1862. Wendel, Armin. 1999. *Die Sojabohne: von der Sojabohne zum Sojalecithin* [The soybean: from the soybean to soy lecithin (Continued–Document part II)]. Hamburg, Germany. 15 p. Unpublished typescript. [28 ref. Ger]

• **Summary:** (Continued): The American Lecithin Company was founded in 1929 in the USA for the marketing of the “Bollmann Process”. It held the patents and granted licenses. ADM (Archer Daniels Midland) and the Glidden Company

were the first companies to build plants on the basis of the Bollmann process.

[Note: ADM and Glidden each sent a team of top-level engineers to Europe to decide what type of continuous solvent plant to buy. They both decided to buy Hildebrandt extractors]. ADM started up its first continuous plant in Chicago, Illinois in 1934 with a capacity of 150 metric tons per day. In 1935, Glidden built an identical plant, and in 1937, Central Soya built an even bigger one in Decatur, Indiana (275 metric tons per day). With the introduction of the soybean trade (the soybean futures market as a new commodity) at the Chicago exchange (the Chicago Board of Trade), the soybean was finally established in the USA (24), (25), (26). The development was more or less complete. The process for extraction from soybeans was established, and soy lecithin became a standard product (27). Today, the soybean is the most inexpensive and productive source of protein in the world. Cultivation takes place primarily in the USA, Brazil, Argentina, and China (those countries represent 91% of the world market) (28), (29). In 1999, 159 million metric tons of soybeans were produced worldwide, of which approximately 50% were in the USA, and approximately 190,000 metric tons of soy lecithin were produced.

und ihr wirtschaftlicher Wert in Asien und Europa. In: Hansa-Muehle. 1929. Soja: Ein Beitrag zur Kenntnis des Wertes der Sojabohne und ihrer Produkte fuer die deutsche Volkswirtschaft. Hamburg, Germany: Hansa-Muehle G.m.b.H. p. 39-56.

(9) (9) The use of steam power and the introduction of the hydraulic press around the middle of the nineteenth century brought an end to the age of the miller for hire (*Lohnmüller*). At the same time, they opened up the path toward a large-scale commercial mill industry. These processed the raw materials that accumulated in the immediate vicinity. Local agriculture could no longer satisfy the demand for fat in Germany, which had grown since 1850. For that reason, oil seeds had to be imported. A port was necessary, and for that reason, oil mills settled around the mouths of rivers. Harburg in Hamburg was the most important port in Germany. The first oil mill in Harburg was built by Jürgen Uthorst in 1686. In 1833, Sixtus Heins built the first commercial mill that was operated with water power, and starting from 1838, it was run with steam and a hydraulic press. In 1843, C. Polmann built an oil mill in Harburg with three hydraulic presses that were driven by a 14 horsepower steam engine. From 1845 to 1849, the Harburg Port was expanded. In 1847, the first locomotive ran from Hanover to Harburg. While in 1847, there were still just approximately 63 ships berthed in Harburg, by 1853 that figure was already 1,197. The population was 5,326. At that time, Harburg already had three oil mills. In 1860, Gottlieb Leonhard Gaiser was the first to import transoceanic seeds (palm kernels). By 1868, the oil industry in Harburg already employed 110 workers, 27 hydraulic presses with 88 horsepower, it produced 45,000 metric hundredweight (*Zehntner* = 100 kg) of oil and already processed 129,435 metric hundredweight of imported seeds. Next to Marseilles, Hull, and Aarhus, Harburg became one of the most important production sites [for oil] in Europe. The Association of German Oil Mills (*Verband der deutschen Ölmühlen*) was founded in 1900 (on April 17, 1900), and starting from 1902, foreign oil seeds were free of duty. Up to the First World War, the processing of foreign oil seeds increased continuously.

(10) Westphall, Paul: *Aktieselkabet Det Ostasiatiske Kompagni*. The East Asiatic Company, Ltd., Copenhagen: 1972. pp. 206-207. "Hamburg Oil Mill Inc. (*Oelmühle Hamburg AG*), Hamburg. The company originated in 1910. At the time, the Stettin Oilworks Inc. (*Stettiner Oelwerke AG*), Stettin, later the Stettin Oilworks in Hamburg Inc. (*Stettiner Oelwerke in Hamburg AG*) was founded. The O.K. participated in the founding. Envisioned as the purpose of this company was the processing of soybeans, which at that time came exclusively from Northern China and which were imported primarily by the O.K. In 1965, the majority of the shares were acquired in the Hanseatic Mill Inc. (*Hansa Mühle AG*) which was also located in Hamburg, and the

production of both companies was concentrated there. After that, the company was given the name Hamburg Oil Mill Inc. (*Oelmühle Hamburg AG*). Along with a pharmaceutical factory (Nattermann), the Hamburg Oil Mill Inc. founded Phospholipid Ltd. (*Phospholipid GmbH*) which dealt with the further processing of soy lecithin."

(11) On March 27, 1896, the Brinkmann & Co. Harburg Linseed Oil and Varnish Factory Ltd. (*Harburger Leinöl- und Firnisfabrik Brinkmann & Co. GmbH*) was founded by Max Brinkmann (1846-1927) and Arnold Mergell (1855-1929) along with Carl Klaue, who left a few years later. After the death of Carl Klaue, the company was renamed the Brinkmann & Mergell Harburg Linseed Oil and Varnish Factory Ltd. (*Harburger Leinöl- und Firnisfabrik Brinkmann & Mergell GmbH*) in 1903. In 1905, the company was dissolved and refounded as the Brinkmann & Mergell Harburg Oil Works (*Harburger Oelwerke Brinkmann & Mergell*) (*HOBUM*). Starting from 1906, this company also processed cottonseed. And as of 1910, the processing of soybeans was included. See: Harburger Oelwerke Brinkmann & Mergell, Volume 15 of the *Veröffentlichungen der wirtschaftsgeschichtlichen Forschungsgesellschaft e.V.* [Publications of the Company History Research Society Reg. Assn.], Hamburg: 1956.

(12) Noblée & Thörl was founded on November 28, 1855 as H. Noblée & Co. by Henri Louis Joseph Noblée for the obtaining of mineral oil from coal. In 1841, he made a request with the city of Hamburg to introduce a sort of street lighting with hydrocarbon (*Hydrocarbür*), which was rejected. In 1849, he once again made a request with the city of Hamburg which was accepted (the H. Noblée & Co. Hydrocarbon Factory and Gas Works in Harburg {*H. Noblée & Co. Hydrocarbür-Fabrique und Gasanstalt in Harburg*}). The decrease in the demand for German lamp oil—a consequence of the greater and greater spread of gas lighting and the discovery of sources of petroleum in the USA—made the obtaining of lamp oil and mineral oil from coal unprofitable. Noblée took the logical step from this, and in 1865 he built a palm kernel oil factory (Noblée & Co.'s Palm Kernel Oil Factory (*Noblée & Co.'s Palmkernölfabrik*)). In 1876, Henri Noblée retired. His son Henri Charles Noblée (1829-1899) took over the company. Consul Max Emil Johann Thörl, the older brother of Friedrich Thörl, joined the company in 1876, and the name was changed to Noblée & Thörl's Palm Kernel Oil Factory (*Noblée & Thörl's Palmkernölfabrik*). In 1899, they changed the name of the company to Noblée & Thörl General Partnership (*Noblée & Thörl OHG*) and later to Noblée & Thörl Successor Co. Ltd. (*Noblée & Thörl Nachf. GmbH*). In 1912, Noblée & Thörl started soybean processing. By 1929, 200,000 metric tons of soybeans had already been processed. See: Noblée, 28. November 1855–28. November 1955. *Festschrift der Noblée & Thörl GmbH* [Commemorative Publication of Noblée & Thörl Ltd.], Nov. 1955.

(13) The Harburg Oil Factory Friedrich Thörl (*Harburger Ölfabrik Friedrich Thörl*) was registered on November 2, 1882. Friedrich Thörl, the younger brother of Max Thörl, who was the co-owner of Noblée & Thörl, studied at Noblée & Thörl as a chemist and technical consultant. In 1906, all of Friedrich Thörl's plants were transferred to F. Thörl's United Harburg Oil Factories Inc. (*F. Thörl's Vereinigte Harburger Oelfabriken AG*). In 1913, they included the processing of soybeans. In 1922, F. Thörl retired from the active management of the company. The van den Bergh group took over the majority of the shares. See: *75 Jahre Thörl*. [75 Years of Thörl] Festschrift [commemorative publication] published November 1958. See also: Philipps, O. 1939. *Friedrich Thörl und die deutsche Ölmüllerei*. [Friedrich Thörl and the German Mill Industry]. Verlag Gerhard Stalling A.G., Oldenburg. (Continued). Address: Managing Director, Nattermann Phospholipid GmbH, Cologne, Germany.

1863. Golbitz, Peter. 2000. Health claim to boost soy sales. *Bluebook Update (Bar Harbor, Maine)* 7(1):1-2. Jan/March. • **Summary:** "The soyfoods market in the United States is expected to receive a boost from Uncle Sam this year as the new Food and Drug Administration approved health claim for soy protein products begins to make its appearance on food labels.

"In October, FDA gave final approval to a rule which allows food products containing 6.25 grams of soy protein per serving to carry a claim promoting the food as being heart healthy. It is felt by many in the food industry that this government approved health claim is a tacit 'stamp of approval' by the largest food regulatory agency in the world and will have a wide spread impact on the marketability of soy protein containing foods not only in the U.S., but elsewhere around the world as well.

"The market for soyfoods in the U.S. has already been experiencing dramatic growth during the past few years due to the increased popularity of such products as soy-based meat alternatives, soymilk drinks and tofu products. According to a joint Soyatech-SJH & Co. study, overall soyfoods sales in the U.S. have been growing at an annual rate of over 20% for the past 3 years, with some categories such as meat replacements and dairy alternatives growing at over 40% per year. Will the health claim help to boost sales in these categories even further?

"I haven't seen a spike in sales yet to indicate that people are grabbing the products off of the shelves any faster,' says Rick McKelvey of Lightlife Foods, one of the nation's leading soy-based meat alternative processors. But, says the Vice President of Sales of the Greenfield, Massachusetts company, 'We are not using the claim yet, that's still about three weeks away.'

"With sales already increasing 33% for Lightlife this year, the driver for any additional growth may be heard to

measure. 'It wasn't brand new news for present consumers,' says Mr. McKelvey of the healthy heart benefits of soy products. 'My hope is that it will help to build a long term impact on demand.'

"At Nasoya Foods in Ayer, Massachusetts, one of the country's leading tofu companies, the plan is to take the new health claim to heart by making an image of the human circulatory pump a central focus of a new logo for all of their products.

"It will become an important element on all of our packaging,' says Amy Towle, Director of Marketing for Nasoya, one of the brands of Vitasoy USA in San Francisco [California], which also produces soymilk and other soyfood products. The health claim itself should appear on 'most, if not all of our tofu,' says Ms. Towle, 'but we expect it will take a few more months before the new label is out.'

"But again, it might be difficult to measure the impact of the new label itself on product demand. According to the company, sales for the month of November were already up more than 50% over the same month last year, without the health claim on the package.

"In the United Kingdom, where soyfoods companies have just weathered a major crisis due to the GMO issue in Europe, the U.S. health claim is seen as a wind of change blowing across the Atlantic.

"It's probably the best thing to happen to soy for 30 years,' says Peter Fitch, Managing Director of the Haldane Foods Group in Buckinghamshire, England. 'Properly handled in the U.K. the beneficiary publicity can help restore soya's tarnished reputation and get it back on the menu. Food manufacturers who took soy out their formulations should be motivated to put in back in again quickly.'

"For its own part, Haldane is considering labeling the soy protein content of their soyfood product line within the constraints of the E.U. regulations.

"Growth in the category of vegetarian foods doesn't surprise soy protein ingredient suppliers like the Central Soya Company, part of Eridania Beghin-Say America. 'Vegetarian foods are going to appeal to regular shoppers looking for intelligent choices to make subtle changes in their diets,' says Charlie Worrall, Manager of the Health and Nutrition Group at EBS America. 'When you get to be 40 or 50 years old, it's very likely that you know someone who has been diagnosed with a heart disease and you begin to make your food choices differently.'

"It's too early to tell what effect the claim will have, but we have seen a large increase in interest,' says Phil Fass, Marketing Manager for the Protein Group at Archer Daniels Midland. 'Companies that had a negative image of soy before now see this as a positive.'

"The food industry is looking for new applications for soy proteins,' reports Mr. Worrall. But food formulators developing new products have their work cut out for them. 'Consumers are not willing to give up taste for nutrition.'"

A photo shows the label of Yves Veggie Ground Round in the middle of which is a heart and the statement: "Made with Heart Healthy Soy Protein... May reduce the risk of heart disease." The caption: "Yves Veggie Cuisine of Canada is using the new FDA health claim on products it sells in the U.S. market."

1864. ADM Protein Specialties. 2000. All your soy protein needs under one roof (Brochure). Decatur, Illinois. 4 p. 28 cm.

• **Summary:** Gives detailed information about: Pro Fam isolated soy proteins (19 types). Ardex isolated soy proteins (3 types). Arcon soy protein concentrates (7 types). Arcon textured soy protein concentrates (2 types). Maicon textured soy protein concentrates (1 type, for vegetarian foods). TVC textured vegetable protein chunks and crumbles (1 type). TVP textured vegetable protein (3 types). Nutrisoy flour/grits (5 types). Soylec and Nutrisoy (lecithinated and refatted soy flours) (3 types). Address: Box 1470, Decatur, Illinois 62525. Phone: 1-800-637-5850.

1865. Messina, Mark. eds. 2000. Third International Symposium on the Role of Soy in Preventing and Treating Chronic Disease [Proceedings of a symposium held in Washington, DC, on Oct. 31 to Nov. 3, 1999]. *J. of Nutrition* 130(3S):653S-711S. March. Supplement.

• **Summary:** These proceedings are divided into three parts: Introduction and six papers. Oral presentation abstracts. Poster presentation abstracts.

Nearly 600 delegates attended this symposium—more than twice as many people as attended the first symposium in 1994.

The symposium was sponsored by Archer Daniels Midland Co., Cargill Inc.-Protein Products, Central Soya, Co., Dr. Chung's Food Company, Monsanto, Personal Care Products Company, Protein Technologies International, SoGood Int., Solbar Plant Extracts, SoyLife/Schouten, Whitehall-Robins Healthcare, the United Soybean Board and the following State Soybean Associations: Illinois Soybean Board, Indiana Soybean Board, Kentucky Soybean Promotion Board, Michigan Soybean Promotion Committee, Minnesota Soybean Research and Promotion Council, Nebraska Soybean Board, Ohio Soybean Council, South Dakota Soybean Research and Promotion Council. Publication of symposium proceedings was supported by educational grants from the United Soybean Board and the Soyfoods Association of North America. Address: 1543 Lincoln St., Port Townsend, Washington 98368.

1866. *ADM Nutrition & Health Update (Decatur, Illinois)*. 2000. Soyfoods for reducing prostate cancer risk. 2(1):1, 3-4. Winter. [14 ref]

• **Summary:** Introduction. Prostate cancer rates. The Asian-soy-cancer connection. Soy and prostate cancer risk—The

evidence: In vitro studies, animal studies, human studies. Conclusions.

Introduction Research on the health effects of soyfoods and soybean constituents has increased exponentially over the past several years (see *In the News*), and the areas under investigation have expanded greatly. Despite the plethora of research, arguably, three of the most important and exciting studies (1-3) have been published within just the past 18 months, and all involve prostate cancer.

"Prostate Cancer Rates: Every 15 minutes a man dies of prostate cancer in the United States, which makes the prostate gland second only to the lungs as the organ most likely to cause a fatal malignancy in men. For 1999, estimates are that about 179,000 American men will be diagnosed with prostate cancer, and about 37,000 will die of this disease (4). A male baby, born today, has a 13% chance of developing prostate cancer, and a 3% chance of dying from it.

"There are striking differences in prostate mortality rates throughout the world—with the highest rates in Western countries. Migration data suggest that these differences are environmentally, not genetically, determined (5). Men who move from low-risk to high-risk countries early in life can acquire the same cancer risk as in their adopted homeland, even within the same generation.

"The Asian-Soy-Cancer Connection: The National Cancer Institute first began seriously investigating the anticancer potential of soy in 1990, but at that time, most of the focus was on breast cancer. In part, this was because of the low Asian breast cancer mortality rate. Japanese rates are about three times lower than US rates, for example (4). But often overlooked, is that US prostate cancer mortality rates are also much higher than Japanese rates, about four times higher (4). Added to this, is the intriguing observation first made two decades ago, that upon autopsy, a surprisingly large number of Japanese men are found to have small prostate tumors (6). This is also the case in other low-risk countries. Thus, the onset of prostate cancer appears to occur later in life and/or prostate tumors grow more slowly in these countries. As a result, men die with their cancer rather than of their cancer.

"Delaying the clinical appearance of prostate tumors by even a few years would have a significant public health impact in Western countries since prostate cancer is a disease of older men. Less than one quarter of the new diagnoses of prostate cancer each year are in men under 65 (4) whereas about half of the new diagnoses of breast cancer occur in women under 65 (7)."

"Conclusions: Evidence that soyfoods reduce prostate cancer risk is quite impressive, although still very speculative. The epidemiologic studies cited above suggest that as little as one serving per day of a soyfood may be enough to reduce risk. Despite the lack of definitive data, prudence would dictate that men concerned about prostate

cancer should consume soyfoods. In addition, other research suggests that a prostate-healthy diet should include ample amounts of selenium (12), and vitamin E (13), and lots of cooked tomato products (14).”

1867. *ADM Nutrition & Health Update (Decatur, Illinois)*. 2000. NutriSoy Branding Program: ADM update. 2(1):1-2. Winter.

• **Summary:** “A nationwide media program has been launched to announce and support the NutriSoy Branding Program. The program was developed in response to growing consumer demand for healthy, good tasting soyfoods.

“Use of the NutriSoy logo will allow consumers to easily identify food products that contain a significant amount of soy protein. It will also provide food companies with an effective means to communicate to their consumers that the food products they are marketing contain a significant amount of soy protein, which is an important part of a healthy diet.”

“Nationwide media support: The Archer Daniels Midland Company has made a long term commitment to support the NutriSoy Branding Program with television, radio, print, and public relations.”

A bar chart at the end of this article, titled “Consumers who have tried soy products,” shows that 20% had tried them in 1996, 32% in 1997, and 67% in 1998. The source of these statistics is not given in the article but Phil Fass of ADM says the statistics come from the latest United Soybean Board annual report on consumer attitudes about nutrition.

Talk with Phil Fass, head of NutriSoy branding program and marketing at ADM. 2000. April 28. To participate in this program a company’s product(s) must contain a significant level of at least one ADM soy protein products, such as Arcon [soy protein concentrate], Pro Fam, or Nutrisoy soy flour. So far, three companies have signed up for the program. Other successful branding programs include the “Intel inside” program initiated by the computer microchip maker, and the NutraSweet program run by the sweetener maker. There is no cost for a company to participate in the program. ADM has an advertising budget of about \$3 million this year, projected to be \$8 million next year.

1868. *ADM Nutrition & Health Update (Decatur, Illinois)*. 2000. Successful soy conference. 2(1):4. Winter.

• **Summary:** “Evidence of the interest in the health benefits of soyfoods and soybean isoflavones was clearly apparent from the number of delegates attending the Third International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, which was held October 31–November 3, 1999, in Washington, DC. During the four days of the conference nearly 600 researchers and health professionals heard presentations that focused on a range of topics. That attendance figure represents a twofold increase

over the first symposium held in 1994. In addition to 48 oral presentations, there were over 100 poster presentations, which is three times more than were presented at the first meeting. Furthermore, in addition to cholesterol reduction, cancer, and osteoporosis, topics covered at the previous symposia, research at this third symposium addressed areas such as hot flashes, hypertension, and cognitive function.

“The number of exhibits was also impressive and clearly illustrated that soy products have become mainstream. During the Tuesday luncheon, six pioneers of the field were recognized for their contributions: Herman Adlercreutz, University of Helsinki (Finland); Chai-Won Chung, Dr. Chung’s Food Company (Korea); Cesare Sirtori, University of Milan (Italy); David Kritchevsky, Wistar Institute (Philadelphia, Pennsylvania); Kenneth D.R. Setchell, Children’s Hospital (Cincinnati, Ohio); and Doyle Waggle, Protein Technologies International (St. Louis, Missouri). The session on coronary heart disease was held in honor of the late Kenneth K. Carroll, for his work on the cholesterol-lowering effects of soy protein.

“As is always the case with scientific meetings, the research presented probably raised more questions than it answered but there is no doubt that those who attended left with greater enthusiasm for their field. The abstracts from the conference are expected to be published in the *Journal of Nutrition* sometime next year.”

1869. *Nutrition Business Journal (San Diego, California)*. 2000. Corporations proceed cautiously with soy. 5(5):16. May.

• **Summary:** The supermarket chain Kroger promoted soyfoods at all of its 2,000 stores as part of Soyfoods Month in April. Nature’s Path has launched Soy Plus Organic Granola, with a claim about reduction of menopausal symptoms. Natural Vitality has introduced Menopausitive, a drink fortified with 110 mg of isoflavones.

In the 17 Sept. 1999 issue of the prestigious scientific journal *Science*, Steven H. Zeisel, chair of the Department of Nutrition at the University of North Carolina (Chapel Hill) wrote a Policy Forum article advocating safety studies for substances like soy isoflavones, which are administered in large doses to obtain medicine-like effects, before they are put on the market. This would apply to products [such as ADM’s Novasoy], for example, were one dose is five times the average human consumption. Central Soya has a new product, Prevastein Soy Isoflavone Concentrate.

1870. *Soy & Health 2000: Clinical evidence, dietetic applications—Second announcement (Brochure)*. 2000. Kortrijk, Belgium. 8 panels. 21 x 10 cm each. [Eng]

• **Summary:** This symposium will be held on 13-14 Oct. 2000 at Palais de Congrès, Brussels, Belgium. Contents: Introduction. Program—Friday: Soy protein and heart disease, new products and technology, soy and cancer. Saturday:

Obesity, hypertension, health implications of soy lecithin, oil, phytosterols, hormonal effects, from science to market. Website: [www.soyconference.com](http://www.soyconference.com). Registration form. Conference format. Call for posters. Symposium venue. Exhibits. International advisory board. Gold sponsors: Protein Technologies International (a DuPont business). American Soybean Association. United Soybean Board. Eridania Béghin-Say: Health & Nutrition Group. Marks & Spencer. Silver sponsors: ADM, Sojasun. Address: Kortrijk, Belgium.

1871. Wolf, Walter. 2000. Soy-related documents–Business records (Archival collection). Peoria, Illinois.

• **Summary:** In July 2000 Dr. Walter Wolf, as he was preparing to retire from the Northern Center for Agricultural Utilization Research in Peoria, Illinois, sent to Soyfoods Center many file folders of soy-related documents that he had collected between about 1968 and the present. Most are in the field of soy protein, and none are confidential / proprietary. Each one is neatly dated, and the documents are in reverse chronological order in each manila file folder.

Dr. Wolf earned his PhD degree at the University of Minnesota, where he studied soy proteins. He began work at NCAUR in 1956; at that time it was named the Northern Regional Research Center. He worked as a chemist in the Meal Products Research Group. He did mostly pure research, rather than applied. At the time there was little interest in food uses of soy protein. One of his main contributions was collecting and publishing statistics on the annual production and price of soy flour, soy protein isolates, soy protein concentrates, and textured soy protein products.

The following files (listed alphabetically) were received by Soyfoods Center. Unless otherwise stated, only one file on each company or subject was received. A thin file contains less than about 20 sheets of paper; a thick one contains more than 20 sheets: ADM (Archer Daniels Midland Co.; 2 thick files 1970-2000). Anderson Clayton (thin, 1971-81). Cargill (thin, 1970-2000). Central Soya (4 thick files, 1959-1999). Dawson Mills (thick, 1974-1983). Edible Soy Products, Inc. (Hudson, Iowa; Maker of Pronuts; thin, 1971-78). EMI Corp. (Des Plaines, Illinois, thin, 1971-74). Erie Casein Co. (thin, 1966-73). Fuji Oil Co. Ltd. and Fuji Purina Protein Ltd. (of Japan, thick, 1972-1993). Farmland Industries and Far-Mar-Co (thin, 1970-1993). Food Ingredients–Dale Johnson (thick, 1964-1998). Garrison Products (extrusion, thin, 1977-78). General Foods (thin, 1974-1981). General Mills (thick, 1965-1976). Gerber Products (thin, 1969). Grain Processing Corp. (1968-1976). Griffith Laboratories (thick, 1968-1986). Gunther Products (purchased by A.E. Staley, thick, 1963-1975). Honeymead Products (Mankato, Minnesota, thin, 1978-1986). Industrial Grain Products (Montreal, Canada, thin, 1973-1975). Kikkoman (thick, 1972-1997). Kraft, Inc. (1965-1984). Lauhoff Grain (1 thin, 1973-86). Loma Linda Foods (thin, 1969-1986). Miles Laboratories (thick, 1970-

83). Nabisco (1974-81). Meals for Millions Foundation (1 thin file, 1976). Protein Advisory Group of the United Nations, PAG Guidelines (thin, 1969-1978). Quaker Oats (thin, 1970-97). Joe Rakosky, consultant (1979-83). Ralston Purina Co. (4 files, very thick, 1962-1999). Soy protein products (2 files, thick, 1970-1986). Soy protein production statistics and estimates (two thick files, 1970-1996). Staley (A.E., 1 thick, 1969-1986). Swift & Co. (thin, 1961-1971). Takeda Chemical Industries (thin, 1970-1984). Textured soy proteins (1 thin, 1969-71). Tofu equipment (thin, 1970s). Tokuji Watanabe tofu studies at Peoria, Illinois (thick, 1960-61). United Nations Industrial Development Organization (UNIDO, thick, proceedings of Nov. 1969 meeting at Peoria, Illinois), Unilever (thin, 1974-79). Wenger Manufacturing Co. (thin, 1975-76). Worthington Foods (thick, 1965-1998). Address: NCAUR, Peoria, Illinois.

1872. Cooper, Kim. 2000. Soyfoods Canada, the new Canadian soyfoods association (Interview). *SoyaScan Notes*. Aug. 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Current members of the new organization are the Canadian Ministry of Agriculture, Ontario Soybean Growers, Natures Milling (Ontario), St. Clair Agri Services Ltd. (a soybean exporter in Ontario), University of Guelph, SoyaWorld Inc. (Vancouver, BC), ADM (Maureen Callahan, from USA), and Galaxy Foods (Ontario).

The group is presently headquartered at the Ontario Soybean Growers' offices in Chatham. Janet Nauta (in charge of communications at OSG), who is serving as executive director, is working on different brochures and cookbooks. The main goal is to raise awareness of soyfoods in Canada. The ultimate question people ask is "What do I do with this stuff?"

The group has already had three meetings with a fourth scheduled for October 25th in Toronto, Ontario.

Note: Because of Canada's archaic food laws, Galaxy Foods can't sell its cheese alternatives in Ontario. The government is considering rescinding this law. One of the focuses is on government relations, and standardizing laws that relate to soyfoods within the various provinces. Address: Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

1873. Wendel, Armin. 2000. Lecithin: the first 150 years. I. From discovery to early commercialization. *INFORM (AOCS)* 11(8):885-90, 892. Aug. [34 ref]

• **Summary:** Contents: Introduction and early history. From research to practical application. The soybean (*Glycine max* (L.) Merrill). The commercial breakthrough: The industrial manufacture of lecithin (Developments in Europe, developments in the United States).

Photos show: (1) Armin Wendel. (2) Theodore Nicolas Goble (1811-1874). (3) Phospholipid structures. (4)

Hermann Bollmann. (5) Bruno Rewald. (6) Hansa Mill's (Hansa Mühle's) first factory. (7) Joseph Eichberg.

Tables show: (1) Lecithin compounds on the market prior to 1910: Lactalbin, Lecitovin, Lecitogen, Lecithol-Riedel, Lecithmedullin, Lecithinum Jodatum, Lecithin chocolate tablets, Lecithin-Perdynamine, Lecithin wine tonic, Lecithin cod-liver oil, Liquid lecithin, Lecithin-egg yolk oil, Lecithinbromin, Lecithcerebrin, and Lecipon. A brief description of each is given (Source: *Präparative Pharmazie*. 1967. 14:212). (2) U.S. Patents issued to Rewald and Bollmann of Hansa-Mühle (17 patents from 1,464,557 to 2,039,739).

Chronology: 1910–Various pharmaceutical preparations based on the expensive lecithin from egg yolks (ovo-lecithin) were commercialized by German companies such as J.D. Riedel AG, Berlin, the Dr. Heinrich Buer company in Cologne, and Actien-Gesellschaft fuer Anilin-Fabrikation (AGFA) in Berlin. The industry began to search for a less expensive source of lecithin. They found the soybean.

A brief biography of Hermann Bollmann follows.

1910 ca.–Hermann Bollmann returned to Hamburg (from China) and made his first attempt to extract oil from soybeans imported from Manchuria.

1911–He established his first company, *Die Hansa Mühle* (The Hansa Mill; Fig. 4) on Wendenstrasse in Hamburg. Bruno Rewald and, from time to time Adolph Schneider (who was also Bollmann's assistant and secretary) were employed in the laboratory.

1916–Hansa-Mühle GmbH, Hamburg, was established [shortly after World War II] for the purpose of processing soybeans based on the Bollmann patents.

1924–1926–According to Hansa-Mühle's report to shareholders, the company's main plant processed 2,277 metric tons (mt) of soybeans in 1924, 14,548 mt in 1925 and 17,385 mt in 1926. Each metric ton of soybeans processed yielded about 8 kg of lecithin. This lecithin was used mainly by the margarine industry.

1927–Hansa Mühle, to keep pace with the growing demand and the competition, planned to construct a new factory “at Köhlbrand and the Neuhof maritime shipping canal in Neuhof” with a capacity of 300 tons of soybeans a day. Other European lecithin manufacturers were the Aarhus Oliefabrik (*Yollkin* [spelled *Yelkin* in the USA] brand) and the Dansk Soyakage-Fabrik [Dansk Sojakagefabrik] (*Chococit* brand), both in Denmark. The three manufacturers formed a cartel.

1929–1930–The worldwide financial crisis was very hard on Hansa Mühle, and ultimately the company had to file for bankruptcy. A new company was established, but Bollmann was demoted. He finally left Hansa Mühle on June 30. It was a huge blow to him, from which he never recovered. He died in Feb. 1934 at age 54.

1965–Hansa Mühle AG merged with Stettiner Ölwerke to form Ölmühle Hamburg AG.

Developments in the United States: Solvent extraction of soybeans was very slow to catch on in the USA—unlike Europe.

1927–Joseph Eichberg, who had heard about developments with lecithin in Europe as early as 1923, first visited Hansa Muehle in Hamburg and proposed that he become the company's representative in the United States.

1930–The American Lecithin Co. (ALC) was established with Hansa Muehle owning a relatively small portion of the shares. Soon ALC was not only distributing lecithin supplied by Hansa Muehle but was also doing research on new applications for lecithin in the USA, such as in chocolate.

1931–By this date Aarhus Oliefabriken was selling its lecithin in the USA through Ross & Rowe (New York City).

1934–Archer Daniels Midland Co. (ADM) was the first company in the United States to make lecithin; that is because they were the first to start large-scale solvent extraction using equipment from Germany. Shortly afterwards, The Glidden Co. did the same.

1935–In the USA, the complicated patent situation “prompted companies to join a patent pool.” ALC was reorganized in Ohio as the new patent holding and licensing company. Address: Managing Director, Nattermann Phospholipid GmbH, Cologne, Germany; and Chairman of the Board, American Lecithin Company (Oxford, Connecticut, USA).

1874. Archer Daniels Midland Co. 2000. ADM this quarter: Fourth quarter report to shareholders. Decatur, Illinois: ADM. 1 p. Front and back. Glossy, color. 28 cm.

• **Summary:** See next page. “ADM directors vote cash and stock dividend: The ADM board of directors has declared a dividend of five cents a share on the Company's stock, payable September 4, 2000 to shareholders of record August 11, 2000.

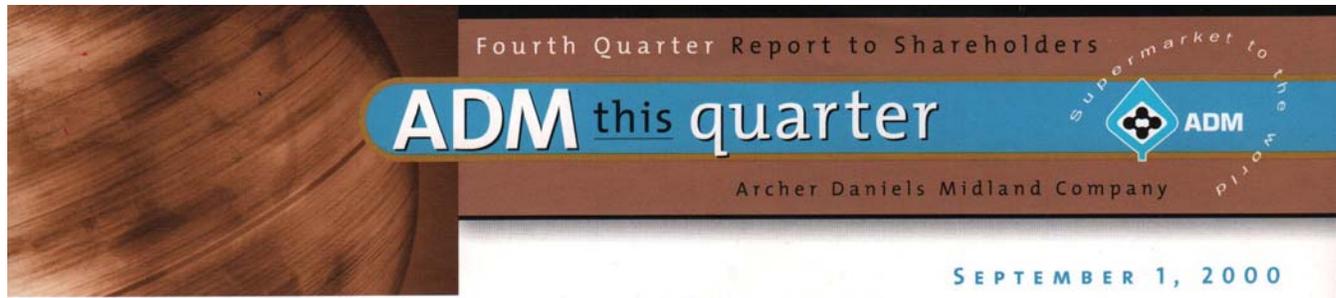

“This is ADM's 295th cash dividend and 275th consecutive quarterly payment, a record of 67 years of uninterrupted dividends. As of June 30, 2000, there were 602,575,493 shares of ADM stock outstanding.

“The directors also declared a five percent stock dividend payable September 25, 2000 to shareholders of record August 28, 2000.”

ADM earned \$0.50 per share for the past fiscal year. Address: Decatur, Illinois.

1875. Soyatech, Inc. 2000. *Soya & Oilseed Bluebook 2001*: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 424 p. Sept. Comprehensive index. Internet address index. Brand name index. Advertiser index. 28 cm.

• **Summary:** On the cover is a color photo of a group of soybean leaves superimposed on a purple and blue integrated circuit. Across the bottom: “The ultimate industry resource:

In print and online. [www.soyatech.com](http://www.soyatech.com).” On the inside front cover is a color ad from Tetra Pak, showing soy milk, its processing and packaging. On the first page is a full page color ad from Northland Organic, “Leading the way naturally.” On the back cover is a color ad from ADM titled “When it comes to soy protein, we bring more to the table.” A large color photo shows many of ADM’s soy protein products made into edible foods, each labeled. Also displays the logo for “NutriSoy: Natural soy protein. The heart of a healthy diet.”

The Foreword states that Soyatech has a newly designed website ([soyatech.com](http://soyatech.com)) which “includes the entire *Soya & Oilseed Bluebook* as part of its many new features.” To gain access, paid subscribers must first register. Address: 7 Pleasant St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

1876. Hutton, Kyle J.; Guymon, John S. Assignors to Archer-Daniels-Midland Company (Decatur, Illinois). 2000. Process for producing deoiled phosphatides. *U.S. Patent* 6,140,519. Oct. 31. 6 p. Application filed 7 Dec. 1998. [26 ref]

• **Summary:** The abbreviation “AI” refers to “acetone insoluble.” In general the phosphatide fraction of commercial lecithin is insoluble in acetone.

Background: “1. Field of the Invention: The invention relates to deoiled phosphatides; food grade or pharmaceutical grade lecithin; and methods for producing same.”

“Summary of the invention: The invention concerns the separation and refining of phosphatides, in particular soybean phosphatides to an oil free state without the use of acetone as an extracting agent. It has been found that the claimed invention results in a higher quality lecithin that is made by a process that can be easily applied to commercial preparations.

“The invention is first directed to a method for producing deoiled phosphatides, wherein the method does not use acetone and the retentate is decolorized following physical separation.” Address: 1. Latham; 2. Forsyth. Both of Illinois.

1877. AGP–Ag Processing Inc a cooperative. 2000. Annual report: Partners in food production. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 56 p. 28 cm.

• **Summary:** Net sales for 2000 (year ended Aug. 31) were

\$1,961.736 million, down 6.4% from \$2,094.504 million in 1999. Earnings before income taxes: \$20.908 million, up 15.1% from the \$18.167 million in 1999.

AGP has earned a profit for 17 consecutive years—“every year since its formation. This was no small task as depressed margins—plagued the soybean processing and refining business due to excess industry capacity.” “AGP’s innovative Oil Premium Program rewards member-suppliers of soybeans that are of more value in the marketplace by paying a premium for higher oil content soybeans.”

A full page (p. 30) is devoted to “AGP Chief Executive Officer Jim Lindsay retires.” He retired effective 1 Nov. 2000. “Jim’s career began in 1958 at Spencer Kellogg and progressed with a move to ADM in 1961. There he held various positions, including vice president of soy processing, vice president of corn sweeteners, and president of Brazilian operations.” Jim has served on the boards of directors of various professional associations, including the National Oilseed Processing Association (chairman, 1986-1990), U.S. Bank, Associated Benefits Corporation, United Way, the Elkhorn, Nebraska School Foundation, and various other community agencies. “Married with four children, Jim is taking this opportunity to help his wife raise their 12 year old daughter.” Photos show: (1) Jim Lindsay. (2) The James W. Lindsay Child Care Center, which “was dedicated on the AGP Campus in fiscal 2000 in lasting recognition of Jim’s commitment to the welfare of AGP employees and their children.”

The next page, “Leadership,” shows that Martin P. Reagan was appointed CEO and General Manager on 1 Nov. 2000. The names of all group vice presidents, senior vice presidents, and vice presidents are given. Color photos of the management staff are shown on the next 4 pages.

A full page (p. 35), titled “Reagan succeeds Lindsay as CEO,” gives a good bio. He was born in Austin, Minnesota, graduated in 1973 with a bachelor of science degree in agricultural economics from the University of Minnesota, then joined International Multifoods grain division. In 1989 he became president of trading and grain merchandising. In 1991 the operations were sold to AGP—where he continued in grain merchandising.

Also contains color photos of (1) Leitig and Lindsay. (2) Huge soybean processing plants and refineries. (4) The board of directors. (5) Management staff. Address: Omaha,

Nebraska. Phone: (402) 496-7809.

1878. Archer Daniels Midland Co. 2000. Annual report: Vision... and value. P.O. Box 1470, Decatur, IL 62525. 44 p. Oct.

• **Summary:** Net sales and other operating income for 2000 (year ended June 30) were \$12,877 million, down (for the second year in a row) 9.9% from 1999 and down 20.1% from 1998. Net earnings for 2000 were \$300.9 million, up 13.1% from 1999, but far below the recent peak of \$796 million in 1995. Shareholders' equity (net worth) is \$6,110 million, down 2.1% from 1999. Net earnings per common share: \$0.47, up 14.6% from 1999. A pie chart (inside front cover) shows that 53% of ADM's 2000 revenues (income) comes from food ingredients, 32% from feed ingredients, 8% from industrial uses, and 7% from services.

Also accompanying the annual report is a "Notice of Annual Meeting." G. Allen Andreas, age 57, Chairman of the Board and CEO, had a 2000 salary of \$2,373,972. Address: Decatur, Illinois.

1879. Dogon, Sally Sinaiko; Sinaiko, Wally. 2000. Genealogy and memories of Joe Sinaiko, soybean pioneer in Cedar Rapids, Iowa. Part II (Interview). *SoyaScan Notes*. Nov. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: One of Joe's close friends was Dwayne Andreas—although Dwayne [born on 4 March 1918] was 27 years younger than Joe. The two friends were both born on March 4. Note: In 1936 Dwayne had moved the family business from Lisbon, Iowa, to Cedar Rapids and renamed it Honeymead Products. In Andreas' 1991 biography, *Supermarketer to the World*, E.J. Kahn, Jr., writes (p. 71) that in Cedar Rapids "Dwayne came under the tutelary spell of one of his Jewish mentors, Joseph Sinaiko, a leading soybean processor. 'A very classy guy,' Andreas would say years afterwards, 'and the best soybean processor of that era.'"

Dwayne Andreas was a frequent visitor at the Sinaiko's home. Sally recalls that he was a charmer, an extrovert, and a wonderful person—with great charisma. He was always very kind and nice to Sally when she was a child. She remembers that Dwayne once told Joe that most of what he knew about soybeans he learned from Joe. During those years, Joe and Dwayne usually did business by word of mouth, rather than written agreements. Each man could always be trusted at his word. Dwayne and Joe remained lifelong friends, and—as with all his friends—Dwayne was very generous and kind to Joe.

Note: *Soybean Digest* reports that in 1943 Joe sold the Iowa Milling Co. in Cedar Rapids to Cargill, Inc.—and considered retirement at age 50. By Sept. 1943, when the American Soybean Association held its annual convention in Cedar Rapids, Cargill already owned the plant. But by Nov.

1943 Joe was active once again with soybeans on two fronts. He had just purchased the Mid-Continent Vegetable Oil Co. in Galesburg, Missouri, and he was [perhaps] installing equipment for a soybean processing plant at Fairfield, Iowa.

On 11 Oct. 1944 the plant in Cedar Rapids burned in a huge and spectacular fire, with an estimated loss of \$200,000. Sally, then age 12, remembers going to see the fire with Joe. In Oct. 1946 Cargill sold the Cedar Rapids expeller plant back to Joe Sinaiko.

Joe was a quiet and simple man. He was not at all impressed by important people, fancy restaurants, or the like. He loved to eat at home, but took the family out to eat once a year. The kids birthdays were not celebrated; Sally never received a present in her life—but she was free to buy anything she wanted—using family funds. He was not a social climber. He liked people who were industrious or conscientious. He had no class discrimination. He rarely wore a necktie and did not require neckties of office workers in his company. In 1938 or 1939 Joe and his family moved into a large, beautiful Tudor house at 2232 Linden in Cedar Rapids. From that time the family had nice cars. In about 1946 Joe and Freda were divorced; she continued to live in the big house in Cedar Rapids. Joe lived on a farm he bought near Marion, Iowa.

Alex Sinaiko, Joe's father, died on 10 Sept. 1944 in Madison, Wisconsin. Rachel, his mother, died on 7 Oct. 1950, in Madison.

In 1958 Joe remarried to Janet Epstein. Shortly thereafter, he had a very nice house built at 3322 Terry Drive, SE, in Cedar Rapids; he and Janet lived there for the rest of their lives. She died in 1985.

When Joe was in his late '70s, after he had "retired," he decided to start a corn processing company. It was named either Corn Sweeteners or Iowa Corn Sweeteners and was located in Cedar Rapids. Les Liabo [pronounced LAI-bo], from the University of Iowa helped Joe run the company; he started as a bookkeeper and worked his way to the top. He also started a small sign business named Hawkeye Sign Co. In Florida he either started or bought a car wash. Always a businessman, these kept him active during his retirement years.

Freda, Joe's first wife, died on 2 Nov. 1964 in Cedar Rapids, and was buried there. Joe died on 3 Oct. 1988 in Cedar Rapids, Iowa. He was buried in Madison, Wisconsin. After Joe died, his eldest son, Bill Sinaiko, told Joe's life story to the *Cedar Rapids Gazette* (see issue of 16 Oct. 1988). Address: 1. 75 Maugus Ave., Wellesley Hills (near Boston), Massachusetts 02481-7614; 2. 2216 Glasgow Rd., Alexandria, Virginia 22307. Phone: 781-237-9709.

1880. Ray, Daryll E. 2000. Are multinationals now the stealth of Brazil's agricultural expansion? (Web article). *APAC Weekly Articles*. Nov. 23.

• **Summary:** "Another thing that the last few years has shown

is that increased globalization and freer trade make it easier for multinational agribusiness firms to expand their presence in both exporting and importing countries. We have dubbed this agribusiness impact as the stealth effect of freer trade, since it did not appear on the computer screens of those doing free trade analyses.”

In Brazil: “Multinational presence has increased substantially in the area of soybean processing. In 1995, for example, the top ten soybean processing firms were, in order, Ceval, Sadia, Sanbra (which in 1997 changed its name to Santista Alimentos SA.), Cargill, Incobrasa, Unilever, Bianchini, Olvepar, Coimbra, and Coamo.

“At that time, Dutch based Bunge owned Santista Alimentos S.A. In 1997 they purchased number five Incobrasa, followed by number one Ceval leaving Bunge solidly in the number one position. Bunge then consolidated the Santista Alimentos’ processing operations under the Ceval name and the retail operations of both companies under Santista Alimentos.

“In that same period, ADM entered the Brazilian market with the purchase of Sadia [No. 2], making Bunge, ADM, and Cargill the top three processors in Brazil.

“Also, ADM purchased Glencore Grain Holding with facilities in Paraguay and Brazil.” Address: Director, Agricultural Policy Analysis Center, Univ. of Tennessee, Knoxville, TN 37996.

1881. Rosen, Norman. 2000. History of Quincy Soybean Products Co. and Joe Sinaiko (Interview). *SoyaScan Notes*. Dec. 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Joe Sinaiko’s sister, Marcella Sinaiko, married Irving J. Rosen, Norman’s father. The Sinaiko family came from a little village or town in Russia named Mel’niki (pronounced mel-nuh-KEE), located between Minsk and Pinsk, about two-thirds of the way to Pinsk. Alex, who was in the logging business, had 12 children but only 8 survived and immigrated to the USA.

In early 1939 (in the middle of winter) Irving and his family, including his wife, Norman (age 12) and three other children packed up their old Dodge car and drove in the hail and snow from Madison, Wisconsin, to Quincy, Illinois. They purchased an old 3-story building refurbished it, and installed 3-4 expellers for soybean processing. This building was located in Quincy, next to the bridge that crossed the Mississippi River into Missouri, on the western border of central Illinois.

In either late 1939 or early 1940 Quincy Soybean Products Co. began operation at 111 S. Front St. in Quincy, Illinois. Irving was the plant manager. The Great Depression still gripped America, and especially small rural Midwestern towns like Quincy—population 18-20,000. When Irving put an ad in the local paper saying he needed factory workers, they formed a line that went around the block.

In 1939, not many soybeans were grown in Missouri. Irving Rosen was a pioneer in encouraging Missouri farmers to plant soybeans; in the early days, he traveled throughout eastern Missouri talking directly to farmers. He was very good with people, and a super salesman. The company also built its own elevators in small rural communities in Missouri; that made it easy for Missouri farmers to sell their soybeans to the company—and at a lower price. They bought soybeans mostly by truck and railroad cars. When Norman graduated from college in 1948, he went to work for his father’s company.

The other members of the Sinaiko family—such as Joe and Ike—played a major role in helping Irving’s company to get started and to survive.

Norman (age 73), Irving’s eldest son, worked in Irving’s business. After college and a stint in the navy, in the early 1950s he helped to build Quincy Soybean’s hexane solvent extraction plant at another location in Quincy. When the solvent plant was up and running, they tore down the original plant but left the storage elevators standing. When Norman left the company in 1961 they were crushing more than 100,000 bushels/day. His brother-in-law, Hal Jackson, a chemical engineer from Eastman Kodak, continued to work at the company.

Of the five Sinaiko-family soybean processing companies, Quincy Soybean was the biggest. In Sept. 1961 the Rosen family sold Quincy Soybean to Moorman Manufacturing Company, a feed manufacturer in Quincy. In 1998 ADM bought the entire Moorman company.

The A.E. Staley Manufacturing Co. in Decatur, Illinois, was one of the first soybean crushers in the Midwest. Note: In about Oct. 1922 they started crushing soybeans. Joe learned a lot about soybean processing in the very early days by going to Decatur and spending a lot of time “in the late hours of the evening hanging around the Staley soybean plant.” Joe was a smart man, and an excellent engineer. He took all the things he learned at the Staley plant and used that information to start his own soybean crushing plant in Cedar Rapids, Iowa. Max Albert was a chemical man, who came from somewhere out East. He married Anna Sinaiko.

During the late 1920s or early 1930s (hard years of the early Depression) Joe Sinaiko made a bar soap from soybean oil. Norman remembers this clearly. It had a strange yellow color and also a strange smell. It didn’t sell very well because of the unpleasant smell. Norman doubts that Joe’s children ever sold that soap.

Ike Sinaiko moved to Southern California because of his allergies and asthma. In Norwalk, he purchased an oilseed crushing plant from a Mr. Holden, the father of the actor, William Holden. Holden had crushed some soybeans in his plant before he sold it.

Norman has many articles, photos, and other information about Quincy Soybean, but he just moved into a new house and they are all in boxes waiting to be unpacked.

Address: 3007 Setting Sun Dr., Corona Del Mar, California 92965.

1882. Barboza, David. 2000. New sprouts, old doubts for A.D.M. *New York Times*. Dec. 24. p. BU1.

• **Summary:** The company's top executives say a new ADM is emerging, one "that offers not just bulk grain but also a growing array of health and nutritional products like veggie burgers, soy milk, natural vitamin E and isoflavones, a soy extract that may reduce the risk of osteoporosis." In short, ADM is looking for alternatives to commodities, and working hard to grow its nutraceutical division.

It has been two years since the "retirement of Dwayne O. Andreas, the legendary chairman who built A.D.M. into one of the world's most powerful corporations." In 1997 the board chose G. Allen Andreas, Dwayne's nephew, to replace him as CEO; in 1999 Allen moved up to chairman of the board as well. Yet today, the leadership and future direction of the company are unclear. The big question concerns Michael D. Andreas, Dwayne's son and once the heir apparent. After his three-year prison term (for illegally conspiring worldwide to fix the price of lysine) ends in 2002, will he return to ADM. And if so, what office or offices will he hold?

In 1996 ADM paid a \$100 million fine to settle the government's charges in the lysine price fixing case. It was one of the largest price-fixing settlements in U.S. history, although ADM never admitted wrongdoing, the company has been unable to rebound. Although the world is awash in vegetable oil, the European demand for soybean meal is rising due to the ban on bone meal in animal feeds. Graphs show that ADM's net income and stock price have fallen significantly since 1996.

1883. Holtzman, Rachel. 2000. Trader Joe's soy foods: Answers to commonly asked questions. Nutrition information (Leaflet). Needham Heights, Massachusetts: Trader Joe's. 3 panels each side. Each panel: 21.5 x 9 cm.

• **Summary:** Question and answer format: Contents: What is soy anyway? Why should I include soy in my diet? Does soy have fat? Some soy products say soy wards off heart disease. What does this mean? Ans: The FDA "recently approved a new health claim linking soy protein to a reduced risk of coronary heart disease. Studies show that foods with soy may help stave off heart attacks and other complications of heart disease by lowering cholesterol. The FDA says it takes 25 grams of soy protein a day to have this desired effect (as long as you also follow a diet that's low in saturated fat and cholesterol.) The product needs to meet the strict criteria to bear the new claim, but it will soon be appearing on more labels."

What are isoflavones and where can I find them? Ans: "Soybeans contain a unique compound called isoflavones, which are phyto (plant-based) estrogens. There are three

isoflavones: genistein, daidzein and glycitein. Some research suggests that isoflavones are responsible for soy's health properties. One half cup of tofu has an average of 40 milligrams (mg) of isoflavones; one cup of regular soy milk has about 20 mg; one serving of Trader Joe's Soy Protein Powder has 43 mg. Lower fat products have fewer isoflavones. Soy protein concentrates lose isoflavones during processing. Isolated soy protein (ISP) and textured soy protein (TVP) are good sources of isoflavones. Heat treatment does not appear to significantly affect isoflavone content." What is the difference between isoflavones and soy protein? How can I include soyfoods in my diet?

Ans: Trader Joe's carries soymilk, tofu, tempeh, soy nuts, edamame (soybeans), soy protein powder, meat substitutes, soybean butter. What is tofu and how can I use it? How much soy should I eat? Ans: About 25-50 grams per day. Address: R.D., Trader Joe's Nutritionist, Needham Heights, Massachusetts.

1884. ADM Protein Specialties Division. 2001. Soy: Put it on your menu. Soy7 Soy Enriched Pasta—Martha Gooch. NutriSoy (Leaflet). Front and back. Four panels each side. 28 cm.

• **Summary:** "Just how popular has soy protein become?"

"Soy is tremendously popular right now. Recently, soy protein and its health benefits were featured in *Time Magazine*, *The Wall Street Journal*, and on *Good Morning America*. *Shape Magazine* called soyfoods one of the "Big 6" food trends, and *Foodservice Director* named soyfoods a 'Hot' food menu item.

"The soy health claim: Make it apply to your menu. The Food and Drug Administration (FDA) approved the use of a health claim on the labels of products that contain 6.25 grams of soy protein per serving (and meet the low fat and no cholesterol guidelines).

"Heart disease is the number one killer of Americans. Your customers will look for meals that contain soy.

"Consumers want to eat healthy, but they don't want to noticeably change their diet. The answer? Martha Gooch Soy7 Soy Enriched Pasta."

Note: Since the soy protein health claim was introduced in October 1999, soy protein has increased in popularity.

1885. Berry, Crystal; Traber, Maret G. 2001. What is vitamin E and what does it do? *ADM Nutrition & Health Update (Decatur, Illinois)* 2(3):1-2. Jan. [35 ref]

• **Summary:** "Vitamin E is a fat-soluble antioxidant whose primary function is to protect the lipids and other vulnerable components of the cells and their membranes from oxidation. Because vitamin E can be oxidized, it is able to serve as the body's primary defender against oxidation. Although vitamin E is an essential nutrient, it has no specific metabolic function like vitamins A and K, which influence vision and blood clotting respectively, and the B vitamins, which

influence bone formation.

“Vitamin E is the collective name for molecules that exhibit the antioxidant activity of alpha-tocopherol. Eight different forms of vitamin E have been identified (four tocotrienols and four tocopherols) and are designated by Greek letters: alpha, beta, gamma, and delta. The tocotrienols and tocopherols have similar complex ring structures, but the side chains of tocotrienols are unsaturated while those of tocopherols are saturated phytol chains. Of the eight forms, alpha-tocopherol is the only form that meets the human vitamin E requirement. When alpha-tocopherol is synthesized, a mixture is formed that contains eight stereoisomers. These stereoisomers have similar antioxidant activities but vary in their physical orientations...”

Synthetic vitamin E is only half as active as natural alpha-tocopherol.

Note: ADM makes only natural alpha-tocopherol, which it extracts from soybeans—actually from soybean oil. Address: 1. Millsaps College, Jackson, Mississippi; 2. Linus Pauling Inst., Oregon State Univ., Corvallis, OR.

1886. Chajuss, Daniel. 2001. Soy protein concentrate: Processing, properties, and prospective. Paper presented at the 92nd Annual Meeting of the American Oil Chemists’ Society. 13 p. Held 13-16 March 2001 in Minneapolis, Minnesota.

• **Summary:** This paper consists of 13 PowerPoint presentation graphics / frames photocopied on 13 pages. 1. Title page. 2. Main presently available industrial soy protein ingredients for the food industry (4 types of soy flours, enzymatic treated soy products, soy protein isolates, soy protein concentrates {SPC}). 3. Soy protein concentrates (three processes: Aqueous alcohol washed “traditional” {Hayes System} concentrates—about 450,000 tonnes {metric tons} per year. Acid washed concentrate—about 20,000 tonnes per year. Hot water washed concentrate—none currently produced). 4. Aqueous alcohol washed soy protein concentrates are usefully applied in (minced meat products, minced and canned fish products, meat analogs and alternatives, bakery products, dietetic foods, infants’ formulas, calves milk replacers, fish and piglets feeds and pet foods, other food products). 5. Nutritive advantages of aqueous alcohol washed soy protein concentrate (6

advantages). 6. Technological advantages of aqueous alcohol washed soy protein concentrate (5 advantages). 7. Alcohol washed soy protein concentrate typical material flow. 8. Functional soy protein concentrates (3 types). 9. Typical gross analysis of traditional aqueous alcohol washed (“Hayes System”) soy protein concentrate (Moisture 6.0–10.0%. Protein {N x 6.25} dry basis 68.0–72%). 10. Major world processors of soy protein concentrates (table). 11. Cost and margins—Soy protein concentrates by aqueous alcohol wash. 12. Prospective—Soy protein concentrate (Steadily growing market, about 15% per year. “Functional” concentrates with tailor made properties are expected to see rapid future growth). 13. Hayes General Technology Company Ltd.

The table of major world processors of soy protein concentrates shows: ADM (Netherlands) AAW (aqueous alcohol washed). Solae LLC—Central Soya Aarhus (Denmark)\* AAW. Solae LLC—Central Soya Sogip (France)\* AAW. Solbar Hatzor (Israel) AAW. Shemen / Soyprotec Industries (Israel) AAW. ADM (USA) AAW. ADM (USA) Acid washed. Solae LLC—Central Soya (USA)\* AAW. Solae LLC—Ceval Alimentos / Bunge (Brazil)\* Acid washed. ADM China AAW.

Note: Letter (e-mail) from Daniel Chajuss. 2006. July 8. Asterisks mean that these plants that had once belonged to several firms now (2006) all belong to Solae. The main reason for the two plants using the acid wash process is that these manufacturers had soy isolate plants before they got soy concentrate plants, and this already had the equipment needed (such as a spray drier, decanter, centrifuges, etc.) to produce acid wash soy protein concentrate. The acid washing system is much less widely used today; it was a prior technology.

There is now concern among infant nutrition experts about the high levels of phytoestrogens, and their estrogenic activity, in infant formulas and foods fed to young growing people. “Thus an advantage of the aqueous alcohol wash SPC process, for certain and very special foods, is that it retains *less and not more* of the soy phytoestrogens in the final concentrate.”

Nutritional advantages of aqueous alcohol washed SPC: (1) Devoid of antigenic protein components (2S, 7S, 11S proteins, glycinin and beta conglycinin). (2) Devoid of soy “antinutrients” (hemagglutinins, phytates, non-digestible

sugars, saponins, etc). (3) Low in antiproteolytic enzyme activity (trypsin and chymotrypsin activity—Kunitz and Bowman Birk trypsin inhibitors). (4) Low estrogenic activity (low in isoflavones / phytoestrogens). (5) Balanced amino acid ratio. (6) Help to reduce the risk of coronary heart disease (CHD). All these make traditional SPC better suited for making calf milk replacers, piglets starters and fish feeds, and a more nutritive product than other industrial soy protein products, especially for the above noted purposes as well as for young human infants.

It is true today that essentially all soy-based infant formulas are made from soy protein isolates. However, in the past, they have also been made from traditional SPC. So why don't isolate makers use the aqueous alcohol wash process to make isolates (with low estrogenic activity) specifically for use in infant formulas and feeding? Because it is technically difficult and costly—although it would be an ideal product for infant feeding. “Personally I believe that ‘refolded-functional’ soluble alcohol washed SPC would be better nutritionally, safer, and a more economical product for infants.”

SPC producers do not compete (and never have competed) on the high levels of isoflavones / phytoestrogens in their concentrates, as all alcohol washed SPC has low levels of these substances. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

1887. *Soyfoods Canada Newsletter*. 2001. Founding members of Soyfoods Canada. March. p. 1.

• **Summary:** Soyfoods Canada was started just 4 months ago. The eighteen founding member companies are: ADM Protein Specialties, C&M Seeds, Galaxy Foods, Momo's Kitchen, Nutri-Passion Foods Inc., Ontario Soybean Growers, SoyaWorld Inc., Sunrise Soya Foods, Tofutti-Cholac Foods, Art Allen Consulting, Flamaglo Food Consultants Ltd., Meatless Gourmet, Moulin Aux Abenakis Inc., OntarBio, Snobelen Farms Ltd., St. Clair Agri Services Ltd., Superior Tofu Ltd., W.G. Thompson & Sons Ltd.

Note: Membership costs \$500 per year. Address: Soyfoods Canada, Box 1927, Blenheim, Ontario N0P 1A0, Canada.

1888. Stephens, Roger; Stephens, Jane Ade. ed. and comp. 2001. *Soyfoods guide 2001: Helpful tips and information for using soyfoods*. Indianapolis, Indiana: Stevens & Associates, Inc. Distributed by the Soy Protein Partners. 24 p. Illust. No index. 28 cm. [23 ref]

• **Summary:** Subtitle: “Soy to the world: Information on the health benefits of soyfoods, and our favorite recipes.”

This guide is available only on a limited basis to dietitians and health professionals.

Contents: Foreword. Keep your heart healthy: Super

soy protein smoothie. Beans, beans, good for the heart: The more you eat, the better your chances of lowering your blood cholesterol levels. Cholesterol: What's in a claim. Sample soy meal planner (4 meals a day for 5 days, to get 25+ grams/day of soy protein).

Dietary guidelines for Americans. Composition of soyfoods (table). The healthy bean: Isoflavones, heart disease, menopause and osteoporosis, allergies, diabetes and kidney disease, fat. Isoflavone content of soyfoods (table). The state of soy research. Protein content of soyfoods (table).

Soy resources: Web sites, books. Soyfood substitution chart. Descriptions of soyfoods: Traditional soyfoods, soy-based products, soy ingredients.

Recipes: Meat alternatives. Textured soy protein. Soy flour. Whole soybeans. Soymilk. Tofu. Soy snacks and smoothies. Soy—Good for your heart.

The Foreword (p. 2) states: “Welcome to the 2001 edition of the *Soyfoods Guide*. More new soyfoods than ever are hitting the mainstream market and, to help consumers appreciate the versatility and health benefits of soyfoods, we've updated the guide with new information.

“In 1999, soyfood sales reached just over \$2 billion, with soymilk sales showing a 60 percent increase. That's a dramatic change from just 20 years ago when we had a total of only \$2 million in soyfood sales.

“The surging popularity of soyfoods can be traced in part to the U.S. Food & Drug Administration's approval for a health claim on soy protein's role in reducing cardiovascular disease. For details on the health claim see page 3.

“Soy's role in chronic disease prevention continues to be a top priority for scientists around the world. Soy research continues to look promising in cancer prevention, osteoporosis and heart research.

“Additional soyfoods information can also be found at the Internet site at [www.soybean.org](http://www.soybean.org).

“The *2001 Soyfoods Guide* is distributed by the Soy Protein Partners. Partners include state soybean boards from: Alabama, Arkansas, Delaware, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Jersey, North Carolina, South Dakota, Tennessee, Texas, Virginia, and Wisconsin. Industry partners include: American Soybean Association, Archer Daniels Midland Company, Central Soya Co., Minnesota Soyfoods Association, Protein Technologies International, Soy Protein Council, Soyfoods Association of North America, Soyfoods Council and the United Soybean Board.” Address: 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

1889. Griffith, Aaron P.; Collison, M.W. 2001. Improved methods for the extraction and analysis of isoflavones from soy-containing foods and nutritional supplements by reversed-phase high-performance liquid chromatography and liquid chromatography-mass spectrometry. *J. of*

*Chromatography*, A 913(1-2):397-413. April. [22 ref]

• **Summary:** “Abstract: An improved method for extraction and analysis of isoflavones from soy protein, soy foods and nutritional supplements is presented. The method uses acetonitrile extraction without acidification, with apigenin as internal standard. Samples extracted in acetonitrile-water are diluted to 50% acetonitrile and directly injected for gradient HPLC separation on a C<sub>18</sub> reversed-phase column. This method saves significant time during sample preparation and improves accuracy and precision.” Address: Archer Daniels Midland Company, Decatur, Illinois 62521.

1890. **Product Name:** Royal Kaviar (Vegetarian–Made from Soy Protein) [Beluga, or Osetra]. Spelled Royal Caviar by March 2001.

**Manufacturer’s Name:** Royal Caviar, Inc.

**Manufacturer’s Address:** 4551 San Fernando Rd., Glendale, CA 91204. Phone: 818-546-5858.

**Date of Introduction:** 2001 April.

**Ingredients:** Purified water, organic soy protein, organic soy oil, natural gums, sea salt, natural color, natural flavor.

**Wt/Vol., Packaging, Price:** 4 oz (110 gm) glass jar.

**How Stored:** Refrigerate after opening.

**New Product–Documentation:** Two leaflets sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. One is 8½ by 11 inches, color. On the front is a large color photo of five shallow jars of the product, with all the label text legible. On the back is information about the product and company. Website: [www.royalcaviar.com](http://www.royalcaviar.com). This is an alternative to typical caviar which are the eggs/roe of the sturgeon fish. The second, titled “It’s finally here: Caviar for everyone!” states that Royal Caviar is the “long awaited dream of all gourmet and fancy food lovers.” Label with magnetic backing (refrigerator magnet for “Beluga”). The colors of this label and the ingredients are different from the label shown in the leaflet. At the center of all labels are the words “Malosol ‘Beluga.” In English, “Beluga” can refer to a large white sturgeon or the caviar processed from its roe.

Talk with Ara Agadjanian, sales manager at Royal Caviar. 2001. April 23. This product was first sold commercially in early April, and is now widely available in local Armenian stores. The company was started by Armenians and they developed the product—which is patented and has a 1-year shelf life refrigerated. The president is Dr. Armen Kazanchian. They have recently had to change the name from Black Gold Royal Caviar to Royal Kaviar since Caviar can only refer to fish eggs. It retails for about one twentieth the price of real caviar. The problem is that the sturgeon is now on the endangered species list (in the “Red Book”) in Russia, so Russian caviar production has dropped to one-tenth of what it was last year. Then, Beluga caviar (the most expensive) sold for \$1,800/lb, but the price is expected to rise 5-10 fold. To obtain real caviar,

the sturgeon fish is always killed and the belly cut open to remove the eggs. To serve Kaviar, remove from the fridge and allow contents to rise to room temperature. Lightly butter a small cracker, then top with 1 teaspoon of caviar. Enjoy.

Products with new labels sent by Ara. 2001. May 2. The words “Black Gold” have been replaced by a UPC indicia. Soyfoods Center taste test. A very creative product, consisting of hundreds of tiny black “eggs” per teaspoon. It is important to serve Kaviar as described above; when eaten straight (alone), it is too salty. An accompanying sheet shows that the soy protein in the product is ProFam 648, purchased from ADM under their documented IP [Identity Preserved] program.

1891. Stevens, Jane Ade. 2001. What is WISHH–The World Initiative for Soy in Human Health? (Interview). *SoyaScan Notes*. May 3. Conducted by William Shurtleff of Soyfoods

Center.

• **Summary:** WISHH started was started by the Illinois state soybean board. The initial real goal was to dispose of surplus soy protein in a responsible way. The program is now funded by various state soybean boards. The contractor is the American Soybean Association and the person in charge is Jim Hershey at ASA. The main soy protein products used are isolates, concentrates, and TVP. These are provided to PVOs (Private Voluntary Organizations) already working with food aid. The first meeting with PVOs was in Oct. 2000. One upcoming use is for AIDS patients in Africa—using funds left from the Clinton Administration’s Africa AIDS program. Address: Stevens & Associates, Indianapolis, Indiana. Phone: 1-800-TALK-SOY.

1892. **Product Name:** Martha Gooch Soy7 Soy Enriched Pasta [Spaghetti, Rotini, Angel Hair, Penne Rigate, Lasagna, Elbow Macaroni, Fettucine].

**Manufacturer’s Name:** Gooch Foods.

**Manufacturer’s Address:** P.O. Box 80808, Lincoln, NE 68501. Phone: 217-451-8119.

**Date of Introduction:** 2001 May.

**Ingredients:** Spaghetti; Semolina, soy protein (isolated), niacin, iron (ferrous sulfate), thiamine mononitrate, folic acid.

**Wt/Vol., Packaging, Price:** 16 oz paperboard box with see-thru window.

**How Stored:** Shelf stable.

**New Product–Documentation:** ADM Nutrition & Health Update (Decatur, Illinois). 2001. June. p. 5. “Soy7 soy-enriched pastas to take a place on supermarket shelves.” “Since the soy protein health claim was introduced in October 1999, soy protein has increased in popularity. Now consumers look for great tasting foods that help meet the FDA health claim, ‘25 grams of soy protein a day, as part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease.’”

ADM and Martha Gooch have teamed up to create this product. The first six varieties are sold retail and fettucine is also available to the food service industry. For more information contact Teresa Winchester at Protein Specialties. Phone: 217-451-8119. Talk with Teresa. 2001. June 13. These products were first introduced in May 2001 in Denver, Colorado. Six products with Labels and portfolio sent by ADM (Decatur, Illinois). 2001. June. Each box is a different shape and has a color photo of the prepared dish on the front panel. Green, blue, and gold on white. American Heart Association logo. FDA heart health claim. “Contains NutriSoy” logo, since each is “Fortified with soy protein.” Package design is excellent. Soyfoods Center product evaluation (by Olga Kochan). 2001. June 29. Flavor: Good. More filling than typical pasta. Evaluation by Akiko Aoyagi: She disliked both the flavor and the texture. The product contains too much soy protein. It may be good for you but it

doesn’t taste like pasta.

1893. Mohammed, Ali. 2001. The industrial utilization of soybean: Overview and potential for Egypt. In: Robert B. Dadson and Nemat A. Noureldin, eds. 2001. Soybeans in Egypt: Research, Production, Economics, Nutrition, and Health. Proceedings of The International Conference on Soybean Production under Newly Reclaimed Lands in Egypt. Bethesda, Maryland: University Press of Maryland. xvi + 201 p. See p. 189-200. Chap. 13. Held 28-29 Nov. 1998 in Egypt. [3 ref]

• **Summary:** Contents: Abstract. Introduction. Why are we looking for industrial uses for soybean? What is the goal? What are the strategies for achieving this goal? Why private / public partnerships to find new industrial market for U.S. farmers? What the government / academic side of the partnership can provide. Potential protein uses: Products for rumen foods, protein meals for aquaculture and other animals, protein meals in animal feeds, human food and ingredients, use of soy flour in breads and bread-like, dough-based products. Non-food uses of soybean.

Tables show: (1) Functional requirements of proteins added to foods. (2) Non-edible uses of soy oils, by product class. Soap, paint or varnish, feed, resins and plastics, lubricants and similar oils, fatty acids, other inedible uses. (3) Commercial applications for defatted soy flour. (4) Commercial applications for industrial isolated soy.

An “Archer Daniels Midland (ADM) processing chart” (or diagram) shows all the different products made from the soybean by ADM. Source: ADM products catalog.

A figure shows: Different types of soy flours and other soyfood products produced from soyprotein [soy protein].

On page 201 is a “Summary of the panel discussion on future soybean research in Egypt,” led by Dr. Jagmohan Joshi (Dep. of Agriculture, University of Maryland Eastern Shore) and Dr. Nemat A. Noureldin (Dep. of Agronomy, Ain Shams Univ., Cairo). Address: Virginia State Univ. Petersburg, VA, 23806, USA.

1894. Wendel, Armin. 2001. Lecithin Geschichte [History of lecithin (PowerPoint presentation)]. Hamburg, Germany. 17 p. May. [Ger; Eng]

• **Summary:** This is an award-winning presentation to the American Oil Chemists’ Society (AOCS). The original was in German; the presentation was in English.

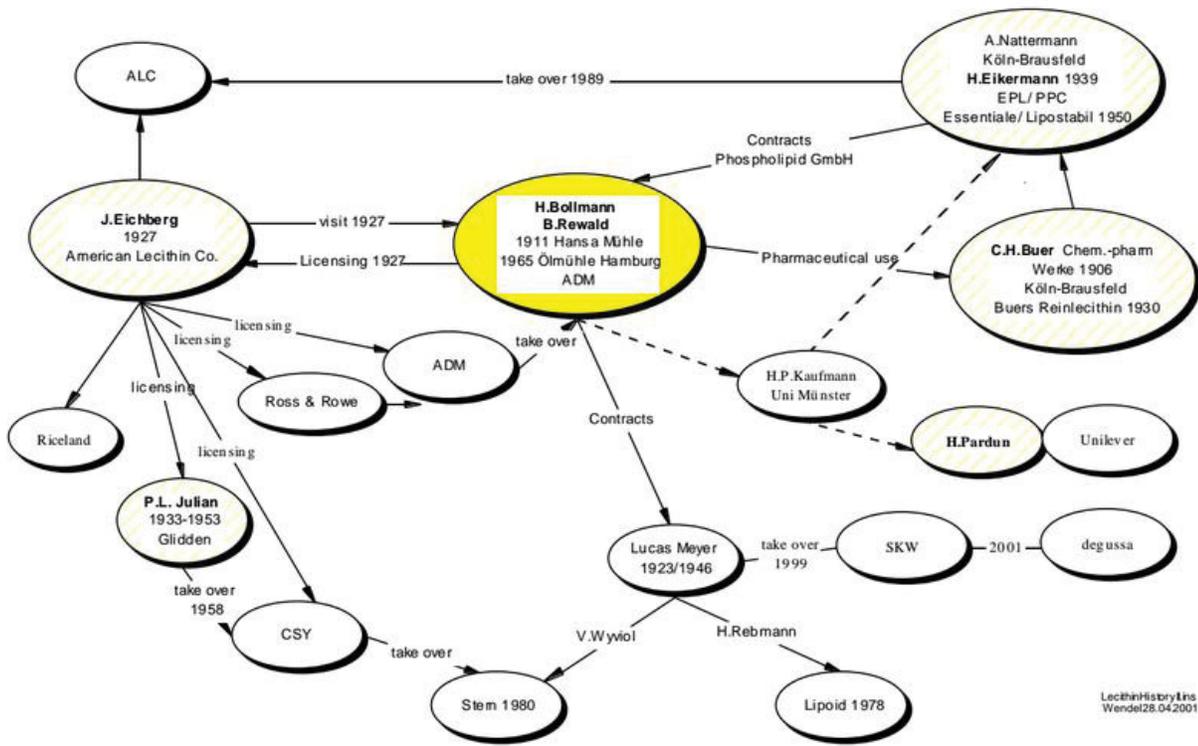

Pages 2-3: 1719–J.T. Hensing (1683-1726) isolated phosphorus compounds from the brain.

1812–L.N. Vaquelin (1755-1809) isolated phosphorus- and fat-containing compounds from the brain.

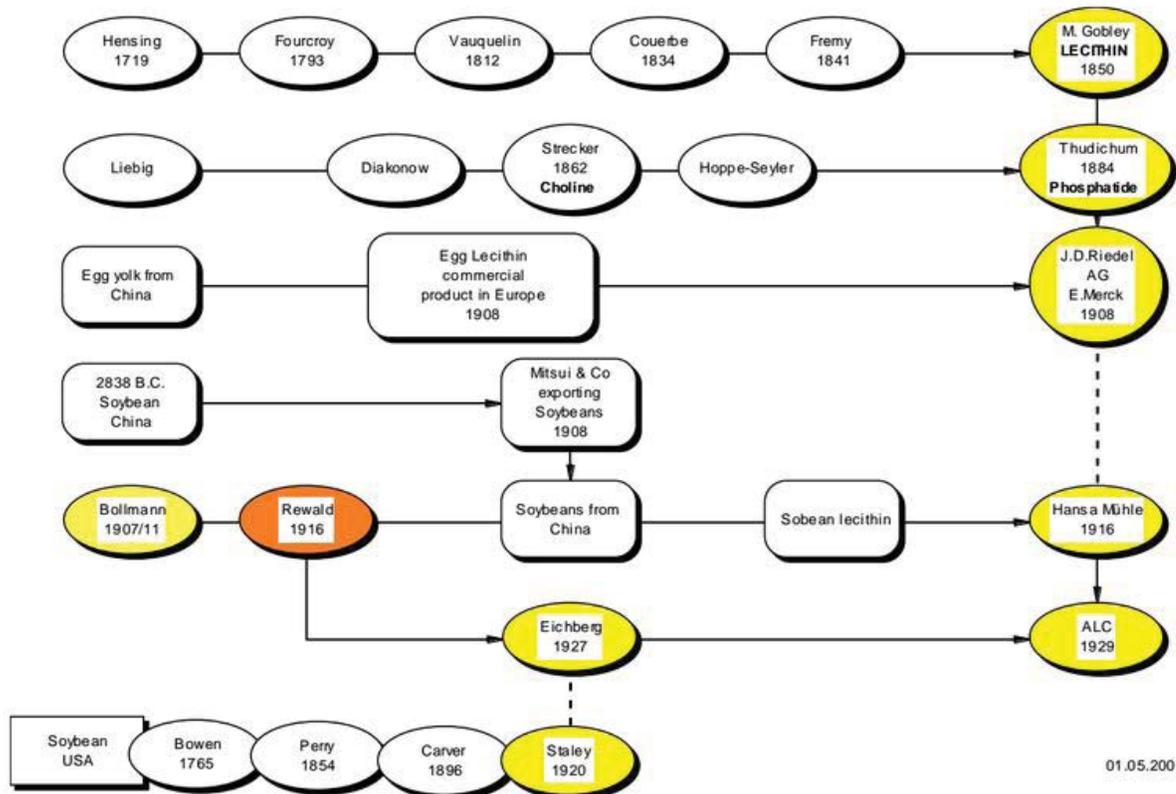

1850–Maurice Goble (1811-1876) isolated phosphorus- and fat-containing compounds from hen’s eggs; he named them lecithin.

1862–Adolph Strecker (1822-1871) obtained nitrogen-containing compounds from the bile; he named them choline.

**LECITHIN - HISTORY**

LecithinHistoryIns  
Wendel28.04.2001

01.05.2001 W

1884–Johann L.W. Thudichum (1818-1901), who was intensively involved with phosphorus-containing lipids, shapes the concepts cephalin (cephalin) and phosphatide.

1908–Egg lecithin is a commercial product in Europe. More than 100 pharmaceuticals containing egg lecithin are on the market. The main manufacturer and distributor is J.D. Riedel AG, Berlin. His brand is Lecithol®.

Page 4: The soybean: its history in China and Europe. In 1913 in Europe about 126,000 metric tons of soybeans were processed.

Pages 5-6: The soybean: its history in the United States.

Page 7: Soybean production in metric tons at selected intervals from 1906 to 1999 in China / Manchuria and in the USA. In 1933 in Germany 1.2 million metric tons of soybeans imported from Manchuria were processed.

Page 7: Soybean production in metric tons at selected intervals from 1906 to 1999 in China/Manchuria and in the USA. In 1933 in Germany 1.2 million metric tons of soybeans imported from Manchuria were processed.

Pages 8-9: History of soybean lecithin in Europe.

1924–Hansa Muehle produced 50 metric tons of soybean lecithin.

1929–Hansa Muehle produced 800 metric tons of soybean lecithin.

By 1929 Hermann Bollmann and Bruno Rewald have published over 200 patents and scientific articles on obtaining and utilizing lecithin.

Page 10: Soybean lecithin history in the USA.

1929–Bruno Rewald first visits the USA and meets Joseph Eichberg. Together they visit U.S. oil mills to introduce and try to license the “Bollmann Process.”

1929–The American Lecithin Company (ALC) is founded by Joseph Eichberg and Hansa Muehle. They later license ADM, Glidden, and Central Soya to use the “Bollmann Process.”

Page 11: Soybean lecithin. Key patents issued to Bollmann and Rewald, 1916-1930.

Page 12: Soybean lecithin “refining” (deoilng).

Page 13: Soybean lecithin “refining” (fractionating).

1939–H. Eikermann at Nattermann makes a fraction that is 75% pure phosphatidylcholine.

1939–Percy Julian at Glidden makes “RAS” Lecithin, an alcohol soluble fraction, and “RAI” lecithin, an alcohol-insoluble fraction.

1964–H. Pardun at Unilever makes a fraction that is 30% phosphatidylcholine, brand-named Bolec. For use as a margarine emulsifier.

Page 14: From the physical to the biological function of lecithin.

Phospholipids are the main component of the membranes of plants and animals (including humans).

It is not possible to live without phospholipids.

Genes rely on phospholipids.

Page 15: From lecithin to phosphatidylcholine.

Page 16 of this presentation uses a bubble diagram to show how central Hermann Bollmann and Bruno Rewald (of Hansa Muehle and Oelmuehle Hamburg) are to the history of soy lecithin. For example:

In 1927 Joe Eichberg of American Lecithin Co. (ALC) visited Bollmann and received a license to sell Bollmann’s lecithin in North America.

In 1989 A. Nattermann (of Köln-Braunsfeld) acquired ALC.

Page 17 shows many major players in lecithin history. Address: Managing Director, Nattermann Phospholipid GmbH, Cologne, Germany.

1895. Cooper, Kim. 2001. Major soybean crushers operating in Canada today (Interview). *SoyaScan Notes*. June 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** There are only two major soybean crushers currently operating in Canada: ADM Agri-Industries Ltd. in Windsor, Ontario, and CanAmera Foods, Ltd. in Hamilton, Ontario. The ADM plant is owned by ADM of Decatur, Illinois. CanAmera is owned by Ferruzzi-Montedison (of Italy), which also owns Central Soya Co. (USA). So neither of the two companies are Canadian owned.

In Ontario province there are also 5-6 smaller companies that use extruders to process soybeans into oil and meal. Address: Marketing Specialist, OSG, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

1896. *ADM Nutrition & Health Update (Decatur, Illinois)*. 2001. Health effects of phytosterols. 3(1):1-4, 6. June. [35 ref]

• **Summary:** Plant sterols or phytosterols are to plants what cholesterol is to animals; they are both key components of plant cell membranes. More than 40 different phytosterols are known to science, but relatively few are found in significant amounts in foods (incl. sitosterol, campesterol, stigmaterol) and all have a chemical structure similar to that of the cholesterol. This structural similarity is probably the reason that plant sterols lower serum cholesterol in humans, with the added advantage of “demedicalizing” the reduction.

Phytosterols are found mainly in oilseeds, nuts, and vegetable oils. Soybeans and whole soyfoods are good sources of phytosterols; 1 cup of tofu has about 40 mg of phytosterols. Yet only a small percentage of that ingested is absorbed. Whereas 40-60% of dietary cholesterol is absorbed, less than 5% of dietary phytosterols is absorbed by most individuals.

1897. *ADM Nutrition & Health Update (Decatur, Illinois)*. 2001. ADM launches new corporate logo. 3(1):4. June.

• **Summary:** The new logo features a blue and green leaf to symbolize the natural origin of all the Company’s products. It is set against a solid blue background in the shape of the previous logo. The new tagline below the logo reads: “The

nature of what's to come." According to ADM Chairman G. Allen Andreas, the new logo and tagline reflect the Company's belief that "nature holds the answer for many of the pressing problem of today's world... and reflect our corporate mission, "To unlock the potential of nature to improve the quality of life."

Note: ADM last changed its logo in 1962.

1898. Tepper, Robert. 2001. Starting Sunrise Brand Marketing Specialists in Jan. 2000. Roger Kilburn sold Harvest Direct to Dixie Diner in June 2001 (Interview). *SoyaScan Notes*. Sept. 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Robert started business at Sunrise Brand Marketing Specialists on 1 Jan. 2000. He started the company while still holding a job at Annie's Naturals. Technically the company was incorporated in Dec. 1999. His company started with three clients, including Harvest Direct and Good Health Natural Foods. Robert managed the sales and marketing for Harvest Direct for a little less than 18 months. He worked closely with Monty and Mary Ellen Kilburn as well as Roger; they are all great folks. Between Feb. 2000 and April 2001 Robert tripled the sales of Harvest Direct. He repackaged the products and got them into supermarket chains such as Vaughn's, Ralph's, Wegman's etc. with 6-10 SKUs (out of 17 sold by the company) in a typical chain. All the products were dry mixes. Harvest Direct's lead items into supers were soy-based pudding mixes. Roger also bought several products, including the Seitan Mix from Arrowhead Mills and the Solait brand in cans he bought from Devansoy (both very good sellers). The Taco, Bar-B-Q, and TVP Chicken Strips (the latter made in Israel; Robert's favorite product).

His 90-day contract was broken on 1 April 2001. No-one from Dixie Diner has ever called him or returned his calls. On 12 June 2001 Roger Kilburn announced the sale of his company (effective June 18) to Dixie Diner, who proceeded to manage it very poorly. Some of his brokers have dropped the line and a number of distributors have discontinued it. Harvest Direct is still alive but declining. Address: Founder, Sunrise Brand Marketing Specialists, L.L.C., 22 Wenonah Ave., Rockaway, New Jersey 07866. Phone: 973-983-7452.

1899. Archer Daniels Midland Co. 2001. Commercial products (Ad). *Soya & Oilseed Bluebook* 2002. p. 114-30.  
• **Summary:** In this multi-page black-and-white ad, addresses are also given for ADM offices in England, Australia, and Japan. Products are described in tabular form under the following categories. For each product is given: Name, grade, assay, granulation or concentration, and applications. Categories: Citric products. Polyol products. Lactic products. Other products: Glucono delta-lactone, xanthan gum. Complexed lecithins. Purified lecithin. Standard lecithins. Modified lecithins. Ultra filtered deoiled lecithins. Capsule

grade lecithins. Distilled monoglycerides. Distilled propylene glycol monoester. Natural-source vitamin E. Novasoy isoflavone concentrate. Phytosterols—all vegetable. Canola sterol esters. Isolated soy proteins (Pro-Fam {20 types} and Ardex {3 types}). Soy protein concentrates (Arcon {9 types}, Arcon T {textured soy protein concentrates, 2 types}, Maicon T {for vegetarian foods}). TVC (Textured vegetable protein chunks and crumbles, 60% protein, for vegetarian foods and meat applications). TVP (3 types). Nutrisoy (defatted soy flours, flakes, or grits, 5 types). Soylec and Nutrisoy (3 types, premix product of lecithin and Nutrisoy). Isoflavones (Novasoy 400, 40% isoflavones). Refined vegetable oils. Address: P.O. Box 1470, Decatur, Illinois 62525. Phone: 1-800-553-3941.

1900. Archer Daniels Midland Co. 2001. ADM this quarter: Fourth quarter report to shareholders. Decatur, Illinois: ADM. 1 p. Front and back. Glossy, color. 28 cm.

• **Summary:** ADM earned \$0.09 per share in the first quarter. Net earnings for the 12 months ended June 30, 2001 were \$383 million compared with \$301 million in last year's 12-month period. Address: Decatur, Illinois.

1901. Soyatech, Inc. 2001. *Soya & Oilseed Bluebook* 2002: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 444 p. Sept. Comprehensive index. Brand name index. Advertiser index. 28 cm.

• **Summary:** On the cover is a rectangular color photo of a soybean in a micrometer, next to a pair of silver calipers, edamame, and exotically colored soybeans—surrounded by a wide, colorful border on a blue background. Across the bottom: "The ultimate industry resource: In print and online. [www.soyatech.com](http://www.soyatech.com).

On the inside front cover is a color ad from Tetra Pak, showing soymilk, its processing and packaging. On the first page is a full page color ad from Vigan Engineering s.a. of Belgium. "Ports and silos equipment—Ships and barges, loading / unloading." On the back cover is color ad from ADM titled "The nature of what's to come." The imaginative collage features edamame in a Chinese paper takeout box with chopsticks on one side, all inside a wok.

The Foreword states: "Our mission is to create an information platform that supports the expansion and development of the soybean and oilseed industry for all people, in all countries." Soyatech's eNews service brings industry-wide news stories to thousands of individuals and companies. "Exciting new multi-client and research studies are slated for production throughout the year." Soyatech will also "be more involved with the creation of symposiums and other opportunities to allow the exchange of ideas, technology, and innovation between industry members." Address: 7 Pleasant St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

1902. *The Non-GMO Source (Fairfield, Iowa)*. 2001. ADM looking for non-GMO soybeans. 1(7):9. Sept.

• **Summary:** “A representative from ADM recently said that the company is in the market for non-GMO soybeans. While Roundup Ready soybeans are approved in Europe, many of ADM’s customers say they need non-GMO beans. Speaking at a meeting sponsored by the Grain and Feed Association of Illinois, the representative said ADM has a greater demand for non-GMO soybeans than they can fill from available supplies. ADM/GROWMARK is paying a premium of 20 cents per bushel to producers and five cents to elevators.

“(Source: *Grain journal*).”

1903. Funk, Linda. 2001. The Soyfoods Council (Interview). *SoyaScan Notes*. Oct. 9. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Soyfoods Council was created by the Iowa Soybean Association. Linda began work on 24 Sept. 2000 and she is managing the “edible budget” of the Iowa Soybean Promotion Board (the one with checkoff funds). The “edible budget” comes under the Marketing Committee. She reported to them every time they meet.

Her first soy event was when the Wisconsin Soybean Association asked her to do a foodservice training event, in June or July of this year. She had Toni Sakaguchi come out from Culinary Institute of America (CIA) in St. Helena, California; they have refined the presentation since then. People absolutely love Toni; she is warm, she knows the products and the principles of cooking, and she is a real professional. She is credible and chefs really like learning from her. She had some wonderful beef dishes and fish dishes. She can answer all their questions. “She’s been fabulous.”

Linda has finished her mission statement, objectives, etc. and is about ready to send out membership letters. When she has members, mostly soy processors and soyfoods manufacturers, then she will figure out how to structure the new organization.

She gets some funding from the Iowa Board and some from the Iowa Economic Development Group—which is interested in adding value to Iowa commodities. Linda has worked with Midwest Harvest (Tom Lacina and the Soy Sisters). One of her missions is to find ways to introduce soyfoods to mainstream America. She hopes to use specific, fun ways, that don’t make the foods weird or strange or scary. “Plunking a pound of tofu in front of a soybean farmer won’t get you anywhere. We have to find ways to introduce soyfoods by combing them with foods that people know and love. It doesn’t have to be vegetarian. It can be a ‘combo,’ such as tofu and cream cheese; it doesn’t have to be ‘all or nothing.’ For the farmers who are the Iowa Board, I’ve started making desserts. They have to be believers before they will approve and fund new projects. We’ve done some very interesting, fun stuff and people are starting to go ‘Wow.

This can taste good.” But a few farmers on the board have told her that what she’s doing is all fine and cute, but “Don’t you dare take the meat off the center of the plate!”

Linda plans to do a seminar at the CIA in St. Helena on December 3-5. Thirty hand-picked chefs from across the USA will attend, and the Soyfoods Institute will pay all their expenses. United Soybean Board will fund that program. Linda has to raise the funds for each event; she had never been a fund-raiser before she accepted this job.

Linda has a two-pronged approach: (1) Mainstream consumers—Figuring out how to help them start introducing soy into their diets. (2) The foodservice channel—including restaurants, onsite (such as corporate dining rooms). She will start by working with the “fine dining chefs,” the ones that people look up to for trends and ideas. Then have it be a trickle-down effect. She believes that getting the foodservice industry involved with help in introducing soyfoods to mainstream Americans.

The most recent seminar was at Kendall College in Evanston, Illinois, near Chicago. Toni Sakaguchi of the CIA did a great job. She demonstrated fun ways to start adding soy flour to recipes chefs were already using—to batters and breads, for example. Toni also used tofu in various recipes. The CIA has developed what they call their “flavor principle package” which enables you to apply flavor principles to whatever recipes you are developing.

Linda is well aware of edamamé; she talked about it this morning on a radio show. She believes in serving edamamé in the Midwest mixed with familiar foods. She served edamamé in the pods to a farmer’s group and “they were fascinated by it and thought it was quite delicious.” But they are not going to use it as a new type of snack.

Linda grew up on a farm in Wisconsin. Her dad is a farmer. She understands the mentality of farmers. She worked on Wisconsin Cheese for many years. She started with the Wisconsin Milk Marketing Board in 1988 and headed up the foodservice area. One of her main projects was to get American chefs and mainstream Americans to believe that Wisconsin cheese-makers could make specialty cheese that were as good as their imported counterparts.

One discussion with chefs is “Do you scream it on your menu or do you soft-sell it?” Linda strongly favors the soft-sell approach—until people are really comfortable with it. Many people she talks to, from consumers to food professionals, still turn up their nose at soy. If you start probing as to why they think this way, many of them go back to soy in a school lunch program or with hippies.

Linda has been writing a column for the *Iowa Soybean Review*, a publication of the Iowa Soybean Association. She includes recipes, and advises cooks not to tell their family what they are doing until they say “Wow, was this good!” Then you can tell them.

Linda eats Harmony cereal each morning, and finds that many others also like it. Her favorite recipes: (1) Molasses

glazed pork tenderloin, with edamame. (2) A combo tofu cheesecake or dessert, with about half cream cheese; it is lower in calories, saturated fat, and cholesterol plus other soy health benefits. (3) Pizza with edamame in the topping; she is working with a commercial frozen pizza company on this. (4) A seven-layer bar with TVP layered and baked (like a granola bar, developed by the Soy Sisters).

Linda has to dispel those preconceptions. Anderson-Erickson in Des Moines came out with the first dairy yogurt that contains soy protein; it's wonderful! The woman who is president of this family-owned business, Merriam Erickson-Brown, is very forward thinking. Linda has done a lot of press on her. The product has been very successful. *Cooking Light* magazine (Birmingham, Alabama) has published many excellent articles and recipes on soy—especially tofu. Jill Melton, their senior food editor, is Linda's friend, and they talk a lot about introducing people to soy. They had a chocolate mousse on the cover of a recent issue. One issue is taking soy out of the "Asian only" category and introducing it into French or Mexican recipes—without making it appear weird or contrived.

A year ago Linda never ate soy; she came from the dairy industry and it was the arch-enemy. She now tells the dairy industry that these two industries can and should work together.

Marv Wilson, who is a fine actor, does an impersonation of Henry Ford, focusing on Ford's work with soybeans. He does this for soybeans farmers, and anyone who asks him. "It's fascinating." Address: Des Moines, Iowa.

1904. *SoyaScan Notes*. 2001. Historical perspective on ADM and soy protein isolates (Overview). Oct. 26. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The following information is from one or more long-time and very well informed insiders in the soy protein isolate industry; they have asked to remain anonymous. ADM started making edible soy protein isolates at a very late date. ADM is a very technologically oriented company. They never put much effort into selling their isolates, even though that little Protein Products Division has always been the pet of Dwayne Andreas. ADM got into edible isolates after Central Soya shut down their isolate plant in Chicago because it was causing too much pollution. The plant had formerly been an old Al Capone brewery, within walking distance of Lake Michigan. ADM actually bought the plant from a junk dealer. ADM has a small but full-time staff that monitors used equipment nationwide, so that when they want to start a new plant they can buy the equipment inexpensively.

When ADM bought the plant, they hired most of the same people who had worked there previously. Within about 2 months they were back up to speed producing edible isolates. They used their technical expertise to get the production line operating at ADM's high standards,

so the product quality was stabilized at higher levels and effluents were decreased. ADM renamed Promine to Ardex and continued the same line of four isolate products. Thus Promine D (Central Soya's flagship isolate) became Ardex D, etc. ADM improved the quality of the products somewhat, but they did not introduce any new products, so they fell further and further behind Ralston Purina and Grain Processing Corp. (GPC, whose main problem was that their volume was too low).

ADM tried to compete by being a very, very efficient manufacturer. Ralston at that time, for example, had a problem with the inconsistency of their bulk density—which was a problem for the "muscle powder market." ADM quickly got uniform bulk density, consistent flavor, no dark particles, and good bacteriological quality. They priced their products a little below the going market price because they were a new entrant, but not much—because the profit margins were already slim due to excess capacity in the industry.

In June 1988 ADM bought GPC's edible isolate business and shut down the plant—in part to get rid of this excess industry capacity and in part because ADM considered GPC's diverse line of Pro-Fam isolates to be of superior quality. ADM's isolate line now consisted of many Pro-Fam products and a few of the old Ardex products. Soon ADM built a new isolate plant in Decatur and shut down the Chicago plant. ADM was now becoming a serious competitor to Ralston's new PTI division.

A large quantity of these isolates went into baby foods, soy-based infant formulas, diet foods, and muscle powders. The industry always had high hopes for isolates in meat applications, but the USDA was very suspicious of them because, as purified proteins, they were hard to detect in meats and they could bind a lot of water. Consequently USDA required a titanium dioxide tracer and spoke of potential "adulteration with water."

Moreover, a huge market was developed in Eastern Europe, where Communist administrators mandated its use in all processed meats. The key to capturing this market was having the lowest price product; there was little motivation to improve quality.

About 5-6 years ago ADM started putting a lot of effort into their soy isolate lines. They developed a line of new products that were functionally superior—including the Pro-Fam 890 series and 825 series (to add to fruit juices). ADM and PTI make many different isolate products in terms of functionality, solubility, etc. But over the past 20 years PTI has made great progress in every aspect of isolate quality (viscosity, bulk density, dispersibility, flavor, color, etc.), new product development, manufacturing, and marketing, so that they have come "to absolutely dominate the market" with approximately 90% market share. In part, this was because PTI could focus all of its attention on isolates—since that was their only product line. ADM, by contrast, has hundreds of other products.

One of our sources is one of the oldest operating distributors of ADM protein products. He is a recognized expert in applications of soy proteins. He has heard (industry scuttlebutt) that Cargill might come into the isolate field, and that they might buy PTI. DuPont paid much too much for PTI (something like 5 times annual sales), so they have been cutting costs furiously and ruthlessly. They have dismissed their entire R&D staff and cut back even on their sales staff. "Anyone would be insane to get into this market with a brand new plant."

The world market for soy isolates is growing nicely. When ADM built its two new isolate plants in Decatur, the production capacity was sold out before either one was finished. They also have a plant in Europe. He does not think that the FDA heart health claim has much of an effect on the market for isolates. "People used to say that soy was really good for you, but..." Now things have changed, and they buy soy. For example, USDA is now actively encouraging the use of soy in the school lunch program (especially textured concentrates since kids won't eat things unless they taste good) and as an extender in meats. Some new isolate plants in China have started production and disrupted the international market—even though the isolate quality is poor.

"TVP—which we all thought would revolutionize the world's diet—has been a bust. Just a bust!" There were 11-13 manufacturers of textured soy flour 20 years ago. Now there are only a few, a majority of it goes into pet foods (the TVP chunks look like chunks of meat), plus commercial burritos, pizza toppings, meat alternatives, etc. but the profit margins are low.

The following are ADM prices F.O.B. plant, per truckload (based on records from files): Recent ADM prices: Soy protein concentrate: 1989–54 cents/lb. 1993–60 cents/lb. 1996–69 cents/lb. 2001–73 cents/lb. Soy protein isolate: 1989–121 cents/lb. 1993–121 cents/lb. 1996–140 cents/lb. 2001–151 to 159 cents/lb. PTI prices would typically be 2-3 cents/lb higher.

1905. AGP—Ag Processing Inc a cooperative. 2001. Annual report. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 28 + 20 p. 28 cm.

• **Summary:** Net sales for 2001 (year ended Aug. 31) were \$1,788.716 million, up 9.0% from \$1,640,838 million (revised downward from \$1,961,736 million) in 2000. Earnings from continuing operations (before income taxes): \$46.038 million, up 2.70 fold from the \$17.069 million (revised downward from \$20.908 million) in 2000.

This year AGP has a new CEO, Martin P. Reagan. "In fiscal 2001, AGP began to divest its U.S. and Caribbean feed operations, its swine business, and its Sherman, Texas, refinery, ending its relationship with Archer Daniels Midland (ADM) in these businesses." "Through a transaction with ADM in fiscal 2001, AGP divested itself of Consolidated Nutrition which was jointly (50-50) owned by the two

companies. In a related transaction, AGP acquired ADM's share of Masterfeeds, the Canadian feed operation that had been equally owned by the two companies." Also an "expansion of the Soybean Component Premium Program [to include protein], and an increase in bio-fuel visibility and growth." AminoPlus is "AGP's high performance dairy supplement" [bypass soy protein].

Contains color photos of (1) Leiting and Lindsay. (4) The board of directors. (5) Management staff. Contains many color photos. AGP now has a website listed on the back cover: [www.agp.com](http://www.agp.com). Address: Omaha, Nebraska. Phone: (402) 496-7809.

1906. Archer Daniels Midland Co. 2001. Annual report: Unlocking the potential of nature—Maximizing value. P.O. Box 1470, Decatur, IL 62525. 44 p. Oct. 28 cm.

• **Summary:** Net sales and other operating income for 2001 (year ended June 30) were \$20,051 million, up 7.7% from 2000. Net earnings for 2001 were \$383.3 million, up 27.3% from 2000, but far below the recent peak of \$796 million in 1995. Shareholders' equity (net worth) is \$6,332 million, up 3.6% from 2000. Net earnings per common share: \$0.58, up 28.8% from 2000.

ADM has a new mission statement: "To unlock the potential of nature to improve the quality of life." This is leading the company to "create added value in our core businesses..."

The section on "Oilseeds" (p. 6-7) states: "Currently more than 40 products are co-branded with ADM's NovaSoy isoflavone logo highlighted on the package. Soy meal can also yield soy isolates and concentrates, the basis for ADM's NutriSoy brand of soy protein. Presently more than 17 co-branded products highlight their NutriSoy content, including ADM's Soy 7<sup>TM</sup> pasta, a protein enriched product that qualifies for the FDA approved health claim.

"Soy oil is an excellent natural source of Vitamin E, which is twice as potent as the commonly used synthetic Vitamin E. ADM's d-Alpha logo for natural-source Vitamin E supplements received a favorable initial response by retailers in fiscal 2001..." Phytosterols and biodiesel are growing markets. "Interestingly, the original diesel engine developed by Rudolf Diesel in the 1890s used an unusual fuel: peanut oil."

Also accompanying the annual report is a "Notice of Annual Meeting." G. Allen Andreas, age 57, Chairman of the Board and CEO, had a 2000 salary of \$2,398,480.

Note: According to a multi-page ADM ad in the *Soya & Oilseed Bluebook 2002* (published Oct. 2001), the company makes 16 isolated soy proteins under the Pro-Fam brand, 2 isolated soy proteins under the Ardex brand, 7 soy protein concentrates under the Arcon brand, 2 textured soy protein concentrates under the Arcon T brand, and TVC (textured vegetable protein chunks and crumbles); TVP is not mentioned. Address: Decatur, Illinois.

1907. Business Trend Analysts, Inc. 2001. The market for fats and oils: Past performance, current trends, and strategies for growth. 2171 Jericho Turnpike, Commack, NY 11725. 549 p. Price: \$1,495. \*

• **Summary:** Contents: 1. The overall report. 2. The market for vegetable oil: The overall market, the market for soybean oil, for corn oil, cottonseed oil, sunflowerseed oil, peanut oil, canola oil, olive oil, other vegetable oils (incl. linseed oil, coconut oil, palm oil and palm kernel oil, tall oil, tung oil, castor oil, sesame oil, cuphea, hemp oil, argan oil). 3. The market for animal fats and oils. 4. Edible end-use markets for fats and oils. 5. Inedible end-use markets for fats and oils. 6. The impact of fat substitutes. 7. Industry structure and economics. 8. Competitor profiles: Archer Daniels Midland, Cargill, Cenex Harvest States Cooperatives, ConAgra Foods, Philip Morris Companies, Procter & Gamble, Unilever.

In Chapter 2, “The market for vegetable oil,” is a long section titled “The market for soybean oil.” Contents: Market overview (1990-2000, 2001E, 2002E, 2010P). Sales and consumption. Production trends. Foreign trade activity. Polymer coatings for seeds. Statistical tables: (1) U.S. manufacturers’ sales of soybean oil. (2) Total U.S. consumption of soybean oil. (3) Consumption of soybean oil: Edible vs. inedible end-uses. (4) Consumption of soybean oil in selected edible products: Salad and cooking oils, baking and frying oils, margarine, other edible products. (5) Consumption of soybean oil in selected inedible products: Resins and plastics, paint and varnish, other inedible products. Soybean oil production, prices, and supply. Soybeans: Supply, crushings, production, prices, and acreage planted and harvested. Worldwide production of soybean oil. Exports, imports, and U.S. apparent consumption. Exports as a percentage of U.S. manufacturers’ sales. U.S. exports and imports by country. Average dollar prices for exports and imports. Address: Commack, New York.

1908. *Nutrition Business Journal (San Diego, California)*. 2001. Functional Foods V. 6(10):1, 3-8. Oct.

• **Summary:** The U.S. retail food market in the year 2000, worth \$495 billion dollars, is divided into the following eight categories, listed in descending order of size: Meat, fish and poultry \$108.7 billion. Beverages \$88.9 (not incl. milk or liquor). Fruit and vegetables \$84.9. Bread and grains \$59.7. Dairy \$53.4. Packaged/prepared foods \$51.7. Snack foods \$30.0. Condiments (incl. oils, dressings, spreads, sauces, spices, sweeteners) \$17.6.

The top five U.S. functional food companies in terms of U.S. functional food sales (\$ million) are Pepsico U.S. \$3,530, General Mills \$1,400, Kellogg \$1,370, Kraft \$780, and Coca-Cola \$650. Smaller top companies include: Clif Bar \$130, Stonyfield Farms \$100, Imagine Foods \$90, and White Wave \$90. 90% of Imagine Foods’ total sales come from functional foods, compared with 100% for White Wave.

Imagine Foods launched a big campaign in 2001 to market Organic Power Dream Soy Energy drinks to athletes and fitness enthusiasts.

“Soy is the functional food star of the last two years with an estimated 300 soy products introduced in 2000 alone.” Ingredient suppliers in the field of soy are now bearing heavy responsibility for functional food research. ADM, Cargill, Central Soya, and Protein Technologies International (PTI, owned by DuPont) are all investing in research, education, and consumer outreach—plus innovation in processing and new ingredients. One of the largest uses of soy protein is SlimFast, but the health benefits of soy are not the shopper’s first consideration.

1909. *Nutrition Business Journal (San Diego, California)*.

2001. Suppliers refine next generation of soy ingredients: Suppliers market to consumers and improve taste, texture, and functionality of soy ingredients. 6(10):18-20. Oct.

• **Summary:** Cargill, with sales of \$49 billion/year, has long been a supplier of soy flour and textured soy flour. But it is a relative newcomer to higher-end soy ingredients. Last year Cargill announced that it is expanding into soy protein isolate, according to Ted Ziemann, president of Cargill Nutraceuticals. According to Kevin Marcus, director of marketing for Cargill Soy Protein Products, Cargill now has an operational pilot plant and is working with about 20 food, sports nutrition, and weight loss companies on full-scale production—which is slated for 2003.

In the summer of 2001 Cargill Nutraceuticals officially launched AdvantaSoy isoflavones, which is available in regular and non-GMO versions, is not produced using solvent extraction, and keeps the isoflavones in their natural state. Meanwhile the Soy Protein Products group is developing six isolates and six process patent applications.

Today, about 150-200 million pounds of soy protein isolate are used in the USA—according to Marcus. At \$1.65 to \$2.10 per pound, this would be worth an estimated \$280 to \$375 million.

ADM, the world’s largest supplier and processor of soybeans, has been selling Novasoy, which contains 40% soy isoflavones. Increasingly ADM is turning its attention to consumer marketing, by branding its products—according to Tony DeLio, president of ADM’s Natural Health and Nutrition, whose focus is to identify, create, and develop nutraceuticals and functional food ingredients, backed by solid science. ADM has developed the NutriSoy consumer trademark. Today Novasoy has about 50 branding partners in the USA. DeLio estimates worldwide soy isoflavone sales at wholesale to be \$30-40 million worldwide. ADM is also making water dispersible phyosterols and sterols under the CardioAid trade name.

A sidebar titled “Large corporations dominate soy proteins market” contains estimated worldwide manufacturers’ sales and market shares compiled by ADM:

Soy flour, comprising about 25% of the value of the market for soy protein products, has annual sales of about \$388 million. Cargill and ADM each have about one-third of the market.

Soy protein concentrates: \$487 million. ADM is the leader with about 48% of the market, followed by Central Soya, then Ceval Alimentos of Brazil. The largest end uses for concentrates are meat extensions and alternatives (49%), animal feed/pet food (30%), functional foods (5%), and dairy replacement/infant foods (5%).

Isolated soy proteins: \$651 million. Protein Technologies International (PTI) is the leader with about 67% of the market, followed by ADM (19%) and Ceval Alimentos (8.8%). The largest end uses for isolates are infant foods and dairy replacements (40%), meat extensions and meat alternatives (20%), and use in other functional foods (10%).

ADM believes that soy concentrate's share of the market may slowly decrease due to strong demand for isolates and improvements in isolate quality. Strong demand for isolates in the USA and abroad lead to projections that this product will grow from 43% of the soy protein market in 1998 to 45% by 2002.

Note: This is the earliest document seen (July 2020) that mentions "Cargill Nutraceuticals."

1910. Endres, Joseph G. ed. 2001. Soy protein products: Characteristics, nutritional aspects, and utilization. Revised and expanded ed. Champaign, Illinois: AOCS Press. ix + 53 p. Index. 23 cm. [106 ref]

• **Summary:** Contents: 1. Historical aspects. 2. Definitions and methods of preparation. 3. Protein quality and human nutrition. 4. Health and soy protein. 5. Functionality of soy proteins. 6. Uses in food systems. 7. Regulations regarding usage. 8. Future considerations.

Soy Protein Council member companies: ADM, Central Soya Co., Cargill. Note that Protein Technologies International is not a member. The Introduction (p. 1) states that more than 1 billion pounds of soy protein products are produced for human consumption each year in the USA—about 4 pounds per person.

Note: This is an updated and expanded edition of: Soy Protein Council. 1987. "Soy protein products: Characteristics, nutritional aspects and utilization." 43 p. Address: PhD, The Endres Group, Inc., Fort Wayne, Indiana. Phone: 219-625-3616.

1911. *ADM Health & Nutrition Update (Decatur, Illinois)*. 2001. Continued interest in soy products, according to a recent survey. 3(3):5. Dec. [1 ref]

• **Summary:** The following are results from a survey conducted for the United Soybean Board, based upon a nationwide telephone of 800 adults 18 years and older.

Consumers who believe soy oil is healthy 88%.

Consumers who are aware of tofu 82%.

Consumers who are aware of soymilk 78%.

Consumers who use soy products at least once a week 27%.

Consumers who believe soy products are healthy 69%.

Consumers who are aware of specific health benefits of soy 39%.

1912. Archer Daniels Midland Co. 2001. ADM this quarter: First quarter report to shareholders. Decatur, Illinois: ADM. 6 p. Glossy, color. 28 cm.

• **Summary:** ADM earned \$0.20 per share in the first quarter. Net earnings for the 3 months ended Sept. 30 were \$131.6 million in 2001 vs. \$109.4 million in 2000. This issue contains a 1 page (front and back) insert titled "Dwayne O. Andreas retires from board of directors." It contains 6 color photos plus a black-and white photo of Dwayne Andreas talking with President Ronald Reagan. The text begins:

"For the first time in 35 years of ADM's history, the slate of directors does not include Dwayne Andreas. Under his leadership ADM launched its drive into agribusiness across the globe. He forged a key position for ADM as the single most important catalyst for the shift to a global food system. The opportunities that Mr. Andreas seized across the globe brought new partners and customers from Europe, Russia, China, and throughout Latin America. Mr. Andreas set the stage and was the principal architect of the global matrix of businesses that ADM enjoys today. As an advisor with the unique confidence of scores of world leaders and as a friend of the farmer, he built bridges across continents and became a benefactor to all the world's citizens. Mr. Andreas' relentless fight to end hunger and malnutrition brought new prospects for peace and democracy in every corner of the world. The board of directors is honored to have Mr. Andreas serve as chairman emeritus this coming year and looks forward to sharing the wisdom of his counsel as we enter a new chapter in ADM's history." Address: Decatur, Illinois.

1913. Lyons District [Cameron], Calhoun County, South Carolina. 2001. Commercial-industrial appraisal card: Tax map 150-11-03-01. Calhoun County, South Carolina. 1 p. 28 cm.

• **Summary:** Note 1. We know from other documents that: (1) In March 1963 Southern Soya Corp. of Cameron was running a soybean processing plant (making soybean oil and meal) at Cameron, South Carolina (*Soybean Blue Book*. 1963. p. 81). They acquired a portion of this land for \$21,000 from David K. Summers, Jr. and Jacob William Summers, who inherited it from their mother, Olivia B. Summers (deed 1951 dated 6 May 1970, and deed 1954 dated 31 March 1971).

In about Aug. 1972 there had been an explosion and fire at that plant. Southern Soya Corporation of Cameron rebuilt the plant, and got it up and running again.

1973 July 26—Allied Mills purchased this piece of land, 15.02 acres, from Southern Soya Corporation of Cameron for \$406,000 (deed 4143). This deed states that Southern Soya Corporation of Cameron was previously named Central Grain Company, Inc.

1974 Jan. 4—Allied Mills was paid \$10.00 by Calhoun County, apparently for a name change. Note 2. From other documents we know that in 1974 Allied Mills became a wholly owned subsidiary of Continental Grain Co. Thus, Allied Mills may have changed its name to Continental Grain Co.

1987 Nov. 23—Calhoun County sold this land (now 14.97 acres) to Continental Grain for \$1.00 and bonds (deed 12291). Note 3. This a financial instrument that enables companies to borrow money through “bonded indebtedness.” A governmental bond, which is an economic development incentive, is issued. The company then deeds the property to the county. When the company had paid off the debt to a bank, the county is obligated by contract to deed the property back to the company for \$1.00. The affidavit with this deed states that the County issued its First Mortgage Industrial Revenue Bonds on 1 Oct. 1973; these were used to finance the construction of a soybean processing facility, which was leased to the company.

1987 Nov. 20—Continental Grain Co. sold this land to Central Soya Co., Inc. for \$5.5 million a few weeks after they had bought it from Calhoun County (deed 12293).

1987 Nov. 24—Central Soya Co. sold the land to Archer Daniels Midland Co. [ADM] for \$6.0 million (deed 12306). Thus Central Soya made \$500,000 in 4 days just by owning this land.

2001 Jan. 31—Archer Daniels Midland Co. sold the land to Golden Kernel Pecan Co. for \$80,000 (deed book 160, p. 57). In the meantime, ADM had shut down the soybean processing plant and cleaned up the property.

2001 Dec. 31—The name on the deed was changed from Golden Kernel Pecan Co., Inc. to David K. Summers, Jr. and J. William Summers (the owners of the pecan co.) for \$5.00 and valuable consideration (“V.C.”).

1914. Breier, Davida Gypsy; Mangels, Reed. comps. 2001. *Vegetarian & vegan FAQ: Answers to your frequently asked questions*. Baltimore, Maryland: The Vegetarian Resource Group. 272 p. Illust. Index. 23 cm. [69 ref]

• **Summary:** Contents: 1. Most frequently asked questions (incl. How many people are vegetarian? Detailed results of polls conducted in 1994, 1997, 2000). 2. Vegetarianism in daily life (incl. How do you pronounce “vegan?” Ans: VEE-gun. Who are some famous vegetarians? What is the history of vegetarianism?). 3. Nutrition (incl. I need impartial, major scientific studies that show a correlation between a vegetarian diet and disease prevention? Gas caused by eating soy). 4. Food ingredients (incl. Soy cheeses, soy lecithin). 5. Recipes (incl. many recipes for tofu, tempeh, soy whipped

cream, chocolate pudding with soymilk, soy yogurt, wheat gluten / seitan, TVP). 6. Vegetarian products (incl. What is seitan? Where can I buy seitan? What is tempeh? What is TVP? Where can I buy TVP? What is tofu? What do I do with it? Alternatives to dairy products. Vegan eggnog. Soy candles). 7. Cooking and baking (Tofu, draining tofu, tofu cream cheese, Tofutti). 8. Travel and restaurants. 9. Veggie kids (Soy-based infant formula. Phytoestrogens in and safety of soy infant formula). 10. Soy (p. 168-76; contains good, balanced responses to the anti-soy articles by Fallon and Enig, p. 173-76). 11. Vegan concerns. 12. Unique questions. 13. Questions about VRG. 14. Appendix: Quick guide to fast food. Quick guide to helpful websites. Protein content of selected vegan foods. Calcium content of selected vegan foods. Iron content of selected vegan foods. Daily values. A senior’s guide to good nutrition. Eat better, perform better, sports nutrition guidelines for the vegetarian. Why is wine so fined? Handy guide to food ingredients. List of suggested reading: Vegetarian cookbooks, vegetarian families, vegetarian travel. School foods information. Feeding plans for infants and toddlers. VRG publications, resources, and tabling materials.

Soy-related questions and answers outside of Chapter 10: Gas and bloating after eating soy (p. 64). Casein found in many soy cheeses (p. 80). Soy lecithin (p. 85). Recipes: Tofu dill dip (p. 88). Spinach pie (with tofu, p. 93). Tempeh stuffed potatoes (p. 94-95). Spicy sautéed tofu with peas (p. 98). Quick sloppy joes (with tempeh, p. 98). Sweet potato slaw (with tofu). Tofu balls (p. 100). Pad Thai (p. 102-03). Davida’s spicy garlic noodles and tofu (p. 105). Soy whipped cream (with soymilk, p. 106-07). Chocolate pudding (with soymilk, p. 107). Heavenly chocolate cupcakes (with soymilk, p. 109). Tofu cheesecake (p. 112). Homemade soymilk, rice milk, almond milk (p. 115). Homemade tofu (p. 115). Tofu recipes on the Web (p. 116). Homemade soy yogurt (p. 116). Homemade wheat gluten & seitan (p. 116). What is tempeh? What is TVP (p. 119). Vegetarian mince or meatless ground beef (p. 120-21). vegetarian and soy cheeses (p. 121). Tofurky (meatless turkey, p. 122-23). Tofutti (non-dairy soy ice cream) and vegan eggnog (p. 125). Soy-based vegan candles (p. 126). Using tofu (p. 129-31). Tofu cream cheese (p. 131). Soymilk and soy creamer (p. 132). Soy buttermilk and soy mayonnaise (p. 133). Feeding an infant with soy formula (p. 154). Are the phytoestrogens in soy formula safe? (p. 155). Helping kinds to switch to soymilk from cow’s milk (p. 156). Address: 1. Baltimore, Maryland; 2. R.D.

1915. Sabaté, Joan; Ratzin-Turner, Rosemary. ed. 2001. *Vegetarian nutrition*. Boca Raton, Florida: CRC Press. [xxiv] + 551 p. Index. 24 cm. CRC Series in Modern Nutrition. [1732 ref]

• **Summary:** The best scholarly book seen to date on this subject. Consists of a Prologue (by Mervyn Hardinge) plus

21 chapters, in five sections, by various authors.

This book contains extensive information on soyfoods as follows: Vitamin B-12, homocysteine, meat analogues and soya milks (p. 47). Summary of epidemiologic studies of soy / tofu intake and breast cancer risk (p. 80-81). Vegetarian diets and soy in the prevention of osteoporosis, diabetes, and neurological disorders (p. 120-21, 125). Iron and soy (p. 202-03). Guidelines to achieve an optimal ratio of essential fatty acids in the diet (p. 203; soy is rich in  $\alpha$ -linolenic acid). Zinc, calcium and soy (p. 206). Women's reproductive function, menopausal symptoms, phytoestrogens and soy (p. 232-34, 244). Health advantages of a vegetarian diet for the elderly—and soy (p. 254-55). Vegan children, protein and soy (p. 302). Iron and soy (p. 304; "While the percentage of iron absorbed from soy may be low, the total amount of iron absorbed is adequate, because soy beans naturally contain relatively large amounts of iron" (p. 304-05)). Phytoestrogens and soy (p. 312-13). Macrobiotic diets (p. 313-15). Calcium and soy (p. 316). Vitamin B-12, miso and tempeh (p. 319-22). Iodine and soy (p. 323). Health-promoting phytochemicals beyond the traditional nutrients—soyfoods and isoflavones (p. 342-45; One table shows the isoflavone content (genistein, daidzein, and glycitein) of soybeans, roasted soyflour, roasted soynuts, TVP, tofu, tempeh, miso, and soy milk). Another shows the isoflavone content of commercial soy products by the weight of a typical serving, in descending order of isoflavone content (cooked soybeans, dry TVP, dry roasted soy nuts, tofu, soy flour, soy protein isolate, soymilk, SoyBoy Breakfast Links, soybean chips, tempeh, miso, soy cheese, Ice Bean [soy ice cream], Green Giant Harvest Burger, soy noodles, Tofutti [soy ice cream], soy sauce, soy oil). Protection against cancer and soy (p. 346-47). Help for menopause and bone loss (p. 347-48). Protective substances and soy foods (p. 397-98). Calcium fortified products such as soy (p. 421). Consuming a wide range of vegetable oils from intact plants—soy (p. 421). Developing a vegetarian food guide—Legumes, lentils and peas (p. 428-29; "Among legumes, the soybean possesses unique nutrient characteristics." Many food guides place soy beverages in the milk-dairy category). Table: Comparison criteria for evaluating soy and grain-based beverages (p. 430). The water efficiency of food production—and soy (p. 449; "The water intensity of animal production is much larger than the water intensity of crops. For instance, per gram dry weight, soybeans require about 0.75 liters of water" compared with about 20 liters for cattle). Note: Joan Sabaté is a man. The series editor is Ira Wolinsky, PhD, Univ. of Houston, Texas. Address: 1. Prof. of Chair, Dep. of Nutrition, and Prof. of Epidemiology, Loma Linda Univ., Loma Linda, California.

1916. Willcox, Bradley J.; Willcox, D. Craig; Suzuki, Makoto. 2001. *The Okinawa Program: How the world's longest-lived people achieve everlasting health—and how you*

can too. New York, NY: Clarkson Potter. x + 484 p. Index. 24 cm. Foreword by Andrew Weil, M.D. [41 + 474 endnotes]

• **Summary:** A remarkable book! Written by a team of internationally renowned experts, it is based on the landmark, scientifically documented 25-year Okinawa Centenarian Study. Okinawans have the world's longest disability-free life expectancy. Their occurrence of heart disease is only one fifth that of Americans. Their rate of breast, ovarian, and prostate cancer is less than one quarter of American levels. And the number of centenarians per 100,000 is six times that of the USA. This is a book with plenty of solid, practical scientific advice.

If you have ever questioned the healthfulness of traditional soyfoods, read Chapter 4, "Eating the Okinawa way" (p. 114-45). A table (p. 116) lists "The top fifteen Okinawan healing foods." No. 1 is "Okinawan tofu." Its main active components are saponins and flavonoids (mostly isoflavones). No. 2 is Miso, which has the same active ingredients.

Step 3 in eating the Okinawan way is to "Eat three calcium foods daily." Calcium-fortified tofu is given as the single best source (p. 122)—containing 46% more usable calcium than the same volume of calcium-fortified orange juice! Calcium fortified soy milk is the 3rd best source. "Dairy products are also excellent sources of calcium, but they are best consumed in moderation—there is little support from interventional studies that they actually help reduce risk for osteoporosis [8]. In fact, osteoporosis rates are lower in societies where people eat few, if any, dairy products. This may be because they are high-protein foods, and *too much protein tends to leach calcium out of bones*. For every gram of protein that you eat, you lose 1 to 2 mg of calcium in your urine [9]. For postmenopausal women your protein to calcium ratio (how much protein you eat versus how much calcium) is actually a stronger predictor of your risk for bone fracture than your calcium intake alone [10]. If you maintain a high-protein diet for an extended period with marginal calcium intake, you could be increasing your risk for osteoporotic fracture.

"The type of saturated fat in dairy products is also the worst offender for making cholesterol in the body."

Step 4 in eating the Okinawan way is to "Eat three flavonoid foods daily. Flavonoids—ubiquitous plant compounds found in large quantities in soy products and some other legumes (beans), and to a lesser extent in tea, onions, and apples—are powerful antioxidants. They provide a weak form of estrogen where the body needs it and block the body's own estrogen in locations where estrogen may induce cancer... two plants—soybeans and flaxseed—have pharmacological levels of these compounds, levels that exceed those in other plants by as much as 1,000 times [14]." "Soy has just been allowed the unprecedented honor of an official U.S. Food and Drug Administration (FDA) health claim [20]... Our prediction is that as the evidence mounts

for soy consumption reducing the risks for breast cancer, prostate cancer, and possibly other cancers such as colon cancer, other USDA-approved health claims will follow.”

“Tips for increasing your flavonoid intake: Learn about soy products.” On pages 126-28 are substantial, accurate descriptions of the following soy products: Tofu, silken tofu, tempeh, miso, soy milk, soy flour, textured soy protein (TSP) or texturized vegetable protein (TVP), edamame, soy nuts.

The praise for soyfoods continues in the next chapter, “Okinawa’s healing herbs and foods.” There are two pages about Okinawa firm tofu (p. 158-59). Address: 1. M.D., Div. of Aging, Harvard Medical School; 2. PhD, medical anthropologist and gerontologist, Asst. Prof., Okinawa Prefectural Univ.–College of Nursing; 3. M.D., PhD, cardiologist and geriatrician, Prof. Emeritus of Community Medicine, Univ. of the Ryukyus, and Prof. and Chair, Dep. of Gerontology, Okinawa International Univ.

1917. Archer Daniels Midland Company. 2002. The nature of what’s to come: a century of innovation–1902-2002. Decatur, Illinois: ADM. [x] + 93 p. Illust. Portraits. Index. 23 x 29 cm. \*

Address: Decatur, Illinois.

1918. Richards, Michael. 2002. Candleworks Inc. and the development of candles made from soy wax (Interview). *SoyaScan Notes*. Jan. 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** “I started, self funded, in a building without any electricity or water, and I didn’t have a university or a corporation behind me, so I stayed under the radar for quite a while. We had these candles out in commercial distribution in the Sept. of 1995—that very definitely was the earliest 100% vegetable wax candle on the market; 33% of the content was soy oil. The actual candle was named Marinis Travel Candle. The candle came in three scents: Reviving, Relaxing, and Marinis. The form was a 1½ oz. covered travel tin. They were meant to pack in a purse or suitcase. The back label reads: “Created with beeswax and plant-derived waxes. Renewable, non-petrochemical resources.” One candle cost \$3.95 retail. The high cost was what drove me to soybean oil. But we were creating something that had never existed before, so we had to overcome many technical hurdles.

It’s an interesting paradox. When you’re an innovator, you’re kind of ahead of the wave. I’ve literally created a new market. Now I’m doing my best to maintain a position in the market after creating this whole new wave.

Michael was making the candles in Iowa City, Iowa. At that time soy oil was part of the content, but by Sept. 1996 we had hydrogenated soy oil as the majority of the content; it was a gradual process. In 1997 the University of Iowa funded chemical engineering intern who wrote a paper titled “Increasing the use of soybeans in the manufacturing of candles”—issued in Aug. 1997. So our developmental process

was documented by the university. We started working with vegetable oil waxes in 1991 and gradually moved to soybean oil in 1995—you know, being a native Iowan that was the direction to go for raw materials. I have a timeline that maps out the history of our development. At a trade show, the Indiana soybean association people used to come around and take pictures of our booth.

Michael’s patent is in process. Cargill bought the patent rights and left Michael with a revenue share. “It was absolutely necessary. If I hadn’t taken action as an entrepreneur working with no funding, I would have been left in the dust—even if I had a patent. Having a patent is one thing, defending it is another. ADM and Cargill both signed research agreements with me in the late 1990s. Quite realistically, Cargill is going to make a lot of money and I’ll make some. But it’s going to be a piece of a bigger and bigger pie. Cargill has a contractual obligation to defend my patent.

“Cargill first makes the soy oil by crushing soybeans, then they hydrogenate it. I have delegated all my wax production to Cargill.” Address: Founder, Candleworks, Inc., 1029 Third St. S.E., Cedar Rapids, Iowa 52401. Phone: 319-363-1774.

1919. The Mail Order Catalog for healthy eating. Winter 2002. 2002. P.O. Box 180, Summertown, TN 38483. 36 p.

• **Summary:** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, vegetarian soyfood cookbooks, plus books on food nutrition & health, alternative healthcare, women’s healthcare, native Americans and their cultures, animal rights, and sustainability.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called “Response TVP flakes”), miso soup mixes, wheat free soy pasta, soy & rice pudding mixes, soy & nondairy beverages and beverage mixes, soy protein powders & shake mixes, soynut butters, sea vegetables, vegetarian jerky, soynuts, plus foods from Worthington and Loma Linda, Jyoti India Cuisine, and Dr. John McDougall. Address: Summertown, Tennessee. Phone: 800-695-2241.

1920. Jordan, Joe. 2002. U.S. agribusinesses take first steps in Cuba. *Bluebook Update (Bar Harbor, Maine)* 9(1):1, 7. Jan/March.

• **Summary:** In Nov. 2001 Hurricane Michelle devastated parts of Cuba, severely damaging crops and killing five people. While continuing to enforce its 38 year old embargo, the U.S. government responded by easing some sanctions last year. ADM, Cargill Inc., and Riceland Foods have secured contracts to sell soy, corn, rice, wheat and other staples to Cuba. Cargill will ship 10,000 tons of crude soy oil in January and February.

1921. Barnes, Stephen; Messina, Mark. 2002. Introduction and satellite session at the Fourth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease. *J. of Nutrition* 132(3):545S-46S. Supplement. March. [6 ref]

• **Summary:** This is the fourth in a series of symposia on this topic that began in 1994 in Mesa, Arizona. The number of attendees was reduced by security concerns and air transportation problems following the terrorist attacks on Sept. 11, 2001 in the United States. Nevertheless, scientists representing 21 countries and 5 continents attended the symposium held on Nov. 4-7, 2001, in San Diego, California; 36 scientists gave oral presentations, including four overviews of soy research—metabolism of soy isoflavones, breast and prostate cancer, hormonal effects in women, and the benefits and risks of soy infant formulas. The rest of the talks presented new research information. Two poster sessions were also held on various subjects: the effects of soy on coronary heart disease and atherosclerosis (31 posters), cancer (15 posters), bone (14 posters), kidney (5 posters), blood pressure (3 posters), and cognition (1 poster). There were 17 posters on the metabolism and analysis of isoflavones and another 21 posters on a variety of miscellaneous categories.

This symposium was supported by: Central Soya Co.; Monsanto; Protein Technologies International; SoyLife Nederland BV [Netherlands] / Schouten USA SoyLife; United Soybean Board; Archer Daniels Midland Co.; Cargill Soy Protein Products / Cargill Nutraceuticals; Illinois Soybean Association / Illinois Soybean Checkoff Board; Indiana Soybean Board; Cyvex Nutrition; Nichimo International, Inc.; Nutri Pharma Inc.; Revival Soy; Solbar Plant Extracts Ltd.; Soyatech Inc.; AOCS Press; Dr. Soy Nutrition; Eurofins Scientific / Product Safety Labs; and Optimum Nutrition. This publication was supported by (in alphabetical order) the Indiana Soybean Board, the Kentucky Soybean Board, the South Dakota Soybean Research and Promotion Council, Soyfoods Council, Cargill, and the United Soybean Board. Address: 1. Dep. of Pharmacology and Toxicology, Univ. of Alabama at Birmingham, AL 35294; 2. Nutrition Matters, Inc., Port Townsend, Washington 98368.

1922. Archer Daniels Midland Co. 2002. A standout protein that blends in (Ad). *Nutraceuticals World*. April. p. 33.

• **Summary:** This full page color ad shows an empty blender with a purple lid. The text begins: “ADM has a great new product for your food and beverage applications that’s the perfect mix of soy protein, fiber, and lecithin. It’s called PFL...” and is sold under the brand name NutriSoy. The tag-line below the NutriSoy log is: “It’s all about a strong beat.” The other logo on the page is “ADM Nutrition.” ADM’s company slogan is: “The nature of what’s to come.” Address: [Decatur, Illinois]. Phone: 1-800-510-2178.

1923. Murray, Shailagh. 2002. Will a ‘temporary’ fuel subsidy ever die? A biodiesel tax break could enjoy a long life, as 25-year-old ethanol grants show. Politics & policy. *Wall Street Journal*. May 9. p. A4.

• **Summary:** In 1977 Congress began to subsidize ethanol, a corn based fuel, to help the industry get started. That was 25 years ago, and the subsidy still exists. The General Accounting Office, the investigative arm of Congress, says the various ethanol incentives / subsidies have cost taxpayers as much as \$15 billion. Today, ethanol is the third largest use of corn, ahead of cereals and sweeteners.

ADM, which processes more corn and soybeans than any single country in the world, is enthusiastic about both ethanol and biodiesel subsidies. ADM is now considering building a biodiesel plant in Minnesota. An important first step is securing an exemption from the federal excise tax on motor fuels. The most widely sold form of biodiesel today blends 20% biodiesel with 80% conventional (petroleum-based) diesel. The pending legislation in the Senate’s energy bill would reduce by one cent the 24.4 cents-a-gallon federal excise tax for each 1% of biodiesel in a blend, up to a maximum of 20 cents. That would eliminate the price gap for 20% biodiesel.

Rudolf Diesel (1858-1913), the German mechanical engineer who built the engine named after him (starting in 1896), envisioned that it would run on vegetable oils.

Soybean growers have proceeded wisely and carefully in bringing biodiesel to market. They have spent \$30 million to clear environmental hurdles. They have worked to avoid charges that a tax break would amount to corporate welfare. Sales of biodiesel have recently risen dramatically: 1999–500,000 gallons. 2000–5 million gallons. 2001–10 to 15 million gallons. Ag Processing Inc., a Nebraska farmer-owned cooperative, makes biodiesel.

Politics: The soybean and biodiesel industries don’t have political-action committees (PACs) to make campaign contributions. But they do have people—farmers in key farm states. And they have congressmen in important and often tight political races. GOP House Speaker Dennis Hastert is from Illinois, ADM’s home and the top ethanol-producing state.

A recipe for making biodiesel (from the National Biodiesel Board) is printed on a recipe card: Harvest soybeans. Make soybean oil. Mix with alcohol and a catalyst, such as caustic soda. Boil at about 160°C. Wait 1-8 hours to get a mix of glycerin and biodiesel. Allow glycerin to settle and separate it from the remaining liquid. Remove excess alcohol and catalyst. Clear, amber-colored biodiesel is now ready to use. Republicans now embrace a renewable-fuels standard on the basis of national security. Address: Washington, DC.

1924. *ADM Health & Nutrition Update (Decatur, Illinois)*.

2002. Special issue: Fourth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease. November 4-7 2001, San Diego, California. 4(1):1-4. May.

• **Summary:** Contents: Introduction. Emerging research areas. Osteoporosis. Cancer. Coronary heart disease and renal function. Cognitive function.

“Introduction: There have been many important developments in the field of soy research during the past 10 years. One event in particular that has helped to stimulate interest in the health benefits of soyfoods and soybean constituents is the International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, which has been held four times since 1994.”

At the Fourth International Symposium (Nov. 2001) there were more than 30 oral presentations and over 100 poster presentations covering a diverse range of areas, including cancer, heart disease, cognitive function, renal function, osteoporosis, and safety.

1925. Archer Daniels Midland Co. 2002. The soybean and ADM–Nutraceuticals. Television broadcast. Newshour with Jim Lehrer. PBS. May 2.

• **Summary:** The following new ADM ad began to be aired on the Newshour on 2 May 2002: “Imagine a world where health problems are prevented before they even start. Is the answer natural food supplements called nutraceuticals? We’re finding out. ADM–The nature of what’s to come.”

1926. *Bluebook Update (Bar Harbor, Maine)*. 2002. New isolate, new thinking: Cargill rewrites its script. 9(2):8. April/June.

• **Summary:** “‘It’s a whole new product line for us,’ says Kevin Marcus, Director of Marketing for Cargill Inc.’s Soy Protein Solutions business. He’s talking about a recently announced proprietary isolate which has been in development for the last two and a half years. But he might just as well be talking about Cargill, since ‘whole’ and ‘new’ are new directions in which the commodities giant insists it is taking itself these days.

“The world’s largest private company, Cargill has always had the reputation for playing its cards close. But now, as it diversifies into refined products, ingredients, and nutraceuticals, Cargill realizes that it has to ‘open up a little more,’ Mr. Marcus says. ‘If someone buys this product (the new soy isolate), it’s not the end of a relationship, just the beginning. They are buying into our technical expertise.’

“That know-how is part of a Cargill initiative called Food System Design (FSD). Soy Protein Solutions, one of four business units under the FSD umbrella, is working with customers to provide new ingredients and other ideas that will fill consumers’ needs. The new isolate is a product of this process.

“‘It’s made with brand new technology,’ Mr. Marcus says. ‘Some people don’t realize that Cargill has been in

the protein isolate business for 30 years but it got lost in the oil business. It’s been separated out again for the past three years.’

“Now Cargill can focus on its protein. To produce this new isolate, a plant is being built in Sidney, Ohio, with an operational date set for fall, 2002. Soy Protein Solutions expects to capitalize on soy protein’s ‘dramatic revolution during the past couple of years, thanks to the FDA’s health claim,’ says Mary Thompson, VP of the Soy Protein unit. But don’t expect it to be operating on a high volume/low price model. Instead, says Mr. Marcus, Soy Protein Solutions, with the rest of Cargill, is focusing on superior products and customer relationships.

“Other recent Cargill debuts have included a new sugar, Trehalose, which is absorbed at a slower, more sustained rate than other sugars and a highly concentrated isoflavone called AdvantaSoy Clear. Cargill’s transformation has included unveiling a new corporate logo and slogans such as ‘I am a problem solver,’ designed to remold the mindset of the company.”

Note 1: Talk with Bill Limpert of Cargill’s Soy Protein Solutions. 2002. July. There was a one-word error in this article: Cargill has been in the soy protein business for 30 years, but has not previously manufactured soy protein isolates. When Cargill changed Soy Protein Products to Soy Protein Solutions about 6 months ago, the company made a major commitment to customer service and to helping customers develop new products using existing or new Cargill protein products. PTI has long been doing this with its isolates, Central Soya with its concentrates, and Cargill with its soy flour. Cargill’s new isolate plant is expected to open in Nov. 2002.

Note 2. Industry insiders note that ADM supplies the entire range of soy protein products but offers little service in order to keep its position as the low-price supplier.

Note 3. As of 8 Oct. 2002 Cargill has offered an organic soy protein isolate to at least one potential customer. However in a follow-up call, their sales manager says they definitely have no plans to make organic soy protein isolates.

1927. Hammond, Gary. 2002. Brief history of Central Soya’s work with soy isoflavones (Interview). *SoyaScan Notes*. Aug. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Central Soya sold small amounts of isoflavones in about 1997, before ADM. But the product never had a name and was never really commercialized. Then they had a joint venture with Henkel that never worked out. Address: Commodities Manager, Gibson City, Illinois. Phone: 1-800-252-6941.

1928. Archer Daniels Midland Company. 2002. ADM–The nature of what’s to come (Ad). *Soybean Digest*. Aug. p. 29.

• **Summary:** A full page color ad. “Imagine a world where health problems are prevented before they even start. Why

do the Japanese have 1/8 the incidence of prostate cancer and fewer symptoms of menopause. Is it a diet rich in soy? ADM is finding out and creating natural supplements called nutraceuticals. So everyone—everywhere—benefits from foods that promote good health.” A color illustration shows edamame in a Chinese folded-paper takeout carton, a wok and chopsticks, and a young soybean plant with two leaves. Address: [Decatur, Illinois].

1929. Murphy, Patricia A.; Barua, Kobita; Hauck, Catherine C. 2002. Solvent extraction selection in the determination of isoflavones in soy foods. *J. of Chromatography. B, Analytical Technologies in the Biomedical and Life Sciences* 777(1-2):129-38. Sept. 25. [21 ref]

• **Summary:** Acetonitrile is better than acetone, ethanol or methanol in extracting the 12 phytoestrogenic soy isoflavone forms found in foods.

Gives the content of daidzein, genistein, and glycitein in soy flour, tempeh, tofu, TVP [textured soy flour], and soy germ. Address: Dep. of Food Science and Human Nutrition, Iowa State Univ., 2312 Food Science Building, Ames, Iowa 50011, USA. pmurphy@iastate.edu.

1930. *Bluebook Update (Bar Harbor, Maine)*. 2002. Purchase puts Bunge on top of the world: Cereol addition makes company world's largest oilseed processor. 9(3):1-2. July/Sept.

• **Summary:** Bunge will acquire a 55% controlling interest in Cereol S.A. from Edison S.p.A., an Italian energy firm, for 449.2 million euros. Cereol has oilseed processing plants throughout eastern Europe including Hungary, Poland, Romania, and Ukraine.

This new combination of Cereol and Bunge will create the world's largest oilseed processing company, and Bunge will become the second largest U.S. soybean processor after ADM. According to the *Wall Street Journal*, Bunge will control approximately 23.5% of U.S. soybean processing capacity.

1931. Byrne, Harlan S. 2002. To market, to market: Global agribusiness goliath Bunge Ltd. feeds the world and nourishes stockholders. *Barron's*. Oct. 21.

• **Summary:** In Aug. 2001 Bunge, the multinational agribusiness company, first began selling its stock to the public (IPO) and was listed on the New York Stock Exchange. Initially priced at \$16, the shares now trade about \$23—quite impressive for a company with operations on four continents. In a second offering in March 2002, Bunge issued 16 million shares at \$19 apiece. Yet the company's name is not well known to the billions of people who consume its products. Soybeans, which supply nearly one-third of the world's edible oils, have powered much of the company's growth in recent years. In the past 5 years, Bunge's soybean processing capacity has leaped to 34 million tons from 5

million tons—about the same as ADM and Cargill.

Founded 185 years ago as a grain trader in Amsterdam, The Netherlands, and incorporated in Bermuda, Bunge is now headquartered in White Plains, New York. Since the 1960s, Bunge has been expanding in the USA, which is now the key to its global distribution.

Bunge's latest expansion involves the two-stage purchase (for about \$900 million) of Cereol, S.A., a leading oilseed processor. Completion of the deal, expected in early 2003, will catapult Bunge to No. 1 among the world's oilseed processors. Photos show: (1) Three views of Bunge grain elevators, shipping lines, and storage facilities. (2) A small photo shows Alberto Weisser, Chairman and CEO. A small graph shows Bunge's stock price from Aug. 1901 to the present.

1932. Archer Daniels Midland Co. 2002. Annual report: A global franchise. P.O. Box 1470, Decatur, IL 62525. 48 p. Oct. 28 cm.

• **Summary:** This year's annual report features ADM's new logo and tagline: “the nature of what's to come.” And it focuses on how ADM functions in today's global agricultural markets. There follows a “100-year perspective” with five pairs of photos comparing then and now. Net sales and other operating income for 2001 (year ended June 30) were \$23,453,561 million, up 17.0% from 2001. Net earnings for 2001 were \$511,093 million, up 33.3% from 2001, but far below the peak of \$796 million in 1995. Shareholders' equity (net worth) is \$6,755 million, up 6.7% from 2001. Net earnings per common share: \$0.78, up 34.5% from 2001.

ADM's most profitable business segment is “oilseeds processing,” which had an operating profit of \$388 million, up 49.2% from 2001.

“This year we celebrated our 100th year anniversary at ADM.... ADM began in Minneapolis as a linseed oil producer.” A small black-and-white photo of the company is shown.

Also accompanying the annual report is a “Notice of Annual Meeting.” G. Allen Andreas, age 58, Chairman of the Board and CEO, had a 2001 salary of \$2,557,833 plus \$142,704 other annual compensation. Address: Decatur, Illinois.

1933. *Plenty Bulletin (Summertown, Tennessee)*. 2002. Soy Huichol: Integrated soy project develops in Mexico. 18(3):4. Fall.

• **Summary:** Mexico's Huichol people have maintained their traditional culture, language, and spiritual way of life for centuries in their homeland, the rugged and remote mountain terrain in the Mexican states of Jalisco and Nayarit. There an estimated 7,000 of these remaining Aztec descendants reside.

But the Huichol are poor, and are being exposed to the outside world. Over the past year Plenty has been developing a soy food and nutrition project with the Huichol Center for

Cultural Survival and Traditional Arts (HCCSTA). Louise Hagler, soy cooking expert and Plenty advisor, visited the Huichol Center in late July. She took 35 soybean varieties to conduct trials. She did a little demo at the Huichol Center with TVP (textured vegetable protein) and also made soymilk, which she turned into tofu, and prepared okara hash.

Chapingo University is the largest and oldest agricultural university in Mexico, located just outside Mexico City in Texcoco. There she met with Dr. José de Jesús Loyola, who is head of the soybean projects at Chapingo University and his compadre Ing. Ciriaco Ayalo Sanchez. Ciriaco has written a 40-page book on how to grow soybeans in Mexico, the only such book available. They told Louise that soybeans were first planted in Mexico in 1909, and that in the 1950s President Diaz started a project to replace indigenous beans with the soybean, but the project failed. “The people did not accept the soybean, most likely because they did not know what to do with it.”

Louise had a very encouraging meeting with the American Soybean Assoc. (ASA) in Mexico City. ASA promotes soybeans as both feed for animals and food for humans, and works with DIF (*Departamento Infantes y Familias*) in Jalisco and other states. DIF does nutritional outreach. ASA works to provide good prices for their “soya seca” (dry soy–TVP) which is part of the food baskets DIF distributes to needy families. They have found that the women who cook the soyfoods prefer the whole soybean to the processed products like TVP because the beans are a more familiar form.

1934. *Bluebook Update (Bar Harbor, Maine)*. 2002. Dream team to lead Soyfoods Summit 2003. 9(4):4. Dec.

• **Summary:** Soyfoods Summit will be held on 26-28 Feb. 2003 in Miami, Florida. The conference, which is being organized by The Food & Beverage Xchange, a division of IQPC (London, England), will have two separate tracks of presentations: (1) Marketing and technology, and (2) Health benefits of soy. Dr. Mark Messina is conference co-chair. A small portrait photo shows Martin L. Andreas (ADM), who will present the keynote address.

1935. Jordan, Joe. 2002. U.S. Food & Agribusiness Exhibition shows opportunities for oilseed industry. *Bluebook Update (Bar Harbor, Maine)* 9(4):2. Dec.

• **Summary:** In late September, 290 U.S. companies took the rare opportunity to present their products to over 16,000 visitors in Havana, Cuba, at the U.S. Food & Agribusiness Exhibition. The trade show was organized by PWN Exhibicon, a Connecticut-based company that applied for the permit in Nov. 1999. U.S. companies can now sell goods to Cuba on a cash-only basis thanks to revised trade sanctions, which became law in Oct. 2000. Companies first took advantage of the new law after Cuba appealed for permission

to buy food from the USA following the devastating Hurricane Michelle in Nov. 2001.

ADM, the primary sponsor of the event, signed \$19.05 million in contracts for soy, corn, and rice products. Cargill, Inc. signed contracts worth \$17.1 million. A photo shows Paul Lang, President of Natural Products, Inc. discussing soyfoods with Cuban president Fidel Castro. As part of the Iowa delegation, he attended a dinner with Fidel Castro. Lang notes about two years after the USSR dissolved [it dissolved in Dec. 1991], Cuba had no feeds for their dairy herds; the cows stopped producing and many died [or were slaughtered for meat]. Since then, Cuba has converted 18 of their 19 dairy plants so they make soymilk and/or dairy alternatives. Also, Cuba is working to incorporate 50% textured soy into most of the country’s meat; in the past they succeeded in incorporating 30% soy. Lang said that Castro has an excellent understanding of soyfoods and of the economics of using soy protein to feed Cuba.

PWN Exhibicon has already applied for the permit to organize a follow-up exhibition in Jan. 2004.

1936. Massey, Linda K.; Grentz, L.M.; Horner, H.T.; et al. 2002. Soybean and soyfood consumption increase oxalate excretion. *Topics in Clinical Nutrition* 17:49-59. [17 ref]

• **Summary:** “Eight healthy adults with no prior history of kidney stones participated in eight oxalate (Ox) load tests, seven foods and an Ox solution control... Thus, frequent consumption of soybeans and soy products (TVP, soynuts, soy beverage, and tofu) may be a risk factor for CaOx kidney stone formation in susceptible individuals, such as those with a prior history of Ca stones, high normal urinary Ox concentrations, or intestinal disease.” Address: 1. Dep. of Food and Human Nutrition, Washington State Univ., Spokane, WA.

1937. *Dragonwagon, Crescent*. 2002. Passionate vegetarian. New York, NY: Workman Publishing. x + 1110 p. Illust. (by Robbin Gourley). Index. 23 cm. [10 ref]

• **Summary:** A superb, massive book, “with more than 1,000 robust recipes with notes on cooking, eating, loving, and living fearlessly”—as the cover proclaims. Very nicely designed, with many delicious recipes. The author is an outstanding writer with a deep knowledge of ingredients—including soyfoods.

Chapter 10, “Celebrating soyfoods” (p. 623-78) begins: “As a soy-loving girl from way back I invite you to enter an ever-expanding universe of foods: not merely extraordinarily healthful, but delectable and diverse—great ingredients for a passionate cook.” This chapter’s contents: Introduction. Inneccote. Whole soybeans. Green soybeans (edamame). Canned soybeans. Cooked dry soybeans. Milled soybeans (soy flour and soy grits). Soynuts and soynut butter. Tempeh. Miso. Natto. Okara. Soy protein isolates. Textured soy protein (TSP or TVP). Soy sauces. Soy milk & soy milk

products (soy yogurt, soy cheeses). Tofu & tofu products (fresh perishable tofus, classic traditional, seasoned tofus {savory baked tofu, other seasoned baked tofus}, ready-made tofu dips and spreads, ready ground tofu). Dry or packaged tofus (cupboard, like silken tofu). Other miscellaneous tofus (tofu burgers and sausages, deep-fried tofu, freeze-dried tofu [dried frozen tofu], tofu hot dogs, yuba).

Concerning yuba the author writes (p. 656): “I believe this traditional Asian product will explode onto the American soy-scene soon because it is so versatile and delicious and has a long and honorable history as a meat alternative. It is the unique thin-chewy texture of yuba sheets, when layered with seasonings and shaped, stacked, cut, and prepared in certain ways, that gives such a convincingly ‘meaty’ feeling to such dishes.”

The word “tofu” appears on 100 pages in this book, “tamari” on 100 pages (she uses the phrase “tamari or shoyu soy sauce”), “soy sauce” on 100 pages, “shoyu” on 98 pages, “tempeh” on 88 pages, “seitan” on 72 pages, “miso” on 58 pages, “soy milk” on 47 pages, “tofu sour cream” on 40 pages, “silken tofu” on 30 pages, “soybeans” on 25 pages, “baked tofu” on 22 pages, “savory baked tofu” on 16 pages, “firm tofu” on 10 pages, “green soybeans” and “edamame” each on 8 pages, “soy flour” on 6 pages, “soy ice cream” and “TVP” each on 5 pages, “dairy free” on 4 pages, “firm silken tofu,” “teriyaki,” “textured vegetable protein,” “yuba” and “whole soybeans” each on 2 pages, “Silk Soymilk Creamer” and “meat alternatives” each on 1 page.

1938. Kneen, Brewster. 2002. *Invisible giant: Cargill and its transnational strategies*. 2nd ed. London and Sterling, Virginia: Pluto Press. x + 222 p. Index. 22 cm. 1st ed. 1995. [210 ref]

• **Summary:** A critical (and we think sometimes unfair) analysis of Cargill’s strategies, activities, and structure. Contents: 1. Mutant giants: Introduction, Bunge Ltd., Louis Dreyfus & Cie, Cargill’s world, public policy. 2. Cargill Inc.–The numbers. 3. Origins, organization and ownership. 4. Policy advocacy and capitalist subsidies. 5. Creatures: Feeding and processing. 6. Cotton, peanuts, malting. 7. Invisible commodities. 9. E-commerce. 10. Coming and going: Transport and storage. 11. Typical stories–Canada and Mexico. 12. Fertilizer. 13. The West Coast. 14. Rivers of soy–South America. 15. Juice. 16. The ‘Far East.’ 17. Seeds. 18. Salt. 19. Only Cargill’s future? Notes.

On the back cover we read: “Transnational corporations straddle the globe, largely unseen by the public. Cargill, with its headquarters in the US, is the largest private corporation in North America, and possibly in the world. Cargill trades in food commodities and produces a great many of them... There are few national economies are unaffected by Cargill’s activities, and few eaters in North America whose food does not pass through Cargill’s hands at some point. Yet Cargill remains largely invisible to most people and accountable to

no one outside the company. This is the second edition of an explosive book that breaks the silence on the true extent of Cargill’s power and influence worldwide—its ability to shape national policies, and the implication of those strategies for all of us.”

About the author: “Brewster Kneen is Canada’s foremost analyst and critic of agribusiness.” Address: Canada.

1939. Pho, Van H. 2002. *An inquiry into the possible tradeoffs between antitrust enforcement and employment*. PhD thesis, American University, Washington, DC. x + 300 p. 28 cm. [54 ref]

• **Summary:** On pages 63-73 is a case study of Archer-Daniels-Midland Co. (ADM). The centerpiece of this study is Table 5 titled “Summary of Archer-Daniels-Midland business activity” (July 1923 to July 1998). The table has two columns: date and business activity. Here are some examples:

July 1923–Acquired the properties of Midland Linseed Products Co. for \$3,175,000. This company formed in 1898 operated linseed oil mills adjoining those of Archer-Daniels Linseed Co. at Minneapolis, Toledo and Edgewater.

1965 Sept.–Acquired Galesburg Soy Products Co. for cash.

1968–Acquired Ross & Rowe, Inc. [lecithin processors] for 6,000 shares.

1969 Nov.–Acquired First Interoceanic Corp. and about 88% ownership of the National City Bank, Minneapolis.

1971 April–Acquired 50% interest in Corn Sweeteners Inc.

1973 Jan.–Acquired 50% of British Arkady Holdings Ltd., which subsequently acquired British Arkady Co., Ltd., England.

1974 Jan.–Purchased a soybean processing plant and edible oil refinery at Araraquara, State of Sao Paulo, Brazil; purchased Oliefabriek De Ploeg B.V. and its subsidiary Oliefabriek De Merwede B.V.; purchased ADM do Brasil Produtos Agricolas, Ltda, Agriproducts, Inc. (Cayman Islands) and Ardanco S.A. (Spain).

1975–Acquired the remaining 50% interest in CornSweeteners Inc. and merged into Co.

1978–Merged with Ross & Rowe, Inc.

1982 Dec.–Acquired a substantial part of Toepfer International Shareholdings.

1987 June–Acquired Gold Kist soybean processing plant at Valdosta, Georgia, from Gold Kist, Inc.

This case study also contains 4 interesting figures (Figs. 8-11) about Archer-Daniels-Midland.

“Figure 8. Archer-Daniels-Midland employment as a share of manufacturing sector and industry employment for the years 1979-1999

“Figure 9. Archer-Daniels-Midland sales as a share of manufacturing sector and industry sales for the years 1979-

1999

“Figure 10. Archer-Daniels-Midland sales per employee for the years 1979–1999

“Figure 11. Comparison of employment levels between Archer-Daniels-Midland and ConAgra for the years 1979–1999.” Address: Dep. of Economics, Faculty of Arts and Sciences, American Univ., Washington, DC.

1940. *Institutional Investor*. 2003. CEO interview with Alberto Weisser of Bunge: Taking the leap. A low-key agribusiness giant is stirring. Its seventh acquisition in roughly three years—France’s Cereol—won’t be its last. Jan. • **Summary:** Though Bunge is not a household name, the company produces more bottled salad and cooking oils than any company in the world—but it generally sells these commodities to familiar brand-name packagers such as General Mills, Kellogg Co., Frito-Lay, Nestlé, etc. With the acquisition last year of French agribusiness Cereol, Bunge now has 24,000 employees in 28 countries and a very strong presence in Eastern Europe.

Bunge has recently made two major transactions: (1) Its initial public offering (IPO) in August 2001, by which the company raised \$278 million by floating 23% of its shares on the New York Stock Exchange. (2) Its acquisition of Cereol, the French agribusiness, which enabled Bunge to jump from 8 million tons of oilseed processing capacity in 1997 to 32 million today. Cereol is the biggest of 7 acquisitions completed since 1999.

Bunge was founded in 1818 by Johann Peter Gottlieb Bunge, a Dutch grain trader. Descendants of the founders were still running the company in the early 1990s, however the location of its headquarters has bounced around from Amsterdam to Rotterdam, Antwerp (Belgium), Buenos Aires (Argentina), Sao Paulo (Brazil, where it stayed for 30 years), and White Plains, New York (since 1999, to be closer to the hub of international trade and finance).

Weisser, age 46 and a native of Brazil, joined Bunge in 1993 as CFO and in 1999 became CEO. Bunge has 3 main divisions: Agribusiness (which includes soybean processing), food products, and fertilizers. Though a giant, Bunge is only about half as big as ADM, the U.S. agribusiness colossus, and its market capitalizations is only about one fourth of ADM’s. Bunge went public mainly to gain access to new kinds of financing—equity capital. The transition from family ownership went smoothly.

1941. Robertson, Robin. 2003. *Vegan planet: 400 irresistible recipes with fantastic flavors from home and around the world*. Boston, Massachusetts: Harvard Common Press. xvi + 576 p. Illust. Index. 23 cm. [15 ref]

• **Summary:** An outstanding, hefty vegan cookbook by an author who knows her ingredients well and uses a rich and pleasing variety of them. She is also an expert on soyfoods, and the book contains many useful insights about them.

We find the graphic design of the book to be weak to poor; the typeface in the recipe titles is hard to read, the ingredients in the recipes printed in gold on white are hard to read, and the many pages of white ink on a gold or other such background are hard to read.

The word “tofu” appears on 91 pages in this book, “tamari” on 67 pages (she uses the phrase “tamari or other soy sauce”), “soy sauce” on 62 pages, “soy milk” on 56 pages, “dairy-free” on 55 pages, “seitan” on 47 pages, “tempeh” on 46 pages, “silken tofu” on 33 pages, “firm tofu” on 29 pages, “miso” on 28 pages, “soft silken tofu” on 23 pages, “extra-firm tofu” on 13 pages, “teriyaki” on 6 pages, “soybeans” on 13 pages, “soy ice cream” and “meat alternatives” each on 10 pages, “TVP” on 8 pages, “baked tofu” on 7 pages, “textured vegetable protein” on 6 pages, “firm silken tofu” on 5 pages, “soy flour” on 4 pages, “soy nuts” and “soft tofu” and “dairy alternatives” each on 3 pages, “edamame” (“fresh soybeans in the pod”) on 2 pages, “soy yogurt” and “frozen tofu” each on 1 page (p. 72),

Yuba is mentioned on pages 182, 350–51 (definition and description), 389, 410–11, 414.

Page 29 states that soy flour is “Made from finely ground roasted soybeans” [i.e., kinako].

“Humans are the only animals that drink the milk of another species and the only animals that drink milk after childhood” (p. 9). Address: Virginia Beach, Virginia.

1942. Klein, Barbara P.; Cadwallader, Keith R.; Chen, Dejun; Khanna, Pradeep; Weingartner, Karl E. 2003. *Textured vegetable protein in the American kitchen*. Champaign-Urbana, Illinois: Illinois Center for Soy Foods. 57 p. Illust. No index. 24 cm. Series: Soy in the American Kitchen.

• **Summary:** Contents: Illinois Center for Soy Foods. Bringing soy foods to the American table. Why eat soy? What is Textured Vegetable Protein (TVP)? (usually extruded whole or defatted soy flour). Many forms of TVP (different size granules or chunks, and various flavors). Buying and storing TVP. Rehydrating TVP. Tips for using TVP. Adding TVP to your diet. Nutrient information,

Recipes (38 recipes). Every right-hand page contains an elegant full-page color photo of the recipe to its left. Most of the recipes are meatless, but a few (such as Sausage Patties, with 1 lb ground pork) call for the use of meat. Address: 1. PhD, editor, Director, Illinois Center for Soy Foods, 170 National Soybean Research Center, 1101 Peabody Dr., Univ. of Illinois, Urbana, IL 61801. Phone: (212) 244-1706 or [www.soyfoodsillinois.uiuc.edu](http://www.soyfoodsillinois.uiuc.edu).

1943. *NSRL Bulletin (National Soybean Research Laboratory, Urbana, Illinois)*. 2003. Illinois Center for Soy Foods publishes second cookbook. 10(1):4. Feb.

• **Summary:** “A new cookbook that presents the many ways that textured soy protein can be used as a healthy and delicious ingredient in the average American kitchen has

been published by the Illinois Center for Soy Foods at the University of Illinois. This illustrated, full-color publication entitled *Textured Vegetable Protein in the American Kitchen* is the second in an ongoing series of soy foods cookbooks.

“Textured soy protein can best be looked at as a typically American soy food,” says Barbara Klein, editor of the book and co-director of the Center. “It is a quick-cooking food with the texture and nutritional value of meat. It can serve as a valuable addition to the kitchens of people who are looking for a quick and inexpensive source of protein and a way to cut back on fat in their diets.”

“Textured soy protein is generally made from whole or defatted soybeans that have been texturized and then ground into granules or chunks of varying sizes. Consumers can buy this product under a variety of names—textured soy protein, textured vegetable protein, textured soy flour, TSP® (a registered trademark of PMS Foods LP), and TVP® (a registered trademark of Archer Daniels Midland Company). For simplicity, the term ‘TVP’ was used in the cookbook.

“TVP provides a complete protein that includes all the essential amino acids,” Klein says. “It is virtually fat free and has no cholesterol. It is also very low in sodium and high in dietary fiber. TVP also retains soy’s isoflavones, which are special components in soy that contribute to its ability to prevent disease.”

“Klein notes that this new book fits well with the goal of the Center, which is to encourage consumers in the U.S. to eat more healthy products made from soy.

“With this book, we hope to inspire a broad range of people to use and enjoy this American soy food,” Klein says. “We show step-by-step how average consumers can cook with TSP and still enjoy the same tastes and textures that they have grown up with.”

“Textured Vegetable Protein in the American Kitchen contains a wide range of tasty recipes ranging from appetizers to desserts, as well as many appealing entrees. All the recipes were developed by Cheryl Sullivan, M.A., R.D., and extensively tested by the staff at the Center.

“With this new cookbook, we can show everyone just how easily this healthy ingredient can be added to the kinds of foods that all of us are used to eating,” Klein says. “TSP is especially adaptable for use in many of our favorite comfort foods, such as chili, meatloaf, and calzones. We also have recipes for everything from carrot bread to cookies. And, most importantly, it all tastes good.”

“She points out that adding TSP to the diet also represents an easy way to gain the many health benefits from soy protein. The U.S. Food and Drug Administration has recently approved a health claim for soy foods that acknowledged the connection between consuming soy and decreasing the chance of developing cardiovascular disease.

“Extensive research has confirmed that eating 25 grams of soy protein per day, as part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease,” Klein

says. “This fact provides another example of how using TSP and other soy foods can add affordable, flavorful, and healthful components to the diet.”

“The cookbook was designed in an easy-to-use format, with a spiral binding that allows it to lie flat for efficient use in the kitchen. Nutritional information, including calorie, fat, carbohydrate, and protein counts, is provided for each recipe. It also contains helpful general information on buying, storing, and efficiently using TSP.

“The book can be ordered at a price of \$15 per copy by calling toll free at (800) 345-6087. Additional information, sample recipes, and an on-line order form for the cookbook and the other title in the series, *Tofu in the American Kitchen*, are also available on the Internet at [www.soyfoodsillinois.uiuc.edu](http://www.soyfoodsillinois.uiuc.edu).”

1944. Sosland, Josh. 2003. Matching grain-based foods and specialty proteins. *Baking & Snack*. Feb. 1. \*

• **Summary:** “Incorporating specialty proteins into the diet represents a red hot health trend.” This idea was reinforced by the creation last month of Solae L.L.C., a joint venture between DuPont and Bunge—based in St. Louis [Missouri], the home of Protein Technologies International. “While agricultural biotechnology and farmer services will be part of Solae, it is the specialty protein business that is at the heart of the venture.” The first product introduced under the Solae brand was 8th Continent soy milk, developed in another joint venture between DuPont and General Mills, Inc. (Minneapolis, Minnesota).

Gives a detailed description of ADM’s work with and market segmentation for soy proteins. Anthony DeLio of ADM says that “a lack of familiarity and wariness about taste stand as two central challenges facing the category... Perception problems have been and will be a challenge. It can be difficult to convince consumers to even give soy-based products a try.” “Texture and flavor continue to be the focal areas for formulators,” says Phil Gentlesk.

“Nutriant [Cedar Falls, Iowa] is the two-year-old nutritional division of Kerry Ingredients, the global ingredient company headquartered in Ireland.”

1945. *Soyfoods Canada Newsletter*. 2003. Soyfoods Canada membership list. Winter. p. 4.

• **Summary:** “For 2002/2003 there are 26 members in Soyfoods Canada. They are:

- ADM Protein Specialties
- Advantage Seed Growers and Processors
- Cold Springs Farms
- Concord National Inc.
- DuPont Protein Technologies
- First Line Seeds
- Galaxy Foods
- Hensall District Co-operatives
- J.L. International

1946. Smith, Tony. 2003. Farm exports boom in Argentina. *New York Times*. March 26. p. W1, W7. World Business section.

• **Summary:** For a decade, the Argentinian peso has been pegged to the U.S. dollar. In Jan. 2003 it was cut loose and plunged, until it is now worth only about 34 American cents. While the devaluation has been painful for most Argentines, it has helped farmers, by essentially wiping out most of their debts since their products are now much cheaper overseas and exports sales are now worth three times as much. Last year Argentina's trade surplus tripled to \$15 billion, and half of the country's total hard-currency earnings came from agriculture. Brazil is also enjoying a farm export boom.

Soybeans, now Argentina's main cash crop, are grown on 64 million acres. Bunge is expanding its operations in Argentina, while ADM, its giant rival, is doing the same in Brazil.

1947. Archer Daniels Midland Company. 2003. Turns out, raiding the fridge can be good for a broken heart: NutriSoy—It's all about a strong beat (Ad). *Vegetarian Times*. March. p. 7.

• **Summary:** This full-page color ad shows a woman raiding the refrigerator. The ad is about NutriSoy, the "all-natural soy protein ingredient that's helping to fortify some of your favorite foods, like breads, pastas, drinks, desserts, entrées, and more. The FDA has approved the claim that including 25 grams of soy protein per day as part of a diet low in saturated fat and cholesterol may reduce the risk of heart disease... So look for the NutriSoy logo." For more information visit [www.nutrisoy.com](http://www.nutrisoy.com).

1948. *ADM Health & Nutrition Update (Decatur, Illinois)*. 2003. ADM Kao launches Enova oil in Chicago and Atlanta. 5(1):1-2. April.

• **Summary:** Most conventional vegetable oils contain

three fatty acids per fat molecule. ADM's Enova contains predominantly diacylglycerols (DAG), fat molecules that contain only two fatty acids per molecule. Instead of being stored as fat, much of the oil is burned as energy, meaning that it shows great promise for helping to address the obesity problem in America.

1949. *ADM Health & Nutrition Update (Decatur, Illinois)*.

2003. ADM rebuilds vegetarian food plant. 5(1):5. April.

• **Summary:** In May 2002, ADM's vegetarian food plant in Decatur, Illinois, suffered a very serious fire. Out of the ashes arose a shiny new plant of about 100,000 square feet "that is the most sophisticated of its type, offering great products in a modern, meat-free environment."

1950. Archer-Daniels-Midland Co. 2003. What if we looked at the world as one giant farm field?... (TV ad). Newshour with Jim Lehrer. Television broadcast. PBS. April.

• **Summary:** "When crops grow where they grow best, we improve agricultural efficiency, make food more affordable, and feed a hungry world. ADM—The Nature of what's to come."

Note: For 6 months Soyfoods Center could not understand why ADM was running this ad. That changed in Sept. 2003 when: (1) *National Geographic* magazine published an article on slavery (Sept., p. 11) which noted that the arrival of large amounts of inexpensive American corn, imported under the NAFTA trade agreement, had "driven millions of Mexican peasant corn farmers out of business and off the land." Economists "suggest that for every ton of corn imported into Mexico, two Mexicans migrate to the U.S." And the penniless daughters are often forced into prostitution. (2) PBS broadcast a story on the plight of cotton farmers in Mali. Cotton, subsidized by governments in the USA and Europe, was being sold on the world market at prices below the cost of production in Mali, thus devastating small Mali cotton farmers and their families. These subsidies, it was argued, were illegal under World Trade Organization (WTO) rules. At a WTO meeting in Cancun, Mexico, in Sept. 2003, trade ministers from Third World countries walked out en masse over this issue of agricultural subsidies—among other things.

1951. Winchester, Teresa. 2003. NutriSoy Wholebean Powder for a growing organic market. *ADM Health & Nutrition Update (Decatur, Illinois)* 5(1):1, 3. April.

• **Summary:** This appears to be organic whole soy flour. "The potential for growth in the organic food industry today is prime. As consumers become more conscious of their health, their children's health, and the environment, their interest in products such as organic foods continues to grow. The organic dairy and meat industry has become especially popular as consumers continue to search for alternatives to traditional dairy and meat products that may have been

affected by antibiotics and growth hormones (1). Over the last 10 years, sales of organic foods have sustained double-digit growth, and this growth is expected to continue at 18-22 percent through 2005. In 2000, organic foods reached \$5.8 billion in U.S. consumer sales, making it the fastest-growing segment of the nutrition industry. This means organic foods growth surpassed supplements, natural foods, functional foods, and natural personal care products (1).

"In response to a growing market of the organic food industry, Archer Daniels Midland Company (ADM) offers up a new innovative product, NutriSoy® powder.

"NutriSoy powder is a spray-dried organic wholebean powder that may be used in many dairy products and beverages, such as soymilk, soy beverages, ice cream, yogurt, cream cheese, and sour cream. It is a revolutionary new product with a low flavor profile, and along with its nutrition quality and user-friendly form, NutriSoy powder is a highly versatile, easily adaptable product.

"NutriSoy powder is very adaptable to processing systems of manufacturers. In addition, its microfine particle size allows it to be nearly self-stabilizing, which may reduce the amount of costly stabilization ingredients normally required.

"Manufacturers can test new formulations and re-formulations in ADM's pilot plant and test facilities. ADM's team of research scientists consists of individuals specializing in specific areas of expertise. They are available to help with research and development challenges. These partner-like relationships go well beyond the traditional services of a grain merchandiser to add value to customers' operations.

"NutriSoy powder has a low flavor profile and smooth, rich mouthfeel that allows it to be used in a variety of flavor systems. These characteristics, in addition to its form, quality, and adaptability, make NutriSoy powder the ideal ingredient for manufactures.

"A consumer-preferred difference in flavor (as confirmed by outside sensory taste panels) is the result of using NutriSoy powder as the base material to make soy-based products. A consistent, great-tasting product can be easily produced using existing equipment at any dairy plant.

"The key component to a great-tasting soymilk-based product consists of the beans from which it has been made. ADM is known for its ability to source, procure, and process specific varieties of quality soybeans. ADM can offer consistent high quality on a global basis. Inside of the dedicated processing facility that manufactures NutriSoy powder is a dedicated processing line, which ensures a consistent, high quality finished product. ADM's unique continuous process eliminates variations in the final powder product, which means the manufacturer can be assured of consistent and efficient processing parameters within the plant.

"NutriSoy powder is a USDA-certified organic soy

product. ADM uses its vast experience from its global IP (Identity Preservation) program to ensure that organic NutriSoy powder meets all of the standards set up under the USDA organic certification program.

"(1) Organic Trade Association. Katherine DiMatteo. Organic Offerings: More Than Just Great Produce. 2001." Address: Communications Manager, ADM.

1952. *World Grain*. 2003. ADM builds soy plant in China. 21(5):12. May.

• **Summary:** ADM is building a soy processing facility in Shanhaiguan, China, in a partnership with Wilmar Holdings. The plant will make ADM's Arcon line of soy protein concentrates, specialty soy flour for soy sauce fermentation, and whole edible soybeans. The plant is expected to be completed by mid-2004.

"Headquartered in Singapore, Wilmar Holdings is a leading processor, merchandiser and distributor of edible oils, oilseeds and related products in Asia and also sources and markets these products globally."

This facility will strategically enhance ADM's position in fulfilling the region's needs for both animal and vegetable proteins.

In a separate report, China's State Grain Bureau predicted soybean crushing capacity could rise 27% this year, as new plants are built. That increase in capacity will probably increase Chinese demand for soybeans from the USA, Brazil, and Argentina.

China imported 10.385 million tonnes (metric tons) of soybeans in 2001-02 according to the USDA; this number is projected to reach 16 million tonnes in 2002-03.

1953. *ASA Today (St. Louis, Missouri)*. 2003. ASA/India spurs major growth in soy consumption. 9(8):6. June.

• **Summary:** In March, the American Soybean Association had a booth at the premier food and beverage trade show in India, the 18th International Food Exhibition, called AAHAR 2003, in New Delhi. "Aahar" means food in Hindi. Eight companies participated in ASA's Soy Pavilion: (1) General Food Ltd. (maker of soy nuts, soy oil, soy flour). (2) M.P. State Oilfed (soy biscuits, soy nuggets [TVP]). (3) Protein Technologies International (soy protein isolates). (4) Ruchi Soya Industries (soy flour, soy chunks, soy oil). (5) Soy Appetite (Soy milk, soy rusk, tofu). (6) Sonic Biochem Indore (Full fat soy flour, defatted soy flour). (7) S.S. Agro Industries (fermented black soybeans, soy chunks, soy granules). (8) S.S.P. Ltd. (SSP, soy milk equipment / machinery).

1954. Dominy, Suzi Fraser. 2003. China: Ambitious plans for soy self-sufficiency. *World Grain* 21(6):31. June. [1 ref]

• **Summary:** China plans to increase domestic production of soybeans and has an ambitious long-term plan to become the world's largest producer of non-genetically engineered

(GE) soybeans. In 2002-03 China's soybean production is expected to reach a record 16.6 million tonnes (metric tons), up 6% from last year and up 59% from 10 years ago. China's Ministry of Agriculture says areas of increased soybean production will be 127 counties in the northeastern provinces of Liaoning, Jilin, and Heilongjiang, as well as the northern region of Inner Mongolia.

China's rapid economic growth has increased demand for meat and fish, and consequently for soybean meal used in animal and aquatic feeds.

Soybean crushing plants now under construction or just built will increase China's crushing capacity by 27% this year, to 57 million tonnes—according to China's State Grain Bureau. ADM, during the last 3 years, has signed joint agreements with the Chinese government to operate 12 crushing plants in China. This year it announced a 50-50 joint venture with Wilmar Holdings in Singapore to construct a new plant in Shanhaiguan, near Tianjin, east of Beijing.

China's crushing industry is now divided into two: large crushers of mostly imported soybeans located mainly near the coast in southern China, and traditional smaller crushers of domestic soybeans in the main soybean growing provinces of northeastern China.

In 2002 China imported 11.48 million tonnes of soybeans from Brazil, Argentina, and the USA, worth US\$2.3 billion. The amount is expected to increase by 50% this year.

A color illustration shows ADM's joint venture in the East Ocean facility.

1955. Andreas, Lowell. 2003. History of work with soybeans (Interview). *SoyaScan Notes*. July 9. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Lowell grew up the youngest of six children, who were born in the following order: Osborn (born in 1903), Albert, Lenore (the only sister), Glenn, Dwayne (born 4 March 1918), and Lowell (born in 1922). Their parents were married in Sterling, Illinois, on 27 Nov. 1902, and soon moved to Minnesota. Four of the five boys (except Osborn, who later became a concert pianist with the Washington Symphony Orchestra, English teacher, and author), shared an almost lifelong involvement in the family's feed and oilseed processing businesses. Osborn was also involved, but only briefly in the mid-1930s.

In about 1927 Lowell's father, Reuben P. Andreas, started a feed compounding business named R.P. Andreas & Son, in Lisbon, Iowa; the "Son" was Albert. He obtained his soybean meal from A.E. Staley Mfg. Co. in Decatur, Illinois; the meal did not come from Joe Sinaiko [who began processing soybeans in the spring of 1928 at Iowa Milling Co. in Cedar Rapids, Iowa]. Reuben's products were sold as "Andy's Feeds." In 1934 Reuben took three more sons (Osborn, Glen, and Dwayne) into the business and changed its name to R.P. Andreas & Sons. Lowell, the youngest, was

still in high school.

In 1938, on the advice of his son, Dwayne (who was so advised that year by Mr. A.E. Staley), Reuben decided to start a soybean processing company in Cedar Rapids, Iowa. The family bought an animal feed manufacturing mill in Cedar Rapids, contracted for a soybean processing plant to be built next to it, and imported solvent extraction equipment from Italy; the manufacturer may have been Bonotto. Next to the solvent extraction plant they had a livestock feed plant built. The family (Reuben, Lowell, Dwayne, Glen) moved to Cedar Rapids (12 miles to the northwest) and in 1938 the new company, named Honeymead Products Co., began processing soybeans into oil and meal.

The name "Honeymead" was coined by one of Lowell's brothers (he does not remember which one) in about 1938 in Lisbon, Iowa. The company was incorporated in Iowa.

In about 1944 Honeymead bought land in Washington, Iowa, and had a soybean crushing plant built on it. Shortly thereafter Honeymead had another soybean crushing plant built in Spencer, Iowa. The soybean oil and meal from both plants were sold on the open market.

Note: In May 1945 Cargill purchased the Honeymead plant at Cedar Rapids, Iowa. By March 1947 Cargill also owned the former Honeymead plants in Spencer, Iowa, and Washington, Iowa. Reuben Andreas, Lowell's father, was an entrepreneur and a good businessman. His sons learned much about business from him. Lowell recalls, "We never talked about sports at the dinner table." Reuben was a Mennonite in his youth, but Lowell recalls that "we did not grow up in a Mennonite home—even though Dwayne likes to eulogize about that"—his Mennonite upbringing and values. Reuben remained actively involved on a day-to-day basis with the family solvent extraction plants and the businesses until they were sold to Cargill.

Glen, Dwayne, and Lowell Andreas each learned a lot about soybean processing from Joe Sinaiko—who let them (his competitors) observe operations in his plant in Cedar Rapids. "In those days, there was room for a lot of competitors," Lowell recalls. "Joe was honest and stuck by his word." He also recalls learning about controlling the moisture in the soybeans being processed and the moisture in the meal being sold, controlling the fat content of the meal produced, and doing everything with a few people as possible. Lowell did this by observation in Joe's plant; Joe never "taught" these things to the Andreas brothers.

Lowell's mother, Lydia, died in 1938, when he was age 16. Lowell's father, Reuben Andreas, had several strokes during World War II (which removed him from business life), later remarried, and died in about 1958.

Lowell first attended Wheaton College in Illinois for 2 years, then went for 2 more years to the University of Iowa in Iowa City. He majored in philosophy (medieval) at both places. Today Lowell believes that philosophy, which taught him to think, reason, and concentrate on a subject, is

an excellent major for business leaders—much better than an MBA degree. Reuben was the only member of the Andreas family who entered the military during World War II. He volunteered and served in the Army Medical Corps in the U.S. for 4½ years; he was in limited service because of his eyesight, so he developed plans to train medics. During the war he married Nadine Hamilton. After the war he returned to Cedar Rapids, where he worked in one of the family owned businesses that insured turkeys; he was an adjuster for turkey insurance for about a year, then the family heard that a soybean plant in Mankato [Mankato Soybean Products Co.] was for sale.

In 1947 Dwayne and Lowell bought that plant and renamed it Honeymead, and Lowell and his wife moved to Mankato from Cedar Rapids to run the plant; “Dwayne was the visionary; I was the manager.” Dwayne continued to reside in Minneapolis, where he was vice-president of Cargill, but he would visit the Mankato plant from time to time.

In 1960 Dwayne and Lowell sold the Honeymead plant in Mankato to the Farmers Union Grain Terminal Association (GTA). Lowell had a contract with GTA to manage the company for them for 10 years. After the sale, in 1964 Dwayne and Lowell started National City Bank in Minneapolis; it was Dwayne’s idea, but Lowell was interested in finance and had it looked like a good business to be in. In 1965 Shreve “Bud” Archer, Jr. of ADM offered to sell Dwayne and Lowell a block of ADM stock [100,000 shares at about half its book value, for a total of \$3.3 million], which amounted to effective control of the company, if they would agree to come in and run ADM—a company that was in decline, had too many workers and was very poorly managed. Dwayne and Lowell saw ADM as a company with great potential if they could turn it around. Dwayne owned 60% of the block of stock and Lowell owned 40%.

Both Dwayne and Lowell moved to Minneapolis, where ADM was headquartered. Lowell stayed there for 1 year. Both men quickly realized that ADM needed “total reorganization” and the first step required moving the headquarters from Minneapolis to Decatur, Illinois,—where they built a new office building. All employees were offered their same jobs in Decatur or generous severance pay if they chose not to move. ADM lost 200 people in the move—without laying off anyone and without problems. Downsizing was the main reason for the move, yet the employees felt they had been treated fairly. By early 1967 Lowell was executive vice president of ADM, and by mid-1968 he was president—focusing on processing and trading. In about 1967 Lowell moved to Decatur with the company, but he told Dwayne at the time that, if he could afford to, he would like to retire at age 50—his ambition since he had gone into business. At age 49 Lowell reminded Dwayne that he had one year left and that he had hired and groomed the

man (Donald B. Walker, former vice president of Ralston Purina, and a good friend) to replace him. True to his word, Lowell retired in 1972 at age 50 and moved with his wife back to Mankato. He still owns his ADM stock and today he has residences in Mankato, Naples (Florida, on the Gulf of Mexico), and Grand Cayman (Cayman Islands, in the Caribbean northwest of Jamaica). Lowell has a daughter, Pamela, and a son, David. Dwayne has one son, but he can never return to ADM. Address: Mankato, Minnesota.

1956. Callewaert, Danilo. 2003. The soymilk industry and market in Europe (Interview). *SoyaScan Notes*. July 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Alpro is by far the leading manufacturer of soymilk in Europe; they control more than 50% of the market—for sure. Last year, Sanitarium Foods introduced their So Good soymilk in gable-top cartons in the UK; they were followed in the UK by Alpro. Both companies use ESL (extended shelf life) packaging. There is less refrigerated food storage in Europe, and cow’s milk is generally non-refrigerated, often sold in aseptic cartons or sterilized bottles.

The soymilk market in Europe is now doubling every 3 years, or about 25% a year—which is remarkable for a food or drink. The largest soymilk maker in France is Triballat (Sojasun brand). In Germany a new competitor is Natumi GmbH, owned by Bruno Fischer. In the UK the largest is Haldane Foods, owned by ADM; also Sanitarium Foods (So Good brand, made from soy protein isolates).

The best selling soymilk package size for Alpro is 1 liter; the next best, in terms of number of packs, is 250 ml. Alpro does not have 2-liter packs. The most popular soymilk flavors for Alpro are vanilla, followed by chocolate (both milk chocolate and dark chocolate; the latter is sold only in France). Alpro continues to make soymilk puddings, and the market is steadily growing. Initially the packaging was bricks but today the pudding is sold only in cups. Alpro also makes fermented soymilk yogurt (4 x 125 gm and cups of 500 gm), and soymilk ice cream (under both the Alpro and Provamel brands; flavors are vanilla and chocolate).

In terms of volume, the Alpro brand (sold in supermarkets; usually non-organic) greatly outsells the Provamel brand (sold in health food shops, and all organic).

Two small companies in Europe make soy cheese: Sojami in France, and Dirk deBuysere [de Buysere] in Belgium, near Rouge, but his product is hard to find. Neither of these contain casein. They are not solid cheeses but rather spoonable / spreadable cheese.

Some soymilks are imported to Europe. Vitasoy is imported into the UK. Yeo Hiap Seng is imported into France (made in British Columbia and also in Singapore). A soymilk made in Argentina is imported into Spain by a big dairy company, which may also be making some soymilk itself.

The UK has by far the largest consumption of soymilk of any country in Europe. France is probably No. 2, followed

by Germany. However on a per-capita basis, Belgium is probably No. 1—even ahead of the UK. That is probably because of all the work that Alpro has done in educating the people of Belgium as to the benefits of soymilk. Address: Alpro, Wevelgem, Belgium.

1957. CHS—Cenex Harvest States Cooperatives. 2003. History highlights of CHS (Website printout—part). www.chsco-ops.com 7 p. Retrieved July 18.

• **Summary:** “Cenex Harvest States was formed in 1998 by a merger between two regional cooperatives, Cenex, Inc. and Harvest States Cooperatives. The following highlights are key dates in the history of CHS.”

1929—North Pacific Grain Growers, Inc. (NPGG) is organized as a regional cooperative, with 60 affiliated local cooperatives. The original 17-member board of directors holds its first meeting on 19 Dec. 1929 at Lewiston, Idaho.

1931—Cenex, originally the Farmers Union Central Exchange, is founded Jan. 15. First offices are in downtown St. Paul, Minnesota.

1938—The Farmers Union Grain Terminal Association (GTA) opens for business in St. Paul, Minnesota, on June 1 with 121 affiliated cooperatives. The new regional cooperative operates one terminal elevator in St. Paul and two branch offices in Duluth, Minnesota, and Great Falls, Montana. NPGG moves its office to Portland, Oregon.

1960—GTA purchases the Honeymead soybean processing plant [Mankato, Minnesota] and the Archer Daniels Midland elevator line in southern Minnesota.

1975—GTA begins leasing the St. Paul Number Two Terminal, a corn and soybean barge-loading terminal on the Mississippi River.

1977—The Honeymead division of GTA purchases Holsum Foods of Waukesha, Wisconsin.

1979—Member-owners purchase more than \$1 billion in goods and services from Cenex.

1981—Cenex marks 50 years of service to agriculture, serving over 1,500 cooperatives in 15 states.

1983 June 1—North Pacific Grain Growers (NPGG) and GTA merge to form Harvest States Cooperatives.

1987—Cenex joins with Land O’Lakes to form the Cenex/Land O’Lakes Ag Services marketing joint venture.

1992—Harvest States reorganizes Holsum Foods and Honeymead to form the Grain and Food Processing Group. Holsum Foods division acquires Gregg’s Foods, Portland, Oregon.

1993—Cenex members officially adopt Cenex, Inc. as the regional cooperative’s name. The Holsum Foods division acquires Miami Margarine Co., Cincinnati, Ohio.

1995—Harvest States’ annual grain volume tops 1 billion bushels for the first time in history.

1996—Harvest States reorganizes: Oilseed Processing & Refining represents Honeymead and related processing / refining interests.

1997—Harvest States forms two defined business units—Wheat Milling and Oilseed Processing & Refining—and offers members opportunities for direct investment and returns on Equity Participation Units. Also: Plans are announced for a new soybean processing and refining operation near the Minnesota–South Dakota border.

1998 June 1—Cenex and Harvest States unite to become Cenex Harvest States Cooperatives, an integrated agricultural foods system linking producers to consumers.

1999—Cenex Harvest States posts \$86 million in net income on sales of \$6.3 billion for fiscal 1999.

2000—CHS Cooperatives is adopted as the name used for the company, along with a new logo.

2001—CHS ends its defined investment program that allowed producers to participate directly in its wheat milling and soybean processing operations.

2002 April—Harvest States division of CHS Cooperatives breaks ground at the construction site of its second soybean crushing facility just outside Fairmont, Minnesota. Note: Production start-up is scheduled for early Oct. 2003 and a community open-house is planned for early September. This plant will be able to crush more than 220,000 bushels/day of soybeans. Situated on 26 acres of a larger 200-acre site, the plant will start with 40 new employees.

2003—Harvest States, the grains and foods division of CHS Cooperatives, announces the opening of Harvest States do Brasil Ltda. in Sao Paulo, Brazil, a wholly owned subsidiary originating and marketing soybeans from Brazil to customers nationwide in the USA. Address: St. Paul, Minnesota.

1958. *ADM Health & Nutrition Update (Decatur, Illinois)*. 2003. Soy intake in the prevention and treatment of breast cancer. 5(2):1-4, 6. Aug. [47 ref]

• **Summary:** Contents: Introduction. Animal and epidemiological data. Clinical trials (human). Conclusions—Adult soy intake and breast cancer risk. Early soy intake and breast cancer risk. Can soy stimulate breast cancer growth? Soy, isoflavones, and tamoxifen: Are there relevant interactions? Overall conclusions.

1959. *Inform*. 2003. ADM celebrates 101 years. 14(9):586. Sept.

• **Summary:** The company was born in 1902 as a linseed business, started by John Daniels and George Archer in Minneapolis, Minnesota.

Since 1969 ADM has been headquartered in Decatur, Illinois.

ADM “is now one of the world’s largest agribusiness companies, with over 24,000 employees in 70 countries and more than 260 processing plants worldwide. A leader in the processing of soybeans, corn, wheat, and cocoa—not to mention the leading global supplier of nearly 1,000 food ingredients—ADM tags itself ‘the nature of what’s to come.’”

believing it can unlock the potential of nature to improve the quality of life for everyone.”

Having mastered flaxseed / linseed processing since the early 1920s, ADM began to diversify. And diversification has been the secret of its success, says Tony DeLio, vice president of marketing and external affairs.

Photos show: (1) The Daniels Linseed Co. that was the beginning of ADM. (2) ADM Headquarters in Decatur.

1960. *Iowa Soybean Review* (Iowa Soybean Association, Urbandale, Iowa). 2003. Soyfoods: New products equal new markets. 14(8):14-15. Summer.

• **Summary:** Discusses Wildwood Natural Foods and ADM's Soy-& products.

1961. Nelson, Tina. 2003. SANA [Soyfoods Association of North America] 25th anniversary celebration. September 4, 2003. Washington, DC: Soyfoods Association of North America. 2 p. 28 cm.

• **Summary:** A brief and superficial story of the founding of the Soyfoods Association of North America in July 1978 in Ann Arbor, Michigan. Steve Demos and Lester Karplus, who were present at both the founding and at this reception, shared their reflections of the past 25 years. She thanks the chefs who created the evening's soy delicacies: Kim Galaez, Patricia Greenberg, Dana Jacobi, and Akasha Richmond. She also thanks and acknowledges the sponsors of the evening: ADM, Cargill, Hain-Celestial Group, Kellogg / Worthington Foods, Light Life, Solae LLC, Sunrich, Tetra Pak, Vitasoy-USA, and White Wave. And she welcomes special guests from USDA, FDA, and Capital Hill.

The talks ends: “Thank you all for coming and enjoy the soy treats and the historical documents and photos with your colleagues.” Address: Galaxy Foods.

1962. Soyatech, Inc. 2003. *Soya & Oilseed Bluebook 2004*: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 408 p. Sept. Comprehensive index. Brand name index. Advertiser index. 28 cm.

• **Summary:** On the cover is a pointillist / expressionist painting, with some of the dots being actual tiny soybeans. of the rear view of a farmer in a tractor plowing a field. On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa) titled “Applying the natural goodness of soy.” The company offers “New products. New technology. New ideas. Full line of enzyme active full fat soy products. Full line of roasted full fat soy products.” On the first page is a full page color ad from Bunge North America (St. Louis, Missouri). “Now more than ever. Since 1923 Bunge North America has enhanced the value of America's Harvests.” On the back cover is color ad from ADM Food Ingredients with the tagline: “For all of your food ingredient needs, ADM is the nature of what's to come.” The text states: “ADM offers the most complete line of over 500 ingredients and has the

expertise to apply them to a wide variety of great-tasting foods.” On the title page of the book is a bright yellow self-adhesive label containing “Your access code,” which expires in a year.

The Foreword, by Peter Golbitz of Soyatech, states: “This is the 16th edition [of the Bluebook] that we have produced and the 56th edition since the publication's inception by the American Soybean Association in 1947.” “World soybean production will reach 195 million metric tons this year, with an estimated value of \$41 billion before processing. This is enough soybeans to give every man, woman, and child on our planet over 30 kilos [66 lbs] each. This great resource can provide nearly half of an adult's protein needs for a year. Unfortunately, due to the imbalance of resource utilization between the developed and the developing world, many people still find it difficult to get adequate nutrition for themselves and their families. This results not only in poor health, disease and decreased productivity, but it also contributes to the lack of security and trust in the world.

“Now it seems that many people are becoming aware of the great resource that soybeans provide. Testimony to this is the great soyfoods boom that is currently underway in the United States and in other Western nations. In most Asian nations, soybeans have been providing protein for direct consumption for centuries... From South and Central America, to Africa and India, soybeans are finding their way into new food products and home kitchens.” Address: 1369 State Hwy 102, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

1963. Archer Daniels Midland Co. 2003. Annual report: Positioning our global franchise. P.O. Box 1470, Decatur, IL 62525. 48 p. Oct. 28 cm.

• **Summary:** “More important than any single market position, ADM is well diversified on a global scale, prepared for changes in market conditions and able to capitalize on a wide range of market conditions.” Net sales and other operating income for 2003 (year ended June 30) were \$30,708.033 million, up 35.8% from 2002. Net earnings for 2003 were \$451,145 million, down 11.8% from 2002, but far below the peak of \$796 million in 1995. Shareholders' equity (net worth) is \$7,069 million, up 4.6% from 2002. Net earnings per common share: \$0.70, down 10.3% from 2002.

ADM's most profitable business segment is “oilseeds processing,” which had an operating profit of \$337 million, down 13.2% from 2002.

“ADM is a world leader in the processing of oilseeds, primarily soybeans, as well as canola, cottonseed, flax and sunflower seeds. We produce two main products from oilseeds: protein meal for use in animal feed, and vegetable oil for cooking, salad dressings, and other food applications. We continue to introduce new products to meet the changing needs of our customers. Our recently announced NovaLipid

line of zero and reduced trans-fat oils enables our food customers to meet new consumer demands for zero/low trans-fat products.

“The global shift in the production and consumption patterns of oilseeds continues. South America is currently the world leader in soybean production, with last year’s crop exceeding the output of the U.S. for the first time. At the same time, economic growth in the Far East, especially China, is resulting in improved diets and increased meat consumption. Protein meal demand expands as meat consumption grows, and ADM is well-positioned to meet these requirements.

“The growth opportunity in China is clear. China has a population five times that of the United States, but per capita meat consumption is only half as much as in the U.S. ADM is the only major oilseed processor to have a significant position in China with joint ventures that operate strategically positioned oilseed processing plants. These operations in China process locally produced oilseeds, as well as imported soybeans from North and South America.

“In fact, ADM is one of the largest exporters and processors of South American soybeans. We are well placed to take advantage of the growth in South America’s soybean crop as we expand our origination capabilities to support both local processing operations and export requirements for ADM facilities in China and Europe. We are adding several new grain origination and storage silos in Brazil, giving us a total of 91 silos in South America. Whether sourced or processed in the U.S., South America, Europe or Asia, ADM is strategically positioned for the growing needs of the global oilseeds market.”

Also accompanying the annual report is a “Notice of Annual Meeting.” G. Allen Andreas, age 59, Chairman of the Board and CEO, had a 2002 salary of \$2,795,833 plus \$153,909 other annual compensation. A photo (p. 3) shows G. Allen Andreas and Paul B. Mulhollem. Address: Decatur, Illinois.

1964. Book Publishing Co. 2003. Fall 2003 fall catalog (Mail order). Summertown, Tennessee. 64 p. 25 cm.

• **Summary:** Contains sections titled Soyfoods Cooking (p. 14-17, including books on tofu, miso, tempeh, soyfoods, meatless burgers, meat substitutes, and TVP), Healthy World Cuisine (Chinese, Japanese, Korean, Indian), Vegan Cooking (p. 24-32), Vegetarian Cooking (p. 33-36), Native Voices (Native American books and authors) (p. 45-61). Address: P.O. Box 99, 415 Farm Road, Summertown, Tennessee 38483. Phone: 1-888-260-8458 or 931-964-3571.

1965. Saunders, David. 2003. Update on the Soy Protein Council (Interview). *SoyaScan Notes*. Nov. 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Soy Protein Council has not been very active during the past few years. They have no annual budget

except for a fixed management fee (overhead, which pays indirect costs including part of David’s salary), deal mainly with regulatory issues (such as USDA, FDA, and school lunch programs), and are paid on a project by project basis. There are three members: Cargill, ADM, and Solae (a joint venture of DuPont and Bunge).

The member companies do promotion at the company level. They have seen much growth in demand for soy protein products since Oct. 1999 when the FDA issued its heart health claim for soy proteins.

Since one of the members was involved in anti-trust and price-fixing issues several years ago, that company’s attorneys have advised that they should not be meeting in a closed room with their competitors. When they do meet, David hires an anti-trust attorney to be present at the meeting, makes sure that there is a clear agenda that is adhered to, and that detailed minutes are kept.

NOPA (formerly NSPA) used to be managed by Sheldon Hauck & Associates, but they left for another management firm. Address: Executive Director, Washington, DC.

1966. Nordquist, Ted. 2003. Big companies increasingly active in the soyfoods industry. DuPont is pushing for an organic standard for a new soy protein isolate made without using hexane (Interview). *SoyaScan Notes*. Dec. 4. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Big companies like DuPont, ADM, and Solae are increasingly active in the Soyfoods Association and at industry conferences. An increasing percentage of the money seems to be coming from them. Soy protein isolates are widely discussed as “soy” but Ted has never heard anyone discuss how they are made—using hexane solvent. Address: TAN Industries, Inc., 253 Sacramento St., Suite 1120, San Francisco, California 94111. Phone: 415-495-2870.

1967. Jacobi, Dana. 2003. Serving soyfoods on Capitol Hill (Interview). *SoyaScan Notes*. Dec. 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Each year the American Soybean Assoc. (ASA) has a board meeting in Washington, DC. At that time they have an event for Congress. This year ASA decided to “host its first Soyfoods Luncheon,” which they announced in a 2-page news release. Representative Jo Ann Emerson (R-MO) served as the Congressional host of the event. White Wave, Solae, Soyatech, and SANA sponsored the event but it (incl. Dana and her food) was paid for by ASA.

Apparently Nancy Chapman of the Soyfoods Association told ASA that Dana was a professional chef with expertise in soyfoods. So Dana got a call from Anna Pavolva of ASA inviting her take responsibility for catering this event. Dana ended up hiring a local caterer, because she lives in New York City and could not make all the preparations at such a long distance. Dana supplied the recipes and supervised the food preparation.

The event took place at lunchtime on Tuesday, 1 April 2003 at the Rayburn Building in Washington, DC. Dana was told to prepare for 200 people, but about 250-350 showed up—most of them staffers, but there were a few members of Congress. The room (29 by 52 feet, or 1,508 square feet) was packed, with standing room only. Food was served on four draped tables, buffet style like a real catered party, with real China plates (no paper plates), and spoons and forks. The attendees ate *all* the food. Dana's meatless recipes (the majority of which came out of her latest cookbook), all on one long table were: Sweet & sour meatballs. Beans and franks (Using Bratos for the franks). Macaroni salad (using ADM's Soy-7 macaroni). Honey mustard with tofu (served 3 kinds of donated soyburgers from Boca and Morningstar Farms). Chocolate velvet mousse. Edamamé. Finger sandwiches with soynut butter and jelly.

ASA hired a chef (Tod Schiller) from one of Washington, DC's premier restaurants, Kinthead's, and he conducted a cooking demonstration at the luncheon; at a second table he served a very elegant soyfoods recipe that included edamamé.

White Wave / Dean Foods had a 3rd table at which they served Silk Cappuccino soymilk out of a cooling machine. On a 4th table at the end of the room was Solae 8th Continent soymilk and Luna Bars (cut into pieces for finger foods). ASA and United Soybean Board had a 5th long table on which was information (leaflet, pamphlets) and exhibits about soybeans and soyfoods.

Dana mingled anonymously and talked with many of the staffers. "They were astounded by all the good food. This sort of event helps greatly to dispel the negative image that soy still has in terms of how it tastes and looks." Dana notes: "My interest is not in preaching to the converted, it is in introducing soyfoods to the rest of the people." Address: New York City.

1968. Archer-Daniels-Midland Co. 2003. Years ago some predicted a nutritious meal today would look something like this... (TV ad). Newshour with Jim Lehrer. Television broadcast. PBS. Dec. 16.

• **Summary:** "But ADM believes breakthroughs in nutrition will continue to come from nature. Like heart-healthy alternatives with foods made from soy. Even vegetable oils that help you curb fat and loose weight. If we are what we eat, the future is looking beautiful. ADM—The nature of what's to come."

1969. FBX. 2003. Soyfoods Summit: February 18-20, 2004. Hyatt Regency La Jolla, San Diego, California. [www.foodbev.com](http://www.foodbev.com) (Brochure). Little Falls, New Jersey: IQPC. 12 p. 28 cm.

• **Summary:** This brochure begins: "The Food & Beverage Exchange is proud to present its 7th Annual Soyfoods Summit." In association with Soyatech. Media partners:

Nutrition Business Journal, The Soy Daily, Nutraceuticals World. The conference, which is being organized by The Food & Beverage Xchange, a division of IQPC (London, England), will have two separate tracks of presentations: (A) Technology & applications, and (A) Health benefits of soy. Summit chairs: Peter Golbitz, president, Soyatech, is chair of track A. Geri Berdak, Director, Public Affairs, The Solae Company, is chair of track B.

The facts: (1) "The US Soyfoods market has grown at an average annual rate of 14% per year for the past ten years and hit \$3.65 billion in 2002." (2) "Per capita soy consumption will rise by 50% in the next 5 years." The main speakers, with their organization, track, an outline of their talk, and a small photo are given. Track A: Dr. Jonathan F. Gordon, Firmenich Inc. Hiraoki Iwamoto, Tendre Corp., Japan (frozen tofu). Phil Fass, ADM. Dr. Michael Shemer, Tivall Corp., Israel. Motohiko Hirotsuka, Fuji Oil Co Ltd, Japan. Brad Strohm, Wenger Manufacturing Inc. Mian Riaz, Texas A&M University. KeShun Liu, Univ. of Missouri at Columbia. Victor Braverman, Braverman & Associates, Mexico. Jorge Arturo Canas Diaz, Central Heledra Diaz, Costa Rica.

Track B: Milagros Virginia C. Lim, Nestle Philippines Inc., Philippines. Mark Messina, Nutrition Matters Inc. John L. Williams PhD, Univ. of South Dakota. Prof. Fujian Yang Zhenhua 851 Bio-Science Co Ltd, China. Omer Kucuk M.D., FACN, Wayne State Univ., Karmanos Cancer Inst. Helen Kim PhD, Univ. of Alabama at Birmingham. Prof. Mindy S. Kurzer, Univ. of Minnesota. Dr. Ari Babaknia, DrSoy. Wendy Barrett, Eat Smart. Deborah Miller, The Solae Group.

Day 1—General session at end of day: John A. Schillinger, PhD, Heartland Fields, LLC. Peter Hannam, First Line Seeds.

Day 2—General session running all day: Paul Lang, Natural Products Inc. Seth Tibbott, Turtle Island Foods. Tom Woodward, Tetra Pak, Singapore. Ted Nordquist, WholeSoy Co. Hsien-Hsin Chang, Lightlife Foods. Gerard Klen Essink, Prosoy Research & Strategy, The Netherlands. Frank Daller, Soyadairy, Canada. Daniel Burke, Pacific Soybean & Grain. Garnet Pigden, The Solae Company. Gerry Amantea, Hain Celestial Group Inc. Johanna McCoy, Soy Happy. Kim C. Kristoff, Gemtek.

Post-conference interactive workshops: Tim Redmond, formerly with American Soy Products. Patricia Godfrey & Danielle Karleskind, Cargill Soy Protein Solutions. Peter Golbitz, Soyatech.

For those who register and pay in full by Dec. 5, the Gold Package of conference plus three workshops the price is \$2,999. By Dec. 31 it rises to \$3,099. By Jan. 9 it rises to \$3,199. After Jan. 9 the full price is \$3,299. This does not include lodging and food. The price is \$1,299 for those who register by Aug. 1, but \$1,599 after Sept. 15.

Note: Talk with two people who will speak at this conference. They are paid no honorarium for speaking, and

they must pay their own transportation both ways and all room and board expenses while at the conference. Why do they go? Both say this gives them an opportunity to attend the conference free of charge, to have a nice vacation in a warm and beautiful part of California, and to meet new people and promote their ideas and (informally) their products.

1970. Mescher, Kelly. 2003. Gift giving for the holidays can include soy: Investing Checkoff dollars. *Iowa Soybean Review (Iowa Soybean Association, Urbandale, Iowa)* 15(3):22-23. Dec.

• **Summary:** Midwest Bakery in Charles City, Iowa, uses soy flour as a top ingredient to bake a variety of soy cookies and soy protein bars sold under the Soy Fields™ label. IM Healthy SoyNut Butter “is another great way to add both the nutrition and great taste of soy to the holidays.” It contains about 30% less fat than regular peanut butter. The Low Carb SoyNut butter has no sugar added.

The Original Well-Bean Coffee Co. Inc. founded by certified nutritionist / dietitian Claudia Delvecchio [Del Vecchio], uses equal parts premium Columbian coffee and locally grown organic soybeans, which are roasted and ground together. They sell 100 different flavors. Claudia developed the product when her mother-in-law was advised by doctors to consume soy after she was diagnosed with non-estrogen receptor breast cancer. Her body became sensitive to the coffee’s acidity; soy acts as a buffer, “mellowing” the coffee and making it less acidic. “She loved the soy coffee and brought it to the cancer center, and they all started drinking it.”

ADM makes Soy 7 pastas and textured soy proteins. Other gifts include cookbooks, such as those published by the Illinois Center for Soyfoods.

“Checkoff dollars have been invested in the Soyfoods Council to increase awareness and demand for soyfoods, thereby increasing demand for U.S. soybeans. (www.thesoyfoodscouncil.com) Checkoff dollars were also invested in an educational campaign targeting school foodservice professionals to take an active, positive response to the national overweight epidemic (www.solveobesity.com).”

Note: Filling the cover of this month’s issue is a color photo of soy dishes and candles with the title “A soy season: New ideas for the holiday.” On the title page, under “About the cover” we read: “It’s easy to add a little soy to your holiday meal this year. Try some tofu in your mashed potatoes. Maybe some edamame in your mixed vegetables. Add some soynuts and a soy-based dressing to your green salad. And don’t forget... soy-based candles. For recipes and other ideas on how to include soy in your meal, contact Linda Funk, The Soyfoods Council, at lfunk@iasoybeans.com or call her at 1-800-383-1423.”

1971. Emmons, Didi. 2003. Entertaining for a veggie planet:

250 down-to-earth recipes. Boston, Massachusetts: Houghton Mifflin. viii + 470 p. Illust. Index. 23 cm.

• **Summary:** A friendly vegetarian cookbook. The index contains 35 entries for tofu, 19 for tempeh, 5 for edamame, 4 for seitan, 3 for miso

Recipes also call for: Adzuki beans, sesame seeds, and tahini.

The section titled “A friendly guide to unfamiliar ingredients” is a glossary with entries including: Adzuki beans. Asian fish sauce (not vegetarian; usually made of an extract of fermented anchovies. Can be replaced by Lee Kum Kee’s Vegetarian Stir-Fry Sauce). Barley miso (See Miso). Black beans, Chinese fermented (See Chinese fermented black beans). Black sesame seeds. Brown miso (See Miso). Chinese fermented black beans (“They are often very salty; do not rinse them, just salt your dish less... They keep indefinitely in the fridge”). Edamame (“Young, blanched soybeans.” They are commonly eaten in the pods as a snack; the pod is inedible. Also sold podless for cooking). Hatcho miso (See Miso). Miso: The five types are: Barley miso (*mugi miso*), Brown miso (*genmai miso*), Hatcho miso (made from soybeans only), Red miso (*aka miso*), White miso (*shiro miso*). Sesame seeds. Sesame tahini. Tempeh (see also p. 231, “Tempeh: the next great frontier”). Tofu (see also p. 217, “Tofu: the other white meat”). TVP (texturized vegetable protein). Vegetarian oyster sauce (Amoy brand). Vegetarian stir-fry sauce (not as sweet as vegetarian oyster sauce. Look for the Lee Kum Kee brand). Address: Author of the book *Vegetarian Planet* and the chef of *Veggie Planet*, a restaurant in Cambridge, Massachusetts.

1972. Harper, Judson E. 2003. *World Book Encyclopedia: Soybean*. Chicago, Illinois: World Book, Inc. A Scott Fetzer Co. 22 volumes. See Vol. 18, p. 689-93.

• **Summary:** Contents: Introduction. The soybean plant. How soybeans are used: Soy meal (incl. livestock feed, soy flour, soy grits, soy protein concentrate, isolated soy protein, textured vegetable protein {TVP}, extruded soy protein, spun soy protein, products that resemble meat, soy derivatives {food flavorings, soy milk, soy sauce, fertilizer, fire extinguisher fluid, insect sprays, paint}), soy oil. How soybeans are grown: Soybean farming in the USA, diseases and [insect] pests. How soybeans are processed. History. Scientific classification.

Crude soybean oil is made into three basic products: (1) technical refined oil used for industrial purposes, (2) edible refined oil, made by deodorizing technical refined oil, and (3) lecithin.

History: “Soybeans are one of the oldest crops raised by human beings. Historians believe the plant first grew in Eastern Asia and was cultivated about 5,000 years ago. The ancient Chinese considered soybeans their most important crop, and one of the five sacred grains necessary for life.”

Note: Each of the previous statements about early soybean

history is incorrect.

1973. **Product Name:** Soy7 Soy Dry Mixes [Burger Mix, Chili Mix, Burger Bits, Taco Mix, Recipe Strips].

**Manufacturer's Name:** ADM Health and Nutrition.

**Manufacturer's Address:** 4666 Fairies Parkway, Decatur, IL 62526. Phone: 1-800-510-2178.

**Date of Introduction:** 2004 March.

**Ingredients:** Incl. NutriSoy soy protein.

**Wt/Vol., Packaging, Price:** Paperboard box.

**How Stored:** Shelf stable.

**New Product–Documentation:** See next page. Leaflet (8½ by 11 inch, color, glossy, front and back) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2004. March. “What is Soy7?” Includes 6 pastas and 5 dry mixes. Each package contains at least 7 grams of all-natural Nutri-Soy soy protein. The ingredients are not listed.

Question: Is NutriSoy soy protein a flour or an isolate?

1974. **Product Name:** NutriSoy Organic Whole Bean Powder.

**Manufacturer's Name:** ADM Health and Nutrition.

**Manufacturer's Address:** 4666 Fairies Parkway, Decatur, IL 62526. Phone: 1-800-510-2178.

**Date of Introduction:** 2004 March.

**Ingredients:** Whole organic soybeans.

**Wt/Vol., Packaging, Price:** 20 kg net bags.

**How Stored:** Shelf stable.

**New Product–Documentation:** See page after next.

Leaflet (8½ by 11 inch, color, glossy, front and back) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2004. March. It “is a revolutionary ingredient that has what most soy products are missing—great taste.” Only hot water is used in processing. Smooth mouthfeel—microfine texture. Applications: “Soy milk. Soy beverages. Ice cream. Cookies and crackers. Yogurt. Drinkable yogurt. Cream cheese. Sour cream.”

1975. Almquist, Brett. 2004. Soy wax in America (Interview). *SoyaScan Notes*. April 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Many candlemakers buy their soy wax from Candleworks (the distributor); it is made for them to their (Candleworks’) patented formula by Cargill. Brett makes his own soy wax using formulas he has painstakingly developed (with a research company) over 2½-3 years. The key variables are the level of hydrogenation of the oil (one or more levels) and the hardeners. He buys all the ingredients / raw components (such as hydrogenated soy oil, fragrances, etc.) and blends them himself. The most difficult type of

candle to make with soy wax is pillar candles—which are his forte. Research has shown that pillar candles made from his soy wax formula are of better quality than those made from Candleworks’ soy wax. He does not plan to patent his formula “since a patent is only as good as the enforcement you give it.” When you patent a formula, you give away most or all of your secrets; it becomes public knowledge.

Two years ago, the National Candle Association commissioned a burn test of different types of candle waxes. They compared pure paraffin, pure beeswax, and 6-8 vegetable wax formulas. They made a 3- by 3-inch pillar, unscented, with the same wick in all. They measured diameter of the melt pool, rate of consumption, etc.—nothing about soot. The results showed that his candles burned the best, better than even paraffin and bee’s wax.

He does not want to sell the wax for two reasons: (1) He does not want to start competing with himself; (2) You can’t make any money selling wax—in part because the price of soybeans is at a 15-year high. His candles now cost about 10% more than paraffin candles. Most of the hydrogenated soy oil in America is made by ADM (his source) and Cargill. Some candle makers use straight hydrogenated soybean oil in their candles; it will work, but the quality of the candles is mediocre.

Candleworks sells most of its oil in liquid form in large quantities—such as tankerloads (40,000 lbs). But most smaller and medium-sized candlemakers can’t handle or buy liquid wax. They buy it in solid form, pelleted or spray dried.

Brett is not sure who the largest manufacturers of soy wax candles are. He thinks his company is in the top three. He has the most diverse product line and the most unique, upscale look. Colonial is a 95 year old company that sells mostly paraffin candles, but also sells “soy blends” which contain more than 50% paraffin. Hannas in Fayetteville, Arkansas, is very large, but they make much more besides candles—such as soaps, and they pour their soy wax in frosted glass so that defects on the surface aren’t visible. Hannas is not one of the biggest makers of paraffin candles; they focus on lower-cost candles—as for Walmart. lotions, bath salts, etc. They cannot do pillars, Their soy votives are very soft (2 oz), so it is hard to ship them. Yankee is another big candle company, but they don’t so much soy. One company that frustrates Brett is Bean Pod (Iowa). They trademarked a name very similar to his and they use the same typeface. Candleworks is surely one of the largest, if not the largest, maker of bulk soy wax. But he has never seen Candleworks at gift shows.

Brett does not know which company made the first soy candles—at least 90% soy. Address: Founder and president, BeansWax Candle Co., P.O. Box 1151, Maple Grove, Minnesota 55311. Phone: 1-866-BEANSWAX.

1976. Richards, Michael. 2004. Life and work with candles: Part V. Preparing for Cargill (Interview). *SoyaScan Notes*.

# Soy7™

## What is Soy7™?

Soy7™ is a versatile line of six soy-enriched pasta varieties and five dry mix entrée varieties, perfect for incorporation into a range of meal applications. Each Soy7 variety contains at least seven grams of all-natural NutriSoy® soy protein per serving. All Soy7 products are cholesterol-free and low in fat, provide a complete source of amino acids, and, of course, provide an excellent source of soy protein. Soy7 pastas also contain about 17 percent less carbohydrate than traditional pastas.

The Soy7 line is also convenient. Soy7 pastas cook just like traditional pastas, and Soy7 dry mix entrées are typically faster and easier to cook than traditional meat or poultry products—all without sacrificing taste or nutrition.

## Natural and healthy

Heart disease is the number one killer of Americans, so incorporating heart-healthy foods into the diet without having to change the way you eat is important. Great-tasting Soy7 products are not only versatile and easy to use, but they also have at least seven grams of NutriSoy brand soy protein per serving. The NutriSoy logo can be found on food products, such as Soy7, which contain a significant amount of great-tasting, heart-healthy soy protein per serving.

Products with the Soy7 logo qualify for the FDA-approved heart health claim, which states that "25 grams of soy protein a day, as part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease." Consumers need only look for the Soy7 logo to know that they are getting a great-tasting, heart-healthy dose of NutriSoy soy protein in each serving!

## Quality products

Aside from their versatility and heart-healthy benefits, Soy7 pastas and dry mix entrées are certified kosher. Pastas shelf-life is two years and mixes one year. Because they meet the American Heart Association food criteria for saturated fat and cholesterol for people over age two, Soy7 products also carry the AHA's heart-check mark.

GOOD NUTRITION, Great Taste!

## Advantages to retailers

Soy7 products can help expand retailers' customer base by appealing to those whose diets are restricted due to eating requirements. Plus, Soy7 products are ideal for vegetarians and for consumers who simply want to eat healthier without drastically altering their diets.

## Soy7™ Pastas

Varieties of Soy7 pasta available for retail sale:

- Lasagna
- Angel Hair
- Rotini
- Penne Rigate
- Elbow
- Spaghetti

## Soy7™ Mixes

Varieties of Soy7 dry mix entrées available for retail sale:

- Burger Mix
- Chili Mix
- Burger Bits
- Taco Mix
- Recipe Strips

Soy7™ is a trademark of Archer Daniels Midland Company.

## NutriSoy® Organic Whole Bean Powder

### NutriSoy® Organic Whole Bean Powder

NutriSoy® Whole Bean Powder is a revolutionary ingredient that has what most soy products are missing—great taste. Its sweet flavor is like no other soy product on the market. And, its microfine texture provides the added benefit of pleasant mouthfeel. These features combine to give you the edge you need to grab a piece of the exploding multi-billion dollar soyfoods market.

In fact, NutriSoy® Whole Bean Powder is a certified organic soy powder, which means you can take advantage of the organic food market's projected growth—up to 22% through 2005. Consumers will be looking for heart-healthy organic foods, so using NutriSoy® Whole Bean Powder is a great opportunity to market your products and your company!

Forty-two percent of Americans say they consume soyfoods once a month or more. Plus, organic non-dairy beverages—an ideal application for NutriSoy® Whole Bean Powder—is among the fastest-growing organic food categories. And, soymilk is the biggest seller among organic non-dairy beverages (made from soy, rice, nut, or oat).

ADM produces NutriSoy® Whole Bean Powder in a dedicated processing facility to take it from bean to powder in one facility, unlike other whole bean powders that go through multiple steps and multiple handlers.

Made from organic soybeans, NutriSoy® Whole Bean Powder is produced by spray drying whole soybeans, giving it a composition very similar to the natural whole soybean. The process also leaves protein, okara, isoflavones, phytosterols, probiotic sugars, and oil in their naturally occurring forms, giving the powder an excellent nutritional profile.

For ADM, producing organic products like NutriSoy® Whole Bean Powder is just one way we fulfill our goal of producing healthy ingredients derived from nature.

#### Why NutriSoy® Whole Bean Powder

- Amazing taste—sweet and pleasant, with none of the typical beany taste of most soy products
- Smooth mouthfeel—microfine texture means no grittiness
- Completely organic—no additives, no chemical treatments, no okara waste—in fact, hot water is the only processing step!
- Self-stabilizing—microfine particle size provides stabilizing properties in finished product systems, which could mean using fewer costly stabilizers
- Easy to use—dispersible, goes into formulation well, requires no special equipment
- Great nutrition—protein, okara, isoflavones, phytosterols, probiotic sugars, and oil all left in naturally occurring forms

#### Instant and dry food and beverages including:

- Soy milk
- Soy beverages
- Ice cream
- Cookies and crackers
- Yogurt
- Drinkable yogurt
- Cream cheese
- Sour cream

#### Backed by the NutriSoy® Brand

When you use NutriSoy® Whole Bean Powder, you can also take advantage of the NutriSoy® Branding Program, a program that provides education on the health benefits of soyfoods and reaches more than 200 million consumers each year. By following some simple guidelines and placing the NutriSoy® logo on your product's packaging, you can take part in the program, which includes national advertising that would feature your product. The NutriSoy® Branding Program also provides valuable tie-ins to the American Heart Association's Heart Walk events, which take place in more than 600 communities and reach more than 800,000 walkers annually.

May 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In about 1998 Michael proposed to his mentor, Herb Wilson, that they file a patent on their process for making candles using vegetable waxes. He discouraged Michael from it and said he would not pay for it—since that would reveal the process to all competitors, invite legal problems, and require an expensive defense of the patent. A patent is only good to the extent that it can be enforced legally.

Before Michael and Cargill met, Cargill had conducted some R&D for the Prang Soybean Crayon wax, but they had done absolutely nothing with candles. The Iowa Soybean Board has documented the fact, and it is well established, that Michael had sold soy candles (made from about 30% liquid soybean oil and 70% beeswax) nationally, including in nationwide chains, before Purdue Univ. (Indiana) announced the idea of making candles from soybean oil. Purdue was issued a patent on their process, which called for mixing soybean oil with petroleum waxes (esp. paraffin).

It was at this stage that Michael contacted Cargill; he wanted to replace his liquid soybean oil with solid (hydrogenated) soybean oil so he could decrease the percentage of expensive beeswax. So in about 1996-97 he began as a Cargill customer, ordering hydrogenated soybean oil from their plant in Sioux City, Iowa (plant manager Jody House). About 6 months after he started to buy vegetable wax from Cargill, Michael found a second source in ADM. On 10 Sept. 1999 Archer Daniels Midland Co. (ADM) invited Michael to their headquarters in Decatur, Illinois. Michael was now ordering stock edible hydrogenated soybean oil in 55 gallon barrels from both Cargill and ADM—to compare them. Each purchase was about \$25,000 to \$30,000—but they knew he was more than a hobbyist. ADM said they felt there was long-term commercial opportunity here, and they wanted to discuss it. On Sept. 10 Michael and ADM signed a confidentiality agreement titled “The secrecy agreement.” However, in that meeting, ADM did not provide Michael with any information. At the time Michael was working on paper coating wax with ADM so, in the margin of the agreement, they widened the scope to include “all paraffin wax replacements.” Michael already had another confidentiality agreement with a paper coating company that serves the fast-food industry. Nothing ever came of this agreement with ADM, however it was significant in the larger picture. To this hydrogenated oil, Michael added other vegetable fatty acids to make a candle wax. After Michael had been Cargill’s regular customer for about a year (they knew he was using it to make candles, but nothing more), they began getting calls from established candle makers and they realized that a new market was emerging for candles made from plant-based waxes. So they contacted Michael. But before they did, Michael had met with Zarley Sease, a law firm in Des Moines, Iowa, that does

all the patent and intellectual property work for Pioneer Hi-Bred International. In the fall of 1999, at their request and as a first step, he provided them with written documentation (timeline, history, description, documents) of developments related to candles during the previous 7-8 years leading up to his use of soybean oil in candles. The most complete copy is probably at the law firm, but Michael has most of it. He then worked with Zarley Sease to develop a patent application, which covered four specific formulas, two for the candle industry, a cosmetic base, and a package / paper coating wax. He was already thinking beyond candles. The patent was basically for a candle composed of about 85% hydrogenated soybean oil and 15% other vegetable fats from other plants. Candleworks had already been producing such candles for 3-4 years. On 5 April 2000 Michael’s patent application for a process for making plant-based candles was filed by Heidi Nebel-Sease of Zarley Sease—which had just defeated Cargill, on behalf of Pioneer, on a major seed issue.

When Cargill learned that Michael was working with Zarley Sease, they realized that they couldn’t just walk around or over him. At that point, in the summer of 2000, Del Craig of Cargill called Michael and asked if they could come to talk with him at his office about what they believed there was some new potential. When Del Craig walked into Michael’s building in Iowa, the plant was filled with black barrels with “ADM” stamped on each one. He said, “This breaks my heart; what can we do to make a deal.” It was the first time he realized that Michael was also buying from ADM. Address: President / Founder, Candleworks, Inc., 1029 Third St. S.E., Cedar Rapids, Iowa 52401. Phone: 319-363-1774.

1977. Archer Daniels Midland Company. 2004. Take your health to heart: NutriSoy 100% natural soy protein (Ad). *Vegetarian Times*. May. p. 69.

• **Summary:** See next page. This full-page color ad shows a young woman at 7:30 A.M. sending her child off to school, at 1:00 P.M. seated at a table on which is a laptop and a glass of soymilk, at 5:30 P.M. during her work-out in the gym, and at 7:00 P.M. eating a burger on a plate. “Eating foods with 25 grams of NutriSoy soy protein every day can help you maintain a healthy heart.”

isoflavones appear in their breast milk and are absorbed by their infants. The significance of this is not known, although researchers speculate that early exposure to soy may protect against chronic disease in adulthood.

An analysis of a number of studies on soy and hot flashes found that, overall, use of soy products reduced the frequency of hot flashes.

Isoflavone supplements reduced the severity of headaches and other symptoms of premenstrual syndrome (PMS).

Soy protein may be useful in reducing risk of prostate cancer because it affects male hormone levels.

Preliminary results suggest that soy isoflavones can improve brain functions, such as memory, in older people. Symposium chairpersons: Mark Messina and Kenneth D.R. Setchell.

1979. *NSRL Bulletin (National Soybean Research Laboratory, Urbana, Illinois)*. 2004. Illinois Center for Soy Foods launches program to test soy in school lunches. 11(2):5. June.

• **Summary:** “As part of the battle against obesity, the Illinois Center for Soy Foods at the University of Illinois has launched a pilot program to demonstrate the benefits of including soy in the state’s school lunch programs. The program will be a joint effort with the Illinois Soybean Checkoff Board and Archer Daniels Midland.

“Many school lunches exceed the maximum fat content allowed by regulations,” says Barbara Klein, co-director of the Center and emeritus professor in the Department of Food Science and Human Nutrition at the U of I. “By adding soy to school lunches, we plan to reduce the overall fat content of the meals.”

“Klein notes that the pilot project is part of an effort by the Center to be an active participant in the fight against childhood obesity.

“Our youth are becoming increasingly overweight,” she says. “Many school lunch programs inadvertently contribute to this problem by offering high-fat lunches. Working together we hope to become part of the solution for overcoming this increasingly important health issue.”

“She points out that the project will involve enhancing some of the more expensive items on the menu, thereby helping to reduce overall costs for running the lunch programs.

“Soy can also play a major role in improving food quality,” Klein says. “It has functional properties that can improve the taste and extend the freshness of many food products.”

“A major focus of the pilot program will be to demonstrate consumer acceptability of soy and soy-enhanced foods and show how they can be easily incorporated into the school lunch programs.

“We will be working with food manufacturers and food service vendors to make products for the test program,” Klein says. “Many of these foods will be popular entrees in which soy will be used to replace some or all of the meat. For example, we may make hamburger that is a mixture of soy and ground meat, and we may make a vegetarian soy burger.”

“As part of the consumer acceptance study, those items will either replace the usual entrée or be served alongside it for comparison testing. The plan is to gather data on acceptability from children, teachers, and members of the local Parent-Teachers Association.

“The pilot program will test soy foods in one or two school districts each in northern, central and southern Illinois and in one or two schools within each of the selected districts,” Klein says. “We will do everything possible to ensure that the product testing and data gathering will operate as smoothly as possible and with minimal disruption to the normal routine in the schools.”

1980. *Food Processing (Chicago)*. 2004. Wellness Foods—New Product Profiles: Two next-generation analogues better simulate full muscle texture. 65(8):s38. Aug. 1.

• **Summary:** ADM has introduced NutriSoy Next using soy proteins combined with other vegetable proteins such as wheat gluten or, in some cases, egg whites. Using a twin-screw extruder with the ingredients at relatively high moisture levels of 50-80% locks in flavor and gives them a moist texture.

Garden Protein International has launched Gardein, which is extruded non-GMO soy protein and wheat. It comes in a variety of formats and flavors. “Beef, chicken, and pork analogs are available in small or medium shreds as well as 3/4 inch and 3/8 inch dice. Pre-sauce options include teriyaki, BBQ, sweet and sour, honey garlic as well as roasted garlic and pepper.”

2004. Guides for interpreting soy research. 6(2):1, 5, 8. Oct. [45 ref]

• **Summary:** Contents: Introduction. Manufacturers who provide information about the isoflavone content on their product labels should express content as the aglycone amount. Researchers should clearly relate their study conditions to usual soy and isoflavone intakes. All researchers, but especially those conducting cell culture or animal studies, should outline the benefits and limitations of the model system used (The gold standard for conducting human trials is the randomized clinical trial—RCT). The media and public health officials should look at the totality of the evidence when commenting on the potential significance of new findings.

1985. *ADM Health & Nutrition Update (Decatur, Illinois)*.

2004. ADM introduces NutriSoy Next line of meat alternatives. 6(2):3. Oct. [45 ref]

• **Summary:** These products are said to have a taste and

texture similar to that of chicken. They are made “using an innovative technique which results in a more tender, juicy product than conventional soy-based meat analogs. The product is manufactured in ADM’s state-of-the-art vegetarian food plant. The 100,000 square-foot plant is completely meat- and dairy-free, and is Kosher, Pareve and Halal certified.”

Note: A separate 2005 leaflet for Nutri-Soy Next explains: “Twin-screw extruders of proteins at relatively high moisture levels [Wenger UniTex] gives NutriSoy Next meat analogs their tender, moist texture.”

1986. Archer Daniels Midland Co. 2004. Annual report: The essential link. P.O. Box 1470, Decatur, IL 62525. 56 p. Oct. 28 cm.

• **Summary:** Net sales and other operating income for 2004 (year ended June 30) were \$36,151 million, up 17.7% from 2003. Net earnings for 2004 were \$495 million, up 9.7% from 2003, but far below the peak of \$796 million in 1995. Shareholders' equity (net worth) is \$7,698 million, up 8.9% from 2003. Net earnings per common share: \$0.76, up 8.6% from 2003.

Accompanying the annual report is a “Notice of Annual Meeting.” G. Allen Andreas, age 60, Chairman of the Board and CEO, had a 2003 salary of \$2,901,667 plus \$119,658 other annual compensation. A photo (p. 3) shows G. Allen Andreas and Paul B. Mulhollem. Address: Decatur, Illinois.

• **Summary:** A gorgeous book, filled with elegant, mouth-watering full-page color photos of prepared recipes. Contents: Introduction, by Linda Funk, Executive Director, The Soyfoods Council. 1. The magical bean: Soy to the world, soy and health, the soyfoods pantry (glossary incl. soybean oil, soymilk, tofu, tempeh, edamame, soynuts, soy flour, textured soy protein, canned soybeans, miso, soy protein powder {soy protein isolates}, dried soy flakes {MicroSoy}, soy yogurt and smoothies, soy pasta {ADM}). Soyfood nutrient chart. 2. Start it up with soy: Appetizers and nibbles. 3. On the sidelines: Sides and salads. 4. Spoon fed: Comforting soups and stews. 5. Vegetarian anyone?

6. Teamwork: Pork, beef, chicken, seafood and soy. 7. The bread box: Breads and muffins. 8. Desserts: Soy and spice and everything nice. 9. Cooking with kids. Resources (Directory of members of The Soyfoods Council and their soy products; Directory of state and national soybean boards).

A smoothie (p. 133) is made at home by combining 1 cup soymilk (plain or vanilla), ½ medium banana (may be frozen, if desired), and optional nondairy ingredients, such as chocolate syrup, peanut butter, fruit juice concentrate, or frozen fruits (alone or in combinations—pineapple, orange, cranberry, raspberry, etc.). “Many of the soy smoothies and soy yogurts on the market today are probiotic, meaning they contain active, live cultures that are beneficial to intestinal health.” Address: 4554 N.W. 114th Street, Urbandale, Iowa 50322-5410. Phone: 866-431-9814.

1993. Manning, Richard. 2004. *Against the grain: How agriculture hijacked civilization*. New York, NY: North Point Press. A Div. of Farrar, Straus and Giroux. 232 p. Index. 24 cm. [45 ref]

• **Summary:** A revisionist history of agriculture, or how agriculture created the dull

minded, fat bellied citizens of today—while destroying the environment. Contents: Arousal. Why agriculture? Why agriculture spread. Hard times. Modern times. A vanguard of feudalism. To see the wizard. Why we are what we eat. Hog heaven. A counteragriculture. I eat, therefore I kill.

The chapter titled “To see the wizard” (p. 123-47) is very critical of Archer Daniels Midland Co. (ADM) and other large agribusiness companies (Cargill, Continental Grain / ContiGroup, Louis Dreyfus, Andre & Cie., and the Bunge & Born Group). It also discusses the farm crisis of the 1980s, the depopulation of rural America, the huge rise in U.S. ag exports, the rise in big farms (“get big or get out”) and capital-intensive industrial agriculture, big farms as major recipients of federal welfare, Dwayne Andreas’ leadership at ADM, how U.S. agriculture has become one big commodity factory, food vs. commodities, the farmer’s falling share of the consumer’s food dollar, monoculture. “Between 1985 and 1995, ADM had received more than \$130 million in export subsidies through USDA.” Demise of the family farm, rise of hog factory farms whose waste is not treated as sewage, the corruption of life, what are people for?, ethanol and subsidies, interview with Dwayne Andreas, there is no free market. Address: Montana.

1994. Miller, Edgar R., III; Pastor-Barrluso, Roberto; Dalal, Darshan; et al. 2005. Meta-analysis: High-dosage vitamin E supplementation may increase all-cause mortality. *Annals of Internal Medicine* 143(1):37-46. Jan. 4. [70 ref]

• **Summary:** “Background: Experimental models and observational studies suggest that vitamin E supplementation may prevent cardiovascular disease and cancer. However,

several trials of high-dosage vitamin E supplementation showed non-statistically significant increases in total mortality.

“Purpose: To perform a meta-analysis of the dose-response relationship between vitamin E supplementation and total mortality by using data from randomized, controlled trials.

“Conclusion: High dosage (greater than or equal to 400 IU/day) vitamin E supplements may increase all-cause mortality and should be avoided.”

Note: Prior to the publication of this study, Vitamin E was widely consumed as a supplement since, among other things, it seemed to be an effective antioxidant. A major manufacturer and promoter was Archer-Daniels-Midland Co. Address: Johns Hopkins School of Medicine.

1995. Ridenour, Jeremiah. 2005. Pulmuone first invests in Wildwood Natural Foods in April 2004 (Interview). *SoyaScan Notes*. Feb. 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Jeremiah met Tom Lacina and his partner / brother-in-law one day when they showed up at the Wildwood plant in Santa Cruz. Jeremiah took them on a tour of the plant, then they went out to lunch. Tom was one of those rare people who was both an attorney and a farmer. He owned a farm and had built a small tofu shop on his land. He was selling about \$50,000/year worth of soy products at the most. They said they were struggling in Iowa trying to make their tofu plant work, and they were losing tons of money. Somebody (Shurtleff) told Lacina that if he wanted to be successful, he should model his company after Wildwood. After visiting Wildwood, they visited San Diego Soy Dairy and Luke Lukoskie. He then called Jeremiah and said that if he was ever in the Midwest, he was welcome to stop by for a visit. On a trip to the East, Jeremiah stopped in to see Tom, who introduced him to venture capitalists (VCs) in Des Moines who scouted for companies potentially suited for Iowa state money. The VCs grilled Jeremiah about his business. To get money from the state of Iowa, a company had to have more than \$5 million/year in sales. Jeremiah really liked Tom and the Soy Sisters (Tom’s wife and sister). Wildwood had run out of capacity, working around the clock 7 days a week, so it was “grow or else.” Wildwood and Midwest Harvest Corp. (Tom’s company) ended up merging, becoming an Iowa corporation and getting money from the state of Iowa for job creation in Iowa and value-added products made in Iowa from Iowa farm crops. A certain percentage of that money had to be spent in Iowa, but Jeremiah was able to get enough to buy a used meat-packing plant in Watsonville, about 25 miles southeast of Santa Cruz. First the new corporation bought 10 acres of land in Grinnell, Iowa, 1½ miles down the road from Tom Lacina’s farm and in 2001 built a state-of-the art plant (22,000 square feet) where only soymilk and cultured foods (such as soy

yogurt) were made—the only such plant in the USA. Jeremiah has long had a strong commitment to organic farming and the use of organic ingredients wherever possible in his products. On his 320-acre farm, Tom Lacina grows some of the organic soybeans that Wildwood makes into cultured soyfoods in Iowa. This is the type of vertical integration that Jeremiah had long sought. Jeremiah used to contract with various organic farmers, but he gradually found problems keeping the protein levels of his two select varieties high enough and ensuring the cleanliness of the soybeans he wanted. So 5-6 years ago he started to buy his soybeans through a broker, and giving very clear specifications—such as at least 43% protein in the soybeans to be used in making tofu. That system has proven to be much better.

While building his first factory in Iowa, Jeremiah bought an old meat-packing plant in Watsonville, California and began to renovate it for food processing. Building two plants at once turned out to be a big mistake. The usual cost overruns occurred. After building plans had been approved by the inspectors and the meat-packing plant renovation was almost finished, inspectors came back in and said that about \$1 million worth of earthquake retrofitting would have to be done. Jeremiah did the work and finished the plant. But now he needed the last million dollars of marketing money that he had been promised by Iowa. But Iowa refused to pay that money, arguing that it would take more than that amount for the company to reach the break-even point. What Wildwood couldn't see, was that politics was at work behind the scenes; Iowa wanted to get out. The money guys told Jeremiah he would have to find a strategic partner. Jeremiah suddenly found himself short of cash and in a financial crisis.

So he made a short list of potential partners who might invest money. House Foods America Corporation (Los Angeles) showed some interest then backed off. Jeremiah had first met Pulmuone in the spring of 2003 at the Natural Products Expo West in Anaheim; their booths happened to be across the aisle from one another. They had a smoothie product and Wildwood had introduced a smoothie the year before; Jeremiah thought that Pulmuone's wasn't very good. Some people from the Pulmuone booth came over to visit. They said that their CEO was coming from Korea and invited Jeremiah to meet him. But for some reason it never happened. So Jeremiah never thought of putting Pulmuone on his short list of potential partners.

Meanwhile, the Iowa cultured products plant was not doing well. "This discipline required to make cultured soyfoods is like that in an operating room." Jeremiah's basic concept was to make these cultured soy products probiotic, which would give them functional value. At his first meeting with the employees he asked how many people had heard of "probiotics," Nobody. Woops. How many had heard of "antibiotic." Everybody. He knew from that moment he would have marketing problems. Jeremiah and a PhD in microbiology had traveled to the plant, established the

sanitation protocols, and trained the workers. But soon after he left, the quality control problems returned. Tom Lacina was more interested in having the paperwork done well than in enforcing the sanitation rules. This led to a loss of business and of money.

There was another factor. Jeremiah has come to believe that many, if not most, Midwesterners see anyone from California as a hippie. Hippies don't know how to run businesses and don't understand most Midwesterners. At one point the VCs put their foot down and told Jeremiah, "Too much travel. We don't want you to come here anymore." At that point things got out of control.

Stonyfield Farms was planning to have their soy yogurt made at Wildwood's Iowa plant—a huge potential account. But the people in Iowa could not produce the quality that was required. They missed a huge opportunity to make the Iowa plant successful. Jeremiah's wishes he had waited until the Iowa plant was making good quality products before bringing in Stonyfield.

Today, the Iowa plant is doing very well in every way; sales grew 400% last year. Pulmuone sent their R&D experts there and turned things around in short order. (8) In April 2004 Wildwood sold a controlling interest to Pulmuone. It was a matter of economic survival. So Wildwood has become an international company, with Korean partners. To celebrate the deal, Jeremiah went on a tour of Pulmuone's facilities in Korea. (9) Origins of Pulmuone in 1955 in Korea as a Christian Farming Cooperative. Their mission is "Love Thy Neighbor" and they are deeply committed to pure foods, organic agriculture, and no artificial ingredients. The saintly Mr. Won. Alex Nam went to college with Mr. Won's son. Pulmuone now has 12 organic food products.

In the early days, the Soyfoods Association was unable to attract any Asian soyfoods companies. Today both Asian companies, huge American food processors (Kellogg, ADM, DuPont, Kraft), and even state soybean boards are members. Address: 412 E. Riverside Drive., Watsonville, California 95076.

1996. Chajuss, Daniel. 2005. Brief biography and history of his work with soy in the USA and Israel. Part III (Interview). *SoyaScan Notes*. Feb. 19. Followed by numerous e-mails. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: In 1972 Hayes General Technology signed a contract to sell the engineering designs and know-how it had developed for a soy protein concentrate plant to Aarhus Oliefabrik A/S in Aarhus, Denmark. This was HGT's first major contract.

In 1973 Daniel Chajuss sold know-how and complete engineering designs to Aarhus Oliefabrik A/S, Aarhus, Denmark (renamed Central Soya Aarhus A/S in Nov. 1992), to manufacture powdered and textured soy protein concentrates for human consumption, pet foods and calves milk replacers; they were sold under various Danpro brands.

On 19 June 1973 Daniel married Talma E. Hirsch in Rehovot, Israel. They had four sons: Ron, born on 18 Dec. 1973 in Tel Aviv; he is now (2005) a computer scientist and electrical engineer. Amir and Shi (twins) born on 17 Dec. 1976 in Rehovot; Amir is a graduate student in physics and philosophy. Shai is a graduate student in business administration and political science. Ori, born on 2 Feb. 1983 in Rehovot, is finishing his military service duties and going to study at a university.

All the soy protein concentrate facilities worldwide, which were established since 1973 and which are still in operation today (including ADM, USA, SOGIP-Bunge, France, etc., with the exception of Central Soya's USA plants) employ Chajuss' technology and/or engineering designs, and are mainly based on the know-how and technology developed by Chajuss. About 90% of the total world production of soy protein concentrates today is made by aqueous alcohol extraction. Most of the protein concentrates are used in the form of powder or grits, some are further texturized, and some are further treated to provide various "functionalities."

In 1974 the Aarhus concentrate plant began regular full-scale operation. It was later bought by Central Soya.

Also in 1974 Daniel, Prof. Birk and the other researchers at the Hebrew University at Rehovot did much collaborative research on soy phytochemicals, such as soy saponins, soy isoflavones, other soy phenolics, etc., which were obtained from alcohol-extracted soy molasses. They found that soy molasses had many interesting and useful applications—even for stabilizing sandy soil and eventually enabling it to be productive for agriculture. Later they developed a technology to remove the isoflavones (very bitter and beany) and saponins from the soy molasses. They found that the isoflavones in the soy germ are not bitter.

Daniel recalls: At [the NRRL in] Peoria, Illinois, they had tried to breed soybeans that had little or no bitter, beany flavor. Essentially they were trying to breed out the isoflavones; fortunately they were not successful. Yet the isoflavone content of both soybeans and soy molasses covers a wide range; for soy molasses it is about 0.5% to 2%.

During 1974 Daniel told researchers at Central Soya and Aarhus Oliefabrik about these compounds found in soy molasses. Then Unimills started a plant and called it 'soy volasses.' The *2004 Soya & Oilseed Bluebook* has a section titled 'Definitions and Glossary,' however it does not yet have an entry for 'soy molasses' (p. 367). But there is an entry for 'soy solubles,

During this time Hayes General Technology also did development work on many different modern soy protein products, functional soy protein concentrates, textured soy proteins, soy flours (full-fat, medium-fat, and defatted; enzyme active or toasted); also on the extraction of specialty oils and cold press systems; on specific extraction plants, as for jojoba oil, primrose oil, argan oil (from the nuts of

the argan tree, *Argania spinosa*, of southwest Morocco), etc.; flash desolventizing systems for non-polar and polar solvents; unique, bland and novel "no waste" (fiber included) soymilk products; precooked "instant" cereal plants; complete low-cost food formulae plants; micro-milling systems; production of vegetarian meat alternatives, incl. vegetarian sausages, schnitzels, patties, and "fried fish"; non-soy based protein products; lupine seed processing incl. lupine protein, lupine oil, and lupine alkaloid alkaloids production systems. Much work was also devoted to the development of low-cost cottage industries.

In 1980 Hayes started to sell soy lecithin commercially; it was separated from the soy oil obtained during the production of "white" flakes by hexane extraction.

Also in 1980 Daniel's father, Elijah M. Chajuss, began to reduce his full active daily work with Hayes Ashdod Ltd. At this time, the two men began thinking about selling that part of their company. Daniel thought it would be better if he focused on research, development, and engineering work. None of his sons was interested in carrying on the family business.

Until 1981, all the shares of Hayes Ashdod Ltd. were held by the Chajuss family.

1984 Sept. 27-28—Daniel attended the First European Soyfoods Workshop held in Amsterdam, Netherlands, as a delegate of E.M. Chajuss Ltd., which was interested in establishing a simple soy cottage industry; at about that time they had developed some simple appropriate processing technologies for soyfoods and soymilk and were thinking about making those in a company other than Hayes Ashdod Ltd.

1984—The Chajuss family began to sell some of the shares in Hayes Ashdod Ltd. (fully owned by the Chajuss family) to Koor Foods Ltd. (headquartered in Tel Aviv), which was a holding company that owned shares and ownership in various food firms and was a part of Koor Industries Ltd., which had been established by labor unions. Hayes Ashdod Ltd. sold crude soybean oil to firms owned by Koor Foods Ltd. Koor has approached the Chajuss family, asking if all or part of Hayes Ashdod might be for sale.

In Dec. 1984 the majority of the shares in Hayes Ashdod Ltd. were sold by the Chajuss family to Koor Foods Ltd. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

1997. Chajuss, Daniel. 2005. Brief biography and history of his work with soy in the USA and Israel. Part IV (Interview). *SoyaScan Notes*. Feb. 19. Followed by numerous e-mails. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** 1985—Hayes General Technology (HGT) Co. Ltd. is incorporated as a separate and independent company, still owned by the Chajuss family, especially to develop engineering, process know how and new technologies,

mainly in the field of soy proteins.

1986–The Chajuss family sold the remainder of the shares in Hayes Ashdod Ltd. to Koor Foods Ltd. One of Koor’s directors was Mrs. Shefi of Kibbutz Hatzor. She was the link connecting her kibbutz with Koor Foods and Hayes Ashdod Ltd.

1987 Feb. 18–Elijah Mathew Chajuss, Daniel’s father and co-founder of Hayes Ashdod Ltd., passed away in Rehovot at age 84.

In March 1987 all the shares of Hayes Ashdod Ltd. were purchased from Koor Foods by Kibbutz Hatzor. A few months later, in about Sept. 1987, the company name was changed from “Hayes Ashdod Ltd.” to “Solbar Hatzor Ltd.”

In 1988 Soya Mainz (of Mainz, Germany) bought from Hayes General Technology engineering designs to set up a soy protein concentrate plant in Germany. The plant was not built and instead in early 1991, Soya Mainz bought 25% of Solbar’s shares.

In 1989 (a year later) Soya Mainz bought an additional 24% of the shares in Solbar, so that they now owned a total of 49% equity in Solbar Hatzor; Kibbutz Hatzor owned the remaining 51% equity of this joint venture between Israeli and German companies.

Note: The proprietary rights of Hayes Ashdod Ltd. know-how and technology remained, however, Chajuss’ proprietary possession. Koor Foods ceased operations in about 1987.

Today HGT does mainly research engineering and designs systems, but it also manufactures special, nonstandardized equipment, and installs complete systems. HGT engineers, including Daniel when warranted, also work as field engineers and consultants on site when the systems they have designed are installed in other countries. They have done that since 1973-74 when their first system was installed outside in Aarhus, Denmark. Systems for manufacturing soy protein concentrates and soy molasses, designed and developed by HGT, have been installed in Israel, Denmark, The Netherlands, France, USA, China, and Brazil. All these plants include texturizing facilities, which although recommended by HGT are designed and made by firms such as Wenger, Extru-Tech, and Clextral. Today HGT is known and often referred to as ‘Hayes Ltd.’. Hayes General Technology Company Ltd. is thus thinking about making ‘Hayes Ltd.’ its official company name. Also today (2005) this company is owned and managed by Daniel Chajuss.

Note: Hayes Ashdod Ltd., although it was sometimes referred to as “Hayes Ltd.” was never officially named “Hayes Ltd.”

In early 1991 the German soy processor, Soya Mainz GmbH and Co. bought a 25% equity interest in Solbar Hatzor Ltd. (formerly Hayes Ashdod Ltd.), soy protein manufacturers of Ashdod, Israel. The company has also contracted with Hayes General Technology Co. Ltd. of Israel

to set up a soya protein concentrate production facility in Germany.

By 1999 Solbar had started a sister company or division named Solbar Plant Extracts to market its nutraceutical products (such as isoflavones) extracted from soy molasses.

Today (Feb. 2005) the makers of traditional type concentrate generally use the systems developed by Daniel Chajuss. These systems are purchased from Hayes General Technology and are presently used by all the leading makers of traditional and functional soy protein concentrates. Today over 95% of the soy protein concentrates manufactured worldwide are made using systems developed by Hayes. Included among Hayes General Technology clients for traditional or functional soy protein concentrates (SPC) have been: (1) Hayes Ashdod Ltd., Ashdod, Israel (later renamed Solbar Hatzor Ltd.), 1962 to 2005 (complete engineering designs and services). (2) Aarhus Oliefabrik A/S, Aarhus, Denmark (alter renamed Central and presently Solae), 1972 to 1974 and later periodically upon request. (3) Bunge Sogip, Bordeaux, France, 1988 to 1996 (later renamed Central Soya Aarhus and presently Solae). (4) Soya Mainz, Mainz, Germany, 1988 (now part of ADM group). (5) ADM, Decatur, Illinois, 1989-1999. Intended to be used for SPC in the Decatur plant. The knowledge was later also utilized by ADM in plants in the Netherlands (Europort) and China. (6) Finnsoypro Oy, Uusikaupunki, Finland, 1995. Textured soy protein concentrate plant. (7) Cargill, Minneapolis, Minnesota, 2000 to 2003. SPC technology licensing and transfer of know-how and engineering designs. Also consultations. (8) Shemen Industry–Soyprotec Advanced Protein Technology, Haifa, Israel, 1999 to present. SPC technological transfer and licensing agreement and consultation services. (9) China–In China HGT is involved directly and or through Wuhan Crown Friendship and provide Hayes know-how, licensing, engineering designs and services to manufacture SPC to firms such as Shandong Sanwei Oil Enterprise (Group) Co. Ltd., Linyin City, to Crown Proteins, to Gushen in Shandong province and to YiQing Group in Tianjin. (10) Brazil–The transfer of know-how and engineering designs is and was made to such firms as IMCOPA (2006) and others through Crown Iron Works, Cargill, Shemen Industries (Soyprotec), Shandong San Wei, etc.

Daniel has retired largely from the commercial side of his business. But he still (2005) has a small company that makes isoflavone products; he likes very much to do research in this company’s laboratories. “Business can be good or bad, profitable or not profitable, but when you do research, you may get good or bad results, but it’s always interesting. That’s what I like to do.” From time to time Daniel goes to the Hebrew University of Jerusalem at Rehovot to do research; he still works occasionally with Dr. Yehudith Birk.

Daniel has become interested in a remarkable plant and its seed, pearl lupin (*Lupinus mutabilis*), a species of lupin

that is grown in the Andes of South America for its edible bean. He has done research on the bitter compounds in this underutilized bean, and believes this seed has a very bright future, including as a human food (see separate record).

Daniel's wife is well (Dec. 2007) and works as information librarian in Tel Aviv University Faculty of Medicine.

The year 2007 marks the 45th anniversary of Daniel's pioneering work with soy products in Israel. Today Hayes makes about 450 to 500 metric tons per year. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

1998. Lamp, Greg. 2005. Keep a watchful eye on Brazil: My view. *Corn and Soybean Digest*. Feb. p. 6.

• **Summary:** Lamp just returned from a two-week tour of Brazil's soybean and cattle growing centers—sponsored by *The Corn and Soybean Digest* and its sister publication, *Beef*. Brazil has plenty of undeveloped land. In the state of Mato Grosso, for example, 70% of the land is undeveloped, yet this state is already Brazil's largest producer of soybeans, cotton, and cattle—and it has the lowest rate of unemployment—6.9%.

Since 2003, soybean king Blairo Maggi (who produces about 250,000 acres of soybeans) was elected governor of Mato Grosso, the long inadequate infrastructure has started to improve rapidly. During the past two years, more than 900 miles of new roads have been constructed.

Rondonopolis, located southeast of Cuiaba in Mato Grosso, "has the largest crushing capacity in South America. Most crushers are U.S. companies like ADM, Cargill and Bunge."

For U.S. farmers, the biggest threat from Brazil may come from its ability to feed and export poultry and pork." As the country produces more corn, to feed with its abundant soybeans, the threat will increase.

Photos show: (1) Greg Lamp. (2) American farmers on a bus tour checking plants for soybean rust. (3) Ships loading at Paranagua port. Address: Editor.

1999. Messina, Mark J. 2005. Update on work with soy (Interview). *SoyaScan Notes*. March 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mark has made presentations on soy and health in 33 countries and has been to Brussels 10-12 times, and once to China.

Second generation statins are truly remarkable in their ability to lower human cholesterol by 30-35%—much more than any short-term dietary change.

The French government is now advising no soy consumption before age 3, and the British government has two editorials on soy consumption in childhood.

Creation of a Soy Nutrition Institute has been under active discussion for the past two years. Three companies are

potentially interested: Solae (the most interested), followed by ADM and Cargill. They would publish accurate, well-documented information about soy and nutrition. They have set two goals: Within 5 years to become like the Egg Association, and within 10 years to become like the Dairy Association. Mark is considering applying for the position of director if he can get a long-term contract and if the salary is adequate. When the media and others had questions about soy, nutrition and health, this is the first place they would think to contact.

The 6th International Symposium on the Role of Soy in Preventing and Treating Chronic Disease will be held in Chicago, Illinois, this summer.

Dr. James Anderson is doing a new meta-analysis on soy and heart health. There are many new studies since his first meta-analysis was published in Aug. 1995.

The earlier a young woman gets pregnant, the lower her risk of breast cancer later in life. One of the most exciting hypotheses in this field is that isoflavone intake (including soy isoflavones) during youth / adolescence significantly reduces breast cancer risk later in life.

A member of the anti-soy group is "Dr. Mercola." He is somehow associated with Sally Fallon and her Weston Price Foundation. Dr. Joseph Mercola is an osteopathic physician and director of the Optimal Wellness Center, his medical clinic outside Chicago. Trained in both alternative and traditional medicine, he has served as the chairman of the family medicine department at St. Alexius Medical Center for five years. Address: PhD, 439 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2000. *ASA Today* (St. Louis, Missouri). 2005. WISHH provides vital assistance to feeding program. 10(5):2. March.

• **Summary:** U.S. Ambassador to Senegal, Richard C. Roth, praised a Counterpart International (CPI) project that is taking advantage of high protein soy products to fight hunger while helping to increase school attendance by 25%. Roth visited Counterpart's Global Food for Education (GFEI) Program where he saw how "high protein soy has complemented CPI's program, which has provided a daily, hot, nutritious meal to more than 16,000 school children since early 2003.

Counterpart received six tons of Textured Vegetable Protein™, better known as TVP, from WISHH and Archer Daniels Midland Co., the manufacturer. Another product to be used in the program is soy protein isolate.

"State soybean organizations and the United Soybean Board provide support for the WISHH program."

A photo shows Ambassador Richard Roth with several Counterpart International staff in a storage room where stacks of ADM's TVP are stacked high.

2001. Chajuss, Daniel. 2005. History of his work with soy in Israel (Interview). *SoyaScan Notes*. April 13. Conducted by

William Shurtleff of Soyfoods Center.

• **Summary:** ADM made acid-wash soy protein concentrate, which cannot be texturized. Daniel thinks they did this after they bought Central Soya's soy protein isolate plant in Chicago, and brought it to Decatur, Illinois. This inability to texturize was one of the reasons ADM asked for Daniel's assistance in establishing a plant to make aqueous alcohol wash soy protein concentrate.

Central Soya made very good soy products—such as Response [textured soy protein concentrate, launched in July 1975]. Daniel has always had very good personal and business relations with Central Soya.

Hayes Ashdod was sold in 1987 and is now named Solbar. It is still in the same location as before, with much of the equipment. After the sale, Daniel used to work there almost every day, but he no longer works with that company.

Daniel helped Finnsoypro Oy (Finnsoy) in Finland to start a plant by giving them know-how; however they bought equipment from a company that is the daughter company of Wenger. Finnsoypro is a small factory that makes about 300 kg/hour of textured soy protein concentrate. The owner (who is very smart) is a neighbor and friend of Daniel in Israel.

Daniel really loves his work at Hayes General Technology (HGT), which he still owns; he is the managing director. He works to install new plants around the world based on the unique technology that he and HGT have developed. He sold Hayes Ashdod Ltd. in part so that he could focus more on his work at HGT. He is now working on a plant in Haifa for a company named Soyprotec; it belongs to Shemen Industries, which is also making soy protein concentrate.

Daniel drinks Alpro soymilk. “Now in Israel tofu and soymilk and other soy products are very, very popular.” Israel's largest producer of dairy milk, Tnuva, now makes soymilk. They generate a lot of okara, which is transformed into a health food product by another company. It contains about 30% protein, 60% fiber, plus some oil, minerals, etc. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

2002. Brewster, Elizabeth. 2005. Beans to go: adding soy to the deli case. *Iowa Soybean Review (Iowa Soybean Association, Urbandale, Iowa)* 16(7):12k of 12-page insert after p. 14. Spring.

• **Summary:** “You might say soy and the deli case were made for each other—as long as you don't say it too loudly.

“From tasty tofu tidbits to soymilk smoothies, a host of deli products can easily incorporate soy, says veteran soy chef Christopher Koetke. The key is keeping the bean's influence subtle and in line with the American palate.

“A hunk of cold tofu is not where Americans are at,” says Koetke, dean of The School of Culinary Arts at Kendall College in Chicago. “But there are many, many ways that

delis can incorporate soy products.”

“Edamame, tasty green soybeans harvested just before they harden, is one of the easiest soy ingredients to use, slipping smoothly into just about any salad or vegetable dish, explains Koetke. Roasted soybeans, called soy nuts, are also at home anywhere in the deli, from snacks to salads to meat mixtures like meatloaf and meatballs.

“I'm also a big proponent of canned soybeans,” Koetke says. “You can use them anywhere you'd use a bean—soups, salads, chili. They're really easy to add.”

“One of the newest ways to add instant soy crunch to deli offerings is Soy Anytime sprinkles from Springfield, Illinois-based Spectrum Foods. The small crunchy nuggets of soy and rice provide 6.5 grams of soy protein in a two-tablespoon serving, plus ‘they're kind of cool,’ says Koetke. “You just sprinkle it into a salad, meatloaf, anything. They're very, very good.”

“On the liquid side, soymilk and smoothies have been riding a wave of mainstream popularity, so consumers are likely to welcome both as deli ingredients or beverages. Koetke especially likes SoYogurt smoothies from Watsonville, Calif.-based Wildwood Natural Foods, which come in five flavors including unsweetened plain. He also suggests mixing soymilk with fruit for a breakfast or dessert treat, or preparing oatmeal with vanilla soymilk for a double whammy of nutrition.

“Products derived from soy, such as tofu, may be trickier to sell at the deli because they tend to suffer from bad taste reputations, well-deserved or not. But Koetke is optimistic about consumers' potential to enjoy the current crop of tofu products if they're willing to give them a try

“I am impressed with tofu manufacturers in America,” he says. “They've made big strides in terms of making tofu that is really designed for the American palate. The whole flavored tofu thing is really, really big. The beauty of it is that it's ready to eat and flavorful, and you don't have to marinate it. You can (even) put it in a spaghetti sauce over pasta—it's delicious.”

“In fact, there are a number of excellent soy pastas on the market, adds Koetke, including ADM's Soy7 for foodservice: lasagna, rotini, elbow, angel hair, penne rigate and spaghetti noodles.

“And many deli products with soy ingredients can segue naturally into foodservice applications, particularly where health concerns are driving menu choices, such as in a retirement facility, spa or school settings.

“Soy is not a bad word [in those settings],” says Koetke. “It's something people are looking for, and that might be a reason for them to try it. But it's up to the chef to make sure that when they try it, they say ‘wow.’

“For more upscale dining establishments, Koetke says soy can play a key role as an exotic ingredient, such as prime beef with a tempeh (fermented cooked soybeans) and mushroom stew.

“The minute you combine [soy] with something more familiar, it becomes an interesting little tidbit on the plate,” says Koetke. “Now you’ve got something that separates you from the chef down the street.”

A photo shows the front panel of a Wildwood Soy Smoothie bottle.

2003. *Iowa Soybean Review* (Iowa Soybean Association, Urbandale, Iowa). 2005. Next generation oils: New low-lin soybean oils sizzle without trans fats. 16(7):12j of 12-page insert after p. 14. Spring.

• **Summary:** “With the FDA’s Jan. 1, 2006, deadline for mandatory trans fat labeling, food companies are resolving to get their fatty acid numbers as low as possible this year. New low-linolenic soy oils that can help reduce—and even eliminate—trans fatty acids will make it easier to keep that resolution.

“The front-runner of the moment is Asoyia trans fat-free soy oil, launched last fall by Winfield, Iowa-based Asoyia llc after years of research by Iowa State University agronomists and food scientists. Asoyia is being produced from newly developed soybeans that contain only one percent linolenic acid (a component of soybean oil that causes it to eventually become stale or rancid), compared with eight percent linolenic acid in traditional soybeans. Soy oils with low levels of linolenic acid don’t need to be hydrogenated for freshness and long-lasting stability, so no trans fats are created in the oil.

“Asoyia llc is marketing the new oil, which is being processed by Wayzata, Minnesota-based Cargill Inc., for commercial cooking applications in the 5 billion-pound market for frying oil. Vivian Jennings, chief executive officer of Asoyia, which is owned by 25 growers of the low-lin soybeans, notes that the trans fat-free oil also offers other advantages for commercial kitchens.

“In extensive tests conducted by food services and restaurants, the one percent linolenic oil lasted 25 to 33 percent longer in frying applications than other current premium frying oils,” says Jennings. “The fried products stay crispier longer and taste the same as those fried in hydrogenated soybean oil.”

“Asoyia also has less saturated fat than some other alternative frying oils.

“Jason Wheelock, kitchen manager for Hickory Park Restaurant Co. in Ames, Iowa, agrees that Asoyia is a winner beyond its trans fat-free status. The casual family dining and barbecue restaurant helped test Asoyia last winter, and ‘it actually worked much better than the oil we were using,’ says Wheelock. ‘The first week we used Asoyia, we were really busy, and we [still didn’t have to change the fryer oil] for two weeks. We usually have to throw out the oil on a weekly basis... our customers didn’t notice any difference in taste, which is a good thing,’ says Jennings.

“Wheelock says the restaurant plans to use Asoyia

again when it becomes commercially available, and plans to highlight the oil’s lack of trans fatty acids.

“We’re also working with some other SYSCO houses in other states, and talking to some major national chains of upper-scale restaurants who will be testing Asoyia,” says Jennings.

“We will be directing our marketing efforts to businesses where fried foods are featured on the menu,” he adds. “These foods can be marketed by restaurants as a more heart-healthy menu item than when they were fried in oils high in saturated or trans fats.”

“Jennings says Asoyia is also exploring larger-scale uses for healthcare foodservice segments, such as hospital, university and school dining rooms.

“Also poised for entry into the low-linolenic market is Nutrium Low Lin soybean oil, the first product to be sold under the new brand name created as part of an alliance between Bunge Ltd. and DuPont. The Nutrium soy oil, which became available for testing and product development last fall, is made from a new Pioneer soybean variety whose oil has less than three percent linolenic acid.

“We expect to have 20 million pounds [of Nutrium soybean oil] available commercially in October 2005, and 150 million pounds in 2006,” says John Jansen, vice president of product and process development at Bunge North America in St. Louis [Missouri]. By 2009, full-scale production of nearly one billion pounds of the oil is planned.

“Nutrium Low Lin is a natural substitute for frying shortenings used by food processors and foodservice operators, says Jansen, but it could also expand into the consumer market ultimately.

“Also debuting in fall 2005 will be low-lin soybean oils processed from Monsanto’s new Vistive soybeans with less than three percent linolenic acid. So far, both Cargill and Ag Processing Inc., Omaha, Nebraska, have signed on as participating processors, with more processors expected to be added in 2006.

“The trans fat concerns driving the low-linolenic segment are also steering other soybean oil solutions, such as interesterified soybean oil, a blend of hydrogenated and nonhydrogenated soybean oils that works best in applications for solid or semisolid fats. The interesterification process, whether chemical or enzymatic, rearranges fatty acids in soybean oil to allow it to function like the partially hydrogenated oils it replaces, but without the trans fats.

“Archer Daniels Midland in Decatur [Illinois], launched its NovaLipid interesterified soybean oil in July 2003, and Bunge and Cargill also offer interesterified soy oils, in addition to other custom blending solutions.

“No matter how they do it, it’s a safe bet that the food industry will remain focused on slimming down soy oils for the foreseeable future. ‘There’s a lot of interest right now because of the pressure on trans fats,’ says Bunge’s Jansen.”

A photo shows that “Asoyia trans fat free soybean oil

(right) offers a clear alternative to conventional soybean oil (left).” Both oils are in clear glass pitchers.

2004. *World Grain*. 2005. ADM to close Brazil soybean processing plant indefinitely. 23(5):11. May. [1 ref]

• **Summary:** Effective immediately, ADM will discontinue operations at its soybean crushing and refining facility at Tres Passos, Rio Grande do Sul, Brazil—due to poor crushing margins.

2005. Givens, Joe. 2005. AGP’s purchase of the Dawson Mills soybean crushing plant from Land O’Lakes (Interview). *SoyaScan Notes*. June 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** This whole acquisition was a very difficult and painful experience for many people at Dawson Mills. Many of the top people at AGP were former ADM employees. “I found them very difficult people to work with.” They came in and “thought they knew it all.” They wanted to replace many experienced, competent employees (such as the plant superintendent and a chemical engineer) with their own people—as fast as they could. Joe had already retired, but he got drawn into the drama because of his long relationship, and often friendship, with these Dawson employees that AGP wanted to get rid of. In the end, AGP had its way. The Dawson plant superintendent had a heart attack and died; Joe is quite sure it was caused by the harassment of the AGP people. One of the Dawson Mills directors, Jim Bauler, went on the AGP board.

Today, the Dawson plant is thriving. Its processing capacity is about 25% larger than it was in 1983. Address: 6566 France Ave. S. #906, Edina, Minnesota 55435.

2006. Choquette, Ray. 2005. The origins of Ag Processing (AGP) in Boone Valley: Bill Lester and Jim Lindsay (Interview). *SoyaScan Notes*. June 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** He thinks of Bill Lester as the “godfather” of AGP. “Through Bill’s communication efforts, the doors were opened for the formation of AGP.” Bill Lester is retired and lives (with his wife, Marion) in Omaha, Nebraska. He can pretty well tell you everything that happened during the organization of AGP; he was there.

“When the soybean processors were merged, a board of directors was in place and the new organization was named Boone Valley Cooperative Processing Association. That board then tried to find an individual to lead the company; that’s when they hired Jim Lindsay. AGP became its own entity with its own board, and began to operate as a regional cooperative processor, whereby stock was issued to the participants and dividends began to be earned. Jim Lindsay retired about 3 years ago and the current CEO is Marty Reagan (a man).

Bill Lester was instrumental in hiring Ray in 1979 to

work at Farmland Industries. When Farmland’s soybean crushing plant became part of AGP in Sept. 1983, Ray was working for Farmland. “We each had to turn in an application and see if AGP would hire us again. We started all over again.” Ray was hired, so he moved from Sergeant Bluff to Eagle Grove, and has been with AGP ever since.

“Bill Lester would offer the perspective that led to the founding of AGP. Bill is one of the premier cooperative leaders in the Midwest, with expertise in the field of soybean processing. Jim Lindsay would offer the perspective of the person who led AGP from the time it started. Jim was an ADM private-sector purist; Bill Lester was a cooperative purist.” Address: Merchandising Manager, Ag Processing (AGP), Eagle Grove, Iowa. Phone: 515-448-4711.

2007. Lester, Bill. 2005. Boone Valley and the origins of Ag Processing Inc (AGP). Part III (Interview). *SoyaScan Notes*. June 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: Boone Valley now had to find a dynamic leader to run the new business—which was deeply in debt. A committee was formed and a head-hunting consultant was hired to let it be known that the job was available and to interview candidates. After seven weeks, in about Oct. 1983, the board of directors chose James W. Lindsay as general manager and CEO. Lindsay had been a vice-president at ADM—a private company and a competitor. “Jim possessed a great knowledge of soybean processing and vegetable oil refining; he worked his way up through the ranks at ADM. He had also spent time in Brazil in charge of ADM’s Brazilian operations. He was also a good leader, by giving you a job to do and the parameters, then letting you do it, with minimum updates unless you were deviating from the original discussion—a good boss and a very capable individual.” “Jim was a bit of a renegade. He didn’t go along with all of ADM’s philosophy and practices. He and I used to kid each other that we were a rare breed—neither of us had a college degree.” When Jim came to work at Boone Valley. He brought with him three coworkers and lieutenants from ADM: Jim Yeates, who became vice president for operations; Tony Porter, to be vice president for marketing and transportation; and Joe Meyer who became vice-president for vegetable oils and a meal exports. Not long afterwards, Daryl Dahl left Merrill Lynch to join the new cooperative as hedging center manager.

It was quickly decided to locate the new company’s corporate offices in Omaha, Nebraska. Initially, the Omaha Bank for Cooperatives offered temporary office space for the new management and staff. Lindsay and his team replaced some of the managers and other top employees at the 5 other soybean processors. “But overall there really weren’t that many. Some refused or hesitated to change the way they had been doing things. Lindsay said, you’re going to have to change, because the old way hasn’t been working.” It was

painful for some who had spent their lives in the soybean processing business and lost their jobs.

The board of directors and Jim Lindsay felt strongly that the new company needed a new name. A stigma had attached to the name “Boone Valley” because of all its financial problems. On 7 March 1984 the name of the new company was changed from Boone Valley Cooperative Processing Association to “Ag Processing Inc a cooperative.” Punctuation was deliberately omitted.” A new logo was also adopted “AGP” in gold letters on a green background. Before long the company was widely called simply “AGP.” That logo has been updated twice to adjust to the changing times.

Bill recalls: In February 1984 Jim Lindsay called me into Omaha. He said, “Bill, I want you to come into Omaha. I know soybean processing backwards and forwards. I know refining. I know the soybean side of it. But I don’t know anything about cooperatives. You’ve spent your whole life in them. I want you to come in and to head up the department known as Member Relations and Governmental Affairs.” In mid-June 1984, Jim and his family moved from Eagle Grove, Iowa, to Omaha, Nebraska. “Jim Lindsay had the private sector mentality and I had the cooperative mentality; we created what we called a ‘new hybrid.’” Bill stayed in this position until he retired on 1 June 1993.

Today AGP is strong organization. They haven’t grown as much during the last 10 in sales and profits as they did during their first 10 years in part because they are in a mature industry (soybean processing), with strong competitors such as ADM and Cargill. In the early years, much of their growth was from diversification, as into soybean oil refining, and from building new plants (as at Hastings and Emmetsburg). “AGP has done a tremendous job in the international marketplace. The terminal they built on the Pacific Coast at Grays Harbor in Washington state has been growing by leaps and bounds and is now a big asset. Their biodiesel business is also poised for growth. Jim Lindsay and Bill got AGP’s soy biodiesel started in its infancy. Two men in Kansas City, Missouri [Bill Ayres and Doug Pickering], were talking about and playing around with biodiesel. “We put \$50,000 into their business in about 1990-91 and now AGP owns that company.”

Bill retired on 1 June 1993. Tremendous changes have taken place in agriculture since then. Bill has kept in touch with developments at AGP since that time. He has continued to live in Omaha. During the summer, he and his family go to their cabin on Spirit Lake in Northwest Iowa. Nowadays he goes to AGP headquarters 2-3 times a month during the non-summer months.

The future of the big cooperatives looks limited to Bill because it is a mature industry. There may be growth of 3-5% a year. AGP also has a small grain operation; they work with the members—the local cooperatives—to help them merchandise their grain in other parts of the USA

and abroad. For example, they use their 100-car trains to move corn and soybeans down to their facilities near the big feedlots in Texas. The logistics is too complex and expensive for the small guys. Address: Omaha, Nebraska.

2008. ADM. 2005. Get to the *heart* of your formulation with NutriSoy® soy proteins (Ad). *Nutrition Outlook* 8(5):26. June.

• **Summary:** See next. page. “Healthy formulations are just a heartbeat away, thanks to NutriSoy® 100% natural soy protein, ADM’s technical expertise, and a broad line of supporting specialty food ingredients.

“For a versatile line of ingredients that makes healthy, tasty products consumers love, turn to the NutriSoy family of products:

“Pro-Fam® isolates

“Arcon® concentrates

“Textured vegetable protein chunks and crumbles

“Flours

“Grits

“PFL™ blend

“NutriSoy® Organic Whole Soybean Powder

“NutriSoy Next™ meat alternatives

“NutriSoy soy proteins—ideal ingredients that get to the heart of your formulas.

- Textured vegetable protein chunks and crumbles
- Flours
- Grits
- PFL™ blend
- NutriSoy® Organic Whole Soybean Powder
- NutriSoy Next™ meat alternatives

NutriSoy soy proteins—ideal ingredients that get to the heart of your formulas.

**NutriSoy®**  
100% Natural Soy Protein

ADM offers more than 500 high-quality ingredients, and the skill to combine them with any food or beverage. **RESOURCEFUL BY NATURE™**

<a href="http://www.admworld.com">www.admworld.com</a>	800-637-5843	<a href="mailto:info@admworld.com">info@admworld.com</a>
--	--------------	--

See us at IFT 2005, July 16-20, 2005, Booth 3127

made from soy ingredients can help reduce fat, cholesterol, and calories in the lunches, and still be acceptable to the students. The test included 4 non-meat entrees: spaghetti with sauce, chili, ravioli, and nuggets (like fast-food chicken nuggets). The percentage of plate waste was used to judge acceptability. “The results showed that the percentage consumed of the soy products versus the meat versions was the same for the chili and spaghetti dishes used in the study.” Equal amounts of these foods were eaten. Soy-enhanced ravioli and nuggets were not as well liked.

A photo shows: “Barbara Klein, co-director of the Illinois Center for Soy Foods, samples some new soy-fortified recipes for tasting in school lunch programs around the state.”

2010. Miller, Tommy. 2005. Riceland Foods no longer operates a soybean crushing plant at Helena, Arkansas. It is now closed (Interview). *SoyaScan Notes*. July 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In 1984, Riceland sold this plant in Helena, Arkansas, to Quincy Soybean Co., which was acquired by ADM in about 1998. ADM shut down the plant in about 2003. Soybean acreage in the South has not decreased. This cutback is because newer and larger plants are more efficient, and have lower processing costs. At the time it was built, in 1964, Riceland’s plant in Helena, Arkansas, was the larger and more modern of the two, but this was not the case by 1984, when the plant at Stuttgart had become the larger and more modern of the two. Address: Soybean Div., Riceland Foods. Phone: 870-673-5500.

2011. McKee, David. 2005. South America: The world’s soybean super supplier. Brazil, Argentina and Paraguay have seen their combined soybean production rise 350% during the past 20 years. *World Grain* 23(8):32-34, 36, 38. Aug.

• **Summary:** A superb, insightful, long article. In Brazil and Argentina, and to a lesser extent in Paraguay and Bolivia, soybean production has grown dramatically in recent decades. “In fact the accelerating expansion of South American soybean production in the last 20 years may be unprecedented for any agricultural commodity in a single region of the world in terms of planted area, absolute increases in harvests, volumes, processing and rising export values.

In 2005-06, considering the soy complex as a whole, Brazil will surpass the USA as the world’s leading exporter with a combined 42.5 million tonnes—based on USDA forecasts. Argentina, at 36.8 million tonnes, will be just behind the U.S.’s 37.7 million tonnes (see bar charts, p. 36). The USA is still the world leader in soybean shipments, but in soybean meal and soy oil, Brazil and Argentina have long ranked number one and two ahead of the U.S.

The main reason for this unprecedented expansion in South American soybean supply during the last decade is the

unprecedented demand in growth from China; rapidly rising incomes there have led to more meat consumption and a bigger, more sophisticated livestock feed industry.

In 1995 China was nearly self-sufficient in soybeans with almost 14 million tonnes of domestic production and less than 1 million tonnes of imports. Yet by 2004-05 (Sept. to Aug.) China had passed the E.U. [European Union] to become the world’s leading importer with 23.2 million tonnes. During the same period, exports of soybeans from Brazil and Argentina increased by 27 million tonnes.

The soybean is a more important crop in South America than even in North America. In Brazil, Argentina, and Paraguay, soybeans and soy products are the most valuable category of agricultural exports.

What has caused this remarkable rise? In Brazil it is the availability of a huge amount of unused arable land in the country’s “Midwest.” In Brazil, soybean production has progressed historically from the southern states of Parana and Rio Grande do Sul, northward into the interior of Brazil’s Midwest.

A sidebar, titled “Capital: The ABCD’s of the soybean industry,” explains that the “role of international capital in the expansion of Brazilian and Argentinian soybean production cannot be overstated.” Huge multinational firms like ADM, Bunge, Cargill, and Louis Dreyfus dominate soybean crushing and trade in both countries. They have provided their own infrastructure as well as seed, fertilizer, and crop financing. Cargill and Bunge even produce and distribute phosphate fertilizer in South America. The ‘big four’ own more than half of the soybean solvent extraction plants in Brazil, and account for a much larger percentage of the country’s total installed crush capacity of 39 million tonnes a year. Bunge is the leading soybean crusher in Brazil, with Cargill at no. 2. But Cargill is the leading soybean exporter, operating five export terminals along Brazil’s Atlantic coast. ADM was the latecomer to Brazil, but after arriving, its strategy has been swift and decisive.

In Argentina, ADM does not own any soybean crushing plants, but in 2004, together with its trading subsidiary, Toepfer, it exported about 20% of all of Argentina’s soybeans—1.8 million tonnes. In Paraguay, ADM moves as much as 40% of the soybean harvest.

Photos show: (1) Aerial view of a new soybean crushing plant at General San Martin Port on the Parana River in Argentina’s Santa Fe Province. Like much of the country’s soybean extraction capacity, it was built purposely for export. (2) Aerial view of Louis Dreyfus port facility and soybean crushing plant in General Lagos, Argentina.

Bar charts show (p. 36): (1—very interesting) Exports (in million tons) of soybeans, soybean oil, and soybean meal from Argentina, Brazil, and the USA in the years 1995 and 2005. In 2005, Argentina exports mostly meal, followed by soybeans, then oil. Brazil exports mostly soybeans, followed by meal, then oil. The USA exports mostly soybeans (more

than Argentina and Brazil), followed by small amounts of meal and oil. (2) Soybean area and harvest (production): In 2005, the USA as the largest total production, followed by Brazil and Argentina. But U.S. production has shown relatively small percentage growth, compared with the percentages of in Brazil (#2) and Argentina (#1).

2012. Soyfoods Association of North America. 2005. New taste of soy: Annual reception September 15, 2005 (Card). Washington, DC. 1 p. Front and back. 13 x 18 cm.

• **Summary:** “The New Taste of Soy is a chance to sample a delightful array of soyfoods and talk with policy makers, Administration officials and leading representatives in the soyfoods industry, including manufacturers, growers and suppliers.

“Thursday, September, 2005. 5:00–7:00 pm. U.S. Capitol, Room HC-5\*, Washington, DC.

“A special thank you to Congressman Collin Peterson from Minnesota for hosting this year’s event. RSVP: members@soyfoods.org—by September 7, 2005.

“Sponsored by: Soyfoods Association of North America, Archer Daniels Midland, Cargill, Boca Foods, Hain-Celestial Group, Kellogg’s / Worthington Foods, Monsanto, Natural Products Inc., Revival Soy, Solae, Sunrich, a Division of SunOpta, Vitasoy USA, White Wave Foods.” Printed green and black on white. Address: 1101 Connecticut Ave. NW, Suite 1120, Washington, DC 20036. Phone: 202-659-3520.

2013. Boismenu, Clyde. 2005. Soy protein isolates—old and new (Interview). *SoyaScan Notes*. Sept. 9. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Cargill has fallen flat on their face with their isolate made by ultrafiltration. Soy protein clogs the filters. The product is very fluffy. And there are waste water disposal problems; they must dilute it and back-flush the filters. It is still made from hexane-extracted white flakes.

Almost all isolates are spray dried; this reduces their dispersibility. To solve the problem, the powder is agglomerated by spraying it with a fine mist of water. It is still a free-flowing powder but now more expensive. Ideally you want an isolate that will “fall in,” meaning it will disperse in water by itself, without stirring, when it is placed on the surface.

Clyde has spent much of the past year evaluating and developing soy protein isolates for food ingredient use. Supro 661 is still the best-selling isolate to the health and natural foods industries. Sand is very dispersible in water but not at all soluble.

Isolates have 3 main problems. 1. Flavor. 2. Those with a bland flavor are quite viscous, so they are not very soluble. 3. Color; many are tan, and can only be made white by bleaching.

Solae and ADM are the two biggest makers of isolates and Solae is about 5 times as big as ADM. ADM’s branded

products have a hard time because they are part of a commodity company, which thinks only in terms of price; they have no concept of sales or customer service. They treat their isolates like a commodity, and always ask: At what price could we sell it? That is the wrong question, the wrong approach. Some people won’t buy it at any price. Customers of isolates need customer support and a product suited to their special needs.

A centipoise (pronounced SENT-uh-pwaz) is a unit of absolute or dynamic viscosity (1/100 of a poise) in the cgs system. Water is 7-10 centipoise. Slimfast in liquid is about 100 centipoise. The approximate viscosity, in centipoise, of various substances at room temperature is: Water 1, olive oil 100, Slimfast in liquid 100, a thin milk shake 700, motor oil 100–2000, honey 2000–10,000, molasses 5,000–10,000, Heinz ketchup 50,000–70,000, peanut butter 250,000. Address: Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

2014. Messina, Mark J. 2005. Update on research on the health benefits and risks of soy (Interview). *SoyaScan Notes*. Sept. 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** A health food company is being sued by a cardiologist and his wife, a Boston, Massachusetts, socialite, because their daughter, who consumed soy infant formula, is now 10 years old, overweight, and shorter than the average height of girls her weight.

Sally Squires wrote an article in the *Los Angeles Times* and ended up quoting Kayla Daniels and Mark.

For people with questions about the health benefits of soy, SANA has a superficial “soy primer.”

Mark and Ginny have now decided not to update their book *The Simple Soybean and Your Health*. Mark is too busy.

There is a new “4th tier” journal titled *Explore: The Journal of Science and Healing*. Parts of it are peer reviewed. They will have a department titled “Point-Counter Point” in which both sides of controversial issues will be debated; it is not clear whether or not this department will be peer reviewed. Kaayla Daniel (who has never published anything in the peer-reviewed literature and has a “phony PhD”) will present one side and Mark will present the other. Yet to do a careful analysis of each of the issues takes much more space than the journal is willing to allow.

A huge new report by NIH on the health benefits of soy has just been published. It concluded no significant benefits.

The 6th International Symposium on the Role of Soy in Preventing and Treating Chronic Disease will be held in Chicago, Illinois, this fall. Mark is again the organizer. Attendance is way down, so it might be the last one. So far only 74 full registrants, 6 students, and 6 complementaries are registered. Sept. 30 is the date after which the cost of admission rises. This compares with 394 attendees in 1995, 496 in 1997, 600 in 1999 (the peak year), 260 in 2001 and

220 in 2003. Why the decline: This is now a mature field. Huge numbers of studies on the health benefits of soy have been conducted and the benefits are just not that impressive. If there is another conference, it will be smaller, shorter, and more focused on hot topics such as soy and cancer. Mark has had to raise about \$100,000 for each of the past conferences.

If consumers lose interest in soy, research, retail sales, advertising, and articles in magazines and newspapers will decline. In America, nutrition comes and goes like fashions; what is “in” this year may be “out” a few years later. White Wave has everything riding on the short term outcome of these developments.

Mark thinks we need a million dollar pro-soy campaign and a solid retrospective study (which would cost only \$300,000 to \$400,000 dollars) to address fertility concerns. A researcher could go to fertility clinics and ask the clients and their living parents which ones consumed soy-based infant formula. Many of the animal studies are very old—the 1946 study on Australian sheep and the later one on cheetahs in a U.S. zoo.

A hot topic now is potential risks and safety concerns of soy, especially for infants, but also fertility concerns for adults. Significant questions are being raised that soy isoflavones could raise hormonal effects. Kayla Daniels is completely irresponsible in the kinds of statements she makes. She says there are “hundreds of studies” in areas where there may be only ten, and where only one is conclusive.

Bunge did a very careful analysis of how much soy protein the average American consumes for all different sources, including breads, soups, etc. They concluded it was 2.2 gm of soy protein per person per day; that would include 1-2 mg of soy isoflavones.

ADM is turning its interest to lignans in flaxseed.  
Address: PhD, 439 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2015. Foster, Mike. 2005. Quincy Soybean Co. and Moorman Manufacturing Co. (Interview). *SoyaScan Notes*. Sept. 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The great Mississippi River flood during July 1993 did not hurt Quincy Soybean Co. The levee at Quincy (which is a “500-year levee”) was one of the few that held, so that company was not flooded. The levee across from Quincy on the Missouri side broke and the bottomland / floodplain was flooded over many square miles. The company may have shut down the processing for 1-2 weeks but nobody was laid off. They simply had to re-route their shipments of soybean products by truck since barges could not travel on the Mississippi. The city of Quincy sits on a bluff 100-150 feet above the river, but the soybean company, now located south of Quincy, is very near the river.

In 1998 ADM purchased Moorman Manufacturing Co.,

the umbrella company which owned Quincy Soybean Co. No single event or problem triggered this transaction, and it is not clear who approached whom. ADM and Moorman had done business for many years; Moorman’s feed company bought soybean meal from ADM to use in their feeds. It was well known for years that ADM wanted the Quincy Soybean Co. to add to its growing network of soybean plants in the Midwest.

Moorman Manufacturing Co. was a closely held corporation with a very interesting history. The company was made up of 3 divisions: MoorMan’s (the feed business), AgriSales (the edible bean business), and Quincy Soybean. There was no liquidity or market for the stock; it was not bought or sold. For many years, Moorman paid a very high dividend. So here was a company that needed to grow and had a large appetite for capital. “When Moorman Manufacturing Co. looked to sell to somebody, ADM made the most sense, because they could buy the whole company—lock, stock, and barrel, and because ADM paid a significant premium over the book value of the shares. There was an excellent fit between the two companies. It was a friendly and mutually beneficial transaction, which took the form of a tax-free stock exchange. Moorman’s shareholders were no longer members of the Moorman family; the last of them, Mrs. Moorman, had died in the late 1960s or early 1970s. The shares had long since been dispersed; by 1998 the Moorman Profit Sharing Fund owned about one-third of the company.

The Moorman family and some of the later executives at Moorman’s were very paternalistic. As shares became available, they would throw them in the profit sharing fund. They were extremely good to their workers; there was never a hint of a union. Some guys who worked for Moorman’s as a laborer, filling feed bags and throwing them on a pallet for their entire lives, would retire with \$400,000 to \$500,000 from the Profit Sharing Fund. “The loyalty of some of the old Moorman employees was unbelievable. During the Great Depression, when many businesses were in trouble, the Moorman brothers explained to the employees that cash was tight and they were in trouble, than asked each one, ‘How much money per week do you need to live on?’ They paid each worker that amount, but they also kept track of how much they had given up from each. Later on, when business improved, they paid the workers back all of the money withheld, plus interest, then they established an annual bonus. People who went through that would have walked through fire for the Moorman brothers. The same sense of loyalty extended to Quincy Soybean.”

Mike has been very lucky. Quincy is his home town. He started with Moorman’s in the feed business in 1971 as his first job out of college. He worked there for 18-19 years before he went to Quincy Soybean. Mike returned to Moorman’s in 1994, then stayed on after ADM acquired the company in 1998 and ran the feed business as its president.

He retired in Dec. 2004. Mike worked for Moorman's his entire life. Like others, he was a beneficiary of the company's profit sharing plan and generosity. The Moorman Manufacturing Co. was very private, and not much is known or has been written about it. There may be a history of the company in the Quincy Public Library. The Moorman's had nothing to do with the Mormon church. However in 1940 E.V. Moorman ran for Vice president of the United States on the Prohibition Party's slate.

Moorman started in 1885 in Big Spring, Kentucky, as a "hog tonic" business, run by a father (T.A. "Tom" Moorman) and his two sons (C.A. Moorman and E.V. Moorman). Initially they raised hogs. "As the story goes, their hogs were sick, they wrote to the USDA describing the symptoms, and asked what they should do. The USDA suggested some mineral supplements. The Moormans obtained the minerals, ground them in a coffee grinder, fed them to their hogs and—gosh—the hogs did very well. The neighbors said, gee, can we have some of that? The next thing you know, the Moormans are grinding minerals, putting it into gunny sacks, putting it on a wagon and delivering it around the country." The business grew from feed supplements to livestock feeds, and they expanded into other species and new product lines. They grew that business until they had about 5,000 employees. In 1900 they moved from Big Spring, Kentucky, to Gorin, Missouri, following livestock populations. In 1910 they ended up in Quincy, because of its proximity to the river and other forms of transportation. In Sept. 1961 Moorman Manufacturing Co. purchased Quincy Soybean Products from Irving Rosen.

After ADM bought Moorman, they kept all of its divisions; they merged Moorman's nationwide feed business with theirs, and continued to operate the edible bean business—basically exporting beans such as pinto beans. ConAgra and AgriSales, depending on what day it was, were No. 1 and No. 2 in the edible bean business. ADM's huge plant at Quincy continues to thrive and be very productive. "It's one of ADM's premier plants."

ADM shut down the plant in Helena, Arkansas, as part of a program to rationalize capacity as new competitors were coming into the soybean crushing industry; they shut down 2-3 plants at about that time. The plant is still standing at Helena, unused. Mike doubts that ADM would have been willing to sell it; they want neither that extra capacity nor that competition. "In a commodity world, it's all about supply and demand." Address: Past President, Quincy Soybean Co., Quincy, Illinois.

2016. Jackson, Harry. 2005. Recollections of Irving Rosen and Quincy Soybean Products Co. Part II (Interview). *SoyaScan Notes*. Sept. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: What kind of a man was Irving? Hal recalls: "He was a wonderful man, a sweet, kind, quiet guy

who worked very hard. He came from a very poor family on the west side of Chicago. I hear he had only 5th grade education. He arrived at work early each day, was a hands-on guy, low key with a low voice, never put on a show about anything, not obtrusive at all, intelligent. He wasn't the kind who would put it in the newspaper every time they started up something; he sort of kept things quiet. He didn't want to be in the news. Like the other Sinaikos, he was a self-made man. He joined the local clubs in Quincy because our people were not well accepted in those days—the good old establishment. He had a hell of a time getting the funds to build the original plant. No bankers would loan him money—except for one man at the State Street Bank, which is why I go there still. He joined the Rotary Club and all that sort of thing but he was still an unknown. He was one of the first people in Quincy to hire black people at his plant.

"Alex Sinaiko, Joe's father, was the big guy in the family; he and his sons were in the grain business in Madison, Wisconsin. The Sinaiko brothers shared people as well as information. Joe had some very fine people who came in and installed equipment. One man was Louis Langhurst, a wonderful man who designed flaking mills and knew a lot about soybean plants. They don't make 'em like that any more." Another guy was Howard Devine from Iowa. He sold the Devinator, a conveyor that had metal plates that moved the flakes into the extractor, and also brought the extracted flakes out of the desolventizer—without mashing the flakes or creating any sparks. Devine's product was similar to that of Linkbelt. Another excellent equipment supplier was Les Mauer from St. Louis, Missouri; he sold conveyors and helped do plant layout; he would climb all over the equipment and the plant, and he knew how everything worked. "We had wonderful people that we worked with—many of them little guys who Joe Sinaiko helped to get started."

How did Irving make money in those early days of soybean processing? Crushing margins, set by the government, were good during World War II. So they made good money during the war. "They got in the right business ahead of time."

The Moorman company, which was headquartered in Quincy, bought soybean meal for the livestock feed business from Irving. Then they decided to expand into the soybean processing business. Irving felt that the time was right for him to retire. So Irving sold his company to them in Sept. 1961 when he was about age 60 and in good health; Hal stayed on until 31 Dec. 1980. Marcella, Irving's wife, had died on 8 March 1958 in Quincy (of a brain tumor), even though Irving, a very loving husband, had done everything he could to save her. Shortly after her death, he moved to Chicago, gave much more responsibility for Quincy Soybean to other people, and visited from time to time. After about 2 years he met a widow named Ida; they were married and continued to live in Chicago. He and Ida vacationed in

Miami Beach, Florida, and Hal thinks he contracted hepatitis B there. This turned into liver cancer. He went to the Mayo Clinic in Minneapolis, Minnesota, for treatment. It was important to Irving that, in his will, the money he made from the sale of his business be distributed equally among his four children. Irving died on 18 April 1964 at the Mayo Clinic in Rochester, Minnesota, of liver cancer.

The Moormans ran the company in a totally different way than Irving had. Hal recalls that they were Christian evangelists; he was the only Jewish guy that ever worked there. Some of the old-timers were very anti-Semitic. "I wasn't that comfortable." Mr. Hulsen, later the president, was very good to Hal. Moorman brought in an outsider from Canada, who made millions for arranging the sale of the company to ADM, then left the company. After ADM bought the company in 1998, they put up ADM stock for the profit-sharing plans. But when the ADM stock dropped from 24 to 12, the Moorman retirees who had profit-sharing and pension plans lost about half their money. This was very upsetting to all the old-timers who had been there for 30-40 years. Some of them had hundreds of thousands of dollars in these profit-sharing plans.

At Quincy Soybean, Hal worked for Ted Bean, who came to Quincy from Lauhoff Grain in Danville, Illinois. "Ted was one of the most astute marketing men I ever met." He kept us out of the soy protein ingredients. business. Things were done very efficiently and people worked very hard, so that Quincy made more money than Moorman's other divisions. Quincy had a very efficient plant and excellent marketing—from Ted Bean. Joe taught his friends how to save money by buying used equipment; Hal traveled all over the world buying used equipment—and a lot of it was just as good or better than new. Every year Quincy increased its volume to gain efficiency. When Hal retired on 31 Dec. 1980, Quincy was the single largest soybean processing plant on one site in the United States. They had solvent extraction plants on both sides of the railroad tracks. The oil refinery is still there.

Quincy used a very unusual process to remove the hulls from soybean meal to make 50-51% protein meal. Starting in about the mid-1960s, they removed the hulls at the tail end of the process using gravity separation vibrating tables named "Sutton tables." Tail-end dehulling cost much less than the other technology which dehulled at the front end. There were 5-6 Sutton tables in the Quincy plant; they were shaped somewhat like a sloping triangle with air coming up from underneath. The heavy material came off the at top and the light fluffy stuff (like the soybean hulls) came off at the bottom. Quincy was one of the few plants in the industry that used Sutton tables; the plant never used expensive front-end dehulling. Louis Langhurst started his own company that made excellent low cost cracking mills and flaking mills.

Ike Sinaiko started a small oilseed crushing company (using expellers) in California. He definitely crushed

soybeans; Hal went there and saw them being crushed. Ike was a very sweet guy. Irving Field, Ike's son in law, took over the company from Ike. Note: Liberty Vegetable Oil Co. in Norwalk, California, started in 1948.

Hal remembers Joe Sinaiko as "tough and smart. He was all business. He was the brains, but he didn't lollygag around [fool around]. He knew what he wanted to do and he knew how he wanted to do it. He was the lead guy and he had a lot of weight on his shoulders. It's not easy to be a pioneer."

Hal offers to help Soyfoods Center do research on the early history of Quincy Soybean Co. He has called the French Oil Mill Machinery Co. (Piqua, Ohio) and they have offered to look in their archives for the date that Quincy Soybean ordered their equipment. He will also work with the local newspaper and historical society.

Note: In Nov. 2005 Hal sent Soyfoods Center a wealth of valuable documents on the history of Quincy Soybean. Adrienne Rosen, wife of Norman Rosen (Irving's son, who now has Alzheimer's), sent many early and very interesting photographs. Address: Quincy, Illinois.

2017. Soyatech, Inc. 2005. Soya & Oilseed Bluebook 2006: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 416 p. Sept. Comprehensive index. Brand name index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** On the cover is color photo of two cupped hands holding a very small soybean plant rooted in soil—against a greenish black background. On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa) titled "Always unique, always innovative, always natural." Color photos show ready to eat products made with Scotsman's Mill whole egg extender, egg white extender, and enzyme active low fat soy flour, plus roasted soy grits, bakery ingredients, and soymilk powders. On the first page is a full page color ad from Bunge North America (St. Louis, Missouri) titled "The shortest distance from harvest to market." On the back cover is a full page color ADM ad ADM showing a Chinese teenager eating tofu from a plate, using chopsticks. The text is the same as that of one of ADM's current TV ads: "Somewhere west of Shenyang, a teenager is stopping for dinner... A dinner rich in soy protein. As one of the world's largest soy processors, we like the idea that there will be no stopping him now."

On the title page of the book is a bright green self-adhesive label containing "Your access code," which expires in a year.

In the Foreword, Peter Golbitz of Soyatech compares the world of today with that of 1947, when the *Soybean Bluebook* was first published. The year 1947 marked a dramatic turning point; "it was the last year that China led the world in soybean production... The U.S. produced 183.6 million bushels (5 million metric tons) [of soybeans] that year, around 34% of the world's total. And the price for a

bushel of U.S. soybeans averaged \$3.34.” In 1948, the U.S. passed China to become the world’s leading producer of soybeans. Today, it looks like Brazil will soon pass the USA as the world’s largest producer of soybeans. Note: In 2005/06 the U.S. produced 78.789 million metric tons of soybeans, followed by Brazil which produced 62.000 million. Address: 1369 State Hwy 102, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

2018. Barrett, Walter. 2005. Work with soybeans in Central Asia (Interview). *SoyaScan Notes*. Oct. 4 and 6. Conducted by William Shurtleff of Soyfoods Center. Preceded by letter (e-mail) of Oct. 3.

• **Summary:** Walter has worked with soybeans in 4 Central Asian nations: Kazakhstan, Uzbekistan, Turkmenistan, and Tajikistan. Kazakhstan and Georgia have the most history with commercial soybean production, because Soviet planners made it happen there. They designated other Central Asian countries for cotton production, in part because cotton needs less water. Latitude is part of the reason. The climate is also very dry, so that all soybeans (and almost all crops) in these countries must be irrigated, but with river water carried by gravity. Of all the Central Asian countries, Kazakhstan has been the most successful at understanding a market economy and making it work.

Walter has many contacts in these countries. He is willing to help Shurtleff try to get a better history of soybeans in each of these countries. First, Shurtleff will send Walter an e-mail containing a table showing the dates he has for the earliest document seen showing soybeans in each in each country, and soybean cultivation in each country. Then the earliest date seen for soybean cultivation in each country. Walter will forward this e-mail to an intermediary (Winrock International or Mercy Corps), who will then mail or phone or hand deliver the message to the network of indigenous researchers Walter has developed over the years. The message will encourage them to contact other researchers who might be interested; then Walter will wait for replies.

Walter believes that Korean communities in at least four of these countries (Turkmenistan, Uzbekistan, southern Kazakhstan, and Tajikistan) were growing soybeans for their own use at an early date—probably since the early 1900s and using them almost entirely for food—such as tofu, soy sprouts, Korean-style miso and soy sauce, green vegetable soybeans, etc. The Koreans raise chickens, for example, but they forage for food and are not fed soybeans. Walter has no idea when, or, why, or how these many Korean communities came to be established in Central Asia. He has no idea where the soybean varieties they grow came from. These Korean communities are all found within a horizontal oval that cuts across national boundaries, and includes the cities of Almaty [Alma-Ata] (in southwest Kazakhstan), Tashkent [Tashkent] (capital of Kyrgyzstan), Dushanbe (capital of Tajikistan), and Ashgabat (capital of Turkmenistan). In this area are

numerous Korean restaurants where Walter has eaten; but he has no idea how many Koreans live in this area. Most individual Korean communities grew only one variety, but each Korean community had its own variety. By contrast, there are not many Chinese communities in these areas.

Walter expects his next trip to Central Asia to be in the spring of 2006—probably Uzbekistan and possibly Turkmenistan or Tajikistan. He is given drivers and interpreters by the NGO sponsoring his trip. One of the ongoing problems he faces is the limited abilities of interpreters; communication is often difficult, and it is hard to pursue agricultural or academic questions with farmers. It is less difficult with educated researchers or academicians (best is Tajikistan, followed by Turkmenistan—who might help find others). The researchers in these countries don’t talk much with each other, either within a country or among countries. They have few opportunities to travel, and little access to the Internet or e-mail. This is because of government restrictions, difficulty of getting visas or money, etc. Researchers are lucky if they have a working computer, but most have a telephone and some have a cell-phone.

Of all Central Asian countries, Kazakhstan is the one in which the soybean is the most important as a commercial crop—by far. They probably have at least several thousand hectares planted to soybeans. The soybeans in Kazakhstan are run through an extruder (extrusion cooker) to make soybean oil and meal. These same extruders are also used to process cottonseed. Soybeans are grown in Central Asia largely because of the demand for meal by the local poultry industry for use in chicken feeds. Poultry is the driving force, and Central Asia is a “protein-poor” region. Walter’s main reason for being there is because of poultry and (to a lesser extent) livestock; it is to help educate them about the soybean, its value for producing soybean meal and oil, and about the importance of protein. He helps farmers to grow soybeans and to develop markets for their beans. Actually, there is a ready-made market from poultry growers—who now have to pay a lot of freight to import their soybeans from Kazakhstan, Iran, Turkey, or India. The key is for Walter to serve as the bridge—to help bring the poultry growers and the potential soybean farmers together, to discover that they have a common interest, and then to work out agreements.

NGOs do lots of impact studies; they want their volunteers to work on projects that will have economic impact. They believe that increasing poultry production will have a positive impact on the economy and the people. The oil is also appreciated, and refined using modern technology within each country for use as a high-quality edible oil, sold in bottles at retail stores. Kazakhstan is about one-half the size of the United States, and is quite a progressive country with a market economy, fairly advanced education and technology. Soybeans are grown mostly in the very south. They were a major crop during Soviet times (Russia was a major market for the oil and meal), but after Kazakhstan

became independent in 1990, soybean production fell off to near zero. The economies of Central Asian countries plunged at about the same time (1989-91). They are now slowly getting back to where they once were.

The second most important country for soybeans (a very distant second, with maybe 300-500 hectares planted to soybeans) is the Republic of Georgia, where the western half is quite moist and the eastern half is very dry. They have a long history of growing soybeans. Walter knows of one company there that is processing soybeans using an extrusion cooker (similar to that made by Insta-Pro).

In third place might be Uzbekistan, followed by Turkmenistan, and Tajikistan—but all with only about several hundred hectares in soybeans.

Walter believes that soybeans could become a valuable double crop in Central Asia, planted after the wheat harvest in June. That would earn farmers more income, improve the soil, and break various insect and disease cycles. They need a legume in the rotation. The government does not help. They seem interested only in short term profit, keeping the status quo, and staying in power, not in innovation or long-term thinking.

In Tajikistan, he met a village farmer, Mr. Mahmaddullo, who had the ability to build machines. He already had a small business making wheat flour using two motor-powered millstones. He worked with Walter to build a revolving soybean drum roaster; the outside was heated by natural-gas flames. After roasting a batch of about 20-25 kg of soybeans, he ground them into roasted soy flour.

In Turkmenistan, Dr. Ashraf spent quite a bit of time working with a Korean community in the town of Dashoguz in making tofu. She also worked a lot with Peace Corps Volunteers (PCVs) in that same town; one of the PCVs was a Korean-American. Walter has not heard of any TVP being made in Central Asia; if its is made, it must be in very small quantity. In Uzbekistan, technologically the most developed, soybeans are being grown—often spread by volunteers. Address: 2804 Trent Drive, Fort Wayne, Indiana 46815. Phone: 260-484-7493.

2019. Archer Daniels Midland Co. 2005. Annual report. P.O. Box 1470, Decatur, IL 62525. 62 p. Oct. 28 cm.

• **Summary:** Net sales and other operating income for 2005 (year ended June 30) were \$33,943.8 million, down 2.0% from 2004. Net earnings for 2004 were \$1,044.4 million, up 211% (more than double) from 2004 and an all-time record. Shareholders' equity (net worth) is \$8,433 million, up 9.5% from 2004. Net earnings per common share (basic): \$1.60, up 210.5% from 2004.

The theme of this report is “intellectual capital.” ADM's record earnings of \$1 billion “reflect the application of our intellectual capital to the management of our network of global assets... The foundation of our business is agricultural processing.”

“Net earnings for fiscal 2005 increased principally due to the absence of last year's fructose litigation expense of \$400 million...” (p. 24). Two graphs (p. 24-25) give analyses by segment in 2005. Oilseeds processing had the highest net sales (\$11,803 million) and the highest operating profit (\$345 million). On pages 56-57 is ten year summary (a table, 1996-2005) of operating, financial and other data. Sales have more than doubled. Total assets are up 78%. Number of employees is up 80%. A photo (p. 2) shows G. Allen Andreas, chairman and chief executive.

Accompanying the annual report is a “Notice of Annual Meeting.” G. Allen Andreas, age 60, Chairman of the Board and CEO, had a 2004 salary of \$2,960,005 plus \$105,907 other annual compensation. Address: Decatur, Illinois.

2020. Bullard, Everett; Summers, David. 2005. History of the soybean crushing plant at Cameron, South Carolina (Interview). *SoyaScan Notes*. Nov. 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** David recalls that in about 1956-1957, when he was age 16, he and his girlfriend were given a ride up in the elevator to the top of about 12 connected towering concrete storage bins at Cameron; they could see for many miles in every direction. He is sure there was no soybean processing plant there at the time; only the storage tanks—used to store soybeans and many other grains such as oats, wheat, etc. The property was owned by Mr. Harper and Mr. Bowers, owners of Southern Soya Corp. in Estill, South Carolina.

Everett had a long background in soybean processing before he arrived in Cameron, South Carolina. In 1947 he started at Wilson, Arkansas, with Lee Wilson & Co., Soybean Division (subsidiary of Lee Wilson & Co.); it was a solvent extraction plant. In 1948 he was at Osceola, Arkansas with Osceola Products Co. (a hexane solvent plant, which was in operation when he arrived). In 1958 he was present in Selma, North Carolina, where he helped to build and start the Selma Soybean Corp. He was plant superintendent at the time he moved to Cameron. He arrived in Cameron in Aug. 1965 and went to work at the Southern Soya Corp. of Cameron, of which Stiles M. Harper was president. The solvent plant at Cameron had started operation in about 1963. Cameron, located in the center of South Carolina, was not a very good site for a soybean processing plant; since it was not near any river or ocean, the soybeans had to be brought in and the oil and meal taken out by rail or truck—which was quite expensive.

In about Aug. 1972 there was a hexane solvent explosion at the plant; Everett was plant manager at the time. He lived about a mile out of town and he heard the explosion from his home at about midnight. An article about the explosion was probably published in a local newspaper, *Orangeburg Times and Democrat* or the *Calhoun Times*. He called two local fire departments but they couldn't get through the chain link fence around the plant. Everett was extremely worried.

If the fire reached the hexane in the bottom of the Rotocel extractor, it could cause a huge explosion and widespread damage. So he called Shaw Air Force Base near the town of Sumpter and they sent a big fire truck carrying foam. The truck backed over the chain link fence, then quickly smothered the fire with its foam. “They saved the day—and the town—recalls Everett.”

David recalls that the hexane gas explosion was in early Aug. 1972. A man named Mr. Ed Polin [Charles Edward Polin, age 53] died from the explosion, about 10-14 days later, after being treated for several days in a burn center—probably at Augusta or Columbia. A black workman, named Bubba, picked him up, carried him to a place with water, and tried to help him. Mr. Polin’s son says that he was buried on Aug. 28 or 29 [sic, Polin died on Aug. 29].

Southern Soya rebuilt the plant promptly and enlarged it.

Continental Grain Co. purchased the mill at Cameron from Harper and Bowers in about 1973. Initially Continental had its own letterhead on the stationery for the Cameron plant. Then they were notified to change the letterhead from “Continental Grain Co.” to “Allied Mills.” But after less than a year they were told to change it back to “Continental Grain Co.” He never understood what that was all about. Initially he traveled to Continental’s head office high in a sky scraper in New York City (He recalls couches made of unborn calf leather, and staying the night at the Waldorf Astoria), then later to Chicago [Illinois], then still later back to New York. “Continental was always very secretive—even with the people who ran their own plants! They always had to have their man, out of their main office, down here at Cameron as “manager.” One was a young man named Gene Gawthorp, and he knew almost nothing about running a soybean processing plant.” Everett, who actually ran the plant, was called “production manager.” Few Whites were willing to work in a soybean plant in South; the dust was terrible, the soybeans smelled awful when wet, and the work was hazardous.

Everett continued working at the Cameron plant until 1983, when he retired. He thinks Continental sold the plant (located at Highway 33 & Cemetery Rd.) to ADM in late 1987. ADM, which operated a plant in Kershaw, South Carolina, never operated their plant in Cameron; Everett thinks they bought it in order to shut it down and thus to get rid of excess processing capacity in South Carolina. Also, he thinks anti-trust law prevented them from operating it. ADM shipped out the machinery they needed at other plants, but they continued to use the concrete storage bins for storing soybeans and other grains. ADM cut up the steel storage tanks and sold them as scrap.

David recalls that in about Dec. 2000, ADM asked David if he wanted to buy the land—before the year’s end. He did and now he owns it. The concrete bins are presently used to store peanuts.

David also recalls that shortly after the soybean plant

began operating, his 35 acres of pecan trees stopped bearing fruit; he never understood why, until the 1980s, when ADM shut down the plant. The next year they started producing pecans again. He now believes that the dust from the soybean plant got on the little sticky part of the flower and prevented the pecan pollen from adhering to it, and thus prevented the pecans from pollinating. Address: South Carolina.

2021. Lamp, Greg. comp. 2005. News: ADM builds new biodiesel plant. *Corn and Soybean Digest*. Nov. p. 10.

• **Summary:** ADM, the leading U.S. ethanol maker, plans to construct its first wholly owned biodiesel manufacturing plant in America. The facility, with a capacity of 50 million gallons, will be built in Velva, North Dakota, near the existing ADM crushing facility there, and will use canola oil (not soy oil) as its primary feedstock. Address: Editor.

2022. Messina, Mark J. 2005. Update on the 6th international symposium and on research on the health benefits and risks of soy (Interview). *SoyaScan Notes*. Dec. 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mark is age 53. The 6th International Scientific Symposium on the Role of Soy in Preventing and Treating Chronic Disease was held in Chicago, Illinois, from 29 Oct. to 2 Nov. 2005. About 225 people attended, of whom 115-20 paid in full and another 15-20 paid in part. They have decided not to publish the proceedings in a professional journal. Mark feels that this was one of the best symposia ever. It was divided into 3 parts. (1) A Soy and Development Workshop, before the symposium, and open to the public. It was mostly about soy formula fed to infants, and its safety. Kaayla Daniel was at all the meetings and tried to get in for free on a media pass; Mark was upset. Daniel Sheehan was also there. The proceedings will be published on the Web. Solait sells almost all of the isolate used in soy infant formulas. (2) The basic symposium. (3) A post symposium meeting on soy and breast cancer. John Millner at the National Cancer Institute is thinking of doing a study on this subject to see if soy is beneficial, neutral, or harmful. It could cost about \$4.9 million.

The most important paper, a breakthrough in Mark’s opinion, is about the effects of supplements on hot flashes. ADM will use this to promote their isoflavones for hot flashes.

Steve Demos was given an award at the conference; he gave a heartfelt and very elegant reply.

The 7th international soy symposium will be held in Bangkok, Thailand from 7-9 March 2007—in conjunction with the 5th Southeast Asia Soyfood Seminar & Trade Show. Part of the reason for the choice of Thailand is a remarkable lady named Teeranard Chokwatana, who was present at the 6th symposium. She and her husband run a superb soyfoods company there named Nutrition House Company, Ltd. ([www.nutritionhouse.co.th](http://www.nutritionhouse.co.th)). Starting operations in 1991 with

a vegetarian restaurant, they have 5 vegetarian restaurants and a line of vegetarian meat-alternative products. They have a royal pedigree and are very wealthy—and very nice and widely admired.

Dr. James Anderson has done another meta-analysis showing that baking soy protein isolates significantly reduces their cholesterol-lowering ability. Address: PhD, 439 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2023. Bennett, Beverly Lynn; Sammartano, Ray. 2005. *The complete idiot's guide to vegan living*. New York, NY: Alpha. 360 p.

• **Summary:** “It’s not a diet—it’s a lifestyle.” The vegan lifestyle means compassion for all living things. It means eliminating animal foods and animal products from one’s diet. True vegans avoid the use of honey, and don’t wear animal skin (leather, suede) or fur. Many avoid silk, made by suffocating silkworms inside their cocoons.

Contents: Part 1: Compassion for all. 1. Why be vegan? 2. Vegan 101 (incl. famous vegetarians and vegans, the Vegetarian Society of the UK, the Vegan Society emerges, Donald Watson, coming to America—Dr. Catherine Nimmo and Rubin Abramowitz, Jay Dinshah, ahimsa). 3. Key to good health. 4. Starting your vegan transition. Part 2: Clearing up misconceptions. 5. But you need meat for protein. 6. But you need dairy for calcium. 7. But carbohydrates make you fat. 8. Vegans are all weak and sickly.

Part 3: A vegan survival guide. 9. Nourishing yourself. 10. Seeking supplementation. 11. Raw foodists: Raw and uncut. 12. Oh baby! Bringing up baby. Part 4: Veggin’ it; Tips for maintaining a vegan lifestyle. 13. Handling family and friends. 14. Dining, vegan style. 15. Supporting your ideals. 16. Buying your vegan eats.

Part 5: Substitution is the mother of invention. 17. Using protein alternatives (incl. Demystifying soy products: soy sauce, the incredible tofu, tempting with tempeh, playing tricks with TVP). 18. Doing without dairy and cheese. 19. Vegan baking substitutions. Part 6: Vegan food for the soul. 20. Breakfast ideas. 21. Lunch and lighter fare. 22. Main and side dishes. 23. Baked goods and desserts.

Part 7: Vegan lifestyle choices. 24. Body care and personal items. 25. Dressing to impress. 26. Other things to consider. Appendixes: Glossary, resources.

The index contains 17 entries for tofu, 16 for soybeans, 7 for tempeh, 3 for seitan, 2 for TVP, and 1 each for edamame, nondairy milk substitutes, shoyu, soy milk, tahini, tamari, and tofurky.

“This book offers a vegan food pyramid, fifty vegan recipes, tips on finding animal-free products and hints for reading ingredient lists and other labels to find ‘hidden’ animal ingredients or byproducts” (publisher’s statement). Address: 1. Vegan chef and author, Eugene, Oregon; 2.

Musician, web developer, and Beverly’s life partner.

2024. Fischer, Juergen. 2005. *Biodiesel quality management: The AGQM story*. In: G. Knothe, J. Van Gerpen and J. Krahl, eds. 2005. *The Biodiesel Handbook*. Champaign, Illinois: AOCS Press. ix + 302 p. See p. 204-10.

• **Summary:** Contents: Introduction: Standardization, quality management and quality control, quality surveys, fuel additives, research and development. Summary.

AGQM is an abbreviation for ArbeitsGemeinschaft Qualitaets Management Biodiesel. e.V., the Association for the Quality Management of Biodiesel, which was founded in Dec. 1999. What is the need for such an organization? The German biodiesel market differs from that of other countries, where biodiesel is generally sold as a blend with petrodiesel in varying concentrations. “Germany is the only country in which biodiesel is sold as a pure fuel, available a public filling stations and with a growing market share.” The largest plants now have a capacity of 150,000 metric tons per year, yet there are also many small plants, but the quality must meet exacting standards so that it does not damage diesel engines. Fig. 1 (p. 204) shows the German biodiesel market, where both sales and production began to take off in about 1999-2000. Address: ADM / Oelmuehle Hamburg, Hamburg, Germany.

2025. Moskowitz, Isa Chandra. 2005. *Vegan with a vengeance: Over 150 delicious, cheap, animal-free recipes that rock*. New York, NY: Marlowe & Co. 258 p. Illust. (color photos). Index. 23 x 18 cm.

• **Summary:** The praise for this innovative book is almost as interesting to read as the book itself. The book is great fun to read—a really fine writer. The index contains 1 entry for edamame (in samosas with coconut-mint chutney), 1 entry for miso (Stewed tofu and potatoes in miso gravy), 6 entries for seitan (incl. homemade), 8 entries for tempeh, 22 entries for firm tofu and 7 for silken tofu, and 3 entries for textured vegetable protein (TVP).

The section titled “Get rid of eggs—Veganize it!” (p. 195-97) begins: “Replacing eggs is the most challenging aspect of vegan baking. Those suckers bind, they leaven, and they give structure to our baked goods. However, like a bad boyfriend, they can be replaced, and with pleasing results.” The first replacer discussed is flaxseeds. Second is silken tofu. “How to use it. ¼ cup blended silken tofu = 1 egg. Whiz in a blender until completely smooth and creamy, leaving no graininess or chunks. You will want to add other wet ingredients, to this mixture to get it to blend properly. I recommend... extra-firm silken tofu, such as Mori-Nu.” Another egg replacer is soy yogurt. ¼ cup soy yogurt = 1 egg. “Soy yogurt works a lot like whizzed tofu as an egg replacer. It makes things moist and yummy.”

She uses the creative word “sammiches” instead of “sandwiches.” Address: Co-host of The Post Punk Kitchen,

New York City.

2026. ADM. 2006. ADM to process Monsanto's Vistive™ low linolenic soybeans at Indiana facility: agreement expands growing area for soybeans, which provide a trans fat solution to the food industry (News release). St. Louis, Missouri. 2 p. Jan. 12.

• **Summary:** St. Louis, January 12, 2006—Monsanto and Archer Daniels Midland Company (ADM) announced today that ADM will process Monsanto's VISTIVE™ low-linolenic soybeans in 2006 at its facility in Frankfort, Indiana, and will market the low-linolenic soybean oil for use by the food industry. VISTIVE low-linolenic soybeans will reduce the need for partial hydrogenation of soybean oil, helping food companies reduce the presence of trans fatty acids (trans fats) in their products.

“For the 2006 growing season, ADM will be contracting with growers in Indiana for up to 40,000 acres of VISTIVE soybean production. ADM will pay a premium to producers who grow VISTIVE soybeans under contract. Then it will crush and sell the processed soybean oil to food companies.

“VISTIVE soybeans, developed through conventional breeding, contain less than three percent linolenic acid as compared to the typical eight percent level found in traditional soybeans. The result is a more stable soybean oil, with less need for hydrogenation. Because soybeans with a lower linolenic acid level reduce the need for partial hydrogenation, their application in processed soybean oils will reduce the presence of trans fats in processed soybean oil.

“The development of VISTIVE is significant because, as of January 1, 2006, all food products and dietary supplements bearing a nutritional facts panel that are regulated by the U.S. Food and Drug Administration and sold in the United States are required to list trans fat content. Kellogg Company, for instance, recently announced that it will use oil from VISTIVE low-linolenic soybeans as part of a major initiative to reduce or eliminate trans fats in a number of its products.

“Low-linolenic soybean oil developed from VISTIVE soybeans will be a valuable addition to ADM's NovaLipid™ portfolio of zero/low trans fat products,” stated Tedd Kruse, ADM Vice President-North American Food Oils. ‘As the essential link between farmers and food manufacturers, ADM is pleased to work with American farmers to create additional value for their products while at the same time providing food manufacturers with healthier ingredients.’

“NovaLipid products are ADM's line of zero/low trans fat shortenings, margarines and oils. The NovaLipid portfolio includes naturally stable oils, tropical fats and oils, blended oils, and enzyme interesterified shortenings and margarines to provide alternatives in various food applications, including baking, confectionery, snack, frying and cereal products. The line was developed in 2003 in response to customer and

consumer demand for healthier fats and oils.

“We contracted all available VISTIVE soybeans in 2005, so we know that this product is in demand. We are very pleased to partner with an industry leader like ADM to ensure a successful expansion of VISTIVE soybeans in 2006,” said Ernesto Fajardo, Vice President of U.S. Crop Production for Monsanto. ‘VISTIVE not only supports growing consumer demand for healthier foods, but also represents an important investment in the future success of the U.S. soybean industry. In addition, this agreement expands the growing area for VISTIVE, giving more farmers the opportunity to grow this value-added soybean.’

“Monsanto expects that VISTIVE soybeans will be grown on nearly 500,000 acres in 2006. VISTIVE soybeans have the Roundup Ready® trait and maintain performance parity with other commercial soybean varieties. For 2006, VISTIVE will be available in Monsanto's Asgrow® brand, as well as Stiner, Prairie™ Brand Seed, Latham® Seed, Kruger™ Seed Company, CROPLAN Genetics®, FS HiSOY®, LG® Seeds, Producers Hybrids®, Midwest Seed Genetics®, Crow's® and NC+® seed brands.

“Specific information regarding grower opportunities and contract details will be available from ADM in the near future.

“Archer Daniels Midland Company (ADM) is a world leader in agricultural processing. ADM is one of the world's largest processors of soybeans, corn, wheat and cocoa. ADM is also a leader in the production of soy meal and oil, ethanol, corn sweeteners and flour. In addition, ADM produces value-added food and feed ingredients. Headquartered in Decatur, Illinois, ADM has over 25,000 employees, more than 250 processing plants and net sales for the fiscal year ended June 30, 2005 of \$35.9 billion. Additional information can be found on ADM's Web site at <http://www.admworld.com>.

“Monsanto Company is a leading global provider of technology-based solutions and agricultural products that improve farm productivity and food quality. For more information on Monsanto, see [www.monsanto.com](http://www.monsanto.com).”  
Address: St. Louis, Missouri.

2027. Global Industry Analysts, Inc. (GIA). 2006. Soy foods—Global strategic business report. 5645 Silver Creek Valley Rd., San Jose, California. 302 p. Jan. \*

• **Summary:** Publisher description: This report analyzes the worldwide markets for Soy Foods in millions of US\$. The specific product segments analyzed are Soy Ingredients, and Soy Oil. The report provides separate comprehensive analytics for the US, Canada, Japan, Europe, Asia-Pacific (excluding Japan), Latin America, and Rest of World. Annual forecasts are provided for each region for the period of 2000 through 2010. The report profiles 151 companies including many key and niche players worldwide such as Archer Daniels Midland Company, Dean Foods Company, White Wave, Eden Foods, Inc., Galaxy Nutritional Foods,

Inc., Gardenburger, General Mills, Glenn Foods, Greet Spot (Thailand), Griffith Laboratories (UK), H.J. Heinz Co. Hain Celestial Group, Hartz International (Australia), Hazlewood Grocery (UK), Heartland Fields (USA), Hermans Foods (Australia), High Mark Foods (New Zealand), Imagine Foods, Inc., Kerry Group PLC (Ireland), Kerry Ingredients (Australia), Kikkoman (Japan, Australia, USA, Singapore), Kimlan Foods Co. (Taiwan), Kuhne Nederland BV (Netherlands), SoyaWorld, Inc., Turtle Island Foods, Inc., and Vitasoy USA, Inc.

Price: Electronic or hard copy 3,496 euros. Please note: Reports are sold as single-site single-user licenses. The delivery time for hard copies is between 3-5 business days, as each hard copy is custom printed for the organization ordering it. Electronic versions require 24-48 hours as each copy is customized to the client with digital controls and custom watermarks. Address: San Jose, California. Phone: 408-528-9966.

**2028. Product Name:** Re: Ethnic Koreans growing soybeans in Tajikistan or Turkmenistan, and her work introducing soyfoods to these countries.

**Manufacturer's Address:** Letter (e-mail) to William Shurtleff at Soyfoods Center, Feb. 18.

**Date of Introduction:** 2006 February.

**New Product–Documentation:** In Tajikistan she met a couple who lived near Dushanbe. The husband, Victor, was planning to grow soybeans. She gave him some seed grade soybeans to grow, although she had the impression that he hadn't grown soybeans before. She sensed that he wanted to grow them because of increased interest in soybeans—for reasons she does not understand. She gave him the seeds that Walter Barrett had given her, because the soybeans she had found in Tajikistan were not of good quality.

Victor led her to a Korean tofu maker, a woman who didn't speak Korean. She supplied tofu to a Chinese restaurant in Dushanbe. She told Helen that she bought her soybeans from Uzbekistan, and said they were expensive. Helen did not ask the woman when she had started to make tofu commercially or what the name of her small business was. Helen does not recall exactly where it was located.

Vera, Victor's wife, sold Korean salads at a green bazaar in Dushanbe. She and other Korean salad vendors at the green markets sold a type of dish made from Chinese TVP, which is white in color and imported from China.

At an import supermarket called Holland Market in Dushanbe, Helen found several Russian-made TVP products and soymilk powder. She also saw soymilk sold in Tetra Pak cartons.

In Ashgabat, Turkmenistan, two Korean men came to talk with Helen at the Winrock office about a soymilk machine.

In the Dashoguz region of Turkmenistan, Helen met two different groups of Koreans (a least 30 people total) who

wanted to see her presentation and demonstration of soymilk and tofu production using a SoyJoy machine, along with a display of soy products such as tofu (in a Tetra Pak carton), TVP, soynuts, soy flour, soy protein isolates, energy bars, soy sauce, etc. In some presentations at farms or for women's groups (including the Korean groups), she also prepared soyfoods or Turkmen foods that included whole soybeans.

In Tajikistan, she gave 3 presentations / demonstrations: One at "Salsa Restaurant" in downtown Dushanbe, and two at a cafeteria and at the meat processing lab of the Khujand branch of the Technical College of Tajikistan. She usually ended her presentations with a meal with the participants. Her menu included Pulov [pilaf] (rice with some meat, soybeans, carrots, and onions), soup, salad, and a crepe (using a mixture of wheat flour, soy flour, and some type of local jam).

At the Agricultural University of Tajikistan in Dushanbe, and at the Khujand branch of the Technical College of Tajikistan, she gave technical presentations using an overhead projector with PowerPoint slides showing the nutritional composition of soybeans, and techniques for the preparation of traditional soyfoods and commercial products such as soy oil, soy protein, lecithin, etc.

In Turkmenistan: She gave food preparation presentations: (1) At a farm in the Mary district. (2) At apartment style homes in the cities (Mary district, and Dashoguz). (3) At the Winrock office in Dashoguz for different groups of women. (4) For 2 groups of Peace Corps volunteers in Dashoguz. "Peace Corps was interested in soyfoods because it was suspected that the protein intake of PCVs in that country was not sufficient."

While in Tajikistan and Turkmenistan, Helen did not see any soybeans being cultivated, nor any bundles of soybean plants harvested for green vegetable soybeans.

After her visit: (1) Her soy recipes were translated into the Turkmen language by Winrock staff, but (as far as she knows) they were not printed or reproduced. (2) A 30-page Russian-language brochure on soybeans was created (using desktop publishing) by a group of Peace Corps volunteers in the Dashoguz area. It included planting information and recipes, with colorful pictures and diagrams; about 200 to 300 copies were printed. The produced was funded by the Peace Corps and Helen, however Helen does not have a copy with her in Mexico. (3) Helen prepared a trip report, which is now the property of Winrock International. She did not write much about Koreans in that report.

She includes a Russian-language article on soya from the newspaper *Asia-Plus* (23 Sept. 2004, p. 4).

Note: This document mentions the earliest known commercial soy products in both Tajikistan and Turkmenistan.

2029. Truth in Labeling Campaign. 2006. Who runs the MSG industry? These are the people who run the fiction that

MSG is “safe” (Website printout–part). [www.truthinlabeling.org/WhoRuns.html](http://www.truthinlabeling.org/WhoRuns.html) 2 p. Retrieved March 8.

• **Summary:** “In the United States, the glutamate industry has two arms. Both work to keep MSG hidden in food. One is the International Hydrolyzed Protein Council [a trade association], which counts as members those who profit from the sale of hydrolyzed protein products (which all contain MSG). Members include, or at one time included, Ajinomoto USA, Inc.; Arancia Ingredientes Especiales, S.A. De C.V.; Basic Food Flavors, Inc., Campbell Soup Company; Champlain Industries, Inc.; CPC International, Inc.; Deltown Specialties; Fidco, Inc.; Etablissements Bio-Springer; Gist-Brocades Food Ingredients, Inc.; Griffith Laboratories; Haco Ltd., Integrated Ingredients; Franceresco S.A.; Quest International; A.E. Staley Manufacturing Co.; Sugemasa; Takeda U.S.A.; Red Star Specialty Products; Provesta Corporation.

“The second arm consists of the International Glutamate Technical Committee (IGTC) and its American subsidiary, The Glutamate Association, whose members include (or used to include), Ajinomoto, Archer Daniels Midland, Campbell, Corn Products Corporation, McCormick & Company, Pet Foods, Pfizer Laboratories, and Takeda. Both organizations are (or were) accommodated under the umbrella of The Robert H. Kellen Company of Atlanta, Georgia and Washington, DC, a trade organization and association management firm. In recent years the International Glutamate Information Service was added to their ranks.

“In the United States, hiding MSG appears to be spearheaded by Ajinomoto, Co., Inc.” The Glutamate Association was established in 1977.

“If MSG isn’t harmful, why is it hidden?” Address: Chicago, Illinois.

2030. Bell, David E.; Shelman, Mary. 2006. Bunge: Poised for growth. *Harvard Business School Case Study* N9-506-036. 36 p. Revised March 9, 2006. [9 endnotes]

• **Summary:** Original copyright: 2005. [www.hbsp.harvard.edu](http://www.hbsp.harvard.edu). Contents: Introduction. The oilseed industry: Farm-to-consumer chain, soybean pricing, genetically modified soybeans, other feeds, other oils. Bunge Limited: Company background, building an oilseed giant. Bunge 2005: Agribusiness, fertilizer, food products. Bunge-DuPont alliance (2003): Technology access, production agriculture, The Solae Company (launched in April 2003, it is a soy ingredients company). The Bunge difference: Focused, efficient and global, integration unlocks value, commitment to partnering. The “Bunge Style.” Managing change: Changes in demand and world trade, greater market volatility, greater traceability and integration (Nutrim Low Lin). Filling in the global mosaic.

Exhibits.

(1) World supply of major oilseeds, 2000/2001 to 2005/2006 (million metric tons). Soybean (by far the

largest), rapeseed, cottonseed, peanut, sun seed, palm kernel, copra.

(2a) Soybeans: World supply and distribution (thousand metric tons), 2000/01 to 2005/06.

(2b) Soybeans: Harvested area and yield by country, 1999-2005.

(3) Oilseed supply chain.

(4) Soybean pricing by major producing country, 1985-2005 (in US\$ per metric ton).

(5a) Adoption of genetically modified soybeans in USA, Brazil, Argentina, 1997-2004. The USA has adopted the most and the fastest.

(5b) Graph: Global area of biotech crops, 1996 to 2004, by crop. Soybean, maize, cotton, canola.

(6) Pie chart (%): Share of global soymeal consumption by region, 1998 and 2005: The big change is in China, which has grown from 9% to 18%.

(7) World vegetable oil supply and distribution, 2000-2005 (million metric tons).

(8) Bunge stock price, Aug. 2001 to Nov. 2005. It has risen steadily and much faster than the S&P 500.

(9) Map of Bunge facilities in Eastern Europe.

(10) Map of trade flows and Bunge’s global footprint. Soy products, corn, wheat. Shows each Bunge facility.

(11) Bunge Ltd. financial summary (in US\$ million except share data).

(12a) Bunge operating segment information, 2002-2004—Agribusiness, fertilizer, edible oil products, milling products, other, unallocated.

(12b) Bunge net sales by geographical area, in US\$ millions, 2002-2004. Net assets by geographical area.

2031. Illinois Center for Soy Foods. 2006. U of I center sponsors events to celebrate Soy Foods Month (News release). Urbana, Illinois. 1 p. March 22.

• **Summary:** “The Illinois Center for Soy Foods at the University of Illinois has scheduled several events to help celebrate National Soy Foods Month this April. A free cooking demonstration and taste test to help consumers become familiar with tofu, soy flour, soy milk, and textured vegetable protein (TVP) will be held on Saturday, April 22, from 9 to 11 a.m. in the test kitchen at the National Soybean Research Center [NSRC] in Urbana.” Participants “will return home with recipes that they can try in their own kitchens.” Space is limited and pre-registration is required.

“The center will also provide free soy-enhanced cookies on campus during the lunch hour each Tuesday in April. The cookies will be available at” 4 convenient locations on campus. The 5 soyfoods cookbooks published by the center will also be on sale for 50% off.

“In addition, the Center will host a soy-tasting event with the theme “Around the World with Soy” on Wednesday, April 19. The tasting will feature international cuisine with a soy twist.” Address: Urbana, Illinois.

2032. Archer Daniels Midland Co. 2006. Renewable energy. Television broadcast. Newshour with Jim Lehrer. PBS. March 6.

• **Summary:** The following new ADM ad began to be aired on the Newshour on 6 March 2006: “The world’s demand for energy will never stop. Which is why a farmer is growing corn and a farmer is growing soy and why ADM is turning these crops into biofuels. The world’s demand for energy will never stop. Which is why ADM will never stop. We’re only getting started. ADM—Resourceful by nature.”

2033. INTSOY. 2006. Processing and marketing soybeans: Meat, dairy and baking applications, May 1-5, 2006 (Leaflet). Urbana, Illinois. 4 panels each side. Each panel: 22 x 9 cm.

• **Summary:** This glossy leaflet (green and black on white) announces a 5-day course (\$1,800) plus the course and an extended workshop schedule (\$2,400). The program now has 15 corporate sponsors: The Solae Co., Staeta, Insta-Pro, Proviant, BAR, N.A., Inc., SOI, ADM, Assoy, Wenger, Microsoy Corporation, US Soy, Silk, Kikkoman, Cargill, and Buehler. Course schedule: Welcome, international soymilk processing, success stories, soymilk, and soy products, marketing, soy flour, soy and meat, hot topics (soy infant

formula, soy and reduction of chronic disease, soy allergies, quality and stability of soybean oil, specialty soybean varieties, biotechnology of soybeans). A list of featured speakers are given; many are from the corporate sponsors!

Talk with INTSOY employee. 2005. The “short course” has been discontinued; it was established through a grant, has come to an end. The course is now under the aegis of NSRL. In the year 2000 the 4-day course attracted 28-30 people. Address: National Soybean Research Lab. (NSRL), 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 244-1706.

2034. Messina, Mark J. 2006. Origin of the Soy Nutrition Institute (Interview). *SoyaScan Notes*. May 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The following companies have paid \$10,000 to join the Institute: Revival, White Wave, ADM, Cargill, Solae, Monsanto, SANA, and the Soyfoods Council (Linda Funk, Iowa). The first meeting will be held on May 15 and 16 in (Monday and Tuesday) at the Sheridan-Clayton Hotel in St. Louis, Missouri. It could be the beginning of something important. Mark will be sending out official notes.

Mark has started to play the mandolin for fun. Also, he thinks that some of the recent not-so-exciting research findings on soy and human nutrition look bad because of the great expectations that so many people now have about soy. If we put things back into a more normal perspective, it still looks good, its just not going to make the food and ingredient manufacturing companies as rich as they hoped—except probably White Wave. Address: PhD, 439 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2035. Soyatech. 2006. Soya Summit 2006: Food & Energy for the 21st Century (Leaflet). Bar Harbor, Maine. 1 p. Front and back. 28 cm.

• **Summary:** This conference will be held on 18-20 Sept. 2006 in St. Louis, Missouri, at the Chase Park Plaza Hotel. Sponsored by The Solae Company. There will be two parallel tracks. The soyfoods track speakers will include representatives from: The Solae Co., Monsanto, ADM, USDA, Kerry Foods, ProSoya, Tivall Corp., Natural Products Consulting, Soyatech, SunRich, and WISHH.

The energy track speakers will include representatives from: National Biodiesel Board, Toyota, DuPont, The ProExporter Network, Delta-T, New Energy Finance, Sigma Capital, Energy Management Institute, Rocky Mountain Biodiesel Consulting.

A third day of workshops on Sept. 20 will include: Taste of Soy: Beyond ingredients—Bring on the food! Address: Bar Harbor, Maine. Phone: 1-800-882-8684.

2036. Jackson, Harry. 2006. Re: Nomination of Irving J. Rosen to Quincy Business Hall of Fame. Letter sponsored by Quincy Chamber of Commerce, July 13. 2 p. Typed.

• **Summary:** Contents: Who. Why, How. Where / when.

What. Conclusion. Irving Rosen, lived 8 July 1898 to 18 April 1964, was born in Chicago, Illinois, and had a 5th grade education. He founded Quincy Soybean Products Co. in 1939 during the depths of the Great Depression, with the help of in-laws and a loan from Harvey Sprick, President, State Street Bank and Trust Co. of Quincy.

From 1939-1941, the original expeller soybean processing plant at 111 S. Front St. in Quincy processed about 500,000 bushels per year, had annual sales of about \$300,000 with 12 employees.

From 1950-51, the solvent plant at 1900 Front St., just south of Quincy, processed about 5 million bushels per year, and had annual sales of about \$15 million with 30 employees.

From 1956-57, the expanded solvent plant at 1900 Front St. processed about 7 million bushels per year, and had annual sales of about \$21 million with 35 employees.

Note: Harry is Irving's son-in-law. Talk with Harry Jackson of Quincy. 2008. Jan. 9. Irving will be inducted into the Quincy Chamber of Commerce Hall of Fame on 16 Jan. 2008. Sixteen family members will be present. He will send Soyinfo Center a packet of information about the induction. Address: Quincy, Illinois.

2037. Dow Jones Commodities News Select. 2006. Brazil's major soy crushers, exporters to stop buying beans from recently deforested Amazon land (News release). Sao Paulo, Brazil. 2 p. July 25.

• **Summary:** Carlo Lovatelli, president of the Brazilian Vegetable Oils Industry Association (*Abiove*) announced a new industry-wide initiative by major soybean crushing and exporting firms in Brazil. These include Archer Daniels Midland (ADM), Bunge, and Cargill. The companies have agreed to stop buying soybeans from recently deforested land in nine states in Brazil—to help prevent deforestation of the Amazon basin by soy farmers.

Lovatelli said the initiative is effective immediately, but only for newly planted soybean land. In October, soybeans start to be planted in October. Soybeans already planted on deforested land in the states of Para, northern Mato Grosso, Maranhao, etc. are not covered by the initiative.

Lovatelli added that his members take their social and environmental responsibilities seriously. Any farmers who want to deforest the Amazon Basin to plant soybeans “won't have access to our markets.” It will take about 2 years to see if the program has any impact on deforestation. Note: The Amazon basin is huge, occupying about half the land in Brazil.

2038. McKee, David. 2006. South Asia: Oilseeds and feed. Regional review. Region is second largest market for imported vegetable oil behind the E.U.; India could become a driving force in global soybean demand. *World Grain* 24(8):27-30. Aug.

• **Summary:** “The future of India's oilseed crushing industry is closely tied to development of the feed sector and demand for protein meals.”

In about 1990 China ceased to be self-sufficient in oilseeds. Shortly thereafter, China created a new and very successful model; it eliminated the tariffs on both imported oilseeds and vegetable oil, then encouraged the oilseed processing sector to build new plants in port cities. This caused cooking oil prices to fall, which stimulated demand. It also led to the production of large amounts of high-protein oilseed meals, especially soybean meal.

A graph shows production and consumption of wheat, rice, and oilseeds in India, Pakistan, and Bangladesh in 2005/06. India, mostly because of its large population, is by far the leader in production and consumption of oilseeds in South Asia.

The major global players in the oilseed industry are Bunge, Cargill, and ADM (through its Singapore-based subsidiary, Wilmar Holdings Pte.). They have all bought into or constructed vegetable oil refineries in South Asia, starting in 2003, when Bunge acquired the vegetable oil business of Hindustan Lever. In 2004 Cargill entered a joint venture with a local company and gained control of four refineries. Wilmar, already a leader in soybean crushing in China and palm oil production in Indonesia, has partnered with the Adani Group, one of India's largest companies, to build a refinery in the state of Gujarat (in west India) at Adani's wholly owned port facility at Mundra (near Mumbai, formerly Bombay).

None of these multinationals have invested in oilseed crushing in the region—for three main regions. (1) They refine crude palm oil imported from their own operations in Southeast Asia, and soybean oil from their crushing plants in South America. (2) Indian government policy protects domestic oilseed growers and processors through high import tariffs on oilseeds (30% on soybeans) and vegetable oils (45% on soybean oil and 80% on refined palm oil). (3) They have restrictions on imports of genetically engineered soybeans.

By far the largest oilseed crusher in India or South Asia is Ruchi Soya Industries, Ltd., headquartered in the city of Indore in Madhya Pradesh state. Ruchi is said to have 25% of India's total soybean crush, and its brands are well known nationwide.

Ruchi Soya originated in the 1960s, when its charismatic founder, Mahadev Shahra, visited farmers throughout Madhya Pradesh hoping to convince them to start planting soybeans. This state is now the leading soybean producer in India, accounting for about 70% of the nation's crop. Ruchi Soya now owns and operates nine oilseed crushing plants in India, both at ports and inland. Its crushing plant at Indore is the largest in India, with a capacity of 2,500 tonnes/day. Ruchi's total soybean crushing capacity is 7,500 tonnes/day. Address: Grain industry consultant.

2039. Soyatech, Inc. 2006. *Soya & Oilseed Bluebook 2007*: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 448 p. Sept. Comprehensive index. Brand name index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the first year in recent decades that the Bluebook (a \$95 value) has been sent free of charge to qualified industry members. On the stylish cover is color photo of a lovely Asian woman holding the nozzle while fueling a vehicle with ethanol fuel (as the lid to the gas tank specifies) within an oval outline. Behind her is a large glass of soymilk base against a background of yellow soybeans.

On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa) titled “Always unique, always innovative, always natural.” On the first page is a full page color ad from Bunge North America (St. Louis, Missouri) titled “The shortest distance from harvest to market.” On the back cover is a full page color ADM ad titled “Trailblazing” showing a young man riding his mountain bike through deep muddy water. The tag line is “Resourceful by nature” and the NutriSoy logo is shown. The oilseeds covered in this book are (alphabetically): Canola / rapeseed, coconut, corn, cottonseed, palm, peanut, soya, and sunflowerseed. Note: This list is unchanged from the previous year.

There is no longer a self-adhesive label containing “Your access code” on the title page.

The Introduction states that 3,400 companies offering 450 specific products or services are listed in this book. In the Foreword, Peter Golbitz writes: “What a difference one year can make. During the past 12 months, the commodities market, including soybeans, oilseeds and corn, has been pulled into the limelight and asked to play a new leading role in the world’s energy industry... Enter biofuels. Renewable energy created from vegetable oils (for biodiesel) and for carbohydrate-based crops such as corn or sugar cane (for ethanol)...” Are these “perhaps, a gateway to a broader realization of the need to create sustainable solutions for humankind?”

Page 196. In column 1 is an entry for “The Scoular Company, Commodity Marketing.” It states: “EP [Edible Products]–Non-GMO soy products; organic soy products; full fat soy flakes; organic corn products. SS [Seed Supplier / Broker / Breeder]–Broker services; soybean seed–for planting; food grade soybeans; identity preserved soybeans; organic soybeans; non-GMO soybeans; whole dry soybeans; food grade corn; organic corn; identity preserved corn; non-GMO corn; whole dry corn; organic feed and meal soybeans; organic feed corn.”

Note the use of the term “food grade soybeans.”

Note 1. CanAmera is not listed in the comprehensive index of this book. Address: 1369 State Hwy 102, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

2040. Thompson, James. 2006. McVictory. *Corn and Soybean Digest*. Sept. p. 38.

• **Summary:** Activists dressed like huge chickens demonstrated in front of McDonald’s restaurants in Europe. Their website and signs said that every bite out of a Chicken McNugget was a bite out of the rainforest. Their slogan: “The Amazon: We’re trashing it.”

The activists said the problem was caused by soybeans. “People cleared the rainforest to grow soybeans to sell to crushers. The crushers sold soybean meal to feed manufacturers, who sold the feed, in turn, to poultry producers. And companies like KFC and McDonald’s served up rainforest destruction to unwitting European customers.”

First McDonald’s Europe told its suppliers not to feed its chickens soybeans grown in the Amazon area. Then ADM, Cargill, Bunge, etc. negotiated a deal with Greenpeace and soybean crushers not to crush soybeans grown in the Amazon ecosystem for two years. The deal only bans soybeans from fields first planted after the agreement was signed. But how will it be policed.

A large color photos shows the activists dressed like huge chickens demonstrating in front of a McDonald’s restaurant in Europe. One is holding a sign. Two are reading a newspaper (Poultry Gazette) with the bold headline: “Fowl play at McDonalds! Hundreds of stores invaded by eco-chickens.”

Note: Greenpeace has become very skilled at getting media coverage for its low-budget campaigns.

2041. Archer Daniels Midland Co. 2006. Annual report: We see opportunity. P.O. Box 1470, Decatur, IL 62525. 64 p. Oct. 28 cm.

• **Summary:** Net sales and other operating income for 2006 (year ended June 30) were \$36,596.1 million, up 1.8% from 2005. Net earnings for 2006 were \$1,312,070 million, up 25% from 2005, and the company’s second consecutive year of record earnings.

On the inside front cover is a tribute to G. Allen Andreas, who joined ADM in 1973 and retired as CEO earlier this year. He presided over the globalization of ADM. The company is much stronger now than when he became CEO. he is now chairman of the board. On 1 May 2006 Patricia A. Woertz, age 53, became CEO and president, and serves on the Executive Committee. She says:

“Two major world developments are before us: the growing demand for food to feed a rising world population and the quest for alternative fuel sources to supply expanding energy needs. ADM is uniquely positioned in the intersection of these two developments, with expertise and capacity to address both.”

Operating profit in oilseeds processing (p. 27, in millions) was \$598.41, up 73.6% from \$344.65 in 2005.

Accompanying the annual report is a “Notice of Annual Meeting” (25 p.). G.A. Andreas, Chairman of the Board and

CEO, had a 2006 salary of \$3,051,667 plus \$396,715 other annual compensation. Patricia Woertz received a bonus of \$750,000 with other compensation of \$213,814. Address: Decatur, Illinois.

2042. Williamson-Hughes, Patricia S.; Flickinger, B.D.; Messina, M.J.; Empie, M.W. 2006. Isoflavone supplements containing predominantly genistein reduce hot flash symptoms: a critical review of published studies. *Menopause* 13(5):831-39. Sept/Oct. [55 ref]

• **Summary:** “Conclusion: Reports concluding that isoflavone supplements do not significantly reduce hot flash symptoms may be incorrect. The lack of discrimination between individual isoflavones contained in heterogeneous isoflavone mixtures from differing sources can be misleading when designing studies, interpreting results, and conducting reviews. In light of these observations, evaluation of isoflavone effects should focus greater attention to the specific composition within supplements in future studies.”

Note 1. Concerning menopause: “... about 10 to 15% of women who have hot flashes have them very frequently and severely. The period of time over which most women experience hot flashes is 6 months to 2 years, but substantial numbers of women report having hot flashes up to 20 years after menopause” (p. 832).

Note 2. Three of the four authors are employees of the Archer Daniels Midland Co. (ADM) which makes the isoflavone supplement. Address: 1-2, 4. James R. Randall Research Center, 1001 North Brush College Road, Decatur, Illinois.

2043. Ruchi Soya Industries Ltd. 2006. Ruchi Soya Industries: The No. 1 processed food company (Website printout-part). www.ruchisoua.com Retrieved Dec. 24.

• **Summary:** Contents: Home. Profile. News. Products. Investors. Exports. CSR. Careers. Contact.

Ticker tape across top of home page: “Ruchi Soya has been ranked No. 124 out of the top 500 companies in India by Financial Express for the year 2005.” A photo on the banner header shows an Indian woman looking at her daughter. Home: “The 20 year old Ruchi Soya Industries Limited is the flagship company of the Ruchi Group of Industries with an annual turnover of Rs. 4,941.57 Crores (2005-06). It is ranked as one of the largest FMCG companies in India with sustained growth in profits and turnover...”

Besides being a leading manufacturer of high quality edible oils, vanaspati, bakery fats and soya foods, Ruchi Soya is also the highest exporter of soya meal and lecithin from India. Nutrela (soya chunks, granules, soya flour) is the largest selling soya foods brand in the country today.

“Ruchi Soya is the undisputed leader in the branded edible oil category with brands like Nutrela Soyumm (Soyabean Oil), Ruchi Gold (Palmoline Oil) [Palm Olein],...”

Profile: The soya revolution. “In the early 1960s, when Mr. Mahadev Shahra went about convincing farmers in M.P. [Madhya Pradesh] about the potential of Soya, he would not have imagined that he will be instrumental in bringing up a small green revolution in the State, by introducing and encouraging Soya bean cultivation on a commercial scale. The family was in the business of commodities trading and subsequently they entered the business of ginning and oil milling. The family’s efforts, along with others, resulted in Soya revolution in M.P. Today M.P. is considered the Soya bowl of the country, and contributes 70% of its production. Despite all odds, Ruchi Soya is now the largest player in the country in edible oils, Soya foods and processed foods categories.”

Ruchi’s exports: Ruchi Soya began operating in 1972-73; it was the first exporter of Soyabean Meal from India. Ruchi is one of the largest crushers of Soya beans in India, and has installed a crushing capacity of 2,500 tonnes/day in Indore, which is the largest crushing capacity at a single location. On a yearly basis, Ruchi crushes 25% of the soy crop in India. This has led to the export of 30% of India’s Soya bean meal on a yearly basis.

Products: (1) Soya foods: Nutrela Proflo soya flour. Nutrela TVP chunks & granules. Edible oils: Refined soyabean oil. Vanaspati: Nutrela vanaspati. Soaps. Address: 301 Mahakosh House, 7/5 South Tukoganj, Nath Mandir Rd., Indore, Madhya Pradesh 452001, India. Phone: (0731) 251 3281-82-83.

2044. *SoyaScan Notes*. 2006. Chronology of major soy-related events and trends during 2006 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Jan. 17–Soyatech (founded and owned by Peter Golbitz) is sold to HighQuest Partners, a management consulting firm headquartered in Boston, Massachusetts.

March 15-17–CERHR (Center for the Evaluation of Risks to Human Reproduction) expert panel meets in Virginia to discuss soy-based infant formula safety. They issue an important report.

May–The Soy Nutrition Institute is founded. Mark Messina is executive director. The founding members (each of whom paid \$10,000 to join) are: ADM, Solae, Cargill, White Wave, Revival, Monsanto, SANA, and the Soyfoods Council (Linda Funk, Iowa).

June 23. Vandemoortele Group, a large oilseed crusher of Ghent and the parent company of Alpro, Belgium, acquires SoFine Foods, a subsidiary of Heuschen & Schrouff and the largest tofu manufacturer in Europe.

July 15–The National Nutritional Foods Association (NNFA) changes its name to the Natural Products Association (NPA); it hopes to attract more members from the natural foods industry which is not represented by a trade association.

Sept.–*The Soya and Oilseed Bluebook*, published by

Soyatech, migrates to the Web. Some bound paper copies will still be published. For the first time in decades, copies are sent free of charge to qualified industry members.

Oct.–House Foods (which owns and operates America’s largest tofu plant in Garden Grove, California), opens a huge, brand new tofu manufacturing facility in Somerset, New Jersey. This enables them to deliver fresh, high quality, low cost tofu to the East Coast, Midwest, and Southeast markets.

Dec. 11–Hain Celestial Group (Melville, New York) acquires the assets of Haldane Foods Ltd. (Newport Pagnell, Bucks., UK) and its meat-free and non-dairy beverage business from Archer Daniels Midland Co. (ADM).

This year biofuels, including soy biodiesel, get new recognition for the important part that they can play in the U.S. energy economy.

2045. Schwarz, Richard W. 2006. John Harvey Kellogg, M.D.: Pioneering health reformer. Hagerstown, Maryland: Review & Herald Publishing. 240 p. Illust. Index. 24 cm. \*  
 • **Summary:** This is a new revised and updated edition of the original classic 1970 edition. Address: Andrews Univ., Berrien Springs, Michigan.

2046. Lester, Bill. 2007. Jim Lindsay and the Supersweet Feeds deal (Interview). *SoyaScan Notes*. Feb. 16. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Jim Lindsay was an excellent CEO, very innovative and good with people. If there was any mistake he made during his tenure was going outside the core business when (on 1 Dec. 1991) he entered into a partnership agreement with Archer Daniels Midland [ADM] to purchase International Multifoods’ North American Ag Operations which included Supersweet Feeds, etc. Jim later wished he hadn’t done it—even though the board of directors made the final decision. He said, “I guess I was entitled to one mistake.” Within 6 months of that Supersweet purchase, you had a transition that took place in the feed business of almost 180 degrees. Let’s face it, the midwest is primarily hogs. You had the centralization and consolidation of that hog industry that took place almost overnight. There was vertical integration from breeding the hogs to feeding them, although slaughtering was usually done by a different company. Supersweet and a lot of the smaller feed companies serviced all of the mom and pop operations. But in 1990-91 those mom and pop operations, almost overnight, faded from the picture. After the consolidation, hog prices dropped. Today, Smithfield is one of the big consolidated hog companies, but they are also a packer. They came into the Midwest and acquired Farmland Foods. Many of these big consolidated companies are private LLCs that operate regionally; Bill does not know their names. Today, a lot of big, integrated producers supply the breeding stock and/or the pigs. And you have a lot of pigs that are fed and cared for on almost a consignment business, by contract. If the death losses

are below a certain level, and contractor does a good management job, there is a bonus or incentive. AGP at one time owned the sows and everything else, but the return on investment was too small, so they’ve gotten out of all of it.”

Bill has visited with a lot of people he knows who are feeding hogs. He has been told that DDG (dried distiller’s grain, a by-product of the process for making alcohol) only works as a feed in very, very small amounts—because most of the carbohydrate (energy) has been removed and it lacks the right balance of amino acids. Most hog rations, from starter to finishing rations, will range from 18-12% protein. Starter rations contain the most protein (16-18%). DDG is fed to cattle wet; they just slop it in to eliminate the drying cost.

For big hog operations, the smell and pollution are big problems that will be hard to fix. “Basically, it’s the protein in the manure that creates all the problems. It putrefies.” One promising approach is to use the manure from big dairy operations to produce methane gas.

Marty Reagan has also been a good CEO. He has spent capital year after year to upgrade or expand processing plants and refineries. AGP is spending \$100 million to upgrade the plant in St. Joseph, Missouri, and double the capacity. “Marty Reagan is probably doing a better job with the membership today that Jim Lindsay was doing when he retired—communicating and meeting with the members, keeping them informed. About 15-20 times a year Marty and man who took Bill Lester’s place will travel to have breakfast, lunch, and dinner meetings with six managers, face to face.” Still, membership has continued to drop, mostly through mergers (of two or more cooperatives) and consolidation. When Bill left in 1993, there were about 310 member shareholder cooperatives in AGP; today its dropped to 210 member shareholders. The number of farmers in the member cooperatives is also dropping. The farms are getting bigger. If anyone is losing ground, its the local cooperatives.

Plants at Volga (South Dakota) and Brewster (Minnesota), are farmer owned processing plants that that changed from being cooperatives to private LLCs. They were losing money, and in a cooperative it is very difficult to pass losses back to your members. But under an LLC they are simply tax write-offs.

Its unbelievable the effect all these new ethanol plants are having on the Midwest. They are driving corn prices up, which in turn are driving land prices up. It will eventually reach a saturation point, but nobody knows when that will happen. Land values should be \$6-8,000 an acre, which seems ridiculously high to Bill.

Back to AGP: Jim Lindsay left AGP on very good terms, greatly admired. Marty Reagan is doing an outstanding job. AGP has been fortunate to have had very good boards of directors. Bill has never missed an AGP annual meeting; they’re usually in Omaha and he enjoys going. Cooperatives force the private soybean processors to offer farmers more money for their soybeans, because at even money, the farmer

will always sell the to co-op of which he is a member, since there will be additional income down the line in the form of patronage payments and equity ownership. But all is not rosy within the cooperative system. Ask yourself: Why did the soybean processing plants at Volga and Brewster come into being? As farmers get bigger, they look for an investment (as in an ethanol or biodiesel plant) that will (1) create an additional product for their crops, (2) add value to the cash basis at which they sell, and (3) receive some income in the form of dividends; co-ops pay patronage to their member co-ops but many individual farmers see little or none of that money. (4) see his income increase in value, or, if things do not go well (5) serve as a tax write-off.

One of the unwritten rules of the game, in terms of locating new soybean processing plants, is that you don't build too near an existing plant. If you don't come onto our turf, we won't come onto yours. This rule is enforced by the threat of retaliation. Address: Omaha, Nebraska.

2047. Mulligan, A.A.; Welch, A.A.; McTaggart, A.A.; Bhaniani, A.; Bingham, S.A. 2007. Intakes and sources of soya foods and isoflavones in a UK population cohort study (EPIC-Norfolk). *European J. of Clinical Nutrition* 61(2):248-54. Feb. [38 ref]

• **Summary:** "Background: It has been suggested that the consumption of a diet rich in phytoestrogens might protect against a variety of diseases common in Western societies. However, there are little available data on the food sources or distribution of intake in the UK diet."

The subjects were 11,843 men and women "from the Norfolk arm of the European Prospective Investigation into Cancer and Nutrition (EPIC).

"Methods: Dietary daidzein and genistein intakes were obtained from 7-day food diaries, completed by participants between 1993 and 1998 and calculated from an in-house food composition database."

Results: There was a large difference in isoflavone intake between soya-consumers and others. "Average daily isoflavone intakes for both men and women were less than 1 mg... However, in soya-consumers, average daily intakes were higher: 8.6 mg in women (IQR [interquartile range]: 2.28-10.72 mg) and 7.5 mg in men (IQR: 2.22-9.17 mg). In both men and women, bread and bread rolls made the highest contribution to isoflavone intake—62.5 and 53.0%, respectively. In soya-consuming men and women, vegetable dishes and milks were the main contributors—25.0 and 38.5% in men and 38.5% and 26.0% in women, respectively.

"Conclusions: Isoflavone intake is low in the UK but may be an underestimate due to soya added to commercial products. Future analyses of the isoflavone and lignan content of basic ingredient foods and commercial items commonly consumed in the UK diet will enable more accurate estimates of phytoestrogen intake to be made. The ability to estimate isoflavone intake in Western populations

more accurately will enable investigations to be conducted into the suggested beneficial effects of phytoestrogens on health."

Introduction: "Traditional soya foods rich in isoflavones, such as tofu, tempeh and miso, are seldom consumed in the UK, but instead soya dairy alternatives, such as milk, cheese and yogurts, and TVP/tofu burgers are more commonly eaten. However, a number of commercial products, such as bread, biscuits and breakfast cereals, contain soya ingredients as food additives and these also contribute to isoflavone intake (ENDS, 1996; Horn-Ross et al., 2000)." Address: EPIC, Dep. of Public Health and Primary Care, Inst. of Public Health, Univ. of Cambridge, Worts Causeway, Cambridge, UK.

2048. Barrionuevo, Alexei. 2007. To fortify China, soybean harvest grows in Brazil. *New York Times*. April 6. p. A1, C7.

• **Summary:** An excellent article on the major changes taking place in world soybean production and trade. For about 3,000 years, China has produced enough soybeans for its own needs. But since about 1995, China has emerged into the world's largest net soybean importer—by far. Three main forces have driven this change: (1) As Chinese workers become more affluent, their appetite for meat increases; therefore more soybeans are needed as animal feed. (2) Fresh water in China has become increasingly scarce. In northern China, where soybeans have traditionally been produced, water tables are dropping at a rate of 3-10 feet/year. "It takes a thousand tons of water to produce one ton of grain," says Lester Brown, president of the Earth Policy Institute, a U.S. environmental research and advocacy group. "So the most efficient way to import water is in the form of grain." (3) China's population, the largest in the world at 1.3 billion people, continues to grow.

Since 2001/02, the USA has been the largest soybean exporter to China. But last year (2005/06), Brazil became China's largest supplier of soybeans; the trade grew 50% over the year before and nearly doubled since 2004. China seeks a long-term, low cost supplier. Brazil still has large amounts of land that could be planted to soybeans, and China hopes to export soybeans directly from Brazil, in its own ships, thereby bypassing the international grain traders such as Cargill, Bunge, and ADM.

But Brazil has drawbacks as a soybean supplier: (1) It has a transportation bottleneck; its infrastructure for transporting the soybeans from field to port in trucks over long (up to 1,000 miles), bumpy, dirt roads, and its congested ports where some ships must wait for up to a month before loading soybeans. (2) Brazil would strongly prefer to export value-added soybean products such as oil and meal rather than raw, unprocessed soybeans. (3) Soybean farmers in Mato Grosso, though producing huge amounts of soybeans, are deeply in debt and losing money, as they become slaves to the big trading companies. (4) The strong Brazilian

currency keeps prices high.

Graphs show: (1) The world's net soybean importers (in descending order): China (by far), European Union, rest of the world, Japan, Taiwan, South Korea. (2) World's net soybean exporters (incl. projections to 2007/08): Brazil, USA, Argentina, rest of world. A map shows world soybean trade. China is the leading destination for both U.S. and Brazilian soybeans. A large color photo shows a truck loaded with soybeans near Rondonopolis, Mato Grosso, Brazil.

2049. Sams, Gregory. 2007. History of work with natural foods and macrobiotics in London (Interview) (Continued—Document part II). *SoyaScan Notes*. April 12. Conducted by William Shurtleff of Soyinfo Center. [Eng]

• **Summary:** (Continued): From 1970 to 1982 Greg was deeply involved in Harmony Foods. Within Harmony Foods (at the same location at Cobbold Road but sectioned off) he opened a 5,000 square foot wholesale business named Whole Earth Cash and Carry. It enabled customers to come in without placing an order in advance.

In 1980 Greg invited Craig to leave the restaurant business and work with him at Harmony Foods. Craig did so; Craig gave the restaurant to Bill Tara. Craig developed a range of sugar-free jams; they were launched in about 1980-81 and were sold under the Whole Earth label. They did extremely well, even in British supermarkets.

In about 1980 they had to sell 49% of Yin-Yang Ltd. to investors, the two Shone brothers (who were independent flour millers) in Liverpool to raise capital. That influx of money helped to keep Harmony Foods afloat.

1982 was a year of rapidly expanding product range, several expansions of premises (he has copies of all old price lists, recipe leaflets, new product announcements, and many photos too). Sales were growing but because of rampant inflation the business started to lose money. Harmony Foods had moved into a new warehouse of 55,000 square feet on Cobbold Road and quickly discovered he could not afford.

In 1982 Greg invented the VegeBurger, which was sold under the Whole Earth label and exploded onto the market. He designed it so it could be made completely under contract so that he wouldn't have to hire a staff and would have no overhead. The new company would be named The Realeat Co. Eventually the entire Whole Earth line became organic. Greg now left the other companies and focused all his energies on VegeBurger. He commissioned Gallup to do the first survey ever on people's attitudes to eating meat in the UK. The first Realeat survey, in 1983, surveyed 1,000 people. The next year he had Gallup expand the sample size to 5,000 people and he developed more refined, standardized questions. These surveys were done entirely for the publicity the results would generate. The news was that a high percentage of young Brits were vegetarian, but also that the number was increasing rapidly every year. So Greg used these statistics in regional new releases which brought

excellent media coverage for VegeBurger all over Britain. At the time he had no idea that anyone else had used that word previously. He did lots of publicity, then and thereafter.

In 1983 he launched the VegeBanger (a meatless sausage)—but an ingredient problem happened which permanently damaged the product.

In 1988, on Aug. 8 (8/8/88), The Realeat Company (located at 2 Trevelyan Gardens) was purchased by British Arkady-Haldane Foods. In about 1990, Greg got completely out of the food business. However he did have an agreement to serve as a consultant and to receive a royalty stream on the products for 10 years. Half of the sale price of Realeat Co. was paid up front and the rest was to be paid as royalties. ADM took Realeat's VegeBurger to Moscow and people loved it. Greg has a photo of Gorbachev holding a VegeBurger. Based on Greg's VegeBurger, ADM created its first retail product ever, which was sold frozen by Pillsbury as the Green Giant Harvest Burger.

For about 2 years Greg looked for his next project. Then in early 1990 he read James Gleick's 1987 book *Chaos: Making a New Science*. This remarkable book introduced the principles and early development of the chaos theory to the public. It was a finalist for the National Book Award and the Pulitzer Prize in 1987. Greg decided to start Chaos Works and [www.chaos-works.com](http://www.chaos-works.com). He and a friend also started to create fractals on his computer and then as a video. He opened a shop named Strange Attractions devoted to chaos theory and getting it into the public consciousness. He developed and sold posters, post cards, etc. and ended up licensing all of these images. After many years he gave the shop to Thornton Streeter.

Then he started to write and publish books, such as *Uncommon Sense: The State Is Out of Date* (1997) and *Sun of GOD: Consciousness and the Self-Organizing Force that Underlies Everything* (2009). Address: London, England.

2050. Sullivan, Cheryl L.; Nash, Marilyn. 2007. Soy on the menu: Recipes for foodservice. Champaign-Urbana, Illinois: Illinois Center for Soy Foods. 52 p. Illust. No index. 26 cm. Series: Soy in the American Kitchen.

• **Summary:** This book has a creative format: (1) An outer color cover folds over the white spiral binding. (2) The pages are spiral bound across the top. (3) The bottom unfolds like a gusset so the book stands up by itself on a table with the pages angled slightly back on a table. (4) A CD-ROM comes with the book. Remarkably, the whole package sells for only \$3.00!

Contents: Bringing soy foods to the American table: Soy in foodservice, why choose soy?, soy foods, vegetarian and vegan recipes [in this book], recipe information, nutrient information, acknowledgements. Recipes: Appetizers. Breakfast. Breads. Salads. Soups. Side dishes. Main dishes. Desserts.

The recipes in this book use: Soy flour, soymilk,

tofu, textured vegetable protein / TVP [texture soy flour], edamame, black soybeans, soy analogs [meat and dairy analogs].

Sidebars include: Biodiesel (p. 10). Research shows kids like soy in school lunches (p. 11). Uncommon soy foods: Tempeh, miso, okara, natto. Are you soy savvy?: Why is soy flour added to baked goods? (p. 14). U.S. soybean production, yield, exports, and domestic usage (1979 vs. 2004) (p. 16). Industrial uses of soybeans: Soy candles, ink, biodiesel, soy cleaners, waterproofing sealants, soy silk (fabric). Are you soy savvy? Edamame (p. 19). INTSOY (p. 22). NSRL (p. 24). What is the soybean checkoff? (p. 27). WISHH initiative for soy in human health (p. 29, 30). Illinois Soybean Association (p. 34). What is okara? Why should you shake up a carton of soymilk? (p. 39). Make your own tofu (p. 47). Address: 1. M.A., R.D., Research Dietitian; 2. Ph.D., Project coordinator. Both: 170 National Soybean Research Center, 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 244-1706 or www.soyfoodsillinois.uiuc.edu.

2051. McKee, David. 2007. Focus on Paraguay: Soy complex accounts for 10% of nation's gross domestic product and the biggest share of its exports. *World Grain* 25(6):32, 34-36. June.

• **Summary:** Paraguay is a land-locked nation between Brazil and Argentina; it is relatively poor, lightly populated, and pastoral. The expansion in soybean acreage during the past 10 years has been rapid and is still accelerating. In 2007 the country planted 2.4 million hectares of soybeans.

ADM, Bunge, Cargill and Louis Dreyfus each has a major presence in the country, but Cargill is the most important. "Relying on its own network of 40 country elevators and port facilities, the Paraguayan subsidiary Cargill Agropecuaria S.A. originates 1.3 million tonnes of soybeans and grain per year." Although Cargill crushes 65% of the soybeans it originates, most of the beans are exported on barges down the Ria de la Plata to Uruguay, Argentina, or Brazil for "transshipping in ocean vessels."

A bar chart shows Paraguay's soy complex exports (in 1,000 metric tons) from 2000-01 to 2006-07. Soybeans are by far the biggest item exported, followed by soybean meal and soybean oil. Address: Grain industry consultant.

2052. Archer Daniels Midland Co. 2007. Annual report: Growing opportunity. P.O. Box 1470, Decatur, IL 62525. 6 + 84 p. Oct. 28 cm.

• **Summary:** Net sales and other operating income for 2007 (year ended June 30) were \$44,018 million, up 20.3% from 2006. Net earnings for 2007 were \$2,162 million, up 64.8% from 2006, and the company's third consecutive year of record earnings. Earnings per share have risen each year, from about \$0.60 in 2003 to \$3.30 in 2007. Cash dividends and shareholders equity have also increased steadily.

On pages 2-3 is a color photo of and message from

Patricia A. Woertz, Chairman, CEO, and President of ADM. "By almost any measure, 2007 was an excellent year for ADM." In a first for ADM, the company bought back 15.4 million shares of ADM stock. ADM opened two new biodiesel plants in the U.S., and one in Brazil, and expanded its oilseed crushing capacity at five North American plants.

On the outside front cover is a color illustration showing how "ADM is uniquely positioned at the intersection of three global trends: growing demand for food to feed the growing and more prosperous global population; increasing demand for energy agriculture and, in particular, transportation fuels from renewable resources; and growing desire for environmental improvement."

ADM's global network, operating in 60 countries, has 240 processing plants and 27,000 employees. "ADM is the global leader in BioEnergy: the largest producer of ethanol in the U.S., and one of the largest producers of biodiesel in Europe." "ADM operates one of the largest and most advanced origination, transportation and logistics networks in the world. Through a fleet of trucks, railcars, barges, and ship charters, the Company is able to take grains from anywhere they are produced in the world, process them into a diverse slate of products, and move these products to any destination in the world."

Accompanying the annual report is a "Notice of Annual Meeting" (39 p.). Patricia A. Woertz (who joined ADM in May 2006 as president and CEO) had a 2007 salary of \$1.2 million, a bonus of \$1.5 million, and various other compensation totaling \$7.6 million (p. 18). Mr. G. Allen Andreas resigned as Chairman and as director of the company effective Feb. 3, 2007. "Pursuant to a Transition Agreement dated as of May 5, 2006 between the company and Mr. Andreas, as amended, Mr. Andreas will remain an employee of the company through June 30, 2008, and will receive a salary of \$1 million per year during the term of his employment" (p. 5). Address: Decatur, Illinois.

2053. NSRL Bulletin (*National Soybean Research Laboratory, Urbana, Illinois*). 2007. Game day chili scores big! 14(3):6. Oct.

• **Summary:** "Cheryl Sullivan and Marilyn Nash, with Illinois Center for Soy Foods (ICSF) and the National Soybean Research Laboratory (NSRL) won top honors for the University of Illinois with their Game Day Chili at the Sixth Annual International Beer and Chili Cook-Off in Urbana, Illinois.

"Over 2,500 attendees sampled 11 different kinds of chili and judges proclaimed the vegetarian chili made with soy to be the best overall. Judging criteria included 5 factors: aroma, consistency, color, taste and aftertaste. The chili was judged on whether it smelled appealing and looked appetizing. It was also assessed based on how well the combination of ingredients melded together, if it tasted good and if after swallowing there was a pleasant aftertaste.

“How good can soy taste? Just ask the judges who gave top honors to Game Day Chili. It was the only entry among all the competitors that included soy. A blind judging format was used, so judges were not aware Game Day Chili was meatless.

“Last year was our first time to enter the contest and participating in 2006 really gave us valuable knowledge for this year’s winning recipe,” said Marilyn Nash, Project Coordinator. Nash commented that one of the recipe’s unique ingredients was chipotle chilies in adobo sauce. ‘It really gave the chili a pleasing smoky flavor.’

“We were the only meatless chili being offered to attendees and many of those who tasted our chili appreciated the fact that it was delicious and vegetarian,” said Cheryl Sullivan, Registered Dietitian.

“Sullivan provided details on the soy component of the recipe. ‘Our recipe incorporates textured vegetable protein, also known as TVPTM, or textured soy protein. It is made from defatted soy flour that has been texturized to resemble meat. TVPTM is a high quality protein and also a good source of fiber. People can substitute it for some or all of the meat in their own favorite chili recipe,’” remarked Sullivan.

“The University of Illinois has a longstanding reputation in the soy area—everything from seed production to processing to nutrition. The recipe was perfected in the Illinois Center for Soy Foods test kitchen located in the National Soybean Research Center on campus at 1101 W. Peabody Drive, Urbana, IL.

“If you’re looking for a crowd pleaser for your next tailgate party or family get together, consider Game Day Chili.”

2054. Soyatech, Inc. 2007. *Soya & Oilseed Bluebook* 2008. Bar Harbor, Maine: Soyatech. 446 p. Nov. Comprehensive index. Brand name index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the 2nd year in a row that the *Bluebook* (a \$95 value) has been sent free of charge to qualified industry members. On the cover are color photos of seven different crops (mostly growing in fields) covered in this book. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hempseed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed. Note that hempseed, jatropha, linseed, and safflower have been added this year.

On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa) titled “Technology doesn’t have to be complicated to be effective.” Photos show applications of some of the company’s products: soymilk ingredients, tofu ingredients, bakery ingredients, and egg replacers. On the first page is a full page color ad from Bunge North America (St. Louis, Missouri). On the back cover is a full page color ADM ad titled “Where does healthy begin?” showing a mother talking with her young daughter

in the back of a pickup, on a farm. The tag line is “Meeting today’s demands. Envisioning tomorrow’s needs.”

In the Foreword, Peter Golbitz writes: “We no longer determine the price of oilseeds and grains based solely upon their value as a food or feedstock—we now factor in what their value may be as an alternative source of energy. The rise in commodity prices that we have seen over the past year... has been primarily driven by the use of, or the anticipated use of, agricultural crops for energy. Whether or not we can ever grow enough crops to make a substantial contribution to our energy supply is now being debated...” “The continuing removal of trans-fats from food applications has created a boom market for oils, other than those that are hydrogenated,....”

“Soyatech’s role in all of this has been to provide as much information as possible to the players throughout the value chain... Soyatech’s seminal reference, the *Soya & Oilseed Bluebook*, will continue to evolve... and provide the best information available on the industry.” Address: 1369 State Hwy 102, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

2055. Lester, Bill. 2007. Biodiesel plants being built in the USA (Interview). *SoyaScan Notes*. Nov. 6. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Many biodiesel ventures have failed for lack of a source of soybean oil. “Most of the biodiesel plants that are being built today are being built by people who have direct ties to a soybean crusher, which becomes a reliable source of crude / unrefined soy oil.” For example, ADM is a partner in the biodiesel plant being built in Missouri. AGP has been big in biodiesel since it is a big soybean crusher that can supply the crude soybean oil. Address: Omaha, Nebraska.

2056. *SoyaScan Notes*. 2007. Chronology of major soy-related events and trends during 2007 (Overview). Dec. 31. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Jan. 1—Soyfoods Center changes its name to Soyinfo Center.

Feb.—The Soy Connection for the Food Industry (Vol. 1, No. 1) starts to be published by United Soybean Board as a free e-newsletter. The subject of the first issue is Qualisoy soy oil.

March 6-8 International Soy Utilization conference held in Bangkok, Thailand. It is organized by: The Institute of Nutrition, Mahidol University (INMU), ASA International Marketing (ASA IM), and the Soy Food Forum Southeast Asia (SFF).

April 4—Organizations listed in the *Soya & Oilseed Bluebook* are invited and enabled to update their own listings online. The update listing will appear as soon as the *Bluebook* editors review it and in the print edition in the fall. The *Bluebook* will continue to be printed as a bound book. Preferred customers will receive a free copy. Qualified

people or organizations in the industry who request a copy pay shipping and handling. Those outside the industry must pay for shipping and handling plus a \$95 fee.

June 11—The Hain Celestial Group completes its acquisition of the tofu and meat-alternatives business of WhiteWave Foods Co., a subsidiary of Dean Foods. The product line includes grilled and baked tofu, seitan, tempeh, etc. These products are expected to complement Hain Celestial's existing meat alternatives under the Yves brand in Canada and the United States. The White Wave tofu business generated sales of approximately \$8 million in the last financial year. Dean Foods keeps Silk soymilk.

July 11—Solae announces that it has completed its purchase of Cargill's Prolisse line of isolated soy proteins (ISP; soy protein isolates), including the patented membrane technology for processing ISP.

Aug. 7—SunOpta (incl. SunRich), headquartered in Canada, announces that it has acquired a soymilk plant in Heuvelton, New York, from ProSoya Corporation (Ottawa, Ontario). Allan Routh is president of the SunOpta Grains and Foods Group.

Aug. 16—CPM (Waterloo, Iowa) acquires Crown Iron Works (Minneapolis, Minnesota). CPM is owned by Golbert Global, a private equity group. The acquisition doubles the size of CPM.

Sept. 11—Hain Celestial Group announces it will delay filing its annual report with the U.S. Securities and Exchange Commission (SEC) pending a review of its practices in granting stock options. Thus, the annual report was received by shareholders in April 2008, rather than the typical Nov. 2007.

Nov. 5—Symington's, a major U.K. food manufacturer, has acquired the dry-mix products from Hain Celestial (formerly known as Haldane Foods) for an undisclosed sum. In the purchase of Hain Celestial's dry mix operation, Symington will take over the Barrow based production centre from Hain Celestial and will enable the company to increase its stake in the growing health food and vegetarian sector. Main products in the acquisition are couscous, sport nutrition, snack pots and vegetarian meals. Brands acquired include Granose, Realeat, Direct Foods, Organic and Amazing Grains. Granose was owned by Haldane Foods which also owned Direct Foods and Realeat. So you will also find Sosmix and Burgamix have disappeared as well—but they have returned under the Granose brand. We now have the Granose Sausage Mix, Burger Mix and others that have replaced the Realeat and Direct Foods Sosmix and Banger Mix as well as the Burgamix. Popular products like Nut Roast, Cashew Nut Roast and Chicken Style Bake were discontinued following the sale of the Realeat, Granose and Direct Foods brands.

2057. Hain Celestial Group, Inc. (The). 2008. Annual report 2007. Melville, New York. 8 + 69 + 3 p. April. 28 cm.

• **Summary:** Net sales for the year ended 30 June 2007 were \$900.4 million, up 21.9% from 2006. Net income in 2007 was \$47.5 million, up 22.1% from 2006.

Acquisitions and divestitures: On 8 Dec. 2006 Hain acquired Haldane Foods Ltd., a UK-based producer of meat-free food and non-dairy beverage products, from the Archer Daniels Midland Co. (ADM). Haldane's brands include Realeat frozen foods, Granose, Direct Foods and Realeat dry mixes, and Granose non-dairy beverages. Price: About \$10.1 million.

On 11 Jan. 2007 Hain acquired Avalon Organics, a leader in body care, for approximately \$126.1 million in cash. This includes the brands Avalon Organics, Alba Botanica, and Alba Organics. On 7 Dec. 2007 Hain acquired Tender Care International, Inc., a marketer and distributor of chlorine-free and gel-free natural diapers and baby wipes under the Tender Care and Tushies brand names for \$3.9 million in cash (see 2008 Annual Report, p. 37).

Most of the report is Form 10-K/A. A table of the company's common stock prices, as listed on the NASDAQ Global Select Market under the ticker symbol Hain, shows the highs for FY 2006 ranged from \$20.59 to \$27.94. The highs for FY 2008 ranged from \$32.33 to a record high of \$35.14.

Page F-2: "On June 15, 2007, we announced that the company had received an informal inquiry from the SEC [Security and Exchange Commission] concerning the company's stock option granting practices and the related accounting and disclosures." An independent investigation was conducted. The numerous problems found in the dating and documentation of stock options are discussed. For example: "Approximately one-third of all options granted were priced at quarterly or annual lows." "Some grant dates in earlier periods appear to have been selected in hindsight." Tables on page F-8 and F-9 show that the above problems resulted in \$6.5 million of additional income taxes and a total loss to the company of \$11.7 million. For example, net income for FY 2006, previously reported as \$37.067 million, is now restated as \$36.367 million, a decrease of about 1.9%.

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (34 p.). Irwin Simon, the founder and CEO, age 49, had the following annual compensation: Salary: \$1.25 million. Total compensation: \$3.851 million. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2058. Messina, Mark J. 2008. Update on research on the health benefits and risks of soy (Interview). *SoyaScan Notes*. July 26. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Analysis of the strengths and weaknesses of the Harvard study showing an association between isoflavone intake and sperm counts, by Cavarro et al., and of the Indonesian study showing an association between

tofu consumption (but not tempeh consumption) and mental function. In the latter study formaldehyde used as a preservative in tofu may have caused the problem.

Different basic types of scientific studies involving humans: Epidemiologic studies, case control, cross sectional, prospective (Framingham), intervention, in vitro, in vivo, food frequency questionnaires. Pilot studies vs. full studies.

Second incarnation of the Harvard study. Biological basis for the Harvard study. Effect more pronounced on overweight people. Four biggest weaknesses in the Harvard study: (1) Only looked at 15 different soyfoods but not at other foods consumed, nor at exercise. (2) Four quartiles based on soy intake did not show a dose response. (3) In the 2nd group soy intake was too low to be significant. (4) Ejaculate volume increased.

Another very important study by J.H. Mitchell in 2001 was titled "Effect of a phytoestrogen food supplement on reproductive health in normal males" (Clinical Science {London}). Involved 12 men

Vittorio Unfer has done important research and a case study on use of soy isoflavones to increase sperm count and fertility. A five-year study on endometrial hyperplasia is of long-term concern.

Feminizing effect is a big unknown. What kind of study could be designed. Two cups of Silk soymilk contains 50 mg of phytoestrogens.

Mark is organizing a soy symposium in Japan in November. At least 12 of the papers are good enough to be the subject of news coverage.

The scientific health evidence in favor of a vegetarian diet over a prudent diet that contains meat is no longer impressive. The evidence in favor of fruits and vegetables has grown weaker.

The evidence that soy is good for health is stronger now than 5-10 years ago, but in a more modest way. But the industry has gotten so small: ADM, Solait, and Silk (\$400 million retail sales). Revival Soy has reformulated many of its products so that they no longer contain soy. Address: PhD, 439 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2059. Archer Daniels Midland Co. 2008. Annual report: Vital to the world. P.O. Box 1470, Decatur, IL 62525. 12 + 84 p. Oct. 28 cm.

• **Summary:** This annual report is mainly Form 10-K with 12 pages of color front matter. Net sales and other operating income for 2008 (year ended June 30) were \$69,816 million, up 58.6% from 2007. Net earnings for 2008 were \$1,802 million, down 16.7% from 2007. Earnings per share were down, but cash dividends per common share were \$0.49, up 14% from 2007, and shareholders equity was \$13,490 million, up 19.9% from 2007. ADM extended its record of uninterrupted dividend payments for 76 years. On pages 2-4 is a color photo of and message from Patricia A.

Woertz, Chairman, CEO, and President of ADM.

Accompanying the annual report is a "Notice of Annual Meeting" (41 p.). For calculating performance-based annual cash incentives, ADM uses three criteria (p. 13): (1) The company's return on net assets (RONA) for fiscal year 2008 (60% weighting). (2) The company's achievement of workplace safety objectives (20% weighting), and (3) the company's achievement of personal development objectives (20% weighting). Address: Decatur, Illinois.

2060. Soyatech, LLC. 2008. Soya & Oilseed Bluebook 2009: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 426 p. Dec. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the 3rd year in a row that the *Bluebook* (a \$95 value) has been sent free of charge to qualified industry members. On the cover is a farmer, wearing blue jeans, a red short and red cap, standing in a field of soybeans, with a cloudy blue sky overhead. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hempseed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed—the same as last year.

Soybean statistics are given as follows:

Production (pages 349-54):

U.S. Soybean: Planting & Harvesting Dates

U.S. Soybean: Acreage, Yield & Production

U.S. Soybean: Harvested Acreage by State

U.S. Soybean: Planted Acreage by State

U.S. Soybean: Yield by State

U.S. Soybean: Production by State

Argentina Soybean: Production & Yield by Province

Brazil Soybean: Production & Yield by State

Canada Soybean: Production, Yield & Value

Canada Soybean: Production, Supply & Utilization

World Soybean: Production & Area Harvested

Crop Marketing & Value (p. 355-56):

U.S. Soybean: Crop Value, U.S. and Major Producing States

U.S. Soybean: Prices Received by Farmers

U.S. Soybean: Prices of No. 1 Yellow

U.S. Soybean: Price Support Operations

Processing & Products (p. 357-61):

U.S. Soybean: Supply, Disposition, Acreage, Yield & Price

U.S. Soybean Products: Value & Crush Margin Per Bushel

U.S. Soybean Meal & Oil: Supply & Disposition

U.S. Soybean Meal: Average Wholesale Price

U.S. Soybean Meal: Stocks, Production &

Disappearance By Month

U.S. Soybean Oil: Utilization

U.S. Soybean Oil: Prices

U.S. Soybean Oil: Supply, Distribution & Price

Argentina Soybeans & Products: Supply & Distribution  
Brazil Soybeans & Products: Supply & Distribution  
Export (p. 362-66):

U.S. Soybean Exports: By Region, Country & Total Value

U.S. Soybean Cake & Meal Exports: By Region, Country and Total Value

U.S. Soybean Oil Exports: By Region, Country & Total Value

U.S. Soybean Exports: By Port & Destination

Brazil Soybean & Product Exports: By Country

U.S. Soybean Exports: By Month

On the inside front cover is a color ad from Tramco—"the world's most complete line of chain and enclosed belt conveyors." On the first page is a full page color ad from Bunge North America (St. Louis, Missouri); on the next page a full page color ad from desmet ballestra—which supplies healthy technologies for oils containing zero trans fat. SunOpta has a full-page ad on page 4.

On the back cover is a full page color ad from ADM titled "Breathtaking" showing a man leaping off a cliff high above a green valley. The text: "ADM breaths new life into functional foods with its all-natural NutriSoy soy isolates. Water washed to leave many nutrients intact."

In the Foreword, Joe Jordan (General manager and Bluebook content director) writes about feeding the world's population of 6 billion 700 million. Peter Golbitz is no longer with the company he founded (see 2008 interview). Address: 1369 State Hwy 102, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

2061. Bennett, Beverly Lynn; Sammartano, Ray. 2008. The complete idiot's guide to vegan cooking. New York, NY: Alpha Books. Published by the Penguin Group. xix + 328 p. Illust. Index. 23 x 19 cm.

• **Summary:** Dedicated: "To those who are guided by the open heart and open mind of compassion."

Being vegan is "not about being on some trendy new diet; it is a lifestyle" (p. 85).

The index contains 48 entries for tofu, 37 for tamari, 30 for soymilk, 8 for tempeh, 6 for TVP, 4 each for miso, soy yogurt, tofu cream cheese, and seitan, 2 for silken tofu and Soyrizo, and 1 each for edamame, soynut butter, and Soyatoo (natural nondairy whipped topping).

"There are so many reasons to go vegan—health and nutrition, weight loss, green and sustainable living, and prevention of cruelty to animals. With over 200 mouth-watering recipes and tips for converting meat- and dairy-based dishes into vegan ones, The Complete Idiot's Guide to Vegan Cooking will help readers enjoy a healthy vegan diet without sacrificing taste" (publisher's description). Address: 1. Vegan chef, author, and host of [veganchef.com](http://veganchef.com) since 1999; 2. Long-time vegan cook and "foodie".

2062. Fiore, Toni. 2008. Totally vegetarian: easy, fast, comforting food for every kind of vegetarian. Philadelphia, Pennsylvania: Da Capo / Life Long. xi + 273 p. + 16 pages of unnumbered plates. Illust. (some color). Index. 24 cm.

• **Summary:** A mostly vegan cookbook; each recipe that calls for milk as an ingredient gives soy milk as an alternative. Rarely, if ever, have we seen such a dazzling and delicious variety of vegetarian soy recipes and information in one book. One purpose of this book is to demystify the world of vegetarian cookery and vegetarianism—especially for non-vegetarians.

The Introduction tells the story of the author's gradual transition from typical meat eater (living in Europe), to animal rights activist in Maine, to vegetarian. She advises: Buy locally, eat seasonally, buy organic, use your intuition (and imagination).

The chapter "Stocking the pantry" contains basic information (p. 39-42, 45-46) about sea vegetables, seitan, and soy products, including edamame, miso, tempeh, textured vegetable protein (TVP), tofu, and soy sauce (Light Chinese soy sauce, shoyu, and tamari), and Worcestershire sauce (vegetarian; without anchovies)

Soy related: Golden tofu bites (with one 14-ounce package firm tofu, frozen, then thawed... p. 50). Red pepper tofu dip (p. 67). Vegetarian Caesar salad (with "silken soft tofu, p. 76). Edamame and apple salad (p. 81; kids love edamame). Boiled edamame pods. Curried lima bean and rice salad with tempeh (p. 92). Tofu lime dressing (with silken tofu, p. 102). Spinach and tofu soup (p. 108). Miso soup. Hot and sour soup (with firm tofu, p. 109). Roasted pumpkin bisque (with soy milk, p. 114). Corn bread (with soy milk, p. 130).

One chapter is titled "Tofu" (p. 145-53): Seared tofu. Tofu sour cream. Baked tofu meatballs. Tofu with parsley sauce. Tofu kebabs with tamari-ginger sauce. Tofu pot pie.

The next chapter is "Tempeh and seitan" (p. 155-69): Best braised tempeh (with sweet and spicy marinade, p. 197). Tamari tempeh. Barbequed tempeh. Jamaican jerk tempeh. Malaysian curried tempeh. Greek stuffed cabbage (with lemon cream sauce and tempeh). Tempeh and cabbage. Moroccan stew. Tempeh cacciatore. Tempeh fajitas. Tempeh marsala. Homemade seitan (from bulk vital wheat gluten). Penne with onions and vegetarian bacon (p. 175). Spaghetti tofunese (p. 176). Tofu ravioli with butter and sage (p. 181-82). Bechamel (with soy milk, p. 184). Tofu lasagna (p. 185-86). Vegetable lasagna (with tofu filling, p. 187). No-egg salad sandwiches (with tofu). Mock fish salad sandwiches (with tempeh). Mock Maryland crab cakes (with tofu, p. 196). Tempeh club sandwiches (p. 197). Cornhusker's reubens (with tempeh, p. 198). New York hot dogs and onions (with vegetarian hot dogs, p. 199). Soysage-pepper sandwiches (with Italian-style vegetarian sausage links, p. 200). Eggplant meatballs (with tofu, p. 214). Stuffed sugar

pumpkins (with tempeh, p. 215). Fluffy mashed potatoes (with soy milk, p. 219). Spinach tortillas with potatoes (and seitan, p. 228). Pfannkuchen (with soy milk, p. 239). Rye bread French toast (with soy milk, p. 240). Loaded bagel (with tofu cream cheese, p. 243). Tofu cannoli (p. 250). Tofu coconut cream pie (like a cheesecake, p. 251). Basmati rice pudding (with soy milk, p. 252). Banana chocolate chip cake (with soy milk, p. 256).

About the author: "A vegetarian for over 20 years, Fiore is a self-taught chef who first embraced Mediterranean culinary techniques and philosophy while growing up in Italy." But she spent the first six years of her life in Germany. Address: Portland, Maine. Host of the national public television show Delicious TV's Totally Vegetarian.

2063. Schneider, Michael. 2008. Major sources, composition and processing. In: Frank D. Gunstone, ed. 2008. *Phospholipid Technology and Applications*. Bridgewater, England: The Oily Press. xii + 201 p. See p. 21-40, Chap. 2. Illust. 24 cm. Series: Volume 22 in The Oily Press Lipid Library. [38 ref]

• **Summary:** Contents: Introduction. Occurrence: Glycerophospholipids, sphingophospholipids. Phospholipid processing: Vegetable phospholipids (fluid {crude} lecithins, solvent technologies {membrane degumming, membrane de-oiling, acetone de-oiling, carbon dioxide de-oiling, alcohol fractionation, chromatographic purification}), animal phospholipids (egg phospholipids, milk phospholipids, marine phospholipids, brain phospholipids). Modification of phospholipids: Chemical modification (chemical hydrolysis, acetylation, hydroxylation, hydrogenation). Commercial uses (summarized in tables 2.10 and 2.11).

Figures: 2.1. Model of a biological membrane (from *Scientific American*).

2.2 Structure of diacylglycerophospholipids; X is residue from choline (PC), ethanolamine (PE), inositol (PI), glycerol (PG), water (PA).

2.3 Structure of sphingomyelin.

2.4 Vegetable lecithin processing (including crude soya lecithin, standard lecithin, modification (hydroxylation), acetylation, hydrolysis), fractionation (with acetone, or ethanol), and compounding (using emulsifiers, carriers, or fats and oils).

2.5 Egg yolk phospholipid processing principles (in order to get various products, such as egg yolk powder or yolk lipids).

2.6 Milk fat globule membrane (remarkable complex).

Tables: 2.1 Phospholipid content of biological materials (% of dry matter; soybeans 0.5, sunflower seeds 0.2, rice bran 1, egg yolk 17, salmon roe 8, milk 0.1).

2.2 Main phospholipid classes of commercial interest and their abbreviations: The two main classes are (a) glycerophospholipids and (b) sphingophospholipids. In class (a) are: phosphatidylcholine (PC), phosphatidylethanolamine

(PE), phosphatidylserine (PS), phosphatidylinositol (PI), phosphatidylglycerol (PG), diphosphatidylglycerol (DPG), phosphatidic acid (PA), N-Acyl-phosphatidylethanolamine (NAPE). In class (b) are: ceramide phosphocholine (sphingomyelin).

2.3 Phospholipid composition in oil-free polar lipid extracts for commercial raw materials (%). Gives values for soya [soybeans], rapeseed, sunflowerseed, corn, egg, milk, salmon roe. For example, egg is the richest source of PC (74%) whereas soya has the lowest content of PC (22%).

2.4 Main fatty acid composition of phospholipid mixtures (%). Gives values for soya, rapeseed, sunflowerseed, corn, egg, milk, and salmon roe. For example, egg is the richest source of 16:0 (30%) compares with only 20% for soya.

2.5 Composition of commercial fluid soya lecithin (%). It contains 52% of 6 phospholipids, 6% glycolipids, 4% carbohydrates, 38% neutral lipids, and five fatty acids (palmitic acid 18%, stearic acid 5%, oleic acid 11%, linoleic acid 59%, and linolenic acid 7%).

2.6 Typical composition of a commercial de-oiled soybean lecithin (%). It contains 81% phospholipids, 10 glycolipids, etc.

2.7 Alcohol fractionation of soybean lecithin.

2.8 Chromatic systems for phospholipid fractionation / purification.

2.9 Lipid composition of commercial marine phospholipid products (%). Gives values for krill, fish processing by-products, and salmon eggs.

2.10 Commercial phospholipid products and their predominant use. 18 commercial products are listed. The uses are: Food, animal feed, industrial, cosmetics, pharma [pharmaceutical], and dietetics. For example: The main uses / applications of fluid soybean lecithin (oil containing) are animal feed, food, industrial, cosmetics, pharma. and dietetics. By contrast, de-oiled soybean lecithin fractions (PC 50-80%) are food, cosmetics, pharma, and dietetics.

2.11 Major companies employing a range of phospholipid preparations. The companies are: ADM (US), Solae (US), Cargill (Germany), Lipoid (Germany), Phospholipoid (Germany), Chemi (Italy), Lecico (Germany), Tsuji Oil Mill (Japan), Fresenius-Kabi (Sweden), Doosan (Korea), Nippon Oils and Fats (Japan), Biofer (Italy), Avanti Polar (USA), Belvo (Italy), Enzymotec (Israel), Lipogen (Israel), and Neptune (Canada). For each company is given: Website, country, and which of 13 commercial phospholipid products it sells. Address: Lecithos-Functional Lipid Innovation and Consulting, Freinsheim, Germany.

2064. Soyatech; HighQuest Partners LLC. 2008. How the global oilseed and grain trade works. Southwest Harbor, Maine; Topsfield, Massachusetts. 80 p. Prepared for United Soybean Board (USB) and U.S. Soybean Export Council (USSEC).

• **Summary:** A comprehensive, in-depth overview for both beginners and experts.

Contents: Introduction–History of the Soybean Trade, Modern Uses of Soybeans, Trends and Developments Affecting the Use of Soybeans, Recent Trends in Trade, Overview of Major Origination and Consumption Countries.

Section 1–Competitiveness of Soybeans and Other Oilseeds: Competitive Oilseeds, Protein and Oil Content.

Section 2–Seed Technology: Major Players in Seed Technology (Monsanto, DuPont and Syngenta), Research and Development in Seeds, Relationships with Major Soybean Processors, Persuading Farmers to Use New Seeds, Profits and Premiums, Impact of Traits on Production Techniques and Sustainability, Successes and Barriers to Entry.

Section 3–Production-Growers: World Soybean Growing Regions, Factors That Explain the Ongoing Shift in World Production to Brazil and Argentina, U.S. Soybean Growing Regions, The Grower’s Role in the Global Soybean Trade, Planting Decisions, Seeds and Crop Inputs, How and Where Growers Sell Their Crops.

Section 4–Quality: Soybean Quality, Cleaning in Brazil and the U.S., Soybean Meal Quality.

Section 5–Grain Elevators: Purchasing the Crop, Elevator Marketing Options, How Elevators Sell Their Crops, Blending, Interior Elevators, River Elevators and Export Terminals.

Section 6–Processor Soybean Crusher: How a Soybean Processing Facility Operates, 5 Steps of Hexane Extraction (Handling and Elevator Operations, Preparation and Conditioning, Solvent Extraction and Oil Desolventizing, Flake Desolventizing, Oil Refining), Further Oil Processing, Crush Margin Review, Decision of When to Crush, Selling End Products, Pricing Each Leg of the Soybean Complex, Incidental Input Costs,

Section 7–Transportation Logistics: Transportation, Growers, Elevators, Soybean Processors, International Sales.

Section 8–Risk Management Tools: Risk and Markets, Brief History of Agricultural Futures and Options, Brief Description of Each Financial Instrument, (Futures Options on Futures, Commodity Swaps, Spreads / Straddles), Basis, Chicago Board of Trade Price, Basis Impacting Trade Volumes, Risk Management Tools, How Commodity Funds and Indexes Affect Chicago Board of Trade Prices,

Section 9–End Customers and Users. Soybeans, Soybean Meal and Soybean Oil: First-Tier Customers in Domestic Markets, First-Tier Customers in the International Markets (Soybeans, Soybean Meal, Soybean Oil), Major Grain Trading Companies (ADM, Bunge, Cargill, Louis Dreyfus), How International Sales Work, Competitiveness of U.S. Soybeans and Products, in the Export Market.

Section 10–Conclusions, Trade Flows (Soybeans, Soybean Meal, Soybean Oil), Description of the U.S. as Residual Supplier for International Market, Soybeans and

Soybean Products Originated in South America are Cheaper than Those Originated in the U.S., How Can the U.S. Become the Dominant Supplier of Soybeans, Meal and Oil?

Appendix: Countries in Each Region of Trade Matrix, International Trade Flow Chart, World and U.S. Soybean Supply & Demand, 2002/03–2006/07 Tables, Major Import Regions for Global Soybean Supply, Index of Maps, Tables and Graphs.

The Introduction–History of the Soybean Trade begins: “Soybeans have been cultivated in China for over 5,000 years for food and as a source of drugs. In 2853 B.C., the Emperor Shen-nung named soybeans as one of the five sacred plants, with rice, wheat, barley and millet.”

Note: What terms does the report use to discuss genetic engineering? The terms “biotechnology” and “biotech” are used a total of 5 times. The term “genetically modified” is used 3 times, but its abbreviation, GMO, is used 33 times. The terms “genetically engineered” or “genetic engineering” are not used at all. Address: Washington, DC.

2065. WISHH. 2009. WISHH–World Initiative for Soy in Human Health (Website printout–part). [www.wishh.org](http://www.wishh.org) Retrieved Jan. 29.

• **Summary:** Contents: Home. About WISHH: Mission and vision, WISHH Committee, Our supporters / partners, Staff. Global outreach: WISHH has activities in the following countries, listed alphabetically and highlighted in green: Afghanistan, Bangladesh, Botswana, Burkina Faso, Cambodia, Ivory Coast, Ghana, Guatemala, Haiti, Honduras, India, Indonesia, Kenya, Mozambique, Pakistan, Senegal, South Africa, Uganda, Vietnam, Zimbabwe. These countries are shown on a map of the world and each program is described in considerable detail if you click on the name of that country below the map. Another group of countries in the same list, whose names are written in black, are those where WISHH presently has projects but (being very busy and active) has not yet had time to describe that project and add a color photo. They are: Angola, Democratic Republic of the Congo (DRC), Ethiopia, Malawi, Nicaragua, Nigeria, Tajikistan, Tanzania.

Media communications: Press releases, Newsletters, Annual reports, Photo gallery (very interesting). Workshops / Training: International workshops, Washington, DC, workshops, Midwest workshops, Other training. Nutrition library: Nutrition HIV/AIDS overview, WISHH presentations, WISHH papers / publications, WISHH HIV/AIDS activities, HIV/AIDS resources, SoyCow & VitaGoat, Economics of soy. Resources / Links: Soybean organizations and agencies (33), U.S. government and international organizations (13). About soy: Soy products, composition of soy, US soy production, Supplier list. Contact us: The WISHH office is co-located with the American Soybean Association office near St. Louis, Missouri.

“Global outreach: WISHH works with multiple private

voluntary organizations and commercial companies in more than 28 different developing countries in Africa, Asia and Central America. Many of these groups are using U.S. high-protein soy to improve diets and health as well as encourage growth of food industries in developing countries.”

Supplier list—Suppliers of soy and soy products: ADM, Bunge Milling, Cargill, Inc., CHS (Cenex Harvest States), Soya Kenya (agent for CHS in Kenya), Louis Dreyfus Corp., Nedan Oil Mills (Pty) Ltd. (Afgri Products) (Republic of South Africa), North American Millers’ Association, Rab Processors Ltd. (Malawi), Seba Foods (Malawi), The Solae Co., Soy Afric (Kenya), SunOpta Food Group LLC (USA), Zeeland Farm Soya (USA).

SoyCow & VitaGoat: Both are manufactured and supplied by Malnutrition Matters (Frank Daller), 498 Rivershore Crescent, Ottawa, ON, Canada K1J 7Y7. [www.malnutrition.org](http://www.malnutrition.org). Details about each low-tech machine are given.

Color photos show: (1) Jim Hershey, executive director of WISHH, with Africans interested in soyfoods in Cote d’Ivoire. (2) Ditto. (3) Handsome boy with soy in Mozambique. (4) Jim Hershey drinking soymilk in Malawi. Address: 12125 Woodcrest Executive Dr., Suite 100, St. Louis, Missouri 63141. Phone: (314) 576-1770.

2066. Dawson, Chris. 2009. Re: History of Clearspring and brief biography. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 14. In reply to an e-mail questions from W. Shurtleff. 2 p.

• **Summary:** “Weeks flying by. Sending a note from home, just before I head out to [www.biofach.de](http://www.biofach.de) organic trade fair in Nuremberg.

“Your focus on soyfoods and soya beans is of prime importance *Today*.

“Soya beans are the most misunderstood food/crop/legume.

“Today rain forests are being destroyed to grow soya for animal feed. Japan is the only country/nation which fully understands the true value of soya, producing some 500,000 tons of miso. Only some 10,000 tons goes abroad. In the West, we are so busy making TVP and/or feeding the soya to animals. We have not a clue!

“Sometimes I feel that I should focus the whole emphasis of Clearspring on Miso, to wake up the West to the true value of Soya.

“I became a vegetarian in 1971-1972.

“I came to London in 1974, still a vegetarian but a bit bored with beans sprouts and the like.

“One bowl of miso soup in 1974 and I immediately knew that miso soup was the key to having an exciting vegetarian diet and that miso is a vital food for now and the future.

“1974 April 1st I headed out for London from Auckland, New Zealand. 36 hours of travel! Came here, to further my studies in organic agriculture.

“1977 A bunch of us started The Community Health Foundation here in London. Within that complex, I started: East West Natural Foods, in Old Street, London. The shop

became one of the most important macrobiotic food stores in Europe.

“Already running from around 1974 [what was?]. Peter Bradford, Bill Tara, Harry and Bob Harrop and several others were running Sunwheel Foods.

“I made indirect imports from Mitoku through Sunwheel Foods for the shop.

1978 Oct. I decided to travel through the U.S. and head back to N.Z., to set up an import business of macrobiotic foods there.

“Sunwheel bought East West Natural Foods in about 1979. Peter went to work there, keen to do retailing. The shop may have run with the Sunwheel name for awhile.

“Sunwheel company was sold off in early 1980’s. The managers, Bob Harrop and Jonathan Toase stayed on for a while. Eventually both Bob and Jonathan left. Bob went to work with Peter at the shop. Jonathan started a wholesale company.

“From a hat full of names, the shop became Clearspring Wholefoods, Clearspring being the name suggested by Bob.

“Next, Peter was keen to open a chain of stores. Peter and Jonathan teamed up again to start a wholesale company/warehouse around 1988 for the planned chain of stores. Clearspring became the wholesale company and the shop became Freshlands. Clearspring became the importer from Mitoku. Sunwheel having been sold a couple of times and having lost its interest in Japanese foods.

“1993 British pound collapsed against the Yen. Sunwheel struggled to open L/C [letters of credit] to Mitoku.

“Enter Christopher Dawson (again)! I did stay in N.Z. for a period, importing from Mitoku. I visited Kazama-san in Japan in 1979 and joined Mitoku in 1980. Kazama-san had visited my store in London in 1977-78. I had been with Mitoku since 1980, running around the world doing sales and running around Japan discovering producers, making their products certified organic.

“I decided to personally start a new company in the U.K., buying Clearspring in Sept. 1993, and then making it an international trading house of Japanese Foods and Western organic Foods. Jonathan stayed for a while as manager

“1998 I decided to come to London and run the company on site, rather than giving directions from Japan. Bob Harrop was always giving me a hand at a distance. In 2002 he came onboard full time and is with me today as Finance Director.

“These few notes today and will try to get back to you with some statistics soon.

“Thank you, Christopher.” Address: 19A Acton Park Estate, London W3 7QE, UK. Phone: +44 (0)20 8749 1781.

2067. Shurtleff, William; Aoyagi, Akiko. comps. 2009. *Bibliography of lecithin: 1,504 references from 1793 to 2009, extensively annotated.* Lafayette, California: Soyinfo

Center. 494 p. Subject/geographical index. Author/company index. Printed March 16. 28 cm. [1504 ref]

• **Summary:** This comprehensive bibliography on lecithin focuses on lecithin derived from the soybean. Starting with the early literature, it shows how and why the soybean has become the world’s most popular lecithin source. It concludes with the vast body of literature published since World War II. Thus it is one of the most comprehensive, current, and useful sources of information on lecithin available today.

One of more than 50 bibliographies on soybeans and soyfoods being published by the Soyinfo Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 31 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 36 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author’s address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author’s first name (if given).

It also includes details on 262 commercial soy lecithin products, including the product name, date of introduction, manufacturer’s name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, and author/company index, are also included. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549 [www.soyinfocenter.com](http://www.soyinfocenter.com). Phone: 925-283-2991.

2068. Davies, Henry. 2009. Re: Chronology of work with soy in Southern Africa, 1987 to present. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 17. 2 p.

• **Summary:** 1987 Nov. 1—First got involved with soy and the feed industry.

1987 Nov. 1—Started work on the first extruders to be imported to South Africa used mainly for the manufacturing of full fat soy. Henry initiated the establishment of the Committee for the Evaluation and Standardization of Analytical Methods for Determining the Effects of Full Fat Soya Processing. This committee aims to provide a nationally accepted standard of quality control for processed soy under supervision of the Agricultural Research Council

(ARC) and the National Protein Council.

1998 March–During 1998, he visited a TVP plant in Egypt together with the American Soybean Association (ASA). It was then that he recognized the similarity between the processing systems used for TVP and that of full-fat soy.

1998 May 21–On his return to South Africa, ASA invited him to attend the International Conference on Processing and Utilization of Soybeans (20-21 May 1999) in Pretoria. He was requested to deliver a paper on the subject of soybean for local human consumption. The title thereof: “Current Food Products and Potential in SA”.

1999 July–Invited by Cochrane Fellowship Program to attend a soy training course at the Illinois University on the processing of soy for Human Foods (Small Scale Processing).

1999 Nov.–Elected as executive member of South African Soyfood Association (SASFA).

2000–Attended an intensive international training course on TVP and related issues at Texas A&M University, College Station, Texas, visiting Insta-Pro International offices in Des Moines, as well as a texturized vegetable protein production plant in Vinton, Iowa.

2004 Jan. 1–Started manufacturing of Recharge Instant High Protein Porridge drink after observing the effects of HIV/Aids within the local community and especially co-workers.

2006 July 15–Eden Manufacturing PTY (Ltd) starts a working relationship with WISHH initiating the first VitaGoat and SoyCow units to be installed at the Bergville Training facility.

2006 Aug. 4–Completed the first training centre at the original Eden Manufacturing building situated in Bergville town.

2006 Sept. 19-22–The first Soy Short Course is held at the new training centre in association with SASFA (South African Soyfood Association). 54 people attended the 4-day course. They were taught how to make soymilk and various other soy beverages using the SoyCow (which requires electricity) and VitaGoat (which is bicycle powered). The course was paid for by WISHH.

2006 to 2009 and current–Chairperson of Soy Southern Africa (SSA), previously known as SASFA.

2008 July 21–Install VitaGoat Food Processing System in Shamva, Zimbabwe. The installation was hosted and paid for by HUMANA People to People ([www.humana.org](http://www.humana.org)). At this location, Henry also lectured on soy nutrition. Humana operates a huge farm where they have managed to plant some soybeans for their own use with the VitaGoat, which produces enough soymilk that Humana can provide (free of charge) 500 ml of soymilk daily to each of 400 school children, as well as enough soymilk to use in their own kitchen for food.

2008 Aug. 8–Install VitaGoat Food Processing system in Tugela Ferry, Northern KwaZulu-Natal, South Africa.

2008 Aug. 21–Install SoyCow Food Processing system in Orange Farm, Johannesburg, South Africa.

2008 Oct. 15–Install a VitaGoat Food Processing system in Nahamatanda, Beira, Mozambique.

2008 Nov. 12–Relocate to new premises outside Bergville town.

2009 Jan. 4–Eden Manufacturing engages in the services of a professional social project manager as well as an educationalist / production manager to add further specialised services to their network.

2009 March–Constitute the establishment of the Eden Social Development Foundation to assist with funding of designated projects. Address: P.O. Box 206, Bergville 3350, KwaZulu-Natal, South Africa. Phone: +27 36 448-1605.

2069. Krohn, Tim. 2009. Lowell Andreas dies. *Mankato Free Press*. April 6.

• **Summary:** “The man who helped grow Archer Daniels Midland into an international Giant and who donated millions of dollars to Mankato college, hospitals and other endeavors has died.

“Lowell Andreas, 87, died Saturday at his home in Mankato.

“After World War II, Lowell and brother Dwayne purchased Honeymead in Mankato, growing it to the largest soybean processing plant in the country. They sold it in the 1960s and bought a bank in the Twin Cities.

“They were asked to join ADM where Lowell served as president for six years before retiring. But he remained on the board of directors until recently and always maintained an office in the Mankato ADM plant.

“Dwayne took over as president and led ADM for 25 years until retiring in 1997.

“ADM, with sales of \$70 billion last year, is the world leader in processing soybean oil and the largest producer of ethanol in the world.

“Lowell was born in Lisbon, Iowa, and majored in philosophy at the University of Iowa.

“Lowell and his wife, Nadine, donated to a variety of groups, most notably the arts at Minnesota State University and Immanuel St. Joseph’s Mayo Health System.

“They donated \$4 million toward the \$14 million Andreas Cancer Center being built at ISJ [Immanuel St. Joseph, now renamed Mayo Health System, in Mankato].

“In 2007, Lowell and other family members donated \$7.5 million to MSU [Mankato State University] for an endowment in the name of Nadine, who died in 2005 at age 82.

“‘Nadine had a deep love for the arts, especially theatre,’ Lowell said at the time of the gift.

“Nadine was born in West Liberty, Iowa, and attended the University of Minnesota, where she performed in theater productions and developed a love of the arts.

“The couple also funded the Andreas Theatre in the

Performing Arts Center and provided the naming gift for the Andreas Observatory on campus [at Minnesota State Univ., Mankato].

“A memorial service will be held at 3 p.m. Thursday at First Presbyterian Church in Mankato. A private burial will be in Glenwood Cemetery. Memorials are preferred to the Andreas Cancer Center at ISJ. Mankato Mortuary is handling arrangements.”

2070. Boismenu, Clyde. 2009. Re: U.S. makers of dry whole-bean soymilk. Letter (e-mail) to William Shurtleff at Soyinfo Center, May 28. 1 p.

• **Summary:** This soymilk does not have the okara removed; rather, it is very finely ground or homogenized under high pressure.

(1) ADM. The organic soymilk market would ordinarily be too large for ADM. But they were issued a patent on a product that was re-functionalized after cooking. The equipment for this was installed in a plant ADM was building in Enderlin, North Dakota to process other edible beans and from the start they targeted the organic market with this soybean operation. However, users of the ADM Organic Whole Soybean Powder apparently found it was not as functional as expected and the project was not successful. “ADM is shutting down as I write.” This then put Clyde in the position of having to find some alternate source to keep his customer running. There are actually four: All of them deal only in Non-GMO and Organic soybeans.

“(1) Soylink, Ottumwa, Iowa—is the most interesting. They have the ability to dry de-flavor milled whole raw soybean and then pulverize it to US 1000 mesh without heat damage. This project has so far also not been successful and the company is in the process of being sold (today actually). Dr. Noel Rudie is a very knowledgeable and friendly guy if you want to contact them.

“There are also 3 companies who have developed the means to mascerate soybeans completely enough (high-pressure homogenizers I believe) to make an acceptable soymilk and spray-dried soymilk powder from whole (de-hulled I am sure) soybeans. You will recognize the huge cost saving this represents.

“(2) SunOpta (formerly SunRich) is the longest established.

“(3) Devansoy has long been into soymilk and I am not sure it is publicly known that Cresco Food Technologies manufactures the soymilk products for them.

“(4) Jeneil Biotechnologies—their website shows only cheese and dairy flavors but they tell me they were under a non-compete agreement for some years and spent this time developing everything they make also from soybeans. Among other things, this apparently means a couple of different kinds of soymilk, including enzyme active and whole bean. Jeneil does not advertise nor publicize their soy based line of products and I found them kind of unhelpful.”

Address: LookAlive / Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

2071. Wendel, Armin. comp. 2009. Soybean solvent processing plants worldwide in 2006, including those that make lecithin. Germany.

• **Summary:** This 4-sheet Excel spreadsheet was compiled by lecithin-expert Armin Wendel in 2009. The 5 columns are: (1) Company name. (2) Country. (3) Area (such as state in USA). (4). City. (5) Lecithin? (Yes/No).

The main companies are ADM, Bunge, Cargill, and Ag Processing Inc. Most companies do not make lecithin, except at one location.

The main countries are USA, Argentina, Brasil [Brazil], China, Netherlands, Germany, Spain and Italy are also listed. Address: Germany.

2072. Archer Daniels Midland Co. 2009. Annual report: When a company serves vital human needs, it must perform. P.O. Box 1470, Decatur, IL 62525. 6 + 90 p. Oct. 28 cm.

• **Summary:** This annual report is mainly Form 10-K with 6 pages of black and white front matter. There is to summary of financial statistics to help the shareholder. It seems to say: “Figure it out for yourself.” On page 36 we find: Net sales and other operating income for 2009 (year ended June 30) were \$69,207 million, down 0.88% from 2008. Net earnings for 2009 were \$1,707 million, down 5.3% from 2008.

Accompanying the annual report is a “Notice of Annual Meeting” (18 p.). Address: Decatur, Illinois.

2073. Soyatech, LLC. 2009. Soya & Oilseed Bluebook 2010: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 356 p. Dec. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the 4th year in a row that the *Bluebook* (a \$95 value) has been sent free of charge to qualified industry members. On the cover are six color photos, including a heavily loaded tanker moving through a blue sea, and a farmer standing in a field of soybeans, bending over to examine one of the plants.

Soyatech has moved to a new part of Maine during the past year. This edition of the *Bluebook* contains 74 fewer pages than it did last year. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hempseed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed—the same as last year.

On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa), makers of innovative ingredients for bakery, soymilk and tofu. On the first page is a full page color ad from Louis Dreyfus Commodities; on the next page a full page color ad from desmet ballestra—which supplies healthy technologies for oils containing zero trans fat. SunOpta has a full-page color ad on page 4.

On the back cover is a full page color ad from ADM titled “Trailblazing” showing a man on a mountain bike riding through muddy water. The text: “ADM constantly finds new paths for functional foods with NutriSoy soy isolates.”

Chris Erickson is CEO. Keri Hayes is publisher and events director. In the Foreword, Joe Jordan (General manager and *Bluebook* content director) writes about the now popular word “sustainability” and its various definitions. He asks many questions about sustainability. Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

2074. Shurtleff, William; Aoyagi, Akiko. comps. 2010. History of soybeans and soyfoods in Canada (1831-2010): Extensively annotated bibliography and sourcebook. Lafayette, California: Soyinfo Center. 1060 p. Subject/geographical index. Printed 20 Feb. 2010. 28 cm. Available free of charge at [www.soyinfocenter.com/books/137](http://www.soyinfocenter.com/books/137). [2336 ref]

• **Summary:** Begins with a chronology of soy in Canada from 1831 to 2010. In 1831 the first soy product (“A few dozen India Soy” [sauce]) arrived in Canada. Soybeans were probably first cultivated in Canada in 1855. Contains a full-page map of soy in Canada, plus many historical illustrations and photos, many color. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2075. Messina, Mark J. 2010. The war has been lost: Update on research on the health benefits and risks of soy (Interview). *SoyaScan Notes*. May 31. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** The image of the safety or healthfulness of soyfoods, primarily on the Web, in large part due to the Weston A. Price Foundation, is getting worse and worse. Mark fears that the future of soy as a human food looks bleak, and that sales of soyfoods and ingredients will decline over the next 20 years—even though the nutritional science is making soy look better and better.

For example, the research on the safety of soy for people with thyroid problems is now solid. Soy does not cause thyroid problems in humans. Soy does cause thyroid problems in rats but rats are a bad model to use for studying this problem. Even for people living in a goiter belt—a place with iodine depleted soil—consuming soy is not a problem.

The research on the safety of soy for women with breast cancer is becoming more solid. The paper by Shu et al. is the most important development although the Guha paper is also basically supportive of safety. The paper by Messina and Wood discusses the clinical work. Add to this the fact that there is another paper albeit smaller in size that will be published soon that supports the paper by Shu and that it is now known that the animal studies aren’t very relevant to humans because the amount of biologically active genistein

in circulation is much higher in mice than in humans makes a pretty strong case. The editorial by Messina, Abrams and Hardy that makes the case succinctly.

It is quite clear that if a young girl has one serving of soymilk a day for life, that will reduce her risk of breast cancer. Likewise for women with breast cancer. However, nothing is clear when it comes to chronic disease and diet. The hypothesis is quite intriguing and has epidemiologic and animal data in support of it. However, without clinical data it will remain speculative. Nevertheless, because the potential benefit is so great, the amount of soy need for protection so small (one serving) and that in my view there is no disadvantage to consuming soy, it seems like a no brainer to make a recommendation for girls to consume one serving per day.

The area where we have the fewest good studies and the biggest knowledge gap is in safety of soy for young children. Seventh-day Adventist children have been consuming soymilk for more than 60 years with no reported problems, yet this needs to be studied scientifically. A good two-year study has been designed but has yet to be funded.

There has been a big decrease in sales of soy infant formulae over the past ten years due to uncertainty in this area.

The main area of concern today is with isoflavones / phytoestrogens (such as genistein), which are classified as endocrine disruptors. The anti-soy faction likes to talk about “estrogens in soy” as being risky and about feminization.

The Weston A. Price Foundation (WAPF) recently had their 10th annual conference / meeting in Chicago; 1,000 people attended. Their focus was not anti-soy, although a few such comments were made.

Note: According to Wikipedia, the organization was founded in 1999 by Sally Fallon and Mary G. Enig, PhD. Headquartered in Washington, DC, it is a “501(c)(3) non-profit organization dedicated to ‘restoring nutrient-dense foods to the American diet through education, research and activism.’ Its goals include disseminating the research and dietary advice of dentist and nutritional researcher Weston A. Price, who studied the foods and health of isolated non-industrialized peoples around the world, and supporting the scientific validation of traditional diets.” Their anti-soy program is named “Soy Alert!” and they repeatedly refer to soy as “toxic.” “In 2010 its membership numbered 13,000 and was growing at an annual rate of 10%, according to The Washington Post (6 Aug. 2008). It has more than 450 community-driven chapters across the United States, and international chapters in Australia, Canada, Finland, Germany, Pakistan, New Zealand, the United Kingdom and various other countries.”

Mark regrets that he agreed to debate Sally Fallon. She made a number of false claims, such as Illinois prison inmates were being fed 100 gm of soy protein a day.

Alpro Soya recently released an excellent cartoon video

commercial titled “Great Ideas Often Take a Long Time to Sink in” as part of its “Join the movement now” campaign. It encourages people to change their diet by replacing meat and dairy by an alternative just once a week.

White Wave [Dean Foods] is no longer funding scientific studies on soy—as they were a year ago. They have turned all their soy activities over to a PR firm. Mark finds this very disappointing. However the Silk Soy Nutrition Center has a good website (soynutrition.com) which focuses on the health benefits of soy.

The next soy conference will be in October. Kaayla Daniel is writing a new book of anecdotes about how she has helped people who had nutritional problems with soy.

What evidence does Mark have that people are concerned about the safety of soyfoods? (1) The United Soybean Board (USB) has sponsored a booth at the annual meeting of the American Dietetic Association each year for at least the last 15 years. The booth is organized by Publicis, the USB’s PR agency. The purpose is to provide information about soy oil and soyfoods. Materials are provided and usually a soy-related product served or handed out. It could be edamame or soynuts or chap stick made with soy oil. The ADA show attracts about 10,000 dietitians. Mark has staffed the booth every year (except one when he was unavailable) to answer questions about soy nutrition. He answers about 50 questions during the 3-day meeting. Most of the questions are about soyfoods (rather than soy oil). He has watched the nature of these questions change over the years. Initially they were about ways to incorporate more soy into the diet. Now they are about the safety of soyfoods and soy formula, and about isoflavones.

(2) He is often contacted by non-scientific journalists who want to interview him for radio, TV, or the Web / blogs. Here again he is now hearing the same safety concerns. (3) Mark gives many talks about soy nutrition each year. After a typical talk, he opens it up for questions. Here, also, he gets mostly questions about the safety of soy. (4) Mark’s wife, Ginny, does a great deal of work promoting vegetarian and vegan diets. She says that support for soy is weakening among vegetarians. (5) On the Web, the number of negative stories about soy nutrition is growing. Almost all are based on hearsay rather than on science. (6) Mark increasingly hears negative comments about soy at random. In short, the climate has changed dramatically since 1990, when the trend was “straight up,” to today when things are looking down. Mark has no reason to believe that this downward trend will not continue.

Twenty years ago the soy industry should have developed a long-term strategy, with adequate funding, to respond to the anti-soy faction disinformation campaign with science-based facts. But the industry was unwilling to do this. They thought it would go away, that it was just a passing fad, or that it was not important and would not have any significant effect on the market, which was growing

rapidly at the time. Mark did everything he could to try to convince the soy industry that this was a real concern and that they should take action. There is still no interest in a long-term strategy, but now it is probably too late. Address: PhD, 429 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2076. Sharma, Ratan. 2010. Re: Work with the American Soybean Association (International Marketing), soymilk and tofu in India and worldwide. Letter (e-mail) to William Shurtleff at Soyinfo Center, Sept. 22. 2 p.

• **Summary:** “I joined the American Soybean Association (ASA) in 1997 as a soymilk and tofu expert and since then I have been in touch with the ASA’s International Marketing (ASA-IM) activities worldwide. Soybean and soy meal utilization in the animal sector is the first priority of ASA-IM as it consumes most of the soybean and soybean meal (utilised in poultry, animals, aquaculture, etc). But they also have a full-fledged food program in almost all their international offices and they have a substantial budget for this. I know these soy food promotion and utilization programs in India, Japan, China, Mexico, Middle East, etc. And we have these programs in Sri Lanka, Pakistan and Bangladesh through our India office.

“ASA-IM sends teams of potential and prospective entrepreneurs to the US and other countries for advance training on the soy food production and utilization. I have lead such teams to attend the advance courses on the soymilk, tofu, TVP and other products at INTSOY, Texas A&M and Kansas State University courses separately. These courses were attended by Pakistan, Bangladesh and Sri Lanka based soy entrepreneurs also. ASA-IM paid all their hefty course fee, hotel stay, as well as meals and other incidental expenses. The participants paid only for their international air fare. I also visited Bangladesh, Sri Lanka, Nepal and Pakistan so many times to help the soymilk and other soy food manufacturers in these countries.

“ASA-IM spends lot of money on the promotion of soy for the food uses all over the world. I may try to send you some pictures of these activities. These help in creating the market for the small, medium and large scale soy food producers. We do it for the soymilk, tofu, soy nuts, soy flour, TVP and all other soy food products manufactured and sold by the Indian soy food manufacturers.

“ASA-IM promotes the soy food business through the trade fairs, industry visits, helping them in attending government training programs etc. The Indian Government also helps in promoting the soy food business and products. Once they provided huge funds for the generic campaign of the soy food products in India and the advertisement program ran on the popular TV channels, radio, print media etc. for a few months. We coordinate the entrepreneur development programs through the government departments and they have run exclusive training programs on the soy

food business in which hundreds of prospective and existing soy entrepreneurs participated.

“Soy fortified products are also popular in India. One of the Indian states, Gujarat, recently introduced wheat flour fortified with soy flour for public distribution system (a subsidised ration for the poor people). All this is run by government programs. The Government of India (GOI) feeds approximately 250 million children, women and men under various feeding programs and soy is the main protein source in most of these. They use other protein options also based on the price and the availability but soy is preferred by the government in these programs. We help them in the product formulation, recipe development etc.

“I introduced the soymilk, tofu and other small scale soy food production business to the Indian army, also for their soldiers who retire at an early age and go for low profile business. I gave them the option of the soy food business on a small scale after their retirement from the army. At one of the army rehabilitation centres they have installed soymilk, tofu and other soy food processing units to train their retiring soldiers. I go there from time to time and impart training to them also when the new lot of soldiers come for this program.

India has made an excellent progress in the soy food business on small, medium and large sale production and there continues to be tremendous growth in this field, especially the soymilk, tofu, soy flour, TVP, soy protein based products etc.; you can see a lot of these products in the super stores. One thing that is remarkable here is that besides selling there products in the rural and urban areas, the soymilk and other soy product manufacturers sell a substantial quantity of their product through the super stores and other organised marketing channels. I help them in making the good quality packaging with the proper shelf life, giving all the nutritional and commercial information on labels, following the rules and regulatory norms framed by the GOI, getting a bar code, taxation, industry licensing, etc.

More later, Ratan. Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

2077. *World Grain*. 2010. ADM building large processing plant in Paraguay. 28(9):20. Sept.

• **Summary:** “Villeta, Paraguay—Archer Daniels Midland Company (ADM) announced Aug. 3 that it will increase its South American oilseed crush capacity by more than 25% with the construction of a major new soybean plant in Paraguay.

“The new plant, with an anticipated daily crush capacity of 3,300 tonnes, will be located adjacent to an ADM fertilizer-blending plant in Villeta, near the capital city of Asuncion, and will benefit from the proximity to a nearby port facility on the Paraguay River...”

A map shows the location of Villeta in relation to

Paraguay, Argentina, and nearby rivers.

2078. Archer Daniels Midland Co. 2010. Annual report: Letter to shareholders & form 10-K. P.O. Box 1470, Decatur, IL 62525. [3] + 96 p. Oct. 28 cm.

• **Summary:** On page 38 is “Consolidated statements of earnings.” Net sales and other operating income for 2010 (year ended June 30) were \$61,682 million, down 10.9% from 2009. Net earnings including noncontrolling interests for 2010 were \$1,919 million, up 11.4% from 2009.

Accompanying the annual report is a “Notice of Annual Meeting” (54 p.). Patricia A. Woertz, the Chairman, CEO, and President, received total compensation in 2010 of \$11.4 million, and including a salary of \$1.3 million and a bonus of \$2.56 million. Address: Decatur, Illinois.

2079. Burcon NutraScience Corporation. 2010. Burcon and ADM enter into Clarisoy letter of intent (News release). Vancouver, British Columbia. 1 p. Nov. 15.

• **Summary:** “Burcon NutraScience Corporation (TSX-BU) (‘Burcon’) announced today that it has signed a non-binding letter of intent (the ‘Letter of Intent’) with Archer Daniels Midland Company (‘ADM’) which details the intention of the two parties to enter into a license agreement pursuant to which Burcon will license (the ‘License’) its Clarisoy technology to ADM on an exclusive basis to produce, market and sell Clarisoy soy protein isolates (‘Clarisoy’ or the ‘Products’) world-wide (the ‘Definitive Agreement’).”

“Clarisoy is a unique soy protein isolate that is 100% soluble, transparent and low in viscosity in acidic beverages. The use of Clarisoy allows for the production of transparent protein fortified beverages such as juices, soft drinks and sport drinks in the low pH range, down to pH 2.5. Clarisoy is also heat stable in acidic beverages, allowing thermal processing, including the ability to hot-fill with no loss in clarity or change in viscosity. Clarisoy soy protein isolate does not have the ‘beany’ taste typically associated with soy protein, opening up significant opportunities in the existing global soy protein market.”

2080. Shurtleff, William. 2010. Re: Work of the American Soybean Association to support or promote soyfoods or soy protein ingredients. Letter (e-mail) to Hervé Berbille, Paris, France, Dec. 6. 1 p.

• **Summary:** “In the early days, certain high-up people in the ASA told me that they strongly disliked what I was writing, and doing, and saying. They even did a few things to try to hinder my work. That was in the mid-1970s. But over the years that has changed quite a bit, largely because of women who hold high positions in ASA’s state soybean boards, who are interested in food, cooking, soyfoods and the potential of soy to do more to relieve hunger and malnutrition.

“The big change came in 1999 when the U.S. Food and Drug Administration issued a health claim for soy protein.

This created huge interest in soyfoods in the USA and many new products, by both very large and very small companies. ASA proudly joined the crowd and really began to support soyfoods as one of its 'new' products.

"Another major change came in early 2001 when ASA created WISHH—the World Initiative for Soy in Human Health. This organization, and its outstanding, deeply-devoted head, Jim Hershey, are now taking soyfoods to the four corners of the world, promoting soymilk, tofu, cottage industries—as well as TVP, isolates and concentrates. I applaud their work.

"I could give you many examples of the things that ASA is now doing that are very favorable and helpful for soyfoods. They sponsor conferences, publish newsletters, conduct market surveys on attitudes towards soy, sponsor fairs and cooking contests, etc.

"Today, I cannot think of a single person in ASA with whom I have a bad or negative or uncomfortable relationship. They either respect my work and my position and simply disagree with it, or they positively like what I am doing and have been doing without stop since Oct. 1972 when I began devoting all my working time to teaching people worldwide about soyfoods.

"ASA is basically in the business of selling vegetable oil and meat. Developing countries (such as India and China) desire more of these two commodities, but in the developed countries they are steadily becoming less popular. Increasingly people want to reduce their consumption of all fats and of meat. So ASA finds itself with a somewhat unclear mission. Nevertheless, in both India and China, ASA is very actively promoting soyfoods and domestic utilization of soy protein.

"This is my analysis of the situation as it now stands. I think ASA is doing a great deal to help the cause of soyfoods. They must flow with the great tides of history—or be left behind. Fortunately they are the keepers of a truly remarkably crop with an ancient, illustrious history—the soybean!" Address: Founder and Director, Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2081. Soyatech, LLC. 2010. *Soya & Oilseed Bluebook 2011: The annual directory of the world oilseed industry*. Bar Harbor, Maine: Soyatech. 348 p. Dec. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the 5th year in a row that the *Bluebook* (a \$95 value) has been sent free of charge to qualified industry members. On the cover are six color photos, and a black and white photo of a farmer leaning against a huge rubber tire that is almost as tall as he is.

This edition of the *Bluebook* contains 4 fewer pages than it did last year. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hempseed, jatropha, linseed, palm, peanut, rapeseed,

safflower, soya, sunflowerseed—the same as last year.

On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa), makers of innovative ingredients for bakery, soymilk and tofu. On the first page is a full page color ad from SunOpta, processors of identity preserved, natural and organic soy products, including whole soybeans, soymilk, soy flours, edamame, oils and more.

On the back cover is a full page color ad from ADM titled "We see potential" which shows a growing soybean plant with pods and leaves. A table shows the many products that can be made from soybeans.

Chris Erickson is CEO. Mark Dineen is president. Keri Hayes is publisher and operations director. In the Foreword, Joe Jordan (General manager and content director) leads with a question: "What could possibly have increased sales by 1274% between 2008 and 2010? The e-Book." He appears to be talking about the entire e-book industry in the USA or perhaps even worldwide. He then writes about Amazon's Kindle and hints that the printed and bound *Bluebook* may soon be available in digital form only. "Sure the *Bluebook* is changing. It always has." Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

2082. Hackett, Jolinda; Bull, Lorena Novak. 2010. *The everything vegan cookbook: 300 recipes for any occasion!* Avon, Massachusetts: Adams Media. x + 294 p. Index. 24 x 21 cm.

• **Summary:** The book begins: "Dear Reader: When I decided to give up eggs and dairy, I asked every vegan I knew for their advice. One sentiment always stood out: 'Learn to cook.'"

Chapter 11, titled "Tofu" (p. 219-42) contains 26 tofu recipes of great variety and creativity. Chapter 12, "Seitan, TVP, and tempeh" (p. 243-65) contains 23 recipes, including homemade seitan.

Other soy related recipes: Vegan mayonnaise (with "1 12-ounce block silken tofu," p. 23). Vegan "pigs" in a blanket (with vegan hot dogs, p. 24). Vegan tzatziki (with soy yogurt, p. 30). Chili masala tofu scramble (p. 38). Quick tofu breakfast burrito (p. 42). Strawberry protein smoothie (with silken tofu, p. 43). Granola breakfast parfait (with soy yogurt, p. 46). Baked "sausage" and mushroom frittata (with vegetarian sausage or "beef" crumbles, p. 53). Creamy miso sesame dressing (p. 61). Tempeh dill "chicken" salad (p. 64). Edamame salad (p. 73). Winter seitan stew (p. 88). Saucy Chinese vegetables with seitan or tempeh (p. 105). Barley pilaf with edamame and roasted red peppers (p. 185). Cheesy macaroni and "hamburger" casserole (with veggie burgers, p. 210). TVP taco "meat" (taco filling, p. 250). Homemade baked seitan (p. 251).

Many other recipes call for soy milk or soy cream. Jolinda Hackett has been a vegetarian for nearly 20 years and a "plant-based vegan" for nearly ten. Address: 1. Santa

Barbara, California; 2. RD [Registered Dietitian], Riverside, California.

2083. Nishimura, Mayumi. 2010. *Mayumi's kitchen: Macrobiotic cooking for body and soul*. Tokyo, New York: Kodansha International. 157 p. Illust. (mainly color). Index. 26 cm. [15 ref]

• **Summary:** This is Mayumi's first English-language book. Madonna (of worldwide musical fame) wrote her a letter that appears in this book (p. 7): "Dear Mayumi, Congratulations on your fabulous book!... Not only are you the best chef in the world, you are part of our family, and we thank you for your love and warmth.

"In the seven years you lived with us and cooked for us, your amazing food helped me to be a happier, healthier person, balanced in body and mind. I feel better than I did 20 years ago. I am very grateful to you for this."

The index of this stylish book contains 24 entries for tofu (some in the chapter titled "Protein dishes"—p. 97-104), 20 for miso, 14 for seitan, and 11 for tempeh. How nice to find a Japanese cookbook that calls for the use of brown rice (basic recipe, p. 67).

The centerpiece of Mayumi's book is her 10-day detox diet.

Also contains specific recipes for: Nabe (with "2 pieces abura-age {deep-fried tofu skins}, halved or cut open on one side to form pouches," p. 67). Soybean and millet croquettes with beet sauce (with "15 oz {425 gm} canned soybeans, drained," p. 84). Seitan pot stickers (with seitan and tofu, p. 113). Smoked tofu salad (with "7 oz {200 gm} firm tofu," p. 104). Black soybean tea (p. 113).

The Glossary (p. 140-49) includes entries for: abura-age, adzuki beans, brown rice, brown rice mochi, edamame, hijiki, kombu, koyadofu, kuzu, mirin, miso, nori, rice milk, rice syrup, seitan, sesame oil, shiso, shoyu (incl. soy sauce and tamari), soba, soy meat nuggets (TVP), soymilk, tahini, tempeh, tofu, umeboshi plum, umeboshi plum paste, wakame, wasabi, whole-wheat flour.

About the author (inside rear dust jacket): "Mayumi Nishimura was born on the small island of Shinojima in Aichi Prefecture [in Mikawa Bay Quasi-National Park]. In 1982 she moved to the U.S. and began studying macrobiotics under Michio Kushi—the leading authority in the field—at the Kushi Institute. Later she worked at the school as head cooking instructor. In 2001 Mayumi became Madonna's private macrobiotic chef, joining her on her Drowned World Tour. Between 2001 and 2008 she cooked for the superstar full-time. Currently Mayumi travels between Japan, where she writes and lectures on macrobiotics, and the U.S." She has written four books published in Japanese. A large color photo of Mayumi, standing, holding a dish of food, appears on the front dust jacket.

The book is dedicated to Mayumi's children, Lisa and Norihiko, to her parents, and to Michio Kushi and his wife,

Midori.

2084. Schneider, Mindi. 2011. *Feeding China's pigs: implications for the environment, China's smallholder farmers and food security*. <https://www.iatp.org/documents/feeding-china%E2%80%99s-pigs-implications-for-the-environment-china%E2%80%99s-smallholder-farmers-and-food> 6 p. May 17.

• **Summary:** "Executive summary: Starting in 1979, pork became the most produced and consumed meat in the world. The reason for its ascent to the top of the global meat heap is simple: China. In 2010 alone, farmers and companies in China produced more than 50 million metric tons of pork, virtually all of which was sold and consumed domestically. This Chinese pork boom, which today accounts for half of all the pork in the world, is the result of a set of policies and trade agreements that liberalized and industrialized Chinese agriculture and enabled enormous production increases.

"In the quest to feed 21 percent of the world's population on nine percent of its arable land, Chinese central authorities prioritize ensuring a steady supply of low-priced pork as an important component of food security (China maintains a strategic pork reserve, the only one of its kind in the world)..."

"Soybean imports are keeping the swine industry in China afloat. In order to overcome the limitations of domestic production for feeding millions of pigs, authorities enacted a series of measures to liberalize China's soy trade, including those required by World Trade Organization (WTO) accession protocols, starting in the early 1990s. Imports quickly overtook both soy exports and domestic production, and today, China is the world's leading soybean importer. In 2010, more than 50 million metric tons of soybeans came into China, mostly from the United States and Brazil. These imported beans accounted for 73 percent of soy consumption in China, and were used exclusively in the production of soybean meal for livestock feed and soy oil for cooking (meal and oil are coproducts in the soy crushing process). In stark contrast to the pork industry, which a handful of domestic companies dominate, transnational agribusiness firms including Archer Daniels Midland, Bunge, Cargill, Louis Dreyfus (together, ABCD) and Wilmar own about 70 percent of the soybean crushing industry in China. In recent years, China has enacted measures to cool the dominance of foreign firms in support of domestic operations. Whether or not these moves will be effective remains to be seen.

"Soy is particularly important in commercial pig feed mixes, but for smallholder and specialized household farmers, corn is the most used feedstuff..." Address: Minneapolis.

2085. Baker Perkins Historical Society. 2011. *The history of British Arkady* (Website printout—part). [www.bphs.net/](http://www.bphs.net/)

GroupFacilities/B/BritishArcady.htm Retrieved July 24.

• **Summary:** “Our origins: Arkady’s origins go back to The Ward Baking Co. (Est. 1849), New York, USA.

“The Ward Baking Co. was the first to establish a Baking Research Fellowship at Mellon Institute, Pittsburgh, Pennsylvania, under the direction of Dr Robert Kennedy Duncan. The institute was set up to establish why bread tasted different in every town. The institute found that mineral salt contents in the local waters were to blame.

“Dr. Duncan patented a mixture of these minerals so that bread making could be improved and standardised by adding this mixture to the water in the process. Dr Duncan died shortly before the release of the product and it was named in his honour. RKD (Robert Kennedy Duncan)—Arkady.

1921—“Some experiments, carried out at Willesden by Hinma Baker, son of W. King Baker, resulted in the discovery of a combination of chemicals that enhanced the action of yeast in bread. To market this ‘bread improver,’ the British Arkady Company Ltd. was formed, and the firm [Baker Perkins] retained a financial interest in it until the time came when the directors decided that its products were outside the traditional range, and they sold the holding to the Ward Baking Company of America” (Source: History of Baker Perkins, by Augustus Muir).

“1921—Arkady yeast food was manufactured in Willesden, London

“1923—Baker Perkins annual reports begin to mention British Arkady. “The British Arkady Company Ltd. in which your company has a substantial holding...” Adequate dividends appear to have been received from the company’s shareholding throughout.

“1923—Arkady products are so successful that a new factory is built in Manchester.

“1925—British Arkady Co. was established to market the Arkady product in the UK. Set up in Old Trafford Manchester.

1935—British Arkady Co. “extended its works.”

“1936—A new soya bean flour mill was put into operation at the Old Trafford site. Made a variety of soy based products including regular and enzyme active full fat soya flour (Hi-Soy and Do Soy), Arkasoy defatted soy flour and Arkady defatted grits. At this stage the whole soy flour was made by toasting and grinding.

“1936-1983: British Arkady Co. market soya products from the Arkady soya mill amongst other activities.

1953—Baker Perkins’ shares are finally disposed of [to Ward Baking Co.?] for a sum “which exceeded the cost of the company by £113,338.”

“1983: Alfred C. Toepfer International (of whom ADM had just bought a significant shareholding) was looking to establish an office in London to trade animal feedstuffs. British Arkady Co. already had a skeletal trading desk and an established customer base. Toepfer bought out the feedstuffs division of British Arkady Co (then dormant)

to become Arkady Feed (UK) Ltd. Offices were moved to Harrow [northwest London] to trade animal feedstuffs with the backing of Toepfer. Their trading record and contacts, combined with expertise in procuring raw materials from origin made for a good partnership. Initial strengths were products from Asia and the Americas (North and South) but today it spans many products from all over the globe.” Address: England.

2086. Archer Daniels Midland Co. 2011. Annual report: Letter to shareholders & form 10-K. P.O. Box 1470, Decatur, IL 62525. [3] + 98 p. Oct. 28 cm.

• **Summary:** On page 41 is “Consolidated statements of earnings.” Net sales and other operating income for 2011 (year ended June 30) were \$80,676 million, up 30.8% from 2010. Net earnings including noncontrolling interests for 2011 were \$2,018 million, up 5.2% from 2010.

Accompanying the annual report is a “Notice of Annual Meeting” (62 p.). Address: Decatur, Illinois.

2087. Giblin, Karen; Seibel, Mache. 2011. Eat to defeat menopause: The essential nutrition guide for a healthy midlife—with more than 130 recipes. Cambridge, Massachusetts: Da Capo Press. xviii + 237 p. Foreword by Dean Ornish, M.D. Illust. Index. 23 cm. [26 ref]

• **Summary:** An excellent book for the lay reader by a woman and a man with top credentials in the field. Includes 130 recipes. On page 3 is an “Ode to Soy and Hot Flashes,” by Mache Seibel, M.D.; it says that soyfoods reduce hot flashes and allow women to sleep at night.

Chapter 4 (p. 23-28) is “Understanding soy foods: The perfect food for menopause.” Its contents: Introduction. Soybeans and foods made directly from them (gives a basic description of each): Soybeans (incl. edamame, dry soybeans, canned soybeans), soy flour, soy powder (very similar to soy flour except the soybeans are cooked before they are ground), soy protein isolates, textured vegetable protein (TVP), soy grits, soy sprouts. Soy milk and products made from it: Soy milk, okara, yuba, soy cheese, soy yogurt, tofu. Fermented forms of soy: Tempeh, natto, miso, soy sauce.

Most of these soyfoods are used in the recipes in this book. Tofu is used the most frequently.

Dr. Ornish’s remarkable Foreword begins: “Many people tend to think of breakthroughs in medicine as a new drug, laser, or high-tech surgical procedure. They often have a hard time believing that the simple choices we make in our lifestyle—what we eat, how we respond to stress, whether or not we smoke, how much exercise we get, and the quality of our relationships and social support—can be as powerful as drugs and surgery, but they often are. Often, even better.

“For more than thirty years, I have directed a series of studies showing what a powerful difference changes in diet and lifestyle can make. My colleagues and I at the nonprofit

Preventive Medicine Research Institute showed, for the first time, that many diseases, including heart disease, prostate cancer, diabetes, and hypertension, are often reversible, and thus largely preventable.

“We used high-tech, state-of-the-art measures to prove the power of simple, low-tech, and low-cost interventions. We showed that integrative medicine approaches may stop or even reverse the progression of coronary heart disease, diabetes, hypertension, obesity, hypercholesterolemia, and other chronic conditions. We also published the first randomized controlled trial showing that these lifestyle changes may slow, stop, or even reverse the progression of prostate cancer, and may affect breast cancer as well.

“Our latest research shows that changing lifestyle changes our genes in only three months—turning on hundreds of genes that prevent disease and turning off genes and oncogenes associated with breast cancer and prostate cancer, as well as genes that cause heart disease, oxidative stress, and inflammation. We also found that these lifestyle changes increase telomerase, the enzyme that lengthens telomeres, the ends of our chromosomes that control how long we live. Even drugs have not been shown to do this.” Address: 1. President and founder of the Red Hot Mamas, Bridgewater, New Jersey; 2. M.D., Prof. of Obstetrics and Gynecology and Director of the Complicated Menopause Program, Univ. of Massachusetts Medical School. He lives in Boston, MA.

2088. Jamieson, Alexandra. 2011. *Vegan cooking for dummies*. Hoboken, New Jersey: Wiley Publishing, Inc. xx + 364 p. Illust. (some color). Index. 24 cm.

• **Summary:** A fun, well written, and very informative book. Contains more than 160 healthy vegan recipes. The index contains 22 entries for tofu, 14 for tempeh, 11 for soy foods, 5 for seitan, 3 for edamame, 2 each for milk replacements (soy milk), miso, soy sauce, soy yogurt, and 1 for TVP (textured vegetable protein).

Also mentions macrobiotics, mochi, raw foods diet, sea vegetables, sesame oil, sesame seeds, etc. Address: Professionally trained vegan chef and board certified holistic health counselor (CHHC), and member American Assoc. of Drugless Practitioners (AADP), New York City.

2089. Mangels, Reed; Messina, Virginia; Messina, Mark. 2011. *The dietitian's guide to vegetarian diets: Issues and applications*. 3rd ed. Sudbury, Massachusetts: Jones & Bartlett Learning. xi + 596 p. Illust. Index. 23 cm. 1st ed. 1996. 2nd ed. 2004. [342 soy ref]

• **Summary:** Chapter 9, “Soyfoods” (p. 249-89) is excellent. Its contents: Introduction. Isoflavones: Isoflavone content of soyfoods, isoflavone absorption and metabolism. physiologic properties of isoflavones. Asian soy intake. Nutritional composition of soybeans and soyfoods: Protein, fat, carbohydrate, vitamins, minerals (iron, zinc, calcium). Chronic disease prevention and treatment: Coronary heart

disease (cholesterol reduction, lipid-independent effects), cancer (breast cancer, prostate cancer), osteoporosis, alleviation of menopausal symptoms, renal function. Controversies: Soy infant formula, cognitive function, thyroid function, fertility and feminization, breast cancer patients, allergy. Intake recommendations.

Table 9-1 (p. 251-52), “Chemical and common names and molecular weights (MW) of the 12 isoflavone isomers found in soybeans” includes the following foods and USDA IDN [identification number]: Tofu: Firm, firm #2, regular, silken firm, extra firm, extra firm #2. Natto. Soymilk, Miso, Tempeh. Soybeans, raw, US food grade. Soybeans, cooked. Soybeans, raw, Japan. Soybeans, raw, Korea. Soybeans, raw, Taiwan. Soybeans, green, cooked. Soybean curd, fermented. Soymilk skin (foo jook / yuba, cooked). Soymilk skin (foo jook / yuba, raw). Isolated soy protein. Soy protein concentrate: Water washed, alcohol washed. Soyflour: Full fat, defatted.

The Glossary of vegetarian foods (p. 447+) includes: Soyfoods: Edamame, soybeans, soy flour, soymilk, soy nuts, tempeh, textured vegetable protein (TVP, a brand name), tofu. Meat analogs: Commercial meat substitutes, seitan. Milks and dairy analogs: Nondairy cheese, nondairy frozen desserts, nondairy milks, sour cream substitute, yogurt. Address: 1. PhD, RD, LDN, The Vegetarian Resource Group, Maryland; Univ. of Massachusetts, Amherst, Mass.; 2-3. Nutrition Matters, Port Townsend, Washington; Loma Linda Univ., Loma Linda, California.

2090. Norris, Jack; Messina, Virginia. 2011. *Vegan for life: everything you need to know to be healthy and fit on a plant-based diet*. Cambridge, Massachusetts: Da Capo Press. xix + 283 p. 23 cm. Index. [219 ref]

• **Summary:** Perhaps the single best book on the subject. Very well written by two experts in the field, concise, and carefully documented.

“The practical companion to *Eating Animals*: a definitive nutrition guide for vegans, including everything from guidelines for making a healthy transition to a vegan diet to kickstart plans, nutrient-dense menus and essential information hot-button issues like soy, protein, and B vitamins”- Provided by publisher.

Contents: Introduction: Going vegan for life. 1. Understanding vegan nutrient needs. 2. Protein from plants. 3. Vitamin B-12: The gorilla in the room. 4. Calcium, vitamin D, and bone health. 5. Fats: Making the best choices. 6. Iron, zinc, iodine, and vitamin A: Maximizing vegan sources. 7. The vegan food guide. 8. Making the transition to a vegan diet. 9. A healthy start: Vegan diets in pregnancy and breast-feeding. 10. Raising vegan children and teens. 11. Vegan diets for people over fifty. 12. Plant food advantages: Health benefits of a vegan diet. 13. Managing weight, heart disease, and diabetes. 14. Sports nutrition. 15. Is it safe to eat soy?: Introduction, soy nutrition, soy isoflavones, soy and

health (heart disease, soy and bone health, hot flashes, breast cancer, prostate cancer, cognitive function, thyroid function, reproductive health and feminization), how much and what kind of soy to eat. Table: Isoflavone, protein, and calorie content of soyfoods. 26. Why vegan? Vegan resources. A quick guide to cooking grains, beans, and vegetables. Metric conversion chart. Acknowledgments.

In Chapter 8, “Making the transition to a vegan diet,” a section titled “Soyfoods primer” has the following contents: Introduction, soybeans, edamame, soynuts, soymilk, tofu, okara. Fermented soyfoods: Tempeh, miso, natto. Western soyfoods: Textured vegetable protein (TVP®, made from defatted soy flour), isolated soy protein.

Concerning soyfoods throughout the book: The word tofu is mentioned on 52 pages in this book, soymilk on 47 pages, soyfoods on 45 pages, tempeh on 33 pages, soybeans on 25 pages, isoflavones on 11 pages, miso, soynuts, and soy sauce on 10 pages each, soy flour and textured vegetable protein on 7 pages each, isolated soy protein on 4 pages, edamame, natto and TVP on 3 pages each, okara on 2 pages, and soy protein concentrate on 1 page.

Reviews: *Publishers Weekly*: “Armed with this compendium and a vegan cookbook, novices will make an easy, healthy transition to meat, egg and dairy-free meals, while practicing vegans can use it as a guide to the best food choices.”

*Reno-Gazette*: “I can’t rave enough about Jack Norris and Virginia Messina’s new book “Vegan for Life.” I’ve found myself reading this late into the night like a page-turning mystery. That’s, in part, because it dispels many of the things I’ve believed about vegan nutrition.”

Peter Singer, PhD, author of *Animal Liberation* and Professor of Bioethics, Princeton University: “Here is the book I have been waiting for! Now when people ask me all those questions about how you can be healthy without eating animal products, I can tell them that they will find the answers in *Vegan for Life*.”

Michael Greger, M.D., Director, Public Health and Animal Agriculture, HSUS [Humane Society of the United States]: “A no-nonsense guide to explode the myths, avoid the pitfalls, and maximize health on a plant-based diet. Required reading for every vegan, old or new.” Address: 1. RD, cofounder and president, Vegan Outreach, San Francisco Bay Area, California; 2. MPH, RD, Port Townsend, Washington.

2091. INTSOY. 2012. 2012 INTSOY Processing and marketing soybeans for meat, dairy, baking and snack applications, June 3-8: A unique opportunity to gain hands-on experience & practical knowledge about soybeans (Leaflet). Urbana, Illinois. 9 panels. Each panel: 28. Single sided. Black and white.

• **Summary:** This printout of an e-mail announces a 5-day course (\$1,500 for 1 attendee). The program now has 26

corporate sponsors (listed alphabetically with the logo of each): ADM, Clarkson Grain, Clextral Group, Crown, Devansoy, French [Oil Mill Machinery Co.], General Mills, Harvest Innovations, House Foods America Corporation, Illinois Soybean Association, Insta-Pro, NEI–Natural Enrichment Industries, NPI–Natural Products, Inc. ProSoya. SavInd (formerly Bar N.A.). Silk, The Solae Co., Soyatech, Soyfoods Association of North America. Soyjoy. SunOpta. United Soybean Board. USSEC. Wenger. WISHH. World Soy Foundation.

Course highlights. Who should attend? Course schedule (preliminary agenda). Sponsors. Address: National Soybean Research Lab. (NSRL), 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 244-1706.

2092. Soyatech, LLC. 2012. *Soya & Oilseed Bluebook 2012*: The annual directory of the world oilseed industry, online at [www.soyatech.com](http://www.soyatech.com). Bar Harbor, Maine: Soyatech. 332 p. Jan. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the 6th year in a row that the *Bluebook* (a \$95 value) has been sent free of charge to qualified industry members. On the cover is a large color photo of two cupped Caucasian hands holding yellow soybeans against background of rows of green soybean plants. Above this main large photo are six small color photos related to various other oilseeds such as sunflowers and palm oil kernels.

This edition of the *Bluebook* contains 16 fewer pages than it did last year. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hemp seed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed—the same as last year.

On the inside front cover is a color ad from Omega-9 Oils. On the first page is a full page color ad from SunOpta with this title: “Can you tell the difference between a bean that’s best for soymilk versus a bean that’s best for miso? We can.” Other full-page color ads in the front are from Intertek, Loders Croklaan North America, Anderson International Corp. (expeller press), AOCS, French Oil Mill Machinery Co. and Insta-Pro International.

On the back cover is a full page color ad from Natural Products Inc. (NPI, Grinnell, Iowa), makers of innovative ingredients for soymilk and tofu to cakes and cookies. They are the makers of Scotsman’s Mill ingredients.

Chris Erickson is CEO. Mark Dineen is president. Keri Hayes is publisher and events director. In the Foreword, Joe Jordan (General manager and *Bluebook* content director) writes about how work began this year to expand the Panama Canal—“the most critical 48 miles in international trade.” Its freight-carrying capacity is scheduled to be doubled by the year 2014. Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

2093. Boismenu, Clyde. 2012. Re: Required labeling of

soy lecithin as a potentially allergenic food since it contains traces of soy protein. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 24. 1 p.

• **Summary:** Clyde, who has been selling ADM soy products (including soy lecithin) for 36 years (it is his main life's work), attached to this e-mail 3 documents related to soy lecithin: (1) ADM [Archer-Daniels-Midland Co.] protein content of soy lecithin. (2) Online article concerning NOAEL level for soy protein—a review of a published article by Ballmer-Weber et al. 2007. (3) Copy of an unpublished 2005 report by Steve L. Taylor titled “Soy lecithin: An expert opinion on its potential allergenicity.”

His letter reads: “I am sure you will find these interesting. The motivation for these studies was that soy lecithin got caught up in allergen labeling by the way our politicians wrote the regulation, even though lecithin contains only trace amounts of protein (circa 100 ppm) and most of that is not allergenic. My ADM lecithin tech told me he thinks the latter is about 5 ppm in food application lecithins with maximum phosphatide content—e.g. the Yelkin Gold reference. But pan coatings and grill release agents and food extrusion die lubricants were, and are, still technically required to label their products to indicate soy allergen content, even where the use is an obvious processing aid (processing aids are broadly exempt from being required on labels).

“This regulatory hit on the industry triggered these studies. However, if I am reading them right, the fact that we now have a NOAEL value for soy protein established at a relatively high level means we can restore sanity to the entire soy industry. Very exciting.

“FYI—even though the regs have for about 10 years required allergen on the labels of all these minor use products, the FDA has fairly openly NOT enforced them in cases where they recognize there is insignificant risk to consumers. For example, in 10 years there are no recorded instances of allergic reaction to soy in lecithin of pan release coatings (bakery use).

“Thanks for your help.—Clyde”

“P.S. Besides ADM soy protein products, I have developed with a Chinese partner the World's Most Perfect Isolated Soy Protein for dry powder protein beverage mixes and neutral pH ready-to-drink protein beverages.

“And, just yesterday I began the introduction of a de-estrogenated soy protein concentrate to try to win back the bodybuilding trade who left us on a dead run in favor of whey proteins when the phytoestrogen issue first blew up. But now there is so much demand for whey proteins that they are assuming their correct place in the economic matrix, to wit, at very high prices—about double our highest priced purified soy proteins. So the time is right for this...”  
Address: LookAlive / Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

2094. CSM UK. 2012. Overview and update of history of British Arkady (Web article). [http://www.csmglobal.com/Countries/United\\_Kingdom/English/Our-Heritage.aspx](http://www.csmglobal.com/Countries/United_Kingdom/English/Our-Heritage.aspx). Printed May 8.

• **Summary:** “1911—The Ward Baking Co. of New York who owned a chain of bakeries throughout the United States couldn't understand why the bread they made was different in every town. The Mellon Institute of Industrial Research was sponsored by Ward to identify the reason why.

“This work revealed that the mineral salt content of the local waters was causing the variation and by creating a mixture of these minerals an improvement and standardisation of the bread could be achieved. The Mellon's director of research at the time was Dr Robert Kennedy Duncan—RKD—Arkady, and so a name and product was born.

“1921—In the UK Arkady yeast food began to be manufactured in Willesden, London.

“1923—Arkady products had become so successful that an entirely new factory was built at Manchester. Production was doubled in 1929 and again in 1936.

“1925—British Arkady Co. moved to Old Trafford, Manchester, marketing a single product, Arkady.

“1967—British Arkady acquired a substantial interest in the Tweedy group, famous for its high-speed mixer developed for the Chorleywood Bread Process.

“1972-1995—British Arkady, now part of ADM, expands its markets across the UK and Ireland and into 21 other countries with a broader range of products including bread mixes, cake, pudding and pastry mixes.

“1995—British Arkady sold to Unilever, joining the Bakery Ingredients division to become Arkady Craigmillar in 1996. Merger of Arkady and Craigmillar. Started cookie production.

“2004—Arkady Craigmillar & Read-Bake are renamed as BakeMark UK but the names Arkady, Craigmillar and Read-Bake remain as the three key brands. BakeMark UK operates from three sites: Manchester, Wirral & Milton Keynes.”

“2012—CSM has 9,700 employees, serving customers in 28 countries all over the world, generating annual sales of nearly 3 billion euros. CSM is listed on NYSE Euronext Amsterdam.”

Note: We are never told what “CSM” stands for, or when they entered the history of British Arkady, or how. Their website (Oct. 2014) is [www.bakemark.co.uk](http://www.bakemark.co.uk).

2095. Shurtleff, William. 2012. The global value chain for soybeans (Editorial). *SoyaScan Notes*. June 12.

• **Summary:** “The value chain is a concept from business management that was first described and popularized by Michael Porter in his 1985 best-seller, *Competitive Advantage: Creating and Sustaining Superior Performance*.” The value chain concept can be applied at various levels of activity, such as a worldwide level, an industry-wide level in

a particular country, or at the level of a particular company operating in a specific industry. The key links in a value chain are those points at which value is added to products. Quantitative data are necessary to analyze the amount of value added (Source: Wikipedia at value chain, June 2012).

In the global soybean chain we have identified four major links or points: (1) Soybean production: This is highly fragmented, with hundreds of thousands of farmers, both large and small, growing soybeans. However some of those farmers are organized into groups, often cooperatives (such as AGP in the United States).

(2) Crushing and other soybean processing. Crushing soybeans to make crude soy oil and defatted soybean meal is the main way that soybeans are processed. However in East Asia, whole soybeans are also processed into human foods, such as tofu, miso, soymilk, tempeh, etc. Large soybean crushers which operate worldwide include Cargill, ADM, Bunge, AGP, Sanbra (Brazil), etc. Defatted soybean meal is further processed to make animal feeds, soy sauce, etc. Crude soy oil is further refined to make edible vegetable oil biodiesel, etc.

(3) Transportation / distribution of soybeans and/or soybean products. Major firms (which are vertically integrated) include Cargill, ADM, Bunge, Dreyfus, the Noble Group of Hong Kong, etc.

(4) End use / retail: The main end uses for soybeans are: From whole soybeans—human foods, often divided into four types: (a) Traditional East Asian fermented soyfoods, such as miso, tempeh, natto and its relatives. The largest makers are miso makers and natto makers in Japan. (b) Traditional East Asian non-fermented soyfoods, such as tofu, soymilk, edamame, roasted soy flour, yuba. The largest makers are tofu makers and soymilk makers in Japan, Hong Kong, and USA. From defatted soybean meal: animal feeds, soy sauce, modern Western soy protein ingredients: textured soy flour / textured vegetable protein (TVP in ad ADM trademark), soy protein concentrates, textured soy protein concentrates, soy protein isolates, and textured soy protein isolates. The largest makers of animal feeds are the same as the major soybean crushers: Cargill, ADM, Bunge, etc. From crude soybean oil: Refined soybean oil and biodiesel. The largest refiners of soybean oil are the major soybean crushers. From refined soybean oil: Edible vegetable oil, salad dressings, margarine, etc. Address: Founder and owner, Soyinfo Center, Lafayette, California. Phone: 925-283-2991.

2096. Saunders, David. 2012. What ever happened to the Soy Protein Council? (Interview). *SoyaScan Notes*. Dec. 13. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** The Soy Protein Council (established in 1971 as the Food Protein Council) dissolved in the first quarter of 2003 after one of the three member companies stopped paying their dues / management fees it owed. The three member companies at the start of 2006 were ADM, Cargill,

and Central Soya (which later became Solait). Hauck & Associates had managed the company from Sept. 1975 until it dissolved. He has no articles about the dissolution; all of their records are gone. The same thing happened to the auto industry when one of its three members left.

Note: Hauck & Associates is an Association Management Company (AMC), established in 1974, with headquarters at Headquarters: 1025 Thomas Jefferson Street, NW, Suite 500 East, Washington, DC 20007. Address: Former President, Soy Protein Council, Hauck & Associates, Inc., Washington, DC. Phone: 202-452-8100.

2097. Kelly, Carla. 2012. Quick and easy vegan slow cooking: more than 150 tasty, nourishing recipes that practically make themselves. New York, NY: The Experiment. xii + 275 p. Illust. (color photos). Index. 24 cm.

• **Summary:** Tofu is mentioned on 29 pages in this book, seitan on 29 pages, soy sauce on 28 pages, soymilk on 23 pages, miso on 18 pages, tempeh on 17 pages, fermented black soybeans on 1 page (p. 114), and cooked black soybeans on 1 page (p. 141).

The section on “Soy foods” (p. 26-29) has subsections on: Regular (water-packed, Chinese-style) tofu. Silken (vacuum packed, Japanese-style) tofu, smoked tofu, tempeh, soy curls (or TVP chunks), soy sauce, miso paste, soy creamer. Also: Seitan and vital wheat gluten, Marmite.

What are soy curls? Defatted soy flour extruded in the shape of curls. “I know not everyone has access to soy curls, but they are available online so try to get them if you can. They cook so wonderfully tender and absorb flavor so well. They do not need to be reconstituted prior to use because of the long cooking time. My first preference for a substitute is TVP chunks, then extra-firm tofu or seitan cut into ½-inch cubes.”

Special soy recipes: Black bean beans (“I have a container of black bean sauce, a pungent paste made from fermented black soybeans, in my fridge that I often use for sautéing tofu or green beans,” p. 114). Soy curl and soybean chili (with “1 cup soy curls” and “Two 15-ounce cans cooked black soybeans, drained and rinsed,” p. 141). Address: British Columbia, Canada (born in New Zealand).

2098. Snyder, Amy; Snyder, Justin. 2012. The everything vegan slow cooker cookbook. Avon, Massachusetts: Adams Media. 304 p. Illust. (color photos). Index. 26 cm.

• **Summary:** Contains individual chapters on tofu, seitan, and tempeh. Tofu is mentioned on 29 pages, tempeh on 25 pages, edamame on 2 pages, and textured vegetable protein (TVP) on one page. And seitan on 30 pages. Address: Atlanta, Georgia.

2099. Soyatech, LLC. 2013. Soya & Oilseed Bluebook 2013: The annual directory of the world oilseed industry, online at www.soyatech.com. Bar Harbor, Maine: Soyatech. 336

p. Jan. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the 7th year in a row that the *Bluebook* (a \$95 value) has been sent free of charge to qualified industry members. On the front cover is a large round color photo collage of four of the major oilseeds, plus harvesting with a combine and shipping in containers.

The 14 oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hemp seed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed—the same as last year.

On the inside front cover is a color ad for Omega-9 Oils (from Dow Agrosiences). Other full-page ads related to soyfoods are: ADM, AOCS, French Oil Mill Machinery Co. and Insta-Pro International.

On the back cover is a full page color ad from Natural Products Inc. (NPI, Grinnell, Iowa), makers of innovative ingredients for soymilk and tofu to cakes and cookies. They are the makers of Scotsman's Mill ingredients.

Chris Erickson is CEO. Mark Dineen is president. Keri Hayes is publisher and operations director. Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

2100. Guardino, Lorraine. 2013. How Soy City Foods (in Toronto, Ontario, Canada) was transformed into Sol Cuisine by Dror Balshine (Interview). *SoyaScan Notes*. Feb. 28. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** During the 1970s Lorraine was part of a meditation group—and doing other “weird” things; she was not on the scene until 1983, but she is familiar with the early history of Soy City Foods and Sol Cuisine.

In 1980 Soy City Foods started as a tofu company (at 2847 Dundas Street West), in order to supply their very successful restaurant, named The Vegetarian Restaurant, which had opened in 1976 at 542 Yonge Street by Wellesly; that was their first little company. It was one of the first vegetarian restaurants in Toronto; Annapurna was the other. However, the restaurant simply couldn't find a source of good tofu.

The Vegetarian Restaurant was established by Golden Age, Inc., a group of 28-30 like-minded young friends. Each person invested about \$1,000 to get it started. Being young, everyone had a lot of energy. The Vegetarian Restaurant was very profitable—initially—and that money enabled it to start Soy City Foods. It was worker owned—a cooperative. The only original restaurant manager Lorraine knows of and can confirm was Paul Dunlop.

Pat Guardino was hired to build the tofu shop because he was a welder. Pat went down to New Hampshire and apprenticed / studied with Jay and Pat Gibbons, owners and operators of Crystal Springs Tofu Shop (renamed North Country Soyfoods by summer 1980) in Bethlehem, New Hampshire; during the week he was there, he learned the

basics of making tofu and tofu equipment.

The goal of Soy City Foods shop was to bring Toronto a “clean protein.” The main owners of the shop ended up being Pat Guardino & Paul Whitehead. However everyone who worked at the Soy City Foods owned it, and all the capital came from these workers.

Also in 1980 a second The Vegetarian Restaurant was opened on Dundonald Street (which is just off of Wellesly Street) along side of Soy City Foods. The owners / workers called the new restaurant the “West End” and the original one the “Downtown.” Both restaurants operated together for about 15 years—from 1980 until about 1995 or 1996, when the Downtown closed, because of dwindling profits and aging staff. When this restaurant had opened at its original downtown location in the mid-1970s there were lots of profits, because the restaurant was very unique. But as the years went on, almost every restaurant in Toronto began to offer good vegetarian food. So the uniqueness dwindled quite a bit as vegetarian food became more widely available. Moreover, leasing and renting rates skyrocketed in the downtown Toronto area. Soy City developed an excellent distribution network and several of their veggie burgers had gone into the larger grocery store chain in Ontario. They were also selling across Canada in foodservice, which ended up being Soy City's largest market. In Canada, in the university market, it was a requirement that each university provide two vegetarian options for breakfast, lunch, and dinner. That became the driver for Soy City's growth at the time. They ended up selling their tofu in bulk to the university market, and one of the contract catering companies sent their chefs to the west end Vegetarian Restaurant for a week and learned how to cook vegetarian cuisine. Soy City developed two veggie burgers for them and they chose which one they preferred—which was called the Soy City Veggie Burger and which contained both soybeans and okara. That is still sold by Sol Cuisine, but it is now called the Almond Grain Burger. Soy City made an ongoing effort to use okara in foods. “It was very difficult for all of us who worked there to see such a beautiful protein and fiber be thrown away. So our Soysage used a lot of okara, as did a falafel and the veggie burger.”

Why did Soy City Foods want to sell? The worker population was aging and they were outgrowing the very small facility as the demand for tofu and veggie burgers steadily grew. Basically the worker-owners made the decision to sell rather than to invest more money and continue on at low wages and personal sacrifice. By 2002 two-thirds of the company's sales were via foodservice. Yet total sales were just under \$1 million (Canadian).

In 2002 Dror Balshine bought Soy City Foods, He was a young entrepreneur, in his early '30s. He already had a business in Toronto named Second Nature that sold veggie burgers and dry veggie burger mix. He did not have a manufacturing facility; his products were co-packed for

him. He was already dedicated to vegetarianism and he used textured soy protein concentrate in his burgers. Lorraine, who was the sales manager of Soy City Foods, already knew Dror who she often met at food shows. She called him and discussed the possibility of his buying the company. He was interested and before long he decided to buy it.

One of the first things Dror did was to change the name to Sol Cuisine. The tofu continued to be sold under the brand / banner of Soy City Foods, and it is only now that the Soy City Foods name is being phased out. This tofu began to be made with organic soybeans in about 1985 and that tradition continued under Sol Cuisine. Shortly after buying Soy City Foods, Dror moved it to Mississauga (5715 Coopers Ave., Unit 1), just west of Toronto. Shortly after this move was completed, Soy City Foods' food manufacturing plant at 2847 Dundas Street West in Toronto, was closed. They made tofu, tempeh, veggie burgers, falafel, etc. at the new, lower-rent and lower-tax location. Later, the company needed a larger facility, so in Feb. 2008 they moved to their present address at 3249 Lenworth Drive, Mississauga (about 10 minutes drive south of 5715 Coopers Ave.). All foods that Sol Cuisine now sells (except the Sol-Dog, a veggie hot dog) are made at the plant on Lenworth Drive. The Sol-Dog is sold only to foodservice. When they moved to Lenworth Drive, they became a HACCP facility and also stopped making tempeh; the cross contamination of the tempeh spores was too strong. Dror is committed to making only vegan foods and to verification by the non-GMO Project (they are very thorough) and to organic when possible. And, all but one of their products are now gluten-free.

Foods shown on a 2005 leaflet include T-Ribz (now called Organic Barbecued Ribz; made from their own tofu, sliced put in a package with their own sauce on top; sold fresh in Canada and frozen in the USA for about 18 months). Organic T-Nuggets (cubed tofu that was marinated, breaded and baked; never sold as a retail product, no longer made). Organic Sol-Ground (now the Veggie Crumble), 3 vegetarian burgers (they now make a total of 5 soy burgers in the retail market; the main ingredient is verified non-GMO TVP, made by ADM).

What was the Soyateria? It was Soy City's soy deli in Toronto that opened in April 1981. The public could come in and have a pita bread sandwich, or buy bulk tofu. There was a little menu. One popular dish was tofu, coated in Engivita nutritional yeast, then sauteed on the grill with sauteed onions and mushrooms and a sauce. The Soyateria did a lot of experimentation to learn what recipes and products people liked. They made tofu cheesecakes, tofu pumpkin pie, bulk soymilk, soft soy ice cream, etc. Lorraine began working there part time in 1983 (it was a short walk from her home) while raising a family. She left her good-paying job at the Royal Bank to work at the Soyateria! It was a lot of fun. But after 5-6 years it went out of business.

John Escavel, who is still production manager at Sol

Cuisine, started working at Soy City Foods in about 1980 or 1981. He has an excellent memory, so he is a good person to talk with about the company's history. Address: Sales Manager, Sol Cuisine, 3249 Lenworth Drive, Mississauga, ONT L4X 2G6 Canada. Phone: 905-502-8500 x 221.

2101. INTSOY. 2013. 2013 INTSOY Short Course: Processing and marketing soybeans for meat, dairy, baking and snack applications, June 2-7: A unique opportunity to gain hands-on experience & practical knowledge about soybeans (Leaflet). Urbana, Illinois. 8 panels + 1 panel insert Each panel: 23 x 15.1 cm. Front and back. Glossy color.  
 • **Summary:** Announces a 5-day course (\$1,500 for 1 attendee). The program now has 24 corporate sponsors (listed alphabetically with the logo of each): ADM, Clarkson Grain, Clextrol Group, Crown, Devansoy, French [Oil Mill Machinery Co.], Harvest Innovations, House Foods America Corporation, Illinois Soybean Association, Insta-Pro, Kays Naturals, NEI-Natural Enrichment Industries, NPI-Natural Products, Inc. ProSoya. SavInd (formerly Bar N.A.). The Solae Co., Soyatech, Soyfoods Association of North America. SunOpta. United Soybean Board. USSEC. Wenger. WISHH. World Soy Foundation.

Course highlights. Who should attend? Course schedule (preliminary agenda). Sponsors. Address: National Soybean Research Lab. (NSRL), 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 244-1706.

2102. Roth, Matthew D. 2013. Magic bean: the quests that brought soy into American farming, diet and culture. PhD thesis, Rutgers, The State University of New Jersey. iii + 530 p. Oct. 28 cm. [1002 + 1208 footnotes + 45 endnotes]

• **Summary:** Contents: Introduction: A Century of Soybeans  
 Chapter 1: Crossings: The Picture Bride: Tsuru Yamauchi. The Missionary: Harry Miller. The Plant Explorer: Frank N. Meyer.

Chapter 2: Footholds: The Agronomist: William J. Morse. The Emissary: Yamei Kin. The Missionary.

Chapter 3: Field Days: The Extension Specialist: J.C. Hackleman. The Salesman: A.E. Staley. The Agronomist.

Chapter 4: Manifold Uses: The Industrialist: Henry Ford. The Chemist: Percy Lavon Julian. The Board: Chicago Board of Trade. The Missionary.

Chapter 5: Wartime Substitute: The Picture Bride. The Nutritionists: Clive and Jeanette McCay. The Investigator: Warren Goss.

Chapter 6: Hidden Ingredient: The Congressman: William Poage. The Breeder: Edgar E. Hartwig. The Middleman: Dwayne Andreas. The Chemist.

Chapter 7: Soytopia: The Writer: Harry Harrison. The Guru: Stephen Gaskin. The Artisans: William Shurtleff and Akiko Aoyagi. The Picture Bride.

This book is a series of carefully researched, well written and well documented biographies of various men,

women and institutions that were important in introducing soybeans and soyfoods to the United States. Some of the men and women whose detailed biographies are presented here (such as William Morse, Henry Ford or Harry Miller) are well known to those interested in the history of soybeans and soyfoods in the USA; yet in each case many important and interesting new details are added to the life story of each person. Other men and women discussed here (such as Harry Harrison, William Poage, Tsuru Yamauchi or Yamei Kin) are largely unknown to soybean historians, and their inclusion in this thesis will help to ensure that they are given the place they deserve in future histories of soybeans and soyfoods in the United States.

The footnotes and bibliography are a treasure. The bibliography, containing 1,002 references, is divided into two sections: (1) Archival sources. (2) Books, chapters, articles, and webpages. Each of the seven chapters has its own series of footnotes, whose numbering starts over again with one at the beginning of each chapter, for a total of 1,208 footnotes. In addition, at the end of the bibliography is a section titled “Notes” which contains 45 numbered notes.

Why so many new bibliographic references? First, because the author did extensive archival research, much of it in archives that have not been previously examined for material on soy. Second, because in recent years many books and periodicals (including newspapers) have been scanned, digitized and made available to researchers and the general public. A search, for example, on “Yamei Kin” will produce a wealth of results in unexpected places.

Containing much new and interesting information, this thesis is not, however, a history of soybeans or soyfoods in the United States. Rather, it presents various important sections and subsections of that larger history.

Contents: Introduction: A century of soybeans.

1. Crossings: The picture bride–Tsuru Yamauchi, The missionary–Harry Miller. The plant explorer–Frank N. Meyer.

2. Footholds: The agronomist–William J. Morse, The emissary–Yamei Kin, The missionary [Harry W. Miller].

3. Field days: The extension specialist–J.C. Hackleman, The salesman–A.E. Staley, The agronomist [William Morse].

4. Manifold Uses: The industrialist–Henry Ford, The chemist–Percy Lavon Julian, The board–Chicago Board of Trade, The missionary [Harry Miller].

5. Wartime substitute: The picture bride [Tsuru Yamauchi], The nutritionists–Clive and Jeanette McCay, The investigator–Warren Goss.

6. Hidden Ingredient: The congressman–William Poage, The breeder–Edgar E. Hartwig, The middleman–Dwayne Andreas, The chemist [Percy L. Julian].

7. Soytopia: The writer–Harry Harrison, The guru–Stephen Gaskin, The artisans–William Shurtleff and Akiko Aoyagi, The picture bride [Tsuru Yamauchi].

Bibliography.

When asked about the unusual structure of the table of contents and the thesis, the author replied (7 Dec. 2015): “The short answer is that the way I structured the dissertation was probably too complicated by half. The idea was to anchor each chapter section to a person, each of whom was either important in their own right and/or was a stand-in for a larger group. Morse, of course, was both: a key figure and a representative USDA ‘agronomist.’ The titling convention was to have the specific person named the first time they appeared, but have only the generic name, such as Agronomist, appear in subsequent chapter-section names. Yamauchi, while not central in her own right, was a way to anchor sections about the Japanese-American community; hence her appearance in three chapters.” Address: Philadelphia, Pennsylvania 19123.

2103. Hymowitz, Theodore. 2013. Illinois has storied history with soybeans: From the Auckland to Lincolnland. *Illinois Field and Bean (Illinois Soybean Assoc.)*. Nov. p. 5-6. Special issue.

• **Summary:** This excellent overview of the history of the soybean in Illinois begins: “On Christmas Day in 1850, the U.S. merchant ship *Auckland* sailed from Hong Kong for San Francisco, California, carrying a shipment of sugar. About 500 miles off the coast of Japan the *Auckland* came across the *Eiriki maru*, a Japanese vessel drifting helplessly on the sea. The crew of 17 was removed from the ship and taken aboard the *Auckland*. The Japanese took aboard some of their belongings, including navigational equipment and agricultural foodstuffs.

“On March 4, 1851, the *Auckland* arrived at the port of San Francisco. The Japanese were not permitted to leave the ship and were kept in quarantine until March 16. The youngest member of the Japanese crew was a 14-year-old boy named Hizoko. Subsequently, Hizoko changed his name to Joseph Heco and was the first Japanese to become a naturalized U.S. citizen.”

Also discusses Dr. Benjamin Franklin Edwards of Alton, Illinois, John H. Lea of Alton, Osborne and Mendel (1917), Garner and Allard (1920), North Carolina, University of Illinois professors William I. Burlison (administration), J.C. Hackleman (extension) and Clyde M. Woodworth (plant breeding). Funk Bros. Seed Co., A.E. Staley Mfg. Co., ADM, Richard Bernard, wild perennial soybeans.

Includes a brief biography and portrait photo of Prof. Hymowitz. Address: Prof. Emeritus, Univ. of Illinois. Phone: 1-800-525-0177.

2104. Hackett, Jolinda. 2013. The big book of vegan recipes: more than 500 vegan recipes for healthy and flavorful meals. Avon, Massachusetts: Adams Media. 512 p. Index.

• **Summary:** Chapter 11 is Tofu (p. 381-415). Chapter 12 is Seitan and TVP [Textured soy protein] (p. 417-447). Chapter 13 is Tempeh (p. 449-470). Each is substantial, with many

recipes. Miso is mentioned on 5 pages, edamame on four pages. Soy milk on 1 page. Is your soy cheese vegan? on 1 page. Address: Santa Barbara, California.

2105. Takeuchi, Yoshiko. 2013. *Cooking with soy*. London, Sydney, Cape Town, Auckland: New Holland Publishers Pty. Ltd. 240 p. Illust. (color photos by Sherly Susan). Recipe index. 27 x 22 cm.

• **Summary:** See next page. An outstanding vegan cookbook, “dairy free, gluten-free friendly.”

Page 8: “Introduction: cooking with soy?... I love almost all foods, but I have a special passion for tofu. There might be food out there that is tastier than tofu and some people think tofu is bland and so avoid it. But tofu is a healthy food—it is low in fat and calories, has zero saturated fat, it’s cholesterol-free; rich in protein and provides bone-healthy minerals, like calcium, potassium and magnesium. The benefits of tofu are many and easy to find.

“I have a strong passion for health and place a high value on it. So I love that tofu can be so versatile and yet deliver the benefits I need for a healthy life. You can eat it plain, deep-fried, stir-fried, steamed, grilled or stewed. You can use it to make sauces, dressings and desserts. You can change the shape of it—slice it, dice it, grate it, purée it, crumb it—there are so many choices.

“Tofu and other soy products have been widely used in Asian cuisine for more than a thousand years and yet they can be used in any type of cuisine—European, Middle Eastern and South American—as you will discover in this book.”

Page 10: Research shows that soy that has not been genetically modified (GMO) or highly refined—“such as soy protein isolate (SPI) or texturised vegetable protein (TVP), which are normally made of GMO soybeans.” “I believe that as long as soybeans or soy products [soyfoods] are in a natural form and preferably organic, they will serve your health in a very positive way.” She likes meat and fish, but she is “on the path to a vegetarian/vegan diet.”

Pages 13-23: Soy family: aburaage, atsugae, edamame, kinako, miso (3 types, each made with a different type of koji), natto, okara, soymilk (made by 3 basic methods), soy sauce, tamari, tofu, tofu puffs [deep fried], tofu skins (yuba), tempeh. Types of tofu: Six types ranging from soft to very firm. Homemade tofu.

Contents (from p. 31): Recipes: Appetisers. Sides. Mains. Desserts. Glossary. Acknowledgements. Recipe index [not as useful as a real index].

Photos on the inside front dust jacket and on page 238 show the author.

“Yoshiko Takeuchi is originally from Japan and has been teaching cooking for over 16 years; having previously worked as a chef for over 11 years. She is an expert teacher of vegetarian, vegan and gluten-free cooking, as well as both traditional and modern Japanese cooking.”

2106. Soyatech, LLC. 2014. *Soya & Oilseed Bluebook 2014: The annual directory of the world oilseed industry*, online at [www.soyatech.com](http://www.soyatech.com). Bar Harbor, Maine: Soyatech. 324 p. Feb. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the 8th year in a row that the *Bluebook* (a \$95 value) has been sent free of charge to qualified industry members. On the front cover is a horizontal collage of four of the major oilseeds, plus a green shoot growing in front of the collage. The 12 oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hemp seed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed—the same as last year.

The book is divided into four major sections: (1) Soybeans, oilseeds & oilseed products. (2) Equipment, supplies & services. (3) Company & organization listings. (4) Statistics & reference.

On the inside front cover is a color ad from Dow Agrosiences. Other full-page ads related to soyfoods are: AOCS, French Oil Mill Machinery Co. and Insta-Pro International.

On the back cover is a full page color ad from Natural Products Inc. (NPI, Grinnell, Iowa), makers of innovative ingredients for soymilk and tofu to cakes and cookies. They are the makers of Scotsman’s Mill ingredients.

“6. Brazil: a Case Study of the Key Success Factors for Value Capture in the Soybean Industry. Background: Converting Soybean into Poultry Exports, Implications: Key Success Factors for Value Capture.

“7. Positioning of African Countries for Successful Value Capture.

“8. Considerations and Steps Required to Develop Policy:

“A—Identify and Prioritize

Opportunities for Value Capture,

“B—Identify Current Policy Bottlenecks,

“C—Develop Key Enabling Interventions,

“D—Address Potential Policy Trade-offs.

Table of 24 figures.

Pages 9-10: Archer Daniels Midland (ADM): ADM is a conglomerate headquartered in the US with interests across a broad portfolio of agriculture and agro-processing sectors, and activities including producing, procuring, transporting, storing, processing, and merchandising agricultural commodities and products. It operates more than

biggest deal ever and its first venture into the flavors market, specializes in natural ingredients.” Consumers have been showing increasing interest in foods made only of natural ingredients.

Wild Flavors was founded in Heidelberg, Germany, in 1921 as a maker of ingredients for nonalcoholic beverages.

ADM is on schedule to move its headquarters from Decatur, Illinois, to the former United Airlines building at 77 West Wacker Drive in Chicago in late August.

2109. African Center for Economic Transformation (ACET). 2014. The soybean agri-processing opportunity in Africa.

270 plants in 60 countries across its portfolio of agricultural commodities world-wide and generated \$61.7bn in revenues in 2010.

“the US, ADM is responsible for 31% of total soybean processing volumes. It has 23 crushing facilities and 13 oilseed refineries in the country. In 2006 ADM’s plants accounted for 30% of US soybean oil production capacity. In Brazil, ADM is the 3rd largest producer of soybeans accounting for 7% of the total produce. Currently ADM’s Africa activities focus on cocoa processing in Cameroon, Côte d’Ivoire and Ghana and the company lacks any significant soybean production or processing assets in the region.

“Across the value chain, ADM activities include production, processing and trading of soybean and its products, through its “Oilseeds Processing” and “Agricultural Services” divisions.

“Oilseeds Processing: Includes activities related to the production, crushing and further processing of soybeans. The processed products are then produced and marketed as ingredients for the food, feed and energy industry. It has made substantial investments in technology, and ADM currently claims to operate the most modern soy processing system in the US, capable of leaving only 1% oil in the soy meal with the rest being extracted and available for further refining

“Agricultural Services: The company has an extensive grain elevator and transportation network, used for buying, storing and transporting soybean and other agricultural commodities and their resale as food and feed ingredients and raw materials for the agricultural processing industry. ADM operates 330 silos in the US, South Africa, Canada, Brazil and other major agricultural regions.

“Beyond core soybean products, ADM operates one of the world’s largest ‘soy isoflavone’ facilities under the brand name of Novasoy. Isoflavones are a unique group of compounds found in soybeans, which share some of the physiological properties of the hormone estrogen, and are used as a dietary supplement.

“Key recent investments include a 50% share in Edible Oils Limited of the UK to procure, package, and sell edible oils in the UK. It also has a 50% share in Stratas Foods in Memphis, US to procure, package and sell edible oils in North America. It has an 80% interest in Toepfer in Germany, which is a global merchandiser of agricultural commodities and processed products.

“Cargill: Cargill is a multinational corporation based in Minnesota in the USA, and is an international producer and marketer of food, agricultural, financial and industrial products and services. Cargill’s overall business operations include purchasing, processing and distributing grain and agricultural commodities, the manufacture and sale of livestock feed and ingredients for processed foods and pharmaceuticals. Founded in 1865 it has operations in 65

countries today and recorded revenue of \$107.9 billion in 2010. It is responsible for 25% of all US grain exports.

“Cargill is a global purchaser, producer and trader of soybean. The company has evolved from trading soybeans, to processing them into meal and oil, to producing high-value natural vitamin E from a soybean byproduct. Cargill has a substantial footprint in the key soybean production markets of the US, Brazil and Argentina. In the US Cargill processes 21% of the available soybean on the market, and accounted for 22% and 13% of soybean oil production in the US and Argentina respectively in 2006, and accounted for 7% of the total soybean crush in Argentina. In Brazil, Cargill has 11% share of total soybean production. Cargill also has substantial presence in some smaller production markets: for example, Cargill has approximately 40% share of total soybean production in Paraguay.

“Although Cargill has a substantial presence in Africa that covers 12 countries including Ghana, Kenya, South Africa, Tanzania and Zambia, these activities do not currently include soybean production or processing.

“It has partnered with the Bill & Melinda Gates Foundation for the South African Soy Value Chain Program being conducted in Zambia and Mozambique. This program will target smallholder farmers and facilitate their access to agricultural inputs and new technologies, facilitate market access, and assist in infrastructure development. This will introduce soya production to 37,000 farmers across the two countries.

“Key recent investments include a \$20 million port terminal in Santarem in Brazil’s northern state of Para in 2003, with the capacity to store 60,000 metric tons of soybeans, and expected throughput of 800,000 metric tons per year. In 2006, Cargill made a significant entry into the Chinese processing sector through a \$60 million investment in a soybean crushing plant with a 5,000 ton per day capacity. More recently, in 2010 Cargill invested \$112 million in an 18MW co-generation plant and a soybean biodiesel production plant with a processing capacity of 240,000 tons per year in Argentina.

Bunge: Founded in 1818 in the Netherlands, Bunge is a leading multinational agribusiness and food company with operations in 30 countries, and net sales of \$41.9bn in 2009. It is a leading grain producer and is also involved in processing and grain trading. Bunge is the world’s largest oilseed producer, with operations across the entire value chain from oilseed cultivation to distribution to retailers and farmers.

“It has three business segments involved at different points across the value chain:

“Grain and Oilseed origination: Sources soybeans, stores and blends them and sells the final product to commodity customers. Bunge trades the resulting aggregated soybeans to over 80 countries.

“Oilseed processing: Produces soybean meal, soybean

crude oil, soybean hulls and hull pellets, and is capable of producing GM-free soy products to cater to markets like the EU. It operates over 50 processing facilities across North America, South America, Europe and Asia. Bunge is a major supplier to the Caribbean, Asia, North Africa and the Middle East.

“International marketing: Focused on the sale of soybean and its processed products to worldwide customers, management of logistics and price risk.

“Bunge has soybean production and processing activities in all the major producer markets: in the US it accounts for 14% of soybean processing, and 15% of production, in Argentina, for 7% of processing and 9% of production, and is the leading producer of soybean in Brazil, with 18% share of volumes.

“In 2009, Bunge built a new \$76m soy processing plant in Brazil with crushing capacity of 1.3 million tons a year. Bunge has also made significant investments in Vietnam, including \$100m toward an integrated soybean processing plant with 3000 tons per day capacity, scheduled to start production in 2011. Bunge also has a 50% stake in a Vietnamese port operator of Phu My Port.

“To date, Bunge does not have a significant presence in the Sub-Saharan Africa oilseeds sector, but in April 2011 it announced a joint venture with Senwes, a South African agribusiness company, to develop grains and oilseed operations in the country as a base for trading in the Sub-Saharan Africa region.” Address: Accra, Ghana.

2110. Mertens, Randall J. College of Agriculture, Food and Natural Resources, Univ. of Missouri; ADM [Archer-Daniels Midland Co.]. 2014. New ADM and CAFNR laboratory teaches entrepreneur skills beyond the blackboard (news release). Columbia, Missouri. 2 p. Nov. 16.

• **Summary:** “Columbia, Mo.—A cutting-edge industrial laboratory to give agricultural and engineering students a chance to hone advanced team and entrepreneur skills will be opened Oct. 9.

“The College of Agriculture, Food and Natural Resources and College of Engineering, University of Missouri, and Archer Daniels Midland Company (ADM) partnered to create the facility in the Agricultural Engineering Building on Mizzou’s east campus.

“The ADM Center for Agricultural Development was designed to provide students experiential learning in the latest theories of biofuel development, food production and energy processing.

“As the global population continues to grow, the world is looking toward agriculture to create viable, sustainable solutions to some of the world’s most pressing needs—like an abundant food supply and advanced renewable fuels,” said Michael D’Ambrose, ADM senior vice president and chief human resources officer. “To help our industry meet this challenge, ADM is pleased to invest in the University of

Missouri and the next generation of agricultural leaders.”

2111. Cancino, Alejandra. 2014. Pat Woertz retiring; ADM names new CEO. *Chicago Tribune* Nov. 6.

• **Summary:** “After eight years at the helm of one of the world’s largest agricultural companies, Patricia Woertz is stepping down as chief executive of Archer Daniels Midland and is being succeeded by Juan Luciano...”

When she joined ADM in 2006, one of the areas the board asked her “to focus on was leadership development and succession planning, with the goal of ensuring an eventual seamless transition to the next CEO.” She is looking ahead to fulfilling a decade of service to the company. She has worked to build a high-performance, results-focused company. Before coming to ADM she was at Chevron, in charge of global refining, marketing, lubricant, and supply and trading operations.

Earlier this year, *Fortune* ranked Woertz as No. 8 among the 50 most powerful women in business.

Last year, according to The Chicago Network’s 2013 census report, 14.5% of executive positions in Chicago’s 50 largest publicly traded companies were held by women.

Luciano, an industrial engineer, will become ADM’s CEO in January. In 2011 he joined the company as chief operating officer. Previously he worked at Dow Chemical, where he was president of the performance division.

ADM moved its global headquarters to downtown Chicago last August.

2112. Shurtleff, William; Aoyagi, Akiko. comps. 2014. History of meat alternatives (965 CE to 2014): Extensively annotated bibliography and sourcebook. Lafayette, California: Soyinfo Center. 1437 p. Subject/geographical index. Printed 17 Dec. 2014. 28 cm. [6759 ref]

• **Summary:** This is the most comprehensive book ever published about the history of meat alternatives worldwide. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of this ancient and interesting subject. It is also the single most current and useful source of information on this subject.

Contents: Search engine keywords. Dedication and acknowledgments. Introduction: Brief chronology / timeline of meat alternatives worldwide. About this book. Abbreviations used in this book. How to make best use of this digital book—Three keys. Contains 435 photographs and illustrations. [www.soyinfocenter.com/pdf/179/MAL.pdf](http://www.soyinfocenter.com/pdf/179/MAL.pdf)

What is a meat alternative? It is a meatless food that has approximately the same taste, appearance, and texture of a related food made from meat, poultry, fish or shellfish. Its nutritional value is, in general, approximately equal to (or sometimes greater than) that of the related food, including essential vitamin B-12. Its name often indicates the meat to which it is an alternative, and the label must indicate clearly that it is a meatless product. For example Tofurky is a

meatless alternative to turkey. FriChik (or White-Chik) is an alternative to fried chicken. Choplets is an alternative to pork chops. Likewise there are Soyloin Steaks, Veja-Links (or Vegelinks), Vegetable Skallops, Bac\*Os (or Stripples), Mock Chicken Tempeh Salad, a myriad of meatless burgers, etc.

Traditionally a main ingredient in meat alternatives has been tofu (including fried and dried frozen tofu), wheat gluten, tempeh, yuba, and nuts (especially peanuts). Yet while these foods have been used for centuries to make meat alternatives, the Soyinfo Center does not include them in our definition of meat alternatives.

More recently, soy protein isolates, concentrates, and modern textured soy protein products (such as spun soy protein fibers, TVP, textured soy protein concentrates, etc.) have been added to the mix. Yet while these ingredients are increasingly used to make meat alternatives, we do not consider them to be meat alternatives. In the 1960s and 1970s they were often called “meat analogs/analogues.”

Meat alternatives serve many useful purposes:

Most people who become vegetarians do so for reasons of health, protection of animals (not killing or exploiting them), and/or concern for the environment. They often keep their desire for the taste and texture of meat—at least for a while. Meat alternatives may make it easier for them to make the transition to, or to maintain, this new diet and lifestyle.

Meat alternatives make it much easier for meat eaters to reduce or eliminate meat consumption—as, for example, when that is suggested by a cardiologist after (or just before) heart surgery. Many heavy consumers of meat cannot imagine life without it.

They serve as an occasional “comfort food” for long-time vegetarians.

A meatless turkey (such as Tofurky) makes it easier for vegetarians to “blend in” at Thanksgiving.

Brief chronology of meat alternatives:

965—The earliest known reference to tofu (worldwide) appears in China in the *Anecdotes, Simple and Exotic (Qing yilu)* by Tao Ku. It states: When Shi Ji was the magistrate of Qing Yang, he emphasized the virtue of frugality among the people, and discouraged the consumption of meat. Instead he promoted the sale of tofu. But rather than calling it *doufu* (the Chinese name for tofu), he referred to it as ‘mock lamb chops’ or ‘the vice mayor’s mutton.’ (Translated by H.T. Huang, PhD, July 2002).

1301—Meat alternatives are next mentioned, worldwide, in China. A recipe for mock lung sausage and one for mock eel (the main ingredient of each is *mien-chin* / wheat gluten) appears in the *Essential Arts for Family Living (Jujia biyong shilei quanji)*, an encyclopedia.

1587 Jan. 24—Yuba, called *uba*, is first mentioned worldwide; it appears in a Japanese diary.

1596—Wheat gluten is again used in China to make meat alternatives in *The Great Pharmacopoeia (Bencao gangmu)* by Li Shizen. Yuba (*doufu-pi*) is first mentioned in China in

the same work.

1621-1627—At a banquet in Ming-dynasty China, a group of Buddhist nuns is reassured: “This is vegetarian food made to look like meat. It has come from the temple, and there can’t possibly be any harm in eating it.” (Egerton’s 1939 translation of *The Golden Lotus {Jin Ping Mei}*, by Xioa-Xiao Sheng).

1790—In the famous book *Recipes from the Sui Garden (Suiyuan shidan)* by Yuan Mei (Qing dynasty), Mock roast goose with yam wrapped in yuba (*doufu pi*) is mentioned. This is the earliest document seen that mentions a meat alternative resembling poultry.

1815—Tempeh is first mentioned worldwide in the *Serat Centini* from Indonesia.

1852 Nov. 24—Meat alternatives are first mentioned in the Western world. “We learn that a distinguished Grahamite has invented a vegetable sausage. It is composed mainly of red flannel and turnip tops, chopped fine. All heating spices are excluded. The vegetable sausage has long been a desideratum with the proprietors of vegetarian boarding-houses.” (*New Hampshire Patriot and State Gazette {Concord}*. “An important invention,” p. 3).

1876—The term “substitute for meat” is first used (in English) in the official catalogue for Japan’s International Exhibition at Philadelphia. Tofu and miso, “afford the necessary nitrogenous substances, and to a certain extent form the substitute for meat;...” (p. 106).

1886—The earliest known document to mention a meat alternative in Japan is *A Japanese-English and English-Japanese Dictionary*. 3rd ed., by James C. Hepburn. The entry states: “Hiriōzu: A kind of food made of tōfu fried in oil.” Hiriōzu (now usually spelled Hiriyōzu) refers to Kyoto-style deep-fried tofu treasure balls.

1888—The term “substitute for flesh meat” is first used (M. Holbrook, p. 117).

1892 March 16—The word “meatless” is first used. The *New York Times* (p. 2) runs an article titled “A Meatless Feast. Banquet of the New-York Vegetarian Society.”

1893 Jan. 15—The term “meat substitutes” first appears. In an article titled “Lectures on Cooking,” the *New York Times* (p. 17) states that Miss Maria Daniell of the Massachusetts Institute of Technology will give a course of lectures on cooking for the sick. It “will include instructions for the... cooking of meats and meat substitutes.”

1895 Dec. 25—Earliest known reference to a meatless turkey. In an article titled “No Meats on the Menu,” about the Chicago Vegetarian Society’s annual banquet, the *Chicago Daily Tribune* states that the twelve course menu included “vegetable turkey.”

1895-1899—Charles Dabney interests Dr. John Harvey Kellogg in developing substitutes for meat. Dr. Kellogg first described this in 1923 in a book titled *The Natural Diet of Man* (p. 334-36): “By the combination of nuts and cereals, a product very closely resembling meat may be prepared.

The process for doing this was discovered by the writer many years ago in a series of experiments undertaken for the purpose by the request of Professor Dabney, then assistant professor in the Department of Agriculture. Recognizing that the increase of population would ultimately lead to an increase in the price of foodstuffs and particularly of meats, and possibly a scarcity of meats, Professor Dabney requested the writer to solve the problem by the production of a vegetable substitute for meat. The result of the experiment undertaken was Protose, a nut-cereal preparation, which to a considerable degree resembles meat in appearance, taste and odor, having a slight fibre like potted meat.”

1896 July–Nuttose, the first commercial meat alternative in the Western world, is launched by the Battle Creek Sanitarium Bakery, renamed the Sanitas Nut Food Co. by Nov. 1896. The brainchild of Dr. John Harvey Kellogg, it is the first of many Seventh-day Adventist meat alternatives and the world’s first canned meat alternative. Peanuts are the main ingredient. In Sept. 1896, Ella Kellogg, Dr. Kellogg’s wife, publishes six recipes for its use in the popular magazine *Good Health* (Battle Creek, Michigan). In a Nov. 1896 advertisement, Nuttose is said to have “somewhat the appearance and flavor of cold roast mutton.” By Dec. 1896 Nuttose is being sold as a “health food” in Los Angeles and advertised in the *Los Angeles Times*.

1896 July–The term “substitute for flesh food” first appears. It is used to describe Nuttose in an article by Dr. J.H. Kellogg in *Good Health* magazine (Continued). Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2113. Madison, Deborah. 2014. *The new vegetarian cooking for everyone*. Revised. Berkeley, California: Ten Speed Press. vi + 665 p. Index. 27 cm. Originally published in New York by Broadway Books in 1997.

• **Summary:** This book (vegetarian) is a revised and expanded edition of *Vegetarian Cooking for Everyone* (Oct. 1997).

Chapter 16, titled “Tofu, tempeh and miso” (p. 521-539) begins: “Soy was the big hope in the 1970s, ‘80s, and into the ‘90s for its protein, lack of cholesterol, its ability to imitate meat in many forms, and its possible health benefits.

“Then suddenly it was under suspicion, and still is. Tofu, which is difficult to digest, should be thought of as a food you eat in small quantities, while fermented soy products, like miso and tempeh, are now preferred.” This page goes on to discuss the pros and cons of soyfoods. TVP (textured vegetable protein) a highly-processed, sawdustlike by-product, often used as a filler in meat dishes, sits at the bottom of her list of wholesome and delicious foods. Hexane, used to treat some “natural” soy products, is a neurotoxin [and a highly volatile petroleum fraction]. She has found that soy oil and soy flour are too often rancid, yet both are widely available in supermarkets. Soy milk and tofu have their own problems; much of their wholesomeness depends on the

company that makes them, the sources of their soybeans (are they organic, non-GMO) and who certifies them when they are imported from China. Eden Foods gets high marks for the integrity of its various types of Edensoy®. Silk® soy milk, made by Dean Foods, gets low marks for its high level of sweetness and the fact that its maker refuses to give the source of its soybeans. Yet soy milk may be beneficial to those who are very lactose intolerant. Some people find it hard to digest soy milk and other soy products. Fortunately there are now other plant milks that are easier on the body and widely available.

Recipes: This section begins with 4 Asian dipping sauces, three of which call for soy sauce. The section on tofu begins with a discussion of tofu, the eight types of tofu, cooking techniques (draining, firming and precooking), four additional sauces for tofu and tempeh (pages 59-61), marinating tofu and tempeh plus 4 marinades, then 16 tofu recipes.

The section on tempeh begins with a discussion of tempeh followed by 9 tempeh recipes.

The section on miso begins with a discussion of miso and the best known of the many types of miso. Since miso is best known in miso soups there are two recipes for kombu stock followed by 6 miso recipes and a list of more garnishes for miso soups.

About the author: On the rear inside dust jacket is a color photo of Deborah Madison. The text below it reads: “Deborah Madison is the author of eleven cookbooks and is well known for her simple, seasonal, vegetable-based cooking. She got her start in the San Francisco Bay Area [California] at Chez Panisse before opening Greens, and has lived in New Mexico for the last twenty years. In addition to writing and teaching, she has served on the boards of Slow Food International Biodiversity Committee, the Seed Savers Exchange, and the Southwest Grassfed Livestock Alliance, among others. She is actively involved in issues of biodiversity, gardening, and sustainable agriculture.” Address: Author and chef, Santa Fe, New Mexico.

2114. Markets and Markets, 2014. *Lecithin market worth 1.11 billion U.S. dollars by 2020* (News release). Pune, Maharashtra 411013, India. 162 p.

• **Summary:** “The report ‘Lecithin and Phospholipids Market by Lecithin Type, by Source (Soy, Sunflower, Egg and Others), by Application (Food, Nutrition & Supplements, Feed, Pharmaceuticals and Others) & Region—Global Trends and Forecasts to 2020’, analyzes the lecithin & phospholipids market, which is segmented based on the type, application, source, and region. The lecithin & phospholipids market, based on source, includes soy, sunflower, egg, and others. The market, based on application, is segmented into food, nutrition & supplements, feed, pharmaceuticals, and others. The report includes the driving and restraining factors of the market with detailed analyses of opportunities and

challenges. The market has been segmented on the basis of the key regions—North America, Europe, Asia-Pacific, and the Rest of the World (RoW). The size of the markets in the key countries has also been covered and projected for each region.

“Browse 65 market data Tables and 62 Figures spread through 162 Pages and in-depth TOC [Table of Contents] on ‘Lecithin and Phospholipids Market by Lecithin Type, by Source (Soy, Sunflower, Egg and Others), by Application (Food, Nutrition & Supplements, Feed, Pharmaceuticals and Others) & Region—Global Trends and Forecasts to 2020.’

A link is given.

“The lecithin market was valued at USD 784.5 Million in 2014 and is projected to grow at a CAGR [compound annual growth rate] of 5.9% from 2015 to 2020. The food segment in the lecithin market is projected to reach a value of 177.37 million tons by 2020. The nutrition & supplement segment dominated the phospholipids market. The driving factors of the lecithin & phospholipids market are increase in the applications of lecithin & phospholipids such as animal feed, pharmaceuticals, and food; growing demand for natural sources of ingredients; increasing consumer awareness and health concerns; and rise in consumption of convenience foods.

“With the increase in per capita income, the expenditure on convenience foods and healthcare products has increased, which has resulted in an increase in the demand for lecithin & phospholipids. These factors provide opportunities for emerging market players. Fluctuating prices of raw materials is the major restraining factor for the market.

“The global lecithin & phospholipids market is segmented on basis of application. The applications considered for this research are food, nutrition & supplements, feed, pharmaceuticals, and others. Sources of lecithin & phospholipids are also classified in the segmentation. By source, the soy segment in the phospholipids market accounted for a share of 73.6% in 2014 and is projected to reach a volume of 3536.2 KT [kilotons = 1,000 tons]. The market for lecithin is projected to reach USD 1.11 billion by 2020 at a CAGR of 5.9% from 2015 to 2020, in terms of value. The Asia-Pacific region is estimated to be the largest market for lecithin & phospholipids, in terms of both, value and volume, in 2015. In the lecithin market, the Asia-Pacific region is projected to be the fastest-growing market at a CAGR of 5.9%, in terms of value, during the review period. This growth is mainly driven by the growing food, feed, and healthcare industries, particularly in developing countries such as India, China, and Latin American countries. The key players of the lecithin & phospholipids market are undertaking strategic decisions of new product developments, expansions, and investments to maintain their position in the market. They are involved in the research & development of various innovative enzyme products to attain a majority market share. The key players in

this market are Cargill Incorporated (U.S.), Archer Daniels Midland Company (U.S.), Lipoid GmbH (Germany), E.I. duPont de Nemours Company (U.S.), and Stern-Wywiol Gruppe Pvt. Ltd. (India).”

“About MarketsandMarkets: MarketsandMarkets is the world’s No. 2 firm in terms of annually published premium market research reports. Serving 1700 global fortune enterprises with more than 1200 premium studies in a year.”

Note: This study costs \$4,650. Since few public statistics are kept on lecithin production and value, market studies generally have to rely on what data is available. Moreover they tend to have a poor understanding of specialized industries. Address: India.

2115. Soyatech, LLC. 2015. Soya & Oilseed Bluebook 2015: The annual directory of the world oilseed industry, online at www.soyatech.com. Bar Harbor, Maine: Soyatech. 320 p. Feb. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the 9th year in a row that the *Bluebook* (a \$95 value) has been sent free of charge to qualified industry members. On the front cover is an aerial photo, near sunset, of a huge soybean field with no weeds visible.

The 12 oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hemp seed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed—the same as last year.

The book is divided into four major sections: (1) Soybeans, oilseeds & oilseed products. (2) Equipment, supplies & services. (3) Company & organization listings. (4) Statistics & reference.

On the inside front cover is a color ad from Soybean Premiums.org. Other full-page ads related to soyfoods are: Crown Iron Works Company, AOCS, French Oil Mill Machinery Co., Zeeland Food Services, Inc (Non-GMO Soy), DSM (Purfine), Buehler, Insta-Pro International.

On the back cover is a full page color ad from Natural Products Inc. (NPI, Grinnell, Iowa), makers of innovative ingredients for soymilk and tofu to cakes and cookies. They are the makers of Scotsman’s Mill ingredients.

Page 5: Greg Mellinger is CEO. Keri Hayes is publisher and operations director. Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

2116. Wendel, Armin. 2015. Re: The largest soybean crushers in Europe who sell their own lecithin. Letter (e-mail) to William Shurtleff at Soyinfo Center, Sept. 13—in reply to questions. 1 p.

• **Summary:** In the European market, soy lecithin is no longer as popular as it was because of GMO [genetically engineered soybeans] and allergy to soy.

The main oilseed crushers in Europe are ADM, Bunge and Cargill.

The food industry in Europe now prefers rape- and sunflower lecithin. Therefore the big oil mills (ADM, Bunge and Cargill) are crushing non-GMO soybeans (mostly coming from South America or India), rapeseeds and sunflower seeds (from Eastern Europe).

Companies modifying or fractionating lecithin are mostly importing lecithin from USA, South America and India.

ADM sells lecithin under the trademarks Yelkin®, Beakin®, Performix™, Thermolec®, Ultralec®, and Adlec™.

ADM sells deoiled lecithin under the trademark Ultralec®.

Bunge sells their lecithin mostly through DuPont (Danisco, Solae, former Central Soya) under the trademark Solec® (liquid and deoiled lecithin).

To explain: Cereol bought Central Soya (CSY) many years ago.

In July 2002 Bunge bought Cereol of France.

In 2003 Bunge, together with DuPont, integrated the business of Cereol into the new company, Solae.

DuPont bought Danisco and integrated the Solae business into Danisco.

Cargill (which purchased Lucas Meyer, Degussa) (fluid lecithin, deoiled lecithin, lecithin fractions): Topcithin, Lecigran, Epikuron, Metarin, Emulfluid, Emulpur, Emultop, Chocotop, Lecisoy, Lecimulthin.

To explain: In July 1999 Lucas Meyer (which sold mostly lecithin) was acquired by the nature products division of SKW Trostberg (a specialty chemical company). In 1998 Lucas Meyer has almost 250 employees, 140 of them in Germany, and generated sales of DM160 million (\$83.5 million). The business was then integrated into Degussa—a large German company with a long history. Degussa sold the business to Cargill. Cargill bought the lecithin business from Riceland.

Monsanto, with their introduction of GMO soybeans, has had a very negative influence in the lecithin business and industry. Address: Germany.

2117. Welters, Sjon. 2015. Re: Names of the various modern soy protein products in Dutch. Letter (e-mail) to William Shurtleff at Soyinfo Center, Nov. 30. 1 p. [Dut]

• **Summary:** Soy protein concentrate—soja eiwit concentraat  
Soy protein isolate—geïsoleerde soja eiwit

Textured soy flour (TVP)—TVP in the Netherlands, but called getextureerde plant eiwit (protein iso flour) and commonly referred to as “sojabrokken” or soja chunks (when made of soy), although sometimes made of oats, wheat, cottonseed.

Spun soy protein fiber—gesponnen soja vezel. Address: Founder and general manager, Rhapsody Natural Foods, 72 Danville Hill Rd., Cabot, Vermont 05647-9622.

2118. Wendel, Armin. 2016. Re: History from 1966 of Nattermann, American Lecithin Co. and phospholipids. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 27. 1 p.

• **Summary:** Note: Armin prefaces this chronology by saying that these dates come from his memory.

“1966—Foundation of Phospholipid GmbH in Hamburg as joint venture (50:50) between A. Nattermann Cie. GmbH and the ‘Ölmühle Hamburg’ (former Hansa Mühle—today ADM). Production of deoiled Lecithin as starting material for Cologne EPL-production. Cooperation ended 1985.

“1971—Cooperation with Lucas Meyer (selling the byproducts of Nattermann to Lucas Meyer). Cooperation ended in 1980.

1977—Foundation of Nattermann Chemie GmbH as affiliate of A. Nattermann & Cie. GmbH.

“1986—A. Nattermann Cie. GmbH acquired by Rhône Poulenc.

“1987—Nattermann Chemie GmbH renamed in Nattermann Phospholipid GmbH.

“1988—Foundation of Nattermann Phospholipid Inc. (USA Dobbs Ferry, New York).

“1988—Nattermann acquired American Lecithin Co. (ALC).

“1989—Rhône Poulenc acquired Rorer—renamed to Rhône-Poulenc Rorer (RPR).

“1994—Nattermann Phospholipid cooperation with Central Soya (CSY).

“1999—RPR merged with Hoechst to form Aventis.

“2001—Nattermann Phospholipid GmbH sold ALC to Randy Zigmont.

“2002 May 1—Nattermann Phospholipid GmbH was acquired by Lipoid GmbH.

“2002—Nattermann Phospholipid GmbH renamed Phospholipid GmbH.

“2004—Sanofi merged with Aventis to Sanofi Aventis (today only named Sanofi—Beside this Nattermann (although belonging to Sanofi) still acts under the name Nattermann).

“2007 Jan. 1—ALC acquired by Lipoid.”

2119. Soyatech, LLC. 2016. Soy & Oilseed Bluebook 2016: The annual directory of the world oilseed industry, online at [www.soyatech.com/bluebook.htm](http://www.soyatech.com/bluebook.htm). Bar Harbor, Maine: Soyatech. 316 p. March. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• **Summary:** This is the 10th year in a row that the *Bluebook* (a \$95 value) has been sent free of charge to qualified industry members. A special letter inserted into this year’s *Bluebook* states: “... we have decided to suspend the print edition of the *Bluebook*. On the front cover is an aerial photo of fields of yellow rapeseed flowers, with blue sky and white clouds overhead.

The 12 oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed,

hemp seed, linseed, palm kernels, peanut, popcorn, rapeseed, safflower, soybeans, sunflowerseed.

The book is divided into four major sections: (1) Soybeans, oilseeds & oilseed products. (2) Equipment, supplies & services. (3) Company & organization listings. (4) Statistics & reference.

On the inside front cover is a color ad from Soybean Premiums.org. Other full-page ads related to soyfoods are: Myande Group Co. Ltd (China), French Oil Mill Machinery Co., Zeeland Food Services, Inc (Non-GMO Soy), Buehler, Insta-Pro, AOCS, Balaguer, IRLR Group, OilDri, Schule, SciKoon, Solex, Crown Iron Works Company, Roskamp Champion.

On the back cover is a full page color ad from Natural Products Inc. (NPI, Grinnell, Iowa), makers of innovative ingredients for soymilk and tofu to cakes and cookies. They are the makers of Scotsman's Mill ingredients.

Page 5: Greg Mellinger is CEO. Keri Hayes is publisher and operations director of this Bluebook.

Note: This was the last edition of the Bluebook that was published by Soyatech. Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

2120. Wendel, Armin. 2016. Re: History of Lucas Meyer. Letter (e-mail) to William Shurtleff at Soyinfo Center, June 14. 1 p.

• **Summary:** Lucas Meyer never crushed soybeans. They got their lecithin, soy flour and soy proteins from soybean crushers.

"Sometimes company history is very complex. At the time (July 15, 1999) when SKW acquired Lucas Meyer—SKW belonged to VIAG.

"In 2000 VIAG merged with VEBA to become EON—and SKW together with Degussa-Huels became the new Degussa AG.

"The food business didn't fit the company any more, therefore Degussa (a VIAG company) sold the food business (which included the former Lucas Meyer business) to Cargill (9 September 2005). Cargill was interested in expanding their food business.

"Edelsoja—according to my files (at least in 1974)—Edelsoja was the 50:50 joint venture of ADM and Lucas Meyer. ADM was the producer and Lucas Meyer was selling the material."

Here are some basic facts about Lucas Meyer:

Address: Edelsoja GmbH—Ausschläger Elbdeich 21 Hamburg

Share Capital: Deutsche Mark (German Mark) 1 Million  
*GF (Geschäftsführer)* = Managing director: Arnd von Wissel, Jens Heiser

*Ges. (Gesellschafter)* = Partner: Ges.: Oelmühle Hamburg AG (500TDM), Lucas Meyer (500TDM)

*Prok. (Prokura)* = Authorized officer: Karl Otto Tielker

*Umsatz* = Sales 1989: Deutsche Mark 30 Million.  
 Employees: 36

*Gegründet* = Founded December 18, 1959

April 4th, 1974 Hamburg HRB (Handelsregister B)  
 Commercial register 16400 (This is the source of this information!)

Former Lucas Meyer employees established their own business:

Dr Herbert Rebmann = 1977 Lipoid GmbH <http://www.lipoid.com/en>

Volkmar Wywiol = 1980 Stern Wywiol Gruppe <http://www.stern-wywiol-gruppe.de>

Dr. Kuno Strauss = 1981 Extrakta Strauss [www.extrakta.de](http://www.extrakta.de)

Jens Heiser = 2005 Lecico <http://www.lecico.de>

Dr. Michael Schneider = Lecithos <http://www.lecithos.de>

Peter Fisser = Fisser Lecithin <http://www.fisser-lecithin.com>

Pierre Labourd = 2006 Novastell <http://www.novastell.com>

The founder of Lucas Meyer, his son and grandson are:  
 1—Herman Heinrich Meyer \*1893 +1978 (in the company 1923-1945)

2—Lucas Heinrich Gustav Meyer \*1924 +1980 (in the company 1945-1980)

3—Lucas C.H. Meyer \*1949 (in the company 1977-2006). Address: near Heidelberg, Germany.

2121. ADM (Archer Daniels Midland Co.). 2016. History of ADM, 1902-1979 (Website printout—part). [www.adm.com/en-US/company/history/Pages/default.aspx](http://www.adm.com/en-US/company/history/Pages/default.aspx) 6 p. Retrieved June 24. [6 ref]

• **Summary:** "1902 John W. Daniels founds Daniels Linseed Company in Minneapolis, Minnesota, and is named president.

"1903—George A. Archer joins W. Daniels in Minneapolis.

"1905—The Company name is changed to the Archer Daniels Linseed Company.

"1911—Capitalization reaches \$1,000,000.

"1914—The Company's first expansion takes place when a linseed mill is leased at Superior, Wisconsin.

"1915—Company expands to compete in eastern markets by building a linseed mill and a public grain elevator in Buffalo, New York.

"1923—The Company hires its first chemist for research. The Midland Linseed Products Company purchase occurs; the Company's name changes to Archer Daniels Midland Company.

"1924—John W. Daniels leaves his position as president and becomes chairman. Shreve M. Archer is named president.

"1925—The Company builds its first concrete grain

elevator in Minneapolis.

“1927–The Armour Grain Company is purchased, forming ADM’s grain division.

“1928–ADM has a record \$8.036 per share earnings.

“1929–ADM purchases the Werner G. Smith Company of Cleveland, Ohio, the country’s largest manufacturer of core oils. ADM starts crushing soybeans in its Toledo and Chicago plants, becoming a leader in the rapid development of soybeans in the United States. ADM acquires the Commander Larabee Corporation, one of the largest flour milling operations in America at the time.

“1931–John W. Daniels passes away and George A. Archer is named chairman.

“1932–George Archer passes away. During 1932-1947, ADM president Shreve Archer serves in the capacity of chairman, although he did not have the title.

“1933–ADM begins the manufacturing of formula feeds.

“1934–ADM installs the first continuous solvent extraction unit in the United States at the Chicago plant and begins the solvent extraction of soybeans.

“1935 ADM achieves a record net profit after income tax and depreciation (hereafter referred to as ‘net earnings’) of \$2,525,745 dollars.

“1939–ADM begins construction of what was then the world’s largest solvent extraction plant at Decatur, Illinois.

“1940–New products development through research grows rapidly, turning raw linseed and crude soybean oil into several hundred different products.

1946–Current assets reach \$50,284,312 with sales of \$186,255,175.

1947–Net sales and other operating income increase to \$297,429,912 and create record net earnings of \$15,673,041. Shareholders’ equity rises to \$54,748,884. Shreve M. Archer passes away and Thomas L. Daniels is elected president. Samuel Mairs is named chairman.

“1952–The cost of property, plant and equipment is \$54,107,838 exceeding \$50 million dollars for the first time. The number of ADM employees grows to over 5,000.

“1954–ADM purchases the resin division of U.S. Industrial Chemicals, with plants in Newark, New Jersey, and Pensacola, Florida.

“1955–Samuel Mairs passes away. Another chairman will not be named until 1958.

“1956–ADM pays its 100th consecutive quarterly payment, a record of twenty-five years of uninterrupted stock dividends.

“1957–ADM enters the isolated soy protein business.

“1958–T.L. Daniels steps down as president and is elected chairman. John H. Daniels is elected president.

“1962–The ADM logo is changed from the Archer yeoman to a logo design meant to represent chemical molecules coming from a natural resource.

“1963–ADM completes its grain export terminal at Destrehan, Louisiana. This is its first direct outlet to the Gulf

Coast.

“1964–T.L. Daniels steps down as chairman and Erwin A. Olson is elected chairman.

“1966–ADM begins producing textured vegetable protein TVP at the Decatur East Plant.

“1967–Net sales and other operating income increase to \$371,625,700 and create net earnings of \$4,370,293. Shareholder’s equity rises to \$91,297,180. ADM sells its Chemical Group to Ashland Oil & Refining Company in a refocus on agricultural products. ADM purchases a fleet of thirty barges, the start of its transportation fleet. ADM completes its soybean oil refining and hydrogenation plant in Decatur, Illinois.

“1968–Net sales and other operating income decreases to \$280,771,608 as net earnings increase to \$4,413,558. Shareholders’ equity changes to \$89,999,809. Erwin A. Olson steps down as chairman. John H. Daniels steps down as president and is elected chairman and Lowell W. Andreas is elected president.

“1969–ADM moves its corporate offices and research laboratory to Decatur, Illinois. ADM forms its specialty division to market a variety of specialty items in the food and industrial areas, including TVP.

“1970–ADM acquires assets of companies, enabling the Company to return to the mixed feed and dry corn milling businesses. Vanier foods operations is purchased. Dwayne O. Andreas is elected to the position of chief executive.

“1971–ADM acquires an eighty-three percent interest in Corn Sweeteners, Inc., a wet corn milling plant in Cedar Rapids, Iowa.

“1972–Lowell Andreas steps down as president and Donald B. Walker is named his successor. John H. Daniels steps down as chairman and Dwayne Andreas is elected chairman and chief executive. ADM forms the American River Transportation Company.

“1973–ADM acquires a fifty percent interest in British Arkady.

“1974–Net sales and other operating income reach \$1,551,288,700, creating net earnings of \$29,410,385. Shareholders’ equity reaches \$176,922,649. ADM acquires soybean plants in Holland and Brazil, its first processing facilities in Europe and South America

“1975–Donald Walker steps down as president and is elected vice chairman of the board. James R. Randall is elected president.

“1977–Donald Walker steps down as vice chairman. ADM employees number approximately five thousand.

“1978–During the Arab oil embargo, President Carter asks Dwayne Andreas to convert a new beverage alcohol plant into a synfuel plant. An ethanol production plant starts up in Decatur.

“1979–Total assets rise to \$1,032,523,000.

“ADM Trucking is established.”

2122. ADM (Archer Daniels Midland Co.). 2016. History of ADM, 1980-2016 (Website printout-part). [www.adm.com/en-US/company/history/Pages/1980-1999.aspx](http://www.adm.com/en-US/company/history/Pages/1980-1999.aspx) 6 p. Retrieved June 24. [6 ref]

• **Summary:** “1980 Net earnings are \$115,958,000 on net sales and other operating income of \$2,802,011,000. Shareholders’ equity increases to \$766,971,000. ADM Industrial Oils is established. The Peoria, Illinois, ethanol plant is purchased.

“1981–ADM pays its 200th consecutive quarterly payment, a record of fifty years of uninterrupted stock dividends. An ethanol production plant starts up in Cedar Rapids, Iowa.

“1982–ADM purchases Clinton, Iowa ethanol production plant.

“1983–ADM acquires interest in A.C. Toepfer; establishes ADM Asia Pacific, Ltd., Hong Kong.

“1984–President Ronald Reagan visits ADM.

“1985–ADM acquires elevators from Growmark and establishes ADM/GROWMARK River Systems, Inc.

1986–Expansion in Europe: ADM acquires Unilever plants in Hamburg & Spyck, West Germany and Europoort, The Netherlands.

1988–ADM purchases the soy isolate business from Grain Processing and the sunflower and canola plant at Velva, North Dakota, from Midwest Processing Company, Inc.

1989–Net earnings are \$424,673,000 on net sales and other operating income of \$7,928,836,000. Shareholders’ equity increases to \$3,033,503,000.

“ADM constructs an industrial soy protein facility in Decatur.

1990–The veggie burger is introduced to the U.S. and U.S.S.R. markets.

1991–ADM enters citric acid business.

1992–ADM builds pilot plant operations for canola oil-based biodiesel fuel in Leer, Germany. Former Soviet President, Mikhail Gorbachev, visits ADM.

1994–Asian expansion: Investments into Wilmar holdings, Singapore, are made with our main JV partner in Asia; first investment into China, East Ocean Oils & Grains (EOGI) in Zhangjigang, is initiated.

1996–Net earnings are \$695,912,000 on net sales and other operating income of \$13,314,049,000. Shareholders’ equity increases to \$6,144,812,000. Total assets increase to \$10,449,869,000. ADM World website is launched. ADM builds a new TVP plant at the Europoort facility. ADM purchases a twenty-two percent interest in Gruma S.A. de C.V.

1997–James R. Randall retires as president. G. Allen Andreas is named president and chief executive. ADM enters the cocoa business. Brazilian expansion: ADM acquires Glencore’s Brazilian grain operations, including a head office in Sao Paulo, approximately thirty-three grain elevators

and a fertilizer processing plant. ADM acquires Moorman Manufacturing Company and subsidiaries.

“1998–Nobel Peace Prizewinner and former Israeli Prime Minister Shimon Peres visits ADM.

“1999–Dwayne Andreas steps down as chief executive and chairman and is named chairman emeritus. G. Allen Andreas steps down as president and is named chairman and chief executive. John D. McNamara is named President. ADM Rice Inc. forms, to be involved in the origination and export trading of rough-paddy rice and milled rice.

2000–ADM partners with Wilmar International Ltd. to construct five soybean crushing plants in China.

“2001–e-ADM website is launched.

“ADM acquires Doysan Yag Sanayii, a Turkish vegetable oil producer with crushing plant, refinery, and packaging operations.

“ADM acquires Sociedad Aceitera del Oriente, S.A. (SAO), a Bolivian vegetable oil producer with crushing plant, refinery, packaging operations, and grain elevators.

“ADM unveils a new corporate logo designed to underscore the company’s deep commitment to nature and global agriculture.

“ADM pays its 300th cash dividend and 280th consecutive quarterly payment, a record of seventy years of uninterrupted stock dividends.

“John D. McNamara steps down as president and Paul B. Mulhollem is elected president.

“ADM creates a technology council with P&G Chemicals aimed at developing innovative natural- based products.

“ADM makes history when it becomes the first U.S. company to sign a contract with Cuba since the embargo began nearly forty years prior.

“2002–ADM completes its acquisition of Minnesota Corn Processors, LLC (MCP). With the acquisition, ADM adds corn wet-milling plants located in Marshall, Minnesota, and Columbus, Nebraska.

“Net earnings are \$511,093,000 on net sales and other operating income of \$23,453,561,000. Shareholders’ equity increases to \$6,754,821,000 equal to \$10.39 per common share. Total assets increase to \$15,416,273,000.

“The number of ADM employees grows to more than 24,000.

2003–ADM increases presence in South America by adding five grain origination and storage silos in Brazil.

“ADM introduces the NovaLipid 0 grams trans per serving oils and shortenings.

“2005–U.S. Environmental Protection Agency honors ADM with a Presidential Green Chemistry Award for a process known as enzymatic interesterification, which resulted in the NovaLipid 0 grams trans per serving oils and shortenings.

“ADM launches the Socially & Environmentally Responsible Agriculture Practices (SERAP) Program,

which provides financial incentives for West African cocoa cooperatives to implement sustainable practices in areas such as safe farming, responsible labor management and forest protection. More than 6,000 farmers participate in the program in its inaugural year.

2006—ADM acquires the technical and intellectual property assets of Groupe Lysac, Inc., in a move that enhances the company's ability to create biodegradable products from natural and renewable resources. Groupe Lysac's absorbent polymers—made primarily from starch, rather than petroleum products—can be used in new generations of industrial applications and consumer products, including disposable diapers.

“Patricia A. Woertz is named CEO and President of ADM.

“2007—Patricia A. Woertz is named Chairman of ADM's Board of Directors, while remaining the company's president and CEO.

“ADM opens its first wholly owned U.S. biodiesel production facility in Velva, N.D.

“ADM receives GE Global Ecomagination Award for saving 1.5 billion gallons of water per year through the installation of wastewater-treatment systems at the company's Decatur, Illinois, corn-processing plant.

“2008—ADM joins forces with Monsanto Company and Deere & Company to harvest, store and transport corn stover—stalks, cobs and leaves of corn plants—as a cellulosic feedstock for biofuel production, as biomass to generate steam and electricity, and as an ingredient in animal feed.

“2009—ADM launches ADM Cares, a social investment program that targets up to one percent of pretax earnings to initiatives that advance societal improvements in areas related to the company's business.

“ADM accepts the Foreign Policy Association's Corporate Social Responsibility Award for demonstrating exceptional corporate citizenship and playing a meaningful role in furthering economic, social and environmental progress in the communities it serves.

“ADM expands its European oilseeds processing capabilities with the acquisition of an oilseed crushing, refining and biodiesel facility in Olomouc, Czech Republic.

“ADM begins operations at its cocoa processing facility in Kumasi, Ghana.

“ADM acquires five oceangoing vessels, totaling 250,000 metric tons of cargo capacity, enhancing the flexibility and efficiency of its transportation network.

“Patricia Woertz and other ADM executives commemorate the 85th anniversary of the company's listing on the New York Stock Exchange by ringing the closing bell at the NYSE.

2010—ADM begins construction of a biodiesel plant in Joaçaba, Santa Catarina, Brazil, which will increase the company's biodiesel production capacity in Brazil by more than 50 percent.

“ADM publishes its first Corporate Responsibility report, detailing the company's progress in the areas of supply-chain integrity, environmental stewardship, social investing and safety since the company convened its Sustainability Steering Committee in 2007.

“ADM opens ethanol dry mills in Cedar Rapids, Iowa, and Columbus, Nebraska, with each facility adding 300 million gallons to ADM's annual ethanol production capacity.

“ADM announces the opening of a Beijing office.

“2011—ADM acquires remaining interest in Golden Peanut Company.

“ADM's deZaan cocoa brand celebrates 100 years.

“ADM begins production of biobased propylene glycol in Decatur, Illinois.

“ADM opens a feed premix plant in Tianjin, China.

“ADM establishes Indian headquarters in Gurgaon and grows Indian oilseed processing capabilities through acquisition of Gheepee Agri Private Ltd., Tinna Oils Ltd. and Madhur Agro.

“ADM acquires Elstar Oils S.A. in Poland.

“2012—ADM's Board of Directors approves a change to calendar-year financial reporting, effective Jan. 1, 2013.

“ADM acquires a port terminal in the state of Pará in Brazil, improving the company's ability to link the country's harvest to export markets.

“ADM and Wilmar International Limited announce plans to partner on fertilizer, ocean freight and tropical oil refining.

“2013—ADM opens a soybean processing facility in Villeta, Paraguay, increasing ADM's South American oilseed crush capacity by more than 20 percent.

“ADM opens an intermodal container freight shipping and receiving facility in Decatur, Illinois.

“ADM constructs a feed premix plant in the city of Nanjing, in eastern China, bringing to three the total number of facilities in the company's Chinese premix network.

“2014—Juan R. Luciano is named the 12th president in ADM's 112-year history.

“ADM constructs a sweetener and soluble-fiber manufacturing complex at Tianjin, China.

“ADM acquires the remaining stake of global merchandiser Alfred C. Toepfer International.

“ADM opens its global headquarters in Chicago. Decatur, Illinois, remains ADM's North American headquarters; Sao Paulo, Brazil, is ADM's South American headquarters; Rolle, Switzerland, is ADM's European headquarters; and Singapore is ADM's Asia-Pacific headquarters.

“ADM acquires WILD Flavors, one of the world's leading suppliers of natural ingredients to the food and beverage industry.

“2015—Juan R. Luciano becomes the ninth chief executive in ADM's 112-year history.

“ADM expands its ingredient business by acquiring savory flavor producer Eatem Foods, and expanding processing capacity for nuts and seeds on the U.S. West Coast.

“ADM takes a series of actions to enhance its ability to connect supply and demand around the globe, including: opening new distribution and merchandising offices in Central America, Asia and Africa; acquiring a port and shipping agency in Brazil; announcing major expansions at port facilities in Argentina and Brazil; launching ARTCO Stevedoring; acquiring full ownership of strategically-located terminals on the Black Sea; and announcing a new merchandising and supply chain joint venture in Egypt.

“To enhance the company’s ability to serve the growing Chinese and Asian markets, ADM opens a soluble fiber plant in Tianjin, China, and a feed-premix plant in Nanjing; the company also announces further expansion in China with the construction of a feed-premix plant in Zhangzhou.

“ADM strengthens its global sweetener footprint by purchasing several European corn processing assets of joint venture Eaststarch C.V.

“2016–Juan R. Luciano becomes chairman of ADM’s board of directors.”

2123. Schneider, Keith; Slotnik, Daniel E. 2016. Dwayne O. Andreas, who turned Archer Daniels Midland into food giant, dies at 98. *New York Times*. Nov. 16. p. B16.

• **Summary:** Dwayne Andreas died on 16 Nov. 2016 in Decatur, Illinois. This excellent biography covers his success in building ADM, several ADM scandals, and his skillful use of the levers of power with friends such as Mikhail S. Gorbachev.

Dwayne Andreas was born into a Mennonite family on 4 March 1918 in Worthington, Minnesota—the 5th of 6 children of Reuben and Lydia Andreas. “His father moved the family to Lisbon, Iowa, where he purchased a grain elevator and raised livestock on a small farm.” Dwayne began working at the elevator at age 9.

In 1936 the family changed the name of the business from Reuben & Sons [Andreas & Sons] to Honeymead Products. In 1939 they moved it to Cedar Rapids, Iowa, where they built a soybean crushing plant, mainly to manufacture soybean meal for feed. “By this time Mr. Andreas had briefly attended Wheaton College in Illinois, and his younger brother Lowell had become active” in the family business. (Lowell Andreas, who spent his entire life in the soybean and grain business and was later president of ADM, died in 2009).

Honeymead became one of America’s major soybean processors. In 1945, after Reuben Andreas suffered several strokes, the family sold the Cedar Rapids plant, but not the Honeymead name, to Cargill.

Dwayne went to work for Cargill and rapidly rose in the ranks. He “met and befriended Hubert Humphrey, who had

just been elected mayor of Minneapolis. Humphrey became a political mentor to Mr. Andreas and the godfather of his son, Michael; Mr. Andreas became a major donor to Humphrey’s Senate and presidential campaigns.

In 1947, Dwayne and Lowell Andreas purchased a soybean crushing plant in Mankato, Minnesota, and named it Honeymead Products Company. That same year, Dwayne married Dorothy Inez, a single mother of a little girl.”

By 1952 Dwayne had resigned from Cargill to help his brother, Lowell, run Honeymead. They turned it into one of the largest soybean processors in the USA.

In 1960 Farmers Union Grain Terminal Association, a larger company, bought out the Andreas brothers for a sum large enough to enable them to start a bank, which became National City Bank. “Farmers Union then hired Dwayne as executive vice president, while Lowell managed the banking business.”

In 1966 Dwayne (age 48) was already a well-known Minnesota grain merchant when the Archer and Daniels families asked him and his brother, Lowell, to become executives and minority shareholders in their midsize farm products company. In 1967 Lowell became president. In 1970 Dwayne became chief executive (CEO) and then chairman of the board. In 1997 he stepped down as chief executive and in 1999 he also stepped down as chairman, succeeded by his nephew, G. Allen Andreas.

Dwayne’s wife, Dorothy, died a few years ago. Dwayne is survived by his son, Michael, two daughters, Terry Andreas and Sandra McMurtrie; nine grandchildren; and 23 great-grandchildren.

In 1970 when Andreas was named chairman and chief executive of ADM, the company’s soybean exports totaled \$1.5 billion. In 1999 when he retired as chairman, the export number had risen to \$7 billion and ADM was the biggest processor in the industry. ADM employed more than 23,000 people and operated in 50 countries.

The company was originally founded in 1902 by George A. Archer as a linseed crushing business in Minneapolis, Minnesota.

“Mr. Andreas often said that the central objective of his life was to provide food for the world’s hungry. In the 1950s he pressed members of Congress to support the Food for Peace grain-export program; President John F. Kennedy appointed him to the American Food for Peace Council.”

Personal friends of Dwayne Andreas were Presidents Richard M. Nixon, Ronald Reagan, Jimmy Carter and Bill Clinton. In 1985 he helped arrange the first meeting between Reagan and Gorbachev. “He was particularly close to president Nixon who opened China’s markets to ADM’s grain.” He worked with all of them to expand export markets, especially for soybeans. “He was largely responsible for making soybeans a top American agricultural export.”

Mr. Andreas was known for his lavish campaign

spending—which almost always returned to ADM more than it cost; he gave equally to both parties. ADM made billions off of federal ethanol programs, sponsored by Senator Bob Dole, a Kansas Republican.

“Fred Wertheimer, the former director of Common Cause, the public interest advocacy group, called Mr. Andreas’s political activities ‘a classic example of how the corporate welfare game in Washington works.’

“He provides huge amounts of political influence money,’ Mr. Wertheimer told *The Washington Post* in 1995, ‘and his company receives huge economic benefits, courtesy of the American taxpayer.’ The Justice Department investigated him and ADM four times in the 1970s and again in 1974. He was acquitted each time.

In 1984, while seeking re-election, Ronald Reagan visited ADM’s headquarters in Decatur, Illinois. “Mr. Andreas commissioned a seven-foot bronze statue to commemorate the event.”

Several members of the Andreas family control nearly 8% of ADM’s publicly traded stock, making them one of the wealthiest families in the United States.

Although much of Mr. Andreas’s access to power came from his hefty political contributions, another source of power was Bal Harbour, Florida, where, in the early 1950s, he helped found the Sea View Hotel, a cooperative. First he bought an apartment there then recruited other powerful politicians to do the same.

Note: A version of this article also appears in print on Nov. 17, 2016, in the New York edition on page B16.

2124. *Herald and Review (Decatur, Illinois)*. 2016. Obituaries: Andreas. Nov. 20. p. D3.

• **Summary:** Decatur—Mr. Dwayne O. Andreas, passed away on Wednesday morning, November 16, 2016, with family by his side at St. Mary’s Hospital in Decatur, Illinois. Since retiring, he divided his time between Decatur, IL and his home in Bal Harbour, Florida, spending time with family and friends.

“Mr. Andreas was proceeded in death by his wife D. Inez Andreas on October 10, 2012.

“A Memorial Mass is scheduled for 11:00 a.m. on Tuesday, November 29, at Holy Family Church in Decatur, IL. A celebration of his life will be held at his home in Bal Harbour, Florida in January...”

“Dwayne Orville Andreas was born in Worthington, Minnesota, March 4, 1918. He grew up in Lisbon, Iowa with his parents Reuben Peter (“R.P.”) and Lydia Stoltz Andreas. The fourth of five [sic, fifth of six] children, Andreas developed his profound respect for the American farmer and the importance of agriculture at a very young age on his family’s farm.”

“Tip O’Neill once stated ‘Andreas is the smartest man I’ve ever met.’”

“Mr. Andreas is survived by his 3 children Sandra

Andreas McMurtrie of Bethesda, MD, Terry Andreas and husband John Hewig of New York, NY, Michael Andreas and his wife Sally of Decatur, IL; grandchildren Meghan Quinn and husband Edward, William McMurtrie and wife Elizabeth, Amanda Herndon and husband Austin, Maria Andreas Guadalupe, all of Bethesda, MD, Anne Detwiler, George Bevis, both of New York, NY, Eric Andreas, Regan Deering and husband Brian, Melissa Chiligris, Benjamin Andreas and wife Heather, all of Decatur, IL; and 24 great grandchildren.

“Obituary written by family members.”

A color portrait photo shows Dwayne O. Andreas.

Note: This exact same obituary was published on *New York Times.com* from Nov. 21 to Nov. 22, 2016.

2125. *Two Moons, Leinana*. 2016. *Baconish: sultry and smoky plant-based recipes from BLTs to bacon mac & cheese*. Woodstock, Virginia: Vegan Heritage Press. xi + 209 p. Illust. (color photos). Index. 23 cm.

• **Summary:** Soyfoods: According to the index, miso is mentioned on 2 pages, tamari on one, tempeh on 3, tofu on 3 (smoked, silken, soft, extra-firm, and super-firm are described), and textured vegetable protein (TVP) on one page. Address: Vegan, Queens, New York.

2126. *Vippy Soya (Website printout)*. 2017. [www.indiamart.com/vippyindustrieslimited/](http://www.indiamart.com/vippyindustrieslimited/) 6 p. Retrieved Feb. 30.

• **Summary:** Vippy Soya is an Indian soybean crusher (manufacturer) and exporter, founded in 1973.

“We are an ISO 9001:2008 certified organization engaged in the manufacturing and exporting of Soya Products. All our products are known for high nutrition value, hygiene and consistent product quality.” There follow color photos of 3 unnamed soy products.

“About us: Established in the year 1973, Vippy Industries Limited was envisioned by Late. Mr. Prakash Mutha. Since then, we are engaged in the manufacturing and exporting of Soya Products. We know the importance of proteins and hence our soya oil & meal have ample quantity of this body building nutrient. Owing to this feature and overall development of our organization, we were awarded the first ISO 9001:2008 certification for any Soya Processing Company in India. Further, we were the first one to be awarded the ISO -9002 certificate by SGS in 1998 and later acquired ISO 9001-2000 certificate from BVQI. Being a pioneer producer of value added Soya products like Defatted Soya Flour, Soya Grits and Flakes for international as well as domestic market, we have achieved Golden Status Certificate from Government of India. All these rich-in-protein products are processed in our manufacturing unit with utmost care. With our advanced machines which are supplied by Buhler Ltd., Switzerland Krupp Maschinentechnik GmbH, Germany and Westfalia Separators, Germany, we produce FDS for defatted soya flour 200 Tonnes/day; extruder plant for

Soya TVP 20 Tonnes/day and full fat soya flour plant 10 Tonnes/day. Mr. Rahul Mutha, Managing Director of our organization has experience of more than 2 decades in oil seeds and oil extraction. Presently, under the mentorship of Mr. Rahul Hirway, we have been able to make a mark in both domestic and international markets.”

A Factsheet states:

“Company CEO: Praneet Mutha.

“Total number of employees: 100 to 500 people.

“Ownership type: Public Limited Company.

“Annual turnover: Rs. 1-2 Crore [Note: 1 crore = 10 million, therefore annual turnover is 10 to 20 million rupees].

“Our history: We began our voyage in 1973 as private Ltd. company and with time became one of the preferred names in the industry. Our first processing plant was installed which had the production capacity of 60 MT/day and present capacity of the same is 1800 MT/day. With time, we garnered a loyal client base and went for first IPO in 1986. At present our factory campus is spread over 20 acres of land at Dewas. Dewas is close near Indore which is a main commercial city in Madhya Pradesh, the soya bowl of India. Each year India produces 9.2 million Tonnes of Soyabean of which 60% comes from Madhya Pradesh. We export these soya products of which the nearest ports are Mumbai, Kandla & Jamnagar.”

A photo shows a Kosher Certificate.

Product portfolio: Soya Lecithin (Non GMO Soya Lecithin), Soyabean Meal, Soyabean TVP, Soyabean Refined Oil and Soyabean Flour = Defatted Soya Flour, Defatted Soya Grits and Defatted Soya Flakes.

“Vippy Industries Ltd. was the first ISO 9001:2008 certified Soya Processing company in India.”

“The Company holds the following prestigious awards given by Soyabean Processors Association of India:

“1999-2000:

“3rd Highest processor in private sector

“2nd Highest manufacturing maximum number of value added products.

“1998-99:

“1st Highest manufacturing maximum number of value added products

“2nd Highest processor in private sector

“2nd Highest exporter as manufacture exporter in private sector.

“1997-98:

“1st Highest manufacturing maximum number of value added products.

“2nd Highest processor in private sector.

“2nd Highest exporter in private sector.”

2127. *Organic and Non-GMO Report (The) (Fairfield, Iowa)*. 2017. “Organic” imports of corn and soybeans not really organic, investigation finds. No. 174. June. p. 22-23.

• **Summary:** “Three shipments representing millions of

pounds of so-called organic soy and corn were discovered to be conventional, through a *Washington Post* investigation. The mysterious transformation into ‘organic’ raises concerns about the USDA’s lax enforcement system for organic imports. The significant organic mark-up earned sellers millions of dollars; over 20 million pounds were distributed to unsuspecting mills and farms.

“Over 50 percent of U.S. organic corn and soybeans are imported—mostly for animal feed. All three shipments passed through Turkey; pesticide residue has been found on half of products originating there. Between 2014 and 2016, Turkish shipments of organic corn and soybeans rose astronomically, arousing suspicion. The imports caused prices to drop by 25 percent, harming U.S. organic farmers who sometimes have crop gluts.” The second shipment, 36 million pounds of soybeans, originated from Ukraine and Turkey, arriving in Stockton, California. Documentation showed the soybeans weren’t organic—pesticides were present, and the soy came from ADM Ukraine that doesn’t trade in organics.”

“The Organic Trade Association called on ‘organic businesses and consumers to join us by asking our elected officials to call on USDA to up its game and protect organic consumers and food makers from bad actors.’

“Meanwhile, organic watchdog Cornucopia Institute called on the USDA to replace the leadership at the National Organic Program.

2128. *Organic and Non-GMO Report (The) (Fairfield, Iowa)*. 2017. ADM invests in production of non-GMO high-protein soybean meal: Non-GMO soybean processing capabilities expanded to meet growing demand across Europe. No. 178. Nov. p. 3.

• **Summary:** “Archer Daniels Midland Company will be making further investments at its crushing facility in Straubing, Germany to produce non-GMO high-protein soybean meal. The added capability will allow the site to serve ADM’s growing portfolio of soybean meal customers and support local farmers in increasing the region’s soybean output. “This investment demonstrates ADM’s commitment to meet customer demand for non-GMO soybean products in this region,” said Rene van der Poel, general manager ADM Straubing. “In addition, it gives local farmers a further incentive to grow more non-GMO soybeans and benefit from bringing soybeans into crop rotations.”

“The demand for non-GMO soybean meal from European soybeans is growing steadily. With the production of non-GMO high-protein soybean meal, ADM will be able to better meet the needs of its poultry feed customers, as well as the dairy and pig feed markets.” Address: Editor.

2129. Cox, John H. 2017. Current status of the Soyfoods Association of North America (Interview). *SoyaScan Notes*. Dec. 27. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** John took over from Nancy Chapman as the new Executive Director of the Soyfoods Association of North America in March 2017.

25 companies are now members of SANA. The two largest companies are ADM and DuPont, which pay \$30,000 each per year. The annual budget is \$250,000. The two largest tofu company members are Hinoichi and Nasoya. The annual meeting is held at the Natural Foods Expo on the East Coast.

SANA now has a competitor—the Plant-Based Foods Association. Jaime Athos of The Tofurky Company recently joined the competitor. Address: Executive Director, Soyfoods Assoc. of North America, 1101 17th Street, NW Suite 700, Washington, DC 20036. Phone: 202-986-5600.

2130. Johnson, Becky. 2017. *The tofu cookbook: high-protein, low-fat, low cholesterol, 80 recipes*. London: Anness Publishing (Lorenz Books imprint). 176 p. Illust. (color photos). Index. 24 cm.

• **Summary:** A very attractive book with superb photos. Contents: Introduction: making tofu, nutrition, types of tofu (firm tofu, silken tofu, marinated tofu, smoked tofu, frozen tofu, deep-fried tofu, other bean curd products {bean curd skins, bean curd sticks, tempeh, textured vegetable protein, soya dairy products—milk, cream, yogurt, etc.}), cooking with tofu, preparing tofu (pressing, searing, cutting, pan-frying, and deep-frying firm tofu, and preparing thin deep-fried tofu {aburaage}), processing silken tofu, draining tempeh, marinating tempeh, cutting tempeh), tofu marinades.

Soups, snacks & starters. Salads & sides. Vegetarian menus. Grains, noodles & pasta. Meat & fish mains. Desserts. Nutritional notes (a nutritional analysis accompanies each recipe).

In addition to hundreds of tofu recipes, 4 pages mention “bean curd skins,” 1 mentions “bean curd sticks,” 1 mentions miso, 8 mention tempeh, 1 mentions textured vegetable protein (TVP). Address: Chef, England.

2131. Rödl, Malte B. 2018. *Marketing meat alternatives: meat myths and their replication in advertising for plant-based meats*. In: Diana Bogueva, Dora Marinova, & Talia Raphaely, eds. 2018. *Handbook of Research on Social Marketing and Its Influence on Animal Origin Food Product Consumption*. Hershey, Pennsylvania: IGI Global. xxviii + 453 p. See p. 327-43. Chap. 22. Feb. Series: *Advances in Marketing, Customer Relationship Management, and e-services (AMCRMES)*. [59 ref]

• **Summary:** “Meat alternatives have been proposed as one solution to decrease meat consumption and thus its negative effects on individuals and the environment. Using three meat myths identified in literature on meat consumption—meat eating is normal, natural, and necessary—this chapter discusses how they emerge in six selected print adverts: (1) normal: dishes containing meat alternatives are portrayed

as traditional, perpetuating normality; (2) natural: the myth that it is natural to eat meat is not explicitly opposed, but bypassed; (3) necessary: meat alternatives are portrayed as even more necessary for good health than meat. The author proposes changes to neutralise these meat myths; but they are unlikely to be adopted by advertising due to its commercial goals. Although meat alternatives are theoretically preferable over meat (and can help individual transitions to vegetarianism), their marketing perpetuates meat myths, and may therefore reinforce a meat-centered culture.”

Note: TVP is mentioned 8 times, soy 5 times, and tofu, tempeh and seitan once each in this chapter. Address: Sustainable Consumption Inst., The University of Manchester, Oxford Road, M13 9PL, UK.

2132. Roth, Matthew D. 2018. *Magic bean: the rise of soy in America*. Lawrence, Kansas: University Press of Kansas. xi + 356 p. June. Illust. Index. 23 cm. [86 + 1085 endnotes]

• **Summary:** This is the best book we have seen to date on the history of soybeans and soyfoods in the United States. Contents: List of illustrations. Acknowledgments. Introduction: *Destined to Succeed?* 1. *Crossing Oceans*. 2. *Jumping the Gun*. 3. *Taking Root*. 4. *Exploring All Avenues*. 5. *Answering the Call*. 6. *Pushing the Boundaries*. 7. *Thriving in the Shade*. 8. *Rising into View*. 9. *Cresting the Peak*. Epilogue: *Here to Stay?*

This outstanding book, based on the author’s PhD thesis, is a series of carefully researched, well written and well documented biographies of various men, women and institutions that were important in introducing soybeans and soyfoods to the United States. Some of the men and women whose detailed biographies are presented here (such as William Morse, Henry Ford or Harry Miller) are well known to those interested in the history of soybeans and soyfoods in the USA; yet in each case many important and interesting new details are added to the life story of each person. Other men and women discussed here (such as Harry Harrison, William Poage, Tsuru Yamauchi or Yamei Kin) are largely unknown to soybean historians, and their inclusion in this thesis will help to ensure that they are given the place they deserve in future histories of soybeans and soyfoods in the United States.

The notes (endnotes), footnotes and bibliography are a treasure. Each chapter has its own series of endnotes, whose numbering starts over again with one at the beginning of each chapter, for a total of 1,085 endnotes. The bibliography, containing 86 references, is divided into two sections: (1) Archival sources. (2) Books, chapters, and articles.

Why so many new notes and bibliographic references? First, because the author did extensive archival research, much of it in archives that have not been previously examined for material on soy. Second, because in recent years many books and periodicals (including newspapers) have been scanned, digitized and made available to

researchers and the general public. A search, for example, on “Yamei Kin” will produce a wealth of results in unexpected places.

Contents: Introduction: A century of soybeans.

1. Crossings: The picture bride–Tsuru Yamauchi, The missionary–Harry Miller, The plant explorer–Frank N. Meyer.

2. Footholds: The agronomist–William J. Morse, The emissary–Yamei Kin, The missionary [Harry W. Miller].

3. Field days: The extension specialist–J.C. Hackleman, The salesman–A.E. Staley, The agronomist [William Morse].

4. Manifold Uses: The industrialist–Henry Ford, The chemist–Percy Lavon Julian, The board–Chicago Board of Trade, The missionary [Harry Miller].

5. Wartime substitute: The picture bride [Tsuru Yamauchi], The nutritionists–Clive and Jeanette McCay, The investigator–Warren Goss.

6. Hidden Ingredient: The congressman–William Poage, The breeder–Edgar E. Hartwig, The middleman–Dwayne Andreas, The chemist [Percy L. Julian].

7. Soytopia: The writer–Harry Harrison, The guru–Stephen Gaskin, The artisans–William Shurtleff and Akiko Aoyagi, The picture bride [Tsuru Yamauchi].

Bibliography.

When asked about the unusual structure of the table of contents and the thesis, the author replied (7 Dec. 2015): “The short answer is that the way I structured the dissertation was probably too complicated by half. The idea was to anchor each chapter section to a person, each of whom was either important in their own right and/or was a stand-in for a larger group. Morse, of course, was both: a key figure and a representative USDA ‘agronomist.’ The titling convention was to have the specific person named the first time they appeared, but have only the generic name, such as Agronomist, appear in subsequent chapter-section names. Yamauchi, while not central in her own right, was a way to anchor sections about the Japanese-American community; hence her appearance in three chapters.”

Note: This book was also published in the *Journal of American History*, Vol. 107, issue 1, June 2020. Address: Philadelphia, Pennsylvania 19123.

2133. Cox, John H. 2018. Re: Planning to write an article about SANA’s 40th birthday on July 30. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 27. 1 p.

• **Summary:** “Hi Bill,

“Thanks for your message. I’m writing an article about SANA’s 40th for the SANA newsletter. I plan to make it about what the organization has accomplished along with an appeal for it to continue. I’d like to include some of the history, certainly a photo would be nice. This will be in the SANA newsletter, mostly for members, but hopefully shared. I would love a quote from you about how the industry has changed–the good changes. What was it like at that first

meeting?

“SANA will do everything we can to protect the use of ‘soymilk’ to describe soymilk. The FDA seems to know that if they interfere with soymilk being labeled as soymilk then they will be sued. I’m not sure the members are ready for this, but I will lead them if this happens. I’m not sure I have the complete history about ‘the outcome of this issue last time around.’ Certainly, the 1997 SANA petition to FDA was a smart move.

“SANA has 20 members, only 12 are making soyfoods. There are only two big ingredient companies–DuPont and ADM. We also have DanoneWave and two tofu companies (House Foods America and Nasoya/Pulmuone.) We continue to lose members and I’m not sure how to turn it around. It is an exciting time for plant-based foods, but soy’s brand still needs help, as you know.

“Thanks for any historical information you can share with us. Good luck with your big project–I would love to know more about it.

“Best wishes, John.” Address: Executive Director, Soyfoods Assoc. of North America, 1101 17th Street, NW, Suite 700, Washington, DC 20036. Phone: 202-331-2451.

2134. Reuters. 2019. Global commodity traders to monitor deforestation in Brazil’s savannah (Web article). <https://uk.reuters.com/article/us-brazil-environment-cerrado-idUKKCN1Q42D8>

• **Summary:** “Brasilia (Reuters)–Six major commodities traders, including Cargill Inc and Bunge Ltd, have agreed to a common mechanism to monitor soybean supply chains for deforestation in Brazil’s vast Cerrado savannah.”

“Companies belonging to the Soft Commodities Forum network that signed onto the agreement to monitor their soy supply chains in the Cerrado include Archer Daniels Midland Co, COFCO International, Glencore Plc’s agriculture unit and Louis Dreyfus Company, according to a Forum statement.”

“While many other trading firms have committed to reaching zero net deforestation in their supply chains globally by certain dates, they have yet to make specific pledges to end destruction in the Brazilian savannah.”

2135. WISHH. 2019. WISHH: World Initiative for Soy in Human Health (Website printout) (Continued–Document part III). [www.wishh.org](http://www.wishh.org) 10 p. Retrieved March 14.

• **Summary:** Continued: (9) “Dec. 12, 2014. ASA/WISHH Regional Director–Africa Traveling in Ivory Coast:

“The American Soybean Association’s World Initiative for Soy in Human Health (ASA/WISHH) program’s Regional Director–Africa, Josh Neiderman, was in Abidjan, Cote d’Ivoire (RCI) this week with the WISHH French Speaking Africa consultant Mamadou Bousso for discussions with the local government’s bureau that buys food for the Ivorian government’s school lunch program.

The Ivorian government is interested in textured soy flour as a replacement for the canned sardines and other expensive protein sources they use currently.

“WISHH is sending a container with 19 MT of TVP™ from ADM, the winning bidder in a recent Quality Samples Program (QSP) tender and the team was planning the technical training activities to be conducted by personnel from the National Soybean Research Laboratory (UIUC). The USDA provided the funds for the sample program and the preliminary planning trip by Neiderman and Bousso. The RCI provides a daily lunch to over half a million children each day. Analysts estimate that their need for textured soy flour will approach 1,000 tons.

(10) “Oct. 17, 2014. ASA/WISHH Welcomes New Project Officer for Africa to the WISHH Team:

“Chris Slemper is the Project Officer–Africa for the American Soybean Association’s World Initiative for Human Health program (ASA/WISHH). Chris provides support for WISHH projects in Africa. Before working at WISHH, Chris served as an agriculture Peace Corps volunteer in Ghana. While serving in the Peace Corps, Chris provided agriculture extension services to a group of cashew farmers in the Brong Ahafo region of Ghana. His efforts focused on improving local farmer capacity through community based initiatives centered on business literacy, best management practices, and volunteerism. Chris earned his Master’s degree in forestry from Southern Illinois University, Carbondale. His studies focused on improving community capacity for sustainable watershed management in the St. Louis Metro East region.”

(11) “Sept. 26, 2014. ASA/WISHH Executive Director Travels to South Africa to Talk Market Development:

“Jim Hershey, Executive Director of the American Soybean Association’s World Initiative for Soy in Human Health (ASA/WISHH) program traveled to South Africa this week. On Tuesday, he met with a U.S. soy importer Impilo Foods who buys defatted soy flour for blending with local corn to make fortified corn-soy blend.

“Hershey also met with FAS/USDA’s Minister-Counselor Eric Wenberg to discuss USDA and checkoff-funded market development programs in Africa. Wenberg was excited to learn that ASA/WISHH is opening a sub-saharan region office in Ghana. While in South Africa, Hershey also participated in the Center for Sustainable Livelihoods Soy Symposium. Hershey ends the week with a meeting with DuPont Pioneer’s Regional Director–Africa Pam Chitenhe.

(11a) “Sept. 4, 2014. ASA/WISHH Hosts Africa Bakers and Business Owners Travel to U.S.”

“Reprinted from ASA Leader Letter... The American Soybean Association’s World Initiative for Soy in Human Health (ASA/WISHH) Program Manager–Africa, Erica Morrow and Regional Manager–Africa, Josh Neiderman traveled to Fargo, North Dakota, last week. Under the United

States Department of Agriculture’s Market Access Program (MAP), ASA/WISHH sponsored nine bakers and business owners from Burkina Faso and Cote d’Ivoire to the Northern Crops Institute (NCI) for a Soy in Baking training. During the course at NCI, participants learned about incorporating U.S. soy flour into their baked goods. While in Fargo, the group visited with Joel Thorsrud of the United Soybean Board and members of the North Dakota Soybean Council. Additional visits were made to two local farms and a grain elevator. Following the visit to North Dakota, the team traveled to Minneapolis, Minnesota, this week to meet with Pam Schutte at CHS, Inc.

Photo: “African Bakers and business owners at Northern Crops Institute.”

(12) “May 2012. WISHH Hosts Feed Training Mission for Southern Africans:

“WISHH organized a training mission to the United States for 10 feed manufacturing and poultry company representatives from four Southern African countries on March 5-9. The effort is part of WISHH’s work with the U.S. Agency for International Development (USAID) Southern Africa Trade Hub (SATH).

“For the first time, participants received U.S. feed mill training because WISHH understand the importance of hands-on learning and the impact of seeing state-of-the-art feed manufacturing and laboratory facilities.

“The participating companies account for 90% of commercial poultry and feed producers in the Southern Africa area, according to SATH, and were from: Malawi, Namibia, South Africa and Zambia.

“WISHH started the trip in Washington, D.C. where participants met with the American Feed Industry Association and the Center for Veterinary Medicine at the Food and Drug Administration. They then traveled to Kansas State University’s International Grains Program facility for a one-week training on feed manufacturing. In addition to tours of local facilities and laboratories, presentations included feed mill design, management, use and maintenance.

“The course covered a wide spectrum of very important subjects, and the diversity in the group attending the course insured an insight into a very wide range of topics. The course presenters were very helpful in answering questions, and the visits to the factories were impressive,” said Cillié Taljaard of Extru Feeds in South Africa. “I am currently involved in the extrusion of soy and maize, and therefore I found the extrusion part of the course most interesting and relevant to my daily business. The energy-saving techniques were also something that I could apply to my current daily manufacturing processes.”

“In addition to the planned presentations and tour visits, WISHH arranged additional tours of the Kansas State University dairy, sheep and goat units at the request of the participants.

“USAID’s Southern Africa Trade Hub (SATH) works to increase international competitiveness, intra-regional trade, and food security in the Southern African Development Community (SADC) region. SATH delivers targeted technical assistance to governments, the private sector, and civil society organizations in support of advancing regional integration and increasing the trade capacity of selected value chains within Southern Africa.

“During a tour of the feed manufacturing operations of Midwest Ag Services in Seneca, Kansas, participants learned about manufacturing various soy-based feed products. This knowledge could potentially aid the Southern Africans by increasing the number of products manufactured for customers or the types of feed they use in their poultry operations.

“During a tour of the feed manufacturing operations of Midwest Ag Services in Seneca, Kansas, participants learned about manufacturing various soy-based feed products. This knowledge could potentially aid the Southern Africans by increasing the number of products manufactured for customers or the types of feed they use in their poultry operations.”

(12) April 2012. Soy packs protein power!:

“April was National Soyfoods Month and the National Soybean Research Laboratory (NSRL) at the University of Illinois encouraged everyone to explore new ways to incorporate healthy soyfoods into their daily diets. Soyfoods are an easy way to enhance protein and provide a convenient alternative that lowers the saturated fat and cholesterol in many recipes.

“WISHH works year round with food manufacturers, livestock producers and aquaculture farms to increase the use of U.S. soy protein to improve the health and well-being of the world’s protein deficient.

“Soy’s biggest nutritional claim to fame is the fact that it is a complete protein, one of the only plant proteins that

contains all nine essential amino acids that our bodies need to function properly. A ½ cup of cooked soybeans supplies about 1/3 of a person’s necessary daily protein. That protein is incredibly filling. Plus, soybeans are cholesterol-free, low in saturated fat, and provide important Omega-3 and Omega-6 fatty acids. Soybeans are also a great source of fiber and are rich in vitamins, minerals and antioxidants. A single glass of soymilk contains over 6 grams of protein and is lactose free.

“Soy offers many health benefits and that is positively impacting the popularity and use of soy. Eating soy may also help in the prevention of certain illnesses such as heart disease, kidney disease, cancers, osteoporosis and diabetes. Soy foods are an excellent choice for weight management as protein helps delay feelings of hunger.

“The history of soybeans has its roots in China as early as the 11th Century and it is known as one of the first crops grown by man. The first soybean plants came to North America in 1765 and as they say, the rest is history. Today, 3.06 billion bushels of soybeans are produced in the U.S. and they take on many forms after harvest and processing. Some examples include soy meal, soy flour, soymilk, tofu, textured soy protein and soy oil.

2137. Seibert, Jeanne. 2019. Re: Founding and early history of NSPA. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 17. 1 p.

• **Summary:** “Here is the information that I was able to find:

“Sometime in early 1930, several soy bean crusher manufacturers met in Chicago to discuss the first rules to govern the purchase and sale of soy bean oil.

“In May 1930 at the first general meeting of the group the term “soybean” (one word not two) was adopted. At this same meeting, Code of Ethics and Constitution and By-Laws were presented by the Chairman of the Organization Committee, Otto Eisenschiml (Scientific Oil Compounding Co.) and adopted. Trading Rules were presented by Trading Rules Committee Chairman, Harry Haze of Harry Haze, Inc. and adopted.

“The Articles of Incorporation were granted from the State of Illinois in May of 1936.

“I have attached the list of representatives and their respective companies to this email. Some of the names may be misspelled because I had to create them from the individual’s handwriting. I cannot provide any copies because what we have in archive are very thin ‘onion skin’ carbon copies and the high resolution copiers of today cannot read them. All you get is a dark shadow on the page.

“Unfortunately, I was unable to find any information prior to 1930 nor was I able to find the publication on soy flour.

“I did find a very interesting article on Gene A.E. Stanley from *American Magazine* dated June 1926, which I have attached too. This is a photocopy of a copy, which is why parts are cut off. I do not have the original clipping.

“Good luck with your research and book.”

2138. Ruiz, N.; Parsons, C.M.; Stein, H.H.; Coon, C.N.; van Eys, J.E.; Miles, R.D. 2020. A review: 100 years of soybean meal. *Feedstuffs*. Jan. 25. \*

• **Summary:** The beginning of a quantitative systematic approach to animal nutrition is the landmark work of Henneberg and Stohman in 1860 in which they delivered for the first time proximate analysis [See: Henneberg, W., and F. Stohmann. 1860. *Beiträge zur Begründung einer rationellen Fütterung der Wiederkäuer* [Contributions to the rational feeding of ruminants. 2 vols.]].

“The 50-year historical review of soybean meal (SBM) published in *Feedstuffs* in 1970 by Dr. J.W. Hayward highlighted many of the pertinent advancements concerned with animal nutrition, product development and promotional aspects of U.S. SBM.”

“In the 1920s and 1930s, SBM was unknown to many companies and nutritionists and it was not used extensively in animal feeds. In fact, six U.S. states were not using SBM in feed formulas for poultry. Hayward pointed out in his review how the use of SBM in broiler diets had increased from little or none used in 1930 to 2.5 million tons in 1970. To promote its use in animal nutrition, Hayward and a special committee in 1938 decided to visit nutritionists at the U.S. Department of Agriculture in Beltsville, Md., and several universities and spread the word about SBM.”  
 Address: 1. Nelson Ruiz Nutrition, LLC.

2139. *SoyaScan Notes*. 2020. What is the water footprint of soybeans and various soyfoods? (Overview). April 24. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** We were asked this question by Lola Hernandez of *Vegetalmente.com*. She wrote:

You can see the water footprint definition in this link and, as you requested, I’m also including the carbon (CF) and water footprint (WF) for tofu and tempeh here:

“Tofu (1kg): 2.523 liters (WF) 0.72 kg (CF)

“Tempeh (1kg): 2.145 liters (WF) 0.56 kg CF

“We are managing several sources, but these two are very complete:

<https://www.thelifeimpact.com/carbon-footprint-of-foods> and

<https://www.thelifeimpact.com/water-footprint-of-foods>

“So far, we have gathered more than 150 references, but I’m afraid they are all in Spanish by now. Hopefully, we’ll have an English version in the meantime.

“If you ever find a source for TVP (textured soy) water and carbon footprint, I’d be very thankful if you share it with

me.

Best regards

“Lola Hernández

“Directora de expansión

“( +34) 622 13 23 43

“www.vegetalmente.com

Note 1. The first link is “Carbon footprint of foods: Highest to lowest CO<sub>2</sub>e, per kilogram (=2.2 pounds). “Avoiding meat and dairy is the single biggest way to reduce your impact on Earth’ according to the most comprehensive analysis of the damage farming does to the planet”–The Guardian (referring to a 2018 Oxford University Study).”

“CO<sub>2</sub>e stands for “carbon dioxide equivalent” and is the common unit for describing greenhouse gases.”

A bar chart shows the carbon footprint of various foods, ranging from lamb (39.2 kg CO<sub>2</sub>e), beef (27) and cheese (13.5) at the high end to lentils (0.9) and tomatoes (1.1) at the other. Tofu (2.0) is the 4th from the lowest.

2140. *SoyaScan Notes*. 2020. Brief chronology of The Drackett Company’s work with soybeans, soy protein, and Azlon (Overview). June 5. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1910–The Drackett Co. is organized as a partnership named P.W. Drackett and Sons. Its main business is distributing a line of bulk chemicals to industrial users. In 1933 the company adopted its present name.

1918-1928–Drackett is America’s leading manufacturer and seller of U.S.P. grade Epsom salts.

1923–Drackett starts production of Drano (a chemical composition used to clear clogged drains), which soon becomes the company’s major consumer product.

1934-36–Drackett starts production of Windex (a spray that cleans windows without water), which soon becomes its second major consumer product. Both products are made at Drackett’s plant at 5020 Spring Grove Ave. in Cincinnati, Ohio.

1935-36–Laboratory studies at Drackett lead to the design of an original pilot plant for oil extraction by the solvent method. Laboratory research is also conducted on the extraction of soy protein from defatted soybean flakes.

1935, fall–Drackett submits samples of industrial soy protein to the Champion Coated Paper and Fiber Co. for examination as to use in paper coatings in place of milk casein.

1936–A pilot plant for making industrial soy protein begins operation inside Drackett’s plant at 5020 Spring Grove Ave. in Cincinnati, Ohio.

1937 Feb.–A solvent extraction pilot plant begins operation on Spring Grove Ave. and continues for 3 years.

1938 April–The world’s first soy protein fiber (and the first experimental textile fiber made from a plant protein) is exhibited by Robert Boyer of the Ford Motor Co. at the

Fourth Annual Conference of the Farm Chemurgic Council in Omaha, Nebraska.

1938–Drackett purchases 60-75 acres of farmland at Sharonville, Ohio (several miles north of the Spring Grove Ave. headquarters), for a solvent extraction plant. Ground is broken in Sept. 1939.

1940, first quarter–Drackett starts to work cooperatively with The Ford Motor Co. to develop a soybean protein suitable for spinning into fiber from which upholstery cloth could be made.

1941 Jan.–Soybean oil extraction begins at the Sharonville plant. Drackett’s initial investment was about \$1.5 million. The plant has an annual capacity of 35,000 tons of soybean meal and 15 million lb of soybean oil.

1941–Drackett’s first industrial soy protein isolate is sold commercially. 15,018 lb were produced and 7,039 lb were sold during the year. By 1942 this soy protein was brand-named Alysol. Some of it was sold to the Ford Motor Co. to make experimental soy protein fibers.

1941 Dec. 7–Japanese military forces attack Pearl Harbor. The United States enters World War II. Henry Ford is soon told to stop making automobiles and to build an assembly line for making bombers for the war effort.

1942 May–The Ford Motor Company produces its first B-24 Liberator bomber using a giant assembly line one mile long that it had constructed at Willow Run in Michigan. Thereafter Ford made one bomber per hour–plus engines, gliders, tanks, armored cars, jeeps, etc.

1943 Nov.–Drackett purchases the Ford Motor Company’s soy protein and soybean fiber spinning operations. Robert Boyer, Francis (Frank) Calvert, and William Atkinson go to Drackett from Ford as part of the deal.

1943 Dec. 2–Drackett starts commercial production of Soybean Azlon, the world’s first commercial fiber made from plant proteins. The fibers were used mainly in felt hats by the America Hat Corporation.

1944?–Drackett is now making a new line of industrial soy proteins named Drackett Protein 110, 112, and 220. The first 2 are for use in paper coatings and sizings, the latter for water-based paints.

1945–The Drackett Co. is the largest soybean processor in Ohio.

1946–Drackett finishes construction of 18 new concrete silos at Sharonville, costing \$500,000, to store one million bushels of soybeans.

1947, mid–Drackett’s plant making industrial soy protein isolates begins operation at Sharonville. It also makes Ortho Protein and Impact Plastic Molding Compounds.

1948 March–Harry R. Drackett, the company’s second president, dies. His son, Roger Drackett, is elected president of the company.

1949 July 12–Drackett’s soybean plastics operations are discontinued completely.

1949–Robert Boyer leaves The Drackett Co. when it shut down its Azlon fiber spinning plant. He begins research on developing the world’s first edible soy protein fibers—to imitate muscle fiber in meats.

1949 Sept.–Drackett introduces Charge dessert for dogs, which contains soya bean flour as an ingredient.

1957 July 1–Drackett sells its entire isolated soy protein business to the Archer Daniels Midland Co. (ADM). William Atkinson goes to ADM as part of the deal. At ADM Atkinson invents TVP—a registered trademark that stands for textured vegetable protein.

1965 Nov.–The Drackett Co. is sold to Bristol-Myers.

1984–The Drackett Company, now part of Bristol-Myers, celebrates its 75th anniversary with an attractive brochure. It makes some American household cleaning products that are first in their category including Windex glass cleaner, Drano drain cleaner, Vanish bowl cleaners, Twinkle copper cleaner, Renuzit air fresheners, and O-Cedar mops and brooms.

1992 Oct.–S.C. Johnson & Sons Inc., of Racine, Wisconsin, buys The Drackett Co. from Bristol-Myers for about \$1.15 billion.

2141. Wikipedia, the free encyclopedia. 2020. Cargill, Inc. (Web article). <https://en.wikipedia.org/wiki/Cargill>. 15 p. Accessed July 13.

• **Summary:** The introduction begins: “Cargill, Incorporated is an American privately held global food corporation based in Minnetonka, Minnesota, and incorporated in Wilmington, Delaware. [2][3][4] Founded in 1865, it is the largest privately held corporation in the United States in terms of revenue. [5] If it were a public company, it would rank, as of 2015, number 15 on the Fortune 500, behind McKesson and ahead of AT&T. [6] Cargill has frequently been the subject of criticism related to the environment, human rights, finance, and other ethical considerations.”

“A color photo shows: “The Cargill Lake Office, occupying the former Rufus Rand mansion on the main corporate campus in Minnetonka, formerly housed the company’s top executives.” [9]

The section titled “Criticism” has these contents:

- 5.1 Human rights abuses
- 5.2 Land grabbing
- 5.3 Food contamination
- 5.4 Deforestation
  - 5.4.1 Soy
  - 5.4.2 Palm oil
  - 5.4.3 Cocoa
- 5.5 Air pollution
- 5.6 Tax evasion.

Concerning Soy, we read: “In 2003, Cargill completed a port for processing soya in Santarém in the Amazon region of Brazil, dramatically increasing soya production in the area and, according to Greenpeace, speeding up deforestation of

local rain forest. [69] In February 2006, the federal courts in Brazil gave Cargill six months to complete an environmental assessment (EA). Initially supported by job-seeking locals, public opinion turned against the port as jobs have not appeared. In July 2006, the federal prosecutor indicated they were close to shutting down the port. [70]

“Greenpeace took its campaign to major food retailers and quickly won agreement from McDonald’s along with UK-retailers Asda, Waitrose, and Marks & Spencer to stop buying meat raised on Amazonian soya. These retailers have, in turn, put pressure on Cargill, Archer Daniels Midland, Bunge, André Maggi Group, and Dreyfus to prove their soya was not grown on recently deforested land in the Amazon. In July 2006, Cargill reportedly joined other soy businesses in Brazil in a two-year moratorium on the purchase of soybeans from newly deforested land. [71][72]

“In 2019 the six largest agricultural commodity traders, ADM, Bunge, Cargill, LDC, COFCO Int. and Glencore Agri, committed themselves to monitoring their soy supply chains in Brazil’s Cerrado. [73]

Note: Details of that agreement are included in this book, under the date June 2020. Cargill appears to be sincere about following the terms of the agreement.

2142. Wikipedia, the free encyclopedia. 2020. Archer Daniels Midland (ADM) (Web article). [https://en.wikipedia.org/wiki/Archer\\_Daniels\\_Midland](https://en.wikipedia.org/wiki/Archer_Daniels_Midland) 13 p. Accessed July 22.

• **Summary:** The introduction begins: The Archer Daniels Midland Company (ADM) is an American global food processing and commodities trading corporation, headquartered in Chicago, Illinois. [2][3][4] The company operates more than 270 plants and 420 crop procurement facilities worldwide, where cereal grains and oilseeds are processed into products used in food, beverage, nutraceutical, industrial, and animal feed markets worldwide.

It was named the world’s most-admired food-production company by Fortune magazine for three consecutive years: 2009, 2010 and 2011. [5] ADM ranked No. 49 in the 2019 Fortune 500 list of the largest United States corporations (which was based on 2018 total revenue). [6]

The company also provides agricultural storage and transportation services. The American River Transportation Company along with ADM Trucking, Inc., are subsidiaries of ADM.

A sidebar states:

Revenue: US\$64.341 billion (2018) [1]  
 “Operating income: US\$1.822 billion (2016)  
 Net income US\$1.279 billion (2016)  
 Total assets US\$39.769 billion (2016)  
 Total equity US\$17.181 billion (2016)  
 Number of employees 32,300 (2016)

History: In 1902, George A. Archer and John W. Daniels began a linseed crushing business in Minneapolis, Minnesota. In 1923, Archer-Daniels Linseed Company

acquired Midland Linseed Products Company, and the Archer Daniels Midland Company was formed. ADM expanded its agribusiness to include milling, processing, specialty food ingredients, and cocoa.[10]

In 1970, Dwayne Andreas became the chief executive officer of ADM, and is credited with transforming the firm into an industrial powerhouse. Andreas remained CEO until 1997 before his nephew G. Allen Andreas was named to this position.[11] He was one of the most prominent political campaign donors in the United States,[12] having contributed millions of dollars to Democratic and Republican candidates alike.

In 2001, Paul B. Mulhollem became the company's president.[13] Under his guidance, the company was the first U.S. company to sign a contract with Cuba since the embargo against Cuba was imposed October 1960.[14]

In May 2006, Patricia A. Woertz became the company's chief executive officer.[15][16] Formerly of Chevron, she was expected to focus on developing ethanol and biofuels. In February 2007, Ms. Woertz was elected Chairman of the Board at ADM.[17]

In May 2006, Patricia A. Woertz became the company's chief executive officer.[15][16] Formerly of Chevron, she was expected to focus on developing ethanol and biofuels. In February 2007, Ms. Woertz was elected Chairman of the Board at ADM.[17]

On July 7, 2014, the company said that it will buy Swiss-German natural ingredient company Wild Flavors for \$3 billion, a move aimed at diversifying the company and helping brands appeal to consumers who increasingly favor foods with natural ingredients and flavorings.[18]

On November 5, 2014, ADM announced that effective January 1, 2015, Juan Luciano will become the company's new CEO.[19] Luciano was hired on in 2011 as the company's Chief Operating Officer. Woertz will retain the position of Chairman of the Board until 2016 when she is expecting to retire.[citation needed]

In October 2015, ADM announced the sale of its global cocoa business to Olam. The sale is valued at about \$1.2 billion. Approximately 1,500 employees transferred to Olam with the sale.[20]

In January 2017, Archer Daniels Midland agreed to sell its crop risk services (insurance) unit to Validus Holdings for \$127.5 million.[21] On January 19, 2018, it was reported that Archer Daniels Midland Co. (ADM) had approached Bunge Ltd. about a takeover, with details "unclear." At that point, Bunge had a market value of about \$9.8 billion, and was also being pursued by Glencore PLC for an acquisition, since May 2017.[22]

There is also a section titled "3 Criticism" which has these contents:

- 3.1 Sherman Antitrust Law Violation
- 3.2 Price fixing
- 3.3 Tax dodging

#### 3.4 Corruption

#### 3.5 Violation of the Foreign Corrupt Practices Act

#### 3.6 Environmental record

3.7 Agricultural subsidies: The company lobbies for agricultural subsidies and price supports including sugar and ethanol. According to a 1995 report by the libertarian think tank Cato Institute", ADM has cost the American economy billions of dollars since 1980 and has indirectly cost Americans tens of billions of dollars in higher prices and higher taxes over that same period. At least 43 percent of ADM's annual profits are from products heavily subsidized or protected by the American government. Moreover, every \$1 of profits earned by ADM's corn sweetener operation costs consumers \$10, and every \$1 of profits earned by its bioethanol operation costs taxpayers \$30."[43]

2143. Dawson, Wayne. 2020. Re: Abbreviated genealogy of Lenora ("Lenore") Jeanette Andreas, elder sister of Dwayne Andreas. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 23. 1 p.

• **Summary:** "She was born on 21 July 1913 in Nobles Co., Minnesota.

"Lenore was 16 in the 1930 Census of Franklin, Linn Co., Iowa

"She married George G Schunknedt 21 April 1932 in Mount Vernon, Iowa (Iowa Marriage Records, 1880-1945 via Ancestry.com)

"1937 Lenore was married to Harlon Sober and living in Clinton, Iowa (City Directory via Ancestry.com)

"1939 Lenore was married to Harlon Sober and living in Clinton, Iowa (City Directory via Ancestry.com)

"Lenore J. Sober was married to Harlon Sober and living in Cedar Rapids, Linn Co. Iowa in 1940 US Census (Ancestry.com)

"On 3 July 1951 she was at a family reunion in Sterling. (Sterling Gazette via Newspapers.com)

"Alive on 31 Dec 1959 when Reuben Peter Andreas died. Lived in North Miami. (Newspapers.com)

"Lenore J. (Andreas) Steele died on Friday 9 May 1969 in Miami, Florida (Merrick Family Tree on Ancestry.com Published death record in *Miami Herald* 10 May 1969 via Newspapers.com) Wife of Marvin R. Steele, brothers Albert, Glen, Dwayne and Lowell Andreas. (Miami News May 10, 1969, Page 14 via Newspapers.com)

"April 4, 2009 Lenore Andreas Steele was dead by the time her brother Lowell died (Newspapers.com Obituary of Lowell Andreas).

Note: Lenore was married 3 times: To George G. Schunknedt, to Harlan Sober, and to Marvin R. Steele.

Note: Some of the following, from her family group record, is repetitive.

Lenora Jeanette Andreas

Birth: Father's Surname: Andreas; Mother's Surname: Stoltz. The name she was given at birth was Lenora. Most

records when she was an adult call her Lenore. Her birth on 21 July 1913 in Nobles Co. was shown in the Minnesota, Birth Index, 1900-1934. Certificate 1913-19493 via Ancestry.com and the Minnesota Historical Society Birth Index.

Marriage: Lenore Jeanette Andreas married 3 times. Her first marriage was to George G. Schunknedt on 21 April 1932 in Mount Vernon, Iowa. Source: Iowa Marriage Records, 1880-1945 via Ancestry.com.

About 1935, Lenore married Harlon Sober. They had two daughters, Sharon, born about 1936, and Susan, born about 1939. (1940 United States Census for Cedar Rapids, Iowa). Lenore and Harlon were divorced circa 1950. By 1953, Lenore had married Marvin Steele when they attended the funeral of her father, Reuben Peter Andreas.

Lenore Jeanette (Andreas) (Schunknedt) (Sober) Steele died 9 May 1969 in Miami-Dade County, Florida. Her record of death was published 10 May 1969 in both the Miami Herald and Miami News. She was the wife of Marvin Steele. No burial record has been found. Secondary Source: Florida Death Index 1877-1998 states she died in May 1969.

Information on the 3 husbands of Lenora "Lenore" Jeanette Andreas.

According their marriage record, Lenora "Lenore" Jeanette Andreas married George Schunknedt in Lisbon, Linn County, Illinois on 21 April 1932. George was born about 1910 in Waterloo, Black Hawk County, Iowa. George was living in Mount Vernon, Linn County, Iowa at the time of his marriage to Lenore Andreas. He was the son of George Schunknedt and his wife, Edith Carlson. At the time of his marriage to Lenore, he was a Publisher. No trace of either George Schunknedt, Sr. or George Schunknedt, Jr. have been found in the census records of the United States Census in the time frame both would have been alive.

Harlon Sober was the son of Isaac Franklin Sober and his wife, Daisy Irene Clay, who died when Harlon was young. His father married a second time to Hazel Carlson. Harlon was born 31 Oct 1914 in Boone, Boone County, Iowa, according to his delayed birth certificate. His father, Isaac Franklin Sober a foreman in the Quaker Oats feed mill in Cedar Rapids where the family was living in 1920. Harlon died on 3 June 1984 in Kane County, Illinois and is buried in the Union Cemetery in St. Charles, Kane County, Illinois. He married Lenore Andreas about 1935. They were the parents of two daughters, Sharren, born about 1936, and Susan, born about 1939. In 1940 when he registered for the draft, Harlon was living in Aurora, Kane County, Illinois, and worked at Honeymead Products. In his registration for the draft, he was described as having a ruddy complexion, blue eyes, brown hair, weighed 145 pounds and was 5 feet 10 inches tall. By the 1940 Census, he listed his occupation as "Examining Salesman" with no employer shown. He had complete 4 years of high school.

Harlon Sober and Lenore (Andreas) Schunknedt were divorced about 1947-1948 since she remarried in 1948, and

he lived on to marry again.

Harlon later married Virginia R., last name unknown. She was listed as his widow in his obituary in 1984.

Harlon Sober's obituary in the Cedar Rapids, Iowa Gazette on 13 June 1984 stated that he had two additional daughters, Cindy Lange and Cathy Storm. There was no statement about who the mother of these two girls was.

Marvin Ross Steele, 3rd husband of Lenore Andreas, was the son of Charles R. Steele and his wife, Libbie Hyek. Marvin was born 30 August 1913 and died 25 Sept. 1992. On 1 Jan. 1938, he married Marion Lind Hicksa in Cedar Rapids, Linn County, Iowa. In the 1940 census, he and his wife Marion were living in Cedar Rapids, Linn County, Iowa. In the census, he listed his occupation as musician in an orchestra.

In 1941, Marvin and Marion were living in Cedar Rapids, Linn County, Iowa. No occupation was listed for Marvin.

On 29 April 1942, Marion Steele filed for divorce from Marvin Steel on the grounds of cruel and inhuman treatment.

On 16 Oct 1944, Marvin enlisted in the Army where he served until 16 May 1946. He served 19 months in the United States and 11 months in active foreign service for which he was paid a bonus of \$217.50 in 1949.

On 23 August 1948, Marvin married Lenore (Andreas) (Schunknedt) Sober in Dixon, Lee County, Illinois.

In the 1950 City Directory of Cedar Rapids, Linn County, Marvin R. Steele and his wife, Lenore, were living on Hamilton SW street. He was listed as a salesman.

Marvin was a pilot in the City Directory of Miami, Florida in 1955. The newspapers at the time cover many stories of his exploits as a pilot.

After the death of his second wife, Lenore Andreas, he married 2 Dec. 1970, Hanna G. Hixon, in Miami, Dade County, Florida. Address: Genealogist, Tucson, Arizona.

2144. ADM (Archer Daniels Midland Co.). 2020. History of ADM, 1902-1979 (Website printout-part). <https://www.adm.com/our-company/history> 2 p. Retrieved July 27.

• **Summary:** 1902–Daniels Linseed Co. founded in Minneapolis

1923–Changed name to Archer Daniels Midland Company

1924–Listed on NYSE

1927–Formed grain division

1929–Began crushing soybeans. Acquired Commander Larabee flour milling business

1963–Built export terminal at the Gulf of Mexico

1967–Entered barge freight business

1969–Relocated headquarters to Decatur, Illinois

1974–Acquired first soybean processing plants in Europe and South America

1979–Established ADM Trucking.

2145. Wikipedia, the free encyclopedia. 2020. Lysine price-fixing conspiracy (Web article). [https://en.wikipedia.org/wiki/Lysine\\_price-fixing\\_conspiracy](https://en.wikipedia.org/wiki/Lysine_price-fixing_conspiracy) 2 p. Accessed July 30.

- **Summary:** The introduction begins: The lysine price-fixing conspiracy was an organized effort during the mid-1990s to raise the price of the animal feed additive lysine. It involved five companies that had commercialized high-tech fermentation technologies, including American company Archer Daniels Midland (ADM), Japanese companies Ajinomoto and Kyowa Hakko Kogyo, and Korean companies Sewon America Inc. and Cheil Jedang Ltd. A criminal investigation resulted in fines and three-year prison sentences for three executives of ADM who colluded with the other companies to fix prices. The foreign companies settled with the United States Department of Justice Antitrust Division in September through December 1996. Each firm and four executives from the Asian firms pleaded guilty as part of a plea bargain to aid in further investigation against ADM. The cartel had been able to raise lysine prices 70% within their first nine months of cooperation.[1] Also discusses: ADM's role.

Popular adaptations: The Informant is a nonfiction thriller book written by journalist Kurt Eichenwald and published in 2000 by Random House[18] that documents the case and the involvement of ADM executive Mark Whitacre. It has been adapted into the 2009 film *The Informant!* starring Matt Damon, which was released September 18, 2009.

Private sector, largely self sufficient: 1. Uganda, Africa Basic Foods (Dr. D.W. Harrison. Roasted whole soy flour, cereal soy blends, 1966-69). 2. India. Ruchi's Products (TVP, 1980).

2152. *SoyaScan Notes*. 2020. The visionary work of Henry Ford and his researchers with soybeans—then and now: Pioneered solvent extraction of soybeans and the use of hexane solvent (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** By September 1934 Henry Ford's researchers had developed a relatively small and inexpensive, continuous-process, counter-current, solvent extractor which was displayed at the "Industrialized Barn" portion of the massive Ford exhibit at the Chicago World's Fair—where it was viewed by millions. Ford hoped that American farmers would build similar extractors in their own barns and use them to process soybeans grown on their own farms as an additional source of income during the non-farming months. This was the first solvent extractor ever built in America. It used high-test aviation gasoline as a solvent. The extractor was a piece of 12-inch diameter steel pipe, 30 feet in length, set at an angle of 10 degrees to the horizontal. The flaked soybeans were moved against the current of solvent by use of a screw conveyor.

In the summer of 1935 Ford spent \$5 million to construct a soybean mill with solvent extraction units in his huge River Rouge automobile plant. *Newsweek* magazine (April 1936) reported that in 1935 the soybean provided oil for the enamel on 1 million Ford cars, 540,000 gallons of the oil went into glycerine for shock absorbers, and 200,000 gallons were used to bind sand cores in the Ford foundries. The soybean meal was reacted with formaldehyde to produce a thermoplastic resin, which was used to make numerous small automotive parts, such as gear-shift knobs, window frames, distributor caps, horn buttons, etc. for Ford cars.

In 1937 and 1938, as part of his village industries program, Ford installed and operated similar solvent extraction plants at his mills in Saline and Milan, Michigan.

In 1950 in America the solvent extractor passed the

screw press to become the leading method of crushing soybeans to obtain oil and meal. It remains so to this day, worldwide, and hexane remains the leading solvent.

Ford was one of the pioneers in the use of hexane as a solvent for extracting soybeans. In 1933 Ford began experiments using hexane solvent for extraction of soybean oil (Boyer, R. 1985. *Reminiscences*, p. 20-23). That year, at the Ford Exposition of Progress in New York City, Ford had a glass model of this extractor that used hexane solvent. In March 1934, the Archer-Daniels-Midland Co. in Chicago became the first company in America to use hexane solvent commercially in an extractor with soybeans. By April 1935 researchers at Ford's Edison Institute were testing the use of hexane as a solvent for extracting soybeans and by April 1936 Ford had switched to using hexane in his extractors at the River Rouge plant.

2153. *SoyaScan Notes*. 2020. The visionary work of Henry Ford and his researchers with soyfoods—then and now: Pioneered soy protein isolates (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Robert Boyer and Bob Smith did extensive, pioneering work on developing soy protein isolates at the Ford Motor Co. Both started research in 1938. Boyer used his isolates to make industrial products, such as spun soy protein fibers and water-based paints. The soy fibers were produced in a pilot-plant with a capacity of 1,000 pounds per day of soybean "wool" and soon a fabric containing 25% soybean wool and 75% sheep's wool was used in the sidewall upholstery of many Ford cars. Bob Smith used his isolates to make a good-tasting soymilk, that was served in Ford cafeterias and schools, and at the Henry Ford Hospital, and was also used as the base for most of the early commercial soy-based whipped toppings—starting with Delsoy. In Nov. 1943 The Drackett Co. bought Ford's soybean fiber spinning operations; Boyer, Francis (Frank) Calvert, and William Atkinson went to Drackett from Ford as part of the deal. Drackett made and sold their fibers, Soybean Azlon, spun from soy protein isolates, from 2 Dec. 1943 to 1949. They were used mainly in felt hats by the American Hat Corporation. Drackett also commercialized other industrial soy proteins, such as Protein 110, 112, and 220, Ortho Protein, and plastic molding compounds. Boyer left Drackett in 1949 when they shut down their Azlon fiber spinning plant; he focused all his energy on developing food uses of edible products made from spun soy isolates. In mid-1957 ADM (Archer Daniels Midland Co.) purchased Drackett's soy protein business. Bob Boyer began to work as a full-time consultant for Ralston Purina in the field of soy proteins starting in early 1960. Since 13 June 1959 Ralston Purina had been manufacturing industrial soy protein isolates (for use in paper coatings) at a plant in Louisville, Kentucky, which they purchased from Procter & Gamble in December 1958. In 1960, after starting consultation

with Boyer, Ralston Purina began its first work with edible soy proteins by establishing a research and pilot plant at company headquarters in St. Louis, Missouri. In about September 1962 Boyer was named technical director of protein products sales in the soybean division of the Ralston Purina Co.; he worked for Ralston until his retirement in 1971. Frank Calvert, Boyer's coworker from the Ford Motor Co. was hired in November 1962 to head up Ralston Purina's R&D work on food-grade isolated soy protein in St. Louis. In 1965 Calvert was named director of soybean research, and in 1967 director of research of the Protein Division. In 1969 Calvert was promoted to director of research, New Venture Management, and finally in 1971 vice president and research director, New Venture Management. During these years, Calvert developed new soy protein isolation processes, 70 percent soy protein concentrate products, and modified soy protein coating compositions for industrial use. Calvert is considered a visionary in soy protein research and the accomplishments of his career were honored in 1973 when the Ralston Purina plant at Memphis, Tennessee, was dedicated to him in recognition of his years of service and dedication to protein technology.

In Oct. 1962 Ralston Purina began to introduce a line of edible soy protein isolate products made at their plant in Louisville: The first three were Edi-Pro A and Edi-Pro N (spray-dried isoelectric and neutral isolated soy proteins respectively) and Textured Edi Pro (an edible spun soy protein fiber). Supro 610 was launched in October 1966. As sales of these products increased, Ralston Purina soon found itself a leader in this new field—along with the pioneer, Central Soya, which had launched Promine in Oct. 1959. Ralston Purina expanded food grade isolate capacity with new facilities at Memphis, Tennessee, beginning production on April 10, 1973; Pryor, Oklahoma, beginning production on December 1, 1976. By late 1975 the company was making about 75 million pounds per year of isolates from its three plants, and was starting to advertise its isolates in a big way, with full-page color ads. This expansion easily vaulted Ralston Purina into the position of world leader in food-grade isolated soy proteins by 1976. On 21 August 1979 the company began producing soy protein isolates at its first plant located outside the United States, in Ieper, Belgium. On 1 July 1987 Ralston Purina established Protein Technologies International (PTI) as a wholly owned subsidiary focused on manufacturing soy protein and fiber products. In 1993 PTI was by far the world's leading producer of soy protein isolates, controlling about 60% of the U.S. market. PTI's sales of consumer soy protein products rose from \$221.6 million in 1989 to a record \$288.1 million in 1992.

2154. *SoyaScan Notes*. 2020. The visionary work of Henry Ford and his researchers with soyfoods—then and now: Pioneered textured soy flour and TVP (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** The world's most popular textured soy protein product among consumers is TVP; the name is a registered trademark of ADM, The Archer Daniels Midland Co. of Decatur, Illinois. One of the two main developers of textured soy flour was William Atkinson, a researcher at the Ford Motor Co. since 1935. After doing early work on industrial soy protein fibers, he went to The Drackett Co., then to ADM when Drackett sold their agricultural operations to ADM in 1957. "TVP Textured Vegetable Protein" was launched commercially in April 1966, and Atkinson was issued a key patent on the product in Jan. 1970 (No. 3,488,770). The product described in this patent has probably had "the greatest impact in bringing the low-cost, textured vegetable products into commercialization." A major breakthrough came on 22 Feb. 1971 when USDA's Food and Nutrition Service authorized the use of textured vegetable proteins (which, in practice meant TVP) as an extender for meat, poultry, or fish in National School Lunch Programs and Special Food Service Programs for children. Up to 30% on a hydrated basis could be used. By 1975 some 75 to 100 million pounds were being used in these programs alone. Starting in March 1973 TVP became a popular retail item as an extender for ground beef—whose price had skyrocketed. By 1976 approximately 60% of the soy flour and grit texturizing capacity in the U.S. was licensed under this Atkinson patent. It dominated the industry from 1970 to 1976 when it, in turn, came to be dominated by the Flier patent assigned to Ralston Purina Co. Wolf (1984) estimated that in 1982 approximately 95 million lb of textured soy flour, worth about \$13.8 million at the wholesale level, were produced in the USA. It continues to be widely used in foods for both people and pets.

2155. *SoyaScan Notes*. 2020. Definition of textured soy protein products (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** The broad term "textured soy protein" refers to three different types of modern textured soy protein products: Textured soy flour, textured soy protein concentrate, and spun soy protein fiber. The first two of these products are available by mail order from several sources, plain or flavored, and in different sized chunks.

Textured soy flour (TSF) is made by running defatted soy flour through an extrusion cooker. The heat generated by friction, pressure, and the adjustable die at the exit end allows production of many different forms and sizes. The best known brand is "TVP," owned by the Archer Daniels Midland Co. This product, when hydrated, has a chewy texture. It is widely used as a meat extender and in pet foods.

Textured soy protein concentrate is a more sophisticated and more expensive product than textured soy flour. It lacks all of the water-soluble sugars which cause flatulence, and it has a much lighter (almost white) color. In recent years it has replaced much of the TSF used as a meat extender and

in other foods. From a nutritional viewpoint, it is important to note that most soy protein concentrate is made by the alcohol-wash process, which removes almost all of the phytoestrogens and isoflavones from the product; little if any is presently made by the water-wash process which does not remove these potentially valuable substances.

Spun soy protein fiber is made by texturizing soy protein isolates. The isolates are mixed with water to form a soft dough (called a dope), then extruded into a salt water bath to form many thin fibers or monofilaments. These are used in meat alternatives to simulate muscle tissue. Address: Soyinfo Center.

2156. *SoyaScan Notes*. 2020. Chronology of tofu worldwide–1930 to present. Part II. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1930s early–Azumaya Tofu Seizo-sho (later renamed Azumaya Co.) starts making tofu, *yaki-dofu* (grilled tofu), and *ganmodoki* (fried tofu patties) in San Francisco at 1636 Post St. between Buchanan and Laguna streets. The company is owned by Mr. Teranishi, who may have started it as early as the early 1920s. In Feb. 1937 it was sold to George and Jack Mizono, and their mother and father (Saichi Mizono).

1932, Dec.–Madison Foods, part of Madison College in Madison, Tennessee, was making Soy Cheese, then by 1939 they had launched Cheze-O-Soy (seasoned tofu), and by 1940 they were making a canned tofu bologna named Yum.

1934–By this year Loma Linda Food Co. (Adventist) in Loma Linda, California, was making Loma Linda Vegetable Cheese (canned tofu with pimiento).

1942 Sept.–Dr. Harry Miller, a Seventh-day Adventist doctor who had worked for many years in China as a medical missionary, begins making Miller's Soy Cheese (tofu) at Mt. Vernon, Ohio.

1944 Sept.–Butler Food Co. in Cedar Lake, Michigan, introduces Butler's Soynut Cheese. Note that the first five Caucasian-run tofu companies in the Western World were all founded and run by Seventh-day Adventists. Note also that each of these five Seventh-day Adventist tofu products used the word "cheese" in the name and that each was canned. 1957 Aug.–Shizuka Hayashi, head of the Japanese-American Soybean Institute in Tokyo, publishes (in *Soybean Digest*) the earliest English-language statistics on tofu in Japan. "There are approximately 45,000 tofu manufacturers in Japan, of which about 23,000 are members of the Tofu Association. There is one large factory in Osaka, the largest in Japan, which consumes 2 tons of soybeans a day." In 1957 Japan will use somewhere between 160,000 and 308,000 tons of soybeans to make tofu.

1958–The world's first packaged tofu is sold in Los Angeles, California, by Matsuda Hinode Tofu Co. Mr. Shoan Yamauchi, owner, conceived of the idea of putting individual cakes of tofu each in a plastic bag with water, sealing the bag

with a heat sealer, placing the bag in a stiff paper deli carton with a wire handle, then folding over the top. The process was labor intensive. This happened at about the same time that a letter from journalist George Yoshinaga had led the city to pass a new regulation requiring tofu to be packaged in individual containers.

1958–Tofu is first sold in a U.S. supermarket–Boy's Market supermarket chain (which had about 12 stores at the time) in Los Angeles. The tofu was sold in individual packages (see above) and made by Matsuda Hinode Tofu Co., whose owner, Mr. Shoan Yamauchi was responsible for this major innovation, and for seeing the mainstream potential of tofu.

1965–The Library of Congress establishes the subject heading "Tofu" as the official name for that food in cataloging books for libraries across America. However, in the mid-1970's disputes arose there about the proper form of romanization of that term. The dispute was resolved by the decision to use the common English term "Bean Curd" instead.

1966–Tofu is first packaged in plastic trays/tubs, the type so widely used today. Again, Mr. Yamauchi conceived of the idea. He went to the Sealright Company in Los Angeles that made Sealright trays and asked them to make a waterproof plastic tray for his tofu. Mr. Yamauchi created three specific early innovations in tray packaging: (1) A very deep tray, holding 26-28 ounces; (2) A method for heat sealing a plastic film to the flange of a tray which had cold water flooding over the flange; (3) High-speed sealing machines to pack and seal the tofu in his plant.

1975 March–Alec Evans, owner of first of the new breed of Caucasian-run tofu shops, starts to make "Tofu" in Corvallis, Oregon. His Welcome Home Bakery and Tofu Shop is the sixth Caucasian-run tofu company in America.

1975 Dec.–*The Book of Tofu*, by Shurtleff and Aoyagi, is published by Autumn Press. This book, which had sold about 550,000 copies by 1997, played a major role in introducing tofu to the Western World.

1977 Aug.–Takai Tofu & Soymilk Equipment Co. publishes its first English-language equipment catalog, which helps many American and European tofu shops to get started.

1977 Sept.–White Wave, owned by Steve Demos, starts making tofu at 1738 Pearl St., in Boulder, Colorado.

1977–Morinaga Milk Industry Co., Ltd. in Japan introduces the world's first aseptically packaged tofu in a Tetra Brik carton. It is named "Morinaga brand Tofu. Soybean Curd." In 1978 the name was changed to "Morinaga brand Ever-Fresh Silken Tofu."

1977–Swan Foods Corporation, owned by Robert Brooks and Mary Pung, starts making "Tofu–Organic" at The Soybeanery, 5758½ Bird Rd., Miami, Florida. This is the first tofu in the Western World labeled "Organic." Swan Foods is also the first American company to make a wide variety of soyfoods, and the first to open a soy deli—which

had a take-out menu.

1978 April–Nasoya Foods, owned by John Paino and Bob Bergwall, starts making Nasoya Organic Tofu (water pack) at Mechanic Street Exit, Leominster, Massachusetts.

1978 Dec.–*The Book of Tofu*, by Shurtleff and Aoyagi, is published by Ballantine Books in a mass-market edition that retails for \$2.95.

1979 July–*Tofu & Soymilk Production*, by Shurtleff and Aoyagi, is published by Soyfoods Center in California. This book is used to start hundreds of tofu manufacturing companies throughout the Western World and in some Third World countries.

1982 April–There are 242 tofu manufacturers in the Western World, including 173 in the United States.

1985 June–The Library of Congress decides to change its subject heading from “Bean curd” back to “Tofu.” This, perhaps more than any other single thing, makes the word tofu “official.”

1983–House Food Industrial Co., Ltd. of Japan purchases 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company is renamed House Foods & Yamauchi, Inc.

1989 Dec.–Sixty-five books (each more than 48 pages long) on tofu have been published in the Western World since 1970. Each one has the word “tofu” or its equivalent in the title. Forty of these books were published in the United States, 6 in Canada, 5 in Switzerland, 5 in Japan (but written in English for sale primarily outside of Japan), 3 in West Germany, 3 in France (but 2 of these were published simultaneously and primarily in Quebec, Canada), 2 in England, and 1 each in Italy, Sweden, and Brazil.

1990 Aug. 3–Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy) acquires Nasoya Foods of Leominster, Massachusetts.

1993 June–Vitasoy purchases Azumaya Inc. (America’s largest tofu manufacturer, and the low-price leader) in California for an estimated \$4–\$5 million.

1993–House Foods Corp. of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is renamed House Foods American Corporation.

1997 March 12–House Foods America Corporation holds the opening ceremony for America’s largest tofu factory, in Garden Grove, California; the company closes its tofu plant in central Los Angeles.

2157. *SoyaScan Notes*. 2020. Chronology of the Sinaiko family’s work with soybeans. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1891 March 4–Born Joseph Morris Sinaiko in Minsk, western Russia, the eldest of eight children of Alex and Rachel Sinaiko.

1904–The family immigrates to the United States,

settling in Madison, Wisconsin, with relatives. Joseph enters school in the 5th grade. Later he completes two years at the University of Wisconsin, Madison, then leaves to work in his father’s milling company.

1921–Joe moves to Cedar Rapids, Iowa. A year or so later he buys the six-story old Jackson Milling Co. building (it is dilapidated and not operating), changes the name to Iowa Milling Co., and starts his own business milling grains.

1922–Joe Sinaiko and Max Albert are both employed at the Iowa Milling Co., located at 602 Dewey Ave., according to the 1922 *McCoy’s Cedar Rapids city directory*.

1928 spring–Iowa Milling Co. starts crushing soybeans to make oil and meal. This is the first company to crush soybeans west of the Mississippi River or in Iowa. The first years are difficult because soybeans are still a relatively new and unknown crop in America. Not long after he started came the stock market crash of 1929 and the Great Depression. Yet, surprisingly, soybean production and processing thrived during the 1930s, and so (eventually) did Iowa Milling Co.

1935 fall–Processing starts at the Illinois Soy Products Co. in Springfield, Illinois–run by I.D. “Ike” Sinaiko, with three expellers.

1936–The Andreas family moves their family milling company (named R.P. Andreas & Sons) to Cedar Rapids, Iowa (from Lisbon, Iowa), and renames it Honeymead Products Co. Dwayne Andreas (one of the sons) and Joe Sinaiko soon become close friends. Joe, whose is 27 years older than Dwayne, also becomes Dwayne’s mentor in the milling and soybean businesses.

1939 fall–Quincy Soybean Co. begins operations at Quincy, Illinois, run by Irving J. Rosen (who married Marcella Sinaiko, Joe’s younger sister).

1938–Max and Anna (Sinaiko) Albert organize the Galesburg Soy Products Co. in Galesburg, Illinois, and operate it as a family partnership.

1939 Nov. 1–The Decatur Soy Products Co. (the former Hight Co. elevator) starts operating in Decatur, Illinois. The officers are: I.D. “Ike” Sinaiko of Springfield, Illinois (president). Joe Sinaiko of Cedar Rapids, Iowa (vice-president). Jasper Di Giovanna of Decatur (manager).

1940 Feb. 14–A fire destroys the Illinois Soy Products Co. in Springfield, Illinois. It is quickly rebuilt as a modern plant with five expellers.

1942 Aug. A full-page ad in *Soybean Digest* titled “Feed more protein” is sponsored by the following five companies: (1) Decatur Soy Products Company (Decatur, Illinois), (2) Quincy Soybean Products Company (Quincy, Illinois), (3) Illinois Soy Products Company (Springfield, Illinois); (4) Galesburg Soy Products Company (Galesburg, Illinois), and (5) Iowa Milling Company (Cedar Rapids, Iowa). Each company is a small soybean crusher and all are owned (or were once owned) and run by members of the Sinaiko family.

1943 Jan.—Cargill purchases the Iowa Milling Co., a soybean crushing plant and feed mill, in Cedar Rapids, Iowa for \$300,000. The initial push came from Julius Hendel of Cargill.

Joe Sinaiko, former owner of the Iowa Milling company, buys a 160-acre farm located 5½ miles northeast of Marion, in Linn County, Iowa. He will take possession in July.

1943 Sept. 5-7—The American Soybean Association holds its annual convention in Cedar Rapids, Iowa.

1943 Oct. 26—Ike Sinaiko sells the Illinois Soy Products Company in Springfield, Illinois, to Cargill, Inc. of Minneapolis, Minnesota. Cargill has been buying other Mid-West Soybean mills to assure itself of an adequate supply of soybean meal during the war years.

1943 Nov.—An article in *Soybean Digest* states (p. 13): “Joseph Sinaiko, well known soybean processor of the Middle West, has purchased the plant of Mid-Continent Vegetable Oil Co., Galesburg, Missouri. The plant, previously owned by a firm in Kansas City, is in an interior town without railroad facilities, but it is near Carthage, Missouri, in the center of a rich feeding belt. Joe is also installing equipment for a soybean processing plant at Fairfield, Iowa. He was a pioneer in Iowa soybean processing...”

1944 March—An ad in *Soybean Digest* states (p. 24) that Cargill now has soybean processing plants in Springfield, Illinois, and Cedar Rapids, Iowa.

1944 June 27—Cargill officially takes over Joe Sinaiko’s soybean processing plant in Cedar Rapids, Iowa—according to Cargill employment records.

1944 Sept.—An article in *Soybean Digest* titled “Some early processors” states (p. 18-19): “First soybeans processed west of the Mississippi River were at Cedar Rapids, Iowa, by Iowa Milling Co., it is claimed. Joe Sinaiko and Max Albert, partners in the venture, installed the equipment consisting of two expellers, in the fall of 1927 and operations began the next spring. Albert later established the Galesburg Soy Products Co., while Sinaiko operated Iowa Milling until he sold to Cargill in 1943.” Note: Max Albert was Joe’s brother-in-law; he married Joe’s younger sister, Anna Sinaiko.

1944 Oct. 11—The Cargill soybean processing plant in Cedar Rapids burns to the ground. An article in *Soybean Digest* (Nov., p. 13) states: “The plant was the first soybean processing plant to be established west of the Mississippi. It was first operated in 1927 by Joe Sinaiko and Max Albert.”

1945 June—Dwayne Andreas’ draft classification is changed to 1A. In anticipation of his being called into the military, the Andreas family sells 60% of its Honeymead plant (in Cedar Rapids, Iowa) to Cargill, Inc. Dwayne Andreas resigns as vice president of Honeymead and goes to work for Cargill as general manager of their Cedar Rapids plant.

1945 Oct.—Cargill purchases (for \$1.6 million) the entire capital stock of Nutrena Mills Inc., a leading Midwest feed

manufacturer with three mills.

1945 Dec.—Joe Sinaiko, Cedar Rapids, buys the new Washington, Iowa, soybean processing plant of Honeymead Products Co.

1946 Oct.—An article in *Soybean Digest* states (p. 22): “Cargill, Inc., announces the purchase of the solvent process soybean plant at Washington, Iowa, from Joseph M. Sinaiko, pioneer Iowa processor. The firm announces at the same time the sale of its Cedar Rapids, Iowa, expeller plant to Sinaiko. The latter was former owner of the Cedar Rapids plant under the name of Iowa Milling Co.”

Joe Sinaiko enters the very competitive field of corn processing as his Corn Starch and Syrup Co. begins operation near Cedar Rapids. His plant turned out to be more efficient than those of his competitors. 1965 Nov.—Archer Daniels Midland Co. (ADM) purchases the Galesburg Soy Products Co. (Galesburg, Illinois), formerly owned by the Max Albert family.

1966 June 1—Cargill signs the papers by which they purchase the Iowa Milling Co. (for the second time) from Joe Sinaiko. The transition took one year, and was completed on 1 June 1967.

1970 May—Joe (now age 79) announces the groundbreaking for Corn Sweeteners Inc. near Cedar Rapids.

1971—Joe sells his interest in Corn Sweeteners to Archer Daniels Midland Co., which uses the plant to enter the corn processing industry.

1986—Joe Sinaiko’s second wife, Janet Burnstein, dies in Cedar Rapids, Iowa.

2158. *SoyaScan Questions*. 2020. Questions about the work of Archer Daniels Midland Co. and members of the Andreas family. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** When was ADM’s stock first listed on the New York Stock Exchange (the “big board”)?

In Dec. 2006 did Hain Celestial buy all companies in the Haldane Foods Group? For how much? In dollars or pounds sterling? From ADM?

How long was Michael Andreas in federal prison and how long was he in a halfway house? When was he released from the latter?

What did Michael Andreas do after he was released and gained his freedom? See the book titled *The Informant: A True Story*, by Kurt Eichenwald, a journalist (2000, Random House). The book documents the mid-1990s lysine price-fixing conspiracy case and the involvement of Archer Daniels Midland. It is mostly about informant Mark Whitacre but probably also has information on Michael Andreas.

An asterisk (\*) at the end of the record means that SOYINFO CENTER does not own that document. A plus after eng (eng+) means that SOYINFO CENTER has done a partial

or complete translation into English of that document. An asterisk in a listing of number of references [23\* ref] means that most of these references are not about soybeans or soyfoods.

# Nature locked the cupboard

## ...but ADM found the key

Nature was generous when she created the soybean.

In each tiny bean are precious ingredients ... raw materials for modern industry. The problem, then, is to unlock this rich supply ... to extract and separate, to purify and improve ... to get out everything which nature put in.

Take the meal, for example. It's naturally rich in protein, but without man's help, much of this protein remains "locked-up" in an undigestible form.

ARCHER-DANIELS-MIDLAND has developed a carefully controlled cooking process which

releases the full growth promoting power. The result? 20% greater protein efficiency ... and extra gains worth as much as \$91 more per ton than those produced by some soybean oil meals.

This is nothing new for ADM. For 25 years, it has been a leader in creating new and better uses for the soybeans you grow. Scores of products born in ADM laboratories and produced in ADM processing plants play vital roles in America's daily life.

This is the way your markets are built ... and this is how they will continue to grow.
