2153. Whiteman-Jones, Michael. 1992. Health Freedom Act gains sponsors and support. *Natural Foods Merchandiser*. Sept. p. 20, 22.

• **Summary:** Senator Orrin Hatch (R-Utah) has introduced the Health Freedom Act of 1992 (S. 2835). If passed, the Act "would define supplements to include herbs, prevent FDA from restricting supplement potencies and from making high-potency formulas available only by prescription, allow scientifically supported health claims for supplements on labels and in advertising, and require the agency to regulate supplements as foods rather than food additives, which face tougher legal restrictions."

Small portrait photos show Orrin Hatch, David Kessler, and Henry Waxman.

2154. Belleme, John; Belleme, Jan. 1992. *Culinary Treasures of Japan: The art of making and using traditional Japanese foods*. Garden City Park, New York: Avery Publishing Group Inc. xiv + 232 p. Illust. by Akiko Aoyagi. Index. 25 cm.

• **Summary:** Contents: Acknowledgments. Foreword. Preface. Map of Japan showing where 21 traditional foods sold by Mitoku are made. 1. Kuzu: The wonder root. 2. Mirin: Sweet rice wine. 3. Miso: A health secret to savor. 4. Mochi: The sweet rice treat. 5. Noodles: Traditional Japanese fare. 6. Rice malt: Heavenly sweet water. 7. Toasted sesame oil: Cooking oil supreme. 8. Shiitake: Miracle mushrooms. 9. Soy sauce: King of condiments. 10. Tea: A national institution. 11. Snow-dried tofu: Protein powerhouse. 12. Umeboshi: Venerable pickled plums. 13. Vegetables of the sea: Underwater harvest. 14. Brown rice vinegar: Japan's liquid treasure. 15. Traditional vessels: Vats, crocks, and barrels. Glossary. Worldwide importers.

Concerning soy sauce, this book discusses Sendai

Shoyu and Miso Co., Johsen, tamari, Mansan Brewing Co. founded by Oguri family in 1875, almost destroyed in Sept. 1959 by the fierce Ise-wan typhoon, "discovered" in 1982 by Akiyoshi Kazama of Mitoku. Now a macrobiotic staple.

For details on the uncondensed introduction to this book see Kushi (1992) "Introduction to *Culinary Treasures of Japan*." Though very interesting, it contains a number of factual errors and statements that leave the wrong impression. Address: Saluda, North Carolina.

2155. *Health Foods Business*. 1992. Unicorn Village listed in top 500 restaurants. Oct. p. 62.

• **Summary:** "*Restaurant Hospitality*, a national industry magazine has published its annual list of the 500 busiest restaurants in the country. The rankings are according to total sales.

"Unicorn Village, in N. Miami Beach, Florida, was the only 'natural foods restaurant' in the United States to be listed. It ranked no. 103 with \$4 million in sales for 1991."

2156. Paolucci, Danny. 1992. Sunshine Soy Company Inc. and the tofu market in Miami, Florida (Interview). *SoyaScan Notes*. Nov. 5. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** After Swan Foods went out of business in Dec. 1978 Danny's stepfather, Marias, who was a financial analyst and a numbers man, didn't think it was a good idea to invest in another tofu company. He wanted to see what happened. So he waited for 18 months, during which time Richard McIntyre and Bob Heartsong set up tofu companies in Miami (Swan Gardens, and Bob & Toni's Tofu Works, respectively). Danny and the Heartsongs (Bob & Toni) had earlier tried to raise money to go into business together, but it didn't work out—since they wanted to give him only 5-10% of the ownership. So they returned the money they had raised to the investors and went their separate ways. Danny opened Sunshine Soy Company Inc. in Coral Gables, financed by Marias, in June 1980. So there were now 3 tofu companies in the greater Miami area.

McIntyre and Heartsong each set up a companies down in the low-rent produce section of Miami—10-15 miles away from Sunshine Soy. McIntyre was fairly innovative and took the idea of vacuum packaging tofu to new heights by having his bags printed and having dividers for each pack in his cases which made the tofu look very neat. That gave him the edge on the market, which won him Tree of Life as a distributor. Danny got a lot of the GNC (General Nutrition Corp.) stores; they both got chain store accounts. In the interim McIntyre hired Leasa, an Asian-American business, to distribute his tofu; they distribute Oriental foods to the chain stores. Danny heard that Leasa and McIntyre paid the chain store buyers \$5,000 each to carry their tofu. He ended up with 3 of the major chains. Soon McIntyre was the largest tofu producer in Miami. Heartsong picked up the leftover

accounts.

Sunshine Soy closed in March 1983 for various reasons: (1) The company's lease was up and the landlord wanted to increase the rent dramatically. (2) McIntyre was the leading tofu maker in the area and hard to compete with. (3) Interest rates were at about 18%. Marias said that Sunshine Soy was not even making a 10% return on investment, so he withdrew his support. Danny was living in the back of the shop, paying himself \$200/week and working 18 hour days with 8 employees. He was burned out and he had lost a total of about \$100,000 over the 3 years. So he went to work as an electrician—a trade he knew. He is now doing well as an electrician. He is still actively involved with Rinzai Zen meditation, and he has a public zendo in his home. Chico and Carol Wagner of Yaupon Soyfoods in Elgin, Texas (started July 1979) and James and Diana Muhs of Ashland Soy Works in Ashland, Oregon (started Oct. 1981) have also long been a Zen students of Sasaki roshi. Danny goes to his zendo on Mount Baldy for Rohatsu sesshin each December. Address: 2219 S.W. 59th Ave., Miami, Florida 33155. Phone: 305-266-0830.

2157. *SoyaScan Notes*. 1992. Soymilk and dairy milk prices in California, December 1992 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** At Berkeley Natural Grocery Co., a large natural food store at 1336 Gilman St. in Berkeley, California, unflavored (plain or original) soymilk made from organically grown soybeans retails for the following prices: Pacific Soy Beverage liter \$1.49 (the equivalent of \$1.41/quart), Vitasoy liter \$1.89 (\$1.79/qt), Vitasoy Lite liter \$1.99 (\$1.88/qt), Edensoy liter \$1.99 (\$1.88/quart), Westsoy liter (regular or unsweetened) \$2.19 (\$2.07/qt), Westsoy Lite liter \$2.29 (\$2.17/qt), Westsoy Plus liter \$2.29 (\$2.17/qt). By comparison, Rice Dream Low Fat Non-Dairy Beverage (a non-soy rice beverage) retails for \$1.99/liter. The average price of the quart equivalents of the 6 soy beverages is \$1.92 a quart. This is \$0.23 per quart or 13.3% higher than the \$1.69 in Dec. 1990.

Cow's milk (fortified with vitamins A and D) sells for the following prices at Safeway supermarkets: (1) Nonfat: \$0.69/quart or \$1.20/half gallon or \$2.22/gallon; (2) Extra light (1% fat; protein fortified): \$0.71/quart or \$1.25 per half gallon or \$2.37 per gallon; (3) Low-fat (2% fat; protein fortified): \$0.74/quart or \$1.27/half gallon; (4) Whole: \$0.93/quart or \$1.60/half gallon. The best-seller among these is non-fat in half gallons. Thus in Dec. 1992 soymilk in liter cartons is, on average, 2.78 times as expensive per unit volume as nonfat dairy milk purchased in quarts, 3.2 times as expensive as in half gallons, and 3.46 times as expensive as in gallons. In Dec. 1990 a quart of soymilk was 2.6 times as expensive as a quart of the best-selling cow's milk. So in the last 2 years the price of soymilk has risen relative to that of cow's milk.

In Oct. 1987, after most soymilk brands were available in liter or quart sizes, soymilk was 3.42 times as expensive per unit volume as dairy milk purchased in quarts. So there has been an 18.8% drop in the price of soymilk relative to that of cow's milk in quarts over the last 5 years.

Bob Gerner, the owner of Berkeley Natural Grocery Co., says that most soymilk prices rose significantly last month. The price of Pacific Soy Beverage is artificially low due to a deep discount, and even then it does not sell well. Customers who buy a case of any brand of soymilk at his store receive a 10% discount, even if that brand is on sale. For Gerner, the 4 best-selling products are Vitasoy regular, Vitasoy Lite, Edensoy regular, and Westsoy plain. Gerner does not carry the new Edensoy Extra because he has too many similar products. He sells 75-90 cases per month of soymilk at this store. Soymilk is one of his best-selling product categories, along with prepared dinners and teas.

2158. Soyfoods Assoc. of America. 1992. Soyfoods 2000: Merchandising soy products into the next century (Ad). *Natural Foods Merchandiser*. Dec. 16-page color special supplement, 8½ by 11 inches, inserted after p. 28.

• **Summary:** Contains full color ads by Morinaga Nutritional Foods, Inc. (Mori-Nu Tofu, Firm and Extra Firm), Lightlife Foods, Inc. (5 types of tempeh, Tempeh Burgers [Lemon Grill, American Grill, Barbecue Grill], Tofu Pups, Vegetarian Chili, Sloppy J, Foney Baloney, Fakin Bacon, Lean Links), Worthington Foods, Inc. (Natural Touch Okara Pattie, Garden Pattie, Dinner Entrée, Lentil Rice Loaf), Sovex Natural Foods, Inc. (Better Than Milk, Tofu Ice Cream [Vanilla or Strawberry], Good Shepherd Spelt, Millet-Rice Flakes, For Goodness Flakes!), Vitasoy (U.S.A.) Inc. (Light Vanilla, Original, and Cocoa soy drinks).

Contains black-and-white ads by White Wave, Inc. (Five Grain Tempeh, Meatless Tofu Steaks, Soya A Melt Soy Cheeses [Regular or Fat Free] and Singles, Lemon Broil Tempeh, Amaranth Tempeh, Teriyaki Burgers, Organic Tofu, Dairyless Non-Dairy Yogurts, Tempeh Burgers, Sea Veggie Tempeh, Meatless Healthy Franks, Snack'n Savory Tofu), Cemac Foods Corp. (Unbelievable brand Cheesecake; based on nonfat baker's cheese; contains no soy, no fat, no cholesterol), Solait International Ltd. (Solait Powdered Soy Beverage), Tofutti Brands, Inc. (Lite Lite Tofutti, Tofutti Cuties, Land of the Free [Non-dairy frozen desserts, free of fat and sugar, sweetened with fruit juice], Tofutti Egg Watchers, Better than Cream Cheese, Sour Supreme [Non-dairy sour cream], Premium Tofutti, Tofutti Soft Serve Mix), Sharon's Finest (TofuRella), American Natural Snacks (Soya Kaas), Great Eastern Sun (Miso Master brand misos), The Macrobiotic Wholesale Company, Turtle Island Foods, Inc. (Keep It Simple Stirfry—Diced Marinated Tempeh), Betsy's Tempeh (Tempeh), Quong Hop & Co. (The Soy Deli—9 Tofu Burgers, 3 Savory Baked Tofu, Pacific Tempeh, 3 Tempeh Burgers, 7 fresh water packed and vacuum packed tofu),

MYCAL Group (natural dehulled soybean flakes).

2159. Mergentime, Ken. 1992. Retrospective: A century of natural products. The evolution of an industry. *Natural Foods Merchandiser* 13(11):1, 26-28, 30. Dec. [3 ref]

• **Summary:** An interesting history of today’s natural products industry. The estimated number of retail stores selling natural products has grown from 150 in 1938, to 1,000 in 1960, to 6,500 in 1981, to 10,100 in 1991. Sales of natural products in the USA have grown from \$1,900 million in 1980 to \$2,900 million in 1986, to \$4,640 million in 1991.

Health reform teaching began with Sylvester Graham in the 1830s, but the natural food manufacturing industry really began in the late 1800s in Battle Creek, Michigan. Two of the pioneers were Dr. John Harvey Kellogg and his brother Will Keith Kellogg—who in 1906 broke away from Dr. Kellogg and took Kellogg’s Toasted Cornflakes mainstream.

The first health food stores (Martindale’s in Philadelphia, Pennsylvania, and The Original Health Food Store in New York owned by Benedict Lust, M.D.) started in the mid-1920s and early 1930s. An early periodical was *Nature’s Path*, published [1925-1953] by Dr. Lust. A key to the industry’s establishment and growth was the acceptance and popularization of vitamins. Early health food companies included Sherman Foods in 1924, Fearn Soya Foods in 1925, El Molino Mills and Naturade in 1926, Ener-G Foods and Orjene (the first natural personal care company) in 1928. *Health Foods Retailing*, the industry’s first trade publication, began in 1936 and continued until 1987. In about 1929 Andrew Rosenberger started a health food store named Nature Food Centre; the store is still open today—along with 101 others along the Eastern seaboard between Maine and Virginia. The publicly-owned chain, based in Wilmington, Massachusetts, now grosses nearly \$50 million a year.

A sidebar discusses Anthony Berhalter of Chicago, Illinois, who in 1936 organized a consumer group named the American Health Foods Association. In the spring of 1937 in Chicago he organized America’s first health foods convention, with 150 attendees, 10-15 booths, and many lecturers. At this meeting the National Health Foods Association was born. It was later renamed the National

Dietary Foods Association, then the National Nutritional Foods Association (NNFA).

World War II spurred interest in vitamins and nutrition. A government program was called Vitamins for Victory. “By 1945, vitamins and supplements had become the most profitable product in health food stores. By the end of the decade the industry was, literally, quite healthy.

During the 1950s stores such as Lindberg Nutrition (Lindberg’s Nutrition Service) became a beacon for retail innovations; it eventually grew into an 11-store chain.

“In 1952 a man named Joe D. Nichols, M.D., opened new doors for the industry when he presented a paper called Concept of Totality, in which he outlined a healing philosophy centered on the ideas of preventative medicine and nutrition, while considering environmental and psychological factors. This was the foundation of holistic medicine as we know it today. Nichols founded Natural Foods Associates (NFA) in 1953 to educate and change the eating habits of Americans. In 1954, he unveiled *Natural Food & Farming* magazine as forum for nutritional education and the fledgling organic industry...

“The ensuing decades saw a fundamental shift in consumers’ perceptions of health and nutritional needs resulting in a phenomenal growth period for the natural products industry. Beginning in the mid to late 1960s, as the Baby Boom generation began to come of age, a new generation of well-educated consumers became aware of a need for natural foods... By the mid 1970s and early 1980s, the industry saw the migration of products, such as yogurt, granola and rice cakes, into mainstream markets.”

Photos show: A health food store inside the Battle Creek Sanitarium in the 1870s. The Sanitarium at the height of its prosperity in 1903. Organically grown fruit and vegetables featured in a produce case in the mid-1950s. The inside of the Battle Creek Food Co. in the early 1920s. Dr. John Harvey Kellogg. Lindberg Nutrition’s second store, circa 1952. Portraits of Gladys Lindberg (1950s) and Sam Reiser, owner of Balanced Foods (ca. 1935).

2160. Mergentime, Ken. 1992. Our industry and the FDA. *Natural Foods Merchandiser* 13(11):28. Dec.

• **Summary:** Since 1938 the FDA and the natural products industry have been at odds. This article outlines some of the more important legal cases where the natural and health food industries have gone head to head—in 1960-64, 1962-74, 1973-77, 1974-76, 1990. In each case, the natural products industry won the key cases.

2161. Whiteman-Jones, Michael; Shurtleff, William. 1992. The modern evolution of soyfoods. *Natural Foods Merchandiser*. Dec. Soyfoods 2000 special supplement insert. p. 4-6.

• **Summary:** A colorful overview of the history of soybeans and soyfoods from 1100 B.C. to the present, worldwide.

Discusses the history of tofu, Samuel Bowen, Benjamin Franklin, T.A. Van Gundy, Madison College, Henry Ford, Seventh-day Adventists, Erewhon, Asian Americans, Kikkoman, the \$1,000 million soyfoods market in America, countries with the highest per-capita consumption of soyfoods, the future of soyfoods. Address: 1. NFM; 2. Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2162. *Whole Foods*. 1992. Whole Foods Market acquires six-store Bread and Circus chain. Dec. p. 16-17.

• **Summary:** “Austin, Texas—Whole Foods Market, based here, has purchased the New England natural food store chain Bread & Circus for \$26.2 million. The move adds six stores to the Whole Foods Market chain and marks the company’s entry into the Northeast market. The acquisition gives Whole Foods Market a total of 19 natural food supermarket outlets with combined sales of over \$182 million. The transaction was effective October 12.”

“Anthony and Susan Harnett, the former Bread & Circus owners who built up the company from an initial single-store purchased for \$30,000 in 1975, reportedly decided to sell their stores to Whole Foods Market after a previous attempt to raise some \$3 million to finance their own expansion plans... Bread & Circus... took in a reported \$62 million in sales last year.

“Whole Foods Market, founded in 1980, reports its sales for the fiscal year ending last September reached nearly \$120 million, representing a 29% increase from the previous year. The company has seven stores in Texas, three in California, two in North Carolina (operated as Wellspring Grocery) and one in New Orleans [Louisiana], plus the Bread & Circus stores.”

2163. *Whole Foods*. 1992. Westbrae poised for “comeback” with addition of Dalfen, Jacobson. Dec. p. 16.

• **Summary:** “Carson, California—In a move the company feels will help to re-establish its market share, Westbrae/Little Bear Natural Foods has announced the addition of two long-time natural foods industry executives to the top of its corporate leadership structure.

“Andrew H. Jacobson and Allan Dalfen have been named president and CEO, respectively, of the natural foods supplier.”

Annual sales of the company’s products are \$25 million, the company reports.

2164. Arrowhead Mills, Inc. 1992. Arrowhead Mills: America’s organic company. Hereford, Texas. 32 p. 22 cm.

• **Summary:** A black-and-white brochure with photos of Deaf Smith farms and farming. on every page. Contents: (1) A great land-ocean of fertile earth, the heartland of America. (2) Organic farmer Ralph Diller of Hereford, Texas, farms 1,100 acres of wheat, corn and rye on the high plains of the Texas Panhandle. In the southwest corner of the Texas

Panhandle lies Deaf Smith County. “Frank Ford, the founder and chairman of Arrowhead Mills, has a life-long love affair with this country. Sometimes when he stands on the rich soil of his own organic farm and looks around him toward the distant horizon, Frank feels like he is standing in the palm of God.” A long quotation from Ralph Diller begins: “I’ve sprayed in years past when it turned out to be a waste of money. Like everybody else, I was just doing it because I was scared. Now I’d rather give the beneficial insects a chance... “To the people in the cities I say that it’s worth it to pay more for your food now because that’s cheaper than doctor’s bills later. We need to take a longer view of it—shortsightedness has got us in a whole lot of trouble.”

(3) A long quotation from Frank Ford describes the country and the water sources that have given birth to Arrowhead Mills in the High Plains. Doug Ragsdale farms 1,300 acres, also planting wheat, corn and rye. He adds fallowing to his crop rotation. He says: “But in any case, organic farming is best for preserving soil and planet together.”

(4) W.J. Brown Farms, Anahuac, Texas, grows 600 acres of organic brown rice. Its a family farm owned and operated by two brothers, and two sons of one of those brothers. One of their grandfathers started farming here in the 1920s. “None of us was ever big with chemicals, but then we got interested in organic farming at an Acres USA convention in 1984, and went fully into it in 1985.”

(5) “Frank Ford and Arrowhead Mills started Arrowhead Mills in 1960, with Frank as the active partner. In those days the facility consisted of an old tin-roofed building that housed a stone mill, and an old rail car for an office. Frank drove a pick-up truck and trailer from store to store, delivering the original Arrowhead Mills product line: two and five-pound bags of stone-ground whole wheat flour and corn meal.

“He also delivered a heart-felt message about organic agriculture: how agricultural chemicals harm both man and the environment, how organic agriculture is healthier for both... it took seven years for Arrowhead Mills to turn its first profit.”

(6) In 1990, when Arrowhead Mills celebrated its 30th birthday, its reward for that persistence was: “a 20-acre complex of offices, manufacturing laboratory, and five warehouses; a phalanx of more than 60 steel storage bins; a fleet of tractor trailer trucks that promote whole and natural foods as they crisscross the country; 80 or so employees (a few more or less, depending on the season), including a full-time manager of Arrowhead’s organic crop certification program.” The original two products had now grown to over 220. The company “now ships more than 20 million pounds of food per year—over 80% of it certified organically grown.”

(7) Dan Warren and Doug Ragsdale, neighbors and partners in Dove Creek, Colorado, farm more than 1,000 acres—all of it dryland farming (no irrigation). Other

Arrowhead Mills farmers are in North Dakota. On the last 2 pages are portrait photos of 24 Arrowhead farmers and employees.

(8) “The word ‘organic’ as it applies to farming has its origin in the fact that it is an agricultural approach which seeks to increase, or at least preserve, the organic matter (called *humus*) in the soil. It is the humus in soil that hosts its living elements, including everything from microbes to earthworms. Humus also absorbs water.” Organic agriculture is “a primary form of environmental stewardship.”

“Arrowhead Mills has also been acutely aware of the another environmental issue: toxicity. For agricultural chemicals—chemical fertilizers, insecticides, and herbicides are now generally recognized to be toxic.”

The two pages titled “Arrowhead Mills Certified Organic Products” include a section on “Beans” that includes Adzuki beans and soybeans.

This booklet, sent to Soyinfo Center by Lorenz Schaller (10 April 2012) was accompanied by the following undated brochures also from Arrowhead Mills in about 1992 or 1993. Kamut: Whole food, whole taste. All about organic foods. The native Americans (quinoa, amaranth, anasazi beans). The story of spelt. The story of quinoa. The story of amaranth. The story of kamut. Address: Box 2059, Hereford, Deaf Smith County, Texas 79045-2059. Phone: (806) 364-0730.

2165. Selawry, Ella. 1992. Ehrenfried Pfeiffer: Pioneer of spiritual research and practice. A contribution to his biography. Spring Valley, New York: Mercury Press. *

2166. **Product Name:** Organic TofuBurgers [Original].

Manufacturer’s Name: Stow Mills (Distributor).

Manufacturer’s Address: Chesterfield, NH 03443-0301.

Date of Introduction: 1992?

Ingredients: Organic tofu (filtered water, organically grown soybeans, natural calcium chloride nigari—a natural mineral coagulant, not a preservative), fresh carrots, rolled oats, sunflower seeds, sesame seeds, dried currants, barley malt syrup, red miso (water, rice, soybeans, salt), onion powder, garlic powder, spices, guar gum, natural orange extract, canola oil.

Wt/Vol., Packaging, Price: 6.5 oz (184 gm) vacuum pack. Retail for \$1.59 (7/92, Maryland).

How Stored: Refrigerated.

Nutrition: Per 3.25 oz patty: Calories 240, protein 14 gm, carbohydrate 19 gm, fat 12 gm, cholesterol 0 mg, sodium 85 mg, dietary fiber 12 gm.

New Product—Documentation: Product with Label purchased at Fresh Fields, Rockville Pike, Maryland. 1992. July 20. Label is 4 by 5.5 inches. Self adhesive. Dark blue, red, and black on light blue and light green. Color photo of a Tofuburger with tomato slices, onion rings, and a lettuce leaf. “All natural. Wheat free. Low sodium. Meatless. Dairy

free. No cholesterol. High calcium. High protein. Stow Mills Tofu Burgers are precooked for your convenience. Please do not overcook. To prepare, just grill, fry or microwave until heated.”

2167. Roller, Ron. 1993. American Soy Products’ research on amazake and its use with soymilk (Interview). *SoyaScan Notes*. Jan. 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron is actively working on making amazake. He ordered an updated copy of Soyfoods Center’s book on Amazake. He is getting fresh koji from Takara Sake USA Inc. in Berkeley.

Confidential update: 1993 Sept. 4. Eden Foods will be introducing 2 new beverages in one week (Sept. 10-12) at the Natural Products Expo East: Eden Rice (a non-dairy rice milk) and Rice-Soy Milk. Both are superior products using Lundberg organically grown rice, and the Rice-Soy milk is much better nutritionally than Rice Milk on its own. They will be using real traditional rice koji in both but will not be making the koji themselves. To make koji in truck-load quantities weekly takes a lot of skill. There are 10 sake manufacturers in the USA and one of these (located not too close to Eden Food’s soymilk factory) will be making Eden’s koji. The whole process is just beginning and it has required the sake company to greatly expand their operations. This has been going on for a year and the expansion is completed. Ron can imagine that eventually Eden will make the koji themselves.

Both of the new beverages will be packaged in Tetra Brik cartons. The rice milk has been a very difficult product to develop technically; the solids tend to settle out. Imagine Foods and Grainaissance both use a lot of oil and a whiter (more refined rice). They also centrifuge out the fiber and protein, leaving basically starch and sugars—according to the Imagine Foods patent. Making real koji into a beverage that is stable and consistent is a very significant task. Ron’s greatest concern now is how Imagine Foods reacts, since they have patented a process related to making a beverage from rice. They have sent Eden letters threatening a lawsuit; but Imagine Foods does not know anything about how Eden will be making their koji or their beverages. If Imagine Foods continues to pursue the path they are now on, Eden might have to tell Imagine Foods’ customers how Imagine Foods makes its product—based on the public information in their patents. Most consumers have little idea how Imagine Foods’ beverage is made. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2168. *SoyaScan Notes*. 1993. Listings for natural foods manufacturers, distributors, brokers, associations, publishers, advertising agencies and public relations firms, and service companies (educational organizations, consultants, and

companies providing research and analysis, product development, promotions and other services) (Overview). Jan. 8. Compiled by William Shurtleff of Soyfoods Center.

- **Summary:** There are three good sources of this information: (1) The annual issue of *Natural Foods Merchandiser* titled "Supplier Guide," which is usually published each August. (2) The annual issue of *Whole Foods* titled "Source Book," which is usually published each May. (3) The annual issue of *Health Foods Business* titled "Purchasing Guide," which is usually published each November.

2169. Simon, Virginia. 1993. A commitment to the earth. *Target Marketing (Philadelphia, Pennsylvania)* 16(1):25. Jan. *

- **Summary:** Environmental consciousness has permeated the various operations at Walnut Acres, a natural foods cataloger in Penns Creek, Pennsylvania. When packing, for example, it eliminated all void fill and padding materials in all boxes that do not contain tins or glass, allowing the use of smaller boxes. Moreover, the company letterhead, newsletters and invoices are printed on recycled paper. However the high cost of such paper has restricted its use in the Arrowhead Mills catalog.

2170. **Product Name:** Organic Tofu–Fat Reduced!

Manufacturer's Name: White Wave, Inc.

Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.

Date of Introduction: 1993 January.

Ingredients: Rocky Mountain glacier water, OGBA certified organic dehulled soybeans, gypsum, nigari (magnesium chloride).

Wt/Vol., Packaging, Price: 16 oz packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.

How Stored: Refrigerated.

Nutrition: Per 85 gm.: Calories 90, calories from fat 35, total fat 4 gm (6% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 5 mg (0%), total carbohydrate 5 gm (2%; dietary fiber 2 gm [6%], protein 8 gm, calcium 4%, iron 6%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Talk with Steve Demos. 1993. Jan. 21. The company will start shipping product tomorrow, and they will launch it in a big way at the Natural Products Expo at Anaheim in February. It is made with Nichii Microsoy Flakes and Nichii is helping in a big way to promote the product. The label says that the product has 30% less fat than regular tofu with the same water content, but actually laboratory analyses show that the product contains 42% less fat. White Wave listed 30% to be on the safe side. The product is certified organic by a third party organic certification organization. The product is priced at about 10-15% above the price of regular tofu. Steve also hopes to

private label the product for other tofu companies.

News release from Susan L. Holden of Holden McClure. 1992. Jan. "White Wave launches first fat reduced tofu in America." "With 60 employees, White Wave sales have grown over 20% annually for the last 5 years, with estimated earnings [sic, sales] of over \$4 million for 1992. In 1992, White Wave was named Small Business Manufacturer of the Year by the Boulder County Chamber of Commerce." The tofu is certified Kosher-Parve by Star K. "This premium product will retail for approximately \$1.14 to \$1.49 per pound... We've made a healthy product even healthier."

Label sent by Lon Stromnes of White Wave. 1993. Feb. 26. 5 by 4.25 inches. Dark blue, red, and white on yellow. Self adhesive (front and back labels). See-through window. Front panel: "Third Party Certified. Fewer calories derived from fat. Organic hard style. Fat reduced by 30%—with no loss of protein." In the lower right corner are the Japanese characters *Yūki Tofu* meaning "Organic Tofu." Back panel: "White Wave reduced fat tofu. Serving size: 1/5 block. Write for recipes." Note: This is one of the first labels seen to use the new FDA NLEA labeling format and information.

Color postcard used to advertise the product. 1993. Feb. "Have a block party! You'll want to celebrate a protein-rich block of tofu with 30% less fat. It's 100% natural and Third Party Certified Organic. And it cooks and tastes just like our regular tofu. So wake the neighbors. Its party time."

Talk with industry observers. 1993. March. The product is somewhat dry and crumbly. White Wave is now private labeling this tofu for Tree of Life, and has picked up a new distributor on the East Coast, plus Mrs. Gooch's on the West Coast.

Ad (full page, color) in *Natural Foods Merchandiser*. 1993. March. p. 18, and April p. 33. "The story of White Wave's reduced fat tofu: A simple tale of the first and only reduced fat tofu in America." A colorful story, with cartoons, a photo of the package label, and the "Nutrition Facts" panel. An 85 gm serving contains 4 gm of fat and 90 calories, of which 35 calories (38.8%) come from fat.

Leaflet of White Wave products. 1996. March. The product name is given as "White Wave Organic Reduced Fat Tofu(TM)."

Talk with Jonathan Gordon of White Wave. 1997. May 5. This tofu is coagulated with both calcium sulfate and nigari. According to an outside lab analysis dated Dec. 1992 the product contains 48 mg of calcium per 100 gm of tofu.

2171. Potter, Michael. 1993. Re: A brief chronology of Eden Foods. Letter to William Shurtleff at Soyfoods Center, Feb. 14—in reply to inquiry. 2 p.

- **Summary:** William Shurtleff sent Michael Potter a chronology of Eden Foods that he (Shurtleff) had compiled from various sources, and asked for Potter's comments, which follow. This letter is a follow-up to a letter written by Potter to Shurtleff on 1 March 1992.

“Eden Foods, Inc. was first incorporated as a non-profit corporation in the winter of 1967/1968, I believe. It was later (Bill Bolduc told me, in a manner that was not consistent with state law) reincorporated (after Ron Teeguarden pulled out) as a regular corporation under the name Eden Organic Foods, Inc. This WAS done by Bill Bolduc in November of 1969.

“Mr. William Shurtleff, traditionally corporations do not define the date they were *founded* as the date they became ‘officially’ or legally ‘incorporated.’ Commonly, decades separate these two occurrences, sometimes centuries.

“These thoughts will loosely follow your 2-page ‘chronology of key events.’ Eden was buying and selling soyfoods, tamari and miso, for more than 2 years prior to Nov. 4, 1969.

“During the spring of 1970 I became a partner of Joyous Revival natural foods in Birmingham, Michigan. I developed a relationship with Bill Bolduc... [the Eden’s store’s manager], as we were both attempting the same things and respected the quality of the work each other was doing. Frequently Bill B. asked me to move to Ann Arbor.

“After a falling out with my partners in December 1970, I visited Bill and Judy [his wife] in January 1971 and was hired by Bill on the spot, at his home, in his kitchen. My first job was to help a failing new Eden retail outlet in downtown Detroit on the campus of Wayne State University. (I never lived in Detroit at the time. I lived in Walnut Lake 30 minutes north.) By late spring or early summer 1971, after closing this Eden store, my pregnant wife Carol and I moved to Ann Arbor where I assumed responsibility for the Eden Foods store at 211 South State St. It is of interest that Eden Foods’ name had already been legally changed back to just Eden Foods, Inc., when I moved to Ann Arbor.

“During the winter of 1971/1972 I was given what amounted to 13.5% of the common stock of Eden Foods, Inc. The share holdings then broke down: Bill Bolduc and Tim Redmond owned the same number of shares, but Judy Bolduc owned a small number of shares so the Bolducs owned the largest block.

Mid-Summer, July 1973, Bill thought the company was going out of business and after I stepped into a near fist fight between Bill and Tim outside the warehouse we were sharing with Mid West Natural Foods; I told them ‘that if they’d just quit fighting and leave things alone, all would be well.’ Bill immediately offered to sell me all of his stock. I asked Bill how much he wanted for it. After a very brief pause he said “\$2,500.” I told him that I’d try to get the money. We parted. Bill left and Tim and I went back to work. The next day I visited a friend named Ray Suber and asked him to help me purchase the stock. He said he would and to come back the next day. I did and was given \$2,500 cash as a ‘contribution to the natural foods movement.’ With the \$2,500 I purchased all of Bill and Judy’s Eden Foods, Inc. stock. Neither Bill nor Judy ‘sold their stock back to the company.’ They sold it

to me for cash. They were glad to get out because they were convinced the company couldn’t make it.”

From a talk on 31 Oct. 1993: There was a 51% Tim Redmond / 49% Michael Potter share holding configuration in Eden Foods, but it lasted for less than a year. When Michael bought all of the Bolduc’s stock, he owned the majority of Eden Foods’ stock. But he realized that Tim Redmond’s father might withdraw his \$10,000 if he knew Michael had majority ownership, and if that happened Eden would not be able to survive. So Michael immediately (as part of the transaction with the Bolducs) gave Tim enough of his stock so that Tim owned 51% and Michael owned 49%.

About 3 months later, Michael loaned about \$44,000 in cash to Eden Foods. This was money that Michael’s father had entrusted to him. But Michael became uncomfortable having no control over something for which he was responsible—both the company and his relationship with his father. Michael discussed his feeling with Tim, and Tim agreed to give Michael equal ownership in exchange for Michael converting his \$44,000 loan into an investment in Eden Foods. Now neither partner could make a major decision without the other’s agreement—a good situation for Eden Foods.

“In September 1973, at Royce Seeger’s home, I received the unanimous recommendation of an employee steering committee and became Bill Bolduc’s successor as president of the company. My first goal was to get us away from MidWest Natural Foods for moral and ethical reasons. I located a new facility in the process of being constructed and developed a relationship with the owner/builder, John Sheer. In the spring of 1974 we relocated to that 4601 Platt Road, Ann Arbor warehouse.

“During this period I was building and moving Eden’s retail store to 330 Maynard St. in Ann Arbor. The move actually took place in the summer of 1973. It included a large store, a large fast food (chapati sandwiches, etc.) deli, and a natural foods bakery named Sun Bakery, that relocated itself from Kalamazoo, Michigan. These three operations were under one roof in a 6,000 square foot old printing plant at the University of Michigan’s campus, leased by Eden Foods, Inc. This operation paid off all Eden’s debt and paid for the new warehouse, computer, offices, trucks and equipment. The wholesale operation was carried by the retail until late 1974 after trucks were put out on regular routes throughout the Mid-west.

In October 1974 I made my first of eleven trips to the People’s Republic of China (Eden made a total of 13 trips between Oct. 1974 and Nov. 1979) and stopped in Japan on the way back to visit Yuko Okada at the Muso Company. Prior to 1974 Eden Foods imported shipments from Mr. Kazama of the Mitoku Co. in Japan. After my visit to Muso, seeing their educational activities, their macrobiotic center activities, etc., I decided to import Japanese foods exclusively from Muso. Tim Redmond had cultivated the

Mitoku connection and initiated our first Japanese imports.

“Spring 1979 Cliff Adler is hired by myself to do sales work for Eden in Chicago. During that summer he lends Eden Foods \$100,000, for which he is paid bank interest rates.

“After the Nov. 27, 1979 warehouse fire Cliff converted his \$100,000 to stock in February 1980 as Tim Redmond left, certain that Eden was finished. Tim’s stock was redeemed with Eden giving him title to our operations at 330 Maynard St. In one transaction Tim was bought out by the company, Cliff and I became 34% shareholders, 10% was sold to Frank Dietrich of Natural Foods, Inc. (Toledo, Ohio) for \$100,000 and the following percentages of Eden Foods’ common stock were given to Eden managers shortly after we laid off 35 people: Ronnie Roller 5%, Michael Gordon 4%, Mark Cook 4%, Kathy Knor 3%, Bill Swaney 3%, and Bob Duha 3%. This free stock was limited to book value and had to be sold to Eden Foods whenever the person left the company regardless of the reason for leaving. It could not be sold another way.

“In early 1984 when Mike Gordon left Eden his stock was awarded to Michael Potter as a bonus by the Board of Directors... to be continued.” Address: Chairman, Eden Foods, Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-7424.

2172. Barrier, Michael. 1993. A simple life no longer: Walnut Acres’ mail order organic foods. *Nation’s Business*. Feb. p. 13-14. *

• **Summary:** Walnut Acres Inc., a 500-acre farm near the tiny town of Penns Creek, Pennsylvania, grows foods organically and sells them by mail order. It employs about 100 people depending on the season. Sales in 1992 were about \$7 million, with other people’s products accounting for perhaps half its total revenues. Paul Keene describes how the mail order business developed.

A portrait photo shows Paul Keene.

2173. **Product Name:** Organic Textured Soy Flour [Chunks, Pieces, or Bits].

Manufacturer’s Name: Great Lakes Organics. Renamed Organic Processing Corporation.

Manufacturer’s Address: 1430 Clifton Rd., Xenia, OH 45835. Phone: 1-800-647-2326.

Date of Introduction: 1993 February.

Ingredients: Organically grown soybeans.

Wt/Vol., Packaging, Price: 25 lb bags.

New Product–Documentation: Talk with Stuart Sapidin of Atlanta, Georgia. 1992. Sept. 18. This company (whose ad he saw in *Vegetarian Times*) makes a TVP-like product from expeller pressed, organically grown soybeans. No solvents are used in the extraction process. Note: This is the same phone number as that owned by Bill Bolduc of Organic Processing Corp., 1430 Clifton Rd., Xenia, OH 45385.

Talk with Jim Leuba who grows soybeans organically near Dayton, Ohio. 1993. Feb. 12. He sells some of his soybeans to Bill Bolduc for his organic TVP—which is on the market. Bolduc also brokers some of Jim’s organic soybeans to ADM; they are used to make tofu in England by a company owned by ADM.

Talk with Bill Bolduc, president of Organic Processing Corporation, 305 N. Walnut St., Yellow Springs, Ohio 45387. 1993. Aug. 16. Bill just returned from visiting with his cousin David Bolduc, who owns a bookstore in Boulder, Colorado. Bill’s business is going well. Originally he wanted to call his product “Organic TVP” but ADM (which owns the TVP trademark) would not agree to let him use or license this term. So he has decided to call his product Organic Textured Soy Flour. The term “hexane free” appears on the label. Bill thinks (and Soyfoods Center agrees) that this is the first commercial organic textured soy flour made without hexane solvent processing. Another company makes the product for him; the first production run was on 15 Jan. 1993, yielding 20,000 pounds. At his warehouse, his company does the screening into 3 sizes: chunks (the biggest, thumb-nail size), pieces (the size of a kernel of corn), and bits (the smallest, granules). He will be sharing a booth with several other Midwest natural foods at the NFM show on the East Coast this fall. The product is on the market and interest in the product has been outstanding. He has not been able to produce enough to supply some of the larger accounts that want to handle the product. But he expects to be able to have sufficient capacity in September/October. He is waiting for a twin-screw extrusion cooker right now. Most of the product is sold retail. Stow Mills (in Chesterfield, New Hampshire) is the product’s largest distributor. They sell it in bulk to natural- and health food stores in the northeast. Some is also sold wholesale to Little Bear / Westbrae, which uses it in their new burritos-brand Vegetarian Chili; they label it as Textured Organic Soy Flour.

2174. Kushi, Aveline. 1993. The early years of Erewhon and its ownership. Paul Hawken (Interview). *SoyaScan Notes*. March 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Aveline calls to say that 3-4 days ago her attorney for 27 years, Morris Kirsner, showed her a book by Paul Hawken titled *Growing a Business*. She and Morris had to laugh when they read that Paul claimed at the start of the book to have started Erewhon and then to have sold it. She talked with Mr. Kirsner about this and they agreed on the following: Originally Aveline owned all of the Erewhon stock. Shortly before Paul left for Japan, she offered him 50% of this stock. At roughly the same time, she offered 50% of the stock in Sanae to Evan Root. Michio, Aveline, Paul, and Evan all went together to Morris Kirsner’s office to sign the documents. Evan was happy to sign the agreement, but Paul did not sign. Aveline does not know why Paul did not

sign; he said he didn't need the stock. Aveline can get copies of all Erewhon's legal documents from Mr. Kirsner to show what happened.

After Paul and Evan went to Japan, Evan wanted to stay longer in Japan to study, but he needed more money. So Michio and Aveline bought back Sanae stock from Evan, and sent him money each month. After Paul returned from Japan, he went to Los Angeles, California, and stayed at the macrobiotic house there for 3-4 months. Aveline was also there and Erewhon-Los Angeles was now in business selling macrobiotic natural foods. Bill Tara and maybe Bruce Macdonald were in Los Angeles at the time.

When Paul and Aveline returned to Boston. Erewhon's situation was completely different. It was now a fairly large wholesale and retail company instead of just a single retail store as it was when Paul left. Aveline wanted to offer Paul (and other top managers) stock after Paul returned. There were many long meetings of the 3-4 main Erewhon managers, but no agreement could be reached about who should get how much stock. So in the end, Aveline continued to own all the stock. Neither Paul nor any of the other leaders/managers of Erewhon ever owned any stock. At one of these meetings, with Michio, Aveline, and various other managers present to talk about Erewhon, Paul expressed himself in a very negative way about many things related to Erewhon. Michio, uncharacteristically, got very angry at Paul. Paul organized at least one meeting of employees and explained his viewpoint. "Everyone (including Evan Root) was shocked. What he said was completely untrue. Not long after that, Paul left Erewhon. Aveline thinks Paul Hawken was a twin.

Aveline's main project now is a prison project. This has been her dream for the past 10 years. She and Michio would like to offer their 400 acres of beautiful land at Ashburnham (near Gardner, about 1 hour drive northwest of Boston near the New Hampshire border), Massachusetts, to the state of Massachusetts. They could build a prison on the land and Aveline and Michio would be able to play a major role in determining the type of food that was served (macrobiotic natural foods), the daily schedule (incl. yoga and dō-in), and the policy. Her youngest son, who is now a lawyer in Massachusetts, is working on this project.

Follow-up talks with Morris Kirsner. 1993. March 22 and April 8. He will look for the early Erewhon legal documents. He handed them over to Hale and Door, the Boston law firm that handled Erewhon's bankruptcy, and they have the corporate minutes stored in their warehouse. He will ask them to send the documents to him. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-232-6869.

2175. *SoyaFoods (ASA, Europe)*. 1993. EC regulation on organic food production. 4(1):2. Winter.

• **Summary:** "The EC regulation (2092/91) on organic food

production and labelling came into force this year. As of 1 January 1993 there will be a legal requirement for anyone packaging organic food, or importing it from outside the EC, to be registered with a national control body and to operate at least to EC regulation standards. At present the regulation applies to plant products only."

2176. Pinault, Pascal. 1993. Re: Tama-France's best importer of Japanese natural foods. Letter to William Shurtleff at Soyfoods Center, April 27. 5 p.

• **Summary:** Tama is located at 883, rue de Bernau, 94500 Champigny / Marne, France. Phone: (1) 49-83-79-94. Fax: (1) 47-06-37-85. Tama traces its origins to the 1960s when it was part of a restaurant, Le Bol en Bois, the first vegetarian place in Paris. This restaurant (at 35, 40 Rue Pascal, 75013, Paris) now specializes in macrobiotic cooking. They added a health food store and a "new age" book shop.

"Tama distributes Mitoku products and excellent miso, soy sauces, amasaké, kuzu, Japanese seaweeds, mochi, etc. They have an excellent list of books concerning natural foods and cooking. They print their own brochures about tofu, seaweeds, and others. Tama has a subsidiary branch named Tofu-Daizou which makes the best tofu in France, as far as I know." Address: "Caplet," 97226 Morne Vert, Martinique, French West Indies 0033. Phone: 596 55-56-57.

2177. Demos, Steve. 1993. New developments at White Wave, Inc. Part I (Interview). *SoyaScan Notes*. May 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** California is White Wave's second largest market after Colorado (especially Boulder and Denver). White Wave was the first company in the Western world to make a wide variety of different types of soyfoods (tofu, soymilk, tempeh, miso products, ice cream, yogurt, etc.). "It has always been my observation that White Wave is primarily in the protein category and only secondarily in the soyfoods category. Tofu has always been the 'media grabber' but the fact is that we are selling vegetable protein. We have always seen our great advantage in the field that we are a broad category player, so that we are trying to define the category. By defining the category, we will effectively pull such products as tofu out of their misplacements in produce into where they should be placed and merchandised, i.e. as meatlike or dairylike foods. We know we have four competitors in every product that we make. So if we have 15 products, we may be competing against 40-60 companies, whereas a company that makes only soy cheese will have only 4 competitors. We see that no one else has looked at the market the way we have.

"Very recently we have established with a leading chain in California an opportunity to merchandise soyfoods as a category. We've done this in Boulder before but as a small company with so many products, it has never jelled for us.

"We now have an executive chef, Leonardo Laudisio,

working for us. I told him, 'We're going to borrow your body and name, and make a myth out of you.' Whatever you have in your mind for the image, his family fits it and looks it. His past is colorful. He has elevated the foods in a very special way. As he said on a TV show recently, 'Look, forget its tofu. Just put it in with all your other foods and benefit from it.' Wonderful approach. We've dazzled people with the tastes.

"The two of us just sort of stumbled into one another. He was based in Sausalito where he was manufacturing these veggie burgers sort of in and out of some kitchens. I believe that the man who originated the recipe was in charge of the Whole Foods Markets kitchens in the area. He inherited it by getting involved with that man. He got further involved when his daughters became vegetarians, then vegans. White Wave has become pretty aggressive as an industrial supplier of tofu to other food manufacturers who use it as an ingredient. I would estimate that we have 85% of the market. That is, about 85% of the products that are nationally distributed and have tofu in them, contain our tofu. This push started a few years ago when we decided not to compete in the entree market and to focus mainly on the fresh foods case. Almost everything we make will go toward dated, long-shelf-life fresh food. So as not to lose the entree market, we decided to position ourselves as a supplier to companies who make vegetarian entrees containing tofu. We agreed not to compete with them, and we offered to develop proprietary formulas and recipes for them. We supply Amy's, Robert & Ken's Pockets, and all the lasagna products (Amy's, Legume). We send these people their tofu in bulk, vacuum packed, with a long shelf life.

"So when we saw the Veggie Life burger in May 1992 and learned it contained 40% tofu, we called up Mr. Laudisio and told him we were interested in selling him tofu. He accepted and we began selling it to him indirectly. His brothers have a very well known restaurant named Laudisio's in Boulder. He came into town for the Boulder Creek Festival. He met with me and asked if White Wave would be interested in making the product. I explained that we were not into contract packaging. (White Wave stopped making such products for Homestyle after they were purchased by Weider Food Co.—which has nothing to do with food or fresh food distribution; Homestyle just died. Both Robert Dolgin and David Burns needed to get out from under debts, so they had to sell the company.)"

The Veggie burger is positioned to compete against the Gardenburger (made by Wholesome & Hearty Foods in Oregon). Brown rice is the main ingredient, followed closely by tofu. Steve acquired the Veggie Life burger for two reasons. First, it was a no-cash deal; it will be paid for on the basis of an earn-out against sales of the product. Second, he was able to hire Leonardo as corporate chef and spokesperson for the company in terms of foodservice sales. On 15 May 1993 the burger hit the market with a new White Wave label that reads: "White Wave Veggie Life Burger."

The retail product consists of 2 patties vacuum packed (2.5 oz), and the 3.5 ounce for foodservice. White Wave is starting a merchandising program named the "Chef Leonardo Endorsement Program." White Wave is planning many new product introductions in the next 120 days. They introduced their new meatless and all-vegan hot dog yesterday. It is still called Meatless Healthy Franks (first launched in June 1989), but the texture, color, taste, and fat content have all been improved. Tofu is still the primary ingredient (most competing brands use soy protein isolates) but the product is 96% fat free. White Wave can continue to use the term "Healthy" in their product names since they were using it prior to the new NLEA regulations. The Lemon-Kiwi Yogurt just came out. Now we're developing another burger that has nothing to do with the Veggie Life Burger; it will be made more meatlike, somewhat like the Harvest Burger, sold frozen and using textured soy protein concentrates, and will probably not contain tofu.

Update. 1993. Dec. 19. The program that was to have involved Leonardo Laudisio did not work out. The concept was good but the personality involved could not be harnessed. He is a fine man but Steve would rather work with a less skilled/talented and highly disciplined individual than with a highly skilled, undisciplined individual. Also many problems developed relating to conflict of interest situations. "He still represents the company as corporate chef, but is definitely a figurehead role. It helps the magic and mystique of White Wave because he is a charismatic individual." Continued. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2178. Demos, Steve. 1993. New developments at White Wave, Inc. Part II (Interview). *SoyaScan Notes*. May 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Right now White Wave is developing a Plan-a-Gram showing what you would see if you looked into a cooler at the company's shelf space—and what needs these products fill—cheese, meat, milk, tofu, tempeh, and ready-to-eat. A chain wants to see this with projected movements and profits per cubic inch. Whole Foods Market (based in Austin, Texas), having recently acquired Mrs. Gooch's (last week) and Bread & Circus, is now the big player among the natural food chains. They will do an estimated \$150 million in retail sales in 1993 in about 30 stores. Steve was recently in California meeting with the division president for Whole Foods. He visited their store in Palo Alto—very sophisticated. "We are working out a year-round merchandising, promotional, and educational campaign with the Whole Foods division in San Francisco to set up a prototype based on the Plan-a-Gram. We have been looking for a chain that understands what we are trying to accomplish and handles the breadth of products that we currently make. We are also looking for a 'preferred vendor relationship.' We'll do the advertising for them out of store, and they'll do

the advertising for us in store. They'll give us prime view at the exclusion of some of the competition's prime view. How do we advertise? Enter Chef Leonardo! We promote him in consumer publications with recipes; on each package will be a Chef Leonardo sticker with a Chef Leonardo recipe enclosed. Then he does demos and cooking classes in stores. He's my myth! If we are successful, he will become Duncan Hines, Pillsbury Doughboy, and Betty Crocker all rolled into one. He has the panache and flamboyance, but at the same time he believes in our products, and is deeply committed to and enthusiastic about them.

White Wave is moving into the institutional foodservice market starting with colleges and universities. Leonardo will offer to go in and train the foodservice workers to prepare the dishes and provide the formulas. White Wave has costed out every recipe and provided a suggested sale price which is at least 4 times the cost of ingredients. White Wave hopes to at least meet if not beat the current profits of the foodservice people they are serving. White Wave makes this offer: "An invitation from Chef Leonardo to take advantage of the interest in and requests for vegetarian entrees in the United States." So White Wave's focus is now shifting away from manufacturing toward merchandising and marketing.

Shortly after White Wave bought Soyfoods Unlimited, White Wave had a very strong position in the San Francisco Bay area and in California in general. Over the past 2 years they have lost an enormous amount of that position as they have focused on becoming a company with national distribution. This was another reason he came to California recently. "For the amount of money we get from that market, which is quite significant, I couldn't believe how little product of ours was on the shelves." Steve is teaming up with 3 other Boulder companies and hiring a regional sales reps (instead of a broker, who typically represents 10-12 lines). Steve hopes to double his sales in the San Francisco market within the next year.

White Wave now makes about 200,000 lb/week of tofu. They are about ready to order new equipment so they can operate their plant at capacity with 2½ shifts plus sanitation. Steve is working 18 hours a day. Everything they do seems to be successful and there is so much to do—like the Midas touch. So they are constantly trying not to lose focus, to keep their goals well defined and to pursue them without getting sidetracked. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2179. Eden Foods. 1993. Edensoy Extra—High performance food. Edensoy + antioxidants + vitamins + minerals = Edensoy Extra. Healthy, delicious vegetable kingdom food. Look good and feel great (Ad). *Natural Foods Merchandiser*. May. p. 10-11.

• **Summary:** "America's favorite liquid soy food is now fortified with beta carotene vitamin A, vegetable origin

vitamins E & D2, and twice as much calcium [in the form of calcium carbonate]... Beta carotene A and vitamin E are potent antioxidants that protect us from 'free radicals' which lack an electron. Antioxidants donate electrons and neutralize their harmful effect. Pollution, too much sun, toxins in food, and high oxygen intake tend to create them. 'Free radical' molecules can destroy a cell, enzyme, protein, alter DNA or harm cells so strength is weakened."

Made from whole soybeans, Edensoy is OCIA certified organically grown and processed. Address: 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 1-800-248-0320.

2180. **Product Name:** Tree of Life Tofu.

Manufacturer's Name: Tree of Life, Inc. (Marketer-Distributor). Manufactured by White Wave (Boulder, Colorado).

Manufacturer's Address: St. Augustine, FL 32084.

Date of Introduction: 1993 May.

Ingredients: Incl. Nichii Soy Flakes.

Wt/Vol., Packaging, Price: 1 lb water packed.

How Stored: Refrigerated.

New Product—Documentation: This tofu, introduced in May 1993, is private labeled for Tree of Life by White Wave. The product is doing well. Tree's main distributor's are Stow Mills, and Mountain People's Warehouse. Tree deals mostly with independent natural foods retailers, not with the chains.

2181. Laudisio, Leonardo. 1993. Biography and history of work with soyfoods, vegetarianism, and macrobiotics (Interview) (Continued—Document part II). *SoyaScan Notes*. June 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** (Continued): So Steve and Leonardo worked together informally but actually. Initially the product was called simply Veggie Burgers. Starting in 1991 they had one stationary location that they rented—The Kitchens, Inc. in San Rafael, Kitchens Inc., an institutional communal kitchen in San Rafael. The name "Veggie Life" came about because Leonardo was on a list of alternative caterers for Bill Graham Performances. He worked at times with Graham. After Graham's death on 25 Oct. 1991 in a helicopter crash accident in California, Leonardo was invited to cater the memorial service; he donated veggie burgers at the Polo Grounds. That was when he came up with the name "Veggie Life." It took him years to develop the label, but on the early ones, photocopied at Kinkos, the address was given as The Kitchens, Inc. in San Rafael.

In Oct. 1991 Leonardo flew to Boulder with 1,000 of his veggie burger in two big Igloo coolers. He served them on the mall at an Oktoberfest festival.

In earlier days Leonardo had purchased shares in Alfalfa's market in Boulder. So he knew some influential people who were now high up in the natural foods industry. In Sept. or Oct. 1992 he sat down with Mark Retzliff and

Paul Repetto and served them his veggie burgers, Italian style. He never served a regular American hamburger-type veggie burger. He always made them special, with special sauces and delicious toppings and maybe no buns. The burger was always the base. Retzloff and Repetto were so taken with these various veggie burgers they told him he was in the wrong business. “You have no business manufacturing these things. Manufacturing is just one small step in the whole process. You’ve got to market them! That’s where the money is. You’re a perfect candidate to market these veggie burgers. Plus you’ve got this fabulous, famous *Laudisio Ristorante Italiano* restaurant in Boulder that can only help you.” Mark said, “I’ve got a great friend in town named Steve Demos. He’ll make these veggie burgers for you. I think he’s looking to branch out and he private labels other products. Moreover, you can buy your tofu from him, probably cheaper than you could buy it in California.”

So Leonardo called Steve Demos and then went to meet him at the White Wave plant. Demos said he would sell him tofu for \$0.10 a pound less than what he was paying Wildwood—if he would buy roughly 1,000 lb at a time. Leonardo asked Steve if White Wave would make the veggie burgers for him. He said, “Not yet.” From that time on, Leonardo started buying the tofu for his veggie burgers from White Wave. Before long he was buying 800 to 900 lb of tofu every 2 weeks.

He flew to Boulder more than once. He also did street fairs. That is when his brother, Antonio, started to get turned on by the whole idea of these meatless burgers. Antonio put them on the menu of his restaurant and did specials with them.

In Aug. 1992 Leonardo realized he was not making enough money from his veggie burgers. With his younger brother, he had owned part of an Italian restaurant named *Laudisio* in Boulder, Colorado. His brother suggested that Leonardo drive his truck to Boulder (where there were lots of vegetarians). They would make the veggie burgers at the restaurant and Leonardo could work in the restaurant. His brother had financial backing to start a new restaurant, the *Mediterranean*. So in Aug. 1992 Leonardo drove his truck to Boulder to start anew. Steve, who was very reluctant to take on any risk, eventually became the deli manager for the new Whole Foods Market in Mill Valley. But Leonardo had real faith in his veggie burgers. In 99% of the times when there was a competition or comparison, his would win.

In June 1992 Leonardo sold his veggie burgers at a “Creek Festival” in Boulder. Repetto and Retzloff suggested again that he talk with Demos again. So he asked Steve Demos again if he would be willing to make *Laudisio Veggie Life* burgers under contract. This time Steve said, “Let me look at the recipe, see how difficult it will be, then I will give you an answer.” From August 1991 to Jan. 1992 we worked on the recipe in Boulder and changed it. Leonardo was still making the burgers in California. Then late one

night he got a call from California; one of his workers had put his hand too far into a machine and sliced off the tip of a finger. Leonardo had no workman’s compensation insurance. He knew he could lose his house. So he now had much more incentive to make things work with White Wave. But he had taken on a big new responsibility—for 6 months—as the project manager for development of the *Mediterranean* restaurant with his brother in Boulder. He has lots of energy and can work hard for long hours every day. Before long White Wave was making the burgers.

The next phase came in early 1992 at the time of the Natural Products Expo at Anaheim, California. White Wave had finally made the first run of acceptable veggie burgers. Leonardo told Steve he would like to attend the trade show at Anaheim because he wanted to start building national accounts; he would pay his own way and his own hotel but he wanted to work out of the White Wave booth. Steve said, “If you come, I want to be sure you are representing White Wave. I don’t want you to be pushing Veggie Life Burgers.” Leonardo agreed and replied. “I want to see how you run your business.” Leonardo flew out to the show with Lonnie Stromnes. He showed up at the booth in bright baggy pants, long hair, handlebar mustache, wearing strange glasses. Really colorful. He speaks fairly good French, Italian, and Spanish. So he ended up selling plenty of White Wave products—and forgot all about the Veggie Life Burger. Leonardo met a lot of people he knew well from his years of work in the field. Steve wasn’t there the first two days of the show. Pat (Steve’s partner) and Lonnie told Steve that Leonardo was doing an incredible job. He was a natural salesman. “We’ve got to see if we can get him into our company.” On the third day Steve asked Leonardo to accompany him to the produce show in San Diego. He said, “I’ll pay your way down. I know what you can do in front of vegetarians but I want to see how you handle yourself with guys who sell produce and drive trucks and have never heard of tofu.”

Leonardo greatly enjoyed working at the show in San Diego. Steve congratulated him on a fine job, then said. “I know you are a budding entrepreneur. But for you to get to where I am, is gonna take you years and a lot of money. So I want to make you an offer. I’ll buy your company. I’ll give you royalties on the product. I want you to head up a nationwide foodservice division of White Wave and sell these esoteric products to mass market using your experience in the restaurant and the restaurant’s reputation. Please think it over.” He laid out a plan in broad strokes. Leonardo liked the idea, so he suggested to Steve that they work out the price and royalties together. “I have never worked for anyone before and I didn’t want to work for you. Just give me more of a commission. I’ll take an advance on my commission. In 6 months if it doesn’t work, I’ll give you the money back.” He said, “No, I’ll take that gamble.” Leonardo does a lot of his selling in the two family restaurants. It is the ideal

setting. Television shows came in and loved the vegetarian dishes Leonardo had developed. It was a huge success. Steve Demos picked up on the idea. He said, "I want to register the trademark 'Chef Leonardo' and work on a program where 'Chef Leonardo' becomes associated with White Wave, so that White Wave not only has a corporate chef but also has a whole program of recipes that have been taste-tested in restaurants so we can play this up. We'll be the only company that has this right now."

30% of the menu at the Mediterranean Restaurant in Boulder is now vegetarian.

Now Leonardo travels to all kinds of foodservice organizations (restaurants, hospitals, college, university and corporate dining rooms) and makes presentations with recipes, products, nutritional facts, taste tests and prices. He knows how these people think and what their problems are. He also knows that 25% of their clients are clamoring for vegetarian food and that they're in a bind. "The growth in this industry is mainstream and foodservice." Address: c/o White Wave, Boulder, Colorado.

2182. Weiner, Michael. 1993. New developments with Amano and Yamashita (Interview). *SoyaScan Notes*. June 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Michael works as a consultant for Peter Joe of Sunrise Market Ltd. and with Amano Foods. He used to consult with Mandarin Enterprises in British Columbia. Now his main work is as a broker, representing various U.S. companies such as Vitasoy, Knudsen, Santa Cruz, etc. Amano still makes all of Westbrae's organic miso. Amano is trying to construct a 60,000 square foot plant. They had a joint venture with Yamashita but it fell apart. Now Yamashita is constructing their own 60,000 square foot soy sauce plant in Oregon. The ground breaking will take place in a couple of weeks. Michael does not feel that this will be much of a threat to Amano, which plans to sell a lot of Amano products in supermarkets. The market is big and growing rapidly. Soyfoods now are given large amounts of shelf space (8-16 linear feet) in the produce section of all supermarkets in western Canada (British Columbia, Alberta, and Manitoba). A major reason for this is that Mandarin and Sunrise have an excellent relationship with the people in charge of the produce section in western Canadian supermarkets. Initially Michael helped to establish some of these relationships; these companies got a few facings for their tofu. Then Mandarin added their tofu burgers. Then Sunrise added Yves Wieners and soy cheese. The products sold, which is proof that exposure will work. Michael was involved in trying to make the same thing happen in Ontario with the Loblaws chain, and in Quebec, but they were never allowed to give the program a try—not even in 1-2 stores.

Safeway supermarkets are so sold on soyfoods that they have developed special open-front, vertical, refrigerated "Tofu Products" cases that are placed adjacent to the produce

case, but have a lower temperature. They are quite large and contain everything from soy drinks to tofu, soy cheese to meatless hot dogs. Soyfoods are very widely available on Vancouver Island.

Sunrise and Michael jointly import Mori-Nu tofu into Canada from Japan. Also Sunrise distributes some juice products for which Michael is the broker. Mori-Nu does not sell well in supermarkets because it's retail price is too high. Address: President, New Age Marketing, P.O. Box 39590, White Rock, BC, V4A 9P3, Canada. Phone: 604-538-0127.

2183. Emerich, Monica. 1993. NFM's 12th annual market overview: 1992. *Natural Foods Merchandiser*. June. p. 1, 34-35, 38, 39-50.

• **Summary:** Industry sales soared 13.8%, breaking the \$5 billion mark in the strongest year ever. A graph (p. 1) shows that natural product sales have grown from \$1.9 billion in 1980 to \$5.28 billion in 1992.

Each year since 1987, the natural products industry has averaged a 13% increase in sales volume per year.

New Hope Communications sells market studies about different aspects of the market.

2184. *Health Food Business*. 1993. Edensoy added to flight meals. June. p. 55.

• **Summary:** "Edensoy, a soymilk manufactured by Eden Foods of Clinton, Michigan, has been chosen to be served with in-flight vegetarian meals in First and Business Class seating on Continental and American West Airlines. Eden's president Nancy Potter said that this is the first time a soymilk is being offered by a domestic airline."

2185. Mountain Ark Trading Company. 1993. Mountain Ark Trader [Mail order catalog]. Fayetteville, Arkansas. 30 p. 27 cm.

• **Summary:** Across the bottom of the cover: "We specialize in macrobiotic foods and products for natural living." A color photo shows a lady lying in a hammock holding a tall glass of iced tea.

Note: The 1994 edition of this catalog is 36 pages, and the same size. Address: P.O. Box 3170, Fayetteville, Arkansas 72702. Phone: 1-800-643-8909.

2186. Roller, Ron. 1993. How much soymilk was sold in the USA in 1992? (Interview). *SoyaScan Notes*. July 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron recently conducted a little market survey, then cross-checked and confirmed his figures with Westbrae, Soyatech, etc. In 1992 the estimated retail value of soymilk (not including infant formulas), sold in the United States was about \$75,000,000. Note that soymilk now retails for a little less than \$2.00/liter. The market is estimated to be growing at the rate of about 12% a year. Approximately 80% of the soymilk is sold in liter or quart sizes and the

remaining 20% is sold in smaller (250 or 200 ml) sizes. Almost all is packaged in aseptic cartons. Soymilk is one of the most popular products in natural- and health food stores nationwide. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2187. Rohé, Fred. 1993. Pioneering natural foods in America (Interview). *SoyaScan Notes*. July 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In April 1965 Fred bought Sunset Health Foods (at 1319 Ninth Ave. in the Haight-Ashbury district of San Francisco) and by about April 1966 he had renamed and transformed it from an old-model health food store to a prototype natural foods retail store, named New Age Natural Foods, at the same address. New Age Natural Foods was one of the first and most famous of the new wave of natural food stores in California. In about 1967 he expanded the store across the street to 1326 Ninth Ave., keeping the original location as a granary which retailed bulk grains, seeds, and beans, and which also had flour mills that ground fresh flours.

In about the spring of 1970 Fred opened a huge natural foods supermarket in Palo Alto, also named New Age Natural Foods. David Manstandrea worked there. Note: Wm. Shurtleff also studied this huge natural foods supermarket for several hours shortly after it opened. He and David had a nice visit and talk.

Also in the spring of 1970, at about the same time as the supermarket, Fred started New Age Distributing Co. In those days it was very difficult for a natural foods retail store to obtain the basic foods and other supplies that it needed. New Age Distributing Co. was the first natural foods distributor of its kind in California. So as small natural food companies started in the early 1970s throughout northern California, they bought their supplies (especially bulk grains, beans, seeds, and organically grown produce) from New Age. Fred's retail stores sold a small amount of food supplements (vitamins, minerals, etc.) but he never emphasized or distributed these.

Also in 1970 Fred started a poultry operation in the town of Freedom, south of Santa Cruz. He did that because there was no honest source of fertile eggs—they had discovered that the source they had been buying from for years was dishonest. He leased a ranch, hired a poultry man as manager (Bill Viebrock—who is still a wholesaler in the natural foods industry), bought and raised 30,000 pullets, developed a very special feed formula was entirely vegetarian, and soon began producing excellent quality fertile eggs—which the company soon discovered it could only sell at a loss, since they were so expensive to produce in this manner. The fertile egg operation proved to be a big mistake that was very costly. This hurt Fred financially in each of his other natural food operations so he got out of the venture at great cost. He was

so financially stretched that he had to get out of wholesaling as well to try to save his two retail stores.

In about 1972 Fred sold New Age Distributing Co. to his shareholders. They kept the same name for a while, then changed it to The Well. Then it was also Pure and Simple because Bruce Macdonald got involved.

Note 1. According to Bruce Macdonald (March 2011) Fred Rohe and Paul Hawken were kindred spirits and became close friends. They were both pioneers in the natural foods industry in the mid-1960s. After Paul (now president of Erewhon Trading Co.) returned to California from Japan in Dec. 1969, he worked with Bruce at Erewhon West in Los Angeles for several months, then traveled to San Francisco for several months where he and Fred wrote a number of excellent pamphlets (“The Flour Story,” “The Sugar Story,” etc.) and worked to organize Organic Merchants, a trade association of natural foods distributors.

Note 2. San Francisco City Directories. 1964-1967. No listing for Sunset or New Age. 1968. No listings for Sunset or New Age, but Fred C. Rohe lives at 12-0 Ripley St. 1969-70. First listing for New Age Natural Foods, 1319 9th Ave.; 1971. New Age Natural Foods (Fred Rohe). Health foods. 1326 Ninth Ave. However an article in the *Oakland Tribune* on 29 Feb. 1969 (which see) shows “Fred Rohe owner of Sunset Health Foods at 1319 9th Ave., San Francisco.” Address: Fred Rohé Marketing Solutions, 15810 Shawnee Circle, Middletown, California 95461. Phone: 707-928-4098.

2188. Demos, Steve. 1993. New developments with soyfoods in America (Interview). *SoyaScan Notes*. July 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Vitasoy purchased Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in May or June 1993 for an estimated \$4-\$5 million. Azumaya did not sell their building or the land on which their plant is situated. So now Vitasoy owns two large tofu manufacturers on both coasts of the USA: Nasoya in Massachusetts, and Azumaya in California.

Mr. Yamauchi sold the rest of his ownership in House Foods & Yamauchi, Inc. to House Foods of Japan. [Note: Another industry observer states that the sale took place in about April 1993 for about \$2 million].

Bill Bolduc is now running a soymilk plant in the Midwest; he now makes Westbrae's soymilk. Steve sees the future of soymilk as being packaged in the new extended shelf life (ESL) gable-top carton and sold as a commodity for a lower price like cow's milk rather than as a specialty flavored beverage.

Anders Lindner told Steve in March that DE-VAU-GE wanted to sell their soymilk plant. He offered to sell the used plant to Steve for a good price in German marks. Steve never responded.

White Wave now makes about 100,000 lb/week of tofu (of all kinds). The company's reduced fat tofu is selling very

well. Quong Hop is stating on two red-on-white stickers on their package that (1) their tofu is “The original reduced fat tofu;” and (2) “The original reduced fat–High protein tofu: Serving size 4 oz., Fat per serving 3 gm. Protein per serving 14 gm.” Lab tests run by more than one company indicate that Quong Hop’s tofu actually contains far more fat.

Steve bought Veggie Life from Leonardo Laudisio much more for the name than for the product (meatless burger) or its formula.

Update: 1993. Nov. 24. Talk with Leonardo Laudisio. On about November 8-10 White Wave secured preferred vendor status from Whole Foods Markets. They now are installing their cold-storage “set” in the individual stores; one is now in the Berkeley store. At the top in large letters is written “White Wave Vegetarian Cuisine” with the oval White Wave logo in bas relief. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2189. Bolduc, Bill. 1993. Current work with soymilk and organically-grown soybeans (Interview). *SoyaScan Notes*. Aug. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bill Shurtleff tells Bill Bolduc that he has heard that Bolduc’s company is now making soymilk for Westbrae Natural Foods. Bolduc admits that this is correct. Shurtleff says that he cannot imagine how Bolduc is doing this, since a modern soymilk plant typically costs about \$1.5 million. Bolduc answers that he purchased the soymilk plant owned by Grove Country Foods in an auction on 4 April 1993. This plant used the University of Illinois process for making soymilk.

Note: Grove Country Foods, USA, is located at 720 S. Main St., Columbus Grove, Ohio. Phone: 419-659-5636 (office) or -2920 (plant). The two main people involved in the company were Dr. Carl Hastings and Prof. Alvin I. Nelson, both food scientists from the University of Illinois. The basic idea of the company was to commercialize new soy products and processes (such as soynuts, soy yogurt, soy ice cream, and soymilk) developed at the University of Illinois. By December 1988 they were in test production of several products but were in need of funds for commercial production and marketing. In early 1989 Grove Country Foods Canada Inc. (located in Ridgeway, Ontario, Canada) introduced Astronuts, a type of soynuts apparently made by some other company, but the company went bankrupt after 1-2 years.

Bill has modified the Illinois process for making soymilk extensively. For example, he removes the okara from the soymilk. Completing these modifications has taken several months, and his company is “now in a start-up mode making soymilk.” Their refrigeration was under-sized so they lost several loads of product to spoilage. This week they are installing another compressor, etc. The system now

works very well if they go slowly, but they need to be able to produce twice as much soymilk as they presently can before he will be satisfied. Now it takes several days to produce a tanker full of soymilk. Westbrae is being patient and supportive even though the process is “a bit bumpy.”

Bill is only making Westbrae’s regular soymilks—not their Malted, which he thinks are still made by Hinoichi in Los Angeles. The only soymilk Bill makes is Westbrae’s. He ships this soymilk in a tanker to a separate facility nearby in the Midwest that packages the soymilk in Tetra Brik Aseptic cartons for Westbrae. Westbrae now has their regular soymilk (the same product sold under the same brand) made by two companies (Pacific Foods of Oregon and Bill’s Organic Processing Corp.) using two different processes. Bill started because Pacific ran out of capacity. Westbrae likes the flavor of Bill’s soymilk as well as they like Pacific’s—even though Pacific’s technology is much more expensive than Bill’s. Bill has dramatically altered the Illinois process but he has decided not to try to patent his altered process.

Within about 2 months Bill expects to have a new soymilk product on the market with another partner (similar to Westbrae, but whose name is confidential) in a new package [perhaps an extended shelf-life (ESL) gable top carton]. After that, Bill hopes to diversify his customer base and his product mix. To do that he hopes to start by making a fresh, UHT Processed, refrigerated soy-based frozen dessert mix (for soft-serve soy ice cream) packaged at another facility, located very nearby, in 2-gallon bags with a 60-day shelf life.

Bill sees the future of soymilk packaging as being in the relatively new extended shelf life gable top carton that is sold refrigerated. This package, which is made by Tetra Pak and Evergreen, is significantly less expensive than the traditional Tetra Brik carton. It is now becoming quite popular in the Midwest and the East Coast because of its lower cost. It can cut at least \$1.00 off the wholesale price of a case (12 quarts) of soymilk, which leads to even bigger savings at the retail level. And the product has a shelf life of 60-90 days refrigerated. Co-packers nearby own the new gable-top packaging equipment. Most of America’s major soymilk companies are looking carefully at this package, it requires a whole new distribution system—refrigerated trucks. Bill knows that there will be a soymilk product on the market in the extended shelf life gable top package by this fall. Bill will make it for another company. The rest is confidential. He just ran the first test batch last Thursday, and now he is doing shelf-life tests. His smaller company has several advantages over the bigger soymilk companies; his company is very lean and can move very quickly. He is not controlled by any multinational corporations.

Bill has a separate company named Organic Marketing that exports organically grown soybeans to Europe; he started Organic Marketing in about 1989 and it was the precursor to Organic Processing. Bill was acting as

marketing coordinator for the Ohio Ecological Food and Farm Association (the organic growers of Ohio). First he sold a lot of organically grown soybeans to Dan Burke of Pacific Soybean & Grain, then he started exporting. He met Jerry Fowler, a British-born man who has a company named Manna International in Ontario, Canada. Bill likes very much to do business with Jerry because he has a very good overview of the market, is cooperative with the growers, and pays good money to the growers for organic soybeans. Bill exports his organic soybeans via Montreal to England, where they are used by the Haldane Foods Group (which is owned by ADM).

Update: Talk with Ron Roller, CEO of American Soy Products (ASP). 1993. Sept. 4. Bill Bolduc is making plain soymilk and shipping it up to Grand Rapids, Michigan, for formulation and Tetra Brik packaging for Westbrae. ASP negotiated with Westbrae for a long time, but Westbrae finally went with Pacific Foods and Bolduc; there were many reasons for this but they are mostly political. Address: President, Organic Processing Corp., 305 N. Walnut St., Yellow Springs, Ohio 45387. Phone: 800-647-2326 OF.

2190. *Wall Street Journal*. 1993. Small food producers win a big concession on labeling. Aug. 18.

• **Summary:** “Congress this month modified the Nutrition Labeling and Education Act [NLEA] to give small companies more time to comply—and to exempt more of them altogether.

“The law requires most food concerns to use labels listing the nutritional content of a product’s ingredients by next May. Originally, it exempted only companies with under \$500,000 in annual sales. But few food concerns are in that category. So, after heavy lobbying from the Retail Confectioners International and the National Association for the Specialty Food Trade, Congress relaxed the rules.

“Under the amended law, companies that have under 300 workers are exempt in the first year from labeling products that sell fewer than 600,000 units and in the second year from labeling products that sell fewer than 400,000 units. Firms that have under 200 workers are exempt in the first three years from labeling products that sell fewer than 200,000 units. And companies that have under 100 workers are permanently exempt from labeling products that sell fewer than 100,000 units annually.”

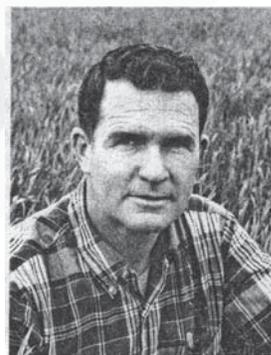

Talk with John Belleme. 1993. Aug. 29. If a company has less than 100 employees and sells less than 100,000 units of any particular product per year, and does not make any nutritional claims about its product, it need not switch to the new labeling regulations. However if it does make nutritional claims, it must use the new label format. In the past, if a product made no nutritional claims about its product, it did not need a panel showing the nutritional composition. The new nutritional panel requires information on 11 nutrients, whereas the old panel suggested only 7. Most of the food

industry did not like the new labeling requirements. It would have cost food companies billions of dollars, and the FDA would have had to greatly increase their staff just to enforce it. Now, if a company makes a nutritional statement, it must use the new panel format—regardless of the company size and sales. The only time the new labeling regulations would not apply would be to the product that makes no nutritional claims, and whose manufacturer has less than 100 employees, and sells less than 100,000 units of the product per year. For example, Westbrae has 300 products since they purchased Little Bear, yet they only have above 3 products that sell more than 100,000 units per year: Several soymilk products and 1-2 flavors of ramen.

2191. Ford, Frank. 1993. President’s letter: Dear NFA members. *Natural Food and Farming (Atlanta, Texas)*. July/Aug. p. 5.

• **Summary:** Frank Ford is also a fourth term vice-president and life member of Natural Food Associates (NFA). He was recently elected by the NFA Board of Directors as NFA President 1993-94. A photo shows Frank Ford. Address: Founder and Chairman of the Board, Arrowhead Mills.

2192. Jakab, Judith. 1993. Arrowhead Mills—The fourth decade. *Natural Food and Farming (Atlanta, Texas)*. July/Aug. p. 5-6.

Frank Ford

• **Summary:** “From one man’s ‘impossible dream’—a vision of America’s returning to a healthier life of growing and eating whole foods—Arrowhead Mills was born in Hereford, Texas, thirty years ago.

“Even before serving as an artillery captain in the army, Frank Ford was preoccupied with this dream. Upon his discharge from military service in 1960, he took up his tools and began the grueling work of constructing the first facilities for Arrowhead Mills. He built four grain bins with hoppers bottoms, digging a boot pit through solid rock with an air-hammer. A 1,000 square foot warehouse was erected to serve the single thirty-inch Meadows Mill. Roofing material was mixed with water hauled in the back of his old pick-up.

“For his first office, Frank added a shed to an old rail car. His bookkeeping time in those days was limited to turning out a handful of invoices and bills of lading on an ancient typewriter and a hand-cranked adding machine. One old metal filing cabinet was sufficient for keeping the records. Most of his daylight hours were spent on a tractor, raising wheat organically.

“No storekeeper within a 250-mile radius was safe from

Frank's persistent attempts to change the prevailing attitude that 'flour should be white'. Generally, after the fourth call, the grocery manager would allow him to leave his stone-ground flour and corn meal on consignment.

"Through Frank's years of long working days, arduous physical labor, and tenacity with local store owners, the company survived. 'Because I took no salary from Arrowhead Mills for the first seven years and supported my wife and four children by farming in the summer and building three homes each winter, the company was ready for the second phase of growth,' explained Frank. By 1968, the younger generation was beginning to stir with recognition of the country's agricultural and nutritional mistakes and were taking their first actions to bring about change. Frank acknowledged the movement's impact on his business: 'Young people in almost every city shared the dream of eating whole natural foods and using organically sustainable farming practices, and they provided a network for distribution.' Arrowhead Mills had outgrown its ability to motor-freight fifty-pound bags of wheat and corn, along with its new products, twenty-five pound bags of pinto beans and sixty-pound sacks of soybeans. Frank described the creation of the natural food distribution system: 'It was not underfinanced. It was unfinanced, but it happened. I gained new inspiration and encouragement through the tireless dedication of these young people.' Having survived its second phase, Arrowhead Mills entered a third challenging stage of development, hampered somewhat by battles with government. 'By 1973, the beachheads were secured and we were ready to move inland with our high hopes; however, as with every dream, the challenges soon began to show up,' sad Frank. 'Almost all of us, in varying degrees, let ourselves be knocked off-course during the following few years.'

"One of America's most fertile farming regions, Deaf Smith County, Texas, was chosen as the center of the huge Mobile M-X Missile site. After four years battling the Department of Defense, Arrowhead Mills won the fight, only to be faced immediately with another issue, which lasted eight years. Deaf Smith County was targeted by the Reagan Administration as the ideal site for the nation's high level nuclear waste 'storage'. The nuclear waste dump was to be placed beneath the nation's largest fresh water underground aquifer. Frank summarized these twelve years as a tragic waste of resources, both financial and human: 'The attack of the bureaucrats with their briefcases and maps on the number one agricultural county in Texas wasted approximately \$200 million in tax money. Even though we won both battles, the costs were high. It is nice to finally be able to do something constructive instead of just playing defense against arrogance and lack of common sense.' Concerned about other problems brought on during the 'Eighties, Frank commented, 'We saw a tripling of our national, corporate, and consumer debt. In business, 60% of our nation's corporate wealth fell into the hands of only 200 companies, much of it through unfriendly

takeovers which created debt and destroyed American jobs. Corruption in some government agencies was widespread. Lack of effective supervision in the deregulation of S&Ls [Savings & Loans], along with overconsumption and damage to our environment, are factors which have combined to put us at great risk. We must return to basic values and methods in business and government. One essential change is the establishment of a new corporate ethic, which will require a networking of those who recognize the need for a better way of doing business."

"Arrowhead Mills flourished in the face of great adversity throughout its first three stages of development. Through its pioneering efforts, more farmers are raising organically-grown grains, beans, and seeds, and now these crops are selling in local markets to better educated consumers across the nation. On the threshold of its fourth decade, the company's bold new direction is defined in Frank Ford's words: 'Arrowhead Mills will seek people with whom to network. We want to be involved with small companies with good management, and products which are above reproach, along with markets for ethical crops in ethical packaging. By networking this way, we will insure that staples will be grown all over America by organic farming and gardening methods. We believe that there are enough consumers who are willing to vote with their dollars for a sustainable America, so that this network, or "green consortium", can be highly successful. It will be a force to be reckoned with in this coming decade of change.'

"A staff of 80 celebrated the 33rd Anniversary of Arrowhead Mills on the 4th of August. Frank expressed his gratitude for their dedication: 'The team here is like an extended family, and they deserve all the credit for our success. While I spent six years in the leadership of our trade association's supply side organization and during the time I was fighting off the federal agencies, they did a solid job of minding the store. We have a good foundation, and now we are looking forward to building on it with like-minded people all across the nation.'"

Note: Given the anniversary date, Arrowhead Mills was apparently founded on 4 Aug. 1960 by Frank Ford in Deaf Smith County, Texas. But other accounts say that Frank purchased an existing company.

2193. Natural Food Associates. 1993. Founded in 1953. What we believe. *Natural Food and Farming* 39(1):1. July/Aug.

• **Summary:** "1. Health is important and it is your own responsibility. You choose your environment, your food, your friends.

"2. Humans are wholistic in nature. Everything in your life contributes to health and happiness, to your well-being and to your future.

"3. You can turn back the clock as you grow older. There are things you can do to insure a long and healthful life.

“4. You will profit by joining Natural Food Associates and the information you receive in your bi-monthly magazine will be the key to a better life and a better future.

“Natural Food Associates: Four-point Objective

+ To each people the values of natural, poison-free food grown on rich, fertile soil.

+ To expose the dangers of chemicals in our food, water and land.

+ To show the interrelationship of soil, water and human health.

+ To convince the American people that good food and better health are necessary to save our civilization.

Page 1 of this issue shows that Frank Ford was president of the NFA Executive Committee. Address: P.O. Box 210, Atlanta, Texas.

2194. Roller, Ron. 1993. Extended shelf life (ESL) gable-top cartons (Interview). *SoyaScan Notes*. Sept. 4. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron has looked at the Tetra Rex ESL program. He feels it is worth considering if you can find a nearby co-packer. He has been talking with a man in Detroit who has one of the ESL packaging machines. He would not want to obtain a packaging machine until there is an established market for the product.

This new ESL package does not offer much cost savings; the key to saving money is distribution. It can be more expensive to distribute refrigerated foods unless you go with a dairy that ships right into stores—which can reduce your distribution costs, since they are already going there. Increasingly dairies are willing to distribute competing products. Cow’s milk is a commodity that is very hard to make money on. So these distributors are diversifying in the items they carry.

Note. This is the earliest English-language document seen (Aug. 2013) that contains the abbreviation “ESL” which stands for “Extended Shelf Life” in connection with gable-top cartons or soymilk packaging. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2195. Mazzieri, Giovanna Fosso. 1993. Work with soyfoods in Italy (Interview). *SoyaScan Notes*. Sept. 17. Conducted by William Shurtleff of Soyfoods Center. Followed by a 4-page typed letter of 6 Oct. 1993.

• **Summary:** Giovanna was in touch with Soyfoods Center in 1985 when she was interested in having *The Book of Tofu* translated into Italian. That project was not successful because she was unable to find a publisher.

Giovanna thinks she was the first person in Italy to ever make tempeh. Roland di Centa asked her to go to Paris; she went there for one week in February 1983 and Anita Dupuy taught her how to make and cook with tempeh. At the time, Anita was definitely selling her tempeh to many

shops in Paris, including Le Bol en Bois, other natural food or macrobiotic shops, and also to the Indonesian Embassy in Paris. She was also making and selling tempeh sandwiches. Anita told Giovanna that she had been in Indonesia for a long time, and that she had learned how to make tempeh there. Giovanna still has Anita’s business card. It shows that Traditions du Grain was located at 16, Avenue Jean-Jaures, 94200 Ivry. Phone: 671.89.88. Anita’s personal residence was 25 rue du 18 Juin 1940, 94400 Vitry. Phone: 681.85.41.

Giovanna returned to her home in Milan, and in May/June 1983 she started making tempeh non-commercially for Roland and six other people. She gave away most of her tempeh free of charge; just a few people paid for it. She never sold tempeh commercially because it takes official authorization and lots of money to open a shop. She could not afford to do it legally and she did not want to take the risk of doing it illegally just to earn a little money. But she is still making tempeh at her home for her friends and herself. She orders her tempeh starter from GEM Cultures in the USA. In June 1983 she also wrote and published a 7-page booklet in Italian, titled “Tempeh,” to teach people how to cook with tempeh. It contained nutritional information plus 14 recipes. She also gave tempeh classes at which she distributed this booklet. To date, no books on tempeh have been published in Italian. As far as she knows, the first and only company that has ever sold tempeh commercially in Italy is La Finestra Sul Cielo S.r.l., an important macrobiotic center, located at Via Brandizzo 149, 10088 Volpiano (Torino). Phone: 011/9951818. She thinks they started to sell tempeh in 1992/1993.

Concerning tofu: She learned how to make tofu from Roland di Centa, who was her master, in June 1982. She also never sold tofu commercially for the same reasons she did not sell tempeh. She helped to popularize tofu in Italy through classes and the distribution of tofu recipes. She knows of four books about tofu in Italian that are now in print: *Il Libro della Soia* (1989, published by Mediterranee), *La Soia in Cucina* by W. Pedrotti (1990, published by Casa Verde), *Il Tofu* by Martha Fischer (1992, published by Mistral Demetra), *La Soia* by W. Pedrotti (1993, published by Mistral Demetra).

Giovanna knows Gilberto Bianchini (pronounced bee-an-KEE-nee) very well. He was a very early tofu producer in Italy, starting in Milan in about 1982 or 1983 (she thinks) at about the same time as Giovanna. In Milan at that time there was only one vegetarian food retail shop and they did not like to sell tofu; they encouraged people to eat cheese instead. So Gilberto had a very hard time. Giovanna is sure that Gilberto started making tofu in Milano and then he moved to Rimini. Gilberto did very active and good work with tofu in Italy and he made a product of fine quality, but she thinks he is not producing it any more. Gilberto is now living at Via Cuoco 7, 47037, Rimini, Italy. Phone: 0541/373670.

Other people who pioneered in introducing soyfoods to Italy were Ferro Ledvinka in Florence. He worked for Mitoku in Japan, and is now a macrobiotic consultant in Florence. Phone: 055/217204. Also Carlo Guglielmo and Elena Roggero, macrobiotic consultants in Turin at the same address as La Finestra Sul Cielo.

She is aware of the following companies producing and selling tofu commercially: (1) Fonte Della Vita, Via Monviso 18, Cuneo, Italy. Phone: 0172/66397. (2) Soyalab, Via B. Cellini 48N, 50020 Sambuca Val di Pesa (Firenze). Phone: 055/8071268.

Giovanna is still active promoting and teaching about soyfoods in Italy. There is a growing interest in soyfoods compared to 10 years ago. Now consumers ask for them. Address: Via Santa Tecla 3, 20122 Milan, Italy. Phone: 02 8646 1747.

2196. Product Name: EdenBlend Rice & Soy Beverage (Amazake & Soymilk) [Original].

Manufacturer's Name: Eden Foods, Inc. (Distributor). Made in Saline, Michigan, by American Soy Products, Inc.

Manufacturer's Address: 701 Tecumseh Road, Clinton, MI 49236.

Date of Introduction: 1993 September.

Ingredients: Purified water, organic brown rice, organic soybeans, kombu (seaweed), carrageenan, Lima sea salt, calcium carbonate.

Wt/Vol., Packaging, Price: 1 liter (33.8 oz) Tetra Brik Aseptic carton.

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 8 fl oz.: Calories 120, calories from fat 30, total fat 3 gm (4% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 85 mg (4%), potassium 270 mg, total carbohydrate 16 gm (5%), protein 7 gm (10%), calcium 2%, iron 6%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Talk with Ron Roller, President of American Soy Products (ASP). 1993. Two new beverages, Rice Blend and Rice Soy, were introduced at the Natural Products Expo East, Sept. 9-12, in Baltimore, Maryland. They are both made from real, traditional rice koji. The EdenBlend (made of amazake and soymilk) tastes better than soymilk. These are really good products that took a great deal of time and innovation to develop; they should be on the shelves of natural foods stores in about mid-October.

Talk with Ron Roller. 1993. Oct. 19. These new products are now expected to be in stores by December. Originally they were going to be named Rice Blend and Rice-Soy, but now the names have been finalized to EdenRice, and EdenBlend. The packages are now being printed; it takes 5-6 weeks to print the film.

Talk with Ron Roller. 1994. Jan. 15. They have started making EdenBlend commercially; a little may be in the

stores by now. Production of EdenRice will start tomorrow; it may not be in retail stores until February.

Label sent by Ron Roller. 1994. Jan. 16. Tetra Brik carton. White and black on light and dark green. "A delicious blend of rice and soy. Grains and beans are the primary foods of the human family. Combined they offer a whole spectrum of nutritional building blocks. Many cultures have intuitively combined grains & beans for balanced nutrition—rice and soybeans in Asia, maize and beans in the Americas, rice and peas in Africa. Grains and beans provide premium nourishment. EdenBlend marries two healthy foods—certified organic Lundberg Brown Rice (the best in the world) and organic soy (the same as Edensoy)... EdenBlend is certified organically grown and processed by OCIA (Organic Crop Improvement Association)."

Spot in Soyfoods (ASA, Europe). 1994. Autumn. p. 5. "Eden Foods launches rice and soya drink." A photo shows the package of EdenBlend Rice & Soy.

2197. Health Foods Business. 1993. Appointments: Peter Roy—Whole Foods Market. Sept. p. 80.

• **Summary:** Peter Roy has been chosen president and chief operating officer of Whole Foods Market, Inc. John Mackey continues as chairman and CEO. For the past five years, Roy has been president of the Northern California region for Whole Foods. He moved to corporate headquarters in Austin, Texas, last month.

In 1974 Roy began his career in the natural foods industry as president of Whole Foods Company (no connection with Whole Foods Market) in New Orleans, Louisiana.

2198. Health Foods Business. 1993. Newly formed sales and marketing service [Oasis, in Sebastopol, California]. Sept. p. 80.

• **Summary:** Oasis Sales and Marketing of Sebastopol, California is now offering consulting services to natural food manufacturers. For more information, contact Greg Hartman, president. Phone: 707-824-0119. A portrait photo shows Hartman.

2199. Product Name: Lite Malted.

Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.

Date of Introduction: 1993 September.

New Product–Documentation: Ad in Natural Foods Merchandiser. 1993. Sept. p. 23. "Another exclusive first for Westbrae is Malted [launched Oct. 1984]—a truly non-dairy delight! Thick and rich, in five delicious flavors... Vanilla, Almond, Cocoa-Mint, Carob, and caffeine-free Java... For an 'almost sinless' treat new Light Malted have less than half the fat and 1/3 fewer calories than original malted. Like

original Maltededs they're sweetened with brown rice syrup, a more balanced sweetener, high in complex carbohydrates, with a smooth, mellow sweetness and no sugar 'rush.' And new Creamy Banana flavor is a hit with kids of all ages. Health-conscious consumers can enjoy Lite Maltededs guilt free. Both original Maltededs and Lite Maltededs now come with a convenient flex-straw that says 'pick me up and enjoy me now!'"

2200. Westbrae Natural Foods. 1993. WestSoy—First and foremost: Westbrae information series no. 1 (Ad). *Natural Foods Merchandiser*. Sept. p. 23.

• **Summary:** "As the industry leader in soy beverages, Westbrae Natural Foods has a history of product innovation. Beginning with the introduction of 100% Organic WestSoy [in 1984], the first and only organic soy drink on the market... Westbrae is proud to have introduced the first 1% low-fat soy drink line—WestSoy Lite [in April 1990]... And when asked us for a soy beverage without added sweetener for soups, sauces and gravies, we introduced 100% Organic Unsweetened Westsoy [in Nov. 1989]."

"Another exclusive first for Westbrae is Maltededs [launched Oct. 1984]—a truly non-dairy delight! Thick and rich, in five delicious flavors... Vanilla, Almond, Cocoa-Mint, Carob, and caffeine-free Java... For an 'almost sinless' treat new Light Maltededs have less than half the fat and 1/3 fewer calories than original maltededs. Like original Maltededs they're sweetened with brown rice syrup, a more balanced sweetener, high in complex carbohydrates, with a smooth, mellow sweetness and no sugar 'rush.' And new Creamy Banana flavor is a hit with kids of all ages. Health-conscious consumers can enjoy Lite Maltededs guilt free. Both original Maltededs and Lite Maltededs now come with a convenient flex-straw that says 'pick me up and enjoy me now!'"

"Another important first for Westbrae was WestSoy Plus, with calcium, vitamins A, D and riboflavin added. WestSoy Plus was the first soy drink to bring your customers a balance of the important nutrients found in dairy milk. Calcium is added in the form of tricalcium phosphate, naturally occurring in phosphate rock and lime. This is the same calcium that is found in dairy milk... Vitamin A palmitate is used as a vegetarian source of vitamin A." Vitamin D is derived from torula yeast. Riboflavin is formed through a biofermentation process of ribose, which is a simple sugar. WestSoy Plus has only 2% fat.

"Behind the careful development of the great tasting new WestSoy products is an experienced Product Development and Quality Control team, headed by Dr. Myron Cooper, PhD. Dr. Cooper is Vice Chairman of the California Organic Advisory Board and Chairman of the Processor Subcommittee. He also serves on the Board of Directors of the Soyfoods Association of America and their Soy milk Standards Subcommittee." Address: P.O. Box 48006, Gardena, California 90248.

2201. Richardson, Al. 1993. Companies using Nichii Soy Flakes, and new developments (Interview). *SoyaScan Notes*. Oct. 14. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** The main American user of Nichii's soy flakes is White Wave of Boulder, Colorado, which uses the flakes in only one product—its reduced fat tofu. White Wave also makes a private label reduced fat tofu for Tree of Life in Florida. Other users are: Ashland Soy Works (Ashland, Oregon), which will be introducing a reduced fat tofu, made from 100% soy flakes, this month; Sacramento Tofu uses soy flakes only in their firm-style tofu; Calco of Dallas, Texas, uses flakes in their firm-style tofu. They buy a truckload about every 5 months. They also use whole soybeans; Dorothy Hwang, a PhD chemist, of Michigan Soy Products Co., Inc. (in Royal Oak, Michigan) uses both soy flakes and soybeans. Dr. Les Wilson made the very valuable discovery that soy flakes can be used to make reduced fat tofu.

Quong Hop recently put a sticker on their Nigari Firm Tofu that says "The original reduced fat tofu," which is in violation of FDA regulations. At the new Whole Foods Market store in Palo Alto, Al recently saw Wildwood's firm tofu with a little sticker on the front that said "Low fat," also a violation. The real problem is that Wildwood's tofu retails for \$0.99, Quong Hop's is \$1.29, and White Wave's tofu, the only real reduced fat tofu is \$1.49.

Nichii has just landed a big agreement with Korea and is now shipping them about 60 tons/month of soy flakes from the plant in Iowa. They are expected to be buying 100 tons/month at the end of this year. Those flakes are being used entirely to make tofu and soymilk. They are buying it for the convenience in dealing with rush orders, and the water and space savings—not for the reduced fat properties.

Nichii's plant in Iowa is now producing a little less than 1,000 tons/month. 95% of this is non-organic soybeans and 5% is organic. There is an increase in demand from Japan for organic flakes. The plant runs a little less than 4 days a week, 10 hours a day.

95% of all soy flakes made in this plant are sold outside America, mainly to Japan and Korea. Al visited Japan earlier this year. All of the flakes in Japan are used for making tofu; none is used in meat products. Nichii/Mycal has about 250 retail stores but just a few of them make fresh tofu in the store using Mr. Chikaarashi's tofu-making machine; yet that number is increasing. 90% of the tofu sold is purchased from outside tofu manufacturers, many of them very large. Nichii sells three types of tofu, each clearly labeled: That made soybeans, that made from a mixture of soybeans and Nichii soy flakes, and that made entirely from Nichii soy flakes. Nichii says "We'll buy your tofu if you use our flakes." None of tofu sold in Japan and made from flakes is promoted for its low fat content. Address: Nichii Company of America, Inc., 23440 Hawthorne Blvd., Skypark 2, Suite 140, Torrance, California 90505. Phone: 310-791-0010.

2202. Plotkin, Tony. 1993. The rice beverage and amazake industry and market in America, and its relationship to the soymilk market (Interview). *SoyaScan Notes*. Oct. 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Grainaissance became a corporation on 26 April 1982, and they moved to their present location in 1986. His company's main competition is Imagine Foods, which is "such a talented, smart company. They set their own rules, and tend not to copy." Cedarlane (in Southern California) has either greatly narrowed its scope or has gotten out of the amazake market entirely. Creative Kitchens (in Florida) has either narrowed its scope or discontinued production. Scotty's Wholesome Foods in Boulder makes a nice amazake in a 12 oz plastic bottle; it is sold mostly in Colorado. Kendall Foods, Grainwaves, and The Bridge are still in business. Kimoto has closed.

Tony has not yet been as successful with his Tetra Brik Aseptic carton as he had hoped—in part because of competition from Imagine Foods. His product has had a slow start, but Imagine Foods has been very successful with their Rice Dream in an aseptic carton. "This carton has really put rice drinks on the map. The quart carton will expand it even further." One key is to get the product as light as possible, since consumers will not pay more than \$0.69 for an 8-ounce pack. It costs Tony a lot of money to ship tankers full of amazake to the packer and then shipping the packed products back. He is working on shipping truckloads of packed products directly from the packer to distributors.

Aseptically-packed products (especially quarts and liters) are much more widespread in the natural foods market than in supermarkets—where the package is used mostly for kids juice drinks.

Imagine Foods immediately realized that their competition was soymilk, so their ads, in effect, say "Hippies and punks (with long hair and earrings) drink soymilk and normal people drink Rice Dream." In the ad they showed packages of soymilk products. It was a very aggressive ad; Tony did a similar ad and Imagine Foods made them discontinue it. Imagine Foods now has its products packaged by Pacific Foods of Oregon; they used to be packaged by Real Fresh (which packs Tony's products).

The market for rice beverages (which was about 5,700 gallons/week in 1988) has grown dramatically during the last 5 years, and especially during the last 12-18 months since Rice Dream became so popular. In some natural-foods stores Rice Dream is the best-selling non-dairy beverage. There are only two big rice beverage manufacturers in America: Imagine Foods and Grainaissance; Scotty's may be #3. Tony would estimate that Imagine Foods sells about 9-10 times as much rice beverage by volume as Grainaissance. In 1984 Grainaissance was making about 1,200 gallons/week; today they make a little over 2,000 gallons/week and have 15 employees. Imagine Foods might be doing a little less 20,000

gallons/week. Tony would guess that the gallon volume of Rice Dream rice beverage sold is about the same as the volume of Vitasoy or Westsoy soymilk.

There are several reasons for the rapid growth of the rice beverage market: (1) The advent of Tetra Brik Aseptic packaging; (2) The very effective product development and marketing done by Imagine Foods. The product is delicious and their ads have been well designed and widely seen; (3) They have positioned Rice Dream as a delicious non-dairy beverage and new product which they invented—rather than as a type of amazake. In fact, they have made as little connection as possible between amazake and Rice Dream—in part because the enzyme-hydrolyzed rice drink that they make is not really amazake. When Tony launched his first aseptic amazake in 1989 he thought seriously about discontinuing the term amazake, but he couldn't think of a good replacement. Its hard to sell a product with a name that people can't pronounce and that sounds foreign. (3) They have benefited from the rapid growth of the larger market for non-dairy beverages.

At the trade show in Baltimore, Eden Foods showed its two new koji-based amazake products—Eden Rice and Rice Blend (with soymilk) Rice Dream. Tony strongly feels Eden is entering the rice beverage market because of the stiff competition they are feeling from Rice Dream—which is causing growth of their soymilk sales to slow. He liked their flavors, but he disliked the fact that Eden adds a sweetener. Eden may promote their product by describing how Imagine Foods uses commercial enzymes rather than koji to make Rice Dream. Eden's price will probably be the most expensive. Tony has heard that another large company will soon be making a rice beverage—perhaps Westbrae. Tony promotes his products by emphasizing two points: (1) No oil is added; and (2) They are made from organic, whole-grain brown rice as you would buy it in the store. When Tony introduced his Almond Lite in Tetra Pak he changed from commercial rice to organic. Address: Founder and owner, Grainaissance, Inc., 1580 62nd Street, Emeryville, California 94608. Phone: 510-547-7256.

2203. Roller, Ron. 1993. The soymilk and rice beverage markets in the USA and Canada (Interview). *SoyaScan Notes*. Oct. 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron has some new very accurate and reliable numbers which show in 1992, in the USA and Canada, about 8.1 million gallons of soymilk and 1.4 million gallons of rice milk were sold. In 1993 about 9.8 million gallons of soymilk and 2.3 million gallons of rice milk were sold. The total amount sold in Canada is quite small compared to that sold in the USA.

When people who have never tried a non-dairy beverage before are served both rice milk and soymilk, they tend to prefer the rice milk—because it is sweeter and it's not soy.

In 1992 the amount of rice milk (rice beverage, including amazake) sold in the USA and Canada was 14-15% of the amount of soymilk sold by volume (gallons). The percentage has increased by an estimated 4-5 percentage points since then. The overall market for both soy- and rice drinks in 1992 was about 9.5 million gallons—a slight decrease from 1991. For the first 6 months of 1993, volume is up about 27% over the same period in 1992, and the total market is projected to be about 12.1 million gallons in 1993.

Looking at the individual soymilk manufacturers, Eden's soymilk production is experiencing strong growth. In the natural foods market, Ron thinks that Westbrae is ahead of Vitasoy. If you include the Oriental market, Vitasoy may be ahead of Westbrae. Vestro (which owns Westbrae) is a publicly owned corporation, so their financial data is available to the public. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2204. Thorson, Bob. 1993. The origin of the name "Eden Foods" (Interview). *SoyaScan Notes*. Oct. 29.

• **Summary:** Bob was one of the people who coined the term "EDEN" which ended up becoming "Eden Foods." In his opinion it is very clear that "Eden Foods" got the term "Eden" from the Environmental Defense Energy Nexus. It happened like this. In late 1968 and early 1969 a group of people interested in environmental issues were living together in Ann Arbor; they sometimes called themselves the Liberty Street Gang. This was a different group from the food-buying co-op. His group was publishing some eco-broad-sides and posters. In mid-March 1969 they read an article in *The New York Times* about how the World Bank wanted to define the environmental movement and agenda for the next few decades. His group didn't think the World Bank was going to do it right. So they talked about setting up a national organization and of calling it the Environmental Defense Energy Nexus or Network. They used the word "Nexus" on a local level, but they planned to change it to "Network" if and when the group established a national presence. They wanted to establish a national magazine, and they saw that organic foods were a very important part of this. Bob talked about the ideas a lot with Ron Teeguarden, although Vic Leabu was much more involved with organic foods than Ron.

The environmental group worked to get a storefront together, starting out in a walk-down basement at 209 South State Street in the Teeguarden-Leabu General Store. Bob traveled frequently by car to New York City. In the spring of 1969 he starting buying bags of buckwheat, brown rice, and whole wheat flour from Greenberg's, a natural food grocery in New York City. Occasionally he bought macrobiotic food from Irma Paule in New York City—for use by his group and several friends. He drove the foods back to Ann Arbor by car, then put the food from Greenberg's in cardboard drums at the

Teeguarden-Leabu General Store; anyone could come in and purchase it. Once or twice Bob ordered foods through the food buying co-op.

The environmental group had in mind that it should be a cooperative. They made a large sign which read simply "E.D.E.N.," which they hung on a card table containing their literature in the Teeguarden-Leabu General Store. The sign was written with a black magic marker on poster board and attached to the front of the card table. It was width of the card table and several feet high. They also wrote a lot of literature on the environment and some of it may have had the acronym "E.D.E.N." on it. This printed literature was given out from the Teeguarden-Leabu General Store. They wrote the very first documents on bioregionalism, and Bob thinks they may have coined the term—since none of them knows where it came from. One member of the group, Alan Van Newkirk, went on to write extensively about bioregionalism and popularize the idea.

Bob first met Bill Bolduc in 1970 after he had started the Eden Organic Foods co-op retail store at 514 East William St. The environmental group baked bread for a while in Bolduc's store. They had access to oven space there which they didn't have previously. The main two bakers were Gloria Dunn and Tom Zimmerman—who were married several years later in New York City. Gloria was actively involved in both the environmental group and in the food buying co-op. Yet she had her own apartment, and did not live with either group. None of the members of the food buying co-op lived with the environmental group on Liberty Street.

Bob was a mechanic in Ann Arbor for many years but now he is studying for a degree in physics at the University of Michigan in Ann Arbor. The last Bob heard, Gloria Dunn Zimmerman ran a fabric business in Woodstock, New York, and her ex-husband Tom Zimmerman was living in Brooklyn. Address: 1309 Miller St., Ann Arbor, Michigan 48103. Phone: 313-747-9521.

2205. Potter, Michael. 1993. History of Eden Foods. Part I (Interview). *SoyaScan Notes*. Oct. 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** This interview attempts to clarify numerous details concerning the history of Eden Foods. Before starting work as a volunteer at Joyous Revival (in Birmingham, Michigan) in about 1970, Mike had worked at an art gallery in Royal Oak, Michigan, for quite a while and was making very good money for a young man at the time—about \$500/week take home pay. The end of his employment at the art gallery and the start of his employment at Joyous Revival overlapped by at least several months. During most of the time that he volunteered at Joyous Revival, his main source of income was unemployment compensation from the U.S. government. Gradually he became the driving force at Joyous Revival, quit his job at the art gallery, and devoted

himself full time to Joyous Revival. At that time he and his wife moved from Royal Oak to Walnut Lake, Michigan—nearer to Joyous Revival. Howard Tannenbaum and Carl Weinstein lived in the Potter's household. The store pretty much supported the household.

Bill Bolduc had gone to Michael a number of times before 1971 and asked him to move to Ann Arbor and work for Eden. But he was dedicated to making Joyous Revival successful. One day in the fall of 1970, while Mike was still engaged in Joyous Revival, Bill asked Michael to meet him at the retail store at Wayne State University that was partially owned by Eden Foods. Mike rode his motorcycle down to the appointment and saw the store for the first time. Michael used to live near Wayne State and he thought he could help develop the store. So Mike worked vigorously, as a volunteer, at the Eden retail store at Wayne State University for only a short period of time in the fall of 1970—before he was hired by Bill Bolduc of Eden Foods in Jan. 1971. By Jan. 1971 it had become evident that the store would not be able to survive financially.

Within 2 weeks after Mike was hired by Bolduc in Jan. 1971, he closed down his household at Walnut Lake in Oakland County, Michigan, and moved to Ann Arbor in Washtenaw County, Michigan, to work full time at the store. He moved to Ann Arbor in the fall of 1971 (conflicts).

"I got hired by Bill Bolduc and I went to work at 211 South State Street. I asked Bill what he wanted me to do and he told me to manage the store." Royce Seeger was there; he had been involved with Vic Leabu (pronounced luh-BOE; he later changed the pronunciation to luh-BUU), Jimmy Silver, and many others. Mike did not get paid by Eden Foods until 1973; he worked as a volunteer. The company refused to pay him for the first few months because he was collecting unemployment compensation and why should he be paid by the company when he could get free money from the government—was the logic at the time. That seemed okay to Mike. He started to get paid by Eden Foods shortly after his unemployment benefits expired.

The first meeting of the Natural Foods Distributors Association that Mike visited was in Seattle, Washington. He was manning Eden's booth there and Mr. Kazama visited the booth. Mike was not involved with imports at that time. Because Tim had lived in Boston, Massachusetts, and worked at Little Sanae there, he was basically Eden's person in communication with the Japanese side of things at that time. Tim may have attended an earlier meeting in Florida. Mike attended all meetings after the Seattle meeting. Mike agrees that all initial Japanese imports had to bear the Erewhon brand. Before the first order arrived from Japan, Mike talked by phone with Yuko Okada, who worked with Erewhon in Boston at the time. At some time between when Tim placed the first order from Mitoku and when it arrived, Michael decided that Eden should get all future imports from the Muso Co.

Mike stayed at the retail store while it was down on Riverside Drive and at the end of Ann Street. He didn't create an office for himself at the warehouse until they moved into Platt Road.

Michael met Clifford Adler for the first time when Ron Roller brought him over to Mike's home on Oakwood in Ann Arbor. It was about the summer of 1978 and Cliff was a painter renovating apartments in Ann Arbor. Ron introduced Cliff as a person who might be good to help Eden Foods. About 7-9 months later, in the spring of 1979, Cliff began to work for Eden Foods; at that time Michael was living in the small town of Manchester, Michigan. Michael's son, Jason, had finished kindergarten in Ann Arbor and they moved to Manchester in about Aug. 1978. Cliff definitely did not start to work at Eden in 1976 (as others recall). The date of his first paycheck could be obtained easily from the Social Security Administration. Eden needed a salesperson in Chicago. The company had been wholesaling foods for a while. The biggest nearby city was Chicago and they didn't have much business there. As a challenge, Cliff went to natural foods stores in Chicago and tried to sell them Eden's products. Where Cliff got \$100,000 to invest in Eden Foods has been the subject of much conjecture.

After the chaos of the fire, decisions came first and the paperwork came later. The first decision, in early December (within 10 days after the fire), was to give stock to 6 key employees to try to motivate them to stay with the company and try to rebuild it—and to lay off about 35 people. These two decisions were announced as one on the same day. The second decision was that Cliff would convert his \$100,000 loan to equity. The third decision, in early 1980, was Tim's personal decision to leave, and to convert his Eden Foods stock into ownership of the corporation named the Maynard Street Connection, Inc.

After the fire, Eden had a negative net worth of more than \$800,000. Four things saved Eden Foods after the fire. (1) Cliff's conversion of his \$100,000; (2) The incredible cooperation, generosity, and kindness that Eden received from its suppliers in the natural foods industry, and their trust that Eden would do its best to pay back their money at a time when interest rates were over 20%; (3) Frank Dietrick's investment of \$100,000 in the company; and (4) The great effort made by natural foods retail stores and consumers to go out of their way help Eden survive by purchasing more Eden products.

From the insurance company Eden ended up receiving \$400,000 net, or \$0.50 for each dollar Eden felt it was owed. Eden had sued its insurer, the Hartford Insurance Company. Eden's lawyer told Michael that Eden would win the case, but the insurance company was planning to appeal it. He asked Michael if Eden could go 2 more years without the money. Michael said "Impossible." The attorney said, "A bird in the hand is worth two in the bush. You'd better settle." Michael told the attorney, "If they'll give us

\$400,000 plus \$45,000 (which is what the insurance adjuster wanted), I'll take it." The insurance company accepted the deal. Mike feels that the insurance company ended up paying Eden \$400,000 less than they owed Eden.

Michael has quite a few important documents from before the fire. Continued. Address: Chairman, Eden Foods, Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-7424.

2206. Potter, Michael. 1993. History of Eden Foods. Part II (Interview). *SoyaScan Notes*. Oct. 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Upon Cliff Adler's death, Michael immediately and automatically acquired Cliff's 34% share in the company—because Eden Foods Inc. and Michael and Cliff, jointly and severally, had a buy-sell contract that came into effect in the event that either Cliff or Michael should die. The value of Cliff's stock, which was reviewed by the Ann Arbor office of Platt-Moran (one of the big eight accounting firms), was \$500,000. Michael paid this amount from his personal funds for the stock. Life insurance paid Cliff's widow an additional substantial sum. It's all a matter of public record.

In August 1992 Michael was released from jail and returned to work at Eden Foods. He was originally sentenced to 8 to 15 years, but he was let out early because he won an aspect of his appeal that his sentence was illegal. He was resentenced and his sentence was changed to 60 months probation.

On 31 Dec. 1992 Michael purchased Tim Redmond's remaining 1,000 shares of stock.

Royce "Roy" Seeger, who lives in Manchester, Michigan, was an early employee at Eden Foods. He ran the mill and was once a stockholder but was deprived of his stock in a way that he does not feel good about. He now serves as Michael's driver (he was hired by the board of directors to drive Michael to and from work) and as a driver for Eden Foods doing various jobs. Michael also lives in Manchester.

What were some of Michael's main contributions to Eden? Building the company into a major natural foods company before the fire. Extricating Eden from its pathetic relationship with Midwest Natural Foods ("It was difficult to get consensus that the situation was not in Eden Foods' best interest and in fact was a very negative reflection on the company.") Saving the company from disaster after the fire. Putting together the American Natural Foods agreement and introducing Edensoy to America.

Shurtleff's summary comments: (1) Eden was a pioneer in many areas, including the development and promotion of organically grown foods, soymilk, and soyfoods in general. Eden has kept a high level of product quality and integrity over the years, based on their philosophy of food and agriculture. Address: Chairman, Eden Foods, Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-

7424.

2207. Redmond, Tim. 1993. More details on the chronology of Eden Foods (Interview). *SoyaScan Notes*. Oct. 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Tim only recalls getting together with other members of the food-buying co-op to divide up food from Erewhon on about two different occasions. Both were at the Teeguarden-Leabu General Store, which was below street level at 209 State St. in Ann Arbor. Everything was very informal; Tim is not sure because he did not do the ordering, but he imagines people had to pay for their orders in advance. He does not recall any food co-op at Marshall's Bookstore, as Ron Teeguarden says. Tim first came to school in Ann Arbor in the fall of 1967. He probably got involved with the informal food co-op in about 1968, toward the end—but he does not recall clearly.

There is no way of arguing that Eden Foods started in 1967. It started in Nov. 1969. Tim does not think that the food buying co-op had a bank account but he can imagine that "somehow the Teeguarden-Leabu account got shuffled into the Eden Foods account" by mistake. People who were members of both groups were Gloria Dunn, Bill Bolduc, and Tim Redmond.

Concerning Michael's 13% ownership in Eden Foods, he had worked a lot as a volunteer at Eden for next to nothing while he was drawing unemployment. The 13% was to compensate him for his volunteer work.

Concerning Tim's initial 51% ownership, the Bolducs sold their stock back to the corporation. Mike Potter did not buy it directly from the Bolducs, but rather from the corporation. Tim was now in control and he thinks he released to Michael only 49% of the stock. He thinks that is what happened but he is not very clear on it, since it was a long time ago. Tim does recall "Michael working on me for that extra 1% and finally succeeding."

Tim recalls the Seattle meeting, which he thinks took place about 1 year after the Florida meeting. Also at the Florida meeting were Roger Hillyard and Ty Smith of Erewhon.

Eden had some preferred stock, which is like a loan to the corporation but with equity as security. It was non-convertible. The loan was made by one of Mike's associate's—only one person and Tim does not know who it was.

Tim has no idea where Gloria Dunn is. He last saw or heard of her in 1970-1971.

Boston: Tim went to Boston, Massachusetts, in the fall of 1969 to work and study at Sanae, a macrobiotic restaurant at 242A Newbury St. in Boston. It started in about early 1968, before The Seventh Inn (which opened in about 1971). At Sanae, Tim trained under the head person, Richard Sandler, and under Michael Rossoff; Tim's brother-in-law, Dave Prentice, also worked there. Then the opportunity

came up with Cynthia Shevel to move to 211 S. State St. In the winter of 1970 Bill called Tim in Boston to help reform America with food as the basis and to help with the move to the new location on South State St. and to try to contribute some money to pay for the move. After the move Tim returned to Boston. He returned to Ann Arbor in Feb/March to work with Bill building the store at 211 S. State St., then he returned to Boston in the spring, finished his macrobiotic studies, Tim returned to Ann Arbor. In May or June of 1971 Tim finished his training in Boston and returned to Ann Arbor with the plan to open a restaurant like Sanae. He looked for a suitable place, but never could find one so he gradually got more involved in the store and eventually gave up on the idea of the restaurant. Address: Vice President of Marketing and Sales, American Soy Products, Inc., 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2208. Seeger, Royce. 1993. Recollections of work with Eden Foods (Interview). *SoyaScan Notes*. Oct. 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** At age 18 Royce was introduced to macrobiotics by Jimmy Silver. He was never involved with the food buying co-op before Eden Foods started. He started working for Eden Foods in about the fall of 1970 at the store on State Street. He was married with a child, he needed a job, and he was interested in macrobiotics, so the job was a natural. At the time he started work, Bill Bolduc, Mark Retzloff, and Tim Redmond were working at that store. After he had worked there about a year, Michael Potter arrived. Initially he ran the cash register, stocked the shelves, and ran the 8-inch stone flour mill grinding wheat, corn, rye, rice, etc. into flour. Shortly after he started work, he also began to mill soy flour. Tom Vreeland grew the soybeans organically. Royce toasted the soybeans lightly, about half way, so that the flour could be milled more easily and was still yellow. The roasting got rid of the heavy raw taste, but some raw soy flour taste still remained. Initially the soy flour was sold in paper bags, but the bags became very oily, so they switched to packing it in 3 sizes of cello bags which we heat sealed. The bags were considered biodegradable. Eden couldn't buy too large a supply since they became brittle after a while. A printed label was affixed by hand to each cello bag. The flour was also sold in big 25 lb paper flour bags, which were stamped with a rubber stamp to indicate the contents.

Eden also made Kokoh, a macrobiotic baby cereal, which contained roasted soy flour and was also packed in the small cello bags. All the ingredients were roasted together and then ground; soy was one of the ingredients. The soy was roasted longer than it was for the flour.

Eden was also importing miso in kegs from Japan. Employees would pack the miso into 1- and 2-lb bags. Eden still imports its miso in bulk kegs.

In those days the store wasn't making much money;

it had just come from being a co-op, so often the only pay employees got was to have their bills paid—such as rent, so they didn't get evicted. They didn't really get a pay check. In about 1973 Royce quit work at Eden to do some construction work for a friend, and then moved to Arizona to be with his wife's parents. After about 10 months he returned to Ann Arbor and went back to work for Eden Foods. This time he stayed until 1978, running the mill and doing packaging. Then he left for a second time; he needed to make more money.

In 1982 Royce returned to work for Eden for a third time. He started working in production at a small bottling line where Eden bottled soy sauces (imported in 55 gallon drums from Japan), vegetable oils, and vinegar. Eden still bottles its soy sauce this way. One person runs the filler, which fills 6 bottles at a time; he slides in 6 bottles, pulls down the lever which fills them, then he puts them on a conveyerized line. The next person on the line puts on caps. Finally, at a labeling machine, one person labels one bottle at a time. Then he went back into running the mill, grinding flours. Royce has been working at Eden, more or less, since 1982. However in 1987 he developed testicular cancer, which had spread throughout his lymph system. His weight dropped to 155 lb and parts of his spine had to be removed. The cancer is now in remission and he feels like he is getting stronger. Royce now serves as Michael Potter's driver, since Michael is not allowed to drive at all by himself. Royce likes working at Eden Foods, even though he is not an official employee, since he is receiving disability payments. Address: 133 S. Clinton, Manchester, Michigan 48158. Phone: 313-428-0973.

2209. **Product Name:** Low Fat WestSoy Soy Drink (Non-Dairy Beverage with Calcium and Vitamin D Added) [Plain, or Vanilla].

Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.

Date of Introduction: 1993 October.

Ingredients: Vanilla: Filtered water, whole organic soybeans*, malted cereal extract, natural vanilla flavor with other natural flavors, tricalcium phosphate, sea salt, vitamin D-2. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 1 liter (1.06 quart) Tetra Brik Aseptic carton. Retail for \$1.39 (11/93, Trader Joe's, Concord, California).

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 8 fl. oz.: Calories 100, protein 4 gm, carbohydrate 16 gm, fat 2.5 gm (percent calories from fat 18, polyunsaturated fat 2.0 gm, saturated fat 0.5 gm), cholesterol 0 mg, sodium 140 mg, potassium 170 mg.

New Product–Documentation: Products (plain and vanilla)

with Labels purchased at Trader Joe's in Concord, California. 1993. Nov. 4. 3.75 by 6.5 by 2.5 inches. Orange or red, dark blue, white, and black on light blue. Color photo of soy milk being poured from a pitcher into a bowl of flaked breakfast cereal with a glass of soy milk behind the bowl. "All natural. No cholesterol. Lactose & dairy free. Great tasting." Each 8-oz. serving of Low Fat Westsoy provides the following percentages of the U.S. Recommended Daily Allowances: Vitamin D 25%, calcium 25%. "Not for use as an infant formula."

Ad in Natural Foods Merchandiser. 1993. Nov. p. 27. "We know the importance of customer satisfaction." "Westsoy Soy Drink—The first value-added enriched soy drink."

2210. Product Name: WestSoy Lunchbox Plus (Non Dairy Beverage) [Plain, or Vanilla].

Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.

Date of Introduction: 1993 October.

Ingredients: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), vanilla flavor with other natural flavors, tricalcium phosphate, expeller pressed organic canola oil*, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2).

Wt/Vol., Packaging, Price: 6 oz. Tetra Brik Aseptic carton. Retail for \$1.39 (11/93, Trader Joe's, Concord, California).

How Stored: Shelf stable; refrigerate after opening.

New Product—Documentation: Ad in Natural Foods Merchandiser. 1993. Nov. p. 27. "We know the importance of customer satisfaction." "Westsoy Lunchbox Plus—The first convenient 6 ounce size enriched soy drink."

Product with Label brought by Cheryl Ishida in her kids' lunch. 1996. April 23. 2 by 4.5 by 1.5 inches (tall and slender, petite, handy size for a kid's lunch). Aseptic carton. Red, black, and tan on white. The word "Lunchbox" is written with many fun colors: Red, yellow, blue, orange, green. Below the product name on the front panel is written: "6 times more Calcium, 10 times more Vitamin A, 20 times more vitamin D, 5 times more Riboflavin, than Original WestSoy. 2% fat." A logo states: "Made with Organic soybeans." The product now comes in Plain, Vanilla, and Cocoa [pronounced KO-ko] flavors.

2211. Hillyard, Roger. 1993. Work with Erewhon, Arrowhead Mills, and The Well (Interview). *SoyaScan Notes*. Nov. 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Fred Rohe started out working for Thom's Natural Foods, a retail store in San Francisco. Then Fred bought Sunset Health Foods (a health foods retail store at 1319 Ninth St. in the Haight-Ashbury district of San

Francisco) and renamed it New Age Natural Foods—at the same address. Roger thinks it was in about 1965 or 1966, because he was living in San Francisco at that time and had just gotten involved in macrobiotics—in Jan. 1966. He started buying his foods from Marina Health Foods (on Chestnut) but when Fred opened his store, Roger started buying his foods there.

At some point Fred bought a chicken farm, transformed it into a natural chicken farm, and created New Age Resources as the company that owned it.

Then Fred teamed up with Phil Parenti / Parente and they did two big things at about the same time: (1) They opened a second store on California Street in Palo Alto, which was a natural foods supermarket (perhaps the first of its type in the USA). David Mastandrea was the manager and Nik Amartseff may have run the deli. At the time the store opened in Palo Alto, Roger was on the East Coast in Boston with Erewhon. (2) Fred and Phil started a distribution company named New Age Distributing.

Then they got into financial difficulties; they had tried to do too much too fast. The stores reverted to Fred and the distribution company and chicken ranch went to Phil. That's when Phil renamed the distribution company The Well. But legally and corporately, it was still New Age Natural Foods—which was the parent company of The Well. Phil was active from day to day at The Well. Then The Well purchased Pure & Simple from Bruce Macdonald; the products at that time were apple juice, corn chips, and fruit butters. By the time of the natural distributors conference at Pajaro Dunes, California, the line had expanded to other fruit juices and Japanese imports, which were coming from Mr. Kazama of Mitoku—all sold under the Pure & Simple brand and distributed by The Well, which was now a master distributor. Some of these products were sold to other distributors, and all were sold to retail stores.

Irwin Carasso, the founder of Tree of Life, sponsored the natural food distributors conference in St. Augustine, Florida. Roger thinks Irwin was the 2nd or the 3rd person who began importing natural foods directly from Mr. Kazama in Japan—First Erewhon, then Pure & Simple, then Tree of Life. Eden Foods started importing after Tree of Life, and after that St. Augustine conference; but they imported from Muso. Initially Erewhon had insisted that everyone import the Japanese products under the Erewhon brand; they maintained that monopoly for quite a while.

At the time the *Deaf Smith Country Cookbook* was published (1973), Roger and his ex-wife Susan (and 2 kids) were living and working in Hereford, Texas. They spent a year there. While Susan was working on the cookbook, Roger was contracting with local farmers for everything from grains to maple syrup, helping to establish Arrowhead's line of consumer packaged products (graphics, copy, etc.) and (most important) he got Arrowhead's distribution system and network going, selling to other distributors. Roger was

employed by Arrowhead. Irwin Carasso was one of the first to be named a wholesaler of Arrowhead Mills' products. Next came Shadowfax. The NNFA convention that year was in Washington, DC.

When they left Texas, after a year, they hopped back in the school bus, drove to Los Angeles and hung out there for a couple of weeks (staying with Bobby Orgo, who worked for Erewhon in Los Angeles), then they drove to Atascadero, but they had no destination. They went to visit Bruce Macdonald (who at that time was living in Santa Cruz, California, and working each day for The Well–Pure & Simple). He sold the Pure & Simple brand than went along with it from Southern to Northern California.

Roger, Susan and their family ended up living in Soquel, California (near the Pacific Ocean and Santa Cruz), in about mid-March 1973; his youngest son was born on March 29, right after they got settled. Jean Allison (from Boston) came out and helped Susan for a while.

The Well went out of business in about 1979. It continued to grow and expand. In very few years, it grew from \$3 million to \$10 million in sales. The peak year was in about 1978, then it went rapidly downhill. It had the wholesale distribution entity, a small production facility in San Jose where it manufactured fruit butters and bottled tamari and some oils, and also raised alfalfa sprouts. Then (in about 1976-77) it bought out Max Kozek, the organic wholesale supplier from Los Angeles. It also had a project to produce 40 acres of organic carrots in the San Joaquin Delta, and about 10 acres in Borrego Springs (east of San Diego). It also had some acreage of organic apples and peaches (small, real old, so there was not production and it was not of high quality), and substantial crop investments in organic produce via contracts with individual growers, as with John Mason who was a hothouse tomato grower in California. Then it bought a wholesale distribution company [Essene Traditional Foods] in Boyertown, Pennsylvania. With all those ventures, scattered near and far, The Well was (1) undercapitalized, and (2) it lost an incredible amount of money on some of its individual ventures, such as the organic carrots (nematode problems). Phil Parenti owned most of the stock at this time, but he did not have a controlling percentage. The other main stockholder was not a regular participant in the company; Roger does not remember his name. Roger had only stock options. The Well just folded up shop and disappeared; it was not sold to anyone. But the Pure & Sample brand name was sold to Jimmy Silver and John Fountain. Phil Parenti went to Monterey, California, and worked with his father in property development. Roger does not know where he is now. Address: Farley's Coffee Shop, #1315 18th St., Potrero Hill, San Francisco, California 94107. Phone: 415-648-1545.

2212. Coward, Lori; Barnes, N.C.; Setchell, K.D.R.; Barnes, S. 1993. Genistein, daidzein and their beta-glycoside conjugates: antitumor isoflavones in soybean foods from

American and Asian diets. *J. of Agricultural and Food Chemistry* 41(11):1961-67. Nov. [31 ref]

• **Summary:** This is a very important article. Isoflavones were first extracted with alcohol (80% aqueous methanol) and then the fat was removed from the extract with hexane solvent. Details of the isolation process are given.

“A method is described for the separation and analysis of isoflavone beta-glycoside conjugates and aglucones in various foods derived from soybeans... Asian fermented soy foods contain predominantly isoflavone aglucones, whereas in nonfermented soy foods of both American and Asian origin isoflavones are present mainly as beta-glycoside conjugates. Since the much larger estimated daily intake of these isoflavones by Asians compared to Americans is similar on a body weight basis to the isoflavones in soybean-containing diets which inhibit mammary tumorigenesis in animal models of breast cancer, it is possible that dietary isoflavones are an important factor accounting for the lower incidence and mortality from breast cancer in Asian women.”

Tamoxifen is an anti-estrogen used to therapeutically prevent the metastatic growth of breast cancer.

The results showed that most Asian and American soy products, with the exception of soy sauce, alcohol-extracted soy protein concentrate, and soy protein isolate, have total isoflavone concentrations similar to those in whole soybeans. Asian fermented soyfoods contain mainly isoflavone aglucones, whereas in nonfermented soyfoods of both Asian and American origin isoflavones are present mainly as beta-glycoside conjugates. The estimated daily intake of these isoflavones by Asians is similar on a body weight basis to the isoflavones in soy-containing diets which inhibit mammary tumorigenesis in animal models of breast cancer. Therefore, it is possible that dietary isoflavones are an important factor accounting for the lower incidence and mortality from breast cancer in Asian women.

In Taiwan, the average human consumption of “soy” is 35 gm/day per capita—according to M. Messina unpublished data.

“The concept of reducing cancer risk by chemoprevention has become an important aspect of current cancer research. It has been suggested that two so-called phytoestrogens, lignans and isoflavones, may play a role in the prevention of estrogen-dependent breast cancer and colon cancer.

Three tables show the isoflavone concentrations in various types of soyfoods. For each food, the content of the following is given: Conjugated genistin, conjugated daidzin, genistein aglucone, daidzein aglucone, total isoflavones, D/G ratio, percentage of genistein aglucones, and percentage of daidzein aglucones. After each food listed below we will show the total concentration “as is” and then (if given) on a dry weight basis.

Table 1 shows isoflavone concentrations (in mg per gram) in basic nonfermented Asian soyfoods: Soymilk

(0.252 / 3.256), Tree of Life tofu (0.417 / 2.031), Mori-Nu tofu (0.494 / 3.827), soy flour (1.338), soy powder (1.748), and soy nuts (2.363).

Table 2 shows isoflavone concentrations (in mg per gram) in fermented Asian soyfoods: Tempeh (0.430 / 1.130), miso (0.920 / 1.379), rice miso (0.404 / 0.721), barley miso (0.721 / 1.195), Shiromiso soup mix (0.708), Akamiso soup mix (0.882).

Table 3 shows isoflavone concentrations (in mg per gram) in other soyfoods: Soy sauce (0.023 / 0.090), soy cheese (0.050 / 0.105), Tofutti soy ice cream (0.032 / 0.092), Ice Bean soy ice cream (0.117 / 0.360).

Although flavonoids are found in many plants, vegetables, and flowers, isoflavones such as genistein and daidzein are found in just a few botanical families. This is because of the limited distribution of the enzyme chalcone isomerase largely to tropical legumes. Partly for this reason, isoflavones are a very minor part of American or British diets. Address: Depts. of Pharmacology and Biochemistry and Comprehensive Cancer Center, Univ. of Alabama at Birmingham, Birmingham, Alabama 35294, Mass Spectrometry Lab., Children's Hospital Medical Center, Cincinnati, Ohio 45229.

2213. Product Name: Mori-Nu Lite Silken Tofu [Extra Firm, or Firm].

Manufacturer's Name: Morinaga Nutritional Foods, Inc. (Importer). Made in Japan by Morinaga Milk Co. Ltd.

Manufacturer's Address: 2050 W. 190th St., Suite 110, Torrance, CA 90504. Phone: 310-787-0200.

Date of Introduction: 1993 November.

Ingredients: Extra firm: Water, soybeans, isolated soy protein, gluconolactone, calcium chloride.

Wt/Vol., Packaging, Price: 10.5 oz (297 gm) Tetra Brik Aseptic carton.

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 3 oz.: Calories 35, calories from fat 10, total fat 1 gm (2 daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 80 mg (3%), total carbohydrate 1 gm (< 1%), protein 6 gm, calcium 2%, iron 4%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Ad (full-page color) in *Health Food Business*. 1993. Oct. p. 37. "Mori-Nu. The lowest fat tofu in the world. The others are just plain tubby."

Talk with Tom McReynolds of Morinaga. 1993. Oct. 14. This product will be launched on 1 Nov. 1993. Distribution will start on Oct. 25. The product does not contain any Nichii Soy Flakes (as is implied in a spot in *Health Foods Business*, Oct. 1993, p. 64). As far as Tom knows, only White Wave and Tree of Life are presently using Nichii flakes to make tofu. The product contains both soybeans (grown in Iowa) and isolated soy protein (from Protein Technologies International). Morinaga has purchased the video of Tom Brokaw interviewing Hillary Rodham Clinton, they have

transcribed the parts about tofu and trying to work healthier eating into the White House. Brokaw ends the interview by saying: Perhaps we'll see tofu at a White House state dinner. Morinaga is doing a news release on the subject. Dr. Dean Ornish has already been invited to the White House to advise President Clinton on his diet. Ornish went in and spoke.

Letter (fax) from Morinaga. 1993. Nov. 2. Mori-Nu Lite–Extra Firm contains exactly 0.7 gm of fat and 36.6 calories per 84 gm serving, so that 17% of its calories come from fat.

Product (Extra Firm) with Label sent by Morinaga. 1994. Feb. 5. 4 by 2.5 by 1.75 inches. Tetra Brik Aseptic carton. Purple, yellow, red, and green on white. On front panel: "Only 1% fat." On one side is a recipe for Vegetable Stir Fry. Soyfoods Center Taste Test. The product has a very firm consistency the like white of a hard-boiled egg, and a very bland flavor.

Leaflet sent by Morinaga. 1994. Nov. 25. "See the Lite!" "Mori-Nu Lite is the lowest fat tofu in the world. We combined extremely low-fat isolated soy protein with rich whole-bean soymilk, and then added only enough water to maintain Mori-Nu's creamy smooth texture... Mori-Nu Lite has no cholesterol, and with only 1 gram of fat per serving, you get the highest protein to fat ration (6:1) and less calories (35) than any other tofu."

Prices at Safeway supermarket in Lafayette, California. 1995. Nov. 28. Mori-Nu (3 types): 11.9 cents/oz. Azumaya Chinese style (firm): 7.5 cents/oz. Thus Mori-Nu Tofu costs 59% more than Azumaya tofu.

2214. Westbrae Natural Foods. 1993. WestSoy–We know the importance of customer satisfaction (Ad). *Natural Foods Merchandiser*. Nov. p. 27.

• **Summary:** This full-page color ad states: "Westsoy is the most complete line of premium soy drinks on the market. Our focus is on innovative, quality products that meet your customer's needs." Also lists the many Westbrae "firsts."

Color photos show packages of: Westsoy Lite, Westsoy Low Fat Soy Drink, Westsoy Plus, Westsoy Lunchbox Plus, Lite Malted, Westsoy Original, Westsoy Lite Nondairy Creamer. Address: P.O. Box 48006, Gardena, California 90248.

2215. Jackson, David. 1993. Work with macrobiotics, Roy Steevensz, Grain Country, seitan, and amazake (Interview). *SoyaScan Notes*. Dec. 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** David comes from San Diego. I learned how to make seitan from Roy Steevensz in about 1978 when Roy when he was he was directing the East West Center on Melrose Ave. in Los Angeles. David would drive to Los Angeles each week, spend 3-4 days at the East West Center learning from and training and working with Roy, then return to San Diego. David also assisted in counseling and

learned to teach macrobiotics. They started selling seitan commercially in Los Angeles in either 1979 or 1980, after Roy had been at the Melrose Ave. location for about a year. David ended up co-directing the East West Center in Los Angeles. Roy Steevensz and David both made the seitan that was sold commercially in Los Angeles. Sometimes they would stay up all night making it. They also made amazake.

In about 1979-80 David invested \$80,000 in the East West Center for Macrobiotic Studies in Los Angeles. "I chose to invest in what Roy was doing at the time because I knew it would help change a lot of people. I admired Roy a lot, and I eventually duplicated Roy's operation in San Diego. That was the whole idea." With the \$80,000 the Los Angeles Center really started to take off. Initially David owned no shares, but in about 1980-81 they formed a corporation named SEN (Social Ecology Now) in which David, Roy, and Roy's wife, Marijke, owned shares.

On 2 Oct. 1981 David opened Grain Country, similar to Roy's Grain Country, in San Diego. It began a natural foods and macrobiotic retail store but soon it expanded to a restaurant and food manufacturing facility—all named Grain Country at 3448 30th St., San Diego 92104. He incorporated it and also had an East West Center for Macrobiotic Studies in San Diego. They started in one building and eventually expanded to four buildings (3442, 3444, 3446, and 3448 30th St.), one of which they owned. Even after starting Grain Country in San Diego, David continued to drive up to Los Angeles several days a week. David ran a live-in work exchange program. All the students (up to 20 at one time) who lived at Grain Country, worked there. By Nov. 1992 David was making seitan and amazake commercially at Grain Country. Then he taught the processes to Jim Brefield, who took over from him. "Jim was my first real right-hand person there. He started taking over all the things that I did and eventually ended up managing my store while I did mostly teaching and counseling. Nothing happened there without my stamp of approval; that's why we lasted so long. I kept my fingers on everything."

In 1989 David sold the Grain Country complex in San Diego to a man named Ira Green. He continued to make seitan until he went bankrupt in 1991. David stayed at the East West Center until Jan. 1991, when he moved to Prescott, Arizona. He has no study center in Arizona. He teaches out of his house and throughout the state. He goes to Phoenix every week to teach; they have just started a natural food store named Grain Country in Phoenix. One community in Arizona makes seitan and sells it to Annie at Gentle Strength Food Store in Tempe. David works for Mountain People's Warehouse 2 days a week as an outside rep. One of the foods he sells is seitan.

Roy Steevensz is now living at the Hopi Indian reservation in Arizona, northeast of Flagstaff. He went there originally about 4 years ago to try help them return to their roots because he felt a very spiritual connection with them.

There have been many, many problems. At one point he was actually kicked off the reservation. But he has a connection with one of the elders named Titus, who is over 90 years old; Roy healed Titus, who was dying. It is part of his lifelong spiritual quest. He is now growing corn. He is a true warrior and his teaching is very strong—too strong, too perfect for many people. He is not a very social person, and David has had "to go in and mop up a lot of the things he has done." Throughout Roy's life he has had a problem with his lack of ability to communicate well. David sees Roy often, admires him greatly, and considers Roy to be his teacher; that is one of the reasons David moved to Arizona.

Roy eventually had to leave Grain Country of Los Angeles because a rebellion from his workers; David tried to hold it together as long as he could. David feels that Roy was a great teacher in Los Angeles; he learned from Roy more than money can buy. "Money is not the object." The people who were there for money were not satisfied with what they were getting. But Roy had trouble communicating to his students what he was trying to do. Roy never exploited others for his own benefit. His motives were always pure and he did things for the right reasons. He was never out to enrich himself or exploit others. When he left on the "salt march" to Washington, DC, the Center in Los Angeles finally fell apart. Michio Kushi is more humble than Roy, who is a bit aggressive. David never hoped to and never did get back any of the \$80,000 he invested in Roy's enterprises. But he received much more than that in the way of valuable teachings. Address: P.O. Box 12412, Prescott, Arizona 86304. Phone: 602-776-8364.

2216. Meyers, Steven. 1993. Recent changes at Farm Foods, 21st Century Foods, Barricini Foods, and Kineret Acquisition Corp. (Interview). *SoyaScan Notes*. Dec. 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The many complex changes that have taken place recently with Farm Foods are very positive, and they give the company the working capital they need to enhance existing products and expand their product line. Farm Foods used to be a brand of Barricini Foods. During the past 2 months, Barricini, a publicly owned corporation, has changed hands. The assets of Barricini were purchased by a company named 21st Century Food Products, which was recently renamed Kineret Acquisitions Corp.

At one time Barricini was a large company with candy stores across the USA, especially on the East Coast. But now all those stores are basically gone. Daniel Lloyd knows the history best, but for a very rough history, Barricini was originally started by the two Barricini sisters in about the 1920s. At one point Barricini was purchased by the Southland Corporation, which owns 7-11 stores. Southland increased the number of Barricini candy stores to over 400. Then corporate decisions were made at Southland in about the 1960s and the number of stores began to decrease.

Southland then sold Barricini, and the company went in and out bankruptcy once or twice. Then the name Barricini and the rights to make the candy were purchased from the bankruptcy court by a group of investors in the early 1980s. Shortly thereafter, when Tofutti (soy ice cream) started to become very popular and widely known, this group of investors and Farm Foods (which was still located on The Farm in Summertown, Tennessee, and was looking for investment money) got together through two venture capitalists (Herman Fialkov and Vincent McKiernin of Barricini) who knew someone who was living on The Farm. Originally Barricini asked Farm Foods to make Tofulite (i.e., Tofutti II). Then when Barricini realized that Farm Foods also knew how to distribute and market it, the two companies merged in a 50:50 merger. Shortly thereafter they raised some money in a private placement, and about 6 months after that the company went public in about 1985. That structure remained unchanged until recently. Barricini Foods stopped producing Tofulite in about 1991 but continued to make Ice Bean. Tofulite sold well in mainstream food stores (Haagen-Dazs distributed the product starting in about 1986) but it was not profitable because of stores required slotting allowances and expected a level of advertising in mainstream stores support that was out of proportion to the product's sales. The advent of no-fat ice cream and frozen yogurt put additional pressure on the category of non-dairy frozen desserts. So Barricini realized that there was room for only one product in the category, and that was Tofutti, whose sales were several times as large as Tofulite's. So Barricini stopped making Tofulite.

Since that time Barricini has been looking for a new infusion of capital; they had many good ideas but no money to carry them out, and they had had to downsize the company which put quite a strain on their cash flow. Also Ice Bean needed new packaging and a lite version as well. They met a man named Irwin Simon who was a vice-president of marketing at Haagen-Dazs (where Barricini first met him) and then a vice-president of marketing at Slimfast. Irwin had a vision of trying to put together companies with good brand names who were niche marketers of food products. Barricini introduced him to the natural foods industry and the more he saw the more he liked it. It fit with his ideals and business concepts, and it is an increasingly dynamic and viable industry with a growing number of big companies moving in. For example Kraft may buy Health Valley.

On 23 August 1993 the big change took place. Irwin Simon created 21st Century Foods (he later renamed it Kineret Acquisition Corporation). He wanted to purchase a number of companies which now comprise three divisions of Kineret: Farm Foods (the natural foods division, which makes Ice Bean, the Organic Pita Classics products, Pizsoy products, etc.), Kineret Foods (pronounced kuh-NAIR-ut, the kosher frozen food company), and California Slim (which sells diet and weight loss products). Irwin had acquired

all the companies but Slimfast, and that purchase was contingent upon a public stock offering which took place in late November 1993. The offering raised between \$3 and \$4 million, which was the full amount they wanted. Some of the money goes to acquire the different brands and companies and some goes for working capital. Daniel Lloyd is now a vice president and general manager of Farm Foods, and Steven is vice president of operations.

Farm Foods' product mix has changed greatly this year and they are planning on expanding quite a bit during 1994. In early 1994 Farm Foods plans to launch Ice Bean Lite and there will be a new line of low-fat, low-calorie frozen entrees using soy. Address: Vice President of Operations, Farm Foods, Div. of Kineret Acquisition Corp., 49 Old Bloomfield Ave., Suite, Mountain Lakes, New Jersey 07046. Phone: 201-334-0101.

2217. Demos, Steve. 1993. New developments at White Wave (Interview). *SoyaScan Notes*. Dec. 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** White Wave is about to rent the Boulder Theater for a town party in May 1994 to show the people of Boulder what the company is doing. "We're renaming Boulder 'Tofu Town.'"

Steve recommends that Shurtleff go to Whole Foods Market's store in Berkeley, California, where there is now a White Wave Vegetarian Cuisine Center. They have a "shelf set" developed as the first prototype for the United States. The set is fully integrated into the store's dairy case; it is not a stand-alone unit. In Berkeley, the set is placed in between amazake and tortillas. There may or may not be dividers on both sides. It contains about 46 facings of White Wave products in an organized fashion, in groups such as meat alternatives, dairy alternatives, cheese alternatives, tofu, tempeh, etc. The term "Vegetarian Cuisine," which does not contain the word "soyfoods" or the word "protein," opens the products to a broader category and it elevates the foods to a higher level than just basic proteins. White Wave has had a dozen cartoon characters made up for the set; they deliver the basic information on soyfoods and ecology, soyfoods and cancer, soyfoods and heart disease, etc. There are individual 3 by 5 inch info-cards printed on both sides. Sources of more information are given on each card. White Wave installed their first sets during the first week in November in the 3 Whole Foods stores in the Bay Area—Berkeley, Palo Alto, and Mill Valley. Berkeley is the best of the three. During the first month, the lowest increase in sales was 160% and the highest was 1,000%.

"We are calling this 'category management' or 'category shelf management.' This is what Walmart is. This is the science of merchandising and marketing. It's a whole new game—and so exciting. We spent a year taking photos of natural and health food stores around the United States, and we realized that there was no organizational schematic to

the evolution which has taken place as products evolved from tofu to tempeh to soymilk, to second generation soy products, and now a new generation of vegetable protein products in which various proteins are blended/extended—e.g. wheat protein and soy protein, or products resembling milk or ice cream (like Rice Dream) made from rice.

White Wave will soon be coming out with a new line of gluten-based luncheon slices; another company will make some of these products. White Wave may perhaps buy another company.

“Concerning our new shelf set, we’re going into natural and health food stores and saying ‘We occupy 18 square feet (or that many cubic inches). Our turn rate is X, our profitability factor is Y, and our average sale price is Z. Here’s our product mix and here’s what we’re doing.’ You’ll see national ads on this in February.

“We’ll be ready to go into supermarket chains when they call us and say ‘We want your products and you don’t have to pay slotting fees.’ We will not pay slotting fees. You invest in either a pull or a push. I am against the push mentality. When the chains call you, it means that the market is ready for your products. If you push in, you run the risk of being premature. Legume is a good example of that.

Steve has visited a number of Safeway stores in California and he feels Safeway is very interested in his products and shelf set. Each set costs about \$500-\$700 per store in time and hardware and logo—not including the food products. So Steve must proceed slowly and carefully in getting into supermarkets. He will probably start with supermarkets in college or university towns. From there he will gather statistics on sales and profitability. He will move very slowly, starting with stores in markets with the right demographics, first down the West Coast, then across the Sun Belt, then over to the East Coast and up. Steve will probably have 3 sizes of sets. The smallest set will contain only the fastest moving items. Steve can get into the dairy case of a supermarket only if he can prove that he can deliver more profit per unit of shelf space. They will take a 30-35% margin, and he hopes to do \$60,000 in sales per store per year.

Right now the company is shut down and they are installing all new equipment. The equipment is made by a variety of manufacturers (some from Takai, some American, some German), and it will have a capacity of 1 ton/hour of tofu. They have just installed what is probably the largest curdling carousel in the United States. They made tofu on Dec. 16-17 to test the equipment, and Steve is very optimistic that the learning curve will be short. “Wataru Takai is arriving in Boulder today. Tomorrow all the big-time pasteurization and spiral chilling equipment will be installed. I’ve never seen a soyfoods company that uses this type of equipment. We also have fancy packing machines, a lot of vacuum packing and water packing machines.

“Sales of White Wave’s basic seitan, sold in a tub, are

increasing rapidly. We are already selling thousands of pounds a week.”

White Wave is now right in the middle of their wastewater nightmare. Fortunately the city of Boulder has given us the okay for our new construction and equipment. The plant will be done by the middle of January. The last phase is the solar employee lounge out front. The city has beaten up on us for the last year on environmental issues. Only Pat Calhoun’s persistence got us through it by wearing out the city’s bureaucracy. One day they threw their hands up and gave us all the permits.

“We are at a critical mass point as of 1 Jan. 1994. We have a new factory (high-output and very sanitary), a new production system, and a new marketing scheme and schematic in place based on reproducible, verifiable numbers. We are ready for takeoff. I’m very excited. We’re all dressed up for the party. I now have what we were dreaming about 15 years ago.”

Note: In the opinion of Soyfoods Center, White Wave is currently, and has been for at least the past 5 years, the most innovative soyfoods company in America. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2218. Randjelovic, Sladjan. 1993. New developments with tofu in Yugoslavia and Czechoslovakia (Interview). *SoyaScan Notes*. Dec. 29. Conducted by William Shurtleff of Soyfoods Center. [Eng]

• **Summary:** Randjelovic called from Serbia, in Yugoslavia, where he is setting up a tofu company that he plans to name Randjelovic. He is looking for source of organic soybeans. His friend named Vacek runs Sunfood in Dobruska, Czechoslovakia (about 75 miles east northeast of Prague near the border with Poland), and his friend is also an agent for Mitoku Macrobiotic Foods. In Prague, Czechoslovakia, someone is starting an automatic tofu plant using Takai equipment. Address: Randjelovic, D. Damjanovica #17, 11460 Barajevo, Yugoslavia. Phone: 381-11-610-088.

2219. Vegetarian Resource Group. 1993. *Vegetarian Journal’s guide to natural foods restaurants in the U.S. and Canada*. Garden City Park, New York: Avery Publishing Group. 2nd edition 1995. 3rd edition 1998. 4th edition 2005. *

2220. Arrowhead Mills, Inc. 1993. *The story of spelt (Leaflet)*. Hereford, Texas. 12 panels each side. Front and back. Color. Each panel 10 x 23 cm.

• **Summary:** A well written and researched leaflet, with many color illustrations. Spelt is an ancestor of our bread wheats; it is rich in protein. “As the number one United States supplier of organic foods, Arrowhead Mills is pleased to bring you Spelt Wheat and other heirloom grains.”

“For consumer information about membership in an

heirloom-grain conservation organization, send one dollar and a long, self-addressed envelope to The Kusa Society, P.O. Box 761, Ojai, CA 93024 USA.” Contains two recipes. Address: 110 South Lawton, Box 2059, Hereford, Deaf Smith County, Texas 79045.

2221. Arrowhead Mills, Inc. 1993. The story of quinoa (Leaflet). Hereford, Texas. 12 panels each side. Front and back. Color. Each panel 10 x 23 cm.

• **Summary:** A well written and researched leaflet, with many color illustrations.

“For consumer information about membership in an heirloom-grain conservation organization, send one dollar and a long, self-addressed envelope to The Kusa Society, P.O. Box 761, Ojai, CA 93024 USA.” Contains two recipes. Address: 110 South Lawton, Box 2059, Hereford, Deaf Smith County, Texas 79045.

2222. Arrowhead Mills, Inc. 1993. The story of te’f (Leaflet). Hereford, Texas. 12 panels each side. Front and back. Color. Each panel 10 x 23 cm.

• **Summary:** A well written and researched leaflet, with many color illustrations.

The botanical Latin name is *Eragrostis tef*. It is native to Ethiopia. “For consumer information about membership in an heirloom-grain conservation organization, send one dollar and a long, self-addressed envelope to The Kusa Society, P.O. Box 761, Ojai, CA 93024 USA.” Address: 110 South Lawton, Box 2059, Hereford, Deaf Smith County, Texas 79045.

2223. Arrowhead Mills, Inc. 1993. The story of amaranth (Leaflet). Hereford, Texas. 12 panels each side. Front and back. Color. Each panel 10 x 23 cm.

• **Summary:** A well written and researched leaflet, with many color illustrations.

This grain amaranth is a member of the genus *Amaranthus*. Some of the huge seedheads have measured 4.5 feet in length.

“For consumer information about membership in an heirloom-grain conservation organization, send one dollar and a long, self-addressed envelope to The Kusa Society, P.O. Box 761, Ojai, CA 93024 USA.” Address: 110 South Lawton, Box 2059, Hereford, Deaf Smith County, Texas 79045.

2224. Arrowhead Mills, Inc. 1993. The story of kamut (Leaflet). Hereford, Texas. 12 panels each side. Front and back. Color. Each panel 10 x 23 cm.

• **Summary:** A well written and researched leaflet, with many color illustrations.

Kamut is an ancient ancestor of durum wheat, with very hard and long kernels. The scientific name is *Triticum durum*; Kamut is a registered trademark.

“As the number one United States supplier of organic foods, Arrowhead Mills is pleased to bring you Kamut-brand Wheat and other heirloom grains.”

“For consumer information about membership in an heirloom-grain conservation organization, send one dollar and a long, self-addressed envelope to The Kusa Society, P.O. Box 761, Ojai, CA 93024 USA.” Address: 110 South Lawton, Box 2059, Hereford, Deaf Smith County, Texas 79045.

2225. Hawken, Paul. 1993. The ecology of commerce: a declaration of sustainability. New York, NY: HarperBusiness. xvi + 250 p. Index. 25 cm. *

• **Summary:** Preface. 1. A teasing irony. 2. The death of birth. 3. The creation of waste. 4. Parking lots and potato heads. 5. Pigou’s solution. 6. The size thing. 7. Private lives and corporate rights. 8. The Jesse Helms Citizenship Center. 9. The opportunity of insignificance. 10. Restoring the guardian. 11. Pink Salmon and Green Fees. 12. The inestimable gift of a future. Acknowledgments. Notes.

Note 1. This book was first published in serial form in the magazine *Inc.* in 1992.

Note 2. This is the earliest document seen (Nov. 2016) with “sustainability” (or sustainable) in the title. Address: Mill Valley, California.

2226. Levenstein, Harvey A. 1993. Paradox of plenty: A social history of eating in modern America. New York, NY: Oxford University Press. ix + 337 p., [8] p. of plates. Illust. (8 p. of plates). Index. 25 cm. [1473* endnotes]

• **Summary:** Contents: Prologue: Depression paradoxes. 1. Depression dieting and the vitamin gold rush (The New Nutrition, Victor Lindlahr, Gayelord Hauser, the willingness to eat for health more than for pleasure, Alfred W. McCann, Prof. Elmer McCollum and acidosis). 2. The great regression: The new woman goes home. 3. From Burgoon to Howard Johnson’s: Eating out in Depression America. 4. One-third of a nation ill nourished? 5. Oh what a healthy war: Nutrition for national defense [World War II].

6. Food shortages for the people of plenty. 7. The golden age of food processing: Miracle Whip *über Alles*. Note: Miracle Whip, developed by Kraft Foods in 1933, is a less expensive alternative to mayonnaise.

8. The best-fed people the world has ever seen? (Insta-Burger-King chain of early 1950s, Ray Kroc visits San Bernardino, the McDonald brothers, Clementine Paddleford). 9. Cracks in the façade: 1958-1965 (kitchen appliances do not reduce time women spend on food preparation, growing suspicion of the food industries, food additives, refined and processed foods, Gayelord Hauser). 10. The politics of hunger.

11. Nutritional terrorism (DDT and pesticides, Rachael Carson and *Silent Spring*, USDA, mercury in fish from the Great Lakes, Jerome Irving Rodale {ex-auditor for the

IRS “was quite unlike most of the others in the huckster-filled health food business.” Circulation of his *Organic Gardening and Farming* magazine soared from 60,000 in 1958 to 650,000 in 1970). “Soon the doors were open to the usual horde of health food advocates and fad diet promoters impatiently waiting for the moments when they could again hold center stage.” Gayelord Hauser, his women and his Five Wonder Foods, Adelle Davis, Organic foods, natural foods, health food stores, the government had sided with the medical establishment to keep the public from turning to vitamins—rather than to doctors—to solve health problems, the FDA and Food Faddism, vitamin advocates, Ralph Nader, agribusiness, cholesterol awareness, the AMA’s council on foods, National Heart Association, Linus Pauling bankrolled by Hoffmann-La Roche, the largest wholesaler of vitamin C, in 1971 Michael Jacobson helped found the Center for Science in the Public Interest, middle class was rapidly losing faith in the food industry and government).

12. The politics of food (The New Left vs. Ralph Nader, radicals, *Ramparts* magazine, Francis Moore Lappe, vegetarianism, Berkeley radical Alice Waters opens Chez Panisse, aphorism *Man ist was er isst* {Man is what he eats, by Ludwig Feuerbach, 1804-1872, German philosopher}, avoidance of meat and white foods, natural foods, Zen macrobiotic diet, Georges Ohsawa, Yin and Yang, Warren Belasco, brown rice, soy sauce, granola, Fred Rohe, Charles Reich, *Mother Earth News*, *Berkeley Barb*, “back to Nature,” organic foods, the women’s movement, LSD, Theodore Roszak, Frederick Stare sets up American Council for Health and Nutrition. Jean Mayer, reviling white sugar, John Yudkin, America’s puritanical streak, Robert Choate destroys sugar and sugar-laden breakfast cereals, the public grows to despise sugar).

13. Natural foods and negative nutrition (You are what you eat {1969}, *Fortune magazine* predicts convenience will win out over natural foods. Delaney Amendment, cholesterol and heart disease, loss of faith in the core of America’s postwar national credo: the ideal of the balanced meal and faith in the Basic Four, Senator McGovern and his committee’s special report *Dietary Goals for the United States* {1977-1978}, which called for a complete about-face in government nutrition policy. “All previous government efforts had centered on getting people to eat more of what was thought to be good for them. *Dietary Goals* emphasized eating less of what was thought to be bad for them”—what Levenstein calls “Negative Nutrition.” A great outcry came from the beef, dairy, and egg producers).

14. Darling, where did you put the cardamom? (The rise of gourmet, high ethnic, and upscale cuisines, French food, Julia Child, Craig Claiborne, snobbery, ethnic food boom, Oriental foods). 15. Fast food and quick bucks (Pizza, McDonald’s, Kentucky Fried Chicken, franchises). 16. Paradoxes of plenty. Abbreviations used in frequently cited periodicals.

Born in 1938, Levenstein’s first book was titled *Revolution at the Table: The Transformation of the American Diet*. This is a carefully researched, generally well written and very interesting cultural history of food and eating in the USA from 1930 to 1993—and of America’s ongoing food wars. However by trying to take a fair and balanced centrist position, and by trying to prevent value judgments from creeping in (e.g., a healthy, balanced diet is better than an unhealthy one), Levenstein no doubt disappoints, and perhaps even infuriates, all sides. His sources on natural and organic foods and vegetarianism are scant and often very negative. Address: Prof. of History, McMaster Univ., Univ. of Hamilton, Ontario, Canada.

2227. Pitchford, Paul. 1993. *Healing with whole foods: Oriental traditions and modern nutrition*. Berkeley, California: North Atlantic Books. xxii + 656 p. Illust. Index. 26 cm. 2nd ed. 1996. 3rd ed. 2002 (both by same publisher). [536 ref]

• **Summary:** Contents: 1. Origins. Part I: The roots of diagnosis and treatment. 2. Yin-yang and beyond. 3. Qi vitality. The six divisions of yin and yang: 4. Heat/cold—The thermal nature of food and people. 5. Exterior/interior: Building immunity. 6. Excess and deficiency.

Part II: Essentials of nutrition. 7. Dietary transition. 8. Water. 9. Protein and vitamin B-12.

10. Oils and fats. 11. Sweeteners. 12. Salt. 23. Condiments, caffeine, and spices. 14. Vitamins and supplements. 15. Calcium. 16. Green food products. 17. Survival simplified. 18. Enjoyment of food. 19. Food combinations.

20. Fasting and purification. 21. Food and children.

Part III: The five element and organ system. 22. Five elements: Seasonal attunement and the organs in harmony and disease. 23. Therapeutic use of the five flavors. 24. Wood element. 25. Fire element. 26. Earth element. 27. Metal element. 28. Water element.

Part IV: Diseases and their dietary treatment. 29. Blood sugar imbalance [diabetes]. 30. The stomach and intestines. 31. Blood disorders. 32. Cancer and regeneration diets. 33. Other degenerative disorders.

Part V: Recipes and properties of vegetal foods. 34. Vibrational cooking. 35. Grains. 36. Breads. 37. Legumes—Peas, beans, and lentils: Healing properties of legumes, improving the digestibility of legumes, techniques for cooking legumes, miso, tempeh, tofu. 38. Nuts and seeds. 39. Vegetables.

Seaweeds: Agar-agar, dulse, hijiki and arame, kombu and kelp, nori, wakame, Irish moss and Corsican (*Alsidium helminthocorton*; it is sold as a tea and discharges worms. 43. Soups. 44. Sauces. 45. Condiments: Chutneys and relishes. 46. Spreads and patés. 47. Pickles. 48. Grain and seed milks (incl. sesame seed milk, almond milk, almond milk shake, sprouted grain milk

{oats, rice, millet, barley}, cooked grain milk). 49. Rejuvelac and yogurt.

50. Fruit. 51. Desserts. Appendixes: Recipe locator. Bibliography (180 references, mostly alternative; Oriental philosophy. Chinese medicine: Theory and foundations. Chinese dietary therapy. Ayurvedic and Tibetan medicine. Western approach to nutrition. Healing the spirit and mind. Chinese herbology. Western herbology. Healing with food. Green foods. Amaranth. Seaweeds. Vegetarian, macrobiotic, vegan. Children. Ecology, politics, and ethics of food. Degenerative diseases and immunity. Toxins and radiation. Cookbooks. Food catalogs, guides, and references. Sources of data for tables, charts, and nutritional statistics). References and notes (356 refs, mostly scientific). Resources index (Incl. Soyfoods Center).

The following are listed in the index (f = most important pages): Acid-forming foods (p. 235f, 240). Aduki [azuki] beans (p. 26, 34, 50, 60, 68, 77, 178, 273, 305, 307, 319, 362, 467f). Amaranth (lots, 419-20f). Amasake (p. 98, 152-53, 155, 160, 163, 275, 287, 592f). Animal products (lots). *Aspergillus oryzae* (p. 592). Ayurveda (lots). Black sesame seed (lots, 492f). Black soybean (60, 68, 288, 317, 324, 327, 468). Bran (p. 332) and its role in relieving constipation (345-46). Buckwheat (lots, 422f). Buddha. Calcium (lots). Cancer. Cheese (but no soy cheese). Cholesterol. Cigarette smoking. Coldness, bodily. Dampness, bodily. Deficiency. Digestibility (Improving the digestibility of legumes, p. 471-73). Five elements system. Free radicals. Gerson, Max and cancer therapy (p. 41, 126, 162, 365-66, 381). Goiter. Gomasio [sic, gomashio]; sesame salt (p. 272, 566f). Heart / Heart/mind. Heat (lots). Hijiki. Ice cream (p. 291, 305 [no soy]). Job's tears (p. 381, 383). Kasha (buckwheat, p. 422). Kelp. Kloss, Jethro (p. 366, 381). Koji (p. 479). Kudzu (p. 22, 25, 29, 60, 289, 299, 309, 317, 414f). Lecithin (lots, p. 127, 470, 414f). Legumes (lots, p. 466-471, 473f). Macrobiotics (p. 3-4). Marijuana (lots). Menopause (p. 181-82, 362-364f, 441, 468, 497). Microwave cooking (p. 20). Milk). Mind, Chinese Zen concept of. Miso (p. 33-34, 60, 72-74, 78, 81, 90, 92, 98, 101, 105-06, 150, 159, 164, 195, 221-22, 272, 275, 315, 376, 479-82f; natto miso p. 482). Mochi (p. 436-37f). Mother's milk—to increase. Mucus. Nails, dry and brittle (p. 285). Oils (incl. soy oil, p. 138-41). Omega-3 fatty acids. Nori. Protein (lots). Qi [chi, p. 16-17]. Quinoa. Rice syrup. Schweitzer, Albert (365). Sea palm (p. 541). Seaweed (lots, p. 540-55f—see also Agar, alaria, arame, bladderwrack, Corsican, dulce, hijiki, Irish moss, kelp, kombu, nori, ocean ribbon, sea lettuce, sea palm, wakame). Seitan (p. 446-47). Sesame butter (p. 81, 492). Sesame seed (lots, 492f). Soybean (p. 52, 56, 60, 105, 124, 161, 178, 232, 235n, 250, 300, 466, 470f; children and soy products 253-54; soy sprouts p. 22, 34, 122, 291, 470f; see also miso, soy sauce, tempeh, tofu).

The section titled “Soybean” (p. 470) begins: “Cooling thermal nature; sweet flavor; strengthens the spleen-

pancreas; influences the colon; moistens conditions of *dryness*; supplements the kidneys; cleanses the blood vessels and heart, improving circulation; helps restore pancreatic functioning (especially in diabetic conditions); promotes clear vision; diuretic; lowers fever; highly alkalizing and eliminates toxins from the body; boosts milk secretion in nursing mothers. Also used as a remedy for dizziness, childhood malnourishment (especially in the form of tempeh and soy milk), skin eruptions, constipation, edema, excessive fluid retention and toxemia during pregnancy, and food poisoning. For the imbalances during pregnancy and for food poisoning, drink soybean juice (prepare as ‘aduki juice’ above). Soybeans are a natural source of lecithin—a brain food.

“Unless well-cooked, soybeans inhibit the digestive enzyme trypsin, making them [sic] difficult to digest. The fermentation process, such as used in tempeh, tofu, miso, and soy sauce, also eliminates the beans’ trypsin-inhibiting effect.

“Soybean sprouts are cooling with a sweet flavor. They are diuretic and used to treat spasms, arthritis, food stagnation, *heat*-type coughs and other heat conditions marked by one or more signs such as yellow tongue coating, yellow mucus, and scanty, dark yellow urine.”

Soy sauce (p. 34, 78, 81, 98, 105-06, 150, 159, 164, 195, 222, 272, 277, 315, 414f, 480). Spirulina. Sprouting (p. 232-33). Sprouts (lots, p. 528-30f). Steiner, Rudolf (p. 19-20, 504). Stomach (beneficial foods, stomach/duodenal heat and, strengthening food). Stress. Sugar (lots). Superoxide dismutase (SOD). Sweating—night sweats (p. 24, 117, 441). Sweeteners. Sweet rice (p. 433f). Tahini (sesame, p. 106, 225, 493). Tempeh (p. 22, 34, 56, 60, 96, 99, 105, 124, 216, 221, 242, 250, 290, 307, 310, 482-86f; vitamin B-12 and p. 98). Thirst. Tobacco. Tofu (p. 22, 25, 34, 55-56, 60, 68, 81, 105, 124, 242, 250, 290-91, 300, 303, 307, 310, 317, 327, 486-89f). Tomato. Tongue coating and digestion (p. 399). Umeboshi plums (p. 78, 159, 222, 272, 307, 414, 583f). Umeboshi vinegar (p. 414). Urinary incontinence and deficiency of kidney qi (p. 318-19). Urination, frequent, from kidney qi and yang deficiencies (p. 318). Valerian root. Vegan (p. 5, 95, 137, 261, 389, 502). Vegetarianism (p. 81-82, 95). Vitamin B-12. Vitamin E. Vitamin K. Wakame. Warming foods (p. 18-20, 26-27). Warts. Watermelon. Wind, bodily (foods which quell, 286-89; incl. black soybean, p. 468). Yang. Yin.

Talk with Heartwood Institute. 1997. Nov. 12. This is basically a massage school that also offers retreats. Paul's background is in the martial arts and massage. He graduated from a college after 4 years but the name of the college is not available. He also did 2 years of graduate work at an institution whose name is not available. The Institute sent their catalog/brochure. Address: Director, Heartwood Inst. Wellness Clinic and Oriental Healing Arts Program, 220 Harmony Lane, Garberville, California 95542. Phone: 707-923-5000.

2228. **Product Name:** Burritos brand Vegetarian Chili (With Textured Organic Soy Flour).

Manufacturer's Name: Little Bear / Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.

Date of Introduction: 1993?

Ingredients: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), tricalcium phosphate, expeller pressed organic canola oil*, sea salt, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 1 liter (1.06 quart) Tetra Brik Aseptic carton. Retail for \$1.89 (7/92, Maryland).

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 8 fl. oz.: Calories 150, protein 6 gm, carbohydrate 18 gm, fat 5 gm (percent calories from fat 33, polyunsaturated fat 3 gm, saturated fat 1 gm), cholesterol 0 mg, sodium 140 mg, potassium 265 mg.

New Product–Documentation: Talk with Bill Bolduc. 1993. Aug. 16.

2229. Macdonald, Bruce. 1994. Macrobiotic Wholesale Co. is now Macrobiotic Company of America (MCOA) (Interview). *SoyaScan Notes*. Jan. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bruce (who was one of the early important figures in Erewhon) bought this company from Kurt Schmitz on 15 Sept. 1993. Kurt, who is about age 65, had come to North Carolina from California to retire. He had worked at Hewlett-Packard for more than 20 years. He purchased the company (named Macrobiotic Wholesale Co.) in Aug. 1986 from Great Eastern Sun; Barry Rand negotiated the deal. At the time the company had sales of about \$170,000/year; now its sales are well over \$1,300,000/year and the last two months have set sales records. Bruce renamed it Macrobiotic Company of America. Bruce used to live in Vermont, but he now lives in North Carolina. Kurt is interested in possibly starting a miso manufacturing company in North Carolina—which has long been considered by macrobiotic teachers to have an ideal climate for making miso (hot summers, cold winters, somewhat humid). The American Miso Company is only 50 miles away. Bruce would like to move the company up to the northeast; he feels it is situated in the wrong place.

Macrobiotic Wholesale Company used to be a division of Great Eastern Sun. Great Eastern Sun sold products to distributors, whereas Macrobiotic Wholesale Company sold directly to retail stores. The distributors got upset with Great Eastern Sun for wearing two hats, so Great Eastern Sun decided to sell Macrobiotic Wholesale Company. Barry Evans still owns Great Eastern Sun.

Note: Half of MCOA is owned by Muso Shokuhin of

Japan. When William Shurtleff asked Bruce about this on 4 April 1997, Bruce confirmed that it was true. When the company was purchased from Kurt Schmitz on 15 Sept. 1993, Yuko Okada of Muso put up 95% of the money and Bruce put up 5%—using his own funds. Yuko borrowed all or most of the 95% to make the purchase, and MCOA is paying him back. Bruce agreed to manage the company in exchange for 50% ownership, which he still has. Muso owns the other 50%. He did not tell the true story to Shurtleff in 1994 because Muso wanted to keep this semi-confidential. Address: Owner, Macrobiotic Company of America, 799 Old Leicester Hwy, Asheville, North Carolina 28806. Phone: 704-252-1221.

2230. DeBona, Don. 1994. Early work with natural foods, macrobiotics, and soyfoods in America (Interview). *SoyaScan Notes*. Jan. 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Don was born in Eagle Pass, Texas, in 1955. He had “hung around natural food stores since high school.” While in high school, he worked as produce clerk at a natural foods store named The Powerhouse in his home town on Towson, Maryland. It was the town’s first natural foods store. They bought foods from Erewhon.

In 1977 Don graduated from a small Catholic college named Mount St. Mary’s College in Emmitsburg, Maryland. He got interested in macrobiotics through books (such as *Zen Macrobiotic Cooking* by Michel Abehsera) that same year several months after he graduated; he had been a vegetarian for about 6 months. His first job after college was in Virginia at Appalachian Outfitters, a store which outfitted people going on camping or river trips.

Don worked for Laurelbrook Foods in Maryland for about a year, starting in 1981. He left shortly after the company filed for Chapter 11 bankruptcy protection on 15 Feb. 1982, then he went to work on a Permaculture farm named Watkins Farm on the Maryland/Virginia border. Run by a man named Law Watkins, it was testing no-till agriculture, growing organic winter wheat, barley, soybeans and summer produce according to the principles set forth in Masanobu Fukuoka’s classic, *The One Straw Revolution...* After working there for a year and a half, in December 1983 he went to Great Eastern Sun (GES, which had started business in March 1982). GES was just starting to get involved with soymilk (Ah Soy) when Don arrived; taking charge of the soymilk was his first project at GES. Barry Evans hired Don and was actively running GES at the time. Marty Roth had just left for Westbrae when Don arrived; Don took his place as general manager/sales manager. John Belleme was still at American Miso Co. John Fogg designed the package for Ah Soy; Don invented the phrase “Nondairy Soy Beverage” which is now widely used on other soy beverages. After working at GES for about a year plus several months, Don and his wife went down to the

American Miso Company in Feb. 1985 to take over from John Belleme. Bob Ballard took Don's place at GES, but Don was the general manager of GES until Nov. 1993, when he hired John Swann. Don still owns part of GES (as well as part of American Miso Co., along with Barry Evans) and is paid by them, even though American Miso Co. is a separate corporation. Bean Mountain Soyfoods in North Carolina was shut down about 2 years ago; John Swann used to be in charge of Bean Mountain. John Fogg worked with John Troy for a while; they started a company named American Natural Foods. Then John Fogg did consulting for Arrowhead Mills, but 2-3 years ago he left the natural foods business and was writing books on motivation. Address: General Manager, American Miso Co., Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

2231. Shurtleff, William; Aoyagi, Akiko. comps. 1994. *Wheat gluten and seitan—Bibliography and sourcebook, A.D. 535 to 1993: Detailed information on 462 published documents (extensively annotated bibliography), 363 commercial gluten and seitan products, 208 original interviews (many full text) and overviews, 104 unpublished archival documents.* Lafayette, California: Soyfoods Center. 347 p. Subject/geographical index. Author/company index. Language index. Printed 9 Dec. 1993. 28 cm. [922 ref]
 • **Summary:** This is the first bibliography ever published about wheat gluten or seitan, and the most comprehensive book ever published on this subject. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of these two interesting foods and food ingredients. Its scope includes all known information about this subject, worldwide, from A.D. 535 in China to the present.

This book is also the single most current and useful source of information on this subject, since 95% of all records contain a summary/abstract averaging 207 words in length.

This is one of more than 40 bibliographies on vegetable proteins being compiled by William Shurtleff and Akiko Aoyagi. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 32 different document types, both published and unpublished; every known publication on the subject in every language—including 736 in English, 68 in German, 61 in French, 26 in Chinese, etc.; and 208 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of gluten, seitan, and related products from their earliest beginnings to the present.

The bibliographic records in this book include 462 published documents and 104 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-

English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 363 commercial gluten and seitan products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included.

Introduction (p. 7-8): Gluten is a complex protein (composed of gliadin and glutenin) found mainly in wheat, but also in corn, barley and rye. It is best known for its ability to give elasticity and cohesiveness to bread, allowing it to rise. Vital wheat gluten, a cream-colored, free-flowing powder, is most widely used to fortify flour and baked goods, but it also finds many other applications. One of the newest and most rapidly growing of these is its use as the main protein source in meatlike products.

Seitan is a Japanese word, coined in 1961 by George Ohsawa (Sakurazawa Nyoichi), a Japanese-born teacher of macrobiotics. He gave this name to a meatlike product developed by one of his students, Mr. Kiyoshi Mokutani. The product was first made commercially in 1962 by Marushima Shoyu K.K. in Japan. It was made by simmering raw wheat gluten in a broth, typically consisting of water, shoyu (soy sauce), kombu (a sea vegetable), and ginger. Seitan was first imported to the Western world in about 1969 by Erewhon, a macrobiotic and natural food company in Boston, Massachusetts.

The earliest publication seen that mentions the word seitan is a 34-page macrobiotic cookbook titled *Cooking Good Food*, published in 1969 by Order of the Universe Publications in Boston. The author, whose name does not appear in the book, is Jim Ledbetter.

Since 1969, interest in and consumption of seitan in the United States and Europe has increased steadily. It continues to be used mostly as an alternative to meat and the macrobiotic community deserves much of the credit for its growing popularity. This book gives details on 104 commercial seitan products that have been developed and launched, mostly in the United States and Europe, and cites 80 published documents (including 40 cookbooks or articles with recipes) in which seitan is discussed. 73% of the published documents are written in English.

The history of gluten can be divided into various

periods, a number of which are first documented in this book: Here are a few highlights.

Early History in China: The earliest Chinese reference seen to wheat gluten is in the *Ch'i-min yao-shu*, the world's earliest encyclopedia of agriculture, written by Chia Ssu-hsieh in A.D. 535. It describes *po to*, a type of noodle made largely from freshly-washed wheat gluten. By the Sung dynasty (960-1279) wheat gluten was being called by its present name, mien chin. It was widely used in place of meat, in various forms, by Buddhists in China. The first 17 citations in this bibliography, all published before 1600, come from China, as do 23 of the first 26 citations published before 1803.

Discovery by Scientists in the Western World: The earliest known reference to wheat gluten in the Western world was in 1745 in a Latin treatise titled *De Frumento* (Concerning Wheat), published in Italy. It describes how Beccari, a Professor of Medicine in the Anatomy and Chemistry Institute of Bologna, Italy, prepared a dough from wheat flour, then washed it with water to isolate the gluten. However as early as 1597 the term gluten had been used to refer to "The albuminous element of animal tissues" sometimes called animal gluten. In 1800 William Henry wrote in his book titled *An Epitome of Chemistry*: "Gluten forms the basis of the muscular or fleshy parts of animals." Numerous early observers noted that the gluten in wheat had distinctly meat-like or animal-like properties.

The first two English-language publications to mention wheat gluten appeared in 1803 in London. John Imison, in his *Elements of Science and Art* gave an excellent definition of wheat gluten. European chemists, especially those in France and Germany, took great interest in gluten, in its properties, and in the individual proteins of which it was composed. By 1900 they had issued more than 62 publications on the subject, compared with only 18 in the USA. In America, the first scientific publication on wheat gluten appeared in 1893, by Osborne and Voorhees in Connecticut.

First Use as a Food in the West in Diabetic Diets: In 1836 and 1841, the French scientist A. Bouchardat, while doing research on diabetes, discovered that gluten was good for use in diabetic diets—which were supposed to have little starch. He proposed feeding diabetics with gluten bread that contained only one-sixth the starch of regular wheat bread. His proposal caught on and for the next century gluten came to be widely used in Europe and the United States mainly in diabetic diets. Many commercial diabetic food products were manufactured. 48 records in this book discuss gluten in diabetic diets.

Seventh-day Adventists in America Discover Gluten: The first original publication on wheat gluten in the United States appeared in 1882. It was an advertisement for Sanitarium Foods published in *Good Health* magazine. This company was located in Battle Creek, Michigan, and

directed by Dr. John Harvey Kellogg, a famous Seventh-day Adventist physician who headed the Battle Creek Sanitarium. The ad mentions Gluten Wafers, Diabetic Food, and Gluten Food. The Seventh-day Adventists soon became pioneers in introducing gluten-based foods, especially meatlike products, to America. 256 records in this book relate to Adventists, including 174 commercial gluten products. In November 1929 La Sierra Industries in Arlington, California (founded and run by T.A. Van Gundy), introduced the world's first meatlike product based on wheat gluten. It was named La Sierra Soy Gluten. From this small beginning many other Seventh-day Adventist companies launched commercial meatlike products based on gluten: The two leaders were Worthington Foods (Worthington, Ohio; 67 products) and Loma Linda Foods (Riverside, California; 48 products).

Popularization of Seitan in America and Europe: All early seitan products in the Western world were made by members of the macrobiotic community. In America the first two commercial seitan products were introduced in Oct. 1972, made by Nik and Joanne Amartseff in Boston. Tan Pups, consisting of skewered deep-fried seitan in a breaded batter, were so delicious that just their aroma drew passers-by into the store. Piroshki (filled with seitan) were also innovative. America's third seitan product was Wheatmeat, sold as small meatball-like chunks in bulk. Its creator, John Weissman, made many of America's earliest and most innovative seitan products and he still owns the trademark on the term "Wheatmeat."

In Europe, the first three seitan products were all made by Jonathan P.V.B.A., founded and owned by Jos Van De Ponsele, who learned how to make seitan in Boston. They were Seitan (1978), Seitanburger (1979), and Seitan Pâté (1980). Since 1972 at least 62 commercial seitan products have been launched in the USA and 38 in Europe.

The Rise of Gluten Worldwide: Starting in the early 1960s interest in and use of gluten by cooks and food processors began to increase rapidly (see p. 335). The number of records in this book grew from 320 in the 1960s, to 476 in the 1970s, to 749 in the 1980s. In 1974 the first of many gluten cookbooks was published by LeArta Moulton. In 1979 the International Wheat Gluten Association was founded by 11 wheat gluten manufacturers; it now has 23 members worldwide. Today most wheat gluten is sold as vital wheat gluten, and used in baked goods or to fortify flour. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

2232. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Soyfoods industry and market—Bibliography and sourcebook, 1985 to 1993. Lafayette, California: Soyfoods Center. 361 p. Subject/geographical index. Author/company index. Language index. Printed 11 Jan. 1994. Published Jan. 1995. 28 cm. [1985 ref]

• **Summary:** This is the second of the two most comprehensive books ever published on the soyfoods industry and market worldwide.

In May 1982 the first study of the burgeoning soyfoods industry in the Western world was compiled by Shurtleff and Aoyagi, and published by Soyfoods Center. In April 1985 the fifth edition of that book, titled *Soyfoods Industry and Market: Directory and Databook* (220 pages), was published. It contained statistics through 1984, the market size and growth rate for each soyfood type, rankings of leading soyfoods manufacturers of each soyfood type and the amount each produced, analyses, trends, and projections. This book is published to update the 1985 market study.

In the decade since 1984 the soyfoods market has continued to grow at a very healthy rate, with some soyfood types (such as soymilk) growing at a truly astonishing sustained rate—in both the USA and western Europe—as the statistics in this book show so vividly. In 1975 only 75 new commercial soyfood products were introduced in the USA, yet that number skyrocketed to 217 in 1979, reaching an amazing 422 new products in 1987.

During the decade from 1984 to 1994, Soyfoods Center has invested most of its time and resources in the production of SoyaScan, the world's largest computerized database on soyfoods, which contains more than 44,500 records as of Jan. 1994. This database also includes a wealth of carefully researched statistics and analyses of the soyfoods market; those from the start of 1985 to the end of 1993 are contained in this book. Its scope includes all known information on this subject, worldwide. Its focus, however, is statistics, analyses, and trends concerning the soyfoods industry and market in the United States and Europe.

In May 1990 Soyfoods Center conducted an in-depth study of the tofu market in Europe (137 pages), and in July 1990 of the soymilk market in Europe (261 pages). All original interviews and published records from both of these market studies, plus a summary of each study, are included in the present book.

The SoyaScan database is composed of individual records. One record might be an original interview with the head of the largest soymilk company in Europe, on the size and growth of the soymilk market in Europe, and new trends in that market, conducted by William Shurtleff of Soyfoods Center. Another might be a published article or an unpublished document concerning the growth of the market for soy yogurts or soy sauce in America.

This book documents the growth of each product category in every country worldwide. The book contains three extensive and easy-to-use indexes: A subject/geographical index, an author/company index, and a language index. These allow you to find the exact information you need on the soyfoods industry and market quickly and easily. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

2233. Lewis, David. 1994. Bean curd banner flies high over Tofutown. *Rocky Mountain News* (Denver, Colorado). Feb. 1. p. 33A, 38A. Business section.

• **Summary:** White Wave produces 2½ tons of tofu every working hour of every day. That's 50,000 pounds of tofu a day, 250,000 pounds a week, and 13 million pounds a year. White Wave sells its tofu and tofu spin-offs—Meatless Tofu Steaks, Dairyless Soy Strawberry Yogurt—in 50 states, Puerto Rico, Mexico, and Canada. Demos vows this is only the beginning. "I'm in this because this is a 100-year project. And I'm not going to be around to see the end of it." A large photo shows Ken Vickerstaff, White Wave's sales and marketing president, and Steve Demos, company president. *Boulder Daily Camera* food writer John Lehndorff coined the term Tofutown USA to describe Boulder. Demos thought up the White Wave logo while meditating in Santa Barbara in 1976. "I learned how to make tofu at a 76-day (meditation) intensive. Demos says that 15% of the people in Boulder, Colorado, consume tofu compared with a national average of 2-3%.

White Wave sales have risen 20% to 35% a year for the last 5 years, with 1993 revenues being about \$5 million. White Wave plans to create brand identity through its new merchandising format—Vegetarian Cuisine Centers. Piloted in three Whole Foods Markets in California, they increased White Wave sales 730% during their first 3 months in existence. Demos' present goal is "brand building." He considers that to be the strength and fortune of the company. "It's the concept of right livelihood. Can you come up with a career choice you and everyone who touches you benefits from? In the end you enjoy it and the world is better off with it than without it. Wealth without guilt. That's an achievable goal."

Note 1. This is the earliest document seen (March 2005) in which Steve Demos uses the term "right livelihood."

Note 2. This is the earliest document seen (Oct. 2013) that mentions the word "Tofutown," or that uses the word "Tofutown" to refer to Boulder, Colorado, or with the word "Tofutown" in the title.

Haru Yamamoto's Denver To-fu Company also makes tofu—a ton of it per day. Address: Rocky Mountain news staff writer.

2234. Roller, Ron. 1994. New developments with soymilk in America (Interview). *SoyaScan Notes*. Feb. 3. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Pacific Foods in Oregon has reintroduced and updated its own line under the brand Pacific Foods in three types: Ultra, Lite, and Select. One is fortified, one is light, and one is plain. They are selling these directly to distributors. Soy-Um is sold to a man named Jenkins in Chicago, Illinois, who used to be with Hormel Foods and who has a lot of connections in the grocery industry. J&G

stands for Jenkins and Gournoe. They are “marketeers.” There was some talk that Trader Joe’s was going to introduce a soymilk under their own label, but somehow they hooked up with J&G. Ron believes that Jenkins wants to sell this as low-cost, grocery brand style soymilk for food chains and the mass market. They are going after the low end of the market, and they have gained some shelf space because of their low price. The product is not for the natural foods market. Their products (in terms of flavor and ingredients) are styled after the Westbrae soymilk products.

But the biggest story is the impending entry of Morinaga into the U.S. soymilk market. Remember that Morinaga is basically a milk company and a very conservative one. It looks like they plan to build a plant to make tofu and soymilk in America and they are looking for a partner in the venture—in part because they don’t know the market that well, in part to reduce their risks, and in part to get extra volume to cover their overhead. But they want the controlling interest in the venture. They are talking with all the major U.S. soymilk manufacturers—especially Westbrae (which is looking for a partner, in part because their soymilk has been made in so many different places) and Pacific Foods. 90% of their tofu sales are in the mass market, and very little is sold to the natural foods industry. So they will probably also try to sell their soymilk to the mass market.

Bill Bolduc in Ohio makes plain, unpasteurized/unsterilized soymilk, then sends it up to Parmalat Foods (5252 Clay Ave., Wyoming, Michigan 49548. Phone: 616-538-3822). Parmalat is a huge and very significant Italian food company that is the biggest user of Tetra Pak Aseptic packaging in the world. They specialize in tomato products, milk, and pasta, and they are an expert at Aseptic packing. That have advertised their dairy milk in an aseptic carton via full-page ads in the *Wall Street Journal*. [Their corporate headquarters is: Parmalat USA, 500 Rt. 17 South, Hasbrouck Heights, New Jersey 07604.] In 1993 Parmalat bought White Knight Packing, which is a Tetra Pak co-packing operation. This was their entree to the American market—except that they previously had some distribution for their tomato products in America. Westbrae was a co-pack customer of White Knight. Parmalat then bought two dairies—one in Pennsylvania and one in Louisiana. They move very quickly and are very aggressive.

Note: Parmalat S.p.a. in Italy (43044 Collecchio, Parma, Italy) was interested in soymilk as early as May 1987. The two contact people at that time were Mr. Barilla and Dr. Alberto Rota. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2235. Roller, Ron. 1994. J&G, Inc., Soy-Um, and the price of soymilk in America (Interview). *SoyaScan Notes*. Feb. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** This low-cost soymilk product and efficient

way it is distributed will probably usher in a new era of less expensive soymilk, create growth in the low-price soymilk market, and introduce soymilk to many non-traditional mainstream outlets outside its home base in the health-food market.

Ron has talked with the people at Jenkins and Gournoe who sell Soy-Um. They are able to sell soymilk so inexpensively [\$1.39 per quart at Trader Joe’s] because of their simple, efficient distribution system and the fact that they are a broker, which means they never own the product and they probably have no warehousing expenses; they may not even own delivery trucks. They probably just ship the soymilk directly from Pacific Foods. But whose truck stops at Pacific Foods? Maybe Trader Joe’s or a common carrier. The truck probably takes the soymilk directly to Trader Joe’s warehouse, then Trader Joe’s probably distributes the soymilk to their 40-50 retail outlets.

American Soy Products now sells Edensoy to Eden Foods (a master distributor), which sells it to many distributors. Large or regional distributors usually make a deal with the bigger retail outlets or chains (such as Whole Foods Markets) to sell products to the retail stores or chains on a cost plus basis. For example the distributor would take the cost at which they buy the product and add a flat 8% to determine the price at which they sell to those retailers. Then the manufacturer, or the master distributor, or the distributor, or the retail outlet could offer a discount to make the product even less expensive to the retail customer.

Westbrae has the same distribution structure as Eden Foods since both are master distributors. At some future point, both Westbrae and Eden Foods will have to look for ways to become competitive with products like Soy-Um—perhaps by reducing margins or becoming more efficient. Pacific Foods does not have to sell through a master distributor,—so they eliminate one link in the distribution chain—which puts them at an advantage in terms of price. It seems unusual that they would sell to J&G—unless J&G can reach new markets that Pacific Foods cannot reach. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2236. **Product Name:** EdenRice—Rice Beverage (Amazake Made from Koji) [Original].

Manufacturer’s Name: Eden Foods, Inc. (Distributor).

Made in Saline, Michigan, by American Soy Products, Inc.

Manufacturer’s Address: 701 Tecumseh Road, Clinton, MI 49236.

Date of Introduction: 1994 February.

Ingredients: Purified water, organic brown rice, rice bran oil, rice syrup, carrageenan, lemon juice, kombu (seaweed), Lima sea salt, calcium carbonate.

Wt/Vol., Packaging, Price: 1 liter (33.8 oz) Tetra Brik Aseptic carton.

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 8 fl oz.: Calories 110, calories from fat 25, total fat 3 gm (4% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 85 mg (4%), potassium 25 mg, total carbohydrate 21 gm (7%), protein 1 gm, calcium 4%, iron 2%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Talk with Ron Roller, President of American Soy Products (ASP). 1993. Two new beverages, Rice Blend and Rice Soy, were introduced at the Natural Products Expo East, Sept. 9-12, in Baltimore, Maryland. They are both made from real, traditional rice koji. The Rice Soy (made of amazake and soymilk) tastes better than soymilk. These are really good products that took a great deal of time and innovation to develop; they should be on the shelves of natural foods stores in about mid-October.

Talk with Ron Roller. 1993. Oct. 19. These new products are now expected to be in stores by December. Originally they were going to be named Rice Blend and Rice-Soy, but now the names have been finalized to EdenRice, and EdenBlend. The packages are now being printed; it takes 5-6 weeks to print the film. On 25 June 1993 Imagine Foods sent Ron a generic letter by certified mail notifying him that Grainaissance had accepted a license on Imagine Foods' patents. Ron called Tony Plotkin of Grainaissance and Tony said he was using a commercial enzyme in addition to the koji. Ron replied to Imagine Foods that ASP was using only koji and that they didn't violate their patents. Ken Becker of Imagine Foods continues to try to get American Soy Products to accept a license, in part because they are suspicious ASP is using a commercial enzyme or enzymes (such as glucosidase) in addition to koji—which ASP is not doing.

Talk with Ron Roller. 1994. Jan. 15. They have started making EdenBlend commercially; a little may be in the stores by now. Production of EdenRice will start tomorrow; it may not be in retail stores until February. Attorneys from Imagine Foods and ASP are still writing letters back and forth as to whether or not ASP's process infringes on Imagine Foods patent. ASP located an article by Hideo Shikata titled "Components in Amazake: Determination of Sugar Composition" (in Japanese). It states that 50-80% of the sugar in amazake produced by rice koji is glucose, whereas Imagine Foods claims that mostly maltose and little or no glucose is produced by koji, using the traditional method without adding enzymes.

Label sent by Ron Roller. 1994. Jan. 16. Tetra Brik carton. Red, green, and black on light yellow. "A refreshing, naturally sweet organic rice beverage."

Ad (1/3 page color) in *Vegetarian Times*. 1994. Dec. p. 32. "New alternative food beverages from the makers of Edensoy: EdenBlend and EdenRice." Photos show the package.

2237. Hauser, Rachel. 1994. 25 must-read books for retailers. *Natural Foods Merchandiser*. Feb. p. 70, 69.

• **Summary:** "Some combination of business, spiritual, ethical, environmental and health interests motivates most people who work in the natural foods industry. With that in mind, the staff at The Natural Foods Merchandiser culled our professional and personal bookshelves to provide a list of what we consider to be the 25 must-read books for those in the natural foods industry. We have tried to provide a broad spectrum, knowing that enhancing knowledge is essential for maintaining and broadening those underlying convictions."

This excellent list ranges from *Be Here Now*, by Ram Dass (1971) to *Diet for a Small Planet*, by Frances Moore Lappe (1971, 1991).

2238. Houy, Deborah. 1994. Organics: Flour power. *Buzzworm's Earth Journal (Boulder, Colorado)* 6(2):53+. Jan/Feb.

• **Summary:** As more people become aware of the negative effects of pesticides, demand for organically grown foods, such as wheat flour, has increased. In addition, more bakers are using flour from organically grown grain in their baked goods.

Discusses companies selling organically grown flour, including Walnut Acres (Penns Creek, Pennsylvania), Mountain Ark, Heartland Mills, and North Country Corp.

Paul Shaw, assistant general manager at "Walnut Acres Organic Farms" says the demand for organic flour is booming. Walnut Acres has a free catalog and sends organic flours and breads by mail.

2239. Jenkins, Kim. 1994. How J&G markets Soy-Um soymilk: The importance of flavor, price, and packaging (Interview). *SoyaScan Notes*. March 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** J&G, which was started in 1989, is a marketing company with headquarters in Chicago, Illinois. Kim's partner, Michael Gournoe, runs the Chicago office. Kim (age 44), who works out of Minneapolis, Minnesota, runs the business, finance, and marketing side of the business, and Michael does the creative design work. They are venture people, who do both active and passive investments, mostly in the food industry. Kim's background was with Hormel (the meat packer; Dick Nolton, the president, was Kim's mentor) and Michael now is quite well known for his creative design work in the food field. He and Michael only get involved with food or beverage products that they believe in—those which are healthy, good for people, and ones with a definite niche. They want all their products made with only natural ingredients and absolutely no artificial ingredients. That is they key for making products taste good. They look for high quality, excellent consumer value, and excellent flavor—but the flavor is most important. They know how to position products. They do work with some meat products;

they also market a smoked salmon from the Pacific northwest to the retail trade. They have more than 25 products. “We are a business company which exists for the purpose of forming strategic alliances with existing companies and entrepreneurial ventures. Our main objective is to identify market potential and achieve the maximum value for all the parties involved. We want to achieve unique positioning with a product and service. We are product strategists. Life is an open book test. Its marketing 101—getting back to the basics.”

The soymilk category is a very interesting one because it is healthy and non-dairy. Kim can’t drink milk due to a bronchial problem. Kim and Michael worked with Trader Joe’s [which has 50-55 retail stores in its chain] to create Soy-Um. Trader Joe’s has taken a deep interest in retailing soymilk. No other retail chain sells as much soymilk on a per store basis as Trader Joe’s. J&G wanted to develop a soymilk that tasted good to mainstream palates. He has found that most Americans do not like the flavor of most brands of soymilk. Three things keep most Americans from buying soymilk: Poor taste, high price, and poorly designed label. The price of many soymilks is too high because too many people touch/handle the product as it moves from the factory to the retail store. Soymilk is surprisingly inexpensive to make but most companies sell it for too high a price—except Pacific Foods, which undersells J&G by a significant amount (a fact that doesn’t bother Kim at all). J&G wanted to develop a good-tasting product in an attractive package (whose design communicates the product clearly to mainstream consumers) at a great price. With soymilk, J&G is not a broker; they take possession of the product and own the label. J&G hopes to sell soymilk in supermarkets (very soon) and in natural and health food stores. How does J&G deliver soymilk to Trader Joe’s so inexpensively? First, they buy the soymilk packaged from the manufacturer [Pacific Foods in Oregon], then they ship most of it to a warehouse (owned by some other company), rent space, and inventory it. They do not own any of their own delivery trucks or warehouses; they just ship the product FOB. They are merchants; they don’t want to own “brick and mortar.” They want soymilk to “mellow out” for at least 14 days in the package before it is sold; it tastes better after that time. It is not possible to bypass the warehousing step because of the size of the production run and the need for “mellowing out.” Trader Joe’s determines the price of the product, but they buy in huge quantities which entitles them to volume discounts.

Kim has heard that American Soy Products is making a large addition to their plant.

Update. Talk with SunRich customer support. 2004. March 19. Kim Jenkins now works as a manager for SunRich in their Minnetonka, Minnesota, office. Phone: 952-939-3958. Address: Minneapolis, Minnesota.

2240. Rose, Richard. 1994. The cheese alternatives industry

and market in America. Part I (Interview). *SoyaScan Notes*. April 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Note: We define cheese alternatives as those which contain a major protein source (such as soy protein or nut protein) in addition to or in place of dairy protein.

Milestones (arrived at jointly by Soyfoods Center and Richard Rose): The soy cheese and cheese alternative category in America started with Soyarella, which was introduced in March 1985. Though expensive, the product was a runaway success, in part because the label claimed (incorrectly) that it contained no casein or other dairy products. Its success alerted other soyfoods companies to the potential of soy cheese. The first major soy cheese to hit the market was Soya Kaas, introduced in Jan. 1986 by Richard McIntyre of Swan Gardens Inc. In June 1986 Mozzarella Style Tofu-Rella was introduced by Richard and Sharon Rose of Brightsong Foods; they had become interested in the category because of Soyarella (not Soya Kaas). The company later became Sharon’s Finest and the product was renamed TofuRella. In Oct. 1986 Original Pizsoy (a whole-wheat pizza topped with soy cheese) was introduced by Tree Tavern Products; It was the first product in which soy cheese was used as an ingredient. In Jan. 1987 Soymage was introduced by Soyco Foods, a Division of Galaxy Cheese Co.; This was Soyco’s first soy cheese product and the first soy cheese that contained no casein. In April 1987 NuTofu was introduced by Cemac Foods Corp. This was Cemac’s first soy cheese product. In April 1988 Soyco shreds and slices were introduced—the first soy cheese shreds and slices. In Jan. 1991 Fat-Free Soyco was introduced—the first fat-free soy cheese. In Dec. 1992 Almond Cheese was introduced by Wholesome & Hearty Foods—the first major non-soy cheese alternative. In April 1994 VeganRella (made from Brazil nuts) was introduced by Sharon’s Finest—a true non-dairy non-soy cheese with excellent flavor.

In the cheese alternatives market, about 98-99% of the products contain casein (milk protein, which makes the cheeses melt) and only 1-2% are truly non-dairy (free of casein). About 95% are hard cheeses and 5% are soft cheeses, mainly cream cheeses, About 95% are soy cheeses and 5% are nut cheeses without soy.

Big American food companies make basically two types of imitation cheeses. The first is a filled cheese in which vegetable oil is used to replace butterfat. The product is positioned as inexpensive rather than low-cholesterol. Roughly 98% of these products are sold to food processors, foodservice organizations, and restaurants, and only 2% to consumers. The market size is about \$500 million. The second is fat-free dairy cheese (the butterfat is replaced by non-fat ingredients such as gums), such as FREE made by Kraft or Healthy Choice from ConAgra. Both are widely sold in supermarkets to the tune of \$50 million to \$100 million.

The size of the natural foods cheese alternatives

market in the USA is about \$15 million/year at wholesale and \$25 million/year at retail; this is the equivalent of about 5 million lb/year. The largest manufacturers (Mfg.) and primary marketers (Mar.; they buy a private labeled cheese from a manufacturer who must sell exclusively to them) are: 1. Soya Kaas, Mfg., \$6 million/year wholesale. 2. Sharon's Finest, Mar., \$3 million/year wholesale. Their source is confidential. 3. Cemac / NuTofu, Mfg., \$2 million/year wholesale. 4. Galaxy / Soyco Foods, Mfg., \$2 million/year wholesale. 5. Phil Leisac & Sons of Portland, Oregon, Mfg. They are owned by or involved with Pacific Foods of Oregon, and make Almond Cheeze for Wholesome & Hearty of Oregon and Soy Gourmet for Patrick Cochran of Nutrition Specialties International, Inc. of Riverside, California.

The major secondary marketers of soy cheeses as such (they must buy from one of the above companies) are: White Wave and Rosewood Farms. Companies that make important foods that use soy cheese as an ingredient in foods are: Imagine Foods (Ken & Robert's Veggie Pockets), Farm Foods (Pizsoy and Pizsoy Pockets), Cedarlane Foods, Amy's Kitchen Inc. (Pot Pies), Rademacher-Worley Farms of Sonoma County (Solar Tacos). The main types of foods in which soy cheese are used as an ingredient are pizzas, pockets, and other. Since soy cheeses and other cheese alternatives are a major part of the natural foods market, any company that develops a product containing cheese must seriously consider using a cheese alternative, which contains little or no cholesterol or lactose, and usually less fat and calories.

The cheese alternatives market is has grown at the rate of about 20% a year for the past 3 years, but now it is starting to level off.

Most people who buy cheese alternatives (estimated 60% of the total) are those who prefer not to eat dairy products and mistakenly believe that these products are non-dairy products. This the market is based on consumer misunderstanding and deception. Labels promote "Cholesterol free and lactose free" because they don't want to say "dairy free." Yet only an estimated 20% of the products are purchased primarily because they are free of cholesterol, and lower in fat, saturated fat and calories. Another 20% are purchased for other reasons (such as lactose free). Of the buyers, an estimated 20% are vegans, 60% are vegetarians, and 20% other. As for outlets, an estimated 75% are sold at natural- and health food stores and 25% at supermarkets. Sharon's Finest sells their cheese alternatives at every Trader Joe's, and at many Lucky, Vaughns, and Ralphs supermarkets in the Los Angeles area. Most of the other manufacturers also sell in some supermarket chains, especially in their geographical region. Wildwood Natural Foods sells NuTofu at each of their sets in Safeway supermarkets in California. Continued. Address: President, Sharon's Finest, P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

2241. Van Rysdam, Casey. 1994. New developments with Soya Kaas and cheese alternatives (Interview). *SoyaScan Notes*. April 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Soya Kaas, Inc., which was owned by Richard McIntyre and his wife, no longer exists. Previously it only existed on a piece of paper from the viewpoint of trademark registration. Soya Kaas, the cheese alternative, is now manufactured by a company named Swan Gardens in Atlanta, Georgia. "In February 1992, when the McIntyres decided to sell their business, American Natural Snacks (ANS) worked with them to structure an agreement that met the needs of both parties. We were both pleased with the result and it was a true 'win-win.'" Richard is no longer affiliated with Swan Gardens, but he continues to have a very good relationship with the company. ANS had been the exclusive national marketing and distributing company for the brand. So when Richard decided he wanted to leave the company, ANS was the logical choice to buy it (though they did not buy the building, which they still rent from Richard). From the standpoint of the trade and of consumers nothing really changed after the sale. The invoicing, the shipping, etc. remained the same. Swan Gardens is now an operating division and wholly owned subsidiary of ANS, and ANS is a wholly owned subsidiary of Tree of Life. Tree of Life is a publicly owned company because its parent company [Royal Wessanen, NV, The Netherlands] is publicly owned.

"Richard is an incredibly bright and innovative person. He is one of those rare people who can see a new idea, grab it, identify it, and make it a commercial reality. He had already visualized and developed his own soy cheese, Soya Kaas, and taken it past the laboratory stage when Soyarella was introduced. He did not get the idea from Soyarella. He both an excellent entrepreneur and a good manager and businessman. He built Swan Gardens into a strong, well-managed business."

ANS has two basic activities: Food manufacturing and contract packaging of bulk foods for sister companies that are distribution divisions (everything from rebottling of oils and Japanese shoyu and tamari to bulk trail mixes). They are a national manufacturer and marketer of confections, with lines like Carafection, Cocofection, Chocofection, Chatfields, products like carob and chocolate chips that are malt-sweetened and dairy free, alkaline-free cocoa powder. They sell these products nationally to both Tree of Life and to Tree's competitors. They have 5-6 national brands and about 50 products (SKUs), and Soya Kaas is one of the major brands.

Within the Soya Kaas family are the core items (12), bulk in 7-lb loaves, 2 shredded items, 3 cream cheeses, 2 Veggie Kaas spreads (without casein, but they have never promoted it as "dairy free"). A new item will be Soya Kaas slices; most sliced cheeses are extruded, not sliced, and they

are made on equipment that is extremely expensive—whether or not the slices are individually wrapped.

One of the challenges Casey's business has been marketing Soya Kaas fairly and honestly with respect to the milk protein issue, without detracting from its potential. The current labels always state clearly that the product contains casein which is a milk protein, and it does not say "Dairy Free" (which would be legal). Yet neither does it say "Warning! A cow died for this product" [which is, of course, not true]. His company has consumer flyers that tell the story of caseinate, explaining what it is, where it comes from, and why it is used in Soya Kaas products. Casey agrees that many people who consume cheese alternatives that contain casein think (mistakenly) that they are truly non-dairy products.

Casey wonders whether the soy oil used in many cheese alternatives is hydrogenated or unhydrogenated. He works very hard and it costs him more money to be sure that the oil in Soya Kaas is not hydrogenated. Consumers want unhydrogenated oil since they believe it is safer.

Follow-up letter (fax) of 6 May 1994 in response to enquiry. Over the last two years, as packaging ran out and they reordered or redesigned labels, they stated in the ingredients listing that casein is a milk protein. In July 1989 the Soya Kaas plant moved to its present location at 6029 Lagrange Blvd. in Atlanta. It had previously been at 218 Laredo Dr., Decatur, Georgia 30330. Address: President, American Natural Snacks, P.O. Box 1067, St. Augustine, Florida 32085-0410. Phone: 904-825-2057.

2242. *Natural Foods Merchandiser's New Product Review*. 1994--. Serial/periodical. Boulder, Colorado. Frequency: Quarterly. Vol. 1, No. 1 Spring (May) 1994.

• **Summary:** Accompanying each new product description is a black-and-white photo and a number to circle on a bingo card for more information. Address: Boulder, Colorado.

2243. Vegetarian and organic food. 1994. London: Mintel Ltd. *

• **Summary:** This new report, which sells for £295, shows that more than 10% of the UK population is vegetarian. The figure rises to 17% among teenagers. This "dramatic growth" is due to health and ethical factors.

Since 1988, sales of meat alternatives, such as tofu and Quorn, have grown from £6.6 million to £22.5 million, and sales of organic foods have increased by a factor of five. Overall sales of vegetarian foods increased from £8.8 billion in 1988 to £11 billion in 1992.

The report also notes that women are more likely to be vegetarian than men and that London has the highest proportion of people with a mainly vegetarian diet. Address: 18-19 Long Lane, London EC1A 9HE, England, UK.

2244. Hughes, James P. 1994. 1994 Michigan annual report—

Profit corporations: Eden Foods, Inc. Lansing, Michigan: Michigan Department of Commerce—Corporation and Securities Bureau. 2 p. May 12. 26 cm.

• **Summary:** Corporate name: Eden Foods, Inc.—corporation No. 187-885. 701 Clinton-Tecumseh Road, Clinton, Michigan 48236. Resident agent: Nancy Potter and Michael Potter. Nature of business: Wholesaler of organic foods. The corporation has 50,500 shares of common stock. 7 May 1992. Corporate officers and directors: President: Michael Potter. Secretary and Treasurer: James P. Hughes. Vice-President: William Swaney. Directors: Michael Potter, Swaney, and Hughes. Signed by James P. Hughes, Treasurer, on 12 May 1994.

On side 2 is a corporate balance sheet. Total assets are \$7,395,695. Address: Treasurer, Ann Arbor, Michigan.

2245. Rosset, Peter; Cunningham, Shea. 1994. The greening of Cuba: Organic farming offers hope in the midst of crisis. *Food First Action Alert*. Spring. p. 1-2. [1 ref]

• **Summary:** Contents: Introduction. Cuba before and after the collapse of the socialist bloc. Mobilizing science and technology to respond to the crisis. The alternative model vs. the classical model [of agriculture]. A Cuban NGO: The Cuban Association for Organic Farming. Conversion from conventional agriculture to organic farming. Elements of the alternative model. Management of crop pests: Biological control and biopesticides. An experiment the world should be watching. What can we do? (Donate money to Cuban groups or Food First, work to have the U.S. trade embargo lifted, travel to Cuba on a "Reality Tour" with Global Exchange {San Francisco}, order the book *The Greening of Cuba: A National Experiment in Organic Agriculture*, by Peter Rosset and Medea Benjamin).

Also discusses: The recent Torricelli Act to tighten the U.S. trade embargo. Rationing of consumer items has expanded dramatically since 1989. Per capita food intake may have dropped by as much as 30% since 1989.

Tables show: (1) Quality of life indicators in Latin America. Cuba is #1 (the best) in 8 of 13 categories, #2 in 3 categories, and #4 in one (average daily protein intake). (2) Basic elements of the classical model and the alternative model of agriculture. Translation of a chart circulated to all planning personnel by the Cuban Ministry of Agriculture.

Note: Peter Rosset, Executive Director of the Institute, holds a PhD degree in agricultural ecology from the University of Michigan. Address: Inst. for Food & Development Policy, San Francisco, California.

2246. Eden Foods, Inc. 1994. We've added something here (Antioxidants, vitamins & minerals) and cut something here (Ad). *Vegetarian Gourmet (Montrose, Pennsylvania)* No. 10. Summer. p. 3.

• **Summary:** This full-page color ad for Original Edensoy Extra shows a carton and a glass filled with the soymilk. At

the bottom of the page is a \$0.40 manufacturer's coupon. Edensoy is fortified with calcium and antioxidant vitamins Beta Carotene A, E, and D-2. Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

2247. *Health Foods Business*. 1994. The Shansby Group buys Arrowhead Mills. July. p. 10.

2248. *Natural Foods Merchandiser*. 1994. Arrowhead Mills interest sold to investment firm. July. p. 7.

• **Summary:** On April 28 the Shansby Group purchased 24% of Arrowhead Mills' stock. Frank Ford, the company founder, owns 25%. A photo shows Ford.

2249. **Product Name:** Tofu Squeeze.

Manufacturer's Name: Unique Utensils (Product Developer-Marketer).

Manufacturer's Address: P.O. Box 3112, Littleton, CO 80161. Phone: (303) 797-6724.

Date of Introduction: 1994 July.

Ingredients: Stainless steel.

New Product–Documentation: Spot in *Vegetarian Times*. 1996. Nov. p. 16. This unique stainless steel utensil squeezes the excess moisture out of tofu. It locks the tofu into place with adjustable notches for desired consistency. A color photo shows the product pressing tofu.

Talk with Cindy Ellingboe of Unique Utensils. 1996. Nov. 1. This product was invented and designed by her husband, Bruce Ellingboe, and launched in about July 1994. It is made by a local craftsperson. The cost is \$9.95 + \$3.50 shipping = \$13.45 total. Since 1994 it has been sold mostly at a few natural food stores in Colorado (especially Alfalfa's Market). Unique Utensils is a small family business, run out of their home, and this is their only product.

2250. Fellman, Louis. 1994. History of pioneering work with tofu cheesecake, Sprucetree Baking Co., and Soy Delites. Part I (Interview). *SoyaScan Notes*. Aug. 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Louis played a major role in developing America's first commercial tofu cheesecakes—which were named Tofu Cream Pies and were delicious. The product was originally developed by Sprucetree Baking Co. in Maryland. From the outset, it was sold with two different toppings: Blueberry and strawberry. Louis was not with Sprucetree when the product was launched in about 1976 by Howard Grundland, who started and owned Sprucetree on Belair Road in Overlea, a suburb of Baltimore, Maryland. Several people helped Howard start the bakery, including Murray Snyder and Norman Zweigel. Louis does not know who first had the idea for the tofu pies and who developed the first recipe.

Louis started working at Sprucetree right after the first East Coast Macrobiotic Summer Camp in about August

or September 1977. [Note: In Oct. 1973 Sprucetree began operations on Belair Road in Overlea.] Sprucetree was making the tofu pies when Louis arrived in 1977 but it was only one of about 30 baked goods (including bread, cookies, other desserts, etc.) that they sold. Louis left Sprucetree twice. The first time was 6-8 months after he first arrived; he was lured back to New York City by Jim Guido, who used to own two East-West restaurants in the city. Louis worked there as a baker, and made tofu pies (which he now called "Tofu Cheesecakes") for the restaurant. He made many tofu cheesecakes and improved on the original recipe. John and Yoko Lennon used to come in to the restaurant (on 74th Street and Columbus Ave.) almost daily and enjoy Louis' tofu cheesecakes. The restaurant was crowded every night and was one of the hot, chic places to eat on the Upper West Side. Louis hired Alan Hoffman to be his assistant at the East-West restaurant. Alan later became the baker at Souen.

In about June 1978, after about 6 months in New York City, Louis returned to Sprucetree. He helped finance Sprucetree's move across town from Belair Road to 4105 Aquarium Place at Reisterstown Road in Baltimore. The company continued to make its tofu pies and other baked goods. In late summer of 1980 Louis found a new job as production manager at Erewhon Natural Foods. So he moved to Boston, Massachusetts, and soon hired Alan Hoffman (a baker at the Souen restaurant, who baked tofu cheesecakes using Louis' recipe) to be his assistant. Within 18 months he was married, with a child on the way, and Erewhon had declared bankruptcy. Next he worked briefly for Great Eastern Sun in North Carolina. Louis and his family moved to New Jersey where his mother was living. There he took jobs to make money, such as selling cars. At this time Tofutti was becoming famous; Louis (now living at 436 Jefferson Ave., Staten Island, New York) considered opening a tofu shop that made fresh tofu in New York City. He and Alan Hoffman even looked at some locations for the tofu company. While waiting for customers to come into the car showroom, he planned a company to make tofu pies which would be profitable and widely distributed. He found some friends who had a food shop in northern New Jersey with an oven and mixing machines. In 1983 Sprucetree stopped making tofu pies/cheesecakes. Continued. Address: Abraham's Natural Foods, P.O. Box 4201, Long Branch, New Jersey 07740. Phone: 908-229-5799.

2251. Fellman, Louis. 1994. History of pioneering work with tofu cheesecake, Sprucetree Baking Co., and Soy Delites. Part II (Interview). *SoyaScan Notes*. Aug. 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** So in about January 1985 Louis started a company named Soy Delites, Inc. that made nothing but tofu pies. Several friends invested money. "I did what a lot of people do. I took every credit card and maxed it out to the limit, then got on my knees and prayed every night. We went

through some trials and tribulations like many companies do.” At first he sold only whole pies, but then he realized he needed to sell packaged, individual serving. Eventually he found a company that made little wedge-shaped containers for pie slices. Louis moved his business into a bagel bakery in Matawan, near where he was living. Then Louis started baking the pies in little round 6-ounce tins with a little plastic lid on each. With a nice label and the new size, the product started selling well. He also made 6-inch pies for people who wanted something bigger. Fillings included banana-almond, carob-coconut, and mint carob chip. Toppings included strawberry, blueberry, raspberry. Richard Worth, who started Sorrel Ridge, made very thick batches of his preserves in 3-gallon containers as toppings for his tofu pies. When Richard left the company, it became very difficult to get a good topping that Louis did not have to cook.

Neshaminy Valley distributed the product from the outset, and a Boston distributor back-hauled the tofu pies to Boston, Massachusetts, where they sold well at Bread-and-Circus. But Louis couldn't get his products into supermarkets or mass market stores. He was making a very modest living, but the satisfaction was there. Eventually Louis bought his own shop for Soy Delites at 568 Broadway, Long Branch, New Jersey. Then he started distributing Mediterranean foods (hummus, tabbouleh) made by another company.

In about 1988 Mark Brancato, who had a concession at the Delacorte Theater—free Shakespeare in the Park, approached Louis and they worked together to develop improved Mediterranean foods. Louis made these foods and first sold them to Mark in the summer of 1988. Then he took some samples to some of his customers. “They loved them. They didn't want the brand I was distributing any more.” The demand kept increasing. Meanwhile, Louis was having problems getting delivery of tofu from Nasoya. So he started buying his tofu from Jeff Connerton of Fresh Tofu in Easton, Pennsylvania. The quality was inconsistent. Finally he looked at the who situation and realized that the tofu pies were not carrying their own weight. So he let them die. Louis made his last tofu pie in about 1988-89.

The tofu cheesecakes sold well, but there were several problems in making them profitable. First their production required a great deal of labor and therefore were not as profitable as Louis had hoped they would be. Second, the packaging was difficult because each pie was so delicate. He sold them refrigerated, but some stores kept them in the freezer, which hardly changed the quality at all. They were distributed by several distributors—but not by enough of them.

What are they keys to selling tofu cheesecakes profitably? (1) Find a good source of high quality, reasonably priced tofu, ideally one that has kosher certification. Find an acceptable sweetener. Maple syrup makes by far the most delicious tofu cheese, but it is too expensive. So Louis used honey, which he detests, both in terms of flavor and

philosophy. Rice syrup is not sweet enough. Rice syrup, brand-named Rice Nectar, is now very readily available on the East Coast, made by T&A Gourmet. Perhaps a mixture of maple syrup and Rice Nectar would make a good sweetener. (2) Use the proper mixer and blade to make the tofu filling very smooth; Louis used a Stefan model made in Germany, not a Hobart VCM. (3) Develop good packaging for the product. (4) Get good distribution for the product, which hinges very much on the packaging, freshness, and shelf life.

In 1992 Louis changed the name of his company to Abraham's Natural Foods, whose main products are Mediterranean-style foods like hummus, tabbouleh, baba ganouj, etc. The market for these latter types of foods was much larger than the market for tofu pies. For a while he made both the tofu pies and the Mediterranean-style foods. Louis' partner from Sprucetree, Howard Grundland, went out of business (he was divorced, and moved), so Louis took over the production of Howard's Sweet Rice Cookies (made with a flour from mochi / glutinous rice). The original recipe, which is macrobiotic, came from Aveline Kushi or Murray Snyder. But the tofu pies were not as profitable as Louis had hoped they would be. So the demand for the hummus and other products basically squeezed out the tofu pies. The Bridge (in Middletown, Connecticut) is now a distributor of Louis' products. Few companies can survive on one product: The companies that make Tabasco Sauce, Pepsi, and Coca-Cola are exceptions.

Louis still pays Howard a small royalty on the Sprucetree Sweet Rice Cookies—which are still selling very well. As of Aug. 1994 Howard Grundland can be reached at 410-239-9791. Murray Snyder (phone: 212-308-3818) is in Manhattan, New York, running a macrobiotic center where he does teaching and consulting. Mark Medoff was planning to go to law school. Louis has been out of the organized macrobiotic scene for years. Address: Abraham's Natural Foods, P.O. Box 4201, Long Branch, New Jersey 07740. Phone: 908-229-5799.

2252. Stevens, Liz. 1994. You call this milk? Yes, there are palatable alternatives to the real thing. *Detroit News*. Aug. 30. p. 3D, 12D.

• **Summary:** An overview of soymilks and rice milks in America. Address: Michigan.

2253. Franke, Adrian A.; Custer, Laurie J.; Cerna, C.M.; Narala, K.K. 1994. Quantitation of phytoestrogens in legumes by HPLC. *J. of Agricultural and Food Chemistry* 42(9):1905-13. Sept. 1. [59 ref]

• **Summary:** “A fast, sensitive, and precise method is presented for the efficient extraction and quantitation of coumestrol, daidzein, genistein, formononetin, and biochanin A from foods by diode array reversed-phase HPLC analysis using flavone as internal standard.” Using this method, the level of phytoestrogens in more than 40 foodstuffs, mostly

legumes, were determined.

“High levels of daidzein and genistein were found in soy products and black beans;” total daidzein and genistein, ranged from 0.3% to 1.4% relative to dry weight.

Table 4, titled “Total phytoestrogen levels of analyzed food items” (p. 1910) gives values (in mg/kg of food material) for daidzein, genistein, coumestrol, formononetin, and biochanin A. Soy-related foods analyzed include soybeans seeds (incl. organically grown in USA from Arrowhead Mills), green vegetable soybeans (raw or boiled), soybean hulls, soy flour, and tofu. Address: Cancer Research Center of Hawaii, 1236 Lauhala Street, Honolulu, Hawaii 96813.

2254. Belleme, John. 1994. New developments with rice beverages and natto (Interview). *SoyaScan Notes*. Sept. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** At the recent Natural Products Expo on the East Coast there was a big battle of the rice beverages. Westbrae has just launched two new rice beverages in aseptic cartons with spouts; one is regular strength and the other is concentrated. This may be the first natural foods product in an aseptic carton with a spout. Imagine Foods then switched to a carton with a spout. Then Imagine Foods put out a big poster explaining why their Rice Dream is superior to Westbrae’s. John prefers the flavor and texture of Rice Dream.

John’s main business is now exporting to Mitoku. There is a big demand for organically grown soybeans in Japan. John has a standing order from Mitoku for 1,000 tons of small-seeded organically-grown soybeans to be used in Japan for making natto. Tommy Carter at North Carolina State University in Raleigh is breeding natto-type soybeans. Charles Kendall, a natto manufacturer in Massachusetts, is now testing the soybeans that Carter breeds. It is a nice relationship. Address: P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

2255. Snyder, Murray. 1994. Tofu cheesecake, Marcea Newman Weber, and macrobiotics (Interview). *SoyaScan Notes*. Sept. 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Murray remembers that Sprucetree Baking Co. made a tofu cheesecake, but he does recall being the source of the recipe. He was the originator of the Sweet Rice Cookie—which Sprucetree also made. When Murray thinks of that cheesecake, he thinks of Marcea Newman (who was married to Dan Weber in December 1982 in Australia, so her name is now Marcea Weber. She and Dan and her children live in Faulconbridge, NSW, Australia). Marcea is a native of New York, but in about 1969-1970 she went to California to study macrobiotics (perhaps with Herman or Cornelia Aihara); she ended up at a macrobiotic study house in San Francisco run by Nan and Dave Schleiger. Murray first met

Marcea in California, then she returned to New York.

Murray arrived in Boston on Valentine’s day in Feb. 1971. He stayed there studying macrobiotics until Oct. 1972. A little later in 1971 Marcea Newman moved to Boston from New York. He and Marcea got their own apartment and lived together in Boston during 1971 and 1972. At this time Marcea was baking (very carefully testing and converting old family recipes to macrobiotics; her mother was an excellent baker) and she taught Murray how to bake. At the time she did not sell her baked goods. It was from some recipes that she gave Murray that he evolved into the Sweet Rice Cookie, the Babka, etc. Using recipes given or taught to him by Marcea, Murray rented out the kitchen in the Erewhon warehouse and started to do some baking.

In 1974 Marcea’s pioneering book titled *The sweet life: Marcea Newman’s natural-food dessert book* was published. It contains a recipe for “Cheesecake Tofu Pie” (p. 37), as well as many other innovative desserts and dairylike products that use tofu as a major ingredient. “Marcea was the person who developed the Tofu Cheesecake that Souen, a macrobiotic restaurant in New York City, eventually made and sold. She was very friendly with them and she lived nearby in New York. She also knew the people at The Caldron restaurant.”

Murray still has a book of large-scale recipes for baked goods that he made at Erewhon from 1971 and later gave to Howard Grundland. It contains recipes for Sweet rice cookies, Dried fruit square, Babka peanut square, Chestnut bar, Kantan cake, Apple crunch, Apple-tahini juice pie, Rice bread. There are no tofu recipes in that book.

Murray can think of only two ways that he could have been the source of the recipe for tofu pie [cheesecake] made by Sprucetree starting in 1975 or 1976: (1) He suggested that Howard Grundland use the recipe in Marcea Newman’s book *The Sweet Life*; (2) He brought Howard a tofu cheesecake made in New York City by either The Caldron or Souen; (3) He could have learned the recipe from his ex-wife, Pam. Note: For more on America’s first tofu cheesecake see letter from Marcea Newman Weber, Oct. 1994.

People that Murray remembers living in Boston during 1971 and 1972 were Michael Rossoff, Lenny Jacobs, Jim Ledbetter, Eric Utne and his brother (Tom?), Phil Levy, Paul Hawken, Bruce Gardner, Tom Hatch, and Matt Chait. Matt Chait used the Erewhon kitchen before Murray began baking there. Matt developed the Ricycle, which were bikes with food trays that went out to the colleges. Tony Harnett also worked in that kitchen; he went on to do Bread and Circus. Matt and Murray created Macrojacks—the original caramelized popcorn with barley malt, raisins, and peanuts “which is now made by 2-3 other companies and sold all over the place.” In late 1971 or early 1972 they had purchased their heat sealer, boxes, and labels, and they began to make and sell Macrojacks—fairly large quantities. They were all ready to make this into a big business, but

circumstances prevented that from happening.

Murray was in Brazil from Oct. 1972 to April 1973. He returned to Baltimore, Maryland, and in 1973-75 he probably made trips up to New York. When he thinks of early tofu desserts, he thinks of the cheesecakes made at Souen (in New York City; it was started and owned by Yama, a Japanese man) and The Caldron (in New York City; it was originally owned by a man named Marty Schloss, plus his wife, Glory, and mother [Seena], who were a good friend of Marcea's). The Caldron had an extensive baking operation, and they may have made a tofu cheesecake even before Souen. Whenever Murray went to New York he would always go to The Caldron to see what innovative new products they had, and he would always bring a number of items back to Baltimore for people to taste test. Marcea would probably remember if The Caldron was known for making a cheesecake, and when and where they got the idea and recipe.

Murray agrees that a remarkably large percentage of macrobiotic students and teachers in the early days were Jewish. He would guess that in 1971-72 roughly 30-35% of the macrobiotic students in Boston were Jewish. "One reason is that many Jewish people of that era were seekers. They were looking for answers; they wanted to know what life was all about and how they could help society. There were unexplained things that were not being talked about in their religion, culture, schools, etc. Historically, there is a strong thread of humanistic ideals within the Jewish culture.

The macrobiotic movement, as he used to know it, is presently very stagnant. Many old problems have never been resolved. Not everybody wanted to follow a strict, Japanese model—and rightly so. "But I think more people are eating what we would consider to be macrobiotic-type food and loosely following what we consider to be a macrobiotic diet. There is definitely a lot of literature and books being sold under the guise of macrobiotic education. Somewhere down the line, macrobiotics may even become invisible because the basic tenets are going to be integrated a lot of educational and wholistic teachings." Murray is a macrobiotic counselor and teacher, but he is "trying to offer a much broader, more flexible, more embracing way to present macrobiotics without creating a dogma."

Note: Call from Howard Grundland. 1998. Aug. 31. Murray Snyder died recently of throat cancer. Address: Macrobiotic Holistic Health Care, 157 East 61st St., 5th Floor, New York, NY 10021. Phone: 212-308-3818.

2256. Business Trend Analysts, Inc. 1994. The health and natural food market: Past performance, current trends, and opportunities for growth. 2171 Jericho Turnpike #342, Commack, NY 11725. 325 p. Sept. Price \$995.00. *

• **Summary:** Chapter 3 of this report, the first of seven chapters that discuss individual product categories, is titled "The Market for Soy Foods: An in-depth analysis of

historical, current, and projected sales. Trends in the U.S. market for soy foods. Manufacturers' total sales of soy foods. Manufacturers' sales of soy foods, by distribution channel. Total retail sales of soy foods. Retail sales of soy foods, by distribution channel. Retail sales of soy foods, by type: Soy sauce, tofu, second generation, soymilk, miso, soynuts, tempeh. Worldwide soybean production, total and per capita. U.S. production of soybean oil. New product introductions in the market for soy and vegetarian foods, including names of manufacturers, brand names, and product descriptions.

Under "Report Highlights and Special Features" we read that after the 3-year recession, most product categories posted strong gains, but "several segments failed to cash in on the growth bonanza. Manufacturers' sales of soyfoods were up a meager 2½%, while the market for frozen health foods declined slightly... One-third of consumers under the age of 35 feel it is extremely important that the food products they purchase are natural; the percentage is even higher among older consumers. Over 40% of adults believe they will contract heart disease or cancer." Today 68% of adults are overweight, up from only 58% a decade ago.

Overall report Contents: 1. Executive summary. 2. Overall market dynamics (including Soyfoods). 3. The market for soy foods. 4. The market for herbal teas. 5. The market for dairy foods. 6. The market for grains and cereals. 7. The market for frozen foods. 8. The market for snack foods. 9. The market for groceries. 10. The health food consumer. 11. The health/natural food store industry. 12. Competitor profiles. 13. Industry directory. Address: Commack, New York. Phone: 516-462-2410.

2257. Kimura, Takuji "Tak." 1994. Edamamé in America (Interview). *SoyaScan Notes*. Oct. 9. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mr. Kimura is a food broker representing Yamato Flight Kitchen (serving meals on airlines). He sells sushi to Price/Costco (Costco bought out Price Club in late 1993). He also demos and sells quite a bit of Yamato's traditional (in-the-pods), boiled, packaged edamamé in California at natural foods stores (such as Whole Foods Market, and Bread of Life), upscale supermarkets (such as Andronico's Park and Shop), and other places such as Berkeley Bowl and Monterey Market (a huge produce market that is busier than Berkeley Bowl). The green soybeans are grown in Oregon by Nishimoto. Yamato buys them frozen from Nishimoto, then boils them in salt water in the pods.

Tak sold his first package of edamamé on Saturday, May 27, 1994 at Whole Foods Market in Berkeley, California. He remembers it clearly, because the store was almost empty. When he asked why, someone explained that it was the Memorial Day weekend. His edamamé come in an 8 oz package, are sold in the refrigerated produce section, have a shelf life of about 5 days, and retail for \$2.88. Nowadays,

he can often sell 30 packs per hour. On the product label is written Yamato Eda Mame (Boiled Soy Beans). Many of the buyers have tasted the product previously at a sushi bar. He sees edamamé as a new trend in America.

He understands that Nishimoto is growing these edamamé in Oregon as part of a joint venture, then is exporting the edamamé from Oregon to Japan. They can compete with imports from Taiwan because the soil in Taiwan is dirty, and the country has a poor environment, and black spots have been found on the pods. Address: 1810 "C" Farm Bureau Road, Concord, California 94519. Phone: (510) 687-2422.

2258. Roller, Ron. 1994. Breeding soybeans to use for making soymilk in America. Part I (Interview). *SoyaScan Notes*. Oct. 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron finds that 1 pound of soybeans yields roughly 8.8 pounds of regular non-flavored soymilk and 11.88 pounds of lite soymilk. For regular soymilk, the solids content of flavored soymilk is less than that of "original" or dairylike soymilk. In 1993 an estimated 9.8 million gallons or 81.6 million lb of soymilk were sold in the USA and Canada. Of this, about 80% was regular and the rest was lite. To make this much soymilk required about 8.78 million lb or 146,333 bu or 3,982 metric tons of soybeans. Almost all of these soybeans were organically grown. Soyfoods manufacturers have to pay about 70% more for organically grown soybeans than for non-organic.

Ron knows that most soybean breeders are breeding soybeans for food uses—especially large-seeded food-grade soybeans for the export market. Many of the large-seeded soybeans are selected for high sugar content and processability (cooking with the seedcoat on, dehulling, etc.). Ron has contacted almost all the seed companies and has asked them for "food use clear-hilum soybeans." They say they are working on such products but say they are all sold to Japan. These seed companies are generally working on large-seeded, high-protein, Vinton-type, clear-hilum soybeans. Ron does not think most companies are interested in phytochemicals yet, but Prof. Maurice Bennink at Michigan State is studying the effect of genistein on colon cancer.

Enrei is a very large-seeded Japanese soybean, with a clear hilum, high sugar content, good taste, and seedcoat that is suitable for both harvesting and dehulling during processing. There is an Enrei industry (association and breeding program) in Toyama, Japan. They treat this variety as if each bean was a gold nugget. They hand-cultivate the plants. Ron has had Michigan State working on Enrei soybeans in their breeding program, and he is developing a program to grow it.

When Ron chooses a soybean variety for making soymilk, the most important factor is the taste of the resulting soymilk. For good taste he wants a soybean with

high sugar content, high protein, and relatively low fat—but he is not sure what causes a soybean to taste good. A panel of 5-6 experienced people from American Soy Products (ASP) tests the soymilks in a 4-5 sample blind test, always with the same control sample—where the control sample is their basic soybean, that every panelist can distinguish from the other samples every time with no problem whatsoever. Second is the protein and oil content of the soybean: high protein, low fat. Third is availability of the seed. Fourth is the price. They pay a premium of 60-70% above the Chicago Board of Trade (CBOT) price for specialty, organically grown soybeans. In 1994 the price went as high as \$18/bushel, but it used to be \$8-9. Many people are willing to pay high prices for organically grown Vintons, but Ron is not willing to pay that for Vintons, he doesn't buy them. But there are other soybeans he will pay more for. Other factors: The region in which it will grow. Processability (easily dehulled and does not produce much foam when cooked). Clear hilum. Large seed size. Many of these characteristics are interrelated. In terms of the agronomic characteristics: Seed yield, including disease resistance, lodging and shatter resistance, emergence, etc.

Ron contracts directly with farmers for all the soybeans he buys. Some varieties he uses are confidential, others are not. ASP developing varieties that they do not want their competitors to know about. He also buys some varieties bred by Pioneer Hi-Bred: his growers can go to their local elevator and buy that seed. Ron generally tells the farmers with whom he contracts to grow his soybeans what varieties he would like them to grow and where they can go to buy those varieties. Once he tells this to the farmers, the farmers generally tell the industry and ASP's competitors often grow the same varieties. "We are continually testing soybeans to find the best ones for our process and product. It's more selection than breeding. We're taking a number of soybean varieties and storing them in specific bin locations, then blending the varieties to create or maintain a certain, consistent taste and product." Ron generally buy's large-seeded soybeans (but not the biggest), because experience has shown that they taste best, and the sugar content seems to have something to do with the good flavor. But for one variety, the flavor changes from field to field, and from one growing area to another. As ASP's demand for soybeans has grown, so has their growing area, and this requires the use of more varieties of soybeans. Moreover, Ron would not take the risk of growing all their soybeans in one geographical area—since they could then all be destroyed by flood, frost, drought, etc. A good soybean for soymilk must yield well for the farmer and make good soymilk. Continued. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2259. Roller, Ron. 1994. Tetra Pak's new TBA Slim Re-cap aseptic carton (Interview). *SoyaScan Notes*. Oct. 13.

Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Tetra Pak has a new carton named TBA Slim Re-cap (available only in the slim form) that is the equivalent of the Combibloc Pour 'n Seal. You open the Re-cap, pull the foil seal off, then when you are done just close the Re-cap—rather than pushing the spout down into the liquid as you must do with Combibloc. The spout is shaped in such a way that air can enter when you are pouring.

Combibloc came out first, but only in a high-acid version. Both are good. Combibloc doesn't have many low-acid filling machines. Yoo-Hoo chocolate milk was the first one out.

Westbrae is using the Tetra Pak carton. Ron thinks that Westbrae's product is just now starting to arrive in natural food stores. It will be interesting to see how the new packaging is received. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2260. Roller, Ron. 1994. Breeding soybeans to use for making soymilk in America. Part II (Interview). *SoyaScan Notes*. Oct. 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** How often does Ron change the soybean variety he uses? He has several base varieties, which are kept secret and which he tries to build on. Every year he tries to find new soybean varieties which are like the base varieties but which will grow in other geographic areas. Moreover the acreage for a particular variety must be expanded slowly as it proves itself both agronomically and from a food point of view. When Ron contracts with a farmer he contracts bushels, not acres. That is, guarantees to pay a certain amount per bushel if the farmer plants a certain number of acres, never just a certain amount per acre planted. This way, both sides take a risk: If the farmer has a large yield, then Ron must buy more soybeans than he wants to. ASP has been hurt before by contracting acres, when there was a flood or frost. Each farmer must get certified, which pretty much guarantees that he has grown the soybeans organically. After a while, ASP knows which growers it can trust, and they become part of ASP's steadily expanding grower base or network.

There are probably very few U.S. soyfood manufacturers that have enough volume that they need to contract directly with farmers. But those that are big or have a large need for organic soybeans must contract directly with farmers to assure themselves an adequate supply of the type of soybeans they want.

Ron would be very interested to know more about how the composition of a soybean affects its flavor. He has a good deal of respect for Pioneer Hi-Bred Seed Co. He thinks they have good seeds, a good staff and research department, and a good distribution system. And they have generally been reliable. They have helped Ron find soybeans for certain

growing areas that they sell. He likes the fact that they are national, spanning the breadth and width of the U.S. soybean growing area, and selling all maturity groups. However, 3-4 years ago, Pioneer Seed Co. got into the cultivation, cleaning, bagging, and export of organic soybeans—with their Better Life program (no pesticides or herbicides, but they can use chemical fertilizers). So they began to compete with Ron for organic farmers to grow their seeds, and they pay the farmers more than Ron does.

Pioneer has a pretty extensive base of soybean customers in Japan for regular soybeans, Better Life soybeans, natto beans, large-seeded soybeans, and organic soybeans. Their Specialty Crops Division has penetrated the Japanese market in many areas. Their employees travel frequently to Japan, they speak Japanese, they have an office there, and they're plugged in. They study those industries in Japan, find out what they want, then they come back and try to breed that into a soybean. As far as Ron can tell, Pioneer is the leader in breeding soybeans for food uses in terms of both volume and specific varieties.

Another company doing research in this area is Jacob Hartz Seed Co. in Arkansas. They are working on some large-seeded soybeans but they are having a lot of trouble. Ron has a low opinion of the soybeans Hartz breeds for making natto; he studied that market intensively.

There has been a demand from Japan to supply some organic beans, so many of the U.S. companies that supply soybeans to Japan have begun small organic programs (not because they want to—they hate it), just to satisfy their Japanese customers. Even though Mitsui or Mitsubishi or Marubeni don't want a lot of organic soybeans, they want enough in a tight market to drive the price way up. It was because of the Japanese demand plus a small soybean crop that organic soybean prices were so high in 1994. Country Life went out of business, with unpaid debts of \$400,000 to \$500,000. Some of the farmers formed cooperative marketing groups; they grow varieties desired by the Japanese, and pool their resources in cleaning and bagging, so they can export containers to Japan and eliminate U.S. middlemen or soybean brokers. Ron feels the price for organic soybeans will stabilize at about \$10-\$12 per bushel.

If Ron worked closely with a soybean breeder and seed company, he would want the right for the farmers with whom he contracts to be able to buy the seed from the seed company. His company is unique in having a large number of cooperating organic growers, and that gives ASP the lowest price and highest quality. If Ron contacts the growers early and tells them what ASP will pay per bushel of organic beans, that becomes the standard base contract price for other companies too. Word travels fast. Nichii buys directly from soybean farmers, but Ron thinks Vitasoy buys from a middleman (a soybean broker or trading company such as Pacific Soybean and Grain). Some soyfoods manufacturers buy through soybean brokers—the biggest of which are

Pacific Soybean and Grain, American Health and Nutrition, and Purity Foods. Domestic soyfoods manufacturers get deluged with calls from farmers who want to grow soybeans just for them at a premium price and sell direct without a middleman. The middlemen or soybean brokers tend to survive on export business.

This is a very complicated issue—particularly seen from the viewpoint of a seed company that wants to breed better soybeans for food uses. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2261. Demos, Steve. 1994. White Wave has moved into a new stage of management and development (Interview). *SoyaScan Notes*. Oct. 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** “Our Tofutown party [on 28 May 1994, in Boulder] was an acknowledgment to ourselves that we are now out of adolescence. It was, to me, a coming out. My whole management style has changed, everything about the company has changed. We have pushed ‘empowerment’ down the ladder. We are now running much more statistics and teamwork. We are now becoming a managerial rather than an entrepreneurial company—though I continue to be an entrepreneur. We have begun bringing in professional managers. Our sales team is now headed by a man who once worked for General Foods. He is a start-up specialist, who has taken four companies from \$4 million to \$25 million. His name is Ken Vickerstaff, and he joined White Wave one year ago as vice-president of sales and marketing. We have become a marketing-driven company; we are no longer a manufacturing-driven company.”

“The major change has been the introduction of the Vegetarian Cuisine (VC) centers, which started in mid-1993. We have also set up a new national brokerage network. Then we went out and began introducing the Vegetarian Cuisine centers to the supermarkets. White Wave has had VC centers in supermarkets for about 5-6 months, and now has a total of about 125 centers in place in all kinds of food stores. Whole Foods Market has been our biggest failure because we cannot get champions at the store level. You need champions at every level. For example, we put a VC center into Alfalfa’s natural foods supermarket in Boulder and sales rose 35%—even though they already called all the products. We recently put VC shelf set into our local Safeway; we were doing 18 cases a week, but this rose to 52 cases.” White Wave is now on the East Coast. They wanted to do a test in a distance market. They were at the Food Emporiums and Tops in New York. White Wave has now developed a financial formula which tells how many revenue dollars a supermarket will generate per linear foot from the sales of these products. Then can scale it 12, 14, 24, 32 feet etc. They must carry the products that White Wave specifies at given prices from specified distributors. The brokers check each week that the

shelf sets and info cards are up and look right. They have a formula. “We could place this in 600 supermarkets in 2 weeks if we let it loose—but we are afraid to. The buyers are ready, but we do not believe the products or the consumers are ready. So we are choosing the markets where we believe the consumer base is big enough—Fred Meyers in the Pacific Northwest, Raley’s in California, etc.

Whole Foods Markets have been disappointing because they do not have top-down management—largely a counterculture backlash to big business. They have a corporate culture where every one is autonomous; everybody makes important decisions. “It is idiosyncratic to our generation. The natural food stores have built their business on a corporate culture that identifies with personal power.” So White Wave has to sell people in every store on their VC centers. At King Soopers, the VP sends out a letter that says, in effect, ‘Put in the White Wave VC centers by Tuesday or I’ll fire you.’

“It’s a fun chess game—in part because, from another point of view, our industry and our company are still in the start-up phase.” Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2262. Kimura, Takuji “Tak.” 1994. Re: Work with édamamé in America. Letter to William Shurtleff at Soyfoods Center, Oct. 16. 5 p. Handwritten, with signature.

• **Summary:** Mr. Kimura was very encouraged to read Soyfoods Center’s *Edamamé: Bibliography and Sourcebook*. He was especially interested in the special report on Minnesota Edamamé. “Because, I myself, conduct demos, averaging 1 hour, to 2 hours at the most, at natural food stores such as Whole Foods Market, Bread of Life, Living Foods, Andronico’s (Park & Shop), Berkeley Bowl & Monterey Market (produce store) & am enjoying tremendous responses. Normally 1 out of 100-150 customers responds ‘Yeah, I hate it!’ 99% of customers have never seen or tried it before, but once they eat edamamé, 50% buy. 1% normally respond ‘I had it at Sushi Bar & always wanted to buy it but did not know where it was available.’

“As I briefly explained to you on the phone, I’ve been a food broker representing Sushi Vendors (5 vendors for each area like Yamato for Bay Area, Arigato for Marin County, etc.) for Price Costco but always feel what if something, sometimes goes wrong. All I’m doing is keeping ‘all eggs in one basket.’ Then I came up with an idea that I must sell what the others or big companies do not sell. What? No way! But I remembered well about you, roughly 20 years ago you wrote a book on tofu which I still have and not many people paid much attention to tofu in those days, the mid-’70’s, right? But what now? Every store carries tofu. Well then, what about Soy Bean related products? I went to many natural food stores but everyone had soy bean related products already. How about soy bean before processing?”

The answer was very simple and obvious, 'Eda Mamé.' 1st I presented sample products to the Whole Foods buyer, & his response was he would carry and authorize to retail out of one of 4 stores provided I conduct demo. So I did at Mill Valley where not many people know me. It was kind of embarrassing at that time, early this year. On the 1st day, I sold out 40 packs of 8 oz size in just a matter of one hour on Saturday. Then I was told to bring twice as many the following Sat., which I did & sold in 1½ hours. Not realizing that Mill Valley had different demography [demographics] from Berkeley, I was over confident. I Presented this program to Andronico's & attempted to sell 80 packs on Friday at their Telegraph Ave. store. God! What a disaster, only 24 sold in 3 hours. This yo-yo game went on & on & on but now Whole Foods still sells an average of 50 packs a day at 3 stores, except Mill Valley does 140 packs on Saturday and Sunday!

"Apart from what I did, this principal I represent is interested in purchasing a vacuum injection packing machine, which costs roughly \$70,000 from Italy. Of course, it's not just for Eda Mamé but also for Sushi & Bento. Sushi & Bento are not required to provide with nutritional facts at this time but Eda Mamé need nutritional facts. I wonder if our current label is accurate because it did not agree with your information... I would appreciate your advice before Yamato goes into a new label printing which will be more like Azumaya's tofu package film." Tak would also like to sell books by Shurtleff & Aoyagi.

"Look forward to a happy and long lasting business relationship with you & your organization... I treasure this [edamamé] book. Thank you again!" Address: 1810 "C" Farm Bureau Road, Concord, California 94519. Phone: (510) 687-2422.

2263. Product Name: UltraSoy (Soy milk, Non-Aseptic) [Original, or Vanilla].

Manufacturer's Name: Ultra Beverages.

Manufacturer's Address: 4015 Cherry St., Cincinnati, OH 45223. Phone: 1-800-514-3683.

Date of Introduction: 1994 October.

Ingredients: Purified water, whole soybeans, brown rice, oat bran, malted cereal extract, tricalcium phosphate, sea salt, vitamin A palmitate, vitamin D-2.

Wt/Vol., Packaging, Price: ½ pint, quart, and half gallon. Recommended retail: \$1.29 to \$1.59 per quart, or \$2.89 per ½ gallon.

How Stored: Refrigerated. Dated 60 days from pack date at 36-42°F.

Nutrition: Fat: 1%.

New Product–Documentation: Ad (1/3 page, black-and-white) in *Natural Foods Merchandiser*. 1994. Dec. p. 20.

"A refreshing new approach to soy milk. UltraSoy. In your dairy case. Made with brown rice & oat bran. Fortified with vitamins A & D and calcium. Low temperature pasteurization

[less than 180°F for 15 seconds] for a refreshing flavor unlike aseptic products. Preferred in taste tests by 75% over leading brands. 21 day shelf life. 7 days after opening. Distributor inquiries welcome." A photo shows 3 sizes of cartons.

Talk with Bill Bolduc, owner of Ultra Beverages. 1995. Jan. 23. He spent an entire year developing this product, which was introduced at the Natural Products Expo at Baltimore in Sept. 1994, and first sold commercially on 1 Oct. 1994 to Alberts. The product has a shelf life of 21 days if stored at 35°F, the recommended temperature. The secret is an extremely sanitary, clean manufacturing plant. The product is sold at a few Fresh Fields stores and they are about to get into the Whole Foods chain. They plan to have a booth at the NFM show in Anaheim and they will try for distribution on the West Coast. The product is now often sold on special at \$0.99 per quart. The recommended retail price is \$1.29-1.49/quart. The oat bran acts as a stabilizer and antioxidant. He still packs for Westbrae and produces some of Westbrae's soy milk. In consumer taste tests in the Dayton, Ohio, area, when UltraSoy (original flavor with low temperature pasteurization) was compared with Edensoy and Westsoy, 75% of the participants said they preferred UltraSoy. Bill is thinking about introducing a product with high temperature pasteurization so he can get a longer shelf life and wider distribution—even though that means a loss of flavor. Bill presently owns 92% of the shares in Ultra Beverages; organic farmers own the other 8% for which they paid \$82,500. Now Bill is looking for additional capital.

Product specifications and description sent by Peggy A. Maus of Ultra Beverages. 1995. Feb. 2.

2264. Morano, Jim. 1994. The patent for making rice syrup owned by California Natural Products may not be valid because of prior art (Interview). *SoyaScan Notes*. Nov. 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Jim has a PhD in food science from Rutgers University, as well as an MBA and a Master's degree in philosophy from Rutgers. His business, Innovative Sweeteners, manufactures organic malt extract, sweet sorghum syrup, and corn syrup from grits. He wants to start making rice syrup using commercial enzymes, he has found a customer for this product, and he has done considerable research on the process. He was recently told by Pam Sander of Zumbro, Inc., that her company has started to make rice syrup using commercial enzymes. They were challenged by California Natural Products (CNP, which has two patents on the process) but CNP dropped their challenge and essentially backed down [Note: Not correct; see interview with Pam Sander 16 Nov. 1994].

He has also talked with Tony Plotkin of Grainaissance, Bob Kennedy of Chico-San, the man who developed Kennedy's enzyme process for making rice syrup, and several men from H.J. Heinz who were closely involved in the purchase of Chico-San. Jim knows the Heinz and many

people who work there. Chico-San once made rice syrup in California. [Note: Chico-San started to make rice syrup (*amé*) in 1972. A fire in 1972 destroyed the Chico-San plant located at Chico, California, and set back the company's marketing efforts 5 years]. Originally they made it using the traditional koji method, but then in about 1974 Kennedy decided to switch to using commercial enzymes because of the difficulty in using koji. Over a period of time, Kennedy had three plants in California for making rice syrup; Jim thinks the first one burned down. He had to move his operations to a new third plant when sales of Rice Cakes started to take off.

In 1974 a man named Carl Abbot, a very smart technical person, was loaned to Chico-San by a local nut company. The owner of the nut company owned a portion of Chico-San at the time. He looked at the koji enzymes, which were basically fungal alpha amylases, and he found several companies that sold those enzymes, as extracts of the *Aspergillus oryzae* in koji. By choosing alpha amylase as the main enzyme, he kept the high level of maltose in Chico-San's new rice syrup made with enzymes. Then he added another enzyme, a high-temperature alpha amylase that helped to liquefy the rice at very high temperatures. So in 1974-76 Carl developed the procedures and enzymes to switch from koji conversion to enzymatic conversion.

After a while, Chico-San's rice cake business began to grow so fast that the rice syrup business became a nuisance. He had to concentrate on making rice cakes, so Peter Milbury found CNP, and Chico-San contracted with CNP to manufacture their rice syrup, and guaranteed to buy and certain minimum amount each month. CNP could not sell this rice syrup to any else, and Chico-San kept ownership of the process. At that time, Chico-San taught CNP how to make rice syrup using enzymes.

In 1984 the rice cakes were selling so fast that Bob Kennedy had the opportunity to sell Chico-San to H.J. Heinz. The man who was mainly responsible for evaluating then buying Chico-San, Ken Smialek (pronounced SMAI-lek), is now the director of H.J. Heinz's operations in Australia. Working closely with him was Jim Fox, a technical expert, who no longer works with Heinz. He lives in Indiana and works as a private consultant. Jim has talked at length with Jim Fox about Chico-San Rice Syrup. Jim's attorney have told him that if he were to make rice syrup using enzymes, CNP would probably not be able to win a legal challenge.

Heinz bought Chico-San mainly for their rice cake; at first they couldn't decide what to do with the rice syrup business. Jim Fox went to California, talked with Cheryl Mitchell of CNP, and explained that rice syrup was not of much use in the regular food industry because it was not sweet enough. She said that she knew how to make it sweeter (she was probably referring to the use of glucosidases or gluco-amylases to develop glucose) but Bob Kennedy never wanted any glucose in his products because he felt that the

natural/health foods industry would not be attracted to such a product since consumption of the glucose by a diabetic could stimulate his or her body's production of insulin which could lead to insulin shock.

When Heinz bought Chico-San they automatically became responsible for all of Chico-San's contractual obligations—including the one to purchase a certain amount of rice syrup from CNP each month. So Heinz said that if CNP would relieve Heinz of its obligation to buy rice syrup, Heinz would give CNP in exchange all rights to make and sell rice syrup. Kennedy now feels he made a big mistake by selling the rights to Rice Syrup to Heinz—something they never really wanted.

CNP was issued the first rice syrup patent in May 1988. But 3 months earlier, in February 1988, William Shurtleff interviewed the Mitchell's about their rice syrup. Pat said: "We did not want to come out with another Grainaissance type product. We wanted a really fine tasting product. Grainaissance has what we consider a lot of negative characteristics, such as a glucose bight. Apparently he [Tony Plotkin, owner of Grainaissance] is using some type of glucose enzyme. Some people like things very sweet." Jim notes that if he can show that Tony was using a glucose-generating enzyme prior to the filing of the first CNP patent, the CNP patent is null and void—because of prior art. Jim has asked Tony about this, but he is unable to discuss it because of his agreement with CNP. But if CNP were to take Jim to court over making rice syrup with enzymes, Jim would simply ask his attorney to depose Tony, who would be required by law to tell the truth—despite his agreement with CNP.

Jim holds numerous patents and he has found by long experience that avoiding an existing patent is five times more difficult than writing a novel patent. He has spent more time researching prior art and ferreting around than he would have if he had written the patent himself. Address: PhD, owner of Innovative Sweeteners, 1 Kingsbridge Road, Somerset, New Jersey 08873. Phone: 908-545-5544.

2265. Kennedy, J. Robert. 1994. How rice syrup and grain syrup came to America from Japan (Interview). *SoyaScan Notes*. Nov. 14. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Chico-San was launched on 6 March 1962 in Chico, California, as a retail store and a wholesale business, capitalized with \$10,000. The first Yinnies grain syrup (rice and barley) and Yinnies (rice syrup candies) that Chico-San sold in America were made in Chico-San's food plant at 1262 Humboldt Avenue, in Chico, California, and sold in about 1971. The Yinnies syrup was on the market about 2-3 months before the candy. The candy was made by boiling down the syrup a little more, then pulling it like taffy using a regular taffy-pulling machine (Bob's idea, never conceived of in Japan). So already Bob had developed two American

innovations: Growing koji on brown rice, and pulling Japanese-style rice candy to give it a texture like taffy. Bob recalls that the demand for the Yinnies syrup (which was used as an all-purpose natural sweetener, especially by macrobiotics) was greater than the demand for the Yinnies confection. These macrobiotic products were made using the traditional Japanese koji process, except that the koji was made from organically-grown brown rice, grown by the Lundberg Brothers at Wehah Farms in Northern California.

Bob used to visit Japan 2-4 times a year in the early 1970s, because Chico-San was importing a large number of Japanese food products and Bob went to visit the farmers and suppliers. During these visits, Lima Ohsawa took him to visit several traditional Japanese shops that made rice syrup (*amé* or *mizuamé*) from koji. Bob observed carefully and took a few notes, which may still be in his diaries (which are in storage). He may have ordered a few samples from Japan, but they were not sold in America.

Bob dabbled and experimented with making rice syrup for at least two years before the product was launched commercially. During this time he learned how to make koji and rice syrup mostly from Mr. Junsei Yamazaki who had emigrated to Chico from Japan in 1963 (sponsored by Bob Kennedy) to make miso and natural shoyu for Chico-San. After graduating from Tokyo Agricultural University, Yamazaki had been a rice farmer in Japan for 17 years. In 1964 he began his first experimental production of miso and shoyu in Chico. His first large batches were made in mid-1970. Since he had to make koji for both miso and shoyu, it was an easy step to make rice koji for amazake. The amazake was cooked, filtered (to removed the fiber), then simmered slowly to yield rice syrup—a slow but relatively simple process. By the late 1960s or early 1970s Yamazaki was making small batches of rice syrup on an experimental basis in the back room at the Humboldt Ave. plant. By 1971 production of rice syrup was in full swing; it was sold in a 12 oz. glass jar and labeled “Yinnies Grain Syrup.”

On 14 Sept. 1972 disaster struck. A fire at the Chico-San plant and warehouse at 1262 Humboldt Ave. destroyed 90% of the company’s natural food inventory worth approximately \$350,000. The company moved to 2244 West First Street in Chico and struggled to get back on its feet. For several months, they continued to make Yinnies syrup from koji in the traditional way in a newly-built koji room. But the demand for this syrup was much greater than the amount that could be made using the traditional koji process. Bob had a friend named Carl Abbott, who worked at a nearby nut plant (Continental Nut Co.) and was also a very bright food chemist. So right after the fire Bob asked Carl if he could do some research to find a way to expand output of rice syrup using natural enzymes with organically grow brown rice to maintain the natural quality and without addition of chemicals—such as caustic chemicals. Carl met with experts at Miles Laboratories (who had never worked with brown

rice before), determined the best commercial enzymes, then made adjustments in cooking times and temperatures to fit the needs of the enzymes. Bob is not sure, but he recalls, two enzymes were purchased from Miles: Alpha-amylase to liquefy the rice, and gluco-amylase to break down the rice carbohydrates into sugars (mostly maltose). When Chico-San switched over to using commercial enzymes with brown rice to make rice syrup, they discontinued the use of koji.

In 1971 and 1972 sales of Chico-San’s rice cakes began to increase dramatically. After the 1972 fire, it took the company about a year to get back to manufacturing any significant volume of rice cakes. By 1973 the demand for rice cakes was growing like mad. Bob had to build new and better machines that could keep up with the demand. Sales of Yinnies syrup were also growing nicely. Then the company ran out of space at the location on West First Street. So on 1 Jan. 1979 the company moved its Rice Cake machines back to the original address at 1262-1266 Humboldt Ave.—which had been renovated after the fire, and on which Chico-San now had a 10-year lease. Chico-San retained 6,000 square feet of its location on West First Street for the manufacture of Rice Syrup. At about that time Bob met Pat and Cheryl Mitchell, owners of California Natural Products (CNP) in Manteca, California. They were making various syrups, but definitely not from rice.

Note: Robert Nissenbaum of Imagine Foods (23 Nov. 1994) strongly disagrees with this 1979 date. He is certain that in the summer of 1984 he visited the Chico-San plant that was making rice syrup. It was located in Chico, in a sort of garage at the end of an alley. He was buying rice syrup from Chico-San at the time for use as a sweetener in amazake he was making in Missouri, and he wanted to find out why the quality was so inconsistent. He thinks that CNP first began making rice syrup under contract for Chico-San after August 1984.

Bob Kennedy decided to contract with CNP for production of all his Rice Syrup. Bob sold all Chico-San’s Yinnies syrup equipment to Pat and Cheryl; this equipment was compatible to whatever they were doing. He also told them all his secrets for making brown rice syrup and had them sign a non-disclosure agreement and a contract which stated that CNP would make rice syrup only for Chico-San. Chico-San guaranteed in writing to buy a specified amount of rice syrup. “Everything went fine until I sold the business to Heinz.”

When Heinz bought Chico-San on 16 Nov. 1984, they wanted it all or nothing. If they decided after six months that there were parts of the business they did not want, Bob could buy those parts back. Chico-San carried \$100,000 to \$150,000 inventory of Japanese food imports. Bob expected to be able to buy back the Yinnies syrup business if Heinz decided not to pursue it, but the contract wording, unfortunately for Bob, allowed Heinz to essentially trade the rice syrup business to CNP. Bob lost track of what was

happening between Heinz and CNP. He was supposed to work for Heinz as a consultant for about a year, but he didn't like it so he asked to be released from that obligation—which they did after about 3 months. “If I had had a crystal ball at the time, I would have kept the rice syrup business, but at the time I did not think much about it. I was really a little burned out with Chico-San. I was doing 10-12 hours a day for years. It was quite a relief to be free of it.”

Bob Kennedy knew about Robert Nissenbaum, who was developing Rice Dream non-dairy ice cream before Chico-San was sold to Heinz. Chico-San was shipping hydrolyzed rice (made by CNP) to Robert Nissenbaum before Nissenbaum was aware of CNP. [Note: Robert Nissenbaum—see interview of Nov. 1994—says he bought only rice syrup from Chico-San, and he became aware of CNP at about the same time as Chico-San, before CNP was processing rice]. Then Chico-San was sold to Heinz in Nov. 1984 and Rice Dream (made with rice beverage from CNP) started to be manufactured in Palo Alto, California, in Jan. 1985. Address: Chico, California. Phone: 916-891-0970.

2266. Sander, Pamela A. 1994. Litigation between Zumbro, Inc. and California Natural Products concerning patents on rice milk (Interview). *SoyaScan Notes*. Nov. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Zumbro has begun making a hydrolyzed rice product. California Natural Products (CNP) began threatening Zumbro plus different customers and brokers saying that they would sue Zumbro, and then they would sue the customers and brokers if they bought this rice product from CNP, since Zumbro was violating CNP's patents. Zumbro told CNP many times that they were not violating CNP's patents, but though Zumbro tried, they couldn't come to an agreement. So Zumbro sued CNP in the Minneapolis circuit court in Minnesota, in order to resolve the problem and to get a summary judgment that Zumbro was not violating CNP's patents, that the CNP patents were not valid, and that CNP was interfering with Zumbro's business. The two companies fought over this matter for about a year in court. “CNP fought the entire time to get the case dismissed. In the end CNP did get the case dismissed in Sept. 1994 on the grounds that they do not do business in Minnesota. Now they could conceivably sue us in California, but I feel fairly certain they won't, because they didn't ask for the case to be transferred to California. They fought so hard to have the case dismissed that I think they don't want this to come out.”

During the case Zumbro sent CNP considerable information on amazake, rice syrup, and related subjects obtained in a search of the SoyaScan database. Zumbro also interviewed a number of people mentioned in that search, including Bob Kennedy, Peter Milbury, Joel Wollner, etc.—all of whom said that this process was prior art, that Chico-San had taught the basic process to CNP, and that they would testify as such. Zumbro also sent information obtained in

these interviews to CNP. “We told CNP that this enzyme process predates you, and we can document that and we have witnesses who will testify. We want to discuss this in court. We tried to come to some agreement with them before the suit, and even during the suit. Let's agree on the amount of glucose we can have in our rice product. Your patent says 'about 5% or more of glucose,' so let's go to 4½%. But they said 'about 5% also includes 3%.' They would let us have up to 3% glucose, but no more. They argue that amazake contained very low glucose and that their invention was to have higher glucose. But we have tested the glucose levels on commercial amazake products and they have high glucose, like 60%. So we feel it is incorrect to say that typical amazake contains less than 5% glucose.”

Although CNP won the suit (arguing that they could not be sued in Minnesota) and did not back down, Pam feels that CNP would not like the matter to become widely known. “I don't expect to hear from them again about this matter. I think we're done, and I don't think they are going to sue us. I think there are so many people coming out with similar rice products, that they will not be able to sue everybody. Also, a company named Habib Arkady makes rice syrup in Pakistan, and have for many years. Gaffar Habib, the president, says the CNP patents are ridiculous. He went around with them on this several years ago and they finally backed down, and have not bothered him since.”

Update. 1997. Jan. 16. Pam Sander left Zumbro in spring or summer of 1996 to start her own company, The Big Map Company, which makes large maps. Phone: 507-775-7130. She is no longer in the food business. Address: Vice President R&D, Zumbro, Inc., Route 1, Box 83, Hayfield, Minnesota 55940. Phone: 507-365-8400.

2267. Nissenbaum, Robert. 1994. The early work of Imagine Foods with Chico-San, California Natural Products, and enzymes in making Rice Dream. Part I (Interview). *SoyaScan Notes*. Nov. 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In March 1983 Robert started making amazake, using the traditional koji method, at a company named Imagine Foods, Inc., Moniteau Farm, Jamestown, Missouri. As an additional sweetener he added Yinnies syrup, a rice-based syrup made by Chico-San in Chico, California. Robert was also buying organically-grown rice from Chico-San. Chico-San bought this rice mostly from Mike Polit of Polit Farms in Maxwell, California. To this day, Robert buys all his organic rice from Mike Polit. The story of why Chico-San left Wehah Farms in the early 1970s is a story of its own. Paul Hawken of Erewhon went to Lundberg and asked to buy their organic brown rice direct, rather than going through Chico-San. Note: The 1975 Erewhon catalog lists Wehah Farm as its supplier of organic and non-organic brown rice. Peter Milbury claims that Wehah broke its exclusive contract with Chico-San. From that point, Chico-San became very

upset at Wehah Farm, so Chico-San developed new sources, primarily Polit Farm. Then Mike Polit started developing other organic farmers in the area. The Lundberg brothers of Wehah did the same thing; they do not grow all the organic rice they sell. Polit and Lundberg became arch competitors.

In June 1984 Imagine Foods launched Rice Dream, a non-dairy frozen dessert, based on their traditional amazake (made from koji) and sold in hard packs (not soft serve). They sold it in the Midwest and the product seemed to have excellent potential. Robert had become good friends with Peter Milbury, who was Chico-San's operations manager. Robert told Peter that he would have to do something to expand his production of amazake. At the time Chico-San was selling very little rice syrup. Robert said: "Whatever you are doing to make Yinnies syrup, we could probably do something similar to make a product like our amazake." They talked about this for several months.

In early June of 1984 Imagine Foods took Rice Dream to its first trade show in Atlanta, Georgia. They wanted to introduce the product nationally. At that show, every major distributor in America wanted to sell Rice Dream. But Robert could not supply this huge new demand from his little plant in Missouri that used a traditional koji process. Peter Milbury was at the same show, as was Joel Wollner, who was doing some consulting work for Chico-San, though he was not employed by Chico-San. Wollner was involved with Mountain Ark, a macrobiotic trading company and community in Fayetteville, Arkansas, a rice farming center. Bob Kennedy was thinking of putting up the money to start making more macrobiotic products in America rather than importing them from Japan, and he was thinking of making these products in Fayetteville. In about May, Joel had learned about Kennedy's ideas from Peter Milbury. So Joel visited Robert's booth at the show in Atlanta, and he and Robert started talking about Fayetteville. Peter invited Robert to visit Chico-San in California after the show; he said they could talk about new possibilities for cooperation in Fayetteville or California or Missouri. Neither Chico-San or Nissenbaum knew anything about California Natural Products (CNP) at this time.

So in late June of 1984 Robert visited Chico-San see how they made the Yinnies syrup (rice syrup) that he used in his amazake, and to see why their quality was so inconsistent. He met Bob Kennedy for the first time. He was taken to a building that was "like a big garage" at the end of an alley in Chico. It was in a different part of town from Chico-San's rice cake plant and other operations. "It was not a pretty sight. They had almost no control over what they were doing. Technically, the operation was a disaster. They just didn't know what they were doing. I was really surprised to see the way it was produced." Robert recalls visiting this plant twice. Chico-San wasn't selling much rice syrup in part because of the inconsistent quality, and in part because they didn't have the time or money to invest in improving the

rice syrup process—since all their resources were going into making rice cakes. "We got a different product every time we received a shipment." Robert has heard of Carl Abbot (the man who developed Chico-San's process using commercial enzymes), but he never met him.

For the next several months Robert, Peter Milbury, and Bob Kennedy discussed possible ways of working together so that Imagine Foods could expand its production of amazake. One idea that looked promising was Imagine Foods making its amazake and Chico-San making its Yinnies rice syrup at the same plant (which they would construct, with Chico-San providing most of the funding) in Fayetteville, Arkansas. Then one day Robert got a call from Peter Milbury, who said that all plans (including those involving Fayetteville) would have to be put on hold because Bob Kennedy had received an offer to buy the company. At about that time Quaker Oats bought Arden, which was the only other maker of rice cakes in America and thus Chico-San's biggest competitor. That is what precipitated the sale of Chico-San to Heinz. Peter was concerned about his job. Robert told Peter he could not wait, but as asked Peter to keep him posted of new developments. A few days later Peter called Robert again, and said, "There is a couple name Pat and Cheryl Mitchell of California Natural Products (CNP), who I have met at natural food trade shows. I know that they have food processing equipment that they are not using all of the time. Would you like me to call them." Robert said "yes." So Peter talked with them and called Robert back to say that Pat and Cheryl were not interested. But after Pat and Cheryl thought about the matter for a few days, they called Peter back and said, "Let's talk about it."

At the time Pat was basically a big produce farmer in central California and Cheryl had a PhD in food chemistry. Pat's father, Bill Mitchell, who worked for General Foods, had been one of America's foremost food scientists and developers of food products. He had roughly 50 food patents, and had been in on the original Jello and pudding patents, and in the development of Cool Whip. He got Pat and Cheryl interested in making various food products. Bill was interested in inulin, which was a pharmaceutical product used to treat diabetics—and was the main product used before the synthesis of insulin in 1920. All U.S. supplies were imported from Israel and it was very expensive. Bill encouraged Pat to grow the dahlia plant from which inulin was extracted, then Bill would try to figure out a way to extract the inulin less expensively using a sort of malting process. Almost by accident, while making inulin into a syrup, Bill and Cheryl found that if they dried the syrup the resulting product had a flavor like grain coffee. So they decided to approach the natural foods industry to see if they could sell this grain coffee. They started going to natural foods trade shows and Peter Milbury met them at one of these shows. At that time, CNP was not using enzymes in food processing operations, but Cheryl had been a consultant

for General Foods and other food companies and she was very familiar with enzymes. Continued. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

2268. Nissenbaum, Robert. 1994. The early work of Imagine Foods with Chico-San, California Natural Products, and enzymes in making Rice Dream. Part II (Interview). *SoyaScan Notes*. Nov. 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: Robert is not sure whether he met Pat and Cheryl Mitchell before or after they first visited Chico-San in the summer of 1984. When they first visited Chico-San's plant that made rice syrup in Chico, she was appalled. But she knew about enzyme technology and she thought that their company, California Natural Products (CNP) in Manteca, California, could make the product. Peter Milbury felt that Rice Dream (a non-dairy ice cream made from amazake) had a great deal of potential and he convinced Bob Kennedy that transferring the production of Yinnies rice syrup to CNP was a good idea. Nobody knew what would come of Heinz's offer to buy Chico-San, but after Pat & Cheryl talked with Bob Kennedy he "agreed that the Yinnies syrup operation was a mess" and decided to make the transfer to CNP. Note that Chico-San never made Rice Dream base.

In 1984 (before Heinz made its offer to buy Chico-San) Pat and Cheryl moved the rice syrup equipment from Chico to CNP in Manteca. They were still basically in the farming business and their entire food processing operation was a very small business they did as a "side business"—since Pat was looking for a way to get out of farming. Robert does not know if the Mitchells bought Chico-San's rice syrup equipment or not, but much of it turned out to be worthless and he is quite sure that if any money was involved in the transaction, it was not much. CNP signed a contract with Chico-San stating that Chico-San would buy a minimum amount of Yinnies rice syrup from CNP each month. CNP only got into this business of processing rice because Rice Dream, made by Imagine Foods, looked like it had real potential. Robert went to California and met Pat and Cheryl, who were very skeptical about Chico-San and rice syrup. But the three of them soon got along very well together, and Robert soon convinced them to get involved because of Rice Dream's potential, based on promises from big natural foods distributors. Robert had to buy all of his Rice Dream base, made by CNP, through Chico-San, and he agreed to buy a certain minimum amount of this base each month. At the time, Robert also told the Mitchells that he was making a beverage product, traditional amazake (Robert made the koji by hand), and that he wanted to find a way to produce it on a much larger scale. He knew that he would not be able to continue making it in the traditional way as volume expanded. "I knew there must be some way to make this rice

beverage without using koji. [Note: Robert prefers the term "rice beverage" to "rice drink]. I spent a lot of time talking with Betty Stechmeyer of GEM Cultures (from whom we were already buying our cultures) about the possibility of inoculating the rice directly with koji spores, without growing the mold on it first. We ran many experiments. At the time I was not aware that commercial enzymes were the answer to our problem. When I got involved with Chico-San I asked them how they made rice syrup, but they declined to reveal their secret (they were using commercial enzymes, but they had 'koji' on their labels and in their catalogs). I began to suspect they were not using koji."

When Kennedy sold Chico-San to Heinz in Nov. 1984, Heinz automatically took over Chico-San's contract and obligations with CNP, and they had to send CNP a check every month—which Heinz disliked. Imagine Foods was required to buy its minimum amounts of Rice Dream base through Heinz. To Heinz, Rice Dream looked like a minuscule product. During this time, Pat, Cheryl and Robert were developing a very close personal and business relationship. Together (and without Bob Kennedy) they developed a completely new and innovative process for making Rice Dream base using commercial enzymes. "We started literally by hand, from scratch, using buckets, trying to make the new Rice Dream base at CNP—even before Chico-San's plant was set up in Manteca. I spent days working on the process during the fall of 1984. I didn't know if an enzyme method would work. I had a sense for the product and the Mitchells had some technical expertise I lacked. It was a good fit."

On 16 November 1984 Bob Kennedy sold Chico-San to Heinz. At this time, the experiments that Robert and the Mitchells were conducting at CNP were looking more and more promising. In late 1984 Robert moved Imagine Foods from Jamestown, Missouri, to Fayetteville, Arkansas. In about December 1984 the Rice Dream base was good enough that CNP began sending it to a dairy plant in Palo Alto, California, for experiments in making this new base into Rice Dream non-dairy frozen dessert. In the meantime, Imagine Foods was still making Rice Dream in Missouri or Arkansas using the traditional koji process.

In January 1985 the new Rice Dream non-dairy frozen dessert was launched commercially, in hard-pack pints in seven flavors: Vanilla, carob, strawberry, lemon, carob chip, orange, and carob almond. The base was made for Imagine Foods, using the new enzyme process, by CNP, and shipped in a large stainless steel tanker. The actual frozen dessert was made by Peninsula Creamery at 900 High Street, in Palo Alto. Koji was no longer used. The use of commercial enzymes increased the glucose content of the product, obviating the use of maple syrup. Robert still lived in Fayetteville (probably) but he traveled frequently to Palo Alto.

Robert, Pat and Cheryl all hoped to have Heinz out of

the picture as soon as possible, so they all acted as a sort of thorn in Heinz's side. Within about 6 months after Heinz bought Chico-San almost everyone who had formerly worked for Chico-San (including Kennedy and Milbury) had left Heinz. The only person who stayed with Heinz a little longer was Bob Kennedy's daughter, Gail. Heinz eventually closed down the offices in Chico. Heinz soon realized that though they had a contract to buy rice syrup from CNP, they were hardly selling any. Sales of Rice Dream base were small in Heinz's eyes. So Heinz had to pay for a product they did not want. Pat Mitchell, who is a relentless negotiator, finally convinced Heinz to get out of the rice syrup business because their involvement made no sense to anyone. Continued. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

2269. Nissenbaum, Robert. 1994. The early work of Imagine Foods with Chico-San, California Natural Products, and enzymes in making Rice Dream. Part III (Interview). *SoyaScan Notes*. Nov. 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Robert has about four letters in his "nostalgia" file documenting key events relating to Heinz and CNP from the summer of 1985 on. A letter dated 31 July 1985 from Pat Mitchell to Joe Ward (a major figure at Heinz) summarizes the problems that exist between CNP and Heinz as CNP understands them. Representatives of the two companies met at CNP on 30 July 1985. Heinz had a contractual obligation to CNP for a specified amount of money, of which a certain amount is still due and which Heinz wishes to terminate. "Because Heinz has not actively marketed the rice syrup and has no apparent intention of doing so in the immediate future, CNP would be agreeable to the proposed termination of the agreement. CNP's commitment to mere contractual minimums as opposed to twice the minimums as originally promised by Chico-San has caused a financial burden to CNP. CNP would be agreeable to the purchase by Heinz of a right-of-refusal on future rice syrup business prospects exclusive of those customers already provided on a list by CNP to Heinz." Many natural foods companies wanted to buy rice syrup from CNP because the quality was so much better. But CNP felt that Heinz was doing nothing to develop this market, so they didn't want to pay Heinz for product sold to customers that CNP had found and developed. "It is understood by Heinz that upon termination of the agreement with Heinz that CNP will be relying on the Imagine Foods account for a specified number of dollars per week. The only way for CNP to survive economically would be to have the Imagine Foods account. Without the Imagine Foods account, CNP has no choice but to enforce the current contract with Heinz and accept the minimums." In short, Imagine Foods was buying more than its required minimums, whereas Heinz was not. Yet Heinz was trying to have the best of

both worlds. They wanted to void their obligations to buy at least a minimum amount of rice syrup from CNP, yet they still wanted to take of a cut of the increasing sales of Rice Dream base to Imagine Foods. "CNP recognizes Robert Nissenbaum of Imagine Foods as having certain rights of inventorship to the process and formula of the amazake developed in conjunction with CNP for Imagine Foods. CNP also recognizes Robert Nissenbaum as having full product rights making a non-dairy ice cream from amazake since he originally approached Chico-San with the concept and product that he was already making. It should be noted that Robert Nissenbaum of Imagine Foods has already indicated his dissatisfaction with regards to the pricing and service structure that is currently being received from Heinz. It is a possibility that Imagine Foods for economic reasons will seek out, within months, the other two companies currently in amazake production to make his formula." Robert felt that he was not getting his money's worth from Heinz; all they were doing was taking a percentage of sales (Robert had to send his payments directly to Heinz rather than CNP) and doing nothing in return. It was just a nightmare. So Robert was threatening to void the contract, which said that things had to be done to the satisfaction of both parties.

A letter dated 9 Aug. 1985 from Marianne McCullough, marketing manager of Chico-San in Pittsburgh, Pennsylvania, written on Chico-San stationery, to Robert Nissenbaum in Fayetteville, Arkansas, states that Chico-San will not pursue negotiations with Imagine Foods for a long-term contract. Agreement in principle has been made with CNP to service Imagine Foods directly, effective date of August 19, 1985, per signed agreement with CNP. In the meantime, Imagine Foods will continue to order through Chico-San's Pittsburgh center.

Within a month or two Heinz was no longer involved with CNP or Imagine Foods. For the first time, Imagine Foods placed its orders directly with CNP and paid its bills to CNP.

In 1986 Robert moved to Palo Alto, taking his company with him. Then in September Imagine Foods moved from 299 California Ave., #305, Palo Alto 94306, to 350 Cambridge Ave., Suite 350, Palo Alto 94306. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

2270. Nissenbaum, Robert. 1994. Imagine Foods, Westbrae, rice drinks, and the pour spout carton (Interview). *SoyaScan Notes*. Nov. 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Imagine Foods and Westbrae launched a commercial rice beverage in a pour spout carton at about the same time. Pacific Foods, where Rice Dream (non-dairy beverage) is currently being packed in aseptic Tetra-Brik cartons, made an agreement with Tetra Pak about a year ago to get new filling machinery that will package in a carton that

has a pour spout. Pacific Foods was told they would have the second machine in the USA that filled this new carton; Steuben Foods (1150 Maple Road, Elma [near Buffalo], New York 14059) got the first machine. Pacific Foods planned to be the first rice beverage on the market in the new pour spout container. Ever since Robert began working with Tetra Pak 5 years ago, he has been encouraging them to improve their package. Tetra Pak was spurred to introduce the new package after Combibloc introduced it first.

Westbrae was having their aseptic packaging done by White Knight Packing [in Grand Rapids, Michigan], which is owned by a very large company in Europe [Parmalat]. When Westbrae found out that Pacific Foods would soon be getting equipment to package with a pour spout, Westbrae contacted White Knight, which in turn contacted their parent company saying that Westbrae wanted to get the pour spout packaging as fast as possible. So the president of Parmalat went to Tetra Pak, and since his company was Tetra Pak's biggest customer, he was able to say "I have to have one of these new machines." So Tetra Pak went around the normal channels and got White Knight a new machine very quickly at about the same time that Pacific Foods got theirs. Pacific Foods was very upset about this.

Westbrae's new rice beverage in the pour spout carton was probably on the market in late September 1994, a week or so before Imagine Foods' rice beverage, but Imagine Foods' product was on the market first on the West Coast.

Westbrae's rice beverage is made from rice syrup (made by California Natural Products, CNP, in Manteca, California) and rice starch. Westbrae has been buying rice syrup from CNP for a long time, to use as a sweetener in their soymilk products. [Note: In fact, on a solids basis, Westbrae buys about as much or perhaps even more rice hydrolysates from CNP as Imagine Foods does.] About 7-8 years ago Imagine Foods tried making a product using the same ingredients (from CNP) that Westbrae is making now; but CNP's ingredients are much better now. One reason Robert decided not to use this approach because of the high content of glucose in the product. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

2271. Nissenbaum, Robert. 1994. Imagine Foods' future plans (Interview). *SoyaScan Notes*. Nov. 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Imagine Foods has decided to install their own Tetra Pak line at California Natural Products (CNP) so they don't have to ship their rice beverage to Pacific Foods of Oregon to have it packaged. That will cut the cost of making Rice Dream. They now have a really good source of organically grown rice, which they buy directly from the farm, and they do all their own rice milling. It is a really good situation with great efficiency at the CNP plant. Imagine has been planning to do this for a long time since

they have developed a very significant international market for this non-dairy beverage—especially in Europe. They are designing an international package. It still makes sense to manufacture the product in one place in the USA—at CNP. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

2272. Imagine Foods, Inc. 1994. Imitation is the highest form of flattery. (But you don't have to settle for it) (Ad). *Natural Foods Merchandiser*. Nov. Insert glued in after p. 26.

• **Summary:** The front of this color 8½ by 11 inch insert ad shows a large carton of Rice Dream. On both sides of it are cartons of four imitations, named "Rice This-New" "Rice That-So Incredibly Sweet," "Rice Drink Knock Off-Westward Ho," and "Brand X Rice Syrup Drink." The text begins: "Have you noticed that several soy milk companies have been introducing rice drinks lately" This new enthusiasm for a beverage we pioneered may have something to do with the fact that Rice Dream has become the best selling alternative to milk in the natural food store.* (Footnote: *"Based on a poll of leading natural food distributors). Why? Superior quality and taste. And try as they might, other rice beverages can't duplicate Rice Dream—we have two U.S. patents to guarantee it."

The back of this ad is titled "Rice Dream vs. Westbrae's Rice Drink." A table shows the differences. Westbrae's drink is said to be reconstituted from concentrates. The main ingredient is high glucose rice syrup. It is thickened by adding rice starch and carrageenan. The Westbrae drink contains 50% more fat than Rice Dream.

This ad also appeared in *Vegetarian Times* (Dec. 1994, p. 5; Feb. 1995, p. 3).

Talk with Robert Nissenbaum of Imagine Foods. 1994. Nov. 23. This ad is saying that Rice Dream, including all of its different flavors and varieties (SKUs), is the best-selling brand of milk alternative in U.S. natural food stores nationwide (ahead of Edensoy, which is the best-selling brand of soymilk, including all its different flavors and varieties). It is not saying that more rice milk is sold in U.S. natural food stores than soymilk. Imagine Foods' best-selling single product (SKU or stock-keeping unit) is Rice Dream Original, followed by Rice Dream Vanilla. Many major U.S. distributors have reported to Imagine Foods that these two products are, in many cases by far, the two best-selling products among ALL products of all categories sold by that distributor. In both Mountain People's Warehouse and Nature's Best, which are the two largest western U.S. regional distributors, these two products are the two best-selling single products for both distributors. Likewise in every one of the other large distributors (Tree of Life, Cornucopia, Stow Mills, etc.), Rice Dream is among the top SKUs. Since Tree of Life tends to promote its own brands, Rice Dream products may not be the very top SKUs, but they

are very high on the list. Address: Palo Alto, California.

2273. Soyfoods Association of America. 1994. Get the soy edge (Ad). *Vegetarian Times*. Nov. p. 71-74.

• **Summary:** This 4-page advertorial, with 17 color photos, is sponsored by the following organizations: ADM, DevanSoy Farms, Inc., Eden Foods, Inc., Lightlife Foods, Lumen Food Corp., Morinaga Nutritional Foods Inc., Soyfoods Association of America, Tofutti Brands Inc., Worthington Foods.

“Did you know you can fit soy into your diet without giving up your favorite foods? Try soy burgers, soy ice cream, soy yogurt, soy hot dogs, soy flour, soy cream cheese, soy sausage, soy chili, soy frozen juice bars, soy margarine, soy milk, soy tacos, soy sour cream, soy sloppy joes, soy ‘chicken’ patties...” Address: Palo Alto, California. Phone: 415-327-1444.

2274. **Product Name:** Westbrae Rice Drink (Non Dairy) [Only 1% Fat, and Concentrate; Plain, and Vanilla].

Manufacturer’s Name: Westbrae Natural Foods (Product Developer-Distributor). Made in Manteca, California, by California Natural Products.

Manufacturer’s Address: Carson, CA 90746.

Date of Introduction: 1994 November.

Ingredients: Plain: Rice base (filtered water, brown rice syrup, rice starch), expeller pressed canola oil, tricalcium phosphate, pea protein, natural flavors, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin.

Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retail for \$1.69 (12/94, California).

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per cup (240 ml): Calories 100, calories from fat 25, total fat 3X gm (5% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 70 mg (3%), total carbohydrate 18 gm (dietary fiber 0 gm, sugars 16 gm), protein 1 gm. Vitamin A 10%, calcium 25%, vitamin D 25%, vitamin C 0%, iron 0%, riboflavin 25%, vitamin E 2%, phosphorus 10%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Ad in *Natural Foods Merchandiser*. 1994. Nov. p. 11. “Wake up! You don’t have to dream any longer.” This is a full page color ad for two new Westbrae Rice Drink products: Only 1% Fat, and Concentrate (which makes 2 quarts). Both products are in a new “Easy Pour” aseptic carton, with added calcium and vitamins A&D. The word “dream” in the ad’s title refers to Rice Dream, the leader in the rice beverage category. A color photo shows the two colorful quart packages of Rice Drink against a blue background on a blue and white tablecloth, with glasses of milk, a bowl of cereal topped with berries, and assorted fruits in the foreground.

Product (1% fat in plain and vanilla flavors) with Label purchased at Berkeley Natural Grocery Co., California. 3.5 by 7.75 by 2.25 inches. Tetra Brik Aseptic carton. Note

this new tall, slim carton with a new easy-pour reclosable cap. Blue, white, red, and black. Photo of white rice drink being poured from a pitcher into a glass, against a light blue background. “Only 1% fat. Rice drink. A cholesterol free food. Tastes great! Non dairy drink. New easy pour. Reclosable spout. With calcium and vitamins A&D. Not to be used as an infant formula.” On one side is a message from President Andrew H. Jacobson titled “We’re here for life.”

2275. Westbrae Natural Foods. 1994. Wake up! You don’t have to dream any longer (Ad). *Natural Foods Merchandiser*. Nov. p. 11.

• **Summary:** This is a full-page color ad for two new Westbrae Rice Drink products: Only 1% Fat, and Concentrate (which makes 2 quarts). The word “dream” in the ad’s title refers to Rice Dream, the leader in the rice milk category. A color photo shows the two colorful quart packages of Rice Drink against a blue background on a blue and white tablecloth, with glasses of milk, a bowl of cereal topped with berries, and assorted fruits in the foreground. Address: P.O. Box 48006, Gardena, California 90248.

2276. *SoyaScan Notes*. 1994. Soymilk and cow’s milk prices in California, December 1994 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Since 1987, every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow’s milk in California. In Dec. 1994 at Berkeley Natural Grocery Co., a large natural food store at 1336 Gilman St. in Berkeley, California, unflavored (plain or original) soymilk made from organically grown soybeans retails for the following prices: Westsoy Lite plain 1% fat liter \$0.99 (the equivalent of \$0.899/quart), Vitasoy creamy original liter \$1.49 (\$1.35/quart), Pacific Foods liter \$1.69 (\$1.53/quart), Vitasoy Lite original liter \$1.89 (\$1.715/quart), Edensoy original liter \$1.99 (\$1.88/quart). The most expensive soymilk is Health Valley Soy Moo at \$2.35/quart.

At Trader Joe’s, a gourmet and natural foods chain in California, Soy-Um quart (plain, vanilla, or chocolate) retails for \$1.39. Edensoy vanilla liter retails for \$1.59. Rice Dream Enriched Non-Dairy Beverage (a non-soy rice beverage) retails for \$1.29/liter (but \$1.59 with reclosable spout).

The average price of the quart equivalents of the 6 least expensive soy beverage brands is \$1.46 a quart. This is \$0.46 per quart lower or 24.0% lower than the \$1.92 in Dec. 1992.

Cow’s milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Nonfat: \$0.85/quart or \$1.42/half gallon or \$2.74/gallon; (2) Extra light (1% fat; protein fortified): \$0.89/quart or \$1.51/half gallon or \$2.86/gallon; (3) Low-fat (2% fat; protein fortified): \$0.89/quart or \$1.27/half gallon; (4) Whole: \$0.89/quart or \$1.51/half gallon. The best-seller among these is non-fat in half gallons.

Thus in Dec. 1994 soymilk in liter cartons is, on

average, 1.71 times as expensive per unit volume as nonfat dairy milk purchased in quarts, 2.05 times as expensive as in half gallons, and 2.13 times as expensive as in gallons. In Dec. 1992 a quart of soymilk was 2.78 times as expensive as a quart of the best-selling cow's milk. So in the last 2 years the price of soymilk has fallen significantly relative to that of cow's milk.

In Oct. 1987, after most soymilk brands were available in liter or quart sizes, soymilk retailed, on average, for \$1.88/quart and cow's milk for \$0.55/quart; thus soymilk was 3.42 times as expensive per unit volume as dairy milk purchased in quarts—compared with just 1.71 times as expensive in Dec. 1994. Since 1987, the average price of soymilk has decreased by 22.4%, while the average price of cow's milk has increased by 54.5% on a quart basis. So the price of soymilk has decreased by 50% relative to the price of cow's milk in quarts over the last 7 years.

2277. Deming, John W., Jr. 1994. Work with Erewhon and the natural foods industry, 1969-1971. Part I (Interview). *SoyaScan Notes*. Dec. 28-29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** John was born on 27 June 1947 in Tacoma, Washington, where his parents were stationed after World War II, though they came from the South. His mother, who was from Arkansas, was the daughter of the founder of Murphy Oil, and the sister of the man who made it into a Fortune 500 company. So John's family was in petroleum business and quite wealthy. Coincidentally, Murphy Oil is also a major soybean grower. John grew up in Louisiana. He attended Tulane University in New Orleans, Louisiana, until 1967, majoring in English. He spent his junior year in Europe (Wales and Spain), then returned to Tulane. He was active with SDS and psychedelics, then dropped out in early 1969.

Buying an old Volkswagen bus with tuition money from his parents, he drove to Vermont. There he helped to develop one of the first communes in Vermont—named Johnson's Pasture and located 15 miles west of Brattleboro—and played a key role in making it work. There were no "macroids" [followers of macrobiotics] in the commune. In May 1969 Deming met John and Chris Abrams at the commune; they would later introduce him to macrobiotics and become close friends. Realizing he had some money from an inheritance (he began to receive substantial amounts of money from various trusts starting at this time) and tired of the commune, he decided to move to California. "That was where the hippie scene was most intense, and I wanted to do my own thing." So he got in a Volkswagen bus with 9 other people and drove to Mendocino County, California.

There, in Sept. 1969, he used part of his inheritance to purchase (from his great aunt who lived in Berkeley) 55 acres of beautiful land, an old fishing camp on the Noyo River and on the Skunk Railroad Line west of Fort Bragg,

California. On the land he started his own commune and lived lightly on the land (which had no electricity) until Aug. 1970. In the summer of 1970 John and Chris Abrams came to California to live with John on his land. (John's father was a well-known heart surgeon and professor at Harvard Medical School). Chris developed terrible eczema on her hands soon after they arrived, but she cured it with a 10-day rice diet—based on the macrobiotic teaching of George Ohsawa. She gave John Ohsawa's book *Zen Macrobiotics*, which he read in one or two nights. This was his introduction to macrobiotics. "I was so taken by the book and so impressed by Chris and by the cure of her eczema, that I decided very quickly to dedicate much time and energy to the philosophy and diet of macrobiotics. I got deeply into it. I read everything George Ohsawa wrote and I was just floored. I went for the whole thing hook, line, and sinker. I wanted to save the world and I thought that this was the way to do it. After using pot all summer, I went on a 10-day rice diet. I had never felt better in my entire life." John now had long hair and a big beard. He soon began to visit Herman Aihara about every two weeks and to learn about macrobiotics from him. After a while, John was the only person left on the land, so in late 1970 he decided to give it to Herman Aihara. Herman later cut down all the redwood trees, sold them for cash, and finally sold the land for cash.

John got into the natural foods movement in 1970. New England, New York, and California were hotbeds of this new-age, vegetarian type activity and John wanted to bring it to the South. He hoped to become a leader of this movement. So he drove to Jackson, Mississippi, where he met a Jewish woman named Renée Rosenfeld, about 55 years old from Belgium, who was really into macrobiotics. They started a little macrobiotic restaurant in her house; they typically served 5-6 people lunch that they prepared themselves. After about 2 months, in Nov. 1970, they started a small natural foods store (about 3,000 square feet, paid for by John) named the Singing River Granary. It was successful as a business. At his store John read a short essay by Paul Hawken published as a brochure, which he felt was the best single statement he had seen about why he was interested in macrobiotics and what the philosophy meant to him. John thought, "I've got to meet this guy Paul Hawken. He has a gift with words." One day in early 1971 Roger and Susan Hillyard from Erewhon drove into town to find out who was buying so much macrobiotic food from Erewhon. Roger was going from Boston to Los Angeles to set up Erewhon—Los Angeles. He loved the store and he said "Any time you want to come to work with us, you're welcome." John took a trip to visit Erewhon—Los Angeles, arriving right after the big earthquake struck the San Fernando Valley near Los Angeles on 9 Feb. 1971. He liked what he saw. Aveline was there, living in a big macrobiotic study house with Tom DeSilva and others. Returning to Mississippi, John sold Singing River Granary in Aug. 1971, moved to Los Angeles, and went to

work with Erewhon. He began by helping Jim Gronemeyer (a very colorful figure) to expand the Erewhon retail store. John met Paul Hawken when Paul came to Los Angeles and invited all the Erewhon employees down to a beach house he had rented at Carlsbad (about 80 miles southeast of Los Angeles). Dora, Paul's wife, was also there, wearing a bikini on the beach, about 6 months pregnant, and looking lovely.

In mid-Sept. 1971 John flew to his cousin's wedding in Boston, then visited the Erewhon warehouse (at 33 Farnsworth St), where he talked to "Big Bill" Garrison, the manager, who offered John a job. "I realized that here I was in Boston at the center of the center, the heart of the heart of everything. A stoned-out hippie in Tucson, Arizona, once told me that Michio Kushi knows more about the Universe than any other person on the planet. I knew I wanted to study with Michio." Continued. Address: 555 Bryant St. #255, Palo Alto, California 94301. Phone: 415-853-1231.

2278. Deming, John W., Jr. 1994. Work with Erewhon and the natural foods industry, 1972-1973. Part II (Interview). *SoyaScan Notes*. Dec. 28-29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: So after 2 months in Los Angeles, John moved to Boston, arriving on 1 Oct. 1971. Other people who were there when John arrived were Bill Garrison, Jimmy Silver, Bill Tara, Paul Hawken and his wife Dora Coates Hawken, and Judy Coates. John moved into the macrobiotic study house on Gardner Road that was under the direction of Jimmy and Susan Silver. He began to work at the Erewhon warehouse. There he met Judy Coates, Dora's elder sister, who was the cook at the Erewhon warehouse. "She was cute as a button, and she was the girl that everybody had their eyes on—though her boyfriend at the time was Norio Kushi. She was just popping around, cooking these great meals."

After 2-3 months of living at the Gardner Road house, John was invited by Aveline Kushi to move into the Kushi house at 62 Buckminster Road in Brookline. John considered this an honor and accepted. Shortly thereafter he grew to know Paul Hawken better. After John had worked for about 3 months in the warehouse (it was run very efficiently and everybody worked very hard), in early 1972, Paul called John into his office and asked him to be Erewhon's first official "salesman." However John was to take no orders, but instead be Erewhon's "ambassador." He would just visit natural foods retail stores across New England and talk about Erewhon's philosophy and products. He drove around in the snow and usually spent the night with one of Erewhon's customers. By the spring of 1972 John had had enough of the job, so Paul asked him to co-manage the Erewhon retail store (which was having problems) at 342 Newbury St.—together with Wesley and Jane. John soon became the sole manager—at \$2.50/hour. "That's where I really came into my own." The store began to do very well financially. Sales

doubled. Paul and John became very close friends. "He was a great guy. Just a wonderful guy, and so charismatic. We felt like together we could take this company to the moon. He urged me to get involved with Judy Coates. The macrobiotic community was very in-bred."

On 27 June 1972 John celebrated his 25th birthday, and to his great surprise discovered that funds from a trust were now available to him. During the next few months he decided to give, then (at Paul Hawken's wise insistence) to loan roughly \$50,000 to Erewhon—at a time when Erewhon was facing its first major financial crisis. John's loan saved the growing company. He and Judy Coates were married in Aug. 1972 in Boston. Paul Hawken and John Deming married sisters, Dora and Judy Coates. John and Judy went to live in Allston, Massachusetts (not far from Boston); Nik and Joanne Amartseff moved in with them. John remembers Nik as a very interesting person whose ancestry was Russian and East Asian. John and Judy's first child, Lhianna, was born in Boston on 27 Sept. 1973.

At some point in about the fall of 1972 John talked to Paul about his wish to invest \$150,000 (a new portion of his inheritance from trusts from his parents and grandparents that had recently become available to him) in Erewhon in exchange for stock. Erewhon was in financial difficulty and needed the money. "We were all new-age guys and we were saying, 'We're doing this for the good of humanity, we don't care about the money.' We were going to set up a foundation, and set up a village outside of Boston where all the people would live and work in harmony on a farm. We had great dreams. I was a good right-hand man to Paul." Paul also worked with a company named Advest, a venture capital company in New England, that planned to raise \$350,000 in a private stock offering for Erewhon. But at the last minute Michio Kushi nixed both deals; apparently he wanted to be the sole owner of Erewhon. Paul Hawken believed that he owned 25.5% of Erewhon and Michio told him repeatedly that he did, but John thinks Michio would never give Paul a document which proved this ownership. Whenever Paul would broach the matter, Michio would create some kind of an excuse, such as saying to him, "Well, actually we're all in this together. There's not really any need to put it down on paper." There was also a little naiveté on Paul's part. John is quite sure that Paul did not actually own any Erewhon stock.

In the Aug. 1973 issue of *East West Journal* Paul Hawken wrote a long, excellent article about Erewhon titled "Erewhon: A biography. The view within." He had some nice words for John Deming: "If there is one person who is 'most' responsible for Erewhon being here today and not bankrupt, it is John Deming, who brought a sense of joy and happiness wherever he went in the company. He assumed the manager's position at the retail store and made it the finest part of the company. His positive attitude was in contrast to the apprehension that all of us shared about the future. He gave Erewhon some money without which we would surely

have failed. On his twenty-fifth birthday John came into a trust which sort of blew his mind. He had known nothing about it. He wanted to just give it to Erewhon, but it is on the books as a loan. It came just in time to pay back overdue creditors and panting bank officers.”

John left Erewhon in late 1973, at the same time Paul Hawken left. Paul went to Findhorn alone in Scotland, came back to the USA and told John how great it was. Paul and Dora lived for 2 months in John and Judy’s house in Lexington, Massachusetts. There Paul and John went into business together, starting a little rice brokerage company named Winton-Gerard (after their two middle names). They sold organically grown brown rice. Then in Nov. 1973 they went back to Findhorn together with their wives and children. Dora was pregnant with her second child, Iona Fairlight Hawken, a girl; her first child was Palo Cheyenne Hawken, a boy [born in 1972]. They were in Scotland for the winter solstice in Dec. 1973, watching the sun barely rise then set in a period of 2-3 hours. Peter Caddy had a charismatic personality. John was the head gardener at Findhorn for the last 2-3 months he was there. To grow those huge vegetables, “We trenched down about 3 feet and put in this incredibly powerful, all natural compost of seaweed and manure. I don’t think it was the elves and fairies that grew those huge vegetables. During the summer the sun is in the sky almost 24 hours a day for 2-3 weeks.” John and Judy returned to America after the summer solstice in 1974.

John and Paul continued to run their rice brokerage company from Findhorn, had many misunderstandings, and later had a big blowup. “Looking at it later, I was very self righteous, and I think we were equally at fault. I would even be willing to shoulder more of the blame. Paul wasn’t an easy guy to work with.”

“I’m very proud of what we did at Erewhon in Boston and the people I worked with. It was one of the high points of my life. The esprit de corps that we had rolling back then was superb. For the rest of my life I have been searching to find that same kind of feeling we had. It was a privilege to work with Paul Hawken and to get to know him as well as I did, even though we had a tremendous falling out later. I went through a period of about ten years when I absolutely hated the guy. But now I like and admire him very much. “The two people who deserve the most credit for Erewhon are Paul Hawken and Michio Kushi. Continued. Address: 555 Bryant St. #255, Palo Alto, California 94301. Phone: 415-853-1231.

2279. Deming, John W., Jr. 1994. Work with Erewhon and the natural foods industry, 1975-1978. Part III (Interview). *SoyaScan Notes*. Dec. 28-29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: In 1975 John got involved with Erewhon again, when the company decided to sell its West Coast operations. John had a lot of dealings with Ty Smith,

and he loaned some money. It is an unpleasant memory for John. He had met John Fountain when Fountain was living in Michio Kushi’s home and studying macrobiotics in Boston, Massachusetts, in the 1972. Fountain ran an ice cream factory in Southern California. They became close friends and are still close friends—Fountain got Deming interested in the philosophy of Andrew Galambos. Deming and Fountain reconnected over an interest in buying Erewhon L.A. “We had decided to go into business together. We looked around, one thing led to another, and we finally decided to buy Erewhon—Los Angeles. I financed the purchase.”

On 1 Aug. 1975 Erewhon, under Ty Smith, sold substantially all of its assets used in operations in California. The selling price was \$350,000, payable as follows: \$100,000 in cash within 15 days of closing, \$100,000 due 90 days from Aug. 15, \$50,000 due in 3 installments in January, April, and July 1976, and \$100,000 due in quarterly installments of \$12,500 each from 31 Oct. 1976 to 31 July 1978. John Fountain was responsible for coming up with all this money.

“I thought I was purchasing it jointly with him, but it turned out I wasn’t; I discovered that I was basically a passive investor in John Fountain’s venture. I had a lot of respect for John’s business talent which, it turns out, was somewhat misplaced. I let John run the business, but I felt very frustrated. If the company had made a lot of money, I would have made a lot too. But the company never made any money. I was pretty naive, though John Fountain didn’t do anything dishonest. It was probably the stupidest business decision of my entire life. The basic problem was that at the time Erewhon was a declining business. Other people were coming along and doing everything better. Erewhon West had financial troubles trying to compete with Nature’s Best and K&L (Kahan & Lessin)—big, established distributors. Erewhon was essentially a middle man, and that was the problem; the middle men were getting squeezed out of that business.”

During this time, John and his family were living in Pacific Palisades. He was studying the philosophy of Andrew Galambos (a brilliant, complex, and learned astrophysicist) largely by listening to him talk. The basis of Galambos’ philosophy was the concept of non-coercion. John notes: “Very briefly, the free market is simply the phenomenon that emerges from *all* non-coercive interactions between human beings (and ultimately all animals). The political state is the phenomenon that emerges (or results) from all coercive interactions. Property is a human being’s body (biological entity) and all non-procreative derivatives thereof. Coercion is any attempted interference in the property of another without that other person’s (the owner’s) permission.”

John Fountain attempted to apply the ideas of Galambos among employees in the daily operations of Erewhon West. For example, he tried to credit and pay people for their ideas to the extent that these ideas contributed to the success of the

business.

That year Deming and Fountain decided to expand Erewhon by opening another retail store—to be named the Erewhon Natural Grocery. Deming, who was living in Irvine, built (from the foundation up) the ultimate natural foods store in nearby Santa Ana, California, about 30 miles southeast of Los Angeles. It was located in South Coast Village, a little shopping center associated with South Coast Plaza—the largest shopping center in Southern California. John’s dream was that this would be the first of a chain of beautiful natural foods retail stores, named Cuisine, which would also cater to the gourmet food crowd. In retrospect, John spent much too much money in building this beautiful store—which came to represent another bad business decision. He hired Bill Bolduc to manage the store, and also hired a professional produce manager. The store opened in Jan. 1977. John and Judy’s second child, Emily, was born on 10 June 1977. At the end of the summer of 1978 John and his wife Judy separated. Continued. Address: 555 Bryant St. #255, Palo Alto, California 94301. Phone: 415-853-1231.

2280. Deming, John W., Jr. 1994. Work with Erewhon and the natural foods industry, 1979 on. Part IV (Interview). *SoyaScan Notes*. Dec. 28-29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In late 1979 John Fountain was obligated to come up with some money for John Deming. Being unable to, Fountain had to relinquish the company to Deming. Deming fired Fountain and ended up taking over Erewhon L.A. under very bad circumstances (“which again proved to be a very dumb mistake”), brought in some professional business consultants to look at the entire operation, we tried several different things but nothing worked the way John wanted to see it work, so John decided to liquidate the entire company and get out. Deming proceeded to sell off the assets piecemeal. There was an Erewhon Natural Foods retail store in Northridge. Fountain sold that store to Deming, and the same day Deming sold it to Tree of Life West. John does not think he made a profit on the sale. Deming found difficulty selling the Erewhon retail store at 8001-03 Beverly Blvd. in Los Angeles, partly because the store was somewhat run down. John Deming (d.b.a. Erewhon–Los Angeles) needed to meet a payroll payment, so he offered to sell the store to Tom DeSilva if he could make the down payment they were asking. Tom got Tyler Smith and Jeffrey Flasher to go in as partners with him and they bought the store. On 13 Jan. 1980, the new owners took over.

Deming sold another large part of Erewhon–Los Angeles to an East Coast vitamin company (sort of a competitor to GNC) that was a division of the same company that owned Marvel Comic Books.

Jimmy Silver and Jeff Hilgert bought the remaining assets from John Deming and in June 1980 they transformed Erewhon West into Pure Sales. Then they defaulted on their

payments to Deming, after writing him a note saying they weren’t going to pay him for various reasons. John was infuriated—it was the last straw. John sued Silver and Hilgert for the money they owed under the contract. They countersued him for \$1.5 million. That scared John, so he proposed that they just forget the suits. He got no more money from Silver and Hilgert.

Also in 1980 John and his wife, Judy, were divorced. The divorce was not related to John’s financial problems. He still feels that Judy is great person. “Her mother’s a saint. I love her dearly. And you’ll never hear a bad word from me about Judy. She is just a fabulous person, and she has been a great mother to our children.”

John returned alone to Boston, Massachusetts, in the spring of 1981 and “basically went into a depression for about a year and that caused me to change my life. I really thought everything through. There were 2 or 3 week periods when I didn’t get out of bed except to get food. I wasn’t married. I had only one close friend (a fellow named Kristen Carlson) but I was ashamed of my poor state of mind and did not allow him to know how bad of I was. Several other friends I had weren’t interested in seeing me because I was such a downer. That was probably the most important year of my life because I came out the other end of it realizing that you’ve got to be master of your own fate. You’ve got to learn—learning is the only option we have in life—and just keep learning and growing. Since that time my life has done nothing but get better and more successful in all ways.” Sober self analysis made John feel down. “I got out of it by dropping that sober self analysis and learning how to think more clearly about life. I read a book by David Burns titled *Feeling Good* and I think that was the turning point of my life. I learned that my feelings were more or less derived from my thoughts.”

After 10 years of being single, John married again in 1988 to a Korean-American woman named Tabitha Lee; they have a 7-month old baby.

John is now thinking seriously about getting back into the natural foods business, in the nutritional supplement market, with some very professional people. They are engaged in negotiations right now.

John believes that one should live without in any way coercing others, and that society should be governed by that principle. He feels that gratitude is one of the most important things in life.

“I believe any social movement is dangerous the moment it turns to political organization or organizations (hence coercion) to achieve its ends. The whole environmental/new-age movement has turned into a horror story. I think the environmental movement is one of the most dangerous forces on the earth right now. There is a very serious and long-term danger to the environment. But the environmental movement response will, I think, cause more pollution and environmental degradation because they call

for more and more government control and regulations. Yet bureaucrats generally don't care about the environment. I think Newt Gingrich and the Chamber of Commerce are just as dangerous in this regard as the environmental movement. Idealists often turn to coercive means, without understanding the social ramifications of coercion—which are horribly dangerous. For example, they want to force everybody to recycle. I also think the women's liberation movement is another very dangerous movement." There were and are very good reasons for concern by women about the way they have been traditionally treated, but their response has been really dangerous. "I am a strong libertarian. I don't even believe in voting. I think it's dangerous." Address: 555 Bryant St. #255, Palo Alto, California 94301. Phone: 415-853-1231.

2281. **Product Name:** Organic Tofu—Extra Firm, with Dulse.

Manufacturer's Name: Twin Oaks Community Foods.

Manufacturer's Address: Route 4, Box 169, Louisa, Virginia 23093. Phone: 703-894-4112.

Date of Introduction: 1994.

Ingredients: Water, organic soybeans, and natural nigari derived from sea water.

Wt/Vol., Packaging, Price: 16 oz.

How Stored: Refrigerated.

New Product—Documentation: Label sent by Jon Kessler. 1996. Jan. 29. "Twin Oaks Community Foods tofu is made by people who live and work together. We are a worker-owned cooperative that is dedicated to cooperation, equality, and non-violence. We take pride in producing this extremely satisfying, premium tofu." A small, round, purple and white sticker that reads "with Dulse" is affixed to the front panel. Another larger round sticker says "Virginia's Finest—Virginia Agriculture." The product is certified organically grown by VAFB in Charlottesville.

Talk with Jon Kessler. 1996. Feb. 9. Bean Mountain Natural Foods (in Weaverville, North Carolina) was one of the first companies in America to make tofu with dulse, and they were making this product when Jon bought their company. The dulse is mixed with the curds before pressing. Jon buys his nigari from Great Eastern Sun, who gets it from Mitoku.

2282. Oser, Marie. 1994. Luscious low-fat desserts. Montrose, Pennsylvania: Chariot Publishing, Inc. 124 p. Foreword by Scott W. Sanders, PhD. 21 cm. [18 ref]

• **Summary:** The many recipes in this vegan cookbook are low in fat (only 3 grams of fat per recipe), use no dairy products or eggs, and contain no cholesterol. Twenty-five attractive full-page color photos show the prepared recipes. The glossary of ingredients contains entries for the following soy ingredients:

"Lite silken tofu—a reduced-fat form of silken tofu. It is sold in aseptic packages in large supermarkets and natural

food stores. Lite silken tofu has 75% less fat than regular silken tofu and does not sacrifice flavor or texture."

"Silken Tofu—a smooth-textured, custard-like tofu that is sold in aseptic packages and is available in most supermarkets and natural food stores. Like regular tofu it is made from soybeans. Silken tofu is an effective egg substitute when used in ¼ cup tofu to one egg proportions. It is also available in soft, firm and extra firm consistencies. I prefer the extra firm consistency."

"Soy buttermilk—a good substitute for dairy buttermilk in baked goods. It is made by adding 2 tablespoons of lemon juice to 1 cup of soy milk."

"Soy milk lite—a reduced fat soy milk that is 1% fat. It is available in large supermarkets and natural food stores." Soy milk lite was first introduced in the USA in March 1990 as WestSoy Lite. Also in 1990 it was introduced in Australia as Sanitarium So Good Lite.

The glossary also defines "Rice milk" as "a delicious non-dairy beverage with a mildly sweet flavor that can be used in place of dairy milk and soy milk. The Rice Dream® brand is available in both original (plain) or vanilla flavors and contains 1% fat and no cholesterol."

It also defines the following sweeteners: Barley malt syrup, brown rice syrup, date sugar, FruitSource (made from grapes and grains), maple syrup, Mystic Lake fruit sweetener, natural applesauce, and Sucanat (granulated organic sugar cane juice).

At the listing for "Tofu" in the index, we are asked to "see lite silken tofu,"—which is used in 33 dessert recipes—including the following (listed alphabetically): Almond streusel cake. Apricot almond custard Austrian apple torte. Banana cream pie. Blueberry custard pie. Chocolate dream pie. Chocolate truffles. Classic pumpkin pie. Lemon yellow icing. Peaches 'n cream parfait. Raspberry banana mousse. Strawberry Nice Cream (creamy frozen dessert like ice cream).

In the introduction to the chapter on cakes, the author says: "One way I achieve a rich cake without eggs or dairy is to use lite silken tofu. Its creamy, custard-like consistency is perfect for replacing the eggs and milk found in traditional cakes. And its low-fat profile will keep you coming back for seconds.

A small color photo on the back cover shows Marie Oser, who has been a vegetarian since 1971. She left a career in TV advertising to pursue her interest in food and nutrition.

Note: The words "low-fat" are hyphenated on the cover but not on the title page. Address: Agoura Hills, California 91391. Phone: 818-707-7353.

• **Summary:** Contents: Introduction. 1. Economic development and agriculture in Cuba. 2. The crisis and emergence of a new model. 3. Management of insect pests, plant diseases and weeds. 4. Soil management: A key to the new model. 5. Mobilizing labor. 6. Generating and using knowledge. 7. Conclusion. Literature cited. Members of Fact-Finding Mission to Cuba (Nov. 1992).

Table 1, p. 10, gives comparative statistics on Cuba in 1989 before the collapse of the Socialist Bloc. Food and Health and Cuba's rank in Latin America: Daily calorie intake per capita #2. Daily protein intake per capita #4. Infant mortality #1 (lowest). Life expectancy #2. Doctors per person #1 (most doctors).

Education: Adult literacy #3 (92.4% vs. 95.7% for the USA). Secondary school enrollment #1 (85% vs. 99% for the USA). Teacher:pupil ratio #1 (21:1 vs. 24:1 for the USA). Percentage of university students who are women #1 (54% vs. 50% for the USA).

Economy, Agriculture, and Science: GNP per capita #3 (\$2,000 vs. \$19,840 for the USA). Grain yield #2. Population per scientist or engineer #1 (most scientists). Movie attendance per person per year (#1, 8.5 times). Theater attendance per person per year (#1 in the world, 2.6 times). Museum attendance per person per year (#1, 0.8 times). Physical Quality of Life Index—as evaluated by Overseas Development Council #1 (11th worldwide, USA is 15th). Address: 1. Entomologist and Agricultural Ecologist, Stanford Univ., Stanford, California; 2. Cofounder, Global Exchange, San Francisco, California.

2285. Shurtleff, William. 1995. *The contribution of Erewhon*

to the natural foods industry in America (Overview). *SoyaScan Notes*. Jan. 9. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Erewhon Trading Company was the key pioneering company in the U.S. natural foods industry. It played a major role in creating this new industry and for many years was the leader in new ideas, product development, and distribution. Even though Michio Kushi started Erewhon, Paul Hawken was the company's heart and soul, and the main visionary; If Michio had built Erewhon according to his vision, it would have ended up much more Japanese. Paul was the pioneer in conceiving the early structure of the natural foods industry. Most of the natural food stores were based on the country store motif of 342 Newbury St., and many of the early natural foods distributors were built on the same model as Erewhon with much the same product line.

Paul focused on developing organically grown foods, finding and training farmers to grow such foods, and making each a commercial reality for Erewhon. Address: Founder and Director, Soyfoods Center, Lafayette, California 94549. Phone: 510-283-2991.

2286. Tara, Bill. 1995. *Early work with Erewhon and natural foods (Interview)*. *SoyaScan Notes*. Jan. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bill Tara was born and raised in Santa Cruz, California. Bill and Paul Hawken were roommates in San Francisco, living in a studio in the warehouse district. Paul was single and Bill had a girlfriend named Renee. Bill and Paul worked together, doing light shows for rock and roll concerts. They also produced some concerts together. They began practicing macrobiotics together in San Francisco in about mid-1966. They learned about macrobiotics from Roger Hillyard (who was also doing light shows in San Francisco), who gave Paul the little yellow-covered book by George Ohsawa titled *Zen Macrobiotics*. Paul started following the diet as prescribed in the book in an attempt to cure his asthma. Bill became interested in macrobiotics at about the same time because he had always been interested in Eastern philosophy, but he had never realized that it might be applied to diet and food. Peter Milbury was also in San Francisco and interested in macrobiotics.

Paul left San Francisco in about mid-1967 to visit a rock and roll club in Washington, DC, for whom he was designing a light show. After that meeting, he went to Boston to meet with Michio Kushi. He was impressed, so he returned to San Francisco, settled his affairs, and moved to Boston. A month or so later, Bill and his girlfriend Renee also moved to Boston, where Bill began to work at the Erewhon retail store at 303-B Newbury Street (below street level).

In Nov. 1968, on Thanksgiving day, the Erewhon retail store moved up and across the street to a much bigger and nicer location at 342 Newbury St. The next day, after moving

the store and attending big party to celebrate the move, Bill left Boston for Chicago to start his next venture. Michio has asked Bill if he would like to go to Chicago to help set up a macrobiotic store and center. Several people in Chicago were already interested in macrobiotics—Vincent (a jeweler) and Lillian Barseviech (who later went to Boston and lived and cooked in the Kushi house for a long time). Bill found the idea to be interesting and it also gave me an opportunity to do a little teaching about macrobiotics, which was becoming his main interest. In downtown Chicago, several weeks after arriving (in December 1968) Bill opened a little macrobiotic food store, named the East West Center, on the tenth floor of an office building in the Loop. Vincent and Lillian had the space ready when Bill arrived with a stock of foods from Boston. He sold foods, gave lectures several nights a week, and organized potluck dinners. Later John Palumbo (a shiatsu practitioner, still works in Chicago as a shiatsu therapist) also starting giving some talks.

After about 9 months, in the autumn of 1969, Bill received a call from Aveline Kushi in Los Angeles, who asked him if he would go to Los Angeles to help her there. Again, he liked the idea so he moved to Los Angeles, taking up residence in the study house started by Aveline at 7511 Franklin Ave. He was soon at work starting another macrobiotic and natural foods retail store, called Erewhon—Los Angeles, at 8001 Beverly Blvd. He started the store because Aveline felt the need for a good place to buy macrobiotic food in Los Angeles—and because he was bored. Two students of macrobiotics, Don Honoroff and John Fountain, found the store location; they were two of the first students to live at Aveline’s study house. Bill did the carpentry and soon opened the store in about September 1969. In October Bruce Macdonald arrived from Boston and helped Bill finished construction, building a walk-in and build more shelves. Bruce took over as manager of the store almost immediately. Bill focused on building up a wholesale distribution company, driving food up and down the Pacific Coast. Since the store was not capitalized at all, Bill needed to sell food fast to pay the bills. Distribution began in about November 1969, as soon as they got their first drop shipment of natural foods from Japan. Paul Hawken, who was in Japan, arranged to have part of a container dropped in Los Angeles, then the rest shipped on to Boston. That was probably the first shipment that Paul supervised from Japan. The first food was wholesaled on a delivery basis. Bill got a pick-up truck and, as driver, began delivering to about 10 small natural food stores, often run by hippies, in Santa Barbara, San Luis Obispo. He sold the food out of the back of the truck—cash and carry. “Come out to the truck and look what we’ve got here.” Without knowing it, Bill had started America’s second natural foods distributing company—After Erewhon—Boston. Erewhon—Los Angeles also bought foods from Arrowhead Mills and a few sources in California. Bill also taught macrobiotic classes in the big living room of

Aveline’s study house. Other speakers included Jacques Delangre, Herman Aihara, and Teizo Okada (of Muso Shokuhin). Bill also taught some classes up the Pacific Coast, as in Santa Barbara (surfers had a little natural foods store) and San Francisco (at a house where Peter Milbury lived on the Panhandle). Bill taught things he had learned from Michio Kushi’s lectures and George Ohsawa’s books.

After about 9 months in Los Angeles, Bill returned to Boston and started to work at the Erewhon warehouse that was just about to open at 33 Farnsworth Street. He helped renovate the building. Other people who Bill worked with were Roger Hillyard, Wally Gorell, Jim Docker, and a guy named Richard (from New York) who eventually started Erewhon Farms. Erewhon Farms was composed of a group people who went back to the land near Keene, New Hampshire, started a sort of commune with a little natural foods retail store, and were growing produce (such as kabocha and daikon) organically for Erewhon. They struggled there for several years and then dispersed.

After Paul Hawken returned from Japan, he (and maybe Roger Hillyard) began to push for a stock option program in Erewhon for the people who had worked for the company for a long time, basically free of charge. Nik Amartseff was included in these talks, since he had brought in a lot of expertise. That is when the trouble started. Michio said, “We’ll work this out, but right now the company is willing to give all of you a kind of bonus. You can either decide to travel for a while at Erewhon’s expense, or you can take a cash payout.” Bill decided to travel, so Erewhon agreed to send him around the world, and to pay both his transportation and living expenses. That is when he made his first trip to Europe (including London), across the Middle East, and into India. He was supposed to collect information for the company on business opportunities in various countries, what products were available, etc. Address: Nova Healing Arts, 370 South 43rd St., Boulder, Colorado 80303. Phone: 303-499-7234.

2287. McFadden, Barclay. 1995. History of Llama, Toucan & Crow, Lama Trading Co., and Stow Mills (Interview). *SoyaScan Notes*. Jan. 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Llama was started Jan. 1973 by Bob Swanson as a little nameless natural food distributor in the basement of The Good Life, a natural food retail store in Brattleboro, Vermont. Swanson was employed as a clerk at the Good Life. The distribution operation started because The Good Life found it difficult to get good natural foods as far north as Brattleboro; Balanced Foods was the only distributor of any consequence in the area at the time, and their service was irregular, their products were expensive, and they carried more pills than foods. Swanson would drive his pickup down to New York and buy foods from a distributor named Motel (run by a man named Lenny). Soon other natural food

stores learned of Swanson's activities, contacted him, and he began buying for those stores as well as for The Good Life. Soon Swanson's natural foods distribution business outgrew the basement of The Good Life, so in 1974 he moved his operations into a small building in Greenfield, Massachusetts, located about 20 miles south of Brattleboro.

Bob Swanson, Howard Rower, and one other person [George Hannides, pronounced HAN-uh-dees], had all put money or sweat equity into the company as it was getting started. They were having a difficult time agreeing on a name. Barclay has heard that when they couldn't come to an agreement, they each decided to choose their favorite animal. Barclay thinks that Swanson chose the llama, he would bet that Rower chose the crow, and the third person must have chosen the toucan. So the company was named Llama, Toucan & Crow. In 1975 the company moved back to Brattleboro, where they bought an old 5-story frame building at 21 Frost St. The building was a logistical disaster, and it was not the same building that Bob Swanson had occupied prior to moving to Greenfield. They had their own flour mill.

In late 1975 and early 1976 the company got into financial difficulty. In May 1976 Barclay bought 95% of the business from Swanson, Rower, Petty Perry (the former owner of the Good Life), and many small shareholders. Some of the original shareholders kept the remaining 5% of the stock, but Barclay bought them out 7-8 years later. Barclay acquired Llama immediately after graduating from the Business School at the University of Virginia. He had some experience in the food business while working for Distribuco, an institutional food service distributor in California. He also spent a year in the cotton business.

One of the first things Barclay did after becoming the majority shareholder was to change the company name to Llama Trading Company.

In 1976 Jane McFadden, Barclay's wife, opened a natural food store named Llama, Toucan & Crow in downtown Brattleboro, Vermont, but it had no financial connection with the wholesale distributing company which had formerly had the same name. Nor was Jane ever actively involved with Barclay's distributing company.

In the spring of 1977 Barclay moved his distributing company to 33 Riddell St. in Greenfield because that was the only building he could find in the area that was suitable, i.e. that was large enough, that the company could afford, and that was located reasonably close to where the company's employees lived. The company stayed in Greenfield for a few years, but then outgrew their building.

In 1979 Bill Miller decided to sell Stow Mills. The company was an old-line pill distributor that was started in 1969. Since Stow had a large share of the food supplement business in the region and Llama carried almost exclusively food products, Barclay thought that a merger would make a lot of sense. He knew he could hold onto his natural food customers, but he was not sure he could hold onto Stow's

pill customers, so he decided to keep the Stow Mills name for the company formed by the merger, even though Llama bought Stow. Richard Youngman had joined Barclay as a shareholder at the time they bought Stow Mills; Richard is still a shareholder.

In 1980 the new Stow Mills moved back to Brattleboro, Vermont, relocating on Quinn Road. In 1981, after Erewhon declared bankruptcy, Stow Mills purchased Erewhon's inventory plus a little extra for good will for less than \$100,000. Stow Mills picked up most of Erewhon's natural foods store accounts. In about 1984 Stow Mills bought (at a liquidation) the remains of New England Health Foods, a distributor that had started in about 1979. In 1986 Stow bought New England Organic Produce from Gene Fialkoff. In 1988 Stow moved from Brattleboro to Chesterfield, New Hampshire (relocating on Stow Drive). In 1991 Stow bought Beautiful Foods, a distributor in Philadelphia.

During these years, about 70-80% of the company's growth has been internal and the remainder has been as a result of acquisitions. In the summer of 1993 Stow opened a new facility (a distribution warehouse plus offices) near Gettysburg, Pennsylvania.

Today Stow is primarily a natural food distributor, with about 85% of their sales being of natural foods, and with most of the rest of being supplements. Stow is the second largest natural foods distributor in America, after Tree of Life. Stow and Tree (through Balanced Foods, which is owned by Tree) are strong competitors in New England, the Northeast, and the Mid-Atlantic regions.

Barclay does not know how to contact Bob Swanson. Address: CEO, Stow Mills, Inc., P.O. Box 301, Stow Dr., Chesterfield Corp. Park, Chesterfield, New Hampshire 03443. Phone: 603-256-3000.

2288. Rower, Howard. 1995. History of The Infinity Company and Infinity Foods. Part I (Interview). *SoyaScan Notes*. Jan. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Howard grew up in a Jewish family in Boston, Massachusetts. In about 1964 or 1965 he got interested in macrobiotics. John Hammond, his next door neighbor and a blues singer, was involved in macrobiotics and he told Howard about it one day. So Howard went to the Ohsawa Foundation in New York City, which was run by Irma Paule in those days. He bought some groceries from her and began practicing macrobiotics. George Ohsawa came to New York in 1965 for a summer camp (See Kotzsch 1985, p. 137) and Howard met him. "Ohsawa said he was looking for a guy like me and he wanted me to grow rice in New York state. I found out that was a pretty impossible task so I asked him to pick something easier. He said 'Okay, grow kuzu.' I said, 'Okay, when you get back to Japan, send me some kuzu plants.' And he said, 'Oh no. That's not the Zen way. The Zen way is for you to do it yourself, now.' I spent about

6 months finding out what a kuzu plant was. Finally I got some old agricultural bulletins that described how good kuzu was, then later described how bad it was. I finally managed to find somebody in the South who dug up some kuzu in the winter and sent it to me. I grew it in my garden in New York. The next year when Ohsawa came, I sat him down under this huge kuzu vine, like an arbor, at the back of my house. I said 'There's the kuzu you wanted.' I took some of the kuzu roots and actually extracted kuzu from them and put it in a test tube. I showed it to Ohsawa, told him it was the first kuzu ever extracted in New York, and gave him the test tube. He was astonished and delighted. He said, 'Now we have to begin to work. I knew I was right. You *are* the man I'm looking for. You must begin to import macrobiotic food products from Japan at once. I will ship them to you.' So we started this relationship and in 1965 I began importing foods from Ohsawa in 1965. He used to send me tamari [soy sauce] and miso in beautiful little 18-liter wooden kegs, tied with rope." Howard sold these products to health food stores and to Michio Kushi.

Also during 1965 Howard read a book about grain and he got very interested in freshly-ground flour. A grain of wheat is alive, but as soon as you mill it, it dies. After 5 days the taste and nutritional value have both declined. So people should mill flour, then keep it refrigerated, and use it as soon as possible. So Howard bought a little home flour mill, and set it up in his house. He ground some wheat flour, his wife made some bread, and they really liked the bread. They served the bread to friends who came to dinner, then they wanted fresh flour, so he made flour for them. Pretty soon he was delivering flour to people, then a health food store wanted to sell it, so he had a label made, even though he didn't have a company name at all. So he threw the *I-Ching* to help him choose a name. The hexagram was "Perseverance Furthers." He was going to name the company "Thomas J. Perseverance" so it would sound like a real person. His brother, who was visiting at the time, said "That's a stupid name. You might as well call it Infinity if you're going to have a dumb name." Howard liked the name Infinity, and decided to name his company The Infinity Co. However, later he did have some labels printed on which Perseverance Foods was the company name—just for fun. He once had a lawyer named Bill Pratt, so he sold "William Pratt Old Barrister" brand honey. One of his children pinched his thumb in the flour mill at home and his wife became concerned that a more serious injury could happen. Moreover everything in the house began to dusted with a thin layer of flour.

Howard started The Infinity Company in about 1965 at 188 Duane Street in New York, in the lower Manhattan neighborhood named Tribeca. It distributed, imported, and manufactured natural foods. George Hannides (pronounced HAN-uh-dees) came to work with him, and he later became a minor working partner.

Howard had a friend who practiced karate in a loft at 188 Duane Street, and his landlord gave Howard a small space that had a desk in it on another floor of the same building. So Howard moved in his mill and started doing business as The Infinity Company. Within 2-4 years Howard incorporated the company and changed the name to The Infinity Food Company. Then the health food stores began asking Howard to make other kinds of fresh flour, such as rye flour or corn meal. He did, and soon the product line had expanded to 250 different products. Eventually he had two 30-inch flour mills plus a 24-inch mill and some little 8-inch ones. He had a room full of mills, and milling was a large part of Infinity's manufacturing business. In addition, at one point, the company was getting truckloads of dried fruit and of fruit juices from California, plus jams and jellies made without sugar from the City of Industry, California.

"Michio Kushi was operating out of a house on Harvard Square in Cambridge. He was selling groceries in the hallway. He had started out in New York, then he ran into some kind of terrible financial trouble. He fled to Cambridge to avoid his creditors. His wife, Aveline, ran the business and he was the guru. In the early days, Michio was Erewhon's biggest asset. He used to go around and lecture, then people would say 'Where can we get this food,' and he'd say 'Go to Erewhon.'" Howard is not sure whether or not he ever sold products to Erewhon in the early days. Howard is not sure whether or not he began importing foods before Erewhon. "Erewhon didn't have any kind of an operation going on when I had my warehouse. They became important later. In the beginning, they may have been getting some products from Ohsawa in Japan at the same time I was. Erewhon was located in the Kushi house in Cambridge, where a few of the real loyal macrobiotics lived with the Kushis and helped to pay the rent. They had sort of a grocery display in the hall, and they sold some foods. In the early days, Erewhon bought miso, tamari and other typical macrobiotic products from Infinity." Continued. Address: 84 MacDougal St., New York, NY 10012. Phone: 212-982-3620.

2289. Rower, Howard. 1995. History of Llama, Toucan & Crow and its relationship to The Infinity Food Company, Inc. (Interview). *SoyaScan Notes*. Jan. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In about 1965 Howard started The Infinity Food Company in New York City, as a distributor of macrobiotic and natural foods. "My totem animal is the crow. I've always been a crow, since I was a tiny child. Everyone knows what animal they are with hardly any reflection." A guy named Bob Swanson showed up one day when Infinity was located at 173 Duane St. Swanson came from the mountains, and he was a llama. He told us that he had friends who had natural or health food stores up in the north. "When they want your food, they either have to come and see you, or you have to ship to them, and the whole thing is a pain in the neck for

them. So I want to distribute to them, but I have no money, yet a lot of energy. Can we work something out? Will you give me a break in the price.”

“I asked him what animal he was and he said he was a llama. Then I introduced him to my partner, George Hannides (pronounced HAN-uh-dees), who was a toucan; he has a great nose and he’s really proud of it. So we said, “All right, let’s go partners. We’ll set something up. We rented a truck, formed a company named Llama, Toucan & Crow, and put up \$2,000. Each of the three of us put up \$600 and the Infinity Company put up \$200; that’s how we divided the stock. Swanson called up all these health food stores in an area that he thought he could reach, and got orders from them. We gave him (and only him) a 5% discount off our catalog price, the price paid by the retail stores. He charged the stores he sold to our catalog price plus 5 cents a pound. For \$2,000 we rented a truck and got a telephone so that he could operate out of the cellar of The Good Life. Bob would come to New York City once a week with the truck, fill it up, then deliver the foods. We three were sworn to secrecy about the price break we were giving him. Then he went to Mottel Sugar and Baking, told Mottel that he had started a little company, and asked if he could buy at 5% off Mottel’s catalog price. Mottel said ‘sure.’ But if Mottel had ever known that we at Infinity owned the company with him he never would have done it, because we were competitors with Mottel. There was an interesting guy named Mottel—that was his first name (Mottel is apparently Jewish for Morris) and everybody called him Mottel—in the pushcart days in the lower East Side. But his real name was Morris Marks. He came to America early in this century. I knew him from when he was 80 until he was almost 90 years old. Mottel had a son named Jack Marks (who was somewhat mentally retarded and ne’er-do-well) and a son-in-law named Lennie. Mottel brought Lennie (a licensed electrician) into his big, profitable business to run it. Mottel worked hard every day. He was under 5 feet tall and he was really skinny. He would point at you with his forefinger when he was talking and to emphasize what he was saying he would hit you in the chest with his outstretched finger, bam, bam, bam, until it would begin to hurt. People really feared him. Moreover, he would never give credit to buyers, but required cash payment on the spot. He used to say. “I went to fart the other day and shit in my pants. If I can’t trust my asshole, I can’t trust you. You don’t get any credit.” Imagine an 80-year old man saying this to you with a Russian accent while poking you with his finger.

Then Bob went to Bazzini, a manufacturer and distributor who specialized in nuts and nut butters, and Bazzini gave him the same deal. He also went to the Cabot Vermont Cheese Cooperative and he bought cheese, which he then sold in New York.

Swanson worked for a few months at The Good Life, then he rented a warehouse in Brattleboro, then he moved

Llama to a bigger warehouse in Greenfield, Massachusetts. The company began to accumulate an inventory after a while. Other people gave them credit then they did a couple of really sharp deals with trucks. Lennie sold two old trucks to Swanson, then Swanson used them as down payment on brand new trucks, but they kept the refrigerated bodies and put them on brand new chassis. Within 1-2 years of its founding, Llama had refrigerated distribution. They began distributing farther and farther west.

Howard did not pay attention to the details of Llama’s operations in Massachusetts and Vermont because he was busy in New York City running Infinity. Besides, it was a secret; no one knew Howard was a stockholder in Llama. Everyone thought Bob Swanson was the sole owner. Llama moved back to Brattleboro into an old wooden book distributors warehouse; he thinks it later burned down. Then there was a big strike within Llama. The workers felt that they should own the company. A guy named Morgan was the head communist. Swanson couldn’t take it when all his buddies, these commune hippies, rose up against him. He disappeared, then he came back and resigned. Suddenly Howard became the chairman of the board of Llama. “George and I put down the strike and sold Llama to Barclay McFadden, who had a little money that he had inherited. He wanted to run the company, and felt he could, and by then George and I had had enough.” Howard was not aware that there were other shareholders in Llama besides himself, George, and Bob. After selling his shares for a reasonable sum, Howard lost track of the history of Llama. Address: 84 MacDougal St., New York, NY 10012. Phone: 212-982-3620.

2290. Rower, Howard. 1995. History of The Infinity Company and Infinity Foods. Part II (Interview). *SoyaScan Notes*. Jan. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** “A Rabbi came and inspected, and we had a kosher seal on everything, because there were Hassidics who wanted to become macrobiotic and couldn’t eat our food unless it was certified by a Rabbi—who we paid \$500 a year.” As he spent time with owners of health food stores, he became interested in organically grown foods. Then he began importing—peanut butter in 500 lb pails from Argentina because the peanuts there were grown without any chemicals.

Within the first two years Jason Hammond, John Hammond’s younger brother, began to work for Howard. John Hammond also worked with Howard for a while, milling flour. The company grew very quickly. So Infinity was moved from 188 Duane St. to 171 Duane St., then to 173 Duane St., and finally in about 1974 to a 30,000 square foot warehouse 157 Hudson St. By this time Infinity was a big macrobiotic and natural food distribution company.

In April 1966 George Ohsawa died. Shortly thereafter

Howard went to Japan. He found that Ohsawa did not own or control any companies. “He just went around to traditional Japanese food manufacturers whose methods he liked, he bought the foods and just re-sold them to me.” Mitoku and Muso still operate this way, as trading companies. So Howard traveled around to visit various food producers, made contracts with them, and began importing directly from them.

In about 1967 Bob Kennedy from Chico-San in California came to New York and offered to buy Infinity Foods. “He felt we were a threat to each other. He feared me as a competitor and wanted to eliminate me. Erewhon wasn’t that big yet; they only started in April 1966.

In 1968 Howard got involved with scientology and “that just destroyed my life. It was also the downfall of Infinity Foods. It took all of my energy, and eventually I had no energy left to run my company. So in about 1976, the year the company had its largest sales ever, I just went out of business. I declared bankruptcy and closed the doors. It was the saddest day in my whole life. It was horrible. George Hannides’ doctor told him that if he kept working at Infinity his wife would soon be a widow, so he left, exhausted from the stress, and started selling restaurant equipment. And Jason Hammond was in the army by then. I still have scars from that. My whole family does. It’s a terrible and scary thing. You just have to really be careful.”

Howard didn’t even try to sell his growing company which was in a growing industry. “When one is half crazed from being part of a religious cult, one isn’t really sane. I wasn’t trying to get out. I was trying to focus on straightening my life out when actually my life was already straightened out. It was a terrible trap. In the end I had to choose between scientology and Infinity, my company, and I chose the wrong thing. I lost it. It’s really sad. I feel like I’ve always been in a hole, and always climbing out of the same hole. I’m just like anybody else. I just lead my life. I just keep trying to move forward.”

Howard describes himself as a “pack rat” and a Gemini. He has an entire warehouse full of “stuff,” including documents, including some early catalogs from Infinity. Howard now owns and manages real estate in lower Manhattan, and he raises beef cattle on a big ranch (1½ million acres) in Central Australia. He had a gallery in Soho where he sold Australian aboriginal art; he closed it 3 months ago but he plans to re-open it soon in Tribeca. Long after he closed Infinity, Howard spent time in Australia with aboriginal people, and he has been adopted by an aboriginal family. Now he rarely goes to his offices any more. He now runs his businesses mostly from his home at 84 MacDougal St. in Greenwich Village by talking with secretaries by phone. Address: 84 MacDougal St., New York, NY 10012. Phone: 212-982-3620.

2291. Bolduc, Bill. 1995. Work with natural foods in

California, including Erewhon (Interview). *SoyaScan Notes*. Jan. 23. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** Bill left Eden Foods in 1973. Then he spent some time in India, where his spiritual teacher, Muktananda, had an ashram in Ganeshpuri. Shortly after returning to America, he helped a fellow from Ann Arbor, Michigan, start an business importing products (such as incense) from India to be sold at Muktananda’s ashrams around America.

Then he was contacted by John Deming, who asked him to help build, open, and manage his state-of-the art natural foods store in Santa Ana, California, about 30 miles southeast of Los Angeles. Bill moved to California in 1 Oct. 1976 to begin work on renovating the inside of the building, which was part of a small shopping mall named South Coast Village. He and his wife flew to California and rented a house nearby. The interior of the store was gorgeous, with custom bulk bins built specially for the store, etc. Bill hired the staff and the store (named something like Erewhon Natural Foods) opened in Jan. 1977. As manager, Bill was responsible for making the store profitable. By about Feb. or March 1977, Bill had mapped out an entire solid advertising and promotional program, with sales projections and all. He asked Deming how much money he could spend on advertising. Deming said he was sorry but had no money to spend, not even for printing leaflets to distribute by hand. Bolduc quit on the spot. He had no idea of the other financial problems related to Erewhon–Los Angeles that Deming was facing at the time.

After leaving Deming’s store, Bill did a few odd projects, then in about August 1977 was hired on a project basis to help Phil Parente / Parenti to ease out of Pure & Simple in San Jose–after Roger Hillyard quit. He worked in and around a huge warehouse in San Jose; there was still a sprouting operation and they made nut butters. All of the operations staff left San Jose in Dec. 1977 so no shipments were made after that, but the accounting staff stayed as the business was being closed.

After that Bill was hired as marketing manager by Larry Brucia at Marin Foods. He had an office in San Rafael and commuted to the store across the San Rafael bridge. Bill worked at this job for several years, then he had to move back to Cincinnati with his two boys (of which he had custody). Address: Owner, 4015 Cherry St., Cincinnati, Ohio 45223. Phone: 1-800-514-3683.

2292. Silver, Jimmy. 1995. Purchase of the Erewhon and Pure & Simple brand names from John Deming (Interview). *SoyaScan Notes*. Jan. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** From the day that Jimmy began to work for Erewhon–Los Angeles in 1976, he always believed that John Fountain owned the company and that John Deming was only an investor. “For years, John Fountain ran that company into the ground. I have no idea why Deming wasn’t paying

attention to what was happening. Then Deming showed up and said to me ‘Listen, this company really belongs to me, and I need to know what you think about what’s happening.’ I told him, then he said ‘I’m going to get rid of Fountain and I really need to have you stay. It’s going to be a great opportunity for you.’ But when he found out what was really happening, and there was going to be work involved, he became somewhat dismayed by the whole thing. It was totally bizarre.”

So Jimmy stayed on and worked for John Deming, who sacked John Fountain in late 1978 or early 1979. Jimmy then hired Jeffrey Hilgert. In early 1980, Jeffrey negotiated with Shade Foods (a maker of yogurt toppings in Belmont, California) for Erewhon–Los Angeles to buy the Pure & Simple name, plus a few jam products, from Shade. No physical assets were purchased. Payments were made over a period of several years.

Jimmy had recommended to John Fountain that Erewhon–Los Angeles be converted from a wholesale distributor to a master distributor of branded products that were sold nationally. When John Deming came in, he liked the idea and told Jimmy to make the change. So Jimmy arranged for K&L, Nature’s Best, and many other distributors to take on the line of products that Erewhon–Los Angeles had formerly distributed for itself. The Erewhon–Los Angeles warehouse and offices were moved from Vernon to Santa Ana, California. The Santa Ana warehouse was much smaller—no more than 8,000 square feet. It housed only the imported Japanese products and Johnson’s Spaghetti Sauce.

When Jimmy and Jeff Hilgert bought Erewhon–Los Angeles from John Deming in mid-1980, they basically wanted the right to use two names: Pure & Simple, and Erewhon. Erewhon–Los Angeles was a very small company, with sales of only about \$35,000 a month at the time, and there were large debts which Silver and Hilgert agreed to pay off for Deming. “He said, ‘I have to have this amount of money’—which was a ridiculous sum. He should have just given us the company and walked away. It wasn’t really worth anything, except that it had these two valuable names—if it could control them.

“John presumably had an agreement with Michio Kushi which allowed him to use the name Erewhon in exchange for paying royalties—a percentage of the sales of the business—to Michio. This is what all the subsequent problems hinged on. After Erewhon went bankrupt, they informed John (without our knowing it) that they were going to require us to stop using the Erewhon name—because we had no right to it, because Deming had never executed the appropriate documents with Michio and wasn’t paying Michio any royalties. The agreement that John had told us he had with Michio—that he had sold us—did not exist! By the time we discovered this, we had already paid him something like \$80,000 to \$100,000. I didn’t find out until much later that

Erewhon notified him that they were going to withdraw the use of the name from him. At that point, John came to us and said ‘Look, you still owe me several hundred thousand dollars for the business, but I’d like to accelerate the payments because I really need cash, and in exchange I’ll reduce the amount of money you owe me to \$250,000.’ He wanted us to pay the balance due over 6 months rather than over something like 5 or 10 years. So we began accelerating the payments. He knew that both he and we would be sued by Erewhon, but we didn’t know it. After we had paid him \$180,000 of the \$250,000, Erewhon sued us. We went to John and asked him to defend us against the Erewhon suit since we still believed he had this agreement with Michio. Even though we had paid him \$180,000 and were in the process of paying the rest, he refused to defend us. He told us it was our problem, that he didn’t think it was a productive use of money, and that he thought he thought we should just walk away from it. So Jimmy hired a lawyer to defend himself, and asked John to produce a copy of his signed contract with Michio. I guess we neglected to scrutinize his agreement with Michio at the beginning because we trusted him and he had been using the Erewhon name for years. John did show us a copy of a written agreement at the time we made the deal, but the agreement had time frames on it, and it had to be renewed and renegotiated, and he said he was in the process of doing that. I learned a lot from this experience, but the tuition was high.

“In June 1980 we signed the agreement to purchase Erewhon–Los Angeles from John Deming, then we renamed it Pure Sales, which had two major lines of branded products: Erewhon, and Pure & Simple—plus Johnson’s Spaghetti Sauce. At the same time we were paying Deming, we were also paying Shade Foods for rights to use the Pure & Simple name. We took Deming’s business from \$35,000 sales a month to about \$350,000 a month within about a year.

Concerning names: Erewhon–Los Angeles had been a natural foods distribution company in Vernon, California, run by John Fountain. There was a time when Jimmy used both the names Erewhon–Los Angeles and Erewhon West, then Erewhon West took precedence as a name when the company became a master distributor of branded products and its products began to be distributed nationwide. The name change took place before Erewhon–Boston declared bankruptcy.

“After Erewhon refused to allow us to use the Erewhon name, we had to come up with a new name and re-label all our products in 90 days at a cost of something like \$50,000 to \$90,000. I called the pasta “Johnson’s” and the tamari So’ Tamari, So’ Pasta, etc.” John had had his lawyer, Fred Marks, write several very specific sentences into the agreement describing the conditions under which we would not have to pay John. There was a hearing in Boston, Massachusetts, and we had to go before a bankruptcy judge there. When we lost the lawsuit, because there was no valid agreement

between Deming and Kushi, our lawyer asked the judge to issue the order in the language that Deming's lawyer had written into our contract. And he did and the judge did. We got a court order losing to Erewhon but it was worded in John's lawyer's language. So we went back to John and said 'We're not going to pay you for the balance due.' We told him we thought he should pay back the \$180,000 we had already paid. He refused. After a month or two he sued us for the \$50,000. So we counter-sued him for everything that we had paid him plus our costs of relabeling—a total of about \$250,000 to \$350,000. John came to us and said that he would drop his suit if we would drop ours. We did not pursue our case because we wanted to focus on our booming business and we did not have the resources to prosecute a lawsuit—nor were we willing to go through the emotional energy drain. So we walked away from it. John had lots of money and for him the whole thing was like a monopoly game. Address: President, Pure Sales, P.O. Box 5116, Irvine, California 92716-5116. Phone: 714-540-5455.

2293. Oates, Bill. 1995. History of The Good Life, and Llama, Toucan & Crow (Interview). *SoyaScan Notes*. Jan. 25. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** It was Bill's idea to start The Good Life, which opened in March 1971 as a natural food retail store at 80 Main Street in Brattleboro, Vermont. Brattleboro was a very active center of the counterculture in the late 1960s and 1970s. In 1964-65 he had lived in Indonesia, where he was doing research for his PhD dissertation on a peasant revolt in West Java, and he grew to be very fond of tempeh. Back in the USA, he entered academia at Lyndon State College in Lyndon, Vermont, teaching Chinese and Southeast Asian History during the Vietnam War. Bill was partners in The Good Life with Peter Strong and Patricia Perry. Bill and Peter were hippies at the time. Peter, who had been a student of Bill's, had worked with David Hatch, who owned and ran Hatch's, in Saint Johnsbury, Vermont. Hatch's may have been the earliest natural food store in Vermont; they did not carry supplements. For a while Peter Strong ran Hatch's.

When the three partners opened The Good Life in March 1971 they sort of used Hatch's as a model. Many of their original employees came from the Total Loss Farm Commune at Packer's Corners in Halifax, Vermont. The commune still exists (they used to make many baked goods for The Good Life), and a book was written about the group. There were some problems in getting good quality natural foods. The Good Life didn't carry vitamins or supplements. Like Hatch's, they would buy some foods from Erewhon in Boston, Massachusetts (Paul Hawken served as a wise advisor for them), and they would also drive a van farther south to New York City, where they would buy from Richter Brothers, Bazzini Nut Co. and others. In New York they would go to Chinatown and buy tofu from a Chinese manufacturer on Mott St. [probably Fong-On]. Prices of

some goods were lower in New York City, Erewhon didn't carry everything, and "frankly they were very disorganized as a business. Paul Hawken was more of a thinker than a manager—a fascinating person." They were buying hard red winter wheat (organically grown) from Ted Whitmer in Montana. They would pay 8-9 cents a pound for the wheat plus 7 cents a pound to have it shipped to Vermont. Ted Whitmer said that if they bought a truckload of 40,000 lb, they could have it shipped on a back-shipment under an exemption for agricultural products; the ICC was still setting rates for freight shipments. So The Good Life took the plunge and in June or July of 1971 bought a 40,000 lb shipment of winter wheat from Whitmer, and paid only 2¼ cents per pound to have it shipped to Brattleboro. So the cost delivered to their store was about 11¼ cents per pound—a great price, compared with the 19-20 cents per pound they would have to pay for Deaf Smith organic wheat from Erewhon [purchased by Erewhon from Arrowhead Mills in Texas]. Ted Whitmer gave The Good Life his list of all his wheat customers (about 25, including a nunnery and some co-ops) in the New England area to help his customers reduce freight costs. So The Good Life contacted all of Ted's customers and started selling their organic wheat to other food stores and groups for 14-15 cents per pound. Most of the stores picked up the orders of wheat at The Good Life, but some of it was delivered to the stores. All the wheat was sold within a month. The origin of Llama, Toucan & Crow can be traced directly to this shipment of wheat. Bob Swanson joined The Good Life as an employee after the first big shipment of wheat, and he used to do a lot of the driving. By the second year, the Good Life contracted with Ted Whitmer to buy 500,000 lb of his wheat, with payment in advance.

Since The Good Life was selling wheat to a growing number of stores, they wanted to buy other foods as well. They drove to New York and picked up several thousand pounds of food each week at special discounted prices, as the retail store thrived. They began to sell some of this food from New York at wholesale prices to customers who purchased wholesale wheat. So they soon found themselves in the wholesale business, and by early 1972 they were delivering foods at wholesale to more than 5 accounts. Then they discovered that the commodities law that enabled them to ship large amounts wheat inexpensively from Montana, would also allow them to ship other foods, such as dried fruits from California, at ridiculously low prices. So they put together a 40,000 lb shipment of dried fruits from California, consisting mostly of dried organic dates, then used organic raisins and other fruits to make a total of 40,000 lb. Now they were really in the wholesale business. Bob Swanson's job expanded from just delivering the food to taking the orders and ordering the food. By the end of 1972, The Good Life found itself with a thriving wholesale business, doing about \$3,000 to \$4,000 a week—about the same as the retail

store. They were making two delivery runs a week, one north to Vermont and New Hampshire, and one south to Connecticut and Massachusetts. And people still came to The Good Life to pick up their supplies—at excellent prices. The tail was now wagging the dog. By this time Peter had gone off to Nepal—to discover himself. Patricia and Bill were running the retail store, which had always carried, in addition to natural foods, imported cheese and wines. They sold no vitamins until many years later. Bill and Patricia decided that, as from the outset, they wanted to be in the retail store business, so they said to Bob Swanson, “If you want this wholesale business, it’s yours, free of charge.” Why free of charge? “It was right, and it was the right thing to do. You’ve got to remember, this was the early 1970s.”

Bob accepted their offer, and in Jan. 1971 he began running the business out of the cellar of The Good Life for several months, until he located a very tumble-down warehouse facility for his new company in Brattleboro, at 21 Frost Street. The building has since been demolished. It had been owned by DeWitt Beverage Company, a beer distributor, and Swanson’s business occupied only one floor of about 5 floors. Swanson operated out of this location for about 8-9 months, then he moved the company down to Greenfield.

Bill has no idea how to contact Bob Swanson now; later Bob went to his home town in Woodbury, Connecticut, where he helped a friend run a natural food store. Then he may have moved to Colorado. Peter Strong, who is now somewhere in Texas, might know how to reach Swanson.

When Barclay McFadden purchased Llama, Toucan & Crow, he had no background in the natural food business. Bill thinks that he was in the military, perhaps either a career officer or he may have been a graduate of West Point.

Bill and his wife now have a consulting company that works with country inns and bed-and-breakfasts in Vermont—mainly helping them to get started or to buy. Address: Box 1162, Brattleboro, Vermont 05302. Phone: 802-254-5931.

2294. Mountain Ark Trading Company. 1995. Mountain Ark Trader [Mail order catalog]. Fayetteville, Arkansas. 70 p. 28 cm.

• **Summary:** By Jan. 1995 this catalog has a glossy cover, is 70 pages long, and 8½ by 11 inches in size. Address: P.O. Box 3170, Fayetteville, Arkansas 72702. Phone: 1-800-643-8909.

2295. Westbrae Natural Foods. 1995. Only Westbrae... No other brand has 100% organic non dairy beverage (Ad). *Vegetarian Times*. Jan. p. 7.

• **Summary:** This full-page color ad shows the front of a large carton of WestSoy 100% Organic Non Dairy Beverage (Original, only 2% fat), with a convenient new pour spout. It also has a free book offer: Buy 4 quarts of WestSoy and get a free copy of *Earl Mindell’s Soy Miracle*. A photo shows Earl

Mindell. “Find out how phytochemicals like isoflavones, that help protect plants from disease, may also help prevent chronic illnesses in humans. These same isoflavones, particularly genistein, are found in abundance in soy.”

This ad also appeared in the March 1995 issue (p. 7) of this magazine. Address: P.O. Box 48006, Gardena, California 90248.

2296. Montanaro, Pamela. 1995. Revolutionary developments with soymilk in Cuba. Part I (Interview). *SoyaScan Notes*. Feb. 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Cuba now has at least 15 factories in operation that make a soy yogurt drink for children. The goal is to have 37 factories in operation by the end of 1995. Leaders of the project believe these 37 factories will be sufficient to provide at least 2 liters per week of soy yogurt drink to all Cuban children ages 7 to 14. Given that the population of Cuba is about 11 million and 23% of the population is under the age of 15, there are roughly 1.1 million kids eligible to receive free soymilk. So Cuba plans to be producing about 2.2 million liters of soymilk a week by the end of 1995. Amazing!

Pam coordinates the Freedom to Travel Campaign for Global Exchange (based in San Francisco). They had decided to do a trip to Cuba during the first week in October, 1994, where the itinerary was focused on projects related to sustainable development—such as organic agriculture, alternative energy, alternative medicine, the bicycle revolution, etc. The trip would also be a “Travel Challenge,” since the U.S. government presently prohibits most Americans from traveling to Cuba, and from investing in or spending U.S. dollars in Cuba. In 1962 the U.S. imposed an export embargo against Cuba, severely damaging the economy. This unilateral embargo, which is still in effect, prohibits even the export of food or medicine from the USA to Cuba. Stiffer trade sanctions enacted by the U.S. in 1992 made things even worse. The only other country that has consistently voted with the USA at the United Nations in favor of this embargo is Israel—and Israel is now operating the largest citrus plantation in the world in Cuba, and also benefitting greatly from investments in Cuban textiles, etc. for export. The “Travel Challenge” is designed to expose U.S. anti-Cuba policies and invite public debate in the USA about their usefulness. The Soy Cubano! project is part of a larger campaign to get food and medicine exempted from the U.S. trade embargo against Cuba. Pam recently met with the staff of Senator Paul Simon (Democrat from Illinois) who is about to introduce a bill that would exempt food and medicine from all U.S. embargoes.

While on this trip in Oct. 1994, Pam met and had a long talk with Dr. Alberto Ortega-Jhones, who is head of Cuba’s new soyfoods research project (Address: *Instituto de Investigaciones para la Industria Alimenticia*, Carreterra al

Guatal, Km. 3½, La Lisa, Havana, Cuba. Phone: 29-9110). Dr. Ortega is a Cuban-born national in his late 40s or early 50s; Pam found him to be “so moving, kind of like a saint in my eyes, very sweet and modest.” One of the vice-directors at the Cuban Food Research Institute in Havana, he was involved for several decades in dairy food research. He was an expert in the subject, studied all over the world, and speaks very good English. He said that since the “Special Period” of austerity started in 1989, production of cow’s milk has been cut to about 20% of what it used to be. To provide an alternative protein drink, the Cuban Ministry of Agriculture made soyfoods a priority, and started to seriously divert resources into the soy yogurt drink project. By May 1994 Dr. Ortega’s project developed soymilk technology and a recipe that was efficient to produce and that Cuban children liked. Dr. Ortega said he believed that “soy protein is the protein of the future” and he feels the Cuban soymilk project and its technology could serve as a model for Third World countries.

Cuba has about 100 factories across the country that produce dairy products. Dr. Ortega was one of the leaders involved in setting up these plants and in launching the program that has provided one liter of cow’s milk per day on the ration to every Cuban child between the ages of 7 and 14. This milk went to families, not to schools, so that family members could share the milk if desired. People 65 and over also got a liter a day.

From Dr. Ortega, Pam learned that Cuba was developing a number of facilities to manufacture a soymilk yogurt drink. Each facility was located inside a former cow’s milk dairy, and was based on converting former dairy equipment to soymilk production. Cow’s milk is being phased out. By Oct. 1994 three soy factories were already operating in Holguin, Santiago and Pinar del Rio. Pam visited the latter factory. While in Cuba, she also tasted a soy-based hard cheese and a cream cheese.

The refrigerated soy yogurt drink is packed in liter bottles, and sent to the neighborhood grocery shop (*bodega*). Cuba is on a ration system and the soy protein drink is available on the ration, so people go to their neighborhood bodega, present their ration card, and pick up their rations, including the soy yogurt drink. This drink is very thick—more like kefir or a milk shake than milk. It apparently has a low pH, which extends its shelf life—and most people in Cuba now have a refrigerator. After finishing the soymilk, a family returns the bottle to the bodega for recycling.

Cuba presently imports most of the soybeans used to make its soy yogurt drink from Canada and Brazil. Pam learned from Chuck Haren of Plenty Foundation that, at one point in its history, Cuba had developed a soybean variety that was especially well suited for tropical climates at that latitude. Plenty used to grow this variety in Dominica. By Oct. 1994 agricultural co-ops in Cuba were starting to grow soybeans under contract for the soy yogurt drink factories.

When Pam returned to the USA from Cuba she decided to try to help the Cuban soymilk project. So in October 1994 she established a new company named Soy Cubano! Company—the Cuba Soyfood Company, which would try to raise \$50,000 to help fund another soymilk plant in Cuba by selling “honorary shares” to Americans interested in investing in the health of Cuban children. For a description of the company and its shares see Global Exchange 1994. As of Feb. 1995 Soy Cubano! had raised several thousand dollars. They have not yet sent the money to Cuba, since they are hoping that the Cuban government will allow it to be considered a direct business investment—thus creating the opportunity for a test case to challenge the U.S. embargo. If that does not materialize, the money will be used to make a direct cash donation—which is also “trading with the enemy.”

One “Honorary Share” in Soy Cubano costs \$5. Anyone who is interested in “investing” can contact the Food and Medicine Campaign at Global Exchange in San Francisco. Remember, however, that doing this involves a big risk because the penalty, if the U.S. government should choose to arrest anyone for “trading with the enemy,” is up to 10 years in prison and a \$250,000 fine. Pam says of Soy Cubano! “It’s been kind of a magical project. It has so many dimensions to it and so many fine people are involved.

When Pam returned to Cuba in November 1994, eleven soymilk factories were in operation; she goes to Cuba roughly 5-6 times a year. Dr. Heshan Ragab, M.D., is working with Pam on this project. Pam has read Mark Messina’s book, *The Simple Soybean and Your Health*. She found it “incredibly enlightening,” and has purchased several copies of it since and given them to key people, including Dr. Ortega. Continued. Address: Coordinator of Soy Cubano! Company, Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St. #303C, San Francisco, California 94110. Phone: 415-255-7296 or 415-558-8682.

2297. Beeman, Randall. 1995. Friends of the Land and the rise of environmentalism, 1940-1954. *J. of Agricultural and Environmental Ethics (Guelph, Ontario)* 8(1):1-16. March. *

• **Summary:** “Abstract: The rise of the postwar environmental movement is rooted in the development of ecological consciousness within intellectual circles as well as the general public. Though many commentators cite the 1960s as the focal point of the new environmentalism, the ecological ethic had actually evolved by the 1930s in the writings and speeches of both scientists and public commentators. Agricultural conservationists led the way in broadcasting the message of ecology. Friends of the Land, an agriculturally-oriented conservation organization formed in 1940 and active through the 1950s, is an interesting example of how the agricultural community was an integral component in the rise of environmentalism. While Friends of the Land flourished only for a brief period, its goals and the ideas that the group represented illustrate how the ecological

ethic was burgeoning by the early-1950s. Furthermore, the history of Friends of the Land is an important chapter in the ongoing quest for ecological agriculture and societal permanence.” Address: Dep. of History, Iowa State Univ., 603 Ross Hall, 50011-1202 Ames, Iowa.

2298. Smith, Michelle. 1995. Minutes of Soyfoods Association of America general meeting. Held March 11 at the Anaheim Convention Center. San Francisco, California. 3 p. Unpublished typescript.

• **Summary:** The general meeting, which lasted from 8:30 to 10:00 a.m., was followed by a board of directors meeting (10:00 to 11:30). Mark Messina reports that the United Soybean Board (USB) is sponsoring dietitian seminars in 26 cities across the USA. The budget for each seminar is \$8,000. Manufacturers can exhibit products at seminars for a fee of \$75 per table. The 2nd Annual Soyfoods Symposium will be held in Brussels in 1996. The \$200,000 needed to fund the project will hopefully be raised mostly through the private sector.

Tim Redmond notes that SAA has budgeted \$16,000 to conduct a nationwide consumer survey on soyfoods. The first portion of the survey was sent to 20,000 consumers. Of the 15,000 that responded, 2,000 people (13.3%) said they eat soyfoods at least once a week. The second portion of the survey, consisting of a 4-page legal-size questionnaire, will be sent out by mid-March to 1,000 of the 2,000 regular soyfood consumers. Responses should be back in 4 weeks, and will be tabulated. The report will be written by Starr Track [Sarah & Peter Starr]. The survey committee will review and finalize the report which will then be available to the public.

New people and companies present at the meeting were Myron Cooper of Westbrae, Allan Routh and Raquel Supallo of SunRich, Gil Garcia of Tofu Shop, Ed Pedrick and Elmer Schettler of Devansoy, Richard Eluk of Clofine, Jack Painter of ADM, Yvonne Lo and Jan Remak of Vitasoy, Sarah and Peter Starr of Starr Track, and Suzanne Shelton Foley of the Shelton Foley Group. Address: Executive Director, Soyfoods Assoc. of America, One Sutter St. #300, San Francisco, California 94104. Phone: 415-393-9697.

2299. Pratt, Steven. 1995. Copy cows: Soy- and rice-based drinks stand in for milk, but with nutritional consequences. *Chicago Tribune*. May 10. p. 3.

• **Summary:** Discusses and gives comments on Rice Dream, Naturally Tofu (Sovex), EdenSoy Extra, and Almond Mylk. Address: Tribune Staff Writer.

2300. Hannon, Kerry. 1995. Pure and unadulterated: Sales are soaring at organic food producer Walnut Acres. *U.S. News & World Report*. May 15. p. 86, 91-94.

• **Summary:** This article is part of “Health Guide 1995,” a cover story on health, nutrition, and fitness. Walnut Acres

Inc., in Penns Creek, Pennsylvania, is the largest producer in the USA of organic food sold by mail order, with 350 products in its catalog. Business is booming and sales soaring as health-conscious consumers switch to natural, organic foods. Sales jumped from \$6 million in 1991 to nearly \$8 million in 1994. In 1994 about 700 tonnes of organic, pesticide-free produce was grown on the farm, three times as much as in 1990. Sales of beef, chicken and eggs, raised without the usual hormones or antibiotics, have doubled since 1989.

Today Walnut Acres has more than 100 employees. Each year about 30,000 visitors tour the plant (of 100,000 square feet) located in the old stable. There the cannery makes 60 cans of soup a minute and the stone mill grinds 1,000 pounds per hour of whole-wheat flour. Some 93% of American consumers want unadulterated food.

Consumers who are still in the mainstream, are now able to buy natural and organic foods in their supermarkets—such as Safeway in California. Whole Foods Market operates a chain of 39 supermarket-size natural food stores in nine states. Fresh Fields, founded in 1991 and based in Rockville, Maryland, now sells its “Good for You Food” at 16 similar stores in five states.

In 1994 sales of natural foods totaled about \$7.3 billion, up 17% from the year before double what it was in 1987. Sales at mainstream grocery stores have been flat. Paul Keene says that since he and his wife started Walnut Acres in 1946, they have “moved from the lunatic fringe to the leading edge of agriculture.” Not long ago, he recalls, they were regarded as “kooks or commies” [communists]. At one time crosses were burned on their property and other time dynamite was tossed onto the land. At age 84, Paul Keene is “so spry that he may be his own best advertisement.”

Robert Anderson, Keene’s son-in-law, is now president of Walnut Acres.

The article discusses the difference between “natural,” “organic,” and “certified organic,” and the debate over the nutritional benefits of organically grown foods. One sidebar, titled “Looking beyond beta carotene,” discusses phytochemicals, which have little or no recognized nutritional value, yet powerful health benefits. James Duke, PhD, recommends whole foods over pills, and his recipe for “Genistein gumbo” soup includes soybeans and tofu. Another sidebar, “Nouvelle veggie cookbooks,” states: “No tofu: Unlike the groovy granola manuals of the 1960s, many new books ignore ersatz meat dishes like ‘filet of tofu,...’”

A large photo shows a Holstein cow (which grazes in spacious, organically grown pastures) with the farm in the background.

2301. *U.S. News & World Report*. 1995. 1995 health guide. May 15. p. 76-78+. *

• **Summary:** This is part of a cover story on health, nutrition, and fitness. The article discusses: The mental benefits of

aerobic exercise. Personal-training software. The success of Walnut Acres, a producer of organic food products. The health benefits of phytochemicals. Vegetarian cookbooks. Drug treatments for obesity. Over-the-counter drugs that have been banned by the U.S. Food and Drug Administration (FDA).

2302. Feldman, Nick. 1995. New developments at Nutrisoya (Interview). *SoyaScan Notes*. May 16. Conducted by William Shurtleff of Soyfoods Center. [Eng]

• **Summary:** Giles Goulet is no longer president of Nutrisoya. In Oct. 1993, he sold his shares to Nick Feldman and one other person, then he (Giles) left the company in Aug/Sept. 1994. Nick is the new president. As soon as Mr. Goulet was out of the company, it started doing very well, and it is still doing well. Mr. Goulet had big ideas but they were not feasible. He did not know the market and was not skilled at marketing.

Nutrisoya got its company name from a brand name owned by Victor Food Products, Ltd. in Scarborough, Ontario. "We had our lawyers take care of that." But Nutrisoya did not buy the company Victor Food Products.

Nutrisoya built its own soymilk plant using components from various sources, including many pieces made by Alfa-Laval. "If you have the right engineers who know something about making good-tasting soymilk, with a few modifications, we have been able to make a soymilk with no beany flavor."

Nutrisoya has never had a Tetra-Brik machine in house; they have their soymilk products packaged in Tetra-Brik cartons by a very large co-packer in Canada. Nutrisoya's competition in soymilk comes largely from Edensoy and from Pacific Foods "which now has a 3rd generation Tetra Pak machine, with the re-cap capability, though supposedly they have not yet perfected the technology." Nutrisoya is the biggest soymilk manufacturer in Canada, with little competition in soymilk from other Canadian companies.

Soymilk products: They no longer make Chocoya; even though it is a great product, it was marketed incorrectly, more like a dairy milk. Since the word "Soya" did not appear on the front panel, consumers often thought it was a dairy milk and so they were not willing to pay a little more for it. It was sold on the shelf in Quebec next to a dairy milk named Chocayo, which retailed for \$0.30 less per 3-pack. He plans to introduce it again some time. Nutrisoya still makes their Natura (pronounced nah-TUR-uh) line of soymilks in strawberry, vanilla, and original flavors, in aseptic Tetra Brik cartons. Nick has a brand new soymilk product named Nutrisoy that he is ready to launch in 1 liter Tetra Brik cartons. "We've been working on it for quite a while. I just have to press a button and it will be out in 2½-3 weeks. It has the exact same ingredients as Edensoy, except it is lower in fat, and has a more neutral taste and a better nutritional profile. The Nutrisoy line, which will start with vanilla and

original flavors, will probably end up replacing the Natura line." Nick would ideally like to package the new line in re-cap Tetra Brik cartons like Pacific does, but that package is not available to him. "I'm a little bit scared to invest a lot of money in a product and its packaging that is going to be competing against other products that have more advanced packaging," the re-cap pack. So Nick hasn't decided when, or even if, he will "press the button." The big question is this: What percentage of consumers, who are less cost conscious, are willing to pay about 20% more at retail for the re-cap pack. Bill suggests that Nick contact Tetra Pak and ask to see their market research on this question. Most of Tetra Pak's film for all of North American is made at a plant in Aurora, Ontario (near Toronto). A plant in Denton, Texas, specializes in the new re-cap packaging. The Natura soymilk line is made more for the supermarkets in Quebec, which sell 10-15% of the total volume. In British Columbia a lot of soymilk is sold in supermarkets. Nick feels his new-formula Nutrisoy soymilk will give him a big advantage over Edensoy. Eden has to pay a 5% duty on soymilk shipped into Canada, plus large transport costs. So a Canadian distributor receives Edensoy at \$19 a case, versus only \$13 a case (32% less) for Nutrisoy. Nick is concerned that Edensoy is coming out in a re-cap package.

Tofu: Nutrisoya is the largest tofu manufacturer in Eastern Canada, but Sunrise is the largest tofu maker in all of Canada. They now makes 3 types of tofu, all curded with magnesium chloride and extra firm in texture: Natural, Fine Herbs (*Fines Herbes*) and Pimento & Onion (*Piment-Oignon*). The two flavored products were introduced in about 1990. They do not make an almond tofu. They package all their tofu products with a \$120,000 Multivac vacuum packaging machine that they own. He likes vacuum packing; Nutrisoya sells a lot of their tofu to supermarkets, and this packaging seems to give a longer shelf life and a neater package. He also plans to buy a water-pack machine.

Nutrisoya makes most of its money from its tofu products; the competition in the soymilk market from Eden Foods and Pacific Foods (who Nick believes is dumping product in Canada) leads to low profit margins. Plans for new tofu products: Nick would like to introduce soft tofu curded with calcium sulfate. Most Caucasian Canadians now buy tofu curded with magnesium chloride (nigari); it is now a \$1.4 million market. Note: Most of the tofu sold in the USA is curded with calcium sulfate because it is a good source of calcium, and is less expensive and much easier to make. Address: President, Nutrisoya Inc., 4050 Pinard, St.-Hyacinthe, QUE, J2S 8K4, Canada. Phone: 514-796-4261.

2303. Allen, Andrea Horwich. 1995. Can isoflavones give soy mainstream acceptance? *Food Product Design*. May. p. 20-21.

• **Summary:** Researchers now believe that a family of phytochemicals present in soy, called isoflavones, may

actually reduce the risk of atherosclerosis by preventing the formation of plaque on artery walls. One isoflavone, genistein, which is present only in soy, also fights cancer by inhibiting the growth of cancer cells. Genistein appears to mimic the effects of estrogen so that the body produces less of that hormone, thus reducing the risk of estrogen-dependent cancers, especially breast cancer. One study of Japanese men suggests that those who eat a diet high in soy protein have a lower incidence of prostate cancer.

Representatives from Morinaga Nutritional Foods, Westbrae, and Pillsbury Green Giant are trying to take advantage of the new discoveries by educating their customers. The FDA seems unlikely to be ready to approve a soy-related health claim such as “Includes your daily intake of soy.” ADM, who makes the Green Giant frozen burgers, is said to retain Mark Messina, PhD, as a consultant. A large photo shows a carton of WestSoy Low Fat Soy Drink (Vanilla). Address: Assoc. Editor.

2304. Packaged Facts. 1995. The meat and dairy alternatives market. New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.

• **Summary:** In 1994 retail sales of these products reached an all-time high of \$286 million, and these sales are projected to top \$660 million in 1999. This very interesting report can be ordered from Packaged Facts, 625 Avenue of the Americas, New York, NY 10011. Phone: 212-627-3228. Price: \$2,150. The authors were Sarah and Peter Starr, though their names do not appear in the report. The product director was David Lumis.

Contents: Part I: The products. Scope of the report (Vegetarian products sold as meat or dairy alternatives, products not covered), history of the industry (an emerging market, part of the vegetarian movement, soybeans—an ancient food of Asia, soybeans arrive in the new world in the 18th century, Kellogg family starts health foods industry, makes first meat analogs, Seventh-day Adventists and others produce tofu and meat alternatives in the 1920s, Henry Ford early proponent of soybeans, meat analogs commercially developed in the United States in the 1940s, non-dairy beverages, growth of “Americanized” meat and dairy analogs booming), product definition (foods used to replace meat or dairy products, description of ingredients—tofu, tempeh, soymilk, okara, soy protein concentrates and isolates, textured vegetable protein, wheat gluten and seitan), product categories (three main categories of meat and dairy alternative products, meat alternatives, dairy alternatives, prepared meals), government regulations (the FDA and FTC, NLEA labeling considerations {went into effect in May 1994, making the USA the world’s first country to have mandatory nutrition labeling}), soy protein allowed in meat products without special labeling, bovine growth hormone), industry associations (the Soyfoods Association of America, the American Soybean Association, the Vegetarian

Awareness Network).

Part II: The Market. Introduction (Retail sales of meat and dairy alternative products by category—1989-94—graph, retail sales of dairy alternatives products by segment—1989-94—graph), market size and growth (market is difficult to monitor, 1994 retail sales estimated at \$286 million, dairy alternatives surpass \$142 million, meat alternatives soar to \$132 million, prepared meals grow steadily to over \$12 million, estimated retail sales of meat and dairy alternative products by category—1989-1994—table, growth in milk substitutes segment leveling off but still in double digits, cheese alternatives segment also experiences slight slow-down in 1994, non-dairy desserts—a slow-growth segment, estimated retail sales of dairy alternative products by segment—1989-1994—table), factors in market growth—overall market (maturing population and interest in nutrition, new dietary guidelines, medical community accepts plant-based diet, studies show vegetarian diet equals a healthier—longer life, soy might help to prevent heart disease and cancer, consumers now approve of vegetarian diets, increased demand for vegetarian foods, youth adopts meatless meals, exposure through foodservice, mass market begins to support meat and dairy alternatives, products in wider distribution, innovative new products, improved technology equals better taste, increased funding for soyfoods through foreign capital, pricing continues to limit market, image—taste and texture still a problem), factors in market growth—meat alternatives (concern about health hazards of meat, fat calories targeted by labeling law, an alternative to chicken and fish, ecological and social considerations will propel meatless meals, meatless meals difficult to handle by foodservice), factors in market growth—dairy alternatives (milk substitutes enter dairy case, awareness of lactose intolerance on the rise, taste profile limits acceptance, cheese alternatives—are they healthier?, projected retail sales of meat and dairy alternative products by category—1994-1999—graph {p. 34}, projected retail sales of dairy alternative products by segment—1994-1999—graph {p. 35}), projected market growth (overall market to reach \$662 million in 1999, meat alternatives and prepared meals to lead growth, projected retail sales of meat and dairy alternative products by category—1994-1999—table, growth of milk substitutes and other dairy alternatives expected to slow somewhat by 1999, projected retail sales of dairy alternative products by segment—1994-1999—table), market composition (meat alternatives will outsell dairy alternatives, share of sales by product category—meat and dairy alternatives—graph, soy-based ingredients most frequently used in meat-like products, protein ingredients used in meat-like products by number of products made with ingredient—1990-1992—table, bulk of dairy alternative sales from milk substitutes, share of sales by product segment—1989 vs. 1994—graph, sales by retail outlet, share of sales by retail outlet—meat and dairy alternatives—1994—graph).

Part III: The marketers. The marketers (About 30 significant marketers—most small, major companies move into the market, meat alternatives—other mass-market players, meat alternatives—natural foods players, the leaders in milk substitutes, cheese alternative market leaders, the leaders in non-dairy desserts, prepared meals market leaders, selected marketers and brands of meat and dairy alternative products—chart), market and brand shares (mass-market leader Worthington Foods challenged by ADM/Pillsbury Green Giant Harvest Burger, wholesome and hearty growing fast, Boca Burger boogies by the Bystanders, marketer and brand shares of meat alternative products sold through supermarkets—1993 vs. 1994—table, natural foods sales of meat alternatives more fragmented, Worthington is leader in natural foods stores, White Wave and Lightlife hold second and third place, estimated marketer and brand shares of meat alternative products sold through natural foods stores—1994—table, many small regional players capture local markets, Eden Foods leads in milk substitutes, estimated marketer and brand shares of milk substitute products mass-market and natural foods stores—1994—table, Imagine Foods' Rice Dream is leading rice beverage, other vegetable beverages, Tree of Life's Soya Kaas holds leading share of cheese alternatives market, estimated marketer and brand shares of cheese alternative products sold through natural foods stores—1994—table, Tofutti holds top market share in frozen desserts, Fairmont Foods establishes lead in supermarkets, marketer and brand shares of prepared meals sold through supermarkets—1994—table, natural foods prepared meals—many brands and no one leader), competitive situation—overall market (marketers compete primarily through new product introductions, growth through mergers and acquisitions). Continued.

2305. Packaged Facts. 1995. The meat and dairy alternatives market (Continued—Document part II). New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.

• **Summary:** Contents: Continued from p. vi. Part III: The Marketers. Competitive situation—meat alternatives (Worthington pioneers Seventh-day Adventist vegetarian market, Miles Laboratories acquires Worthington—places Morningstar Farms in mass market, tofu drives natural foods market, soy frank marketers exploit tofu opportunities, tempeh—another meat alternative ingredient gains interest, wheat-based alternative seitan expands presence, Worthington places tofu patties in natural foods stores—changes hands again, Wholesome and Hearty develops foodservice distribution, meatless burger market heats up, patty competition fierce in natural foods arena, ADM/Pillsbury alliance brings soy burgers to mass market, Worthington fights back, category differentiates in the early 1990s, soy attacked by soy-free burger companies, meat alternative marketers cut the fat, low-fat sausages and franks, tightly targeted vegetarian fun foods and snacks, mass-

market companies introduce ground meat analogs, natural product companies follow suit, Wholesome and Hearty seeks retail growth, others seek lucrative foodservice market), competitive situation—milk substitutes (early market limited to ethnic community, Edensoy a big hit—Vitasoy responds, new lines introduced, competition—domestic manufacturing and larger containers bring down soy beverage prices, flavors and packaging distinguish early products, Westbrae introduces first low-fat soymilk, fortification has become key selling point, Eden's fortified product suits strict vegetarians, new package sizes expand market, re-closable—easy to pour, rice beverages—line extensions grab shelf space, Wholesome and Hearty's almond beverage, 100% organic products, a fresh—new market—some products shift to dairy case, mass-market interest), competitive situation—cheese alternatives (Seventh-day Adventists start category, first natural foods cheese alternative, Soyarella, not dairy-free, handful of marketers compete on price in natural foods arena {Soya Kaas, TofuRella by Brightsong / Sharon's Finest, Cemac Foods, Galaxy Foods, White Wave}, new products parallel dairy-based mass market, a move toward lower fat and fat-free, seeking the most melt-able cheese, Sharon's finest finds innovative ingredients, marketers target vegan market), competitive situation—non-dairy desserts (Tofutti dominates, dairy-free puddings—one major player {Imagine Foods sells a rice-based non-dairy pudding}, non-dairy yogurt has yet to catch on—but White Wave's Dairyless, a non-dairy soy yogurt, seems to be the only major natural foods brand in this category), competitive situation—prepared meals (flavored tofu and seitan expanded into meals, Legume is early innovator, cheese alternatives in prepared meals, other companies dive into prepared meals, action has been in natural foods, supermarket products have not succeeded), competitive profiles (The Archer Daniels Midland Co.—Grand Metropolitan PLC—Pillsbury division partnership, Amy's Kitchen Inc., A&A Amazing Foods Inc., Boca Burger Co.—Sun Foods, Eden Foods Inc., Fairmont Foods of Minnesota Inc., Fantastic Foods Inc., The Hain Food Group Inc., Imagine Foods Inc., Lightlife Foods Inc., Sharon's Finest, Tofutti Brands Inc., Vestro Natural Foods Inc., Vitasoy—USA Inc., White Wave Inc., Wholesome and Hearty Foods Inc., Worthington Foods Inc., Yves Veggie Cuisine Inc.), marketing trends (updated packaging, burger market segmenting into natural and mass market, Worthington—a master at working both markets, hamburger look-alikes crossing back into natural foods, veggie patties crossing into mass market, nostalgia—creating brand loyalty, marketers expanding into other categories, moving into the frozen breakfast section, retail displays, pushing into new distribution channels), new product trends (new—improved packaging, light and healthy, product names emphasize healthy, fat-reversal—mass-market burger-substitutes gaining fat, ground meat alternatives, new flavors and varieties—many gourmet and upscale, ethnic—especially

Mexican and Southwestern, convenience, technology produces better mimics, mixing soy with grains and other ingredients, mainstreaming health foods, natural ingredients preferred—organic even better, selected new product introductions—meat and dairy alternatives—1994–March 1995—chart), advertising expenditures (most advertising not measured, specialty magazines are preferred medium, radio is another alternative, little consumer advertising, Worthington outspends competition, ADM–Pillsbury spends millions to launch Harvest Burger in 1994, Eden Foods targets mass market, Fantastic Foods’ first major spending), advertising positioning (good health is overlying theme, and fat is prime concern, vegetables are a solution to a bad diet, milk substitutes advertised to lactose-intolerant market, highlighting a sense of the familiar, foods children love, traditional burger images used to woo mass market, vegetarian appeal used for meatless patties, organic is important feature in natural foods, examples of consumer advertising), consumer advertising (consumer promotions not heavily used, money-off coupons from several companies, new lines offer more generous rebates, recipes and books educate consumers, in-store promotions—the White Wave Center, marketers join forces in advertorial, sponsoring sports events—a healthy fit, 25 years of earth day, non-profit tie-ins, Turtle Island’s recycling program, other types of promotions, examples of consumer promotions), trade advertising and promotions (three key trade publications, trade ads also used as consumer ads, trade ads scheduled to run in convention issues, trade ads announce growing business, editorial promotions, reaching retailers, example of trade ads). (Continued).

2306. Packaged Facts. 1995. Retail sales of dairy alternative products by segment: 1989–1994 (in million dollars) (Document part). In: Packaged Facts. 1995. *The Meat and Dairy Alternatives Market*. New York, NY: Packaged Facts. 162 + 42 + 6 p. See p. 18. May. 28 cm.

• **Summary:** Sales of milk substitutes (mostly soy and rice milks, in million dollars) rose from \$46.0 in 1989 to \$72.0 in 1991 to \$96.8 in 1993 and \$108.4 in 1994.

Sales of cheese alternatives (in million dollars) rose from \$12.0 in 1989 to \$17.3 in 1991 to \$25.0 in 1993 and \$28.8 in 1994. The average annual sales growth for this period was 19.1%.

Sales of non-dairy desserts (in million dollars) rose from \$4.0 in 1989 to \$4.5 in 1991 to \$5.0 in 1993 and \$5.2 in 1994. The average annual sales growth for this period was 5.4%.

The combined sales of these three dairy alternative product categories (in million dollars) rose from \$62.0 in 1989 to \$93.8 in 1991 to \$126.8 in 1993 and \$142.4 in 1994. The average annual sales growth for this period was 18.2%.

Concerning the accuracy of these figures, page 19 notes that sales in these markets are difficult to quantify

because a large share of retail dollar volume moves through natural foods stores, where sales are mostly untracked, and because various information sources define meat and dairy alternatives products differently. Therefore these “estimates are based on information provided by Soyatech, Inc., the Soyfoods Center, Information Resources, Inc., the natural foods trade, and various manufacturers.”

A table (p. 53) shows estimated market shares of major manufacturers of milk substitute products sold through the mass-market and natural food stores in 1994: (1) Soymilk: Eden Foods (Edensoy) 48%. Vestro Foods (Westsoy, Westbrae) 30%. Vitasoy 12%. Pacific Foods of Oregon 7%. Other 3%. (2) Rice beverages: Imagine Foods (Rice Dream) 85%. Vestro Foods (Westbrae Rice) 10%. Eden Foods (Eden Rice) 5%. (3) Potato beverages: A&A Amazing Foods (Vegeicious) 100%. (4) Almond beverages: Wholesome & Hearty Foods (almondMylk) 100%.

A second table (p. 54) shows estimated market shares of major manufacturers and marketers of cheese alternatives sold through natural food stores in 1994: Tree of Life (Soya Kaas) 41.5%. Sharon’s Finest 20.7%. Soyco Foods (Soyco, Soyimage) 12.7%. Cemac Foods (Nu Tofu) 12.7%. Other 12.4%.

Pages 54–55 state that Tofutti commands about 80% of the frozen non-dairy dessert segment. The remaining 20% is controlled by Imagine Foods (frozen Rice Dream), Turtle Mountain (Sweet Nothings and Living Rightly), and The Hain Food Group (Farm Foods Ice Bean).

2307. Lazzaro, Don. 1995. History and current status of soymilk in Australia (Interview). *SoyaScan Notes*. June 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ceres Natural Foods is their holding company and Pureharvest is their trading name. They made this name change in 1982 since they found the word Ceres was difficult for many people to pronounce. The first soymilk they imported to Australia was made by Saniku in Japan and imported from Mitoku.

Don is interested in macrobiotics. In early 1979 he took over the running of a small macrobiotic and natural foods retail store in Melbourne named Ceres Wholefoods. The only way he could make it viable was to try to buy at better prices, so in April 1979 he started a wholesale and import company, which he named Ceres Natural Foods, also in Melbourne. There was a company named Real Foods (run by Michael Pels) in New South Wales, Australia, that was importing, through Mitoku in Japan, tamari, soy sauce, miso, tofu, etc. Real Foods was the first company in Australia to import foods from Mitoku in Japan.

Don knew Michael from when they both used to live in Sydney in about 1978. Michael purchased some rice cake machines (the same kind used by Chico-san) through Mitoku from Airin Co. These machines were very poorly engineered and constructed. Michael has already sold 168 of these

machines to Quaker.

When Don took over the Ceres Wholefoods retail store in 1979, he approached Michael and asked to be the distributor in Victoria of the food products Michael was importing from Japan through Mitoku. Michael said okay, and Don began distributing. Don asked Michael to import some soymilk from Mitoku, which he did in mid-1980. The stick-on label over the Japanese label said Ceres Natural, in Choc-Malt and Natural flavors. But the first soymilk in Australia was imported from Japan in about 1977-78, through Muso by 3-4 health food stores named Russel's; it was made by Marusan in a stand-up plastic pouch. Not much of it was sold. In about 1980-81, Michael decided to get out of the whole import business in order to focus on making rice cakes. So Mitoku Mr. Kazama and Chris Dawson asked Don to become their importer in Australia. Don also ran a 3rd company, a center that provided information and advice on macrobiotics.

Jim Wilson, who was running Spiral Foods in Australia, had been importing from Mitoku. He convinced Mitoku not to sell to Don, his competitor; Mitoku agreed. Mitoku then approached Saniku, and in about 1981 Don began importing soy milk made by Saniku through Mitoku. Don sold it under the same label he had used before. The Muso started to import some soymilk packaged in Tetra Brik cartons through Spiral Foods. Don got the same product from Kibun, and on it began to use the name Pureharvest.

In short: Four companies pioneered in importing soymilk to Australia: Real Foods, Russel's, Spiral Foods, and Ceres Natural Foods. There was also a little relatively beany Chinese soymilk sold in the ethnic Chinese market. Ceres, as a result of its Tetra Brik package, managed to get fairly good distribution into the grocery / supermarket trade, starting in late 1983 or early 1984. By this time Ceres was by far the biggest seller of soymilk in Australia. They were importing five 20-foot containers per month of the Kibun soymilk product. Ceres was actively promoting this soymilk, doing trade shows, etc.

In 1986 Ceres was approached by a small soymilk maker named Australian Natural Foods (ANF) in Sydney; basically they had old machinery and were in trouble. They approached Don asking if they could make a soymilk for him. They worked out an exclusive deal and formula, and in Nov. 1986 Ceres launched this as Aussie Soy in its first 1 liter package, in Tetra Brik. Sales shot up. It was trucked in a dairy tanker to Bon Lait in Victoria (almost 1,000 miles away) where it was packaged in a dairy that had a Tetra Brick packaging machine. In about 1990-91 ANF first got its own Tetra Brik packaging machine. That same year ANF launched its own soymilk product, named So Natural, to compete with Sanitarium's So Good. It is made from whole soybeans, and is very similar to the Aussie Soy product they have long made for Don.

As early as 1980 Sanitarium Foods was importing

Soyalac in tins / cans. They sold it mostly to Seventh-day Adventists through their own retail stores. Then in April 1987 Sanitarium Foods launched their own So Good soymilk (made from a blend of soy protein isolates, made and packaged by dairy companies) in Australia. They went into it in a big way, with a national campaign. It was the best thing that ever happened to Don and Ceres, because this campaign grew the market dramatically. By April 1987 Ceres was selling 10,000 cartons / month of their Aussie Soy, not including their Japan imports. One year later the figure had skyrocketed to 60,000 cartons / month, increasing to 152,000 on year after that.

Nevertheless, according to the *Australian Grocery Industry Marketing Guide* (1995), Sanitarium has 71% of the dairylike (unflavored) Australian soymilk market, followed by Vitasoy at 7% (they launched in about 1991, and have done a very aggressive marketing campaign), then So Natural (made by ANF) at 5%, Sun Gold at 5%, and Aussie Soy at 4-5%. Of the total Australian soymilk market, flavored soymilks account for only about 5% of the total; the remaining 95% is dairylike; its a milk alternatives market. Each of the three major supermarket chains in Australia (Woolworth's Safeway, Franklin's, and Cole's) has its own soymilk brand. Franklin's has an isolate soymilk made by ANF, starting about a year ago. Sun Gold, made by Associated Dairies of New South Wales, is almost identical to So Good, made by the dairy company that used to mix Sanitarium's product. In about 1990 Sanitarium set up their own soymilk mixing and packaging factory.

Today the soymilk retail market in Australia is \$45 million, with a population of only 17 million people. This is huge on a per capita basis. This market has three main segments: (1) Middle class, educated, with some allergies—70%. (2) Age 50 and older, concerned with cholesterol—20%. (3) Natural foods and vegetarian—10%.

In late 1993 and early 1994 Don approached Berrivale Orchard Ltd. (a cooperative of fruit growers, headquarters in Berri, South Australia) to see if they would be interested in making a soymilk product for Ceres / Pureharvest—because Don's relationship with ANF had become intolerable.

In 1979, to get tofu to sell at his retail store, Don used to go to Chinatown in Melbourne twice a week. He bought it from a little Chinese company (whose name he does not remember) located opposite Victoria Market. He would take a couple of buckets and carry it home in bulk, under water. Address: Pureharvest, 15 Ardena Ct., East Bentleigh, Victoria 3166 Melbourne, Australia.

2308. Kimura, Takuji "Tak." 1995. Update on edamamé in America (Interview). *SoyaScan Notes*. June 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mr. Kimura is a food broker, who demos and sells quite a bit of Yamato's boiled, packaged edamamé in California. Interest in and orders for edamamé are growing

rapidly. Mrs. Gooch's plans to carry the product in all of their stores. In northern California it is sold at 7 Whole Foods Markets (incl. 2 Bread of Life, which Whole Foods just purchased), at Living Foods (recently bought out by Wild Oats), at 6 Andronicos (4 in Berkeley), Tower Market (1 store), Monterey Market (in Palo Alto), Cala Foods in San Francisco (in 5 of their 26 stores). When Mr. Kimura is invited to do a "road show" and set up in front of a store (recently at 19 Price/Costco locations), he easily sells 100 packs a day. Yamato has only an 8-ounce size, but many customers want a 1 pound size. It comes in a vacuum pack with nitrogen, but the film is not strong enough to allow ten packs to be stacked. Address: 1810 "C" Farm Bureau Road, Concord, California 94519. Phone: (510) 687-2422.

2309. Evans, Barry. 1995. The American Miso story. In: Great Eastern Sun. 1995. Pricelist. Effective June 5, 1995. 37 p. See p. 2-3.

• **Summary:** "This spring, as we complete our sixteenth year of operations at the American Miso Company, we are moved to reflect back on the path we have traveled to reach this point. In the spring of 1979, a group of people approached Michio and Aveline Kushi with the idea of forming a new company to produce miso in the United States using traditional methods and only the finest organic ingredients. With the Kushi's enthusiastic support, the Erewhon Miso Company was created to supply Erewhon with miso to distribute throughout the United States. From this distant perspective, it is difficult to remember how powerful a force Erewhon was in the natural foods industry at that time. Dominating the market in the Northeast, Erewhon was the largest distributor of natural food in the United States with strong connections to distributors for its name brands in other regions.

"With Erewhon as our partner, master distributor, and a major investor, we moved ahead confidently with our plans to build a miso factory in the Piedmont Region of North Carolina. The Kushis entreated Akiyoshi Kazama, founder of Mitoku Trading Company, a major supplier then as now of high-quality Japanese natural food to the U.S. market, to put aside any narrow concerns of self interest and find us someone to train our would-be miso makers in the rapidly fading art of traditional miso manufacture. In a selfless spirit of international cooperation, Mr. Kazama searched for someone who still made miso the old-fashioned way, yet was open-minded enough to invite strangers into his home (literally).

"After many false starts amid a lengthy search, Mr. Kazama finally located, in the mountains of Yaita Prefecture north of Tokyo, Takamichi Onozaki, a country miso maker of the old school. Mr. Onozaki, generously opening his home and his heart to *gaijin* [foreign] seekers after knowledge from half a world away, agreed to house and train an American couple, John and Jan Belleme, for an entire miso-

making season. From November, 1979, until June, 1980, Mr. Onozaki taught his students all the miso lore he had accumulated from a lifetime of miso making in his small, rural miso factory staffed entirely by local farmwives. This was intermediate technology with a vengeance!

"Upon the Bellemes' return to America, we rapidly constructed our factory building near Rutherfordton, North Carolina, and Mitoku arranged to ship us our new equipment from Japan. By late 1980 we had begun to make our first experimental batches of rice miso. As the miso slowly aged in its huge cypress vats, great events developed hidden from our eyes which were to have a profound effect on the young Erewhon Miso Company. In July, 1981, Michio and Aveline Kushi journeyed to Rutherfordton for the official christening of the miso plant. The beautiful and joyous ceremony left not a dry eye in the gathering; later we discussed Erewhon's ambitious plans to package and market the rapidly ripening miso.

"A glorious road into the future seemed to lay open before us, but Erewhon's financial condition was rapidly deteriorating as too rapid expansion took its toll on a company stretched to the limit by its success. One month later we received the stunning news that Erewhon had filed for bankruptcy. In one of the saddest stories we have ever had the misfortune to be a part of, the Kushis lost control of the company they had nurtured from its birth, and we lost our only customer, a major investor, and our major source of inspiration and guidance.

"At first we were devastated by the blow fate had dealt us, but we had nowhere to go but forward as we had already made a huge financial and emotional investment in our project. Severing our ties to the past, we renamed our enterprise the American Miso Company and began a desperate search for marketers for our product. When we were unable to find anyone to help us, we resolved to set up our own marketing company and do the job ourselves. Thus, out of the direct necessity, Great Eastern Sun was born in December, 1981. Mitoku, itself almost destroyed in the storm of the Erewhon disaster and eager to rebuild, agreed to export Japanese natural food to Great Eastern Sun. GES processed its first order in April, 1982, and sold the first American Miso in September of that same year.

"In the fall of 1981, Mr. Onozaki came to Rutherfordton on an inspection trip to see exactly how well his students had learned their lessons. He stayed and worked in the factory alongside our own crew, patiently reviewing our practices and refining our procedures until he pronounced himself fully satisfied. He had never left Japan before in his life. In the fall [sic, spring] of 1982, Mr. Onozaki dispatched his daughter and son-in-law to America to work for several months in the miso factory just to make absolutely certain that everything remained kosher. In late 1985, John and Jan Belleme turned over the operation of the factory they had built to their successor, Don DeBona, who remains as miso

factory manager to this day. Three books and many projects later, the circle comes round again as the Bellemes are now Mitoku's U.S. representatives.

"Although our miso was sold only in bulk for its first two seasons, our familiar tubs with the Miso Master logo soon arrived on the scene and sales slowly but steadily grew. Starting with eight barrels, we added six in 1986, seven in 1989, five in 1991, and fifteen more in 1993 for a total of 41 of these leviathans, each holding over four tons of two-year miso. In order to house our expanding activities, we built a second factory building as big as the first in 1992, and we are already experiencing a shortage of space once again as demand continues to grow. Two years ago we began to export our miso to Europe where it is distributed by Lima throughout the continent. The American Miso Company story continues on into the future." Address: Owner, Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

2310. Great Eastern Sun. 1995. Pricelist. Effective June 5, 1995 [Mail order]. Asheville, North Carolina. 37 p. 28 cm.
 • **Summary:** Contents: Catalog information. Miso Master organic miso (traditional, mellow, or sweet). Sweet cloud organic sweeteners. Haiku organic Japanese tea. GES organic English tea. Emerald Cove sea vegetables. Emperor's Kitchen condiments (soy sauce, vinegars, ume plum products, toasted sesame oil, mirin, dried vegetables, shiitake mushrooms, beans, seeds, grains, dry condiments, Atlantic sun-dried sea salt). Traditional Japanese macro pasta. Traditional Japanese specialty items (misos, candies, seaweed and ume, organic pasta, liquid condiments, specialty products {snow-dried tofu, HamaNatto, Zenryu fu (round cakes of wheat gluten), shonai fu (flat sheets), organic brown rice koji, organic nuka rice bran, organic brown rice dinner with azukis [azuki beans], or with vegs, mochi (4 types), noodles (some or bifun rice noodles), ume products, teas, pickles (incl. natto miso chutney)}, personal care products, kitchenware, knives). Address: 92 McIntosh Road, Asheville, North Carolina 28806. Phone: 704-252-3090.

2311. Jacobi, Dana. ed. 1995. The natural health cookbook: More than 150 recipes to sustain and heal the body. New York, London, Toronto, Sydney, Tokyo, Singapore: Simon & Schuster. 271 p. . June. 25 cm.
 • **Summary:** This is a selection of the best recipes published in *East West Journal*, compiled by Dana Jacobi, Dan Seamens, and the editors of *Natural Health* magazine. The recipes are generally low in fat, free of white sugar and other refined foods, and nutrient dense, based on grains, legumes, and vegetables; some contain fish and shellfish. Chapter 4 is titled "Seitan, tempeh, and tofu." Miso and soy sauce are used throughout as seasonings.

Contains recipes for Amasake dressing (p. 153), and Amasake scones (p. 191). Amasake (or Amazake) is defined

in the Glossary of ingredients (p. 243). Address: New York City, NY.

2312. *Natural Foods Merchandiser*. 1995. Soyfoods Association elects officers. June. p. 14.

• **Summary:** The SAA recently announced the results of elections held at Expo West in Anaheim last March. Rick McKelvey of Lightlife Foods (Greenfield, Massachusetts) was elected president, Myron Cooper of Westbrae Natural Foods (Gardena, California) was elected vice president, and Dan Burke of Pacific Soybean & Grain (San Francisco) was re-elected treasurer. Continuing on the board are: Peter Golbitz of Soyatech, Inc.; Yvonne Lo of Vitasoy, U.S.A.; Tom Redmond of American Soy Products; Jack Painter of Archer Daniels Midland; Mark Messina, PhD; Harry Tanikawa for House Foods America; Lester Wilson, PhD, of Iowa State University; and Mike Rohan of the American Soybean Association.

2313. Natural lifestyle magazine and mail-order market. Spring. 1995. Asheville, North Carolina: Natural Lifestyle Supplies. 55 p. Catalog. 28 cm.

• **Summary:** A macrobiotic mail-order catalog with several nice articles, it sells many types of soyfoods and related products, including the full line of Kushi Cuisine, organic soybeans (yellow and black), Rice Dream soymilk (p. 27), Edensoy soymilk, Westbrae Maltededs, Nasoya Vegi-Dressings, Nayonaise, Farmhouse Tekka, organic soy sauce, fresh tofu, snow-dried tofu, organic miso (from Miso Master and Japan-Onozaki, and Hacho Miso), instant miso soups (Mitoku and Fantastic Foods), South River American Miso, and tamari roasted nut mix.

Plus: Mochi, kuzu, sea vegetables, shiitake mushrooms, umeboshi and ume "plum" products, azuki beans, amazake, Corona hand mill, water filters, organic cotton clothes, cookbooks, etc.

Publisher: Tom Athos. Editor and graphic design: Debbie Athos.

On page 5 is a nice ½-page article, "Dr. Spock goes macrobiotic." It begins: "I've been practicing transcendental meditation twice daily since my late seventies. I swim every day, and I try to take short walks after meals. I go to bed at 9 p.m. and get up at 5 or 6 a.m. I do 50 minutes of Yoga stretches each morning. Mary gives me daily massage for my weakened legs. I've been eating a macrobiotic diet for two years. It includes practically no fat, no meat, no sugar and no dairy products. I lost fifty pounds in the first few months and I was eating as much food as I wanted.

"Turning point: Until a few years ago, my health had gradually deteriorated, beginning with a heart arrhythmia at age 65. In 1987 my heart stopped altogether, long enough to drop me face first on the marble floor of the Copley Plaza Hotel in Boston. So they sewed a pacemaker under my skin, with an electric wire into my heart to keep it beating

adequately. Three years ago I had a brief stroke-like episode that reduced my talk to gibberish for 15 minutes, and I was put on a blood thinner to prevent a more serious stroke. My legs were gradually getting weaker and less coordinated; the neurologist said it would be progressive. For a year I had repeated attacks of severe bronchitis that required antibiotics; that scared my internist. In 1991, I was introduced to a Belgian-trained physician who had become a macrobiotic counselor. He put Mary and me on a macrobiotic diet." His health improved steadily. "I feel much more alive and alert. After dropping 50 pounds, I lost all my subcutaneous fat, so I get cold easily,... My cholesterol level has gone from over 200 to 123; Mary's was 285 and is now 124. We found that our annual pharmacy bill went from \$5,000 to \$780."

"Once you decide to take your healing into your own hands, any sense of powerlessness and hopelessness ebbs away." Address: 16 Lookout Drive, Asheville, North Carolina 28804-3330. Phone: 1-800-752-2775.

2314. Smith, Patricia. 1995. Tyler Smith and Erewhon, Los Angeles (Interview). *SoyaScan Notes*. July 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Tyler Smith negotiated the sale of Erewhon, Los Angeles, to John Deming and John Fountain. Tyler recently told Patricia that when John Deming and John Fountain took over Erewhon, Los Angeles, it was their intent to use it to test the ideas of Andrew Galambos in practice. John Fountain tried to apply the ideas of Galambos among employees in the daily operations of the company. Patricia could feel the changes immediately—even though she didn't find out until much later that John Deming owned the company. "We were all committed to Erewhon as a macrobiotic food company." New words and language started to be used. Patricia eventually took Galambos' basic course.

Tyler first met Michio Kushi through a series of lectures at Stanford University in May 1968; the lectures were organized by William Shurtleff as part of an Esalen at Stanford program, of which he was head. Tyler was a first-year student at Stanford Law School at the time. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

2315. Van Rysdam, Casey. 1995. New developments at the Soya Kaas factory (Interview). *SoyaScan Notes*. July 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Soya Kaas manufacturing facility recently moved to new address: Swan Gardens, Inc. (A Tree of Life Company), 1220 Six Flags Road, Suite B, Austell, Georgia 30001. Phone: 404-745-0502. Fax: 404-745-0610. The new location is about 5 miles from the former one at 6029 La Grange Blvd., Atlanta, Georgia 30336. Richard McIntyre had owned the former building in Atlanta, and Swan Gardens leased it from him until about 5 months ago. The new facility, which is also leased, occupies 25,000 square feet,

and is extremely sanitary, with ceiling panels that wash, and separation between the wet and dry production areas, improved air flow (so that outside air is less likely to blow into the production area), etc.; this improves the company's GMP ("Good Manufacturing Practices") significantly. As before, *Escherichia coli* tests are run on every batch. The space is used mostly for manufacturing, dry warehouse, cooler, boiler, maintenance shop and a small amount of office space (1,500 square feet). All administrative and sales work continues to be done in St. Augustine, Florida. 1995 has been a great year for sales of Soya Kaas. The new plant, formerly a warehouse, gives plenty of room for expansion.

On all Soya Kaas labels, in the ingredients statement, casein is listed as "caseinate (a milk protein)." Terminology such as "non-dairy" or "dairy free" is completely avoided. The changeover was complete by the time the new NLEA labeling requirements went into effect. In addition, in response to enquiries, the company sends out a little leaflet (2-3 paragraphs) which explains that "caseinate is pure milk protein with the lactose removed mechanically." It gives a milk-like stretch, etc. They send out a similar sheet on lactic acid, which is also an ingredient in Soya Kaas. Unfortunately a few consumers still do not understand clearly the meaning of "a milk protein." Address: President, American Natural Snacks, P.O. Box 1067, St. Augustine, Florida 32085-0410. Phone: 904-825-2057.

2316. Landy, Craig. 1995. Seedex Inc., a subsidiary of Mitsui & Co. (USA) Inc., is growing green vegetable soybeans in Longmont, Colorado (Interview). *SoyaScan Notes*. Aug. 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Seedex probably has less than 100 acres, and they expect to be able to harvest 7,000 to 10,000 lb of green vegetable soybeans (edamamé) this year. Dr. Akio Suzuki is the president of Seedex, Inc. (subsidiary of Mitsui & Co. (USA) Inc., 1350 Kansas Ave., Longmont, Colorado 80501. Phone: 303-678-7333). Craig plans to meet with Dr. Suzuki on August 27 in Chicago, Illinois. Mr. Suzuki claims that the Colorado environment (dry and sunny) is especially well suited to growing delicious edamamé with a high sugar content. They are hand harvesting the crop since they do not have machinery that would leave the pods undamaged.

Craig got on the trail of edamamé from Gary Brown at Arrowhead Mills; Gary introduced Craig to Dr. Dwayne Johnson of the Dep. of Soil and Crop Science (Alternative Crop Project) at Colorado State University, Fort Collins, Colorado (Phone: 303-491-6438). Dwayne introduced Craig to Akio—all within an hour. Craig thinks that edamamé have great potential as a food ingredient in the USA; perhaps they could be roasted, or pureed. Address: Sales & Marketing, T&G Food Ingredient Services, 4220 Commercial Way, Glenview, Illinois 60025. Phone: 1-800-288-1012.

2317. Schwartz, Arthur. 1995. The Schwartz that ate N.Y.:

Soy vey! Who has great soy dishes. *Daily News (New York)*. Aug. 8. Food section. p. 4.

• **Summary:** The title of the left column is a play on words using the Yiddish term “Oy vey!” which means something like “On no, not more.” The author, is luke-warm about his subject: “Big news. Soybeans are good for us. Like we didn’t know it already.” A sidebar gives a brief definition of each of the different types of soyfoods.

The right column lists New York City restaurants that serve great soy dishes: Josie’s, Golden Unicorn (Chinese), Angelica’s Kitchen (macrobiotic), The Fashion Cafe, Zen Palate. Part II is for takeout: Healthy Pleasures, Natural Frontier, Whole Foods.

The recipe of the week is Quick tofu hoisin. A table lists various soyfoods and the amount of protein contained in each.

Note: Arthur hosts a talk show titled “Food Talk” on WOR radio in New York. On Tuesday, Aug. 8, at 12:30 p.m. Dana Jacobi was his guest to talk about soyfoods. She invited listeners to send a SASE to Soyfoods Center for free tofu recipes and a free catalog of publications. About 150 listeners responded.

2318. Evans, Barry. 1995. Chronology and history of Oak Feed Miso, Inc. and American Miso Co. of North Carolina. Part I. 1947 to 1979 (Interview). *SoyaScan Notes*. Aug. 25. With follow-up talks on 4 Dec. 1999, and 29 June and 2-7 July 2000. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Barry was born on 25 Feb. 1947 in Reading, Pennsylvania. His father was in the army reserves. He has been an avid reader since he was about age 9. He did very well on his SAT exams, and entered Princeton University in the fall of 1965 on an ROTC scholarship; there he majored in history, a subject in which he is deeply interested to this day. After 3 years he left Princeton (in a squabble over a project) and attended Temple University in Philadelphia for one year. Returning to Princeton for a fifth year in college, he graduated in 1970. He has been a “natural foods enthusiast” since he was in college. He entered the U.S. Army in Feb. 1971, living off post at Fort Knox (Kentucky), formally applied as a conscientious objector, and was honorably discharged in Aug. 1972 with full veteran’s benefits. He returned to Temple Univ., enrolled in a PhD program in history, but left after 3½ semesters. In June 1974 he became a vegetarian—though he regularly eats fish. In 1977, while living in Coconut Grove, Florida, he first heard about macrobiotics and heard Michio Kushi speak in Coconut Grove. He became a devoted follower of macrobiotics, which he still is. Barry heard about the miso venture through Kathy Kashdan, his housekeeper, who was the sister of John Belleme’s ex-wife. Sandy Pukel (pronounced puy-KEL), who owned the Oak Feed Store, was the pasha (local chieftain) of the large macrobiotic community (satrapy) in

Coconut Grove. Sandy was also extremely close to Michio, and they were often in touch. Sandy was probably Michio’s closest friend among American followers of macrobiotics. The day after Michio’s lecture, Barry went to Sandy’s Oak Feed Restaurant (where he had previously spent much time) and asked to see John Belleme, the manager of Oak Feed Store, who was seated at a table in the Oak Feed Restaurant with Sandy Pukel, talking with Edmund Benson about the miso company idea. Barry walked over to the table and introduced himself, and said he might like to be involved with the miso company; neither he nor John knew one another, but their paths were soon to become deeply intertwined.

1978 fall—Sandy Pukel, John Belleme, and Michio Kushi start to discuss the idea of a miso manufacturing company in America. John Belleme became interested in this idea in the fall of 1976 in Brookline, Massachusetts.

1978 fall—Various people buy shares in the new miso company. Jim Kenney \$5,000. Frank Head intended to buy shares, but never did. At either that time or later Edmund Benson invested about \$25,000 of \$50,000 that he had formerly pledged.

1978 fall—Pukel and Belleme make a deal through a real estate agent to buy the property in Rutherfordton, North Carolina, on which the American Miso Co. now stands. As Barry recalls, this was the very first concrete move toward starting a miso company other than John taking Japanese Berlitz lessons, which he started at about the same time. They bought something like an option on the property. They put something like \$1,000 to \$5,000 down as good-faith money and had about 6-12 months to come up with the rest of the down payment of \$15,000 to \$20,000. John Belleme rode up to North Carolina on his motorcycle to help make the down payment and sign the original land deeds *before* Barry invested any money. Maybe John also rode up again later.

1979 Feb. 28—Oak Feed Miso, Inc. is incorporated. The initial directors and officers are Sanford J. Pukel (President, 3030 Grand Ave., Coconut Grove, Florida 33133) and John Belleme (Secretary-Treasurer, 5490 W. 1 Ct., Hialeah, Florida 33012). It is not clear who owns how much stock at this time. Oak Feed Miso was discussing a joint venture with Erewhon to establish the actual factory, which would then be called the Erewhon Miso Co.

1979 April—Five of the six months have passed. Barry (now age 32) becomes involved as an investor in the miso company, contributing initially \$50,000, which more than covers the urgently needed down payment. He thinks Sandy could have found a way to make the next land payment without his money, but perhaps not easily. Barry had not been previously involved in the miso project in any way. Barry believes that by this time Sendai Miso-Shoyu and Mitoku (Mr. Kazama) had very little interest in serious participation in the Erewhon Miso Co. Michio may have

wanted them to be involved, but they did almost nothing to demonstrate their interest. At best they may have said “keep us posted.” But nothing ever happened.

1979 Oct.–John and Jan Belleme leave for Japan to study miso making. After “camping out” in Mr. Kazama’s office for a while, he ends up studying with Mr. Onozaki. Barry’s investment helps, but the checks sent to the Bellemes in Japan are written by Sandy Pukel on the Oak Feed Miso account.

1979 Nov. 18–Barry is in a horrific bicycle accident in Pennsylvania. He flies over the handlebars, into a field, breaking 5 vertebrae and 9 ribs. After a 14-hour operation, he spends 6 months flat on his back in the hospital and 1 year in a full-body cast. He was paralyzed from the waist down for quite some time. He did not eat one bite of hospital food; he had all natural-food meals brought in. Continued. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

2319. Evans, Barry. 1995. Chronology and history of Oak Feed Miso, Inc. and American Miso Co. of North Carolina. Part II. 1980 (Interview). *SoyaScan Notes*. Aug. 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1980 June–John and Jan Belleme return to the USA from Japan. A letter shows that by late summer John had started to order miso-making equipment. Barry is sure that the wooden vats come from Arrow Tank Co. (Buffalo, New York) the only traditional barrel maker left in the United States—a very interesting place. The vats are all traditionally made, from old recycled wine barrels and other old wood. Over the years, the miso company has bought all its vats from Arrow Tank Co. The first 35 vats were cypress, but when those ran out, the next five were fir (they took a long time to season), and last 5-6 were redwood (they worked better).

Concerning Joseph and Patricia Carpenter: Barry never met them and he understands that their being asked to leave when the Bellemes returned was a traumatic, landmark event in their lives. Barry was once in prison for 32 months, and was on probation for three years after that, and was awaiting prison for 2 years before he actually went. But when it was over, he let it go and went on with his life. After John returned from Japan, Barry heard about the Carpenters situation from John and Sandy, who said (generally) that they had not done much while they were there, and they did not seem very motivated. But, in all fairness, maybe they didn’t have any clear instructions as to what they were supposed to do. For him, their whole role in the miso company was always very hazy. But until Barry took a hand in things, the whole company was very “loosey-goosey.” Nobody had any clear instructions as to what was to be done. Only John and Jan Belleme know the details of what actually happened. Sandy is a “conflict avoider” so he would have been ambiguous. John was not a conflict avoider. John, who

was never a hippie and was very yang after his stay in Japan, came back to find these two hippie types on the land. “This culture clash may have had a lot to do with it.” Also, there was only one house, so the two families would have had to live together.

1980 summer—Each time the company needed more money, they would come to Barry—since he was the only one they knew who had any and was willing to invest it. This summer, when the building had to be constructed, the equipment ordered and paid for, and land payments made, Barry started to invest a lot more money, and to own more and more shares. When he invested his second \$50,000 he began to pay more attention to who else owned shares. “As I began to sniff the wind a little more, I sensed that I was surrounded by phantom shareholders, and was the only one actually investing any money.” Sandy and Michio didn’t want Barry to be on the board of directors, and they wanted his stock to be Class B, which did not enable him to vote—even though he was now the leading investor. Barry confronted Michio on this while on an airplane en route from Boston to Florida; Sandy was also on the plane. Barry made it plain that he would not invest any more money (he was being asked for about \$90,000 more) unless he could be on the board of directors, and all the stock (not just his) would be voting stock. Michio and Sandy reluctantly agreed. All this came to a head at an important meeting in Miami in the summer of 1980, shortly after John and Jan returned from Japan.

When the Belleme’s returned from Japan, people began to realize that this miso company might really happen. Negotiations had been taking place throughout 1979 and 1980. Three or four versions of an ownership contract / agreement had been presented but never signed; there would be 14-15 more over the next year, and none of those was ever signed either. The negotiations ended with Erewhon’s bankruptcy. The discussions were really between the Erewhon group (comprised of Michio, Aveline, Morris Kirsner—their attorney—and Evan Root) and the Oak Feed Miso group (comprised now of Barry, John and Jan Belleme, and David Young—their attorney). Sendai Miso-Shoyu and Mitoku were not even mentioned; they were out of the picture. Mr. Kazama, owner of Mitoku, probably feared and doubted the potential new American miso company. “The issue was: Who would control the company, Erewhon or us? And how many shares would each person or company own?” Each group wanted to own a majority of the shares. This meeting went on for several days at various places, including restaurants, the Oak Feed Store, and the office of David Young—the Oak Feed Miso group’s attorney. Note: See also meeting of 27 Sept. 1981.

Barry, who was on crutches, flew in from Reading, Pennsylvania, accompanied by his close friend and confidant, Saul Goodman, a macrobiotic healer and shiatsu practitioner. Barry could not travel by himself, and this was the first

trip he had taken after his bike accident. David Young was concerned that the Oak Feed group was being asked to put up almost all of the money yet would not have control; yet he was ambivalent. Sandy Pukel was a member of the Oak Feed Miso group, but he was also ambivalent; he was really on Michio's side. He felt that Erewhon's participation was absolutely vital, and whatever had to be given up to get that participation was appropriate. Everyone should trust in Michio, and Michio would provide.

Sandy was and is one of Michio's closest friends and confidants in the whole world. Sandy and Mona Schwartz were the co-heads of the Florida Macrobiotic Association. An excellent macrobiotic teacher and cook, Mona ran a study house in the Miami area, where Barry ate many of his meals for the first several years that he was practicing macrobiotics. So did Dr. Keith Block. Mona first told Barry how close Michio and Sandy were, and how much each influenced the other's thinking.

Barry recalls that Michio and his attorney, Morris Kirsner, were so demanding and unreasonable in what they wanted that even Sandy hesitated. He wanted to give them more than Barry and John, but he didn't want to give them everything they wanted. Negotiations dragged on and on because they were taking this unrealistic negotiating stance. So it was easy for Barry and John, who saw increasing signs of weakness in Erewhon, to begin to fight a war of attrition and prevent anything from happening.

The Board at that time had five members—including John Belleme, Sandy Pukel, Edmund Benson, Barry, and one other person—which was probably not Michio. Only four other people besides Barry invested money in the miso company: Edmund Benson \$20,000, Frank Head (who started Mountain Ark) \$5,000, the Japanese cook at the Oak Feed Restaurant (Yozo Masuda) \$10,000, and Jim Kenney \$5,000. Barry bought out the first two, and Jim died before the company began operations. Sandy Pukel, as one of the company's founders, got a number of "founders shares" for free, which Barry eventually bought back from him.

1980 fall—A document shows that at this time "John and Jan go on Erewhon payroll and start construction of Erewhon Miso in Rutherfordton, North Carolina." They begin by leveling the land. They went on the payroll of the Erewhon Trading Co., not the Erewhon Miso Co., since the latter company did not have a payroll and never really existed. Of course, Michio and Aveline owned Erewhon and all or most of its stock. Barry recalls that Erewhon was supposed to put up a certain amount of money for their share of the joint venture, and then provide the additional services of buying all miso made by the new miso company, packaging, and distributing it.

Barry recalls that much of the automatic miso-making equipment came from Japan—some or all of it from the Fujiwara Brewing Co. in Hiroshima. John visited them in 1983 when the miso company was considering adding a soy

sauce plant near the miso plant. Continued. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

2320. Evans, Barry. 1995. Chronology and history of Oak Feed Miso, Inc. and American Miso Co. of North Carolina. Part III. 1981 to 1982 (Interview). *SoyaScan Notes*. Aug. 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1981 Jan. 31—Oak Feed Miso, Inc. IRS tax returns (for the fiscal year ending Jan. 31) show losses of \$89,000 for the last year with no sales. Note: The land was purchased on a mortgage, with about \$20,000 down payment.

1981 March—The miso building is essentially complete, but some equipment still had to be ordered—from Japan and the USA.

1981 early—Michio and Aveline Kushi can see that Erewhon is heading for bankruptcy. They try urgently to raise money. Sandy Pukel loans the Kushis \$100,000—and thereby wins their eternal gratitude and friendship. Sandy never gets the money back. Barry is upset, because he believes that this was money he gave to Sandy as his investment in the miso company. Essentially, Barry then had to give Sandy more money which he finally did invest in the miso company—as follows: Sometime later in 1981, to make things more complicated, Sandy (who is now short of cash) asks Barry if he would be willing to invest in Oak Feed Store and Restaurant with the understanding that Sandy will use the money to buy the shares he had pledged to buy in Oak Feed Miso, Inc. Barry accepts the deal, and Sandy invests the \$80,000 to \$90,000 in Oak Feed Miso—which makes Barry happy.

1981 July—The opening ceremony for Erewhon Miso Co. is held at Rutherfordton, North Carolina. This was "the crowning moment of the early phase of the miso company. We were all still together at that point, including Michio. We had a big, beautiful sign out on the road in front of the factory, put up for the opening ceremony, that read 'Erewhon Miso Co.'—even though that was never the name of the company. The delegation from Erewhon was Michio, Aveline, and Evan Root. Evan was overwhelmed by the emotion of it—all just crying like a baby. John and Jan Belleme were there, as was a woman from Asheville who did the photography. Sandy Pukel must have also been there, though Barry has no clear recollection of this. Yet tension between Barry and Sandy had been growing. "Without Sandy and Michio, the project never would have happened." By now many people could see that Erewhon was headed for bankruptcy, but "Even at the time of the opening, everyone thought Michio would pull another rabbit out of his hat in the end," to save Erewhon. In late summer and early fall Barry attended several meetings called to discuss Erewhon's perilous financial condition. These meetings were all held in the area of Boston, Massachusetts, sometimes in the office

of Morris Kirsner, the Kushi's attorney. Barry was invited largely because they hoped he would help bail out Erewhon.

1981 Aug.—John and Jan Belleme start making miso in North Carolina; the soybeans and grains are contributed by Erewhon Trading Co. But by August or September the Kushis can see that Erewhon's bankruptcy is imminent, so they stop sending John his paycheck and additional raw materials. This creates a crisis; everything must be rethought with Erewhon out of the picture. John may have sent out feelers to Westbrae and Eden to see if they wanted to take over Erewhon's role as distributor of the miso—they didn't.

1981 Sept. 27—At an annual meeting of Oak Feed Miso, Inc. all shares are converted to Class A voting shares. Major shareholders are: Barry Evans 1400 shares. Sandy Pukel 1400 shares. John Belleme 900 shares.

1981 Nov. 18—Erewhon Trading Co. files for bankruptcy protection under Chapter 11 of the federal Bankruptcy Act. For the next several months, "various wolves were circling around, trying to grab hold of the half-dead body. Finally U.S. Mills and Nature Food Centres Inc. grabbed it and dragged it off to its lair." As part of the deal, Michio had to agree that he would only do endorsements through the new owners. So Michio, who had lost control of his own destiny for quite some time, could not be involved with the miso company any more. Barry thinks Sandy realized that and his heart went out of the miso company project at that point. Consequently, all deals between the miso company and Erewhon come to an end. Barry thinks that Erewhon Trading Co. invested a total of about \$15,000 in the miso company in the form of payments and miso ingredients. After Erewhon was purchased out of bankruptcy, the new owners, Chuck Verde and Cynthia Davis, never got this investment back. When they called, Barry took the position that the costs and difficulties the miso company had endured because of Erewhon's collapse were much greater than \$15,000. Barry added that if they took the matter to court, he would sue them for breach of contract. In fact, the miso company barely survived that collapse.

Over the past four months Barry, who admires Michio as a spiritual leader, has come to realize that he cannot be counted on to help establish the new miso company. He has grown tired of all the difficulties with Erewhon and Michio; as a practical businessman, he was "a nightmare."

1981 late—Marty Roth now enters the picture. When John Belleme left his job as manager of Oak Feed Store to study miso in Japan, Jim Kenney took over from him. Jim was an epileptic; while traveling on vacation in East Asia about a year later, he died tragically at about age 27—Barry heard he choked on the seed of an umeboshi salt plum that he was using to try to control an epileptic fit. So in about July or August 1981 Sandy brought in Marty Roth, who had been running the Natural Cafe in Santa Fe, New Mexico. Marty was soon working as manager (or assistant manager) of Oak Feed Store. Marty (a very inventive and creative guy) and

Barry (a co-owner of the store) quickly find they get along well and work together effectively. Marty didn't want to stay in Miami, and his job with Sandy wasn't working out. When Marty told this to Barry, Barry said that he was planning to establish his own import company in North Carolina, and that company was also going to take over distribution for the miso factory. It is not crystal clear to what extent Barry lured Marty away from Oak Feed Co. and to what extent Marty would have left anyway.

1981 Dec.—Great Eastern Sun (GES) is organized. The first employee and manager is Barbara Arrow, who arrived in Dec. 1981.

1982—Jan. GES orders its first container of natural foods from Mitoku (Mr. Kazama) in Japan.

1982 Jan. early—Marty Roth moves from Florida to North Carolina to run Great Eastern Sun (GES)

1982 Jan.—Barry makes another investment in the miso company and thereby replaces Sandy Pukel as the largest shareholder. Barry buys out remaining shareholders—except Jim Kenney who is no longer living. Sandy proposes to Barry a deal whereby he would trade Barry all of his stock in the miso company for all of Barry's stock in Oak Feed Store. Barry accepts, but with the added condition that Barry could import goods from Mitoku in Japan.

1982 Jan. 4—Barry Evans sends out a letter on American Miso Co. letterhead to potential customers that begins: "Dear Friends—We at The American Miso Company are proud to announce the opening of our miso shop in Western North Carolina." It ends: "The Lindenself Foundation, doing their business as Linden's Elf Works, located in Piedmont, North Carolina, has been appointed as the sole agent in marketing and distribution of The American Miso Company brand products... Your phone contact is John Troy at... 919/364-2723. Enclosed is the Linden's Elf Works distributor price sheet which includes all the pertinent information for your upcoming Spring catalogue. With kindest regards, Barry Evans, President." When Marty Roth sees this announcement, he argues that GES should distribute AMC's miso; Barry agrees. So John Troy and Elf Works never did distribute any AMC miso.

1982 Jan. 31—Oak Feed Miso has losses of \$67,000 for the previous year with no sales. Total loss: \$157,000.

1982 Feb. 26—Sandy Pukel and Barry Evans sign an agreement whereby Sandy gets out of Oak Feed Miso and Barry gets out of Oak Feed Store and Oak Feed Restaurant by an exchange / trade of stock. Barry recalls that Sandy left the miso company reluctantly for two reasons. First, because he saw the miso company as "his baby" and he liked to be in control—not so much because he saw it as a company with a bright and profitable future. And second, because Michio wasn't involved any longer, and couldn't be because of what had happened to Erewhon. Barry never asked Sandy (or any of the other shareholders) if he could buy their shares. They all approached him with the idea. First, for example, Edmund

Benson wanted to get his money back, so Sandy bought his stock. Yozo Masuda's stock was included in the deal with Sandy.

1982 March 22—Great Eastern Sun is incorporated.

1982 April 19—At the annual meeting of the shareholders of Oak Feed Miso, the name is officially changed to American Miso Co. This change is filed with the state of Florida on 5 May 1982, and signed by Barry Evans and Janet Belleme. The final stamp of filing is 19 May 1982. Barry notes: "In numerology, this date (May 19) is a 44 number, since $5 + 19 + 1 + 9 + 8 + 2 = 44$. Forty-four is the number of ultimate business success." Barry did not plan to incorporate the company on this date. "It was just the order of the universe."

1982 May 18—Great Eastern Sun sells its first food products to a natural food store; they were imported from Japan.

1982 mid- to late- The principals of the American Miso Co. are now Barry Evans, John and Jan Belleme, and Mrs. Kenney. Barry started with 1,400 shares, got 1,400 from Sandy, 100 from Yozo, 250 from Edmund, and 200 from Gary Dukeman (a friend of his)—for a total of 3,350. John and Jan had about 850 shares. John had been given about \$20,000 worth of shares as a founder of the company, and because he went to Japan to learn how to make miso, and because he had worked for a modest salary (less than \$20,000/year) as a miso maker in North Carolina. Mrs. Kenney had 50 shares. On a percentage basis, Barry owned 78.9% of the miso company, John and Jan Belleme owned 20%, and Mrs. Kenney owned the rest. Continued. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

2321. Evans, Barry. 1995. Chronology and history of Oak Feed Miso, Inc. and American Miso Co. of North Carolina. Part IV. 1983 to present (Interview). *SoyaScan Notes*. Aug. 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1983 Oct. 1—Barry desires to buy and John and Janet Belleme desire to sell all their 900 shares in the American Miso Company. John agrees to work as a consultant for 6 months and to train a person to take his place. Barry wants to run the company in a more "commercial" way than John does, starting with major price increases.

1984 Jan. 31—American Miso Co. has gross receipts or sales last year of \$61,941, annual losses of \$68,367, and total losses from day one of \$306,633.

1985 Jan. 31—American Miso Co. has sales last year of \$107,000, annual losses of \$21,000, and total losses from day one of \$327,000.

1985 Dec.—John Belleme leaves American Miso Co. because of a conflict with Barry Evans. Don DeBona, who arrived in the spring of 1985 and worked with John for 6 months, takes over. A year or two before John left, Sandy

purchased his shares in American Miso Co.—because John wanted him to. John felt that Barry was making decisions with which he did not agree, and that he shouldn't have to suffer financially if they turned out to be bad decisions. Barry did not want John to leave, but neither did he want John to be in control of the business. Barry recalls that there was a big conflict and bad feelings between him and John at the time John left.

1986 Jan. 31—American Miso Co. makes its first profit during the past year of \$22,000. Gross revenues or sales were \$214,000 and total losses from day one decrease to \$304,000. Notice the big jump in sales. Barry instituted a 50-70% price increase, over John's protests. Note: Barry never went to business school, but he learned to be a good businessman in the "school of hard knocks."

1987 Jan. 31—Sales last year of \$262,000, profit of \$101,000 (up 4.6 fold), and total losses to date of \$203,000. Now—sales only for the following fiscal years: \$252,000 in 1988, \$275,000 in 1989, \$315,000 in 1990.

Then the fiscal year end changes to Aug. 31 to coincide with that of Great Eastern Sun. Sales are \$161,000 in 1991, \$392,000 in 1992, \$435,000 in 1993, \$505,000 in 1994, and \$550,000 in 1995. In 1995 the total losses carried forward go to zero for the first time. In other words, including his salary, Barry first broke even this year.

1992 Jan. 2—Barry takes a federal vacation, returning to the company on 1 Sept. 1994.

1997 Oct.—Don DeBona decides to leave AMC. The broad issue was control. It was a sad day for Barry. Don owned no shares in the company and, after having been there for ten years, he wanted to own a significant part of the company, and be able to build up equity, if he was to continue. Barry was unwilling to give him that ownership, so he quit—but continued to live in his house on the property. "It was not a very pleasant parting."

2000 July—In the early years, no koji was made each year during the hot months, from about June until August or mid-September. Now, however, the koji-makers are so skilled that they make it during those months, but outside of the koji room on open tables. This helps to meet the steadily growing demand. Today, with a crew of eight (including 4 packagers), AMC makes about 350,000 lb/year of miso (about 7,600 lb/week) and might possibly be able to expand this to 450,000 lb/year with its existing buildings.

2000 July—Almost all the early American Miso Co. records (including payables, receivables, invoices, payroll records, etc.) are kept in many cardboard boxes in a storage area in Asheville—but they are not well organized. Records from the first year or two (1979-80) may be missing entirely. One of these days Barry would like to get these AMC records organized. may be missing. The Great Eastern Sun records are intact from the beginning and are well organized.

Barry: "I have tried to tell you this story in a fair and dispassionate way. No one should think that I was the dogged

person hanging on, or the prime mover of everything. But it was really just the flow of circumstances. I was just swept along, and countless times I was scared to death and wished I had never gotten involved, and spent sleepless nights ruing the fact that I had made such a fool out of myself, and thought things would never work out, and would end in disaster.” But actually the company has experienced nice, steady growth.

Note: Barry planned to buy South River Miso Co. within 1-2 weeks after this interview and was 90% sure the deal would go through—but it never did. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

2322. Mountain Ark Trading Company. 1995. Catalog—September-December 1995 [Mail order]. Fayetteville, Arkansas. 30 p. 27 cm.

• **Summary:** Soy-related products in this mail order catalog include: Miso, soy sauce, tempeh, tofu, black soybeans, yellow soybeans, tofu dressings, natto miso. Also: Sea vegetables, amaranth, quinoa, teff, blue corn. The general manager is Nick Masullo. Address: P.O. Box 3170, Fayetteville, Arkansas 72702. Phone: 1-800-643-8909.

2323. *Natural Food and Farming (Atlanta, Texas)*. 1995. Bio-dynamics: The legacy of Ehrenfried Pfeiffer. 41(2):1, 5. Aug.

• **Summary:** A biographical profile of Ehrenfried Pfeiffer.

Note 1. Bill Francis is now Executive Director and Editor and Lisa Arnold is Secretary / Treasurer of Natural Food Associates.

Note 2. This is apparently the last issue of this pioneering periodical. The issue contains 16 pages and is 8½ by 11 inches in size. Address: Natural Food Associates, U.S. Hwy 59. P.O. Box 210. Atlanta, Texas 75551. Phone: 903-796-3612.

2324. *Natural Food and Farming (Atlanta, Texas)*. 1995. Bio-dynamics: The legacy of Ehrenfried Pfeiffer. 41(2):1, 5.

• **Summary:** An excellent biographical profile.

Note: This is the last issue of *Natural Food and Farming* published by Natural Food Associates, U.S. Hwy. 59, P.O. Box 210, Atlanta, Texas 75551. Phone: 903-796-3612.

2325. Barat, Chandri. 1995. Celentano copies Legume line of vegetarian frozen entrees with tofu (Interview). *SoyaScan Notes*. Sept. 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** About fifteen years ago Chandri and Gary Barat went to Celentano with an idea for a line of vegetarian frozen entrees with tofu. They worked with Dominic Celentano, Sr., a pioneer in the frozen food industry and the first to put frozen Italian entrees in food stores about 50 years ago. They both admired this hard-working, honest man of

integrity, who told them: “A man’s handshake is his word. You can have all the paper in the world, but if the good will of the parties isn’t involved, it doesn’t mean anything.” He told them “he would never do a tofu item, and he would never compete against them.” Though he is a right-wing conservative who jokingly calls Chandri “Mrs. Lenin,” he made a real personal mark on the Barats because of the many values of his they admired.

Before Legume had its first public stock offering, the Barats and their attorneys developed and signed a very professional 30-page legal contract with Celentano; it stated that Celentano would not divulge any of Legume’s confidential information, including proprietary formulas, recipes, etc., but it did not contain a “non-compete agreement.”

When Dominic’s son, Dominic Jr., took over his father’s place as head of the company, he decided to try to introduce a low-fat version of the company’s traditional Italian frozen entrees to the natural- and health food market. He did this in part because profit margins were decreasing from the big chains like Shop Right, and because he noticed the success Legume was having in this market. The products (Cheese Ravioli, Cheese Lasagna, etc. with white flour and regular cheese) were well accepted and widely distributed. These were purchased by retailers in part because the natural foods industry is losing its identity by buying products that contain white flour, white sugar, etc. Chandri and Gary had no problem with this. But then the son did something that Chandri and Gary feel was unethical, if not treacherous. Even though it did not violate any written agreements, it clearly violated a verbal agreement given with a trusted handshake. In early 1995 Dominic Jr. launched a line named “Celentano Vegetarian Selects” consisting of four vegan frozen entrees with tofu that were very similar to those they had been making—and were still making—under contract for Legume since 1983. The four products were: Manicotti Florentine (resembling Legume’s Tofu Manicotti, made by Celentano since Feb. 1983), Stuffed Shells Florentine (resembling Legume’s Stuffed Shells Provencale, made by Celentano since Dec. 1983), Lasagne Primavera (resembling Legume’s Vegetable Lasagna, made by Celentano since Dec. 1983), and Eggplant Rollettes.

Celentano’s introduction of these four products has hurt the sales of Legume’s frozen tofu entrees tremendously. Celentano’s sells his entrees at prices lower than Legume can afford and he promotes them extensively.

Chandri laments: “It is a very unfortunate situation. We still have a close relationship with the father, Dominic Sr., who loved to mock tofu: “It’s just like cardboard. Who would eat it?” When we went to talk to the son, we said, ‘Your father swore to us he would never...’ The son replied: “My father doesn’t have the authority to speak for this business.” The son came on with the wife of the mayor of New York City introducing his non-dairy vegetarian line.

Celentano even uses tofu made by White Wave, the same manufacturer that has supplied Legume all these years.

The Barats would like to leave Celentano and find a new manufacturer for their products, but that is hard because Celentano is very automated. They are also reluctant to leave as long as the father is alive; but he is in his mid-70s and is not well. Chandri is sure that the son will kick Legume out the day after the father dies. The last time Chandri visited him in his office, “he almost picked me up and threw me out, even though I thought I was being quite polite. He said: ‘This is my office, you’re in it, and there’s the door.’”

Three or four years ago Legume began to private label their Manicotti Florentine for Trader Joe’s, and is still on the market and selling very well. They have also made other products for Trader Joe’s (Stuffed Shells, Classic Manicotti—without the spinach) but they have come and gone.

Legume’s best selling products at present are Vegetable Lasagna, Manicotti Florentine, and the new line of canned products. They also still make Barat Bars (chocolate) but they are a relatively small item. They also have a Veggie Protein Cutlet.

Update: 1996. According to one industry insider the above story does not sound quite right because Dominic and his wife “still run Celentano with an iron hand.” Address: P.O. Box 609, Montville, New Jersey 07045. Phone: 201-263-1013.

2326. *Natural Foods Merchandiser*. 1995. New Hope celebrates 20th anniversary. Sept. p. 6.

• **Summary:** New Hope Communications celebrated its 20th anniversary on 1 August 1995. The first issue of the company’s flagship publication, *Natural Foods Merchandiser*, was published in Feb. 1979. “Originally started by Doug Greene as a publishing representative firm in Santa Monica, California, the company relocated to New Hope, Pennsylvania, in 1980 and then moved to Boulder in the summer of 1988.”

The company organizes what have become the industry’s largest trade shows and conventions, Natural Products Expos East and West. The first Expo was held at Anaheim, California, in 1981 with 234 booths and 3,000 attendees. This year’s Expo West drew more than 18,000 industry members to 1,350 booths.

The company’s latest venture is the purchase and renovation of the historic Boulder Theater (see June NFM, p. 6). A photo shows New Hope Communications founder and CEO Doug Greene in a natural products store in 1984.

2327. Albertson, Ellen. 1995. Super soy: The newest miracle food. *Self*. Oct. p. 148-151, 204. [1 ref]

• **Summary:** The subtitle continues: “Okay. One more time. Scientists are telling us they’ve found the nutritional Holy Grail, a simple food that prevents heart disease and cancer. Do we believe them? Yes!”

“Soy may be so effective that it actually crosses the line from nutritional to medicinal.”

This article begins with a summary of the meta-analysis by Dr. James Anderson published in the *New England Journal of Medicine* (3 Aug. 1995). It reported soy in the diet can significantly lower high cholesterol.” It also notes that: (1) “Genistein, a powerful natural chemical unique to soy,” may stop the growth of cancer cells. (2) The natural estrogens in soybeans may “help alleviate postmenopausal symptoms.” In Japan, where soy is typically eaten daily, there is no word for “hot flashes.”

Photos and definitions of various soyfood products are given: Tempeh, soy flour, tofu, textured vegetable protein, soy milk. A section titled “15 delicious ways to add soy to your diet,” gives serving suggestions for these and other soyfoods at breakfast, lunch, snack, and dinner.

A full-page table on p. 204 rates the best (B) and worst (W) of the following, with nutritional information, taste, texture, and comments: Hot dogs: B—Yves Veggie Cuisine Tofu Wieners. W—Soy Boy Right Dogs. Burgers: B—Boca Burger. W—Green Giant Harvest Burger. Sausage: Lightlife Lean Links Italian Sausage. W—Fantastic Foods Nature’s Sausage. 2328. Rose, Ronit Addis. 1995. Groceries go green: natural food stores are winning converts by the cartful. *Vegetarian Times*. Oct. p. 77-78, 80-82.

• **Summary:** Discusses Whole Foods Market, the largest natural foods chain and the only publicly held company. Its sales have jumped 334% since 1991 to \$402 million.

“Whole Foods’ main competitor is privately-owned Fresh Fields based in Rockville, Maryland. Fresh Fields has 15 stores in five states, and about \$200 million in annual sales. On the next tier of natural foods supermarkets is Wild Oats, with 14 stores and six more planned for 1996, which has about \$120 million in sales a year; and Alfalfa’s, with eight stores, three more set to open soon and about \$100 million in projected sales this year. Both chains are based in Boulder, Colo.

“These stores have indeed changed the face of natural foods retailing—perhaps all food retailing—forever.”

2329. **Product Name:** Tree of Life Tamari, and Shoyu.

Manufacturer's Name: Tree of Life, Inc. (Marketer-Distributor). Made in Richmond, Virginia, by San-J International.

Manufacturer's Address: St. Augustine, FL 32084.

Date of Introduction: 1995 October.

Ingredients: Incl. organic soybeans.

How Stored: Shelf stable.

New Product–Documentation: Spot with photo in NFM's New Product Review. 1995. Fall. p. 6. "Tree of Life" has introduced domestically made Organic Wheat Free Tamari and Organic Shoyu. Both new products are made with organic soybeans. The tamari has the sodium content reduced by 25%.

2330. **Product Name:** Tree of Life Ready Ground Tofu [Savory Garlic, or Hot & Spicy].

Manufacturer's Name: Tree of Life, Inc. (Marketer-Distributor).

Manufacturer's Address: St. Augustine, FL 32084.

Date of Introduction: 1995 November.

Ingredients: Incl. tofu.

How Stored: Refrigerated.

New Product–Documentation: Spot with photo in NFM's New Product Review. 1995. Winter. p. 3. "Tree of Life" has introduced two new flavors to its Ready Ground Tofu line of "vegetarian hamburger substitutes." The product works well in many different recipes including lasagna, burritos, and stuffed peppers.

2331. Ledvinka, Ferro. 1995. Introducing macrobiotics and soyfoods to Italy (Interview). *SoyaScan Notes*. Dec. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ferro was a pioneer of macrobiotics in Italy. In the process he also helped to introduce soyfoods, especially to Florence. He first learned about macrobiotics when he read a book on macrobiotics in Italy. He started eating a macrobiotic diet. In Rome there was a macrobiotic center founded and run by Marquesa Parvolo, who had been cured of leukemia or a blood disease by George Ohsawa several years before. In 1971 he heard a lecture at this center in Rome by Rob Dobrin, who gave him Michio Kushi's address in Boston, Massachusetts. In the summer of 1972 he traveled to Boston to study macrobiotics, and there he learned how to make tofu and seitan. After leaving the USA, he returned to Italy, living in Rome. From there he worked to spread macrobiotic food and philosophy to all major Italian cities.

In Jan. 1977 Ferro went to Japan to work with Mr. Kazama at Mitoku, exporting macrobiotic foods to Italy and other European countries. The first Italian company to order these foods (including Japanese miso and tamari) was ProBios in Florence. They were followed by two Italian Macrobiotic Centers, located in Rome and Milan. In Oct. Ferro left Japan, returned to Italy, lived in Rome for a while,

then moved to Florence, where he established the pioneering Fondazione Est-Ouest at via de Serragli 4, in Florence. This was a combination macrobiotic restaurant and macrobiotic study center. Ferro also worked for a while with ProBios. He taught various people to make tofu, seitan, and tempeh—but none of the restaurant customers would buy or eat these strange new foods. So Ferro decided to fry them and serve them as a snack, free of charge, before each meal. A Tuscan proverb says that "Even a slipper, if fried, tastes good." In this way people in Florence started to eat these new foods. The restaurant made and served these foods from about 1982 to 1985. Then people who were working in the restaurant moved to another place, became independent, and they started a small food factory named Soyalab. The founder of Soyalab, Matteo Iacovelli, is now the chairman of the Kushi Institute in Milan. Another person who helped a lot on the way was Alfredo Ingannamorte. These people learned how to make tofu and tempeh in Boston. Alfredo studied at the Kushi house in Becket. Matteo worked at a macrobiotic restaurant (Open Sesame) in Brookline Village. Address: Via Pellicceria 6, 50123 Firenze (Florence), Italy. Phone: 055-827 274.

2332. EarthTrade Inc. 1995. EarthTrade, Inc. announces 3rd quarter sales. Innovative business shows 147% increase in revenues (News release). 1814 Franklin St., Suite 710-E, Oakland, California 94612. 6 p. Dec.

• **Summary:** "EarthTrade has become a leader in the conversion to organic farming in Latin America by working in a close partnership with small farmers and farm cooperatives. Together they are showing that sustainable agriculture makes economic as well as environmental sense, marketing their goods throughout the U.S., Canada, and Europe."

"The company's cumulative revenues for the 9-month period through September 1995 were \$2,232,246, compared to sales in the same period in 1994 of just over \$903,000 and \$1.36 million in total revenues for 1994." Michael Davis is the company's CEO and President. EarthTrade, which works with 2,500 small farmers and farm cooperatives in Central America, Mexico, Canada, and the United States, has offices in New York City, Oakland (California), and San Salvador. It is a member of OCIA (Organic Crop Improvement Association). Address: Oakland, California. Phone: 510-987-7222.

2333. Holt, Stephen. 1995. A soya-based dietary supplement to lower blood cholesterol and promote cardiovascular health. *Alternative & Complementary Therapies* 1(6):373-76. Nov/Dec. [5 ref]*

• **Summary:** A table (p. 376) is titled "Selected soya products for which specific health benefits have been proposed." Four products are listed, and for each the product name, purpose, and source (manufacturer or distributor) is given. The

products are (1) Genista, from Life Services Supplements, Inc. (Neptune, New Jersey) and CartiLife, Inc. (New York, NY). (2) Earl Mindell's Soy Miracle range of products from Free Life International (Milford, New Jersey). (3) Soya products of General Nutrition Corporation (GNC, Pittsburgh, Pennsylvania). (4) NGR/Shaper from H.S.N. (Saint Petersburg, Florida).

Dr. Holt concludes that the use of approximately 25 gm/day of soy protein isolates in an ideal format will provide an excellent primary dietary option for the hypercholesterolemic patient. This should be accompanied by appropriate lifestyle changes under the supervision of a health care professional. Address: President of Natus, Inc., 23-88 28th St., Long Island City, New York 10538.

2334. **Product Name:** Edensoy Extra: Organic Soy Beverage [Vanilla with Vitamin B-12].

Manufacturer's Name: American Soy Products, Inc.

Manufacturer's Address: 1474 N. Woodland Dr., Saline, MI 48176. Phone: 800-248-0301.

Date of Introduction: 1995.

Ingredients: Purified water, organic soybeans, malted cereal extract, vanilla extract, calcium [calcium carbonate], kombu (seaweed), Lima sea salt, vitamin E, beta carotene, vitamin D-2, vitamin B-12.

Wt/Vol., Packaging, Price: 1 liter (33.8 oz, 1.06 quart) Tetra Brik Aseptic carton.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: This product is distributed by Eden Foods, Inc., Clinton, Michigan 49236. Label sent by Eden Foods. A color photo on the front panel shows yellow sunlight drifting down through a forest.

2335. Nguyenle, T.; Wang, W.; Cheung, A.P. 1995. An investigation on the extraction and concentration of isoflavones in soy-based products. *J. of Pharmaceutical and Biomedical Analysis (Oxford)* 14:221-32. *

• **Summary:** Gives levels of daidzein and genistein in Infant formulas: Isomil (ready to feed), Nursoy (liquid concentrate), Prosobee (liquid concentrate). Soy flours (Central Soya–Soyafuffy), Centex, Promax, Promax plus, ADM–Nutrisoy, TVP, Acron-F, Acron-S, Cargill Protein Products -200/20, 200/70, Arrowhead, Molly Farm, Sun Ridge Farm, Soy drink, Tempeh, Soy protein concentrates (Procon, Promine), TVP (Response).

2336. Lovegren, Sylvia. 1995. Fashionable food: Seven decades of food fads. New York, NY: Macmillan. *

2337. Mindell, Earl. 1995. Earl Mindell's soy miracle cookbook: 70 simple, tasty ways to add soy protein to your diet. New York, NY: Simon & Schuster. A Fireside Book. 91 p. No Index. 22 cm.

• **Summary:** The title page states that the recipes in this book

were previously published in *Earl Mindell's Soy Miracle* (1995). At the end of each recipe is the source. Many of the recipes were developed by Judith Eaton, M.S., R.R., and Karen Lefkowitz, M.S., who have been tofu advocates for many years. "Judith and Karen run Nutrition Services, a consulting firm in Pomona, New York.

Contents: Salads. Spreads, dressings and sauces. Soups. Main dishes. Breads and breakfasts. Desserts.

The main soyfoods used—in descending order of predominance—are: Tofu (in 47 recipes). Soymilk (13, incl. Vitasoy and Edensoy). Tempeh (8). Texturized soy protein (3). Soy flour (3). Natural Touch okara patties (2) Miso (1). Soy sauce is used here and there as a seasoning.

Note: This is not a vegetarian cookbook. Ground beef, chicken, crabmeat etc. are used in a relative small proportion of the recipes. Address: R.Ph, PhD, registered pharmacist and Prof. of Nutrition at Pacific Western Univ. in Los Angeles. He lives in Beverly Hills, California.

2338. Olgeirson, Ian. 1996. Boulder tofu company expanding product line: White Wave hopes boomers guzzle soy milk. *Denver Business Journal*. Jan. 4. p. 3A, 17A.

• **Summary:** White Wave got its first big break almost 20 years ago when a King Soopers' buyer agreed to stock its products in two stores on a trial basis. "If the tofu did well in the Boulder markets, King Soopers pledged to put White Wave in all of its Colorado outlets. 'Every morning we delivered tofu to the stores,' said president and founder Steve Demos,' and every afternoon I sent my employees out to buy up the remaining stock... Demos [age 46] may not adhere to such guerilla marketing tactics anymore, but the charismatic titan of tofu hasn't lost his zest for the natural foods business... Demos has built his company into the nation's largest industrial seller of tofu, making 150,000 pounds a week on the Boulder factory."

Now he's "preparing to launch a soy milk product called Silk and a line of vegetarian entrees aimed at turning White Wave into the Dannon Yogurt of the soy by-product world. 'I will be called a heretic and then I will be called a genius,' Demos said.

Sheryl Lamb, a sales manager with Mountain People's Warehouse, anticipates a tremendous demand for Silk and for the line of vegetarian entrees called Full Moon Cafe. Demos' primary goal is to establish brand equity for White Wave. A photo shows Demos, dressed casually, leaning against a tree.

2339. Benda, Walter. 1996. New developments at Mitoku (Interview). *SoyaScan Notes*. Jan. 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Walter worked for Mitoku in Japan for about 3 years. Mitoku's business has been severely hurt by the yen-dollar exchange rate, and the fact that Japanese exports are becoming much more expensive for foreigners. So Mitoku is now trying to import food products and organically grown

ingredients, but they don't have a very good domestic distribution system for imports yet. When he left recently, Mitoku was downsizing. At the beginning of 1995 there were 10-11 employees, by the end of the year there were only 7. Sometimes Walter had the feeling that Mitoku was very close to going out of business. In addition, macrobiotics seems to be decreasing in popularity worldwide. There is less interest, fewer teachers, and fewer new people joining the movement. Walter believes that macrobiotics has become too rigid and too focused on Japanese style food.

Mitoku's two main customers are Westbrae in California (for instant ramen), and Great Eastern Sun in North Carolina. The three main countries to which Mitoku exports are USA, Italy, and the UK. But the UK is complicated. Chris Dawson, who still works as director of Mitoku at the Mitoku office in Japan, purchased Clearspring about 2 years ago. Clearspring was Mitoku's biggest customer in the UK. Dawson now imports a lot of Mitoku products to England via Clearspring then re-ships it to other customers throughout Europe. Address: P.O. Box 583, Max Meadows, Virginia 24360. Phone: 540-637-3799.

2340. *SoyaScan Notes*. 1996. New soymilk manufacturer in America! Cathay Industrial in Los Angeles, California (Overview). Feb. 7-9. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Mr. Shoan Yamauchi bought a brand new building in early 1995 for his son Jon, who has a background in food science and technology, and who started Cathay Industrial in this building at 2121 East 8th St., Los Angeles, California 90021. Phone: 213-623-8126. House Foods needed more space to make tofu so they sold their soymilk manufacturing equipment to Cathay, and in Feb. or March 1995 Cathay began to make the soymilk used in Westbrae Malted. Cathay also soon began to make soymilk (for use as a beverage) for Wy Ky Foods and for AFC—both companies run by Chinese-Americans. They have always made only soymilk; they do not make any tofu. However they do have their own brand of Cathay Tofu, which is made for them by House Foods & Yamauchi, and which their Cathay Distributing Co. distributes. Boon Nakornratana, a native of Thailand, worked for Mr. Yamauchi for almost 20 years. When Mr. Yamauchi bought this new building, Boon came here with Jon Yamauchi. Mr. Shoan Yamauchi is now semi-retired. He visits Cathay about once a week, and visits House Foods & Yamauchi 3-4 times a week.

Note: Westbrae's soymilk is now made in 3 different locations. Cathay Industrial makes only the soymilk used in Westbrae Malted. For the past 3 years, part of Westbrae's soymilk has been made by Bill Bolduc and packaged by White Knight, a Tetra Brik packager in Grand Rapids, Michigan. The rest has been made and packaged by Pacific Foods of Tualatin, Oregon.

Update: Feb. 27. Nancy Knudsen, whose father owns the

juice company, has started her own company named Healthy Harvest. She is talking with Cathay about making a soy & rice beverage for her.

2341. Brawerman, Mark. 1996. Changes in the frozen food case in natural food stores. The fall of Ice Bean (Interview). *SoyaScan Notes*. Feb. 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** A major change in the frozen food section of natural- and health food (NHF) stores took place about 3-4 years ago when Whole Foods Markets began to carry ice creams that contained sugar. Prior to this time, sugar was a taboo ingredient in natural food stores. Suddenly many NHF stores began to carry Ben & Jerry's and Haagen-Dazs, both sweetened with sugar. There is now a new sugar standard in many NHF stores.

At about the same time, the first organic dairy products began to become available. Most natural- and health food stores have relatively little space for frozen foods, yet in recent years there has been an explosion of frozen food products competing for this space. Competition is fierce, including off-invoice discounts, etc. In any given month, about 10% of these products will be on sale.

About 3-4 years ago Mark introduced his line of Living Lightly soymilk ice creams (he changed the name to Living Rightly in 1994) that were sweetened with fruit juices and contained no added fat. Only 8% of the calories came from fat and taste tests showed that these products tasted better than Ice Bean. Within one year Ice Bean was dead; it died before Farm Foods was purchased by Hain. Now the 3 best-selling non-dairy ice creams in NHF stores are Rice Dream, Tofutti, and Living Rightly. Address: 211 S. Poinsettia Place, Unit 3, Los Angeles, California 90036. Phone: 213-469-2255.

2342. PaineWebber. 1996. Whole Foods Market: rating change. San Francisco, California. 20 p. Feb. 29. 28 cm.

• **Summary:** A detailed analysis of Whole Foods Market, the dominant player in natural products retailing, with many tables and graphs. The new rating is "Attractive."

2343. Kushi, Aveline. 1996. Re: Celebration of Erewhon's 30th anniversary at Anaheim. Letter to Friends of Erewhon—in Japanese, Feb. 3 p. Handwritten, with signature on letterhead.

• **Summary:** This 3-page form letter in Japanese is unusual, above all since Erewhon declared Chapter 11 bankruptcy in Nov. 1981. It was then purchased by U.S. Mills. Why would the founder of a bankrupt company celebrate its 30th anniversary? Erewhon was founded in April 1966. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: (617) 232-6876.

2344. Ott, Katherine. 1996. Re: Interest in the possibility of

adding Michio Kushi's papers and materials to the archival collections of the National Museum of American History, at the Smithsonian Institution. Letter to B.G. Mancini at the Kushi Institute, P.O. Box 7, Becket, MA 01223, March 4. 1 p. Typed, with signature on letterhead.

• **Summary:** "It was a pleasure to speak with you recently about the work of Michio Kushi. We at the National Museum of American History, Smithsonian Institution, are interested in the possibility of adding Mr. Kushi's papers and materials to our collections. The kinds of things we are most interested in include: manuscripts; notebooks; correspondence; photographs; objects used in diagnosis, treatment, food preparation, or otherwise unique to Mr. Kushi's system; video and audio tapes of his work; and records and reports chronicling both the philosophical and business growth of macrobiotics. It would be helpful to know the potential size of Mr. Kushi's collection and to have more specific information about the nature of the materials. His donation would be made available to researchers, students, and the general public free of charge, as part of the national collections here at the Museum.

"We are well aware of the importance macrobiotics has had upon American nutrition and lifestyle over the years, as well as the importance of Mr. Kushi to it."

Talk with Katherine Ott. 1996. July 22. Her Division has not yet decided whether or not to add the Kushi papers to their collection. Money must be found to finance the accession and cataloging.

Talk again with Katherine Ott. 1997. Feb. 24. She is personally *very* interested in having the Smithsonian acquire the Kushi papers for its archives center. The acquisition has not yet been approved, but she is 99% sure it will be. It is taking a little longer than usual because of the size and importance of the collection, and the "controversy around macrobiotics," and also because Katerine is only at the Smithsonian one day a week. The Kushis have been willing to help organize the collection and finance its cataloging, which has helped a lot. The Smithsonian budget is so small it is depressing, and they have a huge backlog of uncataloged materials. Her field is "History of Medicine-Objects." Traditionally in the area of medical science, the Smithsonian has collected "Big Science and Technology," and they are very conservative. She has been working to educate her co-workers on the importance of alternative health care and practice. This is an area that appears to have a bright future in America, yet the Smithsonian has very little material about it; it is a field in which macrobiotics was clearly a pioneer. Erewhon was also an interesting and important business which played a leading role in the "transformation of the American diet" and the interest in whole foods, and the archives center also collects important businesses records. The Smithsonian already has a fellowship program and she would like to raise money for a research fellowship to study the material on macrobiotics, alternative

health care, and natural foods—with the goal of writing a history of the subject. Address: PhD, Div. of Science, Medicine and Society, National Museum of American History, MRC 627, Smithsonian Institution, Washington, DC 20560. Phone: 202-357-2413.

2345. Macdonald, Bruce. 1996. New developments at Macrobiotic Company of America (MCOA). Acquisition of Mountain Ark Trading Co. in Fayetteville, Arkansas (Interview). *SoyaScan Notes*. March 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bruce's Macrobiotic Company of America (MCOA) used to sell tofu kits to Mountain Ark but then they stopped re-ordering because they planned to sell the company. When Mountain Ark was under the stewardship of Frank Head and others they were macrobiotic oriented. But 3½ years ago Frank sold the company to Ozark Cooperative Warehouse in Fayetteville. "There wasn't a person in that organization that ever had a bowl of miso soup in their life—I don't think. So they began to steer the company away from macrobiotics toward a mainstream natural food company. One of the first things they did was to put in a line of tomato products. So their macrobiotic customers began to run away."

MCOA acquired Mountain Ark on 1 Feb. 1996. Bruce purchased the company name, toll-free phone number, and mailing list of 5,700 customers. He did not purchase any of their inventory. The company is now located at 799 Old Leicester Highway, Asheville, North Carolina 28806—at MCOA. Phone: 1-800-643-8909. Bruce plans to carry the tofu kit on a regular basis—though it sells slowly. The kit is imported from Japan. The cost changes with each container imported. It retails for about \$20-25.00. In Oct. 1993, Mountain Ark sold the kit for \$36.99 + \$4.95 shipping.

The innovation of this whole scenario is that, over the last 10 years or so, all of the companies that were involved with macrobiotics either went bankrupt or ran away from it. When Bruce took over MCOA 3 years ago he changed its direction and went headlong into becoming the largest variety supplier of macrobiotic foods on the planet. The company started to grow—even in the big natural foods stores—such as Fresh Fields. Macrobiotic foods is the most misunderstood category in the health food industry. For the big stores he printed up a best-seller list of 200 items that could be put in a "macrobiotics section." Now Bruce is in the process of putting macrobiotic sections in all the Fresh Fields stores. "Because we import direct then distribute direct to retail stores, we are able to offer them prices on these foods that are 25-30% less than a normal distributor. The old way of doing business was, for example, Eden Foods imports it, marks it up 30 or 35%, and sells it to Cornucopia, who marks it up 25-30% and sells it to the store." His wholesale and retail catalogs have a great selection of foods. The only difference is that the retail prices are 10% higher. These low

retail markups give a real break to macrobiotic consumers. MCOA also provides information by phone.

Note: MCOA is owned equally by Muso Shokuhin of Japan and by Bruce Macdonald. Address: President, Macrobiotic Company of America, Asheville, North Carolina 28806. Phone: 704-252-1221.

2346. Macdonald, Bruce. 1996. Big problems at Kushi Macrobiotics (Interview). *SoyaScan Notes*. March 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Michio and Aveline have big problems on their hands at their new company Kushi Macrobiotics. “Basically, you’ve got a bunch of high rollers from the commercial food industry thinking that, with slick packaging and cheap ingredients, they can create a product line that is double the price of Fantastic Foods’ and not nearly as good in quality... They just don’t have a clue of the sophistication of the natural foods shopper. They’ve got five guys each making \$125,000 a year, and they haven’t sold a thing yet. Norio Kushi is making \$80,000 a year, and he is barely at the level of knowing how to brush his teeth in terms of business experience.”

Its just amazing. They raise \$1 million privately to start off with. They blew through that with surveys, etc. As Jimmy Silver said aptly, ‘Basically what they found out with their million dollars was that people weren’t interested in what they were selling.’ What they are doing is basically the antithesis of what macrobiotics stands for. Then they proceeded to use no organic ingredients and made it a corporate policy to not use anything from Japan—except brown rice vinegar, of which they are buying a low quality product from Eden Foods. They then raised 6 million with a public offering, and now have less than \$4 million left. They are going through money like crazy. They have a 40,000 square foot warehouse in New Jersey, with 10,000 square feet of offices and 3 people in there. None of the distributors that Bruce knows have picked up the Kushi line.

One little disaster got the president fired. They did a line of 4-5 bean dishes. Some jerk didn’t realize that you don’t add salt to beans when you cook them. So they advertised a 25-minute cooking time on the package; well you could cook this for 25 years and it would never be right. So this guy ordered a production run worth hundreds of thousands of dollars, without checking it with Michio, who is in charge of quality control. It is all garbage.

So 3 weeks ago Aveline called up Bruce in a panic. She thought she was creating another Erewhon. There is a peculiar lack of judgment throughout this whole process. Since Michio is in charge of quality, they do production runs of the whole line and then they send the finished products to Michio. Aveline tried tasting this bean dish and a few others and she was horrified, just beside herself. She says to Bruce, “We want to buy your company.” Bruce says, “Okay, \$5 million and you can have it.” Bruce went to the Kushi’s

home in Brookline and spent 3 days with them. Aveline looks better and healthier than she has in years. They are now planning to go an acquisition binge; the first company they have their sights on is some cracker company. “I laid out a plan for them, including a major change in the 7-member board of directors. Michio can remain as chairman. You can keep three of the ‘financial wizards’ on the board, but the other three have got to be Yuko Okada (of Muso Shokuhin), Christopher Dawson, and me. We’ll take all the losses at the beginning, then turn the company into a worldwide macrobiotic company.”

Bruce’s Macrobiotic Company of America is doing very well financially. When he acquired it, sales were less than \$900,000 a year. This year he will probably do \$3 million. Everyone from Lenny Jacobs on down told Bruce that macrobiotics was dead. True, it has changed, but it alive in new ways. For example, a guy name Horse Schultz is the chairman of the Ritz-Carleton Hotel Chain; he is having his chefs trained at the Kushi institute, and has sent out a memo to all of his hotels worldwide that by a certain date they will be offering macrobiotic quality meals at all hotels in addition to the traditional fare. They are converting one hotel at a time. Bruce is now flying miso down to Cancun. Horse Schultz’s cancer is now in remission. Address: President, Macrobiotic Company of America, Asheville, North Carolina 28806. Phone: 704-252-1221.

2347. Yoshihara, Yasuo. 1996. Update on Shin-Mei-Do Miso Co. (Interview). *SoyaScan Notes*. March 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Yasuo speaks with a slight Japanese accent. Shin-Mei-Do Miso Co. is active and growing. They make brown rice miso and barley miso, each sold in 450 gm and 4.5 kg plastic tubs. Lulu does the bookkeeping. The demand for their miso on the west coast of Canada is increasing so they stopped distributing to Eastern Canada. Within the last week a person from eastern Canada called him about starting a miso factory in eastern Canada, and he had a similar enquiry last year. He may be interested in teaching potential miso makers as an apprentice for pay—depending on the conditions. Shin-Mei-Do sells all of its miso to natural foods wholesalers. Amano in Vancouver makes most of the miso sold in Oriental food stores in British Columbia. Moreover, a huge amount of miso (many tons) is imported from Japan. Westbrae packages imported Japanese miso and has nothing to do with Amano—as far as Yasuo knows. Yasuo doubts that Amano ever made miso for Westbrae. Yasuo has never made miso to be sold under another brand. Shin-Mei-Do is basically still a very small operation. Yasuo does not want to become a big company where the miso is made largely by machines. Address: Shin-Mei-Do Miso Co., 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.

2348. Kushi, Aveline. 1996. The party for Michio and Aveline at Anaheim and the upcoming Smithsonian exhibition (Interview). *SoyaScan Notes*. March 23. Conducted by William Shurtleff of Soyfoods Center.
 • **Summary:** Patricia Smith organized a party for Michio and Aveline to celebrate the 30th anniversary of the founding of Erewhon in Massachusetts. About 20 people came. Unfortunately Paul Hawken and Bill Tara were unable to be there.

Michio just received a letter (fax) from the Smithsonian Institution that they wish to consider doing an archival collection of his personal papers. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-232-6869.

2349. *SoyaScan Notes*. 1996. Interesting new developments at the Natural Products Expo West (Anaheim, California, March 15) (Overview). March. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The big development was the introduction of two refrigerated, extended shelf life (ESL), gable-top, regional soymilk products. One was Silk, by White Wave, and the other was by Nancy Potter.

Kushi Macrobiotic Corp. is in the process of changing its name to Kushi Natural Foods Corp.

An aseptically packed non-dairy beverage named "Organic Oat Milk" was also introduced (with T-shirts) from Sweden. It tasted good. The U.S. distributor is Nordic Farmers, 4848 South Highland Dr., Suite 211, Salt Lake City, Utah 84117. Phone: 801-272-9759. But as of May 17 they have not yet gotten any product in stock.

Michael Potter was conspicuous by his presence at the show. He had a physical problem (perhaps some type of palsy—not a stroke; one half of his face froze up and it was very noticeable), but it has since gotten much better, though there is some lingering effect. When he was in jail, he had an altercation with someone and his head was smashed against a desk; at the time it injured one of his eyes, which has never been quite the same again. He swiped a shuttle van and was soon in handcuffs. Several weeks after the show, during the week of April 4-8, Michael was in San Francisco (where his son Ki lives) talking with his Japanese partners in American Soy Products (ASP) about investing more money in the company to expand the size of the soymilk plant in Michigan; the plant is apparently running at near full capacity.

2350. **Product Name:** WestSoy Lite: Non Dairy Soy Beverage [Plain, Vanilla, or Cocoa].

Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor). Subsidiary of Vestro Natural Foods.

Manufacturer's Address: 5701 South Eastern Ave. Suite 330, Commerce, CA 90040. Phone: 213-722-9817.

Date of Introduction: 1996 March.

Ingredients: Filtered water, organic soy beverage* (filtered

water, organic soybeans*), brown rice syrup, sea salt. * = Organically grown and processed in accordance with the California Foods Act of 1990.

Wt/Vol., Packaging, Price: 64 fluid oz (1.89 liter) Combibloc Aseptic carton. Retails for \$1.99 (1997/12, Concord, California).

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 1 cup (8 fl oz = 240 ml): Calories 100, calories from fat 20, total fat 2 gm (2% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 120 mg (5%), total carbohydrate 15 gm (dietary fiber 0 gm, sugars 11 gm), protein 3 gm. Vitamin A 0%, calcium 2%, vitamin C 0%, iron 2%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Note: This is the first U.S. soymilk product seen sold in a half gallon carton. Talk with Richard Rose. 1996. April. Westbrae introduced a half gallon soymilk at Anaheim. Richard thinks that Pacific Foods no longer makes any soymilk for Westbrae; it may now be made in several places, including perhaps by Parmalat in Michigan. This product is sold in a half-gallon Combibloc carton. Tetra Brik does not have a 64-ounce low acid capacity in the USA.

Product with Label (Plain) purchased from Trader Joe's in Concord, California. 1996. Nov. Retails for \$1.99. 6.5 inches. Orange, blue, red, and black on white. Close-up photo of milk being poured from the front of a pitcher into a glass. "New Pour 'n Seal! 1% fat. 50% less fat than Original WestSoy. Lactose Free. A cholesterol-free food."

2351. Roller, Ron. 1996. Update on the soymilk industry and market in the USA (Interview). *SoyaScan Notes*. April 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In October 1993 Ron estimated (based on a lot of reliable information he had collected) that the size of the soymilk market in the USA and Canada was 9.8 million gallons, up from 8.1 million gallons in 1992. Now he would estimate (without a lot of reliable facts) that this market is about 15 million gallons. Since Dr. James Anderson's article appeared in the *New England Journal of Medicine* on 3 August 1995, and especially during the last 6 months, the soymilk market has expanded rapidly, almost exponentially. Many new consumers have started to drink soymilk, largely for its health benefits. Because of this significant expansion in the customer base, more soymilk is being sold in supermarkets. Ron estimates that about 15% of Edensoy is sold in supermarkets. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2352. Roller, Ron. 1996. Soymilk in extended shelf life (ESL) gable-top cartons (Interview). *SoyaScan Notes*. April 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron looked at the Tetra Rex ESL program

several years ago and discussed the new packaging technology in a SoyaScan interview on 4 Sept. 1993.

Two companies introduced America's first soy milk products in an ESL gable-top carton at the Natural Products Expo at Anaheim in March 1996. White Wave launched Silk, and Nancy Potter, the sister of Michael Potter (founder and CEO of Eden Foods) introduced Healthy Harvest. So Nancy is now in competition with her brother. Ron does not know who makes Nancy's soy milk.

Packaging products in ESL cartons is very expensive, and there are not many ESL machines in the USA. ESL is a technology midway between that of aseptic Tetra Brik packaging and the traditional Pure-Pak gable-top cartons. First ESL involves a UHT (ultra-high temperature) process. Second, the packaging blanks are much more sophisticated than traditional Pure-Pak blanks because they contain a foil layer and they are sterilized with hydrogen peroxide; Ron has heard a rumor that they are irradiated. Finally, ESL has a head space whereas Tetra Brik does not.

Though ESL soy milk is often called a "fresh" product, that would be stretching the meaning of the word "fresh." ESL soy milk made and sold regionally is a threat to aseptically packed soy milk. It involves a different distribution system—one which uses refrigeration. Eden Foods does not sell any refrigerated products, so it would be difficult for Eden to get into ESL. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2353. *SoyaScan Notes*. 1996. Big changes at Muso (Overview). April 18. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Muso's business has been severely hurt by the yen-dollar exchange rate, and the fact that Japanese exports are becoming much more expensive for foreigners. So Muso is now trying to import organically grown foods and ingredients—such as organically grown soybeans.

2354. Saekel, Karola. 1996. Tallying the tofu. *San Francisco Chronicle*. April 24. Food section. p. 2, col. 5.

• **Summary:** This article gives the results of a special taste panel which rated the flavor and texture of ten brands of tofu sold in the San Francisco Bay Area. The article begins: "Thanks to better nutrition information and the availability of good and easy recipes, tofu has escaped from its niche as a strictly ethnic and/or health fanatics' food and found its way into many Western kitchens."

The rankings: 1. Trader Joe's tofu (19 oz, \$0.89 = \$0.75/lb!). 2. Hinoichi (14 oz, \$1.09). 3. Wo Chong (14 oz, \$0.79). 4. Global Protein Foods (12 oz, \$1.89). 5. Golden Gate (19 oz, \$1.63). 6. Soy Deli (made by Quong Hop & Co., 12 oz, \$0.99 to \$1.39). 7. Mori-Nu (shelf-stable, 10.5 oz, \$0.85 to \$1.29). 8. Kikkoman (shelf-stable, 10.5 oz, \$1.29). 9. Azumaya (14 oz, \$0.98 to \$1.19). 10. Wildwood Natural

Foods (16 oz, \$1.39 to \$1.59).

Note: This is the earliest (and only) English-language document seen (April 2003) that uses the term "health fanatics" (or "health fanatic"). Address: Chronicle staff writer.

2355. *Packaged Facts*. 1996. The health and natural food stores market. New York, NY: Packaged Facts. 150+ p. June. 28 cm. *

• **Summary:** "Internal and external competition intensifies in \$7.1 billion market" in 1995.

Note: This report was updated in Aug. 1998 with a slightly different title: "The U.S. health and natural food stores market." The number of pages was increased to 280+.

2356. Tyler, Jim; Neville, Jan. 1996. *Wellspring Natural Food Co. Mail order catalog*. Amherst, Massachusetts: Wellspring. 32 p. 28 cm.

• **Summary:** This is the first issue of this catalog, and Wellspring started in 1996. Soy-related products include: Miso, shoyu, black soybeans (from Hokkaido, Japan), yellow soybeans (organic), azuki beans, snow-dried tofu, kuzu, miso ramen, kinako, natto miso chutney, tekka miso, soy milk, and amasake.

Jim has been a macrobiotic teacher and counselor since 1975-76 and Jennifer was a chef at the Kushi Institute. Main competitors include Gold Mine and other such companies. This catalog is service oriented, easy to use, and more than 80% of the products have lower prices than the competition. Address: P.O. Box 2473, Amherst, Massachusetts 01004. Phone: 1-800-578-5301.

2357. Routh, Allan. 1996. SunRich, soy milk, Davisco, St. Peter Creamery, Prosource, and Northern Milk Products in Alexandria, Minnesota (Interview). *SoyaScan Notes*. May 3. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Allan (whose surname rhymes with "south") is CEO and one of the owners of SunRich. His company manufactures both liquid and spray-dried soy milk at a plant in Alexandria, Minnesota. They own this plant as part of a joint venture with Northern Milk Products. The company in Alexandria is named Northern Milk Products, but in the '95-'96 Soya Bluebook Plus the company name is given as Prosource, Inc. (P.O. Box 1058, 601 Third Ave. West, Alexandria, MN 56308. Phone: 612-763-2470). Sales are handled through SunRich.

Question: What happened to St. Peter Creamery, of St. Peter, Minnesota?; they introduced Soy Supreme Spray-Dried Soy Milk Powder in Dec. 1984 and Soy Supreme Spray-Dried Tofu Powder in July 1985. Answer: Allan used to be part of the soy process with St. Peter Creamery (located in St. Peter, Minnesota), which was owned by the Davis family and which is no longer in business. The Davis family also owned LeSeur Cheese and Lake Norden Creamery; all

these companies (including St. Peter Creamery) are now named Davisco. Stan Davis, the main man, is now retired, but his sons and grandsons are involved. The soy part of the business (the Oberg Division of St. Peter Creamery) was a joint venture between St. Peter and Ed Oberg, and Lou Osterbur. Dr. E.B. Oberg had some patents when he was at Carnation. These patents were only part of the complex, which included “know-how” and process subtleties that made the product taste so good. Like every spray-drier and custom spray-dried in Minnesota and the Midwest, St. Peter was an old dairy plant and a custom processor. This sort of plant used to belong to coops, then individuals would buy them. St. Peter installed its own soymilk. They made soymilk from whole soybeans, then spray-dried it. Soymilk ceased being made at St. Peter in about 1989 because St. Peter decided they wanted to go a different direction and soymilk sales weren’t really taking off. The soymilk equipment was partially moved to Northern Milk Products in Alexandria, Minnesota—located about 150 miles northwest of St. Peter. More precisely, they reconstructed a soymilk line in Alexandria that they thought was a little better than what they had at St. Peter. Allan has been with Minnesota Waxy (which started as a corn company) from the early days. Minnesota Waxy purchased the process from Oberg and Osterbur, and Northern Milk owned the physical plant.

Now Allan’s joint venture company makes Soy Supreme, which used to be St. Peter Creamery’s main soymilk product, made at their plant. But when the general manager at St. Peter, Dennis Anderson, decided to go into business for himself, he bought 3-4 plants—one of which was in Alexandria. So they moved the process to his plant in Alexandria. Basically the same technology that was used to make Soy Supreme (a dry product) is now also being used to make a liquid product, but Allan thinks his company has made significant improvements compared to E.B. Oberg’s product.

SunRich is not really company with its own retail products. They sell foods to food manufacturers. They supply Westbrae with soymilk. They have made most of Westbrae’s soymilk for a while—a number of tankers each week. They also have other soymilk clients. Most of their spray drying of soymilk is done in the neighboring town of Bertha, but they also have two spray driers in Alexandria. Northern also processes some milk products in Alexandria, and they do some specific separations on oats for customers like Quaker Oats. Zumbro, which is a similar company to Northern Milk in Alexandria, does not spray dry the milk made in Alexandria. Dennis Anderson is still in Alexandria.

Minnesota Waxy (recently renamed SunRich) has always been a specialty grain company. Initially their main product was waxy starch corn, which contains an all amylopectin starch; it has a much larger starch molecule than regular amylose starch or common corn starch. Waxy starch is used in many food applications, such as those that

must be freeze-thaw stable, or products that must hold more flavor that is more available. It has many desired functional properties, and can be used to strip cholesterol from eggs. They also grow about 800,000 bushels of specialty, identity preserved soybeans per year, representing about 30% of their total specialty grain business. The soybeans are sold to soyfood manufacturers in both Japan and the USA. All of their corn and soybean production is contracted with farmers. SunRich is a corporation that has about 200 farmer shareholders; it is not a co-op. They have been in business for almost 20 years, and now they contract with a lot of non-shareholder farmers as well all over the Midwest. About 5% of SunRich’s business is in organically grown crops, especially soybeans, and they are emphasizing it more and more.

Talk with Allan Routh of SunRich. 1997. April 18. He used to work with Davisco (St. Peter Creamery) making soymilk solids, but that was years ago. They have been out of that business for 5 years or more. Northern Milk Products is now named Northern Food and Dairy; it is owned by Dennis Anderson in Alexandria, Minnesota. Allan now jointly processes a lot of soy solids products with them. Prosource is one individual who works out of Northern Foods and Dairy; he does processing up there too. Allan’s products are doing well. “Our biggest struggle is just to get big enough to support them.” Address: CEO, SunRich Inc., P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976 or 507-451-3316.

2358. *SoyaScan Notes*. 1996. Who is making Westbrae’s soymilk (Overview). May 3. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Until recently, Westbrae’s soymilk (not including its Malted) was being made by several different companies in different parts of the USA: (1) Most of it was made by Pacific Foods of Oregon, in Tualatin, Oregon. (2) Some of it was made by Nutricia at the old Loma Linda Foods plant in Mt. Vernon, Ohio. (3) Not long after that plant was taken over by Carnation / Nestle, Westbrae’s production was shifted to Bill Bolduc in Ohio. In mid-1993 he purchased a small soymilk plant at which he made plain, unpasteurized/unsterilized soymilk, then sent it northward to Parmalat Foods (5252 Clay Ave., Wyoming, Michigan 49548. Phone: 616-538-3822). Parmalat is a huge and very significant Italian food company that is the biggest user of Tetra Pak Aseptic packaging in the world. Parmalat packaged the soymilk for Westbrae. As of May 1996, none of the above 3 companies make soymilk for Westbrae any longer.

Then in mid-1995 Bolduc was forced to declare bankruptcy, and apparently the relationship between Westbrae and Pacific Foods was not satisfactory for Westbrae. So Westbrae approached Raj Gupta at ProSoya Inc. in Ontario, Canada. In late April 1996 ProSoya started to make Westbrae’s soymilk, apparently using their full

capacity of 1-2 tankers a week, which is about 45,000 pounds or 20,000 liters a week. The product is probably shipped to Farmland Dairies, a packer in New Jersey, where it is packed in Westbrae's new 2-liter Combibloc cartons. ProSoya in Ottawa is also obligated to do quite a bit of R&D work for the Canadian government. It is not clear why or what kind of compensation they receive for this.

The rest of Westbrae's soymilk is made by Northern Milk Products (related to SunRich) in Alexandria, Minnesota. Several tankers a week are shipped to Parmalat in Michigan.

ProSoya would like to set up a soymilk plant with Westbrae (probably in the USA) on a joint venture basis.

2359. Roller, Ron. 1996. How American Soy Products (ASP) disposes of the okara resulting from making Edensoy (Interview). *SoyaScan Notes*. May 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** ASP is the largest manufacturer of soymilk in North America. Located in the rural city of Saline, Michigan (population 6,500; about 9 miles south of Ann Arbor), they are bounded on the south and west by diversified agricultural land. The ASP plant produces about 1,000 lb/hour of okara, which contains on average 80% water (range 78-82%) and 6.7% protein. The okara comes out of a high-speed decanter. 100 lb of dry soybeans yields 75-100 lb of okara. Ron has an arrangement with one farmer, who owns two large trucks, who comes to the plant each night in one of the trucks, leaves it under the okara spout, and drives the full truck away. These two trucks are used only for hauling okara. ASP pays this man a significant amount of money (which is confidential) each year to haul the okara; in fact Ron estimates that the money may be of more value to the farmer than the okara itself. Ron estimates that this farmer composts about 90% of the okara and adds the remaining 10% to feed for his milk cattle. Cattle are pretty sensitive to a change in their diet, and the wet okara is hard to mix. Ron believes it would be much more difficult and expensive to dispose of okara from a city plant than from his in the countryside.

All of the okara must be hauled away regularly every day. This is the most important thing! The operation must be organized and the person doing the hauling must be reliable. If he missed even one day, it would be a nightmare! The okara piles up so fast and Ron would have no idea of what to do with it. The local dump wouldn't take it. The okara freezes in the winter and ferments (putrefies) in the summer.

The amount of okara that ASP produces each year is steadily growing, so Ron is now doing research and planning for the future. The best option appears to be drying the okara then selling it as an ingredient in organic livestock or pet feeds—but they have not yet found a dependable outlet, and dependability is—again—the key. With a dependable outlet, Ron believes they could pay for the drier and make money on it. They have also looked at pelletizing. Drying requires

both a large initial investment in a continuous process operation (ideally made with stainless steel so the dried okara would be food grade) and use of a large amount of energy to remove all that water. On a moisture free basis, okara contains 34% protein (of very high quality) and 49% carbohydrates. Okara with 10% moisture (a realistic figure after drying) contains 32% protein and 37% carbohydrates. Outlets for dried okara in food might include use in a burger, in breads and muffins, etc. Worthington Foods has made their Natural Touch Okara Patties since March 1984; okara is the 4th ingredient in order of predominance. Northern Soy has made Soyboy Okara Courage Burger since April 1995; okara is the 3rd ingredient. Many companies make Soysage. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2360. Kotsch, Ronald E. 1996. *Erewhon at thirty: A pioneer and standard-setter in the natural foods industry celebrates an anniversary*. Needham, Massachusetts: U.S. Mills. 7 p. May. Illust. 28 cm. [1 ref]

• **Summary:** A good, concise history of Erewhon.

"In April 1966 the Kushis opened a retail shop in a tiny basement storefront on Newbury Street in Boston. The store, run by transplanted New York actor Evan Root, was named after the novel *Erewhon* by British writer Samuel Butler. In *Erewhon* (an anagram for the word 'nowhere'), Butler describes an imaginary island in which lawbreakers are put in a hospital and where people who get sick are put in jail. Since the story reflected the Macrobiotic principle that each person was responsible for his or her health, the name seemed appropriate. In the rustic, cramped store, plank shelves resting on cinder blocks were filled with hand-lettered brown paper bags of rice, grains, flour, and beans. During the summer of 1967 when I tended the store, daily receipts averaged about twenty-five dollars."

In the fall of 1967 Paul Hawken and "several other veterans of the San Francisco 'Summer of Love' arrived in Boston to study and work with the Kushis. They took over the running of Erewhon, moved the store to larger, brighter quarters across the street, expanded the product line, and began a mail-order business. Idealistic, smart, energetic, and hard-working, these and other young men and women dedicated themselves to Erewhon as a means to improve the quality of the nation's food and thus to improve the national health and well-being. Over the next decade, Erewhon grew into a large and important retailer, manufacturer, and distributor of natural foods. In 1971, it had sales of about \$500,000, and in 1977 it had gross sales of about \$10 million. During this period the average age of Erewhon's employees was about twenty-two!"

One interesting illustration shows the front of the Erewhon Trading Co. store on Newbury Street in Boston, Massachusetts. This illustration appeared in the October

1980 issue of *Erewhon Monthly*, the newsletter of the Erewhon distribution company.

There follows a good discussion of Erewhon's contributions to the natural foods industry. Address: Massachusetts.

2361. Messina, Mark; Messina, Virginia. 1996. *The dietitian's guide to vegetarian diets: Issues and applications*. Gaithersburg, Maryland: Aspen Publishers, Inc. xi + 511 p. Index. 24 cm. [1939 ref]

• **Summary:** Contents: Preface. Acknowledgments. Part I: An overview of vegetarian diet. 1. Demographics and definitions: History of vegetarianism, profile of vegetarians, types of vegetarian diets. 2. Health consequences of vegetarian diets: Differences in dietary components of vegetarian and nonvegetarian diets, cardiovascular disease, hypertension, cancer, diabetes, obesity, kidney disease, renal stones, gallstones, diverticular disease, other conditions, the dairy connection, phytochemicals, conclusion.

Part II: Vegetarian nutrition. 3. Protein: A historical perspective on protein, protein requirements, vegetarian diets and protein digestibility, assessing protein quality, plant proteins and nitrogen balance, protein complementarity, conclusion. 4. Calcium: Osteoporosis, calcium and osteoporosis, calcium absorption and the RDA, calcium excretion, bone health of vegetarians, meeting the calcium RDA on plant-based diets, plant sources of calcium, other factors that affect bone health/fracture rate, conclusion. 5. Minerals: Iron, zinc, selenium, copper, magnesium, phosphorus, manganese, iodine, sodium, chloride, potassium, fluoride, chromium, molybdenum. 6. Vitamins: Vitamin B₁₂ (cobalamin), riboflavin, vitamin D, vitamin B₆, vitamin B₁ (thiamin), niacin, folate, biotin, pantothenic acid, vitamin C (ascorbic acid), vitamin A, vitamin E, vitamin K. 7. Food guides for vegetarians: A history of food guides, developing food guides for vegetarians, vegetarian food guides, appendix 7-A—food guides for vegetarians (food guide for lacto-ovo vegetarians and vegans, the 1-2-3-4-5 vegetarian food guide, American Dietetic Association's vegetarian food guide, the vegetarian food pyramid, the vegetarian food pyramid, macrobiotic food guide).

Part III: Vegetarian diets throughout the life cycle. 8. Pregnancy and lactation: Weight gain and calorie needs in pregnancy, weight gain in pregnant vegetarians, meeting nutrient needs of pregnancy on a vegetarian diet, meal-planning guidelines, adolescent pregnancy, potential complications of pregnancy, common conditions of pregnancy, vegetarians and lactation, appendix 8-A—food guides for pregnant and breast feeding vegetarians (food guide I, food guide II). 9. Vegetarian diets in infancy: Growth in vegetarian infants, vegetarian diets during the first six months of infancy, solid foods for vegetarian infants, comparison of sample menu plans for 9-month old vegan and omnivore infants, potential concerns in infant feeding,

macrobiotic diets in infancy, fatty acids in the diet of vegetarian infants, conclusion. 10. Preschool and school-age children: Growth of vegetarian children, diets of vegetarian children, protein, fat, calcium, vitamin D, vitamin B₁₂, iron, zinc, guidelines for meal planning for vegetarian children, milk in the diets of vegetarian children, counseling parents of vegetarian children, vegetarian diets for school-age children, school lunch, bag lunch, appendix 10-A—meal-planning guidelines for children (other food guides). 11. Vegetarian diets for adolescents: Growth of vegetarian adolescents, nutrient needs of vegetarian adolescents, meal-planning guidelines for vegetarian adolescents, eating disorders. 12. Vegetarian diets for older people: Dietary status of older vegetarians, nutrient needs of older vegetarians, meal planning for older people.

Part IV: Practical applications for counseling vegetarians. 13. Counseling vegetarian clients: Dietary assessment, counseling clients to plan menus based on vegetarian food guides, vegetarian diets as dietary therapy, reducing fat in vegetarian diets, reducing food costs on vegetarian diets. 14. Diabetes: Diet therapy for diabetes, vegetarians and diabetes, the diabetic exchange lists, appendix 14-A—exchange lists for meal planning. 15. Vegetarian diets for athletes: Vegetarian diets and athletic performance, nutrition needs of athletes, risks of amenorrhea in female vegetarians and female vegetarian athletes. 16. Vegetarian food preparation: Preparing grains, preparing beans, using tofu, using textured vegetable protein, using egg substitutes, cooking with sweeteners.

Glossary of vegetarian foods. Resources on vegetarian diet: Vegetarian resources for dietitians, resources for vegetarian clients, on-line services, mail-order vegetarian foods.

Appendixes. A. Fiber, cholesterol, and macronutrient intakes of adult vegetarians and nonvegetarians. B. Lipid levels in adult vegetarians and nonvegetarians. C. Blood pressure of adult vegetarians and nonvegetarians. D. Anthropometric data of female adult vegetarians and nonvegetarians. E. Anthropometric data of male adult vegetarians and nonvegetarians. F. Intake ratios of N-6 to N-3 fatty acids on vegetarian and non-vegetarian diets. G. Protein, calcium, phosphorus, sodium and potassium intakes of adult vegetarians and nonvegetarians. H. Iron intake and status of vegetarians and nonvegetarians. I. Mineral intake of adult vegetarians and nonvegetarians. J. Water soluble vitamin intake of adult vegetarians and nonvegetarians. K. Fat soluble vitamin intake of adult vegetarians and nonvegetarians. L. Fiber, cholesterol, and macronutrient intakes of vegetarian and nonvegetarian school-age children and teenagers. M. Water soluble vitamin intakes of vegetarian and nonvegetarian school-aged children and teenagers. N. Fat soluble vitamin intake of vegetarian and nonvegetarian school-aged children and teenagers. O. Mineral intake of vegetarian and nonvegetarian

school-aged children and teenagers. P. Fiber, cholesterol, and macronutrient intakes of elderly vegetarians and nonvegetarians. Q. Water soluble vitamin intake of elderly vegetarians and nonvegetarians. R. Mineral intake of elderly vegetarians and nonvegetarians.

The information on vitamin K is excellent and extensive (despite one small error): Table 6-12 (p. 197) gives the vitamin K content of selected foods. The content of soybean oil is 77 micrograms per tablespoon (not milligrams as stated). Other rich sources are (per ½ cup cooked): Lentils (261 mcg), kale (179 mcg), spinach (141), broccoli (119). The source of these statistics is: USDA Provisional table on vitamin K content of foods. 1994. Hyattsville, Maryland: USDA.

Index listings for individual soyfoods: Tofu: p. 38-82, 392. Tempeh: p. 391. Soymilk: p. 214-15, 284-85, 391. Miso: p. 389. Soy cheese, soy flour, soy yogurt, soybeans, soynuts, Take Care (fortified soy protein beverage sold in powdered form), tamari: p. 391 (Glossary of vegetarian foods). Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, Inc., 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2362. Eden Foods, Inc. 1996. Eden Foods protests USDA's proposed organic standards (News release). 701 Tecumseh Road, Clinton, MI 49236. 1 p. June 4. Accompanied by 4-page letter to Hon. Daniel Glickman.

• **Summary:** "Clinton, Michigan–Eden Foods has informed U.S. Secretary of Agriculture Dan Glickman of its objection to the fact that, as now proposed, the national standards for organically grown food under the Organic Foods Production Act of 1990 would bar Eden Foods, or any other company, from informing the public that it upholds higher standards for certified organic food than those proposed by the USDA. For over 25 years Eden Foods has worked closely with 180 family farms in developing standards for growing and processing organically grown food; for independents third-party inspection and certification; and for audit trail record keeping. The natural food consumer has come to expect this high level of protection and authenticity for organically grown food. These standards and practices are consistent with those in place in Europe, Canada, South America, Asia, Australia, Mexico, and India. These standards currently in force further the development of sustainable agriculture by providing incentive for improvement. The federally proposed organic standards remove incentive to improve and make federally mandated minimum standards the maximum by outlawing any communication in the U.S.A. about higher standards. Mr. Michael Potter, Chairman of Eden Foods, states, 'As proposed, the federal organic standards set back the organic food movement thirty years. They allow the use of food additives and processing aids heretofore never allowed. At the same time they make it illegal to communicate about our, or anyone else's, higher standards.

The proposed federal standards would severely undermine this country's sustainable agriculture movement, and be the laughing stock of the international organic farming community.'"

Note: In the summer of 1970, Bill Bolduc of Eden Foods established Eden's first contact with an organic food grower—Bill Vreeland of Ypsilanti, Michigan, who grew organic wheat and soybeans. The two Bills drew up a contract and Bolduc soon made Eden's first direct purchase of organically grown wheat, which the company milled and sold. Soon Bolduc also purchased organically grown soybeans, corn, and rye from Vreeland. These crops, organically grown in Michigan, are shown in the Eden Foods Wholesale Pricelist of 26 July 1971, so they must have been grown during 1970. Address: Clinton, Michigan.

2363. *SoyaScan FactSheet*. 1996. Non-dairy products (alternatives to dairy products), which are good tasting and widely available (Overview). June 22. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** About 30 million Americans are lactose intolerant. Between 4% and 6% of infants develop allergies to the proteins in one or more foods, with cow's milk being the most allergenic. And many other people have moral or philosophical objections to drinking milk (e.g. widespread use of antibiotics, use of genetically engineered Bovine Growth Hormone [rBGH, made by Monsanto], the suffering of calves when forcefully removed from their mother, etc.). Until quite recently, these people had to live without dairy products, but now that has all changed—thanks to soyfoods, which are widely available and usually quite delicious.

Foods marked with one asterisk (*) are sold at most natural food stores and some health food stores and supermarkets (look in your Yellow Pages at "Health & Diet Food Products—Retail"). Foods marked with two asterisks are also sold at most supermarkets.

If you use dairy alternatives regularly, you can save money by making them yourself: See the index of *The Book of Tofu* by Shurtleff & Aoyagi (Ballantine Books edition) for carefully tested, home-scale recipes for soymilk, soy ice cream, soy yogurt (from soymilk or from tofu), tofu, cream cheese, sour cream, whipped cream (from tofu or soymilk), tangy tofu cottage cheese, tofu icing, frozen-banana tofu shake, soymilk kefir, soy mayonnaise (from tofu or soymilk),

Soymilk* is the most popular type of dairy alternative. It is sold in many flavors, often fortified with calcium, vitamin D, antioxidants, etc. in quarts and half gallons. It costs about 1.7 times as much as milk (so if a quart cow's milk costs \$1.00, a quart of soymilk will cost about \$1.70). Popular brands: Edensoy, Westbrae, Westsoy, Vitasoy, So-Yum, Silk, and Pacific Foods. For a tasty soymilk shake, try Westbrae Malted. Rice Dream is a delicious non-dairy rice milk and also an ice cream; both products are made by Imagine Foods. Many other brands of rice beverage (some of whose quality

we think is not as good) are also available.

Soy ice cream* is sold in an outrageous variety of flavors and forms. Hard-pack pints are the most popular, followed by soft-serve, ice cream sandwiches, etc. Popular brands: Tofutti, Living Rightly, Sweet Nothings (fat free), and Ice Bean. Rice Dream is a delicious rice-based non-dairy ice cream.

Soy yogurt* is sold in typical small yogurt cups, in a wide variety of flavors. The most popular brand is White Wave Dairyless. Try their Lemon-Kiwi flavor! Most soy yogurts are fermented/cultured with live cultures, but some are like a parfait (not fermented) made by blending silken tofu, fruits, and a sweetener.

Tofu**, the world's most popular soyfood, is now sold at very reasonable prices in most supermarkets across America. It makes an excellent replacement for cheese in many dishes where the cheese is not required to melt: Salads, sandwiches, in Lasagna for the ricotta cheese, etc. You can also use tofu to make your own soy yogurts and ice creams at home.

Soy cream cheese*. These products, based on tofu, are delicious and moderately priced. Our favorite brand is Tofutti Better than Cream Cheese, which comes in flavors such as Garlic & Herb, French Onion, Herbs & Chives, Plain, Wildberry, or Smoked Salmon. Some bagel shops (such as Noah's Bagels in Northern California) sell this product. VeganRella Cream Cheese (in plain & onion & dill flavors) uses more natural ingredients (no hydrogenated oils, or mono- or diglycerides).

Soy sour cream*. Again, this product is based on tofu. Our favorite brand is Tofutti Sour Supreme—Better than Sour Cream.

Soy cheese* is our least favorite dairy alternative. Most brands contain *casein* (the protein from cow's milk), which allows them to melt, but which also (technically) disqualifies them from being a truly non-dairy product. A few brands are truly non-dairy but they melt in a sort of thick puddle. Top brands with casein: Soya Kaas, TofuRella, Zero-FatRella, HempRella (soy free), and AlmondRella (soy free). Top brands without casein: VeganRella (2 flavors), Soymage.

Soy-based infant formula. Available at most pharmacies and many supermarkets, this is a carefully formulated and regulated product designed to meet the critical needs of infants when served as the sole source of nutrition. It is widely fed to infants who are allergic to cow's milk. But note that 15% to 50% of infants with cow's milk allergy will also develop allergies to soy protein. Soy protein was recently ranked 11th among foods in terms of allergenicity; animal proteins such as milk and eggs remain the most allergenic foods.

Whip Topping**. Sold as “non-dairy whip topping” at most supermarkets, as far as we know, these all contain casein or sodium caseinate from cow's milk. Leading brands: CoolWhip.

For more information on non-dairy products on the World Wide Web, go to <http://www.rella.com>. This website is produced by Sharon's Finest in California.

2364. Roller, Ron. 1996. New developments at American Soy Products (ASP) (Interview). *SoyaScan Notes*. June 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Seikensha is no longer one of the five partners that own ASP; they are still in business but they decided to sell their shares back to the remaining 4 partners—perhaps because they felt they could use the money in more productive ways.

The ASP plant at Saline is now running at full capacity—3 shifts, 24 hours a day. A smaller expansion at the plant has just been completed; they added building space and equipment that was more closely related to packaging than to soymilk. They added some tank capacity, utility chillers, etc. that helped to increase the current capacity and went a long ways toward helping to utilize additional capacity in the future. Packaging capacity, sterilizing capacity, and *Jun* (soymilk base) capacity are all separate but they all need to work together. They now have more packaging capacity than they have production capacity; they could package more product if they could make it.

ASP has a new Tetra Brik Aseptic packaging machine, a TBA-8 filler that puts a pull-tab over the hole. A separate piece of packaging line equipment puts on the plastic cap after the package comes out of the filling room. The cap is stuck on over the pull-tab. The package looks exactly the same but it now has a reclosable cap; you can't retrofit the old machine to give it capping capability.

Soon ASP plans to make a big expansion in the plant. Michael Potter recently sent a letter to Eden distributors to address that issue.

Bill Bolduc is now in Los Angeles, California. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2365. Harvest Direct, Inc. 1996. *Harvest Direct: Food you can live with* [mail order catalog]. Knoxville, Tennessee. 16 p. 27 x 16 cm.

• **Summary:** Contents: Salad dressings. Meals in a minute (Fantastic Foods). Ground meat alternatives (Protean—The versatile replacement for ground meat, Harvest Direct). Soups, spices, condiments. TVP. Ribs, tofu & tofu meals (Fantastic Foods, Mori-Nu, Arrowhead Mills). Meat Alternatives (Worthington Foods, Fantastic Foods). Soup & meal cups. Beans & Beano. Pasta & sauces. Breads & baked goods. Substitutes for sugar, eggs & fat. Dairy alternatives. Baby foods. Glassware. Gift baskets.

On the cover are nine round, dark brown patties arranged in a circle on a blue and white plate. In the center is a sliced red grapefruit, with a strawberry at its center, blueberries scattered around the periphery, and one sprig of

celery. Address: P.O. Box 988, Knoxville, Tennessee 37917. Phone: 1-800-835-2867.

2366. U.S. Mills. 1996. Erewhon 30th anniversary mug (Memorabilia). U.S. Mills Inc., 395 Eliot St., Newton, Upper Falls, MA 02164-1131.

• **Summary:** This beige mug, with a sturdy handle, is 3.75 inches high and 3.125 inches in diameter. On one side, in red and purple letters, is written "1966–1996 Erewhon. The quality standard for 30 years." Above that are three ears of wheat in purple, green, and blue. On the other side, in red letters, is written "Bill Shurtleff." Address: Newton, Upper Falls, Massachusetts. Phone: 617-969-5400.

2367. U.S. Mills. 1996. Erewhon's 30th anniversary (T-shirt). U.S. Mills Inc., 395 Eliot St., Newton, Upper Falls, MA 02164-1131.

• **Summary:** On the front of this large black T-shirt, in gold, red and purple letters, is written "1966–1996 Erewhon. The quality standard for 30 years." Above that are three ears of wheat in purple, green, and blue. Nothing is written on the back of the T-shirt. Address: Newton, Upper Falls, Massachusetts. Phone: 617-969-5400.

2368. **Product Name:** Westbrae Natural Rice Beverage (Half Gallon, Non Dairy) [Vanilla].

Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer's Address: Gardena, CA 90746.

Date of Introduction: 1996 June.

Ingredients: Plain: Rice base (filtered water, brown rice syrup, rice starch), expeller pressed canola oil, tricalcium phosphate, pea protein, natural flavors, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin.

Wt/Vol., Packaging, Price: Half gallon Tetra Brik Aseptic carton.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Ad (1/3 page, color) in *Vegetarian Times*. 1996. June. p. 64. "Only Westbrae—First in half gallons. The best just got bigger." A photo shows the front of the package. The text reads: "New. Pour 'n Seal. Enriched with vitamins A, B and D and calcium. Only 1% fat."

2369. White Wave, Inc. 1996. TofuTown welcomes new corporate beans: White Wave expands sales staff (News release). 1990 N. 57th Court, Boulder, CO 80301. 1 p. July 15.

• **Summary:** Many of the new management and sales changes "are in line with the company's plans to shift from a trade-oriented sales approach to a geographic one. The move is to better service the expanding, nationwide demand for the company's growing Vegetarian Cuisine product line. Head Bean, President and CEO, Steve Demos announced the new

appointments. They are as follows:

"Sheryl Lamb, formerly of Mountain People's Warehouse and Eden Foods, has joined White Wave as the company's new National Sales Manager. In addition to supervising White Wave's regional sales managers, Sheryl will handle sales for the company's West Coast region.

"Mark Machlis, who joined the company last year with White Wave's acquisition of his former company, 'Meat of Wheat,' has been promoted to a new position as Midwest & Southwest Regional Sales Manager.

"Robb Wagg, who joined White Wave in 1995, will continue his role as Eastern & Southeast Regional Sales Manager." Address: Boulder, Colorado. Phone: 303-443-3470.

2370. Natural lifestyle magazine and mail-order market: Spring-summer '96. 1996. Asheville, North Carolina: Natural Lifestyle Supplies. 63 p. Catalog. 28 cm.

• **Summary:** A macrobiotic mail-order catalog with several nice articles, it sells many types of soyfoods and related products, including the full line of Kushi Cuisine, organic soybeans (yellow and black), azuki beans, amazake, Rice Dream soymilk, Edensoy soymilk, Westbrae Malted, Nasoya Vegi-Dressings, Nayonaise, Farmhouse Tekka [miso], organic soy sauce, fresh tofu, snow-dried tofu, kuzu, and miso. Publisher: Tom Athos. Editor and graphic design: Debbie Athos. Address: 16 Lookout Drive, Asheville, North Carolina 28804-3330. Phone: 1-800-752-2775.

2371. Cohen, David. 1996. History of Rainbow Grocery and Rainbow Natural Foods (Interview). *SoyaScan Notes*. Aug. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Rainbow Grocery started in 1973 in Denver, Colorado, as a food co-op and natural food storefront. Located on the corner of Colfax and York, it was the first of the new breed of natural food stores in Denver. The two founders were Mark Retzloff and David Rickard (pronounced ruh-KARD, an exceptionally creative Brit with an Oxford education, a near photographic memory, and a very curious mind). Mark and David had both been with Eden Foods in Ann Arbor, Michigan. Mark, who is now living in Boulder, was the co-founder and owner of Alfalfa's Markets. Mark and Paul Repetto (formerly with Vestro/Westbrae) organized Horizon Organic Milk. He is an excellent networker, who knows very many people in the natural foods industry, and is out talking with people constantly. Rainbow quickly became a small distributor by coordinating the cooperative bulk food buying with the other local retailers and then sharing the foods with the other stores. Gradually being the coordinator allowed them to move out of the basement into larger and larger facilities.

After its original store in Denver, Rainbow opened three more natural food stores: Clearly Nature's Own in Kansas City, Missouri; Rainbow Grocery in Seattle, Washington;

and a second Rainbow Grocery in Denver (which David designed and opened in 1984). There was also a wholesale produce dock in Los Angeles, California; they were buyers and brokers of organic produce.

In 1978 or 1979 the distribution part of the company moved into a large warehouse in Denver (on Monaco Parkway), bought trucks, and started shipping out of state. Dave joined Rainbow in March 1979. More than anyone else, David Rickard taught David Cohen about the business. Other natural food distributors in the area were Arrowhead Distribution, Colorado Specialty Foods, and Green Mountain Grainery; even earlier were Cliffrose and Mountain Rose—which were just closing when David started working with Rainbow. But they all gradually disappeared. In the period from 1990 to 1995, Rainbow's annual wholesale sales increased from \$8 million to over \$50 million. Rainbow was sold in about August 1995 to Cornucopia, which is headquartered in Dayville, Connecticut; the owner is Norman Cloutier.

Note: Rainbow was involved with Guru Maraji. Address: 575 S. Olive Way, Denver, Colorado 80224. Phone: 303-377-5120.

2372. Product Name: Eden Organic Black Soy Beans (Canned).

Manufacturer's Name: Eden Foods, Inc.

Manufacturer's Address: 701 Tecumseh Road, Clinton, MI 49236. Phone: 313 973-9400 & 517 456-7424.

Date of Introduction: 1996 August.

Ingredients: OCIA certified organic black soy beans, water, kombu. "Organically grown and processed in a manner that exceeds the requirements of the California Organic Foods Act of 1990."

Wt/Vol., Packaging, Price: 15 oz (425 gm) can.

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 130 gm.: Calories 90, calories from fat 15, total fat 1.5 gm (2% daily value), sodium 0 mg (0%), total carbohydrate 9 gm (dietary fiber 5 gm [20%], sugar 1 gm), protein 9 gm (18%). Calcium 6%, iron 15%, thiamine (B-1) 4%, riboflavin (B-2) 10%, niacin (B-3) 2%, phosphorus 15%, magnesium 10%, zinc 8%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Product with Label sent by Martha Johnson of Eden Foods. 1996. Oct. 8. Label (copyright 1996) is red, black, and white. A color illustration shows two children seated at a rustic dining table, with a large pot of beans in the middle, each eating from a bowl of beans. The front panel reads: "No salt added. Low fat." A wide vertical red band identifies all of Eden's organic canned beans. The side panel reads: "Quick, Safe & Delicious: High fiber, low fat, vegetable kingdom protein. Eden Black Soy Beans are creamy smooth. A most palatable and digestible soybean. Canning yellow soys made no sense. Organic farmers are society's brightest hope for change. Satisfaction

guaranteed. Recycled paper & soy inks."

Talk with Martha Johnson. 1996. Oct. 29. This product was launched in August 1996. Martha recently presented it at the American Dietetic Association annual convention, served out of a crock pot, unseasoned. The dietitians loved its mild flavor and creamy texture. These black soybeans are grown in Michigan by a farmer who has grown beans organically for Eden Foods for several decades. He had been growing black soybeans for several years and exporting them to Japan. The beans are canned in Eaton, Indiana, at a factory where all of Eden's organic beans are canned. Eden purchased this factory in about 1993.

Letter (fax) of nutritional analysis sent by Martha Johnson. 1996. Oct. 29. Includes an analysis of 12 individual isoflavones by isoflavone expert Dr. Stephen Barnes. These soybeans contain 40.59 mg of total isoflavones per ½ cup serving. Total isoflavone content is 312.3 micrograms (mcg) per gram. This is composed of 144.8 mcg/gm of total daidzein + daidzin, 146.5 mcg/gm of total genistein + genistin, and 21.0 mcg/gm of total glycitein + glycitin. The three most abundant individual isoflavones are: daidzin 98.1 mcg/gm, genistin 85.8 mcg/gm, and genistein 6 OMalGlc 47 mcg/gm.

2373. Eden Foods, Inc. 1996. Eden Foods, Inc., testifies before USDA's National Organic Standards Board (NOSB) (News release). 701 Tecumseh Road, Clinton, MI 49236. 6 p. Sept. 25.

• **Summary:** On Sept. 18 in Indianapolis, Indiana, Michael J. Potter, Chairman and President of Eden Foods, presented testimony to the NOSB. "There are four fundamental issues on which USDA appears to Eden Foods and our organic family farm suppliers to be headed in the wrong direction: I. The First Amendment rights of Eden Foods, Inc. and our right to use private certifiers that are best qualified to provide the public assurance of organic authenticity.

"II. The, as of today, secret list of allowable input materials for food processing, agricultural practices, and animal husbandry.

"III. The USDA intent to allow foods to be marketed as organic that are treated with any chemical substance that the FDA says is legal for use on non-organic food, in storage containers and facilities, and in food processing environments to control pests and fungi.

"IV. The USDA intent to allow genetically engineered organisms into the organic market, and allow irradiated organic food." Address: Clinton, Michigan.

2374. Caton, Greg. 1996. New developments at Lumen Foods (Interview). *SoyaScan Notes*. Oct. 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Greg is working closely with Dr. Suzanne Paxton, a doctor of pharmacy, of PNC–Preventive Nutrition Consultants. Her late husband, Herb Pierson, worked with

the National Cancer Institute and is credited with coining the term “Nutraceuticals.” He was a pure scientist—not a promoter; he died at age 43, just 6 months ago—probably because of the many cancer-causing substances he was working with. He was especially interested in finding plant-based materials that were effective in curing cancer. On the health and medical benefits of garlic alone, he had something like 20,000 references. Many other people have come in and taken credit for his work. Herb and Suzanne’s research “made Wakanaga, and their Kyolic garlic supplement.” Wakanaga is a \$200 million a year garlic company headquartered in Japan.

For Lumen Foods Suzanne has just written a 29-page booklet on the latest developments in soy phytopharmacology. “She was one of the first to publicize the benefits of soy in treating menopausal symptoms. I don’t know anybody who knows more about phytopharmacology and the effects of soy and many other different vegetables. She is a world class authority—a very impressive person.”

Greg has just run a full-page color ad for Heartline Meatless Meats in the September 16 issue of *Time* magazine, which was mailed to 1 million women. Nine years ago he ran a one-third page ad in the December 1987 issue of *Prevention* magazine that reached 4 million readers. It barely paid for itself.

Greg’s business is still small, with sales projected to be about \$1 million in 1996. But during his first year in business, in about 1986, the company grossed about \$40,000. In the last few years the company’s sales have grown for \$350,000 to \$782,000 last year. Most of his growth in sales is from mail order. Now mail order accounts for about half of his sales; it used to be much smaller.

His low-fat Heartline products (named Heartline Lite) do not sell nearly as well as their regular counterparts; a 2 ounce serving of the latter, reconstituted, contains 83 calories (with 27 calories from fat) and 3 grams of vegetable oil, with no saturated fat or cholesterol. Thus, 32.5% of the calories come from fat. There is a very low rate of repeat sales for the low-fat or nonfat products.

Greg was motivated to start his own business because ADM (with whom he worked from 1981 to 1983) denied that there was any problem with flatulence from their TVP products. This was long before soy protein concentrates became popular. GNC (General Nutrition Corp.) created many dinners using TVP at their plant in Fargo, North Dakota, but after several years they realized that consumers were complaining a lot about the gas; so GNC dropped ADM, who at that time was doing a promotional titled “Uncle Archie’s”—which Greg was involved with. So Greg left ADM, did research on new soy products in 1985, then founded the company in 1986.

Greg’s fastest growing product now, Stonewall’s Jerquee, is a deep-fried product, which has much of the fat subsequently removed by centrifuging. “People who eat a

snack want to be wowed. They are looking for an experience. More and more we realize that we are in the experience business. This in the only product we make that is purchased by meat-eaters as well as vegetarians.

Greg now owns five companies; one of these designs and develops Web pages. “If you have to work for a living, your life should be an adventure.” Address: President, Lumen Food Corp., 409 Scott St., Lake Charles, Louisiana 70602-0350. Phone: 318-436-6748.

2375. Spence, Paddy. 1996. SPINS (Spence Information Services) is a new company providing information about the natural products industry to manufacturers (Interview). *SoyaScan Notes*. Oct. 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** SPINS started providing information in Jan. 1996. Their sources of this information are: (1) Natural product distributors, including United Naturals but not including Tree of Life (the biggest such distributor). These distributors account for about 20-30% of all U.S. natural product sales. (2) A.C. Neilson’s HomeScan Panel, with a population designed to mirror the U.S. census.

They provide information only to manufacturers. It is provided on a bi-monthly basis—every two months, down to the UPC level = the individual product or item level. This information, aggregated for the USA costs \$1,500 per category. One such category is non-dairy beverages (soymilk, rice milk, almond milk). Others include meat substitutes, and cheese alternatives. One of their clients is Vitasoy (USA) Inc.

Talk with Richard Rose of Sharon’s Finest. 1997. March 16. The 6-7 distributors from which they now receive information represent well over half of the natural foods market. Richard uses the bar-chart information to say to retail buyers: “Sharon’s Finest is No. 1 in unit sales, but you carry only one of our 17 SKUs. Tofu-Rella is now the best-selling cheese alternative in terms of unit sales (but Soya Kaas is No. 1 in dollar sales). This product is in the top ten and you don’t even carry it.” Address: President, SPINS, San Francisco, California. Phone: 415-284-0546.

2376. Graebner, Lynn. 1996. Mountain People’s parent going public. *Sacramento Business Journal (California)*. Oct. 21.

• **Summary:** United Natural Foods Inc. (UNFI), the parent company of Mountain People’s Warehouse Inc. (an Auburn, California, distributor of natural foods and products), hopes to raise \$37 million in an initial public offering. UNFI hopes to use the new money to repay debt and expand its distribution facilities.

Established in 1976 and largely “home grown,” Mountain People’s merged last year with Cornucopia Natural Foods (of Dayville, Connecticut) a large natural foods distributor. Operating under the umbrella name of United Natural Foods, the two firms “had sales last year of \$283

million [up 41% from the previous year]. United has five distribution centers across the country, eight retail stores, 1,188 employees and 5,500 customers in 43 states.

“The founder and president of Mountain People’s Warehouse, Michael Funk, is now United’s president and vice chairman of the board.”

2377. Eden Foods, Inc. 1996. Great vegetarian chefs celebrate soy. 701 Tecumseh Road, Clinton, MI 49236. 16 panels. Oct. *

• **Summary:** Letter (fax) from then talk with Lorna Sass. 1996. Sept. 8. She is working as a consultant for Eden Foods, developing the recipes for this foldout brochure, which will be distributed at the Natural Products Expo in Baltimore, Maryland, in October, 1996. Address: Clinton, Michigan.

2378. *SoyaScan Notes*. 1996. Black soybean varieties in North America: A brief early history (Overview). Nov. 3. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Since the late 1970s, almost all of the soybeans in the USA have had yellow seed coats. Most Americans, including soybean farmers, have never heard of soybeans that were black, green, brown, white, red, bicolored, or mottled. But have yellow soybeans always predominated in America?

“Previous to the numerous introductions by the United States Department of Agriculture beginning in 1898, not more than eight varieties of soy beans were grown in the United States, namely, Ito San, Mammoth, and Butterball, with yellow seeds; Buckshot and Kingston, with black seeds; Guelph or Medium Green, with green seeds; and Eda and Ogemaw, with brown seeds.” Thus of these eight pre-1898 varieties, 3 varieties (37.5%) had yellow seeds, 2 varieties (25%) had black seeds, 2 varieties (25%) had brown seeds, and 1 variety (12.5%) had green seeds (Source: Piper & Morse 1910, “The soy bean: History, varieties, and field studies,” p. 27).

In this same important 84-page report, the authors describe in great detail the 285 soybean varieties that have been introduced into the United States as of 1909. Of these 285 varieties, 152 varieties (53.3%) have yellow (straw-yellow or olive-yellow) seeds, 55 varieties (19.3%) have black seeds, 44 varieties (15.4%) have brown seeds, 24 varieties (8.4%) have green seeds, and 10 varieties (3.5%) are bicolored (p. 37-39).

Thus, as late as 1910, only about half of all soybean varieties in the United States had yellow seeds. But yellow soybeans were already coming to be preferred. Why? “Yellow or green seeds are preferable to darker colors, as the shattered seeds are more easily found by hogs pasturing the field or stubble” (p. 36).

The first black-seeded soybean was probably introduced to the USA from Japan in 1889 by Prof. W.P. Brooks of the Massachusetts Agricultural Experiment Station, who

traveled to Japan to collect seeds. He had named this variety “Medium Black” by 1895 and in 1893 it was grown at the Rhode Island Agricultural Experiment Station, from which the U.S. Department of Agriculture received it in 1903 under the name “Japanese No. 15.” By 1910 it had been officially named “Kingston” (p. 31).

In 1910 the following named, black-seeded (or partly black) soybeans (listed alphabetically) were being grown in the USA: Arlington, Auburn, Black Beauty, Brindle (brown and black), Buckshot, Chernie, Cloud, Early Black, Ebony, Extra Early Black, Fairchild, Flat King, Hankow (brown banded with black), Hongkong, Jet, Kingston, Large Black, Medium Black, Medium Early Black, Meyer (black and brown), Nigra, Nuttall, Peking, Pingsu, Riceland, Shanghai, Taha (black with olive saddle), Wilson, Wisconsin Black (p. 39-74).

In 1899 Walter Blasdale, Instructor in Chemistry at the University of California, studied the vegetables sold at Chinese markets in San Francisco. He reported that year in USDA OES Bulletin No. 68 that two varieties of soy beans were found, a yellow and a black. “The black is known as ‘hak tau,’ and is designated by the characters ‘black’ + ‘bean.’ Both varieties obtained from the Chinese market in San Francisco grew readily in Berkeley, attaining a height of about 3 feet, and in spite of a very dry season produced an abundant crop of seeds.” In this bulletin, Blasdale included a good, full-page photo of “The upper portion of a plant of the black soy bean.” He then analyzed the nutritional composition of both the original Chinese soy beans and their progeny grown in Berkeley, and presented his results in tabular form. On a dry-weight basis, the original black soy beans contained, on average, 0.35% more protein (39.62% vs. 39.27%) and 0.72% less fat (18.77% vs. 19.49%) than the yellow soy beans.

On 28 August 1906 the USDA, as part of its major seed and plant introduction, received the first black soybean [SPI #19184] noted for its food use. It came from Newchwang, Manchuria, from Plant Explorer Frank N. Meyer, who wrote: “A large variety of the black soy bean. This is a very rare variety and is used for food: also for making a superior oil.”

The first American recipe for using black soybeans was published in May 1917, during World War I, in the *Wisconsin Agricultural College, Extension Circular* No. 79, titled “How to Cook Soy Beans,” by the University of Wisconsin Home Economics Department. The one recipe titled “Black soy bean soup” called for “1 pint black soy beans.” This same recipe appeared the next month, in the June issue of the *Journal of Home Economics* in an article titled “Soy Bean Cookery,” by Nell Beaubien, of the University of Wisconsin Home Economics Department.

In 1960 the first recipe for black soybeans [called “black beans” after the Japanese term *kuro mamé* which means “black soybeans”] appeared in America in a cookbook, *Zen Macrobiotics*, by George Ohsawa. It was recipe No.

118 for Boiled soy beans. But the “black beans” were used only as an alternative ingredient. Most of the recipes for black soybeans in American cookbooks after 1960 were in macrobiotic cookbooks, where they were consistently called “black beans” rather than black soybeans—and one can only wonder if the authors realized that their recipes were really calling for black soybeans. The first macrobiotic recipe calling for “Black soy beans” was published in 1973 by Chico-San in a product catalog which contained many recipes. The first real macrobiotic cookbook to use the term “black soybeans” in a recipe title was *Aveline Kushi’s Complete Guide to Macrobiotic Cooking*, published in 1985 by Warner Books (see p. 257-58).

The first packaged black soybeans sold in America for food use appeared in 1959 in New York City. They were imported from Japan by the Oriental Food Shop, and received a write-up in the May 1959 issue of *House Beautiful* magazine.

In 1962 Chico-San Inc., in Chico, California, one of America’s first macrobiotic- and natural foods companies, began selling “Black Soybeans,” imported from Japan. By January 1970, Erewhon Trading Co. in Boston had followed with a similar product named “Kuromame, a black soy bean import.”

In August 1996 Eden Foods introduced America’s first canned black soybeans—which were also organically grown in Michigan.

The following is a list of 65+ black soybean varieties introduced before about 1940 to North America, arranged alphabetically by name, with the earliest known date of introduction given in parentheses: Arlington (1910), Auburn (1910), Avoyelles (1931), Black (1900), Black Beauty (1910), Black Ebony (1918), Black Eyebrow (1915), Black Ontario (1927), Black Round (1902), Black Sable (1927), Bopp (1927), Buckshot (1907), Cayuga (1933), Chernie (1910), Claud (1914), Cloud (1909), Coker 31-15 (1934), Coker’s Black Beauty (1931), Early Black (1902), Early Wilson (1927), Early Wisconsin Black (1927), Ebony (1907), Edna (1914), Essex (1927), Extra Early Black (1902), Extra Early Black Eyebrow (1927), Extra Select Sable (1927), Fairchild (1910), Flat Black (1904), Flat King (1907), Hiro (1936), Honkong / Hong Kong (1909), Jet (1909), Kingston (1907), Kingwa (1935), Kura (1936), Laredo (1920), Large Black (1907), Mammoth Black (1927), Medium Black (1894), Medium Early Black (1897), Medium Late Black (1897), Meyer (1907), Nigra (1910), Norredo (1935), Nuttall (1907), Oloxi (1937), Ootootan / O-too-tan (1914), Pee Dee (1937), Peking / Pekin / Peking S (1910), Pekwa (1932), Pine Dell Perfection (1937?), Pingsu (1909), Red Sable (1927), Riceland (1907), Royal (Morse 1918), Sable (1914), Sato (1936), Shanghai (1910), Sooty (1912), Taha (1909), Tarheel / Tar-Heel / Tar Heel (1914), Tarheel Black (1915), Watson Black (1936), Wilson (1909), Wilson-Five (1918), Wing’s Extra Select Sable (1911), Wing’s Pedigree Sable

(1916), Wing’s Sable (1910), Wisconsin Early Black (1927), Wisconsin Black (1903), Wisconsin Pedigreed Black (1927).

2379. Miller, Paul. 1996. Beyond seasonal sales. *Catalog Age* 13(12):22. Nov. *

2380. *SoyaScan Notes*. 1996. Soymilk and cow’s milk prices in California, December 1996 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow’s milk in California. In Dec. 1996 at Trader Joe’s, a gourmet and natural foods chain in Concord, California, soymilk made from organically grown soybeans, sold in an aseptic package with reclosable spout, retails for the following prices: Pacific Select (lowfat plain) retails for \$0.99. Westsoy Lite (1% fat) Combibloc half gallon with reclosable spout (plain, or vanilla) retails for \$1.99 (equivalent of \$0.995/quart). Pacific fat free (vanilla, or plain) retails for \$1.19. Trader Joe’s Soy-Um quart (original, vanilla, or lowfat chocolate) retails for \$1.39. By comparison, Rice Dream Vanilla (a rice-based beverage) retails for \$1.39/quart.

The average price of the quart equivalents of these four soymilk brands is \$1.14. This is \$0.32 per quart lower or 22% lower than the \$1.46 in Dec. 1996 and \$0.78 per quart lower or 41% lower than the \$1.92 in Dec. 1992.

The major factors leading to the falling price of soymilk are: (1) The growing popularity of “lite” soymilks since 1990; they contain more water and less fat—but also less protein and other nutrients; (2) The increase in carton size to 2 quarts; and (3) The economies of larger-scale production due to increasing demand. This increased demand is due to the growing awareness of the many nutritional benefits of soymilk (especially from isoflavones such as genistein), the falling price, and the dislike of growth hormones (rBGH, made by Monsanto) used in producing cow’s milk.

Cow’s milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Nonfat: \$0.95/quart or \$1.69/half gallon or \$3.35/gallon; (2) Extra light (1% fat; protein fortified): \$0.95/quart or \$1.82/half gallon or \$3.39/gallon; (3) Low-fat (2% fat; protein fortified): \$1.01/quart or \$1.82/half gallon; (4) Whole (homogenized): \$1.01/quart or \$1.82/half gallon. The best-seller among these is non-fat in half gallons.

Thus, during the past two years, the price of soymilk has continued to decrease while the price of cow’s milk has continued to rise. In Dec. 1996 soymilk in quart cartons is, on average, 1.20 times as expensive per unit volume as nonfat dairy milk purchased in quarts, 1.35 times as expensive as in half gallons, and 1.40 times as expensive as in gallons. In Dec. 1994 a quart of soymilk was 1.71 times as expensive as a quart of the best-selling cow’s milk. So in the last 2 years the price of soymilk has fallen significantly

relative to that of cow's milk.

During the last 13 years, the price of soymilk on a per-quart basis has fallen dramatically—from \$2.48/quart in Dec. 1983 to \$1.14/quart in Dec. 1996; thus, soymilk is less than half as expensive per quart today as it was 13 years ago. The price of soymilk has fallen even more dramatically relative to the price of cow's milk, which has increased from \$0.43/quart to 0.95/quart during this same period. In 1983, a quart of soymilk was 5.76 times as expensive as a quart of cow's milk; today it is only 20% more expensive.

2381. *Soybean Digest*. 1996. Soyfoods special report: Working the miracle crop into your family's diet (Section of articles). Dec. p. 13-17, 20, 23, 26-27.

• **Summary:** On page 4, editor Syl Marking, introduces this special section of articles and cover story by noting: "Cooking with Soy: *Soybean Digest* is plowing new ground again. It's our first-ever special report on cooking with soy (see p. 13). Take some time to not only read it but have the cook in your family try some of the recipes. It's another way to utilize the crop you grow. Let us hear from you—whether you like it or not. If you like it, we'll do it again next December.

On the cover, a full-page color photo shows a mother (Karen Johnson of Minnesota in Christmas colors) with two kids in the kitchen cutting rolled-out gingerbread dough with a cookie cutter. The caption (p. 3) states that she "slipped a little soy flour into the gingerbread dough." At the front of the table are packages of Westsoy Low Fat Soy Drink and Arrowhead Mills Soy Flour, plus an unlabeled 1-pound plastic bag full of yellow soybeans.

This special section begins with a 1-page introduction to six articles which follow; each of these is cited separately. The introduction asks: "But why should healthy, meat- or pasta-and-cheese loving people want to the spoil the flavor of their favorite foods? You shouldn't—and won't—have to. Foods containing soy are tasty as well as healthful.

"Say you want to reduce your fat intake. Or need to increase the amount of fiber your consuming. Studies in Japan, China and the U.S. show that eating as little as one serving of soyfoods a day cuts the risk of some types of cancer by 40-50%.

"You're already eating soy—just look at the product labels of the foods you eat daily... You may want to replace regular milk with some soy milk in the next batch of cookies you make. As you become more adventurous, cut out some of the ricotta or cottage cheese in next week's lasagna and sneak in a little tofu." A color photo shows a little boy and girl about to eat gingerbread cookies fortified with soy flour.

2382. Kleiner, Art. 1996. *The age of heretics: Heroes, outlaws, and the forerunners of corporate change*. New York, NY: Currency Doubleday. xii + 414 p. See p. 273-89. Illust. Index. 24 cm.

• **Summary:** From the back cover: "Art Kleiner has uncovered a kind of secret history that links the medieval monastic orders, the counterculture of the sixties, and the key agents of corporate change in the modern world. I think its a landmark for people both inside and outside the most influential institution of the modern age—the corporation"—by Howard Rheingold, author of *Virtual Reality, Virtual Communities and Tools for Thought*.

Chapter 8, titled "Millenarians," begins with a history of Erewhon Trading Company (p. 273-89), which makes it appear that Paul Hawken was the only important person in the company. Nevertheless, the history is full of interesting insights, many related to Erewhon's role as a pioneer in the countercultural natural foods industry and (for a while) the largest distributor of natural foods and macrobiotic foods in the United States. Kleiner is an engaging and insightful writer. Erewhon was started by Michio and Aveline Kushi who, in the 1950s, had met at La Maison Ignoramus [literally, The House of Ignorance], a macrobiotic institute founded by renegade philosopher George Ohsawa outside Tokyo. Ohsawa claimed to have cured himself of tuberculosis by eating a diet of brown rice, miso soup, and cooked vegetables (from both land and sea). Ohsawa came to believe that a good (macrobiotic) diet is the foundation of both personal and societal health. The first step is to change your own diet, then to help others change theirs. Ohsawa was a Japanese writer, had lived in Paris in the 1920s, and was deeply interested in world government—as well as in Zen. Ohsawa recruited the Kushis to go abroad (Michio was the first to leave Maison Ignoramus and to do so) to promote world government. Michio and Aveline fell in love in the United States and were married. They eventually started teaching young Americans in Cambridge, Massachusetts. Before long they were prosecuted for practicing acupuncture without a medical license—but they prevailed and stayed. In the mid-1960 macrobiotic diets called for staples that were rarely found in East Coast food stores: brown rice, miso, tamari, etc. The Kushis started to sell food and books out of their home in Cambridge. Then [in April 1966] they moved the little store out of their home into a basement retail space at 303-B Newbury Street—and named the fledgling company Erewhon. "... one of their students, Paul Hawken, took over as clerk"—or at least so says this book. Hawken was only eighteen, a lean young man from California. The rest of the story is how Hawken (apparently single-handedly) built Erewhon and the early natural foods movement.

From the publisher's description: "The author explores the nature of effective leadership in times of change and defines its importance to the corporation of the future. He describes a heretic as a visionary who creates change in large-scale companies, balancing the contrary truths they can't deny against their loyalty to their organizations. This book reveals how managers can get stuck in counterproductive ways of doing things and shows why it

takes a heretical point of view to get past the deadlock and move forward.” Address: Former editor of *The Whole Earth Catalog* and freelance business reporter during the 1980s, Oxford, Ohio.

2383. Roller, Ron. 1997. New developments with rice beverages (Interview). *SoyaScan Notes*. Jan. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron does not know how Pacific Foods of Oregon, which began making rice beverage in Jan. 1995, got around the Imagine Foods’ patent. He does not know if Pacific Foods private labels rice beverage for anyone, and he does not know where Westbrae, or where American Natural Snacks, gets their rice beverage products. A Minnesota company [Note: IFP = Innovative Food Processors, Inc. of Faribault, Minnesota (Phone 1-800-997-4437)] was making Rice Trend, which is rice syrup solids; it’s a line of different DEs of rice syrups. Ron talked with them and he thought they were supplying Westbrae. They spent a lot of money battling Imagine Foods on the patent issue.

It was not Jim Morano of Innovative Sweeteners. Jim also works for Krompton Knowles (a big company), probably for their Sweetener Division. As far as Ron knows, Jim hasn’t made any rice beverage but he, too, was battling Imagine Foods on patent issues. Jim’s wife runs Suzanne’s Specialties, which makes koji-based rice syrup.

Ron’s feeling is that rice beverage as a category has continued to grow, but its percentage share of the non-dairy beverage market has probably stabilized. It was zooming [growing very rapidly] several years ago, but is no longer growing at such a fast rate. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2384. Roller, Ron. 1997. New developments with organically grown soybeans in America (Interview). *SoyaScan Notes*. Jan. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The demand for organic soybeans in America is rising rapidly. Ron thinks this has nothing to do with concerns over genetically engineered (transgenic) soybeans such as Monsanto’s Roundup Ready soybeans. “Soybeans have become, hands down, the main cash crop (the one that makes the most money) for organic farmers, at least those in the Midwest. Organic growers in the Dakotas and Montana still rely on wheat as their main cash crop, but the corn, wheat, and soybean growers everywhere else rely on soybeans.” The demand for organic soybeans is growing faster than the supply—even though the supply is rising. Increasing prices have attracted more and more farmers to growing soybeans organically. The biggest demand is still from Japan, as it has been for the past 4-5 years. As interest in organic foods has grown in Japan, bigger food manufacturers (primarily of tofu and natto) have started to use organic soybeans. The American food companies that

use organic soybeans are still relatively small and few. Ron’s company (if you add the organic soybeans Ron exports) may be the single biggest.

The demand for organic natto soybeans from Japan appeared suddenly and is now very large. Acreage that was used to grow organic soybeans for tofu or soymilk suddenly got switched to growing small-seeded organic natto soybeans. Because of that, the acreage used to grow organic soybeans for tofu and soymilk has decreased. Last year the organic soybean crop in the Midwest (especially Michigan and Ohio) was smaller than expected. So the combination of the export demand (mainly to Japan but also to Europe), the loss of acreage to natto beans, the bad crop, and the lack of new growers, has made the price of organic soybeans rise—by about 10%. But remember that the price of organic soybeans were already more than double, very often triple, that of non-organic beans. The highest prices are paid for Vintons and natto beans. It is these premium prices that are so attractive to the organic farmers. “This trend is of great concern to me, and especially the effect it could have on the price of soyfoods. In a free market economy, with lots of farmers looking for value-added crops, you would think that many more of them would start growing organic soybeans. But it is a difficult chasm to cross. A farmer must learn a whole new way of farming, and, he must wait for 3 years before that land can grow organic crops. That 3-year lead time is the big stumbling block; many farmers actually lose money on that land during those 3 years. Some big farmers are now starting to grow organic soybeans, but they getting involved on a gradual basis, adding 50 to 100 acres a year. Those large commercial growers, who have recently switched to growing soybeans organically, are sitting in the catbird seat, and doing extremely well.”

In Ron’s market, there have been very few questions from consumers about genetically engineered (transgenic) soybeans. “It hasn’t become a problem at all for ASP; I think it will be an asset for us—because we don’t use them and we can prove that we don’t. However a lot of growers want to grow transgenic soybeans.” Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2385. B-rave Studio. 1997. Absolutely tofu. Parts I and II (Color videotape). New York, NY. 60 min. each.

• **Summary:** These two excellent 60-minute color videos feature the talented chefs Kate Farrell and Myra Kornfeld from the celebrated vegetarian restaurant Angelica Kitchen in New York City. They demonstrate how to cook a variety of vegetarian tofu recipes. A recipe booklet is include with each video. Each video costs \$24.95 plus postage.

Tofu 1 demonstrates 7 recipes: Orange cilantro baked tofu. Thai kebabs. Sweet ginger tofu triangles. Black [turtle] bean sweet potato casserole. Spring salad with cashews. Provençal pasta cake. Lemon poppyseed cheesecake. You

will also tour a tofu factory.

Tofu 2 demonstrates 6 more delectable recipes: Millet and sunflower croquettes. Roasted vegetable lasagna. Autumn harvest stew. Chick pea and red pepper phyllo. Smokin' chile [chili]. Chocolate mocha moosecake. Then visits with a CSA biodynamic farmer and an organic farmer.

You may also visit their Web site: <http://tofu.wildhack.com>.

Note: *Webster's Dictionary* defines phyllo (pronounced FEE-lo, and derived from the Greek), a word first used in English in about 1950, as "extremely thin pastry dough that produces a flaky pastry."

For more on these videos see: *Vegetarian Times*. 1997. March. p. 12. Address: P.O. Box 1365, Canal Street Station, New York, NY 10013-0877. Phone: 1-800-431-3801.

2386. Roller, Ron. 1997. Growth of soymilk sales in U.S. supermarkets (Interview). *SoyaScan Notes*. Feb. 10. Conducted by William Shurtleff of Soyfoods Center.
 • **Summary:** Ron would estimate that sales of soymilk in U.S. supermarkets now account for about 25% of all soymilk sales in America. It has grown a lot during the past 18 months; this is now the area of most rapid growth. East Coast supermarkets (especially certain chains) tend to sell more soymilk than West Coast supermarkets.

American Soy Products does not subscribe to SPINS (SPence INformation Service) run by Paddy Spence out of San Francisco, California. Ron thinks he could do as good a job of gathering market information as SPINS does. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2387. Smith, Michelle. 1997. Members of the Soyfoods Association of North America (as of 12 Feb. 1997). Walnut Creek, California. 1 p. Feb. 12. Unpublished typescript.
 • **Summary:** The Association has 35 paid members. Two of the companies (Devansoy and MLO Products) have two people listed from each company. The companies are: ADM—Jack Painter, Eden Foods—Sally Gralla, Devansoy—Elmer Schettler & Ed Pedrick, Lightlife Foods—Rick McKelvey, MLO Products—Ed Cabelera & Ryan Schmidt, Pulmuone—Seung Hoon Lee, SunRich—Allan Routh, Sacramento Tofu—Alvin Kunishi, American Miso—Don DeBona, Tofu Shop—Matthew Schmit, Turtle Island—Seth Tibbott, Vitasoy—Yvonne Lo, Westbrae—Myron Cooper, American Soy—Tim Redmond, Clofine—Richard Eluk, International ProSoya—Dusty Cunningham, Monsanto—Molly Cline PhD, MYCAL—Terry Tanaka, Natural Products—Paul Lang, Pacific Soybean—Dan Burke, Alfred College—Charles Goubau, Ohio Soybean Council—Jim Kapp, Iowa Soybean Association—Kirk Leads, Iowa State University—Dr. Lester Wilson, Mark Messina PhD, Nebraska Soybean Board—Stephanie Lynch, EMB Partners—John Eastham, Nutrition Advantage—Anne Patterson R.D., Soyatech—Peter Golbitz, Soyfoods Center—

Bill Shurtleff, Apple Valley Market—Gary Pappendick, Essene—Howard Waxman, Sevananda—Vince Hoffman. Address: Executive Director, Soyfoods Assoc. of North America, P.O. Box 3179, Walnut Creek, California 94598. Phone: 510-935-9721.

2388. Smith, Patricia J. 1997. Update on macrobiotic friends (Interview). Conducted by William Shurtleff of Soyfoods Center, March 14.

• **Summary:** Cecile Levin (a woman, who was Patricia's first macrobiotic teacher) bought Muramoto-sensei's Herb-T Company. She paid too much for it (the records and inventory were very disorderly) and is struggling to keep it alive. Mr. Muramoto may have been using money he got from his salt company to cover losses on his tea company.

Merle Hayward is getting married next week in Hilo, Hawaii, and Patricia is going to the wedding; Merle was Tom DeSilva's girlfriend at Erewhon. "She is a wonderful person; high integrity, hard working. She was the one who did a lot of the detail work when Tom, Jeff [Flasher], and Tyler Smith bought the Erewhon Los Angeles retail store, after it failed." Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

2389. Springhill Farm Foods, Inc. 1997. Hearty & Natural—Products and prices. Minneapolis, Minnesota. 7 p. 28 cm.

• **Summary:** Catalog (black-and-white, photocopy) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 1997. March. Lines include Natures Best, Tree of Life West, and Stonecrest Natural Foods. Most products contain soy protein; all are vegetarian. A spot in *Healthy and Natural Product News* (March 1997; Vol. 4, Issue 2) shows their Hearty & Natural "Veggie Chicken" prepared patties. Address: 9220 Isanti Street NE, Minneapolis, Minnesota 55449. Phone: 612-785-8845.

2390. Macdonald, Bruce. 1997. The complex relationships between Eden Foods, Muso Shokuhin, Macrobiotic Company of America, Gold Mine Natural Food Co., Sierra Natural Foods, and Ohsawa Japan (Interview). *SoyaScan Notes*. April 4. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In Oct. 1974, Michael Potter visited Yuko Okada at the Muso Company in Osaka, Japan, then decided to import Japanese food products exclusively from Muso. Then in Jan. 1984 (following major losses from the bankruptcy of Erewhon (in Nov. 1981) and other American natural foods distributors—including Shadowfax, Laurelbrook, and Good Food Company), the Muso Company of Japan appointed Eden Foods its General Agent for North America. But in subsequent years, as the value of the dollar continued to fall against the yen, making Japanese imports more expensive, Eden began to buy less expensive grades of some products (especially seaweeds and umeboshi) from

Muso. In this way, Eden avoided price increases. But strains grew in the relationship. Muso did not like being dependent on one wholesaler in America and Eden wanted the freedom to shop around. So in the mid-1990s there was an above-board agreement that Muso no longer had to sell its products in the USA exclusively to Eden. But even before that, Yuko had been selling to other companies such as Republic of Tea, Smith & Hawken (Japanese tools), and Gold Mine Natural Food Co.

Jean Richardson of Gold Mine trademarked the name “Ohsawa,” much to the chagrin of Ohsawa Japan. When Bruce working at MCOA, he thought of challenging this trademark, and he feels he could have done so successfully, but at a cost of at least \$30,000 in legal fees. This is even more ironic because MCOA is the exclusive importer of products from Ohsawa Japan. So the trademark borders on misrepresentation. The Ohsawa Japan story goes back to Bob Kennedy, who had been dealing with Ohsawa Japan since the beginning. When Michio Kushi began importing, he did so from Muso—not from Ohsawa Japan. Several years later he also began to import from Mitoku; today Michio recommends only Mitoku products. When Bob Kennedy stopped importing foods from Japan, he sold his business (after Heinz returned the rights to him) to what had been the warehouse of Rainbow Foods. Rainbow started as a store in San Francisco, California, then they grew a wholesale business. A religious group ended up buying that wholesale business from them, and they renamed it Sierra Natural Foods. Sierra bought the rights to import from Ohsawa Japan from Bob Kennedy, then started importing containers. They had also gotten the Soken distributorship, and they started expanding so fast that they couldn’t finance the rapid growth; this (and perhaps some mismanagement) soon led to their bankruptcy. At the time they owed Ohsawa Japan about \$200,000. Ohsawa Japan decided to stop selling foods to America. So they asked Mitoku to be their sub-distributor for America. So even today Bruce buys his Ohsawa Japan products through Mitoku. But Gold Mine can’t buy from Mitoku because Mitoku won’t give out any more distributorships. Mitoku’s main distributors now are U.S. Mills (Erewhon brand), Great Eastern Sun, Granum, and MCOA. Address: President, Macrobiotic Company of America, Asheville, North Carolina 28806. Phone: 704-252-1221.

2391. Macdonald, Bruce. 1997. Was Michael Potter driving when Clifford Adler was killed in an automobile accident? (Interview). *SoyaScan Notes*. April 4. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Cliff Adler was Bruce’s best friend. He was an extremely level-headed guy and would never let a drunk person drive—especially if he was driving too fast—while he was in the car. Both Cliff and Michael were “maniac drivers.” Michael does not remember whether or not he

was driving. The car went off the road at a hair-pin turn that Bruce knows very well. Then it flipped over and over, some 15-20 times. Both Michael and Cliff were thrown out so there was no way to determine who was driving.

In short, Bruce believes that Michael Potter was wrongly accused. Address: President, Macrobiotic Company of America, Asheville, North Carolina 28806. Phone: 704-252-1221.

2392. *SoyaScan Notes*. 1997. How many minerals do human beings need? (Overview). May 1. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The answer seems to be between 19 and 25, as follows:

1. USDA Handbook No. 8-14, revised December 1986, gives values for the following nine minerals for every food (listed alphabetically): Calcium, copper, iron, magnesium, manganese, phosphorus, potassium, sodium, and zinc.

The book *Recommended Daily Allowances*, published by the National Research Council (10th ed. 1989) adds to the above 9 minerals the following five “trace elements” (p. 195-246)—making a total of 14. Chromium, fluoride, iodine, molybdenum, and selenium.

The same 1989 book, on page 257 adds chloride, and in the chapter titled “Other substances in foods,” in the section on “Trace Elements” (p. 267) begins by stating: Evidence for the essentiality of trace elements in humans is often difficult to obtain directly... There is substantial evidence to establish the essentiality of arsenic, nickel, silicon, and boron.”

“Depressed growth, impaired reproductive performance, and other changes have been reported in laboratory animals fed diets extremely low in cadmium, lead, lithium, tin, and vanadium and kept in an environment allowing the strictest control of contamination (Nielsen, 1988). Nutritional requirements, if they exist, are very low and easily met by the levels naturally occurring in foods, water, and air. The evidence for requirements and essentiality is weak.” In addition, cobalt is an integral part of vitamin B-12. This adds eleven more, making a total of 25.

Payless Advanced Formula Multivitamin-Multimineral formula (1997) contains 19 minerals including six of the ten listed on pages 257 and 267 above: Chloride, nickel, silicon, boron, tin, and vanadium. The Payless formula does not include arsenic, cadmium, lead, or cobalt.

2393. Carey, Pat. 1997. Sales of rice beverages pass soymilk sales in America: Some history and current statistics (Interview). *SoyaScan Notes*. May 5. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Growth in the U.S. non-dairy beverage market in recent years has been in rice beverages Pat has solid nationwide statistics for all of calendar year 1996 which show that soy beverages and rice beverages now each have about equal shares of the U.S. non-dairy beverage market.

In terms of dollar value of wholesale prices, rice beverages have 49.3%, soy beverages have 48.8%, and other nondairy beverages (oat, almond, etc) have 1.8%. Since the wholesale price of rice beverages runs 10% to 30% less than that of soy beverages, that means that an even higher percentage of the liquid volume sold is rice beverages.

Pacific Foods formulated and aseptically packaged the Rice Dream beverage made by Imagine Foods from the day it was introduced in June 1990 until about 18 months ago when Imagine Foods installed its own packaging line. Pacific Foods deserves credit for developing the formulation and packaging techniques. At the beginning, Robert Nissenbaum had a small amount of the product packaged at Real Fresh (Visalia, California) but not for very long. Pacific Foods had problems packaging the product initially because it was too thick, but soon Robert reformulated it until it could be packaged without difficulty. The rice base has always been made by a joint venture between California Natural Products (CNP—Cheryl and Pat Mitchell; Manteca, California) and Imagine Foods. Most of the credit for the making the base using commercial enzymes goes to the Mitchells; Cheryl has a PhD in that area. For years, tankers of rice base arrived at Pacific Foods in Oregon from Manteca, California, almost every working day. When Imagine Foods started packaging its own rice beverage, Pacific Foods lost the entire Imagine Foods account, so it introduced its own line of rice beverages. Pacific Foods made the rice base without infringing on the CNP/Imagine Foods patent. They have considerable expertise in that area. Pacific Foods sent samples of rice beverage to Imagine Foods long before Imagine Foods left, because Pacific Foods was making rice syrup sweetener. Pacific Foods sweetens its products with rice syrup which it the company makes itself; it has been making rice syrup for 2-3 years. Pacific Foods is a highly integrated company, and also has a full-line spice company in Seattle, Washington. All of the soybeans Pacific Foods buys are organic.

The big decrease in the price of soymilk during the past few years has been due to the lower price of non-fat or fat-free products. The first fat-free product was Health Valley's Soy Moo, introduced about 5 years ago. The second such product was WestSoy Nonfat, launched in early 1996. Address: Marketing Manager, Pacific Foods of Oregon, 19480 S.W. 97th Ave., Tualatin, Oregon 97062. Phone: 503-692-9666.

2394. *SoyaScan Notes*. 1997. What are natural food retail stores doing about genetically engineered soybeans in their food products (Overview). May 13. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Talk with Bob and Pattie Gerner, owners of the Natural Grocery Company, with stores in Berkeley and El Cerrito, California. 1997. May 10. Not many customers have asked about genetically engineered foods so Bob and Pattie

haven't paid much attention to the issue and don't have any policies or written statements in place.

Talk with customer service rep at Whole Foods Market (WFM) in Berkeley, California. May 13. A week ago his store received a pamphlet on this issue from headquarters. Consumers who want to read it are free to pick up a copy at the customer service desk. It states that the company is surveying manufacturers in order to develop policies. Not many customers seem interested in the issue. The best person to talk with is Jean Greenfield, head of quality control at the WFM regional headquarters in San Francisco. Phone: 415-431-6777, Ext. 205.

Talk with Jean Greenfield, regional manager for WFM in San Francisco. 1998. Feb. WFM has a representative on the Organic Standards Board, and they try to carry as many organically grown products as possible in their stores. Other than that, they are not doing much. Jean has limited powers to make policy because she is only a regional manager. Basically, this is someone else's problem.

2395. Burros, Marian. 1997. Trying to get labels on genetically altered food: Eating well. *New York Times*. May 21. p. B8.

• **Summary:** In December 1996, Whole Foods Market (WFM), the largest natural foods supermarket chain in America, sent a letter to more than 400 of its suppliers asking if their products contained genetically engineered ingredients. About 75% of the suppliers have not yet responded—According to Margaret Wittenburg, quality assurance director of WFM; she wrote the letter. More soybeans are genetically engineered than any other food crop. “They [most Americans] have no idea what foods on their supermarket shelves contain genetically engineered ingredients because the Government does not require those products to be labeled. A small but growing movement of people is pushing for that to change.”

“Europeans have been quicker than American to react to transgenic food... In Austria and Luxembourg genetically engineered food is banned. Most observers suggest that Europe's response is so much more intense because of the European experience with mad cow disease.”

“There are signs that the consumer movement is gaining momentum. Nebraska and Maine are considering legislation for labeling. Mothers for Natural Law, a nonprofit consumer advocacy group, has begun a public awareness campaign. The group, which is affiliated with the Natural Law Party, which promotes transcendental mediation, wants to collect a million signatures on a petition asking the Food and Drug Administration to require testing and labeling of transgenic foods.”

The article then asks how widespread transgenic foods are in U.S. supermarkets. “[The *Times*] asked Genetic ID, a company in Fairfield, Iowa, that tests foods for genetically engineered ingredients, to test four soy-based baby formulas

and eight other products made with soy or corn. The infant formulas—Carnation Alsoy, Similac Neocare, Isomil and Enfamil Prosobee—all tested positive. Eden Soy milk tested negative. Morningstar Farms Breakfast Links and Morningstar Farms Better 'n Burgers, Betty Crocker Bac-os Bacon Bits, all soy-based products, also tested positive. And so did three corn-based chips—Fritos, Tostitos Crispy Rounds and Doritos Nacho Cheesier.”

2396. **Product Name:** Soft Tofu, Firm Tofu.

Manufacturer's Name: Tree Town Tofu.

Manufacturer's Address: 396 Washington St., Ann Arbor, MI 48103. Phone: 313-662-8638 (TOFU).

Date of Introduction: 1997 May.

New Product–Documentation: Talk with John Gingrich, owner. 1997. July 21. John started this company, which began selling tofu in May 1997. It is a traditional shop, and he put together the equipment himself, which includes a BMI Disintegrator. John was a member of Ann Arbor's first tofu company, The Soy Plant, and at one time was in charge of their tofu production. He also worked for Eden Foods.

2397. **Product Name:** Café Westbrae (Coffee-Flavored Soy Beverage) [Coffee, Mocha, or French Vanilla].

Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.

Date of Introduction: 1997 May.

Ingredients: Filtered water, organic soy beverage* (filtered water, whole organic soybeans*), Florida Crystals (dehydrated cane juice), natural flavors, expeller pressed canola oil, organic spray dried coffee*, tricalcium phosphate, potassium bicarbonate, sea salt, carrageenan. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 8 fl oz (240 ml) Tetra Brik Aseptic carton. A 3-pak retails at Trader Joes for \$2.29 (1998/02 Concord, California).

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per box (8 fl. oz.): Calories 130, calories from fat 25, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 85 mg (3%), total carbohydrate 25 gm (dietary fiber 0 gm [0%], sugars 23 gm), protein 2 gm. Calcium 25%, iron 2%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Ad (1/3 page, color) in Vegetarian Times. 1997. May. p. 88. “The first non dairy blended coffee beverage.” A color photo shows the label. A coupon offers \$0.30 off on any 3 flavors of Café Westbrae.

Product with Label purchased at Trader Joe's in Concord, California. 1998. Feb. 15. Front Panel: Colors: Blue, white, tan, red, yellow, and green. A modernistic, stylized illustration shows a man and woman seated at

a coffee table in a café. “Creamy, Low Fat, Non Dairy.” Back panel: “Bring the coffee house to your house—bring home Café Westbrae!... Café Westbrae is a unique blend of organic coffee and organic soy beverage. No cholesterol, no lactose, no grinding, measuring or brewing... just perfect ready-to-drink coffee blends!” Free offer for a compact disc containing ten Pop Rock hits from the 1960s. Just send 6 proofs of purchase +\$3.50 for shipping and handling. A message from Andrew H. Jacobson, president, titled “Westbrae... Naturally” begins: “Back in 1970, when we grew our own organic fruits and vegetables, people knew that the Westbrae stamp on our products meant that only the finest ingredients were used. Today we continue to continue that tradition...” Questions or comments? Call (800) 769-6455. <http://www.westbrae.com>.

Talk with Connie at Customer Support for Westbrae. 1998. March 30. This line of products was introduced in about May 1997. The Kosher symbol is called “square box K.”

2398. Whole Foods Market. 1997. Genetically engineered food: Your right to know (Leaflet). San Francisco, California. 3 panels each side. Each panel: 22 x 9 cm. Address: San Francisco, California.

2399. Barrett, Jennifer. 1997. Growing pains: Will organic food stay organic? *Yoga Journal*. May/June. p. 71-77, 125, 156-59.

• **Summary:** “What began as a counterculture movement has become a multimillion dollar industry that urgently needs regulations. But can we trust the federal government to write them?” Address: Asst. editor, *Yoga Journal*.

2400. Demos, Steve. 1997. New developments at White Wave (Interview). *SoyaScan Notes*. July 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Several years ago Steve hired a very talented manager from General Foods. He doubled the size of White Wave during his tenure, but ultimately he did not work out because of conflicts in corporate culture. White Wave has high standards of honesty and integrity that many managers are not accustomed to.

Steve's friend, Cheryl Lamb, who used to be sales manager for Mountain People's Warehouse, is now White Wave's national sales manager. She has done an excellent job. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2401. Ott, Katherine. 1997. Re: The pleasure of working with you. Letter to Michio and Aveline Kushi, 62 Buckminster Road, Brookline, Mass. 02146, Aug. 25. 1 p. Typed, with signature on NMAH letterhead.

• **Summary:** “Dear Mr. and Mrs. Kushi and the Kushi Family,

“This letter can not begin to convey my appreciation in regard to your generous donation to the Smithsonian of materials related to the history of macrobiotics, your enthusiastic and tireless help in assembling these materials, your warmth and openness to us during our stay in Brookline, and your creative vision for the future of these and other similar materials. Your hospitality was exceeded only by your continual concern to facilitate our work and ensure that we located everything we asked for. The length of my gratitude is substantial, as you can see.

“Throughout this entire endeavor, your staff, especially B.G. Mancini and Chris Akbar, have been resourceful and indefatigably cooperative. This project has benefited immeasurably from their participation.

“I must add one additional personal note. Meeting you, your family, and staff and working on this project (and the proposed project on the history of alternative health practice) have been intellectually and emotionally stimulating for me. I am among the lucky few who have had such a splendid experience given to them and for that I also thank you. I look forward to cooperating with you in the future in undertaking to preserve the history of alternative health practices.

“With Sincere Regards,” Address: PhD, Div. of Science, Medicine and Society, National Museum of American History [NMAH], MRC 627, Smithsonian Institution, Washington, DC 20560. Phone: 202-357-2413.

2402. Kushi, Michio; Kushi, Aveline. 1997. Re: Letter of congratulations to the Lima Team. Lima celebrates its 40th anniversary! Letter to the Lima Team in Maldegem, Belgium, Aug. 30. 5 p. Typed, with signature on letterhead.
 • **Summary:** “We extend happy congratulations from our hearts to the Lima team on its 40th Anniversary.

“The Lima team has truly been a European pioneer in organic agriculture and distribution of organic food. Not only many of Europe’s people, but also people who are in organic food production, distribution and consumption all around the world, are extending their gratitude to the Lima team which has shown such dedication to the health and well-being of humanity.

“As we well remember, Lima began in 1957. George Ohsawa and Lima Ohsawa visited France and Belgium, and stayed with the Gevaert family. As are we, they all were advocating the cause of world peace, especially the pursuit of the realization of a world federal government. The father of Pierre Gevaert was one of the prominent European leaders in this peace movement, as well as a well known artist / painter. The Gevaert family, after suffering during World War II, settled, and began organic agriculture. Pierre Gevaert led his brothers and sisters in the cause of natural health as the base for a peaceful society. George and Lima Ohsawa encouraged their cause and called for four young Japanese students who were experts in their respective fields of food production. With their participation and intensive labor contribution

under the leadership of Pierre and other Gevaert family members, together with the spiritual and philosophical guidance from George and Lima Ohsawa, the company—using the name ‘Lima’ from the name of Mrs. Ohsawa—had begun!

“Though the four Japanese left after their initial contribution, the Lima company continued to encourage organic agriculture in Belgium, France and other areas. It produced bread, miso, and other macrobiotic products as well as importing—mainly from Japan through Mitoku Company, Ltd., and others—the best quality of soy sauce and other organic products which were processed through the most authentic methods.

“While many other companies arose in France, Spain, Italy, Portugal, Germany and other areas of Europe, under the influence of macrobiotic education and rising interest in organic natural food, as well as people’s concern for better health through better eating, Lima has steadfastly remained one of the companies which are most conscientious and thoughtful of the health and well-being of humanity.

“We fondly recall visiting the Lima facilities many times, giving advice on several occasions on the qualities of food. We also remember giving lectures, talks, and discussions at the company on several occasions when we visited Europe.

“In addition to the operation of food production and distribution, Pierre Gevaert and other members of the Gevaert family, as well as macrobiotic and natural foods-related friends, made great contributions towards educating people in society and promoting natural health by holding conferences, forums, seminars, lectures and meetings on many occasions and in many cities.

“We sincerely extend our heartfelt thanks to all these founders, contributors, workers and participants in the operation of Lima.

“After the company was bought and its ownership changed, the spirit of its founders continued to remain. Marc Callebert, who continuously stayed until recently, had also carried forward its original spirit. We all know that though the ownership has changed, the spirit of Lima has never wavered, and shall continuously develop towards further realization of the endless dream of humankind: health and peace of the world. We sincerely trust the current owners and management, together with all Lima workers, are sharing the same spirit: to keep the company a symbolic leader in Europe of authentic, organic, natural and macrobiotic Food producers and distributors.

“While, with many friends’ companies, the Lima team is spreading its contribution to maintain and develop human health in Europe, America has also been changing widely towards organic, natural and macrobiotic food production, distribution and consumption. There are many huge-scale natural food supermarkets which have been set up in every major city in America. The nutritional and eating pattern has

greatly turned into one incorporating more whole grains, organic vegetables, beans and fruits, in addition to authentic macrobiotic products such as miso, soy sauce, tempeh, tofu, sea salt, umeboshi, sea vegetables, sourdough bread and many others.

“Food revolution has definitely begun, and we all know that will change the eating pattern throughout the entire world within a few decades.

“For the past five years, we have been pouring our energies into changing Japan and other Far Eastern countries. Although they are several years behind America and Europe, they are quickly awakening, and a large trend of organic, natural, macrobiotic food has been spreading through the participation of hotels, restaurants, food producers, farmers and consumers. This trend will spread to other Asian countries, and eventually towards the Middle East and Africa, and will enable the world to become a more healthy and peaceful society in the near future.

“We further wish to comment that this movement towards healthy food in general is closely associated with and has been inspiring alternative approaches to health care. Many areas of alternative medicine are dealing with healthy dietary practice, largely including a macrobiotic way of eating. Nutritional science has also been changing towards the reduction of animal food and increase of grains, vegetables, beans and other foods which we have been promoting.

“All of you are part of this wonderful positive movement in the world, and so, together with many friends, we again extend our congratulations to you on your 40th anniversary, and we pray from our hearts for your continuous contribution and success in the development of human health and well-being through the best quality of food. To the many people who have put their efforts into developing Lima as a symbolic existence in the industry: Thank you very much!

“In peace and love, Michio Kushi, Aveline Kushi, with many American macrobiotic, natural food friends.”

Note: Lima NV is now located at Industrielaan 11A, B-9990, Maldegem, Belgium. Phone: +32 50 71 05 64. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-232-6876.

2403. Little Tokyo Service Center. 1997. L.A. Tofu Festival, August 9-10. Los Angeles, California. 22 p. Illust. 26 cm. Saddle stitched (stapled).

• **Summary:** Contents: 1997 LA [Los Angeles] Tofu Festival committees and volunteers. Schedule of events, Aug. 9-10. Map of events. Letter from Little Tokyo Service Center, with thanks to House Foods / Hinoichi Tofu as the Title Sponsor. List of sponsors by rank. Honorary chairpersons: Sandy Gooch and Rob Fukuzaki. Health education and health benefits of tofu. Tofu: A 2,000 year old health food miracle, compiled by William Shurtleff of Soyfoods Center. 1997 LA Tofu Festival restaurant profiles (20 restaurants, p. 7-9):

Aloha Food Factory (Alhambra, CA, started Oct. 1990–Tofu specialty dish: Tofu with cha-shu on stir fried vegetables). Berth 55 (Long Beach, 1988–Tofu poke dish). Buk Chang Dong Soon Du Bu (LA, April 1996–Spicy tofu casserole with oyster, shrimp & clams). Chez Sateau (Arcadia, 1981–Tofu cheesecake, Tofu Caesar Salad. Chef Sato was “Chef of the Year of Los Angeles” and 1980 Chef of the Year of southern California.” He was also a member of the 1980 U.S. Team for the Cooking Competition in the Culinary Olympics). Curry House (Beverly Hills, Aug. 1996–Tofu steak {marinated in soy sauce}, Tofu cheesecake). Furaibo (LA, Aug. 1994–Tofu salad with original ginger). Indo Cafe (Los Angeles, 1993–Stuffed tofu cake {tofu filled with ground chicken and shrimp}, Fried tofu {marinated in turmeric and candlenut}). Jozu Restaurant (LA, Dec. 1, 1996–Fried tofu with marinated porkchops). Little Tokyo Lion’s Club (LA, 1974–Tofu miso soup, Futomaki sushi). Mr. Ramen (LA, Oct. 1993–Vegetarian {with tofu} ramen). Ocean Seafood Restaurant (LA, 1990–Mabo tofu, Tofu with mixed vegetables, Tofu in clay pot). Papa Jon’s Cafe (Long Beach, 1990–Greek tofu salad, Tofu lentil salad, Potato-tofu salad, Sesame tofu salad, Tofu spinach, Lasagna, Tofu broccoli stir-fry, Spaghetti and tofu balls, Tofu/lettuce/tomato {TLT} sandwich, Tofu scramble {breakfast}, Tofu dessert pies, Tofu frosting {on cake}, Tomato basil w/tofu, Teriyaki tofu, and Spinach mushroom pasta w/tofu). Pat Greenberg, “Fitness Gourmet” (Beverly Hills, Renowned instructor of the “Joy of Soy” cooking classes). Southern California Cuisine (LA, 1994–Tofu ravioli served with Curry sauce or traditional marinara sauce). Suehiro Cafe (LA, 1972–Stir-fried eggplant, Bell peppers with tofu braised in miso sauce, Deep-fried tofu with sauce). Three Brothers Restaurant & Catering (Harbor City, 1983–Chinese tofu salad, Tofu seafood salad). Tofutti Brands Inc. (Cranford, New Jersey, 1982–Non-dairy frozen desserts, Tofutti tortellini, Mini ravioli, Tofutti cookies). Unique Catering (Chino Hills, 1995–Tofu patty with shiitake sauce, String beans with tofu dressing, Inari-sushi). Vegetarian Delight (San Gabriel, 1991–Veggie fish in hot braised sauce). Wild Oats Community Market (Santa Monica, 1984–Tofu tempeh deli salad).

Advertisements (p. 10-21), including ads for Tofutti, Patricia Greenberg “The Joy of Soy” cooking classes, JFC International Inc., House Foods America Corporation (full page, inside back cover). Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1600.

2404. *GMF–Genetically Modified Foods Market Intelligence (Genetic ID, Fairfield, Iowa)*. 1997. rBGH labeling suit settled. No. 12. Sept. 1. p. 1-2.

• **Summary:** “The State of Illinois and the City of Chicago have settled a lawsuit brought by a group of natural food companies who sought the right to label their dairy products

as free of recombinant bovine growth hormone (rBGH). The companies, Ben & Jerry's Homemade Inc., Stonyfield Farms Inc., Whole Foods Market Inc., and Organic Valley, won the right to place the following statement on their labels: 'We oppose recombinant bovine growth hormone. The family farmers who supply our milk and cream pledge not to treat their cows with rBGH. The FDA (Food and Drug Administration) has said no significant difference has been shown and no test can now distinguish between milk with rBGH treated and untreated cows.'

"Also known as recombinant bovine somatotropin (rBST [recombinant bovine somatotropin]) and first marketed by Monsanto under the brand name Posilac, rBGH was first introduced to the dairy industry in February, 1994. Bovine somatotropin is a hormone produced naturally in the pituitary gland of cattle, and is a regulator of milk production... When injected into lactating dairy cows, the hormone stimulates milk production."

Approximately 15% of all U.S. milk producers have purchased this Monsanto product. According to Monsanto figures, sales volume for the first ten months of 1996 was up 40% over the same period in 1995.

Also discusses: State legislatures debate rBGH; some laws have been passed. Mid-1995 consumer survey of 1,901 primary food purchasers on rBGH, funded by USDA (Milk from rBGH cows should be labeled as such—94%. Poor overall opinion of rBGH—54%. Concerned about possible discovery of negative long-term effects on human health—74%). Scientific concerns. Concerns of animal rights groups (rBGH increases dairy cows' susceptibility to mastitis, cystic ovaries, and uterine disorders). Limited international acceptance of rBGH: "At present, the 15 countries of the European Union (EU), Canada, Australia, and New Zealand do not permit the importation of rBGH."

2405. Stein, Gary. 1997. New developments at San Diego Soy Dairy (interview). *SoyaScan Notes*. Sept. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Gary's tofu business started growing about 2 years ago and is now booming. He is now operating at full capacity, so he is installing a new BMI cooking system, like the ones at White Wave and Wildwood Natural Foods, in order to greatly expand his production capacity.

Gary now makes private label tofu for several customers, the biggest of which is Trader Joe's. Several years ago Trader Joe's sold only a soft calcium sulfate tofu (probably made by Ken Lee of Soyfoods of America), but since they started selling Gary's very firm nigari tofu, it has become their best-selling tofu. Trader Joe's now buys 8,000 lb/week from Gary. He will soon introduce an Herbal Tofu [named Herbed Tofu by Feb. 1998], in which oregano and other herbs are mixed in with the curds before pressing.

Recently Gary did a mailing to thousands of delis and foodservice places offering (for a refundable \$75) to send

them his chef to teach them how to use tofu in their bulk recipes. He refunds the money at the rate of 10% off each invoice.

Gary does not have to compete with the many low-priced tofu brands made in the Los Angeles area by Asian-American companies. To see these brands and their amazingly low prices, one need only visit one of the many "99 Ranch Market" outlets. These are gigantic Asian supermarkets, each with about 40 linear feet of every low-priced brand fresh tofu, some selling for as little as \$0.49/lb. Also in each of these supermarkets are 7-8 Asian-style restaurants.

Gary still has his soycrafters apprenticeship program; it now costs \$2,500 for 3 weeks of hands-on instruction. The last apprentice to go through was Marian McRiggle—quite a few years ago. Address: Owner, San Diego Soy Dairy, 1330 Hill St., Suite B., El Cajon, California 92020. Phone: 619-447-8638.

2406. Hesser, Amanda. 1997. Miso goes beyond Japanese cooking. *New York Times*. Sept. 3. p. C1, C8 (NY City ed.); p. B1, B8 (Natl). Living Arts section. [1 ref]

• **Summary:** An excellent, long article. The version in the New York City edition (described below) is considerably longer than that in the national edition. Nina Simonds believes that miso is no longer an exotic food as it once was; it has now become much more mainstream. Many varieties of miso are now sold in America. William Shurtleff, co-author of *The Book of Miso*, notes that "It brings a savory flavor to vegetarian meals that is very hard to find. Miso provides a bridge between a steak and a vegetarian diet."

Katagiri & Company, on the Upper East Side of New York City, sells more than 20 varieties. In Japan, miso soup maintains a reputation as a cure-all, much like chicken soup is to westerners.

Contains three miso recipes. One sidebar, titled "The package says a lot," gives the name, address and phone number of six different sources for misos: The Health Nuts, Integral Yoga Natural Foods, Katagiri & Company, Whole Foods Market (all 4 in New York City), South River Miso Co. (Conway, Massachusetts), and Natural Lifestyle Supplies (Asheville, North Carolina—Sells Miso Master, Onozaki, Mitoku, and South River misos).

Photos show: Nine different brands of packaged miso. A bowl of miso soup, with chopsticks.

2407. Sandler, Matthew. 1997. New developments Luppy and with soymilk in the USA (Interview). *SoyaScan Notes*. Sept. 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** At the Natural Products Expo in Baltimore, Matt introduced Luppy, a pudding based on organic milk. For years he had wanted to make a soy-based pudding but he was unable to realize his dream, largely for two reasons. He

was unable to buy soymilk at a reasonable price, and when the soymilk was heated to aseptic temperatures, it developed off-flavors that he was unable to get rid of.

Matt buys organic nonfat dried milk for \$2.30/lb. One pound makes 10 gallons with 10% solids. So the cost of a gallon of liquid is \$0.23.

Matt heard that American Soy Products (makers of Edensoy) has recently doubled the capacity of their soymilk plant.

Matt also heard that Elmer Schettler, president of Devansoy, Inc. (Carroll, Iowa), recently sold his company to Sovex. Devansoy started making Solait (powdered soy beverage) as its own brand in Jan. 1993; Solait had previously been made by Miller Farms. Devansoy also made "Better Than Milk" (powdered soy beverage) for Sovex. Note: Talk with Elmer Schettler, owner of Devansoy, Inc. This is not true. Devansoy is not for sale and has not been sold. Address: Co-owner, Luppy Natural Foods, Inc., P.O. Box 5997, Snowmass Village, Colorado 81615. Phone: 970-923-0333.

2408. Schettler, Elmer. 1997. Westbrae has been sold to the Hain Food Group (Interview). *SoyaScan Notes*. Sept. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Elmer heard this last week from a source that he considers reliable (but that he would like to keep confidential). He will try to confirm it when he sees Myron Cooper at the Natural Products Expo in Baltimore.

Talk with Jim Skiff, owner of Cornbelt Foods in Minnesota. 1997. Sept. 22. Jim talked with Myron Cooper of Westbrae at the Soyfoods Association meeting this last weekend in Baltimore, Maryland. Myron confirmed that the papers have been signed and the deal is 99% done with the Hain Food Group. Address: President, Devansoy, Inc., P.O. Box 885, Carroll, Iowa. Phone: 712-792-9665.

2409. Richards, Michael L. 1997. Re: Launching a signature line of custom candles for Wild Oats. Letter to Karen Lewis, Purchasing Director for Natural Living, 1645 Broadway, Boulder, Colorado 80302, Sept. 25. 1 p. Typed, with signature on letterhead.

• **Summary:** "Lynette and I will arrive at your office in Boulder at 11:00 a.m. on Friday, November 21. We are looking forward to combining the creativity of your company and ours to launch a signature line of custom candles for Wild Oats.

"The customer demand for aromatherapy and home fragrance candles continues to increase. From our perspective, creating your own private label product line is a very timely move to capture this expanding market..."

Fax: 319-337-9034. Internet: www.Candleworks.org. Address: Operations Manager, Candleworks, 2920 Industrial Park Rd., Iowa City, Iowa 52240. Phone: 319-337-6316.

2410. Ontario Soybean Growers' Marketing Board (OSGMB). 1997. Overview of the Canadian soyfoods market. Chatham, Ontario, Canada: OSGMB. 44 p. 28 cm. • **Summary:** This excellent, complete, and accurate market study was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The field research was conducted between Jan. 15 and Aug. 31, 1997. The first study of the Canadian soyfoods market was published in March 1990 (vi + 40 pages).

Contents: Acknowledgments. Summary. Introduction. Research procedures: Methodology, limitations (of the 100 companies in this study, over 75% were visited, interviews were conducted in person, and product samples were collected). The Canadian soyfoods market: History, structure of the Canadian soyfood industry, market highlights by region (The Maritimes, Quebec, Ontario, the Prairies {Manitoba, Saskatchewan, and Alberta}, British Columbia), factors influencing the soyfoods market (A closer look at Canadian demographic trends, a closer look at Canadian immigration trends, a closer look at vegetarianism and family food expenditure trends, research on soyfoods and their health benefits, the American influence). Supply and demand of soybeans for use in soyfoods: Soybean production in Ontario, imports and exports of soybeans, imports and exports of soy products, the soybean crushing industry in Ontario, consumption of whole soybeans by soyfood processors. Opportunities in the Canadian soyfoods market. Soyfood processors and their needs. Market opportunities for food-grade soybeans. Summary comments. Bibliography.

Tables show: (1) Major soyfood companies established in the province of Quebec (p. 13). (2) Major soyfood companies established in the province of Ontario (p. 16). (3) Major soyfood companies established in the province of British Columbia (p. 19).

(4) Percentage of change in units and sales of soyfoods by product in grocery stores in Canada between 1994 and 1996 (soy sauce, soy flour, soy oil, soymilk, tofu and meat analogs). (p. 21). (5) Percentage distribution of population in Canada by province (p. 22. In 1996, 37.5% lived in Ontario and 24.6% in Quebec). (6) Percentage distribution of age groups—Canada (p. 22; In the 15-24 age group, 19% did not eat meat in 1992, down from 23% in 1986).

(7) Percentage of population who do not eat meat & share of budget spent on meat, Canada 1986 and 1992 (p. 28). (8) Canadian soybean: Supply and disposition (September–August crop year)—in metric tons (p. 31). (9) Canadian soybean exports by country of destination (p. 32. In 1997-98 some 325,000 tonnes went to the European Union, 145,000 to the USA, 85,000 to Japan, 40,000 to Hong Kong, 75,000 to other Asia, and 15,000 to other places).

(10) Imports and exports—All countries, dollar values (p. 33. The leading imports are soybean meal \$202.7 million,

crude soybean oil \$16.75 million, and whole soybeans for oil extraction \$12.59 million. The leading exports are protein concentrates and textured protein substances \$9.1 million, soybean meal 6.5 million, and brans, sharps and other residues \$4.3 million).

(11) Soybean crushing facilities in Canada (p. 34. All are located in Ontario province; ADM Agri-Industries Ltd., Windsor. Capacity: 3,600 tonnes/day of raw soybeans. CanAmera Foods, Hamilton, 3,000. Helin Oil Packers, Whitby, 250. Started crushing in 1997. Cold Springs Farm Ltd., Thamesford, 100. Started 1995. Sunfield Oil Seeds, Wingham, 100. Started 1994. Dennis Jackson Seeds Services Ltd., Dresden, 40. Started 1994. Tri County Protein Corporation, Iroquois, 100. Not in operation yet).

(12) Estimated quantities of soybean utilized by soyfood processors—1996—metric tons (p. 35. Total volume of whole soybeans consumed: 9,650 tonnes, of which 4,780 are for soymilk, 4,775 are for tofu, and 95 are for other soyfood products). Total volume of whole soybeans consumed by province (by soyfood processors): British Columbia 3,825 tonnes, Ontario 3,050 (excluding crushing plants), the Maritimes and Quebec 2,535, and the Prairies 240.

(13) Major foreign companies in the Canadian soyfood market (p. 37. Soy cheese: Soyco Foods, Sharon's Finest, Cemac Foods Corp. {Nu-Tofu}. Frozen desserts: Tofutti Brands Inc. Tempeh: Turtle Island Foods Inc. Tetra Pak packaged soymilk: Westbrae Natural Foods, Cenat, Pacific Select, Vitasoy USA Inc., Eden Food Inc. Tofu: Mori-Nu, Vitasoy USA Inc. Prepared dishes: Amy's, Sharon's Finest. Meat analogs: Fantastic Food Inc. MGM Brands, Northern Soy, Soy Boy, Turtle Island Foods Inc. Salad dressing: Nasoya Foods. Soy sauce: Eden Foods Inc., Kikkoman Foods Inc.).

The Prairie Provinces (Manitoba, Saskatchewan, and Alberta) contained about 16.6% of Canada's population (4.5 million persons) in 1995. "The province of Alberta [Capital = Edmonton] is different from the other two Prairie provinces, due mainly to its larger population base, its growing Oriental population and its proximity to Vancouver. Calgary [a large city in Alberta province] and Edmonton have their own Chinatowns, including small Oriental-owned tofu and soymilk production facilities." Note: According to the Canadian Soyfoods Directory (1997, p. 14), there are 7 soyfoods companies in Alberta province, 2 in Manitoba, and none in Saskatchewan. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

2411. Product Name: Edamame [Frozen in the Pods].
Manufacturer's Name: Seaside Farms. Trader Joe's (Retailer). Imported from China by Seaside Farms.
Manufacturer's Address: Seaside: Cardiff by the Sea, CA 92007. Phone: Seaside: 1-888-722-7098.
Date of Introduction: 1997 September.

Ingredients: Soybeans.

Wt/Vol., Packaging, Price: 16 oz plastic bag.

How Stored: Frozen.

New Product—Documentation: Talk with then letter and package from Carol S. Impara, M.S., R.D., Director of Product Information, Trader Joe's. 1998. April 13. Trader Joe's has carried this product since Sept. 1997. Label: 7½ by 10 inch plastic bag. Red, black, and white on clear plastic. In a large circle in the middle of the front of the bag are the Chinese characters for "edamame." Text on front: "Frozen boiled soybeans in pod. Cooks in ten minutes. All natural. High Protein." The Seaside Farms logo is at the top of the front. Trader Joe's name does not appear on the product. On the back are serving suggestions, cooking directions, and nutrition facts. Cooking directions: "Bring 6 cups water to a boil in a large saucepan. Add 1 package (1-lb.) frozen Seaside Farms Edamame and ½ teaspoon salt (optional). Return to a boil. Cook 10 minutes. Drain. Rinse with cold running water to cool. Drain well, and serve."

Ad in Natural Foods Merchandiser. 1998. Nov. p. 22 "Edamame."

Talk with Kevin Cross, owner and founder of Seaside Farms. 1998. Nov. 13. His edamame was first sold by Trader Joe's. Then Kevin's new distribution company Stonecrest Natural Foods, started to carry it within the same week. Today, the product is still distributed by Stonecrest—along with many other distributors. Seaside Farms has a new address: 400 Oak St., Inglewood, California 90303. They moved from their office at Cardiff by the Sea. Kevin is quite certain he is the biggest importer of edamame in the United States. "The numbers are astronomical. This will probably be the No. 1 frozen product in natural food stores in the USA within the next 3-6 months!" This frozen edamame has been the No. 1 frozen item for Stonecrest Natural Foods for 6-12 months. Texas Health now carries it and they told Kevin it is the No. 1 frozen item in Whole Foods—Colorado. Right now it is the No. 1 frozen item in Southern California with Whole Foods and Wild Oats. It will soon be distributed by Rainbow Natural Foods (Dec. 1998), Mountain Peoples (Jan. 1999), and Nature's Best. A broker on the East Coast will be introducing it to the supermarkets next week. "We're taking it everywhere." "Frozen items" includes ice creams, frozen entrees and novelties, etc.—all frozen foods. In Southern California, fresh edamame got its start at the sushi bars, as in Ralph's supermarkets. Before that, only frozen edamame was sold. Trader Joe's now sells edamame in three forms: Frozen in the pods, frozen shelled, and refrigerated in the pods (ready to eat). Kevin strongly dislikes the latter product; he gagged on it. He finds it overcooked and lacking freshness and a fresh taste. edamame. Kevin started carrying edamame even before Seaside Farms. He has been in the soyfoods business since 1980 when he started Soy Power Co. He now owns two food businesses: Seaside Farms (importer; a separate corporation with its own employees, run separately)

and Stonecrest Natural Foods (distributor for Seaside Farms and Soy Power Co.; the company started about 5 years ago). Soy Power (soyfoods developer-marketer for the natural and health foods trade, which has 40 soy items all manufactured by other companies) is now basically a brand that is owned and distributed by Stonecrest. All the billing and money goes through Stonecrest, which is the same entity. Technically, it's "Soy Power Company, Inc. doing business (dba) Stonecrest Natural Foods." Some new edamame products will be out soon; they will be shelled and precooked with flavors, then frozen. To serve: Thaw and just pop them into your mouth.

Spot in Natural Foods Merchandiser. 1999. Feb. p. 88. "Seaside Farms introduces Edamame, a specialty soybean harvested as a vegetable. Found in the frozen foods section, Edamame can be eaten as a snack or mixed into salads and stir fries. The product is rich in isoflavones and is highly nutritious..." A small color photo shows the package (with horizontal red, white, and black stripes) and a glass of edamame (in the pods).

2412. Product Name: WestSoy VigorAid [Vanilla, or Chocolate].

Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.

Date of Introduction: 1997 September.

Ingredients: Creamy Chocolate (March 1999): Organic soy beverage (Organic soybeans*, filtered water), filtered water, dehydrated cane juice, natural flavors, natural cocoa powder, brown rice syrup, vitamin mineral blend (magnesium phosphate dibasic, potassium chloride, dicalcium phosphate, sodium ascorbate, ferric orthophosphate, vitamin E, niacinamide, zinc oxide, copper gluconate, D-calcium pantothenate, manganese sulfate, pyridoxine hydrochloride,...).

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Talk with Myron Cooper, President of Westbrae Natural Foods. 1997. Oct. 10. In Sept. 1997, at the Natural Products Expo in Baltimore, Maryland, Westbrae launched VigorAid, a nutritional soymilk in the same category as Ensure.

Ad (1/3 page, color) in Vegetarian Times. 1998. Jan. p. 53. April. Special advertising section after p. 58. "Don't hate me because I'm good for you." "Let me be your power source through a balance of 25 vitamins, minerals and fiber. Seek me when you desire the support of beneficial phytonutrients and essential fatty acids. Enjoy all the superior nutrition I provide when you drink a rich and delicious VigorAid! Each satisfying serving is a non dairy, low sodium, natural beverage made from organic soy... a perfect choice for a snack or occasional meal! Just don't hate me because I'm good for you!"

For energy and your good health drink VigorAid!

"WestSoy VigorAid nutritional drink. To learn more about the benefits of VigorAid call us for a free brochure at 800-769-6455 www.westbrae.com."

Sell sheet sent by Patricia Smith from Natural Products Expo. 1999 March. The two flavors are now Creamy Chocolate and French Vanilla. Ingredients and nutritional facts are given.

2413. Nissenbaum, Robert. 1997. The U.S. market for rice milk and soymilk (Interview). *SoyaScan Notes*. Oct. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Robert's information is that the amount of rice beverage sold in America is about the same as the amount of soy beverage. Some statistics indicate that the soymilk market may be slightly bigger—say 5-7% bigger. Rice milk has experienced much more rapid growth than soymilk over the last few years. Both have a great place in the American diet. Soymilk probably has a few more applications in cooking.

All Trader Joe's stores have stopped carrying the Rice Dream puddings—at least for now. In some stores, the product fell short of their weekly minimum sales quotas. They are quite strict about dropping a product when it fails to meet their quotas in most stores. Trader Joe's wants Imagine Foods to "re-present" the product next year, together with some other new products from Imagine Foods that they will be carrying. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

2414. Cooper, Myron. 1997. New developments at Westbrae. Sale to Hain Food Group is imminent (Interview). *SoyaScan Notes*. Oct. 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** About 6 months ago the Vestro board of directors changed the company name to Westbrae Natural, Inc. Westbrae is scheduled to be sold to the Hain Food Group on Oct. 14. Myron is quite certain the deal will go through. He and Andy Jacobsen will stay on to run the Westbrae part of the business. The price of Hain's stock has been skyrocketing recently, even though their earnings are less than those of Westbrae. Hain had made several weak offers for Westbrae, then (by coincidence) Chiquita Banana came along and made a strong offer—that almost led to the sale. After that, Hain came back with a serious offer.

Vestro purchased Westbrae in 1988. At that time, Westbrae had only one soymilk SKU (not including Malted), in a yellow box, made by Vitasoy—so there was not much room for growth. Since then, Westbrae's non-dairy beverage category (soymilk and rice milks) has grown extremely rapidly—roughly eight-fold in sales, so that today Westbrae's sales in this category are about \$16 million/year; of that roughly 80% is soy and 20% rice. Myron believes that Westbrae is now the leader in this category (soy + rice

beverages) among all natural foods companies, ahead of both Eden Foods and Vitasoy. Westbrae's distributors tell Myron that the latter two companies now appear to be having problems; they may be having difficulties keeping up with demand. Imagine Foods (maker of Rice Dream) is a very strong competitor, and Rice Dream (rice beverage) has been a bonanza. But Westbrae has just introduced a competitor—Oat Plus, which tastes good and contains soluble fiber (beta-galactones), about which FDA allows a health claim.

Westbrae's single best-selling SKU in terms of units sold may be Malted. Myron has had a hard time finding a manufacturer for this product. They are made by John Yamauchi in Los Angeles. He is having trouble keeping up with demand.

Westbrae has no plans to introduce soymilk in a gable-top carton, primarily because the company now has only one refrigerated product—tub miso.

Myron is very concerned about the possibility of *E. coli* turning up in some company's soymilk and damaging the whole industry. Les Wilson at Iowa State Univ., who is on the Soyfoods Association board, will be looking into this problem in the larger context of soymilk bacteriology.

Since 1988, Westbrae has continued to be a leader in soymilk innovation. They introduced the first "Lite" soymilk, were the first to structure the soymilk category to make it similar to dairy milk (full-fat, low fat, etc.), introduced the first fortified soymilk, the first small kid's size "Lunchbox" soymilk, the first coffee soy [Café Westbrae—Coffee-Flavored Soy Beverage], and (in Sept. 1997 at Baltimore, Maryland) VigorAid,—nutritional soymilk in the same category as Ensure.

After the Hain sale is finalized, Westbrae will take over management of two very interesting Hain soy products: Pizsoy (a natural pizza with soy cheese), and Ice Bean (a soy ice cream originally made by Farm Foods). Myron feels that these products have considerable unrealized potential.

Update: Talk with Hain Food Group—Westbrae. 1998. Feb. 18. Westbrae was, in fact, sold to Hain on 14 Oct. 1997. The new company name is that shown just above. Myron Cooper and other top executives will continue to work at their former location in Carson, California. Address: President, Westbrae Natural Foods, Inc., 1065 East Walnut St., Carson, California 90746. Phone: 310-886-8200.

2415. Gerner, Bob. 1997. Vestro Foods, Westbrae, and the Hain Food Group (Interview). *SoyaScan Notes*. Oct. 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bob is aware that the Hain Food Group plans to purchase Vestro Foods and Westbrae. As far as Bob knows, the people who started Vestro did not come mostly from the old Hain Company. For example, Andy Jacobsen, president of Vestro Foods, came from Tree of Life. However after Vestro bought Westbrae in early 1988, most of Westbrae's management did not stay with the company, so Vestro hired

a number of people from the old Hain Company, spun off by Pet Inc., to run Westbrae. After a while, many of those former Hain people left Vestro.

One of the early major health food distributors in California was Kahan & Lessin. Alan Kahan, son of one founder of the company [Ben Kahan], is now a top salesman for Westbrae.

Rice Dream beverage is now the single best-selling label among all the beverages at Bob's natural foods store. It outsells all the soymilk brands. Two interesting and fairly new soymilk products sold in gable-top cartons are Healthy Harvest (6 SKUs) and Silk (3 SKUs—chocolate and regular in quarts, and regular in a half gallon). Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

2416. Richards, Michael. 1997. Re: New line of vegetable wax candles. Letter to all Wild Oats Natural Market managers, Nov. 28. 1 p. Typed, on letterhead.

• **Summary:** "Recently, you received notification from Karen Lewis, Purchasing Director for Natural Living that authorizes our products for distribution to all retail locations in the Wild Oats system. Enclosed, you will find a wholesale order form and some additional information about Candleworks.

"We know that you may stock other candle products already, however, two things set our products apart from other candles in the market:

"1. Our candles are made from the vegetable based wax that we created. (Most candles are made with a combination of animal fats and by-products of the petroleum industry.) Candleworks natural wax candles are ideal for your Natural Living Product line.

"2. Many customers wish to support social responsibility in business. Social responsibility is the very heart of Candleworks, our company is totally operated by formerly homeless, disabled and disadvantaged work teams. Social responsibility is not a token effort at Candleworks, it is the basis of our entire structure. (A general information sheet about Candleworks is enclosed.)

"We realize that you may have candle stock that you need to sell through, so we are keeping our minimum order small, so you can start immediately to introduce Candleworks products in your store. Customers should respond well to both the environmental and social aspects of our work.

"To encourage 100% participation in launching Candleworks products at all locations in the Wild Oats retail system, we are offering a 10% discount on all opening orders! This offer will be valid until December 31, 1997. (*some samples of our products are enclosed for you to test*).

"Our goal is to work with Wild Oats to create a custom designed private label line of aromatherapy and home fragrance vegetable-wax candle products in the coming

year. These private label items will only be sold in stores operated by your company. We can start now to inform your customers about the distinctive qualities of Candleworks products with our own house line. This way we can generate enthusiastic customer response twice:

“—first when you launch vegetable wax candles with the Candleworks label

“—second, we can then create new interest when we launch the Wild Oats private label line.

“Enclosed please find 2 marketing tools to use as point of sale displays with Candleworks products:

“a. a black and white information poster about our vegetable wax alternative

“b. a color reprint of a recent “Vegetarian Times” product recommendation

“Please laminate these two items for lasting use with our product display.

“Fax your orders to: 319-337-9034.” Address: Director of Operations, Candleworks, 2920 Industrial Park Rd., Iowa City, Iowa 52240. Phone: 319-337-6316.

2417. Eden Foods, Inc. 1997. Eden soy sauces: Traditionally brewed shoyu & tamari (Ad). *Vegetarian Times*. Nov. p. 71.

• **Summary:** This 1/3-page color ad shows bottles of the following: Eden organic tamari (soy sauce; Purple label is “Naturally brewed” in the USA for about 6 months; Green label is “Traditionally brewed” for up to 2 years and imported from Japan). Eden organic shoyu. Eden selected shoyu (2 sizes). “Eden Soy Sauces are created just as they have been for centuries by master brewers who are truly artisan craftsmen. They are aged and tended for over two years, creating rare and versatile soy sauces.” Address: Clinton, Michigan 49236. Phone: 1-800-248-0320.

2418. Hain Food Group, Inc. 1997. Annual report 1997. Uniondale, New York. 5 + 30 p. Nov. 28 cm.

• **Summary:** This unusual annual report is composed of 6 unnumbered pages of annual report on glossy paper and 30 pages of Form 10-K, which is bound in. A color photo (p. 1) shows Mr. Irwin D. Simon, President and CEO. In October 1997 Hain completed the acquisition of Westbrae Natural, Inc. “Westbrae sells over 300 high quality natural and organic food and snack products. Westbrae is the market leader in non-dairy beverages, the largest single natural food category. Westbrae and Hain combine to lead six of the fifteen top selling natural food categories.” A color photo shows four of Westbrae’s soy and rice beverages.

Page 1 of Form 10-K states that On Sept. 11, 1997, Hain executed a definitive merger agreement with Westbrae Natural. The next day Hain offered \$3.625 cash per share for all outstanding common shares of Westbrae. The aggregate purchase price will be approximately \$23.5 million. “For the fiscal year ended DEcember 31, 1996, Westbrae reported net sales of \$32,583,000 and net income of \$1,203,000. For

the six months ended June 30, 1997, Westbrae reported net sales of \$17,502,000 (unaudited) and net income of \$708,000 (unaudited).”

“The company was formed in 1993. Net sales for the year ended June 30: 1994—\$14,963,000. 1995—\$58,076,000. 1996—\$68,606,000. 1997—\$65,353,000 (down 4.9%). Net income for these years: 1994—(\$502,000 loss). 1995—\$2,365,000. 1996—\$2,134,000. 1997—\$1,069,000 (down 50%).

Enclosed with the annual report is a “Notice of annual meeting of stockholders and proxy statement.” The single largest shareholder is Irwin D. Simon, who own 1,573,000 shares, which is 16.7% of the common stock. Mr. Simon, age 38, is the company president, CEO, and a director. In 1997 has salary was \$200,000, with a bonus of \$60,000 and other annual compensation of \$5,400 = \$265,400. He is the company founder and has been the president and CEO since its inception. Former positions: 1986-1990 with Haagen-Dazs is sales and marketing. Dec. 1990 to Dec. 1992 with Slim-Fast Foods Company in various marketing capacities. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2419. Burros, Marian. 1997. U.S. to subject organic foods, long ignored, to federal rules: As industry grows, a call for truth in labeling. *New York Times*. Dec. 15. p. 1, A10.

• **Summary:** Talk with Patricia Smith. 1998. March 23. The Organic Trade Association (OTA) now speaks for the U.S. organic industry. The spokesperson is a woman. One rarely hears of the old OFPANA any more.

2420. *SoyaScan Notes*. 1997. Chronology of major soy-related events and trends during 1997 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Jan. 1—Novartis Seeds (headquartered in Golden Valley, Minnesota) is formed through the blockbuster merger of Ciba Seeds and Northrup King Co. That merger was possible because of the mid-1996 merger of pharmaceutical giants Sandoz and Ciba-Geigy. Novartis Seeds is now America’s second largest seed company after Pioneer Hi-Bred International.

Feb. 3—Monsanto completes its acquisition of Asgrow Seed Co. of Kalamazoo, Michigan, for \$240 million. From May 1968 to 1994 Asgrow had been owned by The Upjohn Co., which built the company into one of America’s largest soybean seed companies. When Monsanto bought Asgrow it was called the Asgrow Agronomics business of Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM), a multi-national agricultural company based out of Monterey, Mexico. of Mexico.

March 4—Morinaga Nutritional Foods’ new tofu plant in Tualatin, Oregon holds its official grand opening. Mori-Nu Tofu, previously made in Japan, starts to be made in America for the first time. The plant, 65,000 square feet worth about

\$15 million, is on the same property as Pacific Foods of Oregon, but in a separate building.

March 12—House Foods America Corporation holds the opening ceremony for America's largest tofu factory, in Garden Grove, California; the company closes its tofu plant in central Los Angeles. The new fully automated, state-of-the-art, 130,000 square foot plant cost \$21 million, and will more than double the company's tofu production capacity to 150,000 pounds/day, from 70,000 in the old plant. The old factory has been operating at full capacity for years. The new plant will have three tofu production lines, and is located on 5 acres of land—which gives plenty of room for expansion.

Sept. Nasoya Foods (owned by Vitasoy) finishes moving into a much larger, state-of-the-art \$13.5 million plant (125,000 square feet) in Ayer, Massachusetts, from its former location in Leominster. The first Vitasoy brand soymilk ever made in America starts to be shipped from the plant in mid-September. Nasoya's offices have now been moved to Ayer from Leominster, but tofu is still being made at the plant in Leominster.

Oct. 14—The Hain Food Group acquires Westbrae Natural, Inc. Westbrae's new name becomes Hain Food Group—Westbrae. Westbrae will continue to be headquartered in Carson, California.

Dec. 1—Phytoestrogens / isoflavones extracted from soybeans by ADM start to be sold commercially in the USA in pill form by supplement companies. ADM's name for the product is Mega Soy.

Dec. 3—DuPont purchases Protein Technologies International (PTI—the world's leading manufacturer of soy protein isolates), a wholly-owned subsidiary of the Ralston Purina Co. DuPont signed a letter of intent to acquire PTI on Aug. 24. PTI, which has offices worldwide, will continue to be headquartered in St. Louis, Missouri.

“How can I get more soy into my diet?” is the question most frequently asked by callers to Soyfoods Center. Soy appears to have a bright future.

2421. Candleworks. 1997. Packing slip for candles shipped to Wild Oats store in Larue, Missouri. Iowa City, Iowa. 1 p. Dec. 8.

• **Summary:** Order No. 01043. Ship to: Wild Oats LOU-39, 8823 Larue Rd., Larue, Missouri 63124. For each of the types of candles ordered is given an item code, description, and quantity ordered. Sample descriptions: Travel tin body balance. Season ensemble. Apoth. kitchen. Travel tin tension tamer. Address: Box 975, Iowa City, Iowa 52244. Phone: 319-337-6316.

2422. GMF—Genetically Modified Foods Market Intelligence (*Genetic ID, Fairfield, Iowa*). 1998. U.S. organic standards: No GMOs? No. 16. Jan. 5. p. 1.

• **Summary:** The fundamental problem is differing ideas of food purity. The organic industry strives to produce food

using a process that is natural, and that puts farming back into harmony with nature. The USDA is concerned that food is safe. USDA secretary Dan Glickman, at the news conference announcing the new proposed organic standards on December 15, said, “These rules are not about creating a category of agriculture that is safer than any other. We have one high standard for food safety in this country, period.”

2423. *Badische Bauern Zeitung (BBZ, Germany)*. 1998. Gentechnik fuhrt zu wachsender Nachfrage bei Oeko-Sojabohnen [Genetic engineering leads to growing demand for organic, non-GE soybeans]. Jan. 31. No. 5. p. 24. [Ger] • **Summary:** Soybean cultivation in the upper Rhine valley received a strong impulse from the Freiburg tofu manufacturer “Life-Food Taifun,” which, through domestic production of organic, non-GE, eco-soybeans (*Oeko-Sojabohnen*), would like to be independent of soybean imports from America.

The background for this is the rejection of transgenic [genetically engineered] soybeans by tofu consumers and therefore a new market potential for organic soybeans. The price of eco-soybeans in 1997 ranged from about 100 German marks per quintal (100 kg) for delivered raw soybeans to 125 marks per 100 kg for processed / prepared (*aufbereitet*) (dried and cleaned) soybeans.

With respect to the project “Ecological Soybean Cultivation 1997” the company Life Food, which took 90 metric tons, accounted for 20 percent of the total soybean demand in Germany.

In Germany each year 3,000 to 4,000 metric tons (tonnes) of soybeans are made into foods each year. Of this amount, 800 to 900 tonnes are used to make tofu. The demand for eco-soybeans lies in the range of 1,200 tonnes per year.

The demand for organic soybeans (*Bio-Soja*) in Switzerland amounts to about 2,000 tonnes and is made up almost entirely of imports.

2424. Denby, Leo. 1998. History of Sheffield Seitan in Vermont (Interview). *SoyaScan Notes*. Feb. 3. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Sheffield Seitan is a very small company that makes natural seitan directly from wheat—without using vital wheat gluten. The company was started in 1979 by Don & Karen Smith in Wheelock, a tiny remote town in Vermont. They started in a log cabin which had been built by Frank and Phyllis Head, and which was available when the Heads went on a long trip to Mexico in about 1977. (The year is firm because one of the Head's daughters was born in Mexico on 2 May 1977.) The cabin had no electrical power and was accessible only by a road through the adjacent town of Sheffield. They had a post office box in Sheffield, so they often gave their address as Sheffield. Don worked as a chef, both were interested in macrobiotics, and they

learned how to make seitan when they worked for Erewhon in Boston, Massachusetts. Their seitan was all hand-made and fresh—because they had no refrigeration. Their first product (introduced in 1979) was the Wheat Puff, which was a version of the Tan Pop that was sold at the Erewhon retail store in Boston; each Wheat Puff was quite large (about 5 oz), made of seitan on a stick and deep fried in a tempura batter. Their second product was named Wheat Meat Burger, a seitan patty introduced in about 1980. They sold most of these Burgers to a restaurant in Concord, New Hampshire, where they were used in sandwiches. The rest were sold to delis and natural food stores. Leo still has the labels from this Burger. Then the Smiths moved to the town of Newark, Vermont, but they kept their original business name, Sheffield Seitan. Now they made the seitan in a food preparation place that was closed at night, which was when they used it. They built their own home. In 1981 they moved themselves and their business back to Wheelock, to South Wheelock, where they were sharing space and their equipment with a baker named Leigh Pierce. She used to make a bread called Gentle Wind, and had a pretty good business going. Don's brother, Ron Smith, would deliver her bread, and he would also deliver the Wheat Puffs to the same stores, which were health food stores and food co-ops across the state of Vermont.

Leo and his wife Christina bought the company in 1981, when it was located in South Wheelock. At that time the Smiths were heading to Arkansas, with plans to live in a macrobiotic community [Mountain Ark]. Leo thinks they had 1 or 2 children; not long after leaving Vermont, he thinks Don and Karen separated. Karen lived for a while in Fayetteville, Arkansas, but has remarried (last name Harple) and now lives in Pennsylvania (Phone: 717-466-6050); Don Smith is presently in Thailand. Sheffield Seitan wasn't making any money at the time. At that time there was a homeopathic/alternative directory named Earth Star, located in Temple, New Hampshire. The owners of the directory allowed Sheffield Seitan free advertisement space in exchange for delivery (once a month) of their directories to the health food stores and food co-ops along the way.

Leo decided to try to use the directory to expand into the frozen food market, by making full cooked, frozen seitan. The idea worked well, so in 1983 they started to make a patty called the Seitan Wheat Meat Pounder, whose weight is given as 1 pound plus. Each one weighs slightly more than a pound. It is 1 inch thick and 6 inches in diameter—much bigger than a typical burger. Nobody else makes such a patty. It can be sliced very thin into strips or cut into chunks for kabobs. Eventually they turned the delivery over to UPS and now they are going through a distributor named Associated Buyers based in New Hampshire.

In about 1985 they introduced Wheat Meat Balls, which were about 1 inch in diameter and weighed about ½ ounce each. But it was too labor intensive to try to roll all the little

balls then cook them in broth—so they dropped the idea. In about 1986 they launched Seitan Wheat Meat Pieces, which are the 3-ounce patties that have been cut into finger strips.

In about Leigh Pierce decided to get out of the baking business—which she had been doing for about 10 years. So the Denbys had to find a new location, because they were sharing the shop that was built onto her house. The Denbys owned the mixer (an old 80-quart Hobart) and they were getting a very good rate on the rent because she used their mixer.

So in 1990 they moved Sheffield Seitan to Lyndon. Leo built their house, then designed a shop adjoining their house—which several contractor friends constructed. They had to have electrical power brought in. The company now makes: (1) The Wheat Puffs (about 600 every week), but the size is now smaller and they have no label. (2) Seitan Wheat Meat Burger (3 oz.) sold in three different packaging sizes: 2 patties, 4 patties, and 6 patties. They are also sold in two different packages: A simple poly bag with a twist and a label, or a deli tub. (3) Seitan Wheat Meat Pounder. and (4) Seitan Wheat Meat Pieces. Today they make about 300 lb/week of seitan, which is used to make all four products. They also make some custom products. About half is sold via mail order to buyers groups, meditation retreats, colleges, and the other half is delivered to retail stores. Address: Owner, Sheffield Seitan, Box 1, Lyndon, Vermont 05849. Phone: 802-748-3327.

2425. Rose, Richard. 1998. New developments at Rella Good Cheese Co. (Interview). *SoyaScan Notes*. Feb. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Richard renamed his company to Rella Good Cheese Co. in about Oct. 1997. Starting in Feb. of 1997, his company began enriching all of its cheese alternatives (except VeganRella) with a vitamin-mineral mix to make them nutritionally equal to dairy cheese. Consumers prefer enriched alternatives; it is not required.

To date, Richard's company has used its self-imposed "Green Tax" to give about \$40,000 to environmental groups (EarthSave, Rainforest Action Network, etc.)—in addition to the more than \$84,000 donated to the Second Harvest Food Bank. The largest single recipient group was EarthSave, but they are no longer a recipient. Right now the Hemp Industries Association is the major recipient among environmental groups. Remember that half the pesticides in the USA are used on cotton crops.

It is not very difficult to buy hemp seeds in the USA, but all of it is imported. Last year 1 million pounds was imported into the USA. You can order by phone from 1-800-buy-hemp. You can also buy it from bird stores, where it is used as bird feed. In addition, about 500,000 acres of feral / wild hemp (called "ditchweed") grow in the USA each year—mostly in the Midwest, but almost nobody harvests the seeds, since that is illegal. Since 1957 it has been illegal to cultivate

hemp in the USA without a license. One group, the Research Inst. of Pharmaceutical Sciences, Univ. of Mississippi, has a license to grow hemp for the DEA (Drug Enforcement Administration) for the 7 patients the government gives 300 joints per month to.

The whole issue of decriminalizing drugs (including marijuana) is now being supported by a number of prominent public figures such as George Schultz (former Republican secretary of State), Milton Friedman (conservative Republican economist), a superior judge in Orange County, and the mayor of Baltimore, Maryland. They want to medicalize addiction. The Netherlands has decriminalized drugs and the results have been good.

So Richard's company imports its hemp seed from Germany; it is certified organic and dehulled. His is the first company to import dehulled seeds. Their flavor is delicious—like sunflower seeds. It is a complete protein and 65% of the protein is edestin—which is very high quality.

Trader Joe's now has its own brand of soy cheese, named Trader Joe's Soy Cheese in Jalapeño Jack flavor. For a while, Trader Joe's kicked TofuRella off their shelves. Then they had a big problem with a shipment of soy cheese from Soya Kaas, so they brought Richard's products back in—sheepishly.

The main ingredient in Richard's soy cheeses is actually spray-dried tofu. In Canada it must be shown as such on the label, but not in the United States. Richard has never been in the factory where his spray-dried tofu is made, but he has asked the owner point blank if they are coagulating it and they say they are. Nor does he have any statement in writing. They probably coagulate a large tank of soymilk with calcium sulfate (not GDL) to make it into thin silken tofu, then they slurry it and run it through a spray drier. At least three companies make tofu powder: Clofine Dairy & Food Products, Inc. (Linwood, New Jersey), SunRich Inc. (Hope, Minnesota), and Prosource, Inc. (Alexandria, Minnesota). Devansoy Farms, Inc. (Carroll, Iowa; Elmer Schettler, president) makes soymilk powder, but not tofu powder.

In May 1997 Richard incorporated a new company named The Hemp Corporation (THC). There is some fall-out from anti-help people in the industry.

In the near future, he plans to transfer all existing hemp products (HempRella, Hempteh Burger) to THC, which does not yet have any products on the market. Three new hemp products for 1998 will be the HempNut (dehulled hemp seeds), a chocolate, and an aseptic hemp milk (a world's first; tests show there will be no problems with trans fatty acids, which sometimes form at high temperatures). He was on the Jay Leno show 3 times, where they did skits with his foods—the cheese and the chocolate. This was related to the name change to Rella Good Cheese Co. which will license the "Rella" trademark.

Richard also plans to change his environmental policy pretty soon to "All profits go to charity."

Richard is now exporting some of his cheese alternatives to Italy. VeganRella has been made under license in England for several years.

Concerning the cheese alternatives market, in 1996 (according to data from SPINS, which covers most major natural foods distributors except for Tree of Life), Richard's company was the leader in units sold, Soya Kaas No. 1 in dollar sales, and Galaxy was a distant third in the natural foods market (but Galaxy's main market is supermarkets). There are only three major players in this market. Richard does not have the statistics for 1997. Richard expects White Wave to be dropping their soy cheese soon. Originally Richard made White Wave's soy cheese. Then there were problems, it went to litigation; arbitration awarded Richard \$45,000 several years ago. Now Soya Kaas makes White Wave's soy cheese.

"The soul of the natural foods industry is being co-opted quickly." One example is Whole Foods Market (WFM). Richard is getting fed-up with the lack of integrity in the industry. WFM recently yanked all the Rellas from all their stores nationwide because sorbic acid (a completely harmless mold retardant/inhibitor) appears on the label. Richard's competitors use sorbic acid (or calcium propionate) as a mold retardant but do not list it on the label. Moreover, WFM carries other products that contain sorbic acid—which they say are "exempted." So WFM punishes the people who are being honest, and at the same time promotes itself as being socially responsible, ethical, members of Social Venture Network, the honest retailer of foods in America. Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

2426. Denby, Leo. 1998. Early natural food stores and distributors in New England (Interview). *SoyaScan Notes*. Feb. 17. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** Leo used to room with Bill Oates, who started The Good Life. Associated Buyers was an early natural foods distributor located in Franconia, New Hampshire. They started before The Good Life began, then they bought Ted Whitmer's organic wheat from Bill Oates.

One of the earliest and most interesting natural food stores in northern New England was Hatch's Natural Food and Free-Loan Library, located just outside of St. Johnsbury, Vermont. It was started by Mildred and Ira Hatch in the early 1960s.

Stephen Zeigfinger was an associate of Bill Oates; in 1968 (at about the same time as Oates) he joined the faculty at Lyndon State College in Lyndon, Vermont, teaching psychology. Stephen later apprenticed at Hatch's Natural Food, then in about 1970 he opened his own natural food store in the business district of St. Johnsbury, Vermont, at 63 Eastern Avenue. This was before The Good Life opened. Reg Ainsworth was also involved with Stephen's store. Address:

Owner, Sheffield Seitan, Box 1, Lyndon, Vermont 05849.
Phone: 802-748-3327.

2427. Tanaka, Wendy. 1998. The joy of soy: Consumer awareness of health benefits boosts Bay company [Vitasoy]. *San Francisco Examiner*. Feb. 17. p. C-1, C-2.

• **Summary:** Vitasoy USA Inc. “has become a powerhouse in the fast-growing soy foods industry.” Yvonne Lo, president and CEO, worked as a city planner in Toronto (Ontario, Canada) before investing \$10,000 to start the U.S. arm of her father’s business in 1979. Company sales have grown at double-digit rates for the past 5 years, reaching an estimated \$43 million for fiscal 1997. Today, the company’s soy milk is the No. 2 brand in the USA, controlling 25% of the \$150 million market (which has been growing at 10% a year since 1990), according to Soyatech Inc. Edensoy is first with 38% of the market.

Soyatech statistics show that U.S. tofu market sales have grown 5% a year for the last 5 years to \$125 million a year last year.

The acquisition several years ago of Azumaya and Nasoya, two of America’s largest tofu manufacturers, has made Vitasoy America’s largest producer of tofu. Now Vitasoy is hoping to further increase its sales of tofu and soymilk with its \$13.5 million state-of-the-art plant in Ayer, Massachusetts. Vitasoy can now deliver soymilk to retailers in 7-10 days, compared with 45-60 days during the years prior to fall 1997 when all of its soymilk was imported from Hong Kong. Moreover, the new plant will eventually have been able to produce 50% more soymilk than the company had been able to import. The plant at Ayer will also produce Nasoya brand tofu. “Vitasoy USA already has a tofu factory in China Basin [actually 1575 Burke Ave., San Francisco] to produce the Azumaya brand.” Vitasoy now sells its products in mainstream retail markets such as Safeway, Lucky, Andronico’s and Walmart. The vice president for produce merchandising at Walmart Superstores says they have had very good success with Vitasoy’s tofu.

A color photo shows Yvonne Lo holding packages of Azumaya tofu and Vitasoy Light vanilla soymilk in front of pallets of product stacked 10 feet high at the company’s Brisbane warehouse. Address: Examiner staff.

2428. *Natural Foods Merchandiser*. 1998. United Natural Foods announces record 4th quarter. Feb. p. 58.

• **Summary:** Dayville, Connecticut.—“United Natural Foods Inc. (UNFI) reported an 18.5 percent net sales increase for the first fiscal quarter of 1998. The first quarter report for the period ending Oct. 31, 1997, includes financial information for both Stow Mills in Chesterfield, N.H. (acquired on Oct. 31, 1997) and United, based here.

“Net sales for the first quarter were a record \$173.4 million compared to net sales of \$146.3 million for the same period last year, the company said. The company also

reported a net loss of \$0.6 million or \$0.04 per share due to a charge of \$4.1 million for expenses associated with the Stow Mills merger.

“Gross profits increased to \$34.2 million for the first 1998 fiscal quarter from \$29.7 million from the same period last year.”

Norm Cloutier, chairman and CEO said, he was very happy with the 18.5% sales growth.

2429. *Natural Foods Merchandiser*. 1998. Arrowhead plans IPO & merger. Feb. p. 58.

• **Summary:** Arrowhead Mills (Hereford, Texas), a cereal and grain company, reports sales of more than \$25 million.

2430. **Product Name:** Organic Soy Beans.

Manufacturer’s Name: Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer’s Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.

Date of Introduction: 1998 February.

Wt/Vol., Packaging, Price: Canned.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Ad (one-third page, color) in *Vegetarian Times*. 1998. Feb. p. 68. “Westbrae and the Beanstalk.” This ad shows the can and label. “High Protein. Rich in fiber. Low sodium.”

2431. Rose, Richard. 1998. New developments at Rella Good Cheese Co. (Interview). *SoyaScan Notes*. March 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In the fall of 1997 Richard fired his national sales manager and his CEO (Janet Crolus, who was with the company two years). Galaxy Cheese Co. almost immediately hired the sales manager, then (according to Richard) they induced him to violate/breach two contracts he signed. Using the money he saved from paying salaries, Richard launched a large ad campaign featuring three ads: (1) A tie-dye ad with the slogan “When we first introduced tofu cheese, people said we must be smokin’ something. Well, we are now,” for hickory-smoked TofuRella, (2) The white mouse in a tree with the slogan “Experts prefer,” and (3) “Not milk?”—See the current issue of *Vegetarian Times*. Plus the ad agency that put the campaign together took on Richard’s company at cost—because they didn’t have any clients from the food industry and they wanted to develop a creative campaign that they could use to win potential new clients. The agency designs the ads and Richard places them. The ad blitz started in Sept. 1997 and is costing \$10,000 to \$15,000 a month. The ads have run in three mainstream supermarket trade magazines (*Supermarket News*, *Produce Merchandising*, and *Produce Business*), and several natural food magazines (*Natural Food Merchandiser*, *Natural Health*, *Natural Health Shopper*, *Alive Canada*, *Veggie Life*, and *Healthy Living* (New York City)). Richard’s products have been

in Safeway–Canada for 11 years; the head buyer likes these products very much. “He thinks he can do a million dollars with our products this year.” Most of the Richard’s company’s growth is coming from supermarkets and chains–A&P, Trader Joe’s, Waldbaum’s and Wegmans (back east).

Galaxy has introduced a new product named “Tofu Slices” which Richard believes is misnamed, since it appears to contain no tofu. It is made in Canada and contains “liquid soy mix” (and no casein). Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

2432. Demos, Steve. 1998. New developments with soymilk at White Wave. Part I (Interview). *SoyaScan Notes*. March 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Morningstar Group is owned by a Texas-based company named Suiza (pronounced SUI-zuh) which is bigger than Morningstar. Suiza Foods Corp. is one of the very big, modern consolidators of the dairy industry. Dean Foods (which owns Vitamite) and Suiza are head-on competitors in the dairy product area. White Wave’s Silk brand soymilk is packaged in an ESL (extended shelf life) gable top carton at the plant of Morningstar Foods Inc. (formerly Avoset, now owned by Suiza), 299 Fifth Avenue, Gustine, California 95322. Phone: 209-854-6461. Contact: Gary Veuve (pronounced Vev, rhymes with rev), the plant manager. Gustine is located just off Highway 5 between San Jose and Merced in Northern California. This plant focuses on dairy products, packaged in both aseptic and ESL cartons, but it also packages Lactaid, Dole juice, a goat milk, etc. In addition, it packages Trader Joe’s soymilk, indirectly via TAN Industries and San Diego Soy Dairy–which Steve believes breaches the contract between White Wave and TAN. Actually Gary Stein at San Diego Soy Dairy apparently has no hand in making the product–he just does the invoicing. The soy base mix is made at Soyfoods of America (owned by Ken Lee, in Duarte, Southern California) using equipment installed by TAN Industries (Ted Nordquist and Wally Rogers). When some other company moved out of Ken Lee’s plant, Ted moved his company in. The installation began about a year ago [March 1997] and it became operational about 6 months ago [Sept. 1997]. This mix is then shipped by tanker-truck up to the Avoset-Morningstar plant, where it is processed. Avoset Food Co. is probably the predecessor which sold itself somehow to Morningstar which sold itself to Suiza. Steve is not aware of any relationship between Morningstar and the former nondairy pioneer Presto Food Products, which introduced Mocha-Mix Coffee Creamer in 1950 (Note: This product was later renamed Mocha Mix Non-Dairy Creamer).

Ted Nordquist has not been buying soymilk from International ProSoya Corp. (IPC) in British Columbia, Canada, for the last six months–to the best of Steve’s knowledge. The soy base mix currently used to make Steve’s

Silk is made using TAN’s plant at Soyfoods of America. There were numerous problems with the Silk product during the 6 months that TAN was making the transition from IPC to Soyfoods of America. Because of the nature of Steve’s contractual relationship with TAN, Steve had no information about what was happening so he was unable to help smooth the transition. He inherited the problems and had to deal with them in a hindsight fashion.

Steve has an exclusive supply contract with TAN for all nondairy beverage in the USA as long as he meets specified minimums of purchase from TAN; he has always exceeded these minimums. Steve now believes it is no longer exclusive because of the new Trader Joe’s soymilk. This will probably be grounds for a lawsuit. Steve feels that TAN has used White Wave and Silk as his springboard–while the contract is still in effect. Ted has a good product and he is going to be a competitor, and he has made plenty of money from the sale of Silk.

TAN decided (about 6 months ago) to stop buying soymilk from IPC and not the other way around. TAN made the switch for two reasons–both economic. First, TAN realized it would be more profitable to make the soymilk closer to Gustine, where it was packaged. The transportation cost of shipping soymilk from Vancouver to central California was about \$2,000 per tanker-truck, compared with only about \$1,500 for shipping from Duarte to Gustine. At least one truck is shipped per week–sometimes two. Second, since TAN now owns the equipment on which the soymilk is made, the profit margin associated with making the concentrate is now TAN’s.

Steve has tasted several of the SoNice soymilk products made by IPC. He thought one of them was good tasting and competitively priced. The others he thought were typical soymilk formulations that were relatively weak. They had some off flavors and problems with balance, color, thickness. Steve thinks “there are a couple of fracturings of focus with the way they are approaching the market.” They have both an aseptic line and a refrigerated line (in five flavors and two different sizes). The essence of refrigerated soymilk production is the ability to turn it fast enough so that you never have spoilage on the shelf. White Wave has never suffered returns on its refrigerated soymilk (Silk) but it took a lot of hard work to get their minimums up to that critical mass point where the product was turning fast. With soymilk in an ESL carton, the carton, not the soymilk, is the limiting factor. Silk has a use-by 84 days from the date of manufacture, but it will usually last for 100 days.

Steve has found it very difficult to work with the contract set up by Ted Nordquist, so much so that he plans to terminate the relationship. Steve feels this is unfortunate–“its like working with a black box.” Steve has no idea how Silk is processed at the Soyfoods Unlimited or at the Avoset plant–or what the costs are. Steve flew with his people to San Francisco, and Ted and his people flew to Boulder–but they

were unable to resolve the problems to Steve's satisfaction. "We have a great name, a great package, and a great product—but we have no control over costs." That means that if White Wave proves to the market that refrigerated soymilk is a big category, they will be "beat up" by competitors because of their inability to control costs. Ted basically says: "I will deliver the product to you at the following cost per gallon." Steve would like to continually lower the price of Silk—and he plans to do so soon. It will go under \$3.00 per half gallon. Steve suggested that Ted take a royalty for the rest of his life and let White Wave deal with all manufacturing and cost reduction issues. But Ted wants control. Steve thinks he was "burned" in Sweden; he is a very good product developer but not such a skillful businessman. IPC tried to introduce SoNice into the U.S. market with a low price strategy, but White Wave and beat them to it. White Wave has contracts with all of the major chains that they exist in so that their pricing plus their support programs will pretty much negate IPC's attempt to come in at a lower price. If IPC really wanted to do so, they would have to cut their prices again—which is a hard way to go with a new product.

Which soymilk does Steve like the best, simply in terms of organoleptics (flavor, color, consistency, etc.)? One SKU from Vitasoy is very good, the Silk made by TAN is a little bit better, but Steve feels that the new version of Silk developed by Jonathan Gordon (completely independently from TAN and not yet on the market) is better than either of those two products.

During the last year, White Wave has worked on new formulations with Tetra Pak at their research facility in Chicago, Illinois. The first major tanker-truck production run was last Friday. White Wave is now in full production with this new formulation of Silk. It will be processed at one plant in Utah and one on the East Coast. Many taste tests have shown that this new Silk is superior to the former Silk made and formulated by TAN. Silk will remain a refrigerated product; it will never be sold in aseptic cartons in the USA—that will be a fracture of focus that sends a mixed message. On the new carton will be two quotations: One from Suzuki roshi about "Beginner's Mind," and the other from Yogi Berra ("You can't hit and think at the same time")! Also at the top front of the carton is written: "32 mg isoflavones per serving." Plus, there is an offer for more free information on isoflavones. White Wave is working to start the educational process on isoflavones—and is also using its Web site and toll-free 1-800 number.

The big ad campaign in Los Angeles from Protein Technologies is teaching about isoflavones but the products (Health Source) are not doing well. So the publicity is helping White Wave. "Like a guy on a bicycle, we're drafting. We're going to try to stay in the draft of the ADMs and PTIs and see where it takes us. We don't have that much pride." Continued. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2433. Demos, Steve. 1998. New developments with soymilk and other soyfoods at White Wave. Part II (Interview). *SoyaScan Notes*. March 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Sales of White Wave's baked tofu are growing at 38% a year, while plain tofu is growing at 18-21% a year. White Wave is the leader nationally in the baked tofu category, with more than 60% of the market share. Plain dairy yogurt in America still outsells dairy yogurt with fruits and flavors, but it was the fruit yogurts that introduced consumers to the plain product. Baked tofu seems to be playing the same role with respect to plain tofu. White Wave is about to invest very heavily in the automation of baked tofu. If a company's plant capacity is 250,000 units per week, it makes much more sense to produce baked tofu at \$1.80/unit instead of block tofu at \$0.70/unit. White Wave is trying to turn the tofu market from block to flavored, in order to gain market share and position—in exactly the same way the company has been trying to turn the soymilk market from aseptic to refrigerated.

One key question concerning baked tofu remains unanswered? How do consumers eat it? Steve thinks they are eating it in the car on the way home from the store as a salted snack food—or perhaps on sandwiches. Until White Wave can be sure of how it is used, they don't want to commit to positioning it against some other product—such as cheese or meat.

White Wave's first goal was to establish its products in the refrigerated dairy section. Whereas many companies still sell tofu to the produce section, White Wave never sells to the produce section any longer. Everything is refrigerated, controlled temperature during distribution and sale. Only rarely does a White Wave product end up being sold in any produce section; they are usually sold in the juice cooler or in the dairy section. 80% of White Wave's revenues come from the natural foods sector, and in natural foods stores all White Wave products are in the dairy section—as part of their shelf-set program, which has been very effective in establishing a beachhead in the refrigerated section. Around that now Lightlife and Yves each have their own sections. So the vegetarian category is emerging, usually located in the store around dairy cheeses, milk, yogurt, and eggs.

The most interesting insight Steve has gained in the last few years is the one that says consumers are picking four product categories that they want to see in supermarkets. So White Wave has been reducing the number of products it offers; it has dropped hot dogs, sausages, all burgers except tempeh burgers and lemon broil. The company is actively evaluating what consumers want and where they want to find it in the store. One new program will be to give consumers a free half-pint carton of Silk asking them to "Try this—It's the new milk."

Steve is very happy with Silk's sales performance

over the past two years. “It’s been exceptional, but it cost \$400,000 just to launch the product.” According to data from SPINS, during the May-June 1997 period, the market shares for soymilk brands in the U.S. natural foods market were as follows: Westbrae 34%, Edensoy 32%, Vitasoy 16%, and Silk 7%. Silk’s share is now 10%. Sales of Silk grew by 170% during the past year. The soymilk market grew by 21% during the same period, Edensoy grew at 30%, Rice Dream dropped 0.4%, and the rice beverage market contracted by 0.2%.

Tree of Life (which does not share its sales figures with SPINS) is no longer the biggest natural foods distributor in the USA. United Naturals is now the biggest (after they bought Stow Mills) with sales last year of \$650 million vs. \$520 million for Tree. United Naturals also owns Mountain People’s Warehouse, Mountain People’s Northwest (which was NutriSource), Rainbow–Chicago (Illinois), Rainbow–Denver (Colorado), Cornucopia, and Cornucopia–Atlanta (Georgia).

ConAgra is trying again to get into the natural foods industry. They recently tried to buy one big privately owned natural foods manufacturer, and were turned down! ConAgra launched a new “Advantage 10” line of frozen entrees (many of which contain gluten products) that is backed by Dr. Dean Ornish. White Wave is supplying them with some of these gluten products. ConAgra had a huge presence at the Anaheim show—yet they don’t understand how natural foods shoppers think and see the world. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2434. Kimura, Takuji “Tak.” 1998. Re: Current distribution *edamamé* in the San Francisco Bay Area (Northern California) and Los Angeles area. Letter (fax) to William Shurtleff at Soyfoods Center, April 6 and 13. 1 p.

• **Summary:** Tak Kimura is a food broker for both Yamato Flight Kitchen (near San Francisco) and Sushi Boy (near Los Angeles, owned by Mr. Yokota). Distribution for Yamato: Direct accounts (retailers): Whole Foods (8 locations), Real Foods (4), Mollie Stone Market (5), Falletti’s Market (3), Sonoma Market (2 supermarkets in Sonoma city), Woodland Market (1 supermarket in Mill Valley), Andronico’s (8), Safeway (260 available, but not all of them presently carry the product).

Direct accounts (distributors): Veritable Vegetable (all of Northern California), Carcione’s (major account is Raley supermarkets in Sacramento area), North Bay (United supermarket and other supermarkets in Sonoma County), Tri-Valley (many independent supermarkets in Sonoma County), Green Leaf (hotels in Hawaii), VegiWorks (serves hotels and restaurants in the San Francisco Bay Area).

Distribution for Sushi-Boy, Inc., of Gardena, California, currently serving only Whole Foods (13 locations) in Los Angeles area counties. Address: Kimura & Associates, Food Broker, 3616 Delancey Lane, Concord, California 94519-

2357. Phone: (925) 687-2422.

2435. *Wall Street Journal*. 1998. Pact is reached to acquire natural food businesses. April 27. *

• **Summary:** Hain will acquire Arrowhead Mills. Address: Staff reporters.

2436. Scott, Mary. 1998. The Trader Joe’s invasion: Boon or threat to the natural products industry? *Natural Foods Merchandiser* 19(4):1, 38, 42. April.

• **Summary:** This is the first of a two-part story on Trader Joe’s, a privately-owned chain with 113 locations in five Western and three Eastern states. Headquarters are in Pasadena, California, and Needham, Massachusetts. The company has adopted a no-frills approach to business. It targets highly educated people, and sells products at much lower prices than most natural food stores. It was founded in 1958 by Joseph Coulombe. Changed the name to Trader Joe’s in 1968 and opened first store in Pasadena. In 1979 Joe sold the company to the very rich Albrecht family of Germany. Joe remained the CEO until 1989. John Shields, the current CEO, say she has little contact with the German owners. His mandate is to grow the company. Sales in 1997 were reportedly more than \$750 million, and are expected to reach \$1 billion this year.

Talk with Bernd Drosihn: 2004. March 15. Aldi is the mother company of Trader Joe’s and the No. 1 discounter in Germany—and maybe in all of Europe.

2437. Soyfoods Association of America. 1998. Soyfoods once a day for life! (Special advertising section). *Vegetarian Times*. April. 12-page color insert after p. 58.

• **Summary:** Contains large color ads by Nasoya (tofu and TofuMate), Morningstar Farms (Chik Nuggets), Eden Foods (organic black soy beans) Vitasoy (creamy original natural soy drink), Westbrae (Westsoy soymilks), Westbrae (Vigoraïd nutritional drink), Sno Pac (frozen Sweet Beans—organic green vegetable soybeans), and GeniSoy (soy protein bars). On the back cover are additional small ads (each with a logo) for Lightlife Foods, Lisanatti, Monsanto, Soyco Foods–Div. of Galaxy Foods Co., Soyfoods Association of North America, and United Soybean Board.

Interspersed with the ads is advertorial text and “Soy facts.” The text on page 1 begins: “Miracle food. Health insurance in a pod. Nutritional powerhouse. The bean supreme. Nutritionists, physicians, researchers, chefs, and food experts of all kinds are raving about the healthfulness and great taste of soyfoods, and it’s no wonder; soy truly is a nutritional and culinary gift from nature.

“Soyfoods are delicious, convenient, and versatile. At breakfast, soy can make an appearance in the form of soymilk, scrambled tofu ‘eggs,’ or soy ‘sausages.’ A soy shake or veggie burger makes a great lunch. Try a tempeh stir-fry, or perhaps a creamy tofu dessert.

“So dig in... with the huge variety of soyfoods available at your local natural foods store, it’s easy to get your daily intake of soy, and reap the many benefits of the bean supreme.”

The inner contents: Food as medicine. Heart health. Fighting cancer. Menopause? What menopause? Strawberry smoothie. Protein punch.

Soy cooking tips (p. 4): Easy ways to incorporate soy into your baking: Use soy flour in your baking. Be aware that soy flour contains no gluten, and therefore yeast breads will not rise without the addition of some gluten-containing flour. About ¼ cup of soy flour per cup of unbleached white flour is recommended for breads, pastas, and pastries. In place of olive oil, try adding a few ounces of Nasoya Silken Tofu and a dash of lemon juice to mashed potatoes. Try mashing miso into your root vegetables in place of butter. When adding miso to dishes, add roughly 1 tablespoon per four servings. Add GeniSoy Natural Vanilla Soy Powder to your baked goods such as muffins or pancakes. Buy Eden Organic Soybeans in a can and use them the same way you would any other canned bean: over rice, with pasta, in stir-frys, etc.

It’s not only what you eat; it’s also what you don’t eat. Making healthy eating taste great. Soy fact: soybeans were traditionally considered one of five sacred crops in China.

No time to cook? Try these quick ways of getting soy in your diet.

Strong bones... a matter of calcium retention. Miso.

Soy fact: there is no word for “hot flash” in Japan. Soy beverage.

Miraculous tofu. So soy convenient. Soy fact: Western culture discovered tempeh through the Dutch colonization of Indonesia. Soy fact: tofu was unknown to most people in the United States until Chinese immigrants came to this country in the 1800’s. Tofu.

Tempeh. By the handful. Soy fact: miso was developed in China about 2,500 years ago. Where to find it. Address: Washington, DC.

2438. Stevenson, Mary. 1998. America’s shining example of sustainable business: Four years after start-up, Mike and Lynette Richards have accomplished a lot in their custom made candle business—especially for their employees who were considered “unemployable.” *In Business* 20(2):12-14. March/April. Cover story.

• **Summary:** In 1992 in New York City, Mike and Lynette Richards started The Candle Project as a small business for homeless people; it was run out of their home. They started making hand-rolled beeswax candles.

In 1993 the Richards moved back to Iowa. With a small amount of capital borrowed from family members, they established Heartland Candleworks in a small cabin without water or electricity located near the Iowa River.

In 1997 Heartland secured production agreements with national retailers like The Body Shop, Ben & Jerry’s, Wild

Oats Natural Foods Markets, and Urban Outfitters.

Last year Heartland Candleworks, Inc. (a for-profit, 4-year-old, family owned business, located in an industrial park at 2920 Industrial Park Rd., Iowa City) bootstrapped its way to \$800,000 in sales. It produced 400,000 custom candles. Today the company makes about 250 different types of candles sold in 2,000 retail outlets. About 30 people are employed in the company’s “welfare to work” program.

In May 1998 Heartland will be “honored with the national Welfare-to-Work Small Business of the Year award from the Small Business Administration; it will be presented by Vice President Al Gore in Washington, DC.” Also in May Candleworks will receive an award (“Business of the Year” for the Eastern Iowa District) by Governor Terry Branstad of Iowa, and in June a national award (National SBA “Business of the Year”) presented by President Bill Clinton.

The company practices environmental awareness. They take used packaging material from nearby Rockwell Avionics and use it to package their own candles. Heartland has just contracted with Iowa Soy Specialties, an innovative organic farmers cooperative, “to purchase soybean wax from them to make candles.” These farmers are also concerned about the environment and jobs. Candleworks is the “primary producer of soybean candles in the country.”

Note: This is the earliest document seen (Oct. 2017) that mentions “soybean wax” in connection with soy candles.

Mike has written a book titled *Light One Candle*, which is both a history of Candleworks and a model for bootstrapping entrepreneurs who want to make a difference in their communities.

Photos show: (1) Lynette and Mike Richards. (2) Three views of the inside of the factory.

2439. Rose, Richard. 1998. Problems at Galaxy Foods (Interview). *SoyaScan Notes*. May 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In April 1997 OU (Orthodox Union) revoked their certification of Galaxy Foods products which contain calcium propionate (a mold inhibitor). The company didn’t used to list it. But paper labels are now starting to reflect it. However Whole Foods still has Galaxy Foods on their shelves. Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

2440. Pear, Robert. 1998. Tougher labeling for organic food: Products of gene engineering cannot carry designation. *New York Times*. May 9. p. A1, A6 (National ed.).

2441. Smith, Patricia J. 1998. The new USDA organic standards (Interview). *SoyaScan Notes*. May 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Patricia was delighted to hear that USDA listened to organic consumers in finalizing the latest draft

of their organic standards (See *New York Times*, May 9). However the California Certified Organic Farmers (CCOF) is now saying it may be as long as 3 years until these standards are finalized. CCOF is the oldest certifying agency in California, started in the early 1970s—at about the same time that Fred Rohe started Organic Merchants (OM). Their headquarters are presently in Santa Cruz. They have 14-15 chapters around the state. The father of the organic movement in America is Jerome I. Rodale, who started *Organic Farming and Gardening* magazine in May 1942.

The state agricultural experiment stations have done and are doing very little research on organic farming—even though it is the fastest growing agricultural sector. Bob Scowcroft puts on some good conferences on organic farming research. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

2442. Fischer, Bruno. 1998. The natural foods market vs. the Reform House market for soymilk in Germany (Interview). *SoyaScan Notes*. May 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Each year about 3 million liters of soymilk are sold at Reform House stores in Germany compared with about 1.2 million liters at natural food stores. Bruno Fischer's soymilk, sold in 1 liter glass bottles, has about 80% of the natural food market. Alpro controls most of the Reform House market with three different brands that it makes and packages in aseptic Tetra Brik cartons. Natural foods stores, like their American counterparts, focus on selling foods, and especially organic foods. Reform Houses, like U.S. health food stores, focus more on pills and supplements.

German dairy milk is mostly (about 80%) sold in gable-top cartons; only about 20% is sold in aseptic cartons. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

2443. Kimura, Takuji "Tak." 1998. Selling green vegetable soybeans (*edamamé*) in the Los Angeles area (Interview). *SoyaScan Notes*. May 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mr. Kimura is a food broker, who demos and sells quite a bit of Yamato's boiled, packaged edamamé (green vegetable soybeans = GVS) in California. Yamato buys these soybeans frozen in 1-pound bags from mainland China. In Burlingame, California, they open each little bag, boil the soybeans in salted water (nothing else is added), package 8 oz. in trays with a nitrogen flush (to help preserve freshness), and ship them refrigerated to retail outlets.

Interest in and orders for edamamé are growing rapidly. He called to thank Bill Shurtleff for the idea of using "Palate Pleasers" as a brand for his edamamé and sushi products. Last week he demoed edamamé at the Whole Foods Market in Beverly Hills, California. In 3 hours on Saturday he sold

120 x 8 oz. packs (which was all he had!) at \$3.59 each (the regular price is \$2.99). In 2 hours on Sunday morning he sold an additional 60 packs. Some customers bought 4-5 packs each. They loved the flavor and they were looking for convenient, tasty ways to get soy into their diet.

Frieda's Finest, a big produce company based in Los Angeles, recently ordered three 30-pound bulk samples.

Last August Tak found a grower of organic edamamé near Sacramento named Short Night Farm, owned by the McAray brothers (P.O. Box 211, Dunningan, CA 95937. Phone: 916-724-3434. Fax: 916-724-4339). Short Night hand-picked the beans and shipped them to the Whole Foods warehouse, but they ended up spoiling. Any farmer who wishes to grow edamamé commercially must have three pieces of equipment: A harvesting machine (a cotton picker works well), a steam blaster, and an instant freezer. Short Night is now getting this equipment. Within 45 minutes after the edamamé are picked, they must be washed and steam blasted then "instant frozen." Yamato now buys 200 cases/week from JFC. Trader Joes now sells edamamé from JFC under a different brand name, but they are interested in selling an organically grown product. If Tak could find a reliable source of organic edamamé at a reasonable price, he is quite sure that he could easily find many buyers, such as Whole Foods, Veritable Vegetable, Real Foods, and others. Address: 3616 Delancey Lane, Concord, California 94519-2357. Phone: (510) 687-2422.

2444. Sams, Gregory. 1998. *Uncommon sense: The state is out of date*. London: Chaos Works. 191 p. Illust. No index. 21 cm. [Eng]

• **Summary:** An extremely interesting and creative book. On the back cover is a photo of Gregory Sams and this brief biographical sketch: "Gregory Sams pioneered the introduction of natural foods to the UK—opening Seed macrobiotic restaurant in 1967 at age 18, Ceres grain store in the Portobello Road two years later [1969] and Harmony Foods (now Whole Earth Foods) soon after, as well as being closely involved with Harmony magazine and Seed, the Journal of Organic Living. He conceived and launched the original VegeBurger in 1982, developed it for six years, then moved out of food and into fractals, founding Strange Attractions—the world's only shop dedicated to chaos theory (London 1990)." Address: 2 Trevelyan Gardens, London NW10 3JY, England.

2445. Spangler, Tina. 1998. Rating the dairy alternatives: Our blind test of 14 nondairy milks revealed which are best in coffee, which are best in cereal, and which are best left alone. *Natural Health*. May/June. p. 58-59.

• **Summary:** White Wave's Silk is considered the best soymilk product. Vitasoy Light Original was the 2nd highest rated soymilk. Westbrae Natural Rice Beverage (Enriched) received the highest overall rating. The 14 products are:

Edensoy Original. Edensoy Extra Original. Harmony Farms Fat Free Rice Drink. Health Valley Fat Free Soy Moo. Mill Milk Organic Oat Milk. Pacific Foods Multigrain Nondairy Beverage. Pacific Foods Nondairy Soy Beverage (Unsweetened). Pacific Select Nondairy Soy Beverage. Rice Dream Organic Original. Vitasoy Creamy Original. Vitasoy Light Original. Westbrae Natural Rice Beverage (Enriched). West Soy Low-Fat Soy Drink. White Wave Silk Dairyless (Soy) Beverage. Address: Associate editor.

2446. Tree of Life, Inc. 1998. Looking for ways to use the ol' bean? (Ad). *Natural Health*. May/June. p. 77.

• **Summary:** This stylish, full-page color ad shows ten different packaged tofu products sold by Tree of Life, plus many dishes in which they are used. "And most are already seasoned, pre-cooked—and ready to serve."

The types are: Organic Firm Style, Reduced Fat Firm Style, Water Pack Firm Style, Baked, Savory Baked, Ready Ground, Savory Garlic Ready Ground, Hot 'N Spicy Ready Ground, Smoked, Hot 'N Spicy Smoked.

2447. Westbrae Natural Foods. 1998. Only Westbrae... Makes soy delicious (Ad). *Vegetarian Times*. June. p. 30.

• **Summary:** This one-third page color ad shows three of Westbrae's main categories of soy beverages: Nonfat (vanilla and plain), lite (vanilla, plain, and cocoa), and plus (vanilla, plain, and cocoa, fortified with calcium and vitamins A&D). Other Westbrae non dairy products include Maltededs, Lite Maltededs, Lite Creamer, and Rice Drink. Address: P.O. Box 48006, Gardena, California 90248.

2448. Elliott, Barbara. 1998. Re: New developments at FarmSoy Company in Summertown, Tennessee. Letter (fax) to William Shurtleff at Soyfoods Center, July 8. 1 p.

• **Summary:** "Correct me if I'm wrong but no one has challenged the claim that FarmSoy Company is the oldest non-Asian soy dairy in the U.S. [Note: Soyfoods Center believes that claim is correct for companies started after 1970. But a number of Seventh-day Adventist soy dairies, including one in Madison, Tennessee—near Summertown, started in the 1920s and 1930s]. We presently are using only certified organic soybeans that are not genetically modified and all of our products are certified organic by Florida Growers & Consumers, Inc."

"Our soymilk is now a principal ingredient in a new drink just out in the market, called Fruit Quest by Del Valle Food Products, Inc. It is the first drink in the U.S. to combine soymilk and fruit juice. Fruit Quest is very tasty and is available through Whole Foods, Wild Oats, and Tree of Life." Address: 96C The Farm, Summertown, Tennessee 38483. Phone: 615-964-2411.

2449. American Soy products. 1998. Official celebration guide: Invitation. Saline, Michigan. 12 p. 13 cm.

• **Summary:** This attractive passport-sized booklet states: "American Soy Products presents the opening of the largest soymilk processing facility in North America. Official opening ceremony: Wednesday, Sept. 9, 1998. Your invitation—VIP guest No. 01325024. Registration time: 11:15 to 11:30. Official ceremony: 12:00 noon to 12:45 p.m. Followed by light refreshments and hors d'oeuvres. Lunch: 2:00 to 3:00. Tours and demonstrations: 1:00 p.m., 2:00 p.m., 3:00 p.m., 4:00 p.m. RSVP by August 12.

"The event will honor the achievements of a unique joint venture partnership formed to produce Edensoy for the North American marketplace."

"Factory facts: Square footage by Aug. 1998—65,000 square feet. Expected annual output—4,000,000 + cases. Number of quality control checks—245 (4000 per day). Soymilk lines—(2) 8800 pounds per hour and 13,200 pounds per hour.

"Celebrate with us 'History in the making' as four international corporations send you their personal invitation to salute cooperation and unity at work."

The CEO of American Soy Products is Mr. Hiroyasu Iwatsuki. "Joint venture partners: Eden Foods, Inc., Clinton, Michigan, USA. Mr. Michael Potter, Chairman/President. Kawasho International (USA) Inc., San Francisco, California, USA. Mr. Akio Ono, President. Marusan-Ai Company Ltd., Okazaki-City, Aichi-Prefecture, Japan. Mr. Hatsuji Shimomura, President. Muso Company Ltd., Osaka, Japan. Mr. Yuko Okada, President." Address: 1474 North Woodland Dr., Saline, Michigan 48176. Phone: 734-429-2310.

2450. Bramblett, Billy. 1998. Company history: Wildwood Natural Foods (Continued—Document part III). Fairfax, California. 10 p. Unpublished typescript.

• **Summary:** "Meanwhile, Mr. Ridenour had brought the Santa Cruz operation into the sunlight of profitability. He had developed systems and teams that worked together toward enlightened profitability. His workers worshipped him, called him 'Dad,' and became a family of which he was the head and patriarch. Wildwood Santa Cruz was profitable in 1991, and on a firm footing.

"After a Stanford MBA analysis indicated that both companies should be headed by the enlightened leadership of Mr. Ridenour, the BOD [board of directors] north elected Mr. Ridenour as president and Mr. Orbuch retired. Mr. Ridenour has set about cleaning up the north and installing those systems and procedures which have been proven effective and profitable in Santa Cruz."

"So as of February 1992, Mr. Ridenour was in charge of both companies... In August, 1992 Mr. Bramblett returned at Mr. Ridenour's request to help with product development and financial analysis (Mr. Bramblett had been the CFO of China Books and Periodicals in San Francisco for the past two years). The analysis determined that the company was

losing money primarily due to distribution costs and the imbalance between the sales of Wildwood products and the sales of products made by other manufacturers, which at that time was 33% Wildwood and 67% other.”

In 1993 Mr. Bramblett took over the accounting department; Wildwood returned to profitability and the owners decided to merge the two companies so they could sell off a small part of it to raise capital. In Nov. 1993 John Breen was hired as controller.

The corporate merger was accomplished in 1994 with each of the four shareholders owning 25% of the surviving corporation. “We then wrote a business plan in which we proposed to build a new tofu factory, bring all production under one roof (likely in Watsonville) and leave a cross dock in Marin County near the Hwy. 101/580 intersection.”

“We finally lined up financing for the new factory, but the senior debt underwriters wanted to see more equity on the balance sheet... We have not yet been successful in this plan but have had much interest and several buy-out offers. We have joined the Social Venture Network and have made presentations to the Investor Circle (SVN spinoff) and have a few investment suitors at this time.

“Meanwhile the combined corporations became profitable in 1995, 1996 and 1997 and so far in 1998. We have strung together 13 consecutive profitable quarters and added to our equity thereby. While only growing total sales by about 10% over the past three plus years, we have flip flopped the products profile and are now at 69% Wildwood and only 31% other products, a much more profitable balance. We have also developed many new products and have several products private labeled for us.

“Most recently we have introduced a new private labeled [by Ted Nordquist and TAN Industries] organic soymilk in gable topped cartons which comes in two flavors, Plain and Chocolate. We expect to have this product in distribution in the western U.S. by September 1998.

“Wildwood is currently producing approximately 30,000 lbs, of tofu per week and bottling 2,000 quarts of Yo Soy traditional soymilk (in plastic quarts) in two flavors, Plain and Honey-Vanilla. We reprocess about 40% of the tofu and sell the rest as either 10 oz. vac pack, or 20 oz. vac pac, 16 oz. firm water pack, 16 oz. medium (low fat, calcium sulfate) water pack, or institutional vac pac in 8 lb. blocks or 7 lb. pre-cut. We also produce 20 oz. vac pac for Whole Foods with their label.

“In addition Wildwood produces Hummus in four styles, traditional Mid East, Low Fat, Spicy Low Fat, and Pesto. To complete our middle eastern line, we also produce Tabouli Salad and Baba Ganooj.

“Secondary tofu products include Baked Tofu in four flavors, Smoked Tofu in two flavors, Tofu Veggie Burgers in three flavors, and Tofu Cutlets (traditional Nama Age). We also make Braised Tofu Salad (cubes of tofu lightly grilled with fresh vegetable in exotic sauces) in five flavors and

fresh tofu salads in two flavors as well as two tofu spreads. We have abandoned the sandwich market altogether.

“The retail side of the natural foods market has consolidated. Very rarely will you find the small neighborhood health food store or the little mom and pop place that would sell ready to eat products such as ours. Now its all big corporate up-scale super stores with coffee bars, juice bars, cookie bars, salad bars, sushi bars in 65,000 square feet of fancy, wide aisles, highly decorated and high prices.

“These stores also demand more margin, squeezing distributors and manufacturers and exhibit ‘serve all our stores or serve none’ ultimatums. We have countered by refining our DSD (direct store delivery) system. Wildwood is now Macintosh networked from orders through production, packing and delivery. The driver/sales reps now deliver to the stores with completed invoice in hand. We educate the store clerks and managers to understand that our full service distribution saves them over 5% in stocking and inventory management expense and have kept the stores margins below 30% in most cases. Also, since we have concentrated on developing products with longer shelf lives and have refined production methods to extend the shelf lives of existing products, the return rates have dropped dramatically to under 3% for the entire Wildwood product line.”

“Quality is still our number one goal, but profitability is a close second.”

“We have expanded our distribution to include several sub distributors. Rock Island Foods carries our longer shelf life products into stores in the SF Bay area which we opt not to serve, as well as into eighty Lucky Markets and any account which is outside of Wildwood’s distribution area. In Los Angeles our products are distributed by California Day Fresh as well as Tree of Life and Nature’s Best.”

In Portland [Oregon], we are carried into natural foods accounts by Zanya Trading, and we are preparing to open the Seattle [Washington] market by the fall of 1998. Our new soymilk will be carried by Texas Health into Texas, Colorado and New Mexico and will pave the way for the rest of our product line into those markets.

“Wildwood will continue to seek financing in order to build a new production facility before the new millennium and we plan to be nationwide by 2005. Our products continue to gain critical acclaim and have won first place or best of show at three separate San Francisco Chronicle and American Tasting Institute events in 1998 alone.

“In case you missed the ownership / management lineup, here’s a recap:

“Jeremiah Ridenour, President & CEO, Board of Directors, 25% shareholder.

“Billy Bramblett, Treasurer, BOD, 25%, GM in Fairfax, product development, demonstrations.

“Frank Rosenmayr, VP & Secretary, BOD, 25%.

“Paul Orbuch, 25%.

“Other key personnel include:

“John Breen, controller.

“Erik Todd, distribution manager.

“Dolly Gianni, human resources (and so much more).

“Doug Porter, purchasing manager, graphic design (and so much more).

“Maria Gonzales, production manager, Fairfax.

“Chris Spalaris, plant manager, tofu manager, Santa Cruz.

“Juan Macias, secondary production manager, Santa Cruz.

“Currently we run thirteen delivery routes which visit our accounts three times a week. We have 95 employees. 1998 sales are estimated to exceed \$6.5 million of which about 70% will be Wildwood branded products.” Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

2451. Hull, Karen S. 1998. Natural foods pioneer dies. *Natural Foods Merchandiser*. July. p. 10.

• **Summary:** “Boulder, Colorado—Hanna Kroeger, founder of one of the first health food stores in the country, died here May 7 at the age of 84.” She was born in Turkey to German Christian missionaries. In 1957, when Kroeger and her husband came to Boulder, they opened Imperial Tea and Health Foods—which later became New Age Foods. She has written many books. A portrait photo shows Hanna Kroeger.

2452. Leading Edge Group. 1998. The U.S. health and natural food market: Past performance, current trends, and strategies for the future. 2171 Jericho Turnpike, Suite 200, Commack, NY 11725. 330 p. July. Price \$1,995.00. Illust. 29 cm. *

• **Summary:** Three past editions of this report have been published by Business Trends Analysts, Inc. (BTA), which is located at the same address as The Leading Edge Group. BTA is the parent company. Since it was founded 20 years ago, it had published reports under two brand names, each of which has a different style. Business Trends Analysts Reports tend to contain mostly secondary research, with an abundance of charts and graphs, and less text and analysis. Leading Edge Reports are conducted by a person with a specialty in that area. The report contains much more primary research and in-depth analysis, and is roughly twice as expensive. This report was conducted by Melina Laverty.

Chapter 5 of this report is titled “Soyfoods and alternative meat products: Market dynamics.

Overall report—Contents: 1. Executive summary. 2. Overall market dynamics (including Soyfoods). 3. The market for soy foods. 4. The market for herbal teas. 5. The market for dairy foods. 6. The market for grains and cereals. 7. The market for frozen foods. 8. The market for snack foods. 9. The market for groceries. 10. The health food consumer. 11. The health/natural food store industry.

12. Competitor profiles. 13. Industry directory. Address: Commack, New York. Phone: 516-462-2410.

2453. Roller, Ron. 1998. American Soy Products’ new soy milk plant and the U.S. soy milk market (Interview). *SoyaScan Notes*. Aug. 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** American Soy Products has expanded its former building, added a second soy milk processing line and a packaging machine. Then the company moved its original processing line so that it is now located next to and parallel to the new line. They started running both lines at the same time 1-2 weeks ago. This has enabled ASP to more than double its soy milk production capacity.

Starting about 2 years ago, ASP began experiencing occasional shortages. Even though they were running their plant 24 hours a day, six days a week, demand was occasionally greater than they could supply. Starting about one year ago, they had constant shortages, and in some cases the demand was up to 50% more than they could supply.

The grand opening in September has several purposes. One is to celebrate the new line and expanded plant. A second is to get some good PR and good-will for ASP, since many consumers and retailers were inconvenienced and upset during the year of shortages and rationing. Even today, Eden Foods is still having to ration soy milk, but that will soon disappear.

Ron finds that soy milk has now really tapped the mainstream; most of the growth is in supermarkets. Unfortunately, during the past year, ASP and Eden Foods have been unable to take advantage of this growth; they have not wanted to take on new customers when they could not fully supply their former customers.

Dairy publications that Ron reads are encouraging local cow’s milk dairies to get on the soy bandwagon by buying powdered soy milk, reconstituting it, and selling it gable-top cartons along with their dairy milk. Some manufacturers of powdered soy milk are now advertising in these dairy publications. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2454. Little Tokyo Service Center. 1998. Presents the Third Annual 1998 LA Tofu Festival (Ad). *Rafu Shimpō (Los Angeles, California)*. Aug. 7 and 12. p. 3. [Eng]

• **Summary:** “Tofu salads. Tofu desserts. Tofu main dishes. Title sponsor: House Foods America Corp. (Hinoichi Tofu). Gold sponsor: Sparkletts. Festival patrons: AT&T, Farmers Insurance Group, Inc., Pacific Bell. Festival supporters: The Gas Company, Vitasoy USA, Inc., Whole Foods Market, Yuasa, Inc. Official festival airline: Northwest Airlines. Celebrity co-chairs: Huell Howser of “California’s Gold” and Lilly Melgar, International Actress. Media partner: KSCI—Channel 18.

“Saturday, August 15: 11 to 6. Sunday, August 16: 11 to 4. Plus: Entertainment, music, taiko, & children’s performances. Health and information screening (free immunization for children on Saturday. Must present immunization card). New recipes and tofu samplers. Promotional and giveaway items. Cooking demonstrations. Drawing—(grand prize, trip for 2 to Japan). Children’s pavilion with games and crafts. Cultural events of the 58th Nisei Week Festival, the Street Arts Festival and Grand Parade on Sunday. Come and experience an array of international tofu dishes prepared by top chefs in southern California.”

Note: Other ads show: “Participating food providers include: Al Mercato, Aloha Food Factory, Bali Place, BCD Tofu, Berth55, Boxer, Cafe La Boheme, Chez Sateau, Citrus, Classic Catering, Coma Tofu, Curry House, Empress Pavilion, Feast from the East, Flowering Tree, Furaibo, Gadsby’s, Galaxy Tea Corp., House Foods America Corporation, Hyatt Regency L.A., Pavan Pacifico, Indo Cafe, Inn of the Seventh Ray, Japan California Products, JFC / Tama Nishiki Rice, Jozu Restaurant, King’s Hawaiian, Marina Mago Restaurant, Melissa’s, Mother Earth, Papa Jon’s Cafe, Southern California Cuisine, Suehiro Cafe, Tofu Cabin, Tofutti Brands, Trader Joe’s, Union Center Cafe, Unique Catering, Vege-D’Lite, Vitasoy USA Inc., Whole Foods Market, Yujean Kang’s, Zen Grill.”

2455. Little Tokyo Service Center. 1998. The Third Annual L.A. Tofu Festival, August 15-16. Los Angeles, California. 26 p. Illust. 26 cm. Saddle stitched (stapled).

• **Summary:** Contents: 1999 LA [Los Angeles] Tofu Festival committee. About Little Tokyo Service Center. Festival sponsors, by rank. Celebrity Co-chairs: Huell Howser and Lilly Melgar. Festival health providers. Schedule of events (orange insert). Map of events (pink insert). *Coma Tofu: El que y porque!* (Eat tofu: The what and why!) in Spanish, with 2 recipes by Yvonne Gonzalez. Tofu: A 2,000 year old health food miracle, compiled by William Shurtleff of Soyfoods Center. Tofu Q&A. 1997 LA Tofu Festival participant profiles (39 restaurants, p. 7-9). Advertisements (p. 13-26), including ads for Vitasoy (incl. Nasoya & Azumaya), Whole Foods Market (incl. White Wave—Vegetarian Cuisine), Yuasa, Inc., Patricia Greenberg and her *Whole Soy Cookbook*, the Indiana Soybean Council and Prang Fun Pro Soybean Crayons, House Foods America Corporation and its Hinoichi tofu (full page, inside back cover). Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1600.

2456. Chou, Hsiao-Ching. 1998. Beans on branches: Fuzzy, green and sweet, they’re full of nutrition. *Denver Post (Colorado)*. Sept. 16. p. 1E, 5E.

• **Summary:** A good, very positive article about edamame

(the Japanese name means “beans on branches”), also called *mao-doh* (“fuzzy beans”) in Chinese. They taste good and they’re good for you. Now, in the Denver and Boulder areas, natural food stores and farmer’s markets offer green vegetable soybeans, freshly harvested from a local farm—for \$5 to \$6 per pound. Try the Boulder farmer’s market, Whole Foods in Boulder, Wild Oats in Denver, Alfalfa’s in Cherry Creek, or the Cherry Creek farmer’s market. In Longmont, Colorado, Pachamama Organic Farm (38 acres) grows 1½ acres of the new crop. This is the second year that Ewell and Lauren Culbertson have grown edamame. Planted in August, they are expected to yield 10,000 pounds before the first frost arrives. Pachamama is the only known farm in Colorado that grows the green soybeans, partly because it’s a labor intensive crop. Americans like these green soybeans, and so do kids. The Culbertson’s 10-year-old son, Amos, packs them in his lunch and enjoys them with his schoolmates. Gives 3 recipes: Fried rice with green soybeans and mushrooms. Green soybean, corn, and artichoke salad. Tarragon sweet beans, onions, and potatoes.

Large color photos show: (1) Lauren Culbertson in the field with both arms filled with fresh soybean plants and edamamé. (2) Roasted light-green edamamé in the palm of a person’s hand. (3) Ewell Culbertson inspecting an edamamé plant growing on his farm. A small black-and-white photo shows bundles of edamamé in a box, with a hangtag on each.

A sidebar titled “Soy hormones power tofu diet,” by Cooking Light (p. 5E) discusses soy hormones and their medical benefits. “The real medicinal hero of tofu is the soybean... But even soybeans have an inner hero—a group of compounds called isoflavones. These plant hormones, with names such as genistein and daidzein, may help battle chronic illness on several fronts...” Stronger bones, lower cholesterol levels, relief from hot flashes, lower risk of cancer.

2457. Potter, Michael. 1998. Early history of Eden Foods (Interview). *SoyaScan Notes*. Sept. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Michael still recalls clearly the signature card dated July 1967. There were names on it, but he does not recall whose names. He asked the person at the bank if he could get a copy of the card, but he was unable to do so. After that one time, he never saw that signature card again.

The date 1968 as the year Eden Foods was founded comes from Michael’s memory. He clearly remembers purchasing food, as a consumer, from an Eden co-op on East William Street in Ann Arbor, Michigan—in 1968. The store was located upstairs and Michael bought some organic flour and maybe some soy sauce, for himself and his girl friend (who later became his wife). These were the days before Eden had a logo—which the company later got from Michael Erlewine [Note: That logo was four sprouts in a circle]. This was prior to his involvement in Joyous Revival, a natural

foods store.

He thinks the year was 1968 because that was the year he graduated from high school. He is absolutely positive that he graduated in 1968 from Shrine High School [a Catholic high school], in Royal Oak, Michigan. But he is not sure how long it was between the time he graduated from high school and his first visit to the Eden food store. "It could definitely have been a year after graduation." Michael is looking at some documents relating to Eden's early history that Shurtleff sent him in 1993 concerning Eden's early history. He says: "Just the information I'm looking at right now has me thinking that it's more than likely that what I said to you earlier about going to East William Street and buying that food in 1968 was wrong. It could have been in 1969." Michael is certain that he went to East William Street and bought that food. The question is when. Michael did not know any of the people who worked at this store. At the time he was living in a northern suburb of Detroit—which was about 25 miles away. He had traveled this distance to buy some good macrobiotic food that was organically grown. He returned to this same store 3 or 4 times during 1968 or 1969 to buy food.

The company wasn't renamed Eden Foods, Inc. in late 1970. It was given that name (Eden Foods, Inc.) in November 1969. He has a copy of a document of that prove this in Eden's corporate files.

Michael has never seen a document from the first incorporation—when it was incorporated as a non-profit corporation. Address: Chairman, Eden Foods, Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-7424.

2458. Eden Foods, Inc. 1998. Celebrating 30 years of quality natural foods: 1968-1998 (Ad). *Natural Foods Merchandiser*. Sept. p. 27.

• **Summary:** Lists 10 milestones in the company's history, which is said to have started in 1968. Note: The founders of this company all agree that it was not founded in any form until Nov. 1969. Address: 701 Tecumseh Road, Clinton, Michigan 49236. Phone: 517-456-7424.

2459. Eden Foods, Inc. 1998. Eden—The highest quality natural food (Catalog). Clinton, Michigan. 12 p. 28 cm.

• **Summary:** This 8-page color catalog, with four pages of inserts, introduces Eden Foods, its products, philosophy, and history. A timeline running across the bottom of each page lists 23 milestones in the company's history, which is said to have started in 1968. Note: The founders of this company all agree that it was not founded in any form until Nov. 1969.

Contents: Eden Foods—Thirty years of dedication: Macrobiotic understanding, tribute to Herman Aihara, Old World pasta—goodness of grain, maturing as an organic manufacturer, organic pioneers of the audit trail, Eden today (supporting 200 family farms with over 20,000 acres

of organic land). Eden Foods—A dedicated network: Color maps show the source of products in the USA, Japan, and Europe. Intuitive imported foods, the Eden brand—fulfilling a promise, organic pest management, our GEO (genetically engineered organisms) policy (since 1993), preserving organic integrity. Edensoy creates a new food category. Eden in the next 30 years? Company goals (back cover).

The first insert, dated Sept. 1998, is written and signed by Michael J. Potter, "leading Eden Foods for twenty-seven years" (i.e. since 1971). The second insert lists all or most of Eden's products. The third is a mailer inviting comments. Address: 701 Tecumseh Road, Clinton, Michigan 49236. Phone: 517-456-7424.

2460. Traynor, Marty. 1998. Weider acquires *Natural Health* [magazine, formerly titled *East West Journal*]. *Natural Foods Merchandiser*. Sept. p. 18.

• **Summary:** Weider (pronounced WEE-dur) Publications Inc. (based in Woodland Hills, California) recently [July 1998] acquired *Natural Health* magazine from Boston Common Press. The magazine, which is geared to consumers age 35 and older, will continue to be based in Boston.

Note 1. Weider promotes body building and big muscles; it sell protein powders and related products. *Natural Health* started publication in Jan. 1971 in Boston, Massachusetts, as *East West Journal*, a magazine devoted largely to macrobiotics and natural foods. During most of its early history, EWJ was an excellent source of creative, in-depth articles about soyfoods.

Note 2. An article in *MediaWeek* (20 July 1998) states that *Natural Health* has a rate base of 300,000. A report in *Mediabankers.com* (May 1998) states that Weider paid \$32 million for *Natural Health*.

2461. **Product Name:** Soynut Butter—Organic.

Manufacturer's Name: Walnut Acres Organic Farms.

Manufacturer's Address: Walnut Acres Rd., Penns Creek, Pennsylvania 17862. Phone: 717-837-0601.

Date of Introduction: 1998 September.

Ingredients: Ground roasted soybeans*, canola oil*, salt. * = Organically grown. OTA certified.

Wt/Vol., Packaging, Price: 1 lb glass jar. Retail for \$5.99.

How Stored: Shelf stable.

New Product—Documentation: Talk with Jane Mulrooney at Walnut Acres. 1999. Feb. 25. Jane developed this product, which was introduced in Sept. 1998 and is made from soybeans grown organically at Walnut Acres in Pennsylvania. The company has three farms in the area with roughly 300 acres growing crops organically. This product is available for \$5.99 plus shipping in the Walnut Acres catalog, and at the Walnut Acres retail store (for 7% less), and at many regular retail stores—for \$5.99. Most people buy it to get the health benefits of soy (isoflavonoids), and the company has information about these benefits that it sends out with the

products. But a significant number of customers are those who avoid peanuts and peanut products; the company uses a separate grinder and a separate roaster from those used with peanuts. The product has a smooth consistency.

2462. Product Name: Soynut Honey Sesame Spread—Organic.

Manufacturer's Name: Walnut Acres Organic Farms.

Manufacturer's Address: Walnut Acres Rd., Penns Creek, Pennsylvania 17862. Phone: 717-837-0601.

Date of Introduction: 1998 September.

Ingredients: Ground roasted soybeans*, canola oil*, honey*, toasted whole sesame seeds*, salt. * = Organically grown. OTA certified.

Wt/Vol., Packaging, Price: 1 lb glass jar. Retail for \$6.29.

How Stored: Shelf stable.

New Product—Documentation: Talk with Jane Mulrooney at Walnut Acres. 1999. Feb. 25. Jane developed this product, which was introduced in Sept. 1998 and is made from soybeans grown organically at Walnut Acres in Pennsylvania.

Note: In the spring catalog, 1999, the company will introduce a new soy product—Soy Peanut Spread (organic), containing equal amounts of soynut butter and peanut butter. “It really tastes like peanut butter.”

2463. Bolduc, Bill. 1998. Establishing Eden Organic Foods, Inc. in Nov. 1969 (Interview). *SoyaScan Notes*. Oct. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bill's full name is William Theodore Bolduc, Jr. The people whose names are on the Articles of Incorporation all sat down together and prepared that document. The move to establish Eden as a non-profit organization was precipitated by the decision of Ronnie and Iona Teegarden to move to California. When they were gone, the group of people who met to buy food together would have no place for their food to be delivered. You could call this group an informal food-buying co-op but the co-op had no name, no bank account, no property, and no organization. Everybody who wanted to participate had a copy of the Erewhon catalog. Once a week or so they would go down to Ronnie and Iona's store and give their order and money. Ronnie and Iona compiled the orders and sent one order off to Erewhon. Roughly ten days later the goods arrived at their store—that a truck would deliver to.

Once the Teegardens decided to move out, the big question was—Is anybody going to keep the co-op going? “If I hadn't stepped in with that \$170, it would have died. Nobody else wanted to take the responsibility. That \$170 was my wife, Judy's money. It was one week's pay. She had a good job as a secretary at the University of Michigan music school in Ann Arbor. Once the Teegarden store was gone, there was not place for the truck to deliver our food to.

“I had just returned to Ann Arbor from the summer

in Berkeley. I couldn't find a job, and couldn't get my old job back. Thank God Judy got a job. There were a bunch of people really interested in seeing food co-op continue, and they were all, like ‘God Bolduc. Why don't you do something. You're not doing anything.’ Jimmy Silver, Mark Retzliff, Linda Succop, Gloria Dunn. They were all pointing the finger at me, wanting me to take it over. I had to think about it for a while. Then I said, ‘What the hell! Sure, I'll do it.’ Once I was convinced that this was the thing to do, then it was like there was a fire under me. The Succop girls, Linda and Judy (Bill's wife) had a little money. Their mom and dad kicked in some of it, and Judy had a good job. We used that money, \$120, to pay the first month's rent on the store at 514 East William Street, upstairs above the bike store. The people who supported this effort were all idealistic and altruistic—as I was—at that time. It was the spirit of the ‘60s.”

One day, about a year after Eden opened, Bill was sitting up in 514 East William St. when in walked Cynthia Chevelle, a very prominent and successful entrepreneur. She owned Middle Earth, which was “the No. 1 head shop in town. She leased the entire main floor (street level) at 211 South State Street. She came to ask if Bill wanted to sublet about one-quarter of the space at 211 South State Street. They walked over together to look at the space. Bill decided to go for it; it was a much better location.

“We changed the name to Eden Foods Inc. and made it a for-profit corporation at about the time when Tim and his dad came into the business, which was just as we were moving into 211 South State Street—about Nov. 1970.” It shouldn't be difficult to order a document from the State of Michigan showing exactly when Eden became a for-profit corporation. Address: P.O. Box 2708, Crestline, California 92352-2708.

2464. Kimura, Takuji “Tak.” 1998. Re: Annual dollar wholesale sales of *edamamé* from 1994 to 1998 (projected). Letter (fax) to William Shurtleff at Soyfoods Center, Oct. 7. 1 p.

• **Summary:** Tak Kimura is a food broker representing three edamame processors/vendors in the USA: Yamato Flight Kitchen (near San Francisco), Sushi Boy (near Los Angeles), and Golden Bowl (a Japanese restaurant in Denver, Colorado). Each of these three buy from JFC (of South San Francisco), which imports frozen edamame. The following are wholesale amounts. To convert to approximate retail figures, divide by 0.68.

1994—\$18,000.

1995—\$64,000. Up 255% over the previous year.

1996—\$88,000. Up 44.2%.

1997—\$156,000. Up 77.3%.

1998—\$541,000 (projected, based on \$406,000 through the end of Sept.). Up 246.7%.

Up to 1997, Tak served only the San Francisco Bay Area, but starting in 1998 he has been serving Trader Joe's (northern and southern California), Safeway, Costco, and

Whole Foods and Wild Oats in Denver, Colorado.

Effective the end of this week, Tak will be serving Lucky supermarkets in the San Francisco Bay Area. Also by the end of November, he will be serving Trader Joe's in the Portland (Oregon) and Seattle (Washington) marketing area. In very early 1999, he will be serving Texas and Arizona. He will also be the broker for Bush Garden of Oregon, a processor which will buy from JFC, and which will serve Trader Joe's and Safeway in Portland and Washington. Thus he is selling mostly on the West Coast of the United States.

Update: Talk with Tak Kimura. 1998. Nov. 16. Trader Joe's started buying edamame from Tak about 6 months ago; Now they are ordering \$37,000/month from him. Address: Kimura & Associates, Food Broker, 3616 Delancey Lane, Concord, California 94519-2357. Phone: (925) 687-2422.

2465. Ridenour, Jeremiah. 1998. How Jeremiah Ridenour of Wildwood Natural Foods and Ted Nordquist of TAN Industries developed America's first soymilk in a gable-top carton (Interview). *SoyaScan Notes*. Oct. 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Background: Ted Nordquist, a native of California, is perhaps the world's leading developer of soy base and dairylike products derived therefrom. He pioneered tofu, soymilk, and soy ice cream in Sweden, and eventually sold his company to one of Sweden's largest food manufacturers, before moving back to California in the early 1990s (1992-94). His family joined him in Sonoma in August 1994.

Jeremiah and Ted met not long after Ted moved from Sweden to California in about 1993-94. This was before his family came, when he was here by himself. Ted contacted Jeremiah. He wanted to make a soy ice cream in the USA—that was his main focus. He suggested that Jeremiah buy Woody Yeh's soymilk yogurt plant in Hayward, California, because Woody's company (Soyeh Natural, Inc.) was about to go out of business. Jeremiah did not do this and Woody went bankrupt then sold his equipment to an Asian American man [Jim Pong of Pure Land Co.] who is now producing tofu there. Woody is now running an import/export company.

Jeremiah liked Ted and thought his soy base was great, so he introduced him to the packaging company, and to Dreyer's (the ice cream company). They spent time together and talked about gable-top soymilk. On his own, Ted soon met Ken Lee of Soyfoods of America (where Ted's soymilk is now made). Not long after Ted got involved with the packaging company, in early 1995, Jeremiah started developing soymilk formulations using Ted's base, then together they started doing pilot runs (into gable-top pints), then larger tailing runs (into quarters) at the packaging plant. In a tailing run, you come in behind someone else's product run, clean out the system with a slug of cleaner, then run your product into the last 100 or so cases. A tailing run duplicates your pilot run on a larger scale to check that all of

your assumptions about scaling up really work. They ran two 100-case runs into quarts—which was pretty expensive—but it proved that everything worked. The minimum soymilk run for Wildwood at this packaging plant would be 3,000 gallons (12,000 quarts). Jeremiah ran some calculations and quickly determined that making and packing that much soymilk would be overstretching the financial resources of Wildwood. The ESL carton will get you a 12-week shelf life, but some precipitation (formation of a little tofu on the bottom) takes place after you add calcium and the carton bulges slightly (which makes it look a little funny) around the 11th week due to some saturation of the packaging material. Therefore Wildwood decided to stamp on a conservative use-by date of 10-weeks. So Jeremiah would have to refrigerate and sell 12,000 quarts of a perishable soymilk in ten weeks. Actually he would have to sell it in 6 weeks, because most retailers won't take a perishable product that has less than 4 weeks (30 days) on it. Thus, Wildwood would have to produce a new batch every 6 weeks. That would be difficult, because it was a new product (the first of its kind in the USA) and no one knew how long it would take to catch on with retailers and consumers. Everyone with experience knew that Murphy's Law operates at full force with new, perishable products. But the cash flow problems were an even bigger problem. Before the first run of 12,000 quarts were sold, Wildwood would have to do a second run—and pay for it. The company was already out trying to raise money to finance expansion of its existing tofu business. Jeremiah finally concluded that he didn't have a big enough cash flow or line of credit to take on the soymilk; it was a great product but was just too risky—and a mistake could sink the company.

If money hadn't been an issue, this new soymilk product could have been on the market in late 1995 or early 1996. Finally Jeremiah had to tell Ted that he and Wildwood did not have the capital and were not willing to take the risk of going ahead on the project. Moreover, Ted's production process at Soyfoods of America had not yet been proven; he did not have the equipment there that he has today, and he had never made 3,000 gallons of soymilk in America—though he had made much more than this in Sweden. Also Jeremiah had questions about the reliability of Soyfoods of America.

Jeremiah's contributions toward developing the new product were choosing the type of sweetener and determining the sweetness level for each flavor. He wanted a sweetness that was very similar to that of dairy milk and that came from an organic ingredient. He eventually chose organic brown rice syrup over organic cane sugar; the former has a roundness of flavor but imparts a tan color to the soymilk. Titanium dioxide, a pigment or bleach, could be added to make the soymilk white, but it would have to be listed on the package as an ingredient and was inconsistent with the company's philosophy on using organic. Most important, Jeremiah introduced Ted to the ESL (extended shelf life) gable-top packaging system.

Ted argued that Wildwood should aim for a quart of soymilk that sold for the same price as a quart of dairy milk—and thus drop the expensive organic ingredients. Jeremiah responded: “That is not who Wildwood is.” So Ted had no choice but to approach Wildwood’s competitors. First he went to Westbrae (who was not interested), and then to White Wave—which was the first company to put this fresh, gable-top soymilk product on the market. Named Silk, it was an excellent product, well made and marketed, and it soon became the most successful product in White Wave’s history. Many industry watchers were surprised at the response and sales volume. White Wave discontinued their burgers and hot dogs so they could focus on their soymilk and yogurt. Over the next few years, Wildwood’s financials improved, and in June 1998 they were finally able to launch their gable-top soymilk—made by Ted Nordquist. Unfortunately, it was now a “me too” product, but moving into a proven market. One big challenge for Jeremiah is how to move his fresh soymilk out of the produce section and into the dairy case. Address: Wildwood Natural Foods of Santa Cruz, Inc., 1560 Mansfield Dr., Suite D, Santa Cruz, California. Phone: 408-476-4448.

2466. Black, Pam. 1998. Is soy the recipe for what ails you? *Business Week*. Oct. 26. p. 162-E18.

• **Summary:** The soybean gained prominence as a health food in the 1970s. Now even former junk-bond king Michael Milken is “promoting soy’s potential to fight prostate cancer...” During the past decade, scientists have discovered estrogen-like active substances named isoflavones or phytoestrogens which may be responsible for “soy’s health effects.”

Researchers have proven that soy has cardiovascular benefits, primarily by lowering low-density lipoprotein, or LDL (“bad cholesterol”). The mechanism is not clear; the soy may keep LDL from being oxidized to form plaques that clog arteries. Soy increases flexibility of the arteries, which stiffen and harden with age. Thomas Clarkson, professor of comparative medicine at Wake Forest University School of Medicine (Winston Salem, North Carolina) emphasizes that some amount of soy protein must be consumed for the phytoestrogens to exert cardio-protective benefits. Isoflavone pills alone will not be effective. Scientists recommend consuming 30 to 60 mg of isoflavones per day with 7-10 gm of soy protein. A table shows good sources of soy protein, plus their content of isoflavones (mg) and protein (gm): Solgar Iso-Soy powder (1 oz) 103 / 12. GeniSoy natural protein powder (1 oz) 74 / 24. White Wave baked tofu (3 oz): 52 / 19. White Wave tempeh (3 oz) 47 / 18. Edensoy original drink (soymilk, 8 oz) 41 / 10. Soyboy Not Dogs (1.5 oz per dog) 35 / 7.

Soy’s effects on cancer are less conclusive; most researchers doubt that soy is harmful. Soy has great appeal to women approaching or past menopause. Nutritionists think

soy phytoestrogens may be safer than Premarin—which may increase the risk of breast cancer.

“And for those of you who’ve always turned up your noses at tofu, there is good news: Soy is available in such guises as hot dogs, burgers, cheeses, and ice cream.”

2467. **Product Name:** The Ultimate Smoothie [Vanilla, Orange, Strawberry, or Chocolate Fudge].

Manufacturer’s Name: Galaxy Foods.

Manufacturer’s Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419 X107.

Date of Introduction: 1998 October.

Ingredients: Chocolate Fudge: High efficiency protein blend (soy proteins, isolated skim milk proteins), fructose and evaporated cane juice, maltodextrin (complex carbohydrate), reduced fat cocoa powder, fiber (oat fiber, carrageenan, xanthan gum, cellulose gum, guar gum), vitamin-mineral premix,...

How Stored: Shelf stable.

New Product–Documentation: *Monthly Insight* (Galaxy Foods, Orlando, Florida). 1998. Oct. p. 1. “We have received our first order for our exciting new product—The Ultimate Smoothie—from General Nutrition Centers (GNC), the leading national (3,700 store) specialty retailer of vitamin and mineral supplements. The Ultimate Smoothie is a psychotropic, all-natural protein energy supplement. This powdered mix consists of an ultra-high efficiency blend of soy and other proteins fortified with isoflavones, vitamins, minerals, and key energy sources.” It “is available in four delicious flavors: Vanilla, Orange, Strawberry, and Chocolate.” Talk with Tina, in marketing at Galaxy. 1998. Sept. 30. They are just now shipping their first order to the Division 2 stores of GNC, which is the southeast United States. Once they are established in those stores, after 1-2 months, it will be available for national distribution. The labels are printed, and they are in the process of developing some literature. It is a powder; just add water or milk. You can stir it or put it in the blender with fruit and ice.

Monthly Insight (Galaxy Foods, Orlando, Florida). 1999. Feb. p. 1. The four flavors are now given as “Strawberry Sensation, Turbo Orange, Vanilla Rapture, and Chocolate Rage.”

Leaflet (color photocopy) sent by Patricia Smith from NNFA show in Las Vegas, Nevada. 1999. July. “The Ultimate Smoothie: Your soy solution.” “Soy protein: Over 7 grams per serving.” On the front photos show two women doing aerobic exercise, an African American man is running, a blond woman and a man are bicycling. On the rear, ingredients and nutritional facts are given for the Ultimate Smoothie (Chocolate Fudge) and the Ultimate Smoothie Bar (Lemon Meringue).

Galaxy Foods Nutraceuticals order form sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2000. March. For the “Ultimate Smoothie”

(Shake) only three flavors are now available: French Vanilla, Fresh Strawberry, and Chocolate Fudge.

2468. *Nutrition Business Journal (San Diego, California)*. 1998. Hain gobbles up marketshare to reach top spot in natural foods. 3(9):11-12. Annual industry overview 1998.
 • **Summary:** The Hain Foods Group, which grew during 1998 by making 14 acquisitions, has positioned itself in a leadership role in the natural foods industry. Revenues increased from \$65.4 million in fiscal 1997 to \$105.8 in 1998, and are projected to jump to \$194 million in fiscal 1999. In 1997 Hain introduced 71 new products. As a result of these acquisitions and new products, Hain now has products in 11 of the top 15 natural foods categories. Recently *Prepared Foods* magazine named Hain as 1998 New Products Company of the Year. Andrew Jacobsen is president of Hain's natural and specialty food division.

2469. *Nutrition Business Journal (San Diego, California)*. 1998. The 23.2 billion U.S. nutrition industry in 1997: Channels and products. 3(9):1. Annual industry overview 1998.

• **Summary:** This sidebar contain two pie charts. In the first, the top three channels are as follows: 49% of all products are sold through retail natural food, health chain, and specialty stores (Retail NF/HC). The second largest channel, retail mass market, sells 25%, and multi-level marketing companies sell 19%.

In the second chart, the leading products are: Natural foods 34%, vitamins 22%, herbs/botanicals 15%, personal care 12%, other supplements 7%, sports nutrition 5%, minerals 5%.

2470. Hain Food Group, Inc. 1998. Annual report 1998. Uniondale, New York. 22 p. Nov. 28 cm.

• **Summary:** Net sales for the year ended 30 June 1998 were \$104.25 million, up 59.5% from \$65.35 million in 1997. Net income in 1998 was \$3.292 million, up more than three-fold from \$1.069 million in 1997.

“1998 achievements: Fiscal 1998 was our most aggressive period for acquisitions... In December 1997, we completed a public offering of 2.5 million shares of common stock that raised approximately \$21 million. We used these proceeds to reduce debt incurred in connection with the Westbrae acquisition... In April 1998, we contracted to acquire four other natural food businesses which closed on July 1, 1998. These acquisitions, of Arrowhead Mills, Terra Chips, Garden of Eatin', and DeBoles Nutritional Foods, make us a premier natural food company with products that lead eleven of the top 15 natural food categories. The cost of acquiring these businesses was approximately \$80 million, which we financed through the issuance of \$40 million in our common stock and \$40 million in senior bank financing.”

The Company was named “New Product Company of

the Year” by *Prepared Foods*, a leading industry publication. The company now markets over 1,500 different products under nineteen different brand names. In 1997 the company stock price ranged from \$3.125 to \$5.75. In 1998 it ranged from \$4.84 in the first quarter to \$27.25 in the fourth quarter.

In 1998 Irwin D. Simon, president and CEO, earned \$225,000 salary plus \$60,000 bonus plus \$5,400 other annual compensation. Andrew Jacobson, now president of the company's Natural Foods Division, was with Westbrae. He commenced employment on 14 Oct. 1997 and earned a salary of \$129,329. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2471. *SoyaScan Notes*. 1998. New Trend: Green vegetables soybeans, widely called *edamamé*, are now selling very rapidly (Overview). Nov.13. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Three companies lead the way: (1) Tak Kimura and Yamato in northern California. (2) Kevin Cross and Seaside Farms in Southern California. (3) Allan Routh and SunRich in Minnesota. In California, green vegetable soybeans are now sold in several of the biggest supermarket chains and at most natural foods stores. They come in three forms: (1) Ready to eat, in the pods, refrigerated (Yamato). (2) Boiled and frozen in the pods (Seaside Farms). (3) Shelled and frozen (Trader Joe's and SunRich). Actually, Trader Joe's sells all three forms. Why the sudden interest? They are a rich source of natural isoflavones that most Americans find to be delicious.

2472. Avery, Dennis. 1998. Notable & quotable. *Wall Street Journal*. Dec. 8.

• **Summary:** This quote is from a article by Avery in *American Outlook*, fall 1998. “According to recent data compiled by the U.S. Centers for Disease Control (CDC), people who eat organic and ‘natural’ foods are eight times as likely as the rest of the population to be attacked by a deadly new strain of *E. coli* bacteria (O157:H7).”

“Organic food is more dangerous than conventionally grown produce because organic farmers use manure as the major source of fertilizer for their food crops. Animal manure is the biggest reservoir of these nasty bacteria that are afflicting and killing so many people.”

Note 1. This information is completely incorrect. According to recent scientific articles and experts at the Foodborne Disease Branch of the Centers for Disease Control (CDC in Atlanta), the great majority of cases of illness or death caused by *E. coli* O157:H7 have their origin in animal products, primarily bovine products (especially undercooked hamburger)—not in plant or vegetable products. From 1982 to 1992 some 87% of the outbreaks of this infectious disease were caused by products of bovine origin. From 1992 to 1996 the figure dropped to 73%.

Note 2. The writer is the author of *Saving the Planet*

with *Pesticides and Plastic: The Triumph of High-Yield Farming* (Hudson Inst. 1995). Leading funders of the Hudson Institute are Dow, Monsanto, Novartis, and ConAgra—which have a vested interest in discrediting organic foods. Address: Senior Fellow, Hudson Inst., Indianapolis, Indiana.

2473. *SoyaScan Notes*. 1998. Soymilk and cow's milk prices in California, December 1998 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.
 • **Summary:** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. In Dec. 1998 at Berkeley Natural Grocer (Berkeley, California), Cindy La reports the following retail prices. (Note: oz = fluid ounces; 32 fl oz = 1 quart; 33.8 fl oz = 1 liter): Westsoy plain/vanilla \$1.89/quart. Note: This is the price for 8-9 months a year. Several times a year (back to school sale, company anniversary sale) it will drop as low as \$1.49, and for 3-4 months a year it will rise as high as \$2.39 (the sticker price). Westsoy chocolate \$2.39/quart. Westsoy organic unsweetened \$2.59/quart. Westsoy 3 x 8.45 oz packs all flavors \$2.59.

Vitasoy all flavors \$1.89/quart. Note: This is the price for half the year. The other half it rises to \$2.39. Vitasoy 3 x 8.45 oz packs all flavors \$2.39.

Soy Dream (Imagine Foods) all flavors \$2.15/quart. Soy Dream Enriched all flavors \$2.25/quart.

Pacific Foods—Select (organic) all flavors \$1.99/quart.
 Pacific Foods—Enriched (organic) all flavors \$2.25/quart.
 Pacific Foods—Fat Free all flavors \$2.39/quart.

Eden Soy organic all flavors \$2.25/liter. Health Valley Soy Moo plain \$2.49/quart.

Berkeley Natural Grocer also carries dairy milk:
 Horizon organic milk \$1.59/pint or \$2.69/quart. Clover Stornetta milk (free of BGH—Bovine Growth Hormone) \$1.09/pint.

Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Fat free (formerly called Nonfat): \$1.07/quart or \$1.89/half gallon or \$3.43/gallon; (2) Low fat (formerly called Extra light, 1% fat, protein fortified): \$1.13/quart or \$2.05/half gallon or \$3.75/gallon; (3) Reduced fat (formerly called Low-fat, 2% fat, protein fortified): \$1.13/quart or \$2.05/half gallon or \$3.75/gallon; (4) Whole (homogenized, fortified with vitamin D only): \$1.13/quart or \$2.05/half gallon. (5) Acidophilus Plus Bifidus—Low Fat (1% fat): \$1.27/quart or \$2.18/half gallon. (6) Horizon Organic \$2.93/half gallon. The best-seller among these is Fat free in half gallons or gallons.

Thus, during the past two years, the price of soymilk has continued to decrease while the price of cow's milk has continued to rise.

2474. *SoyaScan Notes*. 1998. Chronology of major soy-related events and trends during 1998 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** June—WholeSoy Co. of San Francisco (Ted Nordquist) launches Creamy Cultured Soy (soy yogurt) in 3 flavors. In about 2001 the product is renamed WholeSoy Soy Yogurt.

June—Britain's Prince Charles, who practices organic farming and is a patron of the Soil Association, writes an article attacking genetically modified food that is published in Britain's *Daily Telegraph*. Explaining that he wouldn't eat such food or knowingly give it to his family or guests, he concludes, "I happen to believe that this kind of genetic engineering takes mankind into realms that belong to God and God alone." The prince's surprise article helped unleash a wave of anti-GMO activity and sentiment, that continued for weeks in the British press and carried over to the Continent.

Sept.—New European Union (EU) labeling laws, requiring labeling of genetically modified ingredients, go into effect. However the regulation exempts foods which contain no soy protein but do contain soy oil or soy lecithin.

Sept.—Imagine Foods of Palo Alto, California, the natural foods leader in nondairy beverages, launches Soy Dream (soymilk), the company's first soy product. They support the product with an extensive and very creative advertising campaign.

Sept.—Protein Technologies International starts to offer certified non-GMO soy protein isolates.

Oct.—The Hain Food Group (which owns Westbrae) has announced that it will start to label some of its products as GMO-Free (i.e. free of genetically modified / engineered organisms). It has developed a "Pure Food" logo and a "Just Say No to GEOs" slogan.

Oct. 16—Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

Nov. 1-2—Conference titled "Estrogen, phytoestrogens and cognitive function" held in Seattle, Washington (organized by Mark Messina), largely to learn more about the research of Lon White on tofu and dementia/Alzheimer's disease.

Dec. 31—DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

Major trends: (1) The steady expansion of genetically engineered Roundup Ready soybeans. This year an estimated 30% of America's soybean acreage was planted to genetically engineered soybeans. This is one of the hottest and most controversial stories in most countries of the world—except the United States, where it gets unbelievably little media coverage. (2) The hype about the health benefits of soyfoods continues to increase. There are definitely some health benefits, but the exaggerated statements that

now routinely appear in articles and advertisements go far beyond what can be supported by scientific evidence. The media seems intent on making as much money as possible as it whips up the story of soy's health benefits. The bigger the story it becomes, the more money they can make later debunking it. (3) The natural foods industry is changing into a supplements industry because of the higher profit margin on supplements. Many consumers are being misled into thinking that supplements are more important than healthy foods in determining good health. (4) Among commercial soy products this year, the ratio of supplements to foods has increased sharply.

Areas of potential danger on the horizon: (1) Lon White of Hawaii and his data on tofu and dementia/Alzheimer's disease. (2) Young girls discovering that overdoses of soy isoflavones could be useful in growing breasts, then publicizing that information using the Internet and World Wide Web. (3) The danger that the media will start to debunk its own hyped story of the health benefits of soy. (4) The concern that the FDA health label claim for soy will not include traditional soy products—such as tofu and soymilk—which contain too much fat. Therefore manufacturers will be tempted to add soy protein isolates to raise the protein to a level that will trigger the health claim.

2475. Nikkan Keizai Tsūshin-sha (Nikkan Keizai News Agency). 1998. Miso no shuyō-meka [Japan's largest miso manufacturing companies]. Tokyo, Japan. 1 p. [1 ref. Jap]

• **Summary:** This table ranks Japan's top fifty miso manufacturers in descending order of volume produced. For each company it gives the company name, prefecture where the company is located, and tonnes (metric tons) of miso produced in 1993, 1994, 1995, 1996, and 1997.

The top ten companies (with their output in tonnes) for 1997 and 1998 are: (1) Marukome 77,000 / 81,500 (they do not export any). (2) Hanamaruki 38,800 / 39,200 (they export to Westbrae, Canada). (3) Kanesa 27,300 / 27,800. (4) Marusan-ai 26,230 / 26,800 (they export to Eden Foods). (5) Miyasaka Jozo 19,080 / 18,900. (6) Hikari Miso 14,700 / 16,000. (7) Yamajirushi 15,200 / 15,100 (they export to San-J). (8) Fundōkin Shoyu 13,900 / 14,100. (9) Ichibiki 13,100 / 13,000. (10) Takeya 12,000 / 11,500.

Also: (11) Marudai 11,300 / 11,400. (13) Nagano Miso 9,500 / 9,450. (16) San Jirushi Jozo 8,750 / 1,700. (25) Sendai Miso Shoyu 4,900 / ? (they export to Westbrae).

The total amount of miso produced in Japan by all companies was as follows by year (in tonnes): 1993–561,259. 1994–540,390. 1995–539,427. 1996–542,077. 1997–542,238. 1998–548,750. Address: Japan.

2476. Brown, Lynda. 1998. The shopper's guide to organic food. London: Fourth Estate. xiii + 370 p. 20 cm.

2477. Kennedy, Gordon. 1998. Children of the sun: A

pictorial anthology from Germany to California 1883-1949. Ojai, California: Nivaria Press. 192 p. Illust. (some color). Index. 22 cm. [34 ref]

• **Summary:** A fascinating, very original and important book. Starting in the 1880s in Germany, four very interesting reform movements that prefigured the Western Hippie / counterculture movement of the 1960s began: (1) *Wandervogel* (free spirits / migrating birds). (2) *Naturmenschen* (natural men and women). (3) *Lebensreform* (life-reform, esp. vegetarianism, natural medicine, abstinence from alcohol, clothing reform, nudism). (4) *Monte Verita* (mountain of truth; the community at Ascona, Switzerland). This cultural Renaissance exerted its greatest influence in Europe in Germany and Switzerland up until the start of World War I in 1914. Remarkably, a number of the key figures came to America, and especially to southern California, where they were the pioneers in the movements begun in Europe and in the related fields of organic foods, natural foods, raw foods, vegetarianism, nature cure, naturopathy, drugless medicine, nudism / nakedness, and a return to nature. Packed with interesting photos and illustrations (especially by Fidus) in both black-and-white and color.

Contents: Acknowledgments. Prologue. Louis Kuhne (author of *New Science of Healing*, 1883; on 10 Oct. 1883 he opened his "International Establishment for the Science of Healing without Medicine or Operations" in Leipsic [Leipzig], Germany. Enlarged in 1892, 1901, and 1904, it grew to be very large and successful, and had a fruit orchard on the property). Karl Wilhelm Diefenbach. Fidus (born Hugo Hoppener). Adolph Just. Gusto Graser. Hermann Hesse (he lived in a cave with his teacher, Gusto Graser, in the summer of 1907 in the mountains near Ascona, Switzerland). Lebensreform. Naturmenschen. Ascona. Richard Ungewitter. Wandervogel (Founded in 1895 by Hermann Hoffmann in Steglitz, a suburb of Berlin. A youth movement that was both anti-bourgeois and Teutonic in character it had 45,000 members by 1911 and 50,000 by 1914. They sought communion with nature, with the ancient folkspirit, and with one another. Their camps led to the youth-hostel movement when in 1907 Richard Schirmann opened the first hostel in Altena, Germany). Dr. Benedict Lust (1892–Came to America from Germany. 1896–Returned after being cured of tuberculosis in Germany by Father Sebastian Knapp. ca 1901–Opened his Yungborn retreat in Butler, New Jersey on 60 acres of hills, forests, and fruit orchards. 1901 March 1–Established the American School of Naturopathy in New York City; it was the starting point for hundreds of America's health teachers, incl. Paul Bragg and Herbert M. Shelton. 1902–Founded the Naturopathic Society of America, which in 1919 was renamed American Naturopathic Association. He soon became known as the Father of Naturopathy in America. He started the Nature Cure Publishing Co. in Butler, New Jersey, and translated most of the German

health classics into English. He was hounded constantly by the New York Medical Association and was arrested 16 times—from 1899 to 1921—by New York authorities; over 800 naturopathic doctors were arrested during a 12-year period, as well as many chiropractors and Christian Scientists. 1925 he published *Nature's Path* magazine).

Dr. Carl Schultz (arrived in California in 1885 from Germany at age 36 to establish himself as the “Father of Naturopathy” in California. By 1905 he had created the largest “alternative health empire on the West Coast”—p. 134).

Bill Pester (arrived in California not long after 1906, at age 19, from Saxony, Germany—to avoid military service. Settled in Palm Canyon in the San Jacinto Mountains near Palm Springs and lived in a palm hut he built by a stream and palm grove. He lived on Cahuilla Indian land, with permission from the local tribe which greatly admired him. His name even appeared in the 1920 U.S. Census with the Indians. Was the first of the “nature boys” and a mentor to many others—a new breed of Californian).

Arnold Ehret (arrived in California in 1914 from Switzerland. Wrote many books on fasting).

John T. Richter and Vera Richter (Both vegetarians. 1917—Moved from Minneapolis, Minnesota, to Los Angeles and opened the first of three Eutropheons, live-food vegetarian cafeterias in Los Angeles. 1925—*Mrs. Richter's cook-less book*, by Vera Richter published in Los Angeles. 1936—*Nature—The healer*, by John Richter published in Los Angeles. Their most important contribution was their live-food cafeterias, which lasted for over 25 years.

“California's Nature Boys {p. 166}, the first Americans to adopt the lifestyle and philosophy of the German *naturmensch* and *lebensreform*, were all employed at the Eutropheon, and were greatly influenced by Richter's ideas”—p. 156).

Hermann Sexauer (1907—Arrived in American from Germany. 1915—Moved to Santa Barbara. 1934—Sexauer Natural Food Shop opened on Anapuma St. in Santa Barbara—and for 16 years was the only health shop in Santa Barbara. He was a vegetarian). Maximilian Sikinger (1935—Left Europe for the USA, gradually making his way to California. 1941—Began to winter in Tahquitz Canyon. Lived and traveled with the Nature Boys who valued his ideas. 1943—Purchased some property in Santa Monica Mountains. 1946—His book *Classical nutrition* published). eden abbez. Gypsy Boots. Epilogue.

The Epilogue begins with a beautiful 1828 quotation from Goethe about loving and practicing the truth: “The chief thing is to have a soul that loves the truth and harbors it where it finds it. And another thing. Truth requires constant repetition because error is being preached about us all the time and not only by isolated individuals but by the masses. In newspapers and encyclopedias, in schools, universities; everywhere error rides high and basks in the consciousness

of having the majority on its side.”

It then continues: “As the decades passed many of the alternative values introduced by the Germans gradually became interwoven into the fabric of the American mainstream, while the causal factors of this cultural infusion have been reduced to media morsels of historical amnesia and cultural cliches.

“For many of these immigrants, California was the country of the future, and they saw themselves as pioneers helping to lead to a new society, by transplanting and nurturing the most valuable ideas from their homeland into their new dreams for America.

“The real reason these groups never fade away is because they have always been here—a perennial sub-culture.” The Volkswagen Bus, whose first prototype appeared in 1949, was an expression of the *Wandervogel* philosophy of traveling and sleeping in your own vehicle.

Note: Much of the information, plus many of the color photos and illustrations, can be found (March 2005) at the website: www.hippy.com. Address: California.

2478. Zipern, Elizabeth; Williams, Dar. comps. 1998. *The tofu tollbooth*. 2nd ed. Woodstock, New York: Ceres Press/Ardwork Press. vi + 250 p. Illust. 21 cm.

• **Summary:** The title of this book is probably a take-off on “The Phantom Tollbooth,” a classic by Norton Juster (1961). This is not a book about tofu—although most of the stores listed here probably offer tofu. Rather, it is a popular guide to more than 1,000 natural food stores and eating spots—with lots of other cool stops along the way. It was written especially for travelers. All stores have organic produce, unless otherwise indicated. The listings are alphabetically by state, and within each state alphabetically by city name. A good map appears at the start of each state, showing the major roads and numbered cities and towns where natural food stores and eating spots are to be found. For each store is given: Name, address, phone number, and business hours. How to get there by car. Up to 17 symbols indicating such things as: Deli, bakery, cafe, juice bar, salad bar, coffee to go, beer/wine, filtered water machine, nutritionist/herbalist, wheelchair access, bathroom, wheelchair accessible bathroom, independent retail, corporate, co-op, or collective. For many cities there are “hot tips” of places to go and things to see.

The authors strongly advocate organic farming and gardening. Scattered throughout the book are 27 interesting “Organic facts” such as: No. 1. “Support a true economy. Although organic foods might seem more expensive than conventional, conventional food prices do not reflect hidden costs borne by tax payers (as in federal farming subsidies). Other hidden costs include pesticide regulation and testing, hazardous waste disposal and clean up, and environmental damage. Consumers can pay now or pay later. Organic foods are priced for paying now for a more sustainable

environment.” A photo shows the two authors seated cross-legged by the roadside.

2479. *Health Products Business*. 1999-- . Serial/periodical. *
 • **Summary:** Continues *Health Foods Business*.

2480. Kushi, Aveline. 1999. Writing a history of Erewhon in Japanese, and Lily Kushi’s diary. Why did Erewhon go bankrupt? (Interview). *SoyaScan Notes*. Feb. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Aveline calls to say that she is writing the story of Erewhon in Japanese and asks if William Shurtleff will send her (free of charge) all his information on the subject, including the many interviews he has conducted. Shurtleff suggests that she call Katherine Ott at the The National Museum of American History (NMAH), at the Smithsonian, and ask her to please order the material. Aveline says that her daughter, Lily, kept a very detailed dairy, starting in about 1965, of all the events related to macrobiotics and Erewhon—including the exact dates that key events happened, including students arriving in Boston.

Shurtleff asks Aveline why Erewhon, once the leading natural foods distributor in America, went bankrupt. First she says they hired a professional accountant, who wasn’t very skilled, and that turned into a big problem. Second there were rumors of people stealing food from the last big warehouse. And third food was sold to Tony Harnett at Bread and Circus at too small a markup, so that Erewhon ended up losing money.

Shurtleff says that he thinks there were more fundamental reasons. Finally Aveline agrees with two of these: (1) Michio was interested in teaching, and not much in running businesses or money, so all of the business responsibilities were given to Aveline. But her main interest was in teaching cooking. (2) Aveline had responsibility for quite a few businesses that were growing very rapidly. She did not have the experience or skills to manage them successfully. In retrospect she believes that after Paul Hawken returned from Japan, she should have given Paul and several other of the talented Erewhon managers (such as Bruce Macdonald) a significant minority ownership of Erewhon. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-232-6869.

2481. Demos, Steve. 1999. The market for non-dairy yogurts and puddings in the United States (Interview). *SoyaScan Notes*. Feb. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** White Wave’s soy yogurt used to be named “White Wave Dairyless.” But in March 1998 the company reintroduced and repositioned the product as “Silk: Dairyless Soy”—still as a spoonable dessert. It had been reformulated, and a tamper-free sealed lid was added. Steve estimates that the U.S. market for non-dairy yogurts is about \$3-\$4

million wholesale or \$6-\$8 million at retail. It is definitely growing at a very healthy rate—more than 30% a year. Silk has about 80% of that market—based on adjusted SPINS data. SPINS gives a somewhat distorted view of reality because it includes only selected distributors (and omits many of the biggest distributors such as Tree of Life, Stow Mills, etc.), and selected natural food stores—from which the information is extrapolated. Today there is only one major competitor (Nancy’s of Oregon), and one small competitor (he forgets the name) that sells mostly in the Boston and New England markets. Soy yogurt is a big, important product for White Wave, which sells 100,000 units or more of Silk soy yogurt per week. The company sells more units of tofu, but the tofu generates less profit per unit and requires a huge investment in money and factory space. Yet the company’s flagship product is Silk Soymilk—which is number one in both units sold and revenues earned. “Silk is our grand slam.”

Ted Nordquist is expected to introduce a new soy yogurt at the Anaheim show next month under the WholeSoy brand. Steve thinks it is being made at Brown Cow in Petaluma, California.

Jonathan Gordon reformulated White Wave’s soy yogurt shortly before he left—and he did a good job except for the stabilization. When you make soy yogurt that is set in the cup, then you stir with a spoon, it doesn’t fracture smoothly like dairy yogurt. Woody Yeh’s SoyaLatté, for example, was an excellent product, but it didn’t look that good when you ate it. Making a good soy yogurt is very difficult; there are many small tricks. Soy yogurts are almost always pre-mixed, what is called European-style. You first make the soy yogurt, then put it into huge blenders which effectively homogenizes the consistency, causing a loss of body in the product. So you must reconstitute the body. After Jonathan left, White Wave hired an outside firm to help reestablish the stabilization system. Now White Wave has a “nice, fluffy, reconstituted soy yogurt structure again.”

White Wave has two sizes (SKUs) of plain (unflavored) soy yogurt: a quart and a 6-ounce cup. The quart sells phenomenally well. It provides strong support to the premise that flavored yogurts ultimately bring many people to plain. About 15-20% of all White Wave’s soy yogurt (by volume) is sold unflavored—even though it is the same price as the flavored products, and it is premixed just like the flavored products. Many people like to use the plain quart in home cooking. They may sweeten it with maple syrup, etc. Every week, the plain sells as well as the most popular flavor

A close relative of soy yogurt is soy pudding (or soy custard). Both are basically spoonable desserts, but the pudding is not acidified, and therefore probably has to be sold in an aseptic package. Steve believes the soy pudding market is “about to explode” and this category will upstage soy yogurts in the future. Steve would bet that at least three new soy puddings (aseptically packaged) will be introduced within 60 days. Steuben Foods is coming out

with one—probably in chocolate and vanilla flavors—probably at Anaheim in March. Jonathan Gordon would love to develop one but he has signed a non-compete agreement. The pudding is basically a co-packed product; nobody would put an aseptic system just for that—at least at the beginning. Finding low-acid aseptic packers is easy. White Wave is very focused on developing a Silk soy pudding that will be aseptically packaged but sold refrigerated—next to the other Silk products. “This product will be huge! It could be the biggest soy product—after you get acceptance of the word ‘soy.’ But it will be a long time before its sales could pass those of Silk Soymilk.” Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2482. Jack, Alex. 1999. *Let food be thy medicine: 750 scientific studies, holistic reports, and personal accounts showing the physical, mental, and environmental benefits of whole foods.* 3rd ed. Becket, Massachusetts: One Peaceful World Press. 304 p. Index. 23 cm. [8 ref]

• **Summary:** This book, organized alphabetically by subject, is a very original and creative source of information, with hundreds of interesting bibliographic references. The author believes in a natural, whole-foods diet. Includes the following subjects: Alternative medicine, amasake (amazake), Asia Diet Pyramid, azuki beans, bovine growth hormone, cancer, cholesterol, coffee, complex carbohydrates, dairy food, estrogen, evolution, exercise and fitness, fats, fiber, genetically engineered food, genetic model of health and disease, genistein, global warming, heart disease, hiziki, hunza diet, isoflavones, Japanese diet, kombu, kuzu, lignans, longevity, macrobiotics, Mad Cow Disease, meat, menopause, microwave cooking, miso, mochi, natto, nori, osteoporosis, Paleolithic diet, phytochemicals, phytoestrogens, polyps, potatoes, Price–Weston, prostate cancer, protein, rice, Schweitzer–Dr. Albert, sea vegetables, seitan, sesame, shoyu, soy foods, tempeh, tofu, umeboshi plum, vegans, vegetarians, wakame, wartime restricted (diets, incl. World War I and II), whole grains. Resources. About the author. Address: Box 10, Becket, Massachusetts 01223. Phone: (413) 623-5742.

2483. Lamp, Greg. 1999. Soyfoods health claim nears FDA okay: Heart-risk labeling should boost soybean demand. *Soybean Digest*. Feb. p. 68.

• **Summary:** Funds from the soybean checkoff helped generate the research and information that was submitted to the FDA. The process began in 1995 with financial assistance from the Illinois Checkoff Board and the United Soybean Board (USB). Roughly \$1 million in soybean checkoff funds were invested in the project. “A coalition to develop the soy health claim involved ASA [American Soybean Association], USB, state checkoff boards and industry partners, such as Protein Technologies International, Central Soya and the Archer Daniels Midland Company.”

An estimated 20% of all Americans (54.2 million adults) have high blood cholesterol levels—over 240. ASA predicts that if each of these people consumed 25 grams (less than 1 ounce) of soy protein each day, annual demand for soybeans would increase by more than 55.2 million bushels.

Consumption of U.S. soybeans in the United States now totals about 1.2 billion bushels a year.

A color photo shows two 3-shelf racks of American foods. Those on the left rack already contain soy protein: Mori-Nu Tofu, Take Care, GeniSoy bars, Harvest Burgers, Galaxy Veggie Slices, SoNice soymilk, Edensoy, Morningstar Farms [Worthington Foods] meat alternatives, etc. Those on the right rack are foods with potential to have soy protein added: Cream of Wheat, Raisin Bran, puddings, Snackwell’s cookies, etc.

2484. Soyfoods Association of North America. 1999. *Soyfoods Once a Day for Life (Portfolio)*. Washington, DC. 21 inserts. Feb. 15. 28 cm.

• **Summary:** The following eight news releases are from the Soyfoods Association: (1) Soyfoods Association of North America celebrates April as Soyfoods Month (2 p.). (2) Soyfoods sales soar with increased consumer acceptance (2 p.). (3) Soyfoods Association of North America—Industry insiders (ask the experts, 1 p.). (4) Start young enjoying soy (ideas for kids, 1 p.). (5) 1999 Soyfoods Month sponsors (a half-page profile of 11 companies: Archer Daniels Midland, Galaxy Foods Co., Hain Food Group, Lightlife Foods, Inc., P.J. Lisac & Associates, Inc., SunRich, Inc., Tetra Pak, Vitasoy USA Inc., White Wave, Inc., Worthington Foods, Inc., Yves Veggie Cuisine; 6 p.) (6) Soyfoods Association of North America product list (lists soyfood products of 15 companies, many of whom are sponsors of “April is Soyfoods Month,” 11 p.). (7) Soyfoods Association of North America member list (52 companies, 1 p.). (8) Dear member of the press, from Allan Routh, President, SANA (1 p.).

Product brochures from the following companies are also included: (9) Sweet Soybeans—Hearty & Natural Edamame, from SunRich. (10) Vitasoy soymilk, (11) Fresh, ready to heat entrées, from Yves Veggie Cuisine. (12) Go Veggie (dairy alternatives), from Galaxy Foods. (13) Lisanatti—The good health cheese alternative, from P.J. Lisac & Associates (Clackamas, Oregon). (14) Trust the protein authority, from ADM. (15) Fact sheet, from White Wave. (16) Nasoya tofu. (17) Veggie recipes, from Galaxy Foods. (18) Westsoy recipes, from Westbrae Natural. (19) Eating healthy can be soy easy, from Lightlife. (20) The change will do you good, from Morningstar Farms. (21) Sweet beans—Vegetable soybeans, from Sno Pac. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

2485. Tree of Life, Inc. 1999. We’re always coming up with new ways to use the ol’ bean (Ad). *Natural Foods Merchandiser*. Feb. p. 71.

• **Summary:** This full-page color ad shows (around the outside) photos of five different tofu dishes. The text begins: “If your customers are getting tired of tofu, perhaps you’re not stocking the right brand! From traditional to reduced fat to baked and smoked varieties, you’ll find more Tree of Life tofu choices than there are days of the week. And most are already seasoned and cooked. So all your customers have to add is a little imagination and voilà—dinner is served.” At the center is one color photo showing 12 tofu products, each in attractive packages. Below that are the names: “Organic Firm Style, Reduced Fat Firm Style, Water Pack Firm Style, Baked, Savory Baked, Ready Ground, Savory Garlic Ready Ground, Hot ‘N Spicy Ready Ground, Smoked, Hot ‘N Spicy Smoked, Lemon Garlic Smoked (New), and Herbs & Spices Smoked.” At the right center, in a circle, is written: “Congratulations NFM—20 years of excellence.” Website: www.treeoflife.com.

Note: A similar ad, titled “Looking for ways to use the ol’ bean?,” appeared in May-June 1998 in *Natural Health*. The color photo showed 10 tofu products. Address: P.O. Box 410, St. Augustine, Florida. Phone: 1-800-260-2424.

2486. Berlau, John. 1999. The risky nature of organics: Growing produce in manure raises concerns. *Investor’s Business Daily* 15(227):A1, A24. March 3.

• **Summary:** The risk comes from *E. coli* 0157:H7 found in animal manure. Many people choose organic food to reduce the pesticides in their diet according to Kate Clancy, director of the Agriculture Policy Project at the Henry A. Wallace Institute for Alternative Agriculture in Greenbelt, Maryland.

Note: The source of this information criticizing organically grown produce is Dennis Avery of the Hudson Institute in Indianapolis, Indiana. Avery is the author of *Saving the Planet with Pesticides and Plastic* (Hudson Institute, 1995).

2487. Warmuth, Manfred. 1999. Problems with organically grown foods in America (Interview). *SoyaScan Notes*. March 14. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Manfred was born and grew up on a farm in Germany. His brother, who has been an organic farmer in Germany for many years, gets furious when he sees what passes for organically grown foods in the USA. The main problem is the way Americans use manure on organic crops. They are allowed by existing standards to get manure from any source—such as from chickens which are raised in the conventional way and fed antibiotics and hormones. The key question is: How much of each of these undesirable components of manure break down before the manure is spread on organic fields? A related question is: Wouldn’t chemical fertilizers (NPK) be better than many kinds of manure. Manure is also a potential source of *E. coli*.

His brother says that European organic standards are much stricter than their American counterparts, and that

imported, less expensive American organic foods are driving out higher quality European organic foods. European farmers use green manure (from legumes) more than Americans. Address: Professor, Computer Sciences, 111 Overlook Dr., Santa Cruz, California 95060. Phone: 831-425-0461 or manfred@cs.ucsc.edu.

2488. Murrills, Angela. 1999. Tofu can be both tasty and tantalizing: March is the month to celebrate one humble derivative of the soybean, which is exalted at a new Kits eatery. *Georgia Straight (Vancouver, BC, Canada)*. March 11-18. p. 49.

• **Summary:** April is “Tofu Month” in Canada. At a dinner cohosted by the Pink Pearl Chinese Restaurant and Sunrise Soya Foods, the writer ate course after course of “terrific Chinese food—smoked mushroom roll, Rainbow seafood soup, and, the kicker, a satanic chocolate mousse—all of it based on tofu.” She became a convert. When the Joe family began making tofu 43 years ago, their only market was Chinatown. Lifestream, which used to be at Bernard Street and West 4th Avenue, was the first non-Asian store to carry it. Now soy products are everywhere.

Now Yves Potvin, the chef from Quebec, has started a restaurant serving meatless food on West Fourth Avenue. The food is great. At the end of April, he plans to open a second restaurant, at Granville and West 11th Avenue.

2489. Great Eastern Sun. 1999. Premium organic products [Mail order catalog]. Asheville, North Carolina. 32 p. 28 cm.

• **Summary:** Inside front cover: “The Great Eastern Sun story: This fall marked the seventeenth anniversary of Great Eastern Sun’s founding as an importer, distributor, and manufacturer of natural and organic food. Great Eastern Sun is a Buddhist term for the rising sun of the new dawn of mankind’s future enlightenment. Since we intended then, as we still do now, to contribute to the encouragement of international understanding through the promotion of international trade, we felt that this name expressed well the large vision of this very small company.

“An important source of inspiration for us has been the Macrobiotic way of life as propounded here in America by many great teachers, most prominently by Michio and Aveline Kushi. The Kushis have always sought to use their dietary philosophy not only to cure sickness, but also as a tool with which to encourage planetary integration.

“Great Eastern Sun originally came into being as the sales and distribution arm of the American Miso Company. We remain the exclusive marketer, under our Miso Master® brand, for AMC products in North America. From Mitoku in Japan, we receive all of the Japanese products in our Emerald Cove® Organic and Traditional Sea Vegetables, Emperor’s Kitchen® Organic and Traditional Condiments and Specialties, and Macro Pasta® Organic Pasta lines. We bring in most of these products in bulk and bottle or package

them into consumer sizes in our production department.

“We eventually decided to widen our perspective by developing other product lines. Our first venture was to bring out our Sweet Cloud® Organic Brown Rice and Organic Barley Malt Syrup Sweeteners. Shortly thereafter we began to convert the premium Japanese tea we purchased from Mitoku into our Haiku® Organic Twig (Kukicha), Green (Sencha), and Roasted Green (Hojicha) Teabags. After these met with initial success, we produced Great Eastern Sun® Organic English Breakfast, Earl Grey, Orange Spice, Darjeeling, and Ceylon Highland Teabags,

“The last two years have seen the largest new product offerings in GES history. We started off with Sweet Cloud® Organic Raw Cane Sugar, the only organic lightly refined product with real sugar taste. Next we presented our innovative new flavored twig and green tea blends, Haiku® Organic Raspberry Twig, Black Currant Twig, and Ginger Plum Twig, Citrus Supreme Green, Island Breeze Green, and Moroccan Mint Green Teabags, as well as our Haiku® Organic Sophisticated Roast Barley Teabags. This fall we are following up this success with our new astrology-themed herbal tea blends, Mandala® Organic Venusian Sunset, Spheremint, Spiceship, Moonglow, and Red Planet Refresher Teabags.

“In late 1996 we began manufacturing the first of what we hope will be many new products hot out of the new GES experimental kitchen: Emerald Cove® Sesame Hijiki, Ginger Arame, and Spicy Kombu Sea Vegetable Salads, ready-to-eat sea vegetable salads and Emperor’s Kitchen® Organic Sauces of the Orient in scrumptious flavors: Tokyo Teriyaki, Kyoto Wasabi Ginger, Oriental Vinaigrette, Canton Sweet and Sour, Hunan Hot and Spicy, and Bangkok Sesame.

“The biggest continuing news story at GES is that we are approximately 85% organic and we will continue to move as rapidly as possible toward our goal of producing only certified organic products. All Miso Master® Misos, Haiku® and Great Eastern Sun® Teas, and Sweet Cloud® Sweeteners have always been certified organic, while all Macro Pastas® were converted to certified organic three years ago. Over the last three years, Emperor’s Kitchen® Tamari, Shoyu, Umeboshi Plums, Kuzu, Brown Rice Vinegar, Toasted Sesame Oil, Gomashio, and Sesame Sprinkle have all been changed over to certified organic. Recently our Canadian Dulce and Emerald Cove® Arame and Hijiki have been certified organic.

“Whether it be salt from Mexico and France, sugar from Paraguay and Brazil, tea from India, Sri Lanka, and Tanzania, sea vegetables from Canada and Japan, brown rice syrup from Belgium, or spearmint from Morocco, Great Eastern Sun is committed to combing the four quarters of the globe to bring you the finest organic food this planet has to offer, processed with the care and commitment that you have come to expect.” Address: 92 McIntosh Road, Asheville, North Carolina 28806. Phone: 704-252-3090.

2490. Mangels, Reed. 1999. *Vegetarian Journal’s* guide to tofu and tempeh. *Vegetarian Journal (Baltimore, Maryland)* 18(2):20-21. March/April.

• **Summary:** A full-page table gives the nutritional composition of many different brands and products per 3 ounce serving. Data is given for calories, protein, fat, calcium, and iron. Tofu brands/makers include: Azumaya, Kikkoman, MoriNu. Nate’s Easy Tofu (smoked), Nasoya, Smoke & Fire, SoyBoy Baked and seasoned (all varieties), White Wave, Whole Foods. The three tempeh makers are: Lightlife, SoyBoy, and White Wave.

For tofu: Calories range from 30 (MoriNu Lite) to 130 (Nate’s). Protein ranges from 20 gm (White Wave baked) to 4 gm (MoriNu Soft). Fat ranges from 1 gm (MoriNu Lite) to 9 gm (White Wave baked). Calcium ranges from 600 gm (Nate’s) to 20 gm (MoriNu–4 types). Iron ranges from 0.7 gm (MoriNu–4 types) to 9 gm (Nate’s). Address: PhD, RD.

2491. Smith, Patricia J. 1999. The Natural Products Expo at Anaheim and a macrobiotic award (Interview). *SoyaScan Notes*. April 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Expo at Anaheim this year was the biggest ever, attracting some 30,000 people. It was so crowded, one could barely walk down the aisles. “The soyfoods category has just exploded. Everyone was excited; you could feel the buzz.” Patricia collected lots of printed information for Soyfoods Center.

Patricia also organized the first “In the Spirit of Macrobiotics” award, which was presented to Tom DeSilva of Los Angeles, who was a pioneer with Erewhon, Los Angeles, and has continued to run a very successful natural foods retail store. Forty people came to honor him at drinks, and 16 stayed for dinner—including Chuck Verde of Erewhon, Lenny Jacobs, and Michael Potter. The award focuses on the business side of macrobiotics.

Update: 1999. Nov. 19. Patricia just received an e-mail from Norio Kushi saying that Lima Ohsawa died this month in Japan.

Update: 2000 May 2. There was a continuing explosion of soy products at the Natural Products Expo at Anaheim. She saw former macrobiotic friends, Rus Postel and Francis Pintel (who ran the Erewhon warehouse in Los Angeles). Jacques DeLangre has died, and his charming wife Yvette remarried to a childhood sweetheart and now lives in Louisiana, where she still runs the Grain and Salt Society. Patricia wishes that Trader Joe’s would take a stand on genetically engineered foods. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

2492. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part V. Rise and fall during 1998 (Interview). *SoyaScan Notes*. April 21. Conducted by

William Shurtleff of Soyfoods Center.

• **Summary:** One of the former directors, Robert Landori-Hoffman, asked for and was given the exclusive responsibility to finalize the funding for that facility. He indicated to the board that all the funds were in place, it was a “done deal,” and they could go ahead and start development. So they began to “load the land” and engineer the plant, get the building permits, order the very expensive equipment (five packaging lines, holding and blending tanks, compressors, boilers, etc.), and pay deposits on that equipment. They were ready to cut the floors open and put in the drainage. Everything looked great. But by late January 1998 the money still hadn’t come in. IPC was in the middle of launching its United States operations, and they had listings (reserved shelf space) in 6,000 U.S. stores in the first 3 months of 1998—Safeway, Albertson’s, etc. Note: First the head office lists the product, then individual stores can order it. Most of the listings were not by way of cash slotting allowances but by way of “free fills” (fill the shelf once for free with each flavor) which is a very minimal slotting fee.

The company was shipping products like crazy (initially for aseptic cartons much more than gable-top), repeat orders are coming, the volume was skyrocketing, but now there are quality and volume problems with Farmland Dairy, their co-packer in New Jersey. All the base soymilk sold in North America was made in the Ottawa (Ontario) plant, and was shipped by tanker trucks initially to Beatrice Foods in Toronto (Ontario) for formulation and packaging (in Tetra Brik cartons), but was soon shipped down to Farmland in New Jersey where it was formulated and packed in Combibloc packages—because their Tetra Packer did not have a reclosable top—which was considered essential for entering the U.S. market. Farmland needed business; they were only packaging for Westbrae (in 2 liter cartons). Soon Farmland was packaging IPC’s refrigerated products as well. The finished product was sent to five distribution centers. The whole system was very inefficient, in part because it is more efficient to ship west than to ship east. For a while, IPC tried to work with Daisy Linda, the old Loma Linda plant in Riverside, California, to have them package refrigerated products, but then Daisy Linda went through a receivership.

The best way would have been to make, formulate, and package the soymilk in one plant on the west coast in Vancouver (British Columbia), and ship it eastward to distribution centers. So everyone in the company began to focus on the director who said that he had come up with the money to build a new plant. It began to look as if he was trying to suck money out of the company, and consult it to death. The rest of the board and management gave him an ultimatum; come up with the money soon or get out.

SoNice was made with organic soybeans and other ingredients and sweetened with agave. It was a pure product with a great taste. When the product was introduced to U.S. chains like Wegmans and Albertson’s, SoNice became the

best-selling soymilk in their store overnight—because of the quality. They did in-store demos as their main form of advertising. They developed an elaborate kit, including a book about the product, for people doing the demos. Brokers and the heads of top supermarket/grocery stores were ecstatic with the product. But they did not have the money to support the rapid expansion. But very soon it will happen again, and SoyaWorld has the money and horsepower (distribution, contacts, etc.) to make an even bigger splash. Dairyworld Foods has many affiliates and friends in the USA; they will soon make and formulate the base, package, and distribute it. SoyaWorld is just a marketing company.

At the same time, the IPC leadership started from scratch, and tried to find new ways of putting together a partnership to raise the money. They talked to various financial institutions, institutional investors, etc. Mr. Broten had made the company very complex in terms of the many companies that he formed; it was like a shell game. It became too complex for potential investors. Plus, Raj Gupta wanted a large share of the final deal. His greed was part of the pool of greed that destroyed the company. Raj has a contract which guarantees him a minimum large income per year (from royalties, etc.); this made potential investors uneasy.

So as orders kept growing like crazy, IPC was unable to raise the money needed to keep up with growth and rationalize their production and packaging operations. They had already used up all their working capital in capital expenditures—as in the deposits on the new building (plus a big mortgage) and on many different pieces of equipment. With no working capital, became very difficult to operate. By May 1998 IPC hit \$1.2 million in sales for the month; but they were able to fill only about 85% of these orders. Then they just ran out of money.

Farmland in New Jersey started to not give IPC packing time, due to financial difficulties. Then came the straw that broke the camel’s back. By July 1997 IPC was on ad in Canada with A&P stores with a 2-liter products; IPC had paid \$25,000 for a huge ad in the A&P newspaper with 2-liter soymilk on special. IPC was producing only refrigerated at that point; the last UHT product was packaged in May. A&P was looking for 10,000 cases of product for this ad, IPC was trying to fill their requirements, but Farmland (who was being prepaid) was flushing the refrigerated UHT soymilk down the toilet, due to packaging problems. On Farmland’s last run, they ruined 13,000 gallons of formulated product—which was all pre-sold. That was the last straw, and the last production run that Farmland ever did for IPC. IPC never sued Farmland, which reimbursed IPC for the lost product. Farmland said it did not have enough holding tanks for processing (since they had their own milk in these tanks); Moreover, their Schmidt processor went down. But IPC lost the \$25,000 it had spent on the A&P ad, then got fined another \$10,000 by A&P for nondelivery of product.

At that point IPC decided to regroup and focus on getting the money to get the new processing and packaging plant into operation. They began talking with everyone they could find about a partnership—from Nestlé to the Alberta Wheat Pool, to Edensoy, etc. Unfortunately the board of directors did not let the people who knew the business best negotiate with other partners for partnering. The board decided to do the negotiating because they represented the shareholders. At one point the board found a firm that would take the company public by raising \$12 million, which would be put into new plant construction and operating expenses, and essentially allow to the company to move full speed ahead, with projected sales for 1998 nearing \$20 million, and skyrocketing into 1999. They wanted the IPO to be at \$1.20 a share. The directors had just finished raising money at \$1.60 a share, and had given their shareholders expectations of a big increase. So they wouldn't accept the deal at \$1.20 a share. Consequently, at the end of July 1998, the company had to shut down its two soymilk making plants in Vancouver and Ottawa, and go out of business. It was a sad ending, caused largely by greed. The board of directors is now down to two people—Eldon Heppner and Ward Yeager—but they are the two that caused most of the problem, partly because they did not understand the industry, and partly because of their interference in the operation of the company. They raised most of the company from small investors, and were among those who held the company back from going public.

In 1 March 1999 George resigned because he disagreed with the deal that the board of directors had struck with SoyaWorld, and he did not want his name to be on the document that was sent to the shareholders offering them this sale. He was the last employee of the company. After a deal is finalized, George would like to become head of global business development, working as a consultant for SoyaWorld, with a free reign to set up new ventures in countries around the world, including in the natural foods market in North America. He does not want to be a production manager. Most of his experience is in sales and marketing; that's what he has done most of his life. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2493. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part VII (Interview). *SoyaScan Notes*. April 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** By now the two members of the board of directors are on their knees, begging Dairyworld Foods (the huge, billion dollar dairy products and food company in Vancouver, British Columbia—the largest in Canada) to come to their rescue. In about 1997 Dairy Foods World and Peter Joe signed a joint venture agreement, which had been

under discussion and negotiation since about 1995 or 1996. As a result of that, Dairyworld Foods created a division named SoyaWorld Foods, which is a 50:50 joint venture between Dairyworld Foods and Sunrise Markets (Peter Joe, in Vancouver, the largest soymilk manufacturer in Canada). SoyaWorld, which is a marketing company for products made by the two other companies, now controls more than 60% of the non-dairy beverage market in the grocery and supermarket trade in Canada—according to A.C. Nielsen statistics. The second largest player is Beatrice (10-13%), followed by Nutrisoy (a UHT soymilk made by Nutrisoya in Quebec), then the imports (Pacific Foods, Rice Dream, Vitasoy, Westsoy, and Edensoy). SoyaWorld presently markets three soymilk products: Sunrise soymilk (a beany-flavored product made and packaged by Sunrise in plastic bottles), Soyganic (a traditional beany-flavored product made by Sunrise with organic soybeans, packaged at Dairyworld in a gable-top carton and sold refrigerated), and So-Good (licensed from Sanitarium Health Food Co. in Australia, formulated and packaged in gable-top by Dairyworld, and based on soy protein isolates). Soyganic and So-Good appeared on the shelves at about the same time in 1997 under the SoyaWorld brand. They distribute those three products extensively across western Canada, and sell them in the dairy case. They are busy expanding, buying up dairies, so that they are now a national dairy, from coast to coast, in Canada. They own the shelf space in the dairy case across Canada, and they have tremendous synergies with other dairy companies in the United States. They use the dairy for distribution; SoyaWorld is really just a little marketing group. They don't want to see SoNice on the market because it outsold them 7 to 1—because it was a better product.

Now IPC is in such a mess, with so much debt (about six million Canadian dollars). Of this, about \$2.5 million is unsecured to creditors. What could happen that would allow IPC to move forward? (1) A public company could buy the assets of IPC (the equipment, the brand, the goodwill)—not IPC itself; George could get rid of most of the debt with shares in a public company, so the company would not need a great deal of cash. (2) SoyaWorld could buy IPC; since August 1998 they have been trying very hard to do so. They are making a very complicated, long-term offer, with long-term royalties, etc. Both ProSoya (Raj Gupta) and IPC are tied into the deal. The amount of cash that would be put on the table at closing is quite small—not even enough to pay off the secured creditors, let alone the unsecured creditors. George is not happy with this deal, but there is not a lot he can do about it—except to keep on trying to scuttle it—as by talking to Horizon, the organic dairy. George feels very frustrated; he is cooperating with the deal to a degree, but at the same he's looking for a better deal. Yet he thinks the odds are 90% that IPC's assets will be owned by Dairyworld within the next few weeks or months. If it goes through (the closing date is May 4) George will at least get his back

pay—he has not been paid since last August—but he would lose a lot as a shareholder. George does not know whether or not he has a future with SoyaWorld if the deal goes through—but he plans to be in the soy business somewhere. Since George knows more about making IPC's soymilk than any other person in the company, he is one of IPC's most valuable assets—yet SoyaWorld has not offered him a firm employment contract. SoyaWorld hopes to buy out Raj Gupta and his patents, and get him out of the picture. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2494. *SoyaScan Notes*. 1999. Soymilk, rice milk, and almond milk retail prices at Trader Joe's in California, 30 April 1999 (Overview). April 30. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. Note: 2 quarts = one half gallon. Westsoy Plus all flavors \$2.19/half gallon (= \$1.10/quart). Westbrae Natural Lite vanilla or plain \$2.19/half gallon (= \$1.10/quart).

Soy-Um original or vanilla \$1.39/quart. Soy-Um three-pack (250 ml each) \$1.39 for three.

Pacific Foods Fat Free Soy Drink vanilla or plain \$1.29/quart.

Trader Joe's Fresh Non Dairy Soy Beverage \$2.69/half gallon (= \$1.35/quart—gable top carton sold refrigerated).

Galaxy Veggie Milk \$1.99/quart.

Westbrae Rice vanilla or plain \$2.19/half gallon (= \$1.10/quart). Rice Dream Enriched original or vanilla \$1.49/quart.

Breeze almond milk original, vanilla or chocolate \$1.59/quart.

Omitting the highest price soymilks, the price of soymilk ranges from \$1.10/quart for half gallon cartons to \$1.39/quart for quart cartons. A fair average price would be about \$1.25/quart.

2495. *Monthly Insight (Galaxy Foods, Orlando, Florida)*. 1999. Galaxy Foods creates Nutraceutical division. April. p. 1.

• **Summary:** The new division will be headed by Mike Rapport, who has worked with General Nutrition Centers for the last 20 years, most recently as president and chief operating officer of GNC Canada. The division's flagship product will be Galaxy's Ultimate Smoothie, which is available in five flavors including chocolate, vanilla, orange, chococcino, and strawberry. Note: The Ultimate Smoothie is a dry mix product. "A nutraceutical product is one which improves overall well-being while fulfilling daily functional needs." Address: Galaxy Foods Company, 2441 Viscount Row, Orlando, Florida 32809. Phone: 800-441-9419 or 407-855-5500.

2496. Traynor, Marty. 1999. Consider source of organics detractor. *Natural Foods Merchandiser*. April. p. 7.

• **Summary:** Newspapers and magazines in the USA have recently been running articles that question the benefits of organically grown produce, saying that it is dangerous and potentially lethal.

Marian Burros, in a recent column in *The New York Times*, noted that the source of this bad publicity is Dennis Avery of the Hudson Institute in Indianapolis, Indiana. Avery is the author of *Saving the Planet with Pesticides and Plastic* (Hudson Institute, 1995). In a recent issue of *American Outlook* magazine (fall 1998) he states that people who eat organic produce are eight times as likely to get *E. coli* (O157:H7), and that organic produce is a leading source of salmonella, campylobacter, and listeria.

Why is Avery so critical of organically grown food? It may have something to do with the Hudson Institute, a think tank which is funded by such corporations as Cargill, ConAgra, DuPont, Monsanto, and the National Agricultural Chemical Association.

Another group critical of organics is the American Council on Science and Health, also funded by Monsanto and others.

2497. Conquergood, George. 1999. Horizon plans to launch a soymilk product (Interview). *SoyaScan Notes*. May 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Horizon, the company that has become famous for its organic milk, plans to launch a soymilk fairly soon. When George met with them they asked him several times: "Are you connected with Ted Nordquist of TAN Industries?" He told them he was not. The co-founders of Horizon (in 1992) are Paul Repetto and Mark Retzloff. Mark has been in the natural foods industry for 25 years. He was with Eden Foods during its early days (1969-71), and in 1973 was one of the co-founders of Rainbow Grocery in Denver, Colorado. A food co-op and natural food storefront, it was the first of the new breed of natural food stores in Denver. Mark was also once a devotee of Guru Maraji, and lived in an ashram. George cooked with Mark in 1977 at Guru Maraji's big festival in Orlando, Florida. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2498. Bramblett, Billy. 1999. Wildwood's good, long-standing relationship with Safeway supermarkets in California (Interview). *SoyaScan Notes*. May 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Wildwood first started selling its products in Safeway supermarkets in California in late 1987 or early 1988. Safeway was very nice to Wildwood. They allowed Wildwood to "cherry pick," meaning to pick 30

the stores they wanted to service themselves. Rock Island will service any other ones that Wildwood doesn't want to serve. Wildwood picked the stores based on their location and demographics, and on Wildwood's driving routes and schedules. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

2499. Bramblett, Billy. 1999. Update on Wildwood Fairfax and Wildwood Santa Cruz (Interview). *SoyaScan Notes*. May 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Wildwood no longer makes any sandwiches. The 65 people employed at the Fairfax facility include all of Wildwood's driving staff, accounting staff, production staff, and support staff. Santa Cruz is basically a production facility, though three drivers and several administrators operate out of Santa Cruz. Santa Cruz produces all the tofu, and the YoSoy traditional soymilk. Second generation products made at Santa Cruz include the bakes, the burgers, and the tofu cutlets. If it comes in a vacuum-packed bag or a water-pack tub it is made in Santa Cruz. If it comes in a cup (as 18 products do), it is made in Fairfax—including 5 flavors of braised tofu, 2 tofu salads, etc.

Wildwood believes that it makes the best-tasting tofu on the West Coast. It has also been innovative in developing many delicious products, which some other companies are now trying to imitate.

Wildwood has long been in a big crunch making 30,000 lb/week of tofu; about half of this is sold as tofu and half goes into making second generation products. But they could sell twice that much tofu if they had the capacity to make it.

Last year Wildwood started making Baba Ganooj for Trader Joe's (TJ). The project started as a sort of side deal to the Hummus, making maybe 700 units a week. Within a month, Wildwood was making 5,000 units a week for TJ. Bill had to add two shifts and make many other arrangements. TJ liked it and asked what other products Wildwood had. They came and visited, and Wildwood showed them its various products. TJ then asked if Wildwood could make baked teriyaki tofu for them. Billy agreed on the condition that they not order more than 5,000 units/week; TJ agreed. Their buyer for that section is a really great person named Kimberly Sprinkle Kruell, who Wildwood trusts. She told Wildwood that she and TJ like Wildwood and their products, and want to work with the company.

So in an effort to make more "secondaries," Wildwood went to tofu makers it knows and trusts, and ordered a pallet (several thousand pounds) of tofu. They couldn't do it; they were unable to come up with the volume, the quality, and the shelf life that Wildwood needed. So Wildwood concluded that they have to make the tofu themselves.

Wildwood's fresh soymilk in gable top cartons is now selling well. It looks like they might be doing that for Trader Joe's too. "If that happens, it's gangbusters—outstanding!"

Wildwood was working with Ted Nordquist, who

was making their soymilk base; he and Jeremiah have been friends for more than twenty years. But Wildwood "divorced" Ted and went to another supplier of soymilk base. He is very good at making non-dairy products, but he's a character, and working with him is very difficult. He is an enigma, and he doesn't seem to know what he wants. He and Wally Rogers were buddies and partners for many years, and all of a sudden they just split up. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

2500. Conquergood, George. 1999. SunRich, IPC, and soymilk (Interview). *SoyaScan Notes*. May 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** SunRich makes all the soymilk sold by Westbrae and George believes they make soymilk for many other companies. They have done so for at least several years. At one point in 1998 Lorne Broten negotiated with Allan Routh, president of SunRich, about buying IPC—or at least coming to their financial aid. Allan was interested in buying the "SoNice" brand—which is more precisely the "ProSoya SoNice" brand since "So Nice" cannot be registered as a trademark by itself. Allan wasn't interested in licensing or buying the ProSoya process; he apparently didn't want to pay Raj Gupta any money. Allan sent some of his soymilk to George; he wanted to know if George could formulate the SoNice product with his soymilk. George did so and was very impressed. In fact, he thinks it tastes very similar to that formerly made by IPC using the ProSoya process—though not quite as good, perhaps because of the formulation.

How would ProSoya find out if SunRich or any other company was using the patented ProSoya process? Raj Gupta says he can do a "footprint" of the product's flavor profile of any soymilk product [perhaps using chromatography] and tell in that way—with only the commercial product for evidence. But George has never seen any proof of this. If Raj is right, he would not have to send any "patent police" into a competitor's plant. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2501. **Product Name:** Organic Miso Tamari.

Manufacturer's Name: American Miso Co., Inc.

Manufacturer's Address: 4225 Maple Creek Rd., Rutherfordton, NC 28139. Phone: 828-287-2940.

Date of Introduction: 1999 May.

Wt/Vol., Packaging, Price: 5 oz or 10 oz bottle.

How Stored: Refrigerated.

New Product—Documentation: Talk with John Belleme. 1999. Nov. 18. This product was first sold in about May 1999, but it did not appear in the Great Eastern Sun catalog until November.

2502. Kucinich, Dennis J. 1999. In honor of Michio Kushi, Aveline Kushi, and macrobiotics. *Congressional Record* 145(79):June 7.

• **Summary:** Spoken on the floor of the U.S. House of Representatives (Washington, DC); 106th Congress, First Session.

“Mr. Speaker, I rise today to recognize Michio Kushi, the 20th century developer of macrobiotics. This diet is the catalyst for many of the mainstream dietary and lifestyle changes currently taking place.

“The Standard Macrobiotic Diet has been practiced widely throughout history by all major civilizations and cultures. The Diet centers on whole cereal grains and their products and other plant quality [foods]. Twenty-five to thirty percent of daily food consists of vegetables and the remaining intake is comprised of soups, beans and sea vegetables. Consumption of products such as meat and dairy products are typically avoided Michio Kushi, the founder of macrobiotics, was born in Japan and graduated from Tokyo University, the Faculty of Law, Department of Political Science. Influenced by the devastation of World War II, he decided to dedicate his life to the achievement of world peace and the development of humanity.

“Kushi and his wife Aveline introduced macrobiotics to North America in the 1950s by establishing by the first macrobiotic restaurant in New York In the 1960s the Kushis moved to Boston and founded Erewhon, the nation’s pioneer natural foods distributor and manufacturer. Over the last thirty years Michio Kushi has taught throughout the United States and abroad giving lectures and seminars on diet, health, consciousness and the peaceful meeting of East and West. In 1978, the Kushis founded the Kushi Institute, an educational organization for the training of future leaders of society, including macrobiotic teachers, counselors, cooks and lifestyle advisers. In 1986 Michio Kushi founded One Peaceful World, an international information network and friendship society of macrobiotic friends, families, business, educational center, and other associations to help guide society and contribute to world health and world peace. In the 1980s Kushi began meeting with government and social leaders at the United Nations, the World Health Organization, and the White House. The health benefits of a macrobiotic diet have attracted the attention of leading medical professionals. The American Cancer Society reports that a macrobiotic diet may lower the risk of cancer.

“The Smithsonian Institution will announce the acquisition of the Michio Kushi Family Collection on Macrobiotics and Alternative and Complementary Health Care during a special day-long event at the National Museum of American History in Washington, D.C. on Wednesday, June 9. The events include a symposium featuring Michio Kushi and his wife Aveline Kushi, an exhibit of macrobiotic food and books, and an awards presentation to Mr. and Mrs. Kushi for their significant role in the development

of alternative and complementary health care and to the formation of the natural and whole foods movement.

“I ask my fellow colleagues to join me in applauding the dedication and hard work of the Kushis in helping to educate the world’s population on the benefits of the macrobiotic diet.” Address: Representative from Ohio, House of Representatives.

2503. **Product Name:** Soy Wonder (Soynut Butter) [Crunchy, or Creamy].

Manufacturer’s Name: Tree of Life, Inc. (Marketer-Distributor).

Manufacturer’s Address: St. Augustine, FL 32084.

Date of Introduction: 1999 June.

Wt/Vol., Packaging, Price: 18 oz (510 gm) plastic jar.

How Stored: Shelf stable.

New Product–Documentation: Ad (full page, color, trade) in *Natural Foods Merchandiser*. 1999. June. “Will wonders never cease? There’s nothing like them in the world.”

2504. Tree of Life, Inc. 1999. Will wonders never cease? There’s nothing like them in the world (Ad). *Natural Foods Merchandiser*. June.

• **Summary:** This full-page color ad is for Soy Wonder (soynut butter) and Peanut Wonder (low-fat peanut butter). A large color photo shows a jar of each product next to the pyramids in Egypt. Soy Wonder is: “Good source of soy protein isoflavones: More than tofu or soy drinks! No nuts—perfect for those people who are allergic to nuts. 60% less saturated fat than peanut butter. Creamy and crunchy varieties.”

“Peanut Wonder and Soy Wonder are all natural. No artificial anything—No preservatives, no hydrogenated oils, no trans fatty acids, no mono- or di-glycerides, no cholesterol.” Address: P.O. Box 410, St. Augustine, Florida. Phone: 1-800-260-2424.

2505. Yates, Scott C.; Traynor, Marty. 1999. Penton Media acquired New Hope Natural Media. *Natural Foods Merchandiser*. June. p. 11.

• **Summary:** New Hope Communications Inc., founded in 1975 by Doug Greene, has been acquired by Penton Media Inc., a diversified business media company based in Cleveland, Ohio. On May 18, Penton (NYSE:PME, with 1998 revenues of \$233.1 million) announced it had entered into a definitive agreement to purchase New Hope in a cash and stock transaction worth \$82 million. Greene, age 49, will serve as New Hope’s nonexecutive chairman and hold a director’s seat on Penton’s board. New Hope will continue to operate from Boulder, Colorado.

2506. Meadows, Donella. 1999. Poor Monsanto: Corporate demonizing will not transform industrial agriculture, but less hubris and more openness to organic agriculture might help.

Whole Earth (San Rafael, California) No. 97. Summer. p. 104-05, 108.

Address: Contributing editor.

2507. Belleme, John. 1999. The story of how the Oak Feed Miso, Inc. was established, and its relationship to the Erewhon Miso Co. Part I. 1943 to 1978 (Interview). *SoyaScan Notes*. Aug. 22. Conducted by William Shurtleff of Soyfoods Center. With updates in Nov. 1999.

• **Summary:** Without John Belleme's perseverance and determination, the American Miso Co. would almost certainly never have come to be.

John was born on 3 Jan. 1943 in Union City, New Jersey—right across the Hudson River from the Empire State Building. His father died when he was young, so he and his brothers and sisters were raised by their mother. Years later John found that he was dyslexic—but in school this undiagnosed dyslexia caused him many problems and great frustration. He failed first, second, and third grades, so he was much older than his classmates. The frustration sent him to reform school at age 13½ and at age 14 he was “kicked out of New Jersey.” His mother moved the family to Miami, Florida. He was old enough to drive a full-sized motor cycle to the sixth grade. He managed to graduate from high school (just short of age 21) in Miami, went to junior college in Miami for two years, then won a scholarship to the University of Miami. He had liked biology, science, and research since age nine, so once he settled down he became a good student—though because of dyslexia he could barely read or write when he started college. In the mid-1970s he graduated from the University of Miami after two years with high grades in science, and got a job at the Veteran's Administration (VA) hospital in downtown Miami. He was put on one of the first teams in the United States that used and did research using a Phillips electron microscope. Soon they were doing pioneering research. Soon John was quickly promoted to the position of research biologist, a title usually reserved for those with a PhD degree. Soon the team's research was being published in scientific journals. “It was very exciting.” This job, which paid very good money, was mostly a photography job and the hospital had a huge, state-of-the-art darkroom. John worked with an amazing older man from Germany, who required him to carry a camera everywhere he went and to shoot and print his photos as a way of developing his photographic skills. Before long John was a very skilled photographer—and electron microscopist.

But after a while he was transferred to a chemotherapy, a job which he disliked. So he started graduate school to be a school psychologist—and first realized that he had dyslexia.

Sandy Pukel (pronounced pyu-KEL) was the center of a small but growing community of people interested in macrobiotics and natural foods in Coconut Grove, a suburb of Miami. Sandy had a tiny food store. John was with a girl who asked him to buy her some foods at this store.

Before long, he was a regular shopper. Then he started to get interested in macrobiotics, and before long he found himself doing volunteer work at the little store on weekends. Sandy suggested that, to study macrobiotics in depth, he should go to Boston and study with Michio Kushi. After attending a few of Sandy's macrobiotic classes in Coconut Grove, John quit his VA job and left for Boston.

1976 July 4—John arrives in Boston and starts to live at the macrobiotic study house of Ken and Anne Burns. John wrote in 1987 that he “stayed for what was to be one of the most exciting years of my life.” Ken is an exceptional teacher, and the house has a *dojo* atmosphere—like that of a martial arts practice place or Zen monastery. The temperature is kept at 40°F during the winter, and life is spare but rich and deep. Through Ken, John and Jan got very interested in wild foods, and planned to publish a book on the subject. By the fall of 1976 John is interested in miso. He had read *The Book of Miso* by Shurtleff and Aoyagi and on Nov. 17 he attends an afternoon miso class and workshop they conduct at the Burnses' house. John is intrigued by the romance of going to Japan to learn how to do something. After the workshop he decides that he wants to travel to Japan, learn all he can about making miso in the traditional way, then come back to America and help to start a miso factory. John recalls: “I wanted to go to Japan and bring something back. I was going to do this or die.”

After a year in Boston, John worked at Harvard Medical School for a while. Then he and Frank and Phyllis Head drove to Mexico in Frank's van with the idea of teaching the Mexican people about macrobiotics—with whole grain tortillas, etc. Living in a little village in rural Mexico in a house with no electricity and no running water, they managed to tough it out for one summer. Then multiple scorpion bites and general hardship drove them back to America. From Frank's father's estate in Texas, John phoned Sandy, who offered him a job.

1978—John had heard Michio Kushi talk about starting a shoyu factory in America. Michio hoped to involve Sendai Miso Shoyu Co., Erewhon, and some Oak Feed people such as Sandy Pukel and some of Sandy's investor friends. One day John—who was still a pretty small man on the totem pole—he said to Sandy, “Let's start a miso factory in America—rather than a shoyu factory.” He then explained his idea about studying miso in Japan. Sandy's response was “Good! Michio and I have been wanting to do that for a long time too.” John then started to take Japanese language lessons from Berlitz. Sandy established an Oak Feed Miso account on which John could write checks to pay for these lessons, for his travels related to miso in the USA, and for legal fees to form a corporation, etc. Sandy's main concern was running the Oak Feed Restaurant next to the store.

1978 Aug. 6—William Shurtleff is in Miami, Florida, visiting Robert Brooks and Mary Pung of Swan Foods, a soyfoods manufacturer. He presents a slide show (2-3 blocks

from Oak Feed Store) on miso at which John Belleme, Sandy Pukel and one other person are present.

1978—Various groups come together in an attempt to start a miso company in America. The “Oak Feed group” initially consists of Sandy Pukel of Oak Feed Co., John and Jan Belleme, and a few other investors. The “Erewhon group” was composed of Michio and Aveline Kushi, Mitoku, Sendai Miso-Shoyu Co., and a few people from Erewhon. Michio communicated with the Japanese members of the “Erewhon group” (Mitoku, Sendai) by phone; they never attended meetings.

1978 Dec.—The Oak Feed and Erewhon groups meet shortly before Christmas at Michio and Aveline’s home on 62 Buckminster Rd., Brookline (Boston), Massachusetts. Those present were Michio Kushi, Sandy Pukel, and John Belleme. They begin discussions about starting the “Erewhon Miso Co.” Everybody agreed on that company name. John recalls: “It couldn’t have been called anything else.”

What was the need for a miso company in America? First, they wanted to have unpasteurized miso. All the miso being imported by Erewhon from Japan was pasteurized in sealed plastic bags. Cold Mountain miso, made near Los Angeles, California, was sold unpasteurized in 14 oz plastic tubs. So the people interested in the new company began to criticize this product as being made with machines, non-organic, etc. Where would the factory be located? What might it be called? How big might it be? Who might be involved from Japan?

Sandy, Michio, and John all deserve some credit for the original idea of starting a miso factory in America. During 1978 and 1979 every time that Sandy or John went to Boston, they would talk with Michio about the miso company idea. Continued. Address: Honto Press, P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

2508. Belleme, John. 1999. The story of how the Oak Feed Miso, Inc. was established, and its relationship to the Erewhon Miso Co. Part II. 1979 to 1980 (Interview). *SoyaScan Notes*. Aug. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1979 Jan.—John Belleme in Coconut Grove, Florida, writes Bill Shurtleff in California on Oak Feed letterhead that he and Sandy are starting to look for land for the miso company. “Bill, If you were going to make miso in the U.S., based on climate, what state would you choose?” 1979 Feb.—Oak Feed Miso, Inc. is incorporated. Sandy Pukel and John Belleme are the principals.

1979 April—Barry Evans of Coconut Grove, Florida invests money and becomes an important shareholder in the new corporation and a member of the “Oak Feed group.”

1979 spring—Members of the Oak Feed and Erewhon groups meet in North Carolina in the first attempt to locate a site for the miso plant. In attendance are Michio and Aveline Kushi, Sandy Pukel, John Belleme, Frank Head, and Junsei

Yamazaki and his wife (both from California). Michio thought the Yamazakis should be there, so the group paid for their transportation. Junsei was tasting the soil, tasting the water—it was bizarre. Then Aveline insisted that they all rent a car and drive to Atlanta, Georgia, since she thought the miso factory should be near some big city like Atlanta. Every now and then Junsei would sniff the air or get out of the car and taste the soil. John recalls that this trip was disorganized, unsuccessful, and very frustrating.

Why were they looking for land in North Carolina? They knew some people who lived in North Carolina, and they knew a real estate man in North Carolina. But after the trip with Junsei Yamazaki, John began to think that it didn’t really matter where they located the company. Sandy, who is from Coconut Grove (a suburb just south of Miami), Florida, does not like cold weather—not even as cold as North Carolina. John is also from Miami. Moreover, the miso factory was supposed to be a small part of the whole project, which was to be called the Oak Feed Land Project. That was Sandy’s idea, and it was supposed to be an educational center, summer camp, Kushi Institute—similar to what ended up being at Becket. The Kushi’s Ashburnham project had failed by this time. There is actually still a 4-by-8-foot sign on the property that says “Oak Feed Land Project.” Sandy and John wanted a “land project” in a warmer climate that was closer to Miami. They learned that there is an isothermal belt in North Carolina, an unexplained warm stretch of land that runs through the Piedmont below the mountains in western North Carolina; this happens to be an excellent place to make miso because the warm climate brings the miso to maturity faster.

In mid-1979 Sandy Pukel, armed with this new information about the isothermal belt, went up to western North Carolina and bought one of the first pieces of land he was shown—129 acres. The land cost about \$120,000 and the down payment was probably about \$10,000 to \$15,000. Rutherfordton, North Carolina, turned out to be the perfect location. “What would be a 2-year miso in Massachusetts using Mr. Onozaki’s basic formula, was a 1-year miso in North Carolina.” Moreover, Great Eastern Sun and the Macrobiotic Wholesale Company, and a large community of macrobiotic people in Asheville are in North Carolina because of this sequence of ‘accidental’ events born largely of ignorance.

After the land had been purchased, John and Jan rode to North Carolina from Miami on John’s motorcycle and saw the land for the first time. They took \$20,000 cash, which belonged to the new Oak Feed Miso, Inc., and deposited it in a safe-deposit box at the BB&T Bank near Rutherfordton; John kept the key. Sandy flew up to North Carolina while John was there. John and Jan, and Sandy and Jackie (his wife) all went together to the First Citizen’s Bank in Tryon, North Carolina; after signing something, they returned to Miami. John purchased two round trip tickets to Japan, and

set aside \$5,000 for living expenses which he would take to Japan—using corporation funds from the safe-deposit box.

1979 Oct.—John and Jan Belleme (who have just been married) leave Florida to travel to Japan. On the way they visit Thom Leonard at his new Ohio Miso Co.; he has already made several thousand pounds of miso. Arriving in Japan in late October, they spend several weeks in Tokyo with Mr. Kazama “hanging around his office.” The plan had been for the Bellemes to study miso making at Sendai Miso Shoyu, but basically John refused because he knew they had a big factory and he wanted to learn the more traditional way that he planned to use when he returned to America. After John handcuffs himself to Mr. Kazama’s desk, he arranges for the Bellemes to study miso-making with the Onozaki family 10 miles north of Yaita city, in Tochigi prefecture, northern Japan—even though Mr. Kazama had not previously known the Onozaki family. Finally Mr. Kazama drives the Bellemes northward to visit Sendai Miso Shoyu Co. On the way back he drops them off in a country village outside Yaita at the home of the Onozaki family, who run a traditional koji and miso factory. Imagine their surprise when, out of the blue, two Americans appear intent on learning the traditional Japanese art of making miso!

In November John and Jan begin to study miso making at the *Onozaki Kôji-ten*, while living with the Onozaki family. They paid the family a certain monthly fee for room and board, and an additional fee for the teaching and training. He and Jan also received a small monthly wage. At one point John requested an additional \$5,000 from the corporation. The Onozaki family made and sold both miso and koji. About half the koji was sold, mostly 1-2 pound bags to individuals who used it at home, mostly to make amazake. When John was there, the Onozaki family made much more miso than koji. The Bellemes’ study and training continue until the next summer. While in Japan, John wrote many letters back to macrobiotic friends in America as part of campaign to (1) try to prevent Sandy from giving away the miso company to the “Japanese group,” (2) show that he was learning how to make the real traditional Japanese miso, and (3) argue that much of the so-called “traditional” miso being imported from Japan was actually made in modern factories.

1980 April—A letter from John Belleme, titled “Making miso in Japan” is published in *GOMF News* (Orville, California). It is the first published account of his experiences with the Onozaki family. 1980 May—According to Mitoku’s records, the first shipment of Onozaki rice miso from Onozaki Koji-ten in Tochigi prefecture is sent by Mitoku to Oak Feed Store in Miami, Florida; 84 cartons and 4 kegs. John Belleme contacted Mr. Kazama and arranged this shipment. At the time, Oak Feed Store was importing Japanese products from Mitoku and distributing to stores across the USA. Michio Kushi set up the connection and it was all done with his blessing.

1980 May—After their apprenticeship with Mr. Onozaki, John and Jan spend 3-4 weeks at Sendai Miso Shoyu—at Michio’s request. Mr. Kazama drove them to Sendai. John studied the process and took lots of photographs.

1980 June—John and Jan Belleme return from Japan. The Oak Feed and Erewhon groups meet at Oak Feed Co. in Florida to determine ownership of Erewhon Miso Co. There were various contracts. In one, for example, said that Sendai Miso Shoyu and Mitoku would each own 15% of the company—even though it was not clear what they would contribute to the venture. It is finally decided that each of the two groups would own 50%.

1980 summer—John starts to locate and order the miso equipment he needs, which falls into three categories: (1) Purchased from USA: He orders wooden vats from the Arrow Tank Co. in Buffalo, New York. The pressure cookers (for soybeans) and boiler also came from the USA—mostly New Jersey. (2) Purchased from Japan: Two steamers for rice and barley, a rice milling machine, an automatic koji inoculating machine [“rice rocket”] (which they never used until many years later; John did all inoculating by hand), soybean washing machine, soybean crusher (to grind and crush the cooked soybeans), miso mixer (to mix the crushed soybeans with the koji and salt), the foot-activated piston filling machine, which originally filled bulk tubs, and later filled coffee bags and small plastic tubs. (3) Designed by John and fabricated locally: The tilting cooling table to cool hot soybeans then dump them into the soybean crusher, the conveyor that transports raw miso from the miso mixer up into the tall wooden vats, the clam that would come down from the ceiling and lift 400-500 lb of finished miso out of the vats; John also used it to mix miso from one vat to another in mid-season. Everywhere (except in the koji-making process) that Japanese miso makers used intense labor, John tried to use machines.

1980 fall—John and Jan Belleme go on the Erewhon payroll at \$400/week, break ground, and start construction of the miso plant in Rutherfordton, North Carolina. On Sept. 29 the land for the new factory is being leveled. John pays initial expenses using funds in the BB&T safe deposit box.

1980 late—John starts to make small, experimental batches of miso in his house, in the sauna room. In his spare time, John starts to grow shiitake mushrooms, behind the main house, up on the hill. He and Jan had brought shiitake plugs from Japan. They used a chain saw to cut oak trees into logs for growing. He sold small amounts to Great Eastern Sun, but he was too busy with other things for shiitake to become a business, as he had once hoped. Continued. Address: Honto Press, P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

2509. Belleme, John. 1999. The story of how the Oak Feed Miso, Inc. was established, and its relationship to the Erewhon Miso Co. Part III. 1981 (Interview). *SoyaScan*

Notes. Aug. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1981 Jan.–When it comes time to buy equipment and build buildings, the new company finds it has little or no money. It needs about \$40,000. The person constructing the building, Doug Ashley, threatens to put a padlock on the building because John is unable to pay him. He also threatens to sue John. The project comes to a complete standstill for months as Barry and Sandy are trying to settle their conflict in Miami. During this time, when John has nothing else to do, he starts to write articles about his miso apprenticeship in Japan. And Jan corrects her dyslexic husband’s multitude of misspelled words and prepares the stories for publication. Eventually he and Jan wrote over 100 published articles about Japan, Japanese foods, and miso. They contain some 400 of John’s photographs.

During the conflict between Sandy and Barry, John finds himself in a very difficult position—in the middle and torn. At one point Sandy, who had been John’s longtime close friend and macrobiotic mentor, decides that he no longer wants to be involved with Barry Evans and the miso company. Michio Kushi and Mr. Kazama of Mitoku go along with Sandy, dropping their crucial support for the project. John barely knows Barry, but now he finds himself trying to convince Barry not to abandon the miso project. Barry asked John: “If I’m going to trade my ownership in Oak Feed Store for the miso factory, what value does that factory have? It’s a piece of land and part of a building, but can you make miso? How are we going to sell it? Is it a business with potential?” John has to answer all questions with a convincing “yes!” even though he has not yet made miso by himself and has no idea what the market was. But by building up the value of the miso and downplaying the value of Oak Feed Store, John strains his relationship with Sandy. If Barry had abandoned the miso project, all of John’s work in Japan might have been in vain. Moreover it would have left the land and the new building unpaid for—a total mess.

Soon John finds that his role had changed from potential miso maker to miso promoter and educator. His articles must put the wind in the sails of a ship that has stalled in the doldrums. “Every one of those stories had all kinds of intricate purposes to it.” And each is written for various audiences with different goals. John has to convince: (1) All his readers that he is an expert on miso and that his miso would be unique—the best available. (2) Potential macrobiotic customers that the lighter, sweeter misos are good tasting and good for health. He could never build a company solely on long-term salty miso. (3) Michio Kushi, and macrobiotic counselors and teachers, not to say bad things about his miso. “I kept putting pressure on them until some were afraid of me—the miso mafia.” (4) Barry Evans that the company would succeed and be a good investment. John sent Barry a copy of everything he wrote. John was not sure that Barry was completely committed until about 1984.

1981 Jan.—John Belleme’s first article about his miso studies in Japan, titled “The Master of Hoops,” is published in *East West Journal*.

1981 April—John Belleme’s second article, titled “The Miso Master’s Apprentice,” is published in *East West Journal*.

1981 July—John Belleme’s third article, titled “The Miso Master with a Big Heart: Making Miso in a Japanese Village,” is published in *Soyfoods* magazine.

1981 early spring—Increasingly, the much-needed money starts to arrive from Barry. At about this time, and perhaps again earlier, “Barry Evans’ money saved the company—there is no doubt about it.”

1981 May—All of the miso-making equipment has arrived in North Carolina.

1981 July—The two groups meet at the newly constructed Erewhon Miso Co. plant to have an opening ceremony and celebration. About 25 people are present. The Shinto ceremony is conducted by Michio, with salt, daikon, azuki beans, etc. He goes from door to door, putting Japanese symbols on each door. Evan Root, who was there, was deeply moved by this ceremony. The Kushi’s stay on the land for 3-4 days. John remembers that there was a lot of stress during this time. Barry and Sandy were in the middle of resolving their problem.

1981 Aug.—John and Jan start full-time, large-scale production of Erewhon Miso. They have not made any miso on a large scale for more than a year. Erewhon Trading Co. contributed the soybeans, grains, and Lima seasalt (from Belgium); they probably arrived a month or two earlier. Money is still in short supply.

1981 Nov. 10—Michio Kushi files a petition for Erewhon for protection under Chapter 11 of the Bankruptcy Act at the federal in court Boston. This is a disaster for the new miso company. The Bellemes’ paychecks and the miso ingredients stop arriving from Erewhon. The miso company’s name is soon changed to Oak Feed Miso Inc., but the company now has no means of packaging or marketing its products. None of the Belleme’s miso is ever sold under the Erewhon labels or the Oak Feed label. Address: Honto Press, P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

2510. Belleme, John. 1999. The story of how the Oak Feed Miso, Inc. was established, and its relationship to the Erewhon Miso Co. Part IV. 1982 to present (Interview). *SoyaScan Notes.* Aug. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1982 Jan. 4—Barry changes the name of the company to American Miso Co. and announces that it is open for business.

1982 Jan. 31—Sandy Pukel and Barry Evans agree to an exchange of stock whereby Sandy gets out of Oak Feed Miso and Barry gets out of Oak Feed Store and Oak Feed Restaurant. They finalize the deal on Feb. 26, but it is

retroactive to Jan. 31.

Barry starts The American Trading Co. (soon renamed Great Eastern Sun) to distribute their miso which would soon be ready for sale. For a while, Barry Evans and Sandy Pukel had been in a partnership in that import and distributing company. When Barry and Sandy split up, and Barry started Great Eastern Sun, Mr. Onozaki's miso started going to both companies. Marty Roth soon begins running GES.

1982 Jan.—At about the same time, during the first season, after John has made quite a bit of miso Mr. Onozaki visits the American Miso Co. in North Carolina for about 2-3 weeks at the Bellemes' invitation. They are interested in his comments on their miso plant and process, and they pay his way as a consultant and friend. He works with them making miso and gives them some very valuable suggestions (both big and subtle) for improvements—mainly in making the koji. Formal dinner is held in his honor.

1982 April—Mr. Onozaki's eldest daughter, Kaoru, and her husband, Haruo (Mr. Onozaki's adopted son), visit the miso factory and work for 3 months, living under the same roof as the Bellemes. Jan is pregnant when they arrive and the Belleme's son, Justin, is born on 24 May 1982 in North Carolina.

1982 April 24—Richard Leviton, editor and publisher of *Soyfoods* magazine, visits the American Miso Co. in Rutherfordton, North Carolina, and writes an in-depth cover story about the miso-making process, equipment, and company, published in the summer (July) 1982 edition of his magazine. The best, most detailed coverage to date. The color cover photo (taken by Leviton) shows John, Kaoru, and Haruo making miso.

1982 fall—The Bellemes' first miso is ready for sale. It is a red miso made, Onozaki style, with approximately equal parts soybeans and rice. It is sold only in bulk. The logo is two crossed sheaves of grain in a circle—drawn by an artist friend of John Troy's. This miso is shipped to Great Eastern Sun and sold in bulk under the American Miso label.

Prior to about 1983-1984 all of the company's miso was sold in bulk through Great Eastern Sun to stores. Over the years, John had been working on selling miso refrigerated in one-pound plastic bags, each having a pressure-release valve. The unique bag was designed for coffee and made in Italy. Finally, at a food show in Atlanta, Georgia, two big refrigerated distributors—Cornucopia and Tree of Life—decided to carry the new products. Soon refrigerated distribution trucks began stopping by the miso factory in North Carolina to pick up 7 varieties of miso in 1-pound bags. It was a breakthrough. Demand increased dramatically.

1983 Oct. 1—At John and Janet's request, Barry Evans buys all their shares (900 shares, 35-45% of the ownership) in the American Miso Company. John agrees to work as a consultant for 6 months and to train a person to take his place. John Fogg has been handling the marketing account for Great Eastern Sun. John Belleme asks him to design a

retail marketing program, logo, and label for American Miso. He comes up with the idea of "Miso Master." John cringes, because it implies that he is a miso master, whereas he still considers himself a beginner, and he is developing many new types of sweet miso that he has definitely not yet "mastered." Peter Harris draws the Miso Master logo, an illustration showing the head and shoulders of a Japanese miso master, with a knotted headband, in front of a large wooden vat of miso.

1984 Feb.—At the time he sells his stock to Barry, John establishes a new marketing company named Just In Foods, Inc. (John's son is named Justin) for his miso and miso products. It is owned by John and Jan and Barry Evans. John is training Don DeBona to take his place at American Miso Co. His new responsibility will be to work as a marketing person between the miso factory and Great Eastern Sun (a distributor).

1985—John creates another entity named Institute of Fermented Foods (it was never registered or official) as part of his ongoing struggle with Barry Evans. The name appears on the label of many creative miso products Chick Peaso (Chick Pea Miso) and Mellow Ebony Miso (with Black Soybeans).

1985 Dec.—John and Jan leave the American Miso Co. due to ongoing conflicts with Barry Evans. Over the years, John had negotiated with Barry to give him more and more ownership in the company—because he was doing all the work. He eventually owned about 30% of the shares, which Barry bought back from him a year or two before he left—at John's request.

1985—John (who has nothing to do), with Sandy and Blake Rankin form a company named Granum East, based on Sandy's wholesale company in Florida. They plan to sell macrobiotic foods to distributors. It was nothing more than a telephone in John's home office. John would call up Great Eastern Sun (GES) customers and offer them a 10% larger discount than they could get from GES. Within 18 months the company had \$700,000 worth of GES' business. Barry was forced to buy the company from them.

John reflects on Sandy's financial role in the company: Sandy has an incredible money karma; he lets it go out and come in without holding onto it, without any attachment. John was later in a seitan business with Sandy; it failed and lost about \$300,000. When Sandy found out about these losses, he hardly batted an eyelash—and he's not a rich person. He helped people out all over Miami, and not only with money. He'd give them food, or whatever they needed. It was just amazing to see. Then all of a sudden a large amount of money or good fortune would just drop in his lap. Address: Honto Press, P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

2511. Demos, Steve. 1999. White Wave and Dean Foods: The inside story and future plans (Interview). *SoyaScan*

Notes. Aug. 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** White Wave now has its Silk soymilk in 6,000 supermarkets and chain stores—not counting natural foods chains like Whole Foods Market. White Wave’s goal is 10K by 2K = 10,000 stores by the year 2000. In most cases Silk is in the refrigerated dairy case, but in a few cases it is in specialty food or soft drink refrigerated cases. Fred Meyer has Silk in the health food section, but White Wave is battling for the dairy case. But at Ralph’s in Los Angeles it is next to Lactaid in the dairy case.

White Wave has already won the footrace in the USA with SoyaWorld and Dairyworld. From now on it’s a question of who has the most money to stimulate consumers to try their brand. That’s the last face of the mountain to climb. Dean Foods brings to the alliance the fact that they distribute to 17,500 stores (mainly supermarkets and chains), and they have the national brokerage and delivery trucks and 70 factories that support that system. They own two ESL plants today (in Florida and Kentucky) and they have several more on the books (one in California). White Wave also has two coming in, and they now work with Western Quality Foods in Utah (Dairy Farmers of America and Sinton Dairy out of Colorado).

Dean Foods is a superfactory for Nestle. Nestle has three or four superfactories: H.P. Hood, Dean Foods in Kentucky, and Ador in Los Angeles. Dairy Gold in Seattle, Washington, may be a fourth. Nestle Quick, the chocolate milk, is a billion dollar brand. That warrants tremendous investments in systems and efficiencies, which leads to co-pack opportunities for things that are beyond our dreams. Dean was the inventor of The Chug—a single-serve chocolate milk in a disposable plastic bottle, with a screw cap, that looks like an old-fashioned milk bottle; this made it possible to sell single-serve chocolate milk from convenience stores, and per-capita consumption of chocolate milk jumped. The Chug was a \$600 million a year innovation. Also are headed toward the aseptic single serving, Dean Foods is definitely endorsing soy as a concept.

In the dairy business, per-capita consumption of fluid white milk has been decreasing for the past 50 years. The “Got Milk?” and “Milk Mustache” ad campaigns have only slowed the rate of decline from 4% down to 2% a year—but these ads are costing the dairy industry more than \$100 million a year. Part of the problem is that milk has never been considered a pleasure beverage; it’s just a commodity.

How did White Wave contact Dean Foods? “It’s kind of like fishing. You put out your hook with the bait, seen who bites, then let them come after you.” Indeed, Steve went after them and convinced them that this is a concept and category worth paying attention to. Suiza Foods Corp., because they have been associated for a year with Horizon Organic in Boulder, was not a potential partner. Suiza has already invested \$10 million in Horizon. Notice that

the plant in Gustine, California, where TAN Industries packaged soymilk, is owned by Morningstar, which is a Suiza division—you can figure out in a hurry where this war is going to be fought. The rumor that Suiza will get into soymilk through its alliance with Horizon will soon be confirmed. The Gustine facility turned down business from Lactaid, which wanted to introduce a soymilk because White Wave is making such a dent in their sales. The people at Gustine told Lactaid that they did not want to start a project that they would have to stop in Jan. 2000, when they planned to introduce their own brand of soymilk.

“It’s now a whole new game for White Wave. There’s no time to take a breath.” The deal with Dean Foods was a very unusual one in that everyone seemed to come out winning. White Wave got everything that they wanted, plus a huge vote of confidence. Steve anticipated their future desires and he accommodated those in the agreement by certain opportunities as time goes on. “I think the biggest accomplishment was we get to ride this thing for a while.”

The news release was picked up as a blurb in the back of the Wall Street Journal last Tuesday, but the announcement has been getting a lot of national play. The news release and the recent (Aug. 3) *Wall Street Journal* article on Silk have been reinforcing one another, and creating a new round of interest in White Wave and its products, which is translating sales. The local papers and trade journals also picked up the news release. *Natural Foods Merchandiser*, *Prepared Foods*, and *Dairy Foods* all plan to do stories. Their story appeared in 3-4 national TV announcements. It’s very exciting for people throughout the company. For example, the advertising and marketing people are now interviewing full agencies—which were previously unaffordable. “The ability to be whimsical, be creative, and be a little bit off center with things has been a key driving force which we hope not to lose. Nothing that happens, to be quite honest, could influence me enough to take my hands off the throat of this thing. Not until I’m gone. When I sit in meetings today I say, ‘If you thought I was a pain in the ass before, watch this!’” Susan Holden and Holden McClure have done White Wave’s PR for the past 7 years. Before that, White Wave had no PR firm.

White Wave has big plans in the dairy alternatives market—for every product you can imagine. Silk Creamer, based on organic Silk soymilk and non-hydrogenated oils, was introduced at Anaheim in March of this year; after only six months, its sales have surpassed its first year projections—and supermarkets are major buyers. It’s a huge category. Dean Foods is the No. 1 producer of non-dairy creamers in the USA, but they make powders and Silk is a liquid. Some new flavors are planned for the near future. The Silk brand represents dairy alternatives and the White Wave brand represents tofu. “Silk” is the word that the public is saying. It’s a cool word, and “Smooth as...” There’s lot of room for play and fun: “Silk boxers in every carton.” White Wave

has dabbled and played with non-dairy frozen desserts in the past; now they could go big time—pretty fast. But the company will not step outside the dairy alternatives category with things like energy bars or power drinks; it will keep tightly focused on dairy-like non-dairy products.

“Its very important to conduct your mission with some levity and fun—otherwise it never works. Business is an excuse to have parties. We need to pursue that philosophy for as long as possible. We just scheduled our next party; I rented a theater in Boulder for the middle of October.” On using the Silk carton for advertising: “Serve people’s intelligence and needs and you give them two products instead of one. Once you have the consumer’s attention and focus, you can spoon feed them a lot of very wholesome, beneficial things. Our job now is to gain their trust and attention. We have always been say that we deliver more than food; we deliver a little bit of entertainment, and a bunch of information. We want you to think of the package as part of the product.” On the red half-gallon Silk, James Terman has put the story of Henry Ford’s work with soy. “At least 25-33% of our packages will always be used for some additional information other than ‘Buy my stuff.’” The carton of Silk, along with breakfast cereal, is one of the few packages that gets onto the breakfast table or dining table. Steve learned this lesson when he heard from dairy people about all the complaints they received about pictures of missing children on milk cartons. That meant people were reading the cartons; its the perfect captive market. Quotations from Suzuki roshi and Yogi Berra appeared together on one of the Silk cartons. “In the beginner’s mind there are many possibilities; in the expert’s mind there are few”—said Roshi. “You can’t think and hit at the same time”—said Berra. “James Terman and I went into stitches when we put the two of those together. It was such great juxtaposition—so enlightening—just way out there.” Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2512. Lampe, Frank. 1999. GMOs: Do you have a strategy? *Organic & Natural News (Phoenix, Arizona)* 2(8):11. Aug.
 • **Summary:** The mission of natural foods stores is to provide consumers with foods that are inherently different from the “overly processed, nutritionally bereft, and inherently unsustainable offerings” of most American supermarkets. Yet “one of the natural foods industry’s biggest dirty little secrets” is that, unless consumers buy organically grown foods, no such choice exists today. The author argues that natural foods companies should make the hard decision to take a stand on GMOs. A portrait photo shows Frank Lampe. Address: Editorial Director of Natural Business.

2513. Lehndorff, John. 1999. Longmont grower introducing diners to fresh soybeans. *Daily Camera (Boulder, Colorado)*. Sept. 8.
 • **Summary:** Pachamama Organic Farm in Longmont,

Colorado, is now harvesting its 1999 crop of fresh edamame, which are sold at Boulder County Farmer’s Market, Alfalfa’s, Crystal, Ideal, North Boulder Whole Foods, and Wild Oats Markets, and at Vitamin Cottage. Contains a recipe for preparing the fresh or frozen soybeans. A photo shows edamame. Address: Camera Food Editor.

2514. **Product Name:** Natural Brand Soy Baking Mix.
Manufacturer’s Name: GNC [General Nutrition Centers] (Marketer-Distributor).
Manufacturer’s Address: Pittsburgh, Pennsylvania.
 Phone: 1-888-462-2548.
Date of Introduction: 1999 September.
Ingredients: Supro brand soy protein isolate, soy flour, polydextrose, wheat bran, glucone delta lactone, potassium bicarbonate, potassium chloride, disodium phosphate.
Wt/Vol., Packaging, Price: 20 oz (557 gm) cannister with plastic lid. Retail for about \$11.
How Stored: Shelf stable.
New Product–Documentation: Talk with Dana Jacobi, cookbook author and consultant, of New York City. 2000. Sept. 30. This is her favorite soy product for use in baking. It works much better than soy flour, although it is much more expensive. She substitutes it for 20-50% of the flour (typically wheat flour) called for in standard recipes, then adds water since soy proteins absorb water. She uses the baking soda or power as called for in the standard recipe. She prefers the taste and texture of the final product after it has cooled for a day. The soy protein gives the baked goods a much longer shelf life; they taste good 3-4 days after they are baked.

2515. Plank, Dave. 1999. GNC reaction subdued. *Natural Foods Merchandiser*. Sept. p. 7.

• **Summary:** As reported last month in NFM, General Nutrition Centers Inc. of Pittsburg, Pennsylvania, plans to merge with Royal Numico (a baby food manufacturing giant) of the Netherlands in a \$2.5 billion deal. The new company is expected to employ 27,000 people worldwide and to have annual sales of \$3 billion.

• **Summary:** A remarkable book about the author’s spiritual Master, Sant Kirpal Singh, his master Hazur Baba Sawan Singh, and his successors, Darshan Singh, and Rajinder Singh. The author lived, traveled, and practiced meditation in India with Kirpal Singh, describes many spiritual experiences and events. Address: Vancouver, BC, Canada.

2517. **Product Name:** Harmony Farms Soy Burgers [Original, With Onion, With Mushrooms, With Garlic].

Manufacturer's Name: Tree of Life, Inc. (Marketer-Distributor).
Manufacturer's Address: P.O. Box 410, St. Augustine, FL 32085-0410. Phone: (800) 260-2424.
Date of Introduction: 1999 September.
Wt/Vol., Packaging, Price: 10 oz paperboard box.
How Stored: Frozen.
New Product–Documentation: Ad (full page, color) in *Vegetarian Times*. 2000. Feb. p. 61. “Cowabunga: Introducing Harmony Farms Soy Burgers.” Shows a cow, standing upright, riding a surfboard.

2518. Tree of Life, Inc. 1999. She's gotta have it. And she's gotta have it from you (Ad). *Natural Foods Merchandiser*. Sept. p. 61.

• **Summary:** See next page. This full-page color ad shows a lovely young lady, photographed from above, dressed in blue jeans, holding a package of Tree of Life Baked Organic Tofu. Next to the Tree of Life Logo is the tagline: “Our brand is your brand.”

This ad also appeared in the March 2000 (p. 97) issue of this magazine. Address: P.O. Box 410, St. Augustine, Florida. Phone: 1-800-260-2424.

2519. Knox, Andrea. 1999. Kellogg, Heinz are buying their way into natural-foods trend: The corn flakes maker will pay \$307 million for Worthington Foods. Earlier this week, Heinz bought a stake in Hain organic foods. *Philadelphia Inquirer*. Oct. 2.

• **Summary:** This long and very interesting article begins: “It used to be that buying organic and natural food was pretty much a lifestyle thing, done in dim, old-fashioned stores by earnest folks wearing all-cotton clothing and Birkenstock sandals.”

But all that has changed. Yesterday the Kellogg Co. announced that it would buy Worthington Foods, a maker of vegetarian and health foods, for \$307 million—“the clearest sign yet that counterculture eating is going mainstream.”

Natural and organic foods are one of America's fastest growing food categories, with sales increases, on average, of nearly 20% a year, whereas the food industry as a whole averages only 1-2% a year.

Even the growth rate of junk-food lags behind that of organics. Address: Inquirer staff writer.

2520. Jacobi, Dana. 1999. Impressions of the Natural Products Expo in Baltimore, Maryland (Interview). *SoyaScan Notes*. Oct. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Expo was great! There were an unusually larger number of new companies selling soy products; Dana picked up many sell sheets. The Soyfoods Association had a meeting at the Expo at which Peter Golbitz announced that the FDA health claim concerning soy protein and

heart disease will allow traditional, whole soyfoods (such as tofu and soymilk) to bear the claim—even though they contain more fat than allowed under the claim. This was an unexpected development—and very good news. The claim says that 25 grams of soy protein in a low-fat diet may reduce the risk of heart disease. The Association also presented a new position paper on genetically engineered soybeans in soyfoods, stating that foods containing GMO ingredients should be so labeled. The Association did not oppose the use of GMO soybeans in soyfoods, noting that genetic modification will be used for many different purposes, some of which may have health benefits.

Two prepared soy puddings were debuted at the Expo—one from Westbrae and one from Zen Don. Both came in two flavors: chocolate and vanilla. The chocolates were both delicious; the vanillas were not so good. Zen Don is run by a young man age 30-32 who has introduced a soymilk under the brand Zen Don, which has a picture of a panda on the package, and which he has positioned for the mainstream market to compete with Silk. Dana believes that with this name and graphics, the product is mispositioned; moreover she finds it much too sweet.

White Wave debuted Silk eggnog in quarts. They were also dispensing Silk in four new flavors from a cooler and asking for comments: Lemon (which Dana found delicious), strawberry, chai, and cappuccino.

Abbott Laboratories (Chicago, Illinois) is now the mother company for HealthSource (formerly Health Source, from a subsidiary of Protein Technologies International—PTI), the protein powder drinks from Ross Products. This is not cleared stated on sales sheets.

Dana did not see the FDA health claim in today's (Tuesday's) *New York Times*. It will probably be in the Wednesday edition, which has a special food section—as do many other major newspapers. Address: New York City.

2521. Bogo, Jennifer. 1999. Tools for green living: The better brown bag. *E—The Environmental Magazine* 10(5):52. Sept/Oct.

• **Summary:** This small article discusses organic foods sold by White Foods Co., and Walnut Acres Organic Farms LLC. Walnut Acres offers an extensive selection of organic nut butters, such as cashew, sunflower and soy, as tasty peanut-free alternatives. They also offer a delicious peanut-honey-sesame spread which goes nicely with their organic fruit spreads such as sour cherry or apricot, or the company's old-fashioned jams, like raspberry or strawberry.

White Wave sells “half-pint soy milks.”

their crusade for better food (which means vegetarian food in its natural state) began in 1963. They live in Woodstock, New York and have written many very influential books.

2523. **Product Name:** Smoked Tofu Flavors [Lemon Garlic, or Herbs & Spices].

Manufacturer's Name: Tree of Life, Inc. (Marketer-Distributor).

Manufacturer's Address: P.O. Box 410, St. Augustine, FL 32085-0410. Phone: (904) 825-2095.

Date of Introduction: 1999 October.

Wt/Vol., Packaging, Price: 18 oz (510 gm) plastic jar.

How Stored: Shelf stable.

New Product–Documentation: Short in *E–The Environmental Magazine*. 1999. “Tools for Green Living: New life to tofu.” Sept/Oct. p. 52. Tree of Life offers tofu in “a new line of smoked flavors. Lemon Garlic and Herbs & Spices have been added to the Original and Hot & Spicy line.”

2524. Thompson, Stephanie. 1999. Natural foods experiencing organic growth: ‘Health foods’ no more, new options attract consumers and food marketers. *Advertising Age*. Nov. 1.

• **Summary:** Mentions Boca Burgers (“Happy Stomachs, Healthy Hearts” ads), increasing sales of organic foods, last week’s FDA ruling for a soy heart health claim, Kellogg, owner of Worthington Foods and the belief that “Soy-based foods have enormous potential.”

2525. Great Eastern Sun. 1999. Pricelist. Effective November 15, 1999 [Mail order]. Asheville, North Carolina. 24 + 6 p. 28 cm.

• **Summary:** Contents: Catalog information: I Ching reading (hexagram #43), ordering, billing, shipping. Miso Master organic misos (traditional, mellow, sweet, miso tamari). Sweet cloud organic sweeteners. Haiku organic Japanese teas. One world organic classic teas. Mandala organic herbal teas. Organic planet pasta. Emerald Cove sea vegetables. Emperor’s Kitchen condiments (Organic Oriental sauces, condiments in bottles, condiments in jars, condiments in bags, Japanese kitchenware). GES variety packs. Also sells coarse nigari in 44 lb or 440 lb lots. Address: 92 McIntosh Road, Asheville, North Carolina 28806. Phone: 704-252-3090.

2526. Kilburn, Roger. 1999. Harvest Direct owns Devansoy. Other makers of powdered soymilk (Interview). *SoyaScan Notes*. Nov. 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Harvest Direct Inc. assumed control of Devansoy Inc. in June 1998. Elmer Schettler is still the president of Devansoy and also a shareholder. As far as Roger knows, there are only two manufacturers of powdered

soymilk from whole soybeans in the United States: Devansoy and SunRich. Quite a few large food companies are developing new products using Devansoy.

SunRich also makes liquid soy base. All of their customers get the same base, and have it formulated and packaged elsewhere. Westbrae buys its liquid soy base exclusively from SunRich. In exchange for this exclusive agreement, Roger understands that Westbrae retains the right to say who else SunRich can sell soy base to. Address: P.O. Box 50906, Knoxville, Tennessee 37950-0906.

2527. Bossert, René. 1999. Tofu-Absatz waechst weiter [Sales of tofu continue to grow]. *Badische Bauern Zeitung (BBZ, Germany)*. Nov. 20. No. 46. p. 20. [Ger]

• **Summary:** In 1999 Life Food purchased the organic, non-GE soybeans from 115 hectares (ha), mostly from the Rhine valley of southern Baden. In the year 2000 they plan to expand this to 140 ha. Sales of tofu are also growing. The company sells basic tofu and 30 products made from tofu such as patties, terrines, and smoked tofu. This year the company will produce about 800 metric tons of tofu.

The company now gets about half of its soybeans from Hungary and France. This year it paid its German contract farmers 1,250 German marks per metric ton for soybeans.

2528. Pukel, Sandy. 1999. History of interest in macrobiotics and miso. Part I. 1945-1974 (Interview). *SoyaScan Notes*. Nov. 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Sandy was born on 10 Sept. 1945 in Queens, New York City. In 1967 he graduated from the University of Wisconsin, majoring in political science, then went to law school at the University of Tulsa in Oklahoma. After two years he realized he did not want to be a lawyer, and dropped out—at a time when many other young Americans were also dropping out of college or “straight” jobs. For the next two years he passed his leisure time like many other young Americans. In August 1969 he was at Woodstock and appears in the movie—naked. Knowing he wanted to be an entrepreneur, he worked on Wall Street for a while.

In April 1970 a childhood friend from Queens, Willy Rosenfeld, introduced Sandy to macrobiotics. Willy had gone to Harper College (SUNY) at Binghamton, New York, where he met Michel Abehsera. Sandy went to a lecture in New York City by Rebecca Dubawsky. “From that night on I became macrobiotic; I went ‘cold turkey.’” He stopped using psychedelics and quickly got interested in the philosophy of macrobiotics; he wanted to “turn the world on” and saw this as one way to do it. That summer he went to a macrobiotic summer camp / retreat at Awosting in upstate New York with 30-50 other people. There he first met Michio Kushi, who was in short pants and knee-socks. This deepened his interest.

In August 1970 Sandy and five of his closest friends decided move to the island of Jamaica, where they would live a simple life and practice macrobiotics—in paradise. They stopped by Greenberg's Natural Foods at 125 1st Ave. in New York City. Located on the lower east side of Manhattan, it probably had the largest selection of macrobiotic foods in America. There they bought provisions for the trip: a 100-lb sack of brown rice, a keg of Hatcho miso, aduki beans, and soba noodles. They got non-tourist visas, and settled down in a lovely rural spot. The dentists in the group had hoped to open a clinic. But it didn't work out; the local people saw them as white hippies so they kept trying (unsuccessfully) to sell them drugs. The local people just wouldn't let them alone, so after about 6 months, one by one, they returned to the United States. Sandy was the last to leave. He went to Coconut Grove to stay with one of his roommates in law school, Roger Schindler, who happened to live there. But there was no place to eat or to buy macrobiotic foods. So in Nov. 1970 Sandy and two of his close friends started Oak Feed Store. One partner was Leon Matsil, a dentist and Sandy's boyhood friend from Queens; the other was Joel Magazine, an attorney and public defender in Miami, who also went to law school with Sandy in Oklahoma and who Sandy turned on to macrobiotics. They just wanted to have food available. They did not go into it thinking it would be a business—Sandy's father lent them \$4,000 to start the store. It was named Oak Feed Store because the law library was on Oak Avenue. The word "Feed" was used because the purpose of the store was "to feed the people the good food." They name came spontaneously; no one person thought of it. This was the first of many enterprises that Sandy would help to finance. It was located on the second floor walk-up of the law library of the lawyer of one of his friends. The room was about 10 by 15 feet. This was the first macrobiotic food store or organization in the greater Miami area. They ordered their foods via common carrier (truck) from Akin, a distributor in Jacksonville, Florida. Akin distributed many Erewhon products. They also ordered quite a bit of food via mail order direct. They carried relatively few foods: Bulk brown rice, almonds, miso, noodles, noodles, apple juice, plus one cosmetic (Oregene shampoo). "It was really a strict, strict macro kind of place." There was a commune in Coconut Grove named the Maya House, and its members were regular workers at Oak Feed Store. Sandy also worked there regularly.

Also in about 1970 Sandy and his two friends started another communal affiliation that they called LJZ Enterprises—Leon, Joel, and Zuni; Sandy's nickname was Zuni. Everything went into one pool and they shared everything 100%—totally. All money from Joel's law salary, all money from Leon's dental practice and investments, all money Sandy earned from the store went into this pool, and each person took whatever they needed. This included purchases of houses, cars, clothing—everything. This lasted

for the next 7 years and worked very well. To this day, they are all still close friends.

Oak Feed Co. became increasingly popular. After about one year they moved to a street-level retail store in the same building. Then in late 1971 or early 1972 they moved around the corner to a bigger store at 3030 Grand Avenue—where they stayed for the next 20 years. By this time they were running a real business—in spite of themselves.

Sandy recalls: "Once I got into macrobiotics I was a zealot about it—preaching, teaching, everything." In 1972 he began to give the first macrobiotic cooking classes in the area out of a rented home in Coral Gables, where he and Leon lived. A macrobiotic community began to evolve, with Sandy at its center. Sandy got to know Neal Loeb, who had studied macrobiotics in Boston, Massachusetts, and was Michio Kushi's driver. He was planning to bring Michio to Florida for a seminar, but he "flaked out" and couldn't get it together, so in about 1973-74 Sandy organized the weekend seminar. Michio's students in Boston sent Sandy detailed information about how Michio was to be treated, where he was to stay (hotel or motel only), what he was to eat, his detailed schedule, etc. "They were incredibly protective." The seminar was very successful, with a good turnout at a local church or private school auditorium. Michio stayed at Sandy's house and did individual consultations. Sandy and Michio got along very well, and Sandy gave Michio all the money they collected—in part because he didn't care about the money. Soon he and Michio became lifelong very close friends, and Michio started to give seminars in the Miami area on a regular basis.

In about 1973 LJZ bought a very nice house, communally, in Pinecrest a very nice neighborhood of Miami; there the three friends continued living together for a year. Macrobiotic visitors and friends stayed in the guest house on the property. In 1974 Sandy bought his own house (with a lake in his back yard) on 63rd Avenue in Miami, about 4 miles from Oak Feed Store.

In about 1974 Sandy started the Macrobiotic Foundation of Florida. Its purpose was to spread macrobiotics. Edmund Benson was on the board of directors. The cooking classes continued at Sandy's house in Coral Gables. Anyone passing through Florida who knew macrobiotic cooking was invited to be a guest teacher at the cooking class. Tim Redmond taught the first class on macrobiotic desserts—featuring apple pie. Sandy's repertoire didn't include desserts, except perhaps those made from agar or kuzu. Jay Pinsky, from Philadelphia, Pennsylvania, asked if Sandy had any apple butter, peanut butter, or sesame butter; he didn't. "We still ate basically rice, vegetables, miso soup, and aduki beans. We were as close to a Number 7 diet as you can imagine." Continued. Address: Owner, Oak Feed Store and Restaurant, 4500 S.W. 63 Ave., Miami, Florida 33133. Phone: 305-446-9036.

2529. Pukel, Sandy. 1999. History of interest in macrobiotics, miso, and the Oak Feed Miso Co. Part II. 1975 to Aug. 1979 (Interview). *SoyaScan Notes*. Nov. 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: Over the years Michio Kushi had talked about having a factory that made shoyu (natural Japanese-style soy sauce) in the United States. In about 1975, Sandy decided to do something about Michio's dream. He was increasingly an entrepreneur, but only in the sense that he liked to help make things happen. He still did not see himself as a businessman, in that he had little interest in money except insofar as it was important for making things happen. Oak Feed Co. was now a thriving enterprise. But why? "Because we didn't do it to make money, and because nobody took any money out of the company. So all the earnings were put back into the business. My job was to keep the philosophy going." Sandy's living expenses came from other investments. In the early 1970s, most young people Sandy knew who were interested in macrobiotics were dropouts with no money. He lived in a very nice house in Pinecrest (near Miami) and had the money he needed. In 1976 he began looking at the idea of a shoyu factory more seriously, but he soon realized that the complex equipment and buildings would make it too expensive.

Then John Belleme started coming to the macrobiotic cooking classes and other events at Sandy's house on 63rd Avenue. Though he came on his motorcycle, John had a "straight" job in electron microscopy at the Veterans Administration Hospital in Miami. Soon he was deeply interested in macrobiotics and wanted to learn more and more. So Sandy suggested that John go to Boston to study macrobiotics with Michio. John did that, moving into a Ken Burns' study house. He stayed for about a year, then went to Mexico with Frank Head, and finally returned to Miami.

He asked Sandy for a job at the Oak Feed Store, and Sandy said "Fine." He was a responsible and knowledgeable person. John soon became the store manager, while also taking macrobiotic cooking classes at Sandy's house, but he did not see his future in a retail food store, thus he wasn't very happy with the job—though he was a very good worker. John was more a creator than a manager, and he and Jan had become sweethearts—great people and good workers. Jan used to make delicious seitan there. One day in about late 1977 John went to Sandy and suggested they do some kind of a project together. One of the ideas that came out of their brainstorming session was starting a miso factory in America.

A new idea was born, and Sandy responded by making John a deal. If John would work in the Oak Feed Store, in retail, for a total of three years (1976-79), Sandy would take care of the money necessary for making a miso factory happen and he would pay John's expenses related to starting the factory, pay for John's trip to Japan to study traditional miso making, and pay for John's share of ownership in

the new miso company—\$25,000 in shares. John would be responsible for doing the research, learning how to make miso in Japan, etc. John accepted and began to manage the store.

In the fall of 1978 Sandy and John visited Michio in Boston to discuss the idea; Michio was very supportive, but he wanted the miso company to be in Massachusetts—perhaps on land at Becket or Ashburnham. Sandy didn't like the idea of Massachusetts—too much macrobiotic politics and the weather was too cold. Sandy put money from the Oak Feed Store into a separate account that John used to pay his miso-related expenses. Soon he began taking Japanese language lessons.

In 1977 Sandy started the Oak Feed Restaurant, and at about the same time Leon got married. These two events led to the three partners dividing up the properties of the communal LJZ Enterprises. Sandy ended up as the sole owner of the Oak Feed Store and his friends ended up with other businesses. Sandy took in partners in the restaurant; Michael Henry (a friend), and Wayne Neal and his wife. They invested and owned shares in the restaurant. Sandy got Yozo Masuda to be the chef at the restaurant. For many years Yozo had been the right-hand man of Hiroshi Hayashi at Sanae, an early macrobiotic restaurant in Boston. Sandy brought him and his whole family from Japan, and got him a green card so he could cook at the Oak Feed Restaurant.

1979 (early)—At some point, Sandy began looking for land for the miso company—using specifications related to the climate and temperature that John Belleme had given him. But he was also looking for land for another reason—the Oak Feed Land Project. This was Sandy's dream of a macrobiotic educational center where various people would build homes and apprentice with John at the miso plant, and where various macrobiotic retreats and workshops and a summer camp with classes could be held on the land. Sandy spent about two months looking at catalogs, talking to realtors, etc.

1979 Feb.—Oak Feed Miso, Inc. is incorporated. By this time two groups have formed and begun to discuss their potential ownership of shares in the miso company: The Oak Feed group and the Erewhon group. It was agreed that the company would be named the Erewhon Miso Company. In the Erewhon group were Michio and Aveline Kushi, Sendai Miso-Shoyu, and maybe Mr. Kazama of Mitoku. In the Oak feed group were Sandy and John Belleme. It was expected that the Japanese would play a very important role in this company; they would assist the Americans in making miso in the United States. Sandy recalls meeting only once with some representative of Sendai Miso-Shoyu, probably at some natural foods trade show. Michio had most of the contact with them. At about this time the first of many of drafts concerning ownership of shares was placed on the table. None of the drafts was ever signed.

1979 April—Barry Evans becomes a major investor in the miso company.

1979 summer—After extensive research, Sandy flies up to North Carolina (Asheville) alone, looks at several pieces of property that a real estate agent has suggested, finds exactly the piece of land and house he had been looking for, makes a deposit or down payment of \$10,000 to \$15,000, agrees to assume the mortgage of the previous owners at the Tryon National Bank, North Carolina, and flies home alone the same evening. The roughly 90-95 acres of land in Rutherfordton cost about \$100,000 to \$120,000. The mortgage payments were \$500/month for 30 years. It was a lovely but very rural piece of property with rolling green hills. The Sears-style prefab 5-bedroom house on the property was basically thrown in free of charge. The land had become available because someone had died recently. With the new land and house, Sandy's Macrobiotic Foundation could do things that were impossible in metropolitan Florida.

1979 Aug. 7—Sandy closes / finalizes the purchase of the land for Oak Feed Miso in Rutherfordton, North Carolina. He and John Belleme both sign the closing documents. Now the new miso company would have to find the money to make the monthly mortgage payments, plus additional monthly payments to two officers of the bank totalling \$23,000. Barry Evans' money was important in making these payments but it was not essential. The miso company definitely would have been able to pay for the land in Rutherfordton and send John and Jan to Japan without the money Barry invested at this time. The investments Barry made after construction of the factory began in mid-1980 and after Erewhon filed for bankruptcy were more important to the company's survival. Sandy put in the first money; Barry's came later. Sandy told John that if John took care of all the technical matters, Sandy would take care of all the financial matters to make the new company happen. Continued. Address: Owner, Oak Feed Store and Restaurant, 4500 S.W. 63 Ave., Miami, Florida 33133. Phone: 305-446-9036.

2530. Pukel, Sandy. 1999. History of interest in macrobiotics, miso, and the Oak Feed Miso Co. Part III. Aug. 1979 to 1982 (Interview). *SoyaScan Notes*. Nov. 20. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** Continued: 1979 Aug. 16—A “subscribers consent” agreement is signed at a meeting in Miami. The following people, all or most of whom were present, subscribe to buy shares in Oak Feed Miso, Inc. Sandy Pukel, John Belleme (he invested sweat equity, not money; Sandy put up John's share of the money), Barry Evans, Yozo Masuda (chef in the Oak Feed Restaurant), Edmund Benson (a friend of Sandy's involved in macrobiotics), and Jim Kenney (manager of the Oak Feed Store). All these people knew each other, and all but Barry lived near Coconut Grove. John signed as the secretary. Sandy also has the original by-laws of Oak Feed Miso—more than 10 pages of typewritten boilerplate-type language. They are not dated or signed, but they were almost certainly drafted in 1979. No names

or shares are given. Frank Head was never a shareholder as long as Sandy was involved.

1979 Aug. (late)—After the land deal was closed, Joseph and Patricia Carpenter (married, with children, macrobiotic friends of Sandy's from his neighborhood) moved into the main house on the miso company land at Rutherfordton, North Carolina, and lived there, rent free and getting money, throughout the time the Belleme's were in Japan. Joseph was a carpenter and fix-it guy, and he was expected to make improvements to the house and land before the Belleme's returned. Joseph was also hired to be John's assistant and head worker in running the miso company. Joseph “seemed like a hard-working guy” and Patricia was “a sweetheart lady.” Joseph now lives in California and Patricia (who now uses her maiden name, Roberts) lives in Boca Raton, Florida, where she owns an antique store. Her parents live in Lighthouse Point, Florida, and her brother, Brendon Roberts, lives in Boulder, Colorado. Things did not end up on nice terms between them and John. Because they didn't do the work that John had expected of them, he either fired them or kicked them off the land. Sandy doesn't know what they were supposed to do; John would know. The Carpenters then bought land nearby.

1979 Oct.—John Belleme (and his new wife, Jan) leave for Japan. All their expenses are paid from the Oak Feed account Sandy had established—not from the new corporation.

Michio was supposed to arrange for John's welcome in Japan and find a place for him to learn how to be a miso maker. But the people at Sendai Miso-Shoyu didn't want to share their secrets with John, so John ended up studying with the Onozaki family—kind of by accident. It turned out to be a blessing, because Sendai was too automated for John to learn traditional miso-making there. Moreover, Sendai Miso-Shoyu wanted to send one of their people to the USA to run the new Erewhon miso factory; John would have been his assistant.

1980 June—John and Jan Belleme return from Japan. Not long afterwards, there was an important meeting at Sandy's house in Miami. Now that it was becoming clear that a miso company was actually going to happen, people began to get serious about issues of ownership and money. At the meeting were Michio and Aveline Kushi, Sandy, John Belleme, and Joseph and Patricia Carpenter. Joe Carpenter had no money; he was a handyman who was going to be a worker. Sandy recalls it as a “pretty testy” meeting. Michio looked upon the miso company as “his baby.” His contributions would be “in kind” rather than in money. He would supply the company name: Erewhon Miso Company. Moreover, since he owned Erewhon Trading Co., he stated that the Trading Company would buy all the miso, package it, and distribute it under the Erewhon brand. Barry Evans was not there. In short, Erewhon planned to play an essential role in the new miso company.

After John and Jan returned from Japan, they went right to work building the factory and purchasing equipment. John is a very talented photographer. He took many superb photographs of miso making in Japan then documented the rise of the new miso company on the land in North Carolina.

1981 Sept. 27—Sandy has the “Minutes of an Annual Stockholders Meeting of Oak Feed Miso” (3 pages). It is signed by directors John Belleme, Sanford Pukel, and Barry Evans, all of whom, of course, were in attendance. It refers to the Subscribers Consent Agreement of 16 Aug. 1979 and tells exactly who owns how many shares in the company. With the help of an attorney, Barry got his stock converted to Class A, which enabled him to vote for the first time; he also got on the board of directors. Barry and John together now own the majority of shares. Sandy was, alas, no longer in control. The company needed Barry’s money, and his demands were reasonable. The changes seemed inevitable—but it hurt.

In 1981, when it became clear to Michio and Aveline that Erewhon Trading Company was in a financial crisis and needed cash quickly, they appealed to many of their close friends for help. Sandy responded by sending them \$100,000. Nevertheless, on 19 Nov. 1981 Erewhon filed for bankruptcy protection under Chapter 11 of the Federal Bankruptcy Act. That left Sandy in need of money. Barry Evans invested a considerable sum in Oak Feed Store as part of a complex agreement. For Sandy, the Erewhon bankruptcy couldn’t have come at a worse time.

1982 Feb. 26—Sandy Pukel and Barry Evans sign an agreement whereby Sandy gets out of Oak Feed Miso and Barry gets out of Oak Feed Store and Oak Feed Restaurant by an exchange of stock. Barry’s financial strength won over, but this left Sandy upset and bitter at Barry. Sandy believes that there was no connection between this event and his lending \$100,000 to Michio. John was torn—caught in the middle. On the one hand, he felt great loyalty and affection for Sandy, and hated to see him out of the new company. On the other hand, he had invested years in the miso company and wanted to see it through to the end. So John continued to work with Barry, and Barry made him an offer he couldn’t resist. This conflict strained Sandy and John’s relationship for years afterward. About 8-10 years later, Sandy received a beautiful present in the mail of a wooden keg of special miso. It was from John (who had made the miso), accompanied by a nice note as a peace offering, with the hope that the two could renew their friendship.

The idea of the Oak Feed Land Project disappeared when Barry Evans bought out Sandy’s interest in the miso company. Sandy basically held a proxy for most of the other investors; when he left, they also left, selling their shares to Barry Evans.

One sidelight: In about 1993-94 Sandy formed a non-profit organization, an offshoot of the Macrobiotic Foundation of Florida, named The Ignoramus Club. Most

of the members are people who have been involved with macrobiotics for many years. It had several hundred members who paid \$100 each, including Michio, Herman Aihara, etc. No one had any authority over anyone else. At the meetings, some of which drew 50-100 people to Miami, everyone talked freely about macrobiotics. Resentment and criticisms, as well as gratitude came out. “A lot of people owe a lot to macrobiotics.” The Club is no longer active. Address: Owner, Oak Feed Store and Restaurant, 4500 S.W. 63 Ave., Miami, Florida 33133. Phone: 305-446-9036.

• **Summary:** The firm Life-Food of Freiburg is looking to work with farmers who want to grow organic, non-GE soybeans in southern Baden. Contact information for the company is given. About 115 ha of eco-soybeans were grown for Life-Food in Germany this past year. A photo shows a Taifun sign next to a field of eco-soybeans.

2532. Belleme, John. 1999. Update on American Miso Co. (Interview). *SoyaScan Notes*. Nov. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** John has worked for years as a consultant for and vice-president of American Miso Co. John is also on the board of directors. Two days a week, he works closely with Greg Gonzales, who has become an excellent maker of koji and miso. Previously Greg had been a dancer from Southern California.

Today their first batch of good corn koji came out. They have been working out the process for six months. He and Greg used it to make a corn miso. Other people who have used corn in miso have used it in place of the soybeans together with a rice koji. As far as John knows, this is first miso made with corn koji. John also goes to Great Eastern Sun where he is developing new miso products, such as a freeze-dried miso soup—in three flavors.

John thinks the American Miso Company might now be the largest manufacturer of hand-made koji in the world; they produce about 600,000 pounds a year of 5-6 different types of koji which end up in 11 different types of miso. The koji types are: Short-term barley koji, long-term barley koji, mellow barley koji, brown rice koji, white rice koji, corn koji, and soybean koji.

Last year they made soybean miso experimentally for the first time—which was extremely difficult because the carbohydrate content of the soybeans is very low. The trick is to keep the soybean koji from being overrun by bacteria and turning into natto. The soybean miso is now aging.

About a year ago American Miso Co. started selling “miso tamari” in 5 oz and 10 oz bottles. Address: Honto Press, P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

2533. Romero, Christine L. 1999. Meatless turkeys gaining popularity: Vegetarian product companies offer Thanksgiving alternative. *Camera (Boulder, Colorado)*. Nov. 25.

• **Summary:** “Seth Tibbott will fly with a different flock today: Tofurky.”

In San Francisco, Now & Zen (owned by Miyoko Schinner) makes an “Unturkey, complete with sizzling skin.” She says she make her first Unturkey in 1985, and expects to sell about 40,000 Unturkeys this year.

According to *Vegetarian Times* magazine, about 1% of Americans are vegetarian and the number is increasing.

The frozen foods buyer at Whole Foods Market in Boulder says he has probably sold 120 of the meatless birds already, and he expects to sell 80 more by year’s end. Address: Camera Business Writer.

2534. Oihankesni, Anpetu. 1999. Life story and work with the South River Miso Co. (Interview). *SoyaScan Notes*. Nov. 29. Followed by a 4-page handwritten letter of Nov. 29.

Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• **Summary:** Anpetu (whose name was originally Jeffrey Zellich) was born into a Russian Jewish family and grew up in Philadelphia, Pennsylvania, but later in life, while living with the Lakota Sioux, he was given the name he now uses. He has been involved with macrobiotics since 1973. Before that, in 1971-72, he lived alone in a cabin in the woods in New Brunswick, Canada, gardening and using wild plants. He also lived in a tepee in northern Maine.

In 1973 he went to Boston to study macrobiotics. He lived for a while with Jack Garvey and Jack’s first wife. He left to go to Mexico, where he lived for a while with indigenous people (Indians), then in 1974 returned to Boston, where he lived in Jamaica Plain. About 40% of the macrobiotic students in the Boston area at the time were Jewish. He met Hannah Bond through a mutual interest (shared also with Ken Burns) in wild plants. Hannah was older, and came from a Quaker background. She made pickles for Erewhon and was considered to be the best pickle-maker in Boston. He found her to be “the most intellectual woman I had ever met—wonderful.” She had formerly been married to a professor of Greek. They went to his cabin in New Brunswick, Canada, she proposed to him, and they were married in 1982—the ceremony took place at the Elwell’s land in Conway, Massachusetts. Christian and Gaella had both previously worked at *East West Journal*, she as an editor and he as an artist, who also illustrated several of Michio Kushi’s earlier books. They had also both worked with Alan Chadwick, the legendary teacher of French intensive, biodynamic gardening at the University of California at Santa Cruz.

Anpetu was at the South River Miso Co. in about Oct. 1982 when Thom Leonard came for a month (on contract) to teach the Elwell’s how to make miso and use the equipment.

Christian and Gaella were married, had a daughter, and owned 64 acres of beautiful land on both sides of the South River. Christian was able to fund the company’s start-up with his inheritance; he came from an affluent family and his father had died. He and his brother, Will, initially planned to start the miso company together, but later Will left. At one point the Elwell’s approached Michio Kushi to see if he wanted to buy the company. Anpetu and Hannah lived in nearby Conway for 2 years, then on the Elwell’s land in a trailer across the river. Another couple, Don and Martha Wheeler, lived upstairs in the miso shop after it was completed. Don and Martha loaned \$10,000 to Christian for the miso company. Anpetu also loaned \$10,000 to the miso company (though no papers were signed), and worked there making miso for 6-9 months; Hannah was not involved with making miso. During that time they published a flyer on miso (dated spring 1983) which Anpetu still has; he designed the logo showing 3 waves in a circle. The waves symbolized South River and the three stood for the three families who were joining together to create the miso company. He also took quite a few color photos, which he still has. Don and Martha decided to leave first. Then Anpetu’s enthusiasm waned and he and Hannah decided to leave.

Anpetu recalls that many big problems took place after this decision. Christian wanted Anpetu and Hannah to leave promptly, and when they would not set a deadline for leaving, Christian took them to court to try to get them evicted. The case went before a local judge in Greenfield; he suggested they work the matter out among themselves, but said that Christian had the basic rights as a landowner. Anpetu and Hannah left one month later, in the fall of 1983. Christian paid him back the \$10,000 without interest over the next ten years. Anpetu and Hannah separated after being married for 7 years.

Today Anpetu lives a very simple life in Hotchkiss / Cedaredge, Colorado, where he runs an heirloom seed company named Sourcepoint Organic Seeds and practices Vipassana meditation. His teacher is Goenka, of Burma.

Note: Anpetu contacted Soyfoods Center today to request a review copy of *The Book of Miso* as announced in the latest edition of *River Currents: News from South River Miso Company (Conway, Massachusetts)*. Address: Founder and owner, Sourcepoint Organic Seeds, 1349 2900 Road, Hotchkiss, Colorado 81419. Phone: 970-872-4971.

2535. Dixie USA, Inc. 1999. Beef (not!) / fat (not!)—Official catalog & newsletter: Natural foods update [Mail order catalog]. Houston, Texas. 48 p.

• **Summary:** The cover states: “Health food that tastes like junk food. Your one-stop low-fat soyfoods headquarters. New Soy Tradition! New Chicken (Not!) Nuggets Mixes, see page 14. New Sweet ‘n Sour Sauce Mix & BBQ Sauce Mix, see p. 37. New Soy Grits, see p. 6. Award winning recipes. Chocolate lovers unite. Snack your way to health! See New

Soy Rocks, p. 4. Feel like a kid again.”

This catalog is devoted to soyfoods. On p. 2 we read: “The 10 reasons you should eat soyfoods (not pills) each and every day.”

Talk with consumer service person at Dixie USA. 2000. April 10. This catalog was first available in Nov. 1999. Address: P.O. Box 55549 (7800 Amelia), Houston, Texas 77255. Phone: 1-800-233-3668 (800-Beef-Not).

2536. Hain Food Group, Inc. 1999. Annual report 1999. Uniondale, New York. 24 p. Nov. 28 cm.

• **Summary:** Net sales for the year ended 30 June 1999 were \$205.969 million, up 98% from \$104.253 million in 1998. Net income in 1999 was \$11.030 million, up 3.3-fold from \$3.292 million in 1998.

Accomplishments this year: Completed acquisition (on 1 July 1998) of four businesses and brands from The Shansby Group: Garden of Eatin’, Arrowhead Mills, Terra Chips, and DeBoles. Completed acquisition (on 18 May 1999) of the Natural Nutrition Group, including the Health Valley, Breadhsop’s, and Casbah brand names, which are among the best-known in the business. Page 6 is devoted to Health Valley, showing color photos of many Health Valley products. In Sept. 1999 acquired Earth’s Best Baby Food from H.J. Heinz. This organic baby food brand pioneered the category. Also, the Hain Food Group sold 2.5 million shares to Heinz for \$82 million, resulting in Heinz holding a 19.5% interest in the company. The proceeds were used to reduce debt to an extremely low level.

In soy beverages, Hain (mostly Westbrae, plus a little from Health Valley’s Soy Moo) has a 32% market share. A new consumer ad campaign is “Enjoy your soy.” Two new products introduced over the past year are Westsoy JuiceBar, and tea-based Westsoy Chai. JuiceBar, sold in Tetra Brik cartons and described on the label as “A non dairy blend of natural juice and organic soy beverage” comes in flavors like Berry Blast. Chai, in the same type of carton, is described as “A delicious blend of tea and spices & non dairy organic soy beverage.” On the front cover of the catalog is a photo of “Westsoy Low Fat Chocolate Pudding.” Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2537. **Product Name:** WestSoy Low Fat Pudding [Chocolate, or Vanilla].

Manufacturer’s Name: Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer’s Address: Uniondale, New York 11553. Phone: 1-800-SOY-MILK.

Date of Introduction: 1999 November.

Ingredients: Filtered water, organic soy beverage (filtered water, organic soy beans)**, dehydrated cane juice, tapioca starch (heat modified), cocoa processed with alkali, expeller pressed canola oil, natural flavors, sea salt, pectin, lecithin.

** = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 4 x 3.5 oz cups = 14 oz (37 gm).

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per cup (99 gm): Calories 130, calories from fat 25, total fat 3 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 60 mg (2%), potassium 170 mg (5%), total carbohydrate 25 gm (dietary fiber 2 gm [7%], sugars 18 gm), protein 2 gm. Vitamin A 0%, vitamin C 0%, calcium 2%, iron 2%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Talk with Dana Jacobi. 1999. Oct. 26. At the Natural Products Expo in Baltimore, Westbrae introduced (sort of) a soy pudding, in an aseptic 4-pack. They had samples but no literature. Hain Food Group. 1999. Annual Report (Nov. 1999). A color photo of the Westsoy Chocolate Pudding package is on the front cover of this report. But it is not mentioned inside as a new product–yet.

Product (Chocolate) with Label brought by Bob Gerner of Berkeley Natural Grocery Co. 2000. March 13. The product is sold in a 4-pack with a paper sleeve. Label: 6 by 10.75 inches. Paperboard. Chocolate brown, tan, and pink on white. Photo of a spoon filled with a swirl of pudding. “Made with organic soy beverage. All natural. No cholesterol. Contains 7 mg of isoflavones per serving.” Soyfoods Center taste test: Flavor and texture: Superb. Very chocolaty and smooth. Package design: Good.

Talk with Elyse Kops, WestSoy brand manager, Uniondale, New York. 2000. March 14. The puddings, which come in chocolate and vanilla flavors, were first available in retail stores in about Nov. 1999. The recommended retail price is \$3.39 per four-pack.

2538. Roller, Ron. 1999. The complexities and details of growing and certifying organic and GMO-free soybeans for Edensoy beverages. Part I (Interview). *SoyaScan Notes*. Dec. 3. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Not many people in the organic farming and foods industries have begun to deal with the complex problems of growing and procuring GMO-free soybeans. Most believe, incorrectly, that organically-grown soybeans are automatically GMO-free. “The problem is pervasive and harder to deal with than the organic industry thinks it is. Organic now has to be looked at less as a noble standard and more realistically as a series of technical problems. To assume that certified organic soybeans are GMO-free, unless you have done something to monitor for GMO, is naive.” Organic certifiers cannot be relied on to do this monitoring.

Ron first became aware of genetically engineered soybeans several years ago during a talk with William Shurtleff. Since that time, he has become increasingly involved in ensuring the his organically grown soybeans are

also GMO-free.

As an example of the problems: This year Carl Garrich of the Lone Pine Rice and Bean Farm, in Lone Pine, Arkansas, bought GMO-free soybeans from Asgrow Seed Company (now wholly owned by Monsanto) and grew them organically on 600 acres. The seed was certified by Asgrow to be 98% pure; the remaining 2% could be anything. Ron met with him and showed him how to do the GMO strip test developed recently by Strategic Diagnostics Inc. of Newark, Delaware (phone: 1-800-544-8881). When he tested the 600 acres he found an unacceptably high level of GMO soybeans. When he contacted Asgrow to ask them how that could happen, they said that the GMO beans must have been among the uncertified 2%. Carl took a huge loss, and had to sell all 600 acres of his soybeans to the local elevator as regular, non-organic soybeans—at the commodity price. It was a nightmare for Carl, but if the news media picked up the story it could become a public-relations nightmare for Asgrow. Moreover, Asgrow could not afford to let him win a lawsuit or pay him off on it; that would open up their liability big-time. Though it's not Carl's style to file lawsuits, he would probably tell the whole story if some reporter called him. Carl's experience shows that just because a crop is organically grown, doesn't mean it is automatically GMO-free. Finding a totally reliable source for the seed, outside normal commercial channels, is the key to being sure that seed is GMO-free.

Ron used to buy his soybeans from Pioneer Hi-Bred and Northrup King, but with their increasing focus on GMO and because the best food-grade soybeans usually give lower yields and are not very popular, they dropped the varieties he wanted for Edensoy. So about 3-4 years ago, Ron decided to make a big change, due to the growing problems caused by GMO soybeans and difficulty in finding the varieties he wanted. He decided to start working with Iowa State University; he contracted for them to grow foundation seed (F1) of what Ron considered to be the single best variety for Edensoy; they removed any unusual looking beans (e.g. dark hilum beans) by hand before planting. Is there any chance that there could be some GMO soybeans in the foundation seed? Ron has learned the hard way that "There is a chance of anything, anywhere, anytime. It doesn't take much to start the ball rolling. From one grain, ten thousand grains—as George Ohsawa liked to say."

Then Ron contracted with a seed grower in Michigan to grow those seeds, certified organic, to create the next generation (certified or F2 seeds). He started with one soybean variety at first; now he is growing four varieties because Edensoy is best when made from a mixture of varieties. Last year he supplied 3 varieties to about 60 growers who grew 85-90% of the soybeans he needed; the farmers got the remaining 10-15% independently off an approved seed list.

The main thing that Ron has done is to remove himself

from the commercial trade in soybean seeds. He now gets his seed independently and stores his crop independently. Because all of these problems and procedures are new, they are both interesting and scary. For example, sending the seed out to the growers is a bit scary. Supposing he supplied non-GMO seed to them and they delivered a crop with some GMO back to him. Whose problem is it?

Before the ASP plant started in 1986, Ron worked as a buyer for Eden Foods, dealing with many different organic crops—including soybeans. When he transferred to ASP, he focused solely on soybeans. As the market for Edensoy expanded, Ron had to constantly expand his "grower base." One of Ron's biggest and most time consuming problems is finding enough farmers to grow the organic soybeans that he needs. Over the past 20+ years, he has worked to develop trust with a growing core group of soybean farmers. Ten growers have been with Ron for 20 years and 40-50 have been with him at least 10 years. These farmers each have a deep personal interest in and commitment to organic farming. "Once a farmer starts working with ASP, they stay—because we treat them right. There is a physical building here and a factory. Seeing that makes a big difference for many growers—as opposed to selling to a trader who exports their crop. They see what happens to their soybeans." The continuity over many years and Ron's work "with each person as another human being has made a big difference. We develop trust. The organic soybean crop is keeping many small farms alive because the premium is so much higher than the commercial market. I have to have a price that most growers will accept. I don't pay the highest price or the lowest." Supply and demand almost requires that Ron try to "steal" experienced organic growers from other companies. The traders, who export organic soybeans, have often not treated their growers well. They may sign a separate contract with each one, try for as low a price as possible, not ship their beans on time, etc. Today about 80-85 farmers grow soybeans organically for Ron and ASP. Before 1997 he would bring in a core group of soybean growers to discuss prices for the upcoming contract period. At first it was 5-6 grower, then it became 10-12 growers.

It's hard to grow soybeans organically on a big farm; dealing with the weeds mechanically takes too much time. Organic soybean farmers don't spread manure (which must be composted first) on their fields, but the good ones plow in green manure, etc. Continued. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2539. Roller, Ron. 1999. The complexities and details of growing and certifying organic and GMO-free soybeans for Edensoy beverages. Part II (Interview). *SoyaScan Notes*. Dec. 3. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** Continued: Two years ago, in December 1997, in anticipation of the plant expansion, he organized the first

big meeting at American Soy Products' (ASP's) Edensoy factory in Saline, Michigan. He wanted to try dealing with the farmers as a group, where he paid them all the same price and had only one contract. Ninety-five growers showed up, both former ASP growers and new farmers who thought they might like to start working with ASP, depending on the conditions; most were attracted by the premium price offered, the chance to get a contract and the opportunity to see the Edensoy plant. Most of the growers live near the plant, in southern Michigan or northern Ohio, but some come from as far away as Nebraska. Having the growers spread over a fairly wide area reduces the risk the weather damage to the entire crop. During the catered lunch, Ron explained "Here's who we are, here's what we do, here are the quality issues in terms of growing soybeans for us, and here is the contract." The variables in the contract are price and varieties. Ron asked Chad Geater of Iowa State to come to talk to the farmers (with a slide show) about GMO soybeans. Over the years, ASP has become more and more specific about acceptable varieties. Starting several years ago, ASP made farmers who signed their contract agree not to grow GMO soybeans. The issues of GMO seed contamination were explained. Rather than negotiate for price, Ron took a calculated risk. After lunch, asked them to decide on a price themselves, then he left the room. They decided on \$19.00 per "net clean bushel delivered." ASP's elevator does the cleaning; it does not clean any GMO Products. This compared with \$4.50 to \$5.00 they would get for regular soybeans at their local elevator. Not all the farmers signed up, but those who did were happy, and so was Ron—who acquired about 80% of his organic soybean needs in one hour. In previous he might have to make 700-800 phone calls before he got all the soybeans he needed for the coming year. "That meeting really increased our presence among farmers. Its a pretty incredible to be in the room with all these growers who normally never see each other or are in the same place together, openly discussing the organic issues that affect them." New farmers generally learn organic methods from another farmer who is already doing it. Years ago, Ron used to do the organic inspections and certification himself, but he did a little teaching of organic methods; he no longer does any of these things.

ASP uses OCIA, a farmer owned and run group, as their third-party organic crop certifier. Each participating farmer must join a local chapter of OCIA, attend their meeting, etc. Each chapter teaches organic methods and provides lots of social interaction. Last year at the same type of meeting, 160 farmers showed up.

Organic is one issue but GMO-free is quite another. The term "GMO-free" is meaningless. You would have to test (and destroy) every soybean to say a sample was "GMO-free." So the heart of the matter is determining tolerance levels, and testing accurately for those levels. ASP "fronts" the soybeans to the growers; that means they do not pay for

the seed beans until the crop is harvested.

Previously tests to check for GMO (like that from Genetic ID) were too expensive, at \$300 a sample. But a company named Strategic Diagnostics in Delaware developed an "instant" GMO test kit which uses a "strip test." This crucial new tool was developed by Strategic with Monsanto to identify genetically modified plants. Now, for the first time, ASP can test every sample from every farmer for a reasonable price. Each strip is like a little piece of litmus paper made with colloidal gold. They key is determining what tolerance level you want; the higher your tolerance level, the more beans must be in your sample. A 0.1% tolerance level, for example, requires 600 soybeans. To test: Put the beans in a regular blender and grind to a powder. Add water, blend and dilute. Use an eye dropper for them kit to draw off a certain amount of liquid, put that in a test tube, add 3-4 drops of buffer, than put in the little test strip and wait for 5 minutes. The strip will tell you whether or not there are any GMO soybeans in that sample at your level of tolerance. Each test requires two strips and 100 tests cost \$300. ASP's new program works like this. Each grower sends ASP a sample of each variety before they deliver any beans to the elevator. Those beans are then graded for quality and tested for GMO. A form is filled out and the actual test strips are attached to that form, as a physical record of the test. The sample is retained. That then goes to the elevator as approved for delivery. The elevator then conducts the exact same GMO test with each load that arrives, taking 3 probes per load. In this year's crop, one sample out of 85 tested GMO-positive. Ron called the grower and asked what could have happened. He said that his combine had broken and he had his neighbor combine the soybeans. The neighbor grew probably GMO soybeans and some must have been left in the combine. Ron said he could not accept the load soybeans; the grower was surprised but accepted Ron's decision. The system worked! Organic beans could also potentially become contaminated during cleaning, storage, or shipping.

So when organic soybeans are said to be "GMO-free" one must also ask: To what tolerance level, and as determined by what exact testing program? Because the Strategic Diagnostics' strip test is so new, the organic industry still does not understand these key points.

Edensoy now has a little malted corn in its sweetener; compared to soybeans, organic corn is a nightmare when it comes to keeping it GMO free. Note: For example, pollen from GMO corn can drift up to ½ mile in the air. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2540. Roller, Ron. 1999. Update on Edensoy beverages and the soymilk market in the USA (Interview). *SoyaScan Notes*. Dec. 3. Conducted by William Shurtleff of Soyfoods Center.
 • **Summary:** American Soy Products (ASP) finished its plant expansion in Sept. 1998. Before the expansion, it

could make 4 metric tons per hour of soymilk. After the expansion it could make 10 metric tons per hour. The plant is not presently running at full capacity, but with the soymilk market growing so fast, it is hard to say how long it will be until the plant again reaches full capacity.

Competition in the soymilk market is intense, in price and quality, and big new manufacturers are entering. Eden is fortunate in that they have a long-term user base of many loyal consumers. But Suiza Foods Corp. (a powerful dairy consolidator) is expected to have a soymilk on the market by Jan. 2000 and, with Dean Foods and Silk, that should lead to big changes. Refrigerated is a big, big question in Ron's mind, but this is not his job or responsibility. Ron is reluctant to talk about this issue. He makes the soymilk. Eden Foods owns the brand and is the "sole sales agent" responsible for marketing it. Distribution is the problem for Edensoy, since Eden Foods does not presently sell any refrigerated products.

Right now, all is going well at ASP. Getting the new line up and running was tough. There were the inevitable start-up problems with the new, complex machines and getting the people trained. ASP has a pretty experienced crew now. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2541. Elwell, Christian. 1999. Chronology of South River Miso Co. Part I. 1946-1979 (Interview). *SoyaScan Notes*. Dec. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** 1946 Dec. 29—Christian is born at Martha's Vineyard, Massachusetts. His father is a vegetable farmer. When Christian is in grade school, he moves with his family to the Boston area and instead of vegetable farming his father opens a florist and nursery business.

1949 Aug. 3—Gaella (pronounced GAY-luh) is born Margaret B. Jett in Richmond, Virginia. Her family lives in Reedville, Virginia, on the Chesapeake Bay—where she grew up. Her father died when Gaella was 3 years old. Her mother, a school teacher in home economics, remarried to Jennings Butler, a professional fisherman with the menhaden fishing fleet of Reedville.

1969 June—Christian graduates from Cornell University (Ithaca, New York) in landscape architecture.

1969 July—Christian enters Peace Corps training in Morrison, Colorado. His group arrives in Teheran [Tehran], Iran, in Sept. 1969. He serves as a park designer for the municipal office of the Province of Esfahan, the 17th century capital of Persia. During this time, Christian's father dies of pancreatic cancer at age 51. This event, coupled with his immersion in the traditional aesthetic and religious culture of Iran, precipitated a shift in the main stream of his life. He had graduated from Cornell with ambitions of becoming a landscape architect; he was accepted to enroll at the Harvard graduate school of design upon his return from Iran. But he

finished his two years of Peace Corps service in Iran "with an altogether new orientation, burning with questions about the meaning and purpose of life."

1973 spring—Christian returns to the United States for a year. He travels (to the French island of Saint-Barthelemy in the Caribbean for several months, then to California in a Volkswagen bus), studies with a portrait artist in Boston for several months, then studies the teachings of Sri Aurobindu at a center in the Catskill Mountains.

1974 spring—Christian travels to India, where he lives in Pondicherry in association with the Sri Aurobindu ashram and Auroville. After becoming ill with hepatitis, he begins to study alternative health care and healing. After a year in Auroville, he then travels west to Scotland.

1974 May-Sept.—While at the Findhorn community in northern Scotland, Christian meets former students of Michio Kushi (teacher of macrobiotics in Boston), reads the book *Healing Ourselves* by Noboru Muramoto (teacher of macrobiotics in California) and puts its teachings to use—successfully.

1974 Dec. 29—Christian (on his 28th birthday) first attends a lecture by Michio Kushi in Boston. The subject: Right Life. He settles into the macrobiotic community in nearby Brookline and starts to work with the East West Foundation (doing everything from chauffeuring Michio around to helping with their magazine layout and design), while starting Whole Life Arts, a company to distribute French flour mills in the USA.

1976 fall—Gaella arrives in Brookline to study macrobiotics. Works at *East West Journal* as secretary to editor Sherman Goldman.

1976 Nov. to 1977 April—Christian and Gaella first meet at a massage class given by Shizuko Yamamoto. They first talk about making miso for a livelihood at an Irish pub in Brookline Village. While living in Ken and Anne Burns' macrobiotic study house (at the same time as John Belleme; they were good friends) in Brookline, they attend a miso-making workshop by Bill Shurtleff and Akiko Aoyagi. Christian wanted to farm and it seemed that making miso in the traditional way (as he had read about it in *The Book of Miso* by Shurtleff & Aoyagi) would fit into the New England farm cycle as a source of work and income during the cold months. In early 1977 they moved from the Burns' study house to the home of Michio and Aveline Kushi across the street.

1977 late summer—Christian and Gaella go to Covelo, California and work with Alan Chadwick, the legendary teacher of French intensive, biodynamic gardening. He had already left the University of Santa Cruz and set up what he called "The Garden Project" in Covelo. Christian becomes an "apprentice gardener" (later poultry manager) and Gaella is the head cook. They stay for about 6 months, until late 1977. Chadwick "blew up one day—just lost it completely." After that the Project fell apart.

1978 Jan.–Christian and Gaella leave Chadwick’s garden and go to study with Noboru Muramoto at the Asunaro Institute in Glen Ellen, California. He is offering a one week “Fermented Foods Workshop” with an emphasis on miso-making. They ended up staying until April, making miso with him. That spring they make 1,000 lb of miso and write an article about it titled “Making miso in America,” published in *East West Journal* in Sept. 1978. There they first met Thom Leonard, who comes to visit. Thom had already made some miso and tofu in Arkansas. Though they were together for only 2-3 days, they greatly enjoyed talking about their many mutual interests. “It was a really good connection.”

1978 Feb.–Article titled “Learn natural architecture: Conversation at Cornerstones” (with Charlie Wing), by Christian (with photos by William Elwell), published in *East West Journal*. The interview took place in the fall of 1977.

1978 April or May–Christian and Gaella return to western Massachusetts, and with Christian’s brother, Will, look for land in the Pioneer Valley region–within the larger Connecticut Valley.

1978 July–Review (by Christian) of five books by Rudolf Steiner published in *East West Journal*.

1978 Aug.–With financial help from their mother, Christian and Will purchase 64 acres of undeveloped land in Conway, Massachusetts, for \$50,000 cash. They name the place South River Farm; South River (20-40 feet wide) runs through the property. They buy the land with the intention of homesteading, that is building their own home, farming, leading a life that is as self-sufficient as possible. While living in a small apartment in the village of Conway, they first build a barn and several cabins, and get a pair of draft horses.

1978 Sept. 9–Christian and Gaella are married at the Old Brick Church in Old Deerfield, Mass. They learn that one of Christian’s direct maternal ancestors, John Williams, was the first minister of that church in the early 1700s.

1979 March 15–Thom Leonard and Dick Kluding ladle the first batch of miso into their one-ton wooden vats at the Ohio Miso Co. in Monroeville, Ohio. They had begun construction of the shop the previous October.

1979 May 15–The Elwell’s first child, Anna Deerfield Elwell (“Anni,” a girl), is born. They are still living in their apartment in Conway.

1979 fall–The Elwells move onto the land from their apartment. They live in a 24-foot-long pink and white trailer. Will is already living on the land in a cabin they built next to the barn. Continued. Address: Founder and Owner, South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

2542. Elwell, Christian. 1999. Chronology of South River Miso Co. Part II. 1980-1982 (Interview). *SoyaScan Notes*. Dec. 16. Conducted by William Shurtleff of Soyfoods

Center.

• **Summary:** Continued: 1980 Jan.–The Elwells receive a letter from Thom Leonard informing them that the Ohio Miso Co. is for sale.

1980 spring–The Elwells get a \$3,000 grant from the U.S. Department of Energy, Appropriate Technology small grants program–to build a rammed earth house on their property. Fred Hubbard, originally from Cape Cod, hears about this building project through his sister, who was a relative of Christian’s, and offers to participate. Unmarried, he arrives in the early summer of 1980 and lives in a tent on the Elwell’s land.

1980 May–The Elwells purchase the Ohio Miso Co. for \$10,000 cash from Richard Kluding.

1980 summer and fall–Christian tries to “back out of the miso business.” He feels overwhelmed by all the work that would be required. His brother, Will, who had just met his wife to be, is not sure he wants to be involved in the “miso making adventure.” He decided that he would move off the land in the summer of 1981. Christian approaches Michio Kushi, who owned Erewhon, and talks about Erewhon buying the Ohio Miso company. Michio shows a sincere interest in buying the company and in going to Ohio to look at the equipment and miso–but that never happened. A year later, in Nov. 1981, Erewhon filed for Chapter 11 bankruptcy.

1980 Nov.–With the walls of the rammed earth building finished, Christian and Fred Hubbard drive to Monroeville, Ohio, where they “stuffed the entire Ohio Miso company, all the equipment and 13 tons of miso, into the back of a huge semi truck trailer which a trucking company had delivered.” Each vat contains about 2,400 lb of miso. They empty all of the miso into 5-gallon buckets, then put the in-tact wooden vats into the truck, then put the 5-gallon buckets (still filled with miso) into the vats. It took 10-14 days to fill the truck. Christian and Fred drive back to South River Farm and a week later the trucking company delivers the trailer one day before a light snow storm. Christian and Fred, with help from neighbor Don Herzig and his tractor, unload the entire contents and store it in their barn–which was across the river.

1980 Dec.–Christian sends a form letter to Ohio Miso Company’s former customers that begins: “Dear Friends, old and new: The Ohio Miso Company has changed ownership. As of November, 1980, the Elwell family has purchased and moved the equipment and present stock of miso to South River Farm in Conway, Massachusetts... Eventually we want to follow a full cycle by growing the grains and beans on our own farmland... We plan to have our new shop ready for the fall season of 1981...”

1981 winter (Feb/March)–Christian sells Ohio Miso out of the barn, loading it onto a horse-drawn sled, pulling it over a logging road through the woods (the river was impassable) to the road and then on to a UPS terminal in Springfield. One of their best customers is Western Mass. Co-ops–which later became Northeast Cooperatives.

1981 June—The Elwells and partners lay the foundation of their new miso shop—1,220 square feet—and begin building a timber frame (post-and-beam) miso shop on their land. The frame is made of big, heavy timbers which are joined together with wooden pegs—no nails. This is an old English and New England method of construction. Christian had planned to construct a less expensive cinder-block building until he met master timber framer Jerry Sawma, who lives in Conway. Christian and Fred work with Jerry all that summer and fall, helping him frame the building and put the shingles on the roof. Fred and Christian take over from there, putting on the walls, etc. They had not finish by winter, so they covered it with plastic sheeting to keep out the snow.

1981 Nov. 29—Christian writes an “Historical sketch” of the South River Miso Co. on its handsome new letterhead: “There, a new shop of traditional timber-frame construction, featuring a wood-fired masonry cooking stove was completed in 1981. Production capacity is 40,000 to 120,000 pounds of miso per year. Barley miso is the standard variety offered. Others include Brown Rice, Corn, and Black Soybean miso.”

1982 Jan. 1—South River Miso Co. is incorporated.

1982 Feb. to spring—Christian was now thinking of running the miso company with two other families on a community basis; they would contribute money, labor, and community/social spirit. Christian’s brother, Will, had left in the summer of 1981. Christian invites the other families to come and live on the land and work in the miso company. One couple, from the macrobiotic community in Boston, was Anpetu Oihankeshni and Hannah Bond; they were not married when they arrived but they had a wedding ceremony on the land. The other couple was Don and Marcia Wheeler, who were from families that had lived nearby in the Pioneer Valley for generations. These two couples invest \$30,000 to finish the miso shop and get the company running.

1982 spring—Christian and Fred finish building the miso shop, assisted by Don Wheeler and Anpetu. The total cost of the building was about \$80,000, including Jerry’s labor expenses but not including Christian’s and Fred’s time. Jim Sadler later drew a nice illustration of the 5-part building from a photograph. The main center part, which has two stories, is where the miso is made; a living space is in the loft upstairs. The koji room protrudes out toward the front. To the right of the main part is the entryway to the shop where the shipping is now done. To the right of the entryway is a 36-foot-long storage building, where the miso vats are stored. Each vat, made of recycled virgin cypress, holds about 7,500 lb of miso. To the left of the main building, under a roof that slopes downward, is more of the miso shop plus storage for smaller miso barrels. To the far left is a firewood storage shed.

1982 Oct. 25—With the miso shop just finished Christian, Gaella, Don Wheeler, and Thom Leonard hold a dedication ceremony then begin to make the first miso (actually barley

koji for a 2-year barley miso) at South River Miso Co.—according to the “Production Log” which still exists. Thom arrived (from Baldwin Hill Bakery, which is a 45-minute drive away in Phillipston, Mass.) about a week before this day and stayed for about 3 weeks afterward. Part of the agreement in the purchase of Ohio Miso was that Thom would come to Conway to help them get started and teach them as much as he could about miso-making. It was a friendly and informal arrangement. Christian had to keep telling Thom to wait because it took longer than expected to finish building the miso shop; he was very patient and understanding. The organic barley and soybeans used in the first batches of miso were from Living Farms in Tracy, Minnesota. From 1980-82 Thom had taught miso-making classes in Boston. Earlier in 1982 Christian attended one of Thom’s classes at Baldwin Hill Bakery. As of December 1999 Thom has a very nice bakery in Salinas, Kansas, and he is very happy—part of a nice community. The first miso at South River is put into recycled oak whiskey barrels, purchased from Ohio Miso Co. Muramoto also used such barrels and Thom may have gotten the idea from him. The barrels had been burned on the inside so the charcoal would improve the flavor of the whiskey as it aged; the charcoal had to be scraped off before the barrels could be used for miso. Small batches went into the smaller whiskey barrels; larger batches went into cypress wood vats. Christian recalled in 1999: “Thom told me during the first week, as we were washing and soaking soybeans, ‘Miso making is about creating order. That is the main thing to keep in mind here in the shop: to create and maintain order.’ This was his way, in the spirit of Zen food craft, of breaking through the glamour and mystique of miso making.”

Gradually the men used the two horses and cart to move the miso barrels and vats from the barn, across the river, and into the new storage building that was part of the miso shop. By that time Christian had sold most of the miso made in Ohio.

1982 winter—Anpetu and Hannah live above the shop that winter; the Elwells live across the river—before there was a bridge over it. Christian would walk through the ice cold water early each morning (until the river froze) to get the fires started each morning. Continued. Address: Founder and Owner, South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

2543. Elwell, Christian. 1999. Chronology of South River Miso Co. Part III. 1983-1999 (Interview). *SoyaScan Notes*. Dec. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1983 spring—The miso company sends out a very interesting and poetic hand-lettered, dated leaflet and price list. The front panel, with a logo of three waves in a circle, announces the availability of three kinds of miso: Mellow Barley (6 weeks), Mellow Brown Rice (6

weeks), and Mellow Flint Corn (8 weeks). “South River Farm is the coming together of three families seeking common livelihood.” A pie chart shows the company’s costs.

1983 summer—The first in-depth story about the miso company, with five good photos, appears in *Soyfoods* magazine. The article states that the company (whose name is incorrectly given as “South River Farm Miso Company”) is owned by three families, and the names of the six owners are given. Actually, however, Christian and Gaella were (and have always been) the company’s only legal owners.

1983 fall—The community idea fails after one miso season (1982-83). The Wheelers leave first. Anpetu and Hannah leave in the fall of 1983; Anpetu writes a sad poem about falling leaves as they part. It takes the Elwells 10 years to repay the money the other two families had invested.

1983 Sept.—Christian goes to Charlie Kendall, who lives nearby, and asks if he can supply Charlie with rice koji for the amazake he makes. Charlie had been buying all his rice koji, dried and in bulk, from Miyako Oriental Foods in California. Christian offered to match Miyako’s price and make the koji from organic rice. Christian was already making rice koji for his red miso and he needed more customers. After making many trial batches and building a koji dryer, Christian begins supplying Charlie with 900 pounds (three 300-lb batches) of koji at a time. Also that second miso season (1983-84) the first apprentice, Sonia Schloeman, works at the miso shop; Christian needs help and Sonia needs a place to stay. He pays her a salary and she stays in the loft above the shop. After Sonia leaves, the Elwells move into the loft above the shop. The second intern was Dan Hornack, who came all the way from Aspen, Colorado. From then on the arrangement was room (in the cabins across the river) and board plus a small stipend in exchange for the apprenticeship. Other apprentices who worked in the shop over the years have included (in chronological order) Rich Sweitzer and Susan Gribbon (later to marry), Michelle Gemme (Montreal, Canada), Don Phillips, Michael Dessen, Tim Langdon, John and Mary Granger, Caroline Wurts, Maggie Smith, Andrew Goodman, Tolly Gibbons (New Zealand), Anne Walsh Sullivan, Bobby (age 18 and white, from South Africa), Sean LePoutre, Maria Low, Kamil Bersky (a medical doctor from the Czech Republic), and Stephen Jannetta. Stephen worked at the shop for two seasons (Oct. 1990 to May 1991, and Sept. 1993 to May 1994), then helped others (Soyalab, and La Fonte della Vita) to start commercial miso production in Italy. His brother, Phil Jannetta, worked for Mitoku in Tokyo. Most apprentices stayed for one full miso season. Gaella cooked for everyone.

1983 Oct. 17—Isaiah, the Elwell’s second child is born.

1983 Nov.—The company runs its first ad (1/3 page vertical) in *East West Journal*. The theme: “Wisely given miso gives its own wisdom.” An illustration at the bottom shows the miso shop buildings. A logo at the top shows three

waves in a circle.

1985—Starting this year, a group of students from the Kushi Institute at Becket, Massachusetts (which is about 1½ hours drive away) comes to visit to miso shop—even though Christian has had no personal connection with the macrobiotic movement for many years. Over the years, the number of groups has increased to 3-4 a year. In the early years, Christian would give a slide show and talk on miso-making. Now they usually come on a weekend and take a tour of the shop when it is not in production, and Christian will share with them what he has learned about miso.

1989-90—The Elwells, with the help of Fred Hubbard, design and begin building a timber-frame home located behind the miso shop—about 12 feet away from it. For the previous 5 years they had lived in the loft above the miso shop. Fred eventually built his own home in Conway, where he now resides as a carpenter and builder.

1991-92—The Elwells stop taking apprentices and start with paid workers. There was a difficult period of transition as Christian began to tire of working in the shop. Workers include Larry Glanz, a former student who worked with Muramoto-sensei and Stephen Jannetta.

1995 Aug.—Christian seriously considers selling his miso company to Barry Evans, owner of American Miso Co. and Great Eastern Sun in North Carolina. He had taken training to become a Waldorf School teacher. But this would require the Elwells to give up their land, and although it was quite isolated, they did not want to leave it.

1995 fall—Yukio Doyama begins to work at the miso company, a happy, hard-working man who enjoys making miso. At the same time, Steve Freiman comes to live above the miso shop and work with Yukio. Christian was now freed up for an extended time from day to day production and packing work; he began taking a more supervisory role and handled most of the office work and shipping. Andy Mathey followed in Steve Freiman’s position, working with Yukio.

1996-97—This fiscal year the miso business is computerized. In late 1997 Christian decides not to sell the miso company, and to invest much more energy, time and resources in it—“to make it come alive again” after a period of hibernation. “When we clear up things inwardly, this is reflected by outward things.” Quickly, all sorts of good new things begin to happen.

1998 Feb.—The first issue of *River Currents: News from South River Miso Company* is published. This attractive newsletter contains a catalog and order form, plus news about miso and the company.

1997-98 fall and winter—Three young people come to live at South River Farm to cultivate the land—and to work on forming a community. Arthur Lerner comes first, then his partner, Emily Kellert, and soon after, David Fisher. That winter these three also work part time in the miso shop. Robin Cole, a friend of many years, arrives in early spring of 1998 and creates the position of office manager/

administrative assistant.

June 1998–The Elwells and coworkers finalize a mission statement for the miso company after three months of weekly meetings. It is published in the winter (Dec.) 1998 issue of *River Currents*.

1999 Sept.–The apprenticeship program is reinstated; Maria Rossi is the first to fill the position.

1999 Dec. 16–Christian says that the miso company, about to enter its 21st year or adulthood, is taking on a life of its own. Gaella was never a regular miso maker in the shop. In the early years she was a full-time mother and cooked hundreds of meals for builders and then miso apprentices. Her role has always been one of moral support. This year she does work in the shop two afternoons a week on the packing crew. The many new people are contributing to the growth of the miso company as a “learning organization” (see *Fifth Discipline*, by Peter Senge).

South River Farm is now moving in the direction of being home to self-sustaining farmstead—“as the place in which South River Miso is planted.” David Fisher has built a pole barn, gotten draft horses, pays a modest lease, and sells his organic produce. Address: Founder and Owner, South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

2544. *Let's Live*. 1999. A century of good health. Dec. p. 32-39.

• **Summary:** This is a look back at *Let's Live* and the broader field of American health during the 20th century features: (1) A sampling of 25 color covers of the magazine from Jan. 1933 (when it was founded as *California Health News*) to the present. (2) A timeline, with tiny photos, of major developments from 1933 to 1999. (3) Two pages of “Headline news and highlights,” short summaries of major developments with an exact “flashback” date or year. One of these, dated April 1937, shows the front page of *California Health News* with the bold headline “Government endorses soy foods.” The summary titled “Soy story: Finally getting some respect—again” notes that in Oct. 1999 the FDA approved labeling for a soy heart health claim. “*Let's Live*, however, has long been promoting soy’s many benefits.” (4) One page titled *Let's Live* goes Hollywood with 12 color covers (each featuring a portrait photo of a Hollywood star) and 11 questions each beginning with the words “Who said” followed by a quotation. Stars include Bob Hope, Dennis Weaver, Glenn Ford, Mitzi Gaynor, Robert Redford, Chris Everett, Lindsay Wagner, and Tippi Hedren. (5) One page titled “Stand up, speak out, take action” with three summaries of controversial developments (such as fluoridation from 1952), and a profile of Elaine Hein, a vegetarian who has been a reader for 60+ years. (6) One page titled “Still writing after all these years” with profiles and photos of four prolific *Let's Live* writers. (7) One page titled “*Let's Live* gets fit” is about the magazine, exercise, and

fitness from 1942.

2545. *SoyaScan Notes*. 1999. Major soy-related company acquisitions and mergers worldwide 1990-1999 (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1990 Jan.–Worthington Foods acquires La Loma Foods of Riverside, California (formerly Loma Linda Foods, owned by the Seventh-day Adventist Church).

1990 (early)—Daniel Gevaert purchases the Lima Andiran site at Andiran (near Mezin) in southern France from Lima Foods—but not the Lima trademark. In June 1990 Daniel and his wife, Valerie, established Danival.

1990 Aug. 3—Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy soymilk) acquires Nasoya Foods of Leominster, Massachusetts.

1990 Dec. 21—The Haldane Foods Group (a subsidiary of British Arkady Ltd., which is in turn owned by ADM) acquires Unisoymilk ‘n’ By-Products Ltd. of Cheshire, England.

1991 Jan. 1—The Haldane Foods Group acquires Granose Foods Ltd. of Watford, Hertfordshire, England (formerly owned by the Seventh-day Adventist Church).

1991 Jan. 28—Tetra Pak International acquires Alfa-Laval AB.

1991 April—Huegli Naehrmittel A.G. acquires Soyastern Naturkost GmbH / Dorstener Tofu Produktions GmbH.

1991 Dec.—Specialty Food Ingredients (SFI) Europe BV acquires Solnuts BV (Netherlands) and Solnuts Inc. (Hudson, Iowa).

1992 Oct.—Central Soya Co. acquires the Protein Division of Aarhus Oliefabrik in Denmark.

1993 June—Vitasoy purchases Azumaya Inc. (America’s largest tofu manufacturer, and the low-price leader) in California, for an estimated \$4-\$5 million. Vitasoy is now in the tofu business.

1993 June—21st Century Foods acquires Farm Foods from Barricini Foods.

1993—House Foods of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is named House Foods American Corporation.

1993 July—Nutrition et Santé (part of the Sandoz Group) acquires Société Soy of Saint-Chamond, France. The latter company was renamed Nutrition et Soja, and on 15 Oct. 1994 it moved into a new factory at Revel (near Toulouse), France.

1993 (mid)—B & K Holdings of Switzerland acquires Sojinal of Issenheim, France.

1993?—Kineret (pronounced kuh-NAIR-et) Acquisition Group acquires Farm Foods from 21st Century Foods, then in Nov. 1993 the Hain Food Group acquires Kineret plus some assets of Barricini Foods Inc.

1996 April 22—Alpro (Belgium) purchases Sojinal (France).

1995 April 21—Irene and Len Stuttman buy back control of their company, INARI Ltd. (dba. Sycamore Creek) from J. Charles Follett (former CEO) and Peter L. Pairitz (accountant).

1995 April—Quest International, a unit of Unilever, acquires A.E. Staley’s Gunther Products Division.

1997 Feb. 3—Monsanto purchases Asgrow Seed Co. from Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM).

1997 Aug. 24—DuPont signs a letter of intent to acquire Protein Technologies International, a wholly-owned subsidiary of Ralston Purina Co.

1997 Oct. 14—The Hain Food Group acquires Westbrae Natural, Inc., makers of soymilk. Westbrae’s new name becomes Hain Food Group—Westbrae. 1997 Dec. 3—DuPont finalizes its purchase of Protein Technologies International (PTI—the world’s leading manufacturer of soy protein isolates).

1998 Oct. 16—Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

1998 Dec. 31—DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

1999 Jan. 4—W.G. Thompson & Sons Ltd. of Blenheim, Ontario, Canada, purchases Sycamore Creek Co., a maker of soynuts and soynut butter (located in Mason, Michigan).

1999 Oct. 4—The Kellogg Co. (famous maker of breakfast cereals, Battle Creek, Michigan) buys Worthington Foods Inc., America’s leading maker of meat alternatives.

2546. Walz, E. 1999. Third biennial national organic farmers’ survey. Santa Cruz, California: Organic Farming Research Foundation. See p. 19-47. *

• **Summary:** Farmers making the transition to organic soybean production cite weed management as their most important challenge. Address: P.O. Box 440, Santa Cruz, CA 95061. Phone: 831-426-6606.

2547. **Product Name:** WestSoy Crème de la Soy: Non Dairy Soy Creamer [Original, French Vanilla, Amaretto].

Manufacturer’s Name: Westbrae Natural Foods (Product Developer-Distributor).

Manufacturer’s Address: Uniondale, New York 11553. Phone: 1-800-SOY-MILK.

Date of Introduction: 1999.

Ingredients: Original: Organic soy beverage (Filtered water, organic soybeans)*, filtered water, brown rice syrup, organic expeller pressed soy bean oil*, natural flavors, dipotassium phosphate, carrageenan. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 16 fl. oz. (473 ml) aseptic Combibloc carton. Retail for \$3.19 (2000/06, Lafayette,

California).

How Stored: Shelf stable; refrigerate after opening and use within 7-10 days.

Nutrition: Per tablespoon (15 ml): Calories 20, calories from fat 10, total fat 1.5 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 0 mg, total carbohydrate 2 gm (dietary fiber 0 gm, sugars 1 gm), protein 0 gm. Not a significant source of vitamin A, vitamin C, calcium or iron. Percent daily values are based on a 2,000 calorie diet.

New Product—Documentation: Product with Label purchased at Open Sesame in Lafayette, California. 2000. June 5. Combibloc carton. Bluish green, white, and blue on a wood-colored (tan) background. The word “Soy” is written with a small coffee cup in place of the middle letter (“o”). At the bottom of the front panel: “All natural. Lactose free. No tropical oils.” For more information: www.westbrae.com. Note: In May 1992 Westsoy introduced its first such product named “WestSoy Lite Non Dairy Creamer.” Talk with Westsoy representative. 2000. June 5. This product comes in three flavors (see above). All were introduced in Oct. 1999. Soyfoods Center taste test. 2000. June 5. The color is tan. The flavor is bland and not too sweet.

2548. Wild Oats Community Market; Alfalfa’s Markets.

2000. The joy of soy: Resolve to evolve. This millennium, pick up a good habit. Your guide to soyfoods—True health food. Colorado. 8 panels. [10 ref]

• **Summary:** This is a chain store newspaper (published from time to time; copyrighted 1998), with this issue devoted to soyfoods. It contains ads for many soy products sold at the store, many of them on sale. “Soy strategy: Three New Year’s resolutions. 1. Get healthy. 2. Lose weight / cut down on bad fats. 3. Help protect the environment.

A sidebar titled “Cool beans! Top ten reasons to enjoy soy” states: “1. Soy protein helps reduce cholesterol levels, thereby reducing the risk of coronary heart disease, which accounts for more than 500,000 deaths in the U.S. per year.

“2. The soybean is the only vegetable to offer a complete protein profile, equal to both meat and eggs in its protein content.

“3. As a complete protein, soy contains all nine essential amino acids. (The human body needs twenty amino acids, only eleven of which are produced by our bodies).

“4. Soybeans are higher in essential, healthful fats than most vegetable foods.

“5. Soybeans are a good source of several vitamins and minerals, including calcium, zinc, copper, magnesium, iron and many of the B vitamins.

“6. One acre of soybeans provides about 30 times more protein than one acre devoted to raising beef.

“7. Soy is also the richest dietary source of isoflavones, which act as phytoestrogens that may help protect against cancer, osteoporosis and menopause.

“8. Soy may increase bone density and reduce the risk of

osteoporosis.

“9. Soy may reduce menopausal hot flashes in women—good news for those women who do not wish to take hormone replacement therapy.

“10. Other heart-healthy benefits of soy include low saturated fat, high calcium content, high essential fatty acid (EFA) content, high vitamin E content and no cholesterol.”

There are definitions of and information about: Miso, shoyu, tamari, tofu, tempeh, soy milk, soy yogurt, soy cheese, soy desserts, soy oil, soy flour, texturized soy protein, soy grits, soy nuts, edamame (soy in the pod), and meat alternatives.

2549. *Nutrition Business Journal (San Diego, California)*. 2000. M&A [mergers and acquisitions] update: Natural foods command high multiples. 5(1):15, 18. Jan.

• **Summary:** In Jan. 2000 Kraft purchased Balance Bar (\$19.40/share) and Boca Burger. Balance Bar had its initial public offering (IPO) in 1998. In the last fiscal year, Balance Bar had revenues of \$106 million, compared with \$40 million for Boca Burger. Balance Bar makes at least one product that features soy protein. All Boca Burgers are vegetarian and contain soy.

The year 1999 set a new record for nutrition industry M&A activity, with 90 transactions, compared with 75 in 1998.

Note 1. A story on page 1 of this issues states that the price of Balance Bar stock rose 27% during 1999; Hain Food Group was down 11%. Note 2. EBIT = Earnings before interest and taxes.

Note 3. Talk with Boca Burger. 2000. March 13. Chris Scott bought out Richard Gross (Max Shondor) several years ago.

2550. Puente, Maria. 2000. Edamame snacking: Still more soy to the world. *USA Today*. Feb. 8. p. D1. Life section.

• **Summary:** The legions of American health nuts “on the prowl for the perfect snack food” have discovered an exotic candidate that tastes great: edamame. In Asia, they take the place of peanuts as a finger food, and are served piled in bowls at restaurants and bars. Diners suck the savory beans from the pods. The U.S. Food and Drug Administration now says soybeans are good for you, and may help fight heart disease and cancer. What chip can make that boast?

“In fact, all things soy are hot among American food producers.” SunRich of Hope, Minnesota, sells about 2 million pounds/year of edamame and can barely keep up with the 25% yearly increase in demand. Trader Joe’s, a national chain of specialty grocery stores, has been carrying frozen edamame for about a year. Even big-time media are paying attention. The *New York Times* called edamame “the world’s easiest hors d’oeuvre.” A small color photo shows a mound of edamame in a white bowl with chopsticks on the side. The caption notes that they “could go mainstream.”

Address: USA Today.

2551. Jaret, Peter. 2000. The joy of soy: Hailed as the king of all health foods, the mighty soybean has been touted as a weapon against heart disease and cancer. *Harper’s Bazaar*. Feb. p. 152, 156.

• **Summary:** “Wonder foods come and go... But the new superfood of the moment promises to be different. Eventually it’s going to get everyone’s attention, because the health claims being made for it are just too big to ignore.” “A stream of scientific papers have shown evidence that it can fight heart disease and cancer.” Even those who hate tofu are finding that soy can taste pretty good. Many like edamame—those slightly furry green pods served at Japanese restaurants. You run them through your lips and suck out the smooth, slightly salty soybeans inside. “Edamame have become so popular, they’re being sold in bulk stores from New York to California.” At Trader Joe’s, a nationwide retail chain, sales of frozen edamame now rival those of frozen corn and broccoli. Even soymilk is poised to go mainstream. A key reason for the health benefits of soybeans is that they are rich in isoflavones—substances that resemble the natural hormone estrogen. Isoflavones are also powerful antioxidants.

Color photos show: (1) Two large red chopsticks holding one cooked yellow soybean. The caption: “The soybean, Asian staple, may be a big reason why cancers of the breast and prostate are uncommon in Japan and China.” (2) Edamame in the pods, topped with a sprinkling of coarse white salt, on a square bamboo tray. The caption: “Edamame, the salty finger food served at sushi bars, is so popular, specialty food markets are beginning to sell it by the pound.”

2552. White Wave, Inc. 2000. Silk: Put the fastest selling soymilk in your dairy case (Ad). *Natural Foods Merchandiser*. Feb. p. 16.

• **Summary:** This color ad (8½ by 11 inch) contains a photo of a half gallon carton of Silk Vanilla Soymilk (organic, Calcium and vitamin enriched). “The Number 1 selling refrigerated soymilk in America.

“Silk Vanilla half-gallon soymilk is also the largest selling non-dairy beverage in America’s top 600 natural foods supermarkets, SPINS data Oct. 1999.” Address: Boulder, Colorado.

2553. Smith, Patricia J. 2000. Big changes at Macrobiotic Company of America (MCOA) in Asheville, North Carolina: Bruce Macdonald, Yuko Okada, and Norio Kushi (Interview). *SoyaScan Notes*. March 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Patricia has heard from reliable sources that Bruce Macdonald, president of MCOA, was fired by Yuko Okada, over allegations of financial irregularities—such as buying land and paying off personal debts using MCOA

funds. During a MCOA board meeting, at which Yuko, Yuko's son, and Bruce were present, Yuko had a locksmith put a padlock on the door to Bruce's office. Yuko, who lives in Japan and owns the company, is also owner and CEO of Muso Shokuhin. Yuko has installed Norio Kushi as the new president of the company.

Update: 2000 May 2. Bruce Macdonald has sued Norio Kushi. None of the allegations against Bruce have been proven. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

2554. Product Name: Eco Soy Pudding (Organic) [Vanilla, Chocolate, or Chocolate-Orange].

Manufacturer's Name: EcoFoods, Inc. (Product Developer-Distributor).

Manufacturer's Address: Palo Alto, California 94303. Phone: 650-978-9696.

Date of Introduction: 2000 March.

Ingredients: Organic soy beverage* (Filtered water, organic whole soy beans*), fructose, tapioca starch (modified), organic cocoa*, expeller pressed canola oil, organic agave nectar*, natural flavor, calcium, carob powder, lecithin, sea salt, carrageenan. ** = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 4 x 4.5 oz (128 gm) cups = 18 oz (510 gm). Retail for \$2.99 to \$3.20 (4 pack in California).

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per cup (128 gm): Calories 140, calories from fat 25, total fat 3 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 60 mg (2%), potassium 170 mg (5%), total carbohydrate 25 gm (dietary fiber 0 gm, sugars 18 gm), protein 2 gm. Vitamin A 0%, vitamin C 0%, calcium 20%, iron 0%. Percent daily values are based on a 2,000 calorie diet.

New Product-Documentation: Product (Chocolate) with Label brought by Bob Gerner of Berkeley Natural Grocery Co. 2000. March 13. The product is sold in a 4-pack with a paper sleeve. Label: 6 by 10.25 inches. Paperboard. Chocolate brown, green, blue, and pink on white. Illustration of a spoon filled with a swirl of pudding. "Made with organic soy beans. Excellent source of calcium. Low fat & non dairy. 15 mg isoflavones per serving. Organic, genetically unmodified soy beans." Soyfoods Center taste test: Flavor, texture, and package design: Okay.

Leaflet (8½ x 11 inches, glossy color, front and back) brought by Bob Gerner. The front shows the three flavors packaged in sleeves. "A great taste non-dairy pudding with non GMO organic soy beans." The back gives product ingredients and specifications.

Talk with Carole Corb of EcoSoy and C.J. Corb Intl. (phone: 805-773-8801). 2000. March 14. This product was developed by Daniel Adam, who lives in Israel where he runs a natural foods import business, importing Edensoy,

Garden of Eatin' products, Galaxy soy cheeses, etc. The product, which is made in Minnesota, was first launched in Israel on 15 Jan. 2000, then in America in March 2000. Her favorite flavor is Chocolate-Orange. The recommended retail price is \$2.97+.

2555. Product Name: Sesame Miso Dressing.

Manufacturer's Name: Follow Your Heart Natural Foods Market and Vegetarian Restaurant (Marketer-Distributor).

Manufacturer's Address: California. Phone: 1-800-40-Salad.

Date of Introduction: 2000 March.

Ingredients: -

Wt/Vol., Packaging, Price: -

How Stored: -

Nutrition: -

New Product-Documentation: Sell sheet sent by Patricia Smith from Natural Products Expo, Anaheim. 2000. March. "Follow Your Heart-Fresh & Natural Dressings." Glossy, color, both sides. They opened for business in Southern California in 1970.

2556. Food Trade Journal U.S.A. (Ikegawa Food Specialists). 2000. FDA as well as media help Japanese food industry: Soy products and green tea are highlighted. 10(2):1, 3-4. March. [Eng; Jap]

• **Summary:** Each article in this newspaper is published in both English and Japanese. Last October, the FDA gave its approval for U.S. companies to begin using a health claim on foods containing at least 6.25 gm of protein per serving. Except for traditional soy products (such as tofu), each serving must contain no more than 3 gm of fat, 20 mg of cholesterol, and 480 mg of sodium. The FDA believes that adults who consume 25 gm/day of soy protein could experience a decrease in their blood cholesterol, which reduces their risk of heart disease. The mainstream soyfoods that benefited from this announcement are veggie burgers, soymilk, tofu, and soy cheese. But now edamame has emerged as a big seller at supermarkets since a few years ago. A Japanese-style cartoon shows two blonde girls seated at a table. A boy, who is standing, says "I show you how to eat Edamame." Holding a pod of edamame in his right hand, he is popping the beans into his mouth. A circular inset, showing how his fingers hold the pod, is titled "Squeeze." Another cartoon shows Takuji Kimura [Mr. edamame in America], drawn by his son.

The article gives lengthy excerpts from two recent American articles: (1) Hesser, Amanda. 1999. "Bet you can't eat just one soybean." *New York Times*. Sept. 8. p. F3. (2) Deane, Donna. 2000. "Get more soy in your life." *Los Angeles Times*. Jan. 12. p. H1, H3. Food section.

According to Shigeru Shirasaka, president of House Foods (a leading U.S. tofu maker), his company shipped 29 million pieces of tofu in 1999, which is a 70% increase over

1995.

The last page of this article is about edamame, by Takuji Kimura, America's leading edamame broker, Concord, California. Japanese restaurants have been the showrooms for edamame, and they are part of the reason for its growing popularity. Tak Kimura started trying to sell edamame in 1994 at several natural food stores, but nobody seemed interested. He contacted the produce manager of Whole Foods in Berkeley—a woman—without an appointment. When he asked her to try his edamame, she said that she knew what it was—an appetizer at sushi bars! She liked it very much and had tried to find a source, but the restaurants would not disclose their sources. During his first demo day at Whole Foods he sold only 8 packs in 8 hours. But after 2 weeks sales started to increase. Then he got permission to sell edamame at other Whole Foods Markets, and then at the Wild Oats chain of natural food stores. In 1998 sales started to increase rapidly. Now the FDA is supporting edamame and major newspapers are doing stories, so sales continue to grow.

2557. Hain Food Group, Inc. 2000. The Hain Food Group (Portfolio). Uniondale, New York. 35 inserts. 28 cm.

• **Summary:** The inserts, all printed with black ink on 8½ by 11 inch paper (usually colored), include: (1) Westsoy Singles and other Westsoy products. (2) Health Valley Soy O's Cereals (like Cheerios, New product March 2000). (3) Westsoy just got cool! Now in gable-top cartons. (4) Westsoy Soy Central (Display rack). (5) Arrowhead Mills stone ground whole wheat flour (Commemorating 40 years of organic heritage). (6) Westsoy pudding cups (vanilla or chocolate). (7) Crème de la Soy (original, French vanilla or Amaretto). (8) Westsoy VigrAid quarts, Pudding Cups, Westbrae Natural Café, Chai, Juice Bar, Health Valley Soy Moo. (9) Westsoy Organic Malted, Lite Malted. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2558. Newshour with Jim Lehrer. 2000. USDA announces revised standards for organically grown food. Television broadcast. PBS. March 7.

• **Summary:** These revised standards contain three major changes from the former proposed standards: Foods many not be labeled organically grown if they are genetically engineered or contain genetically engineered ingredients, if they are irradiated, or if industrial sludge is used in their production. A processed food must contain 90% organic ingredients before it can bear the "organic" label. In an interview, Secretary of Agriculture Dan Glickman emphasized that these organic standards are not about food safety; the USDA is not stating that organically grown foods are safer than their non-organic counterparts. Rather the standards are for to be used marketing foods grown using natural methods. Moreover, the standards are a way to help

small and medium-sized farmers survive and become more profitable. In 1990 the U.S. Congress mandated the USDA to develop organic standards. The present standards are not final; a 90-day comment period now begins.

2559. Soy isoflavone content of specific soy milks (Leaflet). 2000. Single sided. 28 cm.

• **Summary:** This leaflet, printed with black ink on white paper, contains a full-page table with three columns: Brand, manufacturer (and phone number), and isoflavones/8 oz. The six brands are as follows: (1) Edensoy, from Eden Foods (range 40-45 mg). (2) Pacific, from Pacific Foods of Oregon (range 2-53.5 mg; the 53.5 mg is for Original unsweetened). (3) Silk, made by White Wave (35 mg for all 3 flavors). (4) Soy Dream, from Imagine Foods (40-47 mg). (5) Vitasoy, from Vitasoy (range 16-35 mg; the 35 mg is for Creamy Original). (6) Westbrae, from Westsoy/Hain (range: 4.8 to 50 mg; the 50 mg is for VigrAid).

The products with the lowest isoflavone content are those which are "Light" (watered down) or Fat-free (low fat).

Note: This leaflet was available at a natural foods store in Colorado in March 2000. The compiler and publisher are unknown.

2560. **Product Name:** Westsoy Juice Bar Singles (Soy milk and Juice Mixture) [Berry, Orange, Apple].

Manufacturer's Name: Westbrae Div. of Hain Foods (Product Developer-Marketer).

Manufacturer's Address: New York City, New York.

Date of Introduction: 2000 March.

Ingredients: Soy milk, fruit juice.

New Product-Documentation: Talk with Zaida. 2000. Aug. 7. She has a package of this product.

2561. Shaw, Ann. 2000. History of Avoset Foods, Morningstar Foods, and Suiza (Interview). *SoyaScan Notes*. March 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The plant in Gustine (where Ann has worked in research for 26 years) used to be called Avoset Food Corp. Avoset has been a pioneer in ESL products since the company started; this plant is almost 90 years old. Originally it was a creamery, owned by Foremost, then by Smith-Kline (a pharmaceutical company). In the 1940s, during World War II, Avoset pioneered ultra-pasteurized products for the U.S. military—such as whipping cream in little glass jars for use on submarines. In the 1950s they pioneered whipped toppings in pressurized squirt cans. In the mid-1960s Avoset was the first U.S. company to install a gable-top ESL (extended shelf-life) packaging machine, which packaged long-life whipping cream, and half-and-half. The non-ESL products had a shelf-life of 10-14 days and were considered "nuisance items" by fluid dairies and retailers. In about 1975 Smith-Kline sold Avoset to Anderson Clayton, which broke up the company

and sold it to Quaker Foods, which sold it in June 1987 to Kraft, which sold it in about 1988 Morningstar—which was basically a group of venture capitalists from the Southland Dairies in Texas which bought specialty dairies (such as Bancroft Dairy) making value-added dairy products such as cultured foods, coffee creamers, whipping cream, half-and-half, etc.—products other than just fluid milk. Other branded Morningstar products included Second Nature (cholesterol-free eggs), International Delight (coffee creamers), etc.

In about 1997 (3 years ago) Suiza Foods Corp. purchased Morningstar. Suiza started with one dairy in Puerto Rico in the 1980s; then they started to buy other dairies, and became a major “dairy consolidator,” putting together these many dairies under umbrella. Suiza was basically an acquisitions firm, which did not have any corporate structure beyond the people in the main office who were involved in acquiring new companies. One of the reasons they purchased Morningstar was for the corporate structure—human resources, research labs, etc. So all the research work for Suiza is done by Morningstar. After Morningstar bought Avoset, the technology, packaging, and formulations improved, but the basic business remained unchanged—until 5-6 years ago when Ted Nordquist arrived and Morningstar first began to work with soy. The first development of formulation for Silk soymilk was done at Gustine. Ann knows Ted extremely well.

On the front of the building where Ann works is written “Morningstar Foods” in large letters; below that in smaller letters is written “Avoset.” Gustine is near Merced, California. Morningstar and Suiza have their corporate headquarters in the same building in Dallas, Texas. For information on Sun Soy (which is sold at Ralph’s supermarkets in southern California), contact Patty Herbeck (phone: 214-303-3400) in Dallas. Wildwood soymilk is also made at the Gustine plant. They also package products for Trader Joe’s. At Morningstar’s yogurt plant in Fullerton, they package soy yogurts for Ted Nordquist and Trader Joe’s. Address: Research Dep., Morningstar Foods (a Suiza Company), 299 Fifth Ave., Gustine, California 95322. Phone: 209-854-6461.

2562. Eden Foods, Inc. 2000. Eden’s GEO-free policy since 1993 (Ad). *Vegetarian Times*. April. p. 1.

• **Summary:** This full-page color ad features a letter written by Eden chairman Michael J. Potter on 13 Feb. 1993, titled “Policy Statement. Re: Genetically Engineered Foods,” which states that “Eden Foods will not purchase or sell any food ingredient known to be genetically engineered.” A sidebar states: “Eden Foods has had a policy since 1993 requiring affidavits from all of its growers and suppliers guaranteeing that their food is free of genetically engineered organisms (GEOs). In 1998 New York Times hired a laboratory to test for GEOs in eleven soy and corn based foods. The only one that tested negative was Edensoy

soymilk.”

“Founded in Ann Arbor, Michigan in 1968, Eden Foods is one of the few remaining independent pioneer natural food companies.” A small circular logo shows: “Eden Foods: 32 years. 1968-2000.”

Color photos show: (1) Michael J. Potter, Chairman & President, and William Swaney, Executive Vice President, standing by a large Eden delivery truck. (2) Mr. Bernard Pease, 3rd generation organic farmer.

Note: Soyfoods Center believes that the term “GEO” (as used above) is much more accurate than “GMO” and congratulates Michael Potter on its use. Address: Clinton, Michigan 49236. Phone: 1-800-248-0320 or www.edenfoods.com.

2563. Hain Food Group, Inc. 2000. Notice of special meeting of stockholders. Uniondale, New York. ii + 89 + v + 37 + 27 p. April 28. 28 cm.

• **Summary:** The special meeting will be held on 20 May 2000 in New York City to discuss six points, including the merger with Celestial Seasonings, the change of name to The Hain Celestial Group, Inc. after consummation of the merger, increasing the number of shares of Hain common stock, amend the 1994 Hain Long Term Incentive and Stock Award Plan, etc. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2564. Roberts, Patricia. 2000. History of interest in macrobiotics. Living on the Oak Feed Miso Co. land in Rutherfordton, North Carolina from 1979 to 1980. Part I (Interview). *SoyaScan Notes*. May 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** 1972—Patricia meets Joseph Carpenter (a native of California) in Oregon on a farm where she went to do yoga; she was very involved with yoga and meditation. Joseph is a very friendly and personable fellow, and he has an “incredible memory. Most people are in awe of his brain.” They went together to Tucson, Arizona, to pick oranges. She was living on oranges and bananas, had lost much of her memory, and was very spaced out and emotional. They went into a place named The Granary, where they met Jack Garvey, who brought them into the macrobiotic community. She first met Michio Kushi in Tucson, when he came there to lecture.

1973 Sept. 15—Patricia and Joseph Carpenter are married in Arkansas. They were invited to Arkansas to do a little farming by some friends who had some property there. Their friends were deeply involved with Stephen Gaskin and The Farm in Summertown, Tennessee. They arrived with all of their macrobiotic “judgments” and that led to conflicts. They built a little house on the land in Arkansas, and Thom Leonard came to visit them there in 1973. He took care of their house for the winter when the Carpenters went to visit Patricia’s parents in Florida.

1973 Nov. 11—Their first child, Yana, a girl, is born in Arkansas. They leave to go to “Snowflake,” the first macrobiotic conference in Arizona. It was held on property near a Hopi reservation that a group of people in the macrobiotic community, including Michio, purchased.

1974—Patricia goes to a macrobiotic conference in Miami and meets Sandy Pukel for the first time. She becomes friends with Sandy and his wife, and saw Michio for the second time.

1975 fall—Patricia arrives (with her daughter, Yana) in Brookline, Massachusetts, and lives in the macrobiotic study house run by Ken and Ann Burns. After about 3 months she moves to another study house. Joseph arrives later, in about 1976, and lives in the study house run by Jack and Barbara Garvey, on the same street as the Burns’ house. Joseph Carpenter was very close to Jack Garvey. They both have a close relationship with Michio and Aveline Kushi. For Patricia, who had a Catholic upbringing, Michio was a spiritual teacher. John Belleme arrived in Brookline about mid-1976 and lived in the Burns’ study house; it was at about this time that Patricia first met John—though they never lived in the same study house. Joseph designed and built an addition to the Kushi’s home at 62 Buckminster Road; it was for Aveline—the bathroom of her dreams on the second floor. One day Aveline came to see Patricia in her apartment. She liked a chopping block table that Joseph had built for Patricia. Joseph is an excellent carpenter. He did much of the finish carpentry on the original Erewhon retail store on Newbury St. in Brookline, including the wooden bins for grains and beans.

1977 Christmas—Patricia and Joseph go to Florida for Christmas, one of many trips they took there. Patricia’s parents and many of her friends live in Florida; she loves to visit. In early 1978 Joseph worked as a carpenter for several months in Sandy Pukel’s Oak Feed Restaurant in Coconut Grove, Florida. He had gotten to know Sandy because Patricia and Sandy were close friends. During this time Sandy came to realize that Joseph was a skilled carpenter.

1979 Feb. 12—Patricia’s second child, Benjamin, is born in Brookline. At about this time Patricia’s sister, Christine, moved up to Boston to be near Patricia. In the spring of 1979 Patricia went to Florida to visit her parents and show them her new baby. Sandy flew Joseph down to talk business. Sandy had now decided that he wanted the Carpenters to become part owners of the company—so he offered them a deal, which, as near as Patricia can remember, was as follows. He asked them to live on the land the miso company planned to purchase while the Bellemes were in Japan learning how to make miso. If they would live and work the land, become a presence in the community, and then become owners of and workers for the company, Sandy offered to pay their expenses and give them \$25,000 worth of company shares for each year they stayed and worked on the land—including the first year, of course. But this agreement

was verbal; nothing was put in writing. Back in those days, Patricia, recalls, people were less businesslike than they are today.

Looking back, Patricia believes that she and Joseph failed in their negotiation of this deal. Joseph is an artist, and he is much better at self expression than at negotiating agreements. Sandy is very good at negotiating.

1979 May—On Memorial Day weekend, at the end of May, after four years in Brookline (near Boston), the Carpenters leave and move to Florida for the summer, to be near Sandy, to work out the details of beginning the miso company. In leaving Boston, they were giving up a lot, including many friends (“We were very plugged in. My sister, Christine, was quite upset that we were leaving”) and Joseph’s good carpentry job. But they believed that Sandy’s deal made the move worthwhile.

Patricia flew to Florida with her two young children. At Sandy’s request, Joseph drove their van so that he could go to Hendersonville to meet with several real estate agents. The miso company property had not yet been decided on or purchased. The realtors took Joseph to visit several areas on the isothermal belt, but they didn’t find the property at that time. The isothermal belt means “never too hot, never too cold.” But it freezes and snows a little during the winter.

Patricia recalls that they bought the property from Bob Deakin. Joseph knew Bob Deakin. Bob was driving with his wife and daughter at about that time, on a holiday, to chimney rock. A truck was coming toward Bob’s car and suddenly a bee flew into the cab of the truck. When the truck driver started to swat the bee, his truck swerved across the road and killed Bob Deakin’s daughter. Bob kindly refrained from suing the truck driver or truck company, and somehow, because of the accident (or perhaps because of big hospital bills) he lost his property—which the miso company later purchased.

In Florida, Patricia and Joseph rented a place for the summer on Highland Beach near Boca Raton. They had visits with Sandy and learned more about his plans for the miso company. That summer, Michio came down and did a seminar, which they attended. Michio wanted the land to be used as a summer camp and a place to garden; he also wanted to build a dam and lake. John and Jan Belleme were preparing to go to Japan. Continued. Address: Grass Valley, California.

2565. Lempert, Phil. 2000. Soy: The “hit” ingredient of the year. *NASFT Showcase (National Association for the Specialty Food Trade)* 30(3):6. May/June.

• **Summary:** For consumers it means a new generation of foods with health benefits. Soy is part of the growing nutraceutical movement.

Note 1. Pages 38-42 list the many soyfoods companies that will be exhibiting at the 46th Summer NASFT show in New York City, July 9-11, at the Jacob Javits Center.

Including: American Soy Products (booth 5030), Eden Foods (5001), Hain Food Group (143), International (2145), and White Wave (1162).

Note 2. Page 63 states that October is National Vegetarian Awareness Month. Address: Author of The Lempert Report and a correspondent for NBC's Today Show.

2566. Mangels, Reed. 2000. *Vegetarian Journal's* guide to burgers and dogs. *Vegetarian Journal (Baltimore, Maryland)* 19(3):27-29. May/June.

• **Summary:** When this magazine first looked at these foods 7 years ago, they found 7 veggie burgers and 6 veggie dogs. This year they found nearly 50 veggie burgers and more than 10 dogs. Both the quality and the nutritional value have gone up. These burgers and dogs are generally lower in calories fat, and sodium, and richer in protein, iron, and fiber, than their meat-based counterparts.

A two-page table gives the nutritional composition of many different brands and products per serving. Data is given for calories, protein, fat, and sodium. The products are ranked from lowest to highest fat, then from lowest to highest sodium. The taster's burger favorites were: Boca Burger Vegan Original, Whole Foods Vegan Burger, Gardenburger Roasted Garlic, Garden Vegan, Amy's California Veggie Burger, Nature's Chef Fajita Burger, and Soyboy Okara Courage Burger. Many of these products contain soy. Address: PhD, RD.

2567. *Nutrition Business Journal (San Diego, California)*. 2000. Corporations proceed cautiously with soy. 5(5):16. May.

• **Summary:** The supermarket chain Kroger promoted soyfoods at all of its 2,000 stores as part of Soyfoods Month in April. Nature's Path has launched Soy Plus Organic Granola, with a claim about reduction of menopausal symptoms. Natural Vitality has introduced Menopausitive, a drink fortified with 110 mg of isoflavones.

In the 17 Sept. 1999 issue of the prestigious scientific journal *Science*, Steven H. Zeisel, chair of the Department of Nutrition at the University of North Carolina (Chapel Hill) wrote a Policy Forum article advocating safety studies for substances like soy isoflavones, which are administered in large doses to obtain medicine-like effects, before they are put on the market. This would apply to products [such as ADM's Novasoy], for example, were one dose is five times the average human consumption. Central Soya has a new product, Prevastein Soy Isoflavone Concentrate.

2568. Carpenter, Joseph. 2000. Living in Boston and on the Oak Feed Miso Co. land in Rutherfordton, North Carolina from 1979 to 1980. Part I (Interview). *SoyaScan Notes*. June 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Joseph was born on 5 Aug. 1948 in Oakland, California, at Providence Hospital. He lived with his family

in Berkeley until he was age 10; his father, who was a carpenter by trade, died in 1954, when he was still a boy. He and his mother then moved to nearby El Sobrante (by the back gate of De Anza High School—where he graduated from high school). He attended Contra Costa Junior College for two years, moved up to Sonoma State for a year, then dropped out. At age 19-20 (1967-68), he took off to see the world. As a young man, he became a skilled carpenter, learning by doing. Several of the men he worked with were good teachers.

A hippie during the 1960s, he met Patricia Roberts who was born in March 1947 in Queens, New York, and grew up in Rockaway Beach in Queens. Her father was a New York City police officer and detective for 20-25 years. Her parents retired to Florida in the late 1960s or early 1970s. When the kids were at home, they lived in a nice big home at Whitehouse Point; after the kids were gone, they moved to Deerfield Beach. Soon after meeting Patricia, Joseph stopped using psychedelics drugs and alcohol. They picked apples together in Hood River, Oregon, and lived in an old picker's camp. Having been overweight, he lost about 80 pounds in less than 6 months—and felt great. He and Patricia and a girl friend of hers migrated to Tucson, Arizona, where they were planning to pick oranges for the winter. While looking for a place to stay, they came across a macrobiotic bakery, The Granary, run by Jack Garvey. That was their first introduction to macrobiotics. Because of their largely raw food diet, they were somewhat resistant at first, but soon became friends and students of Jack's. In 1973 Joseph and Patricia were married in Arkansas.

1977 Feb.—Joseph arrives in Boston from Northern California; he is very sure of this date. He met Charlie Kendall (a maker of traditional natto, amazake, and mochi), who had just bought a house in Brookline by the railroad tracks; Joseph helped him extensively remodel that building. Charlie's wife, Yoko, was Aveline's sister. Joseph soon became friends with Bill Painter, who was a house painter by trade and also had a small shop in the basement of the Kushi's house. Before long Joseph was working as a carpenter with Bill Eggloff, building a handsome grain bin for Erewhon's retail store on Newbury Street. Using red oak and Plexiglas, they worked on it in the basement, which had a garage door that opened onto the alley behind the store. Bill, who lived on Cape Cod, stopped working for Erewhon when the bin was finished. But the store needed more fixtures, so Joseph made a bid, signed a contract, then installed new check-out stands, new shelves, and units to hold the crocks of bulk tamari, barley malt, etc. Joseph had a family to support, and carpentry was his livelihood, so he was paid for all work he did in the Boston area. Later, over 4-day weekend, he worked to tear out old bathrooms and office spaces to open up the cramped front of the Erewhon store. He also did some work on a new Erewhon store in Brookline. After Erewhon moved out of their old

4-story brick warehouse, he worked on the huge modern warehouse that Erewhon moved into. The Kushi's house on 62 Buckminster Road had been the headmaster's house for a private school. Upstairs there was an institutional bathroom. Aveline asked Joseph to remodel it to make a private bathroom—with lots of tile. After about a year of working for the macrobiotic community (always for pay), Joseph got “burned out” and went to work for a regular contractor unconnected to macrobiotics.

1977 Christmas—Joseph and Patricia go to Florida for Christmas, one of many trips they took there. In early 1978 Joseph worked as a carpenter for several months in Sandy Pukel's Oak Feed Restaurant in Coconut Grove, Florida. He had gotten to know Sandy because his wife, Patricia, and Sandy were close friends; they had first met when they both went to a seminar Michio Kushi gave in Coconut Grove. After the restaurant opened, in about May 1978, Joseph and Patricia took a vacation to Jamaica. During the summer and fall of 1978 Sandy came to Boston several times. Each time he and Patricia and Joseph went out to dinner together. Sandy mentioned that he was thinking of starting a miso company and asked if they might be interested in getting involved. They expressed interest, but no definite plans or offers were made.

1979 Feb.—Joseph's second child, Benjamin, is born in Boston to his wife Patricia. The Carpenters took many trips to Florida, especially during the winter, to visit Patricia's parents. In about March 1979, over a long weekend, when Patricia and their two children were vacationing in Florida (visiting her parents), Sandy Pukel paid for Joseph to fly from Boston to South Florida for a meeting to discuss the part that the Carpenters might have in the development of the new miso company. Sandy knew Joseph's skills as a carpenter. Joseph recalls that the meeting was at Edmund Benson's house. Sandy said that he wanted Patricia and Joseph to become part of the miso company. In exchange for their labor, they would be given a share of the business ownership worth \$25,000. Joseph does not recall whether they would receive the \$25,000 once or each year that they worked—but he definitely recalls the \$25,000 offer. Joseph recalls that the talk at this first meeting was very general in terms of what kind of carpentry or construction work he would do for the company.

1979 May (late)—Joseph leaves Boston in his van, headed for North Carolina—after handing over their house to the next renters. On the way, following Sandy's instructions, he stops in Hendersonville, North Carolina, for about a week to check out some real estate. With real estate agents that Sandy Pukel and/or Edmund Benson had found, Joseph looks at property the agents thought might be appropriate for the miso company in the Asheville area and in Rutherford County. As far as he knows, Joseph was the first person to actively look for land for the miso company. They found several properties that Joseph considered borderline, so

Sandy (and probably John Belleme and Edmund) flew up from Florida and they all visited these sites together. Finding nothing that was suitable, they left. Joseph continued on to Florida in his van to be with Patricia and their children. Sandy continued to work with local realtors until he found a suitable piece of property. Joseph is quite sure that just before they finally purchased the land in Rutherfordton, Sandy, Michio and he (and perhaps a few other people) all went to see the property at the same time. They walked over the roughly 100 acres of land and through the beautiful house.

During the summer of 1979 Joseph and Patricia met with Sandy and Edmund several times to discuss their living on the miso company land while John and Jan Belleme were away studying miso-making in Japan. Though nothing was put into writing, Joseph and Patricia both recall clearly that their daily expenses would be taken care of, they would work on the land, and, at the end, they would own a part of this new business. They were not given any specific list of tasks or duties they were expected to accomplish. Continued. Address: 10655 Lakeshore Dr., Clear Lake, California 95422. Phone: 707-994-3218.

2569. Gonzales, Greg. 2000. Making miso and koji for American Miso Co. Inc. Part I (Interview). *SoyaScan Notes*. June 20-21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Greg was born in July 1959 in Torrance, near Los Angeles, California, in a middle-class Mexican-American Catholic family. Both his parents were born in the Los Angeles area and Greg grew up in that area. After graduating from high school at age 18-19 he became a professional dancer. In 1987 he went to Japan for 6 months to work as a dancer at a tourist hotel in a small, isolated Japanese town. He liked Japanese culture very much. During this time he wrote short stories, and decided it was time for a change of careers. After returning to the USA, he lived in Los Angeles, found several easy jobs, and went to L.A. Community College for a year to pursue his interest in writing. At that time, in 1989, he met Barry Evans who was living to Los Angeles. They met through a mutual friend, spent a lot of time together during the next year, and became good friends. Barry took a federal holiday and Greg moved to Sonoma County in northern California. There he met a woman named Manon Fancher who became his partner; she already had a child named Keith Fancher. Together they moved to a small lumber town in Plumas County, in the Sierra Nevada mountains, about 70 miles north of Lake Tahoe. Greg worked for the U.S. Forest Service on a timber salvage marketing crew and taught dance on the side. On 12 Aug. 1992 they had a baby boy named Devin.

One day, in 1995, after they had lived in mountains for about two years, Barry Evans called, said he lived and owned several businesses in and around Asheville, North Carolina,

and offered Greg a job working at the miso factory; Don DeBona would be his boss. Greg said he would like to think about it, discuss it with Manon, and visit the company before making a final decision. He had enjoyed miso previously, but did not know how it was made. He liked Japanese food and culture, knew nothing about macrobiotics, and was not sure how he would like living in rural North Carolina. So Barry flew him out to North Carolina. Before his interview with Don DeBona, Greg read *The Book of Miso* to better prepare himself. He accepted the offer. He and Manon tied up loose ends in Plumas County, then drove with their kids across the country to North Carolina.

Arriving in Feb. 1995, Greg worked at Great Eastern Sun for about 8 weeks, then went to work with Don DeBona at American Miso Co. (AMC). Don had had trouble keeping workers; they were attracted by the romance of miso and making macrobiotic foods, but couldn't take the hard work or the rural environment.

Greg worked for Don for about 2½ years. When Don left the company, Greg had plenty of experience making miso but he had never made koji by himself. Greg recalls: "I suddenly found myself with the reigns in my hands. There was a lot of responsibility, and I felt tense at first." He had steamed and inoculated the rice, dug it, put it in the trays, put the trays in the koji room, etc., but he had never stayed with the koji during the night or had to make decisions about adjusting its temperature. Making koji is an art, based on being sensitive to the properties of the koji; it cannot be learned from a book. It takes a long time to "learn how to make koji happy. Newcomers always want to go by what the thermometer says, but it doesn't work that way."

About a month after Greg took over, Barry hired John Belleme, one day a week, to look carefully at the koji Greg had made the day before, and to give him tips on how to improve. John is still active in this role, which is working out very nicely for both John and Greg. "John loves this place."

Greg makes koji at least once a week; Wednesday is koji night, so Greg will be with the koji until midnight. He will check its progress every 60 to 90 minutes, depending on the season and outdoor temperature. A little after midnight, he goes to his cabin on the miso company land and sleeps until a little before 4:00 the next morning. Then he returns to the miso plant, checks the koji again, and starts cooking the soybeans. Because of the fermentation process, koji generates its own heat, and it creates increasingly more heat as it matures, and its mycelium expands and binds the rice into a cake. Each time Greg makes koji it is different, and different types of adjustments must be made. There are no thermostats in the koji room. All temperature adjustments are made by either opening or closing the koji room door or the vents in the ceiling. If the ceiling vents are opened too much, the heat will rise out but so will the humidity. Thus, the balance of opening the door vs. the ceiling vents is important in adjusting the koji room humidity. To add humidity, Greg

may wet the floor of the room and close the room. He never uses a heater to heat the koji room, in part because it dries out the air. When inoculating the rice, Greg will use less inoculant in the summer than in the winter.

This koji is really made in the traditional way—all natural, nothing artificial. Most companies automate their process as their volume expands, but AMC has decided not to do that. Yuko Okada of Muso and Mr. Kazama of Mitoku (both Japanese natural food companies) told Barry Evans that they thought AMC was the largest maker of traditional koji in the world. The company makes about 300,000 lb/year of miso. Don DeBona increased the number of miso vats from 10 to about 45. Continued. Address: 4225 Maple Creek Rd., Rutherfordton, North Carolina 28139. Phone: 828-287-2940.

2570. *SoyaScan Notes*. 2000. One disaster after another leads to success: Brief history of American Miso Company (Overview). June 20. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** This story, with its many strange twists and turns, might be called "One disaster or failure after another leads to success" or "The perfection of imperfection."

1977 Aug. 2—It was a disaster for Bob and Karen Deakin of Rutherfordton, North Carolina, when a bee flew into the cabin of a big truck near their home. As the driver tried to swat it, his truck swerved across the road and smashed into a car driven by Bob Deakin, killing Bob's daughter (age 12½) and severely injuring Bob and his young son.

1979 Jan. 26—It was a second disaster for Bob and Karen Deakin when they were forced to give up the home they had built and the 92 acres of land they dearly loved in Rutherfordton because they could not make the mortgage payments. With Bob still injured from the car crash, the family had no steady income. The land was sold to Oak Feed Miso Co. on 7 Aug. 1979.

1979 Oct.—It was a disaster for John Belleme when he arrived in Japan to study miso and nobody knew who he was or why he was there. The arrangements that were supposed to have been made were never made.

1979 Oct.—It was a small disaster for Mr. Kazama of Mitoku when John Belleme handcuffed himself to Mr. Kazama's desk and said he would not leave until Mr. Kazama had located a miso master with whom John could learn the traditional art of making Japanese miso.

1979 Oct.—It was a disaster for miso master Takamichi Onozaki, of Yaiba, Japan, when two foreigners arrived, without invitation, saying they wanted him to teach them how to make miso. He told them he was sorry, but they could not stay. They stayed in his house, under the same roof, for 6-8 months as they worked hard and learned how to make miso.

1979 Nov. 18—Barry Evans is in a disastrous bicycle accident, breaking 5 vertebrae and 9 ribs. After a 14-hour

operation, he spends 6 months on his back in the hospital and 1 year in a full-body cast.

1980 June—It was a disaster for Joseph and Patricia Carpenter, who had lived on the miso company land for the past ten months and expected to be owners of the miso company, when they were told to leave and, in their opinion, not told why.

1981 Nov. 10—It was a disaster for Michio and Aveline Kushi when their company, Erewhon, is forced to file for Chapter 11 bankruptcy protection because of debts totaling \$4.3 million. The Kushis also had to give up their dream of starting a miso company (named Erewhon Miso Co.) in America. It was also a disaster for the miso company which could no longer count on Erewhon to distribute its products.

1982 Jan. 31—It was a disaster for Sandy Pukel when he has to give up his stake in Oak Feed Miso, Inc. It was his “baby” and he, more than anyone else, was responsible for bringing it to this stage. Equally sad was the fact that his good relationship with John Belleme was strained for the rest of the 1980s; they didn’t talk for years after this event.

1982 Jan.—It was a small disaster for Mr. Onozaki when John Belleme begged him to come to America from Japan to check John’s koji-making. He didn’t want to go. He spoke no English, had never been outside of Japan, and had a business to run at home. Yet he went to help a friend in need.

1983 Oct. 1—It was a disaster when John and Jan Belleme feel they must sell all of their ownership in the American Miso Co. (900 shares) to Barry Evans. They had devoted most of the last 4-5 years working to create and build this company.

1992 Jan.—It was a disaster for Barry Evans when he is forced to take a “federal vacation” in Santa Barbara, California, for 2½ years.

2000 July 4—American Miso Co. is the largest and most successful Caucasian-run miso manufacturer in the Western world. Who is and was responsible for this success? Most of the people named above.

Note: Some of the most interesting (juiciest) stories about this company remain untold, for reasons that cannot be disclosed at this time.

2571. Troy, John. 2000. Update on Wizard’s Cauldron and work with miso (Interview). *SoyaScan Notes*. June 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** John’s original organization was the Lindenself Foundation, a nonprofit organization involved with Eastern spirituality. The linden tree symbolized the heart. Out of this grew Linden’s Elfworks, then Elf Works, Ltd., whose first product was a candy bar named Wizard Baldour’s Power Pac introduced in 1976, and containing ginseng. Elf Works, Ltd. was created outside of the nonprofit corporation, and it existed only briefly (1981-1984).

In about 1980, John was first introduced to miso by Joel Dee of Edward & Sons who was introducing his Miso Cup,

a dehydrated miso soup. Troy’s next product was Wizard Baldour’s Hot Stuff (in Regular or Blazing intensities); it was the company’s first big success. It contained miso from the day it was launched. Troy first bought this miso from Erewhon (a fairly dark salty rice/red miso), but when Erewhon filed for Chapter 11 bankruptcy in Nov. 1981, Troy started buying his miso from Barry Evans of American Miso Co. It was John Belleme and Barry Evans who really got Troy interested in and involved with miso—before American Miso Co. had any miso for sale, but after their miso plant had been constructed. Troy can’t remember how, where, or when he met Barry Evans. Belleme told him about going to Japan and apprenticing with Mr. Onozaki. Later Barry Evans introduced Troy to John Fogg in Charlotte. Troy later worked closely with Fogg; “at first I thought he was arrogant and fussy, but he ended up being a tremendous influence in my life, and taught me so much about marketing... To this day I still draw on the wisdom of John Fogg.”

Troy now makes almost 100 different products for the natural food trade. Most of these contain miso and/or soy sauce. All of his business is private labeling, so he develops and manufactures products, which other companies market. Across the street from his office is a modern, high speed blending, bottling, labeling plant, with plenty of cold storage. He manufactures and bottles every product he develops. His company, The Wizard’s Cauldron, Ltd., run small by a small team of leaders, now does about \$2 million a year in annual sales. His products are now almost totally organic—200 ingredients. John has just a handful of customers. The biggest is Whole Foods Markets; he makes all the salad dressings and sauces sold under the Whole Foods label. Second biggest is Joel Dee of Edward & Sons. Troy makes four brands for Joel Dee: Premier Japan, The Wizard’s, Troy’s, and Rain Forest Organic. Joel’s company owns the “Wizard” brand, which Troy gave him in 1987 as part of his “recovery plan” after American Natural Foods went down the tubes. Joel said, “You make it, I’ll sell it.” At about the same time, they also both developed the Premier Japan brand and line, which is still doing extremely well. In about July 1989 John developed “The Wizard’s Worcestershire Sauce,” a vegetarian sauce, for Joel Dee. It is now selling better than Hot Stuff. Ponzu is the Japanese equivalent of Worcestershire sauce; they use bonito instead of anchovies. But ponzu originated first, so “Worcestershire sauce is a Western ‘knock-off’ of ponzu.” The Ginger Tamari is still a wonderful product that is doing very well.

Troy’s third largest customer is Albert’s Organics, America’s largest organic produce distributor, for whom he makes a line of fresh, refrigerated organic dressings. Albert’s Organics recently merged with UNFI (United Natural Foods, Inc., the collection of distributors that was Stow Mills, Cornucopia, Rainbow, Mountain People’s Warehouse, etc.). UNFI is now a big publicly-owned company. Troy’s favorite product developed for Albert’s is Mellie’s Miso Mustard

Dressing, launched in 1998 with a mild miso from American Miso Co. Albert's daughter is named Mellie.

John is now developing a line of dressings under the Moosewood Restaurant brand for the people who own that restaurant. John's favorite is the Miso Ginger Salad Dressing. A few days ago he closed a deal with Robert Tepper (formerly of The Farm, in Summertown, Tennessee) to market his Simply Delicious brand of dressings. Robert now has his own company named Sunrise Management, which is a brand management company; Simply Delicious will be the first brand he owns. Robert worked for Natural Nectar, then Blue Sky, then Annie's (which he left in early 2000 to start his own company).

John's main work is still developing new products and naming his creations—the work he enjoys most of all things. "It's really fun." Blessed are those who find a way to do what they love most in life. Address: The Wizard's Cauldron, 8411 Hwy. NC 86 N, Cedar Grove, North Carolina 27231. Phone: 919-732-5294.

2572. Troy, John. 2000. Update on the Macrobiotic Company of America and Bruce Macdonald (Interview). *SoyaScan Notes*. June 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bruce was recently kicked out of the company (MCOA), Norio Kushi is now running it, but Muso owns most of it. Bruce has filed a lawsuit against MCOA. Barry Evans and Norio are trying to work together, since Barry would like to slowly get out of the distribution business (he owns Great Eastern Sun) and move towards building branded products.

A few days ago John heard that Mr. Kazama had decided not to sell any more of his Mitoku products to MCOA. Rather, he will help Bruce start a new company in Asheville, and Mitoku will sell to Bruce.

John heard from Norio a few days ago that MCOA wants to come out with a line branded "Kushi Organic" to take the place of Mitoku. They want John to develop a line of miso-based sauces, dressings, etc. for them. "Kushi" is now a registered trademark, owned by Michio Kushi, who is willing to assign it to his son, Norio. Address: The Wizard's Cauldron, 8411 Hwy. NC 86 N, Cedar Grove, North Carolina 27231. Phone: 919-732-5294.

2573. Evans, Barry. 2000. A visit with Mr. Onozaki in Japan: The story of the guests who decided to stay (Interview). *SoyaScan Notes*. June 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In 1984 Barry and John Belleme both traveled to Japan where they visited Mr. Takamichi Onozaki, with whom John and Jan Belleme had spent seven strenuous months studying miso-making in late 1979 and early 1980. Barry visited Mr. Onozaki again last month in Japan. At about age 70, he was still his same energetic self, very

active and healthy and full of vitality, and his daughter and son-in-law were still there living 10 feet away (in Japanese fashion) and working hard making miso. Barry recalls: "He is a wonderful person. When we pulled up, got out of the car, and I saw him there, I broke down and started weeping. I hadn't seen him in 15 years. I think of him as the father of our miso company and I feel the same great affection and respect toward him that I do to my own father. It was very special." Mr. Onozaki then told Barry a story he had never heard before.

When the Belleme's showed up at his house, unannounced, in 1979, it was a disaster for him. He didn't want them to stay at all. He went out for a while, but when he came back he found to his dismay that they had moved all their baggage into the room of his daughter who was away at college, and made themselves at home. They begged him to let them stay overnight, so he relented and said okay, but only for one night. The next day they persuaded him to let them stay for one more night. The whole time they were there, he tried to get rid of them, over and over again—but they bamboozled him at every turn. They talked him into letting them stay for one week, then for one month, then for one more month, then for three months, then for two months more. At every juncture, they had to fight their way to stay the extra time. They would cry and moan. Of course, by end of their stay, television crews were coming up to cover the amazing story of Americans who had come to Japan to learn how to make miso.

But as he told the story it was clear that he was now quite proud of the fact that his disciples had started what is today the largest Caucasian-run miso factory in the Western world.

He then told Barry about how John seemed to have lost some confidence in his koji-making ability during the first season. John asked Mr. Onozaki if he would come to the United States and check that he was making the koji correctly. Mr. Onozaki said that he refused to come the first 3-4 times that John asked him. He had never been outside Japan before, and he has never left it since. He didn't want to go—at all. He didn't speak any English. How would he find his way? He had an active business to run at home. But John just kept insisting that he had to come. Mr. Onozaki said that eventually he remembered an old Japanese saying: "When a friend says he really needs your help, you've got to try to help!" So he felt that he just had to go, though he did so "kicking and screaming." Several months later, he sent his daughter and son-in-law in his place.

On the 1984 trip to Japan, after visiting Mr. Onozaki in northern Japan, John and Barry visited the Muso Company (*Muso Shokuhin*) in Osaka (south-central Japan), then the Fujiwara Brewing Company in Hiroshima (a manufacturer of equipment for making beer, soy sauce, miso, etc.; Barry was considering making shoyu in North Carolina), then the company that makes sweet white miso for Muso in Fukuoka

(on Kyushu, Japan's southernmost island).

On a 1983 trip with Robbie Swinnerton of Mitoku (John Belleme was not along) Barry visited Sendai Miso-Shoyu Co. in northern Japan. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

2574. Demos, Steve. 2000. White Wave reflects on growth and Dean Foods investment: Q&A with Steve Demos, CEO of White Wave. *Nutrition Business Journal (San Diego, California)* 5(6):12-13. June.

• **Summary:** Products with the White Wave and Silk brand names are now sold in virtually all natural foods stores and over 17,000 mainstream supermarkets in the USA and Canada.

The past 12 months have been the most dynamic period of change and growth in the history of White Wave. In 1999 the Silk beverage line was in less than 1,000 supermarkets, but by May 2000 that number had increased to over 17,500. This increase was not a result of anything Dean Foods (a \$4+ billion dairy and specialty foods manufacturer and marketer) did for White Wave. White Wave already had strong momentum before the relationship with Dean Foods began. In 1998 White Wave's distribution was 85% natural foods and 15% supermarkets/grocery stores. In 1999 it was 55% natural and 45% supers. This year the company expects a shift to about 65% supers and 35% natural. For the fiscal year ending 31 March 2000, White Wave's sales were up more than 100% over the previous year, and for the month of March 2000, they were up 400% over the same month one year ago.

White Wave's greatest short-term challenge is to attract, train, and retain personnel who can meet the challenges of the company's growth and, even more important, maintain the company's culture and identity.

Silk's success in supermarkets has attracted several very large corporate competitors. Soymilk products now sold in the refrigerated beverage case include those from Suiza Foods, Hain Foods (Westsoy brand), Imagine Foods, Vitasoy, Best Foods Co., and Pepsico/Galaxy Foods.

White Wave's market share, (according to March data from Spins and April data from IRI) is 20% of the non-dairy beverage sales in natural foods and 78% of refrigerated non-dairy sales in mainstream supermarkets.

FDA approval of a health claim for soy protein has been one factor leading to dramatic growth for White Wave. During the past fiscal year, the company has operated on its previously developed "out-of-sight" growth plan (for very fast growth), which has led to 74% growth in existing markets and 108% growth in sales increase with less than 0.5% out of stock and almost no quality problems.

Concerning industry consolidation, Demos is glad to see natural foods becoming more widely available in America through new channels of distribution. The problem is that

large, multinational companies seldom, if ever, are involved in innovative product development of natural or organic foods. When the entrepreneurial element leaves, the passion to innovate is often lost. No one at White Wave is cashed out or retired, and the passion remains.

Looking back: During the 1970s and 1980s, survival was the key to success for soyfoods companies. During the 1980s it was R&D leading to product innovation and better flavor. During the next decade it will be serious financial backing, dependable and far-reaching distribution, establishing consumer brand loyalty, having consistent and high quality goods and services, and differentiating your company and products from competitors.

2575. Potter, Michael. 2000. Eden Foods rides growth in soy, focuses on quality: \$60 million Eden remains independent in the midst of consolidation. Q&A with President Michael Potter. *Nutrition Business Journal (San Diego, California)* 5(6):10-11. June.

• **Summary:** Since its founding, Eden has distributed dry groceries, not refrigerated or frozen foods. They sell to customers who want quality natural, organic and macrobiotic foods. Their top category is Edensoy soymilk, which represents about 50% of Eden's sales—followed by canned beans, imported Japanese foods, and pasta. Eden's average soymilk sales have grown 28% a year over the last six years. The company's total sales are about \$60 million a year. They have not yet added the FDA health claim to their Edensoy label, and may not.

During the 1970s Eden was a wholesale company distributing to retailers in the Midwest and Northeast. In the early 1980s they withdrew from wholesaling and started selling branded products exclusively to distributors—not to retailers. That's what they still do. In addition, natural and organic products are now in demand in mainstream stores and supermarkets; during the past 5 years, their growth has been strongest in that channel—especially with Edensoy. Tree of Life and United Natural Foods have become primarily DSD (direct store delivery) distributors, especially where their mainstream customers have "natural food sets."

One highlight in the history of Eden Foods was the introduction of Edensoy in July 1983 at the NNFA show in Denver, Colorado. By the following winter, Edensoy had become the fastest moving item in the natural- and health foods industry and created the non-dairy liquid food category. More recently, the highlight has been the continued gains in conversion of soil to organic agriculture.

There is more competition today for organically grown foods, but Eden has long paid its growers well and promptly, so the company gets first call on quantity and quality. The \$30 million plant in Michigan that makes Edensoy buys more soybeans than anyone, and is probably the largest organic processing facility in the USA.

Michael is the sole owner and shareholder of Eden

Foods. People with lots of money want him to take the company public and do an IPO (initial public offering). But he has chosen the path of slow and steady growth—like the tortoise. By staying independent, he stays free to focus on his mission of quality.

Michael says he founded Eden Foods when he was age 19. Note: This is not true. Eden Organic foods was founded in Nov. 1969 by Bill Bolduc. At about that time, Michael had a good-paying job at an art gallery in Royal Oak, Michigan. Then he began working for, and eventually became a partner in Joyous Revival, a macrobiotic and natural foods retail store in Birmingham, Michigan. In Jan. 1971 Bill Bolduc hired Michael Potter to work at Eden Foods. So Michael was not a founder or “co-founder” of Eden Foods, but he has served as President since 1972. The article says that Potter was one of the founders of the Soyfoods Association of America; this is also not true. He is now age 50, with six children and two grandchildren.

2576. Stewart, Martha. 2000. Edamamé. Television broadcast. Tuesday, June 13. Martha Stewart’s Living program.

• **Summary:** The first segment of this TV program is titled “Edamamé” (3 minutes, 20 seconds). Martha Stewart, one of the most famous women in America today and a leading authority on entertaining and cooking, begins by holding a package of Trader Joe’s precooked, frozen edamamé and saying: “If you see edamamé in the freezer section of your grocery store, buy a package and try it. It’s really fantastic. I’m always looking for healthy, easy-to-prepare snacks that are also nutritious—and these are just the answer.” Inside the fuzzy green pods are soybeans. Soy sauce, miso, and tofu are among the many other yummy foods made from soybeans.

Martha demonstrates how to cook the soybeans, following the instructions on the package, by boiling them in heavily salted water for about 5 minutes. Have a bowl of iced water nearby in the sink. “Soybeans like this are packed full of vitamins, nutrients, and unsaturated fats—the kinds of fats that break down cholesterol in your body. As such, I suggest that you try ‘em as a snack.” Lift the edamamé out with a strainer, then lower the strainer into the iced water. Leave until cool, but not too long, lest they become soggy. Drain in the strainer, then while they are still a little bit damp, sprinkle them generously with natural sea salt—the kind with irregular crystals. Then they are ready to eat. “You just squeeze on the pod, and the little soybean pops out. Mmmm. Really good.” “Keep a supply of this edamamé in your freezer, and the next time guests stop by or your children come home from school, you’ll be prepared with a really healthy and delicious snack.”

Talk with Tak Kimura. 2000. July 11. To prepare precooked, frozen edamamé: After the green pods are picked from the soybean plants, they are rushed to the packaging plant, blasted with steam (to clean the surface of the pods), immediately blanched in boiling water for 4-5 minutes (to

help them keep their bright green color and good flavor and texture), then quickly frozen and packaged. A large percentage of the edamamé consumed in Japan today are sold frozen like this, so that they can be enjoyed year-round. This new frozen trend started in about 1990; before that Japanese enjoyed edamamé as a seasonal food, fresh during the summer only. Nowadays quite a few companies even freeze the fresh edamamé during the summer, because they find that dealing with fresh foods is a nuisance.

Note: Martha Stewart has been able to turn her own lifestyle into a major industry. A successful model during the late 1950s and early 1960s, she was even more successful as a Wall Street stockbroker, and again very successful in a catering business she started. In 1982 she wrote a best-selling book titled *Entertaining*. Her ideas about gracious living have had a major influence. Address: Westport, Connecticut.

2577. Wollner, Joel. 2000. Mr. Kitani of Yamaki Co. in Japan has a huge new shoyu and miso factory that uses 100% organically grown ingredients (Interview). *SoyaScan Notes*. July 2. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** In June 2000, on a trip to Japan and China, Joel (together with translator and guide Yoshi Nanabayashi) visited Mr. Tomio Kitani, owner of Yamaki Jōzō K.K. in Saitama prefecture, Japan. He is about age 60 and very healthy and vital. Several years ago he moved from the nearby town into the mountains, where he built a huge new factory where he makes miso, shoyu, tofu (fresh and instant), and pickles. The company’s address is (written Japanese-style): Saitama prefecture, Kodama-gun, Kamiizumi Mura, Oaza Shimo, Akuhara 955. Phone: 0274-52-7000. Fax: 0274-52-7001. Plant manager: Morikawa Kazuhiko. The nearest railroad stop is Kodama station.

The company has about 80 huge shoyu vats filled with moromi. Most of his miso is short-term—1 to 3 months. His koji rooms are fully automated. Yamaki Co. is extremely important in the world of organic miso and shoyu in Japan. Joel thinks they make more of these products than Sendai Miso Shoyu, and may be the biggest such manufacturer in Japan. He also bottles and sells water from a spring he owns. His company is flourishing, and growing very rapidly. Some 90-95% of his market is in Japan; the rest is miso and shoyu exported to the USA. He is the 4th of 5th generation owner, and he hopes his son will take over from him within the next ten years or so. The main ingredient he uses is soybeans, but all of his ingredients are organically grown in Japan by MOA (Mokichi Okada International Association), a quasi-religious, quasi-cooperative organic farmers organization and movement. MOA is one of the pioneering and most important organic organizations in Japan.

Joel first visited Yamaki in 1985 when he, Bob Kennedy, and Herman Aihara were setting up Ohsawa America (after Kennedy had sold Chico-San to Heinz). Joel later brought in Martin Roth—who is now married, lives in Berkeley, and is

head of a marketing company with Kristin Brun (who lives in El Cerrito). Ohsawa America, which traded with Ohsawa Japan, no longer exists. Address: 76 Florida Ave., Berkeley, California 94707. Phone: 510-524-4420.

2578. Wollner, Joel. 2000. Macrobiotics in America today (Interview). *SoyaScan Notes*. July 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Joel, who has been deeply involved with macrobiotics for more than 30 years, observes that in America today, “the macrobiotic movement is much smaller and less vital at its core” than it was, say, 10 years ago. “But its influence has spread enormously.” Joel can see the profound influence of macrobiotics throughout the natural foods and organic foods industries, even in the words and phrases that people use, or in basic concepts about organics—such as the number of years for transitions. Many people in these two industries today are unaware of these deep influences. Erewhon was more successful at forming an industry than at forming a viable company.

Barry Evans, owner of American Miso Co. and Great Eastern Sun, two companies that for years have had macrobiotic customers as their base, adds: “If only there were a macrobiotic community still in existence. It’s pretty well gone, but there are some remnants left.” Address: 76 Florida Ave., Berkeley, California 94707. Phone: 510-524-4420.

2579. *SoyaScan Notes*. 2000. Chronology of Erewhon Miso Co., Oak Feed Miso, Inc. and American Miso Company (Overview). July 6. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** These three companies are actually the same company whose name changed. This chronology is based largely on dated documents. Undocumented dates are usually followed by question mark. Notice the many unusual twists and turns in the story.

1977 Aug. 2—A bee flies into the cabin of a big truck near Rutherfordton, North Carolina. As the driver tries to swat it, his truck swerves across the road, smashing into a car driven by Bob Deakin, killing Bob’s daughter (age 12½) and severely injuring Bob and his young son.

1978 Dec.—Sandy Pukel, Michio Kushi, and John Belleme get together in Boston to discuss the miso factory. They agree on quite a few points. All three are deeply interested in macrobiotics.

1979 Jan. 26—The bank (Tryon Federal Savings and Loan) forecloses on Bob and Karen Deakin’s mortgage. Still injured from the car accident, he is unable to make his land payments. The land goes on the market.

1979 Feb. 28—Oak Feed Miso, Inc. is incorporated in Florida. The initial directors and officers are Sandy Pukel and John Belleme. 1979 Feb?—A contract is drafted by David Young (though never signed) showing what percentage of the

proposed Erewhon Miso Co. will be owned by the Erewhon group (comprised of Sendai Miso-Shoyu Co., Michio and Aveline Kushi, and maybe Mitoku / Mr. Kazama) and by the Oak Feed Group (comprised of Sandy Pukel and John Belleme). The Erewhon group was to have the majority ownership, and Japanese companies and individuals were expected to play a major role in the new company.

1979 March—Joseph Carpenter looks for land in Rutherford County, North Carolina. Talks with several insurance agents.

1979 spring—Members of the Oak Feed and Erewhon groups meet in North Carolina in the first attempt to locate a site for the miso plant. In attendance are Michio and Aveline Kushi, Sandy Pukel, John Belleme, Frank Head, and Junsei Yamazaki and his wife (both from California).

1979 April—Barry Evans makes his first investment in the miso company, \$50,000.

1979 June?—Sandy Pukel travels to North Carolina and makes the down-payment on a piece of land in Rutherfordton. The roughly 92 acres cost about \$110,000 to \$120,000.

1979 Aug. 7—Oak Feed Miso, Inc. finalizes the purchase on the 92 acres of land by assuming the second mortgage and paying an additional \$11,500 each to Lawrence L. Bridges and E. Milton Singletary. Sandy Pukel (president) and John Belleme (secretary) sign the land deed and deed of trust.

1979 Aug. 16—Subscribers Consent Agreement executed.

1979 Aug. (late)—Joseph and Patricia Carpenter arrive in Rutherfordton from Florida to live and work on the miso company land.

1979 Oct.—John and Jan Belleme leave for Japan to begin an apprenticeship with a miso master. They stop by the land in North Carolina to visit briefly with the Carpenters, then also visit Thom Leonard at Ohio Miso Co. Arriving in Japan in late October, they visit Mr. Kazama in Tokyo then travel north with him to Yaita, where they study miso-making with the Onozaki family—which makes only dark rice miso. A good, long letter from Jan describing their experiences is published in 1980 in the book *Macrobiotic Cooking for Everyone*, by Edward and Wendy Esko.

1979 Nov. 18—Barry Evans is in a very serious bicycle accident.

1980 April—A detailed letter by John, about his miso apprenticeship with the Onozaki family in Yaita, Japan, is published in *GOMF News*, a small macrobiotic magazine from Oroville, California.

1980 June—John and Jan Belleme return to the USA from Japan. That summer John located the remaining miso equipment in New Jersey and ordered wooden vats from the Arrow Tank Co. in Buffalo, New York.

1980 fall—John and Jan go on the Erewhon payroll.

1980 Sept. 29—Work has just begun at Rutherfordton in leveling the site for miso factory, which is going to be a metal Butler building. By late 1980 John and Jan begin to

make their first experimental batches of one-year rice miso, at their home, in the sauna.

1981 early—The project stalls for lack of funds. John starts writing articles about his trip to Japan. One goal is to convince Barry not to abandon the project.

1981 Jan.—“The Master of Hoops,” John’s first article, is published in *East West Journal*.

1981 March 9—John Belleme is deeded 7.5 acres of land by American Miso Co. in the northwest corner of the AMC property; later he starts to build a house there.

1981 April—“The Miso Master’s Apprentice,” John’s second article, is published in *East West Journal*.

1981 July—“The Miso Master With a Big Heart: Making Miso in a Japanese Village,” John’s third article, published in *Soyfoods* magazine. Contains many good photos of miso making in Japan.

1981 July—The beautiful and joyous opening ceremony for the Erewhon Miso Co. is held at Rutherfordton, North Carolina. Those present include Michio and Aveline Kushi, John and Jan Belleme, Sandy Pukel, Barry Evans. It is a moving experience for all. But behind the scenes, Erewhon’s financial is rapidly deteriorating—due largely to too rapid expansion.

1981 Aug.—John and Jan Belleme begin full-time large-scale production of one-year Onozaki-style red (rice) miso at their plant in Rutherfordton.

1981 Sept. 27—The annual meeting of the Oak Feed Miso Co. is held at Rutherfordton, North Carolina. Barry Evans is appointed acting chairman. Shares in company are owned as follows: Barry Evans 1,400, Sandy Pukel 1,400, John Belleme 900, Yozo Masuda 100, Edmund Benson 100, and James Kenney 50. All stock is converted to one kind, Class A, which is voting stock. Thus, for the first time, Barry gets the right to vote and becomes a member of the board of directors.

1981 Aug.—John and Jan Belleme begin fulltime, large-scale production of miso and koji at their new plant in Rutherfordton, North Carolina. Fourteen months have passed since they returned from Japan. Twelve more months must pass before this miso is ready to sell.

1981 Nov. 10—Erewhon files for bankruptcy protection under Chapter 11 of the Federal Bankruptcy Act because of debts totaling \$4.3 million. At this time, Aveline Kushi is the sole owner of Erewhon. Thus, the miso company can no longer count on Erewhon to distribute its products. Apparent disaster!

1981 Dec.—Barry Evans establishes Great Eastern Sun (GES) in Asheville, North Carolina, in part to package and market the miso made by AMC. Mitoku, almost destroyed by Erewhon’s collapse, and eager to rebuild, agrees to export Japanese natural foods to GES.

1982 Jan. 4—Barry Evans sends out a letter announcing the opening of The American Miso Company in North Carolina. The company now has a new name (it was

officially changed on 5 May 1982). Barry also announces that Linden’s Elf Works (Rougemont, North Carolina), run by John Troy, has been appointed as AMC’s sole marketing and distribution agent. Note: This arrangement was very short-lived; Elf Works never distributed any of AMC’s miso. Great Eastern Sun did all the distribution.

1982 Jan.—Mr. Takamichi Onozaki comes to America from Japan to see how well his students had learned his lessons. He stays and helps make koji and miso for 2-3 weeks, until he is fully satisfied that all is well.

1982 Jan. 31—Barry Evans and Sandy Pukel agree to a swap of stock, such that Barry gets all of Sandy’s stock in the miso company and Sandy gets all of Barry’s stock in Oak Feed Store and Restaurant. After this, Sandy is no longer involved with the miso company. Barry and John Belleme now own all the company’s shares, and Barry owns a large majority.

1982 April—Great Eastern Sun make’s its first sale, of products imported from Mitoku in Japan to a natural foods store in the USA.

1982 April—Mr. Onozaki’s his adopted son, Haruo, and eldest daughter, Kaoru (Haruo’s wife), arrive in Rutherfordton and spend 3 months sharing the Belleme’s home, helping Jan who is pregnant, and helping to make miso. The Bellemes’ son, Justin, is born on May 24.

1982 July—The first detailed article about American Miso Co. and its method of making miso (with many fine photos) is published in *Soyfoods* magazine: “American Miso makes a Big Move Down South,” by Richard Leviton, who visited the company in April. The company “has struck a careful balance between the traditional approach (as in making koji, which requires skill and personal attention) and labor-saving mechanization (as with bean washing, soaking, cooking, mixing, and moving).”

1982 Sept.—The first miso made by AMC is sold by Great Eastern Sun. It is one-year, Onozaki-style red miso, sold in bulk only in 4 lb, 15 lb, and 40 lb tubs.

1983 Oct. 1—John and Jan Belleme sell all their ownership in the American Miso Co. (900 shares) to Barry Evans for \$30,000. However, John continues to work making miso for AMC. Throughout the past year he has been experimenting with making mellow white and mellow barley misos. Great Eastern Sun is now selling about 50,000 lb/year of white miso from other sources.

1984 fall—AMC miso first starts to be sold in one-pound plastic coffee bags (each with a pressure release valve), refrigerated. A full-page ad showing the bag appears in the Jan. 1985 issue of *East West Journal*. Previously, all their miso had been sold in bulk.

1985 Feb.—Don DeBona leaves his job as general manager at Great Eastern Sun and begins to work at American Miso Co., learning the process from John Belleme.

1985 April?—AMC introduces three varieties of relatively sweet, light-colored, short-term misos: Mellow

White Miso, Mellow Barley Miso, and Amakuchi Mugi Miso—a shock to traditional macrobiotic followers. These light misos were sold in the plastic bags. As of July 2000, half the company’s sales come of such short-term types of light miso.

1985 Dec.—Don DeBona takes over management of the company. John Belleme leaves. It was a difficult transition.

1985 Dec. 31—AMC has its first profitable year, earning \$22,000 in calendar year 1985.

1986 early—AMC miso starts to be sold in one-pound plastic cups/tubs, refrigerated. The plastic bags are phased out.

1987 fall—AMC miso starts to be sold in 8-oz plastic cups.

1988 Feb.—New koji room designed and built by Don DeBona. Constructed at floor level with a large door and high ceiling, it enables the koji crib and racks of koji trays to be wheeled in and out. Before, all the koji had to be carried in and out by hand.

1992 Jan.—Barry Evans is required to take a “federal vacation” in Santa Barbara, California, for 2½ years. He hands the management of American Miso Co. and Great Eastern Sun over to Don DeBona.

1992—American Miso Co. builds a second factory as large as the first.

1993—American Miso Co, now has 41 huge wooden (mostly cedar) miso vats, each of which holds over 4 tons of miso. Starting with only eight vats, they added six in 1986, seven in 1989, five in 1991, and fifteen more in 1993. Also in 1993 AMC begins to export its miso to Europe, where it is distributed by Lima throughout the continent.

1995 April—Greg Gonzales starts work at American Miso Co. learning the process from Don DeBona.

1995—AMC uses up the last of tax loss carryforwards; total past financial losses go to zero.

1997 March—Greg Gonzales takes over management of the company after Don DeBona leaves.

2580. Davis, Richie. 2000. Local businesses profit from change in eating habits. *Recorder (Greenfield, Massachusetts)*. July 31.

• **Summary:** About Tom Timmins of Laughing Grasshopper. And Michael Cohen, who began as a partner in Laughing Grasshopper, then started the company that became Lightlife Foods.

The giant distributor, United Natural Foods Inc. [UNFI], now in West Chesterfield, New Hampshire, “also got its start in Greenfield, in what had earlier in the century been a food warehouse on Bank Row. From there, Llama, Toucan and Crow grew to an Olive Street space [30 Olive St.], then to Brattleboro, Vermont, then back again to 33 Riddell St.” [Greenfield, Massachusetts].

President Richard Youngman recalled that when he joined the distribution company at 33 Riddell St., in about

1980, it had sales of around \$4 million. By the time Stow Mills merged with Llama, Toucan and Crow to form United Naturals 2½ years ago, sales were \$250 million. This year Youngman expects sales to reach \$900 million.

Note: Llama, Toucan and Crow, Inc. was apparently formed on 20 March 1974 in Greenfield, Massachusetts.

Last year South River Miso Co. produced about 36,000 pounds of miso. That is about 3 times what the company produced in 1981, when Christian and Gaella Elwell helped to move it to Conway, Massachusetts, from Ohio. Address: Staff reporter.

2581. Demos, Steve. 2000. New developments at White Wave (Interview). *SoyaScan Notes*. July 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Steve actually did live in a cave practicing meditation for one month outside of Rishikesh, India in the 1970s—but he never told anyone in the soyfoods industry about it until he told CNN Financial News [1 March 2000]. They “ran with it.”

Silk is now in 24,000 supermarkets nationwide. Dean Foods supplied the slotting money, but otherwise White Wave basically got into the stores using its own sales force. White Wave does not now use, and never has used, the Dean Foods distribution system. Rather, they ship Silk from the factory where it is made to the supermarket warehouse, whence it is distributed to individual supermarkets.

Getting into supermarkets was like running a 100-yard dash; the only competitor was Suisa, whose Sunsoy soymilk is now in about 50% of supermarkets in the USA. Suisa now has about 4% of the market. The next race is to take soymilk to the national media; this is more than a 44 yard dash. White Wave will be spending about \$10 million on this media campaign. Their goal is to develop “top of the mind awareness” or TOMA, so that when people hear the word “soy” they think “Silk.”

In the natural foods trade all Westsoy products still have a larger market share than all the Silk products.

During the next few weeks White Wave will launch a new version of Silk soy yogurt, a cultured yogurt with live cultures, made at a dairy in the USA. It will be sold in a new carton—an aseptic single-serving plastic cup.

Steve has learned several key things from people at Dean Foods. First, how to manage data, especially market statistics, and to use them in making decisions, allocating marketing dollars, and targeting interested populations. Second, Steve has a mentor at Dean Foods, Lou Nietto, who is teaching him about the mainstream food business. Lou got his MBA from Harvard Business School and came to Dean Foods from Kraft. White Wave grew up in the natural foods industry, but they are no longer primarily in this business. Steve and Lou talk by phone once a month, and phone to person once a quarter. Lou really believes in White Wave’s products, concept, and entrepreneurial spirit. “We turned

their heads.”

Silk is certainly one of the fastest growing products in the food industry in recent times, and may be *the* fastest.

Steve is the second child in his family; his elder brother is a surgeon. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2582. *SoyaScan Notes*. 2000. The big three natural foods distributors in the USA: Tree of Life, United Natural Foods, and Nature’s Best (Overview). Aug. 3. Compiled by William Shurtleff of Soyfoods Center. [1 ref]

• **Summary:** For a good overview of Nature’s Best see interview with president Randy Lindberg in *Nutrition Business Journal* (June 2000, p. 6). Nature’s best is the largest privately owned wholesaler-distributor in the natural products industry. Randy’s family has been in this industry since 1941 and Nature’s Best will celebrate its 31st anniversary this year (it started in 1969). Their territory covers eight Western states and Alaska, with 18,000 SKUs and a 230,000 square-foot warehouse in Brea, California.

They rank third in natural products distribution with sales of \$175 million, after publicly traded Tree of Life and United Natural Foods.

2583. Holland, Norman. 2000. Update on Northern Soy, Inc. (Interview). *SoyaScan Notes*. Aug. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Northern Soy, still run by Norman and Andy Schecter, has outgrown its present plant in Rochester, New York. They recently purchased 6½ acres of land, where they hope to break ground with a new tofu manufacturing facility in late-September. Eventually the new plant is scheduled to be 85,000 square feet, but phase one will be about one-third of that area. They have hired an engineer (who has designed food plant for General Foods, Cadbury-Schweppes, etc.) to work with Norman and Andy to design the plant and equipment. They plan to have a state-of-the-art facility. Up until now Norman and Andy have done all of the equipment design—and they have “rigged up” a very original and efficient system. They are considering building their own tofu equipment (with local tool-and-die makers) to get to the next level; if they buy a tofu system like Nasoya has, they believe it would sacrifice the quality of their tofu.

They have survived as tofu manufacturers while many other pioneers have gone into marketing or out of business. They now make 1,200 lb/hour or 60,000 lb/week of tofu. But their old plant is bursting at the seams. The new plant will eventually be able to make 5,000 lb/hour or 250,000 lb/week of tofu.

Northern Soy has survived and prospered in three areas: (1) By making private-label tofu—marketed by other companies. They make all or most of the tofu for Whole Foods Markets (East Coast, Midwest, Colorado), UNFI (United Natural Foods—Stow Mills label), Trader Joe’s (East

Coast), Tree of Life, etc. They also have their own SoyBoy label. (2) By making baked and flavored tofu—in four flavors: Italian, Caribbean, Tofulin (Oriental), and Baked-Seasoned-and-Smoked. They probably outsell White Wave 4 or 5 to 1 on these products east of the Mississippi River. And (3) by making tofu-filled ravioli. They just bought a new \$90,000 ravioli machine. They hired a fellow who had been for 20 years the vice president at Rosetto Foods—the largest ravioli maker in the world. They are very committed to ravioli since tofu and ricotta cheese are almost identical—but tofu has better health benefits.

Northern Soy pays and treats all of its workers very well, and has a superb benefits package. The workforce is extremely diverse—Jamaicans, Vietnamese, Hispanics, etc.—and loyal. There is almost no turnover. They have always worked toward being a company where work is respected in every sense. One recent record was when the first Jamaican person in world history curdled tofu at Northern Soy.

Norman is still a vegetarian and he continues to believe that tofu has immense “planetary benefits.” These benefits show up in ways that people just can’t understand. It’s like what the Buddha said about karma—“Don’t ask me to explain it; it just works.” Norman and Andy haven’t been involved with the Rochester Zen Center for about 10 years.

Rich Products of Buffalo, New York, has visited Northern Soy and is interested in working together. Address: 545 West Ave., Rochester, New York 14611. Phone: 716-235-8970.

2584. Lee, Ken. 2000. New developments with yuba, soymilk, and tofu at Soyfoods of America (Interview). *SoyaScan Notes*. Aug. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Soyfoods of America still makes yuba and, in fact, cannot keep up with the demand. The fresh frozen sheets is their best selling yuba product; it is sold mostly to restaurants, where it is used like an egg-roll wrapper. The dried yuba sticks are used in soups. Ken is developing the equipment and a process for automating the yuba-making process.

The company’s best selling product of all is Furama soymilk, sold in both the Oriental and Caucasian markets in the USA. Ken no longer makes tofu; he has House Foods make it for him under his label, since they are the lowest-cost manufacturer.

Two weeks ago Ken’s company introduced a cultured soy beverage under the Trader Joe’s label, in peach and strawberry flavors. It was developed by Tim Huang. Ken will soon introduce a similar product under his SoyWise brand. Address: President, 1091 E. Hamilton Rd., Duarte, California 91010. Phone: 626-358-3836.

2585. *Catalog Age*. 2000. Walnut Acres suspends sales. 17(9):7. Aug.

• **Summary:** Walnut Acres, the 54-year-old organic foods cataloger now based in Arlington, Virginia, insists that its suspension of sales is only a temporary measure.

On its Website and on the outgoing phone message of its 1-800-number, Walnut Acres states that it has chosen to suspend sales while it redesigns its line of products and brands. In addition, a press release says that, effective Aug. 19, Walnut Acres will cease manufacturing operations at its plant in Penns Creek, Pennsylvania. "... the remote geographic locations [sic] of the plant is detrimental in relation to the source of ingredients used in products and the ultimate consumption points of finished goods."

Walnut Acres did not return calls, but a spokesperson for MJ Marketing, its public relations agency, echoed the news release.

In August 1999 Walnut Acres completed an equity financing deal with David C. Cole, former president of AOL Internet Services. "The agreement was expected to breathe new life into the organic foods seller, which faced increasing competition in the dot-com environment."

2586. Clute, Mitchell. 2000. Historic Walnut Acres closes plant, web site. *Natural Foods Merchandiser*. Aug. p. 1, 12.

• **Summary:** The 600-acre farm in Penns Creek, Pennsylvania, is now closed—putting 100 people out of work. This stopped (at least temporarily) sales of the brand that has been a staple since 1946 in the natural foods industry. Walnut Acres was "America's oldest organic farming operation and the first manufacturer to label its products organic."

In August 1999 David Cole purchased a majority share in the company. A former America Online executive and organic farmer, Cole promised aggressive internet expansion and increased opportunities for organic farmers to sell their crops to the Walnut Acres processing facility. The company said the closings are part of a strategic plan to strengthen the company's sales and distribution presence nationwide. The brand name may live on.

2587. Coale, Kristi. 2000. The biofood battle: It's genetic engineering vs. organic farming at UC Berkeley, where the future of agriculture is on the line. *San Francisco*. Aug. p. 64-67, 105-07.

• **Summary:** Gordon Rausser at U.C. Berkeley has been courting big biotech companies—who were increasingly upset at professors at Land Grant colleges for criticizing their practices. Agrochemical companies are buying scientists in universities to do their research. Since 1995, the developers of genetically modified seeds, including Monsanto, DuPont, Dow, and Novartis, have spent \$37 billion worldwide to gobble up other seed- and crop-protection companies. The mergers usually enabled them to gain ownership of gene patents.

2588. Williamson, Mel. 2000. History of Fillmore Foods,

Inc. and Natural Protein Products (1936-1968). Part I (Interview). *SoyaScan Notes*. Sept. 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Willard Fillmore "Mel" Williamson was born in 1936 in Oakland, California. He grew up in Oakland, the youngest of three children. In about 1936, when he was age 13, his eldest sister began training at Jack LaLanne's gym in Oakland. She was one of America's first women bodybuilders; she took it very seriously and trained hard. After she got married, her husband became LaLanne's workout partner. LaLanne was a bodybuilder and strongman, and a good athlete (a great hand-balancer). Thin and weak as a boy, LaLanne had been inspired by Paul Bragg of Southern California to live a healthy and fit life and eat natural foods. LaLanne had one of America's first gyms, and it was in Oakland.

Mel got interested in bodybuilding because of his sister and soon he was training too. In 1948-49 he got a pair of dumbbells for Christmas, and at about age 13 and began training at home in his garage. He entered his first competition at age 14; he did body building, weight lifting, and powerlifting. His sister told him about Jack LaLanne's diet that he followed to improve his well being; from that day on, he would eat anything that was good for him. He drank more liquids, ate plenty of fruits and vegetables. He also ate the standard health foods of the day: Blackstrap molasses, yogurt, wheat germ, and brewer's yeast.

Soon Mel also began working out at Jack LaLanne's gym—and other gyms closer to his home. In 1954 he entered the Mr. America contest—while a senior in high school.

After entering the University of California at Berkeley, Mel continued his interest in bodybuilding. In June 1959 he graduated from Cal Berkeley with a degree in Food Science & Technology—even though the food technology department was in Davis. After graduation, he got his first job working for Hueblein, in San Jose, California. Then he went to work for Dole Pineapple. In Nov. 1964, while still working for Dole, Mel founded a company named Fillmore Foods, in San Jose. He helped develop over 50 products for these companies.

While Mel was working for Dole, some friends at the gym where he worked out asked him if he could develop a protein that tasted good and would help them put on weight. In his spare time Mel developed a product that came to be known as Mus-L-On Gain Weight Formula. He founded Fillmore Foods to develop, manufacture (powder blending), and package this product. A fellow bodybuilder named Bob Mendelsohn, who owned a very early gym in San Lorenzo, formed a separate company that (exclusively) bought Mel's product, then distributed and marketed it to gyms. Mel and Bob worked closely together, discussing pricing, marketing strategies, new products, etc., but they owned separate businesses. A key ingredient in the product was Promine soy protein isolate, which he purchased from the Central Soya

Company.

Bob developed a route of gyms to which he would distribute Mus-L-On—on the days he wasn't operating his gym. Soon Mel developed a second product, which was a protein powder. Pretty soon Akin, a health food distributor, approached Mel and Bob and asked if they could distribute the products to health food stores. Sales increased. Bob sold his gym and devoted all his time to distributing and selling Mel's products. In about 1967 Mel and Bob together started the VIP Health Spa in San Lorenzo. Mel's Fillmore Foods took over much of the distribution and Bob focused on the VIP gym. Finally Bob got out of the food business and Mel got out of the gym business.

In 1968 Mel started making a private-label product for GNC (General Nutrition Centers), which at the time had about 500-600 health food stores. GNC had been carrying the Bob Hoffman line but they planned to replace it with products made by them for Mel who would ship the product to GNC in bulk and they would package it under their own "All Star" label; this was the first product he made for another company. Jack LaLanne had a product named Instant Breakfast; Jack asked Mel to start making it for him. Then Mel started making some of Shacklee's products, as well as a Tiger's Milk Bar developed by Adelle Davis and marketed by Plus Products. When start making Tiger's Milk Bar? Was it the first "energy bar."

In the early 1960s the big health food companies in America were Plus Products (they also sold vitamins and a Tiger's Milk powdered drink), York Bar Bell and Hoffman Co. (York, Pennsylvania), El Molino Mills, Schiff (vitamins), and Thompson (vitamins). Soon bodybuilders from gyms all over northern California came to Mel asking to buy products or make private-label products for them. Soon gyms were asking him to distribute it.

The next thing Mel knew, he was so busy making Mus-L-On that he had to make a choice: keep his job at Dole or quit and go into business for himself. He made the latter choice, and it proved to be the right one.

After several years, Mel moved to Fillmore Foods to Hayward, California, from San Jose. When and why did he start Natural Protein Products? What is a division of Fillmore Foods?

In 1968 Fillmore Foods introduced its first bar, named M-L-O Weight Gain bar. The bar was uncoated and the main ingredients were calcium or sodium caseinate, soy protein isolate, corn syrup, plus some kind of fat. Though it was called a "weight gain" bar or "dietary food for those who wish to gain weight," the concept was clearly a nutrition bar rather than a candy bar. Mel made these in a semi-hand operation. He would roll them out on slabs with a rolling pin, put a frame around them, cut them with gang cutters, then wrap them by hand. He first made them in Hayward or San Jose? The bars were sold by the box and there were 21 individually wrapped bars per box. If a bodybuilder

ate 3 bars a day, as prescribed, he would finish the box in one week. Continued. Address: Owner and Founder, MLO Products Co., Fairfield, California 94533. Phone: 1-888-436-4769.

2589. Jacobi, Dana. 2000. Soy protein powders and GNC's Soy Baking Mix (Interview). *SoyaScan Notes*. Sept. 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Soy protein powders are based on soy protein isolates, and contain small amounts of lecithin, etc. Many brands are on the market, sold in canisters. Dana likes those made for or by Jarrow and Trader Joe's. But the best-selling line by far are those made by GeniSoy, which come in many flavors.

For baking, Dana likes GNC Soy Baking Mix. Based on soy protein isolate, it works much better than soy flour. Address: New York City.

2590. Hain Celestial Group, Inc. 2000. Westsoy (Leaflet). Uniondale, New York. 2 panels each side. Each panel: 22 x 9.5 cm.

• **Summary:** On the cover of this glossy, color leaflet, the word "Westsoy" is written vertically in large white letters against a red background. Four color photos show: (1) Soymilk being poured into a glass. (2) A woman running along the beach with sea foam in the background. (3) Soymilk being poured onto breakfast cereal topped with blueberries. (4) A woman holding a glass of soymilk, meditating in the cross-legged position.

On the inside two panels is a large color photo of the many Westsoy non-dairy beverages—mostly soymilk—and answers to the bold question "Why drink Westsoy soymilk?" Also a 55 cent coupon for any quart or half gallon Westsoy beverage.

On the back panel is a description of nine Westsoy products: WestSoy Plus (new packaging), WestSoy Lite, Low Fat WestSoy Soymilk Drink, 100% Organic Westsoy Soymilk, Vigoraid, Juice Bar, Chai, Cafe Westbrae. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2591. Hain Food Group, Inc. 2000. The Hain Food Group (Portfolio). Uniondale, New York. 32 inserts. 28 cm.

• **Summary:** The inserts, some printed using a color printer in white paper and others printed with black ink on 8½ by 11 inch paper (usually colored), include (1) Health Valley Soy Flakes. Ship date 15 July 2000. (2) Westsoy Smart Plus soymilk (aseptic carton). Ship date 13 Nov. 2000. (3) Westsoy low fat soymilk drink (Chocolate; aseptic carton). Ship date 13 Nov. 2000. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2592. Health Flavors! 2000. Distributor for health foods and natural products (Portfolio). Farm to Market Rd., Brewster,

New York 10509. 5 inserts. 30 x 23.8 cm.

• **Summary:** This portfolio (sent by Patricia Smith from NFM Expo East 2000) contains 5 inserts describing various products sold by the company. These contain Kushi Macrobiotic, Stonewall's Jerquee, Eat You Heart Out entrees, Soynut Crunch Bars, Yamaki Amazake Pickled Daikon OG [organically grown], MMB Snow Dried Tofu, Mitoku Hama Natto Beans, Dakota Gourmet Soy Nuts, Bulk Seaweeds, Kuzu, etc. The main insert is a wholesale price list which contains many soyfoods.

One insert of interest to us is Dixie Diner's Soyfoods Fact Sheet, Vol. 1, Issue 5 (Nov. 1999). It is printed front and back. We will scan only the front. Address: Brewster, New York. Phone: (845) 278-8164.

2593. **Product Name:** SoyO's [Original, Honey Nut, Apple Cinnamon], and Soy Flakes [Original, or Raisin] (Breakfast Cereals).

Manufacturer's Name: Health Valley Company.

Manufacturer's Address: 16100 Foothill Blvd., Irwindale, CA 91706-7811. Phone: (626) 334-3241.

Date of Introduction: 2000 September.

Ingredients: Original SoyO's: Organic oat flour*, wheat starch, soy protein, organic oat bran*, organic cane juice*, sea salt, baking soda, cream of tartar, natural caramel color, natural beta carotene, natural vitamin E (for freshness). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

How Stored: Shelf stable.

New Product–Documentation: Leaflets for both product lines (glossy, color, two-sided) sent by Patricia Smith from Natural Products Expo (Baltimore, Maryland). 2000. Sept. "Profit from the healthy benefits of soy! 8 grams of soy protein in every delicious serving. No genetically modified ingredients."

2594. *Nutrition Business Journal (San Diego, California)*. 2000. GeniSoy markets to an expanding demographic: Soy manufacturer introduces new products, expands distribution and secures non-GMO supplies. 5(7/8):10-11. Annual Industry Overview 2000.

• **Summary:** GeniSoy's parent company, MLO Products, was founded 36 years ago [in Nov. 1964] as a sports nutrition company that relied heavily on soy protein. Today its subsidiary, GeniSoy Products Co., launched only three years ago (in March 1997), accounts for about 50% of total sales—of about \$40 million, to which GeniSoy contributed \$18 million in FY 2000 (ended April 30). More remarkable, GeniSoy's \$18 million is double what it was a year ago, and it is expected to double again next year.

MLO had traditionally marketed soy protein drinks aimed at athletes between the ages of 15 and 40. GeniSoy products are targeted to an entirely different market—those (mostly women ages 35 to 69) areas in which soy provides

benefits, such as heart disease, menopause symptoms, etc. The idea came to MLO quite by accident about 5½ years ago when they were asked by another company to produce a soy protein bar for a university study on soy and cancer. After GeniSoy was launched, its products were sold mainly through MLO's established distribution channels. But soon they picked up many new distributors.

When the FDA announced its soy-heart health claim in Oct. 1999, soy became a very hot category. Many retailers began to develop a "soy set" in their stores—an area where soy products are grouped together. General Nutrition Centers (GNC), for example, are developing such a set, and GeniSoy's products tend to sell more quickly when they are placed in such a set than when they are placed with other bars.

Many consumers believe that soy products don't taste so good, but when they try GeniSoy bars they quickly change their minds and tell their friends. So bars are a great way to introduce consumer to soy.

In Feb. 1999 GeniSoy introduced their first products guaranteed to be free from genetically engineered organisms (GMOs); these included two shakes and one protein powder in the new UltraSoy line. The company says these were made more for the European than for the American market. Later in 1999 the GeniSoy secured a long-term supply contract for non-GMO isolated soy protein from Protein Technologies International, then announced in October 1999 that its entire product line would be made with non-GMO soy.

Recently MLO Products completed a new plant at its Fairfield headquarters, thus bringing its total office and manufacturing space to 125,000 feet. Its extruded candy production capacity has grown to 20 million bars/month. It plans to bring in-house its formerly contracted soynut roasting facilities with a capacity of 2 million lb/month.

Today GeniSoy has 29 SKUs in the U.S. market, 26 in Canada, and 15 in Australia. Two new products are scheduled for release next year: (1) A kind of a soy chip, between a potato chip and a mini rice cake, that will meet the FDA health claim; (2) A Soy Nutty Bar, made with toasted soy nuts, and tasting like a candy bar.

Note: This is the earliest document seen (Sept. 2000) that gives statistics for larger U.S. nutrition bar companies.

2595. *Nutrition Business Journal (San Diego, California)*. 2000. Pacific Foods targets \$50 million sales: Soymilk manufacturer scrambles to expand production, expects 35% growth to continue. 5(7/8):12. Annual Industry Overview 2000.

• **Summary:** Pacific Foods Inc. of Tualatin, Oregon, was established in 1987 to make shelf-stable tofu in aseptic packaging. After buying expensive manufacturing equipment, made in Europe, the tofu business failed.

The company had to scramble in order to stay in business and put its large capital investment to work, so they

found clients for private-label soymilk—the main product that is made into tofu. In 1989, after watching the category grow rapidly, Pacific Foods began producing its own brand of soymilk. The company has been growing at more than 35% a year and in calendar year 2000 expects to exceed \$50 million in sales.

In 1998 Pacific Foods expanded to 250,000 square feet, doubling its production capacity. It now also makes soymilk and rice milk under the Trader Joe's and Fred Meyer brands.

Pacific Foods is not for sale, but it has recently entered into a marketing alliance with a major company to help it enter the mass market via Albertson's and other supermarkets in the Pacific Northwest. Martell of Pacific Foods declined to reveal the name of the partner, but it is a non-U.S. company with "a big name worldwide."

Pacific Foods has changed its soymilk packaging design quite frequently, each time based on reformulation of the products. The company conducts many taste panels and focus groups. Most of its advertising is in trade publications, but in the last few months it began advertising in *Vegetarian Times* and a few other consumer magazines. It has recently done a cross-promotion with cereal maker Nature's Path. One innovative product introduced last year was named Soy Synergy, a functional food designed to be mixed with soymilk or rice milk. In March 1999 Pacific launched several products targeted to the mass market, including a blend of lactose-free cow's milk and soymilk; the products are moving slowly.

2596. Rose, Bruce. 2000. How Bruce got involved with natural foods, soyfoods, Rosewood Products, Inc. and Tofu International Ltd. (Interview). *SoyaScan Notes*. Oct. 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In 1967, while enrolled at Wayne State University in Detroit, Michigan, Bruce got involved with macrobiotics. His main education came from "street school." He would drive to Ann Arbor for the fun of it, and there he discovered Eden Foods, a little upstairs co-op that was the first he found that sold brown rice. He would buy foods, and take them back to the little center which was in Detroit. Michio Kushi visited their center several times and gave lectures.

One of his childhood friends was Tim Redmond, whom he later met during his college years and then at Eden Foods. Redmond's dad invested money in Eden Foods on the condition that they cease to be a co-op. Michael Potter later contributed money "from spurious sources in tune with the times." Potter's attitude has long been "It's Mike against the world."

Many of the food co-ops were started by potheads; most were in university towns and part of the counterculture—a mix of politics and natural foods.

From time to time, usually when some problem or opportunity arose, Eden Foods would run out of money and

call on Bruce. He loaned them money (once \$12,000) and they paid it back each time. In 1978 Bruce started to work for Eden Foods at their warehouse on Platt Road in Ann Arbor. They were already a fairly big food distribution company with large semi trucks [semitrailers]. Soon Bruce learned about the Soy Plant, which was a co-operative on Ann Street in Ann Arbor. He started to visit their deli. In 1979, Bruce and his family moved to a town about 20 miles north of Ann Arbor—before the fire.

Then in Nov. 1979 the Eden warehouse at 4601 Platt Road was destroyed by a large fire. Bruce was a manager at the time. He is quite sure that the fire was *not* caused by arson. If it was arson, it certainly was not done by the owners. They definitely didn't burn down the company to collect on the insurance. The main reason is that Eden was greatly underinsured; they lost a lot more than they got back or than could ever have gotten back. In the best case, insurance pays you 80% of what you're insured for. To this day, nobody knows for sure what caused the fire. The fire almost put Eden out of business; they lost a lot of money. They were able to stay in business because of the help of their friends. Before the fire, the insurance companies were always trying to get Eden to buy more insurance coverage—but they never did.

The fire was devastating for Bruce as well. He had been working on some automatic packaging equipment for Eden; it all melted. So after the fire, he decided to leave the company. They owed him \$15-30,000 at the time. He sat down with Potter and his good friend Redmond and made them an offer. You can forget the debt if you will give me just 15% of the stock in Eden Foods. Potter said "Yes" and Redmond said "No."

Cliff Adler, who had joined the company before the fire, had a profound effect on its recovery. After the fire, he converted a \$100,000 loan into stock so that in 1980 he owned 34% of the company. "Cliff was great. He was an upper management mover and shaker and eased the company's debt burden. He moved the company forward."

At one point Bruce considered starting a company to make tofu, but he didn't want to compete with the Soy Plant. Then he happened to meet Ben Wenzel who was delivering (by contract) the Soy Plant's tofu out of the Ann Arbor area and outside of Michigan. "He was delivering cider and tofu in his old hippie van." So Bruce decided to go into the raw milk cheese business. He got into it by accident by misunderstanding the difference between markup and profit margin. "Had I known the difference, I never would have gone into the business." So in Aug. 1980 he started a distribution company named Rosewood Products, Inc. After about a year, he started to distribute the Soy Plant's products along with his cheese. Then the Soy Plant got into trouble financially. Bruce tried to help them. He said: "I had a long history with the Soy Plant and this looked easy. Making tofu sounds exciting. East meets West type products was the

reason I went in. I never dreamed I'd be packing tofu for 20 years. You never know what life has to offer you."

Bruce ran the Soy Plant for 3 months before they went bankrupt. Then he bid on the company when they were in bankruptcy, and won the bid. He tried to keep all the employees but they came from a co-op background. "I was a pretty traditional business guy. I wasn't smoking dope any more, had short hair, hard working. A lot of the co-ops wouldn't work for me. I found the best workers were good old meat-eaters. The idealists would do great for three months, and then peter out."

For years after he took over the company, people who had loaned the Soy Plant \$100 or so, came to Bruce and said they wanted their money back. He tried to explain that the Soy Plant had declared bankruptcy and their debts were not his. But that didn't satisfy most of them. Bruce estimates that The Soy Plant paid back about half of the roughly \$10,000 they borrowed from members of the community.

In the end, Bruce merged the Soy Plant, a pioneer soy company, into his Rosewood Products, then later renamed it Tofu International Inc.

Update: Letter (fax) from Bruce Rose. 2001. May 22. Bruce says Rosewood Products no longer makes tempeh. They bought from White Wave from 1990-1998, but now buy their tempeh from Lightlife. They sell mostly bulk tempeh burgers. The Soy Plant started making tempeh in 1977. Rosewood started in 1987, stopped about 1995. Address: Founder and President, Rosewood Products, Inc., 738 Airport Blvd., Suite 6, Ann Arbor, Michigan 48108. Phone: 734-665-2222.

2597. Cleland, Nora T. 2000. Couple takes unique approach to farming. *Farm Talk (Parsons, Kansas)*. Oct. 18.

• **Summary:** Innovation is the watchword for Lee and Cindy Quaintance who farm near Edgerton, Kansas, close to Olathe.

Their main crop is organic soybeans, especially those varieties made into tofu. This year they are trying another variety named "Nato" [for making natto], which is smaller than most soybeans. Whereas the count of typical soybeans is about 3,500 per pound, "the little Nato beans run about 6,500 beans per pound."

They have found a company in Garden City, Missouri, which will buy the Nato beans and export them directly to Japan. They expect to be paid about \$15 a bushel, but that isn't quite as lucrative as it sounds because Nato yields only about 35 bushels per acre.

When growing soybeans organically, they have found that it is easier when they are planted in rows 36 inches apart rather than 30 inches. The beans rapidly grow and shade a 10-inch space on both sides of the row—which eliminates the need for herbicides. Still he cultivates the area between the rows once each season to eliminate weeds.

2598. Peyton, Mike. 2000. Revolutionary new packaging for edamamé gives 21-day shelf life. History of work with edamamé at Seaside/Seapoint Farms and Sproutime (Interview). *SoyaScan Notes*. Oct. 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mike got involved with edamamé several years ago when he worked with Kevin Cross of Seaside Farms to import edamamé to the USA. Kevin first learned about edamamé from a sushi bar. Unable to find domestic sources, he began to import. Mike, who has deep connections in Trader Joe's, helped to place the frozen product in Trader Joe's, got it distributed through Wild Oats and Whole Foods, then started selling edamamé to JFC (Japan Foods Corp. in South San Francisco)—before they were importing it. Mike also helped Kevin develop his like of Ricebowl products. Mike and Leslie sold Kevin on the idea of selling edamamé fresh (unfrozen).

Sproutime was the first company to package edamamé in a modified atmosphere tray to give it a long shelf life—21 days. This packaging machine has been used to package other foods for 15-20 years. For many years only one company made this machine, but now several companies made different variations on the basic process. His company owns one such machine (which they purchased and then modified) and has ordered one of the new generation of machines which is being custom fabricated for Sproutime to incorporate their requests concerning various gases, films, containers, packing temperatures, and amount of oxygen in the final sealed product, the amount of ultraviolet rays that the film blocks, etc. Each product uses a different combination of the above variables. For example, Chinese edamamé and Taiwanese are quite different and require different packaging. Chinese edamamé has a thicker pod so it lasts longer. Taiwanese edamamé requires more gas and a different type of film lid. Whole meal replacements (which Sproutime makes) require yet a different combination. If someone tried to imitate what Sproutime does, "they'd be having sleepless nights for years."

Sproutime now has three of its own brands of edamamé, but it buys all these edamamé from Kevin Cross. Mike and Kevin have a strategic alliance, and has become Kevin's customer. Kevin has agreed to sell edamamé for this type of packaging only to Sproutime.

Sproutime makes, packages, or markets over 300 products every day. They do a lot of private labeling for company's like Frieda's Inc., Krogers, Melissa's, Trader Joe's, etc. Sproutime is more of a food company than a produce company; they make home meal replacements, sandwiches, soy-based mushroom almond gravy, etc. Their roots are in the natural foods industry and they use only the highest quality ingredients, but they have become more of a crossover company. Their company, which is not a big company, treats all employees like members of a family.

The company's owner, Leslie Starus, started growing

many kinds sprouts in her garage in 1980 in Venice, California. She was in the right place at the right time; she sold her sprouts to big produce companies such as Frieda's, Melissa's World Variety, Ready-Pak, etc. After 10-15 years, she bought a greenhouse in Canooga Park and expanded into many new prepared products, such as hummus, rolls, etc. She built a very loyal following within the natural food market in Southern California.

Sproutime developed the revolutionary new edamamé packaging by accident. They took the idea to Frieda's and tried to sell them on the idea. Sproutime met with a lot of resistance for a long time since this product represented a paradigm shift. Their customers weren't used to a product packaged like this. The tray makes it look like a deli item, and not a typical produce item. The first company that accepted the new package was Redi-Pak, a big produce distributor in Irwindale, California. They began distributing edamamé in a modified atmosphere tray under the Sproutime label. Address: Sproutime, 8920 Norris Ave., Sun Valley, California 91352. Phone: 818-252-1888 X-12.

2599. Hain Celestial Group, Inc. (The). 2000. Annual report 2000. Uniondale, New York. 30 p. Nov. 28 cm.

• **Summary:** On 30 May 2000 The Hain Food Group completed a merger with Celestial Seasonings, Inc. by issuing 10.3 million shares of Hain common stock in exchange for all of the outstanding Celestial common stock. Each share of Celestial common stock was exchanged for 1.265 shares of Hain common stock. Hain subsequently changed its name to the Hain Celestial Group, Inc. Irwin D. Simon is President, Chairman, and CEO of the new company. Celestial Seasonings is the best-selling specialty tea brand in the USA. The financial statements in the annual report are consolidated from both companies.

Net sales for the year ended 30 June 2000 were \$403.543 million, up 28% from \$315.820 million in 1999. Net income in 2000 was a loss of \$19.097 million, way down from a profit of \$13.517 million in 1999.

Westsoy, the leading soymilk brand in the USA, has seen sales grow at a rate of 58% in recent months (p. 1). New Westsoy products: Westsoy Chai, Westsoy Juice Bar, Westsoy Plus (in half gallon refrigerated), and Westsoy Smart Plus (with 33% more protein than other soy beverages or dairy milk).

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (21 p.). Irwin Simon's annual compensation was: Salary: \$375,000. Bonus: \$625,000. Other compensation: \$5,400. Total: \$1,005,400 million. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2600. *Nutrition Business Journal* (San Diego, California). 2000. Supermarkets meet growing demand for organic food in UK. 5(10/11):14-15. Oct/Nov.

• **Summary:** In the USA supermarkets have been relatively slow to embrace organic foods. But in Britain the major multiples have been in the lead. Sainsbury's has the largest market share, followed by Tesco, Waitrose, Safeway, Asda (Walmart), Somerfields, and Booth's. Many UK supermarkets have also made public their positions on genetically engineered (GE) foods.

Also present in the British market are Small Planet Foods (subsidiary of General Mills), Seeds of Change (subsidiary of Mars), Hovis, Bisto (Rank Hovis McDougall), and Enjoy Organic.

Iceland Foods plc is converting all of its frozen food to organic and selling it for the same price as non-organic.

2601. *SoyaScan Notes*. 2000. Soymilk and cow's milk prices in California, December 2000 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. In Dec. 2000 at Berkeley Natural Grocery Co. (Berkeley, California), Cindy La reports the following retail prices. (Note: oz = fluid ounces; 32 fl oz = 1 quart; 33.8 fl oz = 1 liter. 2 quarts = one half gallon. All soymilk products at Berkeley Natural Grocery Co. are now organic).

Shelf-stable / Aseptic soymilks: Westsoy Light and Plus all flavors \$2.39/quart (but \$1.89 when on special). Westsoy original creamy \$2.59/quart. Westsoy 3 x 8.45 oz packs all flavors \$2.79.

Vitasoy all flavors \$1.99/quart. Note: This is the price for half the year. The other half it rises to \$2.39. Vitasoy enriched all flavors \$1.99/quart (on special). Vitasoy Light all flavors \$2.39/quart. Vitasoy 3 x 8.45 oz packs all flavors \$2.39.

Soy Dream (Imagine Foods) all flavors \$2.15/quart. Soy Dream Enriched all flavors \$2.25/quart.

Pacific Foods—Select all flavors \$1.99/quart. Pacific Foods—Enriched all flavors \$2.25/quart. Pacific Foods—Fat Free all flavors \$2.39/quart.

Edensoy and Edensoy Enriched all flavors \$2.29/liter. Edensoy and Edensoy Enriched 3 x 8.45 oz packs all flavors \$2.29. Health Valley Soy Moo plain \$2.59/quart.

Refrigerated / Fresh soymilks (in gable-top cartons) at Berkeley Natural Grocery Co. White Wave Silk \$1.79/quart or \$2.99/half gallon. Westsoy Plus \$3.59/half gallon. Wildwood all flavors \$1.99/quart or \$3.89/half gallon.

Berkeley Natural Grocery Co. also carries dairy milk: Horizon organic milk \$1.89/quart. Clover Stornetta milk (free of BGH—Bovine Growth Hormone) \$0.95/quart.

Safeway: Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Fat free: \$0.99/quart or \$1.84/half gallon or \$3.25/gallon; (2) Low fat (1% fat, protein fortified): \$1.07/quart or \$2.02/half gallon or \$3.39/gallon; (3) Reduced

fat (2% fat, protein fortified): \$1.07/quart or \$2.02/half gallon or \$3.39/gallon; (4) Whole (homogenized, fortified with vitamin D only): \$1.09/quart or \$2.05/half gallon or \$3.45/gallon. (5) Acidophilus Plus Bifidus–Low Fat (1% fat): \$1.07/quart or \$2.13/half gallon. (6) Horizon Organic \$2.99/half gallon. (7) Lactaid: \$1.89/quart or \$3.35 per half gallon. The best-seller among these is Fat free in half gallons or gallons.

Thus, during the past two years, the price of cow's milk has generally decreased slightly for the first time in at least 15 years. Soymilk prices have largely remained unchanged. Therefore the gap between soymilk and cow's milk prices has increased slightly.

2602. *SoyaScan Notes*. 2000. Soymilk, rice milk, and almond milk retail prices at Trader Joe's in California, 20 Nov. 2000 (Overview). Nov. 20. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. Note: 2 quarts = one half gallon.

Shelf-stable / Aseptic soymilks: Pacific Foods Fat Free Soy Drink vanilla or plain \$1.29/quart. Pacific Foods Multi Grain original \$1.69 quart.

Soy-Um all flavors \$1.49/quart. Soy-Um Fat Free \$1.39/quart. Soy-Um three-pack (250 ml each) \$1.69 for three.

Westsoy Plus all flavors \$2.49/half gallon (= \$1.25/quart). Westbrae Natural Lite vanilla or plain \$2.29/half gallon (= \$1.15/quart).

Refrigerated / Fresh soymilks (in gable-top cartons): Trader Joe's Fresh Non Dairy Soy Beverage \$2.69/half gallon (= \$1.35/quart—gable top carton sold refrigerated).

Non-Soy Non-Dairy Beverages: Aseptic beverages. Breeze almond milk original, vanilla or chocolate \$1.59/quart. Trader Joe's Rice-Um original, original enriched, vanilla, or vanilla enriched \$1.39/quart. Westbrae Rice plain or vanilla \$2.29/half gallon (= \$1.15/quart).

Products discontinued since last year: Galaxy Veggie Milk. Rice Dream.

Omitting the highest price soymilks, the price of soymilk ranges from \$1.15/quart for half-gallon cartons to \$1.39/quart for quart cartons. A fair average price would be about \$1.27/quart.

2603. Larson, Stephanie. 2000. The soyfoods boom: What's driving the explosion? First in a series. *Soybean Digest*. Dec. p. 10-11.

• **Summary:** Mark Messina says the whole market is driven by consumer demand because of health effects. Sales of soyfoods and soy protein products was \$2.1 billion in 1999. Of that total, soymilk sales accounted for \$300 million, up 38% from 1998. A graph shows soymilk sales (in million dollars) from 1992 to 1999, with projection to 2002. These

sales rose from \$100 million in 1993 to \$300 million in 1999, projected to reach \$500 million in 2001.

The United Soybean Board calculated that last year Americans consumed 37 million bushels of soybeans via soyfoods. A color photo shows many commercial soyfood products with colorful labels: Bergin Nut Company Soynuts (no salt), Fantastic Foods Tofu Scrambler, MCOA Brown Rice Miso, Spectrum Soy Oil, Health Trip Soynut Butter, Midwest Harvest Textured Soy Protein, Low-Fat Soy Flour, and Firm Tofu, Country Choice Soy Cocoa, Eden Organic Black Soy Beans, and Whole Foods Soy Ginger Sauce.

2604. Sampat, Payal. 2000. Deep trouble: The hidden threat of groundwater pollution. *Worldwatch Paper* No. 154. 55 p. Dec. 22 cm. [86* ref]

• **Summary:** Contents: Introduction. Valuing groundwater. Tracking the hidden crisis. Nitrates: From green revolution to "Blue Baby." Pesticides on tap. VOCs: From tank of gas to drinking glass. The threat of natural contaminants. Changing course. Notes.

Table 2, titled "Some major threats to groundwater" (p. 17) lists as threats: Nitrates, pesticides, petrochemicals, chlorinated solvents, arsenic, radioactive materials, fluoride, and salts. For each threat is given the major sources (such as fertilizer runoff, manure from livestock operations), health and ecosystem effects at high concentrations, and principal regions at risk. The USA is at risk for the first four threats. Address: Research Associate, Worldwatch Inst., 1776 Massachusetts Ave. N.W., Washington, DC 20036. Phone: (301) 567-9522.

2605. Holtzman, Rachel. 2000. Trader Joe's soy foods: Answers to commonly asked questions. Nutrition information (Leaflet). Needham Heights, Massachusetts: Trader Joe's. 3 panels each side. Each panel: 21.5 x 9 cm.

• **Summary:** Question and answer format: Contents: What is soy anyway? Why should I include soy in my diet? Does soy have fat? Some soy products say soy wards off heart disease. What does this mean? Ans: The FDA "recently approved a new health claim linking soy protein to a reduced risk of coronary heart disease. Studies show that foods with soy may help stave off heart attacks and other complications of heart disease by lowering cholesterol. The FDA says it takes 25 grams of soy protein a day to have this desired effect (as long as you also follow a diet that's low in saturated fat and cholesterol.) The product needs to meet the strict criteria to bear the new claim, but it will soon be appearing on more labels."

What are isoflavones and where can I find them? Ans: "Soybeans contain a unique compound called isoflavones, which are phyto (plant-based) estrogens. There are three isoflavones: genistein, daidzein and glycitein. Some research suggests that isoflavones are responsible for soy's health properties. One half cup of tofu has an average of

40 milligrams (mg) of isoflavones; one cup of regular soy milk has about 20 mg; one serving of Trader Joe' Soy Protein Powder has 43 mg. Lower fat products have fewer isoflavones. Soy protein concentrates lose isoflavones during processing. Isolated soy protein (ISP) and textured soy protein (TVP) are good sources of isoflavones. Heat treatment does not appear to significantly affect isoflavone content." What is the difference between isoflavones and soy protein? How can I include soyfoods in my diet?

Ans: Trader Joe's carries soymilk, tofu, tempeh, soy nuts, edamame (soybeans), soy protein powder, meat substitutes, soybean butter. What is tofu and how can I use it? How much soy should I eat? Ans: About 25-50 grams per day. Address: R.D., Trader Joe's Nutritionist, Needham Heights, Massachusetts.

2606. McCullough, Fran [Frances Monson]. 2000. Living low-carb: The complete guide to long-term low-carb dieting. Boston, New York, London: Little, Brown and Co. xiv + 370 p. Index. 22 cm.

• **Summary:** 175 new recipes from the author of the bestselling *The Low-Carb Cookbook*. Soy-related recipes: Tuna salad with beans and broccoli (with "15-ounce can Eden black soybeans, rinsed and drained" p. 159). Border beanburgers (with "15-ounce can Eden black soybeans," p. 190). Buffalo Boys Chili (with "½ cup Eden canned black soybeans, including some liquid" p. 214). Refried beans (with "15-ounce can Eden black soybeans, rinsed and drained" p. 233). Bean breakthrough (sidebar, p. 236; A half page in praise and promotion of Eden canned black soybeans). Scrambled tofu (with "10-ounce box silken tofu, drained," p. 338). Quick black soybean salsa (with "15-ounce can Eden black soybeans, drained" p. 348). Address: Culinary Inst. of America at Greystone (in St. Helena, California).

2607. Michio and Aveline Kushi macrobiotics collection (Archival collection and finding aid). 2000. Washington, DC: Smithsonian Institution, Archives Center. 48 boxes.

• **Summary:** This is collection AC 619 consisting of 48 boxes (28 cubic feet). The finding aid to the collection is 12 pages. Kathy Keen did the processing. Most of the materials document the 1970s and 1980s. There are five series in the collection: (1) Publications of the East West Foundation and Kushi Institute (the largest series): In boxes 1-7 are issues of *East West Journal* (EWJ) from April/May 1977 through Dec. 1989. In box 9 are volumes 1(1971) and 2(1972) of EWJ. In boxes 10-12 are volumes 2(1972) through 6(1976) of EWJ. In boxes 13-26 are various volumes and issues of macrobiotic periodicals including *Order of the Universe* (from Vol. 1, 1967), Michio Kushi Seminar Reports (from Nov. 1974), *Macrobiotic Monthly* (from July 1965), *Yin Yang* (from Sept. 1962), *Macrobiotic News* (from May 1960), *One Peaceful World* (from No. 27), *The Macrobiotic* (from Vol. 9

Macrobiotics Today (from 1984), *Musubi* newsletter (1971), *Macromuse* (from 1982). In box 29 are Erewhon product catalogs (13 catalogs from 8 Dec. 1972 to summer 1977; other catalogs include 19 Feb. 1973, 6 April 1973, 29 May 1973, 20 Aug. 1973, Nov. 1973, June 1974, spring 1975, summer 1975, Feb. 1976, and spring 1977).

(2) Audio tapes (box 40). (3) Video cassettes of lectures by Michio Kushi on macrobiotic subjects from 1981 to 1991 (boxes 34-40). (4) Books on macrobiotic subjects (99 in English and 8 in foreign languages) (boxes 30-33). (5) Photographs (box 41).

Contents of the 12-page finding aid: History of macrobiotics and Michio and Aveline Kushi. Provenance (the collection was donated in Aug. 1997, with additional materials in May 1999). Scope and content. Related materials. Container list.

There is also a 2-page cataloging record for the collection. Address: Washington, DC. Phone: 202-357-3270.

2608. Davis, Robin. 2001. Fresh is best when choosing edamame: Taster's choice. *San Francisco Chronicle*. Jan. 3. Food section. p. 2.

• **Summary:** Not long ago, edamame—green soybeans—were confined to sushi bars and Japanese restaurants. "Now the little green beans are the darling of the culinary world showing up in all kinds of restaurants as well as grocery stores."

A taste panel of five people tasted five different brands of edamame. One was fresh (Yamato; pre-cooked and sold refrigerated; 8 oz for \$2.99) and four were sold frozen The fresh product was rated best by far with 78 points; it needed no preparation, was pleasantly green and crisp, and did not require additional salt. By contrast, some of the frozen brands had a mushy texture and were discolored. The frozen brands were ranked as follows: Trader Joe's 64, Seaside Farms 56, Cascadian Farms 45, and Hearty & Natural (from SunRich, Hope, Minnesota) 39.

2609. G.T.B. Group of Japan, Inc. 2001. Questionnaire [concerning edamame]. Denver, Colorado. 6 p. Jan. 31. Unpublished typescript.

• **Summary:** This research was conducted over a 2 month period from 1 Dec. 1999 to 31 Jan. 2000. The questionnaire was administered by an in-store demonstrator. The GTB is the edamame vender for Whole Foods, Wild Oats, and King Sooper. The questionnaire consists of 11 questions, with about 4-5 choices after each question. The number of respondents to each question varies from 59 to 132.

1. How long have you known about Edamame? More than 1 year: 49%. First time: 22%.

2. How often do you purchase Edamame? 1-2 times per month: 44%. Once every 2 weeks: 22%.

3. How often do you eat soy products? (Tofu, Dried soybeans, Soymilk etc.). 1-2 times per week: 51%. 2-3 times

per week: 22%. 1-2 times per month: 18%. 2-3 times per month: 9%.

4. Reasons for purchasing our Edamame. Good Taste: 37%. Great health benefit: 33%.

5. Price. Reasonable: 59%. Expensive: 38%.

6. How do you like the flavor of our Edamame? Just Right: 88%. Do not need any salt at all: 7%. Not Enough Salt: 4%. Too Salty: 1%.

7. How do you eat Edamame? By Itself: 81%. Put them into salad: 13%. Put them into stir fry: 5%.

8. How do you feel about the person doing the demonstration? Very friendly: 59%. Provides great information: 23%. Answers customers' questions clearly: 17%.

9. How did you find out about Edamame? By shopping grocery: 53%. At restaurant: 26%.

10. What are other food products you would prefer to eat as snack or quick-preparation meal? Sushi: 37%. Miso soup: 29%. Noodle soup: 28%.

11. If you have any other comments or suggestions, please feel free to give us anything! Address: Denver, Colorado.

2610. Schlosser, Eric. 2001. Fast food nation: The dark side of the all-American meal. Boston, Massachusetts: Houghton Mifflin. 383 p. Jan. Illust. Index. 24 cm. [300+* ref]

• **Summary:** A well researched, well written but critical look at the effect of fast food on American health, economy, and environment—and its broader social implications. The first fast food chain was Carl's Jr. in Anaheim. Chronicles the rise of McDonald's.

Schlosser is an award-winning journalist for the *Atlantic Monthly*. Address: Correspondent, *The Atlantic Monthly*.

2611. *Lancaster Farming*. 2001. Business closed [auction notice] (Ad). Feb. 3. *

• **Summary:** "12 +/- acres with approximately 100,000 +/- square foot food processing facility with outbuildings, including grain processing facility, (8) silos and refrigerated warehousing. Real estate to be sold at 10:00 a.m."

2612. **Product Name:** Edensoy Light: Organic Soymilk [Original, Vanilla].

Manufacturer's Name: American Soy Products, Inc.

Manufacturer's Address: 1474 N. Woodland Dr., Saline, MI 48176. Phone: 800-248-0320.

Date of Introduction: 2001 February.

Wt/Vol., Packaging, Price: Tetra Brik Aseptic cartons. 1 liter (33.8 oz, 1.06 quart) or 250 ml.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2001. Feb. p. 38. "The best tasting soymilk just got a little lighter." On the large front panel is a prominent logo, black on yellow,

which reads: "Certified organic. Tested GEO free." Near the bottom: "Organic soymilk. Less than 1% fat. Fortified with vitamin D2 & calcium."

Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2002. July. p. 18. "EdenSoy: Increase volume sales." A large color photo shows a woman in a food store facing an aisle of foods and holding out a case of EdenSoy Light. Near the bottom of the ad are photos of cartons of EdenBlend and EdenSoy Original.

2613. **Product Name:** Nature's Path Organic Optimum Power Breakfast: Flax, Soy, Blueberry.

Manufacturer's Name: Nature's Path.

Manufacturer's Address: 7453 Progress Way, Delta, BC V4G 1E8 Canada. Phone: 703-799-9660.

Date of Introduction: 2001 February.

Wt/Vol., Packaging, Price: 14 oz (400 gm) paperboard box.

How Stored: Shelf stable.

New Product–Documentation: Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2001. Feb. p. 27. "Optimum's the word (for soy)."

2614. *Nutrition Business Journal* (San Diego, California).

2001. Small Planet Foods looks back on a year with General Mills: Better understanding of demographics and long-term organic contracts are benefits of GM ownership. 6(2):15. Feb.

• **Summary:** Small Planet Foods was purchased by General Mills in Jan. 2000. Gene Kahn is president of GM's Small Planet Foods division. That same month, GM acquired Cascadian Farm and Muir Farms (held by Small Planet Foods), then later acquired Pillsbury-Green Giant.

2615. Spencer, Marty Traynor. 2001. Organic standards finally arrive. *Natural Foods Merchandiser* 22(2):1, 14. Feb.

• **Summary:** On 20 Dec. 2000 the final organic standards were introduced by Secretary of Agriculture Dan Glickman. More than 500 pages long, he called them "the strongest and most comprehensive organic standard in the world." Implementation of the standards will begin on 19 Feb. 2001, when congress finishes the approval process. The first products bearing the USDA organic seal should start to appear in stores in about a year. Katherine DiMatteo, executive director of the Organic Trade Association (OTA), believes these are good, strong standards for both farmers and consumers, and they will be a boon for those who want to export their organic products to Europe other foreign countries. The industry asked for these standards and now they have to comply. The certification organizations will feel the most change.

A sidebar (p. 14) explains the three categories of organic products on which the USDA organic seal can appear on the primary display panel: "100 percent organic," "organic"

(95% of the ingredients are organic, excluding water or salt; the remaining 5% must be from materials that are not commercially available as organic, or nonagricultural materials approved on the National List), and “made with organic ingredients” (contains at least 70% organic ingredients, excluding water or salt).

All three categories must be certified by a USDA-accredited organic certification agency. The name and address of this agency must be displayed on the information panel. A civil penalty of up to \$10,000 can be levied on a person who knowingly makes false organic claims. If less than 70% organic, organic ingredients can be listed on the ingredients statement.

2616. Product Name: Westsoy Smart Plus Soymilk [Plain, or Vanilla].

Manufacturer’s Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).

Manufacturer’s Address: New York City, New York.

Date of Introduction: 2001 February.

Ingredients: Organic soymilk (filtered water, organic soybeans*), filtered water, brown rice syrup, tricalcium phosphate, natural flavors, sea salt, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 1 quart (32 fl. oz.) aseptic Tetra Pak carton–Liter square with spincap. Retail for \$1.78 (2001/02, Lafayette, California).

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 100 gm.: Calories 190, calories from fat 45, total fat 5 gm (8% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 90 mg (4%), total carbohydrate 22 gm (dietary fiber 5 gm [21%], sugars 14 gm), protein 11 gm (22%). Vitamin A 10%, calcium 30%, iron 15%, vitamin D 25%, riboflavin 25%, phosphorus 25%, magnesium 15%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Product with Label purchased at Trader Joe’s in Lafayette, California. 2001. Feb. 3 by 3 by 7.75 inches. Aseptic carton. Purple, red, white and blue. Front panel text: “33% more protein than whole milk. Logo: Made with organic soymilk. Excellent source of calcium. With vitamins A & D and riboflavin. 50 mg isoflavones per serving. Lactose and dairy free. Logo of a red heart with a soy protein banner: See side panel for information on the relationship between soy protein and heart disease.” A color photo shows soymilk being poured onto flaked breakfast cereal.

Talk with customer service rep. at The Hain Celestial Group. This product was first available in stores in Feb. 2001.

Talk with Janice Palmer, soy beverage expert, of Tetra Pak Inc., Pomona, California. 2001. March 26. This new carton is called “Tetra Brik aseptic Liter square with

spincap.” It is resealable, so it will not leak when placed on its side in a refrigerator. When you twist open the cap to break the tamper-evident seal, a plastic claw is pushed down so that it penetrates laminated layers of foil and polyethylene, breaking the interior package seal. The foil blocks light and oxygen and gives evidence of tampering; the polyethylene provides the aseptic seal for the laminated paperboard carton. SPINS refers to soymilk, rice milk, almond milk etc. as the “Non dairy beverage category.”

2617. Product Name: Westsoy Low Fat Soymilk Drink [Chocolate].

Manufacturer’s Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).

Manufacturer’s Address: New York City, New York.

Date of Introduction: 2001 February.

Ingredients: Organic soymilk (filtered water, organic soybeans*), filtered water, brown rice syrup, dehydrated cane juice, natural flavors, cocoa powder (treated with alkali), tricalcium phosphate, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 1 quart (32 fl. oz.) aseptic Tetra Pak carton–Liter square with spincap. Retail for \$1.78 (2001/02, Lafayette, California).

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 100 gm.: Calories 180, calories from fat 25, total fat 3 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 95 mg (4%), total carbohydrate 32 gm (dietary fiber 3 gm [13%], sugars 26 gm), protein 6 gm. Vitamin A 10%, calcium 30%, iron 10%, vitamin D 25%, riboflavin 25%, phosphorus 25%, magnesium 10%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Product with Label purchased at Trader Joe’s in Lafayette, California. 2001. Feb. 3 by 3 by 7.75 inches. Aseptic carton. Chocolate brown, red, white, and tan. Front panel text: “33 mg isoflavones. Logo: Made with organic soymilk. Excellent source of calcium. With vitamins A & D and riboflavin. Lactose and dairy free. Logo of a red heart with a soy protein banner: See side panel for information on the relationship between soy protein and heart disease.” A color photo shows chocolate soymilk being poured into a tall glass.

Talk with customer service rep. at The Hain Celestial Group. This product was first available in stores in Feb. 2001.

Talk with Janice Palmer at Tetra Pak. 2001. March 26. This new carton is called “Liter square with spincap.”

2618. Smith, Patricia. 2001. The Natural Products Expo at Anaheim and the natural foods industry (Interview). *SoyaScan Notes*. March 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Expo at Anaheim this year was the biggest ever, attracting more than 30,000 people. She walked past every booth and almost every one was offering some kind of soy product. The interest in soyfoods just keeps growing.

At the show there was talk about illegal genetically-engineered StarLink corn in Kellogg's Morningstar Farms products such as Corn Dogs, Mini Dogs, and maybe other products. Some company are pulling these products from their shelves.

Before the first Natural Foods Merchandiser (NFM) trade show was held in 1981, at Anaheim, California, the pioneering natural foods companies such as Erewhon, Eden, Westbrae, Sunburst, and Chico-San all (reluctantly) attended the annual NNFA show in Las Vegas, Nevada. There would always be a big party one evening in someone's hotel suite—with lots of fun. But from 1981 on, these and other natural foods companies found their real home at the NFM trade shows.

Patricia saw Yuko Okada at this year's show. His Macrobiotic Company of America now sells only Muso Shokuhin products. Norio Kushi is running the company. Yuko kicked out Bruce Macdonald over alleged financial improprieties. A lawsuit that Bruce filed has apparently been settled.

Michael Potter bought the Herb-T Company from Cecile Levin in southern California. Mr. Muramoto started the company many years ago.

Patricia has now worked for Trader Joe's for 16 years. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

2619. Hain Food Group, Inc. 2001. The Hain Food Group (Portfolio). Uniondale, New York. 30 inserts. 28 cm. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2620. *Nutrition Business Journal (San Diego, California)*. 2001. Stock reporter: Naturade, Galaxy Nutritional Food, and Tree of Life. 6(3):22-23. March.

• **Summary:** Naturade (ticker symbol NRDC), a maker of soy protein products, reported FY 2000 revenues increased to \$15.7 million, up 31% over the previous year. Still, the company reported a net loss of \$2.1 million, which was \$7.6 million better than the previous year.

Galaxy Nutritional Foods (GXY) retained Tucker Anthony Sutro Capital Markets to help it analyze several recent unsolicited offers to buy the company and to revue other options.

Royal Wessanen (KJWSY), the Dutch natural foods company, said Tree of Life, its distribution subsidiary in the USA, was acquiring most of the assets of Food for Health, another U.S. natural foods distributor and subsidiary of AMCON Distributors. Food for Health has \$US50 million in sales.

2621. **Product Name:** Edamame [Shelled, or In the Pod].

Manufacturer's Name: Tree of Life, Inc. (Marketer-Distributor).

Manufacturer's Address: St. Augustine, FL 32084.

Date of Introduction: 2001 March.

New Product–Documentation: Spot in *New Product Review* (Penton/NFM, Colorado). 2001. Spring. p. 4. "Tree of Life Inc." Spot in *Natural Foods Merchandiser*. 2001. March, p. 114. A color photo shows the label of each. Made with "non genetically modified soybeans." Also appeared in the June 2001 issue, p. 62.

2622. *SoyaScan Notes*. 2001. Safeway supermarket in California is now carrying many brands and flavors of refrigerated soymilk and rice beverage (Overview). April 2. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Before March 2001 Safeway supermarket in Lafayette, California, had never carried refrigerated soymilk; they did carry 1-2 flavors of soymilk in aseptic cartons, always unrefrigerated and shelved in an unlikely place. Suddenly in March 2001, as part of a major expansion program, Safeway began carrying the following products in two refrigerated locations. (1) In the dairy case next to cow's milk, all in gable-top cartons: Westsoy Plus, vanilla, organic, \$3.19/half gallon (equivalent to \$1.60/quart). White Wave Silk (calcium enriched), chocolate, vanilla, or plain, organic, \$1.89/quart, or \$3.29/half gallon vanilla. Rice Dream (rice beverage), vanilla or original, organic, \$3.59/half gallon (equivalent to \$1.80/quart).

(2) In the Odwalla cooler at the opposite corner of the store near the produce section: Odwallamilk, original, organic in plastic bottles \$1.69/15.2 oz, or \$1.99/quart, or \$3.49/half gallon (equivalent to \$1.75/quart). Odwallamilk, chocolate, non-organic, \$1.69/15.2 oz. Wildwood Soymilk, real vanilla or chocolate, organic, gable-top cartons, \$1.99/quart.

By comparison: Lactaid is shelved next to soymilk in the refrigerated dairy case. Lactaid quarts are \$1.99—the same price as Silk. Lactaid half gallons (fat free, low fat, or fat free) are each \$3.59–\$0.30 more expensive than Silk half gallons and \$0.40 more expensive than Westsoy Plus.

2623. Schneider, Sally. 2001. Soy meets girl: Our columnist proclaims her love for miso... *Food & Wine*. April. p. 60, 62, 64-65.

• **Summary:** A sidebar titled American miso (p. 62), discusses South River Miso Co., Great Eastern Sun, and the types of miso each makes. Gives the phone number and website for each. Contains three recipes that use miso. A color photos show: (1) Two recipes. (2) Sally Schneider. (3) Bowls of red miso and sweet white miso.

2624. Soyfoods Association of North America. 2001.

Presenting: The secret ingredient for good health.

Washington, DC. 6 cards with index tabs. April. 11 x 19 cm.

• **Summary:** Each glossy card contains a colored tab and usually a color photo or logos. The index tabs on the six cards read: Announcement (April is soyfoods month). SANA website (www.soyfoods.org). Beverages and toppings. Entrees. Ready-to-eat. Survey. Between the cards are various coupons and small promotional brochures. The cards are packaged in paperboard box 23.5 by 4 by 11 cm high. Participating companies and brands are: SunRich. Silk (White Wave). Galaxy Nutritional Foods. Soy-7 Soy Enriched Pasta (Martha Gooch). Lightlife. Westsoy (Hain). Heartland Fields. Smoke & Fire. Vitasoy. So Nice (SoyaWorld Inc. / ProSoy). Boca. In the back is a news release titled “Start your heart towards health in February—Enjoy soy” released for Heart Month in Feb. 2001. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

2625. Pollan, Michael. 2001. How organic became a marketing niche and a multibillion-dollar industry. *Naturally*. *New York Times*. May 13. p. SM130-37, 58, 63, Sunday magazine.

• **Summary:** Excellent writing! Pollan examines the ingredients in an organic TV dinner while standing in the frozen food aisle of his grocery store. He then traces the evolution of the organic food industry from a fringe movement producing odd-looking fruits and vegetables sold in natural food stores by a few impassioned hippies, to a widely available, often processed foodstuff produced by large corporations and sold by major grocery stores.

Discusses in detail: Gene Kahn and Cascadian Farm. USDA's role in organic farming and the USDA's National Organic Standards Board. Big organic and little organic. The battle to get synthetics accepted as organic; the argument between the old movement and the new industry. Industrial organic vs. traditional organic (old-fashioned). Small Planet Foods in Sedro-Woolley, Washington. R. Brooks Gekler, a marketing star at General Mills, which owns Small Planet Foods. “Taste you can believe in.” Greenways Organic, outside Fresno, California. The future of food—toward ever more health and convenience, with no sacrifice of taste. Horizon Organics and organic milk.

2626. Nielsen (A.C.) (IRI). 2001. Nielsen data on tofu in supermarkets, 52 weeks ending May 19, 2001. Chicago, Illinois. 8 p.

• **Summary:** Total selected tofu products: \$46.214 million. Total units sold: 27.690 million.

Note: We find it very hard to interpret the data in this table. How is it sorted? How does one find or calculate the total tofu sales of a particular company? For some companies (Azumaya) this is clear but for others (Hinoichi) it is not. For those that are clear (in descending order by total tofu sales):

Nasoya \$16,016,000. Mori-Nu \$8,187,000. Azumaya \$6,760,000. Hinoichi \$4,164,949. White Wave \$1,459,000. Wildwood Natural Foods \$881,000. Marjon \$877,000. The Soy Deli (Quong Hop) \$830,487. Frieda's Finest \$824,000 + \$209,046. Denver Tofu \$551,000. House Tofu \$489,000. Kikkoman \$393,000. Sun Luck \$338,439. LEASA \$330,000. Happy Tofu \$271,000 + \$111,468. Melissa's \$245,000. Pacific Tofu \$222,000. Soy Shop \$213,900. Pulmuone \$199,000. Mu-Tofu \$181,000 Quong Hop & Co. \$161,000. Island Spring \$154,000. Surata Soyfoods \$125,151. Farm Soy Dairy \$108,000. Ctl Br. \$107,000. Bountiful Bean \$92,100. Vitasoy \$89,871. Pacific Soy \$81,100. Stow Mills \$78,526. Banyan Tofu \$77,600. Wo Chong \$73,189. Harvest Light \$70,000. Golden Gate \$64,700. Cleveland Tofu \$58,200. Panda Farms \$54,000. Sacramento Tofu \$52,900. China Rose \$47,400. Fuji \$47,000. Midwest Harvest, \$44,000. Fresh Tofu Inc. \$39,100. Furama \$38,800. Spring Creek \$24,400. Calco \$7,700. Address: Chicago, Illinois.

2627. **Product Name:** Martha Gooch Soy7 Soy Enriched Pasta [Spaghetti, Rotini, Angel Hair, Penne Rigate, Lasagna, Elbow Macaroni, Fettucine].

Manufacturer's Name: Gooch Foods.

Manufacturer's Address: P.O. Box 80808, Lincoln, NE 68501. Phone: 217-451-8119.

Date of Introduction: 2001 May.

Ingredients: Spaghetti: Semolina, soy protein (isolated), niacin, iron (ferrous sulfate), thiamine mononitrate, folic acid.

Wt/Vol., Packaging, Price: 16 oz paperboard box with see-thru window.

How Stored: Shelf stable.

New Product—Documentation: ADM Nutrition & Health Update (Decatur, Illinois). 2001. June. p. 5. “Soy7 soy-enriched pastas to take a place on supermarket shelves.” ADM and Martha Gooch have teamed up to create this product. The first six varieties are sold retail and fettucine is also available to the food service industry. For more information contact Teresa Winchester at Protein Specialties. Phone: 217-451-8119. Talk with Teresa. 2001. June 13. These products were first introduced in May 2001 in Denver, Colorado. Six products with Labels and portfolio sent by ADM (Decatur, Illinois). 2001. June. Each box is a different shape and has a color photo of the prepared dish on the front panel. Green, blue, and gold on white. American Heart Association logo. FDA heart health claim. “Contains NutriSoy” logo, since each is “Fortified with soy protein.” Package design is excellent. Soyfoods Center product evaluation (by Olga Kochan). 2001. June 29. Flavor: Good. More filling than typical pasta. Evaluation by Akiko Aoyagi: She disliked both the flavor and the texture. The product contains too much soy protein. It may be good for you but it doesn't taste like pasta.

2628. May, Thomas Garvey. 2001. Chef to the stars: Akasha Richmond's entrees have been served at Hollywood's most exclusive events. And now they are available at frozen food sections at naturals stores everywhere. *New Product Review (Boulder, Colorado—A Penton Publication)* Spring. p. 1, 3, 20.

• **Summary:** Akasha has been called a chef to the stars who eat healthy. She met Michael Jackson in 1982, while working at the Golden Temple, a well-known restaurant. The two just clicked from the day they met. She describes the pop star as a “real person.” When she traveled with Jackson, she was part of his inner circle. His personal jet would whisk them away right after the show and fly them to the next town. At the hotel, she'd find the kitchen and see what kind of work needed to be done. It wasn't easy making enchiladas in Czechoslovakia. She always took along plenty of aseptic packages of tofu, masa, and a tortilla press. She loved to cook in Asia, where she'd get up at 6 o'clock to be at the local produce market early. She learned from chefs everywhere she went and was very impressed with Chinese cooks who could create delicious medicinal food—when needed. Going on several tours and working as a private chef for Jackson opened a lot of doors for Akasha. She has catered dinners for Al Pacino, Penny Marshal, Michael J. Fox and Madonna. She has been the tour chef for Barbara Streisand and for Rick Springfield.

She is in the process of developing a line of premium frozen foods—“Chef Akasha's Entrees.”

Akasha grew up in a “food-obsessed family” in Miami, Florida. She learned from both her grandmothers, and her mother grew sprouts in the kitchen and made her own bread. Akasha was working in a health food store by the time she was in high school. By age 17 she was baking cakes with honey instead of sugar.

She moved to California for better beaches, better health food stores, and an opportunity to study art in college. During college, she took a semester off to work at a vegetarian restaurant. Since then, her passion has changed from painting to food. She believes strongly that “healthy food should never have to taste bad.”

A sidebar shows her four favorites: Food, meal to cook (vegetarian Thanksgiving dinner), great-tasting healthy recipe, and client (Captain Kangaroo). A large color photo shows Akasha. Address: Palo Alto, California.

2629. Roseboro, Ken. 2001. Natural food companies face non-GMO label challenges: Angry manufacturers say the burden of labeling is on the wrong industry. *Natural Business LOHAS Journal* 2(2):5, 8. May/June.

• **Summary:** The U.S. Food and Drug Administration's Center for Food Safety and Applied Nutrition is considering outlawing labels such as “Non-GMO” or “Non-GE” or “GMO-free” or “Contains no genetically modified organisms,” and instead requiring phrases such as “Not

derived through biotechnology.” These proposals are in a draft guidance document on voluntary labeling released in January.

But Michael Potter, head of Eden Foods, argues that the FDA is failing to mandate the labeling of genetically engineered foods. Potter notes that polls consistently show that U.S. consumers want GE foods labeled. Address: Publisher, The Non-GMO Source.

2630. **Product Name:** Westsoy Soy Smoothie [Banana Berry, or Tropical Whip].

Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).

Manufacturer's Address: New York City, New York.

Date of Introduction: 2001 May.

Ingredients: Banana Berry: Filtered water, organic soymilk (filtered water, organic whole soybeans*), dehydrated cane juice, banana puree (banana puree, citric acid, ascorbic acid), juice concentrate blend (apple, strawberry, cherry, raspberry and blackberry), natural flavors, pectin, tricalcium phosphate, citric acid, sea salt, carrageenan (carrageenan and salt), beet juice (for color). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml) aseptic Tetra Pak carton—Liter square with spincap.

How Stored: Shelf stable; refrigerate after opening.

New Product—Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March. First ship 15 May 2001. A color photo shows the front panel (label) of each product.

2631. **Product Name:** Westsoy Soy Shake [Chocolate, or Vanilla].

Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).

Manufacturer's Address: New York City, New York.

Date of Introduction: 2001 May.

Ingredients: Chocolate: Organic soymilk (filtered water, organic whole soybeans*), filtered water, dehydrated cane juice, cocoa powder, natural vanilla flavor with other natural flavors, tricalcium phosphate, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml) aseptic Tetra Pak carton. Retail for \$1.79 (2001/10, Lafayette, California).

How Stored: Shelf stable; refrigerate after opening.

New Product—Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March. First ship 15 May 2001. A color photo shows the front panel (label) of each product.

Product (Chocolate) with Label purchased at Trader Joe's in Lafayette, California. 2001. Oct. 6. This store carries both Chocolate and Vanilla. 3 by 7.75 by 3 inches. A color photo on the front panel shows a tall, foamy glass of chocolate soymilk with a straw (on which is a red spiral pattern) in it. Soy protein heart health claim on lower right front. "Excellent source of calcium. With vitamins A & D and riboflavin. Lactose and dairy free." On the back panel: "Check out Westsoy's benefits: 30 mg of isoflavones. No soy protein isolates. Excellent source of calcium. Delicious creamy taste—not 'beany' like others. A cholesterol free food. Low sodium. Totally lactose & dairy-free." Dated: 2001. Soyfoods Center taste test. Nice thickness (like a shake), but too rich and too sweet. Contains a whopping 23 gm of sugars per serving—from cane sugar! Overall: 6.

2632. **Product Name:** Westsoy Green Tea Chai.
Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).
Manufacturer's Address: New York City, New York.
Date of Introduction: 2001 May.
Ingredients: Filtered water, organic soymilk (filtered water, organic whole soybeans*), dehydrated cane juice, organic expeller pressed canola oil*, natural vanilla flavor with other natural flavors, natural tea blend (black tea, green tea), cinnamon, carrageenan, sea salt, guar gum. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml) aseptic Tetra Pak carton.
How Stored: Shelf stable; refrigerate after opening.
New Product-Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March. First ship 15 May 2001. A color photo shows the front panel (label).

2633. **Product Name:** Westsoy Unsweetened Vanilla Soymilk.
Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).
Manufacturer's Address: New York City, New York.
Date of Introduction: 2001 May.
Ingredients: Organic soymilk (filtered water, organic whole soybeans*), natural vanilla flavor with other flavors. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml) aseptic Tetra Pak carton.
How Stored: Shelf stable; refrigerate after opening.
New Product-Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March. First ship 15 May 2001. A color photo shows the front panel (label).

2634. SPINS. 2001. SPINscan data on tofu in the natural / health food market, 12 months ending April 2001. San Francisco, California. 32 p.

• **Summary:** (1) Top ten brands—Natural products supermarkets. Tofu—Ranked by dollar sales. Total US. 1. White Wave (\$6.7 million). 2. Nasoya, 3. Wildwood Natural Foods. 4. Mori-Nu (Morinaga). 5. Soy Deli (Quong Hop). 6. Smoke. 7. Soy Boy (Northern Soy). 8. Dae Han. 9. Tree of Life. 10. Island Spring (\$421,642). Note: The top ten tofu brands have total annual sales of \$22.76 million.

(2) Top ten items—Natural products supermarkets. Tofu—ranked by dollar sales. Total US. 1. Nasoya tofu extra-firm organic 16 oz. (\$1.96 million). 2. White Wave Tidal Wave tofu organic 16 oz. 3. Nasoya tofu firm organic 16 oz. 4. White Wave baked tofu Italian organic 8 oz. 5. White Wave baked tofu Sesame Peanut Thai Style organic 8 oz. 6. White Wave baked tofu Oriental Style organic 8 oz. 7. Wildwood tofu organic 20 oz. 8. Mori-Nu Tofu Lite Extra Firm 12.3 oz. 9. White Wave tofu WP hard organic 16 oz. 10. Mori-Nu Tofu Lite Firm 12.3 oz. (\$531,257).

(3) Dollar share by subcategory. Tofu—Natural products supermarkets. Total US. Unseasoned tofu: 62.4%. Seasoned tofu 37.6%. Seasoned tofu has grown by 6.3% over the past year compared with the previous year; unseasoned has grown by 1.5%.

2635. Aveline Kushi obituary and memorial events (Website printout). 2001. www.CyberMacro.com 2 p. Retrieved entry of July 5.

• **Summary:** "Aveline Tomoko Kushi, an internationally

recognized pioneer and leader of the macrobiotic movement and the natural, organic foods industry, died early Tuesday morning (July 3) after a nine-year long experience with cancer of the cervix and its complications. She was 78. Born in the small town of Yokota in the Izumo area in Japan, she studied teaching in college, and during World War II, she taught elementary school in her mountain district. She moved to Tokyo and became involved in world peace activities at the student World Government Association, run by George Ohsawa. She came to the United States in 1951 to attend a World Federalists Convention, and met her future husband, Michio Kushi, who was also a student of George Ohsawa. This was to be a turning point in her life, which she and her husband have devoted to the achievement of world peace through the spread of the macrobiotic way of healthy living through education. Aveline Kushi lived in New York and Boston, and inspired many thousands of people who have visited, studied, and sought her advice. Soon after moving to the Boston area, she recognized the need to make natural, organic-quality foods more widely available, and in 1966 opened the first natural foods store in the United States. This store, named Erewhon after the novel of a utopian society by British philosopher Samuel Butler, grew from that small store into the leading natural and organic foods distributor, with retail stores in the Boston area, Hartford, and Los Angeles, and an annual income of \$17 million.

“Through this company, she inspired the development of the organic foods industry by encouraging farmers to grow staple grains and beans organically, and by providing a market for their crops. She and her husband also owned several natural foods restaurants over the years, Sanae and the Seventh Inn in Boston, and Open Sesame in Brookline. Aveline Kushi was a co-founder of the Kushi Foundation, East West Foundation, and One Peaceful World, and the Kushi Institute, organizations devoted to the improvement of human health and social well-being. She authored several cookbooks, including Aveline Kushi’s Complete Guide to Macrobiotic Cooking, and has taught macrobiotics at seminars throughout the world. Her classes were seminal introductions to the Western palate of traditional Japanese foods such as miso, tofu, umeboshi, and sea weed. Her cooking classes and natural foods business were a catalyst to the development of related foods companies involved in the manufacture of foods such as high-quality, organic sour dough bread, and soy foods such as tofu, tempeh, natto, and miso.

“Her students and colleagues started companies such as Bread and Circus, Eden Foods, and Imagine Foods. Aveline Kushi also introduced the traditional use of medicinal cooking for various disorders, thus contributing directly to the growth and interest in complementary and alternative healing practices. Macrobiotics is today widely recognized as a leading comprehensive lifestyle approach to the management of cancer and heart disease. Recognizing

the appreciation of different cultures as an integral part of promoting world peace, Aveline Kushi promoted East-West cultural exchange, and introduced U.S. and European audiences to Tea Ceremony, Noh Dance performance, futon making, calligraphy, and flower arrangement. Her students were inspired to start the first futon manufacturing companies in the U.S.A. Aveline Kushi and her husband also started several publications, including the *East-West Journal* (now *Natural Health*) in 1969, which also inspired similar publications such as the *New Age Journal*. Aveline and Michio Kushi’s accomplishments were recognized by the Smithsonian Institution with the establishment in 1999 of the Kushi Family Collection of materials related to their work by the National Museum of American History. She leaves her husband, Michio Kushi, four sons, Norio of North Carolina, Lawrence of New York, Phiya of Becket, and Hisao of California; four sisters and three brothers; 13 grandchildren, and 19 nieces and nephews.

“A funeral service will be held at the First Parish of Brookline, Monday, July 9, at 11.

“Interment will be private”

2636. Associated Press (AP). 2001. Aveline Kushi, 78; a leader in health food movement. *Boston Globe*. July 6. p. B7. [1 ref]

• **Summary:** This obituary also appeared in the *Los Angeles Times* (July 6) and the *Washington Post* (July 7, p. BO6).

2637. *Boston Herald*. 2001. Aveline Kushi, 78, natural food pioneer. July 7. [1 ref]

• **Summary:** “Aveline Tomoko Kushi of Brookline, a world-renowned pioneer of the alternative medical movement and the organic food industry, died Tuesday at Brigham and Women’s Hospital in Boston after a lengthy battle with cervical cancer. She was 78.

“Born in Yokota in the Izumo area of Japan, Mrs. Kushi studied teaching before emigrating to the United States.” “She taught at an elementary school in Izumo before moving to Tokyo, Japan, where she became involved in world peace activities as a member of the World Government Association. Mrs. Kushi came to the United States in 1951 to attend a World Federalist Convention.”

“Mrs. Kushi, in 1966, opened the first natural food store in the United States, Erewhon, which was located in Boston. The store became the leading natural and organic foods distributor with stores in the Boston area, Hartford, Connecticut, and Los Angeles.”

She is survived by her husband, four sons, five sisters, two brothers, 13 grandchildren and 19 nieces and nephews.

A similar obituary also appeared in the *Boston Globe* (July 6), *Los Angeles Times* (July 6) and the *Washington Post* (July 7, p. BO6).

2638. Kucinich, Dennis J. 2001. In honor of Aveline Kushi.

Congressional Record 147(93):July 10. Tuesday.

• **Summary:** A eulogy spoken on the floor of the U.S. House of Representatives (Washington, DC); 107th Congress, First Session.

“Mr. Speaker, I rise today to honor the memory of Aveline Kushi who, along with her husband Michio, had been at the forefront of the macrobiotic movement for the past 50 years.

“Ms. Kushi had become the most prominent and most respected macrobiotic cook in the world. She and her husband introduced macrobiotics to our country in the early nineteen fifties and since then, they guided thousands of individuals and families to greater health and happiness. Macrobiotics, which couples a vegetarian organic diet with a healthful peaceful lifestyle, spearheaded the organic and natural food movements of the sixties which continues today.

“Ms. Kushi was the author of several books that have been translated into multiple languages, including the best-selling cookbook ‘Aveline Kushi’s Complete Guide to Macrobiotic Cooking.’ The Kushis also founded the Kushi Institute and the One Peaceful World Society, both of which promote macrobiotic education and peace on a global scale.

“My distinguished colleagues, please join me in recognizing this outstanding woman. As the mother of five and grandmother of ten, she will be greatly missed by not only her family, but thousands worldwide who have benefited from her pursuit of healthfulness and peaceful living.” Address: Representative from Ohio, House of Representatives.

2639. Martin, Douglas. 2001. Aveline Kushi, 78, advocate of macrobiotic diet for health: A teacher who saw a connection between food and world peace. *New York Times*. July 23. p. B6. [5 ref]

• **Summary:** Aveline Kushi died on July 3 in Brookline, Massachusetts, at age 78, of cancer. She taught and promoted macrobiotic cooking and helped to found one of the nation’s first natural food stores, Erewhon. A macrobiotic diet, based on whole grains and fresh vegetables, provides physical balance that leads to greater spiritual and psychological balance. Aveline and her husband, Michio, taught that entire societies become aggressive and disharmonious from eating meat, dairy products, and processed foods; this undermines world peace.

Aveline was born Tomoko Yokoyama on 27 Feb. 1923 in the small mountain town of Yokota in the Izumo area of Japan. She taught elementary school during World War II, then after meeting Georges Ohsawa, came to the United States in 1951 to attend a meeting of students who supported world government. She stayed to study at the University of Illinois and Columbia University. She and Mr. Kushi were married in 1954.

She is survived by her husband, four sons, four sisters, three brothers, and 13 grandchildren.

2640. Wollner, Joel. 2001. Remembering Aveline Kushi’s funeral (Interview). *SoyaScan Interviews on File*. July 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Aveline Kushi died on July 3 in Brookline, Massachusetts. Joel, a close friend of Aveline’s for more than 30 years, flew back to attend her funeral. He describes here the wake/visitation at a local funeral parlor on July 8, the very beautiful and moving funeral service at the packed First Parish Unitarian Church on July 9, and the reception that followed at Michio and Aveline’s home (62 Buckminster Road) after the funeral—attended by 400-600 people. Address: 76 Florida Ave., Berkeley, California 94707. Phone: 510-524-4420.

2641. Hall, Trish. 2001. Sunnyside up: Entrepreneur David Cole is hatching ideas that may change the way organic farmers do business. Is his Sunnyside Farm the next best thing. *Gourmet*. July.

• **Summary:** Cole is a conventional capitalist. After establishing Sunnyside Farm, he was looking for a vehicle to expand into packaged organic foods. “In 1999, he bought a majority [controlling] interest in Walnut Acres, a venerable family business in Penns Creek, Pennsylvania, that was one of the nation’s best-known purveyors of organic foods.”

Not long thereafter, people said he might form a partnership with the Keene family, which had founded Walnut Acres. After finding that the existing company didn’t suit his needs, Cole bought the rest of it a year later, then basically closed it, keeping only the brand name. He also shut the factory, which he considered too old fashioned and remote, and discarded almost all of the company’s 1,500 products (many of which were not organic). Today, the brand name, Walnut Acres, is the cornerstone for his new company, Acirca. He plans to develop organic products for sale in supermarkets. With that in mind, he has attracted venture capital.

“Gutting Walnut Acres entailed laying off about 100 people, which had a big impact on a small town. None of the previous owners or top executives are allowed to talk about Cole; because of an agreement they signed when he invested, they risk lawsuits if they say anything about what happened at the company. But in organic circles, Cole is known as a man who trashed a struggling but beloved company, a pioneer in the nation’s organic foods business.”

2642. Kushi, Lawrence H. 2001. Aveline Tomoko Kushi—February 27, 1923–July 3, 2001: A celebration of her life, at First Parish in Brookline (Leaflet). Brookline, Massachusetts. 2 p. Front and back.

• **Summary:** There are four panels: (1) The cover shows a portrait photo of Aveline. (2) Inside left: Program of the church service. (3) Inside right. The words to the Heart Sutra (*Hannya Shingyo*), and the Song of Ephemerality, both

romanized. (4) Back: Biographical sketch of Aveline's life.

Accompanying this is 1-page sheet titled "Aveline Kushi Memorial Events" including dates, times, and addresses of visitation, memorial service, reception, and donations to Aveline Kushi Memorial Fund. Address: Brookline, Massachusetts.

2643. Lin, Chang-Chi. 2001. Frozen edamame: global market conditions. In: T. Lumpkin, ed. 2001. Second International Vegetable Soybean Conference. Pullman, Washington: Washington State University. 202 p. See p. 93-96.

• **Summary:** Contents: Introduction: "Edamame is a popular vegetable that is boiled, drained, salted and served in many Japanese restaurants. In the past, edamame was available only as a fresh vegetable during the harvest season in Japan. However, by late 1960's and with the improvements in technology, Japanese manufacturers began to produce frozen edamame. By 1974, these same manufacturers also started to expand their production operations overseas.

"This paper will focus on the frozen edamame market, specifically global supply and demand conditions and Asia Food's contribution to this market.

Market overview—global supply:

Taiwan: From just a few hundred tons of frozen edamame in 1974, Taiwan's production reached a high of 45,000 t [metric tons] per year between 1985 and 1991. By this time, Taiwan had a total of 27 frozen edamame processors and captured 90% of the Japanese frozen edamame export market.

"But with the rising labor and raw material costs in the late 1980's, Taiwanese processors, like Japanese, were forced to expand production operations overseas. As a result, there are only 11 frozen edamame processors remaining in Taiwan at present. These manufacturers export approximately 30,000 t of frozen edamame per year, of which approximately 24,500 t are exported to Japan, 5,000 t to the USA and the remaining balance to other countries such as Canada, Europe and Australia.

"During this period, small quantities of fresh edamame have also been shipped to Japan. However these shipments have steadily declined since edamame usually could not retain its freshness by the time it reaches its customers.

"Though China is currently considered the largest frozen edamame processor, Taiwan will always be regarded as a key supplier. Most of the customers prefer Taiwanese frozen edamame because of its higher brix, better flavor and better quality than others.

China: China opened its door to foreign investments in the 1980's. Taiwanese processors relocated their operations to southern China due to common language and culture, favorable soil, climate and close proximity to Taiwan. The Taiwanese frozen edamame processors brought seeds, farming experts, sophisticated machinery and production

know-how to China. It took over 7 years to stabilize the edamame yield. The quality of the raw materials has also significantly improved over the years.

"Today, China has 10 major Taiwanese companies that operate 16 factories and 30 Mainland Chinese owned factories. Together they export about 40,000 t of frozen edamame to Japan and another 4,500 t to countries including the United States, Europe and Australia.

"Due to its relatively cheap labor, China is expected to remain the largest frozen edamame supplier. However, the rising living costs along the coastal areas of China have prompted investors to shift their investments towards the inland rural areas of China.

"Thailand: In Thailand, production of frozen edamame began in the 1990's. There are currently 3 major processors. They process a total of 9,000 t a year, of which 8,700 t are exported to Japan and 300 t to the USA and other countries. The quality and the price of Thai frozen edamame are in between those of Taiwan and China. Frozen edamame is expected to grow moderately in Thailand.

"Indonesia: Edamame has been cultivated in Indonesia since 1990, though it only produced a few hundred tons per year. By year 2000, about 2000 t were produced and exported to Japan.

"Vietnam: Vietnam had a late start due to its closed-door foreign investment policy. In 1995, it produced 100 t of frozen edamame. Today, about 250 t are produced. The quality of Vietnam's raw material is still in early development stage.

"Other Supply: Frozen edamame is also produced in smaller quantities in Japan, Australia, and the USA."

"Market Overview: Global Demand:

"Japan: Japan is the world's largest frozen edamame consumer. Frozen edamame import has increased from 36,200 tin 1986 to 75,000 tin 2000. The Japanese frozen edamame market is expected to grow further by about 7% per year to 100,000 t by 2005. This strong growth is attributable to several reasons.

"First, continuous improvements in frozen technology have significantly decreased the peculiar/funny taste associated with frozen products. As a result, more restaurants, supermarkets and convenience stores are increasingly replacing fresh edamame with frozen edamame.

"Second, consumers are interested in convenient foods due to the fast-paced lifestyles. In response to this trend, Japanese importers and Taiwanese processors produced frozen salted edamame in the 1990's. Such timely product innovation pushed the demand for frozen edamame as demonstrated by the 50,000 t of frozen salted edamame exported to Japan last year.

"Third, the aging farming population and decreasing number of young individuals choosing farming as their careers in Japan have led to gradual decrease in fresh edamame production in Japan every year. Today only 80,000

t of fresh edamame is consumed against 135,000 t in the 1990s. The demand for frozen edamame has replaced the demand for fresh edamame.

“Finally, the wide variety of edamame available is expected to spur demand. Over 20 years of research, produced new improved edamame varieties. Recently, *Chamame* or brown edamame and *Kuromame* or black edamame have gained popularity among the Japanese consumers due to their distinctive taste. Interestingly, the darker the color the more flavorful and sweeter they become. Since their debut 3 years ago, sales of Chamame and Kuromame have climbed to 6,000 t a year.

“The United States: Export of frozen edamame from Taiwan to the USA started with only 300-500 t per year in the early 1980’s, all of which were destined for oriental/specialty supermarkets and restaurants.

“With the ‘Zen fever,’ ‘vegetarian fever’ and ‘healthy-food’ trends, ‘soy’ products became an instant hit by 1997. Many major and minor influential magazines, articles, news, and other media were also introducing soy products, including edamame, to the public. The FDA’s announcement that soybean could lower the risk of heart disease further spurred the demand for frozen edamame. Frozen edamame will soon be available in hundreds of supermarkets such as Trader Joe’s, Costco, Albertson’s, Ralph’s and Whole Foods.

“Last year, the US imported approximately 10,000 t of frozen edamame. Of this total, 5,000 t were imported from Taiwan, 4,000 t from China and the remaining 1,000 t from Thailand and Indonesia and local sources such as Minneapolis. Continuous scientific findings on the health benefits of edamame are expected to accelerate this growth and eventually make edamame one of the common daily vegetables in American food culture.

“While the frozen edamame market in the US is at its infant stage, it is expected to significantly expand from its current 10,000 t per year to 25,000 t by 2005. Currently about 500 t of frozen edamame is consumed in all other Asian countries. Edamame is expected to move to Canada as well as European countries, however, the demand may not be as dramatic as in Japan and USA.

“Educating the consumers with preparation, cooking and eating methods are very important. Directions for use are printed on the back of the frozen edamame package. Edamame with short blanching time requires additional cooking in microwave or boiling whereas the one with long blanching time can be defrosted and consumed directly” (Continued). Address: CEO, Asia Foods Group of Companies & Chairman, Taiwan Frozen Vegetables & Fruits Manufacturers’ Assoc., No. 1 Wen-Hua West Road, Fengshan, Kaohsiung 830, Taiwan, ROC, Email: seika@asiafd.com.

2644. **Product Name:** SimpleSnacks Roasted Soy Nuts [Unsalted, Lightly Salted, Barbecue, Honey Roasted].

Manufacturer’s Name: Tree of Life, Inc. (Marketer-Distributor).

Manufacturer’s Address: P.O. Box 410, St. Augustine, FL 32085-0410.

Date of Introduction: 2001 August.

Ingredients: Lightly salted: Non-GMO soybeans, sunflower oil, salt.

Wt/Vol., Packaging, Price: 2 oz or 6 oz.

How Stored: Shelf stable.

New Product–Documentation: Natural Foods Merchandiser New Product Review. 2001. Summer. p. 6. Shows the front of four flavors. Leaflet sent by Patricia Smith from Natural Products Expo East. 2001. Oct. “Best tasting soy nuts available. Best price on the market.”

2645. Bramblett, Billy. 2001. Wildwood Natural Foods and Midwest Harvest merge to form Wildwood Harvest Foods, Inc. (Interview). *SoyaScan Notes*. Sept. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** On 24 Aug. 2001 Wildwood merged with Midwest Harvest, a small tofu company in Iowa. The new company is named Wildwood Harvest Foods, Inc. but they don’t plan to “pump up that new name very much.” They are an Iowa corporation, and as a result they got some investment from the state of Iowa, from a fund that is managed by the tecTERRA fund. Iowa is the biggest soybean producing state in America, and also the biggest commodity state. That’s a problem, because they are on “the low end of the food chain” as it were. So the mandate of this fund is to help Iowa companies turn Iowa commodities into value-added products. Cybus Capital Markets manages the tecTERRA fund. Thus Wildwood was able to obtain Iowa public money because they agreed to make this an Iowa corporation, located in Iowa, and because Tom Lacina is an Iowa farmer, and because the company was doing at least \$5 million in sales—which is why Midwest Harvest needed Wildwood.

Farm Bureaus now do a lot of investing, with the goal of giving their member farmers shares of companies that use the state’s farm crops. “We’re really trying to live our mission statement.” Tom Lacina, who runs Midwest Harvest, is very sharp, and he has a very sharp brother, Dr. Sam Lacina, who is a pediatric cardiologist in Grand Rapids, Michigan. Billy will send a news release by an investment firm that also came into the deal. Paul Orbuch and Frank Rosenmayr are no longer with the company; their shares were purchased for cash by Tom Lacina and his brother, Sam, so that there are now still four shareholders, each owning 25% of the company.

The new company will retain both the existing brand names (Wildwood Natural Foods and Midwest Harvest—they are still “brand building”) and the existing products. Tom Lacina built his tofu factory on his organic soybean farm. The new company plans to build another tofu-making facility

on 10 acres they bought at the Grinnell Industrial Park, located south of Grinnell, Iowa—about 3-4 miles from the Lacina farm. Zoning and other issues prevented the larger tofu plant from being built on the Lacina farm.

Last week from California (Billy, Jeremiah, and their wives) went to Iowa for the initial board meeting. The wives went because “this is really a family deal.” The new board of directors consists of several investment people, the four principals/owners (Jeremiah Ridenour, Billy Bramblett, Tom Lacina, Dr. Sam Lacina), Van Tunstall (former CEO of McCormick Shilling, who is also on the board of Monterey Pasta and Organic Food Products), plus several other people whose names appear in a second new release. Van Tunstall, who has his own consulting firm, has been helping Wildwood with its strategic planning for the past three years. “He’s been around the block many times, and he’s a great guy.”

There was also a ground breaking in Grinnell, Iowa, last week. The mayor of Grinnell and 65 people showed up. They had stainless steel shovels and construction hats that said “Wildwood Harvest” across the front.

Wildwood has already purchased a building in Watsonville, California. It was originally Ken Miller’s Meats, then it was Alfaro’s Bakery for many years.

Presently both firms are maintaining their own separate websites, but by the end of this year they will probably have a Wildwood Harvest website, which will link the two separate websites.

Tom Lacina’s wife, one of the Soy Sisters, will be part of the company’s marketing strategy; they have their own website.

This is how the two groups met: Tom e-mailed Billy about 18 months ago and said that he had seen Wildwood’s website and heard about the company. He asked for some advice, since he was just an Iowa farmer who had built a tofu factory on his farm. Wildwood has often wished that it had built its tofu factory on the farm that produced its organic soybeans to eliminate freight bills. Billy e-mailed him back: “You’re a genius for doing that; we should have done that a long time ago.” Tom responded: “My wife, Alesia, probably wouldn’t agree with the ‘genius’ part.” Billy answered: “Hey, my wife’s also named Alicia—but spelled differently.” Tom answered: “My wife is really a graphic artist.” Billy answered: “So is my wife.” Tom responded: “I’m really a musician.” Billy e-mailed back: “Wait a minute here, I’m really a musician too.”

Billy continues: “We knew we had something going at that point, so we traded cookbooks, and aprons. He and his brother-in-law, and her wife (Francene Coons, the other Soy Sister) live on the farm in the other house. All four work on their 320-acre farm and in the tofu factory together. They are all incredibly wonderful people. Tom is an ‘A-Type’ who can do a thousand things and keep it all going. I have many interests but I’ve got to take a rest every once in a while.

Tom is also a practicing attorney, formally trained in music, plays in church every week. Tom’s brother, the cardiologist, had a heart attack at age 40, so now he is an expert on heart health and heart nutrition, and a great admirer of Dr. Dean Ornish. We all had a great time together.”

They have been working on the merger since May of this year. The new plant in Iowa should be in operation by early 2001, at which time Wildwood’s line of products will start being made and distributed from the Midwest. The distributor will be Blooming Prairie, which is Midwest Harvest’s distributor to nine Midwestern states. Wildwood is also looking at wider distribution on the West Coast. They have a new sales and marketing person named Pat Deveau; she has been with Nature’s Best for the past 8-10 years, is very well connected, and is working on building Wildwood’s distribution and broker network.

White Wave will soon become Wildwood’s competitor. Billy has known Steve Demos for years. Steve’s girlfriend, Cheryl, used to work for Wildwood years ago, before she went to Mountain People’s Warehouse.

Wildwood has its soymilk base made in two places: SunRich Northern and Soyfoods of America. Wildwood used to have its soymilk base formulated and packaged at the Morningstar plant (formerly Avocet) in Gustine. Morningstar kicked out Wildwood (for reasons that are not clear) so Wildwood found another co-packer—Heritage Foods, in Santa Ana. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

2646. Eden Foods, Inc. 2001. Edensoy in new six pack cases (News release). 701 Tecumseh Road, Clinton, MI 49236. 1 p. Sept. 25.

• **Summary:** “All Edensoy and EdenBlend one liter containers are now being packaged in ‘six packs’ of six liters per case instead of twelve. This new case pack is North America’s first and only in the aseptic soy and rice milk category.” Address: Clinton, Michigan.

2647. Tepper, Robert. 2001. Starting Sunrise Brand Marketing Specialists in Jan. 2000. Roger Kilburn sold Harvest Direct to Dixie Diner in June 2001 (Interview). *SoyaScan Notes*. Sept. 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Robert started business at Sunrise Brand Marketing Specialists on 1 Jan. 2000. He started the company while still holding a job at Annie’s Naturals. Technically the company was incorporated in Dec. 1999. His company started with three clients, including Harvest Direct and Good Health Natural Foods. Robert managed the sales and marketing for Harvest Direct for a little less than 18 months. He worked closely with Monty and Mary Ellen Kilburn as well as Roger; they are all great folks. Between Feb. 2000 and April 2001 Robert tripled the sales of Harvest Direct. He repackaged the products and got them into

supermarket chains such as Vaughn's, Ralph's, Wegman's etc. with 6-10 SKUs (out of 17 sold by the company) in a typical chain. All the products were dry mixes. Harvest Direct's lead items into supers were soy-based pudding mixes. Roger also bought several products, including the Seitan Mix from Arrowhead Mills and the Solait brand in cans he bought from Devansoy (both very good sellers). The Taco, Bar-B-Q, and TVP Chicken Strips (the latter made in Israel; Robert's favorite product).

His 90-day contract was broken on 1 April 2001. No-one from Dixie Diner has ever called him or returned his calls. On 12 June 2001 Roger Kilburn announced the sale of his company (effective June 18) to Dixie Diner, who proceeded to manage it very poorly. Some of his brokers have dropped the line and a number of distributors have discontinued it. Harvest Direct is still alive but declining. Address: Founder, Sunrise Brand Marketing Specialists, L.L.C., 22 Wenonah Ave., Rockaway, New Jersey 07866. Phone: 973-983-7452.

2648. Product Name: Belsoy Soymilk [Great Tasting Unsweetened, Great Tasting Original, Great Tasting Vanilla, Great Tasting Chocolate].

Manufacturer's Name: Alpro.

Manufacturer's Address: Vlamingsstraat 28, B-8560 Wevelgem, West Flanders, Belgium. Phone: +32 56 43 22 11.

Date of Introduction: 2001 October.

Ingredients: Original: Filtered water, organic soybeans*, organic raw cane sugar, tricalcium phosphate, natural flavors, sea salt, zinc gluconate, riboflavin (B-2), vitamin A acetate, vitamin D-2, vitamin B-12. Belsoy soybeans are third-party certified by ECOCERT-BE-1.

Wt/Vol., Packaging, Price: 32 fl oz (1 quart) or 8.45 fl oz. Tetra Brik Aseptic carton. Retail for \$1.69 (2001/11, Lafayette, California).

How Stored: Refrigerate after opening.

Nutrition: Per 1 cup (240 ml): Calories 120, calories from fat 45, total fat 5 gm (8% daily value; saturated fat 1 gm), cholesterol 0 mg, sodium 180 mg (8%), total carbohydrate 9 gm (dietary fiber 3 gm [12%], sugars 7 gm), protein 9 gm. Vitamin A 6%, vitamin B-2 20%, vitamin B-12 15%, calcium 35%, iron 6%, vitamin C 0%, vitamin D 20%, riboflavin 20%, zinc 8%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Alpro is trying again to enter the U.S. market. Brochure (8½ by 11 inches, color, 4 p.) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. "Belsoy–The taste of Europe!" Page 1: "Our company: Belsoy products are produced at Alpro [in Belgium], a European company producing only vegetable products. At Alpro, our life is Soy. We have more than 20 years experience in the Soy business... Today, Alpro is the market leader in Europe for Soy products and one of the largest Soy manufacturers in the world. All

our products are produced with organic soybeans and are GMO-free." Product range: Soymilk in quart and 8.45 oz sizes. Soypudding in 4.4 oz sizes. Website: www.belsoy.com. Sales and distribution: Belsoy products will be sold in the US through our partners American Natural Snacks (ANS; phone: 904-825-2039) for the natural food trade, and Liberty Richter (phone: 201-843-8900) for specialty food distributors and other channels of distribution. Timing: Belsoy will be available through your distributor from July 1st 2001. Color photos at the bottom of page 1 show four flavors of Belsoy soymilk in quart cartons. Pages 2-3 give ingredients and nutrition facts for 10 SKUs (8 soymilk and 2 soypudding). Page 4 contains barcodes, case and pallet information. Note: Both ANS and Liberty Richter are divisions of Tree of Life.

Trader Joe's Holiday Guide. 2001. Oct. 30–Dec. 31. p. 12. "More interesting new stuff... New! Soy milk fortified with calcium, vitamins and minerals. Original, vanilla, and Belgian chocolate." "Belsoy Soy Milks are made by one of the largest soy manufacturers in the world, with more than 20 years experience in the soy business... Belsoy Soy Milks are made entirely from organic soybeans... They contain nine grams of soy protein per serving... We were very impressed with the clean flavors of all the varieties, and thought the chocolate was terrific! Trader Joe's is the first company in the States to carry these Belgian soy milks. They come in quart (32 fl. oz) shelf stable boxes. \$1.69.

Product (Original) with Label purchased at Trader Joe's in Lafayette, California. 2001. Nov. 1. 1 quart Tetra Brik. Light blue, dark blue, green, white and red. Front panel: A light blue photo in the upper right shows a mother holding two children. In the upper left is a green leaf with a drop of water on it. An illustration shows milk being poured into a glass. In a red heart at lower left is written: "Contains 9g soy Protein per serving. See side panel." The side panel states: "Diets low in saturated fat and cholesterol that include 25 grams of soy protein a day may reduce the risk of heart disease. One serving of Belsoy Soymilk provides 9 grams of soy protein... Product of France. Distributed by Liberty Richter, 400 Lyster Ave., Saddle Brook, New Jersey 07663-5910." Back panel: "Belsoy products are produced by Alpro, a European soy food manufacturer producing only vegetable products." Soyfoods Center taste test. Taste and consistency: 9. We like very much the richness, high natural protein content (9 gm/serving without using isolates), and smooth consistency of the Original soymilk. However, for us, the use of white sugar as a sweetener makes the product unacceptable. Price: Excellent. Package design: 8.

Talk with Liberty Richter (Customer Service). 2001. Nov. 5. They import, then sell to distributors. The first products arrived two weeks ago and are just now starting to appear in stores. They are not aware that the product will be produced in the USA.

2649. Monahan, John. 2001. Natural legacy: The people who

founded an industry. Aveline: Remembering the woman who brought macrobiotics to the United States and helped launch the natural foods industry here. *Natural Foods Merchandiser*. Oct. p. 27, 30, 32, 34, 36-37.

• **Summary:** A short article titled “Inspirational Pioneers,” by Susan Haeger serves as an introduction to what will become a series of articles. She explains the importance of the natural foods industry understanding its own history. “If we do not understand our heritage, we cannot pass it on.” The main article is an excellent biography of Aveline Kushi.

2650. *OG*. 2001--. Serial/periodical. Emmaus, Pennsylvania: Rodale Press. Vol. 48, No. 6. Sept/Oct. 2001. Editor: John Grogan.

• **Summary:** Previous title *Organic Gardening*. Subsequent title *Organic Gardening*. Continued until Vol. 50, No. 2, March/April 2003. The president of Rodale Inc. is Maria Rodale. Address: Emmaus, Pennsylvania.

2651. Hain Celestial Group, Inc. (The). 2001. Annual report 2001. Melville, New York. 36 p. Nov. 28 cm.

• **Summary:** Net sales for the year ended 30 June 2001 were \$412.880 million, up 2.3% from \$403.543 million in 2000. Net income in 2001 was \$23.589 million, way up from a loss of \$17.097 million in 2000, and 74.5% higher than the previous net income high of \$13.517 million reached in 1999.

The company now markets 26 brands with over 1,500 different products. “We continue to bring new organic products to market, as well as foods and snacks free of genetically engineered ingredients (GEIs).

In June 2001 the company acquired Yves Veggie Cuisine in Vancouver, BC, Canada. This gives Hain a strong base for growing its Canada operations. Yves has been extremely successful in Canada and the U.S. with its refrigerated meat and cheese alternatives. Hain will soon launch many of its U.S. products under the Yves brand in Canada, and also introduce many new product categories (p. 2).

“Soy beverages continue to be the largest natural food grocery category, and Westsoy has increased its #1 leadership position in aseptic products by growing 9.5% in the last 12 months in the grocery channel alone. This has been at the expense of both long-standing competitors and new entrants... Westsoy expanded to new beverage varieties including soy-based shakes and smoothies, and new refrigerated Westsoy is gaining in both distribution and sales velocity. We now also have the distribution network in place to aggressively support and merchandise the refrigerated section of natural food stores and supermarkets” (p. 3).

Photos show: (1) Westsoy, all natural soymilk beverages (p. 12-13). (2) Yves all natural soy protein products, incl. Veggie Bologna Slices, Veggie Ground Round, Good Slice (cheese alternative), Good Dog (hot dog alternatives), and Canadian Veggie Bacon. (p. 14-15). Yves “continues to

lead the North American fresh meat alternative category with exceptional growth in both U.S. and Canadian fiscal markets in fiscal 2001. Yves led category growth with the introduction of new ‘Great Tasting’ products... Using Yves’ strong brand name and distribution network in Canada, we will roll out over 70 new products in the Canadian market in fiscal 2002.”

Accompanying the annual report is a “Notice of Annual Meeting of Stockholders and Proxy Statement” (17 p.). Irwin Simon, the founder and CEO, age 43, had the following annual compensation: Salary: \$460,000. Bonus: NA. Other compensation: \$5,400. Andrew Jacobson, president of the company’s Natural Products Group, earned a salary of \$247,500. A color photo (p. 2) shows Irwin Simon pushing a shopping cart filled with Hain-Celestial products. Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

2652. *SoyaScan Notes*. 2001. Chronology of major soy-related events and trends during 2001 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** April 12–Bill Bolduc, founder of Eden Foods and natural foods pioneer, dies in Southern California.

April 17–Martha Stewart, on her popular nationwide TV program *Living*, has a very positive segment on South River Miso Co.

April 18–Richard Rose, a soyfoods pioneer, sells Rella Good Cheese Co. to Tree of Life. He retains his company HempNut, Inc. in Santa Rosa, California. His Hempteh (hempseed tempeh) still contains soy.

May 11–The Kerry Group (of Wisconsin and Iowa) purchases Iowa Soy Specialties, LLC of Vinton, Iowa.

June 12–The Hain Celestial Group acquires Yves Veggie Cuisine (Vancouver, BC, Canada).

Aug. 24–Wildwood Natural Foods (Fairfax and Santa Cruz, California) and Midwest Harvest, Inc. (Grinnell, Iowa) merge to form Wildwood Harvest, Inc. Iowa Agricultural Finance Corporation (IAFC) invests \$3.3 million in the new company, and the Iowa Farm Bureau Federation (IFBF) invests an additional \$700,000. This investment will be used to build and equip a 20,000 square foot soyfoods plant in Grinnell and to remodel and equip another 20,000 square foot soyfoods plant in Watsonville, California.

Aug. 3–Bunge, in its initial public offering (IPO), raises \$278 million by floating 23% of its shares on the New York Stock Exchange. Bunge has been a private grain trading company since it was founded in 1818 in the Netherlands by Johann Peter Gottlieb Bunge.

Sept.–SunRich’s new soymilk plant in Wyoming starts production. By Nov. the plant is at full capacity and expansion begins.

Oct. 21–The USDA’s National Organic Program and its standards take effect.

Oct.–The Coca-Cola Co. acquires Odwalla, Inc. of

California for \$181 million. Odwalla has annual sales of about \$130 million, mostly in fresh, refrigerated juices plus some delectable soy beverages.

Nov. 4-7—Fourth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease held at San Diego, California. General chairpersons and proceedings editors: Stephen Barnes and Mark Messina.

Dec. 10—The Hain Celestial Group, Inc. acquires Lima NV, the leading Belgian natural and organic foods manufacturer and marketer, and its Biomarché operations. Hain appoints Lima's Chairman, Philippe Woitrin, as Managing Director of Hain Celestial Europe. Lima is also a European pioneer in macrobiotic foods and soyfoods.

Dec. 11—Ralston Purina Co. (St. Louis, Missouri, a soy pioneer) is acquired by Nestle SA for \$10.1 billion cash; on this date the deal is approved by the U.S. Federal Trade Commission. The new company is named Nestlé Purina. The merger brings together such household names as Ralston's Dog and Cat Chow and Nestle's Friskies cat food and Mighty Dog brands.

Dec. 24—The Federal Trade Commission approves the merger of Dean Foods and Suiza Foods Corp. (which owns 14% of Horizon Organic Dairy). A federal judge throws out White Wave's lawsuit arguing that White Wave has the right to buy back its own stock at the market price before the merger.

In 2001, for the first time in modern history, the USA lost the distinction of supplying more soybeans and soybean products (oil and meal) than all other countries combined. This year it supplied about 46% of the world's soybean exports. South America (mainly Brazil and Argentina) now supply more than 50%. Devalued currencies in Brazil (the *real*) and Argentina (the *peso*), plus the strong U.S. dollar, make it difficult for U.S. exporters to compete based solely on price. To compete in the future, U.S. growers must find a new strategy, which will focus on soybean quality.

2653. *SoyaScan Notes*. 2001. Brief history of Swan Gardens, Inc. of Montana and Florida. Part II (Overview). Dec. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: Move to Florida: The community (about 6 adults and many kids) packed up two vans and U-Haul trailers, left St. Ignatius in August 1979 and moved to Miami, Florida. They sold the organic farm, tofu company, other buildings, and property to Gerald Minsk, who changed the name of the company to The Tofu Factory. Minsk was with a community of people who lived together in Denver, then in Boulder, Colorado, before moving to Montana.

In Florida, the McIntyres and community members lived together in a large house at 940 17th St., Miami Beach, FL 33139. It took a while to find a good factory site, but eventually the company relocated on the second floor of a very old warehouse next to a railroad siding at 1111 N.W. 22nd., Miami, Florida 33127. Immediately below the tofu

shop was a large fruit and vegetable wholesaler. Getting the building ready for food manufacturing, moving in existing equipment, and constructing new facilities was a big job. Joci's mom and dad came down to help build the tofu shop. Her dad was a retired steam fitter or plumber, and he helped a lot. In addition to the group from Montana, many people from the large surrounding Maraji community who had specialized skills helped the name company to get started—free of charge. A man with framing and dry-wall skills built a storage room for the soybeans, which the company ordered by the tractor-trailer load. A plumber built a water chilling system to accept the hot tofu. An engineer helped to develop the cooking system. An auger pump, usually used for maraschino cherries, was used to pump the delicate curds. Dick found many used 200-gallon dairy tanks in south Florida; they were used for curdling the tofu. Some of these skilled people were also working in Miami to prepare a Boeing-707 at the airport for Maraji. In those day, Guru Maraji and his family spent a lot of time in Miami; many of disciples lived in Miami in ashrams.

Shortly after Swan Gardens started making tofu in Miami, Tree of Life began to distribute their tofu; this was a major breakthrough. Swan had a large vacuum packaging machine and they packed much tofu under the attractive Tree of Life label.

A man named Jim Emmerson (who was probably in his mid-60s at the time) worked very closely with Swan Gardens as a financial and business advisor; he had a great deal of experience running businesses and served as a chief financial officer (CFO) for other organizations. Guru Maraji was very active in the Miami area, and very big events were hosted in his honor. At such events, Swan Gardens would often provide bulk tofu for the vegetarian meals.

Swan Gardens had its tofu distributed as far north as Washington, DC, through Tree of Life, and into the Midwest to Rainstar (Columbus, Ohio). Some of their tofu was even distributed to the Caribbean—probably to the Virgin Islands or the Bahamas. Dick used to say that the company became the largest soyfoods manufacturer in the southeastern USA at the time.

While in Miami, Swan Gardens had a problem, which lasted for about one year, with yellow spots appearing on their tofu. At one point about one-third of their tofu was being returned because of yellow spots on the surface; nobody wanted to buy it. It was borderline disaster. Tests showed that it was caused by a harmless bacterium and the tofu makers came to believe that the bacteria came in on the soybeans.

For the first few years the company struggled to break even or turn a profit. Dick and Joci had a house and earned a salary. The employees either lived with them or in another group house / ashram. Everyone lived simply and worked extremely hard—usually 7 days a week. At the end of each day, the workers had to clean the plant, pipes, etc.

In 1980 Swan Gardens rode out the nearby violent riots in Miami caused when police shot an unarmed black man on the back of a motorcycle.

During December 1985 and Jan. 1986 Swan Gardens launched Soya Kaas, a meltable cheese alternative that contained both tofu and casein (a protein from cow's milk). They developed and manufactured the product in Georgia. Shortly after the product was launched they established Soya Kaas, Inc. as a subsidiary of Swan Gardens Inc.

By Jan. 1986 Swan Gardens had moved from Florida to Georgia, settling in Decatur, a suburb of Atlanta. There are various theories about why Swan Gardens left Miami. Jim Emmerson had a piece of property in or near Decatur; that may have been an attraction, but they would have had to build a new factory. Soya Kaas was Dick and Joci's most important and valuable product.

Gradually Swan Gardens became profitable; Dick and Joci kept the financial records. Dick and Joci are truly remarkable people, admired or even revered by most who worked with them at Swan Gardens. But they are also "fiercely private people and quite strong willed. It was a waste of time to argue with Joci; she knew she was right, and she ran the show. It was sort of a brown-shirt mentality. Everyone had to work hard and toe the line for the greater spiritual cause."

At some point Dick and Jocelyn sold Swan Gardens and Soya Kaas. They probably gave a generous portion of the profits to Guru Maraji.

Maraji now does satellite broadcasts twice a week which appear on regular television such as Dish Network. He is also actively traveling and teaching worldwide. He often flies a large jet, which he leases.

2654. Eden Foods, Inc. 2001. The history of Eden Foods. Clinton, Michigan. 3 p. Unpublished typescript. Undated.

• **Summary:** This chronology (1967-2001) begins as follows: "1967—Michael Potter and a small group of students on the Univ. of Michigan campus, begin making collective, small orders of natural foods from two of the largest wholesalers at the time.

"1968—Eden Foods Co-op is established in Ann Arbor, Michigan.

"1970—Eden Foods begins food processing, opening a bakery, cafeteria, and the 'Turtle Island' restaurant in Ann Arbor."

Note 1. The early entries in this chronology are deceptive and inaccurate. They make it appear as though Michael Potter founded Eden Foods since his is the only name mentioned in the chronology and since his name is mentioned just before the business was established. In fact, Potter did not join Eden Foods until Oct. 1971—a fact that is omitted in the chronology.

Note 2. Eden Foods was established in Nov. 1969—not in 1968. All of the founders (Bill Bolduc, Tim Redmond, etc.)

and early publications agree on that date.

Note 3. The names of the founders of Eden Foods are, unfortunately, omitted from this chronology. To continue:

"1972—Eden Foods begins to wholesale natural foods from the basement of its retail facility and the Eden trucks deliver to retail outlets.

"1973—Eden Foods begins directly importing the finest traditional foods from Japan and China, becoming a major distributor in the natural foods business.

"1975—Eden Foods drafts the first American standards for 'field to shelf' organic food production.

"1977—Eden Foods produces the first Eden Organic Whole Grain Pasta made by the Schmidt Noodle Co., which later became the Eden Organic Pasta Co. in Detroit, Michigan.

"1978—Eden Foods warehouse was completely destroyed by fire. Retail store, cafeteria and restaurant are sold. Eden finds another building and reestablishes warehouse operations. Out of 100 employees, 23 remain and Eden starts over.

"1980—Eden Foods moves from Ann Arbor to the village of Clinton, Michigan.

"1982—Eden begins kosher, circle K, food certification with Organized Kashruth Laboratories.

"1983—North America's 1st soy milk Edensoy is introduced." In fact, Miller's Soyalac Soya Milk had been made since 1940 in Mt. Vernon, Ohio, by International Nutrition Laboratory, founded by Dr. Harry Miller. It was on the market and sold well nationwide for more than 40 years.

The later entries are interesting and probably accurate:

"1985—Eden Foods founds an affiliate company, American Soy Products, in Saline, Michigan, to make Edensoy in the USA.

"1986—Eden opens a warehouse in San Francisco, California.

"1987—Eden partners with the Hirzel family of Ohio to grow organic tomatoes, chilies & cabbage for Eden sauerkraut.

"1989—Eden Organic Pasta Company becomes the first third party certified organic pasta facility in America.

"1991—The first Eden organic beans are canned in Eaton, Indiana.

"1993—Eden expands its facilities in Clinton, Michigan. Eden first questions organic integrity under USDA/NOSB. Eden adopts a policy requiring affidavits from growers and suppliers guaranteeing that their food is GEO-free.

"1994—Eden contracts with a cooperative of family orchards to secure organic tree fruit.

"1997—Eden sponsors the first whole foods cooking show, 'Christina Cooks' nationally, on PBS.

"1998—Eden introduces its first Biodynamic food, Whole Grain Rye Spirals and celebrates its 30th anniversary.

"1999—Eden expands its warehouse facility for the eighth time.

“2000–AIB Certification, New Eden web site is launched and Edensoy Light is introduced.

“2001–Eden purchases Sobaya, the Canadian producer of Eden Organic Traditional Japanese Pasta. Eden receives the prestigious ‘Socially Responsible Business Award’ for exemplary business practices. Over 400 vegetarian recipes are posted to Eden’s renewed web site, along with detailed historical information, nutritional information and manufacturing descriptions for all of Eden’s products.” Address: 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-7424.

2655. Source Family (The). 2001? The Source: Source restaurant “recipes” & Source family. Los Angeles, California. 157 + [20] p. Undated. Illust. No index. 22 cm.
 • **Summary:** This photocopied, comb-bound book was made for Jim Baker’s Source Family / community, and was never sold in bookstores. It is undated and with no copyright page. Most of the pages are numbered, but about 20 (here and there, often containing photos) are not; they were apparently inserted at the last minute. Contents: 1. The Source recipes (p. 1-17) and other family favorites (p. 18-48). 2. Alternative lifestyle choices, for the well being of body, mind and soul (p. 49-93). 3. Father / Yahowha and The Source Family: Truth behind the legends, an epic and never-ending saga (p. 94-157). All photos are courtesy of “the Source Archives.” This book emphasizes on the importance of food, community, and a teacher in spiritual practice.

On the back cover (and on p. v) is a color photo of The Source restaurant taken from across the street, above the following text: “Jim Baker opened The ‘Source Restaurant’ in 1969, on Sunset Blvd. One of the country’s first health food restaurants. Jim’s ‘Spiritual Family’ grew from those who worked at the Source and soon became ‘The Brotherhood of the Source’ and later ‘The Source Family,’ living communally in the Hollywood Hills. We called Jim Father, then Father Yod and later Yahowha. We sold The Source in 1974 and moved to Hawaii, where Father left his body in August of 1975. The new owners recently closed the Source doors after 31 years, bringing a Hollywood legend and tradition to an end. We are printing the ‘Source Recipes’ in honor of our ‘Earthly Spiritual Father’ and The Family that was created.”

In Section 1, recipes used at The Source restaurant include: Hi protein cereal (ground fresh from whole grains and seeds not cooked–like muesli, the raw breakfast cereal). The Source dressing (a version was later sold as Cardini Lemon Herb). Ice cream. Cheese cakes. Source special. Guacamole. Vegetable salads. Entrees: Too much crunch. Magic mushroom.

Section 2 discusses: Fish (recipes for ahi / tuna and salmon). Refined foods to avoid. Good foods (brown rice, miso, tofu, nuts, sesame seeds; p. 57-58). Fasting, enemas and elimination diets (p. 65-66). Tofu (p. 74-75). Miso (p.

75-77). Raw foods.

Section 3, the life story of Jim Baker (1922-1975), mentions: His mother, Cora. The Tarzan audition in Los Angeles. Dora Baker (of France), his second wife. His birth on July 4 in Ohio, parents, childhood, great-grandfather, growth of interest in natural healing and foods, Paul Bragg, weight training and competitive sports, University of Chicago (Illinois), graduation from Swedish School of Massage in Chicago, first big job at the Wright plant, married the boss’s daughter Margaret; they had a daughter named Peggy, opened Bakers Gym, joined the Marines in World War II, received Medal of Gallantry and Silver Star, ardent archer and champion swimmer, heavyweight wrestler, and judo expert, etc. Lived in Topanga Canyon and became a Vedantic Monk, met Elaine Baker and they were married, part of Nature Boys which lead into the Hippie movement (Jack LaLanne, Gypsy Boots). Elaine and Jim had three sons and opened two famous restaurants on Sunset Blvd. They were divorced and he married Dora, a French girl who was with him at The Old World. Dora started The Source with Jim. “He finally found His Spiritual Father in a very powerful and famous Yogi Bhajan from the East who was living and teaching in L.A. Jim became a Sikh... Jim then married Robin, who was 20 and he was 47. She supported him on all levels and was a devoted wife. Slowly the small group of people who were working at the Source started to become more of a communal and family energy. Jim went to India with the Yogi and while there realized “Neither Hindu or Sikh shall I be, for my soul is universal and free!”... Jim came back to L.A. and started to teach meditation and spiritual knowledge at the restaurant on Sundays. He became known as Father. “Most of us were living in vans or other rentals but wanted to live more communally. The Mother House was rented and this was the beginning of the Source Family. Father and Robin / Ahom lived above the Source, while the family lived at our mansion on Inverness St. (p. 98-99).

2656. Eden Foods. 2002. New Edensoy 6 pack: Customer friendly velocity and cash flow (Ad). *Natural Foods Merchandiser*. Jan. p. 26.

• **Summary:** This 8½ by 11 inch color ad shows 6-packs of various types of Edensoy. The outside packaging is new. “There is no finer soymilk.”

2657. *Soybean Digest*. 2002. Healthy growth in soyfoods. Mid-Feb. p. 34-35.

• **Summary:** This article is part of a special pull-out insert on “New Uses.” Notes that soyfoods have reached a new level of acceptance during the past year with the purchase of Kashi Co. (a natural cereal manufacturer) by the Kellogg Co. Kashi already made lines of soy-enriched cereal and the company recently expanded its line to include GoLean soy-based diet drinks and cereals. Founded in 1984 by Philip and

Gayle Tauber, Kashi grew by more than 100% during the fiscal year before Kellogg's purchase—for an estimated \$30 to \$50 million. In the year 2000 Kashi had sales of about \$25 million, compared with \$7 billion for Kellogg. But Kellogg sees a continuing trend toward healthier eating.

Color photos show: (1) Packages of Kashi GoLean and Westsoy Soy Smoothie. (2) Various unpackaged soy products including textured soy protein, soymilk, silken tofu, edamamé, soy cheese, soy hot dogs, breaded soy cutlets, and soy powder. (3) Tortillas filled with cooked whole soybeans and trimmings, a package of Soy Fusion (Berry), and a soy burger between buns. (4) Cover of the 2001 Soyfoods Guide.

2658. Source Foundation. 2002. The Source Foundation: Founded by the children of Yahowah (Website printout—complete). www.yahowah.org Retrieved March 25, 2004.

• **Summary:** Page 1 shows a large photo of YaHoWha (formerly Jim Baker of Los Angeles). Page 2 states: “Love and wisdom: The Source. Jim Baker / Ya Ho Wha and ‘The Source Family.’ Our aim—To purify the body, Elevate the mind, Refine the emotions, and liberate the soul. So that we may be of service to humanity.” “The Source Family was founded by Ya Ho Wha, in 1971. Ya Ho Wha was a man who was born James E. Baker and—after an exhaustive lifelong search—attained God consciousness, while still in his earthly body. This is an overview of the story of Jim Baker—and his evolution into Father Yod and then Ya Ho Wha—and his spiritual Family, The Source Family, who knew him as ‘Father.’ There were about 100 of us who stayed with him constantly, for the last 5 years of his life.

“Several Family Members are working together to publish a more detailed version of this story.

James Edward Baker was born on July 4th, 1922. His father, Jim Baker, left his mother when Jim was about 6 months old. Jim Baker spent the rest of his extraordinary and eventful life Searching for his Father—or at least a ‘Father Figure.’”

“Jim quit high school and traveled the vast, young, vibrant West, while working for The Civilian Conservation Corps” [CCC] during the Great Depression. “He returned to Cincinnati [Ohio] to finish high school and became a swimming champion and the State archery champion.

“In 1945 he returned from the South Pacific, a national hero... a Marine Raider... the most highly decorated Marine of World War II.

“In 1949, he defeated the World Heavyweight Judo Champion in 17 seconds flat! Then he became a champion heavyweight wrestler. In 1950, he produced the Mr. America Contest.

“In 1951 he moved to Hollywood to try out for the role of the first ‘Tarzan of the Apes’ ... Then he began to more seriously pursue his spiritual quest and—in 1951—He became a Vedantic Monk. He joined a Los Angeles group of ‘Health Nuts’ called the ‘Nature Boys.’ They were muscular,

handsome, healthy young men who exemplified the new ‘Natural Lifestyle,’ and explored various ways of eating and living according to Nature’s laws.”

“In 1957, he founded The Aware Inn, our nation’s first Health Food Restaurant. In 1969 he founded the Source Restaurant on Sunset Boulevard in Hollywood—based on an ancient spiritual truth, including ‘The Aquarian Gospel of Jesus Christ.’ He initially served only uncooked foods and it became the most profitable restaurant in the Country for its size.

“He met Yogi Bhanjan, and became one of his most devoted students. He saw the Yogi as his Spiritual Father and as God, but the Yogi did not want that responsibility.

“In 1971 he went to India... He published his teachings in a book called ‘Liberation’ and gave the book freely.”

In 1975 he died in a hang-glider accident.

2659. Redmond, Tim. 2002. Bill Bolduc, founder of Eden Foods and natural foods pioneer, died in March 2001 in Southern California (Interview). *SoyaScan Notes*. March 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bill died of a ruptured aorta. He was living alone in an apartment and was found by a friend. He leaves two adult sons. Tim had dinner with him at the Anaheim trade show shortly before he died. Address: Vice President of Marketing and Sales, American Soy Products, Inc., 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

• **Summary:** This half page color ad shows a lovely lady holding three new Westsoy soymilk products: Smart Lite, Plus, and Low Fat. Each has a heart healthy claim on the front panel. Address: 58 South Service Road, Melville, New York 11747. Phone: 631-730-2200.

2661. Roseboro, Ken. 2002. FDA warns natural foods companies about non-GMO labels. *Natural Foods Merchandiser*. March. p. 26, 30.

• **Summary:** Last November the U.S. Food and Drug Administration (FDA) sent letters (which it said were not “warning letters”) to six companies “expressing concerns about labels that advertise products as not containing genetically engineered (GE) ingredients.” The six manufacturers disagreed with FDA’s complaints, saying they restrict labeling and are a disservice to American consumers. However, not wanting to engage in a legal battle with the FDA, they now say they will change their labels. The FDA objected to three things: (1) Some labels implied the products were superior because they did not contain GE ingredients. (2) Use of the term “genetically modified organisms” noting that must cultivated crops have been genetically modified

through the use of traditional breeding techniques other than biotechnology, and that most foods do not contain organisms. (3) The widespread use of acronyms such as “Non-GMO” or “Non-GE” or “GMO-free.” FDA claimed its research shows that consumers prefer label statements with the words spelled out, such as “biotechnology” or “genetically engineered.”

FDA’s letters apparently resulted from a letter sent to the agency last year by the Center for Science in the Public Interest (CSPI), a consumer advocacy group based in Washington, DC. Yet Joseph Mendelsohn, legal director of CSPI, believes the companies should disagree with the FDA and should provide consumers with label information they want. He compares the present situation with what happened in 1994 when “rBGH-free” labels appeared on dairy products after Monsanto launched genetically engineered bovine growth hormone.

A spokesperson for Hain Celestial says that they believe in consumers’ right to know what is in a product and will label accordingly. Address: Publisher, The Non-GMO Source, Fairfield, Iowa.

2662. Product Name: Simple Snacks: Soy Snappers [Cinnamon & Raisin, Caramel, Zesty Ranch, Lightly Salted, Garlic & Chives, White Cheddar], and Potato Poppers [Sour Cream & Chives, Lightly Salted, White Cheddar].

Manufacturer’s Name: Wessanen USA (Marketer-Distributor).

Manufacturer’s Address: St. Augustine, Florida.

Date of Introduction: 2002 March.

Ingredients: Soy Snappers, Caramel: Low fat soy flour, rice pieces, sunflower oil, dehydrated cane juice, spices, natural flavors, sea salt.

Wt/Vol., Packaging, Price: 3.5 oz. bag.

How Stored: Shelf stable.

New Product–Documentation: Leaflet (front and back, 8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2002. March. “Simple snacks.” On the top half of the front are the fronts of each of the packages. On the rear are nutrition facts and ingredients for each product. These round snacks appear to be extruded.

• **Summary:** In the fall of 1970 Tim moved to Boston and lived in one of the macrobiotic study houses run by Bill Tara. He went back to Michigan, where he and Bill Bolduc finished building the first Eden store in Ann Arbor. Address: Vice President of Marketing and Sales, American Soy Products, Inc., 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2664. Krueger, Carol Ann. 2002. Re: History of work with

soyfoods, 1982-2004. Letter to William Shurtleff at Soyfoods Center, April 4. 5 p. + 2 menus. Handwritten, with signature.

• **Summary:** 1982–After Carol Ann and Timothy Huang were divorced, Carol Ann lived in Arizona with her kids and started making jewelry. She was director of the Graham County Food Buying Club, grew a huge organic garden, and began traveling to craft fairs, Grateful Dead shows, and festivals where she sold her jewelry. Dealing with rheumatoid arthritis put her on the path of natural healing and interest in diet and nutrition. She found that stress, overwork, lack of sleep, lack of water, lack of green leafy vegetables, and a poor, non-organic diet all made her arthritis worse (it flared up), while their opposite made it better. From 1982 to 1989 she lived on a ranch in Pima, Arizona. In 1982 she met and married Richard Sansom.

1989–Carol Ann and Richard are divorced; she moved to Boulder Creek, California, where she lived for the next 4 years.

1990 June–She met her third life partner, Wild Bill, at the Health and Harmony Festival. He was part of the original Renaissance Festival in Northern California, and he played for a belly dance troupe. They began to co-create the Casbah Tea House. He had created a Bedouin-style tent–40 by 32 feet; he would set it up and serve tea, coffee, and treats. Musicians would play and belly-dancers perform. Carol, who now had a long history of feeding people, began to add more food. Soon they became a traveling tea house on the summer festival circuit, serving an organic vegetarian menu based on the foods she had been involved with for the past 20 years. They served a Middle East type menu–hummus, tabouli, pita sandwiches, Greek salads, etc.–which were very refreshing at a hot festival. However many regular meat-eating Americans couldn’t relate to the food. So they added tempeh burgers, vegetarian chili and chili cheese soup, veggie dogs, organic french fries, and tempeh fries–which could serve a wider array of people. Carol bought her basic foods in bulk (e.g., 24 pounds of tempeh) from Mountain People’s Warehouse, a natural foods distributor.

1995–They rented a building on 4th Avenue in the university district of Tucson. They put their crafts/imports into a shop in front called the Creative Spirit Gallery. In the back they developed the tea house concept. Over the past six years they have become a full service restaurant with evening entertainment of music and belly dance. “It is a beautiful international scene that embraces many cultures from around the world. It is decorated with low hand carved chairs from Afghanistan, brass trays from India, a bronze gong and carved wooden statues from Bali, and carpets from Persia. The tea house comes into fruition during the International Gem and Mineral Show when Buddhist, Muslim, Hindu, Christian, and pagan people from around the world come together and be at peace drinking tea and sharing a meal... It is a vision of the beauty and diversity of this world in its fullness.”

1997—Carol and Bill split up. He went into retirement and she had a new tent made from hemp fabric and ropes. She continued to travel with the Casbah Tea House on the festival circuit each summer, serving a menu based largely on soy.

1999—The hand-written Casbah Tea House Festival Menu includes Middle Eastern favorites plus: Veggie Dog, Veggie Chili Cheese Dog, Vegetarian Chili, Tempeh (Soy) Burgers, and Tempeh Reuben.

2001 Feb.—The typeset Casbah Teahouse Tour Menu includes some new Middle Eastern favorites plus: Tofu Veggie Stir Fry, Vegetarian Chili, Tempeh Pita, and three types of soy burgers served with blue corn chips and a dill pickle: Tempeh Burger, Tempeh Cheese Burger, and Tempeh Reuben Burger. Veggie Hot Dogs (made from soy and seitan). Veggie Chili Cheese Dogs, and Tempeh Fries. A color photo (8 by 4½ inches) shows the colorful Casbah Tea House tent outdoors at the 2001 Seattle Hemp Fest (Washington state).

2002 spring—Carol Ann expanded, moving the gallery down the street to 549 N. 4th Ave., where it has three times as much space—the fullness to be a real store. The teahouse is now expanding into being a deli, bakery, and cafe in the front of the building. They make a lot of desserts that are vegan and sugar free, using tofu in their frostings. “We struggle with being a commercial operation trying to survive and holding to our values of providing as much organic high quality ingredients as we can.

“All three of my kids are now grown up, ages 21, 23, and 25. Emma attends the University of Arizona in the art department; she is our main baker and cake decorator. Eva is attending Pima College in graphic computer arts and is our main cook. Ethan is a part-time cook. Today I walked in here and there were nine gorgeous girls running around. They’re all in their 20s, all vivacious and healthy and beautiful. Emma’s assistant in the bakery is Rebecca, who is making tofu cheesecakes; her parents worked with us at Yellow Bean in Detroit, Michigan, when Rebecca was 5 years old. It’s pretty neat how everything has come around.

“We are developing are wholesale aspect slowly, providing the co-op with packaged food items that we make. We’ll see how it all evolves. What a long strange trip its been. One love.” Address: 438 South Star Ave., Tucson, Arizona 85719. Phone: 520-740-0393.

2665. Smith, Patricia J. 2002. Macrobiotic Company of America (MCOA, Asheville, North Carolina) is no longer in business. Bruce Macdonald is importing all of Mitoku’s products to the USA (Interview). *SoyaScan Notes*. April 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Patricia has heard from reliable sources that after MCOA ceased its operations, Norio Kushi left the company. Bruce Macdonald and his daughter, Crystal, both live in Asheville and run Bruce’s company.

Patricia recently visited South River Miso Company where she visited with Christian Elwell, Robin Cole, Megan Calogeras, and Charles Kendall—who is still making natto, amazake, and mochi. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

2666. Ferrier, Grant; Lewandowski, Joseph P. 2002. No end seen to soy sales trend. *Natural Foods Merchandiser*. April. p. 24, 26.

• **Summary:** This article is about soy milk in the USA. The highly publicized endorsement of soy protein in late 1999 by the U.S. Food and Drug Administration (FDA) got the attention of consumers. Market studies have shown phenomenal growth in the soy milk market in both natural products stores and in traditional supermarkets.

Reasons to expect this trend will continue: (1) More than half of the U.S. population has never tasted soymilk. (2) Soy milk consumption is still less than 1% of all milk consumption. (3) Consumer demand for organic foods is growing and the leading brands of soy milk are made with organic soybeans. (4) Lactose intolerance extends across all ethnic groups and appears to increase with age. The percentages of people older than 40 who are lactose intolerant are: African-Americans 70%; Asians 70%; Hispanics 60%; Caucasians 40%. (4) As women grow older, they will be buying more products, such as soy milk, to help them deal with both osteoporosis and menopause. (5) Environmental consciousness is growing and plant proteins are seen as having a small environmental footprint than animal proteins.

Growth rates for various soy products:

Nutrition bars 37%

Soy milk 34%

Cheese alternatives 27%

Food supplements 20%

Meat alternatives

Tofu 3%.

Six soymilk brands account for 80% of sales:

White Wave 21%

Hain Celestial Group / Westbrae 13%

Eden Foods Inc. 11%

Imagine Foods Inc. 10%

Vitasoy USA Inc. 10%.

Pacific Foods 8%

30-40 others 18%

Private label 10%.

Grocery chain growth is built on refrigerated soymilk brands; 63% is refrigerated and 37% is shelf stable. In natural products stores, 38% is refrigerated and 62% is shelf stable.

Top ten soy milk brands in natural products stores: 1. Silk. 2. Westbrae. 3. Edensoy. 4. Vitasoy. 5. Imagine. 6. Pacific. 7. Wildwood. 8. Better Than Milk (Fuller Life Inc.). 9. Odwalla (Coca-Cola). 10. Zen Don.

2667. Golbitz, Peter. 2002. Demand, availability drive new growth in soyfoods market. *Soy Connection (The) (Jefferson City, Missouri–United Soybean Board)* 10(1):1, 6. Spring. [4 ref]

• **Summary:** “The market for soyfood products in the U.S. has experienced strong and steady growth during the past 20 years as food processors and marketers have met consumers’ demands for healthy, tasty and convenient food products.

“More recently, however, we have begun to see a shift in purchasing habits, which indicates that mainstream shoppers buying soyfoods in conventional supermarkets will more likely drive current and future growth.

“Specialty Food Turns Mainstream: Once considered to be primarily health food items, soyfoods have progressively moved from small natural food stores to specialty food status, and now, to elevation as a mainstream food product.

“A wide array of products are currently available in supermarkets and are being marketed by some of America’s largest food companies such as Kraft, Kellogg, ConAgra, General Mills, Heinz, Unilever and Dean Foods. These names join well-established soyfood companies such as White Wave, Nasoya, Eden Foods, Vitasoy, Westbrae, LightLife, Yves, Worthington and Boca Burger, in bringing the message of soy to the masses.

“Sales data from a recent report ‘Soyfoods: U.S. Market 2001’ show that the category as a whole during the year 2000 grew by 21.1 percent to reach \$2.77 billion and that sales should grow by 15-25 percent for the year 2001 (1). According to an earlier study, since 1995, dollar volume has grown 250 percent for the category, hitting double-digit increases in each year (2).

“A recent study, produced by Soyatech, Inc. in conjunction with SPINS, reported that the five top selling categories were meal replacement beverages and powders, followed by energy bars, soymilk beverages, meat alternatives and tofu. In total, these products accounted for 86.5 percent of total soyfood sales. But within these categories and among the distribution channels, both subtle and dramatic shifts are becoming apparent.

“For example, data in the report showed that shoppers are now buying more soyfood products within supermarket and other mass-market outlets than in any other outlet, with sales growth of over 30 percent in 2000. As well, within mass-market outlets, some soyfood categories like refrigerated soymilk, are seeing triple digit growth rates, as new consumers seek out healthy food alternatives, while older, well established brands within the more traditional natural food channels are seeing slow and even decreasing sales.

“Mainstream consumer interest is evident in consumer studies related to soyfood awareness and shopping habits. In the most recent study published by the United Soybean Board (USB), ‘Consumer Attitudes About Nutrition:

National Report 2001-2002,’ the percentage of Americans that consume soyfoods weekly increased to 27 percent in 2001, up from 24 percent in 1999 (3). Similar findings were reported in the 2001 HealthFocus, Inc. study titled ‘Soyfood Shoppers 2001: Who They are, Why They Buy.’ That study reported that 29 percent of shoppers used soy products regularly in the year 2000, up from 24 percent in 1996 and 26 percent in 1998 (4).

“Some of this increase in consumption can be attributed to a heightened awareness of the health benefits of consuming soyfoods since the FDA approved a health claim for soy protein in 1999. According to the USB study, in 1999, only 28 percent of consumers said that they were aware of specific health benefits related to consumption of soy protein, while in 2001, 39 percent of consumers indicated that they were aware that soy may reduce the risk of heart disease by lowering cholesterol levels. Similar findings were reported in the HealthFocus study as well, with 38 percent of consumers indicating their use of soyfoods to help reduce their risk, of disease in the year 2000, up from 26 percent in 1996.

“New Product Positioning Yields Fresh Sales: The strong growth in soyfood sales is being supported by greater distribution of products within mass-market outlets by some of America’s leading packaged goods companies. In addition, more familiar packaging and product presentation has helped to reduce the barrier to trial usage by first time consumers—case in point, refrigerated soymilk.

“After being positioned in the refrigerated dairy case next to dairy milk products, refrigerated soymilk sales grew more than 500 percent in 2000 and shot past sales of shelf-stable, aseptically packaged products in mass-market outlets, according to the Soyatech/SPINS study.

“The Soyatech/SPINS study also reported that other soy product categories that were experiencing strong growth were soy-enhanced energy bars, which grew at 36.9 percent in 2000, soy-based cereals, meat alternatives and other soy-based dairy alternatives.

“The market for soyfood products should continue to show strong growth over the next few years based on increased consumer awareness of the health benefits of soy and a greater selection of good tasting and convenient soyfood products available in mainstream supermarkets.

“About the Author: Peter Golbitz is the president of Soyatech, Inc., a publishing and consulting firm that publishes the annual industry directory, ‘Soya & Oilseed Bluebook.’ In addition, Soyatech publishes a quarterly newsletter, ‘Bluebook Update,’ and maintains a leading soybean-related website on the Internet, Soyatech.com.

“Mr. Golbitz presently serves on the board of directors of the Soyfoods Association of North America, a trade group representing soyfoods manufacturers and marketers. He is the chairman of the association’s standards committee and was integral in the development of processing standards for

both tofu and for soymilk in the U.S.

2668. Demos, Steve. 2002. White Wave’s 25th anniversary: How Steve sold White Wave to Dean Foods for \$189 million (Interview). *SoyaScan Notes*. June 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Steve is at the farm. White Wave’s 25th anniversary is coming up in September. At Goldman-Sachs Steve has given his presentation on Jack and the Beanstalk: A modern day fairy tale. “Depending on who I’m talking to, I bring ‘Right Livelihood’ into it. ‘Right Livelihood,’ to me, is at the root if it, but we don’t always talk about it because we’re not going to use that as the reason for the success in the business model. The business model has to be successful because it is a good business model, its based in Right Livelihood, but I don’t want to become the Right Livelihood company, I want to become the business model that was very successful because it was based on Right Livelihood.”

“Dean Foods is making a commitment to entering the branded foods business. And they’ve also chosen the healthy benefits foods to be part of that. This was somewhat of the introduction of the investment they had made, by me just giving the ‘street’ (Wall Street), so to speak, an update on the soy industry and White Wave.” Dean Foods has owned brands before, but they have all been relatively small and No. 2 or 3 in their category. Dean Foods has about \$250 million a year in cash flow. This money is looking for a home. They need to invest their stockholder’s money or give it back to them. Dean Foods is saying, hey, the way to use the money here is to invest in these value-added, branded foods. Where is the most growth coming from? The legitimate, natural, nutraceutical, healthy benefits, organic type of foods. We ring every one of those bells.

“Our business model is a series of very conscious choices going all the way back to the product itself. It’s good for me, good for you, good for everybody who touches it. Right Livelihood is values-based business, or principal-based business.

“We ultimately gave away 10% of the company back to the employees. But we did it in two different ways. Round one came a few months ago; when we saw that this was very likely to occur, we awarded stock options (at the

lowest possible price) back to the employees based on job responsibility and contribution to growth. That was 5% of the company. Everybody made 3-5 times what the price was of the option was. Nobody turned it down because it was absolutely free money. The option was something like \$10 and the stock sold for \$130; who is going to turn that down? The second round came from the five largest stock holders based only on years one had worked for the company. We have talked about this before so there is no need to go over it again.”

Looking back over the past 25 years, what are the things that have been most important to White Wave success? “One is innovation. The willingness to constantly try until you find something that works. If you look at the number of attempts versus the number of successes, clearly we are in our own one in a hundred, or even five hundred. We’ve introduced a lot more failures over the years than we have Silks. In the process, by innovation, we taught ourselves key things. Now, I could tell you how to make a soy product in any factory, virtually for any type of soyfood, from burgers to ice creams, from fermented to curdled. That gives us a different perspective, and it gives us insights into how soy is going to get into the mainstream diet. All that experience and all that time we have come to understand how it is accepted, what is accepted, what they are looking for. In this industry, I think this is somewhat unparalleled. We’ve tried everything but miso.

Second, we made a business model that was highly profitable and we proved it by investing in all the right stuff. We made all the right decisions for this business model so that we could prove that we could finance growth on our own, without a bank. And over the past several years, since we initially took on Dean’s money, we haven’t received anything else, and yet we’ve probably tripled in size—and the numbers were quite large.”

When do you think that business model was first clear in your head? “It was at least 5 years ago I saw the three levels of profit that are associated with the soymilk business: Extraction, packaging, and distribution. All are money-makers but two of those are owned by the dairies. So my whole business model was: Use the infrastructure that existed, because the dairies had it all in place, and basically tell them you’d pay them more than they were currently making from their normal cow juice stuff. Once we sat that that was, in fact, true, then we started getting more and more interest on our side in going to a vertical business model, because the profits that were present with packaging and distribution were so much bigger than manufacturing the extract. We’re about to start that with Dean Foods; the next step is proving this business model. In the past, White Wave has not been packaging; we have only been extracting. But we got control of how we distributed the extract by where we located the extract. It’s funny. You can pay Mother Nature to distribute for you—in other words use the water where you

find it and need it—or you can pay truckers to distribute if you happen to ship a heavy water product all over the U.S. So we located our extraction systems located in different parts of the U.S.—more efficient for where Silk was being packaged. And then we bought our own extraction. We have not put in our own processing / formulation, which is one more profit level that we haven't even seen yet, and we're already a very handsome business model. White Wave presently has two different extraction locations, but the company draws off of four. We have an arrangement with another company [such as Sunrich] to supply us. White Wave makes about 50% of the Silk sold and the other company also makes 50%. White Wave does not necessarily want control of 100%; there are headaches that come with that. It is expensive to build a soymilk extraction facility. We are focusing our money on ramping up sales.

Anything else? “Over the past 25 years White Wave has stayed true to our principals—but those are things I take for granted. Some people seem to think that those are great achievements. I think they are normal, which is why I don't mention them. How else would I do it? But it's apparent that there are not a lot of people who walk their talk—at all; it's unfortunate. So, even through some very difficult times, we did not compromise our morals or ethics in running the business. We probably compromised our personal well beings [overwork, stress], which is not all that good. But hopefully, we'll be making up for that.

What was it like when White Wave began operations in 1977? Natural foods were bulk only. Organic was known, but there was no differentiation between organic and natural because nobody had yet deceived the public with a fake product. I had started a natural foods store in Pennsylvania based on no packaging, all bulk. So natural foods was a lifestyle but had not been compromised by business yet. There were not a lot of natural foods stores in the U.S. in 1977 and they were mostly co-ops. The big natural foods stores came a few years later. The chains and supermarkets (such as Whole Foods and Wild Oats) came 10-15 years later.”

Organically grown? “We used to go to Walnut Acres, one of the original organic meccas, to buy all our flours and grains for my natural food store named Touch the Earth in Pennsylvania. I have a clear memory of the bottom third of the bag being dirt. It was organic all-right. We always knew that we had to watch for stones and dirt in anything sold as organic. God knows why!

Soyfoods? “I don't think the word had been invented or was well known. ‘Tofu’ as a word was starting to be known, partly because of what you were doing at that time. My first experience of making tofu came through the Seventh-day Adventists—through the Bible we used to carry around—*Ten Talents*. It had a recipe for making bean curd. Of course soy sauce was well known. In 1977 there was no category of foods called ‘soyfoods’ and there were no companies that

were soyfoods companies” (Continued). Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2669. Demos, Steve. 2002. White Wave's 25th anniversary: How Steve sold White Wave to Dean Foods for \$189 million (Interview). *SoyaScan Notes*. June 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: Vegetarian? “You were either Indian (from India) or you could have been a left-over hippie from the 1960s, and then there were the Seventh-day Adventists. My father often talked about a couple of people that he was in business with that were into yoga and were vegetarians. I didn't know anybody who was not eating any animal products.

Non-dairy? “Rich Products and whipped toppings or coffee creamers were starting to come about, and maybe infant formula. I think that would be about it for non-dairy.

In the 1960s, Steve bought tofu from a store named Seeds of Life on Telegraph Avenue in Berkeley; it sold foods only in bulk—no packaging. “You weighed your food and priced it yourself. It was Utopian food shopping.”

Meat alternatives? “That would have to be Worthington Foods with fake sausage. And they certainly weren't called ‘meat alternatives.’ They were called ‘meat analogs.’”

The diet-health connection? “That idea came in in 1984 with a *Time* magazine cover story—‘And now the bad news.’ There were two fried eggs for eyes and a piece of bacon doing a downward grin. I use that in a lot of my talks. That was the beginning of the mainstream diet-health consciousness. Up until that point it was calories and calories only—which had to do with gaining weight; it was not yet about disease and diet and well being. Up until that time the cholesterol hypothesis—the theory that cholesterol caused heart disease—had not been proved. Francis Moore Lappe and *Diet for a Small Planet* arrived in the early 1970s—diet and the planet. Now we had diet and consciousness, and environment and consciousness. This whole idea that diet and health were related did not reach most Americans until the 1980s.” When Steve started making tofu he saw it as a complete food low on the food chain. It seemed to him inevitable that such foods had a bright future. “To me, it was the environmental and the moral animal-rights issues that I was focusing on, far more than I was on diet and health issues. Yet we were looking at tofu as a healthier food—no question. But it was only in the mid-1980s that Americans started to get into the disease-related part of that. Remember, our generation organized the first Earth Day in April 1970, so there was already the realization ‘Aren't we living a little too high on the hog?’ From there people began asking ‘How are we going to save the planet?’ Many of us tried to apply ourselves to this question in some individual way. Lots of us ended up working with food.”

Health benefits of soy in 1977? “Complete protein is the

only thing I can think of. And most people didn't even think that soy was a complete protein. Many people still don't know that.

"The key thing about founding White Wave in 1977 was we had no experience, no money and no access to any. And those translate to no confidence. You don't need both experience and money, just one or the other—in order to have confidence. Now, we know this market. We helped to create it. So we have a high degree of confidence in what we think about it and where we're going with it. That's a big difference. I have all the faith in the world that I know how to think; the question was what I wanted to think about. Making tofu looked like a pretty good thing to think about. So I just paid attention and learned as I went along. I also know that I had some genetic tendencies that way because of my father, Anthony.

"He was a successful entrepreneur—and still is. He started his own company semi-processing minerals and alloys when he was in his 30s. He would crush and size, and then sell that material to the welding-rod or steel industry. His company now has sales of a few hundred million dollars and has a few hundred employees. When we sold White Wave to Dean Foods he was ecstatic. He was an investor in White Wave to boot. He made double digit millions on the deal. He didn't have much faith in his son when I started in 1977, but he does now! He first invested in about 1983-84 when White Wave was in deep financial trouble. Steve's mom, Lorraine, is still alive and her support for Steve has always been strong and positive. She always believed I was an OK person, and she let me know that—like any good mother. My actions had to be honorable; it didn't matter much what they were. My father, likewise, is a man of very high integrity—he just didn't believe in what I was doing. But he started relating to me in a completely different way after we sold White Wave.

"I grew up outside of Philadelphia [Pennsylvania] near Villanova and Bryn Mawr. One brother was a surgeon, the other an attorney. In the 1970s my family basically gave up on me. The joke was: Where's Steve? Oh, he's off in India, up some tree somewhere. We paid for his education; what a waste. But he who laughs last laughs hardest. There is a certain vindication when everybody in your family is capable of retiring because of what you've done.

"I remember going to visit Azumaya (I don't recall what year), and I was very impressed at how big it was—so industrial. It looked like such big equipment. And I remember that they were hand curding and hand ladling. I thought: It will take me decades to get near the money to buy equipment like this. I tried to get money many times, but no bank would lend money to a small tofu manufacturer. White Wave got almost all its money from my family—and Pat Calhoun's folks, but to a much smaller extent. White Wave's five major shareholders are: (1) My elder brother, Jack, who is a surgeon and who carried the investment for the company.

(2) My father, Anthony. (3) Myself. (4) Pat Calhoun. (5) A man by the name of Michael Sutton—an attorney friend of ours, early in the game, who ended up investing a lot. He's the luckiest person on the planet right now. That was the only way White Wave was able to finance its growth over the years.

"The first bank loan came in about the mid- to late 1980s, and it was for equipment. At one point White Wave got an SBA (Small Business Administration) loan for several hundred thousand dollars; it ended up being a nightmare. That helped finance the expansion into two production facilities. Within the last 3 years White Wave issued industrial revenue bonds through a state & federal program and raised \$13 million. We used the money to build two Silk extraction facilities and to rebuild the tofu factory.

"When Dean Foods made its first investment of \$5 million in White Wave in Aug. 1999, all of the money was used for product placement and marketing of Silk. Half of that money went specifically to slotting allowances / fees to supermarkets. We almost never lost a slot, but in some cases we actually went back and paid twice. The rest the money was used for samples, PR (public relations) and advertising. In May 2000 we got a new PR agency that is still with us: Carmichael Lynch Spong, of Minneapolis, Minnesota. They have done a great job for us. We had already put in place all of the financing of the equipment for the capacity expansion. It's not too hard to raise money for equipment; the risk-takers can always take back the equipment and sell it."

Nine months later, having spent the initial \$5 million, White Wave went back to Dean Foods. But things had changed for the better. Sales had now risen to \$28 million. This time Dean invested \$10 million.

Did White Wave have any important firsts? "(1) We took a deep look at foods and challenged how they were being presented. We didn't stop challenging until we found a way that worked and was accepted. We put Silk soymilk in gable-top cartons like milk and put it in the dairy case. When Silk took off, it was everything we could do just to hold on. Silk now has sales of \$170 million a year; all of White Wave's other products might be \$10-15 million. (2) We flavored tempeh and tofu, and basically created the 'flavored tofu' category. (3) We were the first to do shelf sets with soyfoods. We put up 'Vegetarian Cuisine' centers in Whole Foods Markets in the San Francisco area. Ultimately we ended up organizing the entire case around vegetarian foods. (4) Use of the word 'vegetarian' boldly with our product line. It was just one more extension of our lifestyle. The Farm in Tennessee did much the same thing but on a much smaller scale. We need to get back to that idea" (Continued). Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2670. Bearman, Gary. 2002. The Ya Ho Wa 13 Interview (Website printout—part). www.furious.com/perfect/

yahowah13.html Retrieved March 25.

• **Summary:** On page 1 is a photo of Yahowa (formerly Jim Baker of Los Angeles) with a long white beard and long hair seated on the front hood of a Rolls Royce. On both sides of him stand two musicians with long hair.

“Many young people were attracted to the Source Restaurant, which served fresh, delicious vegetarian food, and to the spiritual atmosphere of love, peace and wisdom that was growing there around Jim Baker and the group of young men and women who staffed the restaurant. Jim Baker really looked the part, with his grant stature and well-formed physique, his long beard and hair, penetrating blue eyes and deep resonant voice. Father lived for the family. He adored his sons and loved having the women and children protected and safe. We were totally into spirit and really enjoyed life. It was a magical time of special dispensation, where we experienced what a heaven could be like. Spirit and matter were one...”

Jim Baker was a very successful restaurateur in Hollywood, several times he was a millionaire... The vegetarian restaurant was the first of its kind on the West Coast.” He started, owned and ran The Source restaurant himself at first until the family grew. Damian was the manager. It was vegetarian because: “Sunflower: We did not feel that man has the right to kill another sentient being. There are too many chemicals in the processed meats of today that are harmful. All of the truly enlightened beings were vegetarian. Djin: We believe this was the first diet given to mankind, that it is part of the humane and ethical path of harmlessness, and that we are physically made to eat this way. We have 24 feet of intestines, unlike the carnivores of 10 feet...”

“Where was the restaurant? Djin: Sunset [Boulevard] at Sweetzer in Hollywood, on the northeast corner, between Crescent Heights and La Cienega. We were the first major health food restaurant in Los Angeles that was successful and served all local produce and raw [unpasteurized] dairy.

2671. Spencer, Marty Trayner. 2002. Natural products sales top \$34 B [billion]. *Natural Foods Merchandiser*. June. p. 1, 20, 26, 36, 42, 52, 56.

• **Summary:** On May 8 Dean Foods, a dairy and beverage giant based in Dallas, Texas, purchased the remaining 64% interest in White Wave, maker of Silk soymilk, for \$189 million.

Two days later White Wave founder Steve Demos stood before crowd in a New York City hotel ballroom (with standing room only) and delivered the message he’d been waiting nearly 30 years to pitch: “Operating a business dedicated to the principles of right livelihood and sustainable agriculture can deliver not only spiritual fulfillment, but big-time profits.”

White Wave, which has been unable to keep up with consumer demand, will use the money to expand

manufacturing and marketing.

2672. Smith, Patricia J. 2002. Bruce Macdonald has started a new company, Natural Import Company, in North Carolina (Interview). *SoyaScan Notes*. Aug. 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Natural Import Company (1 Reed Street, Biltmore Village, North Carolina 28803. Phone: 1-800-324-1878). Bruce runs the company with his daughter, Crystal. They have nice retail and wholesale catalogs. He imports foods from Mitoku in Japan and from Clear Spring (owned and run by Christopher Dawson) in England. Bruce has stopped using the word “macrobiotic.”

Talk with Bruce Macdonald. 2011. March 29. His partner is now “Mr. Ishibashi, a worldwide professional negotiator. Nobody beats Ishibashi. For example, he negotiates robotics with car companies.” The recent earthquake, tsunami, and nuclear reactor disaster in Japan may really hurt Mr. Kazama’s business. “Apparently 3 containers of food from Japan (not from Mitoku) landed in Europe, and they were promptly seized and burned.” The Europeans are afraid of contamination from radiation. “If Mr. Kazama loses Europe—that is half of his business. He has three containers ready to go, but he’s very reluctant to ship them.” This could also hurt Bruce’s company, which is dependent on Mr. Kazama for his Japanese imports. “I don’t know whether I’ll have a business or not. Because of the nuclear disaster in Japan, I have sold in three weeks what I would normally sell in three months. I’ve seen hoarding of foods (miso, seaweed, umeboshi plums) in the macro community in the USA. Our business is basically out of food.”

Bruce’s daughter, Crystal, now wants to start an amazake business. Bruce is looking for information on the subject. She wants to sell it in a shelf-stable container, aim it at kids, do “Popsicles” (a Unilever trademark for an ice pop), etc. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

2673. Fonda, Daren. 2002. Organic growth. *Time*. Aug. 12.

• **Summary:** “Whole Foods has transformed the granola-and-tofu lifestyle into a ‘supernatural’ gourmet chain with delicious profits.”

2674. Dixie USA, Inc. 2002. Whole soy foods headquarters!—Official catalog & newsletter: Vol. 19. Natural foods update (Mail order catalog). Tomball, Texas. 35 p. 22 cm.

• **Summary:** The cover states: “Health food that tastes like junk food. Got soy noodles? dixiediner.com.” A color photo on the cover shows two rolls of soy lasagna drizzled with tomato sauce. This catalog is devoted to soyfoods. On p. 2 we read: “The 10 reasons you should eat soyfoods (not pills) each and every day.” Address: P.O. Box 1969, (15555

FM 2920), Tomball, Texas 77377. Phone: 1-800-233-3668 (800-Beef-Not).

2675. Imagine Foods. 2002. "This new packaging is creating quite a buzz around here" (Ad). *Natural Foods Merchandiser*. Oct.

• **Summary:** A full-page color ad. "Same great taste. Splashy new packaging. The #1 selling non-dairy beverage in natural supermarkets. Imagine Foods maintains a 30%+ share of the aseptic non-dairy beverage category. Visit us at Booth #1333 at Expo East."

Note: Does this "#1" refer to Rice Dream + Soy Dream combined?

A black-and-white photo shows an elderly bartender with the shelves behind him stocked full of color Rice Dream and Soy Dream cartons. Two large cartons are in the foreground.

Note: This is the earliest document seen (March 2020) that contains the term "natural supermarkets" (or "natural supermarket"). Address: 1245 San Carlos Ave., San Carlos, California 94070.

2676. Hain Celestial Group, Inc. (The). 2002. Annual report 2002. Melville, New York. 36 p. Nov. 28 cm.

• **Summary:** Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (33 p.). Irwin Simon, the founder and CEO, age 44, had the following annual compensation: Salary: \$520,000. Bonus: \$12,000. Other compensation: \$12,300. Stock options: 300,000 shares. Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

2677. *Natural Foods Merchandiser*. 2002. Members OK UNFI purchase. Nov. p. 10.

• **Summary:** Members of the Blooming Prairie Cooperative Warehouse voted Sept. 28 to sell United Natural Foods Inc., a distribution company based in Iowa City, Iowa; they agreed to use some of the proceeds to form a Blooming Prairie Foundation.

In the vote, 73% of the members favored the sale; the proposal needed a 60% majority to pass. Members of the cooperative will receive 10% of their equity and investment in Blooming Prairie as well as proceeds from the sale.

Note: According to Wikipedia (at UNFI–History, Nov. 2012): UNFI was founded in 1996 by the merger of two regional distributors, Mountain People's Warehouse (founded in 1976, serving the Western U.S.) and Cornucopia Natural Foods (founded in 1977, serving the Eastern U.S.), forming the first natural products distributorship with national scope. Since 1996, other regional distributors have merged with UNFI, filling in the distribution footprint and making UNFI the largest distributor of natural products.

Talk with Jimmy Silver. 2012. Nov. 12. This UNFI cannot possibly be the same company as the huge distributor

that was formed in 1996. Silver's theory is that this smaller company in Iowa probably started first.

2678. *Nutrition Business Journal* (San Diego, California). 2002. Top U.S. natural & organic food companies, 2001. 8(11):5. Nov.

• **Summary:** For each of 43 companies gives the ranking by sales, the natural / organic sales in 2001 (\$ million), the percentage of natural & organic that are organic, and the organic sales in 2001 (\$ million).

The following companies make soyfood products: 1. The Hain Celestial Group \$360. 2. Kellogg (Worthington, Kashi) \$255. 4. Coca-Cola (Odwalla, Mad River Traders) \$160. 5. Dean Foods (White Wave, Alta Dena) \$150. 8. General Mills (Sunrise, Cascadian Farms, Muir Glen) \$125. 11. Stonyfield Farm \$85. 13. Amy's Kitchen \$76. 14. Vitasoy USA Inc. \$75. 15. Imagine Foods Inc. \$70. 19. Pacific Foods \$63. 20. Kraft Foods (Boca Burger) \$60. 23. Eden Foods Inc. \$57. 25. Gardenburger \$55. 29. Galaxy Nutritional Foods \$42. 33. Conagra (Lightlife Foods) \$35.

Sum of sales of top 43: \$3.28 billion. Sum of organic sales of top 43: \$1.63 billion.

2679. *Nutrition Business Journal* (San Diego, California). 2002. Hain Celestial invests in organic growth. 8(11):15. Nov.

• **Summary:** Hain-Celestial has launched new organic products under its many labels: Health Valley, Arrowhead Mills, Garden of Eatin', Westsoy, Westbrae, Hain, and Earth's Best.

Now that the USDA has established organic standards, consumers can buy organic products with confidence.

2680. Organic Trade Association. 2002. Definition of a successful organic business (Ad). *Natural Foods Merchandiser*. Nov. p. 38.

• **Summary:** This 8½ by 11-inch color ad features definitions of four words: Member, organic, trade, and association. Around the border of the ad are listed all the different types of potential members, such as retailers, manufacturers, farmers, educators, researchers, consultants, restaurants, etc. Address: Linda Lutz, western Massachusetts. Phone: (413) 774-7511.

2681. Uhland, Vicky. 2002. One million organic acres added. *Natural Foods Merchandiser*. Nov. p. 1, 5.

• **Summary:** Between 1997 and 2001 certified organic farmland and cropland in the United States increased by 1 million acres, according to statistics recently released by the USDA's Economic Research Service.

This was the same type of growth that was reported between 1992 and 1997.

The USDA tracks the amount of organic farmland, state by state, along with the types of crops grown and total

number of livestock.

“California is still the leader in total amount of organic acreage; the state has seen a 17% annual growth in organic cropland since 1992. In 1999 there were 91,260 acres in California devoted to organic cultivation, with 1,823 growers reporting \$213 million in sales.”

2682. *SoyaScan Notes*. 2002. Cow’s milk prices at Safeway supermarket in Lafayette, California (Overview). Dec. 12. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow’s milk in California.

Safeway: Cow’s milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Fat free: \$1.07/quart or \$1.99/half gallon or \$3.09/gallon; (2) Low fat (1% fat, protein fortified): \$1.18/quart or \$2.35/half gallon or \$3.22/gallon; (3) Reduced fat (2% fat, protein fortified): \$1.18/quart or \$2.35/half gallon or \$3.12/gallon; (4) Whole (homogenized, fortified with vitamin D only): \$1.24/quart or \$2.19/half gallon or No gallon. (5) Acidophilus Plus Bifidus–Low Fat (1% fat): No quart or \$2.39/half gallon. (6) Horizon Organic \$3.69/half gallon. (7) Lactaid: \$1.89/quart or \$3.35 per half gallon. The best-seller among these is Fat free in gallons.

2683. Belleme, John. 2002. Mitoku–Japan’s natural foods pioneer. *Macrobiotics Today (Chico, California)* 42(6):22-25. Nov/Dec.

• **Summary:** A good history of Akiyoshi Kazama and the company he founded, Mitoku. With photos.

“If you are cooking with a high quality, traditional Japanese food that was made in Japan or drink organic green tea that was grown in Japan, there is about an 80% chance it came from Mitoku Company, Ltd., of Tokyo, Japan. This company has profoundly influenced the eating habits of food conscious Americans and has been very influential in setting the manufacturing standards for Japanese natural and macrobiotic foods made in Japan and other parts of the world. However, the statement ‘made in Japan’ has not always been held in such high esteem. In fact, I am old enough to remember when ‘made in Japan’ was a joke.

“After the devastation of World War II, Japan reindustrialized with an eye toward export markets in the United States and Europe. However, Japan’s early attempts at exporting consumer goods were tacky and not very good quality. About 35 years ago all that changed. Those remarkable transistor radios you could hold in the palm of your hand appeared first, then tiny tape recorders and ‘tummy TVs’. We began trading in our gas guzzlers for fuel efficient Hondas, and before long, Japanese steakhouse chefs were tossing shrimp into the air with spatulas and catching them in plates behind their backs.

“Ironically, about the time Americans and Europeans

were warming up to the dazzling array of new high tech consumer goods from Japan, George Ohsawa was roaming the globe preaching his philosophy of yin and yang, an eclectic blend of ancient Shinto, Taoist and Buddhist principles and Oriental medicine, which he called ‘macrobiotics’. In Boston, two of Ohsawa’s students, Michio and Tomoko (Aveline) Kushi, were busy teaching macrobiotics to a growing number of students who were drawn to the life changing possibilities of this new way of living.

“The Kushi’s timing could not have been better. The philosophy of yin and yang attracted people from many walks of life, including hippies, intellectuals, old Bohemians, and people disillusioned with America’s materialistic ways. After lecturing for several years, in 1967, the Kushis founded Erewhon, a small Boston natural foods store supplying macrobiotic students with staples such as grains, beans and other basic foods that are part of the dietary recommendations of the macrobiotic way of life. However, the Kushis soon realized that the quality of food needed was not available in the United States. When Michio Kushi discussed his difficulties with an old university friend, his friend remembered a former schoolmate who was now in the import and export business. He thought his business friend in Tokyo, Japan, might be able to help. That man was Akiyoshi Kazama, the founder of Mitoku.

“Kazama’s business experience in both the United States and Japan made him a prime candidate for the type of partnership Kushi was looking for. A graduate of Waseda University, in Tokyo, Kazama was selected by Yamanashi prefecture, in 1956, to study business in the United States. After arriving in the Chicago [Illinois] area he was placed with a firm, and to his astonishment, learned that one of his coworkers was none other than Iva Togun, ‘Tokyo Rose’, the infamous voice of Radio Tokyo who taunted allied forces in the Pacific during World War II. His relationship with Iva was short-lived, however, because he was immediately drafted into the American Army and earned the dubious distinction of being the first Japanese national to serve in the United States military after World War II. In the service, Kazama was entrusted with the responsibility for large sums of money.

“The association between 39-year-old Kazama and the Kushis was to be a perfect match, for Kazama was both a sharp businessman and a great lover of good food. Although he had never encountered macrobiotics before, as a connoisseur he had made his own discoveries about the best quality foods. Invariably his personal favorites were traditionally made from the finest ingredients and free of high tech processing and chemical additives. Above all he admired those foods that had what he called ‘spirit’. But Japan, like other industrialized countries, had turned away from their traditional dietary roots in favor of mass-produced, highly processed foods with little of the integrity,

flavor, or health promoting qualities of the original product. For example, just about all of Japan's important fermented foods, such as shoyu, tamari, miso, rice vinegar and mirin were being made by hurried, high temperature aging and contained highly processed ingredients. Mr. Kazama knew that finding producers willing to meet Kushi's macrobiotic standards would not be easy, but he was inspired by the idea of introducing Americans to the ancient culinary treasures of Japan.

"In the late sixties and early seventies, Mr. Kazama began crisscrossing the Japanese archipelago in an all out effort to supply Erewhon with macrobiotic quality foods. Many early possibilities led to dead ends and frustration; however, there were a few notable exceptions, such as Johsen shoyu, which was naturally aged in twelve-foot-tall cedar tanks for eighteen months and made from whole soybeans and wheat, and dark, rich Hacho miso, which has been made by the same recipe and method for over eight hundred years! Soon Kazama was joined by Westerners such Blake Rankin, an American, Christopher Dawson, a New Zealander, and Robbie Swinnerton, an Englishman, who helped in the search and export of traditional Japanese foods. By the end of the 1970s, Kazama and the Mitoku band of wandering food detectives had uncovered a virtual cornucopia of rare, flavorful, and medicinal foods, such as long-aged, whole soybean, wheat free tamari; brown rice vinegar that is aged for twelve months in one hundred-year-old earthen jars that are buried in the earth to help regulate the temperature of the delicate fermentation process; kanten and tofu that are freeze-dried in the snow just as it was done before the introduction of electricity; sweet amber mirin made from aging distilled sake and amazake; and natural grain malts with a gentle sweetness that does not overwhelm the taste buds like modern syrups made from enzymes.

"Meanwhile, in the United States macrobiotics was booming. Erewhon had grown from a small store to one of the country's largest natural food distributors, delivering Mitoku products down the East Coast to large stores in New York, Philadelphia, Baltimore, and Washington, D.C. Another Erewhon store had opened in Los Angeles and was importing Mitoku products. In the south, Tree of Life was branching out from its home in St. Augustine, Florida, and Westbrae was importing Mitoku products into California and distributing them in the western states. Although more slowly, macrobiotics was spreading on the other side of the Atlantic, with budding communities in the United Kingdom, France, and Belgium. Companies such as Lima in Belgium and Sun Wheel in England were a few of the early importers of Mitoku products in that part of the world.

"With macrobiotics catching on around the world, Mitoku's future looked secure, however, everything changes to its opposite, particularly in the world of business and finance. Erewhon was growing so fast that it was soon stretched to the limits of its cash flow and financing capacity

and, in 1979, began experiencing financial difficulties. As these troubles worsened, many companies stopped shipping to the Boston firm. Because of a deep personal commitment to the Kushis, Kazama continued to fill orders. When Erewhon finally collapsed in the fall of 1981, Mitoku was its largest creditor and took a three hundred thousand dollar loss" (Continued). Address: Saluda, North Carolina.

2684. Belleme, John. 2002. Mitoku—Japan's natural foods pioneer. *Macrobiotics Today (Chico, California)* 42(6):22-25. Nov/Dec.

• **Summary:** (Continued): "Erewhon's demise nearly destroyed Mitoku, however, with the help of the foreign and Japanese staff, Kazama nurtured the company back to health. Twenty-two years later, Mitoku is the world's largest exporter of traditional Japanese foods. With more than thirty customers in twenty-two countries, Mitoku exports over five hundred products to firms in North America, South America, Central America, Asia, the Middle East, the United Kingdom, Europe, and Australia. Sales have grown from Erewhon's first order of three thousand dollars in 1968 to over twelve million dollars in 2002. Mitoku is also one of Japan's largest importers and distributors of organic and natural foods from the United States, Canada, and Europe, selling these products along with traditional Japanese products to over ten thousand customers in Japan.

"Mitoku's success has transformed the lives of not only Kazama and his family, but, like a pebble dropped into a still pond, Mitoku's influence has had a ripple effect on people and businesses around the world. In Japan small family shops were able to revive ancient food traditions and sell their products at home and abroad. Names such as Johsen, Uchida, Mikawa, Onozaki, Ryujin, and others have become known in natural food stores from Paris to Rio de Janeiro. Moreover, Mitoku producers were introduced to using organic ingredients as Mitoku began importing organic grains and beans for domestic production. (There are very few Japanese organic growers.) As macrobiotics spread, Mitoku products led the way as Kazama rushed to keep up with the ever-increasing needs of the rapidly expanding market. Although demand often surpassed production, Mitoku never wavered from the standards outlined by the Kushis in 1968. Products must be made by traditional methods and recipes, aged at natural temperatures in traditional vessels, and made with organic ingredients, if at all possible.

"Even after the collapse of Erewhon the personal bond between the Kushis and Mr. Kazama continued to grow as their joint effort to introduce the world to macrobiotic foods moved forward with increasing momentum. Moreover, many of the westerners who came to work for Mitoku in the early years went on to start companies of their own. Christopher Dawson owns Clearspring, Mitoku's largest importer and Europe's foremost distributor of traditional Japanese foods.

Blake Rankin went on to start Granum, a Seattle-based Mitoku importer. Bruce Macdonald, who helped open the Erewhon store in Los Angeles, is now the owner, along with daughter Crystal, of Natural Import Company, this country's main distributor of Mitoku brand products.

"My wife Jan and I were also profoundly influenced by Kazama and Mitoku. In 1979 we were sent to Japan as part of a joint venture between Oak Feed, a Mitoku importer located in Miami, and Erewhon to make miso in the United States. We met Mr. Kazama in October of that year and he placed us at the Onozaki shop, which is located north of Tokyo. This was the greatest adventure of our lives, and we will be forever grateful to Kazama and Mitoku for the opportunity. We returned to the United States to build Erewhon Miso Company, but when Erewhon went into Chapter 11, the miso project was taken over by Great Eastern Sun, yet another Mitoku importer in Asheville, North Carolina.

"The history of Mitoku is the story of one man's uncompromising dedication to quality and tradition. When I recently asked Mr. Kazama about the importance of his company in the world natural food movement, he did not talk about how his company raised the standards of natural foods around the world, but rather how Mitoku helped create an opportunity for numerous small Japanese family shops to rediscover their culinary roots and pass this heritage on to future generations. However, from the wider perspective, Michio Kushi has said, 'The history of Mitoku Company, Ltd. is a symbol of the history of the macrobiotic movement throughout the world.'

"Although, at 72, Mr. Kazama looks at the past with gratitude and marvels at the mystery of it all, the future is certainly not clear. As the dollar began to weaken in the eighties, the price of Mitoku products became much more expensive. Soon Japanese foods were being made in other parts of the world at a cheaper price. However, some of these foods are either made by faster, less expensive methods or use lower quality ingredients. Mr. Kazama's goal is to let consumers around the world know there is a difference. When it comes to food, Mitoku has created a whole new meaning for 'made in Japan.'" Address: Saluda, North Carolina.

• **Summary:** A color photo on the top half of the first page shows many soy products, both foods and Industrial products, including: Kaukauna Nacho Cheese, Yves Veggie Tofu Wieners, ProSobee soy formula, NutriGrain energy bars, Betty Crocker Creamy deluxe, Wish-Bone salad dressing, Edensoy soymilk, Mori-Nu Tofu, Ken & Robert's Veggie Burgers, SoyGold industrial solvent, Natural Touch Okara Pattie, soy ink and a newspaper printed with it.

Many "products that people use every day could

justifiably carry the stamp 'Courtesy of ARS Research.'" Omaha Steaks began offering irradiated hamburger patties and ground beef in November 2000—to be sure it is free of *Escherichia coli* O157:H7, bacteria that can cause serious, even life-threatening illness. Today all the 6.5 million pounds of ground beef they sell is irradiated, which means it is treated with "ionizing radiation produced by cobalt and cesium atoms, machine-produced X-rays, or electron beams. Treated meat in no way becomes radioactive." Final FDA approval for irradiation treatment of meat came in Feb. 2000.

Nutrim, a product similar to Oatrim developed by USDA's Agricultural Research Service (ARS), is now being used to make vegan, organic chocolate truffles. Mrs. Mudd's Inc. (Oceanside, California) makes the delicious products; Nutrim flows like heavy dairy cream or coconut cream.

Tifsport is a variety of bermuda grass developed for football and soccer fields, and golf courses. Address: USDA-ARS Information Staff, 55601 Sunnyside Ave., Beltsville, Maryland 20705-5128. Phone: 301-504-1637.

2686. Ruff, Michael D. 2002. Tech transfer: From ARS to a store near you. *Agricultural Research (USDA)* 50(12):2. Dec.

• **Summary:** Since the 1920s USDA's Agricultural Research Service (ARS) has been developing consumer products—described in this issue—including vegan chocolates and "an all-natural biodegradable sunscreen made from rice and oat bran mixed with soybean oil. This new sunscreen could be an additional use for some of the 18 billion pounds of soybean oil produced each year in the USA. A color cover photo shows a package of Edensoy soymilk in a shopping basket.

The Technology Transfer Act of 1986 placed a new emphasis on commercializing federal research. Since this legislation, ARS has become a leader in the federal government, credited with more than 600 new patents and 1,100 cooperative research and development agreements (CRADA's), which are formal arrangements enabling ARS scientists to cooperate with companies on research project of mutual importance. Such agreements often go a long way to ensuring that our research does not end up existing only in the pages of a scientific journal. Address: ARS Asst. Administrator for Technology Transfer, Washington, DC.

2687. **Product Name:** Edensoy (Soymilk) [Unsweetened].

Manufacturer's Name: Eden Foods, Inc.

Manufacturer's Address: 701 Tecumseh, Clinton, MI 49236.

Date of Introduction: 2002.

Wt/Vol., Packaging, Price: 1 liter (1.06 qt) Tetra Brik Aseptic Carton.

How Stored: Shelf stable.

New Product—Documentation: Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2002 (dated). "Pure and Simple. Unsweetened Edensoy. New." A color photo shows the front of the carton on which is a large round color

illustration of a seashore. “12 g protein. Naturally occurring efa” [essential fatty acids]. In front of a chair on a table is very white Edensoy in a glass. “Heart Healthy per FDA... Authentic. Simple. Only Eden selected whole soybeans and water.”

2688. Weil, Andrew; Daley, Rosie. 2002. *The healthy kitchen: Recipes for a better body, life, and spirit*. New York: Alfred A. Knopf; London: Ebury. xxviii + 325 p. Illust. (color photos by Sang An, Amy Haskell, and Eric Studer). Ports. Index. 24 cm.

• **Summary:** Lifelong good health starts in the kitchen. Includes 135 recipes; none require red meat, but not vegetarian. Rosie’s introduction encourages: “Don’t be afraid to work with new ingredients, such as... using tofu,…” The section on “Nutrition and health” contains useful information on the glycemic index (p. xx-xxi), the main sources of fat (p. xxi) and protein (p. xxiv) in the American diet. Eat more vegetable protein, especially from soybeans, “and less animal protein, especially from fish and reduced-fat dairy products. The section on “Stocking the pantry” includes Asian foods—soy sauce or tamari, and “miso paste “Made from soybeans” (p. xxxiii-iv).

Soy related recipes include: “A soy shake,” with silken tofu (p. 3, for breakfast). The section “Got (too much) milk?” (p. 34-35) recommends soymilk as a healthful alternative. And in the “Poultry” section (p. 54), Weil suggests substituting baked tofu. Weil has a full page (p. 58) about “Soy sauce: Shoyu and tamari,” which also mentions “rice starter (koji).” There are recipes for: “Vegetable nori rolls” with natural soy sauce (p. 72-73). Miso pâté (p. 80). Miso soup (p. 125). Meat and meat substitutes (incl. tofu and gluten) (p. 149-50). Greens with tangy miso dressing (p. 244-45). Address: 1. M.D., Clinical Prof. of Medicine, Univ. of Arizona and Director of its Program of Integrative Medicine; 2. Chef trained at the Cal-a-Vie spa near San Diego, former Oprah Winfrey chef.

2689. Netzer, Corinne T. 2003. *The complete book of food counts*. 6th ed. New York, NY: Dell Publishing. 911 p. 18 cm.

• **Summary:** Contains tables of food composition, by product. Tofutti is mentioned on pages 61, 94, 181, 260, 265, 301, 342, 437-440, 444, 446-48, 483, 587, 642, 787. The section titled “‘Cheese,’ substitute and nondairy” (p. 181-82) includes nondairy cream cheese. Also an entry for “Cream, sour—nondairy.”

Under “Edamame” we find values for fresh (in pod or shelled) and frozen (in pod). The section titled “‘Ice cream,’ nondairy” (p. 437-40) gives values for many flavors of the following brands: Rice Dream, Rice Dream Supreme, Soy Delicious, Soy Delicious Purely Decadent, Tofutti Premium, Tofutti Lite Tofutti Low Fat Supreme.

The section titled “‘Ice cream’ bar, nondairy” (p. 444)

gives values for many of the same brands.

The section titled “‘Ice cream’ sandwich, nondairy” (p. 447-48) gives values for many of the same brands.

There are entries for “‘Meatball’—vegetarian,” “Miso,” “Natto,” “Soy beverage,” “Soy beverage mix,” “Soy flour,” “Soy meal,” “Soy nuts,” “Soy protein concentrate,” “Soy sauce” (incl. shoyu, tamari and tamari—wheat free), “Soy spread” (incl. soy butter—roasted), “Soybean” (raw, boiled, or canned), “Soybean—dried,” “Soybean kernels,” “Soybean spread / dip,” and “Soybean sprouts.”

The section titled “Tofu” (p. 827-28) identifies the following types: fresh, fresh—extra firm, fresh—firm (incl. vacuum pack and reduced fat), fresh—silken, fresh—soft, fresh—flavored, fresh—baked (incl. smoked and teriyaki), salted, smoked. Tofu, ground. Tofu pudding. Tofu sauce (Westbrae sauce for tofu). Tofu seasoning mix. “Yogurt,” soy

There are also entries for: Adzuki beans. Seaweed.

There are no entries for: Seitan, Yuba.

2690. Hain Food Group, Inc. 2003. *The Hain Food Group (Portfolio)*. Uniondale, New York. 30 inserts. 28 cm. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

2691. New Hope Natural Media, a Division of Penton Media, Inc. 2003. *Show directory: Natural Products Expo West*. Boulder, Colorado: New Hope Natural Media. 242 p. Illust. Exhibitor Index. Advertising Index. 28 cm.

• **Summary:** Subtitle on the cover: “The premier tradeshow and conference for the natural products industry.” Contains many advertisements, color photos, and information about individual companies.

2692. Colbin, Annemarie. 2003. Interview with Irma Paule: February 9, 2002. *Macrobiotics Today (Chico, California)*. March/April. p. 10-13.

• **Summary:** “No history of macrobiotics is complete without a respectful reference to Irma Paule. She is truly one of the early pioneers of macrobiotics in America, and has not been acknowledged as such to this day, due in great part to her modesty. Hopefully, this interview will bring her accomplishments to light, so that macrobiotic people everywhere can express their gratitude for what she did for this movement in its early days.

“Annemarie Colbin: How did you get into macrobiotics?”

“Irma Paule: Oh, I was a young actress, and a coffee freak. I was drinking 30 cups of coffee a day, you know, it was available everywhere. And one morning I woke up and was totally paralyzed on one side. I couldn’t get out of bed without enormous pain. Called my girlfriend to get me a pack of cigarettes because I thought I was going to die if I didn’t get a smoke. Well, she had just been to a lecture the night before by a guy named Alcan Yamaguchi. He had just come to America and only spoke about 10 words of English,

but she got the idea that he could diagnose something and got him to come to my apartment—I was amazed that someone would come to my walkup cold-water flat, sit cross-legged on the floor, look at me and say, ‘kidney.’ Then he said, ‘coffee.’ He figured it out right away! I was impressed. He immediately sent my girlfriend out to buy fresh ginger root, which was available in the neighborhood. He made me ginger compresses, worked with me for 3 to 4 hours, took the pain away, and took no payment, nothing. He had figured out of course, that what was happening was that my kidneys had uremic poisoning from the coffee. So he brought me a copy of Ohsawa’s early macrobiotic book and said, ‘study-heal.’ My girlfriend cooked half a cup of brown rice for me, and I lay in bed and read the book. And I would cry! I would read the book and figure I could never have coffee again, never have ice cream again, and I would literally weep thinking about this. But meanwhile, I was cured. Three months later I was back to being able to walk, and my whole life was changed. First thing I did was go find Yamaguchi—he had opened this tiny storefront on 10th street, and set out a few things he had brought from Japan. I went to help him, package the goods, whatever. I said, ‘my life is yours, do with it what you want.’ I meant it. So whenever we heard of someone needing help, we went, with the ginger compresses and things like that, and that is how I learnt the largest part of what I needed.

“Annemarie: So when was this, about 1960-61?”

“Irma: No, this was about 1959-60, that’s when I became macrobiotic. Alcan became my dear, dear friend. And when Ohsawa came, I introduced myself to him and because I speak French, I offered to be his translator in America, and that’s how come I got to know him. So I became his assistant while he was in America and corresponded with him as he traveled around the world. He was often in Paris, and I corresponded with the French foundation that he started, which he called ‘Maison Ignoramus’—you know, it was his famous saying that we’re all ignoramuses.

“At that time while Alcan Yamaguchi was still in New York, the main person funding Ohsawa’s visit and the tiny store, was Herman Aihara. At that time he was in New York with the Sato brothers who had a chain of Japanese stores, I think it was ‘Azuma.’ The wife of one of the Sato brothers could not conceive children, and while in Japan Ohsawa had helped her change her diet so that she could conceive and they had children. They were so grateful, that is why they funded people like Aihara and Yamaguchi in small ways, so that they could do their thing.

“Annemarie: Now did Aihara fund Ohsawa, or did Sato fund both?”

“Irma: Sato funded both of them. At that time they were both in New York, and I made myself useful as much as I could. I also rented halls for Ohsawa to speak at when he came to New York. Then there was a nuclear bomb scare and all the macrobiotic people left New York and went to Chico,

California. Aihara left too. Yamaguchi and I both decided to stay. Kushi stayed—they were living in Queens at that time, the Kushi family—I remember very well, because for some reason or another I used to go up to their house, and always by the door there were bottles of cola, probably their children were drinking that. But Kushi was nobody in those days, the big ones if anything were Aihara and Yamaguchi. They had founded the Ohsawa Foundation, and when they left, it fell in my hands willy-nilly, and by default I became the head of the Ohsawa Foundation in New York.

“Really, truly, Annemarie, I learned a great deal from the Japanese. I was truly humbled, so I only called myself the coordinator of the official station here. I rented this little premise at 217 Second Avenue, a small professional apartment, very humble, we had some books, the Ohsawa books, we sold organic brown rice and such. There was a restaurant called ‘Musubi,’ on West 56th street between 5th and 6th Avenues, kind of a swank Japanese restaurant. Then the Sato brothers put money in that restaurant and Yamaguchi ran it like a macrobiotic restaurant. And there, in the back yard, is where I saw the first rice cakes made. It was like a giant waffle-making machine that they had imported from Japan, they would put in it frozen wet rice, it took two people to close it because it was so big and heavy—two or three men would hang onto the handle and bring it down, then it would pop and they’d all fall on the floor, and that’s how you got rice cakes. That was the very first making of rice cakes made here. Then, when they went to California and started Chico-San, that’s when rice cakes became popular. But I remember it very well. And again in that restaurant I arranged sometimes for lectures, I gave lectures myself sometimes. It was a very nice restaurant, except it served macrobiotic cooking, we’d have the Japanese cooks and teach them what we wanted them to do.

“So there I was with the East-West Foundation or the Ohsawa Foundation or the Macrobiotic Foundation (I called it many names). I would give lectures, classes, I advised people, things like that. I didn’t charge, I didn’t believe in it. That is where Bill Dufty found me, he wrote that book *You Are All Sanpaku*, which I’m sure you know about. He was a writer for films and knew everybody, that is how he brought in Gloria Swanson and other celebrities; he eventually became Gloria’s third or fourth husband, I forget which. He used to show up at lectures sometimes. That’s when he brought in Carmen de Lavallade who was married to Geoffrey Holder, the famous dancer, and she’d come down to my little store and talk and buy groceries.

“All these people used to come down, but they didn’t worry about talking to me because I never charged. Ohsawa hadn’t charged me, Yamaguchi hadn’t charged me when he treated me, so why should I begin to charge? Kushi built an empire, but I wasn’t smart enough to build an empire. I just had one volunteer assistant, Cohen was his name, he’s dead now—I realize now that he must have had AIDS, but he did

fine for many years, until I got closed up by the Food and Drug Administration with the Beth Ann Simon story. You heard about that of course. I have all kinds of documentation about it, newspaper articles, everything. There was a famous health writer, Linda Clarke, who put in one of her books how healthful the macrobiotic diet was, but when they closed me down, of all those people do you think they came to my defense? Did anyone talk to the press and say, I'm eating this way and it has helped me with this and that? Do you think Bill Dufty, Gloria Swanson, Carmen de Lavallade, Kushi, said anything? Nobody said a word about anything, they all went right under the rug and left me on my own.

"In one of my lectures there was a young couple, Beth Ann Simon and her husband, and they told me they were on drugs for many years, not just pot. LSD was the big thing in the sixties, and they'd also been on much harder stuff. They wanted to clean up. She took it in her head -because she was a little crazy from all the drugs—that the more salt the better. One night he called me up, they had my phone number at home, he called in the middle of the night, and said, 'It's about Beth Ann, my wife, she can't breathe.' I asked, 'well, what is going on, what has she been eating?' Well, she had drunk three-fourths of a bottle of ta-man soy sauce and eaten a big chunk of gomashio. She had been doing that throughout the night. So I said give her anything sweet you can find in the house, call an ambulance, and take her to the hospital. Of course there was nothing sweet in the house, they were very strict, only carrots, so he tried desperately with carrot juice. And she died. That is all I know. He called me, to tell me she was dead..."

A portrait photo shows Irma Paule. Address: PhD, Founder, Natural Gourmet Cookery School and Inst. for Food and Health, New York City.

2693. Umland, Vicky. 2003. McDonald's market clout enters antibiotics debate. *Natural Foods Merchandiser*. April. p. 1, 12.

• **Summary:** McDonald's Corp, the huge hamburger chain, announced in June that it will stop buying meat from producers who feed their animals growth-promoting antibiotics. This is expected to change the way animals are raised worldwide and worries some major meat industry groups—which quickly endorsed the Coalition for Animal Health's condemnation of McDonald's plan.

In June, McDonald's announced its Global Policy on Antibiotics which requires only direct suppliers—mostly chicken producers—to stop using 24 growth-promoting antibiotics that are used in human medicine. McDonald's encourages its independent or indirect suppliers—beef and pork producers—to do likewise. McDonald's, which buys more than 2.5 billion pounds of chicken, beef and pork each year, believes that policy will ultimately help protect public health.

In May 2002 a bill was introduced in Congress

that seeks to preserve the effectiveness of antibiotics by restricting their addition to animal feed. The bill cites (1) a federal report stating that the more antibiotics a person consumes, the less effective those antibiotics become, (2) a resolution adopted by the American Medical Association in June 2001 opposing nontherapeutic use of antibiotics in animals, and (3) the 1998 European-Union ban on growth-promoting antibiotics in animal feed. The National Cattlemen's Beef Association already recommends that beef producers avoid antibiotics for growth promotion.

• **Summary:** Five brands were tasted and rated in descending order of preference as follows: 1. Sun Soy Creamy Original (79 points, \$1.99/qt). 2. Silk Organic (76 points, \$2.29/qt). 3. 365 Organic Original (67, \$2.99/half gallon at Whole Foods). 4. 8th Continent (61, \$4.49/half gallon). 5. Wildwood Certified Organic (49 points, \$1.99/qt at Safeway). Address: Staff writer.

2696. Belleme, Jan. 2003. New developments with Mitoku and with miso (Interview). *SoyaScan Notes*. June 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** At the end of March 2003, Mr. Kazama closed Mitoku's office in the USA which John and his wife, Jan, ran as a home business. So John is looking for other sources of income.

Rudy Shur plans to publish John's new book on miso in October or November of this year; the title will probably be *The Miso Book*. The book is a wholistic look at miso with emphasis on health benefits.

Vern Verona, a long-time macrobiotic, wrote a book titled *Cancer Preventing Food*, published in 1994 by Prentice-Hall. Vern is now writing a book about miso. John is involved in a miso-marketing venture. He and Sandy Pukel are organizing a 7-day "wholistic health" cruise to the western Caribbean.

Update: 2009. Jan 27. In the spring of 2005 Sandy Pukel and his partner, John Belleme, launched Holistic Holiday at Sea, a fun filled cruise vacation with gourmet vegan fare and extraordinary educational opportunities. The Taste of Health and Holistic Holiday cruise (as it has come to be known) has become a full-time and very successful business, with revenue of more than \$1 million a year. They do only one cruise a year—in the summer. Last year more than 1,000

people went on the cruise. This coming summer will be the 6th cruise. It is organized entirely by John and Jan Belleme and Sandy Pukel. On a typical day, John and Jan work 12 hours a day. The cruise rates per person range from \$1,195 to \$3,000.

Chris Dawson, who now owns Clearspring in London, has built it into a thriving \$10-12 million dollar a year import and distribution business. He imports from Japan and China and also distributes many natural foods made in Europe. John wrote a book for him titled *The Real Taste of Japan*, published by Cross Media. Address: P.O. Box 457, Saluda, North Carolina 28773.

2697. Davis, Robert. 2003. Early interest in spiritual development and soyfoods (Interview). *SoyaScan Notes*. June 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bob went to Goddard College and wrote his thesis in “Planetary Development.” He still has a copy. He focused on the work of Pierre Teilhard de Chardin (1881-1955; French Jesuit paleontologist and philosopher) and Rudolf Steiner (1861-1925; Austrian social philosopher and mystic). Steiner was a deeply influenced by Goethe, developed biodynamic gardening, and wrote about lost civilizations such as Atlantis (a fabled Island in the Atlantic that, according to legend, sank beneath the sea; Atlantis was first described by the Greek philosopher Plato in the 4th century BC), and Lemuria. Address: Founder, Good Karma Foods (GKF), 4527 Hilltop Drive, Clinton, Washington 98236.

2698. Edmonds, Bryce. 2003. NNFA honors industry heavyweights. *Natural Foods Merchandiser*. June. p. 74.

• **Summary:** Includes Walter Willet, Loren Isarelsen, Frances Moore Lappe, Max Huberman, John Mackey, Joseph Pizzorno, Travis Tabor. A small portrait photo shows each person mentioned.

2699. *Organic Gardening*. 2003-- . Serial/periodical. Emmaus, Pennsylvania: Rodale Press. Vol. 50, No. 3. May/June 2003. Editor: Scott Meyer. Publisher: Bernadette Harison Haley.

• **Summary:** Previous title *OG*. Continued until at least Sept. 2006. The chairman of Rodale Inc. is Ardath Harter Rodale (the widow of Robert Rodale). The vice chairman is Maria Rodale; her grandfather, J.I. Rodale, started this small publishing business in 1930. Address: Emmaus, Pennsylvania.

2700. Wang, June. 2003. Pioneering work of Tau Wang, founder of First Vegetarian Foods Co., in introducing Chinese vegetarian foods to California (Interview). *SoyaScan Notes*. July 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** June’s father, Tau Wang, was born in 1935 in Shandong province, China. With his elder brother, he moved to Taiwan at age 11, became a veterinarian, married, and started a family. He was a Buddhist and a vegetarian. He decided (at a time or age unknown to June) to emigrate to the USA. He knew it would take too much time and money to get another veterinarian’s degree in America, so he went through culinary training and cooking school in Taiwan. In the mid-1970s, while in his 40s, he came to the United States and established what June believes is the first Chinese company to make vegetarian products in California—perhaps in the United States. While his family waited in Taiwan as he created a place for them, he began by working at a Chinese restaurant in Maryland for 1-2 years until he obtained his resident status. Then in the late 1970s he moved to Southern California; he liked the semitropical climate and wanted to get away from the cold East Coast climate. In those days, most Chinese still lived in Chinatown in downtown Los Angeles. There he met some Buddhist friends from Buddhist temples. He soon realized that there were almost no Chinese vegetarian foods for them to choose from—other than tofu and vegetables. So he decided to start a company named First Food to make vegetarian foods to supply first the Buddhist temples in Los Angeles, with the hope of soon expanding. His first product was steamed Chinese buns (*mantou*), followed by “Vegetarian Duck” or *Suya* (made by simmering wheat gluten; pinyin: *mianjin*; W.-G. *mien chin*), and steamed and lightly salted wheat gluten (*kaofu*). He experimented with many different vegetarian foods that were not available in Los Angeles. One new product was konnyaku.

June (age 11) and her brother left Taiwan joined their father in Los Angeles in 1979. Mrs. Wang and three more daughters came 6 months later (summer 1980). Soon the whole family was working in the business after school. June recalls: “After school, we kinds would go to work. After work, we would all go home and eat together as a family. Then we’d do our homework. We knew that our life had changed and we all had to pitch in and do whatever we could.” When June arrived, she spoke no English. But she learned and graduated from California State Polytechnic University, Pomona, with a degree in accounting.

In about the mid-1980s Mr. Wang introduced his first soy product which was “Vegetarian chicken” called “Suchee” (pinyin: *siji*; Wade-Giles: *ssu-chi*), made out of extra-firm pressed tofu. It was cooked in water seasoned with a little salt, then the water was pressed out and it was sold in the shape of a half-cylinder. When this product was successful, he extended the line with Mushroom Suchee and Savory Suchee (seasoned with soy sauce and his own blend of seasonings). In 1985 he incorporated the company.

Gradually his business expanded to Chinese restaurants, supermarkets, northern California, then to distributors servicing other states. Because of the language barrier, and

because it was family-run sole proprietorship where he pretty-much ran the whole show, with the help of his family and a few other workers.

June's father was concerned about what would happen to his business when he retired. Their foods were sold, packaged, and distributed only to the Chinese market. He also hoped it would expand beyond the Chinese market. After working outside the family business for a few years, June bought the business from him on 31 Aug. 1999, with the goal of helping her dad to realize his dream of expanding the business beyond the Chinese community. She invited her younger sister, Saline, to join her as a manager—and a potential shareholder. She soon launched a new line of Hispanic / Mexican hand-held meatless snack products named Starlite Cuisine, including 3 flavors each of Soy Taquitos (rolled in corn tortillas) and Soy Rolled Tacos (rolled in wheat flour tortillas)—both filled with textured soy protein concentrates. She hoped to sell these through Trader Joe's, but after sending many samples to the frozen foods buyer, he stole the product name and idea, and now Trader Joe's has its own Taquitos—Ugh!

A brief biography of Tau Wang's work has been written in Chinese. The company also makes an abalone alternative based on konnyaku; it contains no soy ingredients. Address: 1429 Virginia Ave., Suite F, Baldwin Park, CA 91706. Phone: 626-338-8233.

2701. Belleme, John. 2003. From Woodstock to wellness. *Macrobotics Today (Chico, California)*. July/Aug. p. 5-7. • **Summary:** "If Sandy looks familiar, it may be because he has appeared many times in south Florida newspapers, natural foods magazines, and even on national television. If you are a Miami Marlin fan you may have seen him on TV throwing out the first ceremonial pitch during the last game of the 2002 season. However, if you are a member of the hip generation, you may remember Sandy in his starring role as one of the flower children who were interviewed, naked, in the film classic Woodstock. Sandy's transformation from a junk food hippie to the motivating force behind macrobotics in Florida and one of this country's most influential advocates for healthy eating has been a spiritual quest of epic proportions.

"A law school dropout in the late 1960s, Sandy shunned his middle class Jewish Brooklyn roots for a Bohemian Manhattan lifestyle. Disillusioned with his lack of purpose in life in 1970, Sandy had a profound, life altering, 'born again' experience.

"He happened to take a macrobotic cooking class. 'Immediately I had a purpose,' says Sandy, 'everything I was ever interested in came together for me. Macrobotics included everything. My interest in mind-altering substances vanished. I have never looked back.'

"Later that year, at a macrobotic summer camp in upstate New York, Sandy met a man that would set

the direction of his life for the next thirty years. It was macrobotic world leader Michio Kushi, dressed in shorts, knee socks, dress shoes, and white shirt. Michio and Sandy really hit it off and became instant friends. The balancing principles of the macrobotic way of life seemed to be a perfect antidote to Sandy's lack of direction, and soon he was focused not only on changing his life but also on helping Michio change our nation's attitudes towards food and health.

"Fired up from summer camp and from meeting Michio, Sandy and a few of his fledgling macrobotic friends went to tropical Jamaica for a macrobotic getaway. They took 44 pounds of hacho miso, 50 pounds of brown rice, and 66 pounds of azuki beans. That's right, hold the veggies, these guys were hardcore.

"After the Jamaica experience Sandy moved to Coconut Grove, Florida and become the first macrobotic cooking teacher in that part of the country. (By this time he had widened out his diet to include a few root vegetables.) With a \$4,000 loan from his father, Sandy opened a natural food store, called Oak Feed, in the law office of a friend. Before long he moved to a larger location, and by the 1990s, Oak Feed was doing two million dollars in annual sales and occupied one of the swankiest addresses in South Florida. What's more, as Coconut Grove grew and became a Mecca for everything chic, the Oak Feed store and Oak Feed restaurant became the place to rub elbows with the elite of film and sport. However, Sandy's good financial fortune and growing notoriety did not deter him from his bigger dream. With resources from his business Sandy helped to establish the Macrobotic Centers of Florida, with locations in Miami, Tallahassee, Sarasota, Orlando, Palm Beach, and Tampa. Soon he began sponsoring conferences featuring macrobotic leaders Michio Kushi and Herman Aihara. As interest in macrobotics, Oriental medicine, health and natural food grew, Sandy's workshops and conferences expanded to include nationally known teachers and speakers who attracted thousands of attendees in Florida, California, and Colorado. Many of Sandy's conferences are sponsored by his non-profit educational foundation, A Taste of Health, and have featured respected authorities such as Benjamin Spock, M.D., Bernie Seigel, M.D., Deepak Chopra, M.D., Dean Ornish, M.D., and Keith Block, M.D. Other notable featured speakers have been John Robbins, Raffi, Cesar Chavez, Harvey and Marilyn Diamond, and Hollywood celebrities such as natural foods enthusiast and bionic woman Lindsey Wagner, five time Emmy Award winner Ed Asner, Emmy Award winner Ted Danson, and Academy Award Winner Mary Steenburgen.

"On several occasions A Taste of Health has sponsored large, open-air health festivals in Coconut Grove, Florida. These events are supported by the local media and attended by up to 30,000 people. These festivals have been instrumental in introducing tens of thousands of people to

the benefits of a healthier lifestyle. Proceeds from many of these events were used to educate school children about the benefits of good nutrition. John Robbins, author of *Diet for a New America*, is one celebrity who has attended several of Sandy's conferences. 'Sandy is one of the brightest minds in the natural healing movement,' says Robbins about his friend. Michio counts Sandy as one of his 'best friends' and credits him for helping to establish macrobiotics in the United States. 'Sandy has guided many people toward a healthier lifestyle and to make their lives happier and more enjoyable. His seminars have been a major influence in creating public awareness about the importance of diet in the prevention of disease,' said Michio in a recent interview. Senior macrobiotic teacher and author Lino Stanchich, who has been helping Sandy with macrobiotic events for almost thirty years, comments, 'Sandy is a pioneer in the natural foods and macrobiotic movement and has helped bring health and balance to countless people worldwide. He is a visionary who makes the impossible possible and does it with chutzpa and humor.'" Author of *Man in the Kitchen*, Warren Wepman, says of his old friend: 'In his unassuming, yet assertive manner, mostly in the background, Sandy Pukel is the linchpin of macrobiotics in Florida.' In Sandy's own words, 'My life is an expression of what I think is important. 'You are what you eat' is really true. Food creates the body and has a great influence on our mind and spiritual life. My dream is a peaceful, ecologically sane world, which I feel must begin with balanced eating.' True to his ideals, Sandy refuses to sell products that have processed sugars and preservatives.

"Sandy is a macrobiotic evangelist, and many of his business associates have advised him to spend less time promoting macrobiotics and more time worrying about his business and finances. In fact, when Erewhon, the natural foods company owned by Michio and Aveline Kushi, got into financial trouble many years ago, Sandy got a second mortgage on his house to help save the firm, which finally went bankrupt.

"I am one of Sandy's early macrobiotic recruits and was drawn into the powerful vortex of his life over twenty-five years ago. Depressed about my work and life, I happened into the Oak Feed store and asked Sandy a simple question about food. I do not remember the question, but his answer changed my life. The next thing I knew I was living in a macrobiotic study house in Boston, where I met my wife Jan. Just a few years later Jan and I found ourselves sitting on the floor in a 300-year-old house in rural Japan getting miso making lessons in Japanese from a miso master. So it is for thousands of people who have been directly or indirectly changed by the power of Sandy's karmic destiny.

"Although Sandy is widely known in North America as the owner of the landmark Oak Feed store and for his far-reaching efforts to promote food quality and macrobiotics through education, he is also a certified nutritionist and has

a macrobiotic consulting practice in Florida. Sandy has also been involved in several important macrobiotic businesses. He was the motivating force behind the American Miso Company in North Carolina. With the help of Michio Kushi, Sandy was also one of the first to import Japanese foods from Mitoku Company in Japan. This grew into an import company called Granum East, which was eventually sold to Great Eastern Sun in Asheville, North Carolina" (Continued). Address: North Carolina.

2702. **Product Name:** Edensoy (Soymilk) [Organic Chocolate].

Manufacturer's Name: Eden Foods, Inc.

Manufacturer's Address: 701 Tecumseh, Clinton, MI 49236.

Date of Introduction: 2003 July.

Wt/Vol., Packaging, Price: 8.45 fluid oz (250 ml) and 1 liter (1.06 qt) Tetra Brik Aseptic Carton.

How Stored: Shelf stable.

New Product-Documentation: Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2003. July. p. 8.

"Organic Chocolate Edensoy. New." A color photo shows the two cartons and a full glass with a straw. It "is made with family farm organically grown whole soybeans combined with Eden selected organically fair-trade cocoa, naturally malted non-GEO organic barley and corn, with organic maple syrup for a naturally smooth finish. Our cocoa is grown in the Dominican Republic and milled in Holland. Eden Cocoa is rich in polyphenol antioxidants. There is five and a half times more antioxidant power in Cocoa than in the same amount of Blueberries; 10.4 times more than in spinach."

2703. *Vegetarian Times*. 2003. Nothing to smile about. July. p. 14.

• **Summary:** From: *Community Dentistry and Oral Epidemiology* (Oct. 2002). "American children ingest so much fluoride in their foods that the case for water fluoridation—introduced 60 years ago...—is rapidly evaporating."

2704. Wolfe, Anna. 2003. Hain buys Walnut Acres. *Gourmet News* 68(8):18. Aug. *

2705. *Gourmet Retailer*. 2003. Hain Celestial acquires Acirca, parent of Walnut Acres. 24(9):14. Sept.

• **Summary:** Acirca is "a financial and investment group that has diligently extended its Walnut Acres brand since June 2000 by integrating into it a series of organic brands, including Mountain Sun, ShariAnn's, Millina's Finest, and Fruitti di Bosco."

Walnut Acres, founded in 1946, is America's original organic food brand. However, since Acirca does not own any manufacturing facilities, Hain Celestial will have to make

the products at its existing business units. The terms of the acquisition were not disclosed.

Note: Acirca, Inc. was formed on 1 June 2000 to “develop premier certified organic brands” (according to a June 2001 news release by Acirca).

2706. Product Name: Miso Master Salad Dressings [Five Flavors].

Manufacturer’s Name: Great Eastern Sun (Marketer).

Made in North Carolina by American Miso Co.

Manufacturer’s Address: 92 McIntosh Rd., Asheville, NC 28806.

Date of Introduction: 2003 September.

Wt/Vol., Packaging, Price: Bottled.

New Product–Documentation: Talk with Barry Evans of American Miso Co. 2004. Jan. 12. This line of five dressings was first sold in retail stores in Sept. 2003. They are sold in 8 oz bottles.

2707. Smith, Jeffrey M. 2003. *Seeds of deception: Exposing and government lies about the safety of the genetically engineered foods you are eating.* Fairfield, Iowa: Yes! Books. vi + 289 p. Index. 23 cm. [342* endnotes]

• **Summary:** Contents: Foreword by Frances Moore Lappé. Preface by Arran Stephens. Introduction. 1. A lesson from overseas. 2. What could go wrong—a partial list. 3. Spilled milk. 4. Deadly epidemic. 5. Government by the industry, for the industry. 6. Rolling the dice with allergies. 7. Muscling the media. 8. Changing your diet. 9. What you can do? Epilogue. Appendixes: A. GM foods at a glance. B. Enzymes and additives. Notes. About the author. Address: Iowa.

2708. WholeSoy Company. 2003. *Taste matters! Eleven delicious flavors from the best selling soy yogurt in natural foods. Best selling because it’s best tasting. Enjoy!* (Leaflet). San Francisco, California. 2 p. Front and back. 28 cm.

• **Summary:** Leaflet sent by Patricia Smith from Natural Products Expo in Anaheim, California. 2003. Sept. The eleven flavors are: Mixed Berry. Apricot Mango. Strawberry Banana. Blueberry. Cherry. Lemon. Vanilla. Raspberry. Strawberry. Peach. Plain. All ingredients for each flavor are given on the rear. The sweetener is “Organic cane crystals” (sugar). The “live active cultures” in each are “*Lactobacillus Acidophilus*, *Bifidus*, *L. Bulgaricus*, and *S. Thermophilus*.”

Sales info: Oasis Sales and Marketing, 144 Weeks Way, Sebastopol, CA 95472. Address: 335 Sacramento St. #1120, San Francisco, California 94111. Phone: 415-495-2870.

2709. Turtle Island Foods, Inc. 2003. *No holiday guest left behind—Tofurky and Dumplings set for 2003* (Press release). P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. 1 p. Oct. 21.

• **Summary:** “Hood River, Oregon—Turtle Island Foods, Inc. announced today the introduction of a New and Improved

version of its flagship product, Tofurky Vegetarian Feast. This year’s changes include: the addition of a full pound of Cranberry-Apple, Potato Dumplings, a new ‘Tofu Tender’ Stuffed Tofu Roast, a new box with beautiful photos and graphics and a larger, 3.5 lb size for the entire package which retails in natural foods and grocery stores for around \$20.

“Tofurky was first introduced in the USA during the Thanksgiving Holiday season in 1995 when 500 Tofurky Feasts were sold. It was the first product that had been marketed to fill the need of what to serve vegetarian guests at one’s holiday table. The product has been wildly successful providing an alternative to Turkey for people who otherwise were left out of holiday celebrations. Last year, the company sold 120,000 Tofurkys in the U.S., Canada, and UK. This year, the products are to be offered to such major grocery chains as Safeway on a national level as well as in the natural foods supermarkets where it was the #4 overall selling meat alternative in 2002 despite only being sold in the 4th quarter of the year.” Address: Hood River, Oregon.

2710. Bloch, Benjamin. 2003. *All the trimmings. Los Angeles Confidential.* Nov. p. 254-56.

• **Summary:** About Chef Akasha and Chef Beth Ginsberg—color photos show each (with Akasha wearing a White Wave “Silk” cap). Akasha is the national spokesperson for White Wave’s Silk soymilk. Her favorite experiences include: Traveling the world as Michael Jackson’s private chef, catering Pierce Brosnan’s 50th birthday party—a luau on Malibu beach, and cooking for Billy Bob Thornton and Barbara Streisand. She likes to shop for organic produce at Santa Monica Farmers Market, Hollywood Farmers Market, and Whole Foods—which has a remarkable selection of organic artisan cheeses. She is typically booked 4-6 weeks in advance. For details: Chefakasha.com.

Beth has written two cookbooks: *The Taste for Living* and *The Taste for Living World Cookbook*. In 1990 she was a chef in a restaurant on Fairfax named “442.” The health food cuisine included many tofu dishes. They developed a big celebrity clientele. Now she works for Michael Milken and does all of his events, plus those of some business professionals. Funny stories: She had to cook tofu products for the ABC staff for Barbara Walters 20/20 special. They weren’t told what it was. Some said they tasted great, others said they were terrible.

2711. Hain Celestial Group, Inc. (The). 2003. *Annual report 2003: 10 years of changing the way the world eats.* Melville, New York. 32 p. Nov. 28 cm.

• **Summary:** A nice chronology at the front of the report marks the company’s 10th anniversary. At the top of each year is the logo of each brand acquired that year.

“1993—Irwin Simon forms 21st Century Foods with the Farm Foods brand. We acquire Kineret Foods, a specialty kosher brand. Our name becomes Kineret Acquisition

Corp. and we sell 1 million shares and warrants in an initial public offering at \$3.25 per unit. We are listed on NASDAQ under the ticker symbol NOSH. The FDA issues its Nutrition Labeling and Education Act (NLEA), regulations establishing general requirements for health claims and food labeling.

“1994—We acquire the Hain Pure Food Co. and Hollywood cooking oils from PET Inc. We change our name to The Hain Food Group, Inc. Our ticker symbol is changed to HAIN. Sales in our first full year are \$14 million.”

“1995—We acquire the Estee sugar-free brand and the Featherweight low-sodium brand. We establish our medically directed business. Our sales reach \$58 million.

“1996—We enter the snacks business with the acquisition of Harry’s Premium Snacks. We acquire a license to the Weight Watchers line of dry grocery products. Our sales reach \$69 million.

“1997—We acquire publicly held Westbrae Natural and enter the nondairy business with the Westsoy brand, the leading soy milk in the aseptic shelf-stable category. We expand our grocery business with Westbrae Natural, the #1 brand of shelf-stable vegetables and beans. We expand our snacks business with the Bearitos and Little Bear brands.

“1998—We open the year with the acquisition of four leading brands. (1) Terra, the #1 specialty all-natural snack food brand with its Terra Original Exotic Vegetable Chips. (2) Garden of Eatin’, a leading maker of organic tortilla chips. (3) Arrowhead Mills, the pioneer and leader in organic baking mixes and grains. (4) DeBoles, a premium pasta company known for its organic and Jerusalem artichoke pastas. Later in the year we acquire Nile Spice, a leading meal cup and dry soup brand. We issue 2.5 million additional shares of our stock to the public in a secondary offering. Our sales reach \$174 million.

“1999—We acquire the Natural Nutrition Group, bringing us: (1) Health Valley, the #1 brand in natural soups and snack bars, and a strong player in the natural cereals and cookie categories. (2) Breadshop, maker of natural, ready-to-eat granola cereals. (3) Casbah, providing versatile and great-tasting vegetarian prepared mixes and side dishes. The FDA authorizes the health claim that soy-based foods help to lower cholesterol. Our sales reach \$270 million.”

Hain acquired Earth’s Best and Celestial Seasonings in 2000, Yves Veggie Cuisine in 2001, Lima and Biomarché (both in Europe) in 2002, and Imagine Foods (with its premium Rice Dream and Soy Dream brands), Grains Noirs, and Walnut Acres Certified Organic brand in 2003.

Net sales for the year ended 30 June 2003 were \$466.459 million, up 18% from \$395.954 million in 2002. Net income in 2003 was \$27.492 million, way up from \$2.971 million in 2002. Many new products containing soy in the product name are pictured and described incl. Imagine Organic Broth [California Miso or Soy Ginger], Westsoy Soy Slender. Lima Soya Drink.

At the top of this chronology (p. 1) is a list of “10 relevant FDA authorized health claims” from 1993 to 2000. For example: “(1) Calcium reduces osteoporosis risk (1993). (2) Sodium increases high blood pressure risk (1993). (3) Dietary saturated fat and cholesterol increase coronary heart disease and cancer risk (1993). Soluble fiber (fruits, vegetables, whole grains, psyllium seed husk) reduces coronary heart disease risk (1993)...”

Page 2: The Hain-Celestial Group is “one of the largest specialty food companies in the United States.” “We now market almost 1,700 products under 28 different brand names.” This report contains many fine color photos.

Accompanying the annual report is a “Notice of Annual Meeting of Stockholders and Proxy Statement” (33 p.). Irwin Simon, the founder and CEO, age 45, had the following annual compensation: Salary: \$643,077. Bonus: More than \$175,000. Other compensation: \$16,000. Stock options: 600,000 shares. Note: The value of the company’s stock has decreased for the last 3 years in a row. Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

2712. Turtle Island Foods, Inc. 2003. Discovered! Tofurky seed pods. Introducing the new & improved Tofurky Vegetarian Feast with Cranberry-Apple Potato Dumplings (Leaflet). P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. 1 p. Front and back. 28 cm.

• **Summary:** In the middle third of the front of this full-color leaflet is a photo of a box (the packaging) of Tofurky. In the bottom third is a bar chart titled “Meatless poultry subcategory natural food supermarkets. We’re #1.” Source: SPINS Company, San Francisco, California. 52 weeks ending 30 Nov. 2002.” (1) Turtle Tofurky Feast Vegan, 52 oz. \$19.22. \$843,354. (2) Boca Origina Nuggets Chicken Nat. 10 oz. \$3.70. \$819,132. (3) Boca Original Patties Chicken Nat. 10 oz. \$3.65. \$736,161. (4) Boca Spicy Patties Nat. Chicken, 10 oz. \$3.64. \$648,005. (5) Health Is With Chicken Free Ff Nugget, 12 oz. \$4.23. \$607,112. (6) Quorn Chicken Style Nuggets, 10.6 oz. \$3.71. \$592,718. (7) Turtle Tofurky Roast Vegan, 26 oz. \$9.91. \$487,092. (8) Veat Veg. Bites, 7 oz. \$3.69. \$455,658.

The back, titled “What’s new” shows new products, Nutrition Facts, and Tofurky ingredients. Address: Hood River, Oregon.

2713. **Product Name:** WestSoy Lite: Soymilk Drink [Plain]. **Manufacturer’s Name:** Hain Celestial Group, Inc. (Product Developer-Distributor).

Manufacturer’s Address: Melville, New York 11747.

Date of Introduction: 2003.

Ingredients: Filtered water, organic soymilk (filtered water, whole organic soybeans), organic brown rice syrup, organic dehydrated cane juice, tricalcium phosphate, sea salt, carrageenan, vitamin A palmitate, vitamin D2, riboflavin

(vitamin B2).

Wt/Vol., Packaging, Price: 64 fluid oz (1.89 liter) Tetra Brik Aseptic carton. Retail for \$1.89 (2006/06, Oakland, California).

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Product with Label (Plain) purchased by Martine Liguori at Grocery Outlet in Oakland, California. 2006. June. Dark blue, white, yellow, red and black on bluish green. Front panel: “70% less fat than unfortified brands. Excellent source of calcium, vitamin D and riboflavin... 18 mg isoflavones per serving. Lactose & dairy free.” Martine’s taste test: Tastes like sugared water; not good.

2714. Levenstein, Harvey A. 2003. *Paradox of plenty: A social history of eating in modern America*. Revised ed. Berkeley, California: University of California Press. ix + 353 p. Index. 23 cm. Series: California studies in food and culture No. 8. [1529* endnotes]

• **Summary:** This revised edition is identical to the original 1993 edition except that: (1) The publisher and cover are different. (2) It contains a new Epilogue (which updates the book, p. 256-67) after the last chapter, plus 56 endnotes that accompany it. The index appears to be the same. Levenstein was born in 1938. Address: Prof. Emeritus of History, McMaster Univ., Univ. of Hamilton, Ontario, Canada.

2715. Sanson, Gill. 2003. *The myth of osteoporosis*. Ann Arbor, Michigan: MCD Century Publications. 226 p. Revised ed. 2011. *

• **Summary:** Rozanne Bazinet says the older (2003) version is best. “This whole medical problem of fragile bones is caused by fluoride. The WHO organization basically reclassified the definition of osteoporosis to expand the population who would be involved. The book goes through all the myths and explains them scientifically.”

2716. Evans, Barry. 2004. *Macrobiotic foods and miso in America today* (Interview). *SoyaScan Notes*. Jan. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Macrobiotic foods is no longer a product category. Awareness of macrobiotics and macrobiotic foods among consumers has slowly but steadily declined over the past 10-15 years. Even though miso is historically a macrobiotic food, it has not benefited much, if at all, from the general uplift that all soyfoods have gotten in recent years. It is still an obscure food.

Many consumers also have a poor understanding of organic foods. Whole Foods did a survey recently which showed that the average Whole Foods shopper thought that every food product sold at Whole Foods was organically grown—otherwise Whole Foods would not carry it. This, of course, is incorrect.

Barry has had to struggle and struggle every step of the

way to keep American Miso Company (AMC) viable: Its two big miso competitors are Westbrae (now owned by the Hain-Celestial empire) and Miyako / Cold Mountain (which has fixed past problems in its organic labeling so that it is now accurate). AMC was not profitable in 2003; the company is still having a terrible time making a profit. Two new miso products are Miso Master dressings (Sept. 2003) and corn miso. Alberts Organics (now owned by UNFI; their produce branch) has an exclusive on the miso dressings through the end of November, but they don’t operate in California and the Pacific Northwest. The dressings have sold very slowly.

Great Eastern Sun (GES) has never presented itself as a macrobiotic company, but it has always carried a full line of macrobiotic products; the two most important product categories are miso (40% of business) and seaweeds (20%). GES now carries some products that are not macrobiotic—such as sugar and black tea. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

2717. Evans, Barry. 2004. *Failure of nori crop in Kyushu, Japan. Sea vegetables imported to America today* (Interview). *SoyaScan Notes*. Jan. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** About 40% of all the nori produced in Japan comes from the Ariake Sea off the western coast of Kyushu, where it has been cultivated on nets for more than 25 years. This bay was ringed by wetlands, which were gradually filled in by developers. In early 2001 the entire nori crop in that bay failed because of an unseasonal outbreak of red tide—which had several causes, including a land reclamation project which destroyed wetlands that are no longer able to purify the sea water. The Japanese believe that nori will never be grown in that bay again—a huge disaster for thousands of nori farmers! This had led to more of the sea vegetables imported to the USA coming from China and Korea. Barry thinks that 80-90% of all the sea vegetables now consumed in Japan comes from China.

It is generally believed in Japan that, of the various sea vegetables, the kombu crop is the cleanest and most free of heavy metals such as lead, mercury, and arsenic. That is because most of the kombu harvested in Japan comes from the area around Hokkaido, Japan’s northernmost large island, where the cold, clear current flows down from the north. Japan has made a big effort, over the past 10-20 years, to clean up its environment and coastal waters.

China, on the other hand, has little pollution control. Its main goal is to be the low-cost producer of any product that consumers desire—worldwide. It produces a growing percentage of the world’s sea vegetables—but heavy metal content is an issue.

Eden Foods, which is the leading seller of sea vegetables in the USA, buys all of its sea vegetables from Japan and pays more for them than if it bought them from China or

Korea. In recent years, Great Eastern Sun (GES) has built its seaweed business on having less expensive products, imported from China. The only sea vegetable GES imports from Japan (Mitoku) is arame, which is not available from China. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

2718. Nordquist, Ted. 2004. Looking back: Overview of work with soymilk in America (Interview). *SoyaScan Notes*. Jan. 29. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** Jeremiah Ridenour was the first person in the USA to have the idea of selling soymilk in extended shelf life (ESL) gable-top cartons. That was a huge breakthrough. Ted wanted to build a soyplant to produce his soy base in America—ideally in California. Ted met Jeremiah, and Jeremiah told Ted about his idea for using gable-top cartons. Jeremiah took Ted to Gustine, the plant where Ted developed a soymilk product for Jeremiah using Ted's proprietary formulation. He sent many samples to Jeremiah, on the understanding that Jeremiah would use his distribution to sell the new product. After the product was developed, Ted did a feasibility analysis, which showed that he had to produce about 4,000 cases (at 3 gallons per case) to make this a competitive, viable product. Jeremiah said he was unable to buy and sell that much volume—including the big initial cost of buying and printing the cartons. Then Ted took the idea to Westbrae (to Myron Cooper—who said “sorry”), and then to Steve Demos of White Wave; Steve had refrigerated distribution, saw the product's potential, and was very interested. “You have to give Steve all the credit for selling the product.” Ted still did not have a plant that could make his soybase. So Ted bought ProSoya's soybase made at the ProSoya plant in British Columbia, had it shipped by tanker trucks to Gustine, where Ted formulated it, had it packaged in White Wave's ESL cartons, then shipped the finished cartons in cases to White Wave. White Wave paid for the carton's plates and developed the graphics, but Ted had to pay to print the packaging on the ESL stock. White Wave paid for the product (incl. the package) after he received it. Ted make Silk soymilk for Steve for two years. At the end, Steve ordered \$320,000 worth of product then refused to pay for it. Ted thinks that he used that money to move to Utah.

Gary Stein was making tofu for Trader Joe's. Trader Joe's was also buying soymilk in fresh (not ESL) cartons from Rockview Farms—Trader Joe's distributor. Rockview bought its soymilk in bulk from a guy in Los Angeles, who set up his own Alfa-Laval plant to produce soybase and to formulate it for Rockview. Ted does not remember the guy's name but he was only up and running for several years. One day Gary called Ted and explained that Rockview Farms was having all kinds of problems with their soymilk, and that Trader Joe's had called Gary and asked him if he could produce soymilk for Trader Joe's. At this time, Ted was

still selling Silk soymilk to White Wave—but he was feeling tension in the relationship. Ted's contract with White Wave said that Ted could not sell soymilk packaged in gable-top cartons out of Gustine. Ted adhered to the contract. But by this time Ted had his first soybase plant up and running at Soyfoods of America in Duarte, near Los Angeles, California. So instead of buying soybase from ProSoya, Ted was now making his own in California. Gustine bought the packaging, Gary Stein formulated Ted's soybase to make soymilk, Ted packaged it in Gustine, then Gary sold it to Trader Joe's; they split the profits 50:50.

In April 1999, Ted's WholeSoy Co. launched WholeSoy: Creamy Cultured Soy, a Swiss-style soy yogurt in four flavors; he sold it to Trader Joe's through Gary Stein; Ted and Gary split the profits 50:50. Ted did not sell his yogurt direct to Trader Joe's because he is friends with Gary. “I don't do things like that. Our relationship with Trader Joe's was through Gary Stein. So I honored that.” Gary got Ted's yogurt into Trader Joe's. But a year or so later, Ted and Gary agreed that the arrangement was getting too complicated, and that Gary would take the soymilk (packed in Gustine) and Ted would take the yogurt. So Ted now sells his soy yogurt and a 96-ounce soymilk directly to Trader Joe's. Gary Stein is still making soy products for Trader Joe's. Gary no longer works much at his soy plant, which is run by his employees; he is often at Lake Tahoe or skin diving. “More power to him.”

Jeremiah did not start selling soymilk in ESL packages until after Steve stopped buying soymilk from Ted. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

2719. **Product Name:** Lifestream SoyPlus Toaster Waffles. **Manufacturer's Name:** Nature's Path. **Manufacturer's Address:** British Columbia, Canada. **Date of Introduction:** 2004 January. **Ingredients:** Organic whole wheat flour, organic low fat soy flour, organic wheat flour, filtered water, organic flaxseed, organic rice bran, oat fiber, soy germ isoflavone concentrate (non genetically modified soy). **Wt/Vol., Packaging, Price:** - **How Stored:** - **New Product—Documentation:** Ad (full page, color) in *Vegetarian Times*. 2004. Jan. p. 37. “Enjoy America's #1 and #2 selling toaster waffles*, Lifestream FlaxPlus and Buckwheat Wildberry.” * = SpinScan Natural Product Supermarkets, 52 weeks ending 2/22/03. A color photo shows the front panel of a package of SoyPlus Toaster Waffles.

2720. Richmond, Akasha. 2004. Recollections of growing up and autobiography (Interview). *SoyaScan Notes*. Feb. 5. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Akasha was born in Miami, Florida. Her father, Merle Litman, was an attorney and an expert poker player. At age 10 she moved with her family to Hollywood, Florida (near the ocean, about 35 miles north of Miami), where she grew up. Starting at age 10, Akasha was deeply interested painting and drawing. Her mother, Judy, sent her to study with an excellent artist, where she started using charcoal to draw balls, then more complex shapes. Art was her passion when she was young. That's all she wanted to do from morning until night. And she loved to give her paintings and drawings away.

She was also deeply interested in cooking; she also began cooking at age 10, using the *Betty Crocker Boys and Girls Cook Book*, after her father gave her a little oven. She then moved on to her mom's copy of *The Joy of Cooking*. She came from a family of really good cooks. So when her mother discovered Adelle Davis, Tiger's Milk bars and brewer's yeast, they thought she had gone nuts. By the early 1970s her mom was making her own sprouts and serving them in "whisker and peanut butter sandwiches."

By 19 she became immersed in the surf culture of South Florida—greatly influenced by the Beach Boys of California. At age 19 she was into surfing, which introduced her to a new way of eating. She started patronizing local health food restaurants like Here Comes the Sun and the Health Hut. She read *The Miracle of Fasting*, by Paul Bragg and started juice fasting on tropical fruit juices. Her first job, at age 16, was at a health food store. that sold more vitamins than food. Since she loved to cook, she started creating her own healthful dishes.

But she sometimes felt unhappy and depressed in Florida / Miami. Suddenly an opportunity arose for her to go to the island of Kauai, in the Hawaiian islands, to live in a hippie commune, run by two young men whose parents were friends of her parents, and who were disciples of Sai Baba. It was her first contact with Asian spiritual traditions. She started chanting.

In 1976, after receiving a letter from a friend, she left for California for three reasons—including surfing, health foods. She started living in Encinitas—home of Yogananda's Self Realization Fellowship (SRF), great beaches, and many yoga teachers. It was a melting pot of Asian spirituality.

She went to college at San Diego State University. Her father died on Thanksgiving of 1977. She was in school because her parents wanted her to be there. Now she got disillusioned with school and asked herself "What am I doing here?" While still in college she started studying yoga. She met an ex-Sikh named Sahesh, who started dating her sister and needed a place to live. Akasha and friends had a large house (paid for by their parents), so in exchange for living with them, he said he would teach them yoga every day. "He was a real yogi and a real meditator. He got me up every morning and we did an hour of yoga, then an hour of meditation. It changed my whole life." Later Sahesh

developed a heroin problem and a few years ago he killed himself. He was one of those people who lived on a fine line, going from drugs to meditation. He just couldn't stay on the path.

Sahesh used to be married to Akasha's friend, Gurmukh, who was also a Sikh and a student of Yogi Bhajan. Sahesh brought Akasha to Los Angeles (from San Diego) to meet Gurmukh and to take a yoga course from Yogi Bhajan—who was teaching in Los Angeles.

"Yogi Bhajan came to Los Angeles in 1969, bringing the teachings of Kundalini Yoga and his own unique style of Indian and Ayurvedic cooking. In 1974 his students opened Golden Temple Conscious Cookery in Los Angeles." From 1979 to 1984 Akasha was a cook there.

When Akasha left the Golden Temple, she started working as a private chef, and her first clients included Barbara Streisand, Alana Stewart, and Carrie Fisher (HD, p. 179). Eventually she had so many requests that she started a vegetarian meal delivery service, sending meals each week to Michael J. Fox, Dana Delany, Judith Light, and mega producer, writer, and director James Cameron. Akasha continues to feel the influence of Yogi Bhajan. She still takes cold showers, still eats a largely vegetarian diet, still uses ginger tea, onions, and garlic for good health. But she ate a healthier diet before she met Yogi Bhajan; he drank Coca-Cola and served Haagen-Dazs ice cream in the ashram.

Later Akasha left Yogi Bhajan because of things she couldn't deal with on an integrity level, but "of all the people I've ever known, and all the celebrities and all the charismatic people, I've never known anyone like Yogi Bhajan. No one could command a room like he could. He was pretty amazing and pretty intuitive. He was unbelievable." He is still alive but he is in a wheel chair, he rarely leaves his room, he has heart failure, he had a kidney transplant last year, he hasn't walked in a year. He talks in a whisper. Address: Los Angeles, California.

2721. Richmond, Akasha. 2004. Recollections of growing up and autobiography (Interview). *SoyaScan Notes*. Feb. 5. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Akasha's friend, Gurmukh, is now the big celebrity yoga teacher to the stars. She has a huge following in Los Angeles. She is very charming and has her own spiritual following of hundreds of students. "When kundalini yoga gets written up in *Vanity Fair* magazine, they talk about Gurmukh as its guru. She's been branded that way by the media; she has never said she was." She really teaches kundalini yoga but she does not present herself as a guru. She has a center and she is about to open a huge new center. She travels all over the USA and the world teaching kundalini yoga. Gurmukh got her start with Jane Fonda at this studio. When she was pregnant, she had nowhere to go to exercise, so she started going to Jane Fonda's workouts. Now Gurmukh's whole specialty is prenatal yoga. She's

written two books on the subject. Gurmukh was a Zen Buddhist (she practiced for two years at the zendo in Maui, Hawaiian Islands) before she became a Sikh. She was also in the Haight-Ashbury district of San Francisco—"She did the whole thing." She has been a vegetarian for 30 years. She ran the Golden Temple restaurant in Santa Fe, New Mexico. The reason Akasha is in Los Angeles is because Gurmukh's ex-husband (Sahesh?) introduced us. Talk with Akasha 2004 Aug. 1. The real reason she did that was because her ex-husband was sleeping with Akasha's sister, and Gurmukh got jealous, so she became Akasha's friend to lure Akasha's sister away from him. The real reason Gurmukh became friends with me and lured me up to Los Angeles from San Diego was to get me and my sister away from her ex-husband—who lived in San Diego. It ended up being a good thing for Akasha. She asked Akasha to come from San Diego to work at the Golden Temple restaurant in Los Angeles. That was the beginning of Akasha's career as a cook—in 1979.

Husbands: Akasha was a single woman for 9 years before she met her first husband in 1986—he is not worth mentioning. How she got the name Richmond is another long story. Her present husband is Alan Schulman.

Shakti was one of Yogi Bhanjan's older disciples. When Akasha decided to leave Yogi Bhanjan, Shakti got upset and said, "I'm really sorry to see you go. You were the best PR ever had." Akasha has always gotten a lot of publicity for her work of cooking for celebrities; it was written up in many magazines and newspapers (incl. the front page of the food section of the *Los Angeles Times*, sometimes with a photo of her wearing a white Sikh turban). That always attracts publicity and makes Yogi Bhanjan and the Sikhs look good. Akasha was still a student of Yogi Bhanjan while she was cooking for celebrities. At a certain time she decided to leave. "It didn't matter to me if I wore a turban or not any more. When you're in that group, they make you feel like the only way you can be spiritual is to wear a turban. When my daughter was born, someone said to me, 'You'd better start covering her head now or she'll never want to wear a turban.' I thought, 'Well, maybe she won't care.' For most of the Sikhs—but not for all of them—the turban was a big deal. Yogi Bhanjan got mad at me, and he never talked to me again after I left. He told Sat Simran that I left, and I cut my hair, and that was it. I'd never be with him again. He told people that if they left him, they would come back as a cockroach in their next life and would have to go through the 24 million births and deaths it took to get to sit at his feet in this one. That has been documented. And that was mild compared with some of the things they said and did. But there were also people in the group that weren't like that—judgmental and using fear. Yogi Bhanjan liked people to follow the program."

Richard Lasser is one of two people who got Akasha to become a Sikh; he is now a screen writer. Akasha likes to

use goat's milk or cheese to make veggie cheesecakes; They don't have lactose and so are easier to digest.

Note: As of May 2014, Wikipedia has a long entry for "Gurumukh (yoga teacher)." It begins: "Gurumukh Kaur Khalsa is a teacher of Kundalini Yoga as taught by Yogi Bhanjan and a pioneer in the field of pre-natal yoga. She is the co-founder and director of the Golden Bridge Yoga Center in Los Angeles, and the creator of two books and three DVDs.

"Gurumukh was born Mary May Gibson in a small Illinois town. At age nineteen, she left her home to attend college at San Francisco State University in California." Address: Los Angeles, California.

2722. Lewandowski, Joseph P.; Uhland, Vicky. 2004. Maverick merchants: Entrepreneurs, idealists and visionaries have built the natural products industry. To mark our 25th anniversary, *Natural Foods Merchandiser* will pay homage throughout the year to some of the people and innovations in our industry. This month we profile 25 retailers. *Natural Foods Merchandiser*. Feb. p. 30, 32, 34-37.

• **Summary:** The visionaries (with a color portrait photo of most), listed alphabetically by last name, are: Linda Amidon, Rob Auerbach, Michael Cianciarulo, Bruce Cohen, Terry Dalton (founded Unicorn Village natural foods market in Miami, Florida, in 1979 and sold it for \$4.5 million to Whole Foods in 1995), Dan Foley (Wedge Community Co-op in Minneapolis, Minnesota), Mike Gilliland (CEO of Wilds Oats Market, 1984-2001), Sandy Gooch (Started Mrs. Gooch's Natural Food Markets in 1977 in southern California and expanded to 7 stores. Acquired by Whole Foods in 1993), Eric Hinfefent, Cheryl Hughes, Kemper Isely, Bea James, Michael Kanter, Matt Martincich, Debbi Montgomery, Philip Nabors, Mark Ordan, Barry Perzow, Mark Retzloff (see below), Scott Roseman, Debra Stark, Marke Stowe, Cynthia Tice, Robert Tucker.

In 1969 Mark Retzloff and two roommates founded Eden Foods, when he was a student at the University of Michigan. In 1971, he became manager of the Erewhon natural foods store in Seattle, Washington. In 1974 he moved to Denver, Colorado to manage Rainbow Grocery, a division of the Divine Light Mission [Guru Maraji], and bought it in 1976. In 1979 Mark Retzloff and Hass Hassan founded Pearl Street Market in Boulder, Colorado; it was later sold to Wild Oats Markets. In 1983 he and Hassan founded Alfalfa's Market in Boulder; it expanded to 12 stores and was sold to Wild Oats. In 1989 Retzloff left Alfalfa's and worked as chairman of the Organic Alliance in Washington, DC, lobbying for the Organic Food Production Act. In 1991 he returned to the Boulder area and, with Paul Repetto, founded Horizon Organic Dairy, leaving in 2001 (after 10 years) to become CEO of Rudi's Organic Bakery. He left Rudi's in late 2003 and launched Aurora Organic Dairy in Longmont, Colorado. Address: 1. Free-lance writer, Fort Collins, Colorado; 2. Free-lance writer, Denver, Colorado.

2723. Shurtleff, William. 2004. Why do we in the USA use the Japanese word “tofu” rather than the Chinese word “dofu” to refer to this soyfood product? (Editorial). *SoyaScan Notes*. March 4.

• **Summary:** Several important trends would favor the use of the Chinese term “dofu”: (1) During the period 1920 to 1960, Chinese cooking was much better known in the USA than Japanese cooking. There were many more Chinese restaurants, Chinese cookbooks, and Chinese recipes in American cookbooks (See *Cooking with a Foreign Accent*, 1952; *Helen Brown’s West Coast Cook Book*, 1952, etc.). (2) In 1975, there were also more Chinese-American tofu manufacturers. See list in *The Book of Tofu*, by Shurtleff and Aoyagi—although no list is complete because many were small and sold their products mostly to the local Chinese community. (3) Americans generally prefer Chinese-style firm tofu to Japanese-style soft tofu.

But: (1) The influence of confusing Chinese terminology and spelling due to dialects and lack of standard system of romanization. For example, Cantonese is the main dialect of Chinese spoken in the United States, whereas Mandarin is the standard in China.

(2) Influence of Japanese macrobiotic movement: 1. In the 1950s, George Ohsawa, a Japanese teacher, started the macrobiotic movement in the United States. He and his teachers (Michio and Aveline Kushi; Herman and Cornelia Aihara) developed a great popular interest in Japanese foods. 2. Tofu used as an ingredient in many macrobiotic cookbooks. 3. The macrobiotic movement played a major role in starting the natural foods industry in America, especially with the pioneer company Erewhon—started by Aveline and Michio Kushi, Japanese teachers of macrobiotics. The first Erewhon retail store opened in Boston, Massachusetts, in April 1966. Soon Erewhon became the most important distributor of natural foods in the USA. Tofu was sold at most natural food stores, where it was almost always called “tofu.”

(3) Influence of William Shurtleff: He became interested in both macrobiotics and Japanese culture in the mid-1960s. 1967 spring—He took a course in Japanese Art, taught by Michael Sullivan, at Stanford University; that summer he lived in Kyoto, Japan, studying art and architecture and practicing Zen meditation. 1968 May—the Esalen at Stanford program (of which he was director), hosted Michio Kushi, a Japanese teacher of macrobiotics, in a 1-week workshop. At about this time Shurtleff and the members of the commune in which he lived near Stanford University decided to stop eating meat and become vegetarians. 1968 June 10—Shurtleff entered Tassajara Zen Mountain Center south of Carmel, California, where he practiced meditation as a student of Japanese Zen master Shunryu Suzuki, roshi for 2½ years. The delicious vegetarian diet included tofu, miso, and whole soybeans. 1969 Dec.—A photocopied book titled

The Tassajara Food Trip, which he wrote, was distributed to friends at Christmas. It contained many Japanese and macrobiotic recipes served at Tassajara—including 4 recipes calling for “tofu”—the word that was used by everybody at Tassajara to refer to this food. 1971 Jan. 16—Shurtleff arrives in Japan to study Japanese language and culture, and Zen meditation. He becomes increasingly interested in Japanese foods and especially tofu. 1971 Dec. 26—He meets Akiko Aoyagi in Tokyo. She is an excellent cook and artist, and begins to serve him many Japanese-style vegetarian recipes—often including tofu. 1972 Dec.—He begins to write a booklet about tofu, for friends. But after meeting Nahum and Beverly Stiskin, founders of Autumn Press, the booklet is transformed into a book project. In Dec. 1975 *The Book of Tofu*, by Shurtleff and Aoyagi, was published in Japan by Autumn Press. It was the first popular book about tofu in the Western world, and it quickly became a best-seller—selling more than 500,000 copies by the year 2002. The Preface to the 2001 editions gives details about how the book was written.

(4) Influence of Library of Congress. In the USA the Library of Congress has long been the organization that decides which terms will be used to describe important subjects. The results are published in the well-known Library of Congress Subject Headings (LCSH), which is updated each year as new terms are added or outdated terms change. On 6 June 1977 the term “Bean Curd” was approved by the Library of Congress Subject Headings committee. On the same day they approved “Bean Curd, Dried” and “Cookery (Bean Curd).” So starting at this time, “bean curd” became the official, authoritative name for tofu. According to Tom Yee of the Library of Congress, these headings were probably established as a result of cataloging *The Book of Tofu*, by Shurtleff & Aoyagi. Any books about tofu published in the USA would thereafter be given the subject heading “bean curd” by the Library of Congress and libraries across America in their cataloging and card catalogs. New editions of *The Book of Tofu* published after June 1977 were given the subject heading “bean curd.” In May 1985 Shurtleff wrote the Library of Congress, Cataloging in Publication Div., recommending that its subject heading be changed from “bean curd” to “tofu.” He gave three carefully researched reasons for recommending the change. The Library of Congress made the change from “bean curd” to “tofu” in their subject headings. Address: Lafayette, California.

2724. Richmond, Akasha. 2004. Impressions of the Natural Products Expo at Anaheim (Interview). *SoyaScan Notes*. March 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Akasha just returned from the Expo where she catered a dinner for 900 guests, catered a smaller party for White Wave, and sat on two panels. Exhausted, she is taking the day off. The show had a record attendance of 34,000

people registered. At the Modern-Fearn (Minnesota) booth, she met Gayelord G. (“Gigi”) Palermo, who lives in West Palm Beach, Florida, and thus must be quite wealthy. He is about the same age as Akasha. His father is Anthony “Tony” Palermo of Modern-Fearn and (Gigi said) the adopted son of Gayelord Hauser. Gigi told her a remarkable story she had never heard before about how Gayelord Hauser’s career started. Hauser went to a dinner at the Hearst Castle in California. There he met a woman who had been blind for about 20 years. She took a walk with Hauser and told him that she had watched her infant son drown, and had been blind since that moment. After the walk (apparently because of something Hauser told her), her eyesight returned. Because of that, Hearst gave Hauser a column on health and put it in every newspaper he owned. That put Hauser on the map—and changed his whole life. Gigi has a rich archive of Hauser documents, photos, and memorabilia. He owns the rights to it all. Gigi gave Akasha his phone number; he doesn’t do e-mail. However, in *Diet Digest* in 1951, in a letter to his readers, Hauser announces that he is getting a column in the Hearst newspapers. Akasha has never seen a Hauser column in a Hearst Newspaper—such as the *Herald Examiner*.

At the show she met Patricia Bragg at her booth; she is tiny but looks very healthy, with fine skin. She, too, is quite wealthy. In 1959 she and Paul Bragg had a black-and-white TV show titled “Health and Happiness Show” in Hollywood. Clips from it are on the huge Bragg website. Gypsy Boots (age 93) was at her booth and Gigi got a fine photo of all of them. Note: Gypsy died on 8 Aug. 2004. Also at her booth was the founder of the Good Earth chain of restaurants named William Galt (see www.goodearth.com). He founded them in the mid-1970s, and one was in Berkeley. Eventually [in Nov. 1980] the chain was purchased by General Mills. William, now in his mid-70s, lives in Cabo, Mexico and looks very healthy; his skin is clear and he has a full head of hair—a tall, good looking man. He told Akasha the story of how Colonel Sanders got him (William) into natural foods. He first worked for Lowrey’s, the big beef restaurant chain, then he went to work for Kentucky Fried Chicken. There he learned how to run a restaurant. He told the story of how Colonel Sanders got him into eating healthy food. After Col. Sanders sold his chain of restaurants, William walked in to have a meeting with the Colonel and brought a bucket of the chicken. Col. Sanders looked at him and said, “Son—Don’t eat that shit. It’ll kill ya!” Col. Sanders traveled with Shaklee Vitamins and he was a complete health fanatic. William Galt and his daughter are now developing a prototype of a chain of healthy, fast-food, drive-through restaurants in America—like Burger King.

At the show White Wave introduced and demoed a liquid drinkable yogurt named Alive Sweet. She also met a famous African-American named Isaac Hayes, who starred in the movie *Shaft*. He has been into natural foods since the

1970s and is now working to introduce them to other African Americans.

She sat next to Barry Sears, PhD, on one panel; afterwards he predicted to her: “I’ll give this low-carb thing a year.”

Akasha is an admirer of Dr. Andrew Weil.

Efrem Zimbalist II, the son of the famous violinist, has just purchased *Vegetarian Times* magazine—for which Akasha writes a column. She went to a focus group to which he invited her, but found that most readers want more vegetarian recipes. Address: Chef, Los Angeles, California.

2725. Todd, Terry. 2004. Update on the Todd & McLean Collection at the University of Texas at Austin (Interview). *VegeScan Notes*. March 9. Conducted by William Shurtleff of Soyfoods Center. [5 ref]

• **Summary:** The University of Texas at Austin (UT) is home of the Todd & McLean Collection, has one of the largest collections of periodicals, books, papers, and memorabilia on the physical culture, fitness and exercise, and health foods movements and industries in America. Terry and his wife have put together a very substantial part of the collection. They are in the process of gifting it to the University and acquiring a permanent home for it, so it can function as a research facility which has a rare books and periodicals component. Also an area where more modern things, which are replaceable can be looked at by people interested in the field of fitness and exercise. It has only a small collection on competitive sports; they are interested in exercise to improve competitive sports, but not the sports themselves. The best library in the USA, probably the world on Olympic sports is in Los Angeles. It is funded by the Los Angeles Athletic Foundation, whose endowment of about \$125 million was left over after the 1984 Olympic Games run by Peter Uberhoff. They have a staff of 7-8 in Los Angeles—and “all the bells and whistles.” Contact Wayne Wilson, director.

The Todd & McLean collection is primarily concerned with purposeful exercise, like weight training. Terry started collecting 50 years ago, when he was starting as a tennis player. Then he began to lift weights, which was considered taboo for tennis players at the time. Then he became a competitive weight lifter and eventually the national champion. So he had a deep interest in areas that were considered “marginal and harmful” and looked down on by “everyone who was influential and had power”—including traditional medicine and traditional thinking in exercise physiology and physical medicine. “Today, not only is weight lifting not taboo, it is required.” Eventually he got interested in the broader fields of body building; he did Olympic weight lifting and “power lifting.” That was his original focus. Then he and Jan married and she became the top woman lifter of her era and was the pioneer for women lifting weights in America. She got a huge amount of publicity. Both Terry and Jan (much later) earned PhDs

in American Studies. Her dissertation was on the purpose of exercise for women. They have both been at UT for about 22 years; Terry grew up in the area and did he undergraduate work at UT. The university has often had a lot of money because of oil. During some of those fat times, they have invested in rare books. They have always had a kind view of special collections. Knowing that, Terry thought UT would be an ideal spot for his collection to reside. Historically, many of the great collections have been lost, split up, or thrown away when the person who owned them died. Sometimes the families of collectors are resentful of the time and money that the collector spent, so they throw it out! Terry was determined that this wouldn't happen to his; he felt an obligation to protect it and find a home for it. They continued as a mom and pop collection; UT was good up to a point, in that they provided space for the collection, which is not easy. The library continued to grow and grow. They were very close friends with Vic Boff, who died not long ago.

As Terry's interests began to expand, he collected older books about general exercise, diet, rest, mental tranquility, etc. He realized that the older books were much more general. Soon they were collecting in the fields of naturopathic medicine, alternative medicine, winter bathing, all kinds of views on food. Vic Boff was very well connected in this area, with Benedict Lust, Nature's Path, etc. Once they had an established home, with Vic's entree, they began to acquire the collections of other people such as Jesse Mercer Gehman, Christian Gian-Cursio (a naturopathic doctor, lecturer, and avid book collector), and Herbert Shelton.

The key to survival at a University is an endowment. The university manages the endowment and tries to make it grow. Their first, obtained some 20 years ago, started at \$200,000 and has grown to over \$600,000. Their more recent one, which is coming in slowly, will probably be even larger. Their spendable income from the two is about \$50,000/year, with which they hope to hire an archivist and a librarian. Terry (age 66) and Jan (age 52), who have no children and have invested a great deal of their own funds in the collection, now fulfill those functions (free of charge) on a person by person basis. Now 3-4 of Jan's graduate students are doing their PhD research at UT using the collection. One is about "Mail Order Muscle." The book *Crusaders for Fitness* by James Whorton (1982) was researched using their collection. Jack Berryman has done a lot of research in the general area of early exercise as well as physical culture, that laps over into diet. Berryman and Whorton are colleagues at the University of Washington [Seattle]; they are historians who work in the medical school. They have been having meetings with architects about home for their collections. The library is presently on the 1st floor of a gym at UT, and they have run out of available space.

How to access the collection: Some of the material is fairly well indexed, some on cards, and some has been

transferred to computers. All of Shelton's books are listed on paper. He realizes the importance of computerizing and annotating the collection. Terry and Jan work personally with potential researchers. All is by appointment only, with no regular hours. They publish a small journal and a grad student (who is in the final stages of her dissertation) helps them on that.

Prof. McLean was Terry's mentor in the field of exercise and physical culture at UT—long dead; he was very happy they Terry and Jan returned to UT. He helped Terry in his early collecting days and he had a very good collection himself. Kenneth Cooper in Dallas has had a wide-reaching effect on exercise in America.

A person who wishes to use the collection should send a rather precise list of things they are interested in and they would like to do. Jan works in the area that would be of most interest to Soyfoods Center. They will respond promptly to an enquiry, explaining how their resources could be of some benefit. They will try their best to help. They have a general description of the collection. Address: PhD, Room 22 AHG, Univ. of Texas, Austin, Texas 78712. Phone: 512-488-0015.

2726. Drosihn, Bernd. 2004. Update on soyfoods in Europe. Part II (Interview). *SoyaScan Notes*. March 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Soymilk: A major new soymilk maker in Europe is named Wild (www.wild.de), an old German food company that specializes in fruits and ingredients; their retail soymilk is named Soy and Joy. Their most famous brand is Caprisun, a non-soy drink in a foil pouch, well known in the USA. They and So Good, the Australian soymilk now made with Solae, are both strong competitors of Alpro.

Several weeks ago Hain-Celestial of New York purchased two German soymilk makers, both owned by Bruno Fischer, Jr.: Natumi and Gut Honneroth. He sold both companies at a low price—probably because he had to. Bruno had gotten his soymilk into Aldi, the mother company of Trader Joe's and the No. 1 discounter in Germany—and maybe in all of Europe, and he developed a large soymilk business with Aldi—perhaps so large he could no longer handle it himself. Bruno also made a lot of private label soymilk. With Hain, Bruno found a large German dairy to make soymilk for Aldi under a new Aldi brand. The new European CEO of Hain-Celestial is Philippe Woitrin, who was CEO of Lima Foods when Hain acquired it.

Triballat makes the best soy yogurts (Sojasun brand) in the world—in Bernd's opinion. They have a new brand, Sojadé, which are delicious creamy yogurt drinks—maybe organic. The Japanese Yakult concept of drinking live beneficial probiotic bacteria each morning has now caught on in a big way in Europe. Yakult is one of the best entries into the European food market in years. Bernd just saw White Wave's Silk Alive [the name was soon changed; it was sold commercially only under the name "Silk Live"], a similar

product, at the Anaheim Natural Products Expo. But he liked the Wildwood smoothie even better, and the WholeSoy fermented soymilk best of all American products.

In France a small company named Sojami (pronounced so-zha-MEE), which started about 10 years ago, makes very creative, unique, and interesting soy cheeses and cultured soy yogurts. The founder has a university research background and is a very nice guy.

Tofu: Tofu consumption in Europe has expanded steadily over the past 5-7 years, but it is still a very small product. The largest maker of the tofu and tofu products sold in Germany is Life Food GmbH / Taifun Produkte, run by Wolfgang Heck and Guenter Klein. Heuschen-Schrouff B.V. (Landgraaf, Netherlands) and Viana are tied for second place. About 10 years ago, Heuschen-Schrouff started selling their tofu under the organic So Fine brand (www.sofine.nl). An Indian-run company in Kerkrade, Netherlands, run by the brothers Singh (both Sikhs), makes tofu mostly for the Asian (Indonesian) market. In 2001 Viana started selling its tofu to the mainstream market under the Veggie Life brand; this English-language brand name communicates well to people speaking many different languages throughout the EU (European Union)—though distribution is still limited to Germany and Austria. Soto Tofu, formerly run by Rolf Barthof has been sold to a very large dairy company, Algäuland. Viana's main products are tofu and tofu products—such as meat and cheese alternatives. Viana is #1 in Germany in meat alternatives. Germans buy soyfoods for three main reasons: They are good for one's health, they taste good, and good for the environment. Bernd is a vegan, but about 90% of Viana's products are sold to non-vegetarians.

Early tofu companies still active in Europe include Sojafarm (founded and still run by Lothar Stassen), Albert's Tofuhaus (Albert Hess; exports lots of his products to France). A basic problem with the smaller, early tofumakers in Germany is that they didn't have the creativity or power to put a brand on the market. So both these companies produce a lot of tofu under private labels. Lothar bought the Svadesha brand (Svadesha was the first German tofu company) and produces tofu under the Svadesha brand. About 2-3 years ago he also purchased the Nagel's Tofu brand from Christian Nagel, who now markets the tofu under his former brand. So Lothar makes tofu under 3 brands. Berief Feinkost (in Beckum [Bochum?], northern Germany), started 10-15 years ago, tries to cover the mainstream tofu market, but not very successfully. Kassel Tofu Kato (started by Gyoergy / Yuri Debrecini, who was at Soyastern). Thomas Karas is no longer involved with soyfoods; he tried to enter the computer business but Bernd does not know what he is doing now. In Spain, the market leader is Natursoy near Barcelona. Nearby is Salvador Sala of Vegetalia. In Spain, there is a lot of interest in and rapid growth of soyfoods and organic foods. In Italy the Ki Group (Schenker) owns a tofu company—fairly old but not very creative.

In the United States, Pulmuone now has three U.S. factories; their first one in Southgate, southern California, a new one at Fullerton, California, and a 3rd one in New York. The Fullerton factory is the most modern Bernd has ever seen. There they make Gourmet Tofu, introduced in about Jan. 2004, which is presliced and marinated, in 4 flavors / styles: Baked, Sliced, and Marinated.

Meat alternatives: Nestle now owns Osem which owns Tivall, the Israeli maker of meat alternatives. Since all of Tivall's products are held together by eggs or egg whites, none of them are vegan—and none are organic. Quorn, which also contains lots of egg protein, is owned by AstraZeneca [Marlow Foods]—which wants to sell the company because growth and profits have been lower than expected. DE-VAU-GE in Germany is a very big company, they make large amounts of meat alternatives (incl. burgers), and they do a lot of business with Aldi in breakfast cereals—not in soyfoods. Bernd thinks they are good, and very economical manufacturers, but they are not very creative and they have no USP (unique sales point); moreover, many of their products contain egg protein, but their quality is lower than that of Tivall. Bernd believes his meat alternatives are as good as Tivall's, but more expensive, in part because of organic ingredients. Tivall makes its raw materials in Israel, then exports these to Europe for cutting and flavoring.

Klaus Gaiser owns Topas which sells Viti brand meat alternatives based on wheat gluten, with no soy; he owns the brand and markets the products, but he has meat companies manufacture them. However, when his typically 3-year contract with the manufacturer expires, he has to find a new manufacturer, but the previous one keeps making his products under their own brand. In the USA: At Turtle Island Foods (Hood River, Oregon), Bernd met Hans Wrobel, a German who does product development. Note: Hans and Rhonda Wrobel of The Higher Taste developed Tofurky in Portland, Oregon. Bernd makes Pizzarella, a tofu-based cheese alternative. Address: Founder and president, Viana Naturkost GmbH, 54578 Wiesbaum / Vulkaneifel, Germany. Phone: +49 06593-99670.

2727. *SoyaScan Notes*. 2004. Leading ice creams (\$ sales, both dairy and non-dairy) in the natural foods channel only, East Coast of the USA, from 1 Dec. 2001 to 2 March 2004 (Overview). March 20. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** At the beginning of this period (1 Dec. 2001) the sales ranking was as follows: (1) Haagen-Dazs, \$410,000. (2) Ben & Jerry's, \$390,000. (3) Imagine Foods [Rice Dream, non-dairy], \$250,000. (4) Turtle Mountain, Inc. [non-dairy], \$215,000. (5) Stonyfield Farms, \$210,000. (6) Tofutti [non-dairy], \$75,000. (7) Double Rainbow, \$000.

At the end of this period (20 March 2004) the sales ranking was as follows: (1) Turtle Mountain, Inc. [Soy Delicious, non-dairy], \$415,000. (2) Ben & Jerry's,

\$310,000. (3) Imagine Foods [Rice Dream, non-dairy], \$295,000. (4) Haagen-Dazs, \$285,000. (5) Stonyfield Farms, \$235,000. (6) Tofutti [non-dairy], \$115,000. (7) Double Rainbow, \$5,000.

Observations: (1) The company with by far the greatest growth during this period was Turtle Mountain, Inc.; its sales almost doubled. (2) Non-dairy frozen desserts generally grew more than dairy ice creams. (3) The company with the biggest decrease in sales was Haagen-Dazs, followed by Ben & Jerry's—both “super premium” dairy ice creams which are high in calories, butterfat, and cholesterol. Address: Soyfoods Center, Lafayette, California 94549.

2728. Product Name: Soy7 Soy Dry Mixes [Burger Mix, Chili Mix, Burger Bits, Taco Mix, Recipe Strips].

Manufacturer's Name: ADM Health and Nutrition.

Manufacturer's Address: 4666 Fairies Parkway, Decatur, IL 62526. Phone: 1-800-510-2178.

Date of Introduction: 2004 March.

Ingredients: Incl. NutriSoy soy protein.

Wt/Vol., Packaging, Price: Paperboard box.

How Stored: Shelf stable.

New Product–Documentation: Leaflet (8½ by 11 inch, color, glossy, front and back) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2004. March. “What is Soy7?” Includes 6 pastas and 5 dry mixes. Each package contains at least 7 grams of all-natural Nutri-Soy soy protein. The ingredients are not listed.

2729. Product Name: NutriSoy Organic Whole Bean Powder.

Manufacturer's Name: ADM Health and Nutrition.

Manufacturer's Address: 4666 Fairies Parkway, Decatur, IL 62526. Phone: 1-800-510-2178.

Date of Introduction: 2004 March.

Ingredients: Whole organic soybeans.

Wt/Vol., Packaging, Price: 20 kg net bags.

How Stored: Shelf stable.

New Product–Documentation: Leaflet (8½ by 11 inch, color, glossy, front and back) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2004. March. It “is a revolutionary ingredient that has what most soy products are missing—great taste.” Only hot water is used in processing. Smooth mouthfeel—microfine texture. Applications: “Soy milk. Soy beverages. Ice cream. Cookies and crackers. Yogurt. Drinkable yogurt. Cream cheese. Sour cream.”

2730. Clute, Mitchell; Lipson, Elaine. 2004. 25 ideas that changed the industry. *Natural Foods Merchandiser*. March. p. 54, 56, 60, 62.

• **Summary:** 1. You are what you eat. 2. Organic Gardening and Farming (Rodale's). 3. The Dietary Supplements Health and Education Act (DSHEA, 1994). 4. Organic Certification

(USDA, 2002). 5. Natural Foods Co-ops. 6. Advent of large natural supermarkets (Alfalfa's, Wild Oats). 7. Mainstream markets get natural. 8. The emergence of the integrative pharmacies. 9. Earthbound Farms' bagged salads.

10. Horizon becomes the first national Dairy Brand (1991). 11. Soymilk moves to cold case (White Wave's Silk, 1996). 12. It's soy good, I can't believe it's not meat (Gardenburger). 13. Health claims for foods. 14. What does it mean for a food to function [functional foods]. 15. Alternative medicine goes mainstream. 16. Scanners, bar codes, and OrderDog. 17. National natural distribution (Tree of Life). 18. Private label (lower price than name brands). 19. Natural, vegetarian and organic foodservice.

20. Healthy home meal replacement and fast food. 21. Healthy convenience foods. 22. Recycled and recyclable packaging (Dow Chemical Co. and Cargill Inc. developed the polymer). 23. Genetically modified organisms. 24. Organic goes gourmet. 25. Farmers' markets and communally supported agriculture.

2731. Product Name: Organic Granola Bars [Pumpkin FlaxPlus, Apricot 'n Nut, Cranberry Soy, HempPlus].

Manufacturer's Name: Nature's Path.

Manufacturer's Address: 9100 Van Horne Way, Delta, BC V4G 1E8, Canada. Phone: 604-248-8760.

Date of Introduction: 2004 March.

Wt/Vol., Packaging, Price: 14 oz (400 gm) paperboard box.

How Stored: Shelf stable.

New Product–Documentation: Leaflet sent by Patricia Smith from Natural Products Expo at Anaheim. 2004. March. “Authentic 1960's Organic Granola Bars.”

2732. New Hope Natural Media, a Division of Penton Media, Inc. 2004. Show directory: Natural Products Expo West 2004. Boulder, Colorado: New Hope Natural Media. 274 + 36 p. Illust. Exhibitor Index. Advertiser Index. 28 cm.

• **Summary:** From the cover: “The largest conference and tradeshow for the natural and organic products industry.” Contains many advertisements, color photos, and information about individual companies.

2733. *Nutrition Business Journal (San Diego, California)*.

2004. Eden Foods maintains independence in a consolidating industry. 9(3):18. March.

• **Summary:** A good interview with Michael Potter about the history and organic philosophy of Eden Foods. The company, “founded in 1969 as a retail food cooperative,” is the last significant organic food manufacturer in the USA, according to Potter, the company's sole owner. Walnut Acres used to be the oldest independent, until they were purchased and eliminated by Acirca.

Refrigerated soymilk has hurt sales of aseptically packaged soymilks, and Eden's soymilk sales have been

down 8.6%/year for each of the past 4 years. But Potter is optimistic about sales of Eden's other products. In 2003 Eden's sales were about \$45 million.

Eden's sales are 98% from organically grown products. Potter estimates that Eden supports about 300 family farms with 40,000 acres of organically managed farmland in the USA and Canada. The advent of USDA organic regulations [NOP] in 2002 brought major changes to Eden, from adding new organic ingredients to having to redesign all labels. Potter is critical of NOP for lax enforcement of organic standards, but he does not agree with those who think that the industry should work to make organic prices closer to those of conventional foods. "The percentage of income that Americans spend on food is the smallest in the world. Food is undervalued, and when you think 'cheap, cheap, cheap' what you end up with is conventional American food, the laughing-stock of planet Earth." Instead of using lower prices to attract new customers, Potter believes that educating consumers about organic and conventional food should drive future growth.

2734. Turtle Mountain, Inc. 2004. There is a reason... (Leaflet). P.O. Box 21938, Eugene, OR 97402. 3 panels each side. Each panel 8½ x 11 inches. Front and back.

• **Summary:** Another impressive color leaflet sent by Patricia Smith from Natural Products Expo West. 2004. March. A photo on the cover shows two freezers chock full of Turtle Mountain non-dairy frozen desserts. Page 2. "Turtle Mountain has become the #1 frozen dessert company in the Natural Foods Supermarket channel surpassing all of the market's best-known brands. Driving the market through market leadership." A table shows \$ sales ranking and \$ growth compared with a year ago for six companies: Turtle Mountain, Haagen-Dazs, Imagine Foods, Ben & Jerry's Stonyfield Farm Yogurt, Tofutti. Based on SPINSScan 52 weeks ending December 27, 2003.

Page 3 contains 3 nice bar graphs.

Page 5 states (in a pie chart): In natural foods supermarkets: "54% of the market is dairy desserts. 46% of the market is non-dairy frozen desserts and its growing!" Address: Eugene, Oregon. Phone: (541) 338-9400.

2735. Kennedy, Gordon. 2004. Update on health reform movements in the Los Angeles area (Interview). *SoyaScan Notes*. April 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The booklet "Classical nutrition," by Maximilian Sikinger (1946) is not owned by any library in the USA. His main theme was the secret of creation. Maximilian sold them at the Golden Door, a health retreat run by Edmond Bordeaux Székely, in Escondido and Hollywood. Maximilian knew Anne Marie Benstrom, the managing director (during the 1950s and 1960s; she was from Sweden).

The Anne Marie started her own health spa called the Ashram. That land in the Santa Monica Mountains was sold to her by Maximilian, the same land shown in *Children of the Sun* (1998, p. 164), where Maximilian is kneeling on a rock by a stream. That photo is on the cover of his booklet "Classical nutrition." Then Maximilian's land was adjacent to hers. Since the Ashram was only 40 minutes from Los Angeles, it attracted many Hollywood Stars such as Raquel Welch. The Ashram is still there and Anne Marie is still alive and a good resource. She lives both at the Ashram in Calabasas (in the hills northwest of Los Angeles) and in Seattle.

Anne Marie spent time with Emile Zimmerman (one of the early California "Nature Boys"). They looked like Adam and Eve. They went to some tropical adventure in some place like Brazil and tried to live off fruits and air.

Maximilian has been bed-ridden for several years. In the 1950s he started "pumping iron" (weight lifting) at muscle beach in Santa Monica, and he started eating meat. He was a fixture at hippie pop festivals like Gypsy Boots was, but Max was really Boots' guru. Finally the meat eating caught up with him, he started having problems with his health, and then he was put on medications. Carla, his wife, is much younger and is still very clear (phone 818-222-7930).

Paul Bragg was cured of his tuberculosis by Dr. Auguste Rollier, an M.D. practicing in Switzerland. Gordon is quite sure that Bragg mentioned it. He practiced heliotherapy, and his predecessor in the same area was Arnold Rikli. Rollier wrote a book titled *Heliotherapy* (1923; Oxford Medical Publications) which is about treating people who have tuberculosis using only sunshine at 5,000 feet (even in the winter with snow on the ground) in the Alps. Gordon has a copy of the book, which contains many remarkable "before and after" photos.

Louise Hays developed a large following starting about 15 years ago; her books and audio tapes emphasize positive affirmations for bodily health and for each organ. It's all about feeling positive to enable the healing process. You can do it yourself. Edgar Cayce was saying the same thing.

Gordon has a good collection of books on the early health and vegetarian movements in California. Many of these book are reprinted photocopied and sold by Health Research—which used to be in Mokelumne Hill, California, but is now in Pomeroy, Washington State.

The first psychedelic art was done by Fidus (Hugo Hoppener); a number of his works from the 1890s and early 1900s are reproduced in color in Gordon's book. Address: Ojai, California.

2736. Ewing, Jack; Zellner, Wendy; Armstrong, Larry; et al. 2004. The next Wal-Mart? Like the U.S.-based giant, Germany's Aldi boasts awesome margins and huge clout. *Business Week*. April 26. p. 60-62.

• **Summary:** A good analysis, focusing on marketing

and retailing, of the Aldi group in Germany. Aldi is short for “Albrecht Discount.” The reclusive co-founder Karl Albrecht, is said to be the world’s third-richest man, worth \$23 billion. A timeline shows that the story begins in 1913, when the parents of Karl and Theo Albrecht open a small grocery store in the city of Essen, north Germany. 1948–After serving in World War II as German soldiers, Karl and Theo open the first Aldi store in Essen. 1955–Aldi has 100 stores. 1960–The brothers divide the company, with Karl taking Aldi South and Theo Aldi North. They continue to share some operations. 1971–Theo is kidnapped and released after 17 days following a ransom payment of \$4 million. 1976–The first Aldi store opens in the USA in southeastern Iowa. 1979–Theo buys Trader Joe’s, an upscale natural foods and specialty foods discount chain based in California. 2004–Aldi is the world’s 11th largest grocery chain, with \$37 billion in sales and nearly 7,000 stores.

Aldi’s strategy is simple: carry relatively few good products (not including big name brands) and exert strong control over quality and price. All expansion is done using cash, not borrowed money.

A sidebar is titled “Trader Joe’s: The trendy American cousin.” Last year TJ’s profits per square foot were roughly twice that of regular American supermarkets. Between 1990 and 2001 TJ increased its number of stores fivefold and profits grew tenfold. More than 80% of the products are sold under the TJ brand or a humorous variant thereof. TJ’s plays its employees well, with above-union wages, generous bonuses, and a company-funded retirement plan.

TJ’s started in the 1960s [1967 in Pasadena, California] when Joe Coulombe was trying to figure out how to protect his 3 Southern California convenience stores, named Pronto Markets, from the onslaught of 7-Eleven stores. He loaded up on gourmet items and low-priced wines, plus discounted and overstocked merchandise.

Note: Trader Joe’s first expanded to the East Coast (Boston / Cambridge, Massachusetts, area) in about 1985-87.

2737. Ness, Carol. 2004. Kikkoman voted top vanilla soy milk: Taster’s choice. *San Francisco Chronicle*. April 28. p. F2. Food section.

• **Summary:** Five brands of organic soymilk were tasted and rated in descending order of preference as follows: 1. Kikkoman Pearl (73 points, \$2.29/qt at Rainbow). 2. Silk fresh (70 points, \$1.99/qt). 3. Pacific Select Low Fat (68, \$1.89/qt). 4. Vitasoy Smooth (66, \$2.09/qt). 5. Vitasoy Vanilla Delight (58 points, \$2.09/qt).

“Also tasted but unranked were Safeway Select Organic, WestSoy Plus, Soy Dream, Silk (boxed), Clover Stornetta, Trader Joe’s, Pacific Ultra, Wildwood, 8th Continent, Edensoy, and 365.” Address: Staff writer.

2738. Richmond, Akasha. 2004. Where did the natural foods industry come from? (Interview). *SoyaScan Notes*. April 28.

Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** It came from John Harvey Kellogg in Battle Creek Michigan, from Los Angeles and Hollywood.

The early history of health reform movements on the East Coast has been well studied, but nobody has studied that history on the West Coast.

Her idea of Harry Chandler coming to California in the late 1800s because he had tuberculosis and was very sick. He came for the weather. He started peddling fruits and vegetables, made some money, and returned home to Michigan. He got sick again, so he returned to California. He started by owning the distribution for the *Los Angeles Times*, then he married the publisher’s daughter, Miss Otis. Akasha found his obituary. Harry Chandler was a health nut, and that is why he let so many people (such as Harry Ellington Brooks and Philip M. Lovell) write columns in his newspaper. Great connection. The LA Times fueled an interest among people in Hollywood and elsewhere in Los Angeles.

First link, they all came to LA for the weather-sunshine-climate. The Germans also came for the fruit. Sanitoriums in the dry desert with sunshine for TB.

During the period from 1900-1930 in Los Angeles and Hollywood, many people thought about health and medicine in a completely different way than we do today. Much of what we now call “alternative medicine” was mainstream. These people relied on the “healing power of nature” and the idea that “food is the best medicine”—two key concepts that date back to Hippocrates—the father of Western medicine.

There was widespread respect for naturopathic doctors, drugless healing, and “nature cure.” Brook and Lovell both had an N.D. (naturopathic doctor) degree, not an M.D.

For decades, this view of health, healing, and food had almost disappeared from American culture. But now it is making a comeback for three main reasons. It goes directly to the cause of the problem, it does no harm, and it is dramatically less expensive.

The basic idea of going to a doctor, who will treat your symptoms with expensive drugs and medicines while you continue the lifestyle that caused the problem has become very popular for the last few decades—but it is too expensive and often does not solve the basic problem.

“In ancient Greece, doctors worked under the patronage of Asklepios (Pron. = as-KLEE-pee-us), the god of medicine, but healers served his daughter, the radiant Hygeia, goddess of health” (Dr. Andrew Weil, p. 3-4). Address: Los Angeles, California.

2739. Goldbeck, Nikki; Goldbeck, David. 2004. *Healthy highways: The traveler’s guide to healthy eating*. Woodstock New York: Ceres Press. viii + 421 p. April. Illust. 21 x 13 cm.

• **Summary:** A directory of 1,900 eateries and natural food stores in the USA. Organized by state (alphabetically) and

within each state alphabetically by city. For each business is given the name, address, phone number, and directions. Symbols show the type of business (natural food store, restaurant, etc.) plus a list of features (such as vegan, vegan-friendly, vegetarian, vegetarian-friendly, bakery, deli, etc.).

Note: This appears to be an updated and expanded edition of *The Tofu Tollbooth* (2nd ed. 1998), also published by Ceres Press. Address: P.O. Box 87, Woodstock, New York 12498. Phone: (845) 679-5573.

2740. Klute, Mitchell; Edmonds, Bryce; Lewis, Kristen; Uhland, Vicky. 2004. 25 who fortified supplements: Our list of 25 supplements visionaries (including one homeopath) was born of hours of debate, struggle, and learning. Many were left off; many have passed on. All of these 25 have given of themselves, faced criticism and persevered to grow a healthy industry. *Natural Foods Merchandiser*. April. p. 32, 34, 36, 38-42, 44-45.

• **Summary:** To mark its 25th anniversary, *Natural Foods Merchandiser* pays homage to the following visionaries (with a color portrait photo of most), listed alphabetically by last name: Anthony Almada, Elliot Balbert, Scott Bass, Jeffrey Bland PhD (former professor of biochemistry at the University of Puget Sound), Ross Blechman (his parents, David and Jean Blechman, founded Twinlab; he was a past president of Twinlab), Mark Blumenthal (takes saw palmetto), Bill and Peggy Brevort, Randy Dennin, Annette Dickinson PhD, Hal Drexler, James Duke PhD (former botanist with the USDA and author of numerous books on herbs), Christopher Hobbs, Jerry Kessler, Chris Kilham, Rob McCaleb (president and founder of Herb Research Foundation), Loren Israelsen, Jeff Katke, Jerry Kessler (founded Nature's Plus in 1971), Michael McGuffin, Michael Murray ND (has a database of more than 60,000 studies about natural health), Joe Pizzorno, Ed Smith, Dana Ullman (homeopathy), Roy Upton, Janet Zand, Loretta Zapp.

Each person responds to the following: Years in the biz. Accomplishment. Learning experience. Daily herbs/supplements. The next superstars. Hero. DSHEA's future. Desert island fave [favorite].

2741. Wagenvoort, Helen C. 2004. The high price of cheap food: Mealpolitik over lunch with Michael Pollan. *San Francisco Chronicle Magazine*. May 2. p. 10-14. Sunday.

• **Summary:** Pollan, age 49 and former editor of Harper's magazine, recently moved from his farm in rural Connecticut to Berkeley, where he holds a newly endowed chair to teach science and technology journalism. Orville Schell, dean of the UC Berkeley School of Journalism, convinced Pollan to make the move and credits Pollan with creating "food chain" journalism, a vast new world of important reporting; his articles are already making trouble for corporate food conglomerates. He started the movement from corn-fed to grass-fed beef, since "feeding a cow corn, rather than

the grass it has evolved to eat, transforms it from a solar-powered to a fossil-fueled animal." Alice Waters of Chez Panisse has said, apparently not in jest, that she wants Pollan to run for president, with Eric Schlosser, author of *Fast Food Nation*, as his running mate.

Why is organic food more expensive than food produced in the industrial food chain? Because "the real cost of cheap food is not reflected in its price. You're paying for it in your tax dollars because you're giving farmers a \$20 billion a year subsidy." You are also paying for it in public health costs and environmental pollution.

The more than Pollan writes about food, the more surprises he uncovers. Writing about beef led him to study corn, which took him to the Gulf of Mexico—which has become very polluted from nitrogen runoff from the corn fertilizers. That nitrogen comes from the Persian Gulf, "where we go to defend this oil supply that is the real feedstock of our agriculture. Twenty percent of our fossil fuel consumption goes to agriculture; the average item of food travels 1,500 miles before it gets to your plate. Our food economy depends on a cheap energy supply."

Note: Why didn't the study of beef lead him to a slaughterhouse?

2742. Richert, Bill. 2004. Cabino / Incognito / Rocamojo (Interview). *SoyaScan Notes*. May 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** A celebrity chiropractor [Ron Marino] stole his company. Cabino really never existed as a company; for while, he roasted the soybeans in his kitchen in Sherman Oaks, and sold it to 30 local stores. Then he called in his famous friend Ellen Tauscher, who had her own seat on the New York Stock Exchange. They started the company all over again, with hopes of getting a better flavor. But they never managed to get a better flavor—even after 18 months and a huge expenditure of money. But one of the experimental roasts they did was from a company that usually roasted nuts; the soybeans they sent to this company were somehow put into the coffee roaster by mistake and they came out tasting fantastic. So with that process, they started Incognito. River Phoenix, the vegetarian actor, was Bill's main investor. Bill had directed River in a movie titled "A Night in the Life of Jimmy Reardon."

Bill went into business with a celebrity chiropractor. Once the company started to thrive, the chiropractor stole the company; he cut Bill off from his office and from the bank account. But Rocamojo has become an extremely successful product. Its an amazing story. Rocamojo is now sold in Whole Foods, Wild Oats, General Nutrition Centers (GNC), Gristedes (New York), Von's, Safeway, etc. Senator Richard J. Durbin (D-Illinois) wants to put it into the military.

Bill has a huge and very successful law firm working for him on the case. He will tell me the whole story after the trial. Address: 1423 Euclid Ave., Santa Monica, California

90404. Phone: 310-394-7308.

2743. Richards, Michael. 2004. Life and work with candles, Part VIII. After the agreement with Cargill was signed (Interview). *SoyaScan Notes*. May 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In Oct. 2003 Michael purchased back most of the shares from Candleworks' main investor, Herb Wilson, although (as of May 2004) a small amount still remains to be paid (small remainder note). Herb has an excellent set of well-organized Candleworks company records. This expense took all of Michael's cash reserves, required him to borrow money to pay off Herb, and put him under a huge financial burden. Due to poor health, Herb agreed to settle for a lesser amount in exchange for quick payment.

About 6 months ago, Candleworks ceased production of finished candles, since Michael had no operating capital. During the company's move to a different building (18 months ago), Michael had to lay off some of his homeless and disabled workers. Today he employs about 3-4 such people. Throughout Candleworks' entire history, Michael has always "pushed people out the door to get other jobs." Because of the unique Iowa City economy, most of the people trained by Candleworks are still employed.

Presently, candle production is starting again slowly. Michael plans to have 10-12 employees, not 30-40. In the future, Michael plans to focus more of his efforts on income from royalties (getting customers for his soy wax made by Cargill) rather than income from making candles. But there is an interesting relationship between the two. The best way to improve the quality of his soy waxes is the use that wax for making candles. Real production is a much more effective way of doing research than just doing it in the lab.

Concerning deceptive labeling of candles: Some of the large manufacturers are starting to use the term "soy candles" on the label when the candle contains relatively little soy wax and mostly paraffin. This is not illegal since there are no labeling regulations in the candle industry. In fact, the ingredients used to make most candles are not even listed on the package. However buyers (for chains) and consumers nowadays are so much more discerning, so each is likely to ask his source about ingredients.

BeansWax Candle Co. was Michael's first customer for soy wax, even before the Cargill agreement (and one of the first to use the terms "soy candle" and "soy wax"). When Michael went with Cargill, BeansWax refused to switch to Cargill's flakes from the 35-lb blocks of soy wax that they had been used to buying from Candleworks. They believed (as does Michael) that Michael's original wax "looked more natural" and that the Cargill waxes "looked more like paraffin." For them it was a visual thing. Their main customers were natural foods chains such as Whole Foods, Wild Oats, etc. Michael bought hydrogenated oil from Cargill, formulated it himself to make finished PhytoWax,

shaped it manually into 35 lb blocks, loaded it into his pickup truck, and drove to the Iowa-Minnesota border, where he met the founders of BeansWax and transferred the blocks into their trailer; they would drive the blocks north into Minnesota. When Cargill started making the wax, they no longer used the other fatty acids from other sources; Cargill wanted the wax to be 100% Cargill ingredients. So Michael lost BeansWax as a customer; they felt that Michael's waxes were better before he switched to those made by Cargill. Michael thinks BeansWax then hired some people to figure out what was in Michael's pre-Cargill wax, and they did a pretty good job of duplicating his soy wax.

A private research group named Unity Marketing published a study of the candle industry; the full report costs about \$2,000. They have predicted that candle manufacturers who do not switch to soy wax are not going to survive. Companies will have to innovate to survive, and the most important innovation is the conversion to soy waxes. They say it is inconsistent for candle companies to market a product that they say is therapeutic, in some cases make it a base for aromatherapy, and make it from a petroleum product.

Michael presently sees his most important role in life as that of grandfather. He has two grandchildren. Michael, his eldest son, is the father of Christian (age 3), who lives in the Philippines and whom he has not yet seen. His second son, Benjamin, has no children. The third son, Solomon, is the father of Natasha (age 2), who is at Michael's home today. The fourth son, Mel, has no children.

Michael married a Filipino lady in the Philippines. They were together for about a year, but the marriage didn't work out. Michael is now back in Iowa, working at Candleworks. But he returns to the Philippines about once a year to spend time in the village with his son, and he is working to have his son come to the USA for his education. Address: Founder and owner, Candleworks, Inc., 1029 Third St. S.E., Cedar Rapids, Iowa 52401. Phone: 319-363-1774.

2744. Budgar, Laurie; Melville, Nancy; Uhland, Vicky. 2004. 25 who championed a cleaner plate: As we celebrate the inroads natural and organic food has made into consumer consciousness during the last 25 years, we often forget the pioneers who made it possible—the men and women... who educated consumers when the concepts were strange and new, and who persisted in the face of adversity. This month NFM profiles 25 people who have been influential in the natural foods industry. *Natural Foods Merchandiser*. April. p. 22, 24, 26, 28-31.

• **Summary:** To mark its 25th anniversary, *Natural Foods Merchandiser* pays homage to the following pioneers and visionaries (with a color portrait photo of most) who brought natural and organic foods into consumer consciousness; listed alphabetically by last name. For each person is given: A summary introduction, plus the person's answers to 7

questions: No. of years in the industry. What motivated you in the beginning? What motivates you now? What is been your biggest obstacle? What has been your biggest obstacle? When did you finally realize you'd made it? When did you know the industry would survive? What predictions do you have for the future of the industry? If you had to write your own epitaph, what would it say?

Tony Bedard of Frontier Natural Products Co-op. Andy and Rachel Berliner of Magic Mountain Herb Teas. Neil Blomquist of Cup of Sun natural foods store and Spectrum Organic Products. Annie Christopher of Annie's Naturals. Ben Cohen of Ben & Jerry's Ice Cream (the company was sold to Unilever in 2000). Mel Coleman Jr. of Coleman Natural Meats. Joel Dee of Edward & Sons Trading Co.

Steve Demos: In 1974 He founded Touch the Earth natural foods store in New Hope, Pennsylvania. In 1977 he founded White Wave (now the maker of Silk soymilk) in Boulder, Colorado.

Frank Ford, who founded Arrowhead Mills in 1960. By 1990 it had 220 SKUs. In 1999 Ford sold the company to The Hain Celestial Group. His early inspirations: Paul Keene of Walnut Acres, and Warren Clough of Shiloh Farms.

Michael Funk, founder of Peoples Mountain Warehouse in 1976, who went on to become founder of United Naturals Inc. Lynn Gordon, founder of French Meadows Bakery in 1985. Haas Hassan who founded Alfalfa's Market in 1974, then sold it in 1996 to Wild Oats Markets. Bill Knudsen who worked in his family's juice-processing business, R.W. Knudsen, founded in 1961 and was named president in 1977. In 1984 he sold the business to J.M. Smucker. Bob and Charlee Moore, founder of Bob's Red Mill. Robert Nissenbaum, who launched Morning Dew Food Markets in 1971, an organic and natural food store in St. Louis, Missouri. In 1974 he opened Sunshine Inn natural foods restaurant. In 1982 he co-founded Imagine Foods, which he sold in 2002 to The Hain Celestial Group. Michael Potter, who says he founded Eden Foods in 1968 (but who actually joined the company in Jan. 1971—he was hired by Bill Bolduc, who had founded Eden Foods in Nov. 1969). Barry Sears, author of *The Zone Diet* and a researcher at MIT (Massachusetts), where he found that the cause of most chronic diseases is inflammation. "You can put together diets with natural foods to control inflammation much better than you can with drugs. The Zone Diet is not about losing weight but about controlling the hormones that affect inflammation. He wants to use foods to change health care.

Bill Shurtleff and Akiko Aoyagi founded the Soyfoods Center in 1976.

Mo Siegel, founder of Celestial Seasonings in about 1969. Charles Stahler and Debra Wasserman co-founded the Vegetarian Resource Group, an outgrowth of Baltimore Vegetarians (Maryland) which the pair established in 1982. Arran Stephens founded Nature's Path in 1985; he has been in the industry for 37 years [i.e., since 1967]. Bob Stiller

founded Green Mountain Coffee Roasters in 1981. Albert Straus, of Straus Family Creamery. In 1993 he converted his family-owned dairy farm in Marin County, California, into the first certified organic dairy west of the Mississippi. Cyd Szymanski founded Colorado Natural Eggs in 1991—a cage-free business. Annie Withey created Smartfood popcorn in 1984.

2745. Richmond, Akasha. 2004. Jim Baker, The Source, restaurant in Hollywood, and Damian on Oahu, Hawaiian Islands (Interview). *SoyaScan Notes*. June 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Akasha has just talked with a man named Damian who (long ago) was the manager at The Source restaurant, owned by Jim Baker in Hollywood. Damian now owns his own health food store named the Source Health Store in Kailua, Oahu, Hawaii. He was the past president of The Association of Organic Farmers of Hawaii, has long been very active in organic issues, is now married, and has an excellent memory for dates. He said that before World War II, Jim Baker was a sickly teenager. Paul Bragg [or was it Jack LaLanne?] changed his life by making him aware of the importance of diet and lifestyle in good health.

Damian, who first met Jim Baker at a kundalini event, has a book titled *The Source Family Cookbook*, which has Jim Baker's whole life story and all the famous recipes; it was published for the family and was never sold in bookstores.

The name initially proposed for The Source was The Salad Bowl, since it was supposed to be a raw-food restaurant that would feature salads served in large wooden bowls. Baker closed The Source restaurant on Sundays to teach meditation. Also, Jim Baker has a son named Yod who lives in Southern California.

There were two recipes for which The Source was famous: (1) The breakfast cereal, a type of muesli (raw), that they ground fresh each morning, with oats and chia seeds and nuts, then they served it in a wooden bowl with Alta Dena raw cream to be poured on it. Everyone Akasha has ever talked with about The Source talks about that cereal. (2) The salad dressings and salads. Address: Los Angeles, California.

2746. BeDan, Michael; Ginsberg, Lynn; Gits, Victoria; Lewis, Kristen; Spehar, Christin. 2004. 25 natural business builders: Bankers and bean counters, investors and research analysts, marketers and financiers. Here's our list of 25 people whose wide range of talents helped turn the naturals business from a collection of isolated small businesses into a \$42.8 billion industry with potential, commitment and clout. *Natural Foods Merchandiser*. June. p. 68, 70, 72, 75-80.

• **Summary:** To mark its 25th anniversary, *Natural Foods Merchandiser* pays homage to the following visionaries (with a color portrait photo of most), listed alphabetically

by last name: Tom Aarts and Grant Ferrier (Co-founders on *Nutrition Business Journal*), Bob Anderson, Greg Badishkanian, Chip Baird, Marty Baird, Amy Barr, Roy Bingham and Mike Chase, Bob Burke, Carole Buyers, Cliff Feigenbaum, Mary Ellen Molyneaux and Steve French, Doug Greene (Co-founder of New Hope Natural Media in 1978; launched *The Natural Foods Merchandiser* in 1979, and Natural Products Expo in 1981. Currently a member of the board of Penton Media Inc., which acquired New Hope in 1999), Harvey Hartman and Laurie Demeritt, Jeff Hilton, Jay Jacobowitz, Harvey Kamil, Theresa Marquez, J. Gary Shansby and Charles Esserman, Suzanne Shelton, Morris Shriftman, Irwin Simon (Chairman, president, and CEO of The Hain Celestial Group. In 1992, with all the money he could save or borrow, he went out to consolidate and merge healthy food companies. The very first was Kineret Kosher Foods, and the second was Farm Foods. He went public in 1993 at a value of \$3 million; today Hain is valued at close to \$800 million), Paddy Spence (founder and chairman of SPINS, which pioneered the use of sales tracking information in the health and wellness industry), Michael Straus, Sylvia R. Tawse, Scott Van Winkle.

2747. Rich, Deborah K. 2004. Sustainable agriculture is more than organic methods. *San Francisco Chronicle*. July 3. p. F-1, F3.

• **Summary:** “Sustainable agriculture should be an extension of nature.” Address: Monterey writer and olive rancher.

2748. Richmond, Akasha. 2004. Gabrielle Barret (Sikh name: Gunga Bhajan) helped Jim Baker establish The Source in Los Angeles, became an early disciple of Yogi Bhajan and later founded the first Golden Temple restaurants across the USA and worldwide (Interview). *SoyaScan Notes*. July 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Gunga (now age 60) used to be a Sikh and disciple of Yogi Bhajan with Akasha. She was a California surfer girl who ended up going to college and then traveling—she went to Mexico, lived in San Francisco during the summer of 1966, hung around with beatniks, went to New Mexico and studied with the Hopi Indians, then came back to California in 1969, and camped out. As a hippie, she had one dress, one pair of shoes, and a little business making sandwiches—which she delivered to Jack LaLanne’s gym (among other places). She told Akasha that the whole thing of the ‘60s was you wanted to share what you believed in with everybody, and her whole mission was traveling everywhere and teaching everyone about vegetarian food.

One day she was walking down the street in Los Angeles and this big yellow Volkswagen van with a flower on the side pulled up. This guy looked out the window and asked, “Who are you.” She wasn’t Gunga yet, so she said “I’m Gabrielle.” He said “Come with us. I just got off on you. I have to know you.” It was Jim Baker. So in those days, she just got in the

van. He was probably with Robin by then. She was already a vegetarian and really into good food. She helped Jim Baker open The Source restaurant in Los Angeles. This woman had more potential than anyone Akasha knew. She had the best energy. After they opened The Source, she was the hostess at the patio (outdoors) there. Then she became a Sikh and one of Yogi Bhajan’s very first students. He gave her the name Gunga Bhajan—so he gave her his name. A Bhajan is a devotional hymn. She was the first of his students to tie a turban and the first to wear white. She used to meditate for 2 hours every morning with Yogi Bhajan and one other woman (Premka Kaur)—just the three of them. Most of Yogi Bhajan’s early students were hippies, with one exception—an older woman to whom he gave the name Shakti Parwha Khalsa; she had been searching for a spiritual teacher for 20 years. Shakti, whose mind is still as clear as ever, is still a vegetarian and still writing books on yoga. Premka later left the group and sued them. Yogi Bhajan used Gunga to lure Jim Baker into his group. She was the pawn, but she felt that was okay. She helped bring Jim Baker in, but she knew he never wanted to be in somebody else’s show.

Eventually she got married. She opened the first Golden Temple restaurant—it was her idea (not Yogi Bhajan’s), in part because she was such a good cook. The first one was in Washington, DC. Then Yogi Bhajan sent her all over the country, where she opened many Golden Temple restaurants (all vegetarian) and taught vegetarian cooking classes. Then she went overseas and opened Golden Temple restaurants in Amsterdam [Netherlands] and London. She has told Akasha many stories about this time, such as about the woman who invented the lemon-tahini dressing.

When her husband left her, she had a kind of nervous breakdown. She ended up working for a holistic Sikh doctor as a masseuse. “She was the best masseuse in the world. She used to hang out with Sharon Stone—a big, big Hollywood actress—and the Dalai Lama.” Her ex-husband invented telephone pornography. He was the first guy to start those 900 numbers where people call and have sex with someone on the phone. He became a multi-millionaire.

Today, her brain is a little fried, and her memory is not that good. Her story has a really tragic ending. After she stopped being a Sikh, in about 1996, she became a serious alcoholic, who lived on steak fried in butter and gallons of Diet Coke—in Los Angeles. She burned out, then moved to Seattle, Washington. “It was so sad. I was always good friends with her. We loved her. Oh, she had the best energy. Then she kind of bottomed out. Now she lives alone on Bainbridge Island [just north of Vashon Island] off the coast of Seattle and works in a dress shop.

Akasha still talks to her once in a while by phone. She’s very manic—either up or down, but she’s usually up. She doesn’t have a lot of anger about what happened. She still has great energy. She’s fine now, and happy, and lives a simple life. Address: Los Angeles, California.

2749. Wildwood Natural Foods, Inc. 2004. Wildwood Natural Foods enters into a strategic alliance with Pulmuone U.S.A., Inc. (News release). Watsonville, California. 1 p. July 20.

• **Summary:** “Wildwood Natural Foods, Inc. (‘Wildwood’), formerly known as Wildwood Harvest Foods, Inc., is pleased to announce that it has entered into a strategic alliance with Pulmuone U.S.A., Inc. The relationship provides for significant equity investments into Wildwood as well as a broad collaboration on research, production, marketing, and sales.”

Billy Bramblett and Jeremiah Ridenour (founders of Wildwood) and Tom Lacina (COO of Wildwood) express enthusiasm for the alliance. Dan Winegarden, President of the Iowa Agricultural Finance Corporation, supports the alliance. “Separately, Wildwood announces the appointment of Paul S-U Kang as President and CEO. Paul’s experience includes brand management at Procter & Gamble Co. in Cincinnati, Ohio, and mergers and private equity at Goldman Sachs & Co. in New York. He received his A.B. from Harvard Univ. in Massachusetts and his M.B.A. from Stanford Univ. in California.

Other investors in Wildwood include the tecTerra Food Equity Fund I, the Iowa Farm Bureau, soybean farmers, and over a dozen physicians interested in the health benefits of soy.

“Wildwood was founded some 25 years ago and has been a pioneer in the natural and organic food category. Pulmuone U.S.A., Inc., with three factories in the U.S., is a subsidiary of the publicly-listed Pulmuone Co., Ltd., with revenues of \$250 million. Pulmuone Co. Ltd. is the largest player in the global tofu industry and is a part of the Pulmuone Group with businesses in fresh juices, bottled water, fresh noodles, food supplements, and food services.” Address: Watsonville, California.

2750. Kennedy, Gordon. 2004. Collecting periodicals on naturopathy and health (Interview). *SoyaScan Notes*. July 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** He purchased most of his periodicals on ebay (online). He has a few issues of *California Health News*, about 100 issues of *Let’s Live*, and 15-20 issues of *Naturopath and Herald of Health* (New York, published by Benedict Lust), including some hardbound 1-year volumes. He also has a few issues from about 1900-01 of *Amerikanische Kneippblätter* and the *The Kneipp Water Cure Monthly and Herald of Health*. He no longer collects much because he has run out of shelf space. Address: Ojai, California.

2751. Rosario, Marimar. 2004. Organic farming: boon or boondoggle? Several Hoosier farmers consider switching. *Indiana Prairie Farmer (Lombard, Illinois)* 176(8):27. July.

• **Summary:** Organic agriculture is one of the fastest growing segments in the U.S. food industry. “During the 1990s certified organic cropland more than doubled. Two organic livestock sectors, eggs and dairy, grew even faster.”

Of the 7,000 certified organic farms in the USA, 100 are in Indiana. Most of Indiana’s organic farms consist of less than 10 acres.

2752. Alsever, Jennifer. 2004. Kaiser will open natural foods store at Oakland HQ. *Natural Foods Merchandiser*. Oct.

• **Summary:** Last summer, Kaiser started investing \$40 million into an advertising campaign named “Thrive,” which emphasizes healthy lifestyles and will try to slow “Kaiser’s flagging membership.”

2753. B.E. 2004. Original ‘Nature Boy’ Gypsy Boots remembered. *Natural Foods Merchandiser*. Oct. p. 24.

• **Summary:** Gypsy Boots died in August [Aug. 8] at his home in Camarillo, at the age of about 89 [or 93]. He was a lifelong vegetarian—except for a short stint eating fish. He believed, above all, in having a “positive attitude.” He is survived by two sons, Dan Bootzin of Los Angeles and Alex Bootzin of Pacifica, California; three grandchildren, and a sister. Photos show: (1) Gypsy boots in 1948, with six other young men, the “nature boys,” each holding a slice of watermelon. (2) Gypsy Boots in his later years.

2754. Ginsburg, Lynn; Oliver, Hillary; Uhland, Vicky. 2004. 25 people who influenced the organics industry. *Natural Foods Merchandiser*. Oct. p. 74, 76-78, 80, 82, 84, 86, 88, 90.

• **Summary:** To mark its 25th anniversary, *Natural Foods Merchandiser* pays homage to the following visionaries (with a color portrait photo of most), listed alphabetically by last name. They built the organics industry into the \$10.8 billion business that it is today. Roger Blobaum, Bena Burda, Amigo Cantisano and Kalita Todd, Lynn Coody and Yvonne Frost, Michael Crooke, Katherine DiMatteo (director of OTA since 1990), Sam Farr, Jonathan and Katarina Frey, Drew and Myra Goodman, Lewis Grant, Gary Hirshberg, Barclay Hope, Eckhart Kiesel, Senator Patrick Leahy (D-VT), The Lundberg brothers (Lundberg Family Farms, 35 years in the industry), Marty Mesh, Nell Newman, Steve Pavich, Anthony Rodale, Craig Sams (37 years in the industry), Bob Scaman, Bob Scowcroft, George Slemon, Michael Sligh, Zea Sonnabend.

Note: Unfortunately omitted: Paul Hawken and Michio Kushi (Erewhon), Jerome I. Rodale and Robert Rodale (Rodale Press), Michael Potter (Eden Foods).

2755. Hain Celestial Group, Inc. (The). 2004. Annual report 2004. Melville, New York. 58 p. Nov. 28 cm.

• **Summary:** Net sales for the year ended 30 June 2004 were \$544.058 million, up 16.6% from 2003. Net income in 2004

was \$27.008 million, down 1% from 2003.

Accompanying the annual report is a “Notice of Annual Meeting of Stockholders and Proxy Statement” (35 p.). Irwin Simon, the founder and CEO, age 45, had the following annual compensation: Salary: \$810,000. Bonus: More than \$850,000. Stock options: 300,000 shares. Note: The value of the company’s stock rose very slightly during the past year. Now the management is begging for compensation. Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

2756. Product Name: Westsoy Unsweetened Chocolate Soymilk.

Manufacturer’s Name: Hain Celestial Group (The) (Product Developer-Marketer).

Manufacturer’s Address: Melville, New York 11747.

Date of Introduction: 2004.

Ingredients: Organic soymilk (filtered water, whole organic soybeans), filtered water, natural flavors, cocoa powder (treated with alkali), carrageenan.

Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml) aseptic Tetra Pak carton. Retail for \$0.99.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Product with Label sent by Martine Liguori. 2006. June. Purchased at Grocery Outlet, Pleasant Hill, California. Front panel: Color photo shows chocolate soymilk being poured from a pitcher into a clear glass, against a background of stripes of green and yellow vanishing toward purple mountains. “Made with organic soymilk. 1 g net carbs. 46 mg isoflavones per serving. Lactose and dairy free.” Taste test: Nice flavor. Chocolate taste pleasant. User can add sweetener, if desired, to taste. Nice idea. Chocolate taste is pleasant.

2757. Ackerman, Michael. 2004. Science and the shadow of ideology in the American health foods movement, 1930s-1960s. In: Robert D. Johnston, ed. 2004. *The Politics of Healing: Histories of Alternative Medicine in Twentieth-Century North America*. New York, NY: Routledge. viii + 386 p. See p. 55-67. [39 ref]

• **Summary:** Contents: Introduction. Scientific background of the health foods movement. Principal claims of the health foods movement. Health foodist ideology. Scientific controversy and the shadow of ideology. Conclusion.

This is an unbalanced, one-sided and generally negative evaluation of the health foods movement. The writer is not clear about the differences between the health foods movement and the natural foods movement. For example, Joe D. Nichols was clearly a member and leader of the latter, whereas Ackerman classifies him in the former, and begins this chapter with a discussion of Nichols. However this introductory paragraph is very interesting and thought-provoking.

In 1936 a group of dentists in southern California

sought to turn the tide of diet-induced physical degeneration by founding the American Academy of Applied Nutrition (AAAN); they worked to educate health practitioners in “the science and art of nutrition.” Leaders of the health foods movement, besides Joe D. Nichols, included author Adelle Davis, magazine publisher J.I. Rodale, radio broadcaster Carlton Fredericks, “and perhaps most of all the purveyors of dietary supplements, who urged Americans to consume these products to compensate for the deficiencies in the nation’s foods.” Address: Graduate student, Dep. of History, Univ. of Virginia.

2758. Belleme, John; Belleme, Jan; Spevack, Ysanne. 2004. *The real taste of Japan: Using the finest ingredients*. London: Cross Media Ltd. 155 p. Illust. by Osamu Miyagi. 19 cm. [12 ref]

• **Summary:** See next page. Written and published for Clearspring, a natural foods importer and distributor in London.

Contents: Miso. Shoyu. Tamari. Mirin. Toasted Sesame Oil. Brown Rice Vinegar. Ume Plum Seasoning. Dashi. Sea Vegetables: Hijiki, Arame, Nori, Wakame, Kombu, Sea Vegetable Salad. Noodles: Lomein, Udon, Soba. Pickles & Condiments: Umeboshi Plums, Takuan, Sushi Ginger, Tekka, Shiso Condiment. Wasabi. Dried Tofu [Dried Frozen Tofu]. Mochi. Maitake Mushrooms. Shiitake Mushrooms. Lotus Root. Agar-Agar. Kuzu. Japanese Teas: Sencha, Hojicha, Kukicha, Genmaicha. Brown Rice Malt Syrup. Amazake.

This book contains at least one recipe (often several) for the use of each separate type of food. Recipes marked by an asterisk (*) are by Montse Bradford. Peter Bradford helped manage the book’s production.

2759. Bryson, Christopher. 2004. *The fluoride deception*. 1st ed. New York: Seven Stories Press. xxv + 374 p. Illust. 22 cm. *

• **Summary:** Perhaps the best book on the subject. Contents: Through the looking glass. Fireworks at Forsyth. Opposite sides of the Atlantic. General Groves's problem. General Groves's solution: Dr. Harold Hodge and the University of Rochester. How the Manhattan Project [to develop the first atomic bomb, 1942-1946] sold us fluoride: Newburgh, Harshaw, and Jim Conant's ruse. A subterranean channel of secret keeping. Robert Kehoe and the Kettering Laboratory. Donora: "a rich man's hocus pocus". The public health service investigation. As vital to our national life as a spark

plug to a motor car. Engineering consent. Showdown in the west: Martin vs. Reynolds Metals. Fluorine lawyers and government dentists: "a very worthwhile contribution". Buried science, buried workers. Hurricane Creek: the people rule. The damage is done. Epilogue: blind to the truth? Postscript: Dr. Arvid Carlsson, 2000 Nobel Laureate.

Publisher description of the book: "A chronicle of the abuse of power and of the manufacture of state-sponsored medical propaganda, *The Fluoride Deception* reveals how military and industry scientists and public health officials buried information about fluoride's potential for human harm, while promoting its use in dentistry. *The Fluoride Deception* reveals that fluoride pollution was the greatest legal threat facing the wartime Manhattan Project. And the book documents how a secretive group of powerful industries, who all faced extensive litigation for fluoride pollution, collaborated with the Institute of Dental Research to launder fluoride's image. We'll meet the dissident scientists who warned us about fluoride from the beginning. We'll sit with the famous doctor who alerted America in the 1950's to the dangers of cigarette smoking, who reported that fluoride was a systemic poison, with tens of thousands of citizens uniquely sensitive to even tiny doses. We'll walk the cobbled streets of Donora, Pennsylvania, in the shrouded aftermath of the nation's most notorious air pollution disaster in 1948, and meet the scientist who blamed fluoride for the deaths. Today, that scientist joins a growing number of health experts who call fluoride a venomous and hydra-headed poison. They suspect its involvement in a

host of modern illnesses, including arthritis, bone cancer, and emphysema, and a spectrum of central nervous system disorders such as Alzheimer's disease and the epidemic of attention deficit disorder sweeping America's children. Christopher Bryson is an award-winning Columbia Journalism School-trained investigative reporter and television producer. After reporting on Guatemalan Army human rights abuses from Central America in the late 1980s for the BBC World Service, National Public Radio, and The Atlanta Constitution, he won a George Polk Award for work at Public Television's *The Kwitny Report*. In 1998, he was part of a team that won a National Headliner award at ABC News Productions for a History Channel documentary on the bombing of Pan Am Flight 103."

2760. Hottinger, Greg. 2004. *The best natural foods on*

the market today: A yuppie's guide to hippie food. Vol. I. Asheville, North Carolina: Huckleberry Mountain Press. 223 p. Index. 23 cm. [94 ref]

• **Summary:** This book looks very commercial because it mentions many natural products by brand name. We wonder if companies paid to be mentioned. Contains scattered recipes for branded products, and scattered sidebars titled "Hippie wisdom." Discusses: Almonds, almond butter, almond milk, American Miso Co., antibiotics (used in agriculture in 4 different ways; prevention, treatment, and control of disease, and growth promotion. In 1998 the European Union banned the use of antibiotics to promote growth in livestock. In Oct. 2000 the FDA proposed a ban on two antibiotics also used to treat humans), antioxidants, Bifidobacterium (bifidus), bovine growth hormone, bovine somatotropin (BST), Bragg Live Foods, Bragg Liquid Aminos, breast cancer, calcium, canola oil, celiac disease, cereal & Kellogg Brothers, cheese alternatives, dulse, edamame, Eden Foods (says "Eden Foods opened shop in 1968. By 1969 they were grinding their own flours and bottling their own oils and nut butters"), FDA, flaxseed oil, Galaxy Foods (says they "started in 1972 when founder Angelo Morini invented a new way to make a cheese product free of saturated fat, cholesterol, and the milk sugar, lactose"), genetically engineered foods, ghee, ginger, gluten sensitivity, glycemic index, GMO [genetically engineered] crops, Graham–Sylvester, heart disease, hippie foods, Horizon Organic, hormones, Lactobacillus, lactose intolerance, Lappe–Francis Moore, Lightlife Foods, magnesium, Maine Coast Sea Vegetables, Messina–Mark, milk–problems with, miso, Miso Master brand, nutritional yeast, oils, olive oil, omega-3 and omega-6 fatty acids, organic farming, palm oil, phytochemicals, phytoestrogens, prostate cancer, protein, Red Star nutritional yeast, quinoa, saturated fat, sodium, soy milk, soy products, soy sauce, soy supplements and concerns, soy yogurts, spelt, Stonyfield Farm, tahini, tamari, tempeh, trans fats (hydrogenated oils), WholeSoy Company. Near the back are many color coupons for the companies mentioned in the book by name. Address: MPH, RD, Asheville, North Carolina.

2761. Iacobbo, Karen; Iacobbo, Michael. 2004. *Vegetarian America: A history*. Westport, Connecticut, and London: Praeger Publishers. xvi + 267 p. Illust. Index. 25 cm. [447 ref]

• **Summary:** An excellent history of the vegetarian movement in the United States from the late 1700s to the present—extremely well researched, well documented, and original. There have been three major waves of interest in vegetarianism, each beginning about 70 years apart. The first was in the 1830s and 1840s, and included Sylvester Graham and William Alcott. The second was from about 1900 to 1930. And the third and current period began in about 1970.

Contents: 1. Seeds are sown: Native Americans,

Benjamin Franklin, Johann Conrad Biessel (1691-1768; founded Seventh-Day Baptists, Ephrata Cloister in Pennsylvania), vegetarian Dunkers, William Dorrell and The Dorrellites (Leyden, Vermont), John Wollman (Quaker) and his journal, Herman Daggett, L. Du Pre, Johnny Appleseed (John Chapman, follower of teachings of 18th century Christian mystic and vegetarian Emmanuel Swedenborg), Joshua Evans.

2. Abstinance from fleshfoods: Christian vegetarians, and the English connection: Percy Bysshe Shelley, George Nicholson, Joseph Ritson, Rev. William Cowherd and the Bible Christian Church of Salford, William Metcalfe comes to the Philadelphia 1817 and establishes the Bible-Christian Church.

3. Sylvester Graham, Grahamism, and the Grahamites: Cholera epidemic, Graham's preventive medicine, why vegetarian?, Jacksonian era dining habits, Graham bread, Jacksonian era medicine, Isaac Jennings, Asenath Hatch Nicholson, Dr. John Burdell, Graham in the press, William Andrus Alcott and *The Moral Reformer*, American Physiological Society (APS) in Boston, founded in 1837, Mary Gove Nichols, *The Graham Journal of Health and Longevity*, the vegetable diet, Dr. Luther V. Bell and his prize-winning essay, Dr. Milo L. North, Asa Mahan and Charles Finney of Oberlin College [Ohio], Dr. Reuben Mussey, Grahamites and anti-Grahamites, J.J. Flournoy, abolitionists and transcendentalists, A. Bronson Alcott (father of Louisa May) of Concord, Massachusetts, nonviolence and Thoreau, James Pierrepont Greaves, Ham Common, Alcott House, William Lambe and the Physiological and Health Association, Fruitlands, abolitionist-vegetarians, Orson S. Murray, Horace Greeley and Mary Youngs Cheney (his wife), Graham's teachings on physiology and anatomy, William Metcalfe's book *Bible Testimony on Abstinance from the Flesh of Animals as Food...* (June 1840), Larkin B. Coles.

4. The American Vegetarian Society (AVS, organized in 1850 by William Metcalfe): First convention on 15 May 1850 in New York City, the society's periodical *The American Vegetarian and Health Journal* (Nov. 1850–Oct. 1854), Joel Shew and water cure / hydropathy, John Grimes and the first Vegetarian Festival in New York City (Christmas, 1851), feminism, Anne Denton, Charles Lane, death of Sylvester Graham, Dr. Russell Trall, Graham's legacy, front-page headlines in 1853 at the Vegetarian Festival (guests incl. Trall, Greeley, James Caleb Jackson, Frances Dana Gage, Lucy Stone, Susan B. Anthony, and Emilia Bloomer), New York Vegetarian Society (est. 1852), decline of AVS, Henry Stephen Clubb, Fowler & Wells, *The Water Cure Journal*, Quaker Jeremiah Hacker, Thomas Low Nichols.

5. The water cures, Seventh-day Adventists, and the Civil War: Henry Clubb, Octagon Settlement in Kansas (1856), Dr. James E. Spencer and the Harmonial Vegetarian Society in Arkansas (1857), James Caleb Jackson, Our

Home on the Hillside, Dr. Harriet N. Austin, Seventh-day Adventists, Millerites, Ellen G. White, drugless medicine, Dr. Russell Thacher Trall, end of AVS with the death of Wm. Metcalfe.

6. The Civil War to the end of the century: Dr. Mussey, Rev. Henry Ward Beecher, Henry Clubb keeps vegetarianism alive in America (though it lacks a national organization), John Harvey Kellogg, Isaac and Susan Rumford and Joyful News, California, Victoria Woodhull, Clubb founds the Vegetarian Society of America (VSA) in 1886, the VSA cookbook, and its periodical *Food, Home and Garden*, Chicago Vegetarian Society, Rev. A.T. De Learsey, Annie Besant, the New Thought movement, Charles and Myrtle Fillmore found the Unity School of Christianity in Missouri, Ralph Waldo Trine, Chicago World Exposition of 1892 (Illinois), William Axon is secretary of the Vegetarian Federal Union, vegetarian society formed in Washington, DC, vegetarian lectures at the Chicago World Expo, Alice Stockham, Dr. Susana Way Dodds, Dr. Martin Luther Holbrook, *The Herald of Health* magazine (Trall), vegetarianism and Christianity, J. Howard Moore, Lawrence Grunland, Henry Perky and his New Era Cooking School, 1895 gathering of vegetarians to celebrate Thanksgiving at University of Chicago, the animal question and ethical vegetarianism, antivivisection movement.

7. The Progressive Era and the rise of vegetarianism: It followed the Gilded Age and the Victorian Era, women's suffrage and vegetarianism, refrigeration expands food choices, vegetarian foods developed at the Battle Creek Sanitarium and Sanitas Nut Food Co. (Michigan), peanuts and meat substitutes, Dr. John Harvey Kellogg, Lena Francis Cooper [sic, Lenna Frances Cooper], vegetarianism in the media, George Bernard Shaw, Sarah Bernhardt, General William Booth and the Salvation Army, athletes and showmen, Eustace Miles, Karl Mann, walking and cycling, Bernarr Macfadden and his *Physical Culture*, his chain of vegetarian restaurants in New York City, scientific evidence in favor of vegetarianism, M.E. Jaffa, Dabney, E.V. McCollum, Russell H. Chittenden of Yale, Nicola Tesla, Kellogg's *Good Health* magazine, Upton Sinclair and *The Jungle*, passage of the 1906 Pure Food and Drug Act and the Meat Inspection Act, Hereward Carrington, Ernest H. Crosby, glamorous socialite Mrs. Maude R.L. Hammer Sharpe, the Millennium Guild (1912), M.R.L. Freshel, Benedict Lust and naturopathy, Kellogg battles the meat industry, the *Vegetarian Magazine*.

8. The Depression to the sixties: The lean years: Eat more meat, the soybean, Jethro Kloss, Henry Ford, World War II, Symon Gould, John Maxwell, Dr. Christopher Gian-Cursio, Herbert Shelton and natural hygiene, Dr. Jesse Mercer Gehman, *Recovery of Culture*, by Henry Bailey Stevens, the American Vegetarian Party found in 1948 by Symon Gould, its first presidential candidate was John Maxwell, Dr. Mervyn G. Hardinge, H. Jay and Freya

Dinshah, American Vegan Society.

7. Peace, love, and vegetarianism: The counterculture of the 1960s and 1970s: Socialites Pageen and Ed Fitzgerald, the California scene, Gypsy Boots, drugless doctor Pietro Rotundi, Los Angeles Vegetarian Society, Bianca Leonardo, Woodstock, Hog Farm commune of New Mexico, Wavy Gravy, Lewis B. Marvin, Lisa Laws, Yogi Bhajan, Golden Temple restaurant, Haight-Ashbury, hippies, The Farm and Stephen Gaskin in Tennessee, the soy dairy, *The Book of Tofu*, by Shurtleff & Aoyagi, Helen & Scott Nearing, *Diet for a Small Planet*, Nellie Shriver and Connie Salamone, *Vegetarian Times*, PETA, Isaac Bashevis Singer, North American Vegetarian Society, the press, William Blanchard and *Vegetarian World*, McGovern Report.

10. Vegetarianism has arrived: Animal rights, popular vegetarian cookbooks, vegetarianism and the environment, John Robbins and *Diet for a New America*, new scientific evidence, Dr. Neal Barnard and PCRM, Suzanne Havala, Howard Lyman, the movies and television, new vegetarian foods, the Internet, the Atkins Diet attack.

Photos show: (1) William Metcalfe. (2) Sylvester Graham (illust.). (3) William Alcott. (4) Front page of *Graham Journal of Health and Longevity* (16 Feb. 1839). (5) Reuben Mussey, M.D. (6) A. Bronson Alcott in top hat and cape. (6) Henry S. Clubb. (7) James Caleb Jackson. (8) Ellen G. White. (9) Russell T. Trall. (10) John Harvey Kellogg, M.D., dressed in white, riding a bicycle. (11) Menu cover of The First Vegetarian Restaurant, Carl Rasmussen, proprietor. (12) Battle Creek Sanitarium. (13) Bernarr MacFadden on the cover of *Physical Culture* magazine (Sept. 1902). (13) Cover of *Good Health* magazine (Aug. 1898). (14) M.R.L. Freshel. (15) Cover of *The Vegetarian Magazine* (July 1924). (16) Constantina "Connie" Salamone. (17) Ingrid Newkirk of PETA. (18) PETA poster "Does your food have a face? Go vegetarian." (19) Neal Barnard, M.D. of PCRM. (20) Suzanne Havala Hobbs. (21) Howard Lyman. (22) VivaVeggie's Penelo Pea Pod. (23) Two PETA spokeswomen with signs outside Rhode Island State House. (24) Bruce Friedrich of PETA.

Note: This book has several weak points: (1) The authors repeatedly confuse a vegetarian diet with a "plant-based" (vegan) diet. (2) The history focuses too much on the story of individuals and not enough on the great historical forces by which those individuals are shaped. Address: 1. Journalist, researcher, and Adjunct Prof. of English at Johnson and Wales, Univ., Rhode Island; 2. Journalist who has worked for the Associated Press, the Providence Phoenix, and other publications.

2762. Johnston, Robert D. ed. 2004. *The politics of healing: Histories of alternative medicine in twentieth-century North America*. New York, NY: Routledge. viii + 386 p. 26 cm. [1181* ref]

• **Summary:** A creative and sincere look at the complex

subject of the histories of alternative medicine, with many chapters by various authors. “From grocery store to doctor’s office, alternative medicine is everywhere. A recent survey found that more than two in five Americans uses some form of alternative medicine. *The Politics of Healing* brings together top scholars in the fields of American history, history of medicine, anthropology, sociology, and politics to counter the view that alternative medical therapies fell into disrepute in the decades after physicians established their institutional authority during the Progressive Era. From homeopathy to Navajo healing, this volume explores a variety of alternative therapies and political movements that have set the terms of debate over North American healing methods.”

Contents: Introduction: The politics of healing. I. Precursors: The years in the wilderness: Negotiating dissent: Homeopathy and anti-vaccinationism at the turn of the 20th century, by Nadav Davidovitch. Making friends for ‘pure’ homeopathy: Hahnemannians and the Twentieth-Century Preservation and Transformation of Homeopathy, by Anne Taylor Kirschmann. Revisiting the ‘Golden Age’ of regular medicine: The politics of alternative cancer care in Ontario [Canada], 1900-1950, by Barbara Clow. Science and the shadow of ideology in the American health foods movement, 1930s-1960s, by Michael Ackerman.

II. Intersections: Allopathic medicine meets alternative medicine: ‘Voodoo death’: Fantasy, excitement, and the untenable boundaries of biomedical science, by Otniel E. Dror. Western Medicine and Navajo healing: Conflict and compromise, by Wade Davies.

III. Contesting the Cold War medical monopoly: Sister Kenny goes to Washington [DC]: An unorthodox nurse, polio, and medical populism in postwar America, by Naomi Rogers. ‘It could happen here’: California housewives, anti-Communism and the Alaska mental health bill of 1956, by Michelle M. Nickerson. ‘Not a so-called democracy’: Anti-fluoridationists and the fight over drinking water, by Gretchen Ann Reilly.

IV. Contemporary practices / contemporary legacies: Engendering alternatives: Women’s health-care choices and feminist medical rebellions, by Amy Sue Bix. Inside-out: Holism and history in Toronto’s women’s health movements, by Georgina Feldberg. A quiet movement: Orisha and the healing of people, spirit, history, and community, by Velana Huntington. The politics and poetics of ‘Magazine medicine’: New Age ayurveda in the print media, by Sita Reddy. Complementary and alternative medicine cancer therapies in twentieth-century North America: The emergence and growth of a social movement, by David J. Hess. Beyond the culture wars: The politics of alternative health, by Matthew Schneirov and Jonathan David Geczik.

V. Conclusions: Contemporary anti-vaccination movements in historical perspective, by Robert D. Johnston. From cultism to CAM: Alternative medicine in the twentieth

century, by James C. Whorton.

Soy is mentioned on pages 163-64, 174, 177, 178, 179, 348.

Joe D. Nichols is mentioned on p. 55, 324, 325, 326.

“Health foods movement” is mentioned on p. 55-67, 179, 247, 323-24. Address: Assoc. Prof. and Director, Teaching of History Program, History Dep., Univ. of Illinois at Chicago.

2763. Richmond, Akasha. 2005. Organic Milling Co. and Back to Nature Granola (Interview). *SoyaScan Notes*. Feb. 11. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** Organic Milling Co., located in San Demos, California, has a website which says that they started in the 1960s making Back to Nature granola out of the back of a health food store in 1968. They had a link on their website to Back to Nature Granola, which is now owned by Kraft—both the company and the brand. Kraft has a full line of Kraft-type products under the “Back to Nature” brand. Akasha called Kraft and nobody would talk to her; they told her to submit her questions in writing.

So she called Organic Milling Co., which makes the granola for Kraft, and the guy she talked to said they make granola for Weight Watchers, Trader Joe’s, Kraft, etc. The man who founded the company in the 1960s died 4 months ago, and this guy was not there in the beginning. He said he would send Akasha sales sheets showing the original packaging. Address: Los Angeles, California.

2764. Daniel, Kaayla T. 2005. The whole soy story: The dark side of America’s favorite health food. Washington, DC: New Trends Publishing, Inc. xviii + 457 p. Index. 24 cm. Introduction by Sally Fallon. [1797 ref]

• **Summary:** Contents: Acknowledgments. Introduction, by Sally Fallon. Part I: A short history of soy. 1. Soy in the East. 2. Soy goes West. 3. The ploy of soy.

Part II: Types of soy. 4. Green pods, yellow beans and black eyes. 5. The good old soys—Soybeans with culture. 6. Not milk and uncheese—The udder alternatives. 7. All American soy—First generation soy products. 8. All American soy—Second generation soy products. 9. Soy oil and margarine—Fat of the land. 10. Soy lecithin—Sludge to profit. 11. Not trusting the process. 12. Formula for disaster.

Part III: Macronutrients in soy. 13. Soy protein—The inside scoop. 14. Soy fat—Shortening life. 15. Soy carbohydrate—The flatulence factor.

Part IV: Antinutrients in soybeans. 16. Protease inhibitors—Trying on soy. 17. Phytates—Ties that bind. 18. Lectins—Glutins for punishment. 19. Saponins—Soap in your mouth. 20. Oxalates—Casting stones.

Part V: Heavy metals. 21. Manganese toxicity—ADD-ing it up. 22. Fluoride toxicity—Dental and mental fluorosis. 23. Aluminum toxicity—Foil-ing health.

Part VI: Allergens: Shock of the new. 24. The rise in soy

allergies. 25. The soy-free challenge.

Part VII: Soy Estrogens: Hormone Havoc. 26. Phytoestrogens—Food’s fifth column. 27. Soy and the thyroid—A pain in the neck. 28. Soy infant formula—Birth control for baby? 29. Soy and the reproductive system—Breeding discontent. 30. Soy and cancer—High hopes and hype. End notes.

The first six pages of this book are filled with endorsements from Drs. Joseph Mercola, Larry Dossey, Russell Blaylock, Jonathan Wright, Kilmer McCully and many other physicians and scientists.

At the top front of the dust jacket: “Kaayla Daniel blows the lid off nutritional dogma. Soy is NOT a miracle food.—Dr. Joseph Mercola, Founder of the world’s leading natural health and dietary website, Mercola.com.” Address: PhD, CCN (certified clinical nutritionist), 2162 Candelerio, Santa Fe, New Mexico 87505.

2765. Fluoride Action Network (NZ) Inc. 2005. A history of fluoridation (Website printout—part). www.fannz.org.nz/text/world_history.htm 27 p. Retrieved March 6.

• **Summary:** A fascinating overview and chronology (from 1855) of the history of drinking water fluoridation in the USA and several other countries. It argues persuasively that fluoridation of public drinking water is now well known to be of no benefit to citizens. However it is a godsend to large aluminum and superphosphate companies like ALCOA and Reynolds metals, for they can now sell their fluoride which was previously considered an environmental contaminant. Major early players in the drama: H.V. Churchill, ALCOA’s chief chemist. Gerald J. Cox (1930s), a biochemist at the Mellon Institute (founded in 1911; ALCOA’s Pittsburgh [Pennsylvania] industrial research lab); he became a major promoter of fluoridation. Dr. H. Trendley Dean, a public dentist, who began investigating the epidemiology of fluorosis so that new *restrictive* standards could be set for natural fluoride levels. Oscar Ewing, a lawyer.

1939—Prior to this time, fluoride had been targeted for removal from food and water supplies because of its recognized toxicity. Four cities were targeted for initial fluoridation experiments: Grand Rapids, Michigan; Newburgh, New York; Evanston, Illinois; and Brantford, Ontario, Canada. Address: New Zealand.

2766. Richmond, Akasha. 2005. Impressions of the Natural Products Expo at Anaheim (Interview). *SoyaScan Notes*. March 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** At the Expo, White Wave hosted and Akasha catered a large (150 people invited) benefit dinner for the relatively new Organic Center, a 501(c)(3) of the Organic Trade Association (OTA). The Center’s main mission is to prove the health benefits of organic foods; it has a new CEO named Mark Davis.

Steve Demos, days after leaving White Wave, came to the dinner, gave a short speech, and got a standing ovation. He was on the verge of tears.

After Dean Foods forced Steve out of White Wave (he definitely did not resign), many other people—especially those with the most experience, have also resigned. Pat Calhoun was one of these, but they offered her \$1 million to stay on for 2 more weeks to help make the transition smooth—so she did.

Steve spent a little time at the White Wave booth, but without him there it just didn’t have its usual energy. Steve went down to the local Disney shop, bought one of those caps with an arrow through his head, and wore it during the show. He said his nickname was Icarus. People just love him.

Dr. Andrew Weil came to the dinner. Akasha was fortunate enough to be able to spend about 5 minutes with him. He has a huge aura, beaming, very approachable, couldn’t have been nicer. His energy is great. He has been a huge supporter of soyfoods over the years. He gave the keynote address at the Supply Expo (part of the Natural Products Expo); his subject was the health care crisis in America. He has a foundation and the CEO of his foundation was there. He organizes a big nutrition conference each year, and he invited Akasha to attend and cook for the next one. Address: Los Angeles, California.

2767. Laepple, G. Wayne. 2005. Paul K. Keene, Walnut Acres founder, dies. *Daily Item (The) (Sunbury, Pennsylvania)*. April 25.

• **Summary:** A superficial obituary. However the one published in this newspaper the next day (April 26) is excellent.

2768. *Daily Item (The) (Sunbury, Pennsylvania)*. 2005. Paul K. Keene [obituary]. April 26.

• **Summary:** One of the best obituaries seen of Paul Keene, of Penns Creek, who died on April 23 at age 94, at Messiah Village, Mechanicsburg, where he had resided for the last four years of his life. Begins with a summary of his life up to the time he and Betty purchased Walnut Acres.

In 1964 Paul and Betty Keene created the Walnut Acres Foundation to further their commitment to the community and the world. Over the years, many thousands of dollars were collected through the generosity of Walnut Acres customers and friends. Two projects became the foundation’s primary focus: the Walnut Acres Community Center and the Family Village Farm, an orphanage in South India, where the foundation built several dormitories and classrooms and finally, in 1990, a large auditorium dedicated to the memory of Betty Keene.

“Paul was an active member of the Emmanuel United Church of Christ in Penns Creek, Pennsylvania, for many decades. For 10 years he was a member of the United Church Board for World Ministries.

“He was also actively involved as a member of the Middleburg joint school board and Center Township supervisors.

“In 1971, he was awarded Susquehanna University’s first Distinguished Citizenship Award, and in 1976, he was presented with an Honorary Doctor of Science degree from Lebanon Valley College. In 1984, he was awarded the Community Partnership Award from Gov. Richard Thornburgh, and in 1986, he received a citation from the Pennsylvania House of Representatives. In 1998, the Organic Trade Association presented Paul with the Organic Leadership Award.

“Music was very important in Paul’s life, and as a graduate student, he sang with the Yale Glee Club [New Haven, Connecticut]. For nearly 30 years, he continued his love of singing as a member of the Susquehanna Valley Chorale.

“In addition to his wife, he was preceded in death by his two brothers, John Keene of Phoenixville and J. Calvin Keene of Lewisburg.

“He is survived by his sister, Ruth Hostetter, wife of the Rev. Mark Hostetter of Cornwall, Pa.; his three daughters, Marjorie Ann Hartley, wife of Thomas Hartley of RR2 Middleburg, Ruth Keene Anderson, wife of William A. Payn of RR2 Middleburg, and Jocelyn Betty Keene, wife of Thomas Phillips of Pasadena, California; six grandchildren; and eight great-grandchildren.

“A service celebrating Paul’s life will be held at 3 p.m. Friday, April 29, at Emmanuel United Church of Christ, Penns Creek.

“In lieu of flowers, donations in Paul’s memory may be made to Messiah Village, 100 Mount Allen Drive, Mechanicsburg, PA 17055; the Susquehanna Valley Chorale, P.O. Box 172, Lewisburg, PA 17837; or Emmanuel United Church of Christ, Penns Creek, PA 17862.

“Private burial was in Penns Creek Union Cemetery.”

2769. *Daily Item (The) (Sunbury, Pennsylvania)*. 2005. Paul K. Keene. April 26.

• **Summary:** An excellent obituary.

2770. Finnerty, John. 2005. Walnut Acres founder was ahead of his time. *Daily Item (The) (Sunbury, Pennsylvania)*. April 26.

• **Summary:** A good obituary. In 1945 [sic, 1946] Paul Keene and his wife Betty bought Walnut Acres, a farm in Center Township, Snyder County.

Various people (such as Gene Kahn, founder of Small Planet Foods in Sedro-Woolley, Washington [state], and Katherine DeMatteo, executive director of the Organic Trade Association) discuss the importance of Paul Keene to the organic farming movement and industry.

In 1998 the Organic Trade Association honored Mr. Keene with its Organic Leadership Award; he was the second

person to receive this award. Note: The first person was The Honorable Patrick J. Leahy (D-Vermont; Senator); the third person was Frank Ford, Founder, Arrowhead Mills.

2771. DeVault, George. 2005. Walnut Acres founder Paul Keene dies at age 94. *New Farm (The) (Rodale Press, Emmaus, Pennsylvania)*. May 12.

• **Summary:** A good obituary. “The year was 1942. Tractors were about to outnumber horses on American farms. Chemical weed-killers and bug sprays were being promoted as the wave of the future. Organic farming and publishing pioneer J.I. Rodale was just kicking around the idea of starting a magazine for organic farmers. And wannabe organic farmers Paul and Betty Keene were farming and teaching for \$5 a week, plus room and board, as they gained experience and searched for land to start their own farm.”

Walnut Acres eventually grew into a business with sales of \$10 million a year, and a mecca for organic farmers worldwide. In its heyday, the catalog had a circulation of more than 40,000.

For a greatly expanded version, see DeVault May 2006, “What became of Walnut Acres?”

2772. Associated Press. 2005. Paul Keene, organic farmer, dies at 94 (News release). 2 p.

• **Summary:** Paul Keene died on April 23 at the Messiah Village Nursing Home, where he had lived for several years. The co-founder of one of the nation’s oldest organic farms, he proved that using organic methods to grow natural foods can be good business.

The son of a minister and educated at Yale [New Haven, Connecticut] he ran Walnut Acres in Penns Creek, Pennsylvania, located about 55 miles north of Harrisburg, for more than 50 years, until the business was sold in 2000.

The farm initially contained only 108 acres; he and his wife, Betty, borrowed \$5,000 to buy it in the mid-1940s. They worked the land without using tractors or electricity and grew crops without using made-made fertilizers or pesticides widely used by other farmers.

An article (early Sept. 1947) in the now-defunct *New York Herald Tribune* praising their first commercial product—apple butter—helped to jump-start the fledgling company.

By the late 1980s, Walnut Acres had sales of \$5 million a year, covered 500 acres, employed 95 people full time, and yielded about 300 organic products that it sold worldwide via its mail-order catalog.

Ruth Keene Anderson, one of their three daughters, said that her parents were “missionaries at heart.” Ruth still lives on the property, which the family now leases to an organic farmer.

In 2003 the Hain-Celestial Group acquired the Walnut Acres Certified Organic brand.

A photo (by Paul Vathis) shows white-haired Paul Keene, co-founder of Walnut Acres, on 13 Dec. 1988 in a

retail store holding two bags of Walnut Acres products. In 1988 the company had annual sales of \$5 million.

2773. Fox, Margalit. 2005. Paul K. Keene, 94, organic farming pioneer, dies. *New York Times*. May 18.

• **Summary:** An excellent obituary for a great man. “When Mr. Keene started Walnut Acres in the mid-1940’s, the agricultural gospel called for using chemical fertilizers and insecticides, with their promise of cheaper, more efficient farming. Natural farming was viewed as eccentric, if not downright un-American.

“‘It doesn’t seem that long ago that everyone thought we were kooks or Commies,’ Mr. Keene told U.S. News & World Report in 1995. ‘Someone once tossed dynamite on the property. Another burned crosses.’”

“A former mathematics professor and avowed pacifist, Mr. Keene never set out to be a commercial farmer. He simply wanted to go back to the land.”

A color photo shows Paul Keene smiling, holding a hoe on one shoulder.

2774. Sullivan, Patricia. 2005. Organic food pioneer Paul Keene dies at 94. *Washington Post*. May 19.

• **Summary:** An excellent obituary for a great pioneer, Paul Keene, who died on April 23 at Messiah Village Nursing Home in Mechanicsburg, Pennsylvania, not far from the farm where he launched the modern commercial market (and movement) for organic, natural foods. The cause of death was not given.

In the mid-1940s he and his wife, Betty, bought 100 acres of land at Penns Creek in Central Pennsylvania and began to grow crops without using chemical fertilizers or pesticides. He spread animal manure over the fields and focused on the basic principle that “healthy soil begets healthy food.” He believed that manmade chemical assistance was unnecessary and potentially harmful. He had to coax beneficial insects and earthworms back into the depleted soil. A neighbor, Jerome Irving Rodale, said he was thinking about starting a magazine to be named Organic Farming, and invited Paul Keene to be assistant editor; he replied that he’d rather farm.

The Keene’s first harvest, from six old apple trees, was about 15 bushels. Using a large iron kettle over an open fire, they simmered the apples down to 100 quarts of apple butter, which they sold for \$1 a quart. “The food editor of the *New York Herald-Tribune* [Clementine Paddleford] came across one of the jars and wrote her praises into print, which gave the Keenes’ fledgling farm a lucrative jump-start into business.” But it took more than a decade before that farm reliably made a profit.

Keene was one of the first organic farmers in the United States and the first to try direct consumer marketing.

In 1964 Paul and Betty Keene created the Walnut Acres Foundation, which funded a community center in Penns

Creek and an orphanage in India.

In 1987 Betty, Paul’s wife of 47 years, died.

In 1995 Keene told *U.S. News & World Report*: “It doesn’t seem that long ago that everyone thought we were kooks or commies.”

Mr. Keene and his family turned their business into an employee-owned enterprise, although they retained ownership of the land, which had grown to 500 acres.

In 1998 the Organic Trade Association gave Paul Keene its Organic Leadership Award.

Before Walnut Acres was sold in 2000, the business had annual sales of \$10 million. They mailed out about a million catalogues a year and offered more than 700 products.

As of May 2005 there are about 900 certified organic farmers in the United States, and the retail value of their products is about \$12 billion a year.

Paul Keene is survived by; three daughters, Marjorie Ann Hartley and Ruth Keene Anderson, both of Middleburg, Pennsylvania, and Jocelyn Betty Keene of Pasadena, California; a sister; six grandchildren; and eight great-grandchildren. Address: Washington Post News Service.

2775. Sullivan, Patricia. 2005. Paul Keene, 94; helped launch U.S. organic food movement. *Record (Bergen County, New Jersey)*. May 20, p. L9.

2776. Holleran, Joan. 2005. Awareness, consumption of soy up. *Iowa Soybean Review (Iowa Soybean Association, Urbandale, Iowa)* 16(7):12f-12g of 12-page insert after p. 14. Spring.

• **Summary:** “The United Soybean Board in Chesterfield, Missouri, recently published its 11th annual ‘Consumer Attitudes About Nutrition’ survey that provides insights into nutrition, health and soyfoods. The study identifies consumer attitudes and trends in nutrition. Most of the questions relate to soy, but some do not, says Steve Poole, director, edible program, United Soybean Board.

“‘We want this to be a valuable tool for industry players, including manufacturers, marketers and others who aren’t just focused on soy. It’s meant to be a helpful tool to them when they are talking to consumers,’ he says.

“Poole says many companies use the ‘Consumer Attitudes’ survey for sales presentations or even research. ‘One reason they like it is that USB is a third party. Another is that this is a statistically sound survey, and there are benchmarks going back 11 years.

“‘Companies can use it for developing products, identifying markets where they can provide products to fulfill a health benefit, or in sales materials,’ he says.

“Consistent with the past six years, nearly 90 percent of respondents indicated they were somewhat or very concerned

about the nutritional content of food. This year, 74 percent of consumers claimed to have changed their eating habits due to health or nutrition concerns, a four percent increase from 2003.

“Consumers are well aware of the obesity crisis in the United States. The Centers for Disease Control and Prevention state that approximately 130 million Americans are overweight or obese, a total of 64 percent of the nation’s population. An interesting aspect of the survey, however, indicates a new culprit for the crisis. This year, 36 percent considered individuals responsible for their obesity, while 29 percent blamed the fast food industry. ‘That’s a complete flip flop from last year when 35 percent said the fast food industry was to blame and 29 percent said it was the individual,’ says Poole. In determining the cause of the dramatic shift, Poole could only surmise. ‘Speaking anecdotally, the swing could be due to the publicity around the frivolous lawsuits against brand name products—it may have caused a backlash.’

“More than 60 percent of consumers agree that consuming soy-based foods can play a role in reducing obesity, while three-quarters of respondents agree soy products are healthy.

“Soy awareness up and up and up: Overall, consumer awareness of soy products increased this year. Soymilk’s awareness rating stepped up to 90 percent, while regular use of soymilk held fairly steady at 16 percent. Compared to 2003, significantly more consumers are aware of dried or canned soybeans (13 percent). And the regular consumption of soy nuts increased to six percent. Fewer respondents, however, said they consume soy burgers.

“Consumer awareness of soybean oil as a healthy oil is also big, with approximately 90 percent of consumers believing it’s healthy. ‘Last year it was 88 percent; the year before it was 90 percent, and it’s always right behind olive oil,’ says Poole, who adds that Trader Joe’s markets a 100 percent soybean oil, rather than labeling soybean oil as a vegetable oil. ‘Consumers’ positive perception of soybean oil is probably reflected in Trader Joe’s marketing the product as soybean oil,’ he says. ‘Soybean oil is perceived as healthy, particularly as we’re dealing with trans fats,’ says Poole. ‘In the survey we include fats, and consumers are still very confused about fats.’

“The soybean industry in particular has been working hard to develop new soybean oils that are trans fat free—among other healthier attributes (see story on page S10).

“Healthy cooking oil” impressions

“Olive oil 91 percent

“Soybean oil 87 percent

“Sunflower oil 82 percent

“Canola oil 82 percent

“Safflower oil 79 percent

“Corn oil 67 percent

“One-quarter of Americans consume soyfoods or soy

beverages once a week or more, consistent with last year’s results. However, the percentage of consumers who never consumed soy products was up five percent to 38 percent. Among those who do not consume soy, 37 percent report that nothing in particular prevents them from including soy in their diet. Eighteen percent said taste holds them back from incorporating soy into their diets.

“‘When we ask consumers the question... have you ever eaten soyfoods, they generally think tofu, tempeh, etc.,’ says Poole. ‘Certainly soy energy bars and soy as an ingredient in other packaged foods should be considered, but I don’t know that that’s the case. Are people aware that soy is in the products they consume?’ ‘When people say soyfoods to me, I have a broad view of it. Others, though, may strictly see soy milk and tofu,’ he says.

“Poole also sees that several hurdles to consuming soy are fading away. ‘Early on, taste was a barrier to trial and repeat purchase [of soy]. Convenience was a barrier. Those are gone now. People consume and enjoy soy now and don’t even realise it really is soy.’

“In addition, soy is perceived as healthy, according to Poole. Nearly 75 percent of consumers believe soy is healthy.

“The gender gap: While most consumers understand the health benefits of soy, more women (44 percent) than men (28 percent) stated that soy might provide a healthy addition to their diet. Twenty-seven percent of respondents seek out products that specifically contain soy. And 39 percent of respondents recognized specific health benefits gained by including soy in their diet. Similar to last year, 29 percent of consumers—unaided—reported that soy is good for the heart.

“Interestingly, heart health has been a mixed story for the survey. Poole notes that the heart health claim was authorized in 1999, and by 2000 there was a 47 percent awareness of the heart health claim. ‘That has steadily dropped,’ he says. ‘And during the past two years the heart benefits awareness has remained steady at 29 percent.

“‘What happened was that there was so much news and marketers initially put the message on the front of their packages. That happened the first couple of years and then the message gradually moved to the back of the package. Then the media and marketers moved on to the next big thing. That’s another reason why we’re doing this survey. It tracks those trends. Food manufacturers and soy producers need to be aware there’s an opportunity here to turn the volume up and revisit the heart health claim,’ says Poole.

“While women might be the primary shoppers, knowledge of soy’s health benefits should be known across genders. The American Heart Association lists heart disease as the No. 1 killer of both American women and men. ‘The benefit is there [for men as well as for women],’ says Poole, ‘and we’ve never achieved beyond a 47 percent awareness. It points to where we can follow up a little more for next year’s survey. Maybe a sharp marketer will say: ‘I should be targeting men with this message.’

- “Awareness of health benefits of soy:
- “Heart health 29 percent
- “Prevent obesity /weight loss 17 percent
- “Menopause relief 16 percent
- “Cancer prevention 8 percent
- “Protein source 6 percent
- “Reduced risk of osteoporosis 2 percent

“Twenty-one percent of the women who were aware of soy’s health benefits reported awareness that soy might relieve menopausal symptoms. In fact, says Poole, the awareness of menopausal symptom relief is one of the biggest changes he’s noted in the survey over the years. ‘Awareness was at seven percent in 1999. Currently, it’s 16 percent,’ he says. ‘It was actually a little higher—19 percent—last year, following publicity of the HRT trial.’

“Soy meets world: A new question added to this year’s survey reveals interest in soy blended with other ingredients. Specifically, the survey asked which type of meat consumers would prefer to blend with soy. Of the 56 percent of respondents interested, nearly 70 percent would prefer beef as the type of meat to blend soy with. It begs the question: What other ingredients could be blended with soy for an easy, tasty transition toward healthier eating?”

2777. Al-Wahsh, Ismail A.; Horner, H.T.; Palmer, R.G.; Reddy, M.B.; Massey, L.K. 2005. Oxalate and phytate of soy foods. *J. of Agricultural and Food Chemistry* 53(14):5670-74. June 14. [28 ref]

• **Summary:** “Interpretive Summary: Human consumption of soy products is increasing. Soy foods have high nutritional value and also have been reported to have health benefits. However, high concentrations of oxalate in soy foods increase the risk of kidney stones. These are calcium oxalate kidney stones. Soy foods also contain phytate. Studies suggest that phytate exhibits effective anticarcinogenic action against many types of cancer. Phytate is also a potential inhibitor of calcium oxalate kidney stone formation. Our objective was to test 30 commercial soy foods for oxalate and phytate content. There was a wide range of concentrations of oxalate and phytate in the soy foods tested. Soy food containing low concentrations of oxalate and high concentrations of phytate may be advantageous for kidney stone patients or persons with high risk of kidney stones.”

Table 1 is titled “Total oxalate, phytate, calcium (Ca), magnesium (Mg), and sodium (Na) content in tofus.” In the 10-column table the first two columns are product plus coagulant and brand—For example: Extra firm tofu prepared with calcium chloride (Mori-Nu).

Table 2, titled “Total oxalate, phytate, Ca, Mg, and Na content in soy foods.” In the 10-column table the first two columns are product and brand (for example). Soymilk (Pacific Soy). Soymilk (Westsoy). Soya powder (Fearn). Soy flour (bulk). Soy flour (Arrowhead Mills). Soy protein (bulk, Fred Meyer). Textured vegetable (soy) protein (Red

Mill). Edamame soybeans (vegetable) (Hearty). Sweet soybeans (vegetable) (Safeway). Soybeans (vegetable) (C&W). Shelled edamame (vegetable, Safeway). Edamame (vegetable, Safeway Select). Soy beans (Red Mill). Roasted soynuts (Good Sense) Soynuts (GenSoy). Tempeh (White Wave). Tempeh (Turtle Island). Soynut Butter “original creamy” (I.M. Healthy) Soynut Butter “low carb” (I.M. Healthy) Soy protein (Liquid Aminos). Soy sauce (Kikkoman). Address: 1. Dep. of Food Science and Human Nutrition, Washington State Univ., Spokane, Washington 99210-1495.

The other panels describe “22 new Eden certified organic foods.” Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

2785. Eden Foods, Inc. 2005. Eden Product Catalog: 2005-2006. Clinton, Michigan. 64 p. 28 cm.

• **Summary:** A very attractive, full-color catalog showing the company’s devotion to the purest and best natural foods possible. On the inside front and back covers is a chronology of major events in the company starting in 1968. On page 1-4 is a company credo starting with:

“Beginnings: Eden Foods was born of worldwide phenomenon centered around macrobiotics. The desire for health, happiness, and peace on Earth caused us to seek a more peaceful way of growing, handling, and nurturing ourselves with food.

“We began as a natural food co-op in Ann Arbor, Michigan in 1968, travelling the back roads to find farmers who would grow without using pesticides, herbicides, fungicides, or chemical fertilizers. We looked everywhere to find grain, soy foods, sea vegetables, and vegetable oils. In small steps we built a dedicated network of family farms.

“As the co-op grew into a retail store, we started producing whole grain stone ground flours, and our roaster and mixer made cereals. We bottled unrefined vegetable oils, filled jars with sesame butter, and made nut butters with a Hobart grinder. Local health food stores began asking for our food. This sparked our distribution activities and the Eden® brand in 1969. The store expanded with a cafeteria, bakery, and book section, and was one of the few places in the country where you could get miso, sea vegetables, and organic whole grain foods. We still hear from people all over the world who remember the good times and great food at The Eden Deli.” Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

2788. Warner, Melanie. 2005. What is organic? Powerful players want a say. A struggle over standards in a fast-growing food industry. *New York Times*. Nov. 1. p. C1, C4.

• **Summary:** The powerful players include Kraft (Back to Nature, Boca Foods), McDonald’s (coffee from organic, Fair Trade beans), General Mills (Cascadian Farms, Muir Glen), Dean Foods (Horizon Organic, Dean Foods), Groupe Danone, and Wal-Mart. The question: “What exactly does the word “organic” mean? Organic food is still a niche market, with sales of roughly \$12 billion in 2004, within the \$500 billion food industry. Yet this sector is been growing at 20% a year in recent years—which makes it very attractive to Big Food. A bar chart shows organic food sales each year from 1997 to 2004.

Now the federal government is involved again. Last “week Senate and House Republicans on the Agriculture appropriations subcommittee inserted a last-minute provision

into the department's fiscal 2006 budget specifying that certain artificial ingredients could be used in organic food." Katherine DiMateo, executive director of the Organic Trade Association (OTA), supports the new changes, saying the "amendment was intended to protect the industry from the Harvey ruling and will not change the status quo." Arthur Harvey, an organic blueberry farmer, won a federal lawsuit in January, arguing that "no synthetics at all should be used in food bearing the U.S.D.A. organic seal,"

Yet many in the organic industry have been willing to allow some synthetics. Since 2002 the National Organic Standards Board has approved 38 such substances, many of them relatively harmless, such as pectin, baking powder, ascorbic acid, and carbon dioxide.

Yet industry insiders believe the proposed legislation will open the door to a host of other synthetics, "including a large category of so-called food contact substances—things like boiler additives, disinfectants, and lubricants with long names." Moreover, these are not required to be listed on ingredient panels.

There is also major debates over the definition of "organic milk"—the largest organic category—and the meaning of "access to pasture." Discusses Horizon Organic and Aurora Organic Dairy.

2789. Richmond, Akasha. 2005. Natural foods leadership conference in Austin, Texas (Interview). *SoyaScan Notes*. Nov. 5. Conducted by William Shurtleff of Soyfoods Center. • **Summary:** Akasha just returned from a natural foods leadership conference in Austin, Texas, at The Crossing, hosted by Doug Greene (founder of *Natural Foods Merchandiser* and New Hope Communications, Inc.—1975) and Steve Demos (founder of White Wave). About 120 people attended. The tone was very low key, with a spiritual background and lots of mentoring and share-and-tell sessions. One session was on values, and another on the spiritual side of business. Yoga classes were offered every morning. Peter Roy, Drake Sadler, Michael Funk were there. There was a drumming session one evening; each of the participants was given a drum. The theme: We are a tribe and this is our gathering.

Akasha took the galleys to her new book *Hollywood Dish* (formerly *Healthy Hollywood*), showed them to those who were interested (Steve Demos leafed through them), and talked mostly about Otto Carque. Most of the people seemed very surprised to learn that the natural foods industry in California had its origins in Los Angeles in the early 1900s; many felt that they had created this new industry themselves.

Randy Lindberg, who lives in the Los Angeles area, told a remarkable story. His grandmother had 5 health food stores in Los Angeles during the 1950s, named Lindberg Nutrition or Lindberg's Nutrition Service. She used to make what is now called Tiger's Milk in a blender at home. Her husband called it Panther Piss. They turned Adelle Davis onto it and

to the drink's two names. Adelle sold both the product and one of the names (guess which) to Plus Products, and it became one of the most famous of all health foods during the 1960s and 1970s.

Randy's family eventually sold his grandmother's health food stores and used the money to start Nature's Best—a very large distributor of Natural Foods in Southern California; they compete with United Naturals.

Jethren Phillips told the story of Spectrum Naturals, the vegetable oil company. Jethren had previously run United Naturals, a natural foods distributor in Eureka; in the early 1970s he used to work in the Help restaurant in Los Angeles, owned by Warren Stagg.

Steve Demos and Doug Green have become really good friends. They and Steve's wife (who Akasha has found to be a very spiritual, grounded, fabulous lady) left yesterday on a trip to India. Steve hopes to return to his cave at the foothills of the Himalayas. No firm return date is planned. Address: Los Angeles, California.

2790. Hain Celestial Group, Inc. (The). 2005. Annual report 2005: A healthy way of life. Melville, New York. 12 + 62 p. Dec. 28 cm.

• **Summary:** Net sales for the year ended 30 June 2005 were \$619.967 million, up 13.9% from 2004. Net income in 2005 was \$21.870 million, down 20.1% from 2004.

Most of the report is Form 10-K/A. Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (40 p.). Irwin Simon, the founder and CEO, age 46, had the following annual compensation: Salary: \$980,000. Bonus: More than \$1,000,000. Stock options: 300,000 shares. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2791. Nature's Path. 2005. [Chronology of Lifestream and Nature's Path: 1952-2005]. Richmond, BC, Canada. 8 p.

• **Summary:** In the upper left corner of each colorful page is the Nature's Path oval logo. At the lower right is the text "Nurturing People, Nature & Spirit." On page one are described events from the years 1952, 1971, 1977, and 1980—describing the history of Lifestream Natural Foods, Ltd. A color oval photo shows Arran Stephens "holding the mother of all loaves" and smiling broadly.

The remaining 7 pages contain a chronology of Nature's Path. On the last page are 3 entries for the year 2005. Address: 9100 Van Horne Way, Richmond, BC Canada V6X 1W3.

2792. Richmond, Akasha. 2005. *Hollywood dish: More than 150 delicious, healthy recipes from Hollywood's Chef to the Stars*. New York, NY: Avery—A member of the Penguin Group (USA) Inc. xi + 310 p. Illust. Index. 25 x 20 cm. [125 ref]

• **Summary:** One of the most original and interesting

cookbooks seen in decades. This book, originally titled *Healthy Hollywood*, is much more than just a collection of superb recipes and stories about Hollywood celebrities and glitterati. In carefully researched and well-written sidebars, it documents the history of health foods in Hollywood and southern California. The introduction to each chapter tells the history of that type of food, and every recipe has a long and interesting historical headnote. The acknowledgments show vividly Chef Akasha's high and wide circle of Hollywood friends. The introduction—"The Road to Hollywood" tells the story of how Akasha got interested in and researched this subject. History is woven into every page of this book—in the most palatable way. In short, this is a cookbook with a remarkable tale to tell—one to read and study—as well as one to cook from.

Sidebars and illustrations: (1) "The stars and the Hollywood Diet"—Sue Carol (lovely future wife of Alan Ladd) on the cover of *Motion Picture* magazine, Oct. 1929. (2) Mildred Lager (1908-1960). (3) Harry Chandler (1864-1944). (4) Granola (Layton Gentry, Adelle Davis, Dorothea Van Gundy Jones). (5) Photo of silent film star Anita King eating Sun Maid Raisin Pie, 1916. (6) Adelle Davis (1904-1974). (7) Clarke Irvine, 1892-1975. (8) Photo of Radiant Radish health food store, owned by Beach Boy Brian Wilson, Los Angeles, 1969. (9) Otto Carque, 1867-1935, with a photo of his health wagon, around 1912. (10) Gayelord Hauser (1895-1984). (11) "Nature Boy"—Bill Pester and the 1948 hit song by Eden Ahbez. (12) The Ashram—Hollywood restaurant founded by Anne-Marie Bennstrom. (13) The Hollywood diet, with a photo of page 1 of the "18-Day Diet" from *Motion Picture* magazine, Oct. 1929. The sidebar begins: "The first best-selling diet book in America, *Diet and Health, with a Key to the Calories*, was written by Los Angeles-based Dr. Lulu Hunt Peters in 1918, and sold over 2 million copies. The book introduced the concept of counting calories." (14) Alan Hooker (1902-1993). The grandfather of California cuisine, he opened the Ranch House restaurant in 1956 in Ojai, California. (15) Gloria Swanson—Hollywood's Green Goddess. She "was the highest paid and most popular, influential star of the 1920s." (16) Jim Baker (1922-1975). A pioneering organic restaurateur, he opened the Aware Inn in 1957, then the Source restaurant in 1969. (17) Raw, raw, raw (Arnold Ehret, Vera and John Richter, and raw foods). (18) Photo of silent film star Mary Pickford drinking orange juice made with Sunkist fruit and juicer. (19) The godfather of fitness—Jack LaLanne. Master chef Danny Kaye (1913-1987). (20) The Farmer's Market in Los Angeles, started in 1934. (21) Paul Bragg (1881-1976), with photo of Rita Hayworth on the cover of his *Health Builder* magazine. (22) Books and cooks—"150 Recipes of the Stars" (1928), Helen Evans Brown. (23) Health foods—Dr. John Harvey Kellogg, the rise of health food sections in the late 1800s in L.A. department stores, the rise of health food stores, Sandy Gooch. (24) Mae West (1893-1980). Gypsy Boots (1914-

2004). Photo of Boots and Paul Bragg. (25) Food and film. (25) Photo of Donna Reed and Paul Bragg, sometime in the 1950s. (26) Bernarr Macfadden (1868-1955). (27) Celebrity stew and Leo Pearlstein. Paramahansa Yogananda arrived in L.A. in 1925; he advocated a healthy vegetarian diet, including in his magazine *East West*, first issued in 1926. On 8 April 1951 he opened SRF India Café at his India House compound on Sunset Boulevard. "Yogi Bhajan (1930-2004) came to Los Angeles in 1969, bringing the teachings of Kundalini Yoga and his own unique style of Indian and Ayurvedic cooking. In 1974 his students opened Golden Temple Conscious Cookery in Los Angeles. I [Akasha] was a cook there from 1979 to 1984..."

Soyfoods are used in recipes (and recipe titles) throughout this book: Edamame or fresh green soybeans (used in 2 recipes), miso (1 recipe), soymilk (many, especially in place of milk in desserts, incl. "Chocolate Jack Daniel's soy gelato" and "Soya chocolate" milk), soy flour (1, Bill Baker's bread), soybeans (whole, 1, "Soybean casserole"), tofu (10), and tempeh (4).

Also discusses: Sophie and Harry Cubbison (p. 47), El Molino Mills (p. 106). Early veggie burgers (p. 106). Silk soymilk and Steve Demos (of White Wave, p. 266).

The recipes in this book are largely vegetarian (including 17 vegetarian main dishes), all call for organically grown ingredients, and many are dairy-free (using soymilk instead of cow's milk). However: Beef (used in 2 recipes, incl. "Filet mignon Japanese"). Pork (used in 1 recipe, "Citrus roasted pork chops with rosemary potatoes"). Chicken (used in 6 recipes, incl. "Endive petals with curried chicken salad"). Turkey and duck (3 recipes). Fish (many recipes as for cod, halibut, salmon, whitefish). Shellfish (crab, scallops, shrimp).

Talk with Akasha Richmond, who calls. 2005. Dec. 7. Her favorite parts of the book are: The smoothie story (p. 275-80, both dairy and nondairy). Otto Carque. Gloria Swanson. Yogis and Swamis, Granola. She is very happy with everything about the way the book and its promotion turned out ("It looks great")—except she wishes she could have included more photos. Address: Los Angeles, California.

2793. The Craig Sams story (Website printout) (Continued—Document part II). 2005. www.macrobiotics.co.uk 2 p. Copyright The Macrobiotic Guide, Dec. 2005. Retrieved 11 May 2006.

• **Summary:** (Continued): "In 1971 we worked with Andrew Kerr and Arabella Churchill on the first Glastonbury Festival.

We did all the food and invited Infinity Foods to join us. We had garnered some experience of catering at rock festivals the previous year at Plumpton (National Jazz and Blues Festival) and at the Isle of Wight Festival.

“We were the only food suppliers at Glastonbury and all the festivalgoers either ate our food (muesli, brown rice, red bean stew, porridge, unleavened bread with tahini/miso spread) or brought their own. We also supplied some food to Sid Rawles, who led the Diggers, who gave out free food from the cowshed near the farmhouse up on the hill.

“On the Sunday afternoon the local hot dog and ice cream vendors discovered there was a crowd at the farm and drove down to the site. They were met by the festivalgoers who blocked their route and rocked their vans, shouting ‘Out, Out Out’ until they turned around and disappeared.

“Also in 1971 my father Kenneth started *Seed The Journal of Organic Living* which was a thinly-disguised macrobiotic monthly of 32 pages that was humorous, witty, energetic and pushed a broad macrobiotic/ecological/vegetarian/natural lifestyle message. It was way ahead of its time, had a healthy circulation and still reads well all these years later.

“It ran until 1977, monthly, a total of 74 issues. Michio Kushi made the cover in 1975 and Terence Stamp was on the cover of Issue No 2 in 1971. We interviewed rock stars, actors and other people who had interesting and healthy lifestyles and sold a lot of ginseng, grain mills and water filters through our mail order pages. It was supported by monthly ads from Harmony, Ceres Grain Shop and Ceres Bakery that covered the basic costs and Kenneth gave his time for free. He had publishing experience and this was an ideal way to spend his retirement.

“In 1970 we also had the first visitors from Boston, who included Eric Utne (later founded *Utne Reader*), his girl friend Peggy Taylor (later founded *New Age Journal*), the ex-editor of the Boston macrobiotic newspaper Ron Dobrin, Bill Tara and his wife Renee and Paul Petrofsky (who founded *Baldwin Hill Bakery*).

“We rented them a house in Lancaster Road, just off *Lad Broke Grove*, where they had cooking classes, shiatsu classes and other activities. We were very busy with *Harmony Foods* and *Ceres* and the restaurant was becoming a managerial burden on Gregory’s and my limited resources. So we suggested that they take over and run the restaurant and use it to leverage interest in macrobiotics and the cookery classes and other activities at the house.

“We gave them a few thousand pounds to refurbish the place and it reopened after being closed for 5 weeks. Gone were the low tables, cushions on the floor, bedouin tent atmospherics and in were bare floors and tables, white walls and a serene, clean atmosphere.

“The food was more austere but well prepared and presented. But the lively vibes of the old *Seed* were gone. When people laughed or talked too loudly a member of staff

would approach them and suggest they tone it down and the whole atmosphere became reverential and studious compared to the rather carefree and raucous atmosphere that had prevailed.

“I remembered Paul Petrofsky once saying that he felt, on entering *Seed*, that he ‘might get stabbed or something’ but had taken it as a joke. Gregory and I got personal phone calls from friends and long-standing customers complaining about the changes but we were both very busy on our other businesses and couldn’t turn back the clock.

“After about 6 weeks sales were down to 1/3 of what they had been and we had to close the place to stem the losses. We handed it over to a guy who renamed it ‘*Magic Carpet*’, broadened the menu away from macrobiotics but kept it vegetarian. After 4 months he gave it to a garage owner in payment of the restoration bill on his *Jaguar S* type and it then reopened as ‘*Pasture*.’ A few months later we opened a ‘macrobiotic workingman’s café’ called *Green Genes* in the old *Ceres* premises in *All Saints Road*—it was smaller than *Seed* but recaptured the friendly and slightly rambunctious atmosphere of the original

“Because *Harmony Foods* was growing fast we needed larger premises to pack and store our produce and we were about to sign a lease on a building near *Ladbroke Grove* when *Bill Tara* sat with me and Gregory in a car in *Bayswater* and broke the bad news to us.

“He had been Vice President of *Erewhon Foods* and he felt he should tell us, before we signed the lease, that *Michio* and *Paul Hawken* had sent him over to *England* to set up *Erewhon Europe*, there would be no role for us in that business (we hadn’t asked) and that we should consider carefully as he would be sorry to see us in financial trouble because we hadn’t realised what was happening.

“Gregory found a great greeting card with a picture of a sword-waving Samurai on a horse being speared by a samurai on the ground, stuck the *Harmony* logo on the samurai on the ground and the *Erewhon* logo on the horseman and sent it to *Paul Hawken*. As it happened, *Erewhon* hit one of its first cash flow crises and couldn’t even offer *Bill* a ticket home.

“In May 1972 we offered him the opportunity to manage our shop, *Ceres*—I had been managing it since the manager, *Pam Donaldson*, had fallen ill with brucellosis from drinking the milk on *Michael Eavis’* farm in *Glastonbury* and now I was opening a bakery in the premises next door to the shop.

“*Bill Tara* and *Peter Bradford* then did a complete refit and redesign of the shop, opening it up in the back and putting in a herbs and specialities section in a little space in the middle. It was an ambitious redesign, cost us £7000, but we now had the sprouciest and most well-appointed shop in *Europe*.

“However, it required a lot of people to keep it all going, we packed lots of stuff in premises rented from a nearby church, stock was all over the place, shoplifting got

out of hand as there were lots of blind spots and we had to hire private security people and the ultimate indignity was that one of the staff, a member of the English (Maoist) Communist Party organised a group of staff and threatened to take the business over and run it as a worker's commune.

"So we had to fire most of the staff after a rather acrimonious meeting in which we explained that property law and the lease on the property all stood in our favour and we also told Bill that we would have to get in a manager who could run the shop more effectively and with less revolutionary activity going on.

"We got a burly Irishman who had managed a delicatessen in Dun Laoghaire and he closed down the back section of the shop and squeezed all the activity into the front, put in a counter and reduced the staff while keeping sales up.

"Bill and Peter had, meanwhile, found premises in Old Street for the Community Health Foundation, which was to be the macrobiotic centre par excellence. I urged them not to move out of Notting Hill as that was still where the concentrated core population who understood macrobiotics lived, but they were seduced by the size and cheapness of the building and moved there, despite the availability of smaller and more easily manageable premises in Notting Hill.

"The CHF was a success, but was dogged by management and financial problems, became the East West Centre and also the home of Peter Bradford's Freshlands shop that became the 'Fresh' in 'Fresh and Wild.

"Harmony Foods continued (and continues) to prosper and its peanut butter became the number 2 brand in the UK, now known as Whole Earth, a name change we brought in in 1962 as we found that Harmony didn't work for our export business as the trademark belonged to other people in Denmark and in Germany.

"In 1990 my kids launched Gusto, the world's first energy drink, based on guarana, ginseng, Siberian ginseng and 'Free and Easy Wanderer', a Taoist herbal formula dating back to the 12th C. It was the spiritual descendant of the macrobiotic 'beer' that Ohsawa was working on for the 1966 Spiritual Olympics and which his wife Lima thought reactivated the filariasis he contracted at Albert Schweitzer's Lambarene institute [hospital, in Gabon] and killed him.

"In 1991 my partner (now wife) and I founded Green & Black's chocolate. We were looking for organic peanuts for the peanut butter and found some from Togo, West Africa, but they failed our aflatoxin tests. The same organic growers also produced cocoa beans and we made a 70% solids chocolate from them that led to a very successful chocolate brand.

"The 70% is still the best seller but the rest of the range all do well. I eat the others rather sparingly but have outgrown the illusion that there is a difference between brown rice glucose, apple juice glucose and sugar cane glucose—there's no escape from simple sugars, so might

as well be realistic and keep all forms of intake as low as possible.

"People ask how we managed to create a new confectionery brand in a sector where there have been no new brands in decades and I often think it's because of being macrobiotic—I understand guilt about sugar consumption so know how to market a product that addresses that in a mature way.

"Our earliest packs contained a sugar warning on the wrapper: 'Please note: This chocolate contains 29% brown cane sugar, processed without refining agents. Ample evidence exists that consumption of sugar can increase the likelihood of tooth decay, obesity and obesity-related health problems.

"If you enjoy good chocolate, make sure you keep your sugar intake as low as possible by always choosing Green & Black's, the chocolate with the least sugar, the most cocoa solids, and organic too!' Nobody in their right mind in the sugar confectionery business would ever put something like that on their labels, but it worked and we have 5% of the chocolate bar market in the UK to prove it!

"Whole Earth and Gusto were sold to Kallo Foods in 2002—I have since bought back the Gusto brand from Kallo and it was relaunched as a fully organic energy drink in April 2004.

"I am also working, with my son Karim (who produces Soma organic smoothies) on a new range of unique and yummy macrobiotic products so I hope there are still a lot of macrobiotics out there—watch the—The Macrobiotic Guide www.macrobiotics.co.uk website for advertised details."

Includes inns, vacation spots, and travel companies. Baltimore, Maryland: The Vegetarian Resource Group. xiii + 433 p. Forewords by Moby and Lindsay Wagner. 23 cm.

• **Summary:** The Introduction begins: "When we compiled the first edition of this guide in 1993, vegetarians were beginning to find more than cheese sandwiches when traveling."

Contents: Acknowledgments. Foreword from Moby. Foreword from Lindsay Wagner. Introduction. Key to abbreviations. The restaurants are arranged alphabetically by state, and within each state alphabetically by city, and within each city alphabetically by restaurant name.

Here is a sample restaurant entry in Berkeley, California.

"Smokey Joe's Café

"1620 Shattuck Ave., Berkeley, CA 94709 (no phone)

"Vegetarian. Open since 1973, Smokey Joe's Cafe claims to be the first vegetarian restaurant in the Bay Area. This earthy establishment offers omelets, pancakes, French toast, tofu scramble, oatmeal, home fries, a BBQ veggie sandwich, and much more. Many of their dishes involve

beans, eggs, and sprouts. Open daily for breakfast and lunch. Full service, vegan options, fresh juices, \$\$\$. www.smokeyjoesberkeley.com

Note: Many restaurants go out of their way to say which soyfoods they offer.

2795. Loomis, Mildred J. 2005. *Decentralism: Where it came from—Where is it going?* Montreal, Quebec, Canada: Black Rose Books. xxviii + 169 p. Illust (8 unnumbered pages of plates), 21 cm. [50 ref]

• **Summary:** About the history of decentralization in the United States and the need for restoring community and self reliance, and “bringing social and economic ideas back to a more human scale.”

Chapter 6, “Ralph Borsodi, decentralist supreme,” begins: “Ralph Borsodi’s concern was good living. His search was as wide, deep and complex as life itself. He was both an idealist and a practical man, a philosopher and an activist.” A completely original man, Borsodi was born in New York City on 20 Dec. 1886. He became deeply interested in the economist Henry George and his idea of a single tax. In 1929 he wrote *The Ugly Civilization*. He established a School of Living in Rockland County, New York during the winter of 1934-1935. Before long about 20 families began attending regularly from New York City, spending the weekends at the school. Some commentators claim Borsodi’s books inspired “hundreds of thousands of people” to follow his example during the Great Depression.

Chapter 7, “Rodales at the School of Living.” J.F. Rodale and his son Robert arrives the School of Living in the spring of 1940. Both Rodales had a profound effect on decentralization of food production in America.

Chapter 8 notes (p. 64) that the term “Green Revolution” was coined in 1940 to describe this movement for a decentralized society.

Chapter 9, “School of Living global impacts,” introduces Paul and Betty Keene. The Keenes who soon founded Walnut Acres, are mentioned on pages 65-66, 73, 76, 79-84.

Chapter 10, “Agnes Toms and whole foods,” talks about the need for real, natural food grown on fertile soil. Nine books in the school’s library convinced Agnes of the wisdom and importance of the school’s work. She wrote *Delicious and Nutritious*, “the first natural foods cookbook ever published.” We are introduced to Dr. Joe Nichols and the Natural Foods Association (p. 29, 76, 71, 91) and to natural foods (p. xxviii, 68, 74, 76-78, 82-83, 90, 104, 156). Scott and Helen Nearing, E.F. Schumacher, Leo Tolstoy.

Chapter 11, “Walnut Acres chooses to stay small” is all about Paul and Betty Keene—and the start of a major branch of the first natural foods movement in the USA.

Chapter 12, “Thirty years at Land’s End homestead” tells of the life and work of Mildred and John Loomis—modern homesteaders. They (and others) even grew and

sold soy beans (p. 86, 95, 136). Address: Student of Ralph Borsodi and historian of decentralism.

2796. Lund, JoAnna M.; Alpert, Barbara. 2005. *Cooking healthy with soy*. New York, NY: Perigee. Published by the Penguin Group. viii + 368 p. Index. 21 cm. Series: A Healthy Exchanges® Cookbook.

• **Summary:** This unusual book contains 220 recipes. On the cover: “No trouble and no tofu.” The author admits in the Acknowledgments (p. vii): “When I first started this project, almost all my helpers were a bit hesitant. After all, they really hadn’t tried soy products before—even though they had lived all their lives here in eastern Iowa (a state where, no matter which direction you look, you’ll see soybean fields everywhere). But after our first ‘taste-testing’ lunch, they all agreed that these soy recipes sure tasted good!”

This comb-bound book, which is not vegetarian, calls for a commercial branded product (usually available nationwide in supermarkets) in every recipe. These are grouped into five categories: Dairy alternatives (milk-, cheese-, sour cream-, margarine-, yogurt- and ice cream-alternatives), meat alternatives, nut alternatives, pasta alternatives, and miscellaneous (such as Eden Organic Black Soy Beans, or GeniSoy Mountain Medley Soy Nut Trail Mix).

For example: Milk alternatives: Silk Light Plain Soymilk. Silk French Vanilla Soymilk Creamer. 8th Continent Light Original Soymilk. 8th Continent Light Chocolate Soymilk.

This unusual approach raises several questions: Did the author request a kickback for promoting these products? Why does one need recipes for soymilk? Or for Tofutti Mozzarella Soy-Cheese Slices? Or Tofutti America Soy-Cheese Slices? Or Boca Meatless Cheeseburgers? Or Morningstar Farms Veggie Breakfast Bacon Strips? How about all the people who don’t shop at supermarkets?

In the first section, titled “Main street American is cooking with soy—because its good for your health,” the author states: “If you are a health-food store ‘purist,’ then this book probably isn’t for you. But if you are willing to try new recipes that taste the same as your old favorites but feature soy products, then I think you’ll be mighty pleased with the results. I want to ‘bring to the table’ all those men, women, and children who aren’t necessarily vegetarians or already consuming lots of soy foods and food products.” Address: Author and speaker, DeWitt, Iowa.

2797. McCracken, Jan. 2005. *Healthy carb cookbook for dummies*. Hoboken, New Jersey: Wiley Publishing Inc. xxiv + 356 p. Plus 3 unnumbered pages of plates. Illust. (some color). Index. 24 cm.

• **Summary:** In Part I, “Creating a healthy lifestyle counting carbs,” the section on “Counting on friendly low-carb foods in the kitchen” has a subsection (p. 14) titled “Legumes.” It

notes that they are very high in protein, are low in saturated fats and sodium, are packed with dietary fiber, and are rich in iron, calcium, zinc, potassium, magnesium, and B vitamins. Best if all are black soybeans—and they taste great.

In the section on “Understanding net carb math 101” (p. 28) we learn that since the body does not digest dietary fiber, it can be subtracted from the total carbs. For example, the total carb count for a serving of ½ cup of black soybeans is 8 grams of carbs. But the dietary fiber count for this ½ cup is 7 grams. So $8-7 = 1$ gram of net carbs for the entire serving. “This is healthy low-carb eating at its best.”

Edamame (green soybeans), found in the freezer case, are also great for this diet (p. 50).

On page 100 is a sidebar titled “Black soybeans: A great low-carb secret.” Eden Foods makes canned soybeans.

Soy-related recipes: Caribbean style black soybean soup (with “2 cans { 15 ounces each } Eden black soybeans, drained,” p. 107). Spicy black soybean wraps (with “15-ounce can Eden black soybeans, rinsed and drained,” p. 258). Black bean and veggie chili (p. 276).

For another paragraph in praise of black soybeans, see p. 332. Address: Author of two low-carb cookbooks.

2798. Global Industry Analysts, Inc. (GIA). 2006. Soy foods—Global strategic business report. 5645 Silver Creek Valley Rd., San Jose, California. 302 p. Jan. *

• **Summary:** Publisher description: This report analyzes the worldwide markets for Soy Foods in millions of US\$. The specific product segments analyzed are Soy Ingredients, and Soy Oil. The report provides separate comprehensive analytics for the US, Canada, Japan, Europe, Asia-Pacific (excluding Japan), Latin America, and Rest of World. Annual forecasts are provided for each region for the period of 2000 through 2010. The report profiles 151 companies including many key and niche players worldwide such as Archer Daniels Midland Company, Dean Foods Company, White Wave, Eden Foods, Inc., Galaxy Nutritional Foods, Inc., Gardenburger, General Mills, Glenn Foods, Greet Spot (Thailand), Griffith Laboratories (UK), H.J. Heinz Co. Hain Celestial Group, Hartz International (Australia), Hazlewood Grocery (UK), Heartland Fields (USA), Hermans Foods (Australia), High Mark Foods (New Zealand), Imagine Foods, Inc., Kerry Group PLC (Ireland), Kerry Ingredients (Australia), Kikkoman (Japan, Australia, USA, Singapore), Kimlan Foods Co. (Taiwan), Kuhne Nederland BV (Netherlands), SoyaWorld, Inc., Turtle Island Foods, Inc., and Vitasoy USA, Inc.

Price: Electronic or hard copy 3,496 euros. Please note: Reports are sold as single-site single-user licenses. The delivery time for hard copies is between 3-5 business days, as each hard copy is custom printed for the organization ordering it. Electronic versions require 24-48 hours as each copy is customized to the client with digital controls and custom watermarks. Address: San Jose, California. Phone:

2799. Bramblett, Billy. 2006. The real history of Wildwood Natural Foods after its merger with Midwest Harvest to become Wildwood Harvest in 2001 (Interview). *SoyaScan Notes*. Feb. 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: They had the official first board meeting of the newly merged company at a high-class restaurant owned Pulmuone in Korea; the five board members were Paul Kang, Mr. Seung-Woo Alex Nam, Jeremiah, Tom Lacina, and Billy. Pulmuone also owns a chain of natural food retail stores (like Whole Foods) in Korea, and three tofu factories in Seoul.

It seemed like a good fit. In mid-2004 the decision was made to merge Wildwood Harvest Foods Inc. and Pulmuone U.S.A. On 20 July 2004 each company issued a news release announcing the new merger. The deal was struck by a man named Paul Kang, who was an investment banker, who was a Korean-American, and who speaks English very well and has a good relationship with the Korean company; he had already done some other deals with Pulmuone. Wildwood Harvest Foods, Inc. was renamed Wildwood Natural Foods and Pulmuone U.S.A. was give two seats on Wildwood’s board. Pulmuone decided to make Paul Kang the CEO of the new, combined company. He many various changes to the logo.

“Pulmuone’s plan was to go public in a few years, and we were all going to be able to cash in our chips.” Billy and Jeremiah both owned shares in Wildwood which, over the years through hard work and good management (up to a point) had become a valuable company.

In the USA, Pulmuone was doing very well in the Korean market but they were struggling in the mainstream and natural foods markets. Paul Kang was a very smart person but he had never been a CEO before—especially of a food manufacturing company. Paul Kang went to Korea with Billy, Jeremiah, etc. Then they all went to Natural Products Expo East in the fall of 2004 and to Expo West in the spring of 2005. After about 8 months with him at the helm, Pulmuone realized they had made a mistake, so by June 2005 they sort of demoted him to COO (chief operating officer) of Pulmuone U.S.A. and brought in another person Y.C. Kang; they are not related. Y.C.’s first title was CRO (chief reorganization officer). He tried to reorganize things and put a whole new program into place. It got really crazy. It was a wild year; Mr. Nam would come over every couple of months and have personal meetings with Billy, Jeremiah, and Tom. It is kind of a hit and miss style. After doing all this analysis, they say “OK, let’s do this.” They try it for some time and if it is not working they say, “OK, let’s change everything.”

Billy and Wildwood have a deep understanding of their customers and the natural foods market, which has enabled

them to stay ahead of the curve all these years.

At the time of the merger: Since Wildwood didn't have any money, they gave Pulmuone stock—so that Pulmuone has almost all the stock. Then they made Jeremiah and Billy into executive sales persons, who would manage different sales in different geographical areas. Jeremiah was in charge of Northern California. Paul Kang took southern California. Tom Lacina took everything out of California. Billy took ingredient, foodservice, and private label. Billy had already been doing this kind of work for a number of years, in part because nobody else was covering that particular channel. The ingredient people would come to Billy and tell him they needed a particular ingredient. He would work with them to develop their products, etc. Trader Joe's had been Billy's account from the beginning; they came onto the scene because Wildwood won the *San Francisco Chronicle* Baba Ganooj tasting contest many years ago. So Wildwood started making soy products (such as baked tofu—teriyaki and Thai—and burgers under the Wildwood label) for them over the years. For a while Wildwood did Soy Sour Cream made in Iowa for Trader Joe's. So in about Feb. 2005 Pulmuone gave all the new salespeople budgets and said, "OK, you make your top line and your contribution margin goals and we're going to promote you and give you money, bonuses, and stuff like that." Paul Kang didn't do very well, so they moved him back to the Korean company to do investment work. Jeremiah didn't do so well so they put him in public relations. Tom Lacina didn't do very well either in the East, although he has a really great guy working for him there named Jim Williams. The company is in a lot of Whole Foods and UNFI warehouses east of the Mississippi. But he wasn't making his goals—so that put him in charge of all sales and marketing. Billy did very well—110% of the goals he was given. But they wouldn't give him credit for it (later they ended up giving him the bonus they had committed to). Billy still does not understand why. Then they took the Trader Joe's account away from him—an account where he had long, positive experience and good contacts. "They said they had a guy in southern California who would call on Trader Joe's. OK, whatever. So things got a little scratchy there." All this happened in the fall of 2005. Right now, Billy's share is not worth much. However if Pulmuone is successful in turning Wildwood around, the value will return and Pulmuone has given Billy and Jeremiah even more options. Billy owns shares in the new corporation which is named Pulmuone Wildwood Inc.; that's a U.S. corporation. Originally the corporate name was PMO Wildwood—because so many Americans can't pronounce Pulmuone. That was perceptive. But then Mr. Alex Nam who is really the head honcho of the whole shebang (CEO of Pulmuone Co., Ltd. Korea), as soon as they fired Paul Kang, decided to change the name back to Pulmuone Wildwood. Remember—every time you change a company name you have to change your labels, letterhead, etc. It's a huge job. Bill's told them he thought the best name

was "Wild One." Nobody got it. But they did allow Billy to develop a few more products, so that was nice, until he came up with "Sloppy Jofu"—which has been selling very well since 2004. Last year he developed a chili, which they marketing department had trouble launching. Wildwood had been selling tofu to the organic division of Seeds of Change for about 7 years; they have used it in their rice bowls and noodle bowls. They wanted a flavored cube, so he just developed a product for them named "Tofu Barbecubes." He makes the tofu, cuts it into 3/4-inch cubes, marinates the cubes and then bakes them in shallow hotel pans in a conveyerized oven. Wildwood has been baking tofu for 20 years, but never in cubes before this. He just made 8,000 pounds of it for them and sent it to them. They liked it and soon ordered 8,185 pounds more. That was kind of his swan song.

Pulmuone's positive attitude started to decrease about a year ago. Pulmuone offered him a pretty good deal, which he took. But Billy is a consultant for three years; they are paying him about two-thirds of his salary and he doesn't really have to do anything. There is a non-compete clause concerning soyfoods that are the same or similar to those of Pulmuone-Wildwood in form and function; now he has two other clients, one of which is Seth Tibbott of Turtle Island. Billy is going with him to Anaheim in March. Billy is a guitar player. His latest project is with some folks who have a little campaign to get organic foods into school lunch programs in southern California. They call it "The Organic Rebellion." Billy told them he'd write a theme song for them. He just finished it and has recorded the basics. He's now getting kids lined up to do the vocals with him. It starts: "Sign me up for the organic rebellion."

Jeremiah just took a severance pay package; his last day at Pulmuone-Wildwood was Jan. 30, 2006. Jeremiah started a new business, Wise Solutions, developing plant-based industrial products. He has several soy-diesel cars and he has been involved in the promotion of soy diesel for a number of years. Address: Pulmuone Wildwood.

2800. Eden Foods. Inc. 2006. Edensoy: Prepared as if it were for our children (Ad). *Utne Reader*. Jan/Feb. p. 31.

• **Summary:** This ad (full page, color) shows a boy (son of Eden's production manager) drinking soymilk through a straw from a carton of Original Edensoy. "At Eden this means: no irradiation, no preservatives, no chemical additives, no food colorings, no refined sugars, no genetically engineered ingredients—the safest, most nutritious, certified organically grown food that can be found. More than 200 Eden Foods are available at discerning retailers in the USA and Canada. Pure food is our passion. Great taste is our joy." Copyright 2002. Address: Clinton, Michigan 49236. Phone: 1-888-424-EDEN.

2801. Silver, Jimmy. 2006. Old-line health-food distributors

that made the transition to being natural-food distributors in the 1970s (Interview). *SoyaScan Notes*. March 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The five main companies were: Kahan & Lessin Co. (Compton, California, near Los Angeles). Landstrom Co. (San Francisco, California). Balanced Foods (North Bergen, New Jersey; Mid-Atlantic states). Health Foods, Inc. (Des Plaines, Illinois, near Chicago). Sherman Foods, Bronx, New York.

Only Balanced Foods (founded in Nov. 1939 by Dr. Maurice “Doc” Shefferman, and Sam and William Reiser) made the transition smoothly and still exists—although not as an independent company.

Kahan & Lessin (K&L) was purchased in the fall of 1983 by Jameson Pharmaceutical Corp. (San Mateo, California, owned by Jim Jones). Jones was already aware of Walmart and saw K&L as a vehicle for distributing supplements to Walmart. However Jones did not know the business; he survived for only 3-4 years, declaring bankruptcy in about 1980-81.

Landstrom was a family-owned business, but by the time the natural foods industry was becoming significant, Bob and June Merriam, and their younger brother Rick, were running the company. They were hard to deal with and went out of business in the early to mid-1980s.

Balanced Foods, long run by brothers Sam and William Reiser, continued to be a powerful distributor on the East Coast during the 1970s and 1980s and a major competitor of Erewhon. In late 1986 Tree of Life, Inc. (St. Augustine, Florida) purchased Balanced Foods to become the largest natural foods wholesaler in the USA. Tree had been purchased in Dec. 1985 by Netherlands-based Royal Wessanen NV Co. for \$15 million.

Note: One other old-line health food distributor doing business in Aug. 1980 was The Pavo Co., Inc. (Minneapolis, Minnesota), a family business since 1931. Address: President, Pure Sales, California.

2802. Silver, Jimmy. 2006. UNFI (United Natural Foods, Inc.) has now passed Tree of Life / Royal Wessanen to become America’s largest distributor of natural foods (Interview). *SoyaScan Notes*. March 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** UNFI grew out of three smaller natural-food distributors: Mountain People’s Warehouse (Nevada City, California), Cornucopia (Connecticut), and Stow Mills (Vermont and New Hampshire). The name United Natural Foods (also called United Naturals) was coined when Mountain People’s Warehouse and Cornucopia merged in 1995.

Note: The Organic Trade Association (OTA) website (www.theorganicpages.com) shows (March 2006): Mountain People’s Warehouse is a division of United Natural Foods Inc., 22 30th St., NE, Suite 102, Auburn (near Tacoma),

Washington state 98002-1726. Phone: 1-800-336-8872.

The UNFI family also includes Cornucopia Natural Foods and Stow Mills (phone: 860-779-2800), Rainbow Natural Foods (303-360-8459), Albert’s Organics (609-241-9090), and Hershey Imports Co. (732-388-9000). UNFI is the company’s ticker symbol on the Nasdaq. Address: President, Pure Sales, California.

2803. Reiser, John. 2006. History of Balanced Foods and of Sam and William Reiser. Part II (Interview). *SoyaScan Notes*. March 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: In the early 1960s there were only half a dozen health food distributors in the entire country. Balanced Foods had maybe 50-75 customers (mom and pop health food shops) along the East Coast from Maine to Florida.

Both Sam and William had the vision not to be content with a regional distributorship. They bought Akin Distributors (with warehouses in Tulsa, Oklahoma, and Jacksonville, Florida), Midwest Natural Foods (warehouse in Ann Arbor, Michigan), Northwest Dietetic Supply (warehouse in Kent, near Seattle, Washington), and Keene Distributors (Dallas, Texas)—to give Balanced Foods national reach.

When Balanced Foods moved to New Jersey, Sam and Helen Reiser moved to Fort Lee, New Jersey, which is near the George Washington Bridge, north of North Bergen. It made no sense to commute from New York City. Sam and Helen lived the rest of their lives in Fort Lee, New Jersey. Their main competitor was Sherman Foods, until Sherman left the business about 15-20 years ago. Sherman was located in the armpit of the South Bronx on East 138th St.; it was a horrible, dangerous, sort of burned-out neighborhood. Nobody wanted to get into that area. Yet John thinks that Sherman Foods was as big or bigger than Balanced Foods during the 1950s.

The people who ran these health food companies believed deeply in what they were doing, and they also realized the importance of making money to survive.

Sam and William Reiser were very different people, and very complementary. Sam was the inside, operations, money guy who ran the company; he was calm and reflective. William was the head salesman, the outside guy; he was more volatile, the glad hand, who was forever on sales and business trips. William had health problems and died in 1977, whereas Sam lived more than 10 years longer, dying in 1989—after the company had been sold to Tree of Life. Sam was a man who saw his life dream realized, whereas William had passed away. In the mid-1970s, before he passed, William was making lots of money and had the satisfaction of seeing his son working for the company and the company becoming large and successful, breaking sales records every month, year after year. Sam saw a tiny, struggling company

built into the biggest, strongest natural food distributor on the East Coast, and then sold it in late 1986 for a princely sum. At the time of the sale, Norman Roberts was the head of Tree of Life in the USA. He was told by Wesannen, the Dutch company that owned Tree, to become the largest distributor of natural and health foods in the United States. Roberts saw that the easiest and best way to do that was to buy Balanced Foods—which he did. At the time, Sam was willing to sell to any good company that met his asking price. Tree of Life came to him. He told them his price and they said okay. Few men have that satisfaction.

After Sam sold Balanced Foods, Sam told Tree: “Whatever advice and counsel you need from me, it would be my pleasure to give it to you, free of charge for as long as you’d like. He saw no need for an employment contract. But Tree of Life made it clear there was no need for him to stay around—a huge and costly mistake by Tree, since Sam probably knew more about the industry and had more experience in it than anyone in America. Tree also basically told all other members of the Reiser family (except John) to go home. John, now age 40, was mostly in charge of sales, although he did everything and anything. They praised his past work and invited him to stay on. He accepted. About 2 months after Tree took over, John spent 15-20 hours, writing a 25-30 page sales report, which he sent to the national sales manager of Tree (part of the Wessanen management) in St. Augustine, Florida. In it, he told them everything he felt about the present status of Balanced Foods, where it was going, the problems that he foresaw, and how he thought each of these issues could be addressed. After a month, not having heard anything, John called they sales manager to check that he had received the report. He said that he had received it, then added: “I appreciate it, but next time don’t waste your time.” John was also led to believe that he was stuck in the position he was in, that he wouldn’t get any raises, that they would never fire him but he wouldn’t get anywhere. John thinks they wanted to basically cut ties with the Reiser name and forge ahead on their own. There were some big egos involved. In about 1988, John left Balanced Foods, invested in Sherman Foods (still in the Bronx and on the brink of going out of business), and became a 3rd partner. His investment helped to move the company to New Jersey and find a bigger warehouse. From 1988 to 1990, Sherman’s sales doubled from \$12.5 million to \$25 million. But the new partnership did not work very well, so in 1990 the partners decided to sell Sherman Foods to Tree of Life—which closed it up. For John, it was a good experience but not a great investment. John then co-founded Northeast Brokers in Ridgewood, New Jersey; he is now co-owner of this company. His original equal partner was Steve Giordano, who ran Midwest Natural Foods after it was acquired by Balanced Foods. In about 1993 John brought Doug Braun (who had worked for John as a salesman) as a minority partner. After Steve died in 1997, John and Doug made

arrangements to become equal partners.

John will send a detailed 40th anniversary tribute to Balanced Foods from 1980; it took up half of *Health Food Retailing* magazine.

Only Balanced Foods (founded in 1939 by Sam Reiser) made the transition smoothly and still is business—as part of Tree of Life. Kahan and Lessin sold their business for a good price, several million dollars, and considered that they had been a real success. Landstrom had difficulty making the transition from the founders to the next generation, and in trying to expand into a national distributor. They may have tried to bid against Balanced Foods for several smaller distributors. Address: Owner, Northeast Brokers. Phone: 201-612-1154.

2804. Gomory, Adelle Shefferman. 2006. History of Balanced Foods and of Maurice “Doc” Shefferman (Interview). *SoyaScan Notes*. April 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Adelle is the daughter of Maurice “Doc” Shefferman, one of the three founders of Balanced Foods (BF) in Nov. 1939. She recalls that in 1939 if you told someone you were in the health food business, they thought you were nuts; they’d roll their eyes. But its no longer that way; many health foods are now mainstream American foods.

“Doc” Shefferman was a naturopathic doctor, but he never used the titles “doctor” or “Dr”—only “doc.” Before that, he was an optometrist (though he did not have an M.D. degree), but he never practiced. He was born on 10 Jan. 1894 in Zanesville, Ohio. His family soon moved to Washington, DC, where he grew up and went to high school. He did not attend college. He married Dean Spiegel in 1916 in Washington, DC and they had two children, both born in Washington, DC: David (born 20 July 1918) and Adelle (born 20 June 1921).

He became very interested in Benedict Lust (pronounced LOOST, a German-born teacher of naturopathy with headquarters in New York City), so he went to New York City to write for Lust’s pioneering and popular magazine *Nature’s Path*, where he eventually became associate editor. His share of the startup capital for BF probably came from savings from his writings. Maurice was also a talented singer, with a beautiful baritone voice. But he sang and performed for pleasure, not for money.

As Adelle recalls: Her father met Sam and Will Reiser, who were interested in natural foods and they wanted to start a company, but they didn’t have the health-food background. So they wanted to work someone who had a good basic knowledge of the health-food field. “Doc” Shefferman was the one with that knowledge. Jack Schwartz, of *Syndicate Magazines, Inc.* in New York City may well have brought them together.

The three men started this tiny company in Manhattan

(New York City) at 100 Fifth Avenue [between 15th and 16th streets] on the 17th floor of an office building. They were equal owners from the start; they paid the expenses and shared any profits equally. The whole space, no bigger than a big living room, had to hold both the offices and the warehouse. “Everything was right there.”

Adelle, who had graduated from Newtown High School in Queens (New York City) in 1939, was the first employee and the first secretary of Balanced Foods. Helen Hollinger was the 2nd employee. The two young women shared the work that needed to be done—taking orders, typing invoices, etc. But there were only a handful of health food stores on the East Coast in those days. As their number began to increase, so did the size of Balanced Foods.

The USA entered World War II in Dec. 1941. In about 1942 BF moved across the street to 79 Fifth Ave. to get more space. It was a ground floor space with a balcony office, a good open area that had formerly been a bank building. Adelle left the company in 1943. Her husband was in the army in training in the southern USA and she left the company to be with him; he was killed during the war. Adelle did not return to work with BF, but she kept in touch with the company by keeping in touch with her father (“Doc”) and with her friends Helen and Sam.

The company grew rapidly during its early years, moving into a 10,000 square foot after less than 4 years in business. The young company was growing very nicely. “Doc” was grateful that he was in the right place at the right time, doing what he loved best and believed in most deeply, surrounded by talented, trustworthy partners and employees. Each of the partners had unique and complementary high-level skills. They worked as a team, in almost perfect harmony. “Doc” went to work there every day—just like everyone else. He lived what he taught. And he always derived a great deal of satisfaction from his work and from the company he had started.

“Doc’s” specialty was customer relations and education. He knew a lot about nutrition. He continued to write articles about health foods and in 1956 his book, *Food for Longer Living* (Whittier Books, NY; 181 p.) was published. Adelle recalls: He was always a gentleman, always dressed sharp and aware of himself and of others. And, of course, he had that hallmark mustache. He had a lifelong good relationship with his wife and children. He loved to help other people in a very selfless way, and he was almost a missionary for health foods and the good they could do. He was widely respected by others in the health foods industry; he was quite a guy. He was a sweetheart; my father was such a good person. He was very giving, always very thoughtful, good natured with a good sense of humor, good to be around. He stayed active in his business and the industry almost until the day he died—on 19 Sept. 1974 in New York City.

In 1959 Adelle and her 2nd husband, Eugene Gomory, founded Orjene Natural Cosmetics in New York City. This

was a pioneering company, America’s first maker of natural cosmetics—in New York City. Her husband wanted his own business, Adelle knew that the health foods industry was growing nicely, and they found an open niche in the market. In about 1964 their daughter (and only child), Lynne Gomory Machicao, came in to work at Orjene. They ran the company as a family business. After Eugene passed away in 1988, Lynne and Adelle continued to run the company; it is still going in New York and it is still Lynne’s main work. Address: Queens, New York City. Phone: 718-446-5292.

2805. Reiser, Helen. 2006. History of Balanced Foods and of Sam Reiser. Part I (Interview). *SoyaScan Notes*. April 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Helen is Sam Reiser’s wife. She was also Balanced Foods’ 2nd employee. Sam and William Reiser grew up in a family of five children. Their parents were Abraham Reiser (born in Poland) and Rebecca Rosovsky (born in Russia). They probably met in America. Abraham owned a shirt manufacturing company, with a small factory first in upper Manhattan in New York City, then later—in the 1920s—a larger one in Virginia or North Carolina (after he landed a contract from Sears Roebuck and needed to expand). He was a good businessman and quite successful. He continued to live in Brooklyn, traveled to his factory in The South when necessary, and had a reliable manager at the factory who took care of day to day operations.

Abraham and Rebecca’s children, in order of birth, were Katherine, Esther, William, Sam, and Myra (who is still alive). William was 14 months older than Sam. The first two children were born in the Bronx; Sam, the 3rd, was born on 8 Dec. 1914 and came home to the family’s new home Brooklyn, New York, where all the kids grew up. All five children graduated from college—remarkable! Rebecca died in about 1940 in Brooklyn. Abraham died in about 1948, also in Brooklyn.

Sam graduated from New Utrecht High School in Brooklyn, then from 1932 to 1936 he attended Cornell University. But, for some reason he did not receive his bachelor’s degree, a BS in chemistry, until 20 June 1938.

Apparently he wasn’t in a hurry to pick up his diploma. It was the midst of the Great Depression and, fresh out of college in 1936, he got a job with a chemical company in New Jersey for several years. But he soon decided that he would like to be his own boss. His elder brother, William, came to the same conclusion at about the same time.

Sam and Will probably met “Doc” Shefferman through Jack Schwartz, who was their cousin. Schwartz was head of Syndicate Publications, Inc. which published *Health Foods Retailing* and several other important health food magazines. “Doc” Shefferman wrote articles for these magazines and knew Schwartz well. Sam and Will Reiser and “Doc” Shefferman decided to establish and become partners in a new company named Balanced Foods (BF), that would

distribute health foods. Actually there was a 4th partner at the beginning—Bernard Freund; he was with the company for about 5-6 years, but he wasn't willing to work hard so he ended up leaving. William Reiser may have joined a few months after Sam did. Each man put up one-fourth of the startup capital to buy the inventory and office equipment, pay the rent and employees, etc. They borrowed this money from family, relatives and friends. From the outset they had competition: Sherman Foods, located in the Bronx, New York City, had been distributing health foods since 1924!

Balanced Foods opened for business in Nov. 1939 in Manhattan (New York City) at 100 Fifth Avenue [a commercial area between 15th and 16th streets, 1 block west of Union Square, a big park] on the 17th floor of an office building. It was a very small space—about the size of a typical living room—containing both offices and warehouse. The first employee, in Nov. 1939, was “Doc” Shefferman’s daughter, Adelle. In Sept. 1940 Helen Hollinger joined BF as a bookkeeper and the second employee; she had just graduated from the City College of New York and was looking for her first job. She did everything—whatever needed to be done—telephone answering, order taking. Here she first met Sam Reiser, who full time worked in the same office and was her immediate boss. Sam was the “inside man,” officially Secretary-Treasurer, in charge of purchasing, finances, etc. Will was more the “outside man,” in charge of sales. “Doc” Shefferman, who was a naturopath and a very elegant gentleman, had a great reputation in the field. “Doc” knew the most about nutrition, and he had contacts in some of the health food stores—although there were very few such stores at this time. He spent some of his time visiting customers; he was very good at working with and helping them. He cooperated with the stores to sponsor lecturers (such as Bragg or Hauser), advertise, and find a hall where they could speak. He also wrote for *Nature's Path* (owned by Benedict Lust); its offices were located a few miles away but he rarely went there.

BF didn't sell too much in bulk—except wheat germ; the other products were packaged. They did carry a few lines, such as that of Paul Bragg, a lecturer.

Not long after Helen arrived, probably in early 1941, Balanced Foods moved across the street to a larger space at 79 Fifth Ave., on the 11th floor. Again, the offices and warehouse were together, and as before the building (used largely for making men's clothing) and space were not suited for a food warehouse. Within a year, war uniforms for American soldiers in World War II took the place of most of the men's clothing.

In those early years, the company was very small. Everyone worked for very little money, some of which the owners used to pay back the startup capital.

In 1943 they moved about 50 blocks north and 4 blocks east into a very large space [10,000 square feet] at 304 East 64th St., 1 floor above sidewalk level. Rolls Royces (the

luxurious British automobile) were being sold a floor or two below. The Knickerbocker Ice Company was on an adjacent floor. BF's new home felt very spacious was much better suited for commercial operation. There was a commercial elevator in the building, and it could be made to stop at the tail end of a truck for quick and easy loading and unloading. Since BF did not yet own a delivery truck, all the goods where shipped by a trucker they knew or by public carriers.

Sam and Helen both lived near one another (by coincidence) in Brooklyn. They would drive to and from the office in the same car with Will and several other people. In this way, Helen and Sam got to know each other outside of work. Continued. Address: New Jersey.

2806. Reiser, Helen. 2006. History of Balanced Foods and of Sam Reiser. Part II (Interview). *SoyaScan Notes*. April 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: When the U.S. entered World War II, in Dec. 1941, Sam had a dependent father and a baby business, so he was deferred for a while. But on 5 Oct. 1942 he was drafted into the army, had to report to Aberdeen, Maryland, and was away for about 4 years. He fought in France and Germany. During one of his home leaves, he proposed to Helen and they were married on 26 May 1943.

Stuyvesant Town started to be constructed during the war. A huge middle-income development on the east side of Manhattan, it stretched from 14th to 23rd St. and 1st Ave. to Ave. C. Helen and Sam put their names on a waiting list for an apartment—along with some 20,000 other people.

During the war, Sam kept in close touch with both Helen and with Balanced Foods. Helen still has every one of his letters—as well as all the letters she wrote to him. She intends to pass them on to her son, Paul, who has become quite famous as an actor.

The war ended in Sept. 1945 and that November Sam returned home and to work—as if he had never been away. Sam and Helen's first child was born in May 1947, at which time Helen stopped working for Balanced Foods—but that did not diminish her interest in what was going on at the company. This interest continued until Sam retired. They had 3 more children.

In 1947, Sam and Helen (now living with Helen's parents) received good news. They had secured a large apartment Stuyvesant Town. Priority was given to veterans—such as Sam. So they moved in with their infant daughter.

It is not clear when Balanced Foods was incorporated, but Helen is quite sure that it happened before 1947.

One day in 1947 a friend of Sam's from the Hospital Bureau of Standards, a purchasing agent for private hospitals, contacted Sam and asked him if he sold any water-packed canned fruits or vegetables that contained none of the usual salt or sugar. The Bureau wanted sell these foods to dietitians in the hospitals it served. Sam said “no” but offered to develop these products for the Bureau. He was authorized

to go ahead.

Sam contacted a packer in California, and together they developed a line of unique and innovative, healthy canned foods (with no preservatives) that were packaged under the Balanced Foods label. The first product was peaches; BF had to order a carload. Soon two Reiser families found themselves enjoying a lot of California peaches. Of course most of the carload went into their warehouse. At one point there was a big fire in that warehouse, but insurance covered their losses. Next Sam developed other fruits, plus vegetables such sweet corn, green peas, and many types of vegetables. Both sets of Reiser children grew up eating these healthy foods.

Next, BF began selling these healthy canned foods to health food stores. This was the beginning of Balanced Foods' line of private label products. They did not try to sell these dietetic specialty foods to supermarkets, because they disapproved of the idea; it would undercut their main customers in the health foods industry. An addition, they did not have the quantities needed to serve supermarkets.

Balanced Foods continued to grow. In 1951, after outgrowing their 10,000 square foot warehouse, they moved south to an even larger space at 700 Broadway (and 4th Street), near New York University (NYU) and east of Greenwich Village. The spacious two-level structure had offices on a mezzanine overlooking the warehouse. Helen recalls: "It was hard to get the trucks in and out with all the traffic." Balanced remained here for 16 years.

Sam was a very hard worker and brilliant person. He was especially good at science and math, as well as business. He was also a very good educator, and he loved to help anyone who was interested in starting a health food store. Sam believed deeply in what he was doing and he loved his work.

When BF moved to New Jersey, through William's connection with Michael Goldfarb, the price per square foot of warehouse space was lower than in Manhattan. Sam was very interested and involved in the computerization of the company at the public warehouse. "That computer system made all the difference in the world." It was a big leap forward, and gave BF a major advantage over its competitors. The computer was also instrumental in helping Balanced Foods to make the transition from the health foods industry into the natural foods industry.

In 1974 "Doc" Shefferman passed away at while in his 80s. His shares of the company were equally divided between Sam and Will; the value of the shares was paid to Doc's family. There were no relatives or others who owned shares. When Will died in 1977, Sam became the sole owner of the company. Sam and Will got along very well. "They finished each other's sentences."

Sam retired in Dec. 1986, right after Tree of Life bought the company.

Helen was very happy to see now nicely Sam made the

transition from owning Balanced Foods into retirement. He changed with the changing times. "We traveled a little bit and just enjoyed being together." But he died about 3 years after he retired. The best character description she has of Sam is the obituary his son, Paul, read at his funeral.

In addition to being an excellent businessman and very bright and hard-working, Sam was also a family man. He was very much a hand's-on person to customers. He trusted them, he helped them a great deal. When someone wanted to open a health-food store, he helped them in every way possible—even going there and helping them to put goods on the shelves. He was a friend, and that was also good for business. He was very kind and generous. "My first impression of Sam is putting his hand in his pocket to give somebody money." He was also very supportive of the schools his children attended. In 1996 their son, Paul, established the Samuel Reiser Scholarship Endowment in the Department of Music at Harpur College (where he is an alumnus), Binghamton University (State Universities of New York—SUNY).

Helen has a trunk with some old documents relating to Balanced Foods, including the company's first catalog, and an article from *Whole Foods* (Jan. 1990), which contains a nice obituary and photos of 3 partners and the old office (p. 82) plus a photo of Sam on the cover, and another issue from July 1995 with an article titled "Industry veterans look back at the early days" (p. 72-74).

Helen thinks the health foods movement was started in Germany by the hikers, vegetarians, and outdoor people who liked natural things. Benedict Lust, a German, was the pioneer on the East Coast. In fact, the first owner of Sherman Foods, the first natural food distributor in New York City was Ernest Fried, a German. He started with an interest in a health food store on 34th St. in Manhattan. Then he went into the wholesale business, and became a partner in Sherman Foods.

In the United States, Helen thinks, the health foods industry really started in California. During the 1940s, Gayelord Hauser wrote a book that greatly helped the industry, and he did a lot in Hollywood with the movie people. "Paul Bragg used to love to strut his physique; he was very much a physical culture man. He would pose with his muscles exposed. He also lied about his age; he said he was 80 when he was actually much younger—because he was a great specimen for 80." Helen has a bottle of Bragg's aminos in her refrigerator. Address: New Jersey.

2807. Hillyard, Roger. 2006. Thoughts on the history of commercial organically-grown foods in the United States (Interview). *SoyaScan Notes*. April 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Erewhon retail store in Boston, Massachusetts, was definitely not the first retail store in the USA to sell organically grown foods. Early sources that

Roger knows were: The Food Mill in Oakland, California. Walnut Acres in Pennsylvania. Giusto's in San Francisco (Opened in 1940). Oh's Fine Foods on Mission Street in the Mission district, San Francisco (an ethnic bulk grain store, mid-1960s). Address: Farley's Coffee Shop, #1315 18th St., Potrero Hill, San Francisco, California 94107. Phone: 415-648-1545.

2808. *SoyaScan Notes*. 2006. Brief history of organic farming and organically-grown foods in the USA (Overview). April 17. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1942 May–J.I. Rodale begins to publish *Organic Farming and Gardening* magazine in Emmaus, Pennsylvania. Note that the word “Farming” precedes the word “Gardening,” indicating that his focus was more on commercial farmers than on home gardeners. By this time there must have been tens of thousands (if not hundreds of thousands) of U.S. farmers who were still farming as their fathers and grandfathers had, and who had not yet made the switch to using chemicals on their crops.

1948 and 1949 J.I. Rodale wrote and published books on organic farming. Then in Aug. 1949 he started publishing a new magazine titled *Organic Farmer*.

Several interesting questions arise: (1) When were the first food products labeled “organic” or “organically grown” sold in retail stores? (2) Who grew them? (3) Where and in what kinds of stores were they sold?

2809. Shurtleff, William; Aoyagi, Akiko. comps. 2006. *History of Erewhon—Natural foods pioneer in the United States: Extensively annotated bibliography and sourcebook*. Lafayette, California: Soyfoods Center. 220 p. Subject/geographical index. Author/company index. Printed April 18. 28 cm. [306 ref]

• **Summary:** A comprehensive history of Erewhon, with a Preface by James Silver. Includes 100 original interviews with Erewhon's founders, early directors, and others close to the company. Also includes 19 copies of key Erewhon documents from Feb. 1967 to May 1981, including all of one early Erewhon catalog. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2810. Nordquist, Ted; Webster, Robin. 2006. *New developments making dairylike soyfoods in America* (Interview). *SoyaScan Notes*. May 9. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** WholeSoy & Co. is a wholly-owned subsidiary of TAN Industries; Ted now prefers to use the former name instead of the latter. Modesto WholeSoy Co. is its own entity. Ted and his business partner, Henry, now own 85% of the stock.

Silk soymilk was launched in Jan. 1996. Ted was having a lot of problems with the soy base made by Pacific ProSoya

in British Columbia. About a year later [probably in about March 1997] Ted installed a soy base plant at Soyfoods of America in Duarte, California. He did this together with Wally Rogers, owner of Bean Machine Inc. (BMI—using a stainless steel grinder / disintegrator made for BMI by Corenco, owned by Chris Cory). Wally took Ted to Chris and together they designed the grinders to be installed at Soyfoods of America. In about Sept. 1997 Ted started producing soy base for Silk soymilk at the plant in Duarte. This soy base was sent in tankers from Duarte to Gustine, where Ted and coworkers formulated the Silk soymilk.

Ted's next product was made together with Gary Stein. Gary (of San Diego) called Ted and said that Trader Joe's wanted a soymilk. Ted said to Gary, “That's fine, but I have a contract with Steve Demos, so I can't do that.” So Ted set up Gary. He told Gary that Ann Shaw and Laura Tewnion knew how to formulate soymilk. He and Gary talked a lot about it but he told Gary, “I can't touch it with a ten foot pole, but I'm happy to ship the soy base to you.” So Ted shipped the soy base from Duarte to Gustine, then Gary Stein formulated the soymilk for Trader Joe's and sold it to Trader Joe's.

Ted's next product was Certified Organic Soymilk, made for Wildwood Natural Foods and launched in July 1998.

Next, in 1999, Ted and Henry came up with the WholeSoy name. So they had cups designed for WholeSoy but, of course, they had no sales volume, so they sent that idea to Trader Joe's, which agreed for Ted to private label the product for Trader Joe's. So Ted launched both the WholeSoy and the Trader Joe's private label at exactly the same time. They were exactly the same products but in different cups.

In about May 2004 changed the name of his company to WholeSoy & Co. from TAN Industries, and his brand to WholeSoy & Co. from The WholeSoy Co. The words “WholeSoy & Co.” first appeared on their Lite Smoothies in September 2004. Ted did a focus group in which he put out packaging from products made by Silk [White Wave], Stonyfield, Wildwood, and TAN Industries. The members of the focus group were asked to describe what they understood by looking at the different packages. “They thought that WholeSoy was a generic name, that companies like Safeway and Albertsons were making. They thought WholeSoy was a really big corporation, and that therefore its products should sell for the lowest price.” Ted recalls: “It was unbelievable. I was just speechless. I wanted to go in there and tell them how wrong they were!” They knew the Stonyfield brand and thought that product was worth the money. The Wildwood product attracted them because it had a real good appearance.”

In about Jan. 2006 Ted started printing “Soy Yogurt” in large letters on the front of his yogurt cups—which previously said only “Cultured Soy.” It happened like this. Ted's soy yogurt is made by SSI (Super Store Industries), which is owned by Raley's and Save Mart (both supermarket chains).

Ted was going into new packaging and he asked them: “Do you have any problem using the terms “Soy Yogurt” or “Soy Frozen Yogurt” on the cups? They said they would check. They checked all of their contacts then told Ted that there was no objection to using those terms.

In Jan. 2006 Ted started using the term “Soy Yogurt” in large letter at the top front panel of his yogurt cups. He gradually phased it in to all flavors as new cups had to be printed.

In Sweden, Ted had only one plant in the county of Enköping (pronounced en-CHUR-ping) where he made soyfoods. He built (together with Mark Jungstrum of Trensusms Musteri) a soybase plant in the commune and city of Tingsryd near Karlshamn; it produced 3,000 to 3,500 liters/hour of soybase. And he had a test plant at Alfa-Laval in Lund.

WholeSoy’s Soy Cream Cheese was introduced in Feb. 2005 in two flavors: Original and Garlic & Herb. It had a 90-day shelf life with 12 packs per case. Both are still on the market but Ted is in the process of discontinuing the product by letting them “sell through” until they are all off the shelves. He got them into all the natural food stores, but the total market for this product category is too small, so sales were too slow.

In about Sept. 2004 Ted also launched a WholeSoy Smoothie Light, but discontinued it in about Nov. 2005. It contained very little sugar and used Lo Han fruit concentrate as the natural sweetener. Address: WholeSoy & Co., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

2811. Paulson, Amanda. 2006. As ‘organic’ goes mainstream, will standards suffer? *Christian Science Monitor*. May 17.

• **Summary:** “Advocates are cheered by the growing appeal of organic foods. But shoppers, confused by labels, don’t always get what they think they paid for.”

“Mr. Cummins worries about companies buying products like soybeans overseas.

“Consumers buying soy milk or tofu, ‘have no clue that in the case of soy milk and tofu, it’s actually coming from China, where organic standards are dubious and labor standards are abysmal,’ he says.”

2812. DeVault, George. 2006. What became of Walnut Acres? *Natural Farmer (The) (Barre, Massachusetts)*. Spring. p. 29-34.

• **Summary:** Superb! A detailed biography of Paul and Betty Keene and of their pioneering organic farm, Walnut Acres.

Contents: Background. The auction (15 Feb. 2001) of Walnut Acres and all its property; how sad. Paul Keene’s meeting with Mohandas K. Gandhi in 1939 in Mussoorie, India. Meeting Betty Morgan and their marriage in India. Return to the United States and details of where they lived,

when, and what they did from 1940 to March 1946. Return to the auction of 15 Feb. 2001. Paul Keene, who is still living, is (fortunately for him) not there. Age 90 and suffering from Alzheimer’s Disease, he resides in an assisted living facility near Harrisburg, Pennsylvania. The saga of David C. Cole and his acquisition then destruction of Walnut Acres—told from two completely different points of view; that of the organic industry and that of the new CEO of Walnut Acres Mark Rodriguez. Return to the auction of 15 Feb. 2001. Epilogue.

A large photo shows Paul and Betty Keene when they were young (about 1940).

2813. Ferré, Carl; Ferré, Julia; Briscoe, Cynthia; Briscoe, David. 2006. Cornelia Aihara memorial, 1926-2006. *Macrobiotics Today (Chico, California)* 46(3):2, 5-9. May/June.

• **Summary:** Beautiful remembrances of this macrobiotic pioneer and cooking teacher—“spoken at Cornelia Aihara’s Memorial Service on March 4, 2006 at the Unity Church in Oroville, California.” A sidebar, titled “Obituary,” is by Patricia Murray. Chiiko Yokota was born on 31 March 1926 in northern Japan with a congenital heart problem; she was a “country” girl, not a “city” girl. “She first met George Ohsawa when he visited her village. Later she joined his school... It was Ohsawa who suggested she change her name to Cornelia.”

1955—After “corresponding with Herman Aihara, she traveled to New York City with only ten dollars in her pocket trusting that Herman... would take care of her.” He did and soon they were married and had two children.

1960—Cornelia’s macrobiotic work began in New York. 1961—She assisted Lima Ohsawa at the first summer camps held in the United States. Also in 1961, “during the Cuban missile crisis, 16 families, 36 people in all, moved [from New York] to Chico, California. Cornelia cooked for everyone along the way.

1960s—Cornelia and Herman helped to establish macrobiotics on the West Coast, with summer camps in Big Sur, Miramichi, and elsewhere.

1964—*Zen Cookery* is published; Cornelia contributed many of the recipes.

1970—The first French Meadows camp was held—with Cornelia as the head cook. Altogether she cooked at 38 summer camps. Note: French Meadows campground is in Foresthill, California, deep in the Tahoe National Forest, about 15 miles west of Lake Tahoe, California.

1971 March—Cornelia and Herman co-founded the George Ohsawa Macrobiotic Foundation in San Francisco. Also in 1971 her first cookbook appeared, the first in the four-volume series *The Do of Cooking*.

1974—They moved to Oroville and founded the Vega Institute. Herman’s teachings were more theoretical, while Cornelia’s were more practical.

1984—The former Oroville Hospital was transformed into the Vega Study Center. 2006 Feb. 26—Cornellia died peacefully in her sleep in Roseville, California. Her memorial service was March 4th. “Her grave is in the Sierra View Memorial Park in Marysville, California.” Photos show: (1) Portrait of Cornellia Aihara—with another on the cover of this issue. (2) Cornellia, seated at a table, teaching a Japanese song at French Meadows Camp. (3) Cornellia cooking at French Meadows.

Note: Lorenz Schaller writes on 2006. March 24. “Cornellia Aihara graduated to the spiritual world (Sat, Feb. 25, 2006). She left this world 8 years to the day after Herman [her husband] did... Cornellia was certainly a soyfoods pioneer, at least to me, here in the West.” Address: Oroville, California.

2814. Ferré, Carl; Ferré, Julia; Briscoe, Cynthia; Briscoe, David. 2006. Cornellia Aihara memorial. *Macrobiotics Today (Chico, California)* 46(3):5-9. May/June.

• **Summary:** “The following words were spoken at Cornellia Aihara Memorial Service on March 4, 2006 at the Unity Church in Oroville, California.

Life and Accomplishments by Carl Ferré: Good afternoon and welcome to the Memorial Service for Cornellia Aihara, our beloved teacher and friend. On behalf of the Aihara family, thank you for coming to share in this ceremony and celebration of Cornellia’s life and work.

“There was a private funeral ceremony in the Shinto tradition held for Cornellia last Sunday by Priest Koichi Barrish of the Tsubaki American Shrine in Seattle. He reports that the funeral service for Cornellia was a very powerful and moving ceremony. He has sent the memorial plaque so that it will be here during this service to provide a connection to Cornellia’s Shinto practice. We are very grateful to Reverend Barrish and to all who have helped in planning and are participating in the ceremony today.

“I want to begin by providing an all-too-brief remembrance of Cornellia’s life and some of her many accomplishments. Chiiko Yokota was born March 31, 1926 in Northern Japan with a congenital heart problem. As she would remind us many times, she was a ‘country’ girl and not a ‘city’ girl. She taught us what might be termed the ‘country-style’ of macrobiotics. She was never interested in fame or in being in the spotlight but was rather comfortable in the supporting role, teaching us in her very practical ways.

“She first met George Ohsawa when he visited her village. Later she joined his school. Ohsawa said that Cornellia was the best student at remembering his exact words. It was Ohsawa who suggested she change her name to Cornellia.

“In 1955, after corresponding with Herman Aihara, she traveled to New York with only ten dollars in her pocket trusting that Herman, having never met him, would take care of her. He did and soon after they were married. Together

they had two children—a daughter Marie and a son Jiro who are here today. In 1956 it was Cornellia who sent life-saving supplies to George Ohsawa after he had infected himself with tropical ulcers in Africa.

“Cornellia’s macrobiotic work began in New York and in 1960 and 1961 she assisted Lima Ohsawa at the first summer camps held in the United States. In 1961, during the Cuban missile crisis, 16 families, 36 people in all, moved to Chico, California. Cornellia cooked for everyone along the way. During the 1960s Cornellia and Herman helped establish macrobiotics on the West Coast, continuing with summer camps in Big Sur, Miramichi, and elsewhere.

“The first French Meadows camp was held in 1970 and Cornellia could be found in the camp kitchen—the first to arrive each morning before daybreak and the last to leave at night. Altogether she provided the cooking at 38 camps. One of my first years at camp I worked in the kitchen and recall a time when she needed carrots and the 5 or 6 of us who were cutting them were behind in the task. She said, ‘Too slow, you are—don’t try this.’ She put the cutting boards side by side, laid all the carrots on them and cut diagonals in seconds—each piece falling dutifully and perfectly so as to be ready for the next cut. She then cut the entire row in another series of rapid chops. The result was perfect matchsticks, each the same size—you would have to use a micrometer to tell the difference. She scrapped them into the pot, turned giving that slight grin of hers, and said, ‘Okay, now cabbage-ee.’ I asked her later why she needed us since she could do it so much better and faster. She responded simply, ‘then, you never learn.’

“In March of 1971, she and Herman co-founded the George Ohsawa Macrobiotic Foundation in San Francisco. In 1974 they moved to Oroville and founded the Vega Institute. While lessons from Herman were more on the theoretical or spiritual side, lessons from Cornellia tended to be more on the practical side. While Cornellia contributed many of the recipes in *Zen Cookery*, published in 1964, her first cookbooks were the four-volume series of *The Do of Cooking* beginning in 1971. That decade she also wrote *Macrobiotic Child Care*, *Chico-San Cookbook*, which was later published under the title *Macrobiotic Kitchen, Soybean Diet* with Herman, and finally *The Calendar Cookbook* in 1979.

“The 1970s also were a time when Cornellia and Herman would travel around the United States by van, visiting places with anywhere from 6 to hundreds of people in attendance. They took tour groups to Japan and traveled throughout the world spreading the Ohsawa-style of macrobiotics. In 1984, the former Oroville hospital was transformed into the Vega Study Center and Cornellia worked tirelessly to insure that each student was well fed and cared for.

“In 1994 Cornellia’s other area of expertise was displayed with the publishing of *Natural Healing from*

Head to Toe. Whether cooking or home remedies, Cornellia worked her magic with precision and love. Although she had been born with a heart problem, she carried out her dream with determination, perseverance, and great care.

“Our friend Mike Chen reminded me yesterday of one of the most beautiful moments in the service for Herman 8 years ago when the Buddhist priest turned to Cornellia and said: ‘So we have to ask ourselves: Did Cornellia do everything she could for Herman? And, the answer is yes.’ Cornellia came to this country trusting Herman’s words of correspondence and she repaid him for that trust with her undying devotion, hard work, and love.

Cornellia-san, it was an honor to work with you—may you rest now in peace.

“Remembrance by Julia Ferré

“I met Cornellia Aihara in 1980 in Missouri. She was teaching at the macrobiotic summer camp held at Moniteau Farm. I traveled from Madison, Wisconsin, where I was attending college.

“This was my first exposure to macrobiotics. My first cooking class was with Cornellia. She demonstrated how to dice vegetables, carve flowers, and slice crescent moons.

“At the end of camp, I drove with Herman and Cornellia to the airport, but we never got there. The van rolled over on the way. The accident was minor (no broken bones), and thankfully I was back on my feet in a few weeks. Herman, I later found out, was recovering for months. His injuries were more serious. Cornellia nursed him back to health using tofu plasters, green plasters, and around the clock care, regardless of her own injuries.

“A year later in 1981 I attended French Meadows summer camp; afterwards, I moved to Oroville to study with Herman and Cornellia. Cornellia taught me how to cook, among other things, for about a year. Carl was working at the George Ohsawa Macrobiotic Foundation at this time and had just finished work on *Do of Cooking*. We decided to move together to Texas to be close to both of our families and to get married. Our first son was born in Texas.

“In 1985 Carl and I returned to California for Carl to resume working at the Foundation. The Foundation had moved into the Vega Institute’s location on Robinson Street and Carl began working daily with Herman in publishing and managing the Foundation.

“I was in the process of writing my cookbook and Cornellia encouraged me to keep it simple, focusing on daily cooking, which provides one’s core strength. She wrote the forward for my book, *Basic Macrobiotic Cooking*. Cornellia loved children. When our second son was born, we lived in Oroville, close to Vega. Cornellia came to visit me and brought me food. One time she even came and rocked the baby late at night so I could get some needed sleep.

“At French Meadows she always provided extra fruit for the kids’ snacks. She also made kids a special early breakfast and scolded any adults if they tried to eat the kids’ breakfast

rather than waiting.

“I remember Cornellia best when thinking of her at camp. She worked hard, but it seemed her greatest enjoyment came from leading the chanting and from interacting with the children. One year, when I was coordinating the kids’ program, I asked her to come and spend an afternoon with the kids. She came and taught a simple Japanese children’s song. The kids sang that song for years, both informally during the day and for the Variety night show. Cornellia’s eyes lit up every time she heard the children sing. In closing, I would like to say thank you, Cornellia, for all you have shared with me and with the children you loved.

“Peace.” (Continued).

2815. Jones, Morgan. 2006. Remembering Cornellia: or, How could I forget? *Macrobiotics Today (Chico, California)* 46(3):11-14. May/June.

• **Summary:** “‘Never doubt that a small group of thoughtful, committed citizens can change the world; indeed, it’s the only thing that ever has.’”

“I have often come across this quote from Margaret Mead, the insightful and prolific anthropologist. But on just how many of those occasions did I stop to think deeply about the essential truth distilled in these few simple words... and the fact that every moment of every day of my life is richer as a result of one particular ‘thoughtful, committed citizen’?”

“On Saturday, February 25th, Cornellia Aihara, beloved teacher, irrepressible advocate for each individual’s right to be in charge of his or her own life, and the unofficial adopted grandmother of thousands of students of macrobiotics around the world, spoke her last words of enthusiastic advice—this time by telephone to her daughter, Mari, who was visiting with a dear friend in Mexico. Shortly after the phone call with Mari, Cornellia slipped peacefully off this relative plane.

“Cornellia was born in Fukushima prefecture in Japan on March 31, 1926 with a rare and serious congenital heart defect. The doctors were quite convinced her heart would fail and she would die. Well, the doctors were right... but it took a bit longer than they expected for this prediction to come true. Cornellia’s passing comes exactly 8 years to the day after the death of her husband, partner, and likewise much loved teacher, Herman, and just a few weeks shy of her 80th birthday. (Hmmm. Maybe there’s more to this ‘macrobiotic stuff’ ...)

“Since 1955 when she came to America from her native Japan and met and married Herman Aihara, Cornellia and Herman worked tirelessly and selflessly to share with thousands of us lucky students the simple notion that sickness was not some Universal joke played on an unsuspecting mankind, but that health—be it good or bad—was mostly the predictable result of choices each of us makes every moment of every day of our lives. Though it was a strange concept to me, a child of 20th-century America

where science was our new religion, I have come to share Cornellia's unshakable belief that all of us are quite capable of achieving wellness and happiness by relying primarily on our own intuition and insight and—most important of all to Cornellia—our own unique lifetime of experience.

“Nowadays, when I walk into a grocery store—whether my local co-op, a Whole Foods superstore, or even an ordinary neighborhood Safeway or Albertson's or HEB—I see shelves overflowing with inexpensive natural foods I can buy to help keep me physically well and mentally clear. I can easily fill my organic cotton shopping bag with tofu, tempeh, bags of brown rice and millet and quinoa, 6 or 7 varieties of organic miso, pickled umeboshi plums, and a dazzling array of multi-colored organic vegetables from the familiar (carrots and cabbage and cucumbers) to the exotic (daikon and burdock and Hokkaido pumpkin). OK, so maybe Safeway and Albertson's don't yet stock the ume plums or the daikon or the burdock, but just wait... it won't be long.

“Cornellia and Herman Aihara, along with their contemporaries, fellow Ohsawa disciples, and close friends, Aveline and Michio Kushi, comprise one very special ‘small group’ of citizens who have changed my world... and yours. These 4 individuals are the reason we can easily buy the foods that will help us heal and maintain our health in the very same stores that only a few short years ago offered us mostly boxes and bags and cans of packaged, processed, frozen, freeze-dried, preserved and-lately-genetically-modified food-like substances.

“While the TV commercials told us how much less time we'd spend cooking with these modern groceries, Cornellia and Herman knew from long experience that cooking times weren't the only things we'd be shortening. And, boy oh boy, am I glad they chose to dedicate their lives to teaching us what the ads failed to mention.

“Cornellia and Herman taught in many venues—from the living rooms and kitchens of friends with a handful of students in attendance, to the unspoiled campground in the Tahoe National Forest where the annual French Meadows Summer Camp they started in 1970 continues to this day, to the conference auditoriums filled with those of us hungry for a better answer than ‘you only have 3 months to live’ or ‘you'll have to take this medicine for the rest of your life’ gathered again and again.

I met Cornellia and Herman for the first time at the Vega Study Center they founded in Oroville, California when I became a resident student and kitchen apprentice there in 1995. I cannot personally chronicle the whole of her life, as I have only known Cornellia for 11 years. But what I can tell you is it didn't take anyone very long in the presence of this diminutive lady with the unimaginable determination to come to appreciate the twin gifts of her wisdom and her willingness to share what she had learned from a life of working from sunup to long after sundown helping folks who were sick find the path to recovery.

“During my two years at Vega with Cornellia and Herman I came to understand that the lectures and lessons could never be as power fully instructive as the way our teachers—and thus, we their captive students—lived each and every day. While students at Vega we were caught up in the whirlpool that was Cornellia, engulfed in the swirling waters of her wisdom, day in and day out. We learned to cook by cooking (and making a lot of mistakes). We learned to use ginger compresses to relieve pain and help restore kidney function by dipping towels in hot ginger water and applying them to each other over and over again. And we learned to make miso and takuan pickles and mochi and shoyu by... well, by making miso and takuan pickles and mochi and shoyu.

“Cornellia conducted our classes in English, but it took most students a few weeks (and sometimes months) to come to understand her thick Japanese accent made more incomprehensible by what Herman called her ‘speech problem.’ As resident students we would often compare notes while cooking lunch: ‘I think I understood at least half of what Cornellia said in Home Remedies class yesterday,’ one of us would announce with satisfaction and a sense of real accomplishment. ‘Oh yeah, well I think I'm up to 65 percent,’ another would brag. It wasn't a joke that a cooking video Cornellia made in English required sub-titles to be added so that we could understand what she was saying. But difficult as it was to understand her words, Cornellia would not let a one of us misunderstand her methods, her purpose, or her resolve. She lived her life ‘full speed ahead’ and in her teaching she employed this same approach.

“Imagine your loving, gentle, and soft-spoken grandmother as an almost 5-foot tall Japanese woman with slightly sad, dark eyes, long dark hair wound up in a tight bun on top of her head, dressed simply in a pale print cotton blouse and cotton petal pushers, white ankle socks and rice-straw sandals who was keeping six different dishes cooking simultaneously on six individual burners while explaining how fundamentally important it is never to lift the lid on a pot of cooking grain... all done with the evangelistic zeal of a television preacher and the single-mindedness and intensity of a Marine drill sergeant, all the while exuding complete confidence that you, her student, had the brains and the heart to comprehend and apply each and every detail, every day, just as she had presented it.

“Cornellia and Herman were as different as night and day... yin and yang, I guess.

“Herman loved to answer important questions with expansive explanations to help us see ourselves in the largest possible context. If I asked where cancer comes from, Herman would explain the role of the body's acid / alkaline balance in creating the damaged DNA of mutant cells, how a lack of sufficient oxygen intake could slow the body's natural ability to eliminate the damaged cells, how animal protein serves as the building blocks of cancer cells, and how

excess simple sugar supplies the fuel for rapid cell division. And he was just warming up as he spoke of the physical part of the puzzle...

“Cornellia’s answer was simpler: ‘Bad-da diet-ta,’ she would say in her unique usage of the English tongue... and then she would put us all to work, confident that if we cooked for ourselves long enough and paid attention to the changes we saw in our bodies and our minds, eventually each of us would come to understand how what we put in our mouths turned into... us.” (Continued).

2816. Bednarz, Hank. 2006. History of work with Midwest Natural Foods in Ann Arbor, Michigan (Interview). *SoyaScan Notes*. June 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Discusses: Education in a Catholic Jesuit secondary school. Going to business school. Now age 61. Recent personal growth seminar in Ojai, California, with Irwin Carasso. Second home (condo) in Las Vegas, Nevada. Founding Soybean Cellars, then Arbor Farms in Ann Arbor. Story of selling tons of calcium lactate at Soybean Cellars only to find out that it was a cutting agent for drugs. “You do the best drugs and the best foods.” Founding of Midwest Natural Foods (MNF). Forming partnership with David Rock, who still owns an interest in a restaurant in Ann Arbor—though they don’t see one another much. Renting of Veterans of Foreign Wars (VFW) hall in 1969-1970. Tim Redmond, Michael Potter, and Eden Natural Foods. Trying to break the vitamin cartel. Attempting to buy The Marty Bellman Co. in Washington state. Attempting to buy Nutrition Aids, a small health foods distributing company in Detroit, owned by Ernie Erkitz. Learning that “mensch” means a good, honorable person in Yiddish. The 80-20 rule—80% of the people give you 80% of the profit. You wear 20% of your clothes 80% of the time. George Mateljan, founder of Health Valley. Mike Gilleland, the mover and shaker behind Wild Oats. John Mackey, founder of Whole Foods, knew how to pick good people and to delegate authority and responsibility. Balanced Foods buys MNF for a very low price; Hank had no bargaining leverage and did not know how to bargain. MNF had a Chicago [Illinois] law firm to represent them during the negotiations. The clause that all vacations had to be approved by both parties. Dispute over his taking his grandmother to Poland after the sale of MNF. Sam Reiser of Balanced Foods was a tough business man, and two women who worked for him and tried to teach Hank how to fight. Not being Jewish was a disadvantage for him. After MNF was purchased, Hank was squeezed out of the company. Balanced Foods (BF) offered him a 10% discount on all products that Arbor Farms bought from MNF, then failed to honor the handshake deal after 6 months so that they ended up in court. He won but his attorney’s fees were greater than his award. BF did this rather than pay a severance or buy Hank out of his contract. Sam had

his grandfatherly act down cold, with his team of two lieutenants Lenny Goldberg (his attorney) and Harvey Nimar (his accountant). “Just like the Sopranos.” He and Sam had different styles. Address: Ann Arbor, Michigan.

2817. Reiser, Helen. 2006. Recollections of an early electric juicer in the health food industry in New York City (Interview). *SoyaScan Notes*. June 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** When Helen worked for Balanced Foods, in about 1941, she recalls that Mr. Drachenberg, who lived in Detroit, Michigan, had invented, patented, and developed an electric juicer. Doc Shefferman, Helen’s employer, was in touch with Mr. Drachenberg and tried very hard to get a license to sell the machines or to get the actual machines to sell. But Mr. Drachenberg was a very temperamental, undependable inventor, and it was very difficult to get hold of him or his machine. After getting some representation, Balanced Foods eventually was able to order a few, which it sold (for well over \$100) mostly to large health food stores, such as Brownies (owned and run by Sam Brown) at 21 East 16th St. in Manhattan—just off Union Square. The machine, which worked well, was used almost entirely to make vegetable juices rather than fruit juices at the “juice bar.” The man who operated the juicer wore a starched white jacket, like that of a doctor; he looked very professional.

Then, Sam Reiser located two men in Switzerland who had something called “Rotel.” They said they could duplicate Mr. Drachenberg’s electric juicer—because he was not a dependable supplier. Helen does not know what came of that, except that Balanced Foods did import a few of the machines. Address: New Jersey.

2818. Reiser, Helen. 2006. Large, early health food stores in New York City (Interview). *SoyaScan Notes*. June 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Helen remembers: (1) Original Health Foods, on Lexington Avenue. (2) Brownies (owned and run by Sam and Edith Brown) at 21 East 16th St. in Manhattan—just off Union Square. and (3) All Health Food Distributors, at 123 34th St. (they also did a little distributing). Address: New Jersey.

2819. *Badische Zeitung (BZ, Germany)*. 2006. Ein Lauf zum Kennenlernen: BZ-Interview mit Taifun-Geschaeftsfuehrer Wolfgang Heck zen ersten Lauffes “Fuer die Vielfalt” [A run to getting to know: Interview with Taifun president Wolfgang Heck]. June 29. [Ger]

• **Summary:** Discusses the Running Festival (*Lauffest*). A color portrait photo shows Wolfgang Heck.

2820. Royal Wessanen nv. 2006. Our history: From windmills to wellbeing, a story of growth (Website printout—part). www.wessanen.com 2 p. Retrieved July 4.

• **Summary:** “In the 17th and 18th centuries, the Netherlands was one of the world’s greatest trading nations, with a huge merchant fleet that carried new and exotic materials between Europe and the far-flung ports of the Far East, the Americas, the Caribbean, and Africa. The hub of this activity was Amsterdam where many of the ships docked and unloaded their cargoes into warehouses that lined the River Zaan.

“Among the owners of the warehouses was the merchant Adriaan Wessanen. In 1765, the 41-year-old Wessanen teamed up with his 31-year-old nephew Dirk Kaan to trade in ‘Mustard, Canary and other seeds.’ The new company flourished...” In 1789 the company name was shortened to Wessanen.

By the early 20th century, Wessanen was “a large company, and following the award of royal warrants it was known as NV Wessanen Koninklijke Fabrieken (royal factories)... But it was still a typically Dutch company, with production facilities on the Zaan River.

“After World War II, new production facilities were created in Germany, Belgium, France, Italy and Spain. Wessanen became a modern European company.” By 1992, after selling its flour mills, it had “successfully transformed itself from bulk manufacturer to multinational marketer of consumer products. A new phase in Wessanen’s history began.

“Between 1972 and 2003, Wessanen acquired over 20 companies, mostly in Western Europe but also in the United States. All of them were engaged in the food and beverage industry, either in production or distribution.”

“As well as health foods, Wessanen entered the Premium Taste [gourmet] sector—ethnic foods from countries all around the world. Both the Health and Premium Taste sectors are underpinned by the element of ‘authenticity’ and the converging need to make healthy foods more tasty and premium taste foods healthier.

“In 1985 Wessanen entered the US market through the acquisition of Tree of Life. This company had started out in 1970 as a retail store in St. Augustine, Florida, specializing in natural and organic foods. By 1980 it had become the premium wholesale distributor and marketer of natural and organic foods in the southeastern United States with sales in excess of \$30 million.

“Recognizing the potential for transatlantic synergies in both the Health and Premium Taste categories, Wessanen invested in Tree of Life’s own growth. In 1988 Tree of Life entered the Premium Taste sector with the acquisition of Gourmet Foods in St. Paul, Minnesota, which had developed a significant business marketing gourmet, ethnic and specialty foods.” Address: Netherlands.

2821. Royal Wessanen nv. 2006. Health food—Brands—Gayelord Hauser personalized dietetics (Website printout—part). www.wessanen.com 2 p. Retrieved July 4.

• **Summary:** “The Gayelord Hauser brand was established

some 50 years ago by a German dietician who believed in ‘eat better, live longer.’ Today, Gayelord Hauser is a well established brand in France in three product categories: slimming, food supplements and daily dietetics. As well as a wide range of food products, Gayelord Hauser offers customized services directed to adapting dietetics more closely to the daily needs of the individual consumer. These services include a nutritional call center, slimming coaching programme, website, and leaflet in-pack.”

A table shows: “Products: More than 100 products... including juices, biscuits, fruit spreads, non-dairy drinks and desserts, meal replacers, hyperprotein bars and drinks, natural food supplements—brewers’ yeast, herbal teas, slimming drinks, digestive paste. Country of origin: France. Distributors: Distriborg in France and Wessanen in Belgium. Retail outlets: Exclusively Supermarkets and Hypermarkets. Farget group: Daily dietetics & food slimming supplements for women over 50 and slimming products for women between 35 and 55. Market share: No. 2 with a 17% share in the functional food market. Ambitions: To become a market leader in functional foods by establishing a strong link with consumers through the position “dietetics at your own pace,”...”

Another page on the Wessanen website titled “Gayelord Hauser Biorythmes,” advocates a new theory of weight loss based on biorythms and concludes: “Hollywood’s best known dietician: Many of the Gayelord Hauser brand products were inspired by the ideas of Australian [sic, German] dietician Gayelord Hauser. During the ‘golden age’ of Hollywood, stars like Elizabeth Taylor, Grace Kelly and Sophia Loren followed his nutrition advice. He is regarded as the founder of modern dietetics.”

Note: Hauser’s obituary states: Helmut Eugene Bengamin Gellert Hauser was born in about 1895 in Tübingen, Germany, the son of a Lutheran schoolmaster and the 11th of 13 children. He went to the USA to be with his elder brother, Otto Robert, who was a Lutheran minister in Milwaukee, Wisconsin. By May 1927 he was in Los Angeles, California, lecturing on health. In his ad in the *Los Angeles Times*, promoting his lecture, he billed himself as the “internationally famous young Viennese food scientist, whose lectures have inspired thousands to live, eat, and think correctly. ‘Health and Happiness for 100 Years.’” He lived in or near Hollywood for most of his adult life, and was a “nutritionist to the stars.” He was also famous as a world traveler and lecturer on popular nutrition. We doubt that any professional nutritionist would regard him as the “founder of modern dietetics.” He was a promoter and popularizer. Address: Netherlands.

2822. Silver, Jimmy. 2006. Re: Recollections of Lifestream and its founder, Arran Stephens, in British Columbia, Canada. Letter (e-mail) to William Shurtleff at Soyfoods Center, July 5. 1 p.

• **Summary:** Jimmy has known Arran for many years, starting in the 1970s, when what was then his distribution company, Lifestream, was a customer of Erewhon's. Eventually he began to make his own Lifestream products, then sold the company [in mid-1981] and started his cereal venture, Nature's Path, which has done very well. A few years ago he bought back the Lifestream brand, but it doesn't seem to do much compared to NP. "He is a very interesting guy... Susan and I like him and his wife."

For a number of years when Jimmy was exporting some of their products under private label to Japan, he worked with their daughter, who was then their export manager (and living in London, UK, not in Vancouver, BC, Canada).

Even though Arran has "moved" with the market in terms of ingredients, partly driven by cost and competition and consumer taste, Jimmy knows from talking with him that his preference would be to make things more in line with what Jimmy likes too—sweetened with fruit juice rather than organic sugar or cane juice, for instance. Address: President, Pure Sales, California.

2823. Gerner, Bob. 2006. Why natural foods are declining in the USA. Thoughts on the work of Arran Stephens of Canada (Interview). *SoyaScan Notes*. July 18. Conducted by William Shurtleff of Soyfoods Center.

Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

2824. Stephens, Arran. 2006. Work of with natural foods, vegetarianism, Lifestream Natural Foods Ltd. and Nature's Path. Remembrances of Kirpal Singh and meditation (Interview). *SoyaScan Notes*. July 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** A wide ranging interview on many subjects of interest to Arran over his very productive life. Address: Founder and CEO, Nature's Path, Vancouver, BC, Canada.

2825. *SoyaScan Notes*. 2006. Another dimension of the macrobiotic and natural foods movements: Preserving traditional ways of making foods (Overview). Oct. 10. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** George Ohsawa, and the founders of Nippon C.I. and Muso Shokuhin—both Japanese-run companies based in Japan—were the first to seek out these Japanese makers of traditional foods. Soon Mr. Akiyoshi Kazama, founder of Mitoku Trading Co., joined them in the search.

In the mid-1960s, Paul Hawken of Erewhon went to Japan to find and place orders from companies and craftspeople who made foods in the traditional, natural way. Many of these companies were facing financial difficulties as modernization was sweeping Japan, and this new business and new market gave them a new lease on life.

Phase 2 began when companies in the USA and Europe

started making Japanese foods (such as miso) and European foods (such as whole wheat bread) in the traditional, natural way.

2826. Smith, Patricia J. 2006. Michio Kushi's 80th birthday party at the Natural Products Expo East in Baltimore, Maryland (Interview). *SoyaScan Notes*. Oct. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Patricia has just returned from the NFM expo in Baltimore, which was very big and a big success. The first NFM expos on the East Coast started in Baltimore, then in Dec. 2001 moved to Washington, DC, shortly after the Sept. 11 terrorist attacks on the Pentagon and World Trade Center. Attendance was down, as it was the next year when there was an anthrax scare in DC. So this was the first year that the expo returned to Baltimore. Patricia got a \$218 ticket round trip, stayed near the airport, and found it very easy to get around. The main subject of speeches at the expo was Walmart, which wants to sell organic foods for only a little more than non-organic foods.

Michio's party was largely organized by his sons. They raised money from 7-8 company sponsors. They rented an elegant room at the Radisson Hotel and about 200-300 people came—including Michio and all his sons (plus many grandchildren, who were all together for the first time in many years). It started at 6 p.m. and lasted until about 8:45. There was a handout brochure. No press was there. There was Hisao Kushi, who gave the opening speech, followed by such luminaries as Chuck Verde, Mark Retzliff, Michael Potter, Christine Pirello, Neal Barnard, and others. Michio's speech was superb. Patricia was deeply moved—what a joy to be around him. He is always very focused on his dream and his mission, and always on purpose. He talked about how he had had a dream shortly after he arrived in the United States, and how he has followed this dream his entire life. It is about one peaceful world and World Federation. When he talks about it, his viewpoint is never self centered, rather he says, "Let's work together and go forward together."

Food was piled high on tables, there was a sushi bar in the back, and several open bars. Many photos were taken and gifts given to Michio. Patricia thinks he had colon cancer a few years ago but now he looks much better. He has a Japanese "partner," about 46 years old, with whom he now lives and who helps him with his work. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

2827. Dee, Joel. 2006. History and present status of Edward & Sons Trading Co. (his company) and of his work with miso and tamari (Interview). *SoyaScan Notes*. Oct. 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** A far-ranging interview on his many important innovations and success. Joel appears to have been the first person in the Western world to add flavor to soy sauce, with Lemon Tamari (Aug. 1985), Ginger Tamari (Feb. 1988), and

many other related products.

Joel developed the Premier Japan line because he believed the two main importers from Japan (Eden Foods and Westbrae) both defined their market too narrowly—as macrobiotic. He soon came up with the tagline “Traditional Gourmet,” just as the specialty foods market was taking off in the USA. But the macrobiotics criticized this line as not being “medicinal quality” so it never took off in the macro or natural foods markets.

Joel does not supply Trader Joe’s with their Instant Miso Soup; he is not at liberty to reveal the name of the supplier. The TJ product contains dextrose, clam extract, and bonito powder (all for flavor) which Joel’s Miso Cup does not contain.

The main segments of his company are now: Soy seasonings (miso and tamari), rice crackers, organic canned foods (coconut milk, pineapple, etc.), candy, and baked goods. Address: President, P.O. Box 1326, Carpinteria, California 93014-1326. Phone: 805-684-8500.

2828. Eden Foods, Inc. 2006. Organic & Kosher (K) parve (Ad). *Natural Foods Merchandiser*. Oct. p. 41.

• **Summary:** Full page, color. “Eden®, a pioneer of organic food, is a rare company making its decisions focused on long term goals. We have built a dedicated network supporting over 30,000 acres of organic farmland and we only employ traditional cooking and food preparation methods.

“Dedicated to the ‘Creation and Maintenance of Purity in Food’ (TM) our kosher certification is an additional assurity [sic, assurance] of purity. “Today, Eden provides more natural and authentically organic certified kosher foods than any other company in the world.

“Eden’s processing facilities—our bean and tomato canneries, soymilk plant, pasta company, and flour mills—are certified both kosher and organic. We have teamed with Organized Kashrus Laboratories for over 20 years.

“The Eden brand is also your best assurance of freedom from genetically engineered organisms (GEOs) or their derivatives. A meticulous audit trail guarantees the purity of our food from seed, through the soil, to you.” Address: 701 Tecumseh Road, Clinton, Michigan 49236.

2829. Richmond, Akasha. 2006. Update on Akasha and Steve Demos (Interview). *SoyaScan Notes*. Nov. 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Steve Demos is back from his trip around the world. While he was gone, he and his wife had his house rebuilt. He collected many statues of buddhas, which he now has all around his house—“more buddhas than you’ve ever seen in one place.” Akasha is now out of Eaturna (although she still owns some stock) and is getting into the restaurant business in Culver City, California—about 10 minutes drive from her home. The basic concept will be all natural and organic, delicious healthy food. Kind of like Jim Baker’s

Aware Inn. Investors include Steve Demo (White Wave), Peter Roy (Whole Foods), Mark Retzliff (Horizon Organic), Doug Green (Natural Foods Merchandiser), Anthony Zelesky, and quite a few Hollywood people.

She has found a building in Culver City and she and the landlord hit it off beautifully. It is a designated historic landmark and she will preserve it.

Steve Demos wants to buy land in Costa Rica to live on and farm, but “he’s not done yet.” He has also invested in Sambazon, run by Ryan and Jeremy Black. In 2000 they became the first company to bring acai (pronounced uh-SA-hee) berries to the U.S. They sell acai berries, which have more antioxidants than blueberries, in the form of various drinks (smoothies), smoothie packs, non-dairy ice cream, supplements (Powerscoop and Powerpack). Address: Los Angeles, California.

2830. Hain Celestial Group, Inc. (The). 2006. Annual report 2006. Melville, New York. 8 + 55 p. Nov. 28 cm.

• **Summary:** Net sales for the year ended 30 June 2006 were \$738.6 million, up 19.1% from 2005. Net income in 2006 was \$39.6 million, up 19.6 from 2005.

Acquisitions and divestitures: In Dec. 2005 acquired Spectrum Organic Products and their brands Spectrum Naturals and Spectrum Essentials. March 2006 acquired the Queen Helene Batherapy, Shower Therapy, and Foottherapy brands of skin care, hair care, and body care products. “We established a foothold in the United Kingdom in April with the purchase of a fresh prepared foods business, and in June [June 12] we acquired the Linda McCartney brand (under license), a frozen meat-free [vegetarian entrees] business” from the H.J. Heinz Co., for about \$6.6 million, including its manufacturing facility in Fakenham, England.

At the beginning of fiscal 2007 Hain divested Biomarché, a Belgium-based provider of fresh organic fruits and vegetables, to focus on branded products that complement our growth strategy in Europe. Note: Hain’s 2007 Annual Report states (p. F-43) that on 31 Aug. 2006 Hain complete the sale of Biomarché for about \$8.3 million (6.5 million euros).

Most of the report is Form 10-K/A. Accompanying the annual report is a “Notice of Annual Meeting of Stockholders and Proxy Statement” (42 p.). Irwin Simon, the founder and CEO, age 47, had the following annual compensation: Salary: \$1.1 million. Bonus: \$1.7 million. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2831. *SoyaScan Notes*. 2006. Soymilk and non-dairy beverage prices at Trader Joe’s in Lafayette, California (Overview). Dec. 12. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices

of soymilk and cow's milk in California. (Note: oz = fluid ounces; 32 fl oz = 1 quart; 33.8 fl oz = 1 liter. 2 quarts = one half gallon).

Shelf-stable / Aseptic soymilks: Trader Joe's organic original, vanilla, and chocolate \$2.49/half gallon. Trader Joe's non-organic original, unsweetened, or vanilla \$1.29/quart, or chocolate \$1.49/quart. Trader Joe's non-organic chocolate 4 x 8 oz packs \$2.49. Westsoy organic unsweetened \$1.69/quart. Westsoy non-organic plain non-fat \$2.49/quart. Westsoy Plus organic plain or vanilla \$2.49/half gallon. Soy Dream soymilk original or vanilla \$2.69/half gallon.

Refrigerated / fresh soymilks (in gable-top cartons): Trader Joe's non-organic low fat original or vanilla \$2.99/half gallon. Trader Joe's organic low fat original or vanilla \$3.29/half gallon. Trader Joe's organic unsweetened \$3.49/half gallon.

Non-soy non-dairy beverages—Pacific Foods almond original or vanilla \$1.69/quart. Blue Diamond Almond Breeze chocolate or vanilla \$1.99/quart.

Soy Dream [rice beverage] vanilla or original \$1.69/quart. Soy Dream enriched [rice beverage] vanilla or original \$2.49/half gallon.

2832. *SoyaScan Notes*. 2006. Soymilk, non-dairy beverages, and cow's milk prices at The Natural Grocery Co., Berkeley, California (Overview). Dec. 14. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. Cindy La reports the following retail prices. (Note: oz = fluid ounces; 32 fl oz = 1 quart; 33.8 fl oz = 1 liter. 2 quarts = one half gallon). All soymilk products at Berkeley Natural Grocery Co. are now organic or largely organic = Org. MOS = Made with organic soybeans. NON ORG = Non Organic.

Shelf-stable / Aseptic soymilks: Westsoy Light and Plus all flavors (MOS) \$2.39/quart. Westsoy Nonfat (MOS) \$1.99/quart. Westsoy original creamy (95% Org) \$2.29/quart or \$1.79 on special. Westsoy shakes (MOS) \$2.49/quart.

Edensoy Original (95% Org) \$2.79/liter. Edensoy Enriched (95% Org) \$2.89/liter. Eden Blend Rice & Soy (95% Org) \$2.65/liter. Edensoy Dream 3-pack (75-95% Org) \$2.89/3 x 8 oz.

Vitasoy Original (75-95% Org) \$2.65/quart or \$2.09 on special. Vitasoy Light (75-95% Org) \$2.65/quart or \$2.09 on special. Vitasoy Enriched (75-95% Org) \$2.65/quart or \$2.09 on special. Vitasoy Holiday Drinks (95% Org) \$2.99/quart or \$2.19 on special.

Soy Dream Regular or Enriched (Hain) (75-95% Org) \$2.65/quart. Soy Dream 3-pack (75-95% Org) \$3.09/3 x 8 oz. Pacific Foods (95% Org) \$2.89. Kikkoman Pearl (75-95% Org) \$2.59. White Wave Silk (95% Org) \$2.49. Silk 3-pack (75-95% Org) \$3.39/3 x 8 oz.

Refrigerated / Fresh soymilks (in gable-top cartons): Wildwood (95% Org) \$2.39/quart or \$3.99/half gallon. White Wave Silk Plain (95% Org) \$1.99/quart or \$3.69/half gallon. White Wave Silk Vanilla (75-95% Org) \$3.69/half gallon. Soy Dream Enriched (75-95% Org) \$3.89/half gallon.

Rice drinks: Rice Dream (75-95% Org) \$2.59/quart. Lundberg (75-95% Org) \$2.69/quart. Pacific Foods (75-95% Org) \$2.19/quart.

Refrigerated cow's milk. Clover Stornetta \$1.29/quart. or \$2.19/half gallon or \$3.99/gallon. Clover Stornetta 100% Organic \$1.99/quart. or \$3.49/half gallon or \$6.39/gallon. Straus 100% Organic in glass bottle \$2.49/quart or \$3.99/half gallon. Claravale Raw Milk non-organic \$3.99/quart. Organic Valley 100% Organic \$1.99/quart or \$3.99/half gallon. Meyenber Goat Milk non-organic \$3.49/quart. Lactaid Milk non-organic \$2.19//quart.

2833. Fromartz, Samuel. 2006. *Organic, Inc.: Natural foods and how they grew*. New York, NY: Harcourt, Inc. xx + 294 p. No illust. No index. 24 cm. [270 ref]

• **Summary:** Contents: Introduction (the case of Arthur Harvey, a small organic blueberry farmer from Maine). 1. Humus worshippers: The origins of organic food. 2. The organic method: Strawberries in two versions. 3. A Local initiative: From farm to market. 4. A spring mix: Growing organic salad. 5. Mythic manufacturing: Health, spirituality, and breakfast (very interesting, largely about Steve Demos, White Wave Silk soymilk and Dean Foods / Suiza, plus Sylvester Graham, Dr. James Caleb Jackson, Dr. John Harvey Kellogg and his brother Will K. Kellogg, Jeremiah Ridenour, Ted Nordquist, *The Book of Tofu* by Shurtleff and Aoyagi, *Diet for a Small Planet* by Frances Moore Lappe). 6. Backlash: The meaning of organic. 7. Consuming organic: Why we buy. Acknowledgments. Notes.

A history (sort of) of the organic food industry in the United States, and how the movement has gone from fringe, to commercial, to mainstream. This is a niche or underdog food culture involving many issues of morality—the relationship of humans to agriculture and nature, and specifically how a principled person or business can thrive in the modern world without compromising ideals.

The author, a business writer, says in the introduction: “I was particularly interested in the people who sought to manifest their values in business... The intersection of idealism and business was not an easy place to stand, since one usually trumped the other.”

“Sales of organic food had shot up about 20% per year since 1990, reaching \$11 billion by 2003.” This industry, which has its roots in utopian ideologies, will surely have an interesting future.

A great deal of this book is devoted to the recent history, and the early history of the organic food industry in the United States is (unfortunately) extremely weak. The book is hurt first by the lack of an index, second by the lack of

endnote reference numbers in the text (the 254 endnotes themselves are excellent), and third by the lack of complete references to key books cited in the endnotes (he gives the author and title, but no year of publication or publisher; so one who wishes to cite these books must take the time to look up the missing information). Address: Business writer, Washington, DC.

2834. Jones, Ellis. 2006. The better world shopping guide: every dollar makes a difference. Gabriola Island, B.C., Canada: New Society Publishers. vi + 169 p. Portrait. Product Category Index. 16 cm. [26 ref]

• **Summary:** This is a book about green and ethical products. The ratings are not about flavor or sales or market leadership; they are about company commitment to a green and ethical world. The author has consulted many reliable sources (p. 7) for his ratings.

Soy related sections include: Dairy alternatives (p. 68-69): Corporate hero: Silk (White Wave). Corporate villain: Cool Whip (Altria). A+: Silk. A: Follow Your Heart, Stonyfield Farms, Nancy's, Wildwood. A-: WholeSoy, ZenSoy. B+: Tofu Rella, Vegan Rella, Almond Rella, Soya Kaas. C: Lisanatti, Tofutti, Soy Moon, Soyco, Galaxy Nutritional, Soymage, Veggie Slices, Rice Slices. C-: Borden. D: International Delight. D-: Carnation. F: Cool Whip.

Note: Cool Whip is a brand of imitation whipped cream named a whipped topping by its manufacturer. Cool Whip was introduced in 1967 by the Birds Eye division of General Foods. Within two years of introduction, it became the largest and most profitable product in the Birds Eye line of products. Birds Eye later merged with Kraft Foods and Philip Morris, eventually becoming part of Altria Group until the spin-off of Kraft Foods from Altria in 2012. Cool Whip was invented by William A. Mitchell, a food chemist at General Foods Corporation. The key advantage of the invention was that it was a whipped cream-like product that could be distributed in a frozen state by grocery chains and kept in the consumer's refrigerator.

Ice cream alternatives (p. 96-97): Corporate hero: Ben & Jerry's. Corporate villain: Haagen Dazs (Nestle). A: Stonyfield Farms, Ben & Jerry's, Soy Delicious, Straus Family. A-: Celestial Seasonings, WholeSoy, Rice Dream, Soy Dream, Natural Choice. B+: Double Rainbow, Julie's, Newman's Own. B: Starbucks. B-: Dole. C+: Weight Watchers, Godiva. C: Tofutti, Crystal, Fruitfull. C-: Breyers, Klondike. D+: Dove, Snickers. D-: Healthy Choice. F: Dreyer's, Nestle, Haagen Dazs.

Meat alternatives (p. 102-03): Corporate hero: White Wave. Corporate villain: Boca (Altria). A+: White Wave, Tofutown. A: Amy's, Wildwood. A-: Yves, Small Planet. B+: Turtle Island, Tofurkey [sic, Tofurky], SuperBurgers. B-: Morningstar Farms. C+: Pete's. C: Gardenburger, Veggie Patch, Veat, Soy Deli, Health is Wealth, Sweet Earth, Mori Nu, Nasoya, Vitasoy, Primal Strips. C-: Quorn. D: Lightlife.

F: Boca.

Milk & alternatives (p. 108-09): Corporate hero: Silk (White Wave). Corporate hero: Straus family. A+: Silk, Straus Family, Edensoy. A: Horizon. A-: Organic Valley, Nancy's. Organic Pastures, WestSoy, Rice Dream, Soy Dream, Amazake, Helios. B+: Clover Stornetta, Pacific. B: Lactaid. B-: 8th Continent. C+: Alta Dena. C: Crystal, Vitasoy. D-: Nestle. F: Knudsen. Address: Sociology teacher, Univ. of California, Davis.

2835. Singer, Peter; Mason, Jim. 2006. The way we eat: Why our food choices matter. Emmaus, Pennsylvania: Rodale Press, Inc. viii + 328 p. Index. 24 cm. [396 endnotes + 37 refs]

• **Summary:** An outstanding book. Contents: Preface. Introduction: Food and ethics. Part I: Eating the standard American diet. 1. Jake and Lee. 2. The hidden cost of cheap chicken. 3. Behind the label: "Animal care certified" eggs. 4. Meat and milk factories. 5. Can bigger get better?

Part II: The conscientious omnivores. 6. Jim and Mary Ann. 7. Behind the label: Niman ranch bacon. 8. Behind the label: "Organic" and "Certified humane" eggs. 9. Seafood. 10. Eating locally. 11. Trade, Fair Trade, and workers' rights. 12. Eating out and eating in, ethically.

Part III: The vegans. 13. JoAnn and Joe. 14. Going organic. 15. Is it unethical to raise children vegan? [No, if they have a reliable source of vitamin B-12]. 16. Are vegans better for the environment? [Yes! A good critique of factory farms or CAFOs] 17. The ethics of eating meat. 18. What should we eat? Appendixes: Where to find ethical food. Where to find information. Acknowledgments. Endnotes.

Soybeans are mentioned on 10 pages in this book (p. vii, 142, 194, 228, 232, 233, 234, 237, 272, 323), tofu on 9 pages in this book (p. 189, 194, 195, 219, 234, 263, 272, 284, 323), soybean on 2 pages (p. 206, 318), soy ice cream on 1 page (p. 197). Soymage and Veganrella (vegan soy-based cheeses), and a "vegan parmesan cheese made with organic tofu" are mentioned on pages 194-95.

Ice cream (p. 195): At Wild Oats in Overland Park, Kansas, JoAnn (a vegan) opens a glass freezer door and says: "This is the most awesome non-dairy ice cream I've found... yet, anyway. It's organic Soy Delicious... mint marble fudge. There are some other alternatives to dairy ice cream that are pretty good too. We also tasted the Rice Dream bars... but they're really high in fat. So we've kind of shifted away from their stuff. The Soy Dream desserts are awesome. I've taken these chocolate ice cream sandwiches to Sarina's friends in gymnastics class and they love them. They're called Li'l Dreamers. They're organic."

She also likes White Wave firm tofu. Then she gestures toward "Smart Deli," vegetarian salami, turkey slices, and baloney made by Lightlife Foods.

More about ice cream on p. 85: "Here's Soy Delicious, a soy-based ice cream. We eat this because the kids like it.

They don't always accept alternatives to dairy and meat. There's another one, Tofutti Cuties, that they like."

For a nice section on great vegan athletes (Scott Jurek, Carl Lewis), see p. 230.

"The proportion of the population living on farms in the U.S. has fallen from nearly 40% in 1900 to less than 2% today" (p. 142).

It takes about 13 pounds of grain and soybeans to produce a pound of boneless beef, 6 pounds of grain and soybeans to produce a pound of boneless pork, and 3 pounds grain and soybeans to produce a pound of boneless chicken. "If we really want to feed ourselves efficiently, we'll do much better to eat the grain ourselves than to feed it to the chickens" [or other animals] (p. 232). Other environmental concerns about rearing animals are the clearing of forests [and consequent loss of biodiversity] and the amount of water used. By the best estimates, it takes 792,000 gallons of water to produce a 1,000 pound steer (p. 235). On the inside rear dust jacket are color portrait photos and brief biographies of Peter Singer and Jim Mason. Address: 1. Prof. of Bioethics, Center for Human Values, Princeton Univ., Princeton, New Jersey; 2. Exmore, Virginia.

2836. Tibbott, Seth. comp. 2007. Tofurky brand products overview: Natural foods segment. Hood River, Oregon: Turtle Island Foods, Inc. [36] p. 28 cm. [1 ref]

• **Summary:** A full-color booklet bound with a handsome, black ProClick plastic spine. On the front cover: "1980-2006: 26th anniversary Turtle Island Foods, Inc." "Sales data from: SPINscan Natural and SPINscan Conventional. 52 weeks ending December 30, 2006. All statistics are for the total U.S. market.

Contents (unnumbered pages): (1) "Turtle Island Foods honored by Inc. magazine: 2,240th fastest growing small business in the USA (of 6 million total). 159.7% growth rate over last 4 years. 57th fastest growing food and beverage company in the USA. 19th fastest growing food processor.

(2) About Tofurky products: 100% vegan. Based on organic soy products. Use non hexane extracted proteins. VegNews. Winner veggie awards—Best meat substitute.

(3) Natural foods market without Whole Foods (which no longer shares sales info with the industry). Growth of top ten brands ranked by dollar volume. Frozen and refrigerated meat alternatives. 52 weeks ended Feb. 24, 2007. Category: \$35.5 million. Growth: 4.7%. Turtle Island is the fastest-growing brand: 16.1%, followed by Quorn, Nates, Amys Kitchen, Morningstar Farms, Gardenburger, and Yves. Lightlife, Boca Foods, and White Wave all have negative growth.

(4) Natural foods market. Frozen and refrigerated meat alternatives. Top ten of 478 items by dollar volume. 52 weeks ending Dec. 30, 2006. #1. Quorn Chicken Style Nuggets. 10.6 oz. \$1,507,537. 5.6%. #2. Turtle Island Tofurky Italian Sausage (organic) 14 oz. \$1,262,616. 25.7%.

#3. Quorn Chicken Style Patties. #4. Lightlife Gimme Lean Sausage. #5. Quorn Veg. Naked Chicken Cutlet. #6. Turtle Island Tofurky Deli Slices, Hickory Smoked. 5.5 oz. \$1,131,760. 19.2%. #7. Lightlife Smart Dogs. #8. Boca Original Patties Chicken Natural (4-pack). #9. Amys Burger California Veggie. #10. Quorn Meat Free Chicken Tenders.

(5) Natural foods market. Refrigerated meat alternatives, Top 10 of 260 items by dollar volume. 52 weeks ending Dec. 30, 2006. Turtle Island currently as the #1, #3, #9 and #10 best selling items among the 260. They are: Tofurky Italian Sausage. Tofurky Deli Slices Hickory Smoked. Tofurky Deli Slices Oven Roasted. Tofurky Kielbasa (sausages).

(6) Tofurky deli slices: Six features, incl. "Organic tofu based." The six types of deli slices are: Oven roasted, Hickory smoked, Peppered, Italian deli, Cranberry & Stuffing, "Philly-style" steak.

(7) Tofurky deli slices. Bar charts of refrigerated meatless deli sales, 2001-2006. For each year are given: Competitor #1. Competitor #2. Turtle Island. Overall category. "While the competition sales have been flat, Turtle Island has grown the subcategory 72 and has become the #1 brand.

(8) Deli slice standings. (9) Tofurky gourmet sausages. (10) Frozen and refrigerated meat alternatives. (11) Tofurky Jurky: 5 features.

(12) Top 10 jerky items (meat and meatless)—SPINscan natural channel. 52 weeks ending Feb. 24, 2007. The category is \$8.3 million. There are three vegetarian jerkys among the top 10. Tofurky Jurky Original is the #2 seller and Tofurky Jurky Peppered is #7. The other vegetarian brand (#6 seller) is Primal Strips Seitan Teriyaki.

(13) Tofurky "foot long" veggie dogs: 5 features, incl. organic tofu based. (14) "Open mouth, insert foot."

(15-17) Turtle Island tempeh: Five features.

(18-22) Happy Tofurky Day: Five features.

(23-35) Glossy color sell sheets, printed on both sides, with the following titles: (23-24) Happy Tofurky Day! (25-26) Brave New Tempeh. (27-28) Tofurky Jurky. (29-30) Frankly speaking Tofurky Franks & Links are the best! (31-32) There's 3 big new dogs in the house. (33-34) Go beyond the bun: Introducing Tofurky 'foot long' veggie dogs. (35-36) Tofurky deli slices: New look. Other Turtle Island glossy color sell sheets. Address: Founder and President, Turtle Island Foods, P.O. Box 176, Hood River, Oregon 97031.

2837. Non-GMO Project. 2007. The Non-GMO Project (Leaflet). Berkeley, California. 1 p. Front and back. [6 ref]

• **Summary:** Contains nine questions and answers, plus announcements of two events: (1) Non-GMO verification: A retailer initiative. Friday, March 9th, 4:30-6:00 p.m., Convention Center [Anaheim, during Natural Products Expo West], Room 207A. Join Michael Funk, Jeffrey Smith, John Fagan, Albert Straus, Michael Potter, and Megan Thompson (Director of the Non GMO Project) for a discussion on the

need for industry-wide non-GMO verification and a look at how the Non-GMO Project offers the organic and natural products industry the mechanism by which to make this important shift.

(2) The Non-GMO Project verification process demo. Saturday, March 10th, 8:00-10:00 a.m., complimentary breakfast served. The Anaheim Marriott Hotel. Hosted by Dr. John Fagan, Sandy Kepler, and Megan Thompson. This “session will include opportunities to address your questions regarding any aspect of the Non-GMO Project and the Project Verification Program.”

Note: According to the Non-GMO Project website (www.nongmoproject.org/about/history) the Non-GMO Project started in 2007 and the first products to bear “the butterfly” reached the marketplace in early 2010. (Retrieved June 2019). Address: P.O. Box 9012, Berkeley, California 94709. Phone: (510) 704-1959.

2838. Ness, Carol. 2007. Top tamari balances sweet and salty: Taster’s choice. *San Francisco Chronicle*. March 28. p. F2. Food section.

• **Summary:** Seven brands of tamari sold in San Francisco were tasted and rated in descending order of preference as follows: 1. Eden (organic, imported green label) (69 points; \$5.69 for 10 oz at Rainbow). 2. Mitoku imported (60 points, \$7.99 for 10 oz at Rainbow). 3. Eden (55 points, organic, plum-colored label, not imported. \$4.19 for 10 oz at Whole Foods). 4. Kikkoman (53 points, made in Japan, \$3.89 for 10 oz). 5. San-J (45 points, black label, \$2.59 for 10 oz at Rainbow). (6) Ohsawa (35 points). (7). San-J gold label 14 points.

Tamari is a Japanese-style soy sauce “made mainly from soy beans with little or no wheat, which gives it a richer taste than regular soy sauce.” Tasters commented mainly about the color, saltiness, sweetness, and (above all) the balance of saltiness and sweetness. “The panel looked for a smooth, rich flavor balanced by the right amount of salt. Common problems were harsh or sweet notes, or too much salt.” Address: Staff writer.

2839. New Hope Natural Media, a division of Penton Media, Inc. 2007. Natural Products Expo West New products buyer’s guide: March 8-11, 2007, Anaheim Convention Center, Anaheim, CA USA. [Boulder, Colorado]. 42 p. 28 cm.

• **Summary:** On the cover: “Ingredients: 43,000 attendees, 2,600 exhibits. 100 hours of education.” Inside, new products are listed by category. A full-page ad (after p. 42) is for www.nplp.com—the “New Products Launch Pad.”

2840. Non-GMO Project (The). 2007. Why is The Non-GMO Project so important for the organic & natural products industry? (Leaflet). [Bellingham, Washington?]. 1 p. Front and back. 28 cm. [6 ref]

• **Summary:** 1. Consumers expect organic and natural foods to be free of GMOs (Genetically Modified Organisms): It is time to assure non-GMO status in a consistent, rigorous way, so that the meaning of organic and natural is preserved. It is critical for manufacturers of certified organic products to know that according to the NOP, pursuing non-GMO verification does not risk organic status. The Non-GMO Project provides a way to clean up and protect organic agriculture from GM contamination, and its Standard has been designed with ease of verification for organic manufacturers in mind. For example, organic certifiers can play a key role by carrying out non-GMO inspections simultaneous with their organic inspections. This strengthens an important service relationship, while minimizing the cost of inspections for the manufacturer and creating a new opportunity for the certifier.

“2. Consumers want choice: Polls consistently show that a significant majority of North Americans want to know if the food they’re purchasing contains GMOs. For example, a 2003 ABC News poll reported that 92% of Americans feel that the federal government should require labels on food products containing GMOs. A 2000 Canadian poll revealed that 95% of Canadians feel the same way.”

“Despite this clear public desire, our governments still have no plans for labeling. In light of this, The Non-GMO Project was formed to establish systems for traceability and informed choice from within the organic & natural products industry. Leaders from all sectors, including manufacturing, retailing, and distribution have joined together in a commitment to making an industry-wide transition to non-GMO verified products. By creating natural and organic products that have met the highest achievable standard for non-GMO, the industry can continue to lead the way toward offering consumers the safest and healthiest foods and supplements possible.

“3. GMOs pose serious risks to human health and to the environment, and therefore are fundamentally at odds with the principles of the organic & natural products industry: The governments of the U.S. and Canada have approved commercial production of GMOs based on studies conducted by the same companies who created them and profit from their sale. In 30 other countries around the world, including Australia, Japan, and all of the countries in the European Union, there are significant restrictions or outright bans on the production of GMOs, because they are not considered proven safe (2). Genetic engineering is a new technology that inserts the DNA from one species of plant or animal into another species, something that could never happen in nature or through traditional crossbreeding methods. Besides being a threat to biodiversity, the potential for harmful effects on human health from these ‘experiments’ in nature is very real. Test results from scientists outside of the biotechnology industry have shown unsettling abnormalities in lab rats and mice that are fed GM corn and soy. According to one

researcher, ‘The morphology and biochemical structures of rats are very similar to those of humans, and this makes the results we obtained very disturbing (3).’

“4. It is time to stop the proliferation of GMOs, and the organic & natural products industry can lead the way: Right now, we know that in the U.S. more than half of the corn and 90% of soy are genetically modified (GM) (4), and 85% of the canola grown in Canada is GM (5). As a result, it is estimated that GMOs are now present in more than 70% of products in the average U.S. grocery store (6). None of these products are labeled to show that they contain anything unusual, but the fact is GMOs are very different from anything that has ever been in our food supply before. The Non-GMO Project is the mechanism through which the natural products industry can get GMOs out of organic and natural foods and supplements, giving consumers the choice they deserve.

“Who is The Non-GMO Project? The Project started as a coalition of over 300 independent retailers in the U.S. and Canada and has since expanded to include all sectors of the organic & natural products industry. Our Board of Directors represents a wealth of experience from the sectors of manufacturing, distribution, retail, growing, and public advocacy. In addition, a Technical Advisory Board comprised of expert scientists and producers exists to advise the Board of Directors on matters regarding implementation of the Standard.

“What are the objectives of The Non-GMO Project? Offering the industry an independent, 3rd party non-GMO Verification Program is at the forefront of our activities. This program is a collaborative effort with our technical advisors, FoodChain Global Advisors. While FoodChain supervises companies’ progress towards non-GMO verification and functions to consolidate and integrate data, whatever testing, inspection and certification is required along the way can be provided by any qualified body. In addition to the Verification Program, The Project also conducts an Outreach & Education Program, designed to inform both consumers and retailers about issues surrounding GMOs in our food supply, promote awareness about the Project’s non-GMO verification program, its Product Directory, and the meaning of our non-GMO verified ‘shopping cart’ seal.

“What are the benefits of centralized non-GMO verification? Having a consistent industry-wide Standard gives producers clear, reliable goals for non-GMO verification and also helps consumers to know what ‘Non-GMO Verified’ means. In addition, by centralizing verification information, costs are distributed throughout the supply chain so that no single participant is burdened with inordinate costs. Efficient data collection and storage prevents duplication of costs and work while maintaining strong firewalls and confidentiality. Redundancy is eliminated in a manner that strictly protects the confidential business information of each industry member. And perhaps

most importantly, there is an element of critical mass required to create adequate non-GMO product supply. By working together, the organic and natural products industry can ensure sufficient demand for identity-preserved ingredients.

“How can I endorse The Non-GMO Project? There is a simple form on our website, at <http://www.nongmoproject.org/join>. Here you can also see which other organizations and individuals have endorsed the Project.

“How can my company take part in the Product Verification Program? You may enroll in the verification here at Expo, by attending one of the programs listed on this flyer, or by visiting us at The Non-GMO Project booth, #5108, or you may visit our website and contact us directly.

“Non-GMO Verification: A Retailer Initiative Friday, March 9th, 4:30pm–6:00pm, Convention Center Room 207A Join Michael Funk, Jeffrey Smith, John Fagan, Albert Straus, Michael Potter, and Megan Thompson (Director of The Non-GMO Project) for a discussion on the need for industry-wide non-GMO verification and a look at how The Non-GMO Project offers the organic & natural products industry the mechanism by which to make this important shift.

“The Non-GMO Project Verification Process Demo: Saturday, March 10th, 8:00am–10:00am, complimentary breakfast served The Anaheim Marriot Hotel (700 W. Convention Way) This meeting is an introduction to the Non-GMO Project’s Product Verification Process, through which manufacturers, suppliers, processors, and growers can verify the non-GMO status of their products and develop strategies for sustainably avoiding GMO contamination in the future. Hosted by Dr. John Fagan and Sandy Kepler (Food Chain Global Advisors) and Megan Thompson (The Non-GMO Project), this session will include opportunities to address your questions regarding any aspect of the Non-GMO Project and the Project Verification Program.”

2841. Gerner, Bob. 2007. The Non-GMO Project (Interview). *SoyaScan Notes*. April 3. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** The Project started in the summer of 2005. Initially 161 stores signed on and sent back information, but it was hard to use. The project has contracted with Genetic ID of Fairfield, Iowa, to do the testing. The key number is 0.1%. That means that if more than 0.1% of a sample tested is found to be genetically engineered, the entire shipment can be deemed “contaminated.” This is the same standard now used by the European Union. But U.S. industry says this is too tight.

At the Anaheim trade show in March 2007 The Non-GMO Project did two presentations. At the first, Michael Funk was moderator. Author Jeffrey Smith spoke for about 20 minutes. The end was reserved for questions from the audience. Megan Thompson is now executive director. Whole Foods has joined the project. Interest in the subject

seems to be growing. Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

2842. Sams, Gregory. 2007. History of work with natural foods and macrobiotics in London (Interview). *SoyaScan Notes*. April 12. Conducted by William Shurtleff of Soyinfo Center. [Eng]

• **Summary:** Greg no longer works in the field of food but he is grateful to George Ohsawa for all Greg learned from him. Greg has collected a variety of publications to send Soyfoods Center such as the *Harmony: Macrobiotics* magazine he did in 1968-69 (a full set).

Greg was born in Santa Monica, near Los Angeles on 27 Nov. 1948. His father, Kenneth, had come out of the marines in World War II and (under the G.I. Bill) he was a student at the University of California at Los Angeles (UCLA). Then he got a job in London working for the U.S. government (Air Force) as an airbase historian. He wanted to get out of America and he did not want his kids growing up in America. "He wanted to bring us up in London, which was a pretty good idea, I think." He was in the same class as Ronald Reagan. His eyes were opened by the war.

When Greg's father, Kenneth, was younger, he was abandoned by conventional medicine. They did know what the problem was. He was shrinking away, down to about 90 pounds from about 160, and his skin was turning dark. He thinks it might have been related to the time during the war when he was on Iwo Jima and an ammunition dump exploded next to him. He went into a sort of shock after that, from which he recovered, but several years later he went into another. He doesn't know what it was; it could have been a bug of some sort. In 1946 was abandoned by allopathic medicine and the doctors thought he was going to die. Then someone told him about Dr. Nakadadi in Los Angeles. He was a natural healer. He focused on diet—wholemeal cereals, whole-wheat bread (which his wife had to bake herself), no white refined starches, almost no meat (but fish was OK) and no processed or canned foods. Kenneth's mother and father (Greg's grandparents) came from Syria and the Greg's mother, Margaret, was a good cook and she cooked the foods Dr. Nakadadi recommended. Kenneth recovered within a month; he returned to his natural weight and his skin resumed its former color. Thereafter Greg and Craig were raised on a similar, natural diet; they had a sugar ration of 1 teaspoon a day of dark brown sugar. No TV dinners, homemade bread, very little meat.

In 1958 Greg became a vegetarian (although he still ate fish), largely because of his dislike of red meat. "I was a pescatarian." Also on 1958 Kenneth made a New Year's resolution to go pescatarian again, but it only lasted for 6 weeks. Yet Greg persisted; his brother Craig, who was 4 years older than Greg, ate meat.

In about 1965/66 Greg (age 16-17) was introduced to

macrobiotics by his brother, Craig. "Now my diet is what I eat instead of what I don't eat. I read a lot." Craig got interested in macrobiotics when he read about a raid in New York in which George Ohsawa's books were seized and burned. Craig got hold of Ohsawa's books and "immediately embraced macrobiotics. As soon as he introduced it to me, I immediately embraced it—because it was real food." Greg got deeply involved in the philosophy of macrobiotics and he read a lot about it.

On New Year's Eve 1966/67 Greg broke his back when he fell out a tree while a student at Cal, Berkeley. He was paralyzed from the waist down, and that landed him in a wheel chair for life. Greg went to college for only 3 months—the last 3 months of 1966 which was the 1st quarter of his freshman year. He returned to London for treatment of paralysis and rehabilitation. He planned to return to college.

The previous year his brother, Craig, had opened a macrobiotic restaurant in Airlie Gardens; Craig's was the first macrobiotic restaurant in the UK, but it was only open for a few months; it had no permits, was illegal, and the neighbors complained. Craig was in the process of moving his original restaurant and making it legal. The new location was to be at Westbourne Terrace near Paddington. But suddenly and unexpectedly Craig had to leave the UK so that summer (1967) Greg moved in and opened the macrobiotic restaurant. It was in a basement. John Lennon and Yoko Ono (of Beatles fame) were customers. Later (7 Nov. 1968) John drew an original 8-frame cartoon for Greg to help promote his magazine. One can still see it on Greg's website www.chaos-works.com. Initially it was called either "The Macro" or "Greg's." It had permits and was legal. After a year he named it Seed. "Seed became very popular; it was *the* place to eat in London. It was filled every night. It was the only '60s hippie restaurant in London, so people sought it out. It seated 40-50 people at one time. For Greg, the total motivation for Seed was to spread the word about macrobiotics. In 1967 Greg would hand out free brown rice and veggies to hippies on Portobello Road once a week.

Also in 1967 they established a company named Yin-Yang Ltd.; it turned out to be a holding company for all the other Sams brothers ventures. Each brother owned half the shares.

In 1968/69 Greg edited and published *Harmony: Macrobiotics*, a magazine about macrobiotics. He would duplicate it on his duplicator at home, staple the pages together (24 pages per issue at the beginning; 2s 6d). In all, there were only 3 issues; the last was in 1969.

In 1969 or 1970 he opened Sprout Café in a room off the Seed restaurant; the concept was extremely purist (it served brown rice and miso soup) but it lasted only about 2 months. Also in 1969 he opened Ceres, a store that was the only source of macrobiotic foods on All Saints Road in west London. "It was the first macrobiotic food store in London, and also the first natural food store. You couldn't even buy

brown rice in a health food shop. Ceres did really well, and like Seed was profitable almost immediately. “People from the Findhorn community in Scotland used to come to Seed every couple of months to stock up on food. People would come from all over England, and from Wales. “Ceres is still in operation, although its name and modus have changed.”

In mid-1970 Craig returned to the UK. Together they moved Ceres Grain Store to the Portobello Road to a much bigger location—about 1,500 square feet. At that point Greg got out of the restaurant; he had enough to do. He said “Craig, here’s your restaurant.” No charge. But it was part of Yin-Yang Ltd., which was jointly owned. “At the time I was a young hippie, age 20, and I was just doing stuff. I wasn’t keeping track of money so long as a venture was self-supporting.”

In Aug. 1970 Greg began to wholesale macrobiotic foods through Harmony Foods, a new company that was the first macrobiotic food wholesaler in the UK. Harmony Foods had 3 different locations in its first 18 months. The first was in a basement (with the office upstairs) at St. Luke’s Road, followed by All Saints Rd. (in about they moved Ceres to 269A Portobello Road (and renamed it Ceres Grain Shop), then moved Harmony into where Ceres had been; the first price list was printed in Sept. 1970 at All Saints Road), then in shortly in Freston Road (3 floors). Each location was significantly larger than the one before it. Harmony Foods was thriving in every way, including economically. “My biggest problem was keeping all our food products in stock. Harmony Foods was always our main source of income; it paid for the less successful ventures. Everything was under Yin-Yang Ltd. so all the bills were always paid. The customers were mostly new natural food stores, such as Infinity in Brighton, Suma in Leeds, Real Foods in Edinburgh, Scotland, On the 8th Day in Manchester, Holland & Barrett (a chain of health food stores). Brewhurst (in Surrey) owned Holland & Barrett and was the biggest health food distributor. Everything was moving so fast.

What foods did Harmony Foods wholesale? Brown rice, miso (mugi and Hatcho), tamari (both in wooden kegs; both imported from Muso Shokuhin in Japan), millet, buckwheat (roasted and unroasted), whole wheat, whole wheat flour, aduki [azuki] beans, sesame seeds.

Craig started Ceres Bakery on his own; Greg had almost no involvement in that.

When Harmony Foods moved to its new location on Freston Road, both Greg and Crain started Green Genes Café in its old location on All Saints Road. Green Genes was a working man’s macrobiotic restaurant where the food was less expensive with an element of fixed menu. Green Genes lasted less than a year. Greg opened Ceres Bookstore above the Ceres Grain Shop; it lasted for a few years and usually lost money. It wasn’t that Greg liked a busy life. “One had to do the things that needed to be done. Sometimes you’d bite off more than you could chew.”

The last edition of *Harmony* magazine was in 1969. From 1971 until March 1977 (last issue) Greg was involved in establishing and running *Seed: The Journal of Organic Living*. The first issue was Nov. 1971. It was a real magazine with an editor, properly printed and bound. Craig was also involved, but most of the input came from their father, Ken—who was a civilian colonel in Vietnam; he retired from there early.

In 1974, after traveled to Syria with his father to visit relatives. This idea came from the family’s relatives he had visited in Syria. “They were peasants living in the mountains, in a Christian village. They ate meat only once or twice a year, as at Christmas, Easter or weddings; they couldn’t afford to eat meat regularly. They didn’t know what vegetarianism was. They killed a lamb for us because it was a big deal to have foreign visitors. Vegetarian prig that I was, I wouldn’t eat any of that lamb. Afterwards I felt so stupid and guilty; I realized I’d done the wrong thing. So I resolved to stop being so absolute about not eating meat. That meant I would eat a little meat from time to time when the situation called for it.” Continued. Address: London, England.

2843. Bill Tara: Biography (Website printout). 2007. www.billtara.net/bio.htm 1 p. Retrieved April 15.

• **Summary:** “For 40 years, Bill Tara has been an advocate of a Natural approach to health care. He was vice-president of Erewhon Trading Co, one of the first major distributors of organically grown foods in America in the 1960’s and has been active in the Natural Foods Movement in both America and Europe.

“Bill began his educational work in 1967 teaching in Boston and establishing Macrobiotic centers in Chicago [Illinois] and Los Angeles.

“In 1975 he established the Community Health Foundation and the East West Center in London, England where he served as Executive Director till 1980.

“This center was the largest and most active alternative health center in Europe and served as a model for other organizations worldwide.

“He was a co-founder of the Kushi Institute and together with Michio Kushi developed the first full curriculum for Macrobiotic studies and Counselor Certification.

“Bill has served as chairman of 7 international Macrobiotic Congresses in both Europe and North America.

“Over the years he has been interviewed on numerous television and radio programs, submitted expert testimony to the American Congress on diet and disease and is the author of *Macrobiotics and Human Behavior* and editor of *Your Face Never Lies* by Michio Kushi.

“He has been invited to present seminars on Macrobiotics, Natural Health Care, Deep Ecology, and Mind / Body Medicine in over 20 countries.

“Bill has served on the faculties of the Kushi Institutes, in England and America, the Kiental Institute in Switzerland

and Naropa University in Boulder, Colorado, USA.”

2844. Beresford, Hattie. 2007. The way it was [The Ogilvy Ranch and Sunburst organic foods]. *Montecito Journal*. July 5. 8 p.

• **Summary:** Contents: The many faces of the Ogilvy Ranch. Welcome to Lemuria. Murder most foul. A brief return to paradise.

This is a brief history of the Ogilvy Ranch, which is a small private piece of land in the middle of the Los Padres National Forest in Santa Barbara County, California. Montecito is northeast of Santa Barbara.

One of the owners of the ranch was Norm Paulson, who “was trying to save the lost generation of the 1960s by getting them off drugs and into a spiritual life.”

Norman Paulson was a direct disciple of Paramahansa Yogananda. He had spent years searching for self-realization through meditation, Christianity, inner awakenings, and what he believed were contacts with higher powers. After years of living at various places in California and Nevada, Paulson returned to Santa Barbara to work in the construction industry and teach meditation. He gradually attracted a group of followers / disciples.

1969–Paulson and his followers moved into an old ice cream factory at 808 East Cota St. in Santa Barbara. There he founded the Brotherhood of the Sun and the Sunburst New Age Community. In this community, alcohol, drugs, tobacco, and premarital sex were prohibited. They promoted a healthy lifestyle including organically grown foods.

1970–The group purchased a 160 acre parcel and its old lodge off Gibraltar Road, known as Flores Flats, in Santa Barbara. They christened it “Sunburst Farm.” This was the first of the group’s communal farms.

1971–The group added land to their ranch by purchasing the Ogilvy Ranch [about 150 acres]; they renamed it Lemuria, because Paulson believed he was in contact with Ancients from the sunken continent of Mu or Lemuria.

1974–The community published a brochure which “advertised that Sunburst was a Christian society whose goal was ‘to live a natural way of life ruled by the simple laws of Our Father.’ On the Ogilvy Ranch they renovated 100-year-old buildings and added new adobe structures. They planted wheat, corn, vegetables, and herbs, established orchards and vineyards, and grew all organically—without the use of chemical sprays or fertilizers. They used Percheron horses to pull their plows. They tended goats which provided milk, cheese, and wool. From their bee hives they harvested honey. They even built a blacksmith’s shop which made metal tools and implements. Eventually they built a school for the many children in the growing community. Since there were no telephones or other modern means of communication at Lemuria, messages were sent via homing / carrier pigeons. Since Sunburst was never able to produce or make everything it needed, there were occasional town trips to

bring in needed food and supplies.

1976–Sunburst [with over 300 members] purchased [as a lease option the 3,000 acre] Tajiguas Ranch near Gaviota and Gaviota State Park—west of Goleta and even further west of Santa Barbara; there they established another community. “The organization developed an impressive natural [and organic] foods empire during this time, owning 11 local businesses and four large parcels of land.

1978 late—Things began to fall apart. Internal strife and disillusionment “caused two-thirds of the members to leave. Penniless after years of labor for the common good, the disaffected members sued Sunburst for a share of its properties.

1980–The people at the Ogilvy Ranch / Lemuria, were told to move to Tajiguas. Caretakers were hired to watch the Ogilvy Ranch property until it could be sold.

1981 Oct.—One of the caretakers committed a murder on the ranch and cremated the body there. Evidence was later found “of Sunburst’s increasing paranoia that Armageddon was imminent.” Weapons and signs of paramilitary operations were found.

1984—Chris Thompson moved onto the farm as the new caretaker. He and his girlfriend set about “creating a paradise of organic farming and self-sufficiency.” Once every two weeks he’d take his produce or split wood to town.

1987—When Chris Thompson died, his ashes were spread over the ranch he loved. His son, Danny, became the sole owner of the ranch.

Six photos show the Ogilvy Ranch at different times.

Note 1. The comments at the end of this article, most by people who had lived on the Ogilvy Ranch during the Sunburst period, are very interesting.

Note 2. As of Aug. 2010 an offshoot of Normal Paulson’s group still exists at www.sunburstonline.org. Located about 40 miles north of Santa Barbara, they can be contacted at P.O. Box 2008, Buellton, California 93427.

2849. Blereau, Jude. 2007. Wholefood: heal–nourish–delight. Philadelphia, Pennsylvania: Running Press. 332 p. Illust. Index. 23 x 19 cm. [8 ref]

• **Summary:** This cookbook is not vegetarian. Vegan recipes are so labeled. One chapter, titled “Soy” (p. 92-110) is divided into two parts: Tofu and tempeh The index contains 18 entries for tofu, 14 for tempeh, 3 each for miso and tamari, 2 each for miso soup, soy beans, 2 and soy milk, and 1 each for soy flour, teriyaki marinade, and textured vegetable protein.

“Jude Blereau is a natural foods chef, food coach, and cooking teacher who has been involved with the organic and wholefoods industry for more than 15 years. She first became involved in the natural food industry while living in the U.S. in the late 1980s. In 1997, Jude co-founded The Earth Market, a much loved wholefood store and cafe; in Perth, Western Australia. Her focus is on helping people learn about good food-what it truly is, where to get it, how to use it-and to give them the tools and information to make healthy eating a part of their everyday lives. Blereau lives in Australia.” From publisher’s description. Address: Natural Foods Chef, Australia.

2850. Clark, Lisa Frances Ellen. 2007. Organic limited: the corporate rise and spectacular change in the Canadian and American organic food sectors. PhD thesis, Dep. of Political Science, Simon Fraser University, Burnaby campus, Canada. x + 278 p. Published as a book in 2009 in Ottawa, Canada by Library and Archives Canada. [495 ref]

• **Summary:** “This thesis examines the changing political economy of the organic food sector in Canada and the U.S. over the past twenty years.”

Contents: Abstract. Dedication. Acknowledgements. Table of Contents. List of Tables. List of Acronyms and Abbreviations.

Chapter: 1 Introduction: Why Study Organic Food? Major Themes. Research Design. Conclusion.

Chapter 2: A Clash of Values: The Organic Philosophy and the Corporate Approach to Organic Agriculture: The Roots of the Organic Philosophy. The Components of the Organic Philosophy. The ‘Corporate’ Approach to Organic Food Production. Conclusion.

Chapter 3: Business As Usual? Corporate Strategies in the Organic Food Sector. Introduction. Restructuring the Agro-food Sector: From Agriculture to Agribusiness. Conventional Corporate Strategies Applied to the Organic Sector, Implications of the Corporate Strategies for Substantive Elements of the Organic Philosophy. Conclusion.

Chapter 4: From Private To Public: Instituting

Organic Food Regulations into Public Policy Frameworks. Introduction. From Private to Public: the Changes in Organic Agriculture Policies. Institutionalizing Organic Food Regulations into National Policy Frameworks. Regulating Organic Agriculture at the Federal Level. Conclusion.

Chapter 5: Globalizing Organic Food: Regulating Organic in Regional and Global Trade Agreements. Introduction. The NAFTA and the WTO: Basic Principles of Trade Applicable to Organic Food and Agriculture. The Agreement on Technical Barriers to Trade and the Sanitary and Phyto-Sanitary Measures. International Authorities on Organic Agricultural Standards: The Codex, ISO and IFOAM. Conclusion.

Chapter 6: The Development and Transformation of the Early Organic Social Movement. Introduction. The Origins of the Organic Social Movement. The Organic Movement in Transition. Conclusion.

Chapter 7: New Actors, New Directions: The Contemporary Organic Movement as an Advocacy Network. Introduction. The Rise in Professional Organizations in the Organic Social Movement. Issue Linkage: The Anti-GMO and Organic Movement. Conclusion.

Chapter 8: Conclusions–Moving Beyond Organic? Contributions to Political Economy and Future Prospects for Social Resistance Against the Globalized Food System. Themes of the Changing Political Economy of the Organic Agriculture. Contributions to Studies in Political Economy. Social Resistance to Industrialized Agriculture.

Personal Interviews (p. 278). Address: Burnaby, BC, Canada.

2851. El-Hage Scialabba, Nadia. 2007. Foreword. In: William Lockeretz, ed. 2007. Organic Farming: An International History. Oxfordshire, UK; Cambridge, Massachusetts: CAB International. xi + 282 p. See p. ix-xi.

• **Summary:** Some say it started thousands of years ago, when hunter-gatherers settled down and took up agriculture. “After all, farmers of the remote past certainly did not have to deal with synthetic chemicals! However, true organic agriculture is practised by intent, not by default; you do not automatically become organic simply because you never used prohibited chemicals anyway. This makes it clear that organic agriculture started much more recently. It is hard to specify exactly when, but early landmarks include the founding of biodynamic agriculture in the 1920s, the

emergence of a strongly organized movement in the UK in the 1940s and the promulgation of the first organic production standards in the 1960s.”

Organic agriculture is an “oasis,” “a vibrant and innovative movement for cultural and social development.” Address: Senior Officer (Environment and Sustainable Development), Food and Agriculture Organization of the United Nations (FAO).

2852. Lockeretz, William. ed. 2007. *Organic farming: An international history*. Oxfordshire, UK; Cambridge, Massachusetts: CAB International. xi + 282 p. Index. 24 cm.
• **Summary:** An outstanding book. Contains 16 chapters (after the List of contributors and Foreword) by various authors, in four parts.

I: Origins and principles.

1. What Explains the Rise of Organic Farming?, by W. Lockeretz.

2. The Origins of Organic Farming, by G. Vogt.

3. Organic Values, by M. Sligh and T. Cierpka.

4. The Science of Organic Farming, by D.H. Stinner

5. The Evolution of Organic Practice, by U. Niggli

II: Policies and markets.

6. The Development of Governmental Support for Organic Farming in Europe, by S. Padel and N. Lampkin.

7. The Organic Market, by J. Aschemann, U. Hamm, S. Naspetti and B. Zanoli

8. Development of Standards for Organic Farming, by O. Schmid

III: Organizations and Institutions.

9. IFOAM and the History of the International Organic Movement, by B. Geier.

10. The Soil Association [UK], by P. Conford and P. Holden.

11. Ecological Farmers Association and the Success of Swedish Organic Agriculture, by I. Kullander.

12. MAPO and the Argentinian Organic Movement, by D. Foguelman.

13. NASAA and Organic Agriculture in Australia, by E. Wynen and S. Fritz.

14. FiBL and Organic Research in Switzerland, by U. Niggli

15. The Organic Trade Association, K. DiMatteo and G. Gershuny.

IV: Challenges.

16. A Look Towards the Future, by B. Geier, I. Kullander, N. Lampkin, S. Padel, M. Sligh, U. Niggli, G. Vogt and W. Lockeretz.

The soybean is mentioned on pages 56 (“the conventional maize-soybean system”) and 221 (“soybean consignments have already been rejected for exceeding GMO limits”). “Organic soybeans” are mentioned on page 268.

Biodynamic agriculture (including Demeter) is

discussed throughout the book, starting on pages 6, 19-24. Ehrenfried Pfeiffer is mentioned on pages 22, 41, 43-45, 243. Jerome I. Rodale and the Rodale Institute are mentioned on pages 26, 31-33, 51, 56. Rudolf Steiner is mentioned on pages 19, 20, 23, 31, 41-44, 143, 153, 176, 203, 242.

Dedication: “In memory of Ben Stinner. His insightful intelligence, quick wit and engaging geniality delighted and inspired all who knew him.” Address: Friedman School of Nutrition Science and Policy, Tufts Univ., Boston [Medford], Massachusetts, USA.

2853. Lockeretz, W. 2007. What explains the rise of organic farming? In: William Lockeretz, ed. 2007. *Organic Farming: An International History*. Oxfordshire, UK; Cambridge, Massachusetts: CAB International. xi + 282 p. See p. 1-8. [17 ref]

• **Summary:** The number of organic farms was almost negligible until the 1980s; but today such farms number 623,000 with some 32.5 million ha managed organically (Willer and Yessefi 2006, chap. 5). Sales of organic products worldwide reached an estimated \$28 billion in 2004 (IFOAM 2006).

During this time, the organic farming industry has grown in stature and receives increased respect and serious interest from researchers, educators, and agricultural policy makers—a change that started in earnest only in the late 1970s.

At the first international scientific conference of the International Federation of Organic Agriculture Movements (IFOAM), held in Switzerland in 1977, a total of 25 presentations were given. Yet when this same conference returned to Switzerland in 2000, more than 500 presentations were given—a 20-fold increase.

Many European countries spend 6 million euros a year of public money on agricultural research.

In 1971 Earl Butz, Secretary of USA, famously declared, “before we go back to an organic agriculture in this country, somebody must decide which 50 million Americans we are going to let starve or go hungry” (Butz 1971). Yet in 1980 the USDA (headed by Bob Bergland) issued a comprehensive report that enthusiastically endorsed organic agriculture. *Report and Recommendations on Organic Farming* became “one of the most widely requested reports in USDA’s history. It had a startling impact, not just because of what it said, but also because of who was saying it.” Organic agriculture dealt directly with such basic problems as energy shortages, declining soil productivity and fertility, soil erosion, chemical residues in foods, and environmental pollution.

Today the organic agriculture movement has spread to almost every country of the world, including developing countries.

A new concern is that the newcomers to organic farming are in it primarily for the money or subsidies. Address: Prof.,

Friedman School of Nutrition Science and Policy, Tufts Univ., 150 Harrison Ave., Boston, Massachusetts 02111.

2854. Sligh, M.; Cierpka, T. 2007. Organic values. In: William Lockeretz, ed. 2007. *Organic Farming: An International History*. Oxfordshire, UK; Cambridge, Massachusetts: CAB International. xi + 282 p. See p. 30-39. [16* ref]

• **Summary:** Contents: The organic alternative to industrialized agriculture. The diverse sources of values (Albert Howard and Eve Balfour in the UK, Jerome I. Rodale in the USA, and Rudolf Steiner in Germany. Also traditional farmers and peasants worldwide). “Paul Keene, who in 1946 founded Walnut Acres, the oldest US mail order organic foods company.” He was inspired by Mahatma Gandhi in India. The breadth of values in organic agriculture’s formative years and later. Organic values and integrity in the face of increasing trade. Key elements of organic integrity: Environmental stewardship, accountability and fairness. Address: Director of Just Foods, RAFI-USA, PO Box 640, Pittsboro, North Carolina 27312 USA; 2. Director of Member Relations and Human Resources, International Federation of Organic Agriculture Movements, Charles-de-Gaulle-Str. 5, 53113 Bonn, Germany.

2856. Vogt, Gunter. 2007. The origins of organic farming. In: William Lockeretz, ed. 2007. *Organic Farming: An International History*. Oxfordshire, UK; Cambridge, Massachusetts: CAB International. xi + 282 p. See p. 9-29. [54 ref]

• **Summary:** An extremely interesting chapter. Contents: Introduction. Context of the origins: crisis in agriculture and agricultural science, emergence of biologically oriented agricultural sciences, life reform (*Lebensreform*) and health reform movements (in Germany, starting in the late 1800s), farming cultures in the Far East (East Asia). Natural agriculture and its successors in the German-speaking world: Concepts of organic agriculture, organization and pioneers (starting in 1927/28), further development; natural, biological and ecological agriculture, organic-biological agriculture. Biodynamic agriculture (Rudolf Steiner, starting in 1924), biodynamic concepts, biodynamic pioneers and their activities, organizations and activities, biodynamic agriculture during the Third Reich (a collaboration based on compromises was gradually worked out), after World War II.

Organic farming in the English-speaking world (roots go back to agricultural scientist Albert Howard {1873-1947} and to physician Robert McCarrison {1876-1960}): Beginnings in India, organic farming in the UK (incl. Eve Balfour, The Soil Association, the journal *Mother Earth*), organic farming in the USA (incl. The Dust Bowl, The

Friends of the Land, Edward H. Faulkner, Louis Bromfield, Paul Sears, Aldo Leopold, and the first head of USDA’s Soil Conservation Service, Hugh H. Bennett, Jerome I. Rodale and his book *Pay Dirt* {1945}, Selman A. Waksman). Address: Friedrich-Naumann-Str. 91, 76187 Karlsruhe, Germany.

2857. Ness, Carol. 2008. House organic crowned top tofu: Taster’s choice. *San Francisco Chronicle*. Jan. 23. p. F2.

• **Summary:** For tasting they chose 15 brands of firm tofu, served plain. The ranking was: House organic 79 (\$2.49 for 14 oz at Andronico’s). House 74 (non-organic, \$1.69 for 14 oz). Soy Deli organic 73 (\$1.99 for 12 oz). Whole Foods 385 67 (\$0.99 for 14 oz), Azumaya 66 (\$1.79 for 14 oz). Trader Joe’s organic 64. Wo Chong 57. White Wave 55. Soy Fresh 40. Golden Gate 38. Soga (extra firm [made by Pulmuone]) 38. Mori Nu (box, silken) 36. Nasoya 21. Wildwood 20. Small Planet 2. Address: Chronicle staff writer.

2858. Pollan, Michael. 2008. In defense of food: An eater’s manifesto. New York, NY: Penguin Press. 244 p. Index. 22 cm. *

• **Summary:** On the cover is a head of lettuce with a narrow yellow band around it, on which is written: “Eat food, not too much, mostly plants.”

Contents: Introduction. Part I: The age of nutritionism. From foods to nutrients. Nutritionism defined. Nutritionism comes to market. Food science’s golden age. The melting of the lipid hypothesis. Eat right, get fatter. Beyond the pleasure principle. The proof in the low-fat pudding. Bad science. Nutritionism’s children.

Part II: The Western diet and the diseases of civilization. The Aborigine in all of us. The elephant in the room. The industrialization of eating: what we do know: From whole foods to refined, from complexity to simplicity, from quality to quantity, from leaves to seeds, from food culture to food science. Part III: Getting over nutritionism. Escape from the Western diet. Eat food: food defined. Mostly plants: what to eat. Not too much: how to eat. Address: Prof. of Journalism, Univ. of California, Berkeley, California.

2859. Pignataro, Anthony. 2008. In the name of the ‘father’: Celebrity nutritionist and health food seller Patricia Bragg isn’t an easy person to pin down. Here’s what we found when we tried to find out exactly who she is and what she intends to do with all that Waiehu land she owns. *Maui Time Weekly*. Feb. 28. Cover story.

• **Summary:** A very interesting 3-part article with much new information about Patricia Pendleton Bragg. In 2002 Patricia Bragg paid \$1.1 million for 553 acres of farmland and 40,000 macadamia nut trees in Waiehu, a place on the northern coast of Maui. She is a self-proclaimed “Health Crusader.”

“Yet one of her oldest friends has described her as a

'mystery,' and there's considerable truth in that. Bragg is a complex personality, capable of both selfless generosity and relentless self-promotion. She constantly invokes the name of her 'father,' the late nutritionist Paul Bragg, yet clams up when talk turns to her actual biological parents. She'll drop the names of her friends at the drop of her bright pink hat—Tom Selleck, Clint Eastwood, Jack LaLane—but insists she's not a 'Hollywood celebrity.' Bragg Health Foundation donates money to a surprising spectrum of charities: groups opposed to genetically modified foods on one hand, fundamentalist Christian ministries on the other."

Patricia repeatedly refers to Paul Bragg as "my dad." She did so at least a dozen times during the course of this interview. However: "According to her California birth certificate, she was born Patricia Pendleton at Oakland's Peralta Hospital. Her birth took place at 1:57 a.m. on April 29, 1929, and her biological parents were Harry C. and Nettie Pendleton."

"Patricia's use of the Bragg name comes from her marriage to Robert E. Bragg, a chiropractor and son of Paul Bragg. That makes Paul Bragg Patricia's father-in-law."

When the writer asked Patricia about this contradiction, she replied that Paul Bragg had legally adopted her. She repeated for emphasis: "Yes. He legally adopted me."

"While certainly possible—adult adoptions are legal in California—*Maui Time* could find no public record of it having taken place. When I asked Patricia when the adoption occurred, she said simply, 'Years and years ago. My private life is my private life.'

"This became a nearly constant refrain. 'You don't need to go into that,' she'd lecture me whenever I asked about her biological parents. 'I'm not a Hollywood celebrity.'"

Patricia is also president of the Bragg Health Foundation, a non-profit foundation based in Santa Barbara, California. Its website is www.bragghealthfoundation.org. The foundation contributes money to worthy causes.

Note: On the homepage of the Bragg foundation website is a color photo of "Patricia Bragg, N.D., Ph.D., World Health Crusader." The text begins: "Dear Health Friends: The Bragg Health Foundation is a living legacy dedicated to my father's life of promoting optimal health and wellness worldwide. My father, Paul C. Bragg, N.D., Ph.D. dedicated his life to spreading the gospel of good health, happiness and love everywhere he went on his world travels."

"Bill Galt, who founded the Good Earth Restaurant chain in 1976, credits a Paul Bragg lecture with transforming his life from 'the junk food junkie of the world' to being a healthy eater." Address: News editor, Maui Times.

2860. Shurtleff, William; Aoyagi, Akiko. 2008. *Le livre du tofu: La source de protéines de l'avenir—dès maintenant!* [The book of tofu: Protein source of the future—now! Translated from the English by Nathalie Tremblay]. Varennes, Quebec, Canada: Éditions AdA Inc. 430 p. Illust.

by Akiko Aoyagi. Index. Feb. 28 cm. [53 ref. Fre]

• **Summary:** Contents: Preface. Acknowledgments. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food. 3. Getting started. Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History, cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame*), kinako (roasted full-fat soy flour), soybean sprouts (*daizu no moyashi*), natto (sticky fermented whole soybeans, with "gossamer threads"), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein (TVP), soy oil products). 5. Gô (*purée de fèves de soya fraîches*; a thick white puree of well-soaked uncooked soybeans). 6. Okara or Uohana. 7. Curds and whey (*Caillé et petit-lait*). 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding).

9. Deep-fried tofu (*Tofu frit*): Thick agé or nama agé (*Agé épais {côtelettes de tofu frit}*), ganmo or ganmodoki (*burgers de tofu frit*; incl. *hiryozu / hirosu*), agé or aburagé (*pochettes de tofu frit*; incl. "Smoked tofu," p. 197). 10. Soymilk (*Lait de soya*). 11. Silken tofu (Kinugoshi ou tofu soyeux) ("*Kinu* means 'silk'; *kosu* means 'to strain'; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk"). 12. Grilled tofu (*Tofu grillé*). 13. Frozen and dried-frozen tofu (*Tofu surgelé et tofu surgelé sèche*). 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha's chicken, Buddha's ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}; see p. 258 for illustrations of many meat alternatives, incl. Buddha's fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig's head, and molded ham). 16. Special tofu (*Tofu particuliers*).

Part III—Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way. Appendices: A. Tofu restaurants in Japan (many are vegetarian). B. Tofu shops in the West (Directory of 43 shops in the USA, in Europe {Germany 11, Austria 1, Belgium 2, Denmark 1, Finland 1, France 6, Ireland 1, Italy 3, Netherlands 4, Portugal 1, Spain 6, Switzerland 4, UK 9, Wales 1}, and 3 in Latin America {Brazil, Colombia, El Salvador, Guatemala, Mexico}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography.

Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for “Mock tuna salad with deep fried tofu.”

Note. This is the earliest French-language document seen (Sept. 2013) that mentions soy cream cheese (p. 125), which it calls *Fromage à la crème au tofu*. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549 USA. Phone: 925-283-2991.

2861. Hain Celestial Group, Inc. (The). 2008. Annual report 2007. Melville, New York. 8 + 69 + 3 p. April. 28 cm.
 • **Summary:** Net sales for the year ended 30 June 2007 were \$900.4 million, up 21.9% from 2006. Net income in 2007 was \$47.5 million, up 22.1% from 2006.

Acquisitions and divestitures: On 8 Dec. 2006 Hain acquired Haldane Foods Ltd., a UK-based producer of meat-free food and non-dairy beverage products, from the Archer Daniels Midland Co. (ADM). Haldane’s brands include Realeat frozen foods, Granose, Direct Foods and Realeat dry mixes, and Granose non-dairy beverages. Price: About \$10.1 million.

On 11 Jan. 2007 Hain acquired Avalon Organics, a leader in body care, for approximately \$126.1 million in cash. This includes the brands Avalon Organics, Alba Botanica, and Alba Organics. On 7 Dec. 2007 Hain acquired Tender Care International, Inc., a marketer and distributor of chlorine-free and gel-free natural diapers and baby wipes under the Tender Care and Tushies brand names for \$3.9 million in cash (see 2008 Annual Report, p. 37).

Most of the report is Form 10-K/A. A table of the company’s common stock prices, as listed on the NASDAQ Global Select Market under the ticker symbol Hain, shows the highs for FY 2006 ranged from \$20.59 to \$27.94. The highs for FY 2008 ranged from \$32.33 to a record high of \$35.14.

Page F-2: “On June 15, 2007, we announced that the company had received an informal inquiry from the SEC [Security and Exchange Commission] concerning the company’s stock option granting practices and the related accounting and disclosures.” An independent investigation was conducted. The numerous problems found in the dating and documentation of stock options are discussed. For example: “Approximately one-third of all options granted were priced at quarterly or annual lows.” “Some grant dates in earlier periods appear to have been selected in hindsight.” Tables on page F-8 and F-9 show that the above problems resulted in \$6.5 million of additional income taxes and a total loss to the company of \$11.7 million. For example, net income for FY 2006, previously reported as \$37.067 million, is now restated as \$36.367 million, a decrease of about 1.9%.

Accompanying the annual report is a “Notice of Annual Meeting of Stockholders and Proxy Statement” (34 p.). Irwin Simon, the founder and CEO, age 49, had the following annual compensation: Salary: \$1.25 million. Total compensation: \$3.851 million. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2862. Nordquist, Ted. 2008. (1) The increasing difficulty of sourcing organic, non-GE, clear hilum soybeans for making soymilk, etc. (2) SunOpta: Their role in the U.S. soymilk market. (3) Stremick’s Heritage Foods (Interview). *SoyaScan Notes*. June 27. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** (1) Organic, non-GE, clear-hilum soybeans now constitute only 0.03% of total U.S. soybean acreage. 96% of that acreage is genetically engineered. For details see Rhonda Cole’s 2008 PowerPoint presentation. She says (slide 10) that organic soybean production in the USA in 2005 (according to USDA Economic Research Service data) is 122,217 acres. At 40 bu/acre that is 4.9 million acres or 133,000 metric tons. A major problem is contamination of soybeans from genetically engineered crops. When that happens, farmers must sell their soybeans at a low price for use as feed. Then they switch to other soybean varieties that give higher yields than clear hilum; they sell these organic, non-GE soybeans for organic feed. The grower knows that Ted will check the soybeans to be sure they meet non-GE standards, whereas Ted believes that companies buying the soybeans for use as feed rarely check. These developments have not led to an increase of the organic, non-GE, clear hilum soybeans that Ted buys because he has a long-term special relationship with a farmer who supplies the soybeans. A year ago, from most suppliers (not including Ted’s) the price for such soybeans was 39-42 cents/pound; now it is more like 62-70 cents a pound. This gives Ted a price advantage over his competitors, but it won’t go on forever.

Ted is in the process of putting together a nationwide private label soymilk program with Heritage Foods, which

recently bought the Jasper soymilk plant in Missouri. At this plant they formulate the soymilk and package it into plastic half-gallon bottles, UHT (=ESL) half-gallon cartons, and Tetra-Pak aseptic packaging machines. UHT (ultra-high temperature) is held at 185°F for 1-2 seconds.

(2) By far the biggest soymilk manufacturer in the USA is Dean Foods / Suiza. They have about 8 soymilk plants and they used to have about 80-85% of the U.S. market, but Ted thinks they have lost market share to private label soymilk, so they may now be down to roughly 65-70%. SunOpta is also a major producer; they took away the Costco soymilk account from Dean / Suiza. To service this account, SunOpta could have reopened their Wyoming plant (Ted is not sure). Costco, the largest membership warehouse club chain in the world based on sales volume, is headquartered in Issaquah, Washington, with its largest warehouse in nearby Seattle. SunOpta has soymilk extraction plants in Alexandria, Minnesota; Huevelton, New York (the plant in upstate New York they bought from Raj Gupta), and Afton, Wyoming. They have plans to build a soymilk extraction plant in Modesto, California (near Ted's plant) but that plant will probably not start operating for 18-24 months. They have already started to pay rent on the building in order to start getting their permits, waiting for stainless steel machinery, etc.

SunOpta temporarily shut down its plant in Afton, Wyoming, Ted's company took the Bolthouse Farms account, for soybase, away from SunOpta. Bolthouse, headquartered in the San Joaquin Valley, California, makes a line of healthy beverages including "Perfectly Protein Vanilla Chai Tea with Soy Protein"—sold at Walgreens and Whole Foods. (3) Heritage Foods (recently renamed Stremick's Heritage Foods) is a big dairy milk, beverage, and juice company that has been around the dairy milk market for a long, long time. Note: The Heritage website states that they are Nestle's largest distributor in the Western United States. "The early stages of development were begun in 1988 when our President and CEO, Lou Stremick, purchased Carnation dairy in Los Angeles and changed the name to Main St. In 1990, Lou and a group of investors purchased Adohr Farms and merged both Main St. and Adohr together. Adohr Farms was founded in 1916 by Merritt and Rhoda (backwards, that's Adohr) Adamson, and became the worlds largest milk producer. After a rich history including Spanish land grants, a battle to overcome the Great Depression, and more than two decades of ownership by Southland Corporation, Adohr Farms was ready for a new vision and new direction."

Lou's son is Sam Stremick (he does all the organic products) and Ted works with both men. They have many plants that process and fill fluid products, for other people and under their own brands.

Heritage owned half of the Adohr plant in Cedar City, Utah. When Steve Demos left Ted at Morningstar (in Gustine, California) and started having SunRich make his

Silk soybase, it was co-packed [cooperatively packed] at this Adohr plant. So SunRich sent tankers of soybase to the Adohr plant, where it was processed, formulated, and packaged. SunRich was making more and more Silk soymilk for Steve Demos (White Wave), so they decided to save Steve money by building a new plant for making / extracting soybase in Wyoming, which was much nearer to the Adohr plant in Utah. Why SunRich built the plant in Wyoming and not in Utah, Ted does not know. The story is that, without telling SunRich, Steve Demos purchased a APV-Crepaco soybase plant and built it right next to the Adohr plant in Utah. When he started piping soybase into the Adohr plant next door, he just stopped ordering from SunRich—which must have upset them greatly. Steve also has created a lot of bad karma with Richard Rose (on soy cheese) and with Ted (on soybase; Steve didn't pay Ted \$320,000 for 8 months, until Ted took him to court), but he may not have done anything illegal. "Steve is a very shrewd businessman."

Back to Heritage Foods. At Gustine, Ted was working with Neil Donovan, the man who invented Lactaid. Neil was making Lactaid at the Gustine plant and distributing it through Suiza. Neil and Ted designed cartons for WholeSoy Soymilk, which they planned to piggy-back with Lactaid through Suiza. All they needed was for Suiza to sign off on it, when Tony O'Brien from Suiza in Dallas, Texas, called Ted and said he was going to make his own soymilk (SunSoy) so he didn't need Ted. Apparently a man named Loren Wallace from Good Karma Foods went to Dallas and convinced Suiza that they didn't need Ted Nordquist and his soybase; they could buy soy powder from him, and make their soymilk from the powder. That's what they did—and named it SunSoy. After several years Steve Demos (White Wave) had 84% of the soymilk market and SunSoy had 14%. When Ted and Neil got dumped by Suiza, Neil knew Sam Stremick, so they both went to him and asked him if he could package their soymilk at the Stremick packing plant in Santa Ana. He said he could not, and Ted thinks this was because Sam was half owner of the Adohr plant where they were packing Silk. Sam has since purchased the Adohr plant and renamed it Western Quality Foods. Today, Ted has a private label soymilk program with Heritage Foods which started about 5 years ago, as soon as Ted started operating his own soybase plant in Modesto. Ted ships soybase (12% solids) from his plant in Modesto to the Adohr plant in Utah. There it is processed, formulated, filled, and packaged. "Processing" means the soybase is blended (at a certain temperature) with the other ingredients (water, sugar, tricalcium phosphate, a flavor, and some carrageenan) according to a proprietary formula, then the soymilk (6% solids) it is pasteurized or ultra-heat treated, homogenized, and filled into packages. The same process is also used for dairy milk. Western Quality Foods (Heritage Foods) then sells the soymilk. Ted knows what all the private labels (presently four) look like and which companies buy the product, but he does not know

how much soymilk is sold to what companies.

Today White Wave has roughly 7-8 extraction plants where soybase is extracted from soybeans. Address: WholeSoy & Co., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

2863. Bakkum, Leila. 2008. Update on Barry Evans and American Miso Co. (Interview). *SoyaScan Notes*. July 1. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Barry Evans has moved to China and is now living and traveling there and in Thailand. He is traveling throughout the country, visiting existing suppliers, trying to find new ones, and working to be able to go direct, to eliminate middle-men. He seems to be having the best time of his life.

American Miso Co., Inc. (Rutherfordton, North Carolina) will soon be celebrating its 30th anniversary. Greg Gonzales, a former miso maker, has moved on, and Joe Kato is now the main miso maker.

Update: e-mail from Barry Evans. 2008. July 2. "I have had the most interesting, most exciting three years of my life here in Asia. I don't know why I didn't leave the US long ago!" He has found the top expert on Thai massage and has had over 100 two-hour superb treatments from her at \$6/hour. He has also become an expert on and grown to love Thai cuisine.

"Thai people don't like to leave Thailand because they can't get real Thai food abroad and they never really like other cuisines very much. Now I know why."

"I have had a chance to travel widely through much of East Asia in search of the best sources of organic food and I can state unequivocally that in my own experience the Chinese especially are quite conscientious in their devotion to organic standards and have a keenly developed ecological consciousness." Address: Great Eastern Sun Trading Co., 92 Macintosh Rd., Asheville / Enka, North Carolina 28806. Phone: 828-665-7790.

2864. Macdonald, Bruce S. 2008. Re: History of Green Mountain Grainery natural food store in Boulder, Colorado. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 3. 1 p.

• **Summary:** "The Green Mountain Grainery, the very first natural food store in Colorado, was opened sometime in 1967 by George Slavin and Zev Rosenberg. I purchased it in 1971 by trading my shampoo company (The Natural Living Company—Sesame Shampoo and Sesame Lotion) for the shares of Green Mountain Grainery. Over the years we added a wholesale company (Green Mountain Commodities), a granola manufacturing company (Earlybird Granola), and two additional stores in Denver.

"The original Green Mountain Grainery was always a grocery store dating to the 1870's. It was located at the foot

of the Flatirons and the street address was 925 Arapahoe Ave., Boulder, CO. It was condemned by the city of Boulder in 1979 as an eminent domain ostensibly because we were in a 100 year flood plain. The city later build a new library on the site which included the condemnation of 7 businesses and 4 residences adjacent to the Grainery."

Bruce adds in phone call on July 3. Many people in the natural foods movement today don't realize that that movement actually started as a macrobiotic foods movement, with Erewhon being the pioneering company and retailer, starting in April 1966. Also, the word "Grainery" is also often misspelled "Granary." Address: Founder and president, Natural Import Company, 9 Reed Street, Biltmore Village, North Carolina 28803. Phone: 828-277-8870 or 1-800-324-1878.

2865. Macdonald, Bruce S. 2008. Re: History of Cliffrose, Green Mountain Commodities, Mountain Rose, and Green Mountain Grainery in Colorado. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 28. 1 p.

• **Summary:** "Mountain Rose was the name chosen when Green Mountain Commodities and Cliffrose merged. Cliffrose was started in the early 1970s by Lyman White and his wife (whose name escapes me). At one point we distributed by semi to 12 western states. The merger broke up after about 6 months when the very large debts of the former Cliffrose became evident. Lyman went bankrupt about 3 months after I left the company.

"Green Mountain Commodities was the wholesale arm of Green Mountain Grainery. I started it in Boulder I think late 1973 or early 1974. We were competing with Cliffrose so it seemed at the time (around 1978) appropriate to combine our interests. I later found out he had been losing money by the bucketful and was deeply in debt. In those days I didn't know about "due diligence." One debt I remember was \$150,000 to Arrowhead Mills, a princely sum in the 1970s. There were many others..."

"Lyman was not macrobiotic. He was a gutsy entrepreneur, albeit a dishonest one." Address: Founder and president, Natural Import Company, 9 Reed Street, Biltmore Village, North Carolina 28803. Phone: 828-277-8870 or 1-800-324-1878.

2866. Potvin, Yves. 2008. The basic business model of Garden Protein International, Inc. (GPI) (Interview). *SoyaScan Notes*. Oct. 7. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** GPI's main product is Gardein (TM, pronounced gar-DEEN, a word derived from Garden + protein). In his previous business, Yves Veggie Cuisine, Yves was a retail brand manufacturer. He manufactured everything he sold, and built a brand. Then he realized in 1998, when he developed this new proprietary process, Gardein, that he is now an ingredient manufacturer. That was one reason he sold

his former business, but also because his present business is very capital intensive, so he needed more money to get it started.

Many different formulas / recipes are used to make Gardein; its both an art and a science—and constantly evolving with new R&D. All the formulas have much in common (all are meatless. The main ingredients are wheat gluten and soy protein), but each one is different—and thus custom designed—to suit each individual product application. Yves works closely with a chef (and he is also a trained chef with many years of experience) to develop the best possible formula for each application. The product behaves differently with different sauces (when its a low pH sauce they must start with a softer product. The protein in Gardein reacts to a dairy-based sauce much differently from the way it reacts to a tomato sauce). They have recently started to add new grain ingredients such as quinoa, kamut, amaranth, etc. to give new and interesting textures, and to increase the percentage of grain in the product. In Canada Gardein must be fortified to makes its nutritional value equal to or better than that of the meat product it is designed to replace; this is not required in the USA. The strips that they make for Trader Joe's are simply the raw material (plain Gardein), whereas the Chick'n Breasts they make for Costco are carefully formulated and formed to make a second generation product. GPI has no list of all the different types of Gardein. Rather, each company tells GPI the application, and GPI develops Gardein specifically for that product; no two are the same.

Gardein is always sold in a moist form (62-65% moisture, very much like that of meat)—never dry.

GPI sells Gardein either refrigerated or frozen—to keep it fresh. Any product sold refrigerated must be pasteurized first, which creates a whole new manufacturing cycle. Gardein is still much more difficult to process and handle than meat—for example. Most retailers buy it refrigerated, but most of the bulk product (shipped overseas or to foodservice) is sold frozen as to Cysco, Kellogg, Loblaw.

In 2005, after two years of solely R&D, Yves started to sell Gardein; his first customer was the Kellogg Co., which was already selling a line of meat alternatives under their Morningstar Farms brand. This began even before sales in bulk to foodservice.

Yves' basic strategy is to sell the ingredient (Gardein) to food product manufacturers, but they are required by a license agreement to put the Gardein logo on the label. The agreement specifies very precisely the size and location of the logo, how the ingredients are to be listed, etc. and the fact that the buyer cannot mix Gardein with meat.

But GPI also sells Gardein in four other ways: (2) Private label, as when they sell to Kellogg's, Loblaw's, President's Choice or Trader Joe's. Each of these customers also signs a licensing agreement. GPI and the customer work together to design and name the product and ingredients. Many private label customers (such as Kellogg and Trader

Joe's) design their own package / label—but this can be frustrating sometimes, as when Yves can see that a poor package design will hurt sales of the product. The customer then sends its packages to GPI in Vancouver (actually in Richmond, BC, a suburb of Vancouver) where GPI packages its product.

(3) Control label, as for very large customers such as Costco, under the name Garden Goodness. The Gardein logo appears prominently on both the front (lower right corner) and the back (bottom center) of the attractive box. GPI owns the brand "Garden Goodness." Costco asks GPI to develop the product and to design the package; Costco has to approve of both, but they do not get involved in the details. Costco is happy because no other company has that Garden Goodness brand, and GPI is happy because it is their own label and their Gardein brand prominently displayed. "It is a win-win situation." Presently GPI makes only one SKU for Costco—"6 Veggie Chick'n Breasts," but they are about to launch several new items with Costco. GPI has already made the presentation and Costco liked the ideas.

(4) Under its own label, using the "It's All Good" brand. Initially Yves had no intention of going back into the retail business, because its very painful. But as he was trying to work with his previous company (Yves Veggie Cuisine), they kept saying it was too complicated, etc. So he realized he could use his own brand to do basic R&D. For example, in Canada he has tried selling "Its All Good in the meat section, the deli section, and the produce section of food stores. From this experiment, he has learned where it sells best, and he can share this valuable information with his customers that buy Gardein. He has also learned which product types and names sell best, what's the price point, etc. And he gets lots of consumer feedback about those products. Customers such as Trader Joe's, Costco, and Safeway in Canada always want the best seller in the It's All Good" line. Yves always changes the product name slightly, as from "Tuscan Tomato" to "Basil Tomato." A new product Yves is developing to sell under his own label is a stuffed product (like a stuffed chicken), which is Gardein stuffed with black beans (frijoles) and corn; the package has a tomato sauce inside. GPI uses a broker (who is paid 5%) to get these products into the retail market. In addition, GPI has its own sales force (1 person each in Ohio, New Jersey, and Toronto, and 3 in Vancouver). One guy is responsible for private label, one for the club business, etc. Next Wednesday they will make a presentation at Safeway headquarters; GPI wants to launch the "It's All Good" line with Safeway in the U.S. The week after that they go to Kroger headquarters, then the next week to Publics. Yves attends the most important presentations, which causes him to travel a lot.

Yves is also in the process of raising some money to finance that growth; he projects sales to double in the next 24 months. Currently Yves owns all the shares in GPI Inc. He's basically looking for one venture capitalist who will invest

about \$1 million in exchange for 10% of the business—just enough to go to the next level. He hopes to find a person who understands his vision and wants to be part of the journey. Yves believes this can be a \$1 billion company.

Yves believes that he GPI must be strong in its own backyard before it tries to conquer the world. So his initial focus has been on Vancouver, British Columbia, and Canada (with 30 million population). His products are all over Canada, with 80% distribution. “But the big market for us is really the U.S.” Right now, about 40-50% of his sales are in the USA and 10% in the UK, but in 1-2 years he expects that figure to rise to 70%.

GPI presently has two manufacturing sites in Vancouver, located 5 minutes apart; the second facility is leased, 20,000 square feet, and houses all the sales and marketing. One is the distribution center where all products are shipped fresh, refrigerated. The other site makes products that are sold frozen. As soon as every batch of product is made, it is frozen to keep it fresh. Within the next 2-3 years Yves expects to have one plant in the USA and one in Europe, then one in Asia within 5 years. The product has tremendous global potential. Yves is fortunate to have already started one business, and to have already had so much business experience. This makes the growth go much faster, but it is still painful—yet he wouldn’t want to be doing anything else. Yves is married and has two kids. He feels that raising a family and growing a business are quite similar.

(3) GPI sells Gardein (as an ingredient, frozen, by the container) to a customer, such as Tesco or Grassington’s Food Co. in the UK, which has the product developed and produced, and packaged. Of course they also sign GPI’s licensing agreement as described above. In this case the Gardein logo and text must appear in the lower right corner of the front panel: “Made with Gardein(TM). Farm grown protein.” UK customers have (so far) asked for GPI’s opinion on their package design, and GPI always gives an honest opinion. A new brand in the UK will be “Pick of the Crop.”

(4) Food Service Products started with Whole Foods Market in Los Angeles, California, but are now sold to delis, restaurants, schools, catering companies, cafeterias, hospitals, etc. and go mostly through a distributor (such as CANA, UNFI, or Cysco Corp.), unless a company has large enough volume to go direct. GPI’s main foodservice customer at present is Whole Foods, which sells Gardein in their deli and displays the Gardein logo prominently on the deli case. When a product is sold to foodservice, GPI realizes that this product will be served in a wide variety of ways (salads, sandwiches, fajitas, in a sauce, etc.), so it must be designed with that flexibility in mind. Moreover, the product must keep its good texture and flavor whether it is eaten hot or cold. As of Oct. 2008 the following products were available to food service: Chicken Cubes, Chicken Strips, Beef Strips, Chicken Breasts (nonbreaded), Beef Burger, Chicken fillets (non-breaded or breaded), and a seasonal

Stuffed Turkey.

2867. Edge, John T. 2008. Kentucky bloodlines in a new soy sauce. *New York Times*. Oct. 22. p. D3.

• **Summary:** Matt Jamie is making artisanal shoyu in Louisville, Kentucky. In 2003, while thinking about career opportunities, he realized that nobody in the USA was making “small batch soy sauce.” He buys local soybeans that are not genetically engineered, uses limestone filtered water from a nearby spring, and ages his soy sauce in old whiskey barrels, purchased from two distilleries. Its shoyu with an “impeccable Kentucky pedigree.”

In August 2008 his first batch of Bluegrass Soy Sauce hit the market—\$5 for a five-ounce bottle. A photo shows Matt Jamie holding a bottle of his soy sauce.

Note: As of March 2011 Bluegrass Soy Sauce is sold at Whole Foods. The URL is www.bourbonbarrelfoods.com. A video on the website shows Matt, his shop and his process.

2868. **Product Name:** SoyButter (Soynut Butter) (Smooth, or Crunchy).

Manufacturer’s Name: Hilton Soy Foods.

Manufacturer’s Address: Staffa, Ontario, Canada. Phone: 734-973-0778.

Date of Introduction: 2008 October.

Ingredients: Non-GMO toasted soy, soy oil, granulated cane sugar, monoglyceride (from vegetable oil), sea salt.

Wt/Vol., Packaging, Price: 20 kg bag in box, 20 kg pail, 500 lb drums, 2,400 lb bulk totes.

How Stored: Store in a cool, dry, dark place.

New Product—Documentation: Mailing sent by David Singsank, Hilton Soy Foods, 2863 Quail Hollow Ct., Ann Arbor, Michigan 48108. 2009. March 19. Contains a cover letter, 2 undated news releases, a glossy sell sheet (titled “SoyButter: You won’t believe its NOT peanut butter”), and a new product announcement. Website: www.soybutter.com.

Soyinfo Center taste test: Very nice. Tastes a lot like peanut butter, but quite a bit sweeter.

E-mail from David Singsank. 2009. March 20. The company deliberately decided not to call this “Soynut Butter” in order to keep the dreaded word “nut” (for those with peanut allergies) out of the product name. Moreover, 95% of mainstream consumers have never heard of either “soy butter” or “soynut butter.” “Right now we have this product in 85 food service distributors, most of which is sold in schools, some in vegetarian restaurants.”

“Our SchoolSafe SoyButter has been sold in 17.6 oz jars in 2,000 Walmart superstores for 6 months now as SoyButter under its Private Label Great Value. Tree of Life just finished its new label for both smooth and crunchy as Soy Wonder SoyButter. Also A&P stores on the East Coast. About 10 other supermarket chains will launch the jars in 2009 as well.” As for the ingredient listing, which now reads “Non-GMO toasted soy,” they originally had “Soybeans,”

“but considering such a large percent of mainstream still turns their nose up at soy or bean anything, we wanted to use what we felt was the most likely soy word to not cause that reaction. We may add the word ‘whole’ in front of ‘soy.’ Hilton’s product is 10-15% less expensive than competing brands. Why? “Hilton grows their own soybeans, and does all the cleaning, toasting and processing themselves (on farm), so I guess they have lower overhead, including no transporting here and there for those various processes.”

The product is made by Hilton Whole Grain Millers Ltd. A member of Soyfoods Canada. Their listing reads: Contact: Scott Mahon RR#2 6939 Line 26 Staffa, ON Canada N0K 1Y0. Phone: 519-345-0111.

Letter (e-mail) from David Singsank. 2009. March 28. Hilton is owned by Barry & Karen Mahon and their 3 sons, all of whom are involved in the farming and all steps of processing. They make the “best” soynuts (the most important part of the soybutter), toasted soynut pieces, and toasted soy flour. Nothing else, just Soy. Non-GMO and Kosher. The plant is also certified organic, and indeed currently has customers for the OG SoyNuts and Flour. David also send 3 color attachments: (1) Hilton Soy Foods: Soy foods have never tasted this good! Hilton has their own 20,000 sq. foot. facility, located near Stratford, Ontario, Canada. They are able to maintain the highest quality standard. “Our plant and products are Gluten Free, Dairy Free, Kosher certified and 100 Peanut Free and Tree Nut Free.” (2) SoyButter: The testimonials keep coming. Eight glowing testimonials. (3) Article from *Today’s Parent* magazine [Toronto, Ontario, Canada], titled “Battle of the butters” (Sept. 2008, p. 188). FreeNut Butter [Soynut Butter, made by Hilton Foods, Canada] was the top pick of four of the five young taste testers.

2869. Welters, Sjon. 2008. Re: History of work with amazake. Letter (e-mail) to William Shurtleff at Soyinfo Center, Dec. 17—in reply to specific questions. 4 p. 28 cm. • **Summary:** “When I started to study macrobiotics in 1973 in The Netherlands I became aware of a product called amazake. It was not for sale at the time in The Netherlands. I learned how to make it, using koji, from cooking classes at the [macrobiotic] East West Center in Amsterdam. We always used Cold Mountain Koji, made and sold by Miyako Oriental Foods (owned by Mutual Trading Co.) in Los Angeles. We made a few gallons of amazake a week initially. I did not do much with it, aside from teaching how to make it during cooking classes I gave all over the Netherlands from 1977-1983. When I went to the USA in 1980 I saw the Mitoku pouch pack amazake from Japan.”

Q: When and where and why did you start making and selling amazake? Ans: “In Alkmaar [a city in The Netherlands in the province of Noord Holland] we had a natural food store and restaurant between 1977 and 1983, and made amazake from koji imported from Japan. We made

desserts with it and experimented with making our own sake and miso with the koji. It was just a fascinating sweetener and food that I loved from the first day I tasted it.

“In late 1982 I started to experiment with making my own domestic kind of amazake. But I did not use koji because it was expensive, foreign, and hard to get. So I used sprouted wheat and barley at first, but did not like the aftertaste the hulls of the grains gave. I then started to work with pure enzymes that I got from a European enzyme company; bacterial and fungal amylase and other enzymes, that worked well. I continued to make it off and on, with koji or enzymes, for home use but did not sell the koji-made amazake commercially until many years later.

“I took this knowledge and the enzymes to the USA when we emigrated to Fayetteville, Arkansas, in October of 1983, where I continued to experiment using enzymes from American companies. I told Joel Wollner, an old friend of mine and the reason we ended up in Arkansas, about my work with amazake and enzymes. During the winter of 1983-84 we came up with a plan to start a company that would produce (among other things) seitan, of which we would use its by-product, the starch, as the raw ingredient for an amazake-like product. Bob Kennedy, owner of the Chico-San rice cake company, who’s company was also making rice syrup using enzymes at the time, was approached as a possible financier. He came to Fayetteville to talk and I eventually ended up at his rice syrup plant looking at ways to improve the process and see if we could work together. Nothing came of this however, as Chico-San got sold to Heinz shortly thereafter and I moved to Massachusetts and became a partner in Nasoya [a company that made tofu].

“(Note on the side: Joel took Bob to a facility of the University of Arkansas where they were shown UA’s work on a “pounded sweet glutinous rice food,” they, according to Joel, being totally oblivious to the fact that such a product already existed in Japan.)

“However, during our time in Arkansas, the founders of Rice Dream (Robert Nissenbaum and Ken Becker) were running experiments while they were living at an intentional community [Moniteau Farm] north of us in Jamestown, Missouri, trying to figure out how to make amazake ice cream. They were stuck with koji as being an ineffective and expensive way of turning this big kettle full of cooked brown rice into a sweet base for their rice ice cream. Joel and I visited them there and saw what they were doing. Afterward Joel continued his contact with Chico-San and spoke to Peter Milbury (who after Chico-San’s sale, started to work for Lundberg Farms) there about my experiments with enzymes. The word was out and no sooner Robert and Ken started to experiment with enzymes, too. They eventually developed what we now know as Rice Dream, the non dairy ice cream, and Rice Dream the drink, both amazake-inspired products widely available in the US.

“In about 1993, while working in Aveline Kushi’s sushi

restaurant in Stockbridge, Massachusetts, I learned that Mutual Trading Company had a branch in New York, and that they sold Cold Mountain koji—although I think it was still made in California.

“In 1997 we started our restaurant in the back of State Street Market at 20 State Street, Montpelier, Vermont. It was named ‘The Wrap’ until April 2002, when the name was changed to ‘Rhapsody,’ the present name. We started making and selling amazake at the same time we opened the restaurant. Although this amazake was unflavored it was naturally fortified with kombu—just like Eden soymilk. It was sold in 12 fl. oz. plastic bottles in the natural food store cooler, without a label on the bottle; the label or sign was on the shelf just below the bottles.

On 3 May 2002 we expanded into our own restaurant at 28 Main Street in Montpelier, and changed our name to “Rhapsody” from “The Wrap.” In early 2003 we introduced three flavors of amazake in larger (16 fl. oz.) plastic bottles and discontinued the original amazake fortified with kombu. These had nice color labels and were sold in our cooler.

“Currently one of our people at Rhapsody makes about 80 pints per week in our restaurant kitchen, but the demand is much higher. We are just not set up yet to produce more. We cook the amazake and bottle it hot and freeze it to give it its shelf life of one year (at least). Refrigerated it lasts about 3 weeks. Hopefully somewhere in 2009 we will be able to produce at least enough for the New England market.

“Our restaurant, Rhapsody, is self-serve. Therefore, our amazake is not on our menu (we have no menu) and we do not serve it (hot or cold) in cups to people as they are dining. Rather, we sell it as a drink from our beverage cooler (three flavors: I will send you the labels) for \$3.50 per pint, and to stores in Central Vermont. Recently Associated Buyers of Barrington, New Hampshire, has started to distribute the products, too. It is a special, yet exclusive product that deserves wider acceptance, which will come over time as people will start to embrace a more natural diet. I’d be happy to assist the regional development of amazake production.

“The Bridge of Connecticut sells their original amazake in Whole Foods in the Boston area. Charlie Kendall stopped making it as far as I know quite a while ago.”

Note: Sjon has never learned how to make koji starter, so he has always had to buy ready-made koji for his amazake.

In March 2010 Sjon sent a label (red and white) for his Rhapsody Brown Rice Amazaké [Original], made in Vermont, which was re-released on 2 Feb. 2010. Address: Founder and owner, Rhapsody, 28 Main St., Montpelier, Vermont 05062. Phone: 802-229-6112.

2870. Kleiner, Art. 2008. The age of heretics: A history of radical thinkers who reinvented corporate management. San Francisco, California: Jossey-Bass. ix + 391 p. + [16] p. of plates. See p. 323-37. Illust. Index. 24 cm.

• **Summary:** This is the second edition of a book first published in 1996. The material about Erewhon appears to be identical, but it is now on pages 232-37.

2871. Uyttenhove, Chantal. 2009. Re: Lima Seasalt was being sold by 1957. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 27. 1 p.

• **Summary:** “Indeed, we were the exporters of Lima seasalt to the US. As far as I can remember, Eden Foods did import the salt and before that, it was Pierre Gevaert himself who had contacts with Erewhon. EdenSoy has long been produced with Lima sea salt and yes, we delivered salt to the American Miso company.

“In those days, Lima seasalt came from France, from the Isle of Noirmoutier. The so called ‘grey’ seasalt because it is/was harvested from handmade clay pans—*salières*. The gray clay interacts with the salt and thus gives it its color. Today, we still have Lima seasalt but years ago, I decided to step away from Noirmoutier salt because of some issues we had. Today, the Lima seasalt comes from South Portugal, from a company who, years ago, decided to repair and restore century-old *salinas* [salt fields] and started cultivating sea salt the old way. They have hand harvested salt, traditionally sun dried and have been rewarded as a ‘slow food company’ several times. Their ‘Fleur de sel’ is a real ‘delice.’

“The only difference: the salt is white. There is a much longer harvesting season in Portugal so that they don’t have to scrape the salt to the bottom of the salinas. And so, the salt stays pure white because it does not interact with the clay. That company in Portugal is a real beauty.” Note: Chantal encloses two color photos of the white seasalt being harvested in Portugal.

Update: Jan. 29 e-mail. “I started working for Lima in January 1985. Since Lima started in 1957, there is a lot of history before me.

“We are planning on moving to a new building at the end of this year—an ecological friendly building with the least possible footprint—so, I’m in charge to make sure we don’t throw away the old things. I’m sitting on the first ever Lima-Tamari packaging (brown plastic bottle, actually a cosmetic bottle) and all sorts of things. There are a lot of old documents that I still have to go through. There is also a very old movie from before my time which needs to be digitalised. (When finished, I can send you that if you are interested. There is a French and a Flemish version).

“The oldest document I have referring to the sea salt is a handwritten order from 1962. So my guess is that we started with the salt even before that as we have contracts older than that. I did not go through old invoices nor do I have a price list but I’m sure we have that somewhere. Later this year, those things will ‘surface’ again.”

Follow-up e-mail from Chantal. 2009. Feb. 2. “Dear Bill, We do have a well documented history—there is the start of a book; it begins with the engagement of the father

of Pierre, Edgar Gevaert, his work for world peace, first contacts with Ohsawa—and with the start of the Lima production in the kitchen and the opening of the first store to the start the company Lima. One catch: it's all in Flemish ! I'm so sorry.

“Here it says that Pierre Gevaert made a trip to Ile de Ré in France to buy seasalt and that only later, in 1957, he bought machinery. That would mean he started even before 1957 with buying seasalt for the production of tahini and gomashio which was produced in the kitchen.

“The history is so rich Bill, that I could put my job aside and do only this. Unfortunately, that is not possible. I wish more was available in another language but then Flemish and French were the languages at the time so all the documents are in those languages.

“Should something come up during the move, of course we'll think of you. Thank you and kindest regards, Chantal.”
Address: Purchasing Manager, Hain Celestial Europe [Belgium] (formerly Lima Foods N.V.).

2872. Clearspring, Ltd. 2009. Clearspring (Website printout-part). www.clearspring.co.uk Retrieved Jan. 28.

• **Summary:** Contents: Home page. About us. Awards. Glossary. FAQ. News. Books. Links. Stocklists. Trade. Contact. Food quality. Producers. Health. Recipes. Where to buy.

“Introducing the chairman: Christopher Dawson was born 19 September 1953, at New Plymouth Hospital, New Zealand and grew up in Opunake, a rural town in New Zealand. He is the third son of William Geoffrey and Joan Dawson.

“Education: He did his primary, secondary and tertiary education in New Zealand. He first started independently studying vegetarianism and organic agriculture at the age of 18. In 1974 he came to London to further his studies of organic agriculture, both at the Henry Doubleday Horticulture and Nutrition Research Centre in Braintree and the Bio Dynamic Agriculture section at the Rudolf Steiner Emerson College, Sussex.

“Beginning Organic Food Distribution: In 1977, he opened and managed the East West Natural Foods Store at the Community Health Foundation, Old Street, London. He developed this shop into a distribution centre for traditional natural / macrobiotic foods, sourced from both local organic farms and from abroad, especially from Japan.

“From August 1978 through to January 1980 he traveled extensively throughout Europe, America, Australia and Asia, investigating the traditional dietary practices and food-processing techniques. He studied at the East West Foundation in Boston, Massachusetts, U.S.A. about Far Eastern philosophical principles and traditions and studied the distribution network of the natural foods movement in both America & Europe, as well as Australia and New Zealand.

“Eighteen Years in Japan: Christopher made his first trip to Japan in July 1979, visiting natural food enterprises throughout Japan with Mr. A. Kazama, president of Mitoku Co. Ltd. He returned to Japan in January 1980 and began extensive studies into the daily life and cultural and dietary practices of the Japanese people.

“At the end of 1980 he commenced full-time employment at Mitoku Co. Ltd., the major exporter of traditional, natural Japanese foods. During the eighteen years he spent with the company Christopher studied Japanese Foods & production, worked with the producers to develop products to suit the needs of customers abroad and help the producers become compliant with EU organic certification. He also travelled extensively to introduce the foods to markets worldwide, with the intention to see if Japanese foods could really become international foods.

“Building Clearspring in the UK, Europe and the Middle East: In September 1993, Christopher bought the Clearspring Ltd. company, which was then a London based wholesaler with one shop, the very shop that Christopher started in 1977! By 1998, he felt he had sufficient knowledge of traditional, top quality Japanese food and decided it was the right time to come back to UK and to focus on marketing organic and authentic Japanese foods under the Clearspring brand.

“Recognition from the Japanese government: On 25 May 2007, Christopher received the Award for Overseas Promotion of Japanese Food 2007 from the Ministry of Agriculture, Forestry and Fisheries of Japan, for his distinguished contribution to the promotion of Japanese organic food worldwide.”

Down the right side of this page are the following photos: (1) Christopher seated at a desk, writing in a notebook, looking very happy, at an early age (about 6), already a promoter of the written word. (2) Christopher at the East West Natural Foods Store in 1977. (3) Christopher with his mother at home in New Zealand. (4) Christopher at Mitoku in Japan (with Mr. Kazama and staff) in the late 1980s. (5) Photo taken 11 Oct. 1990 with Lima Ohsawa, then 91, the wife of macrobiotic teacher George Ohsawa, and Aveline Kushi, then 67, the wife of macrobiotic teacher Michio Kushi. (6) Christopher with his young family (Japanese wife and 3 children) in Japan in the early 1990s. (7) Christopher, with his wife and two sons in Spain in 2006. (8) Christopher now regularly visits Clearspring's suppliers in Japan, here with team of Sendai Miso Shoyu Company and Mr. Yoshida from Mitoku. (11) Special vegetarian foods prepared at the Dawson household, to celebrate the New Year. Address: 19A Acton Park Estate, London W3 7QE, UK. Phone: +44 (0)20 8749 1781.

2873. Dawson, Chris. 2009. Re: History of Clearspring

and brief biography. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 14. In reply to an e-mail questions from W. Shurtleff. 2 p.

• **Summary:** “Weeks flying by. Sending a note from home, just before I head out to www.biofach.de organic trade fair in Nuremburg.

“Your focus on soyfoods and soya beans is of prime importance *Today*.

“Soya beans are the most misunderstood food/crop/legume.

“Today rain forests are being destroyed to grow soya for animal feed. Japan is the only country/nation which fully understands the true value of soya, producing some 500,000 tons of miso. Only some 10,000 tons goes abroad. In the West, we are so busy making TVP and/or feeding the soya to animals. We have not a clue!

“Sometimes I feel that I should focus the whole emphasis of Clearspring on Miso, to wake up the West to the true value of Soya.

“I became a vegetarian in 1971-1972.

“I came to London in 1974, still a vegetarian but a bit bored with beans sprouts and the like.

“One bowl of miso soup in 1974 and I immediately knew that miso soup was the key to having an exciting vegetarian diet and that miso is a vital food for now and the future.

“1974 April 1st I headed out for London from Auckland, New Zealand. 36 hours of travel! Came here, to further my studies in organic agriculture.

“1977 A bunch of us started The Community Health Foundation here in London. Within that complex, I started: East West Natural Foods, in Old Street, London. The shop became one of the most important macrobiotic food stores in Europe.

“Already running from around 1974 [what was?]. Peter Bradford, Bill Tara, Harry and Bob Harrop and several others were running Sunwheel Foods.

“I made indirect imports from Mitoku through Sunwheel Foods for the shop.

1978 Oct. I decided to travel through the U.S. and head back to N.Z., to set up an import business of macrobiotic foods there.

“Sunwheel bought East West Natural Foods in about 1979. Peter went to work there, keen to do retailing. The shop may have run with the Sunwheel name for awhile.

“Sunwheel company was sold off in early 1980’s. The managers, Bob Harrop and Jonathan Toase stayed on for a while. Eventually both Bob and Jonathan left. Bob went to work with Peter at the shop. Jonathan started a wholesale company.

“From a hat full of names, the shop became Clearspring Wholefoods, Clearspring being the name suggested by Bob.

“Next, Peter was keen to open a chain of stores. Peter and Jonathan teamed up again to start a wholesale company/

warehouse around 1988 for the planned chain of stores. Clearspring became the wholesale company and the shop became Freshlands. Clearspring became the importer from Mitoku. Sunwheel having been sold a couple of times and having lost its interest in Japanese foods.

“1993 British pound collapsed against the Yen.

Sunwheel struggled to open L/C [letters of credit] to Mitoku.

“Enter Christopher Dawson (again)! I did stay in N.Z. for a period, importing from Mitoku. I visited Kazama-san in Japan in 1979 and joined Mitoku in 1980. Kazama-san had visited my store in London in 1977-78. I had been with Mitoku since 1980, running around the world doing sales and running around Japan discovering producers, making their products certified organic.

“I decided to personally start a new company in the U.K., buying Clearspring in Sept. 1993, and then making it an international trading house of Japanese Foods and Western organic Foods. Jonathan stayed for a while as manager

“1998 I decided to come to London and run the company on site, rather than giving directions from Japan. Bob Harrop was always giving me a hand at a distance. In 2002 he came onboard full time and is with me today as Finance Director.

“These few notes today and will try to get back to you with some statistics soon.

“Thank you, Christopher.” Address: 19A Acton Park Estate, London W3 7QE, UK. Phone: +44 (0)20 8749 1781.

2874. Morano, Jim. 2009. The transformation of the natural foods industry (Overview). *SoyaScan Notes*. Feb. 22. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** This is a summary of a talk with Jim Morano, PhD, founder and owner of Innovative Sweeteners, Somerset, New Jersey—on 22 Feb. 2009.

Jim watched as the natural foods industry changed from the first wave (the pioneers who built a new industry, starting in the mid-1960s, because of their deep commitment to and interest in natural foods) to the second wave (the money guys who saw that the industry was taking off and wanted to get in and make money). The pioneers started companies like Erewhon, Westbrae Natural Foods, Chico-San, Tree of Life, and Eden Foods. The pioneers typically had many great ideas and lots of energy; but they often lacked business skills and money. However they learned fast through experience.

The second wave guys typically had both business and marketing skills and experience, plus either money or the ability to attract it. They wore suits, ties, and short hair, and had less interest in the foods themselves than in the profit that could be made from taking them into the mainstream market. They were pretty smart guys and quick learners. Using marketing and money, they could make things happen, big time and fast.

During the 1990s the natural foods market was growing

much faster than the mass market, even though it was much smaller. While the mass market for foods was experiencing annual growth rates in the low single digits, the natural foods market was growing in the low double digits—and certain segments of the natural foods market (mainly soyfoods) were growing well in excess of 25% a year.

It was this difference in growth rates that attracted both the “suits” and Big Food to take notice.

The transformation took place during the years 1995 to 1997. There had been three ingredients that it was forbidden to use or sell (by common unwritten consensus) in natural foods prior to about 1995; sugar (especially white sugar), meat, and highly refined products such as white bread, white rice, white flour, white sugar, etc.

The crucial event in the transition came when white sugar was renamed “evaporated cane juice” (by Bruce Kirk, who was working with Florida Crystals) and allowed into a growing number of natural food products. The era of real food had changed into the era of the illusion of real food.

Jim was well positioned to witness this transition. He was selling natural brown rice syrup, which he had developed and which was sticky and tan. Evaporated cane juice (which Jim calls “minimally refined sugar” and which is only 1% less refined than pure white sugar) gradually took away much of his market and hurt his business.

The “standards” set by the natural food stores represent the “last line of defense” for product quality to the consumer. If an ingredient supplier attempted to rename less-refined sugar as ECJ (Evaporated Cane Juice), it would not fly unless the natural food outlets went along with this false and misleading designation.

In many ways, your local natural food store was similar to the local pharmacy. Most people ask their pharmacist for recommendations and transparent information about medicine. In a similar manner, the natural-food consumer depends on the natural food store proprietor for similar information about natural / healthy food alternatives. As these outlets became more consolidated and commercialized, they lost the commitment to “higher standards” as an uncomfortable trade-off to “higher profits”. Today, it is more about the perception and connotation of the *label* than it is about the quality of the *product*. What we seem to be doing more and more of today is finding new and better ways of making the consumer feel good about eating lousy foods.

Big Food and the “guys in suits” realized early on that the major deterrent to making acquisitions in this new and exciting growth segment was the fact that the natural foods industry started as a counterculture movement to the mass foods market. What consumer back then would trust the name of a mass-market company on a health food product? This is the very reason why, when companies like Kellogg from the mass-market acquired small natural foods companies like Kashi, the former was very careful not to allow their name to be commercially connected

to the latter. Mass-market companies that broke this rule quickly learned a painful lesson. For example, General Mills was one of the first cereal companies to come out with an organic cereal under their own name. If you look up the history of the General Mills product called Sunrise (organic cereal), you will see that it lasted in the marketplace for less than two years. After they failed with the Sunrise product, General Mills purchased Small Planet Foods as well as Cascadian Farms and were careful not to let their corporate name contaminate the historically pure reputation of their acquisition. Even today, it is hard for the average consumer to connect Kashi to Kellogg’s. Address: PhD, founder and owner of Innovative Sweeteners, 1 Kingsbridge Road, Somerset, New Jersey 08873; Now head of Suzanne’s Specialties, Inc. Phone: 732-545-5544.

2875. Gerner, Bob. 2009. The transformation of the natural foods industry (Interview). *SoyaScan Notes*. Feb. 26. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** The two key events that led to a decline in the quality of natural foods were the sale of Bread and Circus (in Massachusetts) to Whole Foods Market (in Dec. 1992) and the sale of Mrs. Gooch’s Natural Foods Markets (in Los Angeles) to Whole Foods (in 1993). Before that time, all natural foods and ingredients had to be “Goochable”; they had to meet Sandy Gooch’s high standards. The next day it didn’t matter.

Mrs. Gooch’s held its suppliers to rigorous standards: no harmful chemicals or preservatives, no artificial colors or flavorings, and no white flour, refined sugar, alcohol, caffeine or chocolate.

Sandy Gooch opened her first natural foods store (Mrs. Gooch’s Natural Foods Market) in Jan. 1977 in West Los Angeles. Over the next decade, the one store grew to become a highly influential natural foods retail chain, with stores in Hermosa Beach (1978), Northridge, Sherman Oaks, Glendale, Beverly Hills, and Thousand Oaks.

These were the two key events from the viewpoint of a natural foods retailer. Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

2876. Hain Celestial Group, Inc. (The). 2009. Annual report 2008. Melville, New York. 60 p. Feb. 27. 28 cm.

• **Summary:** Begins with an 8-page question and answer session with Irwin Simon, the CEO. Net sales for the year ended 30 June 2008 were \$1,056 million, up 17.3% from 2007. Net income in 2008 was \$41.221 million, down 13.3% from 2007.

Acquisitions and divestitures: On 6 March 2008 Hain acquired nSpired Natural Foods Inc., with its MaraNatha and SunSpire brands, for approximately \$37.6 million in cash, including transaction costs. MaraNatha makes nut butters and SunSpire gives Hain an entry into the natural Candy

category.

On 10 March 2008 Hain Pure Protein Corp., a 50.1% owned subsidiary, acquired the turkey production facility and distribution center of Pilgrim's Pride Corp. of New Oxford, Pennsylvania, for \$19.1 million in cash. This expands Hain's ability to offer branded, premium poultry products.

On 2 April 2008 acquired Daily Bread Ltd., a London-based manufacturer of branded fresh prepared foods for the foodservice channel in the UK for about \$36.5 million in cash.

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (71 p.). Irwin Simon, the founder and CEO, age 50, had the following annual compensation: Salary: \$1.325 million. Total compensation: \$7.380 million. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2877. Smith, Patricia J. 2009. Re: The Natural Products Expo at Anaheim (Color postcard). Letter to William Shurtleff at Soyinfo Center, March 7. 1 p. Handwritten.

• **Summary:** A Mickey Mouse postcard, with Goofy, Mickey and Minnie Mouse, Donald and Daisy Duck, etc. On the front: "Hello! from California."

Patricia writes: "Well, the Japanese have made an impression at the expo—along with soyfoods and probiotics. There are 1,600 booths and 50,000 people. the aisles are jammed. The atmospheric is electric." Address: Mill Valley, California. Phone: (617) 354-2001.

2878. Pursell, Tricia. 2009. Park will honor Paul Keene family: Center Township supervisors step closer to starting work. *Daily Item (The) (Sunbury, Pennsylvania)*. March 10.

• **Summary:** Ruth Keene Anderson, a daughter of Paul Keene, is "president of the Walnut Acres Foundation, which in 2006 donated 6½ acres in Penns Creek to Center Township for the purpose of creating a public park to serve residents of the community and the surrounding area.

"About 40 years ago, Keene purchased the land through the foundation and built a community center, which still stands today."

"The park will be named Keene Community Park in honor of Anderson's parents and their many contributions to the community throughout the years and is meant to serve young and old alike," Anderson said, "with a playground, ball field, walking trails and picnic facilities."

2879. Andrews, Roger. 2009. Re: History of Spinning Kitchen (early tofu shop in Boulder, Colorado). Letter (e-mail) to William Shurtleff at Soyinfo Center, May 9. 3 p.

• **Summary:** "This is the account of my Spinning Kitchen enterprise, with the erstwhile partner, Beverly Migliori, from 1977-79. In preparing the outline and draft, I began to pass through memories that, though vivid, I would rather leave

unvisited. I have one good instance from that time and I keep it dearly. My recollection of that time (Corn Mother, Spinning Kitchen) is not unlike the story of The Frog and the Scorpion. Lesson taken, no desire to repeat.

"I had eaten tofu in Japanese restaurants before coming to the Carnival Café. I was intrigued by the ways that tofu was used there in a vegetarian conversion style- tofu 'egg salad', etc. As the interest in tofu for an important vegetarian nutrient source was peaking, it seemed that deliveries of tofu to the restaurant might have been becoming more sporadic. We needed to know more about this wonderful substance.

"Three of us took an early spring ('75?) field trip to 'Denver Tofu' in hopes of cultivating greater interest with our supplier. The cursory tour lasted about 20 minutes. We were shown some of the equipment but none of the processes.

"Some months later, myself, Gene Casternovia & Ann Ford left the 'Carnival Café' to start the 'Corn Mother Restaurant' in an older house where Boulder People's Food Co-op was also located. We each gave time and effort to the planning, development and acquisition for that venture. Service was the buzzword and I was 'in for a pound' on that theme. I did not feel like a third wheel in the business though time proved that was indeed the case. A sad condition became ever more apparent when I asked for some measure as they were taking and none came forth.

"I had met my partner, Beverly, while I was working at the Carnival Café, in Boulder. After my time at the Corn Mother, we were both suddenly unemployed and sought to begin a joint venture. We had The Book of Tofu and a related commercial production manual. With these and the 'mother of invention', we formulated a business outline and set to work. In my mind, I could again hear the admonition that "anything worth doing is worth doing well".

"We took three small loans with Beverly's delightful landlady, once for the beginning expenses, once to import a Japanese tofu grinder and two stainless steel tofu forms, and again for a used telephone company truck as the delivery van. These loans had a great effect on Beverly, as each time that we would borrow money, she would disappear for a few days. All monies were gratefully paid back.

"We used some of the crocks from my childhood, one smaller for the 1st stage of the nigari solution and another larger to soak the two to three daily batches of soy beans. The various stainless steel vessels were found at local restaurant supply stores.

"The Cumberland General Store carried an impressive inventory of cast-iron ware as might have been found in common use in a 19th century farmstead. I asked about larger vessels and they said that the foundry would occasionally cast larger kettles for rendering and so forth. It was a few long months until a 17½ gallon kettle was ready. It was delivered by truck. It took some time to prepare it for our use, chasing the roughcast, cleaning it and seasoning

with several runs of beans that were then respectfully disposed. A corn/feed grinder was crudely adapted to make the *go* [fresh soybean puree]. It was later replaced with a proper machine.

“I fashioned a stock-pot heater from some steel channel and the burner from a large water heater. Such heaters were not so easily found then as now and there was more ingenuity than cash. Tested outdoors first, it was then placed in a fireboard installation beneath a vent in the ceiling. I still have the fire extinguisher that was purchased for the room.

“The Honduran man, Albert, who had been the juice maker for the restaurant had upgraded to a more modern press for his operation and we bought the heavy wood and iron screw press. I fashioned a stainless steel sieve and collar that fit it to the purpose.

“The chemistry and oceanography classes at university came in handy to make good sense of the specific gravity of the saline solutions and ratios for the sizes and optimal temperature of the batches. A woodworker from Arvada, Colorado made the cedar barrels and redwood forms to my specifications. A sheer voile fabric was used for the liners in the tofu forms.

“A local farmer heard of our enterprise and offered to plow virgin soil to plant a few acres of soybeans. He stored the beans there and we would fly them out a ton at a time. He generously tried several varieties until we found one that was best in flavor, texture and tofu yield. Our research had shown us the variables for fine and soft tofu or the more firm varieties. We fixed the process to produce a tofu that was just slightly on the softer side of firm, to include the smooth texture with the firmness to withstand transport. Within a year, the ratio was of a consistent quality at about a 4.25:1 yield, tofu to soaked beans, with the Westbrae nigari. Pushing the chemistry or methods beyond that and the tofu would not stand properly.

“For a short time, we had the good help of very modestly paid assistants. Properly cleaning the equipment was nearly half the day’s work. Upon instruction from the local health department, we used boiling water to clean the wooden vessels, a practice that would not likely pass these many years later.

“Beverly and I paid ourselves after business costs to cover our personal expenses. Hopes were to one day expand into something more viable. We sold our products locally in Boulder and Denver and by air to Aspen and Rapid City.

“We also made soymilk in the quart size, vanilla and carob flavors. Beverly printed a brochure with some of her tested recipes using our soymilk and tofu. A graphic artist, somewhat in the style of R. Crumb, nicely drew up our labels and signs.

“After almost two years, Beverly suddenly abandoned our project and I continued for a couple of months solo. The already early, long and hard work became too much and I was forced to close up shop. (This put our dear farmer at

a great disadvantage. Hoping to help recoup his losses, I steered him to the new venture in town, White Wave.) She then absconded with the truck, all of the equipment and one other item. I have not seen or heard of her since.

“Steve Demos and White Wave had no influence on the Spinning Kitchen; he was doing good factory production and we did traditional hand-made style. No conflict. (I have read that White Wave was sold for some millions. I miss the tofu.)

“Gene Casternovia seemed to enjoy having a tofu shop above his restaurant as if it were part in parcel. Annie seemed increasingly annoyed with our activity upstairs.

“About a year after the demise of The Spinning Kitchen, I received a call from a couple in Safford, Arizona who were putting together a lovely vegetarian restaurant called Desert Gardens. I gave a shopping list over the phone. When I arrived, in fact not a thing had been done. We drove around southern Arizona and northern Mexico for a few days looking for a masa grinder or something that might be made to work and other kitchen implements. I left after a week or so with little having been accomplished. They had my production notes and later I heard that they had indeed gotten something going.

“Further levels of detail and I might have a book of my own. I am very recently aware that there are other varying accounts of this time and activity.” Address: P.O. Box 21128, Cheyenne, Wyoming 82003. Phone: 307-214-9510.

2880. Kastel, Mark. 2009. Cornucopia Institute provides further clarification on Silk importation of soybeans from China. http://www.organicconsumers.org/articles/article_18064.cfm#. 2 p.

• **Summary:** “1. Silk, a pioneering brand [of soymilk] in the organic marketplace, used 100% organic soybeans in their products prior to their acquisition by Dean Foods.

“2. Dean Foods is an \$11 billion agribusiness giant and the largest milk processor in the United States. They own over 50 milk labels around the country, including Horizon Organic, a brand that heavily depends on factory farms each milking thousands of cows.

“3. According to reports by farmers and farmer-owned cooperatives, after Dean Foods purchased the company, they discontinued buying some or all of their organic soybeans from domestic organic producers and told the farmers that their decision was based on price—a price that American farmers could not match.

“4. Dean Foods gradually started introducing additional varieties and flavors [of Silk], many made with ‘natural’ soybeans. These are conventional soybeans. The percentage of their products manufactured with organic soybeans declined steadily over the years, and recently plummeted.

“5. Dean Foods’ statement about buying all North American soybeans was recently put up, presumably, since we had announced the imminent release of our report. We have no way of verifying whether the information is

accurate. Unlike their two competitors in the refrigerated dairy case (Organic Valley and Wildwood), Dean Foods refused to transparently participate in Cornucopia's study—depriving their customers of an independently verified review of their practices.

“6. In terms of Dean Foods buying a ‘small portion’ of their soybeans from China in the past, that seems to contradict the reports from organic growers in the United States, and the company has never released any hard data on their purchases.

“7. Recently, Dean Foods reformulated their Silk product line changing almost all their products over to ‘natural’ (conventional) soybeans. They did this, quietly, without telling retailers or changing the UPC code numbers on the products. Many retailers reported that they didn't find out until their customers noticed and complained.

“8. To add insult to injury, not only did the price of Silk products not go down when they converted to cheaper conventional soybeans, but they now reintroduced three products with organic soybeans and raised the price on those. Greedy profiteering plain and simple.

“On a recent visit to Whole Foods in Milwaukee (May, 2009) the store was offering 25 different Silk soy milk products, in different sizes and flavors, including creamers, of which only one (1) was organic. So much for Dean Foods and their WhiteWave division's commitment to the environment, consumer health and the hard-working family farmers that produce certified organic soybeans in this country.” Address: The Cornucopia Institute, P.O. Box 126, Cornucopia, Wisconsin 54827.

2881. Kimura, Takuji “Tak.” 2009. Shelled edamame (*mukimi no edamame*) in the USA and Japan. Update on the edamame market in America (Interview). *SoyaScan Notes*. June 22. Conducted by William Shurtleff of Soyinfo Center. • **Summary:** The Japanese word “edamame” refers to soybeans served, cooked and seasoned with salt, in their green, fuzzy pods. Shelled green soybeans are not part of traditional Japanese culture. These shelled green soybeans, which are called *mukimi no edamame*, were probably introduced to Japan about ten years ago; the idea may well have come from the United States. The shelled green soybeans are still quite rare and hard to find in Japan. They seem to be most widely sold at high-grade restaurants that serve “fusion” cuisine; the shelled edamame are often used as a colorful, delicious and healthful ingredient in salads.

Shurtleff would be interested to know the answers to the following questions about shelled edamame in Japan (*mukimi no edamame*). When did the word originate in Japanese? When did they start to be sold in Japan? By which company? At what restaurants and stores would you buy them today? Do you have any data on the development and current size of this niche market?

Tak gives his best guess as to the answers.

In the USA, Whole Foods sells 80% edamame (in the pods) and 20% shelled edamame, whereas Trader Joe's is the exact opposite—80% shelled and 20% edamame. Green Leaf, an organic distributor, sells 80% edamame and 20% shelled edamame.

In the USA, sales of edamame rose rapidly from 1994 to 1999 (doubling each year), reached a peak during the years 1999-2001, then dropped about 30%, but have been level since Oct. 2008. However many Americans now eat edamame at least once a week.

On July 11, Tak and his wife plan to go to a Japanese store in San Jose. He will buy chamame, so we can learn exactly what it is and how it differs from regular edamame and kuro edamame (black edamame). Address: 3616 Delancey Lane, Concord, California 94519-2357. Phone: (925) 687-2422.

2882. Walsh, Bryan. 2009. Getting real about the high price of cheap food. *Time*. Aug. 21. [2 ref]

• **Summary:** A hard-hitting but factual article that could have been written by Upton Sinclair, or by Eric Schlosser or Michael Pollan. Pigs, with their tails cut off and packed tightly into pens, are slaughtered at about 5 months of age to become inexpensive pork, ham, or bacon that helps make more than two-thirds of Americans obese, and is a factor in coronary head disease.

This industrial system of raising meat comes at a high cost to the animals, the environment, and to humans. “... our energy-intensive food system uses 19% of U.S. fossil fuels, more than any other sector of the economy.”

Despite the growing awareness, less than 1% of American cropland is farmed organically. Yet our industrial type of food production will have to end sooner or later.

2883. Dimitri, Carolyn; Oberholtzer, Lydia. 2009. Marketing U.S. organic foods: recent trends from farms to consumers. *USDA ERS Economic Information Bulletin* No. 58. 27 p. Sept. <https://naldc.nal.usda.gov/download/41697/PDF> [72 ref]

• **Summary:** “Abstract: Organic foods now occupy prominent shelf space in the produce and dairy aisles of most mainstream U.S. food retailers. The marketing boom has pushed retail sales of organic foods up to \$21.1 billion in 2008 from \$3.6 billion in 1997. U.S. organic-industry growth is evident in an expanding number of retailers selling a wider variety of foods, the development of private-label product lines by many supermarkets, and the widespread introduction of new products. A broader range of consumers has been buying more varieties of organic food. Organic handlers, who purchase products from farmers and often supply them to retailers, sell more organic products to conventional retailers and club stores than ever before. Only one segment has not kept pace—organic farms have struggled at times to produce sufficient supply to keep up with the rapid growth in

demand, leading to periodic shortages of organic products.”
Address: 1. US Dep. of Agriculture, Economic Research Service; 2. Pennsylvania State Univ.

2884. *Organic and Non-GMO Report (The) (Fairfield, Iowa)*. 2009. Food, Inc. exposes problems with industrial food system. 9(8):16-17. Sept.

• **Summary:** A movie review, filled with praise for this hard-hitting new film.

2885. Brown, Lester R. 2009. Our global ponzi economy. *www.earthpolicy.org*. Oct. 7. [1 ref]

• **Summary:** “As recently as 1950 or so, the world economy was living more or less within its means, consuming only the sustainable yield, the interest of the natural systems that support it. But then as the economy doubled, and doubled again, and yet again, multiplying eightfold, it began to outrun sustainable yields and to consume the asset base itself.”

“In a 2002 study published by the U.S. National Academy of Sciences, a team of scientists concluded that humanity’s collective demands first surpassed the earth’s regenerative capacity around 1980. As of 2009 global demands on natural systems exceed their sustainable yield capacity by nearly 30 percent. This means we are meeting current demands in part by consuming the earth’s natural assets, setting the stage for an eventual Ponzi-type collapse when these assets are depleted.

As of mid-2009, nearly all the world’s major aquifers were being overpumped. We have more irrigation water than before the overpumping began, in true Ponzi fashion. We get the feeling that we’re doing very well in agriculture—but the reality is that an estimated 400 million people are today being fed by overpumping, a process that is by definition short-term. With aquifers being depleted, this water-based food bubble is about to burst.”

“And there are more such schemes. As human and livestock populations grow more or less apace, the rising demand for forage eventually exceeds the sustainable yield of grasslands. As a result, the grass deteriorates, leaving the land bare, allowing it to turn to desert. In this Ponzi scheme, herders are forced to rely on food aid or they migrate to cities.

“Paul Hawken, author of *Blessed Unrest*, puts it well: ‘At present we are stealing the future, selling it in the present, and calling it gross domestic product. We can just as easily have an economy that is based on healing the future instead of stealing it. We can either create assets for the future or take the assets of the future. One is called restoration and the other exploitation.’ The larger question is, If we continue with business as usual—with overpumping, overgrazing, overplowing, overfishing, and overloading the atmosphere with carbon dioxide—how long will it be before the Ponzi economy unravels and collapses? No one knows. Our industrial civilization has not been here before.”

2886. Hain Celestial Group, Inc. (The). 2009. Annual report 2009. Melville, New York. 60 p. Nov. 9. 28 cm.

• **Summary:** Begins with an 6-page question and answer session with Irwin Simon, the CEO. Net sales for the year ended 30 June 2009 were \$1,135 million, up 7.5% from 2008. Net income in 2009 was a loss of \$24.723 million, a dramatic decrease from the profit of \$41.221 million in 2008. There were no acquisitions or disposals of companies during fiscal 2009.

Accompanying the annual report is a “Notice of Annual Meeting of Stockholders and Proxy Statement” (71 p.). Irwin Simon, the founder and CEO, is age 51. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2887. Attune Foods. 2009. Attune Foods announces acquisition of Uncle Sam, Erewhon Cereal brands (News release). 535 Pacific Ave., 3rd Floor, San Francisco, CA 94133. 1 p. Dec. 14.

• **Summary:** “San Francisco—Attune Foods, maker of the world’s first Probiotic Chocolate Bar, announced today that it has acquired the Uncle Sam and Erewhon cereal brands from US Mills, LLC, further expanding its portfolio of great tasting food products that deliver digestive health benefits.”

“Erewhon is a leading all natural gluten free cereal brand that is available in more than a dozen delicious varieties. Many varieties are wheat free, low in sodium, low in fat and have long been a staple in gluten free diets.”
“We are thrilled to add Uncle Sam and Erewhon cereals, two brands firmly rooted in the digestive health space, to the Attune Foods line-up of innovative products. With the addition of these great cereals along with our existing probiotic chocolate and granola bars, Attune Foods has cemented its status as a leading natural digestive health company,” said Rob Hurlbut, CEO of Attune Foods.”

“Attune Chocolate and Granola Probiotic Bars contain probiotics that are clinically proven to support a healthy digestive system and boost immunity. Each bar includes 6.1 billion cfus (colony forming units) of the most clinically tested probiotic strains, is an excellent source of calcium and contains less sugar than most yogurts.”

Attune Probiotic Bars were introduced in Jan. 2007.

2888. Esselstyn, Rip. 2009. The Engine 2 diet: the Texas

firefighter's 28-day save-your-life plan that lowers cholesterol and burns away the pounds. New York, NY: Wellness Central. xiii + 273 p. Foreword by T. Colin Campbell, PhD. Illust. Index. 24 cm.

• **Summary:** A very interesting, readable, and innovative book that advocates a sound, healthy diet that can last a lifetime. "Rip managed to convert a firehouse full of committed firefighters to a plant-based diet. Rip (born in 1963) is the eldest son of Caldwell B. Esselstyn, Jr., M.D., who has become famous for his ground-breaking book *How to Prevent and Reverse Heart Disease*. This book is both similar and different. It is similar in that the basic whole foods, plant-based diets advocated by father and son are 98% the same (and please focus on practicing that 98% and not squabbling about the 2%). It is different in that Rip is from a younger generation, is not a physician but an athlete and firefighter, and is trying to help people who want help in lowering their high cholesterol levels and their weight. He is not primarily trying to help people who have had at least one heart attack, are a death's door, and are (generally) willing to do almost anything to save their lives.

In Chapter 2, "My story," we read that while in school, Rip was an outstanding athlete. He set many high school swimming records (he still holds a national record in the 200 meter medley relay); he was a top player in his high school tennis team and co-captain of the water polo team.

At the University of Texas at Austin, he was a three-time All American swimmer and an Olympic trials qualifier in the 100- and 200-meter backstroke and freestyle events. In 1986 he graduated from the University of Texas and within six months he was competing as a professional triathlete—which required a 1-mile swim, a 24.9 mile bike ride, and a 6.2 mile run. In the Hawaii Ironman Triathlon he competed against six-time Ironman Champion Dave Scott, who was powered by a plant-based diet—Rip lost. So in 1987, because of the influence of his father and of Dave Scott, Rip changed to a healthy, whole foods, plant-based diet. In 1997 he decided to become a fire fighter in Austin, Texas. He continued to compete and won many events and set many records. For example, in May 2008 he set the National Record at the U.S. Masters Swimming Championship in the 200 yard backstroke (1:56:55). Rip is married to Jill Kolasinski, and they have a son, Kole.

Rip's commitment to a healthy plant-based diet has resulted in many people asking him to help them with their diets. So in 2007, he devised the six-week Engine 2 Pilot Study in which 62 people agreed to eat a plant-strong diet; he put them through a gauntlet of tests before and after study to quantify the results—which were spectacular. Then in May 2008 he initiated a similar 4-week (28 day) study in which 15 people participated, 13 Engine 2 firefighters and two civilians. Again careful before and after records were kept. The average participant saw his total cholesterol drop 62 points (from 197 to 135), his average LDL (bad) cholesterol

fall 50 points (from 125 to 74), and his weight drop 14 pounds (from 203 to 189). And all this in only 4 weeks! This book is based on the latter plan.

Rip makes much more use of soyfoods in his plant-based diet than does his father. The index contains 16 entries for tofu, 4 for tempeh, 4 for seitan, 2 for milk substitutes ("soy, rice, almond, and oat milk, for example"), 1 each tofu sour cream (p. 239), soy milk, soy yogurt (Silk or WholeSoy).

Soy related recipes include: Migas especiales (with 1 lb firm tofu, p. 154). Breakfast tacos (with "½ tube vegetarian breakfast sausage {we like Gimme Lean})," or use scrambled tofu (p. 155). E2 omelet (with "12 ounces Silken Lite Firm Tofu," p. 156). Lemon cornmeal pancakes (with "2 cups soy milk" and "½ cup soy yogurt, p. 157). Tofu steaks and mushrooms with mashed potatoes and green peas (with "1 pound extra-firm tofu," p. 180).

Linguine and creamy alfredo sauce (with "1 package Silken Lite firm tofu" and "2 cups unsweetened soy milk," p. 195). Lynn's meatloaf (with "10 ounces firm tofu," p. 204). Vegetable stir-fry with brown rice (with "1 pound seitan" and "two tablespoons low-sodium tamari," p. 208). Tempeh-mushroom stir-fry and soba noodles (with "1 package tempeh," and "3 tablespoons low-sodium tamari," p. 209). Red vegetable curry and brown rice (with "1 pound extra-firm tofu," p. 210).

Pad Thai (with "1 pound broiled tofu cubes {see p. 210}," p. 211). The great wooden bowl salad (with "1 pound extra-firm tofu," p. 214-15). Tofu vegetable spread (with "½ pound extra-firm tofu," p. 238). E2 sour cream (with "1 package Silken Lite firm tofu," p. 239). Asian marinade (with "3 tablespoons soy sauce, p. 241). Island marinade (with "4 tablespoons soy sauce," p. 241). Add tofu and allow to marinate refrigerated for 30 minutes to 4 hours (p. 241). Rip's favorite snacks include "4. Soy yogurt: I'm particularly fond of the Westsoy... cherry" (p. 243). E2 Basics chocolate pudding (with "1 package Silken Lite tofu," p. 245). Fruit bowl with soy drizzle (with "4-6 ounce container of soy yogurt," p. 249). Fruit mousse (with "1 package extra-firm Silken Lite tofu," p. 255). Maple sour cream dream (with "1 vanilla soy yogurt," p. 256).

Many recipes call for "Bragg Liquid Aminos" which are simply HVP (hydrolyzed vegetable protein) made by a quick and unnatural / artificial process; soybeans, wheat, and/or corn are immersed in hydrochloric acid until, after 1-3 days, the acid has broken down the protein into its constituent amino acids. Fermentation (as of soy sauce) can do the same thing naturally in 4-6 months. HVP is a source of flavor without salt, but that flavor is generally considered to not nearly as good as the flavor of soy sauce.

Rip has an exercise component to his "Engine 2" 28 day plan.

And Rip gives people a choice as they start the 28 day plan; one can be a Fire Cadet or a Firefighter (p. 22). The

“Fire Cadet option is for those who prefer a more gradual approach.” In week 1 Cadets must stop eating dairy products and processed / refined foods (such as refined sugar, white flour, etc.). In week 2 Cadets must stop eating meat, poultry, fish and eggs. In week 3 Cadets must do without added or extracted oils—even vegetable oils such as olive oil. In week 4 Cadets and Firefighters eat the total E2 diet, a healthy, whole-foods, plant-based diet. A Firefighter (the plan Rip recommends) requires that a give up all of these unhealthy foods from the start of the program. “Americans consume a staggering 50 percent of their calories from refined and processed foods.”

Cholesterol-lowering drugs (such as statins: Rip, who is not a physician, does not use them).

Salt and sodium: Rip advocates a low-sodium diet.

Support groups after the 4-week program: Optional.

People who wish to can create or find one themselves (p. 92).

Meditation and relaxation to reduce stress: Not part of the program.

Sugar and sweets. Avoid refined sugars, high fructose corn syrups, and things such as sodas, candy to which they are added. Instead choose natural sugars such as those in whole naturally-sweet fruits (p. 114-15, 134). In desserts, Rip often calls for up to 3-4 tablespoons maple syrup or agave nectar, yet a recipe for Brownies (p. 247) calls for “½ cup light brown sugar, packed” and “½ cup raw sugar.” And a recipe for “Oatmeal raisin cookies” (p. 253) calls for even more refined sugar. Rip admits he has a sweet tooth. Some of his desserts violate the basic principles of the Engine 2 diet; they contain large amounts of refined sugars—unlike the recipes (developed by his mother) in his father’s book. Moreover, his mother strongly suggests that desserts be saved for special occasions.

This is a sound, healthy diet and anyone who stays on it for 28 days will see dramatic improvements in their overall health and weight.

The Engine 2 diet is a good, practical diet for the rest of your life. But go easy on the desserts and try to avoid the ones with refined sugar. Address: Austin, Texas.

2889. Walters, Terry. 2009. *Clean food: a seasonal guide to eating close to the source, with more than 200 recipes for a healthy and sustainable you*. New York, NY: Sterling. 290 p. Illust. (Color). Index. 24 cm.

• **Summary:** This vegan cookbook, with a strong macrobiotic flavor and 223 recipes (arranged by season), shows you how to eat seasonal, unprocessed, and locally-grown foods that are good for people and the environment.

On pages 17-18 is a section titled “Soy” in which the author describes her belief that “there is so much information about whether soy is healthy or not.” We have rarely seen a short section on soy containing so many clearly false or misleading statements as this one—too many to list. Clearly she gets her information about the nutritional value

of soy from the Web rather than from scientific journals. Nevertheless she recommends and uses miso, tempeh, tamari / shoyu, and tofu.

The glossary of foods likewise contains many errors. For example: Aduki beans: Misspelled. Fermented black beans: She fails to mention that these are soybeans. Gomasio: Misspelled. Tempeh: “Made from pressed and fermented soybeans.” Tofu: “Made from soybean curd.”

The index contains 23 recipes for tofu, 9 each for miso, and tempeh, 3 for shoyu, and 4 for tamari. Address: Connecticut.

2890. Allan, John. 2010. Re: Work with Harmony Foods, a macrobiotic wholesaler, in London, England—and with macrobiotics. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 6. 2 p.

• **Summary:** John now lives in Japan, but was a worker at Harmony Foods, the macrobiotic wholesaler, and various other wholefood outlets in London during the early 1980s. He read *You Are All Sanpaku* in about 1981.

“If you ever get into documenting the ‘microbiotic history’ of the movement in the UK, I might be able to fill in some details (or offer opinions / reflections on it), such as why the marvelous East-West center collapsed and then Harmony Foods (after the Sams sold it), who was responsible for the softening of the message from the old days and pointing a finger to the role of the many Italians strangely enough. There are other people in the UK, like John Law of Community Foods and Infinity Foods Coop of Brighton, that also would deserve a mention. Of course, there were the foundations of the old ‘Nature Cure’ and naturopathy days going back to at least the 1920s and 1930s.

“Peter and Montse Bradford would, obviously, have to have a mention. You know Bill Tara. You probably know most of the other main players.

“One episode I would suggest you were brave enough to investigate is the failure of the Community Health Foundation / East-West Centre on City Road in London. It was one of the greatest, untimely losses to the movement. A fabulous, old Victorian school converted into a nexus of original / alternative health culture. There was a macrobiotic grocer that numerous incarnations later became Clearspring and Fresh and Wild, a bookshop, a macrobiotic restaurant, the Kushi Institute doing macrobiotic cooking and consultations, above them therapy centers and a dojo. Down in the basement a nursery and kitchen. In short an ideal community. A total immersion experience. You learn, you eat, you buy, you read, you trained, your kids were taught, you got a rub down and therapy.

“It was huge and cheap. This is a rough sketch that I would give you to investigate. As I understand it, it all failed and fell apart when the lease came up for renewal. All the others wanted to buy out the lease out, and take over their floor of the building, except for the Kushi Institute as it was

and would not pay for itself. It was supporting itself off renting out, managing the space. The lease was not bought out. A new lease or landlord came in. The rent went way up and one by everyone had to move out. Fresh and Wild, the grocer was the last to leave. The final chapter is even sadder. Within a few years, the area in which it was, changed from being a barren, post-industrial, working class area on the City borders where no one went or lived, to being the most trendy up and coming area in London. Like an East Village, New York City. As a location it could not have been better. I think most folks hold the KI [Kushi Institute] responsible. They had too much small and not enough business. Other folks might speak of ‘management problems.’

“The other story would be Erewhon Foods, basically, trying to screw over Harmony Foods and “conquer” (my words) Europe.

“Harmony was sold off to an ex-Metal Box upper-middle class corporate type named John Guyon who went on to bankrupt it and screwed over a lot of small suppliers. If you find an American ex-hippie Gideon who used to work there as director, you might get more of the story. His wife Mary is still involved in the ‘scene’ in the UK.

“It would be good if you add a bit of realism to the story, but you might have to brave enough to risk putting a few noses out of joint.” Address: Japan.

2891. Roseboro, Ken. 2010. The 2010 non-GMO sourcebook: A buyers guide to global suppliers of non-GMO and organic seeds, grains, ingredients, and foods. Fairfield, Iowa: Evergreen Publishing, Inc. 106 p. Illust. (both color, and blue and white photos). Index. 28 cm.

• **Summary:** Contents: Editor’s introduction (by Ken Roseboro, publisher and editor). Suppliers of non-GMO products: United States, Canada, Europe, Africa / Middle East, Asia / Australia, Latin / South America. The Non-GMO Project special section (includes comments by Michael Potter and Nature’s Path {in Canada}). Related products, services, and organizations. rBGH-free dairy processors in the US. Index of non-GMO suppliers by product category: Seeds (corn, soybeans), canola / rapeseed, processed canola / rapeseed products, corn / maize, processed corn / maize products, soybeans (identity preserved, specialty, organic), processed soy products (flakes, flour, germ concentrate, grits, lecithin, meal, nuts, oil, low linolenic oil, phytosterols, protein, textured protein, soymilk, soymilk powder, soy sauce, tofu, vitamin E / tocopherols), other grains / oilseeds and processed products (alfalfa / hay, barley, cotton,...), other ingredients and processing aids (citric acid, dairy ingredients...), sweeteners, food products, food supplements, animal feed. Index of related products, services and organizations. Complete index of listings. Index of advertisers.

Note 1. In the Suppliers section, many company entries have the Non-GMO Project logo (with an orange and black

butterfly on a green leaf) next to their company name (e.g., Eden Foods, p. 17; WholeSoy & Company, p. 42).

This comprehensive book gives the single best picture of the growing industry, worldwide, opposed to genetic engineering. Address: Editor / Publisher, P.O. Box 436, Fairfield, Iowa 52556. Phone: 1-800-854-0586.

2892. Shurtleff, William. 2010. Thoughts about George Ohsawa. *SoyaScan Notes*. Feb. 5. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** There are six things I greatly admire about George Ohsawa: (1) He had a tremendous sense of gratitude for life itself and for all things. (2) He emphasized the oneness of all things (nonduality) and showed that the pairs of opposites are more deeply one. (3) He had a marvelous love of life, great vitality, and sense of humor. People remember him as a deeply happy and charismatic man. (4) He had a very original and creative mind—especially for a Japanese man of his time. (5) He introduced many fine Japanese foods into Western diets that Caucasians now actually eat on a regular basis—miso, tofu, shoyu / tamari, umeboshi, kuzu, sea vegetables, seitan, natto, and many more—and in doing so played a major role in starting the natural foods movement in America. (6) He played a leading role in introducing brown rice into American food culture, starting in the 1960s. Address: Founder and owner, Soyinfo Center, Lafayette, California. Phone: 925-283-2991.

2893. Assaly, Peter. 2010. Re: History of Nature’s Select, a snack food manufacturer and maker of soynuts. Letter (e-mail) to William Shurtleff at Soyfoods Center, Feb. 15—in reply to inquiry. 1 p.

• **Summary:** What year and month did Nature’s Select, Inc. begin making and selling its first commercial soy product? “I founded Nature’s Select, Inc. and incorporated in June of 1989 as a snack food manufacturer of the world’s first shelf stable Dry Roasted Sunflower Nut available in flexible packaging. Also produced in shell Dry Roasted Sunflower Seeds, Dry Roasted Pumpkin Seeds and Pepita. Then started processing Dry Roasted Soynuts in October 1991, and subsequently launched a full nut line in 1994.

I purchased a building in Jackson, Michigan in late 1991 where we first processed en masse our Dry Roasted Soynuts for Amway Corporations Modern Magic Meals private label program. In March of 1992 we had our first export of a 14-foot container to a company in Italy which lead to the development of packaging and the introduction of our Nature’s Select Brand “Original Home Style” in 1993.

2. What was the company’s address at that time? “Nature’s Select, Inc., 500 Cascade West Pkwy, SE, Grand Rapids, MI 49546.”

3. Soy product names and initial flavors. Nature’s Select Brand Dry Roasted Soynuts—Original Home Style (Herbs & Spices). Nature’s Select Brand Dry Roasted Soynuts—Lightly

Salted. Nature's Select Brand Dry Roasted Soynuts–No Salt. Nature's Select Brand Dry Roasted Soynuts–Spicy Mexican Flavor (Salsa). Nature's Select Brand Dry Roasted Soynuts–Honey Coated.

4. 4. Did you sell in bulk only? Who first bought your soy nut products? Here's only a partial list of our first original packaged customers: 1. S. Abraham & Sons, Inc. the 6th largest Candy & Tobacco Wholesale distributor in the U.S. selling to convenience stores and small supermarkets. 2. Army & Air Force Exchange Commission. 3. Private label to Amway Corporation. 4. Nature's Best, Brea, California. 5. Food for Health, Phoenix, Arizona. 6. Tree of Life, Clayburne, Texas; Bloomington, Indiana: etc. 7. Atlantic Dominion Distributors. 8. Correctional institutions. 9. Vending companies.

Partial list of bulk sale customers included Wild Oats Market, Whole Foods Market, Mountain People's Warehouse; Cornucopia; Rainbow Natural Foods; Northeast Co-Op; United Natural Foods; Tree of Life. Fred Meyer Stores–Nutritional Centers, Clackamas, Oregon. Caudill Seed.

Note: As of 3 Feb. 2011, Nature's Select has its own plant in Greensboro, North Carolina. It is managed by Peter's partner, who has a PD degree. Address: President, Nature's Select, Inc., 500 Cascade W. Parkway S.E., Grand Rapids, Michigan 49546. Phone: 616-956-1105.

2894. Money, Elizabeth Linhart. 2010. A family history in rice. *Edible East Bay (Oakland, California)*. Spring. See also the Koda Farms website.

• **Summary:** An excellent history (initially heart-wrenching) of Koda Farms, located in South Dos Palos (about an hour southeast of Tracy) the dusty heart of California's Central Valley. It is the home of Kokuho Rose, the best sushi rice on the market. It has produced medium- and short-grained rice for over 81 years.

1882–Chinese Exclusion Act of 1882 enables Japanese workers to replace Chinese as the state's main agricultural workers. But the Japanese suffered much the same type of discrimination as the Chinese had.

1908–Prof. William Wylie Mackie, a soil scientist working in Butte County, concluded that the Sutter Basin, which was seasonally flooded by the Sacramento River, could become “the best rice producing land in the world.” An associate of Mackie's, Kenju Ikuta, a Japanese immigrant, sought to use this new knowledge to benefit the Japanese community.

1908–Keisaburo Koda, born in Japan, son of a samurai turned rice miller, sets sail for California. The state's fledgling rice industry (which had developed to meet the needs of Chinese gold-rush immigrants) was about to take off.

“If you've ever traveled the length of the Central Valley, you'll know that the Sacramento and San Joaquin river

valleys are vastly different. To the north, the Sacramento Valley is a land of wide rivers with lush grasslands and riparian corridors [wetlands between river and land]. By contrast, the larger San Joaquin Valley, lying south of the Delta, is considerably drier” and water is a constant issue.

1913–California passes the Alien Land Law, which prohibits non-citizens from owning land in the state. Although it does not mention Japanese, they were its specific target. Since Keisaburo now has young sons, who are American citizens, he makes them shareholders in his new company. But no one will sell good farmland to a Japanese man.

1918–Land prices in the Sacramento Valley are now \$200 an acre, way up from \$30 in 1913. California now has 125,000 acres planted in rice.

1920s late–Keisaburo buys land in the San Joaquin Valley town of Dos Palos where he establishes the State Farming Co., Inc. He becomes a pioneer in sowing presoaked seed with airplanes.

1942 Feb.–Executive order 9066, signed by Pres. Franklin Roosevelt at the start of World War II, forces all Americans of Japanese descent to relocate in “internment centers” away from the West Coast. The Koda family was relocated to Colorado. The Koda family planned to close their operation until they could return. The United States government, however, ordered that their business be kept running to produce food and fiber. This forced Keisaburo to entrust management to strangers since his friends on neighboring farms were too busy overseeing their own operations during the wartime agricultural boom.

1945–When Japanese Americans were freed from the internment camps, the Koda family immediately headed back to Dos Palos to see what had become of their beloved farm. They returned to find it stripped bare. Almost 9,000 acres of land had been sold. Land, dryer, mill, mechanized equipment and planes had been liquidated. Moreover, tensions in the valley were high as local newspapers ran anti-Japanese editorials. Gunshots were fired into many Japanese homes and churches.

Reconstruction of the business was assigned to Keisaburo's sons. Edward and William built another processing facility a quarter mile from their original homestead and gradually repurchased landholdings.

1940s late–The Koda Brothers noticed an unfilled market niche for “sweet rice” (also called “glutinous rice, or *mochi-gome* in Japanese). The instituted a rice breeding program and became the first commercial growers of sweet rice in California. The rice was brand-named Sho-Chiku-Bai Sweet Rice and its flour was Mochiko Blue Star Brand Sweet Rice Flour. The latter was introduced as an innovative thickening agent with superior freezing properties valued by the food industry.

1950s late–A rice-breeding program was established at the farm that resulted in a unique variety of rice that

Keisaburo named Kokuho Rose.

1963–Kokuho Rose was introduced to the domestic market as the first premium “medium” grain rice. Unique in appearance as well as flavor, Kokuho Rose quickly became established as the favorite of Japanese Americans throughout the country.

“Meanwhile, Keisaburo threw himself tirelessly into the arena of Japanese American civil rights.” He worked to repeal the Alien Land Law, and to organize the Naturalization Rights League. In 1954 he proudly became a naturalized American Citizen.

“But one ‘hobby’ that Keisaburo took up in his retirement years that vexed the family... no end was his indefatigable promotion of brown rice.” “He would take a pressure cooker and a bag of brown rice with him wherever he went, and demo it for anyone willing to try it.” Unknown to him, the Beat movement and George Ohsawa, founder of the macrobiotic movement, were also promoting brown rice for its nutritional benefits.

By the 1960s the “brown rice era” had begun. In 1959 Ohsawa made a trip to California and spent a week at Koda Farms. He praised its quality and soon Koda Farms was selling brown rice to one of Ohsawa’s distributors. Brown Rice was served regularly by Edward Espe Brown, head cook at Tassajara and a disciple of Zen master Shunryu Suzuki roshi.

Note: Koda Farms was soon passed by Lundberg Family Farms, an early producer of organic short-grain brown rice. In 1968 Bob Kennedy, president of Chico-San in Chico, California, signed an important early organic contract with the Lundbergs.

2004–Koda Farms begins converting some fields to organic. As of 2010 they have 400 certified organic acres and 350 in transition. Their goal is 1,200 certified organic acres. This move has opened the market to brown rice and increased sales due to the evolution of the organic and local food movements. Address: Freelance food and travel writer, North Beach, San Francisco.

2895. Hodo Soy Beanery. 2010. Hodo Soy Beanery names John Scharffenberger chief executive officer (News release). Oakland, California. 1 p. June 14.

• **Summary:** “Oakland, Calif.–Hodo Soy Beanery, the Bay Area’s only maker of artisan organic soymilk, tofu, yuba, and ready-to-eat soy products, announced today that food and wine entrepreneur John Scharffenberger has joined the company as its CEO. Scharffenberger brings extensive knowledge and experience in launching and building successful gourmet food and wine companies to this new position, where he will oversee Hodo’s growth, build the sales team and distribution network, drive strategic planning, and raise awareness of the distinctive soy products coming from the company’s state of the art facility.

“Scharffenberger discovered Hodo Soy Beanery at the

Berkeley Farmers’ Market, and he subsequently joined as an advisor and board director. John Notz, CFO of Hodo, comments, ‘As John got more involved as an investor and Hodo board member, we realized that he would be a great fit for CEO. Ironically, when we were first crafting our vision for the company, we talked about Hodo as the “Scharffenberger of Soy.” We are very lucky to have him.’

“Scharffenberger admits that he didn’t particularly love tofu, ‘but Minh Tsai, Hodo’s founder and tofu master, had me hooked with the first bite. I’m definitely looking forward to joining the team and expanding awareness of how amazing and innovative Hodo’s tofu products are. This new appointment also frees up Minh to focus on his passion for making great tofu and sharing his enthusiasm for the tofumaking process.’

“Throughout his career, Scharffenberger has energized under-appreciated food and wine categories such as sparkling wine and gourmet chocolate with the successful launches of Scharffenberger Cellars and Scharffen Berger Chocolate Maker. More recently, he has traveled the world as a chocolate expert and served as consultant to the farming and food production industry, helping private for-profit and nonprofit producers analyze, develop and achieve sustainably higher returns. According to Scharffenberger, ‘Hodo Soy Beanery is ready to move to the next level. The creative work of Minh and his crew is converting tofu skeptics with their fresh, locally made products. Our factory tours and production transparency reminds me of when Scharffen Berger was at the same stage.’

“Scharffenberger begins work at Hodo Soy Beanery on June 14th, 2010.

“Hodo Soy Beanery is an organic bean-to-block tofu and yuba maker in Oakland, California. Their products are made fresh daily with whole organic, non-GMO soybeans sourced from a Midwest farmers’ cooperative. Hodo Soy Beanery’s products are available at Bay Area farmers’ markets, specialty grocers like Whole Foods and on the menus of notable restaurants, including The Slanted Door and COI. For more information or to reserve a tour, please visit <http://www.hodosoy.com>.”

Note: In Aug. 2005 Scharffen Berger Chocolate Maker was purchased by The Hershey Co. Hershey purchased Scharffen Berger for about two times the company’s annual revenue, which was approximately \$10 million a year at the time of the 2005 acquisition (Source: Wikipedia).

Previously, John founded Scharffenberger Cellars, an ultra-premium sparkling wine producer, which he sold to LVMH in 1995.

2896. *Chico Enterprise-Record*. 2010. Eldon Lundberg (1928-2010). June 30.

• **Summary:** Eldon Albert Lundberg died on 26 June 2010; he was of Swedish Ancestry. He was born on 20 June 1928 at the home of his parents, Albert and Frances Lundberg, in

Phelps County, Nebraska. This home was part of the farm homesteaded by his grandfather, Andrew Lundberg, who emigrated from Sweden in the 19th century.

In 1937, due to the ravages of the Great Depression and the Dust Bowl, the family decided to leave Nebraska. “They joined many relatives and friends who had already settled in Richvale, California to begin farming land purchased by Frances’s father in 1906. He became a devout Christian. After high school he attended Chico State College for two years.

In the spring of 1948 he began rice farming with his father, but this was interrupted by a draft notice. In Feb. 1951 he joined the U.S. Army and served on the island of Ishigaki in the Ryukyu Islands.

In Nebraska he met his wife, Ruth Marilyn Wendell, and they were married in the Keene Evangelical Free Church on 4 Dec. 1953. Returning to Richvale, they raised three children, Jennifer, Grant, and Julianne. As Eldon farmed rice with his father and three brothers, they established Lundberg Family Farms. Eldon loved to fly the family’s airplane.

“He is survived by his wife of 56 years, Ruth; daughters and sons-in-law, Jennifer and Kevin Parrish, Julianne and Blake Stafford; son and daughter-in-law, Grant and Susie Lundberg; his grandchildren, Emma, Madeline, Grace, Ansel, Georgia, Mae, and Nelson, and his three brothers and their wives and families, Wendell and Carolyn, Harlan and Carolyn, and Homer and Carol Lundberg.”

2897. Pfeiffer Center. 2010. The Pfeiffer Center (Website printout–part). www.pfeiffercenter.org Retrieved Aug. 2.

• **Summary:** Click on Ehrenfried Pfeiffer for a good history of Ehrenfried Pfeiffer and his relationship to the Threefold Community in New York.

“The story of biodynamics in America is deeply intertwined with the biographies of Ehrenfried Pfeiffer and of the Threefold Community, home of the Pfeiffer Center for Biodynamics and the Environment.

The Community’s story begins in 1926, when the members of New York City’s Threefold Group bought a farm in rural Rockland County, about 30 miles northwest of New York City. These American anthroposophists (students of Rudolf Steiner) ran a laundry, a furniture-making shop, a rooming house, and a vegetarian restaurant near Carnegie Hall. Many of them had encountered anthroposophy and even met Rudolf Steiner personally in Europe, and were at or near the origins of many anthroposophical impulses in the arts, education, medicine, and agriculture. They shared a heartfelt obligation to bring anthroposophical ideals to life in the social fabric of the New World, and Threefold Farm was integral to this impulse.

“On July 8-23, 1933, the first Anthroposophical Summer School took place at Threefold Farm. The faculty included three European anthroposophists making their first-ever visits to North America, one being Ehrenfried Pfeiffer.

Pfeiffer’s seven lectures included two with the title, ‘Dr. Steiner’s Biologic Dynamic Agricultural Methods Practically Applied in Farming.’

“Pfeiffer, who was born in 1899, first met Rudolf Steiner at the age of 19. Pfeiffer’s mother and stepfather were both anthroposophists and knew Steiner personally, but they never spoke to Ehrenfried about Spiritual Science, leaving him to find it on his own. Pfeiffer was in university at the time, and Steiner immediately set to work designing Pfeiffer’s education. The course load was extremely heavy, and strongly weighted to the sciences: as Steiner told Pfeiffer, to overcome materialism, we must know its means and methods as well as we know our own.

“Within a few years, Pfeiffer was living in Dornach and working closely with Steiner. Pfeiffer wrote that ‘In 1922 Rudolf Steiner described for the first time how to make the biodynamic preparations, simply giving the recipe without any sort of explanation—just “do this and then do that.”’ It was Pfeiffer, with Ita Wegman and Gunther Wachsmuth, who made and applied the first batch of 500, years before the Agriculture Course of 1924. Pfeiffer was one of a small circle of people entrusted with putting biodynamics into practice, to get as much land as possible under biodynamic care so that, in Steiner’s words, ‘in future everyone will be able to say, “We have tried it, and it works,” even though some of these things may still seem strange right now.’

“In 1928, Pfeiffer took charge of Loverendale, a farm of over 500 acres in the Netherlands. To the massive task of converting a conventional farm to BD, and making it economically self-sufficient, all in the difficult economic conditions of the inter-War years...”

“Pfeiffer lectured in the States regularly during the 1930s, and was a fixture at the Threefold summer conferences, which grew in length and scope with each passing year. In the late 1930s he was invited to work at Philadelphia’s Hahnemann Medical College, where he experimented with using the crystallization patterns of blood for the diagnosis of cancer. This work resulted in Pfeiffer’s being awarded an honorary Doctor of Medicine degree from Hahnemann in 1939. When the war came, Pfeiffer brought his family to Kimberton, Pennsylvania, where Alaric Myrin offered Pfeiffer the opportunity to create a model biodynamic farm and training program. Pfeiffer also led the initiative to found the Biodynamic Farming and Gardening Association, and to start its journal. While at Kimberton, Pfeiffer met J.I. Rodale, a relationship that gave biodynamics a little-known place in the history of the American organic movement.

“Interpersonal difficulties—a motif of Pfeiffer’s life—brought to a close the Kimberton Farms chapter. Aiming to continue his work training biodynamic farmers, Pfeiffer bought a farm in Chester, New York, where a small colony arose focused on farming, education, and the administration of the Biodynamic Association. In the mid-1940s, tuberculosis caused Pfeiffer’s confinement in

the New York State sanatorium in Pomona, not far from Spring Valley. Pfeiffer's wife, Adelheid, and their children Christoph and Willi kept the farm running, but Pfeiffer's illness made it impossible for him to work his milk cows. Upon his discharge from the sanatorium, Pfeiffer was offered living quarters and work space at Threefold Farm. The Bio-Chemical Research Laboratory, which opened in 1946 and operated until 1974, worked to perfect the mass production of the biodynamic preps, among many other projects.

"In the 1940s, Pfeiffer developed and brought to market commercially viable compost 'starters' that helped make biodynamics accessible to home gardeners and conventional farmers. Between 1950 and 1952, he developed and directed an innovative municipal composting program in Oakland, California, in which Oakland's household garbage was composted and pelletized for use as agricultural fertilizer.

"Pfeiffer died in 1961, his life shortened by multiple illnesses and also no doubt by the massive workload he took upon himself, the scope of which is barely suggested in this brief account."

2898. *SoyaScan Notes*. 2010. The first and second natural food movements in the United States: Differences and similarities (Overview). Aug. 19. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** There have been three major reform movements, or waves, related to food and health in the United States. Each has had its own philosophy or theory of diet and health, its own periodicals, and, of course, its own founders, leaders, and teachers / lecturers. All three believed that there were certain natural laws of health and of the body which, if transgressed, would lead to sickness. The way to restore health was not (generally) to take medicines (which simply cover up the symptoms) but to stop the activity which was causing the sickness. All three believed in the healing power of nature, and advocated the return to a simpler, more natural way of living and eating. All three emphasized the importance of a good diet as the basis of good health, and (at least initially) all three advocated a diet based on traditional, natural foods, and avoidance of refined, highly processed, or artificial foods. Each new wave was bigger than the one before it and had more influence on American food culture.

The first natural foods movement, which started in 1953, had its headquarters in Atlanta, Texas. They published an excellent monthly magazine titled *Natural Food and Farming* from April 1954 until Aug. 1995 (Vol. 41, No. 2). Each issue was 8½ by 11 inches, and in 1957 a typical issue was 22 pages long.

The movement was based on an organization named "Natural Food Associates" (NFA) (founded in 1953), which had a large membership from the mid-1950s on, and had many nationwide chapters—such as the "Connecticut Natural Food Associates." Their basic missions were to raise awareness that our food system, soil, water, and bodies were being poisoned by a host of new agricultural chemicals (such as DDT), fluoridation, etc., and to provide an alternative for those who were concerned about their health and/or the environment: "natural foods grown on fertile soil eaten fresh and poison free" (April 1958, p. 6).

They encouraged people nationwide to start a vegetable garden and grow their own food using compost and without using chemical fertilizers or toxic pesticides. They were independent of but closely allied with and active in promoting the fledgling organic gardening and farming movement and the biodynamic farming movement (especially Ehrenfried Pfeiffer). As they watched with alarm as the fertility of the soil was being destroyed by large-scale chemical farming methods, they were especially active in linking the health of the body to the health of the soil.

They worked very hard, for example, to ban DDT and fluoridation and many of their leading members (PhDs and university professors) testified against it.

The founder, president and sparkplug of NFA was Joe D. Nichols, M.D., from 1954 until his death on 27 May 1992. Most of the officers and leaders of this movement were adults, and a large percentage were physicians (M.D.s), dentists, or in academia. They had annual nationwide conventions, and before long, regional and state chapters and conventions. They were very active and well funded—nationwide.

Note: In 1962 *Silent Spring* was published. In 1972 DDT was banned in the USA.

The second natural foods movement started in the mid-1960s and continued until the present. It was founded largely by young men and women who came of age during the period from 1960 to 1980. They discovered, to their surprise, that most food crops grown since the 1940s, were produced using chemical herbicides, pesticides, insecticides, and fertilizers. The safety of these agrichemicals had not been adequately tested. Moreover, many foods were then highly processed or refined, and contained added white sugar, preservatives, stabilizers, and other chemicals. It was quite difficult to obtain traditional, natural foods—even at health food stores. These young people, most of whom considered themselves part of the counterculture (they had fought against the Vietnam War and racial segregation, and for women's rights) decided to try to create a new food system. Some started companies to make new foods (from whole-grain breads and pastries to tofu and miso). Hundreds (eventually thousands) of others started new natural foods stores—which (for the first 10-15 years) sold many foods unpackaged in bulk, would not sell meat, refined foods,

or foods containing sugar or chemical additives, pills, alcohol, or tobacco. From the beginning, the influence of macrobiotics, and of macrobiotic teachers such as Michio and Aveline Kushi (in Boston), Herman and Cornelia Aihara (in Chico, California), and George and Lima Ohsawa (world travelers from Japan) was strong. In fact, the 2nd natural foods movement actually started as a macrobiotic movement. They imported, introduced, and helped to popularize a host of foods from Japan—foods that most Americans had never heard of or tasted—such as brown rice, tamari soy sauce, azuki beans, sesame seeds, sesame salt (gomashio), soba (buckwheat noodles), udon (special wheat noodles), amazake, miso, sea vegetables (hijiki, wakame, kombu, nori, etc.), umeboshi (salt plums), kuzu, kabocha pumpkins, burdock root, jinenjo (glutinous yam), bancha twig tea, seitan, rice cakes, and mu tea. Erewhon was the first company to distribute many of these foods, and many of them gradually made their way into the American diet and language. Macrobiotics taught that whole grains should be the center of the diet—something many Americans had once believed but had long forgotten. Substances unfit for normal human consumption were white sugar, alcohol, dairy products, and all kinds of drugs.

Important early periodicals were East West Journal (Jan. 1971, Boston, macrobiotic), Vegetarian Times (March 1974, Chicago, Illinois), Health Foods Business (1973), Whole Foods (Jan. 1978, Berkeley), and Natural Foods Merchandiser (Feb. 1979).

Erewhon (Boston) was the first distributor of natural foods (fall 1969). Other early distributors were: Westbrae (July 1970, Berkeley, California), Erewhon—Los Angeles (summer 1970), Essene (Feb. 1971, Philadelphia), Eden Foods (June 1971, Ann Arbor, Michigan), Laurelbrook (Aug. 1971, Maryland), Shadowfax (1971, New York), The Well (1971, San Jose, California), Janus (Jan. 1972, Seattle, Washington), Tree of Life (1972, St. Augustine, Florida).

“Pioneers and leaders included the founders and heads of the major distributing companies and periodicals. Plus Sandy Gooch (Mrs. Gooch’s), Tony Harnett (Bread and Circus), Peter Roy and John Mackey (Whole Foods).

By the mid- to late-1970s, most of the health food distributors mentioned above were carrying a complete line of natural foods and distributing them to both health food stores and natural food stores.

Surprisingly, the natural foods industry has never developed its own trade association. Therefore the company that owns Natural Foods Merchandiser has used this opportunity to organize very successful trade shows at Anaheim, California, and Washington, DC each year, and to publish the industry’s most important periodical.

In those heady days of the late 1960s and early 1970s it looked like America was headed into a peaceful, nonviolent revolution. Young people, the revolutionaries (“Power to the people!” “Don’t trust anybody over 30”) would be in

the vanguard. They needed to develop new models for the rapidly approaching future. The Erewhon retail store at 342 Newbury Street that opened in Nov. 1968 was developed as a model new food store. Wooden walls, food in bins, only healthy natural foods. Fred Rohe’s New Age Natural Foods in San Francisco was an early West Coast model retail store.

Erewhon was developed as a model wholesale distributor of the new foods. Many other new and successful companies modeled themselves after Erewhon.

The 2nd natural foods movement was largely vegetarian in addition to eschewing refined foods—and specially white sugar. The 1st natural foods movement advocated the eating of meat, poultry, and fish as good sources of protein.

Soyfoods were a major part of the 2nd natural foods movement, but a very minor part of the 1st. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549.

2899. Thimmaiah, A. 2010. Organic agriculture: Addressing food security in a changing climate. *Palawija News (Bogor, Indonesia)* 27(2):6-10. Aug.

• **Summary:** Contents: Introduction. Sidebar: What is organic agriculture? Organic agriculture. Organic agriculture and food security. Productivity in organic agriculture systems. Energy conservation. Adaptation to climate change. Inclusive business models. Support mechanisms for smallholders through labelling and certification: Fair trade certification, the Participatory Guarantee System. Conclusion.

“The fruits of Green Revolution are turning sour due to the stagnation of crop productivity combined with the deterioration in quality of food and soil health. This is due to the environmental degradation for decades owing to unsustainable agriculture practices. In addition, the modern agriculture has contributed to huge environmental cost by facilitating soil erosion, ground water contamination, loss of soil fertility, loss of agricultural land through salinization and acidification, depletion of ground water tables, loss of biodiversity, increased pest resistance and release of greenhouse gases through deforestation.”

Note: Some of these problems are also caused, in part, by population growth. Address: Advisor, National Organic Program (NoP), Ministry of Agriculture and Forests (MoAF), Royal Government of Bhutan, Thimphu, Bhutan.

2900. Kowitt, Beth. 2010. Inside Trader Joe’s: America’s hottest retailer is also notoriously hush-hush. *Fortune* uncovers the secrets of its success. *Fortune*. Sept. 6. p. 36-37, 88-90, 92, 94, 96.

• **Summary:** An excellent article. 1967—The first Trader Joe’s store is started in Pasadena, California, by Joe Coulombe (pronounced COO-lomb). His store had a superb selection of wine and other alcoholic beverages. His philosophy is limited selection, high turnover.

A sidebar is titled “Meet the original Joe.”

1979—Joe Coulombe sells his company to German

grocery mogul Theo Albrecht—as a great investment. The Albrecht family owns Aldi in Germany and most parts of the European Union

1993–TJ opens its first store outside California in Arizona.

1996–TJ leapfrogged the country, opening two stores near Boston—in Brookline and Cambridge.

Today about 80% of its SKUs (stock-keeping units) are private label products.

2901. Boswell, April. 2010. Re: Work at the Erewhon retail store on Newbury Street in Boston. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 13 and 24. 1 p.

• **Summary:** “On a whim yesterday I googled Erewhon, the natural foods store on Ellery St. in Boston for whom I worked a few months in early 1971. As I scanned through what came across, memories began slipping back. So I thought I’d send on to you what I remember although you probably have plenty of information, and my memories are not very clear. Nevertheless...

“As a 20 year-old (my name was April Deborah Van Outrive in those days) I moved from California to Cambridge, Massachusetts in January 1971, and into a third-floor walk-up apartment with my boyfriend at the time Rory Ingalls (he might have been working at Tao Books), and two other roommates, a South American fellow, Manuel Manga (who was obsessed with geodesic domes) and Fern Weiner. They were all eating and living macrobiotically and I was learning from them. Fern did all the cooking for the house. She taught me how to make an authentic Japanese futon and some basics of macrobiotic cooking.

“After only a month or so for reasons I don’t recall, we moved again into a lovely old macrobiotic house on Ellery St., around the corner from the Orson Wells theater and down the street from Harvard Square. There were eighteen to twenty people living in this house which was run by Bruce and Melinda Gardner. Melinda was pregnant and subsequently had her baby, David, that spring or summer. The house was three stories and had been built in the early eighteen hundreds. I remember Melinda making tofu from scratch in the big kitchen there with a number of us women. My memories of Bruce and Melinda are that they were both calm, gentle people. Melinda called their baby ‘Davie-cha.’

“I went to work for Erewhon on Newbury St. and rode the bus from Cambridge, past MIT and over the bridge into Boston. Russell Desmarais (spelling?) was managing the store as I recall. We had large open barrels of grains, seeds and nuts as well as nut butter grinders, and I recall estimating amounts when helping customers with their grains. One time the famous singer Odetta came in and I waited on her. I didn’t know who she was at the time. I also recall a young man who worked at Erewhon, he played the flute and would sit outside the back door on a ledge or a stairway during his breaks; I was charmed by his haunting tunes.

“Some of us Erewhon employees took a bus one weekend up to Vermont, to donate our time to work on a farm there. We worked in the fields digging stones out of the soil. The stones were as numerous as potatoes in the ground but less satisfying to unearth. I recall wondering if they just continued to rise to the surface over time. Another memory of that weekend is that along the way there, we stopped and swam in the bend of a clear cold river. The idyllic nature of that swim and that time remains with me today.

“On another occasion there was a big party at what may have been the Kushi’s house that we all attended. I recall it as being a gracious home. It might have been Aveline or Michio Kushi’s birthday celebration.

“We attended lectures given by Michio Kushi in Boston, I think this was downtown at a church, close to the Boston Commons.

“Bruce and Melinda were offered the opportunity to run a big house and farm in the countryside outside of Boston, where we had also visited as a group. I think they did leave the Ellery St. house to do that.

“In June or July of 1971, I decided to catch a ride back home and put up a sign to that effect on the bulletin board at Erewhon. A girl name Dulcie answered my ad; she was heading to California in her little VW and could use a traveling companion. She arrived bright and early one fine summer day, I packed my things in her car and off we went. Life made its usual twists and turns and I did not return to Boston.

“I was the girl on the cover one month of the little publication put out by Erewhon, might have been the East-West Journal. I think I was holding a big basket of fresh produce.

“So that’s my little story! Thanks for allowing me to reminisce.” Address: Clayton, California.

2902. *Organic and Non-GMO Report (The) (Fairfield, Iowa)*. 2010. Research finds organic farms produce better fruit, create healthier soil. 10(9):15. Oct.

• **Summary:** “Side-by-side comparisons of organic and conventional strawberry farms and their fruit found the organic farms produced more flavorful and nutritious berries while leaving the soil healthier and more genetically diverse.

“Our findings have global implications and advance what we know about the sustainability benefits of organic farming systems,’ said John Reganold, Washington State University Regents professor of soil science and lead author of a paper published in the [open access] peer-reviewed online journal, *PLoS ONE*. ‘We also show you can have high quality, healthy produce without resorting to an arsenal of pesticides.’

“The study is among the most comprehensive of its kind, analyzing 31 chemical and biological soil properties, soil DNA, and the taste, nutrition and quality of three strawberry varieties on more than two dozen commercial fields—13

conventional and 13 organic.

“There is no paper in the literature that comprehensively and quantitatively compares so many indices of both food and soil quality at multiple sampling times on so many commercial farms,” said Reganold.

“The researchers found that organic had significantly higher antioxidant activity and concentrations of ascorbic acid and phenolic compounds. The organic strawberries also had longer shelf life.

“The researchers also found the organic soils excelled in a variety of key chemical and biological properties, including carbon sequestration, nitrogen, microbial biomass, enzyme activities, and micronutrients.”

2903. *Organic and Non-GMO Report (The) (Fairfield, Iowa)*. 2010. Monsanto Roundup: Gates Foundation under fire for purchasing Monsanto shares. 10(9):20. Oct.

• **Summary:** “The Bill & Melinda Gates Foundation recently purchased 500,000 shares of Monsanto Company, worth an estimated \$27.6 million. Farmers and advocacy organizations around the world were outraged by the purchase, according to the non-profit group AGRA Watch.

“Our biggest concern is that the foundation is invested in Monsanto so they’re looking for Monsanto to make a profit,” said Travis English, of AGRA Watch, in an interview with the *Seattle Times*. “What they’re doing is opening up new markets in Africa for Monsanto to monopolize the seed market.”

“When the economic power of Gates is coupled with the irresponsibility of Monsanto, the outlook for African smallholders is not very promising,” said Mariam Mayet, environmental attorney and director of the Africa Centre for Biosafety in Johannesburg.

“In response to the stock purchase, 250 Seattle residents sent postcards to the Foundation expressing their concern that its approach to agricultural development, rather than reducing hunger as pledged, would instead ‘increase farmer debt, enrich agribusiness corporations like Monsanto and Syngenta, degrade the environment, and dispossess small farmers.’ They also urged the Foundation to cut all ties to Monsanto and the biotechnology industry.

“A 2008 report initiated by the World Bank and the UN, the International Assessment of Agricultural Knowledge, Science and Technology for Development (IAASTD) concluded that small-scale agroecological farming is more suitable for the third world than the industrial agricultural model favored by Gates and Monsanto.”

2904. Hain Celestial Group, Inc. (The). 2010. Annual report 2010. Melville, New York. 8 + 92 p. Nov. 10. 28 cm.

• **Summary:** Begins with an 8-page statement by Irwin D. Simon, the CEO, with a photo of him. Net sales for the year ended 30 June 2010 were \$917.337 million, down 18.3% from 2009. Net income in 2010 was \$28.619 million, way

up from a loss of \$24.723 million in 2009. Arrowhead Mills, founded in 1960 by Frank Ford, celebrated its 50th anniversary. Disposals of companies during fiscal 2009.

Accompanying the annual report is a “Notice of Annual Meeting of Stockholders and Proxy Statement” (81 p.). Irwin Simon, the founder and CEO, age 52, earned a base salary of \$1.4 million and total compensation of \$4.32 million. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2905. Gorell, Wallace. 2010. Re: Brief memoir—Interest in and involvement with macrobiotics. Letter (e-mail) to William Shurtleff at Soyinfo Center, 27 Dec. 2010 and 6 March 2011. 5 p. [1 ref]

• **Summary:** “I moved to San Francisco in January of 1966 at the invitation of my friend Deacon with whom I had studied acting at the Carnegie Institute of Technology, Pittsburgh, Pennsylvania (then considered to be the best theater program in the country; now Carnegie-Mellon University), and soon became a part of The Firehouse Repertory Theatre company, which up to that point had consisted of Bill Tara, director; Jean Allison, actress, George Eby and Deacon, actors, and a few others who took care of technical matters. Paul Hawken did lighting for us and co-produced (with Bill) some of the rock and roll dances we put on to make the money we needed to produce plays—such as “Endgame,” a 1957 theatre-of-the-absurd play by Samuel Beckett. At this remove, I can see that the dances we produced were more culturally significant than the theatre, but we were not far from that view even then. We saw both endeavors as art making.

“Bill Tara has not been celebrated as Bill Graham and Chet Helms have, but he was really good at putting on rock and roll dances. He hired great people to do visuals for us, like Elias Romero, who invented liquid light projections, and Roger Hillyard, a talented filmmaker; he put together great bills with terrific bands—Big Brother and the Holding Company, the Amazing Charlatans [Sopwith Camel, The Wildflower, Great Society]; and he encouraged our company members to dream up performances to incorporate in the evening. He wanted our dances to be more than entertaining; he wanted them to be enlightening. We all did.

“We were intent on changing the world, nothing less, so we saw *everything* we did—eating, tripping, dancing, loving—as vitally important. Reading Timothy Leary, Jethro Kloss, Alan Watts, George Ohsawa and others, we learned that we had to change ourselves before we could change anyone else. So we determined to change ourselves, to *embody* change. It was critical.

“We tend to remember the sixties as carefree, but in fact they were fraught with anxiety. The draft had many of us in a constant state of apprehension. As President [Lyndon] Johnson heated up the war in Vietnam, we watched atrocities on TV as if we were seeing them first-hand. Life seemed nightmarish. A lot of young people, many of them flooding

into San Francisco, got the idea we could turn things around—to open our hearts, to give peace a chance, to treat our brothers and sisters and the planet on which we all live with respect. The belief that we could bring peace to the world by making ourselves peaceful was, perhaps, an exuberance of youth. Most adults would say so. (I haven't reached a conclusion.) But at the time that sort of cynicism dismayed us. We believed it could be done. We believed ourselves to be the *avant garde* that would lead the way. Many of us had experiences with cannabis, LSD and mescaline that seemed to validate such a vision. We wanted to share that vision with the world. “During the so-called ‘Summer of Love’ (1967—the war was still raging in Vietnam) my friends Greg and Mary, with whom I was then living, famously took acid so Joan Didion, on assignment for *Look* magazine, could watch.* (See Didion's essay ‘Slouching towards Bethlehem’ in the collection of the same name). Meanwhile, Bill, Jean, Deacon, Paul, Roger and I were busy planning an anti-war art piece to be presented at the big dance we had scheduled for Halloween night with The Grateful Dead, Quicksilver, Mimi Fariña and other performers. We had bought every second-hand baby doll we could find in San Francisco, had taken a blowtorch to them, and planned to hang them in camouflage netting all over the hall. Roger was putting together a montage of grisly war footage, and Bill, Jean, Deacon and I had rehearsed a piece to perform over the PA system—an excerpt from Kenneth Patchen's ‘Journal of Albion Moonlight.’ The artistic intent was to portray war as a bad trip.

“Ken Kesey, then on the lam, announced that he would appear with the Dead at Winterland Ballroom on Halloween to tell America's youth to turn away from drugs. Hold on, we thought, we have The Grateful Dead under contract for our dance at California Hall. This was confusing. Some of the Pranksters were actually staying at Bill's warehouse home south of Market. (By that time we had been kicked out of the firehouse and were now called the San Francisco Calliope Company.) Could we transfer what we had planned to Winterland, a much larger venue? We decided to sit tight and wait to see what would happen. Then rumors started to circulate that Kesey actually intended to dose the punch at Winterland, thumbing his nose at the law. What would happen if we did our anti-war piece—especially with all those burned baby dolls—to an audience on acid? Not pretty. As it turned out, our dance went on as scheduled. Nothing happened at Winterland. (Another version of this story appears in Tom Wolfe's *The Electric Kool-Aid Acid Test*).

“In retrospect, I can see our bad trip war piece wasn't *just* about Vietnam. It was expressive of what was happening that summer in San Francisco. Psychedelic drugs had, for a year or two, fostered genuine camaraderie there, but other drugs that had appeared on the scene—notably crystal methamphetamine and PCP—had seriously undermined it. The vibe had changed. A lot of youths had lost faith. Some

of us decided we had indeed seen the light, but needed to do more work to sustain the vision. Bill, Jean, Paul, Roger and I were interested in attaining higher consciousness through clean living. Deacon and quite a lot of others weren't.

“We had seen some issues of ‘The Order of the Universe’ out of Boston and wanted to know more about the Macrobiotic study center there. I wrote to the editor, assuming that English was not his first language, and offered my help. Embarrassed, Jim Ledbetter accepted my offer. My friends Mike and Jan Costello drove me across country while I read aloud to them *You Are All Sanpaku* and *The Book of Tea*. By the time I reached Boston, Paul (in his early twenties) was already there, and Aveline Kushi (then about forty) was having an affair with him.” Continued. Address: Berkeley, California, and Flinders Island, Tasmania.

2906. Gorell, Wallace. 2010. Re: Brief memoir—Interest in and involvement with macrobiotics (Continued—Part II). Letter (e-mail) to William Shurtleff at Soyinfo Center, 27 Dec. 2010 and 6 March 2011. 5 p. [1 ref]

• **Summary:** Continued: “Here is an extract from my 1967 journal, describing my arrival in Boston. (It was written without capital letters):

“now i am at 29 university road, brookline. i was greeted by beverly (renée's friend) who said ‘welcome, you can put your things in the basement till we see if you will stay.’ on the way out to the car i met rebecca [Dubowsky], the housekeeper. she asked mike and jan to come only at night [because they looked like hippies—they had even longer hair than I did then]. as i went to bed she was having beverly make her short hair shorter. i wonder about my hair. is my desire to keep it only natural or is it materialistic?

“just being here has made me very high. they are wonderful. i have so much to learn.

“today i have met the kushis. both he and she are amazing. very young-seeming, full of energy. i have spoken to jim ledbetter who is more like i imagined than the kushis. he is thoughtful. they are. their children are happy and active. already i feel love for them all. tomorrow perhaps mom and dad will arrive. “they arrived on the 11:00 shuttle from new york. they like the house and the people. at dinner last night they even liked the seaweed. they spoke with mr. kushi who gave them a brief run down of their ills by looking at them and trying a few pressure points. he ordered two bags full of macrobiotic staples which might be difficult to get in pennsylvania. martin brought the foodstuffs back from the store and i packed them in a picnic basket for their return trip. most everyone here at the house has told me how lucky i am to have such friendly, aware, and open-minded parents.

“now they have left. mother sounds as if she may take mr. kushi's advice and come here to live for a week or so to learn to cook and to have consultation and massage therapy. i have a slight headache and a beginning cold. michael has come by to find out what to do about jan who is sick. i

unpack.

“Because I wouldn’t cut my hair or beard, I was not included as part of the public face of the macrobiotic community. But I quickly made myself at home on University Road, doing a lot of the cooking for our ‘study house,’ and I co-edited ‘The Order of the Universe’ with Jim. I also intently studied macrobiotic theory, trying to make sense of the yin-yang system. I sat with Michio for hours working on a relative ranking of foods. [Note: This was no simple matter given the number of factors to consider. Yin food characteristics: large, wet, fragrant, sweet, sour or spicy, oily, seeds on the outside, native to a warm climate, coloration toward the violet end of the spectrum. Yang food characteristics: compact, dry, odor-free, salty or bitter, seeds on the inside, native to a cold climate, coloration toward the red end of the spectrum. Flesh is more yang than vegetables. Roots are more yang than fruits, stems more yang than leaves, etc., etc.]. ‘Which is more yin,’ I would ask, ‘Cucumber or eggplant? Eggplant or banana? Banana or onion?’

“Another journal entry from that time:

“Michio says that ‘macrobiotics’ will no longer be nonsense in ten years. perhaps that means that in ten years everything will be so nonsensical that no one will notice that macrobiotics still is.

“I returned to San Francisco for the summer of 1968 to share what I had learned—the theory still didn’t make much sense, but the diet did. I served as Bobby Weir’s macrobiotic advisor (Bobby was one of the founding members of the Grateful Dead). I taught a beginning cooking class weekly in the Haight Ashbury, and an advanced class in North Beach. Then after another year in Boston I went off to Japan, in August of 1969, to study acupuncture (which was still thought of as some medieval barbarism in the West, if it was known at all). Michio said he would arrange everything for me, that his parents would meet me at the airport and that I would stay with them while I was studying. Luckily Evan Root, a friend from Boston, met my plane, because I never saw or heard from Michio’s parents during the subsequent year and a half I was in Japan.

“Why Michio told me those things, I have never understood. I tried to construe the whole thing as a trial he had contrived for me, guru-like, but it didn’t make me think better of him. On my own, I never found an acupuncture teacher I wanted to study with, but I did study cooking with Darbin Yamaguchi [the wife of Alcan Yamaguchi] in Kyoto; I did work with the Katsuragis on their farm in southwestern Japan [Okayama] for a year, where I studied traditional methods of food preservation [the family made its own miso and *takuan* pickles]; and I did study shiatsu massage with the generous Miyamoto family in Hokkaido.

“After returning to the States, I worked for a year at my father’s window business near Pittsburgh before returning to Boston. Here is another journal entry from that time:

“9/71 it seems i just can never write in here when the action’s fast. weeks again have gone by and much has happened. now i’m in the hartford airport on my way to pennsylvania to gather up my things so i can return to boston to work with paul and bill and everyone at the erewhon trading company on filthy farnsworth street. who could have guessed it? it wasn’t even on my list of options. i didn’t even try. and already i’ve produced a whole new line of bags for them (us?) and i’m living at garner road. why this year i may even pay taxes.

“now [I’m being paid at erewhon] dollars five hundred sixty [\$560] for each calendar month. paul tells me i’ll be getting seven hundred by december (probably november), but he doesn’t seem to want to be precise. stories of michio shafting various people monetarily make me uneasy in arranging money business here.

“what effects did the trip to japan have on your thinking?” michio asks, and my mind whirls. what a question. ‘about macrobiotics,’ he says. well then. and we talk for over an hour.

“paul hawken seeks to form a new corporation in texas. he says the miller wants to give us (erewhon) nine million dollars.

“There are many unsavory stories I could tell about Paul. He named his son after Frank Ford of Arrowhead Mills in Texas—the miller mentioned above—in order to clinch an Erewhon-Arrowhead merger, then changed the boy’s name when the merger fell through. He had an avid companion in his bed every night his wife Dora was in the hospital bearing him that son. (To get to his room at the Gardner Road house one had to pass by mine.) He routinely dissed Erewhon’s idealistic workers. His secretiveness and duplicity made it difficult for his co-workers, many of whom had once thought of themselves as his friends, to do their jobs. One day when I couldn’t take it any more, I went into Paul’s office to challenge him on his behavior. Screaming, he told me he had no intention of treating anyone any differently, so I resigned. When I returned to my desk, several people at the desks around me whispered, ‘What was *that* about?’ ‘I quit,’ I said. Just then he stormed out of his office, loudly accused me of being incompetent and told me he was firing me. ‘I already told them I quit,’ I replied. He flushed crimson, and screamed at me to get out.

“Precisely because their president was only twenty-three—who can be surprised that he lacked maturity?—many of Erewhon’s employees thought they were working in the ranks of a new world order. They gave up better-paying jobs in order to take part in the great healing. We had an M.D. working in our shipping department. But at the management level I was perhaps the only one who didn’t need to curry favor with Paul. The others had no previous corporate experience—no CV that could land them a similar position anywhere else. I could easily return to a job with my father’s business or, as it happened, return to school (to study

Japanese).” Continued. Address: Berkeley, California, and Flinders Island, Tasmania.

2907. Gorell, Wallace. 2010. Re: Brief memoir–Interest in and involvement with macrobiotics (Continued–Part III). Letter (e-mail) to William Shurtleff at Soyinfo Center, 27 Dec. 2010 and 6 March 2011. 5 p.

• **Summary:** “Michio and Aveline Kushi saw business, saw Erewhon, as a way of advancing the macrobiotic campaign (and/or their own ends). They asked us, the troops in that campaign, to help make Erewhon successful. We tried, telling ourselves we were creating a new business paradigm, although, week after week, the discord Paul created made it harder to swallow that line. Would Erewhon have been peachy without Paul? It seemed so to me at the time, but perhaps that was more youthful naiveté. Bill Tara, Jean Allison, Beverly Sky, Roger Hillyard, Judy Coates, Nancy Lesourd and I—others too, perhaps even Paul—were artists who, trying to change ourselves, trying to change the world, found our way to Boston to study a new technique. We were counter-culturists, mostly strangers to the world of business. The way things were at Erewhon, it was a very uncomfortable world to spend time in. Ill at ease there, disenchanted, some of us migrated away from the scene—although not necessarily away from macrobiotics—trying to find a personal path, to further a personal vision, to walk peacefully forward. Some have been kind of successful, some—not so much. But no doubt all, like me, have found it an interesting passage.”

Note: After reading an earlier draft of this memoir, Shurtleff asked Gorell several specific questions, whose answers are given below. Please excuse any of this information that is now repetitive.

Although the Grateful Dead and The Quicksilver Messenger Service never played at The Firehouse, Wally assumes they did play at the dance his group organized at California Hall.

Wally says he hardly knew Paul Hawken in San Francisco. When asked: “How did Paul, Jean, Bill Tara, etc. support themselves for 2-3 years in San Francisco? How did they pay for food, rent, psychedelics, etc.” Wally replies: “I have no recollection. I worked at the post office for a while and then after the Firehouse / Calliope Company folded I worked as an actor with the New Shakespeare Company which has become today’s Shakespeare in the Park.”

“I don’t believe I ever knew Erewhon to have a head other than Paul Hawken when I was in Boston. I was there for three different stays. Searching back through my journals I find that... I first arrived in Boston in mid-September of 1967. I remained there for the academic year, studying with Michio and Aveline, co-editing ‘The Order of the Universe’ and cooking for the University Road study house. In June of 1968 I returned to San Francisco to share what I had learned.

“In late summer of 1968, I went back to Boston to

continue my studies with Michio and Aveline, to continue to work with Jim Ledbetter on editing ‘The Order of the Universe’ and to try to rationalize the yin-yang classification system for foodstuffs, and again I cooked for our study house on University Road.

“In August of 1969 I traveled to Japan for the first time. I expected I would have enough trouble getting along there without the problems created by having long hair at that time, so I cut it off short before I left.

“I returned to the USA in early 1971, worked for my father in Pennsylvania for about nine months, and then was offered the position of Director of Imports with Erewhon. To be perfectly frank, I can’t recall ever having performed any of the duties that title would suggest, although I suppose I must have. I developed recipes for our packaged line of foods, designed the labels, illustrated (I think) and hand-lettered them. In my free time, I edited some of the recipes for a cookbook Aveline was producing, I painted the signs for Sanae restaurant.”

“I first studied cooking with Aveline and helped her when I could, particularly after returning from Japan when I was living on Gardner Road. In Japan I studied with Lima Ohsawa a few times and took regular weekly classes from Darbin Yamaguchi during the latter part of 1969. I also learned a lot from teaching cooking classes which I began to do in 1968 and continued for some time as a way of repaying the obligation I felt toward my teachers.

“Names [of people studying macrobiotics in Boston during Wally’s first year]: Connie Frank, Beverly Sewerski, Nahum Stiskin, Paul Hawken, Martin Russell (ran the retail store), Rebecca Dubowsky, Anne Harkless, Georgeanne Coffee, Richard Sandler, Bill Tara, Renée Gremore (that’s her name now, can’t recall her name then), Jean Allison, Evan Root, Jim Ledbetter, Joe Leis, Nancy Lesourd, Judy Coates, Dora Coates, Peggy ___ (she became a Druid nun)...

“I’m afraid I can’t tell you who came first and who came later. Just don’t remember except for Jimmy and Susan Silver who I believe came in my second year.”

When asked if he remembered an early tofu “cheesecake” developed in the macrobiotic community in Boston: “There was a lot of experimentation attempting to make foods that people missed—tofu ‘cheesecake,’ seitan ‘chicken,’ etc. I was never much interested in those efforts. I liked food that could be appreciated for what it was and cuisine that presented that food as simply and honestly as possible. But then I didn’t have wild cravings for ‘forbidden’ foods the way many of my fellow macros did. Brown rice was (and continues to be) one of my favorite foods. There were times in those days when I seemed to be the only person I knew—including Michio—who was actually *following* a sensible macrobiotic diet. Everyone else seemed to lurch between bingeing and making penance. This tendency was, I felt, instigated by Ohsawa’s extremism. Japanese macrobiotic adherents paid little or no attention to his edicts

about drinking as little as possible, avoiding yin foods entirely, never picking up your child except for feeding, etc.; while many of his American adherents, to their detriment, strictly followed his advice.”

When asked when and where he learned to write formal Japanese (*keigo*): “After all three stints in Boston, and not really knowing what I was getting myself into, I decided to go back to school to study Japanese formally. (I had done a seven week crash course at Harvard before going to Japan for the first time, but had not, otherwise, done any formal coursework.) I didn’t want to study in a big city so The Monterey Institute of Foreign Studies (as it was then called) was the only place to go. I spent a year there, then transferred to U.C. Berkeley where I completed my B.A. degree. I then went off to study for a year at the Inter-University Center for Japanese Language Studies in Tokyo, where they put us through a *lot* of *keigo* paces. And then I did three more years of graduate study in the rhetoric department at UCB, working on rhetorical analyses of Japanese language materials, mostly the poems of a 20th century symbolist poet by the name of Nishiwaki Junzaburo—six years of formal study in all.

“Sad to say, my reading skills are now back to the level of decoding and my writing skills are next to non-existent, but I can still carry on everyday conversation fairly well and I understand most of what it is said at my tea ceremony lessons.”

Martin ran the Erewhon retail store most of the time Wally was around. He was a “key figure who, as I recall, ran the retail store pretty much by himself for some years. He had a limp from childhood malady and always seemed to feel a bit one down because of it, but was a really good man and quite capable.” Address: Berkeley, California, and Flinders Island, Tasmania.

2908. Spencer, Bob. 2010. Re: Work / study with Erewhon and macrobiotics. Letter (e-mail) to Evan Root forwarded to William Shurtleff at Soyinfo Center, Dec. 30. 1 p.

• **Summary:** “Today I googled the history of Erewhon. I knew what would be there: natural foods pioneer, macrobiotic business, etc. However, there are some bits and pieces often left out.

“Like the majority of young people who went to work either in the retail stores or the warehouses at Farnsworth and then East St., I was at least a part time student of Michio while living in Amherst. In 1971, my experience began as a warehouse laborer unloading trucks of whole grains from the American Mid-west, 100# bags of French seasalt and 20 ft ocean containers of Japanese imports.

“Paul Hawken hired me, but left soon after. Some said it was because of a disagreement with the Kushis over the direction of the business. Doug Bray was my supervisor in the warehouse at that time (late 1971), but he was fired soon after for providing the entire crew with LL Bean shirts for

Xmas. There was no heat in the warehouse.”

“Then came my years in the Production Department as packager, miller (M.I.A.T.) and Assistant Manager under Steve Zoller. Following that came a stint as Sales Representative to Northern N.E. When the company moved to Cambridge, I had the opportunity to try something completely different: warehouse inventory control in an IBM based digital environment. Then, during the approach of bankruptcy, my next job was that of Private Label Purchaser. After bankruptcy my assignment was to manage the Brookline Village retail store: final stop on the Erewhon path. Later I worked for Tony Harnett at Bread and Circus at their Brighton warehouse and eventually left the food business as a result of a dead end decision to manage an independent “Natural” food store in Jamaica Plain in 1984.

“So, why do I tell all this. It is because Erewhon was for me (and for many others) more of a school of business than a pioneer in the natural foods industry. Many of the folks in that picture were not followers of any particular dietary or philosophical regimen. Instead they were people looking to work at a place that appreciated their efforts. In return for good works, they had opportunities to grow with the business and gain all sorts of experience for future employment.

“It wouldn’t surprise me if a large number of folks went on to have their own businesses, like myself. I write this as I sit here at my desk awaiting an ocean freight container of imported stone to arrive and be passed thru US Customs. I have a small warehouse for storage and shipping of the stone. I know what my inventory is and its value. My suppliers make products for me at my own specifications. My accountant relies on the information I provide to make her reports to my bank. Are these not skills developed while employed by the Kushis?

“True, I still eat a lot of rice and pasta. My diet is much wider than before. However, my wife uses the most natural products available. Most of what we eat she cooks herself to control fats, additives and preservatives.

“Oh, yes... I forgot to mention that she also worked at Erewhon in 1974 where we met. That was another benefit.

“Thanks to you both for the chance to remember the 13 years of my life spent working in the food industry. The point is that Erewhon was really much more about opportunity, education and work than it was about natural foods.”

2909. Fraser, Evan D.G.; Rimas, Andrew. 2010. Empires of food: Feast, famine, and the rise and fall of civilizations. New York, London, Toronto, Sydney: Free Press. xiii + 302 p. Map. 24 cm. [600* ref]

• **Summary:** Ten thousand years of history suggest that “sustainable agriculture” may be an illusion.

Part I: The price of food. The three gorges dam. 1. Fairs: the food trade. 2. Larders: what do you do with ten

thousand tons of grain? 3. Farms: growing food for profit and environmental rapine.

Part II: The price rises. An experiment in survival. 4. Water: irrigation's questionable cure. 5. Dirt: the chemistry of life. 6. Ice: preserve us.

Part III: Empty pockets. Storm clouds. 7. Blood: the conquest of food. 8. Money: tea and famine. 9. Time: fair, organic, and slow. Conclusion: the new gluttony and tomorrow's menu.

For 95% of human history, people have eaten only what they hunted and gathered. Before plant domestication, there were no empires. The world's short experiment with agriculture is still ongoing, but agriculture seems to be fatally flawed. It is not just a problem of returning to traditional farming methods. "Bargain-priced energy is the reason we've been free to breed and feed our population past the 6 billion tally. Remove the energy, and those billions, too, will be taken away."

For an excellent review of this book by Richard Manning see *OnEarth* (2101 Fall, p. 70-71). "The flaw of agriculture is inherent and fatal, based in the depletion of soil. The phrase 'sustainable agriculture' has every bit as much meaning as 'clean coal.' The rise and fall of empires is driven by and rooted in agriculture." The cultivation of cereal grains (such as wheat, corn, and rice) inexorably depletes the soil [unless biodynamic or organic soil building practices are used]—not through oversight, negligence, or greed but inevitably. When the soil is exhausted, the city or country goes looking for more soil—and so builds an empire. This is the cycle of history, based on soil depletion. But by about 1960 there was no more new soil to be taken.

Soybeans are discussed on pages 26, 38, 67, 87-88, and 119. Address: 1. Academic specializing in farming, climate change, and the environment; 2. Journalist, Boston, Massachusetts.

2910. Life Food GmbH. 2010. [Tofu assortment (Brochure)]. Freiburg, West Germany. 6 p. 30 cm. [Ger]

• **Summary:** This colorful brochure on glossy paper, with many photos, shows all of Life Foods' food products, grouped by category. Natural tofu: Natural tofu, Demeter tofu, silken tofu. Japanese tofu: Nigari tofu, kinugoshi tofu. Tofu terrine: Tofu terrine: Graffiti." Tofu cutlets: Spelt-sunflower cutlets [spelt is an ancient species of wheat], greenspelt-hazelnut cutlets, tofu-rice cutlets with corn-pepper.

Smoked tofu: Smoked tofu, smoked tofu with almonds and sesame seeds, Demeter smoked tofu with herbs and sunflower seeds. Mediterranean: Tofu rosso, Tofu basil, Tofu olive. Tofu snacks: Japanese tofu filets, pizza-pizza tofu filets, wild garlic tofu filets.

Sausages for cooking (vegan): Tofu wiener, Pusztai wiener (Hungarian style), Tofu cocktail sausages. Sausages for frying (vegan): Tofu grillsausages, Tofu grill herb

sausages, Sombreros (hot tofu sausage for drying and grilling), Tofu-herb grill sausage. Falafel: Falafel traditional, Falafel curry-kokos ["cocos" refers to the coconut], Falafel paprika-harissa ["Harissa" is a Tunisian hot chili sauce commonly eaten in North Africa]. Chilled spreads: Paté "Verdi," Paté Rossini." Cold cuts: Papillon, Rondo.

Taifun bestsellers for 2010: 1. Tofu-wiener. 2. Smoked tofu with almonds and sesame seeds. 3. Natural tofu 200 gm. 4. Basil tofu. 5. Grillsausages. 6. Tofu rosso. 7. Grill help sausages. 8. Tofu filets wild garlic. 9. Spelt sunflower cutlets. 10. Tofu filets Japanese style.

Note 1. "Rosso" is the Italian word for "red." The Taifun website says of its Tofu Rosso (which is part of its "Mediterranean Tofu" line): "This little Italian, with olives, tomatoes and pepperoni has conquered the hearts of tofu fans everywhere, and was awarded the "Bestseller of the Year" prize at the 2005 BioFach trade fair in Nuremberg.

"Fresh fruity taste, ideal for Mediterranean cuisine. Cold with bread, in salads or steeped in olive oil. Sautéed with pasta, rice and potatoes."

Note 2. Demeter is a certification for biodynamic agriculture—as originally developed by Rudolf Steiner (lived 1861-1925). Demeter certification is the oldest traditional organic certification in Europe and is regarded by many as the highest grade of organic farming in the world. Certification is difficult to come by and must be renewed annually. Demeter's "biodynamic" certification requires biodiversity and ecosystem preservation, soil husbandry, livestock integration, prohibition of genetically engineered organisms and viewing the farm as a living "holistic organism" (Source: Wikipedia). Address: Bebelstrasse 8, D-79108 Freiburg, Germany. Phone: +49 761 / 15210-0.

2911. Pfeiffer, Ehrenfried; Ahrens, Lexie; Scharff, Paul W. 2010. Ehrenfried Pfeiffer: A modern quest for the spirit. Compiled by Thomas Meyer. Translated by Henry Goulden. Spring Valley, New York: Mercury Press. 281 p. *

• **Summary:** An English translation of writings by Ehrenfried Pfeiffer—a student of Rudolf Steiner and the founder of biodynamics in the United States. The collection includes autobiographical memoirs; articles on etheric research and nutrition, the etherization of the blood, and the function of the heart; and personal memories of Pfeiffer by Lexie Ahrens and Paul W. Scharff, M.D. Compiled and introduced by Thomas Meyer. Valuable for those wishing to delve deeper in the history of anthroposophy and biodynamics and Pfeiffer's role in it.

2912. Reed, Matthew. 2010. Rebels for the soil: The rise of the global organic food and farming movement. London, Washington, DC: Earthscan. vii + 168 p. Index. 24 cm. [279 ref]

• **Summary:** The best book seen to date on the historical evolution of the organic farming and organic food

movements, written from the United Kingdom where the movements began and have most thoroughly developed.

Contents; Preface. Tables and boxes. Acronyms and abbreviations. 1. Introduction: Organic farming 101, key arguments, organization of the book, identifying organics. 2. Social movements. 3 Saving the soil. 4. Poisonous elixirs. 5. Small, beautiful and reorganized, 1960s and 1970s. 6. The rise of organic food retailing, 1980s. 7. Fighting the future—against GM crops. 8. Peak organics? Bibliography. Index.

Summary: This book investigates the emergence of organic food and farming as a social movement. Using the tools of political sociology it analyses and explains how both people and ideas have shaped a movement that from its inception aimed to change global agriculture. Starting from the British Empire in the 1930s, where the first trans-national roots of organic farming took hold, through to the internet-mediated social protests against genetically modified crops at the end of the twentieth century, the author traces the rise to prominence of the movement (From the publisher).

“The global organic movement has gone through four periods, or ‘waves’ that are distinct from one another. The first was in the 1920s and 1930s when there was no mass movement but a network of people investigating the ideas and themes that became the underpinning of a wider movement. Writers and scientists as diverse as Rudolf Steiner and Albert Howard, separately but simultaneously, started investigating the basis of agricultural fertility.” This period ended with the outbreak of World War II in Europe (see Chapters 3 and 4). The second wave went from the mid-1940s to the late 1960s (Chapters 5 and 6). “The third wave started in the early 1970s when the global movement turned toward ethical or green consumerism backed by state and private regulation...”

“The fourth wave, as the final chapter argues, is forming now around the question of ‘peak food.’”

The subsection titled “The Soil and Health Foundation” notes that in the United States, “the first to sell organic food was Robert Keene, who founded Walnut Acres in 1946, a mail order service.” Keene, who had been to India and had become a follower of Gandhi, saw organic farming as part of a wider challenge to the values of society (Sligh & Cierpaka 2007). Malabar Farm was built in 1939 by Pulitzer Prize-winning novelist / author Louis Bromfield. Located in the hills of Pleasant Valley, Ohio, it was the place where he experimented with sustainable farming during the 1940s. “The most significant actor was Jerome I. Rodale, who founded the Soil and Health Foundation in 1947 to finance scientific research into the ideas of organic farming. He became an enthusiast and advocate after reading Albert Howard’s *Agricultural Testament*. He started publishing his first organic magazine, *Organic Farming and Gardening*, in May 1942.

Ehrenfried Pfeiffer is mentioned on pages 78, and 131-32. Also discussed at length (see index) are: Lady

Eve Balfour, biodynamic farming, Bovine Spongiform Encephalopathy (BSE), Rachel Carson, IFOAM, etc. Address: Senior Research Fellow, Countryside and Community Research Inst., Univ. of Gloucestershire, Cheltenham, UK.

2913. Martin, Timothy W. 2011. Government advises less fluoride in water. *Wall Street Journal*. Jan. 8. p. A1, A3.

• **Summary:** For the first time in 50 years, the government has lowered its recommended level for the amount of fluorine in drinking water. Since 1945, fluoride has been added to U.S. drinking water in hopes of lowering tooth decay. Since 1962, government health authorities have recommended adding a range of 0.7 to 1.2 milligrams per liter.

The new recommended limit is 0.7 milligrams per liter.

A large photo (p. A1), titled “Another moment in the long controversy over fluoride,” shows Dr. Frederick McCay with a dental patient. In 1952, when fluoride was “cutting edge,” he was championing its use.

2914. Tibbott, Seth. 2011. Update on tempeh, Tofurky and Turtle Island (Interview). *SoyaScan Notes*. Jan. 19. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Tempeh sales constituted about 10.7% of Turtle Island’s total sales last year; the remaining 89.3% was Tofurky products. “The various types of Tofurky have steadily become our dominant products by far. Yet sales of all our tempeh products increased 39.8% during calendar year 2010. The increase was in two areas: In March 2009 we launched tempeh strips [Marinated Tempeh] in 3 flavors (Lemon Pepper, Coconut Curry, and Sesame Garlic), and packaged each in a nice box. In June 2010 we added a fourth flavor—Smoky Maple Bacon.” The 39.8% sales increase figure refers to sales of these tempeh strips (4 SKUs, in a 12-pack to the natural food market and a 6-pack to the mass market) and sales of cake tempeh and tempeh strips to the mass market. Last year, Seth sold 27,000 cases of tempeh strips and 29,000 cases of tempeh cakes (of various types) in the natural foods market. Seth has been selling tempeh in cakes for about 30 years, but in strips for less than 2 years. So the strips (which weigh 7 oz per individual package) have caught on very rapidly and are almost at the level of the cakes (which weigh 8 oz per individual). In short, natural foods customers like flavored, heat-and-serve, 2nd generation tempeh products. But here’s the kicker; sales of the strips are growing fastest in the mass market (supermarkets), where Seth sells about 10 times as many cases of strips as he does cakes. And its just getting started. In places like North Carolina and South Carolina they just can’t get enough of these 6-pack cases of marinated strips.

Turtle Island was already in mass supermarkets in the southeastern United States, but by mid-2011 the tempeh products were added as line extensions in those accounts—

especially in Florida, North Carolina, South Carolina, and Georgia, in that order. The Sesame Garlic and the Smoky Maple flavors are the best sellers in the line.

There are a growing number of voices in America talking about the health and flavor benefits of fermented foods.

Seth's tempeh sales (all cakes) (all types) were \$472,000 in calendar year 2002, rising to \$1.3 million in 2009. So sales of tempeh cakes are way up compared with 10 years ago.

The biggest tempeh maker in the USA by far is Lightlife Foods (in Massachusetts); they make about 10 times as much tempeh (Fakin' Bacon and cake tempeh) as Turtle Island. No. 2 is Turtle Island, followed by Hain ("Where good brands go to die"—which now makes Westsoy Tempeh, which was originally made by Steve Demos of White Wave and is probably still made at the former White Wave plant in Boulder, Colorado), then (in the natural foods market) Surata Soyfoods (Oregon), Northern Soy / Soy Boy (Rochester, New York), Rhapsody (Vermont), Wildwood Natural Foods (Pulmuone, southern California, made by Turtle Island), Bountiful Bean (Madison, Wisconsin), Central Soyfoods (Lawrence, Kansas), 21st Century Foods (Jamaica Plain, Massachusetts), Sweet Earth (Birmingham, Alabama), M Café, and Hearty Vegan (Texas).

In the SPINS data there is no category for tempeh alone; rather the category is "Tempeh and Seitan." That category was \$6.1 million in 2006, increasing to \$6.5 million in 2009—but those numbers are inaccurate because Whole Foods Markets recently stopped selling its data to SPINS.

How long will Seth continue to be in charge of his business? Good question. His stepson, Jaime Athos, who is extremely bright, has a PhD in neurobiology from the University of Washington (Seattle), is a vegetarian, and has good business sense, is "chomping at the bit" to take over the business from Seth. Seth wants to continue working there, but perhaps in an emeritus position and as chairman of the board. Seth's 60th birthday is coming up on April 20, 2011, so he has to start thinking about succession and what else he wants to do. He is considering starting a foundation.

Yet his basic financial situation is "rags to better rags; it's not rags to riches." Seth does not have a big attraction to money. "It's never been about money for me. In 1980 when I was first starting Turtle Island on my 2,500 bucks, I had never taken a class in business, but there were these free classes from the SBA [Small Business Administration] on how to start and run a business. So I figured, well, it's free and I don't have any money, so I'd better go there and learn about business. So I go the first class and this guy stands up there and his first question to this room-full of entrepreneurs is: 'How many of you people are out there to save the world?' And my hand shot up. I looked around and no one else's hand was up. And I go, 'Oh god. It's a rhetorical question. I just flunked my first business exam.' And then he goes, 'How many of you are out there to make

money?' Every hand shot up. The place went wild. I was embarrassed—but... I see myself as the cosmic goof—the least likely person to succeed in business. Anyone with a good work ethic, little luck, a good product—so long as she doesn't take herself too seriously—can succeed in business.

"When I was younger, I was always this humorous guy. But when I started a business making tempeh I suddenly transformed into this serious guy. The conventional wisdom was—you don't want to make this funny; just play it straight. You don't wanna upset the middle class with a joke. And I lost tons of money. It was only when I came out with this wacky Tofurky product, that people thought was a joke, did I start making money. Humor started creeping into the way Turtle Island presented itself at that time. The subject lent itself naturally to humor. "I could feel I was letting my true self come through in the business."

One important development: Pasteurizing tempeh by using vacuum sealing for longer refrigerated shelf life. This has been taking place since the mid-1990s, but it has been steadily improved. Refrigerated tempeh has a better texture and flavor than frozen, and requires much less energy use.

Also: People are increasingly becoming aware of the many important benefits of fermented foods and fermented soyfoods.

There has been a shakeup at Lightlife Foods. Top management has been asked to leave Turner Falls and move to Conagra Headquarters in Omaha, Nebraska. At least one top manager has quit.

In June 2010 Turtle Island launched a new product which has, so far, been extremely successful—Tofurky Pizza (vegan), in 3 SKUs. The cheese they use is the remarkable new tapioca-based Daiya Vegan Cheese, made by Daiya Foods, a relatively small start-up company in Vancouver, Canada (www.daiyafoods.com) that was founded in mid-2007 by Andre Kroecker and Greg Blake. They have taken the cheese-alternative category by storm. You can find shredded pieces of Daiya at any Whole Foods Market in the non-dairy cheese section.

Seth asks:

"Have you heard the joke about the fire in the vegetarian cheese factory? Everything melted except the cheese!" This non-dairy cheese really melts and stretches, is gooey and tastes great. Amy's owns the natural foods pizza category but Seth's 3 vegan pizzas are moving up fast on the charts. They started to be sold commercially in June 2010.

Sales of the three Tofurky products (Roast & Gravy, Feast, and Roast) reached 353,250 units in calendar year 2010. Sales have increased every year since Turtle Island started making the product in about 1995. The number sold has increased every year as follows (numbers prior to 2002 were rounded off to the nearest thousand): 1995–500. 1996–1,500. 1997–18,000. 1998–45,000. 2000–84,000. 2002–118,000. 2004–152,070. 2006–201,108 (one millionth Tofurky roast sold!). 2008–308,436. 2009–339,996 (two

millionth Tofurky roast sold!). 2010–353,250. Total: 2,360,734.

Tofurky Feast (3.5 lbs): First sold in November 1995. Gone through several incarnations of size and product offerings. Current pack holds: two pound Tofurky Stuffed Roast, 14 oz Savory Tofurky Gravy, 11 oz Amy's Vegan Chocolate Cake, one set of Tofurky Jurky Wishstixs, Happy Tofurky Day card, coupons for Tofurky products. Sold Frozen, mainly in Natural Foods stores like Whole Foods, Berkley Bowl, etc.

The Tofurky Roast has always had tofu in it; the first two years it was all tofu, no wheat gluten. In 1997 wheat gluten was added to give more turkey-like texture and to aid in freeze/thaw process. Tempeh Drumettes were part of the original Tofurky Feast but were replaced with Cranberry Apple Potato Dumplings in 2003, which were in turn replaced with Amy's Vegan Chocolate Cake in 2010.

Tofurky Roast (26 oz): First sold in October 2002. Only the Tofurky Stuffed Roast. Sold Frozen, mainly in Natural Foods market.

Tofurky Roast and Gravy (2.5 lbs): First sold in October 2005. Includes one 26 oz Tofurky Stuffed Roast and 14 oz of Savory Tofurky Gravy. Sold Refrigerated in Mass Market accounts like Trader Joes, Publix, Safeway, etc. Address: President and Founder, Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

2915. Kushi, Norio. 2011. Re: History of Erewhon, Los Angeles. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 20. 1 p.

• **Summary:** "Erewhon Los Angeles was initially located at 8001 Beverly Boulevard. It was opened in the fall of 1970. John Deming and John Fountain were major investors in helping to open the LA store and during the 1980s Erewhon troubles in Boston, ownership of the LA Store was transferred to John Fountain before Tom DeSilva finally (in 1980) bought Erewhon Los Angeles.

"Tom DeSilva later (May 1991) moved Erewhon to its present location at 7660-B Beverly Blvd. #A, Los Angeles, California 90036-2737. Phone: (323) 937-0777." Address: Traveling by truck in Portland, Oregon.

2916. Robbins, John. 2011. The real Jack Lalanne. *Vegsource.com*. Jan. 27. <http://www.vegsource.com/news/2011/01/the-real-jack-lalanne---by-john-robbins.html>

• **Summary:** An excellent tribute to Jack LaLanne and his legacy—with a nice color photo. It begins: "Jack LaLanne died on Sunday, at the age of 96. He was a mentor to me, as he was to many. He was a great man, more so than most people realize.

"His wife of 51 years, Elaine LaLanne, knew. 'I have not only lost my husband and a great American icon,' she said, 'but the best friend and most loving partner anyone could ever hope for.'" "When it comes to exercise and

health, the name 'Jack LaLanne' has long been virtually synonymous with fitness. Jack literally inspired millions to live a healthful life. But Jack LaLanne didn't start out as a model of health. Far from it." Address: Founder and Board Chair Emeritus, EarthSave International.

2917. *SoyaScan Notes*. 2011. Jesse Frank Ford, Jr.—Social Security Death Index, 1933-2011 (Overview). Feb. 2. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** The full name of Frank Ford (owner of Arrowhead Mills) was Jesse Frank Ford, Jr. Born on 16 Jan. 1933 in Hereford, Texas, he died on 2 Feb. 2011 at age 78. His last residence was 92028 Fallbrook, San Diego County, California. His obituary was published in the Amarillo Daily News and in the Amarillo Globe-News (Feb. 8, 2011, Texas). Spouse's name: Shwu Ching Hahn Ford. Parents' Names: Marjorie Winn Ford.

Children's names: Davis W. Ford and wife Gina of Benton, Texas; Cindy Skypaia and husband Greg of Amarillo, Texas; Susan Lee Ford of Amarillo; Dan Ford and wife Kim of Allen, Texas.

Siblings' names: Davis L. Ford and wife Gwen; Susan Wiltshire and husband, Ashley.

Number of grandchildren: 10. Military: Army.

2918. Kushi, Norio. 2011. Re: The origin of the first Erewhon retail store at 303-B Newbury St. in Boston. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 9. 1 p.

• **Summary:** "Prior to the Erewhon store [in April 1966], starting in September 1964, at 101 Walden St, Cambridge, Massachusetts, we started buying items in bulk from Japan as well as grains in bulk from within the US. We would stock them in the basement and I along with others would package them into smaller containers. We would sell these every day since we had dinners and lectures most evenings. It was a busy happening place. We moved to 7 Eastman Circle in Wellesley, Massachusetts in December 1, 1965 and then to 216 Gardner Rd, Brookline, Massachusetts in March 31st 1966. During these moves we continued to buy the food products in bulk, package them and sell them at our dinners. It was while living in Wellesley, Massachusetts that Evan Root came to live with us.

"We had barely moved into 216 Gardner Rd, Brookline, when within a couple of weeks, the town of Brookline, Health Department finding out about the food operation, shut us down. This is what necessitated the opening of the Erewhon Natural Food Store at 303-B Newbury St. [in April 1966]. The name Erewhon, although it is known that it came from Samuel Butler's book, was actually picked because George Ohsawa had a special fondness for the book Erewhon. George Ohsawa created a comic series titled, 'Jack & Miti in Erewhon.'

"One year later, when my mother opened 'Sanae' Restaurant one block to the east of Erewhon, the original

intention was to call the restaurant 'Nowhere.' When Evan Root went to the Boston City Hall to register the name, the people there thought the name was really odd and refused to allow the restaurant to be called Nowhere. Evan called my mother and while on the phone, my mother picked Sanae for the name." Address: Traveling by truck.

2919. Young, Jean Allison. 2011. Chronology of interests in macrobiotics and work with Erewhon (Interview). *SoyaScan Notes*. Feb. 10. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Chronology: 1945 June 1–Jean is born in St. Paul, Minnesota. She has two brothers. Her father was killed in a traffic accident when she was 18 months old. Her mother went into the hospital for about 2 years. Her mother later came back into their lives, but her father's parents were suing for custody of the children. So her mother married her stepfather (who turned out to be a nice guy) and in 1949 the two of them moved with the 3 children to Los Angeles when Jean was age 4—to get away from the custody lawsuit.

1959 Aug. 22—The family moves to the Hawaiian Islands the day they became a state of the USA. Jean goes to high school in Hilo, on the island of Hawaii, and graduates in 1963 with honors.

1963 early summer—Jean leaves Hawaii to work for the summer at Army/Navy Supply House in San Francisco, California, as a secretary. In the fall she enters San Francisco State College while continuing her job part time during the fall. During college she also worked in several temporary jobs ranging from tax work and insurance to general office work. During 1965-66 she worked part time at Wilson's Advertising Agency in San Francisco as a secretary. She did not graduate from college (this was a time of turmoil, strikes, and protests at San Francisco State) but she does have a 4½ year education in Liberal Arts. Like many students, Jean did participate in the protests.

At the college, Jean was involved in acting, and through that she met both Paul Hawken and Bill Tara, who were doing theater in San Francisco and the psychedelic "drug scene" at that time.

1963-1967—Jean, Paul Hawken and Bill Tara grew to know one another well during the six years when they lived (often together) in San Francisco. In the early spring of 1966, shortly after rock concerts began at the Fillmore Auditorium [at the corner of Fillmore St. and Geary Blvd.] in San Francisco, they rented an old abandoned firehouse [fire station] at 3767 Sacramento Street, north of the Haight-Ashbury district in the Sunset District. Jean, Paul and Bill all lived in the firehouse the entire time they were there. Jean was Bill's girlfriend. They organized and hosted live musical performances and dancing with some of the original street bands in San Francisco—Sopwith Camel, The Charlatans, Big Brother and the Holding Co. (including Janis Joplin), etc. The firehouse held about 100 people, and the door

was kept "closed," admitting people only in small groups. The resulting noise was kept carefully under control so as not to disturb the residential neighborhood. People paid a mandatory "donation" [one ticket shows: "Donation \$2.00"] to hear the performance, and the hosts did not make change. No one sat, as there were no chairs, so everyone danced—although it was usually so crowded that no one could dance. Concerts were held at the firehouse for at least 3 months [Feb. 12 to April 2]. "Since the last concert was the Wreckers Ball, I would assume that we had been told by the landlord that the place was to be raised and he wanted us out." "It was a wonderful and exciting time—to be there at the beginning of the rock and roll music scene in San Francisco." Jean thinks they moved from the firehouse directly to the warehouse south of Market Street, but she is not sure.

Note: This Firehouse is now part of early rock and roll legend in San Francisco. See the long blog titled Rockarchaeology101. See also: <http://www.chickenonaunicycle.com/Firehouse%20History.htm>.

"The rest of the time we were dealing and using drugs." The only LSD they could get in those days was the real Sandoz LSD. Several days in advance of each trip, they carefully prepared their minds, bodies, and the environment. They had someone who was not taking it who was in the room with them to ground them. They did it the right way because it was "a spiritual experience."

They soon moved into and rented one floor of a warehouse on an alley [65 Harriet St.] south of Market Street, between 6th and 7th streets. They pooled the money to pay the rent. "The warehouse was actually an old factory for making the pre-packaged small half-pies that you could buy at a convenience store. Initially, we had a wicked problem with rats and mice (a house cat took care of that) but had so many cockroaches that we use to have a monthly 'cockroach killing party' with Raid and beer. Great fun."

"We lived communally in a huge warehouse space, except for a single room in the back. We each set up our own bedroom area—but shared the living room area (defined by a sofa, chairs and a rug) and open kitchen (defined by a table, stove, refig and cupboards). Bill lived there, I lived there but moved out before Bill, and Paul lived there for a time also."

"The word 'studio' fits to a certain degree. Bill Tara and I were a couple for several years although we broke up at about the time we started the macrobiotic diet—which was Renee came along. Michio and Aveline Kushi made several attempts to get us back together as a couple as they wanted to send us off as a 'teaching team.'"

Jean thinks that Paul Hawken was the first of the group to learn about macrobiotics in about 1967, perhaps from little yellow book that he was given by Roger Hillyard, who was doing light shows in San Francisco at the time. "My memory says that we were pretty much off of drugs by then. As a group we were pretty disgusted with the whole 'flower child' movement of the late 1960's—the indiscriminate use of drugs

just to get as high as you could. We were also more cautious about the drugs that were available at that time, they were cut [diluted] with just about anything that came to hand. You couldn't be sure about the quality. So I would expect that we started with the exact diet as proposed by Ohsawa—brown rice for X number of weeks, gradually adding miso, shoyu, veges [veggies], etc. Alcohol was never a big deal with any of us, so I expect we just stopped. As to sugar, you know how hard that one is!! But, I expect we all tried hard. Very idealistic. I also think we were several months in to the diet—close to a year, before we left for Boston.” Continued. Address: Chatham, Massachusetts.

2920. Young, Jean Allison. 2011. Chronology of interests in macrobiotics and work with Erewhon. Part II (Interview). *SoyaScan Notes*. Feb. 10. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Continued: 1967 early summer—Jean arrives in Boston, Massachusetts. In the summer and fall of 1967 she works at Harvard University's Carpenter Center for Visual Arts as an assistant to the head of purchasing and accounts receivable.

1968 fall—She joins the macrobiotic community in Boston. From the fall of 1968 until the spring of 1970 she was one of the early employees at Erewhon Trading Co., Inc. Her work with Erewhon is described later.

She lived both at Gardner Road and on University Road, and elsewhere. She never lived “off campus.” “Being part of the ‘elite’ of the store, most of the time was spent at Gardner Rd. I moved to University Rd. to be closer to an impermanent lover of the time. At University Rd. I cooked the dinners for a while until I was asked to step down. I was trying to experiment with foods—trying to use standard macrobiotic ingredients to replicate items in the normal American diet, e.g. can you make strawberry ‘shortcake’ with ‘whip cream’ out of flours, rice and berries, etc. This didn't sit well with people who wanted only miso soup, rice and vegetables.

1970 spring—Jean leaves Erewhon and sets out on a trip around the world. Her biological father had left her \$3,000 as insurance. She did not know what to do with it but she wanted to go to Japan so she bought a ticket on a airplane. She left Boston, “I believe with Jim Gronemeyer (an off-site macrobiotic lover of the time), traveling through most of Europe, then Greece, Iran, Afghanistan, Pakistan, Kashmir, India, Thailand, Vietnam (where I tried to get to visit some macrobiotics living in the demilitarized zone but was turned back by the military), Hong Kong and then Japan. I taught a few cooking classes in Germany although since I was paying my own way, my time was my own. In addition, my two-months stay in India [which she found the most fascinating so far] included cooking and teaching at a hospital outside of Calcutta, with macrobiotic Joe Levine, for Indian patients that had been ‘given up’ by their local doctors as incurable.

Cooking and prep was done on the floor on top of pottery jars filled with cow dung. The cockroaches were as big as bats and they would hover just out of reach of the knife, sneaking in when you weren't looking! Good fun!”

By the time she reached Japan, she had run out of money. But she intended to land in Japan because she and Beverly Stiskin were best friends (and Nahum was a close friend)—and had been for at least several years in Boston. They had met in Boston through macrobiotics.

1970 Nov. to 1972 spring—Jean arrives in Tokyo, Japan with \$5 in her pocket. She knew the Stiskins were there. She called Nahum (in Kyoto) and asks him what she should do. He said, “I'm sending you a ticket.” She stays in Japan at the home of Nahum and Beverly Stiskin in Uzumasa (near *Kitano-jinja*—Kitano Shrine), west of Kyoto. Reuben Stiskin was a baby at the time. She pays her way by teaching English in Kyoto to Japanese, and she studies tea ceremony (with Bev) with a Japanese teacher. Michio Kushi wanted all his macrobiotic students to study Japanese culture and language. Jean learned a little Japanese—“enough to get around.” The Stiskins help support her financially, in part with a room in their home. When the Stiskins move to Tokyo, Jean moves with them. Nahum was writing a book on Shinto.

1972 spring—Jean leaves Tokyo, returns to California, stays with relatives, buys a car (1957 Ford Fairlane station wagon with a mattress in the back), and during that summer and fall (10 months) takes a slow, interesting trip across the United States by herself—seeing places such as the Grand Canyon, Yellowstone, Wounded Knee she had long wanted to see—and seeing how people lived. “It was important to me to know America.”

In Boston she moved in with two semi-macrobiotics in an alley off Beacon Street in a basement (not in a macrobiotic house; Woodie and his wife and their two children). When Woodie and his family move out, Jean keeps the place.

1973-1974—Martha Fielding (later associated with Shambhala Books) moves in with Jean.

1973 fall—Jean works for 2-3 years at the Center for International Affairs at Harvard University as a staff assistant; this center was the predecessor of the Kennedy School of Government.

1974 early—Jean meets her husband to be, Andrew P. (“Andy”) Young, who was not a macrobiotic and had no interest in it. He was deeply interested in Japanese food and loved sushi with raw fish. At that point Jean let go of her interest in macrobiotics.

1979 June 30—Jean Allison and Andrew P. Young are married. He goes to Tuck School of Business at Dartmouth College. In 1981 she completes her B.A. degree there—unfinished since San Francisco State days. She becomes a mother of two.

1981—They move (full time) to Chatham, Massachusetts (at the “elbow” of Cape Cod) where Andy starts his own

management consulting business. After several years he goes to work for the local bank. He is now a commercial loan officer. Address: Chatham, Massachusetts.

2921. Young, Jean Allison. 2011. Recollection of work with Erewhon in Boston in 1968-1969 (Interview). *SoyaScan Notes*. Feb. 10. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Jean was in Boston for about 10-12 months before she began to work for Erewhon. "I do remember that shortly after I arrived and moved in to Gardner Road, I experienced my first snowstorm, standing out in the street at night watching the flakes fall through the street light in my raincoat (the only coat I had)."

In the fall of 1968, Jean was asked to become the executive secretary for a small company named Erewhon Trading Company, Inc. In the more than 2½ years that she worked for Erewhon, all her energy and ability was called upon to help the company grow, and it did grow—at an amazing rate. Her main responsibility was to see that the president, the partners and the employees worked together efficiently and smoothly. Later, another part of her work was the lengthy negotiations required for the import and export of food products from Japan. This part of the work really sparked her imagination, as through these negotiations she began to notice a distinct difference between the "way of thinking" of the westerner and his oriental counterpart. This difference would later be one of the main reasons for her trip to and eventual settlement in Japan.

At Erewhon she was also responsible for the ordering of goods, billing, correspondence, and all of the general secretarial work that is necessary for the running of an efficient business. She also designed and implemented a workable bookkeeping system, and accounts receivable and payable system, and a filing system suited to the needs of the company.

In early 1968 she was elected assistant treasurer with check signing authority. As a member of the board, she was intimately involved with all decisions.

But Jean emphasizes: "Whatever you do, don't make my part large. It wasn't."

In Nov. 1968, when Erewhon moved up and across the street to its larger store at 342 Newbury St., Jean was one of six Erewhon employees Paul Hawken, Bruce Macdonald, Roger Hillyard, Jim Docker, Bill Tara, and Jean Allison. They all worked at the Erewhon retail store. Jean never worked at the previous store at 303-B Newbury St. (below street store). After the move, Bill soon left to start a macrobiotic center in Chicago, Illinois. Other people in the macrobiotic community in Boston at the time that Jean arrived were Susan and Roger Hillyard, Nahum and Beverly Stiskin, Jim Ledbetter and Jim Gronemeyer. She has no recollection of Martin Russell.

They knew they were going to do their first real mailing

of products available and prices to the people who had ordered from Erewhon in the smaller store. Evan Root and others had kept a list of names and addresses. Paul Hawken was an extremely dynamic, very charismatic, very intelligent natural leader. He probably has much the same qualities today as he did then. But charismatic leaders believe that they are absolutely right. After the new store closed each day (and sometimes when the store was not busy), all or most of the 5 original employees would meet in the office (off the back storeroom) where they talked about the issues of the day. As Paul said in an interview, it was a group of very energetic, very motivated people who were working for *no* money (only for their room and board).

Jean sees the same spirit in her own children today—the wish to do something that they really love. Jean, who is now retired, has again found something she loves to do, volunteering at a small local historical society, typing into a computer the text of old archival documents from the 1700s and 1800s. She finds it fascinating to just hold and read old documents. "It totally turns me on."

Paul Hawken is pretty tall. Bruce Macdonald was even taller. Bruce also had the beginnings of the charisma and leadership qualities that Paul had. If there was going to be a debate or argument, it was going to be between Bruce and Paul. Should we carry such and such a product? How do we know it really is organic? How do we know if the foods from Japan are produced either organically or without chemicals? When somebody asks you if a product is organic, do you say yes, or no, or I don't know for sure? Shall we price our products low to get them out to the people, or should we price them higher to reflect their higher quality and to enable us to expand this rapidly growing business so we can reach more people? These were all young people with no business experience. There were only two chairs and two desks in that office and it was quite small, so some people sat on desks or on the floor. In the summer, after a while, the group would move out of doors, where there was more room and warmth and fresh air.

The fourth person Jean recalls was Roger Hillyard. He was very quiet. He wasn't confrontational at all. He would wait for a place to break into the discussion and would state what he thought. He was sort of the settling influence between Bruce and Paul. Jean had an equal say. Jim Docker was expected to cover the front of the store; Jean does not recall his being in the backroom sessions. When Paul Hawken left for Japan (about March 1969), Bruce Macdonald took over as head of Erewhon. When Bruce was going to leave, Roger Hillyard was scheduled to take his place.

In early 1970, major changes in policy and management were made which Jean felt were incompatible with the original intentions of the still-small company. Address: Chatham, Massachusetts.

2922. Attune / Attune Foods (Website printout-part).

2011. www.usmillsinc.com/usmills/company_history.php
Retrieved Feb. 12.

• **Summary:** A news release stated that Attune Foods had acquired the Erewhon cereal brands. So we searched Google for: Attune Foods Erewhon

We find this website to be confusing. The large, bold color banner atop the home page says "Attune." Yet the URL, which is completely different, begins www.usmillsinc.com/ as shown above. Moreover the browser tab reads: "Erewhon History."

The page titled "Company History" states correctly that Erewhon was established in 1966 by two macrobiotic educators and was operated out of its initial storefront location on Boston's Newbury Street.

The next paragraph states: "1966-Erewhon founders establish the first Charter of Quality Standards for Natural Products." Note 1. We cannot imagine what this refers to.

Four paragraphs down we read: "1986-Erewhon acquires U.S. Mills. U.S. Mills is the new company name, and Erewhon is retained as a brand name."

"2009 Attune Foods acquires Erewhon, Uncle Sam, New Morning and Skinner's."

For more see Feb. 2011 interview with Rob Hurlbut, CEO of Attune Foods.

Note: Talk with Bruce Macdonald, one of the early and most important principals at Erewhon. 2011. March 2. Bruce is not aware that Erewhon ever established a "Charter of Quality Standards for Natural Products." If they ever did, it certainly was not in 1966, and certainly not before 1971. However Bruce is quite sure that Paul Hawken did something like that, but for Erewhon only, not long after he returned to the USA from Japan in Dec. 1969. Address: 535 Pacific Ave., 3rd Floor, San Francisco, California 94133. Phone: 1-800-641-4508.

2923. Hawken, Paul. 2011. Re: Comments on interview with Jean Allison (Feb. 10). Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 12. 1 p.

• **Summary:** Shurtleff e-mailed Paul Hawken: "Could I ask you a few questions that I missed last time we talked about the early history of Erewhon?"

Hawken replied: "By email, yes!"

Shurtleff replied: "I have never done interviews by e-mail and I think I'd rather not. I wanted to ask you about your time in San Francisco as an entrepreneur before you went to Boston and began work with Erewhon.

"Also, how you got interested in macrobiotics in San Francisco and why you decided to leave that exciting city for Boston.

"So instead I will enclose part of an interview I did this week with Jean Allison, who was one of the early employees at Erewhon and who knew and worked with you in San Francisco—only the part that relates to San Francisco.

"If you would like to comment on it in any way, I would be very grateful. Especially if you find any inaccuracies or disagree with any of it, or would like to add anything to it—which I will attribute to you."

Paul Hawken replied: "A few comments. when bill and jean were living at the firehouse, i was living in north beach and attending sf state [san francisco state college].

"i was not there dealing drugs.

"i/we were not doing a drug scene. that is a stereotype. we were interested in culture, theater, music, performance arts, religion.

"it sounds like people were hanging around for drugs. nonsense. drugs were there of course. just as they are everywhere in current society all the way to the white house, except they call it alcohol. but you wouldn't call the white house a drug scene, so please don't fall for that stereotype of what was happening, at least as far as i was concerned.

"the firehouse could seat maybe a 100+ but in the other part of the firehouse it could hold another 150 people on the dance floor.

"we were hiring big brother and the warlocks for \$50 a night. they weren't the grateful dead quite yet.

"the alley was 69 harriet street. it was memorialized by tom wolfe in electric koolaid acid test. it was where ken kesey held the acid graduation.

"i learned about macrobiotics from a film maker, ben van meter, in 1966.

"jean should speak for herself. she says "we" this and that, and she should say I.

"everyone had a different experience with cleaning up their diet. she describes it in a rather cartoon way. bill lost 80 lbs. in a relatively short time. i didn't lose a pound and didn't need to either, etc." Address: Mill Valley, California.

2924. Tara, Bill. 2011. Re: Creative work with music, dance and lights in San Francisco (1966-67) before starting work at Erewhon in Boston. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 13 and March 3. 2 p. Plus part of website printout: <http://rockarchaeology101.blogspot.com/2009/11/firehouse-3763-sacramento-street-san.html>. Printed Feb. 13.

• **Summary:** "... I signed the lease on the Firehouse (at 3737 Sacramento St., San Francisco) from a guy who built a small theatre on one side of the space for a Jewish youth theatre group. Myself (and George Eby) met at the Ashland Shakespeare Festival where we were part of the company. The plan was to open it as an experimental theatre venue. We had started to do readings in the upstairs and lived there along with Jean Allison, a theatre major at San Francisco State [College]. Paul Hawken had returned from the South as a photographer of the civil rights movement. Paul and I decided to start producing events at the Firehouse.

"We produced seven evening events that were part 'happening,' part music and dance. The first event was

February 1966 and continued till April of that year. I worked a little at the Matrix (the first Rock club in the city and did a little lighting work with Ray Anderson). George knew a few musicians so we created these crazy evenings. Paul worked out lighting. We featured Big Brother and the Holding Co., The Amazing Charlatans, the Sopwith Camel, Wildflower and The Great Society (Grace Slick's first band) as well as some folk and blues performers such as Jessie Fuller and Ale Xtrom.

“Ray Anderson and Elias Romero did light shows and film, we had actors, dancers and generally a crazy time. We had some of the first light shows in the city. We had to move out since the building was sold and was to be turned into a parking lot. The last event was called the Wreckers Ball. After moving out Paul Hawkins, Jean and I formed the Calliope Company. Our group also included Wally Gorell [see handbill for concert on 26 July 1966]. We had a warehouse South of Market [on Harriett St.] and Paul and I fitted it out and lived there as well as using it as a rehearsal space and a studio for the light shows. We produced several Rock Concert / Dances in the California Hall featuring the Dead and the Airplane [Grateful Dead, Jefferson Airplane]. One of these was October 31, 1966 and called the “Dance of Death” generally credited as being produced by Bob McKendrick—he was the money man. It was scheduled on the same night that Ken Kesey was trying to do the Acid Test Graduation and the Dead had signed a contract they couldn't break. The best version of this story is in *The Electric Kool-Aid Acid Test*, by Tom Wolfe.

“Paul was introduced to macrobiotics through a book by Ohsawa given to him by Roger Hillyard who was also doing light shows. Paul and I were both interested in Eastern philosophy and environmental issues. We started to experiment with diet and had fun doing it. Paul and I sought out sources in SF for miso etc. and started to meet some people who had studied with Michio Kushi in Boston. Renee Gremore (later Tara), Paul Petrofsky (founder [with Hy Lerner] of Baldwin Hills Bakery) and Evan Root (the first Erewhon worker). We invited Herman Aihara down to give a talk to a group of outrageous hippies in the warehouse backed by a huge American flag. Years later Herman would comment how he was first to teach the ‘hippies.’ Paul went to the East Coast to install a light show in Washington, DC, visited Boston, met Michio and Aveline, and told me that Michio was the real deal.

“I was just finishing a show I directed but within a few months, Jean, Wally and I had moved to Boston. Roger came later. Paul, Jean, Wally, Roger and I all ended up in the Erewhon crew.”

Note: Bill now lives in Scotland and has spent about 15 years in the UK since 1970. He lived for a while in Portugal. He was born and raised in Santa Cruz, California.

2925. Hurlbut, Rob. 2011. Attune Foods acquires the

Erewhon brand from U.S. Mills (Interview). *SoyaScan Notes*. Feb. 14. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Attune Foods completed the transaction with U.S. Mills on Dec. 11. Attune Foods bought four cereal brands from U.S. Mills; one other brand was sold to another company. But Attune Foods did not purchase or merge with U.S. Mills. Attune can now use the Erewhon brand on any food product they wish.

U.S. Mills is no longer in existence; they shut down on or before 31 Dec. 2010.

Rob founded Attune Foods in Oct. 2006. Their first product, Attune Probiotic Wellness Bar, was on the shelves of stores in Jan. 2007.

Rob grew up in Brookline, Massachusetts and graduated from Brookline High School, but he was not part of the macrobiotic community.

For many years U.S. Mills had their own Erewhon Crispy Brown Rice Cereal. Attune Foods began to sell the product with their name on it in about April 2010. It is the #1 product bearing the Erewhon brand today. All of the growth in the Erewhon cereal line of the past 4 years has been in the gluten-free products. Attune Foods' Erewhon Crispy Brown Rice Cereal is the leading gluten-free box cereal in the natural channel—according to SPINS. Attune Foods has 14 different products (SKUs) bearing the Erewhon brand—including Erewhon Corn Flakes, Erewhon Crispy Brown Rice with Mixed Berries, Cocoa Crispy Brown Rice, etc.

Color photos show the front panel of (1) The original Attune Foods Erewhon Crispy Brown Rice Cereal. (2) The new front box design, which will be on store shelves by March 2011.

Attune Foods makes products for people who have digestive problems. Professionals in the field (gastro-intestinal doctors, registered dietitians, naturopaths, etc.) generally agree that the best way to address digestive issues is through dietary change. Even people at the American Gastro-Enterological Association, who deal with many severe digestive diseases (such as constipation, irregularity, IBS {Irritable Bowel Syndrome} and IBD {Inflammatory Bowel Disease}) have no standard prescription, but they generally prescribe dietary changes or the addition of probiotics to the diet. Erewhon Crispy Brown Rice Cereal approaches the problem in three ways: It (1) Adds fiber to the diet by adding brown rice. (2) Adds probiotics to make sure that the gut flora are in balance. (3) Avoids allergens by eliminating gluten and other allergens that may exist in conventional food channels. Uncle Sam cereal is really about high fiber; it is rolled wheat flake and flaxseed, which delivers over 10 grams of fiber per serving without any artificial ingredients. All the Erewhon cereals are organically grown.

Attune Foods prefers to do ethnographic research instead of focus groups. So company representatives meet

with Erewhon consumers, spend time with them in their kitchens, look in their cupboards, find out who these people are—so that when they talk about the product and think about new Erewhon products, that they are completely consistent with the values of those consumers. Erewhon consumers are the “cultural creatives”—and have been for the past 50 years. Many people have said that once they started to use Erewhon cereal their digestive problems decreased. They have many testimonials saying that eating one of these products has had a major life-changing effect.

Americans get, on average, 17 grams of fiber per day in their diet, but they should get closer to 30 grams. Fiber is the nutrient that is in shortest supply in the American diet relative to the Recommended Daily Allowance. Address: CEO and founder, Attune Foods, 535 Pacific Ave., 3rd Floor, San Francisco, California 94133. Phone: 415-486-2102.

2926. Wolfgang’s Vault—Where live music lives. 2011. San Francisco Calliope Company presents (Website printout—part). www.wolfgangsvault.com/tour-show/san-francisco-calliope-company-presents.html Retrieved Feb. 14.

• **Summary:** This handbill (4¼ by 11 inches) is for a concert to be held on Thursday, July 28, 1966 at California Hall in San Francisco. Billed by the website as “Big Brother and the Holding Company,” it is being sold for \$814. The handbill has green print on a yellow background. The largest word is “Thursday and the next largest, just below it is “California Hall” (at Polk and Turk).

From left to right: (1) A circular logo (in engraving style) with a mythical animal (resembling an antelope) inside, biting its right rear ankle. The text around the perimeter: “The San Francisco Calliope Company’s Greatest Caper. Bilbo’s Birthday Party.”

(2) A vertical list of 8 lines: Big Brother and the Holding Company. The Great Society. The Amazing Charlatans. Electronic Sound. Lights by Romero [Elias Romero Show]. Movies by Anderson. Gifts—Trips—Love. Advance tickets \$2.00.

(3) San Francisco Calliope Company Logo. Their address is: 248 Sixth St.

(4) Ticket outlets: San Francisco: City Lights [bookstore]. Psychedelic Shop. Ms Records. Sausalito: Tides Rock Shop. Berkeley: Shakespeare & Company.

A description of the handbill by the website states: “Concert promoters created handbill versions of many of their posters and used them as sidewalk handouts and dashboard fliers to promote upcoming shows. Many of the handbills are double-sided, with poster art on one side and a calendar of upcoming shows on the other. These handbills represent an important element of rock concert history because they were hands-on marketing tools that united promoter and patron.”

Note 1. California Hall (on Polk Street) was being used as a venue for rock music by 9 April 1966, when The

Jefferson Airplane opened there (Source: Chronology of San Francisco Rock—1965-1969; <http://www.sfmuseum.org/hist1/rock.html>).

Note 2. E-mail from Wally Gorell. 2011. March 14—in response to the question: “Did you design this handbill?” “I’m embarrassed to say I did—terrible lettering.” Address: San Francisco, California.

2927. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline Kushi, and the Boston macrobiotic scene. Part I. Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p. • **Summary:** “I was a minor player in the Erewhon story, but I lived in Los Angeles (L.A.) and Boston and experienced a little of its life, especially towards the end.

“In September of 1967 I arrived in Boston, age 19, at 29 University Road, the Kushis’ first study house (aside from their own home). My then boyfriend was ill and wanted to try macrobiotics. We had been living in Fairfax, California, when a friend passing through during the summer left behind a copy of *Zen Macrobiotics*. When the doctors could find nothing wrong with him, but he was still sick, we went first to the Zen Macrobiotic Restaurant in L.A. on Hollywood Blvd. near Western, which was run by a very nice Japanese man and his family. I don’t remember their family name. It was there for many years and was visited by John Lennon, among others. When we went to Boston I thought we were going to some kind of clinic. I had no interest in macrobiotics myself, and continued to eat my usual diet, which was pretty bad at the time.

“At 29 University Road, we had a room on the third floor next to Matt and Richard Sandler, and in another room, Wally Gorrel. Also in the house were Nahum Stiskin, Bill and Rene Tara, Rebecca Dubawsky, John Palumbo, Bob White and his wife (a black and white couple, unusual for that time), John Claude Ducet, a French Canadian who made the benches and tables for the first Sanae restaurant at 272B Newbury St., Steve Helfner, and Mrs. Ninomiya and her son, who had a separate little apartment or room and did not eat with the rest of us. She made ‘happy coats’ a kind of short kimono to sell to whoever would buy them. There were several others there whose names I do not remember.

“Michio would often come over during the day to check on things, and on people (a few had health issues) and sometimes would give a lecture in the evening in the living room. The Kushis’ home at 216 Gardner Road was less than a mile away.

“At the beginning I didn’t know I was expected to eat the same food as the rest of the household until Steve Helfner asked me one day not to heat up the canned soup, containing meat, that I was going to eat, in the pots used for the rest of the cooking. I think I had a frosted cake in the fridge, too. I don’t know if everyone was being polite or just didn’t take the time to explain to me how things worked there. I was kind of clueless. Anyway, I wouldn’t eat most of

the food served at dinner, for a good while, except the rice and beans, as everything looked so unfamiliar. Michio made numerous dietary recommendations for my friend, that I had to cook specially for about three months. After that period he was well again. We split up and I went to work at Sanae restaurant with Evan Root and Peggy Taylor early in 1968.

“My first impression of Michio, besides that he seemed very cordial, kind, humorous and good-natured, was that this man knows something about life. I didn’t know what though. A few lectures began to enlighten me. It was obvious that he had a different level of understanding. I went to the Arlington St. church lectures also.

“At Sanae, I helped with prepping the vegetables and fruits during the day, along with Peggy, and waitressed in the evenings. Later Rosemary Traill, future sister-in-law of Richard Young, waitressed there also, as did others from time to time. Richard Young worked at a small flower shop just a few blocks away, and would drop by the restaurant during the day sometimes. He was a friend of Peggy and sisters Rosemary and Maureen Traill. He would later marry Maureen Traill after she and Bruce McDonald married and divorced. During the year I worked at Sanae, Marty Russell and then Billy Anton also worked there.

“Evan was a very good restaurant cook, a good boss, and was also very good with the customers. Responsible, solid, earthy, dependable, funny, and I respected him. The customers liked him, and a lot of fellows in the community looked up to him. He was a very good ‘root’ for the macrobiotic movement in Boston. I remember him taking Michio home late at night once, after lecture, on the back of his motorcycle. Michio looked hilarious in a motorcycle helmet. Eventually Richard Sandler took over Evan’s job.

“I moved to the Kushis’ home at 216 Gardner Road, doing the housekeeping and handling minor bookkeeping. Among those who lived there during the year or so I was there were Judy Flohr, who later married Denny Waxman, Susan Sims, who was married to Duncan Sims and moved to Canada, Jim Ledbetter, who made some very strange food in the downstairs kitchen of the 3-story home which Aveline referred to as ‘dogfood,’ Anne Riegal, now the wife of Ron Kotzsch, Eric Utne, Peggy Winter and, of course, Michio and Aveline and their children. Shizuko Yamamoto visited once or twice.

“After about a year I went out to Los Angeles, where Aveline was now living temporarily, to study cooking with her. I intended to stay about six weeks, but ended up staying seven years. I arrived in May 1970 at the 7511 Franklin St. home that Aveline had rented. During this summer Jimmy and Susan Silver and their toddler Rachel lived there, as well as Bruce and Maureen McDonald and their baby daughter, I, Diane Brewer and a few others.

“Aveline would prepare lunches for the Erewhon crew every morning and deliver them to the retail store on Beverly Blvd. Diane Brewer and I would have to prepare

and deliver special meals to a rather tyrannical old woman in a wheelchair who seemed permanently dissatisfied with everything.

“Sometimes Aveline would ask one or more of us to accompany her to Little Tokyo, where she would take her youngest child to get treated by a Japanese doctor for a leg injury, the result of a fall on the stairs in Boston. Her other children remained in Boston with Michio. Once the police stopped us on the freeway because Aveline was driving too slowly. Years later, she said that she had failed her driving test or exam (I’m not sure which) three times. After the third try the examiner told her that if she paid him a certain amount of money (\$75 I think) he would give her a passing mark. She paid.” Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

2928. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part II). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• **Summary:** Continued: “Michio came out to visit once, during the summer I was there, perhaps for meetings about Erewhon. He gave a lecture in the living room at 7511 Franklin also. I remember a cat, perched on the mantelpiece behind the blackboard, stretching its neck around to look at Michio writing something on the board, and everyone laughed. Michio’s immediate response—‘Even cat wants to study, why not man?’

“Another memory from that summer—Aveline and I sitting in the back yard and she telling me ‘Michio always thinks (of) my happiness.’

“Another—scrubbing the new warehouse floor, catty corner from the retail store, on my hands and knees. My first experience working for Erewhon.

“Around September I think, Aveline rented a huge mansion up the street at 7357 Franklin Ave. and we all moved in. Jimmy and Susan Silver, Bruce and Maureen McDonald, Tom DeSilva and his two little boys Joe and Patrick, and many others. The house had once been owned by film star Ruby Keeler, and her name was still there, engraved on the metal mailbox. Ozzie and Harriet lived across the street. Gloria Swanson called once to speak to Aveline and was furious with me because I didn’t know where Aveline was. She’d gone out.

“Hollywood was always more or less present in this Hollywood house. The landlady had been in show business in earlier days in some way and was always willing to let the various film companies shoot films in the front yard or in the house (they paid well I believe). Several were shot during the couple of years I was there. This was always happening in L.A. and you would often see a film shoot taking place on this or that street as you drove by.

“Aveline returned to Boston late that autumn, I think, and left me in charge of the house. I wasn’t a particularly

good cook, by any means, but tried my best, and others cooked also.

“Many people stayed at that house for long or short periods of time. At one time there were nearly 60 people, staying in every nook and cranny, the attic, the basement, over the garage, in the cleaned-out tool shed, everywhere. I occupied a large closet for a while. It was all rather hippie-ish, without the drugs, though there might have been one now and then who took drugs, but certainly not openly that I ever knew about. But many had taken drugs in the past.

“Ron and Iona Teeguarden were there, during which time I think Iona wrote a lovely cookbook. John Fountain was a frequent dinner guest. John Deming was there briefly, and there was much interest in macrobiotics and always many people. Jacques and Yvette de Langre [DeLangre] lived a few blocks away, and held ‘Soba Night’ on Tuesdays. Yvette was a very good cook, and Jacques was a happy, upbeat and friendly personality in the community. He had a photography studio close by on Sunset Blvd., a few blocks away from his home, and once took a number of photos of the Franklin St. house and people there. Mrs. Durkin, the landlady, dropped by from time to time to check on things, a little nervous I think about so many people living there— young, hippie types. She was a kind woman, but made me ask a 16 year old girl to leave the house, worried about having an underage person living there. And also a nice black fellow because she thought he would draw too much attention from the wealthy neighbors. Michio came out from time to time and gave lectures in the very large library, and consultations and sometimes a cooking class. The lectures were very well attended. During one lecture, he levitated (I wouldn’t believe this until I saw it with my own eyes). This was the only time I ever heard him ask the audience to be very quiet as he had to ‘concentrate.’ Usually there were babies making noises in the back of the room or children playing in the hall outside the sliding doors. Michio told the audience that he had been levitating recently to cure the arrogance of some of the teachers, presumably in Boston as L.A. didn’t really have any. Later on, he said he stopped levitating because people were giving it too much attention, over his dietary teachings.

“After a couple of years I left the house in the hands of Roy and Mariko Stevens, and went to work as a secretary for Erewhon in the warehouse in Culver City.

“I think Jim Gronemeyer was vice president when I got there around late 1972 or early 1973, not sure when. I remember him coming in wearing his tennis clothes and carrying his tennis racket, quite late in the morning. Not sure if he took his responsibilities seriously. Byron Jennings took over his job at some point. I don’t know if Gronemeyer left of his own accord, or was fired. Byron was very intense, very yang, but a good fellow, strong, hard-working and with a good sense of humor. He cared about the job and the company. Very brusque and took no b.s. from anybody. But I

liked and respected him. He wasn’t a slacker.

“Loren Spector was there also, in upper management. He had previously run one of the Kushis’ study houses in Boston. He was also intense, also hard-working, and also seemed to care very much about the job and the company. He and Byron seemed to work well together and both seemed together, intelligent and focused.

“I typed letters and answered the phone, and later took orders, so I have no idea what the financial condition of the company was, or the state of operations. But all seemed well. Jeff Flasher ran the warehouse in the back. He was very popular, smart and worked well with people.

“It was kind of a hippie operation, except for Eddie ____, the accountant, another good guy, who was also very focused and worked hard.

“I remember Paul Hawken came out from Boston, for meetings I suppose, and to have a look at things, and arrived at the warehouse at 6 a.m. before anyone was there, and found the front door unlocked. Someone had forgotten to lock it. I’m not sure, but I had the feeling that relations between Erewhon Boston and Erewhon L.A. were not as cordial as they might have been. At that time anyway. But as I said, I don’t really know much about what went on.

“Once, as I left the building at the end of the day, I walked into the middle of a film shoot taking place on the street. I had no idea that anyone was filming the front of the warehouse, and inadvertently disrupted the filming.” Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

2929. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part III). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• **Summary:** Continued: “After a year I left Erewhon L.A., and one day Tom De Silva suggested that I open a macro restaurant. So I did. I found some backers and bought a little hole in the wall restaurant at 525½ Fairfax Avenue, a few blocks from Erewhon. It was only about 25 seats. The menu was very basic, as was the decor (rice, beans, veggies, soups, salad, desserts, tempura, stirfries) but there was no lack of customers. People were hungry for natural foods. Being L.A. we were also visited by a number of celebrities and actors, including John Lennon and Governor Jerry Brown who visited a half dozen times at least, and once conducted an interview there during dinner.

“Three years later I sold the restaurant to a mother and daughter team and moved back to Boston. There I lived and worked at 62 Buckminster Road, which was now the location of the Kushis’ home. I arrived there in September 1977. Laura Knudson, who later married New Hampshire teacher Blake Gould, and I shared the office work and the cooking. Olivia Oredson was also there.

“Aveline had been searching and searching for a location

in which to open the Kushi Institute. Finally she found a third floor space (three rooms) in a warehouse at 17 Station St., less than a mile from their home. Michio and Aveline asked Olivia and me to manage it, using a \$20,000 loan from Sandy Pukel. The opening ceremonies took place on September 25th (I think) 1978. As there was no cooking class room yet, Aveline cooked all the delicacies for the opening at Buckminster Road (which was quite a job) and then had them all transported down to Station St. and carried up the stairs (there was no elevator) to the third floor. It was a very happy day for Michio and Aveline.

“A year later, around August or September of 1979, Michio asked me to come to a meeting at Buckminster Road. Michio had decided to start a ‘Human Relations Board’ (HRB) at the Erewhon warehouse in Cambridge to help the situation there. I believe there were union rumblings [at Erewhon] at the time, though I don’t remember how far along things were.

“The HRB was to be composed of Marty Roth, Lewis Legon, and me. We three and Michio were seated on the floor, in front of the couch in the living room, around a coffee table (Michio always preferred sitting Japanese style) and Michio went over the two or three pages outlining the HRB’s responsibilities. So, in the course of one weekend, I went from working at the Kushi Institute in which I’d been totally absorbed, to walking into a situation I knew nothing about. I’d never worked at Erewhon in Boston, and my job at the L.A. warehouse had been secretarial.

“I don’t really know why he wanted me included in this Human Relations Board. I think he was pleased with the way the Kushi Institute was going at the time. (I was the administrative director and Olivia Oredson was the educational director, but those were big titles for what was still a two-bit operation). For the first couple of weeks at Erewhon I had to go to the Kushi Institute each evening after working all day at Erewhon, to explain my job to my replacement, Steve Gagne.

“In this new job, I was unsure at first, uncertain where to begin, because I had no knowledge of the situation. But it didn’t take too long to get the general picture. My memories of the time I spent in the HRB are as follows:

“There was heavy tension between Jeff Flasher, who was now president of Erewhon, and Marty Roth. I do not know the reason for it, but it was palpable on Jeff’s side. I don’t think Jeff supported the HRB. He wasn’t at the meeting at Buckminster Road, or chose not to attend, though presumably Michio had informed him beforehand.

“Lewis, Marty and I worked well together, and might have been able to make a significant improvement in the company had we had Jeff’s support. But I think he felt very threatened by the HRB, particularly by Marty.

“Instead of handling what we were supposed to handle, Jeff had Marty and I handle union negotiations, along with Evan Root, who was then vice president.

“Before the union negotiations began, Evan seemed a little unsure of his position, and didn’t seem to have a niche, or much to do. At some point he said he was staying for the money. He added a solid feeling to the company, but his talents were not utilized, I think, until union negotiations began.

“The company wasn’t unified. There was an ‘us and them’ feeling between the truckers and the production floor employees, on the one hand, and the managers and ‘suits’ on the second floor. At least there was this feeling on the part of the former. So it was a perfect environment for the union organizers to take hold, and as I found out, these were not the noble union organizers one thinks of as saving the day for the down-trodden employees. They were out for blood.

“I remember being astonished by the woman from the local union who was coaching and advising the employees during our evening meetings. She seemed to be *extremely* hostile to put it mildly. Excitable, ready for a fight. The employees totally distrusted us, and were very into accusing. I think much of this was fostered by the union organizers. Many of the employees were victims in a way, somewhat brain-washed by the union organizers.

“Walking past the Arlington St. Church one weekend, someone outside handed me a flyer and encouraged me to come in and listen to Caesar Chavez speak. I thought well of him at the time from the little I knew about him. However, the incredibly vile things he said during that speech shocked me. I never respected him after that. Had there been a tv crew or microphone there, I think the speech would have been completely different. He may not have realized that he wasn’t speaking only to hard core union sympathizers, but also to members of the general public.

“That experience and the experience of being in on the union negotiations at Erewhon, completely changed my formerly rather benign and supportive views about unions and union organizers. Not very honorable people from the little I saw.” (Continued). Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

2930. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part IV). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• **Summary:** Continued: “I still have my notes, from the three or four months I worked at the Erewhon warehouse in Cambridge in 1979, for a meeting with Michio. Excerpts: ‘Both Lewis and Marty are paranoid about Jeff Flasher, in part justifiable, due to the emotional state and suppressed tension of Jeff, and a few incidents that happened.’ (Can no longer recall what those were). ‘Jeff put up a brick wall against the HRB, though he likes me personally I think, and I think he also likes Lewis, so the administration and the HRB are divided. Can’t work under this. Must be unified, or at least not hostile. But Jeff feels threatened. Hands of HRB are

tied. Jeff gave Marty and me union negotiations to deal with, along with Evan.”

“The HRB has had two different proposals for its purpose, one from you (meaning MK) and one from Jeff. The result is confusion, an uncomfortable situation and stagnation.”

“Erewhon needs yang—clear, just policies, good systems and accountability to a yang source. Erewhon’s systems and structures not orderly. The warehouse is not clean. The company needs to follow American-style business logic to succeed. Some of the employees need someone firm to tell them when they’re really out of line.”

“Besides firm authority, they also need some understanding. The employees are hungry for support (many of them) and encouragement. Problems: no one seemed to listen to them, or cared when they listened, prior to union negotiations. No one communicated the company’s side when suggestions were turned down. There seems to be no one (in authority) who cares about them, everyone is busy with other things. Need a channel for their ideas and some practical utilization of their ideas, and communication about why, when not used.’ (I remember thinking that upper management, in general, was not heartless, just so very focused on the future that they didn’t give enough attention to the present, to the employees).

“Jeff now tightening very much on the HRB and a few of the managers, but mostly the HRB. No one knows or understands what we are doing. We don’t know our limits and freedoms.’ Also, ‘Not enough fellowship. Time is crowded. Most of my time is spent keeping the peace between HRB and Jeff, union correspondence and communication.”

“The warehouse also needs yin, improvements to the dining room, better cafeteria food, little parties, socializing, etc.’ I suggested that Michio think about all of this, and then discuss it with us before he left for Europe, for a seminar tour.

“Key points

“1. Straighten out Jeff and Marty’s relationship.

“2. Straighten out Jeff and HRB’s relationship.

“3. Clarify in Jeff’s presence our purpose and function.

“4. Straighten out where there is overlap, and how to handle.”

“The only way the situation would have been fixable, in my opinion, would have been if Jeff had used the talent that was already on board in the following way. Of course, hindsight is 20/20 they say.

“(1) If Marty Roth had been made operations manager, the company would. have undergone a number of much-needed improvements. Marty was very smart, capable, somewhat experience (I believe he learned a lot about business management from his father), had good sense and good suggestions, and management ability. He was capable of making tough decisions, if necessary. But he was

relatively powerless in the position he was in, given Jeff’s attitude and the change in the purpose of the HRB.

“(2) If Lewis Legon had been empowered to deal with all employee issues, he would have gone to bat for them, but in a way fair to the company, as he could see both sides. This would have helped morale, and taken some of the wind out of the sails of the union organizers. Lewis was capable, smart, and very good natured. He was a great asset to the company in my opinion, and Marty could have been as well.

“(3) While Evan was less willing to consider the employees side as much, he was a good company man. ‘Into protecting the interests of the company. Sees certain sides no one else thinks of. Good at certain administrative duties, like security, benefits, complicated work dealing with outsiders. Very good at representing the company in matters other than financial, though (at that time) lacking in expressing interest or concern for people’s needs.’ He could have continued to take some of the load off Jeff’s shoulders.

“(4) In addition to those three, who were already working at Erewhon, I believe the company need a different person in the position of comptroller, for a number of reasons.

“With those four players, the major problems could have been turned into manageable challenges.

“Michio and Aveline were not at Erewhon much, at least not during those few months I worked at the warehouse, except for a couple of times. I remember both of them attending a meeting we had with one of the lawyers who was advising us on some aspect of the union negotiations. The lawyer had been speaking at length when suddenly Michio began to snore softly. He had fallen asleep, sitting up perfectly straight (eyes closed) on a couch between Aveline and me. Aveline bent forward, looked over at me with a comical expression, repressing a laugh. Evan looked over at Michio and said ‘let him sleep’ and turned his attention back to the lawyer. Aveline dug her elbow into Michio’s side. I wondered what the lawyer thought.

“The lawyers were expensive, one older male, and one younger female. Evan said Erewhon was probably paying for her training (through this experience of helping to handle Erewhon’s union negotiations). But then that was true of many of Erewhon’s employees and managers. Eventually the negotiations went to federal mediation. The mediator was a little surprised, I think, at the company’s greenness and lack of sophistication. Anyway, I left after three or four months feeling that the situation wasn’t fixable, or at least that there was no way I could help to make it better under the current circumstances.” Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

2931. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part V). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• **Summary:** Continued: “I think Erewhon failed for a variety of reasons, not just one thing, but the two most important reasons were that: (1) There was too much youth in management. There were no older, riper, mature heads to steady things. (2) There was almost no one in management who had business skills and training, certainly not at the level and of the type that Erewhon needed at that stage of its growth.

“There was an absence of older, experienced and qualified people managing all of Michio and Aveline’s enterprises and organizations. They were mostly always young and unqualified for the positions they held (including me and including, sometimes, Michio and Aveline’s children). It was the ‘Peter Principle’ [“In a hierarchy every employee tends to rise to his level of incompetence.” “Members are promoted so long as they work competently. Sooner or later they are promoted to a position at which they are no longer competent”]. If you did well in one thing (and sometimes a person was selected even without that slim qualification) you were given more to handle, often much more, often beyond your capabilities.

“So almost everyone was out of their depth, in all of their enterprises. Most everyone was learning on the job, finding their way, with only a very few exceptions, whether in L.A. or Boston. This was also true of Michio and Aveline, but they were not usually involved in the day-to-day management of their businesses. (And they had the additional difficulty of dealing with a different culture, ways of doing things, different language, etc.) They also had so many enterprises going at the same time, which resulted in them giving only a little attention to each, in between travelling and teaching, both abroad and at home.

“Michio and Aveline were inexperienced and unfamiliar with what they were dealing with at Erewhon, and weren’t there often anyway, and wouldn’t have always known what to do if they were. Michio’s success at Takashimaya in NYC in earlier days didn’t translate into success at Erewhon.

“The seventies and eighties were a time when things were developing fast. There was so much interest in macrobiotics or, at least, in natural foods. I don’t think Michio and Aveline, or anyone else, thought it would diminish. Many problems were seen just as difficulties on the way up the mountain to further development and success. Michio and Aveline both had an enormous capacity to remain unperturbed by calamity, at least until it was too late.

“Michio’s lawyer, Morris Kirsner, had a strong influence on Michio and Aveline. He was a very good and trustworthy man, and very protective of the Kushis, but I think his outlook and advice was often too protective, too strict and unyielding, and thus at odds with the more laid back and informal approach of many of the Kushi managers and employees, and even of Michio and Aveline themselves, who were almost always casual and informal. So the two sides didn’t jive, they were both rather extreme, and there wasn’t a

lot of middle ground.

“Other reasons include:

“–The fact that so much money was lost to the law firm to handle the union negotiations. In effect, the union organizers helped to lose all of the jobs of the people they were supposedly trying to help, because the company went into Chapter 11 bankruptcy and was sold. But the union may not have gained a foothold, had management listened and cared more.

“–The fact that so much money was lost to upper level management and other employees who, in my opinion, were taking too high salaries. I doubt if most of them were able to command such salaries at wherever they worked after they left Erewhon. Though some were talented, not all were quite the hotshots some thought they were. Somebody should have put a cap on the salaries. I do not believe Michio and Aveline were involved in this. If they were, I very much doubt that they had any accurate frame of reference for what they were agreeing to. (Often the case.) Aveline didn’t handle money well (she handled it quite badly) and Michio didn’t handle it at all. But more than a few Erewhonians in the offices on the second floor seemed to be living rather high on the hog.

“–Too much money was lost to Tony Harnett of Bread and Circus. Though Richard Young was a good man, he may have been practically giving the goods away in his job as salesman. I do not know if this is definitely true, but I heard something of the sort during the time I worked at the warehouse. He should have been reined in, fast.

“–When the decision was taken to carry dairy foods, meat, etc. to ‘remain competitive with other distributors’ that change in direction changed the heart and soul of Erewhon, and its integrity and purpose, on some level at least. Michio would only have made such a decision if presented to him in a very positive light as the only way to go. I think one must look at all this from the Kushis’ perspective as well. They were always engulfed in a swirl of opinions, pro and con, on many matters, and often didn’t know who was right or who to believe. They were too busy and overloaded as well. They were also dealing, a lot of the time, with many young and inexperienced people, some of whom were rather full of themselves, had all the answers, knew all the solutions, or so they thought. More than a few of them should have been very grateful that they were employed by the Kushi organizations and businesses, as they wouldn’t have had a chance at getting similar positions anywhere else. People also often left on the spur of the moment, and several people stole money or awarded themselves ‘bonuses’ without the Kushis’ knowledge, until after the fact (and those are just the ones I know about—probably there are some that were never known to anyone else). Riding these rapids, and bumping along in the turbulence, Michio and Aveline Kushi tried to stay afloat. They both had their faults, most certainly, and made their share of mistakes, but so did their employees and associates. That should be remembered and taken into

account.

“—Lastly I think there was another financial drain on the company. Jeff Flasher told me he’d taken a \$10,000 loan from Erewhon, during the months I was at the warehouse. I wonder if there were other ‘loans’ after I left. I wonder why Tom Williams, the comptroller, disappeared.” Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

2932. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part VI). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• **Summary:** Continued: “Given all of the above I suppose it was inevitable that Erewhon should fall.

“Many people would have had difficulty filling the shoes of president. Not an easy job. Probably no one, among the community of friends and associates that Michio and Aveline knew, and from whom they would have selected a president, had the experience or training to handle the job. And most anyone would have had some successes, and also made some mistakes. However, if Tom DeSilva or Evan Root had been president of Erewhon, I don’t think either of them would have tolerated too-high salaries, too-low profit margins, or hired Tom Williams as comptroller. Or taken out \$10,000 loans from the company.

“After the collapse of Erewhon, Michio once said that if ever he began a food company again, he would make it a very simple operation, selling grains, beans, sea vegetables, Condiments, miso, soy sauce, noodles, etc. of very good quality, rather than the hundreds of items (thousands I think) that Erewhon carried before it died.

“So, about 12 years later (in about 1994), I was very disappointed and puzzled when he began KFC–Kushi Food Corp. And not sorry when it folded. Michio often had a short memory.

Note: The company was originally named “Kushi Macrobiotic Corporation” (KMC). It was listed on Nasdaq as KMAC as early as 7 Nov. 1995 and as late as 23 Aug. 1996. But by Feb. 1996 it had been renamed (probably for wider appeal) to “Kushi Natural Foods Corporation.” On 26 Sept. 1996 its merger with American Phoenix Group, Inc. was completed.

“When I met the CEO that Michio and Fred Sternau selected to run the company, I was stunned. I mentioned my misgivings firmly to Michio and Fred, separately, when I next saw them. They both seemed strangely casual and not too concerned about it, and didn’t seem to realize the huge impact this person would have on the company.

“One final note: In all the years I worked for Michio and Aveline and in all the time I lived at their home, I never heard either of them say one word that could be construed as anti-semitic. In fact, there were so many Jewish people working for them in their various enterprises and organizations, that I remember the Kushis being criticized

for having too many Jewish people running things. Michio’s secretary for several years, Donna Cowan, was also Jewish. Michio’s lawyer for several decades, Morris Kirsner, was Jewish. And many students and employees were Jewish or half Jewish. Michio seemed too evolved to carry around prejudice of any kind. He was, and is, a great friend of humanity. All humanity.” Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

2933. Root, Evan. 2011. Re: History of Erewhon from Aug. 1967 to Nov. 1968. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 17—in reply to inquiry from William Shurtleff. 1 p.

• **Summary:** “This is my recollection, not perfect, I’m sure.

“In August of 1967, there was an understanding between Paul Hawken, the Kushis, and Evan Root that Paul would take over the management of Erewhon from Evan Root. However, Paul needed to return to San Francisco to wind up his affairs there, pack and return. This would take about a month or perhaps a bit more.

“Paul and Evan took this trip to SF together via ‘drive-away’ car, stopping at various macrobiotic friendly stops along the way. Evan gave ‘lectures’ and cooking classes, and Paul helped out as well as continued to soak up everything he could as preparation for his next step.

“Paul, Bill Tara, Rene, and, I think Jean, lived in a warehouse in San Francisco which they had converted to living quarters. It was quite unique. I gave a MB [macrobiotic] class there which about 30 people attended, Jean and Ty Smith among them.

“The whole trip back and forth took a month or more, so we returned to Boston in late September, 1967. During our absence, Martin Russell, I think, was the main store keeper holding the place for Paul’s return.

“During the next several years, several people from that SF warehouse scene started arriving in Boston, Bill Tara and his then girlfriend (soon to be wife) Rene, Jean, Ty, in particular.

“In my opinion, and I could be wrong, Jean probably signed on to Erewhon one year later than she recalls. The reason I think this is that the first time I met her was in SF in Sept. of 1967. If she arrived in Boston, as stated in #3, in the early summer of 1967, she would have had to return to SF for me to initially meet her there. I suppose that is possible, though she would have had to leave her employment at Harvard to do so. If, however, she arrived in the early summer of 1968 and started at Erewhon in September of that year, then it all makes sense.” Address: Ashland, Massachusetts.

2934. Silver, Jimmy. 2011. Re: Erewhon and San Francisco rock music. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 17. 1 p.

• **Summary:** Jimmy and his wife, Susan, arrived in Boston

in December 1970. “The Erewhon store was first in a little basement space further down Newbury Street [at 303-B Newbury] from Massachusetts Ave. and on the opposite side of the street from the bigger store [at 342 Newbury St.] that succeeded it (the original space became Tao Books and then Redwing Books).

“Once the new store was built, as I recall Jim Gronemeyer was one of the first managers and was succeeded by Eric Utne. I was sent over from the warehouse to keep an eye on Eric for a while, as he was sort of an unknown quantity who was probably chosen by Michio Kushi for the job, for some unknown reason. At least that is my hazy recollection.

“Roger Hillyard and Ben Van Meter’s company [in San Francisco] was called the North American Ibis Alchemical Company [NAIAC] and they appear on many dance posters from that era. Roger then became president of a synthesizer company for a while.

“The North American Ibis Alchemical Company put on light shows and provided the ‘atmosphere’ at many, many of the rock concerts of that era. If you check out the posters for the Fillmore, Avalon and other venues, down at the bottom or somewhere in the body, you will find NAIAC on many of them. I would venture to say that they were THE light show provider of that time.”

Note: NAIAC existed by 17 March 1967; they folded in 1968 and their kit was sold off, Brotherhood of Light buying 12 carousels off of Ben. One website says of them: “possibly the best lightshow name... EVER.”

I remember Marty Russell. Very sweet little guy, walked with a limp and had vitiligo—the skin on his face and neck was discolored brownish and pink. He was married to the oldest of the Coates sisters, Ronnie. I think he died a few years ago, but I’m not certain. The other Coates sisters, Dora and Judy, married Paul Hawken and John Deming respectively. Dora was also married to Richard Young for a while, I believe. There may have been a fourth Coates sister, not in the macro scene—I’m not sure. Note: Sarah Coates and Nancy Coates were not in the macro scene.

“I mainly worked at the warehouse, costing out the import shipments. I sat... at a big desk that had been moved out onto the landing outside the door into the offices. As I recall the offices were on the top floor, the fourth floor, so it was a walk up four flights of stairs and there was my desk, facing the wall outside the door. Paul had the desk moved out there for me—the offices were tight for room but it always seemed kind of personal too.

“However, I was, for a while, sent to ‘work’ at the store and keep an eye on Eric Utne. Eric was pretty loose, so it was fun in a way, although he liked to do all these things that I thought were somehow not what the higher-ups had in mind, like going over to the Prudential Center where they had a sauna and steam room almost every day, or going down to Sanae (at that time there was only ‘little’ Sanae, on

Newbury Street, before The Seventh Inn [originally “Sanae 2”] was built and opened across from the Commons) for lunch. Eric’s idea of work was more like hanging out.”
Address: President, Pure Sales, Irvine, California.

2935. Threefold Educational Center. 2011. A brief history [and chronology] of the Threefold community (Website printout—part). www.threefold.org/about_us/history_and_chronology/history/page1.aspx 2 p. Retrieved Feb. 22.

• **Summary:** The first decades of the twentieth century were a time of social experimentation and spiritual exploration. In New York City in the 1920s, a small band of Anthroposophists—students of Rudolf Steiner—ran a rooming house, a laundry, a furniture-making shop, and a vegetarian restaurant near Carnegie Hall. No ordinary entrepreneurs, the pursuits of the Threefold Group, as they called themselves, were all undertaken to put into practice the social ideals indicated in the writings and lectures of Rudolf Steiner.

Note: The restaurant was “Threefold Vegetarian Restaurant,” at 318 West 56th St. Their menu or sign read: “Finest vegetarian fare with meat dishes for non-vegetarians.”

“It was during the First World War years that Steiner, already a well known scholar and educator, turned his attention to the social question. The times gave the topic special urgency. The war was a catastrophe for all of Europe, and Steiner correctly foresaw that the terms of its conclusion would have dire consequences for Germany’s social and economic fabric. Meanwhile, the Russian Revolution of 1917 showed vividly the powerful, widespread yearning for new social forms, and the total inadequacy of existing solutions.

“Steiner saw that human development had outstripped existing social forms, even the supposedly forward-looking and revolutionary ones. In response, he offered observations that were neither prescriptive nor Utopian, but rather ‘how people would arrange things for themselves’ if they were given the freedom to do so. Freed from distortions imposed by outmoded political, economic and religious structures, Steiner wrote,

“—every individual would freely express and live by his religious and spiritual beliefs—and would confer that right on every other individual (Cultural Life);

“—every individual would enjoy equal political rights—and would honor every other individual’s political rights (Rights Life); and

“—every individual’s economic life would be based on the recognition of our universal interdependence with other people for all our material needs (Economic Life).

“The Threefold Group adopted the task of creating a community where, as Steiner put it, “real cooperation continually renews social forces.” Its members were mostly young Americans; many had encountered Steiner and his teachings while traveling in Europe. Ablaze with idealism,

they threw themselves into pursuing work and social lives driven by ideals of service and goals of social and spiritual improvement.

“Their guiding light was Ralph Courtney. Courtney met Steiner while working in Europe for the *New York Herald Tribune*; soon after, he returned to the U.S. and took it upon himself to find ways to spread awareness of Steiner’s teachings in this country. Indeed, that became his life’s work, beginning with the founding of the Threefold Group and its many ventures in New York City.

“In 1926, the Threefold Group purchased a small farm on Hungry Hollow Road in what was then South Spring Valley, New York. Their aim was to create a conference center, summer retreat, and Biodynamic farm to supply the New York City.

“Biodynamic gardening began almost immediately, making Threefold Farm the first in North America to use the Biodynamic technique that had just been described by Steiner. Anticipating by decades the era of *Silent Spring* and the organic movement, Biodynamics introduced a consciously chemical-free method of agriculture that has been shown to go beyond ‘sustainability,’ and actually strengthen and enliven the soil where it is practiced. “With the help of Charlotte Parker, Paul Stromenger, and Alice and Fred Heckel, among many others, improvements were made, and additions and new buildings were constructed, all with the aim of getting the farm ready to host large groups of people, and in 1933 the first Summer Conference was held. The early conferences featured lecturers from Europe who had known and studied under Rudolf Steiner, many of whom gave their first American lectures at Threefold Farm.”

“In 1993, the Hungry Hollow Co-op Natural Foods Market, which began in 1973 as a natural foods buyers’ club in the basement of a Green Meadow teacher’s home, opened its doors to the public at the location of the old Threefold Corner Store. When the Co-op’s building was renovated and expanded in 2004, Threefold extended its mandate for conscious land care by installing a 3,000 square foot rain garden and starting an ongoing program of ecological landscaping.

“The life of the Threefold Community has always been intertwined with the development of the Biodynamic method of agriculture and land care in North America. In Threefold Farm’s earliest days, it was home to the first Biodynamic gardens in North America. Ehrenfried Pfeiffer, whom Rudolf Steiner selected to be ambassador of Biodynamics to our shores, taught at the first summer conference in 1933, and at dozens more courses in the years that followed. He lived and worked at Threefold from 1946 until his death in 1961, and his biochemical laboratory carried on its work at the community until 1974.

“In 1996, Threefold built upon this legacy by creating the Pfeiffer Center for Biodynamics and Environmental Education. The Pfeiffer Center’s founding director, Gunther

Hauk, brought to Threefold many years’ experience as a Waldorf teacher, authority on Biodynamics, and beekeeper. In its first ten years, the Pfeiffer Center’s One-Year Part-Time Course in Biodynamics, internship program, workshops on beekeeping and other topics, and other programs for adults and children earned it a national reputation for developing and promoting innovative and forward-thinking agricultural and educational practices.”

The excellent chronology has many entries from 1926 to 2007. Photos show: (1) The stylish inside of the vegetarian restaurant. (2) To the right of the chronology: A portrait of Ehrenfried Pfeiffer, outdoors, wearing a hat.

Letter (e-mail) from Rafael (Ray) Manacas of Threefold Educational Center, The Pfeiffer Center, 260 Hungry Hollow Rd., Chestnut Ridge, NY 10977. 2011. Feb. 22. When Ehrenfried lived and worked here (including the period 1955-59), it was know as Threefold Farm, located in Spring Valley, New York. The Pfeiffer Center is in that exact same location today.

“In 1965 the various undertakings centered at Threefold Farm were brought together under the umbrella of the Threefold Educational Foundation and School, a not-for-profit. Today the Foundation is the umbrella for the Threefold Educational Center as well as the Green Meadow Waldorf School, Eurythmy Spring Valley and the Pfeiffer Center to name just a few.” Address: 260 Hungry Hollow Road, Chestnut Ridge, New York 10997. Phone: 845-352-5020.

2936. Keene, Jocelyn. 2011. The ancestors of Paul Kershner Keene and Enid Betty Morgan (Website printout-part). http://freepages.genealogy.rootsweb.ancestry.com/~jbkeene/KeenePhillips/WC01/WC01_002.HTML 8 p. Retrieved Feb. 24.

• **Summary:** A carefully researched and documented genealogy of the ancestors of these two people. A small photograph of each person is given. Address: Pasadena, California.

2937. Keene, Jocelyn. 2011. Re: Paul and Betty Keene (her parents) and Walnut Acres. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 25. 1 p.

• **Summary:** “My father did have lots of files of letters. I haven’t yet done anything with them. These are some of the boxes and boxes of papers in my sisters barn or elsewhere. The letters that I have been quoting from are my mother’s letters. She kept almost every letter ever written to her and I have put them into plastic sleeves in 3 ring binders, preserving the envelopes whenever they were available. She did not have any system for saving her letters. We found them scattered all around the house in drawers and boxes—all jumbled together or separately. But it is a great collection and I have put into chronological order all that I have found. I have 3 large binders of them and when I took care of my

sister... a few years ago I found an equal number of them at her house and now she also has 3 large binders. Someday we will have to get these collections together. Of course, there are not so many letters from my father because they were not separated on many occasions.”

“We noticed my father’s memory failing when my parents were in their 70s. Unfortunately, though my mother’s mind remained clear, she had inherited a then untreatable and fatal lung disease and so died at the fairly young age of 74. It was a blow to my father. His memory became steadily worse and when he was 90 it was noticeably very bad. By that time, he was suffering also from some delusions. But, though his short term memory was bad, he could still remember things in the past and express himself well. He started on our family history before I did and I took over where he left off. When he was 90 is when the business end of Walnut Acres was closed and everything sold at auction. My sister (and all of us as well) was desperate for him to not see that and so we put him into a nursing home so that he wouldn’t be watching the sale of his beloved business in his front yard. I’m sure that also speeded his degeneration. But if he had stayed in his home, the sadness and confusion of that time would also have hastened his demise. There was no way to win in that situation.” Address: Pasadena, California.

2938. Kushi, Norio. 2011. Re: Kushi Macrobiotic Corporation (KMC), formed in 1994. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 26. 1 p.

• **Summary:** “KMC are the initials of the company that was formed in 1994. The full name was Kushi Macrobiotic Corporation, headquartered in Stamford, Connecticut.

“An associate of my father’s, Fred Sternau, approached my father about starting a publicly traded ‘Macrobiotic’ food manufacturing company. Fred Sternau, through his connections, raised over \$2 million to start this venture, which was named, Kushi Macrobiotic Corporation.”

“Basically my father wanted to re-create Erewhon, under the family name ‘Kushi.’ My feeling is that the company was ill conceived and the corporate players had no vision other than to make money. The company basically folded within two years after spending all the venture capital.

“Once it was seen that the company was not going to make any money since the product line was ill conceived and there was no demand for these ‘value added’ products, the CEO resigned with a hefty severance pay of roughly \$200,000 to \$300,000.00—I don’t recall exactly.

“Apparently there is still ‘value’ in having a NASDAQ listed ‘shell.’ Therefore the KMAC shell was split and a company, called American Phoenix, bought 1/2 of the ‘shell’ thereby potentially retaining value for the share holders. American Phoenix was actually based in Australia and they were involved in some products relating to yachts or sailboats.

“The other half of the KMAC shell was renamed Kushi

Food Corporation with the intention that the Macrobiotic Food venture would be resurrected, or, it could be used to lure a private ‘Macro’ biased food company into a public ‘shell.’ As far as I know, nothing ever came of the Kushi Food Corporation shell.

“The CEO of Kushi Macrobiotic Corporation, Robert Morrow, came with an impressive resume, and, as it turned out was either fiction or elaboration of the positions he had held in prior companies. He had no knowledge of the natural food industry, and, the first time he stepped foot in my parents home, stated, ‘Don’t you dare ever offer me any of this Macrobiotic Food, I refuse to ever touch any of it!’ This was prior to him even being hired. In spite of this remark, my father, who was chairman of the board, promptly hired him without checking any of his background.” Address: Traveling by truck.

2939. Deming, Judy Coates. 2011. The six Coates children and memories of Erewhon (Interview). *SoyaScan Notes*. March 1. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** The six Coates children were, in order of birth: (1) Sarah. (2) Judith (“Judy”). (3) Daniel. (4) Marion (“Ronnie”). (5) Dora. (6) Nancy.

Only three studied macrobiotics in Boston: Judy arrived first, in about 1968, then Dora, and finally Ronnie, who went there to be with Judy when Ronnie had her baby in July 1969. However Sarah and Daniel worked at the family business, Laurelbrook Foods, in Bel Air, Maryland.

How did Judy get involved with macrobiotics? She graduated from college in 1966 and went to Baltimore. Carl Sauter and Paul Petrofsky came to visit Baltimore, bringing a 50-lb bag of brown rice. Paul had sent Judy the book *You Are All Sanpaku*, which was her first introduction to macrobiotics. They began eating this brown rice; Carl was eating it raw, right out of the bag—he never did anything half-way. Then Judy moved to New York City, where she lived for 12-18 months. Then she moved to Boston in late 1968 or early 1969. Judy first worked for Erewhon at the 303-B Newbury St.—“that little bitty place downstairs.” Evan Root was also working there, and probably Paul Hawken. Judy lived in the Kushi’s house on Boylston Street; Jean Allison was also there. Also in Boston at the time were Rosemary Traill and her sister, Maureen Traill who married Bruce Macdonald, Bill Garrison, and Jim Docker.

Judy married John Deming. Dora married Paul Hawken. and Ronnie married Martin “Marty” Russell. Address: Ross, California.

2940. Root, Evan. 2011. Re: Tom Williams at Erewhon. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 1—in reply to inquiry from William Shurtleff. 1 p.

• **Summary:** “I remember Tom Williams. He was with Erewhon after the move from Farnsworth to 3 East Street. He was the Comptroller. The Comptroller position at

Erewhon was the first of the 'hired gun' positions. That is to say a professional business person was hired to fill that role. Fairly quickly after the move more positions were filled by professionals with experience, such as trucking manager, operations manager, purchasing manager. Even though many personnel were not 'macrobiotic' almost all were into whole foods or were in some way 'counter-cultural' so to speak. There was a friendly relationship with the professional hires while, at the same time, a difference, sort of like a non-native aura about them.

"At some point Tom was given a vice-president title, and after Jeff Flasher left, he was made president to oversee the chapter 11 proceedings. I did a stint at the 3 East Street warehouse & production facility (with the honorary title of VP) from around the start of the new facility until the summer of '81 before the chapter 11 filing. What the ins and outs were after I left, I am fairly ignorant." Perhaps Patricia Smith or Jeff Flasher might know. Address: Ashland, Massachusetts.

2941. Kushi, Norio. 2011. Re: My brothers and sister. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 2. 1 p.

• **Summary:** "My sister and brothers are:

"Lily, Lillian Midori Kushi, born July 20, 1953.

"Norio, Arnold Norio Kushi, born December 15, 1954.

"Haruo or Larry, Lawrence Haruo Kushi, born December 10, 1956.

"Phiya, Phillip Yoshio Kushi, born October 29, 1959.

"Hisao, Hisao Tenshin [or Tenzing] Kushi, born June 8, 1965.

"Phiya is a nickname that I came up with when we were children and the name stuck. My father picked the western names, which were used as the first name and my mother picked the middle Japanese names, with the exception of our youngest brother Hisao. When Hisao was born, my grandparents on my father's side were living with us. My mother picked the name Hisao, which was decided to be the first name and my grandmother picked the name Tenshin to be used as the middle name.

"The four older children were born in New York City and Hisao, was born in Cambridge, Massachusetts. All of us kids were born in a hospital. "My sister spelled her name 'Lilly' for most of her life. However, in her later years, perhaps the last five years of her life, definitely after the book titled *Aveline* was printed, she began spelling her name 'Lily.' She never made a big deal about it and never corrected anyone if someone were to spell her name 'Lilly.' However, she herself would always spell her name 'Lily.'

Norio (who has long loved cars) writes (3 March 2011, in reply to a question): "I initially started driving a truck in 1981. I also drove for Greyhound and helped to start a bus company, Premier Coach of Vermont for the owner, Ron Charlebois. I went back to driving a truck back in 2002 and have been doing so since then, other than a short period

when my father got sick and went into the hospital. I pretty much live in the truck full time, getting home to Asheville, North Carolina, about once a month. I left Asheville on Monday and am currently in Oxnard, California, having made a delivery here this afternoon.

A photo shows Norio, holding a guitar, with truck in background. Address: Traveling by truck.

2942. Anderson, Ruth Keene. 2011. Re: Recollections of the later years of Walnut Acres. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 9—in reply to questions. 1 p.

• **Summary:** "My recollection of my father's visit with Gandhi was that they walked together and possibly had tea together. I don't think it was even an entire day. Maybe Jocelyn could also comment on that. I remember that Gandhi said to him that there are two ways in which to be wealthy. One way is to have a lot and the other is to want little. He told our father that, if he wanted to find true happiness, he must go home and give away everything that he had.

"Pennsylvania is where our father was born and raised but, more than that, I believe that farm land was cheap there and Snyder County was certainly cheaper than the Philadelphia area. He paid just \$5,000 for the original farm. Walnut Acres is just about a mile from the village of Penns Creek.

"I honestly don't know when people began coming to the farm or when the first tractor was purchased. I guess I thought that there was electricity all along, but there were no indoor bathrooms. What do you remember Jocelyn?

"Our father really didn't involve any of us in the business when we were growing up except that we held menial summer jobs in the manufacturing facility—earning our spending money for college. I was the only daughter to eventually come back to the farm after college and marriage. My husband was in the navy and, after the Vietnam war, was asked by my father to come back and work in the business. Neither my husband or I had business degrees or any experience along those lines.

"In the 1960s, Walnut Acres was the only game in town and the company was booming. After taking the family to Europe on an extended trip, our parents incorporated the business and started a form of employee ownership. Working with a local accountant and a local attorney, they came up with the plan. It seemed quite viable at the time, but as the years went by and there were more and more employees, it put a huge strain on the company. Eventually, the debt to the employees grew to more than \$1,000,000. When an employee retired, he or she would cash in the stock over five years or so.

"The company continued to grow although, at the end, catalog sales were struggling and it was the wholesale side of the business that was booming. Our customer base grew to about 100,000 names and our highest circulation was

about 2,000,000. Our highest sales were in the \$10,000,000 range, but I'm not sure of the years—probably the mid-'90s. It became more and more difficult to show a profit in spite of all our efforts in hiring marketing consultants, etc., etc.

“Some of the mistakes we made were that we offered far too many products in far too many sizes. Everything was very expensive to produce in the small batches we prided ourselves on. In the 1970s we grew all the vegetables on the farm. Our tomatoes were hand picked by the same Amish family for many years. We canned the vegetables in our small cannery; we grew our own beef on one of our farms and used the meat in the many soups and stews we produced. We grew our own grains and ground them into flours and cereals in our mill. We had a bakery where we baked breads and cookies and made some of the first granolas. We also brought in many goods that we repacked to sell. These were things like nuts, seeds, beans, etc., as well as private label products like juices. We made jams and jellies from organic fruits. One of our most popular products was peanut butter which we produced on the farm from organic peanuts that we brought in from Texas and New Mexico.

“A huge challenge came when we were required by interstate commerce regulations to provide nutritional labeling for all of our products. It was an extremely expensive and time consuming project, but it eventually got done. Other expensive projects were computerizing the customer list and, eventually, the entire ordering and fulfillment process.

“My position in the company had to do with catalog production as well as product development and merchandising. At first, we worked with outside firms who developed our catalog. Eventually, we hired a graphic artist from one of these firms and we developed the catalog in house.

“Other than those early years in the 1960s, the company was never wealthy and never had large profits. (I often wished that our father had put even a little bit of that excess money into the stock market but, as a child of the Great Depression, he had no faith in that kind of thing.) Then, in the 1980s, as the Whole Foods Markets and other retailers came along, it became easier and easier for folks to get the same products at a lower price. We tried everything we could think of—full color catalogs, renting endless mailing lists, etc., but it was more and more difficult to compete. And, as the older employees began retiring several at a time, the company had to pay them for their stock. The cash simply wasn't there and the rest is history.

“We brought in someone who we hoped would be a partner and would love Walnut Acres just as we did. Wow, were we wrong! Paul hired a young man right out of graduate school to run the operation and gave him free reign to spend the \$3,000,000 infusion he brought to the company. In a year's time, the money was gone, the plant was closed and we were all fired from our jobs. Absolutely the worst

time of my life! The only good thing that we were able to do in that horrible time was to see to it that our employees got their stock money. Two of our oldest and most beloved customers from Nova Scotia even sent \$10,000 to be distributed among the oldest employees.

“My sisters and I still own the farms and I have been able to maintain their certified organic status by hiring local farmers who are willing to farm organically. It becomes harder and harder to keep that going. These farms have never had chemicals added to the soil and it is heartbreaking to think of that happening in the future. All the farm equipment was sold at auction so I have none of that. The manufacturing facility which is housed in the original barn with many additions is now a noisy and dirty stone veneer plant on 11 acres in the middle of our farm.

“A woman who was one of our fine employees at Walnut Acres lives in the original farmhouse where we grew up. I live in a neighboring farmhouse which was not a part of the original Walnut Acres farm, but became part of it eventually.

“My father still participated in the running of the company until he was in his late 70s. When our mother died in 1987, he went into a kind of hibernation for a couple of years. I went with him to India in about 1990 and by then he was showing signs of the beginnings of Alzheimer's. He was 80 years old by then. He stayed involved in the company, writing his 'Greetings From the Farm' for as long as he was able. He managed his dementia pretty well and was able to live on his own until he was 89, although I was always close by to help him as needed. I'm not sure how much he grasped of the company's closing, but it was an awful time all the way around.

“In many ways, our parents lived their lives as Gandhi instructed them to do so—always giving in every way they could. They formed the Walnut Acres Foundation and built a community center in the village of Penns Creek. This was all funded by our customers and had to close when the company was shut down. They also did a lot of good in raising money for an orphanage in India, the country where our mother was born.

“I hope this helps put a perspective on things. It's awfully difficult to be the second generation who allows the family business to fail, but I'm not sure we had much choice with the way things were set up.” Address: Penns Creek, Pennsylvania.

2943. Macdonald, Bruce. 2011. Competition and feelings between Erewhon and Chico-San. The short-grain brown rice saga (Interview). *SoyaScan Notes*. March 28. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** The split between the Kushis and the Aiharas began in 1961 when Herman and Cornelia, following Ohsawa's advice, moved to Chico, California, with the group (including Bob Kennedy) that started Chico-San, Inc. in early 1972; Michio and Aveline decided to stay on

the East Coast. All four (Michio and Herman, Aveline and Cornelia) were best buddies up until 1961. After that, there was a certain coolness. Bruce remembers, for examples, that when he and others were out in California, they never invited Herman (a sensei) down to lectures or other events. That was unusual.

But Bruce knows much more about the business side of things. “Essentially Bob Kennedy was irate with us because we were selling directly to stores and he was selling through big distributors.” He had chosen to go that route as the easy way to get distribution for his products. This was also in the era before there were many natural food retail stores. “We were underpricing Bob Kennedy, in part because we did not have to go through a distributor and in part because we were willing to sell larger quantities at a time—such as 50- or 100-lb bags. Koda brown rice came in 100 lb bags; Lundberg brown rice came in 50 lb bags. The bags were a generic brown multi-wall paper bag. “I think it said ‘Premium Short-Grain Brown Rice’ on each bag.

In Los Angeles, Bruce first saw short-grain brown rice grown by Lundberg [Note: It was probably harvested in the fall of 1970]. It was described in the Erewhon catalog as “unsprayed.” It was not listed in catalogs as “organic” because Erewhon was afraid of a lawsuit from Chico-San. “Essentially everybody knew that it was the same rice that Chico-San was selling [i.e., organically grown]. How did they know? They just kind of knew. The word got out. At Erewhon, Los Angeles, we had to move a lot. The rice, in bags was piled 4-5 bags high on the floor of their little warehouse across the street from the retail store. Erewhon West hadn’t yet started their warehouse in Culver City, which they moved into in the summer of 1970. So Bruce probably saw this rice in L.A. in early 1970. Bruce has always understood that the Lundbergs had done OK with their organic brown rice in the first year they grew it, but they had gotten trouble in the 2nd year. Bruce suggests that Shurtleff contact Homer or Harlan Lundberg to try to resolve this conflict of dates—and to try to see the actual contract.

In Japan, as Bruce understands it, the traditional practice was to sell rice at little or no markup so that everyone could afford to eat. “I always loved that idea. That’s one reason why Erewhon’s unsprayed rice wholesaled for \$11.00 per 100 lb. bag. We did not take a full markup on that.” Address: Natural Import Co., Asheville, North Carolina. Phone: 802-869-2010.

2944. Shurtleff, William; Aoyagi, Akiko. comps. 2011. *History of Erewhon—Natural foods pioneer (1966-2011): Extensively annotated bibliography and sourcebook*. Lafayette, California: Soyinfo Center. 311 p. Subject/geographical index. Printed 4 April 2011. 28 cm. [416 ref]
 • **Summary:** Begins with a Preface by James Silver, and an Introduction and Chronology of Erewhon by William Shurtleff. Contains 93 historical photos, many in color.

<http://www.soyinfo.com/books/142>. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2945. Hansen, Fran Lynggaard. 2011. *Memories of a building and its business [Brooks House in Brattleboro, Vermont]. Commons (The) (Brattleboro, Vermont)*. April 20. p. 11.

• **Summary:** Last night the Brooks House building burned down. Rachel Bennett recalls: “Llama, Toucan and Crow the health food store [where the Wasteland Gift Shop is now] was the best food store ever. This was before the Food Co-op became an actual grocery store. (It was a buying club at that time.) I went in there every day after middle school.”

A black-and-white photo by Roger Katz (Special to *The Commons*) shows Jack MacKay in front of Llama, Toucan and Crow in the Brooks House on Main Street in the 1980s. MacKay later became one of the co-founders (in Sept. 1980 in Austin, Texas) of Whole Foods Market. Address: Local historian.

2946. Brucia, Larry. 2011. Re: The story of Trail Mix. Letter (e-mail) to William Shurtleff at Soyinfo Center, April 30—in reply to request. 3 p.

• **Summary:** “In the Fall of 1973 I was working at a bakery wholesaler called Hirschfelder Company located on Howard Street in San Francisco. I had just gotten the job making \$2.00 an hour filling orders and loading trucks. It was my intention to make just enough money to go back to Greece where I was working and living.

“A Friday evening visitor changed all of my plans.

“It was around 6 pm on Friday night and most of the guys in the warehouse were either gone for the day or about to leave. Being the new guy in the warehouse I was usually given jobs that no one else wanted to do. So I was asked to go over to the return area of the warehouse and put back into stock or throw away product that was either returned by the customer or damaged in transit.

“The first box I picked up had obviously been damaged as it appeared that something heavy had landed on it. I carried the box over to the shipping table and opened it up. Hirschfelder Company was a bakery wholesaler and carried many products for a bakery. Enclosed in the box were 1 to 2 pounds of various nuts, seeds, dried fruit and coconut in individual bags. When the box was crushed in some way, most of the bags split open and inside the box was a mixture of nuts, seeds and fruit.

“I was going to throw the whole box away as I was not interested in separating the nuts from the seeds, especially at 6 pm on a Friday night, when one of my co-workers, David Ruegg, asked me what I was going to do with it.

“I told him I was going to throw it away. He then said that he wanted it. I asked him what he wanted to do with it and he said that he was going camping and would eat some

himself and feed some to the chipmunks.

“As David was mixing the remaining products together and removing the small individual bags from the box, into the warehouse walks Mr. Peretz, who owned Berkeley Health Foods. My Peretz was one of those customers who like to place their orders in the warehouse by looking for deals, especially overstocked or damaged goods.

“He immediately looked at what David was doing and asked me while pointing at the mixed nuts and seeds, ‘What is that?’ I turned around and asked David, ‘What is that?’ He in turn said, ‘Its David’s Mix.’ I looked at Mr. Peretz who then said, ‘How much do you want for it?’ I again turned to David and said in a low voice, ‘How much do we want for it?’ David hesitated and looked perplexed. I then turned back to Mr. Peretz and said, ‘A buck a pound.’ He then responded back, ‘Too much.’ ‘Ok’, I said, ‘Ninety-eight cents a pound.’ And with that, Mr. Peretz gave me cash for ‘David’s Mix.’ I cannot remember how much it was but I believe it was around \$20.00.

“I told the owner that Mr. Peretz gave me \$20.00 for something I was going to throw away and David was going to feed to the chipmunks and he indicated that we could keep it and so we decided to go to a local bar and have some beers on ‘David’s Mix’ money.

“We laughed about the experience in the bar and never gave much thought to the event until the following Wednesday.

“I got a call from the office indicating that I have a phone call. I picked up the warehouse phone and it is Mr. Peretz who indicated he wanted to place an order with me. He ordered 25 pounds of walnuts, 30 pounds of raisins, and various other products and then added, ‘I also want 100 pounds of David’s Mix.’

“I put my hand on the receiver of the phone and yelled into the warehouse, ‘Mr. Peretz wants 100 pounds of David’s Mix!’ Someone between the pallet racks yells, ‘Ask him what is in it.’ So I did. After Mr. Peretz told me what was in it, I hung up the phone. Meanwhile the guys in the warehouse are yelling, ‘Beer money... beer money.’ Unfortunately, this time, we did not the cash as it went through the regular billing system of the company.

“So I got myself a plastic trash can and lined it with a large trash bag. I then figured out a formula of raisins, chopped dates, dehydrated pineapple, roasted cashews, sliced dehydrated coconut, and peanuts based on a sell of \$.98 per pound. I then put a lid on the trash can and rolled the trash can on its side mixing the above ingredients.

“We then shipped 4-25 pound boxes of David’s Mix to Mr. Peretz at Berkeley Health Foods in the Fall of 1973.

“Over the next several months, Mr. Peretz ordered a number of times. He was repacking David’s Mix into small baggies; twist tying the bag; slapping a label on it; and selling it as David’s Mix in his store.

“Then in late 1973, early 1974, I got a phone call in the

warehouse from the ‘Coop’ stores in Berkeley. There were 6 of these large supermarket type coop stores throughout the East Bay. They asked me if we were the ones making ‘David’s Mix.’ I indicated that we were. But before I allowed them to say anything else and thinking they were a big company, I then said, ‘But the minimum order is 100 pounds.’ They replied, ‘Oh no, we want a 1000 pounds!’

“I rolled a lot of barrels that day to make 1000 pounds of David’s Mix. I then realized that there was a business making David’s Mix.

“I asked David if he would like to go into business with me making David’s mix. I borrowed some money from my dad and David come up with some money as well and we rented a small warehouse in San Rafael, California and started a company called Marin Food Specialties in the Spring of 1974.

“We bought a Montgomery Ward cement mixer and started making David’s Mix in our warehouse. We packed the product in 25 pound boxes and started selling it to health food stores in the San Francisco bay area. We delivered the product in our cars.

“After about a week, David indicated to me that he did not want to be involved anymore in the company and decided he wanted to be a chef. So I bought David out and he went off to culinary school. Meanwhile, I was in our little warehouse making David’s Mix.

“While I was watching the cement mixer go around, I thought to myself, ‘Why am I calling this David’s Mix when David is no longer here?’ So I came up with an idea to make a box with a drawing that looked like a knapsack. I would then package the mix in a bag; drop the bag into the box and there would be a window in the front of the box that would show the product. “I came up with the name, ‘Knapsack Trail Mix.’

“I never did create the box. I got busy making Knapsack Trail Mix in bulk 25 pound boxes and over time created over 20 different kind of mixes and pioneered the bulk sets in natural food stores and grocery stores.

“David Ruegg and I kept in contact over the years. He became a chef and unfortunately passed away on March 21, 2004. I sold the distribution part of Marin Food Specialties in 1986 and my family continues to own Marin Food Specialties that is still manufacturing mixes, snacks and many other products.

“I never went back to Greece. But I am hoping in 2012 I will visit the places in Greece I was planning to go back to in the Fall of 1973—almost 40 years later.”

“P.S. I’m enclosing the earliest document I can find about me and the trail mix story [see Rosenbaum 1986]—published about 25 years ago.

“I did apply for a trademark in later years (probably in the mid 1970’s) for the words Knapsack Trail Mix. It was rejected due to Trail Mix being a descriptive but they did allow Knapsack. I probably could had fought the rejection

but did not due to either lack of money or awareness that I could. We cannot located the file of any information regarding the trademark office.

“As I mentioned [when we talked by phone] Marin Food Specialties was clobbered by a 500 year flood in Marin County on January 4, 1982 where we experienced 4 feet of water in our offices and warehouse. It almost put me out of business. I am afraid many of the early records were lost in the flood. We also moved in September of 1982 to a new location and then again in 1990. So, most of the records have been lost.” Address: San Anselmo, Marin County, California.

2947. Shurtleff, William; Aoyagi, Akiko. comps. 2011. *How Japanese and Japanese-Americans brought soyfoods to the United States and the Hawaiian Islands—A history (1851-2011): Extensively annotated bibliography and sourcebook*. Lafayette, California: Soyinfo Center. 328 p. Subject/geographical index. Printed 12 July 2011. 28 cm. [1259 ref]
 • **Summary:** Begins with a chronology of how Japanese and Japanese-Americans brought soyfoods to the United States and the Hawaiian Islands. Contains 110 historical photos and illustrations (some in color), graphs, and tables. <http://www.soyinfocenter.com/books/146>.

By food: As of late 1941, 537 different Japanese-owned companies in the United States and the Hawaiian Islands made soyfoods. Of these, 418 (78% of the total) made tofu, 62 made miso, 57 made shoyu (soy sauce), and 4 made natto. Five of these companies made more than one soyfood product. Many of these companies are no longer in business.

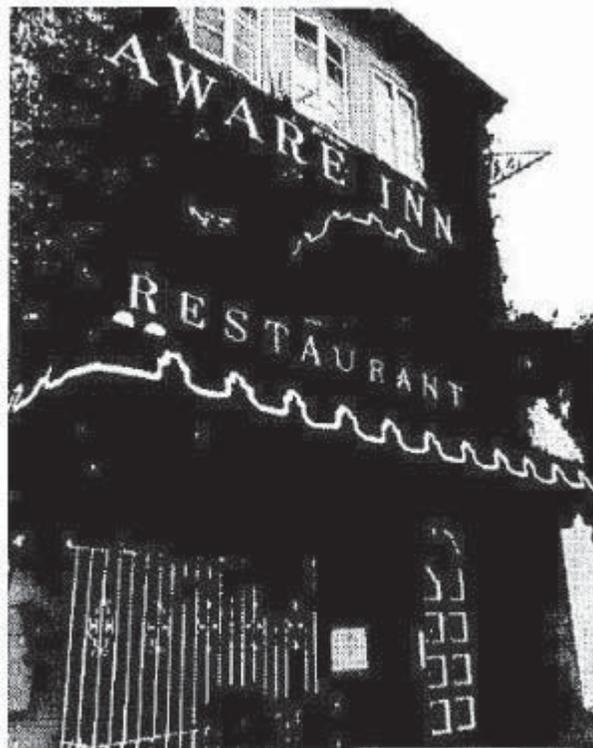

By state: As of late 1941, 311 of these 537 companies operated in California (58% of the total), 156 in Hawaii, 22 in Washington state, 15 in Utah, 10 in Oregon, and 4 in Idaho. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2948. Whitaker, Jan. 2011. *Famous in its day: the Aware Inn*. <https://restaurant-ingthroughhistory.com/2011/07/12/famous-in-its-day-the-aware-inn/>

• **Summary:** This excellent blog about The Aware Inn, begins: “Whether or not it was the first organic restaurant of the post-WWII era, it is clear that Los Angeles’ Aware Inn significantly predated the late ‘60s beginnings of the natural food movement in restaurants. When Jim and Elaine Baker (pictured below in 1955) opened it in 1957 they were dedicated to providing meals using fruits, vegetables, and meats produced without pesticides, artificial fertilizers, and hormones.” No sources are cited.

It also discusses two other restaurants that he and Elaine started: The Old World and The Source.

Photos show: (1) The Aware Inn Restaurant, a two-story building (undated). (2) Jim Baker and his wife Elaine in 1955, embracing. (3) An ad for the Aware Inn, “operated by its creator, Elaine Baker, facing Sunset Strip.”

2949. Kushi, Michio. 2011. Kushi Institute International Aveline Award presented to William Shurtleff and Akiko Aoyagi. Aug. 4.

• **Summary:** The plaque reads: “In recognition for your enduring support of macrobiotics. Your teachings and writings have brought hope and healing to people around the

world. With this award Michio Kushi expresses his gratitude to you for your important contribution to macrobiotics, humanity, and the world.”

Signed, Michio Kushi.

“Presented on August 4, 2011, at the International Macrobiotic Summer Conference.

Note: The award was presented in absentia since Shurtleff was unable to be present at the award ceremony. The plaque is 10½ by 13 inches, with a leather border. The body of the plaque is the printed paper covered by a sheet of glass. The blue logo of the Kushi Institute International is near the top of the sheet of paper.

Other recipients of this award, listed alphabetically by surname are:

Aihara, Cornelia
 Avoli, Diane
 Akbar, Chris

Maine Seaweed

Mitoku Co. Ltd.

South River Miso

Natural Import Company. Address: Massachusetts.

2950. Sharp, Carolyn Heidenry. 2011. Re: Gung Ho!: Aveline Kushi and macrobiotics. (Continued–Part II). Letter to William Shurtleff at Soyinfo Center, Aug. 15. 11 p.

• **Summary:** Continued. Perspective: As to the why of Aveline’s unbalanced diet, again as with Michio, I think there were many reasons that contributed to her unusual way of eating. Thinking back to when she first arrived in this country, around 1951, at her destination, New York City, one can easily imagine some of what she experienced. Gone from her life were all the little shops she had frequented in Japan, filled with what she was used to cooking, and had grown up eating. The many varieties of vegetables, the extremely fresh fish on display everywhere, the noodle shops, different types of delicious pickles, various kinds of mochi and gelatins that girls and young women ate so frequently in little shops, tofu dishes, roasted sweet potatoes and chestnuts, and all the other little niceties to which she had been accustomed. In their place was an alien world with an alien cuisine—steaks and ham, hot dogs and donuts, pizza and hamburgers. Small vegetable selections, unlike now, that didn’t include much of what she was used to cooking, and that also lacked the sea vegetables she liked so much.

“Many of the foods that she would have enjoyed and that would have contributed to a more balanced diet simply weren’t available. This was long before Erewhon, Infinity Foods, Chico-San, Eden Foods, Ohsawa, Great Eastern Sun, Natural Import Co., and all the other high quality natural food wholesalers and retailers that developed in later years. And though New York had a Chinatown, I doubt whether it had the variety and abundance available there now, and what there was was not all of good quality. In addition, Michio and Aveline had no car for a long time, and it’s unlikely that Aveline would have lugged groceries home on the subway from Chinatown more than just occasionally. Not with an

infant in one arm, and then later an infant in one arm and a toddler in tow. Then two toddlers, then three. Even with a car this would have been a difficult expedition. She probably shopped as locally in her neighborhood as she possibly could. And that meant many limitations.

“She was also away from all the support she would have had at home in Japan, not only culinary, but also the support of and interaction with friends, family members, neighbors, and teachers (another kind of “food”—for the soul and heart) especially Lima Ohsawa who would have continued to be a very good influence on her. Then, too, she was away from all the charm and graciousness and quaint little ways and ancient traditions of her native land, which would have been still another form of nourishment. Away from the musical language that would have surrounded her daily. Away from the wonderful calligraphy on display in the shops and streets. So though she was now living in an interesting and powerful city, there were many things missing from her life to which she had been accustomed.

“She had to have been a rather headstrong person to live without all that and then, as well, to eat in a way that was so completely different from the way the people in her new country did, a way that was also, to a significant degree, somewhat inaccessible to her given the few stores where she could buy the relatively inferior products with which she was at least familiar. Had she come here as part of a large family, probably it would have been somewhat easier. But she came alone, and joined one man. So for the first 20 to 30 years there weren’t all the hundreds of natural, organic, quality products we now take for granted. It made a macrobiotic diet quite limited. Still, she made very good meals, but it was quite different and less varied than it is now.

“Homesick: She once told me that when living in New York in the early years, she happened to eat some fruit one day, and then started weeping because she was so homesick for Japan. After that she avoided eating fruit for a long time, not wanting to feel that sadness and longing for Japan which she thought had been induced by the fruit she had eaten. It was a lesson in how food affects psychology, but it also ultimately led to a too-yang condition. However, she wanted to stay yang, so she would be strong, and not pining away for Japan. There was not a trace of self pity in her when she spoke of this. Rather, she was kind of laughing about it. She knew she had chosen to come here, and that in some ways she had had a very good life. But apparently there was an undercurrent sometimes when memories tugged at her heart. It gradually faded over the years, I think, the longing for, though not the memories of, Japan. The trips back and forth to Japan in later years probably helped.

“It wasn’t until the mid-to-late sixties that the first developments in the natural food industry (as we know it today) came about, all very well detailed in Bill Shurtleff’s “History of Erewhon” which covers so much more than just Erewhon. But for a long time, for years and years,

Aveline was somewhat isolated from all that she knew and remembered about food, and was usually without many of the products she would have enjoyed and used in Japan. Michio, too. How much he would have enjoyed all the neighborhood sushi restaurants and noodle shops if he wanted to go out, as Japanese men so often do with each other, had he and Aveline returned to, or never left, Japan. All he had here and all he could usually afford were coffee shops, which had very different menu selections, to say the least.

“So Aveline had a somewhat imbalanced and impoverished diet right from the start in America, as did Michio, and for a very long time after that. Instead of living in a country, city and neighborhood enriched by a wide variety of wonderful vegetable, grain and fish dishes, she made do with a lot less for a long time. I think this was a very big factor in contributing to her imbalanced diet and condition.

“Another factor was that she had done so much cooking for so many years, first for the family when the children were younger, then for so many parties and special occasions for the students, as well as making lunches for employees when Erewhon first started up in Los Angeles, and also all the cooking classes—so many over the years in so many countries. On top of all that there were the dinners for a crowd every night when the students began staying with them. And so, eventually, she delegated the preparation of daily meals at home to others, to student cooks, though she continued to give many cooking classes, both in Boston and wherever she and Michio travelled. After so much intense cooking for so many years, she understandably wanted a change.

“Too yang: Having first learned from George Ohsawa, Aveline leaned towards a rather restricted version of a macrobiotic diet, like her teacher. I think most people who have used the macrobiotic eating plan for any length of time, however much they might appreciate Ohsawa’s insights, life and wisdom, feel nevertheless that his dietary approach was too restrictive to be healthful and balanced in the long run. While his recommendations might be helpful as a cleansing diet for certain people for short periods of time, they can produce a tight mental state and even nutritional deficiencies over time. George Ohsawa was an extraordinary man and an extraordinary teacher, and it would be challenging to encapsulate all that he contributed to our understanding of the impact of food on individuals and societies. However, his approach was lacking in sufficient vegetables, variety and sweets, at least for the average American accustomed to a diet heavy in meat, dairy foods, and sugar. Yet something in Aveline responded to his overly yang style and recommendations, (perhaps that was simply all she knew) and though having children loosened and broadened her views, there was still this tendency towards an overly restrictive approach to her own diet for a long time.

“Aveline was not really a student and teacher of macrobiotic principles in the way Michio was. But she had a strong interest in sharing the traditional cooking and food customs of her native land, and she balanced Michio’s theoretical teachings with the daily practicalities of feeding her family and teaching her students. She also enjoyed teaching the traditional ways of caring for infants, and sharing the happy sounds and sights of her childhood and adolescence, some of which are included in her books.” Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

2951. Sharp, Carolyn Heidenry. 2011. Re: Gung Ho!: Aveline Kushi and macrobiotics. (Continued–Part IV). Letter to William Shurtleff at Soyinfo Center, Aug. 15. 11 p.
 • **Summary:** Continued. “Memories: One of Aveline’s best traits was her delight in babies. It always made her so happy when an infant was brought to the house by a friend or student to show to Michio and Aveline. She was wonderful with infants. She loved to hold them, gaze at them, talk about them, carry them on her back in a Japanese baby sling, while she did a slow walk around the room, gently juggling the child up and down, her arms clasped underneath them.

“Another memory was her gentleness with food. Many times I admired the way she handled food, with such gentle care and respect, though not overly slow or gingerly. It seemed unconscious and a natural part of her being. There was never anything slap-dash in her manner when preparing food, even when cooking for a large crowd or when pressed for time. If she could see some of the cooking shows on television now, she would probably be shocked at the hurried frenzy of some of the cooks, and the blow torches and blenders-loud and chaotic, not peaceful and gentle.

“Other memories include her laughter. In later years, when her English was better, she would tell funny stories about how she tried to teach Michio to drive, and him driving up on someone’s lawn into a bush. (He never did get that license, fortunately for the rest of us). Or about the time her slacks fell down once as she walked down the aisle of an airplane, imitating, as she told the story, Michio’s bug-eyed expression when he saw what had happened. Or about how she walked straight into a very clean plate glass window once, not realizing it was there. Or about how in her early years in Japan, after she had learned a little about Western-style cooking, she pushed all her family members to cook with butter. Then, some time later, after she had learned about the macrobiotic way of cooking, she pushed them all not to cook with butter, and them reacting all confused and puzzled by her reversal. Aveline could laugh.

“She could also cry. But very rarely. In fact, the only time I ever saw her cry, aside from certain Japanese movies, was once. She stood at the window in the office looking out into the yard, forlornly and tearfully, because she hadn’t been able to find a location to rent in which to begin the Kushi

Institute—one that was affordable, that is. It was extremely discouraging to her, after having put so much time and effort into searching, to come up with nothing. But she rallied, gave it another try, and continued the search. Finally she found three rooms on the third floor of a small warehouse, in a building that was mostly being used for artist lofts. A few years later, she would do another long search for a residential facility for Kushi Institute in the country.

“Aveline may not have had the refinement of Lima Ohsawa, but that quality might have been more of a drawback a good deal of the time in the life she lived. It took a tougher, sturdier nature to get through the years in America, and to enjoy them. Lima, wonderful woman though she was, probably would have headed for home very early on, had she been the one to land in New York. Though her life with George Ohsawa was difficult at times, and though she had strength, too, underneath that beautiful doll-like exterior, I think Aveline had a greater challenge.

“I am always mystified when I hear someone speak of Aveline in words that imply she was a sweet, self-effacing, dainty little Japanese wife. She was anything but, and nothing could be further from the truth. And I don’t think she would like to be seen in that light. Because it is a false image, and Aveline wasn’t a phony. Perhaps in the very early years (first year?) of her marriage she was a dutiful and obedient wife (she said as much once) for a little while anyway—a memory that both Michio and Aveline seemed to find amusing in later years. But by 1970, certainly, she was a force to be reckoned with. She very much liked the freedom and participation in society of American-style womanhood, and she lived it to the hilt. Perhaps too much so at times, but that’s another story.

“It took an unusual woman to do what she did. Most other Japanese wives would probably have said, and would have been perfectly justified in saying—I don’t want all these students living in our home, go get a real job and make some money, we have five children to support, we are always broke (most of their early years anyway), I don’t understand Americans, let’s go back to Japan where we understand the culture, I miss Japan, and I don’t want all these phone calls at all hours of the day and night.

“But Aveline had the strength and zest for this great adventure, hard as it was at times, and the willingness to do whatever it took, or at least to give it her best effort. Aveline was a tiny tugboat, pulling the macrobiotic movement (the part that emanated from Boston) with all the might she could muster. I think her life was very important to it taking root in America. Very important.

“And when the feds came to that first little Erewhon store in Boston back in the sixties to look for the incriminating books (health food stores were not allowed to sell books that recommended foods for specific illnesses at that time) she hopped up on the trash can in which the books were hidden and sat on it.

“And when the police came to the door of her home because the neighbors had complained about all the cars parked outside on the road (she was giving a cooking class which was not allowed by the zoning laws) she told the police it was her birthday party (it wasn’t) and they quickly left with many apologies.

“Aveline had spunk with a capital S and pluck with a capital P. She had the spirit of “I’ll try that” and “Let’s do that!” She was always willing to give it a go, whatever it might be. It might not always have been well thought out, or well managed, but she had the gung ho! spirit nevertheless. She once said, when an unavoidable problem was looming on the horizon in connection with some endeavor or other—“then we just suffer”, i.e. we will just suffer and endure it and keep going. And she said it with a laugh. She wasn’t going to let any little thing like a problem stop her from trying to do something.

“Aveline was colorful, both literally (often dressed in a beautiful kimono when going out) and figuratively. She was gutsy. At times she could be feisty. She met challenges head on. With neck outstretched. Ready to ram into them, if need be. She was not faint of heart. Nor a shrinking violet. Of course she was unconventional. She had to be, to live the life she lived, to deal with what she had to deal with. She tried her best, succeeded at some things, failed at others, made plenty of mistakes (some of them colossal), was impulsive, enthusiastic, unapologetic, and kept on going and going.

“She could drive you crazy, often, and offend you deeply with outrageous remarks, once in a great while. She could be extremely parsimonious with money to an overworked staff, while simultaneously being overly indulgent to her children. She henpecked Michio mercilessly at times, especially when she was in a too yang condition. (I asked Michio once why he ate ice cream since he didn’t recommend it to others. He said “when wife is severe.” and his voice trailed off. The man didn’t drink. Doesn’t, that is). Aveline wasn’t always pleasant to work for, but many others would have crumbled in her position.

“All in all, though my experience of Aveline included both positives and negatives, I’m glad I knew her. She gave it her all for a very long time. This dream of a healthy, happy world. I don’t think it was easy to be Michio’s wife. I also don’t think it was easy to be Aveline’s husband. They were so mismatched and unlike. But in some ways they were also well-suited to each other if they were going to take on the life they did. They didn’t really seem to have a marriage in the typical sense of the word, though probably it was more typical in the early years. Later on it seemed to be more of a partnership than a marriage, a partnership in their life work, and of course, partners in parenting their children and in being grandparents. Not all marriages have to be alike.” Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

2952. *Chico Enterprise-Record*. 2011. Harlan D. Lundberg (1933-2011). Aug. 23.

• **Summary:** “Harlan was born September 20, 1933 to Albert and Frances Lundberg in Nebraska, and died of cancer at his home in Richvale on August 16, 2011.

“He is survived by his wife, Carolyn; sons, Mark (Susan), Bryce (Jill), and Eric (Heidi); grandchildren, Anders, Lars, Anne, Emily, Brita, Regan, Dylan, and Luke, and brothers, Wendell and Homer.

“He moved to Richvale in 1937, graduated from Biggs High, Yuba College, and attended Cal Poly SLO [San Luis Obispo] until he was drafted by the US Army. Harlan married Carolyn Murray of Richvale in 1958 and began farming organic and specialty rice with his three brothers, Eldon, Wendell, and Homer, at Lundberg Family Farms.”

A portrait photo shows Harlan Lundberg.

2953. Ferré, Carl. 2011. Planting and nourishing the seed: the origins of West Coast Macrobiotics, Part 1. *Macrobiotics Today (Chico, California)*. July/Aug. p. 25-28. [9 ref]

• **Summary:** Note: This is a history of West Coast macrobiotics up until 1970.

“The spark that ignited macrobiotic activity in the United States was George and Lima Ohsawa’s first visit to the United States late in 1959. After arriving in New York in late November and staying for about a week, Ohsawa traveled to California and gave lectures in Los Angeles and San Francisco. Tommy Nakayama was one of Ohsawa’s students who moved to the U.S. in 1952. He hosted George and Lima in Los Angeles and organized lectures and cooking classes for them (reference 1). Ohsawa also searched for a reliable source of brown rice and discovered the Koda Brothers in Dos Palos, California. These introductions to macrobiotic thinking planted the seed for macrobiotic development on the West Coast.

“Ohsawa returned to New York after being in California for about a week and lectured in New York for about four months. Working with some of his Japanese students already living there, the Ohsawa Foundation of New York was formed in 1960. The first macrobiotic newsletter was published with Herman Aihara as editor in May of 1960. The first Ohsawa-style camp was held that summer at the New Horizon Camp, Southampton, Long Island. Ohsawa taught at the camp and for a while after. According to camp records, 360 people attended the camp at one time or another and the camp served 2,128 meals during the 9 weeks of the camp (2). Herman was elected president of the Ohsawa Foundation in February, 1961 (3).

“George Ohsawa gained some popularity for predicting impending troubles for Gandhi and president Kennedy. One prediction that didn’t come true, however, led to the beginning of macrobiotics on the West Coast of the United States. Ohsawa, concerned about the building of the Berlin wall in 1961 and actions that would lead to the Cuban

missile crisis in 1962, advised the macrobiotic community in New York to move to a safer place in case the crisis resulted in nuclear war and fallout.

“On October 1, 1961, 34 macrobiotic people arrived in Chico, California and were welcomed warmly by the town at the City Plaza. Several people in the group were celebrities and the trip garnered national attention. Teal Ames was a famous television star. J. Robert (Bob) Kennedy, Irv Hirsh (also spelled Hirsch), and Dick Smith were outstanding professional musicians (4). Bob was a trumpet player in the band of the Ed Sullivan Show—one of the most popular television programs in the U.S. for many years. Bill Salant was a noted economist. Alvin Bauman was the group’s unofficial leader. The group arrived a day ahead of schedule and the Chico Chamber of Commerce lodged them for free in local motels. The town of Chico held a banquet the next day in the group’s honor (5).

“This group arranged to hold weekly meetings beginning on their first day in Chico. Their macrobiotic understanding, judgment, and enthusiasm inspired many people to change their lives. They understood three things needed for success—development of body, mind, and spirit. While Ohsawa had planted the seed late in 1959, it was this small group of people that nourished and helped macrobiotics grow on the West Coast.

“Food for the Body: Shortly after getting settled in Chico, the group decided to form a food company (6). Chico-San, Inc. began operations in March of 1962. Chico-San provided brown rice, beans, miso, soy sauce, sea vegetables, and other staple foods imported from Japan to the group and to the local community. J. Robert (Bob) Kennedy was the president of the new company, which was staffed by members of the group—Dick Smith, Irv Hirsh, and others.

“Chico-San’s first company-made product was unleavened ‘macrobiotic’ bread. Herman Aihara and others went around the Sacramento valley selling this bread and Chico-San’s other products out of the back of his car. In fact, Herman made Chico-San’s first sale at the tailgate of his car. Herman often joked that the bread was worth its weight in gold and was as heavy as a gold brick!

“The early years of Chico-San were a struggle. The bread and imported products were not that popular. Most of the workers had to take jobs in order to survive. The musicians in the group found places to play. Herman picked peaches in local orchards. Dick Smith worked for the highway department building the four-lane freeway through Chico. One of the reasons for Chico-San’s poor sales in the earliest days was that people didn’t know why or how to use the products—teaching was needed.

“Publications for the Mind: While everyone contributed to the group’s growth in unique ways, Herman and Cornellia Aihara and Lou and Shayne Oles developed macrobiotic teaching on the West Coast in the early 1960s. Herman and Cornellia were the main teachers, although Herman always

maintained he was a student like everyone else. His ego-less style and willingness to accept his own and other people’s shortcomings allowed him to be an effective leader. While Cornellia learned and could recite Ohsawa’s teachings without hesitation, Herman understood the essence more than the specifics. Herman’s insights into this essence shaped West Coast macrobiotics and allowed him to remain forever faithful to Ohsawa’s philosophy.

“Regular meetings helped the group develop its core teachings; however, it was their publications that transmitted them to a larger audience. The magazine, *Macrobiotic News*, that began in New York in 1960 moved with the West Coast group and continued under a new name of *U.P.* for one issue in early 1962, then *Yin Yang: The Unique Principle* for the rest of the year. These early magazines contain many writings by George Ohsawa, Herman and Cornellia Aihara, and Lou and Shayne Oles.

“Lou’s translating and editing skills provided accessibility of Ohsawa’s writings to an English-speaking audience. He also helped fashion the West Coast macrobiotic method by writing and teaching that there is much more to macrobiotics than diet. He realized that curing individual symptoms was not enough—without comprehension of the dialectic of yin and yang and the oneness of the logarithmic spiral, there is no real cure (7). His urging to understand oneness is reflected in another name change by Lou as editor of the newsletter from *Yin Yang: The Unique Principle* to *Yin Yang: The Unifying Principle* at the beginning of 1963. Lou’s wife, Shayne, was instrumental in presenting macrobiotic recipes and editing recipes of Cornellia and others.

“Macrobiotic book publishing of Ohsawa’s books also moved to the West Coast under the direction of Herman and Lou. The first macrobiotic book published in the United States was *Zen Macrobiotics* in mimeograph form in New York in 1960. By November, a revised edition of *Zen Macrobiotics* in book form was available followed by a translation of Ohsawa’s 1956 French work, *The Philosophy of Oriental Medicine*. *Zen Macrobiotics* provided the details for a macrobiotic practice and *The Philosophy of Oriental Medicine* provided the theory. The need for both theory and practice was, and is, a fundamental principle of West Coast macrobiotics. These books helped many people begin a macrobiotic practice without needing to live near one of the major macrobiotic centers.

“Classes and Events for the Soul: Visits by George and Lima Ohsawa to Chico in November and December of 1962 greatly invigorated the young movement. George visited San Francisco on December 7 for a few days before returning to Japan. The Chico group led by Herman, Cornellia, Lou, and Shayne traveled to Sacramento, San Francisco, and Las Vegas spreading Ohsawa’s teachings to many more people. Other lecturers of note in those early days were Bill Nichols and Al Bauman. They also traveled to Los Angeles to meet with Tommy Nakayama and to teach there.” Continued.

Address: President of the George Ohsawa Macrobiotic Foundation (GOMF) and editor of *Macrobiotics Today*, Chico, CA.

2954. Ferré, Carl. 2011. Full speed ahead: the origins of West Coast Macrobiotics, Part 2. *Macrobiotics Today* (Chico, California). Sept/Oct. p. 25-28. [11 ref]

• **Summary:** “In 1961, 34 people packed up and migrated from New York to Chico, California. They started Chico-San to make quality food available and gave lectures to the local community. However, two years later, the macrobiotic group was still relatively small. The townspeople thought the group was strange and found macrobiotic principles difficult to understand and the foods unfamiliar. The impending nuclear disaster had been averted and the excitement about the group’s move had died down.

“Turning Points: Events in 1963 provided a turning point that allowed the growth of macrobiotics on the West Coast. Slowly, Chico residents began to accept members of the former New York group as neighbors. Rumors about communists within the group turned out to be false. Concerns that their weird meatless and sugarless diet was lethal changed from fear to curiosity as the locals saw that the macrobiotic practitioners were not only surviving but also thriving.

“Health food faddists and sick people were attracted to a macrobiotic diet, but only a few people were attracted to the underlying principles. The tendency was to reduce Ohsawa’s universal macrobiotic philosophy to nothing more than a healing diet. This tendency gave macrobiotics the feeling of a cult or fad rather than a philosophy on which one could base his or her life. Some members of the macrobiotic group understood this and remained committed to teaching macrobiotics in a more unlimiting way.

“Meanwhile, Chico-San needed to find a product that would have mass appeal. Bob Kennedy, the company’s president, asked George Ohsawa for ideas and George suggested rice cakes. George sent a rice cake machine from Japan to Chico in 1963. Later, he sent Junsei Yamazaki, one of his most promising students, to help. Junsei not only set up the rice cake machine, he also was the first person to make natural, traditional miso in America and produced some of the finest Yinnies rice syrup and candies, toasted sesame butter, and traditional tamari shoyu (reference 1).

“These products, especially rice cakes, gave Chico-San a solid financial footing and helped place the Chico macrobiotic group at the leading edge of the natural foods revolution in the United States. The increased sales and visibility meant more people interested in a macrobiotic diet and philosophy.

“By 1963, things were happening in Los Angeles, too. George and Lima Ohsawa and others encouraged Tommy Nakayama, one of Ohsawa’s first students who had moved to Los Angeles in 1952, to open a restaurant. In 1963, Tommy

and his family opened “Zen Restaurant” in Hollywood. George attended the grand opening and was very pleased. Many celebrities from John Lennon, Yoko Ono, Red Buttons, Gloria Swanson, and Meredith Wilson to many other television stars, movie directors, composers, and models were regular customers. They learned about macrobiotics and the yin and yang of foods at the restaurant. Tommy also opened a tearoom next door to the restaurant to introduce Japanese culture to Americans (2).

“In the early 1960s, Louis and Susan Remy, a Belgian couple who were long-time disciples of George Ohsawa, moved to Los Angeles from Canada (3). They gave one of Ohsawa’s books in French to Jacques and Yvette de Langre, introducing them to macrobiotics (4). Together, Louis and Jacques opened a photography studio in Hollywood in 1964. Later that year, Louis and Susan opened the Los Angeles Home of Macrobiotics, offering a residential place for advice and consultation for beginners to macrobiotics as well as for those advanced in understanding the Unique Principle. Herman Aihara and Bob Kennedy were the first guests in November of 1964 (5). These activities greatly increased the visibility and understanding of macrobiotics on the West Coast.

“Publications: For several years, the only macrobiotic books in English were Ohsawa’s *Zen Macrobiotics* (early 1960) and the *Philosophy of Oriental Medicine* (late 1960). Although new and better-quality printings of these titles became available in the early 1960s, these two books were thought to contain all that was needed for successful macrobiotic practice. The early magazines published by Herman Aihara provided useful information and encouragement. Both the books and the magazines were sold mostly at lectures or passed around among friends. By 1964, the group realized that more was needed.

“The primary need was a cookbook. By 1964, Cornelia Aihara collected her recipes and those of Shayne Oles and others in the Chico macrobiotic group. *Zen Cookery* was published in November as an accompaniment to *Zen Macrobiotics*. Even though the numbering system of *Zen Cookery* didn’t correspond to those in *Zen Macrobiotics*, the new cookbook provided needed instruction in macrobiotic cooking.

“Lou Oles began work on a revised version of *Zen Macrobiotics* to make it more accessible to Western readers. He also worked on a new edition of *Philosophy of Oriental Medicine* and had the vision to combine these two books with a translation of Ohsawa’s 1947 Japanese book, *Macrobiotic Guidebook for Living*, as a trilogy. His revised version of *Zen Macrobiotics* came out in 1965. In August of 1965, the Foundation’s newsletter/magazine, *The Macrobiotic Monthly*, was made available on newsstands and in bookstores in an effort to reach out to a larger audience (6).

“Perhaps the most significant publication in 1965 was

You Are All Sanpaku. The author was listed as Sakurazawa Nyoyi (Ohsawa's Japanese name) with William Dufty, a New York journalist and an excellent writer, as responsible for the English version. The majority of the book is his reworking of Ohsawa's works—most notably *Philosophy of Oriental Medicine*. The first 50 pages are Dufty's spellbinding account of his conversion to macrobiotics; they moved many people to make changes in their lives. *You Are All Sanpaku* and his most popular work, *Sugar Blues* published ten years later, helped make macrobiotic philosophy accessible to an ever-widening audience.

“Summer Camps: The 1963 camp held in Chico, California was the first Ohsawa-style camp on the West Coast. George and Lima Ohsawa attended and it was somewhat successful. The second West Coast camp was held near Big Sur, California from August 1-9, 1964. The camp, being located between San Francisco and Los Angeles, was attended by an average of 80 people per day with many Japanese guests. George Ohsawa attended five days and lectured each morning he was there. Other lecturers were Alcan Yamaguchi (7) and members of the Chico group such as Herman Aihara, Teal Nichols, and Lou Oles. Susan and Louis Remy did the cooking for the camp (3).

“One of the attendees of the 1964 camp was Alex Lesnevsky. Alex was an electrical engineer who had dropped out of the mainstream to find something greater in life. He was studying Zen in Los Angeles in 1963 and attended Ohsawa's lectures organized by Tommy Nakayama. The wide range of topics and Ohsawa's willingness and ability to answer all questions using the unique principle impressed Alex. He recalls:

“When he got into it deeper and deeper, I could see the logic of it. There was more to it than I had imagined. He got into all sorts of things I never dreamed of. He wasn't just talking about diet—he was talking about life. He was talking about connecting everything in the universe” (8).

“Alex met many of the old-time macrobiotic group at the camp and a month later he went to work for Chico-San. He also recalls that many sick people attended because they had heard that George was some kind of healer. Day and night people begged for Ohsawa's advice, which he gave freely without charge. He was accepting and considerate of everyone (8).

“In 1965, Camp Satori was held an hour away from Chico in the Feather River Canyon. Lou Oles was camp director and reported that the event was not a happy one. First, some in the Chico group decided not to attend. Second, the enormity of teaching the Unique Principle and the Order of the Universe to people who lacked the ability to comprehend it was overwhelming. Third, many of the younger attendees were more interested in LSD and other recreational drugs than macrobiotics (9).

“Campers also were dissatisfied because they didn't feel they received enough answers. They simply refused to think

for themselves, prompting Lou to write: ‘They have failed to understand the value of the true teacher in the Orient. Only in so far as he is able to provoke his students into thinking for themselves is he worthy of the title Sensei—true teacher’ (9).” Continued. Address: President of the George Ohsawa Macrobiotic Foundation (GOMF) and editor of *Macrobiotics Today*, Chico, CA.

2955. Ferré, Carl. 2011. Full speed ahead: the origins of West Coast Macrobiotics, Part 2 (Continued—Document part II). *Macrobiotics Today* (Chico, California). Sept/Oct. p. 25-28. [11 ref]

• **Summary:** (Continued): “Another perspective on the 1965 camp comes from Alex Lesnevsky. He picked up George and Lima Ohsawa from the airport in Sacramento and drove them to the camp. The camp location was good as was the food and attendance; however, there were lots of hippies—and lots of dope. George was disgusted and blurted out during one lecture, ‘You have low judgment!’ George told Alex that it was the worse summer camp he had ever attended (8).

“It is ironic that the hippies ended up providing the impetus for macrobiotic philosophy to flourish on the West Coast and throughout the United States. This rise in macrobiotic activity proves one of Ohsawa's fundamental principles, the bigger the front, the bigger the back—from the dirtiest mud comes the most beautiful flower.

“Summary: Things were looking up by the beginning of 1966. Lou and Shane Oles decided to move to Los Angeles to be in a larger city with more printing services. This move also allowed Jacques de Langre with his photographic skills to be more involved. New books and new editions of existing books were planned. The remaining members of the New York group had been accepted into the Chico community. More people were familiar with macrobiotics and Chico-San was doing well.

“Macrobiotic teaching was developing. Many sick people looked to macrobiotics for help. Herman Aihara and Lou Oles were intent on keeping Ohsawa's macrobiotic principles at the forefront of the teaching. Herman Aihara summarized Ohsawa's teaching in the early 1960s as follows:

“Ohsawa's greatest concern was that we understand and live with Oneness or Infinity. In other words, he wanted us to live without exclusivity. He wanted us to accept everything with joy and appreciation, making no excuses for ourselves.’ (10). Ohsawa himself was busy working on Louis Kervran's theory of biological transmutation. Simply stated, biological transmutation is the theory that one element can be changed to another in a person's body. Ohsawa had done some experiments in 1964, during which he claimed to have changed sodium into potassium and carbon into iron using very low heat and energy. Ohsawa felt transmutation could usher in world peace because nations would no longer have to fight over expensive elements—they could be transmuted

from cheaper ones (11).

“Another of Ohsawa’s projects involved the Olympics. He noted that there was a physical, athletic Olympics every four years and was organizing the first ever International Cultural and Spiritual Olympics to be held in Japan in the summer of 1966. The future looked bright and overall macrobiotics was moving ahead at full speed. No one, except perhaps Ohsawa himself, foresaw the major bump in the road ahead—the subject of the next installment.

2956. Hain Celestial Group, Inc. (The). 2011. Annual report 2011: Organic, natural, illustrating a healthy way of life. Melville, New York. 8 + 80 + [8] p. Nov. 10. 28 cm.

• **Summary:** Begins with an 8-page statement by Irwin D. Simon, the CEO, with a new illustration of him. Of the \$1.130 billion in worldwide sales, \$981 million were from North America and \$149 million were from Europe. Net sales for the year ended 30 June 2010 were \$1,130 million, up 23.2% from 2010. Net income in 2011 was \$54.982 million, up 92% from the \$28.619 million in 2010. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2957. *SoyaScan Notes*. 2011. Chronology of major soy-related events and trends during 2011 (Overview). Dec. 31. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** May–DuPont buys Danisco A/S in Copenhagen, Denmark, for \$6.35 billion.

June 27–William Shurtleff, founder and director of the Soyinfo Center (Lafayette, California), is selected as the 2011 recipient of the Association of College and Research Libraries (ACRL) Science and Technology Section (STS) Oberly Award for Bibliography in the Agricultural or Natural Sciences for his bibliography “History of Soybeans and Soyfoods in Africa (1857-2009): Extensively Annotated Bibliography and Sourcebook.”

July–Sprouted tofu starts to become more popular. Sprouting soybeans, among other things, before grinding them to make tofu, inactivates phytic acid.

Note. This is the earliest English-language document seen (Jan. 2013) that mentions sprouted tofu.

Almond milks appear increasingly in both supermarkets and natural- and health food stores.

Aug. 1–Lightlife Foods (owned by ConAgra Foods, Inc.; Omaha, Nebraska) fires all of its brokers. A week later they fire the sales people who managed these brokers. This is consistent with their moves over the past 3 years to consolidate management of the brand in Omaha. Meals for Millions, Soy, and Freedom from Hunger (1946-2011).

In 2011 Shurtleff & Aoyagi publish ten free digital history books on Google Books. They are histories of: Erewhon–Natural Foods Pioneer in the United States (1966-2011); Artemy A. Horvath–History of His Work with Soybeans and Soyfoods (1886-1979); Li Yu-ying (Li Shizeng)–History of His Work with Soyfoods and Soybeans in France, and His Political Career in China and Taiwan (1881-1973); Henry Ford and His Researchers–History of Their Work with Soybeans, Soyfoods and Chemurgy (1928-2011); How Japanese and Japanese-Americans Brought Soyfoods to the United States and the Hawaiian Islands–A History (1851-2011); William J. Morse–History of His Work with Soybeans and Soyfoods (1884-1959); Tempeh and

Tempeh Products (1815-2011); Fermented Tofu—A Healthy Nondairy / Vegan Cheese (1610-2011); Fermented Black Soybeans (165 B.C. to 2011).

The budget of the Weston A. Price Foundation (run by Sally Fallon) has increased 10-fold over the past decade. This gives them more power to criticize soy and to promote their agenda which includes raising and eating animals. All this information and their funding sources are on the website.

2958. Ferré, Carl. 2011. From tragedy to happiness: the origins of West Coast Macrobiotics, Part 3. *Macrobiotics Today (Chico, California)*. Nov/Dec. p. 25-28. [13 ref]
 • **Summary:** “Everything changed on April 24, 1966 when George Ohsawa suddenly and unexpectedly died. Lima Ohsawa was with him when he died and sent the news. Four Japanese doctors familiar with macrobiotics diagnosed the cause of death as arterial thrombosis. Theories on the underlying cause among macrobiotic followers range from overworking, sleeping only two to three hours per night, to experiments trying to make a macrobiotic herbal drink that would be as popular as beer and sugared soft drinks.

“Ohsawa himself felt he had revealed too much about the Infinite world and that it was his time to move on. In 1963, he told Madame Rivière, a leader of macrobiotics in France, that he only had three years to live (1). In 1965, he told Alex Lesnevsky, “I shall not live long because I have abused my body too much” (2). His contracting filaria (blood parasites) in Africa in 1956 to prove the worth of the macrobiotic method to Albert Schweitzer comes to mind.

“Some people felt Ohsawa’s death would mean the end of the macrobiotic movement. Actually, the opposite occurred. The growth of macrobiotics on the West Coast and elsewhere increased because of the timelessness of Ohsawa’s teachings and the dedication of Ohsawa’s students. About Ohsawa, Lou Oles wrote, ‘We, who are left behind, face the future with the humility, the smiling faces, the sense of responsibility, and the deep purpose that would have made him the happiest of men (3).

“The macrobiotic group faced other challenges in the early days of 1966. The biggest challenge was the death of Beth Ann Simon. After Herman and Cornelia, Lou and Shayne Oles, and others moved from New York to Chico, California in 1961, Irma Paule ran the Ohsawa Foundation of New York. Irma was a French actress who spoke French and thus became Ohsawa’s assistant while he was in America. In the spring of 1965, Beth Ann and Charles Simon attended one of Irma’s lectures and decided to start a strict macrobiotic practice. Unfortunately, they misunderstood macrobiotic teaching and tried to balance years of LSD, marijuana, and harder illegal drug use with excess yang—lots of salt while drinking little or no water. She died in New Jersey late in 1965.

“Beth Ann’s father was an influential lawyer. He attempted to cover up the drug use and to blame macrobiotics

for her death. Irma Paule was accused of poisoning her but no evidence of this could be found and she was not charged. The father got the FDA involved and the FDA raided the Ohsawa Foundation of New York with hatchets in hand. The Ohsawa Foundation of New York closed, although Irma continued teaching and counseling informally for about forty years (4).

“The Beth Ann Simon case had a profound effect on the West Coast group as well. The FDA inspected the Chico-San store. They made it clear that it was illegal for the same company to sell food products and to provide health claims or information about these products. Chico-San and the California Ohsawa Foundation had to be completely separated. As a result, Herman Aihara resigned from the Ohsawa Foundation and worked for Chico-San only—at least officially. Lou Oles became editor of *The Macrobiotic Monthly* and moved the editorial office to Los Angeles early in 1966.

“The Foundation’s move to Los Angeles separated the food (Chico-San) and the theory (Ohsawa Foundation) and satisfied the FDA. Lou discovered that macrobiotic people in Los Angeles had the mistaken notion that the Chico group had a direct link to inside information about how and what to eat and drink. Lou did his best to dispel this idea. He placed the emphasis back on each person deciding for him- or herself the best foods and preparations for him or her. Lou wrote: ‘Bear in mind that you must enter the Kingdom of Heaven by yourself and for yourself. No one but you can tell you how to be Macrobiotic.’ (5). These statements provide the essence of West Coast macrobiotic teaching.

“One of Ohsawa’s last projects was to establish a Cultural and Spiritual Olympics in 1966. George worked on preparations for over a year before his death. The event was held in Japan as scheduled and many people from the West Coast group attended along with people from around the world. It was a true meeting of East and West as George had envisioned it. The spiritual Olympics in Japan was held instead of a West Coast camp in 1966.

“Early in 1967, the Ohsawa Foundation manned a booth at the National Health Federation Convention held at the Statler Hilton Hotel in Los Angeles. They answered many questions, displayed the Foundation’s publications, and served delicious macrobiotic food. Macrobiotic activity was increasing around the world during the spring of 1967. Lou wrote, ‘Young people from everywhere are turning to the Unique Principle as a source of guidance in a troubled world’ (6).

“The third event to shock the macrobiotic community was the death of Lou Oles on August 20, 1967. Toward the end of June 1967, Lou became ill during a meal at a French restaurant. After becoming weaker and losing much weight over the following few weeks, x-rays were taken and an obstruction in the stomach was found. He flew to Japan to see Lima Ohsawa, arriving on July 18. He was hospitalized

and treated by doctors who understood macrobiotic principles, but his symptoms were too advanced. An autopsy revealed stomach cancer that was at least ten years old, even though Lou was unaware of it, having practiced macrobiotics for the last seven years without any symptoms or perceived illness (7).

“The three deaths, Beth Ann Simon in 1965, George Ohsawa in 1966, and Lou Oles in 1967, were difficult to understand for people who perceived macrobiotics only as a healing diet. People who understood macrobiotic principles, however, saw the deaths as proof that the principles work. Beth Ann misunderstood the principles and tried to counter extreme yin with extreme yang. Lou mistook a lack of symptoms for real health. And, George understood the principles and accepted the price he had to pay for the life he had lived. It was Lou Oles and Herman Aihara who kept the emphasis of West Coast macrobiotic teaching on the order of the universe and the unique principle–theory and practice. Following Lou’s passing, Herman returned as president of the Ohsawa Foundation and the editorial offices returned to Chico, California in the fall of 1967. Herman wrote about the deaths of George and Lou as follows:

“Sadness is followed by joy. Without sadness, no joy, and vice versa. This is the law or justice of the universe. There is only one thing left for us to do and that is to change sadness to joy. Try to change the most disagreeable thing to joy. Our happiness exists only in this effort. Avoiding or escaping the sad or difficult never brings us happiness” (8).

“Unexpected Boost: Many young people who were using LSD and other recreational drugs attended the 1965 West Coast camp. George Ohsawa was disappointed with the drug use. However, some of these attendees would help spread macrobiotics in a huge way. The hippie movement was developing in the Haight-Ashbury district of San Francisco in 1965 and 1966. Some macrobiotic principles, especially dietary ones, became widely accepted by 1967 within this community. While the West Coast groups in Chico and Los Angeles were dealing with the recent death of George Ohsawa and others, hippies in San Francisco were dealing macrobiotics along with marijuana and other drugs (9).

Copies of *Zen Macrobiotics* were passed around and many hippies readily accepted the dietary part of macrobiotics. It was counter to a typical American diet and the food was inexpensive. The number 7 diet also offered a quick cure for every illness created by modern fast-food diets. Natural food stores and restaurants began selling macrobiotic foods. Bill Zemsky created a rice cart stand in front of UC Berkeley and by 1968 with Sandy Rothman as owner and operator, it was reported to be selling ‘hotter’ than the hot dog stand next to it (10).

“The pace of macrobiotic growth quickened by 1967. Both Herman Aihara and Michio Kushi acknowledge that macrobiotics spread more widely and quickly due to

the hippies from San Francisco. Many went to Boston to study with Michio and several became instrumental in the development of macrobiotics on the East Coast and around the world. Others helped Herman and Cornelia develop macrobiotics on the West Coast.

“New macrobiotic restaurants in Los Angeles and elsewhere were established in 1968. That year, Herman Aihara regularly lectured up and down the West Coast from Seattle to Los Angeles and to places closer to home such as San Francisco and Reno, Nevada. In May, Michio Kushi toured the West Coast, lecturing in many of the same cities. In August, Herman traveled to Denver for lectures. Macrobiotics was growing quickly both in numbers and throughout the Western United States.” Continued. Address: President of the George Ohsawa Macrobiotic Foundation (GOMF) and editor of *Macrobiotics Today*, Chico, CA.

2959. Ferré, Carl. 2011. From tragedy to happiness: the origins of West Coast Macrobiotics, Part 3 (Continued–Document part II). *Macrobiotics Today* (Chico, California). Nov/Dec. p. 25-28. [13 ref]

• **Summary:** (Continued): “There was a summer camp announced for August of 1967, but there is no report on this camp in *The Macrobiotic Monthly*. Despite the increased numbers of macrobiotic followers, only about 30 people attended the 1968 camp held in the San Bernardino Mountains. Herman reported that this was the first camp without George Ohsawa present, (11) giving credence to the idea that the 1967 camp was cancelled due to Lou Oles’s failing health.

“In late July of 1968, the largest macrobiotic camp to date was held in France. Over 200 Europeans attended along with about 80 Japanese and people from the United States, Africa, and South America. Shayne Oles from the West Coast group attended.

“The increase in macrobiotic followers meant a larger staff for *The Macrobiotic Monthly*. Twelve issues were published in 1967, and they included more substantial articles. Many of the articles became pamphlets or books. *Macrobiotic Reports* (later called Macro Guides) that were completed in 1968 included *Biological Transmutation*, *Vitamin C and Fruit*, *Life and Death*, and a new translation of *Macrobiotic Guidebook for Living*. These books and other publications helped spread macrobiotics even more.

“Be Your Own Teacher: By 1969, macrobiotics was widely known on both coasts. Teaching on the East Coast was highly organized and more theoretical. Teaching on the West Coast was less formal and more community oriented. In February, Bill French wrote, ‘Studying and learning macrobiotics is somewhat less formal here and could be placed in the category of everyday living, the emphasis being on practical application. Each person is more or less his own teacher and student.’ (12) Herman Aihara lectured in Los Angeles, San Francisco, and Chico each month. Jacques and

Yvette de Langre, Lennie and Susan Richards, and Tommy Nakayama gave other lectures in Los Angeles. The name of the monthly magazine changed to *The Macrobiotic* in January of 1969. In May, Herman and Cornelia moved to Carmichael, a suburb of Sacramento, for easier travel to Los Angeles and San Francisco. The magazine's editorial offices moved to Carmichael in June. Herman continued to travel to Los Angeles and San Francisco monthly for lectures. New macrobiotic restaurants were opened including one in Seattle.

"There were two West Coast macrobiotic summer camps in 1969. The first was held from July 26 to August 2 at Mayaro Lodge in Northern California and about 40 people attended. The main lectures and nightly discussions were led by Herman Aihara with camp directors Shayne Oles and Lennie Richards and others leading other discussions. Cornelia Aihara, Shayne Oles, and others prepared delicious meals. There were cabins and thus 'ample opportunity to be alone, and this was often the case.' (13).

"The second camp was held from August 16 through 25 near Big Sur and was attended by about 150 people. This location had no cabins and thus 'there was little chance for privacy in the camp sites; we all interrelated, grew, and learned—from changes in ourselves, others, and in all of us as a group.' (13) Herman Aihara and Michel Abehsera, author of *Zen Macrobiotic Cooking* who had created and operated several macrobiotic restaurants in New York City, gave the main lectures. Costs were kept low so that many people could attend.

"George Ohsawa gave his first macrobiotic lectures on the West Coast late in 1959. Ten years later by the end of 1969, macrobiotic followers were eagerly awaiting the first California organic brown rice from Chico-San. New books and pamphlets from the Ohsawa Foundation included *Rice and the Ten-Day Rice Diet* and *Macrobiotic Pregnancy*. Through the works published by Herman Aihara, Lou Oles, and Jacques de Langre, annual summer camps, and countless lecture trips on the West coast, the group that migrated to California in 1961 had created a stable and growing macrobiotic community. The group was looking forward to the 1970s and to new challenges to come.

Macrobiotic books list (47 p.).

The International Macrobiotic Directory is available as a printed, bound book or as part of the e-book. The names are arranged alphabetically by country (and within the USA by state), with name, position, address, phone and fax numbers, and email if available (62 p. + 11 p. of yellow pages).

Contains many excellent biographies of people active in macrobiotics.

A full-page biography of Robert Mattson is found on the page after p. 125. Address: Publisher, 46 Howard Street, Waltham, Massachusetts 02451. Phone: 413-281-5584.

2961. Stephens, Arran; Rosen, Eliot Jay. 2011. *The compassionate diet: how what you eat can change your life and save the planet*. Emmaus, Pennsylvania: Rodale Press.

160 p. Illust. (color). Index. 18 cm. [20 ref]

• **Summary:** Contents: Foreword, by Rajinder Singh. Acknowledgments. Preface. Introduction. What is a vegetarian? The health benefits of a vegetarian diet. The ethics of a vegetarian diet. You are what you eat. Vegetarianism and world religions. Concluding thoughts.

“*The Compassionate Diet* persuasively advocates choosing a plant-centered diet rather than an animal-foods diet from a completely holistic perspective. I especially appreciate the book’s extensive coverage of the spiritual aspects of dietary choice, which most of the books and essays in the important conversation about industrial food systems and diet tend to ignore”—John Mackey, Cofounder and CEO, Whole Foods Markets, and a vegan (from the back cover). Address: 1. Vancouver, BC, Canada.

2962. Ferré, Carl. 2012. Think for yourself: the origins of West Coast Macrobiotics, Part 4. *Macrobiotics Today* (Chico, California). Jan/Feb. p. 26-28. [3 ref]

• **Summary:** “The first ten years of the Ohsawa Foundation were filled with changes. Herman Aihara, Al Bauman, Teal Nichols, and Mary Barsamian formed the Ohsawa Foundation of New York in 1961. Herman was elected as the first president. In the fall of 1961, 34 people, including Herman Aihara and family, moved to Chico, California and began West Coast macrobiotics. The West Coast group began Chico-San in 1962 and continued macrobiotic teaching, publishing, and conducting annual summer camps that were begun in New York.

“The Ohsawa Foundation of New York dissolved in 1965 after a raid by the FDA. That same year, Herman Aihara, Bob Kennedy, Lou Oles, Bill Salant, and Bill Nichols incorporated the Ohsawa Foundation of Chico. Herman and Bob were forced to resign from the Foundation because of their work with Chico-San. At that time, teaching about healthy food and selling those foods at the same time was forbidden. Lou Oles moved the Foundation to Los Angeles at the beginning of 1966.

“The young macrobiotic community was stunned in April of 1966 by the death of George Ohsawa. Lou Oles died the following year. Herman Aihara quit working at Chico-San and became president of the Ohsawa Foundation once again. From late in 1967 to 1970, there was a sharp rise in the sales of books, pamphlets, and subscriptions to *The Macrobiotic*. The Aihara family moved to Carmichael, a suburb of Sacramento, in 1969.

“Good Times: By the beginning of 1970, Herman was teaching regularly up and down the West Coast from Seattle and Portland to San Francisco and Los Angeles. In the summer of 1970, the Aihara’s made their first United States/Canada macrobiotic lecture tour accompanied by Alcan Yamaguchi. They lectured in San Francisco, Los Angeles, Tucson [Arizona], Houston [Texas], New Orleans, Philadelphia, New York, Boston, Toronto, Columbus [Ohio],

Chicago, Kansas City [Missouri], Denver, Vancouver, Seattle, Ashland, Chico, and Carmichael.

“The first French Meadows Summer Camp was held from August 14 to 23, 1970. Cornelia Aihara, Nan Schleiger, and Yvette de Langre cooked, and Jacques de Langre began the tradition of having Do-In each morning at 6:30 a.m. The main lectures by Herman and others were in the morning; afternoon classes were more optional. There were lectures and discussions after dinner along with children’s campfires and goodies (1).

“A second West Coast camp was held August 22 to 31, 1970 at Wiley Creek Campground in the Stillaquamish Valley 1½ hours northeast of Seattle. Herman and Alcan attended this camp as well. The community in Seattle was growing fast (2). By the end of 1970, Herman attributed increased interest in macrobiotic teaching to eight factors:

- “1. Young adults (Herman later referred to them as hippies).
- “2. Increased awareness of ecology.
- “3. Increased awareness of organically grown foods.
- “4. Increased awareness of the harmful effects of cyclamates, MSG, refined sugar, and synthetic chemicals.
- “5. Michio Kushi’s work.
- “6. More macrobiotic communities and educational meetings.
- “7. You Are All Sanpaku.
- “8. Chico-San, Erewhon, and other macrobiotic food manufacturers and distributors making good food more available (3).

“One More Big Change: Things were going quite well in 1970, yet there was one more major change to come. The directors of the Ohsawa Foundation of LA [Los Angeles] were Herman Aihara, Shayne Oles Suehle, Fred Suehle, and Bernard Silver. On the November 10, 1970, Herman sent a letter to the other directors proposing a re-organization of the Ohsawa Foundation. He asked that 18 new directors, including Michio Kushi, be added. This increase would give greater suggestions and participations from more local organizations (3).

“Herman’s proposal was rejected, after which he resigned, moved to San Francisco, and formed the George Ohsawa Macrobiotic Foundation early in 1971. The new organization had great support and, that year, many new books were published, including *Is Acid Yin, Is Alkaline Yang?*; *Macrobiotics: An Invitation to Health and Happiness*; *Hidden Truth of Cancer*; and *Milk: A Myth of Civilization*. *The Macrobiotic* magazine continued under Herman’s leadership.

“The next 27 years for West Coast macrobiotics were more stable. However, in 1974, the Aihara’s made another move—this one to Oroville, California, a small town 23 miles from Chico. They purchased a house in Oroville for the George Ohsawa Macrobiotic Foundation and 40 acres in the hills above Lake Oroville to begin a residential learning

center. Herman and Cornelia founded the Vega Institute in 1974 and both organizations were moved into the former Oroville hospital building a decade later.

“The Foundation moved to a separate location in Oroville in 1995. Three years after Herman’s passing in 1998, the George Ohsawa Macrobiotic Foundation moved back to Chico—40 years after the group from New York began teaching macrobiotics on the West Coast. To this day, the Foundation continues with its mission to present macrobiotics to the general public as originally enunciated by George Ohsawa and as appended by Herman and Cornelia Aihara. The Vega Institute closed shortly after Cornelia’s passing in 2006.

“Summary: The essence of West Coast macrobiotics originates from Ohsawa’s insistence that each person learn to think for him or herself. This requires that each person learn macrobiotic principles and how to use them. Each individual is unique, meaning that there is no one diet that is appropriate for everyone all the time. The ultimate goal is to realize our connection with Oneness—our true nature. Then, we can live without exclusivity and without making excuses for ourselves. We can accept everything—good and bad—with joy and appreciation. Ohsawa gave us macrobiotic principles and dietary advice to point us in that direction.

“Ohsawa understood that dietary choices lead us toward this realization or away from it. Much to his disappointment, the early macrobiotic group tended to view macrobiotics only as a curative diet. This thinking led to lists of foods to eat and lists of foods to avoid. Such lists are okay as an introduction as long as people realize that the lists become secondary once macrobiotic principles are learned. Macrobiotics, according to Ohsawa, is more about elevating judgment than about eating certain foods and avoiding others. Understanding macrobiotic principles and eating good food are equally important.

“The early West Coast teachers emphasized learning the order of the universe, the unifying principles of yin and yang, the levels of judgment, and the logarithmic spiral. They encouraged each student to discover for him or herself the natural order of life and how to apply it for whatever purpose he or she chooses. No one person can tell another person how to be macrobiotic. Macrobiotic practice, as a way of life, is unique to each individual and has value for that person.

“The current West Coast macrobiotic objective is to present macrobiotics in as unlimiting way as possible and accepts and encourages all expressions of macrobiotics. Thus, people who see macrobiotics as a way to elevate judgment or to realize divinity are welcome. Macrobiotic practitioners who see macrobiotics only as a curative diet are equally welcome. The reason for this acceptance is simple. We can change what we eat. We can change how we feel. We can change what we think. We can change what we believe. But, we can’t change our true nature. Realizing that which does not change, leads to tolerance, kindness, freedom,

peace, and love—the real essence of all universal teaching, including macrobiotics.

Note: Muramoto sensei (who arrived in 1971), Cecil Levin, and many others who arrived after 1970 are not included in this history which goes up to 1970. Address: President of the George Ohsawa Macrobiotic Foundation (GOMF) and editor of *Macrobiotics Today*, Chico, CA.

2963. Troy, John. 2012. Update on life and work since the year 2000 (Interview). *SoyaScan Notes*. March 7. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** John is now age 72, retired, and still married to Carol. They live on 20 acres of land in Cedar Grove, North Carolina, in a home that he has been building for the last 16 years or so. His ancestors came from North Carolina, and when he was growing up he spent a lot of time hiking in the Great Smoky Mountains.

In 2006 John sold his sauce manufacturing and bottling company for \$7 million to an investment company named Dogwood Equity. He was making and bottling about 500 different products (SKUs) at the time, most for other people / companies. Everyone he asked said he would be less happy after he sold it than he was at the time, but he sold it anyway. Dogwood changed the name from The Wizard’s Cauldron Ltd. to a name that was not as good, diversified into the wrong products, and generally messed things up. It was an “asset purchase” and they bought the rights to make the products. Many of the companies who were John’s customers are no longer with Dogwood.

Why did John name his company “Wizard’s Cauldron”? His wife, Carol, threw the *I Ching* (using special coins) and got Hexagram #50, the Cauldron. Then she threw it again and got the same hexagram. So “Cauldron” became a key word in his company’s name.

His original company was named American Natural Foods. Pure and Simple (owned in part by Jimmy Silver) was his distributor and had a large inventory of his products. When Pure and Simple went down the tubes (bankrupt), John’s company did too.

John is now very much involved with travel and spiritual practice. He also has a radio program, “Conversations with Avant-Garde Sages,” on WCOM 103.5 FM in Chapel Hill, North Carolina, or Cyber Satsang via live streaming audio

(www.thewizardllc.com). Every Tuesday, Eastern Time from noon until 1 pm. He has hosted people such as Norio Kushi (who has written a book).

Where does creativity and everything else come from? “It all emerges out of silence.” “The ‘I’ thought is the big mistake and the problem.” John once asked Doug Greene, who founded *Natural Foods Merchandiser*, what he felt was the secret to his life and work. John said: “I just went with what wanted to happen.”

John has written one book titled “Wisdom’s Soft Whisper” and another titled “The Human Gospel of Ramana Maharshi.” Address: 5134 Boone Village Trail, Cedar Grove, North Carolina 27231.

2964. Nanabayashi, Shugo. 2012. Japan C.I. after George Ohsawa: Part 1: Lima Ohsawa as chairperson from 1966 to 1999. *Macrobotics Today (Chico, California)* 53(2):22-25. March/April. [20 ref]

• **Summary:** “On April 24th, 1966, Yukikazu Sakurazawa, also well known as George Ohsawa (GO), set out on a journey for the infinite universe [passed away]. In 1945, he established True Life Cooperative (*Shin Seikatsu Kyôdô Kumiai*), which later became the present Japan C.I. Two years later, the Cooperative was renamed True Life Association (*Shin Seikatsu Kyôkai*), whose center was called *Maison Ignoramus* (MI). While GO published the magazine ‘Compas’ and ‘SANA,’ he taught a large number of young men and women about Macrobotics (1). In the same year, GO founded World Government Association (*Sekai Seifu Kyôkai*) and took office as the chairperson. Around this time the organization “World Government” (*Sekai Seifu*), whose title is “Macrobotique” at present, began to be issued (2). In 1948, MI juku (or school) was organized in Yokohama, Kanagawa prefecture, and, with the title of the organization changed into “To the New World,” Japan C.I. saw the light of day (3).

“Relying on the footprints of the major contributors to the magazine *To the New World* and *Macrobotique*, we are going to overview a brief history of macrobotics in Japan, focusing on the activities of Japan C.I. Those contributors include Lima Ohsawa, Moriyasu Ushio, Masanori Hashimoto (4), Masaharu Kawashima (PU-named Garimar), Haruko Tanaka, Hanai brothers (Akira & Ryouhei), Makoto Koga, Katsumata family (Yasuhiko, PU-named Toma, and Yuichi), and others who have played significant roles in the dissemination of macrobotics until today. [PU name refers to the name given a person by George Ohsawa.–Ed.]

“The first installment of this series covers 1966 to 1999. During this period, Lima Ohsawa played the role of Chairperson of Japan C.I. We are going to break the period down to a decade term, and introduce people involved who played a major role in each term.

“1960s: Soon after the passing of GO, Spiritual Culture Olympic (*Seishin Bunka Olympic*) was held in Japan from

July to August in 1966. In those days, signs of Japanese culture boom were being revealed after WWII. It was especially Zen culture, which was introduced by Tenshin Okakura and Daisetsu Suzuki, that most impressed Western people (5). By grasping this opportunity GO thought of holding an international conference to achieve the world eternal peace, and called this conference Spiritual Culture Olympic, in comparison with the physical festival: the Olympics. He longed to invite those who intensively studied Japanese culture, to show them around the traditional Japanese temples and shrines, to create occasions for them to meet with the leaders at each place, and to have them have friendly talks with ordinary people. Through all of these cross-cultural interactions between Japanese and western people he intended to find a way toward the world peace. In the end, with the participants of sixty-five western intellectuals and entertainers, the Spiritual Olympic ended in a big success (6).

“What deserves special mention in the 60s besides the Spiritual Culture Olympic is that just a year before GO died, Lima Ohsawa opened the then only macrobotic cooking school, Lima Cooking Academy in 1965 (7). Until she passed away on November 9th, 1999, at the age of just one hundred, she had been the principal of the school for more than thirty years. She also energetically contributed to the magazine, and almost every month until the Aug-Sep 1990 issue, she had constantly introduced macrobotic cooking recipes such as basic ones, seasonal ones, ones for treatment, and ones arranged for Western people who were at first unfamiliar with traditional Japanese original ones.

“In the 1960s, among those who vigorously contributed to the magazine was Ushio Moriyasu. Until he passed away in 1992, Dr. Ushio had been the vice chairperson of Japan C.I. and had written for the magazine nearly every month. From 1968 to 1970, Dr. Ushio wrote more than seventeen articles, following twenty-one by Lima Ohsawa. Since the contents of the articles varied to a great extent, it would be hard to bundle his articles in one piece sweepingly. Year after year, however, he came to have a keen awareness of the problems in each month, and wrote his ideas about those problems in the lights of macrobotics.

“Other than those people mentioned above, Yoshimi Kurimu [Clim Yoshimi] reported macrobotic movements overseas, mainly focusing on Paris, France. Yuzuru Sasai (PU-named Mac) also wrote—primarily about natural agriculture methods.

“1970s: In 1971, Lima Ohsawa published an encyclopedic cookbook, *Macrobotic Cooking*. This book is filled with practical regimen cookery nurtured through years of togetherness with GO and experiences acquired through practice in her own cooking school. In the same year, after the passing of Mrs. Raicho Hiratsuka, who was the leader of women’s liberation movement throughout the pre- and the post-war period and also involved in the peace movement

in her later years, Lima Ohsawa wrote an article about her death in the July 1971 issue.

“In 1972, Lima Ohsawa, for the first time after GO died, departed for the world trip by herself to give lectures in each country. The magazine, under the column named ‘LO (Lima Ohsawa) correspondence,’ covered her having made a tour to the United States and European countries. Her visit to the States started at Hawaii, and then proceeded to Los Angeles, San Francisco, Chico, Seattle, Chicago [Illinois], Detroit, and finally ended at Boston (8). In Boston, she was welcomed by the Kushi’s, and paid a visit to the store and the warehouse of the natural food store Erewhon (9), which Michio Kushi had opened. Following from the United States, Lima Ohsawa visited London, and then Paris, where Klim Yoshimi guided her to a macrobiotic restaurant, Tenryu (10). In 1979, she also made a long-desired visit to Brazil where Tomio Kikuchi lived, who had been a key figure in promoting macrobiotics in South America. It was a long-desired visit because even GO could not visit his beloved disciple in Brazil in his lifetime (11).

“The number of the articles Lima Ohsawa contributed in the 1970s was the most, which totaled 109. She outnumbered the second-most-active contributor, Hideo Ohmori (thirty-two articles). Seemingly, she was the busiest in the 70s with all the everyday cooking classes, visits to macrobiotic gathering overseas, and writings for the magazine.

“In the meantime, Dr. Ushio continuously wrote for the magazine almost every month. While he covered a variety of themes from the point of view of macrobiotics, there was one keyword that characterized his articles in the 1970s: *shio* (or salt). Salt became the keyword because of the fact that Dr. Ushio was appointed as the chairperson of Committee for Investigation on Edible Salt. The Committee was organized in 1972 with a view to restoring the natural salt movement and associated investigation on the quality of salt (12). What lay behind the establishment of the Committee was that a new salt manufacturing method had been introduced, making possible the mass production of salt that had been frowned upon by the manufacturers of the conventional natural salt (13). This very fact that a new chemical or artificial salt was introduced in the conventional market, however, luckily or unluckily, led to the recurrent movement toward the conventional natural salt manufacturing. Moreover many Japanese cuisine cook masters often remarked, ‘I think the recent salt is not as tasty as it used to be,’ which resulted in one reason for setting up the Committee. In the end the investigation report permitted the manufacturing of natural salt for special usage, and new natural salt *Akou’s Amashio* was born in June 1972 (14). Dr. Ushio referred to the details in the March 1974 issue.

“In the 1970s, another prominent contributor to the magazine was Hideo Ohmori. Hideo Ohmori first came across the famous GO book, *The Order of the Universe* in 1950, and improved his longstanding weak constitution

through the dietary cure of GO. With this experience as a turning point, he started volunteering to accept sick people and offer them treatment with macrobiotic methods (15).

“People who knew him well often mentioned that he had did everything in his power to take care of sick people. Therefore his articles were mainly about the treatment through practice of macrobiotics. However, while in the 80s and 90s his articles were mostly focused on conditions of and treatments for each disease, which had previously been discussed in his Right Diet and Medicine Seminar (*Seishoku Igaku Kôza*), in the 1970s, on the other hand, he covered rather basics of macrobiotics and its relation to sickness (16)” (Continued). Address: Researcher of Japan C.I., Japan.

2965. Nanabayashi, Shugo. 2012. Japan C.I. after George Ohsawa: Part 1: Lima Ohsawa as chairperson from 1966 to 1999 (Continued–Document part II). *Macrobiotics Today (Chico, California)* 53(2):22-25. March/April. [20 ref]
 • **Summary:** (Continued): “1980s” In the 1980s, Lima Ohsawa most actively engaged in the cooking school; whereas in the 1970s she was striving for the macrobiotic dissemination campaign primarily through visits to both domestic and foreign camps. She would have wanted to visit the camps in the 1980s too, but her weakened body of eighty to ninety years old may have prevented her from doing so against her will. Besides, she seemingly wished to bring up as many successors and future leaders as possible. In fact, under the leadership of Lima Ohsawa as the principal of the cooking school, there were several future teachers in the school from the 1970s through 1990s (17) From the latter 1980s on, while Hideo Ohmori, Kazue Ohmori’s husband, enjoyed his heyday teaching at Right Food Medicine Seminar, Mrs. Ohmori also wrote articles mainly about parturition and nursing. Furthermore, the current school principal, Mitsushi Matsumoto, with his own experience working for a traditional Japanese restaurant and guidance given by GO and Lima Ohsawa, held a seminar called Technique on Regimen through Cooking (*Shyokuyô Ryôri Gihô*).

“The most active teacher in the 1980s, other than the ones in the cooking school, was Hideo Ohmori. As mentioned above, it would not be too much to say that he had spent almost all his life taking care of sick people after the improvement from his innate weak body through the practice of macrobiotics. He held Right Diet and Medicine Seminar at Japan C.I. While he taught the basic theory of macrobiotics and its application to the disease cure, his wife Kazue handled the practical aspects of the application. Working together they implemented disease cure through right diet. Based on GO’s conventional Yin-Yang theory Mr. Ohmori ventured to change it into more acceptable one for the general public. This was so-called *Four Aspects* (18). He divided traditional yin and yang into four sets: yin-yin, yin-yang, yang-yin, and yang-yang, and at the

center is positioned Moderation (*Chu-yō*). This was the first application theory from GO's, and its theoretical support was based on the theory of the Cosmic Dual Forces and the Five Elements in Chinese Cosmology (*Yin-Yang Gogyō Setsu*). There are some opinions against Hideo's theory because, they insist, it would instead further complicate the original GO's theory and is merely following the lead of the cramming-oriented modern educational system.

"Although this had no direct relation to the activities held by Japan C.I., John Denver, a famous folksong singer in the 1970s, came to Japan C.I. along with his friends. They met Lima Ohsawa, Dr. Ushio, and Aiko Tanaka (19)." Their guide and translator was Ronald E. Kotsch, who wrote the book, *Macrobiotics: Yesterday and Today* in 1985.

1990s: In the 1990s, Lima Ohsawa didn't act as enthusiastically as she used to. Her primary role at Japan C.I. was writing articles for the magazine, whose number also had declined to only sixteen. Instead, however, her successors, as if they were filling the void of Lima Ohsawa, began playing a major role in the cooking school. Among them were Kazue Ohmori, Hiroko Ukitsu, and from the mid-1990s, Shouko Kawauchi, who wrote energetically for the magazine. Above all, Shouko Kawauchi started to write articles in 1995, and until the late 1990s twenty-four articles appeared in the magazine. This outnumbered Kazue Ohmori (15 articles) and Hiroko Ukitsu (16 articles). Mrs. Ohmori continued to enjoy her role in the practical aspect of her husband's Right Diet Medicine Seminar. Though Lima Ohsawa passed away on November 9th, 1999, her students cherished the tradition and continued to manage her beloved cooking school.

"Whether it came from the affection for elderly Lima Ohsawa or from a sense of urgency not to let the macrobiotic beacon go off, GO's disciples Yuzuru Sasai and Yoshimi Kurimu [Clim Yoshimi] resumed writing for the magazine in the 90s. What is noticeable in particular about their articles is, as readers may easily figure out once they see the title of each article—"Principles of Unique" by Mr. Sasai and "Transmutation in Lower Energy" by Mr. Kurimu, they strived to revive GO's macrobiotics and shed the light over the theme of transmutation in his later time. Concerning the transmutation, however, some people regret GO for not having paved the way for his successors (20).

"As in the 1980s, Mr. Ohmori appeared on the magazine most often. His articles counted eighty-eight in the 1990s. This decade is said to be his golden age. As he took an active role both in the magazine and the lecture, the tendency toward the idea, "macrobiotics equals treating diseases" became conspicuous. Along with this tendency, Eiwan Ishida began appearing on the magazine with articles on basic macrobiotics and treatment of diseases. Mr. Ishida studied under Mr. Ohmori and wrote the second-most articles (seventy-five) in the 1990s. He, too, is a person who supported the macrobiotic movement in this decade.

"The title of the magazine was renamed, "Macrobiotique," from "To the New World," in 1995. The reason a coined French word was chosen for the new title had a lot to do with GO's affection for France. Moreover, in order to make macrobiotics more social or acceptable for the public, Japan C.I. felt the need to rename it.

"Notes:

"1. In 1947 GO began to deal in natural foods in one division of True Life Association. This division later became Ohsawa Japan Inc. in 1969. (From Japan C.I. homepage (a)).

"2. The organization was renamed "To the New World" in 1959 and the title was changed into the current "Macrobiotique" in 1995. (From Japan C.I. homepage (a)).

"3. The office was moved to Shibuya, Tokyo in 1954, and then after a few times of relocation settled at the current address of Ohyama-cho, Shibuya, Tokyo in 1974. (From Japan C.I. homepage (a)).

"4. Mr. Hashimoto had been the chief editor of the magazine until *To the New World*, vol. 649 (Printed in Oct. 1991).

"5. See Ryu Ohta (1984).

"6. Thereafter the second Spiritual Olympic was held in 1968. The second Olympic was hosted by Paris C.I., and the total number of eighty-seven Japanese people visited each camp place in Europe. Furthermore in a session of the second Olympic, the third and fourth openings were resolved, which were never held in the end. (See Edt. Hisao Yasuhara, 1976).

"7. The cooking school was renamed Lima Cooking School in 1998, and the name has been still the same until this day. (Edt. Akira Hanai, 1998. 11 and Edt. Akira Hanai, 1998. 12).

"8. See Edt. Masanori Hashimoto (1972. 10).

"9. Concerning the detailed history of Erewhon, see "Soyinfo Center (2011).

"10. See Edt. Masanori Hashimoto (1972. 10).

"11. See Edt. Masanori Hashimoto (1979. 10).

"12. Japan C.I. homepage (a).

"13. See Edt. Masanori Hashimoto (1974. 3).

"14. The current chairperson of Japan C.I., Yasuhiko Katsumata, was the president of Amashio Inc. from 1998 to 2003. (Japan C.I. homepage (b)).

"15. See Ryu Ohta (1984).

"16. Hideo himself never wrote for the magazine. His articles were based on the Right Diet and Medicine Seminar, and these were later compiled for the magazine by his disciples.

"17. Among them were Kazue Ohmori, Hiroko Ukitsu, Hikari Ogata, Mieko Sakurai, and Shōko Kawauchi, some of whom are the chief cooks of the cooking school as of 2011.

"18. See Ryu Ohta (1984).

"19. See Masanori Hashimoto (1981.7).

"20. See Ryu Ohta (1984).

"About the author: Shugo Nanabayashi was born to

macrobiotic parents and started practicing and cooking brown rice for himself at age fifteen. He became a research student of Japan CI, the first macrobiotic promotion association that George and Lima Ohsawa founded. Shugo has a M.A. in management from Meiji University and B.A. in International Imports/Exports Business from Kanagawa University. He enjoys tai chi, chi nei tsang, and playing soccer in his spare time. For more information on Japan CI, see: www.ci-kyokai.jp (in Japanese)."

2966. Tofutti Brands Inc. 2012. Tofutti. 2011 annual report. 50 Jackson Dr., Cranford, NJ 07016. 44 p. 28 cm.

• **Summary:** Tofutti Brands Inc. hit hard times last year as reflected by the fact that, for the 2nd year in a row, they stopped putting the unchanging color cover on their annual report. This report now consists of a 1-page summary by David Mintz, Chairman and CEO, followed by Form 10-K, required by the Securities and Exchange Commission.

Net sales for 2011 were \$15.926 million, down 11.1% from the previous year. Net income was \$43,000, down 90.7% from \$462,000 the previous year. Despite this 90% drop in profits, the salary paid to the CEO was unchanged at \$450,000.

On page 1 Mintz (now age 80) explains that the company's largest customer [Trader Joe's] stopped selling branded goods, including Tofutti's. On the positive side, sales to foreign distributors in 2011 increased to approximately \$2.049 million (13% of sales) compared with \$1.652 million (9% of sales) the previous year.

During the first quarter of 2012, the firm introduced Tofutti Jumbo and Mini Raviolis made with Better than Ricotta, their new non-dairy ricotta cheese product.

Tofutti gets its kosher certification from KOF-K, of Teaneck, New Jersey.

Sales to health food distributors account for about 52% of total sales.

A 13-page "Notice of Annual Meeting of Shareholders" accompanies the annual report. Address: Cranford, New Jersey. Phone: 908-272-2400.

2967. Tsai, Minh. 2012. Making and marketing yuba at Hodo Soy Beanery (Interview). *SoyaScan Notes*. July 4. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** During the past 8 years Hodo Soy has been very effective and innovative in introducing yuba to people in the Bay Area of California. Part of this success has been through effort and part has been (Minh modestly admits) through timing and luck. "We are very fortunate to be in the Bay Area. The only two other places it might work are Los Angeles and Manhattan, New York."

Yuba is now an important and profitable product for Hodo Soy, accounting for about 20% of total sales. However the yuba tables take up about half of all Hodo Soy's manufacturing space.

What are the key's to yuba's success for Hodo Soy? First, education. We have worked to educate our customers who are chefs at restaurants about the large amount of labor that goes into making yuba and contributes to its high price (about \$15 a pound). We have also met with chefs in restaurants and explained that 1 ounce of yuba is quite a good serving size; so each serving costs less than \$1.00. And it looks great on the menu and on the dish." Minh also educates chefs about yuba's versatility (use it as a wrap, put it in soups, etc.) which enables them to develop recipes. The chefs have developed innovative recipes using yuba and their customers seem to enjoy their creations. Most people really love the taste of yuba. "People think of it as a starch-free, gluten-free noodle. It's always al-dente; it doesn't fall apart."

"I believe that we have been doing more education on tofu and yuba than all the big tofu-makers combined." Minh does 95% of this education himself—in person. He enjoys this teaching quite a bit, and he knows these chefs personally.

Yuba has brought a lot of positive publicity to Hodo Soy. It has been called everything from "the lingerie of tofu" to "the sashimi of tofu." Daniel Patterson, chef at Coi restaurant described yuba as tofu's "elegant and sexy cousin" (New York Times, 6 Aug. 2006). This is important in terms of branding, as the company is known to be the introducer and maker of this new product.

Minh (who has Chinese ancestry) was smart (and innovative) to call the product "yuba" instead of "bean-curd skin"—like most Chinese restaurants. But there was another reason he called it yuba. "Our research shows that, as far as willingness to pay for food at a premium price, the Japanese are at the top of the list. They know what it is and they realize it is expensive. And the majority of our Asian customers are actually Japanese." But Hodo Soy's Asian customer base is still relatively small; Minh mission is to introduce high-quality soyfoods to mainstream America.

Hodo Soy sells mostly "mature yuba" (plain fresh yuba) and value-added yuba products, such as Spicy Yuba Strips. From time to time he has requests from high-end restaurants for "nama yuba," which is soft, formless yuba that is not yet mature and fully formed. Each chef wants a particular texture, so Minh sells it to them on a customized basis—and requires that the chef come to Hodo Soy the first time to make exactly the texture of yuba they want.

Hodo Soy delivers all its own yuba and tofu products; they have four delivery vehicles that deliver to 50-60 accounts in the Bay Area—both restaurants and natural grocery stores; Rainbow Grocery in SF, Tokyo Fish Market, and Berkeley Bowl all carry Hodo Soy's fresh yuba. They have a "make to order approach" and a restaurant must order 4-5 days in advance. Value added products are sold through

chains such as Costco, Whole Foods Markets in Northern California, Andronico's, and Molly Stone's.

The two Bay Area restaurants that have done the most to introduce yuba are Coi (Daniel Patterson, in SF's North Beach) and The Slanted Door (Charles Phan; modern Vietnamese cooking near the Ferry Building). Other restaurants that offer may serve yuba include Cyrus (Healdsburg), The French Laundry (Yountville, California), and Ozumo (Oakland and San Francisco).

Hodo Soy has never done focus groups or taste panels with yuba.

Minh first made yuba in about May 2004 when he was tinkering with Sogo Tofu in San Jose. They had a yuba table (with 10-12 frames) that they weren't using. Sogo Tofu was initially built as an adjunct to a large Chinese health grocery store—sort of a Chinese Whole Foods. This store (named Sogo) was part of a chain named Marina Foods, which has a handful of stores in the Bay Area. Sogo, the grocery store, has since closed down but the tofu shop continued to operate. Minh asked Sogo Tofu to make yuba for him, then he experimented using this yuba in recipes, and introduced these dishes to his customers at farmers' markets. The people who owned and operated Sogo Tofu were relatives of Minh's wife. The three yuba dishes, starting in May 2004, were Soy Omelette, Yuba (Fresh), and Poached Yuba Loaf. Minh quickly learned the people at farmers' markets really liked these products. They learned about yuba from him, and he learned from them. The first soy product gave them was the Poached Yuba Loaf, followed by Soy Omelette (yuba marinated in soy sauce and a little brown sugar, then pan fried in a little oil). People were generally surprised at the texture and taste, but they found it to be delicious and asked, "What is it?" He replied, "It's yuba." They asked back, "What's yuba?" So he explained. Eventually they came to want the plain fresh yuba so they could experiment with their own recipes. Another early yuba product was Spicy Yuba Strips (made at Sogo Tofu starting in Dec. 2004); this is still a best-seller at retail outlets for Hodo Soy Minh's 5th yuba product was Sesame Yuba Strips (made at Sogo Tofu and discovered by accident; the other ingredients were toasted sesame paste / butter, a little brown sugar and soy sauce).

To take a step back: Minh approached tofu-making very much from a Western food processing and food science point of view. He wanted to leave the basic traditional methods (as shown for example, in a flow chart) unchanged but introduce modern equipment to do the work of lifting, pressing, scooping, and slicing, and modern methods for measuring temperatures, times, and Brix, etc. Minh soon realized (in about 2004-05) that he needed to supervise the making of tofu at Sogo Tofu. But he was just a beginner. How can a beginner, in a traditional Chinese family and craft, tell his experiences aunts and uncles to change. "It was an impossible situation. After about 2 years Sogo had reached saturation—in terms of quality, sanitation, good

manufacturing practices, and traceability of ingredients. Starting at the end of 2005, our sales for the next 2-3 years basically remained static. In 2006 we decided to build a plant in Oakland, and that took about 2 years." Minh traveled a lot, learned a lot, visited some tofu companies, and made some mistakes. As Minh prepared to open his tofu plant in Oakland, he realized that he "did not want to hire anyone with legacy tofu experience. I wanted to teach them from the very beginning."

Minh's wife, Jean Ku, was not directly involved with the tofu and yuba business at all. But she has been a tremendous supporter by bringing home the income to support the family during the early years. Jean is a top executive at the Energy Foundation—Program Manager for the China Sustainable Energy Program. Although it has been in existence for only 20 years, the Energy Foundation is the biggest contributor to the reduction of carbon dioxide in China. The foundation began with the sole mission of reducing carbon dioxide, and it identified China as the biggest potential culprit. Its founder decided to focus all of its resources on China. So a foundation based in San Francisco has been focused on China's CO2 problems for 20 years! Amazing. It is responsible for the very progressive energy policy in China today—which is more progressive than that of the U.S. One of the advantages of a dictatorship is that it can move policy much more quickly than is possible in a democracy. The Energy Foundation has learned a great deal about problem solving during these 2 decades and the model has now been expanded to Brazil and India. She is doing exactly what she finds most interesting and important—critical to the future of the planet. "She loves what she does, and she is very grateful, just like I am, that we have work that we love." Continued. Address: Founder, Hodo Soy Beanery, 2923 Adeline Street, Oakland, California 94608. Phone: 510-735-4587.

2969. Nordquist, Ted. 2012. Re: Bio of Jonathan Gordon. Letter (e-mail) sent to Henry L. Glasser; Robin Webster; Bill Shurtleff; Jeremiah Ridenour; Laura Tewnion, Sept. 28. 1 p. • **Summary:** Dr. Jonathan Gordon posted a bio / resumé for the IFT symposium. Nancy Chapman (director of SANA) sent a copy of it to Ted Nordquist, with a note ("Reading through the Bios, I have a problem with this Bio") and with the following part of Jonathan's bio highlighted in yellow: "After travelling the globe for two years working with every multinational food manufacturer and many major national

brands, he moved to White Wave Inc., where he was in charge of all production and R&D (and invented 'Silk' soymilk)."

Ted replied to Nancy as follows:

"Jonathan was hired by Steve Demos after we started manufacturing the Silk soymilk for Steve in Gustine, California in the Morningstar plant, beginning in January, 1996. In 1994-95 I developed the Silk soymilk using formulations I brought from Sweden, using the Morningstar pilot plant and the help of Laura Tewnion and Ann Shaw. We produced the Silk soymilk for White Wave from January 1996 to March 1998. Then Steve began producing Silk in the then Ador plant in Cedar City, Utah. Jonathan was the QC [quality control] manager [at White Wave] during the last phase of our making Silk and was then involved in the product from that time on. For him to publish in his Bio that he "invented Silk soymilk" is very far from the truth. To get confirmation of this you can contact Laura Tewnion who still works now for Dean Foods" (her e-dress of Laura Tewnion and Jeremiah Ridenour are given).

"Bill Shurtleff and Henry Glasser can also testify to these facts.

"Jeremiah Ridenour, then President of Wildwood Natural Foods can also testify to these facts. Jeremiah took me to Gary Veuve, then Manager of the Morningstar, Gustine plant and we agreed that I would develop the first ESL gable-top soymilk for Wildwood Natural Foods. For the record, it is important to note that the 'first ESL gable-top soymilk' idea was that of Jeremiah Ridenour! I developed soymilk formulations in Sweden, but with Tetra Pak cartons. ESL is exactly the same pasteurization techniques as aseptic Tetra Pak, but in a less stable carton. It requires refrigeration, but with up to 80 days shelf life, making it a 'refrigerated product' and sold in the dairy case. This introduced 'soymilk' in ESL cartons into the dairy case in the US. I believe the good flavor and being in the dairy case is what made soymilk successful in the USA. I would also give Steve Demos credit for his devotion to marketing this product and Jonathan for keeping the flavor good and developing additional variations. The original Silk soymilk had 5 grams of protein per serving, but when the FDA 'Heart Healthy' seal came along, all the soymilks were increased to 6.25g or 7g of protein per serving (just a little less water in the formulation). It is still sold almost exclusively in aseptic Tetra Pak in Europe. Once the product was developed (Morningstar was manufacturing Lactaid in ESL gable top), Jeremiah could not take it to market because of the minimum volumes required. I was running out of money so I took the ESL soymilk to Myron Cooper of Westbrae and Steve Demos. Steve signed onto the ESL soymilk and then developed the 'Silk' brand name. We made the product in the Silk ESL cartons for Steve for two years, selling it to him FOB Gustine, California, before he left us (abruptly)."

"Thanks, Ted.

"P.S. If you would like to forward this email to Jonathan, please do. I would like to see his response!" Address: Boulder, Colorado.

2970. *Central Valley Business Times (California)*. 2012. Food and ag chemical companies dumping \$34 million against Prop. 37. Oct. 3.

• **Summary:** Berkeley: "In the survey, released Sept. 27, even when presented with information about how much regulation might cost the cash-strapped state, a majority of voters support the ballot initiative.

"Sixty-one percent of Californians favor Proposition 37 and labeling genetically engineered food, while 25 percent of voters are opposed, the survey said. Forty-seven percent said they support the ballot initiative 'strongly,' while 16 percent were 'strongly' opposed. Here are the top ten contributors, according to a MapLight analysis of Secretary of State data through Sept. 30, "Yes" on Prop 37:

"1. Mercola.com Health Resources LLC \$1,100,000.

"2. Nature's Path Foods U.S.A. Inc. \$610,709

"3. Dr. Bronner's Magic Soaps... Inc. \$358,883.

"4. Organic Consumer Organizations' Committee for the Right to know about GMOs (unitemized contributions) \$335,122.

"5. Wehah Farm, Inc., DBA Lundberg Family Farms \$250,000.

"6. Alex Bogusky \$100,000.

"7. Amy's Kitchen \$100,000.

"8. Clif Bar & Company \$100,000.

"9. Great Foods of America \$100,000.

"10. Organic Consumers Association \$92,468."

2971. Brawerman, Mark. 2012. Big changes in dairy free products at Turtle Mountain LLC (Interview). *SoyaScan Notes*. Oct. 4. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Question: When did you realize that you had to make products from other than soy? Ans: "It's not that we had to make something other than soy. On 15 April 2005 we signed a national distribution agreement with Dryer's Ice Cream. This was done with Tom Delaplane, who had run Dryer's for 20 years. Shortly thereafter Nestlé went from having 20% ownership of Dryer's to having 100% ownership. Tom said that he had tested all the non-dairy ice creams worldwide and found that Turtle Mountain's were by far the best. Tom said that he would put Turtle Mountain products in Walmart and in major supermarkets nationwide. He said that our sales would increase to \$40-50 million in 2-3 years, but Dryer's is definitely not going to make any of these products, so you will have to expand production rapidly. Everything he said has actually happened. That created a new problem and a new opportunity for us. At that time, Dryer's carried Mocha Mix, which they stopped distributing once they started distributing our products.

Now up until 2005 Mark had made non-dairy soy products—except for a little frozen dairy yogurt in 1987-88. In 2005 Turtle Mountain was strictly a soy company. But Mark was watching this little company named Coconut Bliss in Eugene, Oregon. They started making their product on a Gelato machine in a clean room—it was very icy and kind of gritty and funky. Yet it started to sell, then sales and distribution increased steadily. In 2007 at a strategic planning session, Mark’s people were talking about new products, including a soy cup yogurt since they thought “the products on the market at that time were all terrible tasting.” Mark starting talking to his people about making a coconut product. But they had no interest in it. Mark’s products had been in Whole Foods for 15 years. He and his people would meet with Whole Foods in December 2007 and show them the new products they planned to be shipping in March/May 2008. Four weeks before the meeting Mark decided that he wanted to take 3-5 flavors of coconut ice cream to that meeting. He normally would never give such a command to his guys; its not a dictatorship. In the northwest, data showed that Coconut Bliss was now outselling Mark’s products. The coconut flavors got developed and Mark took them to the meeting with Whole Foods in Austin [Texas]; they liked them and they started appearing in stores the following April. “Within 5 weeks of putting the product into Whole Foods, each of the 5 ‘So Delicious’ coconut flavors in pints was selling more units and more dollars and at a 20% price premium to his Ben & Jerry’s-type Purely Decadent soy products, than any single soy ice cream. Each one was selling better than any other product we manufactured. Why? People preferred the taste of the coconut to the soy—that’s all I can tell you.”

Mark thinks his company got into coconut just before the anti-soy publicity on the Web became significant. His sales of soy products had not yet started to decrease. “Coincidence, act of God, whatever it was.” His timing was incredibly fortunate—almost perfect.

In April 2008 they first released their coconut ice creams to national distribution via UNFI (United Natural Foods); it went to their 12-13 national distribution centers. Once they brought out the first coconut ice creams in Whole Foods, from that year on their soy business started to go down by double digits each year; the sales of all their ice cream competitors were going down even faster. “We went from about \$27-28 million of net soy sales down to \$16-\$17 million in 3 years.” The coconut went up much, much faster than the soy went down. Mark’s total sales in 2005 were \$10-\$11 million; this year (2012) they will be \$75-80 million. “We have been very blessed with consistently growing the business double-digit for the past 6-years straight. We certainly try hard.” The coconut products (especially coconut ice cream and coconut beverage) have been responsible for most of the growth. Today Mark’s has more than 70% of the dairy free frozen dessert market in the USA. Tofutti

is steadily decreasing in size. Rice Dream (developed by Imagine Foods, now owned by Hain) is almost nonexistent.

Over the years, the dairy industry has gotten a bad image for its products, with things such as bovine growth hormone—but of course Mark never mentions that.

Mark buys his coconut in the form of dried meat—by the container. He uses it all—even the fiber which makes his coconut products a good source of fiber. The fact that the coconut has been dried (is not fresh) has no influence on the flavor—in Mark’s opinion.

Does Mark get many questions about the saturated fats in coconut products. Yes, but he explains that medium-length triglycerides are easier for the body to digest. All of the polyunsaturated oils (such soy, corn, safflower, etc.), which are the predominant edible oils in the United States are scavengers, looking for electrons, disrupting cells so that they can become more stable. They have long chains, are hard to digest, and they make people fat. Moreover, coconut meat is an old food; Polynesians have eaten it for thousands of years.

By the time Mark brought out the coconut ice cream, he had also introduced a soy yogurt. Within 6-9 months thereafter the other soy yogurts (such as WholeSoy and Silk) had a dramatic improvement in flavor.

After the coconut ice cream hit the market, they launched a “So Delicious” coconut yogurt and then a coconut milk. Then in March/April 2011 they were showing a Greek-style dairy free coconut yogurt very quietly at the Natural Products Expo. They were also showing similar Greek-style almond yogurt. They brought out the coconut yogurt first and then the almond yogurt in June 2012. In late 2011 they decided to make an Almond Plus dairy free beverage with 5 gram of protein per serving. They thought—mistakenly—that consumers would pay a little more for the large increase in protein at a 10% premium price; the supermarket store and Walmart buyers loved the product but the consumers refused to pay more. The magic price for selling any dairy free beverage is \$2.99 a half gallon. The almond product is still selling, but Walmart cut it down to 400 to 500 stores from 3,200. It was not the magical home-run product we thought it would be.

Why have sales of dairylike soy products decreased? Mark thinks a key reason is competition from other non-soy products such as coconut and almond. Noise about soy not being healthy on the Web is clearly also a reason, even if it is false.

The official name of Mark’s company has been changed to Turtle Mountain LLC from Turtle Mountain Inc., but they now answer the phones as “So Delicious Non-Dairy.”

Before Mark got involved with soyfoods, he had been in the garment business for many years, including 1½ years with Levi-Strauss. Address: Springfield, Oregon.

2972. www.commondreams.org. 2012. Scenes of ‘Dust Bowl

Days' return (Web article). Oct. 20. Printed Oct. 20.

• **Summary:** "Dramatic video footage and eye witness accounts from Oklahoma on Thursday tell the story of a scene right out of the Depression-era 'Dust Bowl days' as a massive wind-swept cloud of 'reddish-brown' dirt made visibility impossible on a stretch of Interstate-35 between Oklahoma City and Kansas City, Missouri.

"Experts have warned for years about the impact of top soil erosion caused by an over-reliance on industrial farming practices, including heavy use of chemical fertilizers.

"As science journalist April Kelsey, writing for *Suite 101*, explains: "The chemical fertilizers and pesticides commercial farmers rely on to produce high single-crop yields kill many of the essential microorganisms and insects that aerate and build the soil, while heavy farming machinery destroys soil structure through compaction. Chemicals also leach water from the soil, making it salty and acidic and leaving crops vulnerable to drought. Dry and damaged soil erodes much faster than healthy soil.

"Experts estimate that 66 percent of U.S. soil degradation and erosion has resulted directly from these kinds of agricultural practices. The corn fields of the U.S. Midwest are "an area of particular local concern," where as much as 75 percent of the topsoil has been lost to erosion."

2973. Railey, Stuart. 2012. The Hearty Vegan hopes to bring tempeh and other organic foods to larger retailers. *Daily Texan (The) (Austin, Texas)*. Oct. 28.

• **Summary:** "Despite the shadow of today's stifling economy, small business owners Beth and Becky Taylor have subsisted on a passion for delicious food and the adoration of their loyal customers, specializing in the Indonesian delicacy called 'tempeh.' This mother and daughter duo, known commercially as The Hearty Vegan, aims to extend their meatless cuisine beyond UT [University of Texas] co-ops to larger retailers like Whole Foods Market."

"But as the Taylor family has discovered, winning over the hearts and stomachs of food lovers isn't always ideal in a small business setting. The path to success has often been paved with sleepless nights and work without pay. Two years of cooking, marketing and saving has only just started turning a profit for The Hearty Vegan."

"If your mindset is, 'There's no other way but forward,' then you work through all the things that make you quit and it's very good, even for your own personal growth,' Beth added.

"Nonetheless, copious amounts of unrelenting work are slowly beginning to pay off, and not just in revenue. After eight months deliberation with the Austin Health and Human Services Department, The Hearty Vegan is now the only certified tempeh grower in the state of Texas.

"Because the production of tempeh involves keeping food within the 'Danger Zone,' a set of temperatures between 41 degrees Fahrenheit to 140 degrees Fahrenheit, this feat

was not easy to come by."

"In order to get our stamp of approval, we had to figure out ways to deal with each of the main pathogens: salmonella, listeria and clostridium, which is botulism,' Beth Taylor said."

2974. Silver, Jimmy. 2012. History of Cornucopia Natural Foods (Interview). *SoyaScan Notes*. Nov. 12. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** In about 1977 Norman A. Cloutier [owner, pronounced KLAU-tee-ay] and Daniel V. Atwood [Norman's 2nd in command] founded Cornucopia Natural Foods as a distribution company in Rhode Island. Within several years they moved their warehouse to Connecticut.

Jimmy is quite sure this distribution company is not connected to the Cornucopia Natural Foods that was started by Richard Buck in July 1976 as a retail store in Berkshire, Massachusetts.

When Jimmy was an owner of Pure & Simple, in 1980 Cornucopia was a big customer. Jimmy and Jeff went to see them in Connecticut, where they had a brand new building. They had just moved there from Rhode Island. That building, Jimmy thinks, is the Whole Foods regional warehouse for New England.

In about 1988 Norman sold Cornucopia to his employees as an ESOP (Employee Stock Ownership Plan). Norman Cloutier, Steven Townsend, Daniel Atwood and Theodore Cloutier loaned the employees \$4.080 million so they could buy the company. In those days, if you sold your company to an ESOP you got tremendously favorable tax treatment—a very low tax on the income. After the employees owned Cornucopia, Norman continued to work there as the president of the company, and Dan (who may have received some money from the sale) continued on as the vice-president, Then Norman bought a horse farm...

When UNFI acquired Stowe Mills, they acquired Cornucopia at about the same time. Jimmy is not sure of the sequence of events—if Stowe bought Cornucopia and then UNFI bought the combined companies. Or whether UNFI acquired Cornucopia and then Stowe Mills and then forced them together and ultimately combined them in one new warehouse in either New Hampshire or Vermont—where he thinks they remain to this day—but he is not sure. The Connecticut building was taken over by Whole Foods Market, which needed a bigger regional warehouse than the one in Brighton that Bread and Circus had maintained. When UNFI had to merge the two companies operations, Jimmy thinks that Norman was in charge of that, and that merging the two computer systems was such a disaster that it didn't work for about a year; after a year they got rid of Norman. "Norman was a really driven kind of guy, who really liked to succeed at things."

Jimmy thinks that Dan still works for UNFI on the East Coast; he may be a vice-president of the company or he may

have retired. Dan would know all the history of Cornucopia.
Address: President, Pure Sales, P.O. Box 5116, Irvine,
California 92716-5116.

2975. Hain Celestial Group, Inc. (The). 2012. Annual report 2012: Hain Celestial offers products to help support health & nutrition as part of a healthy lifestyle. Melville, New York. 8 + 88 + [6] p. Nov. 10. 28 cm.

• **Summary:** The first 8 pages (8 x 10 inches), which are bound separately, contain a long statement by Irwin D. Simon, the CEO, with a new photo of him. On each left-hand page is a statement, written in large letters (all caps, with a few colored letters or symbols) of different sizes, about the past year or the company's mission. For example (p. 2): "Fiscal year 2012 was a milestone year for Hain Celestial as we finished the year with record sales, operating income and net income. Our year saw double digit growth in sales and earnings with solid results across all of our segments as consumers increasingly focus on health, wellness and nutrition."

Of the \$1.378 billion in worldwide sales, \$991.6 million were from North America, \$192.4 million were from the United Kingdom, and \$194.3 million were from the rest of the world.

The Hain Celestial 2012 Form 10-K is bounded separately. On p. 49 we read: Net sales for the year ended 30 June 2012 were \$1,378 million, up 24.3% from 2011. Net income in 2012 was \$79.225 million, up 44% from the \$54,982 million in 2011. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2976. Non-GMO Project. 2012. Michael Funk: Chair and Co-Founder, United Natural Foods, Inc. www.nongmoproject.org. Retrieved Nov. 12

• **Summary:** Michael Funk founded Mountain Peoples Warehouse in 1976. As one of the pioneers of the natural food industry, and President of MPW, he built the company into the leading natural food wholesaler in the west. In 1996, he co-founded United Natural Foods, to form the largest natural food distributor in the country. As President and CEO of UNFI, Michael led the company to sales of over 2.5 billion dollars. Michael is active in numerous industry and trade groups, and is the president of the Non-GMO Project. He also serves on the Boards of several environmental non-profit groups such as the Sierra Fund and the South Yuba River Citizens League.

A color portrait photo shows Michael Funk.

Note: The Non-GMO Project was established in 2005, by The Natural Grocery Co. (Berkeley, California) and Big Carrot Natural Food Market (Toronto, Ontario, Canada). Address: California.

2977. *SoyaScan Notes*. 2012. Soy milk and cow's milk prices in the refrigerated dairy case at Trader Joe's in Lafayette,

California (Overview). Dec. 27. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Since Dec. 1983, approximately every other year, Soyinfo Center has conducted a survey of the prices of soy milk and cow's milk in California.

Trader Joe's is an all-purpose grocery store which emphasizes low prices and natural foods. Both soy milk and cow's milk are sold in the dairy case under the Trader Joe's brand.

All soy milk is sold in ½-gallon gable-top paper milk cartons. Low-fat vanilla or original (5 gm of protein per cup): \$3.29. Organic unsweetened \$3.49 (7 gm of protein per 8 oz cup). Organic low-fat unsweetened \$2.99 (7 gm of protein per cup).

Trader Joe's organic soy yogurt in the dairy case: Organic 24 ounces: \$2.49. Strawberry or peach (6 oz. cups): \$0.99 each.

Trader Joe's has two sets of soy milk (each set is of about equal size) in its dairy case: Non-organic and organic.

Trader Joe's has two sets of cow's milk (each set is of about equal size) in its dairy case: Non-organic and organic. Most dairy milk is sold in plastic bottles or jugs. In the prices that follow the Non-organic price will be listed immediately before the organic price, separated by a "/".

Cow's milk (fortified with vitamins A and D) sells for the following prices at the Trader Joe's in Lafayette, California: (1) Fat free: quart \$1.29/NA (not available) or half gallon \$2.19/\$3.49 or gallon \$3.39/\$5.99

(2) Low fat (1% fat): quart \$1.29/NA or half gallon \$2.19/\$3.49 or gallon \$3.39/\$5.99.

(3) Reduced fat (2% fat): quart \$1.29/ NA or half gallon \$2.19/\$3.49 or gallon \$3.39/\$5.99

(4) Whole (homogenized, fortified with vitamin D only): quart \$1.29/ NA or half gallon \$2.19/NA or gallon \$3.39/\$5.99. (5) Reduced fat (2% fat) with the cream on top, half gallon NA/\$3.49. (6) Whole (nonhomogenized) with the cream on top, half gallon NA/\$3.49.

The best-seller among these is the fat-free gallons, \$3.39 per gallon, with 4 facings.

Trader Joe's has no acidophilus plus bifidus milk.

2978. *SoyaScan Notes*. 2012. Soymilk and other nondairy milk prices in nonrefrigerated shelf-stable (aseptic) cartons at Trader Joe's in Lafayette, California (Overview). Dec. 27. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Since Dec. 1983, approximately every other year, Soyinfo Center has conducted a survey of the prices of soymilk, other nondairy milk, and cow's milk in California.

Trader Joe's is an all-purpose grocery store which emphasizes low prices and natural foods. Various nondairy milks are sold under the Trader Joe's brand and several other brands.

Varieties of soymilk: Trader Joe's Soy Essential: Soy Beverage. 1 quart, organic, unsweetened, with 500 mg omega-3 ALA [alpha-linolenic acid] plus a good source of fiber and enriched with 7 nutrients: \$1.69.

Trader Joe's Organic. 1 quart: \$1.69. 2 quarts (half-gallon), original, or vanilla or chocolate (all 3 sweetened with sugar): \$2.99.

Trader Joe's nonorganic. 1 quart, original, or vanilla or chocolate (all 3 sweetened with sugar): \$1.69.

WestSoy Nonfat Organic Soymilk (made by Hain-Celestial). 1 quart. Plain (sweetened), vanilla, or vanilla unsweetened: \$1.99.

Soy Dream Organic Enriched (made by Hain-Celestial). 2 quarts (half gallon). Original or vanilla: \$3.19. Enriched with: Soy isoflavones 47 mg per serving. Vitamins A, B-12, D & E. Calcium equivalent to milk. Sweetened with evaporated cane juice [sugar].

Nonsoy, nondairy beverages: Trader Joe's rice milk in 2-quart (half gallon) cartons: Original (unsweetened) organic and vanilla (unsweetened) not organic: \$2.99 each. The same two products in quarts: \$1.69 each.

Blue Diamond Almond Breeze. 1 quart, nonorganic. Unsweetened vanilla, unsweetened original, and sweetened original: \$1.99.

Trader Joe's Almond Smooth. 1 quart, nonorganic, fortified with calcium plus vitamins A, D, and E. Original, chocolate, or vanilla: \$1.69.

Pacific Organic Almond (from Pacific Foods, Oregon). 1 quart. Vanilla or original: \$1.99.

Trader Joe's coconut milk, 1 quart, with calcium, vitamins A and B-12 plus medium-chain fatty acids. 1 quart, nonorganic: \$1.99.

2979. Roseboro, Ken. 2013. GM food labeling: "We lost the battle but we will win the war." Arran Stephens and Gary Hirschberg on the way forward after Proposition 37 [in California]. *Organic and Non-GMO Report (The) (Fairfield, Iowa)* No. 129. Dec. 2012 / Jan. 2013. p. 4-7.

• **Summary:** Six million people in California voted yes on Proposition 37, the ballot initiative to label genetically engineered foods, in the face of \$46 million in spending to defeat the proposition; it lost by 51.5% to 48.5%. Stephen's food company, Nature's Path, donated \$660,000 to support

the proposition, the largest sum donated by any organic food company.

Another GM labeling initiative, I-522 is on a forthcoming ballot in the state of Washington.

Current color photos show: (1) Arran Stephens, CEO of Nature's Path. (2) Gary Hirschberg, chairman of Just Label It.

2980. Roseboro, Ken. 2013. The 2013 non-GMO sourcebook: A buyers guide to global suppliers of non-GMO and organic seeds, grains, ingredients, feed and foods. Fairfield, Iowa: Evergreen Publishing, Inc. 106 p. Illust. (both color, and blue and white photos). Index. 28 cm.

• **Summary:** Contents: Editor's introduction (by Ken Roseboro, publisher and editor). Suppliers of non-GMO products: United States, Canada, Europe, Africa / Middle East, Asia / Australia, Latin / South America. The Non-GMO Project special section (p. 51+). Non-GMO shopping guide. Related products, services, and organizations. rBGH-free dairy processors in the US. Index of non-GMO suppliers by product category: Seeds (corn, soybean, edamame), canola / rapeseed, processed canola / rapeseed products, corn / maize, processed corn / maize products, soybeans (identity preserved, specialty, organic), processed soy products (flakes, flour, germ concentrate, grits, lecithin, meal, nuts, oil, low linolenic oil, phytosterols, protein, textured protein, soymilk, soymilk powder, soy sauce, tofu, vitamin E / tocopherols), other grains / oilseeds and processed products (alfalfa / hay, barley, cotton,...), other ingredients and processing aids (citric acid, dairy ingredients...), sweeteners, food products, food supplements, animal feed. Index of related products, services and organizations. Complete index of listings. Index of advertisers.

Note 1. In the Suppliers section, many company entries have the Non-GMO Project logo (with an orange and black butterfly on a green leaf) next to their company name

This comprehensive book gives the single best picture of the growing industry, worldwide, opposed to genetic engineering. Address: Editor / Publisher, P.O. Box 436, Fairfield, Iowa 52556. Phone: 1-800-854-0586.

2981. Guardino, Lorraine. 2013. Re: How Soy City Foods in Toronto, Ontario, Canada, became Sol Cuisine (Interview). Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 28. 1 p.

• **Summary:** In 2002 Dror Balshine bought Soy City Foods (of Toronto, which had been founded in 1980) and four of people remained with Sol Cuisine for a two year period: John Esquivel, Production Manager; Lorraine Guardino, Sales Manager; Charlie Lund, Production; Peter Ness, Production; Of these only John and Lorraine remain working for Sol Cuisine. Lorraine is still in Sales and John is still Production Manager. Len Bugyra now runs a successful insurance benefits company. Paul Whitehead passed away

several years ago and I have no idea what Jon Cloud is up to. Patrick Lorraine's husband of 30 years but he has not been with Soy City since 1980. Lorraine started working part time (while our children were young) in 1983 at the front of the "Soyateria" as it was called and then began working in production, moved on to sales and have been doing that ever since. John Esquivel has been our Production Manager ever since Jon Cloud left Soy City. Golden Age Foods which was Soy City Foods and the Vegetarian Restaurant, closed its doors when we were purchased from Sol Cuisine.

"Patrick was the first Manager. He was also a welder which came in handy when he built the first tofu shop we had. Wow are we going back! Funny, Lorraine just recently was going through some old files here and found your book, Patrick used it as a bible when he built the first tofu shop and his notations are all through the very weathered copy we have. Lorraine took it home for him.

"Do you know Haro Wehrmann? He grows our Certified Organic soybean for us here in Ontario."

All of the products that Sol Cuisine presently sells contain soy, and many have soy as the main ingredient. All are vegetarian. They sell to both retail and foodservice. They sell in Whole Foods and Raleys in California, People's Co-op in San Francisco. Their three most popular products are tofu, burgers (various types), and breakfast patties. www.solcuisine.com. Address: Sales Manager, Sol Cuisine, 3249 Lenworth Drive, Mississauga, ONT L4X 2G6 Canada. Phone: 905-502-8500 x 221.

2982. *SoyaScan Notes*. 2013. Soy milk and other nondairy milks in nonrefrigerated shelf-stable (aseptic) cartons are moved to a less conspicuous part of the store in a small shelf area at Trader Joe's in Lafayette, California (Overview). March 15. Compiled by William Shurtleff of Soyinfo Center. • **Summary:** This would seem to indicate that these products are becoming less important and selling less.

2983. *SoyaScan Notes*. 2013. Growth of tempeh sales in the USA in mass grocery stores and in the natural foods market (Overview). Compiled by William Shurtleff of Soyinfo Center. [2 ref]

• **Summary:** Sales of refrigerated tempeh in the mass grocery market: For the 52 weeks ending 13 April 2013 sales were \$4.336 million and compared with \$3.543 million during the previous year. This is a year-over-year dollar increase of 22.4%.

Sales of refrigerated tempeh in the natural foods market: For the 52 weeks ending 16 Jan. 2013 sales were \$2.319 million and compared with \$2.167 million during the previous year. This is a year-over-year dollar increase of 7.0%.

From this we also see that about 87% more dollars are spent on tempeh in the mass grocery market compared with the natural foods market.

2984. **Product Name:** Organic Koji [Long-Term Rice Miso, Short-Term Rice Miso, Amazake].

Manufacturer's Name: Rhapsody Natural Foods.

Manufacturer's Address: 752 Danville Hill Rd., Cabot, VT 05647-9622. Phone: 802-563-2172.

Date of Introduction: 2013 April.

Ingredients: Deep well water, polished certified organic brown rice, *Aspergillus* culture. (White to yellow-green color).

Wt/Vol., Packaging, Price: 16 oz (454 gm) sealed plastic bag. Retail for \$10. 15 lbs. \$112.50 bulk quantity.

New Product–Documentation: Letter (e-mail) from Sjon Welters. 2015. Nov. 25. "We started to make our own koji for the mellow red miso and sweet white miso and amazake. Then we introduced our own koji in a retail pack in April of 2013. We make all our koji ourselves. It is organic. All 3 types are made with short-grain brown rice, lightly polished. It can be stored frozen, refrigerated or at room temperature. We have not found a difference in potency in either method. We have three different types of koji because when we ordered koji starter from Mitoku in Japan, they offered these three different kinds of starter. Basically the proportion of different type of enzymes varies with each type of koji."

2985. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of whole dry soybeans, used as beans, or ground or flaked (240 BCE to 2013): Extensively annotated bibliography and sourcebook (Continued–Document part II). Lafayette, California: Soyinfo Center. 950 p. Printed 2 July 2013. 28 cm. [2337 ref]

• **Summary:** 1917 May 19—An article titled "Soybeans for Human Food, by Kay B. Park, published in *Ohio Farmer* is the first to recommend that soybeans not be cooked in the water in which they are soaked. "One result of the work is that an exceedingly simple household method has been found by which soybeans can be made as palatable as navy beans. The process consists merely in soaking the beans overnight in a large excess of hot water or until the bad flavor has disappeared, which can be determined by tasting. The water should be poured off and the beans rinsed. When the strong flavor has been removed the beans can be cooked like navy beans."

1917 Sept.—The term "soy-bean pulp" is first used in the popular *Good Housekeeping* magazine in an article titled "Soy: The Coming Bean," by William Leavitt Stoddard. Eight soy recipes are given; six call for whole "soy beans" and two for "soy-bean meal"—full-fat soy flour. The term soy-bean pulp probably refers to whole soybeans that have been baked then ground or mashed to a pulp.

The term is next used (very clearly) on 2 Jan. 1918 in several recipes in the *Boston Daily Globe*.

1918 Feb.—Dr. John Harvey Kellogg, in an article titled "The Soy Bean" published in *Good Health magazine*,

describes an ingenious way to pressure cook soybeans without using a pressure cooker and with no concern about stirring or burning.

1918 Feb.–The term “whole soy-beans” first appears in the *Journal of Home Economics* (p. 64-70).

1918 July 30–The *Boston Daily Globe* writes: “Odd as it may seem, and incredible as it may appear, the Boston baked bean of today is almost invariably the soya bean, which is imported from China and grown on Southern estates, from Virginia to the Mississippi.”

1918–During the season of 1916 about 100,000 bushels of American-grown soy beans were packed as baked beans by several canning companies in the Central and Eastern States” (W.J. Morse, *Yearbook of the USDA*).

1921 April 27–The term “canned soybeans” is first used by J.C. Hackleman of the University of Illinois, in a letter to W.J. Morse.

1926–Hain Health Foods (Los Angeles, California) begins selling “Canned Soy Beans.”

1929 Nov.–La Sierra Industries (Arlington, California; founded and run by T.A. Van Gundy) starts selling “La Sierra Soy Beans” (Canned; Unseasoned Green-Seeded Type, or With Tomato Sauce) and “La Sierra Soy Cereal”—a toasted and shredded all-soy product. The latter was the company’s best-seller in the early 1930s.

1929-1930–During their 2-year expedition to East Asia, Dorsett and Morse (USDA agricultural explorers) find many commercial products in Japan (Tokyo) containing whole soybeans—many of them treats or sweets for children. In Korea they find no food products but several uses of cooked whole soybeans as feed (as for an ox). In China they find no uses for food or feed.

1933–California Food Kitchens (Los Angeles, California) launches a line of whole soybean products—the earliest such products for which we have an advertisement. These include Gud Fud Soya Beans, Soya Loaf, Soya Rice Lunch, Soya Sandwich Spread, etc.

1934 June–La Sierra Industries launches La Sierra Soy Breakfast Food (Ready to Serve Cereal). The company advertised it in *Health* magazine as “Perfect Protein, High Alkaline Ash, Low Starch.”

1941-1945–During World War II, soybeans again return to prominence just as they did during World War I.

1945–The Kellogg Co., famous maker of breakfast cereals (Battle Creek, Michigan), introduces Kellogg’s Corn Soya Shreds, and advertises them widely—including two full-page color ads in *Life* magazine. They were made from “soya flakes.”

1960–The influential book *Zen Macrobiotics*, by George Ohsawa, contains many recipes for soybeans (including black soybeans) served as beans, often with Japanese seasonings—such as soy sauce or miso.

This is the earliest macrobiotic document seen that gives a recipe for whole soybeans served as beans.

1965–In his work “Soybean Utilization in Japan,” William Brandemuhl has a section on Soybean tsukudani and nimame. He says a very large maker might use 300-350 kilograms of soybeans per day for soybean tsukudani.

This is the earliest document seen that contains the term “Soybean tsukudani.”

1971–Arrowhead Mills (Hereford, Deaf Smith County, Texas) uses a unique process that involves infrared heat to make Soybean Flakes. This type of heat plasticizes the soybeans so that they become cohesive flakes rather than grits and flour.

1992–In *The Zen Monastic Experience: Buddhist Practice in Contemporary Korea*, Robert Buswell, Jr. states: “Bean products constitute one of the largest components of the monastic diet during all seasons. Cooked black [soy] beans, seasoned with soy sauce, sugar, and white sesame, are served at least once a day.” Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2986. Shurtleff, William; Aoyagi, Akiko. comps. 2013. *History of soymilk and other non-dairy milks (1226-2013): Extensively annotated bibliography and sourcebook*. Lafayette, California: Soyinfo Center. 2,972 p. Subject/geographical index. Printed 30 Aug. 2013. 28 cm. [8761 ref] • **Summary:** This is the most comprehensive book ever published about the history of soymilk and other non-dairy milks. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of these interesting beverages. It is also the single most current and useful source of information on this subject.

Contents: Search engine keywords. Dedication and acknowledgments. Introduction: Brief chronology / timeline of soymilk and other non-dairy milks. About this book. Abbreviations used in this book. How to make best use of this digital book–Search it. Eight pages of color photos. Contains 233 photographs and illustrations. <http://www.soyinfocenter.com/books/166>.

Contents: Scope for Soymilk: This book focuses on the use of soymilk as a beverage. Soymilk has long been the most widely consumed non-dairy milk worldwide. Soymilk also appears as a step in the process for making tofu, yuba, soy yogurt, soy ice cream, soy cheese, fermented soymilk (incl. soy acidophilus milk), etc. Each of these soy products is or will be the subject of a separate book.

Amazaké, a thick fermented non-dairy rice beverage from Japan, usually served hot, topped with a dab of grated gingerroot, is also the subject of a separate book.

Use in East Asia: Only in China has soymilk (*doujiang*) long been used as a beverage. Traditionally it was been served hot, ladled from a caldron for breakfast, at the place where it was made either sweetened or as the base of a salted soup served with deep-fried crullers. It was not used to feed infants or as an infant formula.

Starting in the 1920s, a small number of companies in

China started to make and sell bottled soymilk.

In Hong Kong, Vitasoy was launched in 1940 by K.S. Lo as a nutritious food for refugees fleeing during World War II. By 1968 it had captured 25% of the Hong Kong soft drink market, second only to Coca-Cola.

In Japan, bottled soymilk arrived in about 1957. The first soymilk boom started in about 1980; the many brands of soymilk were all sold in 180 ml aseptic cartons.

In the United States and Europe, soymilk started to become popular in the 1980s. The first two brands sold nationwide were Vitasoy and Edensoy, both aseptically packaged so they did not need refrigeration. The first superstar of soymilks, Silk, was launched by White Wave of Boulder, Colorado, in early 1996. It was sold in the dairy case in gable-top cartons that looked like typical milk cartons.

The first widely popular rice milk was Rice Dream, launched in June 1990 by Imagine Foods of Palo Alto, California

Brief chronology of soymilk and other non-dairy products.

1226–Kitab al-tabik [A Baghdad Cookery Book], by al-Baghdadi et al. is the earliest document seen that mentions a non-dairy milk—almond milk.

1365?—Yiya Yiyi [Remnant Notions from I Ya], by Han Yi is the earliest document seen that mentions soymilk, which it calls doufujiang.

1390—"Almond milk" is first mentioned in English in The Forme of Cury. It came to be widely used in Europe during Lent—the first popular non-dairy milk in the Western world.

1640 ca.—Soymilk is probably in use in China by the beginning of the Qing dynasty (H.T. Huang 2006).

1704—Soymilk is first mentioned in English by Domingo Fernandez Navarrete in his book A Collection of Voyages and Travels. Navarrete served as a Dominican missionary in China.

1790?—An undated painting of hawkers selling soymilk (doujiang) in China, by Yao Wenhan, is from the Qing dynasty.

1790—Soymilk is mentioned by Juan de Loureiro in his book The Flora of Cochin China. Loureiro was a Portuguese Jesuit missionary who lived in what is now Vietnam. He notes that soymilk is part of the process for making tofu.

1866—Soymilk is first discussed as a drink in its own right by the Frenchman Paul Champion, who traveled in China. In a French-language article he stated that the Chinese had taken their cups to tofu shops to get hot soymilk, which they drank for breakfast.

1896 June—Soymilk is first referred to in the United States by Henry Trimble in the American Journal of Pharmacy.

1897 July 7—The term "soy-bean milk" (or any cognate / relative thereof) first appears in a USDA or U.S. government

publication: C.F. Langworthy. 1897. "Soy beans as food for man." USDA Farmers' Bulletin No. 58. p. 20-23. July 7. The table, titled "Comparison of the composition of soy-bean milk and cows' milk," gives the nutritional composition of the two liquids. The same term next appeared in Dec. 1916 in a USDA Bulletin by Piper & Morse, and then on 7 Feb. 1917 in a USDA Weekly News Letter.

1897 Nov. 16—Peanut cream and peanut butter are now being made in Kokomo, Indiana by Lane Bros. (Kokomo Daily Tribune, p. 4). This is the earliest document seen that contains the term "peanut cream."

1899—Almeda Lambert of Battle Creek, Michigan, in her book Guide for Nut Cookery, describes how to make "peanut butter, peanut cream, peanut milk, raw peanut milk and cream, almond milk, hickory milk, pine-nut milk, chufas milk and cocoanut milk" at home. This is the earliest document seen that contains the term "peanut milk" or the term "cocoanut milk."

1906 April—Katayama, in Japan, reports that he has made "A condensed vegetable milk" from soy-beans.

1909—The first soy-based infant formulas and soymilk made from full-fat soy flour are developed in the United States by John Ruhrah, a pediatrician. He reports his results in the Archives of Pediatrics (July 1909).

1910—The world's first soy dairy, named Caséo-Sojaïne, is founded by Li Yu-ying, a Chinese citizen, biologist and engineer, at 46-48 Rue Denis Papin, Les Vallées, Colombes (near Asnières), a few miles northwest of Paris. In December 1910 he applies for the world's first soymilk patents (British Patents No. 30,275 and 30,351). The first patent is titled "Vegetable milk and its derivatives." He is issued both patents in Feb. 1912.

1913 June 13—Li Yu-ying is issued the first U.S. soymilk patent (No. 1,064,841), titled "Method of manufacturing products from soja." He filed the application on 10 Oct. 1911.

1914—Maria M. Gilbert, in her book Meatless Cookery, gives a recipe for "Rice milk."—the earliest known use of this term.

1917—Soymilk is being produced commercially in the U.S. by J.A. Chard Soy Products in New York City.

1921 Sept. 23—Vita Rice Products plans to build a factory to make "rice milk products," including Vita Rice Milk, in San Francisco (San Francisco Business, p. 20).

1921—Leon Rouest of France gives the first detailed discussion (in French) of calf-milk replacers based on soymilk.

1929 Nov.—T.A. Van Gundy, founder of La Sierra Industries in Arlington, California, launches La Sierra Soy Milk, and becomes the first Seventh-day Adventist worldwide to make soymilk commercially. The product was canned and the beany flavor removed by live steam processing.

1929 Dec.—Bottled soy bean milk is now widely made

and sold in China. “One large factory in Peking now makes and distributes over a thousand bottles of [soy] milk daily; in Shanghai two factories each meet an even greater daily demand. The industry is bound to grow rapidly to greater dimensions” (Adolph and Wang 1929).

1931–Madison Foods of Madison, Tennessee, introduces Madison Soy Milk—the world’s earliest known soymilk to be fortified with calcium and the second commercial soymilk product made by Seventh-day Adventists in the USA. Madison Foods is a company run by students and faculty within Madison College, a pioneering work/study school.

1936 Jan.—Dr. Harry W. Miller and his son, Willis, start making Vetose Soya Milk, sold in natural or chocolate flavors in sterilized half pint or quart bottles at their Vetose Nutritional Laboratories in Shanghai, China. Dr. Miller is a Seventh-day Adventist physician, a student of Dr. John Harvey Kellogg, and a medical missionary living in China. The world’s first “soy dairy,” this company also made soy ice cream and Acidophilus Vetose (a cultured soya milk)—both launched in Jan. 1936. But Japan was invading China. Within months after the soy-milk business began booming, a Japanese bomb blew up the soy dairy.

1936 April—The earliest known English-language document to contain the modern word “soymilk” is: Miller, Harry W.; Wen, C. Jean. 1936. “Experimental nutrition studies of soymilk in human nutrition.” *Chinese Medical Journal* 50(4):450-59. April. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2987. Shurtleff, William; Aoyagi, Akiko. comps. 2013. *History of soymilk and other non-dairy milks (1226-2013): Extensively annotated bibliography and sourcebook (Continued—Document part II)*. Lafayette, California: Soyinfo Center. 2,972 p. Printed 30 Aug. 2013. 28 cm. [8761 ref]

• **Summary:** (Continued): 1936 June—Sobee, the world’s earliest known branded soy-based infant formula, is launched by the American Soya Products Corp. of Evansville, Indiana.

1939 autumn—Dr. Harry W. Miller, forced by the war in China to return to the USA, starts making soymilk at Mt. Vernon, Ohio, in a large brick plant which he and coworkers built from the ground up. The first two products are canned liquid soymilk (made in a pressure cooker and fortified with vitamins and minerals) and malted soymilk (Soy-A-Malt). Pressure from the powerful U.S. dairy industry and the USDA convinced Miller not to call his product ‘soymilk,’ so he latinized the name to Soya Lac. This term was first used in late 1939 for Miller’s first American soymilk.

1940 March—K.S. Lo, founder and managing director of the Hong Kong Soya Bean Products Co. Ltd. starts to make soymilk in Hong Kong. His product, originally named Vita Milk (Wai-ta-nai in Chinese) was fortified with calcium, cod-liver oil, and vitamins, and sold in milk bottles, primarily as a nutritious, affordable beverage for refugees. In June

1940 the product was renamed Sunspot, and in 1953 it was renamed Vitasoy.

1943—Bob Rich first learned about soymilk from employees of Henry Ford, who were making soymilk at the Carver Laboratory in Dearborn, Michigan, for use in the Ford Hospital. In April 1945 Rich Products Corp. launched Whip Topping—a non-dairy product. The first lawsuit against Whip Topping (1949) charges that this is an imitation dairy product—and thus illegal. Bob Rich and Rich Products (Buffalo, New York) mount an aggressive defense, contending that their product is not an imitation (which implies inferiority to the real product) but a replacement. By 1974 Rich Products (which now also made non-dairy Coffee Rich—a coffee whitener or creamer) had won 40 cases. That year the Kansas Supreme Court declared Coffee Rich “a new and distinct food” and the dairy lobby gave up. Were it not for Bob Rich and his lead attorney, Ellis Arnall (former attorney general and governor of Georgia, 1943-47), non-dairy products might still be illegal in the USA!

1950s—Soymilk enters the modern era as it begins to be marketed in bottles like soft drinks, largely due to work by K.S. Lo of Vitasoy in Hong Kong and Yeo Hiap Seng in Singapore.

1956 Dec.—The Plantmilk Society has its first annual general meeting in London. Mr. C.A. Ling is in the chair. This report in *The Vegan* is the earliest English-language document seen that uses the word “plantmilk” to refer to soymilk and other non-dairy milks—a nice short word.

1957—Japan’s first commercial soymilk, sold in bottles, named Tōnyu, is introduced by the Ueda Tofu Shop in Hachioji, Tokyo. Dr. Harry Miller was the inspiration for and helped to establish the shop.

1960s—In Japan, soymilk slowly increases in popularity. New manufacturers are: Nihon Tanpaku Kogyo (1962). College Health Foods (later renamed San-iku Foods) in Chiba prefecture with its Soyalac (1969, also inspired and aided by Dr. Harry Miller). Luppy Tanpaku (House Shokuhin) in Saitama prefecture with its Luppy soymilk (1969).

1965—ProSobee, the world’s earliest known non-dairy infant formula based on soy protein isolates, is launched by Mead Johnson & Co. of Evansville, Indiana.

1966—The enzyme lipoxigenase is discovered by scientists at Cornell University [Ithaca, New York] to be responsible for the “beany” flavor in soymilk. They develop a process which can be used to help eliminate this “beany” flavor.

1967—Soymilk begins to be packaged aseptically in Tetra Pak cartons. This allows it to be sold without refrigeration for six months or more. The first such product was Beanvit, made by Yeo Hiap Seng Ltd. in Singapore and packaged in a disposable tetrahedron-shaped container.

1970s and 1980s—Soymilk becomes a popular beverage throughout Asia, spreading to Europe, Australia and the

United States.

1979–Hong Kong Soya Bean Products Co. Ltd. starts to export Vitasoy, packed in Tetra Brik cartons, to selected countries throughout the world. By the early 1980s exports were going to over 20 countries, both developed and developing. Exports to the USA began in 1980.

1980 Jan.–DE-VAU-GE Gesundheitswerk, a Seventh-day Adventist food company near Hamburg, Germany, launches GranoVita Soja Drink in 500 ml Tetra Brik cartons; this soymilk product is made by N.V. Vandemoortele (one of Europe's largest oilseed crushers, founded in 1934) in Izegem, Belgium.

1980 June–N.V. Alpro is founded by Vandemoortele to take over production of this soymilk. Inspired and headed by Philippe Vandemoortele, Alpro purchased the land on which it was located from Vandemoortele, and became an independent manufacturer. Alpro quickly became Europe's leading producer of soymilk, making private-label brands for scores of companies.

1983 July–Edensoy brand soymilk is launched by Eden Foods of Clinton, Michigan. Imported from Japan (where it is made by Marusan-Ai Co.), it is sold in plain and carob flavors in stand-up foil retort pouches.

1984 Feb.–The first comprehensive study of the soymilk market in the U.S. is published by Soyfoods Center of Lafayette, California. It estimates that total soymilk consumption in the U.S. in 1983 (not including soy-based infant formulas) was 2.68 million gallons (26% of this was imported), and total production of soy-based infant formulas was 32 million gallons.

1984 March–Vitasoy (USA) introduces the first soymilk whose flavor is described as “Original”—meaning dairylike or resembling (as much as possible) dairy milk.

1984 Aug.–Westsoy Natural brand soymilk is launched by Westbrae Natural Foods of Emeryville, California. Imported from Japan (where it is made by San-Iku Foods), it is sold in one flavor in stand-up foil retort pouches.

1984 Oct.–Westbrae Natural Malted's, a thick soymilk resembling a milk shake, are launched in many flavors by Westbrae Natural Foods, imported from Japan.

1986 Nov.–Edensoy starts to be made in America by American Soy Products (ASP) at a large, modern plant in Saline, Michigan, and sold in Tetra Brik aseptic cartons. ASP is a joint venture of 4 Japanese companies and Eden Foods.

1986–Raj Gupta (of ProSoya Foods International, Ottawa, Ontario, Canada) applies for two patents on the oxygen-free, cold-grind process and equipment that he has invented. The first U.S. patent is issued on 17 May 1988. This process soon becomes widely used to make good-tasting soymilk. ProSoya becomes a major manufacturer of systems used to make soymilk worldwide.

1988 Nov.–Pacific Foods of Oregon launches its first soymilk product, Naturally Northwest Soy Beverage [Plain], in a 1-quart Tetra Brik Aseptic carton. The company's new

factory is in Tualatin, Oregon.

1990 April–WestSoy Lite, America's first “lite” soymilk, with a low fat content, is introduced in plain, vanilla, and cocoa flavors by Westbrae Natural Foods. Made by adding water to regular soymilk, the product is less expensive to make, but also contains less nutrients.

1990 June–Alpro opens a new soymilk plant at Wevelgem, Belgium. Costing about US\$15 million and having a capacity of 45 million liters a year, it is reputed to be the largest in the world. Alpro now makes about 70% of the soymilk in Europe.

1990 June–Rice Dream, a non-dairy beverage, is launched in a Tetra Pak aseptic carton by Imagine Foods of Palo Alto, California. It is made by California Natural Products of Manteca, California, using an innovative patented process, in which the ground rice is digested by enzymes. Many prefer its flavor to that of soymilk. (Continued). Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2988. Brawerman, Mark. 2013. Recent history of Turtle Mountain LLC (Interview). *SoyaScan Notes*. Sept. 10. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** In 2007 Turtle Mountain, Inc. launched its first product that was not a soy ice cream—a soy yogurt. It was named So Delicious Cultured Soy.

In the 2nd quarter of 2008 they launched a dairy free coconut yogurt named So Delicious Dairy Free Cultured Coconut Milk. Within 18 months it became America's #1 dairy free yogurt—as it is still today.

2008 April–Turtle Mountain's first non-soy frozen dessert, made with coconut milk instead of soymilk, is first shipped to stores—Whole Foods and UNFI. Turtle Mountain introduced 5 flavors of non-dairy coconut ice cream in April. A manufacturer is able to go onto the Whole Foods portal and see how much of his own product is being sold in every Whole Foods store five or six weeks after they first started shipping coconut to Whole Foods, the sales data showed that Turtle Mountain was selling more units of each of these 5 flavors than any other product they were selling to Whole Foods—and at a price 20% higher. It was a revelation! After all these years of building up Soy Delicious. If Mark had not forced the R&D people to develop these coconut frozen desserts, he believes the company would have gone out of business.

By 2009 sales of Turtle Mountain's soy frozen desserts were decreasing. Turtle Mountain has not introduced any new soy flavors or products since 2008. Yet the company's website shows that they still offer a lot of soy products. Personally, for his own consumption, Mark prefers the soy to the coconut; he likes the taste better. However Mark prefers coconut oil to soy oil (which is polyunsaturated). But Mark's attitude has always been: Give consumers what they want so long as it is 100% dairy free and natural.

Turtle Mountain has an elaborate system of allergen control to ensure that a person who is allergic to dairy products can enjoy these products with peace of mind.

All of Turtle Mountain's frozen desserts belong to the Code of Federal Regulations category "non-dairy frozen desserts" but their brand is "Dairy Free."

Starting in the last quarter of 2013 all Turtle Mountain brands will change to be So Delicious; for example "Purely Decadent" will be dropped. The process is expected to take 6-9 months. Why change? There are two sets of reasons. (1) In April 2005 Mark signed a national distribution agreement with what was then Dreyer's Ice Cream. At that point Turtle Mountain needed to build a plant; their existing co-packers couldn't make enough product. To raise the money for this plant, Mark had to bring in an investor. He chose Wasserstein & Co. (of New York City). Like all investors, this investor wanted to have the greatest possible return on their investment. They will eventually want to sell Turtle Mountain to some strategic food buyer, some big corporate entity. That is the pact with the Devil that you end up having to make when you don't have enough money. Mark needed \$10 million which he didn't have. The strategic buyer wants a company with one big, well-known brand—such as So Delicious. Hence the need to change all Turtle Mountain brands to this one. Here is how the realization came about:

Turtle Mountain bought a big motor home and put a trailer behind it that would hold 10,000 little cups in a frozen environment. They were looking for someone to drive that vehicle around the United States and do demos. Tom Lawlor, who had done all of Turtle Mountain's label design since 1998 (and who was married with a baby daughter) asked if he could have the job. He is very expressive, outgoing, fun-loving, amiable person—and she is too. Besides being a graphic artist and a photographer, he's a superb marketing person. Tom and his family left on the trip from California in Feb. 2005 and returned that November. As he recalls "It was an amazing experience." He found great consumer interest and insight. About 80% of the people to whom he offered a sample tasted it and were very pleasantly surprised. But roughly 20% of the people to whom he offered a sample would not even try it. They pushed it back saying, "I'm sure it's good for you, but I know I wouldn't like it because it's made with soy." Their attitude had nothing to do with health issues with soy; it was only about taste. Because of that, Tom told Mark, "We should change the brand, because if we don't have the word "soy" screaming on the front of the package, maybe people would be more willing to try it." Mark agreed.

So shortly before Mark signed the contract with Dreyer's in April 2005, he went to Tom Delaplane (who had run Dreyer's for 20 years and who built it into the Dreyer's we know) and explained that he had both good news and bad news. The bad news was that Mark wanted to change the brand of the product Tom thought so much of (Soy Delicious) to "So Delicious." Mark explained, the soy and

taste issue, then added a second point. "And what happens in the future if we want to sell a product that contains no soy? What are we going to do?" Tom thought for a moment, smiled and said "OK." So that's how the name change was decided. On 15 April 2005 Turtle Mountain signed the national distribution contract with Dreyer's. By late 2005 Turtle Mountain had started to make the actual change to So Delicious from Soy Delicious on its labels and sales sheets.

Back to the year 2005. Mark needed \$10 million because he realized he would have to build a plant to manufacture non-dairy frozen desserts. During the previous 2-3 years Mark had been contacted by many people who wanted to buy the company or buy into the company or invest in the company. So in 2005 he chose Wasserstein & Co. (in New York) as the investor and financial partner who would provide the \$10 million. They have since invested even more. Mark was able to retain operational control until 2013. Mark got a used warehouse in Springfield, Oregon, hired a plant manager, and built an entire plant to manufacture frozen desserts—but to the more stringent dairy specifications. The key part is the mix room.

In May/June 2008 Turtle Mountain opened its plant in Springfield; it was the world's first dairy free ice cream plant. There they manufactured mix, froze pints and quarts and tubs, and had an extruded stick bar machine. Turtle Mountain started to make its own extruded novelties. Before that they were doing it with co-packer Oregon Ice Cream in Eugene—which owned cows and made dairy ice cream. They created Turtle Mountain LLC (prior to 2005 the company was named Turtle Mountain, Inc.). Turtle Mountain, Inc. still exists; Mark owns 100% of it. That entity holds Mark's common and preferred and profit unit interests of the LLC. At about the same time Turtle Mountain moved its offices from Eugene to an industrial park in Springfield, where they also have large warehouse space.

2011—They brought out the no sugar added pints and novelties. This is very significant, in part because they are natural ingredients. They use monk fruit (*Siraitia grosvenorii*; *luo han guo*; the extract is nearly 300 times sweeter than sugar) and stevia. This product is also high in fiber, because Turtle Mountain uses all of the coconut, including the dietary fiber. Turtle Mountain's coconut products are a significant source of fiber.

2012 first quarter—Turtle Mountain introduced its almond ice creams—no soy and no coconut. Hain-Celestial has a similar non-dairy product (Almond Dream) which is selling better because Turtle Mountain's product is too expensive.

Also in 2012 Turtle Mountain discontinued all its brands with relatively small sales—such as Sweet Nothings, It's Soy Delicious, etc.

2013 April—Mark stepped down as CEO in April; he is still chairman of the board. The new CEO is Chuck Marcy, who now runs the company.

For the first 7-8 years of Mark's company's existence, Turtle Mountain's net sales were about \$2 million a year. In 2013 the company's net sales will exceed \$100 million. Since 2006 net sales have increased by more than 30% a year—and much of this is during the “Great Recession.” The company now employs 175 people. Of this \$100 million, about 38% are non-dairy frozen desserts, followed by beverages, cultured products (mostly like yogurt), and non-dairy creamers (the smallest segment). They make the beverages and the creamers as both aseptic / shelf-stable and refrigerated products. Address: Springfield, Oregon.

2989. Brawerman, Mark. 2013. Re: Important dates in the history of Turtle Mountain. Letter (e-mail) to William Shurtleff at Soyinfo Center, Sept. 17. 1 p.

• **Summary:** 1980 July—Mark starts to distribute and sell his first product, Jolly Licks Ice-C-Bean, in six flavors. A non-dairy frozen dessert, it is made for him by an ice cream manufacturer: Richmaid Ice Cream Company, Lodi, California (Myron and Brigitte Brockmeyer).

Mark is one of the first, if not the first, of a new kind of soyfoods company—the marketer-distributor. He is soon joined by Legume, Inc., Brightsong Light Foods, and a host of others.

1980 July (later in the month)—Mark changes the name of his company to Pacific Trading Co. and the name of his product to simply Jolly Licks.

1982 Feb.—Pacific Trading Co. introduces its Living Lightly line of products, including six frozen entrees, soft and firm tofu, two flavors of Tofu No-Cheese Cake, etc.

1984 end—Mark stops distributing products. Pacific Trading, Living Lightly and Jolly Licks completely cease operations at approximately the end of 1984. Mark makes suggestions to the manufactures for which he had distributed as to whom of his prior competitors they might approach to distribute on their behalf.

1987 May—Turtle Mountain, Inc. is incorporated to provide protection of Mark's personal assets from his business assets.

1989 early—Mark Brawerman moves his company from San Francisco to Junction City, Oregon, to be near his frozen yogurt co-packer, Jock Gibson of Lochmead Dairy, in Junction City, Oregon.

1994—Mark changes his brand from Living Lightly to Living Rightly.

1996 March—Mark changes his brand from Living Rightly to “It's Soy Delicious” by Sweet Nothings.

1998 March—Turtle Mountain, Inc. introduces two flavors of its new Soy Delicious line of non-dairy frozen desserts.

1999 March—At the Natural Products Expo at Anaheim, California, Trader Joe's buyer, Richard Baltierra, comes to Mark's booth (while Mark was away briefly) and left three purchase orders. Each order was for a full truckload

of product—roughly \$200,000 worth of Soy Delicious ice cream—under Mark's brand (they switched to private label years later). Without this order, Mark would probably have decided to close his business. His sales has been stuck at \$2 million for 5 years and he was either breaking even or losing \$20,000 a year and taking no money out of the business. My father of blessed memory was furious with me: ‘You are newly married and just blowing your mother's inheritance and for what purpose?’” Mark had decided to go to the show and to introduce three new flavors of Soy Delicious, for a total of 5 to make a shelf. “If things don't change at this show, then I'm going to fire all my employees, sell my inventory of finished goods, and walk away. Richard / Trader Joe's changed our luck!! Our sales increased to over \$5 million during 1999. I am grateful to Trader Joe's because of their business over many years; this single handedly funded the growth of our business such that by 2006 we did \$16 million net sales. It allowed us to hire experienced personnel and experiment with new soy based non-dairy frozen dessert products. It is an open miracle from God.”

That volume, concentrated in a small number of flavors, enabled Mark to get his pricing down for his packaging, to get better pricing on ingredients, and to actually make some serious money. With that money Mark hired John Tucker—the first really professional person, who had worked for a large company, he had ever hired. John had run R&D for a \$500 million ice cream company in New Zealand. John became VP Technology and Marketing, but in many ways he worked together with Mark on the same level.

2005 April 15—Turtle Mountain signs a national distribution agreement with Dryer's Ice Cream. Tom Delaplaine, who had run Dryer's for 20 years, predicts that Turtle Mountain's sales would increase to \$40-50 million in 2-3 years. Net soy sales never exceeded about \$25 million. Shortly after April 2005 Nestlé went from having 20% ownership of Dryer's and Haagen Dazs to having 100% ownership.

2005 July—Turtle Mountain LLC is established when Wasserstein and Co. provided the financing to build the first non-dairy ice cream plant in the world for Turtle Mountain.

2007 March—Turtle Mountain begins to manufacture a mini wafer sandwich (similar to Tofutti Cuties) in Springfield, Oregon, but at a different location from our their future non-dairy ice cream plant. They had their mix made at Lochmead, they bought the wafers, and they made the wafer sandwiches.

2008 June—Turtle Mountain begins production of non-dairy frozen dessert mix, extruded, chocolate enrobed stick bars, and other products at its plant in Springfield, Oregon. Pints, quarts, etc. were also filled.

2009 late—Turtle Mountain moves its offices from Eugene, to Springfield, Oregon.

Note: The frame of their extruded stick bar equipment is the same frame originally used by the Haagen-Dazs Ice

Cream Company to manufacture in Bronx, New York, their ice cream stick bars on a glacier extruded line which contained this frame. When Turtle Mountain ordered their new machine to be built, they were able to save a few hundred thousand dollars by “recycling” the old Haagen-Dazs frame.

2011 May—Mark makes John Tucker president of Turtle Mountain LLC; he continued to report to Mark, the CEO. John left Turtle Mountain in May 2013 and became CEO of Dave’s Killer Bread based in Portland, Oregon. Address: Founder and Chairman of the Board, Turtle Island LLC, Springfield, Oregon.

2990. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of cheese, cream cheese and sour cream alternatives (with or without soy) (1896-2013): Extensively annotated bibliography and sourcebook. Includes tofu cheesecakes and cheesecake alternatives (Continued—Document part II). Lafayette, California: Soyinfo Center. 567 p. Printed 22 Oct. 2013. 28 cm. [8761 ref]

• **Summary:** (Continued): In America, this new category has a number of basic characteristics: (1) Casein (a milk protein) or caseinates is used in more than 95% of all products to make them melt and stretch like dairy cheeses. Less than 5% of all products are truly non-dairy; (2) In the late 1980s, most manufacturers, marketers, and retailers deliberately concealed from consumers the fact that casein is derived from cow’s milk (complicated by the fact that FDA regulations allow food products that contain casein to be called “non-dairy”); (3) Many consumers believe that most cheese alternatives are truly non-dairy products. Fortunately, labels and promotional materials have become more honest with each passing year—yet many consumers still remain confused and some deceptive practices still exist; (4) All products are free of cholesterol and lactose, and relatively low in saturated fats. Some are also low in total fats, calories, and sodium; (5) About 95% of the products are soy cheeses and 5% are nut or seed cheeses without soy. Most products contain tofu (either dried or fresh) as a major ingredient; (6) Most products are sold at natural- or health food stores, and retail for about 50% more than typical dairy cheese sold at supermarkets; (7) About 95% of the products are hard cheeses and 5% are soft cheeses, mainly cream cheeses.

1986 Jan.—The first major soy cheese to hit the market is Soya Kaas—a landmark product. It was developed and introduced by Richard McIntyre of Soya Kaas Inc., a subsidiary of Swan Gardens Inc. Marketed exclusively by American Natural Snacks of Florida, it is still America’s most popular cheese alternative.

1986 June—Mozzarella Style Tofu-Rella is launched by Richard and Sharon Rose of Brightsong Foods of northern California. In about 1990 the company was renamed Sharon’s Finest and the product was renamed TofuRella.

1986 Oct.—Original Pizsoy (a whole-wheat pizza topped

with soy cheese) is introduced by Tree Tavern Products; it is the first product in which soy cheese is used as an ingredient.

1987 Jan.—Soymage is introduced by Soyco Foods, a Division of Galaxy Cheese Co.; This is Soyco’s first soy cheese product and the first modern soy cheese that contains no casein.

1987 April—NûTofu is introduced by Cemac Foods Corp. This is Cemac’s first soy cheese product.

1988 April—Soyco shreds and slices are introduced—the first soy cheese shreds and slices.

1988 Nov.—Soyco Foods introduces the first grated soy cheese; it is sold in shakers and contains casein.

1988—New labels for Sharon’s Finest Tofu-Rella become the first (as far as we can tell) to state clearly on the label that the casein in the product is derived from milk.

1990 Nov. 8—Nutrition, Labeling and Education Act (NLEA) of 1990 is signed into law by President George H.W. Bush. The law gives the Food and Drug Administration (FDA) authority to require nutrition labeling of most foods regulated by the Agency. This act unfortunately does not make it illegal to characterize on the label as “nondairy” a product which contains casein or caseinate. But it does deal with this problem as follows (21 CFR Ch. 1(4-1-93 Edition), p. 21). 101.4 (d) “When foods characterized on the label as ‘nondairy’ contain a caseinate ingredient, the caseinate ingredient shall be followed by a parenthetical statement identifying its source. For example, if the manufacturer uses the term ‘nondairy’ on a creamer that contains sodium caseinate, it shall include a parenthetical term such as ‘milk derivative’ after the listing of sodium caseinate in the ingredient list.”

1991 Jan.—Fat-Free Soyco is introduced—the first fat-free soy cheese.

1992 March 27—Tree of Life purchases Soya Kaas, Inc. (founded by Richard McIntyre). American Natural Snacks (ANS, a wholly owned subsidiary of Tree of Life) was McIntyre’s only customer; they had an exclusive arrangement.

1992 Sept.—Soyco Foods introduces Soymage Grated Parmesan Cheese Alternative; it is 100% dairy free and casein free.

1992 Dec.—Almond Cheeze is introduced by Wholesome & Hearty Foods—the first major non-soy cheese alternative in modern times.

1994 April—VeganRella (made from Brazil nuts) is introduced by Sharon’s Finest—a true non-dairy non-soy cheese said to have excellent flavor and texture.

1994 April—The size of the natural foods cheese alternatives market in the USA is about \$15 million/year at wholesale and \$25 million/year at retail; this is the equivalent of about 5 million lb/year. The category has grown at a remarkable rate—about 20% a year for the past 3-5 years.

According to *Packaged Facts* (1995): Sales of cheese alternatives (in million dollars at retail) rose from \$12.0 in

1989 to \$17.3 in 1991 to \$25.0 in 1993 and \$28.8 in 1994. The average annual sales growth for this period was 19.1%.

1994 Sept.–Sharon’s Finest introduces HempRella (with casein), the first cheese made with hemp. There is no trace of THC (the bioactive/psychedelic substance in marijuana) in the product; the company had it tested by the U.S. government.

1999 March–Richard Rose establishes HempNut, Inc., a new company to handle all of his work with legal hemp in a variety of fields, mostly food.

2005 Feb.–WholeSoy & Co. of San Francisco, California, launches Cream Cheese Style Soy Spread.

• **Summary:** A superb, powerful book. A good example of this power is Chapter 3, “Invisible lead” about how industry put lead in gasoline, then controlled the research on lead pollution, and argued that lead was harmless.

“Today [2013] one out of every six children suffers from some form of neurodevelopmental abnormality. The causes are mostly unknown. Some environmental chemicals are known to cause brain damage and many more are suspected of it, but few have been tested for such effects... The brain’s development is uniquely sensitive to toxic chemicals...” (from inside front dust jacket).

“Environmental pollutants such as lead, mercury, and pesticides interfere with brain development, yet we do not test industrial chemicals for brain toxicity. In this book, Philippe Grandjean argues for the necessity of protecting the brains of future generations and proposes a plan of action to halt what he refers to as chemical brain drain” (from the publisher). Address: Prof. and Chair of Environmental Medicine, Univ. of Southern Denmark.

2993. Krampner, Jon. 2013. Creamy & crunchy: An informal history of peanut butter. New York, NY: Columbia University Press. xv + 298 p. Illust. Index. 24 cm.

• **Summary:** This is the best and most comprehensive book on the history of peanut butter seen to date. Excellent research and writing, plus careful documentation. A+.

Unfortunately for us, we obtained this book only a short time before our book went to press, so we were able to benefit only a little from its superb contents, timeline and endnotes.

Contents: 1. Peanuts 101. 2. The social rise of the peanut. 3. The birth of peanut butter. 4. Peter Pan: “improved by hydrogenation.” 5. How Peter Pan lost its groove. 6. Skippy: “he made his first jar of peanut butter in his garage”. 7. Skippy on top. 8. Jif: “but is it still peanut butter?” 9. “Choosy mothers choose...” 10. Peanut butter goes international. 11. The music of peanut butter. 12. Deaf Smith: what’s old-fashioned is new again [A good history of Arrowhead Mills. In 1970 Frank Ford launched a peanut butter that was both natural (unstabilized) and organic (made from peanuts grown without chemicals)]. 13. The rise and fall of the florunner. 14. The peanut butter crisis of 1980. 15. “You mean it’s not good for me?” [about aflatoxins in and serious allergies to peanuts and peanut butter; also its high fat content]. 16. The short, happy life of Sorrells Pickard. 17. Peanut Corporation of America: “There was no red flag.” 18. Peanut butter saves the world. 19. Where are the pea butters of yesteryear?

Appendix 1: Author’s recommendations. Appendix 2: Peanut butter time line. From the publisher: Peanut butter is “found in the pantries of at least 75 percent of American kitchens. Americans eat more than a billion pounds a year.”

Soy is also mentioned on at least 13 pages in this book: “There are about 80 million acres each of corn and soybeans

in the United States, about 15 million acres of cotton, and perhaps 1 to 2 million acres of peanuts” (p. 21).

“Originally, only hydrogenated peanut oil was used in peanut.” But soy, cottonseed, and canola oils are now less expensive, so they are often used instead of peanut oil. Moreover, peanut butter customers may not be aware of the fact that, as of 2001, 80% of U.S. soybeans and 68% of U.S. cotton were genetically engineered (transgenic) (p. 53).

“... palm oil is highly saturated, so it increases bad cholesterol more than unsaturated oils like peanut, canola, soybean, and cottonseed oils. Palm oil is even more saturated than lard, by a margin of 51 to 41 percent” (p. 55).

Soybeans are mentioned in passing as growing outside the CPC peanut butter plant in Arkansas (p. 91).

William T. Young founded Big Top Peanut Butter (which Procter & Gamble later renamed Jif). “Since the 1920s, the hydrogenated oil put into peanut butter to stabilize it had been peanut oil. But starting around 1958, when Jif first came on the market, the peanut butter industry switched to other vegetable oils, such as soy, cottonseed, and canola or rapeseed” (p. 104).

“The plant manager said, ‘You know, they move soybeans in rail cars—why can’t we move peanuts that way?’” (p. 113).

Winners in Jif’s most creative peanut butter sandwich contents include “Crunchy Chinese Fortune Cookie Sandwiches... served with an Asian-style dipping sauce of creamy peanut butter, coconut milk, soy sauce, brown sugar...” (p. 124).

Surprisingly, the world’s earliest brand of peanut butter was made in Melbourne, Australia on 28 Jan. 1898 by Edward Halsey, a Seventh-day Adventist who had worked with Dr. John Harvey Kellogg in Battle Creek, Michigan. A jar sent to the author in 2008 contained no salt or sugar; it is stabilized “with about 1% sunflower-seed oil, as opposed to the soy, canola, and cottonseed oils used in the United States” (p. 128).

In the Netherlands peanut butter is called peanut cheese (*pindakaas*) and the Dutch eat more of it per capita than Americans eat peanut butter. It is used to make satay sauce to go with Indonesian food, especially satay. Two key ingredients in satay sauce are peanut butter and soy sauce (p. 129).

A detailed recipe for satay and its sauce are given on p. 133.

In 1980, when drought caused a shortage of peanuts and high peanut price. Florence Fabricant suggested that consumers mix their precious peanut butter in a blender with tofu (p. 171).

In about 1958 soy, cottonseed and canola or rapeseed oils replace peanut oil to become the three most common stabilizers in peanut butter (p. 240 timeline).

“80 million soybean acres possible” appears in endnote #19 (p. 248).

From the publisher: “In *Creamy and Crunchy* are the stories of Jif, Skippy, Peter Pan; the plight of black peanut farmers; the resurgence of natural or old-fashioned peanut butter; the reasons why Americans like peanut butter better than (almost) anyone else; the five ways that today’s product is different from the original; the role of peanut butter in fighting Third World hunger; and the Salmonella outbreaks of 2007 and 2009, which threatened peanut butter’s sacred place in the American cupboard. To a surprising extent, the story of peanut butter is the story of twentieth-century America, and Jon Krampner writes its first popular history, rich with anecdotes and facts culled from interviews, research, travels in the peanut-growing regions of the South, personal stories, and recipes.” Address: Los Angeles, California.

2994. Krampner, Jon. 2013. Deaf Smith: What’s old fashioned is new again. In: Krampner, J. 2013. *Creamy & Crunchy: An Informal History of Peanut Butter*. New York, NY: Columbia University Press. xv + 298 p. See p. 145-57. Chap. 12. Illust. Index. 24 cm. [31 ref]

• **Summary:** This chapter is largely about Arrowhead Mills and Frank Ford. Ford did not found or establish Arrowhead Mills; in 1960 he bought it from founder Henry Turner (no citation given).

Frank Ford was born in Hereford, Texas, the son of [Jesse Ford, 1894-1969] a country agricultural agent. He went to work at age 11, then went to college at Texas A&M University, which had a strong military tradition; it sent more officers to World War II than West Point. After graduating [in 1955 with a bachelor of science in agronomy] he earned the rank of second lieutenant and was stationed at Fort Lewis, Washington [state], from 1956 to 1958. He served as a battery commander with the Army’s Fourth Division, “the first Army division to have nuclear weapons.” He trained with the “Honest John Rocket.”

After leaving the army, “he returned to Hereford, and went to work for Arrowhead Mills, which he bought from the founder Henry Turner.” Frank worked hard to expand the business.

He was idealistic, religious, and dedicated to healthy living. Boyd Foster, a local farmer who soon became Ford’s chief lieutenant, and before long was president of the company, says of his boss: “‘A born promoter who was very good at promoting Arrowhead Mills and its products. A very good speaker, he was a sort of magnet to our company.’”

Arrowhead Mills started with two products: whole wheat flour and cornmeal. Ford ground them with a traditional stone mill and delivered them to local stores from the back of his pickup. “In 1970 he added a peanut butter that was both natural (unstabilized) and organic (made from peanuts grown without chemicals).” Ford chose the name “Deaf Smith” for his peanut butter and he decided to make it from Valencia peanuts, which were small and sweet but

which had never been used to make peanut butter. Grown just over the border in New Mexico, they “flourish in hot, dry weather and require a shorter growing season than runners and Virginias,…” They constitute only 1-2% of the U.S. peanut crop. Moreover, Ford included the peanut’s skin (which had a somewhat bitter and astringent flavor) right in the peanut butter to make it a whole food.

Such a product fit very nicely into the hippie, natural-food movement. Before long hippies were arriving in buses to meet Frank Ford (a lifelong Republican), to visit Arrowhead Mills, and to see organic farming up close.

After selling Arrowhead Mills to Hain in 1998, Frank and his second wife, Jane Han, moved to southern California, where they lived in San Diego County. Jesse Frank Ford died in 2011.

A photo (p. 156) shows Frank Ford with white hair. Address: Los Angeles, California.

2995. Shurtleff, William; Aoyagi, Akiko. comps. 2014. History of soybeans and soyfoods in Japan, and in Japanese cookbooks and restaurants outside Japan (701 CE to 2014): Extensively annotated bibliography and sourcebook (Continued–Document part III). Lafayette, California: Soyinfo Center. 3377 p. Printed 19 Feb. 2014. 28 cm. [11505 ref]

• **Summary:** (Continued): 1948 Oct. 10–Since the end of World War II, Japan has imported only 42,569 tons of soybeans (Kurakake 1948).

1950 June 25–Outbreak of the Korean War between North and South Korea. Soybean imports from China to Japan come to a complete stop (Hirano 1952).

1951–From about this time, the number of natto makers in Japan increases rapidly. Natto consumption begins to spread southward from the northeast prefectures (*Tohoku chiho*).

1956 Jan.–There are now in Japan about 50,000 tofu shops, 6,000 soy sauce plants, 5,000 miso shops, and 3,000 oil mills (Strayer 1956, p. 8).

1956 April–The Japan American Soybean Institute (JASI) is established in Tokyo with Shizuka Hayashi as its first director and most of its funding from USDA’s Foreign Agricultural Service (FAS). It has only one objective: To increase the market for U.S. soybeans and soybean products in Japan. With its earlier major sources of inexpensive soybeans in Manchuria and Korea now gone, Japan quickly becomes a major importer of U.S. soybeans. However Japanese makers of soyfoods constantly complain, year after year, of the poor quality of U.S. soybeans (too much foreign matter, broken soybeans, weed seeds, etc.).

1957 June–Kikkoman International Inc. (KII), a soy sauce sales company, is established in San Francisco, California, in the United States. KII imports Kikkoman Shoyu from Japan and markets it in the USA.

1957–Japan’s first commercial soymilk, sold in bottles,

named Tōnyu, is introduced by the Ueda Tofu Shop in Hachioji, Tokyo. Dr. Harry Miller is the inspiration for and helps to establish the shop.

1959–The first instant miso soup is introduced by Yamajirushi Miso in Nagano. It contains dried green onions, wakame, dried tofu [probably dried-frozen tofu], etc.

1960–Soybean imports rise to 1,128,000 metric tons (tonnes) topping 1,000,000 tonnes for the first time.

1960–Per capita consumption of shoyu drops to 13.7 kg. It has now fallen below 14 kg/person. Japan is moving toward a more Western-style diet, with bread replacing rice and with more total protein, animal protein, meat, and fat.

1961 July 1–The tax on imported soybeans is removed.

1962–A new natto container made of Styrofoam (*PHP yoki, happo suchiroru*) is invented.

1963 Jan.–William Brandemuhl (an American) arrives in Japan to begin 15 months of field research on soybean realization. In June 1963 he is joined by Tomoko Arai, his bride to be, who helps him greatly. Their resulting book (now published *only* on Google Books), containing many photos, gives a detailed record of soyfoods in Japan at this time.

1964 Oct.–Noda Shoyu Co., Ltd., is renamed Kikkoman Shoyu Co., Ltd.

1965–Per capita miso consumption drops to 7.8 kg, falling below 8 kg/person.

1966–At about this time meat analogs, based on modern soy protein products, start to be sold commercially in Japan.

1966–Soybean imports rise to 2,168,467 tonnes, passing the 2 million tonne mark for the first time. Production of soybeans in Japan drops below 200,000 tonnes for the first time. Japan now produces only 9% of the soybeans it consumes.

1966 May–Kikkoman starts to sell low-salt shoyu.

1968 July–Shizuka Hayashi retires as managing director of the Japanese American Soybean Institute in Tokyo after 12 years of service. Scott Sawyers takes over as country director in Japan for the American Soybean Association.

1968–Bottling of Kikkoman Soy Sauce for the American market begins at the Leslie Foods plant in Oakland, California.

1969 March–Nineteen major food manufacturers in Japan join to form the New Protein Food Council, which will make meat alternatives based on modern soy protein products and wheat gluten.

1969–Annual per capita consumption of soy oil in Japan rises to 3.2 kg, passing the 3 kg mark for the first time. In 1960 it was 1.2 kg/person.

1960s–In Japan, soymilk slowly increases in popularity. New manufacturers are: Nihon Tanpaku Kogyo (1962). College Health Foods (later renamed San-iku Foods) in Chiba prefecture with its Soyalac (1969, also inspired and aided by Dr. Harry Miller). Luppy Tanpaku (House Shokuhin) in Saitama prefecture with its Luppy soymilk (1969).

1972 March–Kikkoman Foods, Inc. (KFI), is established in Walworth, Wisconsin (USA) for the purpose of manufacturing soy sauce and teriyaki sauce. The grand opening and ribbon-cutting is on 21 June 1973, with the governor of Wisconsin present.

1973 June 27–President Richard Nixon sets new regulations for soybean exports from the USA. This comes as a huge shock to the Japanese—and causes them to look to other soybean suppliers, such as Brazil, to diversify their sources.

1978–Soybean imports rise to 4,260,000 tonnes, topping 4 million tonnes for the first time. This is 4.5 times as much soybean imports as 20 years earlier.

1979–Tofu production continues to rise, reaching 1,114,000 tonnes, and topping 1.1 million tonnes (metric tons) for the first time.

1980–Production of natto reaches 153,000 tonnes, up 33% compared with 10 years ago (when it was 115,000 tonnes). This is largely a reflection of the health food movement in Japan.

1980 Oct.–Kikkoman Shoyu Co., Ltd. is renamed Kikkoman Corporation—the company’s present name.

1981 Feb.–Morinaga Tofu starts to be imported and sold in the USA from Japan.

1981 June–Japan’s first soymilk ice cream is made by Kibun in Tokyo.

1981 Nov.–The Ministry of Agriculture and Forestry in Japan announces a Japanese Agricultural Standard (JAS) for soymilk. The soymilk boom in Japan starts; the total yen value of the soymilk by all major Japanese manufacturers is 5,000 million yen. The boom peaks in 1983.

1982–Annual per capita consumption of soy oil in Japan rises to 5.1 kg, passing the 5 kg mark for the first time. In 1960 it had been 1.2 kg/person.

1983 June–Torigoe Seifun, Japan’s fifth-largest flour miller, starts production of tempeh. This is the earliest known commercial tempeh ever made in Japan.

1983 July–At the NNFA show in Denver, Eden Foods surprises the natural foods industry by launching designed-for-America Edensoy in plain and carob flavors. Made in Japan by Marusan-Ai and exported by Muso, it is packed in a 6-ounce retort pouch. Sales of Edensoy soon skyrocket.

1983 Nov. 19–House Shokuhin Kogyo, a major Japanese food company, invests \$2.5 million in Hinode Tofu Co. in Los Angeles as part of a joint venture to expand tofu production.

1983–The soymilk boom in Japan peaks this year at 116,724 kiloliters (kl.). By 1986 it has fallen to 43,392 kl, which is only 37% of the peak.

1985 Sept.–Tofu Time Inc. (founded by David Mintz, maker of Tofutti) enters into an agreement with Daiei, Inc., Japan’s largest ice cream retailer, to export \$350,000 worth of Tofutti to Japan. Daiei also plans to open three Tofutti Shops in Tokyo within the next 6 months.

1994–Yamasa Corporation (the world’s 2nd largest manufacturer of soy sauce after Kikkoman) opens a plant making shoyu in Salem, Oregon. The shoyu is first shipped in April 1995.

1996 April–Kikkoman establishes Kikkoman Foods Europe B.V., Europe’s first soy sauce manufacturer, located in Hoogezand-Sappemeer, in the Netherlands.

1997 March–Kikkoman holds a ground-breaking ceremony for its second U.S. soy sauce production plant in the United States, in Folsom, California. Shipments start in Oct. 1998. Kikkoman’s U.S. production of soy sauce rose from 1.59 million gallons in 1973 to 23.81 million gallons in 1993.

2005 Nov. Yamasa Corporation purchases San Jirushi Corp. and San-J International of Kuwana, Japan, and Richmond, Virginia. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2006. Shurtleff, William. 2014. How to garden or farm organically without the use of animal manures (Overview). *SoyaScan Notes*. March 13. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Use soybean cake or meal (ideally, made without chemical solvents) just as the Chinese and Japanese did for centuries. The Japanese found that it worked better on rice fields than fish meal and was less expensive. The Chinese used it mostly on sugar cane plantations.

For an excellent, more detailed discussion of this subject see: Nearing, Scott. 1953. “Food without animal residues.” *Vegetarian (The)* (Wilmslow, Manchester, England) 1(6):188-89. Nov/Dec. Address: Soyfoods Center, Lafayette, California 94549.

2007. *Organic and Non-GMO Report (The)* (Fairfield, Iowa). 2014. Kroger, Safeway join trend away from GMO food. No. 142. April. p. 8-9.

• **Summary:** The two largest grocery stores in the United States, Kroger and Safeway, have made commitments to not sell genetically modified salmon, according to Friends of the Earth and a coalition of more than 30 consumer, health, food safety and fishing groups, including Center for Food Safety, Food and Water Watch and Consumers Union.

“By making commitments to not sell genetically engineered salmon, Kroger and Safeway have joined the large number of grocery chains that have wisely chosen to listen to the majority of consumers who do not want to eat genetically engineered fish,” said Dana Perls, food and technology policy campaigner with Friends of the Earth. “Now Costco, Walmart, Albertsons and other retailers need to catch up and provide their customers with natural, sustainable seafood that isn’t genetically engineered.”

“The total number of companies committed to not sell GM salmon now stands at more than 60 retailers comprising 9,000 stores, including Target, Whole Foods, Trader Joe’s,

Aldi, H-E-B, Meijer, Hy-Vee, Marsh, Giant Eagle, and now Safeway and Kroger.” Address: PhD.

2998. Jeavons, John. 2014. Re: A letter from John Jeavons and the Ecology Action Team. Letter to Dear Friends at Soyinfo Center, June 3. Typed, with signature on letterhead. [405* ref]

• **Summary:** Aware of intensifying world challenges and the basic need of people to feed themselves, we have been working for 40 years to develop an elegant, small-scale agricultural system—Grow Biointensive® Sustainable Mini-Farming—that when practiced correctly, nurtures healthy soil fertility, produces high yields, conserves resources and can be used successfully by almost everyone. Our goal is to help this system be known and used locally... on a worldwide basis.

Healthy people need healthy food. Healthy food requires healthy soil. Healthy soil requires critical nutrients properly applied and composting.

U.S. initiatives in Grow Biointensive (GB) include:

(1) Two-week GB farmer training course. (2) Economic mini-farm project. Urban outreach and training. Secondary education. Post-secondary education.

Recognizing that a thriving world of health and vitality will be possible only when everyone is empowered to grow healthy soil and healthy food, Ecology Action is offering Global Intensives in GB. (1) Six month internship training program. (2) Milan, Italy. (3) Kenya—G-Black (Grow Biointensive Agriculture Centre of Kenya) has already trained 8,000 people in the GB method. (4) Malawi. (5) Rwanda. (6) South Sudan. (7) International Scouting. (8) Latin America at Dominican Republic. (8) Latin America—Establishment of eleven Mini-Ag Center

Soil Test Stations across Latin America.

Each class offers both hands-on fieldwork and classroom teaching.

An accompanying card summarizes: Grow Biointensive Sustainable Mini-Farming.

“Deep soil preparation plus

“Compost makes possible

“Close plant spacing.

“The use of open-pollinated seeds to grow

“Carbon/calorie crops for calories and compost materials

as well as

“Special calorie root crops for area-efficient calories

with good

“Companion planting provides sustainable soil fertility and a complete balanced sustainable diet within

“A whole system.”

More at: www.growbiointensive.org Address: Ecology Action, 5798 Redwood Rd., Willits, California 95490. Phone: 707-459-0150.

2999. Tibbott, Seth. 2014. From Birkenstocks to corporate

stocks: An abbreviated history of meat alternatives in America (PowerPoint presentation; Continued—Document part II). First presented at the Western New York Inaugural Veg Fest in Buffalo, New York, Aug. 3. 41 frames.

• **Summary:** Continued: (26) “Finally, The Birkenstock Era (BE), begins: Meat Alternative Pioneers of the 1970s and 1980s. Photo: Person walking in a pair of Birkenstock leather sandals—from the knees on down.

(27) “Bill Shurtleff: With wife Akiko Aoyagi, Zen Buddhist visited 300 cities in 1975 sampling and promoting soy foods as an alternative to meat.” Photos: (a) Shurtleff & Aoyagi standing next to the side of their white Dodge van during 1975 tour in Tennessee. (b) Front cover of the following books by Shurtleff & Aoyagi: *The Book of Tofu*. *The Book of Tempeh*. *The Book of Miso*. *Tofu & Soy Milk Production*. *Tempeh Production*. *Miso Production*.

(28) “Stephen Gaskin and The Farm: Ex Marine and college professor, founded the largest hippie commune, The Farm in Tennessee in 1971. It had 1750 acres which they farmed. At its height 1500 vegan hippies lived there. They grew and ate a lot of soybeans and did great pioneering efforts on a variety of soy foods.” Photos: (a) Stephen Gaskin seated cross-legged and looking very happy. (b) Aerial view of much of The Farm in Tennessee.

(29) “Farming Soy Hippie Style.” Photos: (a) A man (naked) with a women (dressed) next to a horse. (b) Many long-haired Farm members carrying armloads of sorghum to load it onto a wagon. (c) Farm members planting seeds. (d) A Farm member in a field of soybeans, talking with two Guatemalan farmers.

(30) “Meat Alternatives Pioneered at the Farm: For protein, the farm processed soybeans into tofu, tempeh, soy milk and ice bean [soy ice cream]. Photos: (a) The rainbow-colored label from the top of a pint of Farm Foods Ice Bean. (b) Farm tofu shop in San Francisco circa 1972. (c) Ditto, with a Farm member pouring a white plastic bucketful of soy puree into boiling water in a caldron. Photos from The Farm Archives.

(31) “Pioneering Tofu Brands of the 1960’s and 70’s: Though tofu had been made by Asians in this country since the early 1900s, in the BE Caucasians, inspired by Shurtleff and the Farm started opening businesses. BE Tofu Companies:

NoMoo Dairy, Portland, Maine

Heartsong Tofu, Miami, Florida

Metta Tofu, Denman Island, British Columbia, Canada

Island Spring, Vashon, Washington

Laughing Grasshopper, Millers Falls, Mass.

Surata Soyfoods, Eugene, Oregon

Rochester Tofu, Rochester, New York

White Wave, Boulder, Colorado

Nasoya, Leominster, Massachusetts.

Photos: (a) Front panel of a carton of Surata Organic Firm Tofu. (b) Michael Cohen and co-worker turning over

a large box of tofu at Laughing Grasshopper. (c) Lulu and Yoshi Yoshihara standing in shop of Shin-Mei-Do Miso.

(32) “Pioneering Tempeh Brands: In 1975 Gale Randall started the first commercial tempeh business in the USA in Lincoln, Nebraska. Other early tempeh companies:”

Tempehworks, Greenfield, MA

Pacific Tempeh, San Francisco, California

Island Spring, Vashon, Washington

Soyfoods Unlimited, San Leandro, CA

White Wave, Boulder, Colorado

Turtle Island Soy Dairy, Forest Grove, Oregon.

Photos: (a) Turtle Island Soy Tempeh label. (b) Seth Tibbott, founder and owner of Turtle Island, dehulling soaked soybeans with a Corona Mill set up in the kitchen of the Hope Coop Cafe circa 1981. (c) Seth Tibbott, holding up two bags of his tempeh. (33) “Turtle Island Foods’ Evolution into The Tofurky Company.” Photos: (a) The earliest existing photo of Seth standing in front of his tempeh incubator. (b) 1980: Hope Coop Café, Forest Grove, OR. (c) 1982: Old Husum schoolhouse, Husum, WA. (d) Seth’s home [in a tree house he built] 1984 to 1991. (e) 1992: Graf Building, Hood River, OR. (f) 2014 New LEED Platinum Tofurky Plant, Hood River, OR. (g) Seth Tibbott holding a box of Tofurky.

(34) “After Birkenstocks Landscape (AB): Most Meat Alternative companies today base their products on soy protein isolate. Quick Guide for Veggie Burgers / Meat Alternatives. No Hexane-extracted Soy ingredients Used.” Amy’s, Asherah’s Gourmet, Field Roast, Helen’s Kitchen, Primm Springs Foods, Soy Deli, Sunshine Burgers, Tofu Shop, Tofurky, Turtle Island Foods, Wildwood.

“Likely Hexane-extracted Soy ingredients Used: Boca, Dr. Praegers, Franklin Farms, Fantastic World Foods, Gardein, Gardenburger, Lightlife, Morningstar, SoyBoy, Spice of Life, StarLite Cuisine, Trader Joe’s, Yves Veggie Cuisine. Photos: (a) Front panel of Tofurky Italian Sausage. (b) Boca Flame Grilled. (c) Amy’s Quarter Pound.

(35) “From Birkenstocks to Corporate Stocks.” A table with two columns shows: (a) Original Meat Alternative Company -> Now Owned By.

Tempehworks (Lightlife) -> Brynwood Partners Via ConAgra.

Nasoya -> Vitasoy.

White Wave -> Dean Foods.

Turtle Island Foods, Inc. -> Turtle Island Foods, Inc.

Boca Burger -> Kraft.

Yves Fine Foods -> Hain Celestial.

Worthington Foods -> The Kellogg Company.

Gardenburger -> The Kellogg Company.

(36) “Who Owns Who?” A complex diagram showing how big food companies have acquired small ones. Many names & words are too small to read.

(37) “Meat Consumption Trends: In 2012, the USDA projects the average American will consume 12.2% less meat and poultry than in 2007. 5% of the US population classifies

their diet as “vegetarian”*. 13% to 17% of the US population now eats vegetarian meals at more than half of their weekly meals*. * according to Harris Interactive poll April, 2011 and 2012 poll by the Humane Research Council. Graphs: (a) Total U.S. meat & poultry consumption, per capita, boneless equivalent (1960-2011). (b) U.S. meat & poultry consumption, per capita, boneless, by species: Beef, pork, broilers, turkey (1955-2012). Source: USDA, December 2011.

(37) “Who Eats Meat Alternatives Today? 36% of Americans!” A bar chart shows “Use of meat alternatives, by age, Mintel, March 2013. Photo: Smiling lady holding a box of Tofurky.

(39) “US Turkey Production vs. Refrigerated Meat Alternative Trends.” Graphs: (a) US turkeys raised, 1989-2012. Rose from 260 million in 1989 to a peak of about 307 in 1995, falling to 250 in 2012. (b) US refrigerated meat alternative sales, 2008 to 2013 in million dollars. Rose from \$587.5 million in 2009 to \$597.5 million in 2013.

(40) “Modern Meat Alternatives of America.” Photos: (a) A veggie burger between sesame buns with a slice of cheese and lettuce. (b) Gimme Lean (chub pack). (c) Veggie burger between buns with lettuce and tomatoes. (d) Gardein Mandarin Orange Crispy Chicken. (e) Original Field Roast (3 flavors in clear chub packs). (f) Tofurky Roast. (g) Chicken-Free Strips. (h) Tofurky Deli Slices: Hickory Smoked.

(41) “This Season’s People.

“We are the people.

We are this season’s people.

There are no other people this season.

If we blow it, it’s blown”–Stephen Gaskin

“If not you, who?

If not now, when?”–Hillel

Photos: (a) Stephen Gaskin (1935-214). (b) Alexander Lyon, tempeh pioneer (1939-2014). Address: Founder and owner, The Tofurky Company.

3000. Nordquist, Ted. 2014. Re: The fall and rise of WholeSoy Soy Yogurt. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 11. 1 p.

• **Summary:** “Provisions Food was evicted by the Visalia Sheriff at 5 AM on April 11th. I was told this on Monday, April 8th and succeeded in removing and taking control of all equipment and supplies by 5:00 PM on April 10th.

“We told the Trade we were back at the Natural Products Expo West in Anaheim in March. All of the natural food companies welcomed us back with open arms with the same article numbers. HEB in Texas did the same since they are distributed by KeHe a natural food distributor. The big chains like Wegmans did the same, although Raley’s and Kroger have not yet taken us back. See Spins Report. We should be getting an updated report next week.

6 oz cups (all flavors) were back in retail stores the first

week of March 2014. 24 oz cups August 4th, 2014.

Ted is still struggling to survive. "It is a daily struggle primarily due to UNFI not paying us in a timely fashion *and* taking off invoice deductions they know will take us months to recover.

Note: UNFI is the sole distributor to Whole Foods Markets, nationwide. Address: TAN Industries, Inc., 353 Sacramento St., Suite 1120, San Francisco, California 94111.

3001. *SoyaScan Notes*. 2014. Soy yogurt and other non-dairy yogurt prices at Whole Foods Market in Lafayette, California (Overview). Oct. 18. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Maker: WholeSoy. Milk made from: Soy. Size: 6 oz. Organic: Sort of. Made with organic soybeans. Plain, Vanilla and Unsweetened are 95% Certified Organic. All other fruit flavors are 70% certified organic (fruit is not organic) certified by QAI. Flavors: Key lime, lemon, plain, mixed berry, raspberry, vanilla, blueberry, peach, cherry, apricot. Price: \$1.19, but today on sale for \$0.89. Large sizes: 24 oz. Flavors: Vanilla, plain, unsweetened plain. Price: \$3.39, but today on sale 2 for \$5.00. Many flavors and one large size are out of stock.

Maker: Nancy's (Oregon). Milk made from: Soy. Size: 24 oz. Organic: Yes. Flavors: Plain Price: \$3.49. Large sizes: 32 oz. Flavors: Plain. Organic: Yes. Price: \$4.49.

Maker: So-Delicious. Milk made from: Coconut. Size: 6 oz. Organic: No. Flavors: Blueberry, strawberry, vanilla, plain, chocolate, raspberry, passionate mango. Three are Non-GMO certified. Price: \$1.99. Large sizes: 16 oz. Flavors: Plain, vanilla. Price: \$3.99.

Maker: Hain Celestial. Brand: Almond Dream. Milk made from: Almonds. low fat. Size: 6 oz. Organic: No. Flavors: Plain, vanilla, strawberry, mixed berry, coconut. Price: \$1.69, but today on sale for \$1.39. Large sizes: 24 oz. Flavors: Vanilla. Price: \$4.49.

3002. Nature's Path. 2014. The future is organic. Let's plant the seeds (Ad). *Organic and Non-GMO Report (The) (Fairfield, Iowa) No. 145. Nov. p. 11.*

• **Summary:** A large color photo shows Arran Stephens, founder and chief garden-keeper of Nature's Path. In the lower right corner is Nature's Path's organic logo, with the words "Eat well. Do good."

3003. Roseboro, Ken. 2014. Whole Foods making big commitment to biodynamic products. *Organic and Non-GMO Report (The) (Fairfield, Iowa) No. 145. Nov. p. 4-5.*

• **Summary:** "Whole Foods Market is leading the way in promoting biodynamic certified products, according to the retailers' executive global grocery coordinator, Errol Schweitzer." Schweitzer sees biodynamic as the future because it is a deeper form of organic agriculture. "Whole Foods now sells about 20 biodynamic products in its stores."

A color photo shows Elizabeth Candelario of Demeter USA with a display of biodynamic products at a Whole Foods store.

3004. Roseboro, Ken. 2014. Biodynamic agriculture: Biodynamic brings holistic perspective to organic agriculture. Agriculture system views farm as an organism encompassing soils, plants, animals, humans, and nature's cycle. stations. *Organic and Non-GMO Report (The) (Fairfield, Iowa) No. 145. Nov. p. 4-6.*

• **Summary:** Frey Vineyards, a "third-generation organic vineyard and farm, is nestled on the slopes of the Redwood Valley in northern California... near the headwaters of the Russian River."

"The view of the farm as an organism was first presented by Austrian Philosopher Rudolf Steiner in a series of lectures in 1924. German farmers had requested Steiner's help after they became concerned about the increasing use of agricultural chemicals. Steiner responded by calling for a spiritual renewal of agriculture."

3005. Madison, Deborah. 2014. The new vegetarian cooking for everyone. Revised. Berkeley, California: Ten Speed Press. vi + 665 p. Index. 27 cm. Originally published in New York by Broadway Books in 1997.

• **Summary:** This book (vegetarian) is a revised an expanded edition of *Vegetarian Cooking for Everyone* (Oct. 1997).

Chapter 16, titled "Tofu, tempeh and miso" (p. 521-539) begins: "Soy was the big hope in the 1970s, '80s, and into the '90s for its protein, lack of cholesterol, its ability to imitate meat in many forms, and its possible health benefits.

"Then suddenly it was under suspicion, and still is. Tofu, which is difficult to digest, should be thought of as a food you eat in small quantities, while fermented soy products, like miso and tempeh, are now preferred." This page goes on to discuss the pros and cons of soyfoods. TVP (textured vegetable protein) a highly-processed, sawdustlike by-product, often used as a filler in meat dishes, sits at the bottom of her list of wholesome and delicious foods. Hexane, used to treat some "natural" soy products, is a neurotoxin [and a highly volatile petroleum fraction]. She has found that soy oil and soy flour are too often rancid, yet both are widely available in supermarkets. Soymilk and tofu have their own problems; much of their wholesomeness depends on the company that makes them, the sources of their soybeans (are they organic, non-GMO) and who certifies them when they are imported from China. Eden Foods gets high marks for the integrity of its various types of Edensoy®. Silk® soymilk, made by Dean Foods, gets low marks for its high level of sweetness and the fact that its maker refuses to give the source of its soybeans. Yet soymilk may be beneficial to those who are very lactose intolerant. Some people find it hard to digest soymilk and other soy products. Fortunately there are now other plant milks that are easier on the body

and widely available.

Recipes: This section begins with 4 Asian dipping sauces, three of which call for soy sauce. The section on tofu begins with a discussion of tofu, the eight types of tofu, cooking techniques (draining, firming and precooking), four additional sauces for tofu and tempeh (pages 59-61), marinating tofu and tempeh plus 4 marinades, then 16 tofu recipes.

The section on tempeh begins with a discussion of tempeh followed by 9 tempeh recipes.

The section on miso begins with a discussion of miso and the best known of the many types of miso. Since miso is best known in miso soups there are two recipes for kombu stock followed by 6 miso recipes and a list of more garnishes for miso soups.

About the author: On the rear inside dust jacket is a color photo of Deborah Madison. The text below it reads: "Deborah Madison is the author of eleven cookbooks and is well known for her simple, seasonal, vegetable-based cooking. She got her start in the San Francisco Bay Area at Chez Panisse before opening Greens, and has lived in New Mexico for the last twenty years. In addition to writing and teaching, she has served on the boards of Slow Food International Biodiversity Committee, the Seed Savers Exchange, and the Southwest Grassfed Livestock Alliance, among others. She is actively involved in issues of biodiversity, gardening, and sustainable agriculture." Address: Author and chef, Santa Fe, New Mexico.

3006. Sams, Craig. 2015. Michio Kushi, last of old school macrobiotic gurus, is no more (Web article). *www.craigsams.com*. Jan. 28. [1 ref]

• **Summary:** "Modern Zen macrobiotics was created by the Japanese leader George Ohsawa. His leading apostle was Michio Kushi. Kushi died in December, leaving the macrobiotic movement leaderless for the first time in its history in the West. In any belief system there is always the potential to confuse the messenger with the message.

"The Ten Commandments ban worshipping graven images and Islam prohibits images of Mohammed. This prevents believers worshipping a fellow human who connected with the universal spirit of love and peace (or 'health and happiness' if you prefer) instead of seeking that connection themselves. In macrobiotics the tendency to follow the man rather than the practice has been a marginalising factor that has kept it as a cult instead of the universally popular diet that we once thought it would become. Yet macrobiotic principles are now the guiding principles of the renaissance in nutritional awareness that is gathering pace worldwide. It looks like we've won, just not under our flag."

"Ohsawa died suddenly in 1966, leaving the macrobiotic movement leaderless.

"Michio Kushi on the East Coast and Herman Aihara

on the West Coast, took up Ohsawa's mantle. Kushi set up the East West Institute in Boston [Massachusetts]. It was a mecca for burned-out hippies who would make the hajj to Boston and work in the study centre or the associated restaurant and food wholesaling business Erewhon, while learning the philosophy and how to cook the food. Kushi's lectures to his followers were published in *The East West Journal* and the *Order of the Universe* magazines, reaching more than 100,000 subscribers worldwide. His students became the missionaries of macrobiotics beyond Boston. Many of them came to London, where we welcomed them and gave them jobs in our restaurant, bakery and shop. We rented them a house in Ladbroke Grove where they could promulgate Kushi's message, give shiatsu classes and teach cooking. They disdained our free and easy approach to macrobiotics and advised us to go to Boston to study with Michio. We thought they were too 'straight.' They wore suits, smoked cigarettes and drank Guinness and coffee just like Michio. But the rest of their diet was much stricter than ours, allowing little in the way of sweeteners or dairy products. It was a bit alienating, but we thought 'each to his own' and were grateful to be introduced to shiatsu and to have active missionaries spreading the message.

"A few years ago I wrote here about our macrobiotic sea cruise. It included late stage cancer sufferers who had, thanks to Michio Kushi's teachings, been clear for five or ten years. It was moving to hear their stories and their gratitude that macrobiotics had given them life beyond their doctors' expectations.

"Will macrobiotics thrive in Kushi's absence? The philosophy is now everywhere, the basic principles of making healthy diet the foundation of your physical and mental well being; eating whole unrefined cereals; exercising actively; always choose organic; avoid sugary refined foods; prefer sourdough over yeasted breads; avoid artificial preservatives and colourings; no trans fats; eat locally and seasonally. these were once quirky macrobiotic precepts but are all now well-established and the stuff of Sunday newspaper supplements. George Ohsawa once commented that as long as you were in a state of bliss it didn't matter what you ate, you were macrobiotic. Kushi's messaging was more prescriptive, but it reached a lot more people. These great men are no longer with us, but thanks to their teachings the quality and variety of food we can easily obtain is better than it has ever been in human history. There is no excuse for eating crap any more. For this we should be eternally grateful."

A photo shows Craig Sams, elder brother of Gregory Sams. Below that is the following brief autobiography:

"Welcome, my name is Craig Sams, I live in Hastings in the south of England. This site's about stuff in which I have involvement or interest.

"I was born in Nebraska in 1944. Our farm was between Emerson and Homer, poetically-named towns a few miles

south of Sioux City.

“After obtaining a B.Sc. in Economics from the Wharton School at the University of Pennsylvania I moved to London in 1966 with the aim of opening a macrobiotic restaurant. In 1967, after a brief career in the ethnic fashion and import business (Afghan coats, Indian posters, Tunisian kaftans, Tibetan shoulder bags, hand-dyed silks) I

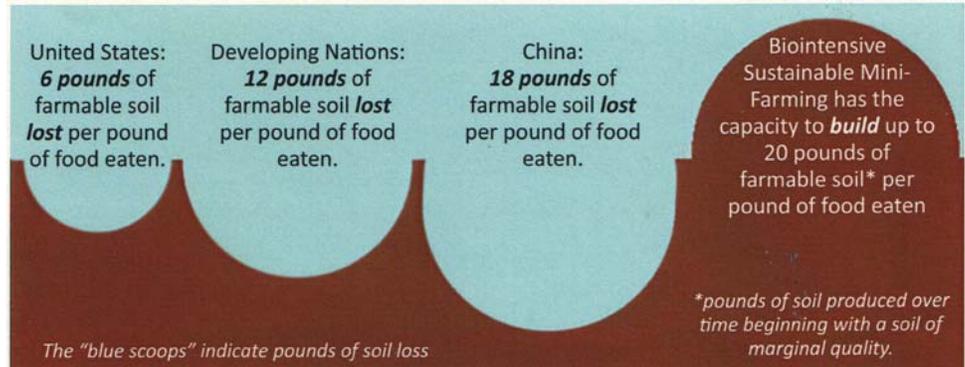

founded, in partnership with my brother Gregory, Whole Earth Foods, a leading organic food company, expanding from its original organic macrobiotic restaurant ‘Seed’ into retail, wholesaling and manufacturing with the Harmony, Ceres Bakery and Whole Earth brands.

“I’m the author of four books: *About Macrobiotics* (1972), *The Brown Rice Cookbook* (1982, new edition 1992), *The Little Food Book* (1993) and, with Josephine Fairley, *The Story of Green & Black’s*. The Sams family (our Dad Ken, Gregory and me) published “Seed Magazine–The Journal of Organic Living” from 1972-1977. I was Hon. Treasurer of the Soil Association from 1990 to 2001 and was Chairman from 2001-2007. I then chaired Soil Association Certification Ltd from 2007-2009 and continue as a director. I chaired Slow Food UK from 2008 to 2015 and continue as a trustee and as a member of Slow Food Sussex.

“In partnership with my wife Josephine Fairley I founded Green & Black’s Organic Chocolate in 1991, an award-winning organic and fair trade confectionery brand whose Maya Gold chocolate was the first product to carry the Fairtrade Mark. I grow most of my own vegetables organically in our potager garden in Hastings and on my smallholding nearby, where we also have a watercress bed and woodland. I’m now President of Green & Black’s Ltd—a non-executive advisory role. I am co-founder and Executive Chairman of Carbon Gold Ltd, a carbon sequestration business based on the use of biochar as a soil improver. Biochar is emerging as a major tool for mitigating climate change and restoring our planet’s degraded soils. In addition I serve as a director of Duchy Originals Ltd and of Gusto Organic, the organic soft drink makers. Josephine and I host the Wellington Square Natural Health Centre in Hastings, a venue for alternative and complementary therapies.”

3007. Jeavons, John. 2015. Re: Happy New Year. A letter from all of us here at Ecology Action. Letter to Dear Friends at Soyinfo Center, Jan. Typed, with signature on letterhead. [405* ref]

• **Summary:** An in-depth discussion of the worldwide Grow Biointensive sustainable mini-farm method. “Over the past 43 years of work, we’ve shown that this is an amazing method that people of all ages and cultures can

use. Compared to conventional farming methods, Grow Biointensive (GB) saves water, builds fertile soil, increases yields and income, reduces or eliminates inputs and energy use, sequesters carbon to reduce global warming, and helps protect wild lands from agricultural impacts.

“The end result of our programs, the thing we’re so proud of, is that people learn how to feed themselves and their families sustainably, and as a result, they no longer have the need to deplete forests and other diminishing natural resources to survive. Rather than leaving their homes to try to eke out a living somewhere else, they are able to stay in their own cities, towns, and villages to help each community thrive.

“And it doesn’t stop there: each person who participates in our programs creates a positive ripple effect as they grow food successfully and teach the method to their neighbors. As these grassroots efforts spread, they not only strengthen people and communities, but they also provide solutions to some of the most serious challenges facing the Earth.

“Tens of thousands of farmers, educators, government officials, and activists have already been trained in this way, and people are practicing Biointensive agriculture in over 140 countries around the world. As the challenges to food security and sustainable living continue to grow, we continue to develop our programs to reach out to an ever-greater number of people.”

Inspiring news from Kenya, Malawi, Rwanda, South Sudan, West Africa, North Carolina, Mexico, Dominican Republic, etc. Address: Ecology Action, 5798 Redwood Rd., Willits, California 95490. Phone: 707-459-0150.

3008. Rossoff, Michael. 2015. The memorial service [for Michio Kushi]. *Macrobiotics Today* (Chico, California) 56(2):17-12. Spring.

• **Summary:** “A memorial service for Michio Kushi was held on January 31, 2015 in Boston, Massachusetts. We begin with Michael Rossoff’s remembrance of the service.—Ed.

“On a very cold winter’s day in Boston, with snow piled high along the sides of the street, about 500 people gathered to show their gratitude and respect for Michio Kushi. Inside the Arlington Street Church where Michio taught weekly during the late 1960s and early 1970s, there was a warmth

and friendship that pulsed throughout the church. Many people had not seen each other for 10, 20, 30, or more years. They all shared one thing in common—having studied or been deeply inspired by Michio and Aveline Kushi’s teachings.

“Though I have been back to Boston over the past years—seeing friends, colleagues, and students—it was another thing to see people from the distant past, whose lives had taken them in different directions. I lived in Boston from 1969 to 1972, in several ‘study houses’ and in an apartment of my own. I also worked at Sanae Restaurant for 2 years and knew many people from that time. For me, it was a total immersion experience, plus a time of great experimentation. There was a common link despite our many differences. That link—an enthusiasm for macrobiotics and the shared deep appreciation for Michio and his teaching of the macrobiotic way of life—was what brought us all back together. Furthermore, people came from across America, Europe, and Japan for a celebration of Michio’s life and dream plus a reunion and sharing.

“The master of ceremony, Haruo (Larry) Kushi, set the tone and focus for the memorial. Speaking for Michio’s four sons and wife Midori, he said that we are as much a part of their extended family as they feel a part of ours. Each speaker brought some unique remembrance of Michio’s life and of his impact on their life and on the much larger scope of society and the world. The speakers were:

- “Midori Kushi, Michio’s second wife
- “Masao Kushi, Michio’s younger brother from Japan
- “Evan Root, friend
- “Eric Utne, friend
- “Alex Jack, Kushi Institute [KI]
- “Aldebert Nelissen’s (created the KI of Europe) two

children:

- “Gideon Nelissen, played a Bach violin sonata
- “Horriah Nelissen, shared a message from her mother
- “Chico Varatojo, director of KI of Portugal
- “Toyofumi Yoshida, president Mitoku Company
- “Michael Potter, president Eden Foods
- “Dennis Kucinich, former Congressman of Ohio
- “Hisao Kushi, youngest son

“The event was a wonderful celebration of Michio’s life, accomplishments, visions, and dreams. Following the memorial service, there was a gala reception at a nearby hotel with music, food and a wonderful opportunity to meet, greet, and catch up with many people from around the country and the world.” Address: Kushi Institute, Becket, New Hampshire.

3009. Stephens, Gurdeep. 2015. *This earth is ours: 30 organic years along nature’s path*. Victoria, BC, Canada: D&I Enterprises. 201 p. Illust. (mostly color). Index. 23 x 29 cm. [98 ref]

• **Summary:** A marvelous, beautifully designed book with an important message for everyone who lives on Planet Earth.

It is much more than a history of Canada’s most famous and revered natural and organic food company, Nature’s Path Foods and its founders, Arran Stephens and Ratana Stephens, his wife. It is about our Earth and its soil, which hang in the balance between forces of organic renewal and forces of fossil-fuel-intensive, chemical agriculture, genetically engineered (GMO) food, and huge, cruel slaughterhouses.

Contents: Dedication. Welcome. Foreword. Introduction. 1944-1985 Deep Roots: Goldstream to LifeStream to Woodlands. 1985-1990 Tilling the Soil: The Birth of Nature’s Path. 1990-1999 Nourishing the Soil. 2000-2010 Sowing the Seeds: into the Mainstream. 2010-2015 Fields of Dreams. Mission Statements and Paths. Acknowledgements. Timeline. Evolution of Corn Flakes (19805 to 2015). Awards. Appendix. Sources [Bibliography]. Photo Credits. Index.

The company’s motto: “Always leave the Earth better than you found it.”

Note: This book is not for sale. It was “cobbled together” from August to December, 2014, for family and friends. The publisher is not a real publisher. Gurdeep Stephens is the publisher. In “D&I Enterprises,” D = Diya and I = Isha, are her daughters. Only 2,000 copies were printed. Address: Nature’s Path Foods, Inc., 9100 Van Horne Way, Richmond. BC V6X 1W3, Canada.

3010. *Organic and Non-GMO Report (The) (Fairfield, Iowa)*. 2015. Organic, GMO supporters clash at “coexistence” meeting. No. 152. April. p. 13.

• **Summary:** “The US Department of Agriculture recently held a two-day summit on coexistence of organic and genetically modified agriculture but the event instead revealed the bitter chasm between supporters of the two systems. At the outset of the event, US secretary of agriculture Tom Vilsack said he was ‘really tired of division’ and wanted to find a ‘path forward’ but speakers at the summit showed how difficult that can be.

“Errol Schweizer, executive global grocery coordinator for Whole Foods Market, discussed the rapid growth in consumer demand for both organic and non-GMO verified foods. He described the challenge of sourcing organic and non-GMO crops in the US because of the threat of contamination from GM corn. ‘It’s like pushing a rope uphill,’ Schweizer said. ‘I actually am importing heirloom corn from Mexico. It’s a huge issue.’

“Lynn Clarkson, an organic grain buyer in Illinois, agreed, saying it was difficult to get organic corn that is below a GMO threshold of 0.9%. Schweizer said that organic is the future of American agriculture. Former US secretary of agriculture Dan Glickman disagreed: ‘We’re not going to feed the world with organic foods.’

“Ron Moore, an Illinois farmer who grows GM soybeans and corn, was unhappy about consumer opposition to GM foods and felt that his fanning system was being disparaged.

“An organic grain handler described how he rejected four truckloads of organic corn due to GMO contamination and lost \$5000. ‘What is the incentive for that farmer to keep growing organic?’ he asked.

“(Source: Associated Press).”

3011. *Organic and Non-GMO Report (The) (Fairfield, Iowa)*. 2015. Center for Food Safety sues Department of Agriculture for withholding GM crop records. No. 157. Oct. p. 8.

• **Summary:** “Center for Food Safety (CFS) recently filed a law suit against the US Department of Agriculture’s Animal and Plant Health Inspection Service (APHIS) under the Freedom of Information Act (FOIA), alleging that APHIS has violated FOIA by routinely failing to respond to requests for records related to genetically modified crops, unlawfully delaying its responses, and withholding public disclosure of information. APHIS has failed to provide a timely final response to at least 29 of CFS’s FOIA requests or appeals. Of these, APHIS has entirely failed to provide a final response to 10 requests and 2 appeals. The lawsuit asks the court to direct APHIS to promptly provide CFS with the requested information and to order APHIS to stop its practice of failing to respond to FOIA requests related to GM crops.

“As an example, APHIS failed to respond to a FOIA request related to GM sorghum, a crop that has completely evaded review and regulation. In another instance, CFS filed a FOIA request in 2004 related to field trials of GM ‘Roundup Ready’ creeping bentgrass. APHIS delayed its response for over four years. In another example, CFS has made three requests regarding GM Wheat field trials since 2002, and APHIS has failed to provide a timely response each time.”

3012. *Chico Enterprise-Record*. 2016. Wendell J. Lundberg (1930-2016). June 19-23.

• **Summary:** “Wendell J. Lundberg, the second eldest of four brothers who built Lundberg Family Farms, a national leader in organic rice and whole grain products, died on Sunday, June 12, 2016 at Enloe Hospital in Chico, CA. He was 85 years old.

“Wendell J. Lundberg was born August 17, 1930 in Holdridge, Nebraska to Albert and Frances Lundberg. In 1937, Wendell and brothers Eldon, Homer and Harlan moved with their parents to Richvale, California.”

“Wendell met his future wife, Carolyn Osborn in 1968. They married three years later and together raised three children, Jessica, Joe, and Alyscia Lundberg. Married for more than 45 years, Wendell and Carolyn Lundberg were also proud grandparents to four grandchildren, Rebecca, Alexandra, Ivan and Maxine.”

Two portrait photos show Wendell J. Lundberg.

3013. Schaller, Lorenz K. 2016. Re: Best books from which a beginner can learn the history of macrobiotics. Letter

(e-mail) to William Shurtleff at Soyinfo Center, Sept. 5. 1 p.

• **Summary:** “Hi Bill, Regarding your question 2. 5-10 books as source material for a ‘History of Macrobiotics.’ The answer to this is complex. The only work I know of on this subject in English is Ronald Kotzsch’s thesis and book [Macrobiotics: Yesterday and Today]. But there must be other writings in Japanese, which I do not know about. This topic is a field that has hardly seen the plow. I would point the putative historian to your book ‘History of Erewhon,’ but that work does not describe itself as a ‘macrobiotic history’ though it veritably is (of the Sixties and Seventies in USA and England). What is missing for our putative historian (and in my view this missing element is huge) is the key and elemental role that acid [LSD] had in the birth of both the modern ‘healthy eating’ trend and the modern ‘natural food’ commercial activity.

“I know of no written works that tackle this topic (I have tried, in a short, extremely obscure mss). ‘Acid’ is still a ‘hot potato’ in our society. It is tainted with the word ‘drug’ and the idea to those who have no experience with it, that it is an ‘artificial substance’ that transports the taker into some kind of artificial, non-reality, ‘drug experience.’

“It was nothing less than acid that, tsunami-like, created a wave of interest in personal health, healthy-eating, and ‘natural’ food. From that interest, everything could bloom, including the huge eventual audiences for your wide-selling published works. Acid is disrespected and misunderstood in the contemporary surrounding society, and for a writer to tackle this topic, they would become a lightning rod.

“The macrobiotic establishment has always added its voice to the condemnation and misunderstanding of acid. Too bad Michio didn’t take a few, really well-guided, well-supported, ‘trips.’ (My view).” Address: Founder & Director, The Kusa Seed Research Foundation, P.O. Box 761, Ojai, California 93024.

3014. Natural Oilseed Crushers Association. 2016. Let’s get hexane out of the natural food supply chain (Ad). *Organic and Non-GMO Report (The) (Fairfield, Iowa)* No. 167. Oct. p. 5.

• **Summary:** A half-page color ad. “Join us. Our mission is to promote the natural processing of all non-GMO oilseeds and to create awareness and transparency of all non-GMO food processing.

3015. Yanase, Kumiko. 2016. Tōfu chiizu keeki [Tofu cheesecake]. Tokyo: Bunkagakuen bunkashuppan-kyoku. 77 p. Illust. (Color). [Jap]*

3016. Lunsford, MacKensy. 2017. Farmers find getting goods into markets a challenge: Small agriculture operations not natural fit for big food stores. *Asheville Citizen-Times*

(Asheville, North Carolina). Jan. 18. p. 1A, 4A.

• **Summary:** “Asheville—Local food is an important industry in Asheville, a city with an abundance of groceries touting mountain-made products and hundreds of farms ringing the area.

“Finding help: In some cases, Whole Foods gives low-interest loans to help small producers defray costs of inspections and other operating expenses as it did for Smiling Hara Tempeh.

“In 2006, Whole Foods Market set aside \$10 million for the program. In 2013, Whole Foods Market expanded the program to \$25 million in loans for independent food businesses.

“‘We’ve dealt with a few small business assistance organizations, and the Whole Foods process was much easier,’ Smiling Hara co-owner Chad Oliphant said. ‘It’s probably the simplest loan application we’ve gone through.’”

3017. Duggan, Tara. 2017. Nut, dairy industries in a froth over ‘milk’ label. *San Francisco Chronicle*. Feb. 13.

• **Summary:** The dairy industry wants the soymilk and nut (such as almond) industries to stop using the word “milk” on their labels. However (1) Most soymilk is sold under a fanciful name, such as Silk or Vitasoy or Edensoy or Westsoy or Safeway O, with the taglines such as “original soymilk” or “light soymilk.”

(2) The USDA first used the term “soy-bean milk” in a U.S. government publication in 1897—more than 100 years ago. In USDA Farmers’ Bulletin No. 58, titled “Soy beans as food for man,” C.F. Langworthy in July 1897 was the first U.S. government employee to refer to soymilk. In his article a table titled “Comparison of the composition of soy-bean milk and cows’ milk,” shows that the two liquids (soy / cow) have the following composition: Water 92.53% / 86.08%, albuminoids 3.02% / 4.00%, fat 2.13% / 3.05%, etc. Since 1897, more than 350 U.S. government publications have referred to soymilk using terms that contain the word “milk.”

(3) The dairy lobby challenged the soyfoods industry on its use of the word “milk” (in terms such as “soymilk”) in the mid-1990s. The soyfoods industry hired a Washington attorney (Steve McNamara) and ultimately won the battle. From that time on the FDA recognized the word “soymilk” as a legal generic term describing a fanciful name. Address: Special to the Chronicle, Chronicle columnist, San Francisco.

3018. Sams, Gregory. 2017. Re: Wholefood history of Britain (Continued—Document part II). Letter (e-mail) to William Shurtleff at Soyfoods Center, March 27, in reply to request. 7 p.

• **Summary:** (Continued): “The Harmony range was sold both packaged and in bulk to health foods shops around the country, and to newly opened natural food outlets such as Infinity in Brighton, Suma in Leeds, Community Foods in

Camden Town, On the 8th Day in Manchester and Realfoods in Edinburgh. We formed a loose-knit Natural Foods Union and met occasionally to discuss issues of product standards and conscious retailing. Most of these early shops later became regional wholesalers.

“In 1972 the eel & pie shop next to Ceres closed and we took the lease on it. Craig set up Ceres Bakery, Britain’s first dedicated 100% wholemeal and sugar-free bakery. He has tales to tell about getting pastry cooks to work without white flour, sugar, cream or butter, but customers came from all over for the best wholegrain bread in Britain (and the legendary cheese and onion pies). We sometimes had customers pulling a ‘prescription’ sheet out their pocket to ask for ‘100% wholemeal bread,’ which some enlightened doctor had presumably prescribed for their constipation.

“Harmony Foods was soon bursting at the seams, selling products to shops throughout Britain as well as natural food retailers in Europe. At the end of 1974 we moved to a new 15,000 square foot warehouse in Bermondsey, south east London. It was time for forklift trucks, pallet racking, automated packing equipment and a stone flour mill I salvaged from a premises in the west country. We soon had over a hundred products on our list with goods arriving in 20-ton containers.

“In 1975, Craig moved into Harmony’s former vacant premises, installed ovens, and turned Ceres Bakery into a wholesale wholemeal bakery, supplying outlets throughout London and nearby counties. Naturally leavened bread was first introduced to the nation at this bakery, Craig having been inspired by our visit to the Lima bakery in Belgium a few years earlier.

“During the early 1970’s Craig and I also catered the first Glastonbury festival, the Isle of Wight, Phun City and other legendary events celebrating hippie culture. Our food was affordable, it tasted good and people felt the extra energy and vitality (i.e. they could party harder). Edible introductions were made to the benefits of eating real food and flyers handed out, urging them to demand our products at their local health food store.

“After Ceres had moved to the Portobello there was a vacant space, so we had a shot at creating a macrobiotic café for the masses, with simple, inexpensive tasty food. We named it Green Genes after a Frank Zappa track we both loved. I think it survived about six months. Ahead of its time, perhaps.

“Our father Ken had now retired early and returned from Vietnam where he’d been a high ranking civilian running Project CHECO for the Air Force. In his spare time he had been publishing an ‘underground’ magazine for the troops, called Grunt Free Press (‘grunt’ having replaced GI as the term for enlisted men).

“Now a lot of Ken’s time was spare so we put our three heads together and decided a magazine was needed. Our father was to publish Britain’s first monthly magazine

dedicated to promoting the holistic life and joys of natural living. *Seed, the Journal of Organic Living* pointed out the perils of the national diet and the benefits of real food. What's wrong with sugar, refined starches, fast foods, food additives, dairy and factory farming? Why should we respect Mother Earth by growing organically, instead of with chemicals that are toxic to the soil and us? *Seed* was discussing these questions back in the 1970's. It changed a lot of lives. Craig and I were regular contributors with my *nom de plume* being 'Bill Barley.' During its final two years Craig and I each took the helm as publishers.

"By 1978 Harmony Foods was once again in need of more space and a massive 55,000 square foot warehouse was on the market in north west London. The rent was a bargain so we moved in, shifting equipment, flour mill, and everything but the wonderful south London ladies who had run the entire packing room. There was space to create a dedicated cash & carry for wholefood traders as well as lots more peanut butter mills and equipment to keep up with the burgeoning demand. Hundreds of tons of food were shifting in and out of our airplane hanger sized premises. Before we made the big move, we'd had some deep discussions and Craig decided to wind up the bakery business and devote his skills to marketing at Harmony Foods. From his post-crisis return to the enterprise, we had always been equal shareholders in everything

"Our experience as sole European agent for the American organic brand Health Valley gave us a taste for something more secure than beans in bags, and we created the Whole Earth label to cover manufactured food products. First off was a range of innovative no-sugar-added jams that Craig had developed, which got us into trouble with the law—because there was no sugar added (the jam eventually won, on appeal). Harmony peanut butter was later rebranded Whole Earth.

"Our product range expanded again, and along with that came more staff to run the office and warehouse. But margins are thin in the food trade and we were experiencing the combined effects of rapid growth pains and a business property tax that nearly doubled every year for three years, becoming twice our rent by 1981. There always seemed to be a plausible reason why we hadn't made a profit in the previous month, and it was always something new. The situation was not good, and complicated. We'd had to bring in minority investors and now they and the banks were breathing down our necks. After all this growth, we had to downsize. Plans were afoot to contract pack the entire range, sell off the cash & carry, and generally 'do something about it,' as we were trading while insolvent, which is an offence.

"While this was in progress I came down in the autumn of 1981 with a case of hepatitis A, which had me grounded at home for a couple of months. It was here that, with a view to re-vitalizing the company, I conceived and created a product that I thought had great potential, and could be entirely

outsourced to avoid adding to the fixed overheads we were desperately cutting. I made up a list of names for this product that included Plantburger, Sesameburger, Vegeburger, Earthburger and Greenburger. They all sounded strange at the time but after a few days 'VegeBurger' came to the fore. As a brand new word, which did not seem descriptive at the time, it was not a problem to register it as the trade mark VegeBurger®. Vegetarians were not yet termed veggie, and vegans were almost unheard of.

"The VegeBurge® was launched in March 1982 under the Whole Earth label and much as I extolled its virtues, our bankers and backers were not impressed, pointing out that 90% of all new food product launches fail. They wanted concrete. I wanted to devote myself to this new 'baby' and, by the 18th of June 1982, I had negotiated myself a resignation as Chairman and M.D. of the company. I gave my negative value shares to brother Craig, and ran off with the VegeBurger.

"I set up my dream business in a spare bedroom at home, trading as The Realeat Company, without limited liability or staff. It was all managed with VisiCalc [spreadsheet software] on my Apple IIe computer from a spare bedroom, utilizing reliable outside contractors and having no employees. This is now called a 'virtual company' and it allowed me to spend my time demonstrating, promoting and marketing. I had no bureaucracy, no fixed overheads, and it was a joy to handle this free-flowing enterprise.

"The VegeBurger quickly became a nationwide success and was soon doing over 250,000 burgers a week, further boosted by the press coverage received following release of my first Realeat Survey in 1983, timed to tie in with the launch of the frozen VegeBurger. I had commissioned Gallup to poll public attitudes to meat consumption, getting the first ever vegetarian head-count. It was news, with more people moving away from red meat consumption than anybody had realized. VegeBurger was on television, radio and newspapers to such a degree that I had to rapidly ramp up production to keep retailers stocked with the new hit. The survey brought a huge number of latent vegetarians out of the closet, especially young women who realized they were not alone in their aversion to meat. The arrival of Mad Cow disease certainly didn't harm sales, either" (Continued). Address: 2 Trevelyan Gardens, London NW10 3JY England.

3019. Jack, Alex. 2017. Update on the Kushi Institute and macrobiotics (Interview). *SoyaScan Notes*. April 1. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** William Shurtleff phoned Alex to request a list of recipients of the Aveline Award from the time it was established.

Alex talks about the Kushi Institute which closed at the end of 2013. The Kushi Foundation (nonprofit) is also no longer active. The Kushi Institute was the main function

of the Kushi Foundation. In late 2013 Michio (who was president and founder of the Kushi Institute) had brought Alex in as the director of the Kushi Institute; Edward Esko was the associate director. The previous management group was on the verge of closing down the Beckett land. They ran the Institute with Michio, who lived in Boston, until he passed away in Dec. 2014. The Institute had been active for 35 years. Aveline had died in 2001. The first thing Alex and Ed did was to start the “annual fund.” which was a fundraising program. There had previously been no comprehensive fundraising to pay off the difference between annual income and expenses. Most schools are non-profit (even Stanford and Harvard) and have this same problem, but they have endowments. Alex and Ed continued to manage the Institute for the next two years. But after Michio died there was a big vacuum and there had not been a functioning board of directors before that time. There had been a few people on the board but the board was basically nonactive since about 2000. After Michio died the board was basically reconstituted; it was controlled by Michio’s family—his children and widow, Midori Kushi. There were four people on the board: two Kushi family members and two non-Kushi family members. It was not a legal board because the law required a majority of non-Kushi-family members. The family owned the 600-acre property at Beckett, which had originally be purchased for the use of the Kushi Institute. During those 35 years the Institute and the programs it conducted leased the land from the Kushi family. There was an inherent conflict of interest because the Kushi family owned the property at Beckett and controlled the Kushi foundation. The foundation could never raise money legally to improve the buildings on the land at Beckett. There were two main buildings on the property, one of which was called the “main house”; they were run-down and deteriorating big-time, with badly-leaking roofs, a furnace that was about to fail, etc. Michio didn’t have funds for renovation. “So the place was kind of falling apart. That was a big problem over the past ten years or so.” The Institute could, by law, maintain the property but it could not make any capital improvements. A number of people wanted to donate money to macrobiotic education. They could donate to the Institute but not for the purpose of improving the property or the buildings on it. The money could be used for programs, salaries, maintenance, etc. Nevertheless by 2015 hundreds of people took programs on the Beckett land each year—maybe as many as a thousand. The programs ranged in length from weekend workshops to 1 week workshops (the flagship program named “Way to Health”), and then there were teacher training programs that took one month; there were three levels and eventually a fourth level. As a rule there were two programs running at once, occasionally three. The last few years they had a summer conference on the Beckett land.

In addition, there were old debts of several hundred

thousand dollars principal. Some were bank loans that Michio had taken out. The interest came to about \$3,000 a month.

Alex and Ed also arranged with Tufts University to do the first controlled clinical studies on breast cancer in macrobiotic practitioners. Tufts and John Hopkins contact them first. Lawrence Kushi, MD, is a breast cancer researcher. However in the summer of 2016 the board fired Alex and Ed Esko. Long story. The breast cancer study never happened. Alex is still reeling from the closing of the Kushi Institute; it became very personal. Alex has never lived on the land at Beckett—except for a few years about 25 years ago when he managed the place and lived in one of the buildings; he has a house nearby. There were never any private homes on the property. Some of the staff lived in the main house.

The board of the Kushi Foundation is now selling the 600 acres of land at Beckett. Alex thinks they already sold 400 acres to the Nature Conservancy. The Kushi Fund stopped on Thanksgiving of 2016.

Since the mid-1990s, the macrobiotic movement has been losing visibility and is not as dynamic as it once was. That was about when the Kushis began to have health problems. Michio didn’t have a regular life. He always wanted to be available.

Shurtleff notes: “Macrobiotics has certainly had a long-time big influence on the natural foods movement. If you walk into a Whole Foods Market today you will be able to see the effects of macrobiotics all over the place, but it won’t have that word on it.”

Alex has his own nonprofit, Planetary Health, Inc., that he has had since about 2000-2001. This is where he is now putting his energy. Address: Planetary Health, Inc., 305 Brooker Hill Rd., Becket, Massachusetts 01223.

3020. Sams, Craig. 2017. A 50-year contribution. *NaturalProducts News*. April. p. 76. [1 ref]

• **Summary:** “50 years ago I opened a little restaurant and macrobiotic study centre in Notting Hill. People filled in their own bills based on what they ate and paid on an honour system. Then Graham Bond brought his Hammond organ down for a party one evening and played until 2am. The neighbourhood erupted in rage and I was chucked out.

Note: Gregory Sams add: “The first restaurant didn’t live long enough to get a name. It was just the macrobiotic restaurant, as was Seed for the first six months or so until I decided to christen it.”

“I found ideal new premises: two big rooms in a hotel basement between Paddington and Notting Hilt. I got it ready to open, but then a complication about my right to stay in the UK meant I had to leave the country. That’s when my brother Gregory, who had been a wheel-chair user since an accident eight months earlier at the University of California Berkeley, rose to the occasion. He completed the restaurant project, supported by our mother Margaret and my girlfriend Ann.

“Seed Restaurant opened in early 1968. It was an instant success, with great macrobiotic food and a loyal customer base that included John and Yoko [Lennon], Terence Stamp and everyone else who understood that organic, wholesome food was the way of the future.

“Macrobiotic harmony: Gregory published a magazine called *Harmony* that neatly set out the basics of the macrobiotic philosophy. He then opened the first ever natural foods store called Ceres Grain Shop. It had all the grains, beans, seeds and organic vegetables. There were no products containing sugar, honey, refined cereals and no supplements. Ceres was the model for the new natural food stores, distinctly different from health food shops.

“I rejoined him in 1969 and we went on to create Harmony Foods, with an offering of hitherto unfamiliar (in the UK) foods like organic brown rice, miso, tamari, aduki beans and seaweeds. Ceres Grain Shop moved to Portobello Road where the manager in 1971 was Pamela Donaldson. Pam represented us in setting up the first Glastonbury Fayre. She became ill so I took over running the shop, working with Gregory. We did the food at that legendary Glastonbury. In 1972 the premises next door became available and we opened Ceres Bakery, pioneering sourdough and wholemeal sugar-free baking. There was little or no competition in those days. Most people were still wondering how long this natural organic food fad would last.

“Gregory liaised with committed organic farmers who grew cereals and bought their wheat, oats, rye and barley, milled it at Harmony Foods and supplied it to Ceres Bakery. He organized flaking of cereals that led to British cereal flakes being the mainstay of German organic mueslis.

“He also sat on the Soil Association committee that drafted the first organic standards: two pages, would you believe? When the Soil Association expressed a lack of interest in ‘trade’, he and David Stickland set up Organic Farmers & Growers to certify and market home-grown organic cereals.

“Organic connections: Harmony Foods went from strength to strength and we moved to a huge warehouse/factory in Willesden. We had a big cash ‘n’ carry area and manufactured our Whole Earth-branded jams, peanut butter, packed cereals and macrobiotic specialties. We grew too fast, and in 1982 found ourselves overstocked and with cash-flow problems. Gregory had just created the world’s first Vegeburger and trademarked it because nobody had used the word before. I concentrated on downsizing Harmony Foods and focusing on peanut butter and jam.

“Gregory instigated the Gallup polls that highlighted the trend to vegetarianism. The Vegeburger was a massive success; Gregory cashed out and retired. For a few months. Then in 1989 he created the world’s first fractal art shop and created stunning posters based on the Mandelbrot set and Chaos Theory. Since then he has written two groundbreaking books: *The State is out of Date* and *Sun of God*, two

books that will change your perspective on everything.

“I am honoured to have known this remarkable guy for 68 years and to acknowledge his seminal contribution over 50 years to this wonderful world of natural and organic food we take for granted today.”

Note: Craig and Gregory Sams are pioneers in the UK organic and wholefood sector. Address: Hasting, Sussex, England.

3021. Bakkum, Leila. 2017. Update on American Miso Co. (Interview). *SoyaScan Notes*. June 6. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** In 2016 Great Eastern Sun (GES) sold about 807,500 lbs of organic, non-GMO Miso Master miso made by American Miso Co.—based on GES’s internal computerized records.

GES has six SKUs (stock keeping units, or varieties) of miso.

Leila calls the first three short-term, light misos and the last three long-term dark misos.

(1) Sweet white miso, aged for 15 days. Accounted for 16.3% of the total.

(2) Mellow white miso, aged for 30 days. 31.1% of the total.

(3) Chickpea miso, aged for 30 days. 17.8% of the total. Contains no soy.

(4) Red miso, aged for 1 year (365 days). 28.1% of the total. Contains mainly rice, soybeans and salt.

(5) Brown rice miso, aged for 2 years. 3.2% of the total. Contains mainly brown rice, soybeans and salt.

(6) Barley miso, aged for 2 years. 3.4% of the total. Contains mainly barley, soybeans and salt.

Mellow white miso is the #1 best seller, red miso is #2 (it sells almost the same amount as #1), and chickpea miso is #3.

American Miso Co. is a separate company from Great Eastern Sun (each has its own books) and each is owned by Barry Evans, who now lives in Thailand but he travels throughout East Asia. He visits each of the 4-6 GES suppliers every 9-18 months to ensure their integrity, to get to know the owner and his family, and to develop their personal and business relationship. These suppliers make sea vegetables (3 types), pasta, wasabi, shiitake mushrooms, etc. Barry Evans has real integrity when it comes to the sourcing of the products.

GES is a natural foods company; its products are organic and certified non-GMO. They had the first non-GMO miso in the world and the first non-GMO sea vegetables.

The miso master at American Miso Co. is Joe “Yoshiharu” Kato, who loves his work and speak good English but with a distinct Japanese accent. The two all-natural brands of miso in America are Miso Master (American Miso Co.) and South River Miso; each is given a great deal of attention, love and care. They are the only

miso companies in America (so far as Leila knows) that do not heat-treat their misos to accelerate the aging process. Other companies also use yeast as an ingredient to speed up the fermentation. On their 3 long-term misos they state on the package how long the miso is aged. Only in the last few years have Americans woken up to the importance of fermented products, unpasteurized products, and living foods. Most people relate to yogurt as the first cultured product.

When Leila goes to trade shows, she never ever serves miso soup. She makes a miso pesto (with sweet white miso) to be served on pasta, a miso barbecue sauce, miso mixed with maple syrup (nice on ice cream), miso salad dressing, miso marinade; everyone at trade shows associates miso with miso soup.

Great Eastern Sun deserves a lot of credit for the advent and rise in popularity of miso because they go to so many trade shows and expos (including fancy food shows) where they introduce people to miso; Leila attends each of these herself and it's exhausting. At every one she is proselytizing and preaching about miso. Rarely does she talk about the health benefits of miso. They want to know, "How do I use this as an ingredient outside of miso soup." She wants to get people excited about other ways of using miso. "When they taste that miso pesto, you can just see their eyes light up."

Leila also has a great idea for a delicious coffee alternative named Miso Sip; here's the link to her video: www.misosip.com—for a misolicious day,

Dr. Michael Gregor just came out with a study on the effect of fermentation on the salt in miso. Fermentation changes the salt, beneficially. Check out his video: <https://tinyurl.com/ya5b98um>

On the GES website (www.great-eastern-sun.com) are five professional videos. Click on media. They are: The Miso Master story (6 min.). Making authentic Miso Master miso (3 min.). 3. Whole Foods interviews American Miso (3:24). (4) New uses for Miso Master Miso (0:58; shows how to make miso pesto, served on pasta). (5) American Miso made in Rutherfordton, NC (2:21, featuring Joe Kato. A traditional Japanese seasoning has been made in the mountains of North Carolina for 35 years).

"In 2015 the following brands of miso were sold in the United States: Miso Master, South River, Westbrae, Cold Mountain, Eden, Mitoku, Hikari, Hanamaruki, Marukome, Ohsawa, and Muso.

Photos show: (a-b) American Miso Company's retail and bulk miso products. (c) A lid of one product showing the length of time this long-term miso is aged. (d) Miso Master Joe Kato. (e) Miso aging / maturing in wooden vats. (f) Yearly sales of Miso Master miso from 2008-09 to 2015-16. (g) Yearly sales of Great Eastern Sun and American Miso Co. combined from 2008-09 to 2015-16. Address: National Sales Director, Great Eastern Sun Trading Co., 92 Macintosh Rd., Asheville, North Carolina 28806.

3022. Dawson, Chris. 2017. Re: Mr. Kazama and history of macrobiotics in the UK. Letter (e-mail) to William Shurtleff at Soyinfo Center, June 12. In reply to an e-mail questions from W. Shurtleff. 2 p.

• **Summary:** Mr. Kazama passed away on 24 March 2012. For an obituary or details contact Yoshifumi Yoshida-san at Mitoku; he is Mr. Kazama's son-in-law and the current President at Mitoku.

For a history of macrobiotics in the UK, contact Marion Price.

"Clearspring must now be most dedicated macrobiotic food company in EU (the world!). I am such a troublemaker with suppliers, making them produce without sugar, agave, refined salt, accelerated fermentation etc.

No one goes to this extent.

All good fun, to try to raise the profile of good food. Address: 19A Acton Park Estate, London W3 7QE, UK. Phone: +44 (0)20 8749 1781.

3023. Ferré, Carl. 2017. Chronology of the life and work of Herman and Cornellia Aihara after they moved to Oroville, California (Interview). *SoyaScan Notes*. July 2. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** 1971 March 2—The George Ohsawa Macrobiotic Foundation was officially incorporated in San Francisco.

1974—Herman and Cornellia Aihara moved to Oroville, California, a small town 27 miles from Chico. In June they purchased a house in Oroville for the George Ohsawa Macrobiotic Foundation at 1544 Oak St., and 40 acres in the hills above Lake Oroville, near the town of Berry Creek 12 miles northeast of Oroville, to begin a residential learning center. They had a small farm and barracks there. The Aiharas lived at 1544 Oak St. for a month while the farm was being made ready. There were years of drought and their attempts to grow rice on the farm did not work out, so they sold the land at Berry Creek in Feb. 1978.

1974 Dec. 26—The Vega Institute, Inc., founded on 26 December 1973 by 11 persons including Herman and Cornellia Aihara, Robert Kennedy, and Peter Milbury, becomes a legal entity, endorsed and filed by Edmund G. Brown, California's Secretary of State at the time. It was a non-profit 501-c-3 corporation. The name "Vega" was chosen because that star is supposedly moving toward the position of the North Star (Polaris), the current celestial north pole. At that time all human conflicts may be resolved.

Carl believes IRS was the cause of Vega starting. When they moved to Oroville they wanted to start a tax-exempt organization out of which they could run their educational activities—and keep that separate from the foundation—GOMF, which was the publication (books and magazines) and summer camp arm. They used the name Vega—instead of Center Ignoramus—for the school.

1977 July—Carl Ferré first meets Herman Aihara at the

French Meadows Summer Camp.

1978 May—Carl arrived in Oroville to work with Herman and was with him for the last 20 years of Herman's life. Vega was closed when Carl arrived (Herman died in 1998).

Note: Herman and Cornelia were living at 1676 Grand Ave. in Oroville; they had moved there from Berry Creek some time in late 1976 or Jan. 1977.

1979—Herman and Cornelia purchased and moved into a house at 2545 Monte Vista near Oroville High School (2-3 miles from downtown Oroville). That was their last residence together. They lived in that house until Herman died in 1998.

1978 Feb.—Herman and Cornelia sell the Vega property near Berry Creek.

1978-1979—Herman ate all meals with the entire staff (6-10 people) at 1544 Oak St. Cornelia ate lunch with the staff but didn't eat dinner; she would cook and then go home. 1544 Oak Street is right next to the post office in downtown Oroville.

1979—The Foundation (GOMF) bought the property at 902 14th St, which the Foundation then moved to. (Carl lent the money to make this purchase possible). The magazine was being printed at 902 14th St. by Mr. Appleman, who wanted to leave town. Herman used the former print shop to print his own magazines. Vega stayed at the Oak Street house.

1984 June 26—The Vega Institute, Inc. purchased the former Oroville hospital at 1511 Robinson St. Both Vega Institute, Inc. (1544 Oak St.) and the George Ohsawa Macrobiotic Foundation (902 14th St.) moved into the former Oroville hospital at 1511 Robinson St. as both properties were used in the transaction. Herman used the building as an educational center. There were three wings; one for the staff, another for students, and the 3rd was used by the Foundation and Vega Offices.

1995 Jan. 1—The Foundation is moved to a separate location in Oroville at 1999 Myers Street.

1998 Feb. 25—Herman Aihara passed away at the Oroville Hospital at age 77.

2001—Three years after Herman's passing, the George Ohsawa Macrobiotic Foundation is moved back to Chico—40 years after the group had moved from New York and began teaching macrobiotics on the West Coast.

2006 Feb. 25—Cornelia passed away at the Roseville hospital, south of Oroville. Address: President, George Ohsawa Macrobiotic Foundation, P.O. Box 3998, Chico, California 95927-3998. Phone: 530-566-9765.

3024. Wasserman, Debra; Stahler, Charles. 2017. 35 years of vegan activism by The Vegetarian Resource Group. *Vegetarian Journal (Baltimore, Maryland)* 36(3):4, 18-22. Cover story. [3 ref]

• **Summary:** Looks at the history of the VRG in blocks of 2-3 years at a time.

“The Vegetarian Resource Group was started in 1982

by Ernie Kopstein, a vegan medical doctor and Holocaust survivor; Norris Fluke, a vegan Senior Olympics swimming medalist; Audrey Fluke, a vegetarian nurse; and vegan activists Debra Wasserman and Charles Stahler. All had previously participated in Vegetarian Society of D.C. activities. Debra was VSDC's treasurer and Charles was their secretary for several years.

“Our intention was to participate in a vegetarian group in Baltimore. When we went to an address from a list of existing vegetarian organizations, we found an abandoned building. So we started a new group originally called Baltimore Vegetarians. Our goal from the beginning was to be scientific, practical, and of assistance to others. As we produced materials, we soon had tens of thousands of people from all over the country asking us for information. Thus was born The Vegetarian Resource Group and *Vegetarian Journal*. Many ideas we tried locally have since been replicated in other areas. Thank you to all who have contributed in their own unique ways to advancing a better world.”

“Following are a few examples of our 35 years of vegan activism:

“1982-1984: VRG Sponsored a Tofu Cooking Class by Sandy Weinstein. Tofu was relatively unknown then to many Americans. Later, Sandy was asked to do a tofu demo on *People Are Talking*, a Baltimore TV show. Someone named Oprah Winfrey was co-host of this show in the 1970s.

“Outreach to hundreds of kids at Timonium, Maryland Children's Fair. We had kids prepare fruit salad, display jars full of dried beans and grains, and then make necklaces using the beans and grains as a way to learn the names of each food.

“Other projects included publishing *I Love Animals* and *Broccoli Activity Book*, a vegetarian display in the front of the main branch of the Baltimore Pratt Library, and the start of VRG's essay contest, which continues, and also evolved into our awarding \$20,000 in college scholarships to high school seniors annually.

“Vegetarianism and the Environment: It was nice for vegetarianism to have moved beyond only the food section. Environmental writer Tom Horton wrote about us in the *Baltimore Sun* in his article on the environment titled ‘Save the Bay—Eat Beans; Will this be the slogan of the environmentalists?’

“He continued, ‘Even those who toil in the environmental movement in Maryland might not recognize them, but the three people with whom I had lunch recently are probably doing in the most basic of ways, as much as anyone in the state about the kind of pollution that is troubling the Chesapeake Bay. Debra Wasserman, Charles Stahler, and Keith Akers are vegetarians—they prefer the term “vegans,” since they don't use eggs or dairy products in addition to abstaining from red meat, fish, and fowl. Our heavy meat consumption in America, they argue, is more

than just a luxury. It exacts a price from our land, water, and energy resources that no country can afford to pay indefinitely.' A resulting editorial in *The Sun* stated, 'Events sometimes converge in unexpected ways. For instance, there is the growing alarm about over-use of farmland-in the United States and the concern over health effects of too much cholesterol. At first glance, the two developments do not seem to have much in common. Intensive farming, American style, damages topsoil and contributes to the ecologically harmful runoff of chemicals and waste into waterways such as the Chesapeake Bay. Consuming too much cholesterol and other fats, as most Americans do, contributes to a horrendous high heart attack, stroke, and cancer death rate...'

"Supermarket Consumer Board: Debra Wasserman volunteered on the Giant Supermarket Chain Consumer Board. She gave input into their adding non-dairy calcium sources of food into their nutrition brochures. At that time, she was able to hear about their introduction of Dreamy Tofu, their own brand of nondairy ice cream. Giant also introduced organic produce wrapped in plastic. Debra tried to explain that most organic consumers didn't want all that packaging, but it really took the moving in of Whole Foods stores before most groceries looked at the organic market seriously.

"1985-1988:..."

3025. Schaller, Lorenz K. 2017. Re: Questions on macrobiotic history (Continued–Document part III). Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 6. 8 p. • **Summary:** (Continued): "Is the author of this essay being over-critical?"

"Yes, you think so?"

"Well then, let us reconsider..."

"Success!"

"Today, brown rice can be purchased in every supermarket in the land, tofu too. Oriental medical arts are widely accepted across the U.S. and are flourishing. The cattle-slaughter nation itself is changing as it too, attempts to survive. Ohsawa's bold prediction of the melding of the East and West is glowing on the distant horizon.

"Conclusion and Postscript

"How could an orphan in Japan (abandoned by its biological father, orphaned by a mother taken away by illness while still in her prime), then hunted as an adult by the secret police of his country, then caught, harshly treated and cruelly persecuted, how could this human being, a resident of far-away Japan, come to see Woodstock on the horizon, bright and glowing, large and clear, decades before Woodstock happened? How could such a thing be possible? The present writer has the sense that at the core of the answer to the above question, lies a mystery; an inscrutable mystery of the Orient, a mystery impossible to penetrate in the here and now. In other words, there is much we do not know, and will never know, and this is how it should be.

"'Macrobiotics' appears today no more enduring than the necklaces, beads, belts and bells, paisley bedspreads and shirts, incense and bellbottoms of the hippies. Like the man himself, the word and the movement it spawned was perishable; "time-sensitive." It delivered its impact and was gone. 'Macrobiotics' today appears no more enduring than the Grateful Dead, the Jefferson Airplane, Big Brother and the Holding Company, the Quicksilver Messenger Service, Canned Heat, the League of Spiritual Discovery and the Brotherhood of Eternal Love. Did they endure? Yes and no. They came (arrived), sang their song, and were gone. But their effects live on amongst us today.

"Somewhere, off in the distance, a new future is brightening its light. Up in the heavens above, a well-experienced locksmith wearing magic spectacles is seated at his workbench, smiling broadly and confidently, cutting a key that will turn the tumblers. A key that will open the door wide for each and all.

3026. Muso Co. Ltd. 2017. *Mu-Tea (Macrobiotic Herbal Beverage)* (Website printout–part). www.muso-intl.com/Macrobi/pdf/mu-tea16.pdf Retrieved Aug. 20.

• **Summary:** "Muso's Mu-tea is made from herbs, most of which are grown in China. Macrobiotic founder, George Ohsawa was the first to blend them into effective mixtures for various diseases. The herbs used in Mu-tea are selected for only the highest quality and maximal effectiveness. Great care is taken to bring out and maintain the original color, flavor, and aroma of the herbs. For today's often stressful lifestyle,

“Muso combines various herbs in Mu-tea that promote a strong body resistant to colds, and soothe stomach problems. Muso offers “Mu-Tea #9” with 9 different herbs and “Mu-Tea #16” with 16 different herbs.

“Citrus Unshu (Mandarin Orange Peel): compounding ratio: 16.6%—digestive troubles, colds, expectoration, cough, pain

“Poria Sclerotium (Hoelen): compounding ratio: 11.2%—diuresis, sedation, cough, diarrhea, palpitation, insomnia, vertigo

“Cnidium Rhizome (Japanese Parsley Root): compounding ratio: 10.0%—tonic, sedation, anemia, menstrual disorders, poor blood circulation, painful period, headache, postpartum disorders

“Herbaceous Peony Root: compounding ratio: 10.0%—fever, abdominal pains, cramps, stomach cramps, muscular pain, nerve pain, painful period, uterine disease, anemia, constipation, cold

“Atractylis: compounding ratio: 10.0%—diarrhea, unformed stool

“Cinnamon: compounding ratio: 9.3%—excitement, carminative, anticonvulsant, sterilization, antiviral

“Angelica Root (Cniuous): compounding ratio: 8.3%—poverty of blood, abdominal pains, menstrual disorder, painful period, constipation, poor circulation. * It has a strong effect to warm hands and feet up

“Glycyrrhiza (Licorice): compounding ratio: 6.7%—corrigent, decline of fever, cramp, stomach cramp, an ulcer of the digestive organs, hemorrhoids, sore throat, cough, expectoration, digestive trouble, hepatitis

“Cyperus: compounding ratio: 5.0%—sedation, menstrual disorders, painful period, menopausal syndrome, hysteria, nervous digestive trouble, stomachache, poor appetite, nausea

“Ginger Root: compounding ratio: 5.0%—irrigation, decline of fever, cold, cough, expectoration, headache, abdominal pains, digestive trouble, evil thought, nausea, travel sickness

“Apricot Kernel (Peach Kernels): compounding ratio: 3.8%—asthma, bronchitis, cough, labored breathing, edema, expectoration

“Rehmannia: compounding ratio: 1.7%—tonic (medicine), hemostasis, poor blood circulation, dry skin, menopause, menstrual disorder, deficient secretion of hormone, diabetes, enlarged prostate, senile back problem, cataract, impotence, poverty of blood

“Coptis: compounding ratio: 0.7%—inflammation, antibacterial, gastritis, indigestion, diarrhea, injury disease, stomatitis, eye disease, pain

“Penax Ginseng: compounding ratio: 0.7%—tonic, alimentation, fragile health, fatigue, during and after one’s sickness, poor appetite, bad complexion, poor circulation, digestive trouble, cold, cough, expectoration.

“Cloves: compounding ratio: 0.7%—indigestion,

vomiting, diarrhea, abdominal psychroalgia

“Moutan: compounding ratio: 0.3%—decline of fever, pain relief, inflammation, menstrual cramps, menstrual disorder, painful period, appendicitis, pain, acne, hemorrhoid.”

3027. Shurtleff, William. 2017. Some effects of macrobiotics on American food culture (Overview). *SoyaScan Notes*. Aug. 20. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1. New Japanese foods (and words) that macrobiotics introduced to Caucasians in the Western world: Miso. Brown rice. Natto. Kuzu. Tamari—and awareness of the quality of the soy sauce you used. Sea vegetables—such as wakame, nori, kombu, hijiki, kanten. Azuki beans. Soba (buckwheat noodles). Udon (flat, wheat-flour noodles). Sesame seeds. Sesame salt (*gomashio*). Tahini (sesame paste). Seitan (wheat gluten & soy sauce). Amazake (thick fermented rice beverage). Umeboshi (salted pickled plums). Mu tea (a delicious herb tea). Many new vegetables, such as burdock root, daikon, etc.

1A. Asian foods whose consumption macrobiotics encouraged: Tofu. Tempeh.

1B. Foods and food accessories to avoid: Sugar (“without question the number one murderer in the history of humanity”), alcohol, recreational drugs.

2. The natural foods movement was initially a macrobiotic foods movement (e.g., Erewhon). This movement is still going strong with stores such as Whole Foods Markets.

2. The idea that whole grains (such as brown rice) should be the center of the diet and constitute 40-50% of the meal.

3. The idea that food was the best way to heal and prevent most diseases by changing one’s constitution. Address: Soyfoods Center, Lafayette, California 94549.

3028. Sharp, Carolyn Heidenry. 2017. Re: History of the Kushi Institute. Letter to William Shurtleff at Soyinfo Center, Aug. 23. 7 p.

• **Summary:** The first Kushi Institute was founded in London, England, in 1977. Bill Tara was one of the co-founders.

“After a difficult beginning in the early 1960s trying to teach macrobiotics in New York city, as well as in Cambridge and Wellesley, Massachusetts, Michio and Aveline Kushi moved to Brookline, a suburb of Boston. There Michio taught informal gatherings of students at his home at 216 Gardner Road, and also at a second home they rented to house the overflow of students who wanted to stay at their home and study with them. This second home, at 29 University Road in Brookline was referred to as a ‘study house’ which was a boarding house where their students lived and were, served macrobiotic meals, and attended

lectures given by Michio in the small living room. Aveline also taught macrobiotic cooking in her home kitchen. From this tiny beginning their educational efforts would eventually grow into many learning centers in many countries.

“Around 1967 Michio began giving lectures in the lower level of the Arlington Street church in downtown Boston across from the Public Gardens. Small groups of about 20 people would gather there, at first, to listen to him speak. Almost fifty years later, after he passed away, his memorial service would be held upstairs in the great old church.

“Not far from the Arlington Street Church was the first little ertwhon store that Michio and Aveline had opened to sell brown rice and miso and other natural and wholesome foods. Later on it was moved to a larger location across the street that was handsomely designed in a welcoming, woodsy, natural decor. Just down the street, they also opened Boston’s first macrobiotic restaurant in the lower level of 272 Newbury Street, which they named Sanae. A few years later they would open a second restaurant, larger and a bit more upscale, called the Seventh Inn, also near the church.

“In December of 1971 they established the East West Foundation. They had used the name East West Institute prior to this when living in Wellesley. A large second floor room was rented on Boylston Street, just around the corner from the Arlington Street Church, and here Michio began giving his lectures.

“Seven years later, in September of 1978 they opened the Kushi Institute in Brookline Village at 17 Station Street not far from their home. (After moving from Gardner Road they moved next to 440 Boylston Street nearby and then to 62 Buckminster Road. They had intended to house many students in this spacious residence and hold classes there, but found out after purchasing it that zoning laws did not permit such activities, even though the old mansion had once been part of a school). So, when they found the Brookline Village location in a commercially-zoned area, they moved their educational activities there. Also in the village they opened a smaller ertwhon natural food store, and later on the Open Sesame restaurant nearby. Meanwhile Kendall Food Co. began their mochi-making business just up the block and one of Michio and Aveline’s students opened an aikido dojo in the same building that housed the Kushi Institute. A small community began to grow around the Kushi Institute, just as it had in downtown Boston in the vicinity of the Arlington Street Church.

“When it opened with the help of a \$20,000 loan from a macrobiotic friend, the Institute consisted of just three rooms on the third floor (walk-up) of a warehouse building that was mostly being used for artists’ lofts. During the previous year they had opened a Kushi Institute at 188 Old Street in London, England.

“The curriculum, as designed by Michio and Aveline during the summer of 1978, consisted of three ‘levels’ of study, each of which were comprised of five courses. These

were (1) Macrobiotic Healthcare. (2) Oriental Diagnosis. (3) Macrobiotic Cooking. (4) Order of the Universe (principles and theory) and (5) Shiatsu massage.

“Successful completion of Level One conferred the designation of Assistant Teacher, and Level Two, Associate Teacher, and Level Three Senior Teacher. Between the levels there was to be a fairly long period of experience and apprenticeship in macrobiotic-related activities or businesses, such as natural and organic farming, macrobiotic food-processing, natural food retail stores, etc. These periods of practical employment and experience were usually not followed through on.

“Michio and Aveline seemed to be creating this curriculum and structure for the first time. Therefore, the Kushi Institute of London may have been more loosely organized, or the teachers may simply have been given a free hand in deciding what classes to present.

“The purpose of the Kushi Institute was to handle the teacher-training aspect of their educational activities, and the East West Foundation was to continue to handle general public seminars, though they also presented at least one, if not more, medical symposia that included presentations by physicians. Eventually the East West Foundation’s activities were suspended probably due to there being insufficient numbers of students to fund two locations. The Kushi Institute then also handled the public seminars.

“Around this time there arose a growing number of people interested in the macrobiotic diet as a healing therapy for serious illnesses, as macrobiotics was gaining a reputation for this, especially for cancer which was on the increase. Many people sought consultations with Michio, and many also attended the week-end program designed especially for those seeking this kind of help. The shorter program made macrobiotics more available to those who either could not afford the money or the time to attend the month-long Levels Program (each Level being four to five weeks long), and who were not interested in becoming teachers of the macrobiotic approach to healthcare.

“More and more attention was given to this aspect of macrobiotics, that is to the health-recovery program, which was disapproved of by some of the Kushis’ long time students who were more interested in the larger perspective and understanding that Michio presented in what was later called the ‘Order of the Universe’ or ‘Destiny’ classes. These classes often consisted of a breath-taking tour of the ‘spiral of history’ or an overview of the physicalization or spiritualization process (how we are born, how we die) or his view of the spiritual world after we pass away, and other loftier perspectives. Also included were the seven levels of judgment, seven principles of macrobiotic theory, the twelve theorems and an explanation of yin and yang energies. Some of this was derived from Ohsawa’s teachings, some were his own. Some students were eager for this kind of knowledge, and some were less appreciative of theory and were only

interested in the more practical aspects of cooking and shiatsu.

“Students were almost always interested in the Oriental Diagnosis course (later called Visual Diagnosis though it included more than just the visible aspects of a person’s physiognomy, such as the sound of their voice, the smell of their breath, and so forth). But it was always popular and enlightening to the students that they could learn so much about their own health and that of their families and friends just by observing obvious indications they had previously ignored.

“The Levels Programs continued to be presented along with the week-end health recovery programs. Right from the beginning of the Kushi Institute students came from various countries, especially those in Europe and South America, probably encouraged by Michio and Aveline during their international seminar tours. No meals were served at the Institute, as there was no kitchen, but many of the students lived in one of the study houses run by friends in the community where they could obtain breakfast and dinner. Eventually, as mentioned, Michio and Aveline began the Open Sesame restaurant nearby the Institute.

“In the beginning the Kushi Institute consisted of three rooms, one of which was used for an office with two desks, two chairs and very little more. The largest room, used for a classroom with chairs and a few folding tables, was bright but very hot in summer. The middle room, also used as a classroom, had zabutons and low desks at which the students sat Japanese-style. It also was unheated in winter which caused some students considerable discomfort. At least one person wore ski-pants to keep warm and others covered themselves in their winter coats. All in all, there were few comforts or amenities” (Continued). Address: 443 N. Washington State Rd., Washington, Massachusetts 01226.

3029. Sharp, Carolyn Heidenry. 2017. Re: History of the Kushi Institute (Continued–Document part II). Letter to William Shurtleff at Soyinfo Center, Aug. 23. 7 p.

• **Summary:** (Continued): Nevertheless, Michio and Aveline were so happy at the opening ceremony of the Institute. Aveline worked so hard and so long to prepare all the food for the many guests. Both of them greeted everyone, and there were many little speeches and smiles all around. In this small, plain setting, in these third-rate premises, it was so touching to see Michio and Aveline, their faces shining with happiness, as pleased and proud as if they were opening a world-class educational center. And, despite appearances, in one sense they were.

“In 1981 the Kushis established the Kushi Foundation, whose mission was to raise two million dollars to buy a Catholic girls’ high school that was up for sale in the expensive Fisher Hill area of Brookline. With a five thousand dollar loan and a rather too ambitious goal, they had high hopes of purchasing this beautiful school as a new home

for the Institute. This plan was strenuously objected to by many of the local residents who didn’t want anyone moving into that school, as one resident said. They especially didn’t want what they considered to be a ‘group of mostly hippies.’ It was bad enough that the Kushi’s driveway in this quiet residential area was always filled with too many cars, even pick-up trucks, and too many people of different colors and races going in and out all the time. There was a good deal of gossip on the hill amongst the neighbors about what was going on at the Kushi home. The Kushi Foundation, such as it was, was located in the same building as the Kushi Institute, though on the second floor along with another large room, still looking as though it were part of the old warehouse which was cleaned up and made into a cooking class kitchen, which had been sorely missing from the facilities.

“The fundraising team of four people worked hard to obtain grants and donations, but no grants could be obtained for property purchases, only for programs. So the fundraising effort failed by the deadline and the \$30,000 down payment on the property was lost. Another \$50,000 that was raised was transferred over to Erewhon in a desperate attempt to save the company which was sinking fast. This was quite illegal, of course, for their non-profit organization to give funds to their business. But to Michio and Aveline, it was all one, a company to supply the wholesome natural foods, and a teaching center to supply the education. Legal considerations didn’t always carry a lot of weight with them. More important was to save their natural food company now that the school had been unattainable. Erewhon sank, and the fifty thousand was lost too.

“Originally, Michio planned to have a number of subdivisions under the umbrella of the Kushi Foundation. The Kushi Institute was one of these subdivisions, and the *East West Journal*, which was the magazine owned by the Kushis, was another. The Journal had moved its offices into the same building that housed the Institute by this time. Michio also had plans for other subdivisions including government and scientific outreach to promote an understanding of macrobiotics among those communities, prison projects to reach those incarcerated with books and classes to help redirect their lives through understanding the effects of food on behavior, and so forth. This was an unusual attempt at centralization for Michio, and opposite to his usual tendency to have many separate organizations and companies.

“When the major Kushi Foundation fundraising effort was being conducted, prior to the East West Foundation’s closing, and prior to Erewhon’s demise, there was the exasperating situation of various Kushi organizations and businesses simultaneously vying for donations or loans for their respective operations from the same pool of friends, students, clients, and associates. This caused considerable annoyance to some, especially the wealthier folks who

resented being approached multiple times during more or less the same time period, even sometimes on the same day.

“Erewhon was lost, the East West Foundation closed, and the Kushi Institute carried on in the same modest facilities in which it had opened.

“Down but not out, Aveline was undeterred and undaunted by these failures. Ever optimistic, she re-focused her attention, this time aiming for a country property. This had long been one of the Kushis’ goals, but the first two attempts had not been a success, the first in Wakefield, Massachusetts, and the second in Ashburnham, also in Massachusetts. Eventually she found a property in the western part of the state, in the little town of Becket. The third time was the charm, just as they had been more successful in Brookline, where their efforts in Cambridge and Wellesley were not.

“With the Kushi Institute still operating in Brookline, the new country residence and dormitory were used partly as a health center and partly as a school. Until that time, about 1985, there had been nowhere for people to live in one central location, where they could have macrobiotic meals three times a day, with teachers on hand to give consultations, cooking classes and healthcare classes where one could learn the importance and effects of different foods. So, in the mid-1980s this goal was finally realized.

“However, some of the local towns people became disgruntled when they learned that AIDS patients were visiting there, and sometimes staying there, and more would be arriving. At that time AIDS was not well understood and there was considerable fear of people who had the disease. So the plans to care for AIDS patients there was dropped.

“But gradually more guests and students began to come to Becket. Some stayed in the lovely old home formerly occupied by an order of Catholic brothers, or stayed in the simple dormitory rooms, in a building which had been converted long ago from a horse barn. Eventually the property became a second location for the Kushi Institute, and some of the Levels Programs were offered there, along with an expanded health recovery program that went beyond the week-end program offered in Brookline to a full week in Becket, allowing for more classes and material to be covered.

“Inevitably, perhaps, competition developed between the two Kushi Institutes for the dozen or more students attending the various programs. Administrators at each location were trying to meet expenses, and with two locations, there was twice the overhead but not twice as many students. So the decision was taken to close the rental property in Brookline and concentrate only on the Becket location.

“Prior to this move Michio had established yet another foundation, One Peaceful World, for the purpose of publishing a newsletter to connect and inform various macrobiotic centers that were taking root around the country as well as in Europe and other parts of the world. The One Peaceful World foundation, begun with a \$25,000 donation,

eventually became the publishing arm of the Kushis’ educational efforts, and produced many macrobiotic-themed books of various kinds during the ten years or so of its existence before it was closed down by a member of the Kushi family over a financial dispute.

“About 1991, Michio had an offer from an investor to purchase the *East West Journal* from the Kushi Foundation. The EWJ had been a relatively successful magazine for over ten years. He chose to sell it because for several years the EWJ had mostly showcased various New Age style authors with only a minimal amount of macrobiotic teachings or articles. Secondly, a scheming had come to light by several people in significant positions at the magazine which, had it come to fruition, would probably have resulted in the demise of the EWJ anyway.

“The magazine was sold and this branch of the Kushi Foundation was no longer. The new owner changed the name to *Natural Health* magazine. And so, a great opportunity was missed for a high quality teaching tool with a global reach” (Continued). Address: 443 N. Washington State Rd., Washington, Massachusetts 01226.

3030. Sharp, Carolyn Heidenry. 2017. Re: History of the Kushi Institute (Continued–Document part III). Letter to William Shurtleff at Soyinfo Center, Aug. 23. 7 p.

• **Summary:** (Continued): “With the publication of the One Peaceful World newsletter there was still some communication with other centers nationally and internationally. However, by establishing the OPW foundation, Michio once again demonstrated his penchant for forming multiple organizations, foundations and businesses. It was another example of what might be termed his tendency towards complexity instead of a simple straightforward unified organization.

“Once again the Kushi Foundation and Institute were competing not only with erewhon and the East West Foundation for donations, but also with One Peaceful World. Michio unwittingly and unintentionally put his various organizations at odds with each other, and again exasperating donors and friends with multiple requests for funding different operations co-existing side by side on the same property. It was confusing for many people rather than clear.

“Through the years Michio and Aveline were almost always looking for donors or loans or investors for their many projects, small and large. There were restaurants, food companies (even post-erewhon), health centers, and various other projects. In Stockbridge about half an hour from the Institute they opened Ghinga restaurant, and in Housatonic they were investors in establishing a high-quality traditional bakery, about an hour away. Before these two there was Deer’s Inn, part restaurant and part bakery, also in the vicinity of the Institute.

“So another community began to take shape as it had in Brookline. Aveline opened a small natural food store

in Lee, a half hour away. Kendall Food Co. moved to Worthington, an hour away, and expanded into making very good quality amazake and natto along with their mochi. The Kushi Foundation opened a small natural food store and later a mail-order business on the Kushi Institute property. A number of people bought second homes in the neighborhood.

“Attendance grew larger at the Institute, gardens were planted that yielded organic vegetables, various kinds of workshops and short programs were added to educational offerings for those especially interested in weight loss or Feng Shui or heart health, etc. Attendance at the annual summer conferences by now approached and sometimes exceeded 500 participants. Occasionally winter conferences were held as well during the December holiday period. Kushi Institute extension programs (the Levels Programs) were held on successive weekends in several cities. Two Kushi Institute cooking teachers trained Ritz Carlton chefs in the art of macrobiotic cooking at the request of the owner of the hotel chain, who had had a health consultation with Michio.

“For nearly forty years thousands of students came through the Kushi Institute, studied the Levels Programs, the health recovery program (eventually named the Way to Health program), had a health consultation to receive personalized dietary guidance, and attended the summer conference or various workshops.

“Some drank deeply from this great well, some took small sips. But many lives were touched and changed for the better by the wise teachings found there. Some went on to help others in their communities and to teach students of their own.

“But with mounting debt, salaries that were far too high for many years beyond what the little educational center could bear, deteriorating facilities, a board of directors in disagreement as to how to proceed, a lack of fundraising efforts on the part of some previous administrators for many years, the selection of highly expensive locations for the annual summer conference which resulted in heavy losses in some years rather than what had formerly been a significant profit, a scandal and ensuing court case, unresolved as of this writing, involving a member of the staff, the decision was finally taken to close the Institute in November 2016 with the possibility of re-opening it in the spring of 2017. But over the winter it was decided to close it down permanently and put the property up for sale.

“And so came the sundown of a dream, the closing of what had been the Kushi’s most successful venture of their entire lives.

“But the dream lives on. For the Kushi Institute leaves a great legacy which continues to ripple ever outward in the lives of its students and their families, thanks chiefly to Michio and Aveline Kushi who gave so much of their time and energy to it. They, and the Kushi Institute, leave the world a far better place, evident in the healthier and happier lives of thousands of students and friends.

“No finer educational institution has ever existed in the United States. This may sound ludicrous to most people who read these words. But if you are familiar with the worth of macrobiotic teachings and have significantly benefited from them, as many people have, you understand this viewpoint.

“For, in not one of our finest universities, with their marbled halls, leafy campuses, huge endowments and all the trappings of status and success, and their great storehouses of knowledge of all kinds, in not one can there be found so much wisdom about life management, health management and how to achieve and maintain a peaceful and vibrant society as at the Kushi Institute.

“If you could look past the condition of the facilities, always in partial disrepair, if you could put up with the small and uncomfortable dormitory rooms and antiquated plumbing, if you could overlook the amateurish aspects of the place, including both the administration and the faculty (though much fine effort, talent and dedication was evident there as well), in other words if you could look beyond the superficial and really wanted to learn about the forces that govern humanity, you could get an education there such as could not be found anywhere else, especially in the things that matter most.

“You could discover there an unequalled treasure trove of wisdom that, in time, may usher in a new age for humanity far above and beyond the ignorance within which it exists today, ignorance especially concerning the very powerful influence of the daily foods we choose to eat.” Address: 443 N. Washington State Rd., Washington, Massachusetts 01226.

3031. Ferré, Carl. 2017. Re: Which books by Herman and Cornelia Aihara sold the best and how many copies did each book sell (including all editions of each). Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 25. 2 p.

• **Summary:** This is Carl’s reply to a question asked by Wm. Shurtleff:

“Herman Aihara

“Acid and Alkaline [total sales about 200,000]

“Is Acid Yin? Is Alkaline Yang?—San Francisco, CA: George Ohsawa Macrobiotic Foundation, Inc. 1971.

• **Summary:** The Hain Celestial 2017 Form 10-K is separate. On p. 58 we read: Net sales for the year ended 30 June 2017 were \$2.853 million, down from \$2.885 million in 2016 and \$2.609 million in 2015.

Net income in 2017 was \$67.430 million, up from 47.4 million in 2016 and \$164.9 million in 2015. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

3033. Roseboro, Ken. 2017. Regenerative agriculture: New certification aims to make organic regenerative. Regenerative Organic Certification fills gaps in organic rules around soil health, worker fairness, and animal welfare. *Organic and Non-GMO Report (The) (Fairfield, Iowa)* No. 178. Nov. p. 4-5.

• **Summary:** A new Regenerative Organic Certification program is being developed that aims to build on existing organic rules and set a ‘high bar’ standard for agricultural practices that regenerate the soil and sequester climate-changing carbon, provide economic fairness to farm workers, and improve animal welfare.

“A coalition of farmers, ranchers, nonprofits, scientists, and brands led by organic research pioneer Rodale Institute worked together to develop the program, which will be administered by international certification specialist NSF International.

“According to Jeff Moyer, executive director at the Rodale Institute, the term ‘regenerative agriculture’ has its roots at Rodale.

“Bob Rodale started thinking about ‘regenerative agriculture’ back in the mid-1980s,’ he says. ‘These words are the cornerstone of what Rodale has been about for about for a very long time.’

“Regenerative agriculture is a concept that has gained more prominence in the last couple of years, particularly with the pressing challenges of climate change and the need to sequester carbon in the soil.

“In 2016, Moyer began having discussions with David Bronner, president of Dr. Bronner’s Magic Soaps, and Rose Marcario, CEO of outdoor apparel manufacturer Patagonia, about the idea of a regenerative organic certification.

“Marcario says Patagonia became involved because of the company’s mission of ‘wanting to do what’s best for the planet’ and because of their experience in developing certification programs. Patagonia was also the first apparel company to switch to 100 percent organic cotton in its clothing,

“‘Over the years, we’ve developed a lot of standards,’ says Marcario. ‘We are used to this relationship with certification and non-governmental organizations and the process itself.’

“Other leaders in the organic farming movement joined the discussion including David Vetter, CEO and farmer of Grain Place Foods, Tim Joseph, founder of Maple Hill Creamery, Will Harris, owner of White Oak Farms. NSF, which has extensive experience in certification standards, joined the effort to create the standard.

“NSF has the capacity to take novel standards and put

them into practice,' Moyer says.

"The group worked for nine months to develop the certification.

"I think we have a nice constituency with brands and suppliers who are willing to go on the journey with us,' Marcario says. 'I'm hoping this influences the industry in a positive way.' Moyer emphasizes the new regenerative standard is based on the existing organic standard administered by the USDA's National Organic Program.

"We're saying that in order to be regenerative you have to at least start with organic and then move to the next level,' he says. 'Organic is a fine standard, but it is a first step.'

"The regenerative standard goes beyond organic, particularly with its emphasis on improving soil health.

"We pay lip service (to soil health) in the organic standard but the truth is that you can farm organically—meet the letter of the law—and still not improve the health of the soil you are farming,' Moyer says. As a result, soil health is one of the three 'pillars' of Regenerative Organic Certification with the goal to increase soil organic matter over time and sequester carbon in the soil. Recommended practices to accomplish this include the use of cover crops, diversified crop rotations, rotational grazing, and no synthetic inputs or GMOs.

"Other pillars of the Regenerative Organic Certification program aim to address other gaps in organic certification including farmer and farm worker fairness and animal welfare.

"There are a few words in there (organic certification) about animal welfare but there are no teeth to it,' Moyer says. 'The organic standard is also mute on worker fairness. You can buy a \$400 coat made with organic cotton, and that cotton could have been harvested by 10-year-old girls.'

"Another important aspect to the regenerative standard is that it provides a path to continuous improvement that organic currently lacks.

"In organic some have said there is no need or room for improvement, and many of us disagree and say there is room for improvement,' Moyer says. 'Nobody at the Ford Motor Company said we really peaked with the Model T car. Ford is always trying to continuously improve their products. We wanted to create a high bar. Regenerative Organic gives farmers something new to strive for so they can have continuous improvement in their operations.'

"Regenerative Organic Certification differs from a regenerative agriculture definition introduced earlier in the year, which is not restricted to organic practices, thus allowing conventional farmers to participate. Developers of that definition say that all of agriculture needs to be included to regenerate the soil and sequester carbon.

"Moyer disagrees. 'We're saying that once you introduce agricultural chemicals into the system, it cannot possibly be regenerative, because you have already literally poisoned the well. We're saying that in order to be regenerative you have

to at least start with organic.'

"Products that are certified will be able to display a Regenerative Organic logo.

"The goal is to have everything in one place that people can count on as a meaningful certification,' Marcario says.

"The time is now for Regenerative Organic Certification, Marcario says.

"Regenerative Organic Certification represents an important moment. If we don't act now, and start changing what we are doing, we're not going to have the planet we are living on in 50 years. I hope more companies will join us on this journey around Regenerative Organic Certification and focus on making big changes in supply chains.'

"The standard is now open to a public comment period at NSF's website. To submit comments, visit http://standards.nstorg/apps/group_public/document.php?doc-ument_id=39305."

A proposed "Regenerative Organic Certified" logo is shown. Address: Editor.

3035. Jenkins, McKay. 2017. Food fight: GMOs and the future of the American diet. New York, NY: Avery (Penguin Random House LLC imprint). [xi] + 322 Index. 24 cm. [279* endnotes]

• **Summary:** From the publisher: "How much do you really know about what you eat? In the last two decades GMOs have come to dominate the American diet, and yet many of us struggle to define what they really are and exactly how they are impacting our food system and our health. Advocates hail them as the future of food, a groundbreaking method of crop breeding that can help feed an ever-increasing global population. Critics, meanwhile, call for their banishment, insisting GMOs were designed by overeager scientists and greedy corporations to bolster an industrial food system that forces us to rely on cheap, unhealthy, processed food so they can turn an easy profit. In response, health-conscious brands such as Trader Joe's and Whole Foods boast "GMO free" labels on their products, while companies like Monsanto have become villains in the eyes of average consumers.

"So where can we turn for the truth? Are GMOs an astounding scientific breakthrough destined to end world hunger? Or are they simply a way for giant companies to control a problematic food system?"

"*Food Fight* takes us on a journey across the country to meet people who fall on all sides of the debate, proving that the answers to these questions are much more complicated than we're often led to believe. From scientists working

to engineer new crops that could provide nutrients in the developing world, to Hawaiian papaya farmers who credit GMOs with saving their livelihoods, to local farmers in Maryland who are redefining sustainability—McKay Jenkins reveals that the role of GMOs and the technology behind them extends far beyond being simply ‘good’ or ‘bad.’ A fresh, nuanced, and unwaveringly objective look at the state of our food system, *Food Fight* is the vital guide to making informed choices about your next meal.”

3036. Shurtleff, William. 2018. What is the clean meat or alternative meat movement? (Overview). *SoyaScan Notes*. Feb. 2. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** This movement, which has at least two different names, is made up of companies which are growing meat in the laboratory in an attempt to avoid all the downsides of animal meat production and to make a product that has the taste, texture and appearance of meat or poultry.

“Beyond Meat is a Los Angeles-based producer of plant-based meat substitute. The company’s products include “The Beyond Burger,” “Beyond Chicken,” “Beyond Beef,” “The Beast Burger,” and “Beyond Sausage.” Beyond Meat’s Products became available nationwide at Whole Foods Markets in 2013.

“Beyond Meat was founded by CEO Ethan Brown in 2009. The company has received venture funding from Kleiner Perkins Caufield & Byers, Obvious Corporation, Bill Gates, Biz Stone, the Humane Society and Tyson Foods”

(Source: Wikipedia, at Beyond Meat, Feb. 2018).

Many other companies are working on the problem. However these products are not much different from the hundreds of meat alternatives, such as Tofurky products, that have been widely sold in the USA and the UK since the 1970s. Address: Soyfoods Center, Lafayette, California 94549.

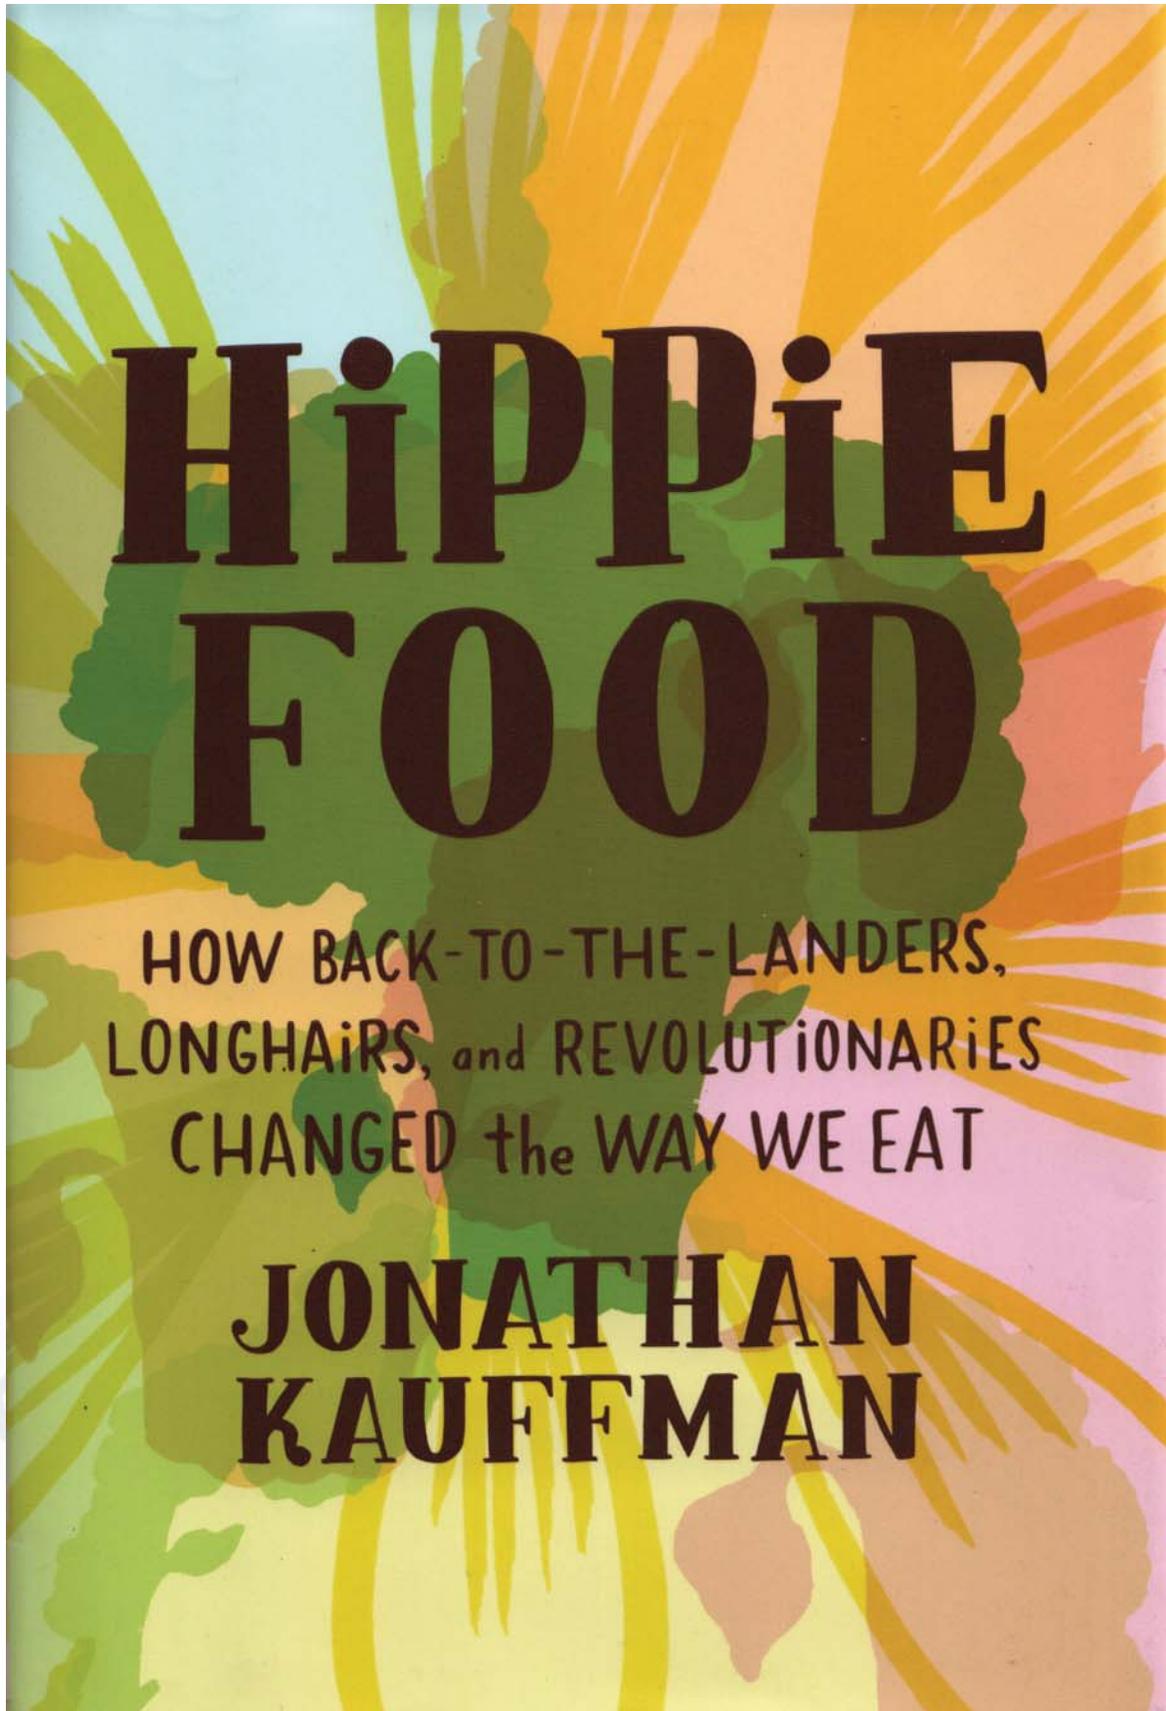

3037. Kauffman, Jonathan. 2018. *Hippie food: How back-to-the-landers, longhairs, and revolutionaries changed the way we eat*. New York, NY: William Morrow, an imprint of HarperCollins Publishers. 344 p. Index. 24 cm. [135 + 390 endnotes]

• **Summary:** See next page. Brown bread, brown rice, granola, tofu, vegetarianism, organic foods. These are just some of the iconic foods that Hippies introduced to America.

Contents: Introduction: Why the counterculture of the late 1960s embraced a completely new type of food and a new way of relating to that food. They wanted real food, pure and from the source. Many Hippies felt America had betrayed their trust. So they worked to build a new America in the shell of the old. Why did Hippie food spread so fast—as if by magic? Taking a journalist’s approach, Kauffmann divides the story of Hippie Food into three eras: (1) The years before 1968 are prehistory. (2) 1968-1974 is the revolutionary era. (3) From 1975 on is the era of creating institutions and businesses, writing cookbooks to bring the revolution to a much broader audience.

1. Fruits, seeds, and (health) nuts in southern California: The Aware Inn, run by Jim and Elaine Baker on Sunset Strip; “it was one of the very first restaurants in the country to print *organic* on the menu.” The Health Hut, owned by Gypsy Boots and his wife Lois, on Beverly Boulevard near La Cienega. Only Los Angeles, which started as a destination for tuberculosis sufferers in the late 1800s seeking to regain their health, could have produced these two. Before them came raw fooders John and Vera Richter, Naturmenschen from Germany, Arnold Ehret, Paul Chappius Bragg, Gayelord Hauser, Healthy Hollywood, *California Health News*, Nature Boys, Jack LaLanne, Steve Allen, Rancho La Puerta, and more.

2. Brown rice and the macrobiotic pioneers: The caravan to Chico, California. Chico-San, George Ohsawa and his teachings, *Zen Macrobiotics*, miso, miso soup, seitan, adzuki beans and kudzu-root, tamari, George Ohsawa Macrobiotic Foundation, rice cakes, organic brown rice, Cambridge, Massachusetts, Evan Root, Beth Ann Simon’s death, George Ohsawa’s death on 24 April 1966 in Tokyo at age 72, Michio and Aveline Kushi, Erewhon, study houses, Paul Hawken, Sanae, macrobiotic restaurants nationwide, the primary practice of macrobiotics seemed to be eating, and selling macrobiotic food, Hawken and organically grown food, Frank Ford of Arrowhead Mills, Erewhon’s quest for brown rice, Lundberg Family Farms starts growing brown rice for

Chico-San, fire destroys Chico-San. Sidebar at end on carob.

3. Brown bread and the pursuit of wholesomeness: Haight-Ashbury and The Diggers, Sylvester Graham and the history of whole-grain bread in America, white flour and bread, discovery of vitamins, Adelle Davis, the poisons in our food (1950-1970s), Black Muslims and dark bread, Beatrice Trum Hunter, Clive McCay and Cornell bread, Ed Brown and Tassajara, *The Tassajara Bread Book*.

4. Tofu, the political dish. Frances Moore Lappé, *Diet for a Small Planet*, eating becomes a political act. Shurtleff and Aoyagi in Japan, The Farm in Summertown, Tennessee, Laurie Sythe Praskin, Stephen Gaskin, The Farm Soy Dairy, soybean missionaries, *The Book of Tofu*, Soycrafters Association founded in Ann Arbor, Michigan, tempeh, Seth Tibbott, tempeh and Tofurky.

Note: This is the best (most accurate and most complete) account of how Shurtleff & Aoyagi, with *The Book of Tofu*, introduced tofu and soyfoods to America in the mid-1970s.

5. Back-to-the landers and organic farming: Samuel Kaymen, Natural Organic Farming Association established in Vermont (June 1971), Sir Albert Howard, J.I. Rodale, Rodale Press, *Organic Gardening and Farming*, Rudolf Steiner, Biodynamics, communes, the back to the land movement, NOFA.

6. Vegetarians on the curry trail: The Seventh-day Adventists, meat substitutes, The Hurds and *Ten Talents*. At the end is a sidebar on Granola and Granula.

7. Food co-ops, social revolutionaries, and the birth of an industry: Whole Foods in Austin, Texas, and Wheatsville.

Conclusion: The revolution failed, the revolution succeeded.

The Aware Inn, a restaurant in Los Angeles, is discussed on pages 19-21, 29, 37-39, 42-44, 55, 178, 218, 232.

Jim Baker, who with his wife founded the Aware Inn, is discussed on pages 19-20, 29-30, 33, 37-39, 42-48, 178, 218, 232.

The Source, a Los Angeles restaurant founded by Jim Baker and his wife, is discussed on pages 45, 47-48, 50-55, 232. The Brotherhood of the Source on pages 51-52, 55. The Source Family on pages 51-54, 275. Address: Reporter for the food section of *The San Francisco Chronicle*.

3038. Ruggles, Ron. 2018. Good Earth restaurant chain founder dies: William Galt, 89, pioneered health food in the 1970s. *Nation's Restaurant News*. Aug. 21.

• **Summary:** A color photo (by Marialice Galt) shows William A. Galt who in 1975 launched Good Earth as a 22-seat restaurant in Reno, Nevada. He eventually grew it to 53 restaurants.

The restaurants served mostly vegetarian dishes “based on Galt’s research into whole grains, hormone-free meats and natural sugars and spices without additives.”

In 1980, General Mills acquired the brand, closing some and converting about 20 of the Good Earth Restaurants into

Olive Garden or Red Lobster brand. General Mills owned these until 1995, when it sold them all to Darden Restaurants Inc.

“In 1986, Richard Martin, West Coast Editor of *Nation's Restaurant News*, told the *Los Angeles Times* that ‘Good Earth is prominently the most prominent chain example of a health-food concept.’”

3039. Hain Celestial Group, Inc. (The). 2018. Annual report 2018: Form 10-K, notice of the 2018 annual meeting and proxy statement. Melville, New York. 105 + 52 p. 28 cm.

• **Summary:** The Hain Celestial 2018 Form 10-K is separate. On p. 60 we read: Net sales for the year ended 30 June 2018 were \$2.457, up from \$2.343 million in 2017 and \$2.392 million in 2015.

Net income in 2018 was \$9.694 million, down from 67.4 million in 2017 and \$47.4 million in 2016.

Irwin Simon will resign from his position as President and CEO of the Hain-Celestial Group and has decided not to stand for re-election. His severance package will be \$34.3 million. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

3040. *Organic and Non-GMO Report (The) (Fairfield, Iowa)*. 2018. First “100 percent organic state” Sikkim wins Future Policy Award. No. 184. Nov/Dec. p. 20.

• **Summary:** “The world’s best laws and policies promoting agroecology were awarded the Future Policy Award (FPA) 2018. The ‘100 percent organic state’ Sikkim, in India, was this year’s winner of the “Oscar for best policies,” beating 51 other nominated policies from 25 countries. Policies from Brazil, Denmark and Quito, Ecuador take home Silver Awards. This year’s award is co-organized by the Food and Agriculture Organization of the United Nations (FAO), the World Future Council (WFC) and IFOAM-Organics International.

“Gold Prize winner Sikkim is the first organic state in the world. All of its farmland is certified organic. At the same time, Sikkim’s approach reaches beyond organic production and has proven truly transformational for the state and its citizens. Embedded in its design are socioeconomic aspects such as consumption and market expansion, cultural aspects as well as health, education, rural development and sustainable tourism. The policy implemented a phase out of chemical fertilizers and pesticides, and achieved a total ban on sale and use of chemical pesticides in the state. The transition has benefited more than 66,000 farming families. The Sikkim tourism sector has benefited greatly from the state’s transition to 100 percent organic: the number of tourists increased by over 50 percent between 2014 and 2017. As such, Sikkim sets an excellent example of how other Indian states and countries worldwide can successfully upscale agroecology.

“Three Silver Awards were granted to Brazil’s National

Policy for Agroecology and Organic Production, Denmark's Organic Action Plan (2011-2020, updated in 2015), Quito's (Ecuador) Participatory Urban Agriculture Programme."

A photo shows: "Maria Helena Semedo, FAO Deputy Director-General presents Pawan Chamling, Honourable Chief Minister of the Indian State of Sikkim, the Future Policy Award." Address: Editor.

3041. Barton, Gregory A. 2018. *The global history of organic farming*. Oxford, UK: Oxford University Press. 242 p. Index. 24 cm. [372* ref]

• **Summary:** From the publisher: "This book tells the untold story of the organic farming movement and its massive impact on the world of agriculture and society. Organic farming turned the gaze of millions of people, institutions, and governments backwards to look at the past as a source of guidance and wisdom. It changed our consumer habits and our ethics, demanding that we think about how our food is grown and the effect our daily habits have on nature. Based on newly discovered archives, it also reveals the towering personalities of Albert Howard and his second wife Louise as overlooked champions of the environmental movement."

Review on abebooks.com: "Organic farming is a major global movement that is changing land-use and consumer habits around the world. This book tells the untold story of how the organic farming movement nearly faltered after an initial flurry of scientific interest and popular support. Drawing on newly-unearthed archives, Barton argues that organic farming first gained popularity in an imperial milieu before shifting to the left of the political spectrum after decolonization and served as a crucial middle stage of environmentalism. Modern organic protocols developed in British India under the guidance of Sir Albert Howard before spreading throughout parts of the British Empire, Europe, and the USA through the advocacy of his many followers and his second wife Louise. Organic farming advocates before and during World War II challenged the industrialization of agriculture and its reliance on chemical fertilizers. They came tantalizingly close to influencing government policy. The decolonization of the British Empire, the success of industrial agriculture, and the purging of holistic ideas from medicine side-lined organic farming advocates who were viewed increasingly as cranks and kooks. Organic farming advocates continued to spread their anti-chemical farming message through a small community that deeply influenced Rachel Carson's ideas in *Silent Spring*, a book that helped to legitimize anti-chemical concerns. The organic farming movement re-entered the scientific mainstream in the 1980s only with the reluctant backing of government policy. It has continued to grow in popularity ever since and explains why organic farming continues to inspire those who seek to align agriculture and health."

Acknowledgements, p. 1: "My greatest debt is owed, however, to the Matthaei family, who carefully preserved the

archives of Albert Howard, and his first and second wives, Gabrielle and Louise. Long thought lost, these newly found papers form a core middle section of this work. The family has kindly allowed me free reign to use this material where the evidence has led, and never intimated any restrictions on my conclusions. I am grateful to them for their generosity. St. Johns College, University of Cambridge, has also kindly accepted the offer of the archival collection from the Matthaei family so that future generations will be able to access the papers."

About the author: Gregory A. Barton is a noted historian of British, world, and environmental history. He is Professor of History at Western Sydney University and the University of Johannesburg, and is the author of *Empire Forestry and the Origins of Environmentalism*, *Lord Palmeston and the Empire of Trade*, and *Informal Empire and the Rise of One World Culture*. Address: Western Sydney Univ., Australia.

3042. Whole Foods Market. 2019. Dinner Tonight: Spaghetti squash with tempeh. *Indianapolis Star (Indiana)*. April 28. p. S6.

• **Summary:** Cut 12 ounces tempeh into small cubes. Marinate tempeh with 2 tablespoons reduced-sodium tamari, ¼ cup mirin and 2 cloves finely chopped garlic for 30 minutes. "Drain tempeh, then add it to the skillet and cook, stirring occasionally, until golden brown, 7-8 minutes; transfer to a plate and keep warm..." A beautiful colored photo shows the finished dish.

Note: This same creative and healthful recipe appears on the same date in the Reno-Gazette Journal (Nevada), Argus-Leader (Sioux Falls, South Dakota), Florida Today (Cocoa, Florida), The Des Moines Register (Iowa), and Arizona Daily Star (Tucson).

3043. Piper, Kelsey. 2019. Beyond Meat is going public. Meat alternatives are going mainstream: you can now buy a stake in vegan meat (Web article). www.vox.com/2019/5/2/18525601/beyond-meat-ipo-vegan-burger 2 p. Retrieved May 2, 2019. [44 ref]

• **Summary:** At the head of the story is a large color photo of a Beyond Burger between buns with all the trimmings.

"Beyond Meat, the plant-based meat company, started publicly trading Thursday morning, and the stock more than doubled in value right out of the gate—it's now trading at \$60, when just last week the company was estimating it would start selling at \$19 to \$21.

"The company sells burgers that contain no meat but taste like they do. Its stated goal is to fix our food system by making such meat alternatives available everywhere and appealing to everyone. Its initial public offering (IPO) is the latest sign that alt-meat is going mainstream—and that's a big deal.

"It's been a good few years for Beyond Meat. National chains including Del Taco, Carl's Jr., and T.G.I. Friday's

have started carrying their products. They've also found their way onto grocery store shelves at Whole Foods, Kroger, and Target. In total, Beyond Meat says its products are available in more than 35,000 outlets, from hotels and college campuses to grocery stores and sports stadiums. Sales have been growing fast—last year, the company reported revenues of \$87.9 million, up from \$32.6 million in 2017.”

Note: Beyond Meat, Inc. was created by vegan Ethan Brown in 2009. The company, which had its IPO on Thursday, May 2 (its ticker symbol is BYND), uses pea proteins that are processed, woven and combined with various flavorings to produce a variety of meat alternatives. Its products are sold in the meat section of most grocery stores and it has long resisted labeling its products as “veggie burgers” or “vegan burgers.” Competitors include Impossible Foods (maker of the Impossible Burger) and Tyson Foods which is working on its own plant-based meat alternatives.

3044. Tibbott, Seth. 2019. How I Built This (Continued—Document part III). Radio broadcast on National Public Radio, May 16.

• **Summary:** Continued: When the company first turned a profit, in about 2000 or 2001, it became really profitable because they brought the production of the Tofurky in house; they had been buying it from a co-manufacturer. In 1998 they started making Tofurky deli slices and Tofurky sausage followed in 2001; they smoked it in a real hickory smokehouse. These new products became popular very quickly. They took the industry by storm and we became a “happening company.” In about 2004-2005 Seth realized the Turtle Island was starting to make a lot of money—enough to give some bonuses and to pay off debts. It was a good feeling, especially since Seth had been so good for so long at losing money. Suddenly businesses that wouldn't talk with Seth about tempeh were now clamoring for Tofurky. Tofurky took Turtle Island from being a regional, West Coast distribution to being a national distribution.

Today the company has a state-of-the-art factory in Hood River. It is a LEED-certified building [applause], with 200+ employees. Revenue is between \$40 and \$60 million a year, very impressive. Seth's products are sold at a tremendous range of stores that sell food—not just Whole Foods and co-ops and Trader Joe's—but also Walmart and Target and Costco.

“What we're seeing right now is the mainstreaming of plant-based foods [applause] and we're in 27,000+ stores worldwide. It's really a friendly world for plant-based foods now. We love to see all great-tasting vegan companies succeed—partly because we're altruists and we're a mission-driven company and we want to see plant based foods grow all over the world, but there's a business reason too, which is that it's easier for us to place products in a category that is hot.

Seth's company, now named The Tofurky Company,

is entirely family owned. In recent years Seth has been approached by a lot of big companies who have offered a lot of money to buy the company. Why not take it? “I feel that I'm rich beyond my wildest dreams right now. To be in this business has brought much joy and a great feeling in my life. I'm able to travel around the world. I'm able to work with nonprofit groups like Veganuary that are just getting going over here [in the USA]. I just feel like the luckiest guy in the world.”

Seth does not want to sell equity in his company; he prefers to borrow, so nobody can tell him what he can do and can't do.

Tempeh now accounts for about 10-15% of Seth's sales. It's really outpacing some of his other products in growth right now. Seth is building a new incubator which will double the company's tempeh capacity; he's pretty excited about that. “I just may have been about 4 decades early on the tempeh thing.” He is no longer using Christmas lights in his tempeh incubator.

Guy Raz: “One final question: How much of this story and the success of this company is because of your hard work and your work ethic and your skill and your intelligence, and how much of this story is just luck and timing.”

Seth's answer: “Certainly luck and timing come into play. I was lucky enough to jump on this jet stream of natural foods that was just starting up in the 1980s and 90s and then helping blaze a trail for other meat alternative companies that come on now. A lot of it is just persistence and hard work and trying to be less stupid.”

“Yeh, that's a good strategy. Seth Tibbott, thank you so much. That's Seth Tibbott, founder of Tofurky. In 2014 Seth's stepson, Jaime Athos, took over duties as CEO [and President] of Tofurky. Last year [2018] the company announced it had sold over 5 million Tofurky roasts. Oh, and you know what Seth and Jaime and others at the company call real live turkeys: fake Tofurkys.” Address: Founder, The Tofurky Company.

3045. Trader Joe's Customer Service. 2019. Why does Trader Joe's have such a poor choice of soymilk? (Interview). *SoyaScan Notes*. June 17. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** 1. There are now only two manufacturers of soymilk in the USA, so the choice is limited in both package sizes and flavors. 2. Many people are allergic to soymilk.

Note: These include: (1) Eden Foods, Inc. = American Soy Products. Address: 800 S. Shamrock Ave., Monrovia, CA 91016. Phone: 626-599-3817.

3046. Roller, Ron. 2019. Update on American Soy Products (ASP) and other soymilk manufacturers (Interview). *SoyaScan Notes*. June 24. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Shurtleff hears from Trader Joe's customer service rep. that there are now only two companies that manufacture soymilk in the USA. Ron says that American Soy Products (which makes Edensoy) and SunOpta (Sunrich) may be the two. SunOpta had a plant that made and packaged soymilk in California and their main customer was Costco (whose main private-label brand is now Kirkland). SunOpta also has a plant in Minnesota that is bigger than ASP.

A look at SunOpta's website shows that "The following soymilks qualify as a milk substitute for federal food programs:

- "Original Soymilk–32 oz.
- "Vanilla Soymilk–32 oz.
- "Unsweetened Vanilla Soymilk–32 oz.
- "Original Soymilk–8 oz.
- "Vanilla Soymilk–8 oz. Three links state:
- "Learn more about SunOpta Soy Ingredients–Liquids.
- "Download The Edge on the Shelf–Soymilk flyer.
- "Contact Us About Organic Soymilk.

Several years ago, Ron wrote a lengthy, original, unpublished report for the ASP board, which wanted to understand why soymilk had fallen out of favor in the USA. It was titled *The Rise and Fall of Soymilk in America*. He went to many different stores and bought one each of all the different soymilk products they sold. He also has reports from TetraPak loaded with data about aseptically packaged soymilk going way back. For Ron, the main thing that stood out was all the negative publicity about soy. The surge of interest in plant protein does not include soy. Very significant is the rise in private label nondairy brands.

Soymilk's flavor is still a problem. 90% of Americans prefer the taste of almond milk to that of soymilk, even though almond milk is very low in protein and other important nutrients.

The fact that soy may be allergenic is a big problem for soy. It is the #1 reason for soymilk recalls. Even if a statement appears about "Made in a plant that also processes soy," that is legally irrelevant. So allergen control is extremely important in today's world. ASP tests the CIP [clean in place] rinsewater using special "allergen trace kits." There are many more regulations, which requires more employees and raises costs. The FDA also seems to be very concerned about food security—that a terrorist could poison our food supply by slipping poison into a blend tank, for example.

The biggest hit for ASP was when soymilk—starting with Silk—started to be sold in refrigerated gable-top cartons. Another ongoing problem is the "super discounters" such as Walmart and Aldi, and the "dollar stores" where the poor are likely to shop. These companies demand lower prices each year; Ron this may be unsustainable.

TetraPak aseptic is growing. ASP was sold almost exactly a year ago to Morgan Foods of Austin, Indiana. Ron

likes his work, which is focused on products, customers, ingredients and making beverages. In Jan. 2019 he resigned as president. ASP makes lots of private-label products.

Check out CloverDale Farms. Another soymilk maker may be So Nice in Canada. Pacific Foods was purchased by Campbell and its products are sold under the Pacific Foods label. Address: American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 734-429-2310.

3047. Canning, Kathie. 2019. Editor's page: It's time to educate confused consumers. *Dairy Foods*. June. p. 10.

• **Summary:** The first problem is that many new plant-based launches "incorporate dairy terminology such as milk, yogurt or cheese in the product name." This is "technically illegal, per federal regulations." It is an issue that the dairy "industry has been asking the FDA to address for some time now."

In 2018 the FDA issued a request for information and got back upwards of 14,000 comments from consumers. The overwhelming majority of comments were in favor of allowing plant-based foods to use dairy terms on labels.

The second problem is that many consumers believe that plant-based products are roughly equivalent in nutritional value to their dairy counterparts. For example, a scientifically valid study found: 77% "of buyers of dairy and plant-based beverages think almond-based drinks [almond milk] have as much or more protein than dairy beverages, when real milk actually has as much as eight times more protein."

Note: Lowfat dairy milk (the best-selling type; 1% milkfat) contains an average of 10 gm per cup of high-quality protein, whereas Blue Diamond Almond Breeze ("almondmilk"), as well as 2 other brands sold at Trader Joe's in Lafayette, California, contain only 1 gm per cup of lower-quality protein. Address: Editor-in-chief, Dairy Foods.

3048. Schweibinz, Marcy; Mangels, Reed. 2019. How does your soymilk measure up? *Vegetarian Journal (Baltimore, Maryland)* 38(3):11-13. [3 ref]

• **Summary:** This 2-page soymilk chart is titled "Partial Soymilk Comparison Chart" because a more comprehensive chart can be found online at vrg.org/nutshell/Guide_to_Soymilks_2019.pdf. The Partial chart contains the following columns for each brand: Product [flavor, powder]. Calories. Protein (g). Fat (g) Carb (g). Sodium (mg). Calcium (mg). Vitamin D (IU). Vitamin B-12 (mcg). Sweetener. Vegan on package/website? Gluten-free on package/website? Organic?

The brands are 8th Continent. Best Choice. Better Than Milk. Eden Foods / Edensoy. Giant Eagle Nature's Basket. Great Value. Great Value Organic. Greenwise (Publix). Hiland Organic Soy. Kikkoman Organic. Nature's Promise Organic. Nature's Soy. Pacific All Natural Organic. Shoprite Wholesome Pantry. Silk, Refrigerated.

3049. Tibbott, Seth. 2019. Re: How Seth started selling his tempeh into Canada. Letter (e-mail) to William Shurtleff at

Soyinfo Center, July 10. 1 p

• **Summary:** “Hi Bill,

Let me work on getting dates and story to you on Canada but I know that we first started selling our tempeh into Canada around 1986. At that time we only sold to a company in Vancouver, BC, called Wild West Organics. They only sold in the western regions of Canada. Around 2001 we started selling to Loblaws, Ontario Natural Foods and other eastern Canada wholesalers. This was accomplished by working with Tim Dunn of Excel Natural Foods brokers. Tim came on to work with us as our National Canadian Sales rep after closing the doors to his brokerage around 2009. This was not related to Trader Joe’s at all.

“Canadian sales data is expensive compared to the US so we don’t buy it often but let me see if I can dig for this information. I do know that in the past several years, Canadian sales have been around 10% of our overall sales.

“Do know Allan Brown but not Aux Vivres.

“Best, Seth.” Address: The Tofurky Company, P.O. Box 176, Hood River, Oregon 97031.

3050. Organic Farming Research Foundation (Website printout). 2019. <http://ofrf.org> Retrieved 16 Oct. 2019.

• **Summary:** Home. News. Events. Donate. Search box (a search for “soybeans” gets about 16 very significant results; for “soy” gets 8, and for “soybean” gets 13). About (Contact, board, staff, financials, internships, jobs, values). Research. Policy. Resources.

“About OFRF: OFRF is a non-profit organization founded in 1990 with the goal of advancing organic agriculture through scientific research. As a leading champion of organic farmers across the U.S., OFRF works to foster the improvement and widespread adoption of organic farming systems by cultivating organic research, education, and federal policies that bring more farmers and acreage into organic production. Through these efforts, OFRF is creating a more resilient and sustainable agricultural system that values healthy environments and healthy people.” Address: P.O. Box 440, Santa Cruz, California 95061.

3051. Hain Celestial Group, Inc. (The). 2019. Annual report 2019: Form 10-K, notice of the 2018 annual meeting and proxy statement. Melville, New York. 103 + 56 p. 28 cm.

• **Summary:** The Hain Celestial 2019 Form 10-K is separate. The new CEO is Mark L. Schiller. His 2019 Annual Base Salary is \$900,000 (p. 31). Mr. Irwin Simon, “who resigned as President and CEO effective Nov. 4, 2018, in accordance with a Succession Agreement dated June 24, 2018 under which he was entitled to continue to receive his base salary of \$1,981,200 through the date of his resignation,” did in fact receive that amount in FY 2019. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

3052. Roseboro, Ken. 2020. The 2020 non-GMO sourcebook: A buyers guide to global suppliers of non-GMO and organic seeds, grains, ingredients, feed and food. Fairfield, Iowa: Evergreen Publishing, Inc. 128 p. Illust. (color photos). Index. 28 cm.

• **Summary:** “When we first started publishing The Non-GMO Sourcebook in 2002, it was 32 pages with about 200 company listings. This year’s 128-page edition features more than 850 companies-ranging from farmers and grain suppliers to ingredient and food manufacturers.

“The growth of The Non-GMO Sourcebook parallels that of the non-GMO market:

“35% of U.S. consumers place non-GMO at the top of their food purchasing criteria.

“The Hartman Group reported that 46% of consumers surveyed in 2018 said they ‘actively avoid bioengineered ingredients,’ compared to just 15% of consumers surveyed almost a decade before in 2007.

“According to the annual International Food Information Council study, 40% of consumers view products with non-GMO ingredients as healthier than identical products made with GMO ingredients.

“There are now more than 60,000 Non-GMO Project Verified products, generating sales of \$30 billion per year.

“The Non-GMO Project verification program grows 15-20% every year. Contents: Editor’s introduction (by Ken Roseboro, publisher and editor). Suppliers of non-GMO products: United States, Canada, Europe, Asia / Australia, Latin America, Africa / Middle East.

Organic & Non-GMO Market News. Related services and products: United States, Canada, Europe, Asia / Australia, Latin America, Index of non-GMO suppliers by product category: Animal Feed, Canola / Rapeseed, Corn / Maize, Other grains, oilseeds, crops, and processed products, Other ingredients and processing aids, Packaged foods and beverages, Plant-based proteins... Processed soybean products.

Note 1. In the Suppliers section, many company entries have the Non-GMO Project logo (with an orange and black butterfly on a green leaf) next to their company name

This comprehensive book gives the single best picture of the growing industry, worldwide, opposed to genetic engineering. Address: Managing Editor and Publisher, P.O. Box 436, Fairfield, Iowa 52556. Phone: 1-800-854-0586.

3053. Wikipedia, the free encyclopedia. 2020. Ehrenfried Pfeiffer (Web article). https://en.wikipedia.org/wiki/Ehrenfried_Pfeiffer. 1 p. Accessed March 23. [15+ ref]

• **Summary:** “Life: Ehrenfried Pfeiffer began work with Rudolf Steiner in 1920 to develop and install special diffuse stage lighting for eurythmy performances on the stage of the first Goetheanum.[1][2] After Steiner’s death

in 1925, Pfeiffer worked in the private research laboratory at the Goetheanum in Dornach, (Switzerland).[3] He became manager and director of the 800-acre (3.2 km²) experimental biodynamic Lovendale farm in Domburg in the Netherlands.[4] This farm was set up to carry out some of the agricultural studies of the Goetheanum laboratory. The work of testing and developing Rudolf Steiner's Agriculture Course of 1924 was an international enterprise coordinated by Pfeiffer at the Natural Science Section of the Goetheanum.[5] Pfeiffer's most influential book 'Biodynamic Farming and Gardening' was published in 1938 simultaneously in at least five languages, English, German, Dutch, French, and Italian.[6] The following year, and just months before the outbreak of World War II, Pfeiffer ran Britain's first biodynamics conference, the Betteshanger Summer School and Conference, at the estate of Lord Northbourne in Kent.[7] Pfeiffer's Betteshanger Conference is regarded as the 'missing link' between biodynamic agriculture and organic farming because the following year (1940) its host, Lord Northbourne, published his manifesto of organic farming 'Look to the Land' in which he coined the term 'organic farming'. [8]

"Pfeiffer first visited the U.S. in 1933 to lecture to a group of anthroposophists at the Threefold Farm in Spring Valley, New York on biodynamic farming.[1] His consulting was essential to the development of biodynamic agriculture in the U.S.

"Pfeiffer developed an analytical method using copper chloride crystallization and used this technique as a blood test for detecting cancer.[9] As a result, Pfeiffer was invited to the U.S. in 1937 to work at the Hahnemann Medical College in Philadelphia[10] While in the U.S., he continued to consult with those interested in biodynamic farming and helped to form the Biodynamic Farming & Gardening Association in 1938. In 1940 he immigrated to the U.S. from Switzerland with his wife Adelheid, escaping the advance of German troops into France. They brought with them their son Christoph and daughter Wiltraud.

"With the advent of World War II in Europe, Pfeiffer took his family to Kimberton, Pennsylvania (near Philadelphia), where Alaric Myrin offered Pfeiffer the opportunity to create a model biodynamic farm and training program. Starting in the late 1930s he taught biodynamic farming and gardening at the Kimberton Farm School. One of his students, Paul Keene, who worked and studied with Pfeiffer there for two years and shortly thereafter co-founded Walnut Acres, recalls: '... he helped bring all of life together for us in a definite coherent pattern' [11]

"While at Kimberton, Pfeiffer led the initiative to found the Biodynamic Farming and Gardening Association, and to start its journal. While at Kimberton, Pfeiffer also met J.I. Rodale, founder of Organic Gardening and Farming magazine, and of the organic movement in the USA. This relationship gave biodynamics a little-known place in the

history of the American organic movement. Interpersonal difficulties—a motif of Pfeiffer's life—brought to a close the Kimberton Farms chapter.[12]

"Aiming to continue his work training biodynamic farmers, Pfeiffer bought a farm in Chester, New York, where a small colony arose focused on farming, education, and the administration of the Biodynamic Association.[12]

"His copper chloride sensitive crystallization theory brought him an honorary degree of Doctor of Medicine from Hahnemann Medical College and Hospital in Philadelphia in 1939.[4] He studied chemistry and became a professor of nutrition in 1956.[3] Pfeiffer wrote on the dangers of pesticides and DDT and Rachel Carson consulted with him when she was writing *Silent Spring*. [13]

"In 1961, at his home in Spring Valley, N.Y., he suffered from a series of heart attacks, lingering for several days, but ultimately was not given the proper medical care and died. His wife subsequently took over the operation of their farm in Chester, New York.

"Work: Pfeiffer was a pioneer of biodynamic agriculture in Europe, Britain,[7] and America. He is most widely known for his innovative work in composting. He conducted extensive research on the preparation and use of biodynamic compost and was the inventor of BD Compost Starter, a compost inoculant.[14] For many years Pfeiffer served as a compost consultant to municipal compost facilities, most notably Oakland, California,[4] as well as countries in the Caribbean, Europe, and the Far East.[14] A technical difficulty with the resulting compost, that it would not spread readily with the commonly used fertilizer spreader, could not be overcome and the project ultimately failed.

"Pfeiffer invented two anthroposophic image forming methods, a method using a round filter chromatography (circular chromatography or chroma test) and the copper chloride crystallization method,[14] developed together with Erika Sabarth. In the latter method, a solution of copper chloride and the test solution is allowed to evaporate. The pattern of the copper chloride crystals can be 'read' based on the patterns of known samples. Similarly, the patterns of the circular chromatographs can be "read" based on known samples.[9] Both methods require much practice to 'read' and interpret the images.

"Honorary degree: Pfeiffer's work at Hahnemann earned him an honorary Doctor of Medicine (M.D.) degree from Hahnemann Medical College and Hospital of Philadelphia on June 8, 1939 at the 91st Commencement ceremony.[15]

3054. Wikipedia, the free encyclopedia. 2020. Good Earth (restaurant chain) (Web article). [https://en.wikipedia.org/wiki/Good_Earth_\(restaurant_chain\)](https://en.wikipedia.org/wiki/Good_Earth_(restaurant_chain)) 1 p. Accessed March 27.

• **Summary:** “Good Earth was a natural foods restaurant chain originally founded [in 1975] in Reno, Nevada, by William Galt and Nancy Galt.

“Franchise locations in Santa Barbara, California, Berkeley, California, and San Francisco, California were owned by Dean Stanley Ashby and family (wife Georgia Anne Ashby, and sons Aaron Stanley Ashby and Dean Stanley Ashby II).

“A franchise location in La Jolla, California was owned by James Forcier.

“The Galts sold the concept to General Mills in [Nov.] 1980.[1]. After expansion to more than 50 locations across the United States the concept lost popularity. General Mills converted most of the restaurants into other chain restaurants they were operating, such as Red Lobster and Olive Garden. Most of the restaurants were located in California.

“During the period Good Earth operated widely, it was “probably the most prominent chain example of a health-food concept”, according to industry trade journal Nation’s Restaurant News.[2]”

3055. Shurtleff, William. comp. 2020. Chronology of Whole Foods Market (Overview). *SoyaScan Notes*. March 30.

• **Summary:** 1978–John Mackey and Renee Lawson borrowed \$45,000 from family and friends to open a small vegetarian natural foods store called SaferWay in Austin, Texas (the name being a spoof of Safeway). When the two were evicted for storing food products in their apartment, they decided to live at the store. Because it was zoned for commercial use, there was no shower stall, so they bathed using a water hose attached to their dishwasher

1980 Sept. 20–John and Renee partnered with Craig Weller and Mark Skiles to merge SaferWay with their Clarksville Natural Grocery, resulting in the opening of the original Whole Foods Market in Austin. At 10,500 square feet and a staff of 19, this store was quite large in comparison to the standard health food store of the time.

1981 May 25–Memorial Day: The worst flood in 70 years devastates Austin. The store’s inventory was wiped out and most of the equipment damaged. The losses were approximately \$400,000 and WFM had no insurance. Customers and neighbors voluntarily joined the staff to repair and clean up the damage. Creditors, vendors and investors all provided breathing room for the store to get back on its feet and it re-opened only 28 days after the flood.

1984–Whole Foods expanded inside Texas, first to nearby Houston and then to Dallas; that year it had 600 employees.

1988–The Whole Foods chain bought the Whole Food Company in New Orleans for its first expansion outside of Texas.

1991 Oct.–Acquires Wellspring Grocery (Southeast) for \$2.13 million.

1991 Oct.–Acquires Bread & Circus (Boston / New England) for \$26.7 million (\$20 million in cash, \$6.7 million in shares).

1992 Jan. 23–Whole Foods goes public (IPO) at a price of \$2.125 per share.

1993 Sept.–Acquires Mrs. Gooch’s (Los Angeles Area) for \$2.97 million (shares only). With this acquisition all the food quality standards existing up to this time were largely forgotten.

1995 Feb.–Acquires Bread of Life (Northern California) for \$5 million.

1995 Feb.–Acquires Unicorn Village (North Miami Beach, Florida) for \$4.11 million.

1995 Dec.–Acquires Oak Street Market (Chicago) for \$2.57 million.

1996 Sept.–Acquires Fresh Fields (Philadelphia, Washington, D.C., Chicago, New Jersey) for \$134.5 million.

1997–Whole Foods revenue passes \$1 billion per year, with 70 stores in 16 states.

2002–Whole Foods first expands internationally with a store in Toronto.

2004 Jan.–Whole Foods buys seven Fresh & Wild stores in and around London, England. UK based Fresh & Wild was founded by Hass Hassan in late 1998. He acquired the long established City Health Store in London and opened the first new Fresh & Wild in Camden Town in February 1999.

2007–Merger with the natural food chain Wild Oats (Boulder, Colorado). Wild Oats was founded in 1987 by Michael Gilliland and his wife, Elizabeth Cook, with the purchase of the Crystal Market vegetarian natural foods store in Boulder, Colorado. In 1992, Crystal Market was re-named Wild Oats Vegetarian Market, and in the ensuing years the company began opening and acquiring other, small natural foods stores.

2013–Whole Foods is said to become the first chain to label all foods produced by genetic engineering.

2017 Aug. 28–Acquired by Amazon.com for \$13.7 billion.

3056. Silver, Jimmy. 2020. Re: Sanae, Sanae 2, and the Seventh Inn. Letter (e-mail) to William Shurtleff at Soyfoods Center, March 31. 1 p.

• **Summary:** Wm. Shurtleff begins by asking Jimmy for his recollections of these two macrobiotic restaurants in Boston: “Dear Jimmy,

“I’m just finishing a book about the History of the

Natural Foods Movement. As far as I can tell, the two earliest macrobiotic/natural food restaurants on the East Coast of the U.S. were Sanae (opened to the public in Feb. 1968) and Sanae 2, which was renamed the Seventh Inn. My questions:

“Q1. Roughly when did Sanae 2 open? Ans: I think sometime in 1972. We moved from LA to Boston in late 1970 and I was working at Erewhon until I left to take over the restaurant. I don’t remember exactly.

“Q2. About how long after it opened was it renamed The Seventh Inn. It had that latter name by July 1972. Ans: I think it was called the Seventh Inn when it opened but Susan says she thinks it was called Sanae 2 when it first opened.

“Q3. How long had it been open when you (perhaps with some help from Paul Hawken) started to manage it? Ans: I think maybe six months, not sure. It was failing and Michio and Aveline were looking to make changes to save it.

“Q4. About when did it close? Why? Akiko and I ate there once with Michio and Aveline and found it very attractive, with food we both enjoyed. Ans: Yes, after it rounded into shape I thought the food was good too, and the experience was OK. There were some experienced people working there and a lot of the work had become routine enough that exceptions could be handled rather than producing crises. I think Susan and I had been away from it for a while when it closed; I’m not even sure we were aware that it had.” Address: President, Pure Sales, California.

3057. Nordquist, Ted. 2020. Re: Wholesoy & Co./UNFI story. Letter (e-mail) to William Shurtleff at Soyinfo Center, April—in reply to request. 1 p.

• **Summary:** “WholeSoy & Co. launched the organic probiotic soy yogurts in 1998. The Company used Brown Cow Farm as the main distributor and Oasis Sales and Marketing to organize distribution with a national broker network. At this time there were approximately 14 distributors covering the USA with trucks out of California that carried both refrigerated and frozen food. The WholeSoy organic yogurts had a 60-day shelf life from production. Distributors required a minimum of 30 days of shelf life by the time the product reached their warehouse.

“At the time only two other non-dairy soy yogurts were available, White Wave Dairyless, a pasteurized yogurt, and Nancy’s soy yogurt made with living cultures. In 1998, we launched the WholeSoy yogurts using ‘soy yogurt’ on the cups. However, an inspector from the California State Board of Agriculture objected to the use of ‘yogurt’ so we reprinted all the cups. In about 14 months the WholeSoy yogurts, now called ‘cultured soy’ were the bestselling non-dairy yogurts in the USA.

“The secret to our success was a proprietary ‘soybase’ manufactured from whole organic soybeans using a Swedish processing method of water, milling, heat, vacuum and separation of fiber to create a good tasting soymilk concentrate. The living cultures were grown on a non-dairy

medium, yielding a 100% dairy free soy yogurt. Brown Cow Farms and Oasis Sales and Marketing were instrumental in expanding the sale and distribution of these organic soy yogurts throughout the USA, together with their own dairy yogurts.

“As sales increased, the WholeSoy yogurts made their way into many Natural Food Stores and into the natural food channels of large grocery chains such as Safeway, Albertson’s, Raley’s, Kroger, Stop & Shop, Publix, HEB etc. Over time, the cost of distribution became a major expense.

“In 1999 UNFI (United Natural Foods Inc.) contracted with Whole Foods, the largest natural food chain, to be their sole distributor. With this agreement, UNFI began buying up many other natural food distributors. As we looked more closely at our invoices and UNFI payments, we discovered that UNFI was subtracting money from our invoices without written documentation. Normally, if there was an issue with a payment such as spoiled or damaged product, the deduction would include physical documentation with details of the issue. Instead, UNFI set in motion a system of deducting off invoice with a link to their accounting system. Now we, the manufacturer, were given the responsibility to find evidence that the deduction was correct. This amounted to so much money that we hired an account manager to review all UNFI deductions, which after investigation, often proved to be incorrect. The money ‘recovered’ easily paid for the cost of this employee.

“UNFI sent us a supplier agreement which included a deduction of 2% net payment off invoice. This meant that UNFI could deduct 2% of the invoice total if they paid within 10 days. Upon further investigation, we discovered that UNFI had been taking this deduction for some time, but paying us much later, often more than 30 days after receiving WholeSoy yogurts into their warehouse.

“Our CFO tried to communicate with UNFI to reach an agreement regarding this and other issues related to the new supplier agreement. This agreement essentially gave UNFI full control and left us little recourse including the 2% net off invoice. After months of being ignored by UNFI I sent to them a letter and copied Whole Foods, that we would suspend all WholeSoy deliveries to them by the end of the following month if they did not negotiate a solution with our CFO. Within a few days this communication opened and within weeks UNFI signed a supplier agreement with us that we could accept. It included an electronic payment system which made it possible for UNFI to pay us within 10 days. If payment was not received within 10 days, we would add this deduction to the following invoice.

“The contract between UNFI and Whole Foods resulted in another issue for our company. We produced organic soy frozen yogurt in 9 flavors. UNFI distributed this product to all its warehouses across the USA. Then, we received notice from the Midwestern UNFI warehouse that Whole Foods had introduced a series of private label 365 dairy ice

creams. This warehouse did not have enough room for this new introduction, so given their contract with Whole Foods we were told that the WholeSoy frozen yogurts would be discontinued.

“The discontinuation of the WholeSoy organic frozen yogurts in this Midwestern UNFI warehouse resulted in the loss of sales in all the natural food outlets in that region. UNFI had essentially monopolized distribution in this region. We eventually discontinued the manufacture of this line of frozen yogurts.

“With this discontinuation of one line of products, we experienced huge charges off invoice from UNFI, sometimes months or years later. They would deduct from our invoice charges related to costs they claimed were incurred during this withdrawal of product from the natural food market. These charges were completely unexpected and very difficult to determine if they were correct, since they occurred in the distant past. This experience would come to haunt us later which I will explain below.

“WholeSoy & Co. manufactured a proprietary organic soybase concentrate used for private label soymilks and the WholeSoy line of organic yogurts, yogurt drinks, frozen yogurts and cream cheese. Our business plan was to co-manufacture these products in dairy facilities, where equipment could be thoroughly cleaned to avoid mixing dairy and soy due to allergen concerns. We tested all our products on a regular basis at the University of Nebraska Food Allergy Research and Resource Program (FFARP). Allergen testing of the rinse water in the manufacturing facilities between every changeover of dairy and soy was required. On a routine basis, samples of finished product would be sent to FFARP for testing of casein, whey, egg and nuts down to 5ppm (five parts per million).

“As the WholeSoy & Co. grew, the capacity of dairies to co-manufacture our products became problematic. We started this processing of soy yogurts in 1998 and moved through five different dairies by 2010. Our volume grew, making it more and more difficult to find additional capacity in a dairy, usually producing over the weekend when their facility offered additional processing. In 2010 a large dairy owned by Kraft Foods was purchased by a local California dairy family. Kraft had removed cheese manufacturing equipment and this family offered to build a yogurt manufacturing line for WholeSoy organic cup yogurts.

“This was the first time WholeSoy & Co. could design its own soy yogurt manufacturing line based on years of experience adapting its formulations to coincide with a dairy’s processing equipment. Between June of 2010 and April 2013, the WholeSoy organic yogurt sales grew to over 480,000 cups with deliveries of 24,000 gallons of organic soybase each week” (Continued). Address: Sonoma, California.

3058. Nordquist, Ted. 2020. Re: Wholesoy & Co./UNFI

story (Continued–Document part II). Letter (e-mail) to William Shurtleff at Soyinfo Center, April–in reply to request. 1 p.

• **Summary:** Continued: “Unfortunately, this dairy consisted of 80% spray drying of dairy milk with only 20% of the operations focused on non-dairy yogurt and other specialty manufacturing. The spray drying business lost money and the family was forced to close the business.

“At this point, the WholeSoy & Co. volumes were too large to find a suitable dairy co-manufacturer. We decided to lease the yogurt filling equipment and build a yogurt processing line at the same facility in Modesto, California, where we produced the organic soybase. The idea was unique in that it would allow for a 100% dairy free operation. This would open doors to many future products that required, for example, orthodox kosher pareve certification. We were already certified organic and had Non-GMO Project verification. We sought outside investments to accomplish this task.

“To make a long story short, it took one year to complete the task before we could relaunch the WholeSoy organic yogurts into the natural food market. Whole Foods, Trader Joes and other natural food outlets took us back using the same packaging and UPC codes. However, large chains like Safeway, HEB, Kroger, etc. did not take us back as quickly. In addition, UNFI started deducting from our invoice charges, related to our initial withdrawal from the natural food market. These charges and our inability to get back into the natural food sections of larger supermarkets led to WholeSoy & Co. permanently closing its operations in March of 2015.

“The continued consolidation of natural food businesses by large corporations and the growing monopoly of distribution by companies like UNFI has led to fewer food choices and higher prices for the consumer. As an example, WholeSoy Plain organic soy yogurt in a 6 oz cup in 2015 sold at Whole Foods for a recommended price of \$1.19, but usually sold for under one dollar. Today, Silk soy yogurt is not organic and sells in most stores for over \$1.79 per 5.3 oz cup.”

Note: Thanks to Kathy Housman and to Anne-Marie Nordquist for each reading the manuscript twice. Address: Sonoma, California.

3061. *SoyaScan Notes*. 2020. Europe’s biggest international food fairs / shows and expositions: ANUGA, SIAL, Helfex, and CIBUS (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** ANUGA and SIAL are held in Cologne (Germany) and Paris (France) respectively on alternating years in October. Each fair lasts for about 6 days, and tickets cost about \$20. Food people and companies come from all over the world to exhibit and see the latest in all kinds of foods and food equipment. ANUGA is held on odd numbered

years (1987, 1989, 1991, etc.) and SIAL on even numbered years (1986, 1988, 1990).

ANUGA (pronounced uh-NEW-guh) stands for *Allgemeine Nahrungs und Genussmittel Ausstellung* (“General exhibition of food and food adjuncts {stimulants / enjoyables}”). Billed as the “World Food Market–Consuma–Gastroma–Technica,” it is held at the Cologne Messe (Exhibition Center) and is sponsored / produced by Messe und Ausstellungs Ges. mbH, P.O. Box 210760, D-5000 Cologne, West Germany. Phone: 221-8210. The first ANUGA fair was held in 1929. Statistics at ANUGA in 1986 were mind-boggling: 200,000 visitors; 5,201 companies exhibiting, from 86 different countries; and what seemed like 50 miles of exhibit space (actually 227,000 square meters).

SIAL (pronounced see-AL) stands for “Salon International de l’Alimentation,” and is also called the ‘International Food and Dairy Exhibition’. The first SIAL was held in Nov. 1964. The permanent address of SIAL is 39 rue de la Bienfaisance, 75008 Paris.

The ‘SIAL d’Or’ (also called ‘Golden SIAL’ or Food Oscar’) gold medal awards, first presented in Oct. 1986, are given for the best new food products in each food category at the AIDA-SIAL International competition judged in Paris in June. The Oscars are a bi-annual competition between 16 nations, including Canada, Great Britain, Italy and the USA. Each country presents products in 7 food and beverage categories: Grocery, alcoholic drinks, non-alcoholic drinks, dairy, deep-frozen, meat / poultry and delicatessen. The retail trade in each country nominates the representative products. At least one soy product, So Good, a soymilk produced by Sanitarium Foods in Australia, has been awarded the Golden SIAL.

Helfex, the International Health Food Trade Exhibition and Convention, is much smaller than the two fairs mentioned above and its scope is much more limited. Held biannually in the spring in the United Kingdom on even numbered years, it is sponsored by the British Health Food Manufacturers Association and the British Health Food Trade Association. The Foreign Agricultural Service (FAS) of the USDA typically has a large pavilion featuring booths representing U.S. health / natural food manufacturers. In 1988 at least 8,000 visitors came to Helfex from 25 countries. About 600 exhibitors were there and the U.S. Pavilion was the biggest booth at the entire show. About 88% of the natural foods products at Helfex ‘88 came from the U.K. The first Helfex was held on 17-19 March 1974 at the Bloomsbury Centre Hotel in London. The tenth Helfex was held on 8-9 April 1990 in Birmingham, England; over 200 companies exhibited in Birmingham. For more information contact the British Health Food Trade Assoc., Angel Court, High Street, Godalming, Surrey, GU7 1DT, England. Phone: 0483-426450. Fax: 0483-426921.

CIBUS (pronounced CHI-bus), the biggest food fair in Italy, is held in Parma in about May each year.

3062. *SoyaScan Notes*. 2020. Dates and locations of NFM Natural Products Expositions (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1992: West–April 10-13, Anaheim, California. More than 13,000 people attended. 1993: East–Sept. 9-12, Baltimore, Maryland.

3063. *SoyaScan Notes*. 2020. Chronology of America’s early macrobiotic and natural food distributors, 1969-1973. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Erewhon: 1966 April–Starts a macrobiotic, natural foods retail store at 303-B Newbury St. in Boston, Massachusetts, founded by Aveline and Michio Kushi, owned by Aveline Kushi, and managed by Evan Root. 1968 Aug.–Erewhon starts to import macrobiotic-quality natural foods from Japan. 1969 spring–Starts selling products wholesale out of the back of its store at Newbury St. 1969 fall–Starts distributing products at wholesale prices to natural foods stores in New England.

Erewhon–Los Angeles: 1969 Sept.–Bill Tara (with support from Aveline Kushi) opens a macrobiotic natural food store named Erewhon–Los Angeles at 8001 Beverly Boulevard in Los Angeles. 1969 Sept.–The company starts importing natural foods from Japan, with shipments arranged by Paul Hawken. That same month, with Bill Tara driving a pickup truck up and down the Pacific Coast, the company starts distributing natural foods to about 10 retail stores.

Westbrae: 1970 May–Ten partners (including Bob Gerner, none of whom had any money) open the Natural Food Works on Olive Drive in Sacramento, California. In July 1970 Bob Gerner starts distributing natural foods to various natural food retail stores in Berkeley, California. Originally his distribution company had no name. In Aug. 1970 Gerner, with his sister, Margaret, and his brother-in-law, Bob Ortiz, founded a new natural foods company named Westbrae Natural Foods at 1336 Gilman St. in Berkeley. The store opened on 2 Feb. 1971 and the distribution company, which was also named Westbrae Natural Foods, continued its operation out of the store.

Essene: 1969 March–Starts a retail store named Essene Macrobiotic Supply at 2031 Samson St. in Philadelphia, Pennsylvania, founded by Denny Waxman and two partners and based on the Erewhon model. 1971 Feb.–Essene Traditional Foods starts distributing natural foods at wholesale prices out of its retail store at 320 South St.

Eden Organic Foods: 1969 Nov. 4–Starts a natural foods store in Ann Arbor, Michigan, managed by Bill Bolduc. 1971 June–Starts to wholesale natural foods out of the back of its retail store at 211 South State Street. 1971 Aug.–Eden Foods starts to distribute its wholesale bulk products, especially in the Detroit area. The company starts to bring in small trailer loads of staples from Arrowhead Mills in Texas. Bill Bolduc and Tim Redmond now run the company.

Laurelbrook: 1971 Aug. 23–Laurelbrook Foods begins as a macrobiotic natural foods wholesale distributor in Forest Hill, Maryland (about 25 miles northeast of Baltimore). The company never moved from its original location, but they kept a post office box (P.O. Box 47) in nearby Bel Air. The company was founded by Rod and Margy Coates.

Shadowfax: 1971. Founded by Charlie Smail in upstate New York as a trucking company. In 1974 they are located at 25 N. Deport St., Binghamton, New York 13901.

Janus: 1972 Jan.–Janus Foods Inc. is established as a macrobiotic and natural foods wholesale and distribution company at 712 Seventh Ave. South in Seattle, Washington, by George Gearhart, Blake Rankin, and Tim Hartman. Distribution starts that month.

Tree of Life: 1971 May–Irwin Carasso opens Tree of Life in St. Augustine, Florida–strongly influenced by the Erewhon model. In May 1972 Feb.–Tree begins distributing natural foods.

Llama, Toucan & Crow: 1973 Jan. Bob Swanson, a clerk at the Good Life (a natural food store in Brattleboro, Vermont) starts to truck natural foods from New York to his store. Soon he starts to distribute natural foods to other natural food stores. In May 1976 Barclay McFadden bought the company and renamed it Llama Trading Co. In 1979 he merged it with Stow Mills.

3064. *SoyaScan Notes*. 2020. People I want to contact to do an interview: Wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Bob Swanson, founder of Llama, Toucan & Crow.

Charlie Smail, founder of Shadowfax.

Parshan Sahota, owner of LifeSource.

Gene Newman of Manna Foods (Scarborough, Ontario, Canada). Who founded the first natural foods distributors headquartered in Canada? Lifestream, founded by Arran Stephens was first I think.

3070. *SoyaScan Questions*. 2020. Questions about the origin and early history of rice cakes in Japan. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** In 1963, in Chico, California, George Ohsawa suggested that the Chico macrobiotic group try making rice cakes (round, made by puffing rice by heating it). He sent them a rice cake machine from Japan and production began in the fall of 1963. Rice cakes soon became Chico-San's first really popular and successful product.

(1) But who invented rice cakes and the device or machine to make them, when, and where in Japan? (2) What was the earliest Chico-San price list or catalog in which rice cakes appear?

3071. *SoyaScan Questions*. 2020. Questions about the history of Chico-San, Inc. in Chico, California. Compiled by

William Shurtleff of Soyinfo Center.

• **Summary:** 1. When did Chico-San first start operation as a business in Chico, California? What did they do and what was their address? Shumway says (1961 Dec. 8): Believers in eating “natural” foods, they have started the “Chico-San” Bakery and plan to share the profits. They will bake breads with no sugar and little yeast.

They also plan to start a restaurant where the menu will show the exact number of calories per serving, and where live music will be provided by group members.

2. Did they ever start that restaurant? If they did, when did it open and at what address? Did it get any reviews in the local paper? How long did it last?

3. When did Chico-San's first imports arrive from Japan? What products were they and where (at what address) did they store them?

4. When and why did Chico-San first move into the basement of a small hearing aid shop in Chico. What was the address and what was the name of the hearing aid shop?

5. At the time of the fire on 14 Sept. 1972, Chico-San's warehouse was located at 1262 Humboldt Ave. in Chico. When and from where did the company move there? What was the size of the building?

An asterisk (*) at the end of the record means that SOYINFO CENTER does not own that document. A plus after eng (eng+) means that SOYINFO CENTER has done a partial or complete translation into English of that document. An asterisk in a listing of number of references [23* ref] means that most of these references are not about soybeans or soyfoods.
