) in the intestinal tract. In Japan, the market for products that include oligosaccharides is estimated at 150,000 million yen ($1,195 million), growing at about 20% a year due to consumer health awareness. But this concept and the resulting products are not yet popular overseas. There are several types of oligosaccharides. The one Calpis developed from soybeans is widely available in these beans and is getting the most attention. Their product has about 20% of the Japanese market. Calpis established a company named Soya Oligo Japan (president, Mr. Kôkichi Sato) with Mitsubishi in 1989 and has been preparing for overseas expansion.

Toyo Shinpo on 21 March 1991, p. 3. Address: Japan.

9670. Miyazawa, Mitsuo. 1991. [Re: Early shipments of miso and shoyu from Sendai Miso Shoyu Co. Ltd. to Mitoku]. Letter to Chris Dawson of Mitoku, Feb. 22. Based on a request from William Shurtleff at Soyfoods Center. 1 p. Handwritten, with signature. [Jap]

• ***Summary:*** "In Oct. 1970 Jôsen Shôyu was shipped in 18 liter cans, and red (rice) miso was shipped in 20 kg cans.

"In March 1976 brown rice miso was shipped in 20 kg cans. According to our research, these were the earliest dates that each of these products was shipped."

Chris Dawson adds: "I understand that Johsen was the first with brown rice miso, so this must be the first shipment ever of brown rice miso... I am trying to pull together information about the first shipments of miso and shoyu by Mitoku. It is a little difficult since we do not have the records on hand and some of our early customers are no longer in operation."

Note: Chris Dawson was still working for Mitoku in Tokyo on 27 Dec. 1991. Address: Sendai Miso Shoyu Co. Ltd., Furujiro 1-5-1, Sendai 982, Miyagi prefecture, Japan.

9671. Lumpkin, Tom. 1991. Work with edamamé (green vegetable soybeans in the pods) in the state of Washington (Interview). *SoyaScan Notes.* Feb. 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In about 1986 Tom founded the East Asian Crop Development Program at Washington State University (WSU), in Pullman, Washington. He is now full-time head of a team of 12 people in this program, all of whom except himself are working part-time, developing East Asian plants to be grown in Washington state. It is an interdisciplinary team with people from food science and marketing as well as agronomists and himself who is interested (among other things) in documenting the history of various East Asian crops. The program is designed to benefit Washington state farmers. One of these plants is edamamé, or vegetable-type green vegetable soybeans.

Tom has collected about 400 varieties of edamamé as part of his work; the germplasm is maintained at Pullman. He has lived in East Asia and speaks some Japanese and Chinese. His wife is Japanese. He obtained a National Science Foundation grant to study at Kyoto University in Japan, where for 18 months he did extensive research on edamamé at about the same time that his student, John Konovsky, was studying the same crop at Iwate University. Of the many Japanese-language citations in their bibliography on edamamé (most previously uncited in English), John "discovered" about two-thirds and Tom about one-third. Tom ran his program at WSU from Japan and returned to Washington every 3 months to plant crops, check details, etc. Tom is collecting documents on edamamé, and has 60 from China. He has translated the titles of all of them and has translated ten entire documents. In addition he has about 150 Japanese journal articles on edamamé from 1920 to the present; many of the more recent ones have an English abstract. Some translators work with him. These documents are part of a growing library on East Asian crops, housed within Tom's program. He is in the process of finishing a book on edamamé in cooperation with Dr. Sundar Shanmugasundaram and another scientist at AVRDC, which plans to publish it. The book should be ready in about 6 months. It will probably be titled *Edamamé: The vegetable soybean*, and will contain a very lengthy and original bibliography–one of the hallmarks of Tom's work. Tom is also working on a book on the azuki (adzuki) bean, which will be published by CAB in the UK; soybeans are mentioned throughout this book. He is also very interested in wasabi. Tom prefers the term "edamamé" but AVRDC likes "vegetable soybeans." This summer a woman named Hu Jia, who is a librarian at the Chinese Academy of Agricultural Sciences in Beijing, is coming to work on his project for about 1 year. Tom has been very close to her family for 12 years. She collects literature in China for him on all of the basic crops he is working on. He has known her father well for a long time. During the Cultural Revolution, she was sent out to be a barefoot doctor for 10 years. She is age 40, has a degree in library science, and speaks good English, in part because her father, a native Chinese, earned a PhD from a university in Minnesota, and is now a chairman emeritus in the Chinese in the Chinese Academy of Agricultural Sciences. Her father will be sending documents on Chinese crops to Tom's program. She will be in the USA for at least a year, in part to learn more about computers, and in part to help on Tom's project.

Edamamé are now being grown in Washington state. In 1990 two farmers grew 20 acres and in 1991 3-4 farmers are expected to grow about 100 acres. D&K Foods in Walla Walla, Washington, is shelling, freezing and packing the beans. Tom has never met a person who did not like them. The Japanese think they are the best they have ever tasted, probably because they are frozen so quickly after harvest. The seeds are a bit smaller than their Japanese counterparts. Dunn International in Waterloo, Iowa, is also growing edamamé.

One of Tom's graduate students, named John Konovsky, is doing his thesis on edamamé, focusing and breeding and agronomy. They are working with D&K in Walla Walla, Washington on developing mechanical harvesting for edamamé.

Tom presented a paper at the INTSOY soybean conference in China last summer. The focus of the conference was utilization. It was excellent. Address: Head, East Asian Crop Development Program, Dep. of Crops and Soil Sciences, Washington State Univ., Pullman, WA 99164-6420. Phone: 509-335-2726.

9672. Eden Foods, Inc. 1991. Eden Foods product overview (Leaflet). Clinton, Michigan. 6 panels each side. Each panel: 23 x 10 cm. Feb.

• ***Summary:*** Two panels of this color leaflet contain a brief history of Eden Foods, plus a chronology of key events in the history of Eden Foods: 1967–The first checking account was opened for Eden Foods, a source of macrobiotic and organic foods in Ann Arbor, Michigan. 1968–Eden Foods, Incorporated became a registered business, with food service, retailing and food processing operations. 1970–Eden Organic Certification Standards were implemented. Eden products were distributed in Michigan and Ohio. 1972–Trade relationship began with Muso Company, Ltd. of Osaka, Japan. 1979–Fire at warehouse reduced records, equipment and inventory to rubble. Two weeks later Eden Foods reopened. 1982–Schmidt Noodle Company, maker of Eden organic pasta since 1976, was acquired by Eden Foods. 1983–Edensoy soy beverage introduced; historic new item in natural foods market. 1985–San Francisco, California sales office and warehouse opened to service the West Coast. 1986–American Soy Products opened to produce Edensoy in Michigan; first aseptic soy beverage plant in the United States. 1988–Eden Foods joined OCIA, Organic Crop Improvement Association, for independent certification of crops. 1989–Eden and OCIA established standards for food processing as well as growing crops.

Six panels inside the leaflet describe the company's main product lines and give color photos of leading products from each line: Edensoy soy beverage. Organic durum pasta. Organic tomatoes. Organic grain sweetener (100% barley malt). Oils & vinegars. Beans & grains. Fruit products. Seasonings (Sesame Shake = gomashio). Traditional Japanese pasta. Traditional Japanese miso. Japanese soy sauces. Japanese sea vegetables. Japanese oils & vinegars. Japanese chips & crackers. Japanese pickles. Japanese concentrated foods (plum, garlic, kombu). Japanese teas. Japanese specialty foods (macrobiotic).

The company's trademark is now "Making a tradition of good health." Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

9673. **Product Name:** [Natto].
Foreign Name: Natto.
Manufacturer's Name: Food for Freedom.
Manufacturer's Address: Nylense [Nijlense] Steenweg 72, B-2270 Herenthout, Belgium. Phone: 014 / 51 7237.
Date of Introduction: 1991 February.
Ingredients: Organically grown soybeans, water, natto starter.
Wt/Vol., Packaging, Price: 150 gm.
How Stored: Refrigerated.
New Product–Documentation: Letter, label, and leaflet sent by Lucio de Berti, owner of Food For Freedom. 1992. Jan. 4. This product, called simply "Natto," was introduced in Feb. 1991. The company now makes about 8-9 kg/week of natto. "During a lecture at the Kushi Institute level II in Florence, Italy, I got interested in natto. I liked the strange state, and I started to produce it on a very small scale for my shop in Como, Italy. I grew to appreciate its qualities more and more. When we started our company Food for Freedom in Belgium, we decided to include natto in our products, to complete the line of our soybean products, and (since it was largely unknown) to help people get in contact with it. Our company is meant to be mainly a fresh tempeh producer, since we believe that tempeh is the best way to use soyabeans for mankind. Our second goal is to help spread the use of soya products integrated into a more philosophical lifestyle, based on macrobiotics."

Label. 3 by 4 inches. Black and pink on white. In Dutch and French. "Serve cold with soy sauce and green onions finely diced or daikon radish, or in soups. Peu misoté ou à la friture aux legumes."

Leaflet (in French). "Fresh natto (Le natto frais)." Contents: List of the benefits of natto. What is natto? The importance of eating natto regularly. How natto is made. How to use natto. For more information. Seven natto recipes.

9674. Johnson, Lawrence A. 1991. New horizons in utilizing Iowa's crops: New crops, products and uses. Paper presented at Seed Science Center Workshop. 28 p. Held 26 Feb. 1991 at Scheman Center, Iowa State Univ.

• ***Summary:*** "In this narration to a slide show containing 57 slides the author discusses the increasing price of petroleum relative to agricultural products (such as corn), the Midwest Agribusiness Trade Research and Information Center (MATRIC), the Utilization Center for Agricultural Products (UCAP; previously known as the National Center for Food and Industrial Agricultural Product Development).

Prof. Johnson represents the Center for Crops Utilization Research (CCUR), whose mission is "to expand utilization of crops grown in Iowa and the Midwest by developing new products, processes, and markets.

"The goals of the center are focused on three major areas. We develop technologies for new products and processes to improve competitiveness of American agriculture. We are striving to replace petrochemical-derived products with those derived from renewable agricultural resources. We are channeling the application of biotechnology into utilization of agricultural products.

"We are concerned about the national trend to focus biotechnology primarily on targets that will increase production and that too little biotechnology is being directed towards utilization targets. The danger is that increased production could further exacerbate our surplus situation unless we also enhance end-use value and develop new ways to use crop materials." The next slides show examples for over 40 projects administered through the center, including a number related to soybeans. Also discusses grain amaranth,

9679. Dawson, Chris. 1991. Re: Chronology of early shipments of shoyu and miso from Mitoku to Europe and the USA. Letter (fax) to William Shurtleff at Soyfoods Center, March 8. 1 p.
• ***Summary:*** 1969–First shipment of organic shoyu (Sakae Shoyu brand) from Fukaya Shoten in Shizuoka prefecture, Japan, to Mr. Sakaguchi of Le Bol en Bois in Paris, in 16 liter tins. This shoyu was made with MOA* ingredients.

1970, Oct.–First shipment of Jôhsen Shoyu and red rice miso from Sendai Miso Shoyu Co. Ltd. in Sendai, Miyagi prefecture.

1971–First shipment of Hatcho miso from Hatcho Miso Ltd. in Aichi prefecture to USA.

1976, March–First shipment of brown rice miso from Sendai Miso Shoyu Co. Ltd. in Sendai, Miyagi prefecture. In 20 kg tins.

1980, May–First shipment of Onozaki rice miso from Onozaki Koji-ten in Tochigi prefecture to Oak Feed in Miami, Florida. 84 cartons and 4 kegs.

1980–First shipment of buckwheat miso from Kamegen Jyozo in Nagano prefecture, to Europe. 100 packs of 500 gm each.

1984, Sept.–First shipment of organic tamari from Mansan Shoten in Aichi prefecture to Blake Rankin of Granum in Seattle, Washington. Four x 18 liters.

1984–First shipment of organic soybean miso from Mansan Shoten in Aichi prefecture to Jon Judson of Soy Source, Christchurch, New Zealand.

1987–First shipment of organic young (*waka*) Hatcho miso from Hatcho Miso Ltd. in Aichi prefecture to USA.

1989–First shipment of organic Hatcho miso from Hatcho Miso Ltd. in Aichi prefecture.

* Note: MOA refers to Mokichi Okada International Association, which is a commercial association related to the Japanese religion *Sekai Kyusei Kyo* which means "helping the world religion." Its basic tenet is to "Make heaven on earth," to bring peace on earth and health to all people. There are approximately 700,000 members in Japan. Mokichi Okada lived 1882-1955. The commercial company was formed in 1920 and is now known as MOA Trading Company. Its purpose is to promote natural and organic farming and provide natural products for people. Address: International Sales Manager, Mitoku Co. Ltd., C.P.O. Box 780, Tokyo 100, Japan. Phone: 3-3201-6701.

9680. Barringer, Felicity. 1991. Census shows profound change in racial makeup of the nation: Shift toward minorities since 1980 is the strongest seen this century. *New York Times.* March 11. p. A1, A12.
• ***Summary:*** "This is the dawning of the first universal nation." Of the 249.6 million residents in America, 80.3% are white, 12.1% black, 9% are Hispanic, 2.9% Asian and Pacific Islanders, American Indians are 0.8%. The number of Asians increased 107.8% during the 1980s. There are now 7.3 million Asian-Americans. States with the highest

© Copyright Soyinfo Center 2014

concentrations of Asians or Pacific Islanders are: Hawaii (685,236, up 17.5% since 1980, 61.8% of the state's population), California (2,845,659, up 127.0% since 1980, 9.6% of the state's population), Washington (210,958, up 105.7% since 1980, 4.3% of the state's population), New York (693,760, up 123.4% since 1980, 3.9% of the state's population), Alaska (19,728, up 144.9% since 1980, 3.6% of the state's population).

"The change in California, the nation's fastest-growing state, was most striking. In 1980, two-thirds of Californians were whites from European backgrounds. In 1990, the figure was 57 percent, meaning that nearly 13 million of the 29.8 million Californians are from minority backgrounds. California's population includes about 35 percent of the nation's total Hispanic population and 39 percent of the Asians in the United States."

• ***Summary:*** Yoshiko Uchida is a famous and prolific Japanese-American woman author who has written extensively about the lives of Japanese Americans. Her portrait photo appears on a color poster celebrating America's most influential women during women's week.

9682. *Toyo Shinpo* (*Soyfoods News*). 1991. Beikoku de gaishoku tatenka. Genchi no tôfu kôjô o kadô. Nihon-shoku resutoran kaisetsu [Restaurant chain in the USA operating tofu plants nearby. Japanese food restaurant opens]. March 21. p. 2. [Jap]
• ***Summary:*** Kyoto Koseikai has decided to start a chain of Japanese restaurants whose menu is based on American-made tofu and beef. In Japan, regulations governing supermarkets have changed, and competition is becoming more severe. Therefore they have started to move into the USA. The company's first operation, a tofu manufacturing plant, is in Terre Haute, Indiana. Now they have purchased a local restaurant for about 40 million yen [$314,000]. They are calling it Gilligan's Island (*Girigansu Airando*). It has 306 seats. Their goal is 150 million yen [$1.18 million] sales per year. The business is run by Kyoto Foods Corp. whose president is Mr. Yoshimasa Yamashita. Kyoto Foods has very strong connections with local people in the financial community. Address: Japan.

9683. Tsukamoto, Joe. 1991. Soybeans in the Yukon Territory and in Manitoba, Canada (Interview). *SoyaScan Notes.* March 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mr. Tsukamoto was the last director of the Whitehorse Experimental Farm (also called the Agricultural Research Station at Haines Junction, and Mile 10-19 Research Station (on the Alaska Highway); previously called Whitehorse Experimental Substation). This organization no longer exists. He was there for about 13 years, then he left for Manitoba when the Farm was closed by the government in about 1967. In about 1983 the Yukon Territorial Government government had just declared agriculture an industry, and they wanted to become self sufficient in perishable, goods, livestock, etc. So they asked him if he would come back from Manitoba to take charge of agricultural work. Since he had other obligations at the time, he recommended Dick Filteau (from Texas), who had just retired and who had extensive experience in this field. Filteau was hired by the Yukon Territorial Government as an advisor on a contract basis; he arrived there in 1983. Using daylength-insensitive soybean varieties provided by Joe, Filteau conducted soybean variety trials at 4-6 locations in the Yukon Territory for 2-3 years to see if they could be used as a protein supplement in livestock feeds. A summary of the results was tabulated and is probably available from the Director, Department of Agriculture, Yukon Territorial Government, in Whitehorse. Some of the plants grew well, especially in areas like Dawson City away from the ice sheets; near the ice sheets frost was the major problem. He thinks that soybeans are not presently being grown now in the Yukon Territory.

Joe doubts that soybeans have ever been tested by a government organization in the Northwest Territories; agriculture may not be declared an industry there.

Concerning soybeans in Manitoba, he was director of the soybean program in that province. The first daylength-sensitive varieties (Altona, and Portage) were tested in Manitoba in about 1961. These were developed by the pioneer, Dr. Baldur Stefansson, who also started the canola program and became world renowned in the latter field. The first daylength-insensitive varieties, Maple Presto and Maple Ridge, were also developed under this program, and introduced in about 1982 and 1985 respectively. They originated from Finnish varieties [sic, actually Swedish varieties from Dr. Sven Holmberg, especially Fiskeby V, according to Dr. Harvey Voldeng], probably developed by Dr. Harvey Voldeng at Ottawa. He is "the" federal soybean breeder in Canada.

The difference between daylength-sensitive and insensitive is that if you plant the insensitive one early in the spring, it will flower early, whereas the insensitive one, no matter when you plant it, will flower at a certain time of year (determined by the balance of light and dark hours).

In the early 1980s a peak of roughly 16,000 acres of soybeans were grown in south-central Manitoba. The government promoted the crop, then canola was given a premium price and soybean acreage began to decline. Today about 1,000 acres of daylength-insensitive soybean varieties are still grown in Manitoba, mostly for seed that is sold to North Dakota and Minnesota. The seed of these daylength-insensitive varieties is superior to the Maturity Group 0 or I

© Copyright Soyinfo Center 2014

varieties grown in the United States.

Joe was formerly an agronomist with the Manitoba Department of Agriculture, Brandon, Manitoba. His mandate was to investigate alternative crops. He retired about 1 month ago. Prior to that he worked for many years to develop about 6 lines of small-seeded natto varieties for export to Japan. He worked with a Japanese merchant and the Japan Natto Association. They are now being tested in Japan for commercial acceptance. Address: 32 19th St., Brandon, MAN, R7B 1K2, Canada. Phone: 204-727-5243.

9684. CSP Foods Ltd.; Central Soya of Canada Ltd. 1991. CSP Foods Ltd. and Central Soya of Canada Ltd. have signed a letter of intent to purchase the edible oils business of Canada Packers Inc. (News release). Canada. 7 p. March 27.

• ***Summary:*** "The purchase includes edible oil refineries in Montreal, Toronto and Wainwright, Alberta, and an oilseed crushing business at Fort Saskatchewan, Alberta, and a seed gathering station at Humboldt, Saskatchewan. A 50% ownership in Prairie Margarine Inc. of Edmonton is also part of the deal... The edible oil business of Canada Packers employs 400 people and generated consolidated sales of approximately $250-million in the fiscal year ended March 31, 1990.

"CSP Foods Ltd. is jointly owned by Saskatchewan Wheat Pool and Manitoba Pool Elevators and is the major processor of canola and sunflower seed in western Canada. It operates crushing and refining facilities at Altona, Manitoba and Nipawin, Saskatchewan. CSP Foods has a crush plant at Harrowby, Manitoba, a refinery at Dundas, Ontario and a 50% ownership in Prairie Margarine Inc. of Edmonton, Alberta.

"CSP Foods is a leading marketer of canola oil and meal products into the North American marketplace. CSP Foods employs 290 people and generated consolidated sales of approximately $200 million in the fiscal year ended March 31, 1991.

"Central Soya of Canada Limited operates a soya/canola crush plant at Hamilton, Ontario and is a subsidiary of Central Soya Company Inc."

"This acquisition will combine three Canadian companies into one. On a North American basis, the new company is estimated to have three percent of the Edible Oils market. This compares to US market shares for ADM, Cargill and Bunge of 33, 20 and 12 percent, respectively...

"Canola is Canada's major oilseed crop, accounting for 65-70 percent of Canadian oilseed production. It is second only to wheat in terms of gross farm revenue, averaging $850-900 million per year. Japan is the predominant export market for canola seed, taking up to 90 percent of total exports and up to 60 percent of canola production. The balance of the crop is sold to the domestic crushing sector, most of which is located in Western Canada."

"Central Soya of Canada Ltd. operates a soy/canola crush plant at Hamilton, Ontario with a soya crush of 365,000 tonnes a year (1,270 tonnes a day) and a canola crush of 227,000 tonnes a year (700 tonnes a day). The crushing canola and soya can take place simultaneously."

Also gives details on: The agreement in principle. Canada Packers Ltd. Assets. CSP Foods Ltd. current operations. Central Soya of Canada Ltd. current operations. New company structure (CSP Foods and Central Soya will each own 50% of the new company and both will provide three Board members or partners to the new company). Rationale for the purchase and merger. The impact on the market place. The impact on producers. Chart of assets of the 3 companies. One map shows the new company's oilseed refineries in Canada, and another map shows its oilseed crushing plants.

9685. *INFORM* (*AOCS*). 1991. Soyfood processing plant to begin operations. 2(3):180. March.

• ***Summary:*** Nichii Co. of America plans to officially open a $7 million soybean processing plant in Jefferson, Iowa, in April 1991. The automated plant is designed to produce 6 tons of soy flakes per hour.

9686. Kudou, Shigemitsu; Shimoyamada, M.; Okubo, K. 1991. A new isoflavone glycoside in soybean seeds (*Glycine max* Merrill), Glycitein 7-O-β -D-(6"-O-acetyl) -glucopyranoside. *Agricultural and Biological Chemistry* 55(3):859-60. March. [6 ref]

• ***Summary:*** Soybeans are known to contain the five isoflavone glycocides (genistin, daidzin, glycitein 7-O-Beta-D-glucoside, 6"-O-acetylgenistin, and 6"-O-acetyldaidzin) and their corresponding aglycones.

Table 1 shows the isoflavone content of nine isoflavone compounds in the hypocotyl, cotyledon and seed coat of soybean variety Suzuyutaka (cultivated in Akita prefecture, Japan in 1988). Address: 1,3-4. Kanesa Miso Co., Ltd., 202 Hamada, Tamagawa, Aomori 303; 2&5. Faculty of Agriculture, Tohoku Univ., 1-1- Tsutsumitori Amamiya-machi, Aoba-ku, Sendai 981. All: Japan.

9687. *Toyo Shinpo* (*Soyfoods News*). 1991. Tôfu Dengaku [Tofu Dengaku: Illustration of a lady in the early 1800s in Japan preparing Dengaku over a grill]. March. 21. p. 4. [1 ref. Jap]

• ***Summary:*** This illustration is from the book titled *Sôsôshi* (1822). It is found in the section titled Shokoku Dôchû Kinwaraji, which is illustrated by Mimaru KITAO. The author of the book is not given.

9688. *Toyo Shinpo* (*Soyfoods News*). 1991. Tataki nattô, yakumi-tsuki. Ichi ninmae 8 mon nari [Pounded natto, with seasonings. One serving costs 8 mon: Ancient natto history]. April 11. p. 4. [2 ref. Jap]

© Copyright Soyinfo Center 2014

• ***Summary:*** Two old illustrations of natto sellers are reproduced. One, by Shigemasa KITAO, appeared originally in the book titled *Rakugo Shôfurin* (A Treasury of Witty Stories) published in about 1830-1844. The name of the author is not given. The other, by Morisada Kitagawa, appeared originally in the book titled *Morisada Manko* (Mr. Morisada's Book of Comical Illustrations Without Particular Thoughts), published in about 1848-1854.

• ***Summary:*** This full-page article contains ten photos, one of them apparently quite old, showing tofu being made in the traditional way (using a hand-turned stone mill) in Okinawa. An inset photo shows the cover of a cookbook titled "Okinawa Tofu Cookery–80 selected recipes" (*Okinawa Tôfu Ryôri–80 sen*) by Masa Kyan, published by Naha Shuppansha in Okinawa.

9690. *Toyo Shinpo* (*Soyfoods News*). 1991. Kawamuki daizu fureeku o tôfu seizô ni. Gyôsha kara mo "oishii" to kôhyôka. Nichii no shyoppu seisaku de Beikoku de seisan kôjô o kensetsu-chû [Dehulled soybean flakes for making tofu. Tofu makers say they produce delicious tofu. With Nichii's shop policy, they are building a plant in the USA]. April 21. p. 7. [Jap]
• ***Summary:*** At their U.S. plant, Nichii (the Nichii Mycal Group) is planning to produce 1,000 tonnes of dehulled soybean flakes the first year, 1,500 tonnes the second year, 2,000 tonnes the third year, and 3,000 tonnes the fourth year. They plan to sell 50% of these flakes in America and export 50% to Japan.

9691. *Jefferson Bee* (*Jefferson, Iowa*). 1991. A plant for the future. April 30. p. 1. Tuesday.
• ***Summary:*** A ceremonial tree planting began the grand opening festivities of the MYCAL Group (Nichii Company of America Inc.) MicroSoy Flake processing plant in Jefferson Monday morning. The planting of a tree symbolizes future growth and prosperity. Taking part in the ceremony were Mr. Toshimine Kobayashi, Iowa Governor Terry Branstad, and Mr. Charles Davis, mayor of Jefferson.

9692. Morinaga Nutritional Foods, Inc. 1991. Dairy-free, low-fat tropical shakes: Made with Mori-Nu and your favorite fruit (Tear-off recipe pad). 2050 W. 190th St., Suite 110, Torrance, California 90504.
• ***Summary:*** This color tear-off recipe pad (6½ by 4 inches), developed by Susan Bucher of Bucher & Russell in Los Angeles, was introduced in April 1991. On the front is a color photo of a strawberry milk shake surrounded by a sliced pineapple, bananas, strawberries, apricots, and other fresh fruits. To the left is a package of Mori-Nu Lite Firm tofu (only 1% fat).

On the back are recipes for: Mori-Nu Hawaiian Smoothie, Mori-Nu Strawberry Banana Shake, and Mango Madness Shake, plus nutritional analyses, Mori-Nu Tofu facts, and an offer for additional free Mori-Nu recipes. Address: Torrance, California. Phone: 1-800-669-8638.

9693. Nichii Company of America, Inc. (MyCal Group). 1991. MicroSoy Flakes: The next millennium (Color videotape). Skypark 2, Suite 140, 23440 Hawthorne Blvd., Torrance, CA 90505. 11.8 minutes.
• ***Summary:*** Tells the story of MicroSoy Flakes and describes their benefits, with emphasis on saving water, energy, and time, increasing tofu yield, and giving good quality tofu. Shows the product being tested inside the Azumaya Inc. tofu factory in San Francisco, and at a small tofu shop in the Pacific Northwest. Lester Wilson at Iowa State Univ. describes tests on the product being conducted there. A very nice presentation. Address: Torrance, California. Phone: 310-791-0010.

9694. Paine, Heather. 1991. Soya and SIAL '90: Editorial. *SoyaFoods* (*ASA, Europe*) 2(1):1. Spring.
• ***Summary:*** "Last year's SIAL (Salon International de L'Alimentaire) was certainly impressive and all the more so because soyafoods and products containing soya had a remarkably good presence... French soyafoods companies were well represented with many new products... In the 'new products' section a soya-oil based margarine from Denmark (Margarines AMA-Dragsbaek Margarine Fabrik S A) won a SIAL D'Or award and a soyamilk from Argentina (AdeS) was highly commended." Address: editor, SoyaFoods, 27a Santos Rd., London SW18 1NT, UK. Phone: 081-874-5059.

9695. Shiraiwa, Masakazu; Harada, K.; Okubo, K. 1991. Composition and structure of "group B saponin" in soybean seed. *Agricultural and Biological Chemistry* 55(4):911-17. April. [21 ref]
• ***Summary:*** Six different kinds of "group B saponin" were detected by HPLC. Saponins have some physiological activity, including hemolytic, goitrogenic, antioxidative, and hypolipidemic properties. Address: 1&3. Dep. of Food Chemistry, Faculty of Agriculture, Tohoku Univ., 1-1-Tsutsumitori Amamiyamachi, Aoba-ku, Sendai, Miyagi 981; 2. National Inst. of Agrobiological Resources, Ministry of Agriculture, Forestry and Fisheries, 2-1-2 Tsukuba, Ibaraki 305. All: Japan.

9696. Tatsumi, Yoshiko. 1991. Kotokoto fukkura–Mame ryôri [Simmer slowly and they expand: Bean cookery]. Tokyo: Zaidan Hôjin Nôsan Gyôson Bunka Kyôkai. 214 p. April 30. [Jap]
• ***Summary:*** The word *kotokoto* in the Japanese title

describes the sound of bubbles coming up during simmering; it is sometimes translated as "pit pat." This book contains a section of edamame recipes (p. 52-58). After that comes a section on tofu, miso, and shoyu (p. 59+). Address: Cooking teacher, Japan.

9697. *Jefferson Herald* (*Jefferson, Iowa*). 1991. Nichii Co. chairman, Jefferson mayor salute opening of soy flake plant. May 2. p. 9.
• ***Summary:*** Contains the full text of addresses given at the grand opening of the Nichii MicroSoy Flake plant in Jefferson Monday morning by Mr. Toshimine Kobayashi of Osaka, Japan, chief executive officer of the MYCAL Group and chairman of the board of Nichii Company Ltd., and Mr. Charles Davis, mayor of Jefferson. Iowa's governor Terry Branstad and a representative of the secretary of agriculture were present. Mr. Kobayashi notes that this is the first overseas plant built for the MYCAL Group. It is the "largest soybean flake factory in the world, with annual production capacity of 120,000 tons and a total investment of $8 million... Every corporation must have its own culture in order to obtain good employees and contribute to the society. It has been five years since we began our efforts under the corporate philosophy of MYCAL... 'MYCAL' is an acronym for 'Young-Minded Casual Amenity Life,' which I believe is the lifestyle that people all over the world are searching for...

"The MYCAL Group have been importing massive amounts of refrigerated pork from John Morrell & Co. of Sioux City, Iowa, through our U.S. subsidiary, Nichii Company of America, Inc. We have imported high quality beef products through that company, as well. With its unique and excellent meat-processing technique, John Morrell & Co. have been assisting us in the development of several second generation health-conscious food products through the use of the vegetable protein obtained from high-quality soybeans."

9698. *Jefferson Herald* (*Jefferson, Iowa*). 1991. Two-day grand opening held by MYCAL. May 2.
• ***Summary:*** Between 1,500 and 2,000 guests toured the new MicroSoy Flakes plant and sampled foods made from tofu. A photo shows dignitaries crossing a bridge to the plant.

9699. **Product Name:** MicroSoy Flakes.
Manufacturer's Name: MicroSoy Corporation.
Manufacturer's Address: 300 East MicroSoy Drive, Jefferson, IA 50129. Phone: 515-386-2100.
Date of Introduction: 1991 May.
Ingredients: Whole dry soybeans.
How Stored: Shelf stable.
New Product–Documentation: *Jefferson Herald* (Jefferson, Iowa). 1991. May 2. "Two-day grand opening held by MYCAL." Between 1,500 and 2,000 guests toured the new MicroSoy Flakes plant and sampled foods made from tofu. A photo shows dignitaries crossing a bridge to the plant.

9700. Richardson, Al. 1991. New developments at Nichii (Interview). *SoyaScan Notes.* May 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Nichii plant opening in Iowa at the end of April was a great success. The governor of Iowa, Terry Branstad, was there, along with 350 invited guests. An additional 1,500 to 2,000 people showed up to taste tofu dishes and take a tour of the plant. They were responding to a full-page ad in the Jefferson paper that Mr. Chikaarashi had run. They loved the Tofutti [soy ice cream] and Tofu Lasagna that were served, but they didn't seem to care much for plain cubes of tofu seasoned only with soy sauce. Address: Nichii Company of America, Inc., 23440 Hawthorne Blvd., Skypark 2, Suite 140, Torrance, California 90505.

9701. Tanaka, Terry; Richardson, Al. 1991. New developments at Nichii (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Nichii is presently selling Microsoy Flakes to only a few small tofu companies in America. They are working with a number of larger companies, but nothing has yet been finalized because those companies need a mixer to process the flakes. Nichii has imported one or more mixers and they are just now clearing customs. They should have imported the mixers a year ago. Most of the flakes made in Iowa are now being sold to Japan. Address: Nichii Company of America, Inc., 23440 Hawthorne Blvd., Skypark 2, Suite 140, Torrance, California 90505.

9702. Messina, Mark J. 1991. Update on soy and cancer prevention research (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Aside from Mark's article titled "Commentary: The role of soy products in reducing risk of cancer," published in the *Journal of the National Cancer Institute* 83(8):541-46 (17 April 1991), there will be no other proceedings published. Much of what the participants had to say has already been published. The conference brought the people and ideas together for the first time. Dr. Stephen Barnes was the co-author and chairperson of the workshop, and his work was the motivation for the workshop.

Mark has almost finished writing a new paper which will be a review of all the literature on the role of soy products in reducing the risk of cancer. This review will contain many studies not mentioned in the article cited above, including about 20 animal studies. The initial animal research was very disappointing. K.K. Carroll, for example, in 1975, found no difference between soy protein and casein in protecting against cancer. The epidemiological work is inconclusive, and soy is limited to a minor role in Chinese, Japanese, and some Seventh-day Adventist studies. So, even if soy was

© Copyright Soyinfo Center 2014

protective, it would not get much attention in these studies. The literature seems to indicate that soy is most protective against colo-rectal cancer and against breast cancer. One basic problem is that case-control studies are often not very supportive of diet-cancer relationships; they are often done in homogeneous populations with a narrow range of dietary differences. For example, Japanese and Chinese have low fat and high soy consumption, while Europe and the USA are the opposite. This is a big problem for the field because even today much of our understanding of diet-cancer relationships is based on these international variations in cancer compared to the FAO data. We don't have that for soy; we just have a series of case-control studies, though they are generally suggestive of a protective effect. The animal studies show mixed results. Of the 4 studies on soy and mammary cancer, for example, 2 show a protective effect and 2 do not. So we need to look deeper for the cause of these differences. It looks like the isoflavones are the most likely candidates to be the effective protective agents. The protease inhibitors are extremely potent chemopreventive agents; they really work. Whether or not there is enough in soybeans to make a difference is a big question. There may be enough, but it is a difficult question to answer. The isoflavones are absorbed, you can measure them and their effects. They clearly can exert physiological or biological effects. If some of the proposed studies are funded, in the next two years we will learn a great deal about these compounds.

Mark feels that his new review of the literature may launch this as a whole field of serious research, and may stimulate much new investigation in this new field. A new case-control study, titled "Dietary effects on breast-cancer risk in Singapore just published in *The Lancet* (18 May 1991, p. 1197-1200), was so supportive of a protective effect of soy against cancer that it alone will stimulate more thinking about this area. The authors of that study did not set out to look solely at soy, but they noted that not many epidemiological studies have been conducted on soy. Those that have, have been quite supportive in showing a protective effect against cancer.

In about 2 months, NCI will be giving out some money for further study of the isoflavones in soybeans, to see how they are metabolized and their other effects. If things go well, with good results over the next 2 years, they might be in a position to do a human intervention study to look seriously at the effect of soy in preventing or curing cancer. Address: Diet and Cancer Branch, National Cancer Inst., 9000 Rockville Pike, EPN–Room 202, Bethesda, Maryland 20892-6130. Phone: 301-496-8573.

9703. Chang, Yong-Sin. 1991. Welcome address. In: S. Shanmugasundaram, ed. 1991. Vegetable Soybean: Research Needs for Production and Quality Improvement. Taipei, Taiwan: Asian Vegetable Research and Development Center (AVRDC). 151 p. See p. 5. Proceedings of a workshop held at Kenting, Taiwan 29 April–2 May 1991.

• ***Summary:*** "The vegetable soybean industry in Taiwan was an insignificant one in the 1970s. But today there are about 30 frozen food processing factories handling a sizeable volume of vegetable soybean for export–primarily to Japan. The total value of vegetable soybean export to Japan and other countries in 1990 reached an all-time high of about US$75 million. Vegetable soybean constitutes nearly 60% of the total exports of all fruits and vegetables processed in Taiwan. Therefore, we are very much interested in this commodity.

"In the early 1980s, the Council of Agriculture recognized the growing importance of vegetable soybean for export and for the domestic market in Taiwan. In 1985, the Council initiated and supported a vegetable soybean research project at the Kaohsiung District Agricultural improvement Station (DAIS) and the Asian Vegetable Research and Development Center."

New and improved varieties were quickly developed. In 1987, AVRDC's selection AGS 292 was released by Kaohsiung DAIS as Kaohsiung No. 1; it now occupies about 84% of the total area cultivated in vegetable soybean in Taiwan. Address: Council of Agriculture, Taipei, Taiwan.

9704. Cheng, Shui-Ho. 1991. Vegetable soybean area, production, demand, supply, domestic and foreign trade in Taiwan. In: S. Shanmugasundaram, ed. 1991. Vegetable Soybean: Research Needs for Production and Quality Improvement. Taipei, Taiwan: Asian Vegetable Research and Development Center (AVRDC). 151 p. See p. 17-21. Proceedings of a workshop held at Kenting, Taiwan 29 April–2 May 1991. [7 ref]

• ***Summary:*** Contents: Abstract. Introduction. Area, production and yield [in Taiwan]. Foreign and domestic trade. Cultural practices. Research and development. Problems and future needs.

The area planted to and production of vegetable soybeans in Taiwan increased from 7,139 ha and 42,839 tonnes in 1983 to 9,852 ha and 63,163 tonnes in 1990. In 1983 the yield was 5,938 kg/ha rising to 6,411 kg/ha in 1990. Two crops are grown each year, in the spring and fall. Exports of vegetable soybeans from Taiwan increased from 452 tonnes in 1972 to 34,821 tonnes in 1989. About 80% of Taiwan's total production was for export. The export value (FOB) increased from US$47.6 million in 1987 to US$75 million in 1990. The major market for the export of frozen vegetable soybean is Japan, which bought 99% of the total export volume in 1989. A new leading cultivar, KS #1, bred by AVRDC and the Kaohsiung District Agricultural Station (DAIS), was the first official release of a vegetable soybean in Taiwan. Address: Council of Agriculture, 37 Nan-Hai Road, Taipei, Taiwan.

• ***Summary:*** Contents: Abstract. Distribution of vegetable soybean. Distribution for fresh market. Distribution of seed. Seed production. Future vegetable soybean production.

The total demand for vegetable soybeans in Japan is almost 160,000 tonnes. This figure has remained constant for several years. About 25-30% of the total is sold frozen. Domestic production provided about 116,000 tonnes (72.5% of the total demand), and 43,000 tonnes (27.5%) were imported. Almost all of the frozen product was imported. The prefectures which produced the most vegetable soybeans in Japan in 1987 were Niigata (13,500 tonnes) and Chiba (12,200 tonnes). Address: 1. Hokkaido Research Station; 2. Chiba Research Station. Both: Snow Brand Seed Co. Ltd., Japan.

ed. 1991. Vegetable Soybean: Research Needs for Production and Quality Improvement. Taipei, Taiwan: Asian Vegetable Research and Development Center (AVRDC). 151 p. See p. 43-44. Proceedings of a workshop held at Kenting, Taiwan 29 April–2 May 1991.
• ***Summary:*** Contents: Abstract. Seed production and supply system. Breeding. Cultivation methods. Future developments.

In Japan, most vegetable soybean seeds are developed and sold by private companies. This paper discusses work in Iwate Prefecture. The Iwate Prefectural Agricultural Experiment Station is concerned with breeding pure lines, plus breeders' and foundation stocks. The Iwate Seed and Plant Center works on seed multiplication. Since most vegetable soybeans are inferior to grain soybeans in their resistance to disease and other damage, it is important to find a variety with strong resistance. Address: Iwate Prefectural Agric. Exp. Station, 737 Sunagome, Takizawa-mura, Iwate gun, Iwate prefecture, Japan 020.

Apparent research needs: Agronomy, biochemistry and plant physiology, breeding and germplasm, harvesting and processing, plant pathology. Conclusion. Acknowledgments.

Early references to immature soybeans (*nama daizu,* later *aomame*) appear in the 8th century A.D., when it is described as one of the sacred food offerings used in *Shinsen,* mentioned in the record book of a royal treasure house called the Shosoin in the capital city of Nara*. *Aomame* is mentioned in the *Engishiki,* a guide to the conduct of government and religious affairs, published in 927 A.D. [Heian period] (Igata 1977). Later, in 1697, cultivation methods for vegetable soybeans were published in the book *Nogaku Zensho* [*A Complete Book of Farming*].

"In Japan, the earliest forms of immature vegetable soybeans were called *eda-nari-mame* (branch-fruiting-bean) or *azemame* (rice-bund bean)* and were probably not well distinguished by the characteristic sweet, savory flavor of current edamame until the Kamakura period (1192-1336) or later, when they became part of Buddhist cuisine. By the middle Edo period, vegetable soybean harvest had advanced from October to August and farmers' wives began selling boiled stems with attached pods on the streets of Edo (early Tokyo), particularly during the Festival of the Dead (*Obon*) in August. At that time, vegetable soybean began being used as it is today, i.e. as a snack food, hors d'oeuvre, or appetizer, usually with alcohol consumption, which explains one of its English nicknames: Beer Bean. (* Source: K. Yamauchi. 1990. "Travels to Study Riddles: Edamame" *Nozogaku no Tabi: Edamame.* July 27. TV Mook, NTV/YTV, Japan. Note: Shinsen is ritual preparation of food to purify the body).

"The dramatic increase in affluence and beer consumption following the Meiji Restoration in 1868 can be partially attributed to a large-scale import of European technology, including German technology for beer production. The culture which centered around drinking and snacking expanded, creating a strong demand for vegetable soybeans. The saltiness of the beans is thought to be the

© Copyright Soyinfo Center 2014

perfect complement to beer. The increase in vegetable soybean consumption resulted in it gaining the attention of agricultural and food scientists, and the development of over 400 varieties. Vegetable soybean has now become so distinct from soybeans in the minds of urban consumers that most do not recognize it as the same species as soybeans.

"Demand for vegetable soybean in Japan is thought to have evolved through four phases in society, in addition to its routine use by farm families. The first was a sacred offering to the *Kami* during the Nara period (*Shinsen*), the second as a food for religious purification during the Kamakura period (*Shojin Ryori*), the third as popular street fare among the Samurai during the Edo period, and the fourth, after the Meiji Restoration in 1868, when it became the most popular accompaniment for beer. Figure 1, a graph, shows that the meteoric rise in vegetable soybean consumption closely parallels the increase in beer consumption in Japan because of the complementary nature of the saltiness of the vegetable soybeans and the taste of beer."

"The second major impetus to vegetable soybean production was the spread of refrigeration, first to the commercial sector, especially to bars and beer gardens in the post-war period, and later to the residential sector in the late 1960s and early 1970s when household refrigerators became widely used. The commercial sector currently uses about 65% of frozen vegetable soybean, while the residential sector uses about 35%. The year-round consumption of vegetable soybean has increased in line with the growing popularity of frozen foods in general.

"A current major impetus to the use of frozen vegetable soybean is the changing role of women in Japan. More than half of all Japanese women are now employed outside of the home, and are thus becoming more unwilling and unable to prepare elaborate meals from basic ingredients... Frozen vegetable soybean is thought to have been marketed in Japan after World War II, but large-scale distribution did not begin until 1965, about the same time the Ministry of Agriculture, Forestry, and Fisheries began keeping formal production statistics for vegetable soybean. Production in Taiwan began around 1966, when several large, Japanese trading companies introduced it as an export crop, and exports to Japan began around 1972."

Fig. 2, a bar chart (p. 123), shows vegetable soybean area, production (of pods), and yield in Japan from 1946 to 1988. Total production in Japan gradually increased from 30,100 tonnes in 1946 to a peak of 121,900 tonnes in 1982, after which it declined slowly to 105,000 tonnes in 1988. Yields were highest in 1969, reaching almost 10 tonnes/ha, then steadily dropped, falling to 7.3 tonnes/ha in 1988.

Fig. 3 is a chart titled "Pedigrees of popular vegetable soybean varieties currently grown in Japan" (p. 126). Early ancestors include: Wase-midori, Tsurunoko, Osodefuri [Sodefuri]. Detailed information on each variety is given in the text.

Research needed on harvesting and processing: "The most difficult problem facing growers is knowing when to harvest vegetable soybean... Second, to control production costs, methods of mechanically harvesting vegetable soybean need to be refined. If harvesters can be developed that do not drop, bruise, or break pods, the technology can replace expensive hand labor" (p. 130).

Note: This paper contains the best bibliography seen of Japanese-language publications on edamame. The Acknowledgments section (p. 130) states: "Most of the following bibliography [187 references] was collected and the articles translated while John Konovsky was a Fulbright Fellow at Iwate University in 1990; special thanks go to Dr. N. Kaizuma at Iwate University for his guidance." Address: East Asian Crop Development Program, Dep. of Crop and Soil Sciences, Washington State Univ., Pullman, WA 99164-6420.

Taipei, Taiwan: Asian Vegetable Research and Development Center (AVRDC). 151 p. See p. 92-102. Proceedings of a workshop held at Kenting, Taiwan 29 April–2 May 1991. [20 ref]

• ***Summary:*** Contents: Abstract. Introduction. Quality requirements and evaluation. Taste related substances during pre- and postharvest periods. Genetic and physiological research on quality improvement.

Sensory evaluation of stored vegetable soybean showed that the taste of the seeds is determined by sucrose, glutamic acid and alanine. Vegetable soybean is rich in protein, and vitamins A, C, and E. Eating boiled vegetable soybeans as Edamame has a 400-year history in Japan. Edamame is very popular served with beer in restaurants or at home during the summer. Vegetable soybean is processed as "Zunda-mochi," by pounding the seeds to a paste. Zunda-mochi is famous in the northeast prefectures of Japan (*Tohoku Chiho*) but production is limited. Most immature vegetable soybean is consumed in Japan as edamame. Undesirable sensory properties are found in isoflavin [isoflavones] which has an objectionable, bitter, astringent, and weak phenol-like taste; daidzin and genistin, which have a bitter, astringent taste; and saponins, which have a bitter, astringent taste. All these are glycosides. Oligosaccharides have generally been considered undesirable in that they cause flatulence; recently, however, these have been reported to support the growth of bifidobacteria, and to play an important role in health.

Table 1 shows correlations between sensory panel scores (with 8 panelists) and four chemical components of soybeans. The strongest positive correlation is for sucrose content (0.88 overall), followed by glutamic acid (0.82), alanine (0.65), and glucose (0.59).

The volatile flavors (volatiles–as measured by GLC =

© Copyright Soyinfo Center 2014

gas liquid chromatography) of boiled vegetable soybeans are highly correlated with quality. "Characteristic, flower-like flavor components of boiled vegetable soybeans are *cis*-jasmone, (Z)-3-hexenyl-acetate, linalool and acetophenone." • ***Summary:*** Contents: Abstract. Introduction. Research up to 1980. Research since 1981. Screening large-seeded germplasm. Breeding strategy. Breeding methods. Vegetable soybean plant type. Research at Kaohsiung DAIS. Future directions.

Varietal improvement of vegetable soybeans in Taiwan began in the early 1950s; the crop was consumed in Taiwan in the form of shelled green beans. From 1950 to 1980, vegetable soybeans were grown primarily in the Pingtung-Kaohsiung area in southern Taiwan during the fall season, and to a lesser extent in the spring and summer. Starting in the early 1970s, a lucrative market for frozen vegetable soybeans emerged in Japan. Varieties introduced from Japan that produced well in southern Taiwan were Tzurunoko (Tsurunoko, known as "205" by farmers), and Ryokkoh (known as "305"). From 1976 to 1980 AVRDC did research on soybeans with large seed size to select those with potential as vegetable soybeans for the Japanese market. Tables 1 and 2 show the results. Vegetable soybeans should have large seeds. Before 1980, a good cultivar was such that 100 seeds weighed 25 gm or more. Today the goal is for 100 seeds to weigh 30 gm or more; a 500 gm frozen pod packet should contain 175 pods or less. Address: 1&4. AVRDC, P.O. Box 42, Shanhua, Tainan 74199, Taiwan; 2-3. • ***Summary:*** Contents: Abstract. Introduction. Breeding system. Breeding objectives. Genetic resources. Future prospects.

Vegetable soybeans grown in Japan are consumed late in the summer, mainly in July and August, and therefore very early or early varieties are used. They are ready to harvest about 90 days after the seeds are planted. Those consumed in the winter are imported from Taiwan, Thailand, or New Zealand. The breeding goal is a high yield of 9-10 tonnes/ha. In olden times vegetable soybeans were used as an offering at festivals during O-bon (August 16) and Tsukimi (Sept. 9).

Table 1 titled "Main vegetable soybean varieties" (p. 27) contains the following columns: Variety, breeding system (local variety, pedigree, cross, mutation–radiation), maturity (early to late), pod size, pubescence color, seed coat color, notes (incl. place or name of developer, incl. private seed co.). The following varieties are listed: Datcha, Krosai-chamame, Hiradoko, Tanbaguro, Okuhara 1 gou, Wase Midori, Tokyo Wase, Saporo Midori, Yukimusume, Mosono Green, Kita no Siki [Shiki], Green-75, Echigo Musume, Hatu [Hatsu] Musume, Iwa-mame-kei 1, Experiment Station, Iwa-mame-kei 4. Address: Nagano Chushin Agric. Exp. Station, Nagano, Japan.

Harbin, a Russian colony in the heart of Northeast China. Its early population growth, brought about by Russian social and demographic micromanagement, was caused by the needs of competitive colonization against the Chinese. In 1896 Harbin was only a village. It began to grow rapidly with completion in 1898 of the Russian railway connecting it to Port Arthur. It was the Russian administrative headquarters from 1898 to 1905. After Russia's defeat in the Russo-Japanese War (Feb. 1904–1905) Harbin's fortunes began to fall. The Chinese Eastern Railway (CER) almost went bankrupt, the Russians and Southern Manchurians returned home, and the population fell precipitously to around 25,000. Harbin was officially opened to foreign residents on 7 January 1907. Its opening as a treaty port in 1907 aided international trade. "Fortunately, by 1908 the revival of the grain trade under a consortium organized by the Russo-Chinese Bank, together with the debut of soybean exports from Northern Manchuria pulled Harbin out of the doldrums. The economic upswing caused by the explosive growth of soybean exports put an end to hard times for Harbin.

Roman Moiseevich Kabalkin, a Russian Jewish businessman, pioneered the soybean export trade. He was the first person to conceive of the idea of exporting soybeans from Manchuria to Europe–before the Japanese. "Kabalkin, who had already made his name and fortune in European Russia, as a grain trader with no fear of novel methods, served for 14 years as a consultant to the Riazan-Ural'sk Railway. By force of association, this led to an invitation from the newly-appointed chief of the CER Commercial Department, K.P. Lazarev, to help develop freight traffic between Siberia and Manchuria. To this end, Kabalkin founded 'R.M. Kabalkin and Son, Inc.'

"His relationship with the CER and his experience in Siberian trade probably served Kabalkin well during the wartime profiteering. Afterwards, his knowledge of world grain markets made him an early advocate of the soybean. Legend describes Kabalkin wandering in the Harbin Marketplace, pointing out the heaps of beans to his son and calling them the 'gold of Manchuria.' Although Kabalkin had sought Petersburg's permission as early as 1907, European export by his new company 'Natanson and Co.' did not start from Vladivostok until January 1909. Mitsui Bussan's first shipment left Dairen in November 1908. However, Kabalkin's eventual inability to compete with the Japanese resulted less from the head start than from lack of credits from the Russo-Chinese Bank and CER. Both companies, the only major sources of Russian capital in the Far East, were already committed to the grain mills as the keynote of Harbin's industrial future. This would prove to be a fatal miscalculation for Russian trade prospects in Manchuria." (p. 188-90).

This information on soybeans is in Chapter 3–Demography (see the section on Jews), and Chapter 4 about the Russian War Laboratory–the Commercial Bureau of the Chinese Eastern Railway.

• ***Summary:*** Japanese-style fermented soy sauce (shoyu) was shown to have anticarcinogenic activity in mice fed diets designed to induce cancer. Cancer inhibition was found to be greatest in the mice receiving the most shoyu. Shoyu was also found to contain antioxidant activity which may be related to the observed anticarcinogenic effect. Address: Dep. of Food Microbiology and Toxicology, Univ. of Wisconsin, Madison, WI 53706.

9721. Ohlund, Tim. 1991. Re: Early work with miso and koji in Sweden. Letter to William Shurtleff at Soyfoods Center, June 5–in reply to inquiry. 2 p. Handwritten.
• ***Summary:*** Tim did the pioneering work with miso and koji in Scandinavia. The following dates were carefully extracted from his records in response to a number of questions asked by William Shurtleff.

1973 summer (July)–I was in Japan to study miso and tofu making, etc.

1982 Feb.–I first sold miso in Sweden. That first year I sold about 35 kg of rice miso and barley miso to friends.

1983 Sept.–I first produced an organic miso (from all organically grown ingredients), using oat koji and yellow peas.

1984 April–I started using the name Malvabo (address: 19063 Örsundsbro, Sweden) and first sold miso to a retail food store. The first varieties of miso I made were rice miso, barley miso, and oat miso. I also experimented with using peas instead of soybeans because peas are easier to grow in Sweden.

1985 Sept.–I first sold the organic miso developed in late 1983. Address: Timoteus Kojiprodukter HB, Härvstagård, 19 063 Örsundsbro, Sweden. Phone: 0171-65106.

9722. Raloff, J. 1991. A soy sauce surprise. *Science News* 139(23):357. June 8. [1 ref]
• ***Summary:*** Japanese have an eight-fold higher risk of stomach cancer than Americans. Some Japanese scientists suspect that the difference may be caused by soy sauce, which contains precursors of chemicals that cause mutations in bacteria. But a U.S. research team (Michael W. Pariza and co-workers at the University of Wisconsin–Madison) have observed just the opposite, that Japanese-style fermented soy sauce "exhibited a profound anticarcinogenic effect." They discovered that soy sauce contains compounds with substantial antioxidant activity; many antioxidants are known to inhibit the development of cancer. Their results appeared in the June 1 issue of *Cancer Research.*

9727. Thornbury, Barbara E. 1991. One-pot cooking, the Japanese way. *New York Times*. July 14. p. XX6, XX31.
• ***Summary:*** An excellent in-depth article about *nabemono,* including the many different regional varieties. Chanko-nabe is a favorite of sumo wrestlers in Kyoto and elsewhere. Ishikari-nabe is a specialty of Hokkaido, Japan's northernmost main island; ingredients include tofu and fresh salmon.

Dote-nabe (oyster nabe) is associated with the port city of Hiroshima; ingredients include "grilled bean curd" and an inch-wide ring of miso spread around the inside lip of the pot like a moat.

Hakata, on the island of Kyushu, is known for its mizutake (sometimes called mizu-daki); ingredients include tofu. Other popular types of nabemono are yose-nabe, sukiyaki, shabu-shabu, and chiri-nabe.

9728. *Toyo Shinpo* (*Soyfoods News*). 1991. Nattô no chihô betsu shijô mapu (Heisei 2 nendo): Tsuini 1,000 okuen no ôdai toppa, shôhi no hanbun was kantô ga shimeru [Map of natto's market share by region in 1990: Finally broke 100,000,000,000 yen goal, one half of the consumption was in Kantô (Tokyo-Yokohama) area]. July 21. [Jap]
• ***Summary:*** A stylized map of Japan, from north to south, contains the following information for natto sales by region (listed from north to south):

Hokkaido 7,237 million yen.
Tohoku region 11,222 million yen.
Hokuriku 4,372 million yen.
Kanto region 51,557 million yen.
Tokai region 7,210 million yen.
Kinki region 9,297 million yen.
Chugoku region 2,966 million yen.
Shikoku island 1,275 million yen.
Kyushu island 8,355 million yen.
Okinawa island 396 million yen.
Japan national total 102,745 million yen.

The three largest regions for natto sales (in descending order of sales amount) are:

(1) Kanto region 51,557 million yen.
(2) Tohoku region 11,222 million yen.
(3) Kinki region 9,297 million yen.

Note: The Kantô region of Japan is a is a geographical area of Honshu, the largest island of Japan. The region includes the Greater Tokyo Area and encompasses seven prefectures: Gunma, Tochigi, Ibaraki, Saitama, Tokyo, Chiba, and Kanagawa. Within its boundaries, slightly more than 40 percent of the land area is the Kanto Plain. The name Kanto literally means "East of the Barrier." The name Kanto is nowadays generally considered to mean the region east of the Hakone checkpoint. The official population on 1 Oct. 2010 was 42.6 million.

North of the Kantô region lies the Tôhoku region (northeast prefectures), which is widely considered to be the birthplace of natto. The region, which has a harsh climate

© Copyright Soyinfo Center 2014

during the cold half of the year, consists of six prefectures (ken): Akita, Aomori, Fukushima, Iwate, Miyagi and Yamagata (Source: Wikipedia, at Kanto region and Tohoku region, retrieved 21 Dec. 2011).

Berlin: Technische Universitaet Berlin, Institut fuer Lebensmitteltechnologie und Gaerungstechnologie–Getreidetechnologie. 171 p. See p. 153-59. [4 ref]
• ***Summary:*** Contents: Introduction. Potential uses of soya bean. Past product launches. Soya product as a foodstuff.

A certain Mr. Robert Whymper was probably the first person to show Europeans how the functional character of soya proteins could be exploited. He returned to England in 1923 after a trip to Japan with a suitcase full of soya beans and a head full of ideas. He carried out a series of experiments using soya flour as an ingredient of the dough in the breadmaking process. This work culminated in the granting of a British Patent in 1926. The patent described conditions of unusually vigorous dough mixing which allowed for the maximum inclusion of air. Very substantial improvements in the colour of the bread crumb and the volume and quality of the bread were observed. We now know that this bleaching and improving effect is a direct result of a coupled oxidation reaction involving the lipoxygenase enzyme present in the soya flour. The breadmaking industry of Europe now uses thousands of tonnes of enzyme-active soya flour every year as a bread improver.

"The work of Whymper and his associates continued and in the early 1930's a heat processed full fat soya flour appeared on the market."

Henry Ford, a man of vision, initiated the next phase in the development of soya proteins for human food. In the early 1950's [sic, mid-1930s] he put together a team to work on the isolation of pure protein from soya and the subsequent spinning of this protein into a stable fibre." After his scientific team was disbanded, the expertise was not lost, for the scientists found places in food companies and began to look at the use of isolated soya proteins in the food industry. It is now well established that isolated soya proteins have functional uses for binding and emulsification, and for improving nutritional value. "More controversial and newsworthy was the attempt by the old Ford researchers to produce textured protein products to simulate meat and other traditional protein foods. They did this by two processes: (1) The spinning of isolate into fibres, using technology from the textile industry; (2) The extrusion of soya bean meal under conditions of high temperature and pressure... Branded food products based on these textured soya proteins were launched on the market in the late 1960s and all during the decade 1970-1980."

During the early 1970s the future looked a little bleak due to the world population explosion, the world energy crisis (precipitated by OPEC), and the world food crisis (which was more specifically a protein crisis). The first World Soy Protein Conference, held in Munich in 1973 with over 1,000 delegates, was a very important affair. "The U.S. Secretary of Agriculture, Mr. Earl L. Butz, opened the conference. Senator Hubert Humphrey made a memorable inspirational address... I was there and I can tell you we all thought we could make a big impact on the world's on the world's problems by supplying textured soya protein."

Against this background, many such products were launched in the U.K. in the mid-1970s by major food companies. All but Kesp were based on textured soya flour: 1975 Feb.–Mince Savour by Nestle; 1975 May–Country Meadow by Brooke Bond Oxo; 1976 Jan.–Soya Choice by Cadbury; 1976 April–Economince by Spillers; 1976 Sept.–Kesp by Courtaulds (made from spun soy protein fiber).

"All of the products enjoyed real success for a period of time. In particular Cadbury's Soya Choice sold well for about three years in every area of the U.K. Sad to relate, however, all of them quietly and gradually lost sales and finally disappeared from the market. It is important to know why... People did not want a substitute food; this was a challenge to their security, a threat to the comfortable familiar world." The consumers of today have become more "green." "It is clear to me, the emotional conditioning that sees security in the consumption of traditional animal foods is being replaced by the more logical attitudes of a new generation. The young people of today want to find ways to preserve the environment and they have an increased perception of health problems that may be caused by the consumption of animal products, especially animal fat. These and other factors are making vegetarianism more attractive.

"A recent Gallup poll has shown, in the U.K., that 3% of the total population are vegetarians. A total of 8.5% are either totally vegetarian or avoid red meat, and 9.3% of children are vegetarian. Vegetarianism has moved from being a refuge of cranks to being fashionable."

A new product popular among yuppies is Quorn, a textured fungal protein, marketed by ICI and RHM via Sainsburys and other selected suppliers. Address: The British Arkady Co. Ltd., Manchester, England.

Bibliography of soy sprouts: 655 references from 3rd century A.D. to 1991, extensively annotated. Lafayette, California: Soyfoods Center. 185 p. Subject/geographical index. Author/company index. Language index. Printed July 12. 28 cm. [655 ref]

• ***Summary:*** This is the most comprehensive bibliography ever published on soy sprouts. It is also the single most current and useful source of information on this subject available today, since 71% of all references (and most of the current ones) contain a summary/abstract averaging 172 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 27 different document types, both published and unpublished, every known foreign language publication on the subject, extensive translations of many Japanese and European works, and many original interviews Thus it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 17 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 40 commercial soy sprout products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

• ***Summary:*** An illustration shows a traditional natto seller, carrying his wares suspended from both ends of a pole balanced on his right shoulder.

9733. *Toyo Shinpo* (*Soyfoods News*). 1991. Kenkô shokuhin to shite no nattô: Nattô no "tare" no genjô [Natto as a health food: The present status of natto's *tare* sauce]. Aug. 1. p. 6. [Jap]

• ***Summary:*** In Japanese, the word *tare* refers to seasoning sauce based on soy sauce.

9734. Egerstrom, Lee. 1991. Bean trade to Japan ripens: When Minnesota Edamame was launched in 1987, not many people knew about one of Japan's favorite food snacks, young soybeans. But this fall the Jackson, Minnesota, company will ship 1 million pounds of the beans to Japan. *St. Paul Pioneer Press* (*Minnesota*). Aug. 5. p. 10-D. Business section.

• ***Summary:*** James Lambert of Minnesota Edamame in Jackson, Minnesota, is growing immature soybeans or green soybeans [green vegetable soybeans] and exporting them to Japan. The Nishimoto Trading Co. of Tokyo liked the taste and look of southern Minnesota soybeans so much that they decided last week to place more than $100,000 worth of their bagging and packaging equipment in the Minnesota Edamame plant. "In September the 4-year-old Minnesota Edamame Co. will start using Nishimoto's equipment to ship 1 million pounds of partially processed immature soybeans to Japan. That's a big jump from the 7,000 pounds shipped in 1988. "Minnesota Edamame has contracts to supply Nishimoto with 3 million pounds of the soybeans from the 1992 Minnesota crop, 6 million pounds in 1993 and 15 million pounds by 1996." Total company sales next year, primarily from the 3 million lb sent to Japan, are expected to reach $1.8 million. The business began in

© Copyright Soyinfo Center 2014

1987 when Minneapolis restaurateur Reiko Weston called James Lambert, who owns Jameson-Williams Co., a grain elevator at Huntley, Minnesota, and a farm management company that does business in the Jackson and Fairmont area. "Weston, founder and operator of the Fuji-Ya restaurant in Minneapolis, wanted Lambert to find a small farm for her to buy so she could grow her own soybeans. She served edamame at Fuji-Ya and other Japanese restaurant properties she owned, and it irritated her to import the soybeans into prime soybean-growing country.

"Weston didn't buy a farm, but she joined with Lambert to experiment with growing and processing edamame in Minnesota. She died in 1988, just as the first crop of soybeans was being planted. 'But she had me hooked by then,' recalls Lambert. The first 7,000 pounds were processed and shipped as samples to Japan. In response, Jameson-Williams received orders for 3.5 million pounds for 1989."

"Meanwhile, Lambert teamed up with a few outside investors and risk-taking employees to build the edamame business. They linked up with Nishimoto, received help from edamame researchers at Washington State, Iowa State and the University of Illinois, and secured technical help and a $100,000 loan from Minnesota's Agricultural Utilization and Research Institute [AURI]. Lambert–who remains the principal shareholder–plowed additional investment, including a farm, into the company.

"Bob Luedtke, the project manager, and Dave Hanson, plant manager, retooled a vegetable harvester to combine the green soybeans. As they worked with the processing equipment for the edamame, they accidentally discovered a way to shell unripened soybeans without bruising the delicate beans. Shelled soybeans, called 'mukimame' in Japan and processed slightly differently than edamame, are popular throughout the Pacific countries mixed in salads and other dishes."

"One reason Minnesota Edamame's potential looks good is the jerry-rigged equipment Luedtke and Hanson came up with. Taiwan, which dominates the edible soybean product markets in the Pacific Rim countries, uses field workers to pick the edamame and mukimame beans by hand."

"Meanwhile, contracts the company has signed with seven southern Minnesota soybean farmers will generate a premium of about $40 an acre more than nearby soybean markets. Six other farmers are on a waiting list to grow beans as production increases in each of the next four years. About $30 of the growers' premium comes in cost savings. Minnesota Edamame will harvest the beans for the farmers, saving them that expense, and the company also supplies the special soybean seeds."

Lambert's company, Minnesota Edamame, is at Route 3, Box 3, Fairmont, Minnesota 56031. Phone: 507-238-1675. A large photo shows a close-up of Jim Lambert kneeling on one knee in a field of soybeans.

Note: This is the earliest article seen in the America's Newspapers database with the word "edamame" in the headline / title. A surprising 89 articles in this database now (as of 15 June 2009) contain the word "edamame." Address: Staff writer.

9735. Tara, Bill. 1991. Pioneering macrobiotics and soyfoods in London (Interview). *SoyaScan Notes.* Aug. 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Starting in the late 1960s, the pioneering work with soyfoods in London was done by Craig and Greg Sams. They and their parents were Americans, and they had gone to college in America. Their father was employed by the U.S. armed forces as an historian; they spent a lot of their time growing up between America and England. Greg fell out of a tree while going to college in Berkeley in the late 1960s and was paralyzed from the waist down, so he was confined to a wheelchair, but was still very active and innovative. In the late 1960s they set up a macrobiotic natural foods cafe / restaurant on Portobello Road in London, then changed it into Ceres Grain Shop, a natural foods retail store. As volume increased, they began to distribute their products out of the back of their shop, and in about 1971 founded Harmony Foods Ltd. as a distribution company located in a warehouse on Ladbroke [sic, Latimer] Road. The model and evolution was similar to that of Erewhon in Boston. Harmony Foods was the first natural foods distributor in England, and probably the second in Europe after Lima Foods of Belgium. Soon they were importing macrobiotic foods from Japan, and distributing organically grown grains from England and from The Camargue (a marshy island in the delta of the Rhone River in the south of France), etc.

Among their early Japanese imports were bulk miso and "tamari" (actually shoyu), imported from Muso in wooden kegs. They repackaged the miso and shoyu in glass bottles under the Harmony Foods label in London. This was the first Japanese miso and shoyu sold in England. In about 1972, as soon as Erewhon started having miso and shoyu packed in Japan, the Sams had the same thing done with theirs, then they applied their own labels in London. But they continued to import in bulk as well. A Chinese company in London made tofu and [mung] bean sprouts, then sold the tofu to the Sams brothers; they sold it unpackaged in open trays in water. At that time, tofu was not emphasized much in macrobiotic circles so not much was sold; it was considered too yin. The Sams also sold deep-fried Rissoles filled with TVP instead of meat; as early as 1970 the Rissoles were being made by an Israeli guy (name?) who owned a shop (name?) by the Hempstead Heath. Marigold Foods also used TVP in the mid-1970s.

In 1970 Bill Tara, then a vice president at Erewhon in Boston, passed through London on his way to India. One purpose of his trip was to scout out the possibility of Erewhon setting up a distribution point or center in England. Paul Hawken was president of Erewhon at the time, and

© Copyright Soyinfo Center 2014

Erewhon was importing miso and tamari from both Muso and Mitoku in Japan. Bill and Paul had been roommates in a warehouse in San Francisco, then they took over the Erewhon food store from Evan Root, Paul starting 2-3 months before Bill. In London, the Sams brothers were just opening a new natural foods restaurant in the Notting Hill area so Bill and Paul Petrofsky spent 2 weeks fixing it up. Paul later started Baldwin Hill Bakery with Hy Lerner. Bill stayed in London 2-3 months during this first visit.

In about 1972 Bill returned to London with Russel Demerais, on the Erewhon payroll, again to start an Erewhon distribution center. But Erewhon went through a cash crisis and Harmony foods had grown dramatically. So Bill and Peter Bradford (an Englishman who had come to American in about 1970 and worked for Erewhon doing organic agriculture at Erewhon Farms near Keene, New Hampshire) began to work for the Sams brothers both at Ceres Grain Shop (the retail store) and Harmony Foods (in the warehouse). Bradford, who now has a very successful natural food store in England named Clearwater Natural Grocer, has been one of the most important promoters of soyfoods in the UK. At this time, Craig Sams set up a bakery. By now, miso and tamari sales had increased; Harmony was still affixing its own label to unlabeled packs.

In 1974 Bill and Peter established Sunwheel as a natural food/macrobiotic distributor. They picked up exotic Japanese imports that Harmony found unprofitable and wanted to drop–so there was little or no competitive feeling with the Sams. By late 1974 Sunwheel Hatcho Miso, Mugi Miso, and Tamari were on the market, imported from Muso (Yuko Okada) in Japan. Sunwheel also made granola and peanut butter. Sunwheel never sold any other soyfood products; they had very limited warehouse space and no refrigeration.

Note: On 17 Aug. 1975 Renée Tara wrote William Shurtleff in California. She was living at 30 B Market St., Bradford-on-Avon, Wilts., England. She is writing a European Macrobiotic Cookbook. She requests information on miso and invites Shurtleff to visit.

In about 1977 Sunwheel acquired a retail store that had been started in and by the Community Health Foundation. By 1979 Sunwheel was very successful, but it needed to be recapitalized or sold. So the partners decided to sell it to a larger health food company; Peter kept the retail store.

In Nov. 1975 Bill established the Self Health Center which by 1976 grew into the Community Health Foundation (CHF). By 1976 CHF was offering classes in soyfoods. Paul Jones was the key man with tofu; he taught classes and started making tofu out of his home in the Highgate area. Paul Jones was definitely the first Caucasian to pioneer tofu in England. Simon Bailey, a baker who was originally with one of the first natural foods stores in England, located in Bath, taught about tempeh. These people were experimenting in the kitchen with soyfoods and taught in a sort of an apprenticeship program. Jon Sandifer, who is still with CHF, learned tempeh from Simon Bailey. CHF sold some tofu and tempeh through its own sit-down restaurant named The Seven Sheaves, then renamed The Natural Snack and changed to a cafeteria. A few people did experiments with miso but it never got to a commercial scale in part because of persistent rumors that Lima Foods was going to start making it.

By the late 1970s soyfoods were growing in popularity in the UK. Two separate groups promoted them; the vegetarians and animal rights people (who liked TVP), and the natural foods and macrobiotic people. Marigold Foods also used TVP in the mid-1970s.

Much of important pioneering commercial work with soyfoods in Europe was done by macrobiotic groups in the Netherlands and Belgium. Bill often went there to teach in 1974-79. Tofu, and later tempeh, were emphasized by groups such as Manna in Amsterdam and De Brandnetel in Antwerp. Macrobiotics was much more active in the Lowlands than in England.

The Sams brothers later started Whole Earth as a marketing company for their jams. They sold it fairly soon. Greg Sams (disabled) is no longer in the food business; he runs The Chaos Shop in London which sells photographic reproductions of computer-generated chaos patterns. Craig started Realeat Co. and now may be with the Haldane Foods Group. Address: Director, Nova Inst., P.O. Box 4648, Estes Park, Colorado 80517. Phone: 303-586-6265.

9736. Stackler, Ben. 1991. Macrobiotics and soyfoods in the Soviet Union (Interview). *SoyaScan Notes.* Aug. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The macrobiotic movement in the West has recently been very active in Eastern Block countries. The leaders there are mostly medical doctors. They are treating Chernobyl radiation patients using macrobiotics. Two areas of greatest activity in the USSR are Leningrad (now named St. Petersburg), and a city in the Ural Mountains (east of Moscow) named Chelyabinsk (also spelled Cheliabinsk; a subdivision of the Russian S.F.S.R.). The St. Petersburg doctors have many ambitious plans. They want to manufacture miso and tempeh on a commercial in cooperative with a brewery in St. Petersburg. A year ago there was a macrobiotic conference in Yugoslavia; 500 people from all over Europe attended and Michio Kushi was the featured speaker. In October 1990 Ben went to Moscow and St. Petersburg with 6 macrobiotic people. He had hundreds of pounds of donated miso sent by airlift to the USSR. The *One Peaceful World* newsletter, published by the Kushi Institute in Massachusetts, did a story on his October trip; it includes the names and addresses of the interested people. He will be making a second trip to the USSR within one week, revisiting people he met before.

Note: The MacNeil/Lehrer Newshour reported on 14 Feb. 1992 that a top-secret Soviet nuclear weapons complex

© Copyright Soyinfo Center 2014

is located near the city of Chelyabinsk. It is one of ten which together produced all of the former Soviet Union's nuclear weapons. Address: 1400 Shattuck Ave. #7-2, Berkeley, California 94709. Phone: 415-527-9389.

9737. Sams, Craig. 1991. Pioneering macrobiotics and soyfoods in England, 1967-1979 (Interview). *SoyaScan Notes*. Aug. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Craig and Greg Sams were both born in America. Their mother is from Nebraska and their father from Pittsburgh, Pennsylvania. Greg is 4 years younger than Craig. During the 1950s and 1960s the family went to England periodically, largely because Craig's father worked in England as a historian for the U.S. Air Force. In 1965 Craig took a year off from college, traveled around the Indian subcontinent, and got hepatitis. Upon returning to the Univ. of Pennsylvania in Philadelphia for his final year, he fell in with 3 followers of macrobiotics and got interested in macrobiotics. In about Feb. or March of 1966 he went to the Paradox, a macrobiotic restaurant in New York and decided that he wanted to start a similar restaurant in London. In late 1966 Craig's brother, Greg, fell out of a tree in Berkeley, was paralyzed from the waist down and was confined to a wheel chair–as he still is.

In Feb. 1967 Craig started a restaurant named the Macro at 10-A Airlie Gardens, Holland Park, London. Yoko Ono, John Lennon's wife, was one of the first regulars. She was the first person Craig met in London who was aware of macrobiotics; she had learned about it in Japan. But Craig had to close Macro after 2 months because of zoning problems. In mid-1967 Greg joined Craig in London and in Dec. 1967 they opened a new macrobiotic / natural foods restaurant named Seed at 136a Westbourne Terrace, W.2, London–a few minutes walk from Paddington Station. Soyfoods were a part of the menu. They got Kikkoman shoyu, shiro-miso, and Hatcho miso from a Japanese import company named Mikado-ya, which was run by Japanese in southeast London out of the basement of a house and supplied Japanese embassies in Europe and Africa. At that time Craig thinks there were no Japanese restaurants or retail stores in London. Seed soon started to import Hatcho and barley (mugi) miso from Muso in Japan. Seed never used any of Lima's soyfood products. Seed also used fermented tofu; they mixed it with tahini, spread it on bread, and called it a Rarebit–an alternative Welsh Rarebit, which is cheese on toast. Seed purchased fresh tofu and [mung] bean sprouts from a Chinese company named Lung Kee on Fermoy Road, Paddington, London, right on the banks of the canal. It was run by one Chinese man who employed about 15 West Indian / Jamaican women who made the foods. Bean sprouts accounted for most of Lung Kee's business. Craig has no idea when Lung Kee started making tofu. In addition to its mainstay, brown rice, Seed served the tofu diced in miso soups, or sauteed with vegetables such as nitsuke carrots, etc., or as a dessert with tofu and apple concentrate whipped with fruit to a thick creamy consistency and chilled. The restaurant did well. It was soon famous for its "groovy vibes" and its free meal of brown rice, veggies, and green tea for those who could not afford to pay. Although the Sams brothers were not "proponents of the brown rice and marijuana regimen" (as Kotzsch had implied in 1985, p. 221), Seed was a favorite hangout for a host of '60s counterculture celebrities such as The Beatles, The Rolling Stones, Yoko Ono, and others. Americans such as Bill Tara, Peggy Taylor, Eric Utne, and Paul Petrofsky also worked there. Then people began to ask the Sams if they could buy staple foods from the restaurant. So food was soon packaged and sold over the restaurant counter.

In about March 1969, to meet the growing consumer demand, the Sams brothers opened Ceres, a natural foods / macrobiotic retail store, at 8-A All Saints Road, 2 bocks from and parallel to Portobello Road. Ceres also did extremely well, with Greg and various managers having the main responsibility while Craig focused on the restaurant. Soyfoods retailed by Ceres included Hatcho and mugi miso, tamari, fermented tofu, and fresh tofu sold in trays immersed in water. Eventually Bill Tara and Peter Bradford took over management of Ceres. Soon other people began to open restaurants and natural foods / macrobiotic stores like Ceres in college towns in England: Infinity Foods in Brighton (at Sussex University; Peter Deadman, Robin Bines, Simon Bailey were involved), Arjuna in Cambridge, Harvest in Bath, and On the Eighth Day in Manchester. In 1970 the Sams developed a large mobile tent macrobiotic restaurant and made a lot of money by taking it to various big rock festivals.

In Aug. 1970 Harmony Foods was established as a natural foods / macrobiotic import, product development, and distribution company. The money from the mobile restaurant was used to rent a building at No. 10 St. Luke's Road in London (only about 300 yards from the Ceres shop), and to import enough products to start a line / range of products under the Harmony Brand (the logo was a yin / yang sign). They stored and packed these in basement at Harmony Foods. Starting in 1969, the first imports for the restaurant and for Ceres had came from Muso in Japan, and from a macrobiotic society in Vietnam came red rice and green tea. In 1970 they started to import 4-5 tons of organically-grown brown rice from The Camargue in the south of France. Grown by the same man who grew brown rice for Lima Foods, it became the company's main product. Harmony Foods started out with about 20 customers–16 conventional health food shops and 4 of the new wave of natural foods stores (which the natural foods stores called "grain shops"). Wholefood of Baker Street was the pioneer "organic shop" that started in the 1950s. They were part of the Soil Association, so organic growers used it as an outlet

© Copyright Soyinfo Center 2014

for the first organically grown produce retailed in England. They soon became an important outlet for Harmony Foods as well. In addition a man named Ivan Seruya would collect food (mostly produce) from the organic growers and deliver it to restaurants like Seed and Manna in London. One other product that was grown organically was Pimhill Flour. Harmony Foods was a pioneer in developing new organic growers (such as Stewart Patterson who farmed wheat with horses) and in putting organically grown foods into retail outlets.

By Aug. 1970 Harmony Foods was distributing soyfoods, including Hatcho miso, mugi (barley) miso, and tamari from Muso in Japan–imported in wooden kegs and packed in glass jars. These were the first miso and shoyu products available at retail outlets in England.

In Jan. 1971 Harmony Foods outgrew its building on St. Luke's Rd. and moved into a larger warehouse at 191 Latimer Road (Maidenhead), a former cosmetics factory. Just before the move, Bill Tara informed the Sams that he was in London to set up Erewhon Europe to compete with Harmony. The restaurant, Seed, was sold in the spring of 1971 and reopened as The Magic Carpet. In 1971 Ceres was renamed Ceres Grain Shop and relocated at 269 A Portobello Rd.

In mid-1972 the shop next to Ceres closed. The Sams took it over and made it into Ceres Bakery. It transformed large amounts of wheat, organically grown in England, into unique and delicious naturally leavened breads. The enzymes in the freshly-milled flour helped to leaven the bread.

When they closed down Seed, the restaurant on All Saints Road, there was still a demand for simple macrobiotic food, so in about Feb/March 1971 they opened Green Genes, a sort of macrobiotic workingman's café on a much smaller scale. Each person picked up her or her food from a counter; there was no table service. It was open for lunch only whereas Seed had been open only in the evenings.

In 1972 they began to publish a magazine titled *Seed: The Journal of Organic Living.* Bill Tara and Peter Bradford helped with it occasionally. It continued for 6 years. That same year, above Ceres Bakery, started Ceres Bookstore, which only last for 1½ years.

Meanwhile Bill Tara and Peter Bradford had expanded and transformed Ceres Grain Shop, but in a way that led to extensive shoplifting, so it was scaled back to near its original size and finally sold in 1979 to Jack Weller. By that year all efforts and resources were focused on Harmony Foods, the wholesale business. Peanut butter (non-organic), the first product manufactured by Harmony, was now in two of the leading supermarket chains, Safeway and Waitrose. Address: 269 Portobello Road, Notting Hill, London W11 1LR, England. Phone: 071-229 7545.

9738. Weigel, Linda. 1991. Witte Wonder sold by Solnuts B.V. New developments with Solnuts in the USA (Interview). *SoyaScan Notes.* Aug. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In mid-1990 Solnuts B.V. sold Witte Wonder to Appel Frenzel GmbH (Kieschecker Weg 240), D-4000 Dusseldorf, Germany. The transfer of ownership took place on 9 June 1990. Witte Wonder was not sold to Wim Bakker (who had been running it for them since 1986) as planned in early 1990, but Wim is still working at Witte Wonder. Solnuts considered Witte Wonder to be too far away from their core activities, and were glad to be free of it.

Solnuts are now being exported to Japan; Solnuts Inc. in Iowa ships them to Toshoku, a Japanese distributor, which sells them to Snow Brand Foods (Yuki-jirushi), for use in mixes, cereals, and also packaged as a snack item. In the U.S. several cookie and bread companies have started using Solnuts within the last year in place of almonds and more expensive nuts. These products are now on the market, but their names are confidential. The Zero candy bar made by Leaf and a salad topping from McCormick both still contain Solnuts. Address: Sales Manager, Solnuts, Inc., P.O. Box 450, 711 Seventh St., Hudson, Iowa 50643. Phone: 800-648-3503.

9739. Nichii Company of America, Inc. Mycal Group. 1991. Is your tofu the right tofu? Lite is right for the 90's (Leaflet). Torrance, California. 1 p. Front and back.
• ***Summary:*** This red, green, and white leaflet was sent to most or all natural food retail stores in America on 22 August 1991. An illustration (line drawing) shows a large cake of "Natural Foods Store Tofu." The text reads: "Only tofu made from *Microsoy flakes* is right for the 90's. Because only tofu made from *Microsoy* flakes is: Lower in calories. Lower in lipids (fat). Higher in protein. And longer lasting on your shelf... than tofu made from ordinary soybeans. So tofu made from *Microsoy flakes* does indeed offer your health conscious customers substantial benefits, while you can benefit from increased sales, increased store traffic, rapid turnover, and customer satisfaction... How do you get the tofu that's right for the 90's on your shelves? Make sure your supplier is using *Microsoy flakes.*

A footnote states "All results confirmed by independent testing at Iowa State University, Food Science and Human Nutrition Department." Note: America is truly in need of a tofu containing lower calories and lower fat. Address: 23440 Hawthorne Blvd., Suite 140, Torrance, California 90505. Phone: 213-791-0010.

9740. Oshita, Ichiko; Kanamori, H.; Mizuta, M.; Sakamoto, I. 1991. Shôyu-chû no hen'i gen kassei o yûsuru beta-karuborin yûdôtai [A mutagenic β-carboline derivative in soy sauce]. *Shokuhin Eiseigaku Zasshi* (*J. of the Food Hygienic Society of Japan*) 32(4):272-77. Aug. [17 ref. Jap; eng]
• ***Summary:*** "A yellow substance (YS) isolated for the first time from soy sauce by HPLC showed weak mutagenicity

© Copyright Soyinfo Center 2014

in *Salmonella* TA 100 without S9 mix. The mutagenicity of the YS increased 7.5 times (His+ revertants /µg/plate) after treatment with sodium nitrite.

"The YS was identified as 1-(5-hydroxymethyl 2-furyl)-9H-pyrido [3, 4-b] indole (1-hydroxymethyl -furyl-Beta-carboline) by MS, ^{1}H-NMR and ^{13}C-NMR. The survey showed that the concentration of YS in Koikuchi soy sauce (regular fermented) was 2.0 µg/ml. The semi-fermented Koikuchi soy sauce and the soy sauce supplemented with amino acid had 0.79 µg/ml and 0.38 µg/ml, respectively. The amount of YS in three kinds of soy sauce increased two fold by heating (120ºC, 20 min). The concentration of YS in soy sauce might serve as a good quality indicator for soy sauce."

9745. Spear, Bill. 1991. Soyfoods in Yugoslavia (Interview). *SoyaScan Notes.* Sept. 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bill just returned from a 1-week macrobiotic summer camp at Kumrovec, Croatia, Yugoslavia; 75 people plus staff attended–during the current civil war. Last year he attended the same event, along with 600 other people. There are presently an estimated 5,000 to 10,000 macrobiotic people in Croatia. The major activity is in Zagreb. Croatia has most of the money and industrial productivity in Yugoslavia and that is a major reason that Croatians want independence. The Serbians are a relatively poor majority.

There are two commercial and at least three home-based soyfoods manufacturers in former Yugoslavia. The best contact is Ivan Jugovac (about 40 years old), owner of Anyo located at Skolska Ulica 43A, 51215 Kastav (near Rijeka), Croatia, Yugoslavia. Ivan knows the names of the other soyfoods companies in Yugoslavia and is part of a loosely-knit soycrafters network there. Anyo, which started about 2-3 years ago, makes 250-300 kg/week of tofu (100 kg/day in 4 or 5 batches) and 150-200 kg/week of seitan. From the tofu they also make smoked tofu, grilled tofu, deep-fried tofu, and tofu spread (with okara). The tofu is made in a 100-liter steam jacketed kettle and the nigari is imported from Japan. Their soybeans (which are not organically grown) come from Becej (pronounced BECH-ay) in Serbia, Yugoslavia. The business is doing well. Ivan makes natto for his personal use. He wants to start making miso and amazake commercially, and is looking for sources of koji and koji starter.

A second soyfoods shop in Belgrade, Serbia (name, address, and contact person unknown) makes tofu, seitan, and tempeh on about the same scale as Anyo. It probably started at about the same time as Anyo. There are 1-2 small tofu shops in Zagreb, and one in Novi Sad, Serbia; in each, the tofu is made in a home kitchen. In Slovenia, a tofu company that will be the largest in Yugoslavia is nearly ready to begin operation in Slovenia, but the current civil war has delayed their opening. They plan to make 100 kg/day of tofu.

The man who knows the most about soyfoods in Yugoslavia is Zlatko Pejic, a peace activist who is president of the Society for the Improvement of the Quality of Life and head of the macrobiotic community in Zagreb. His wife is a cooking teacher. He invited Bill to Yugoslavia, has been to the USA, and lectures throughout Yugoslavia. He has visited most of the soyfoods companies in Yugoslavia, has a fax, and like Ivan speaks pretty good English.

Basically all of the interest in soyfoods in Yugoslavia grew out of macrobiotics. Several of the people who started companies attended the Kushi Institute in London. Two years ago, others attended the International Macrobiotic Institute in Kiental, Switzerland. In both places there are classes in soyfoods production (miso, tempeh, tofu, etc.) taught by various macrobiotic teachers such as Roberto Marrocchesi. Most companies have some books from Soyfoods Center. Bill is still actively affiliated with The Bridge in Connecticut and is a teacher of macrobiotics. Address: North Road, Bantam, Connecticut 06750. Phone: 203-567-0554.

9750. *SoyaScan Notes.* 1991. The concepts of alkaline (*arukari-sei*) and acidic (*sansei*) foods in Japan (Overview). Sept. 20. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** It is common knowledge among most typical Japanese that foods can generally be classified along a continuum that ranges from alkaline at one end to neutral (*chusei*) in the middle, to acidic at the other end. Alkaline foods (those with an alkaline ash) are generally considered to promote and protect health. It is widely believed that one should try to keep one's blood a little on the alkaline side of neutral. According to E.C. Grey's *The Food of Japan* (League of Nations, 1928) and *Inshoku Jiten* (*Encyclopedia of food and drink;* Motoyama 1958; see arukari) and to discussions with numerous Japanese, well-known alkaline foods are as follows. Each food is followed by an "alkaline value" in parentheses taken from Grey (1928, p. 56-111; the "alkalinity is due to lime and magnesia"): sea vegetables including kombu (88.9), wakame (55.8), nori (35.3); black soybeans (40.2), yellow soybeans (38.1), soyfoods (and Soyfoods Center) including yuba (25.6), kinako roasted soy flour (25.2), Hamana natto (Hamanatto 24.8), natto (19.3), green soybeans (ao-daizu, dry; 17.8), Misozuke (vegetables preserved in miso, 16.3), shoyu (14.3); red miso (11.5), okara (9.0), white miso (8.1), edamamé (green vegetable soybeans, 5.8), aburage deep-fried tofu pouched (6.7), soymilk (3.8), tofu (1.1), shiitake mushrooms (41.0), azuki beans (27.0), umeboshi salt plums (3.1), dried fruits including dried fig (46.8), dried persimmon (21.3), raisins (15.3), cheese (18.0), most fresh fruits including yuzu (citron, 11.7), buckwheat (7.0), fig (6.3), lemon (5.9), banana (4.6), mikan (mandarin orange, 4.0); root vegetables including potatoes (13.9), tororo imo (11.5), daikon radish (5.0); most green vegetables such as komatsuna cabbage (11.3), or daikon leaves (10.9), pickled vegetables such as takuan (14.6). Alkaline beverages or liquids include tea, coffee, dairy milk (2.6), condensed milk (8.0), powdered milk (26.6), grape wines, and vinegar.

Acidic foods, which the Japanese believe should be used in moderation, include: white sugar (0), mizuame [rice syrup] (0), chocolate (3.0) and other sweet foods, eggs (2.8), flesh foods including chicken (5.2), pork (5.2), beef (5.1), fresh fish (avg. 5.3), alcoholic beverages including amazake (0), beer (0), sake (0); animal fats including butter (1.6), margarine (0.9).

Many Japanese find that acidic foods, when consumed in excess, give them acid indigestion. Neutral foods include rice (0.5-2.9), wheat (3.5-6.6), barley (2.7-4.6), and wheat gluten (1.0).

Note that this classification system is unrelated to the yin-yang continuum used by macrobiotics; most Japanese are unaware of macrobiotics. The latter, for example, considers meat to be yang (alkaline), whereas wines, fruits, and milk are yin (acidic).

9751. Lydon, Sandy. 1991. How to do research on Japanese and Chinese agriculture in California (Interview). *SoyaScan Notes.* Sept. 25. Conducted by William Shurtleff of Soyfoods Center. [5 ref]
• ***Summary:*** Sandy has done extensive research on the Chinese and Japanese in 3 counties in and around Monterey County. He has read every newspaper on the subject since the earliest times and keyed the important information into his bibliographic database. Most Asian immigrants began, in about the 1870s, as field laborers, then became contract workers, then lease holders. In the typical 5-year reclamation lease, they would find a landowner would had land that needed to be cleared, take 4 years to clear it, then farm it the 5th year. The owners never renewed the leases.

The best researcher on Chinese agriculture in California is Sucheng Chan, who is now chair of the Asian-American Studies Dept. at the University of Santa Barbara. She traveled all over California, living out of her car, visiting county seats and examining documents, such as assessors records, lease books, poll taxes, etc. to try to reconstruct a more accurate picture of the early Chinese in California. All is container in her 1986 book *This Bittersweet Soil.*

Another good researcher is Peter C.Y. Leung at the Univ. of California at Davis, Asian-American Studies Dept. His field is the Chinese in the Sacramento Valley. He has written about Locke, near Walnut Grove.

Another group are the archaeologists at the University of Idaho at Moscow, probably in the Archaeology or Anthropology Dept. Most are white and have relatively little knowledge of Asian-American culture. They do digs and produce lots of printed reports, detailing discoveries of things such as shoyu containers. They try to reconstruct the early history in this way. They have an archaeological clearinghouse and museum.

Paul Chace at the Univ. of California at Riverside is interested in this Asian-American archaeology viewpoint, and he knows the researchers well. He is at 1823 Kenora Dr., Escondido, California 92027. Phone: 619-743-8609.

Very important, influential, and wealthy is the Japanese-American National Museum in Japan Town, Los Angeles. They have a scholarly advisory committee and have raised

© Copyright Soyinfo Center 2014

about $10 million during the last year. Akemi Kikumura, curator of their whole collection, is a great lady and very knowledgeable. The museum has a great collection of interviews with early Japanese-Americans.

Nearby is the UCLA Japanese-American Collection, which is vast but not well organized. In about the 1970s, they sent people all over California to do interviews with first-generation Japanese immigrants. They have a newsletter and many exhibits. Address: History Dep., Cabrillo College, Aptos, California 95003. Phone: 408-479-6223.

9752. Okihiro, Gary. 1991. Research on early Japanese farming communities in California (Interview). *SoyaScan Notes.* Sept. 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Gary is co-author of a book titled *Japanese legacy: Farming and community life in California's Santa Clara Valley.* In researching this book, which covers the period 1895-1945, he does not recall seeing any reference to Japanese growing soybeans in California, but he is almost sure they must have done so. The foremost expert on Japanese agriculture in California is Masakazu Iwata, now Professor Emeritus (retired 5-6 years ago) at Biola University, a small religious college in Los Angeles. He now lives in Montebello, California (phone: 213-723-4389), and he will soon be coming out with a book on Japanese farming in California titled *Planted in Good Soil.* Another very knowledgeable person on this subject is Sucheng Chan who has already published a book on Chinese farming in California and will soon be coming out with one on Japanese farming in California.

Concerning early Japanese farming communities in California, the earliest one he knows of was established in 1865 near Sacramento. It was an agricultural colony named the Wakamatsu Tea and Silk Farm Colony. They came with a feudal lord and tea plants, bamboo shoots, and silk worms. Gary says: "I'll bet they brought over soybeans." They left Japan as disposed people, since they had been on the wrong side (with the Shogun) during the Meiji restoration. Very little has been written about this community, since they did not leave many records. Some mention is made in a book by Bill Hosokawa titled *Nisei: The Quiet Americans* (1969. New York: W. Morrow). In addition, the community was discussed by local Caucasian newspapers. The first Japanese woman to die in California was a member of this community; her grave still exists outside Sacramento. In 1885 there was a Japanese farming community located east of San Francisco Bay. In addition, a Polish traveler to San Francisco described the Chinese gardens surrounding the city. He mentioned a number of crops in his travelogue.

Gary thinks it is more likely that Chinese (rather than Japanese) immigrants first grew soybeans in California. Address: Cornell Univ., Ithaca, New York. Phone: 607-255-6742.

9753. Chan, Sucheng. 1991. Food and agriculture among early Chinese and Japanese in California (Interview). *SoyaScan Notes.* Sept. 27. Conducted by William Shurtleff of Soyfoods Center. [2 ref]

• ***Summary:*** The Chinese in California during the 1800s imported a surprisingly large amount of merchandise and food from China. She would not be surprised if they imported soybeans to make tofu–but they may well have grown the soybeans in California since they did pioneering agricultural research on many new crops. She thinks she recalls seeing a document (probably in account books in the Bancroft library) stating that Chinese imported a kind of dried tofu. When she was researching her book on Chinese in California, titled *This Bittersweet Soil,* she couldn't find any source materials in Chinese, except for account books, which do list beans. But it is never clear what kind of beans they are. And of all the English-language materials she used, there was no reference to soybeans. However in ship's manifests now in the San Francisco customs house, there were many references to bags of beans (see Robert F. Spier).

She does not have any records for Chinese farming in the Imperial Valley, because by the time that irrigation was supplied after 1905 the Chinese had pretty much left agriculture except in a few places where they were already well established.

She could look up her lease records for various counties to see where beans were most widely grown by Chinese. She wrote down beans many times from lease records but does not recall ever writing down soybeans. The Chinese and Japanese farmed mainly in the Delta (of the Sacramento River). She can (and will) very quickly look through her lease records for soybeans, county by county. If she finds a county where there are many records for Chinese or Japanese growing beans, one could then start looking for other sources, such as reports by extension agents or newspapers, to see if soybeans were grown.

Note: Soybeans grow best on sandy or clay loams containing fair amounts of potash, lime, and phosphoric acid. See also: A brief history of soybean cultivation in California (SoyaScan Notes, 28 Sept. 1991).

She has commissioned a lot of detailed translations from books, written in Japanese by Japanese in the USA, that deal with Japanese agricultural and economic activities and crops in California. The period covered in about 1900 to 1940. She has never looked at these carefully to see if soybeans are among them. Her book on Japanese agriculture in California will probably not be ready for at least 5 years because she is too busy with other things. She has a whole room full of material, including many charts. She thinks it is more likely that she will find a document concerning Japanese growing soybeans in California rather than Chinese–because she has almost no Chinese-language sources.

When she was teaching at Cal, Berkeley, she deposited

© Copyright Soyinfo Center 2014

photocopies of the originals of about 20 of these books in the Asian-American Studies Library, 101 Wheeler Hall, at the University of California at Berkeley. The originals are at UCLA, at either the East Asian Library or the Asian-American Studies Center. The two best and most detailed books among these are titled *Zaibei Nihon-jin Sangyô Sôren* and *Zaibei Nihon-jin Shi.* Each has a detailed table of contents. Address: Chair, Asian-American Studies Dep., Univ. of California at Santa Barbara, Santa Barbara, CA 94301. Phone: 805-893-8179 or 2371.

9754. *Star-Tribune* (*Minneapolis, Minnesota*). 1991. From Minnesota to Japan, soybeans for sake. Sept. 27.
• ***Summary:*** A large photo shows a number of men in suits and ties using wooden mallets to break open a 50-gallon keg of sake. The caption states that Minnesota's governor Arne Carlson joined Japanese businessmen and others on Thursday, September 26, in a ceremony rarely seen in Minnesota. Known in Japan as *Kagami Biraki,* it is a sake barrel-busting ceremony. It took place from 12:15 to 2:00 P.M. in St. Paul, Minnesota, at the Como Park Conservatory, in the Memorial Japanese Garden, and it marked the signing of a five-year multimillion-dollar soybean contract between the Nishimoto Trading Co. of Tokyo, Japan, and the Jameson-Williams Co. of Fairmont (also located at East County Road 34, Rt. 1 Box 53A, Jackson, Minnesota 56143. Phone: 507-847-3591). Address: Minnesota.

9755. *SoyaScan Notes.* 1991. A brief history of soybean cultivation in California (Overview). Sept. 28. Compiled by William Shurtleff of Soyfoods Center. [5 ref]
• ***Summary:*** The soybean was introduced to California in March 1851, via San Francisco, by Japanese fishermen who had been saved from a ship foundering at sea by the American ship Auckland. But these soybeans were apparently never grown in California; they were taken from San Francisco by Dr. Benjamin Franklin Edwards to Alton, Illinois, where they were grown successfully in the summer of 1851 by Mr. John H. Lea in his garden. Soon they were also grown in Iowa and Ohio (Hymowitz 1987).

In 1899 Walter C. Blasdale, an instructor in chemistry at the University of California, became the earliest known person to grow soybeans in California. He obtained the seeds from a Chinese market in San Francisco, then grew them in Berkeley, Alameda County.

The first soybean variety tests in California were conducted in 1918 at the University farm at Davis, Yolo County. It was found that soybeans did not thrive well in the interior valleys of California (Hendry 1921; Beard et al. 1973). By 1926 soybeans were being grown in the irrigated districts of California, especially in the orange section of southern California (Morse 1926). By 1944 soybeans were found to grow well on the bottom lands of the lower Sacramento River and in the warmer coastal valleys (Madson 1944).

In 1951 soybean trials began in the Imperial Valley of California, and from 1955-57 soybeans were grown with good results throughout the San Joaquin and Sacramento Valleys (Beard et al. 1973). By the 1970s and 1980s most of the soybeans grown in California were grown in the San Joaquin Valley.

9756. Gerner, Bob. 1991. More early history of Westbrae Natural Foods in California, 1972 to 1980 (Interview). *SoyaScan Notes.* Sept. 29 and Oct. 1. And 11 May 1992. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Gordon Bennett arrived in 1972. He started as a customer, then began work as a janitor, then became a partner. At that time Bob Ortiz was asked to leave. The first year in business, Westbrae made only $7,000 profit before any wages were paid to the three partners. Profits were plowed back into the business. Bob lived in the store to save money.

In 1972-73 Westbrae rented a small separate warehouse several blocks away at 1340 San Pablo Ave. They also rented a rat-infested bakery on East 14th St. in Oakland. There they baked granola and bread; Ganesh (Ganesha) was their bread baker and delivery man. In the late fall of 1973, after less than a year on San Pablo Ave., they moved into a much larger warehouse nearby at 1224 10th Street and incorporated the company. At that time Westbrae began importing traditional, natural foods from Japan. They imported soy sauce in bulk and bottled it at their 10th street facility. Also at that time, Bob transferred all his past company records to the corporation. Bob Gerner owned 28% of the stock, Margaret and Kristin (who had now joined) owned 24% each. Three employees owned stock: Gordon Bennett owned 18%, and Jerry Heverly and Rick Lewis each owned 3% each. The company formed an AESOP (accelerated employee stock ownership plan); the goal was for everyone who had worked for the company for a given time to own shares. As soon as Westbrae formed the corporation and the AESOP, there was constant fighting. They spent more time fighting about ownership than running the business. Prior to incorporation, Bob had made most of the decisions himself; afterwards, though president, he ran the company by committee, and felt that the board should make all the major decisions. This was crazy and rendered Bob ineffective, but he felt he no longer owned the company. Also, he didn't realize that Gordon's main goal was to become the head of the company.

From Feb. 28 to March 2, 1974, Bob traveled throughout Japan, with William Shurtleff as his guide, looking at potential suppliers.

At that time Westbrae had financial problems. They hired Stewart Emery to conduct a self-realization seminar for all the employees in the mountains to give more focus. Before the seminar, the owners had a meeting in which they shared frank feelings about one another–who was effective

© Copyright Soyinfo Center 2014

and who wasn't, how the company was going, etc. Rick Lewis got voted off the board of directors and Gordon Bennett became general manager, replacing Bob Gerner, who was demoted to chairman and president. Stewart Emery later said that the seminar was his only failure. Rick Lewis was asked to work in the retail store as a clerk; he used that as a base to organize a union. On 22 Dec. 1975 the production employees formed a union, named the Alternative Food Workers Alliance. Westbrae was stuck with a union until Gordon Bennett sold the company to Vestro. At one point they may have joined the teamsters union.

Bob and Gordon had an ongoing struggle. In July 1976 Bob left Westbrae (although he was still president) and bought the retail store (Westbrae Natural Foods) back from the company at a very good price. It had been losing money, the company couldn't sell it (in part because it was unionized), and Gordon wanted to just shut it down. Bob closed it for 3 months, remodeled it, then opened it again in late November as Gilman Street Gourmet: Natural Foods & Delicatessen. Shortly thereafter, Westbrae moved its warehouse from 10th Street in Berkeley to Emeryville because the company needed more space and the rent was much better. Bob was disappointed with the move because the 10th Street warehouse had been just a few blocks from his Gilman Street Gourmet.

In about 1977 Bob, Gordon, Margaret Ortiz and Kristin Brun got together for two sessions at Kristin's house, to discuss and have recorded the early history of Westbrae; a woman whom Kristin found apparently wrote down that history. Kristin now lives in Richmond Annex with Marty Roth, and probably has lots of early Westbrae documents and photos. In July 1977 the Oakland Tribune, then the San Francisco Chronicle each did nice articles about Westbrae. In September 1977, Westbrae Natural Foods moved its warehouse and offices from Berkeley into a much larger building at 4240 Hollis St., Emeryville, California 94608.

Gordon was a good manager, but in 1976, at the time Bob Gerner left, he and Bob were each earning only $800/month. Gordon began to push for higher salaries, so he called in Lloyd Dubroff and Bruce Handler who ran a seminar called POEM (Plan, Organize, Execute, and Manage). Bob hired them as consultants at the retail store, then they served as mediators on a conflict between Gordon and Bob over pay levels. They tripled Gordon's salary to $52,000 a year and he liked them instantly. Gordon hired them as consultants on a continuing basis, then he decided they should be on the board. Kristin Brun got voted off the board and they got voted on. In March or April 1979 Gordon announced at a board meeting that he was going to take a sabbatical starting in 6 months and that he didn't want to run the company any more. The board members said "We think you should leave now," so they voted him off the board–much to Gordon's surprise. The board made Lloyd Dubroff the general manager and chief operating officer, and Bruce Handler became CEO. At that point Bob ceased to be president of Westbrae, but he still owned the controlling share of stock–which he continued to own until 1985.

Dubroff and Handler's first move was to draft a budget and get the financial statements up to date. The financials showed that the company was doing very well. Westbrae had just opened a warehouse in the City of Bell (4841 Eastern Ave.) near Los Angeles (named Westbrae South), so Dubroff and Handler bought Celestial Natural Foods, a wholesale company run by Carter Allen on the docks in Oahu, Hawaii that Gordon had been pursuing and that had been a major customer of Westbrae's. Soon they began to increase inventories to 98% in stock, but they suddenly found that they were unable to pay the bills. The comptroller had made serious errors in the financial records, and Westbrae was almost bankrupt. The companies in Hawaii and Los Angeles were both losing large amounts of money, Bob Gerner returned to the company and began fending off angry suppliers and getting permission to string put payments. It was a very stressful time for Bob as he struggled to keep the company he had founded out of bankruptcy.

In Dec. 1979 or 1 Jan. 1980 the board invited Gordon Bennett back in as general manager. Gordon saved Westbrae. He transformed the company from an importer-distributor to an importer-manufacturer. He closed down the operations in Hawaii and Los Angeles, and sold off Westbrae's distribution rights in northern California–at a pretty good price. He also reduced the number of employees. Westbrae's top money-making products were now imported soy sauce (they imported it in drums and bottled it in Berkeley), and tamari-roasted nuts. Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

9760. Kudou, Shigemitsu; Fleury, Y.; Welti, D.; Magnolato, D.; Uchida, T.; Kitamura, K.; Okubo, K. 1991. Malonyl isoflavone glycosides in soybean seeds (*Glycine max* Merrill). *Agricultural and Biological Chemistry* 55(9):2227-33. Sept. [21 ref]
• ***Summary:*** Isoflavone concentration in the soybean hypocotyl is about 5-6 times higher than in the cotyledons. Nine kinds of isoflavone glycosides were isolated from the hypocotyls of soybean seeds. Three kinds were proved to be malonylated soybean isoflavones. The principal conjugated forms of isoflavones in the soybean hypocotyl were 6"-O-malonylglucosides. "All of the isoflavone components produced intensely undesirable taste effects such as bitter, astringent and dry mouth feeling."

A graph (p. 2229) shows "Isoflavone accumulation during maturation of Maple Arrow soybean seeds." The accumulation of daidzin, genistin, glycitin and their corresponding malonylated forms in immature seeds during development began at about 35 days after flowering and increased until about 60 days after flowering. Malonylgenistin and the genistin content increased during the late development of the beans, whereas malonyldaidzin and daidzin accumulated throughout the whole period. Address: 1&5. 9761. **Product Name:** [Emarin Cheese (With Soy Oil and Dairy Milk Protein)].
Foreign Name: Emarin.
Manufacturer's Name: Miyoshi Yushi (K.K.).
Manufacturer's Address: Horikiri 4-66-1, Katsushika-ku, Tokyo-to, Japan. Phone: 03-3634-7141.
Date of Introduction: 1991 September.
New Product–Documentation: Article in Toyo Shinpo (Soyfoods News). 1991. Sept. 1. p. 9. "Daizu umare no chiizu. Miyoshi Yushi no 'Emarin'" [A cheese made from soybeans. Emarin is made by Miyoshi Oil Mill]. This is not a typical soy cheese; rather it is a fermented filled cheese made with soy oil and dairy milk protein. A photo shows the front of the package.

9762. Nishimoto, Miyoko. 1991. The now and Zen epicure: Gourmet cuisine for the enlightened palate. Summertown, Tennessee: The Book Publishing Co. 250 p. Color photos. Index. 24 x 21 cm.
• ***Summary:*** This is a gorgeous, delightful vegan cookbook (though it uses honey), loaded with color photos. Most recipes, designed for entertaining, embody an atmosphere of elegance with a sense of fun, capturing the best of traditional European cuisine, offering gourmet recipes with an element of Japanese style, simplicity, and flavor. Each recipe is accompanied by a nutritional analysis, and most are remarkably low in fat.

The author is founder and owner of the Now & Zen Bakery (1838 Golden Gate Ave., San Francisco, CA 94115) which is well known for its tofu cheesecakes and other delights, and which sells dried okara. She is also a jazz vocalist and vegetarian chef. Born in Japan to a Japanese mother and an American father, she moved to Mill Valley, California, with her parents when she was age 7 and became a vegetarian at age 12. A photo on the rear cover shows Miyoko Nishimoto. She shows great virtuosity in the use of soyfoods–and wheat gluten. The section on ingredients contains excellent, detailed information on miso, nut milks and creams (almond milk and cashew milk, which the author prefers for some uses to soymilk), agar, okara, soy milk and soy cream, soy sauce, soy sour cream, soy yogurt, tamari, tempeh, tofu, frozen tofu, and pressed tofu.

Soy-related recipes include: Tofu "cheese" (p. 32). Tofu "boursin" or herb-garlic cheese ball (p. 33). Tofu "feta" cheese (p. 35). Tofu cream cheese spread with herbs (p. 36). Eggplant and tofu pâté (p. 51). Smoked tofu, mushroom, and garlic canapés (p. 53). Tofu "mornay" sauce (p. 65). Tofu aïoli (p. 82). An introduction to quick and tasty tofu cream soups is given on p. 108. Each of the following cream soups contain tofu. Cream of pumpkin soup (p. 109). Cream of corn soup (p. 110). Cream of green pea soup (p. 111).

Mediterranean eggplant and tofu gratin (p. 115). Tofu burgers suprême (p. 118). Creamy tempeh curry (p. 119). Tempeh mexicali (p. 121). Sweet and sour tofu (p. 122-23). Whole cabbage with hearty tempeh stuffing (p. 124-25). Herbed soybean casserole or stew (p. 132). Savory tempeh and vegetable stew (p. 134-35). Tofu bourguignon (p. 138-39). Homemade tofu pasta (p. 142-43). Ginger tempeh with green peppers (p. 145). Homemade gluten, Tempeh and gluten burgers, and the Great gluten turkey with dressing (p. 150-160). Tempura tofu (p. 163). Marinated tofu (p. 164). Smoky marinated tofu (p. 165). Believable bacon (with tofu, p. 166). Beans and "bacon" casserole (with tofu, p. 167). Orange-soy dressing (p. 177). Tofu sour cream (p. 179). Tofu mayonnaise (p. 180). Tofu thousand island dressing (p. 182). Tropical coconut banana ice cream or sauce (with tofu, p. 212). A different pumpkin ice cream (with tofu, p. 213). Italian cheese-less cake (with tofu, p. 216). Cashew cheesecake (with tofu, p. 217). Tofu crème (p. 218).

For a lengthy and very positive review of this book by Carol Flinders, see *Vegetarian Times* Nov. 1991, p. 86-87. Address: San Francisco, California.

Japan.

9764. Stone, Kathy. 1991. Edamame: Fairmont firm grows and exports this soybean that is a favorite snack in Japanese bars and restaurants. *Minnesota Enterprise.* Sept. p. 12-13.
• ***Summary:*** Last year the Japanese ate 171 million pounds of edamame. The green vegetable soybeans are catching on in the United States and Jameson-Williams, a farm management firm in Fairmont, Minnesota, owned by James Lambert, is at the forefront of this agricultural export. The company employs 10 full time and 50 seasonal employees and had 1990 sales of $2.5 million.

The San Francisco (California) branch office of Japan's Nishimoto Trading Co. is the buyer of Jameson-Williams' edamame. Nishimoto is an importer and wholesaler of processed foods for Japan. Eiji Watanabe is the trading company's general manager.

"Duaine Flanders, technical services manager of the Agriculture Utilization Research Institute (AURI) in Morris, worked with the company to develop the technical expertise needed to process and handle edamame."

"With the help of a $50,000 matching grant from the Mid-America Agri-Trade Council (MIATCO), supported by the federal Foreign Agricultural Service, Jameson-Williams will be able to intensify promotion of its edamame know-how in Japan and Australia."

A photo shows James Lambert with Mike Nishihara (president) and Eiji Watanabe (general manager) of Nishimoto Trading Co.

9766. Kennedy, J. Robert. 1991. History of Chico-San's distribution and import operations (Interview). *SoyaScan Notes.* Oct. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Chico-San never really developed its own distribution company. It used other established distributors, such as Balanced Foods in New Jersey, K&L (Kahan & Lessin) in Los Angeles, Landstrom in San Francisco, and Health Foods Incorporated in Chicago. "We had a tough time getting started in selling macrobiotic foods. Chico-San also sold a lot of macrobiotic foods through its mail-order service because most of the large distributors only wanted the best-selling items such as rice cakes, soy sauce, and sesame salt; they wouldn't take the complete macrobiotic line." In late 1962, shortly after the company was established, Chico-San got a few vans and began a few small routes down to the San Francisco Bay Area and as far north as Redding, distributing 2 types of whole-grain bread (a rice loaf and an unleavened whole-wheat bread) and gluten-nut crackers to the Berkeley Co-op and established (old-line) health food stores. The Berkeley Co-op was one of the first to carry the full line of macrobiotic products. These routes continued until about 1964-65.

Chico-San's first really successful product was rice cakes. They were introduced in 1963 but initially the big distributors showed no interest. That changed starting in about 1964 when a new generation of rice cake machines began to make a better product and a few of the big distributors started to carry them. By 1965 Chico-San's rice cakes and other popular products were being sold at more than 150 California outlets. It was the national popularity of the rice cakes that kept Chico-San from developing its own distribution company, and relying instead on large established distributors–and later brokers.

By about 1966-1967 rice cakes and rice chips (*senbei*) were beginning to cut a wedge into the mass market nationwide, so Chico-San created the Spiral Foods brand for these mainstream products, keeping the Chico-San brand for the health food market.

Concerning imports of miso and soy sauce from Japan, Chico-San first imported directly from George Ohsawa; he located the manufacturer, put the order together, and shipped it himself. Then came Nippon C.I., which was started by George and some of his disciples in Tokyo, but it didn't last very long. In 1966 Chico-San started importing from Muso Shokuhin in Osaka. But after Muso started selling a lot to Erewhon (which became a major competitor for Chico-San), Bob felt that product quality began to decline, so he began to do all his importing from Ohsawa Japan, a company that was developed by George's sister-in-law (Lima Ohsawa's sister), Flora Tanaka, at George's request. Bob felt the quality of products from Ohsawa Japan was better than from Muso, but the prices were higher and the company was not quite as professional in its business dealings.

Concerning the sale of Chico-San to Heinz, Bob is overall not very happy with the outcome. Granted, rice cakes are now much more widely known and sold in supermarkets, but the loss of Chico-San "put a big hole in the process of selling macrobiotic foods." Bob and Herman Aihara bought back the macrobiotic line from Heinz and created Ohsawa America in Chico to try to sell it. Early general managers were Marty Roth, then Lane Seiger (who had previously worked for Bob at Chico-San). But the volume was not there on relatively few products to sustain a company profitably and eventually the company ran up debts of $300,000. At that point Bob basically gave the company to Sierra Natural Foods in Brisbane, California. Sierra had several thousand

© Copyright Soyinfo Center 2014

products; they only paid for the inventory. Bob is now working to develop new products from rice–such as a rice-crust pizza and crackers. Address: Chico, California. Phone: 916-891-0970.

9767. Shindler, Merrill. 1991. Affordable feasts: Japanese spots that offer more than just sushi. *Daily News of Los Angeles* (*California*). Oct. 10. p. L13. Valley edition. L.A. Life section.
• ***Summary:*** This review of the Japanese sushi bar Musashi in Northridge states: "As a sort of pre-appetizer appetizer, there's a wonderful little snack called edamame ($2.50), which is nothing more than a big bowl of boiled fresh soybeans, a dish found in every sake bar in Tokyo. You eat them by squeezing the slightly furry shells, until the little green beans inside pop out. They're more addictive, by far, than pistachio nuts."

9768. Rose, Richard. 1991. Highlights of the NFM Natural Foods Expo at Baltimore, Maryland (Interview). *SoyaScan Notes.* Oct. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sojasun, a soy yogurt made in France [by Triballat], was the best new product at this year's autumn show in Baltimore, held the first week in September. The flavor and texture were superb. Their agent in the USA is looking for an American company to manufacture the product and do a joint venture.

Nichii Co. of America had a huge exhibit, perhaps 4 booths, for their MicroSoy Flakes. Neither Richard nor anyone he has talked to can understand what Nichii is doing, or why anyone would want to buy their product. Yet many people are happy to be working with them since they seem to have a lot of money and they pay promptly. Perhaps they can see something that those who have been in the U.S. tofu and soymilk industry for many years cannot yet see.

Richard's fat-free version of TofuRella (named Heart's D'Lite) will be out by Nov. 1, and the individually wrapped slices by Dec. 1. A 100% casein-free cheese alternative and a soft cream-cheese type product are also in the works.

On Sept. 15 Sharon broker her leg in a freak rambunctious dog vs. owner accident. She is on involuntary sabbatical.

In about May 1991 Richard moved his business out of his home at 9709 St. Helena Rd., Santa Rosa, CA 95404-9623 into larger quarters at 616 Davis St., Santa Rosa, California. Address: P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-963-8628.

9769. Gilbert, Linda C.; Starr, Sara M. 1991. Natural foods companies broaden their horizons: Organic, vegetarian, convenience dominate industry. *Food Business* 4(20):44. Oct. 21.
• ***Summary:*** Discusses these three industry trends, plus San-J International, White Wave, and Lightlife Foods.

San-J will be introducing its OCIA organic certified tamari gold label in November. The 10-ounce product will sell for the same price as its non-organic counterpart. "While the majority of White Wave's $3 million sales still come from tofu, tempeh products reportedly are not far behind. The company says it is growing at about 30 percent annually, and its first and second generation tempeh products are achieving more than 100 percent growth. White Wave's latest offering is a soy yogurt product called Dairyless that is made with live active yogurt cultures, including acidophilus and bifidus. Lightlife Foods, another major soy foods company, has redesigned its logo and added two new products, a vegetarian chili and a sloppy joe mix, both made with tempeh." Address: 1. President; 2. Vice president. Both: HealthFocus Inc., Emmaus, Pennsylvania. Phone: (215) 967-2233.

9770. American Soybean Assoc. 1991. Soybean Association facts: A partnership for progress (Leaflet). St. Louis, Missouri. 1 p. Front and back. 28 cm.
• ***Summary:*** Contents: People and programs. Policy. Domestic promotion. Research. International promotion. Industry information.

"Soybeans represent the third largest cash crop in the United States. Nearly 40 percent of U.S. production goes into the export market, with Japan being the single largest importer... 32,000 farmers are dues-paying members of ASA."

Soybean oil-based inks were first used commercially in 1987. Today one-half of all daily U.S. newspapers have made the switch to soybean oil ink. Address: P.O. Box 41-9200, St. Louis, Missouri 63141-9200. Phone: 1-800-688-7692.

9771. Ebine, Hideo. 1991. Nutritive value and physiological function of miso. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 89-94. [17 ref]
• ***Summary:*** In 1989, approximately 599,000 tonnes of miso were produced commercially in Japan; of this, 80% as rice miso, 10% barley miso, and 10% soybean miso. In addition, an estimated 40,000 tonnes of miso were made at home. Per capita consumption was 5.2 kg/year. 90% or more of all miso in Japan is used as an ingredient in soups. Table 1 shows the 3 basic varieties of miso (rice, barley, and soybean), the 8 subvarieties based on taste and color, and the principal areas where each subvariety is produced. Discusses the basic process for making miso, the chemical composition, fatty acid composition and vitamin and mineral composition of 5 basic types, plus the amino acid composition of 4 basic types. Research is summarized which indicates that miso consumption reduces gastric cancer mortality (Hirayama 1984), miso contains an antimutagen against benzo(a) pyrene and trp-p-1 (Kitamura 1984), miso reduces hepatic

© Copyright Soyinfo Center 2014

[liver] tumors caused by neutron radiation of mice (Ita et al. 1989), a miso component depresses tumor formation by Sarcoma-180 inoculated in mice (Miyazaki 1989), salt-free miso has a cholesterol-lowering effect (Horii et al. 1990), and regular miso has antioxidative activity (H. Kato, 1989). Address: Central Miso Research Inst., Shinkawa 1-26-19, Chuo-ku, Tokyo 104, Japan.

9772. Fukushima, Danji; Motai, Hiroshi. 1991. Antimicrobial activities of soy sauce and manufacturing of preservative-free low-salt soy sauce including productions through bioreactor systems. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 113-20. [17 ref]
• ***Summary:*** Soy sauce is generally very resistant to the growth of microorganisms because of its high salt content (16.9% w/v for regular koikuchi shoyu). Nevertheless, a special microorganism such as *Zygosaccharomyces rouxii,* can grow atop soy sauce even under these circumstances. Therefore preservatives such as sodium benzoate or n-butyl-p-hydroxybenzoate have been used. However consumers now want soy sauce without preservatives and with reduced salt. Soy sauce containing either 9% or 13% salt is now available.

As the salt content of shoyu increases, the water activity decreases. Most microorganisms cannot grow when the water activity is below 0.9 which corresponds to a 14% salt solution. Soy sauce naturally contains two microbicidal (antimicrobial) substances: Alcohol (typically 2.5%) and organic acids (such as lactic, acetic, and citric acids).

"There are two basic methods for preparing preservative-free low-salt fermented soy which are quite different. One is prepared by removing some quantities of salt from ordinarily made soy sauce (method A). The other is produced by adjusting the salt content by the addition of water to specially made low-salt high-nitrogen soy sauce (method B)."

"Most of the genen-shoyu on the Japanese market are prepared by electrodialysis through ion exchange membranes by the method A described above. The consumption of genen-shoyu is grown steadily on the today's Japanese market and the production is estimated to be about 1% of total soy sauce consumption (Hirose, 1989). Usujio-shoyu is mainly produced by the method B and the total production marked by JAS was 15,345 kl in 1988." Address: Kikkoman Corp., 1-25 Kanda Nishiki-cho, Chiyoda-ku, Tokyo 101, Japan.

9773. Harada, K.; Hossain, K.G. 1991. Genetic variation of protein composition in soybean seeds. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 85-87. [6 ref]
• ***Summary:*** "Soybean seeds contain between 35 and 45% protein on a dry weight basis, of which about 70% consists of the two major storage proteins, 7S globulin (Beta-conglycinin) and 11S globulin (glycinin). The 7S globulin is a glycoprotein containing mannose and glucosamine... The 11S globulin is a simple protein composed of six intermediary subunits... The 11S globulin contains more sulfur-containing amino acids than the 7S globulin (Fukushima 1968)."

"About a thousand soybean accessions were screened for variation in subunit composition by SDS polyacrylamide gel electrophoresis (SDS-PAGE) and alkaline urea polyacrylamide gel electrophoresis (AU-PAGE)... The 11S/7S ratio ranged from 0.3 to 4.9." Address: National Inst. of Agrobiological Resources, Tsukuba, Ibaraki, Japan.

9774. Kitamura, Keisuke. 1991. Breeding high quality soybeans for food processing in Japan. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 81-84. [18 ref]
• ***Summary:*** All soybeans grown in Japan are used to make soybean-based foods in Japan. Progress has been made in breeding soybeans to increase the content of sulfur-containing amino acids, as well as improving the food-processing quality by using mutants lacking or with lowered subunits of 7S and 11S globulins, and eliminating the lipoxygenases which are responsible for the for the generation of objectionable beany flavors using 3 types of mutants lacking the isozymes L-1, L-2, and L-3 respectively.

7S and 11S globulins are the two major proteins which amount to about 70% of the total seed proteins... 11S globulin contains 3 to 4 times more methionine and cysteine per unit protein than that of 7S globulin. Furthermore, it was reported that the two globulins have very different functional properties in soy protein foods: the isolated 11S globulin fraction formed a much harder Tofu-gel. These reports suggest that the genetic reduction of the 7S globulin content in the seeds may improve the nutritional and food-processing qualities of soybean."

"Matsuura *et al.* (1989) reported that Beta-glucosidases in soybeans are responsible for the production of daidzein and genistein from the isoflavone glucosides, daidzine and genistin, respectively during the processing of soy milk manufacturing. Because the isoflavone aglucones have more intense astringent and bitter taste than the isoflavone glucosides (Okubo *et al.* 1983), the increase of daidzein and genistein in soy milk by the action of the Beta-glucosidases causes the objectionable aftertaste of soybean products...

"So, if we could develop a new type of soybeans lacking or lowering the Beta-glucosidases in addition to the complete lack of the seed lipoxygenase isozymes, it would be an ideal soybean type for the manufacture of soy milk and related new soybean foods." Address: National Agricultural Research Center, 3-1 Kannondai, Tsukuba, Ibaraki 305,

9780. Ohara, Tadahiko. 1991. New methods of coagulation process of soy-milk based on computerized measurements of electric conductivity and torque. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 103-111. [14 ref]
• ***Summary:*** The coagulation step is crucial to make good quality tofu. Powdered calcium sulfate (*sumashi-ko*) is the easiest coagulant to use, but if too much is used, it impairs the tofu flavor. Tofu coagulated with nigari (magnesium chloride) has excellent flavor, but it is difficult to use because the optimum concentration level is very narrow/limited and the coagulation reaction takes place rapidly. Calcium chloride gives the hardest, most condensed tofu, and is used in making dried-frozen tofu and tofu pouches; when a softer texture or smoother taste is desired, magnesium chloride may be partly added.

Industrial production of dried-frozen tofu ("kori-tofu") has developed mostly in Nagano prefecture since 1950. The total value of the annual production of the 9 factories in Nagano prefecture alone exceeds 12,000 million yen, or 80 million U.S. dollars. A single vat ("reaction vessel") in which soymilk is coagulated may contain 500 to 2,000 liters of soymilk.

This study was designed to develop new methods for (1) measuring rapidly the required amount of any coagulant, (2) obtaining information that will affect the optimum concentration of the coagulant used, and (3) establishing an automatic coagulation process that is not dependent on the judgment of a skilled workman.

It was found that by measuring the conductivity and torque of the coagulating soymilk, displaying the results, and stopping addition of coagulant when these values reach a certain level, the process can be automated. Address: Nagano State Lab. of Food Technology, 205-1 Kurita, Nagano city, Nagano-ken 380, Japan.

5-day conference. Individual English-language papers are cited separately. Address: Prof., Tohoku Univ., Faculty of Agriculture, Dep. of Food Chemistry, Food Biotechnology, 1-1 Tsutsumitori Amamiya-cho, Aoba-ku, Sendai 981, Japan. Phone: 022-272-5321 X-338.

9782. Omura, Yoshimasa; Takechi, Hironori; Hayashi, Katsuo. 1991. Improvement of soymilk flavor for new soymilk products. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 41-46. [7 ref]
• ***Summary:*** "The method developed consists of the soaking of soybeans in water (15ºC, 18 hours) and the immersion of the soaked soybeans in hot water (70ºC, 5 minutes) before grinding. The treatment with hot water reduced the n-hexanal content in soymilk to about 1% of that in untreated one. It was shown that the reduction of n-hexanal was due to the inactivation of hydroperoxide lyase, not of lipoxygenase."

New products made from this bland tofu are: Tofu coagulated with citrus juice (*sudachi, yuzu*), tofu noodles containing dietary fiber, and fried fish cake containing tofu. Address: Tokushima Prefectural Food Research Inst., 2-41 Akui-cho, Tokushima 770, Japan.

9783. Saio, Kyoko; Watanabe, Tokuji. 1991. Food use of soybeans in Japan. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 35.
• ***Summary:*** In 1988 some 47,000,000 tons of soybeans were consumed in Japan; 79% of this amount was used to make edible and 19% (8,900,000 tons) was used for foods. In the process of making edible soy oil, more than 3,000,000 tons of defatted soybean meal were produced; 89% of this was used as livestock and poultry feeds, and 12% was used in foods (mostly for soy sauce, but with some for soy protein products and others). There has been a rapid increase in consumption of edible oil and defatted meal in Japan, accompanied by an increase in animal protein in the diet.

In 1988 Japan produced only 290,000 tons of soybeans domestically, and most of this amount was used for foods, especially tofu (60%), miso (24%), natto (9%), and other foods (dried-frozen tofu, yuba, kinako, etc.). The consumption of these foods has risen proportionally to the increase in Japan's population, which means that over all per capita consumption is static.

A recent survey conducted in Japan showed that 82% of Japanese ate soyfoods more than 3 times/week, and that Japanese people had a rather good image of these foods, describing them as healthy, natural, tasty, good for daily use, inexpensive, and delicious.

Japanese enjoy both traditional and modern soyfoods. The technologies for making "Vegetable Protein Products" from soybean meal have been introduced from the USA since 1970, but these have been modified and adapted to suit Japan's tastes and needs. "The importance of soybean foods in Japanese dietary life cannot be too much emphasized. We love them as traditional but also new foods." Address: 1. Research Council Secretariat, MAFF; 2. Tokyo Metropolitan Food Technological Research Center. K. Saio is presently at: National Food Research Inst., MAFF, 2-1-2, Kannondai, Tsukuba 305, Japan.

9784. Shiraiwa, Masakazu; Nakashima, H.; Yamamoto, N.; Tamura, T.; Matsuda, S.; Okubo, K. 1991. Soybean saponin: Structures and physiological properties, especially antiviral activity in HIV *in vitro*. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 95-101. [20 ref]
• ***Summary:*** The saponins in soybeans are well known to impart an undesirable flavor to some soyfoods. But this report suggests that soybean saponin Bb, the main constituent in the soybean seed, has inhibitory activity against HIV infection. The soybean seed contains about 2% of glycosides, which are composed of several kinds of saponins and isoflavonoids. There are five different kinds of saponins, named soyasaponin A-1, A-2, I, II, and III. Figure 1 shows the structure of each as elucidated by Kitagawa et al. (1974-1985). The authors analyzed the saponin composition of 457 soybean varieties. As a result, six "group A saponins," four "group B saponins," and two "group E saponins" which possess soyasapogenol A, B and E as the aglycone, respectively, have been isolated from the hypocotyl and cotyledons of the soybean seeds, individually named (Aa, Ab, Ba, Bb, etc.), and fully characterized. The chemical structure of soybean saponin is very similar to that of glycyrrhizin, which is known to have a suppressive effect on HIV replication *in vitro*. Address: 1&6. from Hokkaido), sea vegetables, soy sauce (San-J shoyu and tamari, Mansan tamari, Sakae shoyu, Johsen shoyu), San-J teriyaki sauce and Szechuan sauce, Nasoya dressings and Nayonaise, Natto miso chutney, Sesame miso sprinkle, Tekka condiment (jar or bag), jinenjo tekka, MMB [Mitoku Macrobiotic, a premium brand] organic farmhouse tekka, seitan, MMB traditional dried tofu, Tofu burger, scrambler, and stroganoff, Sweet Cloud sesame miso munchie, Sweet life miso candy.

John Troy is not connected to this company, nor is John Belleme; John is the wizard, and now he makes sauces from the Wizard's Cauldron. He also works with John Belleme at Traditional Foods making seitan. Address: North Carolina. Phone: 1-800-926-0974.

9786. *SoyaFoods* (*ASA, Europe*). 1991. 'Tonyu' launched in France. 2(2):2. Autumn.
• ***Summary:*** The French soyfoods association, SOJAXA, has decided to use the Japanese term, 'tonyu,' which means soymilk, as their official name for products formerly called soyamilk or soyadrink–because of labeling difficulties in France. SOJAXA held a press conference in Paris to launch the name and promote soyfoods in general.

The group also presented the results of the second half of their consumer survey. In 1991 some 41% of those polled reported a knowledge of at least one soya product, up 6% over 1990. Some 21% of respondents had consumed at least one soya product, but only 6% consumed soya products regularly. Soya drinks and desserts (in a variety of flavors) were the most popular, followed by tofu and other products. SOJAXA is located in Toulouse, France.

• ***Summary:*** Defatted soy flour treated by a twin-screw extruder was found to be effective in improving the quality of surimi and surimi-based products. Kamaboko (fish meat gel products) prepared from surimi added to these powders became harder and more elastic than that of the control. Address: Food Research & Development Labs. of Ajinomoto Co., Inc., 1-1 Suzuki-cho, Kawasaki 210, Japan.

9788. Tsukamoto, Chigen; Kawasaki, Yoshihiro; Iwasaki, Tsutomu; Okubo, Kazuyoshi. 1991. A process for the removal of glycosides during tofu production and an evaluation of the marketability of the final product. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 47-51. [15 ref]
• ***Summary:*** Soybean seeds contain large amounts of glycosides (such as saponins and isoflavonoids), which have undesirable tastes. This is one reason why soybean foods have not received greater worldwide acceptance. An improved method for making tofu has been developed. "This comprises removal of the soybean hypocotyl fraction, the separation of the soymilk before heating, and the introduction of a defoaming step during heating. On the basis of this proposal, Taishi Foods Co., Ltd. has constructed a new factory which can treat 420 kg of soybean per hour, the products have been marketed since Aug. 1986. This new tofu process provides products which are well accepted by Japanese consumers." This tofu, named "Daigaku Tofu" ("University Tofu") has been sold since Aug. 1986 in Sendai City. On a taste panel test of 27 consumers living in Sendai city, it received significantly higher scores than both soft and firm tofu for taste, flavor, smoothness, and overall acceptability.

At the Taishi Foods factory, removal of the seed coat and hypocotyl is performed by a grinder, which brushes down and strips off these fractions at room temperature (not in excess of 40ºC). After an initial washing, the grinding process takes place, conducted first by a line cutter to make small pieces of soybeans (about 3 mm cube). Water at 50ºC is added and the soybean paste is produced in a colloid mill. This paste is separated into soymilk and insoluble matter (okara), below 50ºC, usually in a centrifuge. Water is again added to the okara and the soymilk re-extracted. The soymilk thus obtained is defoamed with a vacuum pump, preheated to 70ºC using a plate type heat exchanger, then heated with a high temperature, short time, steam injector for about 30 seconds to around 115ºC. After such heating, the soymilk is cooled to 65ºC through a vacuum chamber, the concentration adjusted if necessary, and then kept in a holding tank awaiting tofu preparation. Both both soft silken tofu (kinugoshi) and regular (momen) tofu are produced at the Furukawa factory in the early hours of the morning to allow delivery of the goods to market in the early morning. This tofu contains half the glycosides of regular tofu. Address: 1&4. • ***Summary:*** Name of the confection: Natto Matsukaze. Name of manufacturer: Moriguchi Kakô Shokuhin. Brand: Murasaki-Take. A photo shows the product in a stylish little cloth or paper pouch. Address: Kassui Joshi Tanki Daigaku, Japan.

9791. Pearce, Jean. 1991. Getting things done: Tribute to a miracle. *Japan Times* (*Tokyo*). Nov. 10. [Eng]
• ***Summary:*** "Some time ago I offered to print recipes for natto as a service to those who were disappointed that a natto cookbook was not available in English. There were no responses. Apparently no one has a favorite recipe. Now there is a letter from a reader who says she doesn't like natto but she wants to learn to because of its nutritional value. Please, she says, print some natto recipes.

"I checked my Japanese cookbooks but none listed natto in the index. The basic recipe is, eat it with rice.

"There was one exception, *The Book of Soba,* by James Udesky. His description may explain why it is not listed in other English-language cookbooks." There follows a quotation about natto from Udesky's excellent book–which is much more than a cookbook.

A small portrait photo shows Jean Pearce.

9792. Wong, Anson. 1991. Global Protein Foods in Valley Cottage, New York (Interview). *SoyaScan Notes.* Nov. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Global Protein Foods hopes to be ready to start tofu production in about 2 months or less. Mr. Yasuo Hachijin is presently at the plant in Valley Cottage, and some Takai workers (Mr. Tsunoda) are installing a Takai tofu production system. Valley Cottage is in Westchester County, about 45 miles or a little less than 1 hour drive north of Manhattan, across the river from White Plains to the west. They plan to start with a 6-product line: silken tofu, firm tofu, extra firm tofu, fried tofu (thick or thin), and a dessert tofu. They are experimenting with fruit flavored tofu, a yogurt-like product, etc. They will be targeting their products to two markets: the American market and the Japanese market. The brand for the Japanese market will be something like Kyozen-nen (which is established in Japan), and for the American market G.P. Initially, the company will be focusing its marketing efforts on the tri-state area, which consists of New York City, Connecticut, New Jersey, and possibly maybe a little bit of Pennsylvania. This is equivalent to a 50-mile radius from the plant. Their main competitor in the American market is Nasoya, whose tofu is also the most expensive but the taste and quality are very good. There are many competitors in the Japanese market: Mori-Nu, Kikkoman, and Kyoto-Foods (from Terre Haute, Indiana–their tofu is "very good"). Mr. Hachijin is also involved with Kyoto Foods, but he sees them as a competitor.

Anson's background is in the plastics industry; the food industry is new to him. He went to the recent Natural Products Expo in Baltimore, Maryland. Address: Sales Manager, Global Protein Foods, 707 Executive Blvd., Building E., Valley Cottage, New York 10989. Phone: 914-268-8100.

9795. Food and Agriculture Organization of the United Nations (FAO), Statistics Div., Basic Data Unit. 1991. FAO food balance sheets, bilans alimentaires, hojas de balance de alimentos, 1984-1986 average. 00100 Rome, Italy. xx + 384 p. No index. 30 cm. [Eng; Fre; Spa]
• ***Summary:*** This book is written in 3 languages: English, French, and Spanish. Prepared by the Statistics Div. of the Economic and Social Policy Dept. of FAO in Rome, it gives food balance sheets for 3-year periods (e.g. 1961-63, 1964-66, 1986-88, etc.) for 145 countries (including mainland China but not Taiwan). The introduction discusses: Food balance sheets–what they are and how to use them. Accuracy of food balance sheets. Concepts and definitions: Commodity coverage, supply and utilization elements (production, imports, stock changes, exports, processed trade, domestic supply, feed, seed, food manufacture, other uses, waste, food, per caput supply), Population coverage. Units and symbols. Country coverage: Statistics are given for the world, developed countries as a group, developing countries as a group, 34 individual developed countries, and 111 individual developing countries.

Soybeans are included under the heading "oilcrops" (*oléagineux, semillas oleaginosas*), along with 8 other

© Copyright Soyinfo Center 2014

individual oilcrops plus "others." Soybean oil is included under the heading "vegetable oils" along with 11 other individual vegetable oils plus "others."

For each country, two tables are given. In the first table, per capita food supply, foods are divided into the following commodity groups: grand total, vegetable products, animal products, cereals (excluding beer), starchy roots, sweeteners, pulses, nuts and oilseeds, vegetables, fruit (excluding wine), meat and offal, eggs, fish and seafood, milk (excluding butter), oils and fats (subdivided into vegetable oils, and animal fats), spices, stimulants, alcoholic beverages, miscellaneous. For each 3-year period the following statistics are given for each commodity group: kilograms/year, calories/day, protein (grams/day), and fats (grams/day). Thus, for the Japan (for example), we can see that grams of protein per day from "nuts and oilseeds" increased from 9.8 in 1961-63 to 10.3 in 1986-88. This is the closest we can get to a figure for soyfoods consumption from this table.

The second table gives average annual domestic supply for the period 1984-86 (broken down into production, imports, stock changes, exports, processed trade, total), domestic utilization (broken down into feed, seed, food manufacture, other uses, waste, food), and per caput supply (broken down into kg/year, grams/day, calories/day, protein [gm/day], and fat [gm/day]), for specific foods within each of the major commodity groups. Thus, for Japan, we see that for soybeans during 1984-86, production was 237,000 tonnes (metric tons), imports 4,747,000 tonnes, stock changes 35,000 tonnes, exports 0, processed trade 2,000 tonnes, total domestic supply 4,947,000 tonnes. For domestic utilization, 67,000 tones were used for feed, 8,000 tonnes for seed, 3,636,000 tonnes for food manufacture, 0 for other uses, 89,000 tonnes for waste, and 1,158,000 tonnes for food. The per capita supply was 9.6 kg/year or 26.3 gm/day. Each day this provided 98 calories, 8.9 gm of protein, and 3.7 gm of fat.

For many countries (including the USA and Brazil) no statistics are given for food use of soybeans or for any parts of per caput supply.

A ranking of the countries (not including Taiwan) with the highest per caput supply of soybeans (kg/year) and soybean protein (gm/day) is as follows: Japan 9.6, 8.9. North Korea 9.0, 8.5. Indonesia 7.2, 6.8. South Korea 6.4, 6.1, Hong Kong 3.9, 3.6. China (Mainland) 3.1, 2.0. Singapore 0.2, 0.1. Address: Rome, Italy.

• ***Summary:*** Jimmy was born on 21 March 1942 in Philadelphia, Pennsylvania. His father was an officer in the Army Medical Corps. After a brief stay in Baltimore, when Jimmy was in 4th grade, the family moved to Manhasset, Long Island, New York. He grew up there and graduated from high school. He graduated from Oberlin College in Ohio, then did graduate work at the University of Illinois in the Inst. of Labor and Industrial Relations. He finished his course work after 18 months, but did not write his thesis, then went to New York as a labor organizer. After receiving a draft notice during the Vietnam War, he enrolled in the University of Michigan at Ann Arbor studying Medical Care Organization. Again he completed his course work for the doctoral program, but facing the doctoral thesis, he dropped out in 1967 or 1968.

He was briefly introduced to natural foods and macrobiotics in 1967 in Ann Arbor by a friend named Earl Rosner. One day, in the midst of the psychedelic counterculture he had a deep inner realization that Americans were destroying their ecosystem, both within and without. He quit using psychedelics and began to eat only natural foods. He read *You are All Sanpaku* and *The Book of Judgment*, early macrobiotic works. He bought the books and "health foods" at an old-line health food store named Zerbo's, run by Harry Zerbo in nearby Livonia, Michigan. At the Kuwahara trading post in downtown Detroit he bought real Japanese food–such as various sea vegetables, soba, and

© Copyright Soyinfo Center 2014

noodles–and Koda Brothers Kokuho Rose brown rice.

At about this time (1967-68) Jimmy got into the music business, and was sort of in business with a poet named John Sinclair, who was a great bear of a man, who the media regarded as the Pharaoh of the Hippies, and who managed a band named the MC-5. Jimmy and John were partners in a production company named Trans-Love Productions–Gets You There on Time. Jimmy managed a rock group named Iggy Pop and the Stooges. After a few months John introduced Jimmy and Susan (his girlfriend of several years and wife to be) to Jim Semark, another poet who was into macrobiotics, Baha'i, and meditation. In mid-1968 Semark invited Jimmy and Susan to a macrobiotic cooking class taught by Michio Kushi at Semark's home in Detroit; then they soon met Michel Abehsera–who they thought was wonderful and very down to earth.

Jimmy and his wife, Susan, were married on 23 Oct. 1968 in Ann Arbor. He and Susan were in Ann Arbor at the time the food co-op changed into Eden Foods but they were never members of the co-op or the Zen Macrobiotic Supper Club–for reasons that he cannot now recall. He and Susan were loners and membership in such groups wasn't their style. Jimmy's parents still lived on Long Island in New York so when he and Susan visited them, they used to go into the city and buy foods from Arnie Greenberg (who owned Greenberg's, a Jewish deli-grocery store at 125 1st Ave., near Ratner's vegetarian delicatessen, in New York City). Arnie carried foods in bulk and packaged natural foods from suppliers such as Infinity. Infinity Foods was a small food warehouse on the 2nd or 3rd floor run by a bunch of Scientologists (including Howard Rower and Jason Hammond [son of John Hammond Sr. of Columbia Records and brother of the white blues guitarist John Hammond Jr. of John Hammond and the Nighthawks]) who were into macrobiotics and natural foods. Jimmy had their catalog and visited their warehouse. Located in downtown New York at 171 Duane St. on the west side near the commercial produce and meat area, Infinity started in the mid-1960s and was the first company to import macrobiotic foods from Japan–before Erewhon. The Erewhon retail store used to carry Infinity's products. Then Infinity fell on hard times and disappeared. Arnie would also ship him macrobiotic staples by Greyhound bus. He recalls Gloria Dunn, who looked like a gypsy, and he recalls Eden Organic Foods which was on the second floor of a building near downtown Ann Arbor. Shortly after Bill Bolduc started Eden, Jimmy and his wife left for Los Angeles with Iggy Pop.

Their first daughter, Rachel was born on 23 Jan. 1969 in Ann Arbor. He went to Los Angeles with his band in the spring of 1970. He played music at night then during the day would hang out at the Erewhon retail store on Beverly Blvd. in Los Angeles with Bruce Macdonald and Paul Hawken. He thinks that Michio Kushi had sent either Bill Tara, Bruce Macdonald, or Paul Hawken from Boston to open a branch of Erewhon in Los Angeles in about the summer of 1969. Years later when the store became a wholesale company, it was given the name Erewhon West, since it had different ownership from Erewhon in Boston. At the end of the summer of 1970, he and his wife moved to Los Angeles to live with Aveline Kushi, who had a house on Franklin Ave. in Hollywood. He wanted to work with Erewhon, not in the retail store on Beverly Blvd., but in the little warehouse that they were just acquiring kitty-corner to across the street from the retail store. In about 1970 it began wholesaling and distribution business. But when Jimmy returned in the fall, Hawken was gone; he had moved to San Francisco and gone to work with Fred Rohe. Hawken had apparently had a falling out with Michio and Aveline Kushi. So Jimmy worked with Bruce Macdonald ("a wild man then, as ever").

Jimmy and his family then moved to Boston, where they lived and worked from Dec. 1970 to 1976. Jimmy had been asked by Michio Kushi to take over the failing restaurants (Sanae and The Seventh Inn) in Boston. Both were owned by Sanae Corporation. Richard Sandler and Warren Durbin had grandiose plans to expand Sanae, so they opened The Seventh Inn on Boylston St. in Boston. It was an immediate failure and they struggled with it for years afterwards–then they just up and left. Paul Hawken at Erewhon had promised to help Jimmy with Sanae.

Then Jimmy worked in Los Angeles with Erewhon West (owned by John Fountain–John Deming was the financial backer) from 1976 to 1980. John Deming's family controls the Murphy Oil Co. in Louisiana and they are extremely wealthy. Erewhon West had financial troubles trying to compete with Nature's Best and K&L–big, established distributors. In 1980 Deming fired Fountain and was going to liquidate the company–just shut it down. So Jimmy and Jeff Hilgert bought the assets from Deming and in June 1980 they transformed Erewhon West into Pure Sales. The company has done various things over the years. Initially it sold natural food consumer products. John Fogg developed the excellent marketing concept for So Tamari in about 1981. When Erewhon went bankrupt in 1981, they voided their contract with Pure Sales to permit the use of their name for a royalty–so within 90 days Pure Sales eliminated the Erewhon name from all of their products; all of the Japanese products became "So'" products (So' Tamari, So' Ramen, etc.), a name Jimmy coined, which meant nothing but sounded Japanese. Continued. Address: President, Pure Sales, P.O. Box 5116, Irvine, California 92716-5116. Phone: 714-540-5455.

9800. Teeguarden, Ron. 1991. Founding and early history of the food co-op (in Ann Arbor, Michigan) that later became Eden Foods (Interview). *SoyaScan Notes.* Dec. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron ran a business named the Teeguarden-Leabu General Store located in the basement of Marshall's

© Copyright Soyinfo Center 2014

Bookstore (that sold radical and anarchist literature), which was below the Herb David Guitar Studio at 209 South State Street a few blocks off Main Street in Ann Arbor. The store was financed by his partner and best friend Vic Leabu (pronounced luh-BOE then but luh-BUU now; it's Romanian not French), and Gloria Dunn worked there a lot. A very kind black lady named Rose from Marshall's Bookstore rented Ron and Vic the space for $50.00 a month because she liked the creative work they were doing and Marshall's was using the basement. The store sold antique clothing from the 1920s, art from local artists, and records; it was not a thrift store.

In about the summer of 1969 Ron and Gloria Dunn started a small food-buying co-op. The co-op was an eccentric, inventive, creative expression–and food was part of it. Co-ops were very new in those days. Within a few weeks some friends, who were also involved in macrobiotic cooking, joined the circle of people that were buying food together. These included Vic Leabu, Tim Redmond, Mark and Nancy Retzloff, and Bob Thorson. The informal group ordered food from Erewhon roughly 3-5 times; Gloria and Ron put together the orders which were probably pre-paid. When the food arrived, those who had participated in the order divided it up at the Teeguarden-Leabu General Store. Ron Teeguarden brought whole grains and miso into the co-op. Vic Leabu's influence gradually increased, while Gloria's declined. At the maximum, no more than 12 people were ever involved with the food co-op to which Ron belonged. It was never thought of as a business, it had no assets nor board of directors, and it never paid any money for the space that it used occasionally. It was just a bunch of people buying together.

When the co-op first started, there was only one little old-line health food store in Ann Arbor; the room was about 10 feet square and it did not sell natural or macrobiotic foods except very expensive brown rice in little bags.

To go back a bit: In early 1968 Ron felt he was becoming severely debilitated–from smoking pot (as was the fashion in those days) and the incessant pressure of being a varsity tennis player at Michigan on a full athletic scholarship and a pre-med student with a heavy academic load. In retrospect, he felt like he almost had chronic fatigue syndrome from burning the candle at every end. So he wrote a letter to George Ohsawa (not knowing that Ohsawa had died) asking for advice. He got a great letter back from Herman Aihara saying, in effect: "Eat miso soup and tekka every day, use them to help you give up coffee, and if you ever come to California, please come and stay with me." Ron was deeply impressed with Herman's kind and generous offer to a person he didn't even know. So Ron sold his dope to buy an airplane ticket to California, and appeared at Herman's door in long hair and a beard. They took him in and within a week his life changed and has never gone back. "It was a revelation." He became thoroughly macrobiotic, quit drugs, and returned to Ann Arbor; thereafter his memory became clearer and he dropped everything to start what has become a lifelong interest in Oriental medicine and healing. Ron notes: "I am eternally grateful to Herman as a great man." Shortly thereafter Ron and Iona, who had know each other for years but never gotten along well, were married; she then quit drugs, started a macrobiotic diet, joined the co-op, and soon became a fantastic cook. In 1971 she wrote a cookbook titled *Freedom through cooking: The macrobiotic way.*

Jimmy Silver was not a member of the co-op but he was a key influence because he had been macrobiotic for about 2 years, he had an advanced understanding of the philosophy and practice, he had long hair and was very hip, but he did not use drugs–which was very rare at that time. He was so healthy, his wife was very beautiful, and they were both very pure. He managed a rock group named the MC-5 whose motto was "Sex, drugs, and rock and roll." People looked up to him as the leader of the macrobiotic movement in Ann Arbor. Ron doesn't know where Jimmy got his food–he never came into the co-op. Nor does he recall that the co-op ever had a bank account and he does not see why they would have needed one.

But after 2-6 months the local health department wouldn't let them keep grains in the basement of Marshall's Bookstore, so they moved it to an upstairs location at 514 East William Street; that was when Bill Bolduc and Tim Redmond (with important guidance from Jimmy Silver and help from Mark Retzloff) began to organize the co-op and transform it into a company, which was first given a name–Eden Organic Foods. At that same time, Ron greatly decreased his involvement in the food co-op. He shopped at the co-op quite a bit but he does not recall ever working there. He was busy with his own store and he became motivated to try to finish school (he was in school but carrying a light load), then he wanted to move to California, so he and Iona sold their second-hand general store for $300.

The question arises: When was Eden Foods established? Ron Teeguarden believes that the idea for Eden Foods was born in mid-1969 with the establishment of the original unnamed food co-op that ordered macrobiotic foods. "That was when the seed was planted, though it didn't bloom until later that year when the name Eden was coined and a real macrobiotic food company came into existence." Ron is happy to have been connected with this group and to have helped to plant the seed that has become one of America's most successful natural food and macrobiotic food companies–Eden Foods–but he feels that he deserves very little credit for what he did and he certainly does not want to be called "the founder." "Most of the credit for establishing the company goes to Bill Bolduc." He is now deeply involved with Chinese herbs, has just raised close to $1 million, and plans to build an upscale store in Hollywood by late 1992, and eventually take his concept nationwide.

© Copyright Soyinfo Center 2014

Follow-up talk with Ron. 1993. March 6. The time from 1967 to 1969 is quite hazy in his mind. It seems like another life and another world. "It's a funny, fuzzy feeling to know that I was part of Eden and part of Erewhon when it first started." Ron also started the Acupressure Center in Berkeley. Ron did not follow developments at Eden Organic Foods after he left Ann Arbor in 1970. He does not recall having ever met Michael Potter, and he still does not recall that the food co-op ever had a bank account or that he ever signed a signature card for that account (yet "We probably did have a bank account; Maybe Vic got it and I might have signed it. Maybe that's where the money went every day.") And he has never been aware that the name "Eden" may have been derived from letters in his last name–but he is not sure that his recollections are correct. His new Herbal Emporium in Hollywood is coming along very nicely. Address: The Tea Garden, 1334 Abbott Kinney Blvd., Venice, California 90291. Phone: 310-450-0188.

9801. Redmond, Tim. 1991. Early work with Eden Foods and macrobiotics. Part II. 1971 to 1979 (Interview). *SoyaScan Notes.* Dec. 11 and 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In the summer of 1971 Tim and Bill Bolduc first met Mike Potter, who had been managing a macrobiotic natural foods store named Joyous Revival in Birmingham, Michigan. Mike was born in about December 1949. There used to be free concerts on Sundays in the park in Ann Arbor. Mike would buy a 50-lb bag of rice from Eden plus a few odds and ends, take it out to the park, cook the rice, and sell it by the bowl to people in the audience.

The growing wholesale business made such large demands on Tim's time that he and Bill began to look for someone to manage the retail store. In the fall of 1971, they hired Mike Potter as manager. For a while Mike worked for little or no wages. In 1972 Bill and Tim offered Mike an ownership position, and gave him about 13% of the total stock in lieu of his service. Bill and Tim now each owned 43.5% of the company's stock. This ownership structure lasted for about one year. In about Nov. 1972 the retail store was moved from 211 State Street into a much larger location at 330 Maynard St. Potter continued to manage the retail store until about 1974.

When Bill Bolduc left the company in the late summer or fall of 1973, he and his wife Judy sold their shares back to the company. Bill left for a variety of reasons, in part because of a little friction that existed at the time. Tim now ended up owning 51% of the company stock and Michael Potter owned 49%. Tim was the president. This arrangement continued for about a year until about the winter of 1974, when Potter convinced Redmond to give up 1% of his stock for a certain amount of money he knew the company needed at the time. Tim and Mike Potter were now 50-50 partners. Potter became the president shortly thereafter.

In 1974 Tim Redmond made initial contacts with Muso, a leading macrobiotic supplier. Mike Potter now traveled to Japan and developed Eden's contacts with Muso. Eden began importing directly from Japan, but Erewhon had an arrangement with Muso which stated that Muso could only sell products to American natural foods companies under the Erewhon brand. Eventually the growing number of natural foods importers, including Eden, protested this policy. There were meetings in Florida and California. Yuko Okada of Muso and Mr. Kazama of Mitoku came to a meeting that was held in Florida, and in about 1975 or 1976 Eden began to do business with Mr. Kazama of Mitoku, importing under the Eden brand. This move by Mitoku broke the Erewhon-Muso monopoly. Today Eden again imports all of its Japanese products from Muso.

In 1973, after about 1½ years of operating out of the rudimentary Quonset hut, Eden was ready for a bigger warehouse. So they found an old building near the middle of Ann Arbor, several streets west of Main Street, down by the railroad tracks. They shared this building and their trucking with Midwest Natural Foods which was run by Hank Bednarz and David Rock. During this period of 1½ to 2, Eden and Midwest became competitors. Eden sold only dry bulk and packaged natural foods; Midwest sold packaged health food lines, vitamins, and frozen or refrigerated goods. Though the two companies proved to be philosophically incompatible, they were the first to act as a full-line "super distributor."

Still growing, Eden moved to larger location on Platt Road in the spring of 1974. The previous 50/50 ownership structure continued until the summer 1979, when they took in Cliff Adler as a junior partner. Cliff purchased 10% of the company stock at a favorable price, leaving Mike and Tim with 45% each. Shortly after the disastrous fire occurred in Nov. 1979 at the warehouse on Platt Road, several key employees were encouraged to stay with the company by awarding them shares of stock. Also one outside person purchased some stock from the company; this provided money that the company greatly needed. The retail store and restaurant were made into an independent company (named The Maynard Street Connection, Inc.) from the Eden Foods wholesale operation.

In May 1980 Tim resigned his position with the company, sold most of his stock back to the corporation (he kept only a few shares), and took over management of the retail store and restaurant, which had been the beginning of the company. There were many personal reasons that Tim left. Since the company's future looked uncertain, he received a relatively low price for his stock. He still owns the stock he did not sell at that time. Tim and a friend operated the retail store and restaurant for about 3 years, then they sold it at the end of 1983. In mid-1984 Tim and Mike Potter had lunch and Mike invited Tim to come into the new soymilk venture, American Soy Products (ASP). Tim

© Copyright Soyinfo Center 2014

worked as a consultant for the first 9 months until mid-1985, at which time he became an employee of ASP. Tim is still one of a few people who own shares of stock in Eden Foods; others include Mike Potter and three other people.

Tim is interested in the question: When was Eden Foods founded? He once asked Michael Potter where Michael got that July 1967 date. He recalls that Michael said he had asked the National Bank of Detroit (NBD) in Ann Arbor, which carried Eden's first bank account. It is Tim's guess that the July 1967 date was when Ronnie Teeguarden opened the account for his used clothing store (Teeguarden-Leabu General Store). Tim feels that "Eden Foods did not start in July 1967 by any stretch of the imagination. To say [as a 1991 Eden publication does] that in 1967 'The first checking account was opened for Eden Foods' seems blatantly incorrect." The concept may have started as early as 1967 but the entity and the name did not start until Nov. 1969.

Some people have stated their opinion that the 1979 fire was caused by arson in order to collect insurance money. Tim is sure that these opinions are incorrect. During 1977 and 1978 Eden had been expanding rapidly and had gotten into a tight financial position. Cliff Adler helped the company in this situation. In 1979 they were having the most profitable months they ever had. The business was not in bad financial shape. Moreover the fire cost Eden hundreds of thousands dollars more than they ever recovered from the insurance company. Address: Vice President of Marketing and Sales, American Soy Products, Inc., 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

9802. Silver, Jimmy. 1991. Re: Key contacts concerning the early history of macrobiotics and natural foods in the United States. Letter (fax) to William Shurtleff at Soyfoods Center, Dec. 17. 2 p. Typed, with signature.
• ***Summary:*** Contact information is given for: Roger Hillyard (San Francisco, California). Bruce Macdonald (Vermont). Wendy Calpeno VanGemert (Denver, Colorado). Judy Coates Deming Knepfer (Ross, California). Dora Coates Hawken (Marin, California). Michel Abehsera (Montreal, Canada).

Some notes: "Hy Lerner, a physician who ran the warehouse at Erewhon [Boston] in the early days subsequently started [with Paul Petrofsky] and owns Baldwin Hill Bakery, bakers of the most wonderful whole wheat breads from the Belgian / French sourdough recipe taught to him by Omer Gevaert, one of the members of the family that owns Lima / Belgium. Omer's nephews are Lark and Kerry Lindsey, who started Arden Rice Cakes in North Carolina (with Lima's technical assistance) and subsequently sold the company to Quaker Oats shortly before Bob Kennedy sold Chico-San to H.J. Heinz."

"Eric Utne, presently publisher of *The Utne Reader* (bankrolled by his wife's Rothschild inheritance, according to an interview with Eric) once was manager of the Erewhon retail store on Newbury Street in Boston. As I recall, Michio Kushi put him there for ideological reasons after Roger [Hillyard] put organically grown potatoes on sale in the store and everybody freaked out!" Note: Potatoes, as well as tomatoes and eggplant, are "forbidden foods" in a macrobiotic diet because they are members of the nightshade family.

"Eric was married to Peggy Taylor before that [after working at *East West Journal*] and together they started the *New Age* magazine. When they split up, she kept the magazine, which she later sold. Peggy Taylor was Evan Root's girlfriend when I moved to Boston... Evan later married Barbara Reardon... Barbara was at that time one of the principal students of T.T. Liang, my first t'ai chi teacher, who subsequently moved to Los Angeles and who I see every Saturday morning. He's 91." Address: President, Pure Sales, P.O. Box 5116, Irvine, California 92716-5116. Phone: 714-540-5455.

9803. Fuji Oil Mills. 1991. Fire or explosion in solvent extraction plant. Izumisano (near Osaka), Japan. Dec. 23.
• ***Summary:*** Kingsbaker, C. Louis. 2005. "List of fires and explosions in extraction plants." Atlanta, Georgia. 3 p. Aug. 4. Unpublished manuscript. Note: Izumisano is 22 miles (35 km) southwest of the city of Osaka, facing Osaka Bay. Address: Izumisano (near Osaka), Japan.

9804. Adlercreutz, Herman; Honjo, H.; Higashi, A.; Fotsis, T.; Haemaelaeinen, E.; Hasegawa, T.; Okada, H. 1991. Urinary excretion of lignans and isoflavonoid phytoestrogens in Japanese men and women consuming a traditional Japanese diet. *American J. of Clinical Nutrition* 54(6):1093-1100. Dec. [70 ref]
• ***Summary:*** "Epidemiologic studies revealed low mortality in hormone-dependent cancer in Japanese women and men consuming a traditional diet... The subjects consumed a typical low-fat diet with much rice and soy products, fish, and vegetables... The urinary excretion of lignans was low but that of the isoflavonoids was very high. The excretion of isoflavonoids correlated with soybean-product intake. The low mortality in breast and prostate cancer of Japanese women and men, respectively, may be due to the high intake of soybean products."

The lignans and isoflavonoid phytoestrogens found in mammals are diphenolic compounds with molecular weights similar to those of steroid estrogens. Precursors in plants seem to occur as glycosides; they are converted to lignans and isoflavones in mammals by intestinal microflora.

Thus, the amount of isoflavones in the urine of Japanese is correlated to soy intake. Address: Dep. of Clinical Chemistry, Univ. of Helsinki, Meilahti Hospital, Helsinki, Finland; Depts. of Obstetrics and Gynecology and Preventive Medicine and the Lab. of Gas Chromatography-Mass Spectrometry, Kyoto Prefectural Univ. of Medicine, Kyoto, Japan.

9805. Conlon, Michael. 1991. Focus on food use could increase soybean sales to Japan. *AgExporter* (*USDA, FAS*). Dec. p. 12-13.
• ***Summary:*** "Japan is the world's largest market for soybeans, importing around 4.68 million metric tons in 1990. While most soybeans are crushed for meal and oil or processed into soy protein and soy sauce, there is another usage–direct food use–that offers potential for growing U.S. sales.

"While the volume of soybean imports for crushing to make meal and oil has stayed relatively unchanged over the past several years, soybean imports for human consumption have increased steadily from 827,000 metric tons in 1980 to 1.2 million tons in 1990, an increase of 45 percent. No other country imports such a large quantity of soybeans for food use."

"The U.S. share of the food-use soybean market is around 75 percent, with exports to Japan increasing 17 percent since 1985.

"Domestic production limited: Despite government programs designed to increase domestic production, soybean area planted in Japan has declined in recent years because growers are interested in more lucrative crops such as vegetables and flowers. As a result, Japan has had to import soybeans in order to meet the demand.

"About three-fourths of Japan's soybean imports, or around $900 million worth, come from the United States, translating into an important and steady market for U.S. soybean growers. Also, there are no tariffs or duties to hinder imports of soybeans, making the market even more attractive.

"... Japan is the world's largest buyer of food-quality soybeans, which are used for a variety of Japanese foods." A brief description is given of tofu (the most popular food in Japan made from soybeans), miso, and natto. "In 1989, 42% of soybeans for food use [in Japan] went into tofu, 14% went into miso, 8% went into natto and 36% went into other soybean products. The demand for soybeans used for direct consumption is increasing approximately 3% per year for tofu and miso and about 7% for natto."

Today about 25% of the soybeans used in Japan go for food use while the rest is crushed for oil and meal.

"According to the American Soybean Association (ASA), the varietal soybeans in demand in Japan have an estimated farm gate value in the United States of $1-3 per bushel above crushing beans. This could represent added returns to U.S. soybean producers of up to $55 million per year."

A graph shows the number of metric tons, from 1980 to 1990, used for crushing soybeans and for food-use soybeans. Address: Oilseeds and Products Div, FAS.

9806. Kamata, Yoshiro; Ohta, Kazutaka; Tamauchi, Fumio; Yamada, Minoru. 1991. Cheese analogs from soybeans or soymilk-curd by limited proteolysis. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 38(12):1143-48. *
• ***Summary:*** Using bromelain, cheese analogs can be prepared from soybean curd.

Note: Bromelain is a proteolytic enzyme extracted from the pineapple plant or from other plants of the family, *Bromeliaceae.*

9807. Nichii Company of America, Inc. Mycal Group. 1991. The best just got better (Ad). *Vegetarian Times.* Dec. p. 29.
• ***Summary:*** Below the large title is an illustration (line drawing) of a package of tofu. The text on the front panel (film lid) reads: "Natural Foods Store. Lite Tofu. Firm. OCIA Organic. New Wt. 16 oz." The text of the ad reads: "MicroSoy flakes has dramatically improved the quality of tofu. We challenge you to see for yourself... Tofu made from MicroSoy flakes is lower in calories, lower in fat, higher in protein, longer lasting on your refrigerator shelf, better for the environment, and is made from organic soy flakes." Small print across the bottom of the ad reads: "MicroSoy flakes use up to 47% less water and as much as 40% less electricity in the manufacture of tofu, so they help preserve our environment and conserve our natural resources. Tofu made from MicroSoy flakes contains 8% more protein and 67% less fat for better health. All results confirmed by independent testing at Iowa State University, Food Science and Human Nutrition Department. Comparison of tofu made from whole soybeans and MicroSoy flakes."

9808. Nichii Company of America, Inc. Mycal Group. 1991. Who makes your tofu? Tell them you want the best tofu. Tell them you want tofu made from MicroSoy flakes (Or we can tell them for you) (Ad). *Natural Foods Merchandiser.* Dec. p. 17.
• ***Summary:*** This full-page red, green, and white ad shows a package of water-packed tofu labeled "Natural Foods Store. Lite Tofu. Firm. OCIA Organic." On both sides of it, with a check-off box in front of, and a question mark after, each are the names of the following American tofu manufacturers: Mori-Nu, Hinoichi, Azumaya, Nasoya, Quong Hop, Calco, Soy Foods of America, White Wave, Sam Sung, Mighty Soy, Mandarin, Northern Soy, Swan Gardens, Other.

Tofu made from MicroSoy flakes is best because it is low in fat and calories, higher in protein, longer lasting on your shelf, better for the environment, made from OCIA-organic soy flakes. "Tofu made from MicroSoy flakes contains 8% more protein and 67% less fat for better health."

This ad also appeared in the Feb. 1992 issue (p. 21) of this magazine. Address: 23440 Hawthorne Blvd., Suite 140, Torrance, California 90505. Phone: 213-791-0010.

9809. Tsuiseki: Iya-dôfu [Chase: Stone-dofu] 1991.

© Copyright Soyinfo Center 2014

Television broadcast. Channel 26. California. Dec. 29. Sun. 7-7:30 P.M. [Jap]
• ***Summary:*** In 1185 when the Genji (Minamoto) clan defeated the Heike (Taira) in a famous naval battle on the Inland Sea, some of the Heike survivors fled to mountainous central part of Shikoku island, where their descendants still live today in the remote village of Iya. Shizue Fukushima, a 73-year-old woman, is the village tofu maker. Her Iya-dofu, also called *iwa-dofu* or *ishi-dofu* (meaning "stone tofu"), is much harder than most Japanese tofu. Made by hand, with nigari as a coagulant and without machines, it takes 3 times as long to make as most tofu. The curds are broken into small pieces by vigorous stirring and they are then pressed with a heavy weight for a long time. The finished tofu, dropped onto a stone floor from a height of 1 meter, remains unbroken. A favorite preparation in the village is named *Dekomawashi* derived from the words Dengaku plus *mawasu* (to turn). Slabs of tofu are skewered, and spread with miso. The base of each wooden skewer is then placed nearly upright into the hearth ashes around a fire. Small potatoes are also skewered on separate skewers. When one side is nicely grilled, the tofu is turned so that the other side can also be grilled. Address: Japan.

9810. Wilson, Lester A.; Fenton, A.M.; Wilson, R. 1991. Comparison of whole soybeans to their MicroSoy flakes for tofu production: Steam kettle–hydraulic press system. Ames, Iowa: Iowa State University. 17 p. 28 cm.
• ***Summary:*** Tofu made from Nichii MicroSoy flakes takes much less time (10 minute soak vs. 12 hour soak), 24-48% less water (48% less if process cleanup water is included), 41% less electricity. "The tofu produced from flakes was softer, creamier in color, higher in protein and moisture, but lower in lipid [fat] that bean tofu (24% vs. 40%)." This is to say, on a dry-weight bases, the tofu made from MicroSoy flakes contained (on average) 24% fat, whereas that made with whole soybeans contained 40% fat. This is apparently because more fat remained in the okara when tofu was made from the flakes. No significant differences were found in the yield of firm tofu or in the yield of okara from flakes compared with soybeans.

Concerning sensory or organoleptic qualities, the tofu made from whole soybeans had a significantly firmer texture, which was preferred by the U.S. panelists but would probably not be by Japanese panelists. There were no significant differences in color, beany-flavor intensity, or flavor preference.

Talk with Lester Wilson. 1992. Jan. 31. This undated report was printed on 1 Dec. 1991. One theory as to why the tofu made from MicroSoy flakes contained less fat is that the flakes were made from dehulled soybeans whereas most tofu is made from soybeans with the hulls intact. Perhaps okara which is free of hulls tends to hold more fat. Address: 1. Prof., Dep. of Nutrition, and The Center for Crop Utilization Research; 2-3. Dep. of Food Science and Human Nutrition. 9812. Ishizuki, Yoshimochi; Hirooka, Y.; Murata, Y.; Togashi, K. 1991. [The effects on the thyroid gland of soybeans administered experimentally in healthy subjects]. *Nippon Naibunpi Gakkai Zasshi* (*Folia Endocrinologica Japonica*) 67(5):622-629. [12 ref. Jap; eng]
• ***Summary:*** Changes in thyroid function were studied by administering 30 gm of roasted, vinegared soybeans per day to 37 healthy adults, who had never had goiters or serum antithyroid antibodies. After 1 month, no change was detected in the peripheral thyroid levels, but TSH (thyroid stimulating hormone = thyrotropin) was raised slightly. Diffuse goiter and hypothyroiodism appeared in half the subjects after taking soybeans for 3 months, but they decreased, then disappeared after cessation of soybean consumption. The above results indicate that excessive intake of soybeans for a long time might cause the enlargement of the thyroid gland, and slightly suppress thyroid function in healthy people.

9813. **Product Name:** Mitoku Goma-Muso Sesame-Miso Sprinkle.
Manufacturer's Name: Mitoku Co. Ltd. (Distributor). Made in Japan.
Manufacturer's Address: C.P.O. Box 780, Tokyo 100-91, Japan. Phone: 33-201-6701.
Date of Introduction: 1991.
Ingredients: Barley miso (whole soybeans, barley, sea salt), toasted whole sesame seeds.
Wt/Vol., Packaging, Price: 2.8 oz (80 gm) plastic bag. Retails for $2.39 (11/91, USA).
How Stored: Shelf stable.
New Product–Documentation: Product with Label purchased from Smoky Mountain Natural Foods, Asheville, North Carolina. 1991. Nov. 15. 3 by 3.5 inches. Self adhesive, on a 4.5 by 6.5 inch plastic bag. Reddish orange, yellow, and white. "A traditional Japanese condiment... Sprinkle freely on brown rice, vegetables and other favorite dishes to impart extra goodness, flavor and nutritiousness."

9814. **Product Name:** Sweet Life Candies: Miso Drops–Natural Brown Rice Malt Candy.
Manufacturer's Name: Mitoku Co. Ltd. (Distributor). Made in Japan.

© Copyright Soyinfo Center 2014

Manufacturer's Address: C.P.O. Box 780, Tokyo 100-91, Japan. Phone: 33-201-6701.
Date of Introduction: 1991.
Ingredients: Traditional rice malt (selected whole brown rice, organic sprouted barley, pure spring water), natural brown rice miso (whole soybeans, whole brown rice, water, sea salt).
Wt/Vol., Packaging, Price: 1.76 oz (50 gm) plastic bag. Retails for $1.19 (11/91, USA).
How Stored: Shelf stable.
New Product–Documentation: Product with Label purchased from Smoky Mountain Natural Foods, Asheville, North Carolina. 1991. Nov. 15. 4.5 by 6 inches. Plastic bag. Gold and white on brown with see-through window. "The original sugar-free sweets from Japan... Sweet Life Candies contain no sugar or any artificial sweetening whatsoever; just the rich goodness of rice malt, with exciting natural flavors. The perfect taste treat for all the family." There are 12 other flavors in this natural candy line. The miso flavor is hard, not chewy.

9815. **Product Name:** Jinenjo Tekka: Tekka Condiment.
Manufacturer's Name: Mitoku Co. Ltd. (Distributor). Made in Japan.
Manufacturer's Address: C.P.O. Box 780, Tokyo 100-91, Japan. Phone: 33-201-6701.
Date of Introduction: 1991.
Ingredients: Hatcho miso (whole soybeans, water, salt), jinenjo (wild mountain yam), lotus root, carrot, burdock, ginger, toasted sesame oil.
Wt/Vol., Packaging, Price: 3.5 oz (100 gm) plastic bag. Retails for $5.99 (11/91, USA).
How Stored: Shelf stable.
New Product–Documentation: Product with Label purchased from Smoky Mountain Natural Foods, Asheville, North Carolina. 1991. Nov. 15. 3.5 by 2.75 inches. Self adhesive, on a 6 by 4.5 inch plastic bag. Blue on white.

9816. **Product Name:** Mitoku Natto Miso Chutney: Barley/Soybean/Vegetable Relish.
Manufacturer's Name: Mitoku Co. Ltd. (Distributor). Made in Japan.
Manufacturer's Address: C.P.O. Box 780, Tokyo 100-91, Japan. Phone: 33-201-6701.
Date of Introduction: 1991.
Ingredients: Barley, whole soybeans, barley malt, kombu, ginger, water, sea salt.
Wt/Vol., Packaging, Price: 10.5 oz (300 gm) plastic crock. Retails for $3.99 (11/91, USA).
How Stored: Shelf stable.
New Product–Documentation: Product with Label purchased from Smoky Mountain Natural Foods, Asheville, North Carolina. 1991. Nov. 15. 3 inch diameter. Self adhesive. Red and yellow on metallic gold.

Soyfoods Center product evaluation. 1991. Dec. 3. Good name! This condiment, which resembles Indian chutney in its chunky consistency, but is a little more salty and less sweet, is actually a type of Finger Lickin' Miso (namé miso). Flavor: Very nice. Label design: Terrible–too hard to read.

9817. **Product Name:** Mitoku Macrobiotic Mansan Organic Tamari: Traditional Wheat Free Soy Sauce.
Manufacturer's Name: Mitoku USA (Importer). Made in Japan.
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1991.
Wt/Vol., Packaging, Price: 10 fluid oz bottle.
How Stored: Shelf stable.
New Product–Documentation: Label seen at Open Sesame in Lafayette, California. 1991. Feb. 16.

Mitoku Company Ltd. 1992. "Mansan Organic Tamari: Incomparable Quality and Flavor." *Natural Health.* Feb. p. 126. This ½-page ad has an illustration by Akiko Aoyagi Shurtleff of a man standing on the rim of a huge vat ladling liquid tamari into floating keg. A bold symbol of the character for "tamari" appears in a box to the upper right. "Mansan Organic Tamari is available in North America under the Mitoku Macrobiotic and Emperor's Kitchen label. Exported exclusively by Mitoku Co., Ltd., Tokyo, Japan."

9826. Davis, Clarence B. 1991. Railway imperialism in China, 1895-1939. In: Clarence B. Davis, Kenneth E. Wilburn, Jr., and Ronald E. Robinson, eds. 1991. Railway Imperialism. New York: Greenwood Press. xix + 225 p. See p. 155-73. Illust. Index. 25 cm. [84 ref]
• ***Summary:*** China was late in entering the railway age. The first railway in China (between Shanghai and nearby Woosung) was built in the 1870s by the British firm of Jardine, Matheson & Co. "The line met with general Chinese disfavor, and when an accident caused the death of a Chinese soldier, the [Manchu] court responded to popular outcry by purchasing the railway." The rails were removed, sent to Taiwan, and eventually dumped into the sea. The complex reasons for this initial reaction are discussed.

China's defeat in the Sino-Japanese War of 1894 lead to a revolution in railway construction. Foreign powers demanded concessions to build railways, on very favorable terms to them, and backed by the implicit threat of force. By late Nov. 1898, Russian, Belgian, French, British, German, and to a lesser extent American contractors had reached preliminary agreements for the construction of 6,520 miles of railways in China. Construction was financed by long-term loans. In 1911 more than 90% of China's railways were managed and controlled by foreign interests, with Britain being the dominant player. By the end of the 1920s, about half of China's debt was devoted to railway loans. However by 1934 Japan, with its extensive involvement in Manchuria, had passed Britain to become the largest holder of railway obligations.

Manchuria had the most extensive railway building in China. By 1949, these three provinces contained about 43% of Chinese railway construction. The Chinese Eastern Railway in Manchuria (from Manchouli [pinyin: Manzhouli] to Suifenhe), built by Russia, was owned by its Russian builder. Address: Keene State College, New Hampshire.

9827. Fukushima, Danji. 1991. Recent progress of soybean protein foods: Chemistry, technology, and nutrition. *Food Reviews International* 7(3):323-51. [29 ref]
• ***Summary:*** Contents: Abstract. Introduction. Chemistry: Chemical composition of soybeans (Soybean globulins composed of four major components–2S, 7S, 11S, 15S), importance of three-dimensional structures of soybean protein molecules in food processing, influence of biologically active substances in soybeans on food processing. Technology: Traditional soybean protein foods and recent progress in their technology (soy milk {remove the hypocotyl and hull to remove off flavors; Soyasaponin A has the strongest off flavor}, tofu, kori-tofu, yuba), fermented soybean protein foods: Application of bioreactor for soy sauce production, nontraditional soybean protein foods and recent progress on their technology, recent progress on new soybean protein foods in which soybean proteins are the key material (modified abura-age, modified ganmodoki, deep fried texturized soy protein nuggets). Nutrition: Recent progress on nutritive values of soybean proteins (Soybean proteins have an amino acid score of 100 for persons more than 2 years old), physiological function of soybean proteins (they lower cholesterol levels when used to replace animal proteins). Future of soybean protein foods (Kikkoman fermented soy sauce is well on its way to becoming a universal seasoning. Tofu and tempeh also seem to have a bright future).

"The most important chemical reactions during the process of soybean protein foods are the intermolecular reactions among the residues exposed on the surface of the protein molecules through the denaturation process. In native soybean protein molecules, most amino acid residues responsible for the reactions-such as cysteine (-SH), cystine (S-S), and hydrophobic amino acid residues-are buried in the inside region of the molecule, inaccessible to water. These residues become reactable with each other through the exposure from the inside by heat denaturation during processing. The unique textures of soybean protein foods, such as tofu, kori-tofu, yuba, and texturized products produced by extruder, etc., are the results of both the intermolecular interchange reaction between the exposed -SH and S-S groups and the intermolecular hydrophobic reaction among the exposed hydrophobic amino acid residues. The exposure of amino acid residues is also important for the

© Copyright Soyinfo Center 2014

hydrolysis of soybean proteins by enzymes, through which soy sauce is produced, because the cleavage of the peptide bonds is carried out after binding between the active sites of the enzymes and the enzyme-specific amino acid residues exposed through denaturation." Address: Kikkoman Corp., 1-25 Kanda Nishiki-cho, Chiyoda-ku, Tokyo 101, Japan.

9828. Hesseltine, C.W. 1991. Peoria, an international center of fermentation excellence. *Transactions of the Illinois State Academy of Science* 84(1-2):1-11. [11 ref]
• ***Summary:*** This paper was presented on 28 Sept. 1989 as the after-dinner address for the 50th Anniversary Celebration of the Peoria (Illinois) Branch of the American Chemical Society. Contents: First fermentations. Hiram Walker Co. (1816-1899; for many years they operated the world's largest bourbon whiskey plant in Peoria). Takamine. Northern Regional Research Center. Penicillin & Dr. Andrew Moyer. Penicillin–others (incl. Dr. Kenneth Raper). USDA's Agricultural Research Service (ARS) culture collection (which dates back to 1904). Polysaccharides. Mycotoxins. Fermented foods (especially soyfoods such as miso, shoyu, and tempeh). Fermentation in Peoria today (ADM uses the old Hiram Walker distillery to make fuel alcohol from corn). Honors and awards. References.

"Dr. Jokichi Takamine was the father of commercial enzymology and one of the pioneers of biotechnology. He was born in 1854 in Japan and received his Doctor of Pharmacology and Ph.D. in Engineering. He became very interested in Western concepts that would be useful to the Japanese but he also was interested in Japanese contributions to the West in science, industry and culture. In 1884 he married an American girl whose father helped him financially start the Takamine Ferment Company in Peoria in 1890. This company's business was to produce 'diastase,' a mixture of glucoamylase and α-amylase. This mixture of amylases was produced by the koji molds (*Aspergillus oryzae* and *A. soyae*) and it was here in Peoria that fungal amylase was first introduced to the West. In the production of alcohol from grain it is necessary to break down the starch to sugar, which is then fermented to alcohol. Up to this time the starch conversion step of grain was brought about by the use of malt produced by the germination of grains.

"In the Takamine process the malt was replaced by fungal α-amylase and, therefore, was a process in direct competition with malt utilization. Apparently this new innovation was greeted with apprehension by the malt manufacturers. There was labor agitation and a propaganda campaign against Takamine. In 1894 the distillery where he worked was burned to the ground. Arson was suspected but never proven. The distillery which used fungal amylase was rebuilt, but the company dissolved the Takamine corporation and Takamine left Peoria in 1894. In 1894 Takamine obtained a U.S. patent on his enzyme diastase preparation called Taka-diastase.

"Later Takamine founded the Takamine Laboratories in the East [Clifton, New Jersey] and the Sankyo Pharmaceutical Company of Tokyo. He also isolated crystallized adrenaline at the same time that this was done by J. Abel at Johns Hopkins. Takamine obtained patents on adrenaline. He is also known for arranging for three thousand cherry trees for planting at the Tidal Basin in Washington. Recently a book on Dr. Takamine was prepared and printed by the Miles Company, which some years ago bought the Takamine Laboratories. The book contains his writings translated into English along side the original Japanese."

"The ARS Culture Collection is one of only two large culture collections in the USA, and its primary function is to find and maintain useful or potentially useful microbial and genetic taxonomic material. This collection dates back to 1904 when Charles Thom was hired by the USDA to investigate the mold cheeses. In making these studies, Thom secured several hundred strains of *Penicillium* and *Aspergillus* which became the nucleus of the ARS Culture Collection. At first Thom was at the Connecticut Agricultural Experiment Station, but in 1913 he moved to Washington, DC, taking his cultures with him. The oldest mold culture in the Collection is a strain of *Actinomucor elegans* isolated in 1892. Thom's collection had no formal recognition, and the story is told how Thom worked in the Laboratory on weekends to transfer his collection. In 1940 when the Fermentation Laboratory was established at NRRC, the Thom Collection was moved from Washington, DC, to Peoria and was formally recognized as one of the fermentation groups with Dr. K. Raper in charge. Dr. J. Wickerham joined the group to be curator of the Yeast Collection, and W.C. Haynes was selected to maintain a Bacterial Collection. Since then the number of curators has increased from 3 to 6. Some famous private collections were added in 1940, including the Harvard Collection which had strains isolated before 1900." Address: 5407 Isabell, Peoria, Illinois 61614.

9829. Homma, Gaku. 1991. The folk art of Japanese country cooking: A traditional diet for today's world. Translated by Emily Busch. Berkeley, California: North Atlantic Books. xii + 270 p. Illust. Glossary and index of Japanese words. Recipe index. 26 x 20 cm.
• ***Summary:*** This is a remarkable book by a remarkable man, with many deep insights into both traditional and modern cultures in Japan and the USA; it gives a unique, authentic view of Japanese culture, and makes liberal use of the Japanese names for things, such as foods, utensils, techniques, houses, etc. He uses the Japanese words first, then explains what they mean (in parentheses) in English. Thus the book makes it easy and enjoyable to learn Japanese food-related words.

Moreover, the book is brimming with interesting information about traditional soyfoods in Japan.

© Copyright Soyinfo Center 2014

The author was born in 1950 in Akita, capital of Akita prefecture, in northeastern Japan. Starting as a young boy, he studied Aikido with the founder, Morihei Ueshiba (1883-1969), as a live-in student in the small town of Iwama, in Ibaragi [Ibaraki] prefecture. He was curator of the Lake Ogawara Folk Art Museum, in Aomori prefecture, northeastern Japan, where he worked for about 4 years and learned much of the most interesting tradition, history and other information in this book. Since 1977 he has been living in Denver, Colorado.

Contents: Preface. Foreword. 1. Introduction. 2. The background of country cooking–Folk art and custom. 3. The background of Japanese staple foods. 4. The background of country cooking–Basic preparation. 5. Country meals. Closing. Lake Ogawara Folk Art Museum (*Ogawara Minzoku Hakubutsukan*), located in Furumagi, Misawa City, Aomori prefecture. Founded by Mr. Yukio Sugimoto. Officially opened 29 Aug. 1961. Displays over 15,000 pieces of folk arts and crafts.

Edamame (green soybeans, p. 49-50). In and around his home town, Aug. 15 was too early for harvesting fruits, so they celebrated *mame meigetsu* on Sept. 15. The main food offered at this festival was *eda mame* (green soybeans) along with boiled chestnuts, other fruits, and sweet potatoes. The name of the festival is derived from the word *mame*, which means "bean." In other areas the festival might be called *kuri meigetsu* ("chestnut full-moon") or *imo meigetsu* ("sweet potato full-moon")–depending on the main crop produced. All of the various crops harvested were offered to the moon.

Concerning soybean oil (p. 73): The section titled "Abura–Oils" states: In the Lake Ogawara Folk Art Museum an antique wooden tool (*abura shibori*, see photo) used for extracting oil is on display. The seed or food "to be pressed was placed between two pieces of wood and wedges were hammered into place with a big wooden mallet, driving the pieces together.

"In the Lake Ogawara area this method was used to make rapeseed oil, a popular cooking ingredient." Clearly, the oil was produced in small quantities. "The traditional Japanese farmer was never able to produce enough oil for deep-frying foods."

"There are many sources for natural oils in Japan. From sesame seeds we obtain *goma abura,* from Japanese nutmeg we obtain *kaya abura,* from corn we obtain *kimi abura,* from peanuts we obtain *rakkasei abura,* and from soybeans we obtain *daizu abura."*

Concerning yuba: Although very healthful, yuba (dried soymilk film) is not as popular as most other Japanese soy products. "Tofu is made by bringing soybean 'milk' to a boil. As it boils, a thick film forms on the surface. This film is picked up on a cloth and laid out to dry. The resulting food is yuba.

Note 1. This is the earliest English-language document seen (Oct. 2012) that uses the term "dried soymilk film" to refer to yuba.

"I have served yuba to people visiting from Japan and had them ask me what it was." Yuba is popular in China and parts of southern Asia. It can be eaten fresh or dried. "Yuba is available in Oriental markets in the United States, but chemicals have usually been added during production." A photo shows various dried yuba sheets and dried yuba sticks on a shallow, round, woven Japanese tray (p. 92).

Tofu ("soybean cake"), yuba ("soybean film") and natto ("fermented soybeans") are all examples of soybean products (*daizu seihin*) (p. 139).

In the section on *Nimono*–"Poached dishes" is a recipe for yuba and kikurage ("Soak 2 oz. yuba and cut into 1-inch pieces," p. 186).

Concerning *tonyu* (soymilk): It is mentioned only in the recipe for homemade tofu–using "2 cups *daizu* (soybeans) and ½ teaspoon nigari (coagulant)" (p. 142-43).

Note 2. Koji, miso, miso soup, miso-dama, natto, shoyu. tamari, and tofu are each discussed in detail in separate records. Address: Former owner and head chef, Domo restaurant, Denver, Colorado. Founder and chief instructor Nippon Kan Aikido and Cultural Center, Denver, Colorado.

9830. Homma, Gaku. 1991. Miso, miso soup, miso-dama, and tamari (Document part I). In: Gaku Homma. 1991. The Folk Art of Japanese Country Cooking: A Traditional Diet for Today's World. Translated by Emily Busch. Berkeley, California: North Atlantic Books. xii + 270 p.

• ***Summary:*** This is a remarkable book by a remarkable man, with many deep insights into both traditional and modern cultures in Japan and the USA; it gives a unique, authentic view of Japanese culture, and makes liberal use of the Japanese names for things, such as food, utensils, techniques, homes, etc.

Here we will discuss only those parts of the book relating to miso, miso soup, miso-dama, and tamari: The author arrived in Denver, Colorado, in 1977. One day an Aikido student of his took him to a local health food store. In the Japanese section he found hijiki, wakame, nori, miso, and soba. To his surprise, he found that although the foods were expensively priced, each was of "third-rate quality" (p. 5).

He started a Japanese restaurant in Denver, but never advertised it as a health food restaurant. Would anyone serve unhealthy food in a restaurant? Occasionally there would be customers with questions such as, "What kind of miso or shoyu do you use?" He realized that many customers were worried about their diets, rather than being grateful that they had enough food and that they could had the freedom to choose to eat whatever they wanted (p. 11).

He was born in Akita, in northeastern Japan, where the winters are harsh, and traditional people stored foods for winter survival. Some vegetables were buried in miso (soybean paste). Some soybeans were also preserved by making them into miso, which was a *hozonshoku* (preserved

© Copyright Soyinfo Center 2014

food) (p. 16, 18).

During the Kamakura period [1185-1333] Zen Buddhism became very popular with the samurai. Since Zen forbade the consumption of any warm-blooded animals, the diet was strongly affected. One popular food was *"kanbutsu* (lightly salted, dried fish) flavored with a mixture of soy sauce and miso called hishio" (p. 26). A photo shows Zen priests, heads shaved, eating in a monastery, Note: Hishio was similar to Chinese soybean jiang, a mash with the consistency of thin congee [rice porridge] or apple sauce; it could be separated by straining or filtering into liquid soy sauce [like tamari], with the solid residue being somewhat like miso, although with less flavor.

During the Muromachi period [1336-1573], Zen Buddhism continued to influence the Japanese diet, which consisted mainly of rice, cooked vegetables, and an early form of miso named *namé miso* ("lick miso" [finger lickin' miso]) (p. 27).

In traditional Japanese farmhouses, fish or fowl were sometimes marinated with salt and miso or tamari (juice from making [soybean] miso), "flash-seared on both sides to seal in juices and flavor, then stuck into the *venkei* (bamboo basket stuffed with rice straw used to store foods above the sunken open-hearth fireplace {*irori*}) to be smoked" (p. 32).

In traditional farmhouses, if there was more meat than could be eaten during lunch and dinner, "the rest was marinated in miso and tamari. The miso would keep the meat from spoiling during the night. The next morning the meats were rinsed lightly, seared, and put in the *venkei"* for the rest the working day. When the family returned for a meal, the meat was ready to eat" (p. 38).

Fishermen would mix their cooked rice with *umezu* (the juice left over after pickling umeboshi salt plums). And they would eat fresh fish with their *umezu* rice balls. First they would split the fish in half from the inside out–without using a knife. Then they would dip the fish in tamari or miso, and eat it uncooked, on the spot. Sometimes the tamari was mixed with wasabi (Japanese green horseradish) as a dip. Wasabi is a sterilizing agent, served with sushi to this day (p. 39).

A dish found in Homma's home town of Akita is called *kayaki* or *kai yaki,* which means "shell bake." "A large scallop shell is placed over the fire and filled with fish, tofu, and seasoned vegetables. Miso, soy sauce, or *shottsuru* (juice from pickling fish) as added for taste" (p. 40).

In the Owu mountain range of northeastern Japan, men whose livelihood depends primarily on hunting are called *Matagi.* "These people also farmed, but they were takers of life." So their lives, like those of the fishermen, were restricted and controlled by religious customs. On long hunting trips, the only food or "flavoring they carried was a dried ball made out of soybean paste called *miso dama.* All they had to do was to add water to make miso or miso soup (p. 42).

After the Tokyo Olympics in 1964, "Japan became a country inspired by consumerism." Japanese wanted to be like Americans. In "modern" families, the husband and wife both began to work outside the home. In the evening, just as the husband walked through the door, the wife would tear open a pouch of instant *misoshiru* (miso soup) and add hot water–"looks so real and tastes so good"–as they chased the American dream (p. 46).

Table manners: "When you are being served a meal, your chopsticks should lay horizontally in front of you at the close edge of the table. Your rice bowl is on your left and your miso soup is on the right..." In Japanese restaurants in the USA, when serving dinner, they usually serve a salad and then *misoshiru* or *osumashi* (clear soup) before the meal (p. 56-57).

When you are a guest in a Japanese home, you "can only ask for *misoshiru* a second time. This is very formal; if it is a casual situation the rules are not as strict, yet manners are important in all situations" (p. 58).

Slightly sour Chinese cabbage mixed with tofu and chopped *negi* (Japanese onion [or leek]), "simmered with water, miso, and *sakekasu* (rice wine lees), makes a delightfully sour dish..." "The first bulbs to appear after the winter snow melted belonged to the *fuki* (butterbur) plant. "These bulbs were seasoned with miso and roasted, or made into *sunomono"* (seasoned with rice vinegar) (p. 66).

"Miso and tamari–soybean by-products: Making miso was traditionally a community effort that began May 21st or 22nd (*haru higan* or the spring equinox)." Soybeans are soaked overnight, boiled, drained, and poured into a large tub. Men wearing rice-straw shoes to protect their feet crush the beans. The women then shape the crushed beans, while they are still warm, into pyramids, squares, or balls, depending on the locality [just like with *meju* in Korea]. After the shapes have cooled, they are tied with rice-straw rope and hung under the eaves of the house (see 2 photos, p. 68). When the naturally occurring fungus [mold] begins to grow on the soybean shapes, it is said that "the flower has opened." When the shapes are covered with a fragrant bloom of mold, they are transferred to the *misodaru* (large cedar miso tub). Just before miso making time this tub is filled with water or weighted with rocks and soaked in a river so that the wooden staves would swell tight. It is then tested for leaks. Salt and water are added and the tub is covered. From time to time the cover is removed and the miso is stirred to enhance the fermentation process. This farmhouse method of making soybean miso is simpler than that which requires the use of koji, and the miso has a saltier taste.

While soybean miso is fermenting, a dark, rich, delicious liquid gathers at both the top and bottom. This is collected and called tamari (or miso-damari), and is used in traditional farm houses like soy sauce. In the countryside, shoyu (soy sauce) was traditionally made "as a cash crop to be sold in the cities. The mountain people and country farmers couldn't

© Copyright Soyinfo Center 2014

afford shoyu, so they used tamari or taremiso instead.

As a child, it was Homma's job to crush the boiled soybeans. His family used koji. The traditional farmer keeps a storage shed for the tubs of miso and pickles near his house–but not too near. "City people sometimes use the phrase 'you smell like miso' to mean that you come from" the countryside.

"Sometimes on larger farms, miso was stored for up to eight years. To have old miso in your house meant that you had a large, prosperous family" (p. 67-69). Continued. Address: Former owner and head chef, Domo restaurant, Denver, Colorado. Founder and chief instructor Nippon Kan Aikido ad Cultural Center, Denver, Colorado.

9831. Homma, Gaku. 1991. Miso, miso soup, miso-dama, and tamari (Document part II). In: Gaku Homma. 1991. The Folk Art of Japanese Country Cooking: A Traditional Diet for Today's World. Translated by Emily Busch. Berkeley, California: North Atlantic Books. xii + 270 p.

• ***Summary:*** Continued (p. 72): *Kojikabi* is the koji mold [*Aspergiluus oryzae*]. Koji (made from either steamed rice or barley) and its mold serve as a source of enzymes, which break down [hydrolyze] starches into sugars and proteins into amino acids, in the process of making both miso and shoyu. Koji is also used to make sake, and in farmhouses it was used to make *nigorizake* (unrefined sake, also called *doburoku* or *ohho*) in parts of the northeast prefectures. Nigorizake has been made from *genmai* (brown rice) since the Edo period (1600-1868). (p. 72).

Japan's traditional "seasonings are still undergoing change to suit current tastes [and lifestyles]: witness 'lite' soy sauce and reduced-salt miso!" (p. 74).

A photo shows *miso dama* [which could be called miso koji] and konnyaku dama hanging from the eaves of a traditional farmhouse (p. 83, 85).

There are many ways to preserve fish; one way is to marinate them with miso or tamari (which also add a subtle flavor) and then to dry them. Fish and shellfish (*gyokai-rui*) which have been dried are called *himono* (p. 90).

Homma has childhood memories of morning kitchen sounds. Rice being washed, snapping of kindling to start a fire under the *kama* (rice pot), "the sounds of chopping, as the tofu and scallions were cut for the miso soup" (p. 104).

A whole fish can be used by a single person with no waste. "One section can be eaten fresh that day. The second can be marinated in shoyu or miso for six to seven hours and frozen; this way it is ready to bake and eat at any time" (p. 112).

Breakfast–Setting the table. The simplest breakfast includes *ichihan, ichiju,* and *issai,* which means one bowl of rice, one bowl of soup, and one side dish. This simple breakfast is served during religious training, eaten for four or five days consecutively before a fast, or eaten to change one's diet or to lose weight." "The *ichiju* is either a kombu- or shiitake-based miso soup or a clear soup. The *misoshiru* contains a god balance of tofu and vegetables." The many *issai* include *tsukemono* (a variety of vegetables pickled with miso, salt, shoyu, or *nuka* {rice bran}), and *yakimono* (fish grilled either plain or marinated in shoyu, miso, *sakekasu* {rice wine lees} or nuka) (p. 122).

Okayu is rice porridge. "If you take plain okayu and mix in vegetables, fish, and miso or shoyu, you have *zosui* (p. 125).

"Morning side dishes: Tsukemono–pickles. Originally tsukemono were vegetables pickled in miso. Miso was called 'ko' in earlier times. *Ko no mono* [literally "fragrant things"; *ko* is the Japanese character for "fragrance"] is the old name for pickles." Today miso pickles are still made in Japan, but salted pickles are more popular (p. 126).

Recipe for *miso zuke*–Pickles made with miso (p. 132).

Yakimono–Grilled and broiled dishes (for breakfast): One way to prepare fish for breakfast is to marinate them for 1-3 days in miso, shoyu, or *sakekasu* (saké lees). A recipe for *Kasu zuke yaki*–Fish marinated in rice wine lees is given (p. 144, 146).

Recipes for *Nasu no miso ni*–Japanese eggplant sauteed with miso, Tekkamiso–Soybeans and burdock sauteed with miso (p. 151).

Misoshiru–Miso soup: *Misoshiru* is an integral part of the traditional Japanese breakfast. Japanese farmers started their workday very early. Traditionally they began their day with a large pot (*nabe*) of grains, cereals, vegetables. and miso mixed together to make a porridge like *zosui.* In the last 50 to 60 years the *misoshiru* and rice have been served separately in the traditional Japanese breakfast. There follows a detailed, very interesting 7-page discussion of the art of making and consuming miso soup. Homma has found nothing that evokes as much gratitude and delight from Japanese traveling in the USA as to be served real miso soup. "For myself, if I think of my mother's *misoshiru* I become the most homesick!" "The most important point to consider when making *misoshiru* is timing." The best time to add the miso (which has been mixed with a small amount of dashi to dissolve it) to the soup is just as everyone is sitting down to the table to eat. "As soon as it starts to boil, remove it from the heat and serve." Three recipes are given for making *misoshiru dashijiru:* (1) With kombu and shiitake. (2) With kombu and katsuobushi. (3) With niboshi or yakiboshi (dried sardines or anchovies). Thirteen miso soup recipes are given: (1) Tofu and wakame. (2) Wakame and potato (*jagaimo*). (3) Wakame and shiitake. (4) Sliced tofu and negi leeks. (5) Bits of tofu (*kuzushi tofu*) with spinach. (6) Cabbage with agé (deep-fried tofu puff), (7) Soybean sprouts (*daizu no moyashi*) with agé. (8) Snow peas with agé. (9) Daikon (Japanese white radish) and carrots. (10) Onion and potato. (11) Kabocha (Japanese pumpkin). (12) Sweet potato (*satsuma imo*). (13). Asari or hamaguri (short-neck clam or regular clam). Diagrams (p. 158) show 3 ways (from 3 dishes

© Copyright Soyinfo Center 2014

to 6) of setting the breakfast tray (*ozen*).

Aemono recipes: *Shiraae*–Vegetables and tofu flavored with miso. *Kaiso no ume shiraae*–Sea vegetables and tofu flavored with miso and pickled plum. *Burokkori no shiraae*–Broccoli and tofu flavored with miso and pickled plum. *Nanohana no ume shiraae*–Rapeseed leaves and tofu flavored with miso and pickled plum. *Sayaingen no goma misoae*–Green beans flavored with miso and sesame seeds (p. 178-80).

Nabemono (one pot) recipes: *Tsumire nabe*–Fish ball and vegetable casserole flavored with soy sauce [and miso]. Nabemono with miso flavor base: *Butaniku or toriniku nabe*–Pork or chicken and vegetable casserole flavored with miso. *Gyuniku nabe*–Beef and vegetable casserole flavored with miso. *Kaisen nabe*–Seafood casserole flavored with miso (p. 226-28). Address: Former owner and head chef, Domo restaurant, Denver, Colorado. Founder and chief instructor Nippon Kan Aikido ad Cultural Center, Denver, Colorado.

9832. Homma, Gaku. 1991. Natto (Document part I). In: Gaku Homma. 1991. The Folk Art of Japanese Country Cooking: A Traditional Diet for Today's World. Translated by Emily Busch. Berkeley, California: North Atlantic Books. xii + 270 p.

• ***Summary:*** This is a remarkable book by a remarkable man, with many deep insights into both traditional and modern cultures in Japan and the USA; it gives a unique, authentic view of Japanese culture, and makes liberal use of the Japanese names for things, such as food, utensils, techniques, houses, etc. He uses the Japanese words first, then explains what they mean (in parentheses) in English. Thus the book makes it easy and enjoyable to learn Japanese food-related words. Moreover, the book is brimming with interesting information about traditional soyfoods in Japan.

This record will focus on natto, which originated in Japan in the northeastern provinces (*Tohoku Chiho*) where the author lived.

In the index (p. 276), under "Soybean products (*daizu seihin*)," he defines three different types of natto: (1) Fermented soybeans (natto). (2) Slightly crushed natto (*hikiwari natto*). (3) Whole bean natto (*tsubu natto*). He notes that natto is discussed mainly on page 139.

In Chapter 3, "The background of Japanese staple foods," in the section titled "Products used daily" (p. 94-100) is a subsection on "Natto–Fermented soybeans" (p. 97): "*Natto* is a very popular item on the Japanese breakfast table, but either you love it or you hate it; there is no middle ground. *Natto* is boiled soybeans that have been fermented by introducing the natto fungus [sic, natto bacterium, *Bacillus subtilis*]. Open a package of natto and the first thing to hit you is a very strange aroma. If you stir it, it becomes sticky. Someone watching this might say 'yech.' The translator of this book, Emily, is one of these people. Although she has lived in Japan and traveled extensively in Southeast Asia, she says 'Natto is not for me.'

"Like the tofu peddler, the natto peddler came every morning. Now natto is available throughout Japan, but in the past, because of the growing conditions needed to produce it, many people had not eaten natto in southern Japan. Some of the visitors I have had at Nippon Kan, especially the young [Japanese] visitors who lived south of Osaka, had never tasted natto.

"The weather in northern Japan is favorable for the natto fungus [sic]. Traditionally it was common for the farmers to make their own natto at home. I have tasted homemade natto from many different parts of Japan. Like most traditional foods, the taste and texture varies depending on the location and the family recipe.

"The first natto was discovered, it is thought, when soybeans stored for safekeeping became contaminated with water and created the appropriate environment for the natto fungus [sic]. Historically, many Japanese foods were discovered accidentally, such as in the course of storing or preserving foods.

"Since its initial discovery, the process has been isolated and developed in a controlled procedure.

"To eat natto, pour it from its container into a bowl and stir vigorously with chopsticks until it turns sticky. Then add miso or tamari and shoyu or umeboshi (pickled plums) to suit your taste. Spoon it over rice and eat. Although some people may not agree, I find it tasty.

"I met a very old woman in Denver [Colorado, USA] who was a wonderful traditional Japanese cook. She knew all of the techniques for making homemade sake, natto, tofu, umeboshi and tsukemono–everything in her kitchen was homemade. Sometimes this old woman would make natto and bring it to my home. It did not taste like the natto available in grocery stores. She fermented the soybeans in a styrofoam cup using plastic bread wrappers for a cover. She then wrapped the cups in layers of crumpled newspaper as insulation to keep them warm. So you see, traditional Japanese methods can have a place in modern America."

In Chapter 5, "Country meals," the section titled "Breakfast (*Choshoku*)" (p. 120-58) notes (p. 121-22): "The most simple breakfast includes *ichihan, ichiju,* and *issai,* which means one bowl of rice, one bowl of soup, and one side dish. This simple breakfast is served during religious training, eaten for four or five days consecutively before a fast, or eaten to change one's diet or to lose weight.

"Prior to a fast, this meal is served in less and less quantity until the first day of the fast when *okayu* [rice porridge] is served... Traditionally, the *ichihan* or *meshi* (cooking rice) used for the breakfast meal is brown rice or barley or 60% white rice mixed with 40% barley. The *ichiju* is either *kombu*- or *shiitake*-based miso soup or a clear soup. The *misoshiru* (miso soup) contains a good balance of *tofu* and vegetables. There are many *issai* (called *okazu*) but they can be divided into the following basic categories:

© Copyright Soyinfo Center 2014

tsukemono (a variety of vegetables pickled with *miso,* salt, *shoyu,* or *nuka* (rice bran)); *ohitashi* (a variety of vegetables boiled quickly and flavored with *shoyu*)*; daizu seihin* (*tofu,* fried *tofu* cutlets, grilled *tofu, natto* and other soybean products); *yakimono* (fish grilled either plain or marinated in *shoyu, miso, sakekasu* {rice wine lees}, or *nuka*)*;* and *jobina* (a variety of dishes prepared and stored in the refrigerator to be eaten anytime).

"One or more side dishes are selected from these categories; you don't eat them all in one meal! Every morning you can arrange a new combination. Interestingly, as you increase the number of side dishes the portions of each decrease, so that you are always serving the same amount of food...

"Long ago Japanese people did not eat sitting around large tables. When sitting around the *irori* [sunken fireplace], a small tray was placed on the right side of each person. On each tray was a small side dish plate... After the meal, warm water was poured into their rice bowl and they used their chopsticks to clean it. After a sip of the water was taken, it was poured into the soup bowl, swirled around, sipped again, poured into the side dish plate, swirled and drunk... No washing required! We can conclude from this that the foods being eaten at the time were not oily, as the dishes could be easily cleaned with hot water." Note: This may well be the origin of the Zen *oryoki* (nested eating bowls and chopsticks wrapped in white cloth) and its ritual.

Also in Chapter 5, under "Breakfast," is a section on "*Daizu seihin*–Soybean products," which includes a subsection on "Natto–Fermented soybeans" (p. 139): *Natto* is a very popular breakfast food made by stuffing boiled white [yellow] soybeans into a *tsuto* (casing made from rice straw) and leaving them to sit in a warm, darkened room. Before they are stored, a natural natto fungus [sic, bacterium] is introduced to start the fermentation process. The result is *natto,* which has a sticky 'gooey' texture and a pungent odor. Most Americans in my experience turn their noses up at the sight (and smell) of *natto.* Continued. Address: Former owner and head chef, Domo restaurant, Denver, Colorado. Founder and chief instructor Nippon Kan Aikido and Cultural Center, Denver, Colorado.

9833. Homma, Gaku. 1991. Natto (Document part II). In: Gaku Homma. 1991. The Folk Art of Japanese Country Cooking: A Traditional Diet for Today's World. Translated by Emily Busch. Berkeley, California: North Atlantic Books. xii + 270 p.

• ***Summary:*** Continued (p. 139). "When making *natto,* the mixing bowl needs to be completely clean and free from any traces of salt. The natto fungus [sic, bacterium] is easily destroyed by salt. Salt is used to preserve most Japanese foods but *natto* is completely opposite.

"There are two kinds of *natto.* The first is called *tsubu* and is made from whole soybeans. The second is called *hikiwari* and is made from slightly crushed soybeans.

"Commercially made *natto* can be found in the frozen section of your local Oriental market for about one dollar. There are many different brands to choose from. Defrost the *natto* to room temperature before eating. Making *natto* from scratch involves a fairly complicated procedure. This book will concentrate on how to enjoy commercially produced *natto.*

A sidebar across the bottom of page 139 is titled "How to eat natto:" "1 package natto (*tsubu* or *hikiwari*).

"Suggested garnishes include chopped scallion, cilantro, parsley, trefoil, seaweed, Japanese hot mustard, seven-taste pepper [*shichimi togarashi*], and ginger.

"A. If frozen, defrost natto at room temperature. Remove from package and put in a bowl. Stir vigorously with chopsticks until sticky. Fold in one or two types of garnishes. 1 teaspoon each, and stir vigorously.

"B. Choose from 1 teaspoon shoyu, 2 or 3 pinches of salt, or 1 teaspoon miso. Add and stir again.

C. If you like it spicy, add Japanese hot mustard, seven-taste pepper, or thin matchstick slivers of ginger to taste. Other garnishes include soaked *sukikombu* [sliced dried Laminaria kelp soaked and dried in thin sheets] and *funori* (floating seaweed; [*Gloiopeltis furcata*]).

"Follow steps A, B, and C just before meal time.

"D. Serve with a bowl or warm white rice. Place about 1 teaspoon of *natto* onto your rice and eat them together. The chopsticks used for serving natto are separate from your own chopsticks because the natto is so sticky. Try not to touch your own chopsticks to the natto; touch the rice only. If your chopsticks do touch the natto they will become slippery and other foods will tend to slip. Another method is to use the *nori* (dried strips of [paper-thin] seaweed) to pick up the natto and rice. Place a 2-inch square of *nori* on top of the natto and with your chopsticks scoop up a bite of natto and rice wrapped in nori. This method is the least sticky."

On page 170 is a recipe for Natto soba, in which 3 oz. of natto, stirred until sticky, is used in place of grated Chinese yam in Tororo soba. *Soba* is the Japanese word for "buckwheat noodles." houses, etc. He uses the Japanese words first, then explains what they mean (in parentheses) in English. Thus the book makes it easy and enjoyable to learn Japanese food-related words. Moreover, the book is brimming with interesting information about traditional soyfoods in Japan.

This record will focus on koji (p. 72, 73) which originated in China, where it is called qü or ch'u.

Koji is mentioned in the section on making miso and tamari. "To make modern commercial miso, koji is added as a catalyst to start the fermentation process. Koji is malted rice or sometimes barley, although rice koji is the most popular. *Shiro miso* or white miso has a high percentage of koji. *Aka miso* (red miso) has a lower percentage... It was my job as a child to crush the boiled soybeans used to make miso. The crushed beans were then poured into a wooden tub, mixed with koji, covered and left to ferment for an average of six months to a year" (p. 67-68).

In the section on *Shottsuru:* "The end of November and December in my home town of Akita was the season for *hata hata* or sand fish. Thousands and thousands were caught at sea or were washed up on shore in what looked like an invasion." "For many years, *hata hata* was the source of winter protein in Akita and the surrounding areas... A favorite delicacy was *sushizuke,* which was *hata hata* mixed with koji and white rice in large quantities (sometimes 60 gallons). The mixture was left in a large press to pickle. As the koji and white rice fermented, the vinegar produced preserved the fish. The press kept poisons [toxins] from forming by limiting the access to oxygen" (p. 69).

In the section on *Kanmi* (sweets): "Rice or barley (rice being the more popular of the two) is steamed and mixed with *kojikabe* [also called *tané koji*] (a mold that changes starches to dextrose) to make koji. Koji you remember is used as a catalyst to make miso and shoyu.

"Because of the high starch content in rice, if this koji is brewed and distilled, it becomes quite sweet. This unique sweet taste from fermenting koji is the basis for making saké (drinking rice wine) and *mirin* (cooking rice wine).

Today sake is drunk all over the world. In the old days, sake was to expensive for farmers and common people. The farmers drank *nigorizake* [*nigori-zake*], which was homemade sake. This *nigorizake* did not go through the final filtering separation process, so it was not clear like the sake we see today.

"About 60 or 70 years ago, a new government liquor law was instigated to control the production of homemade sake. It became illegal to brew sake. Of course, unlawful brewing continued. In my hometown area the local word for *nigorizake* is *doburoku* or *ohho.* This *doburoku,* brewed in secret under penalty of law, was most delicious. Today it is no longer illegal to produce *nigorizake* to be sold in liquor stores so long as the producers pay an alcohol tax." "*Nigorizake* has been made from *genmai* (brown rice) since the Edo period (p. 72).

"To make *mirin, nigorizake* is filtered to separate the clear sake from the dregs or lees (the later is called *sakekasu*). Distilling this *sakekasu* results in *shochu* (distilled spirits). Mirin is the result of fermenting and straining *shochu,* adding it to steamed sticky rice and koji, and fermenting the lot together. Mirin is the most popular sweetener used in Japanese cooking" (p. 73). Address: Former owner and head chef, Domo restaurant, Denver, Colorado. Founder and chief instructor Nippon Kan Aikido and Cultural Center, Denver, Colorado.

9835. Homma, Gaku. 1991. Shoyu (Document part). In: Gaku Homma. 1991. The Folk Art of Japanese Country Cooking: A Traditional Diet for Today's World. Translated by Emily Busch. Berkeley, California: North Atlantic Books. xii + 270 p.

• ***Summary:*** This is a remarkable book by a remarkable man, with many deep insights into both traditional and modern cultures in Japan and the USA; it gives a unique, authentic view of Japanese culture, and makes liberal use of the Japanese names for things, such as food, utensils, techniques, houses, etc. He uses the Japanese words first, then explains what they mean (in parentheses) in English. Thus the book makes it easy and enjoyable to learn Japanese food-related words. Moreover, the book is brimming with interesting information about traditional soyfoods in Japan.

This record will focus on shoyu (soy sauce). Pages 68-69: While farmhouse miso is fermenting in a tub, juices leak from the bottom and are collected underneath. This flavorful liquid is called *tamari* or *taremiso;* it is much different from the commercial tamari sold in the United States.

Page 122: Japanese pickles (*tsukemono*) are vegetables pickled with miso, salt, shoyu, or rice bran (*nuka*).

Page 129: A recipe for Pickled Japanese white radish and carrots (*Daikon to ninjin zuke*) calls for 1 tablespoon shoyu as an ingredient.

Pages 136-40: Various recipes, including Ohitashi, Tororo imo, Grated daikon, and steamed Japanese eggplant call for shoyu as an ingredient. Shoyu is also a required seasoning for natto and Chilled tofu.
