## DEDICATION AND ACKNOWLEDGMENTS

**This book is dedicated to ADM (Archer Daniels Midland Co.) and to Dwayne O. Andreas.**

Part of the enjoyment of writing a book lies in meeting people from around the world who share a common interest, and in learning from them what is often the knowledge or skills acquired during a lifetime of devoted research or practice. We wish to give deepest thanks...

Of the many libraries and librarians who have been of great help to our research over the years, several stand out:

University of California at Berkeley: John Creaser, Lois Farrell, Norma Kobzina, Ingrid Radkey.

Northern Regional Library Facility (NRLF), Richmond, California: Martha Lucero, Jutta Wiemhoff, Scott Miller, Virginia Moon, Kay Loughman.

Stanford University: Molly Molloy, who has been of special help on Slavic-language documents.

National Agricultural Library: Susan Chapman, Kay Derr, Carol Ditzler, John Forbes, Winnifred Gelenter, Henry Gilbert, Kim Hicks, Ellen Knollman, Patricia Krug, Sarah Lee, Veronica Lefebvre, Julie Mangin, Ellen Mann, Josephine McDowell, Wayne Olson, Mike Thompson, Tanner Wray.

Library of Congress: Ronald Jackson, Ronald Roache.

Lane Medical Library at Stanford University.

Contra Costa County Central Library and Lafayette Library: Carole Barksdale, Kristen Wick, Barbara Furgason, Sherry Cartmill, Linda Barbero.

Harvard University's Five Botanical Libraries (especially Arnold Arboretum Library): Jill Gelmers Thomas.

French translation: Martine Liguori of Lafayette, California, for ongoing, generous, and outstanding help since the early 1980s. Dutch translation: Sjon Welters. French translation Elise Kruidenier. German translation Philip Isenberg,

Japanese translation and maps: Akiko Aoyagi Shurtleff.

Loma Linda University, Del E. Webb Memorial Library (Seventh-day Adventist): Janice Little, Trish Chapman.

We would also like to thank our co-workers and friends at Soyinfo Center who, since 1984, have played a major role in collecting the documents, building the library, and producing the SoyaScan database from which this book is printed:

Irene Yen, Tony Jenkins, Sarah Chang, Laurie Wilmore, Alice Whealey, Simon Beaven, Elinor McCoy, Patricia McKelvey, Claire Wickens, Ron Perry, Walter Lin, Dana Scott, Jeremy Longinotti, John Edelen, Alex Lerman, Lydia Lam, Gretchen Muller, Joyce Mao, Luna Oxenberg, Joelle Bouchard, Justine Lam, Joey Shurtleff, Justin Hildebrandt, Michelle Chun, Olga Kochan, Loren Clive, Marina Li, Rowyn McDonald, Casey Brodsky, Hannah Woodman, Elizabeth Hawkins, Molly Howland, Jacqueline Tao, Lynn Hsu, Brooke Vittimberga, Tanya Kochan, Aanchal Singh.

Special thanks to: Tom and Linda Wolfe of Berwyn Park, Maryland; to Lorenz K. Schaller of Ojai, California; and to Wayne Dawson (genealogist) of Tucson, Arizona.

■ For outstanding help on this ADM book we thank: Lowell Andreas, Simon Bailey, Clyde Boismenu, Robert Boyer, Steve Buchheim, Richard E. Burket, Greg Caton, Daniel Chajuss, Chr. Daems, Walter Daenzer, Wayne Dawson, Joseph Eichberg, Ronald Ferrari, Peter Fitch, John Holt, Monty Kilburn, Lee Lensch, John Mahlich, Philip Marshall, Vinod K. Mehra, Edwin M. Meyer, Sonia Newhouse, E.B. Oberg, John Patel, Dave Perkins, Ray Pierce, William Pringle, Neil Rabheru, Robert Rich, Peter Roberts, Daniel Sheehan, Jeanne Seibert, Oak B. Smith, George M. Strayer, Randae VanDenover, Dick Wallace, Armin Wendel, Walter J. Wolf.

■ Finally our deepest thanks to Tony Cooper of San Ramon, California, who has kept our computers up and running since Sept. 1983. Without Tony, this series of books on the Web would not have been possible.

This book, no doubt and alas, has its share of errors. These, of course, are solely the responsibility of William Shurtleff.

■ This bibliography and sourcebook was written with the hope that someone will write a detailed and well-documented history of this subject.

# INTRODUCTION

## Brief Chronology/Timeline of ADM

**1884** – George A. Archer (who was born in 1850 in Dayton, Ohio, and worked in Dayton as a partner for 10 years in the linseed firm headed by his father), decides in 1884 to move west to Yankton, South Dakota, to be nearer the source of flaxseed. In 1884 he opens his own linseed factory in Yankton, and founds Archer & Co. In 1889 Mr. Archer moves his business to Minneapolis, Minnesota, and sells the factory to American Linseed Co. (*Minneapolis Star Tribune*, 1932. Nov. 13, p. 1, 6).

**1900 Sept. 26** – “Midland Linseed Oil company of Minneapolis, having a capital stock of \$400,000, has filed articles of incorporation with the secretary of state. The work of the company will be the manufacturing of linseed oil and other products of flax seed, the buying, selling and shipping of flax seed and its products.” (*Mower County Transcript* {Lansing, Michigan}, p. 8). It “will compete with the American Linseed Company, the trust” (*Chicago Tribune*. 1900. Oct. 2, p. 9).

**1902** – ADM dates its founding from this year – in many anniversary documents in later years. It was in 1902 that the Archer-Daniels Linseed Co. was organized and started operations at Minneapolis (*Decatur Herald*, 1939 Dec. 31; *Soybean Digest*. 1952, Nov. p. 22; Dick Wallace, 1981, Sept. 11. Personal communication; *Inform*. 2003. Sept. (“ADM celebrates 101 years”); History of ADM. 2016 & 2020 (on ADM website); Wikipedia ADM (retrieved 2020 July 22).

**1904** – Mr. Archer joins with John W. Daniels to organize the Archer-Daniels Co. On 7 Feb. 1905 it was voted to take the necessary steps toward changing the firm’s name to the Archer-Daniels Linseed Company. George A. Archer, who owned 50% of the company, was president. “When the Archer-Daniels Linseed Company was formed in 1905, John W. Daniels was 47 years old and George A. Archer was 55” (Marion Cross. 1954, p. 23-25).

**1911 June 29** – The Midland Linseed Oil Co., Minneapolis, plans to build a linseed oil mill on the water front of the Jersey side of the Hudson River. E.C. Warner is president of the company. The mill, which will contain 48 presses, is expected to cost about \$650,000. The new mill points to increased imports of flaxseed in the future (*Wall Street Journal*, p. 5).

**1911 Aug. 29** – Midland Linseed Oil company is renamed Midland Linseed Oil **Products** company as its capitalization

is increased to \$5,000,000 by E.C. Warner, Walter D. Douglas, George F. Piper, and Arthur L. Bisbee (*Oshkosh Northwestern* {Wisconsin}, p. 9; *Chicago Tribune*, p. 12).

**1918 March 4** – Dwayne Orville Andreas is born in Worthington, Nobles County, Minnesota, the 5<sup>th</sup> child (and 4<sup>th</sup> son) of Reuben Peter Andreas and Lydia Barbara Stoltz. The family lived a simple Mennonite life. The children were raised with something akin to Mennonite discipline – no movies, no Sunday papers, no ball games on Sundays, a surfeit of religious devotions, and unending hard work.

**1920 July 7** – The U.S. Department of Justice files a suit under the Sherman anti-trust law alleging price fixing of linseed oil against the linseed oil trust – all the big flaxseed oil crushers. The Justice Department assails the industry’s “open price plan” (*New York Times*, p. 23).

**1923 May 22** – The Archer-Daniels-Midland Company is organized to take over the plants of Midland and the assets of Archer-Daniels Linseed Company and the Midland Linseed Products Company. The new corporation, with total assets exceeding \$11,000,000, incorporated in Delaware, will control about 35% of the linseed mill capacity in the United States (*Wausau Daily Herald* {Wausau, Wisconsin}, p. 10); \$5,000,000 is expected to be raised in a major public stock offering (*Star Tribune*, April 24 {Minneapolis, Minnesota}, p. 22; *Cincinnati Enquirer*, April 24, p. 14).

It will become world’s largest producer of linseed oil. Its nine mills contain a total of 334 flaxseed presses. After the merger, the other two largest flaxseed crushers in America were Spencer Kellogg and Sons, Inc., of Buffalo, and the American Linseed Company, owned by Rockefeller interests. (Marion Cross. 1954. p. 34-37, p. 39).

“New York, July 10 [1923] – The Archer-Daniels-Midland Co. has declared an initial dividend of \$0.75 on the preferred stock, payable August 1 to holders of record July 20.”

The new corporation soon has two listings on the New York Curb Exchange: “Archer Dan Midland” sells for about 39. “Archer Dan Mid pfd” [preferred] sells for about 98.

Note: In 1953 The New York Curb Exchange changed its name to the American Stock Exchange (AMEX).

**1924 Feb. 24** – Lowell Willard Andreas is born in Lisbon, Linn County, Iowa, the 6<sup>th</sup> and youngest child of Reuben Peter Andreas and Lydia Barbara Stoltz. He was about 2 years younger than Dwayne.

**1927** – Reuben Andreas, Dwayne’s father, enters the grain

business when he takes over a bankrupt grain, coal and seed business – with a mortgage from the Lisbon National Bank. Dwayne is about age 10.

**1928** – ADM acquires the Toledo Seed & Oil Co. On March 11, 1929, the company announces that it will enlarge its plant to make soy bean oil (*Wall Street Journal*. 1929. March 11, p. 5).

**1928** – ADM acquires the William O. Goodrich Co. located in Milwaukee, Wisconsin (Dick Wallace. 1981. Sept. 11. Personal communication)

**1929** – During this year “ADM took two more extremely significant steps toward diversifying its manufacturing activities. Converting the Toledo [Ohio] and Chicago plants to the crushing of soybeans did not seem momentous at the time because the United States was just becoming aware of the potential value of the soybean.” A photo (facing p. 40) shows the ADM soybean processing plant in Chicago, Illinois (Marion Cross. 1954. p. 40; *Wall Street Journal*. 1929, March 11, p. 5).

**1934 March** – ADM begins operating the first large-scale continuous solvent extraction plant in the USA in Chicago, Illinois. The plant used a “Hildebrandt” extractor to process 100 tons/day of soybeans. The solvent was petroleum naphtha of the hexane type. This ADM plant represented a “turning point and marked the beginning of the large scale edible oil extraction industry as it is known today.” Installations of other large-capacity continuous solvent extraction plants followed in rapid succession: 1934 Nov. – The Glidden Company, Chicago, Illinois. 1937 Nov. – The Central Soya Co., Decatur, Indiana. 1938 Oct. – Honeymead Products Co., Cedar Rapids, Iowa (*Oil Mill Gazetteer*. 1947. Aug. p. 17-21, 35-43).

**1934 June** – ADM starts making food grade lecithin (Dick Wallace. 1981. Sept. 11. Personal communication).

**1935** – James W. Hayward, PhD, becomes director of the new department of nutritional research of the soybean division of Archer-Daniels-Midland Co. at Milwaukee, Wisconsin. He went to ADM immediately after earning his PhD degree in animal nutrition from the University of Wisconsin. He is known worldwide as a leading authority on the use of soybean oil meal in livestock feed (*Soybean Digest*. 1951. Sept., p. 22).

**1935 fall** – After graduating from high school in only 3 years, Dwayne enrolls in Wheaton College, Illinois. His mother hoped that he would be a minister. But he dropped out near the end of his 2<sup>nd</sup> year, thus ending his formal education. Later that year he married Bertha Benedict (whom

he met at Wheaton) in St Lucie County, Florida; he was age 18 and she was 21. They had two children: (1) Terry Lynn Andreas, born about 1943 – place unknown; (2) Sandra Ann Andreas – date and place of birth unknown. On 9 July 1967 Sandra married William G. McMurtie in Washington, D.C. In 1981 she first traveled to India and became Mother Teresa’s faithful acolyte.

**1935** – ADM starts making whole (full-fat) soy flour (Dick Wallace. 1981. Sept. 11. Personal communication).

**1937** – Dwayne Andreas enters the family business.

**1938** – Dwayne Andreas is sent to the Staley Company in Decatur, Illinois, to buy a year’s supply of soybean meal. After completing the deal, Mr. Staley, who was about 80 years old, invited him out to lunch. Mr. Staley said, “Young man, it’s foolish for you to come down here to buy soybean meal. You should build your own plant in Iowa.” Dwayne said, “Mr. Staley, I don’t have that kind of money.” He replied, “Go to Allis-Chalmers (the equipment manufacturer) in Milwaukee and they’ll send you a soybean plant 5% down. Give them my name as a reference.”

Three days later Dwayne started to build a soybean processing plant in Cedar Rapids, Iowa (*Herald and Review* {Decatur, Illinois}. 1999. March 7, p. 55).

**1939 Sept.** – ADM starts to operate its massive soybean crushing plant in Decatur, Illinois (*Decatur Herald*. Jan. 11, p. 1; *Proceedings of the American Soybean Association*. [Sept.] p. 9).

**1939 Sept.** – ADM is now making “soybean pellets” (*Proceedings of the American Soybean Association*. p. 9).

**1939** – The Andreas family opens Honeymead Products Co. Inc. in Cedar Rapids, Iowa (*Herald & Review*. 1999. March 7, p. 1).

**1940 Sept. 28** – The Federal Trade Commission charges the American Lecithin Co., ADM, and several others with “restraint of trade” in the field of lecithin. Thus, ADM is making lecithin by this time (*Minneapolis Star* {Minnesota}, p. 15). On 20 May 1941 it ordered the group to cease and desist (*Federal Register*, p. 2478-80).

**1942** – Cargill Purchases the Iowa Milling Co. The grain milling plant at 411 Sixth Street NE caught fire in October 1944. Lawrence Hoskins, manager of the plant, said there were no [soy] beans or oil in the mill or in the huge concrete storage tanks. Old stock was gone and the new bean crop had not yet come in, but the facility was gutted...

**1945 June 1** – Cargill buys the Honeymead soybean crushing plant in Cedar Rapids, Iowa for an estimated \$2.5 million. This feed and soybean processing plant is situated at 850 Tenth street SW. Dwayne O. Andreas has resigned as vice-president of Honeymead and will become general manager of the Cedar Rapids operations of Cargill. Cargill's new plant in west Cedar Rapids has about 100 employees. The plant has a daily soybean processing capacity of 4,300 bushels, manufactures 200 tons of feed daily and has a bulk grain storage capacity of 700,000 bushels. The Honeymead company will retain its main office here and continue operation of feed and soybean processing plants at Spencer and Washington, Iowa.

**1945** – Honeymead earns \$150,000 a year after taxes, with Dwayne largely running the family business. Sold out to Cargill, Inc. when Dwayne thought he was going to have to serve in the Army. Dwayne has a net worth of \$2.5 million at age 27 (*Herald & Review*. 1999. March 7, p. 1).

**1945-1952** – Dwayne Andreas is vice president of Cargill. He has grown up running soybean crushing plants with his father and brother in Cedar Rapids, Iowa, In 1945 he becomes associated with Cargill, Inc. at its headquarters in Minneapolis. That same year he was elected assistant vice president, and in 1946 a vice president. He was hired by Cargill to develop its vegetable oil processing and refining division to include flaxseed processing (Whitney Eastman. 1968, p. 53-54).

**1946 March** – ADM is now using the tagline “Creating new values from America’s harvests” (*Soybean Digest*. p. 34).

**1949 Oct. 31** – The ticker tape symbol of the Archer-Daniels-Midland Co., on the New York Stock Exchange, was changed to “ADM” from “ADD” (*Barron's National Business and Financial Weekly*, p. 11).

**1951** – “Chemurgy is success factor at A-D-M.” “Archer-Daniels-Midland Company has emerged as the nation’s largest producer of vegetable oils, and as one of the world’s largest processors of farm-crops. Directly this growth can be traced to the application of the principles of Chemurgy, for the company has held fast to its slogan, ‘creating new values from America’s harvests through chemical research.’”

In the company’s 149-year history, it has never finished a year in the red, “and hasn’t skipped a dividend since 1927. As of June 30, 1950, the company was a \$250,000,000 a year business with no bank loans, bonds, notes, or preferred stock, and a net worth of \$80,000,000.” During the last 5 years alone, over \$30 million has been invested in new plants, including a “modern soybean solvent extraction plant that began operating in Mankato, Minnesota, crushing soybeans in Oct. 1950” (*Chemurgic Digest*. 1951. Feb., p. 4).

**1953-1960** – Dwayne Andreas is Honeymead’s executive and chief shareholder.

**1952** – Dwayne Andreas “retires” from Cargill to be able to devote more attention to Honeymead Products Company, a rapidly expanding business owned by Dwayne and his brother, Lowell. For a while, Honeymead was operating [in Mankato, Minnesota] one of the largest soybean processing plants in the USA – or the world. In 1960 the Andreas brothers sold the Honeymead plant to Farmers Union Grain Terminal Association (GTA) – a farmers’ cooperative (Whitney Eastman. 1968, p. 53-54).

**1956** – Dr. James W. Hayward retires as Director of Nutritional Research for ADM when the position of Director of Nutrition was created for him. He worked in this position until the late 1950s. In the early 1960s he worked as a consultant for ADM (Dick Wallace. 1981. Sept. 11. Personal communication).

**1957 July 1** – ADM acquires a soy protein isolate plant from The Drackett Co. William Atkinson goes to ADM as part of the deal. At ADM Atkinson invents TVP – a registered trademark that stands for textured vegetable protein. That plant, located in Evendale [near Cincinnati] Ohio, made only industrial (not edible) soy protein isolates (Dick Wallace. 1981. Sept. 11. Personal communication).

**1960** – Dwayne & Lowell Andreas organize Interoceanic Industries, Inc. – later renamed First Interoceanic Corporation – to act as a family investment corporation for their far-flung activities (Eastman 1968).

**1960-1966** – Dwayne Andreas is executive vice president of Farmers Union Grain Terminal Association, a cooperative.

**1960 abt.** – ADM introduces Adpro 410: A low viscosity, readily soluble isolated soy protein for industrial use (undated brochure).

**1962 April** – Archer Daniels Midland Co. introduces a new trademark and decides to consistently call itself “ADM” (*Soybean Digest*, p. 27).

**1965** – This year’s annual report shows that ADM has had decreases in net income (profit) for four years in a row – from \$4.421 million in 1962 to \$2.765 million in 1965. It’s time to make some big changes. To his great credit, Shreve “Bud” Archer, Jr. of ADM offered to sell Dwayne and Lowell Andreas a block of ADM stock – 100,000 shares at about half its book value, for a total of \$3.3 million – which amounted to effective control of the company, if they would agree to come in and run it – a company that was in decline,

had too many workers and was very poorly managed. Dwayne and Lowell saw ADM as a company with great potential if they could turn it around. (*Wall Street Journal*. 1972. Jan. 18. p. 26; Lowell Andreas. 2003. Personal communication).

**1965** – British Arkady first produces TVP for ADM (Dick Wallace. 1981. Sept. 11. Personal communication; W. Pringle, 1990. May 30. Personal communication).

**1966 early** – Dwayne and Lowell Andreas join ADM. Dwayne joins the board and executive committee. Early the next year Lowell Andreas becomes executive vice president in the newly created office of the president, where he formally shares authority with John Daniels (*Fortune*. 1973. Oct. p. 136-41; *Herald & Review*. 1999. March 7. “Life Line”).

Through First Interoceanic Corp. they buy 100,000 shares of ADM stock, later extending their holdings to 181,900 shares. Dwayne owned 60% of the block of stock and Lowell owned 40%. Both Dwayne and Lowell moved to Minneapolis, where ADM was headquartered. Lowell stayed there for 1 year. Both men quickly realized that ADM needed “total reorganization.”

**1966 Dec.** – The word “TVP” is first mentioned in a publication (*Soybean Digest*, p. 14). The patent application was filed by the inventor, William T. Atkinson, on 7 March 1969, and U.S. Patent No. 3,488,770 was issued on 6 Jan. 1970. ADM refers to this patent number as the one governing TVP®.

**1965-66** – ADM starts producing cereal-soy blends such as CSM and WSB (Dick Wallace. 1981. Sept. 11. Personal communication).

**1967 April** – ADM sells all of its chemical operations for \$65 million. With this money the company catches up on a generation of soybean processing technology it has missed, renovating its two soybean plants at Decatur, increasing the capacity of one to 4,000 tons a day (keeping it the largest in the world). Over a 3-year period, ADM’s soybean crushing capacity is increased from 50 million to 120 million bushels a year.

**1967** – ADM enters the barge freight business.

**1968 June** – ADM announces that the headquarters of two of its divisions – soybean and food products – will be moved from Minneapolis to Decatur, Illinois. The relocation was actually completed in **1969**.

**1968** – ADM acquires Ross & Rowe, Inc., makers of Yelkin lecithin since at least 1931, for 6,000 shares; it becomes a

wholly-owned subsidiary of ADM (Pho, V.H. 2002. p. 64-66; *Minneapolis Star Tribune*, p. 70).

**1969** – ADM finishes moving its headquarters from Minneapolis, Minnesota, to Decatur, Illinois. Later in 1969 John Daniels moves to chairman of the board and Lowell Andreas becomes president of ADM (*Herald & Review*. 1999. March 7. “Life Line”).

**1970** – Dwayne Andreas is named chief executive officer (CEO) of ADM.

**1970** – ADM starts making bacon-flavored TVP (Dick Wallace. 1981. Sept. 11. Personal communication).

**1972 Feb.** – Lowell W. Andreas steps down as president of ADM. He said he would, when he reached age 50, at about the time he joined the company in 1965 (*Wall Street Journal*. 1972. Jan. 18. p. 26).

**1972** – Dwayne Andreas is elected chairman of the board at ADM. He is credited with transforming the firm into an industrial powerhouse. Andreas remains CEO until 1997 before his nephew G. Allen Andreas was named to this position. (ADM website). He was one of the most prominent political campaign donors in the United States, having contributed millions of dollars to Democratic and Republican candidates alike (Frontline, via Wikipedia 2020. July).

**1973 Jan. 15** – ADM acquires 50% of British Arkady Holdings Ltd. and simultaneously acquires its subsidiary British Arkady Co. of Old Trafford, Manchester, England. British Arkady Holdings Ltd. is the important company since it owns all of the subsidiaries, such as the Haldane Group. Also in 1973 British Arkady starts to make TVP in Manchester in 3 flavors: TVP Mince 120, TVP Mince 240, and TVP Chunk 10. The products are sometimes called “soya meat” or “vegetable meat.”

**1973 Oct.** – “Dwayne Andreas’s bean has a heart of gold,” by Ross Irwin is published in *Fortune* magazine. One of the best articles and histories seen on Dwayne Andreas and A-D-M. In the 7 years since Andreas took over the leadership of A-D-M, he has nearly tripled sales (from \$371,626,000 in fiscal 1967 to \$967,710,000 in fiscal 1973) and quintupled operating profits (from \$3,225,000 to \$16,895,000). Meanwhile, the price of the stock has nearly quadrupled.

**1974** – ADM acquires British Arkady (Dick Wallace. 1981. Sept. 11. Personal communication).

**1974** – ADM in Brazil.

1974 acquired; soybean processing, edible oil refinery; Technologia Tecnologia em Vegetais e Proteinas SA / 50%

1974 acquired / soybean processing, edible oil; ADM do Brasil Produtos Agrícolas

Source: Burbach & Flynn. 1980. p. 255.

**1976** – ADM starts making soy protein concentrate and textured soy protein concentrate; the latter was initially named TVP/2 (Dick Wallace. 1981. Sept. 11. Personal communication).

**1976** – ADM is now using a new tagline “Where the people who feed the world buy their groceries.”

**1980** – ADM’s net earnings are \$115,958,000 on net sales and other operating income of \$2,802,011,000.

**1980** – ADM Foods is formed (Dick Wallace. 1981. Sept. 11. Personal communication).

**1982** – ADM sponsors three television ads for TVP on two widely-watched Sunday-morning programs. Also sponsors a major print-ad campaign. “Over 200 million lb of TVP have been used to date in over 1,000 different consumer products.”

“Malthus said it would take a miracle to feed the world. Here it is’ – the soybean.” (*Soyfoods* magazine. 1982. Summer. p. 51, 53).

**1982 Dec.** – ADM buys 80% of Alfred C. Toepfer International (ACTI), a grain trading firm based in Germany. With this, ADM became a multinational grain trader. In 2014 ADM International purchased the remaining 20% of the company.

**1985 March** – British Arkady acquires Direct Foods Ltd., the first soyfoods company it buys. Since ADM owns British Arkady, Dwayne Andreas approves (directly or indirectly) each acquisition. Anna and Peter Roberts, the founders and owners of Direct Foods, Ltd., were buying Arkady’s TVP in bulk, then packing it into small domestic retail packs. Direct Foods thus becomes the first member of what would become the Haldane Foods Group. Having gotten into this business, Arkady liked what they were doing, so they began to look at other ways of adding value to textured protein (John Mahlich. 1994. March 6. Personal communication).

**1986 Feb.** – British Arkady acquires Vegetarian Feasts Ltd. Sonia Newhouse was selling frozen meatless entrees with no additives or artificial ingredients, with TVP as the main ingredient. This company put Arkady in the frozen food business (John Mahlich. 1994. March 6. Personal communication).

**1987 June** – “British Arkady purchases Societe Industrielle des Oléagineux, better known as S.I.O. This long established

French company has a factory in Aras and offices in Paris. Its principal activities include the milling of full-fat and defatted soy flours, and the manufacture of specialty oils for the food industry” (ADM Annual Report, 1987 [Dec.]).

**1987 Aug.** – The British Arkady Group acquires Haldane Foods Ltd., which owned The Regular Tofu Company. Haldane Foods had the best factory and offices in the still nameless group, and it was the biggest of the companies Arkady had acquired, and the one with the nicest sounding name. So British Arkady coined the name Haldane Foods Group Ltd., and began to use it as the first name for the new group of companies. With each new acquisition, Peter Fitch continued to be the Director General Manager leading the Group (John Mahlich. 1994).

**1987** – British Arkady acquires Vegetarian Cuisine Ltd., which basically was doing the same sorts of things as Vegetarian Feasts. Vegetarian Cuisine had a nice factory in Coventry, whereas Vegetarian Feasts had a factory in London that was very expensive. John Mahlich saw the opportunity to put the two into one manufacturing unit and to reduce costs by sharing them (John Mahlich. 1994).

**1987 Dec. 31** – ADM acquires the rest of Arkady Holdings Ltd. so that it now owns 100% (John Mahlich. 1994).

**1988 Sept.** – Haldane Foods Group acquires Realeat Foods Ltd. Gregory Sams was making dry vegeburger mix and frozen vegeburgers, but with 3-4 middlemen each taking a cut. So by tidying that all up and bringing it in house, Arkady had the chance to improve Realeat’s financial status (John Mahlich). In 1990 The Realeat Company released: The 1990 Realeat survey 1984-1990: “Changing attitudes to meat consumption” [in Great Britain]. This was the 7<sup>th</sup> consecutive survey (Greg Sams).

**1989 Feb.** – Haldane Foods Group acquires Kwalitty Foods, which it renamed Saucemasters Ltd. The company basically makes noodle- or rice-based vegetarian snack meals that contain textured protein and dried vegetables with a sauce sachet in each plastic cup. You pour hot water into the cup, leave for 4 minutes, and you have a very convenient and nutritious meal. This type of product is big business in England (John Mahlich).

**1989 March** – Handane Foods Group acquires Genice Foods Ltd. Pronounced JEN-ice, it makes non-dairy ice creams, yogurts, and margarines. “By this time we were deeply into the healthy food, health food, vegetarian business.” Though this was the Group’s first company to make non-dairy products, it fit well because their products were basically made from soya – either soyamilk or soya protein isolates. “Not only were we developing a group of interesting

companies that can make some profit, but we were also signaling to a very large audience that maybe others (such as the many food manufacturers who have been hesitant to use soya) should get into the soya business. And ADM likes that, because the more it is obvious that soya is here to stay and that it has multitudinous uses, the more Dwayne Andreas's dream will come true. (John Mahlich).

**1989** – ADM's new tagline is "Supermarket to the world" (*Des Moines Register*. 1989. Feb. 5; 1992 Annual Report).

**1989?** – British Arkady Co. Ltd. starts making TVP2 – Textured soy protein concentrate. And Arkady Sparkle – Granular Soya Protein Concentrate.

**1990 Dec.** – The Haldane Group purchases Unisoy, a small soya company which was for sale and which made soymilk (John Mahlich).

**1991?** – The Haldane Group purchases Granose Food Company. "Granose had built a brand new and beautiful factory which was about 40 miles north of London, and that fit it very well to the growth and pattern that we were following." So the Haldane Group moved the center of their operations out of the Haldane factory and into the Granose factory, where it now is. Granose was selling soymilk that was being imported from a German manufacturer [DE-VAU-GE]. The Haldane Group decided to discontinue these imports, and now Unisoy is making all of the soymilk for Granose that used to be imported from Germany. The quality of Unisoy's soymilk is definitely as good as the German-made product, and now Granose has added many new soymilk products to its range.

The various products sold by the companies in the Haldane Group are being made in five factories: the Unisoy factory (soymilk), the Genice factory (non-dairy yogurts, ice creams, and margarine), the Haldane factory (which makes all dry mixes), and the Granose factory (which makes frozen burgers and many other non-dry products). The Group also makes unique skinless sausages

"The main thing to remember is that this is all part of ADM, it has all been approved by Dwayne Andreas and the ADM board, and it's very much in line with ADM's philosophy." Dwayne believes that soy products will play a key role in feeding this world. "To Dwayne, that is a mission" (John Mahlich).

**1990 Sept.** – ADM starts to sell Midland Harvest Harvest Burgers – Frozen, plant-based. By May 1992, some 4,500 per day are sold at one restaurant in Moscow (*Direct Marketing*. 1993. Sept. p. 23-26).

**1993 Oct.** – ADM starts to sell its meatless Harvest Burger through the Green Giant Div. of Pillsbury. They are sold at

many U.S. supermarkets. ADM's 1997 Annual Report says that more than 100 million Green Giant Harvest Burgers have been sold (p. 19).

**1994 Nov.** – Michael Andreas, son of Dwayne O. Andreas and heir apparent, is now vice chairman of ADM's board of directors and executive vice president. He observes astutely: "Over the last 15 years, however, I observed the following. Ten million acres of soybeans disappeared from the U.S., while areas in Argentina and Brazil increased 14 million acres where land was cheaper and subsidized credits were available. An additional 18.7 million oilseed acres were planted in Canada and Europe, again with heavy subsidies. Twenty-two soybean factories [crushing plants] were closed in our country, while fifty sprung up in South America and Europe. Our share of the world market in soybean products was cut in half. In fact, over 20,000 soybean farmers left the business, and 50,000 jobs were lost at home" (ADM's *First quarter report to shareholders*).

Note: Bonnie Wittenburg (March 1995) says that all operating divisions of ADM have reported to Michael ("Mick") Andreas for the past 3 years, and he apparently has major input on expansion plans and capital investment. A workaholic, he "joined ADM in 1971 after receiving a bachelor's degree in business from Northwestern University. At ADM he has worked as a commodity merchandiser in the United States and in Brussels, Belgium. He is said to love trading and he continues to keep a desk on the trading floor at ADM; it is not unusual to spot him there. Mick Andreas is past president of ADM's soybean processing division and has generally supervised ADM's commodity trading and marketing worldwide since 1980."

**1995 June 12** – ADM sells its British Arkady bakery ingredient business to Unilever, but keeps the Haldane Food Group and other parts of British Arkady (Doug Schmalz. 1995. July 19. Personal communication).

**1995 Sept.** – Construction of increased isolated soy protein capacity was begun at Europoort (The Netherlands) and in the USA. "Low-nitrite ProFam 781 [soy protein isolate] was successfully introduced into the European infant formula market during the past year" (ADM annual report).

**1995 Oct. 27** – A long article in the *Wall Street Journal* titled "Risk averse," by Scott Kilman et al. states that ADM is a major beneficiary of federal price supports for sugar (they make ADM's high-fructose corn sugar an economical product) and of the 54-cent-a-gallon excise tax break on ethanol (since ADM is the dominant producer of the corn-based fuel additive). Mr. Andreas helps preserve these twin towers of legislative largesse by hedging. ADM leads corporate America in contributing to both political parties. "Since 1981, the company has given more than \$800,000 to

the Democratic Party and more than 1.5 million to the GOP” (Republican Party).

Pie charts show that ADM is the market leader in four major U.S. markets, controlling an estimated 35% of all corn refining, 31% of high-fructose corn syrup, 28% of oilseed [mainly soybean] processing (followed by Cargill 25%, Bunge 16%, Ag Processors 14%, Central Soya 10%, and others 7%), and 26% of wheat milling.

**1996 Jan.** – The U.S. Department of Justice is investigating ADM for antitrust violations. The company is facing a shareholder revolt, and demands for a board of directors with less insider influence (*Wall Street Journal*. 1996. Jan. 16).

**1996 Oct.** – A sweeping federal investigation leads to a \$100 million fine for price fixing against ADM – a record penalty in a criminal antitrust case at the time. ADM was alleged to have been involved in an international scheme to fix the prices of lysine and citric acid, however ADM never admitted wrongdoing. Of the \$100 million, \$70 million was in connection with lysine and \$30 million in connection with citric acid (*Wall Street Journal*. 1996. Oct. 15, p. A3; Standard & Poor’s stock report on ADM. 1997. Jan. 11; *New York Times*. 2000. Dec. 24 and 2016. Nov. 16).

**1996** – ADM changes its top management structure from having a CEO to having a four-person Office of the Chief Executive. With Dwayne Andreas, the team includes ADM President James Randall; Charles Bayless, president of ADM’s soybean division; and G. Allen Andreas, counsel to the board’s executive committee and a nephew of Dwayne Andreas (*Herald & Review*. 1999. March 7. “Life Line”).

**1997 April 18** – Dwayne Andreas, age 79, is surrendering his long-held post as CEO to a nephew, G. Allen Andreas, age 53. Andreas will continue as chairman but ADM officials expect him to play a much diminished role in the company he has run since 1970. Mr. Andreas said he was willing to give up this position in part because he hasn’t directly supervised ADM’s daily operations for years; rather he has concentrated on mapping ADM’s long term strategy (*Wall Street Journal*, p. B17 (West); Steve Buchheim. 1997. Personal communication).

**1997 Nov.** – ADM introduces Novasoy (soy isoflavones).

**1999 Jan. (winter)** – *ADM Nutrition & Health Update*, a glossy 4-6 page newsletter, starts to be published by ADM’s Nutraceutical Division. Two months earlier the U.S. FDA had issued its Soy Health Claim.

**1999 Jan. 25** – Dwayne Andreas’ request to step down as chairman of the board is accepted by the ADM board of directors. He will remain on the board and serve as chairman

emeritus. G. Allen Andreas (nephew of Dwayne Andreas) is chosen by the board to replace Dwayne as chairman of the board (*Herald & Review*. 1999. March 7; *New York Times*. 2000. Dec. 24).

**1999 April** – ADM introduces Pro Fam isolated soy proteins. “This is the first of a new generation of purified soy protein products. Very low flavor, very low odor, and protein functionality greater by a magnitude than anything else available” (ADM spec. sheet).

**1999 July 12** – Michael D. Andreas, age 50 and son of ADM chief Dwayne Andres, is sentenced to 2 years in jail and fined \$350,000 (*Wall Street Journal*. p. A4).

Michael Andreas’ term was later extended by a year after the government appealed. Before his conviction, Andreas was considered the heir apparent to his father, ADM chairman, Dwayne Andreas (*Chicago Tribune*. 2001. Dec. 20. “Andreas released to halfway house”).

**2001 Dec.** – Dwayne Andreas retires from ADM’s board of directors, after having been on that board for 35 years. He agrees to serve as chairman emeritus (*ADM this quarter: First quarter report to shareholders*. 1 page insert).

**2000** – ADM partners with Wilmar International Ltd. to construct five soybean crushing plants in China (*World Grain*. 2003. May. p. 12).

**2001 June** – ADM unveils a new corporate logo designed to underscore the company’s deep commitment to nature and global agriculture. The matching tagline is “The Nature of Things to Come.”

ADM pays its 300th cash dividend and 280th consecutive quarterly payment, a record of seventy years of uninterrupted stock dividends (*ADM Nutrition and Health Update*. 2001. Vol. 3, No. 1).

**2001** – Paul B. Mulhollem becomes president of ADM. Under his guidance, the company was the first U.S. company to sign a contract with Cuba since the embargo against Cuba was imposed October 1960 (“So You Want to Buy a President.” 1996. Frontline on PBS).

**2002** – In his PhD dissertation Van H. Pho writes (p. 63-73) a case study of ADM. The centerpiece of this study is Table 5 titled “Summary of Archer-Daniels-Midland business activity” (July 1923 to July 1998).

**2006 May** – Patricia A. Woertz is named CEO and President of ADM. (ADM website). Before coming to ADM she was with Chevron (*Chicago Tribune*, 2014. Nov. 6).

**2006 Dec. 8** – The Haldane Foods Group is acquired by

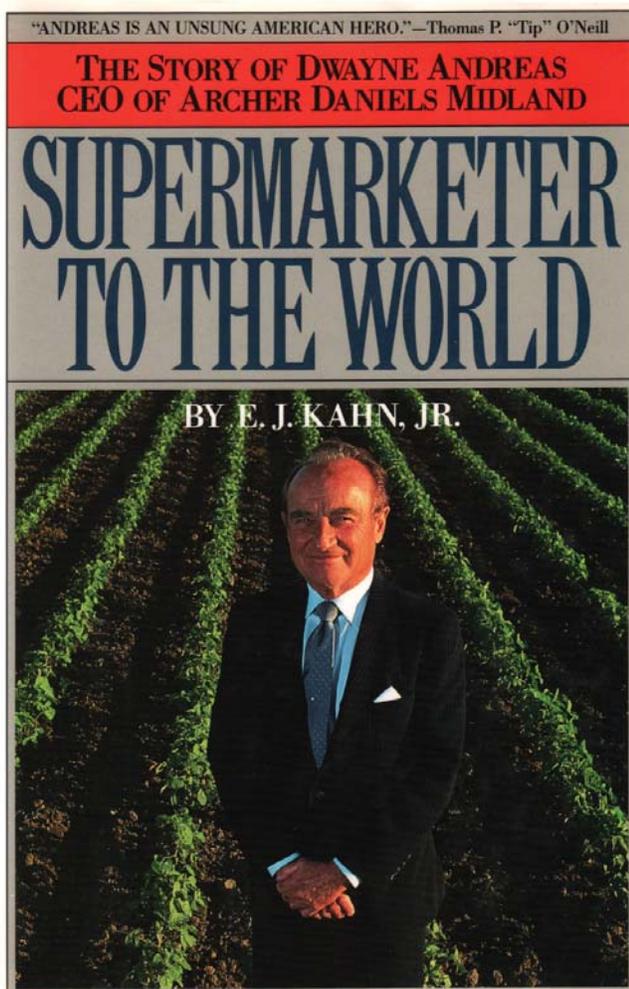

The Hain Celestial Group, Inc. from ADM for about \$10.1 million. At the time of acquisition Haldane's brands include Realeat frozen foods, Granose, Direct Foods and Realeat dry mixes, and Granose non-dairy beverages (*Hain Celestial annual report*. 2007).

**2011** – ADM is named the world's most admired food production company by *Fortune* magazine for three consecutive years: 2009, 2010, and 2011 (ADM news release. 2011, March 3)

**2013 Aug.** – ADM moves its global headquarters to downtown Chicago (*Chicago Tribune*. 2014. Nov. 6).

**2014 July 7** – ADM buys ingredients company Wild Flavors for about \$3 billion (*Chicago Tribune*).

**2016 Nov. 16** – “Dwayne O. Andreas, who turned Archer Daniels Midland into food giant, dies at 98” – in Decatur, Illinois. An excellent biography and obituary (*New York Times*, p. B16).

## ABOUT THIS BOOK

This is the most comprehensive book ever published about the history of ADM. It has been compiled, one record at a time over a period of 42 years, in an attempt to document the history of this interesting subject. It is also the single most current and useful source of information on this subject.

This is one of more than 100 books compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyinfo Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features detailed information on:

- 68 different document types, both published and unpublished.
- 1583 published documents - extensively annotated bibliography. Every known publication on the subject in every language.
- 253 unpublished archival documents.
- 311 original Soyinfo Center interviews and overviews never before published, except perhaps in our books.
- 300 commercial soy products.

Thus, it is a powerful tool for understanding the development of this subject from its earliest beginnings to the present.

Each bibliographic record in this book contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English language publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given). For most books, we state if it is illustrated, whether or not it has an index, and the height in centimeters.

All of the graphics (labels, ads, leaflets, etc) displayed in this book are on file, organized by subject, chronologically, in the Soyinfo Center's Graphics Collection.

For commercial soy products (CSP), each record includes (if possible) the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as advertisements, articles, patents, etc.) are also given.

A complete subject/geographical index is also included.

## ABBREVIATIONS USED IN THIS BOOK

A&M = Agricultural and Mechanical	mm = millimeter(s)
Agric. = Agricultural or Agriculture	N. = North
Agric. Exp. Station = Agricultural Experiment Station	No. = number or North
ARS = Agricultural Research Service	Nov. = November
ASA = American Soybean Association	Oct. = October
Assoc. = Association, Associate	oz = ounce(s)
Asst. = Assistant	p. = page(s)
Aug. = August	photo(s) = photograph(s)
Ave. = Avenue	P.O. Box = Post Office Box
Bld. = Boulevard	Prof. = Professor
bu = bushel(s)	psi = pounds per square inch
ca. = about (circa)	R&D = Research and Development
cc = cubic centimeter(s)	Rd. = Road
Chap. = Chapter	Rev. = Revised
cm = centimeter(s)	RPM = revolutions per minute
Co. = company	S. = South
Corp. = Corporation	SANA = Soyfoods Association of North America
Dec. = December	Sept. = September
Dep. or Dept. = Department	St. = Street
Depts. = Departments	tonnes = metric tons
Div. = Division	trans. = translator(s)
Dr. = Drive	Univ. = University
E. = East	USB = United Soybean Board
ed. = edition or editor	USDA = United States Department of Agriculture
e.g. = for example	Vol. = volume
Exp. = Experiment	V.P. = Vice President
Feb. = February	vs. = versus
fl oz = fluid ounce(s)	W. = West
ft = foot or feet	°C = degrees Celsius (Centigrade)
gm = gram(s)	°F = degrees Fahrenheit
ha = hectare(s)	> = greater than, more than
i.e. = in other words	< = less than
Inc. = Incorporated	
incl. = including	
Illust. = Illustrated or Illustration(s)	
Inst. = Institute	
J. = Journal	
J. of the American Oil Chemists' Soc. = Journal of the American Oil Chemists' Society	
Jan. = January	
kg = kilogram(s)	
km = kilometer(s)	
Lab. = Laboratory	
Labs. = Laboratories	
lb = pound(s)	
Ltd. = Limited	
mcg = microgram(s)	
mg = milligram(s)	
ml = milliliter(s)	

## HOW TO MAKE THE BEST USE OF THIS DIGITAL BOOK - THREE KEYS

**1. Read the Introduction and Chronology/Timeline located near the beginning of the book; it contains highlights and a summary of the book.**

**2. Search the book.** The **KEY** to using this digital book, which is in PDF format, is to **SEARCH IT** using Adobe Acrobat Reader: For those few who do not have it, Google: **Acrobat Reader** - then select the **free** download for your type of computer.

**Click on the link to this book and wait for the book to load completely and the hourglass by the cursor to disappear (4-6 minutes).**

**Type [Ctrl+F] to “Find.” A white search box will appear near the top right of your screen.**

**Type in your search term, such as Decatur or Cedar Falls.**

**You will be told how many times this term appears, then the first one will be highlighted.**

**To go to the next occurrence, click the down arrow, etc.**

**3. Use the indexes, located at the end of the book.** Suppose you are looking for all records about tofu. These can appear in the text under a variety of different names: bean curd, tahu, doufu, to-fu, etc. Yet all of these will appear (by record number) under the word “Tofu” in the index. See **“How to Use the Index,”** below. Also:

**Chronological Order:** The publications and products in this book are listed with the earliest first and the most recent last. Within each year, references are sorted alphabetically by author. If you are interested in only current information, start reading at the back, just before the indexes.

**A Reference Book:** Like an encyclopedia or any other reference book, this work is meant to be searched first - to find exactly the information you are looking for - and then to be read.

**How to Use the Index:** A subject and country index is located at the back of this book. It will help you to go directly to the specific information that interests you. Browse through it briefly to familiarize yourself with its contents and format.

Each record in the book has been assigned a sequential number, starting with 1 for the first/earliest reference. It is this number, not the page number, to which the indexes refer. A publication will typically be listed in each index in

more than one place, and major documents may have 30-40 subject index entries. Thus a publication about the nutritional value of tofu and soymilk in India would be indexed under at least four headings in the subject and country index: Nutrition, Tofu, Soymilk, and Asia, South: India.

Note the extensive use of cross references to help you: e.g. “Bean curd. See Tofu.”

**Countries and States/Provinces:** Every record contains a country keyword. Most USA and Canadian records also contain a state or province keyword, indexed at “U.S. States” or “Canadian Provinces and Territories” respectively. All countries are indexed under their region or continent. Thus for Egypt, look under Africa: Egypt, and not under Egypt. For Brazil, see the entry at Latin America, South America: Brazil. For India, see Asia, South: India. For Australia see Oceania: Australia.

**Most Important Documents:** Look in the Index under “Important Documents -.”

**Organizations:** Many of the larger, more innovative, or pioneering soy-related companies appear in the subject index – companies like ADM / Archer Daniels Midland Co., AGP, Cargill, DuPont, Kikkoman, Monsanto, Tofutti, etc. Worldwide, we index many major soybean crushers, tofu makers, soymilk and soymilk equipment manufacturers, soyfoods companies with various products, Seventh-day Adventist food companies, soy protein makers (including pioneers), soy sauce manufacturers, soy ice cream, tempeh, soynut, soy flour companies, etc.

Other key organizations include Society for Acclimatization (from 1855 in France), American Soybean Association, National Oilseed/Soybean Processors Association, Research & Development Centers (Peoria, Cornell), Meals for Millions Foundation, and International Soybean Programs (INTSOY, AVRDC, IITA, International Inst. of Agriculture, and United Nations). Pioneer soy protein companies include Borden, Drackett, Glidden, Griffith Labs., Gunther, Laucks, Protein Technologies International, and Rich Products.

**Soyfoods:** Look under the most common name: Tofu, Miso, Soymilk, Soy Ice Cream, Soy Cheese, Soy Yogurt, Soy Flour, Green Vegetable Soybeans, or Whole Dry Soybeans. But note: Soy Proteins: Isolates, Soy Proteins: Textured Products, etc.

**Industrial (Non-Food) Uses of Soybeans:** Look under “Industrial Uses ...” for more than 17 subject headings.

**Pioneers - Individuals:** Laszlo Berczeller, Henry Ford, Friedrich Haberlandt, Artemy A. Horvath, Englebert Kaempfer, Mildred Lager, William J. Morse, etc. Soy-Related Movements: Soyfoods Movement, Vegetarianism, Health and Dietary Reform Movements (esp. 1830-1930s), Health Foods Movement (1920s-1960s), Animal Welfare/Rights. These are indexed under the person's last name or movement name.

**Nutrition:** All subjects related to soybean nutrition (protein quality, minerals, antinutritional factors, etc.) are indexed under Nutrition, in one of more than 70 subcategories.

**Soybean Production:** All subjects related to growing, marketing, and trading soybeans are indexed under Soybean Production, e.g., Soybean Production: Nitrogen Fixation, or Soybean Production: Plant Protection, or Soybean Production: Variety Development.

**Other Special Index Headings:** Browsing through the subject index will show you many more interesting subject headings, such as Industry and Market Statistics, Information (incl. computers, databases, libraries), Standards, Bibliographies (works containing more than 50 references), and History (soy-related).

**Commercial Soy Products (CSP):** See "About This Book."

**SoyaScan Notes:** This is a term we have created exclusively for use with this database. A SoyaScan Notes Interview contains all the important material in short interviews conducted and transcribed by William Shurtleff. This material has not been published in any other source. Longer interviews are designated as such, and listed as unpublished manuscripts. A transcript of each can be ordered from Soyinfo Center Library. A SoyaScan Notes Summary is a summary by William Shurtleff of existing information on one subject.

**"Note:"** When this term is used in a record's summary, it indicates that the information which follows it has been added by the producer of this database.

**Asterisks at End of Individual References:**

1. An asterisk (\*) at the end of a record means that Soyinfo Center does not own that document. Lack of an asterisk means that Soyinfo Center owns all or part of the document.

2. An asterisk after eng (eng\*) means that Soyinfo Center has done a partial or complete translation into English of that document.

3. An asterisk in a listing of the number of references

[23\* ref] means that most of these references are **not** about soybeans or soyfoods.

**Documents Owned by Soyinfo Center:** Lack of an \* (asterisk) at the end of a reference indicates that the Soyinfo Center Library owns all or part of that document. We own roughly three fourths of the documents listed. Photocopies of hard-to-find documents or those without copyright protection can be ordered for a fee. Please contact us for details.

**Document Types:** The SoyaScan database contains 135+ different types of documents, both published (books, journal articles, patents, annual reports, theses, catalogs, news releases, videos, etc.) and unpublished (interviews, unpublished manuscripts, letters, summaries, etc.).

**Customized Database Searches:** This book was printed from SoyaScan, a large computerized database produced by the Soyinfo Center. Customized/personalized reports are "The Perfect Book," containing exactly the information you need on any subject you can define, and they are now just a phone call away. For example: Current statistics on tofu and soymilk production and sales in England, France, and Germany. Or soybean varietal development and genetic research in Third World countries before 1970. Or details on all tofu cheesecakes and dressings ever made. You name it, we've got it. For fast results, call us now!

**BIBLIO:** The software program used to produce this book and the SoyaScan database, and to computerize the Soyinfo Center Library is named BIBLIO. Based on Advanced Revelation, it was developed by Soyinfo Center, Tony Cooper and John Ladd.

**History of Soybeans and Soyfoods:** Many of our digital books have a corresponding chapter in our forthcoming scholarly work titled History of Soybeans and Soyfoods (4 volumes). Manuscript chapters from that book are now available, free of charge, on our website, [www.soyinfocenter.com](http://www.soyinfocenter.com) and many finished chapters are available free of charge in PDF format on our website and on Google Books.

**About the Soyinfo Center:** An overview of our publications, computerized databases, services, and history is given on our website.

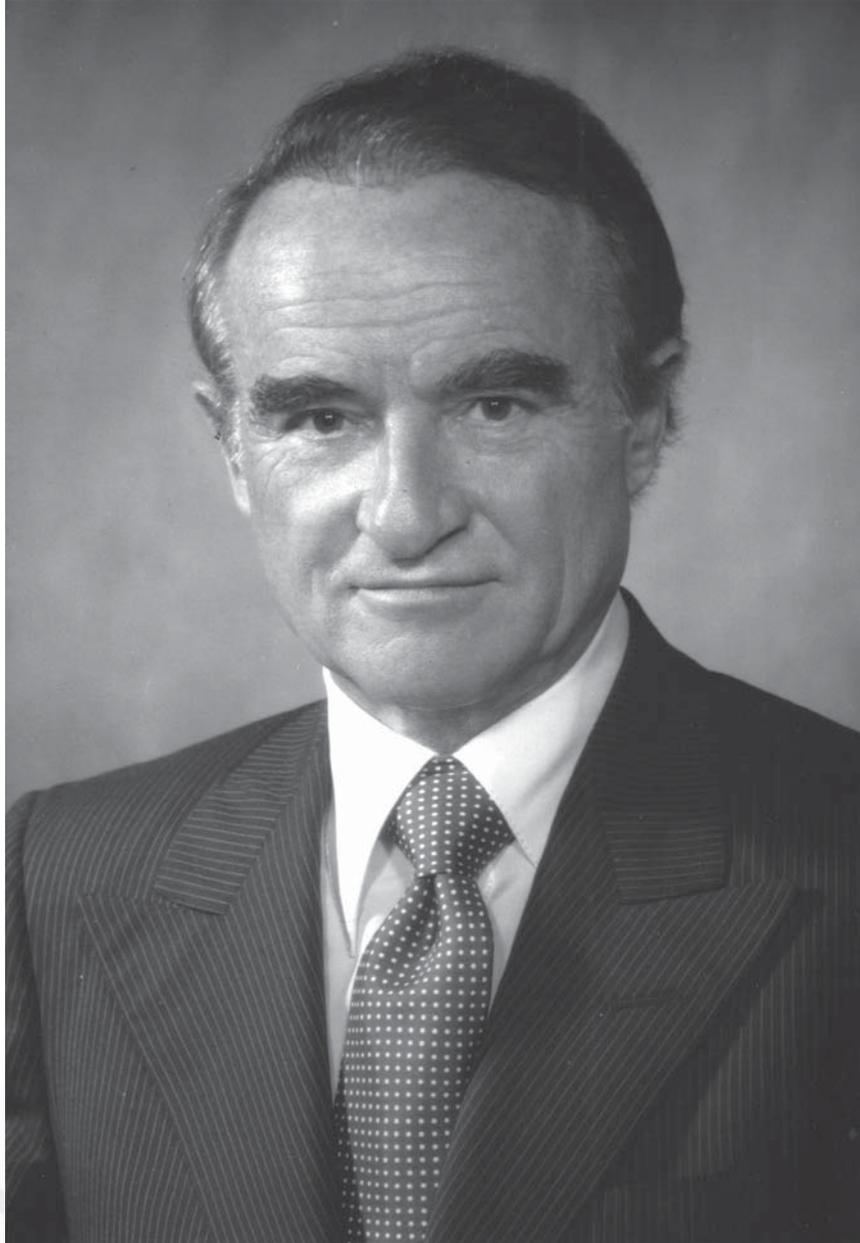

**Soyinfo Center**

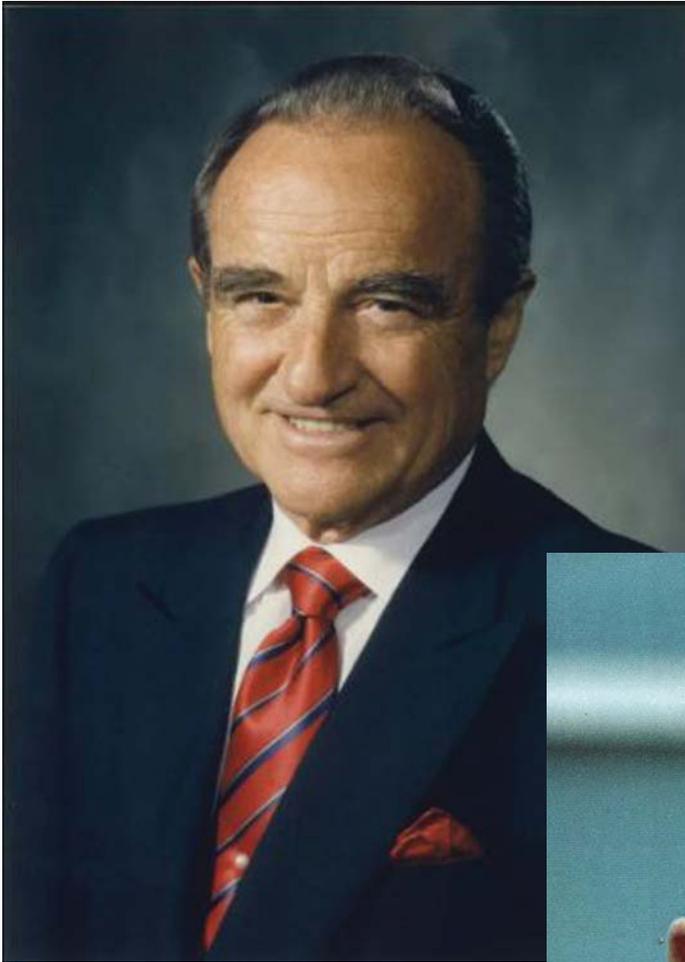

**P.O. Box 234,**

**Lafayette, CA 94549 USA**

**Phone: 925-283-2991 Fax: 925-283-9091**

## Family in which Dwayne Orville Andreas was a Child

<b>Husband:</b>		Reuben Peter Andreas	
	Birth:	13 August 1881 in Sterling, Whiteside Co., Illinois	
	Marriage:	27 November 1902 in Sterling, Carroll Co., Illinois	
	Death:	30 December 1953 in Miami-Dade Co., Florida	
	Burial:	Lisbon Cemetery, Lisbon, Linn Co, Iowa	
	Father:	Martin G Andreas	
	Mother:	Mary H Rutt	
	Other Spouses:	Pauline Margaret Stoltz Herrick (10 August 1940 in Dubuque Co., Iowa)	
<b>Wife:</b>		Lydia Barbara Stoltz	
	Birth:	13 November 1882 in Sterling, Whiteside Co., Illinois	
	Death:	8 May 1938 in Lisbon, Linn Co., Iowa	
	Burial:	Lisbon Cemetery, Lisbon, Linn Co., Iowa	
	Father:	Bernard Stoltz	
	Mother:	Margaret Hummel	
<b>Children:</b>			
1	Name:	Osborne S. Andreas	
M	Birth:	20 October 1903 in Sterling, Whiteside Co., Illinois	
	Marriage:	9 October 1934 in Kings Co., New York	
	Death:	October 1967 in Chicago, Cook, Illinois	
	Burial:	Oak Woods, Cemetery, Chicago, Cook Co., Illinois	
	Spouse:	Evelyn H Curtis	
	Other Spouses:	Marian Bomberger Edwards (Abt. 15 January 1948 in Manhattan, New York) Margot Beman (15 May 1954 in Indiana, United States)	
2	Name:	Albert M. Andreas	
M	Birth:	16 August 1907 in Sterling, Whiteside Co., Illinois	
	Marriage:	1936	
	Burial:	1988 in North Miami, Miami-Dade, Florida, United States of America	
	Death:	2 September 1988 in Springfield, Sangamon, Illinois, United States	
	Spouse:	Viola L. Kemper	
3	Name:	Lenora "Lenore" Jeanette Andreas	
F	Birth:	21 July 1913 in Nobles Co., Minnesota	
	Marriage:	21 April 1932 in Lisbon, Linn Co., Iowa	
	Death:	9 May 1969 in Miami-Dade Co., Florida	
	Spouse:	George G. Schunknedt	
	Other Spouses:	Harlon Sober Marvin R. Steele	
4	Name:	Glen A. Andreas	
M	Birth:	29 January 1917 in Worthington, Nobles Co., Minnesota	
	Death:	5 November 1933 in Pella, Marion Co., Iowa	
	Burial:	Libson Cemetery, Lisbon, Linn Co., Iowa	
	Spouse:	Vera Irene Yates	

5	Name:	Dwayne Orville Andreas	
M	Birth:	4 March 1918 in Worthington, Nobles Co., Minnesota	
	Marriage:	16 December 1947 in Minneapolis, Hennepin Co., Minnesota	
	Death:	17 December 2016 in Decatur, Macon Co., Illinois	
	Burial:	Probably cremated	
	Spouse:	Dorothy Inez Snyder	
	Other Spouses:	Bertha Benedict (1935 in St Lucie Co., Florida)	
6	Name:	Lowell Willard Andreas	
M	Birth:	24 February 1922 in Lisbon, Linn Co., Iowa	
	Marriage:	30 May 1943 in Cedar Rapids, Linn Co., Iowa	
	Death:	4 April 2009 in Mankato, Blue Earth Co., Minnesota	
	Burial:	Mankato, Blue Earth Co., Minnesota; Glenwood Cemeterry	
	Spouse:	Nadine Betty Hamilton	

**Notes:****Reuben Peter Andreas**

Parents: Martin G. Andreas and his wife, Mary H. Rutt. Martin born 18 Jul 1845 in Lancaster Co., Pennsylvania. He died 18 Jan 1930 in Sterling, Whiteside Co., Illinois. Their children: Fannie R., William G., Ida M., Anna L., and Reuben P. Mary died and Martin married Fannie Andrew of Lancaster Co., Pennsylvania. Source: Lancaster, Pennsylvania, Mennonite Vital Records, 1750-2014 via Ancestry.com.

Birth: Several sources which list Reuben's birth give varying places of his birth, although most are not more than 12 miles apart. Sources and places given in each follow:

1. 1880 US Census - Although Reuben was not yet born, Martin and Mary Andreas, his parents, lived in Palmyra Township, Lee Co., Illinois.
2. 1900 US Census - Details shown later in these notes, the family was still living in Palmyra Township, Lee Co., Illinois.
3. World War II Draft Registration which Reuben signed stated he was born in Lee Co., Illinois.
4. Marriage Record of marriage to Pauline - He stated he was born in Sterling, Whiteside Co., Illinois.
5. Social Security Applications and Claims - This record shows he was born in Sterling, Whiteside Co., Illinois.
6. findagrave.com - This shows his birth place as Prairieville, Lee Co., Illinois. This data is NOT shown on his tombstone.

It should be noted that Sterling and Prairieville are in different counties, they are only about 6 miles apart.

Birth and Death: findagrave.com Memorial # 141259303. Photo of tombstone is on the website. Social Security Applications and Claims Index, 1936-2007 states he was born in Sterling, Illinois via Ancestry.com.

First Marriage: The marriage date was taken from an article published in the Sterling, Illinois *Gazette* on 28 Nov 1902, Page 1 titled: "A Double Wedding. Daughters of Mr. and Mrs. Bernard Stoltz Married to Well Known Young Men." The text of the article stated: "A pretty double wedding was solemnized last evening at eight o'clock at the home of Mr. and Mrs. Bernhard (sic) Stoltz, in which two of their daughters took the marriage vows. The ceremony was performed by Rev. Mr. Keagle of Trinity Evangelical Church uniting the lives of Miss Catherinie Stoltz and Paul Jamison of Burt, Iowa, Miss LYDIA STOLTZ and Mr. REUBEN ANDREAS of Prairieville...." Therefore the wedding was performed on 27 Nov 1902.

Second Marriage: On 10 August 1940, Reuben Andreas married his first wife's younger sister, Pauline Margaret (Stoltz) Herrick, in Dubuque, Dubuque Co., Iowa. Source: Iowa State Department of Health, Return of Marriage to Clerk of District Court, Dubuque County #31 4431 and 1900 United States Census, Whiteside Co., Illinois, Supervisor's District 4, Enumeration District 156, Sheet 3, Page 251 A. via Ancestry.com.

Reuben Andreas and family lived in Illinois until sometime between 1907 and 1913 based on the birth places of their children. They then moved to Worthington, Nobles Co., Minnesota where they remained until about late 1919. Source of the move to Minnesota: *Dixon Evening Telegram (Dixon, Illinois)*, 19 Jan

---

**Notes: (cont.)**

1919, Page 3, Col. 2. Again, based on the births of their children, the family moved from Worthington, Nobles Co., Minnesota to Linn Co., Iowa between 1918 and 1922.

Reuben's World War I Draft Registration card, #526, stated he lived in Worthington, Nobles Co., Minnesota. He was a farmer in Township 3. Lydia B. Andreas was his next of kin. He was of medium height, medium build, grey eyes and light brown hair. He registered 12 Sep 1912 from Ancestry.com.

Reuben's World War II Draft Registration Card, Serial # 211, was completed at the Local Draft Board in Cedar Rapids, Linn Co., Iowa on 27 April 1942. It showed he was 60 years old and lived at 525 Vernon Dr. S. E. in Cedar Rapids, Linn Co., Iowa. His telephone number was 6527. His son Glen, who lived on Foote S. W. in Cedar Rapids was the person who would always know Reuben's whereabouts. He was self-employed at Honeymead Products, 850 10th St., S. W. in Cedar Rapids. He was 5' 3" tall, weighed 150 pounds, with hazel eyes, black hair, and a ruddy complexion. Source: World War II Draft Registration Cards, 1942 via Ancestry.com

In 1900, the family of Martin Andreas was living in Palmyra Township, Lee Co, Illinois, He was age 54, and born in July 1845 in Pennsylvania. Both of his parents had been born in Pennsylvania. They owned the farm although it was mortgaged. His wife Mary, age 58, was born in June 1841 in Pennsylvania as were both her parents. Martin and Mary had been married 31 years. She was the mother of 5 children, all of whom were living in 1900. Children living in the household were: daughter Annie, age 21, born August 1878 in Illinois; son Reuben, age 18, born in August 1881 in Illinois; and nephew Earl Andreas, age 13, born in September 1886 in Illinois. Both young men were farm laborers, Reuben having attended school for 5 months and Earl for 7 months. Source: 1900 United States Census of Palmyra Township, Lee Co., Illinois, Supervisor's District 46, Enumeration District 66, Sheet 2, Page 244A. Enumerated in June, 1900 by Mary A. McCleary via Ancestry.com.

In 1910, Reuben P. Andreas and his family were living in Palmyra Township, Lee Co., Iowa. He was 27 years old. His wife was Lydia, age 27. They had been married for 7 years. She was the mother of 2 children, both of whom were living at the time of the census. Reuben was a farmer and was renting the farm. Children in the family were Osborne, age 6; and Albert, age 3. All the family were born in Illinois. Reuben's parents had been born in Pennsylvania. Lydia's were born in Germany. Source: 1910 United States Census of Iowa, Palmyra Township, Lee Co., Supervisors District 4, Enumeration District 59, Sheet 5B. The Census was enumerated on April 27 & 28, 1910 by J. T. Lawrence via Ancestry.com.

In the 1920, Reuben P. Andreas, age 38, born in Illinois, parents both born in Pennsylvania, and his wife, Lydia B. Andreas, age 37, born in Illinois, both parents born in Germany, were living in Franklin Township, Linn Co., Minnesota. In the family were son Osborne S., age 16, born in Illinois; Albert M., age 12, Lenore G., age 6, born in Minnesota; Glen A., age 2, born in Minnesota; Dwayne O., age 1-11/12 born in Minnesota. Reuben was a farmer. The family owned their house but it was mortgaged. Source: 1920 Census of Franklin Township, Linn Co., Minnesota, Supervisor's District 5, Enumeration District 93. Page 1A. Census enumerated on 2 January 1920 by Harry H. Hanks via Ancestry.com.

In the 1925 Iowa State Census, R. P. Andreas was recorded in Lisbon, Linn Co., Iowa. His family was recorded as Lydia B, age 40; Osborne, age 21; Lenore, age 10; Glen, age 8; Wayne [sic], age 6; and Lowell, age 2. Their home was worth \$10,000 with a \$6,700 mortgage. R. P. Andreas carried \$10,000 worth of insurance on the home. R. P. Andreas had attended college for 4 years, Lydia for 1. Enumerator and date were not shown in the Census records on Ancestry.com.

In 1930, Reuben T. Andreas, age 48, and his wife Lydia B., age 47, were living in Lisbon, Franklin Township, Linn Co., Minnesota. They owned their home which was worth \$10,000. Both were born in Illinois. In the family were daughter Lenore J., age 16, born in Minnesota; Glen A., age 13, born in Minnesota; son Glen A., age 13, born in Minnesota; son Dwayne O., age 12, born in Minnesota; son Lowell W., age 8, born in Iowa. Reuben and Lydia had been married 27 years. Reuben was employed as a Manager of a Grain Elevator. Source: 1930 United States Census, Lisbon, Franklin Township, Linn Co., Minnesota, Supervisor's District 57-13, Enumeration District 10, Sheet 4A. Census enumerated 22 Apr 1930 by Elizabeth B. Ink.

In 1936, Reuben and Lydia Andreas sailed from Southampton, England to New York on the ship Britannia. They sailed in Aug 1936 although the day of the month of sailing and arrival are not legible. Reuben was

Enumerated 12 Apr 1940 by Glen D. Cochran. Sheet 11B via Ancestry.com.

- Dwayne Andreas divorced Bertha on 19 June 1948 in Minneapolis, Hennepin Co., Minnesota. Published in the *Star-Tribune (Minneapolis, Hennepin Co., Minnesota)*, 28 July 1951, Page 22, Column 1.

- Dwayne Andreas was recorded in the 1950 City Directory of Cedar Rapids, Linn Co., Iowa. His wife's name was Bertha. He and Bertha resided at 321 Sinclair Ave., SE in Cedar Rapids. Source: *Polk's Rapid City (Linn Co., Iowa) City Directory, 1950*, Publisher R. L. Polk & Co., 500 Karbach Block, Omaha 2, Nebraska.

- Dwayne supported Humphrey for Vice President and also contributed to the campaign of Richard Nixon. *Minneapolis Star (Minneapolis, Minnesota)*, 29 Jan 1966, Page 3.

### **Bertha Benedict**

- Bertha (Benedict) (Andreas) t was also the wife of Mrs. Robert Lebel. *Ohio Divorce Abstracts*, 3 May 1968.

### **Terry Lynn Andreas**

- In a newspaper article regarding her father, Dwayne O. Andreas, Terry Lynn Andreas was called Terry Lynn Bevis. Source: *Herald and Review (Decatur, Linn Co., Illinois)*, 31 Jan 1999, Page 5 via Newspapers.com.

- In the 2016 obituary of Dwayne O. Andreas, it lists his children including Terry Andreas and her husband, John Hewig, of New York, NY. Source: *Herald and Review (Decatur, Linn Co., Illinois)*, 20 Nov 2016, Page D3 via Newspapers.com.

- In 1974, Terry's name was Terry Andreas Bevis.

- In 1986, Terry was called Terry Herbert-Burns in a newspaper article about her father. Source: *Herald and Review (Decatur, Illinois)*, 26 Oct 1986, Page 5, Col. 5.

- In a 2 Nov 1987 newspaper article regarding management changes at National City Bankcorp in Minneapolis, Terry Herbert-Burns was to replace a retiring board member. Lowell W. Andreas was retiring as Chairman and Chief Executive Officer. It is probable that Terry Herbert-Burns was Lowell W. Andreas's niece. Source: *Star Tribune (Minneapolis, Minnesota)*, 2 Nov 1987.

- In a newspaper article published on 11 Jan 1988, Terry Andreas Herbert Burns was participating in a lecture. Her title was Founder and Board Chairman of School for Field Studies

with branches in Kenya, Africa. Source: *The Herald-Palladium (St. Joseph, Missouri)*, 11 Jan 1988.

- Because of the previous two articles, it is probable that Terry Andreas married either one man named Herbert Burns or two men, one named Herbert and one named Burns. No marriage record could be found for this study. The marriage(s) took place between her first marriage to George Randolph Bevis.
- A marriage license was issued to Terry Andreas and John Arthur Hewig in 1994 in Manhattan, New York. Source: *New York Marriage License Index, 1907-1995* via Ancestry.com.

### **Sandra Ann Andreas**

- Sandra Andreas was married to William Gerard McMurtrie on 9 July 1967 in Washington, D. C. They were married in the Holy Trinity Catholic Church. Published 11 July 1967, *Star-Tribune (Minneapolis, Minnesota)*, Page 13, Columns 6-7. She was the daughter of Dwayne Orville Andreas and Mrs. Bastain Daniel Kruidenier. Mrs. Kruidenier was the former Barbara (Benedict) Andreas.
- Sandra served as the secretary for Hubert Humphrey in Washington, D. C. *Boston Globe (Boston, Massachusetts)*, 16 June 1978, Page 47, Column 4.
- Nominated to fill a position on the Board of Directors of ADM when he father retired. *Lincoln Journal Star (Lincoln, Nebraska)*. 14 Aug 2001, Page 4, Column 1. She was not re-nominated in 2003. *Herald and Review (Decatur, Illinois)* 6 Nov 2003. Page 1, Column 1.
- Sandra McMurtrie and a friend who worked for Catholic Relief Services went to India in 1981. In Calcutta they met the celebrated nun, Mother Theresa. From then on, Mrs. McMurtrie was one of her most steadfast disciples and coworkers. Source: Kahn, E. J., *Supermarketer to the World*, New York: Warner Books, 1991. Page 50.

## Second Family in which Dwayne Orville Andreas was a Parent

<b>Husband:</b>		Dwayne Orville Andreas	
Birth:	4 March 1918 in Worthington, Nobles Co., Minnesota		
Marriage:	16 December 1947 in Minneapolis, Hennepin Co., Minnesota		
Death:	17 December 2016 in Decatur, Macon Co., Illinois		
Burial:	Probably cremated		
Father:	Reuben Peter Andreas		
Mother:	Lydia Barbara Stoltz		
Other Spouses:	Bertha Benedict (1935 in St Lucie Co., Florida)		
<b>Wife:</b>		Dorothy Inez Snyder	
Birth:	9 July 1917 in Earlham, Madison Co., Iowa		
Death:	10 October 2012 in Decatur, Macon Co., Illinois		
Burial:	Cremated		
Father:	Raymond Snyder		
Mother:	Leona Mae Simms		
<b>Children:</b>			
1	Name:	Michael Dwayne Andreas	
M	Birth:	30 December 1948 in Decatur, Macon Co, Illinois	
	Marriage:	20 June 1970 in Manhattan, New York	
	Spouse:	Shelley Irene Davidson Suskind	

### Notes:

#### Dwayne Orville Andreas

- The Minnesota Birth Records record the birth of Dwayne Orville Andreas on 4 Mar 1918 in Nobles Co., Minnesota. Mother's name Stoltz. Source: *Minnesota, Birth Index, 1900-1934* [database on-line]. Provo, Utah: via Ancestry.com.
- For census information on the family of Dwayne, see the 1910-1930 Census data included in the notes regarding Dwayne's father, Reuben P. Andreas.
- The 1938 Cedar Rapids, Linn Co., Iowa City Directory listed Dwayne Andreas as Credit Manager, no company listed. His wife's name was Bertha. They resided at 2636 Country Club Parkway S. E. in Cedar Rapids. Source: *Polk's Rapid City (Linn Co., Iowa) City Directory*, Vol. 1938. R. L. Polk & Co., Publishers, 431 Howard St., Detroit, Michigan via Ancestry.com
- The 1939 City Directory of Cedar Rapids, Linn Co., Iowa included a listing similar to that in the 1938 Directory for Dwayne O and Bertha Andreas with the addition that their telephone number was 2-1660. Source: *Polk's Rapid City (Linn Co., Iowa) City Directory*, Vol. 1939. R. L. Polk & Co, Publishers, 431 Howard St., Detroit, Michigan via Ancestry.com
- The 1940 US Census recorded the family of Dwayne Andreas, age 22, and his wife Bertha, age 24, living in Cedar Rapids, Linn Co., Iowa. Dwayne was born in Minnesota, Bertha in Illinois. He had attended one year of college, and she had completed 4 years of high school.

He was a Sales Manager of a Livestock Feed company. He had been employed 52 weeks during the previous year and earned in excess of \$5,000 the previous year. In 1935, he had resided in a rural area of Linn Co, Iowa. She had resided in Aurora, Lane Co., Illinois in 1935. Source: 1940 US Census of Cedar Rapids, 5th Ward, Block 132-33, Linn Co., Iowa. Supervisor's District 2; Enumeration District 57-45A. Enumerated 12 Apr 1940 by Glen D. Cochran. Sheet 11B via Ancestry.com.

- Dwayne Andreas divorced Bertha on 19 June 1948 in Minneapolis, Hennepin Co., Minnesota. Published in the *Star-Tribune (Minneapolis, Hennepin Co., Minnesota)*, 28 July 1951, Page 22, Column 1.

- Dwayne Andreas was recorded in the 1950 City Directory of Cedar Rapids, Linn Co., Iowa. His wife's name was Bertha. He and Bertha resided at 321 Sinclair Ave., SE in Cedar Rapids. Source: *Polk's Rapid City (Linn Co., Iowa) City Directory, 1950*, Publisher R. L. Polk & Co., 500 Karbach Block, Omaha 2, Nebraska.

- Dwayne supported Humphrey for Vice President and also contributed to the campaign of Richard Nixon. *Minneapolis Star (Minneapolis, Minnesota)*, 29 Jan 1966, Page 3.

### **Dorothy Inez Snyder**

- The following information was contained in the Obituary of Dorothy Inez Snyder, second wife of Dwayne O. Andreas. *Herald and Review (Decatur, Illinois)*, 12 Oct 2012, Page 27, Column 1.

- Inez attended Coe College and later graduated from the University of Minnesota. She then earned her Master's Degree in Psychology from Barry University in Miami, Florida.

- She was widely known for her philanthropic activities including the Milliken University Board of Directors, Chairman of the Barry University Board of Directors for 20 years, and the American Red Cross Board of Directors.

### **Michael Dwayne Andreas**

- Marriage: Bride: Shelley Irene Davidson Susskind on 20 Jun 1970. Parents of Groom: Dwayne O. Andreas and Dorothy I. Snyder. Manhattan Certificate # 13300. Marriage took place at the Cathedral of St. John the Devine in Manhattan, New York. Source: *New York, Episcopal Diocese of New York Church Records, 1767-1970*, Manhattan, Cathedral of St. John the Devine, 1957-1970 via Ancestry.com.

- Marriage: *Episcopal Diocese of New York Church Records, 1767-1970* via Ancestry.com. Married at the Cathedral of St. John the Devine.

- Michael joined Archer Daniels Midland Company in 1971 at the age of 23. He became Executive Vice President and ultimately Vice-Chairman before resigning.

- Michael D. Andreas attended Northwestern University in Evanston, Illinois where he was a member of Sigma Alpha Epsilon fraternity. *Northwestern University Yearbook Syllabus 1968, No 84*, Student Publishing Company, Northwestern University, Evanston, Illinois. Page 299.

- Michael D. Andreas and his wife were large donors to United States Senate candidates. *Star-Tribune (Minneapolis, Minnesota)*, 13 July 1978. Page 14, Column 1.

## Family in which Lowell Willard Andreas was a Parent

<b>Husband:</b>		Lowell Willard Andreas	
Birth:	24 February 1922 in Lisbon, Linn Co., Iowa

# SOYINFO CENTER

World's Most Complete Collection of Soy Information

Founded 1976

SoyaScan Databases

Publishing

Consulting

Research Library

## INTRODUCING SOYINFO CENTER

**Mission:** To be the world's leading source of information about soyfoods and utilization of soybeans in both printed and electronic formats. Much of our information is **free!**

**Founding:** In October 1972 William Shurtleff and Akiko Aoyagi began full-time research on soyfoods in Japan while writing *The Book of Tofu*. In August 1976 they founded Soyinfo Center (named Soyfoods Center until 2006) in California.

**Books in Print:** 100+ books on soyfoods and soybeans by Shurtleff and Aoyagi are presently in print. These include three popular books, market studies, and 70 comprehensive histories & bibliographies.

**Book Sales:** These books have presently sold more than 830,000 copies. Our best-selling book is *The Book of Tofu*.

**SoyaScan Database:** SoyaScan is the world's most comprehensive computerized database on soybeans and soyfoods. It presently contains 108,700+ records from 1100 B.C. to the present. These include four basic types of records providing detailed information on: 92,300+ published documents, 16,700+ commercial soy products, 6,300+ original interviews and overviews, and 8,300+ unpublished archival documents. These records are unique, and have been added one at a time over many years; none have been downloaded from other databases. A *Thesaurus* of our database is available.

**Free Books on Google Books:** At least 80+ of our history books and biographies are available free in digital PDF format on Google Books. The same books are also available on our website (see dropdown upper right).

**Focus of SoyaScan Database:** In descending order of importance: Soybean utilization (for both food and industrial uses), history, market statistics, processing, nutrition, technology, marketing, and soybean production (agriculture).

**How to Use the SoyaScan Database:** This database is very easy to use. You do not need a computer or any special skills. Simply call the Soyinfo Center and discuss the information you need with our specialists.

**Website:** At [www.soyinfocenter.com](http://www.soyinfocenter.com) you will find basic information about us, entire free online reference books, a photo gallery, 1,500 pages of our manuscript history of soybeans and soyfoods (free), a thesaurus to subject headings in our database, information on ordering of all our popular printed books, etc.

**Research Library:** The Soyinfo Center Library owns about 98,500 documents, almost all of which have a record in the SoyaScan database. Available for use by researchers with an appointment.

**Consulting Services:** William Shurtleff has been serving as a consultant to the soyfoods industry for more than 25 years. He probably has more personal contacts in this field, worldwide, than anyone else in the world. He has helped to start more than 450 new companies.

# HISTORY OF ADM (ARCHER DANIELS MIDLAND COMPANY) AND THE ANDREAS FAMILY'S WORK WITH SOYBEANS AND SOYFOODS

1. *Mower County Transcript (Lansing, Minnesota)*. 1900. News in Minnesota. Sept. 26. p. 8

• **Summary:** “The Midland Linseed Oil company of Minneapolis, having a capital stock of \$400,000, has filed articles of incorporation with the secretary of state. The work of the company will be the manufacturing of linseed oil and other products of flax seed, the buying, selling and shipping of flax seed and its products.”

Note 1. This is the earliest article seen (July 2020) in the [www.newspapers.com](http://www.newspapers.com) that mentions “Midland Linseed.”

Note 2. This is the earliest document seen (July 2020) concerning the early history of Archer Daniels Midland Co.

2. *Chicago Tribune (Chicago, Illinois)*. 1900. Financial notes: Oct. 2. p. 9.

• **Summary:** “A corporation known as the Midland Linseed Oil company has been incorporated at Minneapolis to compete with the American Linseed Company, the trust.”

3. *Sterling Gazette (Sterling, Illinois)*. 1902. A double wedding: Daughters of Mr. and Mrs. Bernard Stoltz married to well known young men. Nov. 28. p. 1.

• **Summary:** “A pretty double wedding was solemnized last evening at eight o'clock at the home of Mr. and Mrs. Bernard Stoltz, in which two of their daughters took the marriage vows. The ceremony was performed by Rev. Mr. Keagle of Trinity Evangelical church, uniting the lives of Miss Catherine Stoltz and Paul Jamison of Burt, Iowa, Miss Lydia Stoltz and Reuben Andreas of Prairieville. The ceremony was performed in a beautifully decorated corner of the parlor. After the ceremony an elaborate wedding feast was served. The ceremony was witnessed by about fifty relatives of the contracting parties.

“Mr. and Mrs. Jamison will leave for their home near Burt, Iowa, Sunday evening and will be accompanied by Mr. and Mrs. Andreas. The latter will visit the home of the former for several weeks, and on returning home will go housekeeping at Prairieville.

“The ceremony unites four popular young people. The grooms are well to do young farmers and highly respected in the community where they reside. The brides have been residents of this city for a number of years, and are highly spoken of, and have a host of friends, who extend congratulations on the happy event.”

4. *Calumet News (The) (Calumet, Michigan)*. 1911. Display ad: Midland Linseed Co. Oct. 2. p. 9.

• **Summary:** A prominent rectangular ad with a bold black border.

“Old process crushers. Daily capacity 1,000 barrels Linseed Oil. 350 tons Linseed Cake. I can ship from Minneapolis [Minnesota], Chicago or Green Bay [Wisconsin].

“L.P. Buell

“201 7th St. Calumet, Michigan

“Phone 470-J.”

5. *Wall Street Journal*. 1911. Midland Linseed Oil Co. June 29. p. 5.

• **Summary:** “Mill to cost more than \$600,000 to be built on Jersey side of the Hudson.

“Minneapolis—The Midland Linseed Oil Co., Minneapolis is having plans drawn for a linseed oil mill to be erected on the water front of the New Jersey side of the Hudson river, which will contain 48 presses and will cost between \$600,000 and \$700,000. E.C. Warner, president of the company said it is hoped to have the new oil mill ready for operation by December 1 or January 1.

“The indication points to the necessity for importation of flaxseed in the future in greater quantities than in the past,” said Mr. Warner, “and it is for that reason the mill will be erected on tide water.”

6. Associated Press. 1911. Big oil company formed. Midland Linseed Products Company a five million dollar concern. *Oshkosh Northwestern (Oshkosh, Wisconsin)* Aug. 29. p. 9.

• **Summary:** “Minneapolis, Minnesota, Aug. 29.—The Midland Linseed Products company of Minneapolis, capitalized at \$5,000,000, has been incorporated by E.C. Warner, Walter D. Douglas, George F. Piper and Arthur L. Bisbee. It means practically that the Midland Linseed Oil Company of Minneapolis will increase its capital stock from \$2,000,000 to \$5,000,000. The company is now engaged in the construction of a new oil mill in New York which E.C. Warner said today is the reason for the increase of the capitalization.”

Note: This is the earliest document seen (July 2020) showing that the company has changed its name to Midland Linseed Products company from Midland Linseed Oil Co.

7. *Chicago Tribune (Chicago, Illinois)*. 1911. Oil concern capital now \$5,000,000. Aug. 29. p. 12.

• **Summary:** “Minneapolis, Minnesota. Aug. 28.—The Midland Linseed Products Company of Minneapolis, capitalized at \$5,000,000, has been incorporated by E.C. Warner, Walter D. Douglas, George F. Piper and Arthur L. Bisbee. It means practically that the Midland Linseed Oil company of Minneapolis will increase its capital stock from \$2,100,000 to \$5,000,000.”

8. Minnesota Historical Society. 1913. Birth of Lenora Jeanette Andreas.

• **Summary:** Birth date: July 21, 1913. County of birth: Nobles County. Related names: Stoltz.

Note: Her mother’s name was Lydia Barbara Stoltz. Her father’s name was Reuben Peter Andreas. She liked to be called “Lenore.”

9. *New York Times*. 1920. Sues to dissolve linseed oil trust: Government charges prices jumped from 50 cents a gallon in 1916 to \$1.80 in 1918. Assails “open price plan.” Says unlawful combination has kept price at higher figure and destroyed competition. July 1. p. 23.

• **Summary:** “Special to *The New York Times*.”

“Suit under the Sherman anti-trust law was instituted today by the Department of Justice against the so-called Linseed Oil Trust.

“The bill of complaint, as filed in equity today by the Government today in the District Court of the United States for the Northern District of Illinois, at Chicago, charges that in 1916 the defendants’ wholesale selling prices a gallon for linseed oil were the neighborhood of 50 cents; that in October, 1918, the prices had increased to about \$1.80 a gallon; and that since then they would have fallen to lower levels if competition among the defendants had not been restricted, as charged in the complaint.

“A statement from the Department of Justice today said:

“It is charged that, in October, 1918, and ever since, the defendants have engaged in an unlawful combination and conspiracy to suppress competition among themselves in selling linseed oil, to enhance their prices for such oil, and to prevent the lowering of such prices—by means of a so-called ‘open price plan.’ The complaint shows that this ‘open price plan’ includes the continuous interchange among the defendants of information as to their quotations and as to the prices given by them in actual sales.

“In this connection the Department of Justice refers to its recent suit against members of the so-called ‘open competition plan’ of the American Hardware Manufacturers Association, in which the District Court held that the hardwood manufacturers had violated the law in keeping up prices by means of their ‘plan.’ This includes the continuous interchange of information as to the prices received in actual sales...”

“The twelve defendants are the American Linseed Company and National Lead Company of New York City, Archer-Daniels Manufacturing Company and Midland Linseed Products Company of Minneapolis, Ankeny Linseed Manufacturing Company, Des Moines [Iowa], William O. Goodrich Company, Milwaukee [Wisconsin]; Hirst & Begley Linseed Company, Chicago; Red Wing Linseed Company, Red Wing, Minnesota; Sherwin-Williams Company, Cleveland [Ohio]; Toledo Seed & Oil Company, Toledo [Ohio]; Mann Brothers Company, Buffalo [New York]; the Armstrong Bureau of Related Industries of Chicago, and Julian Armstrong and Montagu Ferry, both doing business under the name of the said bureau.”

Note: This is the earliest of only 3 documents seen (July 2020) in [www.newspapers.com](http://www.newspapers.com) that incorrectly uses the name “Archer-Daniels Manufacturing Company” to refer to the “Archer-Daniels Linseed Company.”

10. *Wall Street Journal*. 1920. Newspaper specials. July 2. p. 7.

• **Summary:** “Department of Justice institutes suit under Sherman [Antitrust] law against American Linseed Co. and National Lead Co. of New York City, Archer-Daniels Manufacturing Co. and Midland Linseed Products Co. of Minneapolis, Ankeny Linseed Manufacturing Co., Des Moines [Iowa], William O. Goodrich Co., Milwaukee [Wisconsin]; Hirst & Begley Linseed Co., Chicago; Red Wing Linseed Co., Red Wing, Minnesota; Sherwin-Williams Co., Cleveland [Ohio]; Toledo Seed & Oil Co., Toledo [Ohio]; Mann Brothers Co., Buffalo [New York]; and Armstrong Bureau of Chicago. Government charges defendants have engaged in unlawful combination since October, 1918, to suppress competition among themselves in selling linseed oil and to maintain price of about \$1.80 a gallon, compared with 50 cents a gallon in 1916.”

11. *Wausau Daily Herald (Wausau, Wisconsin)*. 1923. Linseed mill control in huge merger. April 23. p. 10.

• **Summary:** “Minneapolis, Minnesota, April 23—Merger of the Archer of the Archer-Daniels Linseed company and the Midland Linseed Products company of Minneapolis into a corporation with total assets exceeding \$11,000,000 and which will control about thirty-five per cent of the linseed mill capacity of the United States, became known here today.”

12. Goldman, Sachs & Co.; Lehman Brothers; Lane, Piper & Jaffray, Inc., 1923. \$5,000,000: Archer-Daniels-Midland Company (To be presently Incorporated). Seven Per Cent Cumulative Preferred Stock (Ad). *Cincinnati Enquirer (Cincinnati, Ohio)*. April 24. p. 14.

• **Summary:** “Preferred as to Assets and Dividends.

“Redeemable in whole or in part at \$115 per share and accrued dividends.

“Holders of Preferred Stock have the right to buy from the company at any time up to May 1, 1926, at the rate of \$50 per share, one share of common stock for each two shares of preferred stock held.

“On or before January 1, 1925, and annually thereafter from out of surplus and net earnings, at least three per cent of the largest amount of par value of the Preferred Stock that shall have been at any one time outstanding, shall be acquired by the company by redemption or by purchase at not to exceed \$115 per share and accrued dividends.

“Application will be made in due course to list both the Preferred and Common Stocks on the New York Stock Exchange.

“The Seaboard National Bank of the City of New York—Transfer Agent

“National Bank of Commerce in New York—Registrar

“Capitalization:

“Seven per cent cumulative preferred stock (Par value \$100). Dividends payable quarterly, cumulative from May 1, 1923. To be presently authorized: \$5,000,000. To be presently issued: \$5,000,000

“Common stock (No par value). To be presently authorized: 225,000 shares. To be presently issued: 225,000 shares

“Information in regard to this issue and the new company is given in a letter from Mr. J.W. Daniels, President of the Archer-Daniels Linseed Company, who will be President of the new company, copies of which may be obtained from the undersigned, and which he has summarized as follows:

“Business and Management: The Archer-Daniels Linseed Company and the Midland Linseed Products Company started in business more than twenty years ago and both have grown steadily. The new company will take over the business and properties of the Archer-Daniels Linseed Company and will own all the stock of the Toledo Seed and Oil Company and of the Dellwood Elevator Company, Inc., except directors’ qualifying shares. It will at the same time become the owner of all of the plants of the Midland Linseed Products Company, which company, however, will retain the operation of the plants for its own account until July 1st next in order to liquidate its commitments. The new company will then have the largest capacity for linseed crushing in the world and will operate as a unit the adjacent mills of the Archer-Daniels Linseed Company and the Midland Linseed Products Company at Minneapolis, Toledo [Ohio], and Edgewater, New Jersey, as well as the plants at Chicago and Buffalo [New York]. Substantial economies are expected to follow the consolidation.

“The new company will be managed by those who have been primarily responsible for the past success of the Archer-Daniels Linseed Company.

“Sales and Profits: The net sales and net profits of the Archer-Daniels Linseed Company. The Toledo Seed and

Oil Company, the Dellwood Elevator Company, Inc., and the Midland Linseed Products Company. before deducting Federal income and profits taxes paid but after giving effect to Federal taxes at the present rates, for the six years and six months ending March 31, 1923, as certified by Messrs. Price, Waterhouse & Co., Public Accountants, were as follows:”

A table is shown with three columns: (1) Fiscal period or year ending Aug. 31 or Sept. 30; (2) Net sales; (3) Net profits before deducting Federal income and profits taxes paid but after giving effect to taxes at present rates.

“1917—\$31.775 million—\$1.43 million

“1918—\$41.042 million—\$0.731 million

“1919—\$42.571 million—\$1.94 million

“1920—\$58.580 million—\$2.817 million

“1921—\$36.068 million—\$0.101 million

“1912—\$30.513 million—\$1.04 million

“Six months ending March 31, 1923: net sales \$18.909 million—net profits in excess of 1.00 million

“The average of these earnings for the last six years is in excess of three and three quarters times the annual dividend requirement upon the issue of Preferred Stock, and the earnings for the last six months are at the rate of more than five and one half times such dividend requirement.

“Business for the past six months has been active and profitable as shown by earnings. Conditions surrounding the industry are most satisfactory. Demand for the products is very strong. Plants are booked to capacity as far ahead as the company is willing to sell and a prosperous year seems assured.

“Assets: The Balance Sheet of the new company as of March 31, 1923, certified by Messrs. Price, Waterhouse & Co., Public Accountants, after giving effect to the issue of its capital stock, shows tangible assets of \$14,995,998.44, of which \$7,407,054.66 are current assets, against current liabilities of \$4,407,054.66. There is no funded debt.

“We offer \$4,750,000 of the above stock for subscription, subject to allotment, when, as and if issued and accepted by us, at:

\$98 Per Share and Accrued Dividend.

“This offering is made in all respects subject to the approvals of Messrs. Sullivan & Cromwell, New York, N.Y. for the bankers of...

“April 1923. The above offer is confined to licensed dealers of the Division of Securities, Department of Commerce, State of Ohio.”

Note: This ad and announcement appeared in the *San Francisco Chronicle* (24 April 1923, p. 16) and many other prominent newspapers throughout the USA.

13. *Star Tribune* (Minneapolis, Minnesota). 1923. Linseed firm to issue stock for \$5,000,000: Archer-Daniels-Midland Co. to consolidate two Minneapolis concerns. April 24. p. 22.

• **Summary:** Financing of the Archer-Daniels-Midland company which has been organized to purchase and

consolidate the properties of the Archer-Daniels Linseed company and the Midland Linseed Products company, both of Minneapolis, will be by a \$5,000,000 preferred stock issue which will be offered to the public in Minneapolis and New York today.

“The head offices of the new company which will have tangible assets of approximately \$14,955,998 will be located in Minneapolis. The company will control 35 per cent of the linseed crushing capacity of the country. The combined sales of the parent companies last year approximated \$30,000,000. Mills of the Archer-Daniels company are located at Minneapolis, Buffalo, New York, and Edgewater, New Jersey. Mills of Midland Linseed Products company are located at Minneapolis, Chicago [Illinois], Toledo, Ohio, and Edgewater, New Jersey.

“The officers of the Archer-Daniels company who will become the officers of the new corporation are J.W. Daniels, president; G.A. Archer, and S.M. Archer, vice presidents; Samuel Mair, secretary and L.M. Leffington, treasurer. E.C. Warner has been president of the Midland company since it was organized 20 years ago, will retire from active business.

“The preferred stock of the new company will pay a dividend of 7 per cent... In addition to the preferred stock there will be 225,000 shares of common stock of no par value, in the new company.”

Note: By 26 April 1923 “Archer Dan Midland” had a listing on the “New York Curb Exchange” and was selling for more almost \$40 a share.

14. *Buffalo Courier (Buffalo, New York)*. 1923. Dividends declared. July 11. p. 13.

• **Summary:** “New York, July 10—The Archer-Daniels-Midland Co. has declared an initial dividend of \$0.75 on the preferred stock, payable August 1 to holders of record July 20.”

15. *SoyaScan Notes*. 1923. Early history of soybean crushing, including solvent extraction, in the USA (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The first documented crushing of soybeans in the USA to obtain oil and meal took place in 1911 (probably not in 1910 as some accounts say) at Seattle, Washington. The soybeans were imported from Manchuria by the Albers Brothers Milling Co. and sold to Herman Meyer, who operated a small hydraulic press in Seattle. His establishment was later named Pacific Oil Mills.

The second U.S. crusher, and the first to crush American-grown soybeans, was the Elizabeth City Oil and Fertilizer Co. in Elizabeth City, North Carolina; ordinarily a cottonseed crusher, they began crushing soybeans on 15 Dec. 1915. At that time, North Carolina was America’s leading soybean producing state. By 1916 seven cottonseed mills in North Carolina were crushing soybeans.

Soybeans grown in the Corn Belt were first crushed for oil and meal in 1919 (probably not in 1917 or 1918 as one account says) by the Chicago Heights Oil Manufacturing Co. in Chicago Heights, Illinois (located just south of Chicago). The plant, operated by George Brett and I. Clark Bradley, primarily crushed linseed for oil, but it also crushed soybeans, corn germ and mustard seed. For the first few years the soybeans were crushed using screw presses (expellers) which were generally used for crushing corn germs, but by 1922 they were using hydraulic presses. In Aug. 1923 the company went out of business for lack of soybeans. In 1924 Funk Bros. Seed Co. of Bloomington, Illinois, bought the Chicago Heights plant (Eisenschiml 1929, *American Paint Journal*. March 18. p. 22-30; *Soybean Digest*, Sept. 1944, p. 18-19 and May 1945, p. 15).

The A.E. Staley Manufacturing Co. in Decatur, Illinois, first began crushing soybeans on 30 Sept. 1922. Staley was the first company to construct a plant solely for the purpose of crushing soybeans, the first to crush only soybeans in a U.S. plant, and the first to crush only domestically-grown soybeans in a U.S. plant. Staley was also the only one of the early U.S. soybean crushers that survived under the same ownership for more than several years. Although Staley operated at a loss from 1922 to 1924 due to a shortage of soybeans, in 1925 an upswing began and from that year until 1957 Staley was America’s leading soybean crusher (Forrestal 1982, p. 60-66).

In Aug. 1923 the Piatt County Cooperative Soy Bean Company (soon renamed the Monticello Co-operative Soybean Products Co.) in Monticello, Illinois became the first company in the U.S. to process soybeans using solvent extraction. The plant was scheduled to open for business on 5 Sept. 1923. They used a batch extraction process with benzol as a solvent. The plant was shut down in about 1924-26 (*Orange Judd Farmer*. 1923. July 15, p. 375; *Journal of the American Oil Chemists’ Society*. 1977. March. p. 202A).

The first continuous solvent extraction of soybeans was done by the Eastern Cotton Oil Co. in Norfolk, Virginia, starting in 1924, and using a Bollmann extractor imported from Germany. The plant closed in 1925, being unprofitable (W.H. Goss. 1941. *Chemical and Metallurgical Engineering*. April. p. 80; *Journal of the American Oil Chemists’ Society*. 1977. March. p. 202A). As early as 1926 the William O. Goodrich Company (acquired by the Archer-Daniels-Midland Co. [ADM] in 1928) had been experimenting with solvent extraction of soybean and other vegetable seeds using a Scott batch extraction system.”

Note: In 1929 the Archer-Daniels-Midland Co. started crushing soybeans, using hydraulic presses, at its plants in Chicago (Illinois), and Toledo, Ohio (Marion Cross 1954, p. 40).

In 1933 Robert Boyer and coworkers at the Ford Motor Company developed the Ford Extractor using hexane as a solvent. By 1934 it processed 6 tons of soybeans a day using

a screw inside of a metal tube. It was probably the first to use hexane as a solvent. They had a working extractor in Ford's Industrialized Barn at the 1934 World's Fair in Chicago.

ADM and The Glidden Co. initiated large-scale solvent extraction of soybeans in the USA (Chicago, Illinois) in 1934. ADM purchased from Germany a 150-ton-per day capacity Hildebrandt continuous-flow, counter-current (U-tube) hexane solvent extractor. It began operation in March 1934 on Blackhawk Street in Chicago. It was America's first successful continuous solvent extractor; at the time it was also America's largest and most modern soybean crushing system, and the first to use hexane as a solvent with soybeans. The Glidden Co. purchased an identical Hildebrandt solvent extraction plant from Germany and also installed it in Chicago. It began operation in about Nov. 1934.

In 1937 Central Soya purchased from Germany an even larger continuous solvent unit, a 275-ton-per-day capacity Hansa Muehle extractor, which began operation in November 1937 at Decatur, Indiana.

16. *Arkady Review*. 1924-1974. Serial/periodical. British Arkady Co., Manchester, England. Vol. 1. Jan. 1924. Robert Whymper, editor. From 1925 it appeared 5 times a year. [Eng]

• **Summary:** British Arkady Co. 1938. *Arkady*. p. 6. "Not the least achievement of the Company is the publication of the *Arkady Review*. Originated by Mr. Robert Whymper, the first number saw light in January, 1924; from 1925 it has appeared five times annually. Its mission was to put before the baker articles in simple language, written by those best qualified, on the subjects of wheat, flour, yeast, etc. the raw materials of bread, the fermentation and manufacture of bread, and in general to keep the baker in touch with trade developments. Mr. F.E. Thomas, who has been the editor since the first number, has been successful in securing many able writers."

Letter from Bill Pringle of British Arkady. 1990 May 30. "I believe the *Arkady Review* started publication in 1923. Most of the issues for the early years have been lost. We do have various copies for the 1960s and 1970s. The magazine ceased publication around 1974."

17. **Product Name:** Soy Bean Oil, and Soy Bean Oil Meal.

**Manufacturer's Name:** Goodrich (William O.) Co.

**Manufacturer's Address:** Milwaukee, Wisconsin.

**Date of Introduction:** 1926.

**Ingredients:** Soybeans.

**New Product–Documentation:** Nakamura, Hiroshi; Hieronymus, Thomas A. 1965. "Structure of the soybean processing industry." *Illinois Agric. Exp. Station, Bulletin* No. 706. 84 p. Feb. See p. 3. The William O. Goodrich Company started crushing soybeans in 1926; it was acquired by the Archer-Daniels-Midland Co. in 1928.

Note: This is the only record we can find stating that the William O. Goodrich Co. started processing soybeans in 1926.

18. *Gazette (The) (Cedar Rapids, Iowa)*. 1928. Lisbon band gives concert series. June 8. p. 7.

• **Summary:** "Special to The Gazette Republican. Lisbon, June 8. The Lisbon school band, pictured above, has been engaged to play concerts each Wednesday evening during the summer months here. Organized last fall, the band has made rapid progress..." The personnel follows:... saxophones: Lenore Andreas." drums, George Albright, Glen Andreas.

Note: This is the earliest document seen (July 2020) that mentions Lenore Andreas, elder sister of Dwayne Andreas, or that mentions any member of that Andreas family.

19. Packer Products Co. 1928. Display ad: Honeymead brings results. *Gazette (The) (Cedar Rapids, Iowa)*. Dec. 6. p. 13, cols. 7-8.

• **Summary:** "The high cow in Linn County Test Association No. 2 for November, owned by Myer and Redmond, Robins, Iowa, produced 1,839 pounds of milk and 64.3 pounds of butterfat.

"This cow was fed ground oats and Honeymead 16% Dairy Ration.

"For utmost economy in milk production, feed Honeymead 16% Dairy Rations. If your dealer is unable to supply, write or call us.

Packer Products Co., 601 South Second Street, Cedar Rapids, Iowa. Telephone 1595.

Note: This is the earliest document seen (July 2020) that contains the word "Honeymead."

20. *Wall Street Journal*. 1929. Archer-Daniels-Midland Company. March 11. p. 5.

• **Summary:** Toledo Seed & Oil Company, which is controlled by Archer-Daniels-Midland Co. [it was acquired in 1928 and became a subsidiary], will enlarge its plant in Toledo, Ohio, to make soy bean oil. The company plans to spend \$100,000 in special machinery.

21. *Grain Dealers' Journal*. 1929. Contracting soy beans. 63(5):335. Sept. 10.

• **Summary:** A new contract is being offered by Archer-Daniels-Midland Co., of Minneapolis, Minnesota, to "country grain elevator operators having soy bean growers in their territory." Archer-Daniels has eight crushing plants from New York to Portland, Oregon. The company, which has previously been importing significant quantities of soy bean oil from the Orient, now believes that the potential market for soy bean products is almost unlimited, with a present potential outlet for the products of 20 million bushels. Hence the company is now prepared to contract with dealers, and thru them with growers, to ensure a large supply.

A copy of the “Soy bean dealers contract” and the “Soy bean growers contract” are reproduced.

“In effect and in fact this contract guarantees the grower of soy beans a definite price per bushel, which may encourage farmers to contract acreage that needs rotating and would normally go to oats.”

Note 1. This is the 2nd earliest document seen (May 2009) concerning Archer-Daniels-Midland Co. in connection with soybeans.

Note 2. This is the earliest English-language document seen (Jan. 2003) that uses the term “grain elevator” (or “grain elevators”).

**22. Product Name:** Soy Bean Oil, and Soy Bean Oil Meal.

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** Toledo, Ohio.

**Date of Introduction:** 1929 September.

**Ingredients:** Soybeans.

**New Product–Documentation:** *Wall Street Journal*.

1929. “Archer-Daniels-Midland Company.” March 11. p. 5. Toledo Seed & Oil Company, which is controlled by Archer-Daniels-Midland Co., will enlarge its plant in Toledo, Ohio, to make soy bean oil. The company plans to spend \$100,000 in special machinery. Why did ADM decide to start crushing soybeans? Note this interesting new release: *Journal News* (Hamilton, Ohio). 1930. April 2. p. 1. “12 sue plant because of dust.” “Toledo, Ohio. April 2.–(AP)—Charging that dust from the plant of the Toledo Seed and Oil Company had made them ill, twelve persons, two of them children, filed suits asking damages amounting to nearly \$120,000 in common pleas court here yesterday. Individual suits range from \$7,500 to \$10,000.” Then in a small article dated 28 May 1931, the same newspaper published the first results of the suit: “Gets jury award.” “Toledo, Ohio. May 28–(AP) A jury yesterday awarded Mrs. Bessie Anderson \$1,800 in her \$10,000 action against the Toledo Seed and Oil Company on the grounds dust from the plant had made her ill.”

Archer-Daniels-Midland Co. 1935. Archer-Daniels-Midland Company new process soybean oil meal (Ad).

*Proceedings of the American Soybean Assoc.* p. 22. Soybean mills at Chicago and Toledo. Soybean Div., Box 603, Milwaukee, Wisconsin.

*National Fire Protection Association Quarterly*. 1943. Oct., p. 164. “Soybean fire plant record.” 1939 May 15, Toledo, Ohio. Soybean oil extraction plant. “This plant, occupied by the Archer-Daniels-Midland Company, had recently been remodeled for the installation of new machinery to extract soybean oil by the expeller method. Construction changes included the erection of two frame iron-clad roof houses, 1 equals 3 and 1 equals 4 stories in height. These were 17 by 45 and 17 by 50 feet in size. Sprinklers had not been installed in the roof houses as the work was to be done by plant mechanics when convenient.

“The fire originated in a metal stack from driers which

evidently had been coated with residue which ignited spontaneously. Sparks from the burning stack set fire to the unsprinklered roof areas, which were destroyed. Only slight damage was done to areas under sprinkler protection. Approximately 3000 bushels of soybeans were damaged, together with 1000 gallons of oil. The loss was \$20,000.”

USDA Northern Regional Research Laboratory. 1943. “Soybean processing mills in the United States.” *USDA Bureau of Agricultural and Industrial Chemistry*. AIC-26. 10 p. Nov. See p. 3. Toledo, Ohio: “Archer-Daniels-Midland Company.” (Large = capacity over 200 tons/day of soybeans).

Cross, Marion E. 1954. *From land, sea, and test tube: The story of Archer-Daniels-Midland Company*. Minneapolis, Minnesota: ADM. 88 p. “During 1929 ADM took two more extremely significant steps toward diversifying its manufacturing activities. Converting the Toledo and Chicago plants to the crushing of soybeans did not seem momentous at the time because the United States was just becoming aware of the potential value of the soybean” (p. 40). A photo (facing p. 40) shows the ADM soybean processing plant in Chicago, Illinois. “When ADM first started to process soybeans in 1929 at its Toledo and Chicago plants, the hydraulic presses that had been used for flaxseed were used for soybeans” (p. 60).

**23. Product Name:** Soy Bean Oil, and Soy Bean Oil Meal.

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** Chicago, Illinois.

**Date of Introduction:** 1929.

**Ingredients:** Soybeans.

**New Product–Documentation:** USDA Northern Regional Research Laboratory. 1943. “Soybean processing mills in the United States.” *USDA Bureau of Agricultural and Industrial Chemistry*. AIC-26. 10 p. Nov. See p. 1. Chicago, Illinois: “Archer-Daniels-Midland Company.” (Medium = capacity between 50 and 200 tons/day of soybeans). Solvent extraction plant.

Cross, Marion E. 1954. *From land, sea, and test tube: The story of Archer-Daniels-Midland Company*. Minneapolis, Minnesota: ADM. 88 p. “During 1929 ADM took two more extremely significant steps toward diversifying its manufacturing activities. Converting the Toledo and Chicago plants to the crushing of soybeans did not seem momentous at the time because the United States was just becoming aware of the potential value of the soybean” (p. 40). A photo (facing p. 40) shows the ADM soybean processing plant in Chicago, Illinois. “When ADM first started to process soybeans in 1929 at its Toledo and Chicago plants, the hydraulic presses that had been used for flaxseed were used for soybeans” (p. 60).

**24. Product Name:** Super Arkady [Containing Enzyme-Active Full-Fat Soy Flour].

**Manufacturer's Name:** British Arkady Co. Ltd.

**Manufacturer's Address:** Old Trafford, Manchester M16 0NJ, England.

**Date of Introduction:** 1929.

**New Product–Documentation:** Form filled out by Peter Fitch. 1983. British Arkady Co. started doing business in 1921. In 1929 they introduced their first food product containing soy as a major ingredient: Super Arkady, an ingredient for breadmaking containing enzyme active full-fat soy flour. The company now also makes Ardex isolated soy proteins, Hi-Soy full-fat soya flour, and Arkasoy, defatted soy flour.

Note: This is the earliest known commercial soy product made or sold by British Arkady. On 15 Jan. 1973 ADM acquired 50% of British Arkady Holdings Ltd.

25. *Sterling Daily Gazette (Sterling, Illinois)*. 1930.

Obituary: Martin G. Andreas. Jan. 21. p. 14.

• **Summary:** “Another life is ended, another race is run. One by one we answer the Master’s call to exchange the things of time for the things of eternity...”

“Martin G. Andreas was born July 18, 1845, in Lancaster county, Pennsylvania. He passed away at his home at 608 Broadway, Sterling [Illinois], Jan 18, 1930, at the ripe old age of 84 years and 6 months.

When a young man of 18 years of age he, with his parents, Mr. and Mrs. Peter Andreas, came to Sterling. As a young man he worked in this community as a farm hand. On Oct. 28, 1869, he was married to Mary H. Rutt. For two years they lived on a farm at Woodlawn. They then purchased a farm on what was then known as the Dixon road near Prairieville. They resided there for 34 years. Mr. Andreas was one of the pioneer farmers of that community and for almost the entire thirty-four years he served as one of the directors of the Prairieville school.

“To this union five children were born. Fannie R., William G., Ida M., Anna L. and Reuben P. [the father of Dwayne and Lowell Andreas]. Mrs. Andreas passed away July 5, 1907. On March 18, 1913, he was married [for a second time] to Fanny Andrew of Lancaster county, Pennsylvania, who with the following children survive him: Mrs. Fannie Myers, Mrs. E.E. LeFevre, Mrs. Benj. Mellinger, all of Sterling; Reuben P. of Lisbon, Iowa, and one step-son, Rea Kreider of Sterling, William G. having passed away Aug. 18, 1928. He is also survived by one brother, Frank Andreas of Emerson [Illinois] and one sister, Mrs. Ed Powell of Sterling.

“Mr. Andreas was for many years a member of the Mennonite church. When health permitted he was in his place of worship. In the later years when he was deprived of this privilege, he enjoyed the reading of the Word of God and prayer by his pastor as well as the ministers of the city who often called at his home. As the end drew near he was anxious for the time to come when he could steal away and

be at rest. He found a fitting expression of his own desires in the song, ‘The Last Mile of the Way.’

“Funeral services were held at the home at 608 Broadway Monday afternoon at 1 o’clock and at the Science Ridge Mennonite church at 2 o’clock, when many of his neighbors and friends gathered to pay a last tribute of respect.”

26. Rickey, Lacey F. 1930. Re: Report on the meeting of the Executive Committee of the Soybean Marketing Association with Funk Brothers. The companies that have dominated the linseed oil industry are preparing to do the same with the soybean industry. Letter to W.L. Burlison at University of Illinois, Feb. 28. 2 p. Typed, without signature (carbon copy).  
• **Summary:** “On Thursday, February 25, 1930, the following people met in the office of Funk Brothers in Bloomington to consider the methods of handling soybeans. Those representing the growers were: Mr. Armstrong, Mr. McCormick, Mr. Hart, Mr. Sandusky, Mr. Burns, Mr. Fahrnkoff, Mr. Coltus, and Mr. Rickey. Those representing the processors were: Mr. Eugene Funk, Mr. Eugene Funk Jr., Mr. Lafayette Funk, Mr. Miller, Mr. Bradley, Mr. Bracken, and their attorney.

“Mr. Funk believes that the linseed people who have obtained a control of practically the entire flax crushing business in this country as well as Argentine, are preparing to dominate the soybean industry in the same way. He is quite worked up over this idea and for that reason, of course, is strongly against the Archer-Daniels people obtaining soybeans.”

“Doubt was expressed as to whether the soybean growers would remain loyal to their contracts in case they did not prove advantageous during the first year or so.”

“Mr. Funk says that with the present facilities they can handle 700,000 bushels of [soy] beans per year and that this could readily be increased to 1,000,000 bushels.”

“Mr. Bradley was rather outspoken in saying that the University has done practically nothing to advance the feeding of soybean meal to farm animals. It was noted, however, that this meal has never been available on Illinois markets and that some work along this line has been done by the University.”

Location: University of Illinois Archives, Champaign-Urbana. Box 134–Soybeans, 1930-1949. Address: [Chicago, Illinois].

27. Eastman, Whitney H. 1930. Minutes of organizational meeting: May 21, 1930. City Club, Chicago, Illinois. Chicago, Illinois. 2 p. May 21. Unpublished typescript.

• **Summary:** Describes the founding of the National Soybean Oil Manufacturers Association, which in 1936 was renamed the National Soybean Processors Association.

“Mr. Otto Eisenschiml was elected chairman of the meeting.

“Mr. Whitney H. Eastman, Chairman of the Organization Committee, presented in behalf of his committee the Organization Declaration, Code of Ethics and Constitution and By-Laws, all of which were adopted and are herewith attached as a part of the record. Mr. Harry Haze, Chairman of the Trading Rules Committee, presented his report in behalf of his committee, the report being accepted subject to revision to incorporate therein the full text of trading terms according to commercial practice. The report as presented together with the additional trading regulations incorporated therein are herewith attached as a part of the record. Mr. Glenn H. Pickard presented a report for the Technical Committee recommending standard specifications for Crude Domestic Soybean Oil. Report with specifications as adopted is attached hereto as a part of the record. The spelling of the word ‘soybean’ as one word was adopted by the Association.”

“The following officers elected were: President, Otto Eisenschiml. 1st vice president, W.L. Shellabarger. 2nd vice president, R.G. Dahlberg. Secretary, Whitney H. Eastman. Treasurer, I.C. Bradley.

“Directors: H.G. Atwood, E.K. Scheiter, R.G. Bennet, E.D. Evans, B.C. Williams, David Lewis, W.E. Flumerfelt.

“Those in attendance were as follows: Allied Mills, Inc., represented by Mr. H.G. Atwood and Mr. D.W. McMillen. Armstrong Paint and Varnish Works, represented by Mr. R.G. Dahlberg and Mr. H.A. Paulsen. Brown-Edwards Co., Inc. (Mr. H.E. Hoaglund). Central States Chemical Co. (Mr. W.E. Flumerfelt). Evans Milling Co. (Mr. L. DeBourger). Falk & Company (Mr. David Lewis). Funk Brothers Seed Co. (Mr. I.C. Bradley and Mr. E.D. Funk). Archer-Daniels-Midland Company (Mr. Whitney H. Eastman). Harry Haze, Inc. (Mr. Harry S. Haze). Fred A. Jensen (Mr. Fred A. Jensen). The Mangelsdorf Soybean Company (Mr. Fred W. Mangelsdorf).

Glenn H. Pickard (Glenn H. Pickard). Purdue University (Lafayette, Indiana) (Dr. H.R. Kraybill). Roosling, Monroe & Co. (Mr. Carl H. Smith). Scientific Oil Compounding Co. (Mr. Otto Eisenschiml). Shellabarger Grain Products Co. (Mr. W.L. Shellabarger). Spencer Kellogg & Sons, Inc. (Mr. R.G. Bennet and Mr. Howard Kellogg, Jr.). A.E. Staley Manufacturing Co. (Mr. M.M. Durkee, Mr. H.J. Kapp, Mr. H.T. Morris and Mr. E.K. Scheiter). Sterne & Son Co. (Mr. C.B. Martin). University of Illinois (Dr. Roger Adams and Dr. W.L. Burlison).”

Note 1. This is the earliest document seen (July 2019) concerning the National Soybean Oil Manufacturers Association—renamed the National Soybean Processors Association, in 1936.

Note 2. This is the earliest document seen (July 2019) indicating that Spencer Kellogg & Sons was processing soybeans.

Note 3. This is the earliest document seen (Aug. 2019) that mentions Otto Eisenschiml in connection with the National Soybean Oil Manufacturers Association. It is not

clear whether he was Dr. Eisenschiml or Mr. Eisenschiml. Wikipedia (Aug. 2019) has this to say: “Otto Eisenschiml (June 16, 1880–December 7, 1963) was an Austrian-born chemist and industrial executive in the American oil industry, and a controversial author. He may be best known for his provocative 1937 book on the assassination of Abraham Lincoln in which he proposed that a senior member of Lincoln’s Cabinet orchestrated the plot to kill the president.

“Career: Eisenschiml was born in Austria. He attended the University of Vienna and obtained advanced degrees in chemistry [1]. In 1901, he emigrated to the United States and took a job as an industrial chemist. He rose through the ranks to become president of the Scientific Oil Compounding Company. For much of his life, Eisenschiml lived in Chicago, Illinois.” A photo shows Otto Eisenschiml. He was the author of 12 publications (mostly books) about the Civil War; the first of these was *Why was Lincoln Murdered?* (1937). Address: Archer-Daniels-Midland Co. [Minneapolis, Minnesota].

28. Potter, Paul. 1930. Chicago seen as center of soy bean trade: New organization will promote uses. *Chicago Daily Tribune*. June 1. p. F7.

• **Summary:** “Not for decades has there been as sudden a development in the agricultural middle west as the mounting soy bean production gives promise of effecting, in the opinion of a nucleus of manufacturers who have just formed a national association for the industry”—the National Soy Bean Oil Manufacturers’ association. Its president is Otto Eisenschiml, of the Scientific Oil Compounding company, Chicago. The names and affiliations of the other officers are given. They represent Shellabarger Grain Products company, Armstrong Paint and Varnish company, Archer-Daniels-Midland company, and Funk Bros. Seed company.

Its main goal is the development of the infant industry into prominence. It has announced that its first step is the development of specifications on the basis of which soy bean oil can be marketed. The second step will be to work with the University of Illinois, which has appropriated \$20,000 a year for a laboratory and two scientists, at the direction of former President David Kinley; together they will seek new outlets for the oil.

The “industry seems destined to develop Chicago as its central marketing point.” A small photo shows Otto Eisenschiml.

Note 1. This is the earliest published document seen (July 2019) that mentions the National Soybean Oil Manufacturers’ association—renamed the National Soybean Processors Association, in 1936. This is the earliest published document seen (July 2019) that spells National Soybean Oil Manufacturers’ association—with an apostrophe at the end of the word “Manufacturers”—which was one of two spellings.

29. *Grain Dealers' Journal*. 1930. Organize Soybean Oil Mfrs. Ass'n. 64(11):777. June 11.

• **Summary:** Describes the founding of the trade association which in 1936 was renamed the National Soybean Processors Association. "At a meeting held on May 21st, at the City Club of Chicago, the National Soybean Oil Manufacturers Ass'n [Association] was formally launched." Active members will include manufacturers and refiners of soybean oil. "Officers elected were: President, Otto Eisenschiml, Scientific Oil Compounding Co., Chicago; vice presidents, W.L. Shellabarger of Shellabarger Grain Products Co., and R.G. Dahlberg, Armstrong Paint and Varnish Co.; secretary, Whitney Eastman, Archer-Daniels Midland Co., Milwaukee [Wisconsin], and treasurer, I.C. Bradley, Funk Bros. Seed Co., Bloomington.

"Board of Directors (besides the above officers) were: H.G. Atwood, of the Allied Mills, Chicago; Robert Bennet, of Spencer Kellogg & Sons; Edward Evans, of Indianapolis [Indiana]; W.E. Flumerfelt, of the Central States Chem. Co.; David Lewis, of Falk & Co., Chicago; E.K. Scheiter, of the E.A. Staley Mfg. Co., Decatur, and B.C. Williams, of La Fayette, Indiana.

"The first step has been to set up specifications on the basis of which marketing of soy bean oil can be established. The second step is to work with the University of Illinois, which has appropriated \$20,000 annually for a laboratory and two scientists at the direction of former President David Kinley in seeking new outlets for the oil."

<b>Archer-Daniels-Midland Co.</b>	
<i>Soybean Oil Manufacturers and Refiners</i>	
Producers of	
Pure Old Process Soybean Oil Meal—Fine Ground and Pea Size	
EXECUTIVE OFFICES MINNEAPOLIS, MINN.	SOYBEAN DIVISION BOX 1663, MILWAUKEE, WIS.

• **Summary:** The company's Soybean Division is located at Box 1663, Milwaukee, Wisconsin. No product names are given.

Note: This is the earliest ADM ad seen (July 2020) related to soybeans. Address: Executive offices: Minneapolis, Minnesota. Soybean Div., Milwaukee, Wisconsin.

31. *American Miller*. 1930. New concern assumes control of Commander-Larabee: Archer-Daniels-Midland Company and Guy A. Thomas form group to purchase interest held by baking corporation. 58(10):896. Oct. 1.

• **Summary:** "Controlling interest in the Commander-Larabee Corporation and affiliated companies has passed from the Continental Baking Corporation to the National Foods Corporation, recently organized by interests of the Archer-Daniels-Midland Company, largest linseed crushing concern in the country, and Guy A. Thomas of Minneapolis [Minnesota]." The affiliation of the Archer-Daniels-Midland Company with Commander-Larabee increases the latter's grain storage capacity from 10 million bushels to double that amount.

Commander-Larabee was formed only four years ago, in March 1926, by the consolidation of the mills owned and managed by B.B. Sheffield and the group of mills of the Larabee Flour Mills Co. plus the Lysle plant in North Kansas City [Missouri], now known as the Monarch Milling Co.

Four portrait photos show: Shreve M. Archer. C.M. Hardenbergh. Guy A. Thomas. R.W. Goodwell.

32. *Wall Street Journal*. 1930. Archer-Daniels adds to bean oil sales: Bookings from soap manufacturers and refiners in past two weeks up sharply. Dec. 16. p. 7.

• **Summary:** Minneapolis. In the past two weeks, the Archer-Daniels -Midland Co. has "sold 1,00,000 gallons of soy-bean oil to soap manufacturers and edible oil refiners." This is a remarkably large amount of oil for so short a period, given "the average annual consumption of soybean oil in the United States during the last ten years of 2,809,595 gallons."

Previously, almost all soy-bean oil has been sold to the paint, varnish and coated fabric industries at prices slightly higher than linseed oil. But soy-bean oil now sells for about one cent a pound less than linseed oil, and is used in more different industries.

Last year, 1,750,000 bushels of soy beans were crushed; the remainder of the U.S. crop was used for seed or feed on farms. However this year, with the import duty on soy-bean oil increased to 3½ cents a pound, an estimated 4,000,000 bushels will be crushed. Archer Daniels expects that the manufacture of "soy-bean oil will be an increasingly important and profitable part of its business."

33. **Product Name:** Soy Bean Oil, and Soy Bean Oil Meal.  
**Manufacturer's Name:** Archer-Daniels-Midland Co.  
**Manufacturer's Address:** Minneapolis, Minnesota.  
**Date of Introduction:** 1930 December.

**Ingredients:** Soybeans.

**New Product—Documentation:** *Wall Street Journal*. 1930. "Archer-Daniels adds to bean oil sales: Bookings from soap manufacturers and refiners in past two weeks up sharply." Dec. 16. p. 7. Minneapolis. In the past two weeks, the Archer-Daniels -Midland Co. has "sold 1,00,000 gallons of soy-bean oil to soap manufacturers and edible oil refiners."

Sweeney, O.R.; Arnold, Lionel K. 1935. "Processing the soybean." 2nd ed. *Iowa State College, Engineering Extension Service, Bulletin* No. 103. 59 p. See p. 55. Table

31, titled "U.S. soybean oil mills," lists 22 establishments that "are, or have been, processing soybeans for the production of soybean oil: Archer-Daniels-Midland Co., Minneapolis, Minnesota."

Ad in *Proceedings of the American Soybean Assoc.* 1936. [Sept.] p. 30. "New process soybean oil meal." The company now has soybean mills at Chicago, Illinois; Toledo, Ohio; Minneapolis, Minnesota; Milwaukee, Wisconsin; Buffalo, New York.

Milwaukee, Wisconsin: "Archer-Daniels-Midland Company." (Medium = capacity between 50 and 200 tons/day of soybeans).

Haynes, Williams. 1954. *American chemical industry: A decade of new products. Vol. 5.* Toronto, New York, London: D. Van Nostrand Co. li + 622 p. In 1934 Archer-Daniels-Midland reopened the plant of its subsidiary, Wm. O. Goodrich Company at Milwaukee, Wisconsin, as a soya operation.

*Moody's Industrial Manual.* 1974. "Archer-Daniels-Midland Co." See p. 100 "On Feb. 1, 1928 [ADM] acquired the entire property and assets of William O. Goodrich Co. of Milwaukee [Wisconsin], manufacturers of highly specialized and refined qualities of linseed oil."

**35. Product Name:** Yelkin Lecithin.  
**Manufacturer's Name:** Ross & Rowe, Inc.  
**Manufacturer's Address:** 25 Beaver St., New York City.  
**Date of Introduction:** 1931 January.  
**New Product–Documentation:** Ad by Ross & Rowe, Inc. 1931. "Yelkin: The new, improved vegetable lecithin" *Oil and Fat Industries* 8(1):8. Jan.

Ad in *Bakers Digest.* 1943. April. p. 48. "Yelkin BSS Lecithin."

*Soybean Blue Book.* 1947. p. 70-71. Ad on p. 70 reads: "Standardized lecithins. Lecithin headquarters of America. Quality controlled... There is a grade of standardized lecithin specially adapted for each of the following: Confectionery products, bakery products, oleomargarine, paints and printing inks, cosmetics, vitamins, leather and textiles. Backed by a staff of competent technical men with over 17 years of practical lecithin experience, who know lecithin and how to use it." Note: The word "Yelkin" does not appear.

Ad in *Soybean Blue Book.* 1953. p. 101. "25 Years of Lecithin Experience. Pioneers and Leaders in Developing Uses. Leaders in Lecithin Sales." Note: 1953-25 = 1928. *Soybean Digest Blue Book.* 1974. March. p. 118. They are now a subsidiary of ADM. "Sole distributor of the complete line of Yelkin lecithin products." Ad in *Soybean Digest Blue Book.* 1978. p. 37. "Our Yelkin lecithins have been a standard in the industry for over 50 years."

**36. Wall Street Journal.** 1931. Archer-Daniels' earnings \$508,112: Ten months' profit equal to 56 cents a share—\$2.01 for preceding 12 months. Sept. 12. p. 3.

• **Summary:** This net profit of \$508,112 is after depreciation, interest, federal taxes, etc. The company has changed

its fiscal year to end on June 30, instead of August 31. A consolidated balance sheet of the company and its subsidiaries is given for the years 1928 to 1931.

“The relatively low profit is due to substantial losses from soy bean operations and to declines in the price of products which it was impossible to hedge,” Shreve M. Archer, says in his remarks to stockholders.”

ADM has participated in the management of Commander-Larabee Corp., and has realized a small profit from this.

37. *Prairie Farmer*. 1931. Soybeans make poor quality pork: Soybean oilmeal O.K.—There is danger in feeding whole soybeans. 103(32):3, 20. Oct. 31.

• **Summary:** When whole soybeans are fed to hogs, the result is undesirable soft, oily pork. “Soybean mills located in *Prairie Farmer* territory are: Allied Mills, Peoria, Illinois. Funk Bros., Bloomington and Taylorville, Illinois. Archer-Daniels Midland Company, Chicago, Illinois, and Toledo, Ohio. Evans Milling Company, Indianapolis, Indiana. Ralston-Purina Company, LaFayette, Indiana. Procter and Gamble, Louisville, Kentucky. Early-Daniels Company, Cincinnati, Ohio. Staley Company, Decatur [Illinois]. Shellabarger Company, Decatur [Illinois].”

Two photos show: “The loin and bacon on the left are from a soybean-fed hog. The right from corn-fed hog.” The samples on the left are soft (drooping over a pail) and fatty.

Note: This is the earliest document seen (Aug. 2016) that mentions Ralston Purina Co. in connection with soybeans.

38. *Chatham Daily News (Ontario, Canada)*. 1932. Soya bean cooperative gets charter: Form of contract is to be submitted to the growers at once. Matters pertaining to organization of farmers cooperative discussed at meeting of special committee of Board of Trade. May 28. p. 3, 12.

• **Summary:** “A charter has been granted to ‘The Soya Bean Oil and Meal Co-operative Company of Canada Limited,’ and will be in the city in the course of a few days, according to an announcement made by Douglas G. Kerr at a meeting yesterday of the special committee of the Chatham Board of Trade empowered to attend to the details of organization of the farmers co-operative which will operate a crushing plant in the city.

“Another interesting announcement was that more than 6,000 acres have been pledged for soya bean cultivation so far, with promises for more, and that everything augurs well for the operating of a temporary crushing plant in the T.H. Taylor Mills in the fall.

D.E.R. Rispin, chairman of the special committee, presided at the meeting which was held in the agricultural offices. Those in attendance were Douglas G. Kerr, T.R. Jones, Ross Huff, Stewart Campbell, Mayor I.L. Davis, Alderman P.J. Chinnick, and city manager A.L. Thompson.”

Restrictions:... Mr. Kerr explained that the co-operative is permitted to issue 2,000 shares at \$50 each. The restrictions are that only one share be held by one person, and that shares may only be issued to those actively engaged in farming in Canada. Shares can be transferred only with the consent of the directors.

“The constitution calls for 18 directors. Twelve provisional directors have been named for the purpose of organization, and the permanent directors will be appointed at an early meeting of the shareholders. As soon as the bylaws already drafted are approved, the meeting will be called.”

“Management contract: Some discussion was given to the question of a contract with the co-operative management, which will be the Archer-Daniels Midland Company, the opinion being held that details in connection with this could be completed at a meeting to be held next week.”

Full details of the eight-point contract are given. First, the Grower agrees to plant, care for, and cultivate a specified number of acres of Soybeans during a specified season at a specified location.

“2. The Co-operative hereby agrees to purchase and the Grower hereby agrees to sell all Soybeans the Grower produces less such quantity to be reserved for seed requirements for the following season as agreed to by the Co-operative, subject to terms and conditions as herein set forth, at a price per bushel (60 lbs.) to be finally determined when the Soybean products have been manufactured and sold.

“3. The Grower agrees to deliver Soybeans when delivery is called for by the Co-operative to the Co-operative crushing plant at Chatham...”

“4. The Co-operative will make an advance to the Grower on the price per bushel of Soybeans...”

Note 1. This is the earliest document seen concerning soybeans (or this cooperative crushing company) in Chatham, Ontario, Canada.

Note 2. This is the earliest published document seen (Jan. 2010) concerning a soybean crusher in Canada.

39. Morse, William. 1932. Soybeans. Radio broadcast. NBC. National Farm and Home Hour. Sept. 2.

• **Summary:** As president of the American Soybean Assoc., Morse is presiding over a broadcast from the association’s annual meeting. He begins this show, which is carried by a network of 47 associate NBC radio stations, by saying: “I am glad to greet the Farm and Home Hour audience on behalf of the American Soybean Association.” During the broadcast, Morse presents three guest speakers. First, Dr. A.A. Horvath of Pittsburg, Pennsylvania, who gives “a review of the uses of soybeans for human food.” Second, Mr. Whitney H. Eastman of the Archer-Daniels-Midland Company, who speaks about the industrial uses of soybean oil and meal. Third, Mr. F.P. Latham of Belhaven, North Carolina, who

describes “methods of soybean growing on a large scale.”  
Address: [USDA].

40. *Windsor Star (Windsor, Ontario, Canada)*. 1932. Sino-Jap row gives Kent new industry: Chatham mayor and Henry Ford rival emperor’ grow soy beans. Oct. 22. p. 25-26.

• **Summary:** This long and detailed story about soybeans is actually in the Third Section (page 1-2) of *The Border Cities Star*. The Archer-Daniels-Midland company is mentioned several times as a “sort of pioneer in the soy bean business, and before that was a pioneer in the extraction of linseed oil and its marketing in the United States.”

A table showing the many uses of lecithin includes lecithin, soy milk. “Mayor Davis of Chatham has been largely responsible for the formation in Chatham [Ontario] of a Soy Bean Co-operative whose members have some 7,000 [?] acres under cultivation in the district around Chatham and which is now setting up in Chatham a mill for the extraction of oil and meal in an old woollen mill owned by the Taylor milling firm.”

“The soy bean crop in Kent county this season has been very good. Some fields will run as high as 30 bushels to the acre, and the mill expects to have around 200,000 bushels to start work on when it commences operations sometime in November. There is a market awaiting every gallon of oil and every pound of meal, according to G.E. Biles, the expert from the Archer-Daniels-Midland Company which is handling and processing the beans for the new cooperative.”

“It was the soap business, as it is carried out in Great Britain that was responsible for the introduction of soy beans as a commercial crop in the Chatham area. A Chatham banker was on a trip to the Old Country and was impressed with the financial position of two soap companies there. He investigated and found that it was chiefly because they were using soy bean oil, which enabled them to get the quality they wanted in their soap more cheaply than from other fats. Knowing that soy beans grow wonderfully in Kent County, he brought the idea of starting the soy bean industry there, back with him. The present co-operative is the out-growth of that idea.”

“But Canada at present imports soy bean products. The Archer-Daniels-Midland Company, which is in the charge of the installation of the machinery in Chatham and of the handling of the production on a royalty basis for the co-operative, has been one of Canada’s main sources of supply. But the company’s contract says that when the Chatham Co-operative is in a position to supply the Canadian market, the company [ADM] will cease exporting.”

“Mr. Biles is enthusiastic about the possibilities of soy beans. When he started with the Archer-Daniels-Midland company he went to work in a plant in Decatur, Illinois. It was the first plant and they were pressing oil from 400 bushels of soy beans a day. Now they are using 3,500 bushels a day, and there are about 15 plants in the state. Mr. Biles

believes that soy beans, for commercial purposes, will some day overshadow the present huge corn products business. One can make more things from soy beans than from corn...”

41. *Star Tribune (Minneapolis, Minnesota)*. 1932. George Archer is dead at 82: Chairman of board of Archer-Daniels-Midland—Builder of linseed industry. Nov. 13. p. 1, 6.

• **Summary:** “Mr. Archer was born in 1850 at Dayton, Ohio, and had lived in the Twin Cities 43 years. He is survived by a son, Shreve M. Archer, president of Archer-Daniels-Midland Co., and a daughter, Mrs. Luella Archer Elliott of Phoenix, Arizona.

“There will be no funeral services for Mr. Archer in Minneapolis or St. Paul. His body will be taken Sunday night to Dayton, his birthplace, for burial in the Archer family mausoleum... The funeral will be conducted at Dayton.”

“Moved to Yankton, S.D.: The organization that Mr. Archer first became connected with was known as Clegg, Wood & Co. His father, William S. Archer, had been one of the founders of this company, in 1844.

“Shortly after Mr. Archer joined its staff, the name was changed to Wood, Archer & Co. and the young man was admitted to the partnership. He remained in Dayton, with the concern headed by his father, for some 10 years.

“In 1884 however, Mr. Archer decided to come west and continue the linseed manufacturing business nearer to the source of the material from which linseed is made, flaxseed. He accordingly moved to Yankton, South Dakota, and built a small flax crushing and linseed refining plant. Mr. Archer formed a corporation, Archer & Co., to operate this.

“Came to Minneapolis: After five years, Mr. Archer decided that Minneapolis offered greater advantages to a manufacturer of linseed products, particularly in the matter of distribution of both the oil and the byproducts, linseed cake and meal. He accordingly moved the business of Archer & Co. to Minneapolis, built a new and larger plant, and continued operation under that name, on a steadily larger scale, until 1899. Then he sold the plant to the American Linseed Co. but continued in charge of the Minneapolis business, as northwest manager of that corporation, for five years.

“In 1904, Mr. Archer joined with the late J.W. Daniels to organize the Archer-Daniels Co., with Mr. Daniels as president and Mr. Archer as vice president. The two men continued in active charge of the business until some 10 years ago and under their leadership it was developed as a dominant factor in the linseed industry, not only of America but throughout the world.

“Some eight years ago [April 1923], the Archer-Daniels Co. purchased the business and properties of one of its leading competitors, the Midland Linseed Products Co. of Minneapolis, and added them to its previous holdings.”

42. Horvath, A.A. 1933. The soy-bean industry in the United

States. *J. of Chemical Education* 10(1):5-12. Jan. [19 ref]

• **Summary:** This is an excellent overview. Contents:

Introduction: Soybean acreage in the USA in 1917 (50,000 acres) and 1931 (3,497,000 acres), production in bushels of seed for the top 22 states in 1931. Oil milling: Solvent or new process, hydraulic or old process, expeller method, the pioneering work of North Carolina (1916), Chicago Heights Oil Manufacturing Co. (1920), A.E. Staley Mfg. Co. (1922; starting with one expeller. Today capacity is over 1 million bushels/year), the Blish Milling Co. of Seymour and Crotersville, Indiana (1923; they crushed 317,000 pounds of soy beans in the 1927-28 season), current U.S. production of soy bean oil (13.5 million lb in 1930, up from 11 million lb in 1929), the problem of disposing of soy-bean oil meal. Soy bean oil for food. Lecithin. Bleaching properties (J.R. Short Milling Co. and Wytase). Soy beans for food: Use in China, Prof. L. Berczeller and soya flour, the Soyex Co. of Nutley, New Jersey. Glue: I.F. Laucks of Seattle, Washington (Research began in 1923 but the year "1926 proved to be the turning point in the life history of soy-bean glue").

"The maintenance of the soy-bean milling industry at a high level of production is dependent upon the consumption of soy-bean oil meal. And heretofore, according to W.H. Eastman [president of the National Soy-bean Oil Manufacturers Association], this consumption has been disappointingly small, despite the fact that the meal has no superior as a protein concentrate." The American livestock feeder "has not come to realize the value of the meal, nor to utilize its qualities to the same extent as the Danish farmer. In the year 1930 something over 100,000 tons of the meal were manufactured in this country [USA] from our domestic beans. Yet the little country of Denmark is consuming considerably more than we produce in the United States, while our milling industry is forced to store a good share of its production, unable to dispose of it... The demand for soy-bean cake is the limiting factor for the industry."

"Soybean oil has certain properties which make it more valuable to the paint and varnish industries than it would be as a mere diluent for linseed oil. For instance, it is particularly well adapted for grinding pastes... Soybean oil further has the property of mitigating the after-yellowing of a white paint or enamel, and in this respect it is without a peer. The trade would pay a considerable premium over the price of linseed oil to obtain soy-bean oil for this purpose."

"It is estimated that 75 per cent. of the soy-bean oil consumed in the United States is being used by paint and varnish industries and in the manufacture of linoleum, oilcloth, and artificial leather. Lesser quantities are utilized in printer's ink and soap."

Lecithin: "Up to the present time all the soy-bean lecithin used in this country [USA] is being imported from Germany and Denmark. The commercial product is a dark brown paste or heavy viscous liquid, containing about 60 to 70 per cent. of lecithin, the remainder being pure soya

oil, coconut oil, etc... The margarine industry absorbs a considerable amount of this lipid, as its incorporation overcomes many of the differences between butter and its substitute—e.g., it binds the water and prevents spitting when frying. Lecithin is of great interest in the chocolate and cocoa industry..." Discusses many applications of lecithin but does not give statistics concerning imports or domestic consumption / utilization.

"A new era dawned in the possibilities of the soy bean for food with the discovery in 1923 by Prof. L. Berczeller of the University of Vienna of a special process which eliminated the beany flavor from the soy bean and produced a nutty-tasting soy-bean flour capable of being stored for years without marked deterioration. Its principle consists in the subjection of the beans to the action of saturated steam for a short period of time, followed by vacuum distillation. It is to the credit of the Soyex Company that this process was brought over to the United States with the establishment in 1930 of a plant in Nutley, New Jersey. A high standard for soy-bean flour was established."

Soy-bean exhibit at the Chicago World's Fair: "The soy-bean industry of the United States will be adequately represented at the 1933 'Century of Progress' exposition in Chicago in the Agricultural Division under the title 'Century Soy-bean Exhibit.' On July 9, 1931, an organization meeting of representatives of the soy-bean industries was held in Chicago, where a committee was elected for the sections: producing, marketing, and utilization, the latter section being subdivided into human utilization, livestock utilization, the arts, paints and oils, and milling. The 'Century Soy-bean Exhibit' is an excellent opportunity for the domestic soy-bean industries to display their products and it is undoubtedly going to stimulate further developments.

"Conclusions: As Henry Ford recently said, 'The dinner table of the world is not a sufficient outlet for the farmer's products; there must be found a wider market if agriculture is to be all that it is competent to become. And where is that market to be found if not in industry?... For several years we have been running large crops of everything from sunflowers to soy beans through our chemical laboratory, in an effort to find an annual market for the farmer's produce. There can be no doubt that the soy bean is one of the most promising of all agricultural plants for an almost unlimited variety of industrial uses, and that it is going to play an outstanding role in the future economic life of this country.'"

Photos show: (1) A hydraulic process [press] mill (William O. Goodrich Co., Milwaukee, Wisconsin [subsidiary of ADM]). (2) Equipment for soy-bean oil refining process (A.E. Staley Mfg. Co., Decatur, Illinois). (3) Steam aspirator for producing high vacuum for deodorizing vegetable oils (Staley). (4) Soy-bean flour mill (The caption reads: Soyex Company, Inc., Nutley, New Jersey). (5) Baking Laboratory (The caption reads: Soyex Company Inc., Nutley, New Jersey. This photo may contain a photo of

Charles E. Fearn, the man to the right in the two-piece suit, with both sleeves rolled up).

Note 1. This is the 2nd earliest document seen (Nov. 2013) stating that the Soyex Company is located in Nutley, New Jersey.

(6) Plant making soy-bean adhesives (I.F. Laucks, Inc., Seattle, Washington). (7) Tank for adhesives (as high as the chin of a man standing next to it; Laucks).

Diagram: "Exploitation of the soy bean, according to the processes of Hansa Muehle G.m.b.H., Hamburg, Germany. Those derivatives representing products ready for sale are marked by circles." The process uses solvent extraction. On the oil side: There is a "distillation" step before the crude oil, which is refined to make edible oil. Crude lecithin is refined to make finished lecithin. On the meal side: First step is removal of solvent and drying of meal. Then cooling by air to give finished meal. It undergoes grinding, milling and sifting to give grits, hull meal, and edible flour.

Note 2. This is the earliest English-language document seen (Jan. 2019) that uses the term "grits" to refer to coarse soy flour.

Note 3. A footnote on the first page states that Horvath is a "Special Associate Member of the National Soy-bean Oil Manufacturers Association. (P.O. Box 331, Oakland Station)."

Note 4. Talk with Bob at the Map Room of the University of Chicago. 1997. March 25. Oakland Station is probably in Chicago, Illinois. A railway map from the 1930s and a gazetteer from the 1920s show it to be a mail stop on the Illinois Central line at 39th Street. This is 39 blocks south of The Loop, right along Lake Michigan, south of the center of Chicago.

Note 5. This is the earliest document seen (March 2016) concerning soy lecithin industry and market information (all soy lecithin used in this country [USA] is being imported from Germany and Denmark). Address: Pittsburgh, Pennsylvania.

**43. Product Name:** Soybean Oil, and Soybean Oil Meal.

**Manufacturer's Name:** Soya Bean Oil and Meal Co-operative Company of Canada Ltd. (The).

**Manufacturer's Address:** 103 Colborne St. north, Chatham, ONT, Canada.

**Date of Introduction:** 1933 April.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

**New Product–Documentation:** *The Chatham Daily News* 1932. May 28. p. 1, 12. "Soya Bean Cooperative Gets Charter." "A charter has been granted to 'The Soya Bean Oil and Meal Co-operative Company of Canada Limited'..." Note: This is the earliest document that the Chatham Library can find concerning this company (April 1997).

Vernon's City of Chatham (Ontario, Canada) Directory. 1933. Corrected to April 1933. p. 189. "Soybean Oil & Meal

Co-operative Co. Ltd., G.E. Biles, mgr, Colborne n, w cor of Adelaide" (Company located at northwest corner of the intersection of Colborne St. and Adelaide St.).

*Agricultural and Industrial Progress in Canada.* 1935. "Linseed oil." 17(2):27-28. Feb. "The production of the Canadian linseed and soy bean oil industry in 1933, according to a report of the Dominion Bureau of Statistics, was valued at \$2,086,000. The number of plants in operation was ten and the capital investment \$3,022,000.

"Of these ten plants two used soy beans as their raw material, namely, The Canadian Soyabeans Limited of Milton, and the Soybean Oil and Meal Co-operative Company of Canada Limited of Chatham, both in southwestern Ontario." The value of soy-bean oil and meal was no more than \$49,071.

C.A. MacConkey. 1935. Soybeans. Ottawa, Ontario, Canada: National Research Council. p. 65. "Firms Engaged in the Soybean Industry in Canada." "The Soy Bean Oil and Meal Co-operative Company of Canada, Ltd., Chatham, Ontario."

Shepherd's City of Chatham (Ontario, Canada) Directory. 1936. Page B-162 states: The company name and address are exactly the same as in 1933, except that the word "Soybean" is now spelled "Soyabean." So the company name was spelled in three slightly different ways prior to 1936. The manager is now D.D. Gagner. Page C-4 gives the address as 103 Colborne, north side, from North William to Limits. Note: In the 1937-38 edition of this directory, this company is no longer listed. Rather, A.E. Brotherton is at 103 Colborne and Verne Mifflin is at 103½ Colborne. Then in the 1938-39 edition no-one is listed at this address. And in the 1939-40 edition, Ernest Lane is listed at 103 Colborne.

F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-2. Describes Canada's second soybean crusher: "The next effort to start a mill was made at Chatham, Ontario, in 1932 by a farmer's co-operative under the name of the Soybean Oil and Meal Co-operative Co. of Canada, Limited. Farmers secured membership in the company by the purchase of a share valued at \$50 and this gave the purchaser prior rights to sell beans to the company. The number of members was said to have reached from 700 to 800 farmers. Under an agreement with the Archer-Daniels-Midland Company, Milwaukee, Wisconsin (one of the largest millers of soybeans in the United States), this company installed the machinery and provided a manager, Mr. B.E. Biles, to run the mill. In return for these services the Archer-Daniels -Midland Company was to receive 5 cents for every bushel of beans milled. The mill was of the Anderson expeller type and had a total capacity of about 20 tons of beans a day (24 hours)... The mill operated at intervals for a few months, but crushed

only 22,000 bushels of beans. The first year's results were disappointing to the company and the growers alike. In 1933 the price of soybean products rose considerably," and the mill handled something over 50,000 bushels of beans. "The final blow came when Mr. Biles, the manager, disappeared with about \$7,000 of the company's funds. The plant is now idle and did not open for the 1935 crop."

J.W. Tanner. 1973. "Where we are and how we got there: An historical review of soybean production in Ontario." In: Ontario Soya-Bean Growers' Marketing Board, ed. 1973. Ontario Soybean Symposium 1973. Ottawa: Agriculture Canada. p. 13, 18. "Two short-lived crushing plants were established in the south west part of Ontario in the mid-1930s, one of which was located at Shelbourne (or Colbourne/Colborne) Street in Chatham." Note: Founded in 1934 (see p. 18), this was apparently the first crushing plant in Canada.

44. *Flour & Feed*. 1934. Soybean plant of A-D-M newly equipped for business. 34(9):23. Feb.

• **Summary:** Archer-Daniels-Midland Co. now has its Chicago soybean plant in process of remodeling [by adding a solvent extractor]. A photo shows the plant. The first extraction unit has been installed, and the entire work should be completed by February 10th or 15th. Hunter Goodrich, of the soybean division, Milwaukee, Wisconsin plant, announces the installation of machinery and equipment is for the manufacture of soybean oil meal by the new process, or solvent extraction method, which he says is used exclusively in Germany, and marks a new step in the production of vegetable protein concentrates in this country. It is an event of particular significance for the entire feed milling industry.

Note: ADM's first solvent extraction plant began operation in March 1934 on Blackhawk St. on Chicago. It was a 100-ton-per-day capacity Hildebrandt continuous-flow, counter-current (U-tube) hexane solvent extractor. At that time ADM had the largest and most modern soybean processing system in America.

45. **Product Name:** Soy Bean Oil, Soy Bean Oil Meal, and Lecithin (Solvent extracted).

**Manufacturer's Name:** Archer-Daniels-Midland Co.

**Manufacturer's Address:** Chicago, Illinois.

**Date of Introduction:** 1934 March.

**Ingredients:** Soybeans.

**New Product-Documentation:** *Flour & Feed*. 1934. Soybean plant of A-D-M newly equipped for business. 34(9):23. Feb. Archer-Daniels-Midland Co. now has its Chicago soybean plant in process of remodeling [by adding a solvent extractor]. A photo shows the plant. The first extraction unit has been installed, and the entire work should be completed by February 10th or 15th. Hunter Goodrich, of the soybean division, Milwaukee, Wisconsin plant, announces the installation of machinery and equipment is for

the manufacture of soybean oil meal by the new process, or solvent extraction method, which he says is used exclusively in Germany, and marks a new step in the production of vegetable protein concentrates in this country. It is an event of particular significance for the entire feed milling industry.

Archer-Daniels-Midland Co. 1935. Archer-Daniels-Midland Company new process soybean oil meal (Ad). *Proceedings of the American Soybean Assoc.* p. 22. Aug. "New process soybean oil meal produced by the Hildebrandt solvent extraction process employed by the Archer-Daniels-Midland Company is now recognized as a protein concentrate of exceptional merit... Previous attempts to market an extracted meal in the United States proved unsuccessful chiefly because the meal was of inferior quality through failure to remove all of the solvent." This meal "contains not the slightest trace of solvent. One distinct advantage of extracted Soybean Oil Meal is its higher protein content which results from an additional 4 or 5 percent of oil."

MacGee, A. Ernest. 1947. "Vegetable oil extraction solvents; History and general chemical composition." *Oil Mill Gazetteer*. Aug. p. 18. By 1934 a number of continuous solvent plants were operating in Europe. In the USA, the first large-scale plant of this type was that of the Archer-Daniels-Midland Company, Chicago, Illinois. In March 1934 it began operating using a "Hildebrandt" extractor to process 100 tons/day of soybeans. The solvent was petroleum naphtha of the hexane type. As of 1947, this plant is still in operation, and in 1934 it marked the turning point and beginning of large-scale soybean crushing in America.

Cross, Marion E. 1954. *From land, sea, and test tube: The story of Archer-Daniels-Midland Company*. Minneapolis, Minnesota: ADM. 88 p. In 1933 ADM's plant superintendent E.W. Schmidt was sent to Europe to make a study of solvent extraction and bring back the best equipment available. Solvent extraction had originated in Europe, having been introduced by an Englishman in 1843; but only in recent years had the process been perfected to the point where it had come into wide use. Schmidt selected a Hildebrandt unit made in Germany; it used hexane solvent. "After the solvent had been removed by distillation, the oil was ready to be refined and the solvent was available for re-use. This process was so effective that only one per cent of the oil was left in the meal. The lower oil content made solvent extracted meal very hard to sell at first, even though feed purchasers were being offered a protein concentrate that contained 44 per cent protein as compared with the 41 per cent produced by hydraulic or expeller presses. After the extraction unit had been installed in June 1934, ADM started to produce lecithin..." Note: This 150-ton-per-day capacity Hildebrandt continuous-flow, counter-current (U-tube) hexane solvent extractor began operation in March 1934 on Blackhawk Street in Chicago. It was America's first successful continuous solvent extractor; at the time

it was also America's largest and most modern soybean crushing system, and the first to use hexane as a solvent with soybeans.

Letter from Dick Wallace of ADM. 1981, Sept. ADM first started making food grade soy lecithin in June 1934.

46. Archer-Daniels-Midland Co. 1934. A.D.M. at the Paint Industries Show, October 28, 29, 30, 31 (Ad). *Paint, Oil and Chemical Review* 96(19):51. Sept. 20.

• **Summary:** "This year, Archer-Daniels-Midland will show its full line of oils at the show. One hundred samples, including a complete line of regular and special linseed products—and soya bean and china wood oils for all purposes will be displayed for inspection and discussion. You will find this year's A.D.M. display infinitely more interesting than ever—due to several recent developments emanating from our research laboratories. Our booth number is 14.

"Crushers since 1840 (94 years).

"Mills at Minneapolis [Minnesota]; New York; Portland, Oregon; Chicago [Illinois]; Toledo [Ohio]; Milwaukee [Wisconsin]; Buffalo [New York]; St. Paul [Minnesota]; Fredonia, Kansas." Address: Minneapolis, Minnesota.

47. Schmidt, E.W. 1934. Recent developments relating to soy oil extraction by the solvent process. *Paint, Oil and Chemical Review*. 96(23):9-12. Nov. 15. [1 ref]

• **Summary:** Since 1920 and the end of World War I, the soybean processing industry in Germany has developed into one of great importance; Manchuria is the source of their soybeans. Batch extractors are still being used in Germany to process soybeans, however during the last 3-4 years the trend has been definitely toward continuous solvent extraction, especially in the larger mills.

The first continuous solvent extraction unit was built by Hansa Muehle in Hamburg, Germany, for use on soybeans. This gigantic unit has a daily capacity of 33,000 bushels [1 metric ton of soybeans = 36.75 bushels, so 33,000 bushels = 898 tons]. The plant has been in successful operation "for a number of years."

Shortly after the Hansa Muehle plant was completed, Brinckman & Mergel, a large oil milling firm at Harburg, Germany, developed a continuous extraction unit which is known as the Hildebrandt system, named after Mr. Carl Hildebrandt, the chief engineer and inventor. Its original capacity was 100 tons per day; the present unit, with 600 tons per day capacity, has been in operation for the past four years.

After studying the matter carefully, ADM decided that the Hildebrandt system was best suited to their needs. The ADM plant was installed in Chicago last winter and is the "first successful continuous extraction unit that has been put into operation on a large scale in this country."

Diagram 1 shows a cross section of the extraction unit; Diagram 2 is a flow chart of the complete plant. Five photos

show close-ups of the new ADM plant in Chicago. The quality of the "new process" soybean oil and "oil meal" is excellent. Address: General Superintendent, Archer-Daniels-Midland Co.

48. Honeymead Products Co. 1934. Display ad: Honeymead corn sugar molasses: Quick fattener for all classes of livestock. *Gazette (The) (Cedar Rapids, Iowa)*. Nov. 30. p. 17, cols. 1-3.

• **Summary:** "Contains nothing but corn—in a concentrated form.

"Guaranteed tank car analysis.

"Total sugars: From 74% to 82%

"Total moisture: From 18% to 22%.

"Distributed by R.P. Andreas & Sons of Lisbon, IA. And your local dealer."

Note: This is the earliest document seen (July 2020) concerning any of the Andreas family and soybeans. Address: Cedar Rapids, Iowa.

49. Honeymead Products Co. 1934. Honeymead: Corn sugar molasses (Ad). *Des Moines Tribune (Des Moines, Iowa)*. Dec. 5. p. 17. Bottom right corner.

• **Summary:** "Quick fattener for all classes of livestock. Contains nothing but corn—in a concentrated form. Guaranteed tank car analysis: Total sugars: from 74% to 82%. Total moisture: from 18% to 22%. See your local dealer.

Three illustrations show animals eating feed.

Note: This is the earliest document seen that mentions Honeymead in Iowa on www.newspapers.com. This company was run by the Andreas family in Dec. 1934. Address: Cedar Rapids, Iowa.

50. Archer-Daniels-Midland Co. 1935. Archer-Daniels-Midland Company new process soybean oil meal (Ad). *Proceedings of the American Soybean Association* p. 22.

• **Summary:** "New process soybean oil meal produced by the Hildebrandt solvent extraction process employed by the Archer-Daniels-Midland Company is now recognized as a protein concentrate of exceptional merit. The Hildebrandt process as developed in this country by the Archer-Daniels-Midland Company has long since passed the experimental stage of the early American extraction systems.

"Previous attempts to market an extracted meal in the United States proved unsuccessful chiefly because the meal was of inferior quality through failure to remove all of the solvent. That much of the prejudice formerly existing against an extracted meal has been eliminated is due to the fact that the continuous solvent extraction process used by the Archer-Daniels-Midland Company not only produces an excellent quality meal, but one which contains not the slightest trace of solvent.

"One distinct advantage of extracted Soybean Oil Meal

## Archer-Daniels-Midland Company New Process Soybean Oil Meal

¶ NEW PROCESS SOYBEAN OIL MEAL produced by the Hildebrandt solvent extraction process employed by the Archer-Daniels-Midland Company is now recognized as a protein concentrate of exceptional merit. The Hildebrandt process as developed in this country by the Archer-Daniels-Midland Company has long since passed the experimental stage of the early American extraction systems.

¶ Previous attempts to market an extracted meal in the United States proved unsuccessful chiefly because the meal was of inferior quality through failure to remove all of the solvent. That much of the prejudice formerly existing against an extracted meal has been eliminated is due to the fact that the continuous solvent extraction process used by the Archer-Daniels-Midland Company not only produces an excellent quality meal, but one which contains not the slightest trace of solvent.

¶ One distinct advantage of extracted Soybean Oil Meal is its higher protein content which results from the removal of an additional 4 or 5 percent of oil. This combination of higher protein and lower fat content of NEW PROCESS SOYBEAN OIL MEAL provides an unusually efficient and economical feed, particularly since grains normally mixed with protein concentrates contain a higher proportion of fat producing ingredients. The experiences of feeders and manufacturers abroad has demonstrated conclusively the efficiency of NEW PROCESS SOYBEAN OIL MEAL, Germany alone crushing 44,000,000 bushels of soybeans in 1932, all by the solvent extraction process.

¶ Our agricultural colleges have conducted numerous experiments to determine the palatability and feeding value of various types of Soybean Oil Meal. Valuable and instructive as such research has been, it is apparent that it has as yet barely scratched the surface. Recent experiments have shown the value of NEW PROCESS SOYBEAN OIL MEAL as it is produced by the Archer-Daniels-Midland Company, and further research will accord solvent extracted meal a prominent place among high protein concentrates.

### ARCHER-DANIELS-MIDLAND COMPANY

Soybean Mills at  
Chicago and Toledo

Soybean Division  
Box 603, Milwaukee, Wis.

is its higher protein content which results from an additional 4 or 5 percent of oil. This combination of higher protein and lower fat content of New Process Soybean Oil Meal provides an unusually efficient and economical feed, particularly since grains normally mixed with protein concentrates contain a higher proportion of fat producing ingredients. The experiences of feeders and manufacturers abroad has demonstrated conclusively the efficiency of New Process Soybean Oil Meal, Germany alone crushing 44,000,000

bushels of soybeans in 1932, all by the solvent extraction process.

“Our agricultural colleges have conducted numerous experiments to determine the palatability and feeding value of various types of Soybean Oil Meal. Valuable and instructive as such research has been, it is apparent that it has as yet barely scratched the surface. Recent experiments have shown the value of New Process Soybean Oil Meal as it is produced by the Archer-Daniels-Midland Company, and further research will accord solvent extracted meal a prominent place among high protein concentrates.”

ADM has soybean mills at Chicago, Illinois, and Toledo, Ohio.

Note: This is the earliest ad seen (Oct. 2016) that mentions “New Process” [solvent extracted] soybean meal—made by any company. Address: Soybean Div., Box 603, Milwaukee, Wisconsin; Soybean mills at Chicago and Toledo.

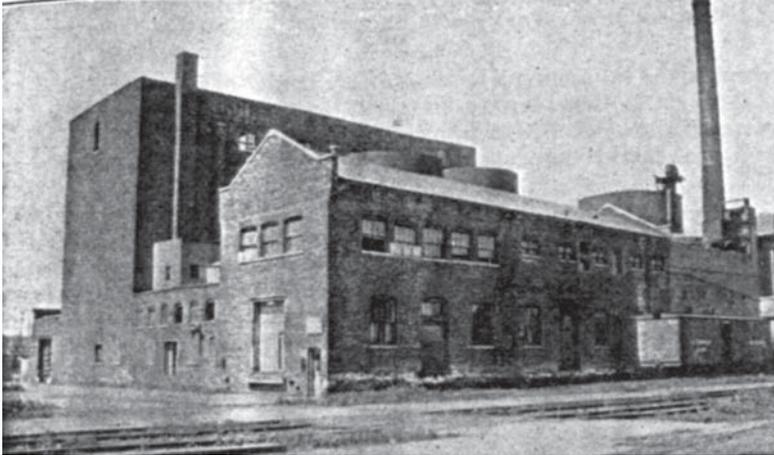

51. *Proceedings of the American Soybean Association*. 1935. Processing soybean oil meal. p. 21, 23.

• **Summary:** “Three methods of extracting oil or fat from soybeans are in use in the United States, each producing a meal of different standards and possible value...” (1) Old process or hydraulic extraction. (2) Expeller process extraction. (3) Solvent extraction. “Recently new solvent plants have started to operate, built on the continuous flow principle...”

A section titled “Soybean oilmeal” (p. 23) states: “The increased acreage of soybeans, and the increase in soybean oilmeal production both tend to center interest in the use of this oilmeal. It is now used only to a limited extent in the corn belt where most of the raw material is produced. No estimate can be placed on the amount of soybean oil meal distributed in mixed feeds, but in Indiana from 1931

to 1934, only 13 per cent of the meals commonly sold as straight oil meal has been soybean oilmeal. The average annual use of 1,562.5 tons of straight soybean oilmeal during this period required the processing of less than 75,000 bushels of soybeans, while the average annual production during this period was 2,000,000 bushels.

“The value of soybean oilmeal used as the only oil meal in rations for various classes of livestock in comparison with

other sources of protein is indicated in the experimental work briefly reported on these pages.

“Detailed results of all feeding work with soybeans, soybean oilmeal, and hay at the University of Illinois are included in Volume III [1930] of the Report of the Association, and summary of the work at Purdue University is included in Volume II [1928, 1929] which are available to all members of the Association.”

A photo (p. 23) shows an exterior view of the “Solvent extraction plant of Archer-Daniels-Midland Co. at Milwaukee, Wisconsin. See opposite page for description of this process.”

52. *Cedar Rapids Gazette*. 1935. Lisbon. Sept. 15. p. 17.

• **Summary:** “Local students leaving this week to enroll in college are:… Glen Andreas, Wheaton, Illinois; Dwayne Andreas, University of Miami, Florida;…”

53. *Wall Street Journal*. 1935. Archer-Daniels-Midland Co. Nov. 23. p. 5.

• **Summary:** Milwaukee, Wisconsin—“The William O. Goodrich Co., a subsidiary of Archer-Daniels -Midland, has started a soy bean oil plant here. The mill is now equipped to handle both flax seed and ‘soya bean.’”

54. **Product Name:** Pro-zyme Flakes.

**Manufacturer’s Name:** Archer-Daniels Midland Co.

**Manufacturer’s Address:** Chicago, Illinois.

**Date of Introduction:** 1935 November.

**New Product–Documentation:** Spot in *Food Industries*. 1935. Nov. p. 551-52. “The purpose of the flakes is to provide a stable head of foam on the beer... Intended to replace a little amount of malt, the soy bean flakes are added to the beer at the rate of approximately three fourths of a pound to the barrel.”

Note: This is the earliest English-language document seen (Jan. 2019) that contains the term “soy bean flakes”—used to refer to a food or beverage item.

55. *Food Industries*. 1935. Soy bean beer improver. 7(11):551-52. Nov.

• **Summary:** Archer-Daniels-Midland Co. of Chicago [Illinois] has just launched “Pro-zyme Flakes,” a soy bean product for brewers. They are intended “to provide a creamy, stable ‘head’ of foam on the beer, and to replace a like amount of malt.” The “flakes are added to the beer at the rate of approximately three fourths of a pound to the barrel.” They should be added directly to the main or malt mash along with the malt, and should remain in the mash through the peptonizing and diastatic steps.

56. *Oil, Paint, and Drug Reporter*. 1935. Trade news briefs: Archer-Daniels-Midland. 128(25):62. Dec. 2.

• **Summary:** The company’s subsidiary, the William O. Goodrich Company, Milwaukee, Wisconsin, “has started a soybean oil mill in that city. The mill is equipped to handle both flaxseed and soybean.”

57. **Product Name:** Full-fat Soy Flour.

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** Minneapolis, Minnesota.

**Date of Introduction:** 1935.

**New Product–Documentation:** Letter from Dick Wallace of ADM. 1981. Sept. ADM started producing full-fat soy flour in 1935.

Note: This is the 2nd earliest known commercial soy product made by ADM in the United States.

58. Sweeney, O.R.; Arnold, Lionel K. 1935. Processing the soybean. 2nd ed. *Iowa State College, Engineering Extension Service, Bulletin* No. 103. 59 p. 28 cm. (Ames, Iowa). First published in 1929. Official publication, Vol. 34, No. 14. 4 Sept. 1935. [42 ref]

• **Summary:** This is a revised version of the original 1929 bulletin. Contents: 1. The soybean and the farm problem: Characteristics of the soybean, uses of the soybean, soybeans in Iowa, the soybean and the nitrogen problem, the soybean and the protein problem, the soybean and the vegetable oil problem. 2. Methods of producing soybean oil: The hydraulic press method, the Anderson Expeller method, the solvent extraction system (stationary, large-scale Soxhlet type, rotary, continuous [Hansa Company, Ford Motor Co.], extraction solvents incl. trichloroethylene). 3. Plant design. 4. Production costs: Operating costs, calculation of costs. “The authors have endeavored to present the philosophy of small plants located close to the grower of the beans who would also be the buyer of the meal at a price not loaded by high freight costs. The farmer would thus retain on the farm the protein portion of the bean with its high feed and fertilizer values.”

Page 39 notes: “A continuous process said to be suitable for a small scale plant is being experimented with by the Ford Motor Company. In this process the flaked beans are fed into the bottom of a pipe set at a 10 degree angle and fitted with a screw conveyor. The flaked beans are moved through the pipe against the solvent, which flows in at about halfway between the upper and lower end. The upper end of the pipe forms a steaming chamber where the solvent is vaporized off. A similar process has been patented by Flumerfelt.”

Photos show: (1) Experimental hydraulic press. (2) An Anderson Expeller.

Table 31, titled “U.S. soybean oil mills” (p. 55), lists 22 establishments that “are, or have been, processing soybeans for the production of soybean oil: Archer-Daniels-Midland Co., Minneapolis, Minnesota. The Chicago Heights Oil Co., Chicago Heights, Illinois. The East St. Louis Cotton Oil Co., East St. Louis, Illinois. The Eastern Cotton Oil Co., Elizabeth City, North Carolina. The Elizabeth City Oil and Fertilizer Co., Elizabeth City, North Carolina. Falk and Co., Carnegie, Pennsylvania. W.F. Fancourt and Co., Philadelphia, Pennsylvania. Ford Motor Co., Detroit, Michigan. Funk Bros. Seed Co., Bloomington, Illinois. Wm. O. Goodrich Co., Milwaukee, Wisconsin [subsidiary of ADM]. W.R. Grau and Co., New York, New York. The Havens Oil Co., Washington, New Jersey. National Oil Products Co., Harrison, New Jersey. The New Bern Cotton Oil and Fertilizer Mills, New Bern, North Carolina. The Peru Products Co., Peru, Indiana. Wm. H. Scheil, Inc., New York, New York. Soybean Products Co., Cedar Rapids, Iowa. Spencer Kellogg and Sons, Inc., Des Moines, Iowa. The A.E. Staley Co., Decatur, Illinois. Standard Soybean Processing Co., Centerville, Iowa. Welch, Holme and Clark, Inc., New York, New York. The Winterville Cotton Oil Co., Winterville, North Carolina.” Address: Iowa State College, Ames, Iowa.

59. *Flour & Feed*. 1936. New soybean committee. 36(9):19. Feb.

• **Summary:** “The Grain & Feed Dealers’ National association has appointed a soybean committee to disseminate information to members.

“The committee is expected to inaugurate a campaign of education on soybeans. There are many things connected with the handling of soybeans that many grain and feed dealers do not know. Future markets on soybeans will be necessary before long. One of the things the new committee might straighten out is the confusion in the public mind about the difference between soybean oilmeal and the whole soybeans. The Chicago packers at a recent meeting stated emphatically that raw [sic, whole] soybeans fed to hogs make soft, oily pork, which must be discounted in price. The faults commonly attributed to whole soybeans do not apply to soybean oilmeal. These two supplements are different in

composition and produce different results when fed to pigs.

“Following are the members of the committee:

“Austin D. Sturtevant, chairman, Bartlett-Frazier Co., Chicago, Illinois; H.R. Schultz, Standard Soybean Mills, Centerville, Iowa; Harold L. Gray, Crabbs, Reynolds, Taylor Co., Crawfordsville, Indiana; Arthur C. Smith, Archer-Daniels-Midland Co., Milwaukee, Wisconsin; Lew Hill, Lew Hill Grain Co., Indianapolis, Ind.; H.W. Glessner, Baldwin Elevator Co., Decatur, Ill.; Ray Rowland, Ralston Purina Co., Circleville, Ohio; P.C. Knowlton, Knowlton Grain Co., St. Louis, Missouri.”

60. Hayward, J.W. 1936. Soybean oil meal: Recommendations on how to use it for maximum results. *Flour & Feed* 36(9):18. Feb.

• **Summary:** The general interest in soybean oilmeal is presently the keenest ever known. The main reason is that it supplies protein at the lowest cost per unit of protein of all concentrates which are universally available on the market today.

It is well known that soybean oilmeal must be thoroughly cooked in order to contain efficient proteins. When the meal is properly cooked, especially where moist heat (live steam) is used and the temperatures maintained are sufficient for complete cooking,” soybean meal has been found to contain proteins which are 20 to 50% more efficient in producing growth in animals than meals prepared at low temperate.

Note: This is the earliest document seen (June 2016) that uses the term “moist heat” in connection with proper cooking of soybean oilmeal (or soybean meal).

This article contains the following tested formulas and recommendations for sound and economical feeding of livestock and poultry: Laying and breeding flock. Baby chick starter and grower. Turkey starter mash. Turkey developing mash—feed with grain form 8 weeks to maturity. Mixture for pigs fed in dry lot. Dairy feed. Cattle and sheep rations. Address: PhD.

61. Dimmock, F. 1936. Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario. In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. 18 p. See Appendix B, p. B1-B6. Held on 4 May 1936 in the National Research Building, Ottawa, Ontario, Canada. [4 ref]

• **Summary:** An excellent insight into early soybean crushing operations in Canada. “During the year 1935 it has been estimated that approximately 10,000 acres were devoted to soybeans in Canada. This acreage was located almost entirely in western Ontario where the comparatively long, warm season provides excellent conditions for the production of this crop.

“Of the 10,000 acres it is unlikely that more than half

of 5,000 acres was harvested for seed. At an average of 20 bushels per acre this would mean a total seed production of about 100,000 bushels. Possibly 50 percent of this quantity will be used for feed and to supply seed for the present season's crop, leaving approximately 50,000 bushels of beans available for disposal for commercial purposes...

"As the centre of soybean production is located in western Ontario, it is only natural that the mills for utilizing the crop should be located there also. The one exception is the plant of the Dominion Soya Industries, 2049 Harvard Avenue, Montreal, Quebec.

"During the fall of 1929 the first oil mill for processing soybeans was established at Milton, Ontario, under the name of the Milton Oil Refineries, Limited. This mill got off to a poor start, and for various reasons such as poor management, poor machinery, and probably poor financing, has never operated with any degree of success. It has changed hands several times but is not operating at present. It uses the hydraulic press method of extraction.

"The next effort to start a mill was made at Chatham, Ontario, in 1932 by a farmer's co-operative under the name of the Soybean Oil and Meal Co-operative Co. of Canada, Limited. Farmers secured membership in the company by the purchase of a share valued at \$50 and this gave the purchaser prior rights to sell beans to the company. The number of members was said to have reached from 700 to 800 farmers. Under an agreement with the Archer-Daniels-Midland Company, Milwaukee, Wisconsin, (one of the largest millers of soybeans in the United States), this company installed the machinery and provided a manager, Mr. B.E. Biles, to run the mill. In return for these services the Archer-Daniels-Midland Company was to receive 5 cents for every bushel of beans milled. The mill was of the Anderson expeller type and had a total capacity of about 20 tons of beans a day (24 hours). Unfortunately during the first year of operation the prices of soybean oil and meal dropped to their lowest point, and as a result the price paid for beans was only about 50 cents per bushel. The mill operated at intervals for a few months, but crushed only 22,000 bushels of beans. The first year's results were disappointing to the company and the growers alike.

"In 1933 the price of soybean products rose considerably (meal from \$21 to \$36.50 per ton) but while the mill handled something over 50,000 bushels of beans the price paid the farmer averaged only 65 to 70 cents per bushel. This continued low price had a very discouraging effect upon the growers and while they continued to produce soybeans they preferred to use them for feeding to livestock rather than sell them to the mill. Much difficulty was encountered in purchasing beans for the mill from the 1934 crop—farmers were beginning to appreciate the value of soybeans for feeding purposes. The price offered, 70 to 75 cents per bushel, brought in very few beans. The final blow came when Mr. Biles, the manager, disappeared with about \$7,000

of the company's funds. The plant is now idle and did not open for the 1935 crop.

"The plant of the Dominion Soya Industries, Montreal, P.Q. [Quebec], commenced operations in the spring of 1935. This mill uses the solvent process and has a single unit extractor built by the Ford Motor Company. Besides oil and meal, soybean flour is also produced... This plant is now operating and has a capacity of about 100 to 150 bushels of beans a day. Only about 25 percent of the beans processed during the past year have been of Canadian origin, the remainder having been imported from the United States.

"A new mill was established in Stratford, Ontario, during the late fall of 1935 under the name of Soya Mills Limited. Mr. T.D. Bell, Toronto, is the president of this company and Mr. H.P. Trickey, vice-president and plant manager. An entirely new and up-to-date mill of the hydraulic press type was brought from England and installed so as to be ready to handle the 1935 crop. About 30,000 bushels of Ontario beans were bought and paid for at 95 cents per bushel f.o.b. Stratford. Additional beans were purchased in the United States. The beans were stored in the plant elevators and the plant commenced operating at about the beginning of January 1936. After the mill had run for some time and several thousand bags of meal had been produced, analysis showed that the press was incapable of extracting the oil below 10 to 11 percent. The feed companies demanded that the meal not carry more than 5 percent of oil. This unfortunate experience has given the company a serious setback. Orders are on hand for every pound of oil and meal that can be produced—oil at 7 to 8 cents per pound and meal at \$30.00 per ton by carlots, at the mill—and not a single pound has been sold due to the unsatisfactory nature of the product. Mr. Bell, the president, was interviewed in Toronto and stated that in all probability the present mill would have to be taken out and returned to England and the regular type of mill (as recommended in the first place by the manufacturers) installed in its place. It is the intention of the company to go right ahead as the management has every confidence of ultimate success.

"At Belle River, Ontario, an entirely new mill is now in the course of construction. Mr. James Edgar, of Edgar Sugar House, Detroit, Michigan, is building this plant under the name of the Edgar Soya Products, Limited. The intention is to produce oil, meal and flour. The mill is to consist of two Ford solvent extractors manufactured by the Ford Motor Company... This company intends to contract with growers for acreage. Although no attempt has been made to canvas the farmers contracts for more than 400 acres have already been secured. It is expected that this mill will have no difficulty in obtaining sufficient acreage to provide for its requirements."

Note: This is the 2nd earliest document seen (Aug. 2019) that mentions "Edgar Soya Products."

"The Dominion Linseed Oil Company plant at Baden,

Ontario... is operating a press of the expeller type at this point and is said to have been processing soybeans for 4 to 5 years" [i.e. since about 1931 or 1932]. "Mr. Livingstone, president of the Dominion Linseed Company, was interviewed in Toronto and states that in addition to soybean oil and meal his company is producing soybean flour at its plant in Owen Sound. This flour has been made by a special process and retains the entire oil content of the bean. It is of excellent quality, having been thoroughly tested at the University of Illinois in comparison with other soybean flours of United States origin and declared as equal or better than most of them for cooking purposes. This company is prepared to produce in addition a low oil content flour and plans to do so in the near future. The company is having considerable difficulty in marketing its soybean flour. Mr. Livingston claims that the large wheat milling companies control the bakeries and are strongly opposed to an additional flour being placed on the market, especially when there is any possibility of such flour being used in bread-making. He also claims that before he can definitely establish the value of this flour, both from the standpoint of nutrition and use, it will be necessary to show results that have been obtained in baking tests conducted by an impartial authority, such as the Dominion Department of Agriculture...

"The Christie Brown Company, biscuit manufacturers, Toronto, have been large buyers of soybean flour and have expressed a preference for the Dominion Linseed Oil Company's product over soybean flours which have been previously imported. The price of 6 cents per pound is considerably lower than 9 cents per pound, which was formerly paid for the imported flours."

Note: This is the earliest document seen (Aug. 2019) stating that Dominion Linseed Oil Co. was crushing soybeans in Ontario.

Tables on page B-5 show that the amount and value of soybeans, soybean oil, and soybean cake or meal imported to Canada have increased dramatically during the past 2 years. For example, during the one year from 1 April 1934 to 31 March 1935 some 4,325 bu of soybeans worth \$7,822 were imported. 64% of these soybeans were subject to a tariff totaling \$2,488.80. Yet during the 10 months from 1 April 1935 to 31 Jan. 1936 some 12,416 bu of soybeans worth \$13,918 were imported. Only 19% of these soybeans were subject to a tariff totaling \$2,242.74. "The imports of the last 10 months period represent the product of about 10,000 acres which might easily have been produced in Canada." Note: This is the earliest document seen (Jan. 2005) that gives soybean production statistics for Canada. Address: Div. of Forage Plants, Dominion Experimental Farms.

62. Farm Chemurgic Council. ed. 1936. Proceedings of the Second Dearborn Conference of Agriculture, Industry, and Science. Dearborn, Michigan: Farm Chemurgic Council; New York: The Chemical Foundation, Inc. 409 p. Held 12-14

May 1936 at Dearborn, Michigan.

• **Summary:** The conference is sponsored by the Farm Chemurgic Council and The Chemical Foundation, Inc. to "Advance the industrial use of American farm products through applied science." Mr. Wheeler McMillan, Permanent Chairman. Mr. Victor H. Schoffelmayer, Permanent Secretary. Contents: Introductory. 1. Council luncheon. 2. General opening session. 3. Symposium on new things. 4. Power alcohol. 5. Starches and sugars. 6. Plastics. 7. Cellulose. 8. Farm chemurgic banquet. 9. Soy bean. 10. Insecticides and fertilizers. 11. Closing general session. 12. Business session. 13. Appendix.

The Soy bean is the only crop discussed as such. Chapter IX (p. 243-67) contains the six papers presented: 1. Soy beans as a farm crop, by Mr. E.D. Funk; 2. The processing of soy beans, by Mr. Clark Bradley; 3. The rôle of soy bean oil in paint formulation, by Mr. E.E. Ware; 4. Soy bean proteins, by Mr. W.J. O'Brien; 5. Soy bean chemistry, by Dr. H.R. Kraybill; and 6. Mixing soy bean oil and tung oil, by Mr. F. Taggart. A discussion followed, moderated by Dr. C.C. Concannon.

Of the many exhibits, the application of vegetable oils in the manufacture of paints and the manufacture of molded plastics from farm grown materials were given most attention. Both of these projects were demonstrated in 5 different displays. Exhibitors included: Ford Motor Company, I.F. Laucks, Inc. and O'Brien Varnish Company.

Soy bean oil for tractors (p. 360): "If he [the farmer] can extract soy bean oil and run tractors on soy bean oil, he does not have to ship the soy beans to market and pay the freight, and let the industrialist extract the oil... he can run his Diesel tractor on the oil, and be ahead of the game all around." Also encourages farmers or groups of farmers to do the initial steps of processing their own soybeans to make industrial products. Note 1. This is the earliest document seen (April 2017) that mentions the use of soybean oil as a specifically "diesel" fuel. Many earlier documents on this general subject referred to its use as "artificial petroleum."

The casein plastics have increased their consumption during the depression. Their total now reaches 4 million pounds. They are used mostly in buttons and costume jewelry. "Of the soya bean plastics little can yet be definitely said as to prices or possibilities. Their characteristics are naturally similar to the casein materials and like them, they are comparatively expensive." Noted from the Chemurgic point of view is that the Ford plant output is said to be 300,000 pounds a year; 100,000 pounds of which represent soy bean material.

Financial report. Disbursements for the first year of the Council's activities ending April 30, 1936 (including organization expense of the First Dearborn Conference): Total Dearborn office—\$55,093.39. Total New York office (including printing and distribution of 40,000 copies of Proceedings of First Dearborn Conference)—\$44,567.41.

Total for the year—\$99,660.80. All financial support was supplied by the Chemical Foundation, Inc.

Conference attendance: 1000 attend second conference; 35,000 attend nationwide meetings. Geographically, public meetings have included every section of the country. “The actual number of meetings organized specifically to further the Council’s activities or at which the Council’s program was presented, was in excess of 100, and the combined total attendance is estimated in round numbers at about 35,000.”

The Soy Bean Committee (p. 391, 396-97). The meeting was called to order by Edward J. Dies, Executive Secretary of the National Soy Bean Processing Association [National Soybean Processors Association], Board of Trade Building, Chicago. Members present included E.D. Funk, Burlison, and Kraybill. Those present by invitation included Dr. J.W. Hayward of Archer Daniels Midland Co. (Milwaukee, Wisconsin), E.E. Roquemore of Allied Mills (Chicago, Illinois), E.F. Johnson and Lamar Kishlar of Ralston-Purina Co. (St. Louis, Missouri). Other members listed as being on the committee were Dr. A.A. Horvath, Chemist, Agric. Exp. Station, University of Delaware, Newark, Delaware. And Dr. Henry A. Gardner, Director, National Paint, Varnish & Lacquer Association, 2201 New York Avenue, N.W., Washington, DC. Mr. Adrian Joyce, President. The Glidden Company, 1963 Union Trust Building, Cleveland, Ohio. Note 2. This is the earliest document seen (Oct. 2005) showing that Dr J.W. Hayward is now working for Archer Daniels Midland Co.; an expert on soybean meal, he was formerly at the Univ. of Wisconsin.

“A sub-committee composed of Messrs. I.C. Bradley, president of the National Soy Bean Processors Association, Ware and Burlison, charged with certain work, found that the particular activity would now be carried on by the newly organized Soy Bean Laboratory at Urbana, which under the direction of the Federal government, will coordinate its work with that of the Experiment Stations of twelve cooperating states. Dr. Kraybill then sketched in broad outline aims and purposes of the new Laboratory and indicated potential benefits to all interests from grower to consumer.”

“On motion of Mr. Bradley the resignation of Mr. H.G. Atwood as Chairman of the Committee was accepted and Edward J. Dies, Executive Secretary of the National Soy Bean Processing Association, was elected as Chairman” (p. 396-97).

Photos show: (1) General view of the exhibition hall from the entrance. (2) Mr. Francis P. Garvan, father of the Farm Chemurgic Council and President of The Chemical Foundation. (3) Dr. Charles M.A. Stine, Mr. Williams Haynes, Mr. Howard E. Coffin.

Note 2. This is the earliest document seen (July 2019) that mentions the “National Soy Bean Processors Association” (spelled with “Soy Bean” written as two words).

Note 4. This is the earliest document seen (July 2019)

that mentions Edward J. Dies in connection with the National Soybean Processors Association. Note the unusual spelling of the name of the Association of which he is executive secretary. Address: Dearborn, Michigan; New York.

63. Herb. 1936. Tell me. *Quad City Times (Davenport, Iowa)*. June 17. p. 16, col. 2.

• **Summary:** “‘Its possible to take the boy out of the country but its absolutely impossible to take the country out of the boy,’ was the statement made by Howard Thompson, in charge of feed sales for the Honeymead people of Cedar Rapids... He says that about 60 per cent of the farmers and feeders endeavor to feed a balanced ration but that only about 10 per cent actually succeed in doing so.”

Note: It seems quite likely that this man, Mr. Thompson, works with the Andreas family at Honeymead Products.

64. Calkin, D.L. 1936. Report by Dr. Whitby of interview with Mr. D.L. Calkin of the Dominion Soya Products Company, Montreal. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. See Appendix B, p. B1-B10. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada. [2 ref]

• **Summary:** Note: In several subsequent interviews in this report, the company name is given as Dominion Soya Industries Limited. Based on a phone conversation of 24 April 1936. Dominion Soya Products Co. uses an inexpensive solvent extraction plant developed by the Ford Motor Co. Aviation gasoline is used as the solvent, but it is not entirely satisfactory, since it leaves an odor in the finished product. Most of the plants processing soya beans in Canada are apparently using solvent extraction. Exceptions are (1) Soya Mills Co. (Mr. Tricky) [sic, Trickey; at Stratford, Ontario], using English-built oil expeller equipment, and (2) Dominion Linseed Oil Company, making whole-oil flour.

Soybean oil: The chief outlets for soya bean oil are to the paint manufacturers and the packers (including Canada Packers), which use it for the production of shortening, or of a refined, bland salad or cooking oil. “It is understood that the Ford Motor Company is now using soya bean oil exclusively for its car enamels.”

Soybean flour: The Ford Motor Co., in co-operation with the Bakelite Co., has developed a successful plastic from soya bean meal. Soya bean flour is being used in England for making sausages; it is claimed to have the advantage of holding the meat juices and of acting as an antioxidant (preventing rancidity). Dr. Rabinovitch of Montreal is in favor of using soy “flour in sausages, especially in the low-grade type known as ‘hot dogs.’ Dr. Rabinovitch on his trip to the north last summer took considerable quantities of soya bean flour and oil for use of the Eskimo. Canada Packers think well of its use in sausages... Brown of Bradley Foulds

in England used soya flour for finishing light textiles with good results, but found that in the case of heavy goods and finishes the flour tends to produce a slimy feel on the goods. Experiments on the use of soya flour in water paints were made by the Sherwin-Williams Co., Montreal. The objection was raised, however, that the solutions stank. In experiments in England in this connection the chief point stressed was the difficulty of getting the flour into solution... Experiments are in progress in Canada on the use of soya flour in the manufacture of explosives, presumably after nitration. Soya bean flour used as a glue in the manufacture of plywood from soft wood has the advantage of being more waterproof than any other glue known. On account of this property it was used for all walls and floors exposed to the weather at the Century of Progress Exhibition in Chicago [Illinois]. Soya bean glue is being made in Canada by the Hercules Glue Company and a small quantity by the Bulldog Grip Cement Co.”

“Mr. Calkin’s experience with Ontario beans has been that they have often been contaminated with shells, small stones, clay, etc. Furthermore, U.S. beans could be bought for 90¢–\$1.00 a bushel at a time when \$1.50 was being asked for Ontario Beans.

“The Co-operative Soya Bean plant in Ontario (at Milton) in which the Archer Daniels Midland Company is also interested is not now apparently operating. It appears that the secretary of the Co-operative decamped with the funds.”

Also describes (p. B5-10) several experiments conducted by J.B. Phillips, MSc, PhD (July 1933 in Montreal) on “beating experiments with sulphite pulp and soya flour” using Dominion Soya Powder as a filler and size for paper. And “Utilization of Dominion Soya in coatings for papers.” Address: Dominion Soya Products Company, Montreal, Quebec, Canada.

65. Breedlove, L.B. 1936. Soy bean—The magic plant: Industrial uses already manifold with more in prospect. Article XV. *Chicago J. of Commerce and La Salle Street Journal*. July 7. p. 11.

• **Summary:** Introduction: Casein and soy bean glues. Lecithin from new plants. Use in ice cream and soup tablets (as well as linoleum, printing inks, and lubricating oils). Industrial forms using soy beans. New laboratory to study uses (regional laboratory in Illinois).

Casein is widely used to make glue. The casein (about 18% by weight) is used with borax water and glycerine in a state of hydrophilic solution to form the highly cohesive jellies called glues.

“The fir and plywood industry of the Pacific coast now uses extensively glue made with soy bean casein. Over half of the box shock plywood industry-cut boxes made for assembly at the shipper’s plant—in the southern and eastern part of this country recently has adopted soy bean glue in

preference to other glues. Tests by chemists of the plywood industry have proven that glue made from soy bean oil will not dissolve in water. The total consumption of soy bean glue for various uses in the wood working industries of this country is nearly 1,500 tons per month.

“Lecithin from new plants: Lecithin is used to give chocolate candy a gloss. Gumdrops manufacturers put in a drop of this substance to prevent hardening in storage. Cotton textile plants produce a soft, supple finish to their goods by the use of lecithin. Tanneries want their chrome leather to take up plenty of grease and lecithin has been found to be the best agent to increase the absorption.

“During the last decade mills for commercial extraction of lecithin from soy beans were successfully operated in Germany and Denmark, and, according to [Bruno] Rewald, over one million pounds are used annually in the German margarine industry. For a number of years soy bean lecithin was imported into the United States in competition with the lecithin extracted from eggs, but recently two mills were constructed in this country to supply the domestic demand. Lecithin is used in margarine to secure a better distribution of the fat.

“A solid made by vulcanization of soy bean oil with sulphur, known as factice, a compounding ingredient for the rubber manufacturer, was introduced last year... This brown compounder is used to increase the aging, curing, strength and wear resisting qualities of automobile tires and other heavy rubber products,....”

The following is a partial list of firms which buy soy beans and make industrial [non-food, non-feed] products from them: Archer-Daniels-Midland Company, Milwaukee, Wisconsin makes refined oils and kindred products. Armstrong Cork Company, Lancaster, Pennsylvania makes cork coverings and linoleum. Armstrong Paint and Varnish Works, Chicago, Illinois makes soaps and paints. The Blanton Companies, St. Louis, Missouri makes soaps. Davies-Young Soap Company, Dayton, Ohio makes soaps. Detroit Graphite Company, Detroit, Michigan makes soy bean oil varnish. E.I. duPont de Nemours and Company, Wilmington, Delaware makes paints, Duco finishes, plastics. Ford Motor Company, Dearborn, Michigan makes plastic automobile parts. Fischer’s Surfa-Saver, Inc., Cincinnati, Ohio makes soft soap. Funk Brothers Seed Company, Bloomington, Illinois makes oil meal feeds. The Glidden Company, Chicago, Illinois makes paints, varnishes, lacquers. I.F. Laucks, Inc., Seattle, Washington, and Portsmouth, Virginia makes glues. Paintcraft Company, Galesburg, Illinois makes paint. Peterson Core Oil and Manufacturing Company, Chicago, Illinois makes core oils. Procter and Gamble, Cincinnati, Ohio makes soaps. Purina Mills, St. Louis, Missouri, makes oil meal feeds. Sherwin-Williams Company, Chicago, Illinois makes paints, varnishes, lacquers. A.E. Staley Manufacturing Company, Decatur, Illinois makes refined oils and kindred products.

Stamford Rubber Company, Stamford, Connecticut makes rubber compounders. Woolsey Paint and Color Company, Jersey City, New Jersey makes paints and varnishes.

The Bankhead-Jones Act of 29 June 1935 authorizes the USDA to establish several specialized laboratories in the major agricultural regions of this country. The department last month designated the College of Agriculture of the University of Illinois as the regional government research laboratory to serve the 12 north central states. The 3 objectives of the laboratory are discussed. "It is expected that twenty research men will soon be at work in the 6,000 square feet of space that the new laboratory will occupy." Address: Staff member, Chicago Journal of Commerce.

66. *Williamsburg Journal Tribune (Williamsburg, Iowa)*. 1936. On motion the following Domestic Animal Claims were allowed... July 30. p. 7, col. 6.

• **Summary:** "Honeyamead Prod., supp Co Home-\$129.50."

Note: The meaning of this entry is unclear except that it shows Honeyamead Prod. to exist on this date.

67. Plambeck, Herbert. 1936. Perfect system for speeding up work: bins, racks and tracks do job in 10 minutes. Clinton County man finds overhead storage bunks big aid. *Quad City Times (Davenport, Iowa)*. Sept. 20. p. 34, col. 1-2.

• **Summary:** "While corn or other grains are running into the movable feed device from above, pellet-size Honeyamead supplement can be shoveled into the hopper from the side."

68. Archer-Daniels-Midland Co. 1936. New process soybean oil meal (Ad). *Proceedings of the American Soybean Association* p. 30.

• **Summary:** Note: This same full-page ad, slightly modified, was published in the 1935 issue of these Proceedings (p. 22).

The company now has soybean mills at Chicago, Illinois; Toledo, Ohio; Minneapolis, Minnesota; Milwaukee, Wisconsin; Buffalo, New York.

This same full-page ad was published again in the 1937 edition (p. 70). Address: Minneapolis, Minnesota.

69. **Product Name:** Soy Bean Oil, and Soy Bean Oil Meal.

**Manufacturer's Name:** Archer-Daniels-Midland Co.

**Manufacturer's Address:** Buffalo, New York.

**Date of Introduction:** 1936 September.

**Ingredients:** Soybeans.

**New Product-Documentation:** Ad in *Proceedings of the American Soybean Assoc.* 1936. [Sept.] p. 30. "New process soybean oil meal." The company now has soybean mills at Chicago, Illinois; Toledo, Ohio; Minneapolis, Minnesota; Milwaukee, Wisconsin; Buffalo, New York.

70. Bohstedt, G. 1936. Feeding soybeans and soybean oil meal. *Proceedings of the American Soybean Association* p. 25-26, 28. 16th annual meeting. Held 14-16 Sept. in Iowa. [1

ref]

• **Summary:** "One of the most amazing things in the world of feeding stuffs has been the increase in soybeans and soybean oil meal. The protein of these feeds is, or can be made to be, very high grade protein with respect to its biological value for certain classes of livestock..."

Whole soybeans, ground or unground, work well in the rations of cattle and sheep. "Soybeans are not used at all extensively for horses, although when fed in limited amounts or as a minor part of the concentrated ration they have proved satisfactory. For pigs, soybeans whether raw or cooked or otherwise heat treated, should be used with great caution on account of the tendency of soybeans to produce soft pork." Pigs "fed in dry lot should not have the ration balanced with soybeans until the pigs weigh about 125 pounds. Pigs on pasture, that do not need anywhere near as much protein feed to balance their ration, may be fed soybeans beginning at a lighter weight." Raw soybeans are poorly utilized by young pigs. "Cooked or toasted soybeans, to be sure, are very much more palatable and efficient from the standpoint of producing gains, but the high oil content of cooked soybeans naturally produces soft or oily pork.

"Soybean oil meal in rations of pigs and poultry: For several years a nutritional research program with soybean oil meal has been conducted at the University of Wisconsin, which project has been supported by Allied Mills, Inc. This work was conducted on an industrial fellowship basis, where Dr. J.W. Hayward, during two years, was the research worker or industrial fellow who had immediate supervision of the work, and where Dr. H.J. Deobald has succeeded" [after Dr. Hayward left to work for ADM]. It was found that soybean oil meal must be heated at the proper temperature for the correct time in order to provide the best nutritional value. Address: PhD, Univ. of Wisconsin.

71. Hayward, J.W.; Steenbock, H.; Bohstedt, G. 1936. The effect of cystine and casein supplements upon the nutritive value of the protein of raw and heated soy beans. *J. of Nutrition* 12(3):275-83. Sept. [18 ref]

• **Summary:** "Several investigators have analyzed the soy bean to determine the completeness of its protein." A list of the four earliest is given, starting with Osborne and Clapp (1907). They have shown "that the protein of the soy bean contains in quantity all of the essential amino acids with the possible exception of cystine. Mitchell and Smuts (1932) and Shrewsbury and Bratzler (1933) claimed a quantitative deficiency of the amino acid, cystine," in soy bean protein.

The addition of 0.3% l-cystine to raw soy beans or the application of sufficient moist heat "practically doubled the nutritive value of the protein."

The summary ends: "Since heating of the soy bean gave its protein a nutritive value practically equal to the nutritive value of the protein of the raw soy bean when supplemented with cystine, it appears that heating the soy bean caused the

cystine fraction of the protein to become available.” Address: Depts. of Agricultural Chemistry & Animal Husbandry, Univ. of Wisconsin, Madison.

72. Hayward, J.W. 1936. The nutritive value of soybean meal as affected by the method of processing soybeans. *Proceedings of the American Soybean Association* p. 29, 31-32, 34-35. 16th annual meeting. Held 14-16 Sept. in Iowa. [1 ref]

• **Summary:** The “solvent meal is spoken of as ‘New Process’ soybean oil meal and the hydraulic and expeller meals as “Old Process” soybean oil meal. Gives details on the process and temperatures used in solvent extracted, hydraulic pressed, and expeller pressed meals. In solvent extraction, the “soybeans are cracked and heated to about 140°F. for about 10 minutes before going to grinding rolls which form them into thin flakes. This cracking, pre-heating, and grinding step is a continuous one. The temperature of the flakes drops to about drops to about 113°F before they are conveyed to the extracting tower.” The hexane extraction takes place at about 113°F.

Expeller pressed soybeans are first cracked then dried to 2% moisture. They are then held in a tempering apparatus at temperatures ranging from 212° to 240°F. for about 10-15 minutes—before expelling the oil.

Research published in the March issue of the *Journal of Nutrition* showed that properly heated meals “contained proteins which had about twice the nutritive value of the raw soy beans or low temperature meals.”

Note: This is the earliest document seen (March 2006) that uses the term “expeller pressed” (or “press” or “presses” or “pressing”) in connection with mechanical pressing of the oil from soybeans. Address: PhD, Director of Nutritional Research, Archer-Daniels-Midland Co., Milwaukee, Wisconsin.

73. *Chicago Daily Tribune*. 1936. Grain board begins trade in soy beans. Oct. 6. p. 29.

• **Summary:** “Trading in soy beans for future delivery was inaugurated yesterday [Oct. 5] on the Chicago Board of Trade. It was estimated 300,000 bushels were traded during the day, and the bulk of the purchase and sales was credited to processors.” A section of the corn pit was reserved for trading soy bean futures; it was crowded when the market opened yesterday.

The opening price of No. 2 yellow soy beans, the “contract grade,” for delivery during December in Chicago public elevators was \$1.20 a bushel. Austin D. Sturtevant of the Bartlett-Frazier company bought 5,000 bushels at that price from F.S. Lewis, who represented Archer-Daniels-Midland company. A photo (p. 31) shows Sturtevant and J.M. Chilton, of ADM’s grain department, looking at the Board’s ticker tape for the first quotation on soy bean futures. “Chilton [or was it F.M. Lewis] sold the first lot, 5,000

bushels, to Sturtevant at \$1.20 a bushel.”

Fluctuation in the price of soy beans is limited to 4 cents per day above or below the average closing price of the previous day. “Commission rates are ¼ cent per bushel.”

74. *Time*. 1936. “Little honorable plant.” Oct. 12. p. 76, 78, 80. [1 ref]

• **Summary:** “Last year ‘the little honorable plant’ put \$35,000,000 into the pockets of U.S. farmers, outranking in value rye and barley. Soybean trading had grown so active that the [Chicago] Board of Trade could no longer overlook it as a potential source of commissions. First futures transaction in soybeans in the Pit this week was 5,000 bu. sold by Archer-Daniels-Midland Co. to Bartlett-Frazier Co. at \$1.20 per bu...

“A Yankee shipmaster brought the first soybeans to the U.S. in 1804... Yet no more than 500,000 acres were planted to soybean in the U.S. in any one year until 1917.”

“In the U.S. some 600,000 farmers grow soybeans in 27 states.” Illinois produced more than half the total U.S. crop last year.

“Food. Soybeans are ideal for diabetics because they contain little sugar, no starch. They do, however, contain more than three times the protein of wheat or eggs, more than twice that of lean meat. Soybean vitamins are A, B-1, B-2, D, E. For vegetarians and diabetics, the bean is converted into cheese, soup, butter, salad oil, macaroni, breakfast food milk (from grinding the beans in water). To bakers soybeans mean a new bread which is expected to break sales records. Last year vegetable shortenings and other lard substitutes required no less than 52,450,000 lb. of soybean oil, compared to a 1934 consumption of 2,735,000 lb.”

“Factory. Each ton of soybeans yields 30 gallons of oil and 1,600 lb of meal. Industry takes the oil and the meal, uses one or both to make glue, paints, combs, candles, radios, buttons, axlegrease, paper size, explosives, linoleum, oilcloth, printer’s ink, billiard balls, rubber substitutes, cigaret holders, Christmas tree ornaments. Last year U.S. manufacturers consumed 91,166,000 lb. of soybean oil, of which 2,550,000 lb. went into soaps, 4,800,00 lb. into linoleum and oilcloth, 13,000,000 lb. into paints and varnishes.”

“Ford & Future... The number 1 U.S. soybean man is Henry Ford. His reason: ‘If we want the farmer to be our customer, we must find a way to be his customer.’ Henry Ford began investigating the beans in 1930, spent more than \$1,000,000 in the next few years growing them, finding out how they could be used. Few months ago the River Rouge works got a \$5,000,000 addition in the shape of a soybean processing plant. Into Ford cars at present go the product of some 60,000 acres of soybeans. The oil goes into glycerine for shock-absorbers, enamel for body finishes [paints], binder for foundry cores. The meal, turned into plastics,

rolls off the assembly line as horn buttons, gearshift knobs, window-trims, distributor cases.

“Said Mr. Ford few months ago: ‘You will see the time when a good many automobile parts will be grown.’”

A portrait photo shows Henry Ford with the caption, “Motormaker Ford. A bean’s best friend.”

Note: This is the earliest document seen (Nov. 2013) that mentions the “assembly line” in connection with Henry Ford. Mass production was pioneered on the Ford moving assembly line in April 1913 at the Highland Park plant—and with it began the rise of the consumer economy.

75. LeClerc, J.A. 1936. Partial list of manufacturers of soybean flour. Washington, DC: Food Research Div., Bureau of Chemistry and Soils, USDA. 1 p. Oct. 19. First ed, Oct. 1933. Unpublished manuscript.

• **Summary:** The following are listed: 1. Funk Brothers, Bloomington, Illinois. 2. A.E. Staley Manufacturing Co., Decatur, Illinois. 3. Shellabarger Grain Products Company, Decatur, Illinois. 4. Soya Millers, Inc., Seattle, Washington. 5. American Soya Products Corp., Evansville, Indiana. 6. Fearn Soya Food Products, 355 W. Ontario Street, Chicago, Illinois. 7. Allied Mills, Inc., Peoria, Illinois. 8. The Glidden Co., Union Trust Bldg., Cleveland, Ohio. 9. Archer-Daniels-Midland Company, Chicago, Illinois. 10. Madison Foods, Madison, Tennessee. 11. Battle Creek Food Factory, Battle Creek, Michigan. 12. Cereo Company, Tappan, New York. 13. LaSierra [La Sierra] Industries, Ontario, California. 14. MacDowell Brothers, Brookville [sic, Brockville], Ontario [Canada]. 15. The Dietetic Supply House, Inc., 1750 W. Van Buren St., Chicago, Illinois. 16. Hilcrest Health Products, 120 Carroll Ave., Takoma Park, Maryland. 17. The Wilbur-Gardner Company, Glendale, California. 18. General Soya Corp., 120 Broadway, New York, New York. 19. Soybean Products Company, 4900 W. Flournoy Street, Chicago, Illinois. 20. El Molino Mills, 5604 Valley Blvd., Los Angeles, California. 21. Mitchell Milling Co., 5613 Lexington Ave., Los Angeles, California.

Note: This is the earliest document seen (Sept. 2009) concerning El Molino Mills and soy. Address: Washington, DC.

76. Bohstedt, G. 1936. Feeding soybeans and soybean oil meal. *Flour & Feed* 37(6):18, 19. Nov.

• **Summary:** “For several years a nutritional research program with soybean oil meal has been conducted at the University of Wisconsin, which project has been supported by Allied Mills, Inc. This work was conducted on an industrial fellowship basis, where Dr. J.W. Hayward, during two years, was the research worker or industrial fellow who had immediate supervision of the work, and where Dr. H.J. Deobald has succeeded him...”

“One of the main objects has been the effect of varying degrees and duration of temperature employed in the process

of manufacturing expeller soybean oil meal, and along with it hydraulic and solvent soybean oil meal. Pigs, poultry and laboratory rats were used for experimental animals...” Address: Univ. of Wisconsin.

77. Finley, John T. Assignor to Archer-Daniels-Midland Company (A corporation of Delaware). 1936. Soybean compound for aging grain distillate. *U.S. Patent* 2,066,263. Dec. 29. 2 p. Application filed 21 Dec. 1933.

• **Summary:** “The present invention relates to the production of a dehydrated pure food compound, to be used in whiskey, grain distillate, rum or brandy as an aging compound, and has particular reference to an improved type of compound comprising soy bean products and method of making the same.”

“It has been my discovery that when alcohol or strong alcoholic solutions are brought in contact with a substance of a high protein and organic mineral character, and these permitted to lager therewith during a short course of time, the raw taste and ethanol odor of new alcohol distillates will be removed and a smooth taste of somewhat aged character imparted thereto, whether the protein substance and organic mineral crude or refined continues to remain in the alcoholic solutions or is removed therefrom...” Address: Chicago, Illinois.

78. **Product Name:** Soybean Oil [Clarified Raw, Excelsior Non-Break, Superb Varnish, Snow Flake Heavy Bodied, Amber Raw, Scientific Pale Boiled, XX Refined, ZYMO, Ink Oil, or Soybean Fatty Acids].

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** Box 603, Milwaukee, Wisconsin.

**Date of Introduction:** 1936.

**New Product–Documentation:** Gray. 1936. All About the Soya Bean. p. 121. International Inst. of Agriculture. 1936. *Le Soja dans le Monde* [The Soybean in the World]. See: Manufacturers of edible soy products. p. 205. “Refined soy oil.” Letter from Dick Wallace of ADM. 1981. Sept. To William Shurtleff at Soyfoods Center. ADM started producing edible soy oils in 1930.

79. Gray, George Douglas. 1936. All about the soya bean: In agriculture, industry and commerce. London: John Bale, Sons & Danielsson Ltd. ix + 144 p. Introduction by James L. North. Late curator, Royal Botanic Gardens, Regent’s Park, London. Index. 28 cm. [19 ref]

• **Summary:** A comprehensive, early work on the soybean. Gray was a Scotch physician. Contents: 1. Introducing the soya bean. 2. The soya bean plant and its cultivation. 3. The soya bean as food: Dietetics, immature green beans, mature dried beans, soya bean coffee, soya bean chocolate, soya bean sprouts, soya bean milk, soya bean flour (incl. Berczeller flour, Soyvita bread made by Messrs. Wm. Beattie, Ltd., Glasgow), bean curd [tofu], soy (also called

1936

soya bean sauce, Chinese bean sauce, or shoyu), miso, fermented bean curd (p. 66-67). 4. Soya bean oil. 5. Soya bean trade. 6. The soya bean in agriculture.

Addenda: Soya bean products in the USA. Dieting and recipes. Statistics. India. Bibliography.

In the chapter on "Soya bean oil" we read (p. 75): "In England, the bean oil trade is carried on by the following firms:—The British Oil and Cake Mills Ltd., the ordinary shares of which are held by Lever Bros., Ltd., so that they are a branch of Unilever, Ltd.

"The Hull Oil Manufacturing Co., Ltd., Hull, now merged in the foregoing concern.

"The Premier Oil Extracting Mills, Ltd., Hull.

"Messrs. Wray Sanderson & Co., Hull.

"The Medina Refinery Ltd., Deptford, London.

"Messrs. J. Bibby & Sons Ltd., Liverpool.

"The Erith Oil Works Ltd., Erith" [Kent].

The first addendum, titled "Soybean products exhibited by the American Soybean Association" (at Washington, DC, p. 120-24) lists the following companies and each of the soy products that they manufacture: American Lecithin Corp.

(Atlanta, Georgia), Archer-Daniels-Midland Co. (Milwaukee, Wisconsin), Armstrong Paint and Varnish Works (Chicago, Illinois), Battle Creek [Food] Factory (Battle Creek, Michigan), The Blanton Co. (St. Louis, Missouri), Cereo Co. (Tappan, New York), The Davies-Young Soap Co. (Dayton, Ohio), Detroit Graphite Co. (Detroit, Michigan), Eastern Health Food Stores Association (Washington, DC), Funk Brothers Seed Company (Bloomington, Illinois), Harshaw Essential Foods, Inc. (Cleveland, Ohio), Keystone Macaroni Mfg. Co. (Lebanon, Pennsylvania), Kloss, Jethro (Takoma Park, Maryland: Fresh [soybean] milk. Pumpkin pie [soybean milk and soybean flour]. Soybean cheese. Soybean bread [20% soybean flour]. Soybean buns. Soybean sprouts. Soybean cake), Laucks, I.F., Inc. (Bloomington, Illinois—home office, Seattle, Washington), Madison Food Company (Madison, Tennessee; Vigorost, Cheese [Tofu], Soybeans canned with Tomato, Soybeans canned plain, Dixie Fruit Crackers), Mead Johnson and Co. (Evansville, Indiana; Makes Sobee [Infant Formula]), Oriental Show-You Co. (Columbia City, Indiana), Paintcraft Co. (Galesburg, Illinois), Prince Macaroni Mfg. Co. (Boston, Massachusetts), Purina Mills (St. Louis, Missouri; makes Cresol disinfectant, Purina turkey and growing fattening chow, Purina lay chow, Purina egg chowder, Purina breeder egg chowder, Purina fitting chow, Purina rabbit chow, Purina chick Growena chow, Purina 34% cow chow, Purina chowder, Purina bulky cow chow, Purina 24% cow chow, Purina pig and hog chow, Protena all mash starting and growing food), Shellabarger Grain Products Company (Decatur, Illinois), Soyex Company, Inc. (Nutley, New Jersey), Staley Sales Corporation (Decatur, Illinois), The Stamford Rubber Supply Company (Stamford, Connecticut), Dr. Roy Monier, President, Board of Managers, State Hospitals (Jefferson City, Missouri), United Drug Company (Boston, Massachusetts), Vi-tone Company (Hamilton, Canada), Woolsey Paint and Color Co., C.A. (Jersey City, New Jersey), Bureau of Chemistry and Soils, Department of Agriculture (Washington, D.C.). Page 120 adds: "The exhibit also contained some 200 soybean products, mostly foods, brought from the Orient by Mr. W.J. Morse, Senior Agronomist, Department of Agriculture, Washington, DC, U.S.A." Note 1. Morse and P.H. Dorsett were in East Asia from 1929 to 1931, when they collected many samples of soybeans and soyfoods.

In the second addendum, recipes, the author notes that soy flour is widely used in diabetic diets. Two leading firms who make soy flour in England and who also incorporate it in various products are: Soya Foods, Ltd., Rickmansworth, Herts, and Dietetic Foods Ltd. 124 Victoria St., London, S.W. 1. "The former specialize in Soyolk which is flour prepared on the principles laid down by Professor Berczeller; it is a mealy powder, fatty to the touch. The latter firm are the sole distributors in Great Britain of the well-known 'Heudebert' Dietetic Food products, a French concern which

makes different kinds of diabetic breads.” The following recipes are then given; \* = Calls for Soyolk soy flour: Soybeans, southern style. Soybean salad. Roasted soybeans [like dry-roasted peanuts]. Soybean croquettes. Soybean soufflé. Stuffing for baked fish\*. White sponge pudding\*. Shortbread\*. Madeira cake\*. Soya soup à la Reine (uses Heudebert soya flour). Soya chocolate (with soya flour). Soya vegetable soup (with soya flour). Soya bean sprout salad.

Note 2. This is the earliest English-language document seen (Jan. 2013) that uses the term “soya bean sprouts” to refer to these sprouts. Address: M.D. (Scotch physician), C.B.E., England. Late medical officer to H.B.M. Legation, Peking, China. Lieut.-Colonel, Retired.

80. *Chicago Daily Tribune*. 1937. Investors’ guide: Archer-Daniels-Midland. Jan. 30. p. 24.

• **Summary:** “Archer-Daniels-Midland company is a leading producer of linseed oil of all varieties. In recent years it has diversified activities somewhat, turning out soy bean oil and meal and various vegetable oils.” Then detailed financial information about the company is given.

81. Hayward, J.W.; Halpin, J.G.; Holmes, C.E.; Bohstedt, G.; Hart, E.B. 1937. Soybean oil meal prepared at different temperatures as a feed for poultry. *Poultry Science* 16(1):3-14. Jan. [15 ref]

• **Summary:** The authors reported that soybean oil meal as the sole protein supplement to grain rations fed to hens was unsatisfactory for the production of hatching eggs. They also found that the hatchability of eggs was improved when small amounts of dried milk and meat scraps were added to the rations.

These studies were made possible by a fellowship supported by Allied Mills, Inc. Address: Depts. of Poultry Husbandry, Animal Husbandry, and Agricultural Chemistry, Univ. of Wisconsin, Madison.

82. Johnson, E.F. “Soybean.” 1937. Is the soybean over-exploited? *Grain & Feed Review* 26(5):14-18. Jan.

• **Summary:** The author, a supporter of the soybean for 25 years, feels the potential for industrial uses of the soybean is being exaggerated.

Contents: Introduction. Soybean flour. Green vegetable soybeans. Lecithin. Soybean oil. Soybean oil vs. linseed oil. Soybean oil vs. cottonseed oil. Soybean oilmeal. Foreign competition. Industrial use of soybean oilmeal: I.F. Laucks and glue, The Glidden Company and paper sizing, Archer-Daniels-Midland Company and soybean flakes used to build a larger and firmer head on a glass of beer. Soybean oilmeal in semi-plastics (not much is used). Industrial exploitation of cornstalks. Soybean crop and equipment increase (Four major factors have contributed to the rapid rise in soybean production: (1) Net return per acre for soybeans compared

with oats and other farm crops; (2) The peculiar resistance of soybeans to drouth and insect damage, especially chinch bugs; (3) The benefits from growing the crop, both related to crop rotation and soil fertility. And the government’s attempt to control surpluses of other crops. Farmers have been paid from \$6 to \$12 to grow soybeans instead. In response to these, soybean “processing plants have sprung up like mushrooms everywhere”).

Investments and crushing capacity. The soybean is still a youngster. Misleading advertisements (by industrial manufacturers). Processors not over-exploiting. Southern soybean expansion.

A photo shows S.F. “Soybean” Johnson. Address: Associated with Ralston Purina, St. Louis, Missouri. Chairman, Statistical Committee, National Soybean Processors Assoc.

83. *Revista de Agricultura (Cuba)*. 1937. La pequena planta honorable [Little honorable plant]. 20(2):67-69. Feb. [1 ref. Spa]

• **Summary:** This is a translation by Prof. Miquel A. Valdiva of the *Time* magazine article of 12 Oct. 1936. Discusses the value of the soybean crop to the United States, the increasing acreage planted in soybeans, their uses as food, and in the factory, and the utilization of the beans in the Ford Motor Co. plant. Address: Chicago, Illinois, USA.

84. Thomas, F.E. 1937. Pioneers. Robert Kennedy Duncan. *Arkady Review (Manchester, England)* 14(2):37-40. April.

• **Summary:** A detailed history, with a photo, of the American man from whom the trade name Arkady was derived (from R.K.D.). Of Irish stock, he was born on 1 Nov. 1868 and died in Pittsburgh, Pennsylvania, on 18 Feb. 1914. He developed Industrial Fellowships, working with the Mellon brothers of Pittsburgh. Duncan was a scientist to whom Mr. George S. Ward brought his bakery problems for solution, with the happy result that the Arkady formula was worked out.

85. *Chicago Daily Tribune*. 1937. Match maker earns million in half a year. Sept. 2. p. 23.

• **Summary:** Starts with an unrelated discussion of Diamond Match company. Then: Archer-Daniels-Midland earned a net profit of \$2,967,295 for the fiscal year ended June 30. This equaled \$5.10 per share on its common stock. These results were up almost 57% from the previous year, when the company earned a net profit of \$1,891,612, or \$3.05 a share. “The company manufactures linseed and soy bean products.”

86. Archer-Daniels-Midland Co. 1937. New process soybean oil meal (Ad). *Proceedings of the American Soybean Association* p. 70.

• **Summary:** A full-page black-and-white ad. The company now has soybean mills at Chicago, Illinois; Toledo, Ohio;

Minneapolis, Minnesota; Milwaukee, Wisconsin; Buffalo, New York. "Browned new process meal and toasted new process flakes are available at the same price as regular meal." Address: Minneapolis, Minnesota.

87. Hayward, J.W. 1937. The nutritive value of soybean oil meal prepared by the different methods of oil extraction. *Oil and Soap* 14(12):317-21. Dec. [16 ref]

• **Summary:** A review of the literature. Address: Dep. of Nutritional Research, Archer-Daniels-Midland Co., Minneapolis, Minnesota.

88. Archer-Daniels-Midland Co., Soybean Div. 1937? 44% protein. New process soybean oil meal and soybean flakes. Milwaukee, Wisconsin: ADM. Bulletin No. 5. 6 p. \*

• **Summary:** This 6-page booklet discusses the feeding value of soybean oil meal.

89. *Gazette (The) (Cedar Rapids, Iowa)*. 1938. Claims allowed. Jan. 9. p. 31, col. 3.

• **Summary:** "Andreas & Son, R.P., grading \$28.12."

Note: We are unable to find any records for "Reuben & Sons" or for "Andreas & Sons" in [www.newspapers.com](http://www.newspapers.com) (July 2020).

90. National Farm Chemurgic Council, Inc. 1938. Official program—Fourth Annual Chemurgic Conference of Agriculture, Industry and Science. New York, New York. 8 p. 18 cm.

• **Summary:** On the cover: The conference will be held at the "Hotel Fontenele, Omaha, Nebraska. April 25, 26, 27, 1938. Purpose: To advance the industrial use of American farm products through applied science."

"Tuesday, April 26. 9:15 A.M. Soybean section: Planning a soybean agenda for next year. Presiding: Edward J. Dies, Chairman, Soybean Committee. 'Soybean oil,' H.R. Kraybill (Purdue Univ., West Lafayette, Indiana), Lamar Kishlar (Ralston Purina Co., St. Louis, Missouri), E.E. Ware (Sherwin-Williams Co., Cleveland, Ohio). 'Soybean oilmeal,' J.W. Hayward (Archer-Daniels-Midland Co., Minneapolis, Minnesota), E.S. Dyas (Iowa State College, Ames, Iowa). 'Solving problems of southern soybean growers,' C.O. Eddy (State Experiment Station, Baton Rouge, Louisiana), Jacob Hartz (Stuttgart, Arkansas), Walter Godchaux (New Orleans, Louisiana).

"General soybean section. Presiding: Eugene D. Funk, Bloomington, Illinois. 'Work of the U.S. Regional Soybean Industrial Laboratory,' O.E. May, Director, U.S. Regional Soybean Industrial Laboratory, Urbana, Illinois. 'Value of recent developments in soybean oil to technical trades,' M.F. Taggart, (O'Brien Varnish Co., South Bend, Indiana). 'The story of soybean glue,' Hugh F. Armstrong, (I.F. Laucks, Inc., Portsmouth, Virginia). 'Past and future prospects for utilization of soybean products,' E.F. Johnson, (President,

National Soybean Processors Association). Address: R.A. Boyer (Ford Motor Co., Dearborn, Michigan). General discussion.

The conference also included four luncheons, an agrol session (agricultural alcohol), a chemurgic banquet, a closing general section, an open form near the end, with Wheeler McMillen (President, National Farm Chemurgic Council) presiding. Address: 654 Madison Ave., New York, N.Y.

91. *Mt. Vernon Hawkeye-Record & Lisbon Herald (Iowa)*. 1938. Mrs. Andreas taken on Mother's Day. May 12. p. 1, col. 7.

• **Summary:** Mrs. R.P. Andreas [born Lydia Barbara Stoltz; the wife of Reuben Peter Andreas and mother of Dwayne and Lowell Andreas, etc.]. This front-page article begins with a portrait photo of Mrs. Andreas.

"Mother's day, this year of 1938, removed Lydia Barbara Andreas from a wonderful influence to a radiant memory. After a year of illness her spirit rests in the eternal and her deeds do follow her and remain to bless.

"Hers was a life of gladness wrapped in kindness, sympathy and helpfulness which wove itself into the life of the community and lives of the people. Out of her unusually happy disposition she knit the fabric of beauty that encircled all who knew her and took form in uplift and helpfulness.

"The virtues of her life were beautiful little secrets that went out in words of sympathy and gifts that lifted. Many a youth will long remember her as a beautiful fairy that in time of need was present and when little hills of difficulty came in the way, she almost miraculously appeared and lifted them over. These fine virtues are known in many a life and are not absent in various societies.

"Her life in charity and philanthropies was the beauty of silent silences and secret secrets. Her joy was doing the needed helpful thing and her life is indeed a jeweled remembrance.

"Mrs. Andreas' life had its inception Nov. 13, 1882 in Sterling, Illinois, the daughter of Bernard and Margaret Hummel Stoltz. She was educated in the schools of Sterling and early became a member of the Evangelical church, She was naturally a Christian in deed as well as fact. Hers was an applied Christian life, ever helpful and gentle.

"Her marriage to R.P. Andreas took place Nov. 27, 1902 in Sterling, where they had their home until moving to Worthington, Minnesota. In 1922 they came to Lisbon. Beside the husband, she is mourned by six children, Osborne S., Albert M., Glenn M., and Dwayne O., all of Cedar Rapids; Mrs. Lenore J. Sober and Lowell W. of Lisbon; three grandchildren, Perry Andreas of Oak Park, Illinois, Betty Jo Ann Andreas and Sharon Lee Sober; her father Bernard Stoltz; four sisters, Mrs. Kathryn Jameson of St. Paul, Minnesota, Mrs. Pauline Herrick of Cedar Rapids; Mrs. Margaret Hey of Dixon, Illinois, and Mrs. Marie McKenzie of Crystal Lake, Illinois, and one brother, Albert Stoltz of

Mount Vernon.

“Funeral Services were held at the home Tuesday afternoon with Rev. G.A. Stauffacher of the First Evangelical Church in Cedar Rapids, assisted by Rev. Philip Brunn. Mrs. Dora Wiles of Sterling, Illinois, sang two numbers accompanied by Miss Daisy Burd. Pallbearers were the five sons and son-in-law Harlan Sober. Interment is was in the Lisbon cemetery.

“Out of town relatives were Mrs. Paul Jameson of St. Paul, Minnesota, Mrs. Marjory Jameson of Mt. Lake, Minnesota, Mr. and Mrs. Harold Jameson of Jefferson; Mr. and Mrs. Fay McKenzie of Crystal Lake, Illinois. Miss Marion Duffy of Chicago; Mr. and Mrs. Henry Hey, Dean and Beukah, Bernard Stoltz and Mrs. Dora Boynton of Dixon, Illinois, Perry Andreas of Oak Park, Illinois, Mr. and Mrs. Albert Stoltz of Mount Vernon, Mr. and Mrs. Paul Herrick of Cedar Rapids; Mr. and Mrs. Walter Hummel of Polo, Illinois, Mr. and Mrs. Elmer LeFevre, Mrs. Ida LeFevre, Mrs. Verna Enright, Mr. and Mrs. Ben LeFevre, Charles and Howard, Mrs. Anna Mellinger, Mrs. Margaret Clark, Mr. and Mrs. Carl Thomas, Mrs. Fanny Meyers and Mr. and Mrs. Will Hummell all of Sterling, Illinois.

“Card of Thanks

“For all the kind deeds, the words and expressions of sympathy tendered us in our sorrow we express our hearty appreciation and thanks.

“R.P. Andreas and family.”

92. Milner, R.T. 1938. Report of the Soybean Analysis Committee of the American Oil Chemists' Society. *Oil and Soap* 15(8):214. Aug.

• **Summary:** Millner is the committee chairman. Members include C.H. Cox, M.M. Durkee, T.L. Rettger, S.O. Sorensen, K.L. McKinney, and N.F. Kruse. Address: U.S. Regional Soybean Industrial Products Lab., Urbana, Illinois.

93. Archer-Daniels-Midland Co. 1938. A-D-M leads: Others follow. A-D-M improved new process soybean oil meal (Ad). *Proceedings of the American Soybean Association* p. 66.

• **Summary:** This full-page ad states: “We are pleased to offer to the trade A-D-M 44% Protein Improved New Process Soybean Oil Meal. As one of the pioneers in the soybean industry in America, we have utilized the facilities of our well-equipped technical department in a constant endeavor to improve our products, and we regard the development of A-D-M Improved New Process Soybean Oil Meal as one of the outstanding achievements in the history of the industry. By an entirely unique process (patent applied for), we have modified the physical properties of our New Process Meal to enable us to offer a product superior to any meal on the market.

“A few noteworthy features of this new product are:

“Non-dusting properties—A-D-M Improved New Process

Meal is a granular dustless product which can be handled equally well in bulk or in bags.

“Color and taste—A-D-M Improved New Process Meal has a golden color and a pleasant taste, but for those who may prefer a darker product with a toasted flavor, we offer our Brownd Improved Meal at no additional premium.

“Mixability with molasses—A-D-M Improved New Process Meal mixes more readily with molasses than do other types of meal, resulting in a uniform and attractive mixed feed. The Improved Meal likewise has a water absorption, 30 to 40% greater than regular market grades of Soybean Oil Meal, and this has a practical application in mixed feeds, particularly poultry mashes and dog food.

“Nutritional properties—Feeding tests with the A-D-M Improved New Process Meal show that we have maintained the same high feeding value in this new product as has been repeatedly demonstrated in experimental work on New Process Meal.

“Price—A-D-M Improved New Process Meal, both Regular and Brownd, is available at the same price as our old style meal and flakes.”

The company has soybean mills at Chicago, Illinois; Toledo, Ohio; Minneapolis, Minnesota; Milwaukee, Wisconsin; and Buffalo, New York. Address: Minneapolis, Minnesota.

94. Hayward, J.W. 1938. The proteins of soybeans and soybean oil meal. In: Soybean Nutritional Research Council, ed. 1938. The Composition and Nutritive Properties of Soybeans and Soybean Oil Meal; A Literature Review. Chicago: SNRC. 62 p. See p. 12-21. Oct. [41 ref]

• **Summary:** Contents: Amount of protein in soybeans and soybean oil meal and factors affecting same (Varieties: Manchu, Dunfield, Mandarin, Illini, Peking, Mukden, Illinois T 117, F.P.I. 54563-3, Scioto). Types of protein in soybeans and soybean oil meal. Amino acid content of the proteins in soybeans and soybean oil meal. Nutritive value of the proteins of soybeans and soybean oil meal. Effect of storage on soybean protein. Industrial uses of soybean protein: Glue, adhesive and sizing materials, plastics, water paint, foundry cores, artificial wool, whipping flours.

“Amount of Protein in Soybeans and Soybean Oil Meal and Factors Affecting Same: Soybeans available in this country and in other countries exhibit a wide variation in protein content, this variation being due to several factors. In the first place, soybeans grown in a single locality show a marked varietal difference in protein content. Piper and Morse (1) state that the principal varieties in the United States may vary from 34.1% to 46.9% in this respect. Carter and Milner (2) of the U.S. Regional Soybean Industrial Products Laboratory at Urbana, whose extensive investigations of the composition of soybeans are still in progress, have reported the following analysis of soybeans to indicate the variation with change of variety [table 1]:

Manchu 45.99%  
 Dunfield \* 43.95%  
 Mandarin 45.54%  
 Illini 44.48%  
 Peking 43.68%  
 Mukden 6.31%  
 Dunfield \*\* 42.07%  
 Illinois T 117 43.20%  
 F.P.I. 54563-3 44.63%  
 Scioto 3.73%

\* Seed from Illinois Experiment Station.

\*\* Seed from Purdue Experiment Station [Indiana].

“An individual variety grown in a single location may also vary considerably from year to year. O’Kelly and Gieger (3) found that the Laredo and Mammoth Yellow varieties analyzed for protein as follows over a period of several years (from 1925 to 1932; table 2):

Laredo ranged from 35.55% to 40.67% protein

Mammoth Yellow ranged from 39.91% to 44.64% protein

A given variety will also vary considerably in protein content from one locality to another. Webster and Kiltz (4) list the following results for four varieties of soybeans grown in different places in Oklahoma in 1931 [table 3]:

The variety Chiquita contained 42.50% protein in Craig County but 46.56% in Stillwater Co.

The variety Dixie contained 43.13% protein in Craig County but 46.82% in Stillwater Co.

The variety Virginia contained 40.00% protein in Craig County but 44.06% in Stillwater Co.

The variety Laredo contained 35.00% protein in Craig County but 47.50% in Stillwater Co. This latter variation is probably closely associated with the influence of varying environmental conditions, such as climate (including rainfall), soil type, fertilizer applied, etc. It has been stated (5) that soybeans grown in Manchuria and the United States are richer in protein than those grown in Germany, and further, that application of phosphatic fertilizers likewise favors protein formation. Inoculation of the soil may have a profound effect. For instance, a 16% increase in the protein content of soybeans grown on inoculated areas over those grown on uninoculated soil has been reported by Smith and Robison (6) who obtained the following results [table 4]:

Ogemaw, not inoculated had 8.08% moisture and 35.39% protein

Ogemaw, inoculated had 8.88% moisture and 42.20% protein

Medium Green, not inoculated had 8.12% moisture and 31.23% protein

Medium Green, inoculated had 8.80% moisture and 36.45% protein

“There is apparently (7) a relationship between the quantity of rainfall and the protein content of soybeans, the lower rainfall tending to produce a higher protein content. After a certain stage in the maturation process, soybean

seeds (3) decline in protein content, but this change is due to decomposition of nitrogen free extract rather than a decrease in the absolute quantity of protein. Likewise, decayed or damaged beans show a higher protein content. There is also some indication (8) of an inverse relationship between the oil content and the protein content of soybeans.

“The amount of protein in soybean oil meal will naturally depend upon the protein content of the soybeans used in processing, but in general the bulk of the soybeans that are processed in this country consist of only a few varieties, grown principally in the Corn Belt States. When these soybeans are all pooled together, the processor finds that the soybeans do not vary a great deal in protein content from one pressing to another. There is, however, a slight difference in protein content between the New Process [solvent] and Old Process soybean oil meals. In fact, the processors employing the solvent method of oil extraction (New Process) have found it possible to safely guarantee 44% of protein in their soybean oil meal; whereas 41% has been the usual guarantee for hydraulic or expeller (Old Process) soybean oil meal (9). Types of Protein in Soybeans and Soybean Oil Meal:

“Osborne and Campbell (10) proposed the name of glycinin for one of the globulin types of protein they obtained from soybeans. They considered it the principal protein, making up about 80 to 90% of the total crude protein contained in soybeans. They also isolated a more soluble globulin which resembled phaseolin in composition and, as far as they could ascertain, it was similar to phaseolin in reaction. They obtained an albumin-like proteid which they termed legumelin, and they estimated it made up about 1.5% of the total protein of the soybean. In addition to these proteins, they isolated a small quantity of proteose. Some of these proteins are listed below with their average composition [table 5]:

Jones and Csonka (11) obtained five protein fractions from soybeans by fractional precipitation at definite concentrations of ammonium sulfate within a range of 33 to 70% of saturation. In order to determine which fraction represented glycinin, a salt extract of soybean meal was dialyzed. From the protein fraction which precipitated, two globulins were separated. One was precipitated from a 10% salt (NaCl) solution by ammonium sulfate at 55% of saturation and did not coagulate even at boiling temperatures. This fraction was called glycinin since its properties agreed with those given by Osborne and Campbell for glycinin.

“Amino Acid Content of the Proteins in Soybeans and Soybean Oil Meal: Osborne and Clapp (12) in their analyses of glycinin, the principal protein of the soybeans, found the content of amino acids was similar to the values reported for casein, the principal protein of milk. Csonka and Jones (13) analyzed the chief protein (glycinin) from seeds of several varieties of soybeans and found them to differ considerably in amino acid content with the greatest variations occurring

in cystine content (a low value of .74% for the Illini variety and a high value of 1.45% for the Manchu soybean). Csonka and Jones (14) were the first investigators to report on some of the amino acids contained in the whole (non protein extracted) defatted soybean oil meal. Again cystine was found to be the most variable amino acid for the various varieties tested. Values ranged from .287% for the Illini up to .491% for the Herman variety. However, these investigators did not believe we needed to fear a quantitative deficiency of cystine in any of the common varieties of soybeans or in the meal made from these varieties. Hamilton, et al. (15), Nollau (16) and Mashino (17) give figures on their determination of the nitrogen distribution of soybean protein using the Van Slyke method.

“We have listed below for comparison the amino acids of the chief soybean protein, glycinin, and the amino acids of casein, the principal protein of milk:” [table 6].

“\*We refer you to the second edition (1934) of *Fundamentals of Dairy Science* by L.A. Rogers and others, for literature references covering all but one of the above values on amino acids in casein. Nutritive Value of Proteins of Soybeans and Soybean Oil Meal:

“Osborne and Mendel (19), Vestal and Shrewsbury (20), Shrewsbury, Vestal, and Hauge (21), Hayward, Steenbock, and Bohstedt (22) found that raw soybeans when fed to rats as the sole or principal source of protein in an otherwise complete ration did not support appreciable growth. However, normal growth resulted when they fed soybeans which had been previously cooked. Vestal and Shrewsbury (20), Shrewsbury, Vestal, and Hauge (21), and Robison (23) reported similar results with pigs. Mitchell and Villegas (24), Mitchell and Smuts (25), and McCollum, Simmonds, and Parsons (26) reported experimental evidence in support of the fact that the raw soybean contains a protein of low nutritive value. Mitchell and Smuts (25) and Shrewsbury and Bratzler (27) claimed that the low nutritive value of the protein of raw soybeans was due to a deficiency of the amino acid cystine.” Continued. • **Summary:** “Dairy Calves: Investigators at Cornell University have found that a properly cooked soybean oil meal can be successfully substituted for at least a part of the dried skimmilk in their calf starter ration. The soybean oil meal ration which gave satisfactory results in their experiments is as follows:”

Ground yellow corn 33.25%  
 Rolled oats (oat meal) 28.00%  
 Wheat bran 10.00%  
 Linseed meal 5.00%

White fish meal 3.00%  
 Dried skim milk 10.00%  
 Soybean oil meal 9.00%  
 Steamed bone meal 0.5%  
 Ground limestone 0.5%  
 Salt 0.5%  
 Cod-liver oil concentrate 0.25%

At Purdue University [Indiana], in two trials lasting 360 and 330 days respectively, Hilton, Wilbur, and Hauge (2) fed eight calves on alfalfa hay and a grain ration containing linseed meal, and eight calves on a comparable ration in which ground raw soybeans were used in place of linseed meal as a protein supplement. It was concluded from these experiments that ground raw soybeans were equal to linseed meal as a protein supplement in the grain ration for growing heifer calves fed alfalfa hay. It seems logical to conclude, however, that this experiment did not represent a critical test of the growth promoting properties of the raw soybeans and linseed meal. Later, these investigators (3) reported that a ration consisting of clover hay, corn silage, and grain was equally efficient in promoting growth of calves as a similar ration supplemented with raw or roasted ground soybeans.

“Shoptaw (4) in a 70 day feeding experiment using eight calves, compared the merits of cow’s milk with soybean milk for use in rations for dairy calves. The soybean milk was prepared by mixing one part of soybean flour with nine parts of water. Grain and hay were fed ad libitum. The soybean milk was found to be less efficient than the cow’s milk in this particular experiment.

“Following extensive feeding experiments with several protein supplements, Hunt (5) of the Virginia Agricultural Experiment Station concludes the following: ‘Soybean (oil) meal is rich in protein and therms net energy, palatable and slightly laxative, tends to promote a sleek, oily coat, and makes an excellent concentrate to supplement corn silage for wintering dairy heifers, ranking first of the concentrates used. This is a concentrate that should become very popular with dairymen.’

“Dairy Cows-Milk Production: Early experiments (6, 7) in this country to determine the feeding value of soybeans for dairy cows compared the soybeans with cottonseed meal. The results of these tests seemed to indicate that ground soybeans were equal to cottonseed meal for milk production. Moore and Cowser (8) reported that ground soybeans were superior to both cottonseed meal and soybean meal for the production of butter fat.

“Gilchrist (9) of Armstrong College, England, found soybean cake (soybean oil meal) slightly superior to cottonseed cake for milk production. Six cows were fed for six weeks on each protein supplement. The basal ration consisted of hay, oatstraw, crushed oats, and roots.

“Hansen (10) of the Royal Agricultural Academy of Germany found soybean cake and linseed cake practically equal in feed value for milk production when added to a

basal ration of hay, bran, and sugar beet chips. No ill effects resulted although four to seven pounds of soybean cake were fed daily.

“Several investigators (11, 12, 13, 14, 15) in this country have reported that cracked or ground soybeans are practically equal or slightly superior to linseed oil meal when used as a protein supplement in the grain ration for milking cows. The feeding periods for these tests were from 28 to 40 days. In most cases the double reversal system of feeding was used and the data collected during the first week, or in some cases the first two weeks, following the exchange of rations were discarded in the hope of avoiding the carry-over effects of the previous ration.

“The workers (12) at Purdue University reported that soybean oil meal was\_ at least equal to linseed meal for milk and fat production, whereas ground soybeans gave better results than either soybean oil meal or linseed meal. Hayden and Perkins (14) and McCandlish and Weaver (16) reported similar results for soybean oil meal vs. linseed meal, but the results at the Ohio Station (14) did not point to any clear-cut advantage for ground soybeans over soybean oil meal.

“Tomhave (17) of the Delaware Agricultural Experiment Station concluded following feeding experiments with dairy cows that soybean oil meal, due to its higher protein content, had a higher value per ton than peanut meal. He also reported for similar reasons that soybean oil meal has a higher value per ton than ground soybeans. Experiments at the Virginia Agricultural Experiment Station (18), designed to measure protein efficiency of certain feedstuffs, showed peanut meal to be superior to soybean oil meal in protein efficiency and soybean oil meal superior to cottonseed meal in these regards. Attention is called to the fact that at least up to the time the above experiments were conducted with dairy cows, the soybean processors were not generally aware of the importance of heat in producing a high quality soybean oil meal, and therefore it is possible that much of the soybean oil meal used did not contain protein with a maximum feeding value.

“In many cases the previously cited investigators reporting a rather satisfactory feeding value for soybeans have failed to give serious consideration to the effect that soybeans have upon the composition of milk and butter due to the high content of a ‘soft-fat producing’ oil in the soybeans. However, it has been pointed out by certain workers (13, 14, 19, 20, 21, 22, 23, 24) that the feeding of soybeans or soybean oil in any appreciable quantity to dairy cows causes the body of the butter produced to be noticeably soft.

Nevens (22) of the Illinois Station summarizes the situation very well in the following remarks: ‘When ground soybeans formed 10 to 25 per cent of the grain mixture and clover hay the roughage, the flavor of the products was not affected, but when the higher proportions of beans were fed, the body of the butter was slightly gummy. This lowered the

score of the butter one to two points, which, of course, is an objection from the commercial standpoint.’

“Horn and Muhl (23) have made similar observations and have considered in addition the effect of solvent extracted soybean oil meal upon yield of milk and fat and the effect upon butter quality. The results of their investigations have been summarized as follows: ‘In two period experiments with 5 and 3 cows, in which soya beans were substituted for not more than 35 per cent of the total concentrates, a small increase in the yield of milk and fat was recorded. Percentage of fat and the general composition of the milk were unaffected, but the butter made from it was soft and soya-like in aroma. This defect was eliminated when 30 per cent palm kernel cake was also fed. Similar effects on yields of milk and fat were obtained with extracted soya meal, in this case without detriment to the quality of the butter.’

“Sheehy (25) of the University College of Dublin reported on the results of feeding experiments extending over a period of three years (1928-1931), intended to determine the effect of dietary fat (or oil) on the fat content of cow’s milk. These experiments differed from those frequently reported in that the observations on variations of milk fat were made under conditions where the milk yield was held as constant as possible. These tests showed that the feeding of 10 ounces of soybean oil daily for nine days, in addition to the roughage and grain ration, did not cause any increase in the butter fat produced. It is interesting to note that these results were obtained when the grain ration contained only 1.8 per cent of fat. In consequence of this observation and similar ones where other oils were fed, it was concluded that a production ration containing 1.8 per cent of fat supplied a diet which was capable of supporting the maximum yield of butter fat in milk.

“There is another serious objection to the feeding of ground or whole soybeans to cattle that has been frequently overlooked and that is the tendency of soybeans, because of their high oil or fat content, to produce scours in cattle when fed in any large quantities especially if the silage part of the ration is restricted appreciably (26). This objection to soybeans should not apply to soybean oil meal due to the fact that in its manufacture most, or in some cases practically all, of the soybean oil or fat has been removed.

“Effect of Feeding Soybeans and Soybean Oil Meal Upon the Vitamin A Value of Butter: Wilbur, Hilton, and Hauge (27) of Purdue University reported after preliminary investigations that the inclusion of soybeans in rations for dairy cows resulted in an inhibition of the transference of vitamin A from the feed to the butter produced. This suppressing factor present in the beans was apparently thermostable since roasted soybeans had virtually the same effect as raw soybeans. Butters of fairly high vitamin A value, however, could be produced even when soybeans were used providing roughage of high vitamin A content was also

fed. Since the substitution of soybean hay for alfalfa hay in the ration resulted in butter of slightly lower vitamin A value, these investigators later (28) studied the effect the maturity of the plants at harvest, had upon the vitamin A content of the butter. They found young plants had no suppressing action whatsoever, but those harvested after the beans were well formed in the pods were significantly guilty. Apparently, then, the beans alone contained this suppressing factor. In a more recent publication (29), these workers reported on their attempt to determine which particular fraction of the bean carried it. They stated that in the removal of the oil, the greater portion of this factor followed the oil, but a small amount remained in the residue. They concluded from this that the inhibition of the transference of vitamin A was not due to the presence of the oil itself in the soybean. In these experiments, the cattle were fed a roughage of alfalfa hay and corn silage with a grain mixture containing 400 pounds of ground white corn and 200 pounds of ground oats which they supplemented with various protein concentrates. The results they obtained expressed in vitamin A units per gram of butter are as follows:" A complex table gives the results. Later (3) these investigators attempted to remove the vitamin A suppressing factor from soybean oil by adsorbents. They found that activated carbon would remove a good portion of this factor.

"These investigations are of theoretical interest, but it is doubtful that the suppressing action of soybeans would have much practical significance." Address: USA.

96. Hayward, J.W. 1938. The proteins of soybeans and soybean oil meal (Continued—Document part II). In: Soybean Nutritional Research Council, ed. 1938. The Composition and Nutritive Properties of Soybeans and Soybean Oil Meal; A Literature Review. Chicago: SNRC. 62 p. See p. 12-21. Oct. [41 ref]

• **Summary:** (Continued): "Although it was common knowledge that the soybean was heated in all the commercial methods of oil extraction (solvent or New Process, expeller and hydraulic or Old Process methods), little attention had been given to the effect the different amounts of heat used had upon the nutritive value of the protein in the soybean oil meals previous to investigations conducted at the University of Wisconsin. From the results of this work, reported by Hayward, Steenbock, and Bohstedt (22) it can be concluded that a most satisfactory soybean oil meal in terms of protein efficiency and all-round feeding properties, can be produced by each of the three methods of oil extraction. Some of the principal points of interest are contained in the following excerpt from their first article:

"Raw soy beans were found to contain protein of low nutritive value as determined by the grams of growth per grain of protein eaten. Commercial soy bean oil meals such as the expeller meal processed at low temperatures, 105°C. for 2 minutes or the hydraulic meal cooked at 82°C. for 90

minutes contained proteins similar in nutritive value to the raw soy beans. On the other hand, commercial soy bean oil meals which had been prepared at medium and high temperatures such as expeller meals processed at 112 to 130 and 140 to 150°C. for 2½ minutes or hydraulic meals cooked at 105 and 121°C. for 90 minutes contained proteins which had about twice the nutritive value of the raw soybeans or low temperature meals... Heating the extracted soy beans at 98°C. for 15 minutes, as in the commercial solvent method of oil extraction, was also found to be an effective method of heat treatment..."

"These investigators also conducted metabolism trials and found that heating the raw soybean to a high temperature in the expeller method of oil extraction caused an increase in the digestibility and biological value of the protein. In one set of metabolism trials the values for digestibility and biological values of the protein were corrected for endogenous nitrogen with the following results:" [table 7].

Raw soybeans: Coefficient of digestibility of protein: 85%, Biological value of protein: 41%.

High temperature Expeller pressed soybean oil meal: Coefficient of digestibility of protein: 87%, Biological value of protein: 51%.

"It should be appreciated that experimental diets used in the metabolism trials at the University of Wisconsin contained the soybean and soybean oil meal proteins at approximately an 18 per cent level, and therefore the results are not directly comparable with those obtained on soybeans when fed at a protein level of about 10 per cent as reported by Mitchell and Villegas (24); nor are they comparable with the reported biological values of the proteins in many foods and feedstuffs where the material was tested at 5 to 10 per cent levels of protein.

"The results reported for the growth and metabolism trials at the University of Wisconsin suggested that the application of heat to the raw soybean caused an increase in availability of certain fractions of the protein molecule. After experimentation with such supplements as casein and the amino acid, l-cystine, Hayward, Steenbock, and Bohstedt (28) concluded in their second paper that heating of the soybean caused such a phenomenal increase in the biological value of its protein largely because the heat caused the methionine-cystine fraction of the protein to become available.

"Investigators at Cornell University conducted a long series of metabolism trials with chicks to determine the relative protein efficiency of the many feeding materials available for use in poultry rations. In their first paper, Wilgus, Norris, and Heuser (29) reported values of 89 and 85 for the relative protein efficiency of expeller and hydraulic soybean oil meals which were of unknown temperature history. These workers later secured samples of the different kinds of soybean oil meals with known temperature histories and samples of the respective soybeans from investigators at

the University of Wisconsin.

Wilgus, Norris, and Heuser (30) have reported the following relative protein efficiency values for these soybean materials" [table 8]:

This table shows that for Expeller, hydraulic, and solvent extracted soybean oil meal, a longer temperature and time, generally gives a higher relative protein efficiency. Solvent extraction gives the highest relative protein efficiency: 92.

"The following chart summarizing the relative protein efficiency values for various feedstuffs as reported by Wilgus, Norris, and Heuser (29, 30), indicates that a properly cooked soybean oil meal is superior to many commonly used supplements in protein efficiency [and it is often less expensive]:

The supplements with the highest relative protein efficiency are:

- Casein 100%
- Dried skim milk 100%
- White fish meal 104%
- Sardine fish meal 98%
- Soybean oil meal (expeller) 92%
- Menhaden fish meal 91%
- Meat scraps 82%.

"It was also at Cornell University that Turk, Morrison, and Maynard (31) conducted metabolism trials with lambs to determine the nutritive value of the protein in corn gluten meal, linseed meal, and soybean oil meal. They reported that the average coefficients of apparent digestibility of the proteins were 67% for soybean oil meal, 66.3% for corn gluten meal, and 63.3% for linseed meal.

"The lambs were more efficient in storing protein from the soybean oil meal ration than from either of the other rations. The average percentage of protein intake stored was 33.8 for soybean oil meal, 26.5 for corn gluten meal, and 26.7 for linseed meal. The biological values obtained were slightly but significantly in favor of the soybean oil meal proteins. They were 72.8 for soybean oil meal, 65.7 for corn gluten meal, and 67.7 for linseed meal. These investigators concluded that the proteins of soybean oil meal were superior to the proteins of linseed meal and corn gluten meal.

"A great deal has been written and said (5) indicating that the proteins of soybeans and soybean products are of exceptionally high order in human nutrition. These statements have been made in most cases following observations of racial habit rather than on the basis of any scientifically controlled feeding experiments. We do find, however, that Kung and Fang (32) have conducted nitrogen metabolism trials with preschool children comparing the proteins of soybeans to the proteins of cow's milk. The results of their experiments showed no marked difference for the children studied in the protein utilization of mixed diets when supplemented with soybean milk or cow's milk.

"Since we have spoken of the value of soybean protein in the human diet, it may be of interest to review some of

the results of experiments with the protein of soybean flour when blended with the proteins of some of our common foodstuffs. Johns and Finks (33) reported the following from experiments on rats:

"1. Bread made with a mixture of 25 parts of soybean flour and 75 parts of wheat flour contained a protein mixture and water soluble vitamins adequate for normal growth. A similar bread containing 15 parts of soybean flour and 85 parts of wheat flour likewise furnished adequate proteins and water soluble vitamins for normal growth.

"2. These mixtures of the soybean and wheat proteins were found two or three times more efficient than the proteins from wheat alone."

"Kon and Markuze (34) in their experimental studies on the effect of soya-wheat and wheat-rye bread on growth, came to the conclusion that a supplementary relationship exists between proteins of white wheat flour and soya bean flour; also that there is a strong indication that a supplementary relationship exists between the proteins of rye flour and of soybean flour.

"For further references on the value of soybeans in human nutrition, the reader is referred to the article of Horvath (35) on this subject."

"Industrial Uses of Soybean Protein: Considerable interest has been manifest in this country relating to the uses of specially prepared soybean oil meal or flour for products of industry. In most cases, these uses depend primarily upon a protein contained in the meal or flour. Some of the industrial uses frequently mentioned for the soybean oil meal or flours and isolated soybean protein are as follows:

1. Glue (37)
2. Adhesive and Sizing Materials (38; Bowden 1937)
3. Plastics (39; Boyer 1938)
4. Water Paint (39)
5. Foundry Cores (39)
6. Artificial Wool (39)
7. Whipping Flours (40)

"For those interested in a review and bibliography on this subject, we refer you to the recent publication by Horvath" (41). Address: USA.

97. Hunter, J.E. 1938. The place of soybean oil meal in poultry feeding. In: Soybean Nutritional Research Council, ed. 1938. The Composition and Nutritive Properties of Soybeans and Soybean Oil Meal; A Literature Review. Chicago: SNRC. 62 p. See p. 53-56. Oct. [20 ref]

• **Summary:** "For maximum performance of poultry from the standpoints of growth and egg production it is essential that cereal grains and their by-products be supplemented with feeds high in protein. Certain concentrates from animal and vegetable sources have been found to be valuable for this purpose. Properly cooked soybean oil meal has been shown to be highly efficient in this respect. Because the soybean is a high protein seed, a number of attempts have been made

to use it as a supplement for cereals in poultry feeding. Such attempts have not been generally successful.

“Philips and Hauge (1) report that whole soybeans were as satisfactory as soybean oil meal, replacing tankage in the laying mash, provided that a mineral supplement was used. In trials in South Dakota (2), ground soybeans ranked third in cost of feed to produce a dozen eggs, in comparison with five other high protein feeds. Kempster (3) found that ground soybeans, even though supplemented with minerals were not an adequate protein for laying birds. Tomhave (4) reports that ground soybeans replacing meat scraps in the laying ration for pullets, in part or in all, reduced egg production per pullet. This decrease is important above levels of 6.8% of soybeans in the laying ration. Tomhave and Mumford (5) report unsatisfactory growth and high feed requirements for chicks fed on raw soybeans. Osborne and Mendel (6), and Vestal and Shrewsbury (7) reported that the cooking of soybeans causes an increase in their growth promoting properties for rats. Robison (8) and Vestal and Shrewsbury (9) report similar results for swine.

“When Purdue (10) University workers fed raw soybeans plus minerals to baby chicks, the results were not as satisfactory as when soybean oil meal plus minerals were fed. Hayward, Steenbock, and Bohstedt (11) found that the heating of the soybean to medium and high temperatures in the commercial methods of oil extraction, practically doubled the nutritive value of the protein. Raw, beany tasting soybean oil meal prepared at a low temperature gave about the same nutritive value for protein as raw soybeans. Wilgus, Norris, and Heuser (12) determined the relative protein efficiency of various supplements, and found that the protein of ground raw soybeans and soybean oil meal was 55 to 88% respectively as efficient as casein. They have assumed that the increased protein efficiency was due to heat treatment in the process of oil extraction.

“In another report, Wilgus, Norris, and Heuser (13) show ‘The Effect of Heat on the Nutritive Properties of Soybean Oil Meal.’ They conclude that ‘Soybean oil meals which are satisfactory as sources of high-quality protein for feeding poultry may be produced by the expeller, hydraulic, and solvent processes by the application of a sufficient amount of heat. The optimum temperature found in this study for the expeller method was 140° to 150°C for 2 minutes in the expeller, and for the hydraulic method was 105°C. for 90 minutes in the cooker. A solvent-process meal produced at 98°C. for 15 minutes (the usual commercial procedure) was excellent in protein efficiency.

“The vitamin G content of the soybeans studied was low and was not affected to any measurable extent by the manufacturing processes. The color and flavor of the meals were not infallible criteria of their nutritive value, but a raw, beany flavor was indicative of an insufficient application of heat and a resulting inferior protein efficiency.

“Sloan (14) reports soybean oil meal as a good protein

supplement for poultry, and states that when supplemented with sufficient minerals is about equal to meat scraps and fish meal, and somewhat better than tankage, gluten feed, cotton seed meal, and not quite so good as dry milk products. He reports the feeding of ground soybeans not as satisfactory as the feeding of soybean oil meal. He also states that soybean oil meal has an advantage over some other vegetable protein supplements in apparently not affecting the yolk color of eggs.

“The Wisconsin (15) Station reports ‘because soybean oil meal is about the best of the plant protein feeds, it has, during recent years, become popular as a substitute for milk and meat scraps in poultry rations. Research at this station has shown that good soybean oil meal serves very well for this purpose so long as it is used to replace only part of the animal protein.’ The Wisconsin workers report lowered hatchability when soybean oil meal is the only protein supplement in the ration. They find that as little as 2% meat scrap, and 2% dried milk fed in combination with soybean oil meal, results in markedly improved hatchability. This reduced hatchability may be due to a deficiency of some part of the vitamin B complex, possibly flavine. Soybean oil meal is not considered a rich source of flavine, but does contain appreciable quantities of this factor as shown by Norris, Wilgus, Ringrose, Heiman, and Heuser (16), who report that soybean oil meal contains three units of vitamin G per gram.

“Soybean oil meal can easily be supplemented with vitamin G carrying materials and optimum results obtained.

“Byerly, Titus, Ellis, and Nestler (17) found that when soybean oil meal was used as a sole protein concentrate and fed at a level of 20%, a drop in winter hatchability resulted. The replacement of part of the soybean oil meal with beef scraps gave satisfactory results. This study further emphasizes the fact that soybean oil meal should not be used as the sole protein supplement in the poultry ration, but should be used in connection with animal protein concentrates. The proper blending of soybean oil meal with animal protein carriers results in a ration that will give satisfactory performance at a low cost.

“Hayward, Halpin, Holmes, and Hart (18), studying the effect of soybean oil meal prepared at different temperatures as a feed for poultry, state that ‘High temperature expeller soybean oil meal (processed at 140-150° for 2½ minutes), medium and high temperature hydraulic soybean oil meal (cooked at 105° and 121°C. for 90 minutes), and solvent extracted soybean oil meal (cooked at 98°C. for 15 minutes) resulted in chicks weighing about twice as much, with less feed required per unit of gain, as the chicks fed ground raw soybeans and low temperature expeller soybean oil meal (processed at 105°C. for 2 minutes) in feeding trials conducted for eight weeks.

“The medium and high temperature hydraulic soybean oil meals were definitely superior, in growth produced and feed required, to the low temperature hydraulic soybean oil

meal (cooked at 82°C. for 90 minutes). However, this low temperature hydraulic meal was not so decidedly lacking in growth promoting properties as were the ground raw soybeans and low temperature expeller soybean oil meal.

“The chicks fed a ration containing 16 parts soybean oil meal and minerals, or a combination consisting of 12 parts soybean oil meal, 2 parts meat scraps, and 2 parts dried milk plus minerals, did not equal in average weight at eight weeks or in feed required per unit of gain the chicks fed a protein supplement consisting of 8 parts meat scraps and 8 parts of dried milk, regardless of the soybean oil meal that was used.

“As for the chicks fed the soybean oil meals which have been designated as properly heated, 12 parts soybean oil meal, 2 parts meat scraps and 2 parts dried milk plus minerals was superior in results obtained in these eight-week feeding trials to 16 parts soybean oil meal plus mineral.

“The combination of 12 parts high temperature expeller soybean oil meal, 2 parts meat scraps, and 2 parts dried milk plus minerals surpassed 16 parts of soybean oil meal plus minerals and approximately equalled the combination of 8 parts soybean oil meal, 4 parts meat scraps, and 4 parts dried milk plus minerals or the all animal protein supplement consisting of 8 parts meat scraps and 8 parts dried milk in weight of pullets and feed required per unit of gain at 20 weeks in two feeding trials. This combination of 12 parts high temperature expeller soybean oil meal, 2 parts meat scraps, and 2 parts dried milk plus minerals also proved highly efficient in comparison to other supplements tested in producing eggs in one 11-month trial reported for pullets.’

“The feeding of cotton seed meal to hens has long been known to cause difficulty in storage eggs. Work at the Missouri station (19) shows that no ill effects were obtained with eggs in storage when either soybean oil meal or ground soybeans were fed to the hens.

Hunter, Marble, and Knandel (20), studying vegetable proteins in turkey feeding, found they could use as much as 14% of soybean oil meal in turkey rations replacing a portion of protein from meat scrap, fish meal and milk, and obtain as good growth as when all animal protein products were used.

“The uses of soybean oil meal in combination with animal protein concentrates produces rations of high biological efficiency at low cost.” Address: USA.

**98. Product Name:** Soybean Oil, and Soybean Oil Meal (Named Double Diamond Soybean Oil Meal by 1952).

**Manufacturer’s Name:** Toronto Elevators Ltd. Renamed Maple Leaf Mills in 1964.

**Manufacturer’s Address:** Queens Quay, Toronto, ONT, Canada.

**Date of Introduction:** 1938.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

**New Product–Documentation:** Ontario Retail Feed Dealers’ Association. 1946. Year Book, 1944-45. On page 11

is a full-page ad for Toronto Elevators Limited, stating that they make soy bean meal.

Talk with Dave Bутtenham, executive V.P. of Ontario Grain & Feed Assoc. 1997. Feb. 20. His association began publishing a trade directory/yearbook in 1944-45. In the first issue is an ad from Toronto Elevators Ltd. stating that they make linseed oil and meal and soybean oil and meal. He has a history from the Canadian Feed Industry Association that may discuss the early history of Toronto Elevators Ltd. The two main newspapers in Toronto in the late 1930s were the *Toronto Telegram* (probably the main newspaper then but no longer in existence; the University of Toronto library may have back issues) and the *Globe and Mail* (very active today). He will try to talk with several elderly men who were active in the Association in the early days. He also knows some people who were top people in Maple Leaf Mills. He thinks Maple Leaf Monarch was the oilseed division of Maple Leaf Mills.

Note: This is the earliest document seen (Sept. 2000) concerning ADM Agri-Industries or its ancestors in Canada.

**99. British Arkady Co. Ltd. 1938.** Arkady: A collection of articles treating mainly of scientific research in pursuit of the “Better Loaf,” contributed by various investigators and reprinted from “The Arkady Review.” Skerton Rd., Old Trafford, Manchester, England. 385 p.

• **Summary:** Preface: “The word ‘Arkady’ was coined by Mr. Geo. Ward of The Ward Baking Company, New York, as a lasting tribute to the memory of Robert Kennedy Duncan—his initials R.K.D. suggesting the name. Why a tribute? Was it necessary? The answer is the world-wide reputation of Arkady, the most skillful and complete piece

of research undertaken or completed for the baking industry. This work was undertaken and carried out by the staff of the Mellon Institute under the directorship of R.K. Duncan. War conditions gave Arkady its greatest opportunity in the U.S.A. and it played its part both in the U.S.A. and on the French front.

“It was, however, not until 1920 that the manufacture of Arkady in this country began in a tiny section of the Willesden Works of Baker Perkins Ltd. Being in need of more space, in July 1923 the first building was completed and occupied in Manchester. In 1929 the size of the works was doubled, and in 1936 redoubling became necessary.”  
Address: Manchester, England.

100. *Decatur Herald (Illinois)*. 1939. 5,000,000 bushel soybean plant to be built here: Begin building immediately. 600 men to rush buildings for completion July 1. Jan. 11. p. 1. Wednesday morning.

• **Summary:** With the announcement “today that the Archer-Daniels Midland company of Minneapolis [Minnesota] would build a five-million bushel grain elevator, head house and soybean plant here, Decatur took its place at the top of the soybean processing industry.

“Whitney H. Eastman of Milwaukee, vice president in charge of the soybean division of the company, said that construction of the huge plant would be started immediately and it would probably be ready for use by July 1 in time to handle the wheat and oats crop.

“Three Big Processors: The new plant will give Decatur three of the largest soybean processors in the world with the A.E. Staley company and the Spencer Kellogg company already operating here.

“The company [ADM] now operates soybean processing plants in Chicago [Illinois], Toledo [Ohio], Buffalo, New York, Milwaukee [Wisconsin] and Minneapolis.

“The new industry will create a gigantic market for soybeans and other grain products grown in Central and other parts of Illinois.”

“The plant will be constructed on the Rowe farm located near Faries park northeast of the city...”

“Mr. Eastman told a representative of the Herald early this morning, that he had mailed last night details of the project to Secretary H.H. Bolz of the Association of Commerce.”

101. Associated Press (AP). 1939. Archer-Daniels to build huge grain elevator. *Chicago Daily Tribune*. Jan. 12. p. 27.

• **Summary:** Archer-Daniels-Midland company plans to construct a 5,000,000 bushel grain elevator, headhouse, and soy bean processing plant at Decatur, Illinois. Whitney H. Eastman, vice president in charge of the company’s soy bean division, made the announcement on Jan. 10 in Milwaukee. He said construction would start immediately and the elevator would probably “be ready for use by next July 1, in

time to handle wheat and oat crops.”

The company now operates soy bean processing plants in Milwaukee (Wisconsin), Chicago (Illinois), Toledo (Ohio), Buffalo (New York), and Minneapolis (Minnesota).

102. *Decatur Herald (Illinois)*. 1939. The vision becomes reality. Jan. 12. p. 4. Morning. Editorials.

• **Summary:** “Decatur yesterday put a block under the title: Soybean Capital of the World!

“Three basic reasons influenced the decision of the Archer-Daniels-Midland company to acquire 96 acres of ground here upon which to erect an elevator and soybean processing plant at a cost of between one at two million dollars. The reasons are: Location near the center of America’s soybean producing section, good transportation facilities and rate structures favorable to grain merchandising and processing, and adequate water supply.

“Decatur citizens have created these favorable conditions.” Foremost among the pioneers was A.E. Staley. The community “built Lake Decatur, largely for the needs of the Staley company, when impounded lakes were more of a novelty than now.”

Major soybean processors in Decatur now include A.E. Staley company, Spencer-Kellogg company, and now Archer-Daniels-Midland company.

Note: The phrase “soybean capital” appears in more than 20 issues of Decatur newspapers in 1939.

Decatur, Illinois: "Archer-Daniels-Midland Company." (Large = capacity over 200 tons/day of soybeans). Solvent extraction plant.

*Soybean Digest*. 1949. Dec. p. 36. "Grits and flakes... Archer-Daniels-Midland Co's. new soybean oil refinery at Decatur, Illinois, was ready to go into production Oct. 30. The refinery will use raw oil from the company's new solvent plant at Decatur which went into production last summer. Plans have been announced for a new pilot plant in Minneapolis."

109. Halpin, J.G. 1939. Soybean meal for growing chicks. *Proceedings of the American Soybean Association* p. 18-21. 19th annual meeting. Held 11-12 Sept. at Madison, Wisconsin. [3 ref]

• **Summary:** "We get a good many letters asking for information about feeding soybeans to poultry. Twenty-five years ago we reported that baked soybeans gave better egg production than raw soybeans. The beans were baked daily and fed mixed with mash. The raw beans were ground and mixed with the mash for the second group.

"Osborne and Mendel (1917) and Vestal and Shrewsbury (1932) reported that cooking the soybeans caused a very significant increase in its growth promoting properties

for white rats. Hayward, Steenbock and Bohstedt (1936) found in experiments with rats that heating the soybean to medium and high temperature in the commercial methods of oil extraction practically doubles the nutritive value of the protein (grams of growth per gram of protein eaten). Raw beany tasting soybean oil meal prepared at a low temperature gave about the same nutritive value for the protein as raw soybeans.

“Hayward, Halpin, Holmes, Bohstedt and Hart (1987) reported feeding trials with growing chicks and laying pullets. In these trials soybean oil meals rendered at different temperatures and raw soybeans were substituted for a part of the milk and meat scrap in the Wisconsin Number 2 chick mash. In these trials, when 14 pounds of ground raw soybeans were substituted for six pounds of meat scrap and six pounds of dried milk in the chick ration, very slow growth was experienced. The chicks on the Wisconsin Number 2 (eight pounds of meat scrap and eight pounds of dried milk) averaged to weigh 658 grams at eight weeks while the raw soybean group (fourteen pounds raw soybeans, two pounds of dried milk and two pounds of meat scraps) weighed only 278 grams each.

“On the other hand a ration made using an expeller soybean oil meal (Exp. S.B.O.M.–140 degrees-150 degrees, 2½ minutes) twelve pounds; meat scrap, two pounds; and dried milk, two pounds; averaged to weigh 560 grams at eight weeks. That is, slightly twice as heavy as the raw soybean group. In another trial when low temperature expeller soybean oil meal (105 degrees C.-2 minutes) was substituted for the meat scrap and dried milk, unsatisfactory growth was experienced (281 grams at eight weeks) but when high temperature expeller meal (140 degrees to 150. degrees C.-2½ minutes) was used the chicks were decidedly better (468 grams at eight weeks) but not equal to the positive control (eight pounds of meat scrap and eight pounds of dried milk) as this lot averaged to weigh 684 grams in eight weeks.

“In another trial using four pounds of meat scrap, four pounds of dried milk and eight pounds of high temperature soybean oil meal, we produced 533 gram chicks at eight weeks and 1660 gram pullets at twenty weeks. While a ration containing two pounds of meat scrap, two pounds of dried milk and twelve pounds of high temperature expeller soybean oil meal produced 518 gram chicks at eight weeks and 1578 gram pullets at twenty weeks. These chicks compared favorably with the positive control (eight pounds of dried milk and eight pounds of meat scrap) that weighed 616 grams at eight weeks and pullets that weighed 1668 grams at twenty weeks.

“Numerous trials then have shown that a good sample of high temperature soybean oil meal can be used to replace all or a part of the dried milk and meat scrap in a chick starter mash. When soybean oil meal is used to replace all of the animal protein, slightly slower growth is experienced but

very satisfactory pullets can be produced.

“That milk, meat and fish products contain some growth promoting factors not contained in soybean oil meal has been shown in a number of trials.

“Milk, fish meal and meat scrap have shown in a number of trials to increase the growth rate when substituted into the soybean oil meal ration. On the other hand linseed meal and gluten meal addition have not improved the ration. In fact 16 pounds of soybean oil meal has been found to be superior to combination of the soybean meal with either linseed meal or corn gluten meal. Special feeds such as liver meal have given splendid results in some trials. In the 1936 trials a combination of soybean oil meal, 13; dried milk, 2; and liver meal, 1; gave chicks that averaged 642 grams at eight weeks compared with chicks on Wisconsin Number 2 that weighed 603 grams and 531 grams for chicks on the soybean oil meal.

“Increasing the amount of soybean oil meal to raise the protein level has not given satisfactory results. For instance in 1939 a group of Single Comb White Leghorn chicks getting Expeller soybean oil meal in the amount of sixteen pounds, averaged 398 grams at eight weeks. A similar group, getting twenty pounds, of the soybean oil meal averaged 399 grams and a third group getting twenty-four pounds of soybean oil meal averaged almost the same 410 grams. In the same series, chicks getting eight pounds of meat scrap and eight pounds of dried milk averaged 607 grams and chicks getting Wisconsin Number 44 (four pounds each of dried milk, meat scrap, fish meal and soybean oil meal) averaged 646 grams at eight weeks.

“In the second trial the group getting sixteen pounds of soybean oil meal averaged 386 grams; the group getting twenty-four pounds of soybean oil meal averaged 388 grams; and the group getting twenty pounds of soybean oil meal averaged 380 grams while the lot on Wisconsin Number 2 averaged 492 grams. Those on Wisconsin Number 44 averaged 520 grams. That additional protein of the right kind will result in faster growth is shown by the lot getting Wisconsin Number 45 which averaged to weigh 623 grams at eight weeks.

“For practical conditions, Wisconsin Number 44, containing four per cent of good quality soy bean oil meal seems to be a very desirable combination for general farm use. When broilers are produced, Wisconsin Number 45 containing five per cent each of dried milk, meat scrap, fish meal and soybean oil meal, appears to be satisfactory. Adding still more protein, that is six pounds each of dried milk, meat scrap, fish meal and soybean oil meal, results in still slightly faster growth for the first eight or ten weeks.

“That adding soybean oil meal to the Wisconsin Number 2 ration would increase the speed of growth was shown by replacing sixteen pounds of the basal (corn, bran, etc.) in the Wisconsin Number 2 chick starter by using soybean oil meal. In that case the chicks on the Wisconsin Number 2 weighed 616 grams at eight weeks while the chicks getting

the soybean oil meal addition weighed 688 grams. This latter group was still heavier than the control at twenty weeks (Control–1668 grams–Soybean oil meal addition–1771 grams).

“Egg Production and Hatchability: Many trials have shown fairly satisfactory number of eggs produced on the soybean oil meal ration. The egg production has been improved however when animal protein feeds were combined with the soybean oil meal.

“Hatchability has not been satisfactory during the winter in the soy bean oil meal groups. On the other hand spring hatches have been satisfactory. Shortly after the hens are allowed out on the wire sun porches the hatchability begins to improve and on the average, the number of chicks produced per hundred eggs and the quality of chicks has compared favorably with the control group after the breeding hens have been exposed to the warm spring sunshine.

“The addition of manganese to the soybean oil meal ration has resulted in improved winter hatchability in two trials (Mn So ¼ pound per ton). The addition of flavon [sic] has also resulted in improved winter hatchability. Why the addition of the mineral in the one case and a vitamin in the other have both improved winter hatchability is one of the many problems that needs further study.

“In the brief time allotted I have been able to hit only a few of the high places in our soybean oil meal studies. I wish to make special acknowledgement to my colleagues; Dr. C.E. Holmes and Mr. Windsor Cravens; to Professor Hart for his excellent council and also to Industrial Fellows; J.W. Hayward, H.J. Deobald and James Christiansen; who have assisted with various phases of this project; and last, but not least to the Allied Mills, Inc. whose financial assistance has made many of these studies possible.

A large table shows: “Supplemental value of certain ‘High Protein’ feeds. Address: [Univ. of Wisconsin, Madison].

Section III: Comics in color.

Section IV: On page 7 is a tribute to ADM (see separate entry).

111. *Decatur Herald (Decatur, Illinois)*. 1939. Special Soybean Issue. A colossus of chemistry. Dec. 31. Part IV. p. 7, 10. Sunday.

• **Summary:** This entire issue of the newspaper is sometimes cited as “Special Soybean Issue,” for it has major stories about soybeans on many pages. And many of the large display ads mention soybeans and Decatur. Note that 31 Dec. 1939 is during the Great Depression and the last day of the decade.

The long subtitle reads: “Archer-Daniels-Midland Co. is the official name of a company that may be described only in superlatives—world leader in making vegetable drying oils—builder in Decatur of the world’s largest solvent-process soybean mill. The construction job itself was record making. Its present properties here are but a foretaste of a greater future.”

The article gives a good overview of ADM and its history. The solvent extraction plant here was imported from Germany.

A photo bears this caption: “In charge of A-D-M’s plant and elevator operations are these four men. Left to right they are: Norman Nelson, elevator superintendent; Vern Bloomquist, plant control chemist; Phil A. Breitengross, shipping superintendent, and Robert S. White, superintendent in charge of plant operations. Page 7: An aerial photo shows the ADM solvent plant and its elevators.

“The Daniels Linseed Co. was built by John W. Daniels at Minneapolis, Minnesota, in 1902.

“George A. Archer joined with Mr. Daniels in 1903 and the Archer-Daniels Linseed Co. was organized and started operations at Minneapolis.”

The present “corporate structure was formed in May, 1923, under the laws of Delaware,... as a successor to the Archer-Daniels Linseed Co.”

“The company’s credit rating with banks is as high as any firm in the country and on its loans the interest rates are extremely low.

“This situation is explained simply—In all of the 100 years of its history, the present company and its forerunners claims never to have had a losing year.

“The record of the Archer and Daniels families, as far as can be determined is spot-clean of a financial blemish. In no year is a loss noted—a record few companies in America can

equal or boast.”

112. Christiansen, J.B.; Halpin, J.G.; Hart, E.B. 1940. Studies on the nature of the effective supplements for soybean oil meal in rations for the production of hatching eggs. *Poultry Science* 19(1):55-60. Jan. [4 ref]

• **Summary:** The authors reported very poor hatchability of hen’s eggs when the diets of the hens consisted of substantial levels of soybean oil meal. They improved the hatchability by the use of several supplements and concluded that at least the winter slump in hatchability could be completely eliminated by the addition of manganese or riboflavin.

115. Burlison, W.L. 1940. Importance of soybeans to American agriculture (With some notes on soybean research). *Proceedings of the American Soybean Association* p. 27-30, 34-35. 20th annual meeting. Held 18-20 Aug. at Dearborn, Michigan.

• **Summary:** Contents: List of 11 things that the future of the soybean as an important Illinois crop is dependent upon—according to G.L. Jordan, Dep. of Agricultural Economics, Univ. of Illinois. Where do we go from here in soybean production? Table 1—Annual production of soybeans in five leading countries from 1925-1939: USA, Manchuria, Chosen [Korea], Japan, Netherland India. Table 2—World production of soybeans in 1,000 bushels (excluding China) from 1925-1939, including percentage increase each year over 1925. These figures include, in addition to the countries shown in Table 1, Kwantung, Taiwan, U.S.S.R., Rumania, Bulgaria, Yugoslavia, and certain other small countries in Europe. U.S. soybean production as a percentage of world production. Why this rapid increase in U.S. soybean production? Rapid increase in U.S. soybean production during the past 6 years. Research leads the way: List of typical research projects at larger corn belt agricultural experiment stations.

Extracts from letters on the future of soybeans in Illinois from thoughtful observers: H.G. Atwood, Allied Mills, Inc., 26 Dec. 1939. G.G. McIlroy, President, American Soybean Association, 7 Dec. 1939. W.J. O’Brien, The Glidden Co.,

8 Dec. 1939 (use of oil in paints). N.P. Noble, Swift and Company Soybean Mill, 8 Dec. 1939 (Swift has now built soybean mills at Cairo, Illinois; Des Moines, Iowa; and Fostoria, Ohio. Swift is using larger quantities of soybean oil in their various products). Edward J. Dies, National Soybean Processors Assn., 14 Dec. 1939. D.F. Christy, Acting Director, USDA Office of Foreign Agricultural Relations, 17 Feb. 1940. E.F. Johnson, Ralston-Purina Company, 21 Dec. 1939. H.P. Rusk, Dean and Director, Illinois Experiment Station, 22 May 1940. J.W. Hayward, Archer-

Daniels-Midland Company, 24 May 1940.

Growth in the number of soybean crushing mills in the USA from about 10 in 1925 to approximately 75 in 1939. Increase in soybean yields in Illinois from 13.5 bushels/acre in 1925 to 24.5 bushels/acre in 1939. Growing industrial utilization of soybeans. Conclusion: "The importance of soybeans to American agriculture is bound to be of greater significance as the years go by."

Concerning research: "Our research program on soybeans in this country is nothing less than remarkable. In 1937 a list of soybean projects was published by H.M. Steece, Specialist in Agronomy, Office of Experiment Stations, U.S. Department of Agriculture." In 1937 some 53 agricultural experiment stations were conducting 258 separate investigations on soybeans. "By far the largest number of these have to do with the varieties and methods of production." A photo (p. 29) shows a tractor pulling a combine harvesting soybeans in Indiana.

Note: This is the earliest English-language document seen (March 2003) that uses the term "soybean research" (see subtitle) to refer to research on soybean production. Address: Head, Dep. of Agronomy, Univ. of Illinois.

116. Hayward, J.W. 1940. Soybean oil meal: Its current consumption. *Proceedings of the American Soybean Association* p. 21-23. 20th annual meeting. Held 18-20 Aug. at Dearborn, Michigan.

• **Summary:** The soybean arrived in America in 1804. During the past ten years the production of soybean oil meal as such has increased in the United States from about 39,000 tons to approximately 1,250,000 tons. Practically all of this production has been used as a feed for livestock and poultry.

For the past several years production of soy flour has held between 11,000 and 15,000 tons. "Before leaving this subject on food, I do wish to give credit to the increasing popularity of edible green soybeans, many specialty soybean products and special health foods, such as soy milk, etc."

Properly processed soybean oil meal is a better feed than raw uncooked soybeans. "In most cases, I think you will find that protein can be purchased cheaper in soybean oil meal than it can be supplied by feeding soybeans at market prices even though they were raised on your own farm." Several calculations are given to prove this point.

Note: This is the earliest English-language document seen (June 2009) that uses the term "edible green soybeans" to refer to green vegetable soybeans. Address: Chairman, Soybean Nutritional Research Council.

117. Hayward, J.W.; Hayward, Mrs. J.W. 1940. Little soybean who are you? *Proceedings of the American Soybean Association* p. 6. 20th annual meeting. Held 18-20 Aug. at Dearborn, Michigan.

• **Summary:** This poem, written and submitted by Dr. and Mrs. J.W. Hayward reads: "Little Soybean who are you /

From far off China where you grew? / I am wheels to steer your cars, / I make cups to hold cigars. / I make doggies nice and fat / And glue and feathers on your hat. / I am very good to eat, / I am cheese and milk and meat. / I am soap to wash your dishes, / I am oil to fry your fishes, / I am paint to trim your houses, / I am buttons on your blouses. / You can eat me from the pod, / I put pep back in the sod. / If by chance you're diabetic / The things I do are just prophetic. / I'm most everything you've seen / And still I'm just a little bean." Address: I. PhD.

118. Taggart, M.F. 1940. Progress in soybean oil paint. *Proceedings of the American Soybean Association* p. 24-26. 20th annual meeting. Held 18-20 Aug. at Dearborn, Michigan.

• **Summary:** "Upon the occasion of this twentieth anniversary of the organization of the American Soybean Association, it is surely quite fitting that the agenda should include such a lay subject as Soya Oil Paint.

"It is not my privilege to know what is going on in other paint laboratories and you can bet your bottom dollar that I do not care, because we have found it just good horse sense to tend to our own rat killing.

"In these times of political, economic and even social unrest, it is often a bit difficult for us to focus our attention upon the more prosaic things of our everyday life. Paint for example.

"This assemblage seems to be permeated with the aroma of Soya Beans. The very presence of such missionaries as Messrs. McIlroy, Johnson, Hayward, Milner, Burlison, Beeson, Boyer and others testifies to the interest in Soybeans throughout the country.

"You are all conversant with the phenomenal rise in importance of Soya Beans as a farm crop. If you will but lend an ear to the other program colleagues, you will be impressed with the versatility of that once lowly but now mighty Soybean.

"Your slaving program officials have asked me to speak upon the Progress of Soybean Oil Paint. Had that subject wordage been phrased, Progress in Oil Paint, I would have centered my expression around Soya Bean Oil. Had the subject been stated Progress in Varnish, I would have necessarily put the spot light upon Soya Bean Oil. So anyway you word my subject, you will receive the same response, so long as you use that first word Progress. | Now Progress works like a window shade—up and down—and again like a window shade it's the pull that counts, not the push. Try pushing up a window shade some day and see how well you get along.

"Now, just how many people are pulling for Soya Paints?

"For some years, this American Soybean Association, the National Farm Chemurgic Council, the Processors and others have been trying to pull the paint formulating chemists

into using greater amounts of Soy Bean Oil in surface coatings and if we are to believe the statements attributed to Otto Eisenschiml and Dr. Holly in a recent issue of *Paint, Oil and Chemical Review*, the party is over. You proponents of Soy Bean Oil in paint might just as well pick up your doll rags and go home. It seems that Soya Bean Oil has to have some other oil carry the load. Perilla Oil, Tung Oil, Linseed Oil or what have you. Some off-breed resin might help.

“Personally, I do not believe such statements are factorial. I hope the two men have been misquoted.

“Permit me to go out on that celebrated limb.

“In 1935, the O’Brien Varnish Company used the insignificant amount of 100 gallons of Soya Bean Oil entirely experimental, because their chemists did not then know how to make good use of the oil and I was in charge of the work. Upon the goading of your Soy Bean Missionaries, the chemists were spurred on to more intensive effort. Let us advance the date now and raise the curtain on a scene of 1940 in the same paint and varnish plant. There you will be amazed, or at least pleasantly surprised, to discover that over 800,000 pounds of Soya Bean Oil will be used this year alone. There are those who will shout derisively, ‘Shame on such chemists.’ ‘The very idea of putting Soya Bean Oil in paint.’ ‘Why, it won’t dry.’ ‘It is too soft, it is an adulterant.’ And so on far into the night.

“Chemists, generally speaking, are self centered folks. Usually going on about their business with but little care for what the general public says or thinks. Being concerned more in accomplishing something, and incidentally have a lot of mental fun, chemists have made great strides, forward toward the goal of Soya Oil Paints.

“Witness the jump in one plant, above mentioned, from a mere hundred gallons to 800,000 pounds in but five years of virgin research. I wonder what others are doing? I’ll bet they are doing plenty with Tung Oil out of sight in price and Perilla Oil recently off the market entirely.

“Let us get at the Progress in Soya Bean Oil Paints more concretely. Here is a panel showing a white enamel as fine a piece of goods as your wife or mine would ask for, for her household use. The product is long in oil, will stay white, has a beautiful luster, is washable, easy to apply, dries fine, get that—I said dries fine, and the oil constituent is all Soya Bean Oil. True, the oil is not just any old Soya Bean Oil that may be laying around the plant in some leaky drum. The oil has received a rather specialized treatment as yet not patented nor even applied for, but the treatment is as different as night and day, and does do the job. Believe it or not, Soya Bean Oil by this treatment is so re-orientated internally as to chemical structure that the pure oil without driers, without added resins or other oils, will dry in a reasonable time to a film quite satisfactory for use in paint products. That, folks, is progress.

“Again resorting to panel display, this treated Soya Bean Oil may be incorporated into various types of varnishes

which are highly resistant to water spotting. That is progress. Dr. Milner may elaborate upon that phase of his work and I will not encroach upon his sphere of activity because of my respect for his efforts and because I like him personally.

“I mentioned this window shade business as a simile earlier in my remarks. Let’s get back to that. We have found that Soya Oil Paints merchandize themselves in those geographical areas where the good word has been spoken. Noised around a bit as it were. First hand experience with a well made Soya Paint will quickly sell the user upon the high quality of Soya Paint. So you see what I mean when I allude to the window shade episode. Good Soya Paints are pulling converts down the middle aisle to the altar of paint quality, and that is my idea of Progress.

“From all directions, you are hearing that first quality paint products can be and are now regularly produced from Soya Bean Oil. Now, why is it that such fact is not reflected in your statistics resume. Here’s the reason: When the urban painter has become confirmed to the religion of more for his dollar, when the farmer insists upon better quality via Soya Bean paints, when in short the gospel has been well preached by sincere pastors of your Church of the Soya Bean—then, there will be a real meaning to Progress in Soya Bean Paints.

“There has been great progress, there will be great progress further, but there is an undercurrent of adverse apathy toward Soya Oil Paints. Wonderful products are regularly made using Soya Bean Oil and we are very happy over the net results but we have noticed that Soya basis paints receive wide acclaim by their own virtues of quality most surely when we make no mention of the presence of Soya Oil. The paints or enamels unto themselves are extra fine top graders, but we dare not tell the whole truth because of certain insidious carpet-bag gossip behind the scenes.

“A definite curse unjustly has been hung onto Soya Bean Oil Paints. Possibly, it is another case of the sins of early youth cropping out, but the curse is there, sin or no sin, either in innocence or ignorance.

“Here is a worth-while opportunity for your publicity committee to do you some real good. Make an independent investigation. Determine the facts.

“Call out the guard, sound off, and you will have progress.

“It is OK by me if I am accused of having spoken rather militantly. I admit it. When I know that such fine folks as the Central Soya Company of Decatur, Indiana, are in there pitching for Soya Oil paint progress, I believe in mentioning it.

“Now brace yourself. The bull’s coming.

“I am sick and tired of hearing what all is wrong with Soya Bean Oil, and I am not interested in picking specks out of rotten apples. However, I am aroused by certain progress in rust inhibitive properties of a new Soya Bean Oil Paint. Here it is or may I say, ‘Here she be.’ That panel was just an old rusty piece of iron. Upon this area over the

rust, we applied good red lead and oil. Admittedly a honey for structural steel maintenance. Underneath that film, the rust is still there as you can determine by merely scratching. Upon this other area, we applied a new Soya Bean coating—right over the rusty surface. By similarly scratching the surface, you may note that the rust is no longer there and the structural iron body is protected. Now that is all I am going to tell you about it. But the general public can suck on their thumb for the rest of the story. We are going to town on it.” Address: Director of Research, O’Brien Varnish Co., South Bend, Indiana.

119. *Minneapolis Star Journal (Minneapolis, Minnesota)*. 1940. FTC charges are denied by 6 firms. Sept. 28. p. 15.  
 • **Summary:** “Washington—Federal trade commission charges of a combination in restraint of trade were denied by American Lecithin company; Glidden company, Cleveland; Archer-Daniels-Midland company, Minneapolis; Ross & Rowe, Inc., New York; Hansa-Muehle, a German corporation, and Aarhus Oliefabrik, a Danish corporation.

“In their answers to the FTC complaint, the firms explained the [American] Lecithin company was formed to make available in this country patents held by the European firms. Lecithin is used in manufacture of candy, paints and other products.”

Note: ADM was apparently making lecithin at this time.

120. Archer-Daniels-Midland Co. 1940. Archer brand: The mark of quality soybean products (Ad). *Proceedings of the American Soybean Association* p. 12.

• **Summary:** A full-page ad. The company now makes and sells 44% protein soybean oil meal, flakes & pellets, and 41% protein soybean oil meal. It has soybean processing plants strategically located at Chicago, Illinois; Toledo, Ohio; Milwaukee, Wisconsin; Minneapolis, Minnesota; Buffalo, New York; and Decatur, Illinois. “Ready for operation October 1st. The largest soybean processing plant in the United States.” A large, bold illustration shows the company’s “Archer brand” logo. Address: Minneapolis, Minnesota.

121. Hayward, J.W. 1940. Soybean oil meal processing: Various systems employed by leading oil meal manufacturers. *Flour & Feed* 41(4):24. Sept.

• **Summary:** “Processes now used for the manufacture of soybean oil meal are: the solvent extraction process, resulting in 44 per cent protein or New Process soybean oil meal, and the hydraulic and expeller processes producing 41 per cent or Old Process soybean oil meal.

“Our company [ADM] was the first to install the approved continuous method of solvent extraction for soybeans in this country. This installation was made in Chicago in 1934. Since this time the Glidden Co. has installed two similar solvent extraction units—Central Soya

Co., Inc., installed a very large unit of a little different design but the same continuous principle a couple of years ago at Decatur, Indiana, and the Clinton Co. of Clinton, Iowa, also put up a continuous solvent extraction unit a few years ago. Three small extraction units of the Henry Ford design are operating in Michigan not far from Dearborn. The Drackett Co. of Cincinnati, Ohio, is processing soybeans by the solvent extraction method and the Honeymead Co. is using a solvent extraction unit of the Allis-Chalmers Manufacturing Co. design in processing soybeans at their plant in Cedar Rapids. Then too, just last year we put up the largest continuous extraction unit in this country of the same design as Central Soya’s. This installation of ours was made at Decatur, Illinois, and has a capacity of better than 400 tons of soybeans per day. We began operating this soybean plant at Decatur in November, 1939.”

Note: This is the earliest document seen (Oct. 2018) that mentions “Honeymead” or the “Honeymead Co.” in connection with ADM. Address: ADM, Minneapolis, Minnesota.

122. McBride, Gordon W. 1940. Chemical engineering advances in soybean processing. *Chemical and Metallurgical Engineering* 47(9):614-18. Sept. [2 ref]

• **Summary:** A photo (p. 1) shows the new Archer-Daniels-Midland Co. solvent extraction plant at Decatur, Illinois. “Meal used in plastics: Although considerable discussion has been heard of the use of soybean meal in plastics, there has not been a great amount actually used. The meal corresponds to a filler, though in part it does react with formaldehyde to form a low-quality plastic. A superior molding compound has been achieved by the use of this meal with phenol-formaldehyde plastic. This has been publicized to a considerable extent by the Ford Motor Co.”

Industrial proteins “find application in the manufacture of paper sizings, adhesives, laminated fiber board, water paints, and miscellaneous coatings. Small molded parts are also being produced from preparations containing phenolic or urea molding compositions in admixture with varying amounts of purified soybean protein pre-hardened with formaldehyde.”

“One large potential outlet for the meal is in the manufacture of a protein fiber by techniques comparable to those of other synthetic fibers already well known.” Address: Chemical engineer, Washington, DC.

123. McBride, Gordon W. 1940. What’s happening with soybeans? *Food Industries* 12(10):55-57. Oct.

• **Summary:** “Greatly increased production, with accompanying increase in soybean oil output and wider utilization of other soybean products, is influencing all food industries.” Discusses, with many statistics, the utilization of soybeans in the USA, including the amount used for oil (crude and refined; nonfood and food), meal, industrial

proteins, and foods. An interesting table on page 56 states that the following foods “are made from soybeans” [sic, many contain soybeans plus other ingredients]: bean powder, bean curd, soy sauce, soy milk, breakfast food, invalid foods, soy flour, infant foods, ice cream, baked goods, macaroni, and sausage. Whole soybeans are used to make sprouts, cooked beans, soy sauce, confections, breakfast foods, meat substitutes, and coffee substitutes. Either whole soybeans or soy flour are used to make “fresh vegetable milk,” which can be further processed to make condensed milk, dried milk, confections, cheese, or casein.

“In addition to the increasing quantities of soybeans that are brought to the market as a fresh green vegetable, larger quantities of the green beans are being canned each year. One unofficial estimate placed the 1939 pack at 15,000 cases (24 one-pound cans each).”

A photo shows the soybean products plant of Archer-Daniels-Midland Co. recently erected at Decatur, Illinois. Address: Chemical Engineer, Washington, DC.

124. McBride, Gordon W. 1940. What’s happening with soybeans? Greatly increased production, with accompanying increase in soybean oil output and wider utilization of other soybean products, is influencing all food industries. *Food Industries* 12(10):55-57. Oct.

• **Summary:** A wide-ranging discussion of soybean production and utilization in the USA.

A large photo shows an aerial view of the Archer Daniels Midland Co, soybean products plant, recently erected at Decatur, Illinois. A table gives “Salient soybean statistics.” A diagram (p. 56) shows the many different food products made from soybeans, with estimated output of the major products in 1939.

Bar charts show: (1) The uses of soybean oil made in the USA each year from 1931 to 1939 (Source: USDA, based on Bureau of Census data). The three uses are: Food products, drying industries, and soap + miscellaneous and loss including foots. The total and the percentage used in food products increased dramatically after 1934, so that in 1939 about 83% was used in food products.

(2) Production, utilization, and average farm price of soybeans in the United States, 1924-1939. The price of soybeans fell steadily from 1924 (\$2.50 per bushel) until 1931 (\$0.50 per bushel) then it rose gradually to about \$0.80 a bushel in 1939. The bar for each year shows the total production, amount used for seed and feed, crushed by domestic mills, and exported. Soybeans were exported in 1931, 1932, 1935, and 1937-39. Address: Chemical Engineer, Washington, DC.

125. Archer-Daniels-Midland Company. 1940. Archer brand: The mark of quality soybean products (Ad). *Soybean Digest*. Nov. p. 10.

• **Summary:** A large photo shows “The largest soybean

processing plant in the United States, located at Decatur, Illinois.” Other soybean processing plants are strategically located at Chicago [Illinois], Toledo [Ohio], Milwaukee [Wisconsin], and Buffalo [New York].

“Our recently enlarged facilities at Decatur permit us to offer the best of service on straight or mixed cars of 44% and 41% soybean products... meal, flakes and pellets.”

The “Archer Brand” logo shows an archer, within a circle, pulling his bow. Above him, in a larger circle, is the word “Archer” and below the word “Brand.”

Note: During the period 1940-1942 ADM has many ads in *Soybean Digest* but mostly only for soybean meal—rarely for soybean oil. Address: Minneapolis, Minnesota.

126. *Decatur Daily Review (Illinois)*. 1940. Staley’s career given praise by business chiefs: His passing certain to be felt widely here. Dec. 27. p. 16.

• **Summary:** “Leaders of Decatur business and industry joined today with grain officials from widely-scattered parts of the country in paying tribute to A.E. Staley, Sr. Their comments follow:” Comments are given by:

“W.R. McGaughey, president of the Milliken National Bank... He had the rare quality of liking people and they in turn liked him.”

“H.R. Gregory, president of the National Bank of Decatur.”

Shreve M. Archer, of the Archer-Daniels-Midland Co... His life is an example of what may be accomplished by hard work and courage and should be a bright beacon to those who follow.

“Frank L. Evans, of the Evans Elevator Co.: Mr. Staley was a truly great man with unlimited vision and the rare ability to make those visions come true. His human kindness and understanding made every visit a pleasant memory. His going is a greater personal loss to more individuals than any man I ever knew.

“Emil F. Kull, of the Baldwin Elevator Co.: Mr. Staley was one of the grandest men I ever had the privilege to know. Not only was he a genius as a builder of big industry but also a genius in inspiring people with whom he came in contact. His great personality and charm was always present regardless of where you met him. His memory will always remain with all who knew him.

“W. Everett Mueller, president of the Mueller Co.: We will miss him tremendously. Mr. Staley did a great deal for the development of Decatur and the state of Illinois, particularly in his work in building up the soybean industry. The marvelous organization he directed here is a great credit to this city.

“C.C. LeForgee, of the law firm of LeForgee, Samuels & Miller, and general counsel for the A.E. Staley Mfg. Co.: Mr. Staley was truly a great man, more so than most people realized. He had the power to visualize and, what is equally important, the power to put his visions in concrete form. He

had a genuine feeling of sympathy for everyone, and the doors of his office were never closed to the workmen in his plant. When Mr. Staley came quietly to Decatur he visualized a great industry here, and it is comforting to know he saw his dream come true.

“W.L. Shellabarger, manager of the soybean division of Spencer Kellogg & Co.: Decatur lost one of its greatest men in its history with Mr. Staley’s death. He was a great builder and an understanding friend of all, from the highest to the lowest ranking.

Mayor Charles E. Lee of Decatur: Mr. Staley exerted a tremendous influence on the growth and development of Decatur, just how much it is impossible to tell. The city has lost one of its best citizens.

“F.M. Lindsay of the Decatur Herald & Review and president of the Community Chest: Mr. Staley has been the Community Chest’s finest friend, its greatest giver and greatest inspiration. He knew that institutions and communities are built by men and he always did a great part in giving both financial and community leadership.

“E.K. Scheiter, vice president of the Staley company: I will always remember Mr. Staley as a great builder. He built dreams into practical realities. He inspired men by his own indomitable will to do worthwhile things. He has been the single greatest influence in my life and the lives of many others. A.E. Staley was a genius.

Howard File, chief chemist at the Staley plant: Mr. Staley has been an inspiration to me ever since I left school in 1912 to work for him. We all admired his leadership, his ability to make you see things straight. He had imagination. After talking to him you couldn’t help getting ideas. Everyone in the plant knew him and he was never too busy to talk to any of his employees.

Glenn A. Moran, president of the Staley Fellowship Club: In behalf of all the members of the Staley Fellowship club I wish to extend my deepest sympathy to the family of Mr. Staley. They have lost a wonderful father. He was a humanitarian in the true sense of the word. He was always ready and willing to help the Fellowship club in any way possible. He was a great and good man, and the membership of the Fellowship club feel a personal grief in his passing.

“Charles A. Keck, pipe fitter foreman at the Staley plant: Mr. Staley was one of the grandest men I’ve ever worked for. I’ve worked for him for 29 years. His office was open to everybody anytime you wanted to go in. If any of his employees needed help or advice, he could always get it from Mr. Staley.”

“A.H. Hansen, assistant millwright foreman at the Staley plant:... Mr. Staley was the best man I ever worked for. He treated his employees well and often asked our opinions on things. He always wanted ideas on working conditions in the plant. I’ve been at Staley’s 22 years and he has always been the same.”

127. **Product Name:** Granose Protose (Formerly named Nutmeat).

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1940.

**Ingredients:** Wheat protein, cashew nuts, peanuts, wheat flour, soya flour, yeast, salt, hydrolysed vegetable protein.

**New Product–Documentation:** Manufacturer’s catalog. 1980. April.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1940. It has been discontinued.

128. Hayward, J.W.; Hafner, F.H. 1941. The supplementary effect of cystine and methionine upon the protein of raw and cooked soybeans as determined with chicks and rats. *Poultry Science* 20(2):139-50. March. [31 ref]

• **Summary:** This article begins: “The exact nature of the change that occurs in the protein of the soybean as a result of cooking has been a subject of study for many years.

“Osborne and Mendel (1917) described experiments with rats which showed that the protein of raw soybeans would not support appreciable growth. Cooking ground raw soybeans was effective in converting the protein into a form that stimulated normal gains.”

This is the earliest study to show that cystine and methionine are important amino acids in improving soy protein quality as determined by feeding both raw and cooked soybeans to rats and chicks.

Homocystine, choline and/or lecithin may also be part of the explanation. Address: Dep. of Nutritional Research, Archer-Daniels-Midland Co., Minneapolis, Minnesota.

129. Goss, W.H. 1941. Modern practice in solvent extraction. *Chemical and Metallurgical Engineering* 48(4):80-84. April.

• **Summary:** The American soybean processing industry uses hydrocarbons “to solvent-extract about 350,000 tons of beans per year, i.e., over 20% of its operations.”

“Solvent extraction of soybeans, as we know it, did not originate in the U.S. Its reduction to practice occurred in the twenties and early thirties and was the natural result of the requirements of Germany and the Low Countries for supplies of edible oils and of protein feeds for their livestock. In Europe, a soybean extraction industry evolved quite logically as a result of (1) the ability of the German trade program to make available plentiful supplies of Manchurian beans, (2) the necessity for recovering the utmost yield of oil in order to meet domestic deficiencies, and (3) the unique adaptability of soybeans to solvent extraction.”

“As far back as the early twenties, efforts were made to solvent-extract soybeans in this country. A Bollman [Bollmann] type of extractor at Norfolk, Virginia [owned by the Eastern Cotton Oil Co.], ran local soybeans in 1924-

1925 and attempted to process imported flaxseed, but the project was unsuccessful. Another Norfolk plant used Scott rotary extractors on a variety of oil-bearing seeds, including soybeans and copra, during the same period. About a year earlier, a batch solvent system at Monticello, Illinois, also failed. The first successful large-scale operations were those of the Archer-Daniels-Midland and the Glidden companies who installed Hildebrandt type extractors in Chicago during 1934 and 1935. The Glidden plant was destroyed by an explosion in 1935 but was immediately rebuilt with a doubled capacity.”

“At present, there are 5 solvent systems used in large-scale soybean extraction in this country, 2 of them being of German and 3 of American origin. These are installed in 8 large (over 50 tons of beans per day) and 2 small plants. At least one other system is operated on a relatively small scale” (see table 2).

An extractor of the Allis-Chalmers type processes soybeans at Cedar Rapids, Iowa. Until recently, another processed soybeans at Evansville, Indiana (probably for American Soya Products Corp.).

“The enthusiasm which ran high in the early 1930’s for the ‘industrialized barn’ type of soybean extractor has become more rationalized, and at least 2 technically satisfactory types of extractors have resulted. The Ford Motor Co. developed one consisting of an inclined tube housing an internal screw which conveys beans upward against a countercurrent solvent flow. It is now being used in one large and 2 small plants, all owned and operated by Ford.

“There has evolved, from work done by Iowa State College and by the R. & H. Chemicals Department of E.I. du Pont de Nemours & Co., an extraction system which, in simple terms, might be described as a Ford extractor running backwards. It is designed for solvents heavier than soybean oil, specifically trichloroethylene; hence it operates with an upward flow of solvent and downward flow of soybeans in the main extraction tube. There are no commercial installations at present.”

“Apparently there is only one commercial soybean extraction plant in the world using any solvent other than a petroleum cut. The exception is the Manchuria Soybean Industry Co., in Dairen. Here, the so-called hot alcohol process is used with a battery of rotary extractors to process approximately 100 tons of soybeans per day. The solvent is 99.8% ethanol... Considerable research has been directed toward the use of methanol-benzene and ethanol-benzene mixtures for soybean extraction in cases where phosphatide recovery is of importance. In the late 1920’s, the plant of the Hansa-Muehle, A.G., at Hamburg operated for a short time using such mixtures.”

Tables show: (1) Soybeans (tons and percentage of total) processed annually in USA by expeller, solvent, and hydraulic methods (1936-39; in 1939 the percentages were 74.2, 20.2, and 5.4 respectively). (2) Estimated total

capacities of installations of the various types of continuous solvent extraction systems worldwide and in the USA (Basis: short tons of oilseeds or oilseed press cakes per 24 hours): Bollman (German): 3,100 / 750. Hildebrandt 2,200 / 430. Fauth (German): 800 / 0. Allis-Chalmers (American): 170 / 170. French (American) 130 / 130. Ford (American): 75 / 75.

Photos show: (1) Aerial view of Central Soya’s huge processing plant at Decatur, Indiana. It uses both a Bollman extraction system and expellers. (2) Ford Motor Company’s soybean mill at River Rouge plant (exterior view). (3) Two small soybean extractors in Ford’s soybean mill at Saline, Michigan. (4) The huge soybean mill of Hansa-Muehle, A.G., Hamburg, Germany, using the Bollman system. (5) Hildebrandt extractor. (6) Experimental extractor built by the R. & H. Chemicals Department of E.I. duPont de Nemours & Co., Niagara Falls, New York. Address: U.S. Regional Soybean Industrial Products Lab., Urbana, Illinois.

130. U.S. Federal Trade Commission. 1941. In the matter of American Lecithin Company, Inc., et al. *Federal Register* 6(98):2478-80. May 20.

• **Summary:** This ruling is in “Docket No. 4173. Part III–Digest of Cease and Digest Orders.”

This ad also appears in the July 1941 issue (inside back cover). Address: Minneapolis, Minnesota.

132. National Soybean Processors Association. 1941. Year book, 1941-1942 (Association year). Chicago, Illinois. 53 p.  
• **Summary:** See next page. Contents: Constitution and by-laws (as amended Oct. 13, 1941; incl. committees, code of ethics). Officers, directors and committees for 1941-42. Membership of the National Soybean Processors Association. Trading rules governing the purchase and sale of soybean oil meal (First adopted 18 Oct. 1933). Appendix to trading rules on soybean oil meal. Trading rules on soybean oil. Appendix to trading rules on soybean oil—Official testing methods.

Article IX, Committees, lists and describes each.

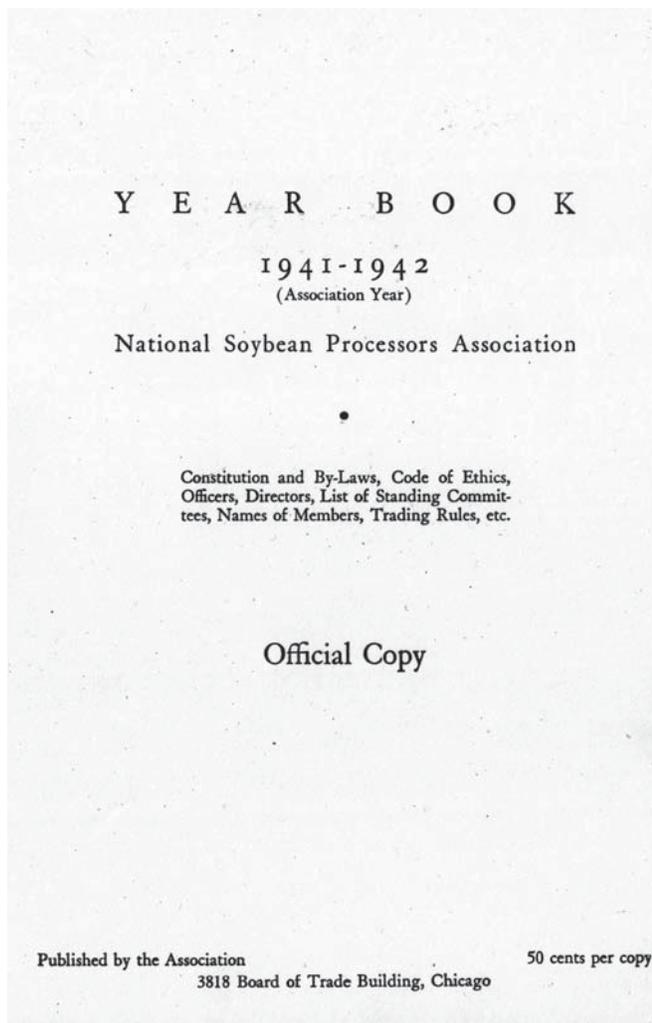

The section titled "Officers, directors, and committees" (p. 14-16) states: President: Edward J. Dies. V.P., Chairman Executive Committee: E.K. Scheiter. Secretary: E.D. Funk, Jr. Treasurer: W.G. Dickinson. Ass't. Treasurer: F.G. Duncanson. Executive Committee: E.K. Scheiter, Chairman—

J.B. DeHaven, E.D. Funk, Jr., W.H. Knapp, W.G. Dickinson, Roy Hall -> D.J. Bunnell, C.T. Prideville, W.H. Eastman, E.F. Johnson, W.E. Flumerfelt, Howard Kellogg, Jr.

Board of Directors: A.M. Andreas, W.E. Flumerfelt, C.T. Prideville, J.H. Caldwell, E.D. Funk, Jr., E.K. Scheiter, J.B. DeHaven, Roy Hall -> D.J. Bunnell, H.R. Schultz, W.G. Dickinson, Howard Kellogg, Jr., I.D. Sinaiko, Roger Drackett, W.H. Knapp, Ralph Wells, W.H. Eastman, J.H. Mitchell.

Standing committees: For each committee, the names of all members (with the chairman designated), with the company and company address of each are given—Traffic and transportation. Research. Finished materials standards. Soybean grades and contracts. Trading rules—oil. Trading rules—meal. Soy flour. Crop improvement. Soybean nutritional research council. Trade development. Edible soybean.

The following companies and organizations are members of NSPA: Allied Mills, Inc., Board of Trade Bldg., Chicago, Illinois (J.B. DeHaven). Archer-Daniels- Midland

Co., Box 839, Minneapolis, Minnesota (W.H. Eastman). Berea Milling Co. (The), Berea, Ohio (H.E. Carpenter). Buckeye Cotton Oil Co. (The), Cincinnati, Ohio (W.H. Knapp). Cairo Meal & Cake Co., Cairo, Illinois (A.T. Madra). Central Soya Co., Inc., Fort Wayne, Indiana (Roy Hall). Clinton Co., Clinton, Iowa (E.W. Meyers). Drackett Co. (The), Cincinnati, Ohio (Roger Drackett). Durkee Famous Foods, Chicago. Elevators & Mills, Inc., Windfall, Indiana (J.H. Mitchell). Funk Bros. Seed Co., Bloomington, Illinois (E.D. Funk, Jr.). Glidden Co. (The), Chicago, Illinois (W.G. Dickinson). Honeymead Products Co., Cedar Rapids, Iowa (A.M. Andreas). Illinois Soy Products Co., Springfield, Illinois (I.D. Sinaiko). Iowa Milling Co., Cedar Rapids, Iowa (Jos. Sinaiko). Laucks (I.F.), Inc., Portsmouth, Virginia (H.F. Armstrong). Old Fort Mills, Inc., Marion, Ohio (P. Turner -> Hugo Melo). Plymouth Processing Mills, Fort Dodge, Iowa (C.J. Simmons). Quincy Soybean Products Co., Quincy, Illinois (Irving Rosen). Ralston Purina Co., St. Louis, Missouri (J.H. Caldwell). Simonsen Brothers, Quimby, Iowa (W.E. Simonsen). Southern Cotton Oil Co. (The), Goldsboro, North Carolina (C.S. Ragan). Soya Processing Co., Wooster,

Ohio (H.H. Heeman). Soy Bean Processing Co., Waterloo, Iowa (W.E. Flumerfelt). Spencer Kellogg & Sons, Buffalo, New York (Howard Kellogg, Jr.). Staley (A.E.) Mfg. Co., Decatur, Illinois (E.K. Scheiter). Standard Soy Bean Mills, Centerville, Iowa (H.R. Schultz). Swift & Co., Chicago, Illinois (C.T. Prindeville). Terminal Oil Mill Co., Oklahoma City, Oklahoma (S.T. Davenport -> O.K. Winterringer). Wells (Ralph) & Co., Monmouth, Illinois (Ralph Wells).

Organizations represented on committees: American Soybean Association, Hudson, Iowa (George Strayer, D.G. Wing). Illinois College of Agriculture, Urbana, Illinois (Dr. W.L. Burlison, J.W. Lloyd). U.S. Regional Soybean Laboratory, Urbana, Illinois (Dr. H.T. Hopper, Donald H. Wheeler).

Insert: New members added since publication of the Trading Rules Book—Bell (Wilbur) Mill, Fayette, Iowa (Wilbur Bell). Central Iowa Bean Mill, Gladbrook, Iowa (Paul K. Klinefelter). Dannen Grain and Milling Co., St. Joseph, Missouri (Dwight L. Dannen). Decatur Soy Products Co., Decatur, Illinois (Joseph Giovanna). Galesburg Soy Products Co., Galesburg, Illinois (Max Albert). Hoosier Soybean Mills, Marion, Indiana (J.H. Caldwell, Jr.). Mankato Soybean Products, Inc., Mankato, Minnesota (Frank J. Berman). Marr (Pete) Soybean Mills, Fremont, Nebraska (Pete Marr). Toledo Soybean Products, Toledo, Ohio (J.H. Brown).

Note 1. This is the earliest document seen (July 2005) that mentions Honeymead in Iowa.

Note 2. This is the earliest document seen (Sept. 2005) that mentions Quincy Soybean Products Co. (Quincy, Illinois) or Irving Rosen. Address: 3818 Board of Trade Building, Chicago, Illinois.

133. *Gazette (The) (Cedar Rapids, Iowa)*. 1941. Honeymead honors salesmen. Nov. 3. p. 12, cols. 5-6.

• **Summary:** “Star salesmen of the Honeymead Products company attended the Iowa-Indiana game Saturday as guests of R.P. Andreas, president of the company. Chartering an interurban car, the group of more than 50 persons went to the game and then returned for a dinner dance at the Roosevelt hotel. D.O. Andreas, salesmanager of the concern, presented gold buttons with a diamond setting to the 12 highest salesmen in the organization. Men who received the awards were... Glen Herrick L. Stoltz...”

134. *Year Book and Trading Rules*. 1941-1988. Serial/periodical. National Soybean Processors Association. Annual. First volume titled Year Book, 1947-48. 68 pages. Published in Chicago. Later published in Washington, DC.

• **Summary:** Succeeded by Yearbook and Trading Rules. The first issue of this periodical, for 1941-42, was titled “Year Book.” Issued annually to all members of the association in about October of each year. The 1981-82 Yearbook, for example, was spiral bound and 23 cm high. Address: 1800

M. St., N.W., Washington, DC 20036.

135. Hayward, J.H. 1941. Soybean flakes for brewing: A promising adjunct. *Western Brewing World* 49(5):7-8, 26. \*  
 • **Summary:** Discusses the use of solvent-extracted soybean flakes as a brewing adjunct. These specially processed flakes are apparently prepared without subjecting the soybeans or flakes to excessive temperatures prior to extraction of the oil and by removal of the solvent from the extracted flakes at low temperatures. Address: ADM.

136. Hayward, J.W. 1942. For better dairy cows. *Soybean Digest*. March. p. 6.  
 • **Summary:** “Some twenty years ago extensive experiments were conducted with several protein supplements as a feed for dairy heifers by the Virginia Agricultural Experiment Station. Excellent results were obtained with soybean oil meal. In a publication by that station in 1921, Prof. R.E. Hunt made the following prediction: “This (soybean oil meal) is a concentrate that should become very popular with dairymen.”

“This prophecy of Professor Hunt’s has already come true regardless of the fact that it has only been during the past few years that the production of soybean oil meal has been sufficiently large so that it was generally available to dairy farmers in this country. Numerous experiments since 1921 have confirmed the early findings at the Virginia Station. These results, together with satisfaction by increased users everywhere, have done a lot in establishing the present popularity of soybean oil meal.

“Virginia Work Continued: The Virginia Agricultural Experiment Station carried on with their studies and in 1925 reported soybean oil meal superior to cottonseed meal in protein efficiency for dairy cows. In 1927 the Delaware Agricultural Experiment Station concluded following feeding experiments with dairy cows, that soybean oil meal due to its high protein content had a higher value per ton than peanut meal and for the same reason a much higher value than ground soybeans, sometimes referred to as soybean meal. Similar tests have been repeated at numerous state institutions during more recent years and always with satisfactory results.

“Nutrition experts have not overlooked the merits of soybean oil meal for dairy animals of various ages. You now find soybean oil meal in practically every leading brand of calf starter meals, growing rations for calves and heifers, dairy feeds and in fitting rations for dairy animals.

“Merits Honors: The success of soybean oil meal in winning honors at experiment stations and in meeting the whole hearted approval of dairymen is probably due to a few of its many unique qualities. Soybean oil meal is unusually palatable to dairy cattle, it supplies protein at lowest cost, is highly digestible and its proteins are of excellent quality for growth, health, milk production and reproduction.” Address:

PhD, Research Director, Archer-Daniels-Midland.

137. Dies, Edward J. 1942. Soybeans: Gold from the soil. New York, NY: The Macmillan Co. 122 p. April. Index. 21 cm. Revised ed. March 1943. 122 p. Includes index, Illust., 22 cm. [205 ref]

• **Summary:** A landmark popular book and a good description of the pioneering period of soybean production and processing in the United States.

Contents: 1. A certain man of science (William Morse and Dr. C.V. Piper). 2. Vignette from antiquity (how the soybean vine saved a caravan in China besieged by bandits). 3. Birth of an industry (U.S. soybean crushing). 4. The big drive starts (A.E. Staley, Glidden, Central Soya, Buckeye Cotton Oil Co., Drackett Co., ADM, Allied Mills, Ralston Purina, Spencer Kellogg and Sons, Swift & Co., Shellabarger Grain Products Co. Standard Soybean Mills, Iowa Milling Co.). 5. Breeding new types (Burlison, Hackleman). 6. Scientists commend product (oil and meal). 7. Lakes of oil. 8. In the field of industry (U.S. Regional Soybean Industrial Products Laboratory, and Henry Ford). 9. Listening post for soy (NRRL at Peoria). 10. Whims and price turmoil. 11. Milk for the tots of China (Dr. Harry Miller). 12. Soys in the home garden (“the vegetable soybean for table use,” “garden varieties of soybeans,” “green soybeans,” “green vegetable soys,” “vegetable type soybeans,” “edible varieties”). 12. Americanizing soy foods (mainly about soy flour and improving its taste for use during World War II). 14. Little bean, what now? Appendix: Chronology of the soybean (27 entries). Bibliography. Dies was born in 1891.

Illustrations and diagrams show: (1) Principal centers of U.S. soybean production (p. 19, map). “Almost 90 per cent of all soybeans are harvested in Illinois, Iowa, Indiana, and Ohio. If three other states are included as shown on the map—Missouri, Michigan, and Virginia—the total is 97 per cent. (2) Principal centers of U.S. soybean processing (p. 20, map). Discs of different size show the various centers. Since Illinois produces 52% of the harvested soybeans, central Illinois is the center of soybean processing [crushing] in the USA. “Total processing capacity in late 1942 exceeded 100 million bushels for the regularly established soybean processing plants.” (3) Diagram of uses of the soybean (p. 68).

Chapter 2, “Vignette from antiquity” begins: “Even when the Pyramids were being built, three hundred years before the Tower of Babel, and twelve centuries before Solomon fashioned his temple, the soybean was hoary with age. The earliest writings on the subject go back to the period of the Pyramids.

“But of the science of soybean growing you will find no recorded beginnings in the musty tones [sic, tomes] of oriental history. No book reveals the name of the inquisitive oriental who in the misty long ago began sowing the seeds, harvesting the beans, pounding them into a mash for cooking

and eating, and probably boring his friends no end with tales of their merit. There is no record depicting this unsung hero's foresight in saving the seed of the magic plant against next year's hunger. Likely as not he was a crude dreamer who fumbled his hunches and accomplished little in a lifetime of wrestling with the problem of proper cultivation.

"Oriental literature of a later date contains much about the plant but of its origin as a food product again there are only legends.

"A choice vignette from antiquity on the initial use of soybeans runs something in this fashion. Long, long ago, far back in the dim past, a caravan pulled out of an eastern China town. It consisted of a number of merchants and their servants... The caravan was bound for a distant inland settlement intent upon disposing of its valuable wares." After trading in the north, the caravan headed home, "now laden with gold, silver, and choice furs received in payment for the merchandise. Suddenly at dusk on a day when the caravan was still far from home it was surrounded by bandits who had learned of the rich prize at hand. Merchants and servants took quick refuge in a rocky defile easy of defense. Here they were besieged day on day until their scanty provisions ran low and starvation seemed inevitable. At length a servant whispered to his master and pointed to a vinelike plant bearing some sort of legume. No one could recall having seen such a plant before but all were touched with the pinch of hunger. So with grave doubts the men pounded the beans into a thick flour, mixed it with water, and made coarse cakes. Upon these cakes the caravan survived, and with renewed strength fought off the foe until help arrived. And, so the legend goes, from that day forth the miracle bean became the staff of life in China." Note 1. This story of the caravan besieged by bandits in China is a longer and embellished version of the tale first dreamed up and told by H.W. Galley in *Soybean Digest* (Dec. 1940).

"True or false, the story has lived through the ages.

"For the first written record of the soybean one must turn to 'Materia Medica,' written by Emperor Shen-nung in 2838 B.C. It describes many plants of China including that of the soybean, but even the name is clouded with antiquity. In the early Chinese history the name 'Shi-yu' [sic] and the 'Ta-tou' were applied to the soybean. These names probably antedate the first authoritative records of the plant."

Dies then discusses Engelbert Kaempfer, Linnaeus, and Moench.

"Then in 1804 a Yankee Clipper ship in full sail glided down the coast of China searching for ports for a return cargo. Not sure of the length of the return journey, the captain ordered several bags of soybeans tossed into the hold as a reserve food supply. And thus did the first soybeans enter America. Little was done about the soybeans then.

Note 2. This is the earliest document seen (June 2003) that further embellishes the myth of the "clipper ship" with phrases like "glided down the coast of China" or

"ordered several bags of soybeans tossed into the hold"—all supposedly in connection with the introduction of the soybean to the United States. This is also the earliest document seen (Aug. 2000) that compares the age of the soybean with that of the pyramids (in Egypt; the oldest and largest was built for Khufu at Giza in the 26th century B.C.), the Tower of Babel (in Babylon [today's Iraq]), or Solomon's Temple (in today's Israel), arguing that the soybean was much older than all of them.

"James Mease of Pennsylvania first mentioned in American literature shortly after this importation that the soybean was adaptable to Pennsylvania and should be cultivated" (p. 9).

In Chapter 3 (p. 14) Dies notes: "The first soybeans processed in this country were imported from Manchuria in 1911 and sold to Herman Meyer who had a small crushing plant in Seattle, later called the Pacific Oil Mills. From the raw material he produced the two chief products—soybean oil meal for livestock feed and soybean oil, selling the latter locally for industrial use. The meal was advertised and sold as 'Proteina,' a high-protein feed. The venture did not last for any considerable period; a few years later Meyer passed away." Note 3. This is the earliest document seen (May 2010) that mentions Herman Meyer.

"Soybeans grown in this country were first processed by the Elizabeth City Oil and Fertilizer Company at Elizabeth City, North Carolina. W.T. Culpepper, now postmaster at Elizabeth City, was manager of the new mill, started in 1912. The first domestic soybeans were crushed for commercial purposes there in the late fall of 1915. It was a small operation."

Note 4. This is the earliest document seen (May 2010) that mentions W.T. Culpepper.

"At that time, most of the soybeans were grown in North Carolina, and the Winterville Cotton Oil Company at Winterville, North Carolina, purchased expellers for processing purposes, and these operated on soybeans for a limited period. Still another mill, operated by Havens Oil Company at Washington, North Carolina, crushed thirty thousand bushels of beans as an experiment in 1916"

"My uncle, Jonathan Havens,' says J. Havens Moss, 'was the first to plant soybeans in this section, devoting considerable acreage to the mammoth yellow [Mammoth Yellow] type which grew and matured splendidly from the very start. Its value to the land was obvious'" (p. 14-15).

Note 5. This is the earliest document seen (Aug. 2016) which mentions that Havens Oil Co. crushed soybeans as early as 1916.

Note 6. On the first page of the copy owned by Soyfoods Center is a signed inscription, in dark blue ink, which reads: "With kind regards to Russell East, who has done much on behalf of the soybean—Edward Jerome Dies."

Note 7. Only minor changes were made on about 13 pages of the revised edition published in March 1943. None

of the statistics in the many tables were been updated, and the bibliography was not changed. Address: USA.

138. Dies, Edward J. 1942. Americanizing soy foods (Document part). In: E.J. Dies. 1942. Soybeans: Gold from the Soil. New York, NY: The Macmillan Co. 122 p. See Chap. 13, p. 90-94. April. 21 cm.

• **Summary:** The soybean, used as a food, got off to a bad start during World War I. In those patriotic days of food substitutes, some misguided scientist ground whole soybeans into a flour and promoted its use as a replacement for wheat flour in bread. But the flavor was terrible and the flour got a bad reputation.

Later it was realized that the key to Americanizing soy flour was to remove its strong “beany” flavor. This was first achieved by removing the hulls then processing the dehulled soybeans with heat and steam to carry off the odors and leave the mild, nutty flavor of the flour intact. By 1926 soy flour was sold as a health food flour. By 1935 it was shown to be a truly acceptable product with a variety of food uses. The amount of soy flour made in the USA increased from about 25 million pounds a year before 1940 to about 100 million pounds in 1942—and growing.

Soy flour is used in a big way by Germany in its army rations and recipes—to extend the protein of meat and bread. German “field kitchens started into the war with more than two hundred soy recipes.”

The British, understanding the value of soy flour, promptly requested it from Lend-Lease. “American meat packers provided sausage for the British army containing 20 percent soy flour or grits to increase the protein content in the can and prevent the loss of fats fried away.”

Makers of soy flour in the United States include: (1) Allied Mills Inc., Chicago, Illinois. (2) Archer-Daniels-Midland Company, Minneapolis, Minnesota; (3) Central Soya, Inc., Fort Wayne, Indiana. (4) The Glidden Company, Chicago, Illinois. (5) I.F. Laucks, Inc., Portsmouth, Virginia. (6) Spencer Kellogg and Sons, Inc., Decatur, Illinois. (7) A.E. Staley Manufacturing Company, Decatur, Illinois.

Note 1. This is the earliest English-language document seen (Sept. 2011) with the term “soy foods” in the title; it is a book chapter.

Note 2. Most of these 7 companies are soybean crushers, and probably therefore make defatted soy flour for food use. Address: USA.

139. Dies, Edward J. 1942. Soybeans: Gold from the soil (Statistical tables and charts). New York, NY: The Macmillan Co. 122 p. April. Index. 21 cm. Revised ed. March 1943. 122 p. Includes index, Illust., 22 cm. [205 ref]

• **Summary:** Page 5: Soybean acreage and production, 1924-1941. United States crop. Soybean harvested for beans. Each crop year extends from Oct. 1 to Sept. 30. Acreage increased from 448,000 acres in 1924 to 5,855,000 acres in 1941.

Yield per acre rose from 11.0 bushels in 1924 to a peak of 20.7 bushels in 1939. Production increased from 4,947,000 bushels in 1924 to 106,712,000 bushels in 1941. Sources: (1) Crops and Markets, USDA. (2) Illinois Crop Statistics, Circular 440-441. (3) Latest government reports, 18 Dec. 1941.

Page 10: Soybeans: production in specified countries, and estimated world total, in thousand bushels, excluding China. Estimated world production rose from 163.000 million bushels in 1922 to 266.700 million bushels in 1940. China production rose from 210.038 million bu in 1931 to 231.302 million bu in 1937. Manchuria production rose from 113.469 million bu in 1922 to a peak of 196.949 million bu in 1930, falling to 149.435 million bu in 1939. United States production rose from 4.947 bu in 1924 to 106.712 million bu in 1941. Chosen [Korea] production rose from 13.017 million bu in 1910 to 18.333 million bu in 1938. Japan production decreased from 17.855 million bu in 1909 to 13.473 million bu in 1937. Netherlands India [today’s Indonesia] rose from 2.603 million bu in 1917 to 9.873 million bu in 1938. Kwantung production rose from 375 thousand bu in 1911 (with a gap between 1919 and 1924) to 650 thousand bu in 1937. Taiwan production decreased from 280 thousand bu in 1921 to 159 thousand bu in 1937. USSR rose from 2.060 million bu in 1936 to a peak of 10.384 million bu in 1932 falling to 2.504 million bu in 1934. Rumania production rose from 26,000 bu in 1934 to 2.572 million in 1939. Bulgaria production rose from 77,000 bu in 1934 to 827,000 bu in 1939. Yugoslavia production rose from 26,000 bu in 1934 to 213,000 bu in 1939. 1909-1941. Other European (Poland, Czechoslovakia, Austria) rose from 55,000 bu in 1932 to 60,000 bu in 1935. With many footnotes.

Page 19: Principal centers of soybean production in the USA. “Almost 90 per cent of all soybeans [in the USA] are harvested in Illinois, Iowa, Indiana, and Ohio. If three other states are included as shown on the map—Missouri, Michigan and Virginia—the total is 97 per cent. The size of the baskets is proportional to the volume produced.

Page 20: Principal centers of soybean processing [crushing] in the USA. “As Illinois produces about 52 per cent of the soybeans harvested for seed, Central Illinois is the center of soybean processing as shown on this map. The discs indicate relative importance of the processing centers. Total processing capacity in late 1941 probably exceeded 90 million bushels.

Page 25: Illinois acreage and production of soybeans for beans, 1919-1941. Acreage harvested increased from 3,000 acres in 1919 to 2.285 million acres in 1941. Yield, in bushels per acre, rose from 10.0 in 1919 to 21.5 in 1941. Production increased from 30,000 bu in 1919 to 49.128 million bu in 1941.

Pages 38-47: Soybeans: Origin and varietal characteristics. This excellent table contains 18 columns.

Variety. Origin (introduction from what country, selection, or cross). Year. Days to mature. Flower color. Pubescence color. Seed characteristics: coat color, germ color, hilum color, seed per pad (range), seed per pound, percent oil, percent protein. Use (green vegetable, grain, forage). The varieties are: Agate, A.K., Aksarben, Aoda, Arisoy, Arksoy, Avoyelles, Bansei, Barchet, Biloxi, Black Eyebrow, Cayuga, Chame, Charlee, Chief, Chernie, Chestnut, Chiquita, Chusei, Clemson, Columbia, Creole, Delnoshat, Delsta, Dixie, Dunfield, Easycook, Ebony, Elton, Emperor, Etum, Fuji, Funk Delicious, George Washington, Georgian, Giant Green, Goku, Habaro, Haberlandt, Hahto, Hakote, Harbinsoy, Hayseed, Herman, Higan, Hiro, Hokkaido, Hollybrook, Hong Kong, Hoosier, Hurrelbrink, Illini, Isoy, Imperial, Ito San, Jogun, Kanro, Kanum, Kingwa, Kura, Laredo, Lexington, Macoupin, Magnolia, Mamloxi, Mammoth Brown, Mammoth Yellow, Mamredo, Manchu, Mandarin, Mandell, Mansoy, Medium Green, Midwest, Mingo, Minsoy, Missoy, Monetta, Morse, Mount Carmel, Mukden, Nanda, Nanking, Norredo, Ogemaw, Old Dominion, Oloxi, Ontario, Osaya, Oootan, Ozark, Palmetto, Patoka, Pee Dee, Peking, Pine Dell Perfection, Pinpu, Richland, Rokusun, Sato, Scioto, Seminole, Seneca, Shiro, Sioux, Sooty, Sousei, Southern Green, Southern Prolific, Soysota, Suru, Tarheel Black, Tastee, Toku, Tokyo, Virginia, Waseda, Wea, White Biloxi, Willomi, Wilson, Wilson Five, Wisconsin Black, Wood's Yellow, Yelredo, Yokoten. Note: This long table "Specially prepared by the Division of Forage Crops and Diseases, Bureau of Plant Industry, U.S.D.A.

Page 53: "United States crop production of soybean oil meal and soybean oil, 1924-1940." This valuable table is poorly titled. It has 5 columns: (1) Year. (2) Production of soybeans. Increased from 4,947 bu in 1924 to 106.712 million bu in 1941. (3) Crushings [crushed]. Increased from 307,000 bu in 1924 to 64.180 million bu in 1941. (4) Production of meal. Increased from 7,400 tons in 1924 to 1.5369 million tons in 1941. (5) Production of oil. Increased from 2.269 million pounds in 1924 to 565.169 million pounds in 1941.

Page 58: Soybean oil imported and exported, 1912-1940. Imports rose from 24.959 million lb in 1912 to a peak of 335.984 million lb in 1918, decreasing to 4.848 million lb in 1940. Domestic and foreign oil exported decreased from 34.803 million lb in 1919 (For 6 months beginning July 1) to 15.953 million lb in 1940.

Page 61: Soybean oil: factory consumption by classes of products, 1931-1940. Compounds [shortening] and vegetable cooking fats rose from 10,869 lb in 1931 to 212.317 million lb in 1940. Oleomargarine rose from 623,000 lb in 1931 to 87.106 million lb in 1940. Other edible products rose from 180,000 lb in 1932 to 39.980 million lb in 1940. Soap rose from 3.816 million lb in 1931 to 17.612 million lb in 1940. Paint and varnish rose from 6.256 million lb in 1931 to 29.828 million lb. Linoleum and oilcloth rose from 2.612

million lb in 1931 to 29.828 million lb in 1940. Printing ink rose from 33,000 lb in 1931 to 82,000 lb in 1940. Miscellaneous rose from 2.051 million lb in 1931 to 16.538 million lb in 1940. Foots and loss rose from 1.625 million lb in 1931 to 20.924 million lb in 1940. The total of these uses for soybean oil rose from 27.885 million lb in 1931 to 431.641 million lb in 1940.

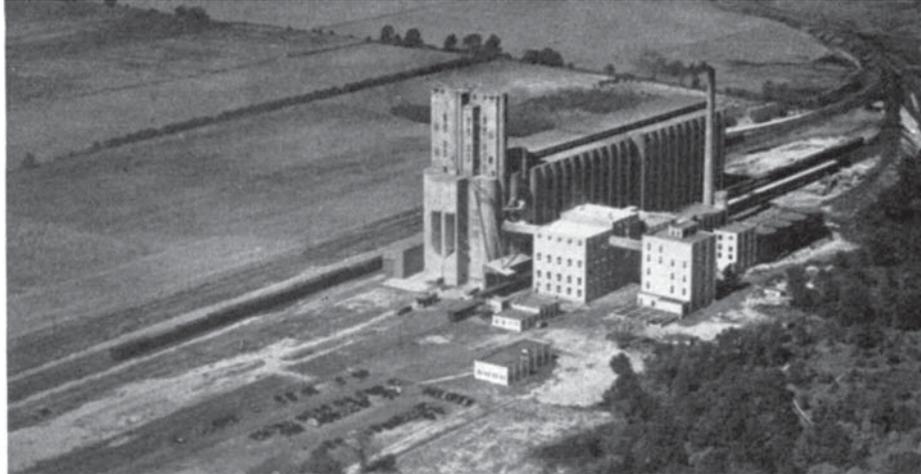

Page 68: Diagram of uses of the soybean. The major categories are: Green soybeans, used as fresh vegetables or in canned vegetable salads. Dry soybeans, used for seed or to make bean sprouts, soup, soy sauce, roasted soybeans, boiled soybeans, stock feeds, vegetable milk [soymilk] (used to make liquid milk products, dry soy milk products, bean curds, soy cheese), debittered soybeans (used to make full fat soy flour, soy coffee, soy butter, soy cereal). Soybean oil meal, soybean flour, soy lecithin, crude soybean oil (used to make fatty acids, alkyd resins, glycerine, core oils, soft soaps, hard soaps, insecticides, and many non-food products mentioned above). Refined soybean oil (used to make food products—vegetable shortening, margarine, salad dressing, edible oils, frying oils). Address: USA.

140. Archer-Daniels-Midland Company. 1942. What is good-will? (Ad). *Soybean Digest*. June. p. 11.

• **Summary:** This ½-page ad states: "Good-Will is the disposition of a satisfied customer to return to the place where he has been well treated. The Archer and Daniels families have been engaged in the Oil Milling business for a century (1840-1940), and the good-will which has been built up during these hundred years is jealously guarded in every transaction."

A large photo shows the "A.D.M. Soybean Processing Plant" located at Decatur, Illinois. Other soybean processing plants are strategically located at Chicago [Illinois], Toledo [Ohio], Milwaukee [Wisconsin], and Buffalo [New York]. The "Archer Brand" logo, "The Mark of Quality Soybean Products" is also shown.

Note: In 1942 Whitney Eastman was at ADM. Address: Minneapolis, Minnesota.

141. Hayward, J.W.; Hayward, Mrs. J.W. 1942. Soy bean serenade. *Cargill News* (Minneapolis, Minnesota). June. p. 32.

• **Summary:** This poem, well known by now, begins: “Little Soy Bean who are you / From far off China where you grew.” Cargill reprinted it from the *Wall Street Journal*. It first appeared in Aug. 1940 in the *Proceedings of the American Soybean Assoc.* (p. 6).

142. USDA Bureau of Plant Industry. Div. of Forage Crops and Diseases. 1942. Firms manufacturing or handling soybean food products. Washington, DC. 3 p. July. Mimeographed unpublished manuscript.

• **Summary:** The companies are listed alphabetically by state, and within state by city. Numbered codes after each company, keyed to a list of 35 soyfood types in the back, explain which foods are made by each company. Unfortunately, it is not clear from this list which companies are manufacturers and which are “handlers” (retailers or distributors).

California: Arlington (Loma Linda Foods), Berkeley (Golden Gate Food Products Co.), Glendale (Hygenic [Hygienic?] Food Co.), Los Angeles (El Molino Mills, Mrs. Hauser’s Soya Foods Co. {4617 Melrose Ave.}, Kevo Co., Klein Soup Co.), San Francisco (Radcliffe Soya Products {146 Fillmore St.}), Santa Cruz (Daglish Health Food Service). Delaware: Milton (Draper Canning Co.). Illinois: Bloomington (Funk Bros. Seed Co.), Chicago (Allied Mills, Armour & Co., Dewey Food Products Inc., Dietetic Supply House, Durkee Famous Foods, Fearn Soya Foods Co. {355 W. Ontario St.}, Glidden Co., Great China Foods Co., Griffith Laboratories {1415 W. 37th St.; handles soy flour and grits}, John F. Jelke Co., Soybean Products Co. {210 N. Carpenter St.}, Swift & Co.), Decatur (Spencer Kellogg and Sons, A.E. Staley Manufacturing Co.), Elgin (B.S. Pearsall Butter Co.), Urbana (Prehn’s Health Food Store).

Indiana: Columbia City (Oriental Show-You Co.), Decatur (Central Soya Co.), Indianapolis (Standard Margarine Co.). Iowa: Des Moines (Soy Products Co.). Maryland: Baltimore (J.H. Filbert, Inc., The Wm. Schluderberg–T.J. Kurdle Co.), Takoma Park (Hillcrest Health Products Co.). Massachusetts: Boston (Prince Macaroni Co.), Newton Centre (W.L. Cummings & Co.). Michigan: Battle Creek (Battle Creek Food Co.), Detroit (Shedd Products Co.). Minnesota: Minneapolis (Archer-Daniels-Midland Co.). Missouri: Kansas City (Harrow-Taylor Butter Co.), St. Louis (Blanton Co.). New Jersey: Vineland (George A. Mitchell). New York: Brooklyn (Agash Refining Corp., Cosmo Packing Co., Soy-Malt Co. {234-A Marion St.}), Elmhurst, Long Island (American Lecithin Co.), Glandale, Long Island (Beskor, Inc. Note: As of May 1997 there is no place named “Glandale”—or “Glendale”—on Long Island), New York City (Barrett & Eastwood, Borden Company, Enco Chemical Corporation, Franklin Mills Co., National Biscuit Co., Soya Corporation of America {Rockefeller Plaza}, Stein, Hall & Co.), Rochester (Vegetable Products Co.). North Carolina: Asheville (Judd’s Health Foods), Lexington (Vitro Nu Foods Corp.). Ohio: Cincinnati (The Churngold Corp., Miami Butterine Co.), Circleville (Winoor Canning Co.), Cleveland (Barton Nut & Candy Co., Pfaffman Egg & Noodle Co.), Columbus (Capital City Products Co.), Greenville (O’Brien Milling Co.), Mount Vernon (International Nutrition Laboratory [Dr. Harry Miller]), Worthington (Special Foods, Inc.). Pennsylvania: Paoli (Great Valley Mills), Philadelphia (J.S. Ivins’ Son, Inc., C.F. Simonin & Sons, Taste Soy Foods), Williamsport (Penna Soya Products Co.). Tennessee: Madison College (Madison Foods). Wisconsin: Hortonville (Fox Valley Canning Co.), Oostburg (Oostburg Canning Co.), Owen (Owen Canning Co.).

The soy food types are: “1. Albumin or protein. 2. Beans—baked. 3. Beans—canned green. 4. Beans—roasted. 5. Breakfast foods. 6. Butter—soy. 7. Candies. 8. Chips or meats. 9. Chocolate. 10. Chocolate and other beverages. 11. Coffee substitute. 12. Crackers, wafers, cookies, puddings, etc. 13. Curd or cheese. 14. Diabetic foods. 15. Flakes.

16. Flavorings. 17. Flour. 18. Flour–prepared. 19. Grits. 20. Health foods. 21. Ice cream powder. 22. Infant foods. 23. Lecithin. 24. Macaroni products. 25. Malted products. 26. Meat-like products. 27. Milk. 28. Molasses–bean. 29. Oil. 30. Puffs. 31. Sauce. 32. Shortening. 33. Soups. 34. Soybeans. 35. Spreads–sandwich. 36. Toast.”

Note: This is the earliest document seen (Dec. 2015) that mentions Griffith Laboratories. Address: Washington, DC.

143. Archer-Daniels-Midland Co. 1942. To the recipient of soybean specialty products: Sales manual No. 14. Minneapolis, Minnesota. 35 p. Aug. 31. Manufacturer’s catalog.

• **Summary:** ADM. A few facts about A-D-M. Just a few of the principal uses of A-D-M products. A-D-M soybean processing plants (an aerial photo of each is shown): Minneapolis, Minnesota; Decatur, Illinois; Buffalo, New York; Chicago, Illinois; Toledo, Ohio; and Milwaukee, Wisconsin. ADM plants and offices. The soybean: Uses, derivatives, applications (full-page chart developed by ADM). Soy flour products made by A-D-M (with analyses, uses, and benefits): Archer brand Orangeblossom Soy Flour (20-24% fat), Archer brand Nutrisoy Flour #1 (1% fat), Archer brand Nutrisoy Grits (1% fat), Archer brand Cherryblossom Soy Flour (medium fat), and Archer brand Carotenized soy flour (low fat).

A letter on the cover addressed to Miss Betty Leaming, Washington, DC, begins: “In view of the current national interest in soy flour and other soybean specialty products, we have prepared this Manual to give a wide variety of factual information on our Archer Brand Soybean Specialty Products.” The letter is signed by J.W. Hayward (Director of Nutritional Research) and R.G. Brierley (in charge of Soybean Specialty Products’ Sales).

“One of the first soybean specialty products to be produced commercially in this country was a soy flour marketed in 1926 as a ‘health flour.’ This was a bolted expeller process soybean oil meal which, because of processing limitations, was quite unpalatable.”

Brief history of ADM: “William Shreve Archer, Shreve M. Archer’s grandfather, started in the Linseed Oil manufacturing business in 1840 at Dayton, Ohio, becoming associated at that time with his uncle, Joseph Clegg, who had been previously engaged in the business for several years. In 1868 Mr. G.A. Archer, Shreve M. Archer’s father, started in the Linseed business at Dayton, Ohio, with his father and great uncle. In 1889 the firm of Archer and Company came into existence.”

“In 1867 Mr. William Leonard, father-in-law of John W. Daniels, father of Thomas L. Daniels, started in the Linseed Oil manufacturing business at Piqua, Ohio. Mr. J.W. Daniels joined the business in 1879, becoming a member of the firm Orr-Leonard and Daniels at Piqua, Ohio, at the age of twenty-two years... The Daniels Linseed Company was built

by John W. Daniels in Minneapolis in 1902.

“Mr. George A. Archer joined with Mr. Daniels in 1903 and the Archer-Daniels Linseed Company was started at Minneapolis, Minnesota. The Archer-Daniels-Midland Company, the present corporate structure, was formed in May 1923 under the laws of Delaware as a successor to the Archer-Daniels Linseed Company and the Midland Linseed Products Company, both of which had been in corporate existence for more than twenty years and had occupied leading positions in the Linseed Oil manufacturing industry.

“At the time of the present incorporation in 1923, the company purchased for cash the properties of the Midland Linseed Products Company and acquired all of the stock of the Toledo Seed and Oil Company and the Dellwood Elevator Company, Inc. The business was expanded further in 1928 through the acquisition of the plants and business of the William O. Goodrich Company in Milwaukee, Wisconsin, the Fredonia Linseed Oil Works of Fredonia, Kansas, and part of the properties of the American Linseed Company. The Werner G. Smith Company of Cleveland, Ohio, manufacturers of foundry oils and importers of oriental oils, was also acquired by purchase in 1929. The Werner G. Smith Division later acquired the Cook Swan Company, Inc. of Bayway, New Jersey, and Wyandotte Oil and Fat Company of Wyandotte, Michigan.

“The company also acquired in 1930 all of the flour milling plants and business of the Commander Larabee Corporation. The company owns a considerable stock interest in the El Dorado Oil Works, coconut oil manufacturers and refiners in San Francisco, California.”

The company has 35 manufacturing plants and owns or operated 60 million bushels of grain elevator storage. A-D-M Soy Flour is used in dog foods, sausage and meat loaf, bread and pastry, and confections of all kinds. “In the Soybean Division we manufacture a unique product known as Lecithin—a fat dispersing agent—used extensively in chocolate coatings, cooking fats, gasoline and lubricating oils, and many other food and manufactured products... A-D-M is recognized as the largest manufacturer and refiner of vegetable drying oils in the world.”

Note 1. This is the earliest document seen (July 2004) that mentions the Commander Larabee Corporation.

Note 2. This is the earliest document seen (Oct. 2001) showing that ADM is using the brand name Nutrisoy. Address: Minneapolis, Minnesota.

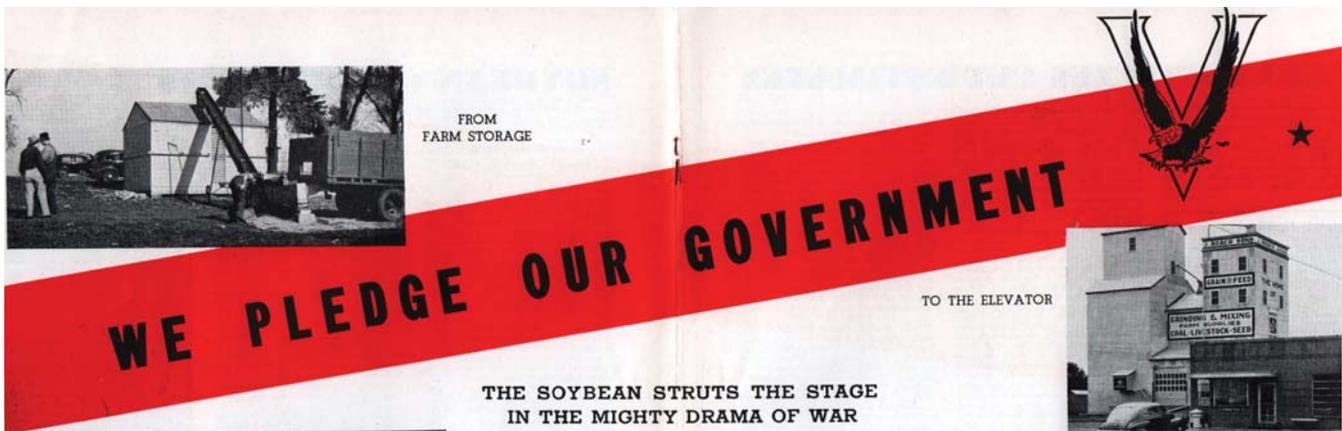

**144. Product Name:** Archer brand Soy Flours [Orangeblossom {20-24% fat}, Nutrisoy Flour #1 {1% fat}, Cherryblossom {medium fat}, or Carotenized Soy Flour {low fat}].

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** Minneapolis, Minnesota.

**Date of Introduction:** 1942 August.

**New Product–Documentation:** Manufacturer’s catalog.

1942. Sales manual No. 14. Letter from Dick Wallace of ADM. 1981. Sept. To William Shurtleff at Soyfoods Center. ADM started producing full-fat soy flour in 1935.

Archer-Daniels-Midland Co. 1947? The ABC of ADM. A photo shows a sack of the flour. The name is now spelled Orange Blossom and the maker is Commander Larabee Milling Co.

145. Hafner, Fred. 1942. The nutritional value of soy flour: a comparison with wheat flour. *Baker's Digest* 16(11):247-48, 251. Oct.

• **Summary:** The two basic kinds of soy flour discussed in this article are [solvent] "extracted soy flour" and "full fat soy flour."

"Soy flour, on the basis of its exceptional nutritional value, constitutes a desirable bread ingredient."

Tables: (1) "Comparison of protein and essential amino acid content of soy flour and wheat flour." Wheat flour is low in lysine whereas soy flour is very rich in lysine.

(2) "Nutritive value of protein in soy flour and wheat flour" (comparison). Address: Dep. of Nutritional Research, Archer Daniels Midland.

146. *Soybean Digest*. 1942. We pledge our government (Ad). Oct. p. 6-7.

• **Summary:** This 2-page spread, printed with red and black ink on white, is the first ad seen in *Soybean Digest* that is a 2-page spread. It is sponsored by 17 different soybean processors and 6 different grain dealers.

In the center of the ad, spanning both pages, we read: "The soybean struts the stage in the mighty drama of war."

"From its most abundant crop in history will soon flow a river of oil and trains of soy flour to help feed the fighting forces—and a mountain of soybean oil meal, the superior protein concentrate, to swell production of livestock and poultry and butter and eggs.

"We, the Growers—in the forward sweep to victory answered the government's call by tilling new far-flung stretches. We will harvest the giant crop to the last bushel despite shortage of help and machinery. And to our

government we pledge ourselves to provide utmost in farm storage to facilitate a smooth marketing movement, and to withhold the drier soys so those of higher moisture may be given first right of way.

"We, the Grain Handlers—have discharged our duties in the past and will do so this year, providing maximum storage with fair treatment alike to all. We pledge ourselves to fight for the full success of the program.

"We, the Carriers—straining under wartime demands, will strive to clear the way for the soybean, and to keep rolling stock rolling to the end that gluts may be avoided.

"We, the Processors—pledge ourselves to keep the drone of our great plants sounding continuously around the clock and around the calendar, save for breakdowns or acts of God—so that the rich, life-giving products may be quickly channeled to our workers, to our fighters, and to our Allies across the seas.

"Thus does the industry—a solid, patriotic, fighting unit—direct this pledge to the President and the Secretary of Agriculture—and in return confidently anticipates continued unstinted cooperation on the part of all governmental divisions."

The list of soybean processors includes: Archer-Daniels Midland Co. (Chicago, Illinois—Toledo, Ohio—Buffalo, New York—Milwaukee, Wisconsin—Minneapolis, Minnesota). Soy Bean Processing Co. (Waterloo, Iowa). I.F. Laucks, Inc. (Portsmouth, Virginia). Rose City Cotton Oil Mill (Little Rock, Arkansas). Cairo Meal and Cake Co. (Cairo, Illinois). Decatur Soy Products Co. (Decatur, Illinois). Clinton Co. (Clinton, Iowa). A.E. Staley Mfg. Co. (Decatur, Illinois—Painesville, Ohio). Illinois Soy Products Co. (Springfield, Illinois). Simonsen Soybean Mill (Quimby, Iowa). Standard Soy Bean Mills (Centerville, Iowa). Spencer Kellogg and Sons, Inc. (Buffalo, New York—Des Moines, Iowa—Decatur, Illinois—Chicago, Illinois). Funk Bros. Seed Co. (Bloomington, Illinois). Soya Processing Co. (Wooster, Ohio). Dannen Grain and Milling Co. (St. Joseph, Missouri). Swift & Company Soybean Mills. Hoosier Soybean Mills, Inc. (Marion, Indiana).

147. *Soybean Digest*. 1942. Cooperation: They know its meaning. Our cooperation means much to our workers, our armies, and our allies (Ad). Nov. Back cover.

• **Summary:** This full-page ad is sponsored and paid for by the following soy-related companies:

Archer-Daniels-Midland Company, Chicago, Illinois—Toledo, Ohio—Buffalo, New York—Milwaukee, Wisconsin—Minneapolis, Minnesota

Soy Bean Processing Company, Waterloo, Iowa

I.F. Laucks, Inc. Portsmouth, Virginia

Rose City Cotton Oil Mill, Little Rock, Arkansas

Cairo Meal and Cake Company, Cairo, Illinois

Decatur Soy Products Company, Decatur, Illinois

Clinton Company, Clinton, Iowa

A.E. Staley Mfg. Company, Decatur, Illinois—

Baldwin Elevator Company, Decatur, Illinois

Stockdale & Maack Co., Estherville, Iowa

Owensboro Grain Company, Owensboro, Kentucky.

Federal North Iowa Grain Co., Cedar Rapids, Iowa

Lowell Hoit & Co., Chicago, Illinois

The Nickel Plate Railroad, Cleveland, Ohio.

The text of the ad states: “American flyers zooming out of the dark night to drop their deadly eggs on Hitler’s factories, our gallant marines storming Jap bastions in Pacific islands, or the boys on our merchant men stalking hidden death in the seven seas, their ship holds full of precious life-giving cargoes bound for our allies, know the full meaning of cooperation. Cooperation spells the difference between life and death, freedom and slavery.

“Cooperation is also vital to us in the soybean industry. Cooperation has already carried us far on the long road to victory since the day our government asked us to grow a cool 9 million acres of soy beans in 1942. Cooperation enabled us

to answer with 10 million acres.

“Cooperation will take us through the most perplexing problems we have ever faced—the problem of green beans—of storage—of transportation over roads groaning under the burden of war goods—of processing by mills asked to double and redouble their efforts 24 hours each day, 365 days each year—all to the end that every precious golden drop of oil may be saved for the war effort, that every pound of oil meal may be available as soon as possible in the farm feed lot in this furious battle for freedom.”

A photo at the top shows two men in a jeep, one holding a rifle. In the lower right corner is an illustration of an American eagle, with raised wings.

148. Hayward, J.W. 1942. Soybean products as a feed for livestock and poultry. *Feedstuffs*. Dec. 5 and 12. \*

149. Hafner, Fred H. 1942. General considerations of soy flour as a bread ingredient. *Baker's Digest* 16(12):282-84. Dec. [3 ref]

• **Summary:** Compares soy flour and wheat flour, analyzes factors and properties of importance to the baker, gives general recommendations for using soy flour to supplement wheat flour in breadmaking, and discusses the benefits of this use. Specifically discusses: Full-fat soy flour vs. low-fat soy flour (expeller or extracted). Protein strength. Fat, a shortening saver (and lecithin). Water absorption. Diastatic enzymes. Yeast food. Color contribution. General recommendations for formulating soy-wheat bread. Benefits derived from use of soy flour. Commercial aspects of soy-wheat bread. Address: Archer-Daniels-Midland Company, Dep. of Nutritional Research, Minneapolis, Minnesota.

150. Eichberg, Joseph. 1943. Report of annual meeting, American Lecithin Company, Inc., January 27, 1943. [Elmhurst, Long Island, New York]. 4 p. 28 cm.

• **Summary:** “Total sales in 1942 amounted to 2,345,373 pounds (R&R [Ross & Rowe] 1,371,370 pounds—Alco [American Lecithin Co.] 974,003 pounds) compared with 1,873,742 pounds in 1941 (dollar value: \$874,009.09 and \$706,627.11); net profits were \$70,828.61 and \$73,928.77 respectively, and Federal and Canadian taxes are estimated at approx. \$78,000.00 against \$32,900.00 in 1941.

“Patent and Legal expenses were cut from \$50,000.00 in 1941 to \$15,000.00 in 1942, due to termination of the F.T.C. matter and, during the year, of the chocolate patent litigation. For Experimental and Research \$18,855.91 was spent compared to \$13,921.54 in 1941—this amounted to a little over 2% of net sales.

“Sales to the chocolate industry were 449,747 pounds compared with 471,907 pounds in 1941 in spite of the shortage of cocoa beans.

“The large increase in sales to the baking industry since September has boosted the demand above our capacity to

supply lecithin, and has necessitated some ‘rationing’ by the Company. During the whole of 1941 we sold 93,977 pounds to bakers while last month (December, 1941) alone we shipped 134,541 pounds to the baking industry. A question of policy is involved—namely, whether the Company should limit its sales to the baking industry and attempt to move more lecithin into fields which may promise greater permanency after the war. From LEC #1 operations the Company netted \$24,518.69 compared with \$21,235.52 in 1941 (806,402 pounds and 822,000 in 1941).

“In the petroleum industry several new customers began using lecithin in lubricants, notably Socony Vacuum, Pure Oil, Sinclair and Ohio Oil Company. Of great potential interest is the exploratory work now being conducted on a large scale by Ethyl Corp. License agreements to make the lecithin lube oil patents available to all refiners were entered into with Texas Company and DuPont, Alco to receive a share of the royalties collected.

Export sales, other than to Canada, amounted to 343,228 Pounds. Because of the large increase in domestic orders export sales have been cut 50% or more; it is felt that these contacts should be maintained, if on a reduced scale, because some of this business may be of a permanent character, at least until lecithin producing units in Europe can be rebuilt and because after the war we may wish to be in a position to respond to competition from imported lecithin.

“Ross & Rowe have been alert and energetic in promoting sales and their readiness to cooperate has been highly appreciated.

“Inventory December 31, 1941 was 697,140 pounds and at the end of December, 1942 was 176,872,—less than a three weeks’ supply at the present rate of sales. At December 31, 1942 we were about one month behind in shipping orders. Strenuous efforts are being made to increase production, with the cooperation of Glidden and ADM. Lecithin emulsion is being obtained from P&G. [Procter & Gamble]. It is felt that a license agreement with P&G. should be considered, also an offer of license to Central Soya Company.

“Central Soya seems to be the source of competitive lecithin, the quality of which is reasonably good and if Central Soya is making 500,000 pounds per annum we could use a portion of this to advantage. Central Soya as well as Penick & Ford who manufacture for Refining, Inc. are thought to infringe our process patents. Refining on the other hand claim that their patents are basic and cover certain operations of Glidden and ADM. We believe that Glidden and ADM should share with us equally the expenses involved in meeting the challenge presented by Refining’s attitude since their oil processing as well as lecithin production is involved.

“To begin with, an independent opinion should be obtained and I suggest we consult Mr. Alan Mann who has been highly recommended by ADM. Incidentally, this has a bearing on our ability to get soybean lecithin emulsion from

Clinton Co. since Clinton is producing more corn lecithin emulsion and does not feel it worth their while to collect and ship only the soybean lecithin emulsion.

“Royalties at present are being earned chiefly from license agreements in the baking and petroleum industries. Patent matters are being handled through the Glidden Patent Department. With our present method of selling, no royalty is included in the price of the lecithin.

“Our research in the petroleum field showed conclusively the value of lecithin in motor oils for passenger car service and gave rise to a modified product which promises to be more effective than ordinary commercial lecithin. A new method for producing soft consistency lecithin was carried to the stage of plant runs. LEXO Cookies were introduced to the drug trade during 1942; widespread interest was manifest in the therapeutic properties of soybean lecithin. We are sponsoring several projects at leading hospitals.

“Prospects for 1943 indicate that we can sell all that Glidden and ADM can produce plus whatever can be procured from any other source. Royalty income should increase. However, we are faced with possible need to bring suits in order to protect our processing patents and baking patent. A vigorous research program is being continued. We are having to hold back rather than push sales and our major problem at the moment is that of getting more lecithin.”

151. McCormick, J.C. 1943. The 1943 government soybean program. *Grain & Feed Journals Consolidated* 90(3):103. Feb. 10.

• **Summary:** An address before the Illinois Farmers Grain Dealers Association, Peoria, Feb. 2-5, 1943, on soybean meal distribution and the soybean marketing program. Detailed price schedules expected to apply to the 1945 crop are given.

The 1942 crop of 209 million bushels, was produced by a large number of U.S. states. And “95% of the soybeans were produced in ten states, 82% in four states and a little more than a third in Illinois. The four states of Illinois, Iowa, Indiana and Ohio ranking as named produced approximately 170 million bushels of soybeans in 1942.

“There is an estimated soybean crushing capacity in the middle west of approximately 100 million bushels. It was apparent early in the fall that after deducting the amount of soybeans to be used for seed and normal farm disappearance for feed there would be several million bushels in the midwest that could not be processed in the states where they were produced. A survey of the total oil seed crushing capacity in the U.S. showed there was more crushing capacity than would be needed to crush the oil seeds produced. In an attempt to get all of the soybeans produced as beans, processed, Commodity Credit Corporation signed contracts with oil seed crushers on the west coast, the east coast and in the southern states. These were in addition to the regular soybean mills.

“Due to the war, imports of copra on the west coast have been almost completely stopped. This meant there were several idle copra mills that could be used for crushing soybeans. The demand for high protein feeds by poultry men, dairymen and cattle men was very strong. If the farmers on the west coast were to meet their production goals of meat, dairy and poultry products they must have protein feeds of some kind. To meet this situation, C.C.C. signed contracts with Pacific Coast processors to crush approximately 5,000,000 bushels of soybeans. They were to purchase their own soybeans in the middle west.

“Contracts were signed with Spencer Kellogg Sons and Archer Daniels Midland Company at Edgewater, New Jersey, to purchase soybeans in the middle west and make the meal available in the Northeast. Any midwest processor having soybean meal contracts in the Northeast was asked to transfer his contracts to these Edgewater plants and make this additional meal available in the midwest.

“Contracts were signed with Swift & Company at Chicago and Buckeye Cotton Oil Company at Cincinnati, to purchase soybeans in the midwest and crush them in the southern cotton seed crushers.

“Cotton seed crushers normally finish crushing cotton seed between Dec. 1 and April 1 depending on the total supply of seed available for crushing and the amount purchased by the mill owner. C.C.C. has contracted with southern cotton seed mills to crush approximately 12,000,000 bushels of soybeans.”

Note: The Commodity Credit Corporation (CCC) is a wholly owned United States government corporation created in 1933 to “stabilize, support, and protect farm income and prices.” The CCC is authorized to buy, sell, lend, make payments and engage in other activities for the purpose of increasing production, stabilizing prices, assuring adequate supplies, and facilitating the efficient marketing of agricultural commodities. Address: C.C.C. [Commodity Credit Corp.], Washington, D.C.

152. Burke, A.D.; Flanagan, Douglas. 1943. Use of soybean flour in an ice cream mix. *Ice Cream Review* 26(8):14-15, 54, 56-57. March.

• **Summary:** Written during World War II, this article begins by noting that when the U.S. government curtailed the use of dry skim milk and limited the serum solids content of mixes, ice cream makers were faced with the problem of finding a replacement. Soybean flour can be used satisfactorily to replace up to 20% of the serum solids of a mix. “The replacement of a portion of dry milk solids with soybean flour imparts smoothness to the finished product, thus improving the body and texture.” A number of formulas for ice cream mixes containing soybean flour are given.

“In conclusion, the writers wish to express their appreciation to the Archer-Daniels-Midland Co. of Minneapolis, Minnesota, whose fine cooperation in

supplying samples of soybean flour, made these studies possible.”

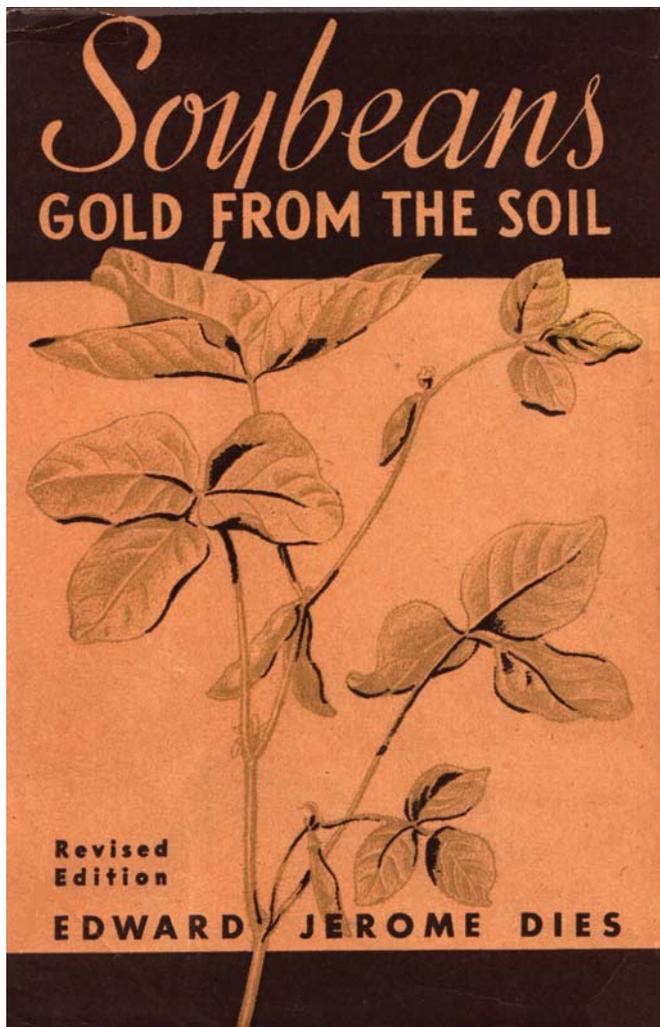

Also in *Southern Dairy Products Journal*, 55(5):4-5, 10-12. March 1945; and in *Ice Cream Trade Journal* 9(3): 12-15, 45-48. March 1945, with the title, “Wartime mixes.” Address: 1. Head of the Dairy Dep.; 2. Plant Superintendent. Both: Alabama Polytechnic Inst., Auburn, Alabama.

153. Dies, Edward J. 1943. Soybeans: Gold from the soil. Rev. ed. New York, NY: The Macmillan Co. 122 p. March. Index. 21 cm. First published in April 1942. [205 ref]

• **Summary:** This revised edition is very similar to the first edition published in April 1942. Minor changes have been made on the following pages: 20, 28, 70-73, 84-85, 90-94, 121-22. None of the statistics in the many tables have been updated, and the bibliography is unchanged. Address: USA.

154. *Soybean Digest*. 1943. Grits and flakes from the industry: Archer-Daniels-Midland closes two soybean processing mills at Edgewater, New Jersey. May. p. 12.

• **Summary:** Two of the Edgewater, New Jersey, “soybean

processing mills of the Archer-Daniels-Midland Linseed Oil Co. have been shut down because of inability to get shipments of beans.” This company converted the plants to processing soybeans “last December by special request of the government, and the company reports it has appealed repeatedly to all federal agencies for shipments.”

155. *Chicago Daily Tribune*. 1943. Investors’ guide: Soy beans. June 25. p. 26.

• **Summary:** America’s large soy bean processors include the Archer-Daniels-Midland company, Spencer Kellogg & Sons, Inc., A.E. Staley Manufacturing company, and the Glidden company.

“The futures market in soy beans on the Chicago Board of Trade was discontinued Feb. 19, 1943, because of new government regulations restricting the delivery of the beans on futures contracts.”

156. Wilgus, H.S.; Zander, D.V. 1943. The value of soybean oil meal from damaged beans. *Colorado Agricultural Bulletin, Miscellaneous Series No. 131* No. 218. 2 p. July.

• **Summary:** “A considerable proportion of the 1942 soybean crop was damaged by frost while immature. Under these circumstances it was desirable to ascertain the growth-promoting value of meal made from frost-damaged beans. Such a meal and another one prepared from normal beans were obtained. Both meals were prepared by the expeller process under as similar conditions as possible.” The beans were graded, as shown in a table.

“It is concluded that the growth-promoting value of the meal made from frost-damaged, immature soybeans was satisfactory for use in a practical starting mash containing 2.5 percent meat and bone scrap.”

Tables: (1) Rations fed to chicks and results. The meal is termed “Soybean oil meal.”

Undamaged meal was supplied through the courtesy of Dr. J.W. Hayward, Archer Daniels Midland Co. Address: Colorado Agric. Exp. Station, Poultry Section, Ft. Collins, Colorado.

157. *Business Week*. 1943. Soybean tangle: Everybody wants a better marketing setup than last year, and problems are tough. Use of oil in nonfoods is banned. Aug. 7. p. 88, 90, 92.

• **Summary:** During World War I, when a large quantity of Manchurian soybean oil was imported to relieve U.S. shortages of oils and fats, processors believed that it could never be refined to be fit for use in food products, so it used almost all of it in industrial products.

But since then new techniques for refining soy oil have improved its quality so much that two months ago, the War Production Board, facing an acute shortage of edible oils, ordered that no soybean oil can go into any nonfood product. Actually only a small percentage of soybean oil produced in

the USA had been going to other than table uses for many years. The new order caused serious concern among makers of paints and varnishes, linoleum, foundry core binders, and many other inedible products in which soy oil has been a major constituent.

“An impressive index of how far up in the world this workaday Oriental legume has come was a meeting held last week in Chicago [Illinois]. Summoned by the Commodity Credit Corp. and the Agricultural Adjustment Agency, 250 men who are leaders in today’s half-billion-dollar soybean industry sweated through an all-day session in a steaming room. They talked solely about the 1943 bean crop.

“Attendance included the head soybean men of such potent food firms as A.E. Staley Mfg. Co., Archer-Daniels Midland Co., Allied Mills, Central Soya Co., and Swift & Co.”

158. Kimball, Warren Y. 1943. Soybean plant fire record. *National Fire Protection Association Quarterly* 37(2):157-70. Oct.

• **Summary:** A record of 14 recent fires and explosions in soybean processing plants. Each is followed by a detailed description of the cause or causes, what happened, etc.

(1) 1935 Oct. 7, Chicago, Illinois. Soybean processing plant. Glidden Soya Products, Inc. 11 killed, 45 injured. Contains a detailed description of all aspects of the explosion. Two photos (one from ground level, one aerial from the southwest corner) show the wreckage.

(2) 1935 Oct. 22, Momence, Illinois. Rural soybean oil plant. Owned by Varnum Parish, Jr. 2 killed, 2 injured. One ground-level photo shows the wreckage.

(3) 1937 Jan. 22, Des Moines, Iowa, Soybean meal storage tank fire and explosion. Plant owned by Spencer-Kellogg and Sons. It took more than two months to put out the fire. No deaths or injuries.

(4) 1939 May 15, Toledo, Ohio. Soybean oil extraction plant, occupied by Archer-Daniels-Midland Co. No deaths or injuries. \$20,000 loss.

(5) 1939 Aug. 24, Buffalo, New York. Soybean cake cooler. Fire in plant owned by Spencer-Kellogg and Sons. \$500 loss.

(6) 1939 Oct. 19, Fort Dodge, Iowa. Soybean oil mill, Plymouth Processing Mills. \$140,000 loss.

(7) 1940 Jan. 2, Marion, Ohio. Soybean cake storage. Old Fort Mills, Inc. soybean crushing plant. \$46,900 loss.

(8) 1940 Feb. 14, near Springfield, Illinois. Soybean oil mill, not operating at the time. Owned by Springfield Stock Yards Company. \$120,000 loss.

(9) 1942 Oct. 22, Oakville, Indiana, Farmers’ Elevator Co. A country grain elevator and feed mill. \$46,000 loss.

(10) 1942 Nov. 28, Danville, Illinois. Rural feed and soybean processing plant. Operated by Hendricks County Farm Bureau. \$30,460 loss.

(11) 1943 March 31, Cairo, Illinois. Vegetable oil mill.

The Cairo Meal and Cake Company’s plant included a soybean oil mill. \$1,653,000 loss.

(12) 1943 July 30, Chicago, Illinois. Soybean oil plant and elevator. Caused by a “dust explosion, believed to be the first on record in a soybean oil plant using the expeller process,...” Plant operated by Norris Grain Co. 3 killed. \$400,000 to \$600,000 loss. Two photos (one full-page and one half-page) show the wreckage.

(13) 1943 Aug. 2-7, Buffalo, New York. Soybean oil plant. Owned by Spencer-Kellogg and Sons. No deaths. Loss not given.

(14) 1943 Aug. 6, Buffalo, New York. Soybean oil plant. In Mill A, owned by Spencer-Kellogg and Sons. No deaths. Loss not given.

Note: Of all these fires and explosions, the worst one was the first, at the Glidden plant in Chicago. Address: N.F.P.A. Engineer.

159. USDA Northern Regional Research Laboratory. 1943. Soybean processing mills in the United States. *USDA Bureau of Agricultural and Industrial Chemistry*. AIC-26. 10 p. Nov. Revised edition, 1948. CA-5, 14 p.

• **Summary:** “The following list of soybean processing mills is divided into three parts: (1) mills in which soybeans regularly constitute the bulk of the throughput, (2) mills which are currently under construction or whose construction is being seriously considered, and (3) mills which are engaged in soybean processing temporarily or part time, or which have otherwise participated in the soybean program by signing a soybean processor contract. It must be realized that changes are occurring very rapidly at the present time, throughout the entire soybean processing industry.

“Solvent extraction plants in group No. 1 are designated with an asterisk (\*). Many of the solvent type mills also contain expellers and screw presses. After the name of each mill in group No. 1, the letter S, M, or L is used to designate whether it is a small, medium, or large installation. These ratings are only approximate and divide mills into three capacity groups: S (small), capacities less than 50 tons of soybeans per day; M (medium), capacities between 50 and 200 tons per day; and L (large), capacities over 200 tons per day.”

(1) Mills specializing in soybeans:

Arkansas: West Memphis–Arkansas Mills, Inc. (S). Wilson–Wilson Seed and Feed Company (S).

California: Oakland–Albers Brothers Milling Company (S).

Illinois: Bloomington–Funk Brothers Seed Company (M). Cairo–Swift and Company (M). Champaign–Swift and Company (L). Chicago–Archer-Daniels-Midland Company (M)\*; The Glidden Company (L)\*; Norris Grain Company (S); Spencer Kellogg and Sons (L). Decatur–Archer-Daniels-Midland Company (L)\*; Decatur Soy Products Company (M); Spencer Kellogg and Sons (L)\*; A.E.

Staley Manufacturing Company (L). Galesburg–Galesburg Soya Products Company (M). Gibson City–Central Soya Company, Inc. (L). Monmouth–Ralph Wells and Company (S). Peoria–Allied Mills, Inc. (L). Quincy–Quincy Soybean Products Company (M). Springfield–Illinois Soy Products Company (M). Taylorville–Allied Mills, Inc. (M).

Indiana: Decatur–Central Soya Company, Inc. (L)\*. Indianapolis–Evans Milling Company (M). Lafayette–Ralston Purina Company (M). Marion–Hoosier Soybean Mills, Inc. (M). Windfall–Elevators and Mills, Inc. (S).

Iowa: Cedar Rapids–Honey mead Products Company (M)\*; Iowa Milling Company (M). Centerville–Standard Soybean Mills (M). Clinton–Clinton Company (M)\*. Des Moines–Spencer Kellogg and Sons (M); Swift and Company (M). Fayette–Wilbur Bell, Inc. (S). Fort Dodge–Plymouth Processing Mills (M [co-op]). Gladbrook–Central Iowa Soybean Mill (S). Iowa Falls–Ralston Purina Company (M). Quimby–Simonsen Soybean Mill (M). Sioux City–Sioux Soya Company (S). Waterloo–Soy Bean Processing Company (M)

Kansas: Emporia–Kansas Soy Bean Mills, Inc. (M).

Kentucky: Henderson–Ohio Valley Soy Bean Cooperative Association (M). Louisville–Buckeye Cotton Oil Company (L)\*. Owensboro–Owensboro Grain Company (S).

Michigan: Dearborn–Ford Motor Company (M)\*. Milan–Ford Motor Company (S)\*. Saline–Ford Motor Company (S)\*.

Minnesota: Mankato–Mankato Soya Products Company (S). Minneapolis–Archer-Daniels-Midland Company (S).

Missouri: Galesburg–Spring River Mill (S). St. Joseph–Dannen Mills (M). St. Louis–Ralston Purina Company (M).

Nebraska: Fremont–Pete Marr Soybean Processing Company (S). Omaha–Allied Mills, Inc. (M).

New York: Buffalo–Spencer Kellogg and Sons (M). Oswego–Oswego Soybean Products Corporation (M).

Ohio: Berea–Berea Milling Company (M). Cincinnati–Drackett Company (M)\*. Circleville–John W. Eshelman and Sons (M); Ralston Purina Company (M). Fostoria–Swift and Company (M). Marion–Old Fort Mills, Inc. (M). New Washington–Ohio Soya Company (S). Painesville–A.E. Staley Manufacturing Company (L). Toledo–Archer-Daniels-Midland Company (L); Toledo Soybean Products Company (M). Wooster: Soya Processing Company (M).

Pennsylvania: Jersey Shore–Pennsylvania Soy Bean Cooperative Association (S).

Tennessee: Memphis–Buckeye Cotton Oil Company (M).

Virginia: Norfolk–Davis Milling Company (S). Portsmouth–Allied Mills, Inc. (M); I.F. Laucks, Inc. (S).

Wisconsin: Milwaukee–Archer-Daniels-Midland Company (M).

Note 1. This is the earliest document seen (Dec. 2005) that mentions Dannen Mills (St. Joseph, Missouri) in

connection with soybeans.

Note 2. This is the earliest English-language document seen (Sept. 2003) that contains the term “screw presses” (or “screw press”) in connection with mechanical pressing of soybeans to give oil and meal (one of two documents).

160. Payne, Donald S. 1943. The story of soya products. In: U.S. Food Distribution Administration, War Food Administration, ed. 1943. Soybeans and Soya Products. Program for Meeting of Interdepartmental Nutrition Coordinating Committee. 25 p. See p. 8-19. Dec. 7. [5 ref]  
 • **Summary:** Contents: Introduction. Production and distribution. Soya flour and grits on the retail market. Soya in mixed foods. Information activity. Reference list of some of the materials available on soya products: Recipes and recipe leaflets, speeches, other (pamphlets, book chapter).

Soya flour and grits on the retail market include the following: A.E. Staley Manufacturing Co. of Decatur, Illinois, opened test markets early in June 1943 with 1- and 3 pound packages of Stoy, a low-fat expeller type of soya flour. Results were good. Complete national distribution of this product is expected by 1 March 1944.

At least two other large processor-distributors have also started on campaigns for nation-wide distribution. The Archer-Daniels-Midland Company has initiated the distribution of Viva Soy, a low-fat extraction-process type flour. The Glidden Company, Cleveland, Ohio, through Durkee Famous Foods, has recently introduced into test markets Durkee’s Soya Bits (a low-fat expeller-type grit) and Durkee’s Soyarich (a full-fat soya flour).

Other processor-distributors are The Central Soya Company, Decatur, Indiana, distributing Me-T-Soy, an extraction-type grit, and The Soya Corporation of America, introducing both a full-fat type flour and grit on the East Coast.

“Closely following the lead of these processor-distributors, private-label brand grocery houses started to package these products for retail distribution at popular prices. These have been very widely distributed. These are now packaged by G.L.F. Farm Products, Inc., Ithaca, New York, a 2-pound package of full-fat type soya flour and a 2-pound package of a toasted soya flake of the low-fat expeller-type.

The Vee-Bee Company of Chicago, Illinois, with its Vee-Bee brand soya flour and soya grits, and the P.D. Ridenour Company, Chicago, Illinois, with its Little Major brand soy flour of the low-fat extraction type, have both attained distribution of 1-pound packages through jobbers in 36 of the 48 states. “The H.D. Lee Company is distributing the Lee Brand soy flour and soya grits in 1-pound packages throughout Kansas, Oklahoma, Colorado, southern Nebraska, Arkansas, and Missouri.

“The Battle Creek Food Company, Battle Creek, Michigan, and The Walker Company, Chicago, Illinois,

continue to market retail packages of full-fat soya flour in specialty stores throughout the Nation...

"In addition to those retail distributors, the following manufacturers sell [soy] flour and grits in wholesale quantities to food manufacturers, restaurants, and institutions." Allied Mills, Inc. (Chicago, Illinois), Archer-Daniels-Midland Company (Minneapolis, Minnesota), Central Soya Company, Inc. (Fort Wayne, Indiana), Commander-Larabee Milling Company (Minneapolis, Minnesota), The Glidden Company (Chicago, Illinois), Procter & Gamble Company (Ivorydale, Ohio), Shellabarger Grain Company (Decatur, Illinois), Soya Corporation of America (Hagerstown, Maryland), Soya Products Company (New York, New York), Spencer Kellogg and Sons, Inc. (Decatur, Illinois), A.E. Staley Manufacturing Co. (Decatur, Illinois), Swift & Company (Champaign, Illinois).

Under "Soya in Mixed Foods" many companies that make foods such as pancake mixes, breakfast cereals, pasta, breads, crackers and cookies, candy bars, muffin mixes, dry soup mixes, etc. are listed, along with the brand name of the product and the area of distribution. "To mention a few others. The Atlantic Macaroni Company, New York City, the Mission Macaroni Company and the Golden Grain macaroni Company, both of Seattle, Washington, and Traficanti Brothers, Chicago, Illinois, also manufacture for local distribution a variety of products containing soya flour in amounts ranging from 10 to 15 percent." Soya products are used in only about 1% of frankfurters or sausages. "Roasted salted soybeans are about as common now as salted peanuts, but not many people realize that soya flour and grits are at present universally used in chocolate bars and any other candy. For further information on these uses I might refer you to the Curtis Candy Co., Chicago, Ill., or the Clark Candy Co., Pittsburgh, Pennsylvania..."

"A large number of dry soup mix manufacturers are experimenting with soya flour and preparing products for domestic distribution. Soya flour and grits are now and will continue to be used extensively in foods prepared for lend-lease and relief feeding. Pea-soya soup, spinach-soya soup, cheese-soya sauce, oat-soya cereal, whole wheat-soya cereal, wheat-soya-egg macaroni and vegetable-cereal-soya stew mixes are being purchased in appreciable quantities... Pork-soya sausage links have been purchased in tremendous quantities under lend-lease..."

"Nine coast-to-coast radio shows have featured the news of soya food products since June 1943. Over 15 prepared radio scripts and stories featuring soya have been distributed since May 1943." Address: Chief, Soya Products Section, Grain Products Branch, Food Distribution Administration, War Food Administration.

**161. Product Name:** Viva Soy (Low-Fat Solvent-Extracted Soy Flour).

**Manufacturer's Name:** Archer-Daniels-Midland Co.

**Manufacturer's Address:** Minneapolis, Minnesota.

**Date of Introduction:** 1943 December.

**New Product-Documentation:** D.S. Payne. 1943. The story of soya products. Dec. p. 12-13. This product was first introduced into Minneapolis, St. Paul, and St. Cloud, Minnesota. The company hopes to distribute the product nationwide.

**162. Product Name:** Honeymead Soy Flour.

**Manufacturer's Name:** Honeymead Products Co.

**Manufacturer's Address:** Cedar Rapids, Iowa.

**Date of Introduction:** 1943.

**Wt/Vol., Packaging, Price:** 2 lb paper bag.

**How Stored:** Shelf stable.

**New Product-Documentation:** Spot in *Soybean Digest*.

1944. Jan. p. 18. A photo shows the bag and front panel.

The product was recently put on the market by Honeymead Products Co., at Cedar Rapids, Iowa. "Its appearance is being heralded by extensive newspaper and other advertising. A Honeymead Soy Flour cookbook is in the process of completion and will be available shortly."

**163. Business Week.** 1944. No war baby: Lecithin, long used by food industry and confectioners, now is widely used in paints, oils, cosmetics, textiles and soaps. No. 756. p. 74, 76. Feb. 26.

• **Summary:** Contents: Introduction. Saves scarce fats. Assists the liver. Found in soybeans. A complex compound. Valued in foods. Freshness preserved. More uses. Another firm extracts. Uses expanded.

In foods, lecithin serves an emulsifier, or dispersing agent, and an antioxidant for scarce fats, where a little of it helps keep a lot of scarce fat fresh. Lecithin assists fats to disperse more freely among the other ingredients of bread, cake, packaged biscuits, and cookies; therefore less fat is required to achieve a given result. There is considerable evidence that lecithin can help in the treatment of psoriasis, a persistent skin disorder, and that it assists the intestinal absorption of vitamin A (and the body's conversion of vegetable carotene into vitamin A).

It also can help in the treatment of arteriosclerosis by reducing excess cholesterol in the blood. And it helps the liver in absorbing vitamin B-1 (thiamine).

Most commercial lecithin is extracted from soybeans; soya lecithin sells for \$0.30 to \$0.35 a pound, which is much less expensive than egg lecithin (\$8-12 per pound), or lecithin extracted by meat packers from animal brains (\$5-6 per pound).

In chocolate, the addition of 0.35% of lecithin can replace 8% of cocoa butter, thereby transforming a lumpy, almost gritty chocolate mixture into one with the consistency of cream.

A small amount of lecithin added to the Army's chocolate powder enables it to fully disperse in cold water

on the battlefield—or any place else where not water is not available.

Added to oleomargarine, lecithin prevents spattering, imparts a smooth consistency and stability against spoilage, and confers butterlike properties.

In the USA, the headquarters for soya lecithin is the American Lecithin Co., Inc. (ALC) in Elmhurst, New York. In 1928 it began to pioneer a German extraction process using purified hexane (a petroleum fraction) to dissolve the lecithin from crushed soybeans. ALC does not process or even handle soybeans, but rather it licenses to the Glidden Co. (Cleveland, Ohio) and Archer-Daniels-Midland Co. (Minneapolis, Minnesota) the rights to its patented process. ALC then buys the lecithin made by these two companies, processes, refines and blends it to various consistencies, then markets it to a host of different applications. Last year Central Soya Co. (Fort Wayne, Indiana) also took a license from ALC but used its own process for solvent extraction of soybean oil.

Before the war, lecithin in the USA was used almost entirely in foods and confections. But today it is also used in many nonedible applications such as oil paints and enamels (where it is a dispersing or wetting agent), leather (as a softener), textiles (to give a soft feel), lubricating oils (as an antioxidant and antigumming agent), leaded gasolines (as a dispersing agent), and cosmetics and soaps (as an emulsifier and antioxidant).

ALC expects big postwar sales of its new lecithinated flour for home kitchen use.

164. Bohn, Ralph M. 1944. Soy products in candies. *Confectioners Journal* 70(830):12, 14, 25. March.

• **Summary:** The various types of soy products based on their fat content are: (1) Full-fat soy flour. (2) Roasted or puffed soy beans: The whole bean may be roasted dry or in oil, or it may be shot from guns in a manner similar to puffed wheat or rice. (3) Expeller flour and grits: The whole soybean is pressed to remove most of the oil and the cake is ground to flour or grits. (4) Extracted flour and grits: The oil is extracted with a volatile solvent. The fat-free portion is debittered and ground to the desired size. The protein in the extracted flour is largely “undenatured” or unharmed by heat.

(5) “Protein whipping products: These are made by extracting the protein from a base material similar to that used for extracted products and drying. These products whip like egg albumen, but they do not coagulate as well with heat. They are constantly being improved...”

Describes ideas for using each of these products in candies and cautions to be observed. Full-fat soy flour works well in a fudge-type candy in which no milk of any kind is used. The following bulk recipes are given: Soy fudge squares and bars. Soy caramel for casting and coating. Milk-soy fudge for cutting. A portrait photo shows Ralph M. Bohn. Address: Feed Products Development and Research,

Archer-Daniels-Midland Co., Minneapolis 2, Minnesota.

165. Eastman, Whitney. 1944. Progress versus heartaches: Soybeans after the war—5. *Soybean Digest*. May. p. 10-11.

• **Summary:** Editor’s introduction: “A straight-from-the-shoulder account of what the soybean industry may expect after the war: tremendous progress—with major adjustments. Mr. Eastman is president of the vegetable oil and protein division of General Mills, Inc., and formerly vice president of Archer-Daniels-Midland Co., in charge of soybean operations. He organized the National Soybean Processors Association and served as its president for a number of years.

“Tremendous progress will be made in the soybean industry in the postwar period, but this period of progress in the industry will be accompanied by many heartaches. There will be heartaches for those who guess wrong or who have not laid-by for a rainy day, and there will be golden opportunities and just rewards for others who have the ‘know how’ and have the courage and the resources to take advantage of opportunities as they occur.

“While there should be marked progress in the breeding and production of improved varieties of soybeans for special classified uses, the notable changes in the industry will take place in the fields of scientific development, processing and distribution.

“The vegetable oil processing industry is one of the oldest industries in the United States, dating back to colonial times. The industry, taken as a whole, has operated for over a century by empirical methods based largely on the experience of a previous generation.

“What technological advances have been made have

taken place very largely outside the industry itself or have been transplanted from Europe. Very little attention has been given to scientific research within the industry except in very recent years. The industry has been nurtured and protected by a high import tariff barrier to foster and expand domestic oilseed crops, but relatively little progress has been made by vegetable oil processors in reducing conversion costs, developing more efficient processes, and reducing distribution expense. The processing industry owes it to the oilseed crop producers and the consuming public to develop more efficient conversion processes so as to be prepared to meet foreign competition under lower tariff protection when that day comes.

“The trend in horizontal expansion in American industry in recent years has brought its full impact upon the vegetable oil processing industry. This movement has gained tremendous momentum in all segments of the industry in the last decade.

“Tendency to Control: The tendency is for the processor to control the two principal products of the vegetable oil processing industry; i.e., vegetable oil and protein concentrates, for use in the manufacture of products which are marketed direct to consumers. This trend toward the control of the vegetable oils and protein concentrates has resulted in greatly reduced quantities of these commodities being offered for sale as such in the open market. In order to justify this trend to our growers and consumers, tremendous economies in conversion and distribution methods will have to be developed.

“The vegetable oil industry, taken as a whole, is one of the vital industries in our domestic economy. It is becoming increasingly significant in our national economic pattern as the derivatives of the vegetable oilseed crops expand their commercial horizon. It is hard to visualize an industry of greater importance to our national economy and security in time of either war or peace.

“The soybean processing industry is the infant segment of the vegetable oil processing industry in the United States. Except for a few isolated and intermittent processing operations the industry is only about twenty years old. The domestic processing industry and soybean production expanded simultaneously. Up until the war, soybean processing facilities have been provided in excess of soybean production. During the wartime period—under Government sponsorship, through the mechanism of price supports, price controls and subsidies—the processing industry has greatly expanded. The expansion has taken place very largely by providing additional processing capacity in the form of expeller or screw press equipment. While there are sound arguments in favor of this procedure under a wartime economy, the policy developed under this exigency may haunt us during the postwar adjustment era. Advance is Overdue: Research and technological advances—resulting in operating economies and enhancement of the value of

the finished products and competitive advantages—are long overdue in the vegetable oil processing industry in the United States. An abundant supply of relatively cheap imported vegetable oils and the lack of severe competition among the larger domestic vegetable oil producers have delayed the expansion of the continuous solvent extraction process in this country.

“In Europe—particularly in Germany—before the war the vegetable oil processing industry had been forced by strained economic conditions and an acute shortage of fats to convert their processing systems over to the extraction process. In this country for approximately a century we have continued to use the antiquated process known as the hydraulic process. In recent years some progress has been made in the development and utilization of the expeller or mechanical screw press, especially in the soybean industry.

“Perhaps because of the wide diversification of interests in the soybean processing industry, greater technological advances have been made than in the older segments of the industry. However, research, scientific development and technological advancement have not kept pace with the rapid overall growth of the soybean industry. There have been many pioneers and individualists giving birth to new ideas and developments in various channels of the industry, but the widely diversified interests of the dominating groups within the industry have greatly impeded scientific advancement.

“The first continuous extraction unit to be built in this country was brought from Germany and installed in Chicago in 1934. Subsequently, other extraction units were purchased in Germany by domestic soybean processors prior to the war. We are no longer dependent upon Germany for this type of equipment. Already several progressive and resourceful American machinery manufacturers have developed and built several such units. Several other large and resourceful machinery manufacturers are exploring the possibilities in this field—studying the several process applications and the economics of the large plant versus the small plant. Machinery manufacturers who have been in on the ground floor in the oil mill machinery business for many years have tried to protect their old established lines of equipment—perhaps because the repair part business has been so lucrative.

“Immediately following the end of the war, there will, without doubt, be a broad swing to the continuous solvent extraction process. The Government under the provisions of the soybean processors’ contract has recognized the efficiency of the extraction process, as have the various interests who have already invested their money in these units.

“As the industry swings over to the extraction process, there will develop a unification of interests among surviving processors such as the industry has not yet seen. The upheaval caused by such a technological advance in the industry will result in far reaching repercussions.

Obsolescence will be exceedingly heavy in writing off undepreciated capital investment, and large amounts of new capital will be required to build the new modern plants and auxiliary facilities. New faces will appear in the industry, and old faces will disappear. Only those who can perform an efficient economic function as a converter or distributor will remain. The industry will be fraught with many heartaches during this transition period but will emerge as a strong segment of our agricultural and industrial economy.

“In order to stabilize the soybean industry and make it secure as a permanent part of our agricultural and industrial economy, we must closely correlate and harmonize the interests of the soybean grower, the processor and the consumer of the finished products. The soybean processing industry buys the raw materials from the grower and sells back to the farmer a large part of the manufactured products. The soybean processor, therefore, holds a key position in the industry, but in order to justify his existence and not be responsible for the upheaval of the industry’s economic stability, he must convert soybeans into marketable high quality products efficiently and distribute the manufactured products to the ultimate consumer at the least possible cost. If the soybean grower is to be expected to produce an adequate supply of soybeans, and this same grower or his farmer neighbor is to be expected to buy a large part of the finished soybean products, the grower is entitled to get a fair price for his soybeans in relation to the price he is asked to pay for the soybean products he is expected to buy.

“The soybean industry is unique in this respect—perhaps more so than any other segment of agriculture. This is a real challenge to the soybean processor. American ingenuity and resourcefulness will meet the problem squarely and solve it. If one group fails to do the job, another will come forward to solve the problem. This is the price of progress.” Address: President, Vegetable Oils and Protein Div., General Mills, Inc. Formerly vice president of Archer-Daniels-Midland Co. in charge of soybean operations.

166. *Soybean Digest*. 1944. Grits and flakes from the industry: Archer-Daniels-Midland Co. has moved its Chicago office from the mill... June. p. 17.

• **Summary:** “... at 927 Blackhawk St., to 904 Wrigley Bldg., 400 N. Michigan Ave., Chicago 11. New telephone is Superior 5860. Expansion of the company’s soybean operations during the past few years made the move to more commodious offices necessary. G.E. Laugen is office manager, E. O. Paschke is in charge of soybean specialty sales and J. W. Gorman handles soybean oil meal and linseed meal sales.”

167. **Product Name:** Baker’s Nutrisoy (Defatted Soy Flour. Lightly Heat Treated).

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** Minneapolis, Minnesota.

**Date of Introduction:** 1944 July.

**How Stored:** Shelf stable.

**Nutrition:** Moisture 7%, protein 52%, fat 1%, ash 6%, crude fiber 3%, other carbohydrates 31%, calories 280/100 gm. PDI (Protein Dispersibility Index): 70/79.

**New Product–Documentation:** *Soybean Digest*. 1944.

July. p. 14. “Commander [Larabee] and A-D-M merge soy division.” “The new division will start immediately merchandising a soya product under the trade name, ‘Bakers’ Nutrisoy,’ through a selected group of Archer-Daniels-Midland Co. brokers, the sales organization of Larabee Flour Mills Co. of the southwest... and the sales organization of Commander Milling Co...”

*Soybean Blue Book*. 1948. p. 83. Archer-Daniels-Midland Co. at 600 Roanoke Bldg., Minneapolis 2, Minnesota, now makes soy flour, soy grits, and ADM Soybean Brew Flakes. Ad in *Soybean Blue Book*. 1959. p. 95. “Bakers Nutrisoy.”

Formo and Peterson. 1959. *Chemurgic Digest*. Dec. p. 6-7. “Chemurgy: A way of doing business.” “Light colored improved Bakers Nutrisoy appears in many bakery products. Low flavor level and light color make it an ideal replacement or supplement for milk.”

*Soybean Blue Book*. 1964. p. 111. “Nutrisoy edible soy flours and grits.” Company is now at 733 Marquette Ave., Minneapolis 2, Minnesota.

168. *Soybean Digest*. 1944. Soybeans... and people: Commander [Larabee] and A-D-M merge soy division. July. p. 14.

• **Summary:** “The soy products division of Commander-Larabee Milling Co. has been merged with the Archer-Daniels-Midland Co., E.J. Quinn, vice president of the milling company, and S.M. Mairs, executive vice president of Archer-Daniels-Midland Co. have announced.”

“This merger is in recognition of the increasing importance of soy flour and soya products in the baking industry.”

With the merger, Commander Larabee Milling Co. becomes a subsidiary of Archer-Daniels-Midland Co. Commander-Larabee Milling Co. is in Minneapolis, Minnesota (Taylor 1944, p. 203).

169. Soy Flour Association. 1944. Soya in rehabilitation food programs. Chicago, Illinois. 15 p. Aug. [2 ref]

• **Summary:** Discusses what soy flour is and how it can and should be used, especially in Europe. Members of the association are ADM, Central Soya Co., The Glidden Co., Honeymead Products Co., Shellabarger Soybean Mills, Spencer Kellogg and Sons, Inc. and A.E. Staley Mfg. Co. Address: 3818 Board of Trade Building, Chicago, Illinois.

170. *Business Week*. 1944. Funds for soya: Securities are offered to public for first time by large soybean processing

company as war boosts volume of sales. Sept. 2. p. 74, 76.

• **Summary:** Last week \$2,250,000 of 3.75% debentures were successfully offered to the public by the Central Soya Co., Inc., of Ft. Wayne, Indiana. It was the first soybean processing company to enter the new issues securities market. "It is particularly fitting that Central Soya should prove the first to break the ice. Founded only ten years ago, it has rapidly grown into the most important unit in the country exclusively engaged in extracting oil and meal from soybeans.

"Also, it has become one of the three largest of the companies now operating in the soybean field, and shares trade leadership only with such substantial old-timers as Archer-Daniels-Midland Co., which is primarily a linseed producer, and A.E. Staley Mfg. Co., whose principal interests lie in the starch business."

The company's founder, D.W. McMillen, Sr., had started a feed business of his own in Indiana in 1916. "McMillen, who had previously done well operating country grain elevators with his father, was so successful in his new venture that in the late twenties directors of Allied Mills, Inc., a leader in the feed line, purchased his business and made him president of their company.

"But, despite his rise to prominence in the feed trade, the more McMillen mulled over the future of the soybean the better he liked its outlook. Finally, he resigned the presidency of Allied Mills in 1933, organized the Central Soya Co. in 1934, and started processing beans on a modest scale at the Central Sugar Co.'s plant at Decatur, Ind.

"In 1935 McMillen's new company built its own soybean oil and feed mill at Decatur; by 1936, it reported annual sales of almost \$3,900,000 and net profits of \$278,000.

"Central Soya sales in the fiscal year ended Sept. 30, 1942, skyrocketed to \$27,700,000 twice its 1941 volume. Profits soared to \$666,000 from the previous year's \$275,000."

Note: *Webster's Dictionary* defines a debenture as "a bond backed by the general credit of the issuer rather than a specific lien on particular assets."

171. Hayward, J.W. 1944. Utilization of soybean oil meal as feed and fertilizer. *Soybean Digest*. Sept. p. 36, 38.

• **Summary:** "*Soybean oil meal, having found wide acceptance as one of the finest and most versatile of protein concentrates, now is in very wide demand. Will it retain its new-found friends after the war? Dr. J.W. Hayward, director of biological research and development of Archer-Daniels-Midland Co., Minneapolis, surveys the situation. He believes utilization should continue to expand if research programs are kept up and as experience grows.*"

"Soybean growers, like all producers of raw materials, are looking forward to the postwar period and wondering just what the future holds for them. How many soybeans the

grower will attempt to produce is normally dependent upon the economic aspects involved. Here the price per bushel of soybeans in relation to the price for other staple crops is very important in the mind of the grower.

"The primary product of soybeans is soybean oil meal. Approximately 80 percent of the soybean is converted to meal products by the processor.

"Just prior to declaration of World War II the production of harvested soybeans was increased rather consistently from year to year. Approximately 2 million tons of soybean oil meal were produced from the 1941 soybean crop. This compares with a total domestic production of all high-protein concentrates during the pre-war period of 5 million to 6 million tons annually. These figures include dry-milk products as such and the equivalent, fed as liquid milk on the farms.

"Under the impetus of the war our present production of soybean oil meal is about 3 million tons annually and compares with a total production of high-protein concentrates of about 11 million tons.

"The tremendous increase in livestock numbers has provided a strong demand for high protein concentrates produced during the past 2 or 3 years. In planning for the future, however, we should not forget that during the pre-war period 5 million tons of these protein concentrates were considered a burdensome supply for our country as a whole and most of us still recall those days when soybean oil meal sold at \$20 per ton and less F.O.B. the mills, and rather hard to sell at that figure.

"Demand Strengthened: However, the demand for soybean oil meal in the post-war period will be strengthened by the widespread familiarity with its proven nutritional properties. Because of aggressive research and expanded wartime usage, many of the nutritional values of soybean oil meal were quickly revealed. Ten years ago, yes, even 4 years ago, there were many who were not familiar with the qualities of soybean oil meal. Today soybean oil meal is widely accepted as one of the very finest and most versatile protein concentrates available.

"Soybean producers may well ask if we can expect further advances in the science and technology of using soybean oil meal in animal and poultry rations. This is a fair question because further improvements will expand the market for soybean oil meal. If it is fair to predict the future of soybean oil meal on the basis of what we have learned about the older, more established protein concentrates, then it can be said without question, that we still do not know all there is to know about soybean oil meal.

"Meat scraps and fish meal, for example, are old established proteins and yet even today we are still learning pointers on what it takes to make these ingredients function in rations for livestock and poultry. The amino acid approach to protein quality has merely been scratched and I predict that this is one phase of protein concentrate studies that will

receive a great deal of attention during the years ahead. I have further confidence that such a study will not limit the utilization of protein concentrates, but rather provide greater knowledge of their makeup and thus make it easier for the consumer to utilize them to best advantage.

“The great percentage of our soybean oil meal production is used in animal and poultry feeds. You may well ask just what we can expect in the way of utilization by the various classes of animals and poultry on the farm or in the commercial feed lots or specialized production units.

“Dairy cattle have normally constituted a demand for 50 percent of all the vegetable protein concentrates produced. During times of normal supply and competition we can expect that soybean oil meal will sell to dairy farmers on the basis of its cost per pound of digestible protein as these consumers do not generally pay a premium for protein quality. In this respect soybean oil meal will have to be placed in a class with some of the other protein materials which have not been generally praised for their efficient protein.

“Beef cattle and sheep do not normally constitute a very large outlet for high protein concentrates except in times of very large production and low prices. These animals normally utilize a large proportion of roughage to concentrates. There are periods of about 3 months out of the year when range cattle and sheep are fed protein concentrates; even then the quality is limited.

“No one seems to know just what percentage of our total protein concentrate supply can be utilized by beef cattle and sheep during normal times. The Feed Industry Council, in their recent estimates on feed usage for 1944, have allotted beef cattle and sheep 20 percent of the total supply of high protein concentrates. This figure may be a trifle conservative for the future because feeding margins do not justify highly finished beef and lamb. Under the free economy of pre-war years many beef cattle and sheep were fed in feed lots for periods of 3 to 6 months. During this time they normally received a protein concentrate in addition to the usual grain and roughage ration.

“If soybean oil meal should ever be priced as cheaply as it was several years ago, beef cattle and sheep feeders can well afford to use it as a substitute for corn. Quite extensive work has been conducted at the University of Illinois on this very subject. They have found that beef cattle gain even more rapidly when soybean oil meal is fed with corn in the proportion of about 1 part soybean oil meal to 4 parts of corn, or 1 to 2 than they do when the proportion is 1 to 7. Dressing percentage and selling price also favor the higher levels of soybean oil meal. These studies have shown that soybean oil meal is actually worth more when fed at high levels than when fed at a ratio of 1 to 7.

“Lamb Rations: In the case of lambs it has been demonstrated that soybean oil meal may actually replace all of the corn in a standard shelled corn, corn silage, soybean

oil meal ration. Lambs which received .84 lbs. of soybean oil meal daily and no corn actually gained more rapidly than when the soybean oil meal and corn were fed in the standard proportions of 1 to 7 and 1 to 9.

“Hogs constitute the greatest potential demand for protein concentrates of any class of farm animals and poultry. Hogs belong to the class of critical animals which require protein of high quality for maximum development. For that reason soybean oil meal, when properly processed, is considered a favorite protein concentrate for hogs.

“Recent advances in hog nutrition have emphasized the need to maintain adequate levels of minerals and vitamins regardless of the protein source. This is of basic importance in all rations. When this practice is followed soybean oil meal can supply the major portion of supplemental protein in all types of hog rations.

“If we consider hog production in the United States during 1940 as a fairly normal year and if we fed these hogs properly balanced rations with respect to protein, there would be a potential annual need for 3 million tons of soybean oil meal, even if soybean oil meal supplied only half of the supplementary protein. Thus we see that if the various established agencies are successful in putting across an educational campaign for the proper nutrition of hogs, this class of animals can very easily become our greatest outlet for soybean oil meal and an outlet that will possibly justify an increase in soybean oil meal over our present production.

“Poultry, is, of course, our most dependable consistent outlet for protein concentrates. The poultry population of this country is normally fairly steady. Its fluctuations are less violent than in the case of hogs. Poultry, like hogs, responds to proteins of high quality and thus a premium is placed on soybean oil meal for use in poultry rations. Here again, correct processing and supplementation of soybean oil meal is necessary for maximum results.

“I consider it appropriate to give credit to the poultry industry for pioneering soybean oil meal more aggressively than any other animal industry. This group was first to learn just what it takes to make soybean oil meal function properly in a complete feed. It was the poultry industry that first placed emphasis on properly cooked soybean oil meal. With emphasis on poultry requirements for quality protein, the extracted or 44 percent soybean oil meal came into high favor.

“Fur-bearing animals, rabbits, dogs and other pets, may possibly become a more important outlet for soybean oil meal than they have been in the past. They have been the last class of animals to accept soy products as a protein ingredient, with the possible exception of dogs. Although the protein quality of soybean oil meal is very satisfactory for fur-bearing animals, such as foxes and mink, there are apparently other factors to consider in making soybean oil meal most useful for these animals. There are now an estimated 15 million dogs in the United States, so we must

admit that these animals themselves constitute a very large potential demand for feed ingredients.

“Thus far the outlet for soybean oil meal and other organic materials for fertilizer purposes has been comparatively small. During a normal year 50,000 tons of all organic fertilizers is considered a relatively significant tonnage. During the war years this tonnage has been reduced to an estimated 20,000 tons. Of course, as you know, soybean oil meal has been restricted for feed purposes and not permitted for use as a fertilizer during our present emergency. The over-all demand for fertilizer varies, of course, but during the present year, there is an estimated demand for probable delivery of some 11 million tons of fertilizer.

“Organic Fertilizers: There are many advantages to organic fertilizers. Soybean oil meal has already proved itself as a reliable carrier of organic nitrogen. Fertilizer tests at the Connecticut Tobacco Experiment Station have shown soybean oil meal to be significantly superior to cotton seed meal as an organic fertilizer. This superiority is based on the greater availability of the nitrogen in soybean oil meal...”  
Address: Director of Biological Research and Development, Archer-Daniels-Midland Co., Minneapolis.

172. National Soybean Processors Association. 1944. Year book, 1944-1945 (Association year). Chicago, Illinois. 71 p.  
• **Summary:** Contents: Constitution and by-laws (incl. committees, code of ethics). Officers, directors and committees for 1944-45. Membership of the National Soybean Processors Association. Trading rules governing the purchase and sale of soybean oil meal. Appendix to trading rules on soybean oil meal: Official methods of analysis (moisture, protein, oil, crude fiber—official). Trading rules on soybean oil. Appendix to trading rules on soybean oil: Uniform sales contract, refining loss method (cup refining test, tentative official centrifugal refining test), soybean oil bleach test—refined oils, free fatty acids, tentative method of grading soybean oil for green color, official method for oil sampling, standard specifications for crude soybean oil for technical uses, moisture and volatile matter (vacuum oven method, hot plate method), modified Gardner break test, iodine number—Wijs method, unsaponifiable matter, official chemists and samplers for oil.

Article IX, Committees, lists and describes each.

The section titled “Officers, directors, and committees” (p. 13-20) states: President: Edward J. Dies. V.P., Chairman Executive Committee: E.K. Scheiter. Secretary: C.E. Butler. Treasurer: E.F. Johnson. Ass’t. Treasurer: F.G. Duncanson. Executive Committee: E.K. Scheiter, Chairman, D.J. Bunnell, C.E. Butler, Edward J. Dies, Jasper Giovanna, S.F. Johnson, Mr. June S. Mitchell, H.R. Scroggs.

Board of Directors (Term expiring Sept. 1945): C.E. Butler, H.L. Dannen, Roger Drackett, Howard Kellogg, Jr., W.H. Knapp, H.R. Scroggs. (Term expiring Sept. 1946):

H.A. Abbott, D.J. Bunnell, H.E. Carpenter, J.B. DeHaven, Philip S. Duff, P.M. Jarvis. (Term expiring Sept. 1947): J.H. Caldwell, Jasper Giovanna, Mr. June S. Mitchell, E.K. Scheiter, H.R. Schulze, P.E. Sprague.

Standing committees: For each committee, the names of all members (with the chairman designated), with the company and company address of each are given—Traffic and transportation. Research. Technical. Soybean grades and contracts. Oil trading rules. Meal trading rules. Soy flour. Crop improvement. Soybean research council. Trade development. Edible soybean. Handwritten on blank facing pages: Contract. Margarine. Wartime exports (11 March 1945). Soybean oil meal industry advisory committee. Nominating committee (16 July 1945). Uniform rules and standards committee for soybean oil meal (14 Sept. 1945). Urea yield committee (14 Sept. 1945).

The following organizations, and individuals are members of NSPA: Albers Milling Co., Seattle, Washington (W.P. Kyle). Allied Mills, Inc., Board of Trade Bldg., Chicago, Illinois (6 members). Archer-Daniels-Midland Co., Box 839, Minneapolis, Minnesota; Chicago, Illinois; Decatur, Illinois; Toledo, Ohio (5 members). Berea Milling Co. (The), Lexington, Ohio. Blanton Mill (The), St. Louis, Missouri. Boone Valley Cooperative, Eagle Grove, Iowa. Buckeye Cotton Oil Co. (The), Cincinnati, Ohio; Louisville, Kentucky; Memphis, Tennessee. 176. **Product Name:** Soybean Oil, and Soybean Oil Meal.

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** Fredonia, Kansas.

**Date of Introduction:** 1945 February.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

**New Product—Documentation:** *Kansas Business Magazine*. 1945. June. p. 10. A table shows: Archer Daniels Midland

Co., of Fredonia, has been in operation since Feb. 1945. They use a hydraulic press for processing mostly linseed, but also some soybeans. The present plant capacity is 4,200 bushels/day. The number "3,000" is included in the table in the wrong column in a confusing way. It might refer to soybean processing capacity.

*Soybean Digest*. 1946. "Grits and flakes..." Jan. p. 28. "Crushing facilities of the Archer Daniels Midland Co., Fredonia, Kansas, are being doubled so that soybeans as well as flaxseed can be handled. Contract for the work has been let to the Fegles Construction Co., Minneapolis [Minnesota] It is expected that the new facilities, which will cost over \$300,000, will be in operation in 6 months."

*Kansas Business Magazine*. 1947. Aug. p. 8-9.

**177. Product Name:** Soybean Oil, and Soybean Meal.

**Manufacturer's Name:** Honeymead Products Co.

**Manufacturer's Address:** Washington, Iowa.

**Date of Introduction:** 1945 February.

**Ingredients:** Soybeans.

**New Product–Documentation:** *Soybean Digest*. 1945

"Honeymead Products Co. opens new plant at Washington, Iowa." June. p. 14. "The Washington, Iowa, soybean processing and feed mixing plant of Honeymead Products Co. has been in capacity operation for about four months. The latest advance in the solvent extraction method is used in the processing plant, which is practically identical in design to the Honeymead plant at Spencer, Iowa, in operation since 1944. Capacity of each plant is approximately 2,000 bushels a day. The feed plant has a capacity of 50 tons daily and is designed for making a full line of Honeymead cattle, hog, and poultry feeds. Hugo Lensch, formerly purchasing agent for the firm's Cedar Rapids plant, is general manager of Washington operations." A large photo shows the new plant at Washington, Iowa.

*Soybean Digest*. 1945. "Honeymead sells to Cargill, Inc." June. p. 24. Honeymead Products Co. sold its Cedar Rapids plant to Cargill, Inc., effective June 1. Estimated purchase price was 2½ million dollars. "Honeymead will continue in business, keeping its main office in Cedar Rapids and continuing to operate its feed and soybean processing plants at Spencer and Washington, Iowa."

In the middle of the ad are two photos showing each of the new plants at Spencer and Washington, Iowa. The bottom third of the ad is text. "The two new Honeymead plants in Washington, Iowa, and Spencer, Iowa, represent the latest advancement in extraction-type soybean plants. They are entirely new

in idea. They are entirely new in method. They are most advantageously located. The result is that Honeymead Soybean Meal is uniformly of the highest quality."

*Soybean Digest*. 1945. Dec. p. 24. "Grits and flakes... from the world of soy: Joe Sinaiko, Cedar Rapids, has bought the new Washington, Iowa, soybean processing plant of Honeymead Products Co. and will continue with expansion of the plant... S.H. Burchfield, plant manager, will remain. Sinaiko is a pioneer Iowa processor."

*Soybean Digest*. 1966. "Honorary life members [American Soybean Assoc.]: Dwayne O. Andreas." Sept. p. 6. From 1938 to 1945 Andreas was "principal executive officer of the family-owned company, Honeymead Products Co., which had soybean processing facilities at Cedar Rapids and Washington, Iowa."

Lauser, Greg C. 1982. "History of Cargill's involvement in the soybean processing industry." Minneapolis, Minnesota. 5 p. Unpublished manuscript. In 1946, Cargill acquired the Washington, Iowa, soybean crushing plant [from Joe Sinaiko].

**178. Bohn, Ralph M.** 1945. Soy flour in the baking industry. *American Society of Bakery Engineers Bulletin* No. 130. p. 504-09. March.

• **Summary:** The question of types of soy flour available to bakers, the use of each type in bakery items, a table of the composition of each type and a few formulas for bakery products in which soy flours are used, are all covered in this Bulletin.

Contents: History of soy flour. Methods of producing soy flour: Full-fat soy flour, solvent extracted (defatted) soy flour, expeller soy flour. Nutritional values of soy flour: Protein. What type of soy flour is preferred in bakery products. Extracted soy flour in bread. Extracted soy flour in yeast doughs. Extracted soy flour in soft cake. High-grade cookies—retail type. Pies. Biscuits and crackers. Pan-greasing. The flavor of bakery products containing extracted soy flour. Formulas. Tables showing the nutritional content of soy flour.

Note: Technically, defatted soy flour "contains less than 1% of fat." Address: Archer Daniels Midland Co., Minneapolis, Minnesota.

**179. Bunnell, D.J.** 1945. Birth and development of a new industry. *Soybean Digest*. March. p. 8-10.

• **Summary:** European companies pioneered the manufacture of solvent extraction plants for soybeans. In the mid-1930s, the first complete plants of this type were imported to the USA from Germany. It took only a few years for the U.S. soybean processing industry to recognize the basic advantages of the solvent extraction process. Today solvent extraction equipment comprises about 22% of U.S. soybean processing capacity.

In 1934, Central Soya Company started with six

expellers which had a capacity of 2,400 bushels per day. In 1937, we imported from Germany an extraction unit having a capacity of 9,000 bushels per day. By this time we had also added four expellers to the original six. Our operation was carried on at one location, namely, Decatur, Indiana. Today we have three plants; one in Illinois, the original, one in Indiana, and one in Ohio. We are operating 38 expellers; the extraction unit has been improved and its capacity increased until now our company has a total daily crushing capacity of 44,000 bushels per day. This is a growth of about 1,800 percent in one decade.”

Note: This is the earliest document seen (Jan. 2009) concerning soybean crushing statistics in the United States.

“The reasons for the many interests to enter the field of soybean processing were divergent in accordance with the special activities of these firms. Old, oil seed processors who dominated the technical [industrial] oil field—such as Archer-Daniels-Midland Co. and Spencer Kellogg & Sons—approached soybeans to round out their complete line of technical oils. Another group which included Central Soya Company, Ralston Purina and Allied Mills had faith in soy protein as an important ingredient to round out their mixed feed manufacturing operations. A third group was made up of edible oil refiners and included A.E. Staley Mfg. Co., Swift & Co., Procter & Gamble, and Durkee Famous Foods, all of whom led the research which opened new uses for soybean oil for edible purposes.

“The last important group to have entered the soybean field have been large flour millers such as General Mills and Pillsbury Flour Mills who were drawn to soybeans now that soy flour is being accepted more generally by the bakery trade. Success in such a short period of time can be attributed to the fact that laboratory research was conducted from so many different viewpoints at the same time.”

The more that soybean processors got to know the soybean, the more products they realized could be made from it: lecithin for many uses; soy flour for bakers, the candy trade, meat packers, U.S. retail stores, and Lend-Lease overseas. In short, companies began to diversify. “Staley, originally oil refiners and corn processors, advertises soy flour in your New York subways. Archer-Daniels and The Glidden Co. find themselves in the mixed feed business, while Spencer Kellogg, technical oil specialists, now distribute shortening to the bakery trade. These are but a few examples of the different avenues into which soybean processors have been led.”

Photos show: (1) Portrait of D.J. Bunnell. (2) Indiana Farm Bureau Cooperative Association extraction plant at Danville, Indiana, constructed during 1944 in a large Quonset hut. Address: Until recently vice president of Central Soya, Inc.

180. *Cedar Rapids Gazette (Iowa)*. 1945. Cargill buys Honeymead C.R. plant: It's two and half million dollar deal.

May 20. p. 25.

• **Summary:** “Announcement was made Saturday night of the sale of Honeymead Products company's Cedar Rapids plant to Cargill, Inc., of Minneapolis, effective June 1.

“Although the purchase price was not disclosed, grainmen estimate” it was about \$2.5 million, including both plant and inventories.

“The feed and soybean processing plant involved in the deal is situated at 850 Tenth street SW. Both companies have been engaged in the feed industry in this territory and the sale marks a major change in the industry. Plans are under way for rebuilding of the Cargill mill at 411 Sixth street NE, which was partly destroyed by fire last fall.”

“D.O. [Dwayne] Andreas has resigned as vice-president of Honeymead and will become general manager of the Cedar Rapids operations of Cargill.”

“Cargill's new plant in Cedar Rapids has about 100 employees.”

181. Kunitz, M. 1945. Crystallization of a trypsin inhibitor from soybean. *Science* 101(2635):668-69. June 29. [6 ref]

• **Summary:** “The presence of a protease inhibitor in soybean has been recently reported by Ham and Sandstedt (1944) and by Bowman (1944).” This paper “deals with the isolation from cold-processed defatted soybean meal of a crystalline protein which inhibits the proteolytic action of trypsin.” The method of isolation is described; it was done using Nutrisoy XXX from ADM, in flake form. Further studies are being conducted on the mechanism of the trypsin-inhibiting action, as well as on its physical and chemical properties.

Note 1. This is the earliest English-language document seen (March 2018) that contains the term “trypsin inhibitor” (or “trypsin inhibitors”) or the term “protease inhibitor” (or “protease inhibitors”) in connection with soybeans.

Note 2. This is the earliest document seen (March 2018) that mentions Kunitz in connection with a protease, or trypsin inhibitor in connection with soybeans.

Note 3. A footnote at the end of the title states: “This work was initiated at the suggestion of Major I.A. Myrsky in connection with his studies on streptococcal fibrinolysin...” Address: The Rockefeller Inst. for Medical Research, Princeton, New Jersey.

182. *Kansas Business Magazine*. 1945. Soybean processing. June. p. 8-10, 22-23.

• **Summary:** This excellent article lists 8 Kansas soybean processing plants and the annual soybean acreage in the state for the past 6 years. It contains much interesting information about Kansas soybean history since 1939.

Photos (p. 8) show: (1) Soybean field of Harry Paris in Ottawa County, Kansas, planted June 15; photo taken Aug. 15. (2) Storage bins and elevator at a Kansas soybean mill. 3. Soybean oil storage tanks. (3) Soybean oil storage tanks. (4) Soybean cake coming from an oil expeller after

the oil is extracted. (5) Bins (house shaped) for soybean storage (140,000 bu capacity). (6) Main barrel of oil expeller showing oil extruding from slits. (7) Cascade of soybeans from car to storage. (8) Filter press to clarify crude soybean oil.

Photos (p. 9) show: (1) Kansas Soybean Mills, Inc., Emporia, Kansas. (2) Kansas Soya Products Inc., Kansas City, Kansas. (3) Soy-Rich Products Inc., Wichita, Kansas. (4) Farmers Union plant, Girard (cooperative).

Tables show: (1) Soybeans harvested for beans in Kansas (Source: Federal-state agricultural statistician): Acreage increased from 8,000 acres in 1939 to 24,000 in 1940, to 47,000 in 1941, to 212,000 in 1942, to a local peak of 244,000 in 1943. Corresponding production and yield figures are also given.

(2) Kansas Soybean Processing Plants: Kansas Soybean Mills, Inc., of Emporia (Ted W. Lord, president), began operation in Nov. 1941—the first soybean processor in Kansas. They now have 3 expellers with an estimated capacity of 1,600 bushels/day. Kansas Soya Products, Inc., Kansas City, Kansas (Ted W. Lord, president), began operation in March 1944. They now have 3 expellers with an estimated capacity of 2,700 bushels. Forbes Bros. in Topeka has 1 expeller with 400 bushels capacity; temporarily operating on corn; no starting date is given. J.J. Thompson [sic, Thomson] & Son, of Hiawatha, began operation in April 1944. They have 1 solvent plant with an estimated capacity of 900 bushels. Soy-Rich Products, Inc., of Wichita, began operation in Feb. 1944. They now have 3 expellers with an estimated capacity of 2,350 bushels. Farmers Union Jobbing Assn. (a cooperative), of Girard, started operation in April 1945. They now have 1 expeller with an estimated capacity of 600 bushels. Consumers Cooperative Soybean Co., of Coffeyville, Kansas, expect to start operation in June 1945. They now have 2 expellers with an estimated capacity of 1,800 bushels. Archer Daniels Midland Co., of Fredonia, has been in operation since Feb. 1945. They use a hydraulic press for processing mostly linseed, but also some soybeans. The present plant capacity is 4,200 bushels/day. The number “3,000” is included in the table in the wrong column in a confusing way. It might refer to soybean processing capacity.

A chart titled “Uses of the soybean” shows the many different ways in which soybeans can be used.

Gives a brief history of the Lord family in Kansas, and the pioneering work of three generations (C.W. Lord, T.B. Lord, and Ted W. Lord) with grains and soybeans. “The Lord boys had incorporated their business in October 1940 with Ted W. Lord as president, Philip R. Lord as vice-president and secretary, and Richard W. Lord, now in the Army, as vice-president and treasurer.” They started operating Kansas Soybean Mills, Inc. in Emporia in Nov. 1941 with only one expeller that handled 400 bushels/day. Two more units were added to the plant there in 1942, bringing the capacity to 1,600 bushels/day by the summer of that year. “Later

additional grain storage tanks were added.”

With the successful operation of the Emporia plant as a background, the Lord brothers purchased an old mill, including large bins and a large building in Kansas City, Kansas, operating first with two units and then installing a third in March 1944, bringing it to 2,700 bushels daily capacity. The Emporia mill also makes its own brand of feeds for beef and dairy cattle, hogs, sheep and poultry. Mr. Lord sees a bright future for his soybean products after the war; he plans to reach new markets and anticipates “a big demand from export areas.” One big problem is jackrabbits, which jump fences to eat the tender, flavorful beans. Soybean production is expected to “grow as means of combatting rabbits is found...” Note: This March 1944 date is given in the table as the date the company began operation; one must be mistaken.

“The increase in the demand for soybean oil has accompanied the decreased output in cotton oil. Many makers of margarine and shortening are today utilizing soybean oil instead of cotton oil or peanut oil.

Most soybean processing plants are in the eastern half of Kansas since most of the soybeans are produced east of the Flint Hills. In 1944, counties with the largest production are: Cherokee—277,920 bushels, 23,160 acres; Anderson—220,480 bushels, 13,780 acres; Franklin—216,770 bushels, 12,980 acres.

183. *Soybean Digest*. 1945. Honeymead Products Co. opens new plant at Washington, Iowa. June. p. 14.

• **Summary:** “The Washington, Iowa, soybean processing and feed mixing plant of Honeymead Products Co. has been in capacity operation for about four months. The latest advance in the solvent extraction method is used in the processing plant, which is practically identical in design to the Honeymead plant at Spencer, Iowa, in operation since 1944. Capacity of each plant is approximately 2,000 bushels a day.

“The feed plant has a capacity of 50 tons daily and is designed for making a full line of Honeymead cattle, hog, and poultry feeds.

“Hugo Lensch, formerly purchasing agent for the firm’s Cedar Rapids plant, is general manager of Washington operations.”

A large photo shows the new plant at Washington, Iowa.

184. *Soybean Digest*. 1945. Grits and flakes... from the world of soy: Uses of soy flour. July. p. 22.

• **Summary:** “The question of types of soy flour available to bakers, the use of each type in bakery items, a table of the composition of each type and a few formulas for bakery products in which soy flours are used, are all covered in Bulletin 130 of the American Society of Bakery Engineers, prepared by Ralph M. Bohn, Archer-Daniels -Midland Co., Minneapolis [Minnesota]. A copy of this valuable bulletin

can be obtained on request to the secretary, Victor E. Marx, 1541 Birchwood Ave., Chicago 26, Illinois, if a 3¢ stamped addressed envelope is enclosed.”

185. *Soybean Digest*. 1945. Soybean plants of Archer-Daniels-Midland Co. Aug. p. 13.

• **Summary:** A half-page photo collage shows the company’s soybean processing plants located at Decatur [Illinois], Chicago [Illinois], Toledo [Ohio], Milwaukee [Wisconsin], and Buffalo [New York], and the interior of the home office in Minneapolis [Minnesota].

“The firm has a record of 106 years of service to the vegetable oil, feed and processed food industries. The biological research and development laboratory, one of the country’s largest, is under the able direction of Dr. J.W. Hayward, well known for his work on the nutritive value of soybean oil meal.” Address: Minneapolis, Minnesota.

186. Archer-Daniels-Midland Co., Soybean Division. 1945. Processors... (Ad). *Soybean Digest*. Sept. p. 84.

• **Summary:** In this ½-page ad a photo shows a man’s hand, against a dark background, with the palm facing upwards filled with soybeans. The small company logo shows an archer in a circle. Address: Roanoke Building, Minneapolis, Minnesota.

187. Honeymead Products Co. 1945. Again—Honeymead does it! Here are the two just completed Honeymead modern plants located at Washington and Spencer, Iowa (Ad). *Soybean Digest*. Sept. p. 77.

• **Summary:** At the top of this full-page black-and-white ad is a map of Iowa, with white stars and bold letters showing Spencer (in the northwest) and Washington (in the southeast). Cedar Rapids and other major cities is shown in smaller black letters. In the middle of the ad are two photos showing each of the new plants at Spencer and Washington, Iowa. The bottom third of the ad is text.

“The two new Honeymead plants in Washington, Iowa, and Spencer, Iowa, represent the latest advancement in extraction-type soybean plants. They are entirely new in idea. They are entirely new in method. They are most advantageously located. The result is that Honeymead Soybean Meal is uniformly of the highest quality.

“Equally new is the Honeymead equipment and laboratory control in these plants for mixing proteins, minerals, vitamin sources and Dextrose that go into scientifically balanced Honeymead mixed feed supplements. The result must be Honeymead Balanced Proteins of greatest feeding efficiency and feeding economy.

“What this means to soybean growers: As the production and number of Honeymead plants is increased, as more and more livestock feeders and poultry raisers feed Honeymead Balanced Proteins—the Honeymead Products Company will become a constantly growing outlet for soybeans, will play

an more important part in the expansion of the great soybean industry.” Honeymead is “proud to be listed among the membership of the American Soybean Association.”

188. Corman, L.B.; Hayward, J.W. 1945. Soybean products for dairy cattle. *Soybean Digest*. Oct. p. 12-13.

• **Summary:** The article begins: “Feed comes before food in our national economy. To the dairy farmer this means that soybean oil meal must be fed before the nation and peoples of the world can have milk and butter.” During World War II, the U.S. worked to become self-sufficient in oils and fats. The great demand for soybean products resulted in steady increases in the farm price of soybeans—which rose from the 1935-39 average of \$0.95 per bushel to \$2.13 as of 15 March 1945. With this favorable price, U.S. farmers currently harvest about 75% of their planted soybean acreage for soybeans as seed or grain, the majority of which ends up being processed. During 1944, soybean meal constituted about 40% of all the oilseed meals consumed by dairy cattle in the USA.

A portrait photo shows J.W. Hayward. Address: Members Soybean Research Council; ADM.

189. *Soybean Digest*. 1945. Archer-Daniels-Midland laboratory. Oct. p. 14.

• **Summary:** This new 40,000 square foot research laboratory is in Minneapolis, Minnesota. Biological research and development on soybean products will be under the personal direction of Dr. J.W. Hayward. Research on soybean oil and lecithin in the paint and industrial fields will be directed by S.O. Sorensen.

190. *Soybean Digest*. 1945. New soybean plant at Mankato, Minnesota. Nov. p. 33.

• **Summary:** S.M. Archer, president of the Archer-Daniels-Midland Co., Minneapolis, Minnesota, has announced plans to build a new feed concentrate mixing and soybean processing mill on the north outskirts of Mankato, Minnesota. The new plant will be known as the “Mankato mills division of Archer-Daniels- Midland Co.” P.L. Kimble will be general manager of the division.

Besides the mixing and processing plant, elevator space will be constructed with a capacity of 500,000 bushels of soybeans and ingredients. The plant is expected to be completed in early 1946.

Note: Construction of this plant was delayed until 1950.

191. *Soybean Digest*. 1945. Brierley heads soy flour group. Dec. p. 45.

• **Summary:** A photo shows R.G. Brierley, who was “recently elected to succeed E.J. Dies as president of the Soy Flour Association. Brierley is manager of the soy products division of Archer-Daniels-Midland Co. and the Commander-Larabee Milling Co. of Minneapolis,

Minnesota. He has been a member of the soy flour advisory committee of the War Food Administration in Washington [DC] and has played an active part in the government's program for utilizing soy products for foreign relief feeding. The Soy Flour Association represents all the major processors of soy flour in the country."

192. Eastman, Whitney H. 1946. The future of the soybean industry in the United States. *Chemurgic Digest*. Jan. 15. p. 33-34.

• **Summary:** Discusses the reasons for the phenomenal and stable growth of the soybean industry in America but raises two key questions about the crop's future following deregulation following World War II: "(1) Will the demand for soybean products continue to expand, and (2) Can the domestic soybean industry compete under a free economy with competitive products of domestic and foreign origin."

The author was formerly vice president of Archer Daniels Midland Company, in charge of soybean operations. He organized the National Soybean Processors Association and served as its president for a number of years. Address: Chemical Div., General Mills, Inc., Minneapolis, Minnesota.

193. Ontario Retail Feed Dealers' Association. 1946. Year book, 1944-45. Toronto, Canada. 91 p. Undated.

• **Summary:** On page 11 is a full-page ad that reads: "Toronto Elevators Limited. Toronto. Montreal. Grain. Linseed oil and meal. Soy bean oil and meal. Master Feeds." Inside the diamond-shaped logo is the word "Telco" and a drawing of many large grain elevators. A photo shows the same large elevators; on them is written "Master Feeds." The book contains the name, address, and phone number of many retail dealers. No such information is given for Toronto Elevators.

On page 3 is a list of the Association's officers for 1944-1945, and another list for 1945-46. The president for both terms was W.M. VanSickle of Campbellville.

Note 1. This is the earliest document seen (Aug. 2019) stating that Toronto Elevators Ltd., in Canada, is processing soybeans.

Note 2. Letter from Dave Duttonham, Executive Vice-President of the Ontario Grain & Feed Association in Ontario. 1997 March 3. His Association owns this Year Book. Looking at page 3, he would guess that was published in about January or February of 1946. Address: Toronto, Canada.

194. Archer-Daniels-Midland Co. 1946. Archer Quality soybean processors (Ad). *Soybean Digest*. April. p. 28.

• **Summary:** This half-page ad looks like a bronze plaque.

The upper half features the Archer logo, with a Robin Hood-like figure about to shoot an arrow from a bow. Across the bottom is written: “Creating new values from America’s harvests.”

Note 1. This is the 2nd earliest document seen (July 2020) that contains the phrase “Creating new values from America’s harvests.” The earliest appeared in the March 1946 issue, p. 34. This ad also appeared in the May issue, p. 28.

Note 2. Later publications show that this phrase / tagline subtly refers to ADM’s active interest in chemurgy and in industrial utilization of farm crops.

195. National Soybean Processors Assoc., Soybean Research Council. 1946. Proceedings—Conference on Flavor Stability in Soybean Oil. Chicago, Illinois. 98 p. Held 22 April 1946 at the Bismarck Hotel, Chicago, Illinois. [53 ref]

• **Summary:** This historic meeting—the first ever to discuss the flavor stability of soybean oil—is held under the auspices of the Soybean Research Council, National Soybean Processors Association.

In his introductory remarks (p. 2-3), Edward J. Dies, chairman of the board, National Soybean Processors Association, Edward J. Dies, described the purpose of the meeting and made a plea for a joint effort: “I cannot too strongly emphasize the economic advantages of a rapid solution of the problem of flavor stability in soybean oil and soybean oil products. This is essential as a means of increasing the nation’s supply of high grade edible fats. Solution of this problem also should ultimately lower the average cost to the consuming public by reason of greater ease in handling by the various manufacturing units involved.”

“This meeting today was a deliberate move to bring together the best research minds in the nation who are engaged in work on this subject. The basic hope has been that we might be able to facilitate a free exchange of ideas and subsequently promote special collaboration among the workers engaged in this field. It is my humble opinion that the success of the conference will depend upon the degree to which those present are willing to exchange knowledge and viewpoints on this subject which would prove of benefit to all, and, moreover, to the extent that the several laboratories engaged in research on the problem are willing to cooperate.”

“Any advantage to an individual or a corporation in attaining a solution before the answer were generally known generally would be of only temporary and transitory value. It would appear to be a problem of general interest, and one whose solution could be brought about speedily through the composite talents of the group, and by reason of free and open exchange of ideas and recommendations.”

The 28 attendees, listed alphabetically, included: O.H. Alderks (The Procter and Gamble Co.), H.C. Black (Swift

and Co.), R.A. Boyer (The Drackett Co.), G.N. Bruce (Durkee Famous Foods), John C. Cowan (Northern Regional Research Lab.), B.F. Daubert (Univ. of Pittsburgh), Edward J. Dies (National Soybean Processors Assoc.), Maurice Durkee (A.E. Staley Mfg. Co.), Herbert J. Dutton (Northern Regional Research Lab.), Egbert Freyer (Spencer Kellogg and Sons, Inc.), Calvin Golumbic (Univ. of Pittsburgh), Warren Goss (Northern Regional Research Lab.), Arne Gudheim (Lever Brothers), J.K. Gunther (Central Soya Co., Inc.), Fred Hafner (Archer-Daniels-Midland Co.), R.G. Houghtlin (National Soybean Processors Assoc.), H.T. Iveson (The Glidden Co.), J. Jakobsen (General Mills, Inc.), N.F. Kruse (Central Soya Co., Inc.), Herbert W. Lemon (Ontario Research Foundation, Toronto, ONT, Canada), Herbert E. Longenecker (Univ. of Pittsburgh), Ralph H. Manley (General Mills, Inc.), Karl F. Mattil (Swift and Co.), R.T. Milner (Northern Regional Research Lab.), W.W. Moyer (A.E. Staley Mfg. Co.), F.W. Quackenbush (Purdue Univ.), H.E. Robinson (Swift and Co.), J.H. Sanders (The Procter and Gamble Co.), L.A. Spielman (The Glidden Co.). Contents:

Contents: Introductory Remarks, by Edward J. Dies, Chairman of Board, National Soybean Processors Association

The Economic Significance of Soybean Oil Flavor Stability, by H.E. Robinson, Assistant Director of Research, Swift and Company, Chicago

The Practical Evaluation of Flavor Stability, by O.H. Alderks, Associate Director, Chemical Division, The Procter and Gamble Company, Ivorydale, Ohio

The Possible Relationship of Iso-Linoleic Acid to Flavour Stability in Hydrogenated Linseed and Soybean Oils, by Herbert W. Lemon, Research Fellow, Ontario Research Foundation, Toronto

Some Observations on the Type of Reaction Effecting Flavor Stability in Soybean Oil, by H.C. Black; Research Chemist, Swift and Company, Chicago

A Review of Research Activities of Procter and Gamble Company on the Flavor Stability of Soybean Oil, by J.H. Sanders, The Procter and Gamble Company, Ivorydale, Ohio

The Significant of Temperature and Light as Well as Iodine Value on the Flavor and Odor Stability of Processed Soybean Oil, by Arne Gudheim, Research Department, Lever Brothers, Cambridge, Mass.

Flavor Stability in Soybean Oil and Soybean Flours, B.F. Daubert and Calvin Golumbic, University of Pittsburgh

The Relationship of Phospholipids to Flavor Stability in Soybean Oil. I. Evaluation of German Water Washing and Citric Acid Treatments, by Herbert J. Dutton, Helen A. Moser, and John C. Cowan, Northern Regional Research: Laboratory, Bureau of Agricultural and Industrial Chemistry, U.S. Department of Agriculture, Peoria, Illinois

General Discussion, Led by Herbert E. Longenecker, Dean of the Graduate School and Professor of Biochemistry,

University of Pittsburgh

Bibliography and Abstracts of the Literature on Flavor Stability in Fats and Oils, Prepared by Miss Margaret Hilligan, Research Librarian, General Mills Research Laboratories, Minneapolis, Minnesota

Note: Between April 1946 and April 1958 the Soybean Research Council of the National Soybean Processors Association sponsored twelve 1-day conferences or symposia at which papers were presented concerning "flavor stability in soybean oil" by leading researchers in the field. An open discussion followed each paper. These conferences were important in solving the problem of off-flavors in soybean oil, which was generally considered the biggest problem facing this oil and the industry that made it. Great progress was made during these 12 years and, largely as a result, soy oil came to be the leading edible oil in the USA. Address: [3818 Board of Trade Building, Chicago, Illinois].

196. Carlson, Shirley C.; Hafner, F.H.; Hayward, J.W. 1946. Effect of soy flour and non-fat dry milk solids in white bread on the nutritional quality of the protein as measured by three biological methods. *Cereal Chemistry* 23(3):305-17. May. [27 ref]

• **Summary:** Supplementation of wheat flour with 3-5% soy protein in the form of soy flour. "All the methods used showed that the proteins of the two white soy breads and the two white milk breads were superior in nutritional quality to the protein of white water bread." The experimental data below demonstrate the similar nitrogen balance values of breads made with soy flour and dry milk solids:

White Bread: True digestibility 93%. Biological value 39%

3% White Soy Bread: True digestibility 95%. Biological value 46%

3% White Milk Bread: True digestibility 94%. Biological value 46%

5% White Soy Bread: True digestibility 92%. Biological value 51%

6% White Milk Bread: True digestibility 94%. Biological value 49%

Whole Wheat Bread: True digestibility 93%. Biological value 46%. Address: Archer-Daniels-Midland Company, Minneapolis, Minnesota.

197. *Staley Journal (Decatur, Illinois)*. 1946. Technicians work with soy flour. May. p. 31.

• **Summary:** "With their goal the standardization of all soy flours, members of the baking committee of the Soy Flour association spent a week recently working together in the Staley bakery laboratories. Meetings for this collaborative work have been scheduled for intervals to cover a period of several months. During the time they are together the technicians work on the problems of soy flour in bread, rolls, sweet goods, cakes, biscuits and crackers. By so working

together they hope to standardize their products, claims and directions for use in various bakery products.

"At these meetings the members make bread, cakes, sweet rolls and other bakery products with and without soy flour, using various formulae and methods of mixing and handling. The resulting products are judged and scored, usually by an outside expert.

"The members of this committee—all bakery technicians—are Ralph M. Bohn, Archer-Daniels-Midland Co., Minneapolis; Homer W. Kuehn, Central Soya Co., Fort Wayne, Indiana; Floyd Crego, Spencer Kellogg Sons Co., Buffalo [New York], and Larry Trempel, A.E. Staley Mfg. Co., Decatur. Harold Grabill, of the Glidden Co., who was a member of the committee, died recently. A.E. Ledger, of the Soy Flour Association, Chicago, also worked with the committee in Decatur.

A one-third page horizontal photo shows men standing between an oven and a table topped with baking pans.

Caption: "Soy flour technicians view cakes as they come from the oven. They are Floyd Crego, A.E. Ledger, Ralph Bohn, Larry Trempel and Homer Kuehn."

198. McWethy, John A. 1946. Soybean success: War boom continues as many plants expand, bring out new products. Examples: Meat flavor, wool-like fibre, bottle cap adhesive, soymilk cheese. St. Louis meeting draws 400. *Wall Street Journal*. Aug. 31. p. 1.

• **Summary:** This article is about the 3-day meeting of the American Soybean Association in St. Louis, Missouri. The soybean industry thrived during the depression, more than doubled in size during World War II, and is now continuing to grow. The A.E. Staley Manufacturing Co., America's largest soybean processor, has just started construction of a new \$1 million plant that will turn soybeans into monosodium glutamate (MSG), making one million pounds a year. MSG has been previously made on a small scale in the USA from wheat, but Staley's plant will be the first to make it on a large scale from soybeans.

The Drackett Co. in Cincinnati is putting the finishing touches on a commercial plant that will make a wool-like fibre from soybeans. Robert A. Boyer, the firm's research director, said the new fibre will be used mostly for blending with rayon. He thinks it may sell for less than wool.

ADM, one of America's four largest soybean processors, earlier this year completed a plant to make a "whipping agent" from the versatile soybean; it can replace egg albumin, which is much more expensive.

Dr. Harry W. Miller, president of the International Nutrition Laboratory (Mt. Vernon, Ohio), "started making soybean products in Shanghai, China, in 1935. Bombed out in 1937 by the Nips [Nipponese = Japanese], he came to this country and began making similar products here in 1939. Now his firm does a \$500,000 a year business and could do a lot more if sugar and other ingredients used with soybeans

were available.” His most popular items are [soy] milk, cutlets, and canned green soybeans. He says the milk tastes “rather like malted milk and is especially good for infants and others allergic to animal milk. His company has also developed a cheese made from soymilk [tofu], a prepared mix for ice cream from the soymilk, and “albumen sheets” [yuba], which are very popular in China.

These sheets aren’t much thicker than a piece of paper and are used in China to make the layers of a loaf filled with mushrooms. The Chinese also use soybeans [yuba] to make products that taste like both fish and chicken. In American kitchens, an excellent substitute for butter can be made “by combining soya oil, soya milk,” carotene oil for color, and salt.

One big American breakfast cereal maker is said to be planning to introduce a “soya flake cereal soon, similar in appearance to cornflakes. Another may soon market a puffed soyabean cereal, a third may introduce a cooked cereal made from soybeans, oats and wheat.”

General Mills is building a factory for producing a synthetic resin from soybeans—a product developed at the Northern Regional Research Laboratory in Peoria, Illinois. Dr. G.E. Hilbert, NRRL’s director, says this new resin shows “considerable promise as a protective coating and as a heat-sealing and moisture-proofing agent.

During the past few years, soybean processors have been switching to the solvent extraction systems, from the expeller system, for obtaining oil from soybeans. Most newer plants use hexane solvent. The advantage of the solvent system is that it removes all but about half of one percent of the oil, compared with 3½% to 5% left in the meal when expellers are used. The meal currently sells for 3 cents/lb compared with 11.75 cents/lb for the oil.

NRRL has recently developed a process that uses alcohol instead of hexane. This yields superior “soyflour.” Before the war, production of soyflour was 25 million lb/year; this year it is expected to top 400 million lb. Roth Products Corp. of Chicago has already used 6 million pounds of soyflour this year in its dehydrated soups, baked goods, pancake flour mixes, and sausage filler.

The soybean industry (especially the NRRL) is also working to make soybean oil more stable. It “has a tendency to develop a grassy or painty flavor on standing.” A process obtained from Germany “goes a long way toward preventing the development of these objectionable flavors.”

The Lincoln soybean variety, developed at the U.S. [Regional] Soybean Laboratory at Urbana, Illinois, and first made available to farmers during the war, is playing a major role in increasing yields. Today farmers in the corn belt are getting 25-30 bushels/acre with Lincoln, compared with only 15-16 bushels/acre in the early 1920s with varieties then

available. Moreover, today’s soybeans contain 20-21% oil compared with only 15-17% about 20-25 years ago.

199. *Soybean Digest*. 1946. Grits and flakes... from the world of soy: Research work of Archer-Daniels-Midland Co., Minneapolis [Minnesota] soybean processors, was praised by Congressman Frank B. Keefe of Wisconsin... Aug. p. 24.

• **Summary:** “... in hearings before a House appropriations subcommittee. The amount of money the firm spends on research is ‘terrific,’ said Keefe.”

200. Collins, Jimmy. 1946. Company converts soybeans into ‘cream’ whip. *Buffalo Evening News (New York)*. Sept. 18.

• **Summary:** “The Rich Products Corporation, 1149 Niagara St., formed only a year ago, has hit the post-war consumer market with a new whipping cream derived from soybeans. Demand is exceeding production. The product already is being marketed in 30 states, Alaska, Hawaii and Bermuda, and will be distributed in other areas.

“Headed by the youthful Robert E. Rich, the company markets the soybean cream under the trade name of ‘Whip Topping.’ The product consists of soy protein, vegetable fat, carbohydrates, salt, flavoring and coloring. The soybean cream, packed in half-pint cartons, whips exactly as regular cream. It puffs up quickly to triple its bulk and may be used for dressing up pies and cakes and other delicacies.

“The company has spent nearly \$60,000 for new plant facilities and machinery to increase production. Mr. Rich said it is the nation’s only producer of soybean cream.

“We are producing approximately 1,000,000 half-pints a month but we expect we will have to step up production

further in the near future,' Mr. Rich said. 'Our plant is working 24 hours a day, seven days a week and employs 47 workers.'

"Mr. Rich also is owner of the Wilber Farms Dairy, which is housed in the building in front of the structure occupied by Rich Products.

"Mr. Rich said the volume of sales of the soybean product already exceeds milk sales by the dairy."

A photo shows Robert Rich and employee Marshall Golding standing next to a mixing vat. Rich is examining a temperature gauge as Golding "dumps a 50-pound cake of soy fat into a pasteurizer containing soy milk." The caption reads: "Soybeans offer competition for 'Bossie.'"

Note: In the early years, when Rich Products Corp. used soy protein as the protein source in its non-dairy products, it obtained the protein from defatted soybean flakes purchased from the Archer-Daniels-Midland Co. (ADM). Rich then used hot water to extract the soy protein from the flakes. In effect, he was using isolated soy protein as the protein source for his whip topping.

201. Eastman, Whitney H. 1946. The growing importance of the soybean in our national economy. *Soybean Digest*. Sept. p. 21-22.

• **Summary:** Editor's introduction: "Mr. Eastman is president of the chemical division of General Mills, Inc., and formerly vice president of Archer-Daniels-Midland Co., in charge of soybean operations. He organized the National Soybean Processors Association and served as its president for a number of years.

"Much has been spoken and written during the past 20 years about the economic importance of the soybean crop in this country. Conservative, courageous and fearless men have expressed their views. They have received the cold facts as they know them, based on actual experience with some phase or segment of the industry.

"Agronomists, soybean growers, industrialists, scientists and economists have all spoken or written favorably of their experience with the crop. However, during this 20-year period in which the crop has been commercially grown and utilized, there has been an unusual amount of unsolicited propaganda by journalists, promoters and publicity seekers. The wonder bean of the orient has been romanced and given much undeserved credit for properties it does not possess.

"The crackpots and dreamers have shouted vociferously about the virtues and properties of the magic bean. Some of this propaganda has been disseminated by overenthusiastic, 'get rich quick' newcomers in the business.

"Great harm has come to the industry because of this excessive applause. It has been difficult for the consuming public to evaluate the statements and claims made by this vociferous group of careless, irresponsible people. It has likewise been a real task for those who have accepted leadership in the industry to develop a sound long-range

program, because of all the confusion caused by a strong crosscurrent of public opinion.

"Scare Crows: In addition to all this disturbing propaganda, some small but influential groups have hung out a few economic 'scare crows' to stifle sound and justified enthusiasm or to otherwise further their own selfish interests. These 'scare crows' are but straws in the wind to forewarn us of things to come. Who knows but that our future enemies—perhaps unknown to us now—are at work among us laying plans to effectuate economic strangulation in a possible future world conflict?

"If there was ever a need in the history of this nation for a sound, unified national program to safeguard our domestic oilseed crops for the purpose of insuring national security and independence, we need such a program now. Tomorrow may be too late.

"The importance of vegetable oils as well as vegetable protein concentrates in helping to win World Wars I and II is well known to the economic and military strategists of every country on the globe. The importance of our domestic soybean crop in helping to win the last World War is equally well known.

"What are we going to do to safeguard this national asset? It seems to me it has already been demonstrated by our experience with the soybean crop during the past 20 years that this crop has attained a high ranking place in our agricultural and national economy.

"Many people are prone to believe that without the two World Wars the soybean industry would never have developed in this country and that it will now shrink back to a relatively unimportant place in postwar years. The simple facts are incontrovertible and refute any such line of thinking.

"Prior to the first World War, the soybean crop was already establishing itself firmly in this country, primarily as an additional crop in our agricultural crop rotation program. During the period between the two great World Wars, the domestic soybean industry, under proper tariff protection—to avoid disastrous foreign competition from the cheap labor abroad—grew up in its own right as an important segment of our agricultural economy and as a vital part of our national economy.

"It is true that the last World War did provide impetus to the soybean industry much the same as it did for many other industries. But what reason have we to believe that the soybean crop or the industry as a whole will shrink back to an unimportant segment of our total oilseed industry in future years?

"Again the economic facts seem unmistakably clear, if we are willing to recognize them and do not try to circumvent them. We must be sure, however, that there are not some obscure or yet unforeseen economic or political factors lurking in the shadows of our international relations.

"Broad Base: The soybean crop has a broad utility

base. No other oilseed crop can be utilized for such a diversification of uses. Probably no other oilseed crop affords the same opportunity for research and the development of new and useful products for all mankind. Untold possibilities are at once evident when one realizes that the soybean contains a most unique and unusual combination of protein, carbohydrates, fat, vitamins, minerals, enzymes and phospholipids. This varied composition of the soybean, combined with the easy accessibility of these natural treasures, places soybeans in a pre-eminent position among our oilseed crops as an economical source for several basic ingredients for processed food products and a wide variety of manufactured products for the technical trades.

“Assuming that we are not going to permit this country to become wholly dependent upon the other oilseed and nut producing countries of the world for our national requirements of vegetable oils and vegetable protein concentrates either in time of peace or war, what oilseed crop are we going to grow as the one major crop to insure national economic security? The answer seems to point to soybeans.

“There are several basic underlying reasons why the soybean crop appears to answer most if not all of the prerequisites for an all-purpose oilseed crop in this country. Soybeans can be grown profitably throughout a rather extensive area in competition with other oilseed crops and our heavy-yielding grain and cereal crops.

“Increasing numbers of smart farmers have learned from their county agents, their agronomist advisors, the agricultural colleges and from their own book of experience in growing soybeans over a period of years, that the net returns from the crop cannot be accurately measured by the price per bushel paid for soybeans in the marketplace at harvest time.

“Noticeable benefits are derived from the companion or synergistic relationship of certain crops grown in rotation. Progressive and prosperous farmers, having observed this agronomic phenomenon, have learned to measure their overall net farm income, not for one single crop or for a single crop year, but for their total farm income for the period of the crop rotation cycle established for a particular farmer in a specific locality.

“The crop has proven itself to be the safest oilseed crop from the standpoint of resistance to disease, insect pests and adverse weather and is exceedingly well adapted to our soil and climatic conditions over an extensive area. The soybean is economically well proportioned in its percentage relationship of oil and protein, making it possible for industry to pay producers a relatively high price for soybeans in relation to the value of the finished products.

“The oil is an all-purpose oil used to equal advantage in the food and technical [industrial] fields, and the protein is likewise an all-purpose protein which finds widespread use as food for humans and animals and as a valuable low-cost product in industry. As further unmistakable evidence that

the soybean crop has a broad utility value, there has never been a sufficient supply of soybeans to satisfy the demand during the last 20 years.

“The use for soybean products, the industrial plants to produce them, and the technology in industry have always kept ahead of soybean production. There are no serious danger signals ahead which would lead us to conclude that the demand for soybean products is going to decline, but on the contrary there is growing evidence and confidence that the demand for soybean products will continue unabated. There is likewise a growing feeling on the part of a widespread group of agricultural and industrial economists that the demand for soybean products will soon exceed the demand for all other domestic oilseed products combined. The feeling is persistently strong that this broad demand for soybean products can be met at price levels which will permit the soybean processor to pay the grower an attractive price” (Continued). Address: President, Chemical Div., General Mills, Inc.

202. Hayward, J.W.; Corman, L.B. 1946. Utilization of soybean oil meal for livestock and poultry. *Soybean Digest*. Oct. p. 10-11.

• **Summary:** “This paper was presented by Dr. Hayward at the recent convention of the American Soybean Association at St. Louis” [Missouri]. Contents: Introduction. Grains out of balance. Compositions and new developments.

Tables show: (1) Production of soybean cake and meal in the United States, 1940-41 to 1944-45 (in 1,000 tons). Source: War Food Administration. Production increased from 1,543.4 in 1940-41 (29.35% of the production of all oil seed meals) to 3,672.4 in 1944-45 (52.56% of the production of all oil seed meals).

(2) Composition of soybeans and soybean oil meal. There are columns for: (a) Nutrients. (b) Soybeans, milling. (c) Midwest varieties. (d) 41 and 43% expeller. (e) 44% extracted. Address: Archer-Daniels-Midland Co.

203. *Soybean Digest*. 1946. Grits and flakes... from the world of soy: Civilian Production Administration has granted Archer-Daniels-Midland Co... Dec. p. 28.

• **Summary:** “... permission to build a \$250,000 plant to process soybean and linseed oils into fatty acids. The project is part of the firm’s 5 million dollar expansion program.”

205. Lewis, Jessica H.; Taylor, F.H.L. 1947. Comparative utilization of raw and autoclaved soy bean protein by the human. *Proceedings of the Society for Experimental Biology and Medicine* 64(1):85-87. Jan. [14 ref]

• **Summary:** Why does raw soy bean flour need to be heated?

In 1917 Osborne and Mendel, in a pioneering study, showed that rats fed raw soy bean flour grew more slowly than a control group fed autoclaved soy flour.

In 1936 Hayward, Steenbock and Bohstedt confirmed these findings and suggested that this was not due to a difference in palatability but rather to a deficiency in the raw flour.

Later investigations in the 1940s showed that this increase in biological activity produced by autoclaving the raw flour was due to an increase in the level or rise in the availability of sulfur-containing amino acids. By the 1940s it was clear that autoclaved soy bean flour had a high biological value similar to that of egg white.

But recently another explanation has been put forth to explain the lower biological value of raw soy bean protein. Ham and Sandstedt (1944) isolated a trypsin-inhibiting substance from unheated soy bean flour which they believed was identical to its growth-retarding action.

In 1945 Kunitz isolated this trypsin inhibitor in crystalline form.

This study on humans concluded: "Both raw and autoclaved soy bean protein support positive nitrogen balance in the adult human. 2. Nitrogen retention is about 20% greater with the autoclaved material than with the raw material."

Note: This is the earliest document seen (Nov. 2019) showing that the nutritive value of soybeans for humans is improved by heating. Address: Boston City Hospital & Dep. of Medicine, Harvard Medical School, Boston, Massachusetts.

206. USDA Northern Regional Research Laboratory. ed. 1947. Report of Soybean Industrial Conference held at the Northern Regional Research Laboratory, Peoria, Illinois, February 27-28, 1947. Peoria, Illinois. 23 p.

• **Summary:** "The meeting was attended by representatives of the U.S. Department of Agriculture, the Agricultural Experiment Stations, the soybean growers, the processing industry, and manufacturers of such commercial items as margarine, shortening, and protective coatings. Dr. G.E. Hilbert, Director of the Northern Regional Research Laboratory, welcomed the participants and explained the reasons for holding these sessions. The objective was first to obtain the views of all the representatives of the growers and industrial groups regarding the technological problems which the soybean industry will face during the next five to ten years. Using these problems as a basis, it was desired that the representatives of the various scientific research organizations then could plan the course to be followed in order to find answers to at least the most important of these questions.

"The meeting then was turned over to Dean H.P. Rusk of the Illinois Agricultural Experiment Station who acted as chairman.

"The prepared manuscripts which served as bases for the ensuing discussions will be printed in *The Soybean Digest*" [May through July, 1947].

A discussion which followed many of the papers is summarized in this document. No mention of these discussions appears in *Soybean Digest*.

Note 1. In the paper by Dr. J.W. Hayward titled "Problems in the use of soybean oil meal for feed and soy flour for food," his position is given as "Chairman, Soyfood Research Council."

Note 2. This is the earliest document seen (Sept. 2011) that contains the word "Soyfood." However, Hayward was actually chairman of the "Soya Food Research Council." Address: Northern Regional Research Lab., Peoria, Illinois.

207. Eichberg, Joseph. 1947. Soybean lecithin comes of age (Continued—Document part II). *Chemurgic Digest*. March 31. p. 109-11.

• **Summary:** (Continued): "As previously mentioned lecithin is a vital constituent of cells and plays a part in cell metabolism. It therefore would on theoretical grounds be a desirable ingredient of cosmetic preparations. Indeed, experience has shown that skin creams made with a small percentage of lecithin exhibit greater softening and penetrating properties. So-called 'wrinkle' creams have been compounded with rather high percentages of lecithin. More highly purified or blended grades are desired for use in cosmetics and soaps.

"The bleaching of soybean lecithin can be done without impairing the quality by subjecting the lecithin emulsion as it comes from the centrifuges in the course of its isolation to the action of hydrogen peroxide or dibenzoyl peroxide or both. Complete removal of the carrier of soybean oil may be accomplished through treatment with a selective solvent such as acetone. A grade free from soybean oil is preferred for use in soaps. In brushless shaving creams however excellent results are obtained with the standard commercial grade.

"By the middle 1930's production of soybean lecithin in this country was well underway. The controlling patents were acquired from the German owners by the American Lecithin Company and licenses granted to The Glidden Company and to the Archer-Daniels-Midland Company. When war came, this country was independent of foreign sources for its lecithin supply. Licenses have since been granted to other processors and are available to the industry on uniform terms.

"The shortage of fats which developed during the war and which still persists served to underline the utility of lecithin as a means of getting the utmost value from every pound of fat. Lecithin entered directly into the manufacture of certain war materials. It was specified in an important type of protective coatings. It served the G.I. in his chocolate beverage powder and it counteracted rancidity in the lard shipped overseas to the armed forces.

“Before the war progressive bakers had been experimenting with lecithin. They found that it caused a better mixing of ingredients, a shorter, richer product. Especially notable were the effects in bread where 0.15 percent of soybean lecithin gives a dryer, smoother handling dough that machines with fewer stickups, and a finished loaf of uniform texture and longer shelf life. Pie bakers and biscuit makers found comparable advantages.

“The scientific literature contained reports from about 1928 describing how lecithin improved macaroni products by reducing disintegration during boiling and enabling manufacturers in some countries to use more of the lower protein flours available to them. This information was never of much interest here because of the high quality of the flours milled from American wheat. Recent experiments have shown, however, that other advantages can be expected and that soybean lecithin will prevent much of the color loss that occurs during preparation of noodle and macaroni products. This loss is attributed to the oxidation of carotenoid pigments contained in the flour.

“The antioxidant effects of lecithin were early recognized. It has been successfully used in vegetable oils, lard and oleo oils, fish liver oils and Vitamin A concentrate and in sulfonated oils, as a rule in small fractions of a percent. The same action has been utilized to control oxidation in dyeing with some textile colors. Various patents have been issued on its use as an inhibitor in lubricating oils. However, in the face of leaded motor fuels lecithin is thought to act more as a solubilizing or peptizing agent than as an antioxidant.

“The emulsifying properties of lecithin act not only through fats but may be employed where water is essentially the only medium. Ice cream and sherbets or water ices afford examples. In general, lecithin promotes the oil-in-water type of emulsion. While the standard commercial grade can be employed to some extent if a suitable pre-mix of fine distribution is prepared beforehand, it is desirable to use a type which will emulsify readily with the mix. The lecithin imparts smoothness, desirable dipping and melt-down properties and in the case of chocolate ice cream not only acts as emulsifying agent for the cocoa butter present in the chocolate but also protects against adverse effects of the alkaloids present, for example on the strength of the gelatin.

“A small amount of fat is added in making various confections. such as caramels. nut brittles, kisses. etc., and when lecithin is present this fat instead of floating around on the surface of the hot batch is taken up and uniformly mixed throughout. Freedom from greasiness. better chewing qualities and longer shelf life result. Most natural fats are a mixture of glycerides of different melting points; when lecithin is incorporated, even as little as .01 percent, these fractions become more compatible. The effect is utilized in compound type shortenings and in winterized salad oils.

“The commercial uses for soybean lecithin far

outripped its use in medicine in spite of earlier interest in the latter. To no small degree this was due to the type of material originally available which was exclusively lecithin of animal origin and also due to the lack of sufficient laboratory and clinical research. Most of the animal lecithin products contained cholesterol as an impurity. Furthermore, the quantities administered were either minimal or entirely inadequate.

“About seven years ago the American Lecithin Company initiated a research program enlisting the assistance of qualified scientists and physicians to study the effects of soybean lecithin in maladies resulting wholly or in part from deranged lipid metabolism. This investigation has also included work on cholesterol imbalance, a factor contributing to hardening of the arteries and heart disease associated with that condition. The refining and processing of many foods extracts. destroys or alters the naturally occurring phosphatides and may account for deficiencies in modern diets. It has been shown that commercial soybean lecithin contains choline and inositol, both of which are regarded as members of the Vitamin B complex and according to animal experiments the minimum daily requirement for choline is rather high.”

“The recovery of soybean lecithin has enhanced the dollar value of the products derived from the soybean and has placed a new tool in the hands of industry and medicine. It seems safe to predict a continued increase in production and consumption.” Address: President, American Lecithin Co., Inc., Elmhurst, Long Island, New York.

212. Andrews, W.G. 1947. The soybean—myth or miracle?  
*Paint, Oil and Chemical Review* 110(9):18, 20, 22, 24, 28-  
 30, 32, 34. May 1. [1 ref]

• **Summary:** This very positive and general article about  
 the benefits of soybeans begins with a long excerpt from an  
 article in *Time* magazine (11 Nov. 1940) about Henry Ford  
 swinging an ax against the plastic rear end of a special Ford  
 car.

A portrait photo shows W.G. Andrews. Address: Archer-  
 Daniels-Midland Co.

213. Bird, H.R.; Boucher, R.V.; Caskey, C.D., Jr.; Hayward,  
 J.W.; Hunter, J.E. 1947. Urease activity and other chemical  
 criteria as indicators of inadequate heating of soybean oil  
 meal. *J. of the Association of Official Agricultural Chemists*  
 30(2):354-64. May 15. [7 ref]

• **Summary:** Soybean oil meal, which used to be a relatively  
 minor member of the group of high-protein feedstuffs, is  
 now a major member of that group. Information that was  
 adequate when this meal was commonly fed as 5% of the  
 diet may be inadequate when it constitutes 20-25% of the  
 diet. It is known that both under-heated and over-heated

meals are of inferior nutritive value. Address: 1. Bureau of Animal Industry, Agricultural Research Administration [USDA], Beltsville, Maryland.

214. Carlson, Shirley C.; Herrmann, E.C.; Bohn, R.M.; Hayward, J.W. 1947. A nutritional study of the fortification of graham-type crackers with soy grits, calcium, and several vitamins. *Cereal Chemistry* 24(3):215-24. May. [17 ref]  
 • **Summary:** Graham-type crackers, fortified with soy grits (30% soy grits replaced an equal amount of graham flour, and calcium, riboflavin, niacin, carotene, and vitamin D were added), have nutritional properties that are much better than those of regular graham crackers.

Rats fed the fortified crackers grew at the rate of 2.8 gm per day for the first 8 weeks. All rats were alive and healthy at the end of 26 weeks. However all rats fed regular graham crackers as their *sole* source of foods, lost weight for the first 8 weeks and died at the end of 9-20 weeks.

These studies indicate that the regular graham crackers are deficient mainly in protein, rather than in vitamins and minerals.

Acknowledgment: Thanks to Fred Hafner, a former member of ADM's research staff, for his assistance in the initiation and planning of the nutritional studies. Address: Depts. of Nutrition & Food Research, Archer-Daniels-Midland Co., Minneapolis 2, Minnesota.

215. Hayward, J.W. 1947. Problems in the use of soybean oil meal for feed and soy flour for food. *Soybean Digest*. July. p. 16, 18, 19, 21-22, 24.

• **Summary:** This speech was presented at the Soybean Conference at Peoria, Illinois, in February.

Soy flour projects (p. 22): "These projects were concerned with such things as taste appeal of soy bread after continuous use of it; effect of different levels and of different types of soy flours on the baking qualities of bread; stability of soy flour; insects infesting soy flour during storage; and numerous other types of projects.

"Dr. A.K. Smith here at this U.S. Regional Laboratory [Peoria, Illinois] has done considerable work on the matter of the proper protein factor to be used for soy flour—that is the factor to be used in converting Kjeldahl nitrogen to protein. The National Research Council and consequently the Bureau of Human Nutrition and Home Economics, USDA, are insisting on the factor of 5.7 in contrast to the commonly used factor 6.25. The low factor is unfavorable to soy flour and apparently is not correct. The 6.25 factor is too high, but the one commonly used for similar non-cereal products in the feed and food world. We need the assistance of your Regional Laboratory in establishing the correct factor, which seems to be, according to Dr. Smith and his associates, approximately 5.9.

"Our soy flour industry can certainly use to advantage all the technical assistance you can spare on several current

projects pertaining to soy flour. The following assignments are suggested for your consideration:

"(1) Express numerically some of the specific observable functions of soy flour in baked goods and the like.

"(2) Determine the effect of using special varieties versus present selected milling varieties for the production of soy flour by the methods commonly used by our industry for its manufacture.

"(3) Explore methods of manufacturing soy flour to see if it is economically possible to effect improvements in quality aspects such as thermophilic bacteria content, flavor, color, particle size and certain functional characteristics such as volume, crumb texture and shelf life of baked goods, especially bread.

"(4) Develop a better consumer acceptance for various foods containing proper amounts of soy flour for product quality and improved nutrition."

A small portrait photo shows Dr. Hayward. Address: Director of Research for the Archer-Daniels-Midland Co.

216. **Product Name:** Soybean Oil, and Soybean Meal.

**Manufacturer's Name:** Honeymead Products Co.

**Manufacturer's Address:** Mankato, Minnesota.

**Date of Introduction:** 1947 August.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

**New Product—Documentation:** *Soybean Digest*. 1947.

Aug. p. 32. "Sale of the Mankato Soy Products Co. by the Washington Cooperative Farmers Association, Seattle, Washington, to Harold Jamieson and Lowell Andreas, was announced July 17. The new owners, formerly associated with Honeymead Products Co., Cedar Rapids [Iowa], will crush both soybeans and flaxseed."

*Soybean Digest*. 1948. Feb. p. 28. "The Mankato Processing Co. announces that the name of the firm has been changed as of February 1 [1948] and is now Mankato Honeymead Co., Mankato, Minnesota. Management remains the same. C.F. Marshall is president, L.W. Andreas is vice-president-secretary."

*Soybean Digest*. 1949. Sept. p. 23. An ad for V.D. Anderson solvent plants states: "Mankato, Minnesota. Here's a 150-200 ton per 24-hour unit that began its operation by the Honeymead Products Co. in the spring of 1949.

National Soybean Processors Association. 1949. *Year Book, 1949-1950 (Association year)*. Chicago, Illinois. 73 p. See p. 17. "Members—Honeymead Products Co., L.W. Andreas, Mankato, Minnesota."

*Soybean Blue Book*. 1949. p. 78. "Processors of soybeans." Minnesota—Mankato: Honeymead Products Co., 202 Given St. President: Clive F. Marshall. Vice president: L.W. Andreas. 5 expellers. Processing capacity: 250 tons/day solvent plant.

*Decatur Daily Review* (Decatur, Illinois). 1950. Feb.

21. p. 14. "What, challenged again?: Mankato, Minn., is processing center." Reprints a recent article from the *Mankato Daily Free Press* that gives a complete history of the soybean crushing plant at Mankato, Minnesota. In Aug. 1947 Honeymead took over the plant from the Washington Cooperative Egg and Poultry association.

*Soybean Digest*. 1957. Honeymead expands further: To add deodorization system to world's largest solvent plant. April. p. 30-31. Honeymead remained a liquid corporation throughout the war years. When the principals returned from service, like many temporarily interrupted businessmen, they turned to the task of picking up the pieces. Honeymead management bought a crushing plant at Mankato, Minnesota in 1948. The plant had 2 expellers and the firm added 3 more. Honeymead soon added a 150 ton per day solvent extraction plant and "very shortly thereafter junked most of the equipment purchased only a few years before."

*Mankato Free Press* (Minnesota). 1960. 'Just day to day business.' Aug. 3. p. 1-2. In 1947, when Honeymead bought the plant in Mankato, the storage capacity was 140,000 bushels. Today it is 3.75 million bushels—a 26-fold increase in 13 years.

Torgerson, Susan. 1980. "Mankato No. 2 in nation in soy processing: 40 years ago industry didn't amount to a hill of beans." *Land (The)* (Southern Minnesota) 4(10):1, 13, 38. April 24. In 1942 Washington Egg and Poultry Association [WAPA], a poultry cooperative, offered the investors double their money for the company; all of Blethen's pleading couldn't stand in their way. In 1946 [sic, 1947] the Andreas family bought the plant from WAPA.

Honeymead Products Co. 1981? "The history of Honeymead" (Leaflet). Mankato, Minnesota. 2 p. Undated "1947—The Mankato plant is purchased by Dwayne and Lowell Andreas and given its present name—Honeymead." Note: The last date in this chronology is 1980.

217. *Kansas Business Magazine*. 1947. Soybean mill has faith in Kansas [ADM mill at Fredonia]. Aug. p. 8-9. • **Summary:** Discusses the Archer-Daniels-Midland Company's operations at Fredonia, Kansas. A-D-M, which has been expanding and modernizing its Fredonia mill for the past year, now processes about 5,000 bushels a day, and has a storage capacity for 900,000 bushels of soybeans. It is claimed to be the largest of its kind in Kansas. "One of the largest flax and soybean mills in the country," it processes both soybeans and flax into oil and meal, and it refines the oil. Soybean oil is used to make paints and protective coatings, and also goes into edible foods, such as salad oils and oleomargarine. The oilseeds come from eastern Kansas, western Missouri, and northeastern Oklahoma. During the first half of this year it processed soybeans, then in July it switched to flax. Expensive new expellers have recently replaced the old hydraulic presses for separating the seeds into oil and meal.

The Fredonia mill was first established in 1890, "one of the first in the country." It was acquired by ADM in 1928. About 80 people are now employed on the average.

Photos show: (1) Aerial view of ADM mill at Fredonia. (2) New cookers inside ADM mill. (3) Expellers which process soybeans and flax in ADM mill. (4) Small portrait photos of D.O. Fink (manager) and R.S. Githens (sales manager).

218. MacGee, A. Ernest. 1947. Vegetable oil extraction solvents; History and general chemical composition. *Oil Mill Gazetteer* 52(1):17-21, 35-43. Aug. [53 ref]

• **Summary:** The growth of the vegetable and animal oil extraction industry since 1930 has been rapid and astonishing. Many parallels can be found with George Stephenson's invention and persistent development of the locomotive in England in the early 1800s. In 1930 Clarence F. Eddy predicted a bright future for larger oil mills using continuous, counter-current solvent extraction. In 1933 David Wesson recounted the history of his work with cottonseed oil (from 1889) and with solvent extraction of cottonseed oil (from about 1900 to 1917), using benzine and low end point-high test gasoline. A mill in New Orleans (Louisiana) ran from 1917-1919, first using aviation type gasoline, later using benzol.

Concerning early solvent extraction of soybeans: Piatt County Soybean Cooperative Co., Monticello, Illinois, operated a batch plant with a capacity of 8 tons/day for about 6 months in 1923-24 using benzol as a solvent. In 1924 the Eastern Cotton Oil Co., Norfolk, Virginia, used a continuous extractor of about 80 tons/day capacity.

Solvent extraction was apparently patented in England in 1856 and had become fairly well established in Europe by about 1870. However these early solvent extraction plants were of the "batch" type and had fairly small capacities, with no means of agitation. In about 1900 the solvent countercurrent principle was introduced in Europe by combining several consecutive batch extractors. Next came the introduction of the "continuous" type extractor. The first two successful continuous extraction plants processing large volumes in the 1920s were: (1) The Hansa-Muehle, A.G., Hamburg, Germany, using the "Bollmann" extractor, and (2) the Extractochemie, A.G., Zurich, Switzerland (but originally of Harburg, Germany) using the "Hildebrandt" extractor. At Hansa-Muehle in 1928 the central plant, consisting of four extractor units with a combined capacity of over 1,000 tons/day, was put into operation. By 1934 a number of continuous solvent plants were operating in Europe.

In the USA, the first large-scale plant of this type was that of the Archer-Daniels-Midland Company, Chicago, Illinois. In March 1934 it began operating using a "Hildebrandt" extractor to process 100 tons/day of soybeans. The solvent was petroleum naphtha of the hexane type. As of 1947, this plant is still in operation.

The ADM plant in March 1934 represented a “turning point and marked the beginning of the large scale edible oil extraction industry as it is known today.” Installations of other large-capacity continuous solvent extraction plants followed in rapid succession:

1934 Nov.—The Glidden Company, Chicago, Illinois, began operating a continuous solvent soybean plant of 100 tons per day capacity.

1937 Nov.—the 400 tons per day plant of the Central Soya Co., Decatur, Indiana, began operation.

1938 Oct.—Honeymead Products Co. Cedar Rapids, Iowa, began operating a continuous solvent soybean plant with 100 tons per day capacity. By Aug. 1947 this plant was owned by Cargill, Inc.

By 1947 an estimated 33% of the soybean processing capacity operating in the USA used the solvent extraction process. Schiffman (1945) reported that of the estimated 4.25 million tons soybean processing capacity on 1 Oct. 1945, only 27% of the capacity in operation was of the solvent type, but 64% of the total capacity under construction on that date was of the solvent type.

Table 1 shows the tonnage and percentage of soybeans processed by expeller, solvent and hydraulic methods from 1936 to 1940. Expeller increased from 68.5% to 74.2%. Solvent increased from 13.2% to 23.1%. Hydraulic decreased from 18.5% to 2.7%.

The largest soybean solvent plant in the USA today is that owned by A.E. Staley Manufacturing Co., Decatur, Illinois. Costing \$2 million and having a capacity of 650 tons per day, it went on stream in March 1945. The extraction tower was supplied by French Oil Mill Machinery Co. and it used a “petroleum hexane-type solvent of 146 to 156 degrees F. general boiling range.”

Two events that occurred during the 1930s were of vital importance to the rapid growth and widespread application of the solvent extraction process in the oil and fat industries: (1) The perfecting of large volume, continuous processing equipment, and (2) the development of light petroleum naphthas of the hexane and heptane types. Address: Manager Skellysolve Sales, Skelly Oil Co., Kansas City, Missouri.

219. *Minneapolis Star (Minneapolis, Minnesota)*. 1947. Shreve M. Archer, 59, succumbs to infection: headed nation’s largest flax processing firm. Nov. 11. p. 17.

• **Summary:** “Shreve MacLaren Archer, 59, president of Archer-Daniels-Midland Co. of Minneapolis, died at 5:50 p.m. Monday [Nov. 10] at Miller Hospital, St. Paul.”

He accidentally swallowed a chicken bone on Oct. 21, was taken to the hospital, but eventually died of the infection.

“Private services will be held at 10 a.m. Wednesday at the Archer residence, 990 Summit avenue, St. Paul. Burial will be in St. Paul...”

“Mr. Archer was born in Yankton, South Dakota, Sept.

29, 1888, the son of George A. and Harriet H. Archer.

“He attended St. Paul Academy and entered Hill school at Pottstown, Pennsylvania, in 1904. From 1907 to 1910, he studied at Sheffield scientific school of Yale University.

“Mr. Archer married Miss Doris Cowley of Dellwood, Minnesota, Sept. 26, 1911.

“In 1923 he was named a vice president of Archer-Daniels-Midland Co. He was elected president of the company Dec. 9, 1924, and was active as chairman of the firm’s board of directors and as a member of the executive committee.

“Under his direction the company became one of the world’s largest processors of vegetable oils and one of the nation’s largest grain and flour filling firms.

“He was a director of the St. Paul Fire & Marine Insurance Co., First National bank of St. Paul, First Bank Stock Corp., Northwest Bancorporation and an executive committee member and a director of the Great Northern railroad.

“Mr. Archer served as president of the Minneapolis Chamber of Commerce, now known as the Minneapolis Grain Exchange, in 1926-27, and was a trustee of the Minnesota & Ontario Paper Co.

“At one time he was chairman of the board of Northwest Airlines, Inc.

“He was a member of the Minneapolis, Minnesota, St. Paul University, White Bear Yacht and Somerset clubs and was chairman of the board of Miller hospital at the time of his death.

“In addition he is survived by five children, Mrs. M.J. Lilleberg and Shreve M. Archer, Jr. St. Paul; Mrs. Joseph C. Uihlein, Jr., Milwaukee, Wisconsin; Mrs. J. Addison Thomas, Kansas City, Missouri, and Mrs. Russell R. Winters, White Bear Lake.

“His sister, Mrs. Lou Ella Archer, resides in Phoenix, Arizona.

“Mr. Archer, in addition to his St. Paul residence, maintained a summer home at Dellwood, on White Bear Lake.

Firms’ Offices to Close Throughout U.S.: All offices and plants of the Archer-Daniels-Midland Co. and of the Commander-Larabee Milling Co. throughout the United States will be closed for 24 hours, beginning at 7 a.m. Wednesday, in respect to Shreve M. Archer.”

A large portrait photo shows Shreve M. Archer.

Note: Shreve M. Archer, born 29 Sept. 1888 in South Dakota. Died 10 Nov. 1947, in St. Paul, Ramsey Co., Minnesota. Burial: Oakland Cemetery, St. Paul, Ramsey Co., MN.

220. Goss, Warren H. 1947. Report of investigation of target: Hansa-Muehle A.G. (Document part). In: W.H. Goss. 1947. *The German Oilseed Industry*. Washington, DC: Hobart Publishing Co. 248 p. See p. 24-34.

• **Summary:** Contents: Official description of target: Hanseatische Mühlenwerke A.G., more generally known as Hansa Mühle A.G., Hamburg-Neuhof, Alsterdamm 3. Target No. FA/18 and T5/82. Period of investigation: 7 Aug. 1945. Names of participants in investigation: W.H. Goss. Names of persons interviewed. Mr. Kruse, Director. Dr. Mayr., Chemist. Mr. Depmer, Engineer. Mr. Miller, Superintendent. Detailed presentation of information obtained: General, soybean extraction, phosphatide recovery, refinery, fatty acids, extraction of other oilseeds, expeller mill, soy flour, ethyl esters in margarine, hydrolysis of cellulose.

Hanseatische Muehlenwerke A.G., “is one of the more famous oilseed mills in the world, partly because of its large size and partly because it was here that the widely-used paternoster or Bollmann type solvent extraction equipment was developed by Dr. Hermann Bollmann starting immediately after World War I. When this development began, the company was experiencing financial difficulties related to the war, and funds for embarking on the new venture were obtained from a group of Hamburg bankers who still own most of the company’s stock.

“During the twenty years following the first World War, the Bollmann system of extraction was developed gradually. In 1924, one Bollmann extractor was sold to an American firm—The Eastern Cotton Oil Co. in Norfolk, Virginia. The extractor was said to have a capacity of 80 tons of soybeans per day and was used on soybeans grown in North Carolina.”

Table I shows 15 mills using Bollmann extractors and their capacity per 24 hours. The mills that process soybean are located in Germany, Belgium, USA, France, Netherlands, Italy, Hungary, and Switzerland; they include Central Soya Co. (Indiana, 70 tons of soybeans), Archer Daniels Midland Co. (Illinois, 300 tons of soybeans).

Hansa-Muehle made no soy flour; the largest producer of soy flour in Germany was the C.F. Hildebrandt Co. in Hamburg. At one time Hansa-Muehle furnished extracted soybean meal to a “Deback Co.” on Wendenstrasse, and it was processed to produce low-fat flour.

221. *Soybean Digest*. 1947. S.M. Archer of A-D-M has passed. Dec. p. 18-19.

• **Summary:** Shreve MacLaren Archer, age 59, president and chairman of the board of the Archer-Daniels-Midland Co., Minneapolis, Minnesota, died on 10 Nov. 1947 at Miller Hospital in St. Paul, Minnesota.

“Mr. Archer accidentally swallowed a chicken bone October 21 and entered the hospital the following night. The bone had entered the esophagus and could not be removed. Infection developed, spreading throughout his body.

“He was buried from the Archer residence at 990 Summit Ave., St. Paul, November 12. Burial was in St. Paul.

“Mr. Archer was born Sept. 29, 1888, in Yankton, South Dakota. He attended St. Paul Academy, Hill School, at Pottstown, Pennsylvania, and Sheffield Scientific School of

Yale University [New Haven, Connecticut].

“In 1923 he was named vice president of Archer-Daniels-Midland Co. He was elected president of the company in 1924, and was active as chairman of the firm’s board of directors and as a member of the executive committee.

“Under his direction Archer-Daniels-Midland Co. became one of the world’s largest processors of vegetable oils and one of the nation’s largest grain and flour milling firms. The company is among the largest soybean processors and manufacturers of soy flour in this country. The company has been among the leaders in the industry since soybeans were first grown commercially in this country. It has worked toward a larger soybean acreage and has also contributed to the expansion of the soybean processing industry, which has a capacity of almost 200 million bushels a year.

“Mr. Archer was a director of the St. Paul Fire & Marine Insurance Co., First National Bank of St. Paul, First Bank Stock Corp., Northwest Bancorporation and an executive committee member and director of the Great Northern Railroad.

“He was formerly president of the Minneapolis Chamber of Commerce, now the Minneapolis Grain Exchange, and a trustee of Minnesota & Ontario Paper Co. At one time he was chairman of the board of Northwest Airlines, Inc.

“Samuel Mairs, executive vice president of Archer-Daniels-Midland Co., has been named chairman of the board.

“T.L. Daniels, executive vice president, was elected president. Both positions previously were held by Shreve M. Archer.

“W.L. Dedon, vice president and treasurer, was elected executive vice president and will also continue as treasurer.

“Erwin A. Olson, vice president in charge of the flax fibre division, was elected to the board of directors.

“Samuel O. Sorenson, technical director, was named vice president in charge of research.

“Mr. Mairs joined the predecessor company in 1903, and was secretary and treasurer for many years.

“The company’s new president, Mr. Daniels, was first in the employ of the firm following his graduation from Yale University in 1914. In 1942 he served in Washington. D.C. as director of fats and oils with the War Production Board and later in charge of the fats and oils division of the War Food Administration of the U.S. Department of Agriculture. He rejoined ADM in 1943 and was elected an executive vice president in 1946.

“His father, J.W. Daniels, was president and chairman of the board of the predecessor company from 1902 to 1923.

“Mr. Daniels is nationally-known in the flax industry and serves as chairman of the flax development committee.

“Mr. Sorenson, former president of the American Oil Chemists’ Society and present member of the Society’s executive committee, joined Archer-Daniels-Midland Co. in

1923. He was named technical director of ADM in 1944.

“In his new capacity as vice president in charge of research, Mr. Sorenson will supervise the activities of the ADM laboratory.”

A large portrait photo shows Shreve M. Archer.

A group of 5 small portrait photos (atop p. 19) has this caption: These men were included in executive changes of Archer-Daniels-Midland Co. in November. Left to right, Samuel Mairs, new chairman of the board; T.L. Daniels, president; W.L. Dedon, executive vice president and treasurer; Erwin A. Olson, vice president in charge of flax fibre division, elected to the board of directors; and Samuel O. Sorenson, vice president in charge of research.

**New Product–Documentation:** Soybean Blue Book. 1947. p. 70.

225. Wherry, Larry. 1947. The golden anniversary of scientific feeding. Milwaukee, Wisconsin: Business Press.

120 p. No index. 22 cm.

• **Summary:** American Mfgs. Assoc. calls it the only history of feed manufacturing in the U.S. Scientific feeding was built on an understanding of the importance of protein and a realization that protein was often the limiting factor in the production of meat, milk and eggs. Early sources of protein were often by-products, such as corn gluten and cottonseed meal.

Appendix I, titled “Chronological history of feed manufacturing,” covers the period 1875-1945 in the USA. Some important dates:

1864–Emil Wolff, a German chemist, publishes his first feeding standards. Known as the Wolff-Lehmann standards, they indicated the amount of crude protein needed by different classes of animals; however they were not widely used.

1875–John W. Barwell of Leicester, England, brings a feed manufacturing business to the USA, locating in Chicago and Waukegan, Illinois.

1886–Albers Milling Co. is founded by Bernard Albers at Seattle, Washington. In 1895 they began manufacturing feeds. In 1929 this company merged with the Carnation Company. By 1947 Albers operated five feed mills: Seattle, Washington; Portland, Oregon; Oakland, California; Los Angeles, California; and Peoria, Illinois.

1894–Robinson-Danforth Commission Company, St. Louis, Missouri, begins making mixed feeds. In 1898 the brand name “Purina” is adopted, and Purina Mills become part of the new corporation, Ralston Purina Co., headed by William H. Danforth. By 1947 they operated more than 30 feed mills.

1896–Dr. C. Lehmann, of the Berlin Agricultural High School, modifies Wolff’s feeding standards to create the Wolff-Lehmann standards, which soon become widely used in Europe and the United States in computing livestock rations; they emphasized that protein was often the limiting factor in the production of meat, milk, and eggs. One of the first protein supplements was corn gluten feed. The American Glucose Co. in Buffalo, New York, sold a feed called “Buffalo Feed.” After about 1900 cottonseed meal, and tankage and meat scraps from packing houses, started to be widely used.

1898–American Milling Company organized as a consolidation of Marsden Company and American Milling Company, by Colonel A.G. Winter. Plants at Owensboro, Kentucky; Peoria, Illinois; Linden, Indiana. Note: American Milling Co. later became part of Allied Mills, which crushed soybeans in the plant at Peoria, Illinois.

1904–Northrup King Co. begins manufacturing feeds at Minneapolis, Minnesota. Founded by J.E. Northrup, Preston King, and C.C. Massie.

1920–Nutrena Mills, Kansas City, Kansas, founded by Van Roy Miller. Note: in Oct. 1945 Cargill purchased (for \$1.6 million) the three Nutrena feed mills at Kansas City,

Kansas; Coffeyville, Kansas, and Sioux City, Iowa.

1920–Pillsbury Flour Mills Co., Minneapolis, Minnesota, begins manufacturing livestock and poultry feeds. Name in 1947: Pillsbury Mills, Inc.

1925–Purina Experimental Farm established by Ralston Purina Co. at Grays Summit, Missouri.

1928–General Mills, Inc. is organized, including Washburn Crosby Company, Red Star Milling Company, Royal Milling Company, Kalispell Flour Mills Company and Rocky Mountain Elevator Company.

1929–Allied Mills, Inc., is formed as a result of the merger of American Milling Company and the McMillen Company. The principal brand names of these predecessor companies, namely “Amco” and “Wayne” were continued after the merger. Now (probably meaning in 1947) operates 7 major feed plants: Peoria, Illinois; Omaha, Nebraska; Fort Wayne, Indiana; East St. Louis, Illinois; Buffalo, New York; Memphis, Tennessee; and Portsmouth, Virginia.

1932–Honeyamead Products Company, Cedar Rapids, Iowa, founded by R.P. Andreas. Operating 3 mills... one at Cedar Rapids, one at Spencer, and one at Washington, Iowa. The firm name was originally “Andy’s Feeds, Inc.,” changed to “Honeyamead” in 1936. Note: In 1938 the Honeyamead name was first used; the family-owned Honeyamead plant began operating in Cedar Rapids in Oct. 1938. In 1944 the Honeyamead plant in Spencer, Iowa, began operation, followed in early 1945 by the plant in Washington, Iowa.

1933–Archer Daniels Midland Company [feed mill], Minneapolis, Minnesota, founded by George A. Archer and John W. Daniels.

1935–McMillen Feed Mills, Inc., Division of Central Soya Company, Inc., founded by D.W. McMillen, Sr. Operates 4 feed mills: Decatur, Indiana; Gibson City, Illinois; Harrisburg, Pennsylvania; and Marion, Ohio.

1936–The Glidden Company of Cleveland, Ohio, began manufacturing feeds under the name of Holland Mills, at Piqua, Ohio. This plant was later destroyed by fire, but feed operations were reestablished at Indianapolis as the Glidden Co. Feed Mill Division with brand names of Glidden and Capitol.

1938–Cargill, Inc., of Minneapolis, Minnesota, founded in 1865 by W.W. Cargill, begins manufacturing feeds. In 1945 they bought the Honeyamead plant in Cedar Rapids. As of 1947 they operate feed plants at: Minneapolis; Cedar Rapids, Iowa (two plants); Fort Dodge, Iowa; Spencer, Iowa. Address: Chicago, Illinois.

**226. Product Name:** Archer brand Orange Blossom Soy Flour (Defatted Soy Flour).

**Manufacturer’s Name:** Archer-Daniels-Midland Co. Commander-Larabee Milling Co.

**Manufacturer’s Address:** Minneapolis, Minnesota.

**Date of Introduction:** 1947?

**How Stored:** Shelf stable.

229. Archer-Daniels-Midland Co. 1947? The ABC of ADM. Minneapolis, Minnesota. 40 p. Undated.

• **Summary:** This is a basic introduction to ADM. The company is divided into: Flax seed department. Commander Larabee Co. Werner G. Smith Co. Grain department. Soybean department. “Creating new values from America’s harvests.”

One full page shows “Research Division at the center surrounded by: Flax fibre division. Linseed meal division. Archer feeds division. Soybean meal division. Soya products division. Soybean oil division. Elevator storage division. Importer oils–core oils. Flour division. Linseed soil division.

“Let’s get acquainted. The following pages show you the plant properties of Archer-Daniels-Midland, the work that keeps them busy, and the relationship of each ADM department to the others ....picture of a vast enterprise that serves industry and develops markets for the harvests of our farms.

“Archer-Daniels-Midland is one of the world’s largest processors of agricultural crops. The business of ADM is concerned with millions of bushels of flax, soybeans, bread-wheats and semolina–and quantities of other grains.

“ADM’s job begins with collecting these crops in rural elevators, storing them in the great terminals, and routing them to the various ADM processing plants, which are located in 26 states from coast to coast. From the laboratories

and mills of ADM flow an endless stream of crop products which find their way into plants of other manufacturers. Here, transformed by further chemical and physical processing, these crop products emerge as finished consumer goods which touch our living every day of the year... foods, clothing, shelter, machinery, protective coatings, and many other end products presented on the pages that follow.

“Exploring a new world—the soybean. An illustration shows a man looking a huge soybean through a telescope.

“Soybean Department: One of the most dramatic success stories in the history of our agriculture is the rise of the soybean.

“The tremendous increase in the growth of this multi-purpose crop brought a new source of income to American farmers, new jobs for industry and important new values to the public.

“In 1924 the United States harvested 448,000 acres of soybeans. It is estimated in 1947 approximately 12,748,000 acres will be harvested.

“The growth of the soybean division of ADM has kept pace with the increased acreage planted to soybeans. Personnel has increased. laboratory activity expanded, plants and processing facilities doubled and redoubled.

“The ADM plant at Decatur, Illinois is a typical soybean operation. This plant can take in 270,000 bushels of soybeans a day—a carload every 8 minutes.

“Other soybean areas are served by plants in Kansas, Minnesota, Illinois, Ohio, and New York.” A background photo shows the ADM plant in Decatur, Illinois.

“The oil that came to dinner: Soybean oil division. Among all the vegetable oils, that of the soybean is the most versatile. It is the star performer in many industries, but its greatest role is played at the dinner table.

“Soybean oil is widely used as a salad oil, as margarine, vegetable shortening and cooking oil. Thus a product that had hardly been tasted in this country twenty years ago, is now consumed at the rate of approximately a billion pounds per year.

“One of the more amazing derivatives of this oil is a product known as Lecithin, which is both a food ingredient and an industrial product. For example, its remarkable chemical make-up enables it to serve as an antioxidant in the processing of such products as cooking fats and chocolate coatings. Lecithin is an important ingredient in the manufacture of soaps, cosmetics, leathers, lubricating oils, munitions, ceramics, insecticides, pharmaceuticals, rubber and printing inks. ADM soybean oil is becoming more and more important in the protective coating industries, where consumption has leaped from two million to thirty-five million pounds since 1928.

“Illustrations: ADM plants, upper left, Toledo, Ohio; upper right, Buffalo, New York; bottom, Chicago, Illinois.

“What next from the soybean? Photos show bags or packages of: Baker’s Nutrisoy: a defatted soy flour. Orange

Blossom soy flour: a defatted soy flour. SturdiMix: for making delicious biscuits, waffles, muffins, pancakes—made by the Sturdiwheat Company (Red Wing & St. Paul, Minnesota). New Soyawheat: High-protein cereal food.

“Soybean Products Division: In recent years, as almost every edition of the newspapers has told of another new product made from soybeans, many have asked -”What next, from soybeans?”

“One of the answers is the array of food products shown on this page. The first soy flour was marketed in 1926 as a ‘health flour’. Testing of soy flours by the Army and Navy during the war years accelerated the growth of the soy flour industry. Last year over 500 million pounds were produced. A great future is predicted for soybean food products as an eager public seeks higher nutritional standards.

“Soy specialties serve uses other than foods. In 1945, over 22 million pounds of soybean meal were consumed in the form of wood glues by the plywood mills of the Pacific Northwest. Other special types of applications are in coatings for fine printing papers, wall paper, certain types of plastics and a remarkable synthetic fibre with many of the characteristics of wool.

“Scores of ADM research projects promise to add still more end-products. For years to come we shall continue to ask, ‘What next, from soybeans?’”

Photos show bags and packages of: Nutrisoy Grits: a defatted soy flour. Packers Granular: a defatted soy flour. Nutri-Whip. Kellogg’s Corn-Soya Shreds. Atry Fatry Coffee-Cake Mix.

“Protein for your pork chops. Soybean Meal Division: Nutritional research has recently developed a method for processing soybean oil meal so that this product, which has been termed a ‘complete protein’, can now help bring to the dinner table new values in meat, poultry and dairy products.

“Soybean oil meal is considered one of the most valuable feeds for livestock. It is rich in the essential amino acids and its proteins are more easily assimilated than any other protein of vegetable origin.

“The wide use of soybean oil meal as livestock feed has been primarily responsible for the huge soybean crops of recent years. As the value of meal has been proved and improved, the crop has been expanded to meet increased demands.

“ADM plants in Illinois, Wisconsin, Minnesota, Ohio, Kansas, and New York supply a constantly growing tonnage of soybean oil meal to the farms of the nation.

“Illustrations: upper left, Twin City ‘A’ Elevator; upper right, Dickinson Feed Mill, Minneapolis; bottom, Mankato Mills Division, Mankato, Minnesota.”

Soybean meal products: 44% [protein] toasted soy bean meal and flakes. 41% expeller soy bean oil meal. 44% soy bean pellets. E.V.G. soy bean oil meal. 41% expeller soy bean grits.

Soya products: Biswhip. Nutriwhip. Baker’s Nutrisoy.

Brew flakes–Kaysoy. Archer brand soya products. Address: Minneapolis, Minnesota.

230. *Soybean Digest*. 1948. New ADM plant is opened. Jan. p. 28.

• **Summary:** “The world’s largest vegetable oil processing plant, a \$1,250,000 installation devoted exclusively to processing oil bearing seeds, was placed in operation at Minneapolis [Minnesota] January 2 by Archer-Daniels-Midland Co.

“T.L. Daniels, ADM president, said the plant was designed to utilize war-developed chemicals, particularly those from the petroleum and synthetic rubber industries, in conjunction with linseed and soybean oils.

“The unit, Mr. Daniels said, is part of a 7-million-dollar oil processing expansion program underway at Minneapolis as a further step ‘towards ADM’s policy of creating new values from America’s harvests.’

“Such products as crude rubber from plantations all over the world and chemicals produced from the petroleum and natural gas industries of the nation will be reacted and combined with products obtained from the farms of the upper Midwest, he said.

“The construction program is a result of 10 years of collaborative research and development work by the Archer-Daniels-Midland Co. research and engineering departments. Another unit now under construction is designed to solvent extract the oil from flaxseed and soybeans by a new process recently patented by the ADM engineering department.

“Tailor-Made Oils: Other units in addition to the solvent extraction plant will separate the oil produced into its component parts of fatty acids and glycerine to obtain the basic ingredients from which can be produced tailor-made special oils for the paint, varnish, linoleum, cosmetic, pharmaceutical, printing ink, and a variety of major industries.

“Improved products for Mr. and Mrs. John Q. Public will result from the new operation, it was explained. Special oils produced will result in paints for interior and exterior application with faster drying time, better durability and increased water and alkali resistance. Longer life will be added to automobile brake linings. Stronger and more durable castings from which innumerable parts are machined in all types of metal working industries will result.

“Other far-reaching effects will become more evident with the various chemical modifications of the basic ingredients obtained from vegetable oils, including linseed and soybean, Mr. Daniels said.

“With operations of the new plant, Archer-Daniels-Midland Co. becomes not only the nation’s largest processor of flax seed, but also the largest producer of vegetable oils, it is claimed.

“Steady Employment: ‘A great deal of the research and development work of the Archer-Daniels-Midland

Co. has been directed toward diversifying and eliminating seasonal employment from our linseed and soybean crushing operations,’ Daniels explained. “‘To do this, the logical step was to carry further the processing of the vegetable oils produced and use them as the basic raw materials for processing into specification products for numerous industries.’

“Linseed and soybean oil meal, remaining from the seed after extraction of oil, will continue to be used in the manufacture of Archer Quality Feeds for poultry and livestock because of its high protein content.”

A large photo shows Samuel O. Sorenson (vice president in charge of research), Walter G. Andrews (director of special oil sales), and J.W. Moore (ADM vice president) inspecting ADM’s new vegetable oil processing equipment.

231. *Windsor Daily Star (Essex County, Ontario, Canada)*. 1948. Yields best in soy beans: Essex, Kent growers winners of contest. Feb. 28. p. 5, col. 8.

• **Summary:** “Top places in the Ontario Crop Improvement Association’s high yield soybean contest were won by Essex and Kent County men.” The top four places were named. Fred Newcombe, of Blenheim, placed first with a yield score of 100 and yield per acre count of 40.56 bushels; he won \$100. William Pajot, of River Canard, was second with 36.18 bu/acre, and a prize of \$60.

The contest was carried out in co-operation with Victory Mills and Toronto Elevators Limited and was designed to expand soybean acreage in Ontario, lead to another good cash crop with high yields, and “further the production of an edible vegetable oil from a home-produced crop.”

Note: This is an one of the earliest articles seen (Aug. 2019) that mentions Toronto Elevators Ltd. in connection with soybeans.

232. *Soybean Digest*. 1948. Grits and flakes... from the world of soy: Mankato Processing Co. Feb. p. 28.

• **Summary:** “The Mankato Processing Co. announces that the name of the firm has been changed as of February 1 [1948] and is now Mankato Honey mead Co., Mankato, Minnesota. Management remains the same. C.F. Marshall is president, L.W. Andreas is vice-president-secretary.”

Note: Talk with Lowell Andreas. 2003. July 23. He does not remember either of these two company names.

233. American Soybean Association; National Cotton Council. 1948. Progress in products (Technicolor motion picture). Hudson, Iowa. 25 minutes. 16 mm. Released on March 1. \*

• **Summary:** Jointly produced and sponsored by the American Soybean Assoc. and the National Cotton Council, this film depicts the use of cottonseed oil and soy oil in margarine, the part that agriculture plays in industry, and the way in which a new industry helps other existing industries

by broadening their markets and creating new ones.

Reviewed in *Soybean Digest* (May 1948, p. 42; June 1948, p. 34; July 1948, p. 34; Sept. 1948, p. 104; Oct. 1948, p. 34; Nov. 1948, p. 19, 40-41). Released on 1 March 1948, it had 900 bookings in the first 6 weeks after release.

By June 1, 1948, bookings on the Technicolor margarine film "had reached the large total of 1,600. There were bookings in all the 48 states, with California, Pennsylvania, Indiana, and Texas each having well over 100. Film shows the part soybean and cottonseed oils play in margarine."

By June 30 over 90,000 people had reportedly seen the Technicolor film. "A total of 1,893 bookings had been made by that date. Bookings may be made through the executive offices of the American Soybean Association, Hudson, Iowa."

By 31 Aug. 1948 the film had been booked 1,272 times and over 230,000 people had seen it. It was shown at the 1948 ASA convention on Sept. 13-15 in Memphis, Tennessee.

As of 27 Sept. 1948 "the margarine movie has been shown 1,193 times to 166,890 people" [numbers revised downward].

By late October it was reported to have been shown to 206,346 people. Address: Hudson, Iowa.

234. Hayward, J.W. 1948. Soybean: Most versatile protein meal. *Soybean Digest*. March. p. 12-13, 15.

• **Summary:** "Historians of agriculture probably will place the soybean in a high position when the full story is told of the wartime feeding program.

"Soybean oil meal carried the protein load during the war years, and it continues carrying the load in the postwar period of serious shortages.

"Total production of soybean oil meal during the crop year—October 1947 up to October 1948—is expected to reach 3,375,000 tons. This would compare with total production of soybean oil meal of 4,084,097 tons in the preceding year.

"Farmers and feeders learned during the war period the high value from a profit viewpoint of a planned protein ration. There never has been a time when production of protein has been sufficient to balance more than one-half of all farm grains fed in the United States.

"Since soybean oil meal constitutes the largest available protein supply for feeding purposes, government officials, the feed trade, and university authorities all have given recognition to the need of a continued large soybean production. It is agreed, generally, that European crops could not become again abundant in a short period of time. Under the proposed American food exporting program it would appear that soybean protein will continue in substantial demand.

"Figures for the production of the various protein concentrates during the past several years are given in Table 1. This relative status will still apply this year, regardless of

slight changes."

Tables show: (1) Production of protein concentrates in the United States (crop years Oct. 1 to Sept. 30) (1930-1946, with estimates for 1947). Soybean oil meal is by far the leading protein concentrate in the USA in 1947 accounting for 42.3% of the total. (2) Amino acid analysis of oil seed meals (including dried skimmilk and corn for comparison). The other meals are linseed oil meal, cottonseed oil meal, corn gluten meal, and peanut oil meal. Source: Block & Mitchell. 1946-47. "The correlation of the amino acid composition of proteins with their nutritive value." *Nutrition Abstracts & Reviews* 16(2):249-78. Address: Member, Soybean Research Council.

235. *Soybean Digest*. 1948. Flour purchase. March. p. 42, 44.

• **Summary:** "Purchases of 100,000 long tons of soy flour have now been completed by the U.S. Army for shipment abroad in the period January through next June. This protein food product is being used for civilian feeding purposes.

"Suppliers of the current order, completed January 7, are Archer-Daniels-Midland Co., Central Soya Co., Inc., The Glidden Co., Spencer Kellogg and Sons, Inc., and A.E. Staley Manufacturing Co., all with large mills in the heavy soybean producing areas of the Midwest. Shellabarger Soybean Mills, Decatur, Illinois, also is currently shipping on a previous contract."

236. *Soybean Digest*. 1948. New A-D-M mill. April. p. 40.

• **Summary:** The Chemical Plants division of Blaw-Knox Co. in Pittsburgh, Pennsylvania, will design and construct a large soybean extraction plant for the Archer-Daniels-Midland Co., which is adding to its facilities at Decatur, Illinois.

The new plant will produce crude soybean oil and high protein meal.

237. *Soybean Digest*. 1948. New oils by Archer-Daniels-Midland Co. June. p. 13.

• **Summary:** Archer-Daniels-Midland Co. has announced the introduction of "four revolutionary oils that are entirely new in their concept and use in the paint, varnish, and protective coatings industry." These new oils, the products of 5 years of intensive research at ADM laboratories, are the first of a series to be known as Admerols. They are based on linseed and soybean oils which are reacted with various chemicals. The names of the products are Admerol 101, Admerol 251, Admerol 301, and Admerol 351.

A photo shows T.L. Daniels, president of ADM, explaining the advantages of the new oils to N.P. Delander, a banker.

238. *Annual Report*. 1948---. Serial/periodical. Decatur, Illinois: Archer-Daniels-Midland Co. Vol. 1 Aug. 1948--.

• **Summary:** ADM's earliest known annual report appeared

in 1948. Soyinfo Center owns originals of ADM's reports from 1960-1970, and 1982 on. Starting in 1960 these annual reports contain a ten-year (1960-1951) summary of "Financial and operating data" in tabular form. Address: ADM.

239. Konen, J.C. 1948. New developments in industrial usage of soybean oil. *Soybean Digest*. Sept. p. 42-44, 82.  
 • **Summary:** Contents: Introduction. To better quality. Non-drying oils. Wetting agents (or plasticizers). Give harder films. Segregation process. Yellowing. Competition.

"Up until a few years prior to World War II, the usage of soybean oil for industrial purposes was quite insignificant as compared to its use as an edible oil. A severe shortage of linseed oil during the war and an almost complete curtailment of the supply of tung oil, which is supplied primarily by importation, led to a marked increase in the demand for industrial soybean oil. Under government restrictions only a limited amount of soybean oil output could be used for non-edible purposes, but the quantity available was avidly taken by industrial users."

The most important and successful industrial use was in the preparation of soybean oil-modified alkyd resins, which dry rapidly to give films of outstanding durability and color retention. Such soybean alkyds are usually a component of the beautiful white finishes on refrigerators, washing machines, stoves, and the like.

A second and highly important development was the use of soybean oil in the preparation of plasticizers. By treating soybean oil with the chemical maleic anhydride, markedly improved drying oils are produced. "Probably the most promising single development leading to increased utilization of soybean oil in the protective coating industry is the development of copolymer modified oils."

"Yellowing: J.S. Long has recently pointed out that the yellowing characteristics of drying oils are almost a direct function of their unsaturation. Thus, soybean oil yellows less than linseed oil, which in turn yellows less than the more highly unsaturated perilla oil and fish oils. The copolymerization reaction frequently reduces the amount of unsaturation and leads to oils of improved color stability.

"The Archer-Daniels-Midland Co. pioneered in exploring the reactions of drying oils with the various commercially available reactive monomeric materials. Out of the many experimental products prepared several containing soybean oil have been judged worthy of commercial exploitation and are now being sold to the paint industry. These products are characterized by unusually fast rate of set-up to a continuous film, excellent through dry, very good stability plus unusually good gloss, gloss retention and color retention. Products prepared in this manner are outstanding in their uniformity and their durability.

"The hydrolysis of soybean oil to give fatty acids and glycerine is becoming an important industrial process, and

production capacities have been greatly augmented in the last few years. The glycerine is used in the manufacture of a host of manufactured products ranging from cosmetics to dynamite. The fatty acids are becoming increasingly important. They serve as a basis for the preparation of alkyds and synthetic ester as pointed out above. In addition, they are used as chemical intermediates for the preparation of amines, amides and nitriles which are, in turn, used in the preparation of synthetic detergents, flotation agents, textile finishing compounds and a rapidly increasing list of other industrial applications. The capacity for production of these chemicals derived from fats is now being materially increased.

"The contributions of research work on soybean oil for industrial purposes are constantly opening up new vistas of usefulness. The practical paint manufacturer, who a few years ago dismissed soybean oil rather preemptorily as being interesting but not practical for a general line of paints and vehicles, is now very keenly aware of this exciting newcomer in the protective coating field. Whereas previously the usage of soybean oil was confined to specialty applications, the modified soybean oils now produced as the result of the technical ingenuity of the oil chemists can be used in practically every application that was previously restricted to linseed and tung oil only. Modified soybean oils are now used in house paints, in barn paints, in flat wall paints, in the highest grades of interior enamels, in exterior enamels, in interior floor finishes, in spar varnishes, in traffic paints, in linoleum, in caulking compounds, and in a whole host of other diversified paint and protective coating products.

"On the basis of the above enumeration of some of the more important methods by which soybean oil has been upgraded for drying oil purposes the future looks extremely bright. From an economic standpoint there are some vital factors affecting the industrial utilization of soybean oil.

"In the first place, the primary usage of soybean oil is for edible purposes and as a result the market price is very closely tied in with the price of cottonseed oil. When either shortages of cottonseed oil or a heavy edible oil demand make the price of cottonseed oil high, soybean oil may be priced as high as linseed oil or may under rare circumstances even be higher in price. Whenever such conditions exist, industrial soybean oil usage will be limited to a very small number of highly specialized usages in which soybean oil is markedly superior to other competitive drying oils.

"In the second place, the variety of modified soybean oils which have been described involve a considerable amount of processing, which, of course, must necessarily increase the price above that of the ordinary commercial grades of soybean oil. Under the present cost structure, unless the price of soybean oil is about 5 or 6 cents per pound under the price of linseed oil, the soybean specialty oils will be about the same in price as linseed oil. In this case the strong tradition of linseed oil usage will result in

relatively limited sale of soybean products.

“Competition: There is a third consideration dictating the choice of drying oils to be used by the industrial user. Concurrently with the amazing advances in soybean technology, there has been a marked improvement in the processing of other oil materials. Tall oil, particularly, is coming to the forefront in the drying oil field. Tall oil is a mixture of fatty acids and resin acids which is recovered as a by-product from the processing of paper pulp from pine wood. Production of tall oil has risen from about 23 million pounds in 1937 to 202 million pounds in 1946, and according to available estimates, the production could be doubled by the introduction of recovery systems in plants which do not now produce tall oil. The low cost of tall oil as compared with normal vegetable drying oils has resulted in a markedly expanded use in the drying oil field.

“Castor, oiticica and fish oils are additional fatty materials which are competitive with soybean oil for industrial purposes. Increase in supplies and reduction in prices of any of these products would affect the usage of soybean oil. This is particularly true in the case of castor oil which is primarily imported from Brazil and which when dehydrated is directly competitive with soybean oil for high quality architectural enamels.

“Looking into the future, the position of soybean oil in this highly competitive field is very favorable. As a result of continuing research and investigation, soybean oil now stands as the second most widely used drying oil. Based on statistics on the utilization of oils in the paint, varnish and allied industries during the first half of the current year, it seems probable that 30-40 percent as much soybean oil will be used as linseed oil compared to a few percent prior to the war.

“This tremendous increase in the utilization of soybean oil did not just happen. Sustained research has led to the development of modified soybean oils which are incomparably better than soybean oil itself in their speed of drying, hardness of films and flexibility of usage in the hands of competent technologists. These new developments in soybean oil technology have led to a diversified group of specialized drying oils which cover the whole gamut of industrial application.

“However, we cannot regard the job as completed—it has really only begun. Many competitors for soya oil’s hard-won place are apparent. It will take the best combined efforts of grower, chemist and processor to prevent usurpation. A continued program directed toward the most economical production and processing is necessary to keep the utilization of soybean oil in industry on the increase.” Address: Research Director, Archer-Daniels-Midland Co.

240. *Soybean Digest*. 1948. Grits and flakes... from the world of soy: Harold Anderson buys Toledo, Ohio, plant from ADM. Sept. p. 104.

• **Summary:** “Harold Anderson, Lucas County, Ohio, elevator and grain man, has bought the East Toledo soybean processing plant from Archer Daniels Midland Co. A-D-M closed the plant in June. Anderson bought it for grain storage. Processing equipment not involved in the deal is being removed.”

241. *Soybean Digest*. 1948. Grits and flakes... from the world of soy: Paschke of ADM to edible soya products division. Sept. p. 106.

• **Summary:** “Edward O. Paschke, for 14 years Chicago [Illinois] sales manager of Archer Daniels Midland Co., has been named sales manager of the firm’s edible soya products division at Minneapolis [Minnesota]. Joseph W. Gorman, formerly in charge of local soybean and linseed meal sales, will now manage all sales in Chicago for A-D-M.”

242. USDA Northern Regional Research Laboratory. 1948. Soybean processing mills in the United States. *USDA Bureau of Agricultural and Industrial Chemistry*. CA-5. 14 p. Sept.

• **Summary:** Footnote: “This is a revision of AIC-26 [Nov. 1943]—Revised June 1946 under the same title.”

“The following list of soybean processing mills is divided into three parts: (1) Mills specializing in soybeans. (2) Mills processing soybeans on part-time basis. (3) Distribution of soybeans processed by solvent extraction, screw press, and hydraulic press methods (Estimates based on data compiled by Bureau of the Census in cooperation with the Northern Regional Research Laboratory). A year by year table from crop year 1936-37 to 1946-47 (Oct. to Oct.) shows the number of tons processed and the percentage of the total processed by each of the three processes. The percentage processed by solvent extraction doubled from 13.2% to 26.6% while the percentage processed by hydraulic press dropped by half from 18.4% to 9.5%. The total tons of soybeans processed rose 8.2 fold from 619 to 5,107 during the 11 year period.

Processors are listed by state (alphabetically), and within each state alphabetically by city. Three symbols are used (in parentheses) to express each plant’s processing capacity in tons of soybeans per day: S = Small—less than 50. M = Medium—50 to 200. L = Large—more than 200. Three other symbols are used to express the type of soybean processing equipment used: X = Extraction (solvent). P = Screw press [or expeller]. H = Hydraulic press.

• **Summary:** “... in memory of Shreve M. Archer, late president of Archer-Daniels-Midland Co., Minnesota, has been made by his widow, Mrs. Doris C. Archer. Mr. Archer was chairman of the hospital’s board of governors for 20 years.”

247. *Soybean Digest*. 1949. Plan soy foods for use in Germany. March. p. 24-25. [3 ref]

• **Summary:** The food nutrition laboratory of Archer-Daniels-Midland Company, Minneapolis, Minnesota, is developing two new foods (tasty soybean “sausages”) based on soy flour, for use in postwar Germany. One sausage is a mixture of 50% meat and 50% soya and vegetables. The other contains no meat, only soya and vegetables.

“A German nutritionist, Dr. William Bening of Frankfurt, can be credited with starting the search for these new and palatable soya foods. He first proposed the use of soybeans to allied food production officials in Germany only a short time after the war had ended in Europe.

“It was already apparent then that it would be a decade or so before his demolished country could expect to be back on a normal meat diet. The individual German, Dr. Bening declares, still is getting less than a pound of meat per month. Milk, fish, and eggs, other sources of animal proteins, are

also extremely scarce.

“The answer, he reasoned, was to use soybeans to fill the breach. He selected the soybean as the best protein source for a logical reason. It is the one vegetable protein that contains a proper balance of the 10 essential amino acids found in meat, and thus, he explains, it can take the place of animal proteins as a tissue builder and source of energy for the German people.

“Moreover, edible soya products contain 50 percent protein and cost only about 5 cents per pound.”

A photo shows Geo. M. Strayer (American Soybean Assoc. Secretary-Treasurer), Dr. William Bening (a German nutritionist from Frankfurt), and R.G. Brierley (Archer-Daniels-Midland Co., Minneapolis).

248. Archer-Daniels-Midland Co. 1949. Cracking the soybean. 600 Roanoke Building, Minneapolis 2, Minnesota. 16 p. Undated. 26 cm. Summarized in *Soybean Digest*, July 1949, p. 23.

• **Summary:** Contents: How America rediscovered the soybean. Edible oils from soybeans. Industrial oils from soybeans. High-protein foods from soybeans. High protein foods from soybeans. Milk, eggs and meat from soybean meal. Materials for modern living from soybeans. Products unlimited from soybeans. What next from the soybean? The meaning of “The scientific shortcut.” On each left-hand page is a full-page photo.

“This company first entered into soybean operations during the 1920’s. In 1934, after long study of European research, ADM opened the first U.S. plant for extraction of soybean oil by the solvent process.” In recent years ADM has introduced new soybean oils for use in paints, varnishes, enamels, and lacquers: Soyagel, Varsoy, Soyalene, Ardol, and OKO. “Recently, ADM created a sensation with the introduction of Admerols—a series of basic new materials for paint-making.” Linoleum can now be made with a high content of ADM soybean oils.

“Among the specialty soy food products created by ADM research are Bakers Nutrisoy, Packers Granular, various granulations of Soy Grits, Nutriwhip, and Archer Brew Flakes. Bakers Nutrisoy adds many values to baked goods of every kind. Packers Granular is a wholesome, nutritious binder used in making sausage and meat loaves. Nutriwhip, made from soybean grits, is a whipping agent used in marshmallow, frappe, [mazetta and nougat], and many delightful bakery and candy products. ADM Soybean Brew Flakes are used as a yeast food and foam stabilizer, in the finest modern brewing.”

In 1947 nearly 25 million pounds of soybean adhesives were used in the manufacture of softwood plywoods. These adhesives, made by ADM, though not waterproof, are highly water resistant. ADM also makes Kaysoy, an adhesive which binds the decorative coating to wallpaper. Kaysoy proteins are also used in the manufacture of coated printed papers (to

hold clay coating to the sheet), in making tape joint cement, in insecticide sprays (to make them spread easier and stick better), and cold water-based paints, and in many other industrial applications.

ADM also makes lecithin for use in baking and candies, soaps and dry cleaners, cosmetics, gasoline and oils.

In the section titled “What next from the soybean?” we read: “Or ponder this potent fact: Two acres of land can produce about 8 to 10 pounds of wool per year, but the same acres can produce about 400 pounds of soybean protein, for synthetic wool. Such facts and figures have explosive force, in any free economy.” Address: Minneapolis, Minnesota.

249. *Soybean Digest*. 1949. Grits and flakes... from the world of soy: George Schmidt, Archer-Daniels-Midland Co., Decatur, Illinois, has announced the invention of a new car unloader. July. p. 46.

• **Summary:** “His working table model is distinctive for its moveable telescoping boom, by means of which one operator can place the shovel into any corner of the car. Two hydraulic cylinders on the side break down the doors, saving time.”

250. *Barron's National Business and Financial Weekly*. 1949. Lower commodity prices accounted for the 10% drop in earnings for Archer-Daniels-Midland Co... Aug. 29. p. 35.

• **Summary:** “Lower commodity prices accounted for the 10% drop in earnings for Archer-Daniels-Midland Co. for the fiscal year ended June 30. Volume was higher; net profits were down 2.5% at \$12,041,752. Sales results since 1939 pleased T.L. Daniels, president, who said: ‘... A very large part of our sales growth has resulted from (value added by processing). We have won business on new products and in new fields which accounts for 40% of the total sales gain.’” Address: New York.

251. Fisher, H.J. 1949. Commercial feeding stuffs: Report on inspection, 1948. *Connecticut Agricultural Experiment Station, Bulletin No. 533*. 130 p. Aug. [51 ref]

• **Summary:** Contents: The feed law. Regulations. Registrations. Inspection, summary of: Commercial feeding stuffs, vitamin D carriers, miscellaneous feeds, biological specimens examined for poisons, A.F.C.O. samples [AFCO = American Feed Control Officials]. The Connecticut broiler ration. Determining guaranties. Analyses: Table 1. Commercial feeds. Table 2. Vitamin D carriers. Index.

Connecticut’s “feed law” regulates commercial feeding stuffs (p. 3-6).

Under 1948 regulations we read that for this calendar year, 244 firms registered 1,413 brands of feeding stuffs. An asterisk after the number of brands means that the word “soybean” is mentioned—typically as “soybean oil meal.” Two asterisks means that all brands listed contain the word “soybean.” Soy related companies include:

Albers Milling Co., 111 W. Massachusetts St., Seattle

4, Washington (1 brand). Allied Mills, Inc., 3400 Board of Trade Bldg., Chicago, Illinois (38). Archer Daniels Midland Co., Minneapolis 2, Minnesota (5\*). Bisbee Linseed Co., 2100 Lincoln-Liberty Bldg., Philadelphia 7, Pennsylvania (2\*). Borden’s Soy Processing Co., Div. of the Borden Co., Kankakee, Illinois (1\*\*). The Buckeye Cotton Oil Co., Cincinnati, Ohio (3\*). Cargill, Inc., 761 Chamber of Commerce, Minneapolis 15, Minnesota. (3\*). Central Soya Co., Inc., 300 Ft. Wayne Bank Bldg., Fort Wayne, Indiana (2\*).

It is surprising to see what things end up being sold for animal feed. Brewers and distillers (such as Anheuser-Busch, Seagram, or Hiram Walker) sell “Budweiser Brewers’ Dried Grains,” “Corn Distillers Dried Solubles,” “Corn Distillers Grains with Solubles,” “Distillers’ Dried Grains,” or “Dried Grains with Solubles.” Rendering companies (which convert waste animal products from slaughterhouses into stable, saleable products) sell “Bone Meal” “Steamed Bone Meal,” “Meat and Bone Scrap,” or “Fish Meal.” Dairy processors sell “Feed Grade Dried Skim Milk” or “Dry Buttermilk.” Sugar refineries sell “Molasses Dried Beet Pulp.” Condensing companies sell “Condensed Whey-Product” or “Dried Whey.”

Of the 967 “Commercial feeding stuffs” tested, 10% (96 samples) were deficient, but 96% met all guaranties of protein, fiber, and fat content. Address: Chemist in Charge, New Haven, Connecticut.

252. Brierley, R.G. 1949. Soy flour in European occupied areas. *Soybean Digest*. Sept. p. 44-45, 88.

• **Summary:** “Soybeans are worth more money! Your able officers have made that statement a by-word to an ever growing soybean industry, and there isn’t a thinking member here who doesn’t heartily subscribe to that well chosen slogan.”

The “sound permanent way to make soybeans worth more money is to so increase the value of their end products in human nutrition, in animal nutrition, and in industrial utilization, that the processor can afford to pay better prices for his raw material. In a sound economy the products made from the soybean have to be worth more before soybeans can command better prices. To be worth more, the products of the soybean must first give more value to civilization, and secondly be so recognized that they get into every day usage.

“I’ve been asked to talk today about my recent trip to Germany and the status of the German soy flour program. I want to tell you first that the trip was the outcome of our conviction that soybean products can be worth more. It was the culmination of work done over the last 7 years by a small group of determined processors to establish edible soy flour as a premium product that could increase the gross revenue of the processor and build new values for the soybean.

“Dr. Bening, my able collaborator while I was in Germany, and the man who has done more for the soybean

industry in Germany than any other man, fortunately is here to give you some first-hand information on the soy flour program we started in Germany. But I want to introduce the subject by sketching some of the background that led up to this German soy flour program, and in so doing, to give you some idea of what the processor goes through in creating new and more lucrative markets for soybean products, so that he can afford to increase his bids to you on soybeans.

“Prewar infant: Soy flour was a rather new and struggling infant when the war started. But it was sound economically and nutritionally, and had more to offer a protein starved world than any other single food product. As compared with the familiar protein foods, milk, eggs, and meat, it was ridiculously cheap. On a unit protein basis it was only 25 percent the cost of the next lowest competitive protein food, milk powder, and so far as calories per pound were concerned soy flour was the same as carcass beef and 25 percent less than other foods which were essentially carbohydrate foods. From a nutritional standpoint soy flour, if properly processed, was the equal of milk in protein quality. We had proved that it was the greatest supplement food there was when incorporated into other basic foods. By adding it to bread, meat products and many allied foods, we were not only adding superlative protein, but the protein was increasing the efficiency of the other proteins in those familiar foods. Our Dr. Hayward and other investigators spent many weary and expensive hours proving that edible soy protein was nutritionally one of the finds of the century.

“But in competitive business, having a superlative product is not enough. It has to be sold. It has to take its place and win its recognition alongside other established products. We can tell you from personal experience that it takes time, money, courage, and faith to establish a new product. Normal prejudice toward a new product is hard enough to overcome; but even harder is the fight against calculated prejudice—calculated prejudice originating from competitive products that see in your new product a threat to their future—calculated prejudice coming from a few complacent members of your own industry who feel you should withdraw from the market until your product is absolutely perfect—calculated prejudice from those few government officials who resist progress and change.

“Despite its merits, soy flour started out as a sort of bootleg item in meat products. It took years of concentrated effort and exhaustive evidence (with a new product you are wrong until proved right) before the Bureau of Animal Industry finally recognized soy flour as a permitted binder for sausage. It took expensive technical talents to prove the case for soy flour as an optional ingredient in bread during the food and drug hearings in Washington [DC]. It has taken much promotional and demonstration work to introduce soy flour and then resell it every time a demonstrator of other competitive foods takes it out of a customer’s formula. It has taken persistence and exhaustive evidence to

disprove the many bizarre rumors that have been started by unscrupulous competition.

“Difficulties: The difficulties involved in introducing a new product and creating new value for soybeans is typified by the difficulties which sent me to Germany. The Army had sent about 200,000 tons of soy flour to Germany. The industry had turned everything upside down to produce the soy flour on practically no notice. Then just as suddenly the program was stopped. Ill-advised political pressure had fostered a costly and ridiculous potato flour program on the Army. At the same time rumors started to come back from Germany, indicating the soy flour program was a failure because of inherent weaknesses in the product. We were told that the soy flour we had shipped contained residual solvent and was ‘dangerous’ to health, that the soy flour was not adequately debittered and gave an off flavor to the bread in which it was used, that soy flour was in the grain allocation and would have to be taken out before it could be distributed, that soy flour was being distributed by oil millers who knew nothing of the product, that soy flour was so bad it was making bread unsalable, that soy flour was backing up so much in distribution that we’d have a surplus of soy flour in Europe for years to come, and that soy flour couldn’t compete with potato flour as a bread ingredient.

“In view of that imposing list of objections, my firm [ADM] decided to take the plunge and send me to Europe to get a factual report for the future if nothing else. It was an expensive gamble but one of the many we’ve taken in trying to realize new values for the soybean.

“Upon arriving in Germany, I was literally adopted by a highly competent but terribly understaffed food group to get the real story on soy flour usage in Germany and then find ways and means of moving the soy flour stocks, and then sell the German food administration on the absolute necessity of proper soy flour utilization if the protein crisis in Germany was to be met.

“6-weeks’ tour: I traveled for 6 weeks in Germany with Army car and driver and with Dr. Bening as interpreter, advisor, and friend. During that time I saw virtually all the key food men in the Allied zone. I talked to most of the responsible allied food men, to the leaders of the German food administration, to the principals of the Ruhr coal control group, to the doctors of the Max Planck Institute (the most prominent human nutrition laboratory in Germany), to the key baby doctors in Bremen and Hamburg, to the principals of the Kralog relief group, to mayors, senators and administration men in most of the principal cities of Germany, to bakers, meat packers, consumer representatives, union leaders, and to a group of over 50 soybean processors and importers. I inspected stocks of soy flour. Dr. Bening and I worked day and night on the most intensive job I’ve ever been on.

“I feel that the findings of that trip are significant for the future of making soybeans worth more by incorporating

them directly in food products. These facts have already been turned over to the Army.

“I found first that the quality of the soy flour was excellent except for two small lots made by two new processors whose minor production had meant virtually nothing in the large over-all program. There was no bad odor or rancidity as per samples carefully drawn and subsequently re-examined” (Continued). Address: Asst. Vice President, Archer-Daniels-Midland Co., Minneapolis, Minnesota.

253. Brierley, R.G. 1949. Soy flour in European occupied areas (Continued—Document part II). *Soybean Digest*. Sept. p. 44-45, 88.

• **Summary:** (Continued): “I found the man that started the benzine odor story. He had mentioned, incidentally, in a report that a color he observed in samples examined under a fluoroscope might show residual solvent, but had subsequently found the same color in samples of whole soybeans. Because of this he had dropped his investigation and was so little concerned that he was taking his laboratory samples home and feeding them to his child with excellent results.

“Bread troubles: I found next that the trouble with any soy flour in bread was that it was the last of a series of grain flour substitutes, and therefore bore the brunt of the criticism of bread in general. Bread was being made with potato flour, corn flour, rye flour, and wheat flour almost incidentally. The incorporation of high percentages of soy flour on top was the straw that broke the camel’s back. To add to the difficulties scheduling of soy flour shipments and stock was so upset by shipping difficulties that the soy flour came in all at once on German distributors who knew nothing more about soy flour than that the name made it sound like a type of wheat flour. Maldistribution and the lack of wheat flour resulted in some bread that was almost 100 percent corn flour, and other breads predominately soy flour. The resulting bread was an abomination. Corn flour and soy flour took the brunt of the public criticism because they were the new and unknown products.

“I found next a soybean industry hopelessly divided and pulling against each other. If there was ever proof for the necessity of a united soybean industry, I found it here. The full fat manufacturers, the oil millers, the growers, the soy importers were all pulling in different directions. There was no united front to present to the government and competitive food interests were having a merry time punching away at the soy program. I gave one of the most difficult speeches of my life, with interpretation, sentence by sentence, to a group of 50 soybean principals in Hamburg, urging them to recognize the needs of Germany for new protein foods and to present a united program to their government food men calling for more soybeans and soy products. I am happy to say that they did present such a program and that it was the start of the present utilization of soy flour in sausage.

“I found next a universal recognition of the terrible lack of protein which could not be touched in any foreseeable future by meat production increases. The prewar production of meat in Germany was 45 kilos per person. The consumption at the turn of the year was 9 kilos. Even the most optimistic estimates for the next 5 to 8 years were for about 50 percent of prewar meat consumption. The problem, however, was to get public recognition of this situation and to stop the wish-thinking philosophy that something would suddenly pop up to solve the meat problem other than the actual development of new protein foods.

“The first few weeks of the trip convinced me that politics in Washington [DC] was going to force large quantities of corn flour and potato flour into German bread. This left no place for soy flour in bread. It was necessary therefore to look around for another outlet for soy flour and the logical place was the meat program. Meat was so short that the ration was a farce—so short that the black market was in full operation, and little could be done about it. Soy flour had been used successfully in meat in this country so it seemed a logical starting point. The first problem was to take the products that were available and try to compound them into new protein foods that could be put up in casing form so that they would resemble meat. The technical problems were imposing and destruction had been so devastating that research facilities were almost non-existent. It was decided to start the work in the United States and then complete it in Germany.

“Our research laboratory as well as others in the industry were put to work on the problem and samples were sent to Germany. The soy flour association [sic, Soy Flour Association, Chicago, Illinois] brought Dr. Bening to the United States and I traveled with him for 4 weeks to show him American facilities and to show him the progress of work here. He then went back to Germany where work continued under the sponsorship of the German and Allied food men. The end result was a new product containing 50 percent meat and 50 percent soy flour and vegetables and other ingredients, which when made up and put in casing was so good that it fooled the experts. After substantial trials and tribulations, this product was produced and introduced into consumption.

“Bright future: The introductory job has been an imposing one. The meat people had to be sold. The chemists and food police had to be placated and cajoled into some sort of cooperation. The consumer took the product without question and with considerable enthusiasm, because it was not only good, but about half the price of meat. The sales promotion job is only just started, but the future looks bright, and before another 6 months have passed we will have proved that this new product can solve what seemed like an insuperable problem when we first tackled it. Dr. Bening will undoubtedly tell you more of this...” Address: Asst. Vice President, Archer-Daniels-Midland Co., Minneapolis,

Minnesota.

254. National Soybean Processors Association. 1949. Year book, 1949-1950 (Association year). Chicago, Illinois. 73 p.  
 • **Summary:** On the cover (but not the title page) is written: "Year Book and Trading Rules, 1949-1950." Contents: Constitution and by-laws (incl. committees, code of ethics). Officers, directors and committees for 1949-50. Membership of the National Soybean Processors Association. Trading rules governing the purchase and sale of soybean oil meal. Appendix to trading rules on soybean oil meal: Official methods of analysis (moisture, protein, oil, crude fiber—official, sampling of soybean oil meal). Trading rules on soybean oil. Appendix to trading rules on soybean oil: Uniform sales contract, standard specifications for crude soybean oil for technical uses, methods of analysis (A.O.C.S. official methods): Refining loss (expeller and hydraulic soybean oil)—Ca 9a-41, refining loss (extracted soybean oil)—Ca 9b-46, refining loss (degummed hydraulic and extracted types soybean oil)—Ca 9c-49, refining loss (degummed expeller type soybean oil)—Ca 9d-49, bleaching test (refined soybean oil)—Cc 8b-49, grading soybean oil for color (N.S.P.A. tentative method), color—Wesson method using Lovibond glasses—Cc 13b-45, sampling—C 1-47, flash point (A.O.C.S. tentative method—Cc 9b-48). Moisture and volatile matter: Vacuum oven method—Ca 2d-25. Break test—Modified Gardner method—Ca 10-40. Iodine value—Wijs method—Cd 1-25. Unsaponifiable matter—Ca 6a-40.

Handwritten: *Soybean Farming* is now available; prices are given for non-members and members, for 100 to 1,000 copies. Assessments: Regular \$.0004 per bushel, 40 cents per 1,000, \$400 per million. Max. \$3,200 per year. Min. \$100 per year. July 6 meeting decreases the regular assessment to \$0.0003 per bushel.

The section titled "Officers, directors, and committees" (p. 12-15) states: President: R.G. Houghtlin. V.P., Chairman Executive Committee: G.G. Golseth. Secretary: W.L. Shellabarger. Treasurer: H.E. Carpenter. Executive Committee: R.G. Golseth, Chairman, H.E. Carpenter, E.A. Cayce, Philip S. Duff, W.H. Eastman, Jasper Giovanna, R.G. Houghtlin, W.L. Shellabarger.

Board of Directors (Term expiring Sept. 1950): D.O. Andreas, E.A. Cayce, Jasper Giovanna, R.G. Golseth, H.R. Schultz, H.R. Scroggs. (Term expiring Sept. 1951): Dwight Dannen, Roger Drackett, W.H. Eastman, R.B. Jude, W.H. Knapp, Karl Nolin. (Term expiring Sept. 1952): S.E. Kramer, Philip S. Duff, D.W. McMillen, Jr., Clarence E. Peters, J.J. Quinlan, Ralph Wells.

Standing committees: For each committee, the names of all members (with the chairman designated), with the company and company address of each are given—Traffic and transportation. Technical. Soybean grades and contracts. Oil trading rules. Meal trading rules. Crop improvement. Soybean research council. Uniform rules and standards for

soybean oil meal. Safety and insurance. Lecithin. Regional: Ohio, Michigan, and East; Illinois, Indiana, Kentucky, Wisconsin; Iowa, Minnesota, Nebraska, South Dakota; Missouri, Kansas, and Mississippi River Delta Sections. Handwritten on blank facing pages: Nominating committee. Reception committee. Official weights committee. Crop Improvement steering committee. Two new members (people; Francis E. Calvert, The Drackett Co., Oct. 1949).

The following organizations, and individuals are members of NSPA: Albers Milling Co., Los Angeles, California (W.P. Kyle). Allied Mills, Inc., Board of Trade Bldg., Chicago, Illinois; Peoria, Illinois; Taylorville, Illinois; Omaha, Nebraska; Portsmouth, Virginia. Archer-Daniels-Midland Co., Box 839, Minneapolis 2, Minnesota; Chicago, Illinois; Decatur, Illinois; Fredonia, Kansas. Big 4 Cooperative Processing Assn., Sheldon, Iowa (Chas. W. Hanson). Blanton Mill, Inc., St. Louis, Missouri (Ross A. Woolsey, Jr.). Boone Valley Cooperative Processing Assn. Eagle Grove, Iowa (Edward Olson); Hubbard, Iowa (D.E. Weld). Borden's Soy Processing Co., Chicago 4, Illinois (C.E. Butler -> J.R. Pentis); Kankakee, Illinois; Waterloo, Iowa. Buckeye Cotton Oil Co. (The), Cincinnati, Ohio (W.H. Knapp); Louisville, Kentucky; New Madrid, Missouri; Raleigh, North Carolina; Memphis, Tennessee. Cargill, Inc., Minneapolis, Minnesota (D.O. Andreas); Springfield, Illinois (Eric Nadel); Cedar Rapids, Iowa (C.W. Bohlander); Fort Dodge, Iowa (H.E. Marxhausen -> R.F. Hubbard); Spencer, Iowa (W.J. Wheeler); Washington, Iowa (Hugo Lensch). Central Iowa Bean Mill, Gladbrook, Iowa (Paul H. Klinefelter). Central Soya Co., Inc., Fort Wayne 2, Indiana (E.W. McMillen, Jr.); Gibson City, Illinois (T.H. Allwein); Decatur, Indiana (C.I. Finlayson); Marion, Ohio (R.W. Fay). Clinton Industries, Inc., Clinton, Iowa (E.W. Myers). Colchester Processing Co., E. St. Louis, Illinois (E.L. McKee). Concord Soya Corporation, Concord, Michigan (Harold K. Rapp; crossed out). Consumers Co-op Assn., Kansas City 13, Missouri (F. Dean McCammon). Consumers Soybean Mills, Minneapolis 15, Minnesota (Riley W. Lewis). Dannen Grain & Milling Co., St. Joseph, Missouri (Dwight L. Dannen). Decatur Soy Products Co., Decatur, Illinois (Jasper Giovanna). Delphos Grain and Soya Products Co., Delphos, Ohio (Floyd E. Hiegel). Doughboy Industries, Inc., Fairfield, Iowa. Drackett Co. (The), Cincinnati 32, Ohio (Roger Drackett). Eastern Iowa Milling Co., New Hampton, Iowa (G.A. Ward). Farmers Cooperative Assn., Ralston, Iowa (Karl Nolin). Farmers Cooperative Co., Dike, Iowa (C.M. Gregory). Farmers Cooperative Elevator, Martelle, Iowa (H.B. Lovig). Fayette Soybean Mill, Fayette, Iowa (L.A. Rose). Fremont Cake and Meal Corp., Fremont, Nebraska (Harry E. Wiysel). Frith (E.E.) Company Inc., Dubuque, Iowa (E.M. Weicher). Funk Bros. Seed Co., Bloomington, Illinois (H.A. Abbott). Galesburg Soy Products Co., Galesburg, Illinois (Max Albert). General Mills, Inc., Chem. Div., Minneapolis 1,

Minnesota (W.H. Eastman); Belmond, Iowa (E.E. Woolley). Glidden Co. (The), Chicago 39, Illinois (R.G. Golseth). Gooch Milling & Elevator Co., Lincoln 1, Nebraska (M.R. Eighmy). Haynes Soy Products Inc., Portland, Indiana (Clarence E. Peters). Hemphill Soy Products Co., Kennett, Missouri (W.A. Hemphill). Holland Pioneer Mills, Inc., Ohio City, Ohio (G.A. Holland). Honeymead Products Co., Mankato, Minnesota (L.W. Andreas); Hoosier Soybean Mills, Inc., Marion, Indiana (J.H. Caldwell, Jr.). Huegely Elevator Co., Nashville, Illinois (J.W. Huegely). Hulcher Soy Products, Virden, Illinois (Norman E. Hulcher). Iowa Milling Co., Cedar Rapids, Iowa (Jos. Sinaiko). Iowa Soy Co., Redfield, Iowa (H.R. Straight). Ipava Farmers Processing Co., Ipava, Illinois (F.P. Brown). Janesville Mills, Inc., Janesville, Wisconsin (A. Roger Hook). Kansas Soya Products Co. (The), Emporia, Kansas (Ted W. Lord); Kansas City 3, Kansas (Richard W. Lord). Ladd Soya, Inc., Bunker Hill, Indiana (Wayne Ladd). Lexington Soy Products Co. (The), Lexington, Ohio (H.E. Carpenter). Louisville Soy Products Corp., Louisville, Kentucky (H.A. Miller). Marshall Mills Inc., Marshalltown, Iowa (J.I. Johnson). Muscatine Processing Corp., Muscatine, Iowa (G.A. Kent). North Iowa Cooperative Processing Association, Manly, Iowa (Glenn Pogeler). Northwest Cooperative Mills, St. Paul, Minnesota (Anthony H. Roffers). Ohio Valley Soybean Co-op, Henderson, Kentucky (G.W. Allen). Owensboro Grain Co., Owensboro, Kentucky (William M. O'Bryan). Pacific Vegetable Oil Corp., San Francisco 7, California (B.T. Rocca, Jr.). Pillsbury Soy Mills, Clinton, Iowa (H.R. Schultz); Centerville, Iowa (H.R. Schultz). Postel (Ph. H.) Milling Co., Mascoutah, Illinois (A.S. Lee). Quincy Soybean Products Co., Quincy, Illinois (Irving Rosen). Ralston Purina Co., St. Louis 2, Missouri (D.B. Walker); Kansas City, Missouri (F.G. Franze); Lafayette, Indiana (Ralph Guenther); Iowa Falls, Iowa (H.N. Johnson); Circleville, Ohio (A.V. Couch); Champaign, Illinois -> Bloomington, Illinois (N.B. Morey). Roach Soybean Mills, Plainfield, Ohio (Howard L. Roach). Shellabarger Soybean Mills, Inc., Decatur 30, Illinois (W.L. Shellabarger). Simonsen Mill Rendering Plant, Quimby, Iowa (W.E. Simonsen). Sioux Soya Co., Sioux City 2, Iowa (J.L. Ward). Southern Cotton Oil Co. (The), Goldsboro, North Carolina (W.V. Westmoreland); Tarboro, North Carolina (W.A. Moore). Southland Cotton Oil Co., Paris, Texas (Richard H. Blyth). Soya Processing Co., Wooster, Ohio (H.H. Heeman). Soya Extraction Div., Continental Grain Co., Columbus 9, Ohio (D.H. Wilson—company crossed out). Soy-Rich Products, Inc., Wichita, Kansas (Ralph S. Moore). Spencer Kellogg and Sons, Inc., Buffalo 5, New York (Robert B. Jude); Chicago, Illinois; Decatur, Illinois; Des Moines, Iowa; Bellevue, Ohio (Harry Stokely). Sterling Soybean Co., Inc., Rock Falls, Illinois (Edward J. McGinn). Swift & Co., Union Stock Yards, Chicago 9, Illinois (S.E. Cramer). Thomson Soya Products, Hiawatha, Kansas (A.G. Thomson). Toledo Soybean

Products Co., Toledo, Ohio (J.H. Brown). Wells (Ralph) & Co., Monmouth, Illinois (Ralph Wells). West Bend Elevator Co., West Bend, Iowa (R.W. Jurgens). Western Soybean Mills, Sioux Falls, South Dakota (E.A. Woodward). Williams Milling Co., Sac City, Iowa (Leo W. Williams).

Organizations represented on committees: U.S. Regional Soybean Laboratory, Urbana, Illinois (John C. Cowan, R.T. Milner).

Handwritten: New members added since publication of the Trading Rules Book—1949. Falk & Co., Pittsburgh, Pennsylvania (Willard Lighter, Jan. 1950). Minnesota Linseed Oil Co., Minneapolis 21, Minnesota (R.J. Lundquist, May 1950). Farmers & Merchants Milling Co., Glencoe, Minnesota (L.H. Patten, Mgr., May 1950). Riverside Oil Mill, Marks, Mississippi (William King Self, Aug. 1950). Planters Manufacturing Co., Clarksdale, Mississippi (A.K. Shaefer, Sept. 1950).

Associate Members: Arcady Farms Milling Co., Chicago 6, Illinois. Armour & Co., Chicago 9, Illinois (John H. Noble). Aubrey & Co., Louisville, Kentucky. Best Foods, Inc., New York, NY. Capital City Products Co., Columbus, Ohio. Cooperative Mills Inc., Baltimore 30, Maryland. Cox (Chas. M.) Co., Boston, Massachusetts. Foxbilt Inc., Des Moines, Iowa. Humco Co. (The), Memphis 1, Tennessee. Kraft Foods Co., Chicago, Illinois. Lever Bros Co., Lever House, Cambridge, Massachusetts. Pittsburgh Plate Glass Co., Paint Div., Pittsburgh, PA. Procter & Gamble Co., Cincinnati, Ohio. Spartan Grain & Mill Co., Inc., Spartanburgh, South Carolina. Tuckers (Mrs.) Foods, Inc., Sherman, Texas. Wilson & Co., Chicago, Illinois. Handwritten: New Associate Members: Clark Mills Inc., Minneapolis 15, Minnesota.

Note: Apparently Continental Grain Co. was not a member this year. They were a member by 1975. Address: 3818 Board of Trade Building, Chicago 4, Illinois.

255. *Soybean Digest*. 1949. Back from Europe. Sept. p. 108. • **Summary:** Dwayne Andreas and Dr. Julius Hendel returned recently from Europe after attending the International Association of Seed Crushers Conference at Montraux, Switzerland. “Both men are vice presidents of Cargill, Inc., Minneapolis, Minnesota.”

“Andreas and Hendel also traveled in Germany, France, Denmark, Holland and Belgium conferring with Cargill agents and customers in the vegetable oil and oilseed business. They spent some time studying the German situation in Hamburg and Frankfurt and were amazed to see the rapid progress being made under the impetus provided by tremendous American expenditures and the apparent determination of some Americans to rebuild Germany as soon as possible.” A small portrait photo shows Dwayne Andreas.

256. Hunter, Robert. 1949. Archer-Daniels: Research,

new products lead way to tremendous postwar growth. A company study. *Barron's National Business and Financial Weekly*. Oct. 31. p. 11.

• **Summary:** Today the ticker tape symbol of the Archer-Daniels-Midland Co., the largest company of its kind in America, was changed to "ADM" from "ADD." The old symbol was an apt one for postwar progress. "To the investor in search of 'growth' companies Archer-Daniels ranks as a find."

Growth during the last four postwar years has been startling. Net sales rose from \$61.9 million in 1939, to \$181.9 million in 1946, up to \$277.0 million in 1949. Net income, after income taxes, was \$1.8 million in 1939, \$6.6 million in 1946, \$15.7 million in 1947, \$12.3 million in 1948, and \$12.0 million in 1949. For the past 4 years, net income averaged 4.3% of sales. Stated another way, since 1946, net sales have 287% and net income 346%.

ADM is the leading processor of linseed oil, the fourth largest flour miller, "and one of, if not the largest processor of soybeans in the country. It leads all others in the production of core oils for foundries." Its sales to industry are much more important than its direct sales to consumers. Whenever possible, ADM management hedges its purchases of raw materials by sales in the futures market or by forward sales of the completed products. Though prices of the raw materials it processes fluctuate sharply, the company has earned a profit every year since it was incorporated in 1923 and has never failed to pay a dividend since 1927. At the end of the past fiscal year, on 30 June 1949, the company had no bank debt, no notes, and no preferred stock. "ADM's growth has been due to its excellent research department and to the 'plough-back' or earnings into the business." Over the past 4 years the net value of ADM's plants has risen to \$29.9 million from 9.5 million.

The central laboratory of ADM's research department has played a leading role in finding new uses for current products and developing new products and processes. ADM claims to have had many "firsts." During the 1920s it claims to have been the first to use the solvent extraction process on soybeans to recover the oil. [Note: Several companies used solvent extraction on soybeans before ADM began in 1934]. In the 1930s ADM, along with associates, found a way to separate lecithin from soybean oil and helped to reduce the price of lecithin from \$10/lb to less than \$1/lb. Address: New York.

257. *Illinois Central Magazine*. 1949. Soybeans: The miracle crop. Illinois Central helped establish crop in Illinois, which today leads the entire country in production. 38(5):8-9. Nov.

• **Summary:** Contents: Introduction. Once little known in America. Railroad took lead. Illinois raises big third. Is leading vegetable oil. Widespread medicinal use. Harvest is one of greatest.

Not many years ago, the soybean "was known to [most]

Americans only as the zestful Chinese sauce used to pour over chow mein and chop suey.

"In less than two decades soybeans have become a heavy tonnage crop for the railroads. Soybean traffic on the Illinois Central has continued to grow by leaps and bounds during the past 14 years. In 1935 the railroad handled approximately 175,000 tons of beans amounting to 4,300 cars with a revenue of \$367,000. By 1948, soybean tonnage had reached the astounding total of more than a million tons loaded in more than 20 thousand cars with a revenue of \$2,701,453, an all-time high."

"This phenomenal growth in tonnage is a tribute to the early faith and efforts of the Illinois Central in promoting soybean cultivation among the farmers along its lines. Grown on only a few thousand acres in 1922, soybeans advanced in the succeeding 25 years to become the fourth largest cash grain crop in the United States.

"The leguminous plant, identified with the history of China as a source of food for man and beast for thousands of years, was introduced into this country in 1804. However it remained only a curiosity for more than a century. A shortage of vegetable oils during World War I focused attention to the soybean as a possible source for an oil substitute. After that war the first commercial plantings were established in North Carolina. However, soybean cultivation migrated westward to become firmly developed in the Corn Belt states of the middle west, where more favorable growing conditions were found.

"Railroad Took Lead: During the initial period of development of the soybean industry, the Illinois Central took a key part in promoting its expansion in the Corn Belt states. The first step in this direction occurred in 1927, when a special 'Soybean Train' was operated in Illinois under the supervision of the Agricultural Department in co-operation with the University of Illinois and several soybean processing establishments. This train attracted great attention. More than 33,000 farmers visited it to learn of the economic value of soybeans as a cash crop for their farms. Farmers soon turned from growing a few acres of beans for hay to planting thousands of acres for threshing and shipment of carload volumes at harvest time. The greenish-yellow beans went to processing mills, where chemists were busy discovering more and more commercial and industrial uses. Corn Belt states, which at times have suffered from a one-crop system, welcomed this supplemental crop that promised to bring new-found wealth.

From this introductory step, interest in the soybean cultivation expanded rapidly. In 1940 two special Illinois Central trains toured Illinois and Iowa bringing further information about soybean cultivation to farmers in those states to aid them in obtaining maximum yields. As a result, Illinois today is the leading soybean producer in country, followed by Iowa and Indiana.

Illinois Raises Big Third: In Illinois alone, production

rose from less than 2½ million bushels in 1927 to almost 50 million bushels in 1941. The high peak came last year when 78½ million bushels flowed like a green-gold river to processing mills.

“Last year national production reached 220 million bushels, Illinois’ share was one-third of the total. The four Corn Belt states of Illinois, Iowa, Indiana and Ohio produce the greatest part of the national crop, although there are some commercial plantings in North Carolina and along the Mississippi River where the four states of Missouri, Arkansas, Kentucky and Tennessee meet. Since 1927, the Illinois Central’s percentage of carloadings from the national production of soybeans has averaged 15 per cent. One year, in 1939, the railroad hauled 20 per cent, or one-fifth of all soybean carloadings.”

A photo (p. 9) shows an aerial view of Decatur, Illinois: “Hungry Mills—Long strings of freight cars, poured millions of bushels of soybeans into the maws of Decatur’s processing mills last month as the harvest hit its peak. In the foreground above is the A.E. Staley Manufacturing Company. The Spencer Kellogg and Sons plant is in the background and behind it is the Archer-Daniels-Midland Company. Another soybean processor, the Decatur Soya Products Company, is not in the picture. Photograph by Decatur Newspapers, Inc.”

258. *Barron’s National Business and Financial Weekly*. 1949. How’s business? Corporate news in review. Dec. 12. p. 16.  
 • **Summary:** “On an overall basis, profit margins are narrower than they were a year ago, said T.L. Daniels, president of Archer-Daniels-Midland Co., but he added that prospects volume-wise are good. All company plants currently are running at capacity.

“For the first quarter, ended September 30, the company earned \$2,063,556, or \$1.26 a share, compared with \$2,627,333, or \$1.60 a share, in the like period last year.” Address: New York.

259. **Product Name:** ADM Supersoy S, and Supersoy C (Salad and Cooking Oils).

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** 600 Roanoke Building, Minneapolis 2, Minnesota.

**Date of Introduction:** 1949 December.

**Ingredients:** Soybeans.

**New Product–Documentation:** Ad in *Soybean Digest*. 1949. Dec. p. 41. “Announcing... ADM Supersoy. These are ADM’s new soybean salad and cooking oils. Supersoy oils are now in production at our new ultra-modern refinery at Decatur, Illinois. Archer-Daniels-Midland Company: Creating New Values from America’s Harvests.”

260. *Soybean Digest*. 1949. Archer-Daniels-Midland Company’s new soybean oil refinery at Decatur, Illinois...

Dec. p. 36.

• **Summary:** “... was ready to go into production Oct. 30.” The refinery will use crude oil from the company’s new solvent plant at Decatur which went into production last summer. Plans have been announced for a new pilot plant in Minneapolis, Minnesota.

261. *Soybean Digest*. 1949. Announcing—ADM Supersoy (Ad). Dec. p. 41.

• **Summary:** See next page. “The little man with the big spoon has some good news for soybean growers everywhere. He’s the Supersoy Chef who is now telling the world about Supersoy ‘S’ and Supersoy ‘C’, ADM’s new soybean salad and cooking oils.

“Supersoy oils are now in production at our new ultra-modern refinery at Decatur, Illinois. We think they are the finest quality salad and cooking oils ever offered. If industry agrees, Supersoy will help build the market for your soybean crops year after year.

“Aggressive advertising and promotion of soybean products is an old tradition with ADM. In the case of Supersoy we plan to make the little man with the big spoon one of the best salesmen *you’ve* ever had.”

Across the bottom of this ad is written: “Creating New Values from America’s Harvests.” Address: 600 Roanoke Building, Minneapolis, Minnesota.

262. **Product Name:** Soy Gluten Flakes.

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** 600 Roanoke Building, Minneapolis 2, Minnesota.

**Date of Introduction:** 1949.

**New Product–Documentation:** Soybean Blue Book. 1949. p. 100.

263. **Product Name:** Kaysoy (Industrial Soy Flours).

**Manufacturer’s Name:** Archer-Daniels Midland Co.

**Manufacturer’s Address:** 600 Roanoke Building, Minneapolis 2, Minnesota.

**Date of Introduction:** 1949.

**New Product–Documentation:** Booklet. 1949. *Cracking the soybean*. ADM also makes Kaysoy, an adhesive which binds the decorative coating to wallpaper. Kaysoy proteins are also used in the manufacture of coated printed papers (to hold clay coating to the sheet), in making tape joint cement, in insecticide sprays (to make them spread easier and stick better), and cold water-based paints, and in many other industrial applications.

Ad in *Soybean Digest*. 1951. Jan. p. 39. “Charting the future of the soybean.” Kaysoy is listed. Ad in *Soybean Digest*. 1954. Feb. p. 21. “Nature locked the cupboard, but ADM found the key.” Kaysoy is listed.

Midland.” Feb. 23. Kaysoy flour, made in Mankato, is the basis for adhesives used mainly by the plywood and wallpaper industries.

Soybean Blue Book. 1963. p. 101. “Glues, Plywood adhesives.” Address: 733 Marquette Ave., Minneapolis 2, Minnesota.

Note: This flour was probably subjected to a minimum amount of heat so that it had a high PDI (protein dispersibility index).

264. *Soybean Digest*. 1950. New ADM plant [at Mankato, Minnesota]. Jan. p. 21.

• **Summary:** T.L. Daniels, president of the Archer-Daniels-Midland Co., Minneapolis, Minnesota, has announced plans to build a new 3-million-bushel soybean processing plant in Mankato, Minnesota.

The plant is expected to be ready next October in time for the 1950 soybean crop. Plans call for a 150-foot-high grain elevator, a processing structure 3 stories high, and a five-story solvent plant.

Note: An earlier plant was announced by ADM for Mankato in Nov. 1945.

265. *Decatur Daily Review (Decatur, Illinois)*. 1950. What, challenged again?: Mankato, Minnesota, is processing center. Feb. 21. p. 14.

• **Summary:** This is largely a reprint of a recent article from the *Mankato Daily Free Press* that gives a complete history of the soybean crushing plant at Mankato, Minnesota.

Mankato, where 3,600,000 bushels of soybeans were turned into oil and meal last year, is the biggest soybean crushing center west of the Mississippi [river], local processors estimate. “And next to Decatur, Illinois, its the biggest in the nation.

“Next year that figure, handled by Honeymead Products, Inc., will be doubled when Archer-Daniels-Midland opens a huge new plant here.

“When Honeymead’ took over a small soybean plant here in August, 1947, about 300,000 bushels were processed in Mankato annually.

“The credit for founding the soybean processing industry in Mankato—and thus laying the base for its phenomenal growth—belongs to a group of Mankato businessmen headed by T.M. Coughlan and S.B. Wilson, however. It was in 1939 when they and their associates set up a Mankato Soybean Products Inc., plant in West Mankato. But, although the business was rated a success, they found it difficult to convince Southern Minnesota farmers that soybeans would be a profitable crop. As a result the production of beans in the area wasn’t much more than one or two per cent of its present total. The Mankato plant found it necessary to ship [soy] beans from Iowa and Illinois for processing.

“In 1943 the Mankato plant was sold to the Washington Cooperative Egg and Poultry association, which operated it

until 1947, when Honeymead took over.”

“Eleven years ago Southern Minnesota farmers found it hard to see the possibilities in a grain which sold for 65 cents a bushel.

“Today the rich soil of Blue Earth county produces more soybeans than any other county in Minnesota. “The state’s top soybean-growing area lies within a 60-mile radius of Mankato.

“Almost 63,000 acres in this county produced 1,500,000 bushels of soybeans in 1948 to lead the state. Last fall’s figures, not yet compiled, will probably be somewhat higher.

“Soybeans today are the No. 2 money crop of Blue Earth county farmers, right behind corn.

“Blue Earth County Agent Quentin Marsh estimates that in 1949, 119,000 acres were planted with corn, 81,000 in oats and 65,000 in soybeans. Oats, while topping soybeans in acreage, doesn’t bring the cash return of beans, selling today at 64 cents a bushel against \$2.13 for soybeans.

“What turned Mankato—an agricultural retail center—into one of the nation’s main processing centers?

“How to account for what amounts to a crop revolution which hiked just one county’s soybean production by 60 times in a decade?

“Price, for one thing. In that time soybeans jumped from 65 cents a bushel to a peak of more than \$4 a bushel. The price now has settled to \$2.13 as of today and has stayed at about that level for the last year. But other things helped.

“Quentin Marsh, county agent, says Blue Earth county’s flat terrain and clayish soil makes the area a soybean-growing Eden.

“For example, the county’s yield per acre in 1948–24 bushels per acre—was the highest in the state.

“C.L. Marshall, Honeymead Products, Inc., vice president, says local soybean-processing facilities create a much better market for farmers.

“Favorable freight rates, gained by Mankato’s location, was another reason cited by Otis Smith, general manager of Hubbard & Palmer, a local firm which buys and ships up to five million bushels of grain a year.

“Mankato’s central location in the soybean-growing area was a major factor in locating the new Archer-Daniels-Midland processing plant here, according to President T.L. Daniels.

“The service by four railroads and a large local market for soybean oil were still other reasons given by Daniels.

“Whatever the reasons. Southern Minnesota’s underdog crop has pulled an ironic trick. Processors imported soybeans 10 years ago. Today, as much as two-thirds of Minnesota’s production is at times shipped to Iowa and Illinois for processing.”

266. Brierley, R.G. 1950. Problems in the promotion of soy flour. *Soybean Digest*. Feb. p. 18-20.

• **Summary:** From an address before the Peoria, Illinois,

soybean conference. "The basic problem in promoting soy flour is that its greatest selling point is nutrition and no one seems to give a darn about nutrition in human food." This is a sad commentary on life in America. Another key selling point is its price. But we have to educate people. "How many people realize that soy protein is the cheapest vegetable protein available for human consumption... How many know that since the start of the war 900,000 tons of soy flour have been used in human feeding? How many know that 26 countries have had American soy flour?" The author would like to "change the name of soy flour to soy protein or soy powder or something that gets away from the 'flour' terminology. Soy flour bears no resemblance to wheat flour. It has no gluten, no starch, you cannot make a loaf of bread from it. It is more analogous to milk powder and is strictly a protein fortifying agent." In 1947-48 more than 9% of all soybean oil meal was turned into soy flour, up from 1% 6-7 years ago. Address: Asst. Vice President, Archer-Daniels-Midland Co., Minneapolis, Minnesota. And secretary of the Soya Food Research Council.

267. *Soybean Blue Book*. 1950. Soya Food Research Council. p. 18.

• **Summary:** Organized 1936. Address—828 Barr Building, Washington 6, DC. Officers: Director—Edward J. Dies. Chairman of research—Dr. J.W. Hayward. Chairman executive board—E.A. Buelens. Vice chairman—R.G. Bierley. Treasurer—H.A. Olendorf. Secretary—Douglas Dies.

"This Council has been the principal part of the Soy Flour Association since organization of the Association in 1936. Inasmuch as most activities are centered in the Council, it was voted at a meeting on Dec. 9, 1949, to drop the name of the Soy Flour Association, which has been somewhat unique as a trade group as its major effort has been along the lines of scientific research, new product studies, and market development.

"On the Council the soybean growers are now represented through membership of George M. Strayer, Secretary-Treasurer of the American Soybean Association, along with producers of soy flour and other interested groups."

268. *Soybean Digest*. 1950. Grits and flakes... from the world of soy: Brierly and Shuman leave for Germany. March. p. 46.

• **Summary:** R.G. Brierly, assistant vice president of Archer-Daniels-Midland Co. (Minneapolis, Minnesota) and Kenneth Shuman, Glidden Co. (Indianapolis, Indiana), left Feb. 16 for a four-week trip through Germany.

269. Brierley, R.G. 1950. Report from Germany. *Soybean Digest*. June. p. 22-23, 43.

• **Summary:** Brierly and C.K. Shuman of the Glidden Co. visited Germany on invitation of the German Foods Ministry.

"Low cost Protein is still the major food deficiency in

Western Germany. Small percentages of soy flour in German bread could solve this problem with no increased cost to the consumer or change in national food habits. Substantial amounts of ECA [European Cooperation Administration] food dollars for Western Germany would be saved by the American taxpayer. At the same time there would be a new market for 100,000 tons per year of American soy flour.

"The foregoing is a summary of the findings of Ken Shuman of the Glidden Co. and the Soya Food Research Council, and myself, after a tour of Germany at the invitation of the German Food Ministry. We had been asked to further investigate in Germany the recommendations of the ECA technical assistance team of Strayer and Carter who had suggested that a major contribution could be made by the addition of soy flour to German bread and meat products.

"For four intensive weeks we studied the protein food problem in Germany. We traveled over 3,000 miles by car, participated in group meetings of bakers, millers, nutritionists, government officials, cooperatives, consumer and union organizations and representatives of various Allied food manufacturers. Over 300 key food leaders of Western Germany were conferred with during these meetings and in many individual discussions. We carried the good will and the soybean food technology of the United States to a country much in need.

"We found Germany a sparkling facade under which lay a multitude of misery, cynicism, fear, and despair.

"Everywhere there was an outward appearance of prosperity. Shop windows shouted with food and merchandise. Rebuilding of everything but residential homes was going on at rapid rate. Controls and rationing were a thing of the past. For a traveler with money, everything was procurable at prices which, when converted to dollar equivalents, were in line with American prices. Even luxury foods such as oranges and bananas, nonexistent a year ago, were in evidence everywhere.

"Looking through this surface prosperity, we found quite a different picture, one that the American soybean farmer and processor should know in forming judgment on the future market possibilities for American soybean materials in Europe.

"Millions out of work: First, we found approximately 15 million people out of the 50 million population in Western Germany either unemployed, displaced or without retirement incomes, or otherwise financially incapable of getting more than essentially carbohydrate foods as a regular diet.

"Second, prices of protein foods were terribly high when considered in light of average income. In one of Western Germany's largest cities there was an adequate supply of per capita protein foods, but during the month before our arrival there had been only 50 percent consumption. This was entirely because of inadequate incomes. While prices were in line with American prices, incomes were roughly 20 percent of the average American income. German experts estimate

that high quality animal proteins are available regularly to only 15 percent of the population. Another 35 percent are borderline in their ability to regularly purchase protein foods, while 50 percent find such foods much beyond their budget.

“Third, we found that the protein available to the average population was coming primarily from cereal sources. The total meat protein available in Germany averaged 25 kilos per person per year against prewar figures of 48 kilos per person per year.

“Fourth, we found that even though there was no actual rationing, money had become the rationing system. The few fortunate were living well but the average person was still on a very inadequate diet. In our many meetings with the German Food Ministry and ECA people in Germany, we were informed that they realized this apparent ready availability of food in general could not long exist. We were asked to investigate and prepare the way technically for the use of soy protein in the German dietary. Why soy protein? Because it had been proven over and over again to be the cheapest and most readily available high quality protein food in sight.

“Our technical investigation started with the premise that the introduction of any new ingredient into the human dietary, if it were to be effective, must be accomplished in a manner that would not alter existing food habits and in a form that had consumer appeal.

“Use in bread: It was decided to first study the inclusion of soy flour in German bread. Here could be made the greatest nutritional contribution to the average diet, because of the extremely high consumption of cereal products in the form of bread by most of the population of Western Germany. The primary problem studied was whether soy flour could be used in German bread without changing it so that its consumption would change existing food habits or have less consumer appeal.

“Large scale feeding tests conducted in the United States had shown that 6 percent of soy flour could be added to American white bread without any taste fatigue or impairment of the average daily bread consumption. Even though German bread was unlike American white bread, it seemed logical to assume that a smaller percentage, such as 3 percent, could well be used in Germany. Tests were run, therefore, in several bakeries, technical bread laboratories, and flour milling test bakeries. Scoring of bread including 3 percent of soy flour combined with various German wheat flours indicated by the opinion of numerous observers, both expert and amateur, that such additions could be made without changing the bread and without adversely affecting consumer appeal. Supplementary tests are now being run in several approved establishments in Germany to further confirm this finding.

“Our next approach was to the ways and means of actually getting 3 percent of soy flour into the German bread. Because there was an over supply of German dried milk

powder, we also investigated the possibilities of adding milk powder along with soy flour.

“There were an estimated 30,000 small bakers in Western Germany. The educational program involved in having them add 3 percent of soy flour and/or milk powder and the distribution problem of getting them supplies was staggering. It was decided, therefore, to approach the flour millers with the idea of having them mix the soy flour and milk powder with wheat flour at controlled levels in their mills. The German flour mills, which service the majority of the bakers in Western Germany, were well equipped to control the admixture on an economical basis. As we left Germany, the Food Ministry was working with these German millers on the program and the millers indicated that they were willing to cooperate.

“It was decided that such a plan would require a revision in flour standards or a creation of a new standard flour terminology to designate wheat flour to which 3 percent of soy flour and/or milk solids had been added. Our discussion with food authorities indicated that such a standard might well incorporate a terminology which would compare to the meaning of the American term ‘Enriched Flour.’

“The next consideration was the economic aspects of the inclusion of soy flour in wheat flour for subsequent use in bread. The world market price of soy flour was less than wheat flour. While we were in Germany, however, local subsidies on wheat flour changed this relationship. There is every prospect now, however, that by July 1st these subsidies on wheat flour will be dropped and the natural world market price relationship between soy flour and wheat flour will be restored. This will make soy flour an item that could be substituted in the ECA program for more expensive protein foods at a considerable saving to the American taxpayer. It isn’t often that money can be saved by giving a population better nutrition, but this would be the case with the addition of soy flour to German bread...” Address: Asst. Vice President, Archer-Daniels-Midland Co., Minneapolis, Minnesota.

Daniels, president of Archer-Daniels-Midland Co., Minneapolis [Minnesota]. June. p. 36. • **Summary:** “Most of the newly acquired stations are in Minnesota’s principal soybean producing area. They will add 26 country elevators to the ADM system.”

272. Brierley, R.G. 1950. Soy flour in Germany. *Soybean Digest*. Sept. p. 72-73.

• **Summary:** The author has recently spent 6 months in

Germany and Europe on two consecutive trips in 1948 and 1950. He has travelled 5,000 miles in Germany and talked with hundreds of Germans who represent government, agriculture, industry, consumers, and unions. After World War II, the U.S. soy flour industry was “asked to produce and ship 150,000 tons of soy flour to Germany. Although we had recommended that the soy flour be incorporated in wheat flour, it was sent from here as soy flour. When we suggested that our experts would assist in seeing that the product was properly used, we were told that the army experts knew all about it and would ably take care of the situation. It was not until first Ersel Walley, and then myself went to Germany that we learned that neither the Germans nor the military occupation authorities knew about the soy flour until just before it arrived, and neither knew how to use it...

“Soy flour shipments were just as suddenly shut off when Congressional pressure forced potato flour on the army... During this period the German food ministry was interested only in building up meat production for psychological and political reasons. There still remained large stocks of soy flour which had backfired when it was added at high levels to bread containing levels of corn flour and potato flour and peanut flour that made the bread unpalatable. Rather than use the soy flour in small recommended levels, to bring real nutrition to the lower income people, it was finally decided to feed it to animals. And the American taxpayer paid for that colossal misuse.” Address: Asst. Vice President, Archer-Daniels-Midland Co., Minneapolis, Minnesota.

273. Hayward, J.W. 1950. Research affecting the feeding of soybean oil meal. *Soybean Digest*. Sept. p. 30-34. Also in *Feedstuffs*. 22(41):36. 1950. Amaral 1958. [7 ref]  
 • **Summary:** Contents: Introduction. Big markets. In chick starters. Phosphorus. Solvent meal (including APF = “animal protein factor” and vitamin B-12). Antibiotics.

Concerning antibiotics: “We understand that the antibiotics, penicillin, streptomycin, aureomycin, and terramycin are equally effective in increasing the growth rate of chicks, poult, and pigs, and that their effect is in addition to vitamin B-12. The antibiotics are certainly not a part of the APF complex, or at least, we have no knowledge of these antibiotics being contained in the natural sources of vitamin B-12, such as fish meal, fish solubles, milk and other animal byproducts.

“For those of you interested in a rather recent good review on aureomycin, I suggest that you read the article cited by Stokstad of Lederle Laboratories.” Address: Nutritional Research Dep., Archer-Daniels-Midland Co., Minneapolis, Minnesota.

275. Archer-Daniels-Midland Co. 1950. New ADM soybean processing plant located at Mankato, Minnesota: Good news for Minnesota and Iowa soybean growers (Ad). *Soybean Digest*. Oct. p. 21.

• **Summary:** An illustration shows the new solvent processing plant and elevators, which are almost ready for use. The plant will have an annual capacity of 3 million bushels of soybeans; the 150 foot concrete tanks are among the tallest in the country. Other ADM soybean processing plants are located at Decatur, Illinois; Minneapolis, Minnesota; Edgewater, New Jersey; Los Angeles, California; Portland, Oregon; Fredonia, Kansas; Buffalo, New York; Chicago, Illinois; Kennedy, Texas. Across the bottom of the ad is the slogan “Creating New Values from America’s Harvests” and the “Archer Quality” logo.

Note: Talk with Lowell Andreas. 2003. July 23. ADM eventually had a feed mill adjacent to its soybean processing plant. This plant is still in operation and still owned by ADM; Lowell has his office there. The ADM plant does solvent extraction of soybeans and refines soybean oil. Years ago, ADM sold the adjacent feed mill to Hubbard Milling Co., which now receives its soybean meal from the plant next door by conveyor belt. So the Honeymead plant that Lowell worked so long to build is now in head-to-head competition with ADM’s plant in Mankato. Address: 600 Roanoke Building, Minneapolis 2, Minnesota.

276. **Product Name:** Soybean Oil, and Soybean Oil Meal.  
**Manufacturer’s Name:** Archer-Daniels-Midland Co.  
**Manufacturer’s Address:** Mankato, Minnesota.  
**Date of Introduction:** 1950 November.

**Ingredients:** Soybeans.

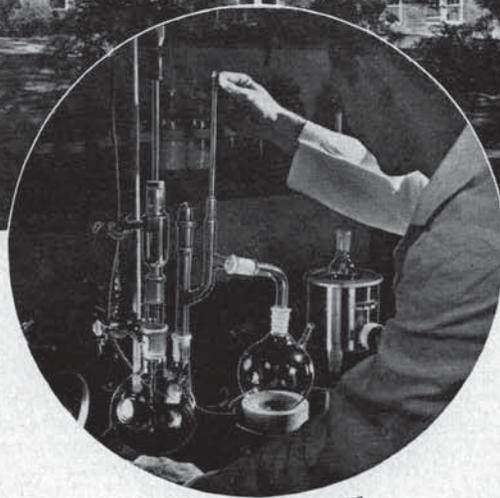

**How Stored:** Shelf stable.

**New Product–Documentation:** Ad in *Soybean Digest*. 1950. Oct. p. 21. “New ADM soybean processing plant located at Mankato, Minnesota: Good news for Minnesota and Iowa soybean growers.” An illustration shows the new solvent processing plant and elevators, which are almost ready for use. The plant will have an annual capacity of 3 million bushels of soybeans; the 150 foot concrete tanks are among the tallest in the country.

## Charting the future of the Soybean

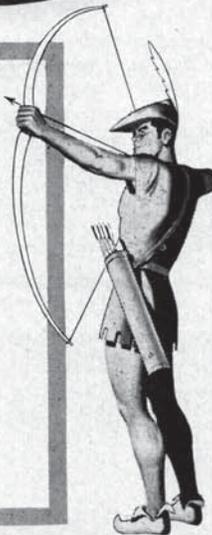

**H**ERE in ADM's big, modern laboratory, a team of highly skilled research men are planning the future of your crops.

For 25 years, ADM has been a leader in creating new uses for the soybeans you grow. Dozens of new products born in this famous laboratory and produced in ADM plants across the nation help fill vital needs in our everyday life. This is the way markets are built . . . and with each new product created by ADM research, the market for your soybeans has grown.

Although ADM is proud of the part it has played in the past, its attention is always on the future. Today, ADM research men are busier than ever . . . learning new secrets . . . developing new products . . . creating new markets . . . for YOU.

### Some ADM Products Made from Soybeans

- ADM Soybean Brew Flakes
- Archer "C" (Cooking Oil)
- Archer "S" (Salad Oil)
- Archer 41% Soybean Oil Meal
- Archer 44% Soybean Oil Meal, Pea-Size, Pellets, Flakes
- Archer 50% Low Fibre Soybean Oil Meal
- Archer Quality-First Feeds
- Arlecine (Soybean Lecithin)
- Bakers Nutrisoy
- Daniels' Supreme
- Kaysoy
- Nutriwhip
- Packers Granular
- Paint Vehicles
- Soya Fatty Acids
- Soy Flour

grown.

“Although ADM is proud of the part it has played in the past, its attention is always on the future. Today, ADM research men are busier than ever—learning new secrets—developing new products—creating new markets—for You.

“Some ADM products made from soybeans: ADM Soybean Brew Flakes, Archer “C” (cooking oil), Archer “S” (salad oil), Archer 41% Soybean Oil Meal, Archer 44% Soybean Oil Meal, Pea-Size, Pellets, Flakes, Archer 50% Low Fibre Soybean Oil Meal, Archer Quality-First Feeds, Arlecín (soybean lecithin), Bakers Nutrisoy, Daniels’ Supreme, Kaysoy, Nutriwhip, Packers Granular, Paint Vehicles, Soya Fatty Acids, Soy Flour.”

Across bottom of ad: “Creating New Values from America’s Harvests.”

A half-page photo shows ADM’s new research laboratory. Two ADM logos, each with an archer shooting an arrow in a bow, appear on this page. Address: 600 Roanoke Bldg., Minneapolis, Minnesota.

278. *Soybean Digest*. 1951. A-D-M’s 3-million-bushel plant (Photo caption). Jan. p. 20.

• **Summary:** A photo shows an aerial view of the huge plant. The text below the photo reads: “Annual processing capacity of this new solvent extraction plant of Archer-Daniels-Midland Co. at Mankato, Minnesota, is 3 million bushels, the largest in Minnesota. Located next to the firm’s Mankato Mills (a formula feed unit), the plant consists of five separate buildings, a storage elevator, a cleaning and drying facility, a processing building, a five-story solvent extraction unit and a warehouse. Storage capacity is 1 million bushels. Plant was formally dedicated last fall.”

279. Brierley, Richard G. 1951. Chemurgy is success factor at A-D-M. *Chemurgic Digest*. Feb. p. 4-7.

• **Summary:** “Archer-Daniels-Midland Company has

emerged as the nation’s largest producer of vegetable oils, and as one of the world’s largest processors of farm-crops. Directly this growth can be traced to the application of the principles of Chemurgy, for the company has held fast to its slogan, ‘creating new values from America’s harvests through chemical research.’”

In the company’s 149-year history, it has never finished a year in the red, “and hasn’t skipped a dividend since 1927. As of June 30, 1950, the company was a \$250,000,000 a year business with no bank loans, bonds, notes, or preferred stock, and a net worth of \$80,000,000.” During the last 5 years alone, over \$30 million has been invested in new plants, including a modern soybean solvent extraction plant that began operating in

Mankato, Minnesota, in Oct. 1950.

“The company’s present operations are far flung and could be divided into five major departments: flaxseed, soybean, The Commander-Larabee Milling Division (wheat flour), Werner G. Smith Division (core oils); and the grain department.”

A-D-M is the world’s largest handler and processor of flaxseed, from which linseed oil is extracted.

“Strip America’s machines of parts made by foundry casting, and hardly a machine anywhere could move. Linseed oil, in the guise of core oil, plays a key role in making these castings. It literally makes America’s wheels go ‘round.

“Floor coverings made of linseed oil are found everywhere—in homes, shops, factories, banks, theaters, offices. For linseed oil is the key ingredient of linoleum, a word derived from the Latin and meaning literally ‘the oil of the flaxseed.’

“The remarkable story of the growth of the soybean industry is in part the story of A-D-M. It pioneered in soybean research and is today one of the leading processors of the crop.”

“Many Soybean Uses: From the soybean comes America’s leading edible oil, special industrial oils, high protein foods. soybean oil meal for animal feeds, adhesives for plywood, coatings for wallpaper and paper, and emulsifiers for paints and foods.

“The last ten years has seen a phenomenal growth in the soybean industry. But it all didn’t just happen. Research had to pave the way.

“Uses for the products of the soybean had to keep pace with the expanded production of the crop. Less than twenty years ago, a 5% to 10% content of soybean oil in any food product was considered a maximum if taste and appearance were to be ideal. But today, some 100% soybean

oil shortenings are used. Obviously, wonderful technical progress has been made.

“In its crude state, soybean oil is not a good industrial oil. It ‘bodies’ slowly in the kettle, and dries too slowly for general use. Laboratory research has literally transformed soybean oil for use in paints. Drying has been speeded, and brushability, acid and alkali resistance, elasticity and other needed properties have been made competitive with more expensive oils.

“The by-product left over after the extraction of soybean oil is called soybean oil meal. It had many disadvantages when first sold to the mixed feed industry. So experts developed scientific processing equipment to further process soybean oil meal into an efficient protein supplement in mixed feeds, and then worked through the agricultural colleges and other nutritional feed experts to prove that soybean oil meal could be made into the best-balanced vegetable protein for livestock and poultry. Today the soybean oil meal of the industry is considered the ‘yardstick for protein feed ingredients’.

“The next job was making these byproducts of oil extraction more valuable. Soybean oil meal has been further refined through research as a basic ingredient for vegetable glues for use in plywood, and as adhesives for all sorts of industrial coatings. Even cold water paints have been developed as new markets for high protein industrial soy flour. Edible soy flours have been developed for use in bread, cereals, cakes, sausage, yeast foods. Millions of pounds have been used in relief feeding by the Army, UNRRA, and Lend-Lease. To a world deficient in protein foods, soy flour will undoubtedly bulk large in the future through new developments coming out of the food and bakery research laboratories.

“Lecithin: One of the most fascinating of all soybean products is a viscous fluid called lecithin. The peculiar chemical character of lecithin makes it valuable in the baking industry (in bread, rolls, doughnuts, pies), in soaps and dry cleaners, in cosmetics, and chemists say its usefulness will be much further explored. Lecithin was originally a bothersome by-product that had to be thrown away. Chemurgy, at work in research laboratories, made lecithin a valuable and sought after product for industry.

“Through its Commander-Larabee Milling Division, Archer-Daniels-Midland Company is the fifth largest flour miller in the United States. The major part of the production is sold directly to bakers. Research, however, is fast finding more lucrative industrial uses for flour. So far, special products have been developed for manufacturers of wallpaper cleaners, dry batteries, insulation board, and oil drilling muds. A-D-M is convinced that, with the vast supplies of wheat in this country, the overcapacity in the milling industry, and the keen competition in bulk flour, Chemurgy must lead the way in finding new and better uses for products of wheat.

“Core Oils: A-D-M, through its Werner G. Smith Division, is the largest United States producer of core oils used by foundries and a major supplier of fatty acids and alcohols. ‘There are many different types of core oils. Essentially they all are used as the binder that holds together the sand that serves as the mold for the casting. About one gallon is used to a thousand pounds of sand. The oil preserves the mold when the hot metal is poured around it during the actual casting process. It then displays that unique property known as ‘collapsibility’; that is, it burns out and causes the molds to disintegrate at just the right moment, leaving the casting free.”

Photos show: (1) Mr. Brierley, age 35, who joined A-D-M in 1942 and by 1945 was manager of its Soya Products Division. (2) T.L. Daniels (president) and Samuel Mairs (chairman of the board) as they examine a vacuum-pressure kettle. (3) The A-D-M processing plant at Decatur, Illinois, which includes five units, namely the elevators, two solvent plants, an oil refinery, and a soy flour plant. A-D-M also produces lecithin and core oils from linseed oil. Address: Asst. Vice-President, Archer-Daniels-Midland Co.

280. *Soybean Digest*. 1951. A-D-M opens plant. June. p. 32.  
 • **Summary:** “Election of a new member to the board of directors and opening of a new product development or pilot plant at Minneapolis were announced May 9 by Archer-Daniels-Midland Co.

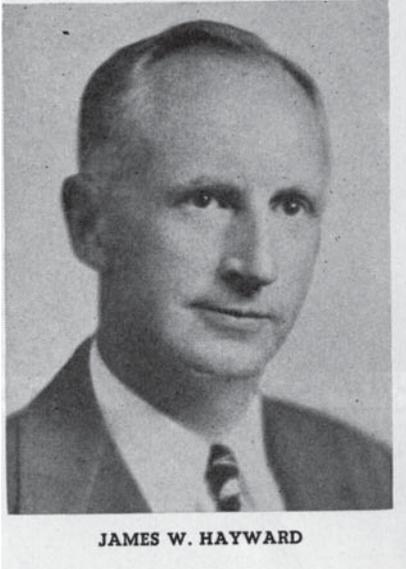

The new director is Grant Keehn, executive vice president of the First National Bank of the City of New York. A former industrial financial consultant and vice president of Kelsey-Hayes Wheel Corp. of Detroit, Keehn is also a director of Great Northern Railway Co., G.D. Searle & Co., Diesel Publications, Inc. and Kelsey-Hayes Wheel Corp.

“The new four-story product development plant, designed by ADM’s chemical engineering section. will process all types of oils and fatty acids. Here oils can be oxidized and modified under varying conditions of heat, vacuum, pressure and chemical reaction.

“The plant will be operated by the ADM research division headed by S.O. Sorensen, vice president. James Konen, director of research, will be in charge. He will be assisted by Newton D. Farel, formerly in charge of ADM’s Los Angeles [California] refinery.”

281. *Soybean Digest*. 1951. Honorary life members 1951 [American Soybean Assoc.]: James William Hayward and Frank S. Garwood. Sept. p. 22.

• **Summary:** James W. Hayward was born near Angola, Indiana, in 1898. In 1925 he was made director of the department of agriculture at Notre Dame University, which position he held until 1932, when he entered the University of Wisconsin to pursue a PhD degree in animal nutrition. He was awarded that degree in 1935. “He became director of the new department of nutritional research of the soybean

JAMES W. HAYWARD

division of Archer-Daniels-Midland Co. at Milwaukee, Wisconsin, in 1935, and transferred with the department to Minneapolis, Minnesota, in 1937, where he now lives.

“The name Jim Hayward has long been intimately connected with soybean oil meal. He did some of the early research on its use as a livestock feed... For many years he has been recognized

as a leading authority on the use of soybean oil meal in livestock feed.”

“Frank S. Garwood, farmer and seedsman, operates over 600 acres of land in Christian County, Illinois.” With his two sons (Harold and Donald), he grows certified soybean seed and seed corn; their farm and business is named F.S. Garwood & Sons. “He is a member of the Illinois Crop Improvement Association, and is active in testing new varieties of soybeans, wheat or oats as they develop.

“Mr. Garwood was one of a number of progressive farmers who pioneered soybean production in Illinois [in the early 1920s] and were responsible for the rapid progress of the crop. For the first 15 years of soybean production he was one of the most consistent producers of large acreages of soybeans in Illinois, averaging 300 to 600 acres a year.

“The first small combine for harvesting soybeans was assembled and put into use on the farm of Frank Garwood in 1924. Before that time soybeans had been harvested as were wheat and oats, with the binder and threshing machine. Mr. Garwood had some difficulty in getting the major machinery firms to see the usefulness of a small combine thresher that farmers could use on soybeans. The Massey-Harris Co. consented to build him one. Farmers and machinery men came from many miles to see if it would work. It did. From then on the combine harvester came into use fast, not only for soybeans but for small grains as well.

“Mr. Garwood graduated from the University of Illinois College of Agriculture. He has spent all of his life on the farm. His ancestors came with the original colony that settled in Christian County, Illinois, from Stonington, Connecticut, about 120 years ago. He helped pioneer the establishment of the Farm Bureau and has served on its board as well as the board of the Christian County Farm Supply Co. He was the first president of the Stonington Cooperative Grain Co., a position he now holds.”

A photo shows each man.

282. Mining, Metallurgical and Chemical Section, Industry and Merchandising Division, Dominion Bureau of Statistics, Department of Trade and Commerce, Canada. 1951. The vegetable oils industry 1950. Ottawa, ONT, Canada. Vol. 2—Part XVIII—p. J-1 to J-8. Oct. 13.

• **Summary:** Ontario province is Canada’s leading producer of vegetable oils. The leading oilseed, in terms of value at the mill, is flaxseed (\$18.5 million) used to make linseed oil and meal, followed by soya beans (\$14.4 million). Most of the soya bean oil in Canada is processed by companies in the slaughtering and meat packing industry to make shortening, etc. Other major uses are in fish packing (5.5%), paints (3.3% of total), and miscellaneous foods (3.2%). In 1950 Canadian imports included \$878,794 worth of edible soya bean oil and \$627,095 of non-edible soya bean oil, \$1,265,296 of soya bean oilcake and oilcake meal, and \$269,120 of soya bean flour. Page J-8 gives a “Directory of Canadian firms in the vegetable oils industry, 1950,” including: (1) Victory Soya Mills at 285 Fleet St. E., Toronto. (2) Toronto Elevators, Limited (Oil Crushing Division), Queens Quay, Toronto. (3) Edible Oils Limited, Fort William.

Note: This is the earliest document seen (Aug. 2019) that mentions “Victory Soya Mills.” Address: Ottawa, ONT, Canada.

283. National Soybean Processors Assoc., Soybean Research Council. 1951. The Duren disease: English translations of pertinent foreign language articles. Vol. 1. Soybean Research Council, National Soybean Processors Association, 3818 Board of Trade Building, Chicago 4, Illinois. 101 p. Oct. Translations of 21 articles are included. Edited by Warren Goss. [62 ref. Eng]

• **Summary:** During the early part of 1951, a number of cattle deaths in the Midwest were tentatively diagnosed as poisoning caused by the feeding of trichloroethylene extracted soybean meal. The symptoms appeared identical to those first described by Stockman in 1916.

Contents: Cover letter, by Warren H. Goss (dated 15 Oct. 1951). Foreword, by Goss. Bibliography: English language (8 references). Translations (all typewritten) of foreign-language documents: German, Finnish, French. Bibliography: Foreign language: 30 references.

The cover letter is on Soybean Research Council letterhead (3818 Board of Trade Building, Chicago. Phone: HARRISON 7-7605). Members: J.L. Krider, Chairman. O.H. Alderks, Ernest Bechtel, H.C. Black, Francis E. Calvert, James C. Fritz, Warren H. Goss, J.W. Hayward, M. McMillan, Wesley Nelson, Kenneth Shuman, Robert L. Terrill, Harold L. Wilcke.

The cover letter states: “Gentlemen: Enclosed is a collection of translations we have prepared of foreign-language articles on the Duren disease, i.e., a hemorrhagic

illness in cattle which has been attributed to the feeding of trichloroethylene-extracted soybean oil meal. Additional articles are being translated, and copies will be sent as soon as they are available. The present transmittal is being sent without awaiting completion of the entire task, because many research workers are anxious to obtain the material as fast as it becomes available.

“Further information about these translations and the manner in which they are being made available is contained in the accompanying Foreword. We hope you will read it and arrange to file or bind your translations in such a way as to permit the addition of more from time to time.

“It is also hoped that this literature will prove of value to the scientists in research institutions where investigations of the Duren disease are in progress. The efforts of these workers are deeply appreciated by the entire soybean industry, and the Soybean Research Council offers this material, as a contribution toward solving the problem.

“Yours sincerely, Warren H. Goss.”

The 2-page Foreword states: “During the early part of 1951, a number of cattle deaths in the Midwest were tentatively diagnosed as poisoning caused by the feeding of soybean oil meal produced by extraction with trichloroethylene. The symptoms, cause, and other features of the ailment appeared identical with those described by Sir Stewart Stockman (3) in 1916 and later by Ralph Stockman (2). The former article, of which an abstract also appeared in 1916 (1), is a well-documented study of bovine mortalities which occurred first in 1912 in Southern Scotland and of experimental feeding tests from which it was concluded that, although soybean oil meal prepared by usual extraction methods (benzine or hexane) is a valuable feed ingredient, the use of trichloroethylene as a solvent in its manufacture yields a product that is toxic to cattle. In another contribution, Stockman (4) furnished data on the operating conditions employed, in the mill where the suspect meal was produced.

“Additional published information on this subject in the English language is meager. Mimeographed reports by Vollertsen (6), (7), were made available by E.I. du Pont de Nemours & Co., Inc., in 1939 and 1941, the latter of which presented indications that processing temperatures influence the degree of toxicity in the finished meal. Through the courtesy of Mr. H. Jasperson of J. Bibby Sons, Ltd., Liverpool, a report by Wakelam (8) was furnished to the writer covering a literature search of the poisonous effects attributed to trichloroethylene-extracted soybean oil meal. Sweeney, Arnold, and Hollowell (5) included, in a bulletin describing the trichloroethylene extraction process, a limited review of the literature and a summary of the Vollertsen results (7).

“Although occasional references to articles in the foreign literature appear in some of the preceding English-language publications, not a great deal of attention seems

to have been called to a major outbreak of the same hemorrhagic disease in Germany and nearby countries in 1923. Because it appeared first in the province of Duren, the illness became popularly known as the “Duren disease”. A perusal of certain German articles reveals that this particular epidemic was very serious and was the object of intense study and many scientific publications during the ‘twenties.’ Members of the Soybean Research Council were impressed with the extent of the foreign-language literature and the findings disclosed therein. In view of the apparent recurrence of the disease in this country, the Council considers it essential that all this material be made available in the form of English translations.

“Through the cooperation of Council members, the Minnesota and Iowa Agricultural Experiment Stations, and the Northern Regional Research Laboratory, mimeographed copies are being prepared of all pertinent foreign-language papers that can be found in the literature. These number forty-three at the present writing and, together with the English-language references cited above, constitute as complete a literature survey as we have been able to compile of the Duren disease.

“The first mailing of these translations is furnished herewith, and more will be sent to the same recipients as they are completed. It is hoped that these will be filed or bound in such a way as to permit the inclusion of additional articles from time to time.

“The individual translators, most of whom performed this task without compensation, have converted the foreign literature into English as accurately as possible, but no guarantee of accuracy is intended or implied. Readers are urged to consult the original foreign-language texts if in doubt as to details of any of the experiments described and statements contained herein. It is not always possible to express in concise English the complete or exact import of expressions used in other languages. The Soybean Research Council, through its office at 3818 Board of Trade Building, Chicago 4, Illinois, will gladly help anyone desiring to consult original texts not readily available in libraries.

“The Duren disease is a baffling problem. Its study is expensive and time-consuming because it affects only bovines. Intensive research is needed to determine specifically what the toxic principle is, how it can be avoided or eliminated in the production of the meal, and how it can be detected analytically. It is hoped that the preparation and distribution of these translations will aid in the conducting of these investigations. The Soybean Research Council is deeply appreciative of the contributions made to this project by the individual translators and extends its thanks to each.

“Warren H. Goss.”

Note: The numbers in parentheses refer to the English-language bibliography at the end of the Introduction. Address: Soybean Research Council, National Soybean Processors Assoc., 3818 Board of Trade Building, Chicago 4, Illinois.

Phone: HArrison 7-7065.

284. *Soybean Digest*. 1951. Solvent plant by Toronto Elevators. Oct. p. 35.

• **Summary:** Toronto Elevators Ltd. is constructing a \$1 million solvent plant for extraction of vegetable oils on the Toronto waterfront, according to an announcement by H.E. Bryant, manager of the vegetable oils department. The plant, which will be used primarily for soybean oil extraction, is the most modern of its kind in Canada, incorporating a number of processing features new in Canada.

A pioneer in Canada's soybean crushing industry, Toronto Elevators Ltd. has been actively engaged in this field since 1938.

Located near the company's grain elevators, master feed plant, and vegetable oils refinery, the new plant is expected to be in operation by about the end of 1951. The crude soybean oil will be pumped to the refinery for processing to meet the requirements of the paint industry. The new solvent plant will also produce edible oils.

The present expeller plant operated by Toronto Elevators Ltd. will be continued in use for crushing flaxseed.

285. Liener, Irvin E. 1951. The intraperitoneal toxicity of concentrates of the soy bean trypsin inhibitor. *J. of Biological Chemistry* 193(1):183-91. Nov. [27 ref]

• **Summary:** A concentrate of soy bean trypsin inhibitor, which had been treated so as to destroy its antitryptic activity, still retained the ability to inhibit the growth of weanling rats when administered by intraperitoneal injection. The LD<sub>50</sub> for rats and chicks was 200 and > 2000 mg. per kg respectively. By-passing the gastrointestinal tract in this manner affords a means of studying a substance's mode of action without introducing the complicating factor of intestinal proteolysis. The evidence suggests the existence of a heat-labile, non-dialyzable toxic principle in hexane-extracted raw soy bean meal (Nutrisoy XXX, made by Archer-Daniels-Midland Co., Minneapolis, Minnesota) which, although closely associated with factors which inhibit trypsin, is not identical with them.

Note 1. Intraperitoneal means within or administered through the peritoneum. The peritoneum is a thin, transparent membrane that lines the walls of the abdominal (peritoneal) cavity and contains / encloses the abdominal organs such as the stomach and intestines.

Note 2. By 1952 the author showed this other toxic substance to be a hemagglutinin. Address: Div. of Agricultural Biochemistry, Univ. of Minnesota, St. Paul, Minnesota.

286. *Dawson Sentinel (Minnesota)*. 1951. Soybean products have multitude of uses in many fields. 68(14):8. Dec. 7.

• **Summary:** "There is a saying in the Orient: 'When you grow the soybean, you grow meat, butter and milk.'" But

there are many other uses. They are summarized from a booklet prepared by ADM.

287. Hayward, J.W. 1951. Soybean oil meal for livestock and poultry. In: K.S. Markley, ed. 1951. Soybeans and Soybean Products. Vol. II. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 891-948. [263 ref]

• **Summary:** Contents: 1. Production and utilization. 2. Types and forms of soybean oil meal products: Definitions, specifications, and nomenclature of products. 3. Nutritive value of soybeans and soybean oil meal: Composition, effect of heat on the nutritive value of proteins (raw vs. cooked soybeans, meals processed at different temperatures compared with soybeans), comparison of commercial meals, function of heat, trypsin inhibitor concept, effect of heat and moisture (overheating). 4. Tests for predetermining nutritive value of protein. 5. Unknown factors required for growth and reproduction: Chick growth and hatchability (chick growth, hatchability), reproduction and growth of swine (reproduction of swine, growing pigs), growth and lactation of rats, growth of calves. 6. Supplementing of soybean protein with other proteins. 7. Supplementing soybean oil meal with minerals and vitamins: Minerals (availability of phosphorus), vitamins. 8. Goitrogenicity of soybean products. 9. Feeding value of soybean oil meal for livestock and poultry: Beef cattle (fattening calves, fattening yearlings, fattening heavy cattle, wintering and pasture feeding, miscellaneous, summary), dairy cattle (calves, dairy cows, palatability of different kinds of meals, soybean oil vs. urea, soybean products as sources of dietary fat, effect of feeding soybean products upon milk and butter {quality}, summary), sheep (fattening lambs, breeding ewes, nutritive value determinations, summary), swine (growing and fattening pigs, the sow and her litter, summary), poultry (starting and growing chicks, egg production, reproduction, turkeys, summary).

Section 5, titled "Unknown factors required for growth and reproduction" states: "There seems to be little doubt that all vegetable protein concentrates, including a properly cooked soybean meal, require supplementing by an unidentified factor(s), sometimes called 'animal protein factor,' for good growth of animals with critical protein requirements, for good reproduction in swine, and good hatchability of poultry eggs."

Note: In this section there is no mention of phytoestrogens, isoflavones, or anything related to them. Address: Archer-Daniels-Midland Co., Minneapolis, Minnesota.

288. Langhurst, Louis F. 1951. Solvent extraction processes. In: K.S. Markley, ed. 1951. Soybeans and Soybean Products. Vol. II. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 541-90. [26 ref]

• **Summary:** Contents: 1. Introduction. 2. Solvents:

Chlorinated solvents, alcohol, hydrocarbon solvents (development of extraction naphthas, hazards of petroleum solvents, ventilation, asphyxiation, fire control, flame arrestors, sewer traps, safety tools, electrical equipment). 3. Power, steam, and water requirements. 4. Extractors: Batch-type extractors, basket-type extractors, vertical U-tube extractors, vertical gravity-type extractors, other types of extractors (Ford inclined screw-conveyor, Detrex Corp. drag chain, Blaw-Knox Rotocel, etc.). 5. Preparation and handling soybeans for solvent extraction: Flaking, flake conveyors, vapor seals (rotary-vane seals, screw plug seals). 6. Extracted Meal: Meal dryers (horizontal jacketed dryers, vertical dryers, recycled vapor dryers), toasting, grinding. 7. Miscella: Pumps, filtration (plate and frame filters, enclosed leaf filters, revolving-plate filters), centrifugation, distillation (horizontal short-tube evaporators, vertical or calandria evaporators, falling-film evaporators, rising-film evaporators, recirculating evaporators), stripping (packed tower, sieve plate towers, bubble cap towers), combination of distillation and stripping, spray drying. 8. Condensation and recovery of solvent: Condensation of solvent, vapor scrubbers, solvent-water separation, vent condensing systems. 9. Degumming and recovery of phosphatides: Degumming, bleaching and drying.

“Chlorinated solvents: The use of the nonflammable solvent trichloroethylene is limited to a few rather small extraction plants processing soybeans. The use of this solvent is inviting because it entails none of the fire and explosion hazards encountered in using petroleum hydrocarbons. Table 93 shows the physical properties of trichloroethylene.” According to a private communication from L.K. Arnold (1948): “Studies on the solvent extraction of soybean oil by trichloroethylene were initiated by the Engineering Experiment Station at Iowa State College and from 1937 to 1939 this work was carried out under a fellowship from the DuPont Company. The later work was done with state funds. The early studies resulted in a pilot plant extractor in which the flaked soybeans were carried down into the solvent and out by screw conveyors. Research by the Detrex Corporation on this type of extractor led to the development of a commercial unit...” (p. 545-46).

Continuous extractors—“Basket-type extractors: The original Bollmann extractor was patented in 1919 (German Patents 303,846 and 322,446) and operated by Hansa-Muehle of Hamburg, Germany, who subsequently sold complete installations to foreign processors. Two such plants were purchased and erected in the United States, the first by the Central Soya Co., Decatur, Indiana, in 1937, and the second by Archer-Daniels-Midland Co., Decatur, Illinois, in 1940. Both these plants had a capacity of several hundred tons per day. The principles of the Bollmann [paternoster] extractor are shown schematically in Figures 128 and 129” (p. 556-57).

“Vertical U-tube extractors: The first Hildebrandt

extraction plant erected in the United States was imported from Germany in 1934 and installed by the Archer-Daniels-Midland Co. at Chicago” (p. 561). It based on 3 revolving screws in a u-shaped tube.

“Vertical gravity-type extractors:... The first continuously operating solvent extraction plant employing this type of extractor was built in 1938 by the Allis-Chalmers Manufacturing Co. following the principle patented by M. Bonotto (U.S. Patent 2,086,181, of 6 July 1937). This plant was built for the Honeymead Products Co., Cedar Rapids, Iowa, and was designed to operate at 50 tons per day, but was later modified to operate at well over 100 tons per day.”

“Other types of extractors:... A unique type of soybean extractor developed by the Blaw-Knox Co. and known as the Rotocel has been in successful operation at the Indianapolis [Indiana] plant of the Glidden Company since 1949.”

Illustrations show each of these extractors. Address: The Iowa Milling Co., Cedar Rapids, Iowa.

289. Wittcoff, Harold. 1951. *The phosphatides*. New York, NY: Reinhold Publishing Corp. xviii + 564 p. See p. 219-23 (Soybeans), p. 483-89 (The Manufacture of Phosphatides), and p. 504-22 (Industrial uses). (American Chemical Society Monograph Series, No. 112). 24 cm. Summarized in *Soybean Digest*, Jan. 1953, p. 28. [100+\* ref]

• **Summary:** An excellent and comprehensive overview. Describes and interprets the nomenclature, isolation, structure proof, properties, synthesis, physical chemistry, enzymic relationships, analysis, sources, biochemistry, medical aspects, metabolic relationships and commercial uses of all known phosphatides. In Chapter XV, titled “Phosphatides of cereals, grains, and oil-producing plants,” a long section on soybeans (p. 220-23) gives a review of the literature under the following headings: Phosphatide content, complex formulation, fatty acids, and phosphatide distribution.

Chapter XXVI (p. 483+) titled “The manufacture of phosphatides” notes that “The phosphatides used industrially are obtained, for the most part, from soybeans and may be considered as by-products resulting from the production and refining of crude soybean oil.” The Bollmann process, which is used almost universally, makes it possible to obtain the phosphatides from the oil without solvent extraction. Table 1 (p. 483) shows that the yield of phosphatides from soybeans is greater than from other commercial oil seeds: Soybean 0.45–0.50%, rapeseed 0.35%, linseed 0.25%, peanut 0.20%, sunflower (with hulls) 0.15%, palm kernel 0.10%.

Page 484-85: “Prior to 1934, commercial lecithin used in this country was imported largely from Germany and Denmark. The principal German manufacturer, Hanseatische Muehlenwerke A.G. (Hansa-Muehle), marketed its lecithin products in the United States through the American Lecithin Corporation. The principal Danish manufacturer, Aarhus Oliefabrik, A/S (Aarhus), marketed its lecithin products in

the United States through Ross & Rowe, Inc.”

Note: This is the earliest document seen (April 2016) that mentions Aarhus Oliefabrik (in Denmark) in connection with lecithin.

“In 1934 the first commercial lecithin plant in America was built in Chicago [Illinois] by the Archer-Daniels-Midland Company, and in 1935 the Glidden Company built a similar plant in Chicago.

“All the above foreign and domestic corporations either owned or controlled process and use patents or operated under license agreements from one another. In order to promote the widespread distribution and use of lecithin in the United States and because of the very confusing and complicated patent situation in 1935, the above concerns entered into an agreement to pool their patent interests. Under this agreement all the companies except Ross & Rowe, Inc. received stock in a new patent holding and licensing company—The American Lecithin Company, Inc. This new company granted exclusive manufacturing licenses to Archer-Daniels-Midland Company and the Glidden Company and a sales license to Ross & Rowe, Inc. The American Lecithin Company also, for a time, continued to sell lecithin in competition with its licensee, Ross & Rowe, Inc. For the most part no royalties were imposed on lecithin consumers.

“Under this arrangement the volume of lecithin production expanded, and at times large quantities of lecithin accumulated at the plants in excess of demand. As the quantity of domestic lecithin increased, the price continued to decline to provide a broader market.

“Certain trade practices of the American Lecithin Company were modified by Federal Trade Commission action in 1941, and the patent pool arrangement was terminated by Consent Decree in 1946.

“There are now about a dozen known producers of commercial lecithin in the United States, most of whom are operating under license from the American Lecithin Company.”

Chapter XXVII, “The industrial uses of phosphatides, chocolate” (p. 504-05) notes that Lecithin-chocolate mixtures were favorite dosage forms before 1908. Address: Research Dep., General Mills, Inc.

290. Matagrín, Am. 1952. La vérité sur le soya: son réveil et son avenir en France [The truth about soya: its awaking and its future in France]. *Terre d'Oc (La): Revue moderne d'agriculture des pays occitans* 34:50-63. Feb.; 34:91-100. March. [24 ref. Fre]

• **Summary:** This two-part article appeared in two consecutive issues. Contents: Introduction: The strengths and weaknesses of the soybean, Haberlandt and the Vienna World Exhibition, soymilk, tofu, soy sauce, USDA, Bresse-Jones, Le Clerc / LeClerc, Morse, Hilbert, Horvath, ADM, Muscatine processing Corp., Galesburg Products Co.,

Glidden Co. (Soya Products Div.). 1. The soybean in agriculture and in market gardening: Favorable climates and soils (temperature, light and photoperiodism, humidity, physical soil needs, chemical and pH soil needs, microbiological soil needs, soil amendments [soil conditioners], fertilizers, use as green manure, chemical fertilizers, bacterial fertilizers { *Vaccinograin* }, crop rotation). Varieties of soybeans; selection of the seeds, Asian classifications, based primarily on color.

1. Varieties of soybeans for all uses: Domestic and industrial: Early or near-early (*mi-précoces*): yellow varieties, green varieties, brown varieties, black varieties. Late: yellow varieties, green varieties, brown varieties, black varieties.

2. Soybean varieties for forage: Early or near early. Late. European varieties, Russian varieties, French selected varieties, mutations are rather frequent but spontaneous hybridization is quite rare, the selection of seeds.

3. Preparation of the land (*terrain*); planting and seeds; tillage, and protection against diseases and pests.

Footnote 12: Li Yu-ying was the founder of a plant making soyfoods in the suburbs of Paris in 1911, and former president of the Scientific Academy of Peking (*Académie Scientifique de Pékin*). He returned to stay for a while in France around 1940. Li and L. Grandvoinet (a French agronomist whose tombstone is in our village in the region of Chautagne [in east Central France]) wrote a book about soya in 1912 that is still useful.

Mechanized agriculture (*motoculture*), tractors, date of seeding.

Part 2: Planting. Maturation, harvest, yield, and storage of the soybean seed (*soya-grain*). Appendix: Names of early American soybean varieties according to earliness.

1. Yellow varieties that are early and productive, adopted and preferred in 1948-1951 in Canada and neighboring U.S. states: Blackhawk, Dunfield, Earlyana, Flambeau, Goldsoy, Hawkeye, Kabott, the various Mandarins, Monroe, Richland. These mature in 105 to 125 days. Varieties suited for northern France are Harrow Manchu, Mansoy, Tokio yellow, etc.

Note: This is the earliest document seen (June 2019) that mentions the soybean variety Harrow Manchu.

2. Semi-early yellow varieties preferred in the areas of less-cold temperature: Chief, Lincoln, Wabash (less often Adams, Dunfield, Hawkeye, and certain Mandarins). These varieties mature in 125 to 140 days after planting. Several highly regarded green varieties are Nahto [Hahto?], and Giant Green.

3. Yellow varieties that are more or less late, grown in the southern USA: Arksoy, Dortchsoy 31, J.E.W. 45, Oden, Improved Pelican, Ralsoy, Roanoke, Volstate. These varieties in 140-170 days. The fine variety Imperial, which matures in about the same time in Savoie, can be added as well as Barchet (brown) or O-too-tan (black).

These late varieties are suited to Roussillon, Bas-Languedoc, Provence maritime, northern Africa, and in the tropical regions of the French Union (*l'Union Française* [which lasted 1946-1958]).

At the very end of the article we read: The author of this article regrets that, from now on, he will not be able to reply free of charge (as he has very often done) to the numerous demands for information that he receives concerning soya. Unlike the majority of his compatriots, he has neither a salary nor an appointment, nor is he retired nor pensioned, nor is he a property owner nor a renter. He lives solely on the modest income from his publications and from consultations on applied chemistry. He hopes not to appear greedy by asking future correspondents to add 8 stamps of 15 francs (or an equivalent amount) to their requests for information so that he will be able to answer promptly. While cultivating soybeans for his personal use, he is not a grain merchant and he will not be able to supply even the smallest quantities of well acclimatized varieties, but he will willingly make such shipments against reimbursement of postage costs and compensation for any product or object of fair exchange.

Hervé Berbille writes (5 May 2014): “This article is very rich in teachings. I think especially in this footnote (3) A. Matagrín confirms what I always suspected. Namely, the Vichy government never had a policy displaying a proactive attitude in favor of the soybean. Moreover, the Vichy government never really intended to promote the culture of this plant, even though the dietary restrictions suffered by the French population during the Nazi Occupation urgently required it. All indications are that powerful interests who foiled the development and cultivation of soybeans in the 1920s under the deceased Third Republic still remained very influential in the Vichy government.” Address: at Chindrieux (Savoie).

291. Clandinin, D.R.; Robblee, A.R. 1952. The effect of processing on the enzymatic liberation of lysine and arginine from soybean oil meal. *J. of Nutrition* 46(4):525-30. April. [5 ref]

• **Summary:** Conclusions: “1. Amino acid or alpha-amino-nitrogen values obtained subsequent to *in vitro* enzymatic hydrolysis do not necessarily constitute a reliable index of the relative nutritive value of soybean oil meals processed for varying periods of time under the same or under different autoclave conditions. 2. Maximum values at any one autoclave processing temperature would, however, characterize a good meal.” Address: Poultry Div., Univ. of Alberta, Edmonton, ALB, Canada.

292. Pellett, K. 1952. Do latex paints threaten market for soybean oil? *Soybean Digest*. April. p. 17-19.

• **Summary:** No! says world’s largest processor for the paint industry, Archer-Daniels-Midland (ADM).

293. *Quincy Herald-Whig (Illinois)*. 1952. One soybean expeller plant shut down: Adverse price ratio between beans and products blamed. May 9. p. 18.

• **Summary:** The Quincy Soybean Products company, like many other companies in the soybean oil and meal industry, has shut down its expeller plant at the foot of Main street—for two months. Its more efficient solvent plant will continue to run, but Irving Rosen, company president, could not say for now long. Mr. Rosen said that he has never seen conditions as bad in the soybean industry as they are now. “This is due to price limits set by the office of price stabilization.” He pays farmers \$2.85 a bushel for grade No. 2 soybeans, but can get only 9-9½ cents/pound for the soybean oil he crushes from these beans. That results in a net loss for the company on every bushel processed.

In the middle of this article is an Associated Press story titled “Processors sit out ‘squeeze’”—with the dateline “Chicago, May 9.” It states that A.E. Staley Mfg. Co., Archer-Daniels-Midland Co., and Swift and Co. have all closed soybean crushing plants, and are closing more, in order to “sit out what they term a ‘squeeze’ between prices on raw materials and finished products.” Either an increase in oil or meal prices, or a drop in soybean prices, would probably warrant reopening the mills—said a spokesman for the Archer-Daniels plant in Chicago.

Note: Harry Truman, a Democrat, is president of the USA.

294. *Soybean Digest*. 1952. Grits and flakes... from the world of soy: “‘Saved’ is the title of a story about the soybean in the Orient and the U.S. and the part played by Archer-Daniels-Midland Co... Dec. p. 28.

• **Summary:** “... in the June issue of *Archer*, periodical of that firm.”

295. Konen, J.C. 1952. Where are soybeans going? How much soybean oil can we use in industrial products? *Soybean Digest*. Sept. p. 41-42.

• **Summary:** Total industrial usage of soybean oil increased rapidly during the war and early postwar period (1943-1948). This trend has been reversed since 1948 because of the greater supply of industrial oils. The drying oil industry is the largest consumer, accounting for 75% to 85% of the total industrial utilization of soybean oil. The paint and varnish industry accounts for 75% of the drying oil consumption of soybean oil. Other industrial uses for soybean oil include: sulphonated oils for textile and leather treatment, lubricants and greases, rubber, soap and chemicals. Address: ADM.

296. *Chemurgic Digest*. 1952. Archer-Daniels-Midland Company celebrates 50th anniversary. Nov. p. 18.

• **Summary:** “A small linseed oil mill has become one of the largest processors of agricultural crops—largely because its leaders utilized science to alter the basic structure of

America's harvests.

"The Daniels Linseed Company was organized fifty years ago. John W. Daniels who established the company, had been processing flaxseed since 1878. George A. Archer joined the company in 1903. The same year the company hired Samuel Mairs, who is now chairman of the board. The company was then known as the Archer-Daniels Linseed Company.

"The three men had very little capital, but big ideas. In the early twenties, they made a decision which was destined to lift the young firm from its place in the ranks of small industry and make it a leader in its field. They decided to use science to alter the basic chemical structure of linseed oil.

"From this decision came the slogan: 'Creating New Values from America's Harvests.' Better products, expanded markets and continued growth have been the result.

"Today Archer-Daniels-Midland Company manufactures more than 700 standard products. These are used directly or indirectly by every major manufacturing industry in the country.

"This same research program, repeated with soybean products, was instrumental in converting soybean oil so it could be used in paints and helped make it America's leading edible oil.

"In 1902 the company consisted of a single flax crushing plant in Minneapolis. Today, it operates 120 plants, ranging from grain terminals to chemical processing plants.

"Recently, the firm started producing chlorophyll, the 'green Gold' of the plant world. Marketing experts and chemists foresee scores of new chlorophyll products within the next few years.

"In addition to making oil well drilling muds from cereal grains, tow for cigarette paper and U.S. currency from flax straw, special fats used in tinplating, it also is interested in whaling.

"Thomas L. Daniels summed up the story of ADM in this manner: 'Since its founding 50 years ago, the history of ADM has been the story of a company that has never stopped pioneering. In the tradition of its founders, it continues to diversify and expand its operations wherever there is a need, an opportunity, and an idea.'

A photo shows: "Samuel Mairs, chairman of the board, accepts 50th Anniversary Cake from Ellis English, vice-president, as Thomas L. Daniels, president and son of the founder looks on. The Minneapolis firm was founded September 30, 1902."

297. *Soybean Digest*. 1952. 50th anniversary [Archer-Daniels-Midland Co.]. Nov. p. 22.

• **Summary:** The firm was founded in 1902 [as Daniels Linseed Company] by John W. Daniels, later joined by George A. Archer [in 1903]. They hired Samuel Mairs as bookkeeper.

"When ADM started in business, it made only linseed

oil and meal in a single flax crushing plant in Minneapolis, Minnesota. Today it manufactures over 700 standard products in 120 plants. The headquarters is in Minneapolis.

A photo shows Samuel Mairs, chairman of the board, as he passes a piece of the firm's 50th anniversary cake to T.L. Daniels, president.

298. Goldberg, Ray A. 1952. *The soybean industry:*

With special reference to the competitive position of the Minnesota producer and processor. Minneapolis, MN: The University of Minnesota Press. xv + 186 p. Index. 24 cm. [156 ref]

• **Summary:** Contents: 1. Introduction: Purpose and scope, source of data, procedure. 2. Production: World production, national production, acreage changes in the Corn Belt, Minnesota production, areas of production, suitable varieties, acreage changes in Minnesota, summary.

3. Utilization: World utilization, national utilization, soybean meal utilization, soybean oil utilization, world and national trade movements, price relations, shortening, margarine, other edible uses, industrial uses (paints, varnishes, linoleum), Minnesota utilization, summary.

4. The processing industry: Marketing channels of the crop, historical evolution, the national processing industry, the Minnesota processing industry, technical development, processing costs, Minnesota processing costs, summary.

5. Factors affecting the competitive position of the Minnesota soybean processor: Transportation, Minnesota transportation, Buffalo–New York, Fargo–North Dakota, St. Cloud–Minnesota, Chicago soybean prices, qualifications, foreign market, summary, storage, commodity markets, price formulation, government action, the Minnesota processor, crushing margins, specific example, crushing-margin relationships over time.

6. Summary and conclusions: The producer, the processor. Appendixes. I. Tables. II. Interviews. Bibliography.

Although Minnesota was one of the last states to develop a soybean crop, the state now ranks 6th in total soybean production in America. In the decade from 1940 to 1950 the dollar value of the Minnesota soybean crop rose from \$76,000 to \$37,000,000.

The U.S. Regional Soybean Laboratory is discussed on pages 24 and 56,

Tables: (1) A comparison of the twelve leading soybean producing states for 1920 to 1950. (2) A summary of protein content, and iodine number of soybeans, by area, three-year averages, 1945-1947. (3) The results of tests on two groups of varieties of soybeans. (4) The averages for soybean varieties for date mature and oil content at three locations, Waseca, Blue Earth, and southwestern Minnesota. (5) Percentage changes in the use of land by forty-two Minnesota farmers, 1941 through 1945 (1940 = 100 per cent). (6) Changes in crop acreages between 1939

and 1949. (7) Index numbers (by percentage) of acreage on fifty southern Minnesota farms, 1941 through 1950 (1941 = 100 per cent). (8) Percentage of total tillable land in specific crops on fifty southern Minnesota farms, 1941 through 1950. (9) Tillable land and specified crops in Minnesota. (10) Percentage of total tillable land in specified crops in Minnesota. (11) The dollar value per acre of grain crops in Southern Minnesota. (12) The comparative cost and returns per acre for grain crops in southern Minnesota, 1945-1949. (13) The indicated frequency with which forty-seven selected farms produced soybeans, 1941-1950. (14) The number and percentage of fifty southern Minnesota farms producing soybeans. (15) Soybean acreage and soybean farms in Minnesota. (19) The deficit in protein for all livestock, using requirements given in feed standards as the quantity needed, 1937 through 1949. (20) Prices paid by farmers per 100 pounds of cottonseed meal and soybean meal, by months, United States, 1950. (21) The production and processing of soybeans in Minnesota, Iowa, and Illinois. (22) Minnesota monthly production of soybean meal, October 1950 through September 1951, and monthly consumption of soybean meal, October 1945 through September 1946. (23) Marketing channels for soybeans, Illinois, 1947-1948 crop years, as a percentage of total sales off farms. (24) The relative costs of acquiring soybeans for large and small processing plants, Illinois, crop year 1948. (25) Soybean-processing plants in the United States, 1950. (26) The estimated soybean-processing capacities of the nine largest operators, May 1945 and January 1951. (27) The number of soybean plants in the United States on July 1, 1944 by size. (28) The number of soybean plants in the United States on January 1, 1951, by size. (29) Soybean mills in operation in Minnesota, October 1, 1945. (30) Soybean production in Minnesota, actual and potential, December 1951. (31) A summary of soybean-processing facilities and operation status, excluding mills crushing soybeans temporarily or less than half their operating time, United States, May 1945 and January 1951. (32) Soybean processing margin by size and type of plant, 1943-1944. (33) The processing costs of six Minnesota soybean plants, percentage breakdown and actual cents-per-bushel range, 1951. (34) The capacity of soybean mills in specified areas, excluding mills crushing soybeans temporarily or less than half their operating time, May 1945 and 1950. (35) The overall freight advantages per ton of meal shipped, as used by commercial men for territories rather than specific locations. (36) Available storage space and estimated requirement for United States soybean mills, 1951-1952 crush. (37) Monthly sales of soybeans by farmers, as percentage of total sales, in ten soybean-producing states, marketing year, 1947-

1948. (38) Soybean stocks on Minnesota farms, quarterly, 1943-1952, by thousand bushels. (39) Range of contract cash prices of soybeans at Chicago, monthly. (40) Range of contract cash prices of soybeans at Chicago, yearly. (41) Receipts of soybeans at Chicago and Minneapolis grain centers for the last five years. (42) Price supports, price ceilings, and average prices received by farmers for soybeans, crop years 1940-1951. (43) Country elevator base ceiling prices for No. 1 and No. 2 yellow and green soybeans. (44) Ceiling prices for crude soybean oil, in tank cars, in cents per pound. (45) Estimated differences in crushing margins among Illinois, Iowa, and Minnesota processing plants.

Appendix I tables: (1) Soybeans: Acreage, yield per acre, and production in specified countries, average 1935-1939, annual 1948-1950. (2) Soybeans: Exports from specified countries, average 1935-1939, annual 1947-1950. (3) Soybean oil: Exports from specified countries, average 1935-1939, annual 1947-1950. (4) Suez Canal: Northbound movement of Manchurian soybeans, December 1950-June 1951. (5) Soybeans: Acreage, yield, and production in the United States, 1924-1950. (6) Acreage of soybeans harvested for beans, United States and selected groups of states, averages 1925-1929, 1930-1934, and 1935-1939, and annually 1940-1950. (7) Soybeans: Supply and utilization in the United States, 1924-1950, by number of thousand bushels. (8) Acreage changes in the six leading soybean states. (9) Soybeans harvest for beans: Acreage, yield, and production for the ten leading states, 1945-1950. (10) Soybeans: Yield per acre, oil content, and oil yield per acre in the principal soybean-producing states, by states, 1944 and 1945. (11) Soybean oil content, temperature, and length of day in the principal soybean-producing states, May-October averages, 1944 and 1945. (12) Soybean oil meal and cake: Supply and utilization in the United States, 1924 through 1949, by number of thousand tons. (13) State-to-state movements of soybean meal in the six main meal-producing states, 1948, 1949, and 1950. (14) Protein concentrates: Estimated use for feed in the United States, prewar average and years 1944 through 1950, year beginning October 1, by number of thousand tons. (15) Relationships between the prices of soybean meal and prices of other high-protein feeds. (16) Soybean oil, crude basis: Production, trade, stocks December 31, and apparent disappearance, 1910-September 1950, by number of thousand pounds. (17) State-to-state movement of soybean oil, 1950. (18) Vegetable oils: Wholesale prices, in cents per pound, at specified markets, annual averages, 1930 through 1950. (19) Wholesale prices, in cents per pound, of leading fats and oils, United States, for specified periods. (20) State-to-state movements of soybeans. (21) The cost of the component parts of a 300-ton capacity, solvent extraction-plant. (22) The price per ton of shipping soybean meal from Decatur, Illinois, December 1951. (23) The average per-ton railroad

freight revenue for soybeans, soybean meal, cottonseed, cottonseed meal, linseed meal, and flax, United States, 1947 through 1950. (24) The total freight traffic, by number of cars, for 1947 (including duplications). (25) The total freight traffic, by number of cars, for 1950 (including duplications). (26) Soybeans: Stocks in various positions, United States, quarterly dates, 1942-1951, by number of thousand bushels. (27) The typical cost to farmers, in cents per bushel, for soybean storage on farms and at country elevators, for three-month and six-month storage periods, Midwestern soybean-producing states. (28) Official United States grades and grade requirements for all classes of soybeans. Continued. Address: Minnesota.

299. Goldberg, Ray A. 1952. *The soybean industry: With special reference to the competitive position of the Minnesota producer and processor* (Continued—Document part II). Minneapolis, MN: The University of Minnesota Press. xv + 186 p. 24 cm. [156 ref]

• **Summary:** (Continued): List of figures (graphs unless otherwise stated). 1. Soybean acreage harvested for beans, Minnesota, 1934-1950. 2. Soybean production, Minnesota, 1934-1950. 3. Value of Minnesota soybean production, 1935-1950. 4. Map: International trade in soybeans, average for 1935-1939. 5. Map: International trade in soybeans, average for 1948-1949. 6. Acreage of soybeans for beans and other specified crops harvested in Indiana, Illinois, and Iowa, 1924-1950. 7. Map: Ten soybean-producing areas. 8. Prices received by farmers for soybeans, corn, and oats, United States, season average, 1924-1950. 9. Map: Concentration of soybean production in the various types of farming areas in Minnesota, 1949-1950. 10. Map: Types of soils in Minnesota.

11. Bar chart: Cash receipts by commodities, Minnesota, 1949-1950. 12. Bar chart: Destination of exports of soybeans and soybean oil from the United States under the Economic Cooperation Administration (ECA, established in 1948 to administer the Marshall Plan): April 3, 1948-June 30, 1951. 13. Pie chart: United States exports of soybeans. 14. Diagram: The soybean: Uses—derivatives—applications. 15. Map: Distribution of soybean meal in 1945 and production of soybean meal in 1950, by states. 16. Production of specified protein concentrates, United States, 1937-1949. 17. Utilization of soybean oil meal among classes of livestock: Percentage distribution, United States, 1950. 18. Prices of soybean, cottonseed, and linseed oil meals, 1940-1950. 19. Utilization of soybean oil in food and non-food products, percentage distribution, United States, 1940-1950. 20. Supply of cottonseed, soybean, coconut, and other oils and food fats, not including butter and lard: Percentage distribution, United States, 1920-1949.

21. Supply of food fats and oils, United States, 1920-1949 (cottonseed oil, coconut oil, soybean oil). 22. Map: Location of principal producers of shortening, margarine,

salad and cooking oils, United States, June 1945. 23. Supply of butter, lard, and other major food fats and oils: Percentage distribution, United States, 1920-1950. 24. Wholesale prices of cottonseed oil and soybean oil, United States, 1935-1949. 25. Utilization of fats and oils in shortening: Percentage distribution, United States, 1920-1950. 26. Map: Location of Minnesota soybean-processing plants, 1951. 27. Proportion of soybeans processed by specified methods, United States, 1937-1950. 28. Flow chart: Soybean oil meal processing, hydraulic method. 29. Flow chart: Soybean oil meal processing, expeller method. 30. Flow chart: Soybean oil meal processing, extraction method.

31. Map of USA: Price of shipping soybean meal per ton from Decatur, Illinois, December 1951. 32. Prices of soybeans: Cash prices of number 2 yellow at Minneapolis, on track bids at Minnesota country points; and futures prices at Chicago, 1950. 33. Cash prices of number 2 yellow soybeans at Minneapolis and Chicago.

34. Soybeans under price support programs, United States, 1941-1950. The first government price support program was in 1942, designed to increase soybean acreage during World War II; both a support price and a ceiling price were established each year for soybeans (see table 42). In 1942, however, only 4,000 bushels were under this price support program; the average price received by farmers for soybeans nationwide was \$1.61/bushel whereas the price support was only \$1.60 a bushel and the ceiling price was \$1.66. From 1943 to 1946 the average price received by farmers for soybeans was higher than the support price, so essentially no soybeans were under the price support program. During the war there were also price supports for soybean oil and meal. Soybean price supports were higher than ceiling prices of soybean meal and oil. So during this time the government paid the extra cost of the processor's soybeans so the processor would be sure of an adequate crushing margin.

"Supports for soybeans were continued after the war. However the market price remained higher than the support price." Consequently, very few soybeans were purchased by the Commodity Credit Corporation (CCC). The largest percentage of the crop to be under price-support programs was 7% (16,000 bushels) in 1949; this figure fell to 5% (about 14,000 bushels) in 1950.

35. Prices of soybeans: On track bids at Minnesota and Illinois country points. 36. Prices of soybeans: On track bids at Minnesota and Iowa country points. 37. Solvent crushing margins compared to weighted processing costs, seven Minnesota farms. 38. Soybean crushing margins for solvent and expeller plants in Minnesota. 39. Soybean crushing margins for solvent plants in Minnesota and Illinois. 40. Soybean crushing margins for solvent plants in Minnesota and Iowa.

41. Soybean crushing margins for expeller plants in Minnesota and Illinois. 42. Soybean crushing margins for

expeller plants in Minnesota and Iowa. Address: Minnesota.

300. Markley, K.S. 1952. Oil processing through the ages. *Yearbook of Agriculture (USDA)* p. 497-503. For the year 1950-51. Crops in Peace and War.

• **Summary:** An excellent history by an expert in the subject. The first fats used by man were probably of animal origin—tallows and greases—which were separated from other tissue simply by heating or boiling with water. Extraction of oils from fruits and seeds was more complex and difficult, yet vegetable oils were used from the time of the earliest records, so methods for their separation must have been developed before the dawn of recorded history.

“The ancient Egyptians and Phoenicians used vegetable oils for food and for anointing their bodies, but not for illumination. The Egyptians used olive oil as a lubricant in moving large stones, statues, and building material. As early as 1400 B.C., Egyptian chariot wheels were lubricated with axle greases consisting of fat and lime. Earthen vessels predating the First Dynasty [2920-2770 B.C.] have been found which contained several pounds of oxidized palm oil. From the Egyptians and Phoenicians, knowledge of how to apply fats and oils spread to the Hebrews, and thence to the Greeks.

“The Hebrews had oil mills powered by treads that were usually operated by prisoners. Pliny [Roman, 23-79 AD] left the earliest description of an oil mill, which was used to crush olives. It resembled the ordinary edge runner, the stones being flat on the inner side and convex on the outer side. The Greeks and Romans are said to have employed screw presses, similar to wine presses for recovering olive oil.”

“The wedge, edge-runner, and screw press were used in Europe for oilseed processing until the invention of the hydraulic press. Their efficiencies were increased somewhat by precrushing and heating the seed in the presence of moisture, a practice in use today.

“The development of the hydraulic press in 1795 made possible a marked increase in the recovery of oil... By 1815, improved forms of the hydraulic press were introduced in France and Germany, where their use spread rapidly.” Bags were soon replaced by press cloths.

In the 20th century, the continuous screw press or expeller was invented in the United States; it is still in use (see p. 504). “The rise of the soybean processing industry in the United States in the 1930s created a further demand for these presses. Efficiency, as well as capacity increased until it became possible to process soybeans so as to reduce the residual oil content of the cake to 3.5 or 4.5 percent.” But “oil technologists were not satisfied to leave even this amount of oil in the extracted cake.”

“The first practical process for the solvent extraction of oil from oilseeds was developed by Jesse Fisher in Birmingham, England, in the 1840s, but no patent for the

solvent extraction of fatty oil was granted until 1856...

Solvent extraction has been practiced on a fairly large scale in Europe since 1870. The first extractors were single-unit, unagitated, batch vessels. Soon multiple unit, agitated, counter-current extractors appeared. Many attempts were made to develop a continuous solvent-extraction process, and about 1920 Hermann Bollmann in Germany developed an extractor that was especially adapted to the recovery of oil from soybeans. This extractor and its operation are discussed in detail in the next chapter.”

Soon Karl Hildebrandt in Germany developed another type of continuous solvent extractor. It “is a combination of two vertical enclosed screw conveyors connected at the bottom by a cross conveyor so that the whole forms a U. The previously rolled or flaked oilseed moves in one leg in the same direction as the flow of the solvent, and in the other leg in the opposite direction.

“This type of extractor was introduced in the United States for processing soybeans in 1934 [By ADM, began operation in April and by Glidden in Nov.] and was followed very shortly by the Bollmann, or paternoster, extractor” [By Central Soya, began operation in Nov. 1937]. Somewhat later, an extractor of American design—the rotating plate, vertical gravity extractor—was introduced [in late 1937 to American Soya Products Corp. Evansville, Indiana, by Allis-Chalmers & Michelle Bonotto]. It was followed by a modified type known as the stationary-plate [plate?] extractor.

“The rapid adoption of continuous solvent extractors for processing soybeans resulted from the fact that such plants are almost completely automatic and yield a meal containing only 0.6 to 0.8 percent of oil, or a recovery of about 97 percent.”

There follows a good history of refining crude oils. “The earliest methods consisted simply of settling and filtering out the solid or gummy materials. Later certain earths or clays were added before filtering to help remove solid impurities and also some of the pigments., thereby imparting a clear and bright appearance. One of the most important in the refining process consists in removing the free fatty acids naturally present in the oil.” Address: Head, Oil and Oilseeds Div., Southern Regional Research Lab., New Orleans, Louisiana.

301. Burlison, W.L. 1952? Looking ahead with soybeans. Urbana, Illinois. 14 p. Undated. Unpublished manuscript.

• **Summary:** Dr. Burlison, who had retired in June 1951, prepared this undated, handwritten manuscript for a talk on soybeans he gave or intended to give in about 1954. Contents: Introduction. 1. The challenge of the past: Publications, research, extension work, early soybean farmers (Stoddard of Carlinville), American Soybean Association, soybean processors in the USA and Illinois, Illinois Farm Advisers Assoc., H.G. Atwood and the Peoria Plan, establishment of Regional Soybean Laboratory 1936

is most significant recent event in soybean history (part is located in Peoria, headquarters in Urbana, Illinois), the challenge, Illinois still leads in soybean production.

2. The facts of the present: Strong interest by the university, researchers, farmers, and processors, average yield has more than doubled.

3. The promise of the future: Industrialists predicted needs for the future (See *Soybean Digest*, Sept. 1952. R.M. Bethke of Ralston Purina Co., H.C. Black of Swift & Co., J.C. Konen of Archer Daniels Midland Co., Ward Calland of National Crop Improvement Council, Mitsuo Hirano, president of Association of Oil and Fats Manufacturers of Japan, J.C.A. Faure of International Association of Seed Crushers, E.M. Learmonth of British Soya Products Ltd. (London), USDA Office of Agricultural Experiment Stations, George Strayer of American Soybean Association).

As early as 1897 in Illinois, "the soybean showed great future promise. To date our College of Agriculture has published 32 bulletins and 42 circulars and many hundreds of journal articles and pamphlets of various kinds. This is truly a fine record."

Today in the United States there are 260 plants which process soybeans; 37 of these are in Illinois.

"It should be noted that the first recorded effort to find an outlet for surplus [soybeans] was in 1921 when the president of the Illinois Farm Advisers Association contacted the industry for the purpose of finding a possible outlet in Illinois to handle our soybeans. Our soybean production was just getting under way which meant some uncertainty in soybean supplies.

"This uncertainty continued until 1928 when, because of heavy abandonment of winter wheat in Illinois, it seemed necessary to turn to soybeans for a part of the acreage if some assurance could be given that a sudden increase in production would not result in ruinous prices. After some negotiations with the late H.G. Atwood a price was set for soybeans as far as his company was concerned. So far as we know, this is the first instance of a case where the price was fixed before that crop was produced. This was a very important move in giving soybeans considerable stability.

"The most significant recent event in soybean history was the establishment in 1936 of the Regional Soybean Laboratory a part of which is now located in Peoria, Illinois, and a section devoted to soybean breeding with headquarters at this university."

"Illinois is still by long odds the leading soybean-producing state. Of the state's 102 counties, 41 produced from 1- to almost 4 million bushels in 1951. Outside of Illinois there are only 21 counties in the nation that produced 1 million bushels of soybeans last year. Four Illinois counties grew between 3 and 4 million bushels in 1951." Champaign County leads the nation with almost 4 million bushels. Address: Univ. of Illinois.

302. Liener, Irvin E.; Hill, Eldon G. 1953. The effect of heat treatment on the nutritive value and hemagglutinating activity of soybean oil meal. *J. of Nutrition* 49(4):609-20. April. [17 ref]

• **Summary:** From unheated soybean flour the authors have isolated a heat-labile protein fraction which is toxic to rats. "A characteristic property of this toxin, which was given the name 'soyin'\*, is its marked *in vitro* agglutinating action toward the red blood cells of the rabbit." (Footnote: \*\*"Pending proof of their non-identity, the terms 'soyin' and 'hemagglutinin' will hereafter be used interchangeably"). The term "hemagglutinating activity" is used several times in this article. Hemagglutinins, like trypsin inhibitors, are easily destroyed by heat. Nutrisoy XXX, a defatted soybean oil meal which had been subjected to a minimum amount of heat treatment, was made by Archer-Daniels-Midland Company (Minneapolis, Minnesota) and was used in this experiment. Address: Div. of Agricultural Biochemistry and Poultry Husbandry, Univ. of Minnesota, St. Paul.

303. *Soybean Digest*. 1953. Grits and flakes... from the world of soy: Hall S. Dillon has been named head of the Archer-Daniels-Midland Co. paint laboratory, Minneapolis, Minnesota... Dec. p. 28.

• **Summary:** "... He succeeds Floyd Nelson who will be technical sales representative of ADM in several Southern and Western states. Dillon joined ADM in 1949."

304. Pallansch, Michael J.; Liener, Irvin E. 1953. Soyin, a toxic protein from the soybean. II. Physical characterization. *Archives of Biochemistry and Biophysics* 45(2):366-74. Aug. [19 ref]

• **Summary:** The authors describe a procedure for the preparation of soyin from defatted soybean flour Nutrisoy XXX (made by Archer-Daniels-Midland Co., Minneapolis, Minnesota). Various physical constants were provisionally reported: isoelectric point (6.1), diffusion constant, sedimentation constant, molecular weight (105,000), and frictional ratio. Address: Dep. of Agricultural Biochemistry, Univ. of Minnesota, St. Paul.

305. Pellett, Kent. 1953. Many unheralded uses for soybean fatty acids. *Soybean Digest*. Oct. p. 8-10.

• **Summary:** Soybean fatty acids used to be seen as almost worthless by-products of the soybean oil refiner's foots kettle. They were sold only to soap manufacturers, who bought them for little more than transportation costs. "Now they are convertible into fatty acids of uniform grades which enter into products as various as rubber and paints, perfumes and paper, and insecticides and cosmetics. And fatty acids are quoted on commodity exchanges at about the price of crude soybean oil. Few products have a wider range of usage yet are more unheralded. The consumers of the end products never hear of fatty acids.

“The fatty acids industry has undergone a big expansion in the past five years... There are about 24 manufacturers of soybean and other fatty acids... General Mills, one of the world’s largest flour millers,... entered the fatty acids field when it built its Chemoil plant at Kankakee, Illinois, a few years ago.”

It was the process of fractional distillation, developed by the petroleum industry, which made it possible to separate fatty acids and tailor them to desired end uses. “Soap and protective coatings are still the chief uses for vegetable oil fatty acids. Paint and varnish lead, with the two uses together consuming 80 percent of the fatty acids produced. Other sizable fields are: rubber 5 percent and chemicals 6 percent.

“Soybean fatty acids are important in many other fields such as linoleum and oilcloth, metal working, cutting and core oils, textiles, leathers, adhesives, cosmetics and pharmaceuticals, though the volume used in these products is small...”

“The producers of fatty acids have their own organization, the fatty acids division of the Association of American Soap & Glycerine Producers, Inc. The following firms, in addition to General Mills, are producers of soybean fatty acids: Acme Hardesty Co., New York, N.Y. Principally for hand soaps and resins. Archer-Daniels-Midland Co., Minneapolis, Minnesota. Armour & Co., Chicago, Illinois. E.F. Drew & Co., New York, N.Y. Emery Industries, Inc., Cincinnati, Ohio. A. Gross & Co., New York, N.Y. For alkyd resins and specialty soaps. W.C. Hardesty Co., Inc., New York, N.Y. For soap and alkyd resins. Southern Cotton Oil Co., New York, N.Y. For protective coatings, synthetic resins, soft soaps, waxes and polishes, and printing inks. Swift & Co., Hammond, Indiana. Vegetable Oil Products Co., Los Angeles, California. For alkyd resins, lubricating greases, soap and rubber. Wilson-Martin Division, Wilson & Co., Philadelphia, Pennsylvania. For soap and alkyd resins. Woburn Chemical Co., Harrison, New Jersey.” Address: Managing Editor, The Soybean Digest, Hudson, Iowa.

306. Burial and death record (findagrave) for Reuben Peter Andreas; died on 30 Dec. 1953 (aged 72) at Miami Beach, Dade County, Florida. 1953. Lisbon Cemetery, Lisbon, Linn County, Iowa.

• **Summary:** Findagrave says Reuben P. Andreas born was on 31 Aug. 1881, Prairieville, Lee County, Illinois. A photo shows his simple headstone.

Parents: Martin G. Andreas (born 18 July 1845 in Lancaster County, Pennsylvania, died 18 Jan. 1930 in Sterling, Illinois, aged 84) and Mary H. Rutt (born 24 June 1851 in Lancaster Co., Pennsylvania, died 5 July 1907 in Sterling, aged 56, at Sterling, Whiteside Co., Illinois). Both are buried at Science Ridge Mennonite Cemetery, Sterling, Whiteside County, Illinois.

His siblings were:

Fanny R. Andreas Myers (1870-1948). William G.

Andreas (1872-1928). Anna L. Andreas Mellinger (1878-1960). Each sibling has a full record in findagrave.

His spouse was Lydia Barbara Stoltz (born 13 Nov. 1882 at Sterling, Whiteside County, Illinois, died 8 May 1938, aged 55, in Lisbon, Linn County, Iowa). She was buried next to her husband at Lisbon Cemetery, Lisbon, Linn County, Iowa. A photo shows her simple headstone.

Peter’s 5 children were: Osborn S. Andreas (1903-1907), Albert Martin Andreas (1907-1988), Glen Allen Andreas (1917-1993), Dwayne Orville Andreas (1918-2016), and Lowell Willard Andreas (1922-2009).

Note: Reuben P. Andreas actually had six children. The missing child is Lenora “Lenore” Jeanette Andreas. Born 21 July 1913 in Nobles Co., Minnesota, died 9 May 1969 in Miami, Dade County, Florida. Her first marriage was to George G. Schunknedt on 21 April 1932 in Lisbon, Linn Co., Iowa. She was also married to Harlon Sober and Marvin R. Steele. See separate record about Lenora/Lenore. Address: Lisbon Cemetery, Iowa.

307. *Gazette (The) (Cedar Rapids, Iowa)*. 1953. R.P. Andreas, 72, Honeymead plant founder, is dead. Dec. 31. p. 1, col. 3; p. 2, col. 5.

• **Summary:** “Cedar Rapids News—Reuben Peter Andreas, 72, of Cedar Rapids, who pyramided a hand mixer into a huge Midwest feed business, died at 3:30 p.m. Wednesday at Miami Beach, Florida, following a long illness.

Founder of the Honeymead Products Company of Cedar Rapids, he was chairman of the board of that firm until earlier this year when ill health forced his retirement. He was living in Florida because of his health.

“Mr. Andreas, bread truck driver, farmer and feed dealer, was the guiding hand of the Honeymead firm in its early years and was responsible for the building of the first continuous soybean solvent extraction plant in the United States.

Born Aug. 13, 1881, at Sterling [or perhaps Prairieville, Lee County], Illinois, Mr. Andreas attended school at Prairieville, Illinois, graduating in 1896. He then took a business college course at Sterling and for a time drove a bread wagon there.

“Began farming: Following his marriage to Lydia Stoltz on Nov. 28, 1902 [sic, Nov. 27, 1902], he began farming near Prairieville. Nine years later he went to Minnesota and continued farming for eight more years before moving to a farm near Lisbon, Iowa.

“In 1922 Mr. Andreas retired from farming to take over a grain, coal, and seed business in Lisbon, which included the Lisbon elevator.

“Five years later he began the operation that was to expand into one of the largest feed firms in the Midwest.

“In 1927 he began manufacturing mixed feeds at Lisbon on a small scale, using a hand mixer in a small room there. The feed end of the business was a sideline proposition

covering a territory in and around Lisbon.

“Business expanded: During the next three years the business expanded and in 1930 the firm installed molasses tanks and started handling molasses in tank car lots. A feed mixer also was purchased at that time.

“With the introduction of corn molasses to the feed trade, the firm began to expand and in 1936 it was renamed the Honeymead Products Company, manufacturers of livestock feed, and moved [from Lisbon] to Cedar Rapids. Mr. Andreas was named president. By that time four of his sons were in partnership with him.

“During its first year of operation in Cedar Rapids the Honeymead Company grossed more than a million dollars.

“It was in 1937 that the company installed the first continuous solvent extraction process plant in the United States. Note: Who designed and built that plant?

In Civic Affairs: In later years large portions of the Honeymead properties were sold to other firms until today the main Honeymead operation is in Mankato, Minnesota.”

After disposing of much of his business interests, Mr. Andreas remained active in civic affairs in Lisbon and Cedar Rapids.

“He served on the board of directors of the Lisbon Trust and Savings bank and, while living in Lisbon, served on

the school board. He was also a member of the Evangelical church there.

“His home in Cedar Rapids was at 525 Vernon Drive SE.

“Mr. Andreas was a member of the Chamber of Commerce, the Elks, the Masons, and the Cedar Rapids Country club.

“His wife died in 1938. He later [10 Aug. 1940 in Dubuque, Dubuque County, Iowa] was married to Pauline Stoltz Herrick, the sister of his first wife.

“Funeral Saturday: Survivors include his wife; a daughter, Mrs. Marvin (Lenore) Steele of North Miami, Florida; five sons, Lowell W. of Mankato [Minnesota]; Osborn, of Chicago; Albert M., of Miami Beach [Florida]; Dwayne O., of Excelsior, Minnesota; and Glenn A., of Pella [Iowa]; two sisters, Mrs. Ben Mellinger and Mrs. Ida LeFevre, both of Sterling, Illinois; 15 grandchildren and three great-grandchildren.

“The body will arrive in Cedar Rapids Saturday morning and services will be conducted at 1:30 p.m. Saturday at Beatty-Beurle chapel. Burial will be in the Lisbon cemetery.

“Friends may call at the chapel after 10 a.m. Saturday.”

A portrait photo shows Reuben Peter Andreas.

308. *Soybean Digest*. 1953. Grits and flakes... from the world of soy: Archer-Daniels-Midland Co., Minneapolis, opened its new vegetable oils processing plant in Los Angeles, California, recently. Dec. p. 28.

• **Summary:** “The plant, described as the most versatile of its kind on the West Coast, will convert linseed, soybean and other industrial oils into products used in the paint, varnish, printing ink and linoleum industries.”

309. Archer-Daniels-Midland Co. 1954. Nature locked the cupboard—but ADM found the key (Ad). *Soybean Digest*. Feb. p. 21.

• **Summary:** A full-page black-and-white ad. “Nature was generous when she created the soybean.

“In each tiny bean are precious ingredients—raw materials for modern industry. The problem, then, is to unlock this rich supply—to extract and separate, to purify and improve—to get out everything which nature put in.

“Take the meal, for example. It’s naturally rich in protein, but without man’s help, much of this protein remains ‘locked-up’ in an indigestible form.

“Archer-Daniels-Midland has developed a carefully controlled cooking process which releases the full growth promoting power. The result? 20% greater protein efficiency—and extra gains worth as much as \$91 more per ton than those produced by some soybean oil meals.

“This is nothing new for ADM. For 25 years, it has been a leader in creating new and better uses for the soybeans you grow. Scores of products born in ADM laboratories and produced in ADM processing plants play vital roles in

# Nature locked the cupboard

## ...but ADM found the key

Nature was generous when she created the soybean.

In each tiny bean are precious ingredients ... raw materials for modern industry. The problem, then, is to unlock this rich supply ... to extract and separate, to purify and improve ... to get out everything which nature put in.

Take the meal, for example. It's naturally rich in protein, but without man's help, much of this protein remains "locked-up" in an undigestible form.

ARCHER-DANIELS-MIDLAND has developed a carefully controlled cooking process which

releases the full growth promoting power. The result? 20% greater protein efficiency ... and extra gains worth as much as \$91 more per ton than those produced by some soybean oil meals.

This is nothing new for ADM. For 25 years, it has been a leader in creating new and better uses for the soybeans you grow. Scores of products born in ADM laboratories and produced in ADM processing plants play vital roles in America's daily life.

This is the way your markets are built ... and this is how they will continue to grow.

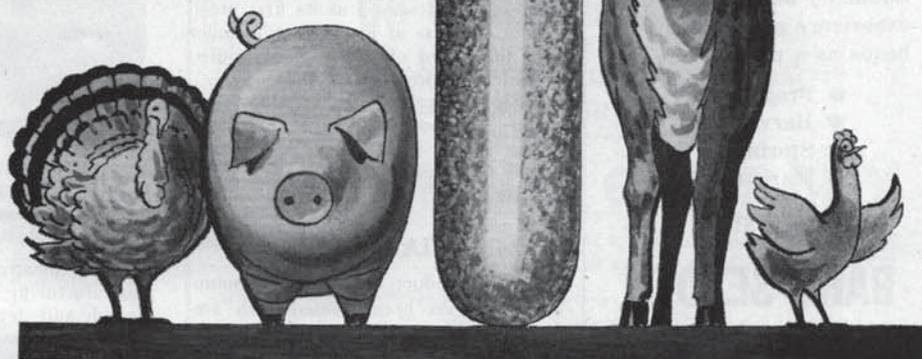

### Some ADM Products made from Soybeans

- ADM Soybean Brew Flakes
- Admex 710 (a plasticizer for vinyl resins)
- Archer "S" (Salad Oil)
- Archer 44% Soybean Oil Meal, Pea-Size, Pellets, Flakes
- Archer 50% Low Fibre Soybean Oil Meal
- Archer Booster Feeds
- R-Lecin (Soybean Lecithin)
- Bakers Nutrisoy
- Daniels' Supreme
- Kaysoy
- Nutriwhip
- Packers Granular
- Paint Vehicles
- Soya/Fatty Acids
- Soy Flour

### Archer-Daniels-Midland Co.

600 Roanoke Building • Minneapolis 2, Minnesota

*Creating New Values from America's Harvests*

America's daily life.

"This is the way your markets are built—and this is how they will continue to grow."

"Some ADM products made from soybeans: ADM Soybean Brew Flakes. Admex 710 (a plasticizer for vinyl resins). Archer "S" (salad oil). Archer 44% soybean oil meal, pea-size, pellets, flakes. Archer 50% low fibre soybean oil meal. Archer booster feeds. R-Lecin (soybean lecithin). Bakers Nutrisoy. Daniels' Supreme. Kaysoy. Nutriwhip. Packers granular. Paint vehicles. Soya fatty acids. Soy flour.

"Creating new values from America's harvests."

Address: 600 Roanoke Building, Minneapolis 2, Minnesota.

310. Terrill, R.L. 1954. The soybean research council: Information gathered by processor group benefits entire soybean industry. *Soybean Digest*. July. p. 18-20.

• **Summary:** Contents: Introduction. Annual meeting. Meal in feeds. A good overview of the goals and activities of the SRC which "is officially a standing committee of the National Soybean Processors Association."

Its "work is of considerable indirect benefit to soybean growers because the information it develops concerning many of the technical aspects of the soybean industry basically serves to increase the utilization of soybean products. Its activities range from studies relating to breeding and cultural practices on soybeans to the utilization of the multitudinous soybean-containing products of today's market. In virtually no other American industry do the processors involved maintain entirely at their expense a group of technical experts whose basic purpose is to gather, evaluate, and distribute technical information for the benefit of the entire industry."

Total membership now stands at 14. Membership is made up not only of men from various member firms but may also include members of outside organizations, for example Dr. J.C. Cowan, head of the oil and protein division of the Northern Regional Research Laboratory at Peoria, Illinois.

The chairman of the council is elected by vote and generally by custom serves for at least 2 years. Dr. Howard C. Black (of Swift & Co., Chicago) is the current chairman. The council maintains a survey (library) of literature pertaining to the soybean. "For the past nine years, the Soybean Research Council has sponsored an Annual Flavor Stability Symposium, and much of the progress in bringing soybean oil to its present status as the major edible oil of the United States can be traced to material sponsored, encouraged, and presented at these meetings. These papers are later presented at the appropriate technical society, but the symposium method is such as to encourage free and frank discussion and interchange of information..." "The most recent symposium was conducted in October 1953 at Chicago, with Harry L. Craig as chairman. Deodorization techniques, objective methods of grading flavor and flavor

stability, and a panel discussion of factors limiting the utilization of soybean oil were among the items on the program."

"Present members of the Soybean Research Council: H.C. Black, Chairman, Swift & Co., Chicago, Illinois. M.L. Brinegar, Allied Mills, Inc., Libertyville, Illinois. J.W. Hayward, Archer-Daniels-Midland Co., Minneapolis, Minnesota. Albert C. Groschke, The Borden Co., New York, NY. H.L. Craig, The Buckeye Cotton Oil Co., Cincinnati, Ohio. W.W. Cravens, Central Soya Co., Inc., Decatur, Indiana. Stuart Bauer, The Drackett Co., Cincinnati, Ohio. Fred H. Hafner, General Mills, Inc., Chemical Div., Minneapolis, Minnesota. Max A. Jeter, The Glidden Co., Indianapolis, Indiana. J. Wesley Nelson, Cargill, Inc., Minneapolis, Minnesota. Everett Blasing, Pillsbury Mills, Inc., Clinton, Iowa. Harold L. Wilcke, Ralston Purina Co., St. Louis, Missouri. Robert L. Terrill, Spencer Kellogg & Sons, Inc., Buffalo, New York. John C. Cowan, Northern Regional Research Laboratory, Peoria, Illinois.

In 1952 the SRC conducted a "broad program of study with regard to the position of soybean oil meal in animal feedstuffs. It was attempted to establish two broad principles: one, the effect of various types of processing (expeller vs. solvent, etc.) on the nutritional quality of soybean oil meal, and two, whether or not this nutritional quality could be predicted on the basis of chemical tests." Soon all manufacturers were invited to submit samples for evaluation.

In 1953 another soybean oil meal survey, even more ambitious than the first, was undertaken. Address: Spencer Kellogg & Sons, Inc., Buffalo, New York.

311. Archer-Daniels-Midland Co. 1954. "Looks like another good soybean year!" *Soybean Digest*. Dec. p. 28.

• **Summary:** The bottom half of the ad shows two men talking to one another. On the top half is this text:

"Next year will be a good year for soybeans, too. And so will the year after that.

"Back in 1929, when Archer-Daniels-Midland opened its first soybean processing plant, the nation's entire soybean crop amounted to only 8.7 million bushels.

"This fall, America's farmers are preparing to harvest over 300 million bushels!

"Amazing? Certainly... for this spectacular increase could not have occurred if the demand for soybeans had not kept pace. And Archer-Daniels-Midland has played an important part in building this demand.

"Scores of new products have been created in ADM's famous research laboratories, processed at a lower cost in ADM's giant soybean plants, and distributed through the skill of ADM's aggressive sales and marketing organization.

"This is how markets are built... and this is how they continue to grow. This year... this month... this week... exciting new soya products are being tested and perfected by ADM scientists. Yes, this will be a good year for soybeans..."

and we at ADM predict that many more good soybean years lie ahead.”

Just below this text is:

“Archer-Daniels-Midland Co.

Creating values from America’s harvests. Minneapolis 2, Minnesota.

To the right of that is ADM’s symbol of an Archer pulling back an arrow in a bow, with a quiver full of arrows on his hip and wearing a feather upright in his cap. Address: Minneapolis 2, Minnesota.

312. Cross, Marion E. 1954. From land, sea, and test tube: The story of Archer-Daniels-Midland Company. Minneapolis, Minnesota: ADM. 88 p. Illust. Index. 28 cm. Second revised edition, Jan. 1957.

• **Summary:** Contents: 1. Flax comes to America. 2. The Daniels Linseed Company. 3. The Archer-Daniels Linseed Company. 4. Eastward ho! 5. Archer-Daniels-Midland Company is formed. 6. Formula for growth. 7. A depression is fruitful. 8. Animal, vegetable and chemical. 9. The soybean–Jack of all trades. 10. New products from research. 11. New horizons. 12. Directors and elected officers.

Pages 23-25: John W. Daniels hoped to have the mill at Minneapolis ready in Oct. 1910 but it was not ready until 17 Feb. 1903 to start crushing flaxseed to make linseed oil. “In the first full year of operation, which closed Aug. 1, 1904, the company showed a profit of \$72,000.

Portrait photos show John W. Daniels and George A. Archer. Shreve M. Archer and Professor H.L. Bolley.

On 7 Feb. 1905 it was voted to take the necessary steps toward changing the firm’s name to the Archer-Daniels Linseed Company. George A. Archer, who owned 50% of the company, was president. “When the Archer-Daniels Linseed Company was formed in 1905, John W. Daniels was 47 years old and George A. Archer was 55.

In about 1909-10 Prof. Bolley, at North Dakota Agricultural College, developed a variety of flax that was resistant to the parasitic fungus that had been causing extensive wilt among U.S. flax plants.

“In order to compete in the eastern market, Archer-Daniels Linseed Company built a linseed mill at Buffalo, New York, which started crushing Feb. 28, 1916.”

Pages 32-33 give a detailed discussion of the 1920 Department of Justice complaint concerning price fixing. This description makes the practice look much more reasonable. The case finally reached the U.S. “Supreme Court where a ruling was handed down in 1923 that the “open price” plan of the Bureau [of Related Industries] was a violation of anti-trust law. Within two years of the time the Bureau was forced to disband, the verdict was practically reversed by a subsequent Supreme Court ruling.

Pages 34-37: “The Midland Linseed Products Co. was, like Archer-Daniels, one of the leading firms in the [flaxseed crushing] industry. (Note: Midland Linseed Oil company

was first incorporated on 26 Sept. 1900 in Minneapolis with a capital stock of \$400,000). “On May 2, 1923, the Archer-Daniels-Midland Company was organized to take over the plants of Midland and the assets of Archer-Daniels. The new company, whose combined properties were placed in the books at \$7,466,032, became the world’s largest producer of linseed oil. Its nine mills contained a total of 334 presses.” A table shows the distribution of these presses.

“For many years the lion’s share of flaxseed crushing had been handled by 4 firms, and then, after the merger of Archer-Daniels and Midland, by 3: ADM, Spencer Kellogg and Sons, Inc., of Buffalo, and the American Linseed Company [owned by Rockefeller interests].

Pages 39-40: By a contract signed July 20, 1928, ADM and Spencer Kellogg agreed to a joint purchase of America’s linseed interests” [i.e., the far-flung mills owned by American Linseed Co.].

From a sentimental point of view the purchase must have been eminently satisfactory, particularly to John W. Daniels and George A. Archer, who more than a quarter of a century earlier had left the American Linseed Company to found their own extremely successful business.

“During 1929 ADM took two more extremely significant steps toward diversifying its manufacturing activities.

Converting the Toledo and Chicago plants to the crushing of soybeans did not seem momentous at the time because the United States was just becoming aware of the potential value of the soybean” (p. 40). A photo (facing p. 40) shows the ADM Soybean Processing Plant in Chicago, Illinois.

Chapter 9, titled “Soybean–Jack of all trades” (p. 56-63) begins with an overview of soybean history worldwide, with emphasis on the USA. “Until 1935 the supremacy of the hydraulic press was unchallenged, but within a few years, it was well on its way to becoming obsolete. An improved expeller press came on the market in 1935 that gave better results on soybeans than the hydraulic press” (p. 60).

“When ADM first started to process soybeans in 1929 at its Toledo and Chicago plants, the hydraulic presses that had been used for flaxseed were used for soybeans... ADM took a bold step in deciding to install a solvent extraction unit for soybeans at its Chicago plant. In this country solvent extraction, never used for volume production, had made very little headway because no satisfactory solvent had been found. The soybean industry was still in its early stage of development and there was no certainty that it was just on the verge of enormous expansion. Furthermore, it was still the depth of the depression and in 1933 ADM’s net sales were the lowest they had ever been. At this time plant superintendent E.W. Schmidt was sent to Europe to make a study of solvent extraction and bring back the best equipment available. Solvent extraction had originated in Europe, having been introduced by an Englishman in 1843; but only in recent years had the process been perfected to the point where it had come into wide use.

“The Hildebrandt unit that Mr. Schmidt selected in Germany consisted of a U-shaped tube about three feet in diameter. The soybeans, having been crushed and rolled into paper-thin flakes, entered one end of the tube through which they were propelled by revolving screws. The solvent, hexane, entered the other end of the tube and moved in the opposite direction while it extracted the oil from the flakes. The oil and solvent mixture came out one end of the tube and the meal came out the other. After the solvent had been removed by distillation, the oil was ready to be refined and the solvent was available for re-use. This process was so effective that only one per cent of the oil was left in the meal. The lower oil content made solvent extracted meal very hard to sell at first, even though feed purchasers were being offered a protein concentrate that contained 44 per cent protein as compared with the 41 per cent produced by hydraulic or expeller presses.

“After the extraction unit had been installed in June 1934, ADM started to produce lecithin, which is derived from crude soybean oil. Like the soybean itself, lecithin has a wide variety of uses for edible, industrial, and medicinal purposes. It is an important ingredient in bakery products, ice cream, and candy, being particularly valuable as a preservative coating for chocolate. Its industrial use ranges from anti-knock gasoline to the textile field and its medicinal uses include cosmetics and pharmaceuticals” (p. 60-61).  
Address: ADM, Minneapolis, Minnesota.

313. Haynes, Williams. 1954. *American chemical industry: A decade of new products*. Vol. 5. Toronto, New York, London: D. Van Nostrand Co. li + 622 p. Index. 24 cm. [9 soy ref]  
• **Summary:** This volume of the 6-volume history, covers the period 1930-1939. Chapter 3, “The Depression-Proof Industry,” discusses Dr. William J. Hale and the origins of chemurgy. He dramatized his idea at the 1931 meeting of the Manufacturing Chemists’ Association, then in 1934 he coined the word “chemurgy,” analogous to metallurgy, meaning working with chemicals, and published his provocative volume, *The Farm Chemurgic*. In 1935, with the active support of Francis P. Garvan and Henry Ford, the Farm Chemurgic Council met at Dearborn, Michigan, and formally organized, with Garvan as president, Wheeler McMillen as vice-president for science, etc. In 1938 Wheeler McMillen succeeded Garvan as president. The chemurgic movement spread far and fast, particularly in the South. At the second Chemurgic Conference in 1936 there was an active discussion of alcohol-gasoline blends. Garvan said that if the 33½% alcohol fuel marketed in England were adopted in the USA, it would put 90 million acres and 6 million unemployed back to work. Henry Ford became interested in growing crops for alcohol to use in lacquers and fuels (power alcohol).

Chapter 16, titled “New Raw Materials” (p. 226-42), notes that “Depression conditions put a premium upon low-

cost supplies and emphasized, especially in the chemical industry, every possible salvage of any waste... Henry Ford not only underwrote the early meetings of the National Farm Chemurgic Council, but he set up at Dearborn a farm products research group... where soybeans became the chief project.

“In the South, where the great staple crops cotton and tobacco had been true chemurgic enterprises generations before Dr. Hale had coined the word, the interest was particularly keen, and in 1937 Senator Bilbo of Mississippi introduced a bill (S. 2140) appropriating \$1,000,000 to be administered by the Department of Agriculture in establishing a research center to solve Southern agricultural problems by finding suitable new crops and profitable new uses for farm products. This idea was altogether too promising to be confined to a single section. Accordingly, the Farm Relief Act of 1938 carried a rider appropriating \$4,000,000 for the establishment of four regional laboratories devoted primarily to chemurgic research...

“Eventually the laboratories were well located at New Orleans, Louisiana; Peoria, Illinois; Albany, California, across the bay from San Francisco; and Wyndmoor, a suburb of Philadelphia [Pennsylvania].”

Pages 277-78 note that the isolation of progesterone, a female sex hormone, was announced almost simultaneously by 4 groups of workers in 1934. It “can be extracted from animal ovaries or synthesized from sterols such as stigmaterol, obtained from soybeans, or obtained from brain or spinal cord of animals...”

In the chapter “New Constituents for Coatings,” pages 355-57 note: “Henry Ford helped the soybean mightily. In 1932 the Ford Motor Company planted 8,000 experimental acres, increased two years later to 12,000, on which 300 varieties were tested, and the harvested crop was processed in an experimental six-ton plant in Greenfield Village. Over 1,000,000 gallons of [soy] oil were used in the ‘paint job’ on Ford cars, 540,000 gallons more made into glycerin to charge the shock absorbers, while 200,000 gallons were used as sand-core binder in the foundry, requirements that demanded beans from 64,000 additional acres. These chemurgic feats were not hidden under a basket, and Ford publicity induced many Middle West farmers to grow this crop.

“The soybean has had an interesting part in crushing techniques. In 1927, when the crop passed 2,000,000 bushels, only a small part of it went to the crushers, the largest at the time, A.E. Staley Manufacturing Company of Decatur, Illinois, handling that year only 165,000 bushels. Staley, which first crushed soybeans in 1922, had been followed by Funk Brothers and a little later by Allied Mills, and with the exception of the pioneer, all the early crushers used plate-type hydraulic presses, standard equipment for linseed crushing. Staley was a trail blazer, demonstrating the expeller press as more efficient for use with soybeans. In 1934 the first large-scale solvent-recovery plant was put in

operation by Archer-Daniels-Midland, followed shortly by a similar installation by the Glidden Company, which was demolished by an explosion soon after its completion. This disaster retarded the development of this process, and during the thirties expeller-type equipment was almost universally adopted. Spencer Kellogg & Sons first crushed soybeans at its Des Moines [Iowa] plant in 1934 and each year following installed equipment at another of its plants, employing both the expeller and solvent methods. In establishing this new industry, the individual leaders were Augustus Staley, late president of A.E. Staley Manufacturing Company and Whitney Eastman, formerly with Archer-Daniels-Midland and more lately with General Mills...

“The earliest extraction operations, installed in 1934-35 by Archer-Daniels-Midland and Glidden, employed Hildebrandt extractors, and a variety of solvents were tried out: acetone, benzene, gasoline, carbon bisulfide, and some of the chlorinated solvents. Glidden embarked on chemical exploitations of soybeans, extracting lecithin, marketed by the American Lecithin Company (Joseph Eichberg, president), and developing a paper-coating product known as Alpha-Protein. In 1934 Archer-Daniels-Midland reopened the plant of its subsidiary, Wm. O. Goodrich Company at Milwaukee, Wisconsin, as a soya operation, and in 1938 Spencer Kellogg purchased the Shellabarger Grain Products Company’s oil mill at Decatur. Other well-known firms interested in soybean products during the 1930s were the Buckeye Cotton Oil Company, subsidiary of Procter & Gamble, soaps, and Larowe Milling Company, feedstuffs.”

Pages 471 and 472 give the high and low price per pound for crude domestic soybean oil in tanks from 1930 to 1939.

Appendix X (p. 486-490), titled “The Farm Chemurgic Movement” by William J. Hale, gives an excellent, concise history of the subject.

Appendix XXVII gives a detailed table showing factory consumption of primary fats and oils in 1939. The leading vegetable oils (in million lb) were: cottonseed oil 1,321, coconut oil 529, soybean oil 370, linseed oil 344, and palm oil 271. The soybean oil was used mostly in shortening (201.6), followed by oleomargarine (70.8), and other edible products (32.3). The main non-food industrial uses were paint and varnish (21.7), soap (11.2), and linoleum & oilcloth (6.4). Address: Stonington, Connecticut.

314. *Soybean Digest*. 1955. Grits and flakes... from the world of soy: New ADM Department. May. p. 35.

• **Summary:** “In a move aimed at further diversification of its activities, Archer-Daniels-Midland Co. has announced the formation of a new products development department. Dr. George K. Nelsen, formerly with the Celanese Corp. and the Shell Development Co., has been named director of the newly created department which is being expanded under Nelson’s direction.

“At the present time ADM makes 850 products which range from livestock and poultry feeds to chemicals.

“In his new position Dr. Nelson will evaluate the market potential for new products developed in ADM research laboratories and will be responsible for the introduction of new products. Nelson also will supervise the company’s market research activities.”

A small portrait photo shows Geo. K. Nelson.

315. *Soybean Digest*. 1955. ADM plans major expansion at Mankato plant [in Minnesota]. Aug. p. 26.

• **Summary:** Thomas L. Daniels, president of Archer-Daniels-Midland Co. announced: “Richer, smoother doughnuts, new high-energy feeds for poultry and hogs, and glues for the plywood factories of the Pacific Northwest will result from a new group of products which will soon be manufactured from soybeans at Mankato, Minnesota.”

One group of products scheduled for immediate production at the expanded plant is a family of industrial soy flours marketed under the ADM trade name Kaysoy. Millions of pounds of such highly refined flours are now used as adhesives and coatings for water-resistant plywood glues.

An illustration shows how the soy processing plant will look next October when the expansion is completed. “Three-story addition to the soybean preparation building (center) will house equipment for dehulling soybean and for grinding soy flour.”

316. Andreas, Dwayne O. 1955. The world fats and oils situation... and its effect on U.S. soybeans. *Soybean Digest*. Sept. p. 25-26, 29.

• **Summary:** Note: Here you see can see Dwayne Andreas’ brilliant mind at work—analytical, and ultimately fair and reasonable.

“Most of the problems which lie ahead for crushers and producers are mutual problems. Our interests are much more mutual than divergent. Recognition of this fact is becoming more and more apparent and more urgent to both of us. And we in the crushing industry look forward to more and closer cooperation with you and other organizations which represent the growers of soybeans.

“We crushers are in a real sense the agents of the growers in marketing their soybeans in the form of products. If we will keep this concept uppermost in our minds we will see why it is that on most issues the crushers and the soybean growers naturally find themselves on the same side of the fence.

“Although soybeans might be considered essentially a feed grain because 85 percent by weight is protein feed eventually consumed on the farm, the value of soybeans is also affected by the value of the oil since it is the oil that goes directly into off-farm markets. Therefore, for the purpose of this discussion I would like to sum up the world fats and oils situation for the 1955 crop marketing year

beginning Oct. 1.

“World production for 1955 is estimated at approximately 26.7 million metric tons of all oils and fats. This exceeds 1954 production by some 600,000 to 700,000 tons and continues supplies at a level above prewar per capita consumption. Prewar per capita consumption was attained in 1953 for the first time.

“In the United States we again have prospects for a new record production and a record surplus for export. Although this surplus oils and fats production today is far larger than it was when our Department of Agriculture made some far-reaching decisions as to its 1955-crop price support policies, the possibilities were even then quite evident.

“On the basis of the latest official crop reports the United States supply of edible oils and fats for the new marketing year exceeds the supplies of last Oct. 1. This is a remarkable truth in spite of the fact that last year’s supplies included a huge government accumulation of cottonseed oil. Production of edible fats is indicated nearly 1 billion pounds larger than in 1954-1955. Let me repeat, we will have more fats and oils to market this year than last year even after including in last year’s supplies the entire accumulation of cottonseed oil in government hands.

“The U.S. government by supporting prices for edible oils and fats through the cottonseed products purchase program has in effect represented the farmer in disposing of his oil and fat surplus. If the government elects (as presently indicated by its announced plans for the 1955 crop) to change from this position of acting as agent of the farmer in disposing of surplus oil production then we must face some even more unpleasant possibilities.

“One puts the farmer at the mercy of cartel or government dominated buying. True, this is only with respect to the surplus oil production but this is one of the most dominant factors in determining U.S. prices for oil and in turn for oilseeds. This is always true for a surplus exporting nation.

“The other possibility is that the grower will be entirely dependent on the price support program. I am assuming of course that oilseed prices will continue to be supported above the world market level for oils and fats. This will be true if soybean supports continue at levels which are in proper relationship to other price supported crops. This latter alternative would attempt to support all edible oils and oilseeds impounding large quantities of soybeans under loan.

“That is one reason why U.S. government domestic and export policies as carried out through the Department of Agriculture and the Commodity Credit Corp. are of primary importance to you as growers. These policies also affect processors, manufacturers of products, consumers, exporters, customers abroad and probably the most important the American livestock, dairy and poultry producers.

“Nobody Consulted: A recent example of the way in which government policies affect our whole industry and

related industries was the decision to offer CCC soybeans for export at less than the price for domestic crushing. This policy—entirely a new policy for soybeans—was inaugurated without any prior consultation of any official nature with the affected segments of the industry. From the growers’ viewpoint, it can have far reaching effects and none of them good. To the extent that CCC sells for export now, precisely that much less export demand will be in the market place when your new crop begins to move.

“Even more important is the precedent involved. After all, the small quantity of 1954 crop soybeans involved is not too important in and of itself. If freely offered for domestic as well as export, it could easily have been absorbed with a minimum of market effect. As it is, buyers abroad, not being required to compete with U.S. crushers, name bargain prices. I was in Europe when this announcement was made. The unanimous reaction was in essence, ‘We can now and in the future buy soybeans cheaper from CCC.’

“Future policies could be inherently just as disruptive to growers, processors and others. We should work together to see that they are not. It is a simple fact that the major problem is one of disposing of surplus oil production. And that this could be solved on a longtime basis and with more regard to all parts of the industry by better means than the policy the government is drifting into for oilseeds. This new policy is going to be quite a shock to soybean growers who have been accustomed to selling their soybeans for prices well above support levels.

“Let’s look at the 1955 oilseed price support programs as announced by the Department of Agriculture on Mar. 16 to June 22. It puts the crusher and producer of soybeans in an untenable position.

“The March 16 and subsequent announcement of June 2 says the effect on price support activity is expected for cottonseed because of a ‘better balance between the consumption and production’ of oilseeds. Further, that the reduced levels of support provide less incentive for planting soybeans. What a different picture we have today when the official Department estimates of production are available. A record soybean crop of 420 million bushels. Cotton oil production of about 1.6 billion pounds, crude. Total edible supply larger than even the last year’s record.

“Policy by Guess: The government’s price support policy for soybeans and cottonseed seems to have been determined largely on the guess that cottonseed would sell above support levels. Even though this belief has been shared by some in the trade, it is inherently wrong for the government to make such far reaching decisions upon its assumption of market prices prevailing a year ahead.

“The people who suffer for bad government decisions are processors and others in industry who, however capable they may be of judging supply and demand factors, cannot foresee possible actions or lack of actions by the government which becomes the most dominant factor in the market place

with prices below or about the support level.

“Back when the 1955 support programs were being developed some of us urged the Department to adopt a different policy. Our proposal was based upon what we honestly believe to be best for the government and for all segments of the oils and fats industries. We proposed that the CCC implement its oilseed programs with an agreement to buy oil. We suggested that it buy soybean and/or cottonseed oil from processors who in turn agreed to pay support price or more for soybeans and cottonseed. Had this been done, the millions of bushels of soybeans already sold all would have brought you at least the full support price.

“I want to emphasize again it is quite obvious that this would not have an effect on the margin of profit for processors as such, but it would make it possible for processors to pay full support price for your soybeans and you could market them freely and in an orderly fashion. That is what we want. The proposal that CCC buy oil is no cure-all for the soybean processing industry, but it has obvious advantages for all of us. They include the following and I hope you will keep in mind that these reasons are based on a longtime view and not for a single crop year:” (Continued). Address: Chairman of the Board, Honeymead Products Co., Mankato, Minnesota.

317. Andreas, Dwayne O. 1955. The world fats and oils situation... and its effect on U.S. soybeans (Continued—Document part II). *Soybean Digest*. Sept. p. 25-26, 29.

• **Summary:** (Continued): “1—The surplus is obviously in the form of oil, not meal. Most tradesmen agree that this country could absorb the meal from not only 400 million bushels of soybeans, but within the next few years, 500 to 600 million bushels, providing it is marketed at a reasonable price.

“On the other hand if CCC should cause high domestic prices of soy meal by impounding soybeans you are apt to lose some more of your other customers to urea.

“Edible fat consumption in the United States is inelastic, one of the most inelastic items in the whole U.S. economy. Experts can predict to a fraction of a pound per capita how much edible fats will be consumed in this country regardless of price. Thus a floor price under vegetable oil does not mean any apparent change in the total domestic consumption of fats.

“2—It is a double-edged weapon, tending to increase the price of beans, and decrease the price of meal. Both edges favor the farmer whose interest CCC is supposed to represent and protect. CCC is best able to cope with the problem of cartel buying, government buying, and the needs of underdeveloped nations.

“3—Oil buying is by far the cheapest method of operation to CCC. Crude soybean oil can be stored and shipped more cheaply than soybeans. It does not have to be refined for storage as does cotton oil. The industry can and will store it for nominal charges on a quality guaranteed basis. If CCC

does encourage the marketing of soybeans at prices above the loan congested storage facilities will be relieved.

“4—Let us use simple arithmetic. If CCC puts a floor on edible oil at say 2 cents a pound over what it might otherwise sell for in the domestic market, it could take over the surplus of possibly 500 million pounds. If it sold this oil at a loss of 2 cents a pound which today seems to be a reasonable estimate, it would lose \$10 million. This operation would, however, raise the entire edible fats market for the U.S. farmer by 2 cents a pound—that is 2 cents a pound on 10½ billion pounds of edible fats production or an increase in farm income of over \$200 million.

“5—Oil buying by CCC at a proper level would permit soybeans to be marketed at prices equal to or likely above the loan level. This would restore the function of price to its proper place in our industry. Soybeans and meal could fluctuate freely according to supply and demand. Similarly cottonseed would flow freely into the market and the resultant enhancement in the price of lard would be a boon to hog producers now harassed by low prices. This would tend to get the government out of our business to the maximum extent possible.

“6—Last and perhaps most important of all is the outlook for future years. It is evident that soybean production in the United States can and should be further increased. It is a natural crop to replace other crops, the acreage of which will be further decreased. Soybean meal consumption can be expanded. Edible oils consumption can expand only in line with population increases. All of which adds up to one conclusion. The simplest and best way to handle an oil surplus is to handle it as oil.

“After outlining some of the favorable points for the proposal to CCC to buy oil at fixed levels, it is in order to give you the objections to such a program as I understand them and with some comments as to the validity of the objections.

“It has been argued that an oil purchase program would result in increased crushing in the early part of the season because of more favorable crushing margins. It is claimed that meal would then be cheap but would skyrocket later in the year when crushing decreased. First, in the past, when government operations have held oil at 12 to 13 cents per pound, processors’ margins have not widened. The enhanced value of oil has been passed right on to the grower in the soybean price. That is an indisputable fact.

“But even more important, meal storage is available everywhere. At processing plants, warehouses, feed mills, and on farms. And there are adequate futures markets. When meal prices get too low purchases for future delivery are made by buyers and by speculators. This natural action in normal market channels results in a carrying charge for meal and it is stored until needed, or else the processor delays crushing. It happens automatically—and is the normal way of doing business. I for one am confident that buyers

are perfectly capable of scheduling purchases of these requirements in any given year.

“Does it make sense to you that the spot meal market would be so glutted that meal would be too cheap and at the same time crushing margins would be excessive? Certainly not!

“Umbrella for Lard: Another objection advanced is that by supporting vegetable oils the government will be holding an umbrella for lard marketing so that lard might tend to take the place of vegetable shortening and margarine as a cooking fat. I regard this objection as not valid for the simple and obvious reason that irrespective of whether the government does or does not buy oil the lard as always will be consumed. It is a byproduct that finds its way rather quickly into consumption channels in either case, that is, with or without a vegetable oil price support. It is a fact, of course, that vegetable oil buying would tend to enhance the value of lard and from the CCC viewpoint this must be considered a plus factor.

“Furthermore, let’s face it, in either case the government will be impounding the same amount of oil. It is only a question of whether they own it as oil, or own it as beans, thereby dominating the bean and meal markets as well.

“Another school of thought simply says ‘It’s easy to export the soybeans instead.’ Let’s use more arithmetic. If CCC were to export the estimated 250,000 tons of fat in the form of soybeans, it would find itself in the extraordinary position of shipping 1,250,000 tons of soybean meal as beans to European livestock producers at prices far cheaper than the American farmer would be required to pay. Thus CCC would be engaging in the ridiculous operation of cornering the meal market against the very people it is supposed to be protecting, the American livestock producers, thereby raising the already high costs of producing milk, butter, eggs, and meat in the U.S.

“Furthermore, with CCC soybeans available at bargain prices you will lose the legitimate market for soybeans built up in Europe over a period of many years. Naturally they will buy CCC bargain counter beans and ignore the free market supplies. This will result in accumulation under the loan of the free market supplies, which Europe otherwise would have bought. This further complicates the problem. Eventually it would result in a complete two price system. CCC would take the loss not only on the small quantity of surplus oil, but on the corresponding meal portion as well, and on the entire 50 to 75 million bushels of otherwise normal soybean exports.

“The most serious concern to me and others in industry has been the apparent lack of an overall analysis of the impending situation by government, growers and industry collectively. Both industry and government have considered the oilseed price support problems on more a piecemeal expediency basis rather than on an overall longtime basis. Make no mistake—price supports are here to stay, whether we

like it or not. And price support programs should be devised on a basis which will give greatest freedom in the market place, cause the least interference with normal commerce, and at the same time effectively support prices to growers at reasonable levels. Impounding vast quantities of bulky raw materials under loan is proven to be a clumsy way to operate. On the other hand, the proposal for CCC to buy crude soybean oil seems to me to meet these criteria far better than presently announced programs and better than any other proposals we have heard. By entering the oil market they will automatically take themselves out of the soybean and soybean meal markets where their interference with the function of price is infinitely more troublesome. If there are other and better plans, I assure you the National Soybean Processors Association will consider them” (Continued). Address: Chairman of the Board, Honeyamead Products Co., Mankato, Minnesota.

318. Andreas, Dwayne O. 1955. The world fats and oils situation... and its effect on U.S. soybeans (Continued—Document part III). *Soybean Digest*. Sept. p. 25-26, 29.

• **Summary:** (Continued): “Questions to Consider: In considering the pros and cons of this entire situation you might ask the following questions:

“1—How much will the impounding of vast quantities of soybeans mean in the loss of your meal markets?

“2—How will such an accumulation of soybeans coupled with the two price system affect your soybean markets prices?

“3—Will not large loan impoundings of soybeans adversely affect both oil and meal markets whereas the oil program could only bear on future oil prices?

“Now I would like to sum up my impressions of the impending situation on soybean growers and crushers. To effectively support prices, large quantities of soybeans must be impounded under CCC loans and eventually go into CCC inventories. If not this year, then next year or the year after. It’s simply inevitable so long as wheat and corn and cotton acreage reductions continue to make land available for soybeans.

“What will such a policy mean in loss of meal markets? When meal consumption is lost for a period, that particular lost consumption is never regained. You know soybeans have been a most satisfactory crop. It is well known that your Association does not look with favor on growing soybeans for government held inventories but wants them to move into consumption through normal trade channels. If you want to further these views, the way to do it is to get behind the oil program.

“The frightening possibility is that the government by mishandling its operations even though with the best of intentions gets more and more into our business—yours of producing and marketing soybeans, ours of crushing and merchandising oil and meal. This is a drastic threat to both

producers and processors. I think the threat is so real and so great that producers and processors must unite in self defense even though it may require a great deal of effort and large sums of money.

“I extend to you, without qualification, the promise of the processors’ cooperation looking to mutually satisfactory solutions of the problems which we face.”

A small portrait photo shows Dwayne Andreas. Address: Chairman of the Board, Honeymead Products Co., Mankato, Minnesota.

319. National Soybean Processors Association. 1955. Year book, 1955-1956 (Association year). Chicago, Illinois. 48 p.

• **Summary:** On the cover (but not the title page) is written: “Year Book and Trading Rules, 1955-1956.” Contents: Constitution and by-laws and code of ethics. Officers, directors and committees for 1955-56. Membership of the National Soybean Processors Association. Trading rules on soybean oil meal. Appendix to trading rules on soybean oil meal: Official methods of analysis (moisture, protein, oil, crude fiber {only method numbers listed}, sampling of soybean oil meal). Trading rules on soybean oil: Tentative refined oil specifications. Appendix to trading rules on soybean oil: Uniform sales contract, standard specifications for crude soybean oil for technical uses, grading soybean oil for color (N.S.P.A. tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed).

The section titled “Officers, directors, and committees” (p. 12-15) states: President: R.G. Houghtlin. V.P., Chairman Executive Committee: Dwight L. Dannen. Secretary: E.A. Cayce. Treasurer: H.A. Abbott. Executive Committee: Dwight L. Dannen, Chairman, D.O. Andreas, H.A. Abbott, R.G. Golseth (term ending Sept. 1956). E.A. Cayce, A.C. Hoehne, R.G. Houghtlin, W.E. Huge (term ending Sept. 1957).

Board of Directors (Term expiring Sept. 1956): E.A. Cayce, Jasper Giovanna, Willard C. Lighter, M.D. McVay, Ralph S. Moore, Clark Yager. Term expiring Sept. 1957: D.O. Andreas, Earl J. Brubaker, Dwight L. Dannen, R.B. Jude, W.H. Knap, Glenn Pogeler. Term expiring Sept. 1958: S.D. Andrews, Jr., S.E. Cramer, A.C. Hoehne, W.E. Huge, Donald C. Ogg, J.J. Quinlan.

Standing committees: For each committee, the names of all members (with the chairman designated), with the company and company address of each are given—Traffic and transportation. Technical. Soybean grades and contracts. Oil trading rules. Meal trading rules. Crop improvement council. Soybean research council. Uniform rules and standards for soybean oil meal. Safety and insurance. Lecithin. Regional: Ohio and East; Illinois, Indiana, Kentucky, Wisconsin and Northwestern Missouri; Iowa, Minnesota, Nebraska,

South Dakota; Kansas, and Western Missouri; Southeastern Missouri and the Mississippi River Delta Sections.

The following organizations, and individuals are members of NSPA: Albers Milling Co., Los Angeles, California (W.P. Kyle). Allied Mills, Inc., Board of Trade Bldg., Chicago, Illinois; Peoria, Illinois; Taylorville, Illinois; Omaha, Nebraska. Archer-Daniels-Midland Co., Box 839, Minneapolis 2, Minnesota; Mankato, Minnesota; Decatur, Illinois; Baldwin Oil Mill, Inc., Foley, Alabama (W.H. Sessions). Belzoni Oil Works, Belzoni, Mississippi (Irby Turner). Big 4 Co-op. Processing Assn., Sheldon, Iowa (Chas. W. Hanson). Boone Valley Co-op. Processing Assn., Eagle Grove, Iowa (Edward Olson). Borden’s Soy Processing Co., New York 17, New York (E.J. Brubaker); Waterloo, Iowa; Chicago 4, Illinois (James R. Pentis); Kankakee, Illinois. Buckeye Cotton Oil Co. (The), Cincinnati 1, Ohio (W.H. Knapp, R.B. Williams); Little Rock, Arkansas; Wilson, Arkansas; Louisville, Kentucky; Greenwood, Mississippi; New Madrid, Missouri; Raleigh, North Carolina; Memphis, Tennessee. Cargill, Inc., Minneapolis 15, Minnesota (M.D. McVay, Jay Haymaker); Chicago 3, Illinois (W.B. Saunders); Cedar Rapids, Iowa (C.W. Bohlander); Fort Dodge, Iowa (W.J. Wheeler); Washington, Iowa (Hugo Lensch); Philadelphia, Pennsylvania (R.F. Hubbard). Central Iowa Bean Mill, Gladbrook, Iowa (Paul H. Klinefelter). Central Soya Co., Inc., Fort Wayne 2, Indiana (W.E. Huge); Gibson City, Illinois (Newell Wright); Decatur, Indiana (T.H. Alwein); Marion, Ohio (W.E. Mann); Chattanooga, Tennessee (R.W. Fay). Checkerboard Soybean Co., Decatur 30, Illinois (R.E. Baer). Colchester Processing Co., E. St. Louis, Illinois (E.L. McKee). Consumer’s Soybean Mills, Inc., Minneapolis 15, Minnesota (Riley W. Lewis). Dannen Grain and Milling Co., St. Joseph 1, Missouri (Dwight L. Dannen). Delphos Grain and Soya Products Co., Delphos, Ohio (Floyd E. Hiegel). Delta Cotton Oil and Fertilizer Co., Jackson, Mississippi (Alfred Jenkins). Drackett Co. (The), Cincinnati 32, Ohio (Roger Drackett). Farmers Cooperative Assn., Ralston, Iowa (Karl Nolin). Farmers Cooperative Co., Dike, Iowa (C.M. Gregory). Fremont Cake and Meal Co., Fremont, Nebraska (Harry E. Wiysel). Funk Bros. Seed Co., Bloomington, Illinois (H.A. Abbott). Galesburg Soy Products Co., Galesburg, Illinois (Max Albert). General Mills, Inc., Chem. Div., Minneapolis 1, Minnesota (Sewal D. Andrews, Jr.); Belmond, Iowa (Walter B. Hotvet); Rossford, Ohio (Glenn W. Martin). Glidden Co. (The), Chicago 39, Illinois (Willard C. Lighter). Gooch Milling & Elevator Co., Lincoln 1, Nebraska (M.R. Eighmy). Haynes Milling Co., Inc., Portland, Indiana (Clarence E. Peters). Holland Pioneer Mills, Ohio City, Ohio (G.A. Holland). Honeymead Products Co., Mankato, Minnesota (D.O. Andreas, L.W. Andreas); Huegely Elevator Co., Nashville, Illinois (J.W. Huegely). Illinois Soy Products, Springfield, Illinois (Jasper Giovanna, Eric Nadel). Iowa Milling Co., Cedar Rapids, Iowa (Joe Sinaiko, Bob Scroggs). Iowa Soy Co., Redfield,

Iowa (Donald C. Ogg). Ipava Farmers Processing Co., Ipava, Illinois (Phil. Snedeker). Kansas Soya Products Co. (The), Emporia, Kansas (Elmer L. Buster). Lauhoff Soya Co., Danville, Illinois (R.G. Golseth). Marshall Mills Inc., Marshalltown, Iowa (J.I. Johnson). McKee Feed & Grain Co., Muscatine, Iowa (L.R. McKee). Mid-States Fats and Oils Corp., Peru, Indiana (Oren P. Cochran); Indianapolis, Indiana (Paul J. Sicanoff). Minnesota Linseed Oil Co., Minneapolis 21, Minnesota (R.J. Lindquist, Jr.). Mississippi Cottonseed Prod. Co., Jackson, Mississippi (H.E. Covington). Muscatine Processing Corp., Muscatine, Iowa (G.A. Kent). North Iowa Cooperative Processing Association, Mason City, Iowa (Glenn Pogeler). Ohio Valley Soybean Co-op, Henderson, Kentucky (A.I. Reisz). Owensboro Grain Co., Owensboro, Kentucky (William M. O'Bryan). Pacific Vegetable Oil Corp., San Francisco 7, California (B.T. Rocca, Jr.). Pillsbury Mills, Inc., Clinton, Iowa (Clark Yager, D.B. Long, E.A. Blasing). Planters Manufacturing Co., Clarksdale, Mississippi (A.K. Shaifer). Quaker Oats Co. (The), Chicago 54, Illinois (K.N. Tilden). Quincy Soybean Products Co., Quincy, Illinois (Irving Rosen, Norman Rosen). Ralston Purina Co., St. Louis 2, Missouri (Donald B. Walker); Kansas City, Missouri (F.G. Franze); Bloomington, Illinois (D.D. Rowland); Lafayette, Indiana (Ralph Guenther); Iowa Falls, Iowa (H.N. Johnson). Riverside Oil Mill, Marks, Mississippi (William King Self). Sisketon Cotton Oil Mill, Inc., Sisketon, Missouri (P.B. Bartmess). Sioux Soya Mills, Div. of Sioux Industries, Inc., Sioux City 2, Iowa (John W. Zipoy). Southern Cotton Oil Co. (The), Goldsboro, North Carolina (W.V. Westmoreland); Tarboro, North Carolina (W.A. Moore). Southland Cotton Oil Co., Div. of Anderson Clayton Co., Paris, Texas (James R. Gill). Soy-Rich Products, Inc., Wichita, Kansas (Ralph S. Moore). Spencer Kellogg and Sons, Inc., Buffalo 5, New York (Robert B. Jude); Chicago, Illinois; Decatur, Illinois; Des Moines 6, Iowa; Bellevue, Ohio; El Centro, California. Swift & Co., Union Stock Yards, Chicago 9, Illinois (S.E. Cramer). Tri-County Co-op Soybean Assn., Dawson, Minnesota (J.C. Givens). Wells (Ralph) & Co., Monmouth, Illinois (Ralph Wells). West Bend Elevator Co., West Bend, Iowa (R.W. Jurgens). West Tennessee Soya Mill, Inc., Tiptonville, Tennessee (Peter Frederickson).

Associate Members: American Feed Stores Home Organization (The), Minneapolis, Minnesota. Armour & Co., Chicago 9, Illinois (John H. Noble). Best Foods, Inc. (The), New York 17, NY. Capital City Products Co., Columbus 16, Ohio. Clinton Foods Inc., Clinton, Iowa. Cooperative Mills Inc., Baltimore 30, Maryland. Cox (Chas. M.) Co., Boston, Massachusetts. Humco Co. (The), Memphis 1, Tennessee. Kraft Foods Co., Chicago, Illinois. Lever Bros Co., New York 22, New York. Procter & Gamble Co., Cincinnati 1, Ohio. Address: 3818 Board of Trade Building, Chicago 4, Illinois.

320. *Soybean Digest*. 1955. Soybean Digest is 15 years old. Nov. p. 8-9. See also Dec. 1955, p. 7.

• **Summary:** The *Soybean Digest* is 15 years old this month. The first issue appeared in November 1940.

“Fifteen years ago this past August the American Soybean Association decided to establish an official monthly publication at its annual convention at Dearborn, Michigan. One purpose was to publish the proceedings of Association conventions.

“But some Association leaders foresaw a much larger role for the Digest. They thought it could become the voice of an entire industry. We believe it has.

“This magazine was born in the early days of World War II when a hungry world was beginning to cry for fats and proteins—and offering the comparatively new soybean crop a challenge and an opportunity. And it was pushing the American Soybean Association into broader fields.

“In 1940 the nation had already produced a 90-million-bushel soybean crop, and was soon to produce a 100-million-bushel crop. By the war’s end the annual crop was almost 200 million bushels.

“Some men thought the soybean would slip back to a place of minor importance as soon as the war was over. Instead, the really tremendous growth of the crop and industry was about to begin. The 1955 crop of soybeans is almost double the 200 million bushels of 1946, and nobody now believes we have reached the peak!

“There is good evidence that the fact that the soybean has now reached an unchallenged position as the leading producer of the nation’s vegetable fats and proteins has been due to the leadership within the Association and the industry. It could have been otherwise.

“The Soybean Digest is proud to have been a part of this growth.

“Plastic Fords were creating a sensation when the Digest was founded. (Editor Strayer was soon to observe soberly that plastics were consuming less than ½% [= half of 1%] of the soybean crop.)

“The Digest carried an article the first year on the use of soy flour by the German fighting forces—Hitler’s secret weapon. Hitler’s legions have long since descended into dust. But soy flour is an even better food fortifier now than it was in 1940.

“Indiana was starting a soybean yield contest, one of the best and first. Illinois University’s G.L. Jordan was predicting a 90¢ average price for 1940-crop soybeans.

“The Ogden and Chief soybean varieties were announced.

“Some of the first year’s headlines are reproduced on this month’s front cover.

“Growth of the Soybean Digest during its first 15 years is well shown by the accompanying pictures of the increasing

staff.

“The Digest was only 16 pages in size the first year. Since, there have been 72 pages in some regular issues, and up to 132 pages in convention issues.

“The magazine has received heart-warming support over the years. A surprising number of first advertisers are still with us, as shown in the accompanying list. One, Seedburo Equipment Co., has carried its message in each issue of the Digest ever published.

“We do not have a similar list of the early readers who are still with us. Their number also might be a surprise.

“We value equally the subscribers and advertisers who have joined us in recent years. We are deeply grateful to all—oldtimers and newcomers. Without them there could not be a Soybean Digest.”

A sidebar shows: “First Year Advertisers Still with the Soybean Digest:

“Ralston Purina Co.  
 “Urbana Laboratories  
 “Central Soya Co.  
 “Nitragin Co.  
 “Archer-Daniels-Midland Co.  
 “Glidden Co.  
 “Spencer Kellogg & Sons, Inc.  
 “J.I. Case Co.  
 “Seedburo Equipment Co.  
 “National Association of Margarine Manufacturers  
 “Agricultural Laboratories  
 “V.D. Anderson Co.  
 “A.E. Staley Manufacturing Co.  
 “Albert Dickinson Co.  
 “Quincy Soybean Products Co.  
 “Iowa Milling Co.  
 “Skelly Oil Co.  
 “French Oil Mill Machinery Co.  
 “Dannen Mills, Inc.  
 “Allied Mills, Inc.  
 “John Deere & Co.  
 “Allis-Chalmers Manufacturing Co.  
 “William H. Banks Warehouses, Inc.”

A large red graph, from 1925 to 1955, across the top of page 9 shows: “Rapid as was the growth of the Soybean crop before the Digest was founded, it has been much more rapid since.” However there was a basic problem with this graph. A correction, published in the Dec. 1955 issue (p. 7) stated: “It should have looked like this!” Below that was the correct graph with this caption:

“This is how the graph showing the growth of the soybean crop before and after the founding of the Soybean Digest on page 9 of the November issue should have appeared. The graph line was turned upside down and made it appear that there had been little expansion since 1940 and that production had leveled out since 1947. Gremlins sometimes creep into the best regulated printshops! Above,

you see the graph as it should be with the big expansion in the soybean crop coming in the past 15 years.”

Photos (p. 8) show: Geo. M. Strayer, editor and founder. G.G. McIlroy [Ohio], former president of the American Soybean Assoc. [ASA] with a letter he wrote on 14 Nov. 1940 that was sent out to members of ASA with the first issue of *Soybean Digest*.

Along the bottom of page 9 is a section titled “Growth of the Staff,” with small portrait photos of the following men and a caption for each:

“Kent Pellett—became managing editor in 1942. R.E. Hutchison—became an advertising representative in 1942. E.E. Yeck—became an advertising representative in 1942. Porter M. Hedge—became Washington, DC, correspondent in 1944. George McCulley—became business manager in 1946. D.C. Cobie—became director of circulation in 1952. John Hendrickson—became an advertising representative in 1942.”

321. Hayward, J.W. 1956. Soybean oil meal: Current developments in its use in formula feeds. *Feedstuffs* 28(6):26, 28, 32, 34-36, 58, 60, 62-63. Feb. 11.

• **Summary:** Longtime outlook for soybean oil meal appears bright, due to recognition of protein feed deficits for present farm population. Address: Director of Nutritional Research, Archer Daniels Midland Co., Minneapolis.

322. Hansen, Louis I. Assignor to Archer-Daniels-Midland Company (Minneapolis, Minnesota; a corporation of Delaware). 1956. Lacquer plasticizer. *U.S. Patent 2,754,306*. July 10. 5 p. Application filed 9 July 1953. [4 ref]

• **Summary:** Discusses plasticizers for nitro cellulose lacquers. Address: Minneapolis, Minnesota.

323. **Product Name:** Lecithin (Named R-Lecin Soybean Lecithin by 1959).

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** 700 Investors Building, Minneapolis 2, Minnesota.

**Date of Introduction:** 1956.

**New Product–Documentation:** Soybean Blue Book. 1956. p. 96. Ad in Soybean Blue Book. 1959. p. 95. Address is now 735 Investors building. Product is now called R-Lecin. Still listed in 1976.

324. Chen, Philip S.; Chen, Helen D. 1956. Soybeans for health, longevity, and economy. South Lancaster, Massachusetts: The Chemical Elements. xii + 241 p. Illust. Index. 21 cm. 2nd ed. Jan., 1962, 242 p. [24 ref]

• **Summary:** A comprehensive review of the subject. Contents: Preface, by the author (South Lancaster, Massachusetts, July 1956). Foreword, by Geo. M. Strayer, Vice-President and Secretary-Treasurer, American Soybean Association. Introduction. Part I: Nutritive value of the soybean. 1. Protein (incl. Dr. Wolfgang Tiling of Hamburg,

Germany; Dr. Harry Miller). 2. Fat (incl. phosphatides, sterols and hormones). 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease (incl. Dr. Wolfgang Tiling of Germany).

Part II: Soy products. 8. Soybean oil: Composition and properties, processing and refining, reversion, uses, phosphatides, margarine, mellorine (vegetable frozen dessert). 9. Soybean oil meal: Heat treatment, Gelsoy, Multi-purpose Food. 10. Soy flour: Uses, soy bread vs. enriched white bread. 11. Soy milk. 12. Soy cheese (or soybean curd, “aptly described by the Chinese as ‘the meat without bones’”—incl. pressed tofu sheets and yuba). 13. Soy sauce: Preparation of kojis, brine fermentation, production yields, microorganisms are available. 14. Soybean sprouts.

Part III: Soybean culture and preservation. 15. Soybean culture: Two types of soybeans (commercial field vs. edible or vegetable varieties), inoculation, fertilizer, cultivation, harvest. 16. Preservation of soybeans: Shelling, canning, freezing, dehydration, harvesting dry mature soybeans.

Part IV: Recipes. 17. Soybeans and soybean pulp: Green or fresh soybeans, dry soybeans, soybean pulp (“prepared by pressing cooked soybeans through a coarse sieve or by grinding them in a food grinder”), recipes (incl. Soyburger, Scalloped green soybeans, and Roasted soybeans—dry roasted or deep-fried (p. 151). Describes how to make wheat gluten at home and praises monosodium glutamate for its ability to improve the flavor of recipes—though its use is called for only in the recipe for Soyburger). 18. Soy flour: Breads, cakes, cookies, pies, soups, other recipes (A recipe for Wafers, p. 180, calls for “½ cup roasted soybeans, finely chopped”).

19. Soy grits and soy flakes. 20. Soy milk. 21. Soy cheese. 22. Soybean sprouts.

Appendices: A. Soybean utilization (chart). B. Manufacturers and handlers of soy foods (Source: 1956 *Soybean Blue Book*). C. References.

Chapter 1, “Protein,” begins: “The soybean is best known for its high protein content (p. 7). It then discusses the work of Dr. Harry Miller (p. 14-15).

Chapter 15, “Soybean Culture,” describes how to grow soybeans in a garden. Pages 126-27 discuss the two types of soybeans: the commercial field type and the edible vegetable type. Five major differences between the two types are discussed (p. 126). The edible varieties are larger in size, do not yield as heavily (though they yield more heavily than snap beans or lima beans), are more prone to shatter as they near maturity in the field, are superior in flavor, texture, and ease of cooking, and some edible varieties are also superior in the manufacture of soybean flour, soybean milk, roasted beans and other products. Table 31 (p. 130) lists eleven varieties of edible soybeans: Very early—Giant Green. Early—Bansei, Fuji. Midseason—Hokkaido, Jogun, Willomi. Late: Illington, Imperial, Funk Delicious, Emperor, Higan. Commercial—Illini.

Chapter 16, “Preservation of Soybeans,” describes how to preserve “green soybeans” by canning, freezing, and dehydration.

Photos show: (1) A sack of Lincoln soybeans (facing p. 1). (2) Soybean plants, showing pods and leaves (p. 3 and 4). (3) A beam balance with a small amount of soy flour balancing many animal products. “The protein value of soy flour: 1 lb. of soy flour contains protein values equal to 2 lbs. beef, or 34 eggs, or 6 quarts milk.” Source: Health and Character Education Institute (p. 6). A similar photo (p. 24) states: “1 lb of soy flour contains food calories equal to 3½ lbs beef, or 3 quarts milk, or 29 eggs. (4) Two views of a child. Left, suffering from marasmus. Right, after six months on a soy milk diet. Courtesy Dr. Wolfgang Tiling (p. 62). (5) A machine at the Northern Utilization Research Branch of USDA treating soybean oil with alkali (p. 72). (6) The distribution of MPF [Multi-Purpose Food] to starving Indian children (p. 91; Courtesy Meals for Millions Foundation). (7) Quaker City No. F4 grinding mill (p. 102; Courtesy Straub Co., 4059 Ridge Ave., Philadelphia, Pennsylvania). (8) Early soy cheese (tofu) production in the United States (p. 108; perhaps at Madison Foods). (9) The Northern Utilization Research Branch, Agricultural Research Service, USDA—shows outside of the huge building (p. 113). (10) How to grow soy sprouts in a glass jar at home (p. 119). (11) Well nodulated soybean roots (p. 129; Courtesy The Nitragin Co.). (12) Baked soybeans in a crock (p. 144). (13) Soy flour used in numerous baked products (p. 159; Courtesy ADM). (14) Griddle cakes [pancakes] made with soy flour brown quickly (p. 173). (15) Soy peanut butter cookies (incl. peanut butter and soy flour; p. 185). (16) Soy grits in a glass jar (p. 198). (17) Freshly-cooked crisp soybean sprouts in a raw vegetable salad (p. 219).

Note 1. The first printing of this book (1956) was dedicated “To Li Yu Ying and William J. Morse, *The Soybean Champions of the Eastern and Western Hemispheres*,” but by the second printing (April 1957) the dedication had changed “To William J. Morse and Harry W. Miller, *The Soybean and Soy Milk Champions of Our Time*.”

The publisher of this third printing was unable to sell all the books printed, so Chen apparently arranged for a company named “Outdoor Pictures” (Box 1326, Escondido, California) to sell them. On the title page, Outdoor Pictures pasted their name and address over that of “The Chemical Elements.”

Note 2. According to the *National Union Catalog*, Philip Stanley Chen was born in 1903. The back cover states that he was born in China and is now a naturalized U.S. citizen. He is a graduate of Emmanuel Missionary College [in Berrien Springs, Michigan] and Michigan State University. Before writing this, his first book on diet, health, or soybeans, he wrote several books on chemistry: (1) *The Chloro Derivatives of m-cresol*. 1933. Easton, Pennsylvania: Mack Printing Co. 7 p. (Abstract of his PhD thesis, Michigan

State College of Agriculture and Applied Science); (2) *The Chemical Elements, Rev. ed.* 1948. South Lancaster, Massachusetts: Chemical Elements (fold chart). (3) 500 Syntan Patent Abstracts, 1911-1950. 1950. South Lancaster, Massachusetts: Chemical Elements. 125 leaves. (4) Syntans and Newer Methods of Tanning. 1950. South Lancaster, Massachusetts: Chemical Elements. 128 p.

In 1962 Chen wrote *A New Look at God*, published by Chemical Elements (288 p.). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

325. *Soybean Digest*. 1957. Soybean market programs under way in Spain, Italy. March. p. 20-21.

• **Summary:** The editor's introduction reads: "Population is increasing and living standards are rising but the hand-produced olive crop is shrinking in these two countries. A mixed feed industry is in its infancy. Here is an opportunity for the U.S. soybean industry to develop permanent markets for its products."

"Howard L. Roach, president of the Soybean Council of America, Inc., left Plainfield, Iowa, on Feb. 26 for Spain and Italy. There he will complete arrangements begun last fall for soybean market development projects which it is hoped will result in greatly expanded markets for U.S. soybean products in those two countries. He was accompanied by Mrs. Roach.

"Roach has gone abroad to finish negotiations with Spanish trade groups, and with the Italian Association of Oil Industry, Fats, Soap and Related Products, and the Italian National Association of Producers of Livestock Feeds for their cooperation in the projects.

"Ground work for the two projects was completed by Roach while in Europe last fall. He plans to open offices for the market development work in Madrid and Rome in the next few months.

"Before the Council president explained, the project agreement for Spain between the Council and the Foreign Agricultural Service of the U.S. Department of Agriculture was signed. The agreements provide for the expenditure of approximately \$120,000 for market promotional work in each country within the period of a year. Of this amount, \$70,000 in each case will come from governmental P.L. 480 funds, and about \$50,000 from the Council and Spanish and Italian trade groups.

"Prospects seem good for a permanently broader market for U.S. soybean oil in Spain and Italy, and also for a growing market for U.S. soybean oil meal.

"Both countries are longtime heavy consumers of olive oil, which their people produce and which they have a taste for. But recent heavy freezes have damaged the olive groves in both countries and olive oil production is down. Olive trees are also subject to recurrent drouths and production is cyclical.

"At the same time the populations of both Spain and

Italy are on the increase and the demand for fats and oils is expanding, so it is felt that both countries will of necessity continue to import vegetable oils in increasing quantities. The imported oil can just as well be U.S. soybean oil if we can learn to adapt it to Italian and Spanish usage.

"Since the average per capita consumption of all fats and oils in Spain and Italy is well below the levels of most European countries, it is possible that well-executed promotional programs might greatly increase Spanish and Italian oil consumption.

"Also, olives are produced by hand labor and the cost of production is high. As the wage level rises in the two countries—it is happening in Spain now—olive oil will become less and less competitive price-wise with U.S. soybean oil.

"The mixed formula feed industry in Italy is relatively new and in early stages of development. As the industry develops increasing interest in the usage of U.S. soybean oil meal is expected.

"The Soybean Council will participate in trade fairs at Bari, Palermo and Verona, Italy; Cologne, Germany; and Barcelona, Spain. At these fairs, the place of American soybean oil meal in livestock feeding will be emphasized.

"J.W. Hayward, director of nutrition, Archer-Daniels-Midland Co., Minneapolis, Minnesota, is representing the Council, as a livestock nutritionist at the Verona Trade Fair March 10-19. Activities to be carried on by the Council and cooperating trade groups in Spain and Italy under the marketing project will include:

"1—Market research and analysis to determine per capita consumption of fats and oils in Spain and Italy and possible markets for soybean oil and soybean oil meal.

"2—Study of government regulations and policies pertaining to purchase and sale of soybean products.

"3—Educational work with trade groups and consumers.

"4—Services of a skilled American oil technician for the vegetable oil industries, consumer groups and others in Spain and Italy in connection with packaging, utilization and merchandising problems.

"5—Promotional programs at the consumer level to explain advantages and limitations of bland vegetable oils including soybean oil, and promotional work to increase per capita consumption of fats and oils.

"6—Assistance in developing livestock feed formulas that will include soybean oil meal as the basic protein ingredient.

"7—Assistance in formulation of programs to raise the nutritional levels of the Spanish and Italian peoples, with special emphasis on soybean products.

8—Visits to the United States of leaders of the Spanish and Italian oilseed industries for tours of inspection of facilities for production, handling, processing and refining of soybean oil as well as the manufacture of livestock feeds.

"Roach will arrange for selected Spanish and Italian oilseed industry leaders to visit the United States to observe our methods and to acquaint them with industry people here.

“The Council aims to have similar marketing projects under way in Austria, Greece and Germany in cooperation with Foreign Agricultural Service before the end of the year.

“Mr. and Mrs. Roach expect to be abroad a little over a month.”

A portrait photo shows Howard Roach wearing a bow tie.

326. Roach, Howard L. 1957. Big attendance at Verona [Italy, International Trade Fair]. *Soybean Digest*. April. p. 20.  
 • **Summary:** “Special to the Soybean Digest from Verona.

“Farmers from Italy, Yugoslavia [Yugoslavia], France, Austria as well as farmers from many other nations crowded the grounds of the International Fair at Verona, Italy, the second week of March to break all attendance records which have stood for over half a century.

“The first 3 days of this fair saw spirited competition in the various classes of the horse show. Horses, still providing most of the farm power in this rich Po valley of northern Italy, had only to look across the fence, however, to see their finish. There, in the greatest tractor show of Europe, were exhibited over 60 different makes of farm tractors with several models of each make on display.

“Mechanization is coming to European agriculture as it has arrived in America. Everything from small garden tractors to giant track-type machines were on display. Diesel motors power most of the units in this country where gasoline is 85¢ per-gallon.

“Germany, France, Switzerland, Holland and other nations had exhibits showing products and produce from their nations but the outstanding exhibit was the one presented by the United States. This exhibit occupied an entire building and showed the progress made in the poultry industry during the past few years in quick growth and feed utilization.

“The exhibit was both educational and interesting. The opening day over 40,000 persons passed through the doors.

“Murals decorating the inside of the building were large photographs showing American farms, soybean fields, grain elevators, soybean processing plants, and feed manufacturing plants.

“Near the office were visible incubators, placed at various heights to accommodate adults and children, in which chicks were constantly emerging from the shell. One middle-aged Italian was heard to say, ‘I knew something like that happened but it always happened under the hen and I couldn’t see just what did take place.’

“Eggs had been pre-set so that each day of the fair this emergence of the chicks from the eggs could be witnessed by the crowds. Nearby were pens of day-old chicks, a pen of broilers, hens in batteries laying eggs, pens of turkeys and at the exit were two freezer counters filled with frozen poultry and poultry products even to the American TV dinner.

“On top of the counters were displays of American

canned poultry while behind on shelves were infrared broilers with 2- and 3-pound broilers turning on their spits.

“Central in the display were samples of feed ingredients with emphasis on 50% soybean oil meal as the protein base for a successful poultry operation. A revolving display of feed grains used by American feed manufacturers along with soybean oil meal attracted the attention of the visitors.

“Many of the visitors had questions which were answered by Kenneth K. Krogh, Foreign Agricultural Service in charge of Trade Fairs; Chas. J. Witt, Foreign Agricultural Service in charge of field operations of Trade Fairs; A.W. Brant, USDA, Beltsville, Maryland, poultry specialist; James W. Hayward, nutritionist representing the Soybean Council of America; and Howard L. Roach, president of the Council.

“This group of Americans was busy from 9 in the morning till closing time at 7 in the evening answering questions and extolling 50% soybean meal as the basis for successful feeding of poultry, hogs and cattle. Many friendships were formed that should prove advantageous to American agriculture.

“Fairs such as this one at Verona, Italy, are made possible by the foreign currency generated through the sale of surplus commodities through P.L. 480. Anyone visiting the Verona Agricultural Fair could not help but feel that a good job of advertising was being done for American agriculture, but that a tremendous job of selling international good will was being accomplished as well.

Photos show: (1) “Soybean Expert, Howard L. Roach, Plainfield, Iowa, president of the Soybean Council of America, explains to farmers at the Verona Fair the importance of soybean oil meal in poultry feeding.

(2) Italian farmer studies sacks of feed concentrate available from the United States at International Agricultural Trade Fair in Verona.

(3) Dr. J.W. Hayward (right), director of nutritional research, Archer-Daniels-Midland Co., answers questions of an Italian poultryman at Verona Fair. Dr. Hayward was a staff consultant attached to the U.S. livestock feed exhibit. The lady is an interpreter. Address: President, Soybean Council of America.

327. *Soybean Digest*. 1957. Honeyamead expands further: To add deodorization system to world’s largest solvent plant. April. p. 30-31.

• **Summary:** Honeyamead Products Co. of Cedar Rapids, Iowa, was in the livestock feed business in the 1930s. The company built its first oil extraction plant when faced with the problem of maintaining a continuous flow and economical supply of soybean meal. Honeyamead installed a solvent extraction plant, unlike the typical plant of that day, which used comparatively inefficient expellers. The company was able to place itself in a more competitive position in the feed business by providing its own soybean oil meal for use in feed mixtures and by marketing the oil.

The Honeymead plants were sold when World War II broke out. Honeymead remained a liquid corporation throughout the war years. When the principals returned from service, like many temporarily interrupted businessmen, they turned to the task of picking up the pieces. Honeymead management bought a crushing plant at Mankato, Minnesota in 1948. The plant had 2 expellers and the firm added 3 more.

At Mankato, Honeymead soon added a 150 ton per day solvent extraction plant and “very shortly thereafter junked most of the equipment purchased only a few years before.

In 1953 Honeymead “awarded a contract to the Blaw-Knox Co. of Pittsburgh [Pennsylvania] for design, engineering, and construction of what was at the time the world’s largest solvent extraction plant—a 500-ton-per-day Rotocel.”

“In 1955 Honeymead installed a continuous refining system for degumming soybean oil.”

In late 1956 Honeymead completed installation of another Blaw-Knox Rotocel, capacity 1,200 tons per day, again the world’s largest. Contains a detailed description of the Rotocel solvent process used at Mankato. Honeymead now produces 2 types of soy flour which are used mainly as an industrial adhesive, a 44% and a 50% protein meal, and a line of extruded pellets for livestock feed.

Photos show: (1) Lowell Andreas (president), James Maslon (vice president of production), W.B. Cox (in charge of specialty sales), and Thayer Mullan (in charge of soybean sales). (2) A workman at the base of the base of the 1,200 ton Rotocel with miscella tank in the background. (3) A tumbling, counter-current air cooler.

328. Archer-Daniels-Midland Co. 1957. Lecithin—Is it a miracle substance? *Soybean Digest*. May. p. 32. Reprinted from Archer-Daniels-Midland Co.’s Archer.

• **Summary:** “Reprinted from Archer-Daniels-Midland Co.’s Archer.

“For approximately 20 years, Archer-Daniels-Midland Co. has been manufacturing and marketing the product which probably comes closest to being a ‘wonder drug’ and the world’s most versatile commodity.

“Actually, lecithin is not a drug but a natural substance found in almost all living cells, especially nerve cells and the brain. It is also present in eggs, nuts, grains, seeds and dairy products. Lecithin forms about 2¼% of the dry material of an egg yolk, which provides the richest source of the material in the human diet.

“Lecithin belongs to a group of substances chemists call phosphatides and which are described as occupying a position between fatty oils and proteins. The lecithin molecule has a Jekyll and Hyde personality. One part is attracted to water while the other part is attracted to fats. This mixture gives lecithin colloidal and emulsifying properties that make it useful in industries ranging from confections to

cosmetics.

“As far as the individual is concerned, lecithin holds wonderful possibilities as a ‘health-giving’ substance. A variety of human ills has been alleviated or even cured after several weeks or months of taking lecithin regularly.

“For Heart Disease: A complex, phosphorized, fatty material, lecithin contains a substance called choline which is regarded as a vitamin. A Toronto doctor proved that when choline is present in the body in sufficient amounts, it removes excess fats from the liver. Ordinarily, there is not enough choline in the human diet to make the liver function at its best. Choline in lecithin may help in the proper disposition of body fats.

“Lecithin also contains inositol which exists in all body cells. Since the material is an emulsifier it is believed that it aids the blood in carrying fats. In younger people blood returns to normal about 3 hours after a meal of fats. Experiments have shown that older people retain fats in the blood for a longer period of time, thus providing more time and a better chance for fats to deposit in the tissues. Such deposits, called cholesterol, cause hardening of the arteries and high blood pressure.

“When cholesterol forms on the inside of the main arteries leading from the heart, they can partly close off the blood stream and cause coronary thrombosis. Should a piece of the deposit break loose and enter the bloodstream, it may reach the heart and cause death. It is thought that lecithin emulsifies excess cholesterol and reduces extra deposits to normal. If high blood pressure is due to cholesterol deposits, some authorities believe lecithin will cause blood pressure to return to normal.

“In some cases lecithin has raised low blood pressure to normal, improved or helped in curing cases of arthritis and rheumatism and even helped early, mild cases of diabetes. When used as a dietary supplement, lecithin has aided in alleviating malnutrition and in building resistance to disease. Very possibly the human diet has changed so much that people today do not get the amount of lecithin required for the metabolism of food. Perhaps, after the age of 50, we need an extra boost.

“Lecithin affects what we eat, what we wear and many of the articles and products we use every day. In manufacturing chocolate, lecithin reduces cost and at the same time improves the quality of the chocolate. Lecithin causes fat in chocolate to spread evenly, thus reducing the amount of cocoa butter necessary in production.

“Added to margarine, lecithin improves baking and frying qualities of the final product and makes a more uniform distribution of water throughout the fat. It permits margarine to froth and brown during frying like actual butter. One of the first uses of lecithin was its addition to margarine. When added to butter in larger amounts, lecithin improves butter flavor. It was known that butter actually contained lecithin, but the product was destroyed in processing

margarine. Egg yolk was first added to margarine to give it the qualities of butter. Now lecithin does the same job more efficiently and economically.

“In bakery goods such as cake, cookies and packaged biscuits, the addition of lecithin increases baking volume and improves texture. Lecithinized bakery goods require less fat, and freshness is preserved far beyond the normal period because fat oxidizes less rapidly.

“Unlimited in Industry: Industrially, the uses of lecithin are unlimited. Added to paints and printing inks, it improves dispersion of pigments in vehicles and retards pigment settling.

“Among other things, lecithin increases the efficiency of soap because of its emulsifying powers; serves as a softener and facilitates mixing in the production of rubber products; produces more even dyeing, greater color brilliancy and improved flexibility in dyeing fabrics.

“Soybean oil contains from 2 to 3% lecithin. The ingredient interferes with many commercial uses of the oil and is therefore removed by a steam process treatment. At first lecithin was considered a waste product, but many uses were subsequently discovered. It became inexpensive and available in quantity through commercial development.

“Crude soybean oil undergoes a de-gumming process and the resulting lecithin is a golden brown, viscous fluid.”

329. *Soybean Digest*. 1957. ADM buys Drackett protein business. May. p. 41.

• **Summary:** “Archer-Daniels-Midland Co., Minneapolis, Minnesota, has purchased from The Drackett Co., Cincinnati, their isolated soy protein business and all facilities located at Evendale, Ohio.

“Announcement of the transaction, which will be effective July 1, was made by the two companies. The purchase price was not disclosed. Acquisition of the isolated soy protein facilities will be another step in the diversification of ADM’s operations, according to A.C. Hoehne, vice president and manager of ADM’s soybean division.

“R.G. Brierley, ADM vice president, will be responsible for operation of this new business under Hoehne’s direction. The plant employs about 200 persons. Brierley said no organizational changes are contemplated. Isolated proteins, on which ADM has done extensive research, are versatile ingredients of many industrial and food products. They are produced from soybeans by a series of chemical extraction and purification processes. Largest present use of the proteins is an adhesive in the manufacture of high grade printing papers, while another major market is as an emulsion stabilizer in water base paints. The proteins also have numerous applications in foods such as soups, icings, meringues and baby foods.

“ADM has two other plants in Ohio, a chemical manufacturing facility at Ashtabula, and a foundry products

plant at Cleveland. The company is one of the largest processors of agricultural commodities, ranking as a major manufacturer of vegetable oils, flour, chemicals, resins, industrial cereals, and plasticizers with 147 plants and elevators in the United States and manufacturing operations in several foreign countries.”

330. Archer-Daniels Midland. 1957. “and what is that, Gramps?” (Ad). *Soybean Digest*. Aug. p. 43.

• **Summary:** A full-page illustration shows a little girl standing in a field of soybeans pointing her finger at one of the rows. Her grandfather, smoking a corn cob pipe, is kneeling behind her. ADM says that it “is proud as punch to have worked hand-in-hand with your Gramps to build this prospering soybean industry.” A logo shows an archer pulling a longbow. “Other ADM products: Linseed, soybean and marine oils, paint vehicles, synthetic and natural resins, vinyl plasticizers, fatty acids and alcohols, hydrogenated glycerides, sperm oil, foundry binders, industrial cereals, vegetable proteins, wheat flour, dehydrated alfalfa, livestock and poultry feeds.” Address: 700 Investors Building, Minneapolis, Minnesota.

331. Roach, Howard L. 1957. Soybean Council of America, its aims and its achievements. *Soybean Digest*. Sept. p. 26-27.

• **Summary:** “The aims of the Soybean Council of America are to bring together growers, handlers, processors and manufacturers, with common interests in soybeans or soybean products, in order that the soybean crop may continue to expand under free economy.

“Now let us look at what has just been said, ‘To bring together growers, handlers, processors and manufacturers.’ I am glad to report that this has been partially accomplished. The growers, the processors, many manufacturers and many handlers are now giving wholehearted support to the Soybean Council of America.

“There are some, of course, who have not yet been told the story and others who would rather wait and see how successful this operation will be before pledging their support, but every mail brings new individuals, companies and organizations pledging support to the Soybean Council of America.

“Next, when we say ‘continue to expand,’ we do not know in just what proportion this expansion will continue. Certainly the expansion in the last 25 years has been phenomenal but so too have been phenomenal the many and varied uses found for soybean products.

“With the growing population of the world and of our own United States, it is anybody’s guess as to what the soybean business will be 25 years from today.

“Third, let us look at the last part of the statement of aims of the Soybean Council of America under a free economy. Soybeans have won their place in the agricultural

economy today, not through the incentive of high support prices, but rather through an active merchandising or marketing program. In order to keep expanding we must keep moving our annual soybean crop into consumptive channels, both home and abroad, and always remember that crops are grown to be consumed, not to be stored.

“The Soybean Council of America is embarked on two programs, one having to do with domestic economy at home, and the other with the exportation of soybeans and soybean products to overseas markets.

“Active programs: First, I would like to speak of some of the programs now underway within our own country. The research committee of the Soybean Council is watching carefully and giving support to research that may provide the answer to the great saturated and unsaturated oil controversy that has been given so much publicity. Coordinating of research already being encouraged by the American Soybean Association, the National Soybean Processors Association and private companies among our various land grant colleges and with the U.S. Department of Agriculture and private research institutions, is going forward. Studies are being made as to additional avenues of research that seem desirable, and ways and means of having same instituted are being investigated by the research committee of the Soybean Council.

“Your merchandising committee has been most active. Last winter, Ed M. James, oil consultant, was hired to make studies for the Council of all aspects of the soybean oil industry. His services were made available to the users of soybean oil, both at home and abroad. Food packers such as the sardine people, the tuna fish packers and others have been contacted, offering the services of Mr. James when needed. Many manufacturers of livestock feeds have been contacted and the merchandising committee is considering the advisability of engaging the services of a nutritionist to be of service to this segment of the industry.

“Your committee has also contacted manufacturers of soy food products and is serving as a liaison committee between inquiries originating by the American public for certain soy products.

“The industrial field has not been forgotten. Contact has been made with the National Paint, Varnish and Lacquer Association and many other industrial users of soybean products.

“In other words, the merchandising committee is looking to every avenue where the future of soybean products can be expanded.

“Your education committee has been instrumental in telling the story about the Soybean Council to the various members and to the public. They are also compiling a library of reference material for use both at home and abroad as well as a morgue of pictures that will be available to those people desiring to use pictures of soybeans and their various uses. Only the lack of sufficient staff curtails the activity of the

education committee.

“Less than a year ago, the Soybean Council of America wrote a contract with Foreign Agricultural Service to do market development work in certain areas of the world, principally Western Europe. I would now like to report on some of the developments of the Soybean Council’s activities in overseas places.

“Your president made a survey of Spain, Italy and the United Kingdom in December of 1956 and while in these places made plans for further market development activity. Returning to Europe in February of this year, I spent much time in contacting business organizations and government officials in Spain. An office was opened in Madrid and placed under the supervision of Mr. Javier de Salas, a Spanish national who has been working in the past for the American Embassy. Mr. de Salas is advisor to the newly formed extension director for agriculture and is an author, writing articles for one of the leading Spanish agricultural magazines.

“Your president has become well acquainted with Mr. Navarro, head of the olive oil syndicate, and a working arrangement has been perfected between the Soybean Council of America and the olive oil syndicate. Parenthetically, I would like to state that the olive oil syndicate is probably the most powerful of all Spanish agricultural organizations, being semi-official as far as government is concerned.

“Dr. Fred R. Marti, who was assistant agricultural attache for Spain, was hired by the Council to head the office for Europe which is located in Rome.

“Miss Audrey M. Capes was engaged as administrative assistant and the Rome office is now functioning under the direction of Miss Capes.

“Plans were made for a display of American soy products with the emphasis on soybean oil at the Fair in Barcelona which was held June 1 to 20.

“Ed James, oil consultant, arrived in Spain in the month of May and your president and Mr. James spent some time in field trips and interviewing various oil refiners in Spain.

“Barcelona Fair: At the Barcelona Fair, arrangements were made with four Spanish companies that were engaged in the business of making potato chips, to make potato chips, frying same in pure soybean oil. These potato chips were given away at the Fair to all visitors and were received with great enthusiasm.

“After the Fair, request was made by companies producing potato chips, for permission to use soybean oil exclusively in the manufacture of potato chips in the future. The Council also provided soybean oil as the medium for cooking fried chicken at the exhibit sponsored by the poultry people.

“Many important contacts were made at the Barcelona Fair, with important business concerns that can use and will use quantities of soybean oil.

“Also contact was made with many people and companies interested in importing and using soybean meal as a source of protein for livestock and poultry feeds.

“Your president attended an Agricultural Fair at Verona, Italy on March 10 to March 19. Dr. James W. Hayward of Archer-Daniels-Midland Co., was also present to serve as nutritional advisor at this Fair. Many important contacts were made at the Verona Fair that can lead to extremely good markets for soybean meal.

“The Council also cooperated with Foreign Agricultural Service in a Fair at Palermo, Sicily, May 24 to June 10. Dr. K.N. Wright of the A.E. Staley Co., was the nutritionist furnished by the industry through the Soybean Council to the Palermo Fair. Dr. Wright succeeded in making additional important contacts in south Italy.

“The Soybean Council is participating in an Agricultural Fair at Salonika, Greece, beginning Sept. 1 and running through Sept. 12. Dr. Edward L. Stevenson of the University of Arkansas will represent the Council at the Salonika Fair and serve as nutritionist there.

“A Fine Foods Fair will take place in Cologne, Germany, Sept. 28 to Oct. 6. Your president has agreed with Foreign Agricultural Service to be present at this Fair to represent soybean interests there. Much time and effort has been spent in planning for this Fair and materials are now aboard ship and on the way to Germany.

“I want to take this opportunity to thank all industry people for the splendid cooperation given the Soybean Council as requests have been made for services and materials in carrying out the Fair operations this past year. The Council had but to ask and everyone pitched in to see that all road blocks were cleared and it indeed has been a pleasure for your president to work with such a group of cooperative people.

“I could go into great detail regarding ramifications of the activities as plans are being laid and dreams realized both domestically and in Europe. This report to you today is like trying to make a report on a horse race that has not yet reached the quarter post. I learned a long time ago that you can't spit in the ocean and create a tidal wave but I do sincerely believe that the program of the Soybean Council is sound and will have a great effect on the marketing of soybeans and soybean products. It can do one more thing. It can serve as a pattern for other commodity groups to come to the realization that crops are produced to be consumed, not stored.

“Surely we have an ambitious pro- gram. Given a staff and time, we can make good on the old saying, ‘The impossible takes just a little longer.’”

A portrait photo shows Howard Roach. Address: President, Soybean Council of America, Plainfield, Iowa.

332. Honeymead Products Co. 1957. This we believe (Ad). *Soybean Digest*. Dec. p. 5.

• **Summary:** Near the top of this full-page black-and-white ad is a large outline map of the United States. From a large star at Mankato, Minnesota, radiate lines with drops of edible or industrial oils, or sacks of oil meal and pellets at the end of each. A bold broken line shows three routes of transport from the plant: (1) Down the Minnesota and Mississippi rivers to New Orleans, Louisiana. (2) Through the Great Lakes and out the St. Lawrence Seaway and River. (3) Through the Great Lakes, then the Erie Canal and down the Hudson River to New York City.

The text reads: “It is our purpose continually to maintain a high level of efficiency in soybean processing; to develop new uses and new markets for soybean products; to employ the most practical and economical methods of transportation. Through the combination of these efforts we strive to narrow the spread between what a farmer receives for his products and what he pays for his feeds. We believe this is our challenge. It is a responsibility we accept.”

“Soybean processors and refiners serving agriculture and industry.” Smaller drawings show a rail tank car, rail hopper car, tanker truck, and barge. Address: Mankato, Minnesota.

333. Archer-Daniels-Midland Co. 1957. Soy flour: Complement to modern eating. 700 Investors Building, Minneapolis 2, Minnesota. Summarized in *Soybean Digest*, July 1957, p. 28. \* Address: Minneapolis, Minnesota.

334. Hayward, J.W. 1958. Soybean oil meal in livestock and poultry feeds. I. A world traveler's viewpoint. *Soybean Digest*. Jan. p. 14-16.

• **Summary:** “The two following articles are from speeches of Dr. Hayward and Dr. Hanson before the American Soybean Association in Minneapolis” [Minnesota].

“U.S. soybean oil meal, as a whole, is the best of its kind in the world. Many foreign countries are definitely in need of our soya for use in formulating adequate feeds for their productive' animals, especially poultry, calves and swine. My travels have proved to me very convincingly that there is a dire need for high quality protein for animals and humans in most foreign countries. Soya protein from the U.S.A., as 50% meal or as edible soy flour, is the answer.

“We are producing a surplus of soybean oil meal here in the States for the best interest of the soybean grower and processor. This is all based on the premise that government price supports will continue. If the production of soybeans continues at recent rates, we are now geared to increase the production of soybean oil meal in the future at a much faster pace than the experts estimate our population will increase.

“I think we should do a real selling job abroad to create a preference for our high-quality soybean oil meal. I would confine our efforts entirely to 50% dehulled soybean oil meal. At such distances this dehulled meal is significantly cheaper per unit of protein than a full fiber meal. It looks like

we should try to export about 1 million tons of our soybean oil meal during the crop year 1957-58, and increase that to some 2 million tons within the next several years if soybean production continues to increase at its present rate. Don't forget that soy flour has a definite place, also, in the food picture abroad."

Tables show: (1) Comparison of soybean oil meal (SBOM) with all other protein concentrates, U.S.A. In the period 1930-40 on average, SBOM accounted for 13% of all U.S. protein concentrates, but in 1956-57 this figure had climbed to 54%.

(2) World production of protein crops, 1954-55 (1,000 metric tons; excluding the USSR). The world's top 3 protein crops were soybeans (19,500 tons), cottonseed (13,700 tons), and peanuts (10,600 tons).

(3) U.S. use of soybeans 1955-56. 74% of the total bushels were crushed.

(4) Essential steps in processing soybean oil meal.

(5) Value of protein fed to chicks.

(6) Effect of processing on nutritive value of herring meal.

(7) Basic ingredients of a 22% broiler starter.

(8) Ingredients used in a typical modern broiler starter.

(9) Animal nutrition research council broiler ration (60.7% corn, 28.0% SBOM; 50% protein).

A photo shows Sr. J.W. Hayward, in a coat and hat, standing next to bags of SBOM at the U.S. exhibit at the Verona (Italy) Trade Fair last year where he was a technical assistant. Address: Director of Nutrition, Archer-Daniels-Midland Co.

335. *Soybean Digest*. 1958. The soybean: Miracle crop of the twentieth century. Jan. p. 1A-16A. Insert.

• **Summary:** See next page. Contents: Introduction and history. The meaning (to America, the American consumer, the consumer, to labor). The growers. The processor. Two maps showing economic importance of soybeans by state. The export market. The government. The future.

Contains many unnumbered tables, graphs, illustrations, and photos.

This 16-page insert is "A *Soybean Digest* Extra.

Prepared and published as a public service by the Andreas Foundation of Mankato, Minnesota, and the Lauhoff Foundation, Box 571, Danville, Illinois."

336. *Soybean Digest*. 1958. ADM protein plant at Evendale [Ohio]. Feb. p. 22.

• **Summary:** The plant where ADM produces isolated soy proteins is another step in the Minneapolis [Minnesota] company's diversification program. The isolates are ingredients of many industrial and food products. Their largest present use is in adhesives employed in the manufacture of high grade printing papers. Another major market is water base paint, where the soy proteins are used

as emulsion stabilizers. The Evendale plant, which ADM purchased from The Drackett Co. of Cincinnati, employs about 200 persons. An aerial photo shows the plant.

337. Honeymead Products Co. 1958. Low in fibre. High in protein. Honeymead Hi-Energy Soybean Oil Meal (Ad). *Soybean Digest*. April. p. 2.

• **Summary:** In the middle of this full-page black, white and orange-brown ad is a photo of a conical pile of this Hi-Energy meal. The company sells the following soybean products: 44% soybean oil meal. Lecithinated soybean oil meal. Hi-Energy soybean oil meal. Soybean pellets. Soybean mill feed. Soy flour. "Soybean processors and refiners serving agriculture and industry." Address: Mankato, Minnesota. Phone: Mankato 791 TWX 541.

338. *Soybean Digest*. 1958. Soybean utilization conference at Peoria. Aug. p. 19.

• **Summary:** "The 1958 soybean utilization conference was held recently at the Peoria laboratories of the Northern Utilization Research and Development Division. The conference is an annual meeting of staffs of this division of the Agricultural Research Service, USDA, and the Soybean Research Council of the National Soybean Processors Association.

"Thirty-five attended this year. The Council had held its annual business meeting in Peoria prior to the conference with the division.

"Value of the exchange of information made possible by the meeting was mentioned by W.D. Maclay, director of the Utilization Division, as he welcomed the group to the laboratories. J.C. Cowan, chief of the Oilseed Crops Laboratory of the division, outlined the program in oilseed research, pointing out that emphasis is on industrial utilization of vegetable oils but that work is continuing on flavor stability and meal.

"W.W. Cravens, McMillen Feed Mills representative, speaking about research that is needed, suggested that more be done on the minor components of soybean meal. J.W. Cole, Glidden Co. representative, discussed research needed on soybean oil.

"Others on the program and subjects they discussed were: C.H. VanEtten, amino acids in soybean proteins; F.B. Weakley, the alleged antithiamin factor; C.D. Evans, research in edible soybean oil; L.E. Gast, plasticizer studies; and H.J. Dutton, labeling fatty acids."

A group photo shows those "attending the soybean utilization conference, all standing, left to right: First / Front Row—F.H. Hafner, General Mills, Inc., newly elected chairman of the Soybean Research Council; H.L. Wilcke, Ralston Purina Co., retiring chairman; R.L. Terrill, Spencer Kellogg & Sons, Inc.; W.D. Maclay, director Northern Utilization Research and Development Division [NU]; J.C. Cowan, NU; C.D. Evans, NU; and C.H. VanEtten, NU.

**339. Product Name:** Do-Soy (Enzyme-Active Full-Fat Soya Flour).

**Manufacturer’s Name:** British Arkady Co. Ltd., Arkady Soya Mills.

**Manufacturer’s Address:** Old Trafford, Manchester 16, England.

**Date of Introduction:** 1958 September.

**Ingredients:** Soybeans.

**Wt/Vol., Packaging, Price:** 25 kg multi-ply sacks with a protective moisture-proof layer.

**How Stored:** Shelf stable.

**New Product—Documentation:** Dawes, R. 1958. “Why not use soya flour in breadmaking?” *Arkady Review* (Manchester, England) 35(3):45-46. Sept. Discusses the benefits of “Do-Soy” at length.

340. Dawes, R. 1958. Why not use soya flour in breadmaking? *Arkady Review* (Manchester, England) 35(3):45-46. Sept. [Eng]

• **Summary:** Commercial products used in breadmaking and made by British Arkady include Do-Soy (soy flour, sold in bags) and Super Arkady. Arkady has published a pamphlet titled “The value of Do-Soy in Breadmaking,” which advises: “1. Use Do-Soy at the rate of 2 lbs. per sack.” 2. It has good food value, with natural oil and lecithin. 3. It carries extra moisture in the dough, and in the bread as well. “The extra protein in the Do-Soy holds twice its own weight of water, whereas the bulk of white flour is starch and this only holds its own weight of water. 4. The dough is more mellow and moulds up better, consequently a better texture results. 5. The colour of the bread is affected outside and in. On the outside the crust has a richer bloom and inside the crumb is usually bleached white by the enzyme action of the Do-Soy. (6) The bread keeps better.

It doesn’t “cost anything to put Do-Soy in, as the extra yield of bread covers the cost of the Do-Soy itself.”

Note: By June 1916 “Arkady Yeast Food,” a product protected by a U.S. patent, was on the market in the United States; it consisted mostly of mineral salts. Ward Baking Co. used Arkady Yeast Food in their bread (Jenkins, W.C. 1916. “The Bread We Eat.” *National Magazine* (The). 44(3):467+, June). *National Magazine*. Address: England.

341. Marcello, Dominic. 1958. Activities of Soybean Council in Italy. *Soybean Digest*. Sept. p. 51-52.

• **Summary:** “I will try to review for you the market development activities of the Soybean Council in Italy.

“Our first task was to ascertain whether there is a market for soybean products in Italy. As a result of studies and other research activities it was learned that there is a sizable market in Italy for U.S. soybean oil meal, oil and other soybean products. However, there are various competing sources of protein that we must be prepared to face. Among them are Russia and Yugoslavia in addition to western suppliers. Energetic efforts must be made to meet this competition both in price and quality.

“It was found that the production of olive oil in Italy is not sufficient to meet domestic needs in an average year and in years of short crop it falls far short of meeting those needs. Italian requirements of vegetable oils are now approximately 500,000 metric tons per year. These requirements are met with 250,000 metric tons of domestic olive oil and 50,000 tons of oil produced from domestic seeds which in reality are byproducts from other commodities. This production is stable except for these regulations changed to accomplish this purpose. All this work is being done through Spanish trade groups as only through recognizing their interests and reconciling them with ours can we carry out our work.

“I think that we can be sure that Spain is an increasing market for U.S. soybean oil and other soybean products. The Spanish economy is in a period of transition. We are having growing pains, but I believe that in the future our foreign currency position will be strengthened and we will be able to buy more and more soybean products that we need so badly.

“... small increases that may be gained if improvements are attained in the extraction process. Therefore an average of 200,000 tons of vegetable oil which could be soybean oil must be procured from other sources.

“It was further found that there is great interest in expanding the livestock economy of Italy and especially in the development of a poultry industry patterned after that of the United States. Such an industry will require increasing quantities of high-quality protein for economic production, and soybean oil meal in its various forms is the logical source of that protein.

“For many years it has been generally acknowledged that Italy’s oft-declared long-range agricultural policy of shifting from marginal wheat production to livestock and poultry would result in an improvement in Italy’s farm income and relieve the Italian government of a substantial and increasing financial burden of grain subsidies. Although to date no such organized shift has materialized, there has been an increase in livestock production and a substantial increase in broiler production. This was due largely to the acceptance and use of balanced feeds in which soybean oil meal played a great part. Imports of soybean oil meal from the United States have increased significantly from 7,700

metric tons in 1955 to over 46,000 metric tons in 1957, and from reports so far this year there is every indication of a further substantial increase. We expect that with dynamic promotion this figure could reasonably be expected to reach 100,000 tons within the next 2 years

“Shift to Livestock: There is reason to believe that the long-awaited shift from wheat to livestock production may soon begin to take place. Italian government officials are preoccupied about the role Italian agriculture will play in the Common Market Area in the face of keen competition from other member countries. It is felt that because of this urgency the government will now place greater emphasis on the livestock and poultry program. Otherwise, the Italian farmer will lose further ground in supplying the local market with meat, poultry and eggs.

“In any program for expansion of livestock and poultry production, Italy must depend on additional imports of feed grains and especially protein feeds. These programs must be closely followed and encouraged. As they become realities all necessary steps must be taken to assure the filling of the needs, insofar as possible with U.S. products.

“With the approval and consent of FAS [USDA’s Foreign Agricultural Service] and the Soybean Council, we entered into the second phase. We set up an office and employed the necessary staff. Administrative support arrangements were made with the American Embassy and we were in business.

“Emphasis was then put on obtaining Italian group participation in our promotional activities. Exploratory work had indicated that there were two organizations in Italy with whom cooperating agreements were desirable and essential. Federconsorzii (the Italian Federation of Agricultural Consortium), the most important agricultural cooperative in Italy, has representatives and agricultural installations in every province of Italy. This organization produced approximately 30% of all mixed feed produced in Italy in 1957.

“The other is the National Association of Livestock Feed Producers whose 60 members produced approximately 60% of the mixed feed produced in Italy last year. The members of this organization and its affiliates produced over 75% of all the Italian seed oil produced in 1957 as well as 100% of the margarine produced.

“Our sights were set. A program of operations was prepared and approved by the Soybean Council and FAS on April 15, 1958. The program includes the following:

“1—Engage in an information and public relations program which shall include preparation, publication and distribution of a technical handbook relating to soybeans and soybean products and their uses; preparation, publication and distribution of a periodic news bulletin; preparation and distribution of news items, feature and technical articles, photos, films, etc., through appropriate channels; preparation, publication and distribution of pamphlets and leaflets both of

a technical nature and for mass use; arrange and participate in conferences, symposiums and contests; and engage in such other public relations activities as day-to-day operations warrant.

“2—Conduct feed demonstrations by establishing two or more experimental centers for poultry and livestock, as well as tests demonstrating the value of using soybean products for human consumption.

“3—Participate in trade fairs, such as Varese and Bari, and seminars held in conjunction therewith.

“Oil, Feed Teams:

“4—Arrange visits of representatives of the Italian feed and oil industries to the USA.

“5—Preparation, publication and distribution of a digest of Italian laws, regulations and policies affecting the purchase, importation, distribution and use of soybeans and soybean products.

“6—Arrange with a suitable Italian institute or laboratory for conducting tests, investigating and experimenting on the use of soybean products, as well as examining such products which are imported into Italy. Tests will include methods of utilizing soy flour in the manufacture of pasta (macaroni, spaghetti, etc.), bread and biscuits and determining consumer acceptance.

“7—Develop standards and controls of quality, purity and uniformity of soybean products.

“8—Collect and disseminate market news and prices of soybean products.

“The following activities were implemented:

“Agreements were negotiated, drafted and finalized with the two organizations. We now have cooperating with us groups that produce over 90% of the mixed feed, 75% of the vegetable oil and 100% of the margarine. The cost of implementing the program will be equally shared.

“A mixed feed conference was held in cooperation with one of our cooperators (Assalzo). The Council and FAS furnished two technicians, Dr. Damon Catron of Iowa State College and Dr. Max Jeter of the Indiana Farm Bureau Cooperative Association. Papers given by these two technical men were published in several publications.

“We participated in the Varese Fair exhibit. This was also attended by Dr. Jake L. Krider, Dr. Charles A. Denton of Beltsville, Maryland, Prof. Steven King of Purdue University, and William Bridges of the Producers Grain Corp. of Amarillo, Texas.

“Seminars were held in cooperation with Federconsorzii, in which our technicians participated in Milan and Padova.

“We are cooperating with FAS and the Agricultural Attache’s office in the forthcoming Bari Fair exhibit Sept. 6-21. Dr. Krider and Dr. J.W. Hayward of Archer-Daniels-Midland Co. will attend.

“We are making arrangements to conduct feed demonstrations, by establishing in cooperation with our cooperators two experimental centers for poultry and

livestock.

“We have practically ready for publication a pamphlet containing a digest of Italian laws, regulations and policies affecting the purchase, importation, distribution and use of soybeans and soybean products.

“Flour has been supplied to Dr. Visco at the Research Laboratories at the University of Rome for test purposes.

“Prices and quotations are obtained daily on soybeans and soybean products and posted on a large quotation board on the wall of our office entrance hall, where it can be viewed by Italian trade groups and other interested persons.

“There is much more that I could add but time does not permit. In conclusion, I would like to say that the mixed-feed business in Italy is a vibrating, pulsating industry and that there is an ever-increasing demand for U.S. soybean products. We are also ready, willing and able to fill the oil-requirement gap.”

A photo shows Dominic Marcello, wearing a dark coat and tie, seated at a desk.

Note 1. This is the earliest document seen (Aug. 2015) that contains the term “Common Market” or the term “Common Market Area” in connection with soybeans.

Note 2. This is also the earliest document seen (Aug. 2015) that mentions any term related to what eventually became the European Union.

The first step in the federation of Europe began in 1952 with the creation of the European Coal and Steel Community.

The European Union was established by the Treaty of Rome on 1 Jan. 1958 (signed by Belgium, France, Italy, Luxembourg, the Netherlands, and West Germany)

In 1979, the first direct, democratic elections to the European Parliament were held.

The union was further consolidated by the Treaty of Maastricht on 1 Nov. 1993.

In 1999 the monetary union was established and came into full force in 2002. It is currently composed of 19 member states that use the euro as their legal tender. Address: Director General for Italy, Soybean Council of America, Inc., Rome, Italy.

342. *Chemurgic Digest*. 1958. Dwayne O. Andreas accepts presidency of [Chemurgic] Council. Oct. p. 3.

• **Summary:** Cover story. A large portrait photo on the cover of this issue shows Dwayne O. Andreas, chairman of Honeymead Products Co., Mankato, Minnesota.

343. *Decatur Herald and Review (Illinois)*. 1959. Soybeans curiosity 40 years ago in U.S.; A.E. Staley Sr., new crop’s missionary. Decatur industry multiplies two hundredfold since 1922. Jan. 25. p. 74.

• **Summary:** Contains a detailed and largely accurate history of A.E. Staley’s early work with soybeans. “America’s first [sic] commercial soybean processing plant was put in

operation in Decatur on Sept. 30, 1922, by the A.E. Staley Mfg. Co... Rated capacity: 500 bushels a day. The first [soy] beans were bought Sept. 28 from Andrews Grain Co. of Walker—1,547 bushels at 99 3/4 cents. They went to process 2 days later.”

An aerial photo of Decatur, Illinois, shows, in one view, the soybean preparation and extraction plants and terminal elevators of A.E. Staley Mfg. Co., Spencer Kellogg & Sons, Inc., and Archer-Daniels-Midland Co.

344. *Decatur Herald and Review (Illinois)*. 1959. Soybean processing draws national firms; solvent method used, replaces expellers. Oil finds industrial, home uses; meal added to feeds. Jan. 25. p. 76. Sunday.

• **Summary:** “Central Illinois has five soybean processing plants.”

These five plants employ about 1,250 persons and have combined storage space of about 24 million bushels.

The A.E. Staley Mfg. was the first to start a soybean processing plant in 1922. Next came Allied Mills with the purchase of a plant in Taylorville [Illinois, from Funk Brothers] in 1931.

The Staley company completed a new soybean plant in 1937, and in [Aug.] 1938 Spencer Kellogg & Sons “bought the Shellabarger Grain Products Co, plant at Brush College Road and Faries Parkway.”

“In 1939 Archer-Daniels-Midland Co. of Minneapolis opened its plant—a plant which was pioneering the use of solvent extraction to replace the expeller method.”

“Ralston Purina entered the scene in central Illinois by buying the newly built Shellabarger Mills Inc. soybean processing plant and country elevators in 1952. This is now Checkerboard Soybean Co.

“Here is a brief history of each of the central Illinois plants.

A.E. Staley Mfg. Co.: In 1922, Staley was the first soybean processor in the area; it is still the largest. “Much of [the company’s] 11 million bushel terminal elevator is used for receiving, storing, and readying soybeans for processing. Although the plant uses more corn [than soybeans], the nature of the soybean market generally more advanced buying and storage.

“In one two week period last fall, the Staley elevator took in more than 5 million bushels of soybeans.

“The two initial products, soybean meal and crude soybean oil, are further processed and refined to produce a total of 67 different products used in hundreds of food items, feed and industrial purposes.

“Soybean processing operations employ more than 600 men and women in all phases of business.”

Describes the old expeller method and the newer, more efficient solvent extraction process. As a final step, soybean flakes are ground into meal.

“Besides a higher oil yield, the extraction process also

allows more exact control and flexibility in determining the content and properties of the products.

Allied Mills, Taylorville: Dec. 1958 was the biggest month, tonnage wise, for Allied Mills' Taylor plant, according to J.B. DeHaven, manager.

"Allied Mills, with headquarters in Chicago, now operates the Taylorville plant as the company's only soybean processing plant. In 1952 Allied Mills centered its soybean operations at Taylorville.

Allied Mills operated soybean processing plants at Peoria, Illinois; Omaha, Nebraska; and Portsmouth, Virginia—in addition to Taylorville.

"In 1952, also, the centering of operations in central Illinois brought about additions to the Taylorville plant. A 250-ton French extractor was installed, an addition was made to the flake preparation building, and an additional one million bushels storage capacity was added. The Taylorville plant, employs about 60 persons in both the plant and office, has a storage capacity of 1,750,000 bushels, and produces soybean oil, and both 44 per cent protein meal and 50 per cent protein meal.

"Allied Mills, which sells its feeds under the name of Wayne Feeds, is the result of a merger in 1929 of American Milling Co. and McMillan Feed Co. of Fort Wayne, Indiana.

"In 1931, Allied Mills bought Funk Bros. plant in downtown Taylorville. In May 1944, a fire destroyed the plant.

"In August 1944, Allied Mills built a million dollar plant on Route 48, northeast of the city. This plant, De Haven [sic, DeHaven] said, became obsolete and too small in 1954.

"Spencer Kellogg & Sons: The Decatur mill of Spencer Kellogg & Sons Inc., is the largest and most important operation of the company.

"The Decatur plant, which has a storage capacity of five million bushels, was purchased by Spencer Kellogg in 1938. It is one of nine grain-processing centers of the company.

"The company, one of the largest processors of vegetable oil seeds, as started in 1824, when Suplina Kellogg, great-great grandfather of the current president of the company, embarked in the linseed oil business.

"Spencer Kellogg & Sons Inc. was incorporated in 1912, and has been constantly expanding, having recently purchased Beacon Milling Co., Cayuga, New York and Staley Milling Co., Kansas City, Missouri.

"Since the purchase of the mill in 1938 from Shellabarger Grain Products Co., Spencer Kellogg has been engaged in soybean crushing at Decatur. The plant produces crude soybean oil, soybean oil meal and soya flour.

"The meal is used in poultry and livestock feeds. Both industrial and edible flours are produced; the industrial flours for use in adhesives and paper coatings, the edible flours for use in bakery products, meal substitutes and dog foods. The oil is sold for use in edible products such as shortening and margarine, and for use in the protective coating field.

"Processing operations are on a 24-hour per day basis, seven days a week, and the company employs about 200 people from the Decatur area, supporting a substantial yearly payroll in the community

"The company started its soybean activities at Decatur. As the crop itself spread outward, the company expanded to Des Moines, Iowa, Bellevue, Ohio, and more recently to the Minnesota area.

"While this expansion went on, the Decatur operation was constantly increased. The plant continues to be the most important operation of Spencer Kellogg & Sons. The company feels this will continue to be so as it modernizes and adds emphasis to the Decatur plant. The future of its operations seems extremely bright with the continued large Illinois production of soybeans and improved products being developed by the Research Laboratories of the company.

"Products are supplied by the Decatur plant to refineries at Long Beach, California; Chicago, Illinois; and Bellevue, Ohio, which specialize in producing a wide variety of up-graded soybean oil products for the so-called industrial user.

"When Archer-Daniels-Midland Co. began processing soybeans on a large scale 20 years ago, Decatur was the logical location for the company's plant.

"That was in 1939, when ADM erected in Decatur the nation's largest solvent extraction plant. Previously ADM had pioneered in development of the solvent extraction process, now used throughout the soybean industry. Since that time, ADM has doubled the capacity of the Decatur plant, installed a continuous-flow refining unit, added an edible oil refinery and built a plant to produce vinyl plasticizers.

"The addition of a truck dump this month will enable Archer-Daniels-Midland to handle a 50-foot truck every four minutes.

"Since 1939 too, ADM has become one of the nation's three largest processors of soybeans.

"ADM's Decatur operations, headed by Robert S. White, production manager for the company's entire soybean division, now employ 320 persons. ADM also has soybean processing facilities at Minneapolis and Mankato, Minnesota, and Evendale, Ohio.

"Production at the Decatur plant is for both edible and industrial purposes. ADM soybean oils are used as salad and cooking oils, and in the manufacture of margarine and vegetable shortening.

"In the industrial field, soybean oil is used in protective coatings [such as paints], linoleum, foundry core oils, printing inks, synthetic rubbers and plastics. They go [sic, The protein goes] into glues and coatings for fine papers and other products.

"At Decatur, ADM produces 50 per cent soybean oil meal, a high protein supplement widely used by livestock and poultry feeders.

"Soybean processing is only one phase of ADM's

operations. Founded in Minneapolis 57 years ago as a flaxseed crushing firm, the company now is a widely diversified corporation with 156 plants and elevators in 21 states and Canada. The president is John H. Daniels, a grandson of the founder.

“Checkerboard Soybean: Checkerboard Soybean Co. not only operates a soybean processing plant in Decatur, but also operates nine country elevators, both as storage facilities and retail outlets for Purina Chows, the company’s feeds.

“The Decatur soybean processing plant is one of 10 such plants in the United States and Mexico operated by Ralston Purina Co. of St. Louis.

“Checkerboard Soybean processes soybeans primarily as a source of protein for the Purina Chows manufactured by Ralston Purina, according to Russell Baer, vice president and general manager of Checkerboard Soybean.

“The Checkerboard operation involves more than 100 persons in the plants, office and country elevators. Storage capacity for soy beans includes about 600,000 bushels in Decatur and another 600,000 bushels at the country elevators.

“The elevators are located at Warrensburg, Elwin, Pana, Raymond, Craig, Ospur, Dunkel, Westervelt and Ohlman.

“Checkerboard Soybean Co. was formed in May 1, 1952, when Ralston Purina bought the Decatur plant of Shellabarger Mills Inc. which was built in 1950 and completed for operation by the fall of 1951.

“Baer said Ralston Purina in the future will have in operation seven new bulk stations in Illinois to handle expedite bulk shipments of Purina Chows.

“Ralston Purina was founded in 1894 in a river front feed store in St. Louis. The original product was a feed for horses and mules.”

346. Archer-Daniels-Midland Co. 1959. Some ADM products from soybeans (Ad). *Soybean Blue Book*. p. 95. • **Summary:** Soybean Blue Book. 1959. p. 95. Photos show plants at Decatur, Illinois; Evendale, Ohio; and Mankato, Minnesota. Seven products are listed: Archer S (salad oil), Soybean oil, Archer 44% soybean oil meal, pea-size, pellets, flakes, Archer 50% low fiber soybean oil meal, Adpro isolated soy proteins, Soybean brew flakes, R-Lecin (soybean lecithin), Soy flour, Bakers Nutrisoy, Daniels’ Supreme, Kaysoy, Nutriwhip, Packers Granular, Soya fatty acids, Admex vinyl plasticizers, Archer Booster feeds, Aroplaz

alkyd resins. Address: Minneapolis, Minnesota.

347. Honeymead Products Co. 1959. This is the farmer who tills the soil that grows the beans so protein rich that are processed into oils and meals to be shipped to markets world-over (Ad). *Soybean Digest*. March. Inside front cover.

• **Summary:** In the middle of this full-page black, white and brown ad is a photo of a farmer driving a tractor whose wheels fit neatly between long, straight rows of soybeans. Honeymead now sells the following soybean products: 44% soybean oil meal. Lecithinated soybean oil meal. Hi-Energy soybean oil meal. Soybean pellets. Soybean mill feed. Soy flour.

“Soybean processors and refiners serving agriculture and industry.” Address: Mankato, Minnesota. Phone: Mankato 7911 TWX 541.

348. Hayward, J.W. 1959. Improved feed ingredient processing. In: Papers Presented at International Animal Feed Symposium. 163+ p. See p. 96-114. Held 4-6 May 1959 in Washington, DC. Sponsored by USDA FAS in cooperation with SCA. [15 ref]

• **Summary:** Contents: Introduction. Soybean oilmeal: Effect of heat. Cottonseed meal. Summary.

“It has been shown that heat, when used at optimum levels in conjunction with properly controlled moisture, time intervals, and other processing variables, may have a beneficial effect on the nutritive value of various protein meals. On the other hand, the improper use of heat during processing can result in a definite deterioration of the protein quality of many of these meals. In addition, improper use of heat can destroy the vitamins, unidentified growth, and reproductive factors, and other desirable nutrients in feed ingredients.

“Granulation (particle size) of one or more of the ingredients in a feed mixture for ruminants can exert a definite effect on the animal and its production...” Address: Director of Nutrition, Archer-Daniels-Midland Co.

349. Honeymead Products Co. 1959. These are the elevators large and tall that protect the beans that farmers grow until they go to the Honeymead plant to be made into valuable oils and meals (Ad). *Soybean Digest*. May. p. 6.

• **Summary:** In the middle of this full-page black-and-white ad is a large photo of Honeymead’s elevators and plant. The company sells the following soybean products: 44% soybean oil meal. Lecithinated soybean oil meal. Hi-Energy soybean oil meal. Soybean pellets. Soybean mill feed. Soy flour.

“Soybean processors and refiners serving agriculture and industry.” Address: Mankato, Minnesota. Phone: Mankato 7911 TWX 541.

International Animal Feed Symposium. Washington, DC. 165 p. Held 4-6 May 1959 in Washington, DC. Sponsored by USDA FAS in cooperation with SCA. No index. 23 cm. [30+ ref]

• **Summary:** The only article on soybeans is by J.W. Hayward, titled "Improved Feed Ingredient Processing," p. 96-114 (15 ref). Address: Washington, DC.

351. Hafner, Fred H. 1959. Edible soy flour and soy grits. *Soybean Digest*. June. p. 8-10.

• **Summary:** Presented in a question and answer format. What are edible soy flour and grits? (Full fat, defatted, low fat, high fat [made by adding back soy oil or lecithin to defatted], lecithinated). What forms do they come in? What are the factors to be considered in the manufacture of soy flour and grits. What is the composition of the various edible soy products? What is the principle use of edible soy products? What types of products are edible soy products used in? Who manufactures edible soy products in the United States? (ADM, Central Soya, General Mills, Honeyamead Products, Spencer Kellogg & Sons, A.E. Staley Mfg. Co.). Address: Oilseeds Div., General Mills.

352. Wright, Roy E. Assignor to Philadelphia Quartz Company (Berkeley, California). 1959. Water-resistant adhesive compositions. *U.S. Patent* 2,894,847. July 14. 10 p. Application filed 22 April 1955. [12 ref]

• **Summary:** Soy is mentioned 51 times in this patent, soya 38 times (e.g. soya protein, denatured soya protein, soya beans, soya bean flour(s), soya flour, raw soya flour, etc).

"Among the soya bean flours which are satisfactory for use in this invention there may be mentioned the 'IR 300' flour of the Staley Company, 'Prosein' from the Glidden Company, 'Kay soy' from Archer-Daniels-Midland Company and 'Soy size' from Spencer-Kellogg Company, etc. In general the proportion of undenatured and unhydrolyzed isolated protein in such formulations should at least equal the starch and/or the soya flour content of the adhesives in order that they shall retain the characteristic and advantageous properties of my new adhesive."

Claims: "4. The adhesive of claim 1 wherein the composition. contains up to about 10% of soya flour but not substantially more soya flour than protein fraction." Address: Oakland, California.

353. Andreas, Dwayne O. 1959. Consider just one example: [soybean oil]. *Chemurgic Digest*. July. Cover.

• **Summary:** "If soybean oil could be prevented from its tendency to revert undoubtedly a cent and one half could be added to its value. This would be equivalent to 15 cents per bushel or \$75 million added value to the soybean crop. People who know the subject estimate it might cost five million dollars in research to lick this problem. Obviously no single firm could earn enough from this development

to warrant such an investment. But, for farmers as a group, \$75 million return on a \$5 million project is a bonanza." A portrait photo shows Dwayne Andreas. Address: President, The Chemurgic Council.

354. Hayward, J.W. 1959. Improved feed ingredient processing. *Feedstuffs*. Aug. 22. \*  
Address: Director of Nutrition, Archer-Daniels-Midland Co.

355. *Soybean Digest*. 1959. Grits and flakes... from the world of soy: ADM accents marketing in organization plan [sic, plan]. Aug. p. 38.

• **Summary:** "A new form of corporate organization that stresses marketing went into effect July 1 for Archer-Daniels-Midland Co.

"John H. Daniels, ADM president who announced the change, said the company's present 12 operating divisions and two operating departments will be placed in four major groups, each headed by an executive reporting directly to the president.

"Within these—agricultural products, chemical products, specialty products, and international—ADM's more than 1,000 standard products and its foreign operations will be grouped according to the markets they serve.

"The board of directors designated three executive vice presidents to head up the three domestic groups.

"Erwin A. Olson, administrative vice president since 1956, was named executive vice president-agricultural products. Walter G. Andrews, former vice president and manager of the resin and plastics division, was elected executive vice president-chemical products group. Richard G. Brierly, an executive vice president since last November, was appointed executive vice president—specialty products group.

"The directors also named Burton W. Schroeder, former vice president and manager of the chemical products division, to be administrative vice president of ADM.

"A new executive committee composed of Thomas L. Daniels, chairman of the board, John Daniels, Olson, Andrews, Brierley, and Schroeder was elected at the same time. All of the new members are directors of the company.

"Under the new organization, ADM's formula feed, dehydrated alfalfa, linseed and soybean meals, country elevators, flour, grain, and Mexican feed operations will comprise the agricultural products group.

"In the chemical products group will be the linseed and soybean oils, vinyl plasticizers, resins, plastics, chemical products, and Glass Plastics Supply Corp., an ADM subsidiary.

"The specialty products group will include foundry products, industrial cereals, isolated soy proteins, soy flours, flax fibre, bulk storage and handling equipment for feed and chemical plants produced by the equipment department, and ADM Canada Ltd., the company's Canadian subsidiary.

“The international division will supervise the company’s export sales, fats and oil trading, and foreign chemical plants.

“Retirement of Albert C. Hoehne from his positions as a vice president and director, effective Aug. 1, was announced after the directors’ meeting. Hoehne, associated with the oilseed industry since 1922, has been manager of ADM’s soybean division since 1955. Hoehne was named to the ADM executive committee in 1949. He is a member of the market development and merchandising committees of the Soybean Council of America.”

Small portrait photos show Thomas L. Daniels (chairman of the board) and John H. Daniels (president).

356. Formo, M.W.; Peterson, R.V. 1959. Chemurgy: A way of doing business. *Chemurgic Digest*. Dec. p. 6-7.

• **Summary:** ADM treats “soybean oil with hydrogen peroxide to get a new product called epoxidized soybean oil. This is a plasticizer (a softener or flexibilizer) for vinyl resins which are the common plastics in raincoats, automotive upholstery and crash pads, shower curtains, synthetic leather, footwear, basketballs, and many other products. The epoxidized oils have particular value in protecting the products from color changes and brittleness during aging.”

Concerning “soyflour,” the first sales of this product were “largely for adhesive applications, particularly for plywood glues where soyflour is the basis for the adhesive for approximately half our plywood. Similar types of “soyflours” were tried in foods and found lacking in quality.” But today many good soyflours are available for food use, including the ADM Nutrisoy line of soyflours. “Light colored improved Bakers Nutrisoy appears in many bakery products. Low flavor level and light color make it an ideal replacement or supplement for milk.”

ADM is now also producing (on a pilot plant scale) an “edible grade isolated soy protein” with a protein content of 96% or higher. Its “bland taste and pleasing odor will make isolated soybean protein extremely valuable as a high protein nutritional supplement for a wide variety of food items.” Preliminary tests show that this product “neither changes the flavor of food products nor does it impart any undesirable characteristic flavor of its own.”

“In 1949 ADM marketed the nation’s first 50% dehulled soybean oil meal. This higher protein content meal found widespread acceptance in the poultry industry. By giving more latitude for incorporation of feed ingredients, this 50% meal led to the high energy feeds which have resulted in such impressive gains in feed efficiency. Partially as a result of these high energy feeds, the broiler industry has shown spectacular growth since 1950.” Address: Archer-Daniels-Midland Company.

357. **Product Name:** Adpro Isolated Soy Proteins (Industrial) [112, 220, or 410].

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** 735 Investors Building, Minneapolis 2, Minnesota.

**Date of Introduction:** 1959.

**New Product–Documentation:** Ad in Soybean Blue Book. 1959. p. 95. “Some ADM products from soybeans.” Seventeen products are listed, including “Adpro isolated soy proteins.” Note: In July 1957 ADM purchased The Drackett Co., and their factory for making isolated soy proteins. This marked ADM’s entry into soy isolates. Both of these Adpro products are industrial soy protein isolates. Adpro 220, of high viscosity, is recommended for use in latex paints or as an adhesive. Adpro 410, of low viscosity, is most widely used in high-solids paper coatings and board coatings. Adpro 112 is a medium viscosity material.

358. **Product Name:** Archer S (Salad Oil).

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** 735 Investors Building, Minneapolis 2, Minnesota.

**Date of Introduction:** 1959.

**New Product–Documentation:** Ad in Soybean Blue Book. 1959. p. 95.

359. Forbes, R.M.; Yohe, Martha. 1960. Zinc requirement and balance studies with the rat. *J. of Nutrition* 70(1):53-57. Jan. [17 ref]

• **Summary:** One of the protein sources used was “C-1 Assay Protein containing 30 ppm zinc (Archer-Daniels Midland Co., Cincinnati [Ohio]).” Address: Div. of Animal Nutrition, Univ. of Illinois, Urbana.

360. *Mankato Free Press (Minnesota)*. 1960. New Honeymead offices (Photo caption). Feb. 26.

• **Summary:** This photo shows Honeymead’s spacious new laboratory, with 5 men at work. The Mankato offices of Honeymead Products Co. were moved recently from their original location on Given St. to the former Denison-Johnson building on Minneopa Road. The company has about 6,000 square feet of executive offices and laboratory space in the new location.

1/ Years shown refer to years of harvest. Southern Hemisphere crops which are harvested in the early part of the year are combined with those of the Northern Hemisphere harvested the latter part of the same year. 2/ Figures refer to harvested areas as far as possible. 3/ Preliminary. 4/ Less than 5 years. 5/ Acreage harvested for beans. 6/ Less than 500 acres. 7/ One year only. 8/ Purchases for export. Local consumption is small. 9/ Java and Madura only. 10/ Includes North Korea. 11/ Includes estimates for the above countries for which data are not available and for minor producing countries. Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source material, reports of U. S. Agricultural Attaches and other U. S. representatives abroad, and related information. Prewar estimates for countries having changed boundaries have been adjusted to conform to present boundaries, except as noted.

SOYBEAN BLUE BOOK

Tables: (1) World soybean production. (2) Canadian soybean production. (3) Soybean production, utilization and value, 1936-1959 Canada. (4) Soybean crushings in Canada. (5) Soybean production-United States (with acreage and yield), 1924-1959. (6) U.S. Soybean production by states (1959). (7) U.S. soybean production, supply, and utilization (incl. exports, carryover), 1924-1959. (8) U.S. soybean production, acreage, and yield by state, 1924-1959. (9) U.S. soybeans: Inspected receipts. (10) U.S. soybeans-supply and distribution, 1952-1959 (1,000 bushels). (11) U.S. Soybean oil meal and cake production, supply and utilization, 1924-1959 (1,000 tons). (12) Soybean oil, meal and cake production and stocks by states, 1955-1958. (13) Oilseed cake a meals, supply and distribution, Oct. 1950-59. Incl. soybean, cottonseed, linseed, peanut, copra, total. (14) Production of protein concentrates (cake and meal), 1937-41 (avg.) to 1951-59. Incl. soybean, linseed, cottonseed, copra, gluten feed and meal, tankage and meat scraps, fish cake and meal, dried milk products (dried and concentrated skim milk, buttermilk, and whey used for animal feed), other milk products (fed on farms), total. Note: In 1953-54,395,000 tons of dried milk products were fed to animals. (15) U.S. soy flour production. (16) Production and exports of soy flour and grits (incl. full fat, low fat, and defatted products, exported commercially or to military). (17) Production of mellorine [frozen dessert where vegetable oil replaces butterfat], 1953-59, by month. (18) U.S. fats and oils production, 1937-41 (avg.) to 1959. Incl. Butter, lard,

edible beef fats, total edible animal fats, corn oil, cottonseed, edible olive oil, peanut oil, soybean oil, total edible vegetable oils, inedible oils. (19) Soybean oil utilization, 1931-1959 (million lb). Incl. Foods: Margarine, shortening, other, total, Non-food products: Soap, paint & varnish, other drying oil products, miscellaneous, loss, total, total domestic disappearance. (20) Same as No. 19 but in percentages.

(21) Utilization of soybean products, 1955-56 to 1958-59. Incl. meal and oil: Livestock feed, industrial, fertilizer, export; from 1955 to 1959, use of soybean oil meal as a fertilizer was negligible, whereas 2.5 to 3.9% was exported. (22) Prices of U.S. soybeans, by month and season average, 1923-1959. (23) Same as No. 22 but only for No. 1 yellow: Chicago, Illinois country shipping points, Minneapolis. (24) Same as No. 21 but soybeans for crushing, No. 2 yellow. (25) Value of U.S. soybean crop, 1925-59 (thousand dollars) in these states: Total USA, Illinois, Iowa, Indiana, Ohio, Missouri, Minnesota. (26) Soybean price support operations, 1932-33 to 1959-60. Started in 1941-42 and has continued to the present, with a peak of \$2.56 per bushel in 1953-55. (27) Price spread, soybeans and end products, 1945-1958. Spread between price received by farmers and value of products. (28) Prices of U.S. soybean oil meal (44% protein), 1929-1959 by month. (29) Prices of U.S. crude soybean oil, by month, 1929-30 to 1959-60. (30) Imports, exports, soybeans, oil and meal.

(31) Soybeans: Inspections for export, 1957-59, with country of destination and port of departure. (32) U.S. trade

in soybeans, fats and oils. (33) Oil and fat exports under P.L. 480. Total, cottonseed oil, soybean oil, Oct. 1954 to Sept. 1959. Incl. country of destination, the top four being Turkey, Pakistan, Israel, and Egypt. (34) Imports, exports cake and meal, 1929-1958, incl. cottonseed, soybean, linseed, peanut, copra. Exports incl. country of destination. (33) Soybeans: Crushings and yields of oil and meal. (35) Bar chart: Major markets for U.S. soybeans since 1953: West Germany, Netherlands, Other Europe, Japan, Canada, Other. (36) Composition of soybean seeds, by variety, incl. Maturity Group No., % protein, % oil, weight of 100 seeds in grams. (37) Amino acids of soy protein. (38) Composition of Lecithin. (39) Composition of soybean oil, by variety. Incl. linolenic acid, linoleic acid, oleic acid, saturated acids.

Official standards for soybeans, Revised effective Sept. 1, 1955. Soy flour standards, for full-fat, low-fat, and defatted. Densities of various soybean products. Map of the USA showing the best adapted soybean varieties for each major soybean producing state. Directories: Processors of soybeans, by state, with address and names of officers (p. 56-74). Canadian soybean processors (p. 74). Manufacturers of 50% protein soybean meal (by state, p. 76). Foreign soybean processors, by country (p. 78-81). Refiners of soybean oil, by state (p. 82-84). Manufacturers and handlers of soy foods (p. 86-93): Beverages, breakfast foods, canners of green vegetable soybeans, canners of mature soybeans, cookies, crackers, toasts and wafers, frozen desserts (companies that make vegetable oils used in frozen desserts), health food store & supply houses, lecithin, macaroni, spaghetti & noodles, margarine, meat substitutes, proteins (Griffith Labs, Gunther, Worthington Foods), pudding powders (Brockville, Ontario, Canada), Salad and cooking oils, shortening, sausage binders, seasonings, soups, soybean oil, soybeans for cooking and sprouting, soy butter (Town Food Co., Riverside, California, makes "Town: soy lecithin spread"; Shedd-Bartush Foods, Detroit, Michigan, makes "Willow Run" soy spread), soy cheese [tofu], soy flour, grits and flakes, soy flour mixes, soy milk, soy sauce, sprouts, vitamins, whipping agents.

Manufacturers of industrial products employing soybeans (p. 94-95): Caulking compounds & floor tile, coated papers & leather dressing, fire-fighting foam, glues, plywood & adhesives, insecticides, laminating, lecithin, oilcloth and coated fabrics, paints and varnishes (13 companies), paper sizings, wallpaper and wallboard coatings, resins, soaps, soybean fatty acids (8 companies), soybean oil. Services for the industry (p. 96-109): Analysts, appraisals, brokers, commission merchants & jobbers, consultants, engineering services, export elevators, exporters & importers, export warehousing and handling, farm management, field warehousing, futures market, market analysis, mill construction contractors, milling service, miscellaneous services, oil transports, transportation.

Equipment and supplies for the soybean industry (p.

110-32): Aspirators, bagging equipment, belting, chains, conveyors, elevators, defoliant, drying and aeration equipment (farm driers, grain driers, meal driers), dust control systems & dust collectors, elevator buckets, fans, farm equipment, fertilizers, fumigants, fungicides, germinators, grain and seed cleaning and separation equipment, grain grading equipment & moisture testers, grain handling equipment, granulators, grinding & mixing equipment, herbicides, insecticides & pesticides, inoculants, laboratory equipment, man-lifts, material level indicators, materials handling equipment, miscellaneous equipment, packaging materials, pelleting machines, power transmission equipment, pumps, respirators, seed protectants, sifters, soil testing, soybean storage (elevator & processing units, farm units), spraying and irrigating equipment, temperature systems, transportation equipment, truck lifts, unloaders, waterproofing, weighing and packaging equipment.

Soybean processing [crushing] and oil refining equipment and supplies (p. 134-42): Bleaching and filtering equipment, catalysts, complete plants [for crushing], continuous counter-current solvent extractors, continuous screw presses, degumming, deodorization, fractionation, hydraulic pressing equipment, hydrogenation, margarine, miscellaneous equipment, neutralization, shortening, solvent recovery, solvents, soybean seed [suppliers and private breeders], vegetable soybean seed. Advertisers' index. Incl. Allied Mills, V.D. Anderson, ADM, Arkansas Grain Corp., Big 4 Cooperative Processing Assn., Blaw-Knox Co., Buhler Mill Engineering Co., Cargill Inc., Central Soya Co., Crown Iron Works Co., Dannen Mills Inc., Delphos Grain and Soya Products Co., Albert Dickinson Co., Louis Dreyfus Corp., Esso Standard Oil, Farmers Cooperative Assn., Farmers' Cooperative Co., Felco Soybean Oil Meal Dealers, French Oil Mill Machinery Co., Funk Bros. (measures oil content of soybeans in 10 minutes), Skelly Oil Co., A.E. Staley Mfg. Co., T.W. Wood & Sons (Seedsmen since 1879; Richmond, Virginia). Address: Hudson, Iowa.

362. Paulsen, Twila M.; Holt, K.E.; Anderson, R.E. 1960. Determination of water-dispersible protein in soybean oil meals and flours. *J. of the American Oil Chemists' Society* 37(4):165-71. April. [9 ref]

• **Summary:** In the early 1930s, investigations on this subject began in the ADM laboratories in an effort to find a laboratory method that would measure the comparative

fertilizer value of various type of soybean oil meals for use in the tobacco industry. Address: Archer-Daniels-Midland Company, Minneapolis, Minnesota.

363. Paukner, Owen; Smallwood, Blair. 1960. Review of oils, varnishes and alkyds: Drying oils. *Paint Industry* 75(6):10-11. June.

• **Summary:** Although soya oil is only a semi-drying oil, it can be chemically modified to take the place of linseed oil as a fast-drying base in oil paints. Chemical modification has, in part, “accounted for a rather phenomenal increase in its use since 1945.” However, the most important factor in the increased use of soy oil has been the production of alkyd resins from it, with their many applications in both industry and architecture.

In 1958 the U.S. paint industry used 902 million lb of oils. Those most widely used (in million lb) were linseed oil 426, soya oil 163, tall oil 81, dehydrated castor oil 63, tung oil (also known as Chinawood oil) 36, fish oil 27, and oiticica (imported from Brazil; pronounced oit-uh-SEE-kuh, from the tree *Licania rigida*). 9. A description of each is given. Address: Archer-Daniels-Midland Co.

364. *Soybean Digest*. 1960. Dr. Hayward joins Council staff. June. p. 23.

• **Summary:** “J.W. Hayward, 61, Minneapolis [Minnesota], world renowned authority on nutritional and biological aspects of soybeans, has been named director of nutrition for the Soybean Council of America, Inc... Dr. Hayward is being loaned to the Council by Archer-Daniels-Midland Co., where he has been director of nutrition for the past 25 years...”

“He is establishing an office for the Soybean Council of America in room 304, Baker Building, Minneapolis 2. Dr. Hayward’s appointment was prompted by a new market development program of SCA and the Foreign Agricultural Service of the U.S. Department of Agriculture. According to terms of the first commodity contract negotiated last January, government funds will be used to develop foreign markets for soybeans and soybean products. Considered a major break-through for the industry, the agreement designates more than 40 countries for market development work, utilizing foreign currencies acquired by the USDA.” A photo shows Dr. Hayward.

365. *Mankato Free Press (Minnesota)*. 1960. Honeymead sells plant for \$6,000,000. Aug. 3. p. 1-2.

• **Summary:** Honeymead’s fixed assets and name (not the corporation) were sold to the Farmers Union Grain Terminal Association (GTA), according to Lowell Andreas, Honeymead president. It was a straight cash deal. The sale, which will have no effect on the 100 employees, was completed at 1:30 p.m. on Tuesday, and will take effect Sept. 2. As part of the sale, Lowell Andreas has agreed to manage the operation for not less than 10 years. He will be

subject only to the GTA board of directors consisting of 12 farmers. GTA, based in St. Paul, Minnesota, is a cooperative which markets grain for more than 600 county [sic, country] elevators in 4 states. Honeymead processes both soybeans and flax.

Note: This is the earliest document seen (Aug. 2016) stating that Honeymead Products, a soybean processor in Mankato, Minnesota, has changed from a privately owned company (by the Andreas family) to one that is cooperatively owned (by Farmers Union GTA).

366. *Mankato Free Press (Minnesota)*. 1960. ‘Just day to day business.’ Aug. 3. p. 1-2.

• **Summary:** Lowell Andreas, president of Honeymead, commented that the \$6 million sale of Honeymead Products Co. is “just day to day business”—as he sipped a cup of morning coffee. After Sept. 2, the effective date of the sale, Andreas will switch from being president of the sprawling soybean plant to being its manager. Lowell and his brother, Dwayne, negotiated the sale with GTA. They went to St. Paul Tuesday morning, without the slightest idea that they would be selling Honeymead. They arrived at 11:00, talked with GTA through lunch, and finalized the deal at 1:30 that afternoon. Now he is looking for a place to invest the \$6 million.

Andreas believes that soybeans have a bright future in this area. In 1947, when Honeymead bought the plant in Mankato, the storage capacity was 140,000 bushels. Today it is 3.75 million bushels—a 26-fold increase in 13 years. The business began to expand rapidly when livestock feeders began to demand soybean meal in their feed concentrates. Portrait photos show Lowell and Dwayne Andreas.

367. *Farmers Union Herald (St. Paul, Minnesota)*. 1960. GTA enters processing field with soybean plant purchase [Honeymead Products Co.]: Another co-op milestone. 34(15):1, 3. Aug. 8.

• **Summary:** “Another milestone in the growth of the farmers’ own businesses in the Upper Midwest has been reached with the announced purchase by GTA of the Honeymead Products Co. of Mankato, Minnesota.

“Announcement of the acquisition by Farmers Union Grain Terminal Association was made to the press in response to numerous inquiries on Tuesday, Aug. 2, by General Manager M.W. Thatcher. The board of directors of the cooperative had, that day, put its final stamp of approval on the \$6 million transaction and the details had been laid before the country field staff... The Honeymead plant, located on the Minnesota River, in Mankato, is in the heart of soybean producing areas of southern Minnesota. It handles around 56,000 bushels of soybeans a day, turns the wonder bean into oils, protein products, flours and flakes which it sells worldwide.

“Dwayne Andreas, chairman of the Honeymead board,

and Lowell Andreas, his brother, bought the company from a Pacific Northwest egg cooperative soon after they came out of the military services after World War II. They are natives of Iowa, born and raised on the farm but have found their greater talents in farm business management roles.” Honeymead’s Mankato plant is now “the largest single plant in the soybean crushing field. It also crushes flaxseed...” The plant consumes about a third of Minnesota’s entire soybean crop. Total sales are around \$50 million a year.

Portrait photos show Dwayne O. Andreas (chairman of the board) and Lowell Andreas (president). Smaller photos show J.L. Maslon, C.T. Mullan, and W.B. Cox, vice presidents of Honeymead. An aerial photo shows the Honeymead plant in Mankato.

Note: This is the earliest document seen (Nov. 2007) that mentions “GTA” (written as such) in connection with soybeans. Address: Minnesota.

**368. Product Name:** Soybean Oil, and Soybean Oil Meal.

**Manufacturer’s Name:** Farmers Union Grain Terminal Association (St. Paul, Minnesota).

**Manufacturer’s Address:** Mankato, Minnesota.

**Date of Introduction:** 1960 August.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

**New Product–Documentation:** *Mankato Free Press* (Minnesota). 1960. “Honeymead sells plant for \$6,000,000.” Aug. 3. p. 1-2. Honeymead’s fixed assets and name (not the corporation) were sold to the Farmers Union Grain Terminal Association (GTA), according to Lowell Andreas, Honeymead president. It was a straight cash deal. The sale, which will have no effect on the 100 employees, was completed at 1:30 p.m. on Tuesday, and will take effect Sept. 2. As part of the sale, Lowell Andreas has agreed to manage the operation for not less than 10 years. Note: Honeymead Products has just changed from a privately owned company (by the Andreas family) to one that is cooperatively owned (by Farmers Union GTA).

*Mankato Free Press* (Minnesota). 1960. ‘Just day to day business.’ Aug. 3. p. 1-2. After Sept. 2, the effective date of the sale, Andreas will switch from being president of the sprawling soybean plant to being its manager. Lowell and his brother, Dwayne, negotiated the sale with GTA. They went to St. Paul Tuesday morning, without the slightest idea that they would be selling Honeymead.

*Farmers Union Herald* (St. Paul, Minnesota). 1960. “GTA enters processing field with soybean plant purchase [Honeymead Products Co.]: Another co-op milestone.” 34(15):1, 3. Aug. 8. “Another milestone in the growth of the farmers’ own businesses in the Upper Midwest has been reached with the announced purchase by GTA of the Honeymead Products Co. of Mankato, Minnesota. Announcement of the acquisition by Farmers Union Grain Terminal Association was made to the press in response to

numerous inquiries on Tuesday, Aug. 2, by General Manager M.W. Thatcher. The board of directors of the cooperative had, that day, put its final stamp of approval on the \$6 million transaction and the details had been laid before the country field staff...”

*Soybean Digest*. 1960 “Honeymead products sold to Farmers Union Grain Terminal Assoc.” Sept. p. 74. “Farmers Union Grain Terminal Association, big St. Paul, Minnesota, grain marketing cooperative, moved into the soybean processing business Aug. 2 with the purchase of Honeymead Products Co.’s soybean plant at Mankato, Minnesota. Purchase price was about \$6 million, according to M.W. Thatcher, general manager of GTA.”

Perdue, Elmer J.; McVey, Daniel H. 1971. “Growth of cottonseed and soybean processing cooperatives.” *USDA Farmer Cooperative Service, FCS Information No. 75*. 82 p. July. See p. 9. Table 4 lists 13 “Cooperative soybean processing associations operating in 1970.” 11. Farmers Union Grain Terminal Association (St. Paul, Minnesota, Honeymead Products Division) (Mankato, Minnesota, 1960).

**369. Product Name:** Ardex 550 (Protein-Rich Edible Soy Flour).

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** 733 Marquette Ave., Minneapolis 40, Minnesota. Phone: FEderal 3-2122.

**Date of Introduction:** 1960 September.

**New Product–Documentation:** ADM. 1960, Sept. *Annual report for the year ended June 30, 1960*. “A high protein soy flour, Ardex 550, that virtually eliminates the characteristic soy taste and odor, is being introduced to the food industry...” *Soybean Digest*. 1960. Oct. p. 25.

*Mankato Free Press* (Minnesota). 1962. “Mankato firm processes products from soybeans: Archer-Daniels-Midland.” Feb. 23. A new ADM soy product, Ardex 550, is a “protein supplement for macaroni and spaghetti products and a replacement for dry milk solids in bread.”

Note: This is the earliest known ADM product with the brand name Ardex.

370. Archer-Daniels-Midland Co. 1960. Annual report for the year ended June 30, 1960. General offices: 700 Investors Building, Minneapolis 2, Minnesota. 18 p.

• **Summary:** Net sales and other operating income: \$239,895,380. Earnings before taxes: \$6,543,592. Net income (profits): \$3,665,321. Current assets: \$64,279,319. Current liabilities: \$13,464,133. Employees: 4,661.

The section titled “Specialty Group” (p. 8) states that a new Prochem Division, “formed during the year by consolidation of the Soya Specialties, Isolated Protein and Industrial Cereal Departments, reported favorable results. A high protein soy flour, Ardex 550, that virtually eliminates the characteristic soy taste and odor, is being introduced to the food industry... Industrial isolated soy proteins were

(<sup>1</sup>) Includes non-operating credits after taxes of \$1,937,940.

under severe competition from imported casein. Facilities for production of Ardex 550 have been installed and expansion of the isolated protein plant was completed. These new protein facilities are among the most modern in the industry.”

The Specialty Group's product lines include (p. 9): Core oils, binders, and washes. Industrial and edible soy flours. Industrial isolated proteins.

On pages 14-15 is a large table showing “Financial and operating data for the last ten years” [a 10-year summary]. Net sales, net income (profit), cash dividends, and number of employees were all decreasing.

On the white cover, the Archer, pulling back an arrow in his bow, is embossed—and barely visible. Address: Minneapolis, Minnesota.

371. Archer-Daniels-Midland Company (a Corporation of Delaware). 1960. Improvements in or relating to delayed action granular fertilizers. *British Patent* 954,555. Date of application and filing complete specification: 12 Oct. 1960. 13 p. Complete specification published: 8 April 1964. Application made in the USA: 13 Oct. 1959. 6 drawings.  
• **Summary:** Concerns slowly soluble fertilizers. Soy alkylid is used in the preparation of the fertilizer. Address: 700 Investors Building, Minneapolis 2, Minnesota.

372. *Soybean Digest*. 1960. Protein-rich soy flour by ADM. Oct. p. 25.

• **Summary:** The new soy flour, Ardex 550, contains 50-55%

protein and is neutral in taste and odor—according to James Meier, manager of the company's Prochem division. “In a commercial bakery test, 3% of Ardex 550 substituted ideally for 4% of milk solids in white bread at a cost saving of 55%.

“The ADM soy flour retards ‘staling’ in baked goods while improving texture and toasting quality. It makes doughs easier to handle and bread doughs more compressible. In doughnuts, Ardex 550 reduces grease absorption.”

373. Archer-Daniels-Midland Co. 1960? Adpro 220: A very high molecular weight, high viscosity isolated soy protein (Brochure). Evandale near Cincinnati, Ohio. 26 p. Undated. 28 cm.

• **Summary:** This brochure, with a red protruding tab that reads “Adpro 220” has a red, white and blue cover with the large logo, including an illustration of an archer, and the company name and address in Ohio. Adpro 220 is an industrial soy protein isolate, recommended for use in latex paints or as an adhesive. Contents: Accent on science. Adpro isolated soy proteins. Specifications and uses. Preparation of alkaline dispersion. Preparation of short mixing type dispersion (Sodium hydroxide as solubilizing alkali). Preparation of long mixing type dispersion (Sodium hydroxide as solubilizing alkali). Preparation of long mixing type dispersion (Bleaching agents and fluidizing agents). Preparation of short mixing type dispersion (Potassium hydroxide as solubilizing alkali). Viscosity data. pH

characteristics of Adpro solutions. Methods of controlling foaming. Preservatives. Fluidizing, buffering and bleaching agents.

On the title page is a half-page black-and-white aerial photo of ADM's soybean processing plant in Evendale, Ohio—"Source of Adpro isolated soybean proteins." Below that are listed three types of these proteins: Adpro 112—A medium viscosity material. Adpro 220—A high viscosity material. Adpro 410—A low viscosity material. On page 2 are large photos of ADM soybean plants at Decatur, Illinois, and Mankato, Minnesota (built in 1950).

The section titled "ADM Products" (p. 4) states: "ADM was founded in 1902... It is the nation's largest flax crusher and producer of core oils and other additives for the foundry industry. One of the three largest soybean processors in the country..."

The section titled "Soybeans" (p. 4) states: "Since ADM first started processing soybeans during the 'twenties' [1920s], it has pioneered in many new developments. In 1934 it introduced solvent extraction processing to this country. In 1949 it marketed the nation's first 50% dehulled soybean meal. Throughout the years ADM has been a constant leader in perfecting and popularizing industrial and edible soy proteins and oils.

"During the past several years ADM has devoted considerable pioneering research to the isolated soybean protein. The results of this effort led logically to the purchase of the Drackett Company, Evendale, Ohio, in July 1957. ADM also has large, modern soybean plants at Decatur, Illinois, and at Mankato, Minnesota." Address: 2795 Sharon Rd., [Evendale near] Cincinnati 41, Ohio. Phone: PRinceton 1-3220.

374. Archer-Daniels-Midland Co. 1960? Adpro 410: A low viscosity, readily soluble isolated soy protein (Brochure). Evendale near Cincinnati, Ohio. 26 p. Undated. 28 cm.

• **Summary:** See next 4 pages. This brochure, with a red protruding tab that reads "Adpro 410" has a red, white and blue cover with the large logo, including an illustration of an archer, and the company name and address in Ohio. The contents are very similar to the brochure for Adpro 220. Adpro 410 is an industrial soy protein isolate, most widely used in high-solids paper and board coatings. It can also be used "in the manufacture of aqueous printing inks, match-striker strips and other applications when an emulsifier, protective colloid, suspending agent, film former and binder with good water resistance are desired."

On the back cover is a list of 30 "ADM sales offices and agents in all principal cities."

On the first two pages inside are aerial views of ADM soybean crushing plants in Evendale, Ohio; Decatur, Illinois; and Mankato, Minnesota (built in 1950).

## ADM SOYBEAN PROCESSING PLANTS . . .

Left - ADM's modern processing plant in Decatur, Illinois.

Right - ADM's Mankato, Minnesota soybean plant built in 1950.

success story in the ‘work’ story...”

For example, at USDA’s Northern Regional Laboratory in Peoria, Illinois, “a new process has been developed for preparing two of Japan’s most important foods—miso and tofu. Both use soybeans.”

Congressmen “ought to support substantial increases in spending for utilization research.” Address: President, Chemurgic Council.

376. Diser, Gleason M. comp. 1961. Glossary of soybean terms. *Soybean Blue Book*. p. 61-64.

• **Summary:** This is the earliest known glossary with this title in the *Soybean Blue Book*. However in the first *Blue Book* (1947, p. 17-19) there was a somewhat similar section titled “Terminology: Definitions and product descriptions for the soybean industry.”

The following terms are defined in this glossary: Soybean(s), soybean processor, soybean processing (solvent extraction, mechanical pressing, hydraulic pressing), soybean oil, crude soybean oil, edible crude soybean oil, refined soybean oil, edible refined soybean oil, hydrogenated soybean oil, degummed soybean oil, winterized oil, technical grade refined soybean oil, soybean fatty acids, soybean soapstock, acidulated soybean soapstock, soybean lecithin, break material, sludge.

Soybean products: Ground soybeans, soybean hay meal, soybean flakes, 44% protein soybean oil meal, dehulled soybean flakes, 50% protein solvent extracted soybean oil meal, soybean proteins, soy flour, soy grits, soybean oil meal, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, protein, isolated protein, toasting. Oriental soy foods: Soy sauce (shoyu), soy milk, miso, frozen tofu, aburaage, kinako, namaage, ganmodoki, tempeh, natto, yuba, moyashi (soybean sprouts). Address: Archer-Daniels-Midland Co., Minneapolis, Minnesota.

377. Paulsen, Twila M. 1961. A study of macaroni products containing soy flour. *Food Technology* 15(3):118-21. March. [7 ref]

• **Summary:** “Adding Ardex 550, a soy flour, to semolina at levels of 12.5, 17, and 25% increases the firmness of spaghetti subjected to long cooking periods and significantly improves the nutritional quality of macaroni products.” Address: Research & Development Dep., ADM, Minneapolis, Minnesota.

378. Rainey, W.L.; Horan, F.E. 1961. A new protein solid for white bread [ADM’s Ardex 550]. *Baker’s Digest* 35(2):34-35, 40. April. [7 ref]

• **Summary:** This seems to be a high-protein, defatted soy flour, but the article is not clear on just what type of product it is. Address: ADM, Minneapolis, Minnesota.

379. Shulman, Sol; Formo, M.W.; Rheineck, A.E. 1961.

Aliphatic urethanes. Effect of chain length on some physical properties. *J. of the American Oil Chemists’ Society* 38(4):205-08. April. [7 ref]

• **Summary:** A study of the thixotropic behavior of certain fatty materials including soybean oil. Address: Archer-Daniels-Midland Co., Minneapolis, Minnesota.

380. Archer Daniels Midland Co. 1961. ADM: soybean products circle the globe (Ad). *Soybean Digest*. June. p. 41.

• **Summary:** See next page. This full-page ad states:

“Around the world. For foods, animal feeds and industrial applications. Yes, wherever you are, for every purpose, you can rely on Archer-Daniels-Midland Company for quality soybean oil, meal, flour and specialty products.

“Long one of the leading, processors of soybeans in the United States, ADM has the production and research facilities and experience to supply you quality products and valuable information on their nutritional and technical utilization.

“Through the years ADM has been a leader in developing new uses for soybeans through research—and in promoting these uses world-wide. At present, for example, ADM is introducing a virtually colorless, odorless protein supplement for foods—a new product vastly superior in both nutritional and functional properties.

“So contact ADM for all your soybean product needs. ADM has sales offices or agents in 27 foreign markets and in every major US city.” Address: 700 Investors Building, Minneapolis 2, Minnesota.

381. *Soybean Digest*. 1961. Grits and flakes... from the world of soy: ADM is building new Central Research Lab. July. p. 20.

• **Summary:** “Archer-Daniels-Midland Co’s. new central research laboratory is pledged to the quest for better foods, fibers and chemicals for human progress. John H. Daniels, ADM president, speaking at ground breaking ceremonies in suburban Bloomington, where the laboratory will be located, said the company has contributed much in these fields since its founding nearly 60 years ago.

“Mr. Daniels called construction of the new laboratory the most significant step taken by the company in the past decade. He said it emphasizes ADM’s increasing concentration on products born from research. The company is a leading processor of chemicals and agricultural commodities.

“The new science facility will be located on a 73-acre tract overlooking the Minnesota River valley [in Minnesota]. It will bring together ADM’s research, technical service and engineering departments and scientific and technical libraries. Completion is scheduled for the fall of 1962.

“ADM, with 100 plants, elevators and mines in the United States and Canada, also maintains research facilities at Newark, New Jersey, Evendale, Ohio, and Los Angeles,

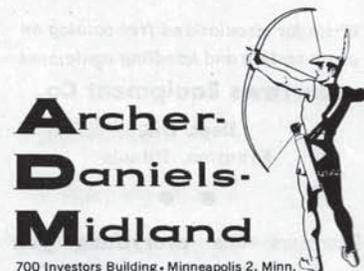

## **ADM** soybean products circle the globe!

Around the world. For foods, animal feeds and industrial applications. Yes, wherever you are, for every purpose, you can rely on Archer-Daniels-Midland Company for quality soybean oil, meal, flour and specialty products.

Long one of the leading processors of soybeans in the United States, ADM has the production and research facilities and experience to supply you quality products and valuable information on their nutritional and technical utilization.

Through the years ADM has been a leader in developing new uses for soybeans through research . . . and in promoting these uses world-wide. At present, for example, ADM is introducing a virtually colorless, odorless protein supplement for foods – a new product vastly superior in both nutritional and functional properties.

So contact ADM for all your soybean product needs. ADM has sales offices or agents in 27 foreign markets and in every major US city.

California.

A photo above this brief article shows two men, each holding a shovel, near a large sign; it has this caption: "Thomas L. Daniels, left, chairman of the board of Archer-Daniels-Midland Co., and Richard M. Nichol森, representing the research department, break ground for ADM's new central research laboratory. Nichol森 is business manager of the laboratory."

382. Hayward, J.W.; Diser, G.M. 1961. Soy protein as soy flour and grits for improving dietary standards in many parts of the world. A special report. *Soybean Digest*. Aug. p. 14-18, 20, 22-23. [5 ref]

• **Summary:** Contents: Introduction. Definition (Defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour). Production. Composition. Nutritional properties. Conventional uses. Economic aspects. Recommended uses in specific diets. Soy milk as a food for children. Summary and conclusions.

This article begins: "Soybeans and products derived from them have served as the chief source of protein in the diet of millions of oriental people for nearly 5,000 years. Various other oilseed products have been developed over the centuries for use as food in different parts of the world. However, because they are adapted to a wide range of soil and climatic conditions and can be produced economically in many areas, soybeans continue to be of special interest in the field of worldwide nutrition.

"In the Orient and many other parts of the Far East, tofu and such foods made from fermented soybeans as miso, natto and tempeh are extremely popular. These foods are all rather uncommon among occidental races. They are not known at all to us in the United States except on an experimental basis. Our edible soya for protein is available for the most part in the form of flour, grits and concentrated protein. However, these forms of edible soya are practically unknown in the countries of the Far East."

Figures show: (1) Production of defatted, dehulled soya products—flour or grits—for edible uses (extracted with hexane solvent). (2) Bar graph—Amino acid composition of soy flour and some cereals commonly used in the human diet (grams of amino acid per 100 grams of food; defatted soya flour is very high {relative to degermed corn meal, patent wheat flour, and white rice} in lysine, methionine + cystine, phenylalanine, leucine, isoleucine and threonine). (3) Pie chart: Supplemental effect of soy flour on the nutritive value of cereal-soya mixtures. (4) Bar graph—Amino acid composition of soy flour in comparison with cottonseed, peanut and sesame flours (grams of amino acid per 100 grams of food).

Tables show: (1) Composition of soy flours and grits. (2) Calcium and phosphorus content of soy flours and grits as compared with some cereals (wheat flour, white rice, degermed corn meal). (3) Moisture, protein content, price

per pound and cost per pound of protein in some food stuffs. Address: 1. Director of Nutrition, Soybean Council of America, Inc.; 2. Research Dep., Archer-Daniels-Midland Co.

383. Archer-Daniels-Midland Co. 1961. Annual report for the year ended June 30, 1961. General offices: 700 Investors Building, Minneapolis 2, Minnesota. 21 p.

• **Summary:** See next page. Net sales and other operating income: \$213,115,452. Earnings before taxes: \$6,268,198. Net income (profits): \$3,747,730. Current assets: \$74,395,267. Current liabilities: \$24,705,743. Employees: 3,706.

A graph (p. 9) shows that in 1961 ADM's research expenditures were 4 times as great as in 1952. The new Central Research Laboratory will be completed in the fall of 1962.

On page 10 is a "Ten-year summary of financial and operating data." Net sales, net income (profit), cash dividends, and number of employees are all decreasing.

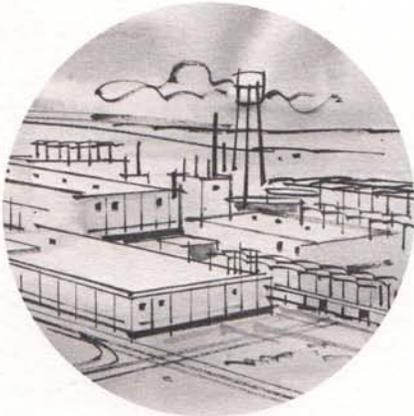

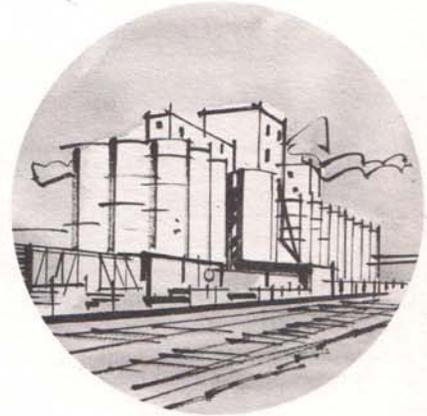

Note: This company needs a turnaround artist. Address: Minneapolis, Minnesota.

384. Roach, Howard L. 1961. Soybean Council of America—promotional progress. *Soybean Digest*. Sept. p. 61-64.

• **Summary:** This long report, presented at ASA's 41st annual meeting, begins as follows: Promotional progress is just a high-sounding term to describe what the soybean Council is doing and how it is being done. It would be well, therefore, to define our objectives in broad terms. The Soybean Council is embarked on an 'educational program to teach better nutrition and diets to the people of the world and, how soybean products can be of assistance in this effort.' Responsibility has been given the Council to carry forward this teaching to 41 countries located on all of the continents. The Council has responded in 21 countries thus far, with active offices located in 14 countries. The population of these 41 countries exceeds 1 billion persons.

"The question naturally follows, 'What does the Council have to offer?' The answer is, 'Soybean products—a superior vegetable protein and a wholesome, palatable vegetable oil.' The Council is not alone in this effort to improve the diet and satisfy hungry people. Other commodity groups such as Great Plains Wheat Market Development Association, U.S. Rice Export Development Association, Millers National Federation, U.S. Feed Grains Council, Dairy Society International, National Renderers Association, Institute of American Poultry Industries and many others also have the same objectives as the Council. The Council works and cooperates closely with many of these organizations.

"It should be pointed out that consumers are not interested in soybeans but are interested in products made from soybeans and, therefore, the Council does not spend time cultivating the desire for soybeans as soybeans, but

**ADM**  
1961 ANNUAL  
REPORT

ARCHER - DANIELS - MIDLAND COMPANY

rather devotes its efforts to the promotion of soy products. It makes no difference to the Council where the processing takes place. We, of course, would like to see the processing done in the United States, but we realize, and our processors realize, that others also want to perform this task. The most efficient processor will watch his business grow while the less efficient processor will have a struggle to survive.

“Within the past 9 months, your president has visited 25 countries located in South America, Asia, the Middle East, Africa and Europe. Everywhere we have heard the call, as Paul and Luke were called 1,900 years ago, and as recited in Acts 16:9, ‘And a vision appeared to Paul in the night; there stood a man of Macedonia, and prayed him, saying, “Come over into Macedonia and help us.”’

“Peoria Conference [in Illinois]: Every good thing should start at home and, therefore, the Council has spent much time and effort on programs here in the United States. Through our director of nutrition, Dr. James W. Hayward, a conference will be held in September when many scientists and others will for 3 days consider ‘Soybean Products for Protein in Human Foods.’ Two weeks ago the entire soy protein committee of the Council met with the Food for Peace officials in Washington and presented ways and means that soy products could be of assistance in this program. Preparation and planning for these important conferences takes much time and effort here at home. Communicating the telling of what the Council is doing, checking with authorities to see if proper statements are being made and all of the efforts of communication, writing statements and speeches, letter writing, telephone, cable and other methods of communication take a large part of the efforts of our domestic staff.

“Our methods of promotion overseas are undertaken in the following manner: Realizing that there are long-established food customs, religious taboos, climate, and many other factors too numerous to mention, we are forced to generalize on methods of education used by the Council in different countries. Following are some of the general policies and methods used to tell the soybean story:

“1. Survey the market situation in each country, and determine the role which U. S. soy products can profitably play in the life of that country.

“2. Establish an office that gives the impression of an on-going business organization that will be permanent. This means a suite of offices in a good business district, equipped in good taste according to the business customs of the country. We have learned that our overseas friends do not want to do business with companies and organizations that are here today and gone tomorrow. Our friends overseas are in business for keeps and expect us to feel and act in like manner. The Council does not emphasize price of our products but rather, dependability of supply from U.S. sources. Many nations have now learned that in order to stay in business, dependability of supply is far more important

than price. They demand an assurance of supply. Our office, our staff and all our actions must carry forward the impression of dependability.

“3. Employ a national of the country where the office is located as director for the Council and charge him with the responsibility of telling the story of soybean products to those who make or influence decisions within his country. The Council has a comprehensive training program for all employees. The director is made responsible for employing other members of his staff. To tell the story effectively, the director must have a good personality, be able to meet persons important in business and government, know English and other languages, and must have executive ability to hire, organize and supervise his own staff as well as organize seminars, fairs and other information media the Council may see fit to employ.

“4. Obtain cooperation from local organizations such as fats and oils associations, vanaspati associations, mixed feed manufacturers associations, livestock syndicates, universities, particularly the departments of nutrition, both animal and human, extension services, school authorities, international organizations such as UNICEF, WHO, FAO, all to serve as advisors and cooperators with and for the Council. The Council works closely with other U.S. government agencies such as International Cooperative Administration, U.S. Information Service, U.S. Operations Missions and others. In many cases these organizations contribute money, time and services to assist the Council in achieving our objectives... telling the story of soy products to the people of the country.

“5. The Council exhibits at national and international trade fairs, exhibits and bazaars to place the story of soybean products before the people.

“6. The Council organizes symposiums and schools and supplies, either from the United States or other countries, internationally known nutritionists and technicians to deliver papers on specific subjects. After the close of the meetings we encourage these persons, representing the Council, to meet with local business interests.

“7. We furnish technicians and advisors as consultants that have particular knowledge in:

“(a)–Livestock nutrition.

“(b)–Fats and oils technology.

“(c)–Human nutrition.

“(d)–General engineering knowledge on shipping, feed handling, storage of both oil and meal and product packaging.

“8. We establish liaison with individuals and companies wishing to procure knowledge of U.S. merchandising methods.

“9. Give to local press as well as U.S. Information Service information on use of soybean products.

“10. Bring to the United States persons selected by local business interests, after counsel by our local director and

the agricultural attache of the American embassy, to view agricultural production of food in the United States and to visit the U. S. soybean processing industry. We also afford opportunities for our guests to observe U.S. merchandising methods.

“11. Sponsor magazines and publications. One example, Nutrition, first published in Spain and now used in all Spanish speaking countries.

A large table (p. 62), titled “Dietary levels of various countries,” has the following 8 columns: (1) Country name. (2) Population. (3) Calories per day [per capita]. (4-7) Protein per day [per capita] (grams) from animal, pulse, other and total. Fat per day [per capita] (grams). The countries are ranked from top to bottom in descending order of calories per day.

A caption below the graph states: “\* Denotes SBC office and/or suboffice. Soybean Council offices are in 21 countries with 892,900,000 population. Peru office: Chile, Colombia, Ecuador, Peru, Venezuela; Denmark office: Denmark, Norway, Sweden; Netherlands office: Belgium, Netherlands. \$ Dollar markets.–P.L. 480 markets, all or part.”

A portrait photo shows Howard L. Roach. Address: President, Soybean Council of America. He is from Plainfield, Iowa.

385. *Soybean Digest*. 1961. Grits and flakes... from the world of soy: ADM to process soybeans at Fredonia, Kansas, plant. Sept. p. 84.

• **Summary:** “The board of directors of Archer-Daniels-Midland Co. has approved conversion of the company’s grain terminal at Fredonia, Kansas, to a soybean processing plant.

“The new facility will utilize the buildings and concrete storage tanks of the 1-million-bushel grain elevator. Conversion of the buildings and installation of soybean processing and handling equipment began immediately, with completion scheduled for the fall of 1962.

E.A. Olson, executive vice president of ADM’s agricultural group, said the plant will have a capacity of 6 million bushels a year. Mr. Olson said the southeastern Kansas location was selected for the plant because of the increasing production of soybeans in Kansas and neighboring Missouri. The plant will also be favorably located for serving the southwestern livestock and poultry markets with soybean meal.

“ADM also operates soybean plants at Mankato, Minnesota, and Decatur, Illinois. The Fredonia plant crushed linseed oil from flaxseed when flax was an important crop in Kansas years ago.”

A small photo showing the plant and 6 huge concrete storage tanks bears this caption: “ADM’S Fredonia, Kansas, installation will be converted to a soybean processing plant. Processing equipment will be installed in the buildings in the foreground.”

386. Wilcox, R.A.; Carlson, C.W.; Kohlmeyer, W.; Gastler, G.F. 1961. The growth response of turkey poult to a water-extract of soybean oil meal as influenced by different sources of isolated soybean protein. *Poultry Science* 40(5):1353-54. Sept. [3 ref]

• **Summary:** The following sources of isolated soy protein were used: (1) C-1 protein from Archer-Daniels-Midland Co., Cincinnati, Ohio; (2) PR protein from Central Soya Co., Inc., Chicago, Illinois; (3) 65 protein from Gunther Products, Inc., Galesburg, Illinois.

It was found “that soybean proteins vary considerably in their effects on poult growth and that, in poult studies, the source of the protein needs to be considered.”

Note: A “poult” is a young fowl, especially a young turkey. Address: Depts. of Poultry Husbandry and Station Biochemistry, South Dakota Agric. Exp. Station, Brookings.

387. **Product Name:** Soybean Oil, and Soybean Oil Meal.

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** Fredonia, Kansas.

**Date of Introduction:** 1961 October.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

**New Product–Documentation:** Soybean Digest. 1961.

Sept. p. 84. “ADM to process soybeans at Fredonia, Kansas, plant.”

Soybean Digest. 1962. Aug. p. 35. “ADM names Fredonia soybean plant staff.” Don O. Fink will be production manager of ADM’s new soybean processing plant in Fredonia, Kansas—according to Raymond E. Fiedler, manager of the ADM soybean division.

In Oct. 1961 ADM began operating Spencer Kellogg & Sons’ former plant in Decatur, Illinois, under a lease.

388. **Product Name:** Soybean Oil, and Soybean Oil Meal.

**Manufacturer’s Name:** Archer-Daniels-Midland Company.

**Manufacturer’s Address:** Decatur, Illinois.

**Date of Introduction:** 1961 November.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

**New Product–Documentation:** Soybean Digest. 1962. July.

p. 8. “Minneapolis a processing center.” ADM “presently operates three processing plants—two at Decatur, Illinois, including the former Spencer Kellogg plant there which ADM leased last November, and the third at Mankato, Minnesota. A fourth processing plant is under construction at Fredonia, Kansas, in the heart of a fast-growing soybean producing area.”

389. *Soybean Digest*. 1961. Grits and flakes... from the world of soy: Purchasing processing plants from Textron. Nov. p. 28.

• **Summary:** “Archer-Daniels-Midland Co. announced that

it is leasing the former Spencer Kellogg soybean plant at Decatur, Illinois, from Interoceanic Industries Inc. The longterm lease became effective Nov. 1. Interoceanic Industries purchased the Decatur plant recently from Textron, Inc. Textron, Inc., obtained the plant last July when it acquired Spencer Kellogg and Sons Inc.

“The sale was the first step in Spencer Kellogg’s program to withdraw from the soybean crushing business.

“Harold W. McMillen, board chairman of Central Soya Co., Inc., and Fred W. Thomas, division president of Spencer Kellogg, announced that Central Soya had completed arrangements for purchase of the Bellevue, Ohio, soybean crushing plant, and that ‘Central Soya will proceed almost immediately with the operation.’

“The company’s soybean plant at Des Moines, Iowa, was purchased by Cargill, Inc. All plants are now under operation by the new lessee or owners.”

390. Chambers, John A. 1961. Soya—The meal in a bean. *Arkady Review (Manchester, England)* 38(4):50-53. Dec.  
 • **Summary:** “Soya beans first made their appearance in this country in 1908 [sic] and over the years the volume of imports has steadily increased.” From these beans was extracted soya oil and protein.

“Another large soya bean usage in this country is in the form of flour, milled from the whole, full-fat soya bean. Raw soya bean endosperm when milled produces an enzyme active flour having a characteristic flavour. This type of flour has an extensive use in bread baking, because of its effect on the keeping qualities of bread. The characteristic flavour present in the raw beans can be removed by efficient processing, and the resultant flour produced from these beans has a pleasant, bland taste.” Address: B.Sc., Research Chemist, British Arkady Co. Ltd., Skerton Rd., Old Trafford, Manchester 16, England.

391. **Product Name:** Lecithin [Fluid, or Plastic Grades].  
**Manufacturer’s Name:** Honeymead Products Co.  
**Manufacturer’s Address:** Mankato, Minnesota.  
**Date of Introduction:** 1961.  
**New Product—Documentation:** Soybean Blue Book. 1961. p. 102. Still listed in 1976.

392. Deutsch, Ronald M. 1961. Snap! Crackle! Enter Dr. Kellogg. The battle of Battle Creek. From pillar to postum (Document part). In: R.M. Deutsch. 1961. *The Nuts Among the Berries: An Exposé of America’s Food Fads*. New York, NY: Ballantine Books. 224 p. See p. 43-45.

• **Summary:** This is a largely unsympathetic and satirical treatment of the health reform work of Dr. John Harvey Kellogg. Page 50 notes that “In 1879 he married Ella Eaton, of Alfred Center, New York. Within ten years, from the burgeoning sales of his books and the food products he was developing, he had earned enough money to build Ella

a twenty-room Queen Anne mansion close to the [Battle Creek] Sanitarium grounds. It was a lavish residence...” Dr. Kellogg drew no salary from the Sanitarium.

“Ella Kellogg kept busy around the Sanitarium. There was not much for her to do around the house, for two reasons. First there were any number of servants. And second, there were no children; Dr. Kellogg had stated publicly that sex bred evil diseases in young men, and therefore he was determined to live without sex as a demonstration that it could be done. Whatever the real reason, John Harvey Kellogg and Ella occupied separate apartments in their home. They were always good friends, and later they adopted a total of forty-two children...”

“We have seen Dr. Jackson’s water-cure establishment offer the first cereal product in *Granula*, crumbled bits of baked wheat. Kellogg had come up with much the same thing. He called it *Granola*. He was sued and changed the name to *Granose*.”

Charles W. Post, a Texan, went to Battle Creek to be cured. After 9 months at the San, Post gave up. He turned to studying the power of the mind, of mind over matter, Christian Science, and the like. Before long he got out of his wheelchair, declared that he was well, and went to work. Before he left the San, he offered to join forces with Dr. Kellogg in making breakfast cereals, but was rejected. In 1892 Post established La Vita Inn on 10 acres in Battle Creek; here the curative forces of both diet and mental healing were combined. Although meat was allowed, the other poisons were not.

Post cured people by telling them they were well—and wrote a book about it. He also wrote “The Road to Wellville,” a pamphlet that he gave away. In 1895 Post started to make Postum Cereal Food Coffee—just add water and serve as a hot drink in place of coffee. He first sold it in paper bags from a handcart in Battle Creek. Then he began to advertise the product widely and his sales soared. Eventually his ads focused on the ability of Postum to prevent “coffee nerves.” In 1898 he launched Grape Nuts, which he also sold as a health food. By 1901 Post had net income of a million dollars from his food business. “Imitators flocked to Battle Creek to stake their claims.” Before long, it was a boom town. Address: Popular scientific and medical reporter.

393. *Mankato Free Press (Minnesota)*. 1962. 60,000 bushels of soybeans processed: Daily at Honeymead. Feb. 23.

• **Summary:** Honeymead Products Co. of Mankato is the “world’s largest processor of soybean products.” Fully 60% of the soybeans grown in Minnesota are processed at this one plant. Honeymead’s soybean products include 44% soybean oil meal, 50% soybean oil meal, Lamisoy soy flour, lecithin, fully refined & deodorized soybean oil, crude soybean oil, toasted soy flour, brew flakes, degummed oil, once-refined oil, shell drain oil, clabber oil, and acidulated soap stock. In addition, Honeymead processes flax only at a recently

purchased company in Minneapolis.

Honeymead's clearing office in Chicago (Illinois) buys, sells, and hedges on the Chicago Board of Trade, where Honeymead has at least 5 men in the pits. A large photo shows the Honeymead office at 320½ Warren Street, where incoming grain prices from Chicago are posted.

Note: Talk with Lowell Andreas. 2003. July 23. In 1962 the Honeymead plant in Mankato was the world's largest single soybean processing plant. However it was Honeymead's only plant, so there were other companies (such as Cargill, ADM, and Central Soya) that processed more soybeans in total at the multiple plants owned by each. The flax processing company that Honeymead had just purchased in Minneapolis was Minnesota Linseed Oil Co. at Fridley, a suburb of Minneapolis; Ray Lindquist was manager before and after Honeymead bought the plant. Most of the soybeans grown in Minnesota and not processed at the Honeymead plant were shipped out of state. Although ADM also had a plant in Mankato, the Honeymead plant got much more and better coverage in local newspapers mainly because Honeymead was a locally owned company that contributed hugely to the Mankato economy, and was about twice as large as ADM. In addition, the publisher of the *Mankato Free Press* and Lowell were close friends.

394. *Mankato Free Press (Minnesota)*. 1962. Mankato firm processes products from soybeans: Archer-Daniels-Midland. Feb. 23.

• **Summary:** Alan D. Colby, manager of the ADM plant in Mankato, Minnesota, says he processes soybeans into better foods, fibers, plastics, coatings, and hundreds of other products. In 1961, the U.S. produced a record 693 million bushels of soybeans, up more than 25% from the previous year, while Minnesota's 56.2 million bushes were up 34% from the 1960 crop.

ADM, a research-minded company, is finding new industrial and nutritional uses for soybeans. ADM's soy flours are used in the Food for Peace program and in milk replacements, their high quality soybean meal is a major ingredient in livestock and poultry feeds, and their soy protein for human foods is used "in the form of dairy products, beefsteaks and chicken." A new ADM soy product, Ardex 550, is a protein supplement for macaroni and spaghetti products and a replacement for dry milk solids in bread.

The major uses for soybean oil are in the manufacture of margarine, shortening, and cooking and salad oils. But it is also a key ingredient in many industrial non-foods products such as paints, varnishes and other protective coatings, of linoleum, oil cloth, foundry core oils, printing inks, synthetic rubber, plastics, and many industrial chemicals with highly specialized uses.

Kaysoy flour, made in Mankato, is the basis for adhesives used mainly by the plywood and wallpaper

industries. "Soybean meal can be further processed into synthetic textiles..."

ADM's plant contributes more than half a million dollars to the Mankato community each year: \$476,000 in wages and salaries, and \$100,000 in real estate and personal property taxes. It also spent more than \$25,000 in Mankato buying supplies.

A large photo shows the ADM plant at Third Ave. and Harper St.

395. Greenlee, Sylvan O.; Pearce, John W. Assignors to S.C. Johnson & Son, Inc. (Racine, Wisconsin). 1962. Epoxide conversion of unsaturated acids. *U.S. Patent* 3,023,178. Feb. 27. 5 p. Application filed 30 June 1955. [13 ref]

• **Summary:** Concerns polyepoxide-unsaturated acid baked coatings. Soy is mentioned twice in this patent, as "soya fatty acids" and "epoxidized soya bean oil" (marketed as Adamex 710 by Archer-Daniels-Midland Co.). Address: Racine, Wisconsin.

396. Chambers, John A. 1962. Tom, Soya and Harry. *Arkady Review (Manchester, England)* 39(1):8-9. March.

• **Summary:** British Arkady makes "full-fat processed soya flour." Gives two typical bread recipes that call for 9 lb 8 oz of wheat flour, 8 oz of processed soya flour, plus lard, cold water and salt. Address: B.Sc., Research Chemist, British Arkady Co. Ltd., Skerton Rd., Old Trafford, Manchester 16, England.

397. *Soybean Digest*. 1962. Nutrition team on world survey of protein needs: Soybean Council of America, Inc. March. p. 20.

• **Summary:** Nutrition specialists from three U.S. soybean processing firms have gone into countries in various parts of the world on a survey of the protein needs of those areas. The soy protein utilization survey is being made under the program of the U.S. Department of Agriculture's Foreign Agricultural Service. The men go as representatives of the Soybean Council of America. They left on their tour in February and will return in March and April.

"Purpose of the trip is to gather information to help other nations solve their nutrition problems, and to determine the market potential for U.S. soy proteins in solution of such problems. The men will study diets, habits, common menus and food distribution patterns in the countries visited. They will confer with government agencies, food industry people, and relief agencies such as Church World Service, the National Catholic Welfare Conference, and the Red Cross. They will visit native families, sampling their foods and menus.

"Members of the team will work through agricultural attaches and the overseas offices of the Council in the countries visited.

"The members of the team and the principal countries

they will survey:

“Louis R. Brewster, operations control manager, General Mills specialty products division, Minneapolis [Minnesota], will visit India.

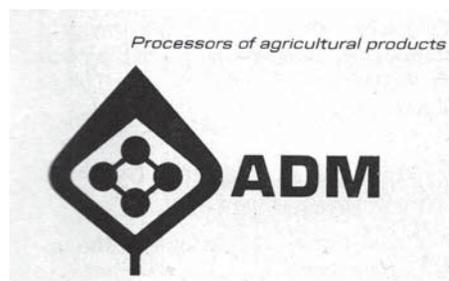

“Promod K. Batra, protein sales department, General Mills, will return to India, his home, as a member of the team.

“Gleason M. Diser, nutritionist agricultural research section, research laboratory, Archer-Daniels-Midland Co., Minneapolis, will visit Turkey.

“James J. Sellner, sales manager, soya specialties department, Archer-Daniels-Midland Co., will visit Egypt.

“Emil A. Buelens, general sales manager for Central Soya’s chemurgy division, Chicago [Illinois], will visit Portugal and Spain.” A portrait photo shows each member of the team.

398. *Soybean Digest*. 1962. Grits and flakes... from the world of soy: Archer Daniels Midland Co. has a new trademark. April. p. 27.

• **Summary:**

“Archer Daniels Midland Co. has introduced a new trademark that will identify uniformly its hundreds of products.

“With

introduction of the new symbol (shown above) the company will call itself ADM.

“Victor P. Buell, ADM vice president and director of marketing, said the new trademark is part of a complete corporate identification program that will bring all of ADM’s diverse operations together under a single banner.”

399. Hayward, J.W. 1962. The increase in U.S. soybeans in recent years: Production and use of soybeans and products have increased more rapidly than any other U.S. industry. *Soybean Digest*. May. p. 17-26. [11 ref]

• **Summary:** Contents: Introduction: Remarkable increase in production since 1924, characteristics which have increased the popularity of U.S. soybeans, importance of mechanized production, organizations currently allied with U.S. soybean production. Soybean oil. Soy lecithin (food and industrial uses). Soybean meal. Soy protein: Soy flour and/or grits. Soy protein as concentrate and isolate (“soy protein concentrate and isolated soy protein”). Industrial use of soy protein products. Conclusions.

“The 70% protein product is called a soy protein concentrate. It is a semi-refined product with a protein content of approximately 70% to 75% on a moisture-free basis, and in a range of 66% to 68% protein on an ‘as is’

basis. This protein concentrate is prepared from special soy flakes by removal of water soluble nonprotein constituents, such as minerals and carbohydrates and certain factors responsible for the undesirable flavor and bitterness sometimes associated with the soy flour or grit products which have not been properly processed. In general, most of the protein present in the original flakes is left in the soy protein concentrate.

“Soy protein concentrate is recommended for use in cereal products, high protein breads, baked goods and prepared bakery mixes. It may be used as a binder in meat products, as a protein supplement in baby and geriatric foods and other dietary specialties. It is useful in adding desirable body and shelf life to caramel and fudge.” Soy protein concentrates sell for about \$0.22 per pound, and isolated soy proteins for about \$0.35 per pound. Photos show: (1) J.W. Hayward (portrait). (2) A ship bound for Puerto Rico being loaded with 30 tons of soybean oil from a tanker. The U.S. “is the world’s largest exporter of fats and oils.” (3) A combine, coming toward the viewer, harvesting soybeans. (4) A few of the food and non-food items that contain soybean products: Lecithin, cake mix, shortening, shampoo, margarine, floor enamel, dessert topping, lipstick, gasoline. (5) Swine in wooden pens at the A.E. Staley Mfg. Co. research center. Swine are a major consumer of soybean meal in the United States.

Tables show: (1) Approximate Cost of 1,000 calories from 3 sources: Soybean oil 2.2 cents. Wheat flour 3.2 cents. Rice 3.8 cents. (2) Typical fatty acid composition of soybean oil, hydrogenated soybean oil, and some other vegetable oils (cottonseed, corn, peanut, safflower, olive). (3) Approximate analysis of the natural or crude grades of lecithin: 35% soybean oil, 20% phosphatidyl choline, 20% phosphatidyl ethanolamine, 20% inositol phosphatide, 5% sugars, sterols, moisture, etc. (4) Estimated amount of soybean meal used in different types of livestock and poultry feeds. (5) Production of protein concentrates in the form of cake and meal, as from soybeans, cottonseed, milk products, tankage and meat scraps, linseed, etc.

400. Archer Daniels Midland Co. 1962. High protein bread: Cornell (McCay) bakery formula (Leaflet). Minneapolis, Minnesota. 2 p. Single sided. 28 cm. [1 ref]

• **Summary:** Describes how to make this bread on a commercial scale using the sponge method. First the sponge is made from flour, water, and yeast. Then the dough is made, containing the following ingredients: Flour (northwest) 25 lb. Water 25 lb. Yeast 12 oz. Yeast food 4 oz. Salt 2 lb, 4 oz. Sugar 2 lb, 4 oz. Nonfat dry milk solids 8 lb. Soy flour (full fat or defatted) 6 lb. Shortening 3 lb. Wheat germ 2 lb. Then gives mixing times, temperature set and time, baking procedure.

403. Budde, Walter M., Jr. Assignor to Archer-Daniels-Midland Co. (Hennepin County, Minnesota; a corporation of Delaware). 1962. Hydrophobic sheet material and method of making the same. *U.S. Patent* 3,043,717. July 10. 6 p. Application filed 17 Nov. 1958. [4 ref]

• **Summary:** Concerns waterproof polyvinyl alcohol films. "This invention relates to improved moisture resistant and essentially water and vapor proof laminations of flexible sheet materials and primarily polyvinyl alcohol film material having an organic film forming polyester chemically and intermolecularly bonded thereto, and includes the process of obtaining the same. More particularly, the invention relates to providing the art with improved water and moisture resistant polyvinyl alcohol films and the process of providing an in-situ polymerization therewith of a co-polymeric polyester

film former produced of selective epoxy and polyepoxide (or oxirane compounds) having internal oxirane groups and obtained by epoxidizing long chain polyhydric alcohol esters of fatty acids, fatty oils and derivatives thereof, which are obtained from vegetable, animal and marine sources, including mixtures thereof, under film forming reactive conditions with strong polybasic anhydride's.

"This application is a continuation in-part of my copending application for 'Protective Film Forming Composition and Resultant Films,' Serial No. 709,791 and further reference is made to the copending application for "Resins and Method of Making the Same," Serial No. 762,805, now US. Patent No. 2,993,920, in which I am co-inventor.

Note: Soy is mentioned 13 times in this patent, as "soybean oil," "epoxidized soybean oil having 6.3% oxirane oxygen" and "epoxy soybean oil material." Address: Minneapolis, Minnesota.

404. Hayward, J.W.; Diser, G.M. 1962. Proteine di soia come farina e semolino di soia, per il miglioramento dello standard di alimentazione in molte parti del mondo [Soy protein as soy flour and grits for improving dietary standards in many parts of the world]. *Rivista Italiana delle Sostanze Grasse* 39(7):353-61. [23 ref. Ita; eng; fre; ger; spa]

• **Summary:** Soybean flour and soybean grits, a source of inexpensive high quality protein, to supplement cereal foods. Address: Soybean Council of America; Research Dep., Archer Daniels Midland Co.

405. *Soybean Digest*. 1962. Minneapolis a processing center. July. p. 8.

• **Summary:** Three of America's leading soybean processing firms are headquartered in Minneapolis, Minnesota: Archer-Daniels-Midland Co., General Mills, and Cargill, Inc.

"ADM Operations: Archer Daniels Midland Co., one of the largest soybean processors, has its general offices at 733 Marquette Ave., Minneapolis.

"The company presently operates three processing plants—two at Decatur, Illinois, including the former Spencer Kellogg plant there which ADM leased last November, and the third at Mankato, Minnesota. A fourth processing plant is under construction at Fredonia, Kansas, in the heart of a fast-growing soybean producing area.

"ADM's first plant was opened in 1929 and 5 years later the company introduced the continuous solvent extraction process in this country. The company produces a full line of industrial and edible soy products, including oils, flours, meals, lecithin and isolated soy proteins.

"General Mills: General Mills' soybean processing activity is now concentrated chiefly at Belmond, Iowa, where a very efficient solvent extraction plant produces basic oils and meals as well as refined soybean oils, soybean lecithin and upgraded high protein food specialties. Management and

sales direction headquarters for oilseeds operations are in the specialty products division located at the new general office building of General Mills, Inc., 9200 Wayzata Boulevard, Minneapolis.

“For 34 years, General Mills has grown and prospered through increasing ability to serve well the people who make its business possible—its customers. Growing popularity of protein foods has increased the demand for soy proteins. New uses are now being developed for Toasted Soy Protein and Multi-Purpose Food which together provide one of General Mills most direct contributions to a better life for all mankind. Today, Multi-Purpose Food is distributed on ‘hunger fronts’ throughout the world and both of these General Mills products are used as components of survival kits for the nation’s Civil Defense program. MPF consists of golden, protein-rich soy grits combined in a scientific blend with essential vitamins and minerals.

“Cargill in Minneapolis: Minneapolis is headquarters for Cargill, Inc.’s vegetable oil processing, merchandising and research operations.

“Buying and selling of raw beans, oil and oil meal through the vegetable oil division’s 17 offices and 10 processing plants is directed from Cargill’s executive offices near suburban Wayzata and from offices in downtown Minneapolis.

“Also near Wayzata is the firm’s research center which houses analytical, biochemistry, organic chemistry, vehicle research and oil technical services laboratories.

“At nearby Savage, Minnesota, on the Minnesota river, is Port Cargill, a multi-transport terminal through which is handled soybeans and oil, grain and various commodities.

“Cargill’s solvent extraction soybean plant at Port Cargill has an annual crushing capacity of 5 million bushels and storage for 1.2-million bushels.”

Small portrait photos show: (1) James W. Stowell, manager of ADM’s vegetable oil sales. (2) M.D. “Pete” McVay, vice president in charge of Cargill’s vegetable oil division.

406. *Soybean Digest*. 1962. Soybean Council of America, Inc.: The Second Annual Staff Conference. July. p. 18-20.

• **Summary:** A large photo shows the entire staff of the Soybean Council of America at Waterloo, Iowa, June 4-15, standing in four rows. “Since the Council was formed a little over 5 years ago, business and market development has increased to where exports [of soybeans and products] amount to over \$1.5 billion per year from the United States. The International Operations Office of the Soybean Council is now operating in over 42 countries throughout the world. For each person is given the name, position, country, and city. These include: Andre Tawa of Egypt. Dominic Marcello and Dr. Fred Marti, international relations, Rome, Italy. Howard L. Roach, SBC president, Waterloo, Iowa. Dr. James W. Hayward, SBC director of nutrition, Minneapolis,

Minnesota. Dr. Carlos Giraldo, Columbia. Reginald Ion Wood, United Kingdom. Vasfi Hakman, Turkey.

Dr. Adolino DiGiorgio, Italy. Dr. Guillermo Ivanissevich, Peru. Alfred S. Kohl, Region III, Rome. R.W. “Robert” Fischer, assistant to the president, Waterloo. Paul D. Vermette, manager, SBC plans and evaluation div., Rome.

Rustom S. Patel, Pakistan. Maharajkumar Virendrasingh, India. Elvind Sondergaard, Denmark. Roger Campbell, budget and financial assistant.

Juan de Madariaga, France. Javier de Salas, region II, Rome. Gonzao Riviera, Spain. Frank W. McWalters, Rome. William A. Luykx, Belgium. Karl W. Fangauf, Germany. Volorus H. Hougen, FAS [USDA’s Foreign Agricultural Service], Washington, DC. Dr. Reynold P. Dahl, special consultant on the Common Market to SBC, Brussels, Belgium.

In addition, there is a full page of candid photos from the conference and a half page of photos of the SBC’s activities in Italy, Spain, England, Norway, and Pakistan.

407. Budde, Walter M. Assignor to Archer-Daniels-Midland Co. (Minneapolis, Minnesota; a corporation of Delaware). 1962. Protective film forming compositions and resultant films. *U.S. Patent* 3,050,480. Aug. 21. 7 p. Application filed 20 Jan. 1958. [7 ref]

• **Summary:** Concerns hard coatings / films from epoxidized drying oils. “This invention relates to dry, thin, tough, hard, adherent, resilient flexible oil film coatings prepared from polyepoxy fatty oil derived compounds of 12 or more carbon atoms in the fatty acid radical, compositions therefor, and their method of production. More particularly the invention relates to an improvement in the preparation of clear and pigmented protective coatings from polyepoxidized vegetable oils and polyepoxidized esters derived therefrom.”

Note: Soy is mentioned 30 times in this patent, as “epoxidized soybean oils,” “polyepoxidized soybean oil,” “soya bean oil,” “polymerized allyl soya fatty acid ester,” “medium oil soya acid modified alkyd resin,” “epoxy soybean oil,” “polyepoxy soybean oil,” “soybean acids,” “polyallyl epoxy soyate (prepared by the conventional peroxide-catalyzed polymerization of allyl epoxy soyate)” and “epoxidized glycol disoyate.” Address: Minneapolis, Minnesota.

408. Skidmore, Gerald. 1962. Use of soy protein in coating paper and board. *Paper Trade Journal* 146(35):32-34. Aug. 27. (Chem. Abst. 58:11569b). [3 ref]

• **Summary:** Soy protein is one of the most important coating binders. Discusses the range of viscosities, preparation of high solids coatings, protein-latex combinations, use of insolubilizing agents, etc. Address: Archer Daniels Midland Co., Cincinnati, Ohio.

409. *Soybean Digest*. 1962. ADM names Fredonia soybean

plant staff. Aug. p. 35.

• **Summary:** Don O. Fink will be production manager of ADM's new soybean processing plant in Fredonia, Kansas—according to Raymond E. Fiedler, manager of the ADM soybean division.

On Oct. 1961 ADM began operating Spencer Kellogg & Sons' former plant in Decatur, Illinois, under a lease.

410. Archer Daniels Midland Co. 1962. Annual report for the year ended June 30, 1962. General offices: Minneapolis, Minnesota. 14 p.

• **Summary:** Net sales and other operating income: \$245,896,523, up 15%. Net earnings: \$4,421,268, up 18%. Operating profit: \$3,626,528, up 19%. Employees: 3,685. Capital expenditures increased dramatically to \$24,771,820.

“In the Soybean Division, we closed an inefficient mill in Ohio, entered into a long-term lease for a mill in Decatur, Illinois, and started construction of a new production unit in Kansas.” The Soybean Division is part of the Agricultural Group. The company has soybean plants at Decatur, Illinois (2), Mankato, Minnesota, and Fredonia, Kansas. “A new soy protein [concentrate] product, Ardex 700, was introduced for supplementing dietary and specialty foods, as well as for protein fortification of a wide variety of baked goods, cereals, geriatric foods and meat products.” The company, whose report now sports a new 4-cornered logo, now writes its name without hyphens and describes itself as “Processors of agricultural and chemical products.” Address: Minneapolis, Minnesota.

411. Chambers, John A. 1962. Soya as a foodstuff. *Arkady Review (Manchester, England)* 39(3):39-41. Sept.

• **Summary:** Discusses briefly soy oil, defatted soya flour, American Multi-Purpose Food (50% protein, 1% fat, 31% carbohydrate), soy sauce, tempeh, and tofu. Address: Research Chemist, British Arkady Co. Ltd., Skerton Rd., Old Trafford, Manchester 16, England.

412. *Soybean Digest*. 1962. Dedicate ADM research center to T.L. Daniels. Nov. p. 26.

• **Summary:** At a ceremony on Oct. 31, the new Archer Daniels Midland Co. research center in suburban Bloomington near Minneapolis, Minnesota, was dedicated to Thomas L. Daniels, chairman of the board and former president. The center has 82,000 square feet of floor space.

413. Marzocchi, Alfred; Rammel, G.E.; Charon, C.W. Assignors to Owens-Corning Fiberglas Corp. (A corporation of Delaware). 1962. Finish for staple glass fibers and yarns manufactured thereof. *U.S. Patent* 3,066,383. Dec. 4. 3 p. Application filed 14 Feb. 1957. [10 ref]

• **Summary:** In the making of glass fibers, such as textile fabrics formed of strands, yarns, threads, etc., it is important to provide a coating which serves as a finish on the glass

fiber services to provide abrasion resistance and flexural strength while at the same time imparting an attractive appearance, colorability, hand feel, and good draping properties.

Example 1 uses 10% by weight of a soybean oil modified phthalic acid-glycol resin. Example 2 uses 20% by weight of a modified alkyd resin (Aroplaz 1400—made by Archer-Daniels Midland Co.). Address: 1. Pawtucket, Rhode Island; 2. North Attleboro, Massachusetts; 3. South Attleboro, Massachusetts.

414. Davis, P.N.; Norris, L.C.; Kratzer, F.H. 1962. Iron deficiency studies in chicks using treated isolated soybean protein diets. *J. of Nutrition* 78(4):445-53. Dec. [18 ref]

• **Summary:** The isolated soy protein used was ADM C-1 Assay Protein, Archer-Daniels-Midland Co., Cincinnati, Ohio.

“Reid et al. (1956) showed that molybdenum in isolated soybean protein was unavailable to the chick and that by use of this protein the dietary requirement was unfulfilled.” Address: Dep. of Poultry Husbandry, Univ. of California, Davis, CA.

415. *Soybean Digest*. 1962. New ADM research center. Dec. p. 24.

• **Summary:** “A promising area for Archer Daniels Midland Co. research is the fabrication of new foods from pure vegetable protein, said ADM vice president Dr. James C. Konen in an address at the dedication of ADM's new Thomas L. Daniels Research Center at Bloomington, Minnesota, Oct. 31.

“‘Ground beef’ that looks and tastes like the real thing but is made from the soybean already is being test marketed, Dr. Konen said. In the laboratory, ADM has gone even further and turned out ‘baked ham’ and ‘turkey breast’ from soy protein.”

A photo shows the new center which has more than 100 laboratories, offices, and conference rooms, and facilities for 260 scientists, engineers and technicians.

416. *Soybean Digest*. 1962. Francis Calvert joins Ralston Purina staff. Dec. p. 11.

• **Summary:** “Francis E. Calvert, nationally known chemist in the industrial protein field, has joined the staff of the special products research laboratories for the Ralston Purina Co. Mr. Calvert will headquarter in the company's research laboratories in St. Louis and will work with W.B. Brew, manager of the special products research laboratories. He will be concerned with research in the utilization and production of isolated soy protein for industrial and edible purposes. He will also engage in customer service work. He assumed his new duties Nov. 5.

“Since 1957, Mr. Calvert has been technical director, Evendale operations, for Archer Daniels Midland Co. at

Evendale, Ohio. Prior to that he was research director for the Drackett Co. in Cincinnati. His principal fields of research have been organic and polymer chemistry.”

417. **Product Name:** Granose Soya Beans in Brine.  
**Manufacturer’s Name:** Granose Foods Ltd.  
**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.  
**Date of Introduction:** 1962.  
**Ingredients:** Incl. soybeans, water, salt.  
**Wt/Vol., Packaging, Price:** Canned.  
**New Product–Documentation:** Letter from Granose. 1981. Lists products they are presently producing that contain soy. Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1962. It has been discontinued.

418. Archer-Daniels-Midland Co. 1962. Your favorite recipes “nutritionally seasoned” with nature’s most perfect food, Hi Protein Soy. Minneapolis, Minnesota: ADM. Summarized in Soybean Digest, Feb. 1962, p. 26. \*  
**• Summary:** This booklet contains recipes using soy flour and grits. Address: Archer-Daniels Midland Co., 700 Investors Building, Minneapolis, Minnesota.

419. Hayward, James W. 1962. Progress report of committee on quality and processing guide for edible soy flour and soy grits. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 219-21.

**• Summary:** Committee members:

“Mr. L.E. Allen, UNICEF

“Dr. J.C. Cowan, Northern Utilization Research and Development Division

“Mr. G.M. Diser, Archer-Daniels-Midland Company

“Mr. F.H. Hafner, General Mills Inc.

“Dr. Max Milner, UNICEF

“Dr. A.K. Smith, Northern Utilization Research and Development Division

“Mr. R.L. Terrill, Spencer Kellogg and Sons

“This project was initiated back in August of 1960 by the Minneapolis office of the Soybean Council of America at the request of Dr. Max Milner, Senior Food Technologist, Food Conservation Division, UNICEF, New York, N.Y. The purpose intended for this guide was to establish quality standards for soy flour and soy grits that could be followed in producing these soya products in quantity for possible use as a major dietary source of protein for young children and/or a major source of supplementary protein in cereal-base and other types of foods for children and adults. This guide has also had as its purpose the matter of acquainting various people identified with WHO / FAO / UNICEF-assisted programs with the identity and many virtues of the particular

soy flours and soy grits that are most likely to be used for the feeding programs as indicated.

“The first rough draft of this guide was issued and circulated to members of the Protein Products Committee (Soybean Council of America, Inc.) on July 11, 1961.

“This guide has now received initial clearance of the U.S. soy flour processors through the Protein Products Committee of our ‘Council,’ and it will be submitted presently in its corrected form to our Special Collaborative Committee which is identified with this project, as listed above.

“This ‘guide,’ still tentative as it now stands, contains the following three distinctive sections:

“1. General, with introduction, definitions, and types of soy flour and grits, descriptions and flow charts covering processing, composition, and recommended uses.

“2. Analytical Methods—source of official and tentative procedures for many routine and special determinations are cited and in several instances specific procedures are enclosed with the guide. These procedures cover determination of general composition and methods under ‘quality control,’ such as urease activity, water dispersible protein, protein bioassays with laboratory animals; sanitary analyses, including bacteriological procedures, procedure for acid-insoluble ash and procedure for detecting presence of possible insect and rodent contamination. This portion also deals with packaging aspects.

“3. This is a separate section containing product specifications for each type of say flour and/or soy grits which are considered to have application in these feeding programs.

“The soya products that are now covered by specifications are as follows:

“Full-fat soy flour (general purpose)

“Defatted soy flour (general purpose)

“Defatted soy flour (toasted)

“Defatted soy grits (general purpose)

“Defatted soy grits (toasted)

“Detailed information is supplied for each soya product, as mentioned, under the following categories:

“Definition

“Analyses, including particle size

“Special Considerations:

“I. Nutritional or Functional Aspects

“PDI (protein dispersible index)

“Urease Activity

“II. Sanitation Aspects

“Bacteriology—total bacterial plate count

“Acid-insoluble ash

“Insect and rodent contamination

“Physical Properties

“Color

“Odor

“Taste

“Texture

“Recommended Uses

“Discussion Following Hayward Report on Processing Guide

“Dr. Hilbert commented that one of the properties which appears to have been overlooked is storage life under specified conditions of temperature and time. He referred particularly to a case where canned food stored on the beaches in the sun in Egypt showed definite deterioration and created a very bad impression when it was fed to people and they became sick.

“Mr. Hafner commented that storage life of soy flour is unusually long, far more stable than milk products, even at 140° F. if kept sealed. In polyethylene bags there has been no deterioration up to 5 years if kept dry and free from rodents and insects. The University of Minnesota has a relative humidity study, reprints of which are available.

“In India after 7 weeks’ storage at 90°-104°F. at a relative humidity well over 75 percent there was a slight softening and loss of crispness of samples stored in open bowls protected only by refrigerator covers at night, but no deterioration. This applied to both extracted and full-fat flours if the lipase had been destroyed. Until a few months ago no stable full-fat flour was being sold. Now we have stable products.

“In paying tribute to Dr. Hayward and his committee, Dr. Milner indicated that the problem is half solved if it can be defined. This meeting and the Processing Guide have defined our problems and brought them into proper focus.” Address: Chairman, Director of Nutrition, Soybean Council of America, 304 Baker Building, Minneapolis 4, Minnesota.

420. *Mankato Free Press (Minnesota)*. 1963. 3 million gallons soybean oil spill when tank splits: Oil could clog pipes, pumps. Jan. 23. p. 1.

• **Summary:** A large photo shows that the soybean oil, which burst out of a tank at the Honeymead Products Co., had such force that it pitched one railroad car off its tracks onto the ice of the nearby Blue Earth river, and knocked another railroad car onto the river bank. The tidal wave of oil covered the ice on the river. The tank that burst is visible at right.

421. *Mankato Free Press (Minnesota)*. 1963. Street crews fight to clear sticky soybean oil ooze. Jan. 23. p. 1-2.

• **Summary:** A photo shows one car on Given street up to its hubcaps in soybean oil.

422. *Mankato Free Press (Minnesota)*. 1963. Hexane blast big concern, not the oil. Jan. 23. p. 1-2.

• **Summary:** The Mankato fire department rushed to guard against the possibility that oil from Honeymead’s ruptured tank might cause a fire or explosion at the company’s hexane processing plant.

423. *Mankato Free Press (Minnesota)*. 1963. Sea of oil isolates 4 in family. Jan. 23. p. 2.

• **Summary:** Four members of Mel Herman’s family were stranded in their dwelling at 416 Given st. when 3 million gallons of soybean oil burst Honeymead’s ruptured tank. Mr. Herman, who is employed as a trucker by Honeymead, was in Minneapolis on business at the time of the accident.

424. Swanson, Bob; Gravenstein, Ed. 1963. Loss could reach \$2 million. *Mankato Free Press (Minnesota)*. Jan. 23. p. 1-2.

• **Summary:** Honeymead’s huge steel tank ruptured at 9:10 a.m. in 20-below zero cold, injuring one man and flooding several blocks surrounding the company in southwest Mankato. The lost oil is valued at \$2.1 million, according to Lowell Andreas, executive vice president of Honeymead. He said the firm is adequately protected against the loss by insurance. All 65 of Honeymead’s employees are being used in the salvage and cleanup. Address: Staff writers.

425. *Mankato Free Press (Minnesota)*. 1963. Honeymead mop-up to take a week. Jan. 24. p. 1-2, 8.

• **Summary:** A large photo shows an aerial view of the Honeymead plant in Mankato. ‘X’ marks the spot where the huge steel tank, filled with 3 million gallons of soybean oil, stood before it burst. Snow is on the ground around the plant. More photos appear on page 8.

426. *Soybean Digest*. 1963. New ADM plant on stream. Jan. p. 26.

• **Summary:** A photo shows ADM’s new plant and elevators in Fredonia, Kansas. With a capacity of 6 million bushels a year, it is now “on stream,” producing crude soybean oil for both edible and industrial uses, and soybean meal. Production manager is Don O. Fink, who joined ADM in Fredonia in 1929.

Douglas Forsberg is merchandising manager for the Fredonia plant, and Elnathan S. Anderson and James W. Lindsay are the soybean traders in the plant’s merchandising operations.

427. *Chemurgic Digest*. 1963. Special board meeting in New York: Andreas and Corey head Chemurgic Council. Jan/Feb. p. 1.

• **Summary:** “One of the purposes of the meeting was to elect a Chairman of the Board, to replace Wheeler McMillen who had resigned... Dwayne Andreas formerly president of the Council since 1958 was elected Chairman of the Board. Mr. McMillen is to remain on the Board and to be a consultant.”

A photo shows a youthful Dwayne O. Andreas.

428. Archer Daniels Midland Co., Soybean Div. 1963. Look what ADM is doing with soybeans (Ad). *Soybean Digest*. March. p. 45.

• **Summary:** This full-page ad states: “ADM research with isolated proteins extracted from soybeans is producing many new or improved products for your use today... and tomorrow...”

“Your future products, whether they be foods or feeds, adhesives or additives, paints or papers... might be better made at lower cost through ADM’s processing and research with soybeans.” Address: Minneapolis 40, Minnesota.

429. *Mankato Free Press (Minnesota)*. 1963. Interior department studies effects of river oil pollution. April 21.

• **Summary:** Secretary of the Interior Stewart L. Udall said that his department, together with the Fish and Wildlife Service are making intensive efforts to pinpoint the immediate and long-term effects on wildlife from the [Honeyamead soybean oil] spill that has now polluted the Mississippi and Minnesota Rivers. That spill “has already killed 2,000 waterfowl, plus an undetermined number of fish, beavers, muskrats and other wildlife.” Udall said his department has an obligation “to protect fully the national interest in such cases of large-scale pollution.”

430. *Mankato Free Press (Minnesota)*. 1963. Oil film still on river here, say officials. April 21.

• **Summary:** A light film of soybean oil (from the rupture of a Honeyamead tank in January) is still floating on the “Minnesota river,” according to federal and state fish and game officials.

431. ADM (Archer Daniels Midland Co.), Soybean Div. 1963. Look what ADM is doing with soybeans (Ad). *Soybean Digest*. April. p. 33.

• **Summary:** A photo on the top two-thirds of the page shows many delicious-looking foods. The text on the bottom one-third states:

“ADM research with isolated proteins extracted from soybeans is producing many new or improved products for your use today—and tomorrow.

“Long one of America’s largest and most efficient processors of soybeans, ADM now boasts four plants strategically located for procurement and processing of premium soybean crops. Special shipping facilities assure economical, dependable delivery anywhere in the world. Your future products, whether they be foods or feeds, adhesives or additives, paints or papers... might be better made at lower cost through ADM’s processing and research with soybeans.

“Contact your nearest ADM office or agent—now located in every major U.S. city and in 40 foreign markets.”

Note: According to the *Soybean Blue Book*, 1964 (p. 109), Central Soya is the only maker of “Edible isolated proteins.” ADM is not mentioned as a maker anywhere. Address: Minneapolis 40, Minnesota.

432. *Mankato Free Press (Minnesota)*. 1963. Army engineers seek to solve oil problem: In Minnesota River. April.

• **Summary:** Army engineers and the Minnesota department of health are studying the pools of crude soybean oil moving downstream towards Minneapolis in the “Minnesota river” after a storage tank broke at Honeyamead Products Co. last January. A major concern is to prevent the oil from entering the Mississippi river south of Minneapolis. Honeyamead will have to bear all expenses involved.

433. *Mankato Free Press (Minnesota)*. 1963. Kato ‘highball’ starts upstream. April.

• **Summary:** “Soybean Oil on the Rocks,” Mankato’s most famous highball, heralded the arrival of spring today, reaching a point between St. Peter and Le Sueur. Huge golden flows of soybean oil started to move downstream in the “Minnesota river” as the ice began breaking up. The golden-to-orange oil was part of 3 million gallons that burst from a tank at Honeyamead Products Co. in Mankato on Jan. 23. From the “Blue Earth river” beside the plant, it flowed into the Minnesota river, and will proceed toward the Mississippi river unless stopped.

434. *Mankato Free Press (Minnesota)*. 1963. Guardsmen pulled one section of oil dam out into the river to connect it with another (Photo caption). April.

• **Summary:** This photo shows burlap bags, stretched between two steel cables. The cables, one 4 inches above the water and the other 18 inches below, are supported by empty oil drums. A motor boat is pulling the floating dam onto the Mississippi River two miles above Red Wing, Minnesota. Oil stopped by the bags will be scooped into boats, taken ashore, and burned. The oil [some of it from Honeyamead Products Co.] has killed an estimated 10,000 waterfowl.

435. *Soybean Digest*. 1963. April advertisers. April. p. 3.

• **Summary:** This is the earliest list of advertisers seen in *Soybean Digest*. They are list alphabetically.

436. Archer Daniels Midland Co. 1963. Annual report for the year ended June 30, 1963. 733 Marquette Ave., Minneapolis, Minnesota 55440. 20 p. 28 cm.

• **Summary:** Net sales and other operating income: \$271,285,056. Earnings before taxes: \$6,534,521. Net earnings: \$3,854,275. Current assets: \$85,799,752. Current liabilities: \$31,540,819.

On page 20 is a “Ten-year summary of financial and operating data.” 1963 showed a new upswing in all important financial numbers—except net earnings (profit) which fell from \$4.421 million in fiscal 1962 to \$3.854 million in fiscal 1963. Address: Minneapolis, Minnesota.

437. *Arkady Review (Manchester, England)*. 1963. HI-SOY in confectionery. 40(3):42-46. Sept.

• **Summary:** Hi-Soy, is a processed [full-fat soya] flour. Recipes are given for cake, general-purpose mix and pies.

438. Chambers, John A. 1963. Soya in nutritional foods. *Arkady Review (Manchester, England)* 40(3):47-50. Sept.

• **Summary:** Soybeans which are high in protein and low in carbohydrates lend themselves to both specialty diets (slimming foods) and to food for those suffering from milk allergies, coeliac disease [celiac] and phenyl ketonuria. A photo (p. 49) shows “Some specialty foods containing soya.” These include Metrecal [spelled Metrecal in the USA] powder and wafers (made by Mead Johnson), Ovaltine, Farley’s Gluten Free Biscuits, and Limmits (“The meal in a biscuit that helps you slim”). Address: BSc, Research Chemist, British Arkady Co., Ltd.

439. Adolphson, Lynn C. 1963. Le développement et l’emploi de la farine de soja dans l’alimentation humaine [The development and use of soybean flour in human nutrition]. *Revue Francaise des Corps Gras* 10(12):649-59. Dec. Presented at a conference on Le Soja et les Produits Derives, 2 Oct. 1963 in Paris. [7 ref. Fre]

• **Summary:** Includes composition, properties, and nutritive value. Address: Archer Daniels Midland Co., Minneapolis, Minnesota.

440. Anderson, Loyd V. 1963. The U.S. soybean story.

*Chemurgic Digest*. Nov/Dec. p. 3-4.

• **Summary:** “Soybean acreage was stimulated by the droughts of the 1930’s and by corn acreage allotments which made land available for beans... In 1929 a soybean laboratory was established in Ohio to conduct research aimed at the development of varieties high in oil and protein. The U.S. Regional Soybean Industrial Products Laboratory was located at Urbana, Illinois in 1936. It carried on industrial utilization research and, in cooperation with the experiment stations of the North Central states, it also conducted agronomic studies in the development of improved varieties.”

Soya Lecithin “has become almost the traditional example of Chemurgy whereby an agricultural by-product of little value is upgraded and is found to have value as the result of scientific investigation. Lecithin is nature’s wetting agent...” In pharmaceuticals, lecithin is a source of choline and inositol. “In the cosmetic industry, it is again a satisfactory and safe emulsifying agent. In soaps, it improves lather stability and represses alkalinity. In paint products, it acts as a wetting and dispersing agent and improves milling, paint leveling and brushing qualities. In rubber, it acts as an antioxidant and as a dispersing agent for the filler. As an additive to lubricating oils, it helps counteract bearing corrosion and otherwise lengthens the life of the product. In gasoline, it is an anticloud and anti-corrosive agent. It helps produce softer, silkier leather products.” Address: Honeymead Products Co., Mankato, Minnesota.

441. *Arkady Review (Manchester, England)*. 1963. Robert Whympier [obituary]. 40(4):58-59. Dec.

• **Summary:** “Robert Whympier was the man who spotted Arkady as a winner for British bread. Robert Kennedy Duncan, after whom Arkady is named, formulated Arkady as a completely new type of ingredient for bread in the U.S.A. but it is Robert Whympier who was mainly responsible for its introduction to Britain.

“Whympier was one of a small band of chemists in the food industry in Great Britain prior to World War I.”

“Mr. Whympier was one of the original directors of the British Arkady Co. Ltd. when it was formed in 1921 and remained on the Board until his death, i.e. for more than 40 years.

“The Arkady Review, which commenced publication in 1924, was Mr. Whympier’s idea and in its early years he was a frequent contributor.”

“Another activity which was a ‘must’ to a man of Mr. Whympier’s outlook was scientific research for better products for making better bread. With this end in view a laboratory and test bakery were included as an integral part of the first small Arkady factory and have remained a vital part of the Arkady Company’s activities ever since.

“It was at the instigation of Mr. Whympier that much research was devoted to the preparation of soya flour for

breadmaking. Soya flour of the processed type had been sold for some years in Great Britain but the special value of the enzyme-active flour which we now call Do-Soy was not appreciated by the baking trade until 1937 when we put it on the market. The usefulness of enzyme-active soya flour in bread is borne out by the estimate that 75% of the bread made in Great Britain to-day contains soya flour.”

“He retired to Italy several years ago and he died in Rome in October. He will be kindly remembered as an adventurous spirit always looking for progress.”

442. Chambers, J.A. 1963. Some thoughts on soya in cake coverings. *Arkady Review (Manchester, England)* 40(4):59-62. Dec.

• **Summary:** Hi-Soy is a full-fat soya flour. Note: The previous article states (p. 59) that an estimated 75% of the bread made in Great Britain today contains soya flour. Address: B.Sc., Research Chemist, British Arkady Co. Ltd., Skerton Rd., Old Trafford, Manchester 16, England.

443. **Product Name:** Hi-Soy (Full-Fat, Heat-Treated Soya Flour).

**Manufacturer's Name:** British Arkady Co. Ltd., Arkady Soya Mills.

**Manufacturer's Address:** Old Trafford, Manchester 16, England.

**Date of Introduction:** 1963.

**Ingredients:** Soybeans.

**Wt/Vol., Packaging, Price:** 25 kg multi-ply sacks with a protective moisture-proof layer.

**How Stored:** Shelf stable.

**Nutrition:** Protein 41.0%, oil 20.0%, phosphatides (lecithin) 2.0%, sugars 10%, other carbohydrates 13.7%, cellulose 2.3%, ash 4.5%, moisture 6.5%.

**New Product-Documentation:** *Arkady Review (Manchester, England)*. 1963. “HI-SOY’ in Confectionery.” 40(3):42-46. This is a processed soy flour. Recipes are given for cake, general-purpose mix, and pies; Ad in *Food Manufacture (London)*. 1967. Ingredient Survey. Jan. p. 13. “Would Mrs. Johnson connect high jinks with Hi-Soy?” This section bound after Jan. 1967 issue (Vol. 42).

Orr and Adair. 1967. Tropical Products Institute Report G-31. “The production of protein foods and concentrates from oilseeds.” p. 56. Hi-Soy is a full-fat soya flour containing 20% fat and 40% protein. Isabel James. 1972. *Vegetarian Cookery*. p. 78. Soya sausage roll filling uses Hi-soy soya flour.

Form filled out by Peter Fitch of British Arkady. 1983. He says Hi-Soy is a full-fat soya flour. It has no enzyme or urease activity. The particle size is 100 mesh. Soya Bluebook. 1986. p. 85. Now spelled “Hisoy.”

444. Chambers, J.A. 1964. The bleaching action of soya. *Arkady Review (Manchester, England)* 41(1):3-6. March.

• **Summary:** “An examination of the patent literature of 1930 reveals some of the very early work done in the Arkady laboratories to effect the natural bleaching of flour through the agencies of high speed mixing and enzyme-active soya flour. The relevant [British] patent numbers covering this work are B.P. 342,697; 343,193 and 343,677. Enzyme-active soya flour, or an aqueous extract of this flour, was added at a level of up to 2% of the wheat flour weight, to a dough made from bleached or unbleached flour. A dough so made was subjected to a fast mixing action which continuously exposed varying parts of the dough to the oxygen of the atmosphere. Oxygen was transferred to the wheat flour, via the soya flour, bringing about the necessary bleaching effect.” Address: B.Sc., Research Chemist, British Arkady Co. Ltd., Skerton Rd., Old Trafford, Manchester 16, England.

445. **Product Name:** Granogen (Powdered Soymilk for Adults).

**Manufacturer's Name:** Granose Foods Ltd. (Importer-Marketer). Made in the USA by Loma Linda Foods.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England. Phone: 0923-672281/2.

**Date of Introduction:** 1964 April.

**Ingredients:** Soya bean solids, corn syrup, soya oil, sugar, salt, lecithin, vitamins.

**Wt/Vol., Packaging, Price:** 1 lb can. Retails for 9 shillings 6 pence (4/64, England).

**How Stored:** Shelf stable.

**Nutrition:** Protein 22.5%, carbohydrate 46.8%, fat 22.6%, ash 4.2%, moisture 3.9%.

**New Product-Documentation:** *The British Vegetarian*. 1961. March/April. p. 93. “Soya milk for household use.” Granose Foods will soon be in a position to supply two varieties of spray-dried soya milk, Soyalac and Soyagen, made by one of their associated companies, Loma Linda Food Company in Arlington, California. Soyalac is specially prepared for infants, whereas Soyagen is for general use. A table compares the nutritional composition of the two products.

*The British Vegetarian*. 1964. March/April. “Granogen: Soya Bean Milk Now Available.” “Readers will be glad to know that a really delicious general purpose soya bean milk is now available in Britain and will shortly be on sale in Health Food Stores.” Made in America, Granose is imported and distributed to the trade by Granose Foods Ltd., Stanborough Park, Watford, Herts. Fortified with vitamin B-12, this fine white powder is sold in a 1-lb can for 9 shillings 6 pence.

Orr and Adair. 1967. Tropical Products Institute Report G-31. “The production of protein foods and concentrates from oilseeds.” p. 72. Soyalac is made in both liquid and powder form by Loma Linda Foods. The powder is imported into the U.K. by Granose Foods Ltd. and sold under their brand name of Granogen. A nutritional analysis is given.

Leah Leneman. 1971. *The British Vegetarian*. Jan/Feb. p. 6. "Plantmilk and sex!" The author (and many other people she knows) prefers the taste of Granogen to that of Plamil as an alternative to cow's milk. Granogen, however is not made in Britain.

Listing in *The Vegetarian Health Food Handbook* (UK). 1974. p. 155. "Granogen Soya Milk by Granose Health Foods Ltd." Note the new company name.

Manufacturer's catalog. 1980. April. "Soya milk for adults with added vitamins and minerals. Of great value to those with milk allergies." Purves. 1981. *Nutrition and Food Science*. Jan/Feb. p. 5-6.

Letter from Adrian Peck, production manager at Granose Foods. 1990. July 11. This product has always been imported as a powder. Granose has never sold a liquid Granogen. Before 1988 it was named Granogen and made in the USA by Loma Linda Foods. From 1988 on it was renamed Soyagen and made in West Germany by DE-VAU-GE.

446. Diser, G.M.; Hayward, J.W. 1964. Expanding overseas markets for U.S. soy protein products: The most serious need in the human diet is adequate levels of good quality protein. *Soybean Digest*. May. p. 16.

• **Summary:** "Based on a presentation made by Mr. Diser at the Annual Meeting of the American Association of Cereal Chemists in Minneapolis" [Minnesota].

"During the period Feb. 1 to March 21, 1962, the Soybean Council of America, Inc., in cooperation with the Foreign Agricultural Service of the U.S. Department of Agriculture, conducted a survey in 11 developing countries to determine the potential utilization of soy products as an aid in alleviating protein deficiencies in the diets of the people in these areas of the world. One of the fundamental purposes of this survey was to learn the dietary habits, levels and status of the people in these countries. Representatives of the soybean processing industry made the survey which covered the following countries: Burma, Egypt, Greece, Hong Kong, India, Iran, West Pakistan, Philippine Islands, Portugal, Spain and Turkey.

"The results of this survey showed that protein malnutrition, suffered by a major portion of the people in these countries as a result of inadequate food supplies, particularly a serious lack of protein foods, could be relieved by utilization of inexpensive oilseed protein products.

"Bread, a principal food in these countries, if properly fortified with soyflour or grits, offers the greatest opportunity for increasing protein in the diet. Soy-supplemented chapattis, pakoris, samosas, buns and various other local breads were readily acceptable because of improved palatability, appearance and storage quality. These breads frequently contained two to seven times the amount of soy flour or grits customarily used in the United States. Macaroni products, including noodles, and various native dishes, supplemented with these soy products, offer another means

of improving dietary protein intake. These foods, as well as beverages and soups based on soy protein, were evaluated by local food specialists and found to be acceptable in all countries. In most instances, lack of availability was the only factor preventing current use of soy products as a source of supplemental protein in the diet.

"Beverages and infant formulas, based on full-fat or defatted soy flour and nutritionally equivalent to cow's milk, were found to be desirable for improving the general health of infants and children as well as expectant and nursing mothers in most of the countries. Products which have been developed and tested for this purpose under the auspices of the Soybean Council of America are presently available so that an 8-ounce serving costs about 1¢.

"Distribution Channels: Relief agencies, military rationing, local government mass-feeding programs, and school lunch programs are immediately available as channels of distribution.

"Based on information collected by the members of the survey team, market development for edible soybean products would logically proceed as follows: (1) samples would be provided for large-scale evaluation, (2) methods of using protein products to improve the nutritional value of foods would be demonstrated to consumers, (3) technical assistance would be furnished to local authorities, (4) relief agencies would be encouraged to purchase and use U.S. soy products to meet protein nutrition problems, (5) locally acceptable products would be developed and sold to meet the demand created by relief agency distribution and other market development efforts, and (6) as a result, developing countries would gradually increase their purchases of U.S. soy protein products or would increase their purchases of soybeans on the open market to process locally into products which would be used in the manufacture of and/or included in native foods for domestic consumption.

"Present acceptance and available means of distribution indicate that a total of 25,000 tons of edible soy protein products could be adequately utilized per month in the 11 countries surveyed. It is within the present capacity of the soy processing industry to produce all the current market demands plus an additional 6,000 tons of soy flour and 10,500 tons of soy grits per month. Within 6 months presently existing plants could manufacture an additional 25,000 tons per month without sacrificing any of the present market requirements. The increased production would consume an additional 20 to 22 million bushels of soybeans annually.

"More recently, greater official recognition has been given to the need for a market development program on the dietary utilization of soy protein products. The Agency for Industrial Development is becoming more cognizant of the need for protein in nutrition. For example, Alliance for Progress sponsored a workshop in Lima, Peru, from April 29 through May 10, 1963, with participating agencies

including the government of Peru, the U.S. AID mission and personnel from the Latin American countries. The purpose of this workshop was to train administrators and managers of child feeding centers in connection with 'Operation Ninon.' A conference on the use of American foodstuffs to further the Alliance for Progress program was held in Quito, Ecuador, on May 12, 1963.

"It is readily apparent that a new concept is being formulated as to the type of foreign aid to be rendered in the future. This concept will undoubtedly include the furnishing of protein from all sources to feed the protein-hungry world.

"A joint intergovernmental committee has been formed to follow up on the utilization of soy protein in foreign aid programs. Pilot projects are being developed on the use of soy protein in various areas. Shipments of soy products have been made to Egypt, Greece, West Pakistan and other countries for large-scale evaluation in response to requests developed through the efforts of the members of the survey team. Institutes have been established in West Pakistan and experiments are being conducted on soy protein products, particularly in demonstrating their value as nutritional supplements for children. The objective in this country is to get these products introduced on a commercial basis.

"Usage in Colombia: Soy products are being promoted for bakery uses in Colombia through the Nutritional Institute and similar institutions. Isolated soy protein and soy flour are being studied as a means of improving the nutritional value of 'panela,' a sugar-based food product widely used in the diet of infants and children in Colombia. In fact, a satisfactory product combining soy flour and panela has been developed by the Colombian Institute of Technological Research and submitted for biological evaluation. The Soybean Council of America is cooperating with the Colombian armed forces in the evaluation of soy protein products. A large-scale study is presently under way in Peru in which the Council is cooperating with the armed forces to compare the nutritive value of soy flour, fish flour and other protein sources as represented by the native supplements.

"The soybean industry, through the Council, has donated sufficient soy grits for a research project to be conducted by the Agricultural Research Service, USDA, in cooperation with the University of Hong Kong. In this instance the soy grits will serve to provide a known amount of supplemental protein in cereal-containing foods in the diet of children in that area. The objective of this research is 'to study the effect on growth and nutritional status of children of increasing their dietary intake of selected nutrients and of replacing a significant part of the rice in the diet with wheat.'

"A very recent and most important development in this area of expanding markets is evidenced by the request from USDA for offers from the industry to sell 160,000 pounds of defatted soy grits to the Commodity Credit Corp. These grits will be donated for distribution overseas by voluntary relief agencies through a market development program to

be administered jointly by AID and the Foreign Agricultural Service, USDA. Evaluation of acceptance of this product in pilot child feeding projects, including school lunch programs, hospitals and orphanage centers, will be carried out in Bolivia, Nigeria, Turkey and the Philippine Islands. Each of these four countries will receive 40,000 pounds of grits for this study.

"The offices of the Soybean Council plan to continue their efforts to bring about revision of the official restrictions presently existing in many countries against the use of soy protein in meat and bread products and other foods" (Continued). Address: Soybean Council of America, Inc., Minneapolis, Minnesota.

447. Diser, G.M.; Hayward, J.W. 1964. Expanding overseas markets for U.S. soy protein products: The most serious need in the human diet is adequate levels of good quality protein (Continued—Document part II). *Soybean Digest*. May. p. 16. • **Summary:** (Continued): The Council will continue to provide information and technical data on the properties of soy flour and soy protein to governmental and various official agencies. Demonstrations and seminars are scheduled in cooperation with schools, hospitals, women's clubs, home economists' groups and other organizations at the consumer level in Belgium, Luxembourg, Denmark and the other Scandinavian countries, France, England and other areas. These projects will include discussions on soy protein products and their nutritional and functional advantages in foods and bakery products. Food fairs will also be held in certain of the countries served by the Council to disseminate such information at both the consumer and industry level. The use of soy flour in bread, baby foods, typical indigenous dishes and various specialty products will be demonstrated by representatives of the Council.

"Efforts will be vigorously continued in attempting to bring about reduction of duties and other taxes on the importation of soy protein products in the United Kingdom, Spain and other countries where tariff barriers have been imposed.

"Keep Close Contacts: Close contacts are being maintained with governmental and educational institutions in Italy in attempting to get soy approved as a food ingredient. The Council office in Rome is working very closely with the largest manufacturers of pasta. Attempts are also being made to improve the level of protein in Italian bread through the addition of soy flour. Licensing of industries for the manufacture and utilization of soy protein products is being promoted in Israel.

"U.S. defense agencies are authorized to purchase protein products for use by armed forces of friendly nations. UNICEF is very active in promoting the utilization of soy in the protein-deficient areas of the world. Church groups and other volunteer relief agencies are taking an active interest in soy as a potential source of supplemental protein for use

in their feeding programs. These are only a few examples of the type of work being carried on cooperatively by Foreign Agriculture Service and the Soybean Council of America in attempting to develop the utilization of soy protein in the various countries.

“Greatest Problem Hunger: As long as population growth continues to exceed levels of food production, hunger can be expected to be the world’s greatest problem. The most serious need in the human diet throughout the world is for balanced nutrition with adequate levels of good quality protein. Unfortunately, many of the distribution programs implemented to date have resulted in the shipment of surplus grains overseas with little or no regard for deficiencies in quantity and quality of protein in the food supplies of the various areas.

“Protein products from the soybean, providing an abundance of excellent quality protein at a greatly reduced cost per unit, could properly supplement the cereals which make up a large share of the diet and thus aid in alleviating protein malnutrition in the protein-deficient areas of the world. These products can be used directly in the human diet as a source of readily available protein in those areas where ability, facilities and land area are not available for the utilization of animals to convert feedstuffs into food.

“A tremendous potential exists for the utilization of U.S. soy protein products in protein-deficient countries. However, this market cannot be effectively expanded without a concurrent improvement in the stability of the administrative and economic status of the respective governments, together with a widespread educational program covering nutrition, sanitation and hygiene among those consumers whose need for a higher level of protein in their diet is greatest.

“While samples of soy protein products have already been supplied through the Council to several of the developing countries for evaluation, it will be some time in the future before a report of the results of these studies can be expected. Consequently, any program for employing these products in improving the nutritional balance of the diets in various areas of the world would be significantly expedited and greatly implemented if data resulting from the research and development studies recently recommended to USDA officials could be made available to those administering the program and providing the technical assistance so necessary for the optimum utilization of these protein products from the soybean.” Address: Soybean Council of America, Inc., Minneapolis, Minnesota.

448. Fitch, Coy D.; Harville, W.E.; Dinning, J.S.; Porter, F.S. 1964. Iron deficiency in monkeys fed diets containing soybean protein. *Proceedings of the Society for Experimental Biology and Medicine* 116(1):130-33. May. [11 ref]

• **Summary:** “Certain foods reduce iron absorption from the gastrointestinal tract. In comparison to many foods the iron of soybeans and of diets containing isolated soybean protein

has been found to be well absorbed.” The isolated soy protein used in this experiment was ADM C-1 Assay Protein, Archer-Daniels-Midland Co., Cincinnati, Ohio.

The results showed reduced gastrointestinal absorption of iron and iron deficiency anemia in monkeys receiving a diet containing this isolated soy protein. Address: Univ. of Arkansas School of Medicine, Little Rock.

449. *Chemical Week*. 1964. Ahead: Synthetics for the starving. New ways to turn inedible raw materials into protein vie for domestic and world uses. 95(8):79-80, 82, 84, 86. Aug. 22.

• **Summary:** Contents: Introduction. Formulated products. Fiber route [spinning soy protein]. Other soy work. How different protein sources rate (comparing the amino acid content of an Ideal, fish, beef, skim milk, soybean, peanut, cottonseed). Other soy work (ADM is working on an inexpensive extruded soy ingredient) [later to be called TVP]. (USDA’s Northern Regional Research Lab. has conducted extensive research on “developing edible forms of soybean protein, as have other food and agricultural manufacturers”). Peanuts and cottonseed. ‘Inedible’ food (slaughterhouse waste, trash fish and fish flour). Petroleum upgrader (petroleum is the newest source of edible protein). Synthetic diets.

A large photo at the top of the first page shows children standing with empty bowls and cups. The caption: “Broad research effort on new sources of protein promises new hope for hungry children.”

Four photos one page 80 have these 4 captions: “Abundant soybean crop, yields 90% protein powder, that can be spun into fiber, for making simulated meat.” Of course, no hungry person could afford such an expensive result of food science wizardry and Robert Boyer’s U.S. Patent 2,682,466.

450. Archer Daniels Midland Co. 1964. Annual report for the year ended June 30, 1964. 733 Marquette Ave., Minneapolis, Minnesota 55440. 18 p.

• **Summary:** Net sales and other operating income: \$291,713,674. Earnings before taxes: \$4,362,764. Net earnings: \$3,282,299. Current assets: \$86,527,677. Current liabilities: \$30,540,752.

On page 16 is a “Ten-year summary of financial and operating data.” 1964 showed a new upswing in all important financial numbers—except net earnings (profit), which has now fallen for three years in a row, from \$4.421 million in 1962 to \$3.854 million in 1963 to \$3.282 million in 1964. Bad news!

On page 3 is a photo of John H. Daniels, president, and Thomas L. Daniels, chairman of the board—standing side by side. Address: Minneapolis, Minnesota.

451. Allred, J.B.; Kratzer, F.H.; Porter, J.W.G. 1964. Some

factors affecting the *in vitro* binding of zinc by isolated soya-bean protein and by  $\alpha$ -casein. *British J. of Nutrition* 18(4):575-82. [10 ref]

• **Summary:** It is well established that soya-bean protein contains some compound that renders zinc in the food unavailable and increases the turkey's apparent requirement for it.

Summary: "5. The amount of Zn bound by isolated soya-bean proteins and by alpha-casein was relatively low at pH 4 but increased markedly as the pH was increased to 5.3.

"6. The amount of Zn bound by ADM assay protein and by alpha-casein increased markedly, particularly at pH values below 4.5, in the presence of sodium phytate.

"7. ADM assay protein from which part of the phytic acid had been removed bound less Zn than the original protein.

"8. The significance of these findings is discussed in relation to the availability of Zn in diets for chicks and turkey poults." Address: 1-2. Dep. of Poultry Husbandry, Univ. of California, Davis; 3. National Inst. for Research in Dairying, Shinfield, Reading, Berkshire, England.

452. McGovern, George S. 1964. War against want: America's Food for Peace program. New York, NY: Walker and Company. xix + 148 p. Forward by President Lyndon B. Johnson. Illust. No index. 21 cm.

• **Summary:** This good history and analysis of the U.S. Food for Peace Program (Public Law 480) is greatly weakened by lack of an index.

Contents: Prologue. Acknowledgments. 1. The challenge of hunger. 2. Tools for the attack. Serving the Food for Peace table. 4. Food: Instrument of economic development. 5. Alianza para el Progreso (Alliance for Progress, proposed by President Kennedy on 13 March 1961). 6. Food and the India way. 7. Freedom from hunger. 8. Victory in the war against want. Appendix I: The Food for Peace Program. Appendix II: A partial list of voluntary participants in the Food for Peace program.

The Food for Peace program began in 1954. Senator McGovern was born in 1922. On 16 Dec. 1960 President-elect Kennedy asked him to serve as director of a newly proposed White House Office of Food for Peace. In the opening hours of his administration, on 24 Jan. 1961, President Kennedy issued an Executive Order creating the Office of Food for Peace; Senator McGovern was its first director.

Chapter 2 includes a history of U.S. relief feeding programs, the work of Herbert Hoover, and the Lend Lease Act of March 1941 (in which the USA procured vast quantities of food for our fighting overseas Allies such as Britain and the USSR), and the Marshall Plan (which sent \$13,000 million in American resources into Western Europe over 4 years). But after the Korean Conflict (1950-1953) farm surpluses began to accumulate in America at the same

time there were chronic food shortages in many parts of the world. So in 1954 Congress enacted legislation designed to utilize U.S. food surpluses in less-developed countries. "This was the very important Agricultural Trade Development and Assistance Act of 1954, Public Law 480. Known around the world as 'PL 480' it was an ingenious combination of self-interest and idealism."

Title I of PL 480 consists of foreign currency sales. Title II is outright grants of food in times of emergency or disaster. Title III authorizes distribution abroad of surplus food by private voluntary agencies, such as CARE and many church-connected agencies. In 1959 a new provision was added to PL 480—the extension of long-term credit at low interest rates on dollar sales of surplus food and fiber. The total of U.S. food assistance since 1948 is over \$20,000 million.

Chapter 7, titled "Freedom from hunger," focuses on FAO (The Food and Agriculture Organization of the United Nations) and its forerunners. FAO was born out of the Hot Springs Conference held by forty-four nations at the Homestead Hotel, Hot Springs, Virginia, from May 18 to June 3, 1943. President Franklin D. Roosevelt issued an invitation to this conference at the peak of World War II, on 30 March 1943, to countries associated with the United States in the war, to discuss world problems of agriculture, nutrition and food. "This first World Food Congress established an interim commission with an office in Washington, D.C., which functioned until" FAO was formally established as an agency of the United Nations on 16 Oct. 1945 in Quebec, Canada, to assume the work of the International Agriculture Institute and is presently governed by the U.N. Conference of Member Nations. FAO's headquarters was transferred from Washington to Rome, Italy, in early 1951 (p. 101).

"In July 1960, FAO, with the approval and cooperation of the United Nations system, launched the five-year, worldwide Freedom from Hunger Campaign." The message of this campaign "to the more affluent nations has concentrated on arousing public awareness of the danger which global hunger and malnutrition pose to the peace and progress of mankind. It has also sought to encourage international cooperation in facing up to the solution of these problems."

"Every nation has been urged to establish a Citizens' Freedom from Hunger Foundation to raise funds for the campaign. In this way private individuals, women's clubs, religious groups, civic organizations, and commercial firms can participate through contributions of money or materials.

"The American Freedom from Hunger Foundation Campaign was named by President Kennedy on November 22, 1961, the day before Thanksgiving." A ceremony in the White House launched the U.S. phase of the campaign. Alvin Shapiro of Washington, DC, was the first head of the American Foundation (p. 103-04). A photo (facing p. 15) shows the people present at the launching of the FFH

Campaign in the Fish Room of the White House (left to right): Marian Anderson, Senator George McGovern, President John F. Kennedy, German Chancellor Konrad Adenauer, and Mrs. Woodrow Wilson.

“A highlight of the campaign was the World Food Congress in Washington, D.C., June 14-18, 1963, timed to commemorate the twentieth anniversary of the Hot Springs World Food Conference” [in Virginia]. President Kennedy opened the conference with a memorable speech (p. 106). The United States pledged \$40 million in commodities, as part of a program to reduce U.S. food surpluses and also feed the hungry (p. 108).

Note: In March 1979 The American Freedom from Hunger Foundation merged with the Meals for Millions Foundation to become the “Meals for Millions / Freedom from Hunger Foundation.”

The World Food Program was first established at the 1960 Food and Agricultural Organization (FAO) Conference, when George McGovern, director of the US Food for Peace Program, proposed establishing a multilateral food aid program. WFP was formally established in 1963 by the FAO and the United Nations General Assembly on a three-year experimental basis. In 1965, the program was extended to a continuing basis.

Chapter 8, “Victory in the war against want, begins: On 23 Sept. 1959 Soviet premier Nikita Khrushchev, at the start of his visit to the United States, visited the farm of Roswell Garst near the city of Coon Rapids, Iowa. He wanted to learn more about modern agriculture. In the Soviet Union nearly 50% of the entire labor force was involved in producing food, compared with only 8% in the United States. Yet the remaining 92% of Americans are better fed than is the Russian populace, and the USA has surplus food which it uses to feed the hungry overseas (p. 113-14).

“The great changes in American agriculture came at an accelerating pace after 1915 with the sharply increased demands for food of World War I serving as a catalyst. In the half century since then the American farm has been transformed. Every phase of the farm operation is heavily assisted by machinery. Rural electrification not only lights the farmhouse but runs everything from water pump to milking machine, hybrid seed, chemical fertilizer, pesticides, livestock feed supplements, soybean products, and a host of other developments, including the cooperative movement, have changed the face and form of rural America.”

In 1862, under Abraham Lincoln and during the Civil War, three historic acts “laid the institutional foundation of American agriculture: The Homestead Act, the Morrill Act, and the creation of the Department of Agriculture (p. 115-16).

In the last half of Chapter 8 McGovern suggests “a ten-point battle plan against hunger led by the American people, which I am convinced will end in victory.” These are largely McGovern’s opinions about how the Food for Peace program

could be improved and expanded. Four example, No. 4 is to “eliminate the political restrictions on our Food for Peace (FFP) program.” He advocates that surplus American food be sent to hungry people (especially children) living in Communist countries, such as the USSR, China, or Cuba.

Appendix I gives 4 pages of statistics about the FFP program, including a graph showing the dollar value of FFP shipments to 5 different regions of the world from 1955 to 1963. Shipments to Europe peaked in 1957 at \$850 million and decreased sharply thereafter. Shipments to the Near East and South Asia peaked in 1961 at \$700 million and have decreased since then but were still the largest in 1963.

Appendix II includes directories of: (1) The executive committee of the American Food for Peace Council. Many of the members of the Executive Committee are private citizens. Mr. Dwayne O. Andreas, an Executive Vice President, is from Farmers Union Grain Terminal Association (FUGTA). (2) The American Freedom From Hunger Foundation, Inc., divided into officers, executive committee, and board of trustees (incl. Dwayne Andreas). (3) American Council of Voluntary Agencies for Foreign Service, Inc. (4) United States trade groups cooperating in foreign market development (incl. Soybean Council of America, and American Soybean Association). Address: Senator, South Dakota.

453. Paulsen, Twila M.; Horan, F.E. 1965. Functional characteristics of edible soya flours. *Cereal Science Today* 10(1):14-17. Jan. [12 ref]

• **Summary:** Discusses the use of soya flours in baked goods. Address: T.L. Daniels Research Center, Archer-Daniels-Midland Co., Minneapolis, Minnesota.

454. *Soybean Digest*. 1965. [Dwayne O. Andreas named to advisory committee by President Johnson]. May. p. 47.

• **Summary:** Andreas, vice president of Farmers Union Grain Terminal Association (Minneapolis, Minnesota) has been “named by President Johnson as a member of a 14-man advisory committee to make on-the-ground evaluations of U.S. foreign aid programs and to recommend steps to improve them.”

455. Horan, F.E. 1965. Contribution of non-animal proteins and fats. *Soybean Digest*. Aug. p. 21-24. [11 ref]

• **Summary:** If we try to look 15 years into the future, to 1980, we will see that non-animal proteins and fats will probably have become increasingly important.

“At this stage of population development, the oilseed proteins can play an important role in giving a better nutritional balance to the diet. The most promising possibilities lie in the soybean, cottonseed and peanut. In fact, soybeans have been a staple in the Oriental diet for centuries.

“The soybean is truly one of the outstanding phenomena

TABLE 5. COMPARATIVE COSTS OF EDIBLE PROTEIN PRODUCTS

Protein product	\$/lb.	\$/Protein lb.
Beef protein -----	0.75	4.20
Egg albumin -----	0.75	0.85
Lactalbumin -----	0.65	0.82
Yeast -----	0.30	0.67
Casein -----	0.55	0.63
Milk solids -----	0.16	0.46
Isolated soy protein -----	0.35	0.40
Wheat gluten -----	0.30	0.38
70% protein soy flour ---	0.21	0.30
Wheat germ -----	0.08	0.27
50% protein soy flour ---	0.07	0.14

in the entire history of agriculture in the United States—it is well called the miracle crop of the 20th century. It is undoubtedly the fastest growing segment of American agriculture.

“Although soybeans were grown in the United States as early as 1804, they remained an agricultural curiosity and minor crop for over a century. In 1924—just 40 years ago—the total production of soybeans in the United States was less than 5 million bushels; last year the United States production was somewhat over 700 million bushels. Approximately 70% of this total was crushed to yield 5 billion pounds of oil and 11 million tons of meal. Approximately 98% of the meal is eventually consumed as animal feed.

“At present a relatively small amount of the meal is upgraded commercially into edible soy flour products, which contain 50% protein. A soy protein concentrate with 70% protein and a soy protein isolate containing 90% protein are also available. The nutritional values of soy protein compared to other types of proteins are given in table 4.

“A comparison of the basic cost of soy protein with other proteins is given in table 5. “Recognizing the nutritional value of the soybean protein in itself may be insufficient. The material still must be agreeable to the palate and must have certain aesthetic qualities to be accepted in many diets. Therefore, a challenge exists to change the forms of the base material in such a way as to build in flavor, texture and mouth-feel. “One approach to this problem has been the application of spinning technology, taken from the textile industry, using isolated soy protein to produce very fine proteinaceous filaments which can then be molded and fabricated into a variety of finished food shapes. Another development concerns the extrusion of soy flour products into forms which can be dried and stored, but later hydrated to give particles with textural characteristics.

“Whether these products should be considered as meat substitutes or supplements, or as entirely new forms of nutritious protein matter will perhaps ultimately be decided by the consumer—and we should have the answer by 1980.” Address: Manager, Agricultural Research Div., ADM, Minneapolis, Minnesota, MN.

456. Archer Daniels Midland Co. 1965. Annual report, fiscal 1965. 733 Marquette Ave., Minneapolis, Minnesota 55440. 18 p.

• **Summary:** Net sales and other operating income: \$323,223,044. Earnings before taxes: \$4,539,842. Net earnings: \$2,765,138. Current assets: \$117,190,381. Current liabilities: \$62,918,546. “At the annual meeting on November 5, 1964, Thomas L. Daniels retired from the Board of Directors and Executive Committee. Mr. Daniels had been Chairman of the Board since 1955 and was President of ADM from 1947 to 1958. Except for three periods of government service, he had been associated with the Company since 1914.”

On pages 14-15 is a “Ten-year summary of financial and operating data.” 1965 showed a new upswing in most important financial numbers, - including net sales and earnings before taxes. But not in net earnings (profit), which has now fallen for four years in a row, from \$4.421 million in 1962 to \$3.854 million in 1963 to \$3.282 million in 1964. \$2.765 million in 1965. Bad news again! Time to make some big changes. Address: Minneapolis, Minnesota.

457. National Soybean Processors Association. 1965. Year book, 1965-1966 (Association year). Chicago, Illinois. 63 p.

• **Summary:** On the cover (but not the title page) is written: “Year Book and Trading Rules, 1965-1966.” Contents:

Constitution and by-laws and code of ethics. Officers, directors and committees for 1965-66. Membership of the National Soybean Processors Association. Trading rules on soybean meal. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}, sampling of soybean meal {automatic sampler, probe sampler}). Trading rules on soybean oil. Definitions of grade and quality of export oils. Tentative soybean lecithin specifications. Appendix to trading rules on soybean oil: Uniform sales contract, grading soybean oil for color (N.S.P.A. tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed).

The section titled “Officers, directors, and committees” (p. 12-15) states: President: Robert G. Houghtlin. Secretary: J.W. Moore. Treasurer: R.E. Fiedler. Executive Committee: L.W. Andreas, Chairman, Wilfred F. Carle, T.W. Bean, B.A. Townsend (term ending Sept. 1966). J.W. Moore, M.D. McVay, R.E. Fiedler, E.B. Copeland (term ending Sept. 1967). R.G. Houghtlin.

Board of Directors: Chairman of the board: L.W. Andreas. Vice chairman of the board: T.W. Bean. Immediate past chairman of the board: S.E. Cramer. (Term expiring Sept. 1966): R.A. Denman, Joe C. Givens, R.G. Golseth, Floyd E. Hiegel, H.D. Rissler, R.B. Williams. Term expiring Sept. 1967: T.J. Barlow, Elmer L. Buster, Elster B. Copeland, F.L. Morgan, H.R. Scroggs, B.A. Townsend. Term expiring Sept. 1968: Donald B. Walker -> Win Golden, Wilfred Carle, Arthur Frank, M.D. McVay, William King Self,

Harry E. Wiysel. General counsel: Raymond, Mayer, Jenner & Block, Chicago, Illinois. Washington counsel: Sellers, Conner & Cuneo, DC. Washington representative: George L. Prichard, DC. Managing director, National Soybean Crop Improvement Council: Robert W. Judd, Urbana, Illinois.

Standing committees: For each committee, the names of all members (with the chairman designated), with the company and company address of each are given—Traffic and transportation. Technical. Oil trading rules. Industrial oil. Lecithin. Meal trading rules. Uniform rules and standards for soybean meal. Crop improvement council. Soybean research council. Soybean grades and contracts. Safety and insurance. Regional: Illinois, Indiana, Ohio, Kentucky, and eastern Missouri; Iowa, Minnesota, Nebraska, the Dakotas, Kansas, and Western Missouri; Mississippi River Delta Sections.

The following organizations, and individuals are members of NSPA: Allied Mills, Inc., Chicago, Illinois; Taylorville, Illinois; Guntersville, Alabama. Archer-Daniels-Midland Co., Minneapolis, Minnesota; Decatur, Illinois; Mankato, Minnesota; Fredonia, Kansas; Bloomington, Illinois. Arkansas Grain Corp., Soybean Division, Stuttgart, Arkansas (Wilfred F. Carle); Helena, Arkansas (W.E. Higginbotham). Big 4 Co-op. Processing Assn., Sheldon, Iowa (Kenneth J. McQueen). Buckeye Cotton Oil Div. of, The Buckeye Cellulose Corp., Cincinnati Ohio (R.B. Williams); Little Rock, Arkansas; Augusta, Georgia; Memphis, Tennessee. Cargill, Inc., Minneapolis, Minnesota (M.D. McVay, Jay Haymaker); Chicago, Illinois (Robert Cournoyer); Cedar Rapids, Iowa (C.W. Bohlander); Des Moines, Iowa (W.J. Wheeler); Fort Dodge, Iowa (George J. Cox); Sioux City, Iowa (A.L. Peterson), Washington, Iowa (William R. Matson); Wichita, Kansas (Ralph S. Moore); Memphis, Tennessee (Philip St. Clair); Norfolk, Virginia (D.H. Leavenworth). Central Soya Co., Inc., Fort Wayne, Indiana (B.A. Townsend); Decatur, Indiana (T.H. Alwein); Indianapolis, Indiana (R.E. Syster); Chicago, Illinois (Willard C. Lighter); Gibson City, Illinois (George R. Walter); Belmond, Iowa (J.R. Wright); Bellevue, Ohio (Harry Stokely); Marion, Ohio (Leroy Rich); Chattanooga, Tennessee (Jack Rosenberger). Delphos Soya Products Co., Delphos, Ohio (Floyd E. Hiegel). Delta Cotton Oil and Fertilizer Co., Jackson, Mississippi (Alfred Jenkins). Farmers Grain Dealers Assn. of Iowa (Cooperative) Soybean Processing Division, Mason City, Iowa (H.D. Rissler). Farmers Union C.M.A. [CMA], St. Joseph, Missouri (Arthur E. Frank). Fremont Cake & Meal Co., Fremont, Nebraska (Harry E. Wiysel). Galesburg Soy Products Co., Galesburg, Illinois (Max Albert & Regi Simon -> Elnathan Anderson, Box 711). General Vegetable Oil Co., Fort Worth, Texas (J.D. Morton). Gooch Milling & Elevator Co., Lincoln, Nebraska (M.R. Eighmy). Grain Processing Corp., Muscatine, Iowa (G.A. Kent, F.J. Prochaska, H.P. Woodstra). Honeymead Products Co., Mankato, Minnesota (L.W. Andreas, W.B. Cox, J.I. Maslon, C.T. Mullan, L.K.

Rasmussen); Huegely Iowa Milling Co., Cedar Rapids, Iowa (Joe Sinaiko, Bob Scroggs, Les Liabo). Kansas Soya Products Co. (The), Emporia, Kansas (Elmer L. Buster). Lauhoff Grain Co., Danville, Illinois (Ralph G. Golseth, Loren R. Larrick, Laurie J. Slocum). Marshall Mills Co., Marshalltown, Iowa (J.B. Saccaro). Minnesota Linseed Oil Co., Minneapolis, Minnesota (R.J. Lindquist, Jr.). Mississippi Cottonseed Products Co., Jackson, Mississippi (H.E. Covington). Missouri Farmers Assn., Grain Div., Mexico, Missouri (Kermit F. Head). Owensboro Grain Co., Owensboro, Kentucky (William M. O'Bryan). Paymaster Oil Mill Co., Houston, Texas (T.J. Barlow, C.R. Bergstrom); Phoenix, Arizona (O.C. Harris); Jackson, Mississippi (John Bookhart). Perdue (A.W.) & Son, Salisbury, Maryland (Robert L. Brodey). Planters Industries, Inc., Rocky Mount, North Carolina (W.T. Melvin). Planters Manufacturing Co., Clarksdale, Mississippi (A.K. Shaifer). Quincy Soybean Products Co., Quincy, Illinois (Theodore W. Bean, John Franks). Ralston Purina Co., St. Louis, Missouri (Donald B. Walker, W.L. Golden); Kansas City, Missouri (A.V. Couch); Bloomington, Illinois (R.C. Witte); Decatur, Illinois (R.E. Baer); Lafayette, Indiana (A. Hardy); Iowa Falls, Iowa (W. Bower); Louisville, Kentucky (J. Gardner); Raleigh, North Carolina (J.L. Bumgardner); Memphis, Tennessee (J.K. Sartain). Riverside Oil Mill, Marks, Mississippi (William King Self). Sisketon, Missouri (P.B. Bartmess). Southern Cotton Oil Div., Hunt Foods and Industries, Inc., New Orleans, Louisiana (F.L. Morgan); Newport, Arkansas (Jerry Jeffrey); Macon, Georgia (M.S. Long); Greenville, Mississippi (M.D. Kolb); Goldsboro, North Carolina (W.W. Davis). Southern Soy Corp., Estill, South Carolina (R.A. Denman). Southern Soya Corp. of Cameron, Cameron, South Carolina (Charles Everett Bullard). Staley (A.E.) Manufacturing Co., Decatur, Illinois (J.W. Moore, E.C. Lane, H.E. Lents); Painesville, Ohio (D.J. Hopkins). Swift & Co., Chicago, Illinois (Scott E. Cramer, W.W. Moore). Townsends, Inc., Millsboro, Delaware (P.C. Townsend). Tri-County Co-op Soybean Assn., Dawson, Minnesota (Joe C. Givens). West Tennessee Soya Mill, Inc., Tiptonville, Tennessee (Tyler Terrett). Yazoo Valley Oil Mill, Inc., Greenwood, Mississippi (N.F. Howard).

Associate Members: American Feed Stores Home Organization, Inc., Minneapolis, Minnesota. Anderson Clayton & Co., Foods Div., Dallas, Texas. Armour & Co., Chicago, Illinois (Harry K. Bean [crossed out]). Capital City Products Co., Div. of Stokely-Van Camp, Inc., Columbus, Ohio. Cereales y Concentrados, Mexico City, Mexico (Francis Tovar [crossed out]). Colchester Processing Co., East St. Louis, Illinois [crossed out]. Cooperative Mills Inc., Baltimore, Maryland. Corn Products Co., New York City, New York (R.W. List). Lawton, Jr.). Huegely Elevator Co., Nashville, Illinois (J.W. Huegely). HumKo Products—Div. of National Dairy Products Co., Memphis, Tennessee (Sam Cooper). Kraft Foods Div. of National Dairy Products Corp., Chicago, Illinois (G.M. Gibson). Lever Bros Co., New York City, New York. Maple Leaf Mills Ltd., Toronto, Ontario, Canada (W.G. Milliken) [handwritten in]. Nebraska Consolidated Mills Co., Omaha, Nebraska [crossed out]. Pacific Vegetable Oil Corp., San Francisco, California. Procter & Gamble Co. (The), Cincinnati, Ohio. Quaker Oats Co. (The), Chicago, Illinois. Spencer Kellogg Div. of Textron Inc., Buffalo, New York. Supersweet Foods Div., International Milling Co., Minneapolis, Minnesota. Valley Mills, Vicksburg, Mississippi. Wesson Div., Hunt Foods and Industries, Inc., Fullerton, California. Ralph Wells & Co., Monmouth, Illinois (Willis H. Wells). Address: 3818 Board of Trade Building, Chicago 4, Illinois.

458. *Soybean Digest*. 1965. ADM acquires processing plant in Galesburg, Illinois. Nov. p. 25.

• **Summary:** “Archer Daniels Midland Co. announced that it has purchased all outstanding stock of Galesburg Soy Products Co., Galesburg, Illinois.”

“The Galesburg plant, located in a major soybean production area, has a processing capacity of 4 million bushels of soybeans annually and 400,000 bushels of storage capacity. It normally employs about 28 persons.”

459. Archer Daniels Midland Co. 1965. If you’re in the agribusiness, look to ADM for a world of service (Ad). *Soybean Digest*. Dec. p. 32-33.

• **Summary:** This 2-page black-and-white ad begins: “ADM serves everyone who travels the road that leads from farm to market—including those whose markets lie abroad.

“ADM’s newest gateway to world-wide markets is the huge export terminal at Destrehan, Louisiana, a joint venture with Garnac Grain Company of New York. The 94 concrete storage bins of the terminal have a capacity of 2¼ million bushels...”

An illustration shows a large tanker loading grain at the terminal. Address: Minneapolis, Minnesota 55440.

460. *Soybean Digest*. 1966. ADM to expand facilities for food oil production. Feb. p. 57-58.

• **Summary:** The expansion will double ADM’s soybean oil refining facilities at its Decatur West plant in Illinois. A soybean oil hydrogenation plant will also be installed there—according to Erwin A. Olson, chairman of the board and executive vice president of ADM’s agricultural group.

Construction will begin immediately; production is scheduled within a year. The new ADM facilities will

process about 600,000 pounds or 10 tank cars a day of refined or hydrogenated soybean oil. The company’s other soybean plant there, Decatur East, presently makes refined oil. Address: Minneapolis, Minnesota 55440.

461. *Soybean Digest*. 1966. ADM will build new plant in Omaha area. Feb. p. 61.

• **Summary:** Archer Daniels Midland Co. will build a soybean processing plant in the Omaha, Nebraska, area. According to John H. Daniels, president of the Minneapolis-based agricultural company, the plant will be a large one, since soybean production in the Omaha area has nearly doubled in the past 4 years.

ADM presently operates soybean processing plants at Fredonia, Kansas; Mankato, Minnesota; Galesburg, Illinois; Bloomington, Illinois; and two plants in Decatur, Illinois.

462. **Product Name:** TVP Textured Vegetable Protein (Textured Soy Flour) [Meat Flavors, Nut Flavors, and Unflavored].

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** Decatur, Illinois.

**Date of Introduction:** 1966 April.

**Ingredients:** Defatted soybean meal.

**Wt/Vol., Packaging, Price:** Sold in bulk.

**How Stored:** Shelf stable.

**Nutrition:** Moisture 6%, protein 52%, fat 1%, ash 6%, crude fiber 3%, other carbohydrates 32%, calories 280/100 gm.

**New Product—Documentation:** Ziembra. 1966. Food Engineering. May. p. 82-93. “Let soy proteins work wonders for you.” “Archer Daniels Midland is currently researching with a patent-applied-for extrusion process. Product (about 50% protein) can be shaped into many fibrous, textured forms—chips, chunks, flakes, slabs, wafers, or puffs. But whole meat-resembling pieces can’t be formed.”

*Soybean Digest*. 1966. Dec. p. 14. “ADM Begins Production of New Protein Foods.” States that TVP is now being made in Decatur, Illinois.

ADM Annual Report. 1967. Page 5: “During the past year TVP moved from the development stage to commercial production. A plant to produce this new concept in nutritious high protein food was placed in operation at our Decatur, Illinois, soybean processing complex.”

*Soybean Digest Blue Book*. 1968. March. p. 112.

Company is now at 733 Marquette Ave., Minneapolis, Minnesota. *Soybean Digest*. 1968. May. p. 38. “Atkinson Pioneered Textured Protein.” Ad in *Soybean Digest*. 1969.

May. p. 9-12. “A fabulous new food: TVP. Dip in batter, saute, and see what you can do with it.” *Soybean Digest Blue Book*. 1969. p. 114. Company is now at 4666 Faries Parkway, Decatur, IL 62526. “TVP, via extrusion process, in meat flavors, nut flavors, and unflavored.”

William Atkinson. 1970. U.S. Patent 3,488,770.

Predicasts. 1974. World Manufactured Soybean Foods. p. 9. "Archer-Daniels-Midland (Decatur, Illinois), through its ADM Protein Specialty Division, has been the world's leading producer of soybean protein foods since 1965. Its 'TVP' extruded textured soy protein is used in meat patties, pizzas, chili, stews and a myriad of other prepared meat products." Main soy meat extender plants are in Decatur, Illinois and Fredonia, Kansas.

463. *Soybean Digest*. 1966. [Dwayne O.] Andreas to ADM board. April. p. 37.

• **Summary:** "Election of Dwayne O. Andreas, Minneapolis [Minnesota] businessman, to the board of directors and the executive committee of Archer Daniels Midland Co. was announced at the board's quarterly meeting. Mr. Andreas succeeds Walter G. Andrews, St. Paul, on the ADM board. Mr. Andrews, associated with ADM for 25 years, had submitted his resignation, saying he wishes to devote more time to his personal business enterprises. Mr. Andreas is chairman of the board of First Interoceanic Corp., a Minneapolis investment company. Until his resignation in early January he was executive vice president of the Farmers Union Grain Terminal Association, St. Paul."

Note: This is the earliest document seen (July 2020) concerning Dwayne Andreas or any of the Andreas brothers and ADM.

464. *Soybean Digest*. 1966. Three U.S. firms are processing [soybeans] in Spain. May. p. 51, 54.

• **Summary:** "The A.E. Staley Manufacturing Co. has announced that its new joint venture processing plant in Santander, Spain, will begin production in May... When fully operational it will have a daily processing capacity of more than 350 metric tons of soybeans. The joint venture company, Sociedad Iberica de Molturacion, S.A., known as SIMSA, is owned equally by Staley and Sonaco, S.A., a prominent Madrid commodities firm... The Spanish plant marks Staley's first overseas venture in soybean processing."

Cargill, Inc. of Minneapolis, Minnesota, and a group of Spanish investors have a processing plant in Tarragona, Spain. It has been operating at peak capacity (700 tons/day of soybeans) since Feb. 1965. It is "operated as an independent Spanish corporation and is know formally as Industrias de la Soja S.A. which shortens to Indusoja and is pronounced 'Indu-soya.'"

"Archer Daniels Midland Co.'s affiliate in Spain, Oleotecnica, S.A., produces soybean-based margarine at its plant in Castro-Urdiales. Oleotecnica refines soybean oil imported from the United States for its margarine. The plant also crushes some soybeans imported from the United States."

465. Ziemba, John V. 1966. Let soy proteins work wonders for you. *Food Engineering* 38(5):82-84, 87-90, 93. May.

• **Summary:** The subtitle reads: "With far better quality and functional properties, soy proteins are finding ever-increasing uses in foods. You can 'engineer' new foods or improve your current products—at more profit, too."

Contents: Introduction to soy proteins—flours, concentrates, and isolates. Soy flours and grits. Who's supplying what. Benefits in quality, cost. Values of soy concentrates. Varieties of concentrates. Highest protein: Isolates. Soy proteins added to egg albumen. Versatility of isolates. Foams and gels. Fiber technique emerges: Worthington's accomplishments ("First textured soy protein fiber product marketed as Worthington's frozen Fri-Chik—an extruded formulation simulating a fried portion of white chicken meat"), problems ahead. Texturizing in other ways.

"New process techniques have been 'engineered' into making soy proteins better so far as quality and function are concerned... Last year about 250 to 300 million lb of soy flours and grits went into formulating food products. About 7 million lb of concentrates and 9 million lb of isolates were used. Present estimates indicate that flours and grits are increasing at a 5% per year rate, concentrates and isolates at about 10% each." Who supplies what? Soy flours and grits: ADM, Central Soya, Crest Products, Staley. Soy protein concentrates: ADM, Central Soya, Crest, Griffith, Gunther Products, Ranell Labs., Swift & Co. Isolated Soy Proteins: Central Soya, Crest, Gunther, Ralston Purina. Spun isolate fibers: ADM, General Mills, Ralston Purina, Worthington Foods. Textured Soy Proteins (extruded grit-type): ADM, H.B. Taylor.

"Archer Daniels Midland is currently researching with a patent-applied-for extrusion process. Product (about 50% protein) can be shaped into many fibrous, textured forms—chips, chunks, flakes, slabs, wafers, or puffs. But whole meat-resembling pieces can't be formed.

"Company's selling product-development lots in various sizes, shapes and flavors. Customers are planning or test-marketing ADM's 'fabricated protein' in stews, chili, and casserole products. Potential market for chunky, ground or snack-type products is likely to be much greater than the one for simulated whole meats." Note: This is the earliest document seen (Sept. 2003) that mentions textured soy flour or grits produced by an extrusion process—later widely known by its ADM trademark as TVP.

"Worthington's simulated meats made from spun soy protein fibers (Fibrotein) come in cubes, slices, chips, granules, rolls, square logs, or other shapes and sizes. They are in fresh, frozen, or dehydrated forms" (p. 93).

Photos show: (1) Soy protein fibers, plus chunks and cubes made from fibers. The caption reads: "Simulated meats can be 'engineered' readily from soy protein fiber shown in the center of these General Mills products." At lower left, going clockwise: 'bacon' chips, 'beef' granules, 'chicken,' 'beef' chunks, 'ham,' and 'seafood.' (2) Many of Worthington Foods' packaged meatless foods made from

textured soy protein fiber; they are canned, frozen, smoked, diced, sliced, or formed into rolls or sausages. (3) Spun soy protein fiber coming out of a spinnerette head (in a glass beaker). (4) Joseph Rakosky operating an electrophoresis apparatus at USDA's Northern Regional Laboratory (NRRL, in Peoria, Illinois). (5) Edible soy protein foam on a meringue pie, developed by USDA at NRRL. (6) A.K. Smith watching Tokuji Watanabe making "tofu cake" by an improved process at NRRL. Address: Senior Assoc. Editor, Food Engineering magazine, Chicago.

466. *Time*. 1966. Commotion in the bean pit. 88:77-78. July 8.

• **Summary:** The soybean is now "the hottest item in the seething U.S. commodities market. Last week futures for soybeans, soybean oil and soybean meal set seasonal records after a month of wild trading." Prices tripled during the month.

"Introduced to the U.S. from Asia in 1804, the soybean did not become a significant agricultural product until World War II cut off normal U.S. imports of fats and oil. From a crop of 193 million bu. in 1945, output rose to 843.7 million bu., worth nearly \$2.5 billion last fall. Soybeans are the U.S.'s most valuable agricultural export, ranking ahead of wheat and corn..."

"Worthington Foods Inc. takes edible soybean fiber produced by Ralston Purina, turns it into meatless frankfurters, roast beef and fried chicken, sells them to Seventh-day Adventists and vegetarians. Archer-Daniels-Midland Co. is testing a soy beverage to be sold in powder form, and Central Soya has developed an ice cream-like frozen dessert made of soybeans.

"What interests researchers the most about the soybean is its high protein content (up to 50%), and this month Central Soya will begin mass production of Promine, an isolated soybean protein, at a new Chicago plant. Promine binds and emulsifies pulverized meats, such as sausages, meat loaf and bologna."

467. *Business Week*. 1966. Soybeans move up on the menu. July 23. p. 82, 84, 87.

• **Summary:** "General Mills, under its Betty Crocker Red Spoon trademark (A.D. Odell in charge), is test marketing the first of a series of projected foods spun out of a protein isolated from soy. Called Bac\*Os, it is designed as a condiment and looks and tastes like lean, crumbled, cooked bacon. Priced at \$0.69 for 3.25 ounces, the jar is equal to 1 lb of cooked bacon." Corn Products' (CPC) Best Foods Div. is marketing Skippy peanut butter containing the product. "Thomas J. Lipton, Inc., a Unilever subsidiary, recently launched four dried gourmet main dish meals including beef stroganoff and chicken la scala. Lipton has patented a process to use isolated soy protein (ISP) as a binder for dried meats... Ralston Purina has developed a series of spun soy

protein foods resembling ham, chicken, and turkey out of ISP. It is selling its spun ISP base, Edi-Pro, to Worthington Foods Inc. Worthington has developed its own line of chicken and ham-like products for sale to religious groups.

"Central Soya makes an isolated soy protein binder called Promine, which goes into sausage and other processed meats. Sales of the binder at \$0.35/lb—twice the cost of the binder it is replacing—are so promising that production will be doubled to 2.5 million lb monthly when a new plant opens in Chicago next month... In addition the company this fall hopes to start exporting a frozen soy dessert to tropical countries with no dairy industries." General Mills, Ralston, ADM, Central Soya, and Worthington combined spend some \$4 million annually on research. Half of this sum is going into basic research and half into product development. ADM recently shipped 3 million lb of a new protein rich soy beverage to Latin America and the East Asia under a USDA program.

468. *Galesburg Register-Mail (Galesburg, Illinois)*. 1966. Max Albert succumbs in New Jersey. Aug. 26. p. 22.

• **Summary:** Max Albert died on 25 Aug. 1966 (Thursday) in Trenton, New Jersey at 9:30 p.m. at the Mercy Hospital after a two-months illness. The retired founder of Galesburg Soy Products, he organized the company in 1938 in Galesburg, Illinois. The funeral will be on Sunday at Trenton, New Jersey, and burial will be at Roosevelt Cemetery in Pennsylvania.

Mr. Albert and his wife Anne maintained a residence in Galesburg at 1612 N. Cherry St. and also in Hollywood, Florida.

Max was born in 1893 in New York City. He was a graduate of the Carnegie Institute of Technology at Pittsburgh, Pennsylvania.

"He was one of the pioneer soybean processors, founding a milling company [Iowa Milling Co.] in Cedar Rapids, Iowa, before organizing Galesburg Soy Products in 1938. He remained with the firm until he retired last year. The company was sold to Archer Daniels Midland" [in Nov. 1965].

The Alberts were married in 1917 in Madison, Wisconsin. Max Albert is survived by his wife and two daughters: Mrs. Horace (Lois) Shaffer, 31 Richey Place, Trenton, New Jersey, and Mrs. Reginald (Eleanor) Simon of Armonk, New York. He also survived by nine grandchildren. A daughter, Betty, died three years ago.

At the family's request, memorials may be made to a charity of the contributor's choice.

Note: Max Albert died in Trenton, New Jersey, because he was visiting his daughter, Lois Shaffer, who lived there.

469. Archer Daniels Midland Co. 1966. "Jack" and the bean stalk (Ad). *Soybean Digest*. Aug. p. 27.

• **Summary:** This full-page black-and-white ad begins: "One

upon a time there were no soybean in America. Our country had to get along without an important source of 'jack' [slang, money].

"U.S. farmer's didn't plant 34.5 million acres of soybeans in the spring and harvest 843 million bushels in the fall."

"But that was Once Upon a Time. And times have changed. The soybean crop and its usefulness have grown miraculously. So has the 'jack.'"

Illustrations show: (1) A goofy \$5 bill. (2) A stylized soybean plant / bean stalk. Address: Soybean Div., Minneapolis, Minnesota 55440.

470. Bowen, William; Shook, Edgar. 1966. Why they call those soybeans "golden." *Fortune* 74:126-29, 186, 191. Aug. • **Summary:** Soybeans have become a \$2.5-billion crop in the U.S., a major U.S. export, and the basis of a hefty domestic processing industry. In the futures market, soybeans have outdistanced all other commodities in dollar volume of transactions. At Chicago's Board of Trade soybean futures are bought and sold in the largest of the seven commodity pits—the pit, the famous arena formerly occupied by the old-time champion, wheat...

"The U.S. produces about 70 percent of the world's soybeans, and is the only nation with a substantial surplus for export. The only other big producer of soybeans, Red China, consumes most of its crop at home..."

"Last fall's crop was four times as big as 1945's, and about 170 times as big as that first officially recorded crop in 1924..."

"Since the early 1950's, demand for meat, and hence for soybean meal, has grown faster in Western Europe and Japan than in the U.S., and as a result U.S. soybean exports have expanded at an average annual rate of 16 percent since 1953... In dollar earnings, soybeans and soybean products now rank as the U.S.'s No. 1 agricultural export..."

"In recent years margins have tended to be uncomfortably narrow...For a big, efficient crusher, the breakeven crushing margin comes to about 17 cents a bushel. During the past several years average industry-wide crushing margins... have tended to run considerably below that breakeven level..."

"Intense competition and meager margins have driven many companies out of soybean processing. The number of companies in the business has shrunk from about ninety in 1946 to sixty-five or so today. Some big companies have dropped out, including Spencer Kellogg and General Mills. The companies still in soybean processing include six giants, all headquartered in the Midwest. Among them they have something like 60 percent of the industry's total crushing capacity. The biggest are Central Soya Co. of Fort Wayne, Indiana, with a capacity of 84 million bushels a year, and Cargill, Inc., of Minneapolis [Minnesota]. Cargill claims to have about the same capacity as Central Soya. The other four

members of the Big Six all have capacities on the order of 50 million to 60 million bushels a year: Archer Daniels Midland Co. (Minneapolis), Ralston Purina Co. (St. Louis), Swift & Co. (Chicago), A.E. Staley Manufacturing Co. (Decatur, Illinois).

"These companies all have large interests apart from soybeans, Archer Daniels, Cargill, Ralston, and Staley in grains, and Swift in meats. Even Central Soya, despite its name, gets less than half its revenues from soybean processing; the company has spread out on a grand scale into other fields, including feed manufacturing and grain merchandising..."

"Soybean futures work like other commodity futures. The future bought or sold constitutes an enforceable contract to take delivery of, or deliver, a specified quantity at a specified price in a specified month at a specified place. But at any time prior to the delivery month the buyer or seller can cancel out the contract at will (though not always, of course, without loss), simply by taking an equal action in the opposite direction. The trader who bought sells, or the trader who sold buys, and, lo, everything washes out. The earlier and later transactions offset each other. Most futures contracts are offset in this way, prior to maturity; at the Board of Trade only 1 percent or so are settled by actual delivery of the commodities.

"Basically, the commodity-futures market enables holders of large inventories to hedge against inventory losses resulting from price declines."

Contains a detailed discussion of hedging and its complexities and uncertainties. "Hedging is more sophisticated than crushing."

471. Archer Daniels Midland Co. 1966. Annual report for the year ended June 30, 1966. Minneapolis, Minnesota.

• **Summary:** Net sales and other operating income: \$361,521,017. Earnings before taxes: \$7,877,783. Net earnings: \$4,945,464. Current assets: \$142,072,993. Current liabilities: \$84,591,173. "ADM enjoyed its best year since 1959. The outstanding factor was the comeback of the Agricultural Group."

"On February 14 Dwayne O. Andreas was elected to the ADM Board of Directors and Executive Committee. On the Board he succeeded Walter G. Andrews, who resigned after 25 years of association with the Company. Mr. Andreas brings to ADM international experience in the merchandising and processing of agricultural commodities."

A "Ten year summary of financial and operating data" shows a dramatic increase in net earnings from \$2.765 million in 1965 to \$4.945 million in 1966—more than doubling in one year.

Photos show: (1) The board of directors. (2) The executive committee. Both include Dwayne O. Andreas. Address: Minneapolis, Minnesota.

472. *Soybean Digest*. 1966. Honorary life members [American Soybean Assoc.]: D.W. McMillen and Dwayne O. Andreas. Sept. p. 6.

• **Summary:** “Dale W. McMillen, a pioneer in the soybean processing industry, demonstrated his belief in the future of the soybean by founding Central Soya at Decatur, Indiana, in the depression year of 1934 when he was 54 years of age.

“He believed that soybean meal could become an important ingredient in animal feeds, and the founding of Central Soya to process soybeans and manufacture Master Mix feeds was his way of putting his belief into action.

“Mr. McMillen was one of the first in the industry to take the major step in 1937 of converting from the expeller method of processing soybeans to the now universally accepted solvent extraction method of processing soybeans into meal and oil. For a company scarcely 3 years old, this was a courageous move.

“In the late thirties, soybean meal had so little standing in the feed industry that one of Mr. McMillen’s first jobs was that of making soybean meal respectable. Through cooperative work with agricultural colleges, utilizing nutrition conferences for veterinarians and livestock feeders, Mr. McMillen and his staff helped dispel false ideas about soybean meal and give soybean meal the place it deserved in the nation’s feedlots. Mr. McMillen’s personal salesmanship and his continuing emphasis on improving the product through technological advances in processing techniques also contributed significantly to building a market for soybean meal, and thus for the soybean itself.

“Now an active 86 years of age, Mr. McMillen has lived to see the soybean crop grow from 23 million bushels in 1934 to a figure approaching the 1-billion-bushel mark in 1966.

“Dwayne O. Andreas, of Excelsior, Minnesota, has had a lifelong association with the processing of soybeans. He believes he has been involved in planning, building, or actually operating about 30% of the soybean processing capacity of the nation at one time or another. Also, he has had a hand in the manufacture of almost every product made from soybeans.

“Mr. Andreas was born on a farm near Worthington, Minnesota, and spent his early years on the farm. During his school years he worked in the family country elevator and seed business at Lisbon, Iowa.

“From 1938 to 1945 he was principal executive officer of the family-owned company, Honeymead Products Co., which had soybean processing facilities at Cedar Rapids and Washington, Iowa.

“From 1946 to 1952 he was vice president of Cargill, Inc., with soybean processing plants in Chicago, Illinois; Fort Dodge, Iowa; Springfield, Illinois; Savage, Minnesota; and Memphis, Tennessee.

“From 1961-65, he was executive vice president of Farmers Union Grain Terminal Association, which owns a

processing plant [Honeymead] at Mankato, Minnesota.

“At present, Mr. Andreas is a member of the board of directors and the executive committee of Archer Daniels Midland Co., which has soybean processing plants at Bloomington, Galesburg and Decatur, Illinois; Fredonia, Kansas; and Mankato, Minnesota.

“Mr. Andreas is also chairman of the board of directors of First Interoceanic Corp., a privately owned investment company, Minneapolis; chairman of the executive committee, National City Bank of Minneapolis; and president of the Andreas Foundation, Minneapolis.”

Photos show D.W. McMillen and Dwayne O. Andreas.

473. *Mankato Free Press (Minnesota)*. 1966. ‘63 Mankato soybean tank collapse not caused by blast, court rules. Oct. 28.

• **Summary:** The Minnesota Supreme Court ruled today [to nobody’s surprise] that the rupture of a huge soybean oil storage tank at Honeymead Products Co. at Mankato in Jan. 1963 was not caused by an “explosion.” Sixty companies carried policies insuring Honeymead against “direct loss by... explosion.” Honeymead had other insurance, but with less coverage than under an explosion. The court turned down Honeymead’s contention that the jury should have been permitted to look at the insurance policies during the trial.

Experts at the trial blamed the tank collapse on the extremely cold weather, which caused welded steel plates to become brittle. Lowell Andreas, president of the company, was out of the country and could not be reached for comment.

474. Chambers, John A. 1966. What is soya? *Arkady Review (Manchester, England)* 43(4):54-59. Dec. [2 ref]

• **Summary:** Includes recipes for Madeira slab cake and chocolate slab. Address: Development Manager, British Arkady Co. Ltd., Skerton Rd., Old Trafford, Manchester 16, England.

475. Cohen, Maxim M. 1966. Seaport of Chicago—Gateway to the Midwest’s soybean lands. *Soybean Digest*. Dec. p. 15-16, 19-21, 23.

• **Summary:** The cover story of this issue of Soybean Digest is “Seaport of Chicago.” This story reads more like an advertisement than an article, although it does contain valuable information. The entire first page of the article is an aerial photo of the “Seaport of Chicago,” with those words written in red across the middle.

Contents: Introduction. Other facilities (on the Calumet River). International port. Calumet elevators. Bulk terminals. Access to all roads.

Photos show: (1) Chicago Harbor Lighthouse. (2) Portrait photo of Maxim M. Cohen. (3) General Mills Chicago installation with 2½-million-bushel Rialto elevator at left. The elevator supplies domestic and export demand.

(4) Cargill's 20-million-bushel elevator on the Calumet channel—largest on the Great Lakes. (5) Archer Daniels Midland Co.'s 4,800,000-bushel Calumet elevator. (6) Continental Grain Co.'s B elevator. Continental has three big elevators at Chicago, A, B, and C. All these elevators are domestic and export terminals, with facilities for receiving soybeans by rail, barge, and truck, and shipping out in rail cars, barges, and ships. Address: General Manager, Chicago Regional Port District.

476. Randolph, Chet. 1966. New vegetable protein foods are now available: International Protein Conference [at Peoria]. *Soybean Digest*. Dec. p. 9-10.

• **Summary:** "Over 250 people attended the International Conference on Soybean Protein Foods at Peoria, Illinois, Oct. 17-19. They came from many states, nine countries, and the United Nations.

"At a similar conference 5 years ago many questions were raised as to how we might meet the protein needs of the world and whether or not the necessary foods could be developed and marketed successfully. At this conference it became clear that scientists have developed the formulas and techniques and that foods are now available from vegetable protein sources. How to distribute or market the foods is not so clear.

"Orville G. Bentley, dean of the College of Agriculture at the University of Illinois, who opened the conference, referred to the soybean as the golden nugget of the Orient that is now recognized worldwide as the efficient producer of high-quality protein and oil. The United States produces 71% of the world soybean supply.

"The need for protein in the underdeveloped countries was clearly reestablished at the conference. Dr. Ricardo Bressani, of the division of agricultural and food chemistry in Guatemala, Dr. Fred T. Sai of the University of Ghana Medical School, and Dr. Kamaluddin Ahinad of the University of Dacca in East Pakistan all reported graphically the need for protein, especially for children and in particular those just weaned. In the underdeveloped areas the infant is taken from the mother's breast and abruptly placed on a starch gruel which may be made from corn, casava [cassava], or rice. At the very time when they need the greatest protection against childhood diseases they are given a strange gruel, in many cases with only half the protein requirements.

"Several men in the medical profession reported on experimental work proving that vegetable sources can supply the needed protein where milk is not available or is too high priced. Dr. George C. Graham of Baltimore City Hospitals [Maryland] reported on a detailed study of undernourished infants who responded to vegetable proteins. Dr. Po-Chao Huang of the Massachusetts Institute of Technology had returned to his native Formosa where he had an experiment with 57 babies that averaged 3 months of age. He compared

cow's milk, soy beverage, and some soy flour and rice formulas. In all cases he found that the growth rate, skin texture and smile of the babies were equal whether the protein was from vegetable or milk protein sources. He even had two sets of identical twins which added to the study.

"Sales of Incaparina: John W. Money with Quaker Oats Co., working in Colombia in South America, reported that Incaparina was beyond the experimental stage and they were actually selling it. This high-protein formula is supplying the protein needs of children in that area to the equivalent of 5 million glasses of milk a month. They have priced their product just below the second staple food, rice.

"We had reports of the many uses of soy flour and soy grits and beverages that can come in an almost infinite variety of forms. One type of soy flour is used in baked goods, another in doughnuts. Soy grits are widely used in dog food, with another type of soy flour finding increased use as a calf milk replacer. Different companies are prepared to sell soy fiber foods with flavors similar to those of fish, ham, chicken, or pizza. Dr. Arthur D. Odell of General Mills, Inc., reported on the techniques and sales of their meat-like products made from modified vegetable tissues. Such items as their bacon chips are on the market and beyond the research stage.

"Others reported on sales of the modified vegetable proteins to hotels and restaurants. This is the sophisticated type of food that goes with a suitable income. People enjoy it as a convenience item.

"We had a report on several formulations of very basic foods primarily for nutrition to sell at the lowest possible cost. General Mills, Archer Daniels Midland Co., Central Soya, and Ralston Purina Co. have highly specialized machinery and equipment for spinning the fibers or preparing the foods.

"Gus C. Mustakas of the Northern Regional Research Laboratory at Peoria, Ill., reported on his work to develop a simple technique that can be used in any village in India or Ghana. This involved soaking the soybeans in a sack, boiling on an open fire and running through a small hand grinder. He reported that with such simple equipment they could make 300 pounds a day to provide half the daily protein needs of 1,600 people.

"It was agreed that one of the big needs is for more know-how in marketing in many areas of the world where cultural, ethnic, and religious backgrounds and tastes vary so widely. Dale W. Johnson, executive vice president of Crest Products, Inc., and Hugh Robinson of Foreign Agricultural Service, Washington, D.C., among others, reported on the complexities of the problems that must be overcome, including the tariffs and government restrictions, as well as such things as the taste habits and advertising patterns in the many different countries.

"Dr. Sai told of Ghana farmers who were quite pleased with the new soybeans they were taught to raise. There

was a celebration at harvest time. But they will never raise soybeans again in that area. The reason is that it took so long to cook the soybeans that all of the fuel in that area was used up before the winter was over.

“Soybeans in India: Stories were told of planting soybeans in India. But at harvest time there was no place to sell them because of the lack of processing facilities. The University of Illinois indicated they will cooperate with India to use soybeans as a teaching tool, in which they are stressing the interdependence of the experiment stations, extension, and teaching. This is the basis of our Land Grant Colleges, but it is something new in other parts of the world. They feel that even if soybeans are not successful in India the teaching techniques will be worthwhile. They plan to approach the problem on a team basis, taking into account not only production but also processing, distribution, and food uses and tastes.

“Dr. Joseph J. Rackis of the Northern Laboratory and Dr. Frederic R. Steggerda of the University of Illinois reported considerable progress in overcoming the flavor and flatulence (gas) problems in soybeans.

“Dr. Edwin W. Meyer of Central Soya predicted that some day, when the volume is high enough, a 70%-protein product can be sold as low as 130 per pound. Some companies reported success in the products that will go through freezing and then heating, such as added chunks in frozen corn that is then heated for food for the table.

“Dr. Odell reported that two University of Iowa men, working with prisoners, found an excellent response in adult human volunteers who subsisted on a strictly vegetable source of protein. After 6 months they were in excellent health.

“Other nutrition studies by the Wisconsin Alumni Association, as well as those in Guatemala, indicate that enough is known now about soy protein so that it can be utilized as the sole source of protein, with no adverse effects on any species of animal on which it is tested. Dr. Odell indicated that it need not cost more than one-half low-quality hamburger per unit of protein. However, again soy foods in this country are expected to find their way into new markets mostly as convenience foods.

“Dr. Clifford W. Hesselstine of the Northern Laboratory reported a former worker is now in Indonesia supplying low-cost protein foods at cost to students and faculty at his university.

“Dr. Lester J. Teply of UNICEF reported that while the soybean is native to the Orient and has been known for centuries, it has not been generally substituted for milk, contrary to popular belief. That is why this is a new area. The familiarity of the Orientals with soybeans may make it easier to introduce soy beverage to provide children with needed protein after weaning. (Some soy milk has been available in the Orient due to the efforts of such men as Harry W. Miller and K.S. Lo.)

“Dr. George L. Mehren, Assistant Secretary of Agriculture, said if we can add protein to the rice, corn, and casava [cassava] already in the diet and get it to the children we can make a dent in the serious problems of malnutrition. He added his official voice to the call for immediate action.

“It was made clear at the conference that the need is there. Scientists have developed the foods and the techniques. There is no doubt now as to the direction we must take. The question now is how do we move in specific areas and how soon are we prepared to move.”

Across the top of the first page is a portrait photo of 7 of the conference speakers. Address: Field Director, American Soybean Assoc.

477. *Soybean Digest*. 1966. Lowell W. Andreas is named director of ADM. Dec. p. 38.

• **Summary:** “Archer Daniels Midland Co.’s shareholders increased the ADM board of directors to 11 members with the election of Lowell W. Andreas, Mankato, Minnesota, at the annual meeting recently. Mr. Andreas is manager of Honeymead Products and treasurer and a director of First Interoceanic Corp., Minneapolis investment company.” A small portrait photo shows Lowell Andreas. Reelected to the board was Dwayne O. Andreas, chairman of First Interoceanic Corp.

478. *Soybean Digest*. 1966. ADM begins production of new protein foods. Dec. p. 14.

• **Summary:** One of the new foods being manufactured at the company’s plant in Decatur, Illinois, is a textured vegetable protein product which ADM president John H. Daniels termed “truly an exciting development for ADM.” “Developed by ADM research, it has the texture of meat, it can be flavored to taste like meat, and it “chews” like meat,” he said. “This textured vegetable protein (TVP) can be used in any foods where meat in granular, chunk or strip form is an ingredient. Patents on our manufacturing process for this product have been applied for and we have a strong patent position.” ...

“Mr. Daniels said the new Decatur food plant also is producing three high-protein food products for the foreign feeding programs conducted by the U.S. government. These include a soy beverage, a corn-soy-dry-milk food and Ceplapro, a cereal protein product. He said the company expects this business to grow.”

Note: This is the earliest document seen (July 2020) that mentions “TVP” and that states it is now being made.

479. *Soybean Digest*. 1966. ADM will build soybean plant at Lincoln, Nebraska. Dec. p. 33.

• **Summary:** “Archer Daniels Midland Co., Minneapolis-based agricultural and chemical firm, announced that it will construct a major soybean processing plant in Havelock, Nebraska, a suburb of Lincoln” (instead of near Omaha,

Nebraska, as announced in Feb.) according to John H. Daniels, ADM president.

“The ADM plant will be on a 50-acre site at 78th St. and Thayer, purchased from the Lincoln Grain Co. ADM has also purchased Lincoln Grain’s 8-million-bushel elevator complex there.” Construction of the modern solvent extraction plant will begin immediately, with completion scheduled for Nov. 1967. It will be Nebraska’s largest soybean plant, employing about 55 workers and processing approximately 33,000 bushels or 1,000 tons of soybeans per day. Production manager will be Alan Colby, who has been manager of ADM’s plant at Mankato, Minnesota, for the past 10 years.

480. *Soybean Digest*. 1966. Calumet harbor and river improvement. Dec. p. 19.

• **Summary:** See next page. Lake Calumet is the largest body of water within the city of Chicago. This map shows Lake Calumet, the Calumet River, Calumet Harbor, and Lake Michigan.

On the map are shown 17 numbered terminals or elevators, including: (9) ADM’s Calumet Elevator. (10) Cargill Chicago Elevator. (11) Continental Elevator A. (12) Continental Elevator B. (17) Continental Elevator C.

481. Neufeld, Don F. ed. 1966. Seventh-day Adventist encyclopedia. Washington, DC: Review and Herald Publishing Assoc. xviii + 1452 p. Commentary Reference Series, Vol. 10.

482. Neufeld, Don F.; et al. ed. 1966. Seventh-day Adventist encyclopedia: Granose Foods Limited. Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 527-28. • **Summary:** “A health-food factory situated in Stanborough Park, Watford, Hertfordshire, England, manufacturing several kinds of nut foods and breakfast cereal biscuits, one of the latter being called Granose. In 1962 business volume [sales] totaled £250,000.

“The SDA [Seventh-day Adventist] health food work in Great Britain was begun by a group of laymen who, under the name The London Health Food Company, purchased health foods from Dr. J.H. Kellogg, of Battle Creek, Michigan, and distributed them to the public. After a few years SDA leaders in Great Britain sent J. Heide, a master baker, to Battle Creek to learn how to make the foods. In 1899 a manufacturing company was formed under the name The International Health Association Limited, changed in 1926 to Granose Foods Limited. The company purchased a flour mill in Salford, near Redhill, Surrey, to serve as the factory. Disused plant equipment obtained from Battle Creek, together with machinery purchased in Great Britain, formed the nucleus from which the present business has grown. W.T. Bartlett was the first manager and secretary and A. Rodd was the first factory superintendent.

“Before electricity was available, candles were often used, a practice that led to a fire that burned the factory to the ground in [Aug.] 1900. Health foods were again temporarily imported from America, but gifts and loans from SDA’s re-established the company, in Birmingham.

“In 1907 all SDA institutions in England, including the food factory, were centralized at Stanborough Park, Watford. The factory has grown until in 1963 it had a floor space of approximately 25,000 square feet, and still further extensions were planned.

“Former managers included H. Osborne, J. Rigby, and George Adair. Joint managers in 1963 were George Norris and B. Goulstone.”

Note 1. This is the earliest document seen (June 2009) that mentions the “London Health Food Company” or that explains its work importing health foods from Dr. Kellogg in Battle Creek, Michigan, and “distributing them to the public.” Presumably the foods were sold.

Note 2. Concerning the term “Granose”: Richard W. Schwarz in his book *John Harvey Kellogg, M.D. (1970)* discusses Granose Flakes on pages 119-20, and 209-10. The first flaked breakfast cereals were developed from wheat jointly by Dr. J.H. Kellogg and his brother Will, in about 1894. Dr. Kellogg named their first successful wheat flakes product Granose Flakes, and on 31 May 1894 he applied for a U.S. patent on “Flaked cereal and process for preparing same.” But in 1903 courts declared the doctor’s patent invalid. Will Kellogg developed the product into a great commercial success, in part by adding sugar to the malt and corn combination from which he made the flakes. “The

sugar greatly enhanced the cereal’s taste appeal, and, as a result, the Corn Flakes business was booming by late 1905.” The term “Granose” appears in 1904 in a “Chart of Food Elements” in the magazine *Good Health* (Jan. Insert after p. 48) published by John Harvey Kellogg in Battle Creek Michigan. It appears to be a grain-based breakfast cereal. Address: Washington, DC.

483. Kreuzer, Glenn. 1967. ADM plus s-o-y spell TVP, cash for Nebraska growers. *Lincoln Journal Star (Lincoln, Nebraska)*. Jan. 29. p. 53.

• **Summary:** “Can we feed an exploding world population that will double in 30 years...” ADM is building a new plant in Lincoln, Nebraska which will make a new Textured Vegetable Protein, or TVP.

TVP is in a granular or dry state which does not require refrigeration. When hydrated, “it takes on the characteristics and nutritional qualities of meat.”

“It can be used in any food where meat in granular, chunk or strip form is an ingredient.”

“Market tests have already shown it to be an excellent food extender. For pizza it has exceeded expectations of its staunchest supporters.

There may be potential for use in countries where refrigeration is limited or non-existent. It is often in these countries where people want meat but are unable to afford it.

At its plant in Decatur, Illinois, ADM is also making high protein foods for foreign feeding programs conducted by the U.S. government [P.L. 480 or Food for Peace Program]. These foods include: (1) A soy beverage, which ADM technicians believe “is ideal for school feeding programs and as a diet supplement in food short nations.” (2) CSM or Corn-soya-milk. “The government has just placed its second order for 10.5 million pounds of CSM.” (3) Ceplapro—made from cornmeal, wheat flour, processed soy grits, nonfat dry milk, soy oil, and vitamin/mineral premix.

Two photos show: “Meat in sukiyaki and sausage on pizza? Wrong twice. It’s TVP, a meat substitute from soybeans in each case. Here’s how some Nebraska soybeans will end up as a result of new Archer Daniels Plant in Lincoln and processing in Decatur, Illinois.”

Note: This is the earliest document seen (Aug. 2020) that mentions Archer Daniels Midland and TVP in [www.newspapers.com](http://www.newspapers.com). Address: Farm Editor.

484. *Food Processing & Marketing*. 1967. Meat-textured protein in commercial production. Feb. p. 46.

• **Summary:** Textured vegetable protein (TVP) is now being produced commercially by Archer Daniels Midland Co. It can be used as an ingredient in any foods in which meat, in granular, chunk, or strip form is presently being used.

485. *Food Technology*. 1967. Soybean protein products new entry in market. 21(2):72. Feb. Cover story.

• **Summary:** “A specially-built plant of the Archer Daniels Midland Company (ADM–Minneapolis, Minnesota) is now in operation, producing new products from vegetable proteins for use in foods. The plant has been erected within the soybean processing complex of ADM at Decatur, Illinois. Textured vegetable protein products are among the first of a number of new foods to be produced at the plant.”

Photos show TVP used in a cheese loaf, a sukiyaki-style dish, a pizza topped with TVP instead of meat. Three basic forms of TVP are beef-flavored strips, chunks, and granules.

486. *Food Product Development*. 1967. Textured vegetable proteins offered in 4 flavors, many forms. 1(1):38. Feb/March.

• **Summary:** TVP is now available from Archer Daniels Midland Co. in chicken, ham, beef, or bacon flavors. The various forms include granules, chunks, strips, or chips. The products contain, on average, 50% protein, 5% moisture, 3% fiber, and 1% fat. They are generally used in recipes and formulations in place of meat.

487. *Journal Star (Peoria, Illinois)*. 1967. ADM sells Mapleton plant to Kentucky refining firm. April 20. p. B-15.

• **Summary:** ADM has sold its entire chemical group, including its major chemical center at Mapleton, to Ashland Oil & Refining Co., Ashland, Kentucky. Construction of the Mapleton plant began in 1960 and in April 1962 it began producing industrial chemicals, mostly from vegetable and animal fats. John H. Daniels, president and CEO of ADM announced the sale, noting that sales from the chemical group accounted for less than 20% of ADM’s total sales of \$361.5 million in fiscal 1966. The main reason for the sale, he said, was to enable management to concentrate on the growth potential in the agricultural processing side of the company. ADM has been in the chemicals business since 1929.

488. Archer Daniels Midland Co. 1967. TVP–Textured vegetable protein: Technical Bulletin 1126 (Booklet). Minneapolis, Minnesota. 25 p. April. 28 cm. [1 ref]

• **Summary:** See next page. Contains technical information about TVP and many bulk recipes. Contents:

- General Information
- Analysis Chart
- Hydration Methods and General Preparation of TVP
- TVP Hydration Time Chart
- Using TVP In Meat Patties
- TVP Nutritional Data

489. Office of the Chief Economist, Resources and Transportation Studies Section, Ontario. 1967. Soybeans in Ontario: Production, utilization and prospects. Toronto, Ontario, Canada. 40 p. April 25. 36 cm. [10+ ref]

• **Summary:** Contents: 1. Soybeans and alternative sources of vegetable oil. 2. Soybeans and soybean products production, consumption and utilization. 3. Soybean varieties and techniques of production. 4. Economic aspects of soybean production. 5. Possibilities of increasing soybean acreage in Ontario. 6. Areas with potential for increased soybean production. 7. Possible effects on soybeans of increasing rapeseed utilization. 8. Conclusion.

Total soybean acreage in Ontario has increased from 154,973 in 1951 to 265,000 in 1965. The two regions of production are the Lake Erie Region (which produced 12.71% of the provincial total in 1965; the largest soybean producing county is Elgin) and the Lake St. Clair Region (which produced 86.38% of the provincial total; the largest producing counties were Kent [94,700 acres], Essex [85,500], and Lambton [48,700]).

“About 70-75% of total Canadian soybean supply is imported (almost entirely from the United States); approximately 80-90% of the supply is crushed domestically, the rest is exported mostly to the United Kingdom” (p. 7).

“The greater part of the crop is sold to the three crushing plants in Toronto (Victory Mills Ltd., Maple Leaf Mills Ltd., and Canadian Vegetable Oils Processing Ltd.). The balance is exported to the United Kingdom where it is accorded preferential tariff treatment... Ontario’s production is insufficient to meet the needs of Canadian processors, and large quantities [of soybeans] (65-70 per cent of their total requirements) are imported duty free from the United States” (p. 21-22).

“Conclusion: Ontario has a potential for increasing its soybean acreage, provided that (a) a gradual change in the pattern of crop production will be brought about (reduction of oats and mixed grain area); (b) research will provide higher yielding varieties especially for the area between the 2,500-2,700 heat unit lines; (c) reliable, cheap herbicides will be available; (d) large scale drainage and pasture

# TVP

TEXTURED VEGETABLE PROTEIN

TECHNICAL BULLETIN 1126

ARCHER DANIELS MIDLAND COMPANY 733 MARQUETTE AVENUE MINNEAPOLIS, MINNESOTA 55440

improvement programs will be carried out; (e) extension efforts will concentrate on disseminating knowledge on adequate methods of soybean growing.

“The striking success of the Corn-Plan launched by the Ontario Government and O.A.C. [Ontario Agricultural College, Univ. of Guelph] indicates that a ‘Soybean Plan’ might lead to similar results.” Address: Toronto, Ontario.

490. *Wall Street Journal*. 1967. Archer-Daniels-Midland says it sold chemical business for \$65 million. May 16. p. 3.

• **Summary:** Minneapolis [Minnesota]–ADM has sold its chemical business to Ashland Oil & Refining Co.

During the current fiscal year, ADM spending will include: acquisition of a barge fleet for transporting agricultural products; construction of a new soybean processing plant in Lincoln, Nebraska; “expansion of present Decatur, Illinois, plants and construction of a new plant in Decatur to make textured vegetable proteins for foods.”

491. Hayward, J.W. 1967. Heat processing of soybean meal for maximum protein quality. *Soybean Digest*. May. p. 43-45, 48. [14 ref]

• **Summary:** From his speech at the World Congress on Animal Nutrition in Madrid, Spain. A large photo shows Dr. Hayward addressing the congress. In 1960 Dr. Hayward retired as director of nutrition at Archer Daniels Midland Co., Minneapolis, Minnesota, after 25 years with that firm. He has since served in the same capacity with the Soybean Council of America, Inc., and now with Soypro International.

“My experience, with rather limited nutritional aspects of soybeans, started back at Purdue University in 1918 with swine. Research in earnest began for me at the University of Wisconsin in 1932, where I investigated rather thoroughly, for a few years, the effect of heat on the protein quality of soybean meal produced by all three methods of oil extraction. After completion of my graduate studies at the University of Wisconsin I joined industry, where many years have been devoted to further researches and market development work with soybeans.

“The Archer Daniels Midland Co. (ADM) brought to the United States in 1933 the first continuous solvent extraction plant to be used in our country on oilseeds (1). It was erected and started to operate on a limited scale in the spring of 1934. According to ADM’s contact man in Europe, many German-owned firms in and around Hamburg had successfully operated for many years continuous solvent extraction plants for removing oil from several different oilseeds including some soybeans. Neither these firms nor any of the others visited in England or on the continent purposely heated their oilseeds, including soybeans or the meal, for any possible benefits the heat might have on the nutritional value of its protein, let alone improve the meal physically such as reducing dust and improving color and the general appearance. Heat and flaking or rolling were used

to facilitate oil removal from the oil-bearing seeds. Heat was also used to desolventize the meal or flakes and, where needed, to reduce the moisture in oilseeds to a safe level for storing.

“However, heat was not used intentionally as a means of improving the feeding value of the meal as could have been the case with soybeans. This does not mean that the light-colored solvent extracted soybean meal made in Germany and some neighboring countries back in 1910 to 1935 was undercooked for good protein nutrition of such critical animals as young poultry, pigs, lambs and calves. This possibility does exist, but it wasn’t even discussed while ADM’s representative was bargaining for his firm’s first solvent extractor, a “Hildebrandt” unit, with the developing and fabricating firm, Brinckman and Mergell, of Hamburg-Harburg, Germany.

“In the United States we found that the new light-colored solvent extracted soybean meal was excellent in protein quality as long as we did not tamper with the live steam or indirect heat in the desolventizing columns, or as long as we ran the unit at the low-gear speed recommended by the manufacturer. Samples of the initial light-colored solvent extracted soybean meal were sent to Cornell University investigators (2) who gave it a “relative protein efficiency” value of 92 in their tests, as compared to 57 for the raw soybeans from which this meal was produced.”

“With the solvent process it has been a common practice since 1937 or thereabouts to wet cook the flakes after oil removal. This was done at will in separate cookers since this heating process would not discolor the oil as it was removed prior to cooking... It was back then (1937) that some of us at ADM coined the term ‘toasted’ for this soybean meal from the wet cooking process.

Figures show: (1) Processing of soybeans to get 44% protein solvent extracted meal. (2) Processing of soybeans to get 50% protein solvent extracted meal.

Tables: (1) Nutritional quality guide for soybean meal. (2) Influence of temperature and moisture content of soybeans on the utilization of extracted soybeans by the chick. Address: Nutrition Director, Soypro International, Inc.

492. Horan, Francis E. 1967. Defatted and full-fat soy flours by conventional processes. *USDA Agricultural Research Service*. ARS-71-35. p. 129-41. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois. [8 ref]

• **Summary:** Contents: Introduction. The soybean processing industry. Definition and composition of soy flours and grits. Effect and importance of heat in the processing of soy flours.

Soy flour has been ground finely enough to pass through a 100-mesh screen. Soy grits refer to particles of larger size, described in terms of the following U.S. standard screens: Coarse No. 10-20. Medium No. 20-40. Fine No. 40 to 80. Also defines: Defatted soy flour. Low-fat soy flour. High-

fat soy flour. Full-fat soy flour. Lecithinated soy flour. Tables show: (1) Composition of soy flours and grits. (2) Commercial types of defatted soy flours: Amount of heat treatment, protein dispersibility index, and relative protein efficiency (dried skim milk equals 100%).

Note: This is the earliest document seen (Jan. 2016) that uses the term “protein dispersibility” or the term “protein dispersibility index” in connection with soybeans. Address: Assoc. Director, Agricultural Products Research, ADM, Minneapolis, Minnesota.

493. Huang, Po-Chao; Tung, T-C.; Lue, H-C.; Lee, C-Y.; Wei, H-Y. 1967. Feeding of infants with full-fat soybean-rice foods. *USDA Agricultural Research Service*. ARS-71-35. p. 183-93. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois. [13 ref]

• **Summary:** Contents: Introduction. Selection of infants. Feeding and care of infants. Clinical findings. Blood data. Nitrogen balance studies. Discussion. Summary. Contains 8 tables. Address: National Taiwan Univ.

494. *Wall Street Journal*. 1967. Archer Daniels desires to buy food processors. June 27. p. 27.

• **Summary:** Archer Daniels Midland Co. hopes to be able to complete some acquisitions within the next fiscal year which begins July 1, said Lowell W. Andreas, executive vice president. Archer Daniels is not yet considering a major entry into consumer products, but the company wants to get as close to consumer marketing as possible.

495. **Product Name:** Nutrisoy 220 (Full-Fat Soy Flour).

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** Minneapolis, Minnesota.

**Date of Introduction:** 1967 June

**How Stored:** Shelf stable.

**New Product–Documentation:** Orr and Adair. 1967.

Tropical Products Institute Report G-31. “The production of protein foods and concentrates from oilseeds.” p. 56. Nutrisoy 220 contains 22-23% fat and 43% protein. The ADM plant has a capacity of 90 (short) tons per day.

496. Orr, Elizabeth; Adair, David. 1967. The production of protein foods and concentrates from oilseeds. *Tropical Products Institute Report* No. G31. 104 p. June. Also titled T.P.I. Report (London). [44 ref]

• **Summary:** Contents: Foreword. Acknowledgements. Introduction. 1. The use of oilseeds as a source of protein. 2. Oilseed resources. 3. The manufacture of protein flours by standard oil milling processes. 4. Some cost aspects of the manufacture of protein flour by standard oil milling processes. 5. Examples of the use of edible flours made by standard oil milling processes. 6. Full fat soya flours. 7. Oriental methods of processing soya. 8. Other processes

for making protein products. 9. The distribution of protein products. 10. Current experience of making protein flours and foods from oilseeds. 11. The initiation of protein food programmes with particular reference to the role of the administrator. Appendices. 1. Protein nutrition. 2. Oilseed statistics. 3. Toxic hazards. 4. P.A.G. Guides [PAG]. 5. Aflatoxin. 6. Questionnaire. 7. Some examples of the cost of packaging oilseed-based protein foods. 8. Prices of edible oilseed products and protein flours and foods made from oilseeds. Bibliography. Chapters 6 and 7 are especially relevant to soyfoods.

“Full fat soya flour (FFSF) is manufactured in the USA by Archer Daniels Midland Co. and Central Soya, and in the UK by 3 firms: British Arkady Co. Ltd., Soya Foods Ltd., and British Soya Products Ltd. There are no official statistics for production in either country. A trade source of information has estimated UK usage of soya flour at 30,000 tons per annum, but this figure includes defatted soya flour made from meal imported from the USA. Full fat soya flours can be divided into 2 main categories: (a) flours used primarily for bleaching purposes in bread, and (b) general purpose flours. When the flour is to be used mainly for bleaching it is made from uncooked beans, since the natural enzymes in the bean must remain active until the bleaching process has been completed. It is estimated that about half the full fat soya flour made in the UK is used in bread manufacture.”

A table lists all known commercial full-fat soy flours, their composition and prices. Describes the Promo Process and Wenger Process for making FFSF, with cost data. Gives case histories for Pronutro in South Africa and Nutresco in [Southern] Rhodesia.

Chapter 7. Oriental methods of processing soya beans: Kinako (“a flour made from ground toasted [soy] beans, used in making cakes”). Fermentation products: Soya sauce (shoyu), miso, natto, tempeh. Developing the use of fermented products. Aqueous extracts: Soya milk and tofu, kori-tofu. Soya milk as a substitute for cow’s milk. The package soy milk shop (including Tetra Pak and Prepac packaging; the Prepac system, developed by the S.E.A.B. Co., Villejuif, France, has a capacity of 1,500 packs/hour). Case histories for soya milk: Rural cooperatives in Taiwan, Saridele in Indonesia, and Vitasoy in Hong Kong. Soya milk made from soya flour: The 4 known manufacturers of soya milk are Promo Ltd. of the U.K. (“The product made by Promo is marketed under the brand name of ‘Velactin’ by the Wander company.”), and Loma Linda Foods (Soyalac and Granogen), Mead Johnson (Sobee or Soybee), and Borden’s Soy Processing Co., all of the USA. Promo and Loma Linda use the traditional Oriental method rather than using soy flour.

Note: This is the earliest document seen (Aug. 2015) concerning Tetra Pak and soy. Address: TPI, 56/62 Gray’s Inn Road, London WC1.

497. Horton, Yvonne. 1967. Soybean products: Candid consumer. *Christian Science Monitor*. July 6. p. 10.

• **Summary:** Increasingly sophisticated edible plant proteins are now available to American consumers, after getting their start in institutions.

Synthetic bacon bits, named Bac-Os, made by General Mills, Inc. from isolated soy protein under the trade name Bontrae, resemble crisp fried pieces of lean bacon without fat. They are being test marketed in Buffalo and Syracuse, New York; in Sacramento and Stockton, California; and in Denver, Colorado.

Before being test marketed at retail outlets, Bac-Os were used for salads on Eastern Airlines flights and for bacon, lettuce and tomato sandwiches in restaurant chains, university dining halls, etc.

Another high-protein product made from Soybeans by General Mills is Modern Protein Food (MPF), also called Multi-Purpose Food; it is recommended by the maker for stocking fallout shelters, for stretching food budgets, and for vegetarian or other special (religious) diets.

Many other food manufacturers are doing research on “vegetable protein products.” Archer Daniels Midland Co. of Minneapolis [Minnesota] makes TVP (Textured Vegetable Protein), which contains no waste, less than 1% fat, and can be cooked in many ways. Other companies involved in the field are Central Soya Co., Ralston Purina Co., Swift and Co., and Worthington Foods. Address: Home economics writer, Christian Science Monitor.

498. Archer Daniels Midland Co. 1967. Fiscal 1967 annual report. 733 Marquette Ave., Minneapolis, Minnesota 55440. 18 p.

• **Summary:** “In our 65th year, ADM is a company expanding and broadening its activities in the whole wide fields of agricultural processing and marketing.” Net sales and other operating income: \$371,625,700. Earnings before taxes: \$5,341,730. Net earnings: \$4,370,293. Current assets: \$91,128,025. Current liabilities: \$29,243,634. “This was a year of momentous change for ADM. It marked a turning point in the Company’s structure and purpose. As we start the new fiscal year, the processing and merchandising of agricultural products, the development and marketing of food and feed ingredients are our single business. Through the sale of the chemical business, we have freed \$65,000,000 for investment in new enterprises... ADM did not receive any income from the Chemical Group after April 1, 1967.” The Chemical Group was sold to Ashland Oil & Refining Co.

Page 5: “During the past year TVP moved from the development stage to commercial production. A plant to produce this new concept in nutritious high protein food was placed in operation at our Decatur, Illinois, soybean processing complex. Since then, sales of the protein product to food manufacturers have grown steadily. We expect sales

of TVP to increase substantially in the year ahead. To supply the increasing demand for TVP, we have expanded the Decatur plant and plan future additions to its capacity.”

ADM is constructing a new soybean processing plant at Lincoln, Nebraska. “When completed in November 1967, the Lincoln plant will have the capacity to process 33,000 bushels of soybeans daily and can be expanded to 50,000 bushels of soybeans daily with the addition of modular equipment.” Address: Minneapolis, Minnesota.

499. *Soybean Digest*. 1967. Honorary life members [American Soybean Assoc.]: Chas. V. Simpson and Whitney H. Eastman. Sept. p. 2d.

• **Summary:** “Whitney Haskins Eastman was one of the early pioneers in the soybean industry in the United States. He helped organize the National Soybean Processors Association under the name of the National Soybean Oil Manufacturers Association in 1930 and was its first president. [Note: Two early documents related to this Association [NSPA] both state that Otto Eisenschiml was elected its first president.] Mr. Eastman served as NSPA president for 5 years, then became the first chairman of the executive committee of NSPA, which post he held for several years.

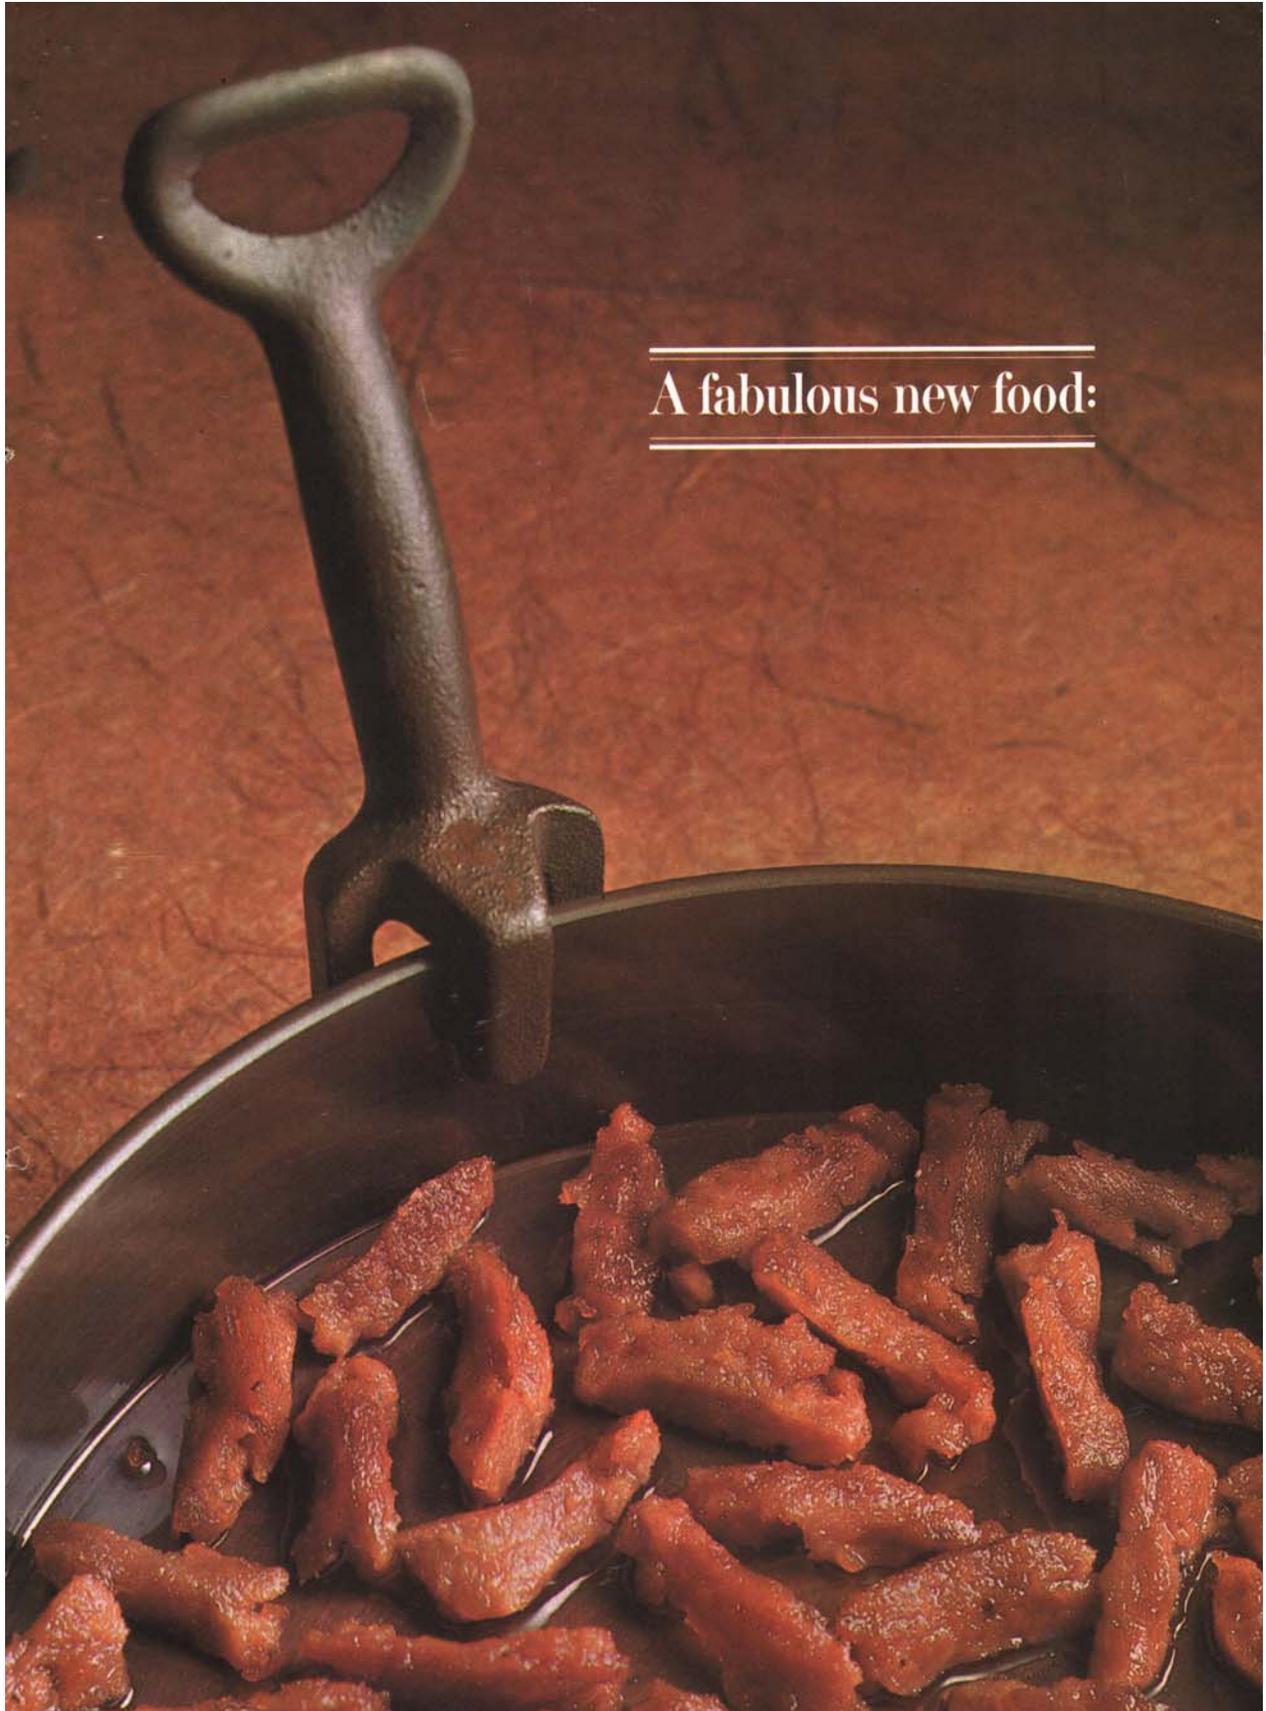

“Mr. Eastman started in the vegetable oilseed processing business after his graduation from Dartmouth College in 1911. He became associated with Archer Daniels Midland Co. in 1928. He was a vice president and director of that company until 1942.

“From 1942 until his retirement in 1955, Mr. Eastman was vice president of General Mills in charge of the chemical division and later the feed division. At present, he is a director of First Interoceanic Corp., of Minneapolis [Minnesota], formerly Honeymead Products Co., Inc., an Iowa corporation.” Photos show Simpson and Eastman.

500. Archer Daniels Midland Co. 1967. A fabulous new food. TVP: Add whatever you like and see what you can do with it (Ad). *Food Product Development* 1(5):[11-13]. Oct/Nov.

• **Summary:** See next page. On the first page of this 3-page color ad is a skillet, with an unusual handle, filled with strips of TVP. On the inside 2-page spread is a red bowl of chop suey with chopsticks on the right side. On the left page we read: “TVP” [in huge letters]: add whatever you like and see what you can do with it. This exotic, oriental dish was made with fresh vegetables and beef-flavor strips of TVP’s textured vegetable protein. You could also include meat. But it could hardly look or taste better—or be more economical.

“TVP is the exciting, nutritious, new all-vegetable textured protein source from ADM. It is available in granular, chunk, dice, strip, and chip forms. It comes unseasoned, or with flavoring of almost any kind—meaty, nutty, tangy, salty, even fruit flavors. Easy to handle and to store and completely controlled in texture, flavor, and color, TVP is exceptionally

A fabulous new food:

well suited for institutional feeding and restaurants. It's an excellent enrichment for casseroles, snacks, stews, gravies, ground meats, and many convenience foods. But find out more about this fabulous new food—about the profit making opportunities it affords. Return the coupon today.”

The coupon says: “Please send me technical data, recipes, and samples of TVP (ADM Trademark).” Address: 733 Marquette Ave., Minneapolis, Minnesota 55440.

501. *Soybean Digest*. 1967. ADM names L.W. [Lowell] Andreas executive vice president. Dec. p. 40.

• **Summary:** Lowell Andreas lives in Mankato, Minnesota. John H. Daniels, president and chief executive officer of ADM, says the announcement is effective immediately. “With the addition of Mr. Andreas to the management staff the office of the president will be established, composed of the president and executive vice president.” The company’s two operating groups, agricultural and chemical, will report to Mr. Andreas, who recently resigned as manager of the Honeymead Products division of Farmers Union Grain Terminal Association. A small portrait photo shows Lowell Andreas.

502. **Product Name:** Nutrisoy 220T and 15% Refatted Baker’s Nutrisoy (Refatted Soy Flours).

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** Minneapolis, Minnesota.

**Date of Introduction:** 1967?

**How Stored:** Shelf stable.

**Nutrition:** Moisture 6%, protein 44%, fat 16%, ash 5%, crude fiber 2.5%, other carbohydrates 26.5%, calories 360/100 gm.

**New Product–Documentation:** Manufacturer’s catalog. 1987. Free flowing powders.

503. **Product Name:** Soylec Soy Flours (Lecithinated) [C-15, C-6, or T-15].

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** Minneapolis, Minnesota.

**Date of Introduction:** 1967?

**New Product–Documentation:** Manufacturer’s catalog. 1987. C-15 and C-6 are premix products of lecithin and Baker’s Nutrisoy. T-15 is a premix product of lecithin and Toasted Nutrisoy Flour.

504. Archer Daniels Midland Co. 1967? Soy flour: Compliment to modern eating (Brochure). Minneapolis, Minnesota. 12 panels. Each panel: 22.8 x 10.3 cm. Undated.

• **Summary:** Contents: Introduction. A baking boon! Soy flour: Now and then. Progress pays off. A natural for institutions. Scoring on the tech-side. The new taste of modern soy flours. Types of modern soy flours: full-fat flour, low-fat flour, defatted flour (containing less than 1% fat, with a protein content of more than 50%). Soy grits.

Heat treatment and solubility. Soy flour is tops in food value. ADM research. ADM products: Introduction, Baker’s Nutrisoy (screened to 200 mesh—as fine as the finest wheat flour. Not heat treated). Nutrisoy Flour, Toasted Nutrisoy Flour, Special X Flour (“An expeller produced low-fat soya flour containing 6.5% fat...”). Nutrisoy Grits and Flakes (“These include a large variety of products which are classified according to texture and degree of heat treatment, and purchased according to specific use. Applications include soy sauce, base flakes for confectionary products, macaroni, whip topping, dry soup and stew mixes, and artificial spices”).

What type of soy flour should I use?—Ask ADM.

Tables show: (1) Approximate composition of ADM Baker’s Nutrisoy Flour.

“Why soy flour? Equally important, but less widely known is the fact that soybeans provide a complete, balanced protein far superior to that of other vegetables and comparable—and in some respects superior—to protein derived from meat, milk, and eggs. Soy protein, like that of animal origin, provides an efficient balance of the *essential* amino acids required by the body to build and repair cells and tissue. These body-building constituents of protein cannot be synthesized by the body rapidly enough to meet its requirements and therefore must be acquired through food.

“Protein of vegetable origin—with the marked exception of the soybean—is deficient in one or more of the essential amino acids. Because of this, much of it cannot be utilized by the body to build tissue.

“Picture protein as a barrel constructed of eight staves, each of which represents one of the essential amino acids. Saw off just one of the staves and the barrel’s usable capacity is limited. The same is true of protein. Utilization of the entire protein is limited to the degree that just one amino acid is deficient. By adding from 3% to 5% soy flour to many recipes, however, the protein is made complete, comparable to that of choice beef steak.”

“Soy flour: Now and then.

Edible soy flours, flakes, and grits marketed today bear little resemblance to those of several years ago.

“The first soy flour was actually a meal. It contained a high percentage of hulls and had a beany, rather unpleasant flavor. The next step was a highly toasted product, dark in color, which disguised the beany taste with a burnt flavor. But in many instances the promiscuous heating denatured the protein so that the product was hardly an improvement.

“Indiscriminate use of soy flour in all kinds of products—especially during World War II—was another unfortunate page in early history. The War-time scarcity of foods induced many to replace wheat flour, milk, or eggs entirely with soy products, regardless of practicability. The unhappy results in many instances placed a stigma on soy flour that still persists among some early users like an old-fashioned superstition.

“Progress pays off: Then, late in the 1940’s, ADM and other major producers set out independently and collectively to drive the ghosts from the soy flour industry . . . to transform scientifically the marvelous nutritive qualities of soy flour into tastier, finer textured doughnuts, cakes, cookies, crackers, breads, soups, cereals, and recently, baby foods. The inexhaustible list of foods that already contain soy flour, and the many uses currently in the testing stage, are proof of their success.

“This rapidly expanding acceptance of soy flour as an efficient, low-cost source of protein may be attributed to education on proper usage, research, and physical improvements in soy flour products. Ahead is a vast potential for usage of soy flour.

“Defatted soy flour is practically fat-free, and with the trend today toward low-fat foods and high protein, it is rapidly gaining in popularity. Containing less than 1% fat, it has a highly digestible protein content of more than 50%.

“Soy grits are the same products as defatted flour but more coarsely ground... in granules ranging in size from that of fine corn meal to corn grits. Soy grits and defatted flour are largely interchangeable in recipes, depending on the desired texture.” Address: 700 Investors Building, Minneapolis 2, Minnesota.

505. Paulsen, Twila M. Assignor to Archer-Daniels-Midland Company (Minneapolis, Minnesota; a corporation of Delaware). 1968. Process for treating soybean particulates. *U.S. Patent* 3,361,574. Jan. 2. 6 p. Application filed 12 Aug. 1963. 4 drawings. [6 ref]

• **Summary:** “This application is a continuation-in-part of application Ser. No. 075,923 filed Dec. 15, 1960 and now U.S. Patent 3,100,709.

“This invention relates to an economical and improved critical processing system for eliminating soybean odor and soybean taste from uncooked or non-toasted particulates of soybeans in their preparation for use in light colored foods for human consumption and the improved products obtained thereby. More particularly, the invention resides in

a discovery of a way to eliminate soybean odor and soybean taste from particulates of soybeans prepared by normal processing and ground for use in food products, particularly for human consumption, by treatment of soybean flakes with protonic acids, salts of said acids and mixtures of said acids and said salts under critical treatment conditions of time, temperature and moisture prior to application in ultimate uses, and obtaining therefrom improved color, without soybean odor and soybean flavor.

“This application provides for a modification over my co-pending application Ser. No. 075,923, now U.S. Patent No. 3,100,709, and distinguishes over my herewith filed co-pending application Ser. No. 301,559 in that the subsequent treatment with a water-soluble peroxide may be eliminated with a resultant retention of desirable functional characteristics and with improved wetting characteristic of the resultant ground products.”

Note: Soy is mentioned 93 times in this patent in the forms “soybean odor and soybean taste,” “soybean particulates,” “soybean flakes,” “extracted soybean flakes,” “full-fat soybean flakes,” “soybean odor and flavor,” “soybean meal,” “soybean bread products,” “soy flour,” “soyflour,” “defatted soyflour,” “soy muffins,” “soybean base material” and “soybean flake material.” Address: Minneapolis, Minnesota.

506. **Product Name:** Soybean Oil, and Soybean Oil Meal.

**Manufacturer’s Name:** Archer-Daniels-Midland Co.

**Manufacturer’s Address:** Lincoln, Nebraska.

**Date of Introduction:** 1968 January.

**Ingredients:** Soybeans.

**Wt/Vol., Packaging, Price:** -

**How Stored:** Shelf stable.

**New Product–Documentation:** Soybean Digest. 1966. Dec. p. 33. “ADM will build soybean plant at Lincoln, Nebraska.”

Archer Daniels Midland Co. 1967. Fiscal 1967 annual report. ADM is constructing a new soybean processing plant at Lincoln, Nebraska. “When completed in November 1967, the Lincoln plant will have the capacity to process 33,000 bushels of soybeans daily and can be expanded to 50,000 bushels of soybeans daily with the addition of modular equipment.”

Archer Daniels Midland Co. 1968. Fiscal 1968 annual report. A photo shows an aerial view of ADM’s new soybean processing plant at Lincoln, Nebraska, which began production in early 1968.

507. *Food Product Development*. 1968. Legal developments: Identity proposals for vegetable protein herald future control of fabricated entrees. 1(6):10. Dec/Jan.

• **Summary:** Two innocent looking documents appeared in the *Federal Register* of 13 Oct. 1967 concerning the establishment of an identity for fabricated foods developed in the future. “General Mills has petitioned the FDA to establish

an identity for a new class of foods” based on spun soy protein fibers to be called *Bontrae*. This “fibrous, textured food, prepared from soy protein isolate.” Part of the proposed identity “defines the process of preparing this filamented food product by a form of extrusion (spinning). General Mills is offering to relinquish its trade mark registration for the name if its proposal is accepted.

In the second proposal, Archer-Daniels-Midland Co. calls for an identity standard for the ingredient “textured vegetable protein” made from one or more proteinaceous materials. Labeling standards are similar in each proposal.

According to the introduction, the FDA would like to establish a single standard for what appears to be two unique classes of food materials. The FDA has seized Bac\*Os, believing the product must be labelled “imitation bacon.” Yet such a name could deceive the consumer, who might think this product need not be cooked or fried like natural bacon.

Another key aspect of the proposal hinges on whether the identity of a product depends on its chemical and physical properties alone, or whether biological considerations should apply. Comments are requested by FDA.

508. *Feedstuffs*. 1968. ADM moves two division offices. May 25.

• **Summary:** President Lowell W. Andreas announced that the Archer Daniels Midland Co. will move the headquarters of two of its divisions—soybean products and food products—from the company’s Minneapolis headquarters to Decatur, Illinois. In Decatur, ADM has two soybean processing plants, soybean oil refining and hardening [by hydrogenation] facilities, and a plant that makes TVP—a new food ingredient now being sold world-wide. ADM employs about 400 people in Decatur.

509. *Soybean Digest*. 1968. Atkinson pioneered textured protein. May. p. 38.

• **Summary:** William T. Atkinson invented the method for manufacturing textured vegetable protein (TVP), a new and versatile soybean-derived food. “Atkinson started his soy research in the 1930s when he developed an automobile upholstery fiber from soybean meal while working for Henry Ford. He continued with the fiber operation after it was sold to The Drackett Co. and moved to Archer Daniels Midland Co. when Drackett sold the agricultural portion of its business to Archer Daniels.” Atkinson is now active in other areas of ADM’s food research program. A photo shows William T. Atkinson.

510. Wokes, F. 1968. Proteins. *Plant Foods for Human Nutrition* 1(1):23-42. May. [19 ref]

• **Summary:** Almost half of the plant proteins consumed by humans come from cereal grains. Address: The Vegetarian Nutritional Research Centre, Watford, Herts. [Hertfordshire],

England.

511. Wokes, Frank. 1968. Our aims [in starting publication of the journal *Plant Foods for Human Nutrition*]. *Plant Foods for Human Nutrition* 1(1):3-6. May. [5 ref]

• **Summary:** “During the Second World War our national food policy was largely based on the pre-war findings of Orr and Lubbock that many British people in the lowest income brackets were living on diets deficient in protein, minerals and vitamins. In order to obtain a satisfactory national war-time diet the production and consumption of plant foods was greatly increased, and that of animal foods diminished; rationing being introduced to ensure equal distribution, regardless of income, of essential nutrients throughout the nation.

“It was my privilege, when writing a popular book on war-time food rationing in the U.K., to have the valuable advice of Sir John Boyd Orr in my attempts to explain the urgency of cutting down the consumption of animal food that needed more shipping space, if imported, and more land, if home-produced. Dr. R.A. McCance and his colleagues in Cambridge University carried out an interesting feeding experiment on themselves which showed that mental and physical activity could be satisfactorily maintained whilst they were living on diets much lower in animal protein than my book had suggested, thus justifying Sir John’s advice.

“A quarter of a century later, when my colleagues and I are helping our friends in Pergamon Press to launch this new Journal, which we hope will assist in solving the much greater problem of feeding the world, it is a great inspiration to us to have received a goodwill message from Lord Boyd Orr which emphasizes the importance of producing more plant foods.

“These foods are the basis of all life. They require much less land and effort for their production than the animal foods that play only a minor part in the diet of most of the world’s population. This is clearly shown by the data from FAO and other authorities that are summarized in the three following papers. They show that for energy, protein, essential minerals and vitamins the world depends mainly on plant food, and must do so to an increasing degree as the mounting number of human mouths to feed causes less and less land to be available for feeding both man and animals, and will inevitably result in the exhaustion of the available land resources. The elimination of inefficient methods of food production will thus become an economic necessity.

“In East Asia, containing over half the world’s population, plant foods have for many centuries been the staple diet, in which the protein is derived mainly from cereals and pulses. Since the Second World War, Dr. H.A.B. Parpia, director of the Central Food Technological Research Institute (CeFTRI) in Mysore, and his colleagues there and in other Indian research centres, have been developing methods for the large scale production and testing (mainly

by clinical trials) of processed plant protein foods. We are in close touch with this important work, and propose to publish regular reports on the findings, together with those on other processed plant protein foods being made in different parts of the world. Dr. Parpia's collaboration in keeping us in touch with Asian developments and his help on the Editorial Board will be greatly appreciated.

"We also aim to cover the extensive investigations on plant foods being carried out in America. Dr. Harry Miller, a medical missionary who first went to China over 40 years ago utilized the opportunity to develop vegetable milks based on soya which have given excellent results in clinical trials there and in the U.S.A., where they are now being manufactured on a large scale. We have been in touch with Dr. Miller, who is a long-standing Honorary Member of our Research Centre, and we will be glad to publish summaries of his findings.

"In Central America the protein supplementary food INCAPARINA, based on a mixture of plant proteins, has proved successful in clinical trials in which Prof. Nevin Scrimshaw played a leading part. Prof. Scrimshaw has kindly arranged for his colleague Mr Richard Shaw (Economic-Industrial Adviser, Institute of Nutrition of Central America and Panama) to provide us with information about INCAPARINA.

"Prof. A.M. Altschul of the U.S. Dept. of Agriculture, a leading authority on the role of plant foods in solving the world food problem, has since the Second World War organized much research, especially on cottonseed protein, a major ingredient in INCAPARINA. His recent book *Proteins—their Chemistry and Politics* expresses forthright views backed by impressive scientific evidence, much of which was published in his numerous articles and in the earlier book he edited on *Processed Plant Protein Foodstuffs*. We look forward to his help on the Editorial Board.

"In this country large-scale investigations on vegetable milks did not start until the end of the second world war, although before that some small clinical trials of the American vegetable milk ALMONDLAC, based on almonds, were made by Drs. Pink and White at the Vegetarian Nursing Home, Blackheath. Dr. Pink later tested clinically several batches of vegetable milks, based on soya and malted cereals, which had been made at the Ovaltine Research Laboratories under my supervision. One of these batches went to Germany for use in large-scale clinical trials by Dr. R.F.A. Dean, who in 1953 published his findings in the monograph *Plant Proteins in Child Feeding*, which contained a comprehensive survey of all the work done in this field up to 1950.

"The last few years of Prof. Dean's life were devoted to clinical and biochemical studies in Kampala, Uganda on African children suffering from the protein deficiency disease kwashiorkor. The book on kwashiorkor published by Trowell, Davies and Dean in 1954 described their findings

together with those of many other leading workers. Much more has since been written about this disease which has caused many thousands of deaths. We hope with the help of experts to give this highly important subject due attention.

"The Medical Research Council, in their preface to Dean's 1953 report, emphasize the great practical value of vegetable milks for child feeding in many parts of the world where cows' milk is scarce and supplies of other animal proteins are limited. This means the Group I poorer countries which, as FAO figures show, contain about five-sevenths of the world's population. In the Group II richer countries (e.g. West Europe, North America and Australia) vegetable milks have been successfully used during the last two or three decades for the treatment of infants and children born with allergies to cows' milk protein. More recently they have proved effective in treating babies born with congenital galactosaemia. This disease inflicts an intolerance of galactose (even to that present in the mothers milk) due to an enzyme deficiency in the galactose metabolic pathway. Such babies die within a few weeks of birth or survive in a pitiable condition, in which blindness and mental disorders are prominent. Although the total number of babies concerned is very small, this use of vegetable milks merits attention because of the interesting biochemical problems involved.

"Apart from animal milks, meat forms the main source of animal protein in diets in the Group I countries. Whilst many of the domestically prepared dishes provide considerable amounts of plant protein, especially if they contain enough of the native pulses, diets too low in protein are often encountered and need improving by addition of protein-rich supplements. These may be made from different plant foods, including nuts, defatted oil seeds or other pulses, about which more information is urgently needed. Protein may also be extracted from leaves, using the methods devised by Mr. N.W. Pine and his colleagues at Rothamsted. After removal of unwanted constituents affecting acceptability, and perhaps also being made more digestible by treatment with papain, the leaf protein can be successfully used to improve diets of infants, children or adults. Leaf protein yields/acre may be considerably higher than yields of seed proteins under the same conditions. Details of these findings must take a prominent place in our reports..." Address: The Vegetarian Nutritional Research Centre, Watford, Herts [Hertfordshire], England; Editor of the new journal.

512. *British Vegetarian*. 1968. The Macrobiotic Restaurant. May/June. p. 239.

• **Summary:** This new restaurant has "just opened at 136a Westbourne Terrace, W.2, a few minutes walk from Paddington Station, where Westbourne Terrace crosses Bishop's Bridge Road (the entrance is on Bishop's Bridge Road). "Mr. Gregory Sams, who runs it, is a vegetarian and makes a speciality of vegetarian and vegan meals. The

recipes are based on organically grown foods, with rice, soya, and sesame the features in a varied menu with an Asian influence; they offer a luxuriously gingery Japanese drink called ume-syo-kuzu [with umeboshi, shoyu, and kuzu]. The menu is a la carte. Phone: 01-723-7367. See also an almost identical article in the July/Aug. issue of this magazine on page 338. "The Macrobiotic Restaurant" is referred to again by this name in the Nov/Dec. 1968 issue of this periodical (p. 529); it is no longer serving lunches. And again in the May/June 1969 issue (p. 290). The name and address are unchanged. 1969

Note: The name of this restaurant was apparently changed to "Seed" shortly after this article was written.

Not in the article is a "Seed" restaurant card and menu from late 1969 or early 1970 sent to Soyfoods Center by Gregory Sams, founder.

513. *Soybean Digest*. 1968. Two ADM divisions to move to Decatur, Illinois. June. p. 36.

• **Summary:** "Archer Daniels Midland Co. has announced that the headquarters of two of its divisions—soybean and food products—will be moved from Minneapolis, Minnesota, to Decatur, Illinois.

"Lowell W. Andreas, ADM president, said the relocation of the divisions is necessary because of the increasing importance of the Decatur soybean processing complex in the operations of the two divisions.

"ADM has two soybean processing plants in Decatur as well as soybean oil refining and hardening facilities and a plant to produce TVP textured vegetable protein, a new food ingredient now being marketed worldwide.

Vice President Raymond E. Fiedler, of the soybean division, and Harry K. Bean, vice-president of the food products division, will move their offices to Decatur as soon as possible.

"Construction of additional soybean oil refining capacity and of an oil hardening [hydrogenation] plant has just been completed at Decatur and both plants now are producing oils for the food industry. Modern [solvent] extraction equipment also is being installed there to replace outmoded machinery, and the textured vegetable protein plant is being enlarged."

ADM "has formed a new food products division to market the company's soy food products and food-grade vegetable oils...

"The division is headed by Harry K. Bean, vice president, and includes the former vegetable oils division and the soy specialties department." It will "coordinate marketing activities for a broader thrust by ADM into the food business."

514. Archer Daniels Midland Co. 1968. Fiscal 1968 annual report. 733 Marquette Ave., Minneapolis, Minnesota 55440. 18 p.

• **Summary:** Net sales and other operating income:

\$280,771,608. Earnings before taxes: \$5,145,669. Net earnings: \$4,413,558. Current assets: \$96,325,590. Current liabilities: \$27,061,523.

"In order to sharpen the coordination among production, sales and research, the administrative offices of the Food Products and Soybean Divisions and the entire Research Department are being moved to Decatur [Illinois]. Division personnel will be relocated there before September 1 and research personnel will follow in the summer of 1969. By then a new office building and research laboratory will have been completed at the Decatur East plant."

A table (p. 14-15) shows a "Ten-year summary of financial and operating data."

Photos show: (1) Lowell W. Andreas and John H. Daniels. (2) An aerial view of ADM's new soybean processing plant at Lincoln, Nebraska, which began production in early 1968. (3) TVP on display at a food exposition in Cologne, Germany. (4) Boxes of labeled TVP on pallets being hoisted by a forklift. (5) Various TVP ads. (6) Each of the 10 members of the board of directors, including Lowell Andreas (president) and Dwayne Andreas (chairman of the finance committee). (7) Each of the 8 members of the president's staff. Address: Minneapolis, Minnesota.

515. *NewsTime (Scholastic)*. 1968. Next TVPburgers? 33(6):2. Oct. 18.

• **Summary:** Switzerland's largest supermarket chain is selling TVP, an American-made substitute for meat, made from soybeans. TVP stands for "Textured Vegetable Protein." Its makers hope the Swiss *won't* think it stands for "tastes very poorly."

516. Archer Daniels Midland Co. 1968. A fabulous new food. TVP: Add eggs or a tangy dip and see what you can do with it (Ad). *Food Product Development* 2(5):73-75. Oct/Nov.

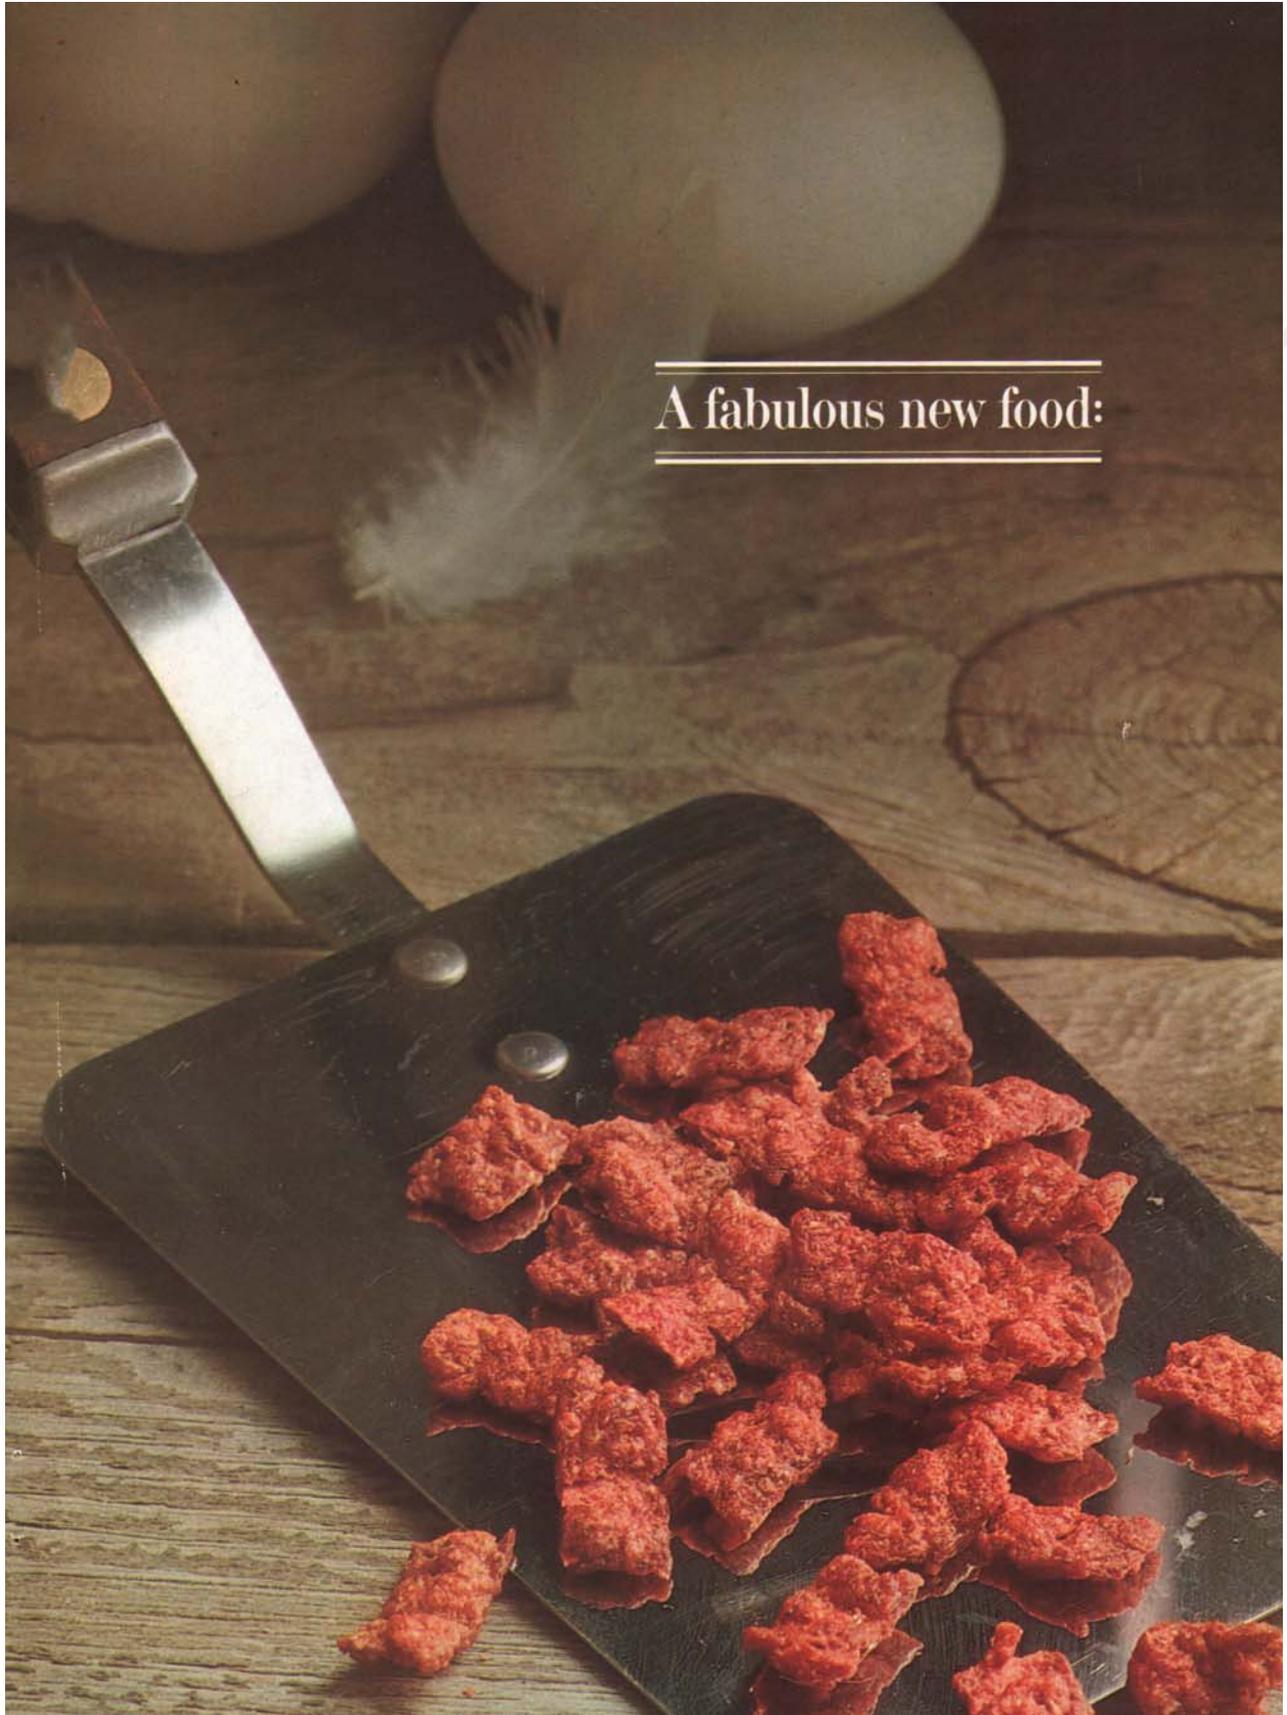

• **Summary:** See next page. On the first page of this 3-page color ad is a stainless-steel spatula with reddish strips of TVP on it—above a wooden table. Below two large eggs and a feather at the top of the page is written: "A fabulous new food."

On the inside 2-page spread is a skillet filled with cheese-topped TVP and eggs, also above a wooden table.

On the left page we read: "TVP [in huge letters]: add eggs or a tangy dip and see what you can do with it.

Eggs and what? Just crisp chips of bacon-flavor TVP\* textured vegetable protein. You could also include some bacon. But these scrambled eggs could hardly Look or taste better ... or be more economical.

"TVP is the exciting, nutritious, new all-vegetable textured protein source from ADM. It is available in granular, chunk, dice, strip, and chip forms. It comes unseasoned, or with flavoring of almost any kind—meaty, nutty, tangy, salty,

even fruit flavors. Easy to handle and to store and completely controlled in texture, flavor, and color, TVP is exceptionally well suited for institutional feeding and restaurants. It's an excellent enrichment for casseroles, snacks, stews, gravies, ground meats, and many convenience foods. But find out more about this fabulous new food—about the profit making opportunities it affords. Return the coupon today.”

The coupon says: “Please send me technical data, recipes, and samples of TVP (ADM Trademark).” Address: 733 Marquette Ave., Minneapolis, Minnesota 55440.

517. Tawa, Andre. 1968. Marketing soy proteins in the Lebanon. *Soybean Digest*. Dec. p. 13-14.

• **Summary:** “More than 50,000 people visited the soy protein stand at the Food Fair at Beyrouth and sampled ADM’s textured vegetable protein in Lebanese foods.”

“The Lebanon, a tiny Arab republic tucked away on the eastern corner of the Mediterranean Sea, is well known in international finance as the oil banker of the Gulf.

“The 2 million people of Lebanon, in ritzy-Riviera-like Beyrouth, or on the snow covered slopes of the ski resorts in the Cedars, do make an ideal market for any new food product.”

“Estimated consumption of all meats is around 40,000 mt/year, 90% of which is imported.” Note: “mt” = metric tons.

“Poultry growing is expanding rapidly and has become one of the major agricultural industries.”

“Last year’s imports of soybean meal rose to about 10,000 m.t., mostly bulk, from the U.S.”

“A more challenging market, which is practically untouched, is the one for soy proteins in human consumption.”

ADM is introducing its TVP to Beyrouth, Lebanon under the brand name Aminos; their goal is 1 lb/year per capita consumption. “Other soy proteins just being introduced to this market are soy flour for bakery products, soy milks, and other soy extenders for the meat packing industries.”

518. **Product Name:** Bacon Bits.

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** Minneapolis, Minnesota.

**Date of Introduction:** 1968.

**New Product–Documentation:** Horan. 1974. Meat analogs. p. 380. Manufacturer’s catalog. Talk with ADM sales dept. 1988. Sept. 15. This product was launched in about 1968, about a year after the company started to make TVP. It is made by texturizing soy flour, and may not be a registered trademark.

519. **Product Name:** Jolly Joan Wheat and Soy Pancake Mix, Whole-Wheat and Soy Pancake Mix.

**Manufacturer’s Name:** Ener-G Cereal Co.

**Manufacturer’s Address:** 6901 Fox Ave. South, Seattle, WA 98108.

**Date of Introduction:** 1968.

**Ingredients:** Wheat or whole wheat, whole soy flour, monocalcium phosphate, sodium bicarbonate.

**Wt/Vol., Packaging, Price:** 16 oz bag in a box.

**How Stored:** Shelf stable.

**New Product–Documentation:** Talk with Sam M. Wylde, Chairman, Ener-G Foods, Inc. 1990. Oct. These two products were introduced at about the same time in 1968, when the company moved to Fox Ave. Shortly after they were launched the company name was changed to Ener-G Foods Inc. and the brand was changed to Ener-G. Each product contained whole soy flour, purchased from ADM (Archer Daniels Midland Co.).

520. Eastman, Whitney H. 1968. The history of the linseed oil industry in the United States. Minneapolis, Minnesota: T.S. Dennison & Co. 277 p. Illust. No index. 24 cm.

Sponsored by First Interoceanic Corporation. Foreword by Thomas L. Daniels. Reviewed in *Soybean Digest*, June 1968, p. 31. [460\* ref]

• **Summary:** A good, very readable work—with a large bibliography but no documentation of individual sources. All references pertain to flax. Chapter 2, titled “Growth and decline of flaxseed production in the United States along with the rise and fall of the linseed oil processing industry” offers a chronology of early developments concerning linseed oil:

Early colonists brought flaxseed to America, primarily for the production of fiber to be spun and woven into linen cloth. As population increased, there was a growing need for linseed oil at home to use in making paints for buildings and machinery, and for linseed cake as a livestock feed.

1793—The first linseed oil was produced in the USA (p. 18)—the same year the cotton gin was invented. Note: This may also have been the first vegetable oil produced in the USA. Small family-owned processing plants, usually bearing the family name, began to spring up along the Atlantic Seaboard. This new industry followed the westward movement of American civil and the flax crop.

1795—The horizontal hydraulic press is invented; efficient but expensive, it soon comes to be used for making linseed oil (in the early 1800s).

1810—There are now 283 flaxseed processing plants in the USA, with a combined annual capacity of less than 300,000 bushels. About 60% of these plants are located in Pennsylvania. Many of them used hand-turned screw presses (resembling apple cider presses), which were much less efficient than the Dutch (stamper) press or the new horizontal hydraulic press. The movement of flax westward often left East-Coast processors in short supply.

1850—The vertical hydraulic press, invented and patented by Edwin Hills, appears on the market. It is widely

used in larger, modern plants until the 1930s.

1860–East Coast linseed processors now feel the competition of inland processors; 26 plants are concentrated in the Miami River Valley near Dayton, Ohio. For many years Ohio was the leading flaxseed producing area in the USA.

1870–Thirty Eastern Seaboard processing plants are still in business, many using imported flaxseed with a higher oil content. 1887–The National Linseed Oil Company is established to consolidate small processors into a so-called Trust to improve processing margins. It ends up controlling about two-thirds of processing capacity, but 21 of its plants were so old and inefficient that they soon had to be dismantled and written off. At this time 70 linseed oil plants are in operation in the USA, with 20 of them in Ohio. During the 1880s many such trusts—but smaller—were formed.

1900–Only 13 Eastern Seaboard processing plants remain in business, six each in New York State and Philadelphia, and one in New Jersey.

1909–Spencer Kellogg and Sons, Inc. builds a large, modern linseed oil processing plant on the Hudson River in Edgewater, New Jersey; it had its own deep-water pier and was equipped with hydraulic presses.

1911–Midland Linseed Products Co., a fast-growing oil processor based in Minneapolis, Minnesota, also builds a large, modern linseed oil plant on the Hudson River in Edgewater, New Jersey; it has 64 hydraulic presses and a deep-water pier.

1912–317 million lb. of linseed oil are produced in the United States.

1922–Archer-Daniels Linseed Co., based in Minneapolis, Minnesota, is the third major company to build a large, modern linseed oil processing plant on the Hudson River in Edgewater, New Jersey; it has 48 hydraulic presses.

1944–Production of linseed oil in the USA reaches an all-time peak of 732 million lb. It is used mostly in paints and varnishes.

Contains an excellent, detailed history of Spencer Kellogg and Sons, Inc. The company, which has headquarters in Buffalo, New York, dates back through 5 generations of the Kellogg family. The Kellogg name has been prominent in the linseed oil industry longer than any other family, dating back to 1824, only 31 years after the first linseed oil was produced in America.

Spencer Kellogg was the “first linseed oil processor in America to do any serious fundamental research on linseed oil in this country. They built a modern research laboratory at Buffalo, New York, in 1909, and under the able leadership of Dr. Alex Schwarcman, carried on an aggressive program in fundamental research on linseed oil. Dr. Schwarcman received thirty-four United States and Canadian patents over a period extending from 1914 to the present time.” The company was sold in 1961 to Textron, Inc. It has since been operated as the Spencer Kellogg Div. of Textron, Inc., a

publicly owned corporation.

Also contains a history of Archer-Daniels-Midland Co. (p. 40-), one of the largest linseed oil processors in the industry. Formed under that name in 1923, it has roots going back 130 years. ADM was said to be a bit slow in recognizing the value of research. As late as 1932 ADM’s entire technical staff consisted of only a few people, but when the new laboratory was completed the following year, the department was expanded. The list of new products developed through research began to grow rapidly starting in about 1940, so that an increasingly large proportion of ADM’s output of linseed oil was sold in refined or chemically processed form.

Chapter 4, titled “The Evolution of Processing Equipment” (p. 107+) gives a good history of the subject. The horizontal hydraulic press, invented in 1795, came into use in the early 1800s. The vertical hydraulic press first appeared on the market in 1850 and was widely used until the 1930s; French Oil Mill Machinery Co. of Piqua, Ohio, dominated the market. The French Oil Mill Machinery Co. made an excellent model. The Spencer Kellogg plant at Edgewater, New Jersey, built in 1909, eventually had 190 hydraulic presses—the largest in the USA. Mechanical screw presses replaced the vertical hydraulic press in the 1930s. The main manufacturer of these presses were V.D. Anderson (Expeller) and French.

“The continuous solvent extraction of oilseeds was first developed in Europe and had been used successfully there for a number of years before the process was used in the United States. The first continuous solvent extraction plant in this country was placed in operation in Chicago [Illinois] in 1934 by Archer-Daniels-Midland Company to operate on soybeans. This plant, like several others of the earlier plants in this country, was designed and built in Europe.” Early U.S. manufacturers of continuous solvent extraction equipment were Allis-Chalmers of Milwaukee (Wisconsin), V.D. Anderson of Cleveland (Ohio), French of Piqua, and Blaw-Knox of Pittsburgh (Pennsylvania). Flaxseed, which has a much higher oil content than soybeans, required prepressing by use of the mechanical screw press.

When [in 1960] Honeymead sold their Mankato soybean processing plant to Farmers Union Grain Terminal Association (FUGTA a farmers co-op), the flaxseed prepressing unit was included. Sometime later [in 1961], First Interoceanic Corporation purchased the solvent extraction plant of the Minnesota Linseed Oil Co., and after operating it for a while, resold it to FUGTA.

A review of this book in *Soybean Digest* (June 1968, p. 31) shows a small photo of Whitney Eastman, who started in the vegetable oil processing industry in 1911, and in addition to linseed oil has been associated with the soybean crop and industry since its early beginnings in the USA. “Mr. Eastman has served as vice president of both Archer Daniels Midland and General Mills, Inc. In recent years he has been a director

of First Oceanic Corp., which is the largest stockholder of ADM.”

521. Eastman, Whitney H. 1968. The Andreas brothers’ linseed oil operations (Document part). In: Whitney H. Eastman. 1968. *The History of the Linseed Oil Industry in the United States*. Minneapolis, Minnesota: T.S. Dennison & Co. 277 p. See p. 53-54. [460\* ref]

• **Summary:** During the 1930s in Iowa, R.P. [Reuben Peter] Andreas built several small soybean processing plants and feed plants. At an early age, the Andreas boys [his sons] began to learn the intricacies of the buying and processing of oilseeds.

Four of his sons—Albert, Dwayne, Lowell, and Glenn—devoted themselves to linseed oil processing and refining. Albert was the first of the four brothers to take an interest in this industry.

In 1937 Joseph Sinaiko established The Northwest Linseed Company. He built a linseed oil processing plant in Fridley (a north suburb of Minneapolis) and installed four French mechanical screw presses. At a later date he installed three French screw presses.

Note: Ray Lindquist, Jr. (personal communication 10 July 2003) says that the Northwest Linseed Co. was in Minneapolis, not in Fridley. He does not know who founded it, but Albert Andreas later owned it. Talk with Sally Dogon, Joseph Sinaiko’s daughter. 2003. Oct. 25. Sally’s husband recalls clearly that Joe Sinaiko established The Northwest Linseed Company near Minneapolis.

In 1940 Albert Andreas purchased financial control of the company and in 1948 sold the plant to Cargill, Inc. None of the other Andreas brothers were involved in this venture with Albert. Glenn Andreas went into banking.

Meanwhile, Dwayne and Lowell Andreas had become involved with soybean processing in Iowa and Minnesota. In 1945 Dwayne became associated with Cargill, Inc. at its headquarters in Minneapolis. That same year he was elected assistant vice president, and in 1946 a vice president. He was hired by Cargill to develop its vegetable oil processing and refining division to include flaxseed processing. In 1952 he “retired” from Cargill to be able to devote more attention to Honeymead Products Company, a rapidly expanding business owned by Dwayne and his brother, Lowell. For a while, Honeymead [in Mankato, Minnesota] was operating one of the largest soybean processing plants in the USA—or the world. In 1958 Honeymead added a prepressing auxiliary unit ahead of its continuous solvent extraction unit in order to be able to process flaxseed as well as soybeans.

In 1960 the Andreas brothers sold the Honeymead plant to Farmers Union Grain Terminal Association (GTA)—a farmers’ cooperative. For a while, Whitney Eastman served as a director of Honeymead along with Dwayne and Lowell.

“At the time of the sale of the Honeymead plant to GTA, the Andreas group organized Interoceanic Industries, Inc.—

later changed to First Interoceanic Corporation—to act as a family investment corporation for their far-flung activities. Interoceanic then entered into a management contract with GTA to manage the operations of Honeymead. This management contract continued until 1967.

“In 1961, Interoceanic purchased Minnesota Linseed Oil Company—jointly owned by National Lead Co. and Minnesota Linseed Oil Paint Company. Interoceanic operated this large, modern, continuous solvent extraction plant and refinery located in Fridley—a suburb of Minneapolis—until 1964, when Interoceanic sold the Minnesota Linseed Oil Company to GTA. Interoceanic entered into a management contract with GTA to manage their linseed oil operations. This arrangement continued from 1964 to 1967.

“The two Andreas brothers, Dwayne and Lowell, and the author [Eastman] are still serving as directors of First Interoceanic Corporation.

“In 1966 Interoceanic purchased a large block of stock of Archer-Daniels-Midland Company, becoming the largest stockholder.” That same year Dwayne was elected to the Board of Directors and the company’s Executive Committee. Lowell was elected to the Board of Directors and a member of the executive and finance committees. In 1967 he was elected executive vice president. On 2 Feb. 1968 he was elected president.

522. Goldberg, Ray A. 1968. *Agribusiness coordination: A systems approach to the wheat, soybean, and Florida orange economies*. Boston, Massachusetts: Harvard University Graduate School of Business Administration. xix + 256 p. See p. 101-47. Index. 29 cm. [402 ref]

• **Summary:** Section III, titled “Soybeans,” contains three chapters. 6. The Dynamics of the Soybean System. Changes in Domestic Consumption: The Utilization of Soybean Meal, The Utilization of Soybean Oil. Changes in Export Consumption: Soybeans, Soybean Meal, Soybean Oil, Changes in Production. Changes in Processing and Marketing. Summary.

7. The Structure of the Soybean System. Channels. Firms and Entities. Coordinating Patterns: Common Ownership in the Soybean Industry (farm cooperatives, export firm ownership patterns, soybean processing firm integration, edible oil product manufacturers’ ownership patterns, nonintegrated firms in the soybean industry). Coordinating Institutions and Arrangements (the futures markets, trade associations, bargaining associations, pool arrangements). Vegetable Oil Export Company: governmental activities, contractual relationships. Summary.

8. Behavioral and Performance Patterns in the Soybean Economy. Behavioral Patterns: Storage, Consumption, Output. Performance Patterns: Profitability (Allied Mills, Inc., Archer-Daniels-Midland Co., Central Soya Co., Inc., General Mills, Hunt Foods and Industries, Inc., The Procter

& Gamble Co., Ralston Purina Co., Swift & Co., Textron's Spencer Kellogg Div.), Price Stability, Competition (ease of entry and exit, concentration). Adaptability. Summary. Address: Assoc. Prof. of Business Administration, Harvard Univ., Boston, Massachusetts.

523. *Food Processing (Chicago)*. 1969. Soy protein debuts as main course. Winter. p. F4-F7. Foods of Tomorrow section.

• **Summary:** About textured soy protein products that can take the place of meat, especially Bontrae (from General Mills, Inc., Minneapolis, Minnesota), TVP from ADM (Minneapolis, Minnesota), and Stripples from Worthington Foods (Worthington, Ohio). The costs vary widely. "Unflavored spun soy fibers in an acid-salt media [medium] cost about 50 cents a pound." Prices of the finished products to consumers are about 2/3 to 3/4 of that of the meat they can replace. "Expanded-soy textured protein [extruded textured soy flour] is less expensive. Cost in chunk or dry granular form ranges from 12 to 40 cents a pound. Since it rehydrates with 2 parts water, the cost on an as-served basis ranges from 4 to 13 cents a pound."

Bontrae comes in the form of frozen, free-flowing, pre-cooked crumbles or dice packed in 5-lb cartons. "General Mills is making a sizable increase in the capacity of its pilot plant for the production of Bontrae..." Bontrae is presently being marketed mainly to Minnesota State institutions, hotel, restaurant, and institutional accounts in Albany, New York, and college food service accounts in the Baltimore (Maryland), and Washington, DC, area.

ADM "calls its expanded-soy textured vegetable protein TVP" (registered trademark). The company "had the first production-size facility for textured soy protein and is now in the midst of a major expansion." In the U.S., TVP has been sold mainly to food processors for use in canned, dehydrated, and frozen foods. But in Europe it is sold mostly to consumers, in 200 gm (7 oz) retail packages.

Swift & Co. (Chicago) entered the market 2 years ago with Texgran, expanded soy protein. In less than a year, sales exceeded capacity. A new plant, being constructed in Champaign, Illinois, should be finished soon.

H.B. Taylor Co. (Chicago) sells Textrasoy, an expanded-soy textured protein, which is the lowest cost textured protein available. Until about a year ago it was sold to the pet food industry.

"Six years ago [1963], Worthington Foods introduced a line of simulated meats based on spun-soy textured protein supplied by Ralston Purina." In 1966, Worthington built its own plant for making the "spun-soy fibers." A new line has just been developed for the institutional market. Worthington's latest product is Stripples, which can replace bacon. It undergoes no shrinkage in preparation for serving, compared with a loss of about 25% of its weight when bacon is broiled or fried. Although it costs twice as much

as bacon, "the as-served cost is only half that of bacon." Ralston Purina still makes spun-soy textured protein in the form of unflavored fibers in an acid-salt media, or in flavored dehydrated form.

Color photos show: (1) A table set with 4 ready-to-eat dishes, each containing "Bontrae spun-soy textured protein," which "is being successfully market tested in restaurants and institutions." On one side is a menu with the bold title "C'est Bontrae." (2) A smiling lady placing silver platters of food on a sideboard. The caption: "TVP expanded-soy textured protein is penetrating the home market in Europe." (3) Three traditional bacon dishes on a table, each containing Stripples. The "latest soy protein convenience food," its hickory-smoked strips can be used in place of bacon. Both the light and dark stripes are protein.

524. *Miami Herald (Florida)*. 1969. Death notices: Steele, Lenore J. May 10. p. 28 [newspaper p. 7-B].

• **Summary:** "Steele, Lenore J., [age] 55. of 285 NE 88 St., passed away Friday [May 9]. A resident here since 1952, formerly of Cedar Rapids, Iowa. Survived by husband Marvin R.; 2 daughters Mrs. Sharon Frady and Sue Ross both of Miami; 4 brothers Albert of Miami, Glenn, Dwayne and Lowell Andreas out of town and 6 grandchildren. Services will be 3 p.m. Sunday in the Philbrick & Son Miami Shores Funeral Home, 11425 NE 2 Ave. Friends may call Sat. from 2 to 4 and 7 to 9 p.m. at the funeral home. Family requests contributions to the Variety Children's Hospital in lieu of flowers."

Note: This exact same death notice appeared in the *Miami News Classified Section*, 10 May 1969, p. 14 [newspaper p. 4-B].

525. Nagle, James J. 1969. Iowa plant to produce soy protein. *New York Times*. May 18. p. F15.

• **Summary:** General Mills announced that it has begun construction of a multimillion dollar plant in Cedar Rapids, Iowa, for the production of soy protein foods marketed under the brand name Bontrae. The plant is necessary because demand for the company's Bontrae products has outstripped the present capacity of the pilot plant that makes them.

General Mills has invested millions of research dollars and "more than 300 man years of effort" in Bontrae foods, which are made from defatted soybean meal that is transformed into spun soy protein fiber. Bac-O [Bac\*Os], the first product, went into test markets several years ago and is now distributed nationally through retail food stores.

Soy protein products made by Swift & Co., ADM, and Worthington Foods are also discussed.

526. Gentry, Robert E.; Connolly, Eleanor M. 1969. Fabricated foods. *Stanford Research Institute, Report No. 374*. 16 p. May. (Menlo Park, California, and Zurich, Switzerland).

• **Summary:** This is subtitled “A research report by the Long Range Planning Service.” Contents: Executive summary. Scope and definitions. Present status and outlook: Changes in product mix, changing technology. Impact on food processing industry: Markets, marketing strategies, processing, research and development. Impact on food service industry. Impact on food wholesalers and retailers. Impact on flavor technology. Impact on packaging materials. Impact on agriculture: Meat and poultry, dairy products, oilseeds, grains. Impact on petroleum, natural gas, and coal. Boxes: New protein sources. Approval by the Food and Drug Administration (FDA). Representative groups of companies developing new sources and forms of food. Examples of fabricated foods—1980.

This report predicts that sales of fabricated foods in the USA will increase from about \$1,500 million in 1969 to approximately \$7,000 in 1980, but will still account for only 5% of total sales of the food processing industry. The primary impact during the 1970s will be on convenience, snack, and other specialty foods.

“Sales of meat, seafood, and poultry analogs amounted to only about \$2.5 million in 1966. Worthington Foods and Loma Linda Foods were the major suppliers to a primarily religious and vegetarian market. In the past few years, several major food companies have entered the market and sales have risen to an estimated level of \$10 million. As flavor and texture improve, 1980 sales will soar to \$1,500 million to \$2,000 million.” The foodservice industry will be a prime outlet for the new products.

The most important food analog in America today is margarine. Among dairy foods, margarine accounts of about 66% by volume of the butter market, nondairy whipped toppings have about 60% of the whipped cream market, and coffee whiteners have about 35% of the cream market. In terms of sales: In 1968 sales of margarine are \$475 million out of \$1,150 million (41%) for the total butter and margarine market. By 1980 this is predicted to increase to \$750 million out of a total \$1,250 million (analogs will have 60% of the total market). Sales of coffee whitener are \$30-35 million out of \$85-100 million (35%) for the total coffee cream and coffee whitener market. By 1980 this is predicted to increase to \$100 million out of a total \$130-150 million (71%). Sales of nondairy whipped topping are \$25 million out of \$40-50 million (55.5%) for the total whipped cream and nondairy whipped topping market. By 1980 this is predicted to increase to \$50-60 million out of a total \$80-100 million (61%). Sales of filled and imitation milks are \$3-4 million out of \$3100-3200 million (0.11%) for the total milk and imitation milk market. By 1980 this is predicted to increase to \$600 million out of a total \$3800-4000 million (15%, the biggest percentage increase). Sales of mellorine and other “frozen desserts” are \$45 million out of \$1200-1300 million (3.6%) for the total frozen dessert market. By 1980 this is predicted to increase to \$80-90 million out of a

total \$1500-1700 million (5.3%).

A table (p. 5) titled “Soy Protein Products” discusses soy flour and grits, soy protein concentrate, and soy protein isolate, describing briefly the protein content, processing, price per pound, 1967 U.S. consumption, and applications. In 1967 soy flour and grits sold for \$0.075/pound and 105-110 million pounds were consumed. Soy protein concentrate sold for \$0.18/pound and 17-30 million pounds were consumed. Soy protein isolate sold for \$0.37/pound and 22-35 million pounds were consumed.

Page 10 lists representative companies developing new sources and forms of food. For each, the company name, city, state, and product name or names are given. Companies selling soy protein products include Archer-Daniels-Midland (Minneapolis, Minnesota), Bryan Bros. Packing Co. (Subsidiary of Consolidated Foods Corp, Chicago, Illinois), Central Soya Co., General Mills Inc. (Minneapolis), Griffith Laboratories, Inc. (Chicago), Loma Linda Foods (Riverside, California), Ralston Purina Co., Swift & Co. (Chicago), H.B. Taylor Co. (Chicago), USDA (“Developing edible forms of soybean protein”), and Worthington Foods, Inc. (Worthington, Ohio).

Note: This is the earliest document seen (Aug. 2002) containing statistics on the meat alternatives industry or market—by geographical region. Address: 1. Senior economist; 2. Industrial economist, Stanford Research Inst., Menlo Park, California 94025. Phone: 415-326-6200.

527. Hedges, Irwin R. 1969. Soybeans in the war on hunger. *Soybean Digest*. May. p. 13-17.

• **Summary:** Discusses protein-rich cereal-soy blends such as CSM (“the high-protein blend”) and WSB (Wheat-Soy Blend) used in the Food for Freedom program. The article begins: “War on hunger: The U.S. government launched a War on Hunger 3 years ago [1966, under President Lyndon Johnson], based on the conviction that next to the pursuit of peace the world faces no issue more important than solving the food / population problem... world population was growing at a rate that would double the number of earth’s inhabitants by the year 2000, while food production was lagging considerable behind the population growth rate.”

“AID is providing incentive to private industry to develop, test and eventually produce for commercial distribution low-cost, high-protein foods and beverages. Under these incentive contracts, food processors receive grants to survey the market, determine costs and availability of indigenous commodities, and develop and test market for prototype foods and drinks.” Under this plan, contracts have been signed with Monsanto for a soybean drink in Brazil, with Swift & Co. for soybean-based foods in Brazil, with Archer Daniels Midland for textured vegetable protein and other foods in Thailand, and with General Mills for a high-protein product in Pakistan. Monsanto’s research in Brazil has already shown good results.

Concerning food and population: “Many developing countries show population growth rates of 2.5% to 3.5% per year, rates that double their population in 20 to 30 years. Two-thirds of the world’s population live in the developing countries.

“Must curb population: These same countries also have great potential for increasing food production by the application of modern science and technology. But unless measures are taken to curb population growth, any likely or possible increase in food production will only postpone the crisis.”

Photos show: Dr. A.M. Altschul and Dr. Max Milner. Address: Acting administrator, War on Hunger, Agency for International Development.

528. Odell, A.D. 1969. Marketing considerations for textured protein products. *USDA Agricultural Research Service ARS 72-71*. p. 131-32. May. Proceedings of Conference on Protein-Rich Food Products from Oilseeds. Held 15-16 May 1968 at New Orleans, Louisiana.

• **Summary:** “We have already heard much about the present and future ways and means by which soy flour, concentrates, and isolates are gaining, and should continue to gain, greater acceptance in the human dietary. To the extent that these advances in utilization can produce a profit at the far end, they are permanent advances and, as such, will have long term commercial viability. Where no such profit motivation is demonstrable, there can be no industrial incentive, no spurs to in-depth research by the technically competent and, in the foreign markets, no shoring-up of the economic infrastructure of those developing nations who can and should be involved with these commodities and their end-product extensions. Until it is eaten, any food is merely a collection of organized chemicals of greater or lesser complexity. Since foods are not eaten because they are liked, but are liked because of the learning process of eating them, marketing’s job is to get the consumer to take the first swallow. With an unconventional food, this requires sophisticated and strenuous marketing effort, no matter how brilliant the background research to create the food, or how obvious the need may be for the product itself.

“Marketing, then, of a rather special type holds the key to the future of consumer products from these raw materials. Why marketing of a special type? Simply because, with the exception of certain parts of the Orient, and even there, in only a limited sense, the new and “never before” foods which can be created from these flours, concentrates, and isolates are totally strange to the consumer. Novelty in foods poses an acceptance problem even among the highly sophisticated in the affluent nations. Greater convenience, better packaging, freezing, freeze drying, and other technical advances applied to traditional foods create no insurmountable obstacles on the domestic scene. A totally new food, however, creates its own problems.

“General Mills, Inc., Ralston-Purina, Worthington Foods, Swift, Archer-Daniels-Midland, and others are, as all of you know, engaged in the creation and introduction of both processor- and consumer-oriented foods from various forms of soy protein. The structural integrity that is engineered into these foods by chewy gels, extrusion puffing, or spinning has, as its purpose, the creation of products that fit into a prized sector of the menu—texture, chewiness, proper mouth disappearance, and general gustatorial gratification. As such, all of the products on which all of us are working have nutritional excellence, can be shelf stable, can possess a considerable degree of mimicry of the familiar, can be used to extend traditional foods, and can certainly be designed to meet parochial preference patterns. Given all these attributes and economy along with them, one would be tempted to conclude that these products are a cinch to succeed in the market place. Such a conclusion would be absurd.” Address: Central Research Laboratories, General Mills, Inc., Minneapolis, Minnesota.

529. Altschul, A.M. 1969. Combating malnutrition: New strategies through food science. *Plant Foods for Human Nutrition* 1(3):149-61. June. [7 ref]

• **Summary:** This article begins: “We might describe what has happened in the past 25 years as a derangement of our ecosystem caused by rapid increase in population density without concurrent increased in wealth and the capacity to produce food.”

Note: In 1974 world hunger and malnutrition, along with human population growth worldwide, were considered the two great problems on the planet. Another major problem was the “protein gap.”

Contents: Introduction. New protein foods. Vegetable protein mixtures (soy protein concentrate, CSM). Improved cereal products. Domestic food production (malnutrition among the poor in the USA).

Protein beverages: Vitasoy, successfully marketed in Hong Kong, is a soybean beverage that contains nearly 2.5% protein; it competes successfully with the most popular soft drinks on the market. Monsanto Co. has signed an agreement with K.S. Lo of Vitasoy, for marketing Puma, a soy beverage, in other parts of the world. Coca-Cola recently announced that Saci, which contains 3% soy protein, is now being test-marketed in Brazil. Textured foods (General Mills makes Bac\*Os from spun soy fibers. Ralston Purina manufactures these soy fibers. Worthington Foods makes and sells a line of textured meatlike products based on spun soy protein fibers. Swift’s Texgran and Archer Daniels Midland’s TVP are made by extruding defatted soy flour. H.B. Taylor Co. makes Textrasoy by thermoplastic compacting of the defatted soy flour).

Soybeans (the five categories of processed products are: full-fat soy flour, defatted soy flour, a 60-70% protein concentrate, soy milk, isolated soy protein—the modern

version of Oriental soy curd {tofu}). Cottonseed. Peanuts. Other sources (copra from coconuts, sesame, fish protein concentrate). Private sector's role (AID program, Quaker Oats, Hinds Co., Vitasoy, Coca-Cola Co.). Photo and brief biography of Dr. Aaron M. Altschul.

Page 76: Photos show bottles of Puma (Guyana), Saci (Brazil), and Vitasoy (Hong Kong). For each is given: The percentage and source of protein. The percentage of calories from protein. The cost per bottle in U.S. cents (range 3.5 to 5 cents).

Fig. 3 (p. 152) is a graph that shows, for various countries of the world, the percentage of total grain supplies fed to animals (Denmark and USA are highest at 72-78%) versus animal protein consumption (pounds per person per year) (Denmark and USA are highest at about 45 lb). Address: Special Asst. for Nutrition Improvement to the U.S. Secretary of Agriculture, USDA, Washington, DC.

**530. Product Name:** Protoveg (Meatlike Products Based on TVP) [Flavors are Ham, Beef, Bacon, and Unflavored. Textures are mince, and chunky. Also Smokey Snaps (which resembled bacon bits)].

**Manufacturer's Name:** Direct Foods Ltd.

**Manufacturer's Address:** Greatham, Liss, Hampshire, England.

**Date of Introduction:** 1969 August.

**Ingredients:** TVP (made by ADM) plus flavoring.

**Wt/Vol., Packaging, Price:** 5 oz or 10 oz double cellophane bag.

**How Stored:** Shelf stable.

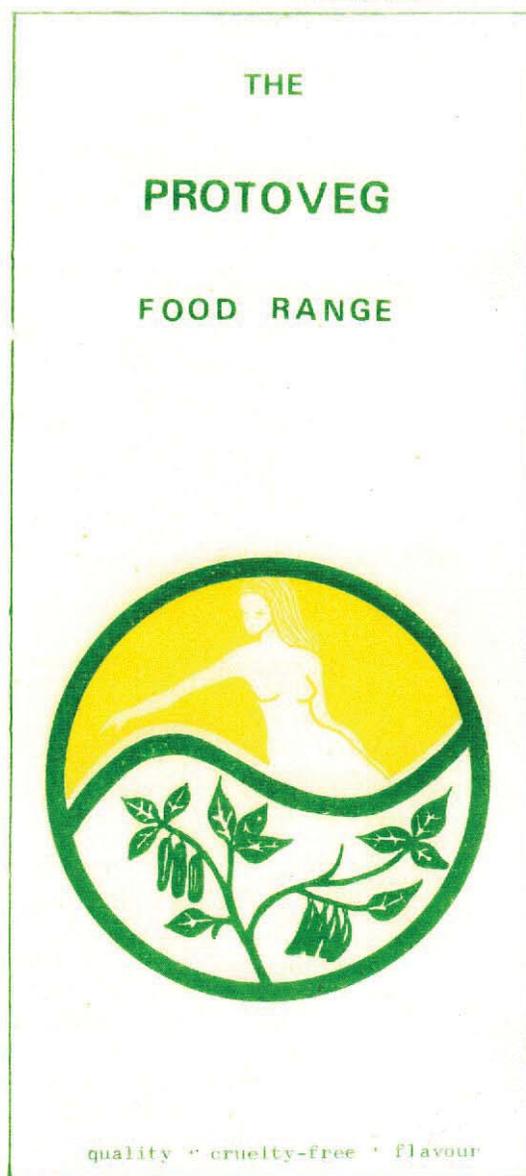

**New Product–Documentation:** See next 3 pages. Mail-order catalog and price list from Direct Foods Ltd. 1969. "The Protoveg Food Range." The company address is Copse House, Greatham, Liss, Hants. 6 panels. Dark green and yellow on light green. Flavors are ham, beef, bacon, or unflavoured. Pack sizes are standard or large. Textures are mince or chunky. There are 14 products total.

Export price list from Direct Foods Ltd. 1974. Oct. 1. Protoveg comes in beef, ham, pork, or natural flavors. Sizes are 5 oz, 10 oz, 10 lb, or 50 lb. 10 products total.

Ad in *The Vegetarian Health Food Handbook* (UK). 1974. p. 88. "Born free? Probably not." An illustration of a bull is shown. "Now you can eat beef without butchery. Protoveg brings you a complete range of meat flavour foods. Protoveg is a natural food made from soya beans." Direct Foods Ltd. is located at Bedford Rd., Petersfield, Hampshire. Phone: (0730) 4911 / 2.

Eva Batt. 1976. *What's Cooking*, rev. ed. p. xvi, xviii. This is a soya-based meat-like product. The unflavoured variety contains added vitamin B-12.

Trade catalog and price list from Direct Foods Ltd. 1977. April 25. Protoveg comes in beef, ham, pork, or natural flavors, plus Smokey Snaps. Sizes are 5 oz, 15 oz, and 10 lb (catering size). 14 products total.

DIRECT FOODS LTD.

Copse House, Greatham, Liss, Hants.

Interview with Peter Roberts, founder of Direct Foods Ltd. 1990. Dec. 12. This was Direct Foods' first product, based on ADM's TVP purchased from British Soya Mills (British Arkady). BSM offered to supply Peter but would not offer any exclusive arrangement. BSM agreed not to compete with Peter, saying they were interested only in selling to food manufacturers, not to the retail market. Peter accepted and in 1969 placed a trial order of about 10 lb of beef chunks or mince. The Roberts called their product Protoveg (pronounced PRO-toe-vej, a registered trademark), and sold

## Trade Order Form (G.B.)—as from 25 April 1977

Cases Required		protoveg	Size	Number per Case	Rec'd Retail Price £ p	Trade Price per Case £ p	
CHUNKY	MINCE						
HANDY SIZE	...c/s	...c/s	Beef Flavour	5 oz	12	.37	3.33
	...c/s	...c/s	Ham Flavour	5 oz	12	.37	3.33
	...c/s	...c/s	Pork Flavour	5 oz	12	.37	3.33
	...c/s	...c/s	Natural Flavour	5 oz	12	.35	3.15
		...c/s	Smokey Snaps	5 oz	12	.57	5.13
ECONOMY SIZE	...c/s	...c/s	Beef Flavour	15 oz	6	.91	4.09
	...c/s		Ham Flavour	15 oz	6	.91	4.09
	...c/s		Pork Flavour	15 oz	6	.91	4.09
	...c/s	...c/s	Natural Flavour	15 oz	6	.86	3.87
CATERING PACKS	...c/s	...c/s	Beef Flavour	10 lb	1	7.90	5.92
	...c/s	...c/s	Ham Flavour	10 lb	1	7.90	5.92
	...c/s	...c/s	Pork Flavour	10 lb	1	7.90	5.92
	...c/s	...c/s	Natural Flavour	10 lb	1	7.44	5.58
		...c/s	Smokey Snaps	10 lb	1	14.80	11.10

The 5 oz size yields approx. 1 lb meat alternative when hydrated.

The economy size packs contain 3 separate 5 oz sachets, each yielding approx. 1 lb when hydrated.

The catering packs (10 lb) are designed to meet the needs of those who wish to bulk-buy. They represent considerable savings and can replace meat for as little as 25p a pound.

The above prices represent a Recommended Retail Margin of 33⅓% (Discount of 25%).

it in 9 different flavors and textures (see above): They packed it in 4.5 oz. double cellophane bags with a label between the two bags, developed a recipe leaflet and order form, and distributed it via their Compassion in World Farming and via Beauty Without Cruelty (Lady Dowding's anti-fur-trapping group). The 4.5 ounces yielded 1 pound of hydrated product;

the mince hydrated in 2 minutes and the chunks in 15-20 minutes. By the mid-1970s a typical label read: Protoveg: Textured Soya Protein. Beef-Style Chunks.\* \*Contains no meat. Vegetarian.

EXPORT PRICE LIST - 1 October 1974

- Wherever possible products are shipped in standard export cases measuring 584mm by 508mm by 813 mm. & composed of Boufort Board.
- Prices quoted are F.O.B. London or Southampton.
- C.I.F. prices can be quoted for specific orders.
- Unless instructed to the contrary, insurance is taken out for the buyer's account.
- Prices quoted are subject to alteration without notice, although every effort is made to notify customers of price alterations in advance.
- Enquiries regarding supply and terms should be addressed to our Agents as under:

Carr, Godden &amp; Co. Ltd., 206 - 210 Bishopsgate, London E.C.2.

- All Protoveg & Ranch House Foods are Guaranteed free of meat and meat-fat.

Reg. No. 949421 England

532. *Soybean Digest*. 1969. Soy foods given big play at ASA's 49th convention [in South Carolina]. Sept. p. 15.

• **Summary:** More than 1,000 people attended the American Soybean Assoc. convention. "The panel on 'Latest Developments in Soy Foods,' with representatives of leading soy foods processors and of the Northern Regional Research Laboratory at Peoria [Illinois] was well attended; and the soy foods luncheons sponsored by Archer Daniels Midland Co. and Central Soya were crowded to overflowing..."

"Archer Daniels Midland featured TVP (its textured vegetable protein) throughout the whole meal from the salad through the main course, along with soy flour and soybean oil shortening."

533. Prestbo, John A. 1969. Meatless 'meats': Several firms develop soybean-based copies of beef, pork, chicken. Some now on market mixed with real thing; low cost, high-protein food is aim. Questions about taste, labels. food aim. *Wall Street Journal*. Oct. 2. p. 1, col. 1 and p. 21, col. 4.

• **Summary:** Discusses soy-based "pork, beef, and nuts" made by 6 U.S. companies including ADM, General Mills, Swift & Co., Worthington Foods, and Ralston Purina Co. Americans are eating more of these meat analogs than they may realize. "Soup mixes, canned stews and chili, frozen ravioli and prepared, frozen hamburger patties are among a growing number of grocery store staples that now contain relatively small amounts of flavored, textured soybean 'meats' along with real meat. In many instances, the only mention of the analogs on the labels of these convenience foods is in the fine-print list of ingredients. Analogs also are being tested in restaurants, factory cafeterias and institutions."

"Since last year, the New York State Department of Mental Hygiene has been adding General Mills Inc.'s meatless crumbled 'beef' and diced 'ham' and 'chicken' to meals for its 90,275 patients in 49 institutions."

Sales of soy-based analogs this year are estimated at \$10 million and growing fast, up from about \$3 million 5 years ago. "One study conducted by a West Coast research firm forecasts sales of \$1.5-\$2 thousand million for the products by 1980, which would equal 5-6% of the meat and poultry market now projected for that year."

"One of the first products to use analogs, Skippy Peanut Butter with Smoky Crisps (simulated 'bacon' bits), was dropped last year after little more than a year in test markets."

"Last year a cattlemen's convention innocently devoured a banquet entree of 'meat loaf,' only to be jolted later by a speaker who told them they had eaten soybeans, not beef."

"Right now, most meat analogs retail for as much or more than the real meat they imitate. But eventually analogs' biggest attraction is expected to be low cost—roughly half that of trimmed, boned and cooked real meat."

Extruded soy "meats" wholesale for an average of

\$0.35/lb., while those made from spun soy protein fibers range from \$0.45 to \$0.80/lb. General Mills is building its first meat analog plant at Cedar Rapids, Iowa. Worthington Foods makes a bacon analog named Stripples, which sells for \$0.79 per half pound package. "Worthington is also developing meatless breakfast sausages with similar characteristics which it plans to call Sizzles."

"Other food makers are trying different approaches to using analogs. Nalley's Fine Foods division of W.R. Grace & Co. is test-marketing Meat Mate, a package containing dehydrated, textured soy particles. When mixed with a pound or more of ground meat and some water, the particles expand, extending the meat weight by up to 50%. Different types of Meat Mate contain various spices." Other products include Wham, Bac-Os, and Bac'n.

534. Altschul, A.M. 1969. Food: Proteins for humans. *Chemical and Engineering News* 47(49):68-81. Nov. 24. [11 ref]

• **Summary:** This article begins: "We might describe what has happened in the past 25 years as a derangement of our ecosystem caused by rapid increase in population density without concurrent increased in wealth and the capacity to produce food."

Note: In 1974 world hunger and malnutrition, along with human population growth worldwide, were considered the two great problems on the planet. Another major problem was the "protein gap."

Contents: Introduction. New protein foods. Vegetable protein mixtures (soy protein concentrate, CSM). Improved cereal products. Domestic food production (malnutrition among the poor in the USA).

Protein beverages: Vitasoy, successfully marketed in Hong Kong, is a soybean beverage that contains nearly 2.5% protein; it competes successfully with the most popular soft drinks on the market. Monsanto Co. has signed an agreement with K.S. Lo of Vitasoy, for marketing Puma, a soy beverage, in other parts of the world. Coca-Cola recently announced that Sachi, which contains 3% soy protein, is now being test-marketed in Brazil. Textured foods (General Mills Makes Bac\*Os from spun soy fibers. Ralston Purina manufactures these soy fibers. Worthington Foods makes and sells a line of textured meatlike products based on spun soy protein fibers. Swift's Texgran and Archer Daniels Midland's TVP are made by extruding defatted soy flour. H.B. Taylor Co. makes Textrasoy by thermoplastic compacting of the defatted soy flour).

Soybeans (the five categories of processed products are: full-fat soy flour, defatted soy flour, a 60-70% protein concentrate, soy milk, isolated soy protein—the modern version of Oriental soy curd {*tofu*}). Cottonseed. Peanuts. Other sources (copra from coconuts, sesame, fish protein concentrate). Private sector's role (AID program, Quaker Oats, Hinds Co., Vitasoy, Coca-Cola Co.). Photo and brief

biography of Dr. Aaron M. Altschul.

Page 76: Photos show bottles of Puma (Guyana), Saci (Brazil), and Vitasoy (Hong Kong). For each is given: The percentage and source of protein. The percentage of calories from protein. The cost per bottle in U.S. cents (range 3.5 to 5 cents).

Discusses private companies making protein foods as part of a USAID 3-year grant program to encourage U.S. companies to develop commercially viable protein foods for production and marketing in developing countries. A total of 14 projects were funded. Address: Special Asst. for Nutrition Improvement to the U.S. Secretary of Agriculture.

535. Atkinson, William T. Assignor to Archer-Daniels-Midland Company (Minneapolis, Minnesota; a corporation of Delaware). 1969. Process for preparing a high protein snack. *U.S. Patent* 3,480,442. Nov. 25. 3 p. Application filed 22 June 1966. [8 ref]

• **Summary:** “Abstract: A process for the precipitation of a friable, crisp, edible snack in which the cells are of random distribution and size of high protein content obtained by extruding a protein mix of a solid protein derivative having a protein content of at least 30% by weight of the solid and from 12 to 20% by weight of the mix of water at a temperature of 20 to 480°F. at a pressure of at least 1000 p.s.i.”

“The preparation of expanded cellular carbohydrates in the form of cheese and meat-flavored snacks by the so-called puffing techniques is known to the art. Such techniques are, however, not satisfactory in the preparation of expanded, cellular products from edible, bland protein derivatives such as [solvent] extracted oil seed proteins, fish proteins, and animal proteins. Nevertheless it would be highly desirable to produce such protein snacks in view of the high nutritional value and low caloric content of the described protein derivatives.” Address: Minneapolis, Minnesota.

536. Abel, Mary A. 1969. Soy proteins work for homemakers. *Soybean Digest*. Nov. p. 29-32.

• **Summary:** Cakes containing soy flour have an unusual tenderness and fine texture with a fragrant aroma, good flavor and a unique moistness when served. Photos show various foods containing soy proteins made by A.E. Staley Mfg. Co., General Mills, Worthington Foods (hors d'oeuvres), and Archer Daniels Midland Co. (TVP beef-flavored sukiyaki). Three photos show General Mills Bontrae food products, including Bontrae crumbles with a flavor like beef, Bontrae rice with a flavor like chicken, and dice with a flavor like ham.

“Soy protein is also making possible the development of new foods. One new line of products, developed by Thomas J. Lipton Inc., recently won the Institute of Technology's 1969 Industrial Achievement Award, the most coveted food industry award. The winning products are the main dish

dinners, nationally distributed and well known to many homemakers. The dehydrated, shelf-stable dinners require only a few minutes preparation to become gourmet main dishes for either family or guests.” Address: Central Soya.

537. *Soybean Digest*. 1969. Burket will head new ADM specialty division. Nov. p. 50.

• **Summary:** “Archer Daniels Midland Co. has formed a new specialty division to market a variety of specialty items in the food and industrial areas, Lowell W. Andreas, ADM president, has announced. The division will be responsible for marketing industrial and edible soy products, including TVP textured vegetable protein.

“The division is to be headed by Richard E. Burket, who is joining ADM as vice president, specialty division... Mr. Burket joins ADM after 15 years with Central Soya... He will headquarter at ADM's new corporate offices in Decatur, Illinois, 4666 Faries Parkway.” A photo shows Richard Burket.

538. *Soybean Digest*. 1969. The soy foods companies. Nov. p. 40, 42-44.

• **Summary:** A summary of the U.S. companies making soy protein foods and their products. Included are Central Soya, Archer Daniels Midland Co., Swift Chemical Co., General Mills, Ralston Purina, A.E. Staley, Loma Linda Foods, Worthington Foods, Fearn Soya Foods, and El Molino Mills.

539. Altschul, Aaron M. 1969. Low-cost foods: Fortified cereals and protein beverages. In: M. Milner, ed. 1969. Protein-Enriched Cereal Foods for World Needs. St. Paul, MN: American Assoc. of Cereal Chemists. x + 343 p. See p. 82-96. [27 ref]

• **Summary:** Contents: The world food problem: Hunger and malnutrition are caused by poverty. Food quality vs. food cost. Improving food quality: Improving the quality of cereals, new protein foods. New foods program. Four generations of protein foods (history). Food distribution within the family. Discussion: The relative importance of adequate nutrition, choosing the most effective approach to improved nutrition, the nature of the problem and the value of improvements. Conclusion.

Tables: (1) New Protein Food Program of the Agency for International Development (Feb. 1967 to July 1968): Countries and products that include soya: Brazil–Krause Milling, Monsanto, Swift. Kenya–Del Monte. Pakistan–General Mills. Thailand–Archer-Daniels-Midland. India–Swift. (2) Conventional and new protein sources (incl. oilseed protein). Address: USDA, Washington, DC.

540. National Soybean Processors Assoc. 1969. Year book & trading rules–1968-1969. Washington, DC: National Soybean Processors Association. 64 p. 23 cm. Spiral bound.

• **Summary:** Contents: Constitution and by-laws (As

amended Aug. 6, 1968). Officers and directors. Names of members. List of standing committees. Trading rules on soybean meal. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}, sampling of soybean meal {automatic sampler, probe sampler}). Trading rules on soybean oil. Definitions of grade and quality of export oils. Tentative soybean lecithin specifications. Appendix to trading rules on soybean oil: Uniform sales contract, grading soybean oil for color (N.S.P.A. tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed). Foreign trade definitions (for information purposes only). Address: 1225 Connecticut Ave., N.W., Suite 314, Washington, DC 20036. Phone: 202/659-4610.

541. Atkinson, William T. Assignor to Archer Daniels Midland Company (Minneapolis, Minnesota; a corporation of Delaware). 1970. Meat-like protein food product. *U.S. Patent* 3,488,770. Jan. 6. 6 p. Application filed 7 March 1969. 1 drawing. [8 ref]

• **Summary:** This is ADM's basic U.S. TVP patent based on extrusion cooking of defatted soybean flakes. "Abstract of the disclosure: A hydratable food product is obtained by forming a protein mix of a proteinaceous material having protein content of at least 30 percent, and preferably a solvent-extracted oil seed protein material, with 20-60 percent of water based on the weight of the protein mix, masticating this mix at temperatures substantially above the boiling point of water, and thereafter extruding this mix at elevated pressures and temperatures through an orifice into a medium of lower pressure and temperature."

This application is a continuation-in-part of application Ser. No. 587,939, filed Aug. 17, 1966, which in turn is a continuation-in-part of application Ser. No. 369,189, filed May 21, 1964, now abandoned. The present invention relates to the production of meat-like food products from vegetable, fish, and similar protein sources. More particularly, the present invention relates to the production of protein structures having a texture and appearance very similar to muscle protein found in common meat products like steaks, fowl, chops, hams, and the like."

In Example 1 the following components, listed in the order that they are added, were mixed in a ribbon blender at 120°F for about 20 minutes: 11,350 gm of extracted soybean flakes containing 50% soy protein and 6.5% moisture; 45 ml of 50% hydrogen peroxide for purposes of flavor and odor control dilutes in 380 ml water; 1,700 gm imitation beef seasoning; 3,785 ml of water, 90 gm of 97% pure sodium hydroxide; and 340 gm of calcium chloride dissolved in 500 ml of water. The resulting mixture was extruded.

In "Meat Analogs," Horan (1974, p. 375) notes that

the product described in this patent has probably had "the greatest impact in bringing the low-cost, textured vegetable products into commercialization: defatted soy flake or flour (50% protein) is put through a continuous process in an extruder to give an expanded and molecularly oriented material having textural properties described as plexilamellar. The product contains an open cell structure in which the majority of the cells have dimensions of greater length than average width and are aligned in the direction of flow of the plastic mass through the extruder. These types are commonly referred to as thermoplastic-extruded products."

Brian (1976) reports that "Approximately 60% of the soy flour and grit texturizing capacity in the U.S. is licensed under this Atkinson patent." The process yields a plexilamellar fibril and is best known in ADM's product trademarked TVP. The product resulting from Atkinson's patent was given a large new market in 1971 when it was accepted into the school lunch program in the USA.

Note 1. The Atkinson patent dominated the industry from 1970 to 1976, and during that time ADM very effectively marketed and promoted TVP. However in Feb. 1976 a very similar U.S. patent (No. 3,940,495) was issued to Ronald J. Flier and assigned to Ralston Purina. A lawsuit and trial concluded that the Flier patent now dominated the Atkinson patent because it could be traced back to a July 1964 patent application. Thereafter most large manufacturers of textured soy flour took licenses on the Flier patent—even ADM!

Note 2. Interview with Don Aldon, former soy researcher at Swift & Co. 1985. Feb. 26. In about 1963-64 Dean Wilding of Swift invented a product named Texgran; it was a textured soy flour, somewhat like today's TVP. Wilding invented a texturization process while trying to find a way to extrusion cook soy flour. He visited Wenger and saw a variety of products they made. He recognized their value and bought a machine. Aldon worked for about 18 months developing the process, doing research, and generating information to be used in the patent. Swift started selling the product before they applied for the patent. "As soon as our competitors saw this product, they recognized its value because they had been extruding dog food. Ralston Purina slammed things together and got a patent application in first. Two weeks later ADM had one in. Then 3-4 weeks later Swift applied." Swift started selling Texgran in 1964-65. The patent was finally issued in about 1971-72. Litigation went on for years and years between the three companies. Finally Ralston got the basic patent since they had applied first. ADM and Swift got a royalty-free license. They did that just to settle the litigation. Address: Minneapolis, Minnesota.

542. *Soybean Digest*. 1970. Help for a hungry world: UN meeting at Peoria. Jan. p. 18-19.

• **Summary:** "Help for hungry people of the world—based on the profit motive—was asked by a man in a United Nations

organization and promised by men in the U.S. soy food industry at a meeting in Peoria, Illinois, the week before Thanksgiving.

“Recommendations from the Expert Working-Group Meeting on Soy Protein Foods will go before the United Nations Industrial Development Organization, Vienna, Austria. If adopted, they will be incorporated into UNIDO’s official report and proposed to U.S. companies. Action of some kind appears likely.

“Action against hunger was the tone established in the opening address Nov. 17 by Dr. M. Mautner, chief of UNIDO’s light industries section, on behalf of Abdel-Rahman, UNIDO executive director, and maintained the rest of the week. With the knowledge and authority of a corporation chairman of the board and with the human concern of one of the family, Dr. Mautner held the meeting to a central theme:

“Industry in countries like the U.S. and Japan can make a profit and help hungry people feed themselves by setting up food processing companies in developing countries and hiring native labor.

“Action was in a statement, with working committees to implement it, proposed Nov. 21 for recommendation to UNIDO. Prepared by Wayne Gottshall of Ralston Purina International, St. Louis [Missouri]; Dr. Dale W. Johnson of Crest Products Inc., Park Ridge, Illinois; and Dr. Jaan I. Tear of Alfa-Laval AB, Tumba, Sweden, the statement read:

“The food-processing and food-equipment-manufacturing industries present would like to express their willingness to cooperate with UNIDO and other UN agencies in seeking realistic ways of meeting the nutritional requirements in the developing countries.’

“Examples in India and Uganda of the kind of action asked and promised were described by Charles Purrett, vice president of international operations for Worthington Foods Inc., Worthington, Ohio. This company has a 30-year, profit-making history of manufacturing food from soy and wheat proteins.

“Companies in Uganda, India: It has an interest in Africa Basic Foods, which makes high protein food from soybeans near Kampala, Uganda. Mr. Purrett said it ‘has contributed a substantial amount of money in addition to technical people, who are in Africa at the moment on Worthington’s payroll.’

“Between 1965, when the Uganda plant was built, and 1968, soybean production increased 12 to 15 times, increasing income from farm and factory jobs. About 120 tons of soybeans went into human food in 1968. Worthington helped develop Vegetable Industries & Products in India. L. Nagaich, managing director, said, ‘Worthington has a humanitarian interest with commercial success as a prime force.’

“‘Action-oriented’ UNIDO, according to Frank K. Lawler, editor of *Food Engineering*, wants industries ‘to stand on their own merits in self-sustaining, profit-making

enterprises while benefiting the developing countries nutritionally and economically.’ He visited UNIDO in Vienna, traveled with Dr. Mautner in the U.S., then joined the working group in Peoria.

“More than 40 soy protein-food scientists, industrialists and equipment manufacturers from 15 countries met 4 days at the U.S. Department of Agriculture’s Northern Utilization Research Laboratory of the Agricultural Research Service and a day at the University of Illinois, Urbana.

“Current efforts are not enough: Dr. Mautner said the most challenging problem of mankind today is to produce enough food at a cost the hungry can pay; but current efforts are not enough. Production is not keeping pace with demand. Protein has not received the expected interest in developing countries. Some foods are not satisfactory because they are incomplete nutritionally, cost too much or do not taste or look right.

“Dr. Mautner considers unsatisfactory any program that depends on subsidy by a donor country. He asked for transfer of know-how to developing countries and repeated the request in various ways throughout the meeting.

“Dr. Robert J. Dimler, director of the Northern Laboratory, reviewed history of U.S. soy development, especially the use of protein in food. G.C. Mustakas reviewed Northern Laboratory research on soy flours and their use in human nutrition.

“Dr. K.A. Harkness, Ohio State University agricultural engineer, sees soy products and other non-animal food as the only way man can cope with overpopulation and pollution in the future.

“Other scheduled speakers at the Northern Laboratory included: Mogens Jul, secretary of the United Nations Protein Advisory Group; Dr. Tokuji Watanabe, Japanese Ministry of Agriculture and Forestry; Dr. Edwin W. Meyer, Central Soya, Chicago; and L.C. Adolphson, Archer Daniels Midland, Decatur, Ill. Scheduled speakers at the University of Illinois included: Dr. G.K. Brinegar, Dr. D.E. Alexander, Dr. R.L. Cooper, Dr. E.R. Leng, and Dr. John Hetrick.

“Experiences in making acceptable, nutritious food with soy products were reported at Peoria by Dr. Shiro Miyasaka, Brazil; Dr. Isaac A. Akinrele, Nigeria; Amara Bhumiratana, Thailand; and Armando Civetta, Colombia. Dr. Mautner closed the meeting with a call for demonstration plants in Nigeria, Thailand and Latin America.

Photos show: (1) Dr. Robert J. Dimler, Director of the USDA Northern Utilization Research Laboratory, welcomes Dr. M. Mautner of the United Nations Industrial Development Organization and the Expert Working Group. (2) Dr. Dale W. Johnson of Crest Products answers a question at meeting.

543. Elliot, Rose. 1970. Cooking with Protoveg (TVP). *British Vegetarian*. Jan/Feb. p. 154-57.

• **Summary:** Made from soya protein and highly nutritious,

Protoveg “brings a new dimension to vegetarian cooking because it can be used for so many dishes where nuts would be unsuitable, or as a change from nuts.” Protoveg can be obtained by mail order from Direct Foods Ltd., C.I.W.F. [Compassion in World Farming], Copse House, Liss, Hants. [Hampshire, England]. It is also for sale at the Beauty Without Cruelty Boutique, 49 Upper Montagu Street, London, W.1.

Gives recipes for Protoveg Bechamel and for Protoveg Roast with Lemon and Parsley Stuffing.

544. Associated Press (AP). 1970. Test meal turns out exciting. *Hartford Courant (Connecticut)*. March 29. p. 19A.

• **Summary:** Secretary of Agriculture Clifford M. Hardin sat down to a meal composed—as the official menu said—of “textured vegetable protein products.” These were made largely from soybeans. “The hors d’oeuvres, which contained no meat, included scallop coquilles, jambon diable [ham], pinwheels and empenados.

The three entrees, which contained both soy and meat, were meat loaf (38% soy), meat patties (30% soy), and sloppy joes (40% soy). There were also soy-oriented dessert, cookies, and candy.

The luncheon was sponsored by General Mills and Archer Daniels Midland, two of America’s largest food processors and users of agricultural products. It is part of a larger trend in the food industry to “help improve nutrition at lower costs to consumers.”

Dr. Aaron M. Altschul, an expert in the field, “said the textured soy food already has involved a high degree of sophistication.”

A chart was displayed at the luncheon showing the cost savings that can be expected by the use of soy extenders in large lots of ground beef. For example, if 40.2 pounds of textured soy protein is added to 100 pounds of ground beef, the cost savings would be 23% or 12 cents a pound.

545. Rackis, J.J. 1970. Re: Visit to Archer Daniels Midland (ADM), Decatur, Illinois. Letter to OC Files, April 8. 2 p. Typed, with signature on letterhead.

• **Summary:** “After touring the new research facilities of ADM, discussions were held with most of the research department. As stated by Drs. Horan, Pour-El, Hamby, Wilkinson and others, there are four areas of research that are of great importance.”

1. Basic research, with respect to the basic chemistry of soy protein. 2. Nutrition: Dr. Horan said that research should be directed toward increasing the nutritional value of soy products. 3. Flatulence: Research directed toward removal and/or inhibition of flatus factors. 4. Flavor. How to improve flavor and reduce undesirable flavors. Address: Principal Chemist, Oilseed Crops Laboratory.

546. Hayward, J.W. 1970. Do it yourself with soybeans

(Letter to the editor). *Feedstuffs*. April 14. \*

547. Archer Daniels Midland Co. 1970. See what you can do with TVP, fabulous new food (Ad). *Food Engineering* 42(4):Inside front cover. April.

• **Summary:** In the top half of this ad is color photo of an overhead view of what looks like a meat and vegetable stew in a cast-iron pot.

The text below reads: “This dish was made with fresh vegetables and TVP® textured vegetable protein. It could also have been made with TVP plus meat. Either way, it could hardly look or taste better... or be more nutritious or economical.

“TVP is the exciting, new all-vegetable textured protein source made by ADM and marketed world-wide.

“It is available in granular, chunk, strip, and chip forms. It comes unseasoned, or with flavoring of almost any kind—meaty, nutty, tangy, and salty. Easy to handle and to store and completely controlled in texture, flavor, and color, TVP textured vegetable protein is exceptionally well-suited for institutional feeding and restaurants. It’s an excellent enrichment for casseroles, snacks, stews, gravies, sausages, ground meats, and many convenience foods.”

In the bottom right is a coupon. Address: 4666 Faries Parkway, Decatur, Illinois 62526.

548. Lambert, Eugene I. 1970. Re: Petition to establish a definition and standards for a new class of foods to be known as Tegretein products. Letter to Commissioner of Food and Drugs, Dep. of Health, Education and Welfare, 5600 Fishers Lane, Rockville, Maryland 20852, May 20. 29 p. Typed, without signature (carbon copy).

• **Summary:** This petition consists of three parts: (1) Cover letter (2 p.). (2) Attachment A—Proposed regulations: Tegretein products; identity; label statement of optional ingredients. Tegretein products; quality; label statement of substandard quality (8 p.). (3) Attachment B—Statement of grounds. Introduction: History of the proposal. The general approach: A single standard. Detailed explanation: Identity standard, quality standard, summary (19 p.).

The cover letter (from attorneys for the Tegretein Industry Group) begins: “The undersigned submit this petition pursuant to Section 701(e)(1)(B) of the Federal Food, Drug, and Cosmetic Act with respect to the issuance of regulations under Section 401 of the Act to establish a definition and standard of identity and standard of nutritional quality for a new class of foods to be known as Tegretein products. This landmark proposal is the culmination of many years of cooperative industry, scientific, and government effort, and represents a breakthrough in the creative use of existing statutory authority to advance institutional goals.”

Note: This is the earliest document seen (March 2009) that contains the word “Tegretein,” a word which abandoned in Nov. 1970. Address: Covington & Burling, 888 Sixteenth

St., N.W., Washington, DC 20006. Phone: (202) 293-3300.

549. Archer Daniels Midland Co. 1970. A fabulous new food—TVP: Add eggs or a tangy dip and see what you can do with it (Ad). *Food Engineering* 42(5):137-39. May.

• **Summary:** On the first page of this 3-page glossy color ad (on cardstock paper) is a stainless-steel spatula with reddish strips of TVP on it—above a wooden table. On the inside 2-page spread is a skillet filled with cheese-topped TVP and eggs, also above a wooden table. Address: 733 Marquette Ave., Minneapolis, Minnesota 55440.

553. *Ralston Purina Magazine (St. Louis, Missouri)*. 1970. Thanks to Mr. Ford. May/June. p. 26-29.

• **Summary:** Henry Ford had an eye for promising young men. And two of Ralston Purina's key research men, Frank Calvert (R&D director for new venture management) and Bob Boyer (senior scientist, central research) received a truly unique education.” In 1930 the new Chemical Laboratory opened in Greenfield Village; Calvert and Boyer were among the 15 boys from the Ford Trade School, Henry Ford's technical school in Massachusetts, who were chosen to work there. Boyer, age 21, who had attended the Ford Trade School [at the Rouge Plant in Dearborn, Michigan] from 1927 to 1930, was put in charge of the project. After deciding to focus on soybeans in 1931, they developed a process for extracting soybean oil. Every morning at 8:00 sharp, Henry Ford used to appear at Boyer's office to see how his pet project was going.

“In 1938 Frank Calvert joined The Drackett Company

in Cincinnati [Ohio], and he was followed in a few years by Boyer. ‘At Ford we were trying to make synthetic wool out of [soy] protein but the war cut these efforts short,’ says Boyer.

The work on ‘soybean fabric’ continued at The Drackett Company during the early 1940s. ‘We tested the wool fabric for salt content and other factors and one day—I’ll never forget it—it occurred to me that if we could make something for the outside of man, why not for the inside.’ That’s how it came about that in 1949 Bob Boyer filed the patent for edible soy protein fiber.

“He obtained the use of a textile pilot plant and hand made samples of ‘synthetic meats.’ Later that year, armed with a soy protein ‘ham loaf’ he contacted Worthington Foods, a firm making meat substitutes for people who shun meat for religious, health or other reasons “If they hadn’t shown interest I probably would have dropped it because I had no income at the time.’

“Swift was the first company to take out a license on the patent and Worthington followed not far behind. Soon several companies were licensed to use the patent and Boyer was kept busy with consulting work...

“In 1957 The Drackett soybean operation was sold to Archer Daniels Midland, and Calvert became technical of their protein operations. The paths of Boyer and Calvert crossed again in 1962 when they both joined soybean research activities at Ralston Purina. Boyer had worked as a consultant to Purina when the company began investigating industrial and edible uses of soybean. When he joined the company he assigned his patent ownership to Purina.”

“Back in the 1930s many people thought our work was crazy,’ recalls Boyer. ‘But Mr. Ford was shrewd enough to know’ better. ‘The best thing he did was to help popularize the soybean.’”

Photos show: Calvert and Boyer, together and separately. The automotive products made at Ford's lab being displayed in New York in 1931; Calvert and Boyer are present. Boyer and Ford conversing. Ford and Boyer standing behind the famous white “plastic” car.

554. Witham, W.C. 1970. Re: Memorandum—Three items of information regarding soybean operations. Letter to F.R. Senti, Deputy Administrator, USDA, ARS, NCIUR [Nutrition, Consumer, and Industrial Use Research], Washington, DC, Aug. 27. 1 p. Typed, without signature (carbon copy).

• **Summary:** While at the annual meeting of the American Soybean Association, Dr. Cowan was given the following information. (1) Cargill is constructing a plant to manufacture textured soy proteins from soy flour at their facility in Cedar Rapids, Iowa. These products will be similar to those produced by Swift and ADM. Staley also announced its intention to make such products, but may be delayed because of a strike that is now 4 weeks old.

(2) Land O'Lakes has purchased the Felco operations, a cooperative in Iowa with one division operating a 700- to 1000-ton a day soybean processing plant. Note: This is the earliest document seen (March 2008) that mentions "Land O'Lakes" in connection with soybeans, or that mentions Felco (in any connection).

(3) "The General Mills' plant at Cedar Rapids has gone on-stream for the manufacture of Bac\*Os. They expect to be making a complete line of Bontrae products shortly before or just after Labor Day [the first Monday in September]. The latter will be sold to institutions, restaurants, etc. initially." Address: Acting Director of Div., Northern Regional Research Lab., Peoria, Illinois.

555. Ashton, Maureen R.; Burke, Carole S.; Holmes, A.W. 1970. Textured vegetable proteins. *British Food Manufacturing Industries Research Association, Scientific and Technical Surveys* No. 62. 36 p. Aug. [92 ref]  
 • **Summary:** Contents: Introduction. Protein sources. Extraction. Spinning. Extrusion. Gelation. Other methods for generating texture. Commercial aspects. Nutritional aspects. Legal aspects. References. Appendix. The appendix contains an extensive list of patents (mostly British and U.S.) on textured vegetable proteins grouped by the company assigned to or inventor. For each patent, the inventors, country, patent number and year are given, with a brief description of the subject. No patent titles are given in either the appendix or bibliography. The companies/inventors are Archer Daniels Midland Co. (2 patents), R.A. Boyer (3), F.P. Research Ltd (1), General Foods Corp. (7), General Mills Inc. (23), C. Giddey (1), J.H. Kellogg (2), Lever Bros. and/or Unilever (20), G.K. Okumura and J.E. Wilkinson (1), Ralston Purina (4), Swift & Co. (4, including 2 listed for R.A. Boyer), Dr. A. Wander A.-G. (2 Swiss), Worthington Foods Inc. (2), C.L. Wrenshall (1). Address: 1-2. BSc; 3. PhD, FRIC. All: British Food Manufacturing Industries Research Assoc., Randalls Road, Leatherhead, Surrey, England.

556. Hayward, J.W. 1970. 50 years of soybean meal. *Soybean Digest*. Aug. p. 78-83. [16 ref]  
 • **Summary:** "To my knowledge no feed ingredient in the U.S. compares with soybean meal in its importance to our human food supply from animal and poultry sources. Its timely increase in availability (table 1) and high content of potentially excellent quality of protein (2, 3, 5, 6, 8, 9) made it possible for farmers and commercial growers to increase materially the production of poultry meat, both chicken and turkey, as well as pork, beef, milk, and eggs, over the past 40 years.

"In fact, this nutritional discovery for monogastric animals and the increase in protein as soybean meal were timed just right so that the men and women in our armed forces everywhere during World War II could receive

adequate meat products. Yet back home we had to have meat rationed for only a very short time.

"The U.S. production of chicken broilers was pretty much a seasonal business even by the late twenties. In fact, the total production in 1934 was only 34 million birds. It increased to 310 million broilers by 1947. But today the production of U.S. chicken broilers exceeds the 2½-billion mark annually (11). This segment of the poultry industry alone must use in excess of 2½ million short tons of soybean meal annually (44% or 49% protein type). Currently most of our U.S. broiler rations contain 25% to 28% soybean meal. They contained little or none even by 1930.

"Chicken layers and turkeys for meat (11) bring the annual requirement of poultry for soybean meal up to some 4½ to 5 million short tons. I estimate also that U.S. hogs will require another 3 to 4 million short tons annually of soybean meal. The turkey diet in 1930 contained no soybean meal, while the one in 1969 contains 37% and seems to be well balanced nutritionally in all respects.

"The 1908 Minnesota hog ration contained no soybean meal—6.3% in 1947, 10.3% in 1953, and 20% in 1958 with ground yellow corn at 77.5%. (11). The 1958 Illinois hog ration contained 76.10% ground yellow corn and 20% of soybean meal (11).

"In view of all of the increase in numbers of our animals and poultry for meat, which require more of our domestic soybean meal each year, it may come as a surprise to many that at the same time we have been increasing considerably our exports of soybeans and soybean meal. This year, soybean meal exports should exceed 3 million short tons. Soybean exports are likely to exceed 400 million bushels, with soybean oil about holding its own on exports at somewhat less than 1 billion pounds.

"Here are some of the many pertinent highlights over the past 50 years, concerned with the nutritional, product development, and promotional aspects of our U.S. soybean meal:

"Nutritional: 1—Discovery of the mineral deficiencies of soybeans and soybean meal, especially calcium and phosphorus, during the early twenties.

"2—Unextracted soybeans, raw or heated, tended to produce objectionable soft carcasses and soft fat when fed at 14% or more of the entire ration to young pigs (50 to 60 pounds) in drylot and continued on to market weights of 200 to 250 pounds-years 1930-35 (12, 13).

"3—The protein of raw soybeans and underheated soybean meal had favorable amino acid content but failed to produce satisfactory growth of white rats, baby chicks, and pigs. The same was suspected for humans (2, 3, 5, 6, 7, 8, 12, 13, 15, 16).

"4—Proper cooking greatly improved the biological value of the protein of soybeans and soybean meal made by either of the three processes of oil extraction—hydraulic, expeller or screw press, and the continuous solvent extraction method.

Dry heat was usually ineffective. Overheating was about as bad as raw or underheating of soybeans and soybean meal for improving the biological value of its protein for laboratory rats, chicks, and pigs. (2, 3, 5, 8, 12, 15).

“5–Riboflavin needed in soybean meal rations for young poultry and pigs was discovered and made available in crystalline form from 1935-37. Many other B-complex vitamins and essential trace minerals were identified. The limitation of phytin phosphorus in soybeans and soybean meal was reported.

“The animal protein factor (APF) required in soybean meal rations for young monogastric animals and poultry was identified, given the name of vitamin B-12, and made available in a concentrated form about 1948.\*

\* Footnote: “One of the finders of B-12 was Geo. M. Briggs of the University of Minnesota, son of George Briggs of Wisconsin, a founder of the American Soybean Assn. See the latter’s article on page 50.

“Some of the antibiotics were also identified and produced initially for use in feeds in the late forties (11, 12).

“The Sept. 6, 1969, issue of Feed-stuffs (11) is an excellent source of information on most of these basic early nutritional discoveries and developments.

“6–By the early to mid-forties proof was available that we could use high levels of a properly cooked soybean meal in improved poultry and pig feeds to replace all but some 3% of the animal-source proteins such as fish meal, meat scraps, and dried skim milk (9, 12).

“7–The formula for the original Connecticut Broiler Ration was released in 1947. Its supplemental protein was largely a combination of 8% soybean meal, 8% meat and bone scraps, and 8% fish meal.

“To my knowledge, the latest version of the ANRC (Animal Nutrition Research Council) reference diet for broilers was released in May 1956. It contained 27.98% of the 50% protein (now 49%) de-hulled soybean meal, 60.7% ground yellow corn (grade No. 2) and very little animal source protein.

“8–Cornell University investigators at Ithaca, New York, conducted a considerable amount of excellent research on heated full-fat soybean meal as well as determined on chicks the metabolizable energy of various soybean products (2, 13).

“9–In 1949, the uniform rules and standards committee for soybean meal in cooperation with the Soybean Research Council, both of NSPA (National Soybean Processors Assn.), conducted an industry survey and prepared a soybean meal exhibit for members of the Nutrition Council of AFMA (American Feed Manufacturers Assn.) at their midwinter meeting. The samples collected consisted of 28 different expeller meals and 25 solvent extracted meals. The first choice of the Nutrition Council (AFMA) was a 44% protein solvent extracted soybean meal. This meal was practically nondusting with 1.2% for the total portion through a

combination of 80-, 100-, and 200-mesh screens, and its PER (Protein Efficiency Ratio) was excellent. These features are still preferred by the majority of our feed industry of today.

“10–There was no substitute years ago (1940-1960) and there is none that I know of today for actual periodical animal feeding tests supplemented by proven laboratory tests for use by the soybean processor in maintaining top performance of his daily soybean meal production when it is to be used in current critical feeds for young monogastric animals and poultry (2, 3, 8, 12-16).

“11–In the early fifties a top-ranking industrial firm interested in feed additives conducted chicken broiler feeding tests to compare five different name brands of soybean meal. Two meals were close, with the best one worth \$55 more per ton than the poorest of the five meals. The additives used in most broiler feeds today would overcome a part of this difference but not all of it. Most additives are expensive and some of them need not be used at all if the soybean meal is precision cooked (toasted) and periodically animal tested.

“12–Urea is on the increase, replacing a part or all of many of the natural proteins such as soybean meal in feeds for ruminants, especially for growing and fattening beef cattle. There is good evidence favoring a combination of urea and soybean meal for beef cattle.” Continued. Address: Consulting specialist, Minneapolis, Minnesota.

557. Hayward, J.W. 1970. 50 years of soybean meal (Continued–Document part II). *Soybean Digest*. Aug. p. 78-83. [16 ref]

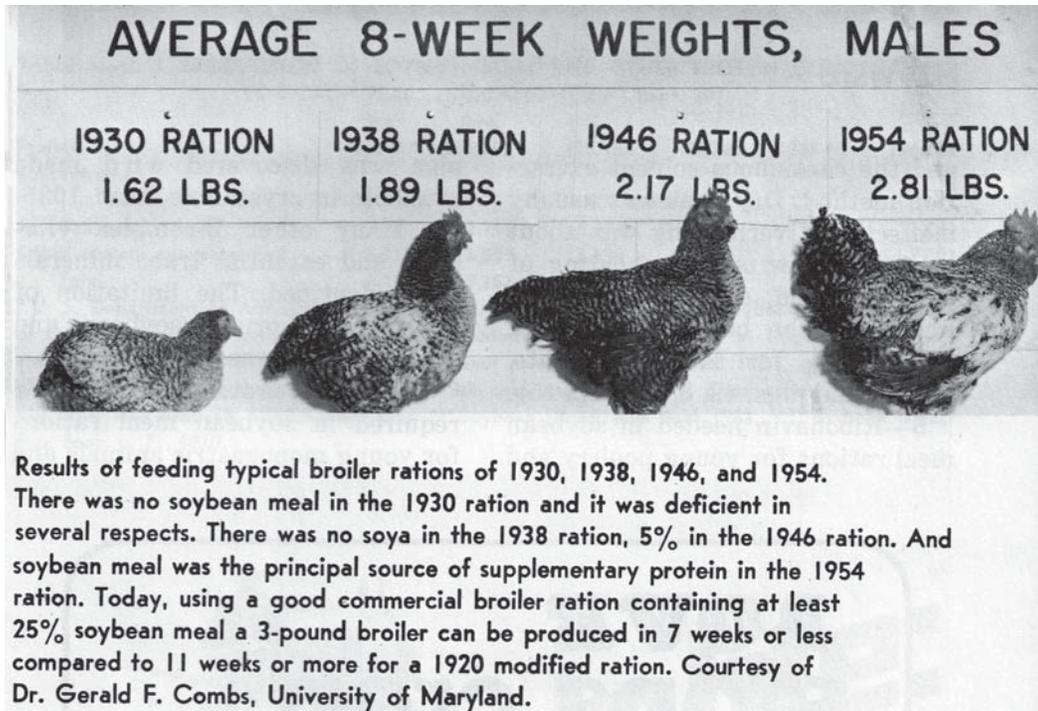

• **Summary:** Continued: “This mixture results in better acceptance of the urea with the economy as good or better because of the improved performance of the animals in the feedlot, a higher selling price at the market, as well as a higher dressing percent and an upgrading of the carcasses when slaughtered.

“Product development:

“1–Most of the early processing of soybeans was with expellers or screw presses. There was a gradual but definite shift during the late forties and early fifties to continuous solvent extraction for processing soybeans. For the past 10 years or more here in the U.S. some 97% solvent and 3% expellers or screw presses have been used for processing our soybeans.

“It is mandatory, however, that for the solvent process hexane or another proven material be used as the solvent. For a time, up until the summer of 1952, a few small extraction plants used trichloroethylene as the solvent with mostly disastrous results from feeding the meal to ruminants.

“2–In 1947 a couple of large soybean processors began making a dehulled soybean meal for high-energy poultry and hog rations. This was then a 50% protein meal and referred to in most instances by that name. Today several processors make this type of meal and refer to it generally as 49% soybean meal (2, 8).

“3—There has been over the past several years some interest expressed in a cooked unextracted soybean meal for use in swine and poultry feeds. (2). In fact, quite recently units for roasting or heating beans by extrusion on the farm have been made available to farmers (13).

“4—Soybean meal for use in feeds leads all other soy protein products in quantity. However, some special soybean meal is produced for industrial uses, and soy protein products as flour, grits, flakes, protein concentrates, and protein isolates are produced in several hundred million pounds annually for food and industrial uses. Soy lecithin is another important product from soybeans (2).

“Promotional Aspects: 1—In 1937 the National Soybean Processors Assn. (NSPA) organized the Soybean Nutritional Research Council on the insistence mostly of my good friend and boss at the time, Whitney Eastman. Back in those days, our Council membership consisted of J.E. Hunter, H.E. Robinson, K.J. Seulke, Lyman Peck, Lamar Kishlar, J.L. Gabby, K.J. Maltas, and J.W. Hayward.

“2—Our Council had lots of work cut out for it, but its initial function was to promote the use of soybean meal in feeds for livestock and poultry. It is hard to believe now that back in the twenties and even most of the thirties soybean meal was an unknown item to many firms of our feed industry and practically all nutritionists at our state agricultural experiment stations.

“3—A classic trip was made out east in 1938 by one of our special committees consisting of Dr. J.E. Hunter, Lyman Peck, and myself to call on USDA nutritionists at Beltsville, as well as at state colleges and agricultural experiment stations. Six states, Maine, New Hampshire,

Vermont, Massachusetts, Connecticut, and Rhode Island, as I recall, were not using a pound of soybean meal in their New England Conference formulas for poultry. We changed their minds shortly on that score. We also visited at College Park, Maryland (University of Maryland), and at Cornell University at Ithaca, New York. One man, Colonel Howe at Beltsville, was largely responsible for our Council preparing an extensive literature review (Blue Book), on soybeans and soybean meal.

4—Our Soybean Nutrition Research Council had a booth with some of our men on hand at many state fairs, the International Livestock and Agricultural Products Show in Chicago, and a World Poultry Congress in Cleveland, Ohio. We also supplied speakers on soybean meal for many state nutrition conferences.

“5—The Soybean Council of America Inc. was formed in 1956 to promote soybean products in some 40 countries of the free world (2). Several of us oldtimers as well as many new enthusiasts from our state universities and experiment stations represented the Soybean Council at many trade fairs and nutrition conferences in several countries overseas in the interest of soybean oil and soy protein products such as meal, flour, and grits.

Photos show: (1) Dr. Hayward, who “has long been recognized as a leading authority on livestock and poultry feeding. He was director of nutrition for Archer Daniels Midland Co. from 1935 to 1960. He was director of nutrition for the Soybean Council of America and undertook many assignments overseas from 1960 to 1964.”

(2) Two white pigs: “Littermate barrows. The smaller pig was fed a typical ration of 1908, which did not contain

soybean meal and was nutritionally deficient in several respects. The larger pig was fed a nutritionally adequate corn-soybean meal ration typical of 1958.”

(3) Male broiler chickens, average 8 weeks of age. Five side-by-side photos show: 1930 ration, bird weighs 1.62 lbs. 1938 ration, bird weighs 1.89 lbs. 1946 ration, bird weighs 2.17 lbs. 1954 ration, bird weighs 2.81 lbs.

• **Summary:** See next page. A full-page photo shows individual photos of the men awarded this honor:

1946–W.J. Morse,\* agronomist, USDA, president, ASA; W.L. Burlison,\* chief, agronomy division, University of Illinois, president, ASA. 1947–I.C. Bradley, J.C. Hackleman, G.G. McIlroy. 1948–J.B. Edmondson, David G. Wing, C.M. Woodworth. 1949–Keller E. Beeson, Jacob Hartz Sr., E.F. (Soybean) Johnson.

1950–G.H. Banks, E.J. Dies, Taylor Fouts. 1951–Frank S. Garwood, James W. Hayward. 1952–Garnet H. Cutler. 1953–George M. Briggs. 1954–J. Ward Calland. 1955–Geo. M. Strayer. 1956–J.L. Cartter, John P. Gray. 1957–Howard L. Roach, Ersel Walley. 1958–Harry W. Miller. 1959–John W. Evans, W.E. Hodgson.

1960–Frederick Dimmock, Edgar E. Hartwig. 1961–Shizuka Hayashi, Albert H. Probst. 1962–Chester B. Biddle, Joseph E. Johnson. 1963–Allan K. Smith, C.R. Weber. 1964–A.J. Ohlrogge, Leonard F. Williams. 1965–Russell Davis, Jake Hartz Jr. 1966–Dwayne Andreas, Dale W. McMillen. 1967–Whitney Eastman, Chas. V. Simpson. 1968–Herbert W. Johnson, John Sawyer, Walter W. Sikes. 1969–Frederic R. Senti, Hays Sullivan.

As shown above with Burlison and Morse, with each person's name is give their current position or title, whether or not they are still living (\* = deceased), and offices they have held in the American Soybean Association (ASA). Page 41 is filled with small, individual photos of each of ASA's honorary life members.

559. Weller, Paul. 1970. Birth of an industry. *Soybean Digest*. Aug. p. 58-59, 61.

• **Summary:** A fairly good, brief history of the soybean

crushing industry in the USA, and the National Soybean Processors Association. Soybeans had been grown in America “since about 1804. Civil War soldiers carried them as ‘coffee berries,’ using them to brew ‘coffee’ when the real product became scarce.”

The first soybeans in America “were likely crushed as early as 1910, among the Chinese in California. Oriental emigrants were then importing soybeans from China and Manchuria, and crudely crushing them for cooking oil. These early efforts were followed by commercial activity among several North Carolina cottonseed mills. In 1915, when cottonseed became scarce, the mills substituted locally grown soybeans.”

“On a warm fall day [Sept. 30] in 1922, A.E. Staley Sr. pulled a master switch on the nation's first commercial soybean processing plant. He helped inaugurate a new industry offering, for the first time, a key commercial market for America's soybean crop. The place was Decatur, Illinois...”

“Role of the processors: Several commercial leaders saw the promise of soybeans by 1920. They also saw a need for expanded markets, if farmers were to receive a fair return for their crop. Acreage was expanding fast—Illinois had 16,000 acres in 1919, with Indiana having only several hundred. But by 1922, this total had doubled, and farmers were rushing to plant more. A.E. Staley Sr. started with his processing mill at Decatur. The following year, Eugene D. Funk Sr. set up the nation's second commercial processing plant at Bloomington, Illinois. Funk, a pioneer seed producer and an organizer of the American Soybean Assn., recognized that domestic processing operations would be necessary to move the fast-growing soybean crop—by then estimated at over a half-million acres.

“These early processors faced seemingly insurmountable odds. It was nearly impossible to obtain a steady supply of soybeans to maintain their plants. It was just as difficult to dispose of soybean oil meal and flour. No one would buy it in 1924, and few persons would accept it as a gift. It was even difficult to sell the domestically produced soybean oil, because buyers considered it grossly inferior to imported oils.

“The answer lay in extensive programs of education, and the early processors accepted this responsibility. Working closely with state universities and extension services, they helped develop bulletins to help farmers produce more soybeans. Marketing teams fanned out to ‘sell’ U.S. soybean oil and meal products.

“One of the most unique projects ever attempted was a special Soybean Exhibit Train, supplied by the Illinois Central Railroad. Soybean processors and USDA extension personnel equipped and staffed the train to tell the soybean story to the nation. In 21 days [during 1927], the six-car soybean train traveled 2,478 miles, to 105 towns across America. Nearly 34,000 persons toured its varied soybean

product exhibits.

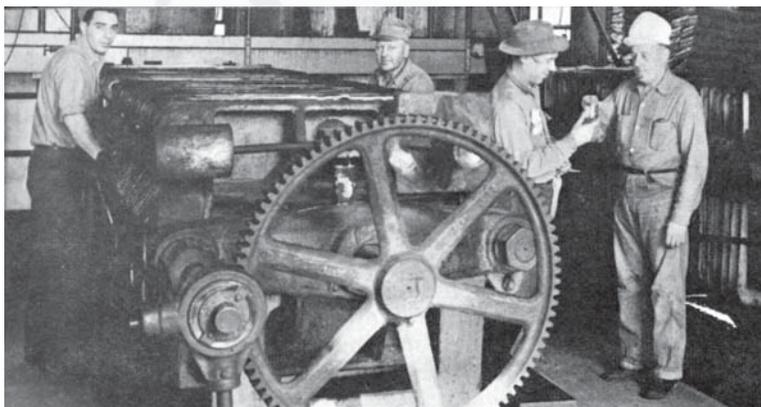

“Formation of NSPA: The soybean processing industry was expanding enough by 1930 to warrant a national association of processing firms. A committee was set up under the leadership of Whitney H. Eastman of Archer Daniels Midland Co. Eastman called an organizational meeting for May 21, 1930, at Chicago’s downtown City Club. Twelve processing firms were represented, including A.E. Staley Mfg. Co.; Archer Daniels Midland Co.; Allied Mills Inc.; Funk Bros. Seed Co.; and Spencer Kellogg & Sons.

“The meeting gave birth to the National Soybean Oil Manufacturers Assn., forerunner of today’s National Soybean Processors Assn. Eastman, now retired in suburban Minneapolis, recalls the original Association objectives: “To promote in the industry a mutual confidence and a high standard of business ethics; to eliminate trade abuses; to promote sound economic business customs and practices; to foster wholesome competition; to provide ultimately for individual efficient business management operating independently and thus generally to promote the service of the industry in the public welfare.”

“Other industry benefits came out of the formation of a processors’ association. Prior to this time, prices for soybeans were largely determined by demand and supply for soybean seed. Establishment of new markets for processed products and the rapid expansion of soybean acreage due to new demand changed this structure. During the early 1930’s, prices were based on demand for oil and meal, and generally improved as demand increased. At one point, the price per bushel increased from 60¢ to \$1.23.

“NSPA formed a variety of committees to service the burgeoning industry. There was a research and trade promotion group, a soybean grades and contract group, traffic and transportation group, as well as committees on statistics and industry liaison. These formed the nucleus of NSPA’s current slate of 13 specialized committees.

During NSPA’s first 25 years, U.S. soybean acreage jumped from 3,473,000 acres yielding 13,929,000 bushels—to 21 million acres yielding a crop of 457 million bushels. By 1956, soybeans were second only to corn in cash farm

income on the nation’s farms.

“It was during this first 25 years that most of today’s major soybean processors entered the business. Central Soya Co. shipped its first load of soybean oil on December 8, 1934, from its plant at Decatur, Indiana. Swift & Co. built its first expeller soybean mill at Champaign, Illinois, in 1937, followed by a second mill at Des Moines, Iowa in 1939. At about the same time, Quincy Soybean Co. was formed at Quincy, Illinois, Cargill Inc. entered the field in 1943 at Minneapolis [Minnesota], and other major processors followed quickly the industry’s challenge.”

Photos show: (1) The Elizabeth City Oil & Fertilizer Co. in North Carolina, generally believed to have been the first to process U.S. grown soybeans. A test run was made on 10,000 bushels in Dec. 1915. (2) The soybean crushing plant in the Funk Bros. Seed Co., Bloomington, Illinois, installed in 1924. (3) The Archer Daniels Midland Co. solvent extraction plant in Chicago, Illinois, in about 1946. (4) One group of the nearly 34,000 people visiting the “Soybean Special” train in 1927. Inside its six cars was the story of the soybean industry as it existed at that time. Address: National Soybean Processors Assn.

560. Archer Daniels Midland Co. 1970. Fiscal 1970 annual report. 4666 Faries Parkway, Decatur, Illinois 62525.

• **Summary:** Net earnings after taxes were \$8,737,355. Address: Decatur, Illinois.

561. Bure, Jean. 1970. La production de viandes végétales [The manufacture of meat alternatives {vegetable meats}]. *Economie Rurale (L’)* No. 85. p. 177-81. July/Sept. [Fre]

• **Summary:** Some cereal and animal proteins share a common past (e.g., the experience of Beccari in 1728, Liebig’s hydrolysates, etc.) However, most of the new synthetic meats appearing in the U.S. are derived, not from cereals, but from the soybean.

Huge milling groups have put on the market these new “vegetable meats.” These products were presented in France at the *Salon des Industries de l’Alimentation (S.I.A.L.)* in 1966 and 1968.

The making of “vegetable meats” consists in the production of protein fibres from a concentrated extract to which a structure similar to that of meat is given. This is done by spinning out and by shredding.

The makers are well aware that they cannot compete with meat, but they want to create new money-making products completing their ever-expanding range of convenience foods.

Note: Within this article is another article (p. 176-81) titled *Le Fabrication de Viandes Vegetales*, by M. Munier (*Ingénieur ENSIA à l’ARIA*) which has these contents: Historical (Boyer, how to make spun protein fibers). Importance of research

enterprises. Production of protein fibers: Extraction of pure proteins [soy protein isolates], formation of the fibers. Research on a structure analogous to that of meat. Other processes for the manufacture of vegetable meats: Shredding (U.S. Patent 3,047,395 of 1962), extrusion–expansion (British Patent 1,049,848), others (aside from Ford, the great captains of industry have likewise obtained patents: Swift, Unilever, General Foods, Nabisco, Worthington Foods, Ralston Purina, General Mills, Pillsbury Mills, etc.). Some new products: Bontrae, TVP, Textrasoy, Texgran, Edi Pro. Organoleptic and nutritional aspects: Organoleptic problems, nutritional problems. In conclusion, by J. Bure. FAO estimates the as follows the annual protein available to human beings: (1) Animal proteins, 30 million metric tons, of which about 10 million come from meat and poultry, about 4 million come from fish and other seafood, and about 2 million come from eggs. (2) Vegetable proteins, 150 million tons. of which about 110 million come from cereals, about 20 million come from oilseed cakes (including soya), and nearly 10 million come from legumes.

Therefore, there is 5 times as much vegetable protein available as animal protein. But animal protein is of higher quality. Address: Directeur du Département des industries céréales de l'École nationale supérieure des industries agricoles et alimentaires.

562. *Food Product Development*. 1970. Legal developments: Nutritional quality is basis for identity standard for proposed class of functional proteins. 4(5):12. Aug/Sept.

• **Summary:** “A new class of materials, *Tegretein* products, will be established if a recent proposal from Archer Daniels Midland and General Mills is enacted by FDA.” The biological quality (biological activity) of *tegretein* must be at least 70 per cent that of casein.

563. Winson, Abraham; Hampson, Ernest Jeffreys. Assignors to Arkady New Foods Ltd. (a Company of Arkady Soya Mills). 1970. Production of dairy products. *British Patent* 1,314,870. Application filed: 10 Oct. 1970. 3 p. Complete specification filed: 4 Oct. 1971. Complete specification published: 26 April 1973.

• **Summary:** “This invention relates to the production of dairy products such as milk and cheese from soya beans.”

Milk as conventionally produced by cows is in fact a very uneconomical process. It has been shown that a cow converts into milk only one eighth by weight of the foodstuffs ingested.”

The lactose in milk can also be a problem; it crystallizes when milk is condensed, especially upon aging.

“Example 1: 200 gms. of soya beans having 90% total dry solids were ground and added to 1800 mls. of water together with 60 gms. of maltose produced by enzymatic hydrolysis of starch and 1.5 gms. of calcium carbonate.

“The resulting mixture was heated at 55°C for about

1 hour. After cooling the mixture was passed through a sieve and centrifuge and the fibrous and insoluble material removed therefrom. (The fibrous and insoluble material was found to contain 31% protein, 20% fat, 10% fibres the balance being sugar and minerals and after drying yielded a valuable animal foodstuff.)

“The sieved mixture was then boiled to coagulate the protein and thereafter cooled to about 60°C at which temperature the mixture was homogenised in the presence of 1% by weight of glyceryl mono-stearate based on the weight of fat contained in the mixture.

“Between 10 and 30% of this homogenised mixture was combined with hydrogenated palm kernel oil, glyceryl monostearate and lecithin to form a cream and the cream thereafter added to the remainder of the homogenised mixture and re-homogenised.

“The re-homogenised mixture was cooled to ambient temperature and aged, the resulting product having a pH of 7.5 and resembling milk in taste, appearance and analysis.

“Example 2. To 300 lb. water at 50°C containing 0.34 lb. sodium carbonate was added 45 lb. enzyme active, full fat soya flour. The mixture was stirred vigorously for 1 hour. After this the insoluble material [okara] was removed by centrifugation. The resulting liquor was boiled and thereafter cooled to approximately 70°C. 12 lb. of a high maltose containing corn syrup was added and sodium carbonate was added to achieve a pH of 7.5.

6½ lb. hydrogenated palm kernel oil were melted together with 1 oz. glyceryl monostearate and 1 oz. lecithin, and a cream formed with approximately twice the volume of hot liquor.

The cream was recombined with the majority of the liquor and the whole homogenised and cooled. 290 lb. milk was obtained with the appearance and proximate analysis of cow's milk.

“The invention is not restricted to the above described specific examples many variations thereof being possible without departing from the scope thereof.” Address: Old Trafford, Manchester, England.

564. Archer Daniels Midland Co. 1970. You think maybe people won't like your pizza if it looks and tastes better and costs less? (Ad). *Soybean Digest*. Nov. p. 26-27.

• **Summary:** An ad for TVP brand Textured Vegetable Protein. Address: Box 1470, Decatur, Illinois 62525.

565. Dimler, R.J. 1970. Soy food opportunities through research. *Soybean Digest*. Nov. p. 17-23. [13 ref]

• **Summary:** Contents: Introduction. Research on edible oil. The use of plant proteins for food. Comparative cost of food proteins. Alternative plant protein sources. Food uses of soy protein (soy flour or grits, concentrates, and isolates). Full-fat soy flour. Cereal-soy combinations (e.g., CSM, which “is intended primarily to be a food supplement for children”).

The market in Oriental foods [tofu, miso, soy sauce].  
Conclusion.

Photos show: (1) A small portrait photo shows R.J. Dimler. (2) Foods containing full-fat soy flour: soy milk, chapatis, soy cookies, and CSM. (3) Meatloaf, without and with soy protein. (4) Peruvian children sitting in the rubble of the earthquake on 31 May 1970 that killed 66,000 people. "Fifty tons of high-protein food (TVP) were recently shipped by CROP, the community hunger appeal of Church World Service to earthquake victims."

Tables show: (1) Flavor score improvement of soybean oil with new copper catalyst (plus linolenic acid content). (2) Comparison of flavor scores of copper-reduced (+ no linolenic acid) soybean oil with cottonseed oil. (3) Efficiency of land use. Soybeans (yield: 24 bushels/acre) can produce 500 lb of protein per acre, compared with 320 lb for corn, 180 lb for wheat, 100 lb for milk, and 60 lb for beef. (4) Comparative prices of edible protein products: Beef costs \$2.55 per pound of protein, whole milk solids \$1.00, isolated soy protein \$0.40, and 50% soy flour \$0.14. (5) Costs and production estimates of soy proteins: Flours and grits, 40-50% protein, costs 6.5 to 7¢ per pound, 105-110 million lb produced in 1967. Concentrates, 70% protein, costs 18¢ per

pound, 17-30 million lb produced in 1967. Isolates, 90-95% protein, costs 35-39¢ per pound, 22-35 million lb produced in 1967. (6) Food uses of soy protein: Whipping agents in confections and dessert mixes, infant foods, breakfast foods, bakery products, beverages, meat products, simulated meats, flavoring agents, dietary foods. (7) World protein deficit, 1970. Fish protein concentrate: 3.0 million tons = 240 million bushels of soybeans. Dry beans and peas: 6.7 million tons = 160 million bushels of soybeans.

Pie charts show: (1) Disposition of U.S. soybean oil (1969, forecast): Shortening 30%, margarine 19%, cooking and salad oil (29%), exports (16%), nonfood use (6%). Total: 7.7 billion lb.

(2) Disposition of U.S. soybean meal (1968-68): Domestic feed use (76%), exports (21%), nonfeed use (3%). Total: 14.3 million tons. Address: Director, Northern Regional Research Lab., Peoria, Illinois.

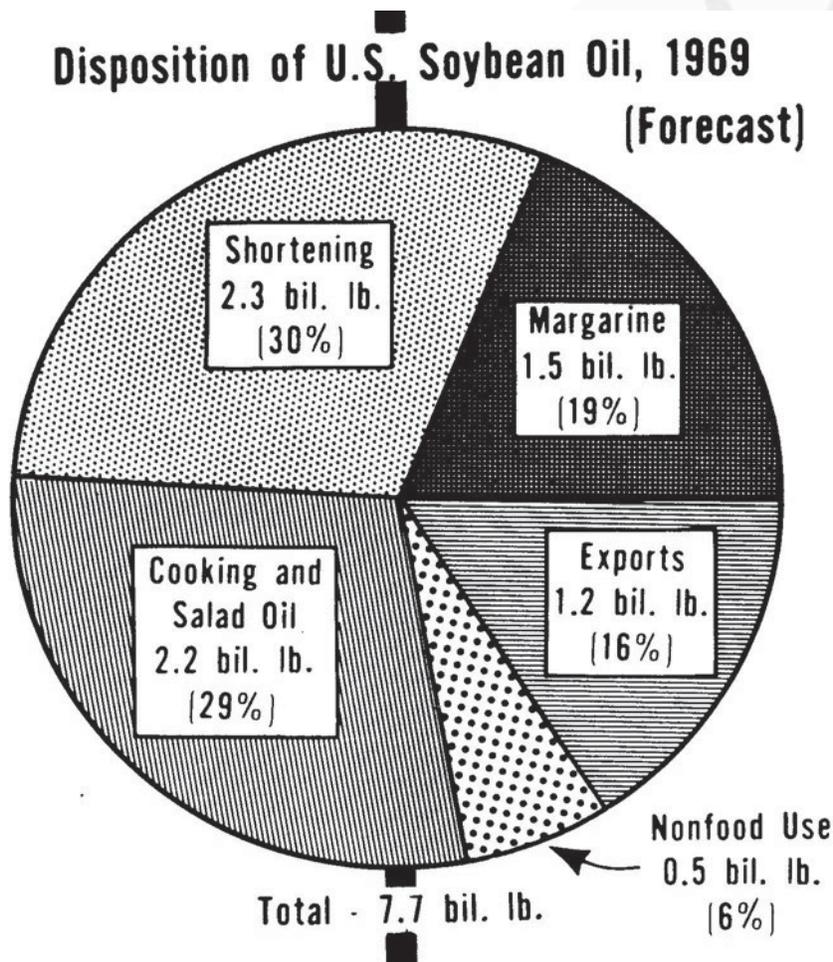

566. *Food Processing (Chicago)*. 1970. Protein adds nutritional 'punch' to snacks. Autumn. p. F6-F7. Foods of Tomorrow section.

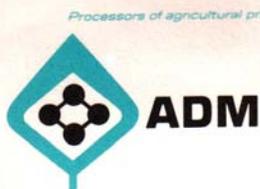

• **Summary:** The section titled "Soy protein" notes: TVP Smoky Chiplet is a high-protein snack made by Archer Daniels Midland Co. (Decatur, Illinois). Soy specialties as ingredients for high protein snack foods are available from Cargill Inc. (Minneapolis, Minnesota). For soy protein isolate ingredients contact Ralston Purina Co. (St. Louis, Missouri). For soy flour information contact A.E. Staley Mfg. Co. (Decatur, Illinois). Three brochures about soy protein, soybean oil, and soybean processing are available from the National Soybean Processors Assoc. (1225 Connecticut Ave., N.W., Washington, DC). "Soy protein concentrate for snack formulation is available from Swift Chemical Co." (Oak Brook, Illinois).

567. *Food Processing (Chicago)*. 1970. "Textured protein products" replaces "Tegretein..." 31(11):91. Nov.

• **Summary:** "... as a generic designation for vegetable protein foods in the food standard proposal submitted by Archer-Daniels-Midland and General Mills." Better consumer understanding of the term was given as the reason for the proposed change.

568. Edwards, Charles C. 1970. Textured protein products: Proposed

ARCHER DANIELS MIDLAND COMPANY DECATUR, ILLINOIS 62525 TELEPHONE 217/423-2571

standard of identity. *Federal Register* 35(236):18530-31. Dec. 5. 21 CFR Part 15. [2 ref]

• **Summary:** This section begins: "Notice is given that a petition has been filed jointly by Archer Daniels Midland Co., Post Office Box 1470, Decatur, Illinois, 62525, and General Mills, Inc., 9200 Wayzata Boulevard, Minneapolis, Minnesota, 5540, proposing the establishment of a definition and standard of identity for a class of foods to be known as 'textured protein products,' prepared from vegetable protein and other ingredients. If such identity standard is established, the Commissioner of Food and Drugs proposes that it be added to Part 15—Cereal Flours and Related Products under a new Subpart D—Textured Protein Products.

"In the Federal Register of October 13, 1967 (32 F.R. 14237), a notice of proposed rule making was published based on a petition for 'bontrae' filed by General Mills, Inc., and a petition for 'textured vegetable protein' filed by Archer Daniels Midland Co., both for vegetable protein type products."

"4. The petition initially proposed 'tegretein products' as the class name for the subject foods. Additional research by the petitioners, however, resulted in their concluding such name would be meaningless to consumers without a considerable explanation. The petitioners changed their petition to apply the name 'textured protein products.'" Address: Commissioner of Foods and Drugs, FDA, Washington, DC.

569. Hamdy, M.M. 1970. Re: Enclosing a packet of information about TVP. Letter to Dr. Walter J. Wolf at USDA, Peoria, Illinois, Dec. 10. 1 p. Typed, with signature on letterhead.

• **Summary:** See next page. Enclosed is a packet of about 25 individual glossy sheets. Those with price quotations (dated Sept. 1, 1970) and general information have the orange-gold heading "TVP: A fabulous new food." Those with bulk recipes have: "Try this tasty TVP recipe." Address: Ph.D., Manager Food Technology Section, Research Dep., ADM, Decatur, Illinois.

570. Schwarz, Richard W. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. Illust. Index. 22 cm. See p. 44, 120-23, 243. Also

published in 1970 by Andrews Univ. Press (Berrien Springs, Michigan).

• **Summary:** This excellent biography of Dr. J.H. Kellogg was originally written as a 1964 PhD thesis at the University of Michigan. Although it contains no references or footnotes, and thus lacks the documentation and completeness of the dissertation, it is still (March 2009) the best biography of Dr. Kellogg. The author is a Seventh-day Adventist.

Contents: Preface. 1. The boy foreshadows the man. 2. A convert (the early health reform and vegetarian movements in America). 3. From teacher to doctor. 4. A man is what he eats. 5. Changing American habits. 6. Developing the Battle Creek Sanitarium. 7. Sanitarium ups and downs. 8. A torrent of words. 9. Variations on a boyhood dream. 10. The unwilling surgeon. 11. Products of an active mind. 12. All work, but little play. 13. What manner of man. 14. Father of forty-two children (and Ella Eaton Kellogg, his wife). 15. His brother's keeper. 16. The ties of fifty years are broken. 17. Food manufacturing and family quarrels. 18. New outlets for promoting an old program. 19. The last battles. 20. An epilogue.

Concerning meat substitutes [meat alternatives] (p. 121-23): "During the years in which he directed the experiments which led to the production of flaked cereals, Bromose, and Malted Nuts, Dr. Kellogg also attempted to develop a substitute for meat from plant sources. He traced his interest in such a product to conversations with Dr. Charles W. Dabney, noted agricultural chemist and former president of the University of Tennessee. When Dabney was serving as President Cleveland's Assistant Secretary of Agriculture [probably about 1893-1897], he had discussed with Kellogg the problem of supplying adequate protein for the world's rapidly expanding population. The men agreed that it was better economics to use grain for human food than to feed it to animals and then use them for food. The problem, as Dabney saw it, was to produce a grain product which would have all the nutritional value and taste appeal of meat.

"In 1896 Kellogg announced that he had perfected the ideal substitute for meat in Nuttose, a nut product which he could prepare to taste much like beef or chicken... The doctor's interest in new vegetarian meatlike protein foods continued active until shortly before his death. Among some of the more popular creations later developed in his

# TVP

A fabulous new food

ARCHER DANIELS MIDLAND COMPANY  
BOX 1470 DECATUR, ILLINOIS 62525

Packaged in corrugated cartons of 50 lbs. net weight with polyethylene liner.

laboratories were Protose, Battle Creek Steaks, and Battle Creek Skallops. Various combinations of nuts and wheat gluten composed the principal ingredients in the imitation meats...

“Kellogg’s last major food discovery was an artificial milk made principally from soybeans. He was particularly enthusiastic over soy milk because it proved an excellent host for the *acidophilus* bacteria which the doctor believed needed to be implanted in the intestinal tract in order for it to function perfectly. Shortly after Kellogg had developed soy acidophilus milk, he chanced to read that Marie, smallest of the Dionne quintuplets, was suffering from bowel trouble. Immediately wiring the quints’ physician, Dr. A.R. Dafoe, he announced he was sending him a supply of soy acidophilus milk, which he was certain would cure Marie’s problem. About ten days later he received a letter from Dafoe which indicated that the soy acidophilus milk had indeed corrected the situation and asked that a continuous supply be sent to Callander, Ontario [Canada], for the five little girls.”

In summarizing Dr. Kellogg’s major accomplishments, the author notes (p. 243): “His introduction of peanut butter added another widely accepted item to the American diet, and it probably did more to provide a market for peanuts than did the efforts of any other person, with the possible exception of George Washington Carver. John Harvey’s development of meatlike products from nuts and legumes combined with wheat gluten has not only helped to enrich the dietary of thousands of persons who for ethical, health, or religious reasons choose to be vegetarians, but such high-protein foods also hold possibilities for supplementing the diet in countries where the supply of meat is insufficient to provide enough protein for a rapidly expanding population.”

Concerning Granola: In the early 1860s, Dr. James Caleb Jackson of Dansville, New York, developed Granula, America’s first successful cold breakfast cereal, made solely from wheat. For 40 years, Dr. Jackson operated “Our Home on the Hillside,” probably the most successful of the “water-cure” institutions that blossomed in the 1850s. “In an atmosphere approaching that of a European spa, Jackson provided hydropathic treatments and a special diet for as many as a thousand patients a year.” In about the 1870s, at the Battle Creek Sanitarium, John Harvey Kellogg developed a similar product, which he named Granola. It differed from Jackson’s Granula in that it consisted of several grains, and longer baking dextrinized the starch more thoroughly. “At first he apparently had no thought of selling it. He intended it solely for sanitarium patients. Gradually, however, as former patients and others interested in dietetic improvement sent to the sanitarium for Granola, a small commercial business developed, and Battle Creek thus took its first step toward becoming the ‘Breakfast Food Capital of the World.’... Shortly after the production of Granola for patients at the sanitarium began in 1877, Dr. Kellogg organized the Sanitarium Food Company as a subsidiary of the Battle

Creek Sanitarium. Operated as an adjunct to the sanitarium bakery, for more than a decade it marketed a variety of oatmeal, graham, and fruit crackers and whole-grain cooked cereals—all originally devised to provide variety in the menu of sanitarium patients.” All products were made from whole grains without artificial additives, and all underwent prolonged high-temperature baking designed to dextrinize their starch. “By 1889 the Sanitarium Foods had become popular enough to warrant the establishment of a separate factory; Granola alone sold at the rate of two tons a week.” But when Dr. Kellogg wanted to expand the business, other sanitarium doctors refused to vote the funds. So Dr. Kellogg launched the private Sanitas Food Company, relying heavily on his younger brother, Will Keith, who had served as his personal accountant and business manager since 1880. John Harvey’s new flaked cereals and vegetable meats became the property of the Sanitas Company. In mid-1906 Dr. Kellogg decided to change Sanitas’ corporate name to the Kellogg Food Company. Then: “In the spring of 1921, to avoid further difficulties with Will Kellogg’s manufacturing business [Battle Creek Toasted Corn Flake Company], Dr. Kellogg changed his concern’s name to the Battle Creek Food Company.”

Concerning flaked breakfast cereals: The first ones were developed from wheat jointly by Dr. J.H. Kellogg and his brother Will, in about 1894. Dr. Kellogg named their first successful wheat flakes product Granose Flakes, and on 31 May 1894 he applied for a U.S. patent on “Flaked cereal and process for preparing same.” But in 1903 courts declared the doctor’s patent invalid. Will Kellogg developed the product into a great commercial success, in part by adding sugar to the malt and corn combination from which he made the flakes. “The sugar greatly enhanced the cereal’s taste appeal, and, as a result, the Corn Flakes business was booming by late 1905.” Will convinced his brother, John Harvey, to relinquish Sanitas’ rights to Corn Flakes, and in early 1906 Will established a separate Battle Creek Toasted Corn Flake Company with outside financing. John Harvey agreed not to take an active part in the new company’s management. Six months later John Harvey decided to change Sanitas’ corporate name to the Kellogg Food Company. The new company “began operating in July 1908, with Dr. Kellogg owning all but two of its fifteen thousand shares of stock. Not only did the new company absorb the old Sanitas Company, but it also leased the entire plant, machinery, goodwill, and business of the Battle Creek Sanitarium Food Company, thus bringing the manufacture and distribution of all the food products with which Dr. Kellogg was associated into one organization. By then John Harvey had decided that it would be a good thing to put out all company products under the trade name ‘Kellogg’s.’”

Will became very upset when Dr. Kellogg attached the family name to his new food company and products. Eventually a series of legal battles developed between the

two brothers over this and other products. Will Keith Kellogg is discussed on pages 64, 118-20, 122, 144, 148, 192, 210-18, 224, 237-38.

On pages 193-208 are 16 pages of excellent black-and-white photos from the life of Dr. Kellogg, starting with a portrait of him and his wife in 1884.

Reprinted in 2006 by Review and Herald Publishing Association (Hagerstown, Maryland)—but with the new subtitle: “Pioneering health reformer.” Adventist pioneer series. On the new cover, on a snipe in the upper right corner: “Father of the health food industry.” Address: Andrews Univ., Berrien Springs, Michigan.

571. Trager, James. 1970. The enriched, fortified, concentrated, country-fresh, lip-smacking, finger-licking, international, unexpurgated foodbook. New York, NY: Grossman Publishers. xv + 579 p. Illust. Index. 24 cm. [350+\* ref]

• **Summary:** This hefty volume is packed with information about a multitude of interesting, little known, or bizarre subjects related to food. It is divided into 11 major chapters, each of which contains many mini-chapters, often with witty or enticing (but often un-descriptive) titles such as “mushrooms take savvy” or “Farmer Jefferson.” The extensive index is very useful, containing entries for such things as Accent/MSG (p. 445-48), prehistoric agriculture and food (p. 3-11), meat analogs and Bac\*Os (p. 450-51, 457, 501), Archer Daniels Midland (p. 450), bean curd (p. 333, 362), Battle Creek Sanitarium (p. 460), Kellogg (p. 384, 460-61), miso soup (p. 362), soybeans (p. 21, 262, 382, 450-51, 518), soy protein (p. 450), vegetarianism and vegetarians (p. 3, 324, 343, 457-59).

In Chapter 10, titled “Nuts in the Fruitcake” (p. 455-86), the author takes the opportunity to make fun of anything he discusses related to health/natural foods or vegetarianism. To him, it all smacks of food faddism and extremists. There are sections about vegetarians past and present (“there are no convincing nutritional justifications for vegetarianism”), Sylvester Graham (“One of America’s first home-grown food faddists”), Horace Fletcher, Dr. William Howard Hay and acidosis, Gayelord Hauser (“Perhaps the most prominent diet and health mythologist in recent years”), organic foods baloney (“DDT has not yet been shown to have harmful effects for humans”), Carlton Fredericks and Adolphus Hohensee, Tiger’s Milk, aphrodisiac foods, and food and astrology. Address: New York.

572. **Product Name:** Ranch House Vegetable Mince, Bolognese, Curry, Stew, Goulash.

**Manufacturer’s Name:** Direct Foods Ltd.

**Manufacturer’s Address:** Petersfield, Hampshire, GU32 3EW, England.

**Date of Introduction:** 1970?

**Ingredients:** Macaroni Mix: Wholemeal macaroni, textured

soya protein, dehydrated onions, green bell peppers, peas, mushrooms, vegetable oil, sea salt, corn flour, raw sugar, yeast extract, spices, herbs.

**Wt/Vol., Packaging, Price:** Macaroni: 141 gm plastic bags for ½ pound.

**How Stored:** Shelf stable.

**New Product–Documentation:** Brochure (4-panel color) from Direct Foods Ltd. 1970? “Protoveg Meat Substitute and Ranch House Convenience Meals.” “Reduce your meat bill using Direct Foods.” The company address is now Petersfield, Hants. GU32 3EW. Phone: Petersfield 4911/2. Contents: What is Protoveg? How is it used? How is it made? How is it sold? Is it as good for you as meat? Typical analyses.

Export price list from Direct Foods Ltd. 1974. Oct. 1. Ranch House Meals (each 112 gm) include Vegetable Mince, Vegetable Bolognese, Vegetable Goulash, Vegetable Stew, Vegetable Curry. There is also a catering pack consisting of 50 lb of any flavour. Sosmix—meatless sausage mixture (13 oz). is also listed. The company address is now Bedford Road, Petersfield, Hants.

Trade catalog and price list from Direct Foods Ltd. 1977. April 25. The product line is the same as in 1974 except for the addition of: 10 lb sizes for each flavor, and Sizzleberg.

Food Report (Lehmann). 1982. Jan.

Talk with Peter Roberts. 1990. Dec. 12. In about 1970, Direct Foods Ltd. introduced a line of about 20 vegetarian protein products, all replacements for meat and all sold under the Ranch House brand.

573. **Product Name:** Sosmix.

**Manufacturer’s Name:** Direct Foods Ltd.

**Manufacturer’s Address:** Petersfield, Hampshire, England.

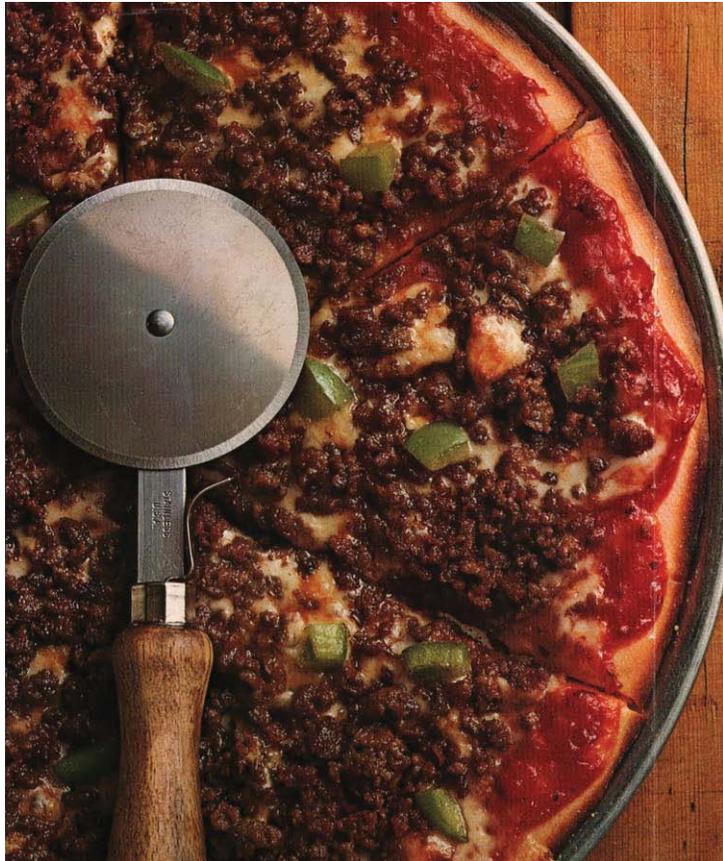

**Date of Introduction:** 1970?

**Ingredients:** Macaroni Mix: Wholemeal macaroni, textured soya protein, dehydrated onions, green bell peppers, peas, mushrooms, vegetable oil, sea salt, corn flour, raw sugar, yeast extract, spices, herbs.

**Wt/Vol., Packaging, Price:** Macaroni: 141 gm plastic bags for ½ pound.

**How Stored:** Shelf stable.

**New Product–Documentation:** Food Report (Lehmann). 1982. Jan. Talk with Peter Roberts. 1990. Dec. 12. In the early 1970s British Arkady was making a product named Banger Mix (a “banger” is a sausage), made with soya protein and pig fat. Peter asked them to replace the pig fat with a hardened vegetable oil. The Roberts named the resulting product Sosmix. Introduced in about 1970, it was a dry sausage mix and soon became Direct Foods’ best-seller. To prepare the product, you mix the dry product with water, let it hydrate for about 2 minutes, roll it into sausage shapes (or croquette shapes), then fry it. Or you can put it around an egg to make a Scotch egg.

**You think maybe  
people won't like  
your pizza  
if it looks and  
tastes better  
and costs less?**

So why not add TVP textured vegetable protein? This fabulous new high protein food can be textured and flavored to complement sausage or pepperoni . . . or pork or beef, for that matter.

Adding TVP is like adding more meat—better, in fact, because of its absorbent qualities. And hydrated, it costs about one-fourth the price of meat.

TVP is ideal for pizza, and for casseroles, sauces, sloppy joes, tamales, patties, — any product that contains ground beef or pork. And ADM makes the widest range of seasonings, flavorings, colors, particle sizes and specialties of any source.

It saves you money, and improves the taste, appearance, texture and nutrition of your product . . . whether fresh, frozen or canned. In fact, TVP retains its texture even after reheating.

Check into TVP. Call 217-423-2571, or drop us a line at Archer Daniels Midland Company, Box 1470, Decatur, Illinois 62525.

**TVP**  
Textured Vegetable Protein

As Peter Roberts tells the story: Once the labeling division of the county public analyst's department threatened a lawsuit if Direct Foods did not change the product's name. They felt that the name implied that the product name was a "phonetic crib on the word sausage, which suggests that the product is a sausage with a meat content, and as such should come under the sausage regulations." Peter Roberts politely explained that "the term Sosmix had an entirely different origin. Down in the West Country around Devon and Cornwall there is an old country tradition of 'sosing,' which means to swill a food around in the frying pan as its frying. The authorities took on a glazed look in their eyes and went away. They didn't bother us after that."

Letter from Peter Roberts. 1991. Oct. 15. Sosmix was not part of the Ranch House line. It stood on its own.

574. Fiedler, R.E. 1971. Economics of the soybean industry. *J. of the American Oil Chemists' Society* 48(1):43-46. Jan.

• **Summary:** A long and very interesting article. Contents: Abstract. History. Growth rate of the crop. Meal. Oil. Marketing of soybeans. Potential problems for soybeans.

Tables: (1) Soybeans: U.S. supply and distribution, 1924-1968. The 5 columns are: (a) Crop year beginning Sept. 1. (b) Acreage harvested for beans (1,000 acres). (c) Production (1,000 bu). (d) Crush (1,000 bu). (e) Exports (1,000 bu). In all areas, the growth has been amazing.

(2) Comparison of major U.S. crops: acreage and dollar value in 1952, 1960 and 1969. The crops are corn, cotton, wheat, tobacco, oats, soybeans, barley, grain sorghum. In 1969 corn is no. 1 in dollar value by far; soybeans are no. 2.

(3) Protein consumption by U.S. domestic feed industry in thousand of tons, 1952-1968. The columns are: soybean meal, cottonseed meal, fish meal, gluten feed & meal, tankage and meat scraps, Urea (soybean meal equivalent). Others. Total.

(4) Per capital consumption of fats and oils by country. The 3 columns are country name, pounds per year, and percentage vegetable oil.

(5) Food fats and oils: Domestic U.S. consumption in million of pounds, 1959-1958. The columns are: soybean oil, butter, lard, cottonseed oil, others, total, soybean oil as a percentage of the total. Address: Archer Daniels Midland Co., 4666 Faries Parkway, Decatur, Illinois 62526.

575. Archer Daniels Midland Co. 1971. You think maybe people won't like your pizza if it looks and tastes better and costs less? [TVP] (Ad). *Food Processing (Chicago)*. Winter. p. F18-F19. Foods of Tomorrow section.

• **Summary:** See above. On the left half of this gorgeous 2-page color ad is a large round tray of baked pizza, cut into pieces, on a natural wood background, with the round cutter atop the pizza. The text begins: So why not add TVP

textured vegetable protein? This fabulous new high protein food can be textured and flavored to complement sausage or pepperoni... or pork or beef, for that matter.

“Adding TVP is like adding more meat—better, in fact, because of its absorbent qualities. And hydrated, it costs about one-fourth the price of meat.

“TVP is ideal for pizza, and for casseroles, sauces, sloppy joes, tamales, patties—any product that contains ground beef or pork. And ADM makes the widest range of seasonings, flavorings, colors, particle sizes and densities of any source.”

“TVP (trademark) Textured Vegetable Protein.” Address: Box 1470, Decatur Illinois, 62525. Phone: (217) 423-2571.

576. Horan, F.E.; Odell, A.D.; Forman, M.J. 1971. Textured vegetable proteins. *PAG Bulletin (Protein Advisory Group, WHO / FAO / UNICEF)* 2(1):22-26. Winter. No. 13.

• **Summary:** This paper was compiled from background documents presented by the authors at the 18th PAG [Protein Advisory Group] meeting held on 9-12 Feb. 1971 at Rome, Italy. Contents: Introduction. Spun monofilament products. Extrusion-expansion products (currently marketed at about \$0.45/lb). General considerations. Case studies: Thailand (ADM’s TVP), Brazil (Swift & Co.’s textured meat analogs), India (Swift & Co., ditto). Textured vegetable protein products: Fibroprotein—Spun Protein Fibers (Worthington Foods Div., Ohio), Textured Edi-Pro (Ralston Purina Co., Missouri), Texgran (Swift & Co., Illinois), Bontrae (General Mills, Minnesota; spun vegetable protein products), Carne Vegetal (Industria e Comercio de Productos Alimenticios Vegetal Ltd., Brazil). LiveLong—VP (Nisshin Flour Milling Co. Ltd., Japan; a wheat gluten extract in the form of a dried or frozen mincemeat-like product. “It seems to be made by a filament extrusion process using isolated wheat gluten protein”). The Farmarco Co. (Far-Mar Co., Kansas), The Fuji Oil Co. (Japan; thermoplastic extrusion), and Shefa Protein Foods Ltd. (Israel) each manufactures texturized soy food products by thermoplastic extrusion.

Introduction: “The chief virtue of the individual members of this new class of foods rests in their ability to supply precisely reproducible balanced dietary inputs of essential amino acids with greatly enhanced agronomic efficiency and with high consumer acceptance... At the moment two broad classes of meat analogues are apparent. The extrusion—expansion products sell for US 10-15¢ per pound; the spun monofilament products sell at present in the USA for 20-25% less than meats, but are still too expensive to be of interest for developing countries.”

“General considerations: Meat analogs do not appear to have a negative connotation to vegetarians; there are many examples of eager acceptance of meat analogs by such groups. The textured protein approach is also a stride forward in food efficiency, since conversion of soy to animal protein averages about 7% efficiency.”

“Over the past few years US/AID has entered into contracts with twelve different U.S. commercial companies to investigate and evaluate low-cost proprietary protein products in some ten developing countries.”

Note: This is the earliest English-language document seen (Dec. 2004) that uses the word “Fibroprotein” to refer to edible spun soy protein fiber. Address: 1. ADM, Decatur, Illinois; 2. General Mills, Minneapolis, Minnesota.

577. Anderson, Earl V. 1971. The new priorities. Food: Preventing hunger and malnutrition. *Chemical and Engineering News* 49(10):19-22. March.

• **Summary:** This special report looks at new opportunities for chemists and chemical engineers in three areas: food, shelter, and health. Technology can help in solving the problems of world hunger and malnutrition. FAO “estimates that 2 billion people are hungry or undernourished, including several million Americans.” USDA’s Aaron M. Altschul believes that food technology, properly directed, can help solve these problems. In addition to the Green Revolution, there has been “the other Silent Revolution of this century,”... the explosive growth in our knowledge of foods and nutrition, and in the ability to engineer foods.

The emphasis has been on protein foods “because protein deficiency is the most universal nutritional problem... Of the 82 million tons consumed in the world, only 25 tons [31%] come from animal sources.” Most of the animal protein is consumed by the 1 billion people in developed countries.

Protein deficiencies can be overcome by fortifying grains or natural protein concentrates—as from soybeans—with amino acids such as lysine. Or we can use new techniques for converting “inexpensive vegetable proteins into textured foods that look and taste much like the more expensive animal foods. Products have been made from vegetable protein that closely resemble beef, chicken, seafood, ham, and bacon. They cost less than the real thing yet they are nutritious and attractive. Such products from textured soy already are being widely marketed in the U.S., western Europe, and Japan. In time they may become new protein sources in the less-developed countries.

“In fact, AID now is sponsoring studies of textured products in less developed countries. Archer-Daniels-Midland is conducting one in Thailand and General Mills in Pakistan.”

But what should we call these new products? You can’t call it meat because it isn’t. “You can call it soybeans because nobody would buy it. These products have been called animal protein food analogs... But that’s not a marketable name either. The name that industry and the Government seem to be settling on is textured protein products (TPP).” The FDA has proposed a standard for TPP.

“Vitasoy, a soybean soft drink that has been sold in Hong Kong for 25 years, has captured 25% of the soft

drink market there.” Based on that success, “Monsanto is marketing a soy protein beverage called Puma through a franchiser in Guyana. It is now the second most popular soft drink in the country (Coke is first). Coca Cola, meanwhile, is marketing a fruit-flavored beverage, Samson, in Dutch Guiana (Surinam).

“So far, soybeans are the major source of vegetable proteins used in food fortification and TPP products.”

Also discusses: Cottonseed protein, proteins from peanuts, sunflower, and safflower seeds, fish protein concentrate (FPC), and single-cell protein from petroleum, computer controlled food processing lines, etc.

Photos show: (1) “Liquid protein fed into this spinning machine emerges as bands of tiny food fibers.” The machine is tended by a man in a white hard hat. (2) A black boy drinking Puma in Guyana. (3) “British Petroleum’s protein-from-petroleum plant at Grangemouth, Scotland.” It produces 4,000 tons/year of animal-grade protein by fermentation of *Candida* yeasts on a petroleum substrate. Address: Senior Editor, New York City.

578. Martin, Roy E. 1971. Edible soy proteins: Challenge and opportunity. *Soybean Digest Blue Book Issue*. p. 26-30, 32-33. March. [6 ref]

• **Summary:** Contents: Introduction (“A new frontier is being forged in food technology with the development of soy protein for human consumption”). The proteins defined (Soy flour, flakes, and grits). Types of soy flour (Full-fat, low-fat, defatted). Soy proteins. The concentrates. The isolates. The spun proteins. Textured proteins. Soy milk. Soy beverages. Blended foods (USDA CSM, WSB). Special products for overseas (Puma, Sobee {“A U.S. full-fat soy flour product nutritionally adequate to support infant growth, introduced in Taiwan”}, Cerealina, Pro-Nutro, Saridele, Saci, Nutresco, Nestle’s soy-corn flour marketed in Brazil). How large is the market? Further reading.

Soy milk: “Soy milk has been used for centuries in the Orient for infant feeding [sic] and other purposes... the process has been refined and its application greatly extended in the Far East by Dr. H.W. Miller and others. K.S. Lo [of Vitasoy, Hong Kong] has been bottling soy milk as a nutritious low-cost soft drink and selling many millions of bottles yearly.” In 1959 the World Health Organization built a \$1 million soy milk plant in Indonesia [to make spray-dried Saridele]. In the Western world soy protein [isolate] is used in soy-based infant formulas. “It is also used by adults with allergies, diabetes, or who for other reasons prefer” a non-dairy milk.

Tables show: (1) New Protein Food Program of the Agency for International Development (an independent federal agency). Five columns show: Country. U.S. company. Date of product [launch]. Product description & contract [no product names are given]. Raw materials. Of the 11 products in 7 countries, eight contain soya. They are: Brazil, Krause

Milling Co., March 1967. Brazil, Monsanto, June 1967. Brazil, Swift, April 1967 (two products). Kenya, Del Monte, June 1968. Pakistan, General Mills, June 1968. Thailand, ADM, Aug. 1968. India, Swift, July 1968.

(2) Protein cost per pound of various foods:

Beef (retail) \$4.44.

Chicken (dressed) \$1.50.

Wheat flour \$0.60.

Bulgar wheat [bulgur] \$0.47.

Peanut meal (defatted) \$0.43.

Dry skim milk [nonfat dry milk] \$0.40.

Wheat (whole) \$0.30.

Cottonseed flour \$0.17.

Fish meal (food) \$0.14.

Soy flour (food) \$0.11 (from Bean 1966).

(3) Efficiency of land use for protein production. Three columns give the name of the crop or animal, average yield per acre, and pounds of protein per acre.

Soya bean, 24.2 bu, 508 lb.

Other legumes, 20.7 bu, 293 lb.

Maize, 64.2 bu, 323 lb.

Wheat, 25.1 bu, 180 lb.

Milk, 2,780.0 lb, 97 lb.

Beef, 342.0 lb, 58 lb.

Note: No earlier source of this table can be found; it is not in Bean (1966).

Photos show: (1) Sukiyaki made with textured vegetable protein. (2) A stable whip of soy protein being ejected from the spout of a pressurized can onto the top of a parfait dessert. (3) Defatted soy flakes, which are the raw material for defatted soy flour, special soy protein, soy protein concentrate, isolated soy protein. Address: General Manager, Vegetable Protein Products, Swift Chemical Co.

579. Perdue, Elmer J.; McVey, Daniel H. 1971. Growth of cottonseed and soybean processing cooperatives. *USDA Farmer Cooperative Service, FCS Information No. 75*. 82 p. July. [9 ref]

• **Summary:** Soybean cooperatives’ percentage of the total U.S. soybean crush rose from 3.8% in 1949 to 15.2% in 1968. In 1968-69 roughly 15% of the soybeans grown in America were marketed through cooperative oil mills. Returns to patrons [farmers] of cooperative soybean mills during these 21 crushing seasons amounted to \$51 million, or 7.5 cents per bushel.

“Cooperative soybean and cottonseed mills have held joint annual conferences since 1955. An outstanding accomplishment of these conferences was the organization in 1962 of Soy-Cot Sales, Inc., Des Plaines, Illinois. This coordinated joint sales agency markets products manufactured by 22 member mills.” Cooperative mills are expected to move toward production of soybean flour and cottonseed flour for use in human food.

Cooperative activity with soybeans began when soybean

producers (farmers) in western Kentucky and eastern Indiana formed the Ohio Valley Soybean Cooperative and built the first cooperative soybean plant at Henderson, Kentucky, in 1940-41. "This was an effort to increase bean prices, to encourage production by offering another market, and to have a source of high protein feed for livestock. During and immediately following World War II, it became almost impossible for soybean producers to obtain soybean meal either as meal or in the form of mixed feeds. To alleviate this situation, they built cooperative mills..."

"Between 1940 and 1949, soybean producers constructed 21 soybean mills—19 of them from 1940 to 1945. These plants were in Pennsylvania, Ohio, Indiana, Illinois, Iowa, Wisconsin, Kansas, and Missouri. During the period 1950 to 1970, eight cooperatives constructed or acquired 10 mills. These were in Minnesota, Missouri, Arkansas, and Georgia in areas where bean production has been increasing rapidly.

"Thus between 1940 and 1970, 29 cooperatives built or acquired 31 processing plants. In 1970, 13 of these cooperatives were still in operation with 15 crushing plants... All the early plants were small and were built for the primary purpose of serving as a source of high protein feed. Most of them had a capacity of only 10 to 50 tons a day.

"By the early 1950's, larger plants had been constructed and protein was more readily available through commercial channels. As the situation became more competitive, the small plants (many of them poorly located) found they could not produce and sell meal at competitive prices without operating at a loss. By the mid-1950's many of them had closed and by 1960 most had ceased operation.

"Only three screw press plants were operating in 1970; each one processing only 40 to 50 tons a day. The other 12 plants were large solvent plants ranging in capacity from 250 to 1,700 tons a day. Most of the recently constructed plants have a daily capacity of about 1,500 tons" (p. 8-10).

Table 4 (p. 9) lists 13 "Cooperative soybean processing associations operating in 1970," together with the plant location and the year the "plant was built or acquired." The headquarters is listed if it is different from the plant location. The earliest is the Farmers Grain Dealers Assoc. (FGDA), Des Moines, Iowa, Soybean Division; plant at Mason City, Iowa, built in 1943. It was originally located at Manly, Iowa (1943-51), moved to Mason City in 1951, and merged with FGDA in 1967. Note 1. The original name was North Iowa Cooperative Processing Association, and the manager was Glenn Pogeler from 1943 to 1964.

The associations (companies) are: 1. FGDA, started 1943. 2. Boone Valley Cooperative Processing Assoc. (Eagle Grove, Iowa, started 1943). 3. Farmers Regional Cooperative, Fort Dodge, Iowa, Big 4 Division (Sheldon, Iowa, 1943; Big 4 Cooperative Processing Assoc. merged with Farmers Regional in 1967. In 1970, Farmers Regional merged with Land O'Lakes). Note: We can say that on 1

April 1970, Land O'Lakes began operating the soybean processing plant at Sheldon, Iowa.

4. West Bend Elevator Co. (West Bend, Iowa, 1943). 5. Farmers Cooperative Assoc. (Ralston, Iowa, 1944). 6. Missouri Farmers Assoc., Columbia, Missouri, Soybean Div. (Mexico, Missouri, 1946). 7. Producers Cooperative Assoc. (Girard, Kansas, 1948). 8. Dawson Mills (Dawson, Minnesota, 1951). 9. Arkansas Grain Corp. (Stuttgart, Arkansas, 1958). 10. Farmland Industries, Kansas City, Missouri, Soybean Processing Div. (Van Buren, Arkansas, 1960; Farmland Industries acquired Co-op Processing Assoc. in 1968). 11. Farmers Union Grain Terminal Association, St. Paul, Minnesota, Honeymead Products Div. (Mankato, Minnesota, 1960). 12. Far-Mar-Co, Hutchinson, Kansas (St. Joseph, Missouri, 1963). 13. Gold Kist, Inc., Atlanta, Georgia, Gold Kist Soy Div. (Valdosta, Georgia, 1968).

Table 5 (p. 10) lists 13 "Cooperative soybean processing plants that had ceased operations as of 1970." "1. Ohio Valley Soybean Cooperative (Henderson, Kentucky, 1940). 2. Coshocton Farmers Exchange (Coshocton, Ohio, 1943). 3. Ohio Farm Bureau Cooperative Assoc., Columbus, Ohio (Springfield, Ohio 1943). 4. Farmers Cooperative Elevator (Martelle, Iowa, 1943). 5. Farmers Cooperative Company (Dike, Ohio [sic, Iowa], 1943). 6. Indiana Farm Bureau Cooperative Assn., Indianapolis, Indiana (Danville, Indiana, 1943; Wabash, Indiana, 1944; Vincennes, Indiana, 1944; Rushville, Indiana, 1945). 7. Alhambra Grain and Feed Company (Alhambra, Illinois, 1944). 8. Consumers Cooperative Association, Kansas City, Missouri (Coffeyville, Kansas, 1945). 9. Jersey Shore Cooperative Soybean Association (Jersey Shore, Pennsylvania, 1945). 10. Northwest Co-op Mills, St. Paul, Minnesota (Menomonie, Wisconsin, 1945). 11. Farmers Cooperative Elevator (Hubbard, Iowa, 1945). 12. Farmers Cooperative Elevator Association (Blooming Prairie, Minnesota, 1950). 13. Halstad Elevator Company (Halstad, Minnesota, 1956)."

Table 6 (p. 11) shows: "Soybeans crushed and percent of U.S. total crushed by cooperative mills, selected years 1949-68." The number of U.S. cooperatives crushing soybeans decreased from 19 in 1949 to only 13 in 1968. But the amount of soybeans crushed by these cooperatives increased from 7.37 million bu in 1949 (3.8% of total soybeans crushed) to 92.13 million in 1968 (15.2% of total crushed).

Photos show: (1) Soybean processing plant of Gold Kist Inc. (formerly Cotton Producers Assoc.) at Valdosta, Georgia (p. 12). (2) "Loading dock area of modern warehouse at Boone Valley Cooperative Processing Assoc., Eagle Grove, Iowa. This association operates a truck fleet for receiving soybeans from local elevators and shipping meal" (p. 55).

Note 2. This is the earliest document seen (June 2005) that mentions Gold Kist in connection with soybeans. Address: USDA Farmer Cooperative Service.

580. Hadsell, Robert M. 1971. Food processing: Search for

growth. Concern for nutritive value, additives, convenience items, and new products, as well as diversification, mark this \$90 billion industry. *Chemical and Engineering News*. Aug. 23. p. 17-27.

• **Summary:** The food industry is one of the largest segments of the U.S. economy. The \$90-billion food *processing* industry, noted for its low profit margins and steady growth, is always looking for new growth areas. In 1960 U.S. consumers spent 20.0% of their disposable income on food, but only 16.6% in 1970. There is a long-term trend toward convenience foods—those that require less preparation before serving. Sales of snacks are booming. There has been a major shift to vegetable sources of oils and fats, away from animal sources such as butter and lard. Proteins are increasingly used as ingredients in foods.

Hammonds and Call of Cornell University [Ithaca, New York] found (1969, 1970) that the four largest selling proteins in human foods were nonfat dry milk (1,020 million lb), whole dry milk (50 million lb), soy protein (192 million lb), and casein (100 million lb). Others included egg proteins, hydrolyzed vegetable proteins [from wheat and soybeans], and whey. They point out that many of these protein ingredients are added to foods for functional rather than nutritional reasons. “Soy proteins in particular are noted for their ability to bind water and fats.” The retention of water improves the freshness of baked goods, for example. In processed meats, added protein retains natural juices and flavor, and may help bind ground particles together—as in hamburger patties. “Proteins also act as stabilizers for whipped dairy products. Of the vegetable proteins, soy protein is most widely used as a food ingredient.” Dr. Hammonds and Dr. Call estimate that 121 million pounds of soy flour and grits were used in food products for human use in 1969, along with 33 million pounds of soy concentrates and 38 million pounds of soy isolates.” The flour and grits (40-55% protein) cost 5.5 to 11 cents/lb, the concentrates (60-79% protein) cost 18-25 cents/lb, and the isolates (90-97% protein) cost 35-45 cents/lb.

In 1970 Dr. William T. Manley and Dr. William W. Gallimore, economists in the USDA’s Economic Research Service, came up with slightly different estimates. Production in a fourth category, textured soy proteins, was about 25 million pounds. They cost about 50 cents/lb and up, depending on the type. If all of Manley and Gallimore’s soy protein products were used in human foods, “per capita consumption in 1970 would have been less than 3 pounds.” Yet they predict that by 1980 vegetable protein extenders will displace 15-20% of the meat in food preparations.

A photo shows two hands spreading a tow of spun soy protein fibers. Each tow contains 16,000 monofilaments.

The section titled “Integration” discusses ADM, Central Soya, and A.E. Staley Manufacturing Co. how they specialize in soybean processing, and how they are undergoing vertical integration. The 1970 acquisition of

Gooch Food Products marked ADM’s entry into the sale of consumer products. ADM makes and “markets a line of soy protein ingredients, including textured soy protein made by extrusion in a 3,000 ton-per-month plant at Decatur, Illinois.” One of ADM’s textured soy protein products resembles bits of bacon; it is sold to other food companies to market—not to consumers. Address: Asst. Editor.

581. Laine, Iris Coyn. 1971. Soy goes to school. *School Lunch Journal* 35(7):41-43. July/Aug.

• **Summary:** “On February 22, 1971, USDA authorized the use of textured vegetable protein, fortified with vitamins and minerals, to meet part of the minimum requirement of two ounces of cooked meat for the Type A school lunch.” Discusses: What this means: Main dishes, sandwiches. What are textured vegetable proteins? Look and taste. Nutritional content. What products are available? Want more information? Contact the Food Protein Council. The nine regular members of the Council are listed: ADM, Cargill, Central Soya Co, Far-Mar-Co, Griffith Laboratories, Miles Laboratories, Ralston Purina Co., A.E. Staley Manufacturing Co., and Swift Chemical Co.

“For schools that prepare their own foods, there are several recipes in USDA’s ‘Quantity Recipes for Type A School Lunches’, that are ideal for including textured vegetable protein products.” The names of ten main dishes (with the USDA Card No. for each) and 2 sandwiches are given. A photo shows three school lunch dishes which include textured vegetable proteins: Hamburger, sloppy joe, and spaghetti sauce. Address: Foodservice Relations Director, Food Protein Council.

582. Pour-El, Akiva. 1971. The unfulfilled dream: The use of soy products in cereal flour. In: American Assoc. of Cereal Chemists, Southern California Section, ed. 1971. *Soy: The Wonder Bean*. California (Symposium). 160 p. See p. 93-111. [46 ref]

• **Summary:** The soybean has great potential to benefit mankind. “The tale to be unfolded here is not one of progress but of wasted opportunities and unfulfilled hopes.” A photo shows Dr. Pour-El. Address: ADM, Decatur, Illinois.

583. Walker, D.B.; Horan, F.E.; Burket, R.E. 1971. Engineered foods—the place for oilseed proteins. *Food Technology* 25(8):55-60. Aug. [12 ref]

• **Summary:** Contents: Introduction—history. Both oil and meal economically important. A need for inexpensive protein foods. Vegetable protein: a natural choice. Problems of engineered protein foods. Low-cost nutritional blended flours (CSM, WSB, etc.). A wheat-soy blend for bakery products. Textured protein products: the spinning process, the thermoplastic extrusion process. Consider economics. Obstacles to be overcome: educational, governmental regulations. Looking toward the future.

“The development of the soybean industry in the U.S. has brought about striking changes in land utilization in that some 400,000 acres were planted in soybeans in 1925, compared to over 42 million acres in 1970—a hundredfold increase.” Address: 1. President of Processing Co.; 2. Director of Research; 3. V.P. of Soy Specialties. All: Archer Daniels Midland Co.

584. Burket, R.E. 1971. Protein markets for 1972: Combining soy protein with meat offers livestock growers a better market for parts of carcass not sold as retail cuts. *Soybean Digest*. Nov. p. 5-7. [4 ref]  
 • **Summary:** In 1970, estimated volume of production for soy protein foods in the U.S. was as follows, in million lb: Soy flour and grits 325-500 (\$0.065/lb), soy protein concentrates 25-30 (\$0.20-25/lb), soy protein isolates 20-25 (\$0.38-45/lb), textured soy protein products 25 (extruded dry is \$0.27+/lb, and spun fibers containing 60% moisture are \$0.50+/lb). A portrait photo shows Mr. R.E. Burket. Address: Vice President, Specialty Div., ADM.

585. *Food Processing (Chicago)*. 1971. Textured vegetable protein in school lunch program: Reduces ingredient cost for meat dishes up to 20 per cent. Autumn. p. F4-F9. Foods of Tomorrow section.

• **Summary:** A major, comprehensive cover story with 3 color photos and one black-and-white photo. Discusses: “Textured vegetable protein” [textured soy flour], “hydrated vegetable proteins,” “products fabricated from spun fibers,” “spun protein products,” “extruded and expanded products,” FNS Notice 219 (by USDA’s Food & Nutrition Service), “vegetable protein ingredients,” spun vegetable protein—Bontrae from General Mills, Temptin from Miles Laboratories, “granular soy concentrate” [from Swift & Co.], Promosoy SL from Central Soya, Mira-tex 210-1 from A.E. Staley Manufacturing Co., unflavored textured vegetable protein from ADM, Ultra-Soy from Far-Mar-Co, and Patty-Pro from Griffith Laboratories.

Note: This is the earliest English-language document seen (Nov. 2015) that contains the term “granular soy concentrate.” It refers to a type of extruded textured soy flour.

586. *Soybean Digest*. 1971. What’s ahead for soy protein? Nov. p. 11-13.

• **Summary:** Discusses the work of the Food Protein Council, established this year as an autonomous organization within the National Soybean Processors Association. “The goal of the new FPC is to centralize promotion of edible vegetable protein for use in human food.” The focus in 1972 will be on the school foodservice market, plus the institutional and commercial restaurant market. “The Food Protein Council, like its parent association, the National Soybean Processors Assn., is managed by Smith, Bucklin & Associates Inc...

Member companies of the Council are: Archer Daniels Midland Co.; Cargill Inc.; Central Soya Co. Inc.; Far-Mar-Co, Inc.; Griffith Laboratories; Miles Laboratories Inc.; Ralston Purina Co.; A.E. Staley Manufacturing Co.; and Swift Chemical Co.”

587. Kies, Constance; Fox, Hazel M. 1971. Comparison of the protein nutritional value of TVP, methionine enriched TVP and beef at two levels of intake for human adults. *J. of Food Science* 36(6):841-45. Sep/Oct. [14 ref]

• **Summary:** Three groups of adult men were fed beef, an extruded soybean product resembling beef (TVP; textured soy flour produced and supplied by the Archer Daniels Midland Co.), and a 1% DL-methionine fortified product—at two levels of nitrogen intake. Mean nitrogen balances of subjects fed 8.0 gm nitrogen per subject per day were: beef +0.74 gm nitrogen per day, TVP +0.78, methionine fortified TVP +0.72. Mean nitrogen balances of subjects fed 4.0 gm nitrogen per subject per day were: beef -0.30 gm nitrogen per day, TVP -0.70, methionine fortified TVP -0.45. DL methionine fortification at the 1% level of the TVP was demonstrated to be partially effective in improvement of nitrogen balance at low nitrogen intakes. Address: Univ. of Nebraska, Lincoln, Nebraska.

588. Dimler, R.J. 1972. Re: Misuse of the abbreviation TVP for textured vegetable protein. Letter to F.R. Senti, Deputy Administrator, MNR, ARS, Jan. 6. 1 p. Typed, without signature (carbon copy).

• **Summary:** “I find that some of my people are falling into the bad habit of using ‘TVP’ as an abbreviation for the term textured vegetable protein. Unfortunately, TVP is a registered trademark of the Archer Daniels Midland Company, therefore we all need to be very careful to avoid using TVP except in specific reference to the ADM products.

“I am sure that the ADM choice of trademark is going to prove awkward and inconvenient for many people. It is too obvious an abbreviation for the class term textured vegetable proteins.” Address: Director of Div. [Peoria, Illinois].

589. Dimler, R.J. 1972. Soy flavors. *Notes from the Director of the Northern Division* No. 1052. p. 2. Jan. 7.

• **Summary:** “On December 14, Mr. A.C. Eldridge and Dr. W.J. Wolf (OC) exchanged ideas about the nature and origin of flavors in soybean protein products with some research members of Archer Daniels Midland Company, Decatur, Illinois. The ADM group seems convinced that many flavors in soybean protein arise from enzymic and nonenzymic reactions during processing. Of course, a prime suspect is lipoxxygenase acting on polyunsaturated fatty acids. Earlier Dr. D.B. Hand and coworkers at the New York State Agricultural Experiment Station in Geneva implicated this enzyme during their studies on soy milk. Additional enzymes may also be involved since conditions necessary to inactivate

lipoygenase almost invariably inactivate other enzymes as well. Consequently, correlation of flavor score with inactivation of lipoygenase does not prove that a cause-and-effect relationship exists. The ADM group is still trying to find a satisfactory group of terms to be used by their taste panel to describe the various flavors noted in soy products particularly after cooking.” Address: Director [Northern Regional Research Lab., Peoria, Illinois].

590. *Wall Street Journal*. 1972. Archer-Daniels-Midland president Andreas reportedly will quit: Executive expected to retain big equity and remain a director; Donald Walker seen successor. Jan. 18. p. 26.

• **Summary:** Lowell W. Andreas, age 49, will step down as president of ADM within a few weeks; he was not available for comment.

Donald B. Walker, who presently heads the firm’s soybean processing operations, was once an executive in the soybean operations of Ralston Purina Co.

In 1965 the Andreas brothers, Lowell and Dwayne, obtained a controlling interest in ADM at a time when profits were drooping. Since then profits have more than quadrupled. “In fiscal 1971 ended June 30, net income was \$12.2 million, or \$3.83 a share, and sales were \$659.8 million.

“The Andreas brothers, after taking control, sold off some unprofitable divisions and trimmed overhead costs dramatically.” They also moved the company headquarters to Decatur, Illinois, from Minneapolis, Minnesota.

591. Winson, Abraham; Hampson, Ernest Jeffreys. Assignors to Arkady New Foods Ltd. 1972. Manufacture of protein-containing foodstuffs [cheese-like products]. *British Patent* 1,356,363. Application filed: 26 Feb. 1972. 4 p. Complete specification filed: 29 Jan. 1973. Complete specification published: 12 June 1974.

• **Summary:** Soymilk was subjected to a 3-stage lactic fermentation (e.g. with *Streptococcus cremoris* or *S. diacetylactis*) and the resultant curd pressed, then either salted and stored to produce a cheese-like product or treated with beef or fish flavors. Address: Skerton Rd., Old Trafford, Manchester [England].

592. *Wall Street Journal*. 1972. Ralston, Archer, Swift accord. April 6.

• **Summary:** The three companies announced jointly settlement of litigation concerning a vegetable protein product, in federal district court at Peoria, Illinois. Ralston and Swift agreed to pay Archer a royalty for a nonexclusive license to make, use, and sell textured protein products made under a patent held by Archer.

Note: This short article (2 column inches) is in the lower right corner of an unknown page. It may appear only in the Midwest edition.

593. *Journal Star (Peoria, Illinois)*. 1972. Agreement reached on soybean patent. April 9.

• **Summary:** Discusses the settlement of litigation entered into by ADM, Ralston Purina Co. and Swift & Co. involving a high-protein meat-like product made from soybeans. Swift claims that “Morris D. Wilding filed for the patent March 1, 1965. ADM says William T. Atkinson applied for the patent Aug. 7, 1966, and Ralston claims Ronald J. Flier filed for it Sept. 9, 1966.

“On Aug. 13, 1971, the U.S. Patent Office Board of Patent Interferences wrongly rule that Flier was the inventor, says ADM’s suit. Ralston contests ADM’s claim.”

594. *Journal Star (Peoria, Illinois)*. 1972. Soybean dispute settled. April 11.

• **Summary:** On 18 Aug. 1971 ADM filed against Ralston Purina Co. (St. Louis, Missouri) and Swift and Co. (Chicago, Illinois). They filed countersuits. Each of the companies claimed the patent for making simulated meat from vegetable sources (mainly soybeans; for human consumption and pet foods) had been assigned to them by inventors. ADM granted to Ralston and Swift a nonexclusive license to make and sell products under a process patented by William T. Atkinson. They will pay ADM a \$30,000 royalty.

Ralston Purina granted to ADM a license to make and sell the product under a patent of Ronald J. Flier; ADM will pay a royalty of up to \$30,000. Swift granted to ADM and Ralston a royalty-free license.

595. Mustakas, G.C. 1972. Re: Memorandum–Extrusion cooking research as related to textured protein patents. Visit of Mr. Endre Sipos of Central Soya Co. Letter/Memorandum to E.D. (Engineering & Development Lab.) files, June 27. 1 p. Typed, without signature (carbon copy).

• **Summary:** Endre Sipos is assistant director of research at Central Soya Co., 1825 North Laramie Ave., Chicago, Illinois. He visited and spent about 2 hours “seeking background information on the relevancy of our early extrusion-cooking studies with the textured soy protein patent applications. ADM has been issued a product patent, and in the near future a Ralston-Purina employee will be issued a process patent; the latter will be assigned to ADM who will control the patent rights. In a recent court settlement, Ralston-Purina and Swift will get use of the patents on a royalty-free basis.

“Central Soya does not feel that the patent claims are justifiable based on prior art both at NMN [probably Northern Marketing and Nutrition Division, later called Northern Regional Research Center, Peoria, Illinois] and in their own research laboratories. Their patent attorneys are now studying the case and feel that their company could make a good case in any infringement suit.

“Mr. Sipos questioned me extensively about our early

extruder work, our patent, and our affiliations with UNICEF, AID, and the Wenger Company.

“In discussing current research, Mr. Sipos emphasized their continuing interest in protein isolates and concentrates commenting that this market will continue to grow. A large obstacle involves the whey disposal problem and it must be solved. He thought this was an area in which the regional laboratories should be getting into. Central Soya currently has a government grant to work on the problem. He feels that ultrafiltration (UF) and reverse osmosis have promise but there are some engineering problems remaining to be solved. They are assigning 40 cents per pound to the value of the protein recovered by UF. I mentioned that we had a definite interest in soy whey disposal for future work pending availability of funds and personnel.

“When I asked about protein yields in the commercial isolate process, he said they are around 30 to 35 percent depending on how much washing they give the curd. This agrees somewhat with Dale Johnston’s (Crest Products) published figures of 25 to 50 percent. Such low yields are a deterrent to the development of low-cost foods from isolates.”

Note: This is the earliest document seen (March 2002) that uses the term “reverse osmosis” in connection with soy. Address: Principal Chemical Engineer, Engineering & Development Lab., Northern Regional Research Lab., Peoria, Illinois.

596. Tung, Ta-Cheng; Huang, Po-Chao. 1972. Feeding of infants with toasted full fat soybean foods. *Tropical Agriculture Research Series* No. 6. p. 199-208. Sept. Symposium on Food Legumes. [18 ref]

• **Summary:** Contents: Introduction. Contains 5 figures and 4 tables. Table 1 shows ingredients of the soya-bean rice formulae: Full-fat soya flour (from ADM or Wenger) 45%. Pre-cooked rice flour 15%. Soya oil 10%. Sucrose 27.5%. Salt mixture 2.5%. Address: Dep. of Biochemistry, College of Medicine, National Taiwan Univ., Taipei.

597. *Decatur Daily Review (Decatur, Illinois)*. 1972. Business briefs. Oct. 16. p. 5.

• **Summary:** “Ross & Rowe, Inc., promotes Garfield: Theodore G. Garfield has been promoted to general sales manager of Ross & Rowe, Inc., a wholly-owned subsidiary of Archer Daniels Midland Co.”

“Garfield will maintain his office at Ross & Rowe’s headquarters at ADM in Decatur.

“Harry K. Bean, ADM vice president, is president of Ross & Rowe, Inc.”

598. Ontario. Ministry of Agriculture and Food. Economics Branch. 1972. The soybean industry in Ontario. Toronto, Ontario, Canada. ix + 93 p. Oct. 6. 28 cm. [10 ref]

• **Summary:** Contents: 1. Introduction: Background, U.S.

production and utilization of soybeans, Canadian supply and utilization of soybeans, supply and disposition of protein meal in Canada, supply and disposition of edible oils in Canada.

2. Soybean production in Ontario: The importance of soybeans to Ontario agriculture, agricultural land use in southwestern Ontario, yields and farm value of principal cash grain crops, characteristics of farms producing soybeans, proportion of soybeans grown on farms in different size groups, soybean production on crop and livestock farms, size and income potential of farms producing soybeans, comparative costs and returns for soybeans and other crops.

3. Marketing soybeans in Ontario: Timing sales of Ontario soybeans, the country elevator system, handlings by county, comparison between Ontario and Indiana elevators, services performed by country elevators, terms of first sale, grading, purchase and transport of soybeans by processors, the Ontario Soya-Bean Marketing Board.

4. Processing soybeans in Ontario: Structure and technology of the industry, the market for Canadian oil, the market for Canadian meal, processing margins.

5. Price determination for Ontario soybeans: The general price level for soybeans, Chicago prices and Chatham Track prices, tariff change and price, on-boat prices and handling expense, summary of price adjustment, significance of the difference in relative prices in May and December, quality difference and price, the dealer margin.

6. Prospects and outlook for soybeans: U.S. and world prospects for soybeans, prospects for Ontario soybeans in present markets, competition from prairie rapeseed, alternative opportunities for Ontario soybeans, summary of price outlook.

Soybeans were introduced into Canada in 1893 at the Ontario Agricultural College. They began to be produced commercially in the early 1930s. “From 1941 to 1971, the area planted to soybeans in Ontario increased from 10,000 to 360,000 acres. Although soybeans are not a major contributor to total farm income in Ontario, they are a vital part of the cash grain economy of southwestern Ontario... Cash receipts from soybeans amounted to \$16.7 million in 1969, \$23.9 million in 1970, and \$29.1 million in 1971. From 1969 to 1971, soybeans accounted for 29.2% of Ontario farm cash receipts from grain and 1.7% of all farm cash receipts.

“In Canada, soybean production and processing is concentrated in Ontario, where the industry was established during World War II. The original impetus came from war-time government policies designed to alleviate the shortage of edible vegetable oils that resulted from the War’s disrupting world production and marketing.” p. 4.

“Very few farms in Ontario produce only soybeans. The crop is usually combined with other cash grain enterprises or with livestock production. In 1966, there were 7,652 farms in Ontario with soybeans, 7,325 of which were in Elgin, Essex,

Kent, Lambton, and Middlesex counties.” p. 17.

“Only three edible oilseed processing plants are in operation in central Canada and all are in Ontario. One is in Hamilton and the other two are in Toronto... Canadian crushers continue to rely largely on imported soybeans.”

“Vertical integration is important in the soybean crushing industry. Victory Soya Mills is owned by Procter and Gamble, a large refiner and user of vegetable oils. Canadian Vegetable Oil Processing Limited (CVOP) is owned by Canada Packers, which refines and uses large quantities of oil. Canada Packers also uses soybean meal in preparing feed for sale through its owned and franchised feed dealers. Maple Leaf Mills is not integrated in terms of oil but is integrated with respect to both purchase of grains and manufacture and sale of animal feed. In view of its lack of integration into use of oil, Maple Leaf is in a good position to sell to Lever Brothers (Monarch Fine Foods) and to Swift Canadian.

“About 23 million bushels were crushed in Ontario in 1970-71. About half of this total was crushed by Victory. The other two firms divided the rest, with CVOP crushing a little more than Maple Leaf Mills” (p. 46). Address: Parliament Buildings, Toronto, Ontario, Canada.

599. Archer Daniels Midland Co. 1972. If you think there’s no place in your product line for TVP... Think again (Ad). *Soybean Digest*. Nov. p. 2 (Inside front cover).

• **Summary:** The top two-thirds of this full-page color ad shows mock-up packages of many imaginary commercial products: Pizza, chili, tamales, meat ball stew, meat loaf frozen dinner, frozen sausage & cheese snack rolls, canned sloppy joe, dry soup mix, and omelet with with imitation bacon bits.

The text states: “TVP–The original textured vegetable protein.” Covered by U.S. patent 3,488,770. “You’ll find TVP already on the shelves in a great variety of brand name consumer products.” It is the answer to ever-increasing costs. Address: Box 1470, Decatur, Illinois 62525.

600. *Soybean Digest*. 1972. How Decatur became the “Soy Capital” [of the world]. Nov. p. 16.

• **Summary:** The top two-thirds of this article consists of six photos: (1) Soy City Tire. (2) The A.E. Staley Mfg. Co. main office in Decatur (14 stories tall). (3) Soy Capital Bank. (4) Soy City Motel. (5) Soy Ford, Inc. (6) Archer Daniels Midland Co. east plant, where TVP is produced. The caption:

“The city of Decatur, Illinois, and its business firms confidently proclaim the city the ‘Soybean Capital of the World,’ as these photos by Leon H. Cassity testify.

“They include the two major processing firms, Archer Daniels Midland Co. and A.E. Staley, and also a number of companies that capitalize on the word ‘Soy.’

“Although Decatur, Illinois, had confidently billed itself as the soybean capital of the world since the 1930’s its claim

was not always secure, the *Decatur Herald and Review* recalls.

“Quoting the Review: ‘Decatur’s neighbor, Taylorville, challenged the title claim in 1946, and for 3 years the sparring went on.

“Oratory contests pitted Decatur Mayor James A. Hedrick against his counterpart in Taylorville, J.W. Spresser.

“The high spot of the oratory was reported to have been when Taylorville attorney Charles Bliss said with tongue in cheek: ‘If all the beans raised in Christian County were dumped in front of the Decatur city hall, it would take 96 snow plows to clear a way for Mayor Hedrick to reach his office before his term expires.

“If oil from the Taylorville soybean crop was poured into Lake Decatur it would make 44 tall men standing on each other’s shoulders look like a totem pole salad.’

“Decatur citizens didn’t take the attack lying down.

“Mrs. Clifford Smith, radio chairman for Woodrow Wilson Junior High School, said, ‘Decatur, the biggest processing bean center, is the capital of the soybean world, in the same manner as Detroit is the center of the automotive industry, instead of the ore field which produced the steel for the cars.’

“The debate continued, but Decatur found proof positive when Clinton Anderson, then U.S. Secretary of Agriculture, spoke of Decatur as the soybean capital of the world.” Address: Decatur, Illinois. Phone: (Area Code 217) 423-4411.

601. *Soybean Digest*. 1972. Grits and flakes... from the world of soy: Two processors get TVP licenses. Dec. p. 23.

• **Summary:** “Archer Daniels Midland Co., Decatur, Illinois, agri-processor, recently announced an additional licensing agreement under its textured vegetable protein product patent.

“Cargill Inc., Minneapolis, Minnesota, has obtained a nonexclusive license to make, use and sell textured vegetable protein products made in conformity with the patent held by ADM.

“This patent covers a high-protein textured product made from soybeans and/or other vegetable oilseeds.”

602. **Product Name:** Protoveg Pork Chunks (Meatlike Products Based on TVP).

**Manufacturer’s Name:** Direct Foods Ltd.

**Manufacturer’s Address:** Greatham, Liss, Hampshire, England.

**Date of Introduction:** 1972.

**Ingredients:** TVP (made by ADM) plus flavoring.

**Wt/Vol., Packaging, Price:** 5 oz or 10 oz double cellophane bag.

**How Stored:** Shelf stable.

**New Product–Documentation:** Rose Elliot. 1972. *Not just a load of old lentils*. p. 151. Recipe for “Vegetarian Pork

Chunks in Ginger Cream Sauce” calls for “1 cup Protoveg pork chunks.”

Export price list from Direct Foods Ltd. 1974. Oct. 1. Protoveg comes in beef, ham, pork, or natural flavors. Sizes are 5 oz, 10 oz, 10 lb, or 50 lb. 10 products total.

603. Smith, A.K.; Circle, S.J. 1972. Protein products as food ingredients. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 339-88. Chap. 10. [180 ref]

• **Summary:** Contents: 1. Flavor: Taste panel results, flavor components, plastein formation and flavor, plastein formation and nutrition, some food uses tolerant of soy flavor. 2. Bread and pastries: Soy flour history, effect of soy flour on baking characteristics, soy protein isolate in bread, soy flour and flavor, enzyme active soy flour, soy flour in Britain, detecting of soy flour in wheat flour. 3. Other baked goods: General, doughnuts, snack products. 4. Breakfast cereals. 5. Macaroni products. 6. Dairy-type products: Imitation milk, soy milk, filled milk, soybean cheese, imitation cream cheese, coffee whiteners, whip toppings, and frozen desserts, yogurt type products. 7. Comminuted meat products and meat analogs: Comminuted meat products, meat analogs, spun fiber type meat analog, extrusion-cooked type meat analog, heat-gelled type meat analog, meat fibers in heat-gelled protein matrix, assay of soy protein products in meat-type foods. 8. Gelling and aerating agents: Gelsoy as gelling agent, soy protein isolate as gelling agent, soy protein isolate as aerating agent, soy whey protein as aerating agent, enzyme modified isolates as aerating agent, foam-mat drying adjunct, foaming agent for soda water. 9. Miscellaneous food applications: Brew flakes, soups, gravies and sauces, confections, imitation nut meats, and [soy] nut butters, spray drying adjunct. 10. Nonfermented Oriental soybean foods: Introduction, Chinese soy milk, dried soybean whole and defatted milks, tofu (fresh tofu, bagged tofu, dried tofu, fried tofu), yuba, kinako (“The Japanese have a product which is similar to full-fat soy flour except that it is made from whole roasted soybean and this contains the seed coat”), soybean sprouts (compositional changes).

Concerning Brew Flakes (p. 373): “Soy flakes, grits, and peptones have been used since about 1937 or earlier (Burnett 1951) as adjuncts in brewing beer. Grits and ground meal from screw press processing were the first products used in brewing but later they were replaced by solvent-extracted flakes. The best results are obtained with flakes or flour having a high NSI (nitrogen solubility index) with a minimum of heat treatment in processing. Up to 0.75 lb. of flakes per barrel of beer has been recommended by Hayward (1941).

“The flakes may be used in the normal mashing operation to provide amino acids, peptides, minerals, and vitamins as nutrients for the yeast. It was reported by

Wahl (1944) and Wahl and Wahl (1937) that addition of hydrolyzed soybean protein directly to the beer improves foam stability, flavor, and body of the beer.” Address: Northern Regional Research Lab., Peoria, Illinois.

604. Snider, Nancy. 1972. Soybean (protein) recipe ideas. New York, NY: Arco Publishing Co., Inc. 112 p. Illust. Food category / recipe index. 18 cm.

• **Summary:** Contents: Preface. About this book. Who makes what: Archer Daniels Midland Co. (TVP), Central Soya (Promosoy), Far-Mar-Co (Ultra-Soy), General Mills, Inc. (Bac\*os, Bontrae), The Griffith Laboratories, Inc., Ralston Purina Co. (Edi-Pro), A.E. Staley Co. (Mira-Tex), Swift & Co. (Texgran), H.B. Taylor Co. (Textrasoy), Worthington Foods, Inc. (Fibrotein). The facts about soy protein. Soy what? Cooking with soy protein. Cover-ups. Things to do with bacon-flavor soy protein. Soy cooking tips. Breakfast ideas. Breakfast put-ons. Appetizers. Soups. Garnishes for soups. Entrees. Soy sandwiches. Breads. Desserts. Food category / recipe index (within each major food category {appetizers, bread, breakfast ideas, desserts, etc.}, recipes are listed alphabetically).

605. Horan, F.E. 1973. Wheat-soy blends: High-quality protein products. *Cereal Science Today* 18(1):11-14. Jan. [13 ref]

• **Summary:** Wheat-Soy Blend is a mixture of bulgur wheat flour, wheat protein concentrate, defatted soy flour, soy oil, minerals and vitamins.

In recent years “empty calories” has become a household saying when matters of everyday nutrition are discussed. It refers to food that are high in calories and low in nutritional value. Address: Director of Research, ADM, Decatur, Illinois.

606. *Soybean Digest*. 1973. Name Andreas ADM board chairman. Jan. p. 31.

• **Summary:** “Dwayne O. Andreas, chief executive of Archer Daniels Midland Co., was also elected chairman of the board by the directors, succeeding John H. Daniels. Mr. Daniels was elected chairman of the board of Independent Bancorporation, ADM’s wholly-owned bank holding company subsidiary, to succeed Mr. Andreas. Mr. Andreas plans to headquarter in the ADM executive offices at Decatur, Illinois, and Mr. Daniels will move to the Independent Bancorporation’s executive offices in Minnesota.

“Shareholders re-elected all present directors and all other officers.

“ADM is a leader in production and marketing of high protein soy flours and soy specialty products, including TVP, ADM’s brand of textured vegetable protein. According to Donald B. Walker, ADM president, the great world need for protein food has led ADM to place increasing emphasis on

food proteins both in the U.S. and internationally.”

Note: The arrival of Dwayne Andreas as CEO and board chairman marks the start of a new and very successful era for ADM.

607. Kosaric, Naim; Singh, Narendra. 1973. Nutrition—Two views. Kosaric: develop new technologies. Singh: research is on the wrong track. *Ceres: FAO Review on Development* 6(1):32-40. Jan/Feb.

• **Summary:** Discusses: Population explosion, amino acid fortification of foods, fish protein concentrate, leaf proteins and leaf protein concentrate, single-cell proteins (especially petroleum-grown yeast protein), ramie (*Bohemeria nivea*), etc.

Singh argues that corporate elites from developed countries set the R&D priorities and patterns in Third World countries for their own (elite) benefit, while disregarding simple, local solutions to nutritional problems. “Soy interests have extensively supported specific R & D use of the soybean. TVP promotion is the latest manifestation of their pursuits. In India, even research on groundnuts was supported by North American interests because of the market potential for soybean technology. Now, overt and covert promotional pressures have started to displace groundnut by soybean, even in raw material research and development.”

Singh notes that leaf protein research started over 40 years ago and research on petroleum-grown yeast protein (SCP) started about 10 years ago. There are large sidebars on “Amino acid fortification of foods” and “Leaf protein concentrate” based on information provided by the Joint FAO/WHO/UNICEF Protein Advisory Group. Address: 1. Assoc. Prof., Faculty of Engineering Science, Univ. of Western Ontario, Canada; 2. Inst. for Storage and Processing of Agricultural Produce, Wageningen, Netherlands.

608. Horan, F.E. 1973. Meat analogues. In: Congressional Record, Senate, April 4, 1973. See p. S 6653–S 6656. \*

• **Summary:** This paper was originally presented at the third meeting of the Working Group on Integrated Meat Development, Industry Cooperative Programme, 22 March 1973, FAO Headquarters, Rome, Italy. Address: ADM, Decatur, Illinois.

609. Lockmiller, N.R. 1973. Increased utilization of protein in foods. *Cereal Science Today* 18(3):77-81. March. [13 ref]

• **Summary:** Details are given on each type of soy protein product and the way each is used. Table 4 gives the price per pound for various soy protein foods, the estimated annual production in 1972, and the current uses. Soy flour and grits, \$0.15-\$0.17/lb, 352-500 million pounds produced in 1972. Used as ingredients for baked goods, dog foods, sausages.

Soy protein concentrates, \$0.21-\$0.25/lb, 40-50 million pounds produced. Used in manufacturing textured products. Ingredients in processed meats, baby foods, and health foods.

Soy protein isolates: Regular \$0.41-\$0.45/lb, modified isolates \$0.92-\$1.33/lb. Production of both types: 35-40 million pounds. Regular isolates are used in manufacturing analogs such as meatless ham, bacon, hot dogs, etc. Modified isolates are used in whipping agents.

Textured soy protein products: Extruded flours, \$0.27/lb and up. Spun isolates \$0.50/lb and up. Production of both combined: 35-40 million pounds in 1972. Textured soy protein products are used in bacon bits, bacon strips and similar foods.

Table 6 shows what companies supply which of the following types of edible soy-based ingredients: Soy flour and grits (defatted, low-fat, full-fat), concentrates, isolates, spun fibers, textured soy prod. The companies are ADM (soy flour and grits—defatted, low-fat, and full fat, textured soy prod.), Cargill, Central Soya, Far-Mar-Co, General Mills, Griffith Labs, Gurley, Inc., Lauhoff Grain Co., Miles (Worthington), National Protein, Ralston Purina, A.E. Staley, Swift & Company. Address: A.E. Staley Mfg. Co., Decatur, Illinois.

610. Fischer, Norman H. 1973. Beanburgers—More Americans turn to soybean products as meat substitutes: Restaurants, stores find consumers like the taste and especially the price. The future gets a lot closer. *Wall Street Journal*. April 3. p. 1, col. 1.

• **Summary:** In the continuing struggle against high meat prices, King’s Food Host, a restaurant chain based in Lincoln, Nebraska, has been adding TVP for several months now to its Big King burgers at about 20 of its 140 branches. It sells these “soyburgers” for \$0.49, which is 10 cents less than usual. Sales have been very good, with no complaints.

In the past, soybean products have been slipped into a variety of consumer foods, but during the past few months, they have been increasingly advertised as extenders in hamburgers. Consumers seem to welcome the reduction in meat prices.

“The future is now: Over the past several years, such companies as General Mills Inc., Archer-Daniels-Midland Co., Ralston Purina Co., and the Worthington Foods subsidiary of Miles Laboratories Inc., have developed soybean products that have virtually the same appearance, texture and taste as beef, pork, poultry, seafood and even nuts. Some of these all-soy products already are on the market, and more are being added annually.

“U.S. Agriculture Department [USDA] researchers say that by 1980 soy protein could account for as much as 8% of the nation’s ‘meat’ requirements.”

This is good news for those who grow and process soybeans. The National Soybean Processors Association says that sales of soy protein products for use in human foods totaled about \$75 million last year, a ten-fold jump from five years earlier. And buoyed by the growing use of soy as an extender for ground beef, sales this year are expected to

reach \$120 to \$140 million.

“The biggest move was made in mid-March by Red Owl Stores Inc. in Minneapolis [Minnesota], when it introduced ‘Juicy Burger II’ in the fresh-meat counters of its 51 supermarkets in the Minneapolis-St. Paul area and its six Duluth stores. ‘Juicy Burger II’ is 75% ground beef and 25% soy protein, plus a few flavorings. It is selling for about 75 cents a pound, 20 to 25 cents less than all-beef hamburger sells for.” Address: Staff reporter.

611. *Business Week*. 1973. Making it cheaper to eat protein. May 12. p. 184, 186.

• **Summary:** Skyrocketing food prices are forcing the food industry to develop new textured soy protein products to extend or substitute for meat, using either of three general methods: Spinning (Miles Laboratories/Worthington Foods), concentrating (Central Soya Co. concentrates), or extruding (ADM, this is now the leading method for making textured vegetable protein).

“Archer Daniels Midland vigilantly protects both its broad product patent and its copyright on the initials TVP (for textured vegetable protein). The company cemented its patent position with a court suit in 1971. Today, five of its eight competitors—Cargill, Miles Laboratories, A.E. Staley, Swift, and Ralston Purina—sell vegetable protein lines under license from ADM.

“Burger mixes: TVP got its first big boost when the Agriculture Dept. [USDA] in 1971 approved its use in the national school lunch program. By the end of 1972, total demand had grown to about 55-million lb. a year, with ground beef as the largest single market.

“Red Owl Stores, Inc., sells such burger mixes across its butcher counters, usually in a mix of 75% meat to 25% vegetable protein. Called Juicy Burger II, or Juicy Blend II, the product sells for \$0.75 a lb., compared with \$0.99 a lb. for ground beef. Red Owl says that the mixture outsells whole meat by 3 to 1. Kroger Co., the nation’s third-largest food chain, last month came out with its own mix of ground beef and textured vegetable protein, called Burger Pro.

“Dr. Virgil O. Wodicka, director of FDA’s Bureau of Foods, says: ‘Don’t tell consumers what it isn’t—tell them what it is.’”

612. *Business Week*. 1973. Dwayne Andreas’ affair with the soybean: he has parlayed the protein-rich legume into a major commodity. June 2. p. 54.

• **Summary:** Andreas has great interest in and hopes for TVP, though it presently accounts for only a tiny fraction of ADM’s total sales. “Andreas believes its potential as a food extender and meat substitute in the U.S. could lead to sales of 2.7 billion pounds by 1980. Now ADM has an estimated 60% of the business, with the rest produced under license. Talks are also under way for ADM to construct TVP plants in Brazil and Yugoslavia, an ADM TVP plant is under

construction in Great Britain and one is in the planning stages in Australia.

“The 55-year-old Andreas seems the very antithesis of an entrepreneur... His father, Reuben P. Andreas, was farming at Lisbon, Iowa, near Cedar Rapids, when he took over a bankrupt country elevator during the Depression and ran it as a family enterprise with his four sons. Honeymead Products Co. [sic, R.P. Andreas & Son], as it was called, bought processed soy meal until 1938, when the 20-year-old Dwayne persuaded his father to buy the machinery to process its own. Honeymead built the plant in Cedar Rapids.

“In 1945, the Andreas family sold the family-owned business to another private company, the giant Cargill, Inc., in Minneapolis [Minnesota]. For seven years Andreas ran Cargill’s soybean business.

“In 1952, he left Cargill and again set up Honeymead [in Mankato, Minnesota], which promptly reentered the soybean business in competition with his former employer. Andreas and his brothers, Lowell, Albert and Glenn, sold Honeymead to the Grain Terminal Association, which operated the soybean business of Farmers Union, a large farmer-owned co-operative...

“In 1966, Minneapolitans were startled to learn that he had bought an interest in Archer Daniels Midland, an old-line family-controlled grain company. With a foothold in ADM, which Andreas says he was ‘invited’ to take by the Archer family, Andreas began buying ADM stock on the open market. Andreas was invited to sit on the board, and became chairman of the executive committee in 1968. ‘I knew that ADM was a dozen years ahead of everyone else in textured vegetable protein research, and I believed that was where the important action was going to be,’ Andreas recalls. ‘One of the first things I did was to take the edible soy out of the lab and construct a plant in Decatur to make all the grades of edible soy protein in 1969. When we first built it, we thought we had the capacity to make all the product we could sell through 1976. We have already doubled production, and are short.’”

A photo shows Dwayne Andreas. The caption: “Andreas sees a 2.7-billion-lb soybean market by 1980.”

613. Cranebrock, Al Van. 1973. Archer-Daniels-Midland getting fat on soybean hamburger diet. *Los Angeles Times*. June 3. p. 3, 6.

• **Summary:** Supermarket chains in growing numbers are buying TVP to mix into their meat. “Just in the last week or so, Jewel Cos. Inc., whose food stores dominate the grocery business in the Chicago area, has begun selling TVP by itself in a private-label package and displayed next to beef in the meat departments. The idea is that the TVP can be mixed with the beef in the home to suit a family’s taste.”

ADM is currently sold out of TVP, is producing around the clock seven days a week, and will have expanded its capacity by 50% next month and an additional 50% by

December. ADM has licensed Ralston Purina, Swift, and A.E. Staley Mfg. Co., among others, to produce TVP. It is estimated that TVP now accounts for 25% of ADM's earnings but only a small fraction of that in sales. Address: Exclusive to The Times from Reuters.

614. *Feedstuffs*. 1973. ADM adds protein specialty division. July 23.

• **Summary:** Richard E. Burket has been named president of the newly formed division, which will market the company's TVP brand of textured vegetable protein and its line of soy flour and grits.

615. Korslund, Mary; Kies, C.; Fox, H.M. 1973. Comparison of the protein nutritional value of TVP, methionine-enriched TVP and beef for adolescent boys. *J. of Food Science* 38(4):637-38. July/Aug. [6 ref]

• **Summary:** Textured vegetable protein [made from defatted soybean meal] is used increasingly as a economical source of protein. This 23-day experiment, consists of a 5-day adjustment period and three 6-day experimental periods during which nitrogen balance is measured in human subjects.

“Mean nitrogen balances for subjects fed TVP, methionine-enriched TVP or beef as the primary source of dietary protein were -0.08, +0.48 and +0.32 g per day, respectively (Table 3).” Address: Dep. of Food & Nutrition, Agric. Exp. Station & College of Home Economics, Univ. of Nebraska, Lincoln, NE 68503.

616. Standifer, L.N.; Owens, C.D.; Haydak, M.H.; Mills, J.P.; Levin, M.D. 1973. Supplementary feeding of honey bee colonies in Arizona. *American Bee Journal* 113(8):298-301. Aug. [8 ref]

• **Summary:** Two protein rations were fed to colonies of honeybees in summer and winter tests, and compared for stimulation of brood production. Ration 1 (11% protein patty) contained 690 gm Wheat, 907 gm expeller-processed soybean flour (52% protein; made by ADM), 3,175 gm granulated sucrose, and 1.9 liters sucrose-water (2:1 v/v). Ration 2 (11% protein pellets) contained Wheat, sugar, and water. Both rations supported brood production when natural pollen and nectar were insufficient. Address: Agricultural Research Service, USDA, Be Research Lab., 2000 E. Allen Road, Tucson, Arizona 85719.

617. *Forbes*. 1973. The hamsoyburger: Science made it possible but high meat prices made it practical—The hybrid hamburger, which is in many ways better than the real thing. Sept. 15. p. 85-86.

• **Summary:** For years, American companies have been experimenting with the idea of using soybeans to make meat go further, but it took soaring beef prices to make the idea a reality. It all started at Red Owl Supermarkets

in Minneapolis, Minnesota. In March 1973, the 400-store chain introduced Juicy Burger II at 50 of its stores. The new product, 75% hamburger and 25% soybean extender, was 20 cents a pound less expensive than its all-meat counterpart. But it also contained less cholesterol, fewer calories, and less shrinkage. The labeling was very clear; consumers knew what they were buying. The chain has already sold one million pounds of the new product—which is outselling regular ground meat 6-to-1 and is now called Juicy Blend II—in response to loud complaints from the state department of agriculture.

After Red Owl broke the imaginary barrier, hundreds of other supermarket chains started to carry the product: Safeway, Kroger, Grand Union, Stop & Shop, etc.

618. Tanner, J.W. 1973. Where we are and how we got there: An historical review of soybean production in Ontario. In: Ontario Soya-Bean Growers' Marketing Board, ed. 1973. Ontario Soybean Symposium 1973. Ottawa: Agriculture Canada. 110 p. See p. 11-22.

• **Summary:** The best summary of soybean history in Canada seen up to this time. The author believes that, “based on the chaotic events of the last 12 months... for historical purposes it would seem desirable to divide the history of soybeans into two eras: pre-September 1972 and post-September 1972. Certainly the events of the last year created an awareness in producers and the general public alike of a whole new vocabulary, including words such as anchovies, futures market, protein gap, embargo, superburger, and soaring prices. The latter produced another vocabulary most of which would be unprintable.”

Note 1. This is the earliest English-language document seen (Nov. 2014) that contains the term “superburger” (or “superburgers”).

“The first report of soybeans grown in Canada was by C.A. Zavitz in 1893 at the Ontario Agricultural College. The seeds had been obtained from Dr. C. [Prof. C.C.] Georgeson, Kansas, who had received them from Japan three years earlier. [Note 2. Zavitz first published his research on soybeans in 1901, and first reported the results of his 1893 research in 1908]. For 30 years Zavitz, alone in Canada, meticulously conducted trials on variety tests, dates of planting, seed rates and row widths for soybeans grown for seed and hay.

“By 1927, Zavitz had evaluated over one hundred varieties, most of them for five years or over. The 31 year average of his best variety, Early Yellow was 16.78 bu/acre. The 22 year average green crop yield for the variety Ito San was 7.5 tons per acre per year. In 1924, Zavitz released OAC 211, the first variety of soybeans registered by the Canadian Seed Growers' Association. The variety continued as one of the recommended varieties until the mid 40's.

“The soybean program at Harrow was started in 1923 by Dr. F. Dimmock. [In 1923 he grew the first soybeans

at Harrow. In 1925 the first soybeans were grown in Kent County. In 1930 the first soybean crosses were made at Harrow.] Dr. Dimmock was transferred to the Ottawa research station in 1927 where he continued his work on soybeans and produced a string of excellent early varieties of soybeans over 35-40 years including Acme, Comet, Crest, Mandarin, Capital, Merit, Kabott and Pagoda. The Harrow research was continued by Casper Owen who started breeding soybeans in 1931. This program was to prove to be one of the most outstanding in North America producing such varieties as AK (Harrow), Harman, Harly, Harosoy and Harome.”

“In the late 1920s a few farmers were growing a small acreage of soybeans for grain, harvesting with a reaper and threshing the seed out. Two short-lived crushing plants were established in the south west part of Ontario in the mid-1930s, one of which was located at Shelbourne [sic, Colborne] Street in Chatham.”

Note 3. Founded in 1934 (see p. 18), this was apparently the first crushing plant in Canada. In *Shepherd's City of Chatham (Ontario) Directory 1934-35* (p. B-166) we read: “Soyabean Oil & Meal Co-operative Co Ltd, G E Biles, mgr, Colborne n, w cor Adelaid.” Spelled out, with punctuation, this becomes: northwest corner of the intersection of Colborne St. and Adelaide St. See also C.A. MacConkey (1935, p. 65) who gives the company name as: Soy Bean Oil and Meal Co-Operative Co. of Canada, Ltd.

“Subsequently, few beans were grown for hay. The late 1930s were critical years for the soybean in Ontario, and without the help of the Maple Leaf Mills plant (which was primarily processing flax) and Toronto Elevators [which later merged with Maple Leaf Mills in 1962], there would have been no place to market the new crop.

“The establishment of soybeans as a major crop in North America was assured by the occurrence of World War II. Demand for oil created a rapid expansion in acreage and processing facilities, and in the U.S.A. 1940 marked the first year in which the acreage harvested as seed exceeded the acreage harvested for hay. The latter continued to dwindle away and now, represents an insignificant portion of the U.S. acreage.

“The rapid expansion in acreage, once the demand for oil was established, occurred as a result of a major promotional effort by the consuming industries. With the construction of a new plant in Toronto in 1944, Victory Mills launched one of the greatest promotions of a crop ever witnessed in the Province of Ontario. Extension bulletins, newspaper advertisements, movies, newsletters and meetings inundated the farmers with information and enthusiasm. Ralph Chamberlain and later Ivan Roberts promoted the crop at every opportunity. Acreage grew and by the early 50's, the soybean had become a major cash crop in S. Ontario and had its own marketing board.

“As the market for oil increased and the acreage

expanded in the 1920's and 30's, the problem of disposing of all of the meal economically became acute, to the point of slowing the expansion... Gradually the feed industry began to recognize the value of the meal in livestock and pet foods with the result that, with a major market established for the meal by-product, the expansion of the oil industry was assured.”

“To me there have been three outstanding accomplishments in the development of soybeans in Ontario to date: the pioneering work of C.A. Zavitz at the Ontario Agricultural College... Next, the role of Victory Mills in promoting the crop once the market for oil was established.

“Finally, the development at the Harrow Research Station of the variety Harosoy by Mr. Casper Owen. Released in 1951, Harosoy eventually grew to 80% of the Canadian crop (1965). However, its total impact was even greater in the United States Midwest where, in 1966, 26% of the total U.S. crop of 25 million acres was Harosoy, including 42% of the crop in Illinois, 48% in Indiana, 46% in Ohio and 58% of Michigan's crop. To be that dominant, a variety can't just be good, it must be great and Harosoy (and later Harosoy 63) was certainly that.”

A graph (p. 20) compares soybean yield in the USA and Canada from 1924 to 1971. The first statistics on Canadian soybean yields date from 1941, and from that year onward Canadian soybean yields were generally higher than U.S. yields—in some year 5-6 bushes/acre higher.

A second graph (p. 22) shows the surprisingly parallel growth of the number of soybean acres harvested from 1924 to 1972. Though the number of acres is smaller in Canada, the rate of growth is almost identical. Address: Crop Science Dep., Univ. of Guelph, Guelph, Ontario, Canada.

619. Manchester, Harland. 1973. And a new way to trim your meat bill. *Reader's Digest*. Oct. p. 119-21.

• **Summary:** About the rise of TVP in the USA as a meat extender. It started to be used in school lunch programs but has now moved into supermarkets. In March 1973 “Red Owl Stores, Inc. of Minneapolis [Minnesota], placed a ground-meat product containing 25-percent soybeans and selling for about 20 cents a pound less than the all-beef hamburger at the meat counters of 51 of its stores in the Minneapolis-St. Paul area. It outsold all-beef hamburger three to one and is now marketed in all 136 Red Owl Stores, as well as 200 franchise stores. Red Owl also sells frozen pizzas and patties in which soybean proteins are used.” Discusses ADM, Worthington Foods, Henry Ford, and Robert Boyer.

620. Ross, Irwin. 1973. Dwayne Andreas's bean has a heart of gold. *Fortune*. Oct. p. 136-41, 243-45.

• **Summary:** One of the best articles and histories seen on Dwayne Andreas and A-D-M. In the 7 years since Andreas took over the leadership of A-D-M, he has nearly tripled sales (from \$371,626,000 in fiscal 1967 to \$967,710,000

in fiscal 1973) and quintupled operating profits (from \$3,225,000 to \$16,895,000). Meanwhile, the price of the stock has nearly quadrupled.

Dwayne Andreas was born in 1918, the fourth son in a family of 5 boys and a girl. They lived on a 160-acre farm in Lisbon, Iowa. "His father, Reuben, came from a Mennonite family, and the children were brought up in something akin to Mennonite discipline—no movies, no Sunday papers, no ball games on Sundays, a surfeit of religious devotions, and unending hard work.

"In 1928, Reuben Andreas was persuaded by the local banker to take over a bankrupt grain elevator in Lisbon. The whole family worked at the business, and it prospered. After graduating from high school, Dwayne went off to Wheaton College, in Illinois, for a year and a half and then entered the family business. Once a year he would travel 300 miles to Decatur, Illinois, to negotiate for his annual supply of soybean meal from the A.E. Staley Manufacturing Co. On a memorable day in 1938, Staley took him to lunch and suggested that the Andreases build a soybean-crushing plant in Iowa. Staley pointed out that Iowa farmers were about to plant a lot of soybeans; Staley's people did not want to expand geographically, so here was a golden opportunity. A few days later, the Andreas family contracted to build a factory in Cedar Rapids. Business was excellent...

"By 1945 the Honeymead Products Co., Inc., was earning \$150,000 a year after taxes. Dwayne Andreas was by now largely running the business, his father having retired and his older brother Albert having sold out. Dwayne was classified 1A in the draft, and in anticipation of departure for the Army he sold the Cedar Rapids plant, and later two smaller operations, to Cargill. In the end, Andreas was not called up and he found himself the 40 percent owner of a corporate shell, still called Honeymead, with a net worth of about \$2.5 million. Thus he became a millionaire at the age of twenty-seven.

"After the sale, Andreas went to work for Cargill, whose president, John H. MacMillan Jr., offered him a 4 percent stock interest. Andreas remained for seven years, making a \$400,000 after-tax profit when he sold his stock back to the company. He built a number of soybean and other oilseed plants, traveled widely, and for the first time got an inside view of the operations of an international trading organization.

"Meantime, his younger brother Lowell had come out of the Army and put Honeymead Products back into the soybean business in Mankato, Minnesota. Dwayne by this time owned the bulk of Honeymead shares. He left Cargill and went to work developing export markets and handling transportation logistics at Honeymead, while Lowell ran the plant. In seven years after-tax earnings went from \$300,000 to \$1 million.

"In 1960, Andreas received a phone call from M.W. Thatcher, the veteran manager of the Grain Terminal

Association, which represented thousands of farmers in Minnesota and the Dakotas who sold soybeans to Honeymead. Thatcher told him that his farmers now wanted to process their own beans and share in the profits."

So G.T.A. bought Honeymead for a sum that eventually came to about \$10 million. "The proceeds went to a corporate shell named First Interoceanic Corp., and both brothers were hired by G.T.A., Dwayne becoming executive vice president." But they were not happy there, in part because of the very different ways that cooperatives and private companies run their businesses.

The Andreases used Interoceanic to invest in several small businesses, and to buy a soybean crushing plant in Decatur. In 1963 they put up \$2.5 million to start the first new bank in downtown Minneapolis in over 40 years; in June 1964 the National City Bank opened and was very successful.

"The move into Archer-Daniels-Midland came in September, 1965, in an unusual way: the Andreases were invited in to provide new leadership. A-D-M not only was a diversified agricultural processing company, but also had a large chemical operation. It was controlled by the Archer and Daniels families of Minneapolis; John Daniels, a grandson of a founder, had served as president since 1958. In 1965, after a three-year decline in earnings, the company could not cover its dividend. Shreve M. Archer Jr., a director, took the lead in inviting the Andreases to join the company, offering to sell a block of 100,000 shares from the holdings of the Archer trust... To Dwayne Andreas, the request to lead A-D-M out of the doldrums looked almost irresistible...

"There were more practical considerations, of course. The stock was a good buy, for at \$33 a share it was nearly \$26 below book value. Andreas could also see great growth potential in A-D-M... Moreover, Andreas was greatly impressed with textured vegetable protein (TVP), a soybean product edible by humans, which A-D-M's laboratories had developed. At the time, TVP was being produced only in the lab, but Andreas could see a host of possibilities for it as a meat extender and as a cheap protein in a variety of foods—from cereals to tuna-fish salad...

"Through First Interoceanic the Andreases bought 100,000 shares of A-D-M, later extending their holdings to 181,900 shares. They assumed personal authority gradually and with faultless diplomacy. Dwayne joined A-D-M's board and executive committee in February, 1966; early the following year Lowell became executive vice president in the newly created office of the president, where he formally shared authority with John Daniels. After a year, Lowell became president and Daniels chairman of the board. While Lowell ran the company on a day-to-day basis, Dwayne, who owned most of Interoceanic, became the ultimate boss in everything but title. He finally assumed the title of chief executive in 1971.

"In 1969, A-D-M and First Interoceanic merged, with

the result that the two Andreas families increased their holdings to 16.6 percent of the shares, and A-D-M became owner of the Minneapolis bank. Lowell Andreas remained president until 1972, when he retired at the age of fifty, as he had long warned he would.

“The Andreas family’s first significant move to revamp A-D-M came in April, 1967 when the entire chemical division was sold to Ashland Oil for \$65 million... Later in the year A-D-M’s unprofitable alfalfa-dehydrating plants were sold for \$5 million... With this sizable bundle of cash, expansion started in a big way.” They invested much of the new money in soybean processing and constructing a TVP plant in Decatur. They increased the capacity of one Decatur soybean crushing plant to 4,000 tons a day—making it the largest single soybean plant in the world. During a 3-year period A-D-M’s soybean crushing capacity was increased to 120 million bushels a year from 50 million.

Two dramatic graphs show: (1) U.S. soybean production, exports, and cash price per bushel from 1964 to 1974 est. (2) A-D-M’s net sales and net earnings during the same period. The caption: “As the bean goes... so goes Archer-Daniels-Midland.”

A large color photo shows Dwayne Andreas in coat and tie, smiling.

621. Alfin-Slater, Roslyn B.; Jelliffe, Derrick B. 1973. Centuries-old cuisine of China is healthful, well balanced: SFH—Science, food, health. *Los Angeles Times*. Nov. 18. p. S70.

• **Summary:** “The Chinese diet, as might be expected, varies considerably from one region of the country to another. Yet it falls into two main groups, based on rice or wheat, the cultural superfoods.”

“In traditional Chinese culture, no animal milk or its products, such as cheese, are eaten at all. It is perhaps for this reason that the soya beans has been” called “the cow of China.”

“Soya curd (tofu),” precipitated by calcium, has an appearance and consistency very similar to those of cream cheese, and is also an important source of calcium in the Chinese diet, which is otherwise rather low in this mineral.

Interestingly, “appropriately flavored soya curd was consumed by Buddhists at feasts hundreds of years ago as a sort of artificial meat—long antedating the present-day textured vegetable protein (TVP) products, mainly derived from soya, which can be processed to give the appearance, texture and flavor of various meats.”

622. Greenberg, Daniel S. 1973. Slaughterhouse zero: How soybean sellers plan to take the animal out of meat. *Harper’s* 247:38-43. Nov.

• **Summary:** Discusses economics and marketing in the growing industry that makes meatlike products from soybeans. “Among some dozen major firms in America’s

vast culinary-industrial complex, the rise of simulated meats is regarded as the biggest opportunity for the triumph of an ersatz product since margarine took over two-thirds of the nation’s butter trays.”

“Numerous regional hamburger chains now serve mass-produced ‘extended’ hamburger patties, and all-vegetable simulations of breakfast sausage and patties are routinely available in supermarkets.”

“Research on the texturizing process began in the 1930s, when the elder Henry Ford became fascinated with the soybean and assigned a team of researchers to transform it into products ranging from fenders to upholstery material. Following laboratory successes that were not economical enough for the production line, the team eventually split up, but two of the researchers, Robert A. Boyer and William T. Atkinson, maintained an interest in rendering the soybean palatable to American tastes. In 1954, Boyer patented a process for isolating protein from soybean meal and spinning it into resilient threads that could be fabricated into simulated meat products, known in the trade as ‘analogs.’ In other words, they look and taste like the real thing. The process, however, was relatively expensive, and beyond the vegetarian market there was little demand for these simulations.

“The real break came in 1970, when Atkinson patented a cheap and comparatively simple process for imparting ‘chew’ to soybean flour by moistening it into a ‘plasticized’ mass, bringing it to a high temperature, and rapidly forcing it through perforated dies into a chamber of lower temperature and pressure. The result is a neutral-tasting granular material of any desired size and shape, depending on the dies, which contains about five percent moisture. When these granules are mixed with water, they retain their structural integrity, and in feel and texture resemble moist bits of hamburger.”

“Dr. Aaron M. Altschul, head of the nutrition program at the Georgetown University School of Medicine, is more outspoken: ‘The ability to produce texture out of soy flour will probably rank with the invention of bread as one of the truly great inventions of food.’”

“ADM... is venturing beyond the hamburger market. Its subsidiary, Gooch Foods, Inc., of Lincoln, Nebraska, is marketing ‘Noodles Stroganoff with Beef-flavored Vegetable Protein Chunks,’ as well as other dishes containing simulated beef.”

“In February 1971, after years of badgering by the industry, the Food and Nutrition Service of the U.S. Agriculture Department finally sanctioned the use of extenders for the meat portion of the school diet to a maximum of 30 percent. The enabling document—FNS Notice 219—is generally regarded as the Magna Carta of textured vegetable protein. During the first year of certification, the schools used 23 million pounds of the stuff; this year they’re up to 40 million pounds, and with meat prices soaring, no one thinks it unreasonable to expect at

least a doubling of that amount in the next year or two.”

“The Red Owl supermarket chain, some 130 stores in the Midwest, had recently introduced ground meat extended 25 percent with textured vegetable protein, labeled ‘Juicy Blend II’ to conform with a Minnesota ban on using ‘burger’ for extended products. It sells at about 20 cents a pound below the undiluted version, and is said to be outselling the all-meat counterpart by three and four to one.”

“The old rules specified that ‘A food shall be deemed to be misbranded’ if it is an ‘imitation’ of another food and does not bear the word ‘imitation’ on the label. The new rules simply say that ‘nutritional inferiority’ shall be the only criterion for evaluating the difference between reality and verisimilitude. The man-made version, if it’s nutritionally equal, need not bear the pejorative ‘imitation,’ though it may not be labeled as the real thing either.” Address: Publisher of *Science and Government Report*, a Washington-based newsletter.

623. Lehman Brothers. 1973. Ralston Purina Company: Company & industry study. New York. 112 p. Nov. 27. [5 ref]

• **Summary:** This company study includes a study of the U.S. soybean crushing industry. Leading processors of soybeans 1972-73 (p. 71). Company (estimated million bushels crushed/percentage of total): Cargill (130 million /18.0 percent), Archer-Daniels-Midland (120/16.6), Central Soya (90/12.5), Ralston-Purina (70/9.7), Esmark (55/7.6), A.E. Staley (55/7.6), Anderson Clayton (40/5.5), Allied Mills (35/4.8), Others (127/17.6). Total bushels crushed is 722 million.

Year Total Crush Percentage crushed by 4 largest companies

1954-55 241.4 million bu 41%  
1963-64 436.8 million bu 50%  
1972-73 721.9 million bu 56%.

624. ADM–Archer Daniels Midland Company. 1973. The possibilities are infinite (Ad). *Soybean Digest*. Dec. p. 2.

• **Summary:** A full-page black-and-white ad. An illustration shows the cratered moon in the foreground with the earth rising behind it.

“The simple soybean. People never thought of it as much more than animal feed—until ADM research perfected TVP® textured vegetable protein.

“TVP® can virtually duplicate the taste, texture, appearance and nutritional values of ingredients now being used at a fraction of the cost. Amazingly versatile, low-cost TVP® is hard at work cutting costs while maintaining quality in everything from catfish stew to beef chop suey.

“Depend on ADM, over 30 years the leaders in soy protein research to continue the exploration of the soybean’s potential. After all—the possibilities are infinite. The originators of textured vegetable protein.” Address: Decatur,

Illinois. Phone: 28541.

625. **Product Name:** Arkady T.V.P. Textured Vegetable Protein (Textured Soy Flour) [TVP Mince 120, Mince 240, and Chunk 10].

**Manufacturer’s Name:** British Arkady Co. Ltd.

**Manufacturer’s Address:** Old Trafford, Manchester, M16 0NJ, England. Phone: 061-872-7161.

**Date of Introduction:** 1973.

**Nutrition:** Per 100 gm.: Protein 51.5 gm, fat 1.0 gm, moisture 6.5 gm, ash 6.0 gm, crude fibre 3.0%, total carbohydrate 32.0 gm, dietary fibre 19.0 gm, calories 250.

**New Product–Documentation:** Letter from W. Pringle of British Arkady. 1990. May 30. “British Arkady began to sell T.V.P. in 1965, but we did not produce on this site until 1973. The product we sold was ADM’s, and we were their agent in the UK.”

Manufacturer’s brochure. 1989? T.V.P. Textured Vegetable Protein: Quality, Nutrition, Economy. 4 p. Discusses: How the product is made into chunks, strips, granules, and mince. Applications: Meat products, catering, vegetarian dishes. Methods of use. Nutritional analysis. Packaging (in 5 kg and 25 kg multi-ply paper sacks) and storage.

Interview with Peter Roberts, founder of Direct Foods Ltd. 1990. Dec. 12. British Arkady had tried to sell their Arkady TVP to the retail trade through the Cash and Carry chain but had failed—at considerable expense to Arkady. In 1985 Arkady bought Direct Foods Ltd.

626. Adolphson, Vivian. 1973. Texpro cookbook (textured protein). n.p. 17 p. No index. 22 cm.

• **Summary:** Texpro, made by ADM, would later be known as TVP. Contents: Dedication. The meat that never moved a muscle: Introduction to textured proteins. Nutritional breakdown of Texpro per 100 grams: Bacon flavor, ham flavor, beef flavor, plain. Recipes: Bacon flavor, ham flavor, beef flavor, plain. Texpro meat ratios for school lunch.

The Introduction states that it “has been used for several years now by food processors and institutions such as hospitals, orphanages, and schools. However it has not been readily available to housewives except in the form of imitation bacon bits.” It is sold in three flavors: Bacon, ham, beef, plain, and U-218. Note: Vivian is the wife of L.C. Adolphson, who works for ADM. Address: USA.

627. Salsbury, Barbara G. 1973. Tasty imitations: A practical guide to meat substitutes. Bountiful, Utah: Horizon Publishers. vii + 75 p. No index. 22 cm.

• **Summary:** This is a book of TVP recipes from a Mormon perspective. Contents: Foreword. About the author (autobiographical). Protein and proper nutrition. Textured soy protein: Soybean lore, what is T.S.P., types, availability, and storage. Suggestions for cooking with T.S.P.

Ten chapters of recipes use a different flavor of T.S.P. in each chapter with either “regular grocery items” or “home storage items.” The latter are typically part of a Mormon food storage program. The T.S.P. flavors used are beef, bacon, chicken, ham, and sausage.

Chapter 14, “Legumes or dried beans,” includes recipes for cooked or dry soybeans. Address: Orem, Utah.

628. **Product Name:** Oil Roasted Soynuts.

**Manufacturer’s Name:** British Arkady Co. Ltd.

**Manufacturer’s Address:** Arkady Soya Mills, Old Trafford, Manchester, M16 0NJ, England. Phone: 061-872-7161.

**Date of Introduction:** 1973?

**How Stored:** Shelf stable.

**New Product–Documentation:** Peter Fitch. 1979. *Journal of the American Oil Chemists’ Society* 56(3):304-05. March. “Vegetable proteins in snacks.”

Shurtleff. 1981. Makers of Soynuts.

Letter from W. Pringle. 1990. May 30. “British Arkady had a patent on the production of a type of soya nuts, dating back to the early 1970s. The product was sold through various health food outlets. The most popular brand was “Noots.” It disappeared from the market about 5 years ago.”

629. American Soybean Assoc. ed. 1974. Proceedings: World Soy Protein Conference. *J. of the American Oil Chemists’ Society* 51(1):47A-216A. Jan. Held 11-14 Nov. 1973 in Munich, Germany. 28 cm. [566 ref]

• **Summary:** See next page. Contents: Session I: World protein markets. Session II: Soy protein products, their production, and properties. Session III: Legal and regulatory aspects of soy utilization in foods. Session IV: Utilization of soy proteins in foods. Session V: Utilization of soy protein in foods. Session VI: Nutritional aspects of soy protein foods. Session VII: Future developments and prospects. Round-table papers. Registration list (directory of participants). Directory of exhibitors and press.

Berwin Tilson, president of the American Soybean Assoc., notes in the introduction (inside front cover): In Oct. 1972 “It was felt that the time was right to gather together top representatives from all areas affecting the soy foods industry... 1,100 representatives from 47 countries actually attended.” This was a pioneering and very important conference. It was opened by the U.S. Secretary of Agriculture Earl L. Butz, and senator Hubert Humphrey delivered a memorable, inspirational address. Many distinguished scientists and politicians also presented papers.

Exhibitors (inside back cover): Purina Protein Europe (Brussels, Belgium). Archer Daniels Brussels S.A. (Belgium). Cargill Inc. (Minneapolis, Minnesota). McKee CTIP (Rome, Italy). Central Soya International Inc.–Chemurgy Division (Brussels, Belgium), Alfa Laval AB (Tumba, Sweden; soymilk equipment). Staley Europe

(Amsterdam, Holland). A/S N. Foss Electric (Hilleroed, Denmark). Westfalia Separator AG (Oelde, West Germany). A/S Nirg Atomizer (Soeborg/Copenhagen, Denmark). Nabisco Inc.–Protein Foods Div. (Fairlawn, New Jersey). Miles GmbH (Frankfurt am Main, Germany). Lucas Meyer und Edelsoja GmbH (Hamburg, Germany). General Mills Inc. (Minneapolis, Minnesota). Address: Hudson, Iowa.

• **Summary:** Contents: Abstract. Introduction. History of the soybean in the U.S. Economic impact. Soybean protein. Textured soy protein. References.

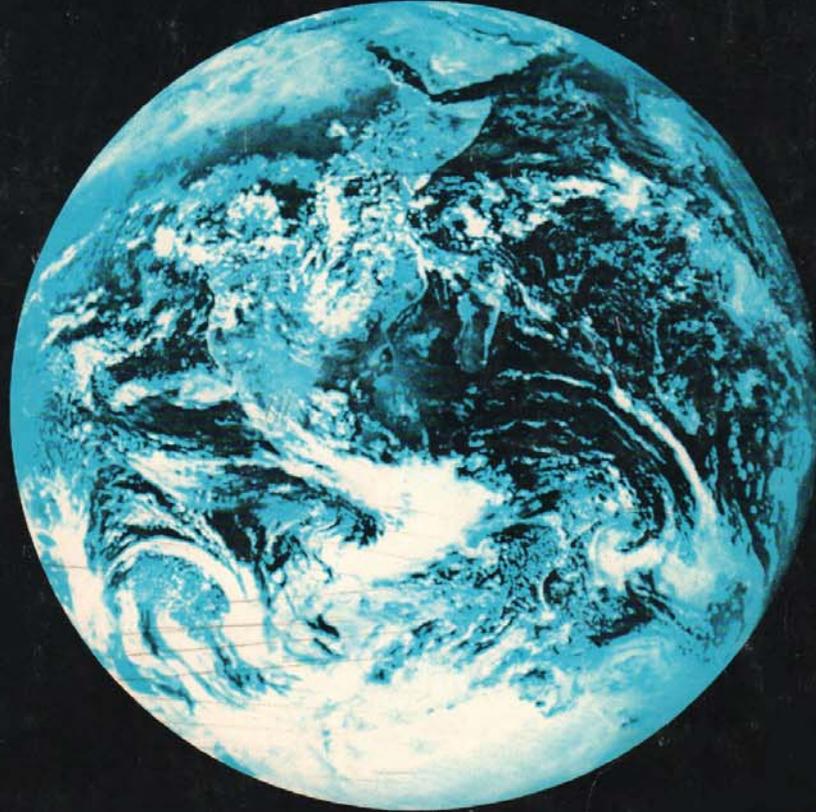

Table XII states that U.S. producers of edible soy protein products are: ADM, Cargill, Central Soya, Far-Mar-Co, General Mills, Griffith Labs, Lauhoff Grain Co., Miles Labs (Worthington), National Protein, A.E. Staley, Swift & Co. All make textured soy protein products except National Protein (which makes only grits and flours). Central Soya, Ralston Purina, and Staley make soy protein isolates. Central Soya, Far-Mar-Co, Griffith Labs, and Swift & Co. make soy protein concentrates. Address: Archer Daniels Midland Co., Decatur, Illinois.

632. McCloud, J.T. 1974. Soy protein in school feeding programs. *J. of the American Oil Chemists’ Society* 51(1):141A-142A. Jan. Proceedings, World Soy Protein Conference, Munich, Germany, Nov. 11-14, 1973.

• **Summary:** Contents: Abstract. Introduction. National school lunch program. Memphis city schools. Astrofood. Preportioned meat entrees. Textured vegetable protein.

When the U.S. Congress passed the National School Lunch Act in 1946, its declared objective was “to safeguard the health and well-being of the nation’s children and to encourage the domestic consumption of nutritious agricultural commodities and other food.” Since that time the National School Lunch Program has grown steadily. The Memphis City School System offers food service to 118,000 students but has only \$0.18 budgeted to spend for each meal. Last year the system served over 13,200,000 Type A lunches. Meanwhile the price of ground beef has skyrocketed from \$0.56/lb in Sept. 1969, to \$0.59/lb in Sept. 1970, to \$0.69/lb in Sept. 1972, to \$0.15/lb in Sept. 1973. At the same time the fat content has increased from 22% in 1969-72

## World Soy Protein Conference

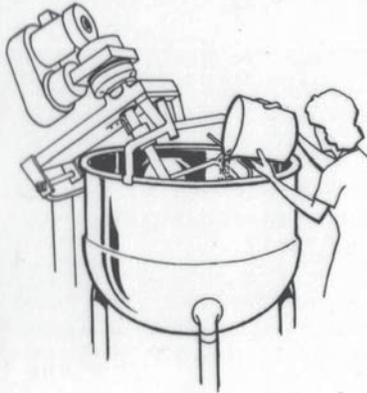

Munich, Germany

November 11-14, 1973

# AMERICAN SOYBEAN ASSOCIATION

### 3 STEP PROCEDURE FOR MIXING TVP® WITH GROUND MEAT

#### STEP 1

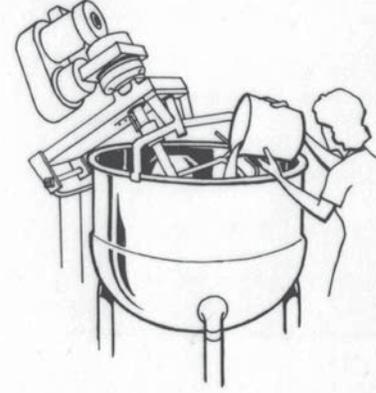

Combine ground meat and dry TVP® in mixer.

#### STEP 2

Mix for 30 seconds on low speed.

#### STEP 3

Add beef stock or water and allow to rehydrate for 5 minutes. Use in recipes as you would ground beef.

to 39% in Sept. 1973. In Feb. 1971 the USDA permitted TVP to be used in school lunches but only in a 30% or less hydrated ratio. This permits schools to mix 1 part TVP and 2 parts water with 7 parts ground beef or pork. Dry TVP costs \$0.383/lb in 30 lb cartons; rehydrated, it costs only \$0.128. Theoretically this school system could save over \$100,000 a year by using TVP with its ground beef products.

Note: This is the earliest document seen (Dec. 2015) describing the use of textured soy proteins in the National School Lunch Program. Address: Board of Education, Memphis, Tennessee.

633. Pringle, William. 1974. Full-fat soy flour. *J. of the American Oil Chemists' Society* 51(1):74A-76A. Jan. Proceedings, World Soy Protein Conference, Munich, Germany, Nov. 11-14, 1973.

• **Summary:** Contents: Abstract. Introduction. Production. Enzyme active soy flour. Heat processed full-fat soy flour. Uses. Address: The British Arkady Co. Ltd., Arkady Soya Mills, Old Trafford, Manchester M16 0NJ, England.

634. Wolf, W.J. 1974. Re: Visit by Akiva Pour-El and Peter Fitch. Letter to OC Files, Feb. 20. 1 p. Handwritten.

• **Summary:** "Nutrisoy 220 is made by steaming [soy] beans

at 2 lbs. pressure for 45 minutes, drying, dehulling and grinding to a flour. Process was developed this way because it was the easiest way to carry out cooking.

"Fitch is with The British Arkady Co., Ltd., a subsidiary of ADM."

Attached are 15 thick, glossy cards, each 5 by 8 inches, containing basic information about TVP and recipes. Across the bottom of each card is written, after the blue ADM logo:

"Archer Daniels Midland Company, Decatur, Illinois 62625

"TVP® The Original Textured Vegetable Protein "A Patented Product / U.S. Patent Number 3,488,770.

Card 1 contains 3 line drawings showing the "3 Step Procedure for Mixing TVP® with Ground Meat." The rest of the cards are bulk recipes. Address: Oilseed Crops Laboratory, USDA, NCAUR, Peoria, Illinois.

635. Gooch Foods, Inc. 1974. A new way to trim your meat bill. Red Skillet TVP Dinners (Ad). *Journal Star (Peoria, Illinois)*. Feb. 27.

• **Summary:** Note: Gooch Foods is owned by ADM, maker of TVP brand textured vegetable protein. Address: Lincoln, Nebraska.

636. Jewel Food Stores. 1974. Janie reports: How to use soy protein products! (Ad). *Chicago Tribune*. Feb. 28. p. S\_A23.  
 • **Summary:** Jane Armstrong, Jewel's home economist, begins: "In a recent column I discussed what soy protein foods are and why they are important. This week I'd like to tell you how to prepare and use them."

"There are two primary uses for textured vegetable protein: as extenders for ground meat and analogs, used as alternatives for meat, fish or poultry protein." "TVP products" include "Burger Plus, Proteinettes, Williamson, and Red Skillet Dinners."

"Meat alternatives are available in frozen forms (Morningstar Farms breakfast foods and Freezer Queen skillet dinners for example), dehydrated, and fresh forms."

You may be surprised to learn that "One acre of land produces 500 pounds of soybeans, but only 58 pounds of beef! So, you can see what future implications are with TVP... Quite a few TVP products are now available at Jewel, so why not try one this week?"

A portrait photo shows Jane Armstrong. Address: 1955 North Ave., Melrose Park, Illinois.

637. Burket, R.E. 1974. Blending animal and vegetable proteins for today's market. *Soybean Digest*. Feb. p. 16.

• **Summary:** "R.E. Burket, president, Protein Specialty Div., Archer Daniels Midland Co., discusses the use of soy protein as a food extender and additive rather than as a substitute for meat products."

"All of this talk about soy proteins, and particularly textured soy proteins, replacing meat has stirred up great interest within the livestock industry in the U.S. and frankly speaking, this interest is sometimes unnecessarily hostile."

"The discussion should center around soy proteins as meat extenders, not as 'meat substitutes.' With the exception of such items as imitation bacon bits, dry convenience dinners and the few products being sold into the vegetarian or health food fields, the bulk of the edible soy proteins produced today are used to extend meat in processed meat such as patties, loaves, sausages, chilis, etc."

"This is clearly pointed out in a marketing research report, Synthetics and Substitutes for Agricultural Products—Projections for 1980. This report, No. 947, was prepared by the Economic Research Service division of the U.S. Department of Agriculture. It was stated in this report that the market for the analog product, that is to say the one where meat is completely replaced with the substitution of a protein product, would be a minor factor even by 1980. This report did state that the use of substitute proteins in combination with meat could be as large as between 4% to 8% of the red meat production. The only fault with this report is the use of the word 'substitute.' Those of us in the industry producing soy protein products refer to our proteins as being an alternate protein or a complimentary protein to meat."

"It should also be noted that this report was careful to state that the demand for red meat would still be so great that even with the use of alternate proteins in the magnitude projected, there would still be a need to increase the production of red meat by at least 10% to meet the projected 1980 demand. What do these seemingly conflicting projections mean? Simply, that there is no serious conflict between meat and soy proteins. There is an increasing need for both."

"As we study what creates this need, we will find several factors favorable to the use of soy protein as complimentary proteins in meat products."

"The first factor is that of function. The various soy protein products being used today in combination with meat offer, in addition to their protein contribution, such things as structural integrity, binding, emulsifying and fat absorption qualities."

"Such functional properties are necessary in order to fully utilize the various cuts of the beef carcass. As an example, you are well aware that the average 1,200 lb. steer has a dressout weight of approximately 60% and provides around 720 lbs. of meat products. Of these 720 lbs., approximately 75%, or 540 lbs., are in the form of chuck, rib, loin or round."

"But approximately 25%, or 180 lbs., are in the form of such cuts as brisket, foreshank, flank, short plates and organ meats and/or suet. Quite often, in order to utilize this 25% of the carcass that has either a higher fat level than accepted by the public or a lower binding ability than necessary for incorporation into processed meat products, it is necessary to incorporate nonmeat items along with these cuts to make acceptable meat food products. Based on technology known today there is no better compliment to these meat cuts than the high protein, low fat soy protein products which are available in large quantities at reasonable prices."

"The second factor favorable to the incorporation of soy protein products into processed meat products is the economics of these proteins. The four general categories of soy proteins used in the meat industry today are soy grits, textured soy proteins, soy protein concentrates and isolated soy proteins. These products range in price from 15¢/lb for the soy grits to approximately 30¢ for the textured soy proteins and concentrates and up to approximately 60¢ for the soy isolates. When hydrated with water sufficient to bring these protein products back to the protein/moisture ratio which exists in meat, the per pound price for these products then ranges in the area from 6¢/lb-12¢/lb. Compared to meat at approximately \$1.00/lb, and please remember we have hydrated these soy proteins to a comparable protein/moisture ratio, you will see that the soy proteins offer great savings in addition to their functional properties."

"The third factor that must be present to create demand for the soy proteins is consumer acceptance. There has been much publicity regarding the success supermarkets received

in marketing the beef patty mix products. These mixes were generally composed of 75% meat and 25% hydrated textured vegetable protein. The marketing of such products to the consumer began in March 1973 in supermarkets in the Minneapolis, Minnesota area and has quickly spread to a nationwide basis. These products were clearly labeled as to their contents and carefully advertised accordingly. The consumer showed a willingness to try such products and seems to be more than satisfied for repeat sales to show that she is willing to purchase beef patty mixes at the savings offered to her over the all-meat product.

“It should be pointed out that at the same time these beef patty mixes have been increasing in sales, the consumption of meat products has continued to rise and this therefore bears out the contention of the U.S. Department of Agriculture report that there is sufficient demand for both proteins, each independently and collectively. It is obvious the American consumer has become used to feeding her family meat and would welcome the chance to continue to supply meat and extended meat products if they meet her required standards in regard to quality and price. Certainly, the use of soy proteins in combination with meat will help to keep the processed meat products in the price range the consumer can afford.

“Study 947 referred to earlier shows that just under 30% of the red meat consumed in the U.S. was consumed in the form of ground meat and/or comminuted products.

“You can see from what has been given that there is a place in the market for soy proteins and that in most applications they do compliment meat proteins. Properly utilized and labeled, these soy proteins offer the consumer a viable alternate, and it has been shown that the consumer welcomes such a choice.” Address: President, Protein Specialty Div., Archer Daniels Midland Co.

638. *Changing Times (The Kiplinger Magazine)*. 1974. Now there’s “meatless meat.” It cuts your food costs and may be healthier too. 28(2):53-54. Feb.

• **Summary:** Discusses textured vegetable proteins. “With the exception of the imitation bacon bits, such as Bac-Os from General Mills and Stripples from Worthington Foods, the textured vegetable proteins have not been available on most supermarket shelves. Now you can expect to see more of them...

“The big breakthrough for textured vegetable proteins came in February 1971 when the U.S. Department of Agriculture approved their use in the national school lunch program. Soy proteins, fortified with vitamins and minerals, can replace up to 30% of the meat in patties, stews, poultry and fish dishes served for school lunches...

When meat prices soared, soy processing companies began to market a new class of nutritious, dehydrated meat extenders in two- to three-ounce “envelopes,” similar to dry soup. They are often sold near the meat counter or with

“other semiprepared dinner mixes, such as Hamburger Helper. The packets may contain natural soy crumbles or caramel-colored granules that blend well with beef. They also come unflavored, so you can add your own seasonings, or preseasoned...”

Note: This is the earliest English-language document seen (Aug. 2011) that uses the term “soy crumbles,” probably to refer to small chunks of textured soy flour.

“Last summer, a midwestern food chain took a full-page newspaper ad to inform shoppers of the advantages of TVP, the trademark for Archer Daniels Midland’s product...

“Late last year Cargill, Inc., a large grain company, entered the consumer market in the Southwest with Burger-Plus, a lightly seasoned textured soy protein. It test-marketed three-ounce packages at two for 49 cents. Each package of mix and water stretched a pound of ground beef to a pound and a half. Other recent market entries include Grand Union’s seasoned and unseasoned ‘meat’ mixes, General Mills’s Burger Builder and A.E. Staley’s Burger Bonus. More firms plan to package soy products.”

639. Hunter, Beatrice Trum. 1974. Textured vegetable proteins: Satisfactory meat substitutes. *Consumers’ Research Magazine* 57(2):32-35. Feb. [2 ref]

• **Summary:** The author concludes that “Soy proteins are not an adequate substitute for meat, poultry, and fish.” This article focuses mostly on TVP brand textured soy protein, which has been widely promoted. TVP products are inferior in nutrient quality to traditional animal protein sources. They are indigestible for some individuals and produce flatulence. Blended with ground beef at levels up to 25%, the TVP can leave an aftertaste. “It was estimated that by the summer of 1973 one out of every four food stores across the country was selling such blends. Such sales have often outstripped sales of pure ground beef... Vegetable proteins are now said to be selling at a total rate of \$83 million annually, but the industry anticipates sales to reach \$1,500 million by the end of the present decade.

“Clearly, TVP products do not represent a move toward the rational use of plant protein in a world headed toward a serious shortage of animal protein. Rather, these products must be viewed as a new triumph of food technologists and processors who have succeeded in persuading many individuals to substitute such ‘reasonable facsimiles’ for real, natural foods.”

640. Burket, R.E. 1974. New uses of soybean products. *Tennessee Valley Authority, Bulletin* Y-69. p. 148-51. March. Soybean Production, Marketing and Use. Muscle Shoals, AL: TVA.

• **Summary:** Contents: Introduction. Add a quality factor. Functional advantages. Market acceptance. New uses for oil. Address: President, ADM Protein Specialty Div., Decatur, Illinois.

641. *Food Processing (Chicago)*. 1974. Mergers, acquisitions: Archer-Daniels Midland Co. April. p. 8.  
 • **Summary:** ... of Decatur, Illinois, agreed in principle to purchase Oliefabriek de Ploeg, B.V., of Rotterdam, Netherlands, for an undisclosed amount. ADM plants to expand the plant's capacity to 1,500 tons/day and to construct plants for making vegetable protein and soy flour on the adjacent property.

642. *Soybean Digest*. 1974. Processing plant in Australia. April. p. 34.  
 • **Summary:** "Archer Daniels Midland Co. of Illinois is building a soybean processing plant in Australia in conjunction with the Australian company, Provincial Traders. The first of its kind in Australia, the plant, slated to begin production in April 1974 is sited at Toowoomba in Queensland. The district around Toowoomba, known as the Darling Downs, produces the bulk of Australia's soybean crop. The new plant will initially handle 250 tons of seed per day, and will step up to 750 tons/day when more soybeans become available."

643. Zell, Fran. 1974. Soy moves in the market: New on the shelves. *Chicago Tribune*. May 2. p. N\_A18 or S\_A18 or W\_A18.  
 • **Summary:** The products mentioned below have been taste-tested by members of the Tribune food staff. (1) Williams Fortified Textured Vegetable Protein with Seasoning is a hamburger / ground beef extender. Seasoning flavors include hamburger, meat loaf, spaghetti, and taco. Price: \$0.39 per 4-oz. package.

(2) Park Burger Plus, formulated by Jewel Food Stores and introduced last year, is also a hamburger extender. The two varieties are seasoned (recommended for hamburger patties) and unseasoned (recommended for casseroles and other recipes). A 2-oz. packet extends ground beef 37%.

(3) Red Skillet Brand TVP dinners contain no meat at all. The textured vegetable protein (made from soybeans) comes in the form of beef or ham-like chunks. The dinners can be mixed with other dishes or sauces (such as Macaroni & Cheese Sauce).

(4) Soy Ahoy roasted salted soy nuts, made by the Malt-o-Meal Company, have been available under the Soy Town label in health food stores for several years. The two flavors are regular (the best seller of the two) and dry roasted. Now they are being test marketed in regular grocery stores.

A photo showing burgers being weighed on a beam balance bears the caption: "Textured vegetable protein gives you twice as many burgers."

644. Julien, Bruno. 1974. France's soybean imports up with growth of feed industry. *Foreign Agriculture (USDA Foreign Agricultural Service)*. June 17. p. 12-13.

• **Summary:** Reflecting the influence of the compound feed industry on protein sources, soybean meal accounted for over half of France's 2.6-million-ton protein source supply during 1970-72, followed by peanuts. The National Institute for Agronomic Research (INRA) recently confirmed the growth of protein use. For a long time there was only one soybean crusher in Northern France, the S.I.O. company [Societe Industrielle des Oléagineux], which crushed about 60,000 tons a year. Since 1970, however, Soya France has been crushing imported soybeans in a plant on the Brittany Coast. During 1974, the plant is expected to reach its full production capacity of 400,000 tons. The French Government recently authorized the construction of two new plants in the western part of France in Brest. Address: Office of U.S. Agricultural Attaché, Paris.

645. *Journal of Commerce (London)*. 1974. Netherlands to build 3 new soya factories. July 9.

• **Summary:** According to the Algemene Bank Netherlands, the factories for processing soybeans for direct human consumption will be constructed by Unilever, Archer Daniels Midland Co. (USA), and Cargill Soya Industry B.V. (a subsidiary of the American company). Two factories will be near Rotterdam and the third near Amsterdam.

Cargill Soya B.V. already crushes about 1 million tons of soybeans per year to make oil and meal; the company's new factory will make at least 15,000 tons of textured soya protein and 50,000 tons of soya flour. The Unilever plant will make about 30,000 tons/year of soy protein concentrate. ADM has recently acquired the Dutch firm Oliefabriek De Ploeg which processes about 85,000 tons of soybeans a year; this plant will be expanded.

The Netherlands is centrally located in relation to EEC product markets and Rotterdam is the center of European oilseed trading and crushing.

646. Edwards, Larry. 1974. Soy extenders remain 'food of the future' as category sales dwindle. *Advertising Age*. July 29. p. 3, 46.

• **Summary:** Sales of textured soy protein products have dropped along with the price of ground beef. "The category, which sources say peaked at about \$4,000,000, now reportedly has dipped to about \$3,000,000, with most of the products gathering dust on retail shelves."

"Last year, in response to consumer disenchantment with skyrocketing meat prices, a flood of branded consumer meat extender entries hit the market. To date only Plusmeat from Central Soya's J. H. Filbert Co. has moved into broad distribution. Among other extender entries in limited test markets: Burger Bonus and Tuna bonus from A. E. Staley's consumer products group; Betty Crocker's Burger Builder from General Mills; Armour-Dial's Burger Savor; Ac'cent ground beef extender from Ac'cent International, and Progresso Foods' Extend'n Flavor."

“Miles’ Worthington Foods unit, forerunner to its development of Morningstar Farms, already has over a 50% share of an estimated \$12,000,000 vegetable protein market for religious groups such as Seventh Day Adventists.

“According to researchers at Frost & Sullivan, New York, market research company, the total vegetable protein market jumped to about \$115,000,000 during 1973, but has since leveled off. Its size was put at \$82,000,000 for 1972, and the company predicts it will climb to \$1,500 million dollars by 1980.”

Miles Laboratories has stayed away from positioning their Morningstar Farms products as “meat substitutes.” Other products that continue to do well are Gooch Foods’ TVP Red Skillet Dinners and General Mills; Bac\*O’s, one of the original consumer vegetable protein products.

“Miles’ Worthington Foods unit, forerunner to its development of Morningstar Farms, already has over a 50% share of an estimated \$12,000,000 vegetable protein market for religious groups such as Seventh Day Adventists.

According to researchers at Frost & Sullivan, New York, a market research firm, the total vegetable protein market jumped to about \$115,000,000 during 1973, but has since leveled off. Its size was put at \$82,000,000 for 1972, and the company predicts it will climb to \$1,500 million by 1980.

647. *Windsor Star (Essex County, Ontario, Canada)*. 1974. Hopes for soybean plant surface. Aug. 17. p. 7.

• **Summary:** “Essex—The first signs of attempts to woo Maple Leaf Mills to locate a \$15 million soybean crushing plant in the county emerged Tuesday night. At their regular monthly meeting, the directors of the Essex County Federation of Agriculture [whose president is Peter Epp] decided to encourage the firm to move to the Windsor area. About a month ago, Maple Leaf Mills of Toronto announced it was interested in building a multi-million dollar crushing plant along the waterfront in Sarnia. The company, which is gradually phasing out its Toronto operation because the Ontario government is expropriating the land, owns elevators in Sarnia.” Railways, highways, and deep water ports are available in Sarnia. But there is opposition to the proposal because the St. Clair Parkway Commission has plans for expanding a park system along the shoreline. Note: Maple Leaf Mills later decided against buying the Sarnia site.

652. Direct Foods Ltd. 1974. Export price list—1 October 1974. Petersfield, Hants [Hampshire], England. 1 p. 33 cm.

• **Summary:** Printed with black ink on legal-size white paper it gives details on two product lines: Protoveg and Ranch House Meals. At the top center is a circular yin-yang logo with a naked woman in the top half and a soybean plant with pods in the bottom. To its left is written: “Convenience protein direct from the plant.” Address: Petersfield, Hants [Hampshire], England. Phone: Petersfield 4911 / 2.

653. Stone, David E. 1974. Profile: Francis E. Calvert pioneer of soybean protein. *Food Engineering* 46(10):40, 42.

Oct.

• **Summary:** Francis Earle Calvert was born in 1912 in Cambridge, Massachusetts. He was selected by Henry Ford to be part of a special group attending Ford's Wayside Technical School in Sudbury, Massachusetts. There was no tuition—a Godsend during the Great Depression. Then he attended Ford's Edison Institute at Dearborn, Michigan. Calvert's introduction to the soybean came directly from Ford himself—in the early 1930s. One day the great entrepreneur dropped in lugging a 100-pound sack of soybeans, saying that there must be something valuable in them since Orientals had been using them for 4,000 years. He challenged the young students to find out how to use them.

He and his young co-workers at the Greenfield Village laboratory had developed a destructive distillation process. It decomposed the soybeans using heat in a closed container. Later Calvert helped to design a new solvent extractor for soybean built like an Archimedes screw; it removed soybean oil using a counter-current solvent. Soon Calvert, and colleague Robert Boyer, were making spun protein fibers for upholstery in Ford cars, as well as plastic car parts.

Because soybeans were hard to get, the young men had to grow their own. They planted several thousand acres of soybeans, then had to develop mechanical equipment to harvest them. Now they set out to adapt them to human consumption. In 1936 the lab delivered fortified soymilk to Dearborn families, made a soy sherbet that was sold in the Ford employee cafeteria, and canned green soybeans for use as a vegetable.

Why do soybeans have a bitter taste? Its a survival mechanism.

The Drackett Corporation hired Calvert, and shortly thereafter they purchased the Ford Textile Fiber Division. They put Calvert in charge of basic protein research. In 1949 he was appointed research director at Drackett. In 1962 Calvert joined Ralston Purina Co. in special soy products research. He retired in Aug. 1973. Address: Product Mgr., Food Protein Div., Ralston Purina Co.

654. Henry, Wayne. 1974. Re: Literature on soy grits and flour. Letter to Walter Wolf, Northern Utilization Research Lab., 1815 University, Peoria, Illinois 61601, Dec. 20. 1 p. Typed, with signature on letterhead.

• **Summary:** He encloses a technical bulletin on the company's soy flour and grits. "As of this date, we do not have any printed literature on our soy protein concentrate."

Printed across the bottom of the letterhead: "Far-Mar-Co food operations: (headquarters) Hutchinson, Kansas; Overland Park, Kansas; St. Joseph, Missouri; Shreveport, Louisiana; Seattle, Washington; Los Angeles, California."

Note: Dr. W.J. Wolf states on 17 Oct. 1974, based on information from Bert Miner of the Farmer Cooperative Service, that Far-Mar-Co is producing about 100 tons/day

of defatted edible soy flour and 30 tons/day of soy protein concentrate. However the concentrate plant is now down because of a previous explosion in the alcohol recovery unit. They also have a small pilot plant in Hutchinson, Kansas, making "TVP" [textured soy flour] in unknown amounts. Dr. Henry told Dr. Wolf on 19 Dec. 1974 that they make soy protein concentrates but have not promoted them much. They are using some of it internally and are not yet up to capacity on production. Address: Vice President, Food Operations, Far-Mar-Co, Inc., 960 North Halstead, Hutchinson, Kansas 67501. Phone: 316-663-5711.

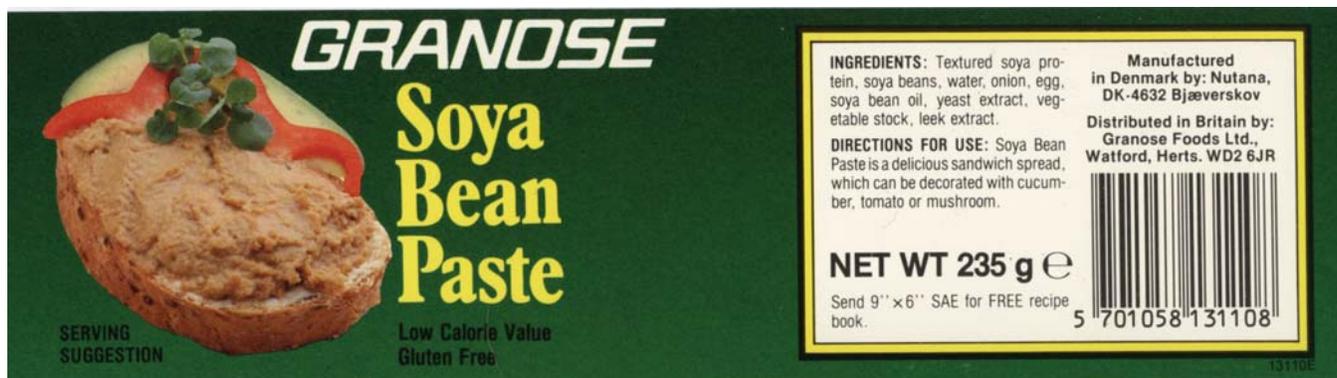

655. Predicasts, Inc. 1974. World manufactured soybean foods. Special Study No. 108. Predicasts, Inc., 200 University Circle Research Center, 11001 Cedar Ave., Cleveland, OH 44106. vi + 93 p. Dec. 24. No index. 28 cm. Research Analyst: Frederick M. Ross.

• **Summary:** Contents: 1. Introduction. 2. Summary. 3. Economics of Soybean Foods: Soybeans, soy flour, meat extenders (based on extruded textured soy flour), synthetic meat (based on spun isolates). 4. Industry structure: General, \$1,000 million food and feed giants (ADM, Cargill, Central Soya, General Mills/Takeda Chemical, Nabisco, Ralston Purina/Fuji Oil, and Esmark [Swift]), other major manufactured soy food companies (Unilever, General Host [New York], Miles Laboratories/Worthington & Kyowa Hakko Kogyo, A.E. Staley Mfg. Co., Stange [Chicago, Illinois], Chambers & Fergus [Humberside, England]), food industry structure. 5. Demand for manufactured soybean products: Demand for meat & substitutes, supply of natural meat, demand for meat substitutes, demand for soy flour. 6. North America: United States, Canada. 7. Latin America: General, Argentina, Brazil, Mexico, Other Latin America (Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay). 8. West Europe: General, France, West Germany, Italy, Spain, United Kingdom, Other West Europe. 9. East Europe: General, Hungary, Poland, USSR, Other East Europe. 10. Africa: General, Egypt, Nigeria, South Africa, Other Africa & Mideast. 11. Asia: General, China, India, Indonesia, Japan, Pakistan, Other Asia. 12. Oceania: Australia, New Zealand, Other Oceania.

Most sections contain numerous tables, mostly on meat and meat substitute consumption, and raw protein consumption, by country. Address: 200 University Circle Research Center, 11001 Cedar Ave., Cleveland, Ohio 44106. Phone: 216-795-3000.

656. Predicasts, Inc. 1974. Unilever (Document part). In: World Manufactured Soybean Foods. Special Study No. 108. 1974. Predicasts, Inc., 200 University Circle Research Center, 11001 Cedar Ave., Cleveland, OH 44106. See p. 12.

• **Summary:** "Unilever, the European manufacturing, chemicals, drugs and food conglomerate with 1973 sales of almost \$11 billion, is the largest firm in the world currently

involved with soy-derived protein foods. Unilever is the European pace setter in soy protein food research. Although proposed joint venture plans with Archer-Daniels-Midland and Cargill have been denied, Unilever is proceeding with its own plans to build a 30,000 ton-per-day soy protein food plant of its own at Zwijndrecht, Netherlands, via its Unimills subsidiary. The firm already maintains soy food research facilities in the Netherlands, the United Kingdom and elsewhere in Europe." Address: Cleveland, Ohio.

657. **Product Name:** Special X Flour.

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** Box 1470, Decatur, Illinois 62525.

**Date of Introduction:** 1974.

**New Product-Documentation:** Horan. 1974. Meat analogs. p. 380.

658. Duda, Zbigniew. 1974. Vegetable protein meat extenders and analogs; with special emphasis on proteins of soybean origin. Rome, Italy: Food and Agriculture Div. of the United Nations. Animal Production and Health Div. vii + 89 p. No index. 27 cm. [214 ref]

• **Summary:** Contents: Author's preface. Acknowledgements. Foreword. Introduction. Raw materials: Soybeans, other raw materials. Definitions: Meat extenders, meat analogues. Protein rich products originating from soybeans: Soy flour and grits, food utilization of soybean flours and grits, soy protein concentrates, soy protein isolates, texturized soy protein. Technological and functional properties of vegetable protein. Market considerations. A random selection of T.V.P. extenders and analogues with their characteristics and uses: Miles Laboratories, Inc., Marschall Division, Elkhart, Indiana, USA, Vegetable protein food products (Temptein TM spun textured vegetable protein, vegetable protein meat analogues, bacon-like flavoured chips, dehydrated ham-like flavoured cubes, R pepperoni-like flavoured links, Pro-lean 45 TM, Maxten textured vegetable protein, Morningstar Farms—breakfast links, patties, slices), Swift food protein, General Mills, Inc.—textured vegetable protein foods, Worthington Foods, Inc.—textured vegetable protein foods, Archer Daniels Midland Co.—textured vegetable

protein products, Purdy Steak Corp.—textured vegetable protein products, A.E. Staley Manufacturing Co.—textured and untextured vegetable protein products (200 series textured vegetable protein products, 400 series), Ralston Purina Company—textured soy protein products, Central Soya International Inc.—soy protein products, Nabisco, Inc. Protein Food Division—textured vegetable protein products, Lucas Meyer—soy protein products. Possible sources of meat substitutes other than soybeans: Protein from beans, from rapeseed, from sunflower seed, from cottonseed, from peanuts, other sources of proteins. General technological considerations. Projected consumption and market penetration. Cost considerations: The scale of production, the degree of processing, the price of raw materials. Conclusions. Selected Bibliography. Appendix I: USA soybean processors and products manufactured. Appendix II: Selected recipes using TVP for type A school lunches. Appendix III: Addresses of some companies making soy protein products. Appendix IV: Soybean utilization chart.

This book is compiled from a British viewpoint and cites many British journal articles, thus making it a nice complement to the American articles and bibliographies on this subject. Its bibliography is excellent. Address: Meat and Milk Service, Animal Production and Health Div., FAO, Rome, Italy.

659. **Product Name:** Granose Soya Bean Pâte (Gluten Free). Later renamed Soya Bean Paste.

**Manufacturer's Name:** Granose Foods Ltd. (Marketer). Made in Denmark by Nutana Helsekost.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1974.

**Ingredients:** Soya beans, onion, egg, textured soya protein, soya oil, yeast, salt, hydrolised vegetable protein, spices, monosodium glutamate.

**Wt/Vol., Packaging, Price:** 205 gm (7 oz) can.

**How Stored:** Shelf stable.

**New Product-Documentation:** Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. Label. 1980?, undated. 9.5 by 2 inches. Green, black, yellow, and white.

Text only “Granose soya bean pate makes delicious sandwiches with mushrooms, tomato, cucumber, etc.” Labels in Danish, Dutch, and Finnish.

Form filled out and Labels sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Nutana, was introduced in 1974. It is now named Soya Bean Paste. Label. 1990. 9.5 by 2.25 inches. White, yellow, and black on green. Photo of a slice of bread spread with the paste garnished with a slice of tomato, avocado and a sprig of green. “Low calorie value. Gluten free. Ingredients: Textured soya protein, soya beans, water, onion, egg, soya bean oil, yeast extract, vegetable stock, leek extract. Directions for use: Soya Bean Paste is a delicious sandwich spread, which can be decorated with cucumber, tomato or mushroom.”

660. **Product Name:** Soyapro (Canned Texturised Vegetable Protein).

**Manufacturer’s Name:** Granose Foods Ltd. (Marketer-Distributor). Made in Denmark by Nutana.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1974.

**Wt/Vol., Packaging, Price:** Can.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Clare Bryant. 1974.

*Everyday Vegetarian and Food Reform Cooking*. p. 137. The following is included in a list of meat substitutes. “Soyapro: A tinned [canned] texturised vegetable protein. Many other brands of TVP will appear on the market in the years to come.” Neither the name or address of the maker is included.

661. **Product Name:** Sanitarium Health Foods TVP Textured Vegetable Protein [Smoked Flavour, Roast Flavour Chunky Pieces, Roast Flavour Mince Style, Savoury Flavour, Southern Flavour, and Sweet & Sour Flavour], and Unflavoured T.V.P.

**Manufacturer’s Name:** Sanitarium Health Food Co.

**Manufacturer’s Address:** 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.

**Date of Introduction:** 1974.

**Ingredients:** Savoury: Soy flour, salt, dried yeast, vegetable oil, vegetable flavouring syrup.

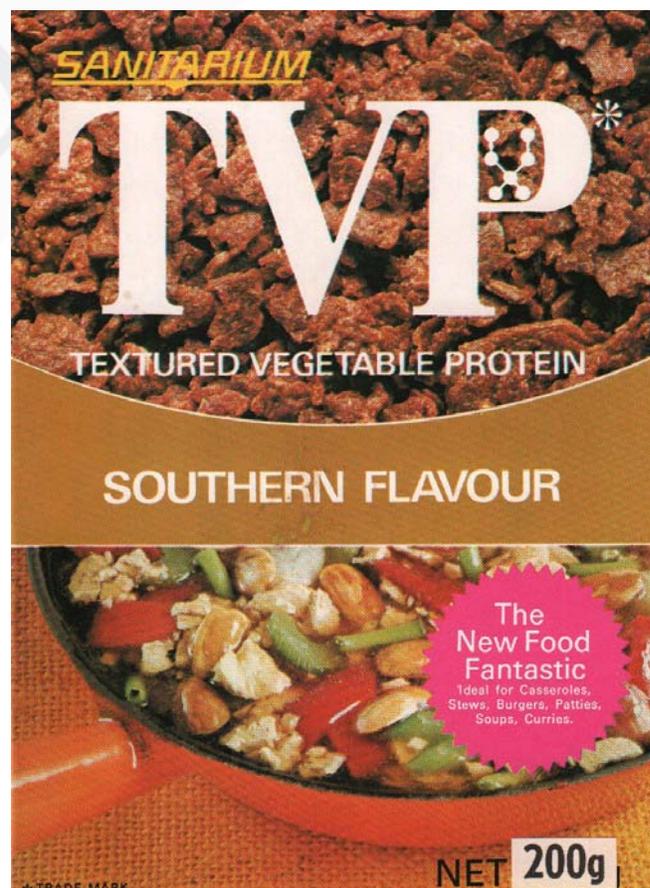

**Wt/Vol., Packaging, Price:** 300 gm box. Later canned.

**How Stored:** Shelf stable.

**Nutrition:** Savoury: Protein 35.0%, moisture 6.5%, ash 11.0%, fibre 2.5%, carbohydrate 24.0%, fat 21.0%.

**New Product–Documentation:** Label. 1980, undated.

Box. 13 by 9 inches. Full color. Photo shows TVP as is and in a skillet with rice. “The New Food Fantastic. Ideal for Casseroles, Stews, Burgers, Patties, Soups, Curries.” Letter from Sanitarium Health Food Co. 1981. Leaflet. 1981? 6 panels. Red and brown. “The new food fantastic. Sanitarium TVP Textured Vegetable Protein... From Sanitarium... The people who believe food should not only taste good, it should be good for you.” With 5 recipes. Leaflet. 1981. Full color, yellow background. “Sanitarium presents 30 exciting recipes with a difference from around the world... The difference is TVP. Textured Vegetable Protein.” Soya Bluebook. 1982. p. 61. “Canned vegetable protein foods and textured vegetable protein.” 1985. p. 86.

Letter from Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1974.

662. Archer Daniels Midland Co. 1974. The growing challenge: Protein cereal products for world needs (Portfolio). Decatur, Illinois. 28 p.

• **Summary:** The jacket of this portfolio has color illustrations on the front, and a two-page table with 3 columns containing information about ADM's operations and plants, products, and markets. The 24-page booklet inside has a girl's face looking out through a globe-shaped hole; below that is a huge field of grain harvested by five combines.

Contents: Introduction. World population and world food supply. The protein gap. Protein calorie malnutrition—A global struggle. Early detection of PCM can save lives. Treatment of protein calorie malnutrition. Solving the protein calorie malnutrition problem. Protein quantity and protein quality are essential to good health. Wheat and soybean blends provide low cost high quality protein sources. The situation in the United States. Key nutrients. The macronutrients. Address: Box 1470, Decatur, Illinois 62525.

663. Archer-Daniels-Midland Co. 1974. In: Moody's Industrial Manual. See p. 100.

• **Summary:** Contains an excellent, detailed history of each of the company's acquisitions and sales. "Incorporated in Delaware, May 2, 1923 to acquire (1) the linseed oil plants at Minneapolis [Minnesota], St. Paul, Toledo [Ohio], Chicago, Buffalo and Edgewater (N.J.) of Archer-Daniels Linseed Co., formed in 1902 as Daniels Linseed Co. and the name changed several years later to Archer-Daniels Linseed Co. (2) the entire capital stock of The Toledo Seed & Oil Co. of Toledo, manufacturers of linseed and castor oils, and (3) the entire capital stock of The Dellwood Elevator Co., operating a 1,500,000 bushel elevator adjacent to the linseed oil plant at Buffalo.

"On July 1, 1923 acquired the properties of Midland Linseed Products Co. for \$3,175,000. This company formed in 1898 operated linseed oil mills adjoining those of Archer-Daniels Linseed Co. at Minneapolis, Toledo and Edgewater.

"On Feb. 1, 1928 acquired the entire property and assets of William O. Goodrich Co. of Milwaukee [Wisconsin], manufacturers of highly specialized and refined qualities of linseed oil."

In 1968 ADM acquired Ross & Rowe, Inc. for 6,000 shares. In Jan. 1973 [actually Jan. 15] ADM acquired 50% of British Arkady Holdings Ltd. which subsequently [actually simultaneously] acquired [its subsidiary] British Arkady Co. Ltd.

"In Jan. 1974, Co. purchased a soybean processing plant and edible oil refinery at Araraquara, State of Sao Paulo, Brazil. The purchase was from Industrias Reunidas Marilu S/A of Rio de Janeiro. Co. was to begin a major construction

and renovation program immediately to install facilities to produce textured vegetable protein, a line of full fat and defatted soy flours and specialty protein products."

Note: On 31 Dec. 1987 ADM acquired the rest of Arkady Holdings Ltd. so that it now owned 100%. Both dates (15 Jan. 1973 and 31 Dec. 1987) were confirmed by Dick Burket of ADM on 25 April 1991. Arkady Holdings Ltd. is the important company because it is the parent company for all of the different Arkady companies such as the Haldane Group, etc.

664. Briscoe, Alan K. 1974. Soybean granule recipes. Bountiful, Utah: Horizon Publishers. 24 p. 22 cm. Pamphlet No. 2 in The Storage Bin Series.

• **Summary:** Contents: Introduction. Using beef soybean granules. Using ham flavored granules. Using bacon flavored granules. Using chicken flavored granules. Using unflavored granules.

In this TVP recipe booklet, the author calls TVP "soybean granules." Address: Utah.

665. Bryant, Clare. 1974. Everyday vegetarian and food reform cooking. Shaldon, England: Keith Reid Ltd. 143 p. Illust. by Graham Searle. 23 cm. Recipe index.

• **Summary:** Soy-related recipes include: Miso soup (p. 19). Soy bean cake (made with whole soy beans, p. 45). Miso wakame soup (p. 90).

Page 137 lists "Meat Substitutes" including "Protoveg: Texturised vegetable protein made to look and taste like meat in several flavours." "Soyapro: A tinned [canned] texturised vegetable protein. Many other brands of TVP will appear on the market in the years to come."

666. Horan, F.E. 1974. Meat analogs. In: A.M. Altschul, ed. 1974. New Protein Foods. Vol. 1A. Technology. New York: Academic Press. 511 p. See p. 366-413. Chap. 8. [92 ref]

• **Summary:** Contents: Introduction: What is meat? What is a meat analog? Historical development of meat analogs: Comminuted meats [meat emulsions such as frankfurters, sausages, bologna, and meat loaves] and ground meat types [such as hamburger], gel types, spun-fiber types, other fibrous types. Commercial developments: Protein raw materials, spun-fiber types, thermoplastic-extruded types. Nutritional aspects: Soy flours, soy protein concentrate, and isolated soy protein, spun-fiber types, thermoplastic-extruded types. Marketing aspects: In combination with meat, as a complete replacement of meat, marketing considerations, marketing accomplishments. Considerations for the future: Forecasting the growth of meat analog markets, relationship of meat analogs to the meat industry, meat analogs as related to the world food problem.

Table 1B (p. 380-81) is of great interest; it shows "United States commercial soy protein products in meat applications." The 1st column is "Company name." The next

6 columns under "Trade name" are as follows: 50% protein (flours flakes or grits; or textured); Soy protein concentrates (powder; or textured). Soy protein isolates (powder; or textured). For example, under "Textured soy protein concentrates" are only two products, GL-9921 and GL-219 both made by Griffith Laboratories (Chicago, Illinois).

Note: This is the earliest English-language document seen (Nov. 2015) that contains the term "Textured soy protein concentrates." However it is part of table 1B and written on two lines, with the word "Textured" on the bottom line.

"The conversion of vegetable protein materials into food products with meat-like texture is one of the great food inventions of all time" (p. 367).

A meat analog may resemble meat "in one or more simple functional characteristics such as appearance, texture, flavor, and color.

"A meat analog might best be considered as an engineered protein food product, fabricated to offer advantages over the natural meat product in one of several ways. These plus points may be a lower unit cost for an end-use product of comparable nutritional and palatability characteristics; a designed and controlled composition related to the quantity and quality of fats employed;..."

These engineered products "may be a complete replacement of the animal protein food with vegetable protein" or "they may be a combination of meat and vegetable protein" (p. 369-70).

According to a paper presented by Horan on 5-6 Feb. 1970 at the Gottlieb-Duttweiler Inst. for Economic and Social Studies, Green Meadow Foundation, Ruschlikon-Zurich, consumption of soy protein products in human foods is as follows: Soy flours (50% protein) 400,000,000 lb. Soy protein concentrate (70% protein) 25,000,000 lb. Soy protein isolate (90% protein) 20,000,000 lb. This is the equivalent of 500,000,000 lb of 50% protein soy flakes.

In thermoplastic-extruded types of meat analogs, a mixture of soy flour and water, plus flavoring, coloring, and supplemental nutrients (if desired) is "fed to a cooker-extruder and subjected to elevated pressure and temperature whereby a plastic mass is formed and extruded through a die to a condition of lower pressure and temperature, thus forming an expanded product. Depending upon processing conditions, variations in formulations, types of dies, and the speed of the cutting knife at the face of the die, a wide range of products can be made differing in density, shape, size, color, and flavor." They generally have 8 common characteristics, which are described. Address: Archer Daniels Midland Company, Decatur, Illinois.

667. Leading processors of soybeans, 1972-73. 1974. See p. 71

• **Summary:** This two-part table is Exhibit 39 of an unknown document. The two sources of the information are Lehman

Brothers Estimates, and USDA. In 1972-72 (the crop year begins in September) an estimated 722 million bushels of soybeans were crushed in the United States. Estimates of the number of bushels crushed by major U.S. soybean crushers is as follows:

Cargill 130 million bushels. 18.0% of industry total.

Archer-Daniels- Midland 120 million bushels. 16.6% of industry total.

Central Soya 90 million bushels. 12.5% of industry total.

Ralston-Purina 70 million bushels. 9.7% of industry total.

Esmark [Swift] 55 million bushels. 7.6% of industry total.

Staley, A.E. 55 million bushels. 7.6% of industry total.

Anderson Clayton 40 million bushels. 5.5% of industry total.

Allied Mills 35 million bushels. 4.8% of industry total.

Others 127 million bushels. 17.6% of industry total.

Part II of the table shows the growing consolidation in the soybean crushing industry:

Year: 1954-55. Crushings (million bu.): 241.4. Four largest companies: 41% of total. Eight largest companies: 64%. Twenty largest companies: 89%.

Year: 1958-59. Crushings (million bu.): 398.8. Four largest companies: 40% of total. Eight largest companies: 63%. Twenty largest companies: 86%.

Year: 1963-64. Crushings (million bu.): 436.8. Four largest companies: 50% of total. Eight largest companies: 70%. Twenty largest companies: 88%.

Year: 1967-68. Crushings (million bu.): 576.4. Four largest companies: 55% of total. Eight largest companies: 76%. Twenty largest companies: 94%.

Year: 1972-73. Crushings (million bu.): 721.9. Four largest companies: 56%\* of total. Eight largest companies: 82%\*. Twenty largest companies: 97%\*. \* = Estimates.

668. Machanik, Anne; Machanik, Gerald. 1974. Nutritious dishes that replace meats and fishes. Cape Town, South Africa: Hollandsch Afrikaansche Uitgevers Maatschappij (HAUM). xi + 112 p. 22 cm.

• **Summary:** A vegetarian cookbook. Soy-related recipes include: Soyabean roast (with cooked, mashed soybeans, p. 8). Spinach stalks with Somos (Soybean protein [actually textured soy flour], p. 61). Sweet and sour potatoes with TVP (Vegetable protein, p. 68). Sweet potato and soybean casserole (p. 68-69). Tomato and soybean stew (p. 70). Address: 1. Author; 2. Formerly Senior Medical Officer, Dep. of Labour, of the Office of the Workmen's Compensation Commissioner, and Head, Industrial Health and Safety, South African Bureau of Standards.

669. Quick, Vivien; Quick, Clifford. 1974. Everywoman's wholefood cook book. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 128 p. Illust. Index. 21

cm. [16 ref]

• **Summary:** A vegetarian cookbook. The Preface contains a nice statement by Bill Pickering, one-time holder of the world swimming record for the English Channel, on the importance of a vegetarian diet.

Soy-related recipes include: Soya bean savoury (p. 52). Nut savoury (with soya flour and Nutmeat Mixture, p. 56). Soya flour noodles (p. 57). Baked soya beans (p. 58). Protoveg (TVP) and recipes for using it. "Protoveg is in our opinion one of the nicer textured protein foods on the market at the moment. It is made by Direct Foods Ltd., which is licensed for the benefit of *Compassion in World Farming* (a Public Trust). All profits will be recycled for further development of protein direct from the growing crop.

"There is an unflavoured pack and various specific flavours—all of which are of 100 per cent vegetarian origin." Note: Barmene and Vecon are used occasionally as seasonings (e.g., p. 58). Barmene is a yeast extract which, by 1976, contained vitamin B-12. Address: Elmer, Middleton-on-Sea, Sussex, England.

670. **Product Name:** Loma Linda Vitaburger, and Vitaburger Chunks (TVP-brand Textured Soy Flour).

**Manufacturer's Name:** Loma Linda Foods.

**Manufacturer's Address:** 11503 Pierce St., Riverside, CA 92515.

**Date of Introduction:** 1974?

**New Product–Documentation:** Larson. 1974. "The vegetable protein and vegetarian cookbook."

671. Andreas, Dwayne O. 1975. Presentation on ADM. Paper presented to the New York Society of Security Analysts. 11 p. Jan. 21. Unpublished manuscript.

• **Summary:** Mr. Andreas has been processing soybeans and other agricultural commodities constantly since 1938. Four of ADM's top executives come from competing companies: Mr. Walker from Ralston [Purina], Mr. Burket from Central Soya, Mr. Randall from Cargill, and Mr. Bean from Anderson-Clayton. In 1965, thanks to an entirely new technology that was developing for soybean processing, ADM was transformed from a conglomerate into a non-conglomerate focusing on food technology. "Thanks to a great job that had been done in research, ADM received basic patents on TVP (Textured Vegetable Protein; TVP is a registered trademark). This knowledge was immediately commercialized and TVP has been very successful... it is now produced by some 12-13 different companies."

"The Marshall Plan developed Western Europe and Japan into the greatest cash customers that the United States ever had... This global internationalizing of food distribution had the effect of disorienting much of the entire food processing industry. That is, a plant that was not located so that it had access to the world markets might have become worthless or obsolete overnight. And dozens did."

Currently ADM has about 17% of the soybean processing business in the U.S., 17% of the wheat milling, 25% of the barley malting, 25% of the margarine oil business, 30% of the linseed oil, and 27% of the durum flour business (the basic flour for making pasta products).

A four-horse team is pulling ADM in a certain direction for the future. "One is the edible soy business which includes our TVP and soy flours, in which we are the leaders, and will soon include our soy protein concentrates. It is inevitable that edible soy proteins will increase in use over the next 20 years by leaps and bounds on a worldwide basis. And it is for no other reason than economic compulsion. The cost of making good quality high protein edible products out of soy is so low compared to other protein sources that it is just a matter of how long it will take the food companies to learn how to use it in more ways. In the soy flour business many soy flours are now being used to replace dried milk products just as margarine once replaced butter and this use is due to grow substantially in the next few years. The soy fortified bread and roll products you saw today are examples of how protein levels can be boosted by 50% with little or no increase in cost. ADM is the largest producer in the world of soy flour.

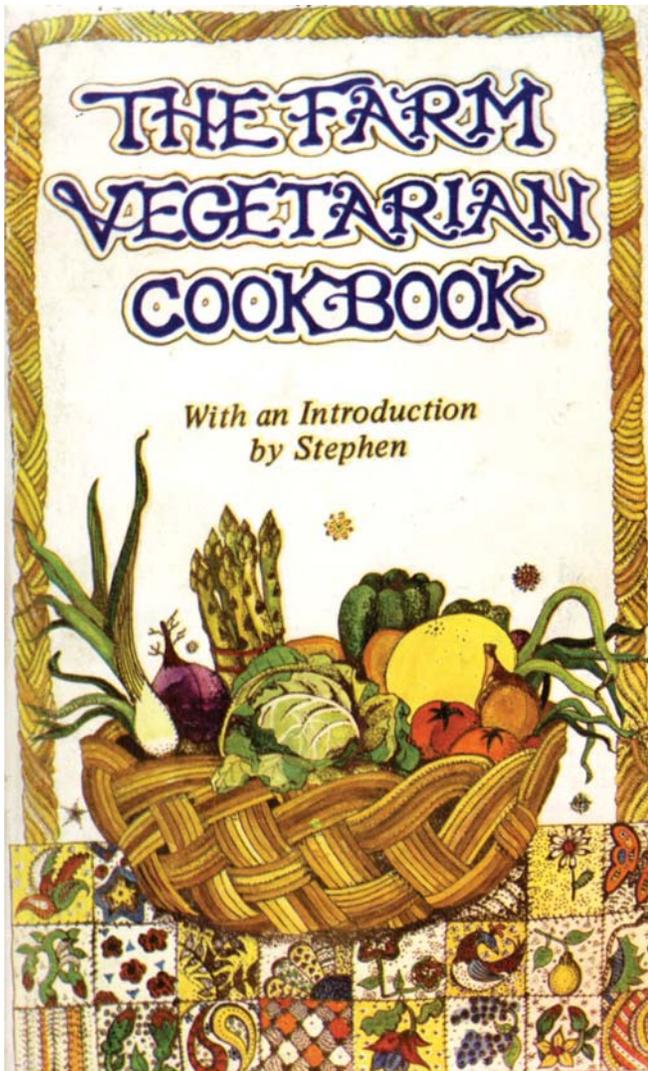

"TVP business has an enormous potential, maybe largely outside of the United States. In every country where there is a balance of payments problem, and where they are importing meat, we get a terrific tail wind from the government in selling TVP..."

"The second thing going in our favor is the continuing worldwide expansion of the margarine business. Margarine is replacing butter, and that's a trend that is unstoppable. This trend is fundamental to our business, since about eighty percent of all of our fats and oils, corn oil, soybean oil, go in margarine.

"A third part of our business which has almost unlimited future growth is the soybean meal portion, where we make a refined [dehulled] grade of soybean meal that's used by the poultry industry all over the world. Under today's technology, poultry is by far the cheapest form of meat that's commercially produced. It will expand very much faster than either pork or beef, because it's so much cheaper and so easy to produce, and that business will continue to grow enormously, worldwide.

"The fourth horse of our four-horse team is the corn refining business." We produce corn syrup and fructose [two different products], which are experiencing very rapid growth in demand. Two other very good firms, Standard Brands and the A.E. Staley Co. are now producing fructose, but suddenly most of the soft drink people have decided to use fructose, creating an enormous demand. So "we changed our plans and now plan to produce about 480 million pounds of fructose by next winter and to double that by sometime in 1976."

So the four-horse team pulling ADM into the future is edible soy products, margarine, soybean meal, and

refined corn sweeteners (corn syrup and fructose). Address: Chairman and CEO of ADM.

672. Farm, The. 1975. The Farm vegetarian cookbook. Summertown, Tennessee: The Book Publishing Co. 128 p. Illust. Index. 18 cm. Revised edition by L. Hagler. 1978. 223 p.

• **Summary:** Expanding on the pioneering “Yay Soybeans!” (Oct. 1974), this creative and creatively illustrated vegan cookbook contains many extremely innovative and original recipes including: Soybean Stroganoff. Soyburgers. Spaghetti Sauce with TVP. Soysage. Soy fritters. Indonesian fried tempeh. Soymilk. Tofu. Tofu spreads. Soy “yogurt.” Soy “cheese.” Soy “butter” (made with soy flour). “Cream cheese” (made with soymilk). Soy “mayonnaise.” Soy “whipped cream.” Soy “coffee.” “Soy ‘nuts.’” Soy pulp granola. Ice Bean [soy ice cream] (Recipes include: Pineapple “sherbet” and “Vanilla ice bean,” each made with soy milk instead of dairy milk). Mellowmeal (breakfast cereal containing soy flour). Soy “yogurt” Danish pastry. Soy

bread. Soy pulp cookies. Soy “cheese cake.” Blintzes (filled with tofu).

Gluten recipes (p. 54-59) include: Basic gluten (feeds 8 generously). Gluten roast. Gluten burritos. Chili gluten. Oven-fried gluten. Janice’s barbecue [barbecue] gluten ribs.

The back cover states: “We are a large, long-haired spiritual community in Tennessee. We came together through open meetings in San Francisco with Stephen. We have 750 people, including 250 kids, living on 1,750 acres. This cookbook is to help as many people be vegetarians as possible without turning any of them off and making them think its strange or weird and to let people know that it tastes good, is nice, graceful, and it can be a turn-on, that it’d be really neat to eat, and make you look forward to meal-times and make you really happy to eat such good food.” The Introduction, by Stephen, begins: “The thing about our cookbook is we don’t want to be faddish or cultish or scare people off. We just honestly want them to know how to make it on vegies, even somebody who doesn’t particularly have a moral reason for being a vegetarian, but just wants to eat a little cheaper, or somebody who learns to be a vegetarian to lose weight, ‘cause you maintain a really healthy natural weight on vegetables... The main thing is that we’re absolute vegetarians. We don’t do meat or milk or eggs or cheese or fish or fowl.”

“You can increase the world’s food supply by being a vegetarian. So its good for everybody else, its good for the individual for health, and its good for the soul and the spirit not to be involved in killing. And I understand that vegetables are alive, but like I’ve said before, I’ve been to pig stickings, and I’ve been to rice boilings, and rice boilings have better vibrations than pig stickings.”

Photos show: Facing title page: People planting white potatoes at the edge of a large field in front of the woods. The lady in front is Sylvia Tepper, Robert Tepper’s wife. Pages: (1) Little Susannah Frohman eating a rolled up soybean tortilla. (3) Stephen Gaskin. (18) Ruth Thomas, making lunch in the kitchen of the only house on the property when Farm folks first came here. It housed The Farm’s clinic, school, bank offices, and receptionist for a number of years until other facilities were built for these purposes. Ruth could make a mean soybean burger (which is pictured). (23) Laurie Sythe making potato soup on the other side of the same kitchen Ruth was pictured in. (35) Poblano chili plants. (60-61) Tempeh sliced to be round to fit on buns, resting on a plate (L) and a tray (R). (64). Uncle Bill (age 82, center, surrounded, from left by: Marilyn Keating, Jeffrey Keating, Ruth Thomas, Patrick Thomas, Uncle Bill, Joel Kachinsky, Roberta Kachinsky, Bruce Moore, Roslyn Moore {holding baby Sam}. All at their home on Schoolhouse Ridge. The house, named “Kissingtree,” was originally built for Stephen and family, but he declared it “too fancy” for him, and he passed it on to this group {women were mostly schoolteachers in our school}). (67) Janice Hunter

making stir fry at the Tower Road House kitchen. (68) John Hurgeton drinking a glass of soymilk on a construction site somewhere. (71) Sue Ellen, who worked in The Farm's soy dairy, holding a glass of soymilk and relaxing. (89) Sour soymilk Danish pastry. (106) Jars of canned goods stored at the Farm's canning facility. Thanks to Cynthia Holzapfel for providing photo captions.

Illustrations appear on almost every page: On the front cover is a color illustration of a basket full of vegetables on a quilt. Many of the pages have illustrated borders or unique illustrations (line drawings) (flowers, plants, leaves, a pot of steaming food, psychedelic designs, native American motifs, etc.) where there would otherwise be empty space. Pages: (10) A Farm member eating, with one hand, a tortilla wrap filled with cooked whole soybeans. (20) A young woman in a kitchen facing the stove. (28-29) Illustrations of two Farm members making pizza. (65) Uncle Bill in a kitchen stirring a pot. (81) A pitcher labeled "Soy Milk." (83) An old-fashion, hand-turned ice cream machine for making Ice Bean. (88) Sour soymilk Danish pastry. (95) A happy man and a woman eating bagels. The man's finger, pointing up, serves as a bagel holder. Yum! (100) Overhead view of a round table with ten people eating. (105) A vase full of kitchen utensils. (113) A lady holding a cake—a very favorite recipe on The Farm. (120) A lady rolling out dough on a table.

Note 1. This book played an important role in introducing soyfoods (especially tempeh and soy ice cream), as well as a vegan diet, to America.

Note 2. This is earliest publication seen by The Farm that contains a tempeh recipe.

Note 3. This is the earliest document seen (Oct. 2008) that contains the word "vegies" (one of two documents).

Note 4. This is also the earliest document seen (Oct. 2008) that uses the word "barbeque" or "barbequed" rather than the standard "barbecue."

Note 5. This is the earliest English-language document seen (Oct. 2013) that contains the term "Soy 'whipped cream' (regardless of capitalization).

Note 6. Some sources (OCLC/WorldCat) cite Stephen Gaskin as the author of this book. Others cite Louise Dotzler; her maiden name was Louise Hagler, but she was married to Thomas Dotzler in 1975. Later that decade they separated and Louise reverted to using her maiden name As "Louise Hagler," she was the editor / author of several later revised and expanded editions of *The Farm Vegetarian Cookbook* (1978, 1988) plus several outstanding books about soyfoods published at The Farm. Address: Summertown, Tennessee.

673. *Food Processing*. 1975. Plant, laboratories: Archer-Daniels-Midland,... Feb. p. 8.

• **Summary:** "... Decatur, Illinois, plans to build soy protein concentrate plant, scheduled to be in operation by March 1975. Company said expansion necessary to meet domestic and overseas demands."

674. Kies, Constance; Fox, Hazel M.; Nelson, L. 1975. Triticale, soy-TVP and millet based diets as protein suppliers for human adults. *J. of Food Science* 40(1):90-93. Jan/Feb. [12 ref]

• **Summary:** "These results suggest that triticale additions may be advantageous in the case of relatively poor quality plant protein resources such as millet and also in the case of relatively good quality sources such as soy. Additional work is needed on the effects of mixing cereal/plant protein resources in human diets." Address: Dep. of Food & Nutrition & Dep. of Agronomy, Nebraska Agric. Exp. Station & College of Home Economics, Univ. of Nebraska, Lincoln, NE 68503.

675. ADM. 1975. Technical data: Ardex 500. Ardex 700F, Ardex 700G. ADM: Box 1470, Decatur, Illinois 62525. 8 p. March 1.

• **Summary:** "Ardex is the trademark of ADM's family of soy protein concentrate products."

Ardex-500 is a full-fat soy protein concentrate

Ardex 700-F (fine) is a defatted soy protein concentrate in flour form.

Ardex 700-G (granular) is a defatted soy protein concentrate in granular form.

These products "possess a low level of the flavors usually associated with soy proteins."

"The process of manufacture (patent pending) involves the extraction of the water-soluble carbohydrates, minerals and other minor constituents, and inactivation of off-flavor-producing enzymes and anti-nutritional factors."

The composition is given in detail—minerals, amino acids, bacteriological, etc.

The product has been advertised as "TVP/2®."

676. ADM, Soybean Division. 1975. Technical data: Ardex 550. Soylec. Defatted grits, expeller grits, expeller flour for use as meat binders and extenders (Leaflet). ADM: Box 1470, Decatur, Illinois 62525. 8 p. May 1.

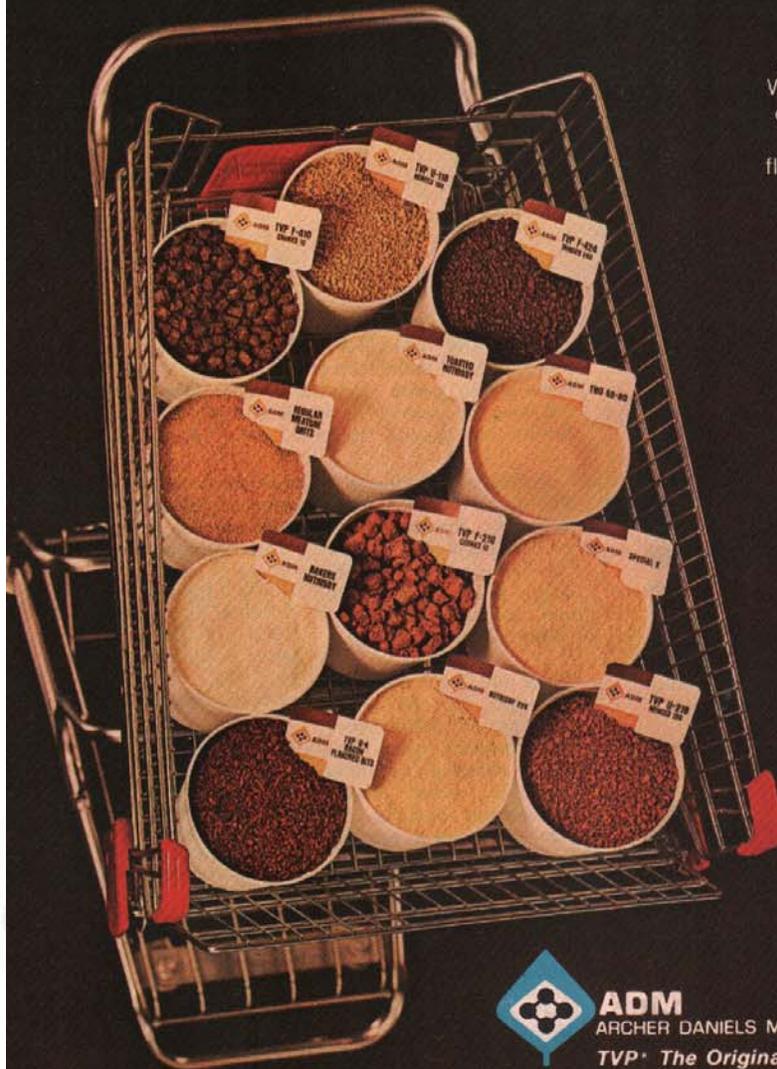

• **Summary:** Approximate composition of Ardex 550 (2 p.). Toasted Nutrisoy grits (composition) and Fine and regular Meatone grits (1 p.). Soylec: Lecithinated soy flour: Analysis of T-6 and T-15. (2 p.) Nutrisoy 220, Special X soy flour, Regular Meatone Grits. (composition) (2 p.)

677. Archer Daniels Midland Co. 1975. One stop shopping: At ADM—Where soy protein products come in the right textures, flavors, colors, sizes and types for formulations (Ad). *Food Processing (Chicago)*. June. p. 31.

• **Summary:** In a shopping cart are 12 ADM products: TVP F-410 Chunks 10, TVP U-118 Minced. TVP F-424 Minced 240. Regular Meatone Grits. Toasted Nutrisoy. TNG 40-80. Bakers Nutrisoy. TVP F-210 Chunks 10. Special K. TVP K-4 Bacon Flavored Grits. Nutrisoy 220. TVP U-210 Minced

# ONE STOP SHOPPING

**At ADM -- Where Soy Protein Products Come In The Right Textures, Flavors, Colors, Sizes and Types For Your Formulations.**

In the world of soy protein ADM can meet all your needs. We're unequalled in quality and quantity of full-fat and expeller products. Plus defatted flours, flakes and grits. And there's no wider choice of protein solubility in flour or flake form.

ADM supplies ingredients rich in protein and with excellent water and fat holding characteristics for canned and frozen foods, processed meats, bakery goods, cereals, candies, food drinks and more. ADM textured protein provides the unique combination of high quality and lowered costs in your food formulations.

ADM pioneered soybean food product development, introduced TVP® brand textured vegetable protein, has world-wide production capacity and research programs.

Let ADM serve you with its unmatched product variety, quick delivery and assistance in developing your own soy protein applications. For one stop shopping write or call: (217) 424-5419

180.

678. MacMillan, Joan Bradford; Smith, Elizabeth B. 1975. Development of a lacto-ovo vegetarian food guide. *J. of the Canadian Dietetic Association* 36(2):110-17. Summer. [13 ref]

• **Summary:** Page 111: “Whether the plant-based diet is arrived at by means of simple elimination of meat, fish and poultry, or by judicious substitution of suitable high protein vegetable sources for the animal proteins, it is known that it is possible to supply a nutritionally adequate dietary by means of plant foods plus milk and eggs.” “The guide was designed for vegetarians who consume some milk and eggs.”

Page 112: Table 1. Food groups and serving sizes. “The standard serving of milk is one cup whole, 2%, skim (added Vitamins A and D).” Other dairy products, such as 4 oz. cream cheese, may be substituted. “One and a half eggs on the average are recommended by the guide. This includes those used in baked items,…”

The four food groups are: 1. Bread, cereal, pasta, and rice. 2. Vegetable protein foods, including TVP, A. Legumes: 1 cup cooked soybeans or other beans, ¼ cup peanuts or peanut butter, 6 oz. soybean curd. “Meat analogues: These are usually canned or frozen meat-like foods derived from vegetable protein (often soy, gluten or nut protein).” B. Nuts and seeds (1½ oz. or 3 tablespoons). 3. Milk and eggs. 4. Fruits and vegetables.

Note: This is the earliest document seen (Nov. 2014) that contains the term “plant-based diet” in a nutritional context. This term, which is now widely used, denotes a diet that contains a high percentage of calories from plant foods, with an optional small percentage of animal foods allowed. There is no universally agreed numeric value for the definition of high vs. small percentages in this context. The term appears to mean different things to different authors; these diets can range from strict vegan to non-vegetarian with limited consumption of flesh foods. Address: 1. Research Asst.; 2. Assoc. Prof. Both: Dep. of Foods and Nutrition, Faculty of Home Economics, Univ. of Manitoba, Winnipeg [Canada].

679. Baldwin, R.E.; Korschgen, B.M.; Vandepopuliere, J.M.; Russell, W.D. 1975. Palatability of ground turkey and beef containing soy. *Poultry Science* 54(4):1102-06. July. [8 ref]

• **Summary:** In Part 1, ground dark turkey meat was combined with 10, 20, or 30% of rehydrated unflavored textured soy protein (TSP) (Bontrae Crumbles, General Mills, Inc., Minneapolis, Minnesota 55427). In Part 2, unflavored TVP (from ADM, Decatur, Illinois 62525) was used in place of Bontrae.

“A sensory panel indicated no significant difference in flavor between the controls and ground turkey or beef patties containing 10% textured soy protein (TSP). Both of these products were rated acceptable, whereas patties containing 20 and 30% TSP ranked just below acceptable

on the rating scale... As much as 40% TSP was substituted for ground turkey in sweet-sour and chow mein entrees without significantly lowering mean scores for aroma, flavor, and general acceptability.” Address: Univ. of Missouri, Columbia, MO 65201.

680. *Food Processing (Chicago)*. 1975. Protein update: Guides to protein products and companies. Aug. p. 28, 33-34, 36, 38, 40-41, 44, 48, 50.

• **Summary:** Discusses soy protein products made by: ADM, Baltimore Spice, Cargill, Carnation Co., Central Soya Co., Custom Food Products Inc., DMI Inc., Far-Mar-Co., General Mills, Grain Processing Corp., Griffith Laboratories, Industrial Grain Products Ltd., Lauhoff Grain Co., Miles Laboratories, Nabisco, National Protein Corp., Paniplus Co., Ralson Foods, Ralston Purina, Staley (A.E.) Co. (Protein Div.), Swift & Co. Details on how each product can be used and a complete address for each company are given.

Note: A table (p. 25) shows what soy proteins are available from what companies. For example: General Mills, Inc. (Minneapolis, Minnesota): Makes spun and textured vegetable protein products. “Spun protein is produced from soy isolate base and is used in products such as frozen ham dices and frozen chicken dices and chunks.” Recently the company has developed a patented process for Steam Texturization of protein. The product has a clean taste and comes in a range of particle sizes. Its texture is very similar to that of pork, beef, poultry and seafood. “Products are available to meet specific application needs with regard to texture, flavor, color, size, and nutrition. Products can also be produced to retain many times their weight of moisture.”

Grain Processing Corp. (Muscatine, Iowa): A line of soy protein concentrates with 70% protein. Two new soy protein isolates, including high and low solubility products, with 90% protein, are spray dried, free flowing powders.

Griffith Laboratories (Chicago, Illinois): Soy protein concentrate, powdered and granular structured. The latter is recommended as a meat extender in meat patties since it imparts texture, binding characteristics, moisture retention and extra nutrition. This textured soy concentrate is also “available in any number of seasoning blends.” Address: Assoc. Editor.

683. National Soybean Processors Association. 1975. Year book and trading rules 1975-1976. Washington, DC. ii + 103 p.

• **Summary:** On the cover (but not the title page) is written: Effective October 1, 1975. Contents: The National Soybean Processors Association [Introduction and overview]. Constitution and by-laws. Officers and directors. Executive staff. Members. Standing committees. Food Protein Council. Trading rules on soybean meal. Sales contract. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}), sampling of soybean meal {automatic sampler, probe sampler}), official weighmaster application, semi-annual scale report, official referee chemists (meal). Trading rules on soybean oil. Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, grading soybean oil for color (N.S.P.A. tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed), official weighmaster application, semi-annual scale report, official referee chemists (oil). Soybean oil export trading rules. Foreign trade definitions (for information purposes only).

The page titled National Soybean Processors Association (p. ii) states: “The NSPA is the professional association of America’s soybean processors. Its members process and market more than 95 percent of all soybean crushed within the continental U.S. From nearly 85 processing centers, in every major soybean producing region of the nation, NSPA members service America’s agricultural community.

“During the past crop year about 700,000,000 bushels of soybeans moved through processing plants of NSPA’s 33 member firms. Approximately 60 percent of America’s 1.2 billion-bushel soybean crop is bought and processed by NSPA members. Exporters account for another 32 percent of the crop, and the remainder [8%] is returned to farms for seed, feed, and residuals.” Also discusses industry programs, soybean research, and international market development.

The section on officers, executive committee, and board of directors (p. 7-8) gives the name, company affiliation, and phone number of each person. Officers—President: Lowell K. Rasmussen, Honeymead Products Co. Vice President: John G. Reed, Jr., Continental Grain Co. Secretary: Stiles M. Harper, Southern Soya Corporation. Treasurer: T.J. Suelzer, Central Soya Co. Immediate past president: James R. Spicola, Cargill, Inc. Executive Committee: Donald B. Walker (‘77), ADM. James R. Spicola, Cargill. Thomas J. Suelzer, Central Soya. John G. Reed, Jr., Continental. Martin Hinby (‘76), Cook Industries.

Board of Directors (alphabetically by company; each member company has one representative on the board): Thomas H. Wolfe, Anderson, Clayton & Co. Donald B. Walker, Archer Daniels Midland Co. George H. Heinz, Buckeye Cellulose Corp. John Fallon, Bunge Corporation. James R. Spicola, Cargill, Inc. Thomas J. Suelzer, Central Soya Co., Inc. John G. Reed, Jr., Continental Grain Co., Martin Hilby, Cook Industries. Joe C. Givens, Dawson Mills. Alfred Jenkins, Delta Cotton Oil & Fertilizer Co. John A. Dotson, Far-Mar-Co., Inc. Kenneth E. Sullivan, Farmers Grain Dealers Assn. of Iowa. Donald M. Chartier, Farmland Industries, Inc. Gaylord O. Coan, Gold Kist Inc. Lowell K. Rasmussen, Honeymead Products Co. David C. Thompson, Krause Milling Co. Kenneth J. McQueen, Land O’Lakes, Inc. Floyd W. Brown, Lauhoff Grain Co. Kermit F. Head, Missouri Farmers Assn.—Grain Div. James A. Smith, National Protein Corp. Robert E. Hicks, Owensboro Grain Co., Inc. Frank P. Perdue, Perdue Incorporated. John H. Payne, Planters Manufacturing Co. William T. Melvin, Planters Oil Mill, Inc. Theodore W. Bean, Quincy Soybean Co. E.J. Cordes, Ralston Purina Co., W.L. Knoll, Riceland Foods, Inc. J.D. Morton, Sherman Oil Mill. Stiles M. Harper, Southern Soya Corp. James W. Moore, A.E. Staley Mfg. Co. W.W. Moore, Swift Edible Oil Co. Preston C. Townsend, Townsend’s Inc. Tyler Terrett, West Tennessee Soya Mill, Inc.

Executive office, Washington, DC: Executive Director, Sheldon J. Hauck. Director, Public Affairs: Jack DuVall.

Administrative Asst.: Jean N. Sullivan. National Soybean Crop Improvement Council: Robert W. Judd, Managing Director. General counsel: Edward H. Hatton, Esq., Jenner & Block, Chicago, Illinois.

Members (listed alphabetically by company; within each company, first the name of the official Association representative {who is on the Board}, followed by the other personal members listed alphabetically by surname. For example, Archer Daniels Midland Co., the company with the most personal members, has 24. After the name of each personal member is given his address and phone number. In the listing below, the number of personal members is shown in parentheses after the name of each company, followed by city and state of the various locations): Anderson, Clayton & Co. (6); Phoenix, Arizona; Osceola, Arkansas; Jackson, Mississippi; Vicksburg, Mississippi; Houston, Texas. Archer Daniels Midland Co. (24); Decatur, Illinois; Galesburg, Illinois; Granite City, Illinois; Fredonia, Kansas; Mankato, Minnesota; Red Wing, Minnesota; St. Louis, Missouri; Fremont, Nebraska; Lincoln, Nebraska; Kershaw, South Carolina. Standing committees: For each committee, the function of the committee, the names of all members (with the chairman designated), with the company and company address of each are given—Crop Improvement Council. Meal trading rules. Oil trading rules. Safety and insurance. Soybean Research Council. Technical. Traffic and transportation. Food Protein Council (Objective and rules adopted 3 March 1971, amended 5 Nov. 1971). Address: 1800 M St., N.W., Washington, DC 20036. Phone: (202) 452-8040.

684. *Quick Frozen Foods*. 1975. \$100-million market by 1980 is foreseen for frozen soy extenders and analogues: Textured soy protein. 38:24-26. Oct.

• **Summary:** The market is growing for textured soy protein products that can “stand in” for more expensive meat, poultry and seafood in frozen usage. “Trend is toward analogues that extend animal protein to the point of replacing it” as the main component in new products entering the field. After industry consultation this magazine estimates that by 1980 these extenders and analogues combined will range from a low of \$60 million to a high of \$200 million in frozen food use.

Products discussed include: Central Soya Co.'s Response [a textured soy protein concentrate]. Ardex 700, one of the “TVP” [sic, soy protein concentrate] products

from ADM. Nabisco's VMR line with its beef, chicken, and seafood extenders. General Mills' Bontrae "no-meat meats" (beef, chicken and ham products spun from soy protein isolate) and no-tuna tuna. Most Bontrae products are sold frozen to food service people for better flavor. Mott's Soyloin entree line available from the Foodservice Division of Duffy-Mott Company, Inc., New York, NY. "These frozen, pre-cooked products include soy-analogues resembling traditional Sloppy Joe, Chili Con Carne, Chili Hot Dog Sauce with Meat, Sliced Meat Loaf in Tomato Sauce, Salisbury Steak in Gravy or in Sweet 'N' Sour Sauce, Meat Balls with or without Spaghetti Sauce."

"In the retail field, complete lines of vegetable protein analogues of animal foods are exemplified by the products of Worthington Foods, Worthington, Ohio... and the Joshua Foods Division of Food Producers, Inc., Minneapolis, Minnesota, among others... Twenty-eight of the [Worthington] items are frozen, with sales amounting to almost half of the company's total. The frozen products are predominantly spun from high-protein isolates. Their primary advantage is their well-wrought texture, and they also have shipping and storing advantages.

"The Joshua Foods products include meatless 'sausage' pizza, meatless 'meat' casseroles with noodles and macaroni, meatless lasagna, stew and barbecue cubes. All are shipped frozen. The Joshua Foods Division is in partnership with the Israeli developer of the special structurization process the company utilizes. The firm first produced its basic Joshua Filet, simulating beef, in 1973, and offered it to hospitals and other institutions. Retail product development followed success in the institutional market in the same year—initially with ground beef extender."

"General Mills is producing retail frozen soy products under the 'Betty Crocker' label in addition to 'Bontrae.' First introduced were Betty Crocker Country Cuts—textured soy protein with a flavor like ham, and Country Cuts with a flavor like chicken. The pre-cut chunks may be thawed and served in salads or added directly from the freezer and heated with various hot dishes.

"Two new Betty Crocker products, in three varieties each, are currently undergoing testing in the Fort Wayne and Tucson marketing areas—a croquette entree in ham, chicken and seafood flavors (with the seafood variety containing some real cod) and ham, chicken and barbecue beef meat sticks that blend real animal protein with vegetable protein in a potato crust. Each 1½-ounce box of Meat Sticks contains 12 sticks."

**685. Product Name:** Ardex 700 F and 700 G Soy Protein Concentrates.

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** 4666 Faries Parkway, Decatur, IL 62526.

**Date of Introduction:** 1975 November.

**How Stored:** Shelf stable.

**New Product–Documentation:** Spot in Food Processing. 1975. Nov. p. 56 "Defatted protein concentrates." Two improved soy protein concentrates are available from ADM (Decatur, Illinois). Ardex 700 F is in flour form, while 700 G is in grit form.

Archer Daniels Midland (ADM) Annual Report. 1977. "What's new: A 75 year report from Archer Daniels Midland Company." Page 8 states that cookies which are good for kids are "based on our new Ardex soy protein concentrates." The last page states that ADM Protein specialties makes "Ardex 700 soy protein concentrate."

A sell sheet from Basic Foods Company (Los Angeles) gives a nutritional analysis; both products contain 71.0% protein and 8.0% moisture. 700 F has a fine particle size that will pass through a 100 mesh screen; 700 G, grits, will pass through a 20-mesh screen.

*Soybean Digest Blue Book*. 1978. p. 34. Letter from Dick Wallace of ADM. 1981. Sept. To William Shurtleff at Soyfoods Center. ADM started producing soy protein concentrate in 1976.

**686. Product Name:** Cadbury's Soya Choice (Canned Meat Substitute) [Mince, or Casserole Chunks].

**Manufacturer's Name:** Cadbury Typhoo Ltd.

**Manufacturer's Address:** Franklin House, Bouvinville, P.O. Box 171, Birmingham B302NA, England.

**Date of Introduction:** 1975 December.

**Wt/Vol., Packaging, Price:** Can.

**New Product–Documentation:** Archer Daniels Midland (ADM) Annual Report. 1977. "What's new: A 75 year report from Archer Daniels Midland Company." p. 8. "Who needs high priced foods? Not the British. Cadbury's Soya Choice fills the bill. Based on TVP, these products are a raging success. It has the good flavor and nutrition of meat. At half the price. A color photo shows two cans of Cadbury's Soya Choice (Casserole Chunks, and Mince).

Cummings. 1979. *Food Manufacture* (London). 54(1):49-51. Jan. The product was launched in Dec. 1975.

*Food Engineering*. 1979. Jan. "Marketing Soy Products." A photo shows four cans of Cadbury's Soya Choice (Curry, Mince Italian Style, Casserole Chunks, and Mince).

Cummings. 1979. *Journal of the American Oil Chemists' Society* 56(3):400-03. March. "Launching a successful product on the consumer market." Development of the product by Cadbury Schweppes started in 1973 at a time when meat prices in the UK has started to rise and the economy was in one of its periodic downturns. "The final product was launched in December 1975. The brand name chosen was Soya Choice... We originally launched in blue cans but have since changed to discriminate between the mince and the chunk form."

Jenny Botsford. 1980. Soya. p. 50. Shows a black-and-

white photo of two cans of Cadbury's Soya Choice, one in Casserole Chunks and one in Mince texture. The photo on the can shows the product in a pie. The text on the front bottom of the can reads: "Textured soya casserole chunks (or mince) with onions in beef gravy."

R.A. Sair. 1981 (presented Aug. 1978). Marketing plant protein in Europe. p. 395-97. Shows a black-and-white photo of each product in its can. States that test marketing of the product in London began in Jan. 1976. Describes how the product and marketing strategy was developed.

W. Pringle. 1991. "Soya protein, past experience & future potential." In: Soja in Lebensmitteln: Vortraege 2. Hamburger Soja-Tagung. p. 156. Cadbury Soya Choice was launched in Jan. 1976. It consisted of extruded textured soya in gravy. There were three different products in cans. All of the meat extenders or meatlike products launched in the UK during 1975 and 1976 enjoyed real success for a period of time. "In particular Cadbury's Soya Choice sold well for about three years in every area of the U.K. Sad to relate, however, all of them quietly and gradually lost sales and finally disappeared from the market."

687. Kies, Constance. 1975. Nutritional evaluation of fabricated foods. In: G.E. Inglett, ed. 1975. Fabricated Foods. Westport, CT: AVI Publishing Co. vii + 222 p. See p. 186-95. Chap. 14. [7 ref]

• **Summary:** Contents: Introduction. Approaches to measurement of nutritive quality. Comparison of protein value of ground beef, TVP and methionine-enriched TVP at two levels of intake. Effect of varying the ratio of beef and TVP nitrogen on protein value. Comparison of protein quality of several commercially available plant protein products processed to resemble ground beef. Vitamin/protein interrelationships influencing the protein value of TVP. Conclusion. Address: Prof. Dep. of Food and Nutrition, The Univ. of Nebraska-Lincoln, Lincoln, Nebraska.

688. Silverstein, Alvin; Silverstein, Virginia B. 1975. Beans: All about them. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. 86 p. Illust. by Shirley Chan. Index. 22 cm. Summarized in Soybean Digest, Sept. 1975, p. 43. [7 ref]

• **Summary:** This excellent book for children discusses beans in legend and history, how to grow them, and their future as a low-cost protein supplement. Includes experiments, bean recipes, and games.

Contents: Beans. The story of beans. The history of beans. Beans in legend and lore. The life story of the bean. Kinds of beans. Beans in the garden and the marketplace. Beans for the future. Fun with beans. Beans for good eating.

Page 2: "Kuan Yu, a great war god in Chinese folktales, was a bean curd [tofu] seller in his youth."

Pages 12-13, a brief (and partially accurate) history of the soybean, begin: "Soybeans are native to eastern Asia. The oldest written records of them date back to 2838 B.C.

[sic], when Emperor Shen Nung of China wrote a description of the plant." Also mentions: The five sacred grains, soybean "milk," tofu, yuba, [soy] sauces, soybean paste, soybean sprouts, soybean oil, Engelbert Kaempfer, first introduced "to the United States around 1800 when a ship brought some to Philadelphia [Pennsylvania], Commodore Perry (1854), USDA tested about 10,000 different kinds. Now soybeans are the number one U.S. cash crop, accounting for more than 75% of the world's soybean supply. Soybeans are used as foods for humans (in the form of oil, flour, soy sauce, "milk substitutes, and meat substitutes and "extenders") and feeds for animals. They are also used in the manufacture of more than 250 industrial products, including paints, soaps, lubricants, adhesives, and fertilizer.

Page 16: "In China, beans were a good luck symbol. A person who wore a string of soybeans hidden around his neck was believed to possess magic powers to do amazing feats. Three dark soybeans soaked in sesame oil for three days were used to foretell the future."

The chapter "The life story of the bean" (p. 18-29) gives (with illustrations) a simple and accurate description of the bean seed and how it grows, discussing the hilum or seed scar, the micropyle or tiny hole at one end of the hilum, the seed coat, the two cotyledons in which food for the young growing plant are stored, the embryo nestled (a plant in miniature) between the cotyledons, with its two tiny leaves (the plumule), a little root (the radicle), and a stemlike part connecting them (the hypocotyl). When the seed is planted, and it germinates or sprouts, the "embryo root pokes its tip out through the micropyle and grows out into the soil. Tiny root hairs form along the growing root. They take in moisture and dissolved minerals from the soil." The hypocotyl grows until it "suddenly pushes up out of the soil—the first part of the seedling to emerge. It is bent over, for the cotyledons are still buried in the soil." The hypocotyl continues to grow. In a day or so the seed coat splits, then the top of the plant pops up out of the soil. "The empty seed coat is left behind, buried beneath the surface." Now the young bean seedling is growing straight up. The two seed leaves at the top unfold and grow quickly. Below them on the stem are the two cotyledons. As sun shines on the growing plant, its leaves, cotyledons, and stem begin to turn green—a turning point in the life of the plant.

For a while, the growing plant takes the food it needs from the reserves stored in the two cotyledons. But as these reserves are used up, they shrivel and finally fall off. Now the young plant must create its own food using chlorophyll and photosynthesis.

Chlorophyll traps energy from the sun. When examined under a magnifying glass, one can see that the surface of a plant leaf contains many tiny openings called stomates, which are usually open during the day and closed at night. "When the stomates are open, gases from the air pass freely in and out." Air is about 80% nitrogen, 20% oxygen, plus

smaller amounts of carbon dioxide, water vapors, and others gases. In the leaves, “carbon dioxide and water are combined, using the sunlight energy trapped by chlorophyll, into sugar, starches, and other complicated chemicals. Scientists call this process photosynthesis (photo means light, and synthesis means a putting together).” The by-product, oxygen, passes out into the air through the stomates; it is the gas that humans and other mammals need to breathe.

Describes the underground activities related to plant growth, nodules, bacteria that live symbiotically in the roots and fix ammonia and nitrogen. Also describes the bean flower, its parts, self-pollination, the key role of bees, and how the seeds are formed from the flower.

The chapter “The soybean–Number one” (p. 36-39) describes the current status of the soybean in the USA. The chapter “Beans for the future” discusses modern developments such as CSM, soyfoods such as sufu, tempeh, miso, spun soy protein fibers, soybean meat analogs, textured vegetable protein (TVP).

When a bean seed sprouts, how does it know which way is “up”? “Could you ever get a seedling with its roots pointing up in the air and its shoot poking down into the soil?” Supposing you cut off all sunlight? No, plants have a built-in gravity sense which scientists call “geotropism.” A plant hormone called an auxin causes the plant to bend upward—and toward the light (heliotropism). In 1888, the symbiotic partnership between legumes and nitrogen fixing bacteria was first discovered by Hellriegel and Wilfarth. There are short-day plants, long-day plants, and day-neutral plants; flowering will not begin until the length of days and nights is just right (p. 54-59). Bean recipes (p. 70-75). Address: 1. Prof. of Biology, Staten Island Community College, New York City; 2. Translator of Russian scientific materials.

689. ADM. 1975? The meat that never moved a muscle. Introduction to textured vegetable proteins (TVP). Decatur, Illinois: Archer Daniels Midland Co. 21 p. Undated.  
 • **Summary:** Contents: Introduction. Helpful hints with TVP. Recipe cards (pages 2-21, many including “lowest priced ground beef”).

“Introduction: TVP has been used commercially for several years now by food processors and institutions such as hospitals, orphanages and schools. However, it has not been readily available to housewives except in the form of imitation bacon bits.

“TVP is a meat-like product made from soy beans. It is designed to be used with other meats or by itself. Briefly, here’s how it’s made: the hulls are removed from the soy bean, then the oil, and what’s left is ground into flour. The flour is then put through a giant machine called an extruder where great heat and pressure force the flour out of the machine through various sized holes, much like your home food grinder. This causes the molecules to change, forming

chains instead of a random network. This is what gives the product its fibrous, meat-like appearance.

“TVP is currently employed in numerous packaged, canned, and frozen foods. And, many are still being developed. Some pizzas and pizza rolls contain textured protein; likewise, some canned products such as chili and sloppy joes. Every product that does contain textured protein is clearly labeled as such. It is a good idea to get into the habit of reading what the manufacturer includes as ‘ingredients’ on their label.

“I should mention one more item. Plain minced textured protein is a handy item that I keep within reach at cooking time. When using canned chicken soup, or beef vegetable soup or other soups that may be skimpy in their meat content, I add about ¼ cup of plain minced textured protein and simmer about 15 minutes. This makes for a more substantial serving and costs very little in time or money, compared with using additional real meat. Needless to say, protein consumption is thus increased.” Address: Decatur, Illinois.

690. Giovanna, Jasper Di. 1975? My recollections of I.D. [“Ike”] Sinaiko and early history of Illinois Soy Products Co. Illinois? 22 p. Undated. Unpublished typescript.

• **Summary:** In early 1935 Jasper saw a news story in the newspaper in Springfield, Illinois, stating that a man from Madison, Wisconsin, named Isaac Sinaiko had purchased an old flour mill and warehouse located near The Springfield Stock Yards. It said that Mr. Sinaiko, together with certain associates, intended to install machinery and equipment and remodel the building to accommodate a soybean processing business.

The U.S. was still in the throes of the terrible 1929 to 1937 Depression. Jasper, who had only part-time work, was looking for a better job. At the time he was doing stenographic work, light bookkeeping, and other secretarial work. Through Mr. Rankin, superintendent of the Springfield Stock Yards, he got in touch with Ike Sinaiko—who called him to say that he would soon need a stenographer-clerk-bookkeeper. They met at Jasper’s office in Springfield and Jasper began to send out letters to potential customers advising them of the new business; each contained samples of soybean meal and soybean cake.

The new company, named Illinois Soy Products Co., was incorporated under the laws of Delaware. Associated with Ike in the company were his father, Alex, and his brother, Joe. A little later an attorney, Carl Sorling, an attorney in Springfield, also joined. Carl had a very successful law firm, apparently specializing in corporate law.

The president and managing of the company was I.D. Sinaiko. His father, Alex, still lived in Madison, Wisconsin, but come to Springfield often and spent time at the plant during construction and installation. Joe Sinaiko was Ike’s elder brother. He also had a younger brother, Arlie, who

was an eye, ear, nose, and throat doctor. Joe Sinaiko lived in Cedar Rapids, Iowa, where he ran the Iowa Milling Co., a soybean processing plant which he owned. "Joe Sinaiko was one of the first soybean processors in the State of Iowa and one of the earliest in the United States." In Madison, Wisconsin, the home of the Sinaiko family, the Sinaikos had operated a feed store and feed jobbing business. But, in the early days, Joe Sinaiko was the only family member who had experience with soybeans and soybean processing. In the early days Joe had also manufactured feeds, and at times soap. "In Iowa Joe had a large recognition and enjoyed a big following. He was lovingly referred to in certain circles as 'Iowa Joe.'"

While the plant was being remodeled and the machinery installed, Alex and Joe Sinaiko spent a great deal of time in Springfield. They guided the activity and worked closely with Ike. Since Ike had little real experience with soya processing, and Jasper had absolutely none, Joe spent much time patiently teaching them. They began to order booklets, circulars, and other information on soybeans from the University of Illinois Agricultural Experiment Station, the U.S. Department of Agriculture in Washington, DC, the National Soybean Processors Association, etc.

As the plant opening approached, Ike hired a traveling salesman, Matt Carrigan, to call on the trade and also to solicit soybean meal and cake business. The machinery being installed for soybean processing was made largely by the V.D. Anderson Co. of Cleveland, Ohio. Anderson's representative in the Illinois area, John Lundberg, contributed his experience and knowledge. The original machinery included three "Duo Expellers," which each crushed or pressed 350 bushels of soybeans per day, for a total of 1,050 bushels/day.

In 1935 the soybean industry in the USA was in its infancy. Most of the soybeans were yellow, but some black or brown soybeans were grown for hay. The latter were considered inferior for processing since they contained 1-2% less oil and because the dark skins discolored the yellowish soybean meal. "Some buyers seeing the dark specks got the idea that the meal had been adulterated."

The Sinaiko's hired James Schlesinger to be plant superintendent. His son-in-law, Gordon Cruikshank, who worked for the C&IM Railway Co., gave Ike and Jasper much valuable help concerning rates and the use of "Milling in Transit" billing of soybean meal. Much money was involved in proper application of "transit billing" and rates.

"In the fall of 1935 processing started at the Illinois Soy Products Company. Prices for soybeans were between 50¢ and 60¢ per bushel. I believe our starting base wage rate for laborers was 25¢ per hour and for skilled men up to 45¢ per hour. 'Skilled' men would be maintenance men, millwright, and expeller operators.

"I soon learned that Ike Sinaiko was a man of high character, soft-spoken, keen of mind and with a friendly

disposition. He was a charitable and also religious man. He quickly made friends in business circles and also in personal activities. He became active in his church. Also, Ike's wife Ruth was very well liked and made friends readily... He was well liked by his 'peers' in the Soybean Industry.

"Inasmuch as the soybean industry was very young at the time, a good deal of effort was needed to induce farmers to plant more soybeans. We had also to disseminate information to buyers of Soybean Meal as to how to feed successfully the soybean meal to cattle, hogs, chickens, turkeys etc." (p. 5)

Ike started a plan of trading soybean meal for soybeans on a pound for pound basis. This appealed to soybean growers and helped the company, which was profitable for two or three years. However when oil prices began to increase relative to meal prices the practice was discontinued.

"I learned a lot from Ike because of the gentle way he responded to angry shippers who were disturbed by grade discounts. Ike had a pleasing manner with customers and potential customers. He was always generous, but not overly so."

"Ike had a wonderful way with children. He was very democratic with employees and soon earned their friendship and respect." A long story follows of how he helped Albert Cresswell and his family (p. 6).

Both Ike and Joe were very wise and skillful in capitalizing on the movement of markets. They had a knack of buying and selling at the right time. Ike illustrated this many times to the profit of Illinois Soy Products Co.—which was a success right from the first year. Another factor was the expanding livestock and poultry industries; demand for soybean meal in feeds was greater than the supply.

The soybean meal made by the company was sold under the brand name of "Illini," a good choice for a processor located in Illinois. "Although the Illinois Soy Products Company was the only soya processing plant in Springfield there were 3 large competitors in Decatur, Illinois: A.E. Staley Mfg. Company, Archer Daniels Midland Company, and the Shellabarger Soybean Processing Company. Allied Mills was located at Taylorville, Illinois just 26 miles away. Funk Brothers Seed Company had a soybean plant at Bloomington, Illinois. Ralston Purina Company operated at St. Louis, Missouri; Glidden in Chicago. There was also a plant in Quincy, Illinois, but I have forgotten the owners of that plant. Ike soon became on good terms with the operators of those plants and they sometimes loaned us machinery parts and gave us information regarding what to do about problems. Of course, Joe Sinaiko was daily in touch with Ike and was extremely helpful with machinery, loan of personnel, and when needed loans of money. Ike had great respect for Joe and also Love."

The company soon began to expand, adding several larger Anderson expellers. Ike and Ruth built a new, beautiful

and spacious house in southwest Springfield, adjacent to Washington Park. Ike began to travel more, both on business and for pleasure. He took his family to Israel, Europe, and Havana, Cuba—leaving Jasper in charge. Ike suffered from asthma, and all the dust around the soybean plant made it difficult for him to breathe properly. He cleared his throat frequently, and occasionally hinted that he would like to get away from the Illinois humidity. Continued.

691. Giovanna, Jasper Di. 1975? My recollections of I.D. ["Ike"] and early history of Illinois Soy Products Co. (Continued). Illinois? 22 p. Undated. Unpublished typescript. • **Summary:** Continued: At Joe's suggestion, Ike entered the Illinois Soy Products Co. into membership with the National Soybean Processors Association. He even served on some Association committees. The secretary or president of NSPA at the time was Edward J. Dies, an author of agricultural or Wall Street subjects. He wrote several books about soybeans.

In about 1937 Ike had some meetings with a representative of a German company that designed and built solvent extraction plants for soybeans. At that time most of the industry capacity was of the expeller type (or hydraulic in the southern U.S.). A number of larger companies, including ADM in Decatur, were looking at solvent extraction plants. Eventually, after serious consideration, Ike decided against such a plant, apparently for three reasons: (1) He wanted to move to a better climate; (2) Extraction plants required considerable water and sewage usage, neither of which were easily obtainable at the plant site; (3) These plants were very expensive.

Ruth Sinaiko's maiden name was Grebler. Her parents moved from Wisconsin to Springfield to be near Ruth and Ike and for new business opportunities. This made everyone happy. Ike and Ruth adopted a baby girl. "They named her Jean and gave her all their love."

As time passed, the acreage planted to soybeans in the U.S., including Illinois, increased. The country began to come out of the Depression. Irving Rosen, a brother-in-law of Ike's, together with Joe and Alex Sinaiko, bought the soybean plant at Quincy. Max Albert, another brother-in-law, also with Joe Sinaiko's help, bought property at Galesburg, Illinois and made plans for a soybean processing plant.

These plants became successful and this made Ike happy. There were good relations between the various families and many get-togethers. Frequently Ike would take Jasper to these get-togethers. "They all treated me very affectionately. Joe and Ike would advise me of the virtues of working hard and of being honest and of keeping good morals and character. This impressed me very much and had much to do with how I handled myself."

"During this time, along with the rapid expansion of the livestock and poultry feeding there was a big jump in volume of pet food business, especially the dog food business. There was a growing acceptance of dry dog food which

was relatively new in pet feeding. Soybean products were widely used in the manufacture or formulation of 'dry' dog food. Ike got the idea to make a Soya Pea-Sized Cake for use in Dog Food. This product was obtained by a screening process of the Soybean Cake after it left the Cake Crusher in our process. The Pea-Sized Cake was accepted and became a permanent part of the business of the Illinois Soy Products Company."

Ike also made a mixture of molasses with soybean cake for feeding cattle. Then he ordered and installed a "pellet machine" and made "Soybean Meal Pellets" for about a year. But neither of the two products was successful. Note: This is the earliest English-language document seen (June 2018) that contains the term "Soybean Meal Pellets" (regardless of capitalization).

Discusses Hitler's 1938 rise to power in Germany, his oppression of Jews, and the family of Eric Nadel of Hamburg. Eric and his wife came to Springfield and Ike hired him to work in the office. He also later helped Otto Langfelder.

Joe and Ike decided to start a soybean plant in Decatur, Illinois, because of the favorable freight rates and "milling in transit" privileges. Also large amounts of soybeans were grown in the surrounding area. They purchased the vacant Hight Elevator, an old concrete elevator situated on the I.C. railroad in an industrial area, and started Decatur Soy Products Co. It began production at harvest time in 1939. ADM's new solvent extraction plant was not ready until shortly afterwards.

When Germany invaded Poland and Britain [sic], and World War II began, the commodity markets exploded. The war helped the soybean industry to grow, and most processors thrived. Decatur Soy Products was a financial success its first year.

During the 1930s, the U.S. was a net importer of fats and oils. Most of the imports came from Southeast Asia. After the Japanese bombed Pearl Harbor, these imports stopped. The U.S. government took emergency action to increase our supply of oils and fats by a big increase in the planting of soybeans and other oilseeds. Their program included control of the soybean processing industry by the U.S. Commodity Credit Corporation (CCC). After many meetings, a plan was developed which put all soybean processors under contract with CCC. This contract fixed the profit margins of the processors, and controlled the prices processors could pay for soybeans or charge for products. Ike played a role in these negotiations and his views were respected. The profit margin was good and processors, with few exceptions, prospered. Through these meetings and related NSPA meetings Ike became well acquainted with the leaders of the Industry as well as the CCC and he attended many of the meetings where decisions were made. A few of these people were Soybean Johnson of Purina, Gene Funk of Funk Brothers Seed Company, Ed. Sheiter of A.E. Staley

Mfg. Company, Dwayne Andreas of Honeyamead Products, Ralph Goldseth of the Glidden Company, Clive Marshall of Allied Mills, Hank Lloyd of U.S. CCC, Ed Dies of the N.S.P.A. Mr. Shellabarger of The Shellabarger Soybean Processing Company.”

The War created a major expansion in the livestock and poultry industries, and also in the usage of fats and oils, not only in the U.S. but in countries allied with us. Therefore soybean acreage grew rapidly and processing capacity grew with it. Yes despite this expanded capacity, demand for products was greater than supply. Because of the mushrooming demand for feeds, the availability of formula feeds was limited by the feed company’s ability to buy proteins. Soybeans had become the single largest U.S. source of protein for the feed makers. Some processing firms began to hold back on selling proteins to the trade so they could increase their production of feeds, and some even used this advantage to enter the formula feed business. The feed firms that found their protein supplies completely or partially cut off were desperate to obtain supplies. Most of the processors, including Illinois Soy Products Co. and Decatur Soy Products Co. started allocation systems based on the previous year’s usage. New customers could only be given an allocation as the processor’s production expanded.

The leading U.S. grain company and exporter of grains, the Cargill Co., had recently entered the formula feed business. Since Cargill was not a soybean processor and found it difficult to buy enough soybean meal, Cargill decided to buy a going soybean processing business. Joe and Ike often visited and spoke with Julius Hendel of Cargill as well as some others prominent in Cargill’s managing team, and Cargill’s desire for a soybean plant was conveyed to Ike or Joe. After some preliminary talks, a deal was made for Cargill’s purchase of the Illinois Soy Products Company. [in early 1944] The price paid was generous and afforded Ike and the other stockholders a very good capital gain. Cargill agreed to keep Eric Nadel and the other personnel on to help run their new acquisition.

“Following the sale of Illinois Soy Products Company, Ike made plans for moving his family and home to Los Angeles, California.

“Ike did not intend to retire. He scouted around in California for a business to buy or get into. There was an expeller-type soybean plant in Norwalk, California that was owned by The Glidden Company and which was closed-down. It had not operated for a while. Ike and Joe decided they could make a go of this business and they formed The Liberty Vegetable Oil Company, following purchase of the closed plant

“In the beginning Ike processed mostly soybeans and flax at The Liberty Vegetable Oil Company, but as time went along he learned to crush profitably such oil bearing seeds as safflower, copra, and off-grade walnuts and other nuts which were in good supply in Southern California. Later, he put

in a small scale refinery and produced refined oils for the cosmetic trade... This business was a success for Ike from the first year, though it took a good deal of doing on Ike’s part.”

692. Ross & Rowe. 1975? Soybean lecithin (portfolio). Box 1409, Decatur, Illinois. Undated—but probably 1975,

• **Summary:** On the glossy cover of this portfolio is written:

“Soybean Lecithin

Yelkin T®

Yelkin TS®

Yelkin SS®

Yelkin DS®

Yelkin 1018-H®

R&R 551®

Foss & Row, Inc.

On the back cover bottom is the ADM logo inside a map of the world.

“Ross & Rowe, Inc.

“Subsidiary of Archer Daniels Midland Company

“Box 1409, Decatur, Illinois 62525

“Tel: 217/424-5805.”

Inside are many glossy inserts—most printed front and back with photos—explaining the uses and specifications of these different types of lecithin. Lecithin is an emulsifier, wetting and dispersing agent, parting agent, antioxidant, and nutritional source. For example, Yelkin T is a standard plastic (heavy-bodied) lecithin; it is not fluid and not bleached. Much lecithin is sold in food-grade 55-gallon drums. Address: Decatur, Illinois.

693. *Grocer (The) (London)*. 1976. Soya factory. 198(6218):7. Jan. 24.

• **Summary:** “The first ‘soya meat’ factory in Brazil, located at Sapucais do Sul, Rio Grande do Sul, is to commence production in January. It is expected to produce 2,000 tons per month of TVP (texturised vegetable protein). The company which owns the factory—Sarandi S/A Agro-Industria e Comercio—plans in future to export TVP to other countries in Latin America and to Africa, the Middle East and Europe.”

694. deMan, J.M. 1976. Texture-structure relationships in new protein foods. *Cereal Foods World* 21(1):10-13. Jan. [4 ref]

• **Summary:** Contents: Introduction. Spun fibers. Extruded products. Additional techniques (*kori-tofu*). Water sorption characteristics. Textural characteristics.

Photos show: (1) Scanning electron microscopy of spun soy fibers at six magnifications. (2) John M. deMan, with a brief biography. (3) Scanning electron microscopy of TVP. (4) Scanning electron microscopy of *kori-tofu*. (3) Scanning electron microscopy of structured soy protein concentrate. Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, Canada.

695. **Product Name:** [Soycomil {Soya Protein Concentrate for Young Animals} (K is a fine powder for calf milk replacer, or P is a coarse powder for pelleted piglet feed)].

**Foreign Name:** Soycomil.

**Manufacturer's Name:** Unimills B.V. Renamed Loders Croklaan B.V. in 1986. Subsidiary of Unilever.

**Manufacturer's Address:** Lindtsedijk 8, 3336 LE Zwijndrecht, Netherlands.

**Date of Introduction:** 1976 January.

**Wt/Vol., Packaging, Price:** 25 kg valve bags and in bulk.

**How Stored:** Shelf stable.

**New Product–Documentation:** Soya Bluebook. 1980. p. 54; 1981. p. 64. This is the earliest listing seen for a soy protein concentrate outside the USA. No brand name is given. Note: This company is owned by Unilever. Soya Bluebook. 1987. p. 72. UniMills B.V., affiliate of Unilever N.V. of Rotterdam, makes Unico and Soycomil Soy Protein Concentrates, at Zwijndrecht. They contain 60.5% protein on a dry basis and come in a variety of particle sizes.

Talk with Carol Velthuis at Michigan State Univ. 1989. Aug. 9. The product, used only as a calf milk replacer, was introduced at least 10 years ago.

Spot in Feed Management (Mt. Morris, Illinois). 1989. Dec. These are two antigen-free soya protein concentrates. "As indigestible carbohydrates present in soybean meal, soya flour, and full fat soya are removed during the process, the digestibility of the protein is considerably improved... Soycomil is an ideal protein for early weaned piglets as diarrhea due to undigested proteins is prevented." The K type is for calves and the P is for piglets; the P is not a textured soy protein concentrate.

SoyaFoods (ASA, Europe). 1990. Spring/Summer. p. 2. Loders Croklaan will expand the capacity of its soy protein concentrate plant by 50% at its sister company, UniMills, in Germany.

Letter (fax) from Aat Visser of Loders Croklaan. 1990. Aug. 6 and Aug. 27. Before Nov. 1971 this company's name was Unimills B.V., based in Wormerveer, Netherlands. In Nov. 1971 Unimills was acquired by Unilever. In 1973 Unimills started to produce soya protein concentrates on a pilot plant scale. In Jan. 1976 Unimills introduced Soycomil K and P, soy protein concentrates for young animals, and Unico. Production was (and still is) at Lindtsedijk 8, 3336 LE Zwijndrecht, Netherlands. In Sept. 1986 the spelling of the name was changed from Unimills to UniMills, and the protein division was transferred to Loders Croklaan, at that time named simply Croklaan. The concentrates and flour are available in various particle sizes and degrees of functionality in 25 kg valve bags and in bulk.

Product brochure sent by Aat Visser. 1990. Aug. "Soycomil–The ideal protein for all young animals." Soycomil is a soya protein concentrate made by a special process and recommended in particular for use in feeds for

young animals. Soycomil K is a fine powder, especially suitable for use in calf milk replacer. Soycomil P is a coarse powder, particularly suitable for pelleted piglet feed. Contents: Description. Manufacture. Quality control. Antigens (Loders Croklaan has developed a manufacturing process which effectively eliminates the soya antigens). Main uses. Product characteristics. Amino acid content. Biological analysis. Packaging/keepability. The advantages of Soycomil (11 are listed). Nutritive value of Soycomil: For veal calves, rearing calves, piglets, and mink.

This product is shown in the ADM Annual Report (Sept. 1992, page 11) as now being made by ADM at Europoort in 25 kg paper sacks.

696. *USDA Farmer Cooperative Service. FCS Research Report.* 1976. Appendix–Companies producing and distributing soy products. No. 33. p. 53-82. Jan. Edible Soy Protein: Operational Aspects of Producing and Marketing. [60 ref]

• **Summary:** Part I. "Companies producing and/or distributing under private label brands of textured vegetable protein products that meet the requirements of FNS Notice 219." (Note: FNS is USDA's Food & Nutrition Service). Lists every known company making such products (as of Sept. 1974), with the company address and the full name of each product. The following companies and brands are listed; (D) = Distributors: Allen Foods (D) Lasco; Archer Daniels Midland Co. TVP; Biggers Bros. (D) Farmbest Promate; Cargill Inc. Textratein; Central Soya Co. Inc. Promosoy, Centex; Continental Coffee Co. (D) Continental; Continental Organization of Distributor Enterprises, Inc. (D) Code Fortified; Embassy Grocery Corp. (D) Lucky Boy Pro-Tenda; Far-Mar-Co, Inc. Ultra-Soy; Federated Foods, Inc. (D) Parade Promate; First Spice Mixing Co., Inc. (D) Texite; Frozen Food Forum, Inc. (D) Frosty Acres; Galanides, Inc. (D) Galanides; General Mills, Inc. Bontrae (Frozen Hydrated or Dehydrated); Griffith Laboratories Griffith's GL-219, Promate, GSVP, GSPC; B. Heller & Co. (D) Heller's; Hollymatic Corp. (D) Hollymatic; Institutional Wholesalers, Inc. (D) Saxony; Lauhoff Grain Co., Inc. Vita-Pro; Marshall Produce Co. (D) Marshall; Miles Laboratories Maxten, Temptein; Nabisco, Inc. VMR I or II; National Institutional Food Distributor Associates, Inc. (D) NIFDA Promate; National Protein Corp. Textrasoy; National School-Pak (D) Promate; Nugget Distributors, Inc. (D) Nugget Promate, Nugget Magi-Pro; Oppenheimer Casing Co. (D) Textured Oppenheimer Pro; Portland Wholesale Grocery Co. (D) Preferred Stock; Ralco Foods SPF-200; Ralston Purina Co. SUPRO; S.E. Rykoff & Co. (D) S.E.R.; John Sexton & Co. (D) Sexton Protein Plus; A.E. Staley Mfg. Co. Food Service Div. Nutra-Mate; A.E. Staley Mfg. Co. Mira-Tex; Swift Edible Oil Co. Swift's Texgran, SFP-TA, Burger-Aide I; Sysco Corp. (D) Sysco and Sysco Promate.

New additions to the list: Custom Food Products, Inc.

(D) CFP; Miles Labs. Pro-Lean; Industrial Grain Products Ltd. Perplus; General Spice, Inc. Sotex.

Part II (p. 70-81). “Companies producing and/or distributing under private label acceptable textured vegetable protein product mixes.” Alberto-Culver Co. Milani; Bernard Food Industries, Inc. Tex-Pro; Biggers Brothers Inc. Farmbest; Continental Organization of Distributor Enterprises CODE; Federated Foods, Inc. Red & White or Parade; Kraft Foods. Kraft School Lunch Chili Mix & Textured Vegetable Protein. Kraft School Lunch Sloppy Joe Mix & Textured Vegetable Protein. Footnote: The textured vegetable protein component of the Kraft mixes is Promate #500-SL or Promate #100-SL manufactured by Griffith Labs. Lawry’s Foods, Inc. Stretch; Milwaukee Seasoning Laboratories, Inc. MSL TVP, Flavormate; National Institutional Food Distributor Associates, Inc. NIFDA; National School Pak; North American Laboratory Co., Inc. Magic Menu; Nugget Distributors, Inc. Nugget; Sysco; Williams Foods, Inc. Williams Expand; The Golden Dipt Co. Golden Dipt/DCA.

Note: The above product mixes are used in the Type A school lunch. Typical mixes are for chili mix, meat loaf or meatballs, patty mix, pizza sauce, sloppy joe, spaghetti sauce, or taco filling. The name of the manufacturer of the textured soy protein ingredient is given for each. Address: Farmer Cooperative Service.

697. Woollen, Anthony. 1976. The secret of solnuts. [A nut analogue from soybeans made by Solnuts BV of Tilburg]. *Food Manufacture (London)* 54(1):55, 57. Jan. [1 ref]

• **Summary:** This “nut analogue from soybeans has tremendous possibilities in bakery and confectionery products.” The plant, very similar to one operating in the USA, was built in Tilburg under the supervision of Mr. Jim Becker and was originally scheduled to come on stream in August 1977. But initial teething troubles delayed the start and it was not until November 1978 that the plant began to produce Solnuts of the quantity required. Now, after an investment approaching £1M, the plant is producing about 1,600 tons/year. When designed capacity is eventually fully utilised, production is expected to be between 8,000 and 10,000 tons/year.

Jim Becker, an American, developed/invented a method of preparing and roasting soya beans. The company director is Mr. F. van der Marel. Several important contracts have been obtained to supply major food manufacturers in Holland, Germany, Switzerland, Austria, Spain, Greece and the UK, including in the last-named Kelloggs and Granose Foods. Holland and Germany are where the company’s main markets are at present. The final composition of the product is: fat 19%, protein 47.4%; carbohydrate 3.7%, fibre 3.6%, ash 3.6%, and moisture 2%. The big advantage of Solnuts over any other soya product is their texture. The first Solnuts became available in the course of 1978.

698. Flier, Ronald J. Assignor to Ralston Purina Company, Inc. (St. Louis, Missouri). 1976. Protein product and method for forming same. *U.S. Patent* 3,940,495. Feb. 24. 10 p. Application filed 17 Jan. 1973. [5 ref]

• **Summary:** “Related U.S. Application Data: Continuation of Serial Number 600,471, Dec. 9, 1966, abandoned, which is a continuation-in-part of Serial Number 381,853, July 10, 1964, abandoned.”

“Abstract: A method of producing an expanded product which resembles meat, directly from soybean meal itself, including the steps of utilizing soybean meal that has substantially all the fat removed to an amount of about 5% or less, and preferably 2% or less, moistening the soybean meal such as mixing the soybean meal with water to obtain a moisture content of about 20%-40% by weight, controlling the pH within the range of 5 to 12, preferably 6 to 9, preferably adding an edible pH altering electrolyte while maintaining the controlled pH, and then simultaneously, mechanically working, heating above 212°F, and pressurizing the moistened soybean meal in an extruder chamber sufficiently to cause continuous conversion of the meal to a flowable substance, and forcing the substance through and out of restricted orifice means to expand it into a lattice network structure having resilience, body strength, and appearance approaching that of meat. 52 claims, 1 drawing figure.”

Note 1. “Abandoned” means that the patent examiner probably gave the inventor a hard time on the patent application so that the inventor abandoned all or part of it.

Note 2. At the time this patent was issued, there was another rather similar U.S. patent (No. 3,488,770) that had been issued to William Atkinson of ADM on 6 Jan. 1970. The Atkinson patent, between 1970 and 1976, and played a major role in making TVP a very widely used product in the USA. However after the Flier patent was issued, a lawsuit and trial determined that the Flier patent dominated the Atkinson patent largely because it could be traced back to 1964. For more details, see the interview with Ed Meyer on 10 May 1993.

Note 3. On 6 Sept. 1989 the United States District Court—Central District of Illinois ruled in a case of Ralston Purina vs. A.E. Staley that patent No. 3,940,495 (the Flier patent) “is held to be unenforceable by virtue of inequitable conduct.” Address: Ladue, Missouri.

699. Weimer, Jon. 1976. Taste preference for hamburger containing textured vegetable protein. *USDA National Food Situation* No. 155. Feb. p. 45-46.

• **Summary:** “Abstract: Taste tests were conducted under controlled laboratory conditions to determine participants’ preferences between a regular hamburger product and three ground beef products which contained textured vegetable protein (tvp). In a test in which participants

were not informed that any of the products contained tvp, no difference in preferences resulted. In a test in which participants had prior knowledge of what products contained tvp, the regular hamburger product was significantly preferred over each of the tvp-blended products.”

“The recent period of high hamburger prices provided an opportunity for a new meat substitute to become established in the food market. This product, textured vegetable protein (tvp), was available at a substantially lower unit price than regular hamburger meat. The tvp can be blended with hamburger, resulting in a mix of animal and vegetable products with a substantially lower cost than regular hamburger. Food retailers could offer the blended product at a lower price than regular hamburger, and it was this feature that was expected to establish tvp in the market.

“However, the blended hamburger could not be advertised and labeled as a regular grade of hamburger. Consequently, food retailers offering the blended product proceeded to devise a variety of names to describe the product and differentiate it from regular hamburger. This factor certainly aided food purchasers in terms of product identification, but it may have negatively influenced their impression of the blended product compared to the regular grades of hamburger.

“A number of factors determine whether a new product will gain acceptance in a market. Two factors considered of importance for blended hamburgers were the consumer preference for the product compared to regular hamburger and the influence of prior knowledge of the product identification on such preference.

“Two experiments were conducted to determine how consumers liked the tvp blended product compared to regular hamburger. In the first experiment, knowledge of the product contents was withheld. In the second, each participant was told which sample contained tvp and which sample was regular hamburger.

“Four products were used in each of the two experiments. One product designated as A was regular ground chuck purchased at a local supermarket. The other three products designated as B, C, and D consisted of ground chuck blended with tvp, and each was purchased locally at a different supermarket.

“Participants in each experiment were employees of the Department of Agriculture. A total of 144 participants divided into two groups of 72 was selected from a group of 400 volunteers. There were 36 men and 36 women in each group, and each group participated in only one experiment.”  
Address: Social Science Analyst, National Economic Analysis Div., Economic Research Service, USDA.

700. Clayton, Hugh. 1976. Vegetable protein: A new ingredient in the British diet. *Times (London)*. March 19. p. 19, cols. 4-8.

• **Summary:** “Students of propaganda will find an interesting

field for study in the debate about the use of textured soya protein where only meat was used before. Farmers and butchers are pursuing a loud campaign against ‘moc meat’ [mock meat] and appear to be winning the argument.”

Representatives of the National Farmers’ Union (NFU) have “spoken darkly about the ‘disquieting reports’ about the long-term effects of using” textured vegetable protein (TVP). “The soya lobby is less vocal but no less influential.” Since 30% TVP is now allowed as a meat extender, some of Britain’s largest meat processors, such as Unilever and Spillers, now sell catering packs of TVP.

The retail market was harder to crack. Nestlé, the first to jump in, “used the prestigious and long-standing Crosse & Blackwell label as a vehicle for a meat extender.” A table shows companies that followed Nestlé’s lead with tinned [canned] products: Cadbury Schweppes (Cadbury’s Soya Choice, canned chunks in beef gravy, 15 oz for 30p. The product contains 6% by weight of beef fat). S. Daniels, a distributor of Danoxa hams, sausages, and tinned stew (Danoxa Kesp Curry, 15¼ oz for 30p. Based upon the Cortauld spun protein product Kesp). Spillers (Tyne, large stewed steak, 43½ p.). Unilever (Walls 15 oz stewed steak with gravy, 46 p.). RHM (Chesswood 15 oz curry with beef, 38p.). Allied Breweries (Appleford, 15 oz meatless steak, 36p.)

Two companies sell canned, precooked beans in sauce: Allied Breweries (Delicia 10 oz soya beans in tomato sauce, 24 p.). Heinz (Heinz 20 oz baked beans in tomato sauce, 19½ p.). Miles Laboratories, which markets TVP in Britain, sells an imitation bacon in the USA. Address: Agricultural correspondent.

701. Garino, David P. 1976. Foreign demand for soy protein is seen tied more to economics than nutrition. *Wall Street Journal*. May 17. p. 28 (East). Or West Coast ed. p. 22.

• **Summary:** “Foreign countries are developing quite an appetite for soy protein.”

A shortage of meat in Poland has led the government to decree that Polish sausage and other meats contain soy protein.

International demand for soy protein is growing faster than U.S. demand say experts in the field.

Although soy protein is being used in an ever increasing number of foods, its main use continues to be as a meat extender and substitute, largely for economic rather than nutritional reasons. It generally takes 2-2½ lb of feed to produce one lb of chicken (live weight), 3½-4 lb of feed for one lb of pork, and 4-5 pounds of feed for one pound of beef—all live weight. So when feed prices rise, as they have in recent years, meat production becomes more costly and soy protein extenders look more attractive. Sales of soy protein isolates climbed 60% last year, following a gain of about 40% in 1974 according to Ralston Purina. In 1976 sales of textured soy flour in Europe are growing at 15-20%

a year. West Germany doesn't permit use of soy protein in meat.

The percentage of disposable income spent on food is 18% in the USA, 25% in Western Europe, more than 25% in Eastern Europe, and about 40% in developing countries. Address: Staff Reporter.

702. Andres, Cal. 1976. 20% textured vegetable protein in meat rolls improves yield, cuts cost: 'Corned beef,' 'pastrami,' 'ham,' beef extended. *Food Processing (Chicago)*. May. p. 82.

• **Summary:** A sidebar titled "Laboratory-pilot plant available for meat formulation work" discusses ADM's new laboratory/pilot plant. Address: Assoc. Editor.

703. *Bank of London & South America Review*. 1976. An 18 million cruzeiro soy protein factory in Araraquara, Brazil, will be built jointly by Nestlé (Switzerland) and Archer Daniels Midland (U.S.). May. p. 266. \*

704. Clayton, Hugh. 1976. Acquiring a taste for meals without meat. *Times (London)*. June 11. p. 8, cols. 4-5.

• **Summary:** The article, written in a negative tone throughout, begins: "If some farmers and butchers had their way, meat-like groceries made from soya beans would be banned from shops and the catering market. They condemn such products as undesirable and possibly unsafe substitutes foisted upon the public by unscrupulous food companies that make them masquerade as meat."

"Soya flour and other derivatives" have long been used in meat products, "but products based on soya and containing little or no meat are new to shops in this country. Here is a guide to some of them:

Name, description, use, price and packaging is given for each. Crosse & Blackwell Mince Savour. Appleford's Meatless Stew, Goulash and Curry. Cadbury's Soya Choice. Danoxa Kesp Curry. Delicia Soya Beans in Tomato Sauce. Meat Extenders Coloured Mince and Coloured Flakes, from A.E. Staley (Decatur, Illinois). Unflavored soya protein supplied by The British Arkady Co. of Old Trafford.

The article concludes: "The great obstacle is flavouring. A mouthful of soya protein flakes tastes very much as this page probably would." So highly-flavoured sauces must be used. "The great advantage" is "that soya beans do not have to be slaughtered before we eat them."

705. ADM–Archer Daniels Midland Co. 1976. The processing of soybeans, corn, barley and flax... (Ad). *Soybean Digest Blue Book*. p. 51. June.

• **Summary:** In the left half of this full-page ad, an illustration shows a rayed sun shining thru several grain plants with large soybean seeds in the foreground. In the right half the text reads: "The milling of soft, hard, and durum wheat. The refining of soybean and other vegetable

oils. Soy protein research and the origination of textured vegetable protein. Production of macaroni, spaghetti and other consumer products. Blending animal feeds.

"Transporting, storing, processing and marketing a seemingly endless variety of products. Archer Daniels Midland Company—processing and marketing basic commodities derived from the Nation's harvest."

Note: This ad also appeared in this 1973 edition of this yearbook (p. 2). Address: Decatur, Illinois 62525.

706. Lachmann, Alfred. 1976. The AID program to utilize LEC's in LDC's. *LEC Report* No. 1. p. 13-17. D.E. Wilson, ed. Low-Cost Extrusion Cookers: International Workshop Proceedings. (Fort Collins, CO: Dep. of Agric. and Chemical Engineering, Colorado State Univ.).

• **Summary:** An excellent early history. "As early as 1971 a search for low-cost extrusion equipment began. One of the extruders selected for further study was the Brady Crop Cooker Model No. 206, manufactured by Koehring Farm Division..."

"Later, in 1973, another low-cost extruder was located which produced flour from full-fat soybeans for use in feed formulations. It was the Insta-Pro extruder, Model 500, manufactured by Triple 'F' Inc. Note: This is the earliest document seen (July 2006) that mentions the "Insta-Pro" extruder.

"As a consequence, experimental work was started to test the capabilities of low-cost extruders for the manufacture of human foods. Samples of experimentally extruded soy flours were tested by Northern Regional Laboratories and ADM for their physical and chemical characteristics and for the destruction of anti-physiological factors. Kansas State University evaluated the soy flours for their suitability as protein fortifiers in the manufacture of bread and found them to be suitable for this purpose..."

"The first testing of a low-cost extrusion cooker outside of the United States took place in India in 1973. In Calcutta at the United Flour Mills, a CARE-purchased Brady Crop Cooker was installed and a test program was started to look into production of foods for Asian CARE-sponsored feeding programs.

"The first AID/USDA-sponsored testing program was initiated in Guatemala. In Guatemala the machine to be tested was loaned to CARE by USDA. CARE in turn selected as its testing organization the Institute of Nutrition of Central America and Panama (INCAP)..."

"In 1974 it became clear that specific problems encountered in utilizing low-cost extrusion cookers required solutions, and that a systematic testing program to evaluate and analyze capabilities of low-cost extrusion equipment should be started. A research contract was signed between Colorado State University and the USDA. The University's Agricultural Engineering Department was given the task of determining the operational characteristics and capability of

cooker-extruders for the production of human foods...

“A year later, USDA signed a research agreement with CSU extending its role in studying low-cost extrusion cookers. In this agreement the Food Science and Nutrition Department and the Agricultural Engineering Department became involved in a new project. The general objectives of this project were to assist selected developing countries in their efforts to supplement or replace foods from international donor agencies with commodities produced locally, and to utilize food technology in related areas to improve diets of their local population...

“Another testing program was initiated at EAIRO in Nairobi, Kenya, where white maize, a special local millet, rice and soybeans were cooked successfully. During the testing program the cooker was utilized to produce enough material of a corn-soy blend to initiate a study on the acceptability of this product as a commercial weaning food in Tanzania.

“A third machine will soon be installed at the Philippine Women’s University...

“In Sri Lanka a cooker has been installed by CARE with auxiliary equipment provided through CSU which performs as a production unit. It is utilized for the cooking of dehulled sorghum to which a small quantity of soybeans has been added...

“In Costa Rica an electrically powered extrusion unit, furnished by CARE, is located at the Pronutre plant and has been used to demonstrate processing of whole soybeans and corn-soy blends.

“In Indonesia, again with CARE’s initiative, the performance of extrusion cookers will be studied at the Institut Pertanian Bogor (IPB).” Address: Nutrition and Agribusiness Group, USDA/ERS.

707. Daftary, Rasik D. Assignor to Archer Daniels Midland Company (Decatur, Illinois). 1976. Process for preparing soy protein concentrate. *U.S. Patent* 3,971,856. July 27. 6 p. Application filed 3 March 1975. [3 ref]

• **Summary:** “Process for preparing a full-fat soy protein concentrate having a bland taste and light color and substantially all of its original protein and fat by subjecting dehulled, cracked soybeans to water at 180°F to 212°F, removing the beans from the water, washing the beans in fresh water, and drying to 8-15% moisture. The product is useful as a human or animal food or it may be subjected to further processing to remove the oil to produce a defatted soy protein concentrate useful in preparing a variety of foods.” Address: Decatur, Illinois.

708. *Food Processing (Chicago)*. 1976. Liquidation: Industrial protein & soybean plant located in Chicago (Ad). July. p. 147.

• **Summary:** Although Central Soya’s name does not appear on this full-page ad, it is in fact announcing the closing of

Central Soya’s soybean plant at 1825 North Laramie Ave., Chicago, Illinois 60639. More than 150 pieces of equipment are listed (without prices) as being for sale. Note: This plant was started by The Glidden Co. The plant and equipment was soon purchased by ADM.

709. Lamm, R. McFall, Jr. 1976. The production of vegetable oil and vegetable oil products in the United States. *Virginia Polytechnic Institute, Department of Agricultural Economics, Research Division Bulletin* No. 118. 41 p. July. [17 ref]

• **Summary:** Contents: List of tables. List of figures. Introduction. The nature of production in the vegetable oil industry: Production of crude soybean oil and meal, production of refined soybean oil, production of cooking oil, production of margarine, production of shortening, production of mayonnaise and salad dressing, a note on concentration and vertical integration in the vegetable oil industry. Summary. Literature consulted.

Consolidation in the soybean crushing industry (p. 8-9): The *Census of Manufacturers* reports periodically on the number of soybean processing plants. This number grew from 26 in 1937, to 47 in 1939, to 133 in 1947. But in the early 1950s the number of plants began to decrease, though individual plants were increasing in size. There were only 117 plants in 1958, dropping to 102 in 1962 and 1967, then to only 94 in 1972.

Shortening (p. 25-26): In the late 1800s a surplus of cottonseed oil developed in the USA as a result of expansion of the cotton industry. It was discovered that this oil could be blended with lard without significantly changing the properties of the lard. The blended product, made mostly by meat packing companies, was called “compound” and was the forerunner of modern shortenings. With the introduction of the hydrogenation process in 1909, hydrogenated vegetable oil (mostly cottonseed oil) quickly replaced “compound” as the preferred type of blended shortening.

Table 2.61 (p. 28) gives statistics on per capita consumption of fats and oils products including cooking oil, margarine, shortening, mayonnaise and salad dressing, butter, and lard each decade from 1910 to 1970. Consumption in margarine increased from 1.6 lb in 1910 to 11.0 lb in 1970. Butter decreased from 18.3 lb in 1910 to 5.3 lb in 1970.

Concentration and vertical integration (p. 35-36): Many products in the vegetable oil industry are produced at processing facilities with several “plants within one plant.” The arrangement reduces transportation and management costs, but it requires that the firm be either vertically or horizontally integrated.

“In the soybean processing industry three of the five largest producers are integrated vertically in the oil products business. These three firms are Central Soya, Anderson-Clayton, and Archer-Daniels-Midland. Central Soya processes crude soybean oil, refines vegetable oil, and has

a subsidiary which produces margarine and mayonnaise. Anderson-Clayton processes crude soybean oil, refines vegetable oil, and produces cooking oil, margarine, shortening, and salad dressings. Archer-Daniels-Midland processes crude soybean oil, refines vegetable oil, and produces cooking oil, margarine, and shortening. Riceland Foods, a farmer's cooperative, although not one of the five largest soybean processors in the soybean processing industry, is probably the single most integrated vegetable oil firm in the country. This company produces soybeans, processes crude soybean oil, refines vegetable oil, and produces cooking oil and shortening." Address: Blacksburg, Virginia.

710. Rosenfield, Daniel. 1976. The changing climate for plant protein foods: 1965-1976. *Cereal Foods World* 21(7):302-03, 305-06, 338. July. [11 ref]

• **Summary:** In the author's opinion, the following are the most important milestones from 1965 to 1976 in the development of a plant protein food industry.

1965—The U.S. Agency for International Development begins to respond seriously to the world's malnutrition problems. Of special importance is its three-volume *Report on the World Food Supply*, by the specially organized President's Science Advisory Committee. It encouraged private U.S. firms to develop commercially viable protein foods for developing countries in three phases: (1) Study the food habits and nutritional needs of a particular area. (2) Product development. (3) Limited market testing. The results of phases 1 and 3 would be available to the public. AID would reimburse the company up to \$60,000 per project. Table 1 shows a listing of 10 projects authorized under the 3-year program. The 5-column table shows: Region or country, company name, date of contract (1967 or 1968), description of product, raw materials.

1966—General Mills' Bac-O's venture. That year the company announced its decision to market nationally, as part of its Bontrae line of meat alternatives made from spun protein fiber, a fried bacon bit analog. By Oct. 1966 Bac-O's were under limited test market in both retail and institutional outlets, and frozen Bontrae was under development (Odell 1967). In the summer of 1969 General Mills gave further proof of the seriousness of their commitment to Bontrae by starting construction of a large soy protein spinning plant in Cedar Falls, Iowa. By Nov. 1969 Bac-O's, still made in a pilot plant, were available nationwide except on the West Coast, and frozen Bontrae in flavors like ham, beef, and chicken was being sold to restaurants, hotels, and other institutions in New York state and adjacent areas. These pioneering moves had a tremendous effect on the thinking of other large food companies indicating, as they did, that the time for the soy protein foods of the future had arrived.

1971—Textured proteins for School Lunch Program. On 22 Feb. 1971 the USDA's Food and Nutrition Service issued

FNS Notice 219 allowing federal reimbursement credit in the School Lunch Program for textured vegetable proteins. In practice, textured soy flour (such as TVP) could be used as an extender for meat, poultry or fish up to 30% on a hydrated basis provided the soy protein ingredients were fortified to meet certain nutritional specifications. Heretofore dry beans and peanut butter had been the only plant proteins allowed as substitutes for animal proteins in the Type A Lunch. The textured soy protein was used primarily as an extender for ground meat. In the 1971-72 school year some 8-9 million lb of TSP were used, yielding three times this much weight of hydrated product at a cost of less than \$0.08 per pound hydrated.

1973—Meat-soy retail market mixtures. By 1973 U.S. meat prices had risen rapidly to all-time highs. In March 1973 Red Owl Retail Food Stores in Minneapolis, Minnesota, introduced Juicy Burger II, a blend of 25% hydrated TSP and 75% ground beef. Soon similar beef-soy blends began to appear under fanciful names such as Burger-Pro, Plus Burger, or Pro/Teen. Advertising stressed lower cost compared with all-beef products and less shrinkage in cooking. In late 1973, at the peak of interest, an estimated 30-40% of all U.S. supermarkets carried beef-soy blends. The new blends retailed for 15-25 cents a pound less than regular hamburger and from May to August 1973 they had captured about 29% of the market share for hamburger. In Sept. 1973 beef prices tumbled. By March 1974 the market share of beef-soy blends had dropped to 20%, then to 10% by Nov. 1975. Yet, as a result, millions of Americans became familiar for the first time with modern soy protein products and accepted them.

1973 Nov.—World Soy Protein Conference is held in Munich, Germany, and attended by over 1,100 delegates from 45 countries. The proceedings are published in the Jan. 1974 edition of the *Journal of the American Oil Chemists' Society*. The importance of the conference is underscored by the participation of U.S. Secretary of Agriculture Earl Butz and U.S. Senators Herbert Humphrey, Carl Curtis, and Walter Huddleston. A high point in the growing acceptance of soy proteins in foods, the conference concluded that more and more of the rising demand for protein foods would have to be met from sources such as soy that were not traditional in the West. The conference in Munich started a tradition and subsequent conferences (with much the same basic message and speakers) were held in Singapore (Jan. 1978), Amsterdam (Oct. 1978), and Acapulco (Nov. 1980).

1974—Miles Laboratories/Worthington introduced a line of meat analogs based on spun soy protein fiber and sold nationally at supermarkets under the Morningstar Farms brand. These sausage-like Breakfast Links and Patties, and ham-like Breakfast Slices represented the first attempt to market soy protein meat analog entrees (not including Bac-O's, a condiment) to mainstream America. These products were first sold commercially in limited

test markets and to the institutional trade in 1972. In the fall of 1975 bacon-like Breakfast Strips were introduced nationally. The company spent \$7.5 million on a nationwide promotion campaign in 1974 featuring prime-time television commercials emphasizing the nutritional angle. About 10 million Americans tried the Morningstar Farms breakfast line in the first 18 months, meeting the company's goal, but fewer people than expected went back for seconds. In 1973 Miles' officials predicted sales of more than \$100 million a year within the decade. But by 1977 sales were running only \$15 million a year, less than half the levels expected at that time, though still indicating a rather favorable consumer response. In 1977 Miles introduced a new improved line of the same products said to be tastier, juicier, and meatier. The marketing focus was narrowed to consumers desiring a protein source free of cholesterol and low in saturated fat. While consumers found the quality of the new line improved, sales remained slow, partially because the new line, priced the same as the old line, was 2-27% more expensive than canned ham, prepared sausage, or bacon. By 1980 the advertising budget had been cut and the products were no longer found in a growing number of supermarkets. Nevertheless the traditional Worthington line continued to be successful and popular among motivated vegetarians.

In short, the edible plant protein revolution has been won. Most nutritionists recommend that Americans eat less meat and saturated fats. Address: Dir. of Nutrition Affairs, Dep. of Nutrition, Miles Laboratories, Inc., Elkhart, Indiana 46514.

711. Rennie, Gary. 1976. Maple Leaf plant construction set for November. *Windsor Star (Essex County, Ontario, Canada)*. Aug. 4. p. 1.

• **Summary:** Construction of the \$37-million Maple Leaf Monarch vegetable oil processing plant will start in November this year, William Milliken, president of the company said today. The \$37 million includes the price of the land. It is scheduled to begin operating in September 1978.

"The plant will be the largest integrated vegetable oil processing plant of its kind in Canada. A 41-acre site in the Morton Industrial Park in Windsor's west end [on the Detroit River waterfront] has been purchased for the plant which is a joint venture of Maple Leaf Mills Ltd. and Lever Brothers Ltd., both of Toronto."

The plant, which will employ about 100 workers permanently, and will process mainly soybeans (both locally grown and imported from the USA) plus some flax, rapeseed and sunflower seeds. With a processing capacity of about 1,400 metric tons per day, it will produce about 41% of the vegetable oils and meals in Eastern Canada.

"Maple Leaf Mills has been active in oil seed processing since 1941 and its vegetable oil division will be the nucleus of the new company. Lever Brothers Ltd.,

through its subsidiary, Monarch Fine Foods Ltd., is a leading manufacturer of edible oils and margarine."

Note: This is the earliest document seen stating that Lever Bros. owns part of Maple Leaf Monarch.

712. *Food Processing (Chicago)*. 1976. 3 protein concentrates now in commercial production. Aug. p. 61.

• **Summary:** The three soy protein concentrates available from ADM are Ardex-700F (flour consistency), Ardex-700G (grits), and Ardex 500 (full-fat soy flour).

713. Andres, Cal. 1976. Soy concentrate rapidly absorbs and retains over 4 times its weight of water: Textured product actually improves on retorting. *Food Processing (Chicago)*. Sept. p. 47-48.

• **Summary:** ADM's soy concentrate line includes flour, grits, and textured products. Textured soy concentrate is a bland-flavored, practically white, retortable, textured protein product. Address: Assoc. Editor.

714. *Family Health*. 1976. Is there a TVP in your future? 8(9):52. Sept.

• **Summary:** Contains 9 recipes using textured vegetable proteins, which you can find in local supermarkets and health food stores. The ingredients include: Sausage-like breakfast links. Bacon-like breakfast strips. Ham-like breakfast slices. Refrigerated cholesterol-free egg substitute. Sausage-like breakfast patties. Vegetable protein patties. Vegetable protein links.

715. Shurtleff, William; Aoyagi, Akiko. 1976. Tofu & Miso America Tour: 29 Sept. 1976 to 3 Feb. 1977 [Itinerary with two maps]. Lafayette, California: New-Age Foods Study Center. Unpublished manuscript.

• **Summary:** On 13 Sept. 1976 the authors bought a large, white 1975 Dodge Tradesman 300 van (used, with 40,000 miles on it). On one side Akiko painted in large, bold letters "Tofu and Miso America Tour 1976-77." Their *Book of Tofu* had been published in December 1975 and *Book of Miso* on 23 Sept. 1976. On Sept. 29 they packed the van full to the ceiling with their books on tofu and miso, plus Larry Needleman's tofu kits—and departed. In the van was an itinerary of hosts and places to which they had been invited and the route drawn on a large map of the USA.

This trip had five main purposes: (1) To introduce tofu and miso to America; (2) To introduce people to the many benefits of a meatless / vegetarian diet; (3) To encourage people to start soyfoods companies, especially tofu shops; (4) To discuss the dangers of human population growth to our small planet; and (5) To promote the authors' newly-published *Book of Tofu* and *Book of Miso*.

This itinerary includes the name and address of 64 people and organizations visited. Many of these were pioneers in the soyfoods and natural foods movements:

## TOFU &amp; MISO AMERICA TOUR 1976-77

Sept. 29–David and Kathleen Sandler, Robert Dolgin, Don Wilson, Farm Food Co. (San Rafael, California; we observed and recorded in detail how Don Wilson made tempeh and tempeh starter / inoculum, and how soymilk ice cream was made at Farm Food Co.). Oct. 1–Petaluma, California. Oct. 2–Josephine County Food Center, Grants Pass, Oregon. Oct. 3. Heliotrope Natural Foods (Salem, OR). Oct. 4–West Bank Cafe (Corvallis, OR). Oct. 5. Visit Linda Shurtleff (McMinville, OR). Visit *Rain Magazine* (Portland, Oregon). They do an interview which is published in their Nov. 1976 issue. Oct. 6. Blake Rankin and Janus Natural Foods (Seattle, Washington). Oct. 7. Janus. Oct. 8–Luke Lukoskie and Sylvia Nogaki of Island Spring (Vashon, Washington). Oct. 10–Jack Grady, a macrobiotic (Spokane, WA). Oct. 13–Univ. of Minnesota. Oct. 14–Georgie Yiannias of Wedge Food Co-op and Ananda Marga (Minneapolis, Minnesota). Our largest class with 300 people. Oct. 15–Barbara (“Bobbie”) Reinhardt Shurtleff dies of colon cancer at Alta Bates Hospital, Berkeley, CA. Oct. 15. Famine Food Co-op (Winona, Minnesota). Oct. 16–Bonnie Maroney of The Wisconsin Farm (Ettrick, WI). Oct. 19–Visit George

Strayer and Larry Krueger of the American Soybean Assoc. (Hudson, Iowa). Visit David and Ann Tucker (Iowa City, Iowa). Oct. 20. Outpost Natural Foods (Milwaukee, WI). Visit Bountiful Bean Co-op. Oct. 21. Visit Dr. Danji Fukushima and Kikkoman Foods (Walworth, Wisconsin). Oct. 22–Visit Drs. Hesseltine, Wang, Wolf, Mustakas, Cowan at Northern Regional Research Center (Peoria, Illinois). Oct. 23–Morning class on commercial production for Les Karplus and 5 people at Vegetarian Incorporated (Urbana, Illinois). Oct. 23-24. Side trip to visit ADM and Staley (Decatur, IL). Oct. 24–Les and Debbie Karplus of Vegetarian Inc. (Urbana, IL). Oct. 25–Visit Dr. L.S. Wei of the Univ. of Illinois Dept. of Food Science (Urbana, Illinois). Evening program for Karplus in Urbana. Oct. 26. Purdue University (Indiana). Oct. 27–Chris Steele (Lansing, Michigan). Oct. 28–Mike Potter and Louis Howie of Eden Foods (4601 Platt Rd., Ann Arbor, Michigan). Oct. 29–Calico Market (Erie, Pennsylvania). Oct. 30–Visit Greg Weaver and Jay Thompson of Rochester Zen Center (Rochester, New York; Later Northern Soy). Visit Genesee Co-op. Oct. 31–Alternative Health Education Center (Rochester).

Nov. 1–Visit Arnold Karmody at Empty Cloud (Canandaigua, New York). Meet Dr. Keith Steinkraus (Geneva, New York). Nov. 2–Visit with Dr. Steinkraus at New York Agric. Exp. Station (Geneva, NY). Lunch together with his wife, Maxine. Nov. 3–Tom MacDonald at Hannibal, New York. Nov. 4–Ira and Kathy Leviton of Corncreek Bakery (South Deerfield, Massachusetts). Visit Laughing Grasshopper tofu shop just before it begins operation. Nov. 5–Fritz Hewitt of Common Ground Restaurant (Brattleboro, Vermont). Visit Tom Timmins of Llama, Toucan & Crow (Brattleboro). Nov. 6. Shep Erhard (Franklin, Maine). Nov. 7–Ann S. Johnson, assistant manager of dining halls, Univ. of Maine (Orono, ME). Nov. 8–Visit Marine Colloids (Rockland, Maine). Nov. 10–Drive to Boston, stay with Nahum & Beverly Stiskin (Brookline). Nov. 13–Tofu & Miso program in Boston. Visit Erewhon Natural Foods (33 Farnsworth St., Boston, Massachusetts), Martha Trundy, Jeffrey & Gretchen Broadbent. Nov. 14–Visit to shops in Boston’s Chinatown. Michio and Aveline Kushi give a big party in our honor at their home at 62 Buckminster Rd., Brookline, then take us out to dinner at the Seventh Inn. Nov. 15–Tofu-making class at a home in Boston. Nov. 17–Visit offices of *East West Journal*. Sherman Goldman conducts long interview, later published in Jan. 1977 issue. Miso-making class at home of Ken Burns. Nov. 18–Visit Joel Wollner in Cape Cod. Nov. 19–Radio show then program for Joel. Nov. 20–Peter Smith at Quaker group in Pennsylvania. Nov. 22–Visit Woods Hole, Massachusetts to study sea vegetables. Evening program at New Bedford, MA. Nov. 23–Stay with Seung Sahn, Sa Nim at Providence, Rhode Island Zen Center. Meditate and show students how to make tofu. Evening at Insight Meditation Center, Barre, MA, a Vipassana center in a former Catholic seminary, co-founded in 1976 by Jack Kornfield, Joseph Goldstein and 3 others. We have dinner, meditate with the sangha, and hear Jack talk about Vipassana. Nov. 24 Sit morning zazen with master and students at Providence zendo. Nov. 25–Thanksgiving. Akiko and I stay alone in a house near Hartford, Connecticut and taste a good tofu pumpkin pie. I read about seaweeds. We take a long walk in the countryside. Nov. 26–Program for Erewhon Natural Foods in Hartford (stay with Maria Orefice, owner of Garden of Eating restaurant in Hartford). Article in *The Hartford Courant* (Dec. 1). Nov. 27–Long River Food Coop in Connecticut. Nov. 28–Stay with Susan and Kirk Gershuny of Snowflower (Tivoli, New York). They plan to make soy ice cream soon. Nov. 29–Drive in deep snow to the New York Farm in Franklin, New York. Stay in a big house they built. Nov. 30–Carl Bethage of the East West Center in Gardiner, New York. Also did a radio program.

1976 Dec. 1–Visit Frances Moore Lappé at her upstairs office in Hudson-on-Hastings, New York. Then visit her large home on the hillside. Dec. 1–5–We missed a program for Annemarie Colbin in New York City (partly because we feared our van would be burglarized on the street) so

we stayed Dec. 1-5 at the luxurious home of Leo S. Nikora (Niki; Bobbie’s friend). I work on writing *The Book of Kudzu*. Dec. 6-7. Program for 40 people (Hosts: Nancy N. Bailey and Robert Rodale) at Rodale Press (Emmaus, Pennsylvania); I am surprised they serve white sugar on their dining tables. Dec. 8–Tim Snyder of Ecology Co-op in Philadelphia. Dec. 9–Stay at home of Sylvia Anderson in Pleasantville, New Jersey and do a program upstairs in a modern university. Study magnificent photos of Native Americans by Edward S. Curtis. Dec. 10–Visit Jay and Freya Dinshah of the North American Vegetarian Society (Malaga, New Jersey); their poor vegan child has bowed legs. Dec. 12–Cindy Blouse in Dallastown, Pennsylvania. Dec. 13–Visit Laurelbrook Foods, a natural foods distributor in Forest Hill, Maryland. We meet Rod and Margie Coates. Dec. 14–Big program hosted by Ella May Stoneburner and Seventh-day Adventists near Washington, DC. Dec. 15–Michael Rossoff (who ran the East West Center in Washington, DC) planned to host a class in a DC church. After we witness a robbery, we are afraid to leave our van on the street. So we do a scaled-down program in the home of Murray and Pam Snyder, which was the East West Center in Baltimore, Maryland. Visit Laurelbrook Foods Warehouse #2 in Durham / Chapel Hill. Dec. 16–Roanoke Food Co-op in Copper Hill, Virginia. Dec. 17-18–John Shuttleworth and Jim Morgans of *Mother Earth News* (Hendersonville, North Carolina). They do a long interview and take photos. Program at night. Note: An audio tape of Bill’s talk at this program is filed with Soyfoods Center documents for 1976. Dec. 19–Chandler Barrett in Atlanta, Georgia.

Dec. 28 & 29–Workshop on tofu and miso at East West Foundation, Coconut Grove, Florida. Not on written schedule, but shown in two published articles. Handwritten trip notes show: “Dec. 27-29. Heartsong, Miami. Bob & Toni Heartsong, 6051 S.W. 46th Terrace, Miami, FL 33155. Was this also related to Mary Pung, who flew from Florida to attend one of the programs on our tour? At the time, she invited us to come to Florida—which was not on our planned route.

Note 1. This is the earliest document seen (May 2019) concerning the work of Ira Leviton or Tom Timmins with soy. One evening, before Shurtleff was scheduled to speak at Leviton’s Corncreek Bakery, Leviton drove Shurtleff to see the Laughing Grasshopper Tofu Shop which was under construction on the second story of an old wooden building in the nearby town of Millers Falls, Massachusetts. Much of the equipment was made out of wood—including wooden curdling vats and a wooden cider press. The company opened in Jan. 1977.

Note 2. This is the earliest document seen (March 2020) concerning Llama, Toucan & Crow in Brattleboro, Vermont.

Note 3. This is the earliest document seen (March 2020) concerning the forerunners of United Natural Foods, Inc. (INFI)—in the form of Llama, Toucan & Crow. Address: 790

Los Palos Manor, Lafayette, California 94549. Phone: 283-3161.

716. Archer Daniels Midland Co. comp. 1976. Edible soy protein seminar, Moscow and Warsaw. Decatur, Illinois. 220 p. 28 cm. No index. [366 ref]

• **Summary:** See next page. Held 13-14 Oct. 1976 at Moscow, USSR and Oct. 18-19 Oct. 1976 at Warsaw, Poland. These seminars, conducted by soy protein manufacturers, were designed to educate eastern Europeans and sell products. Address: Decatur, Illinois.

717. Burket, R.E. 1976. An introduction to edible soy protein. In: Archer Daniels Midland Co., comp. 1976. Edible Soy Protein Seminar. Decatur, Illinois. 220 p. See p. 1-12. Held at Moscow, USSR and Warsaw, Poland.

• **Summary:** A good introduction to modern soy protein products.

A brief biography of Richard E. Burket is given on page 2.

“Born: Sandusky, Ohio, U.S.A., 1928

“Schools: Sandusky High School

“Oberlin College—Bachelor’s Degree—Liberal Arts, 1950

“Military Service: U.S. Army, Armor Branch, 1950-53

“Business Background: 1954-69, Central Soya

Company. Over a fifteen year period, worked in a variety of positions with Central in the areas of edible proteins, soybean processing and merchandising, grain merchandising and other related areas, including extensive work in international marketing.

“In 1967 Mr. Burket led the organization of the Edible Soy Protein Committee [within National Soybean Processors Association] and served as its first Chairman. This organization grew to become the Food Protein Council and he is again serving as Chairman.”

“1969-Present, Archer Daniels Midland Company. Joined ADM in 1969 as a corporate Vice President with responsibilities for the marketing of ADM specialty proteins.

“In 1974 was promoted to Vice President and Assistant to the President with responsibilities for the corporate research, public relations and governmental relations in addition to assigned duties in growth opportunities being investigated by ADM.” Address: Vice President and Asst. to the President, Archer Daniels Midland Co., Decatur, Illinois; and Chairman, Food Protein Council.

718. Cole, Morton S. 1976. Bakery applications for soy protein products. In: Archer Daniels Midland Co., comp. 1976. Edible Soy Protein Seminar. Decatur, Illinois. 220 p. See p. 175-87. Held at Moscow, USSR and Warsaw, Poland.

• **Summary:** Contents: Resumé. Introduction. Types of soy protein products used in bakery goods (soy flours, soy protein concentrates, soy protein isolates, enzyme-active soy flour is a source of lipoxigenase enzyme for bleaching wheat

flour, full-fat soy flour). Nutritional contribution of soy flours to bakery products. Types of bakery products supplemented with soy protein: bread and buns, high-protein breads, cakes, cookies, sweet doughs. Effects of soy flour on processing of bakery products: absorption, oxidation, fermentation (they act as a buffer), mixing and development.

Tables: (1) Functions of soy flours in bakery products. (2) Improvement of wheat flour nutritional value by addition of defatted soy flour (added at 0, 6, or 12% levels). (3) Soy flour in straight dough bread. Address: PhD, Assoc. Director of Research, Archer Daniels Midland Co., Decatur, Illinois.

719. *Times (London)*. 1976. Unilever moves into vegetable protein market. Nov. 16. p. 24, col. 2.

• **Summary:** Although Unilever is the largest food processing group in Britain, both Nestlé and Cadbury Schweppes have entered the British retail market first with “TVP foods made from north American soybeans.”

However in Holland, Unilever has already sold a rissole made from meat and TVP and in West Germany Unilever has a spaghetti sauce containing TVP.

Dr. J.G. Collingwood, Unilever’s director of research, said that in 10-20 years “between 5 and 20 per cent of the meat eaten in Britain might be replaced by vegetable protein.”

720. Archer Daniels Midland Co. 1976. For the world of foods, and foods of the world: ADM soy proteins (Ad). *Soybean Digest*. Nov. p. 76.

• **Summary:** Shows a map of the world with flags at major ADM locations. World headquarters are at Decatur, Illinois, with a plant at Fredonia, Kansas. European headquarters at 222 Ave. Louise B-1050 Brussels, Belgium, with plants at Rotterdam, Netherlands, and Manchester, England. Latin America headquarters is Nestle / ADM at Caixa Postal 632, Campinas 13.100, Sao Paulo, Brazil.

“Development of soy protein ingredients for use in foods for people has been the chief mission of ADM for more than thirty years.” TVP is The Original Textured Vegetable Protein. U.S. Patent 3,488,770. Address: Decatur, Illinois.

721. Koch, Carol. 1976. USSR, Polish seminars foundation for future contracts. *Soybean Digest*. Nov. p. 19.

• **Summary:** “‘Edible soy protein seminars being conducted in Poland and the USSR are just the foundation on which we hope to build a future for soybean market development in these countries,’ according to Dennis Blankenship, ASA director of market development.

“Conducted in late October, Blankenship remarked that these seminars marked the first time American industry could deal directly with prospective Soviet and East European customers on the topic of soy protein foods as a means of meeting world food needs. The seminars were jointly sponsored by ASA, the Food Protein Council and the Foreign

# **EDIBLE SOY PROTEIN SEMINAR**

MOSCOW, U.S.S.R. OCTOBER 13, 14 - 1976

WARSAW, POLAND OCTOBER 18, 19 - 1976

ARCHER DANIELS MIDLAND COMPANY DECATUR, ILLINOIS 62525

Agricultural Service.

“Drawing together expert technicians in the production and application of various soy protein products, the seminars briefed government and institutional feeding officials on the uses soy could have in their nutritional programs. Delegates came from the USSR, Hungary, Poland, Romania, Yugoslavia, East Germany, Czechoslovakia and Bulgaria.

“Among, the speakers at the seminars was Richard Burket, Archer Daniels Midland. According to Burket, ‘As an industry, the edible soy protein industry is rather young.’ But as a food product, it finds uses ranging ‘from basic [soy] flour to the textured products and are used in everything from bakery products to meat and dairy products.’ It looks to be a growing market on an international basis, he contends, because soy protein provides an economic protein source that is versatile. It’s biggest boost came from the U.S. Government when it’s use was approved in school lunch programs thus opening the door to the growing institutional feeding market.

“One portion of the seminar discussed the nutritional aspects of soy protein products; the general manufacturing process plus composition, function and nutritional properties of soy flour and grits; textured soy protein products, and soy concentrates and isolates. Speaking to these topics, respectively, were Dr. Irvin E. Liener, Univ. of Minnesota; Dr. Donald Quass, Dawson Mills, Minnesota; Dr. Bernard Link, Cargill Inc., Minnesota; Dr. L.D. Williams, Central Soya Co., Illinois.

“The second part of each seminar covered the various applications of soy ranging from consumer applications to bakery, meat and whipping applications plus a look at developments that may take place in the future. Chris Edwards, Ralston Purina S.A., Belgium, opened the discussion of soy applications and was followed by Robert Bartz, Nabisco Protein Foods, New Jersey; Dr. Morton S. Cole, Archer Daniels Midland, Illinois; William Readdy, Griffith Laboratories, Illinois; Jaap Van Son, A.E. Staley, The Netherlands; and Sheldon J. Hauck, Food Protein Council, Washington, D.C.

“Addressing both seminars on the future soybean supply prospects and technology available to U.S. soybean farmers were Dick Falb, ASA, and Gerald Michaelson, ASA president from Dawson, Minnesota.

Keynoting the Moscow meeting was U.S. Assistant Secretary of Agriculture Richard Bell, and U.S. Ambassador Richard T. Davies opened the Warsaw conference.

“A special 1-day seminar on soybean meal utilization followed the USSR meeting.

“Following an introduction to participants by Alan Trick, ag attache, Dick Falb, ASA, provided an overview of U.S. soybean production. Then the conferees were given the technical information for application of soybean meal in their livestock and poultry rations.

“Dr. Keith Smith, ASA animal nutritionist, discussed

the production, composition and utilization of soybean meal; and Dr. Park Waldroup, Univ. of Arkansas, delineated current trends in amino acid nutrition.

“Dr. Vaughn Speer, Iowa State Univ., addressed the use of soybean meal and amino acid requirements for pregnancy and lactation in swine. Closing out this special conference was W.W. Cravens, Central Soya, discussing soybean meal usage in U.S. feed.

“With favorable reception of these seminars, both from the soy for human nutrition standpoint and for livestock rations, Blankenship says ASA hopes to be able to expand communication channels between the U.S. and these countries.”

722. *Soybean Digest*. 1976. Fair encourages soy use as food. Nov. p. 30.

• **Summary:** “Foreign diplomats and agricultural attaches attending a special reception on Capitol Hill in September nibbled on Swedish meatballs, ‘terrific tacos,’ Polynesian tidbits and other fancy hors d’oeuvres—all made from soybeans. The buffet, designed to show the wide variety of food uses for soy protein, was a feature of the 1976 International Soybean Fair, which hosted diplomatic representatives from over 70 foreign countries. The fair was the brainchild of Representative Paul Findley (Republican from Illinois), who arranged a similar event in 1972... ASA’s [the American Soybean Association’s] Princess Soya Mary Nell Taylor was hostess for the fair... Findley said the fair’s emphasis was on ‘encouraging the use of soybeans and soy products as food to help feed the protein-deficient peoples of the world.’” A photo shows: USDA Assistant Secretary Richard Bell, Princess Soya Mary Nell Taylor, Representative John Jenrette (Democrat, South Carolina), and Richard Burket of Archer Daniels Midland Co.

723. *SoyaScan Notes*. 1976. Chronology of soybeans, soyfoods and natural foods in the United States 1976 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Feb. KQED-TV in San Francisco, California, airs a 30-minute special titled “Tofu.” It is an interview with William Shurtleff and recipe preparation by Akiko Aoyagi.

March. “The Joys of Soy” by Brenda Bortz, published in *Organic Gardening and Farming* magazine is the first major popular article on tempeh in America. In June, *Prevention* magazine runs a cover story on tempeh.

April. Soybeans: Brazil as a Competitive Force by J.M. Schultz and W.P. Mason submitted as a Harvard Business School MBA thesis. One of the best early in-depth analyses.

April. The second of the new wave of commercial Caucasian-run tofu shops is started by Peter and Judy Beane in Portland, Maine. There were at least 7 small commercial Caucasian-run tofu shops in America by the end of 1976.

May-June. *Mother Earth News* publishes the first of five

long articles on soyfoods, each excerpted from *The Book of Tofu*.

June 2-5. First International Workshop on Low-Cost Extrusion Cookers held at Colorado State University, with 51 participants. Organized by Judson Harper and Richard Jansen, with funding from USAID through USDA. The 173-page proceedings, edited by Wilson and Stumpf, are published shortly thereafter. Cereal-soy blends are seen as having great promise for production in developing countries.

This year cereal-soy blends are first produced in Third World countries using low-cost extrusion cookers: Thripocha in Sri Lanka and Maisoy in Bolivia.

July 20. What is Tofu? pamphlet by Shurtleff and Aoyagi published by Westbrae Natural Foods in Berkeley.

Aug. 6. New-Age Foods Study Center established by Shurtleff and Aoyagi in Lafayette, California. The name was changed to The Soyfoods Center in Sept. 1980.

Aug. The Learning Tree Tofu Kit, America's first widely sold and important tofu kit, is launched by Larry Needleman of Bodega, California, based on designs from *The Book of Tofu*.

Aug. Farm Food Company, a branch of The Farm in Tennessee, opens America's first soy deli, in San Rafael, California. They serve tofu sandwiches, salads, salad dressings, and cheesecakes; tempeh burgers, deep-fried tempeh cutlets, tempeh with creamy tofu topping, and Indonesian delight (tempeh strips); soymilk ice cream, shakes, yogurt, mayonnaise, and whipped creme; soybean stroganoff and burritos; and TVP chili. They essentially launched the concept of second-generation soyfood products—and many of them were made with tempeh.

Sept. 23. *The Book of Miso*, by Shurtleff and Aoyagi published by Autumn Press.

Sept. 29. Shurtleff and Aoyagi begin "Tofu and Miso America Tour." They do 70 public programs nationwide and travel 15,000 miles in their white Dodge van, continuing until 3 Feb. 1977. In the van they carry hundreds of copies of *The Book of Tofu* and *The Book of Miso* and many of Larry Needleman's tofu kits, plus little bags of natural nigari, all of which they sell at their programs. They usually have meals and spend the night with the people who have sponsored and organized their program. They also visit numerous soyfoods producers and researchers, including The Farm in Tennessee from Dec. 21 to Jan. 2. After the tour, tofu shops started in most of the areas where they spoke.

Sept. Dr. Kenneth Bader becomes executive director of the American Soybean Association. With the help of increasing funding from checkoff programs, he ushers in an era of growth, and increased activity and strength for ASA.

Oct. 13-15. Seminars on the use of soy protein for foods and meal for feeds are held in Moscow, sponsored jointly by the U.S. Foreign Agricultural Service, the American Soybean Assoc., and the Food Protein Council. More than 200 Soviet officials attended.

Oct. *The Joy of Soy*, by Sylvia E. Anderson self-published in New Jersey.

Nov. Island Spring starts making tofu in Vashon, Washington. Founded by Luke Lukoskie and Sylvia Nogaki.

Dec. The term "soyfoods" (spelled as one word) is coined by Benjamin Hills of Surata Soyfoods in Eugene, Oregon, for use in their company name. It is first used in a book (*Tofu & Soymilk Production*) by Shurtleff and Aoyagi in July 1979, and as a magazine title in July 1980.

Dec. Morinaga Milk Industry Co. in Japan is granted the world's first patent on a method for manufacturing aseptically packaged tofu (in Tetra Brik cartons), U.S. Patent 4,000,326.

\* Kibun, in Japan, introduces East Asia's first commercial fermented soymilk products, a line of acidophilus soymilk drinks brand-named Soena.

\* Beginning of the rise of the modern soymilk industry in Japan. This is the first year that a significant amount of soymilk was sold.

\* Kikkoman soy sauce passes La Choy to become America's best selling brand of soy sauce. The three major soy sauce markets are consumer retail, restaurants and other institutions, and industrial (for food processors). La Choy may still be the leader in consumer retail; Kikkoman leads in restaurants.

\* Beef consumption in America peaks at 95.4 pounds per capita. It had risen rapidly from 38.6 lb/person in 1930. After 1976 it falls steadily, hitting 75 lb/person in 1985.

\* National Soybean Research Program established in Brazil, building upon the National Soybean Project (1972) and the National Soybean Research Center (1975).

724. Anderson, Sylvia E. 1976. *The joy of soy*. Pleasantville, New Jersey: New Life Press. 48 p. Dec. Illust. Index. 23 cm. Spiral bound. Rev. ed. 1977. Spiral bound.

• **Summary:** Contents: What is the joy of soy. Whole, dry soybeans ("My favorite way to cook whole, dry soybeans is to pressure cook them"). Soymilk. Tofu. Sweet tofu. TVP. Okara. This vegan cookbook was inspired by The Farm, a large spiritual community in Tennessee, where the author and her children lived for several years. "When I arrived on The Farm, I thought I didn't like soybeans... Now I love soybeans and soymilk—not because my tastebuds have changed and I've acquired a new taste for them, but because I've learned new ways to cook soybeans so that they taste good to those same old tastebuds.

"The recipes in 'The Joy of Soy' have been developed through feedback from members of The New Life Co-op (326 S. Main St., Pleasantville, New Jersey), where products made from them have been selling rapidly for the past nine months."

Note: The author's favorite recipes are: (1) Grandma's chickenless soup with Kreplach (and tofu, p. 19). (2) "Cheezy" soybean d'lishes (p. 6). (4) Garden salad d'lishes

(with tofu, p. 21). (5) Pizza d'lishes (with tofu, p. 23). (6) Tofu cookie bars (sweet, p. 26). (7) Tofu cinnamon rolls (sweet, p. 27). (8) Tofu-filled carob cupcakes (sweet, p. 28). (9) Okara soysage (p. 40). (10) Soysage d'lishes (with TVP, p. 37). (11) Okara spice cake (sweet, p. 45). (12) Dairyless macaroni and cheese (with tofu, p. 15). Address: Pleasantville, New Jersey.

**725. Product Name:** TVP/2 Textured Vegetable Protein Concentrate (70% protein) [Flavored, or Unflavored].  
**Manufacturer's Name:** Archer Daniels Midland Co.  
**Manufacturer's Address:** 4666 Faries Parkway, Decatur, IL 62526.

**Date of Introduction:** 1976.

**How Stored:** Shelf stable.

**New Product–Documentation:** Archer Daniels Midland (ADM). 1976. "ADM Foods: Where the people who feed the world buy their groceries." On page 10 we read: "But recently, ADM introduced TVP/2, a second generation textured protein made from soy protein concentrate. This 70% protein made from soy protein concentrate can replace meat entirely in many applications with no loss of appetite appeal."

Archer Daniels Midland (ADM) Annual Report. 1977. "What's new: A 75 year report from Archer Daniels Midland Company." Page 8 states that "in 1965 ADM introduced TVP brand textured vegetable protein. Ten years later we introduced a second generation of TVP containing 70% protein, along with a new soy protein concentrate" [Ardex 700]. The last page states that ADM Protein specialties makes "TVP/2 textured vegetable protein concentrate, flavored and unflavored."

*Soybean Digest Blue Book*. 1978. p. 34. Dick Wallace. 1981. Sept. Letter to William Shurtleff at Soyfoods Center. ADM started producing textured soy protein concentrate in 1977.

**726. Product Name:** Granose Soyapro Wieners. Later renamed Soya Wieners.  
**Manufacturer's Name:** Granose Foods Ltd. (Distributor). Made in Denmark by Nutana.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1976.

**Ingredients:** 1980: Soya protein, vegetable oil, egg albumin, oats, salt, glucose syrup, vegetable stabilizer.

**Wt/Vol., Packaging, Price:** 385 gm can.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Manufacturer's catalog. 1980. April. "Soya sausages. Serve as frankfurters. Can be broiled, grilled or fried."

Form filled out and Labels sent by Granose Foods Ltd. 1990. June 13. States that the product, made in Denmark by Nutana, was introduced in 1976. It is now named

Soya Wieners. Can Label. 1990. 9.5 by 4 inches. Photo of the prepared dish, three wieners on a plate with rice and vegetables against a brown background. Vegetarian.  
**Ingredients:** Water, soya bean oil, egg white powder, textured soya protein, tomato puree, onions, soya protein isolate, salt dextrose, spices, soya sauce, oatmeal, guar gum (E412), sodium alginate (E401), hydrolyzed vegetable protein, smoke flavor. Serving suggestion: Heat or roast Soya Wieners and serve with spaghetti or mashed potatoes. Sliced Soya Wieners are delicious in salads. Ideal for lunch and dinner. Dietary analysis available on request.

**727. Product Name:** Granose Soyapro {Canned Slices} [Beef Like, Chicken Like, or Ham Like].

**Manufacturer's Name:** Granose Foods Ltd. (Marketer-Distributor). Made in Denmark by Nutana.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1976.

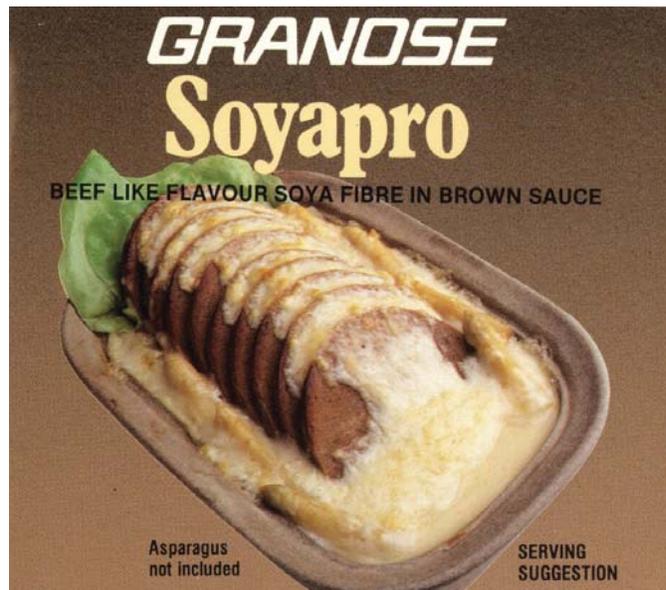

**Ingredients:** 1980: Soya protein, vegetable oil, egg albumen, hydrolysed vegetable protein, salt, flavourings.

**Wt/Vol., Packaging, Price:** 400 gm can.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Manufacturer's catalog. 1980. April. "Slices of flavoured soya protein fibre canned in sauce. May be used hot or cold as slices or added in pieces to pies, casseroles, etc. Beef like flavour only contains in addition, wheat protein."

Form filled out and Labels sent by Granose Foods Ltd. 1990. June 13. States that the product was introduced in 1976. Made by Nutana. Subtitle is now, for example, "Chicken Like Flavour Soya Fibre in Brown Sauce." Can Label. 1990. 9.5 by 4 inches. Photo of the prepared dish on a plate with rice and vegetables against a brown background. "Ingredients: Water, textured soya protein, soya bean oil, egg

white powder, starch, hydrolysed vegetable protein, yeast extract, vegetable stock, wheat flour, celery powder, salt, stabilizer. Serving suggestion: Cut into shreds and place in a stew of carrots and peas, sprinkle with parsley, serve with potatoes and a salad. Ideal for lunch and dinner.”

728. **Product Name:** [Fansteco or Fan'steco (Simulated Meat Products)].

**Manufacturer's Name:** Societe Industrielle des Oleagineux (SIO).

**Manufacturer's Address:** Main Office: 30 Rue des Peupliers, 92000 Nanterre, France.

**Date of Introduction:** 1976.

**New Product–Documentation:** B. Julien. 1976. Foreign Agriculture. April 19. p. 6. Soya Bluebook. 1986. p. 92.

729. ADM Foods. 1976. Market news: Special IFT edition. Visit ADM booth 222-223, 317-318. Decatur, Illinois. 27 p. 28 cm.

• **Summary:** A similar report was published in 1976. This one seems to be focused on corn sweeteners or CornSweet™—high fructose corn syrup. James R. Randall is president of ADM. On the inside front cover is this slogan: “ADM: Where the people who feed the world buy their groceries.”

Page 8: “ADM Foods” is mentioned. “ADM, the largest domestic soybean crusher in the United States...”

Page 10: “Food ingredient production in Europe: The continuing increase in demand for proteins in the food and feed industries has prompted ADM's expansion in protein production in Europe. Double digit increases in prices of food stuffs in many European countries has created the need and demand for lower cost high protein foods and food ingredients.

“ADM currently has two plants producing soy protein products in Europe. The British Arkady Co., Ltd. in Manchester, England offers a line of full fat soy flours, defatted soy flours and soy grits, soy concentrate, soy isolates, blends and additives for the bakery industry and a complete line of textured vegetable protein products.

“ADM Netherlands has recently completed a soybean processing plant in Maassluis, Holland. This plant which serves the food industry of continental Europe, is producing a full line of textured vegetable proteins and a complete line of defatted soy flours. Refined soybean oil for the salad oil and margarine industry is also processed at this plant.”

Page 22: In Cedar Rapids, Iowa, ADM has built a new plant and now makes 4 million pounds a day of high fructose corn syrup.

Gary Null (director of the Nutrition Institute of America), writes an article in *Family Circle* magazine (Nov. 1973) ADM summarizes: “Many nutritionists now feel that you need not fear cholesterol if your diet is Lecithin rich.” Address: Box 1470, Decatur, Illinois 62525.

730. Archer Daniels Midland Co. 1976. ADM Foods: Where the people who feed the world buy their groceries. Decatur, Illinois. 17 p. 28 cm.

• **Summary:** ADM supplies basic food ingredients to food processors. This report is designed to show visually (with various captions accompanying 2-page color spreads) the huge scale of ADM's food ingredients operations. Contents: ADM Foods: 10,000,000 acres of it. “The retail value of the foods made with our ingredients exceed \$20 billion in 1975... and that's more than the sales of the top five packaged food companies in the U.S. combined. Our business is food. On a big scale.”

“ADM Foods: Enough high fructose corn sugar to make 50,000,000 12-oz. soft drinks every day.” “Corn sugars and syrups” help to cut costs. “At the world's largest, most efficient corn sugar plant located in the heart of Iowa corn country, ADM Corn Sweeteners can produce 40 tank cars of high fructose syrup a day. Another plant at Decatur will almost double that capacity.” Note 1. High fructose was first introduced in the USA in 1967. ADM soon became a leading manufacturer.

“ADM Foods: Enough bakery flour every day to make more than 300 square miles of bread (and enough margarine to spread on it). ADM Foods: Enough malt to roll our more beer every hour than 50 eight-horse hitches can haul.

“ADM Foods: Enough textured vegetable protein to top a 125 acre pizza daily.

“Textured vegetable proteins have been heralded as the meat, milk and eggs of the future. Well, the future is now! ADM Protein Specialties introduced this economical source of food protein in 1967. Today, more than 500 consumer products in your grocery stores contain our TVP® brand textured vegetable protein. TVP® has also found great acceptance in Europe and many other countries.

“So far, TVP® has been used primarily to extend meats in products such as patties, stews, tacos, pizzas, prepared dinners and casseroles. But recently, ADM introduced TVP®/2, a second generation textured protein made from soy protein concentrate. This 70% protein product can replace meat entirely in many applications, with no loss of appetite appeal.

“Our researchers also have developed luncheon meats, sausages and chops containing between 30% to 50% TVP® that maintain excellent product quality.

“Other products ADM processes from soybeans are helping to feed the world by replacing scarce and costly animal proteins in baked goods, dairy and egg replacers and highly nutritious beverages.”

Note 2. This is the earliest English-language document seen (July 2020) that uses the term “TVP/2” to refer to textured soy protein concentrate.

“ADM Foods: Enough pasta to feed 23,940,000 people every day.”

“ADM Foods: Enough [granulated white] sugar to coat a donut the size of the New Orleans Superdome every 23 minutes.”

“ADM Foods: Enough animal feed to fatten 8 turkeys a year for every American home.” Address: Box 1470, Decatur, Illinois 62525.

731. Banton, O.T. ed. 1976. *History of Macon County [Illinois]*, 1976. Decatur, Illinois: Macon County Historical Society. iv + 555 p. See p. 135-36, 223-25. Illust. Index. 23 cm.

• **Summary:** Pages 135-36: “One of the biggest shifts in farming operations in Macon and other central Illinois counties came with the start-up, on Sept. 30, 1922 by the A.E. Staley Mfg. Co., of one of the first commercial soybean processing facilities in America. Augustus E. Staley. Sr., who for more than 10 years had been convinced that soybean production and processing could become a profitable operation, took a gamble on the venture with his bean plant and started urging farmers of the region to increase their soybean acreage. More than 32,000 acres of beans were raised in Central Illinois in 1922, but prior to that their uses had been limited. The Staley plant produced soybean oil, for which there was a market, and soybean meal, which was far better livestock feed than the whole beans had been. For the first few years the Staley bean plant failed to make a profit, but that soon changed and the plant has been enlarged several times. Bean acreage likewise has expanded almost explosively, until beans have joined corn as a leading farm crop.

“In 1925 Macon County farmers harvested 2,300 acres of beans. By 1935 this had increased to 83,000 acres, yielding 21 bushels per acre, with the crop valued at \$1,185,000. By 1965, some 108,600 acres were harvested, with a yield of 32 bushels per acre. Value of the crop was \$8,814,000. Acreage has continued to increase, and the 1975 record crop was valued at \$25,093,000; the average yield was 39 bushels per acre. Yields of both beans and corn have been materially increased in recent years by farmers cutting down the space between rows—from 40 to 30 inches, which made possible the growing of many more plants per acre. The reason for the earlier 40-inch rows was that 40 inches was needed for a horse to walk between the rows at cultivating time.

“Government support programs, introduced in 1933 to protect farmers against ruinous prices in years of heavy crop yields and make farm income less susceptible to whims of the weather, have been up and down in the last 10 years. During the time of grain surpluses, acreage controls were on wheat and corn. These controls were removed in 1974, and holding acreage out of production has gone by the wayside. Today few control programs remain.”

Pages 223-25: Central Mills at Main St. and Broadway was established in 1855 and produced flour under various

trade names. It was known as Hinkle & Condell when David S. Shellabarger bought into it in 1858.

“Shellabarger had come to Decatur two years earlier from Carlyle, Pennsylvania, where his family had been millers since 1776. Selling his Hinkle firm interest in 1872, Shellabarger with three partners, Isaac Shellabarger, Benjamin Dillehunt and William Bowers, took over a larger mill, the Great Western, at Cerro Gordo and Water Streets. New machinery was installed and larger buildings added. In 1888 David Shellabarger became sole owner and was joined in the business by his three sons. As the wheat belt moved westward the Shellabargers opened flour mills in Kansas, and the Decatur mill centered on corn products. The Shellabarger family continued to be identified with the grain industry in Decatur for nearly a century after David’s arrival in 1856.

“W.H. Suffern moved his elevator to Decatur from Pierson in 1891 and in partnership with Robert I. Hunt formed Suffern, Hunt & Co. A cereal mill built in 1907 produced the first breakfast food corn flakes, which were shipped to Indianapolis and Battle Creek, Michigan, for packaging. The mill, located on the site of the Polar Ice Co., burned in 1909. Pratt Cereal Mill was the first cereal oil mill in the United States. Organized in 1895 by F.M. and R.E. Pratt, who had arrived in 1880, it was the forerunner of the A.E. Staley Mfg. Co. The plant occupied some two blocks along the Wabash tracks on the east side of Decatur. The firm brought in 100 carloads of machinery and erected large storage tanks. Ten carloads of corn were ground daily for an output of 25,000 gallons of oil which was used in soaps, paints and salad oil. Corn starch and animal feed were by-products. In 1902 the Pratt and Shellabarger mills, along with several others in the Midwest, were purchased by American Hominy Co., a trust business centered in Indianapolis [Indiana]. The Decatur units, known as the Wellington Starch Co., were bought by A. E. Staley in 1909 from American Hominy, enabling him to start his starch firm here in 1912.

“Augustus Eugene Staley, Sr., founder and chief executive of the giant soybean and corn processing firm which bears his name, was born on a farm near Julian, North Carolina in 1867. As a farm boy he grew up amid post Civil War privations of a Southern state. He had little schooling and his time was spent in farm chores. Deciding on a job as a traveling salesman at the age of 17 he peddled tobacco to country stores in the Carolinas, Virginia and Tennessee. Later he traveled for an extract firm and for Royal Baking Powder, possibly visiting Decatur.

“After 15 years of selling on the road, Staley settled in Baltimore and entered the starch business in a small way with \$1,500 in capital. He had fancy boxes imprinted ‘Cream Corn Starch,’ and filled them from bulk starch purchased in barrels. He did the packaging at night and the selling by day. The ‘Cream’ designation is still used by the company.

“Though the first years were difficult, Staley’s business began to expand so rapidly that Eastern competitors shut off

his starch supply. He turned to the Corn Belt, looking for factory space to make his own starch. He raised \$600,000 in capital by incorporating and selling stock to his many grocery store friends. A half dozen not too new buildings on 21 acres in Decatur launched the venture in a defunct corn processing plant.

“With World War I halting export business, the Staley plant had to close for 15 months. Staley mortgaged his home, borrowed on his life insurance and went back to his earlier investors who backed him with more dollars. The plant reopened and as business picked up vast expansions were undertaken. A corn syrup refinery began operating in 1920. Seeing great possibilities in the little known soybean brought from Manchuria by missionaries, Staley encouraged Midwestern farmers to grow this grain and in 1922 the company opened the nation’s first [sic] soybean processing plant, pioneering this important ‘money crop’ industry. Prices of soybean oil today are quoted FOB [f.o.b. = free on board] Decatur. One of the most recent additions to the Staley line of corn sweeteners is high fructose syrup used as a sugar substitute in food and soft drink processing.

“The A.E. Staley Mfg. Co. with its international headquarters, research center and principal grain refining facilities located in 137 buildings on a 400-acre site in Decatur has a daily processing capacity of more than 200,000 bushels of corn and soybeans. Employment averages about 3,800 in 15 U.S. plants and 12 sales offices. International activities span the globe and the company has a policy of acquiring at least one small related firm annually. A.E. Staley was frequently described as a man of confidence and vision, and the success of his Decatur venture bears out that description. He was a personal benefactor to numerous local institutions. A monument to Staley, who died in 1940 and was succeeded as company president by A.E. Staley Jr., is a 14-story company office building erected in 1929, a graceful edifice of stone and marble. As an old man looking back on his career, Staley, during an interview at the time he was given an honorary degree by Millikin University, made this comment: ‘My salesmanship built this business.’

“The Staley family has been a benefactor to local institutions. Two of the larger gifts are the Staley Pavilion, a large section of Decatur Memorial Hospital, and the Staley Library at Millikin University, the latter built in 1976. Success of the Staley company in corn and soybean processing brought other companies in the industry to Decatur, and the city earned the title ‘Soybean Capital of the World.’

“Archer-Daniels-Midland Co. which was based in Minneapolis, erected a Decatur plant in 1939 and later acquired soybean plants that had been operated by Spencer-Kellogg, Shellabarger and Ralston Purina. Other divisions moved from Minneapolis to Decatur and in time the entire international office with some 400 employees followed. A textured vegetable protein (TVP) plant and new office

building were constructed. A new \$30 million corn refinery added 300 jobs. Recently acquired by ADM was the Tabor & Co. elevator firm.”

Photos show: (1) Soybean test plot, Dane Brett Farm 1960. Signs show Clark, Shelby, Harosoy and Lindarin soybean varieties, (2) A biplane dusting a field. “Controlling the corn borer was a problem in 1951. This was the beginning of chemical pesticide use on the farm.” (3) “Augustus Eugene Staley from a portrait in the Masonic Temple. Mr. Staley contributed a large sum to the building of the temple.” (4) Staley Co. office building. (5) Aerial view of ADM Decatur East soybean processing plant.

Note: The editor, O.T. Banton, was also editor of the *Herald and Review* (Decatur, Illinois).

732. Batt, Eva. 1976. What’s cooking? A guide to good eating. Revised ed. Enfield, Middlesex, England: The Vegan Society. xxxii + 100 p. Introductions by Gordon Latto, and by Muriel Dowding. Portrait. Index. 21 cm.

• **Summary:** A vegan cookbook, the first edition of which was published in 1973. The author has been a vegan for the past 16 years. She was the secretary of the Vegan Society for 5 years and has been the vice-president for the past 7 years.

The acknowledgements contains a poem which ends with the verse: “Old Mother Hubbard’s sweet smelling cupboard, Has no meat for the doggie to chew; But he’s happy to eat Vegetarian eat, Now she puts TVP in the stew.” Page v. recommends Delice (non-dairy frozen dessert). Page x features a half-page section titled “Soya” focuses on soya flour and recommends the Soyolk brand, which has been heat treated. The section titled “Milk” (p. xv) notes that “The fortified vegetable milks such as Plamil, Granogen and Granolac are useful sources of all of these nutrients [found in cows milk] and a daily glass of one of these is a very good habit. Page xvi discusses Textured Vegetable Protein (TVP) and notes that the brands Vitpro and Protoveg also contain added vitamin B-12 in the unflavoured types. Soyanutta is a vegetable oil product that is praised for being “entirely free of any hydrogenated oils or fats.”

On pages xxix to xxxii is 4-page advertorial titled “Why Plamil?” by Leslie J. Cross [Secretary, The Plantmilk Society, Uxbridge, England]; it talks about the suffering that dairy milk consumption by humans causes to calves and cows, gives a history of the Plantmilk Society (founded in June 1956 in London as a registered charity), the company named Plantmilk Ltd. (founded in 1961), and the production of its first non-dairy milk in 1965 at Langley, Bucks. (It as initially sold under the name Plantmilk, but later for legal reasons the brand was changed to Plamil). In 1972 the plantmilk factory at Langley was closed and moved to Folkestone, Kent—the very town where the idea of making such a milk first crystallized. Plamil, sold in 2 sizes of cans, is now extracted from the soya bean and contains added vitamins, including B-12. “In addition to plantmilk, the

company also makes a non-animal replacement for dairy cream: this is sold in cans under the brand name of Plamil Delice. There is also a chocolate bar—Plamil Chocolate.

Soy-related recipes include: Junket (made with Plamil, p. 62). Frozen fruit nog (made with Granogen). Banana ice cream (with Plamil). Plamil ice cream (p. 63). Vegetable cream cheese (made with Plamil, Granogen, or Velactin, p. 82). Soya cheese (Cheddar style, made with Soyolk soy flour and margarine, p. 82). Soya compote (with Plamil and soya flakes, p. 82). Onion soup (with soya flour, p. 83).

Page 101 is about The Vegan Society, founded in 1944, and located at 47 Highlands Road, Leatherhead, Surrey, England. Mrs. K. Jannaway is Secretary. Address: England.

733. Burket, R.E. 1976. Market potentials for high protein foods and food ingredients from soybeans. In: L.D. Hill, ed. 1976. *World Soybean Research [Conference I: Proceedings]*. Danville, Illinois: Interstate Printers and Publishers, Inc. xvii + 1073 p. See p. 817-19.

• **Summary:** Soy proteins already enjoy large markets in such areas as baked goods and processed meats. Any soy protein product to be used as a food ingredient or to construct a food analog product must have three basic characteristics: It must be able to justify its use on an economic basis and on a functional basis, and it must be accepted by consumers as a quality product.

The prices and protein content of various soy protein products are as follows: Soy flour 10 cents/lb, more than 50% protein. Soy protein concentrates 25-30 cents/lb, approximately 70% protein. Isolate soy protein products 55-60 cents/lb, over 90% protein. Textured soy protein products made from soy flour 16 cents/lb. Textured soy protein concentrates just over 30 cents/lb.

Given that a dry textured soy flour product costs 16 cents/lb, when hydrated with 1½ times its weight in water, it costs only 7 cents/lb; in a wide variety of applications, it can replace commercial meat products costing up to 10 times that price.

Approximately 68% of the protein consumed by Americans is animal protein. The rising prices of animal products and the concern about problems caused by cholesterol began to create an interest in more economic and healthful foods just at the time when makers of edible soy protein products were launching new and improved products.

In Feb. 1971, USDA's Food and Nutrition Service approved the use of textured vegetable protein products as a partial meat replacer in Type A school lunches, signifying that the use of soy proteins had "come of age." It was soon demonstrated that these soy proteins could allow savings of 20-30% of the cost of meat and still maintain product quality [with less fat] and nutrition. Address: President, Protein Specialty Div., Archer Daniels Midland Co., Decatur, Illinois.

734. Horan, F.E. 1976. Use of soy protein for food. In: L.D. Hill, ed. 1976. *World Soybean Research [Conference I: Proceedings]*. Danville, Illinois: Interstate Printers and Publishers, Inc. xvii + 1073 p. See p. 775-88. [19 ref]

• **Summary:** Contents: Introduction. Protein as a nutrient. World supplies of protein. Soybean production. Adequate protein diets. Soy-cereal blends. Textured vegetable products. Soybeans as human food. References. Address: Director of Research, ADM, Decatur, Illinois.

735. Horan, F.E.; Wolff, Hans. 1976. Meat analogs—a supplement. In: Aaron M. Altschul, ed. 1976. *New Protein Foods. Vol. 2. Technology, Part B*. New York: Academic Press. xvii + 324 p. See p. 260-79. Chap. 9. [50 ref]

• **Summary:** Contents: 1. Introduction. 2. Advances in technology: Fiber-containing types, thermoplastic extrusion types, other approaches. 3. Advances in analytical methodology: Analysis of meat-soy protein blends, measurement of texture. 4. Additional information on performance: Meat patties, meat loaves, storage of frozen beef patties containing soy protein, nutrition. 5. Advances in marketing: Areas of application, the future. References. Address: 1. Archer Daniels Midland Co., Decatur, Illinois; 2. A.E. Staley Manufacturing Co., Decatur, IL.

736. Neufeld, Don F. ed. 1976. *Seventh-day Adventist encyclopedia, revised [2nd] ed.* Washington, DC: Review and Herald Publishing Assoc. 1640 p. 25 cm. Commentary Reference Series, Vol. X. First ed. published 1966.

• **Summary:** This indispensable reference work, which is about 10% longer than the original 1966 edition, contains excellent short histories with some updated or additional financial and/or production statistics for the food companies.

A complete list (with city and country) of all SDA food companies is given at "Food companies."

New entries: World Foods Service (1968): "A department of the General Conference whose director coordinates the various phases of the denominational food production and marketing activities throughout the world field. Each division (except North America) has a world food service secretary to further the development of the food ministry within his area of operation.

At the Autumn Council of 1967 a health food department at the General Conference level was created. At the Autumn Council of 1968 this department was named World Foods Service.

"Secretary (until 1974) and Director: E.W. Howse, 1969- ." Address: Washington, DC.

737. Neufeld, Don F.; et al. ed. 1976. *Seventh-day Adventist encyclopedia, 2nd ed.:* Granose Foods Limited (British Health Food Factory). Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 527-28. Or. p. 624.

• **Summary:** "A health-food factory situated in Stanborough

Park, Watford, Hertfordshire, England, manufacturing several varieties of vegetarian protein foods and breakfast cereal biscuits, one of the latter being called Sunny Bisk. In 1973 business volume totaled £400,000, made possible by updating the processes with modern machinery.

“The SDA [Seventh-day Adventist] health food work in Great Britain was begun by a group of laymen who, under the name The London Health Food Company, purchased health foods from Dr. J.H. Kellogg, of Battle Creek, Michigan, and distributed them to the public. After a few years SDA leaders in Great Britain sent J. Heide, a master baker, to Battle Creek to learn how to make the foods. In 1899 a manufacturing company was formed under the name The International Health Association Limited, changed in 1926 to Granose Foods Limited. The company purchased a flour mill in Salford, near Redhill, Surrey, to serve as the factory... A fire burned the factory to the ground in 1900. Health foods were again temporarily imported from America, but gifts and loans from SDA’s re-established the company in Birmingham.

“In 1907 all SDA institutions in England, including the food factory, were centralized at Stanborough Park, Watford. The factory has grown until in 1973 it had a floor space of approximately 44,000 square feet, and still further extensions were planned.” Address: Washington, DC.

738. Roberts, Anna; Fevre, Jean Le. 1976. *The earth shall feed us: Cooking for the New Age using textured vegetable proteins instead of meat.* Copse House, Greatham, Liss, Hampshire, England: Published by the authors. 84 p. Illust. by Joanna Hicks. Recipe index. 20 cm.

• **Summary:** Contents: Foreword by Peter Roberts, NDA, NCA (Greatham). Notes and guidance. Editorial/biographies. Protoveg hydration times, abbreviations, measures. Analysis of Natural Protoveg, and Ranch House Foods Vegetable Stew, Vegetable Bolognese, Vegetable Curry, Vegetable Mince, and Vegetable Goulash. Recipes: Snacks ‘n starters. Supers ‘n suppers. Sweet indulgences.

All the recipes in this book (with the exception of the last section) are based on Protoveg and Ranch House Foods brands of textured vegetable proteins sold by Direct Foods Ltd. This is a vegetarian cookbook; dairy products (milk, cream cheese, double cream, evaporated milk, whipped cream, cheese, cottage cheese, butter) and Free Range eggs are included in some recipes. Photos (p. 11) show Anna Roberts and Jean Le Fevre (both authors are women), accompanied by brief biographies.

The Foreword begins: “It was during our years at Little Barnett Farm in the Hampshire village of Froxfield, when Anna and I suddenly realised, with something of a shock, the depth of that unfaltering, absolute trust which our farm animals put in us. It was a trust that in the end we knew we could not honour unless we were to turn the farm into a sanctuary, for farm animals are bred to make a living for

the farmer—in our case via their milk—and when they can no longer contribute, they must die, and the farmer must look away. In the eighth year at Little Barnett we knew we could look away no longer. It seems hard and it is hard that farming should be like this, yet it has been so for thousands of years ever since our ancestors first employed animals to convert the fibrous grasses into meat and milk. In the main, the farm animals have benefited from their association with man—that is, while they were allowed to orientate to the natural world and while farming was a way of life. The age of technology came and relentlessly pressed the animal deeper and deeper into the production-line until exploitation took over from husbandry...

“Finally, it is the health of the consumer that is the crux of the matter, and rightly so. Serious reservations arise concerning the health-risk of factory farm products due to the build-up of disease in intensive animal units and the antibiotics, growth promoters and hormones used.”

Note: See also the Wikipedia entry for “Peter Roberts (activist).” He is best known for having founded (with his wife, Anna) Compassion in World Farming, for which he was awarded an MBE in 2002. Address: Hampshire, England.

739. Zonta Club of Decatur. 1976. A.E. Staley Manufacturing Company, 2200 East Eldorado Street, 1929-1930. In: 1976. *Places & People in Decatur 1900-1929.* Decatur, Illinois. 128 p. See p. 124-127. Illust. No index. 23 cm.

• **Summary:** The “1929-30” in the title means that this book deals with structures built in Decatur between 1929 and 1930. The mission of Zonta Clubs ([www.zonta.org](http://www.zonta.org)) is advancing the status of women and girls. This book was written by Helen Beeson, Charlotte Meyer, Margaret Meyer, and Ruby Mochel. It was produced as part of the “American Revolution Bicentennial Celebration.”

“The beginning of the Staley Company dates back to the ‘gay nineties’—back to 1897 when a young man with only \$1500 in his pocket set out to make his fortune. This man was Mr. A.E. Staley, founder of the company that bears his name today. The rise of the company from a one-man concern to a multi-million dollar business is due largely to his initiative, courage and keen foresight.

“The story of Mr. Staley’s life and the development of his industry is a saga of American opportunity. Starting out as a poor farm boy in North Carolina, he left home at age seventeen. His first job was as a railroad section hand. But his ambition was to be a salesman and for fifteen years he traveled selling tobacco, groceries, flavoring extracts and baking powder. Part of his territory was Decatur, but at that time it is doubtful that he had any idea of making this his home.

“But selling on the road didn’t appeal to him as a life’s work. He wanted to settle down, hopefully with an income

of \$4000 a year. He settled in Baltimore, rented a small room for \$200 a year and began to pack starch which he bought in bulk. He called his product Cream Corn Starch. Mr. Staley stated that he nearly starved the first two years, sometimes making only \$15 to \$50 a month and having to hock his watch to meet expenses. But things changed and the third year his income improved and continued to go up from then on.

“In 1909 he learned of the financial difficulties of the Wellington Company in Decatur (formerly the Pratt Cereal Mills) which had been operating a starch plant. He came to Decatur, looked the situation over, bought the plant and by 1912 had it remodeled and reopened for business. This was the first unit in the Staley company of today and a big venture at that time.

“The company prospered and in 1919 corn syrup was added to its line. Staley was a pioneer in the soy bean industry. Their initial plant built in 1922 made them among the first industries in the nation to process soy beans. It was under Mr. Staley’s guiding hand that farmers were informed of the merits of growing the then little known soy bean and that helped to develop it into one of the nation’s major crops.

“In 1974 the field of corn sweeteners came into the limelight due to soaring sugar prices. New methods which generated an entirely new corn sweetener—high fructose syrup—were developed. At this time there are several domestic producers of this syrup of which the Staley Company is one. Leading markets for the product are food processors and soft drink bottlers.

“As the business grew, more and more buildings were erected. Today the original buildings are gone and a maze of 137 towering structures comprise the three-hundred acre Staley complex. Though its products are diversified today, the company is still basically involved in two major endeavors, corn refining and soy bean processing with 85¢ of its sales dollar derived from these sources. The industry which began with about two hundred employees now has over 3700 men and women engaged in producing and marketing its several hundred different products, has plants in ten states in the nation and operations in a number of European countries, Canada and Mexico.

“One of Mr. Staley’s dreams was to erect a building which would be a tribute to the loyalty and trust of his employees and customers. The million-dollar Staley Administration Building erected in 1929-30 was the fulfillment of that dream. This building which houses the administrative and clerical personnel stands in a landscaped five-acre park. It is fourteen-stories high with Indiana limestone facing it and is topped by a two hundred seventeen foot tower with a revolving beacon which can be seen for twenty miles. Architects for the building were Aschauer and Waggoner of Decatur. The J.L. Simmons Company was the general contractor.

“The foundation course of stone and the entrance

steps of granite are from Mt. Airy, North Carolina near Mr. Staley’s boyhood home. An elaborate system of two hundred floodlighting projectors and copper reflectors with red, blue and amber lenses furnished colored lighting and made the building stand out at night. Because of the national effort to conserve energy, this lighting has been discontinued in the past few years, however, in the earlier years it was a common summer evening pastime for families to park their cars where they could enjoy the many changing color combinations that played upon the beautiful tower. Regular passengers on Wabash trains watched for the view of the lovely building, but especially so if the lights were on.

“The building’s main entrance has lofty arched doorways with revolving bronze doors. The spacious lobby has a high ceiling of gold, blue and walnut and an interesting floor design. Walls of Roman lava rock, high-arched windows with velvet draperies and balcony arches with bronze grill work give an impressive but warm welcome to the visitor. Elevator doors have pictorial etchings in bronze and are framed in black marble. Light fixtures feature a special corn motif. Since redecorating a few years ago, lobby draperies are of gold with rugs and other furnishings in soft autumn colors.

“Executive offices are beautifully furnished but chosen so that each one maintains its individuality. Rugs from China and desk appointments from Tiffany’s are probably the most elaborate of any office building in Illinois. The executive dining room with its massive oak furnishings gives an appearance of quiet elegance. The cafeteria for administrative and clerical personnel has gay red tables and walls with interesting murals appropriately dealing with corn cultivation as begun by the American Indians.

“But beautiful furnishings are not confined to the lobby or executive quarters alone. Throughout the entire building, furnishings are carried out in keeping with the intent of the building, and have equipment that is efficient, functional and attractive.

“It was Decatur’s good fortune that Mr. Staley liked our city. Not only was his company a big industrial addition, but he was instrumental in a number of activities for the betterment of the community. It was the urgent need of the Staley Company for a more adequate water supply that brought plans for the present lake to a head. While waiting for the big impounding dam and lake to be constructed, Staleys built a temporary dam in 1920 where the Staley Bridge is now located. It was removed in 1922.

“It was largely through Mr. Staley’s financial help that the Masonic Temple was built. He was interested in Decatur’s social agencies and a generous contributor to the Community Chest (now United Fund) and to the Decatur and Macon County Hospital. In recent years environmental control activities have received high priority as part of the company’s responsibility to society.

“No history of the Staley Company would be complete

without mention of the company-sponsored athletic teams. Mr. Staley and his general superintendent, Mr. G.E. Chamberlain were both avid sports fans. In 1917 a baseball team was formed sponsored by the Staley Fellowship Club, which by the early 1920's was rated one of the top industrial teams in the country. 'Iron Man' Joe McGinnity was the manager and Charlie Dressen a player.

"In 1920 Mr. Staley hired George Halas who had been a standout athlete at the University of Illinois, to upgrade the company football team. He did this, lining up a team including top college stars from other areas. Ranny Young and Kile MacWherter from Millikin and a few of the 1917 Decatur players, among them Charlie Dressen and Jack Mintun. The Staley Starchmakers had much success but there was a question as to whether Decatur was large enough to support a professional football team. By the end of 1921 Mr. Staley withdrew his company's sponsorship and backed by a \$5000 contribution and his best wishes, the team moved to Chicago" (Continued). Address: Decatur, Illinois.

740. Zonta Club of Decatur. 1976. A.E. Staley Manufacturing Company, 2200 East Eldorado Street, 1929-1930 (Continued–Document part II). In: 1976. Places & People in Decatur, 1900-1929. Decatur, Illinois. 128 p. See p. 124-127.

• **Summary:** (Continued): "They continued to play under the Staley name until 1922 when they were christened the Chicago Bears. While Mr. Halas deserved all the credit heaped upon him, he was the first to say that without Mr. Staley and his company, there might not be a Chicago Bears team today..."

"Although Mr. Staley's formal education consisted of a few years at a small country school, he was the recipient of two honorary degrees which were among his prized possessions. In 1940 he was awarded an honorary doctor of science degree by Millikin University in recognition of his many contributions to Decatur. A doctor of laws degree was given him the previous year by High Point College, High Point, North Carolina.

"Mr. Staley's many friends and employees knew him as an amiable man, jovial and unpretentious usually with a red rose in his buttonhole. Above all he was a good citizen and a gracious gentleman. He was president of the Staley Company from its founding until 1932 when he was succeeded by his son, A.E. Staley Jr. He died in his winter home in Florida in 1940 at the age of seventy-three.

"Mr. A.E. Staley, Jr. was the company president from 1932 until 1958. He died March 19, 1975. Mr. E.K. Scheiter served as president of the company from 1958 until 1965. Mr. Donald E. Nordlund is presently the company's chairman and chief executive officer."

Photos show: (1) First Staley office building. (2) The present towering Staley administrative and office build [the Castle in the cornfields]. (3) The main entrance to the latter

building, showing the ceiling and floor design.

Note: The section on the Masonic Temple (p. 120-23) gives a brief history of the temple and its "applied modern art decoration." It was dedicated in Feb. 1929, only a matter of months before the great financial crash occurred. A portrait of A.E. Staley hangs in the temple; "the portrait was in part a memorial to Mr. Staley for his support of the building of the temple." Mr. Harry I. Kline is credited with saving the temple from foreclosure after the crash. Address: Decatur, Illinois.

741. ADM–Archer Daniels Midland Co. 1976? ADM TVP: The original textured vegetable protein. Decatur, IL 62525. 19 inserts. Undated. 23 x 15 cm.

• **Summary:** See next page. Nine of the inserts in this portfolio are data cards about TVP and 10 are bulk recipes for extending meat (such as beef patties or Sloppy Joes). Address: Box 1470, Decatur, Illinois 62525. Phone: 217 / 423-2571.

742. Food Protein Council. 1976? The protein power of soybeans. Washington, DC. 8 p. Undated. Distributed by ADM.

• **Summary:** See page after next. Contents: Protein power. Nutrition. Availability. Built-in benefits. Approved by school lunch. Acclaimed by experts. Satisfied users (four testimonials). Processing. Soy flour or grits. Soy protein concentrate (incl. granular soy protein concentrate). Isolated soy protein. Textured soy protein: Extruded soy protein (soy flour), spun soy protein (fibers). Future of soy protein. Address: 111 East Wacker Drive, Chicago, Illinois 60601.

743. Wilson, Barry. 1977. Soya meat on the threshold of a boom. *Agra Europe (London)* No. 706. p. M/3-M/8. Jan. 7.

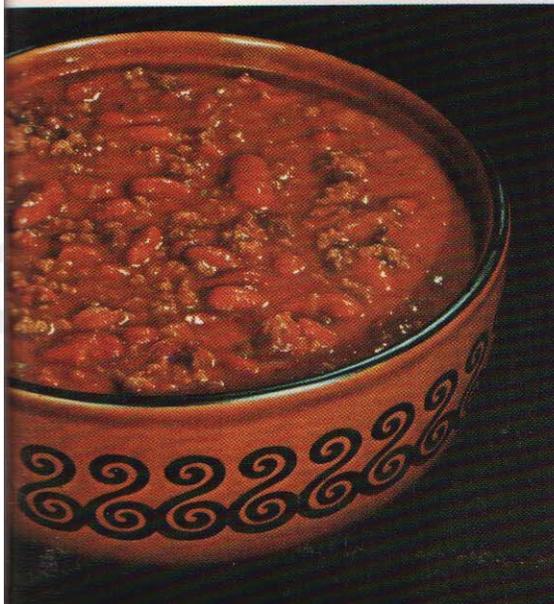

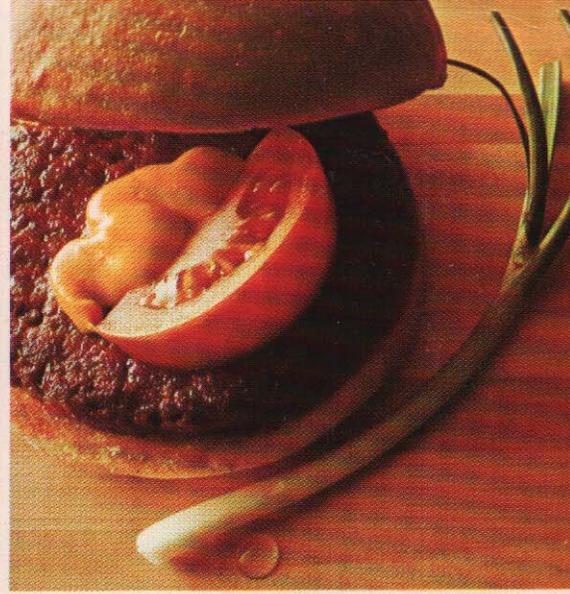

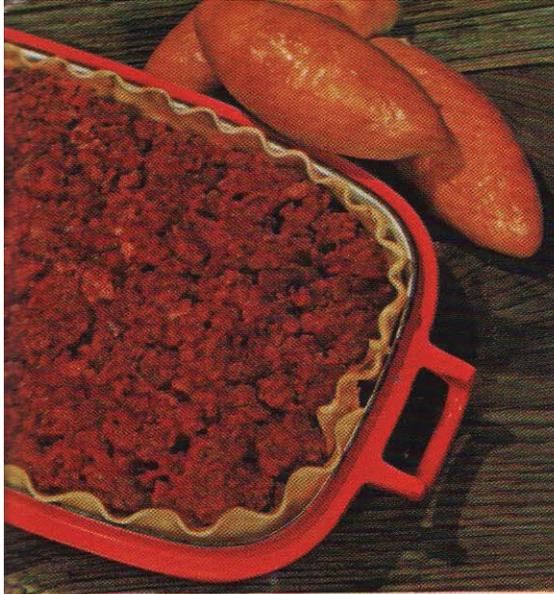

• **Summary:** By "soya meat" or "vegetable meat" the writer means "TVP (textured vegetable protein)" which is actually textured soy flour (defatted). A good history of TVP in Britain and Europe; it was launched in Britain three years ago at a time when the UK and most of western Europe was beginning an unprecedented beef glut. With beef prices low, TVP struggled.

During the second half of 1976 TVP sales began to increase and they are expected to increase even faster in 1977.

The launch of Kesp (a spun soy protein product) by Courtaulds in 1973 was a fiasco.

Manufacturers of TVP in the UK include: (1) British Arkady, Old Trafford, Manchester. (2) Spillers (Lucas & Co.), Kingswood, Bristol. (3) British Soya Products, Puckeridge, Herts. [Hertfordshire]. (4) Courtaulds, Kesp Protein Foods, Coventry. (5) GMB Proteins, Blackhorse Lane, London. (6) Miles Laboratories, Slough, Bucks.

The names of six distributors and five users are also given.

**tvp**<sup>®</sup>  
The Original  
TEXTURED  
VEGETABLE PROTEIN

® REGISTERED TRADEMARK

“There is no doubt that British Arkady has the lion’s share of the British TVP human consumption market.” The best guess is that British Arkady now has about 40-50% of the UK market, followed by Spillers, then British Soya Products.

It is clear that all the raw material for the TVP [defatted soy flour] sold in the UK is imported from the United States. Briefly describes five commercial products that are on the market. Address: London.

748. *Soybean Digest*. 1977. Soy meat makes new inroads in U.K. and parts of Europe. Feb. p. 45.

• **Summary:** “Sales of soy meat, or textured vegetable protein (TVP), are making new inroads in the United Kingdom (U.K.) and parts of Europe with U.K. sales growing 30% in the last quarter of 1976 and a further increase of 50% expected in 1977 and 1978. TVP use has been boosted as red meat prices surged late last year. Further consumption may be encouraged by expanded school lunch programs in view of government expenditure cuts in the U.K. and new official rules on the use of TVP. It was noted that the meat market situation has changed since TVP hit the European market 3 years ago. At that time beef prices were low and the market glutted with red meat.”

749. Associated Press (AP). 1977. A note for the future: cup of soybean coffee? *Detroit News*. March 18. p. C-5, col. 3.

• **Summary:** As the price of coffee soars to near \$5 per pound, Archer Daniels Midland Co. (ADM, Decatur, Illinois), a major soybean processor, announced yesterday that it is “resuming research on using soy products as a substitute or extender for coffee.” Soybeans now cost about \$0.13 per pound (\$8/bushel).

750. *J. of the American Oil Chemists’ Society*. 1977. Continuous solvent extraction... The early beginnings of a giant industry. 54(3):202A-204A. March.

• **Summary:** The origins of solvent extraction: On 13 Nov. 1855 a patent to extract fat from bones and wool using carbon bisulphide was issued in France to E. Deiss. On 3 Dec. 1856 additional patents were issued to the same inventor covering extraction of oil from oil-bearing seeds.

In the USA a batch solvent extraction plant at Southport Mills, New Orleans, Louisiana, ran in 1917-1919 on aviation-type gasoline and later on benzene to remove oil from cottonseed cake, copra, palm kernel, and other oleaginous material. The experiment ended when business conditions returned to normal in the USA after World War I.

The origins of continuous solvent extraction are integrally linked with soybeans, largely because soybeans contain less oil than most oilseeds. “The end of World War I left Germany with a shortage of fats and oils as well as animal feedstuffs. The Germans began to seek better ways to get the most out of their imported Manchurian soybeans.

Two continuous solvent extractors using countercurrent principles were developed. The Bollman [Bollmann], or basket, extractor, was patented in Germany in 1919 and 1920; the Hildebrandt, or U-tube, extractor, was patented in 1934.

“Solvent extraction also was being tried in the United States. In Monticello, Illinois, the Piatt County Soybean Cooperative Company operated a batch plant in 1923-24; Eastern Cotton Oil Company operated a Bollman extractor from Germany, at Norfolk, Virginia, in 1924-25. Both ventures proved unprofitable.”

“Proscio Oil Co. in Norfolk, Virginia, ran a solvent extraction operation for several years in the 1920s. A relatively small quantity of soybeans was processed. “Most early efforts at solvent extraction failed at least partially because of a lack of sufficient volume of soybeans.

“The best publicized effort in the United States was part of Henry Ford’s soybean research plant at the Edison Institute (see accompanying article). Ford perceived farmers as his prime customers for his Model T automobile and decided if he wanted farmers for customers, he would have to find a new way for industry to become a customer for farmers.

“ADM and Glidden initiated large-scale solvent extraction of soybeans (in the United States) in 1934,’ John Cowan recently wrote in an introduction for a forthcoming volume on soybean oil. ‘By importing equipment from Germany for the manufacture of oil, meal, and phosphatides. The plants processed 100 tons a day.’

“The ADM and Glidden plants were both in Chicago and both utilized Hildebrandt, or U-tube, extractors, with a petroleum of the hexane-type as a solvent. The ADM plant went on stream in March 1934, A.E. MacGee says [in a 1947 article for *Oil Mill Gazetteer*], with the Glidden plant following about November 1934.

“On Oct. 7, 1935, the Glidden plant at 1845 N. Laramie Ave. reopened after being shut down for five weeks. At 11:40 that morning the plant was destroyed in an explosion that shattered windows as far as a mile away and rained bricks on nearby structures. Eleven persons died and 43 were injured... The explosion apparently was triggered by a solvent leak... Cowan says the plant was immediately rebuilt at double its original capacity.

“In those early 1930s while Ford was looking for industrial uses for soybeans and the first large-scale plants were rising in Chicago, Proctor & Gamble in Cincinnati had set Norman F. Kruse to work on soybean oil research. P&G was examining soybean oil for use in Crisco [shortening] and salad oils. In January 1933, P&G shifted a recent Purdue graduate, R.P. Hutchins, to the project as Kruse’s assistant. Kruse and Hutchins became friends, a friendship that would endure corporate animosity more than a decade later when each was with a different firm.

“‘Kruse was a wonderful man,’ Hutchins recalls. ‘He set

about to teach me everything he knew. He was completely unselfish.’ Kruse directed lab work with Hutchins, letting Hutchins write the reports so Kruse could spend more time working with the pilot plant crew.

“In September 1936, Kruse left P&G for Central Soya and Hutchins became head of P&G’s soybean research efforts. Hutchins says Kruse left because he wanted to work on soybean oil extraction on a larger scale. If so, Kruse went to the right place. In 1936, the two-year-old Central Soya firm sent Kruse and Harry C. Offutt to Germany to study continuous extractors. Kruse and Offutt recommended that Central Soya buy a Bollman (basket) extractor.” In Jan. 1937, during a trans-Atlantic phone call, Dale W. McMillen, Central Soya’s founder, to buy the largest extractor available.

Years later, in 1966, Harold W. McMillen, Dale’s son, told a dinner audience in Indiana that this decision came in the midst of the Great Depression, when solvent extraction was a new process, “and the future of the soybean was still regarded with skepticism by many.”

In Nov. 1937 the plant went on stream in a five-story structure beside a cluster of tall (110 feet) silos that increased Central Soya storage capacity by 1 million bushels. With a capacity of 275 tons/day of soybeans, the plant was the largest of its time in the USA.

In the fall of 1936 Honeymead Products Co. of Cedar Rapids, Iowa, opened a plant, based on the German process, with a capacity of 100 tons/day of soybeans.

“Kruse’s former employer, Proctor & Gamble, had a subsidiary firm in Louisville [Kentucky] that produced cottonseed oil for P&G products, Hutchins says. Cotton acreage around Louisville was declining, soybean acreage was increasing. P&G decided to buy a Bollman extractor for a new plant in Louisville.

“In September 1939 with ground broken and foundations started in Louisville, and the extractor sitting on the Hamburg docks for imminent shipment to the United States, England declared war on Germany and a blockade of her ports. Hutchins recalls the German manufacturer said the extractor could be delivered via overland routes to Italy, still neutral at the time, for shipment to the United States. P&G, perhaps mindful that its English operations depended on government allocation of scarce raw materials, decided not to try to circumvent the English blockade. Instead, P&G turned to Piqua, Ohio where French Oil Mill’s C.B. Upton recently had hired Harry Robinson as solvent plant superintendent. Robinson had been with Central Soya when the Decatur, Indiana, plant was built, but apparently he and Kruse had clashed. Robinson left and brought his know-how to French Oil.

“French Oil told P&G it could produce a virtual copy of the Hansa-Muhle V. Bollman unit stranded on the Hamburg docks. Allis-Chalmers preparation equipment was to be used, but the extractor was the first one to be built in the United States by French Oil. The extractor based on Central Soya’s

unit, went into operation during February 1941.” Continued.

**751. Product Name:** Ranch House Sizzleberg, Savoury Macaroni with TVP (Mix), Soysage, Seasavour.

**Manufacturer’s Name:** Direct Foods Ltd.

**Manufacturer’s Address:** Bedford Rd., Petersfield, Hampshire, GU32 3EW, England. Phone: Petersfield 4911/2.

**Date of Introduction:** 1977 April.

**Ingredients:** Macaroni Mix: Wholemeal macaroni, textured soya protein, dehydrated onions, green bell peppers, peas, mushrooms, vegetable oil, sea salt, corn flour, raw sugar, yeast extract, spices, herbs.

**Wt/Vol., Packaging, Price:** Macaroni: 141 gm plastic bags for ½ pound.

**How Stored:** Shelf stable.

**New Product–Documentation:** Trade catalog and price list from Direct Foods Ltd. 1977. April 25. The product line is the same as in 1974 except for the addition of: 10 lb sizes for each flavor, Sizzleberg (1 lb yields 2 lbs), and New Savoury Macaroni with TVP.

Food Report (Lehmann). 1982. Jan. Talk with Peter Roberts. 1990. Dec. 12. In about 1970, Direct Foods Ltd. introduced a line of about 20 vegetarian protein products, all replacements for meat and all sold under the Ranch House brand.

**752.** Shields, Bill. 1977. Vegetable oil plant to begin production in fall of ‘78. *Windsor Star (Essex County, Ontario, Canada)*. June 29. p. 3-4.

• **Summary:** William G. Milliken, president of Maple Leaf Monarch Company, said his vegetable oil processing plant and refinery now under construction on 40 waterfront acres, is scheduled to begin production in the fall of 1978. It will be the largest integrated vegetable oil plant in Canada, and is expected to stimulate Ontario soybean production. Lever Brothers is the largest margarine manufacturer in Canada. The deodorized and hardened oils and fats from the Windsor plant will be used in the production of margarine, shortening, salad and cooking oils. Refined technical oils will be used in the manufacture of paints and varnishes, printing inks, plastics and caulking compounds.

An illustration (architectural drawing) shows Maple Leaf Monarch’s vegetable oil mill and refinery. Address: Star’s Business Editor.

**753.** ADM–Archer Daniels Midland Co. 1977. Top bean (Ad). *Soybean Digest Blue Book*. p. 113. June.

• **Summary:** In the top half of this full-page ad, an illustration shows a pile of soybeans with an ADM flag (with logo) flying from the top. The tag-line at the bottom of the page: “Where the people who feed the world buy their groceries.”

The text: “As the leading domestic processor of soybeans, ADM sits high atop the pile... Now ADM is

acknowledged around the world as the leader in the edible soy processing field and the largest producer of upgraded soy protein products. Such as TVP, the original textured vegetable protein which began the revolution of soy products in foods. And our most recent development, Ardex 700 [textured] soy protein concentrate, an outgrowth of ADM’s soy process engineering group.”

Note: The exact same ad appears in the *Blue Book* in 1978 (p. 113). In the 1979 *Blue Book* (p. 71) it is almost identical except that a plant in North Kansas City, Missouri, has been added to the previous year’s list. In 1980 (p. 3) it is exactly the same as in 1979. Address: World Headquarters: Decatur, Illinois 62525. Phone: 217-424-5422.

**754. Product Name:** Untoasted Soy Flour, Toasted Soy Flakes, and Soy Grits (Bulk and Bagged).

**Manufacturer’s Name:** Honeymead Products Co.

**Manufacturer’s Address:** P.O. Box 29, Mankato, MN 56001.

**Date of Introduction:** 1977 June.

• **Summary:** Based on market prices in Feb. 1977, a fabricated pork chop with 25% Ardex 700G can offer an approximate 25% savings in raw material costs. The concentrate is hydrated with a 3:1 ratio of water to soy when used to extend pork chops. Address: Research Div., Archer Daniels Midland Co., Decatur, Illinois.

**758.** Harland, B.F.; Oberleas, D. 1977. A modified method for phytate analysis using an ion-exchange procedure: Application to textured vegetable proteins. *Cereal Chemistry*

54(4):827-32. July/Aug. [13 ref]

• **Summary:** Gives the phytate content of 8 meat analogs and alternatives made by General Mills and ADM. The amount of phytate per serving ranges from 31 mg to 354 mg. The phytate content per 100 gm edible portion (EP) ranges from 112 to 1,321 mg. Address: 1. Div. of Nutrition, Food and Drug Administration, Washington, DC 20204; 2. Dep. of Nutrition and Food Science, Univ. of Kentucky, Lexington, Kentucky 40506.

759. Archer Daniels Midland Co. 1977. Annual report. Decatur, Illinois. 33 p. 27 cm.

• **Summary:** Net sales in 1977 were \$2,114 million, up from \$1,647 million in 1976. Net earnings in 1977 were \$61.4 million, down from \$65.2 million in 1976. ADM's protein specialty division successfully introduced Ardex 700, a new soy protein concentrate, and Nutrisoy Fiber. A new light colored TVP was developed for extending fish. The company's TVP brand of textured vegetable proteins remains the largest selling textured product, both in the USA and worldwide (p. 5).

Textured soy protein concentrate products are called TVP/2. A new class of products designated as a soy beverage base are now being evaluated in dairy-type applications, such as milk replacers, cheese, and dessert bases (p. 11).

British Arkady Co.: Sales of TVP, now in its second full year of manufacture in Manchester, England, were up.

Page 13: "In memoriam (full page):

"Thomas L. Daniels, Director Emeritus, died May 23, 1977. The son of John W. Daniels who founded Daniels Linseed Company in 1902, Mr. Daniels started with the Company in 1914, and was first elected a Director in 1915. After service with the Diplomatic Corps he rejoined the Company in 1929 as the Assistant Treasurer and a Director. In 1933 Mr. Daniels was elected a Vice President and in 1947 President. Under his direction the Company established a central research laboratory and stressed the requirements of long-range planning, research and more advanced and specialized products.

"Mr. Daniels retired as President in 1958 but continued to serve as Chairman of the Board until his retirement in 1964. He was named Director Emeritus at that time."

A half-page portrait photo shows Thomas L. Daniels. Address: P.O. Box 1470, Decatur, Illinois 62525.

760. Lublin, Joann S. 1977. Soybean saga: Revival is attempted for meat substitutes that flopped after '73. But new line of Miles Labs is still facing resistance to the taste and the price. Pitch to the health-conscious. *Wall Street Journal*. Oct. 26. p. 1, 27.

• **Summary:** Miles Laboratories Inc. is coming out with new versions of its meatless products "that it says taste, feel and smell more like the real thing. A sampling of the new Morningstar Farms line of vegetable-protein products,

just now starting to be marketed, largely supports Miles's claim. The products are tastier and juicier, they feel meatier and smell less spicy than earlier versions. But the bacon substitute in particular falls short of the real thing. In the words of one impartial taster, it looks and tastes more like painted cardboard than real bacon."

"When Miles offered its original meat substitutes in 1973, officials predicted sales of more than \$100 million a year within the decade. Now, 4 years later, Morningstar Farms sales are running around \$15 million a year, less than half the levels expected by now. The products, moreover, have registered pretax losses of \$33 million since their development. Others in the food business were similarly overoptimistic. Industry-wide sales of soy protein products last year totaled about \$120 million, up from \$75 million in 1972 but far short of forecasts of \$1.5 billion by 1980... When the original products were offered, meat prices were soaring to 1973 peaks and the public was eager for alternatives."

"Miles Laboratories, best known for its Alka-Seltzer antacid, had great expectations for meat substitutes in 1970 when it bought Worthington Foods Inc., a pioneer in textured-vegetable-protein technology. Miles reformulated several Worthington products and began test-marketing sausage-like links and patties, ham-like slices and bacon-like strips in 1972.

"Consumer surveys at the time showed that more than half of all U.S. households had at least one member concerned about heart-disease risks from excessive cholesterol in his diet. Miles marketers reasoned that many of the 40 million concerned families would welcome cholesterol-free replacements for their breakfast protein. The company spent \$7.5 million on a nationwide promotion campaign in 1974, featuring prime-time television commercials emphasizing the nutrition angle.

"About 10 million American families tried the Morningstar Farms breakfast line in the first 18 months, meeting the company's goal. But fewer people than expected came back for seconds, and outside analysts suggest the current sales are half the anticipated volume."

**761. Product Name:** Nutrisoy Fiber (Soy Bran).

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** ADM, Box 1470, Decatur, Illinois 62525. Phone: 1-800-637-5850.

**Date of Introduction:** 1977 October.

**Nutrition:** Moisture 7%, protein 12%, fat 2%, ash 5%, crude fiber 34%, other carbohydrates 40%, calories/100 gm 70.

**New Product-Documentation:** ADM Annual Report.

1977. The company now makes Nutrisoy fiber (a soy bran). Frank French. 1977. Baker's Digest. Oct. p. 102.

"Bakery uses of soy products." "Nutrisoy fiber is the toasted ground cotyledon of the soybean and at 40 per cent crude

## NUTRISOY FIBER SOY BRAN

This is a soy bran product completely derived from the soybean and is produced from the seed coat portion of the soybean.

Nutrisoy Fiber with a crude fiber content of approximately 38% offers one of the highest fiber sources among commercially available vegetable products. Most of the carbohydrate content is non-digestible and although there presently is no standard method for determination of dietary fiber the non-digestibles which should approximate dietary fiber will approach 76% (crude fiber plus carbohydrates).

Composition	Typical Analysis
Moisture	9%
Protein (N x 6.25)	10%
Fat	1%
Ash	4%
Crude Fiber	38%
Carbohydrates (by difference)	38%

### Granulation (typical)

- through US 40 – 100%
- through US 60 – 95%
- through US 100 – 75%

### Microbiological (typical)

Standard Plate Count – 25,000 per gram

### Packaging

Packaged in valve type 50 lb. net weight multiwall paper bags

### Storage

Best storage stability is realized at dry, cool conditions. At least one year storage stability can be expected at conditions of 50% relative humidity and 75 degrees F.

### Applications

Some applications are bread, crackers, cookies, muffins, cereals, dry mixes and snacks. Levels of addition are variable but generally range from 5 to 50%.

Box 1470, Decatur, Illinois 62525

fiber is highest in fiber among natural fiber materials.” Manufacturer’s leaflet. 1979. 1 p. “Nutrisoy Fiber soy bran.” This high fiber product is derived from the seed coat portion of the soybean. The crude fiber content is approximately 38%. Most of the carbohydrate content is non-digestible. For use in breads, crackers, cookies, muffins, cereals, dry mixes, snacks.

ADM. 1987. “Look Where Soybeans Go.” p. 18. Called Nutrisoy Fiber E. Characteristics: Total dietary fiber 72-75%, neutral detergent fiber 55-60%. Applications: Breads, crackers, muffins, cereals, dry mixes, snacks.

762. French, Frank. 1977. Bakery uses of soy products. *Baker’s Digest* 51(5):98-103. Oct. [7 ref]

• **Summary:** Contents: Introduction. Production of soy products. Use in bread production. Use of other soy products: Lecithin, cakes and doughnuts, sweet goods, variety breads, fiber breads. Conclusion.

The use of soy flour in making white bread has several significant advantages: Moisture retention, bleaching and oxidation using an enzyme active soy flour, crust color improvement, improved nutritional profile.

Fig. 3 (p. 100) is a bar chart showing the cost per pound of protein from various sources. The three least expensive sources are “lowfat soybean flour, granular soybean concentrate, and extruded soybean flour;” the three most expensive are beef (about 15 times as expensive as soy flour), pork, and tuna fish.

Fig. 4 shows the improvements in protein quantity realized from fortifying white bread with 12% soy flour: (1) It raises the protein quantity by 50% from 8.0% to 12.0% protein; (2) It raises the protein quality by 95% from 1.00 to 1.95—compared with 2.50 for casein.

“Nutrisoy fiber is the toasted ground cotyledon of the soybean and at 40 per cent crude fiber is highest in fiber among natural fiber materials.” Table V gives a nutritional analysis of Nutrisoy fiber, which contains: Protein 10%, moisture 9%, fat 1%, crude fiber 40%, minerals 4%, carbohydrates 36%. Address: Archer Daniels Midland Co., Decatur, Illinois.

763. **Product Name:** [GranoVita Seasoned Patty Mixture with TVP].

**Foreign Name:** GranoVita Soja-vita.

**Manufacturer’s Name:** DE-VAU-GE Gesundkostwerk GmbH.

**Manufacturer’s Address:** Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.

**Date of Introduction:** 1977.

**Ingredients:** Soya protein, bread crumbs, wheat gluten, wheat flakes, glucose, egg protein, yeast, potato starch, onion, spices, sea salt, celery, parsley.

**Wt/Vol., Packaging, Price:** 200 gm box retails for DM 5.

**How Stored:** Shelf stable.

**Nutrition:** Protein content: 36% protein.

**New Product–Documentation:** Full-page ad for 8 granoVita soy products in the book by Manfred Heide. 1977. *Vegetarische Ernährung: 193 Rezeptvorschläge und Speisepläne für ein Vierteljahr* [Vegetarian nutrition and food: 193 recipe suggestions and meal plans for a quarter of a year]. Stuttgart, West Germany: Paracelsus Verlag. “This product is named “Soja-vita” (Fertig gewuerzte Bratlings-Mischung).”

DE-VAU-GE leaflet. 1980? *Rezepte aus der GranoVita Versuchskueche*. DVMC. Manufacturer’s catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products.

764. **Product Name:** Good for Ya Textured Vegetable Protein (TVP brand Textured Soy Flour).

**Manufacturer’s Name:** Farm Foods.

**Manufacturer’s Address:** 156 Drakes Lane, Summertown, TN 38483.

**Date of Introduction:** 1977.

**Ingredients:** Defatted soy flour, vitamin enriched.

**Wt/Vol., Packaging, Price:** 1.5 lb, 5 lb., 10 lb., 25 lb., 100 lb.

**How Stored:** Shelf stable.

**New Product–Documentation:** See next page. Label.

1977, dated. 4 by 9.5 inches. “Made from defatted soy flour. Vitamin enriched.” A color logo, in a vertical rectangle with rounded corners, shows rows of crops (soybeans) in a field converging in the distance at the foot of three mountains—over which arches a 6-color rainbow. Printed in *Fermentation Funnies*. Farm Foods Products Catalog. 1978. p. 2.

Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods*. p. 189. A photo shows the label and a nutritional analysis is given. The product “is a high-protein, granular, hydrateable [sic, hydratable] food prepared from defatted soyflour. Fortified with vitamins and minerals, including vitamin B-12, it meets the Federal School Lunch Program standards. This all vegetable product is also cholesterol free.”

765. **Product Name:** Granolac Infant Soya Milk (Powdered).

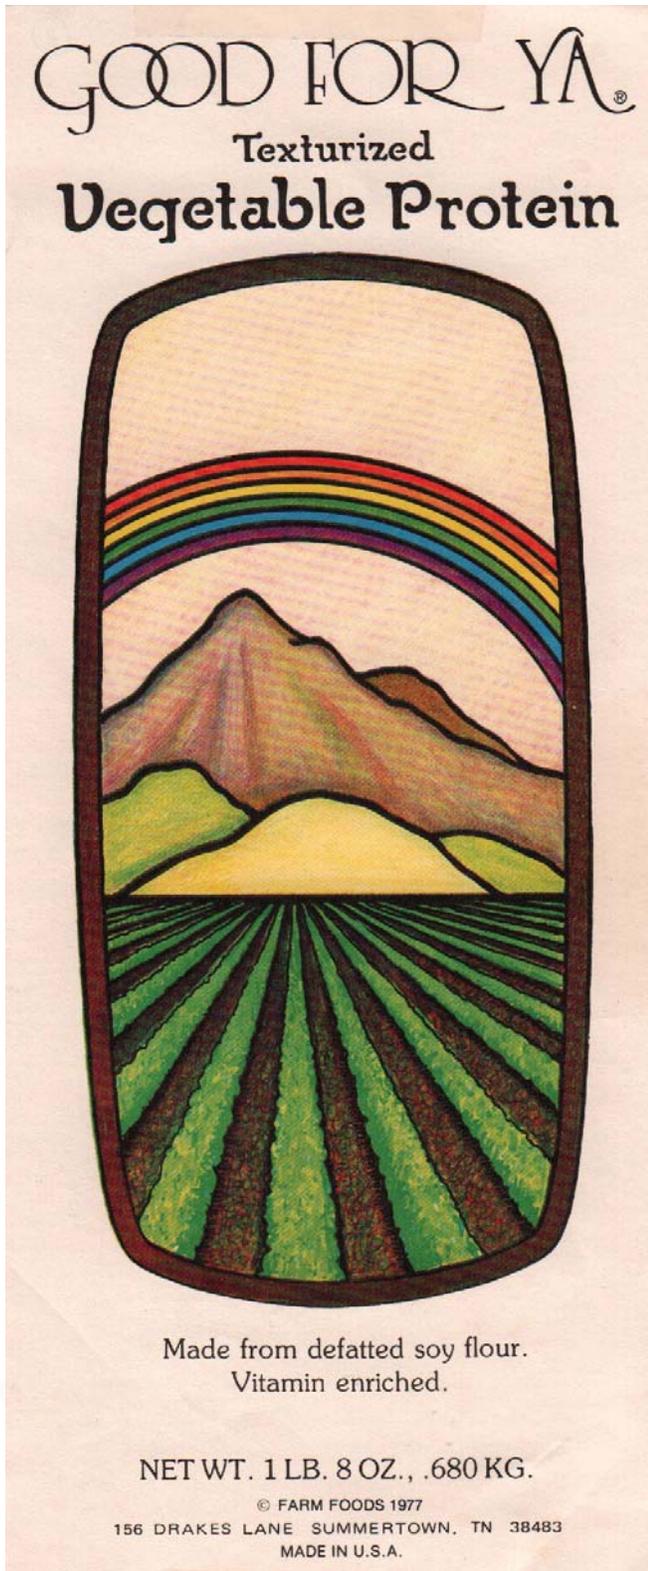

**Manufacturer’s Name:** Granose Health Foods Ltd. (Marketer). Made in the USA by Loma Linda Foods.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1977.

**Ingredients:** Soya bean solids, corn syrup, soya oil, sugar, salt, lecithin, vitamins.

**New Product–Documentation:** *The British Vegetarian*. 1961. March/April. p. 93. “Soya milk for household use.” Granose Foods will soon be in a position to supply two

varieties of spray-dried soya milk, Soyalac and Soyagen, made by one of their associated companies, Loma Linda Food Company in Arlington, California. Soyalac is specially prepared for infants, whereas Soyagen is for general use.

A table compares the nutritional composition of the two products.

Listing in International Vegetarian Health Food Handbook (UK). 1977-78. p. 189. "Granolac Infant Soya Milk by Granose Health Foods Ltd." Manufacturer's catalog. 1980. April. "Infant formula soya milk. As near to the taste, texture and nutritional value of mother's milk as is possible. Basic ingredients similar to Granogen, with modifications. Full analysis available."

Dorothy E.M. Francis. 1984. "Alternatives to Cow's Milk: Comparisons." p. 147-48. In: David L.J. Freed, ed. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Ballière Tindall. Granolac Infant, from Granose, is for infants older than 3 months.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product was introduced in 1980. It is no longer on the market, and no label is available.

766. ADM Milling Co. 1977. The growing challenge. Shawnee Mission, KS 66207. 28 p.

• **Summary:** This booklet is about world hunger, and ADM's involvement in the U.S. government's attempts to solve it

The color cover shows the sun, low in the sky, shining behind heads of wheat growing in a field. Describes ADM's involvement in the P.L. 480 Food for Peace program and the company's product of what are called "protein cereal grain blends."

Contents: Nutrition, infant survival, and family planning (The four countries adding the most people to the annual world population increase are China (13.3 million), India (12.8), Indonesia (3.4), and Brazil (2.8)). Supplemental food: A vehicle to good health and national development (P.L. 480 foods fight protein-calorie malnutrition). Deficient diet: What is a food supplement (Protein-cereal food products are ideal food supplements). Pregnancy. Lactation. Children: Their special needs. WPC-Soy. Health: Good health and the school age child. Adult health and productivity. Energy requirements by year and age. Emergencies and national disaster relief. Key nutrients: Protein, amino acids, protein content, PER and NPU for protein cereal grain blends and other protein sources. PCM: Protein calorie malnutrition, marasmus and kwashiorkor. Treatment of PCM. Micronutrients. U.S. Recommended Daily Dietary Allowances.

The back flap contains product description sheets. In Oct. 1989 there were sheets for SFCM: Soy fortified cornmeal, 12% soy-fortified wheat flour, WSB: Wheat Soy Blend, CSM: Corn Soy Milk, WPC-Soy, SFB: Soy fortified bulghur, and ICSM: Instant Corn Soy Milk. Address: Shawnee Mission, Kansas.

767. Anderson, Eugene N., Jr.; Anderson, Marja L. 1977. [Food in] Modern China: South. In: K.C. Chang, ed. 1977. Food in Chinese Culture. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 317-382.

• **Summary:** Page 326 states: Soybeans—the fifth of the classic Five Staples (or Five Grains)—are usually the most important, although other legumes make a surprisingly good showing in south China, no doubt because soybeans grow better in the north. The soybean “produces more protein per acre and per pound than any other common humanly edible crop, plant, or animal. This has caused them to become more important than any animal food as a protein provider in China. The Chinese have long recognized their similarity to animal products and, indeed, have built up a huge cluster of imitation-meat foods (probably developed originally by, and certainly now associated with, vegetarian Buddhists). The Chinese lack of interest in dairy products is almost certainly, in part, a result of the fact that the soybean provides the same sorts of nutrition more economically—though a desire to differentiate themselves from the border nomads and to be independent of them in food economy must also be taken seriously as an explanation. (It is the classic Chinese explanation of the phenomenon but has been dismissed by those moderns who believe that all traditional explanations must necessarily be wrong.)

“Further discourse on the soybean belongs properly in the following section on food processing, for the soybean is used neither in its raw state nor, usually, in a simple boiled or roasted form. There are good reasons for this. The soybean, being so nutritious and succulent, has been faced with intense natural selection pressure by seed-eating insects and other animals; surviving soybean strains contain whole galleries of poisons and other unfortunate chemicals, which protect the seeds against destruction but make them dangerous food in the uncooked and unprotected state (Committee on Food Protection 1973). Simply prepared soybeans are not very digestible, since heat bonds some of the nutrients into hard-to-digest form in the intact bean. Thus almost all soybeans consumed in China are fermented, ground into flour, and then processed, sprouted, or otherwise milled.”

“The soybean is so famous that one is surprised to discover from Buck that the broad bean outranks it in some parts of south China.” However in genetically susceptible individuals, *Vicia faba* produces favism, a condition characterized by acute anemia and other unpleasant symptoms. Other important sources of protein are black soybeans (a variety of soybean mentioned by Buck) and sprouts from mung beans and soybeans (*tou ya*). Bean sprouts bridge the gap between grains and vegetables (*ts'ai*) (p. 326-27).

“A huge bowl of rice, a good mass of bean curd, and a dish of cabbages—fresh in season, otherwise pickled—is the classic fare of the everyday south Chinese world.”

“The New World vegetables stand out as a special class because of their common and recent origin in China and their extreme importance. The white and sweet potatoes have become staples, as has corn. In addition to these, the

peanut (*Arachis hypogaea*) has become the most important oilseed through much of south China, as well as a much used food” (p. 328). The peanut came from South America. Today, peanuts have become more important in areas where they are grown than rapeseed. Peanut and rapeseed oils are polyunsaturated and contain plenty of linoleic acid, a dietary requirement (p. 333, 343, 348). Mushrooms and their relatives are widely used in vegetarian dishes (p. 332).

The section on food processing (p. 337-41) notes that tragic practice of polishing rice, which removes most of the nutrients including fiber. There are many questions about the origins of pasta. Egg noodles probably originated in China. Italian spaghetti is similar to Chinese *mien* and ravioli to *chiao-tzu*, but they may have existed elsewhere before Marco Polo brought them to Italy from China. The technology of soybean process is too complex to discuss except briefly in this chapter. Most important is the production of bean curd or *tou-fu* (Cantonese *tau-fu*, Hokkien *tau-hu*). Hokkien cooks prefer a drier, firmer bean curd. Bean curd is often sold fried. The skin resulting from boiling soymilk [yuba] is skimmed off, dried, and widely used. “Other closely related processes produce the range of imitation meats developed by vegetarians, specifically Mahayana Buddhists. Credible imitations... are made for chicken, abalone, and other white meats, and even beef and pork. The West has picked up the idea and developed it much further, climaxing in the production of textured vegetable protein (TVP), but has—characteristically!—ignored the problem of making the result taste good. The ideal in the West seems to be to make it tasteless” (p. 339).

Concerning fish farming (p. 334-35): “Some fish, however, a pond-reared. Those that have been effectively domesticated are carps. These have several advantages: they produce vast amounts of protein per acre; they do not have to be specially fed since they eat algae and weedy grass and small animals of the ponds and pond fringes; they can live in foul water, and thus in stagnant ponds and market fish barrels; they are efficient converters, putting a large percentage of their feed into growth; and relative to other fish, they are easy to breed in captivity. The first fish farmed in the world were probably the Chinese carps.” However, no mention is made of soybeans being fed to the fish.

On the origin of chop suey (p. 355-56): “Cantonese: To non-Cantonese, or, perhaps better, to non-initiates into this style of cooking, Cantonese food means chop suey and sweet-sour pork. Chop suey is not a typical Cantonese dish, as everyone knows who has much sophistication in Chinese food,... Much more characteristic of Cantonese cooking are stir-fried dishes often flavored with black beans (salted, strongly fermented soybeans);... fish with black beans;...”

“Like all Chinese cuisines, Cantonese is subject to many regional variations. A distinctive one is that of Toisan [Toishan, Taishan], the area of Canton from which about half of all American Chinese trace their ancestry. Its main

claim to fame is that it gave the world chop suey (Cantonese *tsap sui*, ‘miscellaneous things’ or, at worst, ‘miscellaneous slops’). Typically a sort of hash of leftovers warmed up with bean sprouts, a very folklike dish, this food now has a widely known origin myth:... Its origin in old Toisan was traced down by the indefatigable hunter (of big game and food) Li Shu-fan (1964).”

Note: In discussing the origin of “chop suey,” Li Shu-fan (1964, p. 211-12) does not mention *tsap sui*. Address: 1. Assoc. Prof. of Anthropology, Univ. of California at Riverside; 2. Riverside, California.

768. Archer-Daniels-Midland. 1977. What’s new: A 75 year report from Archer Daniels Midland Company. Decatur, Illinois. 12 p.

• **Summary:** See next page. Contents: We’ve come a long way. And we’re still making news in milling. The vegetable protein explosion (p. 8). The high fructose story keeps getting sweeter (ADM launched CornSweet in 1973). Beer or cocktails with your pasta dinner? ADM today: Where the people who feed the world buy their groceries.

A photo facing page 8 shows a man—perhaps William T. Atkinson—making TVP.

“Our forerunner started in 1902 with a single mill and soon became a leading crusher of flaxseed... 75 years ago, ADM was strictly in the business of crushing flax for its oil, which was used primarily as a drying oil in paint... Today ADM is the bridge between two giant industries, agriculture and food... Total commitment to the baking industry has led us to add vital wheat gluten to our line of specialties recently. Gluten is the non-soluble protein in wheat. It is the part of wheat flour that makes it possible to make an elastic, cohesive dough from wheat flour. Adding vital wheat gluten enables bakers to use less expensive flours, it improves bread features such as loaf volume, flavor, softness. It’s a necessary ingredient in the popular new variety breads.”

In “1965 ADM introduced TVP brand textured vegetable protein. Ten years later we introduced a second generation of TVP containing 70% protein, along with a new soy protein concentrate. Today you’ll find ADM’s soy proteins in more than 600 brands of prepared foods on the grocer’s shelves. Soups, chili, frozen dinners, pizza, gravies. You’ll find other forms of soy protein in everything from beverages and baked goods to pet foods.” Some of the most recent developments include: New soy variety breads, sweets that are good for kids (cookies based on the new Ardex soy protein concentrates), a new soy beverage based on new technology that tastes great and has the quality of nutrition needed by growing children, and Nutrisoy fiber (a soy bran). “Who needs high priced foods? Not the British. Cadbury’s Soya Choice fills the bill. Based on TVP, these products are a raging success. It as the good flavor and nutrition of meat. At half the price.” A color photo shows two cans of Cadbury’s Soya Choice (Casserole Chunks, and Mince). A full-page

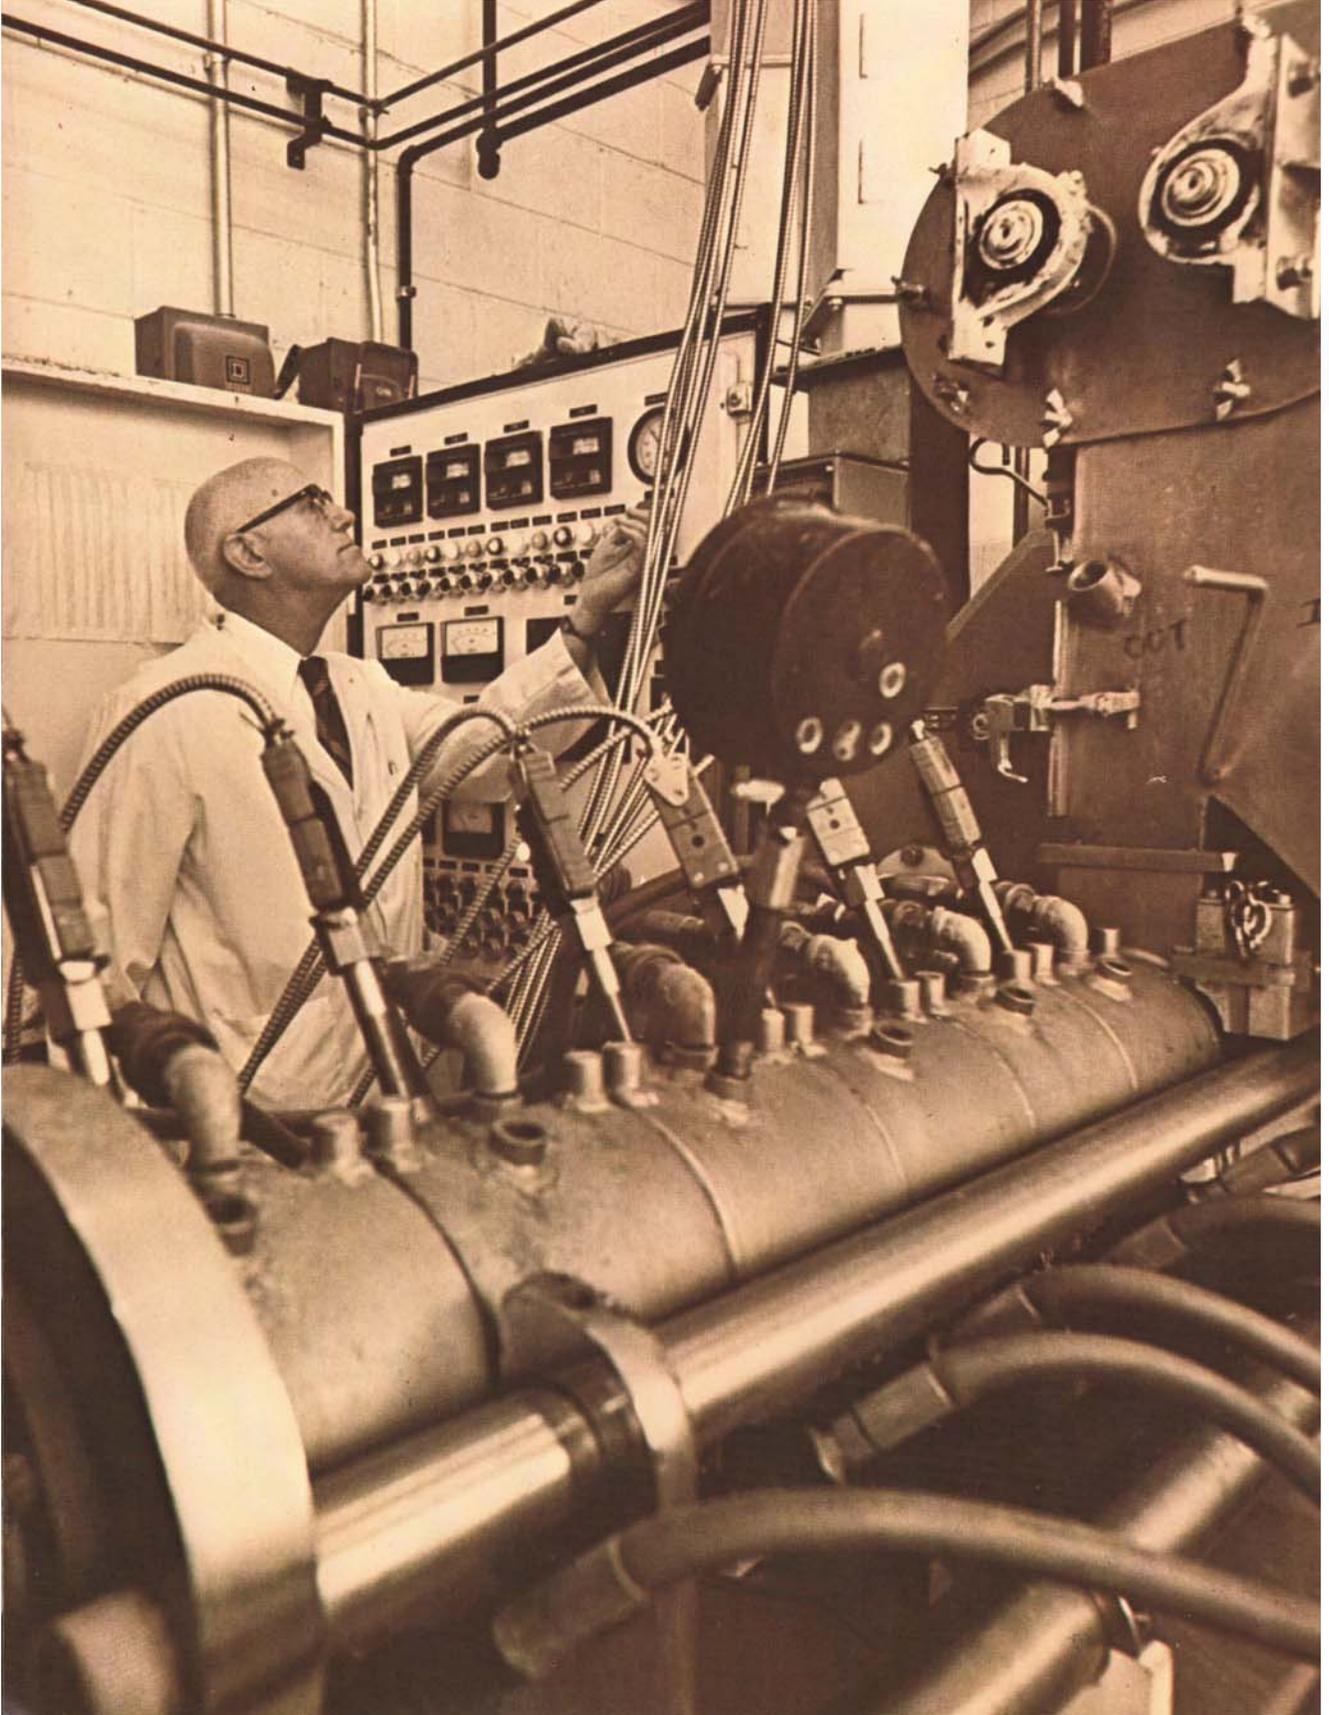

black-and white photo on the facing page shows a person (perhaps William Atkinson) running a large extrusion cooker.

The last page is titled: “ADM Today: Where the people who feed the world buy their groceries.” ADM Refined Oils makes Yelkin lecithins, margarine and shortening oils, and cooking oils. ADM Milling makes wheat gluten. ADM Protein Specialties makes: TVP textured vegetable protein (flavored and unflavored), TVP/2 textured vegetable protein concentrate (flavored and unflavored), Ardex 700 soy protein concentrate, Nutrisoy low and full fat soy flours, and Nutrisoy defatted soy flours and grits. Address: Archer Daniels Midland Company, Box 1470, Decatur, Illinois 62525.

769. George, Susan. 1977. How the other half dies: The real reasons for world hunger. Montclair, New Jersey: Allanheld, Osmun & Co. xxix + 308 p. Index. 21 cm. [500+\* ref]

• **Summary:** Soybeans are discussed in several places: Between 1972 and 1973 U.S. soybean production increased by 25% (p. 9).

Chapter 4, titled “Technology: Now who pays to do what to whom?” shows that no new technology, not even a new crop is neutral in the effects it has on different classes of people. A report on soybeans in Brazil commissioned by the French Government Center for External Trade showed that they are becoming an increasingly important crop there. Since Brazil can produce and sell its crop between the two U.S. soybean harvests, the government’s official agricultural policy encourages Brazilian farmers to grow more soybeans since they are a profitable export crop. The price of soybeans is attractive, so farmers have abandoned corn, a traditional crop, as well as wheat (to a lesser extent) because soybeans demand less fertilizer. Since soybean production is easily mechanized, fewer Brazilians need be employed. Soybeans are usually crushed to make oil and meal. This complex processing technology is being taken over by the world’s most competent processors—large multinational agribusiness firms, such as Cargill and Bunge. Small Brazilian processors are going bankrupt. Since Brazil’s infrastructure for transporting and loading the soybeans is substandard, the World Bank has been kind enough to contribute half the price of new private export corridors to the seaports, which the Brazilian government has kindly declared necessary for the multinationals. No doubt the Brazilian soybean industry will be profitable for multinational agribusiness, but what will be the consequences for ordinary Brazilians. From 1970 to 1972, the price of corn, a traditional staple food and feed, has risen 60%, while the price of chicken has gone up 33%. Soybeans have drastically decreased the amount of land previously used for growing the *feijao* or black bean—another staple crop and key human protein source; during this period its price jumped by 275%. Rice production also suffered from the soybean competition. All of these developments hurt average Brazilians, and especially the poor.

In addition, real estate prices in areas best suited to soybean production have risen dramatically; one hectare in Rio Grande do Sul, which sold for 1,500 cruzeiros in 1972, sold for less than 10,000 cruzeiros less than a year later. Thus, smaller farmers with less mechanization are losing out to those who can afford to buy more than and agricultural equipment. Soybean production in Brazil directly counteracts the efforts of the Brazilian government to limit inflation (p. 67-69).

Chapter 6, titled "Planned scarcity," notes that in the USA, one acre in 6.5 is now planted to soybeans. Europe is only 2% self-sufficient in plant protein production. After World War II, Europe introduced American hybrid corn to replace local varieties; though the yield was higher, the protein content was lower. Thus a new protein source had to be found for feeding livestock, and U.S. soybean meal seemed to be the most rational and inexpensive solution. Export of soybean meal from the U.S. to Europe jumped from only 47,000 tons in 1949 to nearly 5 million tons in 1972-73. Major U.S. processors set up crushing mills in Europe. In short, the entire post-war European livestock industry has been developed on the basis of extensive use of low-price soybean meal. The U.S. established a "near-monopoly position for supply not only of Europe but of Japan and other nations."

Discusses the 1973 U.S. soybean export embargo, which began in June and sent prices soaring to \$12 a bushel, from \$2. The embargo was removed 3 months later and at year's end it became clear that the scare over shortages was unwarranted. The Food for Peace program introduced soya oil into countries like Spain and Tunisia that had never before tasted anything but their own olive oil. Even the butter-rich Netherlands now consumes more imported soy margarine than butter. "Far be it from me to suggest collusion I can't prove, but it is at least evident who profits from higher prices and who suffers. A futures market in soya meal was opened in London in April 1975 as a measure that might check price fluctuations." Yet the key fact is that European countries do not produce soybeans, nor any alternative protein crop.

Discusses the new effort to extend the use of soya beyond feeding animals by promoting TVP, and the international conference held at Munich, Germany, in Nov. 1973. Earl Butz (U.S. Secretary of Agriculture) led the American delegation; Hubert Humphrey stated: "Food is a new form of power. Food is wealth. Food is an extra dimension in our [U.S.] diplomacy." "Americans presented 24 out of the 38 papers (including 13 by agribusiness representatives and 10 by USDA people). Only one was by a nutritionist. "One sees absolutely no alternative to continued US MNC (multinational corporation) control of the world plant-protein production and prices." "The only rational way to offset price and foodstock manipulation by the giant traders would be to have grain stocks held in government

hands, to be released or held back as the market situation demanded." The grain traders are "frantically opposed to any reserve system..." (p. 122-25).

Chapter 8, titled "Food aid?... Or weapon," discusses: Importance of feedgrains exports, Soybean Council of America, American Soybean Association, PL 480, promotion of soybean exports to Spain, Iran, and Korea, Ralston Purina and Cargill, Food for Peace counterpart funds used to finance research in recipient countries, "common defense" military expenditures (p. 172, 176).

Chapter 11, titled "What can 'they' do?" discusses alternative food sources, single-cell protein (SCP), America's energy-devouring food-production system which could exhaust U.S. fossil fuel reserves within 25 years, research by DuPont showing that when soybeans are experimentally flooded by carbon dioxide, they quadruple yields and fix more nitrogen (p. 239-40). Address: A Smith College graduate now studying at the Sorbonne. Fellow of the Transnational Inst.

"They have gone and done what I told them not to" (American Medical Assoc., Percy Magan and Sutherland).

Photos show: Ellen G. White (p. 8, 11, 14). Ann Stanley Kellogg and John Preston Kellogg, the parents of John Harvey and Will K. Kellogg (p. 23). John H. Kellogg (p. 36, 38, 48, 52, 60, 68-71). Dr. James Caleb Jackson and Dr. Russell T. Trall (p. 40). The Western Health Reform Institute (p. 46, 49). Battle Creek Sanitarium (p. 56). Graph showing yearly patronage of the Battle Creek Sanitarium, 1866-1939. It grew from 53 patients in 1866 to a peak of 7,462 in 1926, then fell to 3,283 in 1935, and rose back to 3,691 in 1939. W.K. Kellogg (p. 74-80). Sydney, Australia, Sanitarium (p. 126). Sanitarium Foods Labels (Australia) including Gluten Meal (p. 142-43). Paradise Valley Sanitarium (California, p. 158-59). Percy Magan (p. 188, 201).

A bar chart (p. 73) shows yearly patronage of the Battle Creek Sanitarium from 53 people in 1866, to 1,174 in 1886, to a local peak of 7,034 in 1916, to an all-time peak of 7,462 in 1926; by 1939 yearly patronage had declined to 3,691. In "1933 the institution went into receivership. The Federal Government eventually turned it into an army hospital." Address: 2. Freelance writer and editor, Wrightwood, California.

772. Edwards, R.A. 1978. Social and legislative constraints [on soy protein foods]: The Australian situation. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 12-13.

• **Summary:** There are somewhat less than 200,000

vegetarians in Australia, mostly Seventh-day Adventists, Hindus, and Jains. Their dietary needs have been met for the last 40 years by the Sanitarium Health Food Company, which is owned by the Adventist Church. Their meatlike products include Nutmeat, Rediburgers, Vegecuts, and Vegelinks. Initially the protein in these foods came exclusively from nuts, then wheat gluten was added, and more recently they have also included low-fat soy flour imported from the USA. The company imports texturized soy protein products and also makes their own, but they have found that their traditional untexturized vegetable protein foods outsell TVP by a factor of 50 to 1. Sanitarium appears to be the only supplier of non-meat protein foods to Australian and New Zealand consumers, presumably because the market is not big enough to attract a second company of the type.

As far as the author knows, the only Australian manufacturer of TVP other than Sanitarium is Griffith Laboratories, which makes an unflavored TVP for the very large and lucrative pet food market; they also make a low-fat soy flour.

In Australia, heart disease is the most serious disease, accounting for more than 30% of all deaths. With health professionals advocating a reduction in animal products, total fats, saturated fats, and cholesterol, and with the increasing awareness during the last few years of the relation between nutrition and health, "it would seem to me to be an opportune time to give the marketing of soy bean products a deeper and more searching examination than the superficial approaches that have been taken in the past." Address: Prof., School of Food Technology, Univ. of New South Wales, P.O. Box 1, Kensington 2033, Australia.

773. Archer Daniels Midland Co. 1978. Vegetarian cookbooks: A selected bibliography. Decatur, Illinois: ADM. 3 p. Feb. 2. Unpublished typescript. 28 cm. [36 ref]

• **Summary:** Many of these 36 vegetarian cookbooks focus on soybeans or soyfoods. Address: P.O. Box 170, Decatur, Illinois 62525. Phone: 217/424-5200.

774. **Product Name:** Nutrisoy 101.

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** Decatur, Illinois.

**Date of Introduction:** 1978 March.

**Ingredients:** Defatted soy flour (2 parts), partially hydrogenated soybean oil (1 part), and sodium phosphate.

**How Stored:** Shelf stable.

**New Product-Documentation:** ADM Technical data for Nutrisoy Formula 101. Dated March 1978.

Spot in Processed Prepared Food. 1979. Jan. "A recipe for scallops." Nutrisoy 101 is a textured vegetable protein.

Food Engineering International. 1979. June. p. 36-37. "Emulsifier based on soy protein."

Food Product Development. 1979. 13(10):52. "Improved soy flour-oil blend answers beverage base needs."

775. *Food Engineering*. 1978. Soy stroganoff: Soy protein provides the total basis—both beef and dairy replacement—for a highly palatable stroganoff. 50(3):ef-28. March.

• **Summary:** Developed in the ADM test kitchens, this formula contains TVP Strip S (caramel colored).

776. Munoz, Juan M.; Sandstead, H.H.; Jacob, R.A.; Logan, G.M., Jr.; Klevay, L.M. 1978. Improvement of oral glucose tolerance test and peripheral insulin activity by dietary fiber. *Clinical Research* 26(3):584A. April.

• **Summary:** Types of fiber consumed were “soybean hulls (SH; 86.7% dietary fiber), textured vegetable protein (TVP),” soft white wheat bran (SWW), corn bran (CB), or hard red spring wheat bran (HRS). The oral glucose tolerance was improved in healthy subjects by the consumption of SH, CB, and HRS. Address: USDA, Agricultural Research Service, Human Nutrition Lab., Grand Forks, North Dakota.

777. Munoz, Juan M.; Sandstead, H.H.; Jacob, R.A.; Logan, G.M. Jr.; Klevay, L.M. 1978. Effects of dietary fiber on plasma lipids of normal men. *Clinical Research* 26(3):584A. April.

• **Summary:** Types of fiber consumed were “soybean hulls (SH; 86.7% dietary fiber), textured vegetable protein (TVP),” soft white wheat bran (SWW), corn bran (CB), or hard red spring wheat brans (HRS). Total plasma cholesterol decreased 14.0% with soybean hulls, and 17.56% with HRS.

Note: This is the earliest document seen (Aug. 2001) containing experimental evidence that soy fiber lowers blood cholesterol. Address: USDA, Agricultural Research Service, Human Nutrition Lab., Grand Forks, North Dakota.

778. Ward, A.G. 1978. Commercial development of soya bean protein products in the EEC. In: Commission of the European Communities. Agriculture. 1978. Report of the Study Group on Vegetable Proteins in Foodstuffs for Human Consumption, in Particular in Meat Products. See p. 83-85. Appendix IV. April.

• **Summary:** “The soya bean is the main source of specialized vegetable protein products for human consumption within the EEC. Wheat gluten is also used but only to a very limited extent.” It is difficult to estimate the current scale of usage for human consumption.

“Belgium: N.V. Vamo Mills produces toasted defatted flour and grits. No extruders known to occur in Belgium. Production of isolates being undertaken by Purina Protein Europe (associate of Ralston Purina Company USA).

“Denmark: Aarhus Oliefabrik A/S produces defatted flour, soya concentrate (Danpro) and textured soya concentrate. The company operates the only extruder in Denmark. Dansk Sojakagefabrik A/S produces defatted soya flour and grits as well as full fat soya flour.

“France: Société Industrielle des Oléagineux

produces defatted soya flour and grits as well as full fat soya flour. Rhône Poulenc is reported to be working with an experimental soya protein spinning plant (not yet commercial). No information has been received about extruders functioning in France.

“Germany: Ölwerke Noury and Van Der Lande, Ölmühle Hamburg A.G. and Holtz and Willemsen all produce defatted soya flour and grits and the first two also produce full fat soya flour and grits. No information has been received about extruders functioning in Germany.

“Netherlands: Cargill Soja Industrie B.V. (associated with Cargill Inc., USA) produces defatted flour and grits. The company has three extruders for textured soya products, each with a capacity of about 7,000 to 10,000 tons per annum. These are not thought yet to be working to capacity. Unimills B.V. produces defatted soya flour, soya concentrate and products textured by extrusion with a single extruder. ADM-De Ploeg B.V. produces defatted soya flour and grits and also textured soya flour. The company has a single extruder of capacity 7,000 to 10,000 tons per annum, and is an associate of Archer Daniels Midland Co., USA.

“United Kingdom: British Soya Products produces defatted soya flour and grits as well as full fat flour. The company also produces by its own techniques (not conventional extrusion) the “Bespro” range of textured products. These may include gluten with the soya material. Spillers Ltd (Soya Food Ltd and Lucas Ltd) produces defatted flour and grits as well as full fat flour. Soya concentrate (Newpro) and textured soya flour are also produced. It is believed that the company now has the production capacity of two extruders (14,000 to 20,000 tons per annum). GMB (Proteins) Limited (jointly owned by General Mills Inc., USA and Bush, Boake Allen Ltd) produces a textured soya product (“Bontrae”), not by conventional extrusion. It is thought the current production capacity is a few thousand tons per annum. Miles Laboratories (U.K.) is linked to Miles Laboratories Inc., USA. Information is lacking as to whether the company has production capacity in the U.K. for textured products, as well as importing U.S. products. Courtaulds Limited produces a range of spun soya protein products (Kesp), some of which may incorporate gluten. Annual production is not known. The British Arkady Co. Ltd is associated with Archer Daniels Midland Co., USA. Defatted soya flour and grits, full fat soya flour and textured soya products (by extrusion) are produced. The single extruder has a capacity of 7,000 to 10,000 tons per annum. Extensive research and development has been carried out by Unilever Ltd. (in close association with Unilever in the Netherlands) to develop the “mesophase” process for the preparation of soya protein products and to utilize them in foods. The processes have not yet been commercially exploited.

“No information has been received concerning the production of soya protein products for human consumption

and in particular textured products from Ireland, Italy and Luxembourg but Italy has very substantial capacity for the production of oil and meal from soya beans.” Address: Procter Dep. of Food and Leather Science, Univ. of Leeds, Leeds.

779. *Cereal Industry Newsletter*. 1978. High fiber/low cholesterol. High fiber bread diets have lowered blood serum cholesterol levels by 12 to 17%. 8(5):1. May.

• **Summary:** High fiber bread diets have been found to lower serum cholesterol levels by 12-17% in 15 male volunteers. This preliminary human nutrition study was conducted by USDA’s Science and Education Administration (SEA). Speaking before FASEB, SEA medical officer Juan M. Munoz said the volunteers were fed bread supplemented with finely ground soybean hulls and other substances. “Serum cholesterol levels were lowered significantly in the six males eating diets with soybean-hull supplemented bread.

Typed note attached to the article by ADM: “Dr. Munoz has indicated to us his conclusion that soy bran is the ‘best’ overall performer of this research. Soy bran had the most significant effect in lowering cholesterol of all items tested. Soy bran was the only fiber product tested to show significant reduction of LDL [bad] cholesterol *and* significant increase in glucose tolerance.”

780. **Product Name:** Granose Sausfry: Seasoned Soya Protein Sausage Like Mix.

**Manufacturer’s Name:** Granose Foods Ltd. (Marketer-Distributor). Made in the UK by British Arkady.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1978 May.

**Ingredients:** 1980: Vegetable fat, textured soya protein [textured soy flour], rusk, glucose, stabiliser, salt, herbs, spices, colouring, added vitamins.

**Wt/Vol., Packaging, Price:** 500 gm (1.1 lb) bag.

**How Stored:** Shelf stable.

**New Product–Documentation:** Ad in *Alive* magazine (UK). 1978. May. p. 28. “Now our range is even more wholesome.” “Sausfry, the versatile soya-based sausage mix.”

Manufacturer’s catalog. 1980. April. “Textured soya protein in a beef sausage like flavour which only requires the addition of water to make it usable in any of the ways in which sausage meat can be used.”

Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that the product, made by British Arkady, was introduced in 1980. Address on bag is now Newport Pagnell. Label. 1990. 3.5 by 8 by 2 inch white coated paper bag. Red, yellow, brown, and black on white. An illustration (line drawing) on front panel shows a woman standing behind a table of baked goods. “Healthier wholesome food.” Pack panel: “Make it plain... Add 750 ml

(1.33 pints) of cold water to contents and leave the mixture for five minutes. Divide and form into sausage shapes, fry gently until golden brown.

“Make it fancy... Cook Sausfry shapes in hot batter for a tasty toad-in-the-hole or wrap in pastry to make savoury Sausfry rolls. Add onion, tomato, sage—any of your favourite flavours—and create exciting new ways to serve Sausfry.

“Note: Sausfry contains no animal matter and no Monosodium Glutamate.

“Ingredients: Textured defatted soya flour (defatted soya flour, iron, thiamin, riboflavin, vitamin B-12), hydrogenated vegetable oil, rusk, stabiliser (Methyl Cellulose, of plant origin), sea salt, hydrolysed vegetable protein, herbs, spices, colour (beetroot red).”

Color photo of package in *Linda McCartney’s Home Cooking*. 1990. p. 18.

781. Montgomery, Marlowe. 1978. Selected bibliography on the U.S. soybean industry. Decatur, Illinois: Archer Daniels Midland Library. 7 p. May. Unpublished manuscript. [94 ref] Address: ADM.

782. Granose Foods Ltd. 1978. The Granose grain harvest (Ad). *Alive (England)*. June. p. 36-37.

• **Summary:** Products (non-soy) include Sunnybisk (crispy whole wheat cereal biscuit made since 1895), Muesli, Fruit Bran (breakfast laxative food), Bran, Stabilised Wheatgerm, Swiss-Cup (Coffee Substitute). Granose products “also include exciting soya-based foods... Granose is a member of the worldwide organization, World Food Services, itself a division of the Seventh-day Adventist Church.” The Services own over 30 other health food factories. Address: Stanborough Park, Watford, Herts. WD2 6JR, England.

783. LeMaire, W.H. 1978. Bacon analogs... Exciting possibilities. *Food Engineering* 50(6):ef-14, 15. June.

• **Summary:** Breakfast muffins, pancakes, and omelets represent three different—yet practical—applications for bacon analogs. Bacon replacers have an image problem—how to get food processors to think of them other than as a garnish for salads. Major suppliers, such as ADM, Far-Mar-Co, and Cargill either have or are close to introducing cheese, pepperoni, and ham as well as improved bacon analogs. It is known that Central Soya, since purchasing General Mills’ steam texturization process for texturizing soy, is considering the flavored, textured analog market. General Mills and McCormicks are busy developing the retail market with national brands. Durkee’s and other suppliers pursue regional markets with their brands. Most of these retail products are simply bought from the three major suppliers and re-packed. Altogether the market for bacon analogs is today a 10 million pound market, roughly divided between food service and retail at 4 million pounds each with over 1 million pounds in other processed foods. Address: Midwest editor.

784. *Food Processing (Chicago)*. 1978. Functional soy protein: Permits salad dressings with 50% less oil/calories. July.

• **Summary:** Nutrisoy 101 is a soy protein powder containing about 34% protein and 32% fat. It can be used to make pourable or spoonable salad dressings; three recipes are given. Soylec Special, a lecithinated soy protein, contains 37% soy lecithin in a dry, free-flowing form.

785. **Product Name:** Granose Curry Sauce.

**Manufacturer's Name:** Granose Foods Ltd.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1978 July.

**Ingredients:** Textured soya protein, sultanas, wheat flour, starch, salt, pineapple, onion, sugar, tomato powder, apple flake, coconut, spices, herbs.

**New Product–Documentation:** Manufacturer's catalog. 1980. April. "Spiced curry sauce with textured soya protein and fruit. Serve with rice."

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in July 1978. It has been discontinued.

786. Robin, Mike. 1978. The reign in the U.S. lies mainly in the grain. *Lincoln Gazette (Nebraska)*. Sept. 20. [7 ref]

• **Summary:** Contents: Introduction. The Soviet wheat deal. Cargill and the state. Tradax. And back home. Food for Peace in Korea. Soybeans in Brazil.

This 4-page report shows how Cargill has grown through efficiency, predicting the future, taking advantage of every opportunity, and—whenever possible—using public monies and subsidies to finance its operation

The Soviet wheat deal: "Because farmers had no advance knowledge of the Russian sales, they sold their grains at prices ranging from \$1.25 to \$1.50 a bushel. The grain companies scurried about trying to buy these cheap grains from farmers, co-ops, and government-held reserves all through the early part of the summer of 1972. Several months later, when the Soviet sales were announced and the price of wheat rose as much as 50 percent, farmers realized the extent of the beating they had taken on what came to be known as the 'Great American Grain Robbery'. Agriculture Department officials claimed that even they had no knowledge of how much wheat had been sold to the Russians. Then Agriculture Secretary Earl Butz stated at a press conference, 'Farmers knew precisely as much as the grain companies. Some money has been made in the deal. Some trading companies made it. But it's the name of the game.'"

Although Cargill is adamant about the merits of free trade and looks askance at government regulation of the grain trade, the company nevertheless has many friends and

employees in high government positions.

"Tradax: In order to market and export its grain, Cargill set up a new corporate entity, Tradax International, in Panama. Vice President Walter Saunders explained: 'Organizing the new company in Panama enabled us to conduct our trading activities in the international grain market on the same tax footing available to our major competitors.'"

"Finding that Panama was less than ideal for doing business, Cargill then set up a Swiss Company called Tradax Geneva. Tradax is so large that by itself it ranks as one of the world's largest grain traders. Cargill Chairman Erwin Kelm told the U.S. Senate subcommittee on multinationals that Cargill sells as much as 50 percent .of its grain yearly to its own subsidiaries abroad. Now, when the Soviets buy U.S. grain, they no longer go to Cargill in the U.S. as they did in 1972. Instead, they buy from Tradax Geneva, which makes it difficult to monitor Soviet purchases—U.S. law doesn't require Tradax to report its sales,—and, additionally, Cargill does not pay U.S. taxes on its sales through Tradax."

"Soybeans in Brazil: Again in Brazil, Cargill was successful in using public monies to finance its operations. In 1972 Cargill received a loan of \$25 million from OPIC, a semi-public agency, to build a soy-bean crushing plant in Brazil. The Export-Import Bank also helped by underwriting loans of more than \$1 million. Soybean prices were skyrocketing in the early 1970s, and Brazil had already emerged as one of the world's largest soybean producers, second only to the U.S. Cargill jumped at the opportunity to get a foothold in the Brazilian market and its potential large profits.

"What both of these lending agencies and Cargill chose to overlook is the fact that much of Brazilian soybean production is for export and would be competing with United States-grown soybeans in world markets, thus undercutting the position of U.S. soybean farmers in the international market.

"As Verl Loyland of the Finley Farmer Grain and Elevator Company of North Dakota told the Senate Committee on Multinationals in 1976, 'I think the big problem, the way we look at it, is that these few [grain] companies are multinational companies. They are really not our salesmen. The multinational companies can pick up grain in any country they so desire, at whatever price advantage, or what have you. Just because a big sale is made to Russia doesn't necessarily mean they are going to buy from the U.S.'"

"To underline this point, in 1976 Cargill's European subsidiary, Tradax, sold 37 million bushels of soybeans to the Soviets. Terms of the sale allowed the beans to originate anywhere.

"Dennis Blankenship, director of market development for the American Soybean Association, claims that the soy processing boom in Brazil accounts in part for the recent

drop in volume of American meal shipped to Western Europe. The Brazilian government heavily subsidizes its soybean exports and ships abroad as much as 70 percent of its soy production, most of which is processed by subsidiaries of the grain giants, such as Cargill Agricola, Dreyfus, Bunge, and Archer-Daniels-Midland.

“While there appears to be little question that American agribusiness promotion of soybeans in Brazil has had harmful effects for U.S. producers, the expansion of soybeans has been far more deleterious to Brazil farmers and consumers alike. *How The Other Half Dies*, by Susan George [1977], summarizes a French government report on the introduction of soybeans to Brazil. Much of what follows is drawn from that study.

“The authors of the report are certain that soybeans have drastically reduced the amount of land previously devoted to staple crops, particularly the feijao or black bean... [see Susan George]

“In this article I have tried to break the veil of secrecy that has shrouded Cargill and its activities from public view. Cargill’s influence on our lives is profound, and demands much more study...”

787. Cole, Morton S. 1978. Extending muscle proteins. *Cereal Foods World* 23(9):535-538. Sept.

• **Summary:** Recent estimates of soy protein production are: Soy flour: 730 million lb. Isolated soy protein: 51 million lb. Soy protein concentrate: 8 million lb. Textured soy protein: 204 million lb. Address: Archer Daniels Midland Co., Decatur, Illinois, 62521.

788. *Food Product Development*. 1978. Meat plus vegetable protein—Opportunities for growth. 12(8):36, 39, 42, 46, 50. Sept. [1 ref]

• **Summary:** Discusses soy-based meat extenders made by Central Soya, A.E. Staley, Griffith Labs, ADM, and Grain Processing Corp., plus a new labeling regulation for the products that will take effect on 1 July 1979. It will require use of the term “vegetable protein product” on the label. At that time, if you remember, beef prices headed skyward and consumers decided that the prices were unwarranted and started cutting beef purchases. Then the Fed slapped price controls on beef, and grocery operators discovered vegetable protein. Many combination products were introduced, some of them badly formulated, mishandled and overextended. As a result, consumer rejected the products, and most of the new combos died on the vine when beef prices started to recede.

Products are simply a lot better than they were in 1973-74. Advances in processing technology of the vegetable products have produced a blander, more functional product. Steam introduced into the system at various points during extrusion is used to “blast off” undesirable flavor notes. Discusses Central Soya, Staley, Griffith Laboratories, Archer Daniels Midland, and Grain Processing Corporation.

789. *Trend (Austria)*. 1978. Agraraffaere: Das Sojawunder vom Marchfeld [An agricultural affair: The soya wonder from Marchfeld]. 9(9):42-51. Sept. [Ger]

• **Summary:** Discusses the achievements Anton Wolf has made in adapting soybeans to Steiermark, Austria. His yields have averaged 3000 kg/ha, higher than the U.S. average. The U.S. is actively trying to kill soybean production in Austria, so that the country will have to buy U.S. soybeans. But Austria also grows rapeseed, which has a higher oil content than soybeans.

Of the 62.2 million metric tons of soybeans produced worldwide in 1976, the U.S. produced 34.4 million. China 12 million, but uses them all within the country. So the USA is the main soybean exporter worldwide (Brazil sold a meager 330,000 metric tons in 1976). U.S. exports are controlled by a small “soya clique” (*Soja-clique*) consisting of firms, such as Cargill, Continental Grain, ADM, Central Soya, and Bunge—all of which are owned by eight Jewish families [sic, not true!]. A photo shows soybean breeder Anton Wolf.

790. National Soybean Processors Association. 1978. Year book and trading rules 1978-1979. Washington, DC. ii + 106 p.

• **Summary:** On the cover (but not the title page) is written: Effective October 1, 1978. This is the 50th anniversary issue. Contents: The National Soybean Processors Association [Introduction and overview]. Constitution and by-laws. Officers and directors. Executive office. Members. Standing committees. Food Protein Council. Trading rules on soybean meal. Sales contract. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}), sampling of soybean meal (automatic sampler, probe sampler), official weighmaster application, semi-annual scale report, official referee chemists (meal). Trading rules on soybean oil. Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, grading soybean oil for color (N.S.P.A. tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed), official weighmaster application, semi-annual scale report, official referee chemists (oil). Soybean oil export trading rules. Foreign trade definitions (for information purposes only).

The page titled National Soybean Processors Association (p. ii) states: “During the past crop year about 900,000,000 bushels of soybeans moved through processing plants of NSPA’s 29 member firms. Approximately 55 percent of America’s 1.7 billion-bushel soybean crop is bought and processed by NSPA members. Exporters account for another 41 percent of the crop, and the remainder [4%] is returned to

farms for seed, feed, and residuals.” Also discusses industry programs, soybean research, and international market development.”

The section on officers, executive committee, and board of directors (p. 7-8) gives the name, company affiliation, and phone number of each person. Officers—Chairman: John G. Reed, Jr., Continental Grain Co. Vice Chairman: C. Lockwood Marine, Central Soya Co., Inc. President: Sheldon J. Hauck. Secretary: A.E. Idleman, A.E. Staley Manufacturing Co., Inc. Treasurer: Edward J. Cordes, Ralston Purina Co. Immediate past chairman: Lowell K. Rasmussen, Honeymead Products Co.

Executive Committee: Gorge A. Heinz ('79), Buckeye Cellulose Corp. Donald H. Leavenworth ('79), Spicola, Cargill, Inc. C. Lockwood Marine, Central Soya Co. Inc. John G. Reed, Jr., Continental Grain Co. Gaylord O. Coan ('80), Gold Kist, Inc. Lowell K. Rasmussen, Honeymead Products Co. William T. Melvin ('80). Planters Oil Mill, Inc. Theodore W. Bean ('79), Quincy Soybean Co. Edward J. Cordes, Ralston Purina Co. Richard E. Bell ('80), Riceland Foods, Inc. Austin E. Idleman, A.E. Staley Mfg. Co.

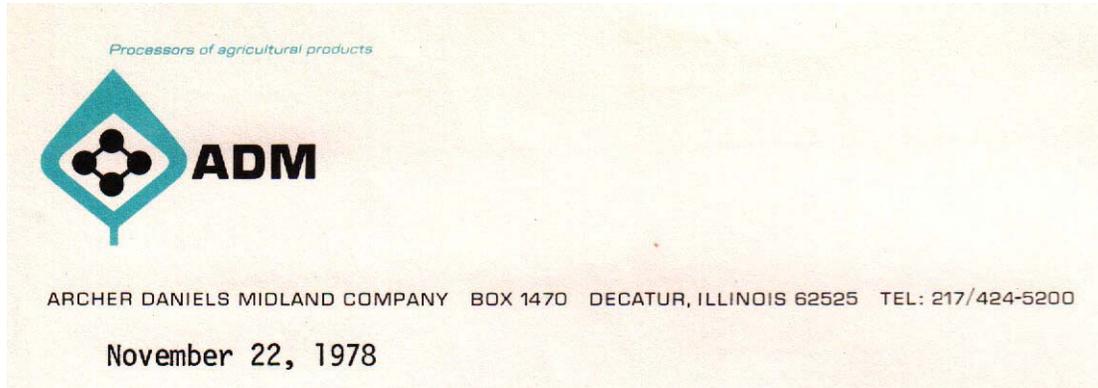

Board of Directors (alphabetically by company; each member company has one representative on the board): Thomas H. Wolfe, Anderson, Clayton & Co. Charles Bayless, Archer Daniels Midland Co. Keith Voight, Boone Valley Coop. Processing Assn. George H. Heinz, Buckeye Cellulose Corp. David C. Thompson, Bunge Corporation. Donald H. Leavenworth, Cargill, Inc. C. Lockwood Marine, Central Soya Co., Inc. John G. Reed, Jr., Continental Grain Co. Joe C. Givens, Dawson Mills. Alfred Jenkins, Delta Cotton Oil & Fertilizer Co. Kenneth E. Sullivan, Farmers Grain Dealers Assn. of Iowa. Donald M. Chartier, Farmland Industries, Inc. Gaylord O. Coan, Gold Kist Inc. Lowell K. Rasmussen, Honeymead Products Co. Kenneth J. McQueen, Land O'Lakes, Inc. Floyd W. Brown, Lauhoff Grain Co. Kermit F. Head, Missouri Farmers Assn.—Grain Div. Robert E. Hicks, Owensboro Grain Co., Inc. Sewell L. Spedden, Perdue Incorporated. 791. Shurtleff, William. 1978. Protein source for the future. *PHP (Japan)*. Oct. p. 8-18, 79-82. Illust. 18 cm.

• **Summary:** Contents: Introduction. Ten reasons why soybeans will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost source of protein in almost every country of the world. 3. High nutritional value. 4. Time tested for over 2,000 years. 5. Remarkably versatile. 6. Appropriate technology (“Traditional soyfoods can be produced in cottage industries”). 7. New dairylike products. 8. Soybeans are hardy and adaptive. 9. Free

nitrogen fertilizer from nodules on soybean plants. 10. Great productivity potential.

Discusses new patterns of soy protein utilization, with specific reference and descriptions of tofu, soymilk, tempeh (“Indonesia’s most popular soyfood”), miso, shoyu, whole dry soybeans, roasted soybeans, fresh green soybeans, soy flour, kinako, soy sprouts, and textured soy protein (TVP), yuba, and natto. Concludes with a discussion of new developments in the Western world.

Note: This is the earliest English-language document seen (Aug. 2013) that contains the word “dairylike” (written as one word) in connection with soyfoods. Address: New-Age Foods Study Center, P.O. Box 234 (951½ Mountain View Dr.), Lafayette, California 94549. Phone: 415-283-2991.

792. VanDenover, Randae. 1978. Re: Thank you for your evaluations of ADM’s soy protein products. Letter to William Shurtleff at New-Age Foods Study Center, Nov. 22. 1 p. Typed, with signature on letterhead.

• **Summary:** See above. “I want to thank you for sharing your evaluations of soy protein and the recipes and the recipes you recommend.”

Note: Shurtleff first wrote her on 14 Nov. 1978 thanking her for sending the two types of TVP. “Akiko has been testing and developing a number of recipes and the results have been far superior to anything we had possibly imagined. Tacos and Sloppy Joes got top grades.”

“I have also enclosed a reference article by Mark Sterner and Hank Sterner. If you should wish to contact them, Meals for Millions Foundation is located at 1800 Olympic Blvd., P.O. Box 1666, Santa Monica, California 90406.” Address: Mgr. of Research Kitchen, Research Dep., Archer Daniels Midland Company, Box 1470, Decatur, Illinois 62525. Phone: 217 / 424-5200.

793. Kent, Jack. 1978. Oilseed mill starts search for qualified staff: Maple Leaf Monarch plant. *Windsor Star (Essex County, Ontario, Canada)*. Dec. 1.

• **Summary:** Canada’s first multi-oilseed processing plants will require a specially trained work force. “The Maple Leaf

Monarch plant will replace the present facilities of Maple Leaf Mills on the Toronto waterfront and more than triple the capacity of the plant.” Address: Star business reporter.

794. Archer Daniels Midland Co. 1978. ADM soy protein specialties: TVP, TVP/2, Ardex 700 (Portfolio). Decatur, Illinois. 25 inserts. 30 cm.

• **Summary:** See next two pages. On the front cover of this portfolio is a large color photo of five meatlike dishes containing textured vegetable proteins. Below that is the title, on three lines, in large bold letters. On a long tab is written “ADM soy protein specialties.” On the inside front cover are four paragraphs with bold red headings: (1) A plant to develop edible soy protein began in 1930 at ADM. (2) In 1970 ADM was granted a patent for TVP. (3) TVP/2 textured soy concentrate offers new possibilities for food processors. (4) Ardex 700 soy protein concentrate for meat, cereal, snack foods, baking and dairy foods.

A cover letter dated 15 Dec. 1978 on ADM letterhead (Decatur, Illinois) is from Bob Sullenberger, Sales Manager, Protein Specialty Division.

The sixteen numbered inserts, printed with dark brown ink on orangish-tan laid paper, give basic information, nutritional composition, etc.: 1. Nutrient data for TVP unflavored non-fortified (also fortified) nutrients per 100 grams—Typical. 1A. Physical properties—size / shape / density. Ingredient declaration. 2. TVP bacon flavor bits. 3. Nutritional data—Typical. 4. Labeling regulations. Microbiological data for TVP—Typical. 5. Soy protein concentrate: Ardex-700F, Ardex-700G. 6. Nutrisoy fiber soy bran. 7. Defatted soy flours. 9. Lecithinated and refatted soy flours. 10. Defatted soy grits. 11. TVP/2 unflavored minced 240 ACH type. 12. Nutrisoy 220T. 13. Kaysoy defatted soy flour and grits. 14. Toasted Nutrisoy T-6. 15. Nutrisoy 101. 16. Soylec special lecithinated soy flour.

The next seven inserts (A-G) give bulk recipes: A. Beef patties. B. Veal patties. C. Pork patties. Breakfast links. D. Chili con carne. Chili con carne with beans. E. Sloppy Joes. Taco filling. F. Fabricated fish fillets with Ardex 700F and TVP. Fish binder for 100 lbs of finished product. G. Meatless and nondairy stroganoff.

Finally, a color leaflet on Imitation bacon flavor bits. Address: P.O. Box 1470, Decatur, Illinois 62525. Phone: 1-800-637-5850.

795. ADM Protein Specialties. 1978. Extending meat with TVP made good sense in 1967. It makes more sense all the time (Ad). *Processed Prepared Foods*. Dec. p. 21.

• **Summary:** See page after next two pages. A large graph in the top half of the ad shows the price of all meat from 1967 to late 1978; it has been rising. On the same graph is another showing the price of meat extended with 24% TVP. It is considerably less expensive than regular meat.

The text continues: “In recent months, meat has cost as

much as 30¢ a pound more than meat extended with TVP.”

Note: TVP is usually used to extend ground beef or hamburger. Address: Decatur, Illinois 62525. Phone: 800-637-5850.

796. **Product Name:** Granose Vegex [Beef-Flavoured Chunks, or Mince].

**Manufacturer’s Name:** Granose Foods Ltd. (Marketer-Distributor). Made in the UK by Courtaulds.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1978.

**Ingredients:** Soya protein, vegetable oil, edible starch, salt, flavouring, natural colour.

**New Product–Documentation:** Ad in *Alive* magazine (UK). 1978. May. p. 28. “Now our range is even more wholesome.” “Vegex Chunks, delicious spun soya protein for casseroles and pies.”

Manufacturer’s catalog. 1980. April. “Textured spun protein which has a similar texture to meat. Beef like flavour. It has a long shelf life, and is a balanced protein.”

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Courtaulds UK, was introduced in 1978. It has been discontinued.

797. **Product Name:** Granose Ravioli (Vegetarian).

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1978.

**Ingredients:** Durum wheat flour, tomato paste, vegetable oil, bread crumbs, salt, corn starch, spices, textured soya protein (textured soy flour), groats, yeast extract, mushroom, egg albumen, carrot, onion flakes, egg whole powder, caramel.

**New Product–Documentation:** See page after next four pages. Manufacturer’s catalog. 1980. April. “Traditional Italian style pasta filled with savoury soya protein in a spicy tomato sauce. Serve hot on toast or with potatoes or other vegetables.”

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1978. But a note says “Not Applicable.”

Label sent by Granose. 1990. July 11. The soy is textured soy flour.

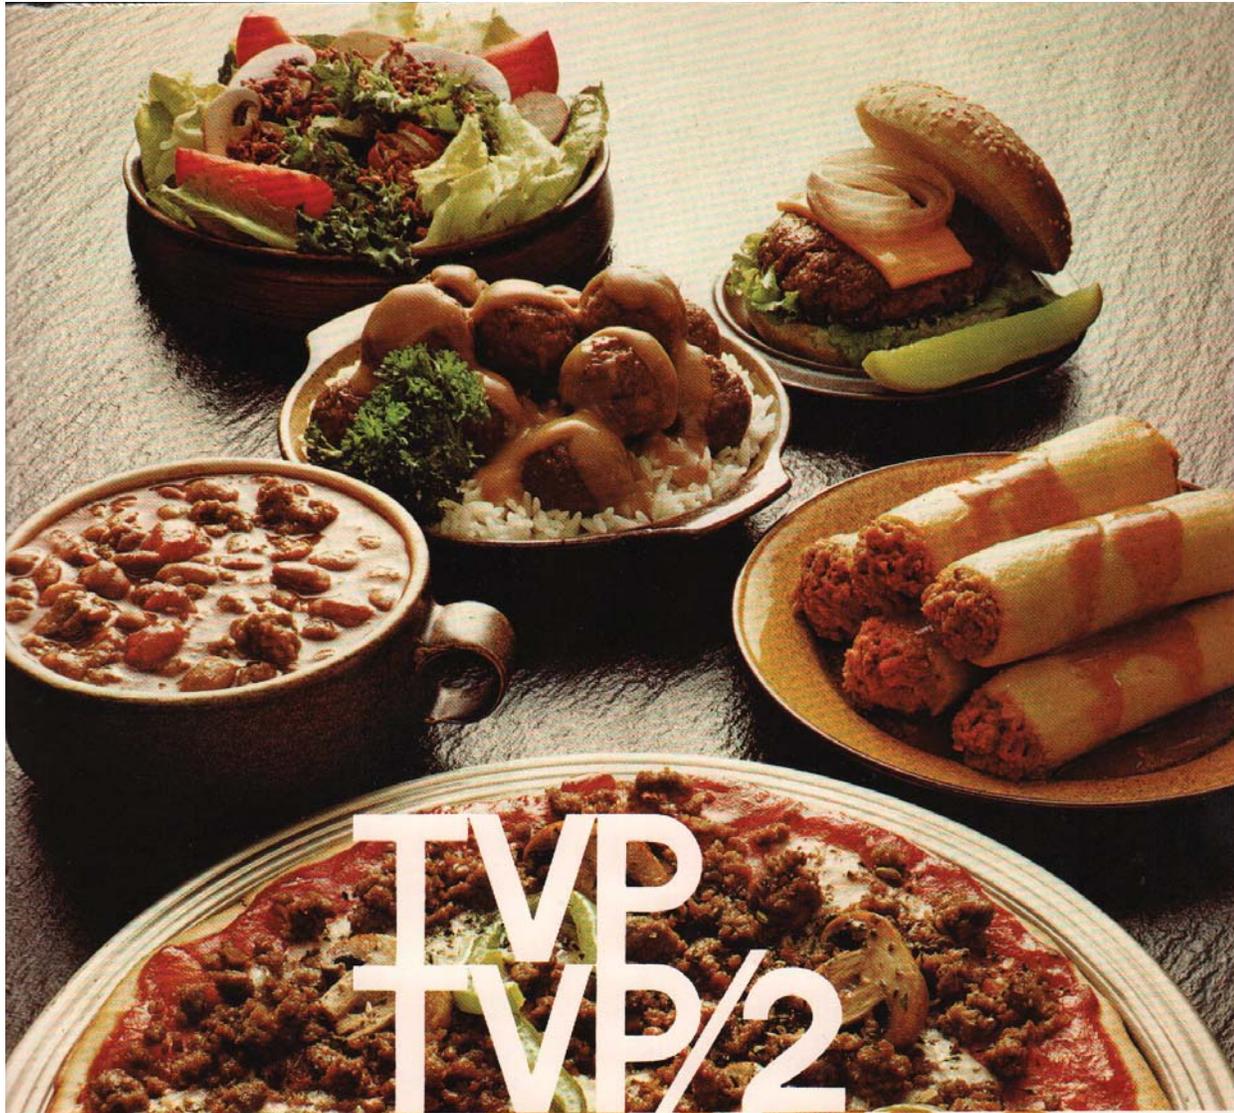

798. **Product Name:** Granose Cannelloni.

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1978.

**Ingredients:** Durum wheat flour, tomato puree, vegetable oil, sugar, textured soya protein (textured soy flour), onion, carrots, salt, celery, oats, cornstarch, mushroom, spices, yeast

## Extending meat with TVP made good sense in 1967.

## It's making more sense all the time.

In recent months, meat has cost as much as 30¢ a pound more than meat extended with 24% TVP.

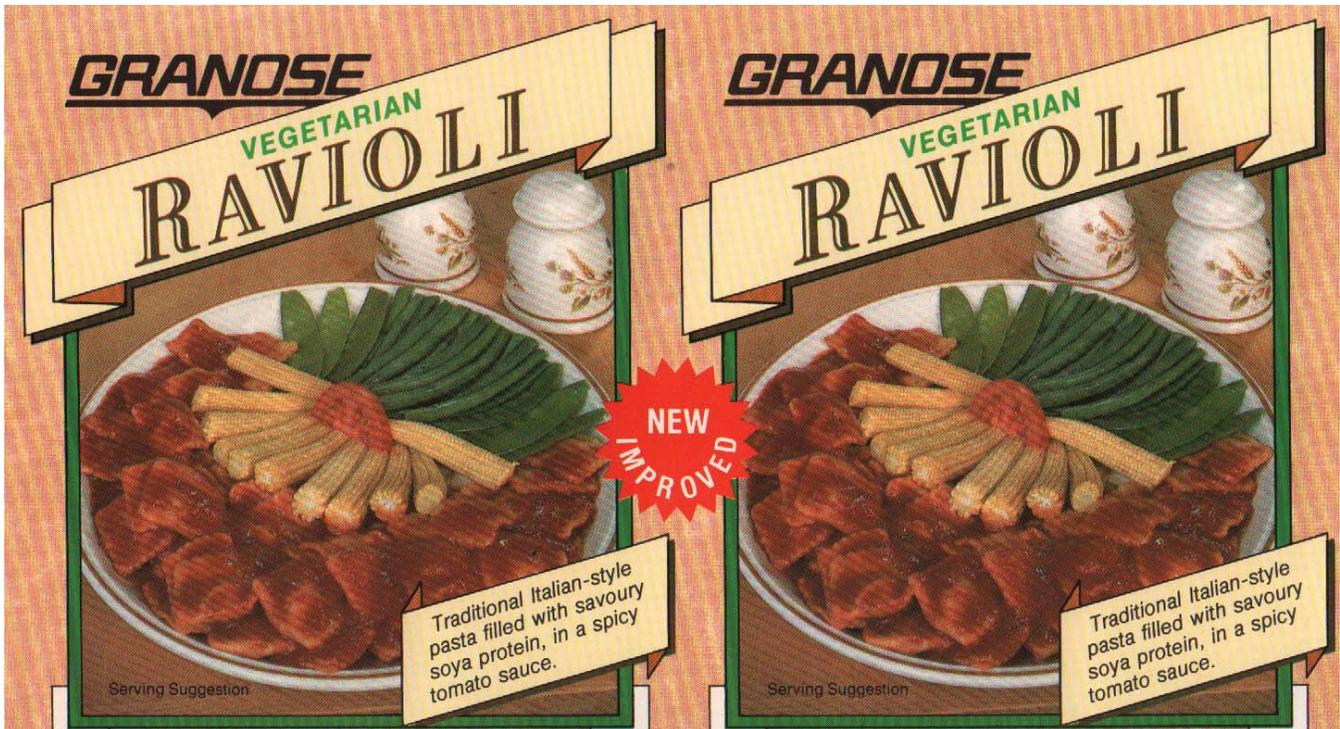

For more than a decade, TVP® textured vegetable protein has been helping the food industry cope with the high and ever climbing cost of meat. Isn't it time you found out how TVP can extend your profits while maintaining the quality

of your product.

ADM developed the first textured vegetable protein. Pioneered its use. And we have a complete meat laboratory where we can work with you to develop the optimum formulation for your product. Call toll-free, 800-637-5850, Protein Specialties Division, Decatur, Illinois 62525.

**ADM PROTEIN SPECIALTIES**

extract, egg albumen, egg whole powder, caramel.

**New Product–Documentation:** Manufacturer’s catalog. 1980. April. “Traditional Italian style Cannelloni filled with spicy soya protein in a tangy tomato sauce. Heat in ovenproof dish topped with grated cheese.”

Form filled out by Granose Foods Ltd. 1990. June 13.

States that the product, made by Granose, was introduced in 1978. It has been discontinued.

799. **Product Name:** Granose Vegetarian Goulash.

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1978.

**Ingredients:** 1980 and 1990: Water, textured soya protein, maize starch, hydrolysed vegetable protein, tomato puree, wheat flour, salt, yeast, carrot, onion, potato, leek, capsicum, mushroom, sugar, paprika, spices, herbs, vegetable oil.

**Wt/Vol., Packaging, Price:** 425 gm (15 oz) can.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** See at right. Manufacturer’s catalog. 1980. April. “Soya protein and vegetable stew in a sauce flavoured with paprika. May be heated as in the can or have added vegetables.”

Form filled out and Labels sent by Granose Foods Ltd.

1990. June 13. States that the product, made by Granose, was introduced in 1978. Label. 1990. 8.5 by 4.25 inches. Photos on front and back panels show a kettle or wok full of the ready-to-serve product, which resembles a meat casserole.

“Textured soya protein and vegetables in a savoury sauce...

A traditional stew with soya protein and vegetables in a tasty

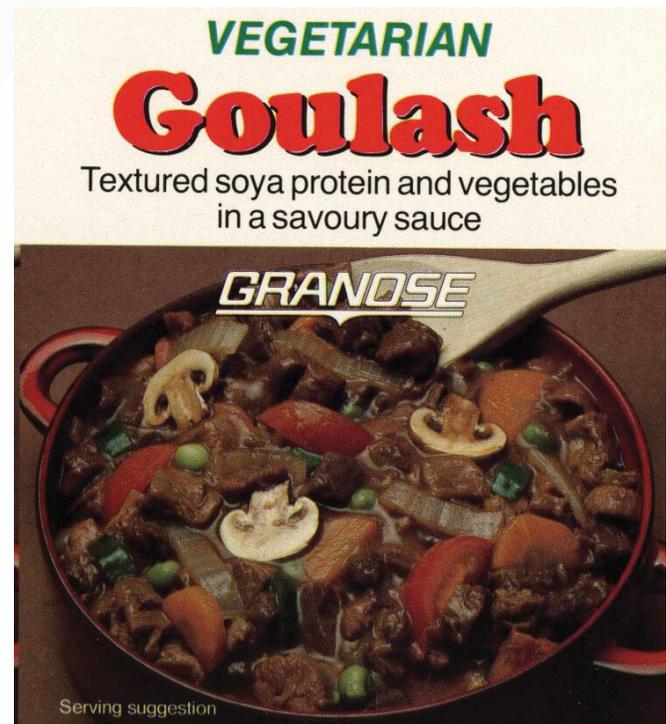

sauce seasoned with paprika and tomato. Contains no animal products.”

800. **Product Name:** Mealmaker: Soya food–Chunks.

**Manufacturer’s Name:** Mysore Snack Foods Limited.

Marketed by Voltas Limited.

**Manufacturer’s Address:** 19, Platform Road, Bangalore, 560-020, India.

**Date of Introduction:** 1978.

**Ingredients:** Defatted soya flour, spices.

**Wt/Vol., Packaging, Price:** 250 gm paperboard box. Maximum price Rs. 7.20. Local taxes extra (printed on box).

**How Stored:** Shelf stable.

**New Product–Documentation:** See above. Ad for Mealmaker in Soyaneews (Sri Lanka). 1978. Nov. p. 6. “Mealmaker: The delicious meat extender. Manufactured by Mysore Snack Foods Ltd. (Bangalore 560 023, India). Marketed by Kissan. This ad originally appeared in *Femina*.

Label. 1987. 5 by 7.25 by 2 inch box. Green, yellow, and red, with photo on front and back of TVP chunks (1/2 to 5/8 inch diameter) being mixed in a stainless steel bowl, surrounded by vegetables. Text in both English and Hindi. “New. 100% Vegetarian. Tasty dishes every day of the year. Imagine a whole variety of tasty vegetarian dishes every day of the year. Even some of those for which you have had to depend on seasonal vegetables. Not any more. You have Mealmaker. Just refer to our simple, tasty Mealmaker Recipes inside this pack. Easy to make and delicious, every one in your family will love it. Mealmaker comes to you in rich golden chunks. With protein nourishment. To make yours a happy Mealmaker home. Marketed by Voltas Limited. 19, J.N. Heredia Marg, Bombay 400 038, India.

Recipe leaflet: 9 by 5.75 inches. Black and red on white. 1 side in English, one in Hindi. Divided into Vegetarian Dishes (Yoghurt Curry, Vegetable Stew, Spinach Mealmaker

Dhokras, Coconut Kababs, Sesame Croquettes, Baked Cheesy Delight) and Non-Vegetarian Dishes (Prawn Biryani, Masala Chops [mutton], Mutton Curry, Moghlai Gravy). “Mealmaker makes those delicious dishes go a longer way—with more nutrition too.”

801. Boyer, Robert A. 1978. Technological gaps in vegetable protein texturization. *J. of Texture Studies* 9(1/2):179-89. [14 ref]

• **Summary:** Contents: Introduction. Vegetable protein raw materials. Raw material flavor problems. Current texturizing methods. Binders. Scientific literature gaps. Proposed new texturizing techniques. Conclusions.

“The growth of the textured vegetable protein industry has not kept pace with early predictions. High costs and marginal quality are among the factors retarding progress. Some of the technological gaps handicapping the industry are: lack of a process for preventing formation of off-flavors by enzymes while maintaining protein functionality, lack of a low cost thermosetting binder, lack of a protein suitable for spinning, and the indigestibility of certain soybean fractions.”

“Two methods of texturization dominate the industry today: extrusion by screw presses and wet spinning... Extrusion accounts for a majority of the tonnage of textured vegetable protein (TVP) being produced today.” The relatively inexpensive soy flour (about one-third the cost of

soy protein concentrate and one-sixth the cost of soy protein isolate) can be used as the starting material. The extruded products are usually in the form of dry granules or expanded and porous chunks.

Perhaps the most serious problem confronting any process based on the use of soy flour is the lack of digestibility and frequent incidence of flatulence. Address: Miles Laboratories, Worthington, Ohio 43085.

802. Duff, Gail. 1978. *Gail Duff's vegetarian cookbook*. London: Macmillan. 374 p. Index. 23 cm.

• **Summary:** Pages 14-15 note that: "Products made from soya beans are very important in meatless diets..." She uses tamari, miso, whole dry soybeans, and soya flour, but has an intense dislike of TVP (textured vegetable protein). Soy-related recipes include: Soya mayonnaise (made with soya flour, p. 81-82). Barbecued soya bean and tomato spread (p. 246). Crunchy soya bean sandwich spread (p. 247). Miso, onion and parsley sauce (p. 319). Basic soya bechamel (p. 319).

The section titled "Soya beans" (p. 190-97) has a nice introduction followed by recipes for: Salted soya beans. Basic method for soya beans. Soya bean hot pot. Soya bean blanquette. Soya bean goulash. Soya bean and tomato casserole. Spiced lemon soya beans. Barbecued soya beans. Soya beans with cucumber-Chinese style.

803. Farm, The. 1978. *Yay soybeans! How you can eat better for less and help feed the world*. Second revised edition. Summertown, Tennessee: The Book Publishing Co. 14 p. Illust. 22 cm. 2nd rev. ed. 1978, 14 p.

• **Summary:** The first edition of this creative little booklet, published in 1974, was printed with blue ink on white paper; this 1978 edition uses brown ink on white paper. Contents: Living on soybeans. Some of our favorite ways to eat soybeans. Basic cooked soybeans: Soybeans and tortillas, Soybean stroganoff, Soy fritters, Cheezy soybeans (Good Tasting Nutritional Yeast gives the cheezy flavor), Soyburgers, Soy nuts (dry roasted), Soy coffee. Soymilk: Using soybeans or using soy flour, Soy mayonnaise (made with soymilk), Soy yogurt.

Tofu: How to make at home (6 step process using nigari, epsom [sic, Epsom] salts, vinegar, or lemon juice as a coagulant), Tofu salad dressing, Tofu salad [like an eggless egg salad], Scrambled tofu, Pan fried tofu, Tofu cheesecake. Soy pulp: Introduction, Scalloped tomatoes and pulp, Soy pulp burgers, Soy pulp cookies. Soy flour: Basic salad and sandwich spread, Seasoned sandwich spread. TVP-Textured Vegetable Protein: Introduction, TVP tortilla and taco filling, Taco filling sauce, TVP spaghetti sauce, Sloppy Joes. Good Tasting Nutritional Yeast: Introduction, Melty cheese, Cheese crackers, Golden gravy, Yeast 'omelette.' Eggless cookery: Introduction, Pancakes (with soymilk), Chocolate cake (with sour soymilk), Cookie crust for cheesecake. A word about

vitamin B-12. Some facts about people and food. Plenty. Address: Tennessee.

804. Gaskin, Ina May. 1978. *Spiritual midwifery*. Revised ed. Summertown, Tennessee: The Book Publishing Co. 473 p. Illust. Index. 23 cm. [10+\* ref]

• **Summary:** The original 1975 edition of this pioneering book, by "Ina May and The Farm midwives" (380 p.) did not mention soyfoods. However in this edition, the section titled "Taking Care of Yourself While You're Pregnant: Nutrition" (p. 227-31) states: "You will need to increase your protein intake by about 30%. On the Farm, we are complete vegetarians, and our main source of protein is soybeans and soy products such as soymilk; soy yogurt; tofu (soybean curd); hard, pressed tofu (more concentrated); soymilk ice cream; and TVP-texturized vegetable protein. Soybeans and soy products are very high in protein of a quality comparable to eggs and mother's milk (the international standards for complete protein).

"You can get plenty of protein for pregnancy by eating daily one cup of soybeans plus 12 ounces of soymilk or yogurt, or ½ lb. tofu and a pint of soymilk, or one cup hydrated TVP and a cup of soymilk or soy yogurt, or one quart of soymilk or soy yogurt and ½ cup of soybeans. We highly recommend a vegetarian diet for a healthy pregnancy and life."

Note: This is the second earliest published English-language document seen (March 2007) that uses the term "soymilk ice cream." Address: The Farm, Summertown, Tennessee.

805. Moore, Shirley T.; Byers, Mary P. 1978. *A vegetarian diet: What it is; how to make it healthful and enjoyable*. Santa Barbara, California: Woodbridge Press Publishing Co. 120 p. With 7 color photos. 23 cm. [111 ref]

• **Summary:** A sound, readable, and well documented book written by Seventh-day Adventist nutritionists. Covers up-to-date information on nutritional adequacy of vegetarian diets, types of vegetarians, daily food guides, and sample menus. The tone of Chapter 1 is quite defensive, as if Seventh-day Adventists had been previously accused of being unscientific, faddists, and/or quacks.

Contents: Acknowledgments. Preface. 1. A vegetarian diet: What it is; what it is not. 2. Filet mignon or pecan patties. 3. Food and people. 4. Now for the menu. 5. The littlest vegan: A nonmeat diet for infancy. 6. Why the vegetarian lifestyle. Conclusion. Appendixes: A. Sample menus for a week. B. Suggestions for dining away from home: Full-fledged vegetarian restaurants, restaurants catering to cultural food tastes (Chinese, Japanese, Greek, Italian, Mexican), cafeterias, smorgasbords, restaurants, salad bars, airlines, supermarket meals (no specific restaurants are mentioned—only these types). C. A sampling of vegetarian cookbooks [28 books are listed, many of them by Seventh-

day Adventist authors]. D. Meat analog manufacturers [ADM, Cedar Lake Foods, General Mills, Loma Linda Foods, Miles Laboratories / Worthington, Millstone Foods]. Address: 1. PhD; 2. M.A. Both: Loma Linda Univ., Loma Linda, California.

806. Shearson Hayden Stone Inc. 1978. Special survey: U.S. and Canadian soybean processing facilities. New York, NY. 8 p. Nov.

• **Summary:** The USA has a total soybean crushing capacity of 1,226 million bushels/year based on 330 available days. A ranking of the capacity of major U.S. soybean crushers is as follows (as of 1 Nov. 1977):

Cargill 224 million bushels/year. 18.3% of industry total.  
Archer Daniels Midland 178 million bushels/year.

14.5% of industry total.

Central Soya 94 million bushels/year. 7.7% of industry

total.

A.E. Staley 93 million bushels/year. 7.6% of industry total.

Ralston Purina 92 million bushels/year. 7.5% of industry total.

All Co-ops 232 million bushels/year. 19.0% of industry total.

Other 312 million bushels/year. 25.4% of industry total.

The leading soybean crushing states (in million bushels per year capacity) are: Illinois 258, Iowa 176, Minnesota 83, Tennessee 73, Indiana 70, Arkansas 69, Missouri 68, Mississippi 59, Ohio 50.

The individual soybean crushing plants with the largest capacity are (\* = food grade plant): ADM\* (Decatur, Illinois) 150,000 bushels/day. Quincy Soya (Quincy, Illinois) 120,000 bushels/day. Cargill, Inc. (Memphis, Tennessee) 100,000 bushels/day. A.E. Staley (Des Moines, Iowa) 100,000 bushels/day.

Canadian soybean crushers capacity (total 148,000 bushels/day) are: Maple Leaf Mills (Windsor, Ontario) 60,000 bushels/day. Victory Mills (Toronto, Ontario) 42,000 bushels/day. Canadian Vegetable Oil Processing (CVOP, Hamilton, Ontario) 33,000 bushels/day. Maple Leaf Mills (Toronto, Ontario) 13,000 bushels/day. Total: 148,000 bushels/day. Note: Maple Leaf Mills is the largest Canadian soybean crusher, with a total capacity of 73,000 bu/day.

807. **Product Name:** Textured Soy Flour?

**Manufacturer's Name:** Mysore Snack Foods Co.

**Manufacturer's Address:** Bangalore, India.

**Date of Introduction:** 1978?

**New Product–Documentation:** R. Nave. 1979. LEC Report No. 7. p. 96. "Experience with extrusion cookers in India." Mysore Snack Foods Company of Bangalore has a Wenger X-25 extrusion cooker and is producing product for Indian government feeding programs. "They attempted to produce TVP for the commercial market but withdrew after a few

months."

808. Fillip, Janice. 1979. Refabricated soy protein. *Whole Foods (Berkeley, California)* 2(1):26-28, 30. Jan.

• **Summary:** Contents: STP, LTD, TVP, QED–Uh, what is it? From soy to flour. Isolating the isolate. Extruding textures. If it's fab, is it food? A small step for soy, a giant step for proteinkind. Address: California.

809. Nave, Robert. 1979. Experience with extrusion cookers in India. *LEC Report* No. 7. p. 95-100. D.E. Wilson, ed. Low-Cost Extrusion Cookers: Second International Workshop Proceedings (Fort Collins, CO: Dept. of Agric. and Chemical Engineering, Colorado State Univ.). Held in Dar es Salaam, Tanzania.

• **Summary:** Contents: Background and objectives of SPRA. Extrusion cookers at SPRA. Other extrusion cookers in India. Types of products produced at SPRA on various machines: Commercial products, feeding program products. General observations. The Brady Crop Cooker and Wenger X-900: Comparisons of machines and cost, advantages of each machine. Basic requirements for production facilities housing a LEC. Conclusion.

"I. Background: A. The Soya Production and Research Association, which we established in 1971, grew out of our desire: (1) To establish a project for the utilization of soybeans which were being introduced as a farm crop but for which no market seemed to be developing. (2) To develop some soybean-based food products which could be processed in large quantities and which would be readily accepted by the Indian people; and (3) To produce low-cost soybean-based foods and yet be a viable company which could produce some surplus income for use in developmental and charitable projects.

"B. SPRA is a partnership of the Methodist Church in India and the G.B. Pant University of Agriculture and Technology which is the Uttar Pradesh State Agricultural University... (D) SPRA has made it a point not to be dependent on government feeding programs.

"II. There are three extrusion cookers at SPRA. These are a Wenger X-25 with the necessary parts to convert it to an X-900, a Brady Crop Cooker and a Wenger X-155... The X-900 and Brady Crop Cooker can process unground soyabeans and do not require water, steam or a drier to reduce moisture after processing. (B) Mysore Snack Foods Company of Bangalore has an X-25 and is producing product for government feeding programs. They attempted to produce TVP for the commercial market but withdrew after a few months.

"IV. Types of products produced by SPRA on various machines: A. Commercial Products: 2777Textured Vegetable Protein, Corn-Defatted Soya Weaning Food, Rice-Defatted Soya Snack Food (flavored with peanut oil and local spices). B. Feeding program products: Corn and ground soyabeans,

Full-fat soya meal from whole ground soyabeans, Full-fat soya meal from whole unground soyabeans, Full-fat soya meal from whole dehulled soyabeans.

“Our inability to put the full-fat soya flour... on the market is due to our inability to find suitable packaging.”

“Advantages of each machine:

“The X-900: high production per hour, lower cost of production, easier cleaning, more versatile, inactivation of trypsin inhibitor good (0.05 when measured as urease activity).

“The Brady crop cooker: lower initial cost, easier to operate, less skill required for maintenance, inactivation of trypsin inhibitor good (0.10 when measured as urease activity).”

“VII. Conclusions: At SPRA we feel that LEC’s can fulfill an important need in providing low-cost nutritious foods for both the commercial market and feeding programs in man Third World countries.” Address: Soya Production and Research Assoc., Bareilly, India.

810. Shurtleff, William; Aoyagi, Akiko. 1979. Soybeans (Document part). In: W. Shurtleff and A. Aoyagi. 1979. *The Book of Tofu*. New York: Ballantine Books. 433 p. See p. 58-75. Chap. 4.

• **Summary:** Contents: Introduction. Soy protein foods—Traditional non-fermented soyfoods: Whole dry soybeans, soynuts, roasted soybeans, fresh green soybeans, soy sprouts, natural soy flour and soy grits, roasted soy flour (kinako).

Traditional fermented soyfoods: Tempeh, miso, shoyu (Japanese natural soy sauce), natto (fermented whole soybeans, including Japan’s cracked natto {*hikiwari natto*} and finger lickin’ natto {*yukiwari natto*, containing rice koji and salt}, and thua-nao from northern Thailand), soy nuggets (inc. Japan’s Hamanatto and Daitokuji natto).

Modern western soyfoods (developed using high-level technology): Soy flakes, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun soy proteins, textured soy proteins (TVP is an ADM brand name), textured soy concentrates, soy oil products. Address: P.O. Box 234, Lafayette, California 94549.

811. **Product Name:** Flavored Textured Soy with Crispy Texture [New Improved Bacon, Type Q Bacon, Pepperoni, Italian Sausage, Breakfast Sausage, Bacon Flavored Chips, Beef Strips, Chicken Strips, Taco Flavored Granules].

**Manufacturer’s Name:** Westward Industries, Inc.

**Manufacturer’s Address:** 1819 S. Meridian, Wichita, Kansas.

**Date of Introduction:** 1979 January.

**Ingredients:** Textured soy flour plus flavorings.

**How Stored:** Shelf stable.

**New Product–Documentation:** Talk with Jim Beyers.

1999. May 3. Westward Industries was started by Ken Towers. He licensed the rights to make TVP but developed

his own flavoring systems in-house. In Jan. 1979 Westward Industries started making standard textured soy protein products in Kansas at 1819 S. Meridian, Wichita. Westward didn’t sell any products under its own brand; it was either sold in bulk to foodservice or private labeled for all the glass-packers in the country like John R. Sexton, Durkee Foods, R.T. French, McCormick, Safeway, CFS-Continental, Ponderosa Steak Houses, Pizza Hut—any company that sold bacon-bits in jars. “We were the largest processor of imitation bacon bits in North America, probably for about ten years.”

812. Davis, Melissa. 1979. The soy of cooking: Out of the field, into the kitchen. *Washington Post*. March 15. p. E1, E14, E20.

• **Summary:** Starts by discussing Henry Ford’s interest in and work with soybeans. He wanted to find a way to “grow automobiles out of the soil. In 1940 he discovered that soybeans were his bumper crop.”

Last week a milestone in soybean history was made on Capitol Hill [Washington, DC]. “About 500 people including senators, representatives, ambassadors, diplomats and freeloaders turned up at the International Soybean Fair.

While Chai Zemin (of the People’s Republic of China) and Bob Bergland (U.S. Secretary of Agriculture) stood shaking hands, people pushed and shoved to get to the bar and to hors d’oeuvres made from every soybean product imaginable—soy flour, tofu or bean curd, textured vegetable protein (TVP), soy milk, soy sauce, etc. Also mentions tempeh and miso.

Although most Americans think of soybeans as something fed to chickens and cows, companies like Miles Laboratories, Procter & Gamble, Ralston Purina, Nabisco and Kraft are “hoping we will take soybeans into our kitchens.”

The hors d’oeuvres at the Soybean Fair (10 dishes prepared by chefs from the Chinese Embassy and 13 presented by the Food Protein Council) attempted to prove that soy protein foods can be tasty and attractive. Although one critic said, they ‘taste like vacuum cleaner dust,’ some of them came close (the Morning Star Farms bacon analog had a dusty nutty taste very unlike bacon). There were a few interesting hors d’oeuvres including soy nuts and garlic smothered bean curd.”

Then comes a description of how to cook soybeans using 3 different methods: (1) Pressure cooker method—45 minutes at 10-15 pounds pressure. (2) Regular method—soak, then cover and simmer for 4½ to 5 hours, or until tender. Add water as needed. (3) Freezer method: Pour the soaked beans with water into ice trays or freezing containers. The beans should be just covered with water. Freeze overnight, or as long as you like. Remove from freezer, place in a pot with sufficient water to cover. Cover and simmer (do not boil) for 2½ to 3 hours, or until tender. Add more water if needed.

Then come four recipes: (1) Soy nuts. (2) Peanut Butter Cookies (with 3 cups soy flour; makes 60 cookies). (3) Fried bean curd with garlic and scallions (6 servings). (4) Soyburgers (with 7 cups cooked soybeans; makes 16. From *The Farm Vegetarian Cookbook*).

The event was largely sponsored by the Food Protein Council and its member companies. "There were a few interesting hors d'oeuvres including soy nuts and garlic smothered bean curd."

813. Fitch, Peter. 1979. Vegetable proteins in snacks. *J. of the American Oil Chemists' Society* 56(3):304-05. March.

• **Summary:** Contents: Abstract. Introduction. Product applications.

Key issues concerning snacks are a high degree of convenience (ready to eat/serve), nutritional value, and consumer appeal. One soybean snack [oil-roasted soynuts] is made by subjecting whole soybeans to a patented flash-frying technique, which causes them to expand and change texture so that they are virtually indistinguishable from roasted nuts. "By selection of cooking oil, process time, and postflavoring, it is possible to arrive at a highly acceptable quality snack with novelty appeal and excellent nutritional properties. The protein content of the product is in the order of 35%. Antioxidants and suitable packaging ensure adequate shelf stability for the 25% oil content, most of which is soy origin and present in the bean prior to processing.

"Such a product is currently on sale in a limited section of the British Retail Market, where it is in the form of the whole bean. For manufacturing purposes, a kibbled or particulate material would probably be more desirable."

Soy proteins can also be added to expanded snacks. In Britain, textured soy proteins are used in snacks such as a meat pie and pizza. Cakes, biscuits, and breads are enriched with soy flour. A photo shows Fitch. Address: The British Arkady Company Ltd., Arkady Soya Mills, Old Trafford, Manchester M16 0NJ, England.

814. Kadane, V.V. 1979. Vegetable proteins in cooked and/or fermented sausages. *J. of the American Oil Chemists' Society* 56(3):330-33. March. [21 ref]

• **Summary:** Contents: Abstract. History of soy proteins in cooked sausages in Europe—Reasons for acceptance. Economical factors of increased sausage consumption—Reasons for the TVP need. Spun vegetable proteins. Nutritional aspect of soy proteins in sausages. Brine extension of sausage meats. Use of soy proteins in dry and semidry meat products. General processing procedures with soy proteins. Production of fermented and dry sausages with soy proteins. Role of structured concentrates and textured proteins. A photo shows Kadane. Address: Central Soya Reprasantzbuero, c/o Braddock and Co., GmbH, P.O. Box 1150, Berliner Alle-5, 607 Langan, West Germany.

815. Munoz, Juan M.; Sandstead, H.H.; Jacob, R.A.; Logan, G.M.; Reck, S.J.; Klevay, L.M.; Dinitzis, F.R.; Inglett, G.F.; Shuey, W.C. 1979. Effects of some cereal brans and textured vegetable protein on plasma lipids. *American J. of Clinical Nutrition* 32(3):580-92. March. [94 ref]

• **Summary:** The hypothesis that dietary fiber lowers serum cholesterol was tested and confirmed in ten healthy men, ages 19 to 54 years. Total plasma cholesterol decreased 14% when "soybean hulls" were added to the diet. Textured vegetable protein (TVP) was also added. Soybean hulls, by themselves, contained 92% dietary fiber. Address: USDA Science & Education Administration, Human Nutrition Lab., Grand Forks, North Dakota 58201.

817. Tofu Shop (The). 1979. Workshops in tofu-making on the community level (Portfolio). Telluride, Colorado. Eight inserts. 28 cm.

• **Summary:** Rather than being a typical portfolio, with many

inserts, that all arrive at one time, this is a collection of eight documents all related to a common theme.

(1) “Workshops in community level tofu-making: Beginning in April 1977, the Tofu Shop of Telluride, Colorado, is making available to interested groups and communities training workshops in tofu-making on the community level. Topics to be covered in these workshops will include: The process of tofu-making. Setting up shop. Other soy products. Marketing. Financing and fundraising. Bookkeeping and record keeping. Restaurants and delis, Nutritional info. Community education. The community food chain. The personal benefits. Inner-shop organization. Contacts and resources.

“Workshops are led by members of the Telluride Tofu Shop and may include an experience in tofu-making... Apprenticeships—The Telluride Tofu Shop also has a limited number of openings for workers / owners in its restaurant and wholesale business. A one year time commitment is required.”

(2) “Dear \_\_\_: The Telluride Tofu Shop was born in October, 1977, when we moved into our small, unfurnished shop with a meager one-thousand dollars capital and began making tofu. Now in April, 1979, twelve of us operate a growing restaurant and wholesale food business with annual sales approaching fifty-thousand dollars annually. What happened during this period is something we want to share with other communities and groups of interested people.” So we are offering a workshop in “How to Start a Community Tofu Shop.” (3) “The community level tofu shop and the local food chain.” A complex circular diagram shows many complex relationships.

(4) “Supplies and information for community level tofu-making.” Lists five key organizations: (a) Soy Crafters Association of North America (SANA; Greenfield, Massachusetts, Richard Leviton). (b) New-Age Foods Study Center (Lafayette, California; Books, brochures, tofu-making materials, slides, tapes, general info.). (c) Bean Machines Inc. (Bodega, California; Larry Needleman. Tofu-making equipment from Japan). (d) Farm Foods (Summertown, Tennessee. Attn. soydairy; tempeh starters, tvp, cookbook, general info.). (e) Westbrae Natural Foods (Emeryville, California; Nigari).

(5) A tofu recipe: For making approximately 15 pounds of tofu. Gives equipment, ingredients (soybeans and nigari), and recipe [process].

(6) A settling box press. Two views showing how to make one yourself.

(7) Soymilk: Nutritional information and recipes courtesy of The Spinning Kitchen, Boulder, Colorado.

(8) Our favorite tofu recipes.

Letter (e-mail) from Matthew Schmit. 2009. March 30. “Our motivation for doing tofu workshops was primarily to spread the word. But also hoping to make a little money.

“We (Christie Mather and myself) conducted three

workshops in early 1979. There were approximately 12-15 participants per workshop. These workshops were far from Telluride, so there was no concern about competition.

“The first was in Arcata, CA, (little did I know I would be moving there soon), to a group known as the Arc Community which was trying to form an intentional community to purchase land. My sister and brother-in-law were members, hence our invitation. After we left, they began making tofu weekly in home kitchens and selling it informally in the community. When I moved to Arcata, I joined the group as they began planning to rent a production space. As it turned out, it was too big of a leap for them. Their effort dwindled. I went ahead and opened the Arcata shop. The Arc Community eventually disbanded.

“The second workshop was held in Ashland, Oregon, in the home of friends from Telluride. They were very involved in the Ashland Food Co-op. Later when the Co-op expanded and installed a commercial kitchen, co-op members began making tofu in-house. I visited them once during production after moving out to Arcata. Eventually, Ashland Soyworks started up and Co-op production stopped.

“The third workshop was held in The Dalles, Oregon, also in the home of ex-Telluridians. As far as I know, nothing every grew out of that.” Address: 116 N. Oak St., P.O. Box 69, Telluride, Colorado 81435.

818. Hanes, Phyllis. 1979. Have a go at tofu: Cheeselike food from Orient a versatile economizer. *Christian Science Monitor* 71(130):14. May 31. Eastern edition.

• **Summary:** “Anyone who is serious about cutting down on food expenses has not really tried until he’s had a go at tofu. A favorite food in the Orient for years, tofu looks to most of us like a soft, white cheese, but it is far more versatile. The time has come for tofu to be used in all kinds of dishes in Western kitchens, because it is economical. It has about as much protein as a pound of hamburger, but less fat. It blends easily with all kinds of food, with meat or fish, and in dishes such as stuffed zucchini, enchiladas, sandwiches, or scrambled eggs...”

“The answer to using more tofu is found in a most comprehensive book, *The Tofu Cookbook*, by Cathy Bauer and Juel Anderson (Rodale Press, Emmaus, Pennsylvania, \$8.95). Instruction are just about perfect, with answers for all the questions you could possibly think of on this subject.”

Contains a recipe for Kima (Indian Curry) with tofu. Also mentions okara, TVP, and ymer (a dairy product used as a topping). Address: Food editor, Christian Science Monitor.

819. *Food Engineering International (Chilton’s)*. 1979.

Emulsifier based on soy protein: It permits a 40%-50% calorie reduction in salad dressings without loss of quality. Also, stability is improved significantly. 4(6):36-37. June.

• **Summary:** Discusses Nutrisoy 101, an emulsifier developed and made by ADM. It offers substantial cost

savings by allowing the user to reduce oil and/or egg yolks without altering the appearance, consistency, or eating characteristics of the product. This free-flowing powder contains approximately 34% protein and 30% oil. “The label declaration for it in the finished product is as follows: soy flour, partially hydrogenated soybean oil, sodium phosphate.”

820. Jaeger, Martin. 1979. The likely effects on Ontario soybean producers of the shift in the location of a soybean crushing plant from Toronto to Windsor. Toronto, Ontario, Canada: Ontario Ministry of Agriculture and Food. 17 p. June. Series: Economics Information. 30 cm. [6 ref]  
 • **Summary:** Contents: Foreword. Trends in the Ontario oilseed industry: Production trends, facility changes, institutional trends. The current situation. The change: UCO (United Co-Operatives of Ontario) facilities, Maple Leaf-Monarch facilities. The likely effects of the change on Ontario farmers: The effect on pricing and delivery patterns, pricing during the close of navigation, direct delivery, effects of the new processing location on elevators. Summary. References.

Index to tables: 1. Oilseeds production, imports and exports, Canada, crop year 1969-70 to 1977-78. 2. Soybean production and utilization, Canada, 1969-1977. 3. Area, yield, and production of soybeans, Ontario, 1967-1978. 4. Farms reporting soybeans and area in soybeans, Elgin, Essex, Kent, Lambton, and Middlesex, Statistics Canada Survey, mid-year 1969, 1977, and 1978. 5. Availability of major edible oils, by type, Canada, 1967-1977 (calendar year). 6. Supply and disposition of oilseed meals, by crop year, Canada, 1967-68 to 1977-78, crop year beginning August 1. 7. Soybean marketings in Ontario as a percentage of crop year total by month, 1953-54 to 1977-78.

Page 1: “Over the years, plant breeders have developed varieties which can mature with fewer heat units.” Soon, even earlier varieties will be introduced, making it possible to expand the Canadian areas suited to soybeans well beyond the traditional five-county area of southwestern Ontario (Essex, Kent, Lambton, Elgin, and Middlesex).

Pages 11-12: In 1972, the Canadian federal government expropriated some property on the Toronto shoreline (at the northwest end of Lake Ontario) which included the Maple Leaf crushing plant. Maple Leaf began to seek a new location. In 1977 it announced that it was forming a partnership with Monarch Foods (Lever Bros. Limited) to construct an integrated crushing and refining plant in Windsor alongside the proposed United Co-operatives of Ontario (UCO) deep water terminal on the Detroit River. The UCO and Maple Leaf-Monarch facilities are scheduled to open in the summer of 1979. Maple Leaf-Monarch is owned equally by Maple Leaf Mills and Lever Bros. Ltd. Lever Brothers Ltd. was not previously in the oilseed crushing business in Canada, although it is in this business elsewhere

in the world on a far larger scale than was Maple Leaf Mills in Canada.

The author thinks the opening of the Windsor crushing plant may increase slightly the average price received by Ontario farmers for soybeans. Address: Economics Branch, Ontario Ministry of Agriculture and Food, Legislative Buildings, Toronto, Ontario M7A 1B6.

821. Morgan, Dan. 1979. Cotton, wheat and corn bowing to the reign of king soybean. *Washington Post*. July 24. Section A. p. 1, col. 1.

• **Summary:** According to unofficial private estimates, America’s largest soybean crushers (with their estimated capacity in millions of bushels) are: Cargill 224, ADM 178, Central Soya 94, A.E. Staley 93, and Ralston Purina 92.

“In West Germany soybean oil has gained wide acceptance and is produced by such major companies as Unilever. But the oil has encountered strong resistance in France as a cooking oil because ‘the French prefer a richer, peanut smell and like butter,’ says the American Soybean Association’s Michael A. Phillips. Efforts to promote soybean oil in France also have encountered strong resistance from French agricultural interests.

“Earlier predictions that Brazilian soybean products would supplant those of the United States in markets abroad have proved to be exaggerated. Since the early part of the decade, foreign and local interests have invested massively in processing plants in Brazil. The Brazilian government backed this development with generous concessions to foreign investors and with enormous subsidies to exporters of meal. These subsidies have amounted to as much as \$1 a bushel and have enabled exporters in Brazil to offer European and Japanese feed buyers discounts of \$20 to \$30 a ton below the U.S. price. But this year U.S. trade negotiators—spurred by the powerful Midwest farm bloc—obtained a promise from Brazil to phase out the subsidies.”

822. Horan, F.E. 1979. Corporations and the world food problem. Paper presented at World Game ‘79, New York University, Loeb Student Center, New York City, NY. July 18. 20 p.

• **Summary:** Focuses on ADM, vegetable proteins, TVP, cereal-soy blends, and the Food for Peace Title II program. Figure 1 shows percentage of after-tax income spent on food: Canada 14.8, France 16.5, UK 16.6, Netherlands 16.9, USA 17.0, West Germany 21.2, Korea 46.8, Philippines 50.8.

In the period 1963-65, the percentage of total protein obtained from vegetable and from animal sources was: Developing regions: 81/19. Developed regions 46/54. World 68/32. Address: Vice President, R&D Div., Archer Daniels Midland Co., Decatur, Illinois.

823. Leviton, Richard. 1979. Of soybeans, the soil, herbicides & farmers: a visit to the Midwest soybean belt

(Continued—Document part IV). *Soycraft (Greenfield, Massachusetts)* 1(1):20-25. Summer.

• **Summary:** (Continued): “The Soyfoods Industry Viewed from the Field: My final concern was with future supplies of food-purpose soybeans and with how soybean producers and distributors view the rapidly growing soyfoods industry. I asked Larry Eggan how he would characterize the current production and consumption pattern in the United States. ‘The soybean crop is one that, every year, there are people who think this is the year we are going to over-produce, but so far we have never had over-production on soybeans, because the demand for protein keeps on going up.’ Plantings for 1979 are forecast to be up by seven percent over 1978; this would mean sixty-eight-point-eight million acres planted to soybeans, which could provide total harvests of nearly two billion bushels. ‘There is, very simply, a boom. The farmers created the largest crop the U.S. has ever seen in soybeans last year. Current estimates say there is going to be no surplus and that’s astounding. I see soybean production skyrocketing, but I see consumption skyrocketing also.’ Wes Randall regards the soyfoods industry as ‘a sleeping giant’ and believes we are dealing with ‘an untapped market.’ Dan Burke, of Pacific Soybean and Grain, in San Francisco [California], suggests ‘the soyfoods market will be for many, many years to come, still a minor portion of the market for soybeans. Yet that’s why we feel it’s so important on our part to come up with some varieties and practices of better protein development in a particular bean.’

“Larry Eggan believes meat will always be available but it will follow the typical pattern in Japan today, where beef costs twelve to thirteen dollars a pound. ‘I think within the next five or ten years we are going to see soy products take over the place of meat in the consuming public’s mind.’ Textured vegetable protein products will undoubtedly constitute an important portion of this increase because more research has been conducted in that area than any other. ‘Tofu, as the raw product, is just like TVP was ten years ago when it was first developed.’ Henry Fieldson sees the soyfoods industry affecting a few growers in ‘a gradually increasing way’ yet he doesn’t think it will be too long before ‘we find ourselves out here in the cornbelt producing more acres of soybeans than corn. We’re rapidly approaching that stage because the products needed in the world food economy are protein and oils, rather than carbohydrates, which is what corn produces.’

“What is necessary here is to make tofu a household word, Henry suggests; then we will have a different picture. Dan Burke recommends traditional soyfoods manufacturers to ‘go ahead full blast’ and ‘to expose the product to as many people as possible’ and he adds, ‘I think that within the next ten years the proliferation of soyfoods eaten in the United States is going to be very dramatic. And I think the greater growth is going to be in the area of traditional, Asian-type foods.’ Larry Eggan voices agreement: ‘As people are made

more aware of soyfoods and are willing to accept them, it’s going to come very fast. There’s going to be a big explosion, and I don’t think it’s going to take any longer than ten years, maybe five.’ As the market for high-protein soyfoods expands, however, so, too, will the number of companies producing them. Dan Burke offers this mildly ominous forecast. ‘Very few large food companies are involved in the traditional soyfood industry at the present time. But in the years to come, I think they will be; and what they will do is, rather than do a great deal of research and development themselves, they will sit back and wait for the acceptance of soyfoods by the American market and then they will acquire successful soyfoods companies.’

“Whether or not this gloomy, or perhaps cheerful, forecast is correct, we cannot presently determine. Yet we can be certain that soybean growers and distributors will be scrutinizing this new market and re-evaluating their production standards, while seeking new varieties of soybeans, better suited for soyfoods manufacture, in the years to come.” Address: Colrain, Massachusetts.

824. Morgan, Dan. 1979. Once-lowly soybean is nation’s top cash crop, beating corn and wheat. *Los Angeles Times*. Aug. 13. p. D14, D16.

• **Summary:** Across the American South, large areas that had once been planted to cotton are now planted to soybeans. In 1979 American farmers will harvest more acres of soybeans than of either corn or wheat. Soybeans (all 21.3 billion bushels in 1979) are now also the leading U.S. cash crop, producing more income for farmers than corn, wheat, or cotton. In addition, soybean exports now “bring in more revenue than any other U.S. crop—\$6.9 billion in 1978 compared with \$5.9 billion for feed grains and \$4.6 billion for wheat.”

“The rise of soybeans to the status of a glamour crop came about through” the increased consumption of animal products (especially poultry and hogs) at home and abroad since World War II. Soybean meal became the main source of protein in feeds for these animals.

Pfizer and several other pharmaceutical firms have entered the soybean seed business.

A bar chart shows the largest U.S. soybean processors, based on the estimates of private security analysts. Figures are for capacity in millions of bushels per year: Cargill 224. ADM 178. Central Soya 94. A.E. Staley 93. Ralston Purina 92.

Soybeans grown near the Mississippi River—“the ‘Main Street’ of the world grain trade”—are like to be exported. The soybean trade up and down this river is largely dominated by multinational grain companies such as Cargill, Continental, and Bunge. In a 180-mile stretch of river from Osceola, Arkansas, up to Silkeston, Missouri, are 10 grain terminals belonging to those 3 multinationals. Address: The Washington Post.

825. Eldridge, Arthur C.; Black, L.T.; Wolf, W.J. 1979. Carbohydrate composition of soybean flours, protein concentrates, and isolates. *J. of Agricultural and Food Chemistry* 27(4):799-802. July/Aug. [22 ref]

• **Summary:** Products tested include: Nutrisoy 7B, toasted Nutrisoy, and unflavored minced TVP (from ADM), Baker's Concentrate, Promosoy 100 [soy protein concentrate made by aqueous alcohol leach process], and Promine D [isolate] (from Central Soya), uncooked flavored Crumbles [textured soy flour] (General Mills, Inc.), undenatured GL-301 [soy protein concentrate made by dilute acid leach process], and denatured Patti-Pro [soy protein concentrate made by dilute acid leach process] (Griffith Laboratories, Inc.), FPC [food protein concentrate, made by steaming & water leach process] (Swift and Co.), Edi-Pro N, Edi-Pro A, Supro 700, Supro 610 (isolates from Ralston Purina Co.).

Dehulled, defatted soybean flours contained the following mean sugar content: rhamnose 0.6%, fucose 0.1%, ribose 0.1%, arabinose 2.4%, xylose 1.0%, pinitol 0.9%, mannose 0.9%, galactose 7.6%, and glucose 8.1%. The same sugars were found in soybean protein concentrates; however, the amount of each was less. Soybean protein isolates contained mannose 0.8%, galactose 0.5%, and glucose 0.5%, with traces of the other five sugars. Address: Northern Regional Research Center, Peoria, Illinois.

826. National Soybean Processors Assoc. 1979. Selected events, quotes, and highlights in the history of NSPA (Continued—Document part II). Washington, DC. 7 p. Aug. 24. 28 cm. [5 ref]

• **Summary:** Continued: “1956: NSPA began shortening its business sessions conducted during the annual meeting, and also introduced a session of outside speakers. Basically, the members wanted to ‘speed up the proceedings.’

“1956: NSPA witnessed the introduction of large-scale financing of oil and fat exports under P.L. 480, and played the prime role in organizing the Soybean Council of America, intended to pursue market development.

“1957: From the annual report of the Washington representative: ‘Fortunately, our basic (NSPA) thesis that soybean production warrants continued expansion—that a vast unfilled domestic market exists for protein feeds—that the

only problem is an export market for surplus oil—seems to have almost unanimous acceptance by government and by a large part of the trade.’

“1957: From an address to the NSPA Annual Meeting by Dr. Earl Butz: ‘The phenomenal growth of the soybean industry was made possible by the ability of growing markets to absorb soybean products (oil and meal) at competitive prices. Your industry has always insisted that soybeans and soybean products be priced to sell in both domestic and world markets.’

“1958: From the report of the Chairman of the Board: ‘1957-58 has been an interesting year—a year in which many new records are being established: A record production of 479 million bushels... 8,137,000 tons of soybean meal produced... 7,990,000 tons of soybean meal consumed domestically... 3,710,000,000 lbs. of soybean oil produced, of which 2,940,000, were consumed domestically.’

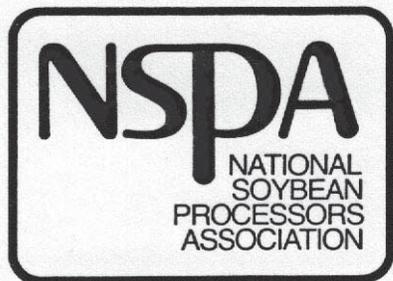

“1960: NSPA first approved direct financial contributions for soybean research projects, first made recommendations to the government about the GATT negotiations, and first prevailed upon USDA to convene meetings on the ‘restrictions abroad upon imports of soybean products.’

“1961: NSPA inaugurated its weekly statistical reporting service, started trading oil on a neutral oil basis rather than a refining loss basis, displayed ‘a growing interest in the activities of the International Association of Seed Crushers,’ and hired Bob Judd to head NSCIC [National Soybean Crop Improvement Council].

“1962: From the Chairman’s annual report: ‘The poultry industry is growing rapidly in Western Europe and with the growth of this industry will come the increased demand for quality soybean meal. If we, as an industry, want to capture this market, we must make better quality meal than ever before and maintain that quality.’

“1962: A Message to NSPA: ‘I am pleased to send greetings and good wishes on the occasion of the 33rd Annual Meeting of the National Soybean Processors Association... The efficiency and foresight of America’s soybean producers and of your processing industry has had much to do with the rapid expansion of soybeans in this country... Soybean oil has made a significant contribution to meeting the crucial requirements of hungry people in underdeveloped and developing countries. Your production of soybean meal is basic to our livestock feeding industry which supplies an abundance of meat, poultry and dairy products to our consumers.’ Signed, John F. Kennedy, President, August 20, 1962.

“1963: From the President’s Report: ‘Your Soybean Price Support Committee, composed of Messrs. McVay, Chairman, L.W. Andreas, B.A. Townsend, J.R. Moore, Donald B. Walker, and Martin Hilby, with George L. Pritchard and R.G. Houghtlin as ex officio members, worked diligently with the Department of Agriculture during its

deliberations on the 1964 price support level. I am confident that the factual presentation which the Committee made to the 'Decision Makers' was a vital element in the ultimate decision to make no change in the support level.'

"1966: From the Washington representative's report: 'Much work has been done with U.S. officials concerned with the GATT negotiations. NSPA thanks are due to Messrs. Andreas, Bruce, Carle, Golden, Hogan, Langsdorf, Larrick for their time and travel to meet with Ambassador Blumenthal and Jim Birkhead... It still appears that the U.S. should maintain the duty-free entry of soymeal into the Common Market and may possibly obtain some small reduction in the 10% crude oil duty.'

"1967: From the Chairman's annual report: 'We are being drowned by exports of sunflower oil from Russia.'

"1967: NSPA invited freshman Senator George McGovern to speak to its annual meeting. He said: 'Noting the rapid expansion of your industry and the new plants going up all around, I've been hoping that one of you will be putting in a large soybean mill in South Dakota.'

"1968: Robert G. Houghtlin retired as NSPA's President, and enumerated the association's accomplishments during his 23 years as being, principally: establishment of the National Soybean Crop Improvement Council, establishment of a Washington office, establishment of the Soybean Council of America, and ingredient research programs under the Soybean Research Council.

Note: In Sept. 1968 NSPA moved its headquarters to Washington, DC, from Chicago, Illinois. Smith, Bucklin began to manage the association.

"1970: From remarks by Maharajkumar Virendrasingh, NSPA's representative for India, at the annual meeting: 'I have been a representative of NSPA since July 1969. After our persistent knocking, the door in India has opened to the possibility of marketing soybean oil as an edible liquid... In November, a NSPA team consisting of Jim Moore, Jim Hogan, Kermit Head, and Sheldon Hauck came to India... Their visit created a good impression.'

"1971: NSPA held its first meeting out of the United States, in Montreal [Quebec, Canada]. NSPA also held its first Soybean Efficiency Contest, to get growers to compete for higher yields. As always, it amended the trading rules.

"1972: NSPA first disseminated radio releases and newspaper mat releases, emphasizing to growers the desirability of increasing production. The association also adopted its current modern logo and graphic look.

"1973: For the first time, NSPA systematically congratulated and welcomed new members of Congress just elected, and in the spring, published a brochure explaining the need for more soybean research—it was entitled, 'Increased Soybean Yields: An Important Key to Food Costs and Farm Income.'

"1973: From the President's speech to the ASA Convention: 'I have to admit that there have been a few days

lately when I almost wished for the old days of tranquility—when we weren't being pointed out as the whipping boys for the high costs of eggs, poultry and meat, and when the government was helping us find new markets overseas rather than limiting our sales, and no one ever dreamed that we would have to contend with price controls in a time of peace.' Note: On 27 June 1973 a soybean export embargo imposed by U.S. Secretary of Commerce. Soybean prices skyrocketed to their highest levels ever.

"1974: NSPA began sponsoring speakers before the annual meeting of the American Agricultural Editors Association, tackled fuel allocation regulations, sponsored a congressional reception in Washington, attended the FAO meeting in Rome, exchanged views with the Federal Trade Commission, and, like the British raj three decades before, withdrew from India.

"1975: Meeting in Kansas City [Missouri], NSPA heard CFTC Commissioner Gary Seevers, USDA Assistant Secretary Richard Bell, IASC President Jan Randag, and ASA Vice-President Seymour Johnson: This was also the year that NSPA began jousting with the Environmental Protection Agency, and asked Secretary of State Henry Kissinger what the U.S. would do about Brazilian export subsidies.

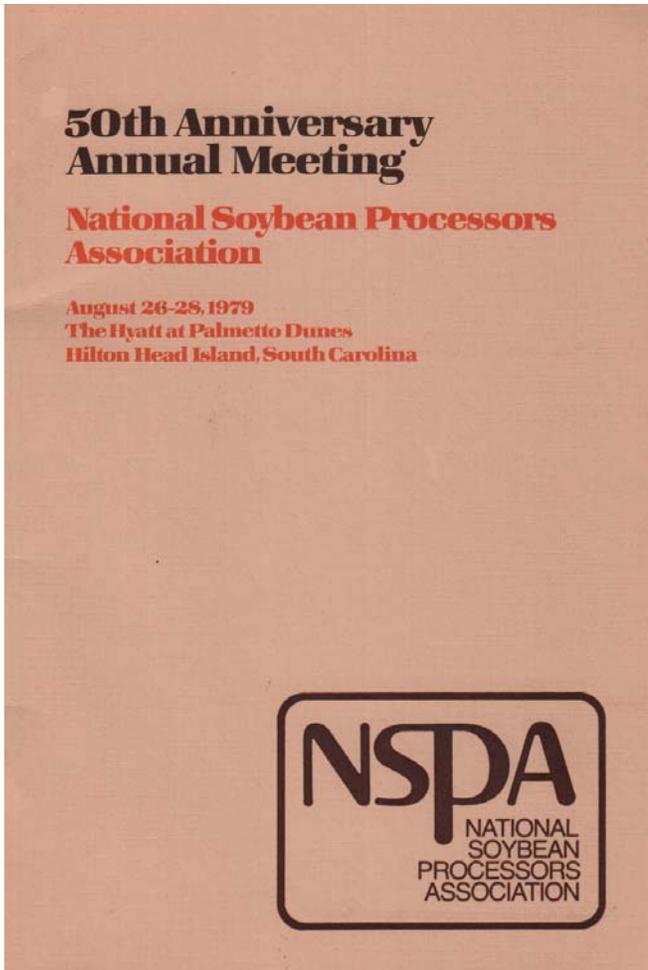

"1976: The Year of Palm Oil and Skim Milk Powder—two international trade conditions that were the subject of NSPA complaints to the U.S. Government. Also the year of the second International Soybean Fair, in Washington, co-sponsored by NSPA.

"1977: New Secretary of Agriculture Bob Bergland said on June 2 that palm oil was 'no longer a problem,' since the oilseed market was strong and since 'soybean industry leaders' had told him it was just good healthy competition. At its annual meeting, NSPA heard Congressman Paul Findley denounce the new agriculture bill, just passed by Congress, and heard the president of the Brazilian production financing commission characterize as 'irreversible this tendency toward liberalization' of Brazilian trade practices.

"1978: NSPA inveighed against the coal strike [1977-78 in the USA; 110 day national bituminous coal strike], testified on the loan rate, opposed a soybean set-aside, requested special railcar orders from the ICC [Interstate Commerce Commission], helped to avert an Austrian oilseed imports tax, and began a major new program led by its new NSPA Meal Export Development Committee." Address: Washington, DC.

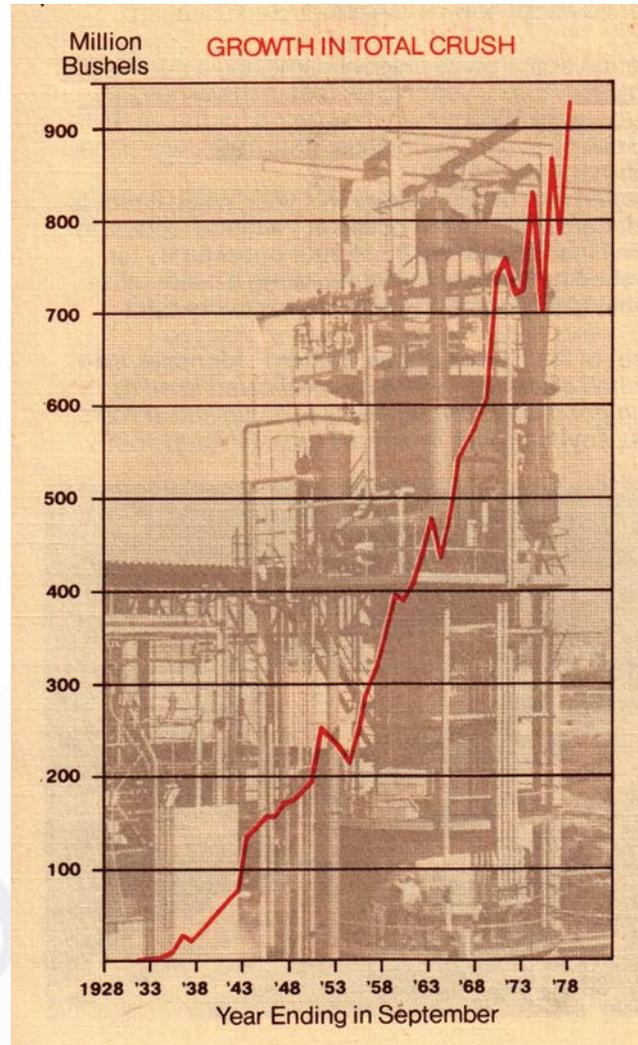

827. National Soybean Processors Association. 1979. 50th Anniversary Annual Meeting—National Soybean Processors Association: August 26-28, 1979, The Hyatt at Palmetto Dunes, Hilton Head Island, South Carolina. Washington, DC. 26 p. 23 cm.

• **Summary:** Contents: Letter of congratulations from President Jimmy Carter. Welcome to the 50th Anniversary

Annual Meeting of the National Soybean Processors Association (NSPA). Historical perspective (incl. graph of million bushels of soybeans crushed from 1933 to 1978). NSPA anniversary year officers and staff. 50th anniversary year board of directors.

Chief elected officers of NSPA, 1929-1977 (p. 4-5; each is now listed as “Chairman, Executive Committee,” but in documents before the mid-1970s each actually used the title of “President”): Otto Eisenschiml 1929-30 (Note 1. The NSPA was not officially formed until 21 May 1930. It was originally named the “National Soybean Oil Manufacturers Association,” but in 1936 was renamed the National Soybean Processors Association). Whitney H. Eastman 1931-35. I.C. Bradley 1935-36. E.K. Scheiter 1936-37. E.F. Johnson 1937-38. W.H. Eastman 1938-41. E.K. Scheiter 1941-45. D.G. Bunnell 1945-47. W.H. Eastman 1947-49. R.G. Golseth 1949-51. E.A. Cayce 1951-53. W.E. Huges 1953-55. Dwight L. Dannen 1955-57. M.D. (Pete) McVay 1957-59. Glenn H. Pogeler 1959-61. Donald B. Walker 1961-63. Scott E. Cramer 1963-65. Lowell W. Andreas 1965-67. Now the title in the book changes to “President”: Theodore W. Bean 1967-69. James W. Moore 1969-71. James W. Hogan 1971-73. James R. Spicola 1973-75. Lowell K. Rasmussen 1975-77.

Chief staff officers of NSPA, 1929-68: Edward J. Dies 1928-47 (Consultant, executive secretary, president, chairman. See Note below). Robert G. Houghtlin 1947-68. A portrait photo shows each of the above men from Dannen (1955) to Houghtlin (1968). Special invited guests (p. 6-7): U.S. friends of NSPA, international friends of NSPA, corporate officers of NSPA member firms (Agri-Industries, Archer Daniels Midland, Anderson Clayton Co., Buckeye Cellulose Corp., Cargill Inc., Central Soja Co., Continental Grain Co., Farmland Industries, Gold Kist Inc., Missouri Farmers Association, Perdue Incorporated, Planters Oil Mill Inc., Riceland Foods Inc., A.E. Staley Manufacturing Co.).

National Soybean Crop Improvement Council (NSCIC, p. 8-9): A portrait photo shows the managing director since 1961 Robert W. Judd, 26 advisory board members (Billy Caldwell, William Colville, Garnet Craddock, Roy Creech, Robert Gast, Dale Harpstead, Edgar Hartwig, Jack Hiatt, Maurice Horton, Robert Howell, Thomas Hutcheson, Jr., Hyde Jacobs, Herbert Johnson, Robert Leffel, William Martin, Arnold Matson, Charles McAnts, Wallace Moline, Bill Ott, John Pendleton, John Pesek, Marvin Phillips,

Edward Runge, Paul Santelman, Berlie Schmidt, Lloyd Seatz, Warren Shaw, Keith J. Smith (ASA), Walter Thomas, and Coleman Ward). Plus 3 special 1979 guests (Athow, Bernard, Turnipseed). NSPA annual meetings, sites from 1968-82. 50th annual meeting program of events (Master of ceremonies will be Earl. L. Butz, Secretary of Agriculture). Eleven pages of ads.

Note 2. Concerning Edward J. Dies: These dates seem incorrect. All prior records show that this association was organized on 21 May 1930, not in 1928. In 1950, when Dies was elected honorary life member of the American Soybean Association, *Soybean Digest* wrote of his career: Edward Jerome Dies, formerly the president of the National Soybean Processors Association, “was a staff correspondent of the Associated Press and a magazine writer before launching his Chicago [Illinois] public relations bureau. In 1936, when the soybean crop was only 33 million bushels, his agency was engaged by the National Soybean Processors Association to correct certain adverse publicity. Soon he became president of the expanding trade group, and continued in office until 1945, when he resigned and went to live in Washington. He has retained a connection with the soy flour industry as director of the Soya Food Research Council.” Address: 1800 M Street N.W., Washington, DC 20036.

828. *Food Product Development*. 1979. Improved soy flour-oil blend answers beverage base needs. 13(10):52. Oct.  
 • **Summary:** Nutrisoy 101, an improved soy flour-soy oil blend (2:1) produced by ADM Foods, imparts a highly acceptable flavor, texture, and mouthfeel to beverages, thus expanding soy flour’s previously limited potential as a beverage base. It readily disperses in cold water with agitation, and remains in suspension for 3 days, or if carrageenan is added, for 1 week. It can be used as an economic replacement for milk solids, as in milk shakes or flavored milks. It can be fermented with lactic acid to yield a soy yogurt or cultured sour cream dressing. It can also serve as a low-cost replacement for milk-protein counterparts in dips, sauces, and salad dressings. Sample formulations for vanilla and chocolate soy beverages are given.

829. Williamson, Doug. 1979. Maple Leaf Monarch Co. oilseed plant will have little impact, study claims. *Windsor Star (Essex County, Ontario, Canada)*. Nov. 20. p. 20.  
 • **Summary:** A new government report, commissioned by the Ontario Soya-Bean Growers’ Marketing Board and prepared by the economics branch of the Ontario Ministry of Agriculture and Food (OMAF), says that Ontario’s newest oilseed processing plant in Windsor (near central Michigan) will not have any dramatic impact on the provincial soybean industry. Though the oilseed crushing capacity of Ontario province is now 50% greater, there will be only minor price changes for area farmers because of the plant’s location and therefore little incentive for them to increase production.

The most significant effect of the plant will be that western Canadian rapeseed and Ontario soybean meal will replace U.S. soybean meal in the southwestern Ontario market. Yet the 1979 crop is expected to total 25 million bushels, up 32% from the 19 million bushels last year. Ontario processor requirements are between 35 and 40 million bushels; the difference is made up by soybean imports from Michigan and Ohio. During the warm months, crushers buy soybeans by the boatload. But in winter, when Seaway navigation is closed, they must rely on stored soybeans since trucking from elevators is expensive. Address: Star agricultural reporter.

830. Dussaigne, A.; Dronne, Yves. 1979. Les protéines nouvelles en alimentation humaine [The new proteins in human nutrition]. Rungis, France: Laboratoire de recherches et d’études sur l’économie des I.A.A. 111 p. Dec. [97 ref. Fre]

• **Summary:** Contents: Introduction. List of 30 tables. Part I: The protein industry. Definition and characteristics of proteins. The quantitative structure of the protein industry (the world protein industry, the French protein industry). Qualitative aspects of the protein industry. Energy problems in the protein industry.

Part II: New proteins in human nutrition. Supply and demand. Products derived from soya: Powdered products, textured products. The domains of utilization: Restaurants, the food industry. Regulations that are in force: In the USA, in Europe (France, Britain, European Union). The structure of the supply: Overview, manufacturers (American, European, Japanese, those in other countries). Development of consumption in the principal markets: The American market, European, Japanese.

Part III (p. 77+): Perspectives on development of new proteins. The nature and present utilization of new proteins: Importance of terminology, characteristics of the potential markets (Third World countries, developed countries). Consumption of new proteins and the economic environment. Bibliography (in chronological order).

Note 1. This is the earliest document seen (Aug. 2015) that contains the term “European Union” in connection with soy.

Note 2. This is the earliest French-language document seen (Nov. 2015) that uses the terms *concentrat* or *concentrats* to refer to a soy protein concentrate. Address: France.

831. **Product Name:** Defatted Soy Flakes [Untoasted, or Heat Treated].

**Manufacturer’s Name:** Archer Daniels Midland Co.  
**Manufacturer’s Address:** Box 1470, Decatur, Illinois 62525.

**Date of Introduction:** 1979.

**New Product–Documentation:** Manufacturer’s catalog.

1987. For use in protein extraction (HVP, etc.).

**832. Product Name:** Toasted Nutrisoy Grits [Coarse, Medium, Fine, or Extra Fine Granulation].

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** Box 1470, Decatur, Illinois 62525.

**Date of Introduction:** 1979.

**New Product–Documentation:** Manufacturer's catalog. 1987. For use in cookies, crackers, specialty breads, ground meat systems.

**833. Product Name:** Granose Dinner Balls: Savoury Protein Balls in Sauce.

**Manufacturer's Name:** Granose Foods Ltd. (Distributor). Made in Denmark by Nutana Helsekost.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1979.

**Ingredients:** Textured soya protein, wheat protein, soya oil, bread crumbs, oat flakes, egg white powder, vegetable margarine, wheat flour, maize starch, salt, yeast, hydrolysed vegetable protein, onion powder, herbs, celery powder, spices, monosodium glutamate.

**Wt/Vol., Packaging, Price:** 400 gm (14 oz) can.

**How Stored:** Shelf stable.

**New Product–Documentation:** Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. Label. 1980, undated. 9.5 by 4.25 inches. Full color, mainly beige, blue, and white. Photo shows balls in a casserole. "Ready to serve. Heat in a pan and serve with potatoes and other vegetables, or make into a casserole." Labels in Danish, Dutch, and Finnish.

Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Nutana, was introduced in 1979. Can Label. 1990. 9.5 by 4 inches. Photo of the prepared dish with many meatlike balls on a plate atop a bed of rice, surrounded by green beans, against a brown background. Ingredients: Water, gluten, textured soya protein, vegetable margarine, soya bean oil, oat meal, wheat flour, egg white powder, vegetable stock, modified starch, onion powder, celery powder, curry, marjoram, peanuts, rolled barley, sweet basil, sea salt. Serving suggestion: Granose Dinner Balls are ready to serve. Heat in a pan and serve with potatoes and other vegetables, or make into a casserole. Ideal for lunch and dinner. Send 9"x6" SAE for FREE recipe book.

**834. Product Name:** Granose Frikalets. Soya Rissoles in Onion Sauce.

**Manufacturer's Name:** Granose Foods Ltd. (Marketer). Made in Denmark by Nutana Helsekost.

**Manufacturer's Address:** Stanborough Park, Watford,

Herts., WD2 6JR, England.

**Date of Introduction:** 1979.

**Ingredients:** Rissoles: Textured soya protein (textured soy flour), oat flakes, onion, egg white powder, hydrolysed vegetable protein. Sauce: Onion, soya oil, wheat flour, maize starch, soya sauce, salt, hydrolysed vegetable protein, yeast, spices, monosodium glutamate.

**Wt/Vol., Packaging, Price:** 425 gm (15 oz) can.

**How Stored:** Shelf stable.

**New Product–Documentation:** Manufacturer's catalog.

1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. Label. 1980, undated. 9.5 by 4.25 inches. Full color, mainly beige, blue, and white. Photo shows 2 burgers or rissoles with peas and carrots. "Ready to serve. Granose frikaletts need only to be heated in their own sauce. Serve with potatoes and other vegetables for an easily prepared meal." Labels in Danish, Dutch, and Finnish.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Nutana, was introduced in 1979. It has been discontinued.

**835. Product Name:** Millstone Burger-Like: A Vegetable Protein Product–Imitation Ground Beef.

**Manufacturer's Name:** Millstone Foods Inc.

**Manufacturer's Address:** P.O. Box 323, Penryn, CA 95663.

**Date of Introduction:** 1979.

**Ingredients:** Water, soy flour, textured vegetable protein, salt, hydrolyzed vegetable protein, onion, garlic, spices, tomato, caramel color, natural flavorings.

**Wt/Vol., Packaging, Price:** 19 oz (538 gm). Can.

**How Stored:** Shelf stable.

**New Product–Documentation:** Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods*. p. 222-23. A photo shows the label.

Label sent by Millstone. 1981. March 1. Label reads as shown at product name. Brown and yellow lettering on white background. With recipe for Burger Patties (with eggs). The company also makes Tender Cuts (basically wheat gluten but with soy flour and TVP), and Nut Meat (mainly peanuts with corn and soy flour).

**836. Product Name:** Soy Fortified Rice, and Whey Soy Drink Mix (WSD), and WPC-Soy: Wheat Protein Concentrate/Soy.

**Manufacturer's Name:** P.L. 480 Food for Peace Program.

**Manufacturer's Address:** USDA, Washington, DC.

**Date of Introduction:** 1979.

**How Stored:** Shelf stable.

**New Product–Documentation:** Contains 41% wheat protein concentrate and 36% full-fat soy flour, making it a high protein-calorie density food. WPC-Soy was shipped in amounts of less than 500 tonnes a year.

ADM Milling Co. (Shawnee Mission, Kansas). 1989. Product information sheet. "Nutritionists involved in world food programs have long recognized the need for an inexpensive, safe supplemental food for use in preschool and young school age feeding programs. A wheat protein concentrate/soy food blend (WPC-soy) was specifically designed to meet these demands. This was accomplished through the proper blending of full fat soy flour, wheat protein concentrate, soy oil, corn syrup solids, and a vitamin-mineral premix." Gives contents, proximate chemical analysis, nutritional data, vitamins, minerals, and essential amino acid profile. PER is 2.14 compared with 2.5 for casein (milk protein). Basic uses and recipes: As a beverage, as a gruel.

837. Canadian Feed Industry Association. 1979. *Sharing the past, shaping the future: 50 years of the Canadian feed industry*. Ottawa, Ontario, Canada: CFIA. 186 p. Illust. 28 cm.

• **Summary:** Contents: Introduction. Our history. The way it was. The formation years 1929-1939. The Years of Challenge 1940-1945. Growth and Expansion 1946-1961. The Years of Influence 1962-1979. Conventions. Agriculture Du Québec. Medication and Animal Health. History of Mill Equipment. Genetics and Nutrition. Changes at the Farm Level. Company Histories. Looking Ahead Shaping the Future. Secretaries to C.F.M.A. Industry Members 1979. Statistics. 1979 Board of Directors. C.F.I.A. Administration. Advertisers Index. In the "Company Histories" section, that of Maple Leaf Mills Ltd. is given on pages 141-42; it includes Maple Leaf Milling and Toronto Elevators.

"Maple Leaf Mills Ltd.: The inspiration and hard work of a handful of men in the late 1930's blossomed into Maple Leaf Mills of the 1970's, a diversified enterprise whose history is part of Canada's coming of age in feed and livestock production and agricultural research. Today's computer-speed marketing aids were not available when Toronto Elevators Ltd., a grain company, and Maple Leaf Milling Co., a flour miller, began selling feed in the late 1920's. By 1929, both were members of the original Canadian Feed Manufacturers Association and competing against one another in the feed business. More than 30 years later, the two pioneering companies merged to form Maple Leaf Mills Ltd. and retained the 'Master Feeds' brand name of Toronto Elevators.

"There had always been strong bonds between the two firms. Fred Presant, who joined Toronto Elevators in 1929 to establish a feed manufacturing operation at the request of company founder Gordon Leitch, was an old friend of Ted McRostie who engineered the creation of Maple Leaf's feed production set-up.

"From its flour milling operation at Pt. Colborne, Ontario, Maple Leaf had the by-products at hand to produce prepared feeds for livestock as well as a scratch grain for

poultry made of a whole grain mixture. Ted McRostie, manager of the feed department, worked closely with Prof. Graham of O.A.C. and in the early 1930's Maple Leaf was selling Monarch Poultry and Livestock Feeds as well as a line of Cafeteria Open Formula Feed. Bags of O.A.C. Cafeteria laying mash—illustrated by hens walking up to a cafeteria—were produced on the philosophy that birds had selected from a range of ingredients. Maple Leaf Milling was the only company that sold feeds on the open formula basis: 300 lbs. crushed oats, 150 lbs. bran, 85 lbs. soybean meal, 100 lbs. middlings. The whole formula was right on the jute bags. Maple Leaf's second feed mill was constructed in Montréal just after the Second World War.

"Of the feed manufacturing developments which modernized the industry in the 1950's, there were two. Prior to bulk handling, 'feed was put in 50 lb. paper bags instead of 100 lb. jute bags, the reason being that there were three flights of stairs to climb in made-over buildings.' The second revolution was the 'pelleting of feeds, making crumbles. That had most to do with the mechanization of broilers and caged layers since mash in conveyor belts is difficult to control.'"

"As a grain company, Toronto Elevators did not have animal or cereal by-products for feed manufacturing as did meatpacking or flour milling companies. Toronto Elevators used what was called a whole-grain base and this is what they came to in later years. This was the start of high-energy complete feeds, the result of experimentation, observation and results obtained by Fred Presant and others in the company. 'I had very definite ideas as to the quality of the product that we were going to put out under the name of Master Feeds which I had originated.'

"Presant's purposefulness grew out of his earlier work in the poultry business, managing a 2,000 laying hen farm at Bracebridge, Ontario in 1917, one of the largest farms in Ontario at the time. When Master Feeds was launched as a department of Toronto Elevators, 'nobody knew who we were or our product and the salesmen would have to go round and visit individual poultrymen, usually with a flock of 200 laying hens,' notes Presant. But as the farm business began to grow. Presant's salesmen approached farm suppliers to be dealers. In 1932 Fred Presant served as President of C.F.M.A."

"Then your reputation grows.' A concrete symbol of the sales work was the construction of a new feed plant in Toronto in 1938."

"In 1962, Toronto Elevators merged with Maple Leaf Milling and the feed operations were combined as Master Feeds." Address: Box 2080, Station "D," Ottawa, Ontario K1P 5W3, Canada.

838. Doyle, Rodger Pirnie. 1979. *The vegetarian handbook: A guide to vegetarian nutrition and foods*. New York, NY: Crown Publishers. x + 182 p. Illust. Index. 24 cm. [20+ ref]

• **Summary:** Table 3, “Daily food guide for vegan adults” (p. 30) recommends soy milk, tofu, and fermented soybean curd [fermented tofu].

The section titled “Weaning infants on vegan diets” (p. 40-44) also discusses soy milk and The Farm in Tennessee. Soy milk is also recommended for pregnant and lactating women (p. 54-55).

Chapter 9, titled “A pair of unusual diets,” discusses macrobiotic diets and fruitarian diets. The author is quite critical of a number of macrobiotic practices and teachings: Studies have shown nutritional deficiencies. Restricted intake of liquids may lead to kidney stones and kidney failure. “The greatest danger of a macrobiotic diet is not to adults but to newly weaned infants... Don’t wean infants on Kokoh... Wean them instead on either milk or fortified soy milk.”

Page 93 states: “Soybeans are among the most valuable of vegetarian foods, not only because of their high-quality protein but because they can be made into soy milk and tofu (soybean curd)... Two other soy products that are widely used in the United States are soy sauce and miso.”

Pages 96-97 discuss soy milk and textured vegetable protein (TVP).

Table A, “Typical vegetarian menus” (p. 134-35) is divided into lacto-vegetarian and vegan, and within each type it gives menus for breakfast, lunch, dinner and snacks for: (1) Infants 6 to 12 months—970 calories. (2) Children 4 to 6 years—1800 calories. (3) Males 11 to 14 years—2800 calories. (4) Males 15 to 50 years—2700 calories. (5) Males over 50—2400 calories. (6) Females 11 to 14 years—2800 calories. Various soyfoods are listed, including “soy milk” and “soy ice cream.”

839. Riker, Tom; Roberts, Richard. 1979. *Directory of natural and health foods: A sourcebook for dietary revolution*. New York, NY: Putnam (A Paragon Book). 320 p. Index. 37 cm.

• **Summary:** The first part of this book (p. 7-49) consists of essays on natural foods and nutrition (some reprinted). Part two is a commercial catalog/directory of natural foods available in 1979; it lists and describes (with many photos and labels) products from most of the major U.S. natural foods manufacturers. An Index (p. 293-308) lists participating companies alphabetically.

Soy-related products include: Hain Super-E Soy Oil and Crude [unrefined] Soy Oil (Los Angeles, California, p. 55). Health Valley Soy Moo (Montebello, California, p. 56). Edward & Sons Miso-Cup (Union, New Jersey, p. 57). Family Orchards Fruit & Nut mixes, incl. Back Packer+\*, Hi-Fiber Mix+, Hi-Iron Mix+, Hi-Protein Mix+\*, Hiker’s Helper, Mixed Nuts\*, Mountain Munchies\*, Tamari Mixed Nuts\* (+ = contains Soy Nuts; \* = contains Tamari Peanuts) (Berkeley, California, p. 60-61). Niblack Tamari Pumpkin Seeds (Pepitas), Tamari Roasted Sunflower Seeds, Liquid Lecithin, Granular Lecithin (Rochester, New York, p. 72-73).

Arrowhead Mills Unrefined Soybean Oil (Hereford, Texas, p. 75). Good Morning New England Granola incl. Cashew-Raisin Bran-ola (with okara soy fiber), Happy Trails Mix (with roasted soynuts) (Amherst, Massachusetts, p. 79). Elam’s Soy Flour (Broadview, Illinois, p. 81).

A long section on Erewhon and its products (p. 84-108) is probably the reproduction of an Erewhon catalog. Erewhon is now located at 3 East Street, Cambridge, MA 02141. Following several pages about the company and its philosophy and standards, each of its major products is discussed in detail, often with nutritional analyses. A label for Soy Flour (organically-grown stone-ground, 24 oz.) is shown; the main recommended use is for making soy milk! A major part of the presentation is titled “Japanese food guide.” Products described include: Umeboshi (2 pages): Plums pickled in brine (umeboshi). Umeboshi paste. Plum concentrate (*bainiku ekisu*). Miso (2 pages): Hatcho, waka-Hatcho, soybean, barley, brown rice, rice, and natto miso varieties. Tekka (made with Hatcho miso). Sweets made from mizu ame [rice syrup]. Nigari. Gomashio. Koji starters for various types of miso or shoyu. Goma-muso (60% barley miso and 40% whole sesame seed butter). *Gomamiso furikake* (with barley miso, whole roasted sesame seeds, and shredded nori seaweed). Kombu candy. Kokkoh. Dried tofu (*Kohya-dofu*). Brown rice sake. Mirin. Gluten cakes (*Kuruma-fu*). Seitan (Gluten cooked in shoyu). Rice crackers seasoned with tamari soy sauce. Kuzu (3 pages). Tamari and shoyu (4 pages; Johsen Shoyu is made in Sendai and tamari is made by San-jirushi Co.). Seaweeds (4 pages): Kanten, arame, hijiki, kombu, ne-kombu, nori, seasoned nori, kanten, kanten flakes, wakame, and mekabu.

Good Food brand Soy-Millet Bread (Austin, Texas, p. 120). Arrowhead Mills Bulgur-Soy Grits (p. 121). Erewhon Morning Cereal, and Infant Cereal (each containing soy beans). Chico-San Black Soybeans (imported), and Azuki Beans (Dainagon imported small red), and Lima Soy Sauce (Chico, California, p. 126-27). Arrowhead Mills 7 Grain Cereal, and Deaf Smith Crunch (granola-type cold cereal) (each contains soybeans, p. 130).

The section on pages 188-197 is titled “Soy.” It lists Farm Foods Tempeh Kit, Tempeh Starter, Natural Nigari for Curding Tofu, Soyflour, Whole Cleaned Soybeans, Good for Ya Textured Vegetable Protein (Summertown, Tennessee, p. 189). New England Soy Dairy Tofu (with many tofu recipes, Greenfield, Massachusetts, p. 192-96).

The Redwood Sprouter Co. sprouter containing Soy Sprouts (1976, Austin, Texas, p. 202-04). Worthington Foods (a photo shows their line of 38 products). Millstone Burger-Like (with soy flour and TVP), Wheat Fries (with wheat gluten), Tender Cuts (with wheat protein and soy flour) (Penryn, California, p. 222-23). Sunrise Health Products Lecithin Granules (p. 274-75).

840. Smith, Elizabeth Bernice. 1979. *Vegetarian meal-*

planing guide: A lacto-ovo-vegetarian diet. Winnipeg, Manitoba, Canada: Hyperion Press Ltd. 104 p. Illust. (some color). 21 x 22 cm. [57+ ref]

• **Summary:** At head of title: “Dr. Elizabeth Smith’s New World of Eating.” Table 5e (p. 25) lists calories for meat alternates group. Soybean sprouts, miso, soybean curd (tofu), soybean milk, and TVP are moderate calorie, while soybeans and soy grits are high calorie.

Page 47 notes: “Generally speaking, legumes are moderately deficient in methionine. Soybeans are an exception, as are their by-products, tempeh (fermented), tofu (the curd formed for soya), and soybean milk. All these are roughly equivalent in quality to cow’s milk.

Page 49 notes that when breast feeding is not possible, soyamilk may be formulated as a very satisfactory substitute; vitamin B-12 must supplement it in pill form. “An infant who cannot tolerate cow’s milk because of allergy and cannot be breast fed may accept a soybean formula until 3 to 4 months of age. At weaning, according to Fomon, the child should continue to receive by cup either soybean formula or soybean milk fortified with vitamin B-12.

Pages 54-56 describe in detail how to sprout soybeans at home, and how to prepare homemade soymilk and tofu (soybean curd). It is advised that fermented soybean products such as miso and tempeh not be produced at home “as the control of the fermentation process by specific micro-organisms is too difficult to achieve without specialized training and equipment.”

Soy-related recipes include: American soybean loaf (with soaked, ground soybeans, p. 76). Soybeans printanier (with cooked soybeans). Soya sesame loaf. Soya cheese balls (with cooked, seasoned soybeans). Soybean casserole (p. 77). Sprouted soybean Creole. Sprouted soybeans au gratin. Bean sprout chop suey (with tofu, p. 77). Skillet soya sprouts and beans (p. 78). Soybean stroganov (p. 78). Address: Winnipeg, Manitoba, Canada.

841. Meilke, Karl D.; Young, Larry; Miller, Dorothy. 1980. A quarterly forecasting model of the Canadian soybean sector. *Agriculture Canada, Policy, Planning and Economics Branch, Working Paper No. 9*. 73 p. Jan. [24 ref]

• **Summary:** “Soybean Domestic Demand and Trade (p. 3-5): Until very recently Canada’s three soybean crushers were located in the Toronto-Hamilton area and had a combined rated crushing capacity of approximately 635,000 mt. [metric tons = tonnes] per year. Actual soybean crushings varied from 547,000 mt. in 1968/69 to a high of 743,000 mt. in 1978/79 and averaged 657,000 mt. over the eleven year period (Table 1).

“Early in 1980 Maple Leaf Mills closed its small Toronto crushing plant and opened a new integrated crushing plant, jointly owned with Lever Brothers, in Windsor, Ontario. The opening of this new plant has implications for the pricing of Ontario soybeans and for Canadian trade in

soybeans, soyoil and soymeal... Canada’s soybean crushing capacity will increase by almost 50 percent, to 890,000 mt. per year, when the new plant is in full operation.”

“Two recent events may have an impact on the pricing of Ontario soybeans. The first is the opening of the Windsor crushing plant, which Jaeger (1979) feels may increase slightly the average price received by Ontario farmers for soybeans. The second is the removal of the United States tariff of 60¢/bushel, on soybeans, during the recent GATT negotiations. The possibility of shipping Southwestern Ontario soybeans into deficit producing areas in the U.S. adds a new element to marketing and possibly pricing Ontario soybeans.”

With the “increased output of soyoil from the Windsor plant, Canada’s soyoil price may not be above the U.S. price by the full amount of the tariff. Since there is no publicly reported soyoil price it will be hard to know if this has happened” (p. 48).

Note: This is the 2nd earliest English-language document seen (Sept. 2016) that uses the term “soyoil” to refer to soybean oil, and the first to use it consistently throughout a document. Address: School of Agricultural Economics and Extension Education, Univ. of Guelph, ONT, Canada.

842. Erickson, Eric H.; Herbert, E.W., Jr. 1980. Soybean products replace expeller-processed soyflour for pollen supplements and substitutes. *American Bee Journal* 120(2):122-26. Feb. [6 ref]

• **Summary:** For years, expeller-processed soybean flour has been used by beekeepers as a protein source for honey bees. This flour has either been fed alone or mixed with other ingredients such as yeast, dried skim milk, or pollen and then fed as a pollen supplement. Products tested in this experiment included Bland 50 (0.5% fat), F-200 (0.9% fat), and I-200 (made by the A.E. Staley Mfg. Co. of Decatur, Illinois), and Toasted Nutrisoy T-6 (7% fat) and Soylec T-6 (made by Archer Daniels Midland Co., Box 1470, Decatur, Illinois).

Pollen contains 4-5% fat. Both Bland 50 and F-200 were better consumed and resulted in more sealed brood when mixed with pollen. Nutrisoy T-6 was more effective when used alone. Address: 1. Bee Research Laboratories, Agricultural Research-Science and Education Administration, USDA, Madison, Wisconsin 53706; 2. Beltsville, Maryland 20705.

843. Levey, Gail A. 1980. An in-depth look at textured vegetable protein: More than you ever wanted to know... *Vegetarian Times* No. 35. Jan/Feb. p. 56-59.

• **Summary:** Discusses how TVP and spun soy protein fibers are made and their nutritional value. Address: M.S. in nutrition.

844. Torgerson, Susan. 1980. Mankato No. 2 in nation in soy processing: 40 years ago industry didn't amount to a hill of beans. *Land (The) (Southern Minnesota)* 4(10):1, 13, 38. April 24.

• **Summary:** "It wasn't a farmer, but a lawyer who introduced soybeans to this area. William Blethen, Mankato, as a young lawyer in 1938 was handling a case in Winona, and during the three-day hearing, he roomed with his Iowa client Riley Lewis.

"Lewis, a retired country extension agent, whiled away their spare time extolling the success of soybeans in his state and sent Blethen home with the beginnings of an idea that a soybean processing plant in Mankato might prosper."

Blethen's research showed that southern Minnesota was within the northern boundary of soybean country. He hosted three Mankato residents—a banker, a farmer, and a businessman—on a tour of a soybean processing plant [owned by Ralph Wells & Company] in Monmouth, Illinois.

Blethen recalled that he put the three men in his two-door Plymouth coach, paid all their expenses, and took them to Monmouth—even though he was making only \$150 a month at the time. He asked the three to please give him every reason why he *shouldn't* open a soybean processing plant in Mankato, but none of their criticisms seemed strong enough to sway him. In Mankato, Good Thunder, and Rochester (Minnesota; his former home) he sought out investors who were willing to put up a total of \$50,000. The core group of investors, who lived in Mankato and its environs, among them several bankers and associates of the telephone company, included the now deceased Judge S.B. Wilson, C.P. Barnard, and T.M. Coughlan.

They named the new company Mankato Soybean Products, Inc. [probably in 1939]. For \$7,500 they purchased the abandoned Minnesota Pipe and Tile Co. on the current Honeymead site. Their purchase included several warehouses, a building suitable for offices, a rail line, and a city block of property fronting the Blue Earth River. They installed one expeller, which worked like a big meat grinder to crush and press the oil from the soybeans.

But they still needed soybeans. In the spring of 1939, various farm meetings were scheduled in the area. Blethen and his former client, Lewis, who had been hired to manage the plant, made the rounds of the meetings, urging farmers to try this amazing crop. Though Blethen, a lawyer, knew nothing about farming, he was telling farmers how to plant and grow soybeans. The meetings attracted interest but few commitments. The farmers went home, thought it over, and talked to their neighbors. Richard L. Myers, an investor and then president of the First National Bank in Good Thunder, recruited tenants from his family's farm to experiment with soybeans.

The time was ripe for soybeans in southern Minnesota. The main crop had been wheat until the early 1900s, when corn was introduced. By the 1930s corn was well established

and farmers were looking for a crop—ideally a legume—to use in rotation with corn. This opened the door for soybeans.

During Mankato Soybean Co.'s first year of operation, soybeans were not available locally, so they had to be purchased elsewhere and shipped in by train. The company lost money its first year and investors had to come up with another \$50,000 to cover expenses. Note: We are not told when the company began processing soybeans. A conservative guess would be Sept. 1940, but it could have been as early as Sept. 1939.

In 1941, Lewis was succeeded as plant manager by Ed Ober, a Lake Crystal farmer. Fortunately Ober recruited Frank Bergemann as manager. Bergemann adapted the plant to also process flax, helping to make the company profitable by its third year—as more and more local soybeans began pouring into the plant.

In 1942 Washington Egg and Poultry Association [WAPA], a poultry cooperative [Lynden, Washington State], offered the investors double their money for the company; all of Blethen's pleading couldn't stand in their way. In 1946 [sic, 1947] the Andreas family bought the plant from WAPA. Address: Staff writer.

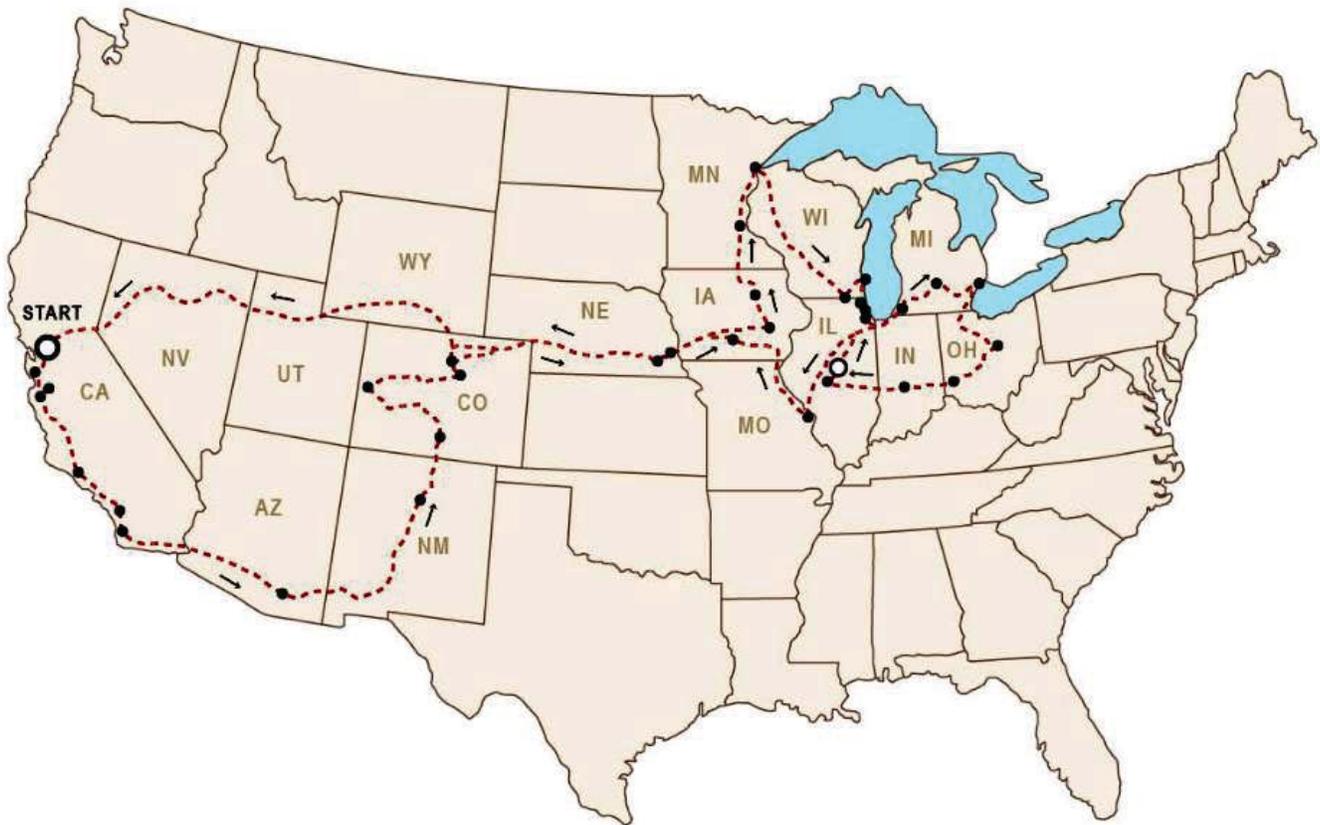

845. Granose Foods Ltd. 1980. Granose—Britain's leading health foods: Product information. Stanborough Park, Watford, Herts., WD2 6JR, England. 5 p. April. Unpublished typescript.

• **Summary:** The name of each product is given, usually with a basic description and ingredients. Product categories include: Breakfast cereals. Protein foods—soya based: Soya beans in tomato sauce, Goulash, Curry sauce, Bolognese sauce, Chicken flavoured pie filling, Chicken flavoured savoury pudding, Ravioli, Cannelloni, Soyapro wieners, Soyapro slices, Beef like, Chicken like, Ham like. Dried foods—soya based: Vegex (Chunks and Mince), Sausfry, Granogen, Granolac. Dried foods—nut based: Rissolnut (with soya nuts). Address: Watford, Hertfordshire (Herts.), England.

846. Herbert, E.W., Jr.; Shimanuki, H. 1980. An evaluation of seven potential pollen substitutes for honey bees. *American Bee Journal* 120(5):349-50. May. [1 ref]

• **Summary:** "One of the primary objectives of our research is to develop a diet for honey bees that can be used to replace the natural pollen on which they depend." When fed eight diets over 12 weeks, bees reared the most brood and consumed more diet when offered pollen followed in decreasing order by whey-yeast, Wheast, Bee Feast, and Pollenex. Three soybean products were tested: Bland 50 (0.5% fat) and F-200 (0.9% fat) (made by the A.E. Staley Mfg. Co. of Decatur, Illinois), and Toasted Nutrisoy T-6 (7% fat) (made by Archer Daniels Midland Co., Decatur, Illinois). Only F-200 and Toasted Nutrisoy supported brood rearing; Bland 50 did not enable bees to rear brood during the study.

## 1980 SOYFOODS AMERICA TOUR

Address: Bioenvironmental Bee Lab., Agricultural Research Science and Education Administration, USDA, Beltsville, Maryland 20705.

847. Morris, Charles E. 1980. America's gold. New directions for basic commodities. *Food Engineering* 52(5):95-97, 108-11. May.

• **Summary:** About corn, wheat, and soybeans.

848. Shurtleff, William; Aoyagi, Akiko. 1980. Soyfoods America Tour: May 5 to June 10; July 25 to Aug. 3, 1980 (Log and trip report—unpublished, including Itinerary with map). Lafayette, California: New-Age Foods Study Center. Unpublished log.

• **Summary:** This trip had five purposes: (1) To introduce tempeh to America; (2) To promote the authors' newly published *Book of Tempeh*. Harper & Row, the publisher, paid most of the trip expenses; (3) For William Shurtleff to attend the University of Illinois Short Course in Soybean Processing; (4) To visit and study soyfoods companies in America; (5) To introduce people to the many advantages of a meatless / vegetarian diet.

A photo shows: Shortly before the trip, Akiko (left) and Valerie Robertson (right) (working in the Shurtleff's small

home kitchen) "canned" many quart Mason jars of Tempeh Cacciatore to serve at the intermission of each lecture / presentation.

Includes the name and address of 37 people and organizations visited. Many of these were pioneers in the soyfoods and natural foods movement: April 25—Optimum Foods (Napa, California). April 27—David Burns (Sebastopol, CA). May 5—Jeremiah Ridenour of Monterey Bay Soyfoods (Santa Cruz, CA). May 6—Thelma Dalman, Foodservice Director for the Santa Cruz City Schools, *Monterey Peninsula Herald*, Ted & Marie Fehring (Carmel), Paula Welch Terui of Jack and the Beanstalk (Carmel Valley, CA). May 8—Al Jacobson of Garden of Eatin', Mr. Kaye Dunham of Tumaros, Hugh Roberts of Meals for Millions. May 9—Eddie Okita of Okita Enterprises, and Noritoshi Kanai of Mutual Trading Co. (Los Angeles, CA). May 10—Kay Glass (La Cañada, CA). May 11—Frazier Farms natural foods supermarket (Escondido, CA), Bill Walton vegetarian and basketball star (San Diego, CA; we stay with Craig Wright and Andrew Salony of TriLife; they hope to market Bill Walton's tofu under the TriLife brand). May 12—Clare Quinn of The Farm (Tucson, Arizona; her check bounced so we never got paid). May 13—Kathryn Bennett of Southwest Soyfoods (Santa Fe, New Mexico), Tracy McCallum, Taos.

May 14–Leslie Wertz (Alamosa, Colorado). May 16–Stay with Christie and John Baker (Boulder, Colorado). May 17–Steve Demos of White Wave Soyfoods and Good Belly Deli. May 18–Sanford and Rebecca Greenwood of East West Center (Boulder, Colorado). May 19–Judson Harper and the low cost extrusion cooker program at Colorado State Univ., Carol Hargadine of Nupro Foods & Soywaze Tofu (Fort Collins, CO). May 21–Gale Randall of the Indonesian Tempeh Co. (Palmyra, Nebraska). May 22–David Tucker of New Pioneer Co-op Society (Iowa City). May 23–George Strayer of Edible Soy Products (Makers of Pro-Nuts, May 23) and Agricultural Exports (Hudson, and Cedar Falls, Iowa). May 24–Cedar Falls (Iowa) and Minneapolis media. May 25–Pat Aylward and Jamie Stunkard of Joy of Soy Tofu (Minneapolis, Minnesota). May 27–Richard Cihoski (Duluth, MN). May 28–Chris Burant of Bountiful Bean Plant and Jehan Ziegler of Higher Ground Cultured Foods (Madison, Wisconsin). May 29–Danji Fukushima of Kikkoman Foods (Walworth, Wisconsin), Diane Loomans of The Magic Bean Co-op (Milwaukee, Wisconsin). May 30–Susan Dart (Lake Forest, Wisconsin), Research staff of Kraft Foods (Glenview, Illinois), Brian Schaefer of It's Natural (Evanston, Illinois). May 31–Paul Obis of *Vegetarian Times* magazine (with Brother Ron Pickarski) (Oak Park, Illinois). June 2–Lou Richard of Fearn Soya Foods, Leonard and Irene Stutman of INARI, Ltd. June 3–John Gingrich of The Soy Plant. June 4–Tim and Carol Ann Huang of Yellow Bean Trading Co. (Detroit, Michigan). June 5–Glen Blix and Charles D. Howes of Loma Linda Foods (Mt. Vernon, Ohio; furthest point east on tour). June 6–Warren Hartman of Worthington Foods (Worthington, Ohio). June 7–Mick Vissman and Bill Lutz of Hip Pocket Tofu Deli and Rain Star (Columbus, Ohio), Ed Willwerth of Soya Food Products (Cincinnati, Ohio). June 8–Jay McKinney of Simply Soyfoods (Bloomington, Indiana). June 9–Lynn Adolphson and Bob Thompson of Archer Daniels Midland Co., and Grant Smith of A.E. Staley Mfg. Co. (Decatur, Illinois). June 10–11–Les Karplus of Corn Country Foods and Strawberry Fields. June 11–William Thompson and John Santas of INTSOY (Champaign, Illinois).

During the INTSOY Short Course: July 6–We did a program hosted by Patricia Mutch at Andrews University (Berrien Springs, Michigan).

July 9–13–Third Annual Soycrafters Association of North America conference was held at the University of Illinois, produced by Richard Leviton. There were 270–285 attendees, and it made good money.

People at the University of Illinois we met during the course: Dr. William Thompson, Frances Van Duyne, Harold Kauffman, John Erdman, L.S. Wei, A.I. Nelson, M.P. Steinberg, Munir Cheryan, Ted Hymowitz, Woody Yeh.

Return trip after course: July 28–Bob Davis of Light Foods (St. Louis, Missouri). July 30–James Lowrie of Iowa State University (Ames, Iowa). Aug. 2–Lake Tahoe. Aug. 4–

Home in Lafayette, CA.

At most of the public classes/lectures on this trip, Shurtleff and Aoyagi served their favorite tempeh and tofu dishes. They wanted to find out how Americans liked tempeh, so they asked for a show of hands as to which the attendees liked best. The tempeh dish was usually Tempeh Cacciatore, and the results were, on average, that the tempeh was preferred by a ratio of 2 to 1 over the tofu.

On this trip, Shurtleff and Aoyagi did 27 public programs, had 28 media interviews and appearances, traveled 9,000 miles, earned \$13,000 gross income and \$8,500 net income. Address: P.O. Box 234, Lafayette, California 94549.

849. Shurtleff, William. 1980. Notes from INTSOY Short Course in soybean processing, SANA Conference (Urbana, Illinois), and subsequent research trip (May 5 to Aug. 3). Lafayette, California: New-Age Foods Study Center. 143 p. Unpublished manuscript. 28 cm. Spiral bound.

• **Summary:** This five-week INTSOY short course at the University of Illinois at Urbana began on 16 June 1980. Contents: Introduction (John Santas, Tom McGowen, Dr. Siedler, D. L.S. Wei). Tour of Food Science Lab. History of INTSOY, by Dr. Thompson. Soybean nutrition, by John Erdman. Soybean grading methods, by D. Wei. A.E. Staley Mfg. Co., by Hank Parker. Soybean oil and margarine, by E.G. Perkins. Soybean crushing, by Ross Brian. Soybean agronomy, by Bill Judy. Antinutritional factors in soybeans, by Dr. Wei. Harvesting, drying, and handling raw soybeans, by Gene Shove. Field trip to University of Illinois agricultural machinery dept. Soybean nutrition, by Barbara Klein. Livestock feeding, by Don Bray. Processing whole soybeans for food, by Dr. A.I. Nelson. Ralston Purina Co. and soy protein isolates, by Dr. Kolar. Film titled "Protein for People" from Ralston Purina.

Third week: Margarine, by Dr. Wei. Quality control of soy protein products, by Dr. Wei. Field trip to Kraft Foods Humco plant in Champaign, Illinois (Margarine, Vegemite). Wenger, extrusion cooking, and textured protein foods, by Randy McDonald. Low-cost extrusion cookers and cooking, by A.I. Nelson. Field trip to Lauhoff Grain Co. (good manufacturing practices). Drying foods, by Dr. Wei. Soya in Third World countries, by Dr. Thompson.

Fourth week: Soybean dal, by Dr. Nelson. Visit to Ted Hymowitz who is writing a book on the history of soybeans (p. 56). Sensory evaluation, by Dr. Tobias. Oriental soyfoods, by Dr. Wei.

Fifth week. Soymilk, soy yogurt, and soynuts, by Dr. Nelson (Kibun). Griffith Laboratories, by Ann Daniels (incl. history, HVP, soy protein concentrate, TVP). Home and village level production of soybean foods, by Dr. Nelson. Soy flour and soy fortified baked goods, by Dr. Cho-Chen Tsen of Kansas State Univ. Soybean crushing, soy flour, and plant sizes, by Sheldon Williams.

Shurtleff research trip. Visits to ADM and A.E. Staley

Mfg. Co. in Decatur, Illinois, American Soybean Assoc. in St. Louis, Missouri (Read William Morse's 1929-31 journal of trip to East Asia). Talks with David Hildebrand, Mike Tarano. Address: P.O. Box 234, Lafayette, California 94549.

850. Le Claire, J.-M.; Le Meter, L. 1980. 1.–Sur la route du soja [1.–On the route of soybeans]. *Ouest-France*. June 9. [Fre]

• **Summary:** Part one in a series on “Strategies concerning proteins,” this article discusses how and from where soybeans get to France.

Two companies have a quasi-monopoly: (1) Soja-France, owned by the American multinational Cargill, owns two solvent extraction plants—at Saint-Nazaire and at Brest. (2) Archer-Daniels Midland (ADM), also of the USA.

Tables show: (1) French consumption of soybean meal in 1978. That year some 595,515 tonnes (metric tons) of soybeans were crushed in France using solvent extraction. These soybeans were imported from the following countries—in descending order of amount (tonnes): Brazil 1,197,281. USA 372,000. Belgium 325,045. Netherlands 176,740. Germany 88,253. Argentina 78,430. United Kingdom 18,290. Other 18,320. Total: 2,274,889. Exports: 10,413. Used / consumed in France: 2,860,000.

(2) Imports of soybean meal to France through various seaports in 1978. For each port is given the total amount imported, and how much of that total came from which countries. In descending order of total (in tonnes): 1. Lorient 500,572 (83.2% from Brazil). 2. Bordeaux 375,606 (77% from Brazil). 3. Brest 210,159 (84% from Brazil). 4. Saint-Nazaire 164,230 (55% from Brazil). 5. Nantes 67,476 (69% from USA). 6. Caronte 61,687 (100% from Brazil). 7. Rouen 32,256 (68% from Argentina). 8. Saint-Brieuc 17,136. 9. Saint-Maio 14,510. Address: France.

851. **Product Name:** Granose Sausalatas (Meatless Sausages Canned in Brine) [Plain, or Smoked].

**Manufacturer's Name:** Granose Foods Ltd.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1980 June.

**Ingredients:** 1980: Water, wheat protein, rusk, peanuts, soya flour, vegetable fat, onion, hydrolysed vegetable protein, spices, herbs, oat flour, textured soya protein comprising defatted soya flour, niacin, calcium pantothenate, iron, vitamins B-6, B-2 and B-12, salt, yeast, soy isolate.

**Wt/Vol., Packaging, Price:** Can.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Manufacturer's catalog. 1980. April. Shurtleff. 1981. “Delicious when fried, grilled, or baked.”

Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1948. It is still on the market. Label. 1990. 8.5

by 4 inches. Brown, beige, and black on tan. Color photo of three sausages on a dish with vegetables. “Vegetable protein sausages containing no animal products whatsoever. Delicious when grilled, baked or fried. Ingredients (1990): Water, wheat protein, rusk, peanuts, soya flour, vegetable shortening, seasoning (comprising dehydrated onion, hydrolysed vegetable protein, spices and herbs), oat flour, textured soya protein (comprising de-fatted soya, niacin, calcium, pantothenate, iron, vitamin B-6, B-2 and B-12), salt, yeast, soy isolate.” Address is now Newport Pagnell, Bucks.

Color photo of package in *Linda McCartney's Home Cooking*. 1990. p. 18. The label is black, brown, and white on tan.

Note: This product was first introduced in 1948, but did not contain textured soy protein at that time.

852. Shurtleff, William. 1980. Notes on visit to Kraft in Glenview, Illinois and meeting with Dean Wilding and his research team. Lafayette, California. 1 p. June. Unpublished typescript.

• **Summary:** In 1975 Kraft bought Carnation's soy protein isolate plant at Coshocton, Ohio, and started soy research at that time. They now have 14 people in the protein products working primarily on soy. They are not looking mainly at soy protein isolates, but rather at full-fat soy flour (ffsf), made from defatted soybean meal produced by ADM and Central Soya.

They hot grind at 13% solids in an Urschel Comitrol, then spray dry the ffsf, which contains 40% protein and 25% fat. They remove the insolubles to make soymilk, then remove the sugars to make a full-fat isolate. The key area of use of soy is in imitation cheeses—which have better flavor but less functionality. Isolates cost \$0.90/lb vs. \$1.50 for casein. They are also interested in imitation fermented cream cheese.

Dean Wilding, the head of the team, is a fine man, vegetarian, Mormon, interested in natural foods.

They ferment their soy protein isolate with one pure culture, which gives it a new flavor; they then use this in experimental process cheeses in place of some sodium caseinate—which comes from cow's milk. We tasted this product. Kraft is apparently doing very little work on new products and not much with soy. Address: Lafayette, California.

853. *Soybean Digest*. 1980. Soy [protein food] demand grows in Spain. May/June. p. 40.

• **Summary:** “Here's a case study of how to develop a market. Exports of U.S. soybeans to Spain tripled from 701 metric tons of soy vegetable protein in 1976 to nearly 2,000 metric tons in 1979. When market development work began, it faced several challenges: high quotas and tariffs on texturized vegetable protein (tvp), government regulations on soy protein identification and a fragmented

industry with no organized government contact. First step by ASA: organize importers and help them develop a responsible food-ingredient group. The National Vegetable Protein Association formed in 1978. This group successfully appealed government ingredient requirements and gained liberalization of tvp imports. Duty on tvp was reduced from 47% to 11%. Other projects: soy protein educational program for pediatricians and dieticians and seminars on soy protein for Spanish decision-makers. Officials expect continuing efforts to help increase the tvp market to over 10,000 metric tons by 1986.”

854. Central Soya Co., Inc. 1980. Central Soya sells Chicago plant fixed assets to Archer Daniels Midland (News release). 1300 Fort Wayne National Bank Building, Fort Wayne, IN 46802. 1 p. Aug. 15.

• **Summary:** The fixed assets of the plant consist of a soy protein isolate facility and equipment, a grain elevator, and a warehouse at 1825 N. Laramie, Chicago. The sale price was not disclosed. On 3 Jan. 1980, Central Soya announced plans to discontinue the isolate portion of its soy protein business and to dispose of the assets.

Note: This was the original pioneering Glidden plant. With this purchase, ADM has entered the soy protein isolate business. Address: Fort Wayne, Indiana. Phone: 219-425-5295.

855. Dubois, Donald K. 1980. Soy products in bakery foods. *AIB Research Department, Technical Bulletin* 2(9):1-10. Sept. [12 ref]

• **Summary:** Contents: Introduction. Processing of soy products. Quality factors. Defatted soy flour. Enzyme active soy flour. Full fat, high fat and lecithinated soy flours. Soy grits. Soy protein concentrates. Soy protein isolates. Milk replacer blends. Soy bran. Nutrition. Products. Summary.

AIB stands for the American Institute of Baking. “Soy products, because of their unique functional and nutritional properties, have become major ingredients in many food systems. The use of soy protein as an ingredient, extender, or analog has spread to every category of food, and consumption of edible soy protein in the United States has grown from less than one hundred million pounds per year in the early 1960’s to over one billion pounds per year in 1978.”

Ten tables give the nutritional composition plus NSI (Nitrogen Solubility Index) and PDI (Protein Dispersibility Index) of different soy products, and the manufacturer of each, as follows: Table IV–15 defatted soy flours: A.E. Staley: Bland 50, I-200, and F-200. ADM Company: Baker’s Nutrisoy, Nutrisoy, and Toasted Nutrisoy. Central Soya Co.: Soyaffluff 200W. Cargill, Inc.: 70 PDI Soy Flour and 20 PDI Soy Flour. Dawson Food Ingredients: Dawsoy Flour 100/70, Dawsoy Flour 200/20, Dawsoy Flour 200/70, and Dawsoy Flour 200/88. Farmland Industries: 200L and 200E.

Table V–2 enzyme active soy flours: ADM Company:

Nutrisoy 7-B. Cargill, Inc.: 90 PDI Soy Flour.

Table VI–1 full fat soy flour made by Ingredients Systems, Inc.

Table VII–1 low fat soy flour made by Food Ingredients.

Table VIII–4 refatted soy flours made by ADM: 15% High Fat, Bakers Nutrisoy, Toasted Nutrisoy T-6, and Nutrisoy 220T.

Table IX–8 lecithinated soy flours: ADM Company: Soylec C6, Soylec C15, and Soylec T15. Central Soya: Soyalose 105W and Soyarich 115W. Cargill, Inc.: 3% Relecithinated soy flour, 6% Relicithinated soy flour, and 15% Relecithinated soy flour.

Table X–13 brands of soy grits: ADM Company: Defatted Soy Grits 8-20, Defatted Soy Grits 20-40, Defatted Soy Grits 40-80, and Defatted Soy Grits 80-0. A.E. Staley: Bland 50-Medium Grits and Bland 50-Coarse Grits. Lauhoff: Soy Grits 5/16, Soy Grits 8/30, and Soy Grits 20/0. Dawson Food Ind. [sic, Ingredients]: Dawson Grits 10, Dawson Grits 20, Dawson Grits 40, and Dawson Grits 60.

Table XI–3 “soy protein concentrates”: Griffith Labs: Promax 70. ADM Company: Ardex 700F and Ardex 700G. A.R. Staley: Sta-Pro.

Table XII–16 “soy isolates” (incl. pH, particle size, and special properties of each): Ralston Purina: Edipro A, Supro HD 90, Protein 220, Supro 350, Supro 610, Supro 620, Supro 630, Supro 660, and Supro 710. Dawson Food Ind.: Isoprime 900, Isoprime 900GL, Isoprime 900G, and Isoprime 900L. Grain Processing Corp.: Pro-Fam S-955 and Pro-Fam S-970.

Table XIII–1 type of soy bran: Nutrisoy Fiber, made by ADM. Address: American Inst. of Baking, Manhattan, Kansas.

856. *Nutrition News (Pomona, California)*. 1980. Soyfoods from the magic bean. 3(10):1-4.

• **Summary:** Discusses the nutritional value of soybeans, meat analogs, tofu, tempeh, miso, soy sauce, and TVP.

857. Boyer, Robert A. 1980. Work with Henry Ford and soybeans. III (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 3. 3 p. transcript.

• **Summary:** Floyd Radford was head of Ford’s soy farms. At the Chicago World’s Fair the Ford exposition was producing soybean oil by solvent extraction of soybeans. The soybean oil was the sole fuel used to power a diesel engine, which ran an electric generator, which produced all of the electricity for the exhibit. It was very neat.

Boyer developed the first plant protein fiber in about 1938. That year the Ford Motor Co. had a machine to spin soy protein fibers at the World’s Fair in New York. He was aware of work in Italy spinning casein into fibers from reading technical journals prior to 1936. He used the term “spinning” because the textile industry uses that term to describe how rayon is produced. In both cases, a

more correct term would be “extruding,” since the dope is extruded through spinnerettes.

Ford’s soybean fiber spinning pilot plant had a capacity of 1,000 pounds of fiber a day, but they probably produced less than that. They would send the fiber to the mill, where 1 part of soy fiber would be blended with 3 parts wool to make sidewall (not seat) upholstery, which got less wear and wouldn’t mark like cotton.

When making soy protein isolates, the fiber (insoluble cellulose) is removed during clarification by centrifugation; no one had ever been successful in removing it by filtration, which would be better. After dissolving the soybean meal in alkali, it is clarified by centrifugation, then precipitated. Practically the same process is still used to make soy protein isolates.

Just a few plastic trunk lids were ever made, and they were used only on demonstration or experimental cars; they were never part of commercial Ford vehicles.

When Boyer left Ford Motor Co. he went to work for The Drackett Co., which bought Ford’s soy protein operations. Mr. Drackett sold [actually shut down] his soy fiber spinning operation in 1949. Drackett later sold all its soybean operations to ADM. After Boyer left Drackett in 1949 he filed for his first edible soy fiber spinning patent the same year; it may have been granted in 1951. He applied for a new, expanded patent, with much broader claims to a food product manufactured from man-made protein fibers, in 1951; it was granted in 1954.

In Aug. or Sept. 1949 Boyer paid his first visit to Worthington Foods. Worthington was the first company to whom he disclosed what he was doing, and showed a sample of a prototype product (pork chops) made from spun soy protein fiber. He did not go to Swift initially because he had been advised to keep away from meat companies, which might buy then bury his patents. If Worthington hadn’t been interested in his spinning process when he first visited them, he might have just given up then. He wasn’t sure if it was a screwball idea or not. Moreover, he had been out on his own for almost a year and was running out of money. Worthington was excited with Boyer’s idea but they needed a source of fiber.

So Boyer went to the Virginia Carolina Chemical Co. (VCCC) in Taftville, Connecticut. They were spinning fibers for cloth and they allowed him to use their spinning pilot plant in 1949 to produce the first edible spun soy protein fibers for research purposes and prototypes; he was not employed by them. VCCC was interested enough to call in Corn Products Corp. (CPC), which was interested—but they said they wanted to use corn gluten instead of soy protein. Boyer said “Fine.” After the first successful run, using the VCCC pilot plant, CPC got very interested. Fibers were spun from casein, corn gluten, and soy. CPC bought the first license to his soy fiber spinning process for food use in 1949. They took an exclusive option on the license for

9 months. The first sale of edible protein fiber was made by CPC to Worthington Foods; the fiber was made of corn gluten. After working for a year with CPC, everyone in the project realized that the flavor of corn gluten was so horrible that it would never work in foods. So CPC converted to a non-exclusive license. Boyer, now a bit desperate and against the advice he had been given, decided to approach a meat company. He chose Swift & Co., which took an option immediately; they were the second company to license his patent and from 1950 to 1954 they retained exclusive rights to his patent. In about 1955 Swift converted to a non-exclusive, and Boyer immediately went back to Worthington to see if they were interested in a license yet. They were.

So after having waited 7 years, Worthington finally purchased a spinning license in 1956. At that time, Boyer began to spend 50% of his time at Worthington for a year after they took the license. Initially Worthington did not spin their own soy fibers since it was too expensive for them and they did not have much money at the time. Ralston Purina was well equipped to make these fibers for them. It was not until the mid-1960s that Worthington started to spin their own fibers.

By 1977 seven large food companies had licenses on the patent: Swift & Co., Unilever/Lever Brothers in England, General Foods, Nabisco, General Mills, Ralston Purina, and Worthington.

The original Bac\*O’s were made from spun soy protein fibers. Today he thinks they are made from textured extruded soy flour. General Mills took a license from Boyer. They got 25% of his consulting time, Ralston Purina got 25% and Worthington got 50%. Bac\*O’s came on the market in about 1965 and were a real sensation. It was the biggest thing that had happened with Boyer’s idea to date.

Loma Linda is now spinning soy protein fibers, as is some company in Japan—or at least they used to be.

How big is the market for foods made from spun soy protein fibers? Boyer would guess at least \$30 million a year. Worthington’s total sales was \$20 million including gluten. Miles got Worthington a new plant shortly after they bought Worthington. Now Bayer owns Miles and Worthington. The Morningstar Farms line is not making the profits they would like it to make.

Note: This is the earliest English-language document seen (Oct. 2015) that uses the term “spin soy protein fibers.” Address: 632 Edgewater Dr., Apt. 731, Dunedin, Florida 33528. Phone: 813-734-2415.

858. Goodbrad, John. 1980. History of Sovex Natural Foods, Inc. and other small Adventist food companies (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 26. 1 p. transcript.

• **Summary:** Sovex is a private company. John and his wife are Seventh-day Adventists, as are many of the company’s employees. John worked at the Boulder Sanitarium (also

called the “San,” in Boulder, Colorado) from 1947 to 1953; the Sanitarium owned 8 health food stores and he was in charge of them. During the time he was in Boulder, the Sanitarium did not manufacture any foods; they had already gotten out of that business.

Then he went to work for Collegedale Distributors (in Collegedale, Tennessee), which was owned by Southern Missionary College. They made, and still make, granola.

Sovex was founded in 1953 by the Hurlingers in Holly, Michigan. The company’s original product was Sovex, a flavor concentrate paste, made from a mixture of brewer’s yeast and soy sauce. In 1964 John bought the business and moved it to Collegedale, Tennessee, where he worked.

In 1981 Sovex products containing soy include Prothin Snack Chips, Vege-Pat (textured soy flour, in sausage, burger, and chili flavors), and Granola (their main product line, in nine flavors, many of which contain soy grits).

Sovex had no relationship with Madison Foods (of Madison, Tennessee). Madison was one of the pioneers in the meat substitute field. They were purchased by Worthington Foods, which phased out the Madison products. John has eaten Madison products on and off for over 50 years, but has had no direct contact with them for a number of years. John has a copy of *Back to Eden*, autographed by Jethro Kloss.

A Mr. White, who was a grandson of Ellen G. White, had a super soymilk recipe about 20 years ago. He started with soy flour, ran it through an homogenizer, then sweetened it with honey. People loved the flavor; it was fresh, not canned. He called it Nu-Milk and made it on the sly at the Southern Missionary College dairy in Collegedale, Tennessee. It was illegal because there are laws against putting anything but milk in a milk processing plant.

John just talked with Frank Miller (phone: 817-641-8343), who used to work for Madison Foods and who now owns Texas Protein Products, a company that sells TVP in Texas. Another key man was Bruce Stepanske, who made soymilk at Madison until it was discontinued. Address: President, Sovex Natural Foods, Inc., Box 310, Collegedale, Tennessee 37315. Phone: 615-396-3145 (or 2111).

859. *Soyanews (Sri Lanka)*. 1980. Soyameat sales climb. 3(4):1. Nov.

• **Summary:** “A ton of soyameat is sold in a day in the city of Colombo, according to one company now marketing soyameat in Sri Lanka. There are already three companies in the soyameat or textured vegetable protein importing and retailing business with Lankasoy, the first in the market, fetching the largest sales. The others are Delmege Forsyth who sell soyameat under the brandname TVP, Textured Vegetable Protein, and Ceylon Agencies and Industries Ltd. who market soyameat under the name Bontrae Textured Vegetable Protein.

People like its convenience. Mr. R.S. Wijesekara of Lankasoy “is certain that with more salespoints opened

throughout the country the predominantly Buddhist and Hindu public will increasingly turn to vegetable protein obtained from soyabeans.”

860. *SoyaScan Notes*. 1980. Chronology of soybeans, soyfoods and natural foods in the United States 1980 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Jan. 4. An embargo on the sale of grain to the USSR is announced by President Carter in retaliation for the Soviet invasion of Afghanistan. Though the embargo was lifted in 1981, it led to a subsequent reduction on Soviet purchases of U.S. soybeans and products.

Feb. Second issue of *Soycraft* magazine published by Leviton. 5,000 copies. On Shurtleff’s suggestion, Leviton decides to change the magazine’s name to *Soyfoods* in future issues. Feb. By now *Soycraft* magazine and the Soyfoods Association of North America (SANA) are subscribing to a press slipping service (probably Luce). This subscription continues until early 2001.

Feb. New England Soy Dairy holds a big press conference and soyfoods luncheon in Boston.

Feb. First statistics on the size of the U.S. soyfoods industry and market published by SANA (Soyfoods Association of North America) and The Soyfoods Center.

Feb. Plenty, a Third World development and relief organization run by The Farm in Tennessee, works with the people of Solola, Guatemala to open a solar-heated soy dairy. They make tofu and soy ice cream. Partial funding comes from Canadian International Development Agency (CIDA). A promising, original concept and model for taking soybeans and soyfoods to Third World countries.

March 10. *Tempeh Production* by Shurtleff and Aoyagi published by The Soyfoods Center (176 p., 8½ x 11 inches).

March. Trader Vic (Bergeron), internationally famous San Francisco restaurateur, publishes a poster titled “Put a Little Tofu in Your Life,” containing a lovely Polynesian girl and names of tofu recipes served at his restaurants. Three major newspaper stories on his tofu cuisine follow.

March. Soja Soyfoods Cafe opens in Toronto, Canada.

March. Hip Pocket Tofu Deli and Rainstar, a distributor of soyfoods, open at the same location in Columbus, Ohio.

March. A second commercial source of tempeh starter culture is now available from Ann Arbor Biological Supply [Michigan] and GEM Cultures, run by Gordon McBride and Betty Stechmeyer.

April. “Climbing Curd,” an article on tofu, published in Time magazine, as a result of the New England Soy Dairy Press Conference in February.

May. New England Soy Dairy puts Numu brand soymilk on the market after 2 years of product development. It is quickly withdrawn and dropped, due to short shelf life.

May 5 -June 9. Shurtleff and Aoyagi do Soyfoods America Tour: 20 public programs, 30 media interviews, and

5,800 miles of driving to promote and teach about tempeh and tofu. Ends in Champaign / Urbana, Illinois where Shurtleff attends the INTSOY Short Course on Soybean Processing for 2 months.

May. Gary and Chandri Barat start selling soyfoods (Whipped Tofu Mousse Pie, Tofu Muffins, Tofu Spinach Quiche) at street fairs in New York City under the name Legume. During 1980 both Legume and Quong Hop & Co. in South San Francisco introduce tofu quiches (both sold frozen); these are America's first tofu entrees to be sold frozen.

June. "Tofu" by Nancy DeRoin published as a cover story by *Cuisine magazine*.

June. U.S. Supreme Court rules that man-made organisms created by genetic manipulation can be granted copyright protection. This ushers in a new era of research on and commercialization of soybean varieties by private companies.

June. INTSOY and Land of Lincoln Soybean Farmers establish International Soybean Institute, headed by Russ Odell, to expand soybean utilization overseas.

June. American Soybean Association's *Soya Bluebook* publishes its first information on the new wave of U.S. soyfoods producers.

July. *Das Miso Buch* (The Book of Miso), by Shurtleff and Aoyagi published in German by Ahorn Verlag.

July 9-13. Third Annual Soycrafters Conference at the University of Illinois. Organized and financed by Richard Leviton. 270-285 attendees from 10 foreign countries. Very successful, with a profit of \$7,000. Third issue of Soyfoods magazine published by Leviton. A new Board of Directors is elected with Luke Lukoskie as chairman.

July. Mark Brawerman starts Jolly Licks (later renamed Pacific Trading Co.), a soyfoods marketer-distributor, in San Francisco. First product is soymilk ice cream. Quickly expands to tofu cheesecakes, tofu tamales, etc. Best existing model of this new concept.

Aug. 15. Archer Daniels Midland Co. enters the soy protein isolate market with its purchase of Central Soya's isolate plant.

Aug. Wildwood Natural Foods, Inc. formed in Fairfax, California. Original owners are Paul Duchesne, Paul Orbuch, Bill Bramblett, and Frank Rosenmayr. They do very creative work with prepared, convenience tofu products, such as sandwiches and salads.

Aug. *Tofu: Everybody's Guide*, by Stephen Cherniske published by Mother's Inn Center for Creative Living.

Aug. *The Soy of Cooking*, by Norton and Wagner self-published.

Aug. 20. "Tofu Gaining Popularity as a Cheap Protein Source," by Sylvia Porter published in the *Washington Post*. This is the earliest known publication to mention David Mintz's work with tofu. It describes the numerous deli products he makes from tofu. Ice cream is not mentioned.

Sept. 3. "Tofu: Trader Vic's Creativity Americanizes an Asian Staple" by Harvey Steiman published in San Francisco Examiner. Trader Vic is one of America's foremost restaurateurs.

Sept. Richard Leviton (Soyfoods Association) and Thelma Dalman (food service director for Santa Cruz city school system) lobby for tofu in Washington, D.C. USDA grants 1-time approval for a test program using tofu in Santa Cruz County School Lunches. But this failed to set a national precedent.

Sept. Soyfoods Association board holds first meeting in Colrain, Massachusetts. Plans fund raising program that fizzles.

Sept. 17. New-Age Foods Study Center (run by Shurtleff & Aoyagi) changes its name to The Soyfoods Center. Creates new logo and letterhead.

Sept. 24. "A Couple on a Tofu Mission in the West" (about William Shurtleff and Akiko Aoyagi) by Lorna Sass, published in *The New York Times*.

Oct. First issue of *The Beanfield* (named after a chapter in *Walden* by Henry David Thoreau) a monthly soyfoods newsletter, published by Leviton. Name changed to *Soyfoods Monthly* in March 1982.

Oct. Tofu and The Bountiful Bean Plant in Madison, Wisconsin are on the Today Show for 2 minutes. This TV segment is aired 2-3 times.

Oct. 13. "With his Book on Tofu William Shurtleff Hopes to Bring Soy to the World" by Dianna Waggoner published in *People* magazine (circulation 3.4 million). The same issue noted: "Model Cheryl Tiegs" has been eating tofu for several years and gives it some of the credit for helping her to lose 35 pounds in 1972. Her favorite recipe for Oriental Pudding (with "1 block tofu (4 ounces)") is published.

Oct. Severe nationwide shortages of peanuts and peanut butter. Soyfoods producers miss a golden opportunity to make and sell soynut butter.

Nov. 1. First Soycrafter Apprenticeship Program begins at Island Spring, Vashon, Washington (state). Conceived of and directed by Luke Lukoskie, each program lasts 21 days, strongly emphasizes practical experience supported by books, periodicals, and tapes. Six programs per year. Costs: \$20 non-refundable registration fee plus \$500 individual tuition; \$400 per person group rate for two or more from the same business.

Nov. 9-14. World Conference on Soya Processing and Utilization held in Acapulco, Mexico, organized primarily by the American Soybean Assoc. 1,100 participants from 35 nations; of these approximately 300 registrants and 250 student attendees were from Latin America. Proceedings published in March 1981 issue of Journal of the American Oil Chemists' Society. Leviton attends and mans a SANA booth, but is not invited to speak.

Nov. Soyfoods Center publishes three pamphlets on

soyfoods in Spanish: *Que es el Tofu? Que es el Tempeh? Que es el Miso?*

Nov. *East West Journal* and Michio Kushi stop misusing the term “tamari” and start using the proper term, shoyu or “natural shoyu.”

Dec. The Soyfoods Center and Soyfoods magazine merge and computerize their mailing lists of people and organizations world wide actively interested in soyfoods. 5,000 names now on list. Soyfoods Center pays all costs of computerization. By mid-1981 there were 10,600 names in 50 categories. List is available for rent.

Dec. Farm Foods starts national ad campaign for Soy Ice Bean with full-page color ads in national magazines: *New Age*, *Whole Foods*, *East West Journal*, and *Vegetarian Times*.

Dec. First branch of the International Soyfoods Center Network starts in Sweden, run by Ted Nordquist. Headquarters are in Lafayette, California.

Dec. *The Tofu Primer* by Juel Andersen published by Creative Arts.

Dec. Soymilk viili is first made (on a home scale) by Gordon McBride and Betty Stechmeyer of GEM Cultures in Fort Bragg, northern California. This cultured milk product, similar to the traditional Finnish dairy product, has a thick consistency almost like honey.

Dec. New England Soy Dairy becomes the first of the new generation of Caucasian-run tofu companies to top \$1 million in annual sales (they hit \$1.2 million). With only 6 workers in the plant, they are making \$4,000 profit per month during the last quarter.

Dec.—Seth Tibbott of Turtle Island Soy Dairy starts making and selling tempeh out of Hope Co-op, Forest Grove, Oregon, about 20 miles west of Portland, Oregon.

\* In *Diamond v. Chakrabarty*, the U.S. Supreme Court upholds by 5 to 4 the patentability of genetically altered microorganisms, opening the door to greater patent protection for any modified life forms.

861. **Product Name:** Granose Chicken Flavoured Savoury Pudding.

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1980.

**Ingredients:** Wheatmeal flour, vegetable fat, textured soya protein, maize starch, soya flour, salt, onion, hydrolysed vegetable protein, milk powder, leek, mushroom, yeast, vegetable oil, herbs, silica, spices, natural monosodium glutamate.

**New Product–Documentation:** Manufacturer’s catalog. 1980. April. “Chicken flavoured pie filling in the same delicious pastry case as the original Granose Savoury Pudding.”

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in

1980. This product has been discontinued.

862. **Product Name:** Granose Soya Oil.

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1980.

**Ingredients:** Soya oil.

**Wt/Vol., Packaging, Price:** Bottled.

**How Stored:** Shelf stable.

**New Product–Documentation:** Manufacturer’s catalog. 1980. April. “High grade, 100% Soya oil suitable for all culinary purposes.”

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1980. It has been discontinued.

863. **Product Name:** Granose Swiss Cup.

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1980.

**Ingredients:** Rye, oats, millet, barley, figs, chicory.

**New Product–Documentation:** Manufacturer’s catalog. 1980. April. “An instant cereal beverage. A substitute for coffee. Contains no caffeine or tannin.” Note that it also contains no soy.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1980. It has been discontinued.

864. **Product Name:** Granose Chicken Flavoured Pie Filling.

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1980.

**Ingredients:** Textured soya protein, maize starch, wheat flour, salt, onion, hydrolysed vegetable protein, milk powder, leek, mushroom, yeast extract, vegetable oil, herbs, silica, spices, monosodium glutamate.

**New Product–Documentation:** Manufacturer’s catalog. 1980. April. “A tasty soya protein pie filling flavoured with mushrooms and other vegetables. Bake in a pastry case, or serve as a casserole with other vegetables or as a snack on toast.” Shurtleff. 1981. *Overseas Adventist Food Companies*. p. 6. They imported some of these meat analogs under their own brand from Nutana, and also imported soymilk from Loma Linda in Ohio, and packaged it under their Granose brand.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1980. It has been discontinued.

865. **Product Name:** Granose Bolognese Sauce.

**Manufacturer's Name:** Granose Foods Ltd.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1980.

**Ingredients:** Tomato puree, textured soya protein, maize, starch, onion, hydrolysed vegetable protein, salt, wheat flour, oregano, garlic, bay.

**New Product–Documentation:** Manufacturer's catalog. 1980. April. "Italian style Bolognese sauce with seasoned, minced soya protein. Serve hot with spaghetti or vegetables."

Rombauer's "The Joy of Cooking" (1975 ed., p. 353) has a recipe named Bolognese Pasta Sauce, which contains the following ingredients in descending order of predominance: Chopped lean beef, beef stock, dried mushrooms, dry white wine, and butter.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1980. It has been discontinued.

866. **Product Name:** [Soyana Unflavored TVP (Chunks, or Minced)].

**Foreign Name:** Soyana Soya (Kloesse, or Gehackt).

**Manufacturer's Name:** Soyana.

**Manufacturer's Address:** Postfach 8039, Friedensgasse 3, CH-8002 Zurich, Switzerland. Phone: 012-028-997.

**Date of Introduction:** 1980.

**Wt/Vol., Packaging, Price:** 250 gm plastic bag. Retails for 4.70 Swiss francs (11/83).

**How Stored:** Shelf stable.

**New Product–Documentation:** Letter from Verena Krieger. 1983. March 8. Soyana started selling TVP in 1980. R. Leviton. 1983. Report on trip to Europe with American Soybean Assoc. Oct-Nov. p. 17. Soyana Soya Klosse (puffed TVP) seen in Reformhaus health food store in Zurich, Switzerland.

Talk with Walter Dänzer. 1990. May 30. The product is unflavored TVP sold in two textures, chunks and minced. Sold in 250 gm plastic bags, it was Soyana's first product.

Note: This is the earliest record seen (June 2015) concerning Soyana.

867. **Product Name:** Westico Vege-Steak (Beef-Flavored Textured Vegetable Protein).

**Manufacturer's Name:** Westico Foods.

**Manufacturer's Address:** West Indies College, Mandeville, Jamaica.

**Date of Introduction:** 1980.

**How Stored:** Shelf stable.

**New Product–Documentation:** Letter from Robert Folkenberg. 1983. Feb. 15. "This company, organized in 1970, is presently a fairly small operation, producing about 2 tons of TVP each week. We fully expect this rate of production to increase dramatically in the near future."

Form filled out and labels sent by Westico. 1990. June 28.

Note: This is the earliest known commercial soy product (one of two products) made in Jamaica.

868. **Product Name:** Westico Vege-Mince (Beef-Flavored Textured Vegetable Protein).

**Manufacturer's Name:** Westico Foods.

**Manufacturer's Address:** West Indies College, Mandeville, Jamaica.

**Date of Introduction:** 1980.

**New Product–Documentation:** Letter from Robert Folkenberg. 1983. Feb. 15. "This company, organized in 1970, is presently a fairly small operation, producing about 2 tons of TVP each week. We fully expect this rate of production to increase dramatically in the near future."

Form filled out and labels sent by Westico. 1990. June 28. Also in about 1980 Westico Foods started selling Loma Linda Vita-Burger Chunks, Redi-Burger, and Linketts. The label for each, which is basically the Loma Linda label, states that each food is "Processed by Westico Foods."

Note: This is the earliest known commercial soy product (one of two products) made in Jamaica.

869. Binding, G.J. 1980. About soya beans: Wonder source of protein and energy. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. and New York: Pyramid Books. 64 p. 18 cm. 1st ed. 1970. About series, no. 35.

• **Summary:** Contents: 1. Beans in general. 2. History of the soya bean. 3. Content of soya beans. 4. About lecithin—vital for retaining youth. 5. The soya bean in the Far East. 6. American influence on the soya bean. 7. Industrial uses in America. 8. The soya bean and world food shortage. 9. Soya bean recipes.

A section titled "Wonder food—God's gift to man" (p. 10) states: "For over 5,000 years this tiny seed has been the staple food of certain parts of the East, including North China, Japan, Korea, and some areas of India. The ancient Yogis, who were among the world's first vegetarians, placed great faith in the soya bean as a supplement to their meatless diet." On the cover is a color photo showing TVP, lecithin, soymilk, soy sauce, miso, soya bean oil, soya flour, and soya sprouts.

Note 1. The copyright page states: "First published 1970. Second impression 1971. Third impression 1977. Second Edition, revised and reset 1980." Note 2. This book has no preface by Carlson Wade. Address: F.R.H.S., England.

870. Burbach, Roger; Flynn, Patricia. 1980. Agribusiness in the Americas. New York, NY: Monthly Review Press. 314 p. Index. 21 cm. [62 ref]

• **Summary:** "In southern Brazil, more than a dozen multimillion-dollar soybean processing plants owned by U.S. multinationals are scattered throughout the region.,

surrounded by large-scale mechanized soybean farms, none of which existed two decades ago.” In Brazil, soybean production has been growing at the rate of 8-12% a year over the past decade (p. 84-85).

The chapter titled “The U.S. Grain Arsenal” gives a history and assessment of PL 480, the U.S. Food for Peace Program (established in 1954), as “an institutionalized arm of U.S. imperialism... In the past 25 years, close to \$30,000 million worth of agricultural commodities have been shipped overseas under the PL 480 program. It is not surprising that little of this food has reached the hungry in recipient countries, since the original legislation did not even pretend to have a humanitarian purpose (The humanitarian intent clause was added to the law much later.) As suggested by its name—Agricultural Trade and Development Act—PL 480 was intended primarily to develop future commercial markets for U.S. grain exports and to solve the problem of mounting U.S. farm surpluses by dumping them overseas.

“In line with this purpose, over three-quarters of PL 480 commodities have been shipped abroad under long-term, low-interest credits provided by Title I of the law. These credits allow foreign governments to import U.S. agricultural products for resale in their own countries...”

The sale of Title I commodities generates funds for the recipient governments (known as “counterpart funds”); these funds as a form of U.S. economic assistance, which have often been used to finance military expenditures. The repayment of PL 480 loans in local currencies was allowed until 1981.

Title II of the program, under which the U.S. finances food donations to “friendly countries” through private international relief agencies is of less direct political use.

During the first 12 years of the PL 480 program, “one-quarter of all U.S. agricultural exports were financed by PL 480’s easy credit terms... In 1969 PL 480 accounted for only 15% of U.S. agricultural exports, and by 1977 this figure had dropped to 4%.

“Under the guise of the food aid program, the U.S. Department of Agriculture has worked hand in glove with grain multinationals to develop these commercial markets. One of their goals has been to generate demand for U.S. agricultural products by encouraging people abroad to adopt American-style eating habits. Trade associations representing the U.S. food industry have received millions of dollars worth of PL 480 local currencies toward this end. The U.S. Feed Grains Council, for example, has used these monies to promote the development of local livestock and poultry industries which rely on imported feed grains. Another example is the Western Wheat Growers Association, which has encouraged people throughout Asia to eat wheat-based products like bread instead of locally grown rice.”

the largest dollar tag ever in Maple Leaf Mills history was the vegetable oil processing complex at Windsor, Ontario.

“This huge, \$50 million plant is the country’s largest vegetable oil processing operation. It started up in 1979. The plant will supply more than a third of eastern Canada’s vegetable oil and meal market. Jointly owned by Maple Leaf Mills and Lever Brothers Limited, it operates as a separate company, Maple Leaf Monarch Limited.

“Maple Leaf Mills had been in the vegetable oil business since the early years of World War II. The original refinery processing oilseeds, mainly soybeans, was located on Toronto’s central waterfront.

“This facility, however, became obsolete for a number of reasons. Despite expansions, the overall capability of the plant to produce oil and meal volumes for the markets of the 1970s and 1980s was limited. As well, the long-term plans by several levels of government to revamp Toronto’s waterfront meant the plant would ultimately have to be torn down.

“With the Windsor plant now in operation, Maple Leaf Mills and Lever Brothers share a partnership in one of the western world’s largest and most modern vegetable oil refineries.

“Two main operations are carried out at this facility—seed crushing and oil processing. The seed-crushing operation processes about 450,000 tonnes (metric tons) of oilseeds annually, approximately 80 per cent of which are soybeans. The oil processing section produces about 50,000 tonnes of vegetable oils which are consumed in the production of margarine, shortening, salad and cooking oils. Technical oil products are used in the manufacture of paints, varnishes, printing inks and caulking compounds. The high protein meals produced are aimed primarily at the poultry and livestock feed markets of eastern Canada.

“Maple Leaf Monarch’s Windsor plant represents a major market for Canadian soybean growers, located as it is in an area served by excellent transportation facilities to enable economic assembly of raw materials for processing.” An aerial photo shows the “Maple Leaf Monarch vegetable oils plant at Windsor, Ontario, one of the world’s largest.”

A section titled “History Highlights” (p. 16-21) gives a chronology of the company from 1833 to 1980. 1904–Maple Leaf Flour Mills Company Limited incorporated under Dominion of Canada letters patent. The company soon begins acquiring other flour mills and elevators. 1908–Maple Leaf acquired Wheat City Flour Mill (in Brandon, Manitoba; founded 1901) 1910 April 5–Maple Leaf Milling Co. Ltd. formed to take over assets of Maple Leaf Flour Mills Co. Limited, with mills at Thorold, St. Catharines, Kenora, and Brandon, and grain elevators in Western Canada. Also Hedley Shaw Milling Co. (est. 1901, by acquiring Grantham Mill {St. Catharines, est. 1836} and Welland Mills {Thorold, est. 1848}). 1928–Toronto Elevators built elevator of 2 million bushels capacity at Queens Quay, Toronto. The

company also purchased all 1,156 outstanding shares of Sarnia Elevator Co. Ltd.

1946–“Toronto Elevators started oil refinery at Queens Quay and began importation of food oils.”

1956–“Toronto Elevators modernized Queens Quay feed plant and acquired a new elevator at Wallaceburg.”

1961–“Amalgamation of Toronto Elevators Limited, Maple Leaf Milling Company Limited, and Purity Flour Mills Limited. Maple Leaf Mills Limited was the emerging company.”

1972–“Federal Government expropriated the Queens Quay complex for future redevelopment of Toronto harbor lands.” 1975–“Maple Leaf Mills and Lever Bros. commenced a joint venture, construction of a major vegetable oil plant at Windsor, Ontario.” Note: This is the first mention of Lever Bros. in this chronology. 1976–“Norin Corp., of Florida, acquired 74% of the common stock of Maple Leaf Mills.” 1979–“Norin Corp. acquired all outstanding common shares of Maple Leaf Mills.”

1980 “Canadian Pacific Enterprises Limited, of Montreal, acquired all common shares of Maple Leaf Mills as a result of purchase of Norin Corp.”

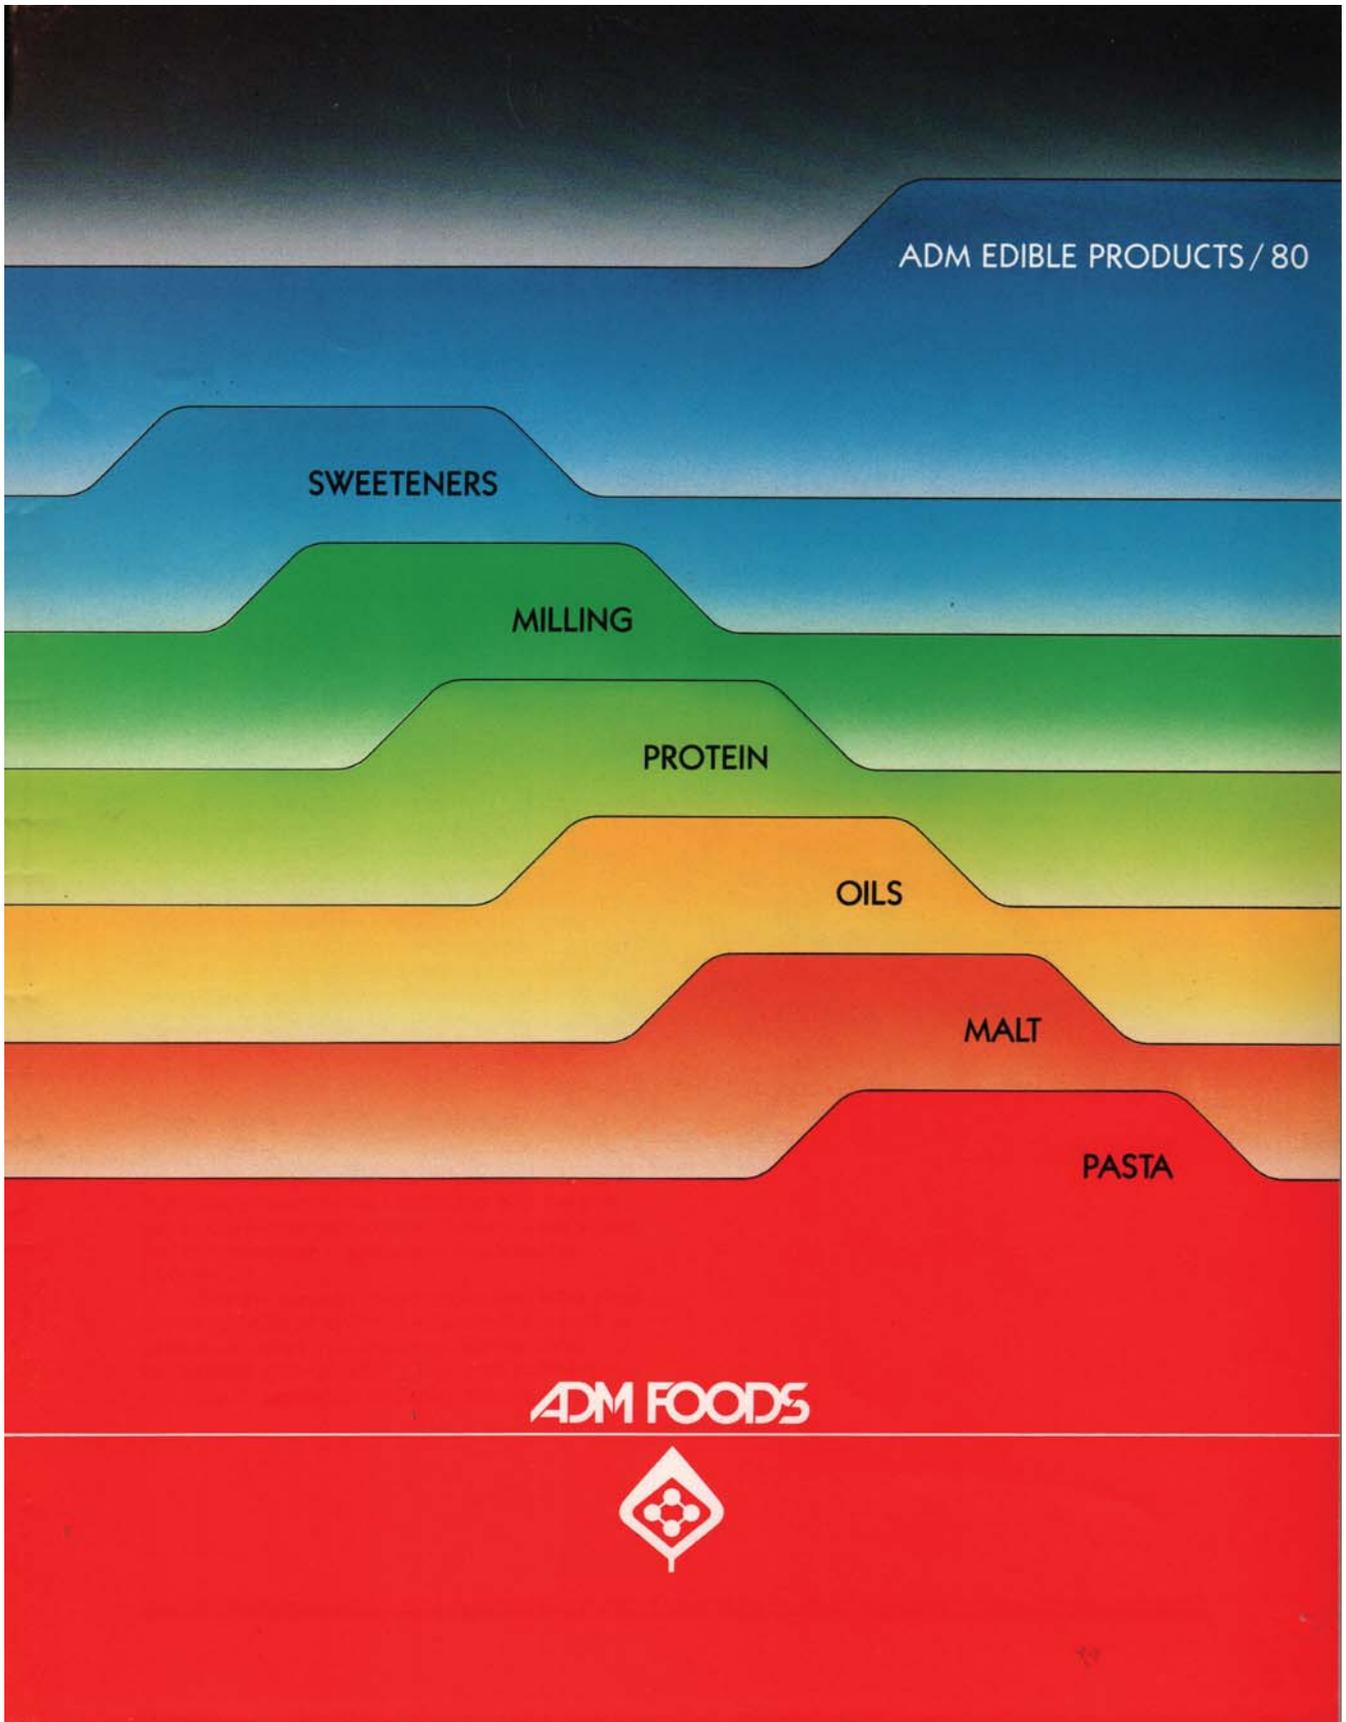

On page 22 is a historical listing of the presidents of Maple Leaf companies, with their dates of office. Address: Toronto, Ontario, Canada.

874. ADM Foods. 1980? ADM edible products: Sweeteners, milling, protein, oils, malt, pasta. Box 1470, Decatur, IL 62525. 26 p. Undated. 28 cm. Catalog.

• **Summary:** See next pages. Pages 14-16 describe the following soy protein products and give their nutritional composition: TVP textured vegetable protein, TVP condiment types (bacon flavor bits and chips, sausage flavor bits, pepperoni flavor bits, cheese flavor bits, onion flavor bits, garlic flavor bits), Nutrisoy 101, Soylec Special, Nutrisoy Fiber soy bran, Toasted Nutrisoy flour defatted soy flour, Nutrisoy flour, defatted soy flour, Bakers’ Nutrisoy, defatted soy flour, Nutrisoy 7B flour, defatted soy flour, Soylec lecithinated soy flour and 15% refatted B.N., Soylec T-6, Soylec T-15 lecithinated soy flour, Toasted Nutrisoy grits 8-20, 20-40, 40-80, 80-0 defatted soy grits, Soybean Brewflakes, defatted soy flakes, Ardex 700F (free-flowing powder) and Ardex 700G (grit form) soy protein concentrate. Address: Decatur, Illinois.

875. Pural. 1980? Spécialités Pural [Pural specialties]. France: 14 p. Undated. 21 cm. [Fre]

• **Summary:** This Seventh-day Adventist company sells the following soy-related products: Sojlactis (soymilk). Sojanelles (meatless soya quenelles or dumplings). Granotose and Frika-Vita. Grano-san (a paté that includes soy flour). Sandwich-san (with soy flour). New products: Sojanelles épicées, Pasta-Chuta (with soy proteins). Sojafleish (soymeat based on TVP).

876. Shellenbarger, Sue. 1981. Generous maverick. ADM's Andreas takes risks that pay off—with a little help. Gasohol, fructose ventures succeed after congress adopts favorable laws. Financing useful politicians. *Wall Street Journal*. Jan. 15. p. 1.

• **Summary:** 1965—ADM today would not be recognized by anyone who knew it in 1965; that is when Shreve M. Archer Jr. and John H. Daniels, who represented the company's controlling families, invited Dwayne Andreas and his brother Lowell to rescue the company from a three-year slide in earnings. They did indeed transform the sleepy oilseed milling and chemical firm into an agricultural processing powerhouse with annual sales of \$2.8 billion, profits of \$116 million, and a highly promising future outlook.

1974—Andreas decides to spend \$20 million on a commercial fuel-alcohol plant. Gasohol is 90% gasoline and 10% ethyl alcohol. But the plant was too years too early—until the 1978 revolution in Iran created new fears about petroleum supplies.

Mr. Andreas spends about 60% of his time jetting around the world, working to open up new markets in places like China, pressing his causes in Washington, DC, and just thinking up new ideas.

Justin Dart, chairman of the executive committee of Dart & Kraft Industries Inc. calls Dwayne Andreas “one of the smartest guys in America.”

“Mr. Andreas has had friends in the past six presidential administrations,” and “he has always hedged his bets by contributing as much to Republicans as Democrats...” In 1972, for example, he gave roughly \$150,000 to the late Minnesota senator Hubert Humphrey, his longtime friend and mentor. Thinking of Humphrey he says: “If I could do it over again, as long as I could afford it, I'd give a hell of a lot more.”

That generosity, Dwayne Andreas says, “springs from his religious training as a Mennonite, a conservative denomination dictating a simple, agrarian life. He was taught to give 10% of his income to ‘whatever I thought was good, and that includes politics, churches and schools, and I always have. And more. And I'm proud of that.’”

A handsome dot-style illustration shows Dwayne Andreas. Address: Staff Reporter of the Wall Street Journal.

877. **Product Name:** Granose Soya Milk (Plain, or with Carob).

**Manufacturer's Name:** Granose Foods Ltd. (Marketer). Made in Belgium by Alpro.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1981 January.

**Wt/Vol., Packaging, Price:** 500 ml Tetra Brik Aseptic carton.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product—Documentation:** Soyfoods Center Computerized Mailing List. 1983. July 20. STS. 1985. Containers for Soymilk. Shows color photo of 500 ml Tetra Brik carton. Orange and green on white. “100% Vegetable. Rich in protein. High in polyunsaturates.” Use by 7/84.

Form filled out by Alpro. 1990. May 30. Alpro began making this product (2 flavors) in Jan. 1981 in 500 ml cartons. Granose stopped buying it from Alpro in Dec. 1984; DE-VAU-GE became the new source.

Note: This is the earliest product seen in Britain that uses “Soya Milk” as the product name.

878. Howse, Eric. 1981. Seventh-day Adventist work with soyfoods worldwide (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 12. 2 p. transcript.

• **Summary:** Howes was the International Director at the General Conference in Washington, DC, until he retired. Soyfoods are a rapidly growing component of Adventist food work worldwide. Discusses: Sanitarium Health Food Co. in Australia, DE-VAU-GE in West Germany, Granose Foods in England. A major new component is low-cost extruders making TVP. Address: 6471 Penn National Drive, Fayetteville, Pennsylvania 17222. Phone: 717-352-7239.

879. Whisker, Ray G. 1981. Re: Breeding and growing soybeans in soybeans in the U.K. Letter to William Shurtleff at Soyfoods Center, Feb. 21. 1 p. Typed, with signature.

• **Summary:** Dear Bill, Thanks for your letter.

“The soy seldom gets publicity in the U.K., and this is usually confined to its use in tvp products which are not too popular. Soybeans can never become a viable farm crop in U.K. as climatic conditions are generally unfavorable. But is has potential as a home-garden high protein vegetable and, perhaps, as a supplemental feed crop for very small-scale farmers. I am thinking primarily of certain small-leaf overseas strains which cannot flower in Britain, and thus make extra foliage as compensation for lack of flowers.”

“Found your catalog most interesting and hope your work and literature will continue to flourish and prosper. I make soymilk from a 1940 Canadian recipe, and we use the leftover mash in cakes and stews etc. It must be the most versatile vegetable on earth. Where else can you find a plant which provides ‘meat’ ‘milk’ ‘Cheese’ and Oil.” Address: Soybean Breeder, East Molesey, Surrey, England.

880. John, Harrison W. 1981. Adventist food industries: Recent developments. *Spectrum: Journal of the Association of Adventist Forums* 11(3):28-36. Feb.

• **Summary:** One of the most informative articles ever written about Seventh-day Adventist food companies worldwide. “Ever since Ellen G. White's health reform message of 1863, Seventh-day Adventists have had a ‘theology’ of nutrition.” In 1979 food sales for Adventist manufacturing and marketing companies totaled \$188

million, up 95% over 1974 sales of \$96 million, and up 3.68 times over 1970 sales of \$51 million. The most successful company is Sanitarium Health Food Company in Australia. Sales for the 5-year period 1975-79 totaled \$400 million. Their most popular product is read-to-eat “Weet Bix,” a breakfast cereal that outsells Kellogg’s Corn Flakes in Australia.

In Europe: Earned income figures for 1978 were impressive. DE-VAU-GE’s income was \$12.2 million (second only to Sanitarium Health Foods in Australia). Nutana’s was \$7.6 million (\$10 million in 1979), and Granose’s was \$1.8 million. Nutana showed an impressive tenfold sales increase from 1973 to 1979.

Profit figures, however, were not impressive. In 1978 Granose lost about \$295,000 and Nutana \$5,903. DE-VAU-GE’s profits were unknown. Granose had been a consistent money loser; between 1975 and 1978 it lost an average of \$101,000 a year and its net worth decreased from \$331,902 in 1975 to \$113,515 in 1978. Thus in October 1979 Sanitarium Health Foods of Australia was asked to take over the management of ailing Granose. Loma Linda Foods in the USA has also had problems. Though 1978 sales were \$11.7 million, they lost \$390,000. In April 1980 management and control of LLF was transferred to Sanitarium of Australia. In about 1978 Granix in Argentina and Superbom in Brazil entered the vegetable protein market with TVP and are currently producing 700 tons/year. In 1976 a “World Foods Service Expansion Program” was started to finance expansion of food production into countries having serious nutritional problems. Low-cost extrusion cookers making TVP were a key part of this program. Address: Rockville, Maryland.

881. *Soyfoods*. 1981. Giant tofu market: School lunches. 1(4):8-9. Winter.

• **Summary:** The federally-subsidized school lunch program serves an estimated 3,800 million meals annually. Thelma Dalman (director of Food Service for Santa Cruz city schools, a district that has experimented with tofu-based vegetarian meals for three years) and Richard Leviton (director of Soycrafters Association) went to Washington, DC, on 13-18 September 1980 to investigate the possibilities of having tofu “legalized” for school lunches. “The result was not only favorable but startling in significance.” Dalman and Leviton met with numerous senators and representatives who were sympathetic to enlist their support. “Aides to these congressmen each expressed lively and informed interest in tofu and a willingness of their office to cooperate. Dalman and Leviton presented a two-hour program on tofu and public schools to 15 members of the Nutrition and Technical Services Division (NTSD), a regulation advisory group in the Food and Nutrition Service. A request was made for the USDA to grant interim permission to use tofu at 30% substitution for the meat requirement (2 oz. lean cooked

meat) in the school meal pattern. For a lunch to meet the ‘reimbursable meal pattern’ its components must conform to a strict nutritional code, essentially based on meat protein. Textured Vegetable Protein (TVP) has been granted use in meals at 30% replacement... So the strategy was to bring in tofu on the shirttails of TVP. As it developed, we fared better than we had expected; the USDA, in fact, let us know they favored a higher equivalency rating for tofu than TVP and chose to regard tofu as a whole food rather than like TVP [which is considered a fortified, highly processed food].

“Henry Rodriguez, director of NTSD, stated: (1) Tofu may now be used as part of the reimbursable meal pattern based on section 210.H of the *National School Lunch Program*... (2) To obtain approval, individual school boards must apply to their Department of Education, Child and Nutrition Division, to request them to apply to USDA-FNS for permission to use tofu based on section 210.10.H. (3) Meanwhile FNS and SANA will draft a USDA *Specification* for tofu which will legalize and standardize tofu’s use in school meals.”

Richard Leviton made a second visit to Washington, DC on 24-27 Nov. 1980 to meet with the USDA again as well as with a handful of congressmen and the FDA.

882. *Food Engineering*. 1981. Peanut butter base is 80% extended. 53(3):108. March.

• **Summary:** Ottens Flavors (in Philadelphia, Pennsylvania) developed this formula which contains 20% natural peanut butter, 40% partially hydrogenated vegetable oil, 22% pulverized soybean (Textured Vegetable Protein #624 made by ADM), 8.25% glycerine, 8.00% brown sugar, and 1.25% salt (microfine). Ottens, known for its flavors, developed the prototype to demonstrate a tangible application of its flavor that simulates natural peanut butter. A taste panel found “no appreciable difference” between the formulation and peanut butter.

883. Langsdorf, A.J. 1981. Economics of soya protein products and outlook. *J. of the American Oil Chemists’ Society* 58(3):338-40. March.

• **Summary:** Table I shows wholesale prices of various soy protein products in the United States (as of late Oct. 1980, F.O.B. production point, varies with size, shape, color, and flavors). Soy flour 18-20 cents/lb. Soy grits 18-20 cents/lb. Textured soy protein (unflavored) 32-36 cents/lb. Soy protein concentrate 42-46 cents/lb. Soy protein isolate 92-102 cents/lb.

Table III shows the relative costs of protein from selected food sources (as of June 1980). For each source it gives the percentage of protein in the food, the retail price of the food (\$/lb), and the cost of the protein (\$/lb). The most expensive source of protein is Beef (round); the protein costs \$12.40 per pound, compared with \$6.77 for eggs (medium), \$3.25 for chicken, \$1.03 for soy protein concentrate, and

\$1.00 for textured vegetable protein [textured soy flour].  
Address: Archer Daniels Midland Co., P.O. Box 1470,  
Decatur, Illinois.

884. Sleeter, R.T. 1981. Effects of processing quality of soybean oil. *J. of the American Oil Chemists' Society* 58(3):239-46. March. [49 ref]

• **Summary:** Tables: (1) Relationship between amount of soybean damage vs. free fatty acid composition. (2) Fatty acid distribution as a function of triglyceride position. (3) Relationship of free fatty acid content as a function of processing step. (4) Mono- and diglyceride content of soybean oil vs. degree of processing. (5) Phosphorus content of soybean oil as a function of processing step.

(6) Relationship of phosphorus, magnesium and calcium content of soybean oils degummed at various pH values. (7) Tocopherol content at various stages of processing. (8) Effect of processing step on sterol and squalene content. (9) Effect of degumming on sterol content. (10) Summary of the effect of processing steps on the chlorophyll content.

(11) Effect of pH and amount of bleaching earths on color factors. (12) Effect of processing step on nitrogen content. (13) Amount of trace minerals which lower the keeping time of lard by one-half at 208°F. (14) Amount of some volatile oxidation products in relation to metal content. (15) Correlation of trace copper and iron as a function of processing step.

(16) Toxic trace elements as a function of processing step. (17) Peroxide value variation resulting from increased bleaching time. (18) Fatty acid content of hydrogenated soybean oils. (19) Comparison of positional isomerism of two hydrogenated soybean oils (nickel catalyzed). (20) Fatty acid composition of nickel-catalyzed, hydrogenated soybean oil.

(21) Effect of operation during hydrogenation on the resultant oil. (22) Effects of processing step on residual pesticide level. The pesticides are: Aldrin, Dieldrin, beta-BHC, ppi DDE, pp DDT, PCB. (23) Effect of processing step on added antioxidants. Address: Archer Daniels Midland, Decatur, Illinois.

885. Strayer, George M. 1981. Re: History of soybeans in America and of the American Soybean Assoc. Letter to William Shurtleff at Soyfoods Center, April 8—in reply to inquiry. 2 p. Typed, on letterhead.

• **Summary:** “In the late 1930’s several railroads sponsored not only exhibit cars but soybean trains. For instance, the Illinois Central Railroad sponsored a soybean train which would visit towns along the Illinois Central line, inviting people to come into the train, see the exhibits, see motion pictures and hear speeches. The Chicago Great Western Railroad and the Milwaukee Railroad also sponsored soybean trains. Normally there were two or three or four exhibit cars plus a car used for showing motion pictures and

a car where the speeches were delivered and the discussions held. These soybean trains were quite a factor in popularizing soybeans in those early days. The railroads, of course, were looking toward the ultimate revenue they might get from hauling the soybeans to the processing plants and hauling the oil and meal to the ultimate users, as well as viewing it from the standpoint of the general welfare of the communities involved and therefore the welfare of the railroads.”

Glen McIlroy, a farm manager in Irwin, Ohio, was one of the strong characters in the early days of Strayer’s association with the American Soybean Association (ASA).

“During the war years soy flour was manufactured in rather large quantities for the Army. In ASA we had been able to obtain a copy of a German army Soya cookbook, distributed to all chefs and cooks in the German army. It gave some very extensive directions on the use of soy flour in increasing protein content of many of the dishes served to the German army. This intense interest in soy flour was reflected in this country, and several companies started manufacturing, packaging and merchandising soy flour in consumer sized packages. The Honeymead Company, the Staley Company, Archer Daniels Midland all manufactured and merchandised soy flour in consumer sized packages during and immediately following the war years. It was this interest in possible use and promotion of soy flour which was responsible for the organization of the Soy Flour Association in 1939.

“Shortly after World War II animal proteins became much more plentiful and much cheaper in price, and consumer size packaging of soy flour largely passed out of the picture and has never regained its prominence, except through the health food stores.

“Jack Cartter and I were the two members of ECA Technical Assistance Team No. 1. This was the first technical assistance team sent outside the United States under the Marshall Plan. Our mission was to study the possibilities of soybean production in the northern European countries, and particularly the possible expanded use of soybeans as a source of protein in human nutrition. Prior to our going over in September of 1949 about 30 varieties of soybeans produced in the United States had been sent to a number of points in Europe, had been planted there, and we visited those trial plots. We also visited oil milling plants which were equipped to handle soybeans, and we visited with people in France, Holland, Germany and Sweden who were doing breeding work on soybeans. We wrote a report submitted to the Department of State, under whom ECA was administered, summarizing our findings. Basically, it was our belief that soybean production could never be a major factor in the northern European countries because of the climatic conditions there. However, we did return firmly convinced that there was a huge market for soy oil and for soy protein in many of those countries. Those findings have been brought out by the tremendous increase in sales of soybeans,

soybean oil and soybean meal into the European countries.

“After the work which I did in Japan in 1955 I was asked by USDA to go to Europe to do a similar study on market potentials. I visited nine countries of northern Europe on this study, and came back convinced that some countries offered markets for U.S. soybeans, others offered markets for U.S. soybean meal and protein, and still others offered markets for U.S. soybean oil. I came back convinced that the job was too big for the American Soybean Association as it was then constituted, so I arranged for a meeting of the Board of Directors of the American Soybean Association with the Board of Directors of the National Soybean Processors Association. Out of that meeting came the Soybean Council of America, which carried on the work in the European countries starting in 1957. In countries such as Italy and Spain, where olive oil dominated the oil markets, we set up programs to introduce high quality soybean oil. In Germany we set up a program designed to introduce soybean oil into margarine production. We also set up programs in Germany, Italy, France and the Netherlands to promote the use of soybean meal in livestock feeding. Working with the Foreign Agricultural Service, the promotional work was carried out in the European countries by the Soybean Council, of which Howard Roach was president and I served as executive director. We recognized that through a long period of time there was little likelihood of an organization made up of soybean processors and soybean producers continuing its work, but we were able to convince the processors that they, too, had a stake in the overseas markets and for a period of years they did participate extensively. However, we could see the handwriting on the wall and it was for this reason that in the early 1960’s we started the campaign to pass legislation in the various states which would allow the soybean check-off. When funds from growers became available in some quantity the Soybean Council folded and was replaced.” Address: President, Agricultural Exports, Inc., P.O. Box 266, Hudson, Iowa 50643. Phone: 319-988-4593.

886. Huang, Timothy. 1981. Early work with soyfoods distribution and the Yellow Bean deli in Detroit (Interview). Conducted by William Shurtleff of Soyfoods Center, April 9. 1 p. transcript.

• **Summary:** Timothy started a soyfoods marketing and distribution company called Yellow Bean Trading Co. in Detroit in about Sept. 1978. His first products were Soy Plant products from Ann Arbor, sprouts, TVP and soy flour (from Farm Foods), and soyfoods books. In March 1979 he and Carol Ann, his wife, started a soyfoods deli named Yellow Bean Vegetarian Foods at 15309 Mack Ave. in Detroit. They made 3 types of tofu pies (carob, cocoa, peanut butter) and a bulk tofu salad [like an eggless egg salad]. He was selling these 2 products to 25 accounts by summer 1979. Address: Detroit, Michigan.

887. Worthy, Ford S. 1981. The 500: The *Fortune* directory of the largest industrial corporations. *Fortune* 103(9):322-47. May 4.

• **Summary:** Companies are ranked by sales. Soy-related companies include: Ralston Purina (St. Louis, Missouri) is No. 72 with \$4,886 million in sales. Land O’Lakes (Minneapolis, Minnesota) is No. 109 with \$3,304 million. Archer-Daniels-Midland (Decatur, Illinois) is No. 139 with \$2,802 million. Central Soya (Fort Wayne, Indiana) is No. 207 with \$1,744 million. And A.E. Staley Mfg Co. (Decatur, Illinois) is No. 218 with \$1,656 million in sales.

Note: Cargill is not listed because it is privately owned. In 1981 Cargill’s sales were about \$12,000 million a year. Exxon was No. 1 on the Fortune 500 with \$103,142 million in sales. Mobil was No. 2 and General Motors was No. 3.

888. Shurtleff, William. 1981. Analysis of the U.S. and Western world tofu industry. Lafayette, California: Soyfoods Center. 1 p. May 17. Unpublished typescript.

• **Summary:** In this 1-page summary, prepared for Kikkoman Corporation, a table gives the following statistics for the years 1979, 1980, and 1981: Number of tofu manufacturers in the USA (120, 145, 159), Canada (7, 14, 19), other non-Asia, total. Raw soybeans used (tons/year) in USA. Percentage of total raw soybeans used for all soyfoods in the USA. Yield (pounds of tofu made from 1 pound of soybeans) (2.5). Tons of tofu produced in USA (16,250, 20,500, 26,000). Wholesale value (million dollars) (12.0, 17.5, 25.0). Retail value (million dollars) (23.2, 33.9, 48.5). Number of production employees (602, 759, 965).

Notes: The largest food uses of soybeans in the USA in 1981 are: Soy flour and grits (defatted) 52.6% (of all soybeans used), textured soy flour (incl. TVP) 19.7%, soy protein isolates 16.9%, soy protein concentrates 7.7%, soy sauce 1.2%, tofu 0.8%, soymilk and dairylike products 0.6%.

Estimates of regional markets for tofu: Largest market—California. Second largest—East Coast from Massachusetts to Maryland. Third largest—Pacific Northwest. Fourth largest—Northern Midwest (Wisconsin, Michigan, Illinois, Minnesota, Indiana).

Addresses of tofu manufacturers is included. Address: The Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

889. ADM Foods. 1981. Wouldn’t you know that when ADM put their protein knowledge to isolates—they’d be the best (Ad). *Food Processing (Chicago)* 42(5):35-38. May.

• **Summary:** A four-page color ad. Photos show: (1) A fit man and woman riding a tandem bicycle. (2-3) The woman looking at a variety of food products, each of which contains Ardex isolates made by ADM. A sign on the wall reads “Protein knowledge sold here.” (4) The couple riding away on their bike, with a wicker shopping basket on the back rack

filled with foods.

ADM makes Ardex D, Ardex DHV, Ardex F, and Ardex SP-6—each with unique characteristics for different food applications. Address: Div. of Archer Daniels Midland Co., P.O. Box 1470, Decatur, Illinois 62525. Phone: 1-800-637-5850.

890. Andres, Cal. 1981. The versatile soybean: Supplies two necessary food components—protein and fats—plus wide range of functional attributes. *Food Processing (Chicago)* 42(5):142-44, 146, 150, 152, 154, 156, 158, 163. May.

• **Summary:** This article is in the section titled “Ingredients handbook.” Contents: Introduction. Protein: Soy flour and grits (50-52% protein), soy protein concentrate (70% protein), and isolated soy protein (90% protein or more), extremely versatile, extruded products, spun soy protein made from isolated soy protein, functional benefits of using soy protein, analogs—products resembling conventional foods in appearance, color, flavor and texture (such as breakfast strips {bacon}, whipped toppings, and imitation cheese), soy protein makes excellent use of farmlands potential to produce protein, Gallup poll shows 71% of Americans view soy protein favorably, different types of soy flour.

Soy protein suppliers (tells what kinds of products are sold by each company): ADM Foods (Archer Daniels Midland), Cargill Protein Products Dept., Central Soya Co., Dairyland Products, Dawson Food Ingredients (Subsidiary of Dawson Mills), Farmland Agriservices, Inc. (formerly known as Far-Mar-Co., Inc.), Food Ingredients, Inc. (the U.S. “sales representative of a full-fat soy-protein flour produced in Germany), Griffith Laboratories, Kraft Foods (isolates), Lauhoff Grain Co. (soy flours and textured soy flour), Ralston Purina (regular isolates, “blends of isolated soy proteins plus other ingredients such as dairy products.” “Structured isolated soy proteins are available as a fiber and as a granular product. The fiber is the frozen, hydrated form and is retort-stable with no degradation of fiber. Texture is similar to that of muscle fiber”), A.E. Staley Manufacturing Co. (The Protein People; soy flours and textured soy flours, soy protein concentrates, whipping proteins, hydrolyzed vegetable proteins), Food Protein Council (Washington, DC; has two brochures).

Soybean oil. Suppliers: Capital City Products Co. (Div. of Stokley Van Camp, Inc.), Durkee Foods (Div. of SCM Corp.), Humco Products (Div. of Kraft, Inc.), A.E. Staley.

Lecithin. Lecithin suppliers: Ross and Rowe, Inc. (Div. of ADM; regular and granulated lecithin), Central Soya, A.E. Staley. On the last page is given the full name and address of each supplier mentioned in the article.

Photos in the article show the cover of the following brochures, each available from one supplier: (1) ADM Foods: “Look where soybeans go.” (2) Central Soya Co.: “Soy flours & soy grits.” (3) Food Protein Council: “Vegetable protein: Products and the future.” (4) Kraft: “The

new soy on the block.” (5) Ralston Purina: “Purina proteins: Product information.” (6) A.E. Staley: “The protein people.” (7) Food Protein Council: “Soy protein: Improving our food system.” (8) ADM: “Food oils.” (9) Capital City Products: “A complete line...” (9) Staley: “Refined oils.” (10) Ross & Rowe, Inc.: “Soybean lecithin: Yelkin T,...” (11) Central Soya Co.: “Lecithin from Central Soya naturally.” (12) Ralston Purina Co.: “Nutritional aspects of Ralston Purina isolated soy protein.” Address: Senior Associate Editor.

891. **Product Name:** Full-Fat NutriBits (Full-fat Textured Soy Flour).

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** Decatur, Illinois.

**Date of Introduction:** 1981 May.

**New Product—Documentation:** Processed Prepared Foods. 1981. May. p. 107. “Soy extended spread in 2 forms.” These full-fat soy flour particles, probably extruded soy flour, can be used as a peanut butter extender.

892. *Food Engineering*. 1981. Soy’s answer to peanut shortage. 53(5):128-29. May.

• **Summary:** A peanut spread (not peanut butter) has been developed by ADM. It contains specially processed Nutrisoy bits, and comes in two types—smooth, containing 40% peanuts, and a crunch type containing 45% peanuts. “To the non-expert, the peanut spread developed by ADM is virtually the same as peanut butter...”

893. *Processed Prepared Foods*. 1981. Soy extended peanut spread in two forms [with NutriBits]. May. p. 107.

• **Summary:** “NutriBits are a full fat soy particle that can be roasted with peanuts or added prior to grinding.” Made by ADM, they are probably nuggets of extruded full-fat soy flour. They can replace 55-60% of the peanuts in peanut butter. “ADM’s smooth style peanut spread contains 40% peanuts, while crunchy style contains 45% peanuts. The peanut spreads cost about \$0.45 less per lb than peanut butter, based on the market price of peanuts in late March 1981.”

“Government regulations require that peanut spreads be nutritionally equivalent to, or better than, peanut butter.” Address: Chicago.

894. ADM—Archer Daniels Midland Co. 1981. We unlocked a 5,000 year old secret of the soybean (Ad). *Soya Bluebook*. p. 31. June.

• **Summary:** In the top half of this full-page ad, an illustration shows a curved row of soybeans, each one larger as it approaches the foreground. The nearest and largest one is cut vertically into halves, which are joined (as with an invisible hinge) at the back. On the right half is a raised die of the letters TVP; on the left half is the sunken impression made by that die. The tag-line at the bottom of the page:

“Using America’s abundance to solve the world’s needs.”

The text: “5,000 years. That’s approximately how long the soybean has been cultivated by man. And all that time the soybean possessed the capability to provide life giving protein to people all over the world.

“But the vast potential of the soybean’s protein contribution was to remain largely untapped [outside of East Asia], until ADM scientists developed and perfected TVP Brand textured vegetable protein. TVP put the soybean on family tables everywhere in America and around the world.

“And our research and processing developments have brought about the most extensive variety of soybean oil, lecithin, soybean meal, and upgraded soy protein products available today.”

Note 1. In the *Soya Bluebook*, in the section on “Soyfood Manufacturers,” under “Soy flour, protein concentrates & isolates” the entry for ADM (p. 61) shows that the company makes: “Nutrisoy edible soy flours and grits, ADM soybean brew flakes, and soy protein concentrates.” They do *not* yet make or sell soy protein isolates.

Note 2. This exact same ad appears in the *Soya Bluebook* in 1982 (p. 4). Address: World Headquarters: Decatur, Illinois 62525. Phone: 217-424-5200.

895. Cadwallader, Sharon. 1981. Naturally. *Washington Post*. July 9. p. E14.

• **Summary:** “By now, most North Americans have some notion of what it means to be a vegetarian, but I think a remainder column is in order now and then.” Gives a brief history of vegetarianism starting with the Bible (Genesis 1:29), and the Greeks, Romans, followed by some of the major reasons that people become vegetarians, and her favorite books on the subject—*Diet for a Small Planet*, by Frances Moore Lappe, and *Laurel’s Kitchen*, by Laurel Robertson and Carol Flinders.

“I think that the quality of our future depends on rethinking our food habits. Right now there is a great deal of research going on in the field of soy foods.” Contains a recipe for Lasagna using “1½ cups textured vegetable protein (TVP), available in health food stores.”

896. Hooten, Dan. 1981. Dawson Mills’ protein analog plant. Protein prices. Isolate markets. Functional properties desired by industry (Interview). *SoyaScan Notes*. Aug. 17. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.

• **Summary:** Dawson Mills invested \$11 million in their protein analog plant. It was intended to have a capacity of 9.5 million lb/year but was actually capable of producing only about 400,000 lb/month or 4.8 million lb/year.

Soy protein prices (per lb): Flours and grits: \$0.14. Concentrates: \$0.31-33. Isolates: \$1.02—from Ralston Purina and Grain Processing Corp. \$0.90—from ADM. Note that ADM is working off inventory that they have accumulated

since start-up. A number of Central Soya’s former isolate customers have gone to other suppliers.

Isolate markets: (1) Health foods. (2) Infant formulas—Some doctors go to soy formulas directly to avoid potential allergy problems with cow’s milk. (3) Milk products. (4) Meat emulsions—In Europe fat, water and isolate are emulsified and then frozen. This emulsion is later mixed with meat in the preparation of products that are “stuffed into casings or cans.”

Japan is still a net importer (2-3 million lb/yr) of isolates.

Functional properties desired by industry: (1) Film forming ability—with strength. (2) Casein-like properties (the imitation cheese market is now about 150 million lb—uses 40 million lb of casein). Casein sells for \$1.35-\$1.40/lb. Address: Dawson Food Ingredients.

897. Lenetsky, Mark. 1981. Short course on soyfoods: What they are, how they are used. *Health Foods Business*. Aug. p. 46, 49-50, 52, 53. [2 ref]

• **Summary:** Contents: Introduction. Tofu or “soy cheese.” The many uses of tofu. Makings of miso. Tamari—by any name. Tempting tempeh. ‘High tech’ approach (TVP). Its a joy to cook with soy: Selected recipes from suppliers. Address: Nutritional consultant, Applegate Natural Foods, Tigard, Oregon.

898. Wallace, Dick. 1981. Re: History of ADM. Questions answered on Soyfoods Center letterhead (dated 11 Sept. 1981) and returned to SC on 3 Dec. 1981. 2 p.

• **Summary:** The largest ADM crushing plant at Decatur has a capacity of 4,000 tons of soybeans a day. ADM Foods was formed in 1980. British Arkady first produced TVP in 1965, and was acquired by ADM in 1974.

Dates when ADM first started producing certain soy products: Edible soy oils, 1930; Food grade lecithin, June 1934; Full-fat soy flour, 1935 (still producing); Cereal soy blends such as CSM, WSB, 1965-66 (CSM production has been discontinued); Soy protein concentrate, 1976; Textured soy concentrate, 1977; Bacon-flavored TVP, 1970.

Midland Linseed Oil Co. was incorporated in 1902, then reincorporated as Midland Linseed Products Co. in 1912. William O. Goodrich Co., located in Milwaukee, Wisconsin, was acquired by ADM in 1928. Dr. J. Hayward began employment with ADM in Sept. 1935 and worked as Director of Nutritional Research until 1956, when the position of Director of Nutrition was created for him. He worked in this position until the late 1950s. In the early 1960s he worked as a consultant for the company. On 1 July 1957 ADM acquired a soy protein isolate plant from The Drackett Co.

Note: That plant, located in Evendale [near Cincinnati] Ohio, made only industrial (not edible) soy protein isolates. Address: Decatur, Illinois.

899. Dunn, John R. 1981. U.S. cooperative soybean processors (Interview). Conducted by William Shurtleff of Soyfoods Center, Sept. 15. 1 p. typescript. [1 ref]

• **Summary:** It is now generally agreed that ADM has passed Cargill as America's leading soybean crusher—but both companies have about the same crushing capacity. According to his best information, America's top 12 soybean crushers are (as of Oct. 1979): 1. ADM. 2. Cargill. 3. A.E. Staley. 4. Central Soya. 5. Bunge. 6. Ralston Purina. 7. Gold Kist. 8. Farmland Industries. 9. Continental Grain. 10. Riceland Foods. 11. Quincy Soybean. 12. Land O'Lakes. Other leading cooperative crushers, in descending order of size, are Honeymead Products, Agri Industries, Boone Valley Processing & Marketing Assoc., and Missouri Farmers Association. All of these companies use solvent extractors.

The top 4 firms own and operate 54.5% of the processing capacity. The next 4 control 20.6%, for an 8-firm total of 75.1%. The next 4 control 11.2%, for a 12 firm total of 86.3%. Bunge, which is based in Argentina, has moved up on the list through some recent acquisitions, including a plant in Mississippi in July from Gold Kist.

Concerning cooperatives, each regional co-op is taken as a unit. They operate completely independently of each other. So it is not accurate to think of the co-ops as a whole—although they do have some areas of cooperation with one another, e.g. export sales efforts and domestic processed product sales. They operate independently on procurement and processing. The total amount of soybeans crushed by the cooperatives is probably less than that crushed by ADM or Cargill. Address: USDA Agricultural Cooperative Service (ACS), Washington, DC 20250. Phone: 202-475-4929.

900. Bunge Corporation. 1981. Re: Confirmation that Jose Zilio and Henri deKerchove will visit the Northern Regional Research Center on Oct. 21. Letter to Mr. Joseph J. Rackis, Northern Regional Research Center, 1815 N. University Avenue, Peoria, Illinois 61604, Sept. 24. 1 p. Typed, without signature on letterhead.

• **Summary:** These two gentlemen, who are with Bunge's client Samrig in Porto Alegre, Brazil, are very involved with soya processing, production of isolated soy protein, TVP, etc. "The purpose of their visit is to discuss protein technology and marketing of products they manufacture." Address: One Chase Manhattan Plaza, New York, New York 10005. Phone: Cable Address: BUNGSA.

901. Shurtleff, William; Aoyagi, Akiko. 1981. History of Archer Daniels Midland Company (1929+). Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 9 p. Sept. Unpublished typescript. Available online at [www.soyinfocenter.com](http://www.soyinfocenter.com).

• **Summary:** [www.soyinfocenter.com/HSS/archer\\_daniels\\_midland.php](http://www.soyinfocenter.com/HSS/archer_daniels_midland.php)

A comprehensive history of the subject. Address: Lafayette, California. Phone: 415-283-2991.

902. Soyfoods Center; Soycrafters Assoc. of North America. 1981. Soyfoods production in America and the West (Report). Lafayette, California. 1 p. Sept.

• **Summary:** See next page. This full-page table contains statistics for the following soyfoods and soy ingredients: Low technology, traditional. Tofu & tofu products. Tempeh. Soymilk & soymilk products. Soy sauce, shoyu & tamari. Soynuts & soynut butter. Miso. Soy sprouts. Whole dry or mature soybeans. Whole soy flour & grits, full fat. Fermented soymilk. Fermented tofu. Fresh green soybeans. Roasted soy flour & soy coffee. Natto, thua nao & kinema. Yuba. Soy nuggets (Hamanatto, tou-ch'ih [Fermented black soybeans]). Soy delis and restaurants. Secondary soyfoods prod-distributors. Soyfoods marketer-distributors. Subtotal.

High technology, modern [soy ingredients]: Soy flour & grits, defatted. TSP / TVP (extruded soy flour). Soy protein concentrates. Soy protein isolates. Meat analogs (secondary products), Soy oil.

Subtotal: High tech. Total: Low tech & high tech.

This table has 12 columns with information about each soyfood. (1) Type of soyfood. (2-5) Number of manufacturers: USA, Canada, Other West, Total. (6-7) Raw soybeans used (tons / year): USA, % of total used. (8) Yield (lbs of food from 1 lb of soybeans). USA only—(9) Tons produced. (10) Wholesale value (million \$). (11) Retail value (million \$). (12) Number of employees.

Note 1. Total retail value in USA is \$998 million.

Note 2. The statistics for soy oil are incomplete. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

903. National Soybean Processors Association. 1981. Yearbook and trading rules 1981-1982. Washington, DC: National Soybean Processors Association. ii + 106 + A1-12. 23 cm. Spiral bound.

• **Summary:** On the cover (but not the title page) is written: Effective October 1, 1981. Issued annually to all members of the association. Contents: Constitution and by-laws. Officers and directors. Executive office. Members. Associate members. Standing committees. Trading rules on soybean meal (first adopted 18 Oct. 1933). Sales contract. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}), sampling of soybean meal {at origin} (automatic mechanic sampler, pneumatic probe sampler, probe sampler), sampling of soybean meal (at barge loading transfer facilities), official weighmaster application, semi-annual scale report, manufacturers' certification—Installation of automatic sampler (at barge loading transfer facility), semi-automatic sampler certification (at barge loading transfer facility), official referee chemists (meal). Soybean

meal export trading rules: Minimum blending procedures for export meal blended at ports, sampling of soybean meal (at vessel loading facilities), manufacturers certification—Installation of automatic sampler (at vessel loading facility), semi-automatic sampler certification (at vessel loading facility). Trading rules on soybean oil (first adopted 21 May 1930). Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, grading soybean oil for color (NSPA tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed), official weighmaster application, semi-annual scale report, official referee chemists (oil). Soybean oil export trading rules. Uniform soybean oil export contract. Foreign trade definitions.

The page titled National Soybean Processors Association (p. ii) states: "During the past crop year about 1,000,000,000 bushels of soybeans moved through processing plants of

NSPA's 24 member firms. Approximately 50 percent of America's 1.8 billion-bushel soybean crop was bought and processed by NSPA members. Exporters account for another 36 percent of the crop, and the remainder [14%] is returned to farms for seed, feed, and residuals." Also discusses industry programs, soybean research, and international market development."

The section on officers, executive committee, and board of directors (p. 7-8) gives the name, company affiliation, and phone number of each person. Officers—Chairman: Gaylord O Coan, Gold Kist, Inc. Vice Chairman: Edward J. Cordes, Ralston Purina Co., President: Sheldon J. Hauck. Secretary: Donald H. Levinworth, Cargill, Inc. Treasurer: Lowell K. Rasmussen, Honeymead Products Co. Immediate past chairman: C. Lockwood Marine, Central Soya Co., Inc.

Executive committee: Richard G. Rypkema ('83), Agri Industries. Charles Bayless ('83), Archer Daniels Midland Co. David C. Thompson ('82), Bunge Corporation. Harold H. Leavenworth, Cargill, Inc. C. Lockwood Marine, Central Soya Co., Inc. Gaylord O. Coan, Gold Kist, Inc. Lowell K.

Rasmussen, Honeymead Products Co. Kermit F. Head ('82), Missouri Farmers Assn.–Grain Div. Sewell L. Spedden ('82), Perdue, Incorporated. Edward J. Cordes, Ralston Purina Co.

Board of directors (alphabetically by company; each member company has one representative on the board): Richard G. Rypkema, Agri Industries. Thomas H. Wolfe, Anderson, Clayton & Co. Sheldon J. Hauck. Director, Public Affairs: Murray C. Keene. Director, Regulatory Affairs: Rhond R. Roth. Administrative Asst.: Alicia B. Rickman. National Soybean Crop Improvement Council: Robert W. Judd, Managing Director. General counsel: Elroy H. Wolff, Sidley & Austin. Special counsel: Julian B. Heron, Jr., Heron, Haggart, Ford, Burchette & Ruckert.

Members (listed alphabetically by company; within each company, first the name of the official Association representative {who is on the Board}, followed by the other personal members listed alphabetically by surname. For example, Archer Daniels Midland Co., the company with the most personal members, has 23. After the name of each personal member is given with his address and phone number. In the listing below, the number of personal members is shown in parentheses after the name of each company, followed by city and state of the various locations): Agri Industries–Soybean processing division (2); Des Moines, Iowa. Anderson, Clayton & Co. (4); Phoenix, Arizona, Jackson, Mississippi, Houston, Texas. Archer Daniels Midland Co. (23); Archer Daniels Midland Co. (26); Little Rock, Arkansas; Augusta, Georgia; Decatur, Illinois; Galesburg, Illinois; Granite City, Illinois; Fredonia, Kansas; Mankato, Minnesota; Red Wing, Minnesota; Kansas City, Missouri; Clarksdale, Mississippi; Fremont, Nebraska; Lincoln, Nebraska; Kershaw, South Carolina; Memphis, Tennessee. Boone Valley Coop. Processing Assn. (3); Eagle Grove, Iowa. Bunge Corporation (9); Cairo, Illinois; Danville, Illinois; Logansport, Indiana; Emporia, Kansas; Marks, Mississippi; New York City, New York. Cargill, Inc. (20); Osceola, Arkansas; Gainesville, Georgia; Cedar Rapids, Iowa; Des Moines, Iowa; Sioux City, Iowa; Washington, Iowa; Chicago, Illinois; Wichita, Kansas; Burnsville, Minnesota; Minneapolis, Minnesota; Fayetteville, North Carolina; Sidney, Ohio; Memphis, Tennessee; Chesapeake, Virginia. Central Soya Co., Inc. (11); Gibson City, Illinois; Decatur, Indiana; Fort Wayne, Indiana; Indianapolis, Indiana; Belmond, Iowa; Bellevue, Ohio; Marion, Ohio; Delphos, Ohio; Chattanooga, Tennessee. Continental Grain Co. (11); Guntersville, Alabama; Chicago, Illinois; Taylorville, Illinois; New York City, New York; Cameron, South Carolina. Farmland Industries / Far Mar Co (4); Van Buren, Arkansas; Sergeant Bluff, Iowa; Hutchinson, Kansas; St. Joseph, Missouri. Gold Kist Inc. (6); Decatur, Alabama; Atlanta, Georgia; Valdosta, Georgia. Honeymead Products Co. (3); Mankato, Minnesota. Land O'Lakes, Inc. (5); Fort Dodge, Iowa; Sheldon, Iowa; Dawson, Minnesota; Minneapolis, Minnesota. Missouri Farmers Assn.–Grain Div. (6); Mexico, Missouri. Owensboro Grain Co., Inc. (2); Owensboro, Kentucky. Perdue Incorporated (2); Salisbury, Maryland. Planters Oil Mill, Inc. (2); Rocky Mount, North Carolina. Quincy Soybean Co. (4); Quincy, Illinois. Ralston Purina Co. (8); Bloomington, Illinois; Lafayette, Indiana; Iowa Falls, Iowa; Louisville, Kentucky;

Kansas City, Missouri; St. Louis, Missouri; Raleigh, North Carolina; Memphis, Tennessee. Riceland Foods, Inc. (9); Helena, Arkansas; Stuttgart, Arkansas. Sherman Oil Mill (1); Fort Worth, Texas. Southern Soya Corp. (1); Estill, South Carolina. A.E. Staley Manufacturing Co. (7); Decatur, Illinois. Townsend's Inc. (2); Millsboro, Delaware. West Tennessee Soya Mill, Inc. (1); Tiptonville, Tennessee.

Associate Members: ACLI Soya Co, White Plains, New York. Anderson Clayton Foods, Dallas, Texas. Balfour MacClaine International, Ltd., New York City, New York. Best Foods, a Unit of CPC International Inc., Englewood Cliffs, New Jersey. Canadian Vegetable Oil Processing—Div. of Canada Packers Inc., Hamilton, Ontario, Canada. Standing committees: For each committee, the function of the committee, the names of all members (with the chairman designated), with the company and company address of each are given—Export development committee, Crop Improvement Council. Meal trading rules. Oil trading rules. Safety, health, and loss prevention. Technical. Address: 1800 M. St., N.W., Washington, DC 20036. Phone: 202/452-8040.

904. Pink, Dave. 1981. Oilseed processor ready to reap area advantages. *Windsor Star (Essex County, Ontario, Canada)*. Nov. 9. p. 25.

• **Summary:** Maple Leaf Monarch (MLM) Company's Windsor plant opened for business in July 1979 with a capacity to crush 360,000 tonnes of soybeans each year and up to 95,000 tonnes "of the softer oilseeds including rapeseed (or canola), flax, and sunflower seeds." In Toronto the company could crush only 90,000 tonnes of soybeans and 50,000 tonnes of flax. The company was hoping that their new oilseed crushing plant in Windsor, in Canada's soybean heartland, would give it an edge over the competition. But after two years in production, company president William Milliken says a Windsor address hasn't made much difference—so far." Local soybean production hasn't grown much; MLM depends on the USA for 40% of its soybean supply. But Milliken is optimistic that the move will

eventually pay off. MLM has the best of both worlds. First, a 42-acre site on the Detroit River in Windsor's west end, gives access to a deep water port. Second, the surrounding counties of Essex, Kent, and Lambdon, are Canada's major soybean producing areas.

MLM, which employs about 115 (mostly skilled tradesmen) is owned equally by two parent companies: (1) Maple Leaf Mills, a division of Miami, Florida-based Norin Corp. which is now controlled by Canadian Pacific Ltd., and (2) Lever Bros., a division of the giant European multi-national Unilever Corp. MLM's only other Ontario competitor, Victory Soya Mills, has announced no plans to crush rapeseed. MLM supplies about 36% of Eastern Canadian soy products from its \$60 million Windsor plant—slightly behind Victory Soya Mills and slightly ahead of Canada Packers. MLM had sales of about \$200 million in 1980. These three Eastern Canada crushers combined were able to supply just 80% of Eastern Canada's one million tonne soybean meal market last year, with the balance coming from U.S. firms. The three crushers supplied 172,000 tonnes of soybean oil last year, including small amounts exported to North Africa and the Caribbean. Only 4,000 tonnes of U.S. soybean oil had to be imported into Eastern Canada. But the three Eastern crushers can't compete with U.S. companies for the Western Canadian market; Minnesota crushers can offer lower prices. MLM will continue to run 24 hours a day, 7 days a week, even though there is a soybean oil surplus.

A photo shows William Milliken in a hard hat, standing outside the MLM mill. Age 60, he is a 35-year veteran of the oil seeds business.

Note: This is the earliest document seen (Jan. 2005) that mentions "canola" together with soybeans. The word "Canola" is derived from CANada + Oil + LOw acid. Address: Star agriculture reporter.

905. Dunn, John R. 1981. Re: History of U.S. cooperative soybean processors. Letter to William Shurtleff at Soyfoods Center, Nov. 17—in reply to inquiry. 3 p. Typed, with signature. [2 ref]

• **Summary:** There are three basic organizational types for soybean plant cooperatives: (1) mills owned independently by single local cooperative associations, (2) mills owned by federated regional cooperatives which are, in turn, owned by local cooperatives, and (3) mills owned by centralized regional cooperatives, which are directly owned by farmer members. In reality, combinations of these three types are possible."

"Typically, the meal from cooperative soybean plants is sold either to cooperative feed mills (intra or inter-association sales) to non-cooperative feed mills, or to exporters. Very little meal is sold directly back to farmer owners.

"Most coop mills are not operated in direct conjunction

with local cooperative grain elevators, as you indicate in the text. This may have been the case in the 1940's perhaps, but since that time, mills have become more independently located, procuring soybeans from farmers, from several local elevators by truck, or from distant production regions by train.

"I believe that ADM is now the largest processor—slightly ahead of Cargill. I don't have good figures to back that, however, rather a growing consensus among industry experts.

"Since our study, Gold Kist has sold its plants in Marks, Mississippi, and Decatur, Alabama, to Bunge, dropping Gold Kist to a 15 rank and raising Bunge to 3rd. The net effect on total cooperative share of processing capacity was to lower it to about 17 percent.

"Finally, while ACS has worked closely with the cooperative processors over the years, it would probably be an overstatement to say that we have worked with them more than any other government agency—I just don't know on that one. The credit for cooperatives' success in soybeans accrues to cooperatives themselves, and what assistance we have provided pales by their accomplishment.

"The following table shows various cooperative soybean processors, where they have or have had mills, and when each mill started or was operated. (1) Gold Kist: Decatur, Alabama 1974-1981; Marks, Mississippi 1977-1981; Valdosta, Georgia 1968-present. (2) Farmland Industries: Van Buren, Arkansas 1960 [sic, Oct. 1959]; Sergeant Bluff, Iowa 1974 [sic, Aug. 1975]; St. Joseph, Missouri 1963 (Far-Mar-Co merger). (3) Riceland Foods: Helena, Arkansas 1965; Stuttgart, Arkansas 1958. (4) Land O'Lakes: Sheldon, Iowa 1970; Dawson, Minnesota 1980; Ft. Dodge, Iowa 1971. (5) Honeymead Products: Mankato, Minnesota 1960. (6) Agri Industries: Mason City, Iowa 1943; Manning, Iowa 1979 [Formerly North Iowa Cooperative Processing Assoc., managed by Glenn Pogeler from 1943-1964]. (7) Boone Valley Processing Association: Eagle Grove, Iowa 1943. (8) Missouri Farmers Association: Mexico, Missouri 1946."

On other subjects: Intrade was formed in 1968. Farmers Export Co. [FEC] started in 1968. SoyCot started exporting soybean products in 1979. Address: USDA Agricultural Cooperative Service (ACS), Washington, DC 20250. Phone: 202-475-4929.

906. Smith, Oak B. 1981. Re: Research—Wenger's accomplishments in the past 26 years. Letter to Joe Wenger, Lou Wenger, Don Wenger and Lavon Wenger at Wenger International Inc., Nov. 27. 8 p. Typed, on letterhead.

• **Summary:** I think we are observing an important development—"a technological revolution in food processing which may be the best and perhaps the only economic answer to the food and feed needs of the world which will see its population jump from four billion souls today to 7 billion by the year 2000."

"Extrusion cooking, of course, is but one small link in that food processing chain. I think, however, that we need to look at our own contributions towards solutions of major food problems, and hope that our past accomplishments will help point us towards equally important achievements in the future. What are those Wenger accomplishments in the past 26 years? [i.e., since 1957].

"1. We saw and understood the opportunity that extrusion cooking could give us as a company.

"2. We developed the first commercially available extrusion cooker, and it was all Wenger—we followed nobody else, copied no one, we learned to control our own (often irascible) machine.

"3. We learned how to apply moisture uniformly and how to develop temperatures with screws, with steamlocks, and with final dies.

"4. We learned the advantages of preconditioning with steam.

"5. We learned what gelatinization of starches and cereal flours was, and developed our own method of gelatinizing. We defined gelatinization, and we explained our method of gelatinizing fully and quickly to the industries of pet foods, breakfast cereals, snacks, starches, and industrial processing industries. We publicized the first article written about extrusion cooking and related that to pet foods, and we made this known around the world.

"6. We learned about the toxic constituents in oilseed and pulse proteins, and studied the methods by which heat labile growth inhibitors can be controlled in soybeans, in glandless cottonseeds, and in field beans and peas.

"7. We defined growth inhibitors, and proposed to the feed and food industries the possibilities of extrusion cooking of full fat soybeans."

"9. We explained the process for the extrusion cooking of full fat soybeans for control of growth inhibitors to U.S.D.A., and we were told by U.S.D.A. that our methods would never work in control of growth inhibitors in soy which (they said) needed to be cooked for 30 minutes at 220 degrees F. to control the growth inhibitors. U.S.D.A. did subsequently back down, but only after we had shown them the Purdue [Indiana] work.

"10. We explained to UNICEF the dual capability of controlling the growth inhibitors in soybeans, while simultaneously gelatinizing cereal flours, thus producing the first extrusion cooked, cereal based, protein enriched, mixed and fortified foods for children. We demonstrated that capability to UNICEF and (later) to U.S.D.A."

"11. We developed a good and simple method of dehulling soybeans.

"12. We developed a method of adding intermediate heads, screws, and steamlocks to provide additional dwell time in the extruder.

"13. We demonstrated to U.S.D.A. the first cooking of defatted soy proteins, thus producing the first chewy,

meat-like substance now called textured soy protein meat extenders. We, thereafter, demonstrated this capability to ADM, Swift, and to Ralston Purina and to others who have become the major producers of textured soy proteins around the world.

“14. We developed a secondary cooling and forming extruder, which in turn brought us into the production of third generation snacks, breakfast cereal flakes, and textured soy meat analogs.

“15. We demonstrated to the world our ability to make second generation snacks at unheard of capacities, and with a versatility which no competitor could approach.”

“21. We studied and mastered our ability to process foods at the maximum capacity per hour to a preselected degree of cook of any extrusion cooker manufacturer in the world. We did so with much less electrical energy and much less steam per ton of product. The economics of these achievements are probably the largest single reason why people buy Wenger equipment today, to the exclusion of others.

“22. We developed, perfected, and patented Uni-Tex, a product which is more like the structure, appearance, and mouthfeel of meat than any man-made product in the world. We have not done as well commercially with this product as it merits, but that is only because of inability to locate good meat-like flavors which will stand the temperatures of extrusion. We will find such flavors, and we will also apply flavors externally (which could not be used in soups or stews), but which could be used in casserole dishes, curries, ethnic foods, etc.

“23. We developed our first small machine in 1962, and managed to persuade the major food companies of the world to install the X-25 (and more recently the X-20) as a research and development machine in this country and abroad.”

“25. We have greatly improved our ability to produce, shape and continuously cook, shape and dry third generation snacks. This represents one of the best potentials for future business for us, in my opinion.

“27. We have mastered the processing arts of making dry expanded pet foods, soft moist, and semi-moist pet foods and fish foods. We have maintained our dominant position in pet foods, while developing dominant postures in the production of snacks, textured soy, breakfast cereals, instantized soups, and cereals processed for industrial purposes.” Address: [Chairman, Wenger International, Inc., 2400 Pershing Rd., Kansas City, Missouri]. Phone: (816) 221-5084.

907. Andres, Cal. 1981. Prototype products include higher protein, lower calorie, lower cost frozen desserts, milk based drinks. *Food Processing (Chicago)* 42(12):60-61. Nov.

• **Summary:** ADM Foods has used high fructose corn syrup (HFCS) and isolated soy protein to develop a new family of “dairy compatible” products that “will permit dairy managers to expand product lines and to improve equipment utilization

and operating costs. All products can be made under normal process conditions on existing equipment.” The two main product types are non-dairy frozen desserts and drinks. Ingredients, formulas, nutritional information, and cost savings are discussed.

Note: This is the earliest document seen that mentions either “high fructose corn syrup” or “HFCS” in connection with soy. Address: Senior Associate Editor.

908. Hannigan, Kevin J. 1981. Dressing oil mimics butter—but at much lower cost. *Food Engineering* 53(11):91. Nov. • **Summary:** Subtitle: “This soy-based product has all the advantages of butter for many uses. Even more, its pourable at room temperature and heat stable for 35 hours at 105°F.” Gold ‘N Flavor is a new soy-based liquid dressing developed by ADM Refined Oils, Decatur, Illinois. It can give popcorn that same rich aroma but at less cost than butter or butter substitutes. It contains lecithin, rich buttery flavors, and beta carotene for color. Some harder fractions are built into the oil via precision hydrogenation to give it the exact texture and stability desired.

909. Selliers, Francois de. 1981. Proposal for the financing of a systematic implementation of soya milk plants in the world. Brussels, Belgium: International Investment and Development Corp. 20 p. Nov. Unpublished manuscript. • **Summary:** This study, which is also said to be authored by the “Committee for the Promotion of Soya Milk Manufacturing in Low Income Countries ‘Comsoy,’” consists of several parts. (1) Proposal—11 pages, dated Oct. 1981. (2) Soja bean milk: Presentation for the state of Kenya—2 pages, dated 14 Dec. 1981. (3) Members of the Committee: Eleven who have formally accepted membership, one who has accepted membership in principle, and six who are being invited—1 page, dated 4 Nov. 1981. (4) Memorandum to members of Comsoy: Meetings of Mr. Deselliers; trips to the United States, October 4 to 8 and Oct. 17 to 29, 1981. Discusses persons met on the trip incl. at the IFC (International Finance Corporation), the World Bank, A.I.D., U.S. Department of Agriculture, UNICEF, Bristol-Myers Company, Archer Daniels Midland Co., Appropriate Technology—6 pages, dated 5 Nov. 1981. Address: Chairman, IIDC (International Investment & Development Corp.) Belgium, Belgium S.A., Rond-Point de l’Etoile 3, Boite 8, B-1050 Brussels, Belgium. Phone: (02) 640-68 00.

910. **Product Name:** Tofu, Tofu Burgers, Okara Cakes. **Manufacturer’s Name:** Regular Tofu Company Ltd. **Manufacturer’s Address:** 75 Chandos St., Leicester, LE2 1BU, England. Phone: (0533) 549839. **Date of Introduction:** 1981 December. **New Product—Documentation:** Form filled out by John Holt. ca. 1982. The company opened in Dec. 1981. He now uses 50-100 lb/day of dry soybeans to make regular tofu

(vacuum packed), tofu burgers, and okara cakes. Letter from John Holt. ca. May 1982. "Having used your book to learn how to make tofu, we now have a small business here making about 700 lb/week of tofu and about 2,500 tofu burgers per week. We give our okara to a pig farmer... We sell the nigari tofu vacuum packaged." Soyfoods Center Computerized Mailing List. 1982. Sept. 17. Owner: John Holt.

911. Soyfoods Center; Soycrafters Assn. of North America. 1981. Per capita use of soyfoods grows to nearly 9 lbs. in U.S. *Vegetarian Times* No. 52. Dec. p. 6.

• **Summary:** Based on a Sept. 1981 news release copyrighted by the Soyfoods Center and the Soycrafters Assoc. of North America, this summary of a market study gives for each major soyfood product the number of manufacturers in the USA, Canada, and worldwide. The tons/year of raw soybeans used. And (in the USA only) the tons of food produced, wholesale value, retail value, and number of employees.

In the USA, the number of manufacturers, tons of product produced, and retail value in million dollars are as follows for low technology, traditional: Tofu and tofu products (154, 22,700, \$50.4), tempeh (32, 494, \$1.78), soymilk and soymilk products (14, 148,000, \$118.0), soy sauce, shoyu & tamari (15, 54,837, \$203.0), soynuts and soynut butter (12, 2,750, \$4.6), miso (10, 2,000, \$4.8), soy sprouts (5, 360, \$0.25), etc. Subtotals for low-tech (284 manufacturers, 231,305 tons produced, \$392.25 retail value).

For high-technology, modern: Soy flour & grits, defatted (12, 400,000, \$190.4), textured, extruded soy flour (TSP/TVP) (2, 200,000, \$179.2), soy protein concentrates (3, 45,000, \$56.7), soy protein isolates (3, 45,000, \$126.0), meat analogs (secondary products) (6, 20,000, \$55,000). Subtotals for high-tech (26 manufacturers, 710,000 tons produced, \$615.6 retail value). Total low and high tech: 310 manufacturers, 941,305 tons produced, and \$1,007.85 million dollars.

The news release reads: "Americans are consuming an average of nearly nine pounds of foods made from soybeans per year, according to the Soycrafters Association of North America and the Soyfoods Center. The largest growth is occurring in the consumption of tofu (or beancurd) and tempeh (fermented patties).

"Traditional soyfoods, which include tofu, tempeh, soymilk, miso, soy sprouts, soynuts and soy sauce, account for \$390.7 million in annual retail sales. High technology, modern soy protein foods, which include soy flour and grits, soy protein isolates and concentrates, extruded soy flour and meat analogs, account for \$615.6 million in annual sales. This amounts to nearly \$1 billion worth of soy products consumed by Americans per year.

"Per capita consumption of the low technology foods is now at 2.13 lbs. per year, while consumption of the high

technology foods, which are generally used as ingredients in other products, is now at 6.45 lbs. These figures represent a steady growth in consumption of the large soybean crop produced annually; the greatest part of the crop goes to feed livestock. In 1980, for example, only 2.1% of the 60 million ton crop was used in America for food, which is believed to be the highest percentage ever; 57% of that crop, however, was exported.

"The director of the Soycrafters Association, Richard Leviton, and William Shurtleff of the Soyfoods Center have forecast the following trends for soyfoods use in the United States over the next five years:

"A steady growth in the use of tofu and tempeh by non-vegetarians.

"Growth in the use of convenient, prepared foods made from soyfoods.

"The Big Tempeh Boom" an upsurge in the use of fermented soy patties.

"Large corporations will start marketing secondary soyfoods (such as dips and dressings) via national advertising.

Also published in *New Age* (Jan. 1982, p. 17) under the title "Tofu Takes Over."

912. **Product Name:** [Textured Vegetable Protein].

**Manufacturer's Name:** ADM do Brasil TVP S.A. Technologia Em Vegetais E Proteinas S.A.

**Manufacturer's Address:** Cx. Postal 632, Campinas, SP, Brazil.

**Date of Introduction:** 1981.

**New Product-Documentation:** Soya Bluebook. 1981. p. 58.

913. **Product Name:** Arcon (Soy Protein Concentrates) [F, G, or S].

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** P.O. Box 1470, Decatur, IL 62525. Phone: (217) 424-5432.

**Date of Introduction:** 1981.

**New Product-Documentation:** Manufacturer's catalog, ADM Foods/Protein Specialties. 1981. *ADM edible products/81*. The section titled "Proteins" (p. 19) states that these three types of "soy protein concentrate products are manufactured by extraction of the water-soluble carbohydrates, minerals and other minor constituents, and inactivation of various enzymes.

"Acron F is an off-white, free flowing flour with a particle size such that 95% of the product passes through a 100 mesh screen.

"Acron G is available in off-white grit form consisting of irregularly shaped particles of such size that at least 90% is retained on a 100 mesh screen.

"Acron S is a highly functional soy protein concentrate that provides nutrition and versatility in many food

applications. Acron S is a white, free flowing flour with a particle size such that 95% of the product passes through a 100 mesh screen.”

**914. Product Name:** Arsoy Fiber (Dietary Fiber from Soybean Cotyledons).  
**Manufacturer’s Name:** Archer Daniels Midland Co.  
**Manufacturer’s Address:** Box 1470, Decatur, IL 62525.  
**Date of Introduction:** 1981.  
**Nutrition:** Moisture 7%, protein 20%, fat 1%, ash 4%, crude fiber 13%, other carbohydrates 55%, 100 calories/100 gm.  
**New Product–Documentation:** Manufacturer’s catalog. 1987. Total dietary fiber is 62-65%. For use in baked products, cereals, dietetic foods & beverages as a carrier for total fats, etc. ADM. 1987. “Look Where Soybeans Go.” p. 18. Total dietary fiber 60-65%, neutral detergent fiber 20-22%. Applications: Same as above. Talk with ADM sales dept. 1988. Sept. 15. This product was acquired at the time that ADM took over Central Soya’s isolate operation in Chicago. It is a by-product of soy protein isolate production.

**915. Product Name:** Soy Beverages [Raspberry, Banana, Strawberry].  
**Manufacturer’s Name:** British Arkady Co. Ltd.  
**Manufacturer’s Address:** Old Trafford, Manchester, M16 0NJ, England.  
**Date of Introduction:** 1981.  
**Ingredients:** Incl. soy protein isolates.  
**Wt/Vol., Packaging, Price:** Tetra Brik Aseptic carton.  
**How Stored:** Shelf stable; refrigerate after opening.  
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1981. March 4. Soya Bluebook. 1982. p. 63; 1986. p. 102. Now a subsidiary of Archer Daniels Midland Co.

Richard Leviton. 1983. Nov. p. 22. At Anuga, British Arkady received lots of interest in their isolate soymilk. It was sold in Tetra Pak in raspberry, banana, and strawberry flavors.

**916. Product Name:** Do-Soy (Full-Fat, Enzyme Active Soy Flour).  
**Manufacturer’s Name:** British Arkady Co. Ltd.  
**Manufacturer’s Address:** Old Trafford, Manchester, M16 0NJ, England.  
**Date of Introduction:** 1981.  
**Ingredients:** Soybeans.  
**Wt/Vol., Packaging, Price:** 25 kg multi-ply sacks with a protective moisture-proof layer.  
**How Stored:** Shelf stable.  
**Nutrition:** Protein 41.0%, oil 21.0%, carbohydrate 24.0%, crude fibre 2.5%, ash 4.5%, moisture 7.0%.  
**New Product–Documentation:** Soya Bluebook. 1981. p. 63. 1986. p. 85. Company is now an affiliate of Archer

Daniels Midland Co. Ltd. Product information sheet. 1983. Do-Soy has strong enzyme activity. Add it at 7.0% on flour weight and with it an equal weight of extra water.

**917. Product Name:** Arkasoy 50 (Toasted Defatted Soya Flour).  
**Manufacturer’s Name:** British Arkady Co. Ltd.  
**Manufacturer’s Address:** Old Trafford, Manchester, M16 0NJ, England.  
**Date of Introduction:** 1981.  
**Ingredients:** Soybeans.  
**Wt/Vol., Packaging, Price:** 25 kg multi-ply sacks with a protective moisture-proof layer.  
**How Stored:** Shelf stable.  
**Nutrition:** Protein 50.0%, oil 1.0%, carbohydrate 32.0%, crude fibre 3.0%, ash 6.0%, moisture 8.0%.  
**New Product–Documentation:** Soya Bluebook. 1981. p. 63. 1986. p. 85. Company is now an affiliate of Archer Daniels Midland Co. Ltd. Product information sheet and form filled out by P. Fitch of British Arkady. 1983. Arkasoy is a defatted soy flour. Enzyme activity is negative. P.E.R. is 2.1. Total plate count 20,000/gm (max.). *Escherichia coli* and *Salmonella* are absent.

**918. Product Name:** Arkady Grits 55 (Defatted Soya Grits).  
**Manufacturer’s Name:** British Arkady Co. Ltd.  
**Manufacturer’s Address:** Old Trafford, Manchester, M16 0NJ, England. Phone: 061-872-7161.  
**Date of Introduction:** 1981.  
**Ingredients:** Soybeans.  
**Wt/Vol., Packaging, Price:** 25 kg multi-ply sacks with a protective moisture-proof layer.  
**How Stored:** Shelf stable.  
**Nutrition:** Protein 55.0%, fat 1.0%, fibre 3.0%, ash 5.5%, moisture 9.0%.  
**New Product–Documentation:** Soya Bluebook. 1981. p. 63. 1986. p. 85. Company is now an affiliate of Archer Daniels Midland Co. Ltd. Product information sheet. 1983. Total plate count 20,000/gm (max.). Yeasts and moulds 200 per gm (max.). *Escherichia coli* and *Salmonella* are absent.

**919. Product Name:** Granose Soya Dessert (Vanilla, Chocolate, Strawberry, or Banana).  
**Manufacturer’s Name:** Granose Foods Ltd. (Marketer). Made in Germany by DE-VAU-GE.  
**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.  
**Date of Introduction:** 1981.  
**New Product–Documentation:** Lindner. 1987. The World Soymilk Market.  
 Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by DE-VAU-GE, was introduced in 1981 in Vanilla, Chocolate, Strawberry, and Banana flavors. The desserts were made by Alpro in Feb.

1984.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. The desserts were first made for Granose by Alpro in Feb. 1984 in Vanilla and Chocolate flavors.

920. **Product Name:** [S.I.O. Soy Flours].

**Manufacturer's Name:** S.I.O. Direction Proteines.

**Manufacturer's Address:** Chez Societe des Produits Excel, 26-36, Rue des Peupliers, 92000 Nanterre, France. Phone: (1) 785-69-01.

**Date of Introduction:** 1981.

**New Product–Documentation:** Soya Bluebook. 1981. p. 63. No contact person is given. See also SIO 1986. Note: This company seems to be related to Societe Industrielle des Oléagineux (SIO).

921. Daenzer, A. Walter. 1981. Soya-Eiweiss: Nahrung der Zukunft [Soy protein: Food of the future]. Zurich, Switzerland: Verlag Bewusstes Dasein. 84 p. Illust. No index. 21 cm. [Ger]

• **Summary:** Contents: 1. The long journey of a new basic food (TVP, or Soyameat). 2. How it came to Soyameat. 3. The significance of Soyameat for nutrition. 4. Meat or soy protein? (starts with a photo of 25 famous vegetarians). 5. Soy products, the Third World, and world food supplies in the future. 6. Tips and recipes.

This is Dänzer's first book, about textured soy protein (especially Soyana brand TVP), which his company sold. Born in 1947, he is a disciple of the Indian spiritual teacher, Sri Chinmoy. He wrote the book largely to promote his TVP, which he imported and packaged for the Swiss Reform Houses.

He calls TVP *Soya-Fleisch* or *Gefasertes Soya-Eiweiss*.

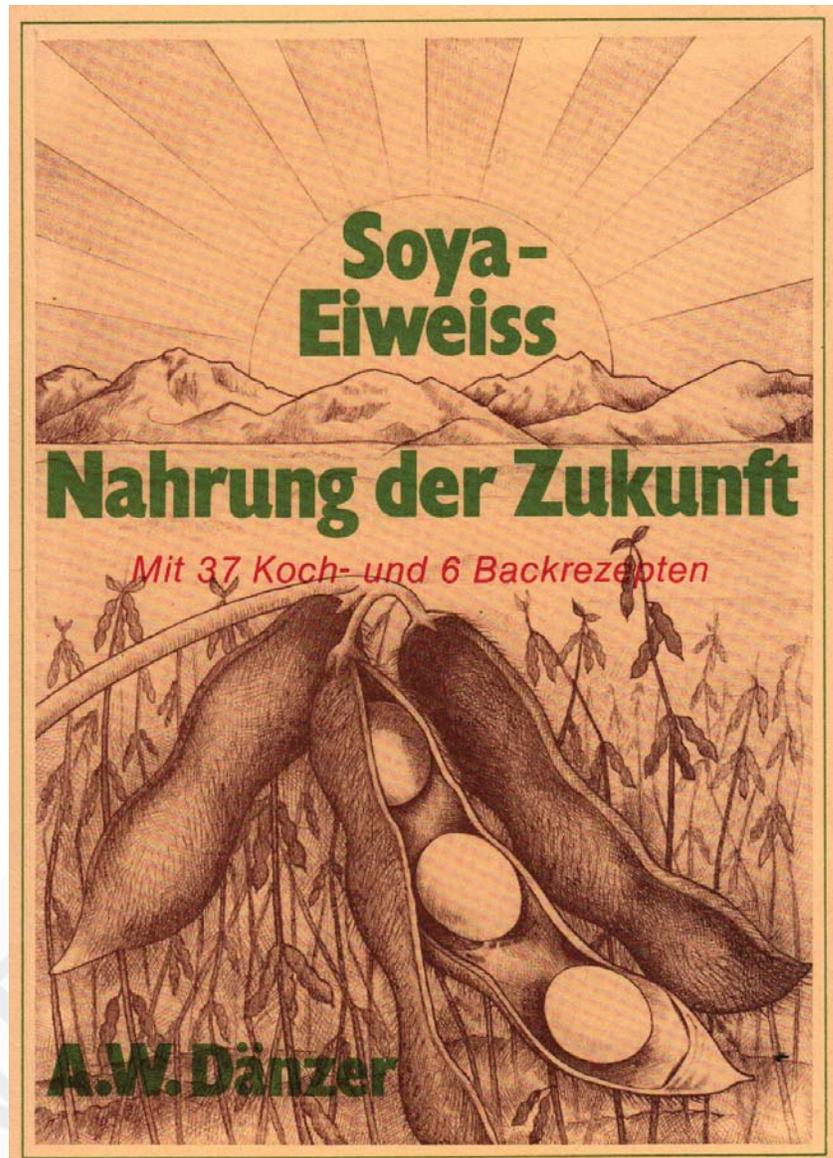

He writes a lot about the purines in meat, as well as the antibiotics, hormones, and cholesterol it contains.

By 1980, he says, there will be enough soy protein on earth to supply the protein needs of every person on earth. How can this be, when now it provides only 25%?

The future is determined by consumer decisions. You hold the future in your hand and in your pocketbook.

He prefers the word *Soya* to the more standard and widely used *Soja*.

Advantages of TVP: Good for food storage. Tasty. Can be prepared quickly. Nutritious. Versatile. Pure plant product with no antibiotics, hormones, cholesterol, or purines. Inexpensive. Abundant. Has a long shelf life at room

temperature.

He discusses *biologisch* [organically grown] and *Reformhäuser* (old-line health food stores). He emphasizes *biologische Soyabohnen* [organic soybeans] and *biologische Tofu* [organic tofu] made with nigari.

Living Farms was founded on 6 Jan. 1975.

Tofu makes all dishes lighter and easier to digest.

There is a need for solar-powered tofu shops in third-world countries.

He uses the nice word *Tofurei*. Who coined this German word and when?

He and his co-workers developed their own Swiss-style tofu recipes (100 recipes).

He has two brands: Soyana and Soyaquel. One is probably for supermarkets and one for Reformhäuser. Address: Soyana, Postfach 8039, CH-8002, Zurich, Switzerland.

922. Forster, Dorothy H. 1981. *Cooking with Tvp: Exciting, nutritious and economic dishes using textured soya protein*. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 96 p. Recipe index. 18 cm.

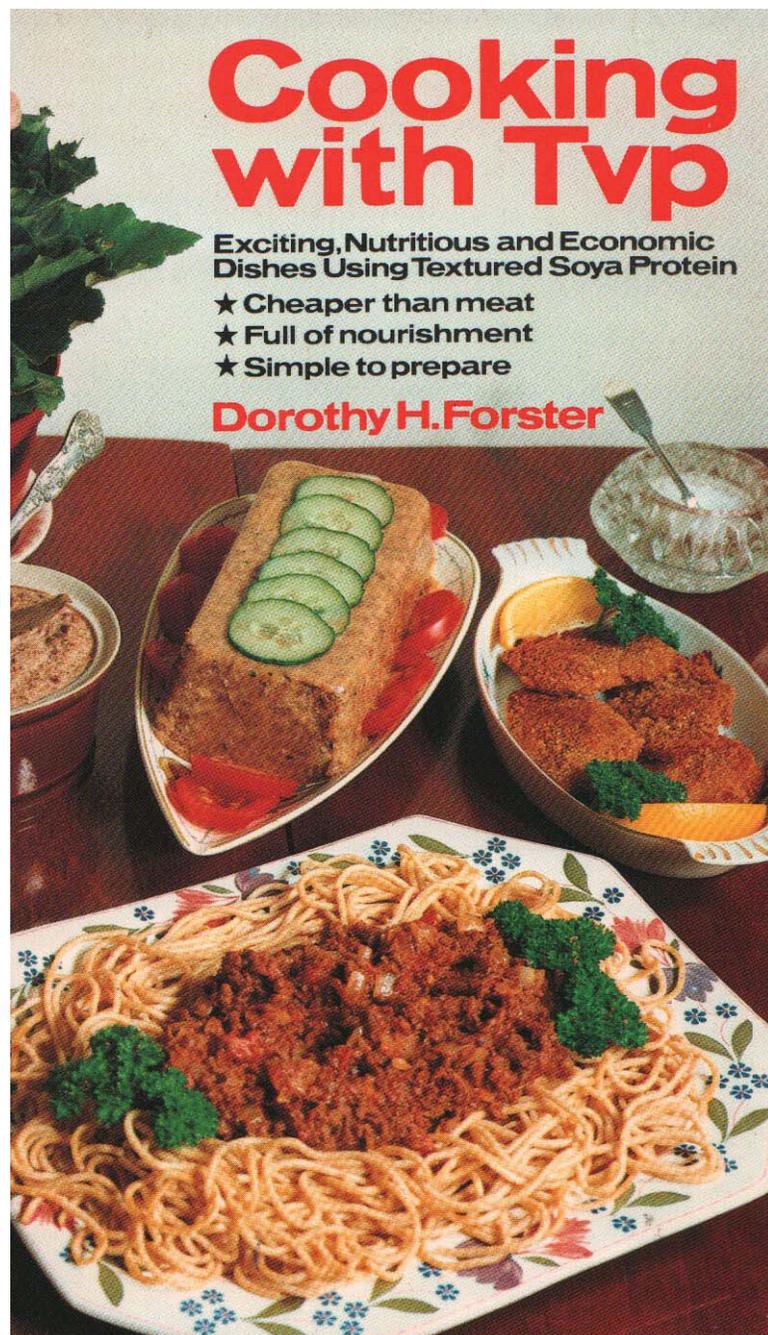

• **Summary:** Contents: Introduction. 1. Soups. 2. Sea food favorites [vegetarian, with dulse often used as a seasoning]. 3. Main meals with mince. 4. Main meals with chiplets. 5. Main meals with chunks. 6. Main meals with slices (or chunks). 7. Some dishes with soya grits.

Tvp is made from de-fatted soya flour which is extruded through a die, under pressure, to make the different sizes of

particles. "There are several varieties and we suggest you experiment until you find the type you are happy with... When reconstituted, Tvp can absorb twice its own weight in liquid. Thus 150g (5 oz) will be equal 450g (1 lb) of meat, when soaked."

Soya grits (with 2 recipes) and soya milk are also discussed. "There are several makes of soya milk on the market in either liquid or powder form as a useful alternative to milk." Miso is mentioned as a seasoning for TVP.

Suppliers of Tvp in the UK are: Lotus Foods Ltd. in London (formed by the author, Dorothy Foster), Direct Foods Limited in Petersfield, Hampshire (Proto-veg Tvp), Itona Products Ltd. in Wigan, Lancs., Life and Health Foods in Norwich, and Marigold Health Foods Ltd. in London (Vitpro Tvp). Address: England.

923. Francke, A. 1981. Plant proteins, the European experience. In: D.W. Stanley, E.D. Murray, and D.H. Lees, eds. 1981. *Utilization of Protein Resources*. Westport, CT: Food & Nutrition Press, Inc. 403 p. See p. 362-69. Chap. 19.

• **Summary:** Contents: Introduction. Vegetable protein sources. Production technology—soy. Application technology—soy. Market situation. Consumer acceptance. Legal acceptance. Conclusions.

"Unilever has played an active role in both the production and application of soy protein materials... In Europe the major source for the production of vegetable protein for human consumption is still the soybean..."

"Production of soy protein materials in Western Europe is concentrated in Denmark, The Netherlands and the United Kingdom. France and West Germany produce only small amounts... Some producers are U.S. firms (e.g. Cargill, ADM) or their European subsidiaries; others are European companies. Typical European producers are Aarhus Oliefabrik (Denmark), Unimills (The Netherlands), Spillers and British Soya Products (United Kingdom) and Edelsoy [Edelsoya?] (West Germany)..."

"Typical European producers of isolates are Oppenheimer (England) and Edelsoy (West Germany). Fibre spinning is still being studied, e.g. by Rhône Poulenc, France, although it has not made a real break-through. The protein department of Courtaulds (United Kingdom) who until recently, was the sole European manufacturer and supplier of spun soy fibres has been taken over by Mars..."

"The whole current range of soy protein materials is being used in Europe. The best information is available for the United Kingdom.

There, in 1972, 90% of the 45,000 tons of soy food ingredients used was accounted for by full-fat flour in bakery products and, to a lesser extent, in baby and health foods. Only 2,000 tons of soy materials, textured and non-textured flours and isolates, were used in meat products, mainly in institutional feeding and in the catering sector. This amount has increased to 5,000 tons in 1975. In 1977, the total consumption of soy materials amounted to 50,000 tons; thus no great change had occurred.” Address: Unilever Research Duiven, Zevenaar, The Netherlands.

924. Hoshijo, Kathy. 1981. *Kathy cooks... naturally*. The Self Sufficiency Assoc., P.O. Box 1122, Glendale, CA 91209. 497 p. Illust. Index. 28 cm.

• **Summary:** This excellent natural-foods, vegetarian cookbook, written with a nice balance of heart and mind, contains over 1,000 recipes—many written from an Hawaiian viewpoint. The lovely and talented author is the hostess of a popular TV series “Kathy’s Kitchen.” In the long chapter titled “Soybeans” (p. 349-92) is an introduction to the nutritional value of soybeans and soyfoods, plus many recipes for using and making the following at home: Whole dry soybeans (often cooked and mashed; 13 recipes), soy nuts (deep-fried or dry roasted), kinako (roasted soybean flour; homemade + 1 recipe), soy milk (homemade + 19 recipes), yuba (homemade + 11 recipes), okara (15 recipes), tofu (homemade + 50 recipes), frozen tofu (“Homemade TVP” + 7 recipes), miso (18 recipes). Address: Self-Sufficiency Assoc., 2525 South King St., Honolulu, Hawaii 96826, or P.O. Box 1122, Glendale, California 91209.

• **Summary:** Contains many interesting biographies, often based on the author’s first-hand knowledge. Contents: Section I: 1. A time to pause and reflect. 2. Dr. W.B. Morse. 3. The Cinderella crop of this century and some orchids long overdue. 4. First soybean crushing plant (Hull, England; Seattle, Washington; Elizabeth City, North Carolina). 5. George M. Strayer (Contains a good history of the American Soybean Association and Strayer’s role in it). 6. Ersel Walley. 7. Dr. Harry Miller. 8. Henry Ford. 9. Northern Regional Research Laboratory. 10. Dr. Reid Milner. 11. Soybeans in China. 12. The first combine harvesters, the western migration, and the passing of an era (a good history of combines in the USA from the 1850s to the present). 13. Prof. W. Ralph Nave (agricultural engineer, specializing in improving combine design for harvesting soybeans). 14. Soybean harvesting equipment.

Section II: 15. August Eugene Staley, Sr. 16. Eugene D. Funk, Sr. (and the Peoria Plan, p. 74). 17. Dale W. McMillen [of Central Soya]. 18. Jacob Hartz, Sr. 19. Archer-Daniels-Midland Company, Inc. 20. Jay Courtland Hackleman. 21.

Dr. Robert W. Howell. 22. Dr. W.O. Scott. 23. Program. 24. Crop improvement associations. 25. Illinois Crop Improvement Association. 26. Professor Emeritus Alvin L. Lang. 27. Morrow Plots.

Section III: 28. Dr. Clyde Melvin Woodworth. 29. Dr. R.L. Bernard. 30. Theodore Hymowitz. 31. A reluctance to accept change or progress. 32. Episodes. 33. Russian Tour. 34. South Farm buildings. 35. Soybeans again assert their value. 36. Taylor Fouts. 37. Excerpts from the Mumford Files. 38. Excerpts from the Hackleman Files. 39. Soybean variety and inoculation demonstrations. 40. The frosted green soybean dilemma. 41. Soybeans in the Deep South. 42. Mr. H.G. [sic, George Heartsill] Banks. 43. Dr. E.E. Hartwig. 44. U.S. soybean production. 45. Aquaculture... the world’s untapped resource, by Julian M. Weiss (Based on an article in the Dec. 1980 / Jan. 1981 issue of *From Lion* magazine. “While the history of fish farming is traced back to 500 B.C. when Chinese seafarers were successful in breeding carp, interest in improving technology fell behind other innovations. 1974 to 1979 the harvest from aquaculture more than doubled to nearly 7 million metric tons...”). 46. Almost a century of progress. About the author (autobiographical): Leo Gilbert Windish was born in 1909. A retired seedsman, he attended the University of Illinois in 1927 and 1928. He was close friends with Hackleman, and wrote this book in fulfillment of a promise he made to Hackleman, whom he described as “the soybean’s greatest missionary.” Windish also knew Burlison (the first to promote soybeans heavily) and Woodworth (the first soybean geneticist).

Note: Most of the chapters about people contain a portrait photo of the person on the first page. Address: 101 Exchange St., Galva, Illinois 61434.

926. Windish, Leo G. 1981. *Archer-Daniels-Midland Company, Inc.: Pioneer soybean processors who rank among the giants in the industry* (Document part). In: Leo Windish. 1981. *The Soybean Pioneers: Trailblazers, Crusaders, Missionaries*. Galva, Illinois: Published by the author. viii + 239 p. See p. 97-103. Chap. 19.

• **Summary:** The western world was slow to realize the possibilities of the soybean, which has been a mainstay of the Chinese diet since time immemorial, and has a recorded history dating back 5,000 [sic, about 3,000] years. Until nearly 1900, soybeans were grown only as a curiosity in botanical gardens or at agricultural experiment stations.

“The introduction of the soybean can be considered to date from 1898, when the Department of Agriculture started a program of research and began importing many varieties. It took a long time for farmers to become aware of the value of the plant, not only as silage but for its soil-building properties, as green manure. The nutritional value of the bean was not stressed, but in 1915 enough beans were harvested so that a cottonseed oil mill was able to use its presses on soybeans during a shortage of cottonseed. This experiment

was the first attempt to crush domestic soybeans; however, imported soybeans had been crushed by a mill as early as 1910 on the Pacific coast.

“The soybean first came into prominence after the United States entered World War I. Research on proteins resulted in a big increase in acreage, but it was 1924 before soybeans were available in commercial quantity, and another ten years before more than one-third of the crop was harvested as beans. The ratio did not exceed 50 percent until 1940, but as a result of great demand for soybeans during World War II, 90 percent of the crop was being harvested as beans in 1950.

“The first soybeans were raised on North Carolina farms, and they remained primarily a southern crop until the center of production shifted to the corn belt in the 1920’s. Since soybeans thrive on the same climate and soil as corn, this area now produces over three-fourths of the total crop.

“Intensive research by agricultural experiment stations has aided tremendously in furthering the production of soybeans. The development of special strains for specific areas has been extremely important because soybeans are acutely sensitive to soil and climate. Research has singled out varieties that fill demands for higher oil content, earlier maturity, or greater yield. The average yield, which doubled between 1925 and 1950, is now 22 bushels per acre. Of more than 10,000 varieties introduced by the Department of Agriculture, only about 100 are grown to any great extent.

“Soybeans are borne in typical legume-family seed pods containing one to four roundish seeds or beans, ranging in color from yellow through green to black. Darker-seeded varieties that contain less oil are still grown occasionally in the south, but for processing purposes the yellow-seeded types are preferable because of their higher oil content and lack of pigment which discolors the oil and flour.

“The development of the soybean industry, greatly stimulated by both world wars, stems directly from World War I. Such a shortage of fats and oils developed in 1918 that 336 million pounds of poor-quality Manchurian-pressed soybean oil was imported. After the war fats and oils continued to be in high demand, and made it seem worthwhile to try to crush domestic soybeans. The fact that the first processor could only obtain enough beans to make four tank cars of oil in 1920, did not deter another firm from entering the business in 1922.

“Those pioneer soybean processors were a determined lot who overcame seemingly insurmountable odds. It was extremely difficult, to get an adequate supply of soybeans, and just as difficult to dispose of the soybean oilmeal and flour, which no one would buy and few would accept as a gift. It was even difficult to sell oil because it was considered inferior to the imported variety.

“Though production rose to 5 million bushels in 1924, farmers still had to be prodded into raising soybeans as late as 1928, when one of the processors, to be sure of an

adequate supply, contracted to pay a set price for all of the soybeans planted on 50,000 acres. Production climbed very slowly until a 50 percent increase boosted the crop to 14 million bushels in 1930. Once processors realized that soybeans had a promising future they began to expand their facilities, and the public cooperated by readily accepting the new products.

“Not even the worst depression in history could hold back the soybean industry, that made its greatest strides when economic conditions were at their worst. Convinced that soybeans were a profitable crop, farmers boosted production more than three-fold to 49 million bushels in 1935, and nearly double that figure with the 99-million-bushel harvest of 1939. During the war years of 1942 through 1945 the crop ran nearly 200 million bushels, and by 1950 another 50 percent gain raised production to just under 300 million bushels.

“This tremendous increase in the crop reflected a corresponding increase in the demand for soybean products. In 1950, nearly 2½ billion pounds of oil and over 5% million tons of soybean meal were produced. Creating the demand to warrant such an output was a remarkable achievement, particularly since it was accomplished in a relatively short time. In 1924, when 950 thousand pounds of oil were produced, soybean oil was considered an inferior product, an adulterant, or a substitute drying oil used in the paint industry in place of the higher-priced linseed oil.

“None of the oil was of edible quality in the 1920’s, but farsighted importers had begun experiments in refining and clarifying Manchurian oil. The first large-scale use of soybean oil for edible purposes was by the margarine makers in 1930. It proved so successful that the next year’s consumption of oil showed a 275 percent increase. By 1939 margarine shortening and salad oil accounted for 80 percent of the half-billion-pound output. Though six times as much oil is now produced, 85 percent of it is used for edible purposes. Soybean oil has become the leading edible oil, and ranks as the greatest competitor of butter, since it furnishes nearly two-thirds of the margarine output.

“Practically all of the 6½ million tons of soybean oil meal now produced each year is used in livestock and poultry feeds. The meal is also made into soy flour, an important ingredient in ice cream, candy, baked goods, prepared mixes, macaroni products, and high-protein bread. Although industrial uses of the soybean have been highly publicized, they consume only a minute portion of the output. Nevertheless, the soybean is an important ingredient in a host of products as varied as plastics, cosmetics, wallboard, paper coatings, insecticides, paint, ethyl gasoline, and plywood.

“For nearly 100 years, there was little or no change in the method of extracting oil from seeds. The large crushers continued to use the hydraulic press that had been patented in 1850. Each of the two other methods of processing had

very serious drawbacks. The early-day expeller, a continuous screw press that operated on the same principal as a meat grinder, was not suitable for large-scale production of linseed oil but was used successfully in processing small quantities of other oils. The solvent process was commercially feasible as far as crushing was concerned, but since the meal was strongly impregnated by the fumes of naphtha used as a solvent, this 'New Process' meal was extremely hard to sell. In those days, purchasers naturally preferred 'Old Process' meal produced by the hydraulic press.

"There were no drastic improvements in any of the processes until the 1930's, when technical advances were made in all three to such a degree that there was a complete upheaval in the industry. An automatic cake-former eliminated some of the hand labor in the hydraulic process, yet the presses still had to be filled and emptied manually. Until 1935 the supremacy of the hydraulic press was unchallenged, but within a few years it was well on its way to becoming obsolete. An improved expeller press came on the market in 1935 that gave better results on soybeans than the hydraulic press. Three years later a further improved model produced superior results on flaxseed. Since this new expeller press left only a 4 percent oil content in the meal as compared with 5 to 7 percent left by the hydraulic press, the flaxseed industry began to convert to expellers" (Continued). Address: 101 Exchange St., Galva, Illinois 61434.

927. Windish, Leo G. 1981. Archer-Daniels-Midland Company, Inc.: Pioneer soybean processors who rank among the giants in the industry (Continued—Document part II). In: Leo Windish. 1981. *The Soybean Pioneers: Trailblazers, Crusaders, Missionaries*. Galva, Illinois: Published by the author. viii + 239 p. See p. 97-103. Chap. 19.

• **Summary:** Continued: "When ADM first started to process soybeans in 1929 at its Toledo and Chicago plants, the hydraulic presses that had been used for flaxseed were used for soybeans. No special equipment was installed because at that time this was the best available method of processing. ADM took a bold step in deciding to install a solvent extraction unit for soybeans at its Chicago plant. In this country solvent extraction, never used for volume production, made little headway because no satisfactory solvent had been found. The soybean industry was still in its early stage of development, and there was no certain assurance that it was on the verge of enormous expansion. Furthermore, it was still the depth of the depression, and in 1933 ADM's net sales were the lowest they had ever been. At this time plant superintendent E.W. Schmidt was sent to Europe to study solvent extraction and bring back the best equipment available. Solvent extraction had originated in Europe, having been introduced by an Englishman in 1843, but only in recent years had the process been perfected and come into wide use.

"The Hildebrandt unit that Schmidt selected in Germany

consisted of a U-shaped tube about 3 feet in diameter. Having been crushed and rolled into paper-thin flakes, the soybeans entered one end of the tube, through which they were propelled by revolving screws. The solvent, hexane, entered the other end of the tube and moved in the opposite direction while it extracted oil from the flakes. The oil and solvent mixture came out one end of the tube, and the meal the other. After the solvent had been removed by distillation, the oil was ready to be refined, and the solvent was available for re-use. This process was so effective that only 1 percent of the oil was left in the meal. The lower oil content made solvent-extracted meal very hard to sell at first, even though purchasers were being offered a protein concentrate that contained 44 percent protein as compared to the 41 percent produced by hydraulic or expeller presses.

"After the extraction unit had been installed in June, 1934, ADM started to produce lecithin, which is derived from crude soybean oil. Like the soybean itself, lecithin has a wide variety of edible, industrial, and medicinal uses. It is an important ingredient in bakery products, ice cream, and candy, being particularly valuable as a preservative coating for chocolate. Its industrial uses range from anti-knock gasoline to the textile field, and its medicinal uses include cosmetics and pharmaceuticals.

"Shreve M. Archer's reports to the stockholders usually contained a minimum of information stated as briefly as possible. The only clue to the significance of the announcement he made in the 1939 annual report lay in the fact that soybean was spelled with a capital 'S.' Because of the growing importance of the soybean industry the board authorized the construction of a modern plant in Decatur, Illinois. This location was chosen because of the availability of raw material and a favorable rate structure. Construction was started early in the year. This was to be the world's largest solvent extracting plant.

"Once again Mr. Schmidt, then ADM's general superintendent, had gone to Germany to investigate the latest developments in extraction. This time he ordered a Hansa-Muhle unit which carried the flaked bean in buckets on a moving chain. The continuous extraction unit also operated in a U-shaped tube, but in this case the solvent flowed through both sides of the U and drained out the bottom. The unit had a daily capacity of 400 tons, four times the capacity of any that had been used in Europe, and made ADM the largest processor in the world.

"Even if it had been foreseen that war would, break out in a few months, the new plant could not have been rushed to completion faster. The land was not purchased until June, 1939, but with three shifts working on a 24-hour basis the plant was completed by November. In addition to the solvent unit, which occupied a 5-story tower, storage capacity for 5 million bushels was provided.

"With this huge new plant ADM was ready, just in time, to take full advantage of the phenomenal increase in demand

for soybean products that came as a result of World War II. While the consumption of soybean oil was doubling and tripling, ADM laid plans for expansion, but they could not be implemented until war-time restrictions were lifted. In 1949 before a second unit was installed that more than doubled the original capacity of the plant.

“In recent years there have been a number of important additions to the Decatur plant. A continuous-flow refining unit was installed in 1949 and the following year an edible-oil refinery was completed. Up to that time ADM, while selling crude soybean oil to margarine and shortening manufacturers, had not produced edible oils. The new refinery made it possible for ADM to supply the food industry with cooking and salad oil, and to furnish edible soybean oil to large consumers such as canners of sardines and tuna fish. ADM became the largest producer of soy flour by virtue of the new processing plant installed at Decatur in 1949. Still another addition, completed in 1953, was a plant that uses vegetable oils, particularly soybean oil, in making vinyl plasticizers.
