“A new solvent extraction plant for soybeans went into operation in November, 1950, at Mankato, Minnesota. This is conveniently located for processing both the Minnesota crop and that of northern Iowa. Even more important in the choice of this site was the fact that ADM already had a formula feed mill there. The solvent extraction plant was built adjacent to the feed mill so the meal could travel by conveyor belt from the extraction unit to the feed plant.

“The Chicago plant, with capacity of 6,000 bushels a day, was closed in 1953 because of its small size, and its proximity to the 54,000-bushel-a-day plant in Decatur which has varied facilities for special processing. Because of the demand for such products as flours and edible oils, production facilities at Decatur were modernized and those at Mankato greatly enlarged.

“When the solvent extraction plant was installed at Mankato in 1950, Minnesota had ranked sixth in annual soybean production with 17.8 million bushels. By 1956, when a record 457 million bushels were produced nationally, it had climbed to second place with 52.5 million bushels. The Mankato mill has been equipped to produce both edible soy flour for bakery products and prepared mixes and industrial flour for adhesives and coatings. Since one of the chief markets for industrial adhesives is the plywood industry of the west coast, Mankato’s location on three major railways makes it a very advantageous shipping point. From Mankato, too, the western market is supplied with high-protein soybean oil meal. Originated by ADM and first produced at Decatur, 50 percent protein meal is widely used in high-energy feeds for hogs and poultry” (Continued). Address: 101 Exchange St., Galva, Illinois 61434.

928. Windish, Leo G. 1981. Archer-Daniels-Midland Company, Inc.: Pioneer soybean processors who rank among

the giants in the industry (Continued—Document part III). In: Leo Windish. 1981. *The Soybean Pioneers: Trailblazers, Crusaders, Missionaries*. Galva, Illinois: Published by the author. viii + 239 p. See p. 97-103. Chap. 19.

• **Summary:** Continued: “Had it not been that most of the extraction and processing facilities were new and at top efficiency, ADM would have fared far worse during the period when marketing of soybean products was so seriously handicapped by economic factors. There were only 33 days during the 1953-54 crop year when soybean oil and meal together brought a better price than soybeans themselves. In 1955 ADM lost money on its basic soybean processing. Nevertheless, throughout these years ADM’s upgraded soy products continued to produce a profit.

“And thus another chapter in the pioneer history of soybean processing has been added, on the part of the Archer-Daniels-Midland Company. Their innovations and added capacity helped greatly to expand the growth of the soybean and its products (17).

“Back in 1926, the William O. Goodrich Co. was acquired by ADM... oil from soybeans and other vegetable seeds, using a Scott batch-extraction system. In 1933, Shreve M. Archer sent a representative to Europe to study the major solvent extraction plants, and the next year started a 150-ton-a-day Hildebrandt continuous solvent extraction unit, thus becoming the first in the country to process beans by that process. Walter Flumerfelt, then a successful processor in Waterloo, Iowa, had operated a small solvent plant at Monticello, Illinois for two years beginning in 1929. It was the first actual business venture of this type and Flumerfelt’s patent on continuous solvent extraction was later used on wheat-germ extraction. Much helpful information came out of the Monticello venture.

While Archer-Daniels-Midland Co. began processing by expeller in 1929, their big push in the industry came with entrance into the solvent extraction field. They were first in volume production and merchandising of this type of 44 percent protein meal. In research work and merchandising of solvent extracted soybean oil meal, long popular in Europe, they spent a fortune of substantial proportions. In this project alone there is an interesting story that has yet to be written as a guide to other industries. The following information was taken from pages 27-30, Chapter 4, titled *The Big Drive Starts*, from the book *Soybeans, Gold from the Soil*.

“At the outset the new solvent product was placed on consignment with all types of dealers and distributors over a wide area. Said Whitney Eastman, ADM vice president: ‘We might just as well have placed it on the shelves of jewelry stores in Iceland.’

“Years of intensive sales plugging and skillful merchandising policies brought about the present-day acceptance and a growing demand that absorbs a larger volume each year, Long before the Goodrich Co. was acquired by Archer-Daniels-Midland Co., it had studied the

refinement of Manchurian soybean oil and in the early 1920's clarified soy oil was developed, along with a number of other special oils. This was a forward step of some consequence.

"A Very Close Call: Only tariff protection saved the soybean industry from being nipped in the bud and permitted manufacturers to expand the grower's market. Even before the industry was developed there was a group of vegetable-oil processors and agriculturists seeking domestic protection from the Manchurian inroads, and progress was made after the tariff act of 1913. For the next eight years 'free traders' sought to destroy this protection. In these battles Whitney Eastman took an active part. In 1921 this small group fought through a duty of 20 cents a gallon on cottonseed and soybean oils, increases of taxes on some other competing oils, and a duty lift to 30 cents per bushel on flaxseed. There were further battles and further gains in 1922, 1930, and 1936, until the soybean farmer felt at least his expansion program could not be destroyed overnight by defective tariff rates.

"During the five years of the legislative drive beginning in 1930, Whitney Eastman had served as president of the processor's association. His company meanwhile moved ahead to the position it now holds as one of the giants in the industry. Other major companies which entered the field about that time were Allied Mills & Co. and Ralston-Purina Co., which entered the field in 1930 and at one time was the largest single consumer of soybean meal. Spencer Kellogg & Co. stepped into the industry in 1935 under the direction of Howard Kellogg, Jr., and Swift & Co. began operations in 1937 with one of their larger early plants located in Champaign, Illinois.

"Processors never lacked for courage. Even during the stock market crash in October, 1929, new soybean processing plants were being launched. Among them were Standard Soybean Mills and the Iowa Milling Co." Address: 101 Exchange St., Galva, Illinois 61434.

929. ADM Foods. 1981? ADM edible products/81: Sweeteners, milling, baking specialties, proteins, oils, malts, pastas. Box 1470, Decatur, IL 62525. 30 p. Undated. 28 cm. Catalog.

• **Summary:** Pages 19-21 describe the following soy protein products: TVP textured vegetable protein, TVP condiment types (bacon flavor bits and chips, sausage flavor bits, pepperoni flavor bits, cheese flavor bits, onion flavor bits, garlic flavor bits), Arcon soy protein concentrate, Ardex isolated soy proteins (Ardex D, Ardex DHV, Ardex F, Ardex SP-6), Nutrisoy 101 and Nutrisoy 102, Nutrisoy Fiber soy bran, Toasted Nutrisoy flour—defatted soy flour, Nutrisoy flour—defatted soy flour, Bakers' Nutrisoy—defatted soy flour, Nutrisoy 7B flour—defatted soy flour, Nutrisoy 220T—refatted soy flour, Soylec lecithinated soy flour and 15% refatted B.N., Soylec T-6, Soylec T-15 lecithinated soy flour, Toasted Nutrisoy grits 8-20, 20-40, 40-80, 80-0—defatted soy grits,

Defatted soy flakes (offered for brewers, etc.), Nutrisoy Bits, Arlec lecithin granules.

Note: In this catalog, ADM has changed the meaning of the brand name "Ardex" to refer to isolated soy proteins. Address: Decatur, Illinois.

930. ADM Foods. 1981? Look where soybeans go. Box 1470, Decatur, IL 62525. Undated. 28 cm. Catalog. \*

• **Summary:** On the cover is a huge yellow soybean, over a field of soybeans planted in rows facing the viewer. The title is written above the soybean in small letters. Address: Decatur, Illinois.

931. Honeymead Products Co. 1981? The history of Honeymead (Leaflet). Mankato, Minnesota. 2 p. Undated.

• **Summary:** Here are a few dates that are important to the growth and development of Honeymead.

"1937—A group of Mankato, Minnesota, businessmen buy an old tile plant and convert it to crush soybeans. Note: The company is named Mankato Soybean Products until 1947.

"World War II [1942]—Western Farmers [Washington Egg and Poultry Association], a Seattle, Washington, based Farmer Cooperative buys Honeymead to insure a steady supply of soy protein for their livestock feed.

"1947—The Mankato plant is purchased by Dwayne and Lowell Andreas and given its present name—Honeymead.

"1949—Solvent extraction is introduced.

"1957—Honeymead begins refining soybean oil.

"1960—Honeymead is purchased by the Grain Terminal Association [GTA], a grain marketing cooperative based in St. Paul [Minnesota]. We process 50,000 bushels of soybeans daily.

"1961—GTA purchases Minnesota Linseed Oil Company, at Fridley, Minnesota, a flax-crushing operation.

"1963 [sic, April 1964]—Honeymead begins producing hydrogenated or 'hardened' soybean oil, the basis for margarine or shortening. We're processing 240,000 lbs. or tank cars of hydrogenated oil per day.

"1964—Honeymead makes its first 40 tankcar shipment of 'hardened' oil to New Orleans [Louisiana].

"1965—Waste water control is instituted at our Mankato facility.

"1967—Minnesota Linseed begins to develop a new oilseed market—sunflowers. First contracts cover 10,000 acres.

"1974—Honeymead and Minnesota Linseed merge. Honeymead enters the consumer foods market with the purchase of Kent Products, a margarine manufacturer based in Kansas City, Missouri. Construction is started on a new processing plant in Mankato.

"1975—Honeymead purchases its second margarine plant, Carthage Creamery, Carthage, Missouri, and places it under Kent Products management.

“1976—Construction of our new soybean processing and edible flour plant is completed. Mankato now processes 80,000 bushels of soybeans each day.

“1977—Honeymead strengthens its position in the consumer foods market with the acquisition of Holsum Foods, an established food processing company.

“1979—Honeymead consolidates three plants: (1) Carthage Creamery, (2) Kent Margarine, and (3) Holsum Foods, Kansas City, into one operation, by completing construction of a new margarine plant in Olathe, Kansas.

“1979—With the purchase of Miami Margarine in Albert Lea, Minnesota, Honeymead continues to expand its lines of margarine and shortening.

“1979—Holsum Foods, with its headquarters in Waukesha, Wisconsin, is given management responsibility for all existing food processing and margarine operations.

“1979—Construction of a new extraction plant begins at Honeymead’s Fridley sunflower and flaxseed plant.

“1980—Honeymead completes construction of its new extraction plant at Fridley. We are now able to process 54,000 bushels of flaxseed or an equivalent amount of sunflower seeds each day.”

Note: The source of this document is unknown. Address: P.O. Box 29, Mankato, Minnesota 56001.

932. Boismenu, Clyde. 1982. Textured soy protein products in America today (Interview). *SoyaScan Notes*. Jan. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The biggest present outlet for TVP (more precisely textured soy flour or TSF) is in the pet food industry, and some is used in the U.S. school lunch program. Occasionally a foreign country, such as Poland or the USSR, will buy some to extend meats.

The Briggs Amendment is a California state amendment of about 1975; it regulates the labeling of meat products containing soy. If you add soy to hamburger you must label it “imitation hamburger,” and even restaurants and institutions must state the names on the menu or, if there is no menu, in a sign on the wall, if the extender is bread crumbs. But the health inspectors overlook a lot of violations, as in small restaurants. Companies are not even allowed to use fanciful names such as “Superburger.” Because of all this, customers in California have stopped using soy in droves and brought sales to a crashing halt. Clyde thinks there may be a similar law in New York; he does not know how many other states have such restrictive laws.

Nationwide, imitation cheese must have the word “imitation” as the largest word on the box; it looks absurd.

A company that wants to make TSF must buy a number of large extruders. Each one makes 3,000 to 5,000 lb/hour, and most companies own 3 to 5. Every one of the major manufacturers for TSF or textured soy protein products is losing money. Prices are terribly low and the industry is operated at an estimated 10% of capacity in 1981.

ADM’s TVP is the most dense, but it gets too soft on cooking. Textured concentrates are too hard, and are like gristle or rubber in the finished product; they have less flavor but cause less flatulence. Textured isolates are too expensive, costing more than the meat they are intended to replace. All companies are desperate for a breakthrough.

ADM has never spent much money on developing imitation beef, ham, or chicken. Yet it the company has developed meatless entrees to increase profit margins. Uncle Archie’s line of meatless entrees included Pepper Steak (the first one developed), Chicken Almadine, Sweet and Sour Pork, and Hearty Stew. ADM wanted to move from TVP extender to meatless entrees about 2 years ago. Like everybody, they rushed to GNC (General Nutrition Corp.), which reformulated the pepper steak by removing the mushrooms. It didn’t sell well before or after the reformulation, so ADM tried to market it themselves under the Uncle Archie’s brand. From the start, they appealed to the Safeway mentality, using lots of artificial ingredients. The product now tastes good but it looks like they will flop anyway.

Worthington and Loma Linda are also having big, indeed disastrous, problems. All the TSP (textured soy protein) products are dying on the vine. Central Soya can’t sell textured concentrates. Loma Linda plans to try to duplicate the success of Sanitarium Food Co. [Australia] with breakfast cereals. Some health food stores have carried Loma Linda products, but natural food stores object to all the additives. And now even some Seventh-day Adventists are starting to be critical for the same reason. None of the natural- or health food stores will carry Clyde’s TVP because it contains so much artificial stuff.

Nabisco is no longer in the business, and Central Soya has discontinued the line of material they bought from General Mills. Cargill and Lauhoff are now in quite a precarious position. Cargill makes a good line of soy flours, but they also have a line of textured protein products that they have never been able to position correctly; they are operating at about 10% of capacity. Cargill got in early then in 1976 spent several million dollars more upgrading their plant so it is one of the nicest in the industry. A man with the inside scoop on Cargill is ADM’s manager in the western region, Bill Potter, phone 213-833-1389. He was Cargill’s sales manager and now lives in Los Angeles.

The three people and companies that hold all the process patents and pooled them were Nabisco, Swift & Co. and ADM; that jump-started this industry. All three had a slightly different process, so they cross licensed to get the TVP process going. Lynn Adolphson of ADM is the best man in the USA to ask about his; he really knows the industry.

General Mills was one company that really went into TSP in a big way. They had a line of flavored products that has never been duplicated since—all the TVP items that were used as meat extenders, including the Bontrae line which

were very fancy products. They introduced spun isolates in a really big way in both the bacon bits type products and their whole line of frozen meat analogs. One day they shut down the whole operation without any warning. They sold the frozen line to Dawson Mills, and sold the Bontrae process to Central Soya, both of whom have shut down these products in the last 18 months or so. Dawson Mills got completely out of the ISP business, but may still have a weak line of textured products. People keep hoping the market will materialize, but it never happens, so eventually they have to get out to cut their losses.

Three companies went out in the first washout: General Mills, Swift & Co., and finally the Marschall Division of Miles Laboratories. A division of National Can called National Protein Products or something like that made a compressed soy grit very similar to that made by Nabisco.

We're now heading for a second washout. Lauhoff is weak but has a little niche in the pet food industry. With the market collapsing and export sales bleak, everyone is going hook and tong after the pet food industry. Lauhoff was just bought by Bunge. Worthington is probably in a pretty precarious position. They have huge capacity with a market of 2-10% of capacity.

Lauhoff and Cargill will probably be the next ones out. Dawson Mills is sort of dragging along at the rear, a little weak. Clyde is not sure if they still sell textured products. They banked an awful lot on textured soy concentrate. They still have a few fairly large customers—such as SAGA Food Services. All three companies need big volume to run their machines economically.

ADM is definitely in the strongest, premier position among the makers of new soy protein products. ADM has strength across the board—not just in pet foods. They are the only company with a truly complete line of products and a decent line of flavored products. ADM is way out in front with the edible soy products because of better texture and flavor. Cargill, Dawson Mills, and Central Soya have sort of a nondescript product—not outstanding and not positioned well. They are losing money.

Central Soya is having problems with its textured soy protein concentrate. Staley is a dogged competitor. They have concentrated on a few items which they sell inexpensively; they do a good job with those, but they have no flavored products. Farmland (Far-Mar-Co) is also a dogged competitor. They have a line of flavored TSF that has never gone any where.

Each strong manufacturer has at least one pet food account from which they draw their financial life. All the companies are losing money on their pet food TSF but they have to have it to keep their overhead spread thin enough to make money on anything else. So the competition in the edible soy products industry is brutal.

What killed them all was Wenger Manufacturing Co. In the early days the pet food makers were happy to get TSF

at 60 cents/pound, which was much cheaper than beef. But soybean meal was 6 cents/pound. So pet food makers started to buy a lot—dozens of carloads. Then Wenger shows up and says, “Why not buy an extruder, buy soybean meal for 6 cents/pound, and make your own TSF?” This forced TSF processors to drastically lower rates to cost of meal plus a fixed processing charge. That still allowed the processors to work off a lot of scrap. Some bought Wenger extruders. That was the end of profits in the pet food industry.

Dwayne Andreas took an early liking to TVP. Dwayne is a very homey person, a Quaker [sic, Mennonite] in the true sense. He developed and made a flaked breakfast cereal out of TVP; it contained 100% of the RDA for everything and you just poured milk on it—not a hot cereal. Or it could be used as a tuna extender. But in about 1972 the cereal makers rejected it; they thought it was too concentrated. That was one of the first times ADM got burned—a sort of TVP tragicomedy. Bob Sullenberger is another key man and good source of information. Address: Basic Foods Co., 1211 E. Olympic Blvd. #204, Los Angeles, California 90021. Phone: 213-623-6686.

**933. Product Name:** Vegetable Protein Entrees [Uncle Archie's Chicken Almondine, Sweet 'N Sour Pork Style, Pepper Steak, or Hearty Stew Style].

**Manufacturer's Name:** Archer Daniel Midland Co.

**Manufacturer's Address:** Decatur, Illinois.

**Date of Introduction:** 1982 February.

**Ingredients:** Sweet 'N Sour Pork: TVP (soy flour), sugar, cornstarch, bell peppers, natural flavorings, vinegar solids, onion, tomato paste, garlic, sherry wine solids, monosodium glutamate (flavor enhancer), salt, spice, disodium inosinate and disodium guanylate (flavor enhancers), artificial flavor and colorings, citric acid.

**Wt/Vol., Packaging, Price:** 5.8 oz paperboard box.

**How Stored:** Shelf stable.

**Nutrition:** A 2/3 cup serving contains 10% of the U.S. RDA for protein, 138 calories, and less than 1 gm fat.

**New Product—Documentation:** Spot in Soyfoods. 1982.

Winter. p. 57. The product line is billed “An Oriental style entree based on textured vegetable protein and a delightful blend of vegetables served in a sauce designed to enhance their flavors.” The product is dehydrated.

934. Lauser, Greg C. 1982. History of Cargill's involvement in the soybean processing industry. Minneapolis, Minnesota. 5 p. March 15. Unpublished manuscript.

• **Summary:** Soybean processing: “1942—Cargill entered the soybean processing business with the acquisition of expeller plants in Springfield, Illinois (sold in 1950), and Cedar Rapids (east), Iowa. Note: These two plants were purchased from Ike Sinaiko and Joe Sinaiko respectively, but probably in 1943.

“1943—Cargill acquired Plymouth Processing

Company's plant and grain elevator at Ft. Dodge, Iowa (sold in 1971 [to Land O'Lakes]).

"1945–The company acquired from Honeymead solvent extraction plants in Spencer and Cedar Rapids (west), Iowa. The solvent-extraction process is used in modern plants today.

"1946–Cargill acquired the Washington, Iowa, soybean crushing plant and began crushing flax seed at a plant it built at Port Cargill in Savage, Minnesota. The same year, the company acquired from the Falk Corporation a flax processing plant in Minneapolis. Since 1967, that plant also has been crushing sunflower seeds.

"1947–The company opened a soybean crushing plant at Savage, Minnesota.

"1950–Cargill built its first plant specifically designed to crush soybeans in Chicago to serve domestic oil and meal markets. In 1956, a refinery was built adjacent to the crushing plant that produces industrial refined non-edible oil used in paints and other protective coatings and in vinyl products. Cargill also acquired a flax crushing plant in Philadelphia that was closed as a crushing plant in 1953.

"1957–Cargill opened a soybean processing plant in Memphis, Tennessee. A second plant was added adjacent to the first in 1970.

"1959–Cargill expanded the scope of its soybean crushing activities to the Southeast by opening a facility in Norfolk, Virginia, and acquired a plant in Sioux City, Iowa, from Sioux Industries.

"1960–The Wichita, Kansas soybean crushing plant was acquired from the Soy Rich Company.

"1961–The company acquired the Des Moines, Iowa soybean crushing plant from Spencer-Kellogg Co. In 1967, Cargill opened its first domestic salad oil refinery adjacent to this crushing plant.

"1965–Cargill began crushing soybeans overseas at its new plant in Tarragona, Spain.

"1968–The company opened a second overseas crushing plant in Amsterdam, the Netherlands.

"1970–A third seed crushing plant [named Soja-France, with Dominique de Clerq as chairman of the board and general manager] was opened at St. Nazaire, France. A crushing plant at Reus, Spain, also was added in 1970 and Australian cottonseed crushing operations were acquired in 1972.

"1967–The company opened the Gainesville, Georgia, soybean processing plant. A refinery, Cargill's first to produce hydrogenated or "hardened" oil for the Southeastern food manufacturing industry, was built adjacent in 1979.

"1970–Cargill built the Fayetteville, North Carolina, crushing plant and a refinery was added in 1976.

[1971–Soybean crushing plant at Fort Dodge, Iowa, sold to Land O'Lakes.]

"1973–Soybean processing complex began operations at Ponta Grossa, Brazil.

"1975–Acquired plant in Osceola, Arkansas.

1976–Soybean plant was built at Barcelona, Spain.

"1977–Soybean plant constructed and operations began at Brest, France.

"1978–The company opened a soybean processing plant in Sidney, Ohio, to serve domestic meal and oil markets. This facility was the company's first soybean processing plant designed to burn coal as its source of power.

"1980–Construction began on vegetable oil refinery adjacent to Wichita soybean crushing plant and operations started in late 1981. A crushing plant also was acquired in Antwerp, Belgium.

"1981–Company acquired a soybean crushing and vegetable oil refinery complex in Hartsville, South Carolina.

"1982–Cargill acquired a soybean crushing plant in Monte Alto, Brazil.

"Summary. Soybean Crushing: The company now operates soybean processing plants in the United States, the Netherlands, Belgium, France, Spain, Brazil. The plants range in capacity from 20,000 to nearly 120,000 bushels a day. In the U.S., the company operates 15 plants in Iowa, Illinois, Minnesota, Kansas, Virginia, North Carolina, South Carolina, Tennessee, Georgia, Arkansas and Ohio. It operates 6 U.S. refineries located in Gainesville, Georgia; Fayetteville, North Carolina; Des Moines, Iowa; Hartsville, South Carolina; Chicago, Illinois and Wichita, Kansas."

In a cover letter to William Shurtleff, Greg says: "I'd now like to answer the specific questions you posed in your letter:

"1. Ralston Purina is the largest animal feed producer, according to *Feedstuffs* magazine.

"2. Will Cargill is the focus of Cargill's early history because he was the founder and is generally regarded as the most innovative and enterprising, while his brothers' skills in administration and finance served the company well.

"3. Nutrena Mills were headquartered in Kansas City, Kansas, when they were acquired in 1945. While they may have used Cargill soybean meal in their animal feeds, it is highly unlikely because of the transportation costs between Kansas City and the nearest Cargill crushing plants at the time in Ft. Dodge and Washington, Iowa. Nutrena probably had closer sources of supply for meal.

"4. I've addressed the seeming contradictions you mentioned in the attached, edited version of your copy."

Address: Public relations, Cargill, P.O. Box 5625, Minneapolis, Minnesota 55440.

935. **Product Name:** Tofu: Soy Bean Curd.

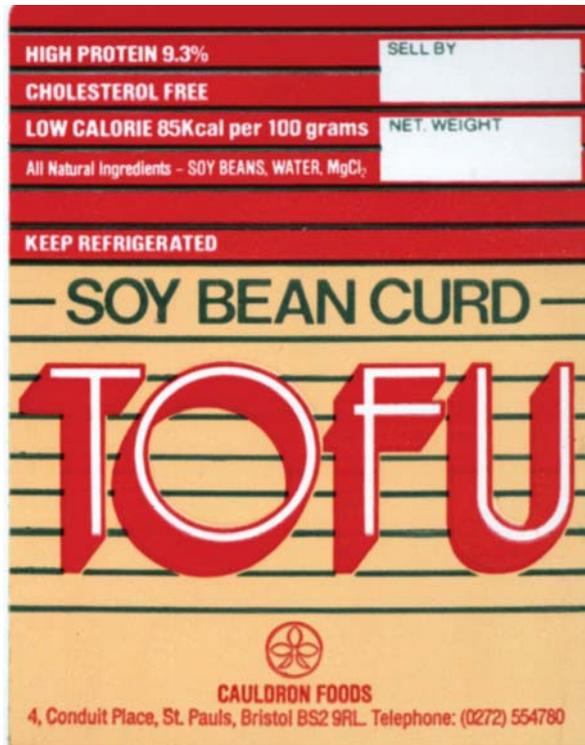

**Manufacturer's Name:** Cauldron Foods Ltd.

**Manufacturer's Address:** Sunny Bank, Chapel Lane, Fish Ponds, Bristol 16, England. Phone: 858-881.

**Date of Introduction:** 1982 March.

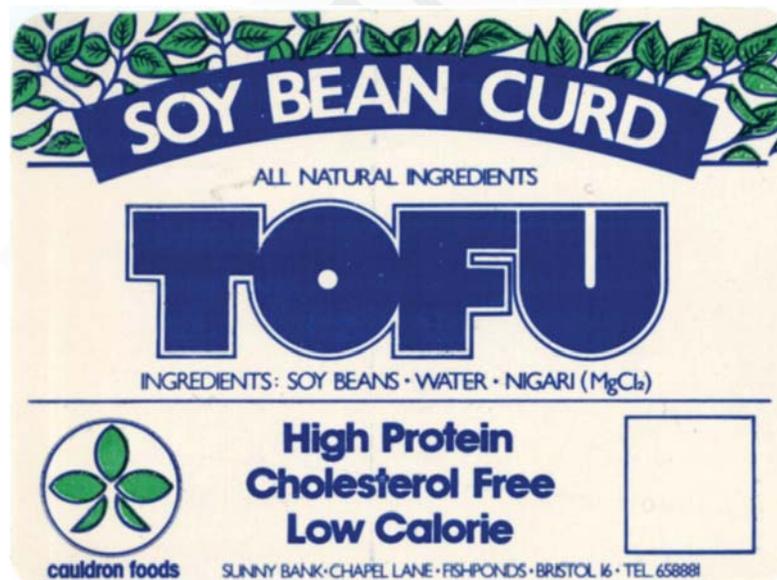

**Ingredients:** Soy beans, water, nigari, magnesium chloride.

**How Stored:** Refrigerated.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1983. June 20. Owners: Philip Marshall and Peter Fagan. Original address: Sunny Bank, Chapel Lane. Later: 4, Conduit Place, Lower Ashley Rd., St. Paul's, Bristol BS2 9RL, England.

Richard Leviton. 1983. Trip to Europe with American Soybean Assoc. Oct/Nov. Unpublished manuscript. p. 26-28. See history of the company. Philip Marshall and Peter Fagan started their partnership in Cauldron Foods in Sept. 1981. Philip was previously a partner with Paul Jones, and at the time he joined with Peter he was already a Bristol tofu

maker selling some tofu in bulk to the converted. They now make 1,200–1,500 lb/week of tofu, all in one day. They are planning to do a fermented tofu spread.

Labels. 1983. 4 by 3 inches. Self adhesive. Blue and green on white. Bean vine drawing. “Soy Bean Curd. All Natural Ingredients. High Protein. Cholesterol Free. Low Calorie.” Label. 1983, undated. 3 by 4 inches. Self adhesive. Red, beige, green, and white. “Soy Bean Curd. High protein 9.3%. Cholesterol Free. Low Calorie 85Kcal per 100 grams. All Natural Ingredients.” Address: 4, Conduit Place, St. Paul's, Bristol, BS2 9RL.

Soya Bluebook. 1985. p. 100. Ad in The Vegan. 1986. Summer. p. 4. “Cooking with tofu? Look for the mark of quality. Tofu and smoked tofu.” Address: 149A South Liberty Lane, Ashton Vale, Bristol, England.

Letter from Neil Robinson. 1989. Aug. 7. The three major tofu products in Britain, as far as I know, are (1) Tofeata Tofu by Haldane Foods (Hera), Leicester, England; (2) Cauldron Foods, Bristol, England; (3) Truehealth Tofu by Birchwood Foods, Wrexham, Wales.

Talk with Philip Marshall, founder. 1990. March 29. Cauldron Foods was founded in 1980 and began to produce tofu in late 1981 in Bristol. This was a pioneer tofu company in England.

Note: This is the earliest record seen (May 2019) in connection with Cauldron Foods Ltd.

936. **Product Name:** The Bristol Nut Burger (Meatless Tofu Burger).

**Manufacturer's Name:** Cauldron Foods Ltd.

**Manufacturer's Address:** Sunny Bank, Chapel Lane, Fish Ponds, Bristol 16, England. Phone: (0272) 554780.

**Date of Introduction:** 1982 March.

**Ingredients:** Tofu, brown rice, textured soy flour, peanuts, shoyu (soybeans, wheat, water, salt), soy oil, salt, hydrolysed vegetable protein, onion extract, citric acid, garlic.

**Wt/Vol., Packaging, Price:** 85 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1983. 5.5 by 7 inches. Plastic. Dark brown, light brown and white. Poster. 1983, undated. 6 by 8 inches. Red and blue on white. “The Bristol Burger Range of Natural Convenience Foods are now available in 3 Varieties. Ready Cooked. Can be eaten Cold or Hot. Low Calorie and High Protein.” Richard Leviton. 1983. Trip to Europe with American Soybean Assoc. Oct/Nov. Unpublished manuscript. p. 26-27. This company was built on the burger, which contains TVP (purchased from British Arkady) to add chewiness.

937. Hannigan, K.J. 1982. Corn/soy-based frozen desserts: Taste & nutrition made to order. *Food Engineering* 54(3):92. March.

• **Summary:** ADM has developed a non-dairy frozen dessert in which butterfat is replaced by hydrogenated soy oil and casein is replaced by soy protein isolate (Ardex F). Three variations with formulas are available containing 10% fat (ice cream type), 4% fat (ice milk), and 2% fat (sherbet). The ingredients are soy oil, soy protein isolate, a 55% fructose 36DE corn syrup, and stabilizer/emulsifier. Various flavors have been developed and the formulas can be modified for higher protein, reduced sweetness, or reduced sodium.

938. Eldridge, Arthur C. 1982. Determination of isoflavones in soybean flours, protein concentrates, and isolates. *J. of Agricultural and Food Chemistry* 30(2):353-55. March/April. [9 ref]

• **Summary:** These commercial soy products have high estrogenic activity. Their total and individual isoflavone content was determined by high-performance liquid chromatography. Dehulled, defatted soybean flours (10 samples) contain the following mean isoflavone content (mg/100 gm): Genistin 119.8, daidzin 61.7, daidzein 32.8, genistein 26.6, glycitein 7-Beta-glucoside 12.9. The total of these numbers is 253.8. The same isoflavones were found in soy protein concentrates and isolates but in decreased amounts.

Preparation of extracts: Ground defatted soybean flour was extracted with several solvents. Refluxing with 80% methanol gave the maximum extraction and most reproducible results.

Of the commercial soy flours used, one was a true soy flour (Nutrisoy 7B, made by ADM), and eight were textured soy flours: TVP (unflavored, ADM), Textratein (Cargill), Centex 300, 300L, 400, and 400 SL (Central Soya Co.), Mira Tex (Staley), and Promote III, SL (Griffith Labs).

The soy protein concentrates tested were: Response (Central Soya Co.), Food protein concentrate (Swift & Co.), Pro Con 2000 (Staley), Promosoy 100 (Central Soya), and GL-301 (Griffith Labs). GL-301 had the highest total isoflavone content (317) and Promosoy 100 had the lowest (16)—a dramatic difference. Those with the highest isoflavone content were prepared by aqueous leaching of defatted soybean flours, whereas those with the lowest content were prepared by extracting hexane-defatted soybean meals with alcohols, which removed some of the isoflavones from the meal.

The soy protein isolates tested were: Edi Pro N, Edi Pro A, Supro 610, 620, and 710 (all made by Ralston Purina Co.). Supro 710 had the highest total isoflavone content (132) and Supro 620 had the lowest (105)—a relatively small difference. Address: Northern Regional Research Center, Peoria, Illinois.

939. *Food Processing (Chicago)*. 1982. Wet curd isolated soy protein has maximum functional attributes: Protein is essentially undenatured. 43(4):38-40. April.

• **Summary:** Contents: Introduction. Applications. Physical and chemical characteristics.

Research efforts on protein have gone through three major phases. Because of a perceived shortage of protein, the first major research efforts were aimed at finding new protein sources. “With realization that most of the developed countries have sufficient protein supplies, studies changed direction to producing proteins of high quality—combinations of proteins were designed to secure more desirable amino acid profiles. In more recent years, the primary goal of protein research efforts has been development of, and/or understanding, improved functional characteristics.” Address: ADM Foods, Box 1470, Decatur, Illinois 62525.

940. **Product Name:** Whole Earth VegeBurger (Dry Mix) [Herb & Vegetable, Chili, No-Salt (Aug.)].

**Manufacturer’s Name:** Yin-Yang Ltd. [Whole Earth]. Renamed The Realeat Company in June 1982.

**Manufacturer’s Address:** London NW10, England.

**Date of Introduction:** 1982 April.

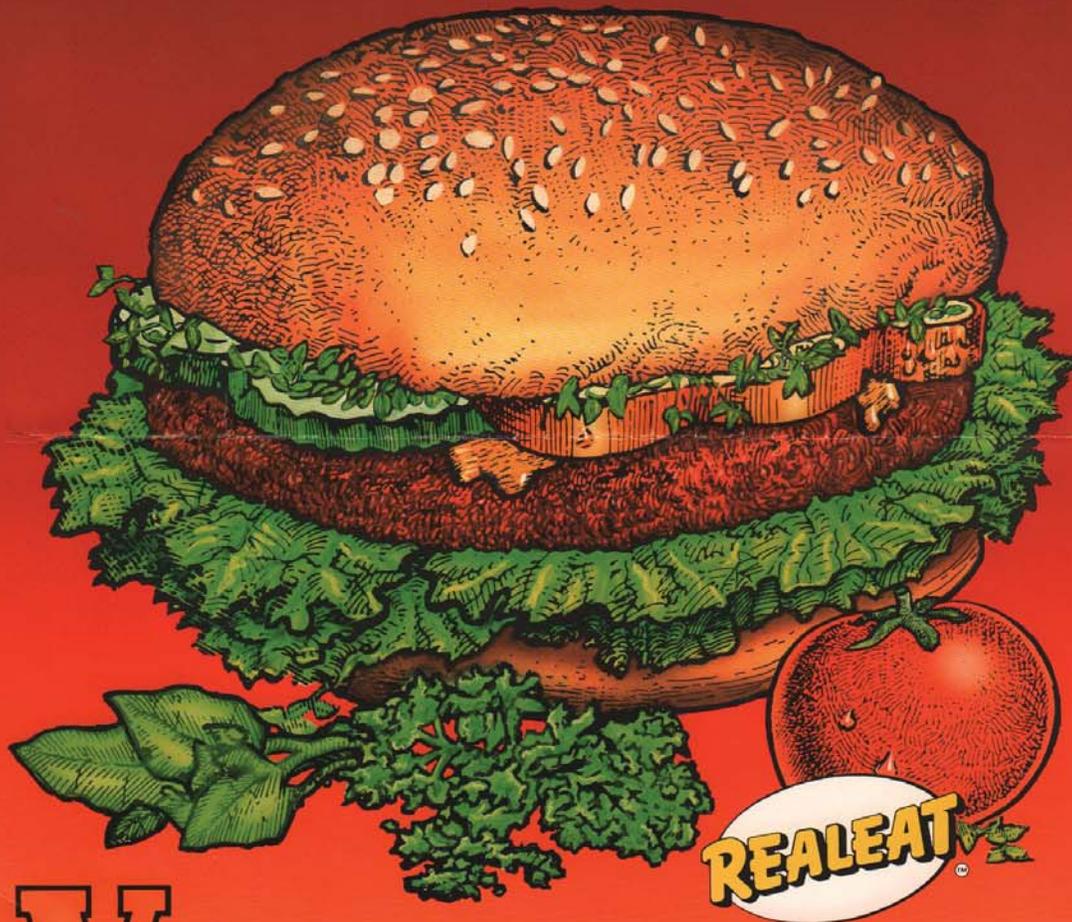

**Ingredients:** 1982: Sesame seeds, rolled oats, wheat gluten, textured soya flour, wholewheat rusk, dehydrated onion, dried mixed vegetables, yeast extract (Seasoning and seasalt vary between the 3 varieties).

**Wt/Vol., Packaging, Price:** 125 gm foil sachet, makes 4 x 70 gm burgers. Retail for 59 pence.

**How Stored:** Shelf stable.

**YOU'LL HAVE NO BEEF  
WITH OUR BURGERS!**

**VEGEBURGER<sup>®</sup>**

**THE SAFE ALTERNATIVE!**

**Nutrition:** Contains more protein, half the fat, and less calories than an average beefburger. Cooked product: Protein 19%, carbohydrate 17%, vegetable fat 6%, dietary fibre 5%, calories 190/100 gm when fried.

**New Product–Documentation:** Dee previous page. Low, Robert. 1983. “And here comes... the VegeBurger.” *Observer (The)* (London). Feb. 27. p. 4. Sunday. This meatless burger, which was created by Gregory Sams, was launched nationally last week.

Leaflet. 1986. VegeBurger. “Realeat made the VegeBurger famous in 1982...” But in other Realeat publications the year of introduction is given as 1983. Note: It was sold locally in 1982, then launched nationally in Feb. 1983. “You just mix it with water and egg (optional), wait for 15 minutes, and shape into burgers for frying.”

Ad in *The Vegetarian*. 1984. May/June. p. 12. “Vege Burger by Realeat. The alternative that works. From health and natural food stores everywhere.”

Letter from Gregory Sams. 1988. March 30. Says the product was introduced in 1982. Leaflet, undated. “A Recipe for success.” Gives detailed product information. “Realeat made the VegeBurger famous in 1982 with the launch of the first all-natural meat alternative that tasted better, cost less, and did you good—with convenience. It proved a powerful combination and paved the way to a new market in meatless foods.”

Talk with Philip Marshall of Cauldron Foods Ltd. 1990. July 9. This is probably the Haldane Food Group’s best-selling soy product. Greg and Craig Sams are brothers, and both American. Philip does not know if they still work with Haldane or if they are retained as consultants. Both are very talented guys, excellent at marketing, and probably made their money quite nicely. One is in a wheelchair, paralyzed from the waist down. In the early days, both were involved with Whole Earth and the early events at Portobello Road. Whole Earth became Harmony Foods, a large health food wholesaling company.

Color photo of package in *Linda McCartney’s Home Cooking*. 1990. p. 18. “Realeat Vege Burger Mix. Herb & Vegetable Style.” The package is orange, yellow, and brown. “All natural—All vegetable.” A large color illustration shows a burger between buns.

Letter (e-mail) from Gregory Sams, originator of the VegeBurger—in response to questions from William Shurtleff. 2007. Feb. 8, 9 and 12. “The initial VegeBurger was launched as a Whole Earth branded product when I was still running Whole Earth, located in London at NW10. That was in April 1982. The VegeBurger was launched in two flavours: Herb & Vegetable, and Chili. A No Salt variety came out in Aug. 1982. The *Official* name of the company was still Yin Yang Ltd. VegeBurger and I went solo as The Realeat Company in June 1982. Whole Earth was in deep financial trouble and our investors and bankers had no faith in the product which I’d created to help save us. I had faith and was

happy to pass the reins over to my brother Craig and to go off and work from home (at 2 Trevelyan Gardens, London, NW10 3JY—where I had been living since Feb. 1980) with my new baby [VegeBurger]. It was our joint rescue plan, and the backers and bankers bought it. It worked for both of us. By early 1983, VegeBurger was a best seller in health food shops throughout the country. The article by Low on the VegeBurger in *The Observer* (London; Feb. 27. p. 4. Sunday) was prompted by my press release, which tied into the launching of the frozen VegeBurger in Feb. 1983. In 1988 The Realeat Company moved from my home to a serviced location at Acorn House in Nearby Acton for six months prior to my sale of the company.” “Yes, those are the original ingredients. The base of the VegeBurger mix was virtually equal parts of the first four ingredients. The secret was the texture obtained from the combination of wheat gluten and soya protein.”

2015 May 31. “The Vegeburger—Gregory’s story.” from [www.chaos-works.com](http://www.chaos-works.com). “The VegeBurger was, actually, prompted by a case of hepatitis that had me house-bound for the last few months of 1981. For the fifteen years prior to that, in conjunction with brother Craig, I had been running various natural foods businesses, each one the first of its kind in the country. It started when I opened Seed Restaurant in 1968 at the age of 19, progressing to CERES natural food store on the Portobello Rd. This then led to the importation, manufacture, and distribution of natural products through Harmony Foods—which evolved into Whole Earth Foods. Publishing and cafes, a bakery and a bookshop, pop festival catering and all sorts were included in the mix over the years. Mom helped cook in the very first days of the restaurant and dad published Seed, the Journal of Organic Living for six years. All of this set the scene for the VegeBurger to be such an instant success. In 1982, I was in charge of Harmony Foods/Whole Earth with my brother Craig doing the marketing. We sold hundreds of tons of natural foods every week but were in dire financial straights. Our equal shares had a negative value, and the investors who owned nearly half of the company were very upset about it all.

“In 1981 I returned from a trip to Colorado’s Rocky Mountains and came down with hepatitis. The only way to cure it was an enforced stay-at-home rest from the frenzy of keeping up with the relentless demands of Harmony Foods. With this enforced ‘free’ time I decided to work on something that could breathe new life into the company, without being a drain on its resources. I wanted something unlike our huge range of grains and beans and seeds and basic products, but still appealing to the same market.

“I had been vegetarian from the age of 10, at a time when I knew of no other vegetarians in any of the subsequent four schools I attended. Having been brought up by a health-conscious mother in a pre McD era, I had never even tried a hamburger. The idea of creating an alternative to the hamburger with an easy-to-make mix appealed to me as

being quite unlike bagging up beans (there will always be somebody who can put a pound of beans in a bag for less than you). I spent about four months experimenting with different ingredients and mixes, working on texture first, and then the vegetables, herbs and seasoning. It was after about three months that I knew I was getting close when my long-suffering wife, Sandy Sams, asked for a second bite of the latest sample forced upon her.

“There was nothing on the market then that provided a natural alternative to the hamburger, and the product needed a name. I wrote out a list one evening of the options, including Plantburger, Sesameburger, Vegeburger, Earthburger and Greenburger. They all sounded strange at the time but after a few days ‘VegeBurger’ came to the fore. As a brand new word, which did not seem descriptive at the time, it was not a problem to register it as the trade mark VegeBurger. Vegetarians were not yet termed Veggies.

“The VegeBurger was launched in March 1982 under the Whole Earth label and much as I extolled its virtues, our bankers and backers were not impressed, pointing out that 90% of all new food product launches fail. I wanted to devote myself to this new ‘baby’ and, by the 18th of June 1982, I had negotiated myself a resignation as Chairman and M.D. of Whole Earth Foods. I gave my shares to brother Craig who gradually developed the company into a solvent Whole Earth Foods and later launched Green & Blacks chocolates with wife Josephine. I set up my dream business, trading as The Realeat Company. It was all managed on my Apple IIe computer from an in-house office conversion, utilizing reliable outside contractors and having no employees. This is now called a “virtual company” and it allowed me to spend my time demonstrating, promoting and marketing. I had no bureaucracy, no fixed overheads, and it was a joy to run this free-flowing enterprise.

“The VegeBurger quickly became a nationwide success, especially boosted by the press coverage it received following release of the first Realeat Survey in 1983, commissioned to tie in with the launch of the frozen VegeBurger. I commissioned Gallup to conduct a poll of public attitudes to meat consumption, getting the first ever vegetarian head-count. It was news, with more of a move away from red meat consumption than anybody had realized. VegeBurger was on television, radio and newspapers to such a degree that, when I wasn’t being interviewed on radio or responding to a press query, all my time was spent keeping retailers stocked with the new hit. The survey brought a huge number of latent vegetarians ‘out of the closet,’ especially young women who realized they were not alone in their aversion to meat.

“The secret of the VegeBurger was simple in retrospect. It had a better flavour than your average beefburger, cost you less, didn’t kill cows, and made you feel a whole lot better—all done with natural ingredients.

“By 1988 things were getting a bit too complicated to

keep on running by the seat of one’s pants. It was clear that I could either get out of the business now while it was all going well, or start wearing suits, and employing them, in order to eventually have loadsa money, while risking it all going down the drain if I screwed it up.

“So I sold the Realeat Company on the 8th August ’88 and left the food industry altogether. One of my most treasured “pay-offs” from all those years is the ability to easily buy healthy organic foods that I once had to import, pack, sometimes manufacture, and always introduce, if I wanted to include them in my own diet—which I did.”

941. Holt, John. 1982. Re: New developments at The Regular Tofu Co. Letter to William Shurtleff at Soyfoods Center, May 1. 1 p. Handwritten, with signature on letterhead.

• **Summary:** “Having used your book to learn how to make tofu, we now have a small business here making about 700 lb/week of tofu and about 2,500 tofu burgers per week. We give our okara to a pig farmer... We sell the tofu vacuum packaged. As yet we don’t have a means of packaging soya milk. It is sold over here in Tetra Briks and is very expensive. We want to expand the business to make larger quantities of tofu (regular and silken if possible) and to sell soymilk more cheaply... At present, our equipment is very similar, I should imagine, to a small Japanese tofu shop. We use nigari.

An accompanying form states that this company started business in Dec. 1981 and now uses 50-100 lb/day of dry soybeans. Address: 75 Chandos St., Leicestershire LE2 1BU, England. Phone: (0533) 549839.

942. Pautz, Jane Abe Cadwell. 1982. Re: Directory of soyfoods manufacturers in Sao Paulo, Brazil, and comments on the availability of these foods. Letter to William Shurtleff at Soyfoods Center, May 29. 3 p. Typed.

• **Summary:** List all known companies in Sao Paulo that make soyfood products. A separate listing is given for each product with the full company name and address. The product categories include: Tofu and tofu products (2 companies). Soymilk (4). Shoyu (3). Sellers of whole dry soybeans (1). Lecithin (1). Soyflour (1; soyflour is available in many stores without a brand name). TSP / TVP (2).

“As you know we have a large Japanese colony here in the country. I am only aware of what is here in Sao Paulo.”

“Soynuts are available in health food stores in small unlabeled packages. I have not seen soy nut butter. Miso (miso) is plentiful. Soy sprouts are sometimes available in open-air markets along with other Japanese products. They aren’t common. Fresh green soybeans [edamamé] are also available at certain times of the year in these markets. Of course there is lots of soy oil. I think that Sanbra [SANBRA] is one of the big producers or sales company of the beans [soybeans]. In some of the health food stores there is a product available called ‘carne de soja’ (literally “soy meat

[textured soy flour]). There is no brand name and I have not experimented with it.”

“I will be working on a book of tofu recipes during this vacation. The publisher wants to publish it yet this year.

“Last year I gave 3 lessons in working with soyfoods at the Nestlé experimental kitchen here in Sao Paulo, and may be working with a new health foods store / restaurant in developing foods. I would like to see them try some typical soy-deli kinds of things. There is a lot of interest here, new stores of ‘produtos naturais’ [natural food products] and vegetarian restaurants are quite popular.” Address: Rua Spinagés 1974 Apto. 61, 01258 Sao Paulo, Brazil.

943. Thornock, Kaylene. 1982. The usability of tofu in schools and colleges. Jack’s Beanstalk, P.O. Box 26615, Salt Lake City, Utah. iii + 102 p. May. No index. 28 cm.

• **Summary:** Contents: About tofu. Acknowledgments. Agreement for research on tofu. Statement of objectives. Research objectives #1-6. Summary of research findings by objectives.

Tofu was served and evaluated by students at Brigham Young University in a number of popular recipes. Generally, the more students knew about tofu, the higher their acceptance level. Tofu was very well accepted in both entrees and dessert items. A cheesecake, in which tofu was substituted for one-third of the cream cheese, was preferred almost 2-to-1 over that without.

Among the recipes tested which contained tofu were: Brownies, burritos, chow mein, chili rellenos, cheesecake, enchiladas, French toast, fruit smoothies, guacamole dip, onion dip, pizza, pumpkin pie, quiche, scrambled tofu, spaghetti sauce, stroganoff, tofu stew, and yakisoba (fried buckwheat noodles).

Cost savings: Ground beef at \$1.39/lb was found to be 74% more expensive than tofu at \$0.80/lb. At 50:50 extension a foodservice operation would save \$29.50 per 100 lb of food product, or 21%. If 600 lb a week was served, this would result in an annual savings of \$9,204 in one entree item. Foodservice directors find this very impressive. Tofu may replace all or part of the following ingredients to realize substantial cost savings: Bleu cheese \$4.60/lb. Mozzarella cheese \$3.60. Cream cheese \$2.95. Round steak \$2.15. Beef sirloin roast \$1.79. Ground beef \$1.39. American cheese \$1.29. Tofu \$0.80. Other economical substitutions are for mayonnaise, salad dressing, cottage cheese, sour cream, ice cream, eggs, chicken, sausage, pork. Note that TVP (textured soy flour) is now widely used by foodservice institutions in tacos and to some extent in hamburgers.

Nutritional value: Tofu is a star, being free of cholesterol, low in total fats and saturated fats, very low in calories, and free of salt... in addition to being an excellent source of high-quality protein.

Acceptability: Jack’s Beanstalk (a tofu manufacturer in Salt Lake City, Utah) introduced a 50-50 mixture of tofu

and ground beef under the catchy name of “Burgerlite” in college food lines. “Where tofu content has been 25-50% and all recipes tested have been in a form familiar to the college students (i.e. meat loaf, tacos, spaghetti sauce, etc.), acceptability has been equal to that of products not containing tofu.” The more education and exposure people have concerning tofu, the more their general level of acceptance increases. The more accurate information they have, the less they fear change. To boost acceptability, two things are important: educate frontline foodservice employees and give general (or, even better, specific) recommendations for using tofu. In addition, develop a general strategy for introducing tofu as a new food to students, much as you would launch any new product. For example, prepare a campaign slogan: “Tofu, the new and upcoming food of the future is coming your way.” Tofu seems to work best in desserts, entrees, salads and dressings, sauces, soups, and beverages. Try to develop recipes to yield at least 75 to 100 portions.

944. Nave, Robert W. 1982. Re: History of work with soyfoods and soybeans at SPRA in India. Letter to William Shurtleff at Soyfoods Center, June 5. 7 p. Typed (single spaced), with signature on letterhead.

• **Summary:** Gives details of his pioneering work, starting in 1968 when he was working at the Nave Technical Institute, Shahjahanpur, UP, India. In March 1970 Nave visited Joe Wenger and his plant in Sabetha, Kansas. He was impressed and the Wenger company then offered to give him the machinery (a Wenger X-25 extruder) necessary to set up a pilot project making extruded soy flour in India. During 1970 USAID in Delhi and the G.B. Pant University joined the proposed project. “From 1970 to late 1971 or early 1972 the project operated as NTI Soya Products. It was set up as a Part of Nave Technical Institute. After the University became a partner, the name was changed to Soya Production & Research Association. The association has been set up as a charitable company...”

“SPRA produced Nutri Nugget (TVP), Protesnac (a soya-rice spiced snack), Protein Plus (a corn-soya weaning food), Nutriahar (a wheat-soya–fullfat [full-fat]–weaning food) and extruded fullfat soya flour. SPRA has not produced soymilk, tofu, etc. except on an experimental basis.”

SPRA started building a factory in March 1971 at Bereilly. In July 1972 SPRA produced 40 tons of corn-soy weaning food for some feeding trials to be conducted by USAID in Madras state. Nutri Nugget (TVP) was the company’s first product; the defatted soybean meal was originally purchased from Prag Ice & Oil Mills, and then from General Foods of Indore (owned by the Sahara brothers). In 1978 the company began having problems with its factory manager (George Grundy) and with production. Grundy and an electrical contractor, Kalim, had been approached by the Sahara brothers to build an extruder for

them and set up a competing factory. “Grundy and Kalim then took our machinery apart on the pretext of maintenance and copied it, mostly at SPRA expense.”

“Nutrela is produced by Ruchi. Ruchi is the name of one of Kailash Shahra’s daughters after whom the company is named. The first extruder they used in this plant is the one made by Grundy as explained above. Unfortunately and in spite of their large media campaign their impact has been negative. They have gone so far as to provide retailers with new packages into which to fill the contents of the outdated packages which did not sell. Because they have little or no quality control, neither Meal Maker nor Nutrela sell well in the markets where Nutri Nugget is available. Both took the wordings used on their boxes and in their ads almost verbatim from the Nutri Nugget boxes and ads...”

“Dr. Al Nelson was the key figure in setting up the soybean utilization lab at Pantnagar. Dr. Surjan Singh was head of the department of Food Science and Technology and in charge of the utilization lab. Both were key people in the University’s roll in working with us when we were setting up the SPRA—although it had already existed for almost a year at NTI Soya Products.

“As far as I know, no one is extracting soy oil by expellers. All is being extracted by solvent. In Nagpur, someone who had been in the states for some time set up a soy milk project which has local distribution and was a private commercial effort...”

“The government figures on soybean cultivation are not accurate. It is less than they say—largely because certain agricultural officers pad figures in order to make their efforts look better. However, cultivation is on the increase and will increase even faster when the market becomes adequately developed to assure sale of the crop.

“Almost as long as I can remember, it has been possible to get tofu in various foods in Chinese restaurants in India. I assume the Chinese were making this for their own limited use but did not try to market it outside.

“I have heard of soy flour being used in idli but think it is very limited if at all. Defatted soy flour and soybeans just aren’t available in most places. I have never seen defatted soya flour on sale in retail stores anywhere. If it is now available, it has come very recently...”

“TVP is the major soy food product in India. I imagine the total production of this is not much more than 200 tons per month at present but that this is more restricted by ability to produce than lack of market.

“I think the first solvent extraction of soy oil was in about 1969 or 1970.

“When I was in India last April 1982, the milk production at Pantnagar was closed and Sipso was not doing well. In both cases it seemed to be more because of management problems than anything else. The product was good. I have no knowledge of the Jabalpur plant.

“Possibly 50% of the people in India would eat eggs,

meat, fish or poultry if they could afford them. Perhaps 20% eat these regularly. There is a great market for soy foods in India and it will grow at an increasingly rapid rate until India is one of the biggest users of soy foods in the world. It is a natural for soya foods if they are produced in a way that suits Indian tastes and conditions.”

Attached is a 3-page news release (undated) about: (1) Dr. Vivian Erasmus, a native of India and general manager of SPRA in Bareilly, Uttar Pradesh, who will be in Minnesota from June 24 to July 13. A full-page biography is given. (2) SPRA in India; it is an association of the Methodist Church in India through the Nave Technical Institute (80% shares) and the G.B. Pant University of Agriculture (20% shares). The Methodist Church in India is affiliated to the United Methodist Church of the U.S. “All surplus earnings of the association are use to support charitable projects.” The “main impact of SPRA has been in private homes through distribution and sales of its products in retail outlets. It now has nation-wide distribution. Its products include textured soy protein under the name of Nutri Nugget, a soy rice snack, a wheat soy weaning food and full-fat soy flour. Due to the pioneering work of SPRA, soybean based foods are now well established in India.” Address: Compatible Technology, Inc., 7600 Harold Ave., Minneapolis, Minnesota 55427. Phone: (612) 545-0378.

945. Shurtleff, William; Aoyagi, Akiko. 1982. Soyfoods industry: directory and databook. 2nd ed. Lafayette, California: Soyfoods Center. 56 p. June. 28 cm. [24 ref]

• **Summary:** A detailed study of the rapidly emerging soyfoods industry and market. Contains original statistics compiled by the Soyfoods Center through interviews with companies. Contents: 1. Terminology: The many types of soyfoods. I. Traditional low-technology soyfoods. 1A—Nonfermented soyfoods: Fresh green soybeans, whole dry soybeans, soynuts and soynut butter, soy sprouts, whole soy flour & grits, roasted soy flour [kinako] & soy coffee, soymilk and dairylike soymilk products, tofu (eight types), okara or soy pulp, yuba.

1B—Fermented soyfoods: Tempeh, miso, soy sauce, shoyu & tamari, natto & thua-nao, fermented tofu & soymilk, soy nuggets [fermented black soybeans] (Hamanatto & tou-ch’ih).

II. Modern soy protein foods: Defatted soy flour, grits & flakes, soy protein concentrates, textured soy protein products, soy protein isolates.

III. Soy oil products: Soy salad oil & cooking oil, soy oil margarine & shortening, soy lecithin.

2. Soyfoods industry directory: Names and addresses of over 850 soyfoods manufacturers in the Western world, plus major soymilk, miso, shoyu, and yuba manufacturers in East Asia. 3. Analysis of the soyfoods industry in the U.S.

4. Trends in U.S. and world soybean production: Graph of world soybean production (1922-1979) including graphs

for the world total, USA, Asia total, and Latin America. Graph of U.S. soybean production, yields, and exports (1924-1979).

5. Analysis of the tofu industry in the West: The U.S. tofu market: overview and outlook. Graph of the number of tofu (and tempeh) manufacturers in the West from 1975 to 1982. Four-year analysis of the tofu industry in the West. Listing of North America's largest tofu manufacturers and their weekly tofu output. Japan's largest tofu manufacturers and their daily output. Favorite tofu, soymilk, and tempeh recipes as served at U.S. soyfoods, delis, cafes, and restaurants, or marketed as ready-to-serve products. Books on tofu published in America.

6. Analysis of the tempeh industry in the West: Graph of number of tempeh manufacturers. Recipes. Listing of North America's largest tempeh manufacturers and their weekly output.

7. Analysis of the worldwide soymilk industry: Analysis of the soymilk industry in the United States. Analysis of the soymilk industry in Japan. Major Japanese soymilk companies and their products.

8. Analysis of the soy sauce / shoyu and miso industries worldwide. Statistics on fermented soyfoods in East Asia. The soy sauce market in the United States (1981). U.S. imports of soy sauce. Graph (1947-1981. Source: U.S. General Imports, Schedule A. Commodity by Country. U.S. Dept. of Commerce, Bureau of Census). U.S. imports of soy sauce. Table (1947-1981. Source: U.S. General Imports, etc. See above). The shoyu / soy sauce market in Japan. Graph. (1886-1980. Includes: Number of manufacturers. Per capita consumption. Shoyu production. Kikkoman's market share (%)). The miso market in Japan. Graph. (1930-1980. Includes: Per capita consumption. Total miso production. Factory production. Number of manufacturers. Home production. Amount of soybeans used). Overview of the miso market in the United States. Miso exports from Japan (1981). Japan's ten largest miso manufacturers and their output.

9. Other: Analysis of the soynuts industry in the U.S. North America's larger soyfoods delis, cafes & restaurants. The soybean crushing industry; overview.

10. Soyfoods terminology and standards (Glossary of soyfoods terms): I. Traditional nonfermented soyfoods: Fresh green soybeans, okara, roasted soy flour (soy coffee, soy chocolate), soybeans, soymilk (soymilk ice cream, soymilk soft serve, frozen soymilk yogurt, soymilk mayonnaise, soy shakes, soy nog, soymilk whipped cream), soynuts, soy sprouts, tofu (regular tofu, deep-fried tofu {deep-fried tofu cutlets called nama-age or atsu-age in Japan, deep-fried tofu burgers or burger balls, called ganmodoki or hiryoze in Japan, deep fried tofu pouches (called aburage in Japan; the words "deep-fried" may be dropped from the names after the initial usage, and in recipes or on package labels, if desired}), silken tofu {made without separation of curds

and whey, called kinugoshi in Japan; modern types, all made with glucono delta-lactone as coagulant, and all known in Japanese as juten-dofu, are packaged lactone silken tofu, bagged lactone silken tofu (fukuro-dofu), sealed lactone silken tofu (buro-dofu), and Ever-Fresh Lactone Silken Tofu (in Tetra-Pak}), grilled tofu, frozen and dried-frozen tofu. (Note 1. It is illegal to describe the latter product as "freeze-dried tofu," since freeze-drying is a completely different process), terms associated with making tofu {fresh soy puree, a coagulant or curdling agent, forming box, filter bag or pressing sack, tofu comes in cakes, not blocks}), whole soy flour, flakes and grits, yuba.

II. Traditional fermented soyfoods: Fermented soymilk products (soymilk yogurt {Soy Yogurt, Soyogurt, Soygurt}, acidophilus soymilk, soymilk kefir, viili, piima, buttermilk {Soy Kefir, etc.}), fermented tofu (wine-fermented tofu, brine-fermented tofu), miso (rice miso, barley miso, soybean miso, Chinese soybean chiang), natto (thua-nao from Thailand and kinema from Nepal; all are non-salted), fermented black soybeans [fermented black soybeans] (Chinese fermented black soybeans know as shih, tou-ch'ih, tou-shih, or dow-si; savory fermented black soybeans called Hamanatto in Japan, Daitokuji fermented black soybeans called Daitokuji natto in Japan, Philippine fermented black soybeans called tausi or tao-si in the Philippines, Indonesian soy nugget paste called tauco, formerly spelled tao-tjo, Malaysian soy nugget sauce called tao-si), soy sauce (shoyu). The five basic types of Japanese shoyu are: regular shoyu called koikuchi shoyu in Japanese, light-colored shoyu called usukuchi shoyu, tamari shoyu, clear shoyu called shiro shoyu, and rich shoyu called saishikomi shoyu), tempeh, other fermented soyfoods.

Note 2. This is the earliest document seen (Sept. 2012) that uses the word "Soygurt" to refer to soy yogurt.

III. Soy oil and modern soy protein foods: soy oil, defatted soy flour, flakes and grits, soy protein concentrate, soy protein isolate, textured soy protein products (TSP, TVP is a registered trademark of the Archer Daniels Midland Company and cannot be used as a generic name for this product), meat analogs (foods typically made from spun soy protein fibers to resemble meat, fish, or poultry products).

11. Names of soyfoods around the world: Names of 40 products. Brazilian / Portuguese names. British English names. Chinese names (fermented tofu is Toufu-ju or Sufu). French names. German names. Japanese names. Spanish names.

12. Key institutions working with soyfoods in the West: The Soyfoods Center, Soyfoods Association of North America, INTSOY, American Soybean Association, Bean Machines, Inc., Soycrafters Apprenticeship Program, USDA Northern Regional Research Center, Sojaquelle.

About The Soyfoods Center.

Note 3. This is the 2nd market study published by Shurtleff. Address: Soyfoods Center, P.O. Box 234,

Lafayette, California 94549.

946. *Soyanews (Sri Lanka)*. 1982. New instant soyafood. 4(10):1. June.

• **Summary:** “The Cereal Products Factory in Kundasale is now marketing soya flakes. Soya flakes are made by boiling dehulled whole beans and passing them through a roller to flatten them wafer thin. The flaked beans are then artificially dried.” In this form they need no further cooking. They work well in instant dhal. “Soya flakes are marketed at Rs. 16/ a kilo (wholesale price). At this price it is virtually a give-away when compared with the prices for the imported Textured Vegetable Protein now on sale at prices ranging from Rs. 55/ a kilo to Rs. 86/- a kilo.

“The TVP, however, is chewy and more meatlike while the soya flakes come closer to the texture of dhal. The soya flakes retain nearly all the protein (43%) and fat (20%) in the whole bean while the TVP, which is made from defatted [soyabean] meal contains around 52% protein.”

947. **Product Name:** Ardex (Soy Protein Isolates) [DHV, D, F, SP-6, or R].

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** 4666 Faries Parkway, Decatur, IL 62526.

**Date of Introduction:** 1982 July.

**How Stored:** Shelf stable.

**New Product–Documentation:** Manufacturer’s catalog, ADM Foods/Protein Specialties. 1981. *ADM edible products/81*. The section titled “Proteins” (p. 19) describes these four types of “Ardex isolated soy proteins: Isolated Soy Proteins have the specific functions of imparting to products the added value of nutrition and replacing costly ingredients that are either diminishing in availability or expanding in cost. Many times both.

“An isolate also functions to control the quality in the production process. It allows for production variables, where the ingredients it replaces probably won’t.

“The result is a more quality consistent product. Consequently, many food producers use isolates in combination with their present formulations to increase product consistency as well as reduce ingredient costs.”

Manufacturer’s catalog. 1982. Feb. “Soy beverage concepts using Ardex isolated soy proteins.” Ardex F and Ardex SP-6 are recommended for making milk-like beverages. Ardex R with pH properly adjusted can also be used. The ingredient cost of 8 oz. of whole milk is 8.6 cents, compared with 3.2 cents for unflavored soy beverage, 3.7 cents for chocolate soy beverage, and 8.3 cents for soy fortified milk. Ingredients in the unflavored soy beverage are Ardex F 3.62% (dry weight basis), ADM 468 partially hydrogenated soy oil 2%, Cornsweet 42 (fructose) 8%, emulsifier 0.25%, salt 0.08%, and stabilizer 0.02%. Total solids are 13.97%, protein 3.47%, fat 2%, and calories 67.7

per 100 gm.

*Soyfoods*. 1982. Summer. p. 7-8. Ardex F is a highly dispersible isolate that can replace nonfat milk solids.

Soya Bluebook. 1982. p. 64. No brand names given. Note: This is the first time that ADM has appeared in the Soya Bluebook as a maker of edible soy protein isolates. Soya Bluebook. 1983. p. 64. No brand names given.

Manufacturer’s catalog. 1987. DHV is salt tolerant, non-dusting, highly dispersible. D is adhesive, emulsifier & emulsion stabilizing. F and SP-6 are non-gelling, readily dispersible. RH is isoelectric pH isolate.

948. Mandoe, Bonnie. 1982. Soy power. Part III. Soybeans, soy grits, and TVP. *Bestways*. July. p. 96, 98.

• **Summary:** Discusses and gives recipes for whole soybeans, soyburgers, soy sandwich spread, soynut butter, soy-grit wheat bread, TVP moussaka, and TVP stuffing (for tomatoes, green peppers, or zucchini). “The more I study and use soybeans the more impressed I am with these versatile, high-protein legumes. It’s no exaggeration to say that there are hundreds of ways to use them.”

949. **Product Name:** California Meatless Chili.

**Manufacturer’s Name:** Meatless Foods, Inc.

**Manufacturer’s Address:** Hollywood, California.

**Date of Introduction:** 1982 July.

**Ingredients:** Red kidney beans, textured vegetable protein [soy flour], onions, tomatoes, herbs, shoyu, honey.

**Wt/Vol., Packaging, Price:** 1.5 lb in plastic tub with preprinted film lid.

**How Stored:** Frozen.

**Nutrition:** 8 oz. contains 417 calories and 30% of the protein RDA.

**New Product–Documentation:** Spot in *Soyfoods*. 1982. Summer. p. 56. “Vegetarian Chili with TVP.”

950. **Product Name:** Hera Meatless [Hamburgers, Croquettes, Goulash Mix, Chili Mix, Stroganoff Mix, Goulash, Tomato Soup, Vegetable Soup].

**Manufacturer’s Name:** Pharma Food (Distributor). Made in England by Haldane Foods Ltd.

**Manufacturer’s Address:** Netherlands.

**Date of Introduction:** 1982 July.

**New Product–Documentation:** Food Report (Lehmann). 1982. July. The hamburgers and croquettes in 200 gm cartons retail for Hfl. 5.95. The goulash mix, chili, and stroganoff also in 200 gm boxes for Hfl. 2.95. The goulash, tomato and farmers vegetable soup in 125 gm packs, sufficient for making 1 liter of soup, at Hfl. 2.85.

951. *Soyfoods*. 1982. ADM’s soy miracle premiers on national TV. Summer. p. 51, 53.

• **Summary:** Slogans for three TVP television ads are “Quality,” “Experience,” and “Acceptance.” “Over 200

# ADM'S SOY MIRACLE PREMIERS on NATIONAL TV

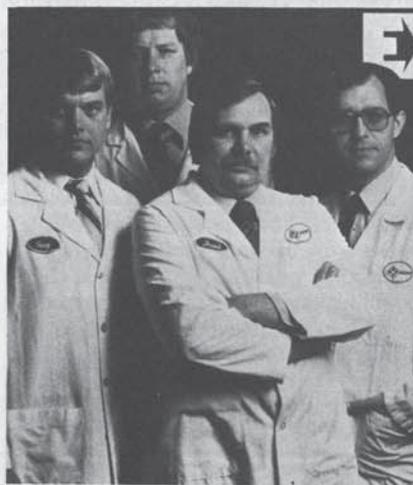

## QUALITY

There is no substitute for quality ingredients. And that's as true when you're using TVP® and other soy protein products as it is with any other ingredient. Note that we said ingredient, because properly utilized, that's what soy protein is. It's a functional, high-quality source of protein that lets you maintain your profit margins. And we have a staff that will show you how you can use soy protein in conjunction with other ingredients to maintain present quality standards for your product.

We've already developed over 350 different formulations of TVP for our customers over the years. And if one of those formulations isn't just what you need, we'll work with you to develop a new one. You may have your own reasons for not having used soy proteins in your products up until now. But lack of product quality isn't one of those reasons. For more information on ADM soy protein products, write or call ADM Foods, Protein Specialties, Box 1470, Decatur, Illinois 62525, (800) 637-5630. A Division of Archer Daniels Midland Company.

ADM FOODS  
ADM

## EXPERIENCE

Our competitors buy the same systems we use. They can even buy the same machinery to produce it. But one thing they can't buy is ADM's wealth of experience in applying soy protein technology to processed foods. Back in 1970, not fewer than ten other companies had to look only to extrude textured vegetable protein. But only ADM made the commitment to build large-scale plants to turn out the product. We did this, because we believe in the product. Today, using soy protein is accepted practice as an ideal method of protecting profit margins.

But you naturally want to do all this while assuring yourself that you'll maintain your product quality. And the answer here is to rely on our staff of expert technologists. Our facilities include a meat lab with the capability of doing everything from product reformulations to food preservation innovations. And with our experienced staff, we'll show you how you can incorporate soy protein into your existing systems, resulting in an ideal product that has excellent sensory qualities. Finally, if one of our 350 formulations of TVP isn't just what you need, we'll be happy to produce a new one for you. For more information, call or write ADM Foods Protein Specialties, P.O. Box 1470, Decatur, Illinois 62525, (800) 637-5630. A Division of Archer Daniels Midland.

ADM FOODS  
ADM

## ACCEPTANCE

Not every food processor has accepted the use of TVP textured vegetable protein for processed foods. Which is too bad, because the public already has. Fact: Consumers have been eating pizza with a combination meat/TVP topping for ten years, with nary a complaint. And Americans have also been happily consuming bacon bits, chili, stews, soups, tamales, enchiladas, TV dinners, and entrees containing TVP. Altogether, over 200 million pounds of TVP have been used in over one thousand different consumer products. The lesson is this: The public is more willing to accept TVP in food products than you realize.

The key, of course, is to incorporate TVP properly. And we have the staff to show you ways of utilizing it in your products. And I'll show you how you can protect your profit margins without sacrificing one bit of quality. We've got over 350 different types of TVP, many of which were created for a specific client need. And if one of these isn't just what you need, we'll be happy to come up with a new one. Consumer acceptance is just one part of the ADM TVP story. For more information, just call or write ADM Foods, Protein Specialties, P.O. Box 1470, Decatur, Illinois 62525, (800) 637-5630. A Division of Archer Daniels Midland Company.

ADM FOODS  
ADM

million lb of TVP have been used to date in over 1,000 different consumer products."

"Malthus said it would take a miracle to feed the world. Here it is—the soybean. Thus ran a nationally placed two page advertisement for soy protein during 1981 sponsored by the Archer-Daniels-Midland Company (known as ADM), a multifaceted Midwest grain processing firm with annual sales of \$3.6 billion. The ad, which portrays a soybean and its protein, oil and lecithin components, is only a part of ADM's overall image-building campaign for soy protein, a campaign that recently ventured into national network television advertising.

"ADM's 1981 print campaign featured at least three full color double page spreads in various influential food industry magazines including horizontal publications (that reach a wide cross-section of food and beverage industry executives) such as *Food Engineering*, *Food Development*, *Processed Prepared Foods*, *Cereal Foods World*, and *National Provisioner*. Vertical publications (that target special interest groups) such as *Meat Processing* and *Meat Industry* were used because the application of soy protein ingredients in meats represent ADM's largest market for its soy line.

The ads, reproduced here, stress 'Quality, Experience, Acceptance.' ADM's branded TVP (textured vegetable protein), which comes in 350 different formulations, is positioned as a quality ingredient, 'a functional, high quality source of protein that lets you maintain your profit margins.'

"In 'Acceptance' ADM admonishes the food industry for being reluctant in trying TVP because 'the public is more willing to accept TVP in food products than you realize.' Consumers, the reader is told, have enjoyed pizza with a combination of meat and TVP toppings for 10 years.

"Americans have also been happily consuming bacon bits, chili, stews, soups, tamales, enchiladas, TV dinners: and entrees containing TVP.' Over 200 million pounds of TVP, the ad states, have been used to date in over 1000 different

consumer products.

“The ‘Experience’ ad completes their message by stressing ADM’s ‘wealth of experience in applying soy technology to processed foods,’ and the concept of incorporating soy protein within existing food products. TVP is positioned as a food ingredient useful in protecting profit margins in meats.

“ADM’s 1982 print ad plans call for a retrenchment because of the depressed economy: ADM will promote its larger corporate image rather than its specific products such as corn sweeteners, soy concentrates, and soy flour (ADM happens to be the world’s second largest producer of high fructose corn sweeteners and the largest of soy flour).

“In August 1980 ADM planners ventured into national television advertising when they purchased a 25% sponsorship of NBC’s ‘Meet The Press,’ aired on Sunday mornings. Thirteen weeks later they increased their involvement to 50%, sharing the sponsorship with United Technologies of Connecticut.

“Pleased with their initial foray into television, ADM next bought a partial sponsorship, in January 1982, of ABC’s ‘This Week with David Brinkley,’ also on Sunday morning and immediately following NBC’s program. The ads are image-oriented, designed to increase public awareness of ADM as a company and are not intended as marketing tools for specific consumer products.

“Of the ads themselves, ‘Solar Protein’ focuses on the soybean, how it captures sunlight and converts it to protein, how soybeans can help feed a hungry world through products such as wheat-soy flour blends and textured vegetable proteins (used as meat supplements or main entrees). ‘Pioneering’ reviews ADM’s research with margarine, fructose, and TVP, while ‘Blended Foods’ speaks of ‘America’s agricultural abundance’—corn, wheat, soybeans—and ADM’s work to make nutritious foods from them to help curb world hunger.

“The two Sunday news programs were carefully selected, notes ADM’s advertising account executive Gerald Kleckner, of Martin Williams Inc., in Minneapolis, because they represent ‘the highest demographic available on TV.’ Some 80% of the viewing audience, Kleckner states, is in the \$30,000-plus income bracket. ‘Meet The Press’ reaches 5.1 million households, while Brinkley’s show captures another 4.4 million, and both Sunday morning programs—selected also for their highly educational, political, topical formats and world famous personalities—reach 9.5 million American households.

“It’s not surprising that ADM would be the first soy protein company to begin national television advertising. ADM has been an innovator since their founding back in May 1923 when the Archer-Daniels Linseed Company merged with Midland Linseed Products to become the world’s largest linseed oil producer. In 1929 ADM moved into soybean processing and by the 1930s had installed

one of America’s first solvent extraction plants to process soybean oil. In 1934 ADM branched out into lecithin, again a first, and, in 1939, they established their present massive plant in Decatur, Illinois, that handles 4000 tons of soybeans daily. The 1950s saw them involved with soy isolates. In 1965 ADM pioneered the texturizing of soy protein with their patented TVP product line.

“ADM, ‘using America’s abundance to meet the world’s needs,’ is also involved with soy flour milling, corn sweeteners, soybean oil, gasohol, soy concentrates, and hydroponics. As head of the world’s second largest soybean processing company, it is little wonder that ADM’s Chairman would be lauded by *Fortune* magazine: ‘No individual has made a greater success of processing and merchandising the pale yellow bean than Dwayne Andreas.’”

952. *Soyfoods*. 1982. Soy isolates: New tofu ingredient? [ADM Foods]. Summer. p. 7-8.

• **Summary:** “ADM Food’s search for new applications for its high protein soy isolates have led them to frozen soymilk dessert, a flavored soymilk beverage, imitation cheeses, and, most recently, silken tofu.

“ADM, one of the nation’s largest soy isolate producers, located in Decatur, Illinois, has been devoting considerable research effort to find new product applications for its basic soy ingredient, isolated soy protein. Initial commercial interest in isolates (which contain 90% protein, as most of the carbohydrates have been removed) began in the 1930s when they had industrial uses such as paper coatings. But by 1967, at least 22 million pounds were produced, and by 1981, annual production was estimated at 90 million pounds as isolates were used in numerous foods.

“Soy isolate production begins with defatted soybean flakes, from which protein is extracted, in an aqueous solution, from the insoluble residue with the aid of screens or centrifuges. The ‘soy curd’ is precipitated at the isoelectric point (pH 4.5, where the solubility of the protein is at a minimum) using a food grade acid such as acetic or phosphoric. The curds and whey are separated by centrifuging, the curds are washed, then neutralized with food grade alkali. Finally the isolate is spray-dried for storage.

“Recently ADM Foods announced the development of a ‘wet’ curd isolated soy protein” that has maximum functional properties. The curd is suitable for interaction with milk, whey, and egg proteins in foods. The wet curd can be used as a partial replacement (up to 50%) for casein (a milk-derived protein) in imitation mozzarella cheeses, and as a coffee whitener that will not coagulate after immersion in the hot liquid. The soy isolate slurry is not heat denatured, has a pH of 4.5, solids content of 23%, is easily pumped, can be delivered in stainless steel tanks of 45,000 pounds capacity, and is stable for two days at room temperature.

“At first glance, soy isolates may seem a world away

from everyday tofuming, yet this year ADM researchers began experimenting with their Ardex isolated soy protein for a silken tofulike product and even custom designed yogurt type desserts. A soy beverage base, made from soy isolate, is heated to 80°C; then 1% (by weight) glucono-delta-lactone (GDL) is added. After 20 minutes the milk has set to a yogurt-style smooth consistency. To make a 'firmer' silken tofu, ADM scientists added (5% by weight) kappa-carrageenan and 0.5% tetrapotassium phosphate to the beverage before heating.

"This method, ADM researchers suggest, greatly simplifies the tofuming process while providing significant cost reductions. 'These products can be formulated to achieve up to 80% ingredient cost reductions compared to conventional tofu,' their report states. The use of soy isolates also allows for the extension of several dairy systems using soy such as puddings, sour cream, yogurt, baby food, and frozen desserts.

"ADM Foods has experimented with three processing methods for preparing a soymilk beverage including batch pasteurization, high temperature, short time pasteurization, and ultra high temperature (UHT) for aseptic packaging.

"For the batch method, water at 50-55°C is agitated while the soy isolate powder is mixed in, followed by corn sweetener (fructose) and vegetable oil. The mix is heated to 60°C and held for 30 minutes with constant agitation.

"Next comes a two stage hot homogenization (at 2500 psi, then 500 psi) followed by immediate cooling to 5°C. Flavorings are added and the product is packaged for storage. The ingredient cost per 8 fluid ounce serving for unflavored soy beverage is \$0.032 compared to \$0.086 for whole milk. The cost per pound of protein served is \$1.701 compared to milk's \$4.938. The soy beverage's nutritional profile includes 3.47% protein, 2.00% fat, total solids 13.97%, and 67.70 calories per 100 grams.

"The soy isolate has been applied in making frozen soymilk ice creams that yield protein contents twice the level of those in standard ice creams. With the isolate-based desserts, as the fat content is reduced, the caloric density is also reduced, so that a 4% fat soy dessert has about 20% less calories than standard ice cream, while a 2% fat dessert has nearly 30% fewer calories. The ingredients include Ardex soy isolate, sucrose, CornSweet (corn sweetener), corn syrup, stabilizer, emulsifier, while the ingredient cost is \$0.017 compared to \$0.048 for standard ice cream—a savings of 64.6%. Nutritionally, the product is comparable to standard ice creams, with 1.8% protein, 2.00% fat, 142.50 calories per 100 grams, and 117 calories per 4 fluid ounce serving.

"ADM representatives provided samples of their strawberry soymilk dessert along with chocolate and unflavored (but sweetened) soymilk beverage at the recent U.S. International Food Show in New York City."

953. *Food Engineering*. 1982. Ingredients report: soy

protein. 54(8):107-08, 110.

• **Summary:** "Soy protein suppliers exhibiting at Food Expo '82 mainly stressed functionality by demonstrating new applications for existing products.

Grain Processing Corp. showed its 21-product lineup of ProFam soy protein isolates.

Central Soya Co. demonstrated the rapid hydration characteristics of its Response 4400 line of "structured soy protein concentrates."

A.E. Staley Mfg. Co. demonstrated its broad line of soy protein products featuring Procon 7241 textured soy protein concentrate and its StaPro 3000 soy protein concentrate.

Gunther showed its "D-Series" of whipping proteins.

ADM demonstrated Ardex isolated soy protein sweetened with CornSweet 42 high-fructose corn syrup. Ardex F can also be used to fortify milk.

Also mentions Cargill, Lucas Meyer America, San-J, and Kikkoman International.

954. Vinall, Geo. H. 1982. The processing and marketing of oil seeds in Ontario. *Notes on Agriculture (Guelph, Ontario)* 18(1):24-27. Aug.

• **Summary:** Begins with the early history of Canadian Vegetable Oil Processing (CVOP, the writer's company) in Hamilton, Ontario. Oilseed processing in Ontario started during World War II.

Note: Documents show that six companies started crushing soybeans to make oil and meal before 1940: (1) 1930 March-Milton Oil Refineries, Ltd., Milton. (2) 1932-Dominion Linseed Oil Co., Baden. (3) 1932-The Soya Bean Oil and Meal Co-operative Company of Canada Ltd., Chatham. (4) 1936-Edgar Soya Products, Ltd., Belle River. (5) 1936-Soya Mills Ltd., Stratford. (6) 1938-Toronto Elevators Ltd., Toronto.

From 1940 to 1942 Canada was finding it difficult to obtain enough vegetable oil to satisfy growing domestic demand. A good supply of ground nuts [peanuts] was located in India, Canada's war-time government then negotiated with an Australian (Sir Walter Carpenter) to move a small expeller (oil seed) processing plant from British Columbia to Ontario. In 1942 this plant, which had been processing copra (coconut) on a Vancouver dock side, was moved to the Hamilton harbour waterfront. Canada's federal government then arranged to have thousands of tons of peanuts (in jute bags) delivered to Hamilton for processing. From 1943 to 1948 peanut deliveries were intermittent and this other oilseeds such as sunflowers, flax, palm kernel and copra were crushed in Hamilton. After the war, the Hamilton plant began looking for a more local source of oilseeds and in 1948 began crushing American-grown soybeans.

"G.S. Boulter was the prime person in the transfer of the oilseed processing plant from Vancouver to Hamilton. In 1944 he left W.R. Carpenter and, starting that same year, was instrumental in building another oilseed crushing plant

(Victory Mills Ltd.) in Toronto. Later in the 1940s a third plant was built by Toronto Elevators Ltd. (later Maple Leaf Mills Ltd.) in the Toronto harbour.

The plants that processed oilseeds during the 1940s used expellers to separate the oil from the seed.

In 1979 Maple Leaf Mills closed their Toronto Plant and relocated in Windsor, increasing their capacity by 1,200 tons per day.

“In 1967 the United Kingdom [UK] joined the E.E.C. which effectively cut off a market for Canadian soybean oil and meal. Up to that time Ontario crushers always had an alternative to the domestic market... Thus the application of duties by the UK effectively restricted soybean products (except in dire situations) to Canadian markets.”

Tables show: (1) Current daily capacities (tonnes per day) for Ontario oilseed processors: Victory Mills Ltd., 1,360 soybeans. CVOP 1,200 soybeans + 600 soft seed. Maple Leaf Monarch 1,100 soybeans + 280 soft seed.

(3) Production of soybean oil and rapeseed oil, 1976-1981. Rapeseed oil figures were always larger. (4) Consumption of soybean and rapeseed oils, 1976-1981—for margarine, shortening, salad oils and total. Address: Canadian Vegetable Oil Processing, Hamilton, ONT, Canada.

955. Steele, Leon. 1982. Re: History of Funk Bros. work with soybeans. Letter to William Shurtleff at Soyfoods Center, Sept. 28. 2 p. Typed, with signature on letterhead. [1 ref]

• **Summary:** The first ad for soybean seeds in a Funk Bros. catalog appears in the 1903 catalog. In the early years, soybeans were described as a hay crop and as a soil builder with “nutritive” grain. Then as Funk built their first mill in 1924, the emphasis shifted to grain and later to the products that interested feeders—soybean meal.

“Funk bought a feed mill and elevator at Taylorville [Illinois, about 70 miles south of Bloomington] in 1929, installed machinery to process soybeans in 1930. (Used machinery from cotton seed mills.) The plant became operative in 1930 and by 1931 the Funk catalog listed the soybean mill at Taylorville as well as the one at Bloomington. The plant Funk bought did not have soybean

crushing machinery.”

Both Funk plants, at Bloomington and Taylorville, used expellers to crush the soybeans.

“Funk enlarged their solvent extraction plant in 1963, moving from 250 ton per day to 500 ton per day. A new solvent recovery system, new flaking system, and a new extractor were part of the expansion. Funk operated the mill at a good profit through 1963, but in 1964 crushing margins had declined to the point that Funk decided to lease the mill to ADM. ADM operated the mill through 1966 and in 1967, Funk sold the machinery and the mill was dismantled and the building torn down.

“Funk’s current interest in soybeans is in the growing, processing, and marketing of soybean seed. We now have large processing plants for soybean seed at Bloomington, Illinois and Belle Plaine, Iowa. We have extensive breeding nurseries and research facilities at Bloomington, Illinois and Greenville, Mississippi, operated by a staff of qualified breeders. Funk now markets public varieties and proprietary varieties from their own breeding.”

Note that Funk is now a seed company owned by Ciba-Geigy. Address: PhD, Research Consultant, Funk Seeds International (a Company of Ciba-Geigy Corp.), 1300 West Washington St., P.O. Box 2911, Bloomington, Illinois 61701. Phone: 309/829-9461.

956. *Soyanews (Sri Lanka)*. 1982. Deep frozen tofu. 5(1):3. Sept.

• **Summary:** Describes frozen tofu and tells how to make it in homes that have a deep freezer. Gives a few recipe ideas. “Deep frozen tofu when thawed and oven or solar dried turns into a chewy meaty product like TVP.”

957. Eichberg, Joseph. 1982. Re: Early history of lecithin in the United States and Europe. Letter to William Shurtleff at Soyfoods Center, Oct. 8. 2 p. Typed, with signature on letterhead.

• **Summary:** The letterhead reads, “Since 1929, 1st in America. Lecithin products for every purpose.” An image of the company trade mark shows an eagle with outspread wings above a circular shield, inside which is written:

“American Lecithin Company. Best in America.”

In small letters in the far upper left of the letterhead: “In New York: 32-34 61st Street, Woodside, L.I. [Long Island], N.Y. 11377. Telephone: (212) 274-4350.”

To answer your questions: “1. Lecithin was first used commercially in margarine in Germany in the early 1920’s. 4. Egg yolk on a dry basis would contain 8-10% lecithin. 5. In chewing gum, lecithin is used for its softening, plasticizing, and release effects.

“6.  $Mg_2P_2O_7$  would be I believe magnesium diphosphate [actually probably magnesium pyrophosphate] and perhaps contain some water in the molecule.

8. Glidden started making lecithin in Chicago in 1935.

11. In the early days, we represented Hansa Muehle in the USA; they were the leading producers of lecithin in Europe and owned the patents of Bollmann, Rewald, and others. In 1935 a new American Lecithin Co. was organized with Glidden and ADM as stockholders. 12. The three largest uses of lecithin today are probably in the baking industry, the coatings industry, and in the manufacture of margarine.

“Commenting in general: I do not believe egg lecithin was ever commercially important; small quantities were used in Germany years ago in the preparation of various “pharmaceutical” products but for food use it was usually much too expensive and usually had unpleasant odor and taste characteristics. Calcium phosphate is used in the oil-free lecithin granules or powder as a flow agent.”

“I would guess that Unilever is probably the largest in lecithin in Europe. Lucas Meyer, to the best of my knowledge, does not make commercial lecithin and never did—they buy it from oil mills for resale and for some refining of the commercial lecithin. Lucas Meyer are large sellers of lecithin, buying the output of numerous mills; Unilever use large quantities of lecithin in their own production of margarine and to sell to others.

“ADM’s soy processing plant was in Chicago and at this location they produced America’s first domestic lecithin, followed in 1935 by Glidden who also had a solvent extraction plant for processing soybeans in Chicago.”

The most widely used grade of lecithin is the standard commercial fluid unbleached soybean lecithin; the acetone extracted purified type, which is rather expensive, goes chiefly to the health food trade; however other uses for deoiled granules and powder are being developed in the food industry and even for some industrial applications. Address: President, American Lecithin Co., P.O. Box 4056, Atlanta, Georgia 30302. Phone: 404-522-7060. Telex: 54-2238. Cable Address: “Armand”.

958. Nave, Robert W. 1982. History of work with soyfoods and soybeans at SPRA in India (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 25 and 28. 3 p. transcript.

• **Summary:** SPRA was founded by Robert W. Nave, an

American who was born and raised in India and worked there as a missionary since the late 1950s. His interest in improving the well-being and economic status of low-income people in India led him in the 1960s to establish the Nave Technical Institute (NTI), a Methodist missionary foundation and school at Shahjahanpur, Uttar Pradesh. In 1968 Nave and co-worker Peter Chowfin visited Dick Matsuura, director of the soy program at Pantnagar. Matsuura encouraged them to consider a church-sponsored program for producing soyfoods—since no private businesses were willing to take the risk and the work was clearly of real importance. In 1970 Nave founded a nonprofit, charitable organization called NTI Soya Products. Joe Wenger and his Wenger Manufacturing Company, old friends of Nave’s parents, donated a Wenger X-25 extrusion cooker to the new organization to help in setting up a pilot project in India making textured soy protein foods. Soon additional funding was obtained from the USAID, Pant University, Bread for the World of West Germany, the Methodist Church, and Nave Technical Institute. Nave started building a factory at Bareilly, an industrial center 50 miles northwest of Shahjahanpur, in March 1971. Key people helping to start the new company were Prof. A.I. Nelson, Surjan Singh, Dick Matsuura, and Eldon Rice.

“In early 1972, in order to raise additional funds and to cement ties with Pant University, Nave sold 20% of the stock in NTI Soya Products to the university; NTI owned the rest. At that point the company was renamed Soya Production and Research Association (SPRA) and converted to a profit making organization, but with all the profits to be used for socially beneficial activities. In July 1972 SPRA produced its first large run, 40 tons of a corn-soy blend to be used in an AID feeding program in Madras. Defatted soybean meal was especially made for SPRA by the Prag Ice and Oil Mills in Aligarh.

In the fall of 1972 SPRA started to make its first commercial product, an extruded/textured soy flour (TVP). Recipes were developed and the product was marketed at a low price in inexpensive packaging for the poor. But they wouldn’t take it even when it was given to them. So SPRA took a new approach, marketing the product for the rich to reach the poor. The company chose a catchy name (Nutri Nugget), developed a fancy box written entirely in English for snob appeal, and introduced the product only in the finest stores, with demonstrations at colleges and for upper income women’s groups. After much hard work, the product caught on. Its success was assured when Sikhs started using it at their wedding dinners to satisfy both vegetarian and nonvegetarian guests. Soon all TVP came to be referred to by the public as Nutri Nugget (or Soy Nugget or Nugget). During the first year SPRA sold about 10 tonnes of Nutri Nugget. In 1973 they added their next product, Protesnac, a soy-rice spiced snack, a fortified analog of the puffed rice which was popular, especially in Bengal, on festive

occasions. By 1974 the company had introduced Protein Plus (a corn-soy weaning food), Nutri Ahar (a whole soy flour-wheat weaning food), Paustic Ahar (a sweetened ready-to-eat corn-soy blend), and an extrusion cooked whole (full-fat) soy flour (Singh 1978). By 1974 840 tonnes a year of these products were being produced, with about half being sold through the retail trade.

In 1974 SPRA, in cooperation with G.B. Pant University, introduced a soybean extension program in the plains of Rohilkhand Division of Uttar Pradesh, an area on the plains near Bareilly where soybeans had not been grown economically before. SPRA hoped to develop a closer, more reliable source of soybeans. Using a grant from the Central Agency of West Germany, SPRA worked with hundreds of farmers, providing certified seeds, fungicide, Rhizobium inoculum, and careful supervision, plus a guarantee to buy all soybeans produced at a predetermined price. R.N. Trikha of Pant University was head of the program, which conducted hundreds of demonstrations and established demonstration plots (40% of which had yields over 2,000 kg/ha or 29.6 bu/a), published a Soybean Technical Newsletter and other extension literature, had an advisory service, and conducted many training sessions, soybean field days, and crop yield competitions. As a result of all this important local work, yields and production increased markedly (Trikha and Nave 1979). This extension program was still active as of 1982. Soya Production and Research Association (SPRA) expanded considerably during the late 1970s and early 1980s. In about 1977 a larger extrusion cooker, a Wenger X-155, replaced the original X-25. But as the products, especially the basic Nutri Nugget (plain TVP), grew in popularity, competitors sprang up on all sides, in most cases imitating almost exactly SPRA's product and marketing techniques. By 1981 SPRA had 50% of the Indian TVP market, but there was competition from four other companies. Still SPRA was able to sell all it could produce and was planning to double production. In May 1981 Nave established a new nonprofit corporation named Compatible Technology, Inc., which was registered and located in Minnesota. Though legally unrelated to SPRA, its funding was raised by Nave and its purpose was to transfer ideas and technology to India. Projects in 1981 included development of: low-cost packaging techniques for whole soy flour, 5-to-10 horsepower low-cost extrusion cookers, small soy oil extraction plants, a soy-based cookie for feeding programs (a soy-fortified flour would be sold to local bakers and institutions, which would bake the cookies for fresh local consumption), tempeh, and a soyfoods training center. In 1981 SPRA made and sold roughly 2,000 tonnes of Nutri Nuggets (TVP) plus 120 tonnes of Protein Plus for net sales of \$2.5 million. SPRA has done pioneering work with soyfoods and soybeans in India, being the first company to interlink soyfoods research, product development, processing, and marketing with soybean crop extension.

Address: Compatible Technology, Inc., 7600 Harold Ave., Minneapolis, Minnesota 55427. Phone: (612) 545-0378.

• **Summary:** "SPRA was founded by Robert W. Nave, an American who was born and raised in India and worked there as a missionary since the late 1950s. His interest in improving the well-being and economic status of low-income people in India led him in the mid-1960s to establish the Nave Technical Institute (NTI), a Methodist missionary foundation and school at Shahjahanpur, Uttar Pradesh. In 1968 Nave and co-worker Peter Chowfin visited Dick Matsuura, director of the soy program at Pantnagar. Matsuura encouraged them to consider a church-sponsored program for producing soyfoods—since no private businesses were willing to take the risk and the work was clearly of real importance. In 1970 Nave founded a nonprofit, charitable organization called NTI Soya Products. Joe Wenger and his Wenger Manufacturing Company, old friends of Nave's parents, donated a Wenger X-25 extrusion cooker to the new organization to help in setting up a pilot project in India making textured soy protein foods. Soon additional funding was obtained from the USAID, G.B. Pant University, Bread for the World of West Germany, the Methodist Church, and Nave Technical Institute. Nave started building a factory at Bareilly, an industrial center 50 miles northwest of Shahjahanpur, in March 1971. Key people helping to start the new company were Prof. A.I. Nelson, Surjan Singh, Dick Matsuura, and Eldon Rice.

"In early 1972, in order to raise additional funds and to cement ties with Pant University, Nave sold 20% of the stock in NTI Soya Products to the university; NTI owned the rest. At that point the company was renamed Soya Production and Research Association (SPRA) and converted to a profit making organization, but with all the profits to be used for socially beneficial activities. In July 1972 SPRA produced its first large run, 40 tons of corn-soy blend to be used in an AID feeding program in Madras. Defatted soybean meal was especially made for SPRA by the Prag Ice and Oil Mills in Aligarh.

"In the fall of 1972 SPRA started to make its first commercial product, an extruded/textured soy flour (TVP). Recipes were developed and the product was market at a low price in inexpensive packaging for the poor. But they wouldn't take it even when it was given to them. So SPRA took a new approach, marketing the product for the rich to reach the poor. The company chose a catchy name (Nutri Nugget), developed a fancy box written entirely in English for snob appeal, and introduced the product only in the

finest stores, with demonstrations at colleges and for upper income women's groups. After much hard work, the product caught on. Its success was assured when Sikhs started using it at their wedding dinners to satisfy both vegetarian and nonvegetarian guests. Soon all TVP came to be referred to by the public as Nutri Nugget (or Soy Nugget or Nugget). During the first year SPRA sold about 10 tonnes of Nutri Nugget. In 1973 they added their next product, Protesnac, a soy-rice spiced snack, a fortified analog of the puffed rice which was popular, especially in Bengal, on festive occasions. By 1974 the company had introduced Protein Plus (a corn-soy weaning food), Nutri Ahar (a whole soy flour-wheat weaning food), Paustic Ahar (a sweetened ready-to-eat corn-soy blend), and an extrusion cooked whole (full-fat) soy flour (Singh 1978). By 1974 840 tonnes a year of these products were being produced, with about half being sold through the retail trade.

"In 1974 SPRA, in cooperation with G.B. Pant University, introduced a soybean extension program in the plains of Rohilkhand Division of Uttar Pradesh, an area on the plains near Bareilly where soybeans had not been grown economically before. SPRA hoped to develop a closer, more reliable source of soybeans. Using a grant from the Central Agency of West Germany, SPRA worked with hundreds of farmers, providing certified seeds, fungicide, *Rhizobium* inoculum, and careful supervision, plus a guarantee to buy all soybeans produced at a predetermined price. R.N. Trikha of Pant University was head of the program, which conducted hundreds of demonstrations and established demonstration plots (40% of which had yields over 2,000 kg/ha or 29.6 bu/acre), published a *Soybean Technical Newsletter* and other extension literature, had an advisory service, and conducted many training sessions, soybean field days, and crop yield competitions. As a result of all this important work, local yields and production increased markedly (Trikha and Nave 1979). This extension program was still active as of 1982...

"SPRA expanded considerably during the late 1970s and early 1980s. In about 1977 a larger extrusion cooker, a Wenger X-155, replaced the original X-25. But as the products, especially the basic Nutri Nugget (plain TVP), grew in popularity, competitors sprang up on all sides, in most cases imitating almost exactly SPRA's product and marketing techniques. By 1981 SPRA had 50% of the Indian TVP market, but there was competition from four other companies. Still SPRA was able to sell all it could produce and was planning to double production. In May 1981 Nave established a new nonprofit corporation named Compatible Technology, Inc., which was registered and located in Minnesota. Though legally unrelated to SPRA, its funding was raised by Nave and its purpose was to transfer ideas and technology to India. Projects in 1981 included development of: low-cost packaging techniques for whole soy flour, 5-to-10 horsepower low-cost extrusion cookers, small soy oil extraction plants, a soy-based cookie for

feeding programs (a soy-fortified flour would be sold to local bakers and institutions, which would bake the cookies for fresh local consumption), tempeh, and a soyfoods training center. In 1981 SPRA made and sold roughly 2,000 tonnes of Nutri Nuggets (TVP) plus 120 tonnes of Protein Plus for net sales of \$2.5 million. SPRA has done pioneering work with soyfoods and soybeans in India, being the first company to interlink soyfoods research, product development, processing, and marketing with soybean crop extension."

• **Summary:** Jan. White Wave in Colorado is the first company to get its tofu placed in the yogurt / dairy case in supermarkets.

Jan. Legume, Inc. launches Tofu Lasagna, frozen in a box. It is soon followed by Tofu Ravioli.

Jan. *The Incredible Tofu Cookbook, California Style*, by Immegart and Dansby self published.

Jan. New England Soy Dairy launches "Year of the Dog" Chinese New Year tofu promotion and nets 47% immediate sales increase.

Jan. Food Protein Council, a trade association, changes its name to Soy Protein Council, since all of its members make only soy protein products.

Jan. Island Spring survives industry's first publicized tofu recall and the discovery of new tofu spoilage microorganism, *Yersinia enterocolitica*.

Jan. ADM becomes a sponsor of "This Week with David Brinkley" on Sunday ABC TV, with 4.4 million viewers.

Jan. Soyfoods Unlimited in California introduces tempeh burgers and ships them air freight to East Coast markets; Pacific Tempeh in California follows suit.

Feb. Yuba is first produced and sold commercially in the Western world by Ken Lee of Soyfoods of America, in Duarte, Southern California. Trial production had begun in Nov. 1981.

Feb. *Soyfoods* magazine No. 6 (yellow cover) published.

Feb. Many large ads run by San-J (tamari), New England Soy Dairy, and Legume in major national trade journals.

Feb. Unicorn Restaurant in Miami, Florida, has \$15,000 gourmet, soy / natural foods banquet to welcome chef Ron Pikarski, who makes elegant tofu dishes and carves a swan from soy butter.

Feb. Nasoya buys \$50,000 Kutter vacuum-packaging machine, which helps to popularize this packaging style for tofu.

March. *Tofu Fantasies*, by Juel Andersen published by Creative Arts.

March. USDA issues new school lunch regulations, fails to approve tofu for use.

March. Inaccurate, damaging article on iron binding by soy proteins appears in San Francisco Chronicle and Los Angeles Times.

March. Fifteen soyfoods companies exhibit at Natural Foods Expo, Anaheim, CA. Richard Leviton gives key speech. 5,000 visitors see expo. Pacific Tempeh unveils new full-color tempeh burger poster.

March. Auenland Tofu und Soja Produkte (Prien-Chiemsee, Germany), founded by Peter Wiegand, starts to make 7 tofu products from day one: (1) Tofu Pizza, Tofu; (2) Apple Tart, or Tofu Slices; (3) Tofunafish Salad or Tofu Salad; (4) Tofu Mayonnaise; (5) Tofu Burger (Ready-to Eat, Vacuum Packed); (6) Auenland Tofu; (7) Baked Tofu Sandwich. Peter had learned how to make tofu at Wildwood Natural Foods, Fairfax, California.

March. Cauldron Foods Ltd. of Bristol, England, founded by Philip Marshall and Peter Fagan, starts making: (1) Tofu: Soy Bean Curd; (2) The Bristol Vegetable Burger (Meatless Tofu Burger); (3) The Bristol Chilli Burger (Meatless Tofu Burger); (4) The Bristol Nut Burger (Meatless Tofu Burger).

March. Big increase in European soyfoods companies; there are now eleven.

March. Name of *The Beanfield* newsletter changed to *Soyfoods Monthly*.

March. Great Eastern Sun trading company founded in North Carolina by Barry Evans.

April. At New York's International Food Show, Quong Hop, Yeo's, and President brand soymilks, and Veda's Bayou Delights (tofu / tempeh pot pies) exhibit. ADM serves soy isolate ice cream and soymilk.

April. Quong Hop unveils its new Soy Deli marketing concept for retail using posters and tofu entrees sold frozen.

April. Jack's Beanstalk in Utah does creative work at introducing tofu to institutions. Develops 30 bulk recipe cards scaled to 100 servings.

April. ADM unveils work with glucono delta-lactone (GDL) and soy isolates in making tofu.

April. *Toyo Shimpō*, Japan's tofu newspaper, gives extensive coverage to upcoming Soyfoods Come West conference in Seattle, Washington.

May. Island Spring releases two 5-minute color video tapes demonstrating tofu cooking for showing in supermarkets.

May. Public schools in Hawaii are granted permission to use tofu in meals.

May. *Soyfoods Directory and Databook*, (1st ed.) by Shurtleff and Aoyagi published by Soyfoods Center, the first book of its type listing all soyfoods companies and industry and market statistics, 21 pages. Based on many phone interviews with company owners. Second edition published in June as *Soyfoods Industry: Directory and Databook*, 52 p.

May. William Shurtleff and Mark Fruin receive a grant from Kikkoman to write a book on soy sauce.

May. *Cook with Tofu*, by Christina Clarke is 2nd runner-

up in R.T. French's Tastemaker awards for cookbooks.

May. Clearway Tofu sponsors the first Mother's Day Tofu Fair in Santa Cruz, California, with tofu recipe competition, music, and prizes.

June. Vitasoy USA runs color display ads for soymilk on San Francisco buses.

June. Kibun of Japan exhibits four flavors of soymilk in Tetra Pak cartons at National Restaurant Show in Chicago, Illinois.

June 16. *The New York Times* runs an article on Dieter Hannig, Director of Food Research for Hilton Hotels. His many tofu recipes on microfiche are sent to 86 Hiltons worldwide.

June. *Bestways* magazine begins a 3-part series on soyfoods by Bonnie Mandoe.

June. *The Soy Dairy: A Way to Save the Small Farm*, by MacCormack published by Sunbow Farm.

June. *The Book of Nigari Technique* (in English) published by Yoshikawa Kagaku in Japan.

June. Metta Tofu Products in Denman Island, BC, Canada, introduces Frozen Buddha soymilk ice cream.

June. Haarmann & Reimer debuts flavors for tofu and okara at IFT convention in Las Vegas.

June. Royal American Foods is launched in Kansas City, Missouri, with \$1 million startup capital to sell TVP entrees, tofu-like products via multi-level marketing system.

June. Granny Goose Potato Chips does extensive radio advertising in California for a new potato chip. Ad makes frequent, positive reference to tofu. First national radio ads mentioning tofu.

June. Farm Foods presents Ice Bean at American Booksellers Convention at Anaheim, California, along with previews of their new tofu cookbook.

July. "Discover Tofu" published by *Cosmopolitan* magazine.

July. Farm Foods receives a U.S. trademark for "Ice Bean" as a soy ice cream.

July. Bob Davis of Light Foods excites NNFA convention in New Orleans, Louisiana, with debut of Light Links, the world's first tofu hot dogs.

July. Eden's Orchard tofu / soymilk ice cream introduced in New York by Heller Enterprises.

July. Richard Jennings announces a new formula for okara / barley tempeh; later purchases Southwest Soyfoods, relocates company in Santa Fe, New Mexico. Continued.

961. Archer Daniels Midland Co. 1982. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p. 27 cm.

• **Summary:** Net sales for 1982 (the year ended June 30) were \$3,712.977 million, up 1.8% from \$3,647.491 in 1981. Net earnings for 1982 were \$154.99 million, down 12% from \$175.98 million in 1981.

In the ADM Foods Division is the Protein Specialties Division. Sales of the company's line of isolated soy protein

products experience strong growth.

Note: Page 32 states that Ralph Bruce is Vice Chairman of the Board and Retired Executive Vice President. Address: Decatur, Illinois.

962. **Product Name:** [Soy Flour].

**Manufacturer's Name:** ADM do Brasil TVP S.A.

**Manufacturer's Address:** CEP 13100, Cx. Postal 632, Campinas, SP, Brazil.

**Date of Introduction:** 1982.

**New Product–Documentation:** Soya Bluebook. 1982. p. 64.

963. **Product Name:** Ardex Soya Protein Isolate, and Arcon Soya Protein Concentrate.

**Manufacturer's Name:** British Arkady Co. Ltd.

**Manufacturer's Address:** Old Trafford, Manchester, M16 0NJ, England.

**Date of Introduction:** 1982.

**How Stored:** Shelf stable.

**New Product–Documentation:** Soya Bluebook. 1982. p. 66. Form filled out by P. Fitch of British Arkady. 1983. He calls it "isolated soy protein."

Manufacturer's brochure. 1990. Ardex SP6 Soya Protein Isolate. "Applications include cooked meats, powdered beverages, dairy type products, and dietetic foods requiring a low sodium content." Note: All Arkady isolates contain a minimum of 90% protein on a dry basis.

Manufacturer's brochure. 1990. Ardex F Soya Protein Isolate. "Ideal for all dairy applications including soya beverages, high protein drinks, frozen desserts and ice creams because of its low flavor profile and excellent dispersibility properties... It contains a minimum of 90% protein (on a dry weight basis)."

Manufacturer's brochure. 1990. Ardex DHV Soya Protein Isolate. "Can be used in many meat applications requiring emulsification of fat and water, stabilization of comminuted meat products, water binding, cohesion and formation of heat stable gels."

Manufacturer's brochure. 1990. Ardex D Soya Protein Isolate. "Is suitable for all applications including cooked meats, powdered beverages, dairy type products, and dietetic foods requiring a low sodium content."

964. **Product Name:** Lecithin.

**Manufacturer's Name:** British Arkady Co. Ltd.

**Manufacturer's Address:** Old Trafford, Manchester, M16 0NJ, England.

**Date of Introduction:** 1982.

**New Product–Documentation:** Soya Bluebook. 1982. p. 58; 1986. p. 81. Now an affiliate of Archer Daniels Midland Co., Decatur, Illinois. W. Pringle, Sales Director.

965. **Product Name:** Lecithin.

**Manufacturer's Name:** Maple Leaf Monarch Co.

**Manufacturer's Address:** 365 Evans Ave., Toronto, ONT, M8Z 5W7, Canada.

**Date of Introduction:** 1982.

**New Product–Documentation:** Soya Bluebook. 1982. p. 58.

966. **Product Name:** [Soyoptim, Soyassim, Protisoya, Dynasoya, and Flocosoya Soy Flours; Panisoy Soy Flour Mix].

**Manufacturer's Name:** Societe Industrielle des Oleagineux (SIO).

**Manufacturer's Address:** Direction Proteines, Groupe Lesieur, 122 Av. du General De Gaulle, Boulogne-Billancourt, 92103, France. Phone: (1) 604 30 32.

**Date of Introduction:** 1982.

**New Product–Documentation:** Soya Bluebook. 1982. p. 66, 70. Contact: Guy Deneck, Proteins Dir. 1986. p. 86. Only Protisoya soy flour is produced. Address is now 30 Rue des Peupliers, 9200 Nanterre, France.

967. **Product Name:** [Lecithin].

**Manufacturer's Name:** Societe Industrielle des Oleagineux (SIO).

**Manufacturer's Address:** Direction Proteines, Groupe Lesieur, 122 Av. du General De Gaulle, Boulogne-Billancourt, 92103, France.

**Date of Introduction:** 1982.

**New Product–Documentation:** Soya Bluebook. 1982. p. 58.

968. Archer Daniels Midland Co. 1982. American agriculture: Our heritage and hope (Brochure). Decatur, Illinois: Archer Daniels Midland Co. 14 p.

• **Summary:** This brochure, interesting in both format and content, combines an overview history of agriculture in the USA, with two-page color photos of American farm scenes showing increasingly modern farm equipment at work. Each photo is accompanied by a bold quotation for its era, by Dwayne O. Andreas, Booker T. Washington, Franklin D. Roosevelt, and President Ronald Regan, respectively. A color photo on the cover shows a modern tractor pulling a plow. Inside the back cover is a portfolio pocket.

The text of the first foldout states that during the period from 1910 to 1979, "soybeans enjoyed the single most phenomenal growth of any farm product." Address: Decatur, Illinois.

969. Barbara, L.; Mazzella, G.; Cornia, G.L.; Testoni, S.; Pironi, L.; Roda, E. 1982. Hepatobiliary effects of soybean protein diet. In: G.C. Descovich and S. Lenzi, eds. 1982. Soy Protein in the Prevention of Atherosclerosis. Lancaster [Lancashire], Boston, The Hague: MTP Press. 110 p. See p. 39-44. Chap. 5. [18 ref]

• **Summary:** “Lithogenic” refers to promoting or undergoing the formation of calculi, or little stones in the body. “Litholytic” means: Tending to dissolve calculi. Textured vegetable proteins (TVP) appear to exert a hypocholesterolaemic effect in man (Sirtori et al. 1977; Carroll et al. 1978; Descovich et al. 1980) and animals (Kritchevsky et al. 1981; Huff et al. 1980), although the mechanism of their action is still unknown.

“Furthermore, the substitution of vegetable for animal proteins in lithogenic diets significantly inhibits the formation of gallstones in hamsters (Kritchevsky et al. 1979) and a soy-protein enriched diet, after 40 days of lithogenic diet, has an apparent litholytic effect in hamsters” (Angelin et al. 1979). Address: Univ. Bologna, Via Massarenti 9, 40138 Bologna, Italy.

• **Summary:** Contents: Preface and acknowledgments. Foreword by Rabbi Zalman Schachter. Introductory remarks on vegetarianism by Dr. Jean Mayer. 1. One man’s meat is another man’s porridge. 2. Compassion for animals in the Hebrew Bible. 3. The psychological roots of human compassion. 4. The craving for flesh. 5. Slaughter as a mode of worship. 6. The dietary laws as atonements for flesh eating. 7. The celebration of life. 8. What science can tell us 9. Steps toward vegetarianism in recent Jewish life. 10. Eight questions and answers. Appendixes: I. What’s cooking? II. Protein complementarity. Notes.

Foods mentioned include: Gluten (wheat protein). Lecithin. Marmite. Peanut butter. Tofu (p. 82, 106). TVP (p. 76). Address: Univ. of Illinois at Chicago Circle.

971. Forrestal, Dan J. 1982. The kernel & the bean: The 75-year story of the Staley Company. New York, NY: Simon and Schuster. xxv + 315 p. Illust. Index. 22 cm.

• **Summary:** This is the best (and only) history of the A.E. Staley Manufacturing Company.

Contents: The kernel [corn]. The bean [soya]. 1. How it all began. 2. The high road to debt and Decatur. 3. Staley makes history in sports. 4. Soybeans come to the U.S. 5. What’s good for Decatur is usually good for Staley and vice versa. 6. Trials and triumphs of the thirties (In 1938 Staley launched Sweetose corn syrup, made with enzyme technology). 7. Countdown for a weary pioneer. 8. New management and a new world war [World War II]. 9. Strictly business. 10. Smooth road ahead, except for the bumps. 11. The shock waves of the sixties. 12. That Shangri-La called retail. 13. The sweetest story ever told. 14. A little thing

called fermentation. 15. The soaring seventies. 16. The new Staley Company. Directors and corporate officers (1951-1981). Honor roll of service.

Augustus Eugene Staley was born on 25 Feb. 1867 in a log cabin on a 265-acre farm near Julius, North Carolina. His father was William Staley [1840-1885] and his mother was Mary Jane Ledbetter Staley [1842-1906]. Augustus was the eldest child. The three other children in the family were Arthur E. Staley [1869-1930], Georgiana Staley [1872-1952], and Wilhelmina C. "Willa" Staley [1885-1950]. Growing up on a farm with many chores to attend to, little Gene had little time for primary school, except during the winter months; he was a self-taught and self-made man.

"At one camp meeting, in 1880, Gene Staley's father met a Methodist [other accounts say Baptist] missionary who had recently returned from China and who had brought back a basket of strange beans called soybeans. Gene Staley later recalled, 'The missionary gave my father a handful of the beans. My father turned them over to me to play with. I planted two rows of the beans in the family vegetable garden. I was proud of them. I weeded them and picked them. Then I planted some more. The missionary said they would be good for the soil. I believed it—even if no one else did.'"

In 1881, at age 14, he began selling some produce from the family farm in Randleman, the nearest town; it contained 300 people and was 9 miles away. He drove the farm's wagon alone and barefoot, and by mid-day, having sold everything, he headed home and declared "I'm going to be a businessman."

In Sept. 1883 he saw a sign in Greensboro, North Carolina, that read "Boy Wanted—\$15 a Month." He went to the Odell Hardware Company's retail store on South Elm Street and got the job. There he was given the hard work of lifting farm implements in the back room. He learned how to stretch \$15 a month, of which \$10 went for room and board. At Christmastime he was fired.

For the next 14 years, from 1883 to 1897, Gene Staley was a successful traveling salesman. He visited such distant places as Seattle, Washington. He made good money although he had to work long hours and had no fixed location to call home. In 1896, his net profit was \$5,000—a fortune at the time. More important, he learned a great deal about how to be a successful salesman, and about business and people.

On 14 Dec. 1898 Gene Staley, age 31, was married to Emma Tressler, age 23, and the daughter of Andrew J. and Emeline Richardson Tressler of Bryan, Ohio. She was a fine pianist. She agreed to his proposal on the condition that he "Settle down in Baltimore and have a home I can share with you." They lived in a rented house at 1721 St. Paul Street. She continued her piano lessons at a Baltimore conservatory. Gene's starch suppliers were giving him a hard time, so he decided to start his own starch manufacturing company. On 12 Nov. 1906 the "A.E. Staley Starch Manufacturing Co. of Baltimore, Maryland, was incorporated under the favorable

auspices of Delaware law, with Gene Staley as president and Charlie Schuster as secretary-treasurer." He found shareholders to fund his new operation among the roughly 2,600 starch retailers who knew him directly. The company was capitalized at \$3.8 million. In early 1908 he learned that a 13-year-old starch manufacturing plant in Decatur, Illinois, was in receivership. The location he knew was ideal. In 1909 he bought it for \$45,000 and began to fix it up. (p. 19, 25).

Though corn refining by the "wet milling" process would continue to be A.E. Staley's principal business, in 1922 founder Gene Staley declared: "The day will come when our plant will process more soybeans than corn." By 1950 this prediction had come true, as the Decatur facility handled 50 carloads daily of soybeans versus 30 of corn.

As early as 1918 Gene Staley had begun his own soybean investigations, and in 1920 he ordered two expellers from the V.D. Anderson Company of Cleveland, Ohio. The manufacturing equipment was ready by 1921 but two delays held up the commencement of soybean crushing: (1) A special ramp for trucks bringing soybeans into the plant needed to be built, and (2) 1921 was a year of economic depression for both the nation and the company; Staley's expenses exceeded income by \$692,000. Finances were so tight that it was deemed prudent to delay the pioneering venture into soybean processing for another year.

In 1922 the company issued two formal announcements: (1) June 1922: "The A.E. Staley Manufacturing Company announces that in response to the general and urgent desire on the part of farmers in Central Illinois, it has been decided to install a soybean plant in conjunction with the Decatur starch and glucose manufactory.

"A satisfactory building is now in readiness. Several expellers have been purchased and delivered. Bean dryers are under construction. Storage for 150,000 bushels of beans is ready for use. The plant is planned so that large increases in capacity may be had without expensive changes. The first unit will have a capacity of about 500 bushels a day. It will be finished in ample time for the 1922 harvested crop."

(2) Oct. 1922: "On September 30, the new soybean plant of the A.E. Staley Manufacturing Company was put into operation, thus inaugurating a new industry for Central Illinois and providing the growers of this territory with a market for their beans."

Staley's first actual purchase of soybeans occurred on September 28, 1922, from the Andrews Grain Co. of Walker, Illinois. The transaction involved 1,547 bushels at \$0.9975 per bushel. Subsequently 5,674 bushels were purchased from various sources. However after operating for only 16 days and producing 209,300 lb of soybean meal and 42,036 lb of oil, the expellers ran out of beans and had to be shut down. Later more beans were found but the new mill was in operation for a total of only 74 days in 1922 and 57 days in 1923. When the 1924 season approached, soybeans were rather plentiful—but at \$1.50 a bushel. Although soybean

production and acreage in Illinois were now growing rapidly, times were still hard for the company. A letter written by Gene Staley in May, 1924, in response to an inquiry from West Virginia, said, in part: "The result of our experience in the soybean industry so far has been both unprofitable and discouraging, but it is our intention to leave the machinery in our plant for another year. If the operations are not profitable, we'll dismantle the plant and discontinue the soybean business altogether... Our company refused to pay over \$1.50 [a bushel; some new companies have paid up to \$1.80] but on 34,000 bushels we lost more than \$12,000."

Fortunately a major upswing came in 1925. The company bought almost 70,000 bushels of soybeans for \$1.30 a bushel and stayed in operation for 7 months. This increased to 8 months in 1926. Staley continued to buy all the soybeans that farmers brought him (p. 60-62).

Page 54: "Soybeans come to the U.S.: In 1922, the city fathers of Decatur, Illinois, never envisioned their community hosting such organizations as Soy Capital Bank & Trust Company, Soy Capital Electric Inc., Soy City Electric Supply Co., Soy City Marine Inc., Soy City Motel, Soy City Tire & Retreading Inc., Soy City Towing Co., Soyland Power Cooperative Inc., and Soyland Service Center, Inc.

"Not to mention radio station WSOY.

"Back in 1922, Decatur was a beanless sort of place, content to be in the heart of the Midwest's sprawling farm belt where corn ruled as king of the realm, and content to have the Staley company spearheading corn's golden era."

The term "The Castle in the Cornfields" is in the Index and appears on pages x, 83, 91, 93, 188, and 245. Page 87 states: "the editors [in 1929 and 1930] began to call it 'The Castle in the Cornfields.'"

The amazing story of this building's construction appears on pages 83-91. The story of its sweltering interior and how air conditioning finally arrived is on pages 188-91. The ground was broken on 16 Feb. 1929 and the new offices were occupied on 19 April 1930 (p. 87). However the building was not finished until 1931.

Note 1. Soyinfo Center believes that (in some areas) this book is more colorful than it is accurate. For example, the crucial "Peoria Plan" of 1928 is not mentioned.

Note 2. The biggest weaknesses of this excellent book are: (1) it has no bibliography, endnotes or footnotes. So we generally don't know the author's source of any particular piece of information. (2) It contains almost no genealogical information about A.E. Staley's family; when and where were his children born? when and where were they married, and to whom? (Continued). Address: Decatur, Illinois.

972. Forrestal, Dan J. 1982. The Soybean Special train (spring 1927). Helping to establish the National Soybean Oil Manufacturers Association (1930) (Document part). In: Dan Forrestal. 1982. The Kernel & the Bean: The 75-Year Story

of the Staley Company. New York, NY: Simon and Schuster. xxv + 315 p. See p. 64-68.

• **Summary:** Gene Staley was concerned that farmers would not be farsighted enough to plant enough soybeans to keep up with his ambitious plans. He felt he would need more than 300,000 bushels of soybeans by the mid-1930s. So he decided to conduct a massive education program throughout central Illinois by hiring a train! He announced that "the newest thing on rails will be the Soybean Special." Working together with the Illinois Central Railway Company, the University of Illinois College of Agriculture, and Southern Illinois Normal University, Staley helped put together a promotional marvel. The project was planned in 1926 and began operation in the spring of 1926.

When the Soybean Special rolled out for inspection on 28 March 1927 in Decatur, it was "whistle-tooting proof that Gene Staley was a salesman, an 'operator,' an entrepreneurial innovator, and a spirited crusader for the lowly bean."

The Soybean Special consisted of an engine and six cars. "At the rear was an office car containing dining and sleeping quarters for officials." There were two cars contained exhibits and displays on soybean planting, cultivation, processing, and utilization, prepared with the help of Professor J.C. Hackleman of the University of Illinois. There were also two cars converted into motion picture theaters and a lecture car. In 1927, between March 28 and April 17, a total of 33,939 passed through the train as it traveled 2,478 miles and made 105 scheduled stops.

A special touch of showmanship, suggested by Staley, was a contest—with prizes were awarded in seven districts of the 19 counties visited by the train. Each prize was the same—50 tons of soil-enriching limestone. The game involved guessing the number of soybeans in a 5-gallon glass jug.

"Frederick Wand, articulate expert on soybeans, was the Staley company's principal and constant representative on the train, but Gene Staley went aboard for some parts of the excursion. When a young visitor asked Staley if he was the 'inventor' of soybeans, and displayed a sense of modesty which was appropriate under the circumstances but otherwise atypical. When a newspaper reporter asked Staley if he ever had time to cultivate a hobby, he replied, 'Sure.' When the reporter followed through with the question, 'What might your hobby be?' the Decatur entrepreneur answered, 'Soybeans—just soybeans I guess.'"

"The year 1927 showed the Staley company far out in front in the soybean industry, crushing 216,000 bushels and accounting for 39% of all beans processed by an industry that was now up to 18 processors. (This leadership role was destined to be staunchly maintained by Staley until 1957 when Cargill Inc., the formidable Minneapolis [Minnesota] company, unceremoniously jostled Staley off the peak.)"

The early years were difficult because, before 1922, not many soybeans were grown on farms around Decatur. Gene Staley recalls (p. 68): "But I worked hard and wound

up losing money on soybeans in the start-up years... even though I always knew we were on the right track and would need perseverance and patience in order to achieve profits." I was nice to have a profitable corn refining company to support these new, experimental ventures.

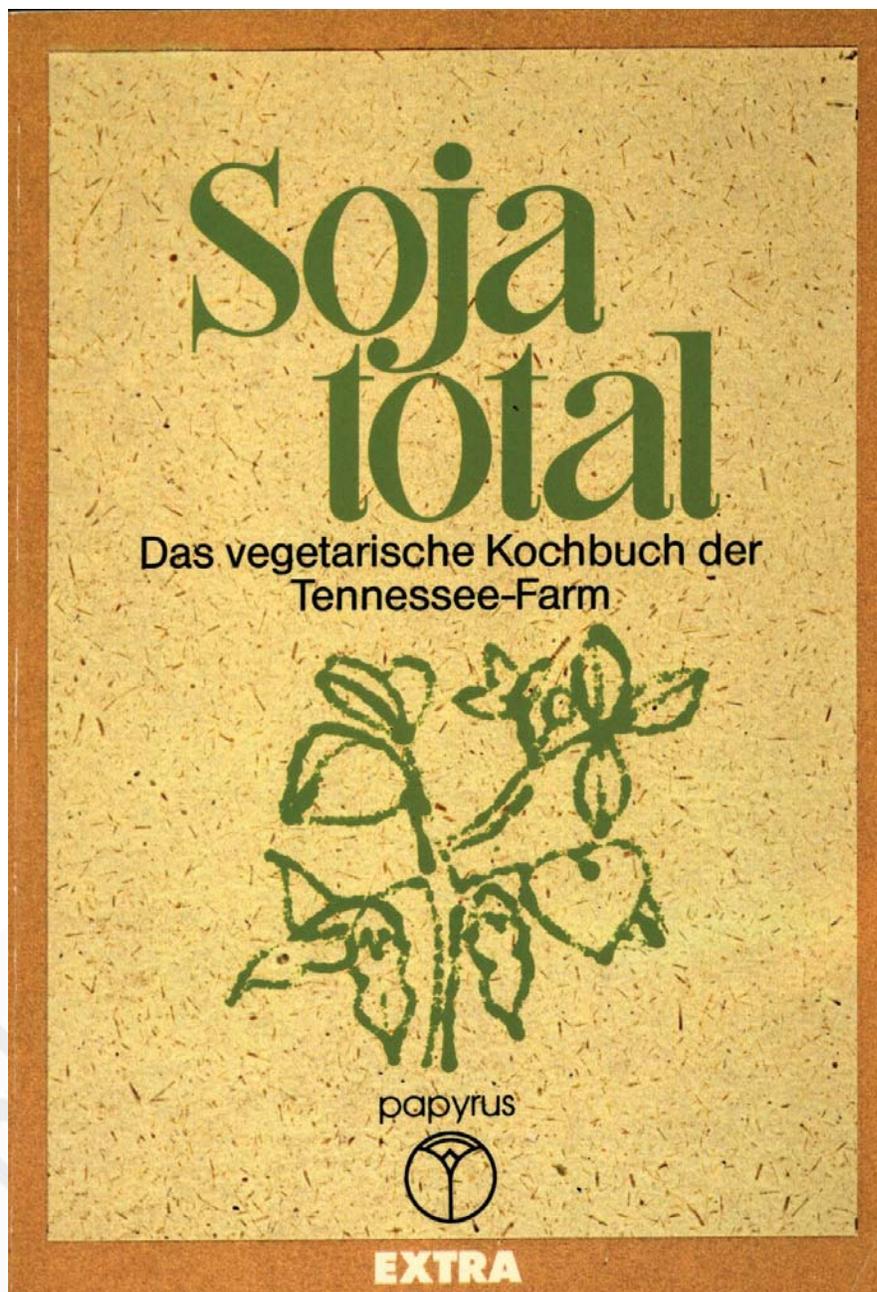

"By 1930 the soybean processing industry had expanded enough to feel it needed a trade association. The Staley company was represented at an organizational meeting held at the City Club in Chicago as were Archer Daniels Midland Company, Allied Mills Inc., Funk Bros. Seed Co., and Spencer Kellogg & Sons, Inc. By the time the National Soybean Oil Manufacturers Association was completely organized, it had 12 processing companies in its ranks. It subsequently changed its name to the National Soybean Processors Association." Address: Decatur, Illinois.

August:

BBC of London, England, runs 30 minute program on the U.S. tofu industry

*Whole Life Times* publishes "Why Are Soyfoods Catching on?" by Judy Brown

Soy Protein Council in Washington, D.C., releases filmstrip on soy protein

Poet/writer Marge Piercy writes a poem with tofu mentioned, published in *New York Times Book Review*; first literary acknowledgement of tofu

Keats Publishing releases booklet *Tofu, Tempeh, Miso & Other Soyfoods* by Richard Leviton; 32 p, 15,000 copies printed

September:

Legume has first public stock issue (IPO), approved by SEC; raises \$100,000

Nasoya releases "Tofu Slices" vacuum packed, marinated/broiled tofu

New England Soy Dairy releases pre-flavored, boxed tofus

*Restaurant Hospitality* magazine publishes feature article on tofu

Miyako Oriental Foods, maker of Cold Mountain Miso, relocates with \$15,000 reopening party

USDA's Dr. C.W. Hesseltine receives \$50,000 research grant to study shelf life of tofu, tempeh, and miso

Shurtleff & Aoyagi publish *Soyfoods Labels, Posters & Other Graphics*

Soyfoods Unlimited runs full page color ads in

*Vegetarian Times*, *New Age Journal* for tempeh burgers  
October:

Richard Leviton does “Soyfoods in the Heartland”  
nationwide tour with 13 programs, 11,000 miles

*Tofu Cookery* by Louise Hagler, published by The Farm  
in Tennessee

*Tofu Cookery* by Fusako Holthaus published by  
Kodansha, New York (both books have color plates, a first)

Beatrice Wittels’ CSC sponsors World Food Day in  
Philadelphia with speech by Richard Leviton, soyfoods  
banquet 200 people and Pennsylvania’s senator attend.

La Choy asks Soy Plant in Ann Arbor, Michigan, about  
making tofu for them. Saga Foods asks Rising Sun Soy  
Farms in Columbus, Ohio, the same

South River Farm Miso opens as the nation’s 2nd  
Caucasian miso shop (in Massachusetts, formerly Ohio)

Farm Foods prepares tofu meals at ECHO trade show in  
Pennsylvania

*Vegetarian Times* publishes full-color photos of Dieter  
Hannig’s tofu files (Continued). Address: 1. 100 Heath Road,  
Colrain, Massachusetts 01340; 2. P.O. Box 234, Lafayette,  
California 94549.

980. Patton, Greg. 1983. Modern soy protein products  
(Interview). *SoyaScan Notes*. Feb. 11. Conducted by William  
Shurtleff of Soyfoods Center.

• **Summary:** The biggest market for soy protein isolates in  
the U.S. today is in health-food protein powders. Many of  
the big manufacturers of these are in Hayward, California:  
Natural Formulas, Natural Protein Products, Shamrock,  
Cambridge Diet, etc. Isolates are not used much in meat  
pumping, sausages, etc. ADM and Ralston Purina both make  
isolates. Greg and Clyde Boismenu are competitors, and  
both know the industry very well.

Central Soya’s “Response,” a textured soy protein  
concentrate, is the Cadillac of textured soy protein products.  
Much better than TVP, it is excellent in patties and meat  
loaves. Using Response in a reformulated hamburger need  
not cost any more than using TVP, since it hydrates at a 4:1  
ratio and more can be used since it has less soy flavor and  
causes less flatulence. It costs \$0.50/lb versus \$0.30 for TVP.  
Address: 8707 San Leandro St., Oakland, California 94621.  
Phone: 415-638-5223.

981. Folkenberg, Robert. 1983. Re: History of work with  
soyfoods by the Seventh-day Adventist (SDA) Inter-  
American Division in Latin America. Letter to William  
Shurtleff at Soyfoods Center, Feb. 15. 3 p. Typed, without  
signature on letterhead.

• **Summary:** The first SDA food factory in South America  
was Granix in Buenos Aires, Argentina, in 1938. Today  
Superbom of Brazil is the largest producer, making an  
estimated 30 tons/month of textured soy flour (TVP). In  
the Caribbean region, Industrias Covac in Alajuela, Costa

Rica, was the first organized in 1967, followed by Alimentos  
Colpac of Mexico in 1969 and Westico foods in Jamaica in  
1970. Today Alimentos Colpac makes about 10 tons/week  
of TVP and 3,000 liters/week of soymilk. Westico Foods  
makes 2 tons/week of TVP, which is expected to increase  
dramatically in the near future. Industrias Covac makes  
about 3 tons/week of TVP and 1,000 liters/week of soymilk.  
Alimentos Integronaturales in Montemorelos, Mexico makes  
about 3,000 liters/week of soymilk. They and Productos  
Icolpan in Colombia will soon start producing TVP. Address:  
Field Secretary, Inter-American Div., P.O. Box 340760 (760  
Ponce de Leon Blvd.), Coral Gables, Florida 33134. Phone:  
305-443-7471.

982. Marbach, William D.; Ukai, Nancy. 1983. Tokyo’s  
soybean blockade. *Newsweek*. Feb. 28. p. 63.

• **Summary:** “Archer-Daniels-Midland of Decatur, Illinois  
would like to export soy isolate to Japan so that it can cash  
in on the latest Japanese health-food craze—soybean milk.  
(Making soybean milk, or *tonyu*, from soy isolate is simple:  
just add water, flavors and heat). The trouble is that ADM’s  
soy isolate is a threat to an industry the Japanese would like  
to develop to replace the old-fashioned way of making *tonyu*  
by crushing and boiling the beans.

“When ADM applied to the Japanese Ministry of  
Agriculture for a ‘Japan Agricultural Seal’ (JAS)—without  
which Japan’s quality-conscious consumer would resist the  
product—the request was denied. ‘According to the Japanese  
Agricultural Standard, whole soybeans must be the main  
ingredient of soy milk,’ the ministry ruled...

“‘The product must already be on the Japanese market  
before we consider it a candidate for the JAS mark,’ said one  
ministry official. A Japanese Catch-22...

“Fuji Oil Co., a big soybean processor, already makes  
lower-grade isolate for other products and is reportedly  
getting ready to enter the booming \$100 million *tonyu*  
[soymilk] market.” Address: Tokyo, Japan.

983. Johnson, L.A.; Lusas, E.W. 1983. Comparison of  
alternative solvents for oils extraction. *J. of the American Oil  
Chemists’ Society* 60(2):181A-192A. Feb. [33 ref]

• **Summary:** The ideal solvent can be easily removed from  
the meal; is non-flammable; stable; non-reactive with oil,  
meal, or equipment; pure; only slightly soluble in water; and  
readily available at low prices.

Today hexane is the solvent of choice for most oilseed  
crushers. “Recent research on alternative solvents has  
focused on ethanol, isopropanol, methylene chloride,  
aqueous acetone, and hexane/acetone/water mixtures.”

The section on “History of solvents used in oilseed  
extraction” states that the first patent for solvent extraction  
of oilseeds was issued to E. Deiss in 1856 in France. A  
few years later, Deiss constructed a plant at Marseille for  
extracting oil from olive presscake, and the process quickly

expanded across France and Italy.

By 1870 batch solvent extraction was well established in Europe for commercial oilseed processing. Early solvents used in oilseed extraction included carbon disulfide, petroleum naphthas, trichloroethylene and ethanol.

Before 1920 solvent extraction was done mostly in batches. But in the early 1920s continuous and countercurrent extractors were developed in Germany by Bollmann and Hildebrandt to extract the oil from soybean imported from Manchuria. By 1928 Hansa-Muehle in Hamburg, Germany was extracting 1,000 tons of seed per day in four Hildebrandt extractors (MacGee 1947).

In the United States, Henry Ford did pioneering work developing solvent extraction equipment that farmers could use in their barns to process soybeans. "In 1934, the Archer-Daniels-Midland Co. and the Glidden Co. each opened plants in Chicago [Illinois] using Hildebrandt U-tube extractors and hexane-type petroleum naphthas for solvent." These were the first large-scale solvent extraction plants in the USA, and each processed about 100 tons/day of soybeans. Address: Food Protein R&D Center, Texas A&M Univ., College Station, TX 77843.

984. Daenzer, Walter. 1983. Re: Work with tofu and TVP in Switzerland. Letter to William Shurtleff at Soyfoods Center, March 17. 2 p. Typed, with signature on letterhead. [Eng]  
 • **Summary:** "Soyana was founded in 1980. We give 10% of our TVP sales to the Swiss Red Cross. They use it in India and the Sudan. They are very happy with it.

"Right now, we just had our first debut on Swiss TV. It was extremely successful. We are writing a book which will multiply the tofu sales not only here, but quite probably also in other countries like yours. This is a bold statement, but I am sure because it comes from a totally new angle.

"All the workers in our tofu plant are disciples of Sri Chinmoy. They practice their master's teachings to unite the aspiration in the inner world with the dedication in the outer world and thus understand their work as a service which they try to do in a good consciousness—with their heart's love and their mind's vastness. They meditate not only before and after work, but most of the time also at every hour for a few minutes. Therefore, Sri Chinmoy has honored their tofu factory with the name 'The Secrets of Perfection-Flames.' Sri Chinmoy has shown unending concern to the soy world. He is the only spiritual master who has spoken at length on how God feels about His soybean." Address: Soyana, Postfach 8039, Zurich, Switzerland. Phone: 01/202 89 97.

985. Eichberg, Joseph. 1983. Early history of lecithin in the United States and Europe, and of the American Lecithin Co. (Interview). *SoyaScan Notes*. March 25 and 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** An in-depth history by one of the industry's pioneers. In 1928 Eichberg worked for American Associated

Companies (AAC) in Atlanta, Georgia. They were a mini-conglomerate active in textiles, roofing materials, etc. A man named James W. Conway was renting space in their building. In 1925-26 he had been interested in the possibilities of an edible oil operation in Norfolk, Virginia, but it never materialized. At that time he had been in touch with Hansa Mühle (the Hansa Mill) in Germany. Then he started talking with AAC about the idea. AAC asked Eichberg to investigate the possible project, and in about 1928 he contacted Hansa Mühle. In about 1930 American Lecithin Corporation (ALC-1) was incorporated in Atlanta, with Joseph Eichberg as president. Most of the stock was owned by AAC, but Hansa Mühle may have owned a small portion. Conway had no formal association with either AAC or ALC.

ALC-1 (a Georgia corporation) had two main sources of income: Royalties on patents licensed, and profits from sale of lecithin.

In 1934-35 ALC was reorganized as the American Lecithin Company (ALC-2), an Ohio corporation with headquarters in New York. Adrian Joyce, president of The Glidden Co., lived in Cleveland, Ohio, and had a legal staff there. Moreover, Ohio laws were favorable. Eichberg was president of ALC-2 (he worked at headquarters in New York) and Adrian Joyce was chairman of the board.

The main reason there is not much research on lecithin is that big pharmaceutical companies have no incentive to spend money on products they cannot patent. They make millions from their patented compounds.

Archer Daniels Midland Co. made not only the first soy lecithin in the USA, they made the first commercial lecithin of any type. ADM had developed a patent for the use of hexane, the Sorensen and Beale patent, which described the use of hexane in place of the alcohol-benzol procedure. ADM's manufacture of soy lecithin was followed very shortly by The Glidden Co. (both under license from ALC).

Glidden went their own way in the 1940s and not long thereafter ADM did too. ALC went its own way; it continued to license people to manufacture lecithin under some of the patents and bought lecithin from them, independently of Glidden and ADM. ADM started to market its own lecithin in about 1950, but it did not sell any of this to ALC.

ALC is now a Georgia corporation; they moved back to Georgia in 1959 and organized a new Georgia corporation at that time. They are still active in buying and selling lecithin and in making some compositions of their own. But their patents have all expired.

The recent summary [of lecithin] by the National Research Council (conducted at the request of FDA) was good; it did not give a negative feeling at all. LSRO abstracted that document from a larger report; its not conclusive. They are lukewarm on the therapeutic benefits of lecithin.

Also discusses Dr. Bruno Rewald and Hermann Bollmann, both of whom worked for Hansa Mühle in

Germany, the American Lecithin Corporation (organized in about 1930), the American Lecithin Company (formed in about 1934-35).

Lucas Meyer was never a manufacturer of lecithin; they bought lecithin from manufacturers (usually soybean crushers in and around Hamburg, Germany), then refined it and sometimes did additional processing, such as adding emulsifiers. They have an office, but also some tanks, mixers, etc. Address: American Lecithin Co., P.O. Box 4056, Atlanta, Georgia 30302. Phone: 404-522-7060.

986. Szuhaj, B.F. 1983. Lecithin (Interview). Conducted by William Shurtleff of Soyfoods Center, March 25. 2 p. transcript. [1 ref]

• **Summary:** Lecithin that is not sold commercially is blended back into the soybean meal and used in livestock feeds. It is sort of a secret; the industry doesn't talk about it. This has been the practice since the 1930s. It is neither a plus nor a minus for the meal. Lecithin comprises about one half of one percent of the total soybean and 2% of the oil.

A phospholipid is a lipid containing phosphorus. Phosphatides are a subcategory of phospholipids. Chemical lecithin is a phospholipid. But it is better to use the term "phosphatides" when writing about lecithin.

The three largest manufacturers of commercial lecithin in the USA are Central Soya, followed by A.E. Staley, and ADM. Cargill, the largest crusher in the USA, makes a lot of lecithin but does not sell it commercially. Central Soya has been the largest for at least 10 years. ADM is now out of the Centrolex business; they stopped making granules in 1982.

The health food industry looks to lecithin suppliers / manufacturers (which comes down to Central Soya) to conduct research on the health benefits of lecithin. But Central Soya is not in a position to put up the money needed for such studies; it would cost too much and (if the studies showed clear benefits) there would not be much profit from the resulting sales of lecithin. So nothing is going to happen.

In 1976 H. Peeters edited a book titled *Phosphatidylcholine: Biochemical and Clinical Aspects of Essential Phospholipids*. Nattermann, a German seller of phospholipids (and a competitor of Central Soya), brought together many scientists to work on their product and then to write articles about that product. They held a symposium in Belgium and published the proceedings (in English) in the book edited by Peeters, noted above. It was a contrived thing. They coined a new term, Essential Phospholipids (EPL). They spent lots of time and money with various clinics in Europe. Some of the papers were well done, but scientists see it as "paid for" conclusions. That's why people are looking for negatives nowadays.

One of the best authentic articles was published in *Lancet* in 1977 (vol. 8028, p. 68-69). It indicates that lecithin improved memory / brain function.

How about lecithin and coronary heart disease? Lots

of research has been done but none of it is conclusive. Moreover, lecithin is regarded as a natural foodstuff, so it is not as highly regarded by the medical profession as if it were a pure chemical substance. Since it is a complex mixture of phosphatides, it would not be wise to try to promote it as a drug. Trying to prove that a natural food is therapeutic would be as difficult as showing that vitamin C can be used to treat the common cold. Address: Central Soya Co., P.O. Box 1400, Fort Wayne, Indiana.

987. Shurtleff, William; Aoyagi, Akiko. 1983. History of soy lecithin. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 31 p. March 30. Unpublished typescript. Available online at [www.soyinfocenter.com](http://www.soyinfocenter.com).

• **Summary:** [www.soyinfocenter.com/HSS/lecithin1.php](http://www.soyinfocenter.com/HSS/lecithin1.php)

Note: A comprehensive, greatly expanded edition of this book was published in free digital format on Google Books in 2016.

A comprehensive history of the subject. Contents: Part I: What is lecithin? Basic definition. Etymology and nomenclature. Manufacture. Varieties of lecithin and their composition. Natural sources of lecithin. Functional properties. Food uses. Therapeutic uses. Nonfood and industrial uses. World production. Part II: History of soy lecithin in Europe. Early research (pre-1900). 1900-1939. 1940-1983. Part III: History of soy lecithin in the United States. 1923-1939. U.S. research on the therapeutic value of lecithin. The U.S. lecithin industry and market. Part IV: History of soy lecithin in East Asia.

"The first soy lecithin appeared on the U.S. market in 1929, having been imported from Germany (Eichberg 1942) by American Associated Co. (Atlanta, Georgia), one of the founders of American Lecithin Co. (ALC). For the next five years, all the soy lecithin used in the U.S. was imported from Germany and Denmark (Horvath 1933). Aarhus Oliefabrik made lecithin in Denmark and exported it to the USA via Fries Bros., New York. In 1932 Schweiger was issued a U.S. patent (No. 1,892,588. Dec. 27) for producing a light-colored lecithin by bleaching it with hydrogen peroxide, a process that is still widely used.

"One organization that pioneered in the introduction of lecithin to the U.S. was the American Lecithin Corporation. It so happened that James W. Conway, mentioned above for his early interest in lecithin and attempt to start a plant, rented office space in a building owned by American Associated Companies (AAC), a mini-conglomerate in Atlanta. In about 1929 he started discussing his ideas with AAC, which contracted Mühle, Hamburg, and assigned Joseph Eichberg, an AAC employee, to work on the project. In 1929 Eichberg and Bruno Rewald from Hansa Mühle traveled the U.S. together, checking out prospects. In about 1930 American Lecithin Corporation was incorporated in Atlanta, with Joseph Eichberg as president; most of the stock was owned by AAC, but Hansa Mühle may have owned

a small portion. As the exclusive U.S. representative of Germany's Hansa Mühle, ALC acquired rights under the key lecithin patents from Hansa Mühle (then the leading lecithin producer in Germany and owner of patents granted to Bollmann, Rewald, and others), and prepared to grant licenses on the patents and lease the equipment to American companies interested in manufacturing lecithin in America. ALC also imported and marketed lecithin during this period but it did not manufacture of lecithin.

"Commercial production of lecithin began relatively late in the U.S., which is not surprising when it is recalled that the soybean crushing and refining industries did not really begin their takeoff until the mid-1930s. In 1934 the Archer Daniels Midland Company (ADM), at their plant in Chicago, Illinois, became the first in America to Manufacture soy lecithin. Made under license under the Hansa Mühle patents via ALC, this was also the first commercial lecithin of any type made in America. The next year the Glidden Company, again under license from ALC, began making soy lecithin at their solvent extraction plant in Chicago. In 1934-35 ALC was reorganized as the American Lecithin Company to promote the production and sale of lecithin in the U.S. and to give the major manufactures a major share of the ownership. The stockholders of the new ALC were ADM, Glidden, Hansa Mühle, American Lecithin Corporation and Aarhus Oliefabrik, the Danish producer. The various patent positions were reconciled. Joseph Eichberg was president of the new ALC and Adrian D. Joyce, then president of Glidden, was Chairman of the Board. The new company was chartered in Ohio, where laws were favorable and Glidden's legal staff was located, but Eichberg and working headquarters were located in New York. ALC now had two main sources of income: royalties from patents licensed and profits from sale of lecithin purchased from licensees. Ross and Rowe, later acquired by ADM, were active in selling for the new company."

"Glidden first began to market its own lecithin in 1946 (*Soybean Digest* 1946) and ADM followed suit in about 1950, when it stopped selling through ALC. ALC went its own way too; in 1947 it first started to do some of its own additional processing and refining of lecithin, making various specialty products, as for bakers and others. After severance of marketing ties with Glidden and ADM, ALC continued to license others to manufacture lecithin under some of the patents and then bought lecithin from them and marketed it. In about 1959 Eichberg and ALC moved back to Atlanta and organized a new corporation. Today ALC is still active buying and selling lecithin and making some compositions of their own, though all the early patents have, of course, expired." Address: Lafayette, California. Phone: 415-283-2991.

988. Ling, C.A. 1983. Re: Plamil Foods Ltd. Letter to William Shurtleff at Soyfoods Center, March 3. 1 p. Typed,

with signature on letterhead.

• **Summary:** "You will gather from the attached completed questionnaire that we were the pioneers of a liquid soya milk in this country in 1965 and the enclosed labels and literature will give you further background information.

In answer to your questions... may we say that we obtain our soya protein isolate from Arkady ADM, Skerton Road, Old Trafford, Manchester M16 0NJ. We shall be obtaining from them shortly some TVP for a Goulash we propose marketing and also some de-fatted soya for a non-dairy chocolate bar we shall be producing i.e., with soya in place of milk. Regretfully we cannot say in answer to 55 and 56 whether the British Soya Products Ltd. or Soy Foods Ltd. are still in business as we have no connection with either company;

"We have already stated that we were pioneers in this country of liquid soya milk in 1965 and at that time the labeling authorities in the country would not permit us to use the definition of 'soya milk' or 'soy milk' and insisted that we used the terminology 'plantmilk'. We have taken this matter up from time to time with the Trading Standards Office (responsible for carrying out the labelling laws) and understand that the matter is at long last being centrally reviewed, so that we hope we may be able before long to use the terminology "soya milk". When you re-write your summary in numerical order relating to the UK, perhaps you would be good enough to make mention that we were the pioneers of a liquid soya milk here in 1965. After it being the sole one on the market for a number of years in the country, Itona decided to bring out one approximately five years ago and Granose also entered the market with one a couple of years ago. So we appear to have stimulated their interest!

"Yours faithfully, Plamil Foods Ltd." Address: Managing Director, Plamil Foods, Plamil House, Bowles Well Gardens, Dover Road, Folkestone, Kent CT19 6PQ, England. Phone: Folkestone (0303) 58588.

989. Shurtleff, William; Greenslade, David. 1983. Mahatma Gandhi: Soyfoods pioneer in India. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 2 p. March. Published in part in *Vegetarian Times*, June 1983, p. 4. Unpublished manuscript. [5 ref]

• **Summary:** Although it is well known that Mahatma Gandhi revitalized the vegetarian movement in India, it is less well known that he was one of India's first pioneers to introduce soybeans and soyfoods. His work during the 1930s still serves as an inspiration to many Indians, who are today transforming India into one of the world's leading soybean growing and soyfoods using countries.

Gandhi's earliest known mention of soybeans or soyfoods was in the July 1935 issue of *Harijan*, his popular magazine for village uplift. There he referred to a book by Dr. H.V. Tilak called *Balanced Diets*. Dr. Tilak's book was based in an orphanage of over a hundred children, whose

diet was made richer in protein and more balanced by the addition of soybeans.

In September 1935, Gandhi reprinted a report on soybeans by the Bombay Health Association. This article listed the nutritional and medicinal values of soybeans and also explained how to make soymilk, soy flour, and soy coffee. The October issue of *Harijan* reported that the kitchens at Gandhi's ashram has introduced experimental rations of soybeans into the communal diet. The same article compared soybeans with eggs, wheat, and ghee. Since the more economical soybeans were rich in protein and oil, Gandhi later ordered reductions in the portions of wheat and ghee and suggested that all beans, other than soy, be omitted altogether.

November's *Harijan* reported that soybeans were being boiled, steamed, and used in soups. The ration of ghee had been stopped and soybean portions increased. Gandhi pointed out that everyone seemed to thrive on the new diet. In the same issue, Gandhi reprinted a leaflet by the Baroda State Food Office describing soybean crop cultivation. By December 1935, *Harijan* reports that soybeans had become a substantial part of the diet at Gandhi's ashram.

The December 1935 and January 1936 issues printed a dozen soyfood recipes, including the techniques for making, "TO-FU," "shoyu-sauce," and "soya bean sprouts," Gandhi said he was particularly fond of the sprouts.

By September 1936 *Harijan* was recommending an exhaustive book on soybeans written by F.S. Kale, an Englishman in charge of the Baroda State Food Service Department. Entitled, *The Soya Bean: Its Value in Dietetics; Cultivation and Uses*, this was the first book on soyfoods published in India. *Harijan* also carried a report on soybean cultivation experiments in the USA and the Soviet Union in the same issue.

By 1936, after careful consideration of economic, nutritional and medicinal evidence, Gandhi wholeheartedly favored the cultivation and widespread use of soybean in India and his magazine ran lists of prices and of the places where soybeans could be obtained.

We lose track of Gandhi's interest in soyfoods in late 1936. However in 1949 his ideas were republished in *Diet and Diet Reform*, a book which sold thousands of copies. The fact that Gandhi took such an interest in soybeans and soyfoods is a major source of encouragement to the many Indians working in this burgeoning field today. In 1982 India produced 500,000 metric tons of soybeans, making it the world's ninth largest producer, and soyfoods (such as TVP, soymilk, and soy oil) were catching on rapidly in this country where an estimated 50 percent of the population is vegetarian, and another 30 percent eats only a very small amount of meat. Address: Lafayette, California.

990. Cummins, Marilyn L. 1983. Using the bean in the board room: Best of show—ADM. *Agri Marketing*. April. p. 36, 66,

114-17.

• **Summary:** "The light comes up on a solitary soybean. An unseen force sets it rocking, then to the incessant pulse of the background music, it begins an amazing journey through an obstacle course of foods containing soy protein.

"This well-trained bean whizzes past a loaf of bread an instant before a slice crashes to the table, nimbly keeps its balance as it rolls along the edge of a salad bowl and ricochets out of an empty glass just before the milk comes gushing in.

"All in a day's work for the winner of this year's Best of Show award in the National Agri-Marketing Association's advertising and communication competition. The Archer Daniels Midland Co., Decatur, Illinois, and its agency, Martin/Williams Advertising Inc., share the honor for the TV commercial "Soy Protein." The spot won the single TV commercial category and starred in ADM's first-place series of commercials portraying America's abundance.

"The commercials honored by NAMA are but a fourth of the more than 20 network spots aired by ADM in the past two-and-a-half years to tell the story of agriculture to the public in general, and the nation's power brokers in particular..."

The text of the "Soy Protein" commercial, accompanying 12 TV frames, reads like this:

"The newest development in nutrition is actually one of the oldest foods known to man.

"The soybean.

"For over four thousand years, the Chinese have used it to make nutritious, protein-rich foods.

"But in America, the history of the soybean is considerably shorter.

"In fact it didn't become a widely used food ingredient here

"until the early nineteen seventies.

One thing's for sure though, it's come a long way since then.

"Over the years one company has led the way in unlocking

"the versatility of the soybean.

A company that each day continues to develop new ways

"to use this abundant, functional source of protein.

"The Archer Daniels Midland Company. That's using the old bean."

The final frame shows a whole soybean at the top, the ADM logo in the middle, and the full company name across the bottom—all against a dark background. Address: Managing editor.

991. Johnson, Dale. 1983. Statistics on soy protein production. Full-fat soy flour. Dawson Mills and Loma Linda. Central Soya (Interview). *SoyaScan Notes*. May 23. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.

• **Summary:** Estimates of soy protein production: Textured soy proteins (flours or concentrates) 150-200 million lb/year. Isolates 120-150 million lb/yr, including: Ralston Purina (doing very well), ADM (having lots of problems), and Grain Processing Corp. (“sold out”). Much of the isolate made in the USA is being exported for use in meat products in Europe and Africa. About 10-20 million lb/year of the non-exported isolate is used to make infant formulas in the USA by Mead Johnson, Ross Laboratories, and Syntex (Borden operation). A large amount of textured soy flour is still going into pet foods. Prices (dollars/lb): Soy flours \$0.13. Soy protein concentrates \$0.40-0.60 (lower priced are for calf starters). Soy protein isolates \$1.10 to \$1.35.

Full-fat soy flour: There is no significant production in the USA; in the past, production was several hundred tons/month. Some is imported from Germany (Lucas Meyer).

Dawson Mills: As of June 1, they will discontinue production of soy flour and grits, and textured soy flour. Loma Linda (California) purchased one of their two isolate spinning lines and was trying to have AMPI [American Milk Products, Inc.] run it for them [in Minnesota] using isolate purchased from elsewhere. Dale is not sure of the status of this project. Dan Hooten, formerly with Dawson Mills, is now apparently involved in sales of dairy products at Land O’Lakes (now located in Eau Claire, Wisconsin).

Central Soya is no longer using their steam texturization process. Address: Food Ingredients (Minnesota), Inc., 2121 Toledo Ave. North, Golden Valley, Minnesota 55422.

992. Hooten, Dan. 1983. Dawson Mills closing down their flour and grit operations. Estimate of soy protein isolate production capacities (Interview). *SoyaScan Notes*. May 24. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.

• **Summary:** Dawson Mills [as of June 1] will discontinue production of soy flour, soy grits, and textured soy flour, because the products are not selling well; the factory is located too far from the markets. They formerly shipped soy flour to the West Coast for PL-480 programs, but that market has dried up.

His estimate of total U.S. isolate production capacity (not including Kraft) is 104 to 110 million lb/year, as follows: ADM 20-25. Grain Processing Corp. (GPC) 14-15. Ralston Purina 70 as follows: Memphis, Tennessee 20; Pryor, Oklahoma 30; Louisville, Kentucky 20.

Wayne Pruitt of Griffith Laboratories (5 April 1983) does not know whether Land O’Lakes will continue production of their calf starter material (intermediate in properties between a flour and a concentrate). Address: Industrial Sales, Land O’Lakes, Eau Claire, Wisconsin.

993. Hooten, Dan. 1983. Estimate of soy protein isolate capacities in the USA (Interview). *SoyaScan Notes*. May 24. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.

• **Summary:** He estimates the total capacity to be 100-110

million lb/year, with individual company capacities as follows (in million pounds per year): Ralston Purina 70 at three plants (Pryor, Oklahoma 30; Memphis, Tennessee 20; Louisville, Kentucky 20). ADM 20-25. Grain Processing Corp. 14-15. Address: Industrial Sales, Land O’Lakes, Eau Claire, Wisconsin.

994. Puski, Galeor. 1983. Kraft still makes only soy protein isolates (Interview). Conducted by Dr. Walter Wolf of NRRL, May 25. 1 p. transcript.

• **Summary:** At their small pilot plant operation in Coshocton, Ohio, Kraft makes only “a couple million pounds a year.” Puski adds that several years ago ADM couldn’t sell their isolate, but now they can’t make enough. He does not know who is buying that isolate or how it is used.”

Wolf’s Note 1. According to Dick Lockmiller (May 1983), Kraft’s capacity was 2.5 million lb/year when they purchased the small continuous process plant, but it has increased to 6 million lb/year.

Wolf’s Note 2. Puski’s statement about ADM conflicts with comments by Dale Johnson that “ADM is having a lot of problems” and Wayne Pruitt’s remark that ADM was “not operating?”

Note 3. Attached to Wolf’s notes is a large flow sheet of the “Kraft Continuous Isolate Process.” Its source is not known. Address: Kraft. Phone: (312) 998-3541.

995. Shurtleff, William. 1983. In Harbin (June 6-7) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 10-12. Unpublished manuscript.

• **Summary:** 6:00 a.m. I walk to the local market. See one stall (a mobile cart) selling gelled tofu curds (*doufu-fa*) over which is poured a sweet brown sauce then topped with some diced red chilies and green herbs. Served with deep-fried breadsticks. One other place serves soymilk hot with deep-fried breadsticks. No tofu at all in the market. Some say it is sold only in winter. No other soyfoods seen.

Soy milk terminology: (1) Dou Nai—it sounds more modern than “Dou Jiang.” Implies or connotes no beany flavor, is thicker and has a higher protein content. (2) Dou Ru—(Alfa-Laval used this) is harder to pronounce.

[Henan Area grows lots of soybeans]: more than Heilongjiang? The money to build soymilk plants in China is partially foreign capital. People and institutions are falling all over each other to help China develop “China Orient Leasing.” 50% are Japanese.

Eaton [Eton], A consortium from Cleveland, Ohio, is planning to build a \$50 million oil extraction and protein refining plant in Jiamusi. Oil = extract, refine, make margarine, shortening, etc. Protein = feed, isolate, concentrate, tofu and soymilk production.

Tuesday June 7, 1983 (Harbin): Min-Lite = the Ministry

of Light Industry is interested in a soymilk plant. Also, the State Farm Bureau (Bean processing division) and the Soybean Institute is working in breeding (for both protein and oil), diseases, and physiology.

Soy milk Taste Tests in Harbin: Chocolate was vastly the first choice, second was sweetened, third was plain / dairy-like. They dislike added oil in soymilk and would like to try fruit-flavored soymilk (apple, pineapple). Added fat coats the mouth with a greasy / gummy film. Vitasoy has no added fat.

Dou Ru Fen: Niu Nai Mai Jing. 205 gm. This product consists of a white powder containing 10% cow's milk powder, 40% soymilk powder (spray-dried traditional soymilk, not soy flour), and 50% (!) sugar. 1000 tonnes a year are made, starting in 1978 or 1979. Sold to housewives who use it to make breakfast soymilk. Costs RMB 0.78–0.80 = 70–80 cents. Cow's milk powder is stirred into hot soymilk. The mixture is concentrated and spray dried. Also made in Beijing, but this one is the best quality.

Pure: Soy milk powder is made in Beijing by Beijing Foodstuff Corp. since 1980. Called Doujiang-Fen (Soy milk powder) and also retailed to housewives for breakfast use. It is 50% powdered soymilk and 50% sugar. It is spray dried.

Fresh green soybeans (Maodou = Hairy bean): Mostly eaten by farmers. Also sold in markets. Not packaged or canned. Whole dried soybeans: some canned in China. It is sold in Beijing.

Tofu in Heilongjiang: None is sold during the summer because it spoils easily and people do not like to eat tofu in the summer. A lot is sold in winter.

Soybean use: Of China's 9 million tonnes produced, one man estimates that 80% of soybeans are crushed. The meal is used mainly for feed, but some for tofu, soy sauce, and textured vegetable protein (TVP).

Main uses for foods made with whole soybeans in approximate order: (1) Tofu and kan-dofu. (2) Soymilk. (3) Soy sauce. (4) Miso = Doujiang. (5) Yuba. (6) Fermented tofu.

Main uses for foods made with defatted soybean meal: (1) Tofu. (2) Soy Sauce. (3) Miso. (4) Soymilk.

Soy nuggets [fermented black soybeans] are made only in the south of China. This state farm bureau man estimates that there are 200,000 tofu shops in China, one in every village, but there are no statistics on tofu.

Big tofu factory in Harbin. Ministry of Light Industry people in charge. He does not think as many soybeans will ever be used for soymilk as for tofu.

Many government groups are doing research on soyfoods, such as tofu and soy sauce, but no single group. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

996. *Soyfoods*. 1983. Like a rolling bean [ADM's new TV commercial]. Summer. p. 13. [1 ref]

• **Summary:** "For 60 seconds on national Sunday morning

television, in view of 9.5 million households, a soybean lithely rolls past cubes of tofu, infant formula, bread, pizza, chili, salad dressing, ice cream, and soymilk while the narrator intones 'The newest development in nutrition is actually one of the oldest foods known to man.' This may be tofu's first appearance on national television and such a tasteful way to make a debut.

"This is the newest corporate commercial of Archer-Daniels-Midland Company, the \$4 billion Decatur, Illinois, oilseed processor, which has been sponsoring its commercials on 'This Week With David Brinkley' and 'Meet The Press' since 1982. The full color television spot, created by Martin Williams Advertising of Minneapolis [Minnesota], is 'fast becoming a media star,' senior account executive Gerald Kleckner explains. 'The "Soy Protein" commercial has won about every advertising competition we've entered it in, including: Business and Professional Advertising Association: Best Television Commercial; National Agri-Marketing Association: Best Television Commercial; Communication Arts: featured in their CA '82 Annual as one of the 40 best television spots of the year; CLIO Awards: finalist, corporate television advertising.'

"The ADM commercial's goal—its production was detailed in Agri-Marketing, April 1983—is 'to increase awareness of the versatility, importance, and widespread use of soy protein in processed foods.' ADM's viewer targets include highly educated, highly salaried government leaders, Wall Street and corporate America, and sophisticated farmers. (See *Soyfoods*, No. 7, 'ADM's Soy Miracles')."

997. *Soyfoods*. 1983. Calcium absorption, soyfoods, and vegan diets. Summer. p. 20-21. [1 ref]

• **Summary:** "The recent medical experience of a 41-year-old man, who had been following a longterm (12 years) vegetarian diet, and who was diagnosed as having osteoporosis (porous bones from calcium deficiency) raises important questions for nutritional research on the suitability of vegan diets and calcium absorption from soyfoods.

"The subject broke the neck of his right femur, 3 inches below the top, during a fall while ice skating. The orthopedic surgeon who set the break commented it was 'virtually impossible' for a man of 41 to break this bone except in a serious car accident. He also found the bone 'exceptionally soft, like balsa wood.' The subject was next interviewed by a nutritional endocrinologist who gathered information on the subject's diet, lifestyle, blood, urine, and bone mineral density. The densitometer results revealed the subject's bones were of low density, quite porous: in fact 2.29 standard deviations below the national norm. This means that only one man his age in a hundred has a lower bone density. The doctor concluded that while the subject was healthy with a proper diet, for many years he had had a serious calcium deficiency. Thus his body, receiving insufficient dietary calcium, drew reserves from his bones, thereby

demineralizing them to a point of extreme weakness.

“A closer examination of the subject’s diet revealed that his calcium intake had been far below the US RDA of 800 mg per day. The subject was curious that East Asians and most Third World residents did not consume the RDA yet seemed to have strong bones. The endocrinologist responded that (1) non-dairying cultures such as Japan and China have evolved genetically to utilize nondairy calcium sources much more efficiently than dairy-consuming peoples; (2) if a person who is raised on a dairy-rich diet changes, in mid-life, to a low calcium diet, his body is unprepared and may quickly enter a prolonged negative calcium balance; and (3) the literature indicates that Japan has one of the highest rates of osteoporosis and fractures of any country for which data exists.

“On the physician’s recommendation, the subject began a calcium supplement program as follows: Breakfast, 250 mg oyster-shell calcium with vitamin D; Lunch, the same; Dinner, 250 mg phosphorus; Bedtime, same as dinner. Additionally, the subject began drinking 2 glasses daily of low-fat milk while consuming more sesame seeds, kale, broccoli, and calcium sulfate tofu. The goal was to increase daily calcium intake up to the RDA of 800 mg.

“Tofu and tempeh (and other soyfoods) had been a key part of the subject’s diet and a main source of his calcium, yet while calcium sulfate tofu is a good source for calcium, nigari-coagulated tofu has only 28% as much calcium as the former. The accompanying chart illustrates the amounts of various soyfoods required to fulfill the RDA for protein and what percent of the calcium RDA is thereby fulfilled. It is clear that tofu is by far the most concentrated source of calcium on a protein basis among soyfoods, yet one would have to consume 1½ to 2 pounds a day to obtain all one’s protein from tofu. Yet 550 g of regular tofu or 405 g of firm tofu would supply all one’s calcium requirements. Further, the most concentrated sources of soy protein (TSP, isolates) generally have the lowest concentrations of calcium.

“The subject next calculated how much calcium might be provided by typical per-meal servings of various soyfoods. Six ounces (170 g) of regular tofu or firm tofu provides 31% to 42% of the calcium RDA. Three ounces of tempeh (85 g) provides 15%; one cup of soymilk (336 g) provides a mere 6%. By comparison, the same amount of cow’s milk provides 50% of the RDA for calcium and 17% of the protein. Again, among the soyfoods, tofu appears to be by far the best source of calcium.

“However, not all of the calcium present in foods is actually absorbed by the body. In a typical American diet, 70% to 80% of the calcium consumed is excreted in the feces. Phytic acid, present in soybeans, grains, and other legumes, tends to bind some of the calcium into an insoluble complex, limiting its absorption. Oxalic acid, found in spinach, beet tops, collard greens, chard, parsley, and chocolate, can also bind calcium. To date, there has been no

research on the effect of phytic acid in soyfoods on human calcium bioavailability. This is an important area for future research in addition to general studies on calcium balance in vegetarian diets.

“The correct conclusion to draw from this case history is not that a soyfoods diet can lead to calcium deficiency, but that in a primarily soy protein-centered and traditional vegetarian diet, care should be exercised to supplement the diet with adequate calcium. The US RDA of 800 mg for calcium, the subject contends, is a ‘reasonable’ figure. ‘I had always thought,’ concludes the subject, ‘that if I ate a traditional diet, like any Third World peasant, I would be in the best of health. Live and learn!’

A large table shows the protein and content of the following soyfoods, and the amount of each one must consume to get one’s recommended daily allowance. 1. Tofu, regular calcium sulfate curded. 2. Tofu, firm calcium sulfate curded. 3. Tempeh. 4. Soybeans, dry. 5. Soy flour / TVP. 6. Soymilk. 7. Soy protein isolate.

998. Fargo, Charlyn. 1983. Soy-food firm takes aim at diverse markets. *Crain’s Chicago Business*. July 17. p. 3, 43.

• **Summary:** About: Spectrum Foods, Global Foods, Royal American Co., and Carl Hastings. “When floods hit Houston [Texas] and New Orleans [Louisiana] this spring, Global Foods [of Decatur] came to the rescue. Through the American Red Cross, the company supplied tasty, low-cost meals to the flood victims, including chili, beef stroganoff, Mexican dinners and a sweet-and-sour Oriental dish... Soybeans are the basic ingredient in all the company’s instant entrees.

“Global is one of three companies run by local entrepreneur Carl Hastings under the corporate umbrella Spectrum Foods. Each division aims at a different market: Global is targeting charitable organizations; Royal American Co. sells directly to consumers, and the brand-new Continental Food Assn. plans to cultivate the institutional (nursing homes and penal institutions) and export markets, particularly Saudi Arabia and Greece.

“The dynamic Mr. Hastings—who earned a doctorate in food science from the University of Illinois—has built Spectrum into a profitable, \$11-million retail sales empire since leaving A.E. Staley Manufacturing Co. in February 1982. He started Spectrum with \$1 million in capital provided by 25 investors. The company, which has 125 employees, uses a direct selling method similar to that of Amway Corp. Distributors—25,000 in the 50 states, Puerto Rico and Guam—invite prospects into their homes for tasting parties. A.E. Staley supplies the company with raw soy-protein concentrate, and Spectrum handles production of the meals...

“Though ADM isn’t involved in direct sales of soy-food products, it does sell soy-protein concentrate to an East Coast retailer, General Nutrition Corp. Mr. Hastings hopes

to double revenues during the second year of operation... Sales to vegetarians and health-conscious consumers look promising. But real growth is expected from the institutional market and the new international division.”

999. Brennan, Thomas J. 1983. Re: Soybean production in Austria. Letter to William Shurtleff at Soyfoods Center, Sept. 30. 2 p. Typed, with signature on letterhead.

• **Summary:** The closed door policies of the region make information gathering a difficult, if not impossible, task. Two soybean specialists in the region are: (1) Dr. Jerzy Szyrmer, Plant Breeding and Acclimatization Inst., Radzikow, Poland. He has been attempting to develop soybean varieties for home production and consumption; he has no commercial interests at all. (2) Prof. Dr. Victor F. Lishchenko, or his assistant, Dr. Leonid Kolesnikov, Food and Agriculture Dep., Inst. of U.S. and Canada Studies, 2-3 Khelbny per., Moscow, USSR. Lishchenko has just published a book in Russian on soybeans in the USSR.

“Now to address some of your questions. What causes swings in production and imports of soybeans and products? That is difficult to answer. Initially I would say imports are directly related to hard currency availability. The scientists and livestock production people recognize the value of soybeans, but don’t control the purse strings. That’s the central bank or foreign trade organizations. Soybean purchase requests go in the basket with all other import needs.

“Production swings are often caused by weather or disease. More commonly, however, I would attribute changes to government attitudes. For example, in Yugoslavia producers are paid nearly \$400/MT (metric ton = 1000 kg) to raise soybeans while they could buy C.I.F. at about \$250/MT. Soybean production has increased, but so has corn and wheat production. These products are now bartered for beans and meal. If hybrids could be developed, Hungarian production would soar, as corn production did in the 70’s. They want to grow soybeans, however, at this time, it is still more profitable to grow corn and small grains. The value of the crop per hectare far exceeds soybeans’ potential value. Certain state farms which have produced beans in the past want to increase production; however, the central government discourages this by setting low prices. Three or four years ago the attitude was different and soy production was encouraged. Talk to Bob Bergland about the Farmland / Eaton proposal for a soy crushing plant in Hungary.

“Statistics on soy protein utilization are hard to come by. Imports are usually handled by the Ministries of Food, where I have few contacts. Sales are also controlled by a small number of companies, e.g., Ralston, ADM, Staley, etc., which are not prone to reveal figures. USDA at one time listed TSP [textured soy protein] sales, but I haven’t seen any statistics for 1982 or 1983.” Address: Gatterburggasse 18/2/3, A-1190, Vienna, Austria. Phone: 37-41-18.

1000. McDougall, John A.; McDougall, Mary A. 1983. The McDougall plan. New Century Publishers Inc., 220 Old New Brunswick Rd., Piscataway, NJ 08854. 340 p. Foreword by Nathan Pritikin (8/83). General index and recipe index. 24 cm. [804\* ref]

• **Summary:** This carefully researched and documented book and cookbook argues convincingly in favor of a vegan diet that uses no animal products, that is low in fats, calories, and sodium, and rich in complex carbohydrates. Pages 89-90 give the percentage of calories from fats in various foods under 3 categories: low-fat vegetable foods (incl. oatmeal 16% of calories from fat, apple 9%, broccoli 9%), high-fat vegetable foods (incl. avocados 88% of calories from fat, almonds 82%, peanut butter 77%, sunflower seeds 76%, tofu 53%, soybeans 40%, wheat germ 27%, tempeh 25%), and animal foods (bacon 94%, t-bone steak 82%, frankfurters 80%, cheddar cheese 73%, egg 65%, tuna in oil 64%, milk [whole 3.5% fat] 49%, ice cream 49%, milk low-fat 31%, chicken [light-skinned] 18%, tuna in water 6%, buttermilk 3%, skim milk 2%).

Note: The author, however, argues repeatedly against the use of tofu and tempeh based on the “percentage of calories from fat” concept. His figures are correct but we and many nutritionists feel the basic concept, originally popularized by Nathan Pritikin, overlooks two key points: (1) the percentage of water in the food, and (2) the average serving size.

Page 198, in a section on rich [high fat] plant foods, states that tofu, tempeh, soybeans, textured vegetable protein (TVP), and miso contain excessive fat and most are high in calories. “The rich plant foods may account for a small portion of your daily food (less than 10 percent of your calories per day) but only after you have attained the level of health you are striving for. In general, these foods are more harmful than health-supporting. Never eat these foods if you have problems with your health that remain unsolved. If you begin using this group of foods and find that you are also gaining weight or getting back some of your old ailments, then stop eating these foods immediately.”

Appendix I, p. 322-28 contains a table listing the percentage of calories from protein, fat, and carbohydrates in many foods. It also gives the calorie concentration (in calories per gram) for each food; foods with a low concentration aid in weight-loss programs. Tofu has only 0.72 calories per gram, and soy sprouts only 0.46; both are low. No soyfoods are used in the many recipes in this book.

Note: According to a colleague, John McDougall suffered a stroke at age 19, which led to much of his current interest in diet and health. He is not a Seventh-day Adventist. Address: 1. M.D. Both: Near Kailua Bay, Oahu, Hawaii.

1001. *Herald and Review (Decatur, Illinois)*. 1983. Inventor sees use for TVP. Oct. 7. p. 14.

• **Summary:** William T. Atkinson, the inventor of TVP,

retired in 1976 as “senior research chemist for the Decatur-based Archer Daniels Midland Co. At age 72, he is a consultant to ADM. In 1970, he patented the TVP process... He later assigned the patent to ADM. Many companies, including A.E. Staley Mfg. Co., Cargill and Ralston-Purina, have purchased rights to use the process. The first products using the TVP process were sold in the early 1960s. They did not become common in grocery stores until the 1970s... Since about 1950, Atkinson had been researching ways to convert soybeans into food for human consumption...

“In 1935, the Detroit native went to work for Henry Ford. He and other researchers in Ford’s Greenfield Village developed a soybean-based fiber which was used for such products as automobile upholstery, clothing and, during World War II, felt... The soybean operation, and Atkinson’s services along with it, were sold in 1943 to The Drackett Co. and moved to that company’s Cincinnati, Ohio, facility. Atkinson began working for ADM in 1957 when it purchased Drackett’s agricultural division. He moved to Decatur in 1969. Drackett shifted its soybean research efforts to food applications in about 1950. This was because of the development of new synthetic fibers which were superior to soybean-based fiber in making clothing and other non-food products. As a result, Atkinson’s research effort shifted.” A photo shows Atkinson. Address: 852 Karen Dr., Decatur, Illinois 62526. Phone: 217-877-9048.

1002. *Eagle Grove Eagle (Iowa)*. 1983. Boone Valley Co-op names chief exec. Oct. 19. p. 5A.

• **Summary:** James W. Lindsay, age 49, of Decatur, Illinois, has been named general manager and CEO of “Boone Valley Cooperative Processing Association, Omaha, a newly-formed soybean processing cooperative,... Lindsay has been serving as manager, operations, of the Archer Daniels Midland Co., Decatur, Illinois. His appointment as manager of the new company is effective October 24, 1983.

“The new venture began operation September 1, 1983, following unification of the soybean operations of three regional cooperatives including Boone Valley,” Land O’Lakes, and Farmland Industries.

A native of Des Moines, Iowa, Lindsay attended Drake University [Des Moines, but did not graduate], then served in the U.S. Army from 1956-1958. Lindsay comes to Boone Valley after “a 25-year career in oilseed and grains sales, production and transportation. He began his career in the traffic department of Spencer Kellogg & Sons, Des Moines, Iowa, in 1958, moving through a series of traffic and sales positions. In 1961 he joined Archer Daniels Midland Company (ADM).

“With ADM, Lindsay held positions as general manager of soybean operations in Fredonia, Kansas, and Lincoln, Nebraska; manager, export sales; regional manager, soybean operations; vice president, soy processing group; president of ADM’s soy operations in Brazil; manager, general traffic

department; and vice president, corn sweetener operations, Cedar Rapids, Iowa; before assuming his most recent position in 1980.

One of the top priorities for the new CEO and board will be the selection of a new corporate name for the unified soy processing venture.

“The new company, headquartered in the First National Bank Building in Omaha, Nebraska, operates processing facilities in Eagle Grove, Sergeant Bluff, Fort Dodge, and Sheldon, Iowa; St. Joseph, Missouri; Dawson, Minnesota; and Van Buren, Arkansas.

“Lindsay will report to the Boone Valley Board of Directors,” whose names and affiliations are given.

1003. Atkinson, William T. 1983. History of work with soybeans and soyfoods, and the invention of TVP (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 26. 6 p. transcript.

• **Summary:** In 1935 he began to work on soybeans with Robert Boyer under Henry Ford. He isolated proteins from the soybean and attempted to manufacture Azlon, an artificial wool, from spun soy protein fibers. Atkinson did the developmental work and spun the original soy protein fibers. Boyer’s work was to maintain the research lab and staff for Henry Ford, who made his office in the building. Henry Ford at that time was chairman of the board and had a lot of time to devote to agricultural research. His son, Edsel, was president of the company.

From 1935 to 1949 he worked with soy protein fibers to make fabrics, and developed molded industrial plastics. In 1949 he made a major switch to developing foods made from soy protein. Starting in 1949 he developed a food grade isolated soy protein in powdered form at Drackett. He thought it was an excellent product with potential applications in products such as Gerber’s Baby Food, malted milks, etc. This was the original food-grade isolated soy protein. After a lot of market research they found that nobody was interested in a food grade soy protein, even if it tasted good, and was the right color and price.

Atkinson began to work at ADM in 1957 when ADM purchased Drackett’s Agricultural Division. In 1958-59 ADM started selling this soy isolate to Consolidated Foods in Texas; it was quite satisfactory and practical. In about 1959 ADM made the mistake of selling about 25 pounds of it to some company that was working with Pillsbury to incorporate soy protein isolate granules into a chili product for Pillsbury. One year later they received notification from Swift and Ralston Purina that the product could no longer be patented because a year had elapsed since it was first sold. Discouraged, they began research on other ways of making foods from defatted soy flakes.

In 1961 he started extruding his isolated soy protein into plexilamellar material. Initially he used a rubber extruder, then changed to a plastics extruder. But ADM failed to patent

the extruded isolates since they were basically a commodities company with little knowledge in this patent area. No patent attorney or department was connected with the research group until about 1963.

Work on extrusion of defatted soy flakes started in about 1961.

Note: As of May 1991 William Atkinson was still alive but he had Alzheimer's disease and was unable to talk. Address: 852 Karen Dr., Decatur, Illinois 62526. Phone: 217-877-9048.

1004. Leviton, Richard. 1983. Long summary of trip to Europe sponsored by the American Soybean Association (Interview). *SoyaScan Notes*. Nov. 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Discusses: Euvepro in Italy, ASA in Italy, Alpro / Vandemoortele, British Arkady, the confusion of mung beans and soybeans, tofu made from soy protein isolates that doesn't develop a spongy texture when frozen, regulatory restrictions, Bernard Storup, tofu burgers, Prolait, Le Bol en Bois, ASA soybean program in England, desire in Eastern Europe for more meat, the many small private businesses in Hungary, Soyana's excellent products (Daenzer makes 5,000 lb/week of tofu in Switzerland), the Reformhaus chain, Vietnamese tofu shop in Dornach, less refrigeration at the distribution and retail levels in Europe has led to new packaging, soyfoods have started to appear in the big international food trade shows in Europe (e.g. ANUGA). Witte Wonder opened in 1981, now makes 1,000 lb/week of seitan. Cauldron Foods (UK) makes mostly tofu burgers, and has a lot of good technical innovations such as control panels. Cauldron also makes a fermented tofu spread. Dragon & Phoenix (UK) makes several tons of tofu a day. In July Wolfgang Furth-Kuby and Lucas Kelterborn (Germany) published the first issue of a European soyfoods newsletter titled *Rundbrief*. Paul Jones (UK) has 2 plants and makes 5,000 lb/week of tofu. One man from Cauldron Foods was Paul Jones' original partner. Full of Beans also makes miso.

Oct. 28. "I have an all morning meeting at ASA's headquarters in Brussels, Belgium, with Dennis Blankenship, Rita Batens, Roger Leysen, and Michael Martin. It is proposed that I chair the 1984 First European Soyfoods Conference to be held in late September, probably in Amsterdam. ASA agrees to be a sponsor and to help secure another 6 or so sponsors. ASA also agreed to finance the production and mailing of a bi-monthly European Soyfoods Newsletter." Address: Colrain, Massachusetts.

1005. Hopkins, Harold. 1983. The coming out of soybeans and whey. *FDA Consumer* 17(9):8-13. Nov.

• **Summary:** In 1982 America's soybean crop was worth \$12,500 million, compared with \$9,500 million worth of wheat and \$19,300 million worth of corn. The soybean is America's number one cash crop since corn is largely used to

feed livestock on the grower's farm. Various ways of using soybeans as food (soy flour, TVP, etc.) are discussed briefly.

Photos show: (1) Products in which soy oil is a major ingredient: Crisco shortening, Crisco oil, Wesson oil, Parkay margarine, Wishbone Italian dressing, Blue Bonnet margarine, and Hellmann's Real Mayonnaise. (2) Truckloads of soybeans being driven onto tilting ramps at a grain elevator; the trucks are anchored, the tailgate opened, then the ramp tilts backwards to dump the contents. Address: Editorial Director, FDA Consumer.

1006. Leviton, Richard. 1983. Report of soyfoods research and speaking trip to Europe with American Soybean Assoc., Oct. 8–Nov. 15, 1983. Colrain, Massachusetts. 82 p. Unpublished typescript. 28 cm.

• **Summary:** Describes visits to or discusses: ASA Belgium (Dennis Blankenship, Rita Batens, Michael Martin), Parma, Euvepro Conference, Parmalat, Guy Coudert and Dr. Sabin president of ONIDOL, Anuga, Jonathan, Société Soy (Bernard Storup, Jean de Preneuf), Le Bol en Bois, Budapest (Hungary), Agrimpex (Hungary), Migros, Sojalade / Die Genossenschafts Tofurei (Verena Krieger), Galactina, Soyana (Walter Daenzer), Alpro (Belgium; Phillip Vandemoortele and Christian Daems), Aarhus retail stores (Denmark), Witte Wonder, Manna, Cauldron Foods Ltd. (Phillip Marshall, Peter Fagan). Contains a directory of principal people contacted, listed by country. Those not mentioned above are: England: Wild Oats Wholefoods (Mike & Loes Abrahams), British Arkady Co. (Bill Pringle), Sunworld Inc. (David White), Health Foods Manufacturers' Association (Britain). Belgium: ASA, Le Paradoxe (Dota Figuera). China Trading, Ralston Purina (A.G. van der Horn), Premier Foods (Pauline Six Chan). Italy: Cargill SpA (Claudio Rocchietta), Parmalat SpA (Dr. Alberto Rota, Mr. Barilla), ASA (Sergio Monari). France: Robert Bonneterre, Aux Rayons Verts. Germany: European Federation of Health Products Manufacturers (Wolfgang Reinsch, Bad Homburg). Hungary: Central Food Research Inst. (Balint Czukor), Agrimpex (Potori Karoly). Denmark: Danish Turnkey Dairies, Det Gronne Kokken. Netherlands: Witte Wonder Products (Niko van Hagen), Manna (Hans den Hoed), Albert Heijn Supermarkets, Dutch Seed Crushers & Oil Processors Assoc. (Dr. C.J.M. Meershoek). Switzerland: Sojalade (Verena Krieger), Soyana (Walter Daenzer). Austria: Tom Brennan.

Bound in the back of the report are photocopies of labels and promotional materials (graphics) from the following companies: Witte Wonder, Société Soy (Cerny), Cauldron Foods, Manna, Dansk Tofu (Sdr. Vinge Gl. Mejeri, 8860 Ulstrup), Sojalade, Bonneterre, Mutter Erde, Genossenschaftstofurei Engel (Dorfplatz, Ottenbach).

Note: This is the earliest document seen (May 2005) that mentions Parmalat in connection with soy.

Migros (p. 18-19) is Switzerland's biggest supermarket / department store; it sells some whole wheat products.

Consumers oppose them for their size, but they attract foreign customers. Natural foods people are very political; they are opposed to Third World imports. Migros is expected to start selling tofu soon. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1007. Leviton, Richard. 1983. Visit with Christian Daems and Philippe Vandemoortele at Alpro, Izegem, Belgium. Oct. 28 (Document part). In: R. Leviton. 1983. Report of Trip to Europe with American Soybean Assoc. 82 p. See p. 21. Unpublished manuscript.

• **Summary:** Vandemoortele doesn't like soy protein isolates in soymilk because of their poor image. A good tasting plain soymilk is possible if it is properly made. Isolate-based foods don't have the old basic food Oriental image. They also don't like isolates because, if the product's sales become large, the dairy industry will jump on the isolates for fakery and low quality. If used in place of dairy, the product would be called 100% synthetic. So not using isolates is a defensive measure. Codex Alimentarius (in Feb. 1984) will look at this issue. They may allow the term "soymilk" if a product is made from whole soybeans, but "soy drink" if it is made from isolates.

Alpro is opening a new soymilk plant in Ghent in Feb. 1984—the biggest in the world. They will make a 100% natural product from liquid and powder. [Note: Alpro never ended up making the powdered soymilk, says Philippe Vandemoortele 9/91.] This soymilk plant will have a sewage treatment system to recover all the water. The okara will be sold to the mixed feed industry. They will try to make soymilk powder at the same price as subsidized dairy milk and sell the powder for reconstitution. Alpro soymilk will be sold in supermarkets by Sept. 1984. They want high margins, will do promotions, and plan new products. Vandemoortele uses 50,000 tons of soybeans every 2 weeks [for all products, not just soymilk]. Alpro uses organically grown beans from France to make soymilk for Lima Foods in Belgium; these are 100% more expensive than regular soybeans. They will look to the USA and Asia for more markets for this output since the European market is too small. They will focus on areas that have a protein shortage or lactose intolerance. They have sold one turnkey soymilk plant to Madagascar. Alfa-Laval has not sold any soymilk plants recently due to currency problems.

Europe is such a bad market for soymilk, in part because of the many languages. With 10 European countries and languages, labeling requirements make it very complicated to market one food uniformly. Alpro sells more soymilk in north Belgium than in the south. There are more macrobiotics and more money in the north. This is typical for Europe as a whole with natural foods.

At ANUGA, British Arkady received lots of interest in their soymilk made from soy protein isolates, and health foods interest in their soy proteins. It is a Tetra Pack soymilk

in raspberry, banana, and strawberry flavors. They exhibited meats and biscuits using isolates. A.E. Staley was pushing isolates for bakery uses.

Michael Martin of the American Soybean Assoc. explains European regulation problems. Soymilk is taxed at 17% when it is traded in the EC. This Value Added Tax (VAT) would be only 6% if soymilk were reclassified as a health food instead of a liquid, powder, or paste. The VAT varies by country but is usually higher on beverages. Dinner with Martin at Le Paradoxe, a natural foods restaurant in Brussels. They serve "croquettes de soja, tofu brochette, and Tofu Ganmo (2 burgers). There are 6 natural foods restaurants in Brussels and all use tofu. The Japanese wanted Alpro to do their soymilk in Europe. They started soymilk in 1975 with the idea of bringing alternative vegetable sources to developing countries.

Vandemoortele's sales are now \$600 million/year. In 1936 Philippe's grandfather imported Manchurian soybeans for crushing in Europe. Vandemoortele, which now competes with Unilever in margarine, has a high level of expertise in R&D.

"We sample Alpro soymilk. One tastes thin, metallic, then gives a fatty mouthfeel. Another with sugar and vanilla is too sweet. I'm not impressed with them.

"Philippe is about age 35 and macrobiotically oriented in diet. Very confident, perhaps overly."

The tofu market is completely different from that of soymilk. Tofu is all education work and no comparison of products. With soymilk, there is comparison, but no education work needed. Philippe and Christian are concerned that most of the low-tech soyfoods industry and retailers in Europe are unskilled, small, and unprofessional. They don't want the average public to associate their soymilk with this vegetarian style. They want it to be seen not as a special food, but for everyone.

The European vegetable protein industry made a classic blunder. They put soy steaks in German supermarkets in the 1970s using TVP from British Arkady and ADM. Address: Colrain, Massachusetts.

1008. Leviton, Richard. 1983. Brief history of Soyana and Walter Daenzer (Document part). In: R. Leviton. 1983. Report of Trip to Europe with American Soybean Assoc. 82 p. See p. 19-20. Unpublished manuscript.

• **Summary:** Based on an interview with Walter Daenzer. Soyana is Switzerland's largest tofu company. Soyana's factory and office are at two very different locations in Zurich. Daenzer, who first became familiar with soy in New York City, has been a vegetarian for 15 years. He first saw soy as textured meats. The company began in 1980, when they started to re-package and sell TVP in consumer-size packets in Zurich. He did 1-3 demos/week that year. "De Gustation" then published his first cookbook about soy protein.

In Sept. 1981 he started to plan tofu production, then on 1 Feb. 1982 he began to produce tofu, and now produces about 6,000 lb/week (2,727 kg/week) of very firm tofu with 13% protein. Of this, it sells about 40 kg/month in bulk to the University of Zurich. The company, which has 5 production and 3 office employees, makes tofu 3 days/week and burgers 1 day/week. They use a Takai W30C system. Daenzer didn't want to use water-filled tubs for packing the tofu, so he uses a Tiromat form-fill-seal vacuum packer that gives tofu a 2-week shelf life (dated), but could actually go to 3 weeks.

Soyana also makes several shelf-stable tofu spreads and dips, packaged in tins, pasteurized, with a 6-month shelf life. "Zurich has the most innovative, dynamic people in Switzerland, I am told, with an international atmosphere; there is a widespread interest in trying new foods." Soyana displays the Biona symbol (a "Y") on its products in recognition of having passed the inspection by the federation of Swiss Reform Houses (about 400 shops). Biona is an association of Reform House stores, "VRSD," with 400 members, called in Swiss the Assoc. of Swiss Reform & Diet Specialty Stores. It corresponds to West Germany's Neuform which has 2,500 members. Only one-half of these shops have refrigeration facilities. The Soyana brand is sold only in Biona stores, whereas Soyana's Sojaquelle brand is sold elsewhere. The "Bioladen" stores are more like American natural foods stores. There are 60 of these in Switzerland; they are environmentally oriented, political, and wholistic.

Soyana's director says that Migros, Switzerland's leading supermarket chain with about 2,000 stores and 70-80% of Swiss food sales, is likely to sell tofu, but under its own label and possibly manufactured in-house. Migros has a bad reputation among food manufacturers, because Migros often starts selling a company's product, then if it becomes successful they make their own product and drop the original manufacturer. Co-op is the second largest Swiss food chain. Meanwhile, Soyana is active presenting cooking classes on tofu, has published two tofu cookbooks (each has sold 10,000 copies), and have a third at the printers, *Tofu Kur* (actually it ended up being titled *Schlank mit Tofu*) in full color, a weight-loss book with 127 low-calorie tofu recipes. It should be out in Nov. 1983. Weight Watchers International contributed 30 recipes to the book.

In April 1982 Daenzer tested Tetra Pak soymilk using taste panels and got good reports. The milk was made using his Takai system and flavored with honey. The Swiss Milk Industry Assoc. protested, asking the Tetra Pak company to stop working with Soyana, and they did. 95% of all Swiss milk is in Tetra Pak cartons so if people see a soymilk in such a carton they assume it is dairy milk. Address: Colrain, Massachusetts.

1009. Archer Daniels Midland Co. 1983. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p. 27 cm.

• **Summary:** Net sales for 1983 (the year ended June 30)

were \$4,291.957 million, up 15.6% from \$3,712.977 million in 1982. Net earnings for 1982 were \$110.185 million, down 28.1% from \$154.99 million in 1982.

Page 2:  
Operating report:  
"Meanwhile the governments of all other grain exporting countries are encouraging record grain production through subsidized exports. Some examples are:....  
"Brazilian export subsidies have made Brazil the cheapest source of soybean oil and meal, frozen poultry and alcohol.

"Spanish export subsidies have made Spain the third largest exporter of soybean oil and a growing exporter of soybean meal.

"Malaysian export subsidies for processed palm oil lower the whole world price structure for edible oils.

"Even Portugal has become a significant exporter of soybean oil and meal under the impetus of export subsidies."

Page 4 is all about Mr. Albert C. Toepfer. Below a nice portrait photo of him we read: "Mr. Alfred C. Toepfer, founder and Honorary Chairman of Alfred C. Toepfer International (ACTI). By successfully managing ACTI's growth during a turbulent period of over 60 years, Mr. Toepfer established his reputation as the 'Dean of World Agri-Trade.' He is also a respected worldwide philanthropist."

"Mr. Toepfer began his trading business in the Fall of 1919 purchasing excess hay and straw from the large farms of Salle, an area now divided by East Germany and Poland, and carting it to Hamburg where it was baled and exported to fiber deficient Western European nations. From this inception, Mr. Toepfer developed a powerful world trading organization which by 1979 shipped nearly 25 million tons of grain and feedstuffs. In 1979, Mr. Toepfer sold 50 percent of his company to Intrade, a partnership of 11 dynamic cooperatives representing over 1,700,000 farmers from both sides of the Atlantic. Their common goal was to combine reliable supplies with formidable demand through the efforts

of free and unrestricted trade.

“The following farmer-owned cooperatives are our new partners through Intrade in Toepfer International:

“Agway Inc., Syracuse, NY, U.S.A.

“Cebeco Handelsraad, Rotterdam, Netherlands

“Citrus World Inc., North Wales, FL [Lake Wales, Florida], U.S.A.

“Deutsche Raiffeisen Warenzentrale (DRWZ), Frankfurt/Main, Germany

“DSV-SILO-und Verwaltungsgesellschaft MBH., Duisburg, Germany

“Gold Kist, Atlanta, Georgia, U.S.A.

“Indiana Farm Bureau Cooperative Assoc., Inc., Indianapolis, Indiana, U.S.A.

“Landmark Inc., Columbus, Ohio, U.S.A.

“Land O’Lakes Inc., Minneapolis, Minnesota, U.S.A.

“Union Nationale des Cooperatives Agricoles de Cereales (UNCAC), Paris, France

“United Co-operatives of Ontario (UCO), Ontario, Canada

“Our opportunity to join Toepfer and the cooperatives in this partnership in 1982 was no coincidence. ADM buys nearly half of its raw materials from cooperatives. More than half of our European customers are cooperatives. Together, we now have annual sales of over 30 billion dollars and execute over 30 million tons of export trade. At any given time we may have as many as 100 vessels at sea carrying out our international business. It is from this base that Toepfer International intends to expand and prosper. ADM has benefited from the young and experienced management team of ACTI, personally trained by Mr. Toepfer, and reflecting nearly 65 years of accumulated trading wisdom. Led by Mr. Johanne Tonder (see color portrait photo, p. 1), Managing Director, the aggressive team of ACTI traders headquartered in Hamburg, Germany, Their 48 offices and agents around the world give them access to virtually every major supplier and customer on the globe. ACTI is one of the largest exporters of South American, Thai, Australian and European grain and agricultural products in addition to maintaining a solid North American base. This enables them to serve customers from all markets giving them essential flexibility of trade and access to lowest-cost suppliers at all times.

“Their sophisticated and disciplined approach to trading has enhanced ADM’s own operations. We have tied our communications systems together, forming a worldwide network with instant access to trading activity and information throughout the world. Their knowledge and experience in international currency exchange activities have already proven invaluable to our staff in the face of the crippling impact of the high U.S. dollar on U.S. products in the world markets.

“ACTI owns significant equities in various facilities around the globe. Equity interests in a tidewater oil mill in Germany as well as European flour mills, tapioca facilities in

Thailand and elevators and loading facilities throughout the world provide ACTI and ADM with enhanced trading and transportation opportunities.

“Through ACTI we enjoy strong trade ties with all nations. Our relationship will enable us to capitalize on the export subsidies provided by the governments of Brazil, Spain, Portugal, Malaysia, Argentina, the EEC and other countries for grain and processed products. While U.S. foreign trade policy has closed many doors to U.S. traders, it has opened the floodgate of production and trade for competing countries.

“ACTI has firsthand experience in coping with the impact of individual nations’ agricultural and trade policies. Together with ACTI we are now in a position to benefit from the abnormal trade flows created by subsidies and other government actions.

“More importantly, by having access to supplies outside the U.S. ADM through ACTI can maintain an image and record of dependability with all of the hungry nations of the world.”

Page 22: “Note 1–Business Acquisitions:

“Effective December 1982, the Company purchased for cash a substantial minority interest in Alfred C. Toepfer International and related companies, an international commodity trading group based in Hamburg, West Germany. The Company’s equity in the net earnings of Toepfer since the acquisition date is included in other income.” Address: Decatur, Illinois.

1010. Aarons, Theodore. 1983. Infringement against Schapiro patent #3,988,511, “Preparation of Water Dispersible Protein Products.” Berkeley, California. 3 p. Unpublished manuscript.

• **Summary:** Instantized (lecithinated) [isolated] soy protein is widely sold at retail stores. The three major manufacturers are ADM, Grain Processing Corp., and Ralston Purina (makers of Supro 630 and 660, which contain 91% protein and 0.5% lecithin). Ralston had an estimated 75% of the market in 1976. The market size in the USA is estimated to be at least 20 million lb a year. In 1983 Shaklee retailed 7 million lb, Fillmore Foods 4 million and Natural Formula 0.5 million. Other large retailers include General Nutrition, ABCO Labs (Concord, California), Winning Labs (Costa Mesa, CA), Shamrock Labs (Dublin, CA), Bestline products (Elk Grove, Illinois), National Vitamin (Hollister, CA), etc.

The Ralston Purina Annual Report (30 Sept. 1982) stated that the company’s sales of soy protein were \$144 million.

According to U.S. Dept. of Commerce figures, approximately 550 million lb of edible soy protein meal were produced in 1983; 44% of this meal is protein. Address: Protein Research Assoc., Berkeley, California.

1011. **Product Name:** MacSoy TVP?

**Manufacturer's Name:** MacSoy Lanka Pvt. Ltd. (Importer). Made in England.  
**Manufacturer's Address:** 51 Layards Rd., Colombo 5, Sri Lanka.

**Date of Introduction:** 1983.

**How Stored:** Shelf stable.

**New Product–Documentation:** Form filled out by Jane Gleason. 1988. She met with Mr. Davis Philip, Director 25 March 1988. The managing director is Wesley Philip. This company started in 1983, initially entirely with soy food products. Then they diversified. Davis Philip is looking for sources of TVP as the best quality English TVP is now priced too high. He is planning to produce TVP in Sri Lanka. "Initially the beans will be imported to ensure the most suitable strain, then later they can be grown here. Cost of the project: Rs. 4 million, half private, half government. He wants information of TVP equipment."

The company presently uses 1,000 kg/month of soybeans (purchased from a private source for Rs. 7/50–10/00 per kg) and 100 kg/month of soy flour (purchased from SFRC at Gannoruwa for Rs. 16/kg). Production is now stable. "Consumers purchase the product for nutrition and economy, especially low income earners, vegetarians, and those who have to take low cholesterol foods. Soy sauce and soya noodles are sold to all income earners."

1012. **Product Name:** MacSoy Soya Cafe.

**Manufacturer's Name:** MacSoy Lanka Pvt. Ltd.  
**Manufacturer's Address:** 51 Layards Rd., Colombo 5, Sri Lanka.

**Date of Introduction:** 1983.

**Ingredients:** (Not given on label).

**Wt/Vol., Packaging, Price:** 100 gm box. Retails for Rs. 7/5.

**How Stored:** Shelf stable.

**New Product–Documentation:** Form filled out by Jane Gleason. In March 1988 she talked with Mr. Davis Philip, the director. The managing director is Wesley Philip. The company began producing soyfood products in 1983, then diversified. Davis Philip is looking for sources of TVP as the best quality English TVP is now priced too high. He is planning to produce TVP in Sri Lanka. "Initially the beans will be imported to insure the most suitable strain, then later they can be grown here." Cost of the project: Rs. 4 million, half private, half government. He wants information on TVP machinery.

The company presently uses 1000 kg/month of soybeans (purchased from a private source for Rs. 7/50–10/00 per kg) and 100 kg/month of soy flour (purchased from SFRC at Gannoruwa for Rs. 16/kg). Production is now stable. "Consumers purchase the product for nutrition and economy, especially low income earners, vegetarians, and those who have to take low cholesterol foods. Soy sauce and soya noodles are sold to all income earners."

Note that this soy sauce is made for MacSoy by Eastern Food Products.

1013. **Product Name:** MacSoy Noodles. High Protein. Fortified with Soya.

**Manufacturer's Name:** MacSoy Lanka Pvt. Ltd.  
**Manufacturer's Address:** 51 Layards Rd., Colombo 5, Sri Lanka.

**Date of Introduction:** 1983.

**Ingredients:** Wheat flour (80%), soy flour (20%).

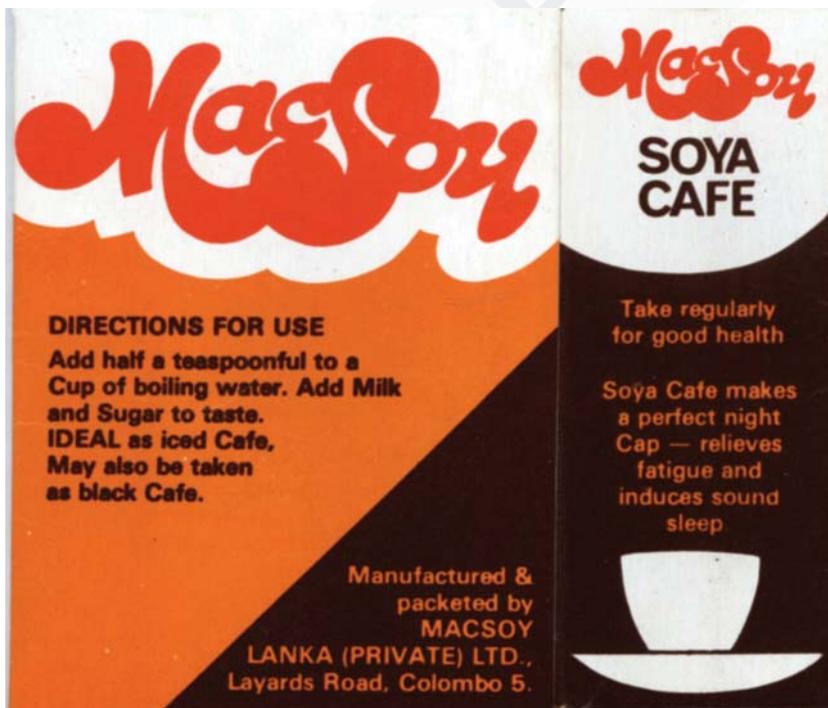

**Wt/Vol., Packaging, Price:** 350 gm plastic bag retails for Rs. 7/50.

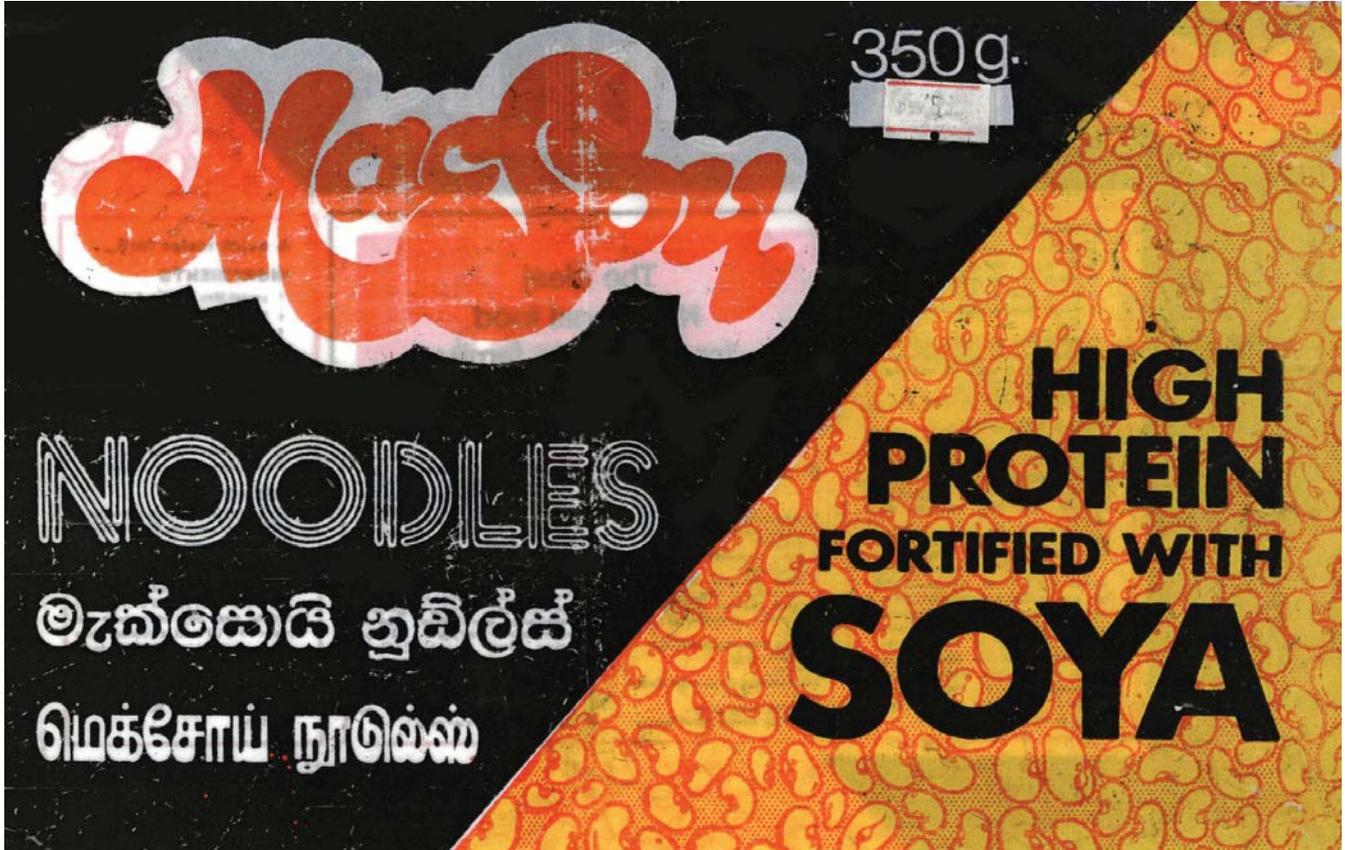

**How Stored:** Shelf stable.

**New Product–Documentation:** See next page. Form filled out by Jane Gleason. 1988. She met with Mr. Davis Philip, Director 25 March 1988. This company started in 1983, initially entirely with soy food products. In addition to Noodles and Soya Cafe, the company markets Mrs. Liu's Soy Sauce under a MacSoy Label, and an imported TVP and soya oil. Label for Noodles. 1983. 12 by 8 inch plastic bag. Dark brown and orange on white. In English and Sinhalese. "The Ideal Nutritional Food for the Whole Family." Gives a recipe with meat, vegetables, and soy sauce.

1014. **Product Name:** Ultra-Soy (Textured Soy Flour), and Textured Soy Protein.

**Manufacturer's Name:** PMS Foods, Inc.

**Manufacturer's Address:** 2701 E. 11th St., P.O. Box 1099, Hutchinson, KS 67504.

**Date of Introduction:** 1983.

**New Product–Documentation:** Soya Bluebook. 1987. p. 74. Note: PMS Food Inc. was formerly the part of Farmland and Far-Mar-Co that made TVP.

1015. **Product Name:** [Roasted Soybeans].

**Manufacturer's Name:** Societe Industrielle des Oleagineux (SIO).

**Manufacturer's Address:** Direction Proteines, Groupe Lesieur, 122 Av. du General De Gaulle, Boulogne-Billancourt, 92103, France. Phone: (1) 604 30 32.

**Date of Introduction:** 1983.

**New Product–Documentation:** Soya Bluebook. 1983. p. 77. Contact: Guy Deneck, Proteins Director.

1016. Driver, Christopher. 1983. *The British at table, 1940-1980*. London: Chatto & Windus–The Hogarth Press. xi + 212 p. Illust. Index. 23 cm. [220\* + 169 endnotes]

• **Summary:** Chapter 2, titled “The seven lean years,” discusses the period from 1941 to 1947 when food was rationed during World War II in Britain. An excerpt from the diary of Vere Hodgson for 7 May 1944 (p. 16) states: “I have an order with the Dairy for a pound of sausage... of soya bean flour.”

Chapter 6, “Tastes of Britain: the age of choice” includes

long discussions (p. 99-107) of the rise of vegetarianism and health / whole foods. Since “the free market in ‘flesh food’ returned to Britain it has been clear that shortages converted fewer people to vegetarianism than abundance does.”

“The distinction between vegetarianism and whole food is fine.” Almost all health food restaurants are vegetarian, but not all vegetarian restaurants serve health food. “By 1980, the profession of vegetarianism no longer sounded like the equivalent of wearing sackcloth and ashes.” Also discusses TVP and Worcestershire sauce (p. 99), “plant milk” and single cell proteins (p. 137-38), “TVP (texturised vegetable protein),” “meat extenders or substitutes of this kind, chiefly derived from the soy-bean,” “march up to Soho Chinatown and sit down to a dish of beancurd [tofu] made from the same soybean staple by a cottage industry process ecologically superior to the multi-million pound machinery and vast energy input that western culture tolerates for the sake of making fake steak,” “The first tentative flights of artificial protein may seem a long way from the precious mating calls of contemporary British foodies...” (p. 139).

World population continues to grow, and global food production must grow with it. “At some point not very far along that road, the role played in human diet by comparatively inefficient protein conversion machines such as cows, pigs and chickens, however intensively bred and farmed, would have to be diminished or abandoned. Here and there, the animals concerned would be relegated

to agricultural zoos, to be gazed at with wild surmises by people who obtained their nourishment chiefly from the protein output of those industrious worms, bugs, and funguses, appropriately flavored.”

Contains an interesting bibliography and endnotes.  
Address: England.

1017. Migliaccio, Janice Cook. 1983. *Follow Your Heart's vegetarian soup cookbook*. Santa Barbara, California: Woodbridge Press. 128 p. Illust. 24 cm.

• **Summary:** Contains more than 50 delicious vegetarian soups developed by the author and other creative soupmakers at Follow Your Heart's famous natural foods restaurants—and served to more than 1 million customers. Follow Your Heart began in 1970, founded by Michael Besancon, as a small vegetarian lunch counter in the corner of a natural foods store in Canoga Park, California. In 1973, Follow Your Heart grew to include the store as well. In 1976 it expanded and moved to a much larger store a few blocks away. In Sept. 1982 it opened a second store (without a restaurant) in Santa Barbara, California. Today Follow Your Heart employs about 100 people, all vegetarians. The head store is at 21825 Sherman Way, Canoga Park, California 91303.

The seasonings tamari and Dr. Bronner's "Balanced Protein Seasoning" (p. 17-18) and the "special food items" Bakon Bits, miso, textured vegetable protein (TVP, p. 24-25) are described and used in a number of recipes. Soy-related recipes include: Miso vegetable soup (with miso and tofu, p. 97). Oriental vegetable soup (with tofu and tamari, p. 103-05). Sweet and Sour Oriental Vegetable (with tofu and tamari, p. 120-21). Address: Southern California.

1018. Sams, Craig; Sams, Ann. 1983. *The brown rice cookbook: A selection of delicious, wholesome recipes*. New York and England: Thorsons Publishers Inc. 128 p. Illust. by Clive Birch. Index. 20 cm.

• **Summary:** Page 14 gives a description of soya sauce, shoyu, tamari, and miso. Soy-related recipes include: Miso soup with brown rice (p. 30). Miso sauce (p. 54). Tamari sauce (p. 55). Miso rice (p. 125). Craig Sams has also written a book titled *About Macrobiotics*.

"In the early 1960's many people in Europe and the U.S.A. were attracted to the ideas of Georges Ohsawa, a Japanese who had rediscovered the importance of dietary balance in traditional Eastern medicine." He taught macrobiotics, a dietary system in which brown rice plays a major role. "In the world of pop music the expression 'brown rice sandwiches' was used in association with the musicians who adopted wholefood diets." Then in the mid-1970s came the bran boom with an upsurge of interest in sources of dietary fibre, including brown rice.

Why did brown rice ever lose its once pre-eminent position to white rice? "The answer lies partly in the fact that while white rice will keep almost indefinitely, brown rice

should be fresh. It attracts insects once it has been husked, so it needs more care in storage and more attention to efficient distribution." White rice also cooks more quickly.

"Pythagoras would not let his students eat beans because he believed they inhibited the higher intellectual processes. However, it is likely that this was because the prevalent bean of classical Greece was the fava bean—harmless in itself but with a hard brown skin which, if regularly eaten, can lead to favism, symptoms of which are deterioration of vision and mental faculties."

1019. Sirtori, C.R.; Noseda, G.; Descovich, G.C. 1983. Studies on the use of a soybean protein diet for the management of human hyperlipoproteinemias. In: M.J. Gibney and D. Kritchevsky, eds. 1983. *Animal and Vegetable Proteins in Lipid Metabolism and Atherosclerosis*. New York, NY: Alan R. Liss, Inc. ix + 177 p. See p. 135-48. (Current Topics in Nutrition and Disease, Vol. 8).

• **Summary:** In 1972 at the Center for the Study of Hyperlipidemias at the University of Milano, early attempts were initiated to replace animal proteins in a diet with textured vegetable proteins (TVP) from soybean. The only purpose at that time of the substitution was to find a dietary substitute which would allow raising the ratio of polyunsaturated to saturated fatty acids beyond the limits reached by diets with animal proteins.

These 10-year old studies conducted on "hypocholesterolemic volunteers clearly showed that the simple substitution of animal proteins with TVP resulted in a significant decrease of plasma total and low-density lipoprotein levels." Address: 1. Center E. Grossi Paoletti, Univ. of Milan, Milan, Italy; 2. Beata Vergine Hospital, Mendrisio, Switzerland; 3. Il Medical Clinic, Univ. of Bologna, Italy.

1020. *Food Engineering*. 1984. These tasty frozen desserts can be high protein: Frozen desserts are reformulated to double the protein at much less cost. You can cut calories, too. And with good taste. 56(1):49. Jan.

• **Summary:** Dr. L. Steven Young is Manager of Product Applications for ADM Foods (1825 N. Laramie, Chicago, Illinois 60639). He has used Ardex Isolated Soy Proteins and Cornsweet 55 (55% high fructose corn syrup) and vegetable oils to replace the milk protein, lactose and sucrose, and butterfat in traditional ice cream. The new products can have twice the protein of standard ice cream at less cost. A good example of how ADM's formulations can succeed is in the Trinidad School Lunch Program. Young reports: "They're using a product that is actually a soy protein fortified milk made with MSNF (milk solids not fat), vegetable oil, isolate, and sweetener." This lower cost product has all the nutrition of milk and twice the protein.

1021. Hatch Natural Products. 1984. Catalog and price list.

746 Germanna Highway, Culpepper, VA 22701. 76 p. 28 cm.  
 • **Summary:** This company distributes natural foods from 48 manufacturers including Arrowhead Mills, Chico-San Inc., Eden Foods Inc., Edward and Sons Trading Co., Fantastic Foods, Great Eastern Sun, Kingdom Foods, Living Farms, Love Natural Foods, Mitoku (Great Eastern Sun), Virginia Soyworks, and Westbrae Natural. The company was founded by Mildred and Ira Hatch; Its history is given on page 1. The ingredients in each product are listed. They carry soybeans (p. 16-17), dinner mixes with TVP (p. 31-32), imported Japanese miso and soy sauce (p. 37-43), soybean oil (from Arrowhead Mills p. 60-61).

Concerning so-called “cold pressed” oils the catalog states: “The words ‘cold pressed’ on many oil labels is generally thought to mean that they contain natural oils processed by the low temperature and pressure method discussed above. But this is totally mistaken. The words ‘cold pressed’ are absolutely meaningless when used as an indication of quality. They have no bearing on how the oil was extracted or at what temperature it was removed. They appear only as a marketing aid which just confuses and misleads the consumer and may be found on oils that are chemically extracted, bleached, and deodorized. Reputable suppliers refuse to use the term on their labels.

“Oils are extracted by two methods: pressure and chemical solvents. Pressing is normally done by what is called an expeller press. Temperatures produced seldom fall below the 140° to 160°F range. Still, the oil produced at these temperatures loses little of its flavor and nutrition.”

Concerning soybean oil: “Soy oil’s flavor is the strongest of all the oils, and many people find the unrefined product unbearable. Its flavor is best described as fishy or painty and lacks stability.” Address: Culpepper, Virginia. Phone: (703) 825-4302.

1022. Daems, Chr. 1984. Re: Alpro’s commercial soymilk products. Letter to William Shurtleff at Soyfoods Center, Feb. 7. 1 p. Typed, with signature on letterhead. [1 ref]  
 • **Summary:** Alpro started commercial production of soymilk in 1979 at a plant in Izegem with a capacity of 6,000 liters/hour. Soymilk production in their new plant in Ghent is expected to start in May 1984. They have 3 brands of their own: Soyamel, Alpro, and Provamel. They also sell their soymilk to several companies who use their own brand. The best known are DE-VAU-GE in Germany and Granose Foods in England. They have recently started selling to Health Valley in California under the latter’s brand.

They sold a turnkey soymilk plant to a company in Madagascar, which started making soymilk in Jan. 1984. They were attempting to sell compact soymilk plants with capacities of 2,000 to 4,000 liters/hour to other countries. Address: Alpro, Zuidkaai 33, B-8700 Izegem, Belgium.

1023. Calvert, Francis E. 1984. Work with Ford and Drackett

on soybeans (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 19. 3 p. transcript.

• **Summary:** Francis (Frank) Calvert was first introduced to soybeans after he went to Detroit. In about 1931, Ford arrived at the Chemical Plant in Greenfield Village (also a lab and a pilot plant), with a 20 pound sack of soybeans. He threw them on the workbench and said, “More people eat these than anything else. There must be something awfully good about them. Why don’t you fellows find out what it is.” They were already doing research on agricultural wastes and chemurgy, on almost every crop you could think of.

Their first problem was getting soybeans. There were none available. Within the next year or two they planted thousands of acres themselves. Ford plowed up a big field and planted quarter acre plots with different varieties. It was an enormous quantity. Even though they didn’t know what to do with them, it was Ford’s style. He did nothing small. They raised hundreds of quarter acre plots, testing different varieties.

Dr. Edsel Ruddiman, after whom Edsel Ford was named, was a nutritionist and pharmacologist. He ran the food laboratory and made lots of the foods served in the Ford cafeteria to Ford employees. They were first sold as samples, but didn’t sell well because of the flavor. From about 1932-33, the products included soy milk, soy cheeses, and soy ice cream and sherbets. Soynuts were also made in a counter-current fryer in rectangular buckets on a chain. The employees ate most of the products and tourists consumed some. Food was also served from the kitchen at the Wayside Inn in the village. Products were provided as a snack, but most were given as samples, and a few were sold.

Both Atkinson and Calvert, research chemists, reported to Boyer. Calvert left Ford in 1938 and went to Drackett. Boyer and Atkinson left later to do work on soy-based plastics.

ADM bought The Drackett soybean crushing plant in about 1957. Calvert went with ADM for about 5 years, until 1960-61. From 1962-74, he worked for Ralston Purina. In December 1958 Ralston purchased Procter & Gamble’s plant in Louisville, Kentucky, and were already somewhat involved with isolates; they began working with foods after 1962.

Ralston went into dietary products and infant formulas in about 1963-64, supplying soy protein isolates to most of the infant formula manufacturers such as Miles and Wyeth Labs. Ralston, Loma Linda and Worthington were the biggest suppliers of infant formula from 1962-74.

Don Walker, Vice President of Ralston Purina, took a strong interest in soy protein. Ralston took the lead primarily because of the strong interest and leadership of Hal Dean, then Chairman of the Board and CEO. Dean was the key motivating force from the early 1960s. He firmly believed in and supported soy protein development.

Ford was the father of the soybean industry in the U.S.

He had an impact just through his interest in soybeans. He planted soybeans and promoted and merchandised them in the same way he promoted the industrial barn at the World's Fair in Chicago. Ford set up an extraction plant and actually extracted oil and molded gearshift balls at the Industrial Barn at the Fair. People couldn't believe their eyes! Ford was the single largest soybean grower in the U.S. at that time.

Note: Frank Calvert passed away in about 1986.

Address: 1513 Northlin, Kirkwood, Missouri 63122. Phone: 314-822-3187.

1024. **Product Name:** Granose Soya Dessert (Vanilla, or Chocolate).

**Manufacturer's Name:** Granose Foods Ltd. (Marketer). Made in Belgium by Alpro.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1984 February.

**New Product–Documentation:** Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by DE-VAU-GE, was introduced in 1981 in Vanilla, Chocolate, Strawberry, and Banana flavors. The desserts were made by Alpro in Feb. 1984.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. The desserts were first made for Granose by Alpro in Feb. 1984 in Vanilla and Chocolate flavors.

1025. Khan, L.M.; Hanna, M.A. 1984. Expression of soybean oil. *Transactions of the ASAE (American Society of Agricultural Engineers)* 27(1):190-94. Jan/Feb. [7 ref]

• **Summary:** A maximum oil yield of 85.71% was obtained from ADM soybean flakes. The Brady crop cooker flakes showed satisfactory oil yields (60%). Address: Agricultural Engineering Dep., Univ. of Nebraska, Lincoln.

1026. Shurtleff, William; Aoyagi, Akiko. 1984. Brief history of Alpro in Belgium (Document part). In: Shurtleff and Aoyagi. 1984. *Soy milk Industry and Market: Worldwide and Country by Country Analysis*. Vol. 1. 177 p. See p. 122-23.

• **Summary:** "In 1975 Alpro, the Protein Division of the Vandemoortele group started making soymilk; they decided to introduce alternative, vegetable proteins to developing countries. This Group, established in 1879, by the 1980s ranked as one of Europe's largest food processing companies in the fields of edible oils and fats, and protein foods. In 1978 the Group employed over 1,700 people and had annual sales of over \$600 million. In 1979 Alpro started commercial production of soymilk at a plant in Izegem with a capacity of 6,000 liters/hour. They also sold a turnkey soymilk plant to Madagascar (it started production in January 1984) and were attempting to sell compact soymilk plants with capacities from 4,000 to 8,000 liters/hour to other countries. In May 1984 Alpro opened a new soymilk plant at Ghent, reputed to be the largest in the world. The 100% natural soymilk is

made from whole soybeans, not soy protein isolates, and is sold under three brands: Soyamel, Alpro, and Provamel. Alpro will look to the U.S. and Asia for additional markets for this product, since the European market is small. They plan to focus on areas with protein shortages or lactose intolerance. In October 1983 an Alpro representative visited the USA and lined up Health Valley in Los Angeles as a master distributor. In early 1984 Alpro got distribution on the East Coast of the USA. Alpro sells quite a bit of its soymilk to other European food companies, which sell it under their individual brands. DE-VAU-GE in West Germany and Granose in England, for example, sell plain and carob soymilks (made by Alpro) in 500 ml packs. The main figures behind Alpro are Philip Vandemoortele (Managing Director) and Christian Daems (Marketing Manager)." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1027. Wolf, Walter J. 1984. The soy protein isolate industry in America in 1983 (Interview). *SoyaScan Notes*. March 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Dr. Wolf talked with Dan Hooten who is now with Land O'Lakes, but who used to be with Dawson Mills. Land O'Lakes bought Dawson Mills several years ago. The following are Hooten's estimates of the capacities of America's largest isolate manufacturers in 1983:

Ralston Purina, 70 million lb/year. The company has 3 plants: Prior, Oklahoma, 30 million lb/year. Louisville, Kentucky, 20 million lb/year. And Memphis, Tennessee, 20 million lb/year.

ADM (Archer Daniels Midland), 20-25 million lb/year. Grain Processing Corp., 14-15 million lb/year.

Thus the total capacity of the top 3 U.S. companies is 104-110 million lb/year (47,200 to 49,800 metric tons/year). Some of these isolate products are exported. A.E. Staley Mfg. Co. began to make isolates about 1 year ago. Hooten does not know their capacity. Address: Northern Regional Research Center, Peoria, Illinois.

1028. Shurtleff, William; Aoyagi, Akiko. 1984. History of soy protein concentrates, isolates, and textured soy protein products. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 25 p. March 4. Unpublished typescript. Available online at [www.soyinfocenter.com](http://www.soyinfocenter.com).

• **Summary:** [www.soyinfocenter.com/HSS/protein\\_concentrates.php](http://www.soyinfocenter.com/HSS/protein_concentrates.php)

A comprehensive history of the subject. Contents: Definition of types of products. Part I: History of modern soy protein products from origin to 1964. Soy protein isolate: Tofu, Nagel in New York 1903, Beltzer in 1911, Ajinomoto in 1919, Cone and Brown patent in 1928, Glidden (first plant in U.S. for production of industrial grade soy protein isolate) in 1935, first study of use of soy isolates in food (Woodruff at University of Illinois, 1938), Glidden first company in the West to produce a soy protein isolate for use in food (1939,

enzyme-modified), Glidden first with large-scale production of non-enzyme modified isolates (1957), Worthington Foods introduced Soyamel in 1952 (first soymilk based on isolate). Soy protein concentrates: First developed and introduced in Germany in 1925, first commercial food-grade concentrates and first patent from Griffith Laboratories in 1959. Textured soy protein products: Developed in China 1,000 years ago, made from tofu or yuba, earliest Western meat analogs developed by John Harvey Kellogg about 1896 (without soy), first synthetic industrial protein fiber (Lanital, made from casein) introduced in Italy 1936, first industrial (non-food) soy protein fibers in 1938 from Robert Boyer of Ford Motor Co. (used for upholstery), Boyer got patent for use in food (1951), rights purchased by Worthington, Dr. Harry Miller's soya loaf in 1939, Worthington first to produce a meat analog based on spun soy protein fibers in 1960, textured soy flour (TSP or TVP) introduced as food ingredient in U.S. in 1964.

Part II: History of modern soy protein products in the U.S. from 1965 to 1981. 1964 Belden report from Harvard Business School *Protein Paradox*. Commercial Protein Foods Studies Program of the U.S. Agency for International Development (AID) encouraged U.S. firms to develop protein foods for the Third World in 1967. General Mills Bac-O's test marketed 1966. Producers. February 1971 breakthrough when USDA authorized use of TVP in school lunch programs. 1972 *Soybeans. Chemistry and Technology*, edited by Smith and Circle, contained all the research on nutrition and processing up to that time. 1973 high beef prices led to beef-soy retail blends. Appearance of TSP cookbooks, starting in 1971. First World Soy Protein Conference held in Munich, Germany, in 1973. In 1974 Miles Laboratories/Worthington Foods introduced Morningstar Farms meat analogs, the first soy protein meat analog entrees marketed to mainstream America. Textured soy concentrates and other concentrate developments. New developments with isolates. New flavorings. New textured soy flour development. 1978 Keystone Conference on soy protein and human nutrition sponsored by Ralston Purina. Problems with government regulation.

Part III: History of modern soy protein products outside the U.S. and Europe (1960-1981): Japan. China. Other Asia: Philippines, India, Sri Lanka. Latin America: Colombia, Mexico. Address: Lafayette, California. Phone: 415-283-2991.

1029. *Wall Street Journal*. 1984. Archer Daniels to acquire Illinois soybean plant. March 30. p. 40, col. 4.

• **Summary:** "Archer-Daniels-Midland Co. said it has agreed to purchase a soybean processing plant in Taylorville, Illinois, from Continental Grain Co. The value of the transaction wasn't disclosed by the processing concern.

"ADM said it will operate the plant, which includes a 3.5 million bushel elevator complex, as a grain storage

facility. Continental Grain previously said it would close the 90-employee plant by the end of the month because of sluggish demand for soybean products."

Note: In 1929 Funk Bros. Seed Co. bought a feed mill and elevator at Taylorville, Illinois, and began operation in 1930. It was later acquired by Allied Mills.

1030. Beversdorf, Wally D. 1984. Soybean breeding developments and new varieties [in Canada]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 36-48.

• **Summary:** A similar soybean symposium held in Sept. 1973 at Ridgetown Agricultural College of Agricultural Technology (Ridgetown, Ontario) played an important role in the development of soybean breeding in Canada. During the past 10 years, soybean production in Canada has more than doubled, thanks in large part to improvement in varieties, but also to improved management practices, and increasing demand for soybean products. Since 1973 early-maturing varieties have greatly expanded the area adaptable to growing soybeans. One of the major successes in soybean breeding during the past decade has involved the improved tolerance of soybeans to phytophthora root rots.

Traditionally 5 counties have produced most of the soybeans in Ontario and in Canada. Since 1973 soybean production outside this 5-county area has grown by 180%. Canadian varieties are often defined by the number of heat units (HU's) they require to mature properly. Certain "soybean Heat Unit Areas" are also defined; the best known are the 2600, 2800, 3100, and 3400 Heat Unit Areas. The southern tip of Ontario gets about 3100 to 3500 heat units. The 2600 soybean Heat Unit Area is generally the coldest and farthest north, and soybean yields from this area are generally lower than from warmer areas, in part because the number of days to maturity is less. In 1974 only 3 soybean varieties were recommended by OMAF (Ontario Ministry of Agriculture and Food, Publication 296) for the 2600 Heat Unit Area: Altona, Vansoy, and Hardome. But in 1984 six varieties were recommended for this Heat Unit Area: Maple Presto, Maple Amber, McCall, Maple Arrow, Bicentennial, and Evans.

All soybean varieties recommended by OMAF were developed by public institutions. The first privately developed variety, XK505 (from Maple Leaf Mills, Ltd.) appeared as a recommended variety in 1975. In 1984, 24 of the 35 varieties recommended by OMAF were developed in the private sector, by six companies breeding or evaluating soybean varieties in Ontario.

Future prospects for cultivar development: Progress in developing sources of low linolenic acid soybean oil suggests that within 10 years soybean varieties will be able to produce oil that no longer requires hydrogenation and winterization for salad oils. "This should result in reduced

refining costs and the elimination of *trans* isomers of fatty acids, which have been implicated in elevated blood serum cholesterol.” Address: Crop Science Dep., Univ. of Guelph, Guelph, ONT, Canada.

1031. Caty, Thérèse. 1984. Dossier: Le soja [Dossier on soyfoods in France]. *France Dietétique*. Feb/March. p. 24-31. [Fre]

• **Summary:** This extremely interesting article gives an introduction to the various soyfoods, then list all known soyfoods products sold in France, complete with the brand, product name, ingredients, nutritional composition, weight or volume, and packaging. The last half of the paper is a French translation of a paper titled “The American boom in traditional soy products,” presented by Richard Leviton on 11 Oct. 1983 at a conference in Parma, Italy.

The following products, manufacturers/marketers (and brands) are listed: 1. Whole soybeans and flour: Lima (Organic soybeans, organic whole soy flour). 2. Textured soya: Charusse, Soyavit. 3. Convenience prepared foods for vegetarians: Pural (Frika Vita, Sojafleisch, Pasta Chuta, Sojavite, Soja Mignon, Sojanelles, Sojanelles épicées), Hera (Croc Meal, Herameal, Végémeal, Potage), Fritini (Aux herbes). 4. Liquid soymilk: Celnat (Soyo), Lima, Pural (Sojlactis), Sapov (Sojal), Provamel (Soya Drink, Soya dessert choco [a pudding, made by Alpro in Belgium]), Naturvit (Soyalet, Soyalet sans sucre). 5. Tofu: Le Bol en Bois (Koya-dofu), Soy (Tofu, Croque Tofu [6 types]). 6. Tempeh: Traditions du Grain. 7. Miso: Celnat (Brown rice miso imported from Japan, Barley miso), Lima (Hatcho miso, barley miso). 8. Soy sauce: Celnat (Shoyou), Lima (Tamari, Tamari Shoyu). Address: France.

1032. Davis, C. Murray. 1984. The state of the soybean crushing industry [in Canada]. In: Ontario Soya-Bean Growers’ Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 103-12. Held March 18-20.

• **Summary:** In Canada, “the largest single soybean crusher is Victory Soya Mills, located in Toronto, rated capacity 1,350 tpd (tons per day) or 480,000 tpy (tons per year). Next is Maple Leaf/Monarch at Windsor, rated at 1,300 tpd or 462,000 tpy. Finally, Canadian Vegetable Oil Products in Hamilton, rated at 1,200 tpd or 1,367,000 tons/year.”

“The soybean crushing industry created with private capital, until recently, progressive and profitable all without one dollar of government involvement, has been ignored, abused and generally kicked from pillar to post for the last 5 years.” This industry has come under tremendous pressure from and been seriously damaged by market domination of canola oil financed through massive federal and provincial government subsidies. “Fifteen years ago, rapeseed oil was unknown—today, Canola controls almost 55% of the refined / deodorised vegetable oil in Canada.”

The most blatant subsidy is the freight rate structure that allows western Canadian oil access to eastern Canadian consumption. The Crow Bill (which allows canola oil reduced and subsidised freight rates to Thunder Bay, in western Ontario) and the Minister of Transport threaten to shut down Ontario’s soybean crushing industry. The author urges abolition of all subsidies. “Let the marketplace decide. We currently have a heavily subsidized Canola industry losing enormous amounts of money at the expense of a self-supporting, and up until recently, profitable soybean industry. This is insanity. Compounding this are overpriced Canadian soybeans relative to soybean costs for competitive U.S. crushers.”

The words “soyoil” (p. 3) and “soymeal” (p. 6) are mentioned.

Note: The author began his career at Victory Soya Mills in 1962. Address: Manager of Commodity Operations, Victory Soya Mills, Toronto, ONT, Canada.

1033. Rennie, J. Clare. 1984. A look at the progress of soybeans [in Canada] in the last decade. In: Ontario Soya-Bean Growers’ Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 22-35.

• **Summary:** “In 1893, Professor C.A. Zavitz, crop specialist at the Ontario Agricultural College, grew probably the first field of soybeans, as a replacement for cow peas which had failed, and set in motion a 30-year variety testing program for Ontario farmers. Canada’s first new variety, OAC 211, was introduced in 1923; this was followed in the 1930’s by three early maturing ones, A.K., Mandarin, and Capital, introduced by Dr. Dimmock of the Harrow Dominion Experimental Station. A colleague, Dr. Cass Owen, was the originator of Harosoy, introduced in 1951. It quickly became a leading Ontario variety as well as the main one grown in the American soybean belt for many years...”

“However, soybeans were not a major crop in Ontario, or for that matter in the USA, until the Second World War. What was grown was largely for green manure and forage. The statistics on soybeans in Ontario were not even given separately until 1942. The predominance of linseed meal and cottonseed meal and oil was too strong to be easily overcome by another crop. The wartime demand for an easily available source of vegetable oil and protein gave soybean production its first big boost...”

“In Ontario, the production figures for the last decade show... sharp increases. Aside from demand which made it economically attractive for farmers to grow soybeans, this increase has been made possible by a breeding and management research program to extend Ontario’s soybean area and to maintain yields at competitive levels. Until the late 1970’s, virtually all of the province’s soybeans were grown in Essex, Kent, Lambton, Middlesex, and Elgin Counties. With new early maturing, high-yielding varieties

adapted to the growing conditions in Central, Western and Eastern Ontario, production in these areas is increasing rapidly. The number of hectares planted has risen from 4,010 ha in 1972 to 61,500 ha in 1982...

“The Ontario breeding program has emphasized not only early maturity and high yields, but also resistance to disease and to pod shattering, and good nodulation capabilities. Under the direction, since 1976, of Dr. Wally Beversdorf... the program is rapidly coming of age. Maple Arrow, a high-yielding variety adapted to 2,600 heat unit areas, was developed at the Central Experimental Farm, Ottawa. Its introduction in 1976 was the shot in the arm needed to expand the soybean-growing area, and the OMAF/Guelph program is aimed at continuing this expansion...

“In the last decade, we have largely overcome nodulation problems, with the introduction of granular inoculants in the mid-1970’s. These inoculants, which have proven particularly effective in first-time soybean fields...

“The introduction of a flexible floating cutterbar has further cut harvest losses, which had been as high as 30 percent with rigid cutterbars and conventional combines...

“With the establishment of the [Maple Leaf Monarch] crushing facility at Windsor [in July 1979], the province’s daily crushing capacity has increased by 300 tonnes per day, and the three crushing plants at Toronto, Hamilton, and Windsor are crushing about 35 million bushels of soybeans each year.”

Table 4 shows that in 1972 only 9,909 acres (2.5% of the total Ontario province planting) took place outside the traditional five-county region. By 1982 this had increased to 151,964 acres (17% of the total planting)—largely due to the development of new short-season varieties in the “Maple” series, which matured in 100-108 days at 2200 to 2550 heat units. Address: Asst. Deputy Minister of Technology and Field Services, Ontario Ministry of Agriculture and Food (OMAF).

1034. Mjeda, Luka. 1984. Soyfoods and vegetarianism in Yugoslavia (Interview). *SoyaScan Notes*. May 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Luka, who is a vegetarian, has arranged for a translation of *The Book of Tofu* by Shurtleff and Aoyagi into Yugoslavian. There is a good book on vegetarian cooking in Yugoslavia written by Ljubo Grubor of Zagreb. About the only soy products available in Yugoslavian food stores are whole soybeans. There are about 120 natural food stores in the country, mostly in the western part. They sell herbs, cheeses, milk, and honey. He has never heard of TVP, or of the use of soy flour in bread.

Yugoslavia is the most liberal and capitalistic country in Eastern Europe. There is a lot of self-management. In 1951 the first factory was given to the workers and in 1953 all factories were given to the workers. Address: Photographer-Journalist, Skokov Prilaz 2, 41020 Zagreb, Yugoslavia.

Phone: 041/672-393.

1035. **Product Name:** SoyBoy Soymilk Ices (Non-Dairy Ice Cream).

**Manufacturer’s Name:** Regular Tofu Company Ltd. Made in Leicester, England, by Rossa Ltd.

**Manufacturer’s Address:** 16 The Halcroft, Syston, Leicester, England LE7 8LD.

**Date of Introduction:** 1984 May.

**How Stored:** Frozen.

**New Product–Documentation:** Letter from John Holt. 1987. Aug. 19. “First introduced here approx. May 1984.”

1036. **Product Name:** Heraveg Vegetarian Main Meals [Beef Style, Mince, or Chicken Style].

**Manufacturer’s Name:** Haldane Foods Ltd.

**Manufacturer’s Address:** Units 16 & 20, Long Furrow Trading Estate, East Goscote, Leicester LE4 8XJ England.

**Date of Introduction:** 1984 June.

**How Stored:** Shelf stable.

**New Product–Documentation:** Food Report (Lehmann). 1984. June. Advertised in health food magazines. In dry form, packed in cartons, they are claimed to produce no soya aftertaste.

Note: This is the earliest known commercial soy product made by Haldane Foods Ltd.

1037. Leneman, Leah. 1984. The foods that are soya good. *Vegetarian (The)*. May/June. p. 12.

• **Summary:** “Soya foods are playing an increasingly important role in the American health food movement, a positive trend which hopefully will be echoed in the U.K. By soya foods I do not mean TVP (which has never really caught on in a big way in the States), but tofu (soya bean curd) and tempeh. These are low-cost, low-technology products simple enough to make in your kitchen.” In America the movement away from dairy products is for reasons of health rather than ethics. In Britain, ethics come first. Cholesterol is the real bugbear to Americans. In New York the author tasted a soft-serve tofu ice cream with a “creamy texture I would not have believed possible in a dairyless product.”

1038. **Product Name:** SoyBoy Tofu [Regular, or Silken].

**Manufacturer’s Name:** Regular Tofu Company Ltd.

**Manufacturer’s Address:** 16 The Halcroft, Syston, Leicester, England LE7 8LD.

**Date of Introduction:** 1984 June.

**New Product–Documentation:** Ad in *The Vegetarian* (England). May/June. p. 12.

1039. **Product Name:** SoyBoy Tofu Burger [Savoury, or Chili Flavour].

**Manufacturer’s Name:** Regular Tofu Company Ltd.

**Manufacturer's Address:** 16 The Halcroft, Syston, Leicester, England LE7 8LD.

**Date of Introduction:** 1984 June.

**New Product–Documentation:** Ad in *The Vegetarian* (England). May/June. p. 12.

1040. **Product Name:** SoyBoy SoySage (Meatless Sausage).

**Manufacturer's Name:** Regular Tofu Company Ltd.

**Manufacturer's Address:** 16 The Halcroft, Syston, Leicester, England LE7 8LD.

**Date of Introduction:** 1984 June.

**New Product–Documentation:** Ad in *The Vegetarian* (England). May/June. p. 12. "High fibre protein slices."

1041. *Soya Bluebook*. 1984. Industrial product manufacturers, and non-food uses of soy oil in the USA. p. 80-95, 205. Aug.

• **Summary:** Product categories are: Adhesives/coatings (7 U.S. companies / 6 foreign companies), industrial lecithin (8/43), industrial soy flour (4/25), industrial soy oil (10/47), paints & varnishes (5/3), resins (5/3), soaps (0/30), soy sterols & tocopherols (3/11), soybean fatty acids (6/36).

In 1982, nonfood utilization of soy oil totalled 205 million lb., or 2.1% of total U.S. soy oil usage (97.9% was for foods). Of this, 96 million lb was used for resins and plastics, 38 millions lb for paint and varnish, 16 million lb for fatty acids, and 55 million lb for other nonfood uses.

Manufacturers of soy sterols and tocopherols include—  
In the USA: Distillation Products Industries, Kingsport, Tennessee 37662; Durkee Foods Div. of SCM Corporation, Cleveland, Ohio 44115 [Formerly The Glidden Co.]; Henkel Corporation, Minneapolis, Minnesota 55435. In Japan: Ajinomoto Company Inc., Chuo-ku, Tokyo; The Nisshin Oil Mills Ltd., Chuo-ku, Tokyo. In Europe: Cargill B.V., Amsterdam, Netherlands; Industrie Chimiche Italia Centrale S.p.A. (ICC), Ancona, Italy; Italiana Olii e Risi S.p.A., Ravenna, Italy; S.I.O. S.p.A. (SIO), Modena, Italy. There are also 3 manufacturers in Brazil and one in India.

1042. American Soybean Assoc. ed. 1984. First European Soyfoods Workshop, Proceedings. Brussels, Belgium: ASA. 129 p. Held Sept. 27-28 at Amsterdam, Netherlands (Krasnapolski Hotel). No index. 30 cm. [38 ref]

• **Summary:** See next page. Contains 9 papers, mainly on soyfoods in Europe. A directory includes company name, person's name, and address for the conference's 105 participants. Organizations represented include Caderas de Kerleau, Aarhus Oliefabrik (Aarhus C, Denmark), Aixagri, Alfa-Laval, Alfa-Laval Food (John Wilson), Alpro N.V. (Ph. Vandemoortele, Ch. Daems), Alpura Koreco Ltd., Aros Sojaprodukter (Ted Nordquist), BRT, Cargill (R. Sevink, Amsterdam, Netherlands), Cauldron Foods Ltd. (Mr. Marshall, Mr. Fagan), Centraalbureau Voor Schimmelstruct,

Centro Studi Proteini Vegetali, CETIOM ONIDOL (Emmanuel Prudom, Toulouse, France), Chemex, Comite Eetbaar Plantaardig Eiwit (Hague, Netherlands), Consumers' Association, Condimenta, Cooperative Occitane, Danish Turnkey Dairies Ltd., Delisana Natuurvoeding, Deutsche Gesellschaft für Ernährung [2 different addresses], DE-VAU-GE Gesundheitswerk (Dr. W. Lubosch), Dragon & Phoenix Ltd. (Donald Lysen), E & R Chemicals, Edelsoja GmbH (K.O. Tielker), E.M. Chajuss Ltd. [Daniel Chajuss], Fa L.L. Frank (Missendorp de Bie), Fed. Nat. Syndicats De Dietetique, F.I.M. Housterman, Food Industries, Food Manufacture, F.M. Lin, Galactina Ltd. (P. Speck), Gebruder Bauermeister, Gemint, Giulini Chemie, Goorden Import Cy, Henselwerk GmbH (Rolf Berger), Heuschen (Mr. Heuschen, Deurne, Netherlands), Itona Products Ltd. (Mr. and Mrs. Hampson), Ivel, Keuringsdienst Voor Waren, Libelle, Lucas Meyer (Axel Schulte), Masterfoods, Melkunie Holland, Niticel B.V., ONIDOL (Guy Coudert), Paksoy TIC, Paul's Tofu (Paul Jones), PFW Nederland BV, Plumrose FDD, Premier Foods, Purina Protein Europe (A.G. van der Horn & Willy Naesens, Zaventem, Belgium), Royal Neth. Dairy Federation, Ruitenbergh N.V., Sanico N.V., S.G.A. Flavours, SIO [Societe Industrielle des Oléagineux, Marie Gérard, Nanterre, France], Sopad Nestlé (Mr. Rolland, France), Sojadoc (A. Lacombe, P. Roger, Mr. Henras & Mr. Attié; St. Paul, 81140 Penne du Tarn, France), Sojaquelle (Wolfgang Furth-Kuby), Solnuts B.V. (J. Liebrechts), Soy (De Preneuf, Cerny, France), Staley Intern[ational], Stern Chemie (Volkmar Wyviol, Hamburg), UNCAA, Union Deutsche Lebensmittelwerke [Hamburg], Univ. of Strathclyde [Glasgow, Scotland], Vamo Mills (B. Cleenewerck, Ghent, Belgium), Versteegen Specerijen, V.D.SP.V.B.A., Wenger International (I. Ben Gera, Antwerp, Belgium).

Registered on Sept. 27. Naarden Intl., Protevit, Wessanen, Mr. Karas & Mr. Drosihn [Soyastern—From Germany, not Turkey].

A note in the Nov. 1984 issue of *Soya Foods* (ASA, Europe) (p. 2) stated that the workshop was attended by 105 people from 14 countries, and was considered to have been very successful.

Note 1. This is the earliest published document seen (May 2015) concerning Sojadoc of France.

Note 2. E.M. Chajuss is the name of Daniel Chajuss' father. He and his son founded Hayes Ashdod Ltd. "E.M. Chajuss Ltd." is a limited or incorporated company that was jointly owned by Daniel and his father. Daniel Chajuss attended this Soyfoods Workshop as a "delegate" of E.M. Chajuss Ltd. company.

Note 3. This is the earliest document seen (March 2020) that mentions Wessanen of the Netherlands. Address: Brussels, Belgium.

1043. Archer Daniels Midland Co. 1984. Annual report. P.O. Box 1470, Decatur, IL 62525. 16 p.

AMERICAN SOYBEAN ASSOCIATION

FIRST EUROPEAN  
SOYFOODS WORKSHOP

SEPTEMBER 27-28, 1984

KRASNAPOLSKI HOTEL  
AMSTERDAM

• **Summary:** Part I describes ADM's daily work. "We produce enough vegetable oil each day for 8 million pounds of margarine. We grind enough corn each day to empty a string of 700 trucks. We produce enough sweeteners each day for 92 million soft drinks. We distill enough ethanol each day for 375,000 tankfuls of super unleaded gasoline. We mill enough flour each day to bake 25 million loaves of bread. We process enough peanuts each day for 3,500 doubleheaders. We export enough food and feed ingredients each day to fill 17 barges. Imagine what we can do tomorrow."

Part II is the financial data. Address: Decatur, Illinois.

1044. **Product Name:** Vegetable Feasts Chile Sin Carne.

**Manufacturer's Name:** Vegetarian Feasts.

**Manufacturer's Address:** 21 Carnwath Rd., Fulham, S.W. 6, London 3HR, England.

**Date of Introduction:** 1984 September.

**Ingredients:** Incl. textured soy flour (TVP, granulated), red kidney beans, tomato puree, onions, green and red peppers, mixed herbs, chili powder.

**Wt/Vol., Packaging, Price:** Microwaveable container with cellophane top.

**How Stored:** Frozen.

**New Product–Documentation:** Talk with Sonia Newhouse. 1988. Feb. 25. She founded this company and started to make vegetarian frozen entrees in March 1984, after having been cured of osteo-arthritis.

1045. **Product Name:** Vegetable Feasts Stroganoff.

**Manufacturer's Name:** Vegetarian Feasts.

**Manufacturer's Address:** 21 Carnwath Rd., Fulham, S.W. 6, London 3HR, England.

**Date of Introduction:** 1984 September.

**Ingredients:** Incl. textured soy flour (TVP, minced), mushrooms, peas, onions, sour cream, wine.

**Wt/Vol., Packaging, Price:** Microwaveable container with cellophane top.

**How Stored:** Frozen.

**New Product–Documentation:** Talk with Sonia Newhouse. 1988. Feb. 25. She founded this company and started to make vegetarian frozen entrees in March 1984, after having been cured of osteo-arthritis.

1046. Vaidehi, M.P. 1984. Re: Request for tempeh culture and studies on tempeh in Bangalore. Letter to William Shurtleff at Soyfoods Center, Oct. 5. 1 p. Typed, with signature on letterhead.

• **Summary:** She requests a packet of tempeh starter culture for some consumer acceptability studies. "I was one of your students at M.F.M." [Meals for Millions, in Santa Monica, California] and hope you will help me in encouraging tempeh use in Indian villages.

"In one of my studies I found that when tempeh curry and chips were served to 100 villagers and 100 urban

consumers in India, the results were very promising. The consumers liked tempeh, tofu, and nutri nuggets (TVP); they liked soya curds the least." Address: Assoc. Prof. & Head, Dep. of Rural Home Science, The Univ. of Agricultural Sciences, Hebbal, Bangalore–560 024, India.

1047. Cahalan, Steve. 1984. Staley created market. *Herald & Review (Central Illinois)*. Nov. 14. p. A3.

• **Summary:** "In large part, Decatur owes its title of 'Soybean Capital of the World' to Augustus E. Staley Sr., founder of A.E. Staley Mfg. Co. which in turn founded the U.S. soybean processing industry in the early 1920s.

"The title was promoted by the late Henry H. Bolz, longtime general manager of the Association of Commerce. He said the title was justified because Staley almost single-handedly encouraged farmers to grow soybeans and provided the first and most dependable market.

"Staley was born in 1867 on a farm near Julian, North Carolina, and at age 17 became a traveling salesman of such products as starch, baking powder and flavoring extracts.

"After 15 years as a traveling salesman, he started his own starch business in Baltimore. He purchased the former Wellington Starch Co. plant in Decatur in 1909 and moved to the city.

"The company survived tough times after World War I and gradually expanded.

"Staley opened his first soybean processing plant in 1922 in Decatur, after urging farmers to grow soybeans.

"He put together a traveling promotional and educational 'Soil and Soybean Special' train which traveled through Central Illinois in 1927.

"The special train of six cars and an engine had exhibits about soybean planting, cultivation, processing and uses; motion picture theaters, and a lecture car.

"The U.S. Department of Agriculture, University of Illinois College of Agriculture and Southern Illinois State Normal University at Carbondale helped put the exhibits together.

"In the 1930s, Staley envisioned using refined soy bean oil in foodstuffs instead of just using the crude oil as a substitute oil in paints and soaps. He also convinced feed formulators to use the protein-rich meal in their feed mixes.

"Asked in the late 1930s what his hobby was, he answered, 'Soybeans, I guess. They're my baby.'

"He first became interested in soybeans as a boy, after his father had been given some soybeans by a missionary who had returned from China. The city's major processors and the production from the surrounding area led to the grain trade pricing soybeans and bean products 'F.O.B.' Decatur. That designation provided the official stamp of approval to Decatur's "soybean capital" claim.

"Decatur now has just two soybean processors, down from five in 1953.

"They are Staley and Archer Daniels Midland Co.,

the world's largest until Cargill Inc. recently purchased the soybean facilities of Ralston Purina."

A portrait photo shows Mr. A.E. Staley. Address: Herald & Review Farm / Business Writer.

1048. Ingram, Ron. 1984. Analysts: Staley to drop soybeans. *Herald & Review (Central Illinois)*. Nov. 14. p. A3.

• **Summary:** "A.E. Staley Mfg. Co.'s review of its soybean operations is seen by market analysts as another move by the Decatur firm away from total dependence on agribusiness for its profits.

"They're throwing in the towel. They've given up hope of the soybean business coming back to an adequate return on investment," said David Goldman, a vice president with E.F. Hutton & Co. Inc., New York.

"Long term, maybe this (soybean crushing) doesn't fit any longer' in Staley's plans, said Craig Carver, a vice president with A.G. Edwards & Sons Inc., St. Louis.

"If Staley should sell its soybean operations, both analysts agreed it would be a positive move for the company.

"The soybean crushing business in good times tends to be quite volatile, and we haven't had many good times in the last few years, Carver said. 'Staley has gotten the reputation for running that business pretty conservatively and that eliminates a lot of profit opportunities. You have to manage the business aggressively to take advantage of swings in the markets.'

"Goldman said it appears Staley sees there has been a fundamental change in the soybean processing business which has permanently reduced the profit potential for soybeans.

'If you'll pardon the pun, all of their soybean earnings didn't amount to a hill of beans anyway,' he said. 'It's been a drag on earnings. It's been a drag on return.

"Goldman said Staley should be able to 'get some cash for it, even if they have to write off something' to do so.

"Referring to Staley's recent merger agreement with CFS Continental Inc., nationally the No. 2 food service industry supplier, Goldman said the acquisition will help Staley restructure into high-growth and high-return areas. 'When it's all over they will be less of an agricultural company than they were.'

"Carver said last week's announcement by Pepsico and Coca Cola to use 100 percent high-fructose corn sweetener—a major Staley product—in their colas may have helped Staley toward a decision to review its soybean operations.

"Fructose will make the whole corn milling industry some good margins as a result of the major bottlers' decisions, Carver said. Carver said there are some potential buyers for Staley's soybean operations, among them Central Soya of Fort Wayne, Indiana; Conagra Inc. of Omaha, Nebraska, or Continental Grain Co. of New York.

"He also suggested Decatur-based Archer Daniels Midland Co. could buy part of Staley's milling capacity, but

could not acquire it all without getting in trouble with the U.S. Justice Department over antitrust violations.

"Goldman said ADM is 'up to something sneaky.' He said between June 30 and Sept. 30 ADM's cash position increased to \$1 billion from \$300 million, strongly implying the company is preparing to make a major acquisition.

"I wonder if they may have known something about Staley,' Goldman said.

"Richard E. Burket, ADM vice president and assistant to the chairman, declined Tuesday to comment on Staley's announcement that it is reviewing soybean operations.

"Burket acknowledged ADM was aware of the action and added, 'At this time we don't know what we might be able to do.'

"ADM is the second-largest U.S. soybean processor. It held the No. 1 ranking until recently when Cargill Inc. of Minneapolis, Minnesota, acquired the mills owned by Ralston Purina Co. of St. Louis [Missouri]. The acquisition pushed Cargill into the top spot among U.S. soybean processors." Address: Herald & Review Farm / Business Writer.

1049. *SoyaScan Notes*. 1984. Early tofu manufacturers in Europe, listed chronologically by country (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** All of the following started making tofu before 1985. Countries with the earliest tofu manufacturing are listed first. The month production started, when known, is given after a slash following the year. Thus 1911/06 is June 1911.

France: Usine de la Caséo-Sojaine (run by Li Yu-ying) 1911/06, Two or three tofu shops in and around Paris, including 1-2 at Colombes 1964/03. Alimentation Japonais Osaka 1972, Le Bol en Bois 1975/12, La Roussellie 1978/02, Institut Tenryu 1981/01, SOY (Société Soy) 1982/06, Les Sept Marches 1982/09, Sojatour Tofu Shop 1982/09, Ets. Co-Lu 1983/06, Lagadec Tofu 1983/06, Soja d'Oc 1983/10, Nyingma Dzong 1983/11, Tofu Kuehn 1983?, Sojagral Ouest 1984/12.

Netherlands: Vanka-Kawat 1958, FA. L.I. Frank: Frank Soya 1959?, Heuschen B.V. 1964, Firma Post & Teekman 1965, Stichting Natuurvoeding Amsterdam (renamed Manna Natuurvoeding B.V. in 1982) 1977/09, Hwergelmir: Foundation for a Natural Life 1979/07, Firma Ergepe 1981/01, Stichting Oost West Centrum 1981/01, Michel Horemaus Tofu 1981/01, Witte Wonder Products 1981/04, De Morgenstond 1981/12, Soy-Lin or F.M. Lin 1982/09. Jakso: Center for Agriculture & Craftsmanship (later called Yakso) 1983/06, Vuurdoop 1983/07.

England, UK: Dragon & Phoenix Co. 1966, Wong Chung 1975 or before, Lung Kee 1975 or before, Full of Beans Wholefoods 1978/08, Paul's Tofu & Tempeh 1981/01, Yu's Tofu Shop 1981/01, Cauldron Foods Ltd. 1981/09, The Regular Tofu Co. Ltd. 1981/12, Bean Machine (Wales) 1982,

Hong Kong Supermarket 1982/09, Stewart Batchelder Tofu 1983/06.

Belgium: Etablissements Takanami (Takanami Tofu Shop) 1976, Jonathan P.V.B.A. 1977/01, De Brandnetel 1979/07, Unimave Tofu 1980, Aversano Tofu Shop 1981/01, Alternatur 1981/01, Seven Arrows Tofu 1982/04, 1983/10, Vajra 1983/11.

Switzerland: La Moisson 1978, Le Grain d'Or 1981/01, Genossenschaft Sojalade (later renamed Genossenschaftstofurei) 1981/09, Soyana 1982/02, Soy Joy 1982/04, Restaurant Sesam 1982/04, Opplinger Tofu 1982/09, Natural Products Promo Carouge 1982/09, Joya 1982/09, Centre Macrobiotique de Lausanne 1982, Osoja: La Maison du Tofu (later renamed Tofushop Centanin SA) 1983, Tofurei Pfannenstiel 1983/11, Thieu's Soja Spezialitaet 1983/11, Conserves Estavayer S.A. (Sold at Migros Supermarkets) 1984/06, Galactina Ltd. 1984/11, Berner Tofurei 1984?

Italy: Roland A. di Centa 1978, Gilberto Bianchini of Centro Macrobiotico ed Alimentazione Organica (Community Food). Renamed Centro Macrobiotico Tofu 1978/11, Ohnichi Intl. Foods Co. Lotizzazione Industries 1982/09, Circolo L'Aratro 1982/09, C.D.S. Pianetta Terra Soc. Coop. A.R.L. 1982/12, Aldo Fortis Tofu 1983/06, Fondazione Est-Ouest 1983/06.

Germany: Svadesha Pflanzen-Feinkost 1979, Alexander's Tofu Shop [Nabben] 1981/01, Biogarten 1981/01, Auenland Tofu & Soja Produkte 1982/03, Tofuhaus Belsen (renamed Yamato Tofuhaus Sojaprodukte in Jan. 1984) 1982/07, Thomas Karas und Ingeborg Taschen (associated with Bittersuess; renamed Soyastern Naturkost GmbH in Dec. 1985) 1982/11, Albert Hess Tofuhaus Rittersheim (Later in Tiefenthal) 1983/07, Tofukost-Werk TKW GmbH 1984/05, Christian Nagel Tofumanufaktur 1984/08, Sojatopf (renamed Soto in April 1989) 1984/09.

Austria: Weg Der Natur 1980/05, Tofurei Wels (renamed Schoen Tofurei in 1987) 1982, SoyVita Austria 1983/05, Taiwan Restaurant 1983/06, Walter Brunnader Tofu 1983/06, Soyarei-Erich Wallner Tofu 1983/06, Tofurei Ebner 1983/11, Soyarei Wallner Ebner 1984/02, Fernkost Markt Nippon Ya Kondo GmbH 1984/02, Naturkostladen 1984/02, Sojarei Ebner-Prosl 1984/04, Sojvita Produktions GmbH 1984/06.

Sweden: Aros Sojaprodukter 1981/02.

Denmark: Tofu Denmark (Soy Joy?) 1982/03, Dansk Tofu 1983/06.

Portugal: Unimave Tofu 1980, Shogun Produtos Aliment. 1982/09, Jose Parracho Tofu 1982/09, Próvida Lda. 1984.

Spain: Zuaizo 1984/03.

1050. *SoyaScan Notes*. 1984. Chronology of soybeans, soyfoods and natural foods in the United States 1984 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Jan. A highly influential 10-year, \$150 million study released by the National Heart, Lung, and Blood Institute in Washington, D.C. proves for the first time a direct relationship between high blood cholesterol and the risk of heart attack, the nation's number one killer.

Jan. Legume, Inc. launches an all-natural line of cholesterol-free low-calorie Italian and international gourmet tofu-based frozen entrees in stylish full-color packages: Tofu Tetrizzini, Cannelloni Florentine, Vegetable Lasagna, Tofu Bourguignon, Sesame Ginger Stir-fry, Stuffed Shells Provencale, Tofu Manicotti, and Tofu Lasagna. Jan. Eden Foods becomes the sole import agent for Muso Shokuhin in the United States.

Feb. 25. *Soymilk Industry and Market: Worldwide and Country-By-Country Analysis*, by Shurtleff and Aoyagi published by Soyfoods Center. 177 pages, 640 references. \$350.

Feb. Marusan-Ai, Japan's second largest soymilk maker and one of the five largest miso makers, starts to market tempeh. They publish a 27-page tempeh booklet and by May are producing 30 tonnes (66,000 lb.) of tempeh a month, making them the largest tempeh manufacturer in the world. During 1984 at least five Japanese food companies are making tempeh, leading to a mini-boom of this soyfood which was first sold commercially in Japan in 1983.

March 2. Based on responses to his Oct. 1983 survey, Tom Timmins drafts preliminary 3-page tofu standards (2 pages of which are microbiological standards) that he circulates to the Soyfoods Standards Committee, inviting comments. On March 6 Wm. Shurtleff of Soyfoods Center expands these, keys them into the Center's word processor, and returns them to Timmins.

March 2. Problems start between Eden Foods and the U.S. Food and Drug Administration (FDA). FDA sends Eden a strongly worded letter citing eleven claims in Eden's brochures that the agency considers erroneous, including the company's apparent endorsement of Edensoy as an infant formula. FDA asks Eden to recall the brochure in which Edensoy is promoted as "Good for Babies." An infant became ill due to copper deficiency on an Edensoy diet.

March 8. Soyfoods Association of America members have 12 pages of impressive color advertisements and information about soyfoods and the Association in Natural Foods Merchandiser, in preparation for the NFM Anaheim Natural Foods Expo in March. Full-page color ads by Legume, Erewhon shoyu, Vitasoy, San-J, Tofutti, Edensoy, and Pure & Simple soy sauce.

March 11-13. At the Natural Foods Expo at Anaheim, the Soyfoods Association organizes the first Soyfoods Pavilion, a 16-booth cluster of soyfoods companies and products, which is the hit of the Expo and a show of strength for the industry. Lots of delicious free food draws throngs from the 9,000 Expo attendees.

March 11. At Anaheim, Vitasoy launches its first

designed-for-America soymilk, in natural, coconut, and chocolate flavors, each sweetened with maple syrup, and imported from Hong Kong. Many subsequent eye-catching, health-oriented full-page color ads are run in national health magazines.

March 29. First draft of the Tofu Standards, 15 pages double spaced, is compiled by Shurtleff. Timmins allocates \$2,000 to retain two Washington, DC, attorneys who are specialists in foods and regulations to assist the committee in developing professional standards. The draft is circulated to 38 people who are asked to respond to a poll on 14 key issues.

March 29. The term “second generation” products is first applied to soyfoods by Wm. Shurtleff in the new tofu standards. A computer-related term indicating one step more advanced, it quickly replaces the term “secondary,” which has a slightly negative connotation.

March. American Soybean Association’s Belgium Office publishes the first issue of *Soya Foods*, a 6-page newsletter edited by Michael Martin, Protein Market Development Manager. It will be issued three times a year in English, French, Dutch, and Italian. This is a completely new direction for ASA in the Western world... but it doesn’t last long.

April 7. *Soyfoods Industry and Market: Directory and Databook 1984* (4th ed.) by Shurtleff and Aoyagi published by Soyfoods Center. 215 pages, \$95.

April 13. Richard Leviton resigns as co-director of *Soyfoods* magazine and decides to discontinue his active involvement in the U.S. soyfoods movement. He plans to go to England to write a novel about King Arthur; he leaves in late April.

April 20. *Tofu, Tempeh, & Other Soy Delights*, by Camille Cusumano published by Rodale Press. It is widely and positively reviewed by national media.

April 27. The term “soymilk” is legalized for use in Canada, after a lengthy and expensive court battle by Victor Food Products. The court ruled that this is the “common and ordinary term” for the product, used since about 1918 in scientific articles and commerce. Thus it cannot be squelched by dairy interests.

April. New England Soy Dairy, America’s largest Caucasian-run tofu manufacturer, changes its name to Tomsun Foods, Inc.

May. *Nutritional Cooking with Tofu*, by Christine Liu published by Graphique Publishing in Michigan.

May. American Natural Foods (formed in Jan. 1984 by John Troy, creator of miso-containing Hot Stuff) has a private stock offering that raises \$150,000. In October ANF debuts a line mainstream American sauces and seasonings, each featuring miso, that are delicious and beautifully marketed.

May. *Die Tofu Kueche* (The Tofu Kitchen), by Verena Krieger, Swiss soyfoods pioneer, published by Tanner +

Staehelin Verlag in Zurich. 171 pages with many photos.

June 7. “Tofu” by Barbara Hansen and “Tofu: Americanization of a Soy Food” by Karen Gillingham published in the *Los Angeles Times*.

June. Landstrom Distributing Co. of San Francisco, files for Chapter XI bankruptcy. Keene Distributors of Texas, and Collegedale of Tennessee, both profitable, well-run companies, are also pulled under, innocent victims of the Landstrom collapse. All three units were owned by Nutritional Foods, Inc. and all were major natural / health foods distributors. These bankruptcies seriously hurt the natural foods industry as well as many individual companies; sales and confidence plummeted nationwide. In late 1984 Fillmore Foods purchased Landstrom, and Balanced Foods purchased Collegedale and Keene.

June. Migros, Switzerland’s largest supermarket chain, launches Tofu Nature, its own brand of tofu, made at Conserves Estavayer S.A., with widespread publicity and excellent product information on both tofu and soybeans. It is sold in the same section as dairy products and eggs. The launch is considered a great success; supply is not able to catch up with demand until late December.

June. *The Book of Soybeans*, by Tokuji Watanabe and Asako Kishi published by Japan Publications. 191 p.

June. *Using Tofu, Tempeh & Other Soyfoods in Restaurants, Delis & Cafeterias*, compiled by Shurtleff & Aoyagi, published (comb bound; 181 p.) by Soyfoods Center.

July. Kikkoman completes its second major shoyu (Japanese-style soy sauce) plant outside Japan, in Singapore. The 18,000 square meter factory, with a capacity of 3,000 kl (792,500 gallons) a year and 40 employees, costs \$14 million. It will make shoyu and teriyaki sauce. Official opening ceremony was Nov. 21.

July. The requirement in effect since 1965 that isolated soy protein used as an ingredient in meat and poultry products must contain titanium dioxide as a tracer, is removed from federal meat and poultry products inspection regulations, following a petition by ADM, Grain Processing Corp., and Ralston Purina.

July 9. “Its Trendy, Tasty and Tofutti” (2/3 page) by J.D. Reed published in *Time* magazine (U.S. circulation 4.3 million). Probably the biggest media coverage for tofu in U.S. history. Tofutti hits the big time!

July 17. *History of Tempeh*, by Shurtleff and Aoyagi published by Soyfoods Center. 102 pages, including 375 references. Continued.

1051. **Product Name:** Sojal Soya Milk.

**Manufacturer’s Name:** Haldane Foods Ltd.

**Manufacturer’s Address:** Hayhill Industrial Estate, Unit 25, Sibley Rd., Barrow Upon Soar, Leicestershire LE12 8LD, England.

**Date of Introduction:** 1984.

**New Product–Documentation:** Letter from Bernard Storup. 1984. March 22. “A new type of soymilk is Sojal, sold in France by Ste. Sapov, 10 Place Jean-Juares, 13410 Lambesc. It is made in a dairy with Brazilian powdered soymilk, with 0.3% sugar, and is the best soymilk I have ever tasted.”

Soya Bluebook. 1987. p. 104. Product originally launched by The Regular Tofu Co. Simon Bailey. 1988. Natural Choice. Aug. 15. “Soya-based products.” A photo shows the carton. “By Hera.” CSP form filled out by Simon Bailey. 1988. Sept. 28. Gives date of introduction as 1984. Letter from Simon Bailey. 1988. Oct. 10. Haldane joined forces with British Arkady in Feb. 1988 as part of Arkady’s Health Food Div. Brian Welsby and Peter Fitch are joint managing directors.

Talk with Philip Marshall. 1990. July 9. Brian Welsby started this company. He sold Sojal, which was made in France using powdered Brazilian soyamilk from OLVEBRA. He had it packaged and marketed in the UK as made with soybeans. Marshall thinks there was some argument between Welsby and Sojal, because he trademarked “Sojal,” which was in fact their name, in the UK. There was apparently a falling out between Welsby and Sojal, so he probably had to get his soymilk produced in the UK by some other company. He would not have used Haldane’s own soymilk, because the flavor would not have been acceptable. Haldane was big in dry mixes, which is why Arkady bought them. When Haldane was acquired by Peter Fitch, Welsby was “given the golden handshake.” He no longer works with the Haldane Group.

1052. **Product Name:** VegeBanger (Meatless Sausage Dry Mix) [Herb, or Spicy].

**Manufacturer’s Name:** Realeat Company (The).

**Manufacturer’s Address:** 2 Trevelyan Gardens, London NW10 3JY, England. Phone: 01-459-3401.

**Date of Introduction:** 1984.

**Ingredients:** Wheat gluten, textured soya flour, rolled oats, wholewheat rusk, soya protein, seasalt, yeast extract, tomato, onion, herbs & spices, garlic, and beetroot.

**Wt/Vol., Packaging, Price:** 125 gm foil sachet, makes 10 x 30 gm sausages. Retail for 59 pence.

**How Stored:** Shelf stable.

**Nutrition:** Contains 60% more protein than the average pork sausage and far less fat. Cooked product: protein 23%, carbohydrate 11%, vegetable fat 12%, dietary fibre 4%, calories 267/100 gm when fried.

**New Product–Documentation:** Leaflet. 1986. VegeBanger. Letter from Gregory Sams. 1988. March 30. Introduced in 1984. Leaflet, undated. “A Recipe for success.” Gives detailed product information.

1053. **Product Name:** Sojal Frozen Non-Dairy Dessert.

**Manufacturer’s Name:** Regular Tofu Company Ltd. Made

in Leicester, England, by Rossa Ltd.

**Manufacturer’s Address:** England.

**Date of Introduction:** 1984.

**How Stored:** Frozen.

**New Product–Documentation:** Interview with John Holt. 1987. Aug. 1987. “Our company was the first to sell soy ice cream in England. Michael Cole was one of our salesmen. Then he left and started making and selling his own soy ice cream.”

Note: This is the first non-dairy soy-based ice cream made or sold in the UK.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 10 and 16. The name of this product was pronounced SO-jal. Ray is quite sure they had it made for them by Rossa Ltd., a very small ice cream company in Leicester (pronounced LES-tur), and he thinks the same company also later made the first soy yogurt for the Regular Tofu Company Ltd.

1054. ADM Co. 1984. Dairy products update. Decatur:

Illinois: Archer Daniels Midland. 24 p.

• **Summary:** On the cover are two colorful scoops of ice cream on top of a cone which is an ear of corn. It’s called an “Ice cream corn.”

Contents (soy related): The use of corn sweeteners and soy protein in dairy products... The use of soy protein in fluid and frozen products. The use of soy protein in cheese substitutes and cheese-like products. Characteristics and use of Ardex brand isolated soy protein (90% protein)... Additional brochures available.”

Note: This is the earliest English-language document seen (Oct. 2013) that uses the term “cheese substitute” to refer to a Western-style soy cheese.

“Field performance of soft serve mixes is critical. The product must be dry and stiff to remain on cones.” “Frozen yogurt is likened to something between ice milk and sherbet. Lactic fermentation provides tartness, which is highly compatible with fruit flavors.”

Various types of yogurt include: Regular or unflavored, Swiss style, sundae style, and liquid yogurt.

Ardex F is dispersible isolated soy protein. TVP can be used to add protein and “crunch.” “Ardex isolated soy proteins [F] can be used effectively to produce tofu-like products” (p. 19).

A table (p. 20) gives formulas for “Yogurt” soft curd. “Tofu” firm curd. “Tofu” from dry mix. Chocolate dessert.

Ardex F is dispersible; used for dairy foods. Ardex SP-6 is dispersible; used primarily for injected whole muscle meat products. Ardex R is used where special functionality is required, e.g. coffee whitener, liqueur, cheese, etc. Ardex D is an emulsion stabilizer for use in meat systems,... Ardex DHV is a water and fat binder and adhesive agent. Address: Illinois.

1055. Bertrand, Jean-Pierre; Laurent, Catherine;

Leclercq, Vincent. 1984. Soja. Aus dem Franzoesischen von Felicitas Schaetzel [Soya. Translated from the French by Felicitas Schaetzel]. Zurich, Switzerland: Unionsverlag. 130 p. Illust. No index. 21 cm. Reprinted in 1988. [8 ref. Ger]

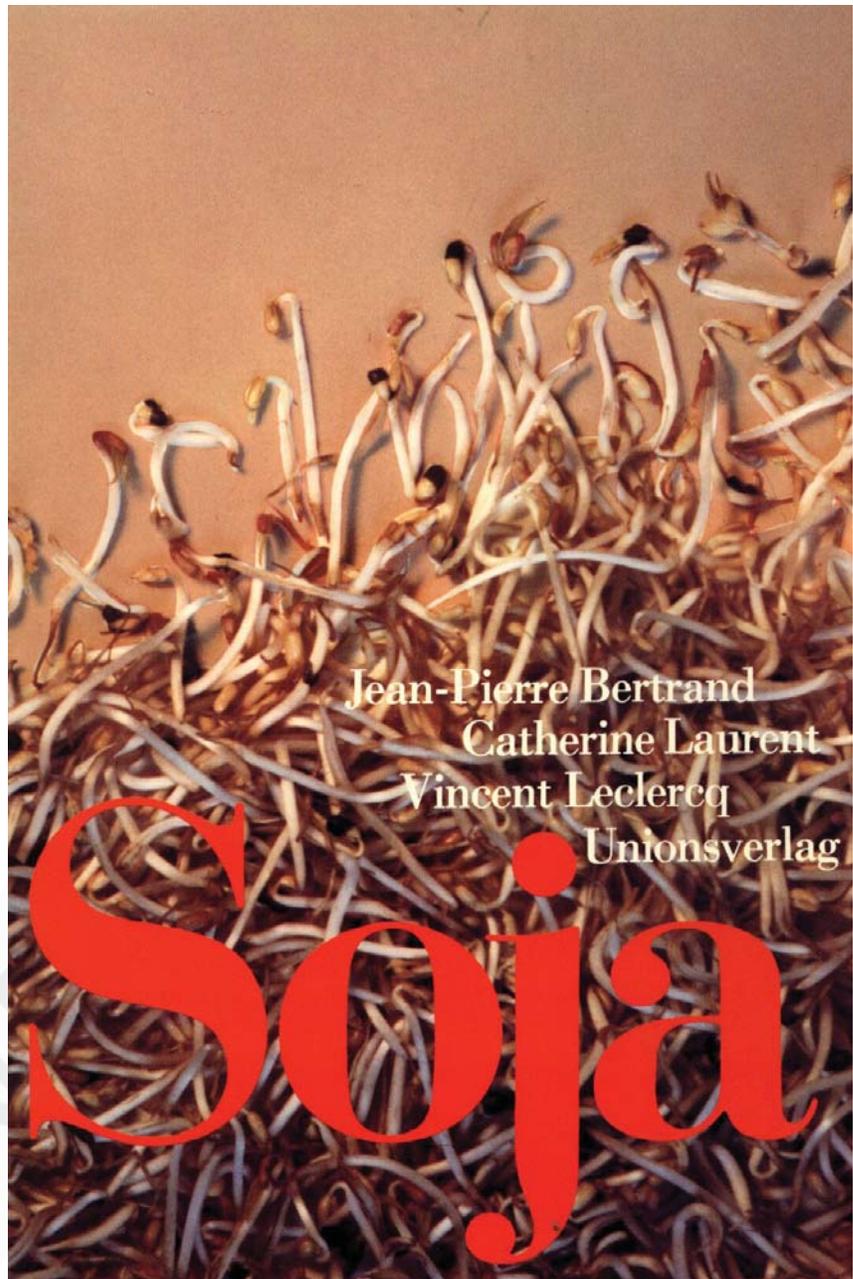

• **Summary:** A German translation of *Le Monde du Soja* (1983), this book gives a very good overview (from the French point of view) of the development of the soybean plant in the context of world agriculture. However it suffers from lack of an index.

Contents: 1. The soybean in the world economy: Portrait of a “sacred grain,” soybean meal / cake—a high-value feed, soy oil—from diesel motors to ice cream, soy protein—the industrialized protein. Sidebar, by Verena Krieger: Soymilk and tofu, miso, tamari, shoyu and soy sauce, tempeh, soy sprouts. Producers and users. 2. The soya complex: Consumers and producers without power, the producers—a club with contradictions, the multinationals in the middle of the soya chain (a profile of each of the largest multinationals: ADM {USA}, Bunge & Born {Argentina}, Cargill {USA}, Central Soya {USA}, Continental Grain {USA}, Louis Dreyfus {France}, Ralston Purina {USA}, A.E. Staley {USA}, Unilever {England/Holland}, p. 30-31), the international wholesale business, the commodity exchange as a barometer.

3. How prices are determined: Subsidy politics in the USA, price guarantees in Brazil, the price of soybean meal and soy oil. 4. From sacred bean to soya complex—a look back: Colonial times, Europe becomes curious, the American soya complex is born, the struggle over margarine, soybean meal becomes successful, the war as a big opportunity, soya conquers America, soya against cotton—the oil battle.

5. Soya from the Americas conquers the world: The Marshall Plan—the first clever offensive, Public Law 480—food aid with a club-foot, trade pressure under the banner of free trade. 6. The politics of the importing countries: U.S. soya vs. EU cereal grains, France—the model of protein dependency, in the maze of European agrarian politics, Japan—the free way for imports. 7. The embargo of 1973—Trade war and crisis: the exchange awakens.

8. Brazil—The new soybean giant: The export sector is nursed back to health, credit—but not for everyone, the export boom, the equal weight problem. 9. The newcomers—Argentina and Paraguay. Paraguay, a little appendage of

Brazil?, startup difficulties in Argentina, help for Soviet stock-farming.

10. The new questions: The Eastern Bloc in the conflict of goals, industrial comeback of the soybean in China, developing countries—meat and oil for the poor? 11. The reverse side of the “Soya Model:” Brazil—Flight from the land, dependency, and hunger, Tunisia—adulterated olive oil, Senegal as loser in the peanut / soya battle, a model of supply dependency.

12. Which alternatives? A “protein plan” in the European Union, better utilization of the green forage stock, industrial amino acids—a way out / escape? 13. Plant- vs. animal protein: Industrial soya protein—food of the future?, the Third

World, a large market with the ability to pay, a future with contradictions.

Figures: (1) The various basic ingredients and commodities that can be made from the soybean (p. 11). (2) Overview of the use of soybeans and soy products (p. 14-15). (3) Soybean production and trade worldwide, 1980/81, Sept. to Oct., in million metric tons. (4) German newspaper headlines concerning soybeans, 1983-84 (p. 36). (5) Map of worldwide soybean trade, 1935-1939, in 1000 metric tons (p. 46). (6) Map of worldwide soybean trade, 1948-1949, in 1000 metric tons (p. 59). (7) Map of worldwide soybean trade, 1980, in 1000 metric tons (p. 63). (8) Graphs of soybean exports, from USA, from Brazil, from Argentina (p. 83). (9) Bar graph—Yield of protein in kg of protein per ha: Soybeans 7,900. Alfalfa 7,200. Potatoes 5,000. Maize 4,500. Poultry 1,200. Pork 800. Milk 700. Beef 600 (p. 120).

About the authors:

Jean-Pierre Bertrand, an agronomist (*ingénieur agronome*) and economist, is a research fellow at the French National Institute for Agricultural Research (*Institut national de la recherche agronomique, INRA*).

Catherine Laurent, a veterinarian and economist, is the author of a doctoral thesis on the soybean industry (*filière du soja*). Vincent Leclercq, an agronomist (*ingénieur en agriculture*) and economist, is a research associate at the INRA, for the International Economics Laboratory in Montpellier (*Laboratoire d'économie internationale de Montpellier*). He is also a member of Solagrail, which stands for Agro-Food Solidarity (*Solidarités agro-alimentaires*). Address: France.

1056. Brennan, Jennifer. 1984. *The cuisines of Asia: nine great oriental cuisines by technique*. New York, NY: St. Martin's Press. ix + 542 p. Illust. (line drawings). Index. 24 cm.

• **Summary:** The “Nine great Oriental cuisines” are those of “China, India, Indonesia, Japan, Korea, Malaysia, The Philippines, Thailand, Vietnam” (as stated on the book's cover). The book contains many recipes, yet it is largely organized into chapters by cooking techniques: barbecuing, steaming, stir-frying / using a wok, deep-frying, etc.

The chapter on “Japan” discusses soybeans, miso, tofu, and shoyu on pages 44-45. Soyfoods are said to be the 2nd largest source of protein in the Japanese diet.

The section on “Soybeans” (p. 97-104) includes a discussion of the names of various soyfoods in different Asian languages and countries. For example: “The basic bean curd is called *tau-fu* in Cantonese, *tau-hu* in Hokkien, and *tofu* in Japanese.” Or consider this (p. 99): “During the basic process of making bean curd, at the stage where the bean and water mixture is boiled, a skin or residue forms on the top. This skin [yuba] is skimmed off and dried. It is commercially available in sheets... and in the form of sticks that bear the picturesque name of ‘second bamboo’ [dried

yuba sticks] in Chinese, meaning that they are the second residue from the curd.”

There follows a 3-page table titled “Soybean products” (p. 101-03) which has four columns: Description, Chinese name [Cantonese], Japanese name, comments.

Note: Before proceeding, we believe that the design of this table is fundamentally flawed. (1) Why are the names of the basic soyfoods not given in the other languages with which this book is concerned, including Mandarin Chinese, Korean, Indonesian, Vietnamese, Filipino, etc.? (2) Why is no English name given for each basic soyfood product? Sometimes the description is the English name, yet that name is rarely the name a person would use if they were selling the product in an English-speaking country. (3) Why are so many common “soybean products” omitted from this table, such as the various basic other types of Japanese miso and of Japanese shoyu (besides *koikuchi shoyu*), fermented black soybeans (*douchi*, *dow see*), soymilk, soy sprouts, roasted soy flour, whole soy flour, soybean oil, textured vegetable protein, etc. These problems are easily solved with alternate table designs. For example, have one table for each language, with the name of each soyfood product given first in English and then in the language of that country. Put the description and comments in a glossary to avoid repetition. Or, have a glossary entry for each soyfood, with the English name, description, comments.

The table is divided into four basic types of soybean products. After each, we will give the Cantonese name and then the Japanese name, and we will indicate disagreements using [sic]. NL = Not listed.

(1) Bean curd: *Tau fu fu* [sic] = *kinugoshi tofu*. *Tau fu* = *momen tofu*. NL = *yaki tofu* [sic, *yaki-dofu*]. NL = *koya tofu* or *kori tofu* [sic, *koya-dofu* or *kori-dofu*]. *Tau fu pok* = *abura age*. *Fu chu* = *yuba* [sic, *fu chu* is dried yuba sticks. Yuba in Mandarin is *doufu pi*]. *fu joke* [sic, *fu jook*] (bean curd sticks) = NL. *Tim joke* [sic, *tiem jook*] (sweet bean curd sticks) = NL. *tau fu kon* [Mandarin: *doufu gan*; pressed tofu].

(2) Soy sauce: Light = *chan ch'an* or *sang chu* = *usu kuchi shoyu* [sic, not the same]. Dark, medium = *see yu chan yan* = *shoyu* [sic, *see yu* is soy nugget sauce, not made in Japan. Japanese shoyu is not traditionally made in China]. Dark, heavy, sweet = *chu yan* = NL.

(3) Fermented bean pastes and cheeses. Black bean paste = *dau see tau ch'ih* = NL. Sweet, white bean paste = NL = *shiro miso*. White soy cheese [fermented tofu, should be classified under tofu] = *pai doufu-ru* or *foo yee* or *foo yu* = NL. Red soybean paste = NL = *aka miso*. Red soy cheese or spiced red bean curd = *hung doufu-ru* or *nom yee* or *nam yu*.

(3) Miscellaneous soybean productions. Soy jam = *yun shi jeung* = NL. Whole fermented soybeans = NL = *nato* [sic, *natto*]. Red bean sauce = *saang see jeung* = NL. Soybeans and malted rice = NL = *moromi miso*. Hoisin sauce = *hoisin* = NL.

In the “Basic recipes” section is a recipe for Indonesian

dark sweet soy sauce (*ketjap manis*).

The Glossary (p. 499-515) contains the following soy-related entries: “Bean Curd (*tofu*, Japanese; *tao foo*, Chinese; *tahu*, Indonesian and Thai; *tokwa*, Philippines): A curdled, soft, cheeselike preparation made from soybean milk. Used as a source of protein in Asian cooking. Available loose or in packages.”

Bean paste, red sweet [from azuki beans]. “Substitute Chinese sweet red bean paste, p. 132.”

Bean paste, yellow (Chinese).

“Beans, black salted fermented. (Called *dow see* in Chinese) These are very salty soybeans, sold in cans in Chinese markets. Used with garlic as a flavoring for fish and pork dishes. substitute: Soybeans, cooked until soft and seasoned with plenty of soy sauce.”

Bean sprouts: Usually refers to mung bean sprouts, “although alfalfa and soybean sprouts are also used.”

Hoisin sauce: Soybeans are a major ingredient, along with garlic, chili peppers, and various other spices and ingredients.

Miso. Oyster sauce: “A Chinese sauce, made from oysters cooked in soy sauce and brine.” Used as a seasoning with cooked foods and as a table sauce. See recipe p. 146.

Red bean sauce: “A strong table sauce made from mashed soybeans.” Available in cans from Chinese stores.

Soy sauce

Also contains entries for: Kombu. Monosodium glutamate (MSG; “I do not use it nor do I recommend its use”). Mung beans.

The index contains 28 entries for soybean, 22 for soy sauce, 14 for miso, 6 for bean paste, oyster sauce, teriyaki, 4 for bean curd—deep fried, hoisin sauce, vegetarian dishes, 2 for ketjap, and 1 each for beans—black salted fermented, bean curd—fermented, jam—soy, jang (see miso), milk—soybean, ragi, shoyu (see soy sauce), soybean oil, sukiyaki, tahu, tau-fu or tau-hu (see bean curd), tempe [tempeh], textured vegetable protein (TVP), tofu (see bean curd), tou shih [fermented black soybeans],

About the author (from the back cover): “Jennifer Brennan grew up in Pakistan and India and has spent many years in Southeast Asia. She is the author of *The Original Thai Cookbook*.” She is “Winner of the IACP [International Association of Culinary Professionals] Award for the Best Literary Food Writing.”

1057. Francis, Dorothy E.M. 1984. Alternatives to cow’s milk: Comparisons. In: David L.J. Freed, ed. 1984. *Health Hazards of Milk*. London, Philadelphia, Toronto, etc.: Baillière Tindall. xvii + 281 p. See p. 145-150. [8 ref]

• **Summary:** In the section on “Milk Substitutes,” table 8.1 is titled “Milk substitutes suitable for different age groups.” The following soya products are listed with their manufacturers and osmolality in mmol/kg (millimole/kilogram): Infants from birth: Formula S Food (Cow &

Gate), Prosobee liquid and powder (Mead Johnson), Wysoy (Wyeth, contains beef fat). Infants from three months, in addition: Granolac Infant (Granose). School age children and adults requiring enteral feeds: Fortison Soya (Cow & Gate). Social replacements of milk: Granogen (Granose), Plamil (Plant Milk Ltd.), Soy Bean Milk (Itona), Soya Milk Liquid (Granose).

A discussion of “Soya formulas” is given on p. 148-49. Social replacements of milk “do not contribute significantly to the nutritional intake, particularly for calcium and riboflavin.” Address: SRD, Group Chief Dietitian, The Hospital for Sick Children, Great Ormond St., London, WC1N 3JH, England.

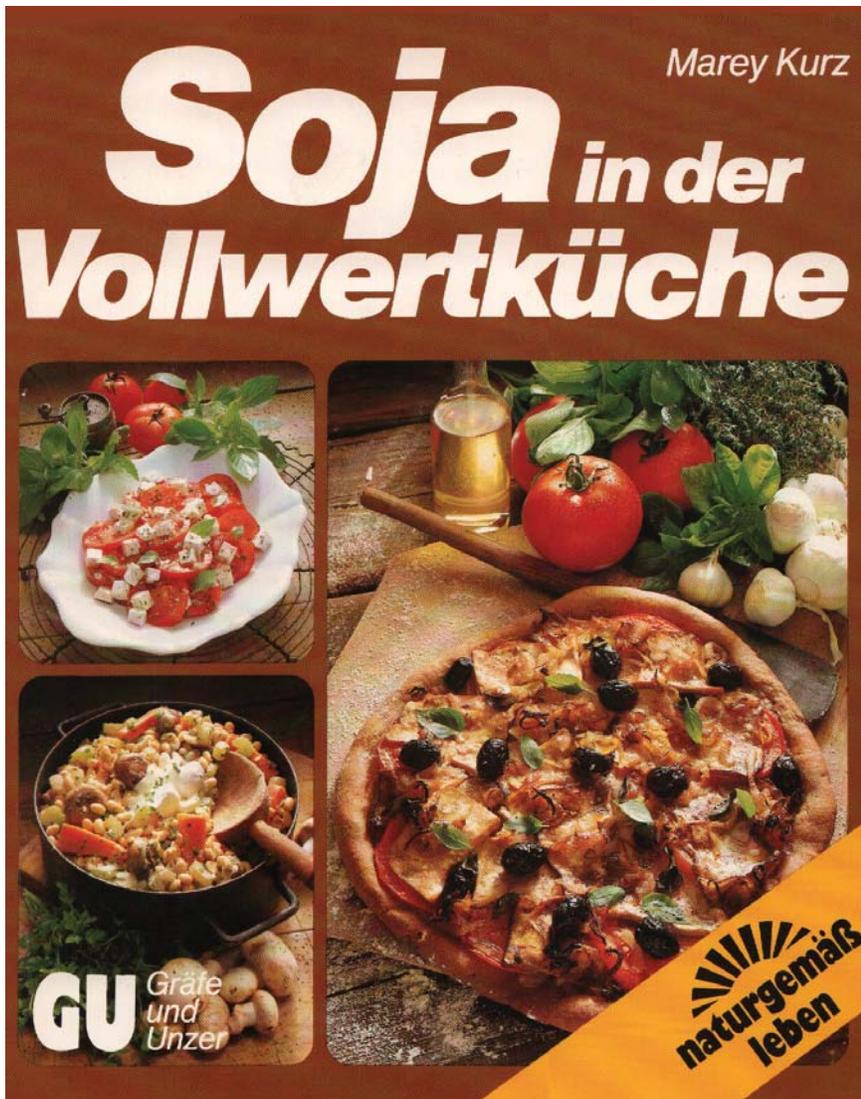

1058. Friedman, Rose. 1984. *Jewish vegetarian cooking: The finest traditional recipes, made exciting and original by the use of healthy, natural ingredients*. Wellingborough, Northamptonshire, NN8 2RQ England: Thorsons Publishing Group. 128 p. Foreword by Philip L. Pick. Illust. by Ian Jones. Index. 22 cm.

• **Summary:** “The official cookbook of the International Jewish Vegetarian Society.” This is a lacto-ovo-vegetarian cookbook. Unlike most American Jewish vegetarian cookbooks which use tofu so extensively in pareve meals, this one makes very scant use of soyfoods, perhaps because it was published in 1984 before the soyfoods movement in England reached take-off. Only one recipe has any sort of soyfood in the name (Soya Bean Goulash, p. 71, which uses ½ lb of cooked soya beans), Tvp (minced) is used in recipes such as Klops III (p. 48), Tomates Reyanos (p. 66), Lahne Be Sahem (p. 67), and Bobotie (p. 70). Soy flour is used in Klops II (p. 47). The index is poorly done, with no reference to major ingredients—only recipe names.

1059. Kurz, Marey. 1984. *Soja in der Vollwertkueche: Rat und Rezept-Ideen zum Kochen und Backen mit allen Soja-Varianten: Bohnen, Mehl, Milch, Sauce, Tofu und Miso. Das erste komplette Soja-Kochbuch [Soya in whole-foods cookery: Advice and recipe ideas for cooking and baking with all the varieties of soya: Beans, flour, milk, sauce, tofu and miso. The first complete soya cookbook]*. Munich, West Germany: Gräfe und Unzer GmbH. 102 p. Illust. Index. 20 cm. [11 ref. Ger]

• **Summary:** Foreword. Everything about soy (*Soja*). Basic soy recipes (How to make at home): Soy grits. soy sprouts, light soybean pulp (cooked ground soybeans), dark soybean pulp, cooked soybeans, sweet cooked soybeans, cooked azuki beans, soymilk, tofu—Soya quark or soya cheese (*Sojaquark oder Sojakäse*), sokar.

Soups and one-pot dishes. Refines ragouts. Delicate meatballs or rissoles. Pies, pastries and spreads. Hearty vegetable dishes. Special salads. Side dishes, garnishes, and entremets. Fine sauces. Soya for those in a hurry. Desserts and confections. Drinks and energy-spenders. Delicious

spreads for breads. Bread, cakes, pastries (*kuchen*) and baked goods.

Appendix: Glossary, books and addresses: gomashio (*gomasio*; sesame salt), graham flour (*Graham-Paniermehl*; see *Vollkornbrösel*), Indonesian soy sauce, margarine, miso, nigari, okara, mushroom soy sauce (*Pilz-Sojasauce*), gomashio (*Sesamsalz*; *Gomasio*), soybeans (*Sojabohnen*), textured soy flour (*Sojamarke*, TVP), tahini (*sessamus*), defatted soy flour (*Sojamehl fettarm*), whole (full-fat) soy flour (*Vollsojamehl*; *Sojamehl vollfett*), soy oil, soy sauce (*Sojasauce*), soy grits (*Sojaschrot*), tofu (*Sojaquark oder -käse*), tofu mayonnaise, Worcestershire sauce (*Worcestershiresauce*). Address: West Germany.

1060. Roberts, Anna. 1984. The Protoveg cook book: Recipes using textured soya protein. Petersfield, Hampshire, England: Published by Direct Foods Ltd. 88 p. Comb bound. Illust. Recipe index. 15 x 21 cm.

• **Summary:** See next page. Protoveg is Direct Foods' and

the Roberts' brand name for textured soya protein [TVP®]; Protoveg is sold in two textures (mince and chunks) and in many flavors (beef, ham, pork, natural, etc.).

Contents: Foreword. Calorie comparisons (minced beef vs. Protoveg). Protoveg recipes. Protoveg menu recipes. Multiple choice recipes. Oven temperatures. Imperial to metric conversions. Analyses [nutritional composition of each type of Protoveg]. Index to recipes (alphabetical by recipe name).

The first page (unnumbered): "Anna Roberts, chairman and co-founder of Direct Foods Limited, has been a vegetarian for twenty-five years. She and her husband Peter turned away from a meat diet whilst still farming in Hampshire. Their three grown up daughters and their grandchildren are following the same path. These recipes will be found invaluable to those seeking an alternative protein source."

"Dedicated to all those who are trying to follow a humane diet."

"Foreword (by Peter Roberts): What is it, Protoveg?"

"It is a direct food, that is to say it comes direct from the growing plant and does not depend on plant matter being converted through the gut of an animal.

"It is a protein food and can be used to take the place of meat in countless recipes. The variety of its use is limited only by your imagination. The recipes in

this book are put forward to start you off, and you will soon be experimenting with ideas of your own. In fact some of the recipes in this cookbook were submitted for the various Protoveg Recipe Competitions which have been run by Direct Foods Ltd. and we are grateful to our customers for them.

"Protoveg was the first textured soya protein food on the retail market in Britain and we published the first cookbook on the UK market—'The Earth Shall Feed Us'. It's first edition was sold out in a very short time but was not reprinted as some of the varieties in it were no longer available. In many ways 'The Protoveg Cookbook' is its successor but has been improved and expanded.

"Protoveg can be used to 'extend' meat by mixing the beef minced variety with minced beef, for instance, but this is rarely as successful as hoped for, and it is better used on its own. Many of the advantages are lost when mixing it with meat. You introduce gristle and cholesterol and you have to

Obviously they were all pullets, but what happened at the hatchery to all the cock chicks?

“To keep a cow profitably she has to have a calf every year, after which she will give you a thousand gallons of milk, spread over ten months. She was never designed to give that much milk. Breeding and nutrition make her give four times what she would yield in the wild, and in the wild she would only have a calf about every third year. The pressures put on the patient cow cause her great discomfort when newly in milk and deplete her reserves so that her productive life is short, perhaps only three lactations.

“A herd of dairy cattle in a meadow is an idyllic scene, and certainly the cows enjoy themselves, build up relationships with one another, have their special friends, likes, dislikes, and some are cunning and mischievous while others lazy or complacent.

“Unfortunately, behind it all there is diabolical cruelty. When the calf is born it sucks the colostrum or ‘beastings’ from its mother while it is still wet from the birth. The mother licks and fusses about it. This first milk contains antibodies that will protect the calf from its childhood diseases.

“But then when the mother-bond is at its strongest the calf is taken away. Separated, the cow and calf call for one another night and day for two or even three days. They have

“No such thing was in existence at that time but some god must have been listening because two years later textured soya protein was developed in America and we were able to obtain certain marketing rights. Protoveg was launched.

“There are hopes that the food science techniques learned can one day be applied to field beans, sunflower, grain peas and the white lupin grain. What a breakthrough that will be. Farmers will be able to reintroduce rotations to get away from the barley-barley-barley monocropping that demands so many toxic chemicals, and they will be able to grow a greater variety of cash-crops without the need to exploit beautiful animals in the squalour of factory farms.

“Bon appetit!—Peter Roberts.”

Talk with Peter Roberts, 12 Dec. 1990. This book, which was published in 1984, sold about 8,000 copies via mail order and health food shops. Address: Hampshire, England.

1061. **Product Name:** [Textured Vegetable Protein].

**Manufacturer’s Name:** Productos Icolpan.

**Manufacturer’s Address:** Medellin, Colombia.

**Date of Introduction:** 1984?

**New Product–Documentation:** Letter from Robert Folkenberg. 1983. Feb. 15. “This company, organized in 1972, has ordered the necessary equipment to produce TVP

but they are not yet in production.”

**1062. Product Name:** Soybean Oil, and Soybean Oil Meal.

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** Fostoria, Ohio.

**Date of Introduction:** 1985 January.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

**New Product–Documentation:** *J. of the American Oil Chemists' Soc.* 1985. “Soy pioneer bows out, others grow bigger.” March. p. 474, 476. On 12 Jan. 1985 A.E. Staley Manufacturing Co. announced that it had sold its five soy processing plants “to Illinois-based Independent Soy Processors Co., owned by a general partnership of individuals associated with Archer Daniels Midland (ADM) and including ADM as a minority partner.” One of the plants was at Fostoria, Ohio.

Note: The Staley Continental Annual Report for 1985 states (p. 40) that the five soybean processing plants were sold on 11 Jan. 1985 for approximately \$84 million in cash.

**1063. Product Name:** Soybean Oil, and Soybean Oil Meal.

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** Des Moines, Iowa.

**Date of Introduction:** 1985 January.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

1067. *Wall Street Journal*. 1985. A.E. Staley sells soybean business to partnership. Jan. 14. p. 8, col. 2.

• **Summary:** Staley continues to divest itself of soybean operations. It is selling 4 mills in Illinois, Ohio, Indiana, and Missouri, and a mill and oil refinery in Iowa. Independent Soy Processors (ISP) includes Archer Daniels Midland as a minority shareholder. The mills have been leased to, and are being operated by, ADM.

1068. *CSY FYI (Central Soya Newsletter, Fort Wayne, Indiana)*. 1985. New processing plant a waterfront

institution: Victory Soya Mills. Jan. p. 3-4.

• **Summary:** Central Soya acquired Victory Soya Mills in Toronto 7 months ago. Canada's largest soybean crushing plant, it processes 1,350 tons of soybeans daily, 7 days a week, 24 hours a day. It has recently been operating at near record volume since two of the mill's chief competitors (Mapleleaf Monarch and Canadian Vegetable Oil Products) have endured strikes in recent months.

Central Soya's first processing plant in Canada, it employs 118 people. Its main products are soy oil (for food and industrial uses), and soybean meal (used in livestock and poultry feeds). Other products include lecithin and soybean flour, both used in the baking and confectionery trades. The plant has been a Toronto waterfront institution since World War II. It was built during the early 1940s by financier E.P. Taylor, and originally operated as Sunsoy Products Ltd., the first [sic] soybean processor in Canada.

1069. Young, L. Steven. 1985. Work with soy protein products by ADM and Central Soya, including soy ice creams and soy protein isolates (Three interviews). Conducted by William Shurtleff of Soyfoods Center, Jan. 9 and 16, Feb. 14. 7 p. transcript.

• **Summary:** ADM and Ralston Purina have approximately equal shares of the market for isolated soy proteins; there are no other major manufacturers. In 1984 approximate total use of isolates, with Tofutti as a major user, was 200,000 to 400,000 lb as delivered. Since only 2% of the soy ice cream mix is isolates, this translates into 10 to 20 million lb of mix. To convert this to gallons, figure 40-50% overrun, leading to 3 to 3.5 million gallons of nondairy frozen desserts.

Why did Central Soya get out of the soy protein isolate business at the very time when they were the world leader with their line of Promine products? Probably because it was not profitable. When they got out, they literally handed the market over to Ralston Purina. They told their former customers to buy from Purina, and even which products to buy. This move made Purina's isolate business profitable. Prior to that, Purina was within a year of getting out of isolates. Address: ADM, Manger of Product Applications, Food Research Div., 1825 N. Laramie, Chicago, Illinois, 60639.

1070. Rich, Robert. 1985. History of Rich Products Corporation's work with soy-based dairy analogs: Rich wins legal battles for non-dairy products (Interview: Continued—Document Part III). Conducted by William Shurtleff of Soyfoods Center, Feb. 8 and March 20. 12 p. transcript.

• **Summary:** (Continued): The new formulation had numerous advantages over its predecessor. Its flavor was better and its shelf life at 40°F was extended to 6 months, from 3-4 weeks. It could be whipped to a stiffness never before attained by any cream or filled cream (containing added vegetable fat). It whipped up to 4 times its liquid

volume, giving more than double the yield of dairy whipping cream. It retained overrun, freshness, flavor, and a "decorator's edge" for more than 48 hours at temperatures as high as 80°F. The base had a unique advantage over dairy whipping cream. It could be reconstituted or extended with either the usual water or nonfat milk, or with fruit juices to give special effects such as an orange icing or filling. Now Rich began to introduce the new Whip Topping in various sizes. In 1952 came Sundi-whip in an 8-ounce pressurized can for soda fountains and over-the-counter trade. In about 1953 appeared Rich's Green Label Whip Topping, which was developed for bakery and institutional use. Prior to mid-1955 Whip Topping had been Rich's only product. At that time they launched Rich's Frozen Chocolate Eclairs, which had Whip Topping as the filling. The eclairs quickly became enormously successful, and were called "the hottest thing to hit the frozen food industry in the last five years." In February 1955 Quick Frozen Foods published an excellent 27-page, tenth anniversary story of Rich Products' first decade, upon which we have drawn heavily. The 1960s. In 1963 Rich Products introduced Coffee Rich, a frozen liquid coffee whitener. It was test marketed in Baltimore. Rich deliberately used the generic disclaimer "coffee whitener" rather than "non-dairy creamer" to avoid as much as possible stepping on the toes of dairy interests. Coffee Rich was the second such liquid product to be sold in America; Presto Food Products in Kansas City, Missouri, had introduced a non-dairy coffee creamer named Mocha Mix (containing soy protein) in 1950, although Rich was not aware of it. But Rich's product was the first frozen liquid non-dairy creamer. The original Coffee Rich used coconut oil and contained no protein, being based on the 1953 patent formulation. The lack of protein gave the product a long shelf life when sold refrigerated in dairy cases, as was planned. But the product started settling out, so the company switched to using sodium caseinate as a protein source, then in about 1963 began using soy protein (typically about 0.75% by weight) as the main protein source. In the mid-1970s soy oil replaced half of the coconut oil, then later in the 1970s all of it. The dairy industry spent a small fortune trying to keep Coffee Rich off the market. Its fight against Whip Topping had been short lived largely because heavy whipping cream (of which little was sold and lots spoiled) was not a big money maker for milk dealers and dairies. But cream was the "bread and butter" of the dairy industry, and it girded to fight in state after state to the bitter end. In some states dairy interests claimed Coffee Rich was an "imitation cream" and hence against the state law; in others they claimed it was mislabeled because the words "imitation cream" did not appear on the label. The first lawsuit was in Louisiana in 1961. Rich Products won in a one-day trial. The defense was exactly the same as it had been for Whip Topping. Coffee Rich was a replacement, not an imitation. Angered by this defeat and hoping to break Rich by exhausting his financial

resources on court cases, dairy interests had Coffee Rich seized in Virginia, Michigan, and Washington. But the former college wrestling and football star wasn't easily downed. He parried by persuading the Carnation Company (which sold Coffee Mate, a powdered caseinate-based coffee whitener) to split all forthcoming legal fees. Two or three years later General Foods joined the non-dairy defense fund. Their Birdseye Division sold Dream Whip, a powdered whip topping, and later the famous non-dairy Cool Whip. Now all legal fees were split three ways. Dick Borne of RGB Labs says they were sharing expenses too before the association was formed, and that General Mills came in after. At about this time (in 1968) the group finally established the National Association for Advanced Foods, to defend the rights of non-dairy products and to be sure that no small companies went off half-cocked and lost precedent setting lawsuits. Ellis Arnall was the Association's first director; they charged annual dues plus assessments and took in new members. The many trials continued to be fought in the name of Rich Products Corp., since it had prestige. In the 1960s a small company selling Instant Blend, a non-dairy creamer or topping, after deciding to defend itself, lost its lawsuit 7-0 in the Massachusetts supreme court. They were kindly permitted to continue selling the product as long as it was distinctively colored—blue! The dairy industry gloated. A year later Rich Products deliberately sold Coffee Rich in Massachusetts so that it would be seized. Their case also went to the state supreme court, but this time Rich's team of seasoned attorneys won... 7-0! By 1966 some 15 consecutive court decisions had ruled in Rich's favor, though five of these went as far as the state supreme court. By 1974 the number of cases and victories for Coffee Rich had grown to 40. That year the Kansas Supreme Court declared Coffee Rich "a new and distinct food" and the milk lobby gave up. Rich Products' success in these suits led to the creation of a new food product category: Coffee whitener. Coffee Rich was the company's third product to contain a significant amount of soy protein. But Rich did not especially promote the fact that his products contained soy on the labels or in advertising, though he often discussed it with reporters. The company initially bought its isolated soy protein isolates for Coffee Rich from one or more of the big manufacturers (Central Soya, ADM, or Glidden). In the mid-1960s a powdered Coffee Rich was developed. In about 1965 Rich Products stopped using soy protein in its retail Whip Topping and switched over to the non-protein formulation adopted for institutional use in 1953. At about that time, company stopped making isolated soy proteins. By 1967 Bob Rich had built Wilber Farms Dairy into the largest solely owned, independent milk company in America. That year he decided to sell it and get out of the dairy business. Rich Products (whose plant was now 140,000 square feet) was doing well enough with non-dairy products to support him amply. In 1969 Bob Rich's oldest son, Robert Rich, Jr., started to work

at the company's Buffalo headquarters as sales manager. After graduating from Williams College in 1963, he had run the Rich Products plant in Fort Erie, Ontario, Canada. After setting up the company's first marketing department in Buffalo, he embarked on a bold program of acquisitions, based on the observation the Rich Products then had more frozen food distributors than any other frozen food packer in the USA. Company sales in 1969 were \$33 million. The first acquisition, that year, was the Elmtree Baking Co. in Appleton, Wisconsin. Sales began to rise by leaps and bounds. The 1970s. In 1975 food sales from Rich Products and affiliates had topped \$100 million a year. That year the company was awarded the National Frozen Foods Convention's first Grand Award, for "achievement in developing the frozen food industry..." and for his "pioneering work in researching and popularizing simulated frozen dairy products" (*Quick Frozen Foods* 1975). In November 1978 Rich Products launched an exciting new product and a revolutionary new process. The product was Bettercreme, a non-dairy icing that whips and is used primarily on cakes. It contained an enzyme-modified isolated soy protein (made perhaps by A.E. Staley's Gunther Products). (Continued). Address: Chairman of the Board, Rich Products Corp., P.O. Box 245 (1150 Niagara St.), Buffalo, New York. Phone: 716-878-8000.

1071. Aldon, Don. 1985. Work with Swift & Co. and non-dairy frozen desserts (Interview). *SoyaScan Notes*. Feb. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Don started with Swift & Co. in 1961 in the "Vegetable Protein Products Division," a brand new division of the oil mill department. The oil was their main product and the protein-rich meal was a by-product. The president of the oil mill department started this department to turn the meal into food. Research on vegetable proteins started in about 1957-58.

Their first product, launched in early 1961, was brand-named SFP (Swift's Protein Food), a water-extracted, granular soy protein concentrate, containing 70% protein. It was not an isoelectric concentrate, and it was not texturized. It was used mostly in ground beef products, but also in some breads. More was sold to other companies than used in Swift's meat products.

The next product was Texgran, a textured soy flour (somewhat like today's TVP), invented by Dean Wilding in about 1963-64. He invented a texturization process while trying to find a way to extrusion cook soy flour. He visited Wenger and saw a variety of products they made. He recognized their value and bought a machine. Don worked for about 18 months developing the process, doing research, and generating information to be used in the patent. Swift started selling the product before they applied for the patent. "As soon as our competitors saw this product, they recognized its value because they had been extruding dog

food. Ralston Purina slammed things together and got a patent application in first. Two weeks later ADM had one in. Then 3-4 weeks later Swift applied.” Swift started selling Texgran in 1964-65. The patent was finally issued in about 1971-72. Litigation went on for years and years between the three companies. Finally Ralston got the basic patent since they had applied first. ADM and Swift got a royalty-free license. They did that just to settle the litigation. Note: The final key U.S. patent (No. 3,940,495) was issued to Ronald Flier of Ralston Purina in Feb. 1976, based on an application filed on 17 Jan. 1973, but based on an earlier application filed on 10 July 1964.

Texgran was used by Swift as a meat extender and sold to other companies as well. The first retail product in which Texgran was used was artificial bacon bits, the first such product on the market. Don developed this product, which was launched in about 1977-78. It was based on Texgran, with flavors added then smoked in a smokehouse. Right after that, General Mills introduced Bac\*O’s.

Swift, which had a combined dairy and ice cream department (the main plant was in Holland, Michigan) was also involved in making soy ice creams, using soy protein isolates purchased from Central Soya. For years, Swift also made an artificial nonfat dried milk (NFDM) called Provide, based on soy flour and cheese whey. They introduced it in about 1973-74. It was used by bakeries in place of NFDM. But Swift never really got into using isolates commercially. They were preparing to do so when they sold the business.

Dean’s Dairy in Arizona was the first to start selling Swift’s artificial milk, which contained vegetable fat, nonfat dry milk, and soy isolates. The product didn’t last very long; it was used to sort of test the market. For details, ask Tony Scaletto, who was Mr. Dipper Dan—head of Swift’s ice cream operations. “We had those ice cream parlors nationwide at one time. He developed all the ice creams and novelties. He may not remember all that went on with soy; we were compartmentalized.” Note: Talk with Tony Scaletto (Feb. 26): He is certain that Swift never had a frozen dessert containing soy protein on the market. He tried using soy protein in a soft-serve product but it was unsuccessful.

Swift got out of the soy protein business because it was driven by the vegetable oil business. They sold the whole oil business (3 crushing plants) to A.E. Staley in about 1979. The one making soy products was in Champaign, Illinois. He is not sure exactly why, but probably because sales and earnings fluctuated too much and could not be controlled. Also, most of the old-timers who really knew the business had retired.

Staley kept Provide and had it custom made outside. Since Staley had its own textured soy protein product, it shut down the Swift protein plant; SFP lingered on, then died.

Concerning Swift’s early history: They started as a meat packer. Then in the 1930s or 1940s they started making oil products from lard. In about 1938, to extend their business,

they got into the oil extraction business and soybeans. Today their big products are processed meats and poultry. Swift bought Hunt-Wesson in late 1983 or 1984. Swift & Co. is now a division of Beatrice Meats, Inc. in Oak Brook, Illinois. All the old company records on soy have been discarded.

Dean Wilding is now in the Philippines building houses. He left Kraft several years ago. His son is a contractor. Address: Alberto Culver, 2525 Armitage, Melrose Park, Illinois. Phone: 312-450-3000.

1072. Johnson, Dale W. 1985. Work with The Glidden Company and Central Soya (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 27. 5 p. transcript.

• **Summary:** Dale went to work for Glidden in 1948. The following people worked at Glidden: Walter Bain, Sidney Circle (who now has Parkinson’s disease), Andy Engstrom, Art Levinson (who was with Spencer Kellogg & Sons in the 1920s and 1930s before coming to Glidden), Willard C. Lighter, Ed Meyer, Joseph Rakosky. People who worked at Central Soya before Central shut down their food labs in early 1949: Louis Sair who went to Griffith Laboratories, Ken Gunther who founded Gunther Products, and E.B. Oberg who went to Glidden and then Carnation.

Industrial soy protein isolates really started commercially in about 1934. They were originally used mainly as coatings for paper, but some were used in paints, shoe polish, and other miscellaneous uses. Procter & Gamble started making industrial soy protein isolates in the late 1930s or early 1940s; they made an isolate that went into Spic and Span, a wall cleanser. The isolate served both as a good detergent and to give a coating to a painted wall to make it easier to clean the second time.

Also discusses Promine D, Amisoy, Ralston Purina, Pillsbury’s work with soy isolates, Picot Laboratory in Mexico, General Foods, Pillsbury, Morel, Sidney Circle’s move to Anderson Clayton in 1967, why Central Soya sold its isolate business to ADM, the story of how Glidden developed soy protein concentrate (first commercialized as Promosoy by Central Soya in the early 1960s), first big sale of Promosoy in the early 1960s to Mead Johnson for use in their Metrecal Wafer (it was not used in liquid Metrecal), Central Soya’s concentrate plant at Gibson City, Illinois, Henry Ford’s researchers who did the pioneering work in whipped toppings, especially Rex Diamond who eventually went to Rich Products and ended up committing suicide, and Bob Smith who went to Delsoy, Bob Boyer and Francis Calvert went to Ralston Purina, Bill Atkinson went to ADM, Jim Liggett at Central Soya developed Rich Freeze (a soy ice cream). Address: Food Ingredients (Minnesota), Inc., 2121 Toledo Ave. No., Golden Valley, Minnesota 55422. Phone: 612-588-9456.

to overcome disadvantages? Frozen soybean desserts. Technology is here for soy beverages. Feb. p. 46.

• **Summary:** Blends of soymilk and dairy milk are being considered in Australia. Address: Australia.

1074. *Australian Dairy Foods*. 1985. Soy report: Six new soy drinks expected. Soy products will enter market. Feb. p. 48.

• **Summary:** The first Australian soy drink last year was “Golden Life,” a “sport food” launched by Martin Pharmaceuticals in Tetra Brik cartons. Also concerns: Anders Linder of STS-Soya Technology Systems, Rajasoya, Vital, Soyvita, Granose. Address: Australia.

1075. Boyer, Robert A. 1985. Reminiscences: Automotive design—Oral history project. Dearborn, Michigan: Henry Ford Museum and Greenfield Village. 130 p. Accession #1673.

• **Summary:** This is the transcript of an interview conducted by Dave Crippen of the Henry Ford Museum on 7 Feb. 1985 at Mr. Boyer’s home in Dunedin, Florida. It covers all aspects of Boyer’s work with soybeans at the Ford Motor Co., including: Growing up in Royal Oak, Michigan; his father worked in the accounting department of the Ford Motor Co. at Highland Park, Michigan (p. 1). Boyer’s first meeting with Frank Campsall (p. 2). Growing up at the Wayside Inn (the oldest hotel in America, in South Sudbury, Massachusetts, p. 1-6). Attending high school in Framingham, Massachusetts (p. 6). First meeting with Henry Ford when the two ice skated together on the mill pond behind the Wayside Inn (p. 7). Moving to Dearborn in Sept. 1927 to attend Ford’s Trade School (p. 7-11). Early work at the chemical plant (quarter-size model of Iron Mountain plant) in Greenfield Village (p. 12-13). Ford’s trip to Germany [Peace Ship to Europe, in 1915 during World War I?] crystallized a lot of his thinking. The Great Depression and the origins of his chemurgic thinking. In 1934 the first National Chemurgic Conference was held at Dearborn Inn; Boyer was in charge of the program. Mr. Irene DuPont attended and Mr. Ford spent a lot of time with him. Before that, the DuPonts and the big banks did not trust Ford. (p. 14). Opening of Greenfield Village in late 1929 on the 50th anniversary of Edison’s first successful light bulb (p. 15). Chemical experiments on truckloads of farm crops using a retort; Frank Calvert (p. 16-19).

Experiments starting in about 1933 using hexane as a solvent to extract the oil from soybeans; the Ford Extractor (p. 20-23). Boyer’s group wanted to get pure protein from soybeans. So “in the lab we developed our own process for extracting the oil... We used hexane solvent, like dry cleaning. We’d flake the beans and run them through a pipe that was full of hexane on an angle with a screw in it.” Hexane solvent is “distilled out of petroleum. It has a very narrow boiling point—66° centigrade. The Ford extractor...

got quite a lot of attention. We built it across the street from the chemical plant. It was about 150 feet away. Mounted it all by itself because everybody was afraid of fire.” A roof was built over it but no walls. It was probably built in about 1933.

In 1933 at the World’s Fair [sic, the Ford Exposition of Progress] in New York City, Boyer’s group had a glass model (on a table) of this extractor that used hexane solvent.

Note: Ford boycotted Chicago’s A Century of Progress Exposition which opened in 1933, in part to call attention to the company’s 30th anniversary; he held his own “industrial fair,” first in Detroit and then in New York, in late 1933. *Business Week* described it as “the greatest industrial show ever held.” Some 2.3 million people attended the two-week show in New York.

A working model of the Ford extractor, using hexane solvent, was at the Chicago World’s Fair, starting in mid-1934, in the Ford Industrial Barn. “They would never let you do that today. Too dangerous.”

Research on purified soy protein and soy plastics with formaldehyde; Bakelite (p. 24-25). Use of soy oil for foundry core binders for casting the Ford V-8 engine block; thus, the soy experiments are now commercialized. Building a 50 ton/day extractor (p. 26-27). Spinning soy protein fiber like rayon, based on spinning milk protein in Italy. Using the fibers to make wrinkle resistant synthetic wool, a suit of clothes for Henry Ford and others, overcoats, neckties, felt hats. “We also found that these fibers blended in very well with rabbit fur for making men’s felt hats. So the Hat Corporation of America took all the fiber we could make. It wasn’t very much and they would blend it in with rabbit fur. And they actually had them [the men’s felt hats] on the market.” Rabbit fur is very expensive (p. 29-36). Ford’s suit of clothes contained 65% wool and 35% soy fiber. Boyer leaves Ford Motor Co. in 1943. Problem with fiber was tensile strength, especially wet strength. Ford’s interest in this fiber work, and his fitness at age 75 (p. 37-38). Ford “was not a true vegetarian but he was pretty close” (p. 38). Edsel Ruddiman’s work with foods (p. 39-47). Boyer and Ruddiman attend American Soybean Assoc. soybean conference in Washington, DC [in Sept. 1932] where they saw “leather-like products that the Chinese make” [yuba]. Boyer tried unsuccessfully to use the idea to make “synthetic leather.” USDA’s experimental farm in Holgate, Ohio, where many soybeans sent back by W.J. Morse were tested (p. 40-42). Work with soybean milk (p. 43-46). The executive dining room in the Engineering Laboratory. Henry Ford invited Boyer to lunch there about 6 times (p. 45). Development of soy ice cream; lipoxidase enzyme inactivation (p. 45-46).

Visits to Battle Creek, Michigan and Dr. John Harvey Kellogg (p. 47). Boyer’s work was with industrial products; the plastic car and structural plastics with hemp, flax, and phenol formaldehyde (soya protein Bakelite resin) (p. 47-64,

70). Making trunk lids using a hydraulic press (p. 50). Ford's famous axe demonstration on a trunk lid (p. 50-52). Lowell Overly and Joe Stewart (p. 53-56, 61, 78-79). Boyer drives the plastic car home (p. 63). Ford's aim with the plastic car: to provide industrial markets for farmers (p. 65). World War II stops plastic car development (p. 65-66). Contract to build an airplane wing of plastic (p. 66-70). The plastic lid and car contain little or no soy (p. 70). Fiberglass and the Chevrolet Corvette (p. 71). Plexiglas and the B-24 bomber made at Willow Run (p. 72). Edsel Ford's death of stomach cancer in the spring of 1943 and its effect on his father, Henry (p. 73-74). Ending work with soy fiber (p. 74).

Boyer leaves Ford in 1943 and goes to work for Drackett Co. in Cincinnati, Ohio. Wife needs to leave Detroit. After 1943 Boyer's career really takes off. Dr. Gangloff (p. 75-77). Use of soy fiber by Drackett in felt hats. "We sold them a lot of fiber and we decided to build a bigger plant." Building a protein plant and a fiber plant in Cincinnati big enough to supply the hat company's demands and larger "than we needed just to supply our fiber operation." They also had a big operation in Cincinnati for high-impact (not structural) plastic (p. 78-80). Drackett's marketing people knew how to market Windex and Drano "but they had no feeling for the soybean operation. So when Mr. Drackett died, they sold the whole soybean plant to Archer-Daniels-Midland (ADM, p. 81-83). Before Mr. Drackett died, Boyer's division had developed commercial soy products, and Drackett was making money on the plastic (phenol formaldehyde plus hemp) and the fiber (p. 81). Use of soy protein as a paper coating (p. 83). ADM finally closes the old Drackett protein plant and sells it to Central Soya, which used the million bushel elevator capacity for storage (p. 83-84).

Shortly after Mr. Drackett died, Boyer left Drackett to work on his edible soy fiber, where he owned patents. "If we can make a fiber from soy protein that resembles the outside of a sheep, why not make a fiber that will resemble the inside (p. 84-86). Idea of building an edible soy protein plant is in Cincinnati, with Mr. Drackett's approval (p. 87). Boyer tries to find companies to license rights to his landmark patent: Virginia Carolina Chemical (Taftville, Connecticut, p. 88); Swift & Co. (p. 89-92); Unilever, which was interested in peanut protein in Africa and at Port Sunlight near Liverpool (p. 92-94, 112-13); General Foods and Nabisco (Fairmont, New Jersey research lab) (p. 94, 99). Unilever and Swift pay licensing fees of \$20,000 a year plus consulting fees. General Mills and Ralston Purina (p. 94-95). Why Swift dropped its interest (p. 95-96). General Mills and Bacos (p. 96). Patent expires in 1971 after 17 years (p. 96). Worthington Foods (p. 97). Ralston Purina was getting into protein. In about 1956-58 they "had bought Procter & Gamble's protein plant in Louisville [Kentucky], which was making industrial protein for paper coating" (p. 98). Worthington Foods was too small to make their own soy protein fibers, so Ralston Purina made it for them (p. 78-80). Ralston Purina's great

success with edible soy protein and their small conflict: pet food vs. human food (p. 100-01). From 1961 to 1971 Boyer was receiving licensing fees / patent royalties from Ralston Purina, Worthington, and General Mills (p. 102). General Mills and Bacos (p. 103-04). Ralston Purina's patent lawsuit against Far-Mar-Co. Ralston won \$8 million. Boyer testified as an expert witness (p. 104-05).

Boyer remarries and retires in 1971 (p. 102, 105, 107). Subsequent work with Miles and Worthington; the Morningstar Farms line (p. 105-08). Companies now spinning soy protein fiber (two in the Netherlands, one in Japan, one in Australia). Ford Foundation was not interested in his work with soy protein for Third World nations (p. 110). Central Soya bought the ADM plant that was located in Chicago (p. 113-14). Kellogg's Corn Soya breakfast cereal (p. 114-15). Worthington's Soyloin Steaks; all early Kellogg and Worthington vegetarian products based on wheat gluten (p. 119). When Worthington bought Battle Creek they got their lady research director; she worked at Worthington until she was quite elderly. Boyer visited her in her lab at Battle Creek several times (p. 119-20. Note: Josephine F. Williams was in charge of the lab and product development at Battle Creek, where she worked closely with Dr. John H. Kellogg. She kept similar positions at Worthington Foods, according to Ron McDermott). Henry Ford as a soybean pioneer and visionary. The soybean is now America's No. 2 cash crop and also our second largest earner of foreign exchange. "That really started from Ford. When we first started in 1931, hardly anybody ever heard of the soybean, and Henry Ford's penchant for publicity publicized the soybean... He certainly made it popular and made people become aware of it. Today it's darned important." He should be remembered as the "Father of the Soybean." "I always thought it would be nice if they would rebuild the [Soybean] laboratory [in Greenfield Village] or restore it like it was when we were doing the soybean work and give it the real credit that it deserves..." (p. 120). After Henry Ford died in 1947 his family wanted no part of any of his pet projects. They completely eradicated the old Ford company (p. 121). Henry Ford was deeply interested in the welfare of American farmers. His tractors and Model T were of great use to them (p. 121). Origins of Ford's interest in chemurgy; William Hale and Dow Chemical Co. in Midland, Michigan; the first three chemurgic conferences in Dearborn, Michigan, in May 1935, 1936, and 1937 (p. 122-27). Ford and Ruddiman establish a complete canning line for good-tasting green soybeans on the outskirts of the Ford estate. The equipment was quite expensive. When World War II threatened, Ford gave it to Michigan State University to teach canning to students. (p. 129-30). Boyer's personal impressions of Henry Ford (p. 128-30). Address: 632 Edgewater Dr. #731, Dunedin, Florida 33528.

1076. **Product Name:** Granose Soya-Franks: Vegetarian

Soya-Sausages.

**Manufacturer's Name:** Granose Foods Ltd. (Distributor).

Made in West Germany by DE-VAU-GE.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1985 February.

**Ingredients:** Water, vegetable oils, onions, egg protein, wheat protein, soya protein, spices, seasonings, salt, gelling agent (guar gum, carob gum), wheat flour, glucose, apples, smoke flavour, oat-flakes, breadcrumbs, herbs, milk protein, soya sauce.

**Wt/Vol., Packaging, Price:** 200 gm cellophane wrapped pack. Retail for £1.06.

**How Stored:** Refrigerated or frozen.

**Nutrition:** Per 100 gm.: Calories 272.

**New Product–Documentation:** Food Report (Lehmann). 1985. Feb. The company says that these are just the first of some 20 new products planned for introduction this year.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by DE-VAU-GE, was introduced in Feb. 1985.

Label sent by Granose. 1990. July 11. 2 by 5.5 inches. Red, brown, green, yellow, and black on white.

1077. **Product Name:** Granose Chicken Style Curry.

**Manufacturer's Name:** Granose Foods Ltd.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1985 February.

**Wt/Vol., Packaging, Price:** 425 gm can for £0.89.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Food Report (Lehmann). 1985. Feb.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in Feb. 1985.

1078. Gunther, J. Kenneth. 1985. History of Gunther Products (Interview). Conducted by William Shurtleff of Soyfoods Center, March 7. 3 p. transcript. [3 ref]

• **Summary:** Gunther Products Inc. was founded by J. Kenneth Gunther in 1949. He received a degree in biological chemistry at the University of Illinois in 1946, then worked briefly as a researcher at Swift & Co. in Chicago. In September 1944 he was offered a job by Central Soya Co. as director of their Central Research Laboratory; there he began his first research work with soy proteins.

Before he arrived, Central Soya had done work on developing a whipping agent from soy proteins. They hired an egg albumen expert from Armour & Co. named John R. ("Ray") Turner to sell the product, but it didn't sell well because of its poor quality. Though not trained as a researcher, Turner was nevertheless technically inclined and very curious. He did some experimental work to improve

the product and made several key discoveries, including the first successful use of enzyme hydrolysis of proteins with pepsin to make a whipping agent. In May and October of 1945 Turner applied for patents on his inventions; these were granted in 1949 and 1950 (U.S. Patent 2,489,208 and 2,520,581). In June 1946 Turner wrote an article in *The Manufacturing Confectioner* about "soy albumen," which had come into demand as a result of scarcities during World War II.

At Central Soya Ken Gunther also conducted research on whipping proteins made from soy protein. There he and Louis Sair improved on Turner's original, landmark patent invention. Like Turner, they hydrolyzed the soy proteins with pepsin, but they also separated and removed much of the insoluble protein from the solubles and added a little sodium chloride, giving a more concentrated whipping agent with greater whipping strength. On 6 June 1947 Raymond S. Burnett and James K. Gunther applied for a U.S. patent on this improved process for making soy albumen. The patent (No. 2,489,173) was granted on 22 Nov. 1949—before either of Turner's patents were granted!

Whipping agents and whip toppings are very different soy-based products. The whip toppings, such as Delsoy or Rich's Whip Topping, had a high fat and moisture content (about 35% fat, 55% water, and 10% sugar), and were used in place of whipping cream; they used a small amount of sodium proteinate that was not enzyme modified. Whipping agents or "soy albumen" type products, by contrast contained no fat, were modified (hydrolyzed) with enzymes, and were used in place of egg whites.

In the late 1940s Central Soya's founder, D.W. McMillen, forecast a huge depression. In early 1949 he fired most of his research staff, including Gunther. The outbreak of the Korean War in mid-1950 revived the U.S. economy so that McMillen's predicted depression was aborted.

In the summer of 1949 Ken Gunther founded Gunther Products in his home town of Galesburg, Illinois, where his family still lived and owned property. He purchased an exclusive license from Central Soya to manufacture enzyme-modified non-fat isolates under their patent. He paid license fees of 4% on sales for the next 14 years. Gunther Products bought food-grade soybean flakes (containing about 50% protein, also used in making soy flour) from A.E. Staley Mfg. Co. and from ADM. The main uses of Gunther's whipping proteins were in confectionery products, especially nougat-like or marshmallow-like nougat candies. The maker of Mars Candy Bars was one big customer. Most of the rest was used in icings and as an ingredient in a sponge cake mix (which sold very well in Australia). Lever Brothers was interested in Gunther's products for 2-3 years.

In 1969 Gunther Products was sold to the A.E. Staley Manufacturing Co. Ken Gunther, who was 62 years old at the time, needed \$750,000 to expand his plants to meet demand and Staley was very interested in getting into this kind of soy

protein business. Before that time Staley had done almost no research on soy protein foods in their huge laboratories—except for a little work on soy flour during World War II. Ken stayed on to run the business (which continued to be very successful), retiring in about 1973. Address: Gunther Products, 701 W. 6th St., Galesburg, Illinois 61401. Phone: 309-342-0119.

1079. Meyer, Edwin W. 1985. History of work with The Glidden Company (Interview). Conducted by William Shurtleff of Soyfoods Center, March 8. 5 p. transcript.

• **Summary:** A far-ranging interview on the history of The Glidden Co. and Central Soya.

Ed began working for Glidden in Aug. 1936. The work with soy proteins were just starting. He was invited to join the group by Dr. Percy Julian whom he had previously done some studies with at DePauw University in Greencastle, Indiana. Julian was a very famous Negro chemist. At DePauw, because of the very different role of blacks in society, they couldn't put him on the staff, so he was a research associate and did fine research in alkaloid chemistry. In late 1935 things heated up for blacks at DePauw so they thought it best if he moved on, even though it was a Methodist Episcopal School. He went to Glidden.

Dean Lewis of the Paper Institute in Appleton, Wisconsin, found Julian. Glidden had become interested in isolating soy proteins for industrial purposes in about 1933, when they had some pilot plant studies going in Cleveland [Ohio], their home base. Glidden got into soy through paints.

The Glidden Co. was founded in the early 1900s or late 1800s as a paint and varnish company; initially there was no connection with soy. It was a family owned concern. Adrian Joyce Sr., treasurer of the Sherwin-Williams paint company in the 1920s. He was an entrepreneur. He and several friends decided to go it on their own. The old-line Glidden family was selling their small paint and varnish company in Detroit [Michigan]. His investing group bought the company in about the 1920s. He got interested in soybeans because casein was the base for water-based paints in those early days, and vegetable oils were used quite extensively in paints, before resins took over the paint industry.

Joyce went to Europe and in Germany learned more about soybean processing. He saw the applications for Glidden. So in about 1933 Joyce and co-workers began to do some experimentation in Cleveland on isolating soy proteins for use in paints. Glidden had a paint plant in Chicago on LeClaire Ave. Joyce decided to put up a commercial soybean crushing plant on the property adjacent to the paint plant at 1825 N. Laramie. They did this in 1934, a combined solvent-exPELLER plant, with a double Hildebrandt unit from Germany. The capacity was about 500 US tons a day. At the same time, in 1934, they installed a full-scale protein isolation plant for industrial purposes. Both went into operation in early 1935. That was the first isolate plant

in America. But in October 1935 the solvent extraction plant blew up, and also leveled the soy protein isolation plant next door. It was a disaster. They boldly rebuilt the crushing plant with new Hildebrandt units (not larger) plus a bank of Anderson Expellers ("Expeller" is an Anderson trade name) but at that time they did not build a new protein isolation plant, just a pilot plant, which was in operation by 1936. It stayed as a pilot plant for several years.

Percy Julian and Ed Meyer both arrived in August 1936. Julian took over as Director of Research of Glidden's Soya Products Division. The first director of the Soya Products Division was Eric Wahlforss, a Finn. He was let go at the time and returned to Finland. Percy's task was to improve the isolated soy protein then being made in Glidden's pilot plant. They were working with the Paper Institute on using soy protein as a sizing and coating adhesive for paper. Paint was now of secondary interest. This expanded the horizons of industrial isolates. Julian, with his skeleton research force, Bernard Malter, Meyer, Donald Payne (chemical engineer from Purdue), began working to improve isolate quality in 1936. In late 1937 they began to build a commercial industrial isolate plant based upon new research findings. It went into operation in late 1938. George Walker was the chemical engineer in charge of the pilot plant; the plant manager was George Brett. The principal uses were paper coating and paper sizing. Research continued on using the isolates in water-based paints. In about 1937 Julian hired a young PhD out of Northwestern named E.B. Oberg. He came from the U.S. Gypsum Co. that had been making water-based paints. Julian was head of research until 1953.

In 1938 Meyer switched over to head the research effort on soy phosphatides (lecithin), reporting to Julian, but with his pay coming from Joe Eichberg of the American Lecithin Company. Glidden had a German lecithin plant put in along with the solvent extraction plant, making natural grades, containing 30-40% soy oil (as opposed to refined, oil-free grades). It was in place when Meyer arrived. In 6 months he got an assistant. In 1938 Meyer started the research on granular phosphatides (lecithin) that are very popular today in the health food market. They were selling food grade lecithin, containing oil, through American Lecithin Co. The lecithin was sold mostly to the confection trade as viscosity modifiers to chocolates, plasticizers to chewing gum, and cocoa-butter lecithin with oil-free lecithin was used in the confection trade as a viscosity modifier for chocolates. Meyer continued working on the granular isolates until he left to return to graduate school at Northwestern in September 1940. The project was the turned over to Herbert T. Iveson, a young man from the University of Illinois, who developed commercial granular lecithin in the early 1940s.

Glidden was definitely the first US company to have granular lecithin on the market. (Probably the first US commercial lecithin, non-granular, was made by ADM at their old solvent extraction plant on Blackhawk St. in

Chicago). American Lecithin had contracts with ADM, Glidden, and Hansa Muehle (which supplied information). [When Meyer returned to Glidden after graduate school, he worked with the fine chemicals crew on sterols, etc.]

Earliest food grade isolates in the USA. They were made by Glidden on a very small basis, using industrial grade isolates cleaned up and enzyme modified. It was enzyme modified and sold as a whipping agent into confections. The volume was very small. Meyer worked with Bernie Malter on this in the late 1930s. They fine-ground the industrial isolate and simply mixed it with papain enzyme. A key man in moving forward this modified isolate work was Mr. Art Levinson, then sales manager of the soy products division. Ed thinks Glidden conceived the idea of enzyme modification of isolates. Central Soya started research on enzyme modified isolates in the early 1940s and their work, especially that of Ken Gunther, improved on that of Glidden. The first patent on an enzyme modified isolate may have been by Levinson and A.G. Engstrom. Applied in late 1930s and granted in mid-1940s.

Note: See U.S. Patent 2,381,407. Issued 1945 Aug. 7. 4 p. Application filed 31 July 1940.

Later, in the late 1940s, Glidden made non-enzyme modified isolates at a small pilot plant.

Overview of 1930s. Main contributions: 1. The pioneering of soybean solvent extraction along with ADM. 2. Development of the concept of protein isolation of soybeans (separating a commercial purified protein from the soybean). Key isolate people were W.J. O'Brien, Vice President of R&D in Cleveland. He was the VP responsible for the Soya Products Division. Percy Julian, Roy Brett, etc. reported to him. Also Adrian Joyce was a key driving force. O'Brien was an executor in a sense. The paint field was their prime money maker. Within this was Glidden's firsts with commercial and small-scale edible soy isolates.

The Soya Products Div. was founded when they built the plants in 1934-35. The Glidden Co. bought the famous Cone and Brown Patents from I.F. Laucks, Co. Laucks was importing Manchurian soybean cake and grinding it up for use in plywood glues. Laucks sponsored the work of Cone and Brown on isolation of proteins. This was pioneering research. Cone and Brown he thinks were Laucks employees, not employed by Glidden. Residuals of I.F. Laucks still exist today.

Glidden's major contributions during 1940s. 1. Development of granular phosphatides to a commercial scale, and marketing of them to the dietary food industry. First sold in about 1942-43 to certain health food outlets = dietary outlets. Not used in other food products. 2. During the War Years industrial isolates came into their own, the process had been well established, so researchers were exploring other avenues. 3. Major contributions were minimized by the war effort. All of the protein after America entered the war was requisitioned by the Navy. It became the

base for the "bean soup" fire extinguishing foam. All Glidden protein went into that. Prior to this National Foam Systems (NFS) used scrap leather, hoofs, horns, hides to make fire extinguishing foam; it was digested and boiled vigorously with calcium hydroxide. Glidden sold isolated soy protein to NFS for this industrial use. On board a ship they would pump air into the liquid bean soup and it would foam to plaster burning ships, etc. This demand dried up after the war. The major thrust of Glidden's industrial plant then went back to the paper industry. Continued. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

1080. Meyer, Edwin W. 1985. History of work with The Glidden Company (Interview) (Continued–Document part II). Conducted by William Shurtleff of Soyfoods Center, March 8. 5 p. transcript.

• **Summary:** (Continued): 4. In 1945, to add another chapter, Percy Julian hired Sidney J. Circle, who was put in charge of protein R&D. Under his direction a major effort was made to exploit the edible proteins. Before that it had been just drifting along. During the late 1940s a viable process was developed for making an edible product. Circle deserves credit for advances made. Tim Anson worked for Lever Brothers. Had been at the Rockefeller Inst. and made a name for himself in protein chemistry. He was interested in edible proteins and in the forefront of making meat analogs. Circle had set up a pilot plant and Glidden sold Lever Bros most of their material; it was used for test purposes. Not much came of it, except Anson patents, assigned to Unilever. Glidden's work continued into the early 1950s. Uses of those edible isolates was all at a laboratory stage. Ask Circle if any were sold.

Ed Wilhelm, a chemical engineer, came in in 1938. He could be a good information source. He lives in Florida.

Glidden began to realize in the mid-1950s that they were not going to succeed in the soy processing business unless they invested a lot more money. The soybean business had been growing. The meal had become a principal ingredient in mixed feeds. But Glidden realized that they could get a higher return on their investment if they spent their money to build company-owned paint stores. They had a big paint operation throughout this whole period, and still do. Ed does not know what percent of total sales the soy operations were.

Question: Was the whole Chicago plant called the Soya Protein Division or was that just a part of the plant?

They still do a big paint business as part of the SCM Corporation (Smith Corona Marchant). So Glidden tried to sell the business in about 1955. They contacted Central Soya he thinks and Central Soya turned it down. Willard Lighter was vice president of the Chemurgy Div. in the early 1950s. He pushed for commercialization of edible isolates. Glidden had a solvent plant and the peripheral works plus a feed mill down in Indianapolis, Indiana. They decided that they were going to build a big commercial isolate plant there. It was

designed and they began to put up the structural steel work in 1956-57. They had learned how to handle the sewage effluent, a key factor. All this time they were trying to sell the Chemurgy Division. Then they lowered their price and Central bought it in 1958, then took over in Aug. 1958.

Lighter was transferred to Cleveland [Ohio] as Executive vice president for Glidden. Richard Wesley was going to stay on with Central Soya. Wesley asked Meyer to stay on as Director of Research of the Central Soya Chemurgy Div. Central Soya scrapped the Indianapolis plant and rebuilt from scratch. Ed invites me to call back. He still consults for Central Soya.

In fact, Central Soya pioneered the dehulled, so-called 50% soybean meal, which is now 49%. This made possible the feeding of poultry, since poultry can't stand the fiber in a 44% meal. This expanded the horizons of feeding soybean meal tremendously. They had also done some soy flour and enzyme modified soy proteins, a process still in use today.

Glidden's first large scale production of soy isolates began in 1958, not 1957. Moreover Central Soya did not give the \$1 million to Dale Johnson, but they did invest it in the plant. Waldo exaggerates a bit. They gave the \$1 million to the whole organization; they encouraged everyone to stay.

Percy Julian left because Glidden had not had a very profitable history in the fine chemical area, so they wanted to give it up. He left in 1953. The fine chemical group, became a central/simple organic laboratory. That lasted from 1953-58.

Central Soya bought Glidden in July 1958. In the early 1950s Glidden changed the name of its Soya Product Division to the Chemurgy Division. Central Soya did not have a chemurgy division.

In 1949 Central Soya closed out all their edible work and cleaned house. "I knew the guy who was responsible for helping to clean the house." They too had not done well in the edible field. E.B. Oberg was one of their early directors, he left Glidden in 1938 for Central Soya, then from there he went to Carnation; Ken Gunther was the last director. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

1081. Kahn, E.J., Jr. 1985. Profiles (soybeans). The staffs of life. V. The future of the planet. *New Yorker* 61:50-56, 60-66, 68-85. March 11.

• **Summary:** This wide-ranging overview of the soybean, from earliest times to the present, is well written though a little patchy and scattered. Among the topics it discusses: Soybeans as a relief food. Ted Hymowitz, Benjamin Franklin, and tofu. The Shah of Iran switching to soybean oil. The attempt by the Hunt Brothers of Texas to corner the soybean market. The Nixon soybean shock. Soybeans in Brazil and Manchuria. The origin of the soybean in China and Japan. Soymilk and Dr. Harry Miller. The dissemination of the soybean to Europe and America. How the soybean

became popular in America; William Morse and the USDA. Henry Ford's work with soybeans and William Atkinson. Dwayne Andreas and ADM. "There is no question in my mind but that the soybean is the fundamental future of the planet," Dwayne Andreas says.

Also discusses amaranth, the winged bean, IBPGR, loss of genetic diversity, and water shortages. The article closes with a quotation from Monkombu Sambasivan Swaminathan, the director general of the International Rice Research Institute in the Philippines: "We live in this world as guests of green plants."

1082. Meyer, Edwin W. 1985. History of work with The Glidden Company (Interview). Conducted by William Shurtleff of Soyfoods Center, March 13. 3 p. transcript.

• **Summary:** A far-ranging interview on the history of The Glidden Company, this is a follow-up to the interview on March 8.

Ask Sid Circle for Burnett's nearby address.

Spencer Kellogg: One guy (Ed is trying to remember his name) worked for Central Soya for a while, first in sales then in quality control. ADM purchased Spencer Kellogg plants in Decatur and Central Soya purchased their Bellevue plant.

Procter & Gamble: Their work with soy isolates was out of their Buckeye Cotton Division, for processing cottonseed used in their shortening. They had a plant in Louisville, Kentucky, and they made some industrial protein. For a short while they used it in Spic & Span as a film former—but *not* before 1935, probably after 1943. In the late 1930s might have been doing something.

1937 vs. 1935 and the introduction of soy isolate. Why he choose 1938. 1. They want to forget the solvent extraction plant explosion disaster in Oct. 1935 in Chicago. 2. The material made in the soy protein plant was of poor quality. It was a full scale plant—not a pilot plant. The poor quality may have been related to poor desolventizing at the solvent extraction plant. The two plants were practically wall to wall. The soy protein plant was of commercial size and it was intended for commercial utilization by the paper and paint industry. But the process was not a viable one; the material produced was completely unsatisfactory. Ed is not sure if the soy protein was sold or not. Maybe not. Glidden started building the plant in 1934; it started operation just before the explosion, but it was not commercially viable.

The explosion caused by a hexane leak. The original solvent plant may not have had Anderson Expellers, only a European solvent extractor. Glidden definitely had an Expeller plant in Aug. 1936 on site where industrial protein plant had been.

Other protein pioneers: Borden had a soybean Expeller crushing plant in the late 1930s in Kankakee, Illinois, later sold it to Swift. It was not making modern soy protein products.

Moffat St.: Glidden's offices were on a small side street.

It split the Glidden Co in half. 1 city block from Laramie Ave. to LeClaire. They owned the property on both sides of the street. In the early 1940s they bought the street then in 1941 fenced it in for security with a navy contract.

Horsburg was the man's name, not Horsboro. Not sure if from Sherwin Williams.

Ed Wilhelm is key man to check with. He developed the first pilot plant for industrial isolates!! Before the first plant and the explosion. He goes way back.

Alpha Protein: Glidden was very careless in handling it as a registered trademark. The term later came to be used generically for isolated soy protein. Yet it was trademarked from the outset.

The food grade soy protein product was not "Soya Whip" but "Albusoy;" it later became known as Premium Albusoy.

Central Soya's term was "Soya Whip" when Ken Gunther was working on it at Central. Albusoy was a registered trademark coined by Al Levinson. Later when the Glidden company stopped making it and Gunther Products was in operation, Gunther used to make the product for them and put it in bags marked Albusoy. They sold it way into the 1950s or even 1960s. Central Soya developed a better product than Albusoy, digested with pepsin (operated in the isolecetric range so no need to neutralize). When Gunther left Central Soya in 1949 he got exclusive rights under license. He began to make this whipping agent. He had a license to the Central Soya patent. It came on in competition to Albusoy, which Glidden made until 1949 or 1950. They switched to a small spray drier for the production of the Albusoy, phasing out drum drying.

Yes! It was advertised in 1943. Made in small amounts. How much? Gunther was making the product after 1950. Starting when? Chinese egg albumin had been shut off to the egg industry.

Rohm & Haas was a big enzyme company; they made an enzyme named Rhozyme. Mulsoya was used as a sizing for silk and cotton fibers during weaving to give additional strength, then later it was washed off. Ed's brother, Carl, ran the pilot plant. He started in 1938, before Albusoy.

Sterols: Utilizing soy sterols for the production of hormonal material was started by Ferriholz, who worked for I.G. Farben Industries in Germany. It was discovered in late 1930s. Glidden picked it up soon. First published in the *Annalen der Chemie*. Also Herman or Henry Kraybill at Purdue worked on isolation of soy sterols. He was an agricultural chemist.

Perrin from National Foam Systems got some Glidden isolates and developed the fire extinguisher. Scrap leather was cheaper, but the soy protein isolate was in steady supply and a big volume. Cost was no longer a question with the government paying.

From collection points from the farming areas, it was transported by barge to the central elevator on the Calumet

Harbor. Had 2 or 3 river elevators. Central Soya got them after the sale—after 1958

Glidden's Central Organic Chemistry Research Labs. (COL). This group of technical people is much too big to be supported by the Chemurgy Div. What shall we do? All the researchers were biochemical/organic chemistry oriented. Let's make that our central organic lab to serve the rest of the divisions. This was the best research operation in the Glidden Co, both facilities and people. The FCG people joined with the Chemurgy research people joined to form one organization. From then on, Chemurgy now contracted with COL to do their research! Ed became assistant director. Dr Wayne Pol? (now in Chicago) became director of research. Sid Circle was a part of that.

Ask Ed Wilhelm when in 1958-59 the edible protein plant went into operation. It was constructed adjacent to the industrial protein plant, had a common wall. The whole chemurgy research group continued to work in the same location. All kept doing what they had before. No key people were lost. Sid and his group stayed, Rakosky stayed as head of the microbiology lab. The essential people stayed and made the move to Central Soya. The lecithin people (such as Paul Davis) stayed.

Central Soya's headquarters were then in Ft. Wayne, Indiana, in the old bank building; they are now in a new high rise. Central's offices were not out with its plants. When did they move their offices from Decatur, Indiana, into the city? Probably in the early days.

Who of top Central Soya management can I interview?

Promosoy: The alcohol process had been explored by A.K. Smith in Peoria [Illinois, at NRRC] but no one had ever commercialized it. Glidden or Central Soya was the first to do so. The alcohol process preserves all of the proteins; whey proteins are lost in the aqueous process, which causes disposal problems. Griffith Labs. had big problems with disposal. Also, you can recover and recycle the ethyl alcohol. The alcohol process gives a bland concentrate. Didn't have to be neutralized or spray dried. Just desolventized then ground. Griffith's product difference was promotion. Griffith had a bigger sales organization for selling their edible products than Central. They had been in this business of selling edible products for a long time. One early product was Pro-Max? Then later changed the name to GL-301. Now they have both products.

Lou Sair left slightly before the closing of Central. He was not there in 1949. He was not severed at the time of the closing. Sair lives in the Chicago area. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

1083. Sair, Louis. 1985. History of Griffith Laboratories (Interview). Conducted by William Shurtleff of Soyfoods Center, March 16. 4 p. transcript.

• **Summary:** Griffith Laboratories was founded in 1918 by a salesman of baking supplies named Enoch L. Griffith.

The main first product was Aquatex, a gelatinized starch sold to the bakery trade. The company specialized in bakery supplies. The son of the founder, C.L. Griffith, is now age 92, and still active in the business.

Lou Sair was born in Canada in 1910. He graduated from the University of Manitoba [Canada] with BS and MS degrees in cereal chemistry, then earned a PhD degree from McGill University (McDonald College). After working at the National Research Council on a meat problem, then Ogilvie Flour Mills and the Corn Industries Research Foundation in Missouri (on starch and cereals), he went to work for Central Soya Co. in about 1944 and began his first research on soy.

After World War II started, egg albumin (egg white) was selling for \$5 a pound. In 1939 the Glidden Co.'s Soya Products Division had started making a whipping compound named Albusoy, then in 1944 Soybean Products Co. in Chicago had started selling a similar product named Soyco that was made elsewhere for them. The Regional Soybean Industrial Products Laboratory in Urbana, Illinois (after 1942 called the USDA Northern Regional Research Laboratory) in Peoria, Illinois, played a leading role in the research on whipping compounds. Sair recalls that Albusoy yielded a fairly coarse foam, so while at Central Soya he was assigned the job of coming up with a good whipping compound. He made isolated soy protein, then used a pepsin digestion to convert the isolate to a fat free compound that whipped nougats and candy very well. Used in cakes, it rose beautifully during baking, then collapsed, since it was not denatured by heat. This product, also called Soy Whip, was of excellent quality and in 1945 it was commercialized. During the 2 years that Sair was at Central Soya, no one thought that soy isolates might have a place in human foods or in the food supply, other than in frills such as whip toppings. No thought was given to using soy protein isolates in sausages, breakfast cereals, etc.

In 1946 Sair left Central Soya and Ken Gunther took over research on whipping compounds. Soy Whip continued to be a commercial product, sold to good candy accounts. Then in 1949 Dale McMillan, founder of Central Soya, decided that there was no future for vegetable proteins at Central Soya so he shut down the whole operation and licensed the rights to the whipping compound to Ken Gunther, who established his own company in 1949 in Galesburg, Illinois, and, with his brother, Robert, made this product (and others like it) for many years until A.E. Staley bought the company. The company didn't expand much and is still fairly small.

In 1950 Sair and Rathman (both from Central Soya) were issued a patent on an improved process for making a soy-based whipping agent. He thinks he got 2-3 patents at Central Soya on Soy Whip. Another author on one may have been Mr. Turner, a salesman.

In 1946 Sair went to work for Griffith Laboratories, where he worked in many areas. He got over 50 patents at

Griffith. He thinks he has more patents as a food chemist than anyone in USA. Griffith is involved in almost everything. But his mind kept going back to the work he did at Central. Griffith had a big business in binders for sausage products, so he began to wonder if they couldn't use a soy protein in sausages. Since Griffith was not a soybean crusher, nor a manufacturer of isolates (which have a very low yield and cause major waste disposal problems), he hit on a very simple idea called the 'isoelectric (water) wash process' (different from the alcohol extraction process) to make a soluble soy protein concentrate (as they named it). The yield was 70%. Sair got the first patent. He began working on development of such a product in about 1950. This was long before Sidney Circle began working on this at Glidden (note at Glidden; Circle's was insoluble with an alcohol wash). It has a sandy texture, a completely different product. Extracting the sugars from soy with alcohol denatures the protein, so it has no emulsifying properties. It is a filler with good nutritional properties. But it has little functional value.

The Griffith process started with defatted soy flour, purchased from the A.E. Staley Mfg. Co., which sold them several hundred million pounds over the years. The protein was extracted from the flour, the pH lowered to 4, the sugars washed out with water, the protein neutralized, and then the protein was spray dried. The Nitrogen Solubility Index of the protein was 70%. A pound of the concentrate would do about the same job in terms of binding power as an isolate but it was much less expensive.

They went to the USDA and, after a long process, got the first approval to use soy protein concentrate in sausage—at a fairly low level.

In 1956 Griffith Laboratories introduced America's first commercial food-grade soy protein concentrate. The demand was great for their small production. At that time Griffith was also manufacturing a lot of sodium caseinate. They couldn't supply the market for caseinate for some applications. So Sair went to Glidden and bought some isolate. Sair thinks they were the first company that bought any soy isolate with the intention of putting it into a food. But the taste was so terrible (it was high in sulfur from Glidden's paper coatings), that it almost ruined a few Griffith accounts. Griffith bought large quantities then gave it up because it was absolutely useless as food. Griffith was using the isolate before it was modified (ask Ed Meyer).

Years later Ralston Purina went to Griffith and asked to purchase a license on their concentrate. Griffith refused.

In the 1920s Griffith Labs got involved with manufacture of hydrolysates at their East Coast plant in Newark, New Jersey. Initially everything was made from wheat gluten. In about 1965 they began to hydrolyze soy. George Inglett was in charge, under Sair for 2-3 years doing research on hydrolysates; George is now at NRRC in Peoria, Illinois.

One of Griffith's most interesting stories is in textured

soy proteins. One of Sair's patents may even be before ADM's TVP. He made what was called a "structured protein." In 1976 it was named GSVP (Griffith Structured Vegetable Protein). It is made by using soy flour by a controlled extrusion process; they controlled the pressure along the length of the extruder and at the exit from the die to give a good structure. He thinks it is greatly superior to TVP.

Note: Talk with Ralph Sair at Griffith Labs. 1991. Oct. 15. Louis Sair passed away about 3 years ago. The next best man to talk with about the early history of Griffith Labs would be Irving Melcer. Address: 9100 S. Sacramento, Evergreen Park, Illinois 60642. Phone: 312-422-2033.

1084. *J. of the American Oil Chemists' Society*. 1985. Soy pioneer bows out, others grow bigger. 62(3):474, 476. March.

• **Summary:** The soybean crushing industry is undergoing major restructuring as A.E. Staley Manufacturing Co., a pioneer in soybean processing, leaves the business. On 2 Jan. 1985 Cargill finalized its purchase of six soybean processing facilities from Ralston Purina. At that time it probably passed ADM to become America's largest soybean crusher. The plants acquired by Cargill are in Bloomington, Illinois; Lafayette, Indiana; Iowa Falls, Iowa; Kansas City, Missouri; Louisville, Kentucky; and Raleigh, North Carolina. A 7th plant owned by Ralston Purina at Memphis, Tennessee, was not offered for sale, but was scheduled to be closed in February.

With this acquisition, Cargill now has 20 soybean crushing plants in the Midwest and Southeast. The location of each of Cargill's 14 other soybean crushing plants, with daily processing capacities ranging from 20,000 bushels to 120,000 bushels, are given.

Ten days later the A.E. Staley Manufacturing Co. announced it had sold its soybean crushing business to Illinois-based independent Soy Processors Co., owned by a general partnership of individuals associated with Archer Daniels Midland (ADM) and including ADM as a minority partner. With this, ADM probably recaptured its lead, but only by a slight edge.

In October Staley agreed to buy CFC Continental Inc., the nation's second largest supplier to the food service business. Ralston Purina, meanwhile, in October acquired ITT's Continental Baking Co.

Central Soya Co. has 9 soybean crushing plants, 7 of them in the USA at: Gibson City, Illinois; Decatur and Indianapolis, Indiana; Bellevue, Delphos, and Marion, Ohio; and Chattanooga, Tennessee. These 7 U.S. plants are said to have a total capacity of about 10,000 tons/day of soybeans. The 2 plants outside the U.S. are in Utrecht, The Netherlands, and Victory Soya Mills in Toronto, Ontario, Canada.

Ag Processing, a cooperative based in Omaha,

Nebraska, operates 6 soybean crushing plants in the USA at: Van Buren, Arkansas; Eagle Grove, Sergeant Bluff, and Sheldon, Iowa; Dawson, Minnesota; and St. Joseph, Missouri. Total crushing capacity is estimated at 11,000 tons/day of soybeans. Ag processing is now entering the edible oil refining business, constructing its first refinery adjacent to its soybean crushing plant at St. Joseph, Missouri. Expected to be completed in 1985, it is rated to have a refining capacity of 12 tank cars (720,000 pounds) of soybean oil per day.

Two poultry-related firms that are building oil refineries next to their soybean crushing plants are Perdue Inc. of Salisbury, Maryland, and Townsends of Millsboro, Delaware. Each refinery will have a capacity of 12 tank cars (720,000 pounds) of soybean oil per day.

According to the *Soya Bluebook*, the capacities of Perdue's two crushing plants are 700 tons/day at Salisbury, Maryland, and 600 tons/day at Cofield, North Carolina. Townsend's single crushing plant has a 1,200 tons/day capacity.

1085. Oberg, Elmer B. 1985. History of work with Central Soya and Glidden (Two interviews). Conducted by William Shurtleff of Soyfoods Center, March 16 and May 4. 3 p. transcript.

• **Summary:** Oberg worked for Glidden from 1937-39, for Central Soya from 1939-43 (at Decatur, Indiana, as director of research), then for Carnation from 1943 on. He started as director of research at Carnation, at Oconomowoc, Wisconsin, but did not do a lot of work with soy at Carnation. Products discussed include Melksoy and Soyaffluff (soy flours), soy lecithin, Protein-70 (perhaps the first non-commercial soy protein concentrate, later developed into a commercial product under the name Promosoy by Sidney Circle at Central Soya and under the name Promax by Lou Sair at Griffith Labs).

Oberg did lots of work on commercial lecithin products. When he arrived at Central Soya in Oct. 1939 the company was making no lecithin, but they were experimenting with separating it from soy oil. When he left Central Soya in 1943, only 4 years later, the company was producing about 20 million lb per year. It was a very exciting program and he was very involved. Glidden had some early lecithin patents, including granular lecithin. Then Central Soya came along and sort of pushed their way in. Now Central Soya has become very big in lecithin. Granular lecithin was not made at Central Soya while he was there. Central Soya's brand name was "Central's Lecithin." The product started slowly. They did some interesting bleaching and modification work. "For years we sold our lecithin through the Cleary Corp. in New Jersey. They were a broker. American Lecithin Co. was a competitor, and was ready to sue Central Soya. He thinks ADM sold through American Lecithin. Staley got into the business later.

Oberg did some interesting, historically important work

at Central Soya on Protein-70, which is now called a protein concentrate. “I really believe I was the first one who did the first one and made any of that product.” He is quite sure (but not positive) that Lou Sair got involved later. Oberg made the soy protein concentrate by leaching soy flakes at the isoelectric point to remove all the soluble solids. He thinks that he and Sair used the same process, but Sair carried on his research only after he went to Griffith Laboratories. Protein-70 did not become a commercial product while was employed by Central Soya. Today the product is named Response and it is Central Soya’s only soy protein product.

“Glidden was really struggling, and practically dead until World War II came along and shot the soy protein isolate group into the air. They struggled to make money on Alpha Protein and to get it into the paper trade.”

Glidden sold a lot of soy grits to the baking trade, and (in about 1937-39) lots of Expeller soybean meal to the pet food trade. It contained 6-7% soy oil and was not extruded or texturized. It was just ground coarsely and screened to get various particles for use in canned dog food. This was a good source of income. Most of it was sold to a dog food company in Iowa (Ask Ed Meyer, who is a wonderful guy, has a superb memory and historical sense, and is the nicest person to work with; he keeps a neat notebook).

Note: In early 1949 Central Soya shut down its research laboratory, of which Ken Gunther was head. The man who had the keys to the laboratory door went there at about 5:00 A.M., locked it up, and when the employees arrived, they couldn’t get in. Central Soya shut down the operation because they felt it wasn’t paying off. In retrospect, this turned out to be a very short-sighted viewpoint. Address: 11228 Village 11, Camarillo, California 93010, or Oberg Foods Co., 1201 Broadway, Suite 203, Quincy, Illinois 62301. Phone: 805-484-3542 or 217-224-8010.

**1086. Product Name:** Scrummi (Non-Dairy Soy Ice Cream) [Banana & Honey, or Apricot].

**Manufacturer’s Name:** Vegetarian Feasts.

**Manufacturer’s Address:** 21 Carnwath Rd., Fulham, London SW6, England.

**Date of Introduction:** 1985 March.

**Ingredients:** Incl. tofu, fruits.

**How Stored:** Frozen.

**New Product–Documentation:** Talk with Sonia Newhouse. 1988. March 13. Sonia developed this product for her daughter, who was allergic to dairy products. It debuted at the International Food Exhibition in London, this product received positive reviews mention in the London Evening Standard and at the show. She thinks it was one of the first tofu ice creams in England. But it was never commercialized because the ice cream equipment did not arrive before she sold the company. Her daughter, Suzanna Price, named the product (short for scrumptious) and her daughter owns the formula. Today she served us 5 flavors of her homemade

tofu ice cream (pineapple, banana, raspberry, apricot, and chocolate) which are basically variations on Scrummi.

1087. *Grocer (The) (England)*. 1985. Soya milk spearheads move into yogurt, ice cream. April 6. p. 23.

• **Summary:** Michael Cole, managing director of Soya Health Foods of Trafford Park, Manchester, reports that he is selling about £3 million worth of his new Sunrise soya milk each year, and producing 46,000 gallons a week in half-liter aseptic Tetra Pak cartons. Major grocery chains have shown great interest in the product. Most competing soya milks are imported to England. Cole imports only his soya beans—from Canada. His company’s biggest competitor is Granose, which is selling through Safeway and other outlets.

Cole presently has to feed his okara, a by-product of soymilk production, to pigs. “But in the next few weeks we will be installing a vegetarian sausage and burger plant which will take care of that.”

Cole is a former health food shop owner who has all been involved in the marketing and manufacturing side of the trade, not only in England but also in India and America.

A large photo shows Cole standing next to stacked cartons of his Sunrise Soya Milk. The caption reads: “Soya yogurt possible—Michael Cole.”

Note: This was the article that led to the founding of Genice in Wales. Ray Pierce, who was with Classic Ices in Wales at the time read the article, learned that Michael Cole of Soya Health Foods Ltd. was planning to make a soy ice cream, then contacted Cole and offered to work with him in developing the product. It became Classic Ice’s first non-dairy ice cream. Seeing its potential, Ray and Irene Barclay left Classic Ices and started Genice. Address: Manchester, England.

1088. Meyer, Edwin W. 1985. Details on work with The Glidden Company (Interview). Conducted by William Shurtleff of Soyfoods Center, April 8. 4 p. transcript.

• **Summary:** Discusses: ADM’s solvent extraction plant in Chicago, Norm Witte, Central Soya’s Miracle Meal (the world’s first dehulled soybean meal made with a desolventizer-toaster; launched in 1952, it revolutionized the poultry industry), Central Soya’s first desolventizer-toaster started operation in Decatur in May 1950, Central Soya’s soy protein concentrate plants, Robert Boyer and Frank Calvert, Norman F. Kruse [pronounced Cruze], Endre F. Sipos. Elmer B. Oberg.

Say Calumet Harbor, not Calumet River; Ed thinks they acquired the 2 country elevators on the rivers but may have added on something. Ed Wilhelm might know.

Promine was used mostly by a large sausage manufacturer in Detroit, Michigan, for its functional properties. It was looked at but never used by John Morrell & Co., Armour, Swift, or Kraft—which had an all-meat image and mentality; “they never touched it.

Glidden sold Morrell a lot of soybean grits for dog food, for years during the 1930s; Morrell had a dog food company in Iowa, which made a popular canned product.

Ed had to make a rapid exodus from the Glidden Co. on Laramie after ADM bought it. They wanted to get in quickly; he left some important documents behind.

ADM did sell their lecithin through the American Lecithin Co. in the early days, just like Glidden. Ask Joseph Eichberg about the exact nature of the agreement.

Ed wouldn't say that Glidden soy operations Chicago was struggling, but their profits were not up to Glidden's expectations so they were considered a weak division. World War II helped a lot financially, especially since the industrial protein was requisitioned by the U.S. Navy through NFS. Toward the end of the war Glidden was supplying soy flour for the relief programs to the liberated areas, especially Italy.

Oberg is too gracious to say that Central Soya bought Glidden largely for its research team. The main reason was the price was cheap; the whole works for \$14 million, including all the elevators. Central got a great deal. Some years later they sold the Calumet Harbor elevators to Cargill for \$8 million. At that time Central Soya had only a small development group under Sipos, who is still with them. He reported to Norm Kruse, starting in 1953. True, they basically had no research team. It was of equal importance to many others.

**Steroids:** After 1953 they had a major contract with Charles Pfizer Co. to process steroids and to sell them an intermediate for making corticoid steroids / hormones. That was the main business. They also had a little business with Charles Strauss in Montreal, Canada. "After 1953 we toll processed for Pfizer alone (that means for a given sum you process material for a certain party) so we remained in the steroids business."

Ed was an Abbott–Glidden–Upjohn fellow at Northwestern University. Abbott Labs and Upjohn were very interested in Glidden's work; they were involved in an informal joint research operation. General Mills got into making soy sterols at their Kankakee plant. Glidden put them into the business in a way. Upjohn was buying sterols from General Mills for many years. Upjohn is still using soybeans for their corticoid hormones. General Mills sold that plant to Henkel A.G., a German company.

The forerunner of Promosoy (Central Soya's soy protein concentrate) was Protein 70 (also called Pro-70), developed by E.B. Oberg. The pilot plant was built in 1959 and the full commercial plant later at the Gibson City plant. Pro-70 was developed at Glidden by Sidney Circle. He started working on the concentrate after the soy protein isolate, in about 1953-54. Pro-70 was not commercialized until after Central Soya bought Glidden's Chemurgy Div. in 1958. It was commercialized under the name Pro-70. The term Promosoy was introduced in about 1960 [sic, 1962] with the Gibson City plant. Both were exactly the same product—a

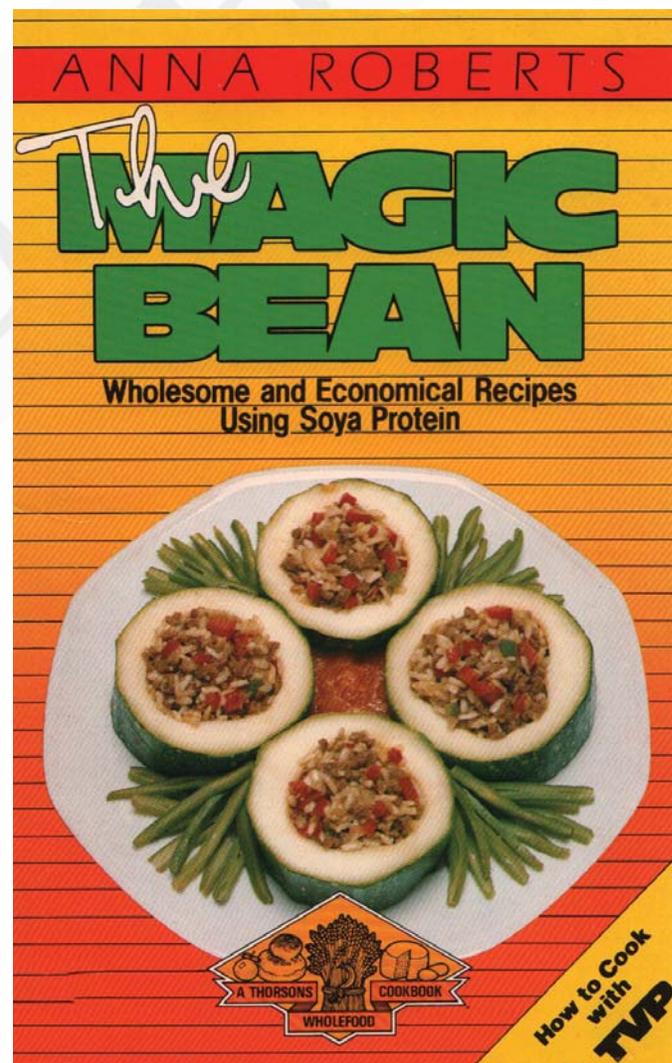

soy protein concentrated. Response, their textured soy protein concentrate, was developed later under Ed Meyer's supervision.

The first formula for Rich Freeze was developed by Jim Liggett in about 1963-64; Ed was director of research at the time. It was developed partly for the Japanese market. "We [Central Soya] had an affiliate, Dai Nippon pharmaceutical, which was selling our granular phosphatides in Japan. Dai Nippon also had a few food ingredients, principally plant gums. They thought they might sell Rich Freeze, but they bombed out" [failed].

The Cone and Brown patent which was the basis for Alpha Protein. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

1089. Roberts, Anna. 1985. *The magic bean: Wholesome and economical recipes using soya protein*. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 128 p. Illust. by Clive Birch. Index. April. 20 cm.

• **Summary:** This is a lacto-ovo-vegetarian cookbook

about how to cook with TVP. It uses milk and free-range eggs. Dedicated to her husband, Peter, and to their family. Contents: Foreword by Peter Roberts: The requirements of life (protein and amino acids), protein quality, where protein comes from, the history of soya, the processing of soya, the texturing of soya, why replace meat, how do soya proteins compare for food values?, is it as good for you as meat, other important factors. Introduction. 1. Snacks and starters. 2. Soups. 3. Main meals.

Page 12 notes that 74% of the world's protein comes from plants and only 24% comes from animals. The FAO statistics are as follows: Plant protein—wheat 31%, soya 15%, rice 14%, maize / corn 14%, other 10%. Animal protein—meat 13%, fish 7%, milk and eggs 4%.

When people eat protein, regardless of whether the source is plants or animals, the body breaks it all down [catabolism] into basic building blocks, called amino acids, then makes the proteins that it needs [anabolism] from these building blocks.

Note: This book was also published by Thorsens in 1985 under another title: "The magic bean: Wholesome, delicious and economical recipes using natural soya protein." Address: Petersfield, Hampshire, England.

1090. Shurtleff, William; Aoyagi, Akiko. 1985. Soyfoods industry and market: Directory and databook 1985. 5th ed. Lafayette, California: Soyfoods Center. 220 p. Index. April. 28 cm. Updated every 1-3 years with a bibliographic supplement. [360 ref]

• **Summary:** Contents: 1. Introduction. 2. Directory of soyfoods manufacturers. 3. Directory of soyfoods support industry: Goods & services. 4. The many types of soyfoods. 5. Historical: Historically most important books and serials, earliest references to individual soyfoods. 6. Year in review. 7. Soyfoods industry and market in the U.S. 8. Tofu industry and market in the U.S. and Canada. 9. Soymilk industry and market: Worldwide and in the U.S. 10. Tempeh industry and market in the U.S. 11. Soy sauce industry and market in the U.S. and Japan. 12. Miso industry and market in the U.S. and Japan. 13. Soynut industry and market in the U.S. 14. Natto industry and market in Japan. 15. Statistics on fermented soyfoods in East Asia. 16. Soyfoods in restaurants, delis & cafeterias. 17. Soybean crushing industry in the U.S. 18. Soy oil industry and market in the U.S. 19. Soy flour and cereal-soy blends industry and market worldwide. 20. Modern soy protein products industry and market in the U.S. 21. Soyfoods terminology and standards. 22. Names of soyfoods in major foreign languages (incl. Chinese / pinyin; Hoisin sauce = haixian jiang). 23. Soybean production worldwide and country-by-country. 24. Key institutions working with soyfoods worldwide. 25. Measures, weights, and equivalents. 26. About the Soyfoods Center & soyfoods consulting services. 27. Bibliography.

In February 1977 a Gallup poll in America showed a

remarkable shift in the public's awareness of and attitudes toward soyfoods. The sampling of 1,543 adults across the nation found that: 33% believe that soybeans will be the most important source of protein in the future—ahead of fish at 24% and meat at 21%. 55% believe that "soy products have a nutritional value equal or superior to that of meat." 54% reported that they "had eaten foods containing soy protein as a prime ingredient within the past 12 months." Younger age groups living in large cities and those with college or university educations had the most favorable attitudes toward soy protein, indicating that support for soyfoods is likely to grow in the future. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1091. Oberg, E.B. 1985. Re: Activities at The Glidden Co. and Central Soya Co. 1937-1943. Letter to William Shurtleff at Soyfoods Center, May 4. 4 p. Typed, with signature. Plus 2-page follow-up letter on July 30.

• **Summary:** Dr. Oberg was with Glidden from 1937-39, with Central Soya 1939-43, then director of research at Carnation from 1943 on; he did not work much with soy at Carnation. During his 2 years at Glidden he worked primarily on industrial uses of soy protein, and obtained several patents in this field. His notebook from Glidden reads: "Alpha Protein prepared in June 1939 was 117 tons, or for 22 days it was 5 tons/day. Cost was 10 cents a pound. Half of the cost was the soybeans, \$22.50/ton."

Concerning lecithin at Glidden: "My notes show that on 11 July 1939 Glidden was making 2,000 to 2,500 lb/day of lecithin. Much of it went to Texas Co., namely about 50,000 lb/month for \$0.30-\$0.33/lb. This lecithin was used as an additive for their 'Insulated' lubricating oil. 0.1% was used in oil to prevent or reduce carbon formation in auto engines. Emil Buelens was plant production manager for Glidden's lecithin program. He now lives at 1022 Marion St., Oak Park, Illinois 60302 (Phone: 312-383-4755). He played a major role in lecithin production for Glidden and also later at Central Soya."

"I know that as of Oct. 1939 Central Soya [C.S.] was not selling any lecithin but was experimenting with its separation from oil. When I left C.S. in 1943 their production rate was about 2,000,000 lb/year. In Dec. 1939 we shipped our first lecithin, 5 barrels (2,300 lb) to W.A. Cleary Corp. The second 5 drums went to Cleary on 2 Jan. 1940. Oberg was involved in this exciting lecithin program, but Norman F. Kruse (now deceased) was the driving force behind the program. He was a graduate of Iowa State University in chemical engineering. Hydrogen peroxide was used for the single bleach plus benzoyl peroxide (purchased from the Lucidol Corp. of Buffalo, New York) for the double bleach."

Mr. Oberg was very much involved in working with Central Soya's "legal beagles," the Schley and Trask firm of Indianapolis, Indiana, in trying to obtain the Kruse patent but they were turned down repeatedly. The final "turn

down” came with a note that said “and this is final.” “That’s when Mr. George Schley and I went to the patent office in Washington, DC, and with our samples convinced the patent examiner that our process was indeed different from that of anyone else. It was an important victory for Central Soya.” This development put Central Soya in competition with American Lecithin Co. which had long monopolized that business; they were operating under the Sorensen and Beal (ADM) patent. Mr. Kruse’s right hand man was C.I. “Scotty” Finlayson.

Note: Talk with Ed Meyer of Central Soya. 1993. April 7. Ed joined Central Soya on 1 Sept. 1958, so he was not there during the period 1939-43. But he thinks that during this period Central Soya made what is known in the trade as “crude lecithin.” It is not refined but it was usually bleached. It could be used for industrial applications (such as a pigment dispersant in paints) or food applications.

Oberg co-authored two patents at Central Soya, both pertaining to the isolation of sterols from soybean oil. He also co-authored some at the Glidden Co. (1937-39), but Dr. Percy L. Julian’s name was first on each.

During the period 1934-1943 Central Soya made quite an effort to get various companies to use its fat-free soy flour. Working with a large bakery in Fort Wayne, Indiana, they found they could replace only about 10% of the wheat flour in bread before getting reduced loaf volume. C.S. tried to get the confectionery trade to use its Mel-K-Soy soy flour in place of non-fat milk powder. The soy flour had a higher protein content and probably lower cost.

D.W. McMillen Sr. (“Mr. Mac”) was very interested in the possibility of using our fat-free flour in plastics as in phenolic or urea resins. We worked with plastic companies in Ohio and Michigan. On one occasion I went to the New York area, and especially to Brooklyn, and visited a number of moulding companies. Mr. Mac couldn’t believe it when I reported to him that my results were very negative.

“At one time Mr. Mac, Kruse and I visited Henry Ford’s soy processing plant at Dearborn, Michigan. Robert A. Boyer had a very extensive and interesting set-up for making soy fiber from soy protein. Once Mr. Mac gave a paper, which I wrote for him, on plastics, at a service club meeting in Fort Wayne. He and Henry Ford were both dreaming of a greater use of soy products in plastics.”

“Mr. Mac was very interested in the people in his company, down to the lowest man on the totem pole. He found time for personal contact with them, for he knew they were the key to the success of many projects. Mr. Mac was a great ‘pepper-upper.’ At sales meetings his frequent comment was ‘You have only your own record to beat,’ and also ‘Work is a tonic.’ Total laboratory personnel in Oct. 1942 was only twenty-two!”

“My first reference to Protein 70 (later called Concentrate in the industry) reads ‘Protein 70 prepared and taken to Masonite Corp. on 29 Jan. 1940.’ I have complete

records of that lab and pilot plant work, which continued into 1941. Protein 70 was also taken to companies like Celotex, Reilly Tar Chemical Co., and Central Paper Co. Central Soya never got into commercial production of Protein 70 while I was there” (i.e. before 1943).

In our lab preparations we used 100 gm. soybean flakes, 15 liters water, and 70 cc. of 25% sulfuric acid, plus 46 cc of 10% formalin. The mixture was stirred, allowed to stand overnight, the whey siphoned off, and the concentrate bagged off, pressed, dried and ground. 88% of the soluble carbohydrates were removed. In other preparations no formalin was added, and the product was neutralized with alkali. So the 70% protein product [soy protein concentrate] “that we made by leaching flakes at the isoelectric point was for industrial uses and not for edible uses.

“As of October 1942 we were processing about 12,000 bushels (360 tons) of soybeans per day in our solvent plant and the same amount in our expellers.”

A good contact who worked on soya flour at Central Soya was Weldon “Solly” Soldner. “He was at our lab when I arrived in 1939 and he stayed long after I left in 1943. While there, he handled the soy flour and grit research. I think he is retired and living in Decatur, Indiana.”

“Although we did a fair amount of work with various enzymes while I was at Central Soya, I don’t believe any of it pertained to the use of enzymes to hydrolyze soy protein so as to make it a better ‘whipping’ compound like egg white.” Address: 11228 Village 11, Camarillo, California 93010; Also: Quincy, Illinois. Phone: 805-484-3542 or 217-224-8010.

**1092. Product Name:** Protoveg Savoury Bakes (Meatless Meatloaves) [Chicken Style, Beefy Style, Pork and Pepper Style].

**Manufacturer’s Name:** Direct Foods Ltd.

**Manufacturer’s Address:** Petersfield, Hampshire, England.

**Date of Introduction:** 1985 May.

**Wt/Vol., Packaging, Price:** Foil trays. Retail for £1.25.

**New Product–Documentation:** Food Report (Lehmann). 1985. May. The products require only the addition of water and can be baked in their own foil trays for just 20 minutes.

**1093. Product Name:** [Sojal Soya Milk (Natural, Banana, Strawberry, or Carob)].

**Foreign Name:** Sojal Soja Melk.

**Manufacturer’s Name:** Pharma Food (Distributor). Made [actually marketed] in England by Haldane Foods.

**Manufacturer’s Address:** Netherlands.

**Date of Introduction:** 1985 May.

**Wt/Vol., Packaging, Price:** Liter cartons. Natural is Hfl. 3.10 retail. Flavored is Hfl. 3.30.

**New Product–Documentation:** Food Report (Lehmann). 1985. May. 1986. June. Two varieties of Sojal soya milk are newly available: one contains 9% soy flour and honey, the

other has no added sweetener. See also the Sojal soymilk imported to England by Haldane from a company in France; it is made from powdered Brazilian soybeans.

1094. STS–Soya Technology Systems. 1985. Containers for soymilk (Leaflet). 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 2 panels each side. Each panel: 30 x 21 cm. Also published in Chinese. [Eng; Chi]

• **Summary:** Color photos show carton containers (Tetra Brik, Combibloc, Pure Pak), plastic bottles (incl. Remy/Serac Aseptic UHT), glass bottles, cans, and plastic bags (Prepac/UHT, Doypack/Toyo Seikan standing pouch/retort sterilized). Brands include Granose, Marigold, GranoVita, Soy Moo, Magnolia, No Cow, Vegemil, Vitamilk, Amofood, Milho Verde, PureHarvest, Yeo's.

Note 1. Milho Verde is made by Pennone–Produtos Alimenticios Ltda., Av. Adolfo Pinheiro 1247, Sao Paulo, Brazil. Their factory is at another address.

Prepac is at 62 Rue Pasteur, 94800 Villejuif (a commune in the southern suburbs of Paris), France. Address: Singapore.

1095. Archer Daniels Midland Co. 1985. “Tofutti” (TV ad slicks). ADM, Decatur, Illinois. 1 p.

• **Summary:** See next page. Shows 12 color frames from the ADM TV commercial promoting Tofutti, shown on “Meet the Press” (NBC) and “This Week with David Brinkley” (ABC). Address: Decatur, Illinois.

1096. **Product Name:** Sojal Light Dairy Free Frozen Dessert [Strawberry, Carob, Hazelnut, or Vanilla].

**Manufacturer's Name:** Regular Tofu Company Ltd. Made in Leicester, England, by Rossa Ltd.

**Manufacturer's Address:** 16 The Halcroft, Syston, Leicester, England LE7 8LD. Phone: 0533 605665.

**Date of Introduction:** 1985 June.

**Ingredients:** Carob: Water, dehulled soya beans, honey, vegetable oil, carob, soya lecithin, guar gum.

**Wt/Vol., Packaging, Price:** 500 ml.

**How Stored:** Frozen.

**New Product–Documentation:** See page after next. Ad in *The Vegetarian*. 1985. July/Aug. p. 23. “Sojal, So Good! New dairy-free frozen desserts, by Hera.” These new soy ice creams, made from soya milk, come in light vanilla, strawberry, carob, and hazelnut flavors.

Soya Bluebook. 1986. p. 104. Address: Hayhill Industrial Estate, Unit 25, Barrow Upon Soar, Leicester, Leicestershire, England. Letter from John Holt. 1987. Aug. 19. “The product was launched with these labels in June 1985. It was sold prior to that under the name of Soyboy Soy Ices.” Leaflet. 1987. “Sojal, So Good! New dairy-free frozen desserts by Hera.” Shows all 4 Labels in color. “Only 100 calories per 100 ml. Cholesterol free. No animal ingredients. No added sweeteners except honey. Contains

polyunsaturated vegetable oil.” On the rear is a handwritten letter from John Holt, with signature.

1097. Vansickle, Janice. 1985. Processing plant sold to U.S. firm. *Windsor Star (Essex County, Ontario, Canada)*. July 20. p. A3.

• **Summary:** The sale of Maple Leaf Monarch, a soybean crushing plant on Maplewood Drive in Windsor, “was to have been completed Friday” [July 19] to Archer Daniels Midland Co. of Decatur, Illinois, for an undisclosed amount. The plant employs 90 unionized employees. A local union leader said at least 11 non-unionized employees were dismissed, but Dick Burket, vice-president of ADM, said his company is not planning any changes in either management or operations. Address: *Star agriculture reporter*.

1098. **Product Name:** Granose Soya Milk [Sugar Free, Plain/Dairylike, Organic; Coconut, Chocolate, Strawberry, Banana, Carob].

**Manufacturer's Name:** Granose Foods Ltd. (Marketer). Made in West Germany by DE-VAU-GE Gesundheitswerk GmbH.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

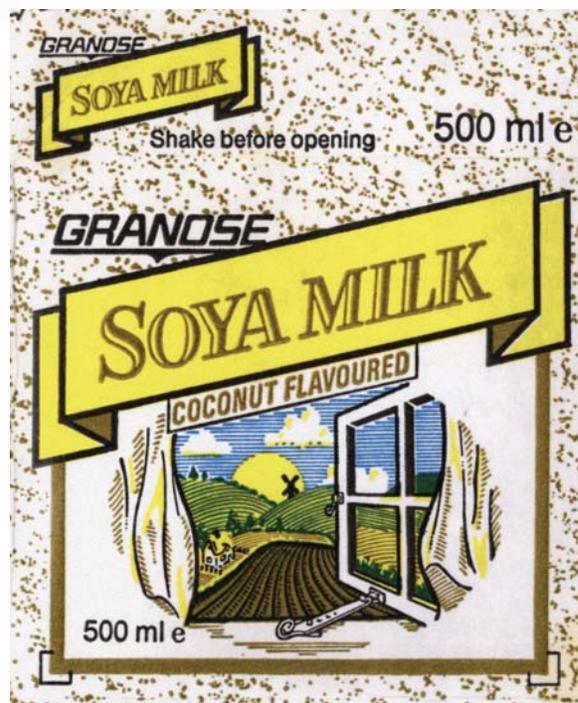

**Date of Introduction:** 1985 August.

**Ingredients:** Coconut: Water, dehulled soya beans, raw cane-sugar, coconut powder, sea-salt.

**Wt/Vol., Packaging, Price:** 500 ml Tetra Brik Aseptic carton.

**How Stored:** Shelf stable; refrigerate after opening.

**Nutrition:** Per 100 ml: 70 calories. Fat fractions: polyunsaturates 39%, saturates 15%.

# "Tofutti"

Today, America is moving towards more nutritious foods and ingredients from ADM are helping to lead the way.

Research.

At the Archer Daniels Midland Company, it's an on-going process.

Working with corn, soybeans and other abundant crops, ADM scientists are busy developing ingredients for the foods we eat.

Ingredients that have made a variety of new products possible.

One example is Tofutti brand frozen dessert, developed and produced by Tofu Time.

Besides its great taste, Tofutti is cholesterol-free and lactose-free.

Qualities that are important to today's health-conscious consumers.

At ADM, we produce a number of popular food ingredients.

Including the principal ones in Tofutti: protein from soybeans and sweeteners and oil from corn.

So you see, before you can buy your groceries, the people who feed the world have to buy theirs.

And many of them bring their shopping lists here:

The Archer Daniels Midland Company.

See this and other ADM commercials each Sunday on **"Meet the Press"** (NBC) and **"This Week with David Brinkley"** (ABC).

ARCHER DANIELS MIDLAND COMPANY

# Sojal, So Good!

## NEW DAIRY-FREE FROZEN DESSERTS

BY **hera**

- ★ ONLY 100 CALORIES PER 100mls
  - ★ CHOLESTEROL FREE
  - ★ NO ANIMAL INGREDIENTS
  - ★ NO ADDED SWEETENERS EXCEPT HONEY
  - ★ CONTAINS POLYUNSATURATED VEGETABLE OIL
- THE REGULAR TOFU CO. LTD..

**New Product–Documentation:** STS. 1985. Containers for Soymilk. Shows color photo of 500 ml Tetra Brik carton. Orange and green on white. “100% Vegetable. Rich in protein. High in polyunsaturates.” Use by 7/84.

Spot in Food Trade Review. 1986. June. Granose Foods Ltd. (UK) launched new strawberry soya milk in 500 ml Tetra Paks. Ad in The Vegan. 1986. Summer. p. 17. “Why does Granose Soya Milk flow so smoothly? Well, its the natural choice.” Shown in 500 ml and 1,000 ml. Sugar free or sweetened with raw cane sugar.

Photo and Spot in The Vegetarian (UK). 1986. Sept/Oct. “Granose strawberry flavoured soya milk. Absolutely delectable—pure strawberry essence, no artificial flavour or colour so its not bright pink!”

Label. 1987. Gold, yellow, brown, blue, and green. Illustration of sunrise seen through a farmhouse window.

Soyfoods (ESFA). Granose Foods Ltd. has launched a strawberry soya milk, made from soya beans, pure strawberry essence, raw cane sugar, sea salt, and natural vegetable flavoring. Presented in 500 ml “Tetra Paks,” it has a 6-month shelf life unopened.

Ad in The Vegan. 1988. Summer. p. 16. “Granose Soya Milk [Banana flavoured with no added sugar].”

1099. Leneman, Leah. 1985. Tomorrow’s world [soyfoods]. *Vegetarian (The) (England)*. July/Aug. p. 21-24.

• **Summary:** There are now 8-9 brands of soya milk sold in Britain. “It is a shame that most people’s introduction to tofu is in the form of Morinaga silken tofu which... is now found in most health food stores. Silken tofu is pleasant and nutritious, but is much softer than regular tofu and is therefore much less versatile. Following recipes meant for firm tofu with it can be frustrating.

“Granose is the first big-name health food manufacturer to feature a line of tofu-based products (imported from Denmark). Two of the three tinned convenience meals seem to me less than ideal. The tofu adds nothing special to either the Tofu and Tomato Sauce nor to the Tofu in a Savoury Bean Sauce; they might just as well have used tvp. However, the Chinese-Style Tofu is really excellent, with a nice balance of tastes and textures, including the cubes of tofu—just about the nicest tinned convenience meal around.

“The first national distributor of tofu (to the best of my knowledge) was *The Regular Tofu Company*... Like all other national distributors, their tofu is vacuum-packed, which considerably lengthens its shelf-life... *Paul’s Tofu* (The Old Brewery, Wheathampstead House, Wheathampstead, St. Albans, Herts.) produces another vacuum-packed firm tofu, which is available in London and South-East England...

“*Bean Machine* (Station Road, Crymych, Dyfed) produces not only tofu but also a range of ‘soysage’ foods made from okara... They also make ‘Soyannaize,’ a dairy-free dressing. *Duchesse All-Natural Tofu Dressing and Dip* (made by St. Giles Foods Ltd, St. Giles House, Sandhurst

Road, Sidcup, Kent DA15 7HL) is another mayonnaise-type product...”

She is writing *The International Tofu Cookery Book* for Routledge & Kegan Paul. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

1100. *Natural Foods Merchandiser*. 1985. New products, changing diets propel soyfood sales. Aug. p. 1, 39-40, 42-44.

• **Summary:** “The soyfoods revolution is being fueled by several powerful trends... Many consumers are attracted to soyfoods because they are an excellent no-cholesterol ‘replacement’ for meat and dairy products. Soyfoods are also growing with the rising tide of macrobiotics, which promotes the use of various soy products. And there are now enough soyfoods on the market to create synergy within the category: consumers buying soymilk try tofu, and go from tofu to tempeh.

“Tofu is by far the best-selling product in the soyfoods category, according to figures provided by the Soyfoods Association [and Soyfoods Center]. An estimated \$60 million worth of tofu is produced and sold in the U.S. annually, while frozen tofu desserts, entrees, and prepared products account for approximately \$25 million. Soymilk sales have jumped from near zero a few years ago to \$10 million today, while tempeh is an emerging growth category at 5 million in yearly sales.” All of the retailers interviewed by NFM indicated that the soymilk category is experiencing major growth. Most of the growth has been in six-ounce aseptic individual serving packages supplied by such companies as Westbrae, Ah Soy, Vitasoy and Eden. Health Valley’s Soy Moo has recently been repackaged in a 8.45-ounce package.

“Tempehworks produces approximately 7,000 pounds of tempeh a week during peak months, including that used in its processed tempeh products, such as Fakin’ Bacon, New York Style Strami and Kansas City Barbecue.”

Includes “A directory [sic, glossary] of soyfoods terminology” that defines tofu, tempeh, soybean, miso, soymilk, shoyu/tamari, TVP or TSP, soy protein isolate, defatted soy flour, and “secondary” soyfoods products.

1101. Franklin, John. 1985. History of Honeymead Products Co. (Interview). *SoyaScan Notes*. Sept. 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Honeymead is an agricultural cooperative that crushes soybeans. Honeymead’s parent company is Harvest States Cooperatives. John Franklin is the director of public relations there. Honeymead was formerly part of GTA (the Farmers Union Grain Terminal Association), which had 2 plants—Mankato (which crushes soybeans and makes edible products) and Minnesota Linseed Oil (which also recently started to crush some sunflower seeds). An old-timer at Mankato is Stan Eichten.

Honeymead was started by a group of businessmen

in Mankato. Then it was sold to the Andreas family; Dwayne and Lowell Andreas ran it. They sold it to GTA (also a co-op) in about 1960. GTA purchased a margarine company in Kansas City, then purchased 2 margarine plants—Drew in Kansas City and a salad dressing plant named Wholesome Foods. They may have owned or bought a refinery also.

In June 1983 GTA merged with North Pacific Grain Growers (NPGG) to form Harvest States Cooperatives. NPGG, headquartered in Portland, Oregon, grew mostly white wheat. GTA was looking for an outlet on the Pacific Rim.

Honeymead now makes industrial soy oil mainly for adhesives/coatings, paints & varnishes, pesticides, and soaps.

Note: This is the earliest document seen (March 2008) that mentions “Harvest States Cooperatives” in connection with soybeans—and with Honeymead. Address: 720 Minneopa Rd., P.O. Box 3247, Mankato, Minnesota 56002. Phone: 507-625-7911.

1102. Archer Daniels Midland Co. 1985. Annual report 1985: We bring home America’s harvest. P.O. Box 1470, Decatur, IL 62525. 16 p.

• **Summary:** Part I describes ADM’s daily work. “ADM. Where the people who feed the world buy their groceries.” Pages 8-9 note: “We unlock the protein inside the soybean.” Contains color photos of many soy products including Protoveg Vegetable Goulash, and Betty Crocker Hamburger Helper (p. 1), Similac (p. 7), ProSobee, Rich’s Coffee Rich, Betty Crocker Bac\*O’s, and Protoveg Sizzles (p. 9), Tofutti (p. 15).

Part II, an insert in the portfolio, is the annual report financial data (34 pages). Net sales and operating income: \$4,738,767,000. Net earnings: \$163,908,000. Total current assets: \$1,367,826,000. Total current liabilities: \$328,822,000. Address: Decatur, Illinois.

1103. Dunn, John R. 1985. Update on U.S. cooperatives and soybeans (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 2 p. typescript. [1 ref]

• **Summary:** Estimated capacities (in tons/day) of the major U.S. soybean crushers (Sept. 1985). Mr. Dunn has compiled the following statistics from the trade literature: 1. ADM

### Estimated Capacities of Major Soybean Crushers. Sept. 1985.

<u>Company Name</u>	<u>Estimated Capacity (tons/day)</u>	<u>Ownership</u>
1. Archer Daniels Midland	33,500	Public
2. Cargill, Inc.	26,000	Private
3. Bunge	12,700	
4. Ag Processing Inc.	10,500	Co-op
5. Central Soya	9,800	Private
6. Quincy Soybean	4,600	Public?
7. Continental Grain	4,100	?
8. Ralston Purina	3,000	Public
9. Harvest States (Mankato)	2,500	Co-op

33,000. Ownership: Public. 2. Cargill, Inc. 26,000. Private. 3. Bunge 12,700. Private. Ag Processing Inc. 10,500. Co-op. 5. Central Soya 9,800. Private. 6. Quincy Soybean 4,600. Public? 7. Continental Grain. 4,100. Private? 8. Ralston Purina. 3,000. Public. 9. Harvest States Cooperatives (Mankato). 2,500. Co-op.

In August 1983 Land O’Lakes, Farmland Industries, and Boone Valley Processing Assoc. put all their plants into an interregional cooperative named Ag Processing Inc., headquartered in Omaha, Nebraska. It began operation in August 1983. Boone Valley no longer exists; its feed mill was taken over by Farmland. Land O’Lakes and Farmland still exist—they just spun their soybean processing assets into Ag Processing, of which they are owners. In Sept. 1983 [or June 1982] Ag Processing Inc. closed its plant in Fort Dodge, Iowa.

“Sept. 1983. Ag. Processing Inc. closed its Fort Dodge, Iowa plant.

Oct. 1984. Ralston Purina sold 6 of its 7 plants to Cargill. It kept its large plant in Memphis, Tennessee. That was part of a change in Ralston’s strategy to exit some of the commodities/ingredients and concentrate more on consumer products.

“Dec. 1984. A.E. Staley sold all its 6 plants to a wholly-owned subsidiary of ADM.

“1984. Riceland Foods sold its Helena Ark plant on the Mississippi to Quincy Soybean, based in Quincy, Illinois.

“1984. Coops. Goldkist had 3 plants. It sold 2 to Bunge. Marks (Mississippi, but not on the Miss. River) and Decatur (Alabama). Kept the one in Valdosta, Georgia.

“March 1984. Cargill closed its small (about 300 tons/

day capacity) plant in Washington, Iowa

“The big picture. Last 4 years. Two main things are:

1. Consolidation of crushing activities in the Western Corn Belt to rationalize their capacity, including some vertical integration. Ag Processing Inc. has just began processing a salad oil called Ag Soy (spell?) in their St. Joseph, Missouri plant. Consumer or industrial product? 2. Contraction out of export based soybean crushing activities. Never had plants overseas. Goldkist’s two plants and Riceland’s one river plant were all oriented toward export. But Ag Processing Inc. is still doing a lot of exporting. Others now better placed to serve the domestic market. Plants that were sold were the ones that depended on an active export market.

“Ag Processing Inc. is now the biggest cooperative SB crusher.”

A ranking of the cooperative soybean processors is as follows: 1. Ag Processing Inc. 2. Harvest States (including Honeymead). 3. Gold Kist. 4. Riceland. 5. Agri-Industries. Address: USDA Agricultural Cooperative Service (ACS), Washington, DC 20250. Phone: 202-475-4929.

1104. Anderson, Ronald L. 1985. Re: History of Continental Grain Company’s involvement with soybeans. Letter to William Shurtleff at Soyfoods Center, Nov. 11. 10 p. Typed, with signature on letterhead.

• **Summary:** The following is excerpted from a 1985 Continental Grain Strategic Planning Study: History–World Processing Division: 1946–Allied Mills–Bought Taylorville, Illinois soybean crushing plant (100 tonnes/day capacity). Note: Allied Mills owned a soybean crushing plant at Taylorville, Alabama, by Aug. 1935.

1960–Allied Mills–Guntersville, Alabama, crushing plant start-up (500 TPD).

1965–Continental acquires 51% of Allied Mills, a major feed producer [Wayne Feeds] as well as a producer of fresh poultry.

1973–Acquired Allied Mills’ plant in Cameron, South Carolina (300 TPD) and expanded it to 800 TPD.

1974–Allied Mills becomes a wholly owned subsidiary of Continental Grain. Continental’s new Processing Division is created by consolidating the above three soybean plants from Allied Mills. That year Continental expanded its charter to include participation in international processing and oilseed product trading. Thus the company first expanded outside the USA. 1975–Acquired a specialty plant in Culbertson, Montana, to crush safflower and sunflower seeds (no soy; Expanded to 400 TPD in 1983). 1975–77–Constructed a soybean crushing plant at Liverpool (1,500 TPD; expanded to 2,200 TPD in 1982).

1976–Acquired a soybean and cottonseed crushing and oil refining plant at Capsa, Paraguay (600 TPD). 1977–79–Constructed a soybean crushing plant at Maringa, Brazil (2,200 TPD). 1979–Rebuilt a plant in Maurie, Australia, with a toll crush agreement with the Australian government, to

crush soybeans, sunflower, and safflower seeds (300 TPD).

1980–81–Built a plant to crush sunflower and soybeans at Chivilcoy, Argentina (800 TPD). 1981–Acquired 50% of ICIC plant at Ancona, Italy. It crushes 800 TPD of soybeans and 250 TPD of sunflower seeds, and also refines oil. 1983–Bought plant in Sydney, Australia (300 TPD).

1984–Sold plant at Taylorville, Illinois. 1985–Acquired soybean crushing plant at Venice, Italy (1,200 TPD). 1986–Sold Liverpool plant (2,000 TPD). 1987–Sold Cameron plant (1,000 TPD). 1987–Closed Oleaginosa tung nut plant in Argentina. 1988–Sold Culbertson plant (400 TPD). 1989–Plant to sell all South America and Australia plants and upgrade Italian plants. 1989–Formed joint venture marketing company [Conti-Quincy] with Quincy Soybean of Quincy, Illinois.

In 1975 Continental’s oilseed crushing capacity was 3,000 TPD or 1,100,000 tonnes/year. By 1985 this had increased roughly four-fold to 11,800 TPD or 4,300,000 tonnes/year.

A table lists all U.S. soybean crushers, the city and state of each of their plants, and the capacity of each. There were 78 plants with a total capacity of 121,025 TPD

America’s largest soybean crushers are ADM (18 plants, 32,900 TPD, 27.3% market share), Cargill (21 plants, 29,200 TPD, 24.2%), Bunge (8 plants, 14,600 TPD, 12.1%), Central Soya (8 plants, 12,000 TPD, 9.9%), Ag Processing (6 plants, 10,050 TPD, 8.3%), Quincy Soybean Co. (3 plants in Illinois and Arkansas, 5,700 TPD, 4.7%), and Others (12 plants, 16,270 TPD, 13.5%). Address: Senior Vice President and General Manager, Continental Grain Co., World Processing Div., 277 Park Ave., New York, NY 10172. Phone: 212-207-5100.

1105. Hashizume, Kazumoto; Ohara, Tadahiko; Ando, Yoko. 1985. [Identification of vegetable protein in animal protein by urea polyacrylamide gel electrophoresis]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 47. p. 167-72. Nov. [7 ref. Jap; eng]

• **Summary:** Figures show: (1) Disc electrofocusing of soybean, wheat and meat proteins in 7.5% polyacrylamide gels containing 8M urea. (2) Disc electrophoresis of soybean, wheat and meat proteins in 7.5% gels containing 8M urea at pH 8.9. (2) Effect of pH of polyacrylamide gels on electrophoretic patterns of soybean, wheat and meat proteins. (11) Urea and SDS electrophoretic patterns of commercial meat products containing TVP.

1106. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Document part II. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]

• **Summary:** (Continued): In 1975, Farm members started a company to promote the use of soybean products in the America diet. The company, named simply Farm Foods [Farm Food Company], began sales on the East Coast with full-fat soy flour (ground fresh on The Farm), TVP (texturized vegetable protein), Good Tasting Nutritional Yeast, split soybeans, and Tempeh Starter Kits (developed by Cynthia Bates and Dr. Lyon). In 1976, under the management of Leticia Coate and Robert Tepper, Farm Foods began participating in national health food trade shows. At the time, they were one of the only companies representing soyfoods. Along with their packaged products, they sold cookbooks and served free samples of tempeh, TVP chili, and nutritional yeast crackers.

“The products and recipes developed over the years led to the publication of three cookbooks: *The Farm Vegetarian Cookbook* (1975) and *Tofu Cookery* (Oct. 1982), edited by Louise Hagler, and *Tempeh Cookery* (March 1984), edited by Colleen Pride. These books made a major contribution in westernizing recipes previously Oriental in origin. They were available in all natural food stores throughout the country.

“The work with soy products on The Farm also inspired members to start two vegetarian restaurants; the Farm Foods Cafe [opened Aug. 1976], in San Rafael, California, managed by Robert Dolgin, was the first “soy deli” in the United States. Everybody’s, located in Nashville, Tennessee [opened July 1980], was managed by Judd and Diane Hoffman.

“The acceptance by the public of Farm Foods Cafe was overwhelming, and although it only operated from 1976 to 1977, it pioneered the path for many tofu delis that have followed since. The unique characteristic of this deli was the tofu and tempeh shop producing fresh products located in the rear of the store. The Farm Foods Cafe also became the first [sic] company to market a non-dairy ice cream made from soybeans. This frozen dessert, marketed under the name of ‘Farm Foods Ice Bean,’ is still being sold in health food stores nationwide.

“In 1977-78, The Farm Foods Cafe closed, and the soy processing equipment was moved to San Francisco. Farm Food Company began wholesaling soy products throughout California under the management of Robert Tepper. They continued marketing Farm Foods Ice Bean, and added tofu salad [like eggless egg salad], ‘tofu cheesecake,’ a frozen soy yogurt dessert, and the first firm-pressed tofu to hit the California market. In 1980 it was decided to drop the perishable tofu business and concentrate on the nationwide distribution of Farm Foods Ice Bean. The plant in San Francisco was closed, and large scale production began in a Memphis, Tennessee, dairy and ice cream factory. This

new location gave the company easier access to East Coast distributors, and they soon established additional warehouses in Connecticut and California.

By 1984, under the management of Ron Maxin and Michael Lee, the weekly production of The Farm Soy Dairy [in Summertown, Tennessee] was 1,000 lb of tofu, 150 gallons of soymilk, 20 gallons of soy yogurt, 20 gallons of soy ice cream, 400 ice cream sandwiches, and 90 lb of tempeh. Today, the Soy Dairy produces an average of 5,000 gallons of soymilk a month for Farm Foods to use in Ice Bean production. The soymilk is shipped by tanker truck to the Ice Bean production plant [in Memphis], and the Farm Soy Dairy also markets its products in Nashville and Columbia, Tennessee.

“The Farm’s uniquely controlled vegetarian diet led to two official studies of its effect on the children. In 1979, Dr. Jeffrey Hergenrather, et al., conducted a study on the pesticide levels in the breast milk of vegetarian nursing mothers on the Farm. He submitted a letter of his findings to the editor of the *New England Journal of Medicine*, March 26, 1981. His letter challenged a previous article written by Rogan, et al, (*New England Journal of Med.* 1980) which stated that ‘there are no obvious dietary predictors’ of chemical pollutant in human milk. Rogan went on to say ‘For certain fat-soluble chemicals, nursing infants can be regarded as living at the top of the food chain and are exposed to much more than background levels.’ Dr. Hergenrather’s study included 12 women whose breast milk was analyzed for 17 chemical substances. When compared to the seven contaminants studied by Rogan, in all but one of the contaminants, which showed no difference in contaminant levels, the milk of the vegetarian women had lower levels of contamination.

“The second study was conducted by Jean Roberts Fulton in 1980 and was published in the *Journal of the American Dietetic Association*. She studied a group of the Farm nursery school children and found their amino acid and iron intake to be adequate. (The diet was low on calories, however.)

“The innovative methods used by the Farm soy technologists inspired many groups and individuals to start all over the world to train in the Farm Soy Dairy, and many who couldn’t come personally were encouraged through correspondence. In 1977, Plenty, the non profit relief organization founded by the Farm, established an international training program whereby people from other countries could come and train in soybean processes and other technologies that The Farm had to offer. The Farm Soy Dairy received its first trainees from Guatemala and Mozambique.

“From the beginning days of the Farm Soy Dairy, the technicians realized the value that soybeans could have in Third World countries. Eventually they were able to share their knowledge and training in the field of soybeans by

starting a dairy in an impoverished country. In 1979, Plenty Canada and Plenty USA sent Farm Soy Dairy technicians Laurie Sythe Praskin, Suzy Viavant and Richard Decker to Guatemala to help establish Plenty's first international soy dairy/tofu shop. Other technicians who trained on the Farm have gone on to help start soy programs with Plenty Canada in Lesotho (in Southern Africa, 1979-present), Jamaica (1983-present), St. Lucia (1983-present), and Dominica (1984-present).

"Many of the people who lived on The Farm and trained in the Soy Dairy or with Farm Foods have started their own soy companies or are working in underdeveloped countries. The common goal felt by all has been to provide healthful, delicious foods for all people, rich and poor alike. Because soybean products can be presented as gourmet dishes, yet can also be prepared very simply, they continue to be accepted by all classes of people" (Continued). Address: 17969 Oak Dr., Los Gatos, California 95030.

1107. *SoyaScan Notes*. 1985. Chronology of soybeans, soyfoods and natural foods in the United States 1985 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Jan. 2. The soybean crushing industry begins a year of major restructuring as the big get bigger and two pioneers drop out. Ralston Purina announces that it has sold six of its soybean crushing plants to Cargill, Inc. A seventh at Memphis, Tennessee, was closed. This removed the company from the soybean commodity business. With this transaction Cargill passes ADM to become America's largest soybean crusher.

Jan. 3. "Myth or Miracle: Debunking the Tofutti Fad," by Mark Medoff published in *Whole Life Times*. The first exposé of Tofutti, which contains very little tofu. Jan. 13 Medoff appears on the Gary Null Show, Natural Living, to discuss his findings for 1 hour on prime time radio.

1985 Jan. 12. A.E. Staley Manufacturing Co. announces that it is basically getting out of the soybean crushing business. It has sold five of its six soybean plants (having a combined crushing capacity of some 275,000 bushels daily) to Independent Soy Processors Co., which is closely affiliated with Archer Daniels Midland. Staley was unable to sell its Decatur facility, which ceased operations indefinitely in Jan. 1984. With this transaction ADM has probably regained a slight lead as America's largest soybean crusher.

Jan. 14-26. Soybean Utilization Workshop held at Soyfoods Research Center in Gannoruwa, Peradeniya, Sri Lanka, sponsored by the Sri Lanka Soybean Project and INTSOY. 24 representatives from 12 developing countries participate. The world's first event of its kind (*Soyanews*, Dec. 1985).

Jan. 25-27. Natural Foods Expo at Anaheim. Soy ice creams steal the show. Tofu standards are debated heatedly at Soyfoods Association board of directors meeting on Jan. 28,

especially by Ralston Purina attorney. Board decides funds are too limited to try to hire an executive director for SAA. Jan. 31. Paul Obis, founder and editor of *Vegetarian Times*, is seriously considering buying *Soyfoods* magazine from Doug Fiske. He makes a firm offer in late March.

Feb. "Designer Beans," an excellent overview of the U.S. soyfoods movement and its gourmet connections by Sandy MacDonald, published in *New Age* magazine.

Jan. American Soybean Association introduces SIS (Soybean Information Service), a computerized database focusing on soybean production and marketing, and oil and meal. The earliest record is 1958.

Feb. 21. *Tofutti and Other Soy Ice Creams: Non-Dairy Frozen Dessert Industry and Market*, by Shurtleff and Aoyagi published by The Soyfoods Center. Two volumes, 352 pages. This is the first study of the rapidly emerging soy ice cream market, and of Tofutti.

Feb. 27. "Tofu Products May Be In, but Its Fans Wonder if There's Tofu in the Products" by Trish Hall published in *The Wall Street Journal*. Second major exposé on so-called "tofu ice creams" (such as Tofutti and Gloria Vanderbilt Glace), which contain only a token amount of tofu, as a marketing gimmick.

March 13-14. The theme of the Feb. 27 *Wall Street Journal* article picked up by the NBC evening news and the Today Show. Very positive coverage for tofu. Gary Barat of Legume, David Mintz of Tofu Time, and Gloria Vanderbilt each speak about tofu.

March 22. *The Book of Tempeh*, extensively revised second edition by Shurtleff and Aoyagi, published by Harper & Row. New bibliography (374 entries), history chapter, and list of tempeh producers.

March 26. Soyfoods Association's Tofu Standards (7th draft) presented to eight senior officials at the U.S. Food and Drug Administration's Center for Food Safety and Applied Nutrition, in Washington, DC, by Tom Timmins (Head of SAA Standards Committee), Gary Barat (President of SAA), Steve McNamara and Tom Donegan (SAA Food & Drug attorneys). The FDA group hears an hour long presentation on tofu, the standards, and the Soyfoods Association of America.

March. Soyarella (later renamed Soy Mozzarella), a tofu-based cheese, is introduced. It becomes an instant hit. Distributed by Neshaminy Valley Natural Foods of Huntingdon Valley, Pennsylvania, it is labeled as "non-dairy," yet it melts, and it tastes like cheese. Shrouded in secrecy, its manufacturer is unknown and the ingredients are questionable. It is sold in large blocks and labeled at individual stores.

March. American Soybean Assoc. launches a campaign among its members to write USAID and encourage them to cancel support for U.S. programs (such as INTSOY) aiding soybean production in Third World nations. The campaign is successful.

April 1. INTSOY signs a new cooperative agreement with USAID. Their work will henceforth focus on soybean utilization. The shift toward utilization began in 1983 and all work on soybean production and varietal development stopped in Aug. 1986.

April. *Tempe: An Annotated Bibliography*, compiled by Siagian and Sofia in Indonesia. Containing 273 references, it is the first bibliography to introduce the extensive Indonesian-language research on tempeh, the majority of which has been published since 1980.

April 15-16. International Symposium on Tempeh held in Jakarta, sponsored by the Indonesian Ministry of Health. 113 people attend.

April. Central Soya buys Griffith Laboratories' line of protein products.

May 31. Barricini Foods acquires Farm Foods, which then becomes a trade name for Barricini's natural / health foods line of non-dairy frozen desserts, including the pioneering product, Ice Bean, and Barricini Tofulite.

May. Morinaga, one of Japan's largest dairy companies, establishes Morinaga Nutritional Foods, Inc., a subsidiary with offices in Los Angeles, to focus on promoting their long-life silken tofu in America.

May. At the 6th Annual *Natural Foods Merchandiser* Merchandising Awards, soyfoods do well. Miso Mustard by American Natural Foods and Malted by Westbrae win gold medals. Ah Soy by Great Eastern Sun wins a silver.

May. Soft Tofu Cheese, a non-dairy cream cheese cultured in miso, launched by Simply Natural, Inc.

June. Tofu Topper launched by Worthington Foods.

June. Ralston Purina publishes its 1985 Consumer Attitudes Monitor. Soy Protein in Foods, based on a nationwide survey of 628 adults. Indicates positive attitudes toward soy protein and soyfoods.

July 19. Shamrock Capital, a private company headed by Roy Disney, buys Central Soya, a publicly owned corporation. Agreement to buy was announced April 2.

July. Soy Supreme, spray-dried tofu powder, launched by Oberg Foods Div. of St. Peter Creamery.

July. Asian Symposium on Non-Salted Soybean Fermentation held at Tsukuba, Japan.

July 31. Tofu Time's sales of Tofutti increased more than sevenfold last year to \$17,114,886 as compared with \$2,361,391 for the previous year. Net income increased nearly 100-fold to \$2,006,451.

July. New Gallup survey on vegetarianism of 1,033 Americans shows that millions are eating less meat and tens of millions agree with the move away from meat. 72% disagree with what used to be the standard notion: "The vegetarian diet is just a fad that will pass." A majority (52%) believe that "no one really needs to eat meat more than once or twice a week."

Aug. The DE-VAU-GE soymilk plant in West Germany starts production. Built by STS, with 4,000 liters/hour of

soymilk capacity, they make Granose and GranoVita brands of soymilk.

Aug. Lightlife Meatless Tofu Pups (hot dogs) introduced by Tempehworks / Lightlife Foods of Greenfield, Massachusetts. The product sold nearly \$250,000 in the next 10 months.

Sept. Soyfoods Center introduces SOYA, a computerized bibliographic database on soybean utilization, history, nutrition, processing, marketing, and production. Contains 18,500 references from 1100 B.C. to the present.

Sept. 30. Fearn Natural Foods in Illinois is sold by Louis Richard to Modern Products, Inc. in Milwaukee, Wisconsin.

Sept. 30 to Oct. 4. Tropical Soybean Workshop held at the International Institute of Tropical Agriculture (IITA), Ibadan, Nigeria. Proceedings are published in 1987 as *Soybeans for the Tropics*. Also this year IITA established a soybean utilization unit.

Sept. Tofulicious, a tofu-based non-dairy ice cream launched by Eastern Food products of Minneapolis. It was developed in conjunction with the University of Minnesota and funded by the Minnesota Soybean Research and Promotion Council. By 1986 it has become the first soyfood product in recent times to be actively promoted by state soybean associations, who sell it at many state and county fairs... where it is a big hit. Through Tofulicious many soybean growers begin to warm up to soyfoods.

Oct. 8th Draft of the Tofu Standards finished, incorporating extensive suggestions from FDA. Compiled by William Shurtleff.

Oct. Mori-Nu brand aseptically packaged tofu introduced by Morinaga Nutritional Foods.

Oct. Cream of the Bean Soygurt, a cultured soymilk yogurt, launched by Cream of the Bean, Inc.

Nov. Kikkoman introduces a long-life tofu in a foil retort pouch, imported from Japan. Poor quality causes the product to be withdrawn. It was re-introduced later.

Dec. Tofu Time starts exporting Tofutti to Japan. The first order by Daiei (a large retailer) of tubs for their parlors, is \$350,000. This may be the first major export of a soyfood product (not including ingredients such as soy protein isolates) to Japan.

\* The International Institute of Tropical Agriculture (IITA) in Ibadan, Nigeria, starts a program to promote processing and utilization of soybeans in Nigeria and throughout Africa. Continued.

1108. *SoyaScan Notes*. 1985. Chronology of soybeans, soyfoods and natural foods in the United States 1985 (Continued) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Continued. 1985 New Trends:

Dramatic Rise of Tofutti and Other Soy Ice Creams. 1985 will go down in the soyfoods history books as the "Year of Tofutti." Never before in history of the United

States has any soyfood product achieved such widespread and sudden popularity or notoriety.

During 1985 at least 50 brands of soy ice cream (many with “Tofu” on the label) were on the market worldwide, most in the USA. And many were made by America’s biggest dairy companies. An estimated 2.5% of all frozen desserts except novelties (popsicles, bars, etc.) sold in supermarkets were soy-based nondairy. The result of all this was to introduce tofu and isolated soy proteins to millions of people in a very positive context.

But many of the companies that sold so-called “tofu ice creams,” while emphasizing tofu in their product names and marketing programs, actually had surprisingly little (if any) tofu in their products. In fact they contain so little that this marketing gimmick might be misbranding and a deliberate deception of the consuming public.

Rise of Soyfoods in Europe. Thanks to the Belgian Office of the American Soybean Association (ASA), and specifically to the efforts of Michael Martin, Europe’s growing soyfoods movement is starting to become organized and active. In March 1984 Martin launched Europe’s earliest known soyfoods newsletter, *Soya Foods*, and in September organized the First European Soyfoods Workshop, for which bound proceedings were published. This is the first time in recent decades that ASA has promoted soyfoods (other than soy oil) in the Western World. The strong U.S. dollar has led to a recent dramatic decline in imports of soybeans and soybean meal to Europe for feed and oil use (European rapeseed and sunflowerseed are being substituted), so the ASA is exploring new outlets where soy is unique.

The launching of tofu production and marketing by Switzerland’s biggest supermarket chain, Migros, and by Galactina, a large and respected maker of dietetic and pharmaceutical products (including soymilk) is a landmark for tofu in Europe. In early January, *Tages Anzeiger*, one of Switzerland’s biggest newspapers, had a special report on tofu, followed on Jan. 9 by a 30-minute TV feature on tofu.

The total number of soyfoods companies in Europe continues to show a steady increase. Many of these are being founded by people interested in macrobiotics. By Jan. 1985 there were 1,113 names in The Soyfoods Center’s computerized mailing list of people actively involved with soyfoods in Europe.

At the 1984 ASA soyfoods workshop, Martin reported the following estimates of annual European soyfoods consumption: A table with three columns shows: Soyfood name, consumption, percentage of U.S. consumption.

Soy oil–1.7 million metric tons–38%  
 Modern soy protein products–40 million kg–28%  
 Soymilk–9 to 10 million liters–7%\*  
 Tofu–5 to 6 million kg–22%  
 Tempeh–400,000 to 500,000 kg–50%  
 Miso–250,000 to 300,000 kg–11%

\* U.S. figure includes soy based infant formulas.

European figure is not clear on this point.

Note that the population of the USA is about 234 million compared with 489 million for all of Europe (not including the USSR), but 237 million for Northern and Western Europe, where most of these products are consumed.

Rapid Growth of Second Generation Soyfoods. In the 1984 edition of this book, we stated that the three fastest growing soyfoods in the USA (in terms of production increases) were tempeh (33% a year compound annual growth rate), tofu (15%), and soy sauce (14%). But now the picture has changed. In 1984 the fastest growing category was second generation products, ready-to-eat, all-American preparations, especially those based on tofu. The leader in this group is clearly soy ice creams (led by Tofutti), with a production growth rate of roughly 600% a year for the past 1-2 years. Then comes convenience tofu-based entrees such as Legume’s products, tofu burgers and tofu burger mixes, and the like. This is the number one way that soyfoods are now entering the mainstream American diet. And the biggest gains are being made by marketing companies, rather than manufacturers. The second fastest growing category may now be imported soymilks, growing at about 40-60% a year. Major New Capital Influx. The following is a brief summary of new capital influx to the soyfoods industry: A table with four columns shows: Company name, date of offering, \$ amount, equity or debt; use.

Legume–Oct. 1982–\$100,000 net–Equity. For tofu frozen entrees

Legume–Oct. 1982–\$100,000–Debt. For tofu frozen entrees

Legume–Nov. 1983–\$400,000 net–\*Equity. For tofu frozen entrees

Legume–Nov. 1983–\$200,000–Debt. For tofu Frozen entrees

Hinode Tofu–Nov. 1983–\$2,500,000–Equity For general expansion

Tofu Time–Dec. 1983 \$2,760,000 net–Equity. For soy ice cream

Tempehworks–July 1984–\$265,000–Debt. For tempeh expansion

Legume–Feb. 1984–\$200,000–Debt. For tofu frozen entrees

Legume–Aug. 1984–\$1,248,000 net–Equity. For tofu frozen entrees

Brightsong–Dec. 1984–\$500,000–Equity. For tofu products

Legume–April 1985–Expecting lots more. For tofu frozen entrees

White Wave–Expecting.

Note: Equity = Sale of equity ownership in the company via stock in a public offering or in a private placement. Debt = Debt financing by taking out a private loan.

How have these companies fared? Tofu Time has done spectacularly well. The value of the company

has increased more than five-fold since Dec. 1983, and profits are excellent. Legume, a marketer of low-calorie, cholesterol-free frozen entrees featuring tofu, has had the hardest sledding. A preliminary prospectus by Huberman Margaretten & Straus dated 5 June 1984 stated that from its inception through 31 March 1984, the company incurred aggregate losses of \$709,773, including a loss of \$18,465 in 1982, then \$225,302 in 1983, increasing again to roughly \$486,500 in 1984. Legume's common stock had a negative book value; 1984 sales were "a little less than \$1 million." Yet the company has excellent products and in early 1985 landed some big food chains, which could help its bottom line considerably.

**Growing International Interest in Tempeh.** During 1983-84 Japan became a major tempeh producer. By May 1984 the world's largest tempeh producing company was Marusan-Ai (of Japan), which made 15,150 lb. a week. New marketing and production techniques were pioneered. The full story was described by Shurtleff and Aoyagi in *Tempeh Production* (1984).

Three Major International Symposia Featuring Tempeh were held: 15-16 April 1984 in Jakarta, Indonesia; 15-17 July 1984 in Tsukuba, Japan; and May 1986 in Honolulu, Hawaii. A special 13-day group study tour on Japanese Food Fermentations, led by Dr. Keith H. Steinkraus, has been organized by the Japanese-run, New York-based Technology Transfer Institute. Tempeh continues to be one of the fastest-growing soyfoods in the USA.

**Growing Interest in Spray-Dried Tofu.** Eleven articles were published this year on a product that promises to revolutionize the tofu industry. The first and largest manufacturers (St. Peter's Creamery and Clofine) are both dairy companies. Spray dried tofu should appeal to the food industry, since it is easy to ship, store, and process.

**Dairy Magazines Publishing Many Positive Articles About Soy-Based Dairylike Products.** Traditionally the dairy industry has seen dairy analogs as a threat and fought to oppose them. The decades-long struggle against margarine is a good example of this. But now, many small dairies, struggling to survive, are looking for new products. A number (such as St. Peter's Creamery and Clofine) have gained a new lease on life by starting production of soyfoods.

**Major Changes in the U.S. Soybean Crushing Industry.** Narrow crushing margins, a depressed export market for U.S. soybean meal, and poor profitability have led two of America's biggest soybean crushers, the A.E. Staley Manufacturing Company and Ralston Purina, to decide to get out of the soybean crushing business in Jan. 1985. Clearly they view poor profitability as a long term problem, and plan to diversify away from unpredictable agricultural commodities toward the "value added," retail end of the nation's food supply. Staley, in effect, sold its plants to ADM and Ralston Purina sold its plants to Cargill. In Nov. 1984 Staley acquired CFS Continental, Inc., the nation's

second largest supplier to the foodservice industry. Staley, previously the oldest existing soybean crusher in America (since 1922), now relinquishes that honor to ADM. ADM is now the largest soybean crusher in America, but Cargill (which has many overseas plants) is the biggest in the world. These changes have led to a concentration of control in the U.S. soybean crushing industry. Both Staley and Ralston Purina plan to keep their edible soy protein (isolates, concentrates, etc.) operations.

Biotechnology is Emerging as a Major, Promising Factor in future soybean breeding development. Some agricultural experts are predicting that it could usher in the latest agricultural revolution, following the agricultural revolution of the 1940s and the Green Revolution of the 1960s and 1970s.

The "Calcium Craze" Starts in America, aiding sales of tofu (curded with calcium sulfate), which is one of the best non-dairy sources of calcium.

1109. *SoyaScan Notes*. 1985. Development of the book *History of Soybeans and Soyfoods* (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1980 Oct. 22. First Table of Contents for *Soyfoods History*. I started this book because Nahum Stiskin of Autumn Press refused to let us use material from our tofu and miso books in our next book, titled *Soyfoods*, and it's hard to write the history portions of soyfoods. Inspired by Dr. Harry W. Miller and Henry Ford.

Dec. 9. Start to put bibliographic records on 3 x 5 inch file cards.

1981 March 13. Add chapters on Nutrition, National Soybean Processors Assoc., T.A. Van Gundy.

April 26. Add Society for Acclimatization, Li Yu-ying, Horvath, Lager.

May 15. Make Overview into four chapters. Add Soybean Chronology, Sri Lanka, History of Soybean Production, Asian History, Berczeller, USDA.

May 30. Change book title to *History of Soyfoods and Soybeans* from *Soyfoods History*.

June 6. Make Chronology Chapter 1. Make History of Soybean Production a separate chapter. Add McCay, *Soyfoods Producers in the West* (Listing of companies), changed title from *Soyfoods History* to *History of Soyfoods*.

August 21. Four Soybean Processors (Staley, ADM, Ralston Purina, Central Soya), Hymowitz, Bureau of Plant Introduction.

Oct. 8. Cargill, Co-op Processors, drop Hymowitz, *Soybean Production Pioneers*, put Soy oil ahead of soy flour, change the order of many chapters.

Nov. 3. Change title to *History of Soybeans and Soyfoods*. Put soy nuggets [fermented black soybeans] before miso.

Nov. 7. Set up first 3+2 character cataloging codes for Soyfoods Center library and documents, e.g. Hym-81.

1982 Jan. 2. Brief History of Fermentation East and West.  
 Feb. 2. Macrobiotics and Soyfoods, Kikkoman.  
 March 21. K.S. Lo and Vitasoy. Relocate East Asian pioneers at end of Pioneers section.  
 June 18. Separate Fermented Tofu and Fermented Soymilk.  
 July 22. Separate Soy Oil and Soybean Meal from Hydrogenated Soy Oil Products.  
 Aug. 21. Put all country histories together.  
 Oct. 25. Start using % instead of percent in Margarine chapter.  
 Nov. 13. D.W. Harrison.  
 Nov. 19. Decide to do separate chapter on Lecithin. Retitle each country from "History of Soyfoods in X" to "History of Soybeans and Soyfoods in X."  
 1983 Jan. 1. Switch from 3-letter codes to 4-letter. Hymo-73.  
 April 17. Changed "at" to KW = (keyword) on cards.  
 May 5. Dr. Fearn.  
 Nov. Added Cereal-Soy Blends at Flour chapter, Iowa State University, History of Soyfoods and Health Foods in Los Angeles.  
 1984 March. Meals for Millions, SFM-Rodale.  
 Sept. 22. Added 12 chapters on individual countries. Divided hydrogenation into 3 chapters: Oil, margarine and shortening. Change book's subtitle to "Past, Present, and Future." Structure it into four volumes.  
 Oct. 31. Completely restructure Soybean Production chapter into 16 parts. Discuss each by decade.  
 Dec. 26. Add Ice Cream.  
 1985 Jan. 19. Change ModProt to ProtMod, ProtIsol, etc.  
 March 8. Add PPC = Pioneering Protein Companies: Glidden, Rich Products, Gunther, Griffith Labs, I.F. Laucks. March 9. Add the Chemurgic Movement and US Regional Soybean Industrial Products Lab: Industrial Uses of Soybeans. United Nations, History of World Food and Protein, Hunger and Malnutrition.  
 April 17th. Redo outline, giving each company its own line and bibliography, like Adventists. Print outline vertically. Address: Director, Soyfoods Center, Lafayette, California 94549. Phone: 510-283-2991.

1110. **Product Name:** Hera Vegetable Savoury Mixes [Fibre-Rich Burgers, Meatballs, Meatloaf, Shawburger, or Soysage].  
**Manufacturer's Name:** Haldane Foods Ltd.  
**Manufacturer's Address:** Units 16 & 20, Long Furrow Trading Estate, East Goscote, Leicester LE4 8XJ England.  
**Date of Introduction:** 1985.  
**Ingredients:** Meatballs: Textured soya protein food, oatmeal, potato powder, vegetable fat, hydrolysed vegetable protein, oatbran and germ, vegetable oil, onion powder, guar

gum, garlic powder, herbs, spices.

**Wt/Vol., Packaging, Price:** 200 gm (7 oz) in cellophane envelope in paperboard box.

**How Stored:** Shelf stable.

**Nutrition:** Meatballs: Per 33 gm: Calories 123, protein 9.3 gm, fat 4.7 gm, carbohydrate 11.7 gm, fibre 3 gm, minerals 2.6 gm.

**New Product–Documentation:** Labels. 1985, undated.

"Meatballs: A complete natural mix of Soya Protein, Herbs, and Spices. High fibre. Requires only water. Needs no eggs. No added salt."

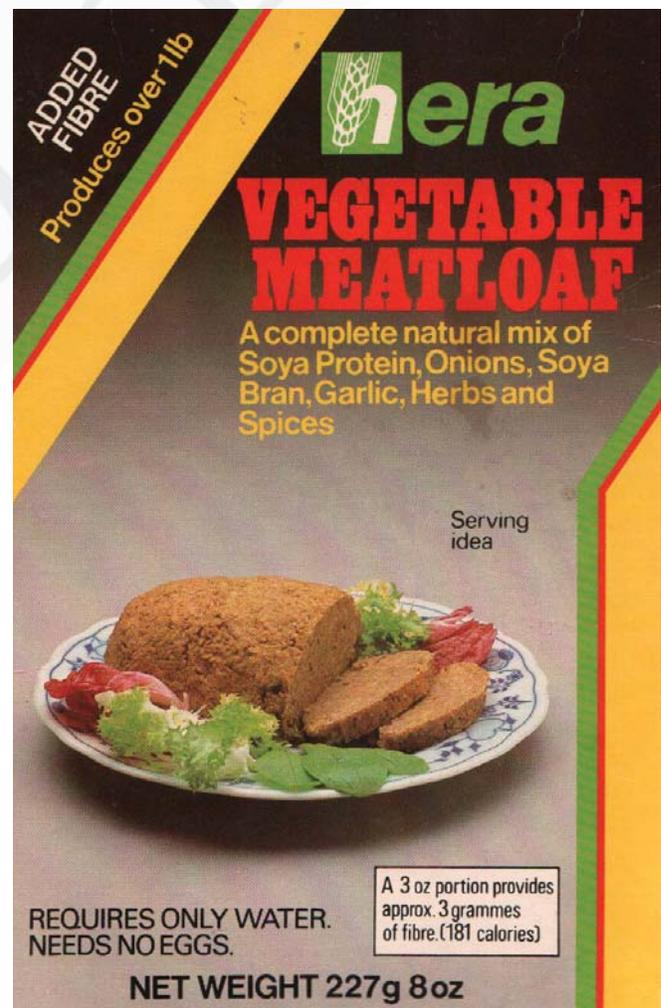

1111. **Product Name:** Hera Vegetable Soup Mixes [Bran Paysanne, Farmhouse Vegetable, Tomato, or Vegetable Goulash].

**Manufacturer's Name:** Haldane Foods Ltd.

**Manufacturer's Address:** Units 16 & 20, Long Furrow Trading Estate, East Goscote, Leicester LE4 8XJ England.

**Date of Introduction:** 1985.

**Ingredients:** Goulash: Wholemeal wheat flour, dried onions, vegetable oils, cornflour, hydrolyzed vegetable proteins, textured vegetable protein food, tomato powder, paprika

powder, sea salt, wheat germ, potato powder, caraway seeds, herbs, spices.

**Wt/Vol., Packaging, Price:** 125 gm (4.4 oz) plastic envelope.

**How Stored:** Shelf stable.

**Nutrition:** Per 100 gm Goulash: Calories 393, protein 16 gm, fat 13 gm, carbohydrate 53 gm.

**New Product–Documentation:** Label. 1985, undated.

“Goulash: Wholesome soup mix based upon natural ingredients and with added natural supplements.” Soya Bluebook. 1987. p. 100.

1112. **Product Name:** Hera Vegetable Meals [Bolognese, Casserole, Chili, Curry, Goulash, or Stroganoff].

**Manufacturer’s Name:** Haldane Foods Ltd.

**Manufacturer’s Address:** Units 16 & 20, Long Furrow Trading Estate, East Goscote, Leicester LE4 8XJ England.

**Date of Introduction:** 1985.

**New Product–Documentation:** Label. 1985, undated. “A complete natural mix of Soya Protein...”

1113. **Product Name:** Hera Soya Milk.

**Manufacturer’s Name:** Haldane Foods Ltd.

**Manufacturer’s Address:** Units 16 & 20, Long Furrow Trading Estate, East Goscote, Leicester LE4 8XJ England.

**Date of Introduction:** 1985.

**New Product–Documentation:** Product leaflet. 1985, undated. “Health, Hera, and You.”

1114. **Product Name:** Hera Tofeata Tofu. Soya Bean Curd.

**Manufacturer’s Name:** Haldane Foods Ltd.

**Manufacturer’s Address:** Unit 25, Hayhill Industrial Estate, Sibley Rd., Barrow-Upon-Soar, Leicester, England.

**Date of Introduction:** 1985.

**Ingredients:** Water, dehulled soybeans, calcium sulphate (natural coagulant).

**Wt/Vol., Packaging, Price:** 255.6 gm (9 oz) vacuum pack inside full-color paperboard box. Retail for 65 pence.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm.: 328 calories, protein 7.8 gm, fat 4.3 gm, 2.3 gm.

**New Product–Documentation:** Label. 1986, undated.

“Fresh, Light. A non-dairy meat alternative. A versatile replacement for meat and dairy products. Keep chilled.”

Letter from Simon Bailey. 1988. Oct. 10. Haldane joined forces with British Arkady in Feb. 1988 as part of Arkady’s Health Food Div. Brian Welsby and Peter Fitch are joint managing directors. Letter from Neil Robinson. 1989.

Aug. 7. The three major tofu products in Britain, as far as I know, are (1) Tofeata Tofu by Haldane Foods (Hera), Leicester, England; (2) Cauldron Foods, Bristol, England; (3) Truehealth Tofu by Birchwood Foods, Wrexham, Wales.

1115. **Product Name:** [Soy Flour, Textured Soy Grits,

Textured Soy Protein].

**Manufacturer’s Name:** Sojaprotein.

**Manufacturer’s Address:** Industriska Zona B.B., 21220 Becej, Yugoslavia.

**Date of Introduction:** 1985.

**New Product–Documentation:** Soya Bluebook. 1985. p. 90; 1986. p. 87.

V. Molar. 1988. *Hrana i Ishrana* (Food and Nutrition). 29(2):67-69. “Quality aspects of products made by the Sojaprotein Co. for catering.” The company makes full-fat and defatted soy flour, full-fat soy grits, and textured soy protein.

Letter from Dr. L. Bodis, director of FTTE in Budapest, Hungary. 1990. April 2. “Soya Vita is an extruded product, used mostly as a substitute for meat. It is made by Sojaprotein (in Becej, Yugoslavia), which also makes soy-cubes, TVP, soy meal, and soy oil.”

Note: This is the earliest known commercial soy product made in Yugoslavia.

1116. **Product Name:** [Soja Vita {Soy-Enriched Food Similar to Grits}].

**Manufacturer’s Name:** Sojaprotein.

**Manufacturer’s Address:** Industriska Zona B.B., 21220 Becej, Yugoslavia.

**Date of Introduction:** 1985.

**New Product–Documentation:** Hillyer. 1987. *Soybean Digest*. Oct. p. 24. “Eastern Europe wants more beans.”

In the soya cookbook titled *Eteleink Szojaval*, there is a color photo of a bagged product named Soja Vita on page 11, and a full-page ad on page 45.

Letter from Dr. L. Bodis, director of FTTE in Budapest, Hungary. 1990. April 2. “Soya Vita is an extruded product, used mostly as a substitute for meat. It is made by Sojaprotein (in Becej, Yugoslavia), which also makes soy-cubes, TVP, soy meal, and soy oil.”

1117. **Product Name:** Mealmaker. Spiced and Flavoured.

**Manufacturer’s Name:** Spices & Essences (Ceylon) Ltd.

Forbes & Walker Group (Importer & Marketer). Made in India by Mysore Snack Foods Limited.

**Manufacturer’s Address:** S&E, 29 Braybrooke St., Colombo 2, Sri Lanka.

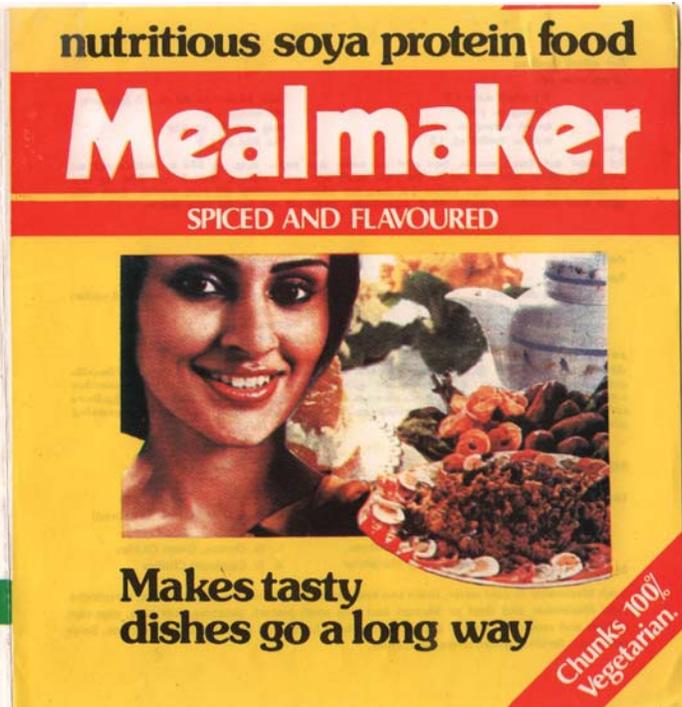

**Date of Introduction:** 1985.

**Ingredients:** Soybeans, spices.

**Wt/Vol., Packaging, Price:** 100 gm retails for Rs. 7/50.

**How Stored:** Shelf stable.

**New Product–Documentation:** Label/Leaflet. 1985. 5.5 inches square. Red, yellow and black with photo of beautiful lady holding a dish of TVP. “Nutritious soya protein food. Makes tasty dishes go a long way. Chunks. 100% vegetarian. Cholesterol free. Excellent meaty texture. Natural spices added. Flavour enhanced.” Recipes for Mealmaker Curry, and Sweet and Sour Mealmaker. Imported—probably from

India.

1118. Batt, Eva. 1985. *Eva Batt's vegan cooking*. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 144 p. Illust. (55 line drawings) by Margaret Leaman. Index. 22 cm.

• **Summary:** Across the bottom of the front cover: "The classic vegan cookbook. Recommended by The Vegan Society."

Contents: Acknowledgements. Introduction. Mueslis. Soups and small savouries. Salads and Salad dressings. Ways with vegetables. Main meals. Small savouries. Savoury sauces, stuffings and spreads. Desserts and ice cream. Bread, cakes and buns. Pastry, biscuits and cookies. Miscellaneous. Useful information.

Soy related: In the Introduction are sections on "Soya" (p. 13-14) and "Textured Vegetable Protein (TVP)" (p. 17; several brands are available. "Most come in flavoured and unflavoured varieties, in chunks and mince." This nutritious food is low in fat, "high in protein, economical, easily stored, requires very little cooking, and no waste {bone, skin, gristle or fat} is involved").

Recipes include: Beauty breakfast (with "3 tablespoons vegetable milk" [Plantmilk concentrated soymilk], p. 28). Fresh fruit muesli (with vegetable milk, p. 29). Cream of onion soup (with "2 teaspoons soya flour" and "¼ pint {140 ml} undiluted concentrated vegetable milk," p. 34). Salad cream (with "1 tablespoon undiluted concentrated vegetable milk," p. 41). Tofu mayonnaise (with "4 oz {120 gm} silken tofu," p. 41). Basic nutmeat mixture (with "2 level teaspoons soya flour," p. 54). Curried textured vegetable protein (with

"1½ oz {45 gm} unflavoured textured vegetable protein, mince or chunks," p. 55). Mushroom pie (with soya flour, p. 62). Fricassee with mushrooms (with "2 oz {55 gm} tvp mince," p. 63). Savoury steak (with "tvp slices" and "soy sauce," p. 66). Bengal curry (with "1 teaspoon soya sauce," p. 68). Pizza (with "10 oz {285 gm} cooked tvp or tin of soya beans," p. 75). Onion tart (with "Soya sauce," p. 76). Soya fritters (with soya flour, p. 79). Soya burgers (with "2 oz. tvp mince," p. 81). Soya crispie (with soya flour, p. 92). Junket (with "½ pint {285 ml} concentrated soya milk," p. 96). Banana ice-cream (with "¼ pint soya milk," p. 97). Plamil ice-cream (with "7 fl oz {200 ml} concentrated soya milk," p. 97). Fruit and nut loaf (with "7 fl oz {200 ml} soya milk," p. 101). Tiger's bread (with 1 oz {30 gm} soya flour," p. 102). Small fruit cakes (with soya flour, p. 102). Soya 'cheese' (cream style) (with "4 oz soya flour," p. 122). Soya 'cheese' (cheddar style) (with "3½ oz Soyolk or other heat-treated soya flour," p. 122). Soya compote (with "2 oz. soya flakes"). Soya milk and/or soya flour are used in many baked goods (breads, cakes, and buns, etc., see p. 99-137).

Note: Eva has basically not yet realized how tofu, tempeh, miso and good-tasting soymilk can transform a vegan diet.

Previous edition published as *Eva Batt's Vegan Cookery*, the first major vegan cookbook ever published, with over 300 recipes, plus practical advice and nutritional information. The "corporate author" is given on OCLC as the Vegan Society.

Plamil Foods put this at the top of its list of recommended vegan cookbooks. "This cookery book is most comprehensive and advises on preparing nutritious

appetising meals without meat, fish, eggs or dairy products. Essential nutrients from vegetable sources, planning meals for best food value, savoury dishes, snacks, desserts, cakes, bread, biscuits, sauces, garnishes, etc.” Address: Vegan Society, UK.

1119. Kahn, E.J., Jr. 1985. *The staffs of life*. Boston, Massachusetts: Little, Brown and Co. 310 p. See p. 251-299. Index.

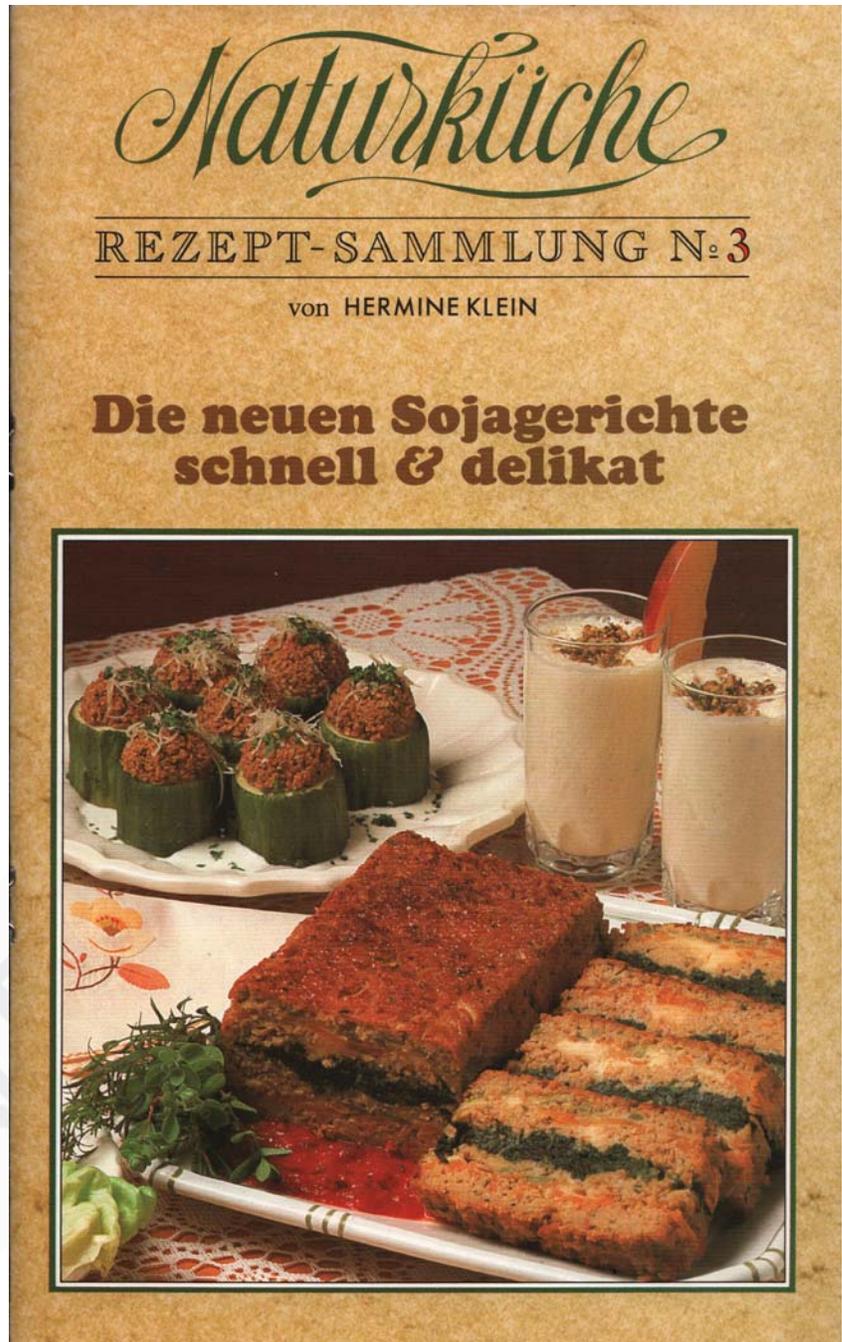

• **Summary:** Most of this book originally appeared, in somewhat different form, in *The New Yorker* (1985). Contents: Preface. Author’s note. 1. Corn: The golden thread. 2. Potatoes: Man is what he eats. 3. Wheat: Fiat panis. 4. Rice: Everybody’s business. 5. Soybeans: The future of the planet. Ely Jacques Kahn was born in 1916.

1120. Klein, Hermine. 1985. *Die neuen Sojagerichte: Schnell und delikate–Naturliche Rezept-sammlung No. 3* [The new soy recipes: Quick and delicate–Natural recipe collection No. 3]. Vienna, Austria: Fachverlag Gesundheit GmbH. 50 p. Illust. 24 x 15 cm. [Ger]

• **Summary:** An attractive cookbooklet. Contents: Introduction. Green seeded soybean recipes. Yellow soybean recipes. Making tofu at home. Tofu sweets. Soymilk recipes. Miso soups. Soy granule recipes. Soy granule sweets. TVP recipes. Soy burgers (*Sojastangerln*). Address: Vienna, Austria.

1121. McDougall, Mary A. 1985. *The McDougall health-supporting cookbook*. Vol. 1. Piscataway, New Jersey: New Century Publishers. v + 122 p. Index. 23 cm.

• **Summary:** This is a vegan cookbook whose 250 original recipes are designed to support The McDougall Plan, which is a diet low in fat and sodium, high in complex carbohydrates. Since soyfoods are relatively high in fat, they are used sparingly and the recipes are marked by a symbol of a crown. Soy-related recipes include: No gluten bread (with 2 cups defatted soy flour, p. 7). Rice-soy bread (gluten-free) (p. 7). Easy corn bread or muffins (gluten-free) (p. 7-8). Puffs (gluten-free) (p. 8). Carrot corn bread (gluten-free) (p. 8). Plain & simple corn bread (gluten free, p. 9). Tofu-garlic dressing (p. 12). Tofu chili dip (p. 16). Curried tofu dip (p. 16). Best tofu mayonnaise (p. 16-17). Tofu mayonnaise (p. 17). Tofu “TVP” (using frozen tofu, p. 17). Tamari sauce (p. 37). Azuki rice (p. 62). Tofu and vegetables with rice (p. 67). Mu shui

tofu (p. 78). TVP sloppy joes (p. 89). Smoothies (non-soy, p. 27; using regular or frozen bananas, apple juice or water, and other frozen or fresh fruits). Tofu cheesecake (p. 108). Apricot tofu pie (p. 108-09). A portrait photo on the back cover shows Mary McDougall.

Note 1. Not long after this book was published, New Century Publishers changed its name to New Win Publishing, Inc. and moved to Clinton, New Jersey. As of 2000 this book is published by Putnam/Penguin.

Note 2. This is the earliest English-language document seen (Feb. 2005) that contains the term “gluten-free” (or

“gluten free”). Address: P.O. 14039, Santa Rosa, California 95402.

1122. Patel, John. 1985. Re: Unisoy Milk and By Products Ltd. Letter to William Shurtleff at Soyfoods Center. 1 p. Typed, with signature on letterhead. Undated.

• **Summary:** This company plans to make Gold Soy Ice Cream and “Burgers.” Note: Mr. Patel died on 5 Nov. 1985. He never became actively involved with the Unisoy company.

Note: This is the earliest document seen (June 2015) concerning Unisoy in England. However the company’s first product was not launched until May 1986. Address: 24 Chorlton Dr., Cheadle, Cheshire SK8 2BG, England. Phone: (061) 428-9433.

1123. Young, L. Steven. 1985. Soy protein products in processed meat and dairy foods. In: R. Shibles, ed. 1985. World Soybean Research Conference III: Proceedings. Boulder, Colorado: Westview Press. xxiii + 1262 p. See p. 182-90.

• **Summary:** Contents: Soy protein products: Textured vegetable proteins, soy protein concentrate, soy protein isolates, processed meat applications, vegetable protein entrees—low fat, no cholesterol, reduced calorie. Processed dairy foods: Beverages, all vegetable/high protein frozen desserts, imitation cheese and cheese-like products. Address: ADM, Food Research Div., Chicago, Illinois, 60639.

1124. British Arkady Co. Ltd. 1985? What’s in a name? The story of Arkady. Skerton Rd., Old Trafford, Manchester, England. 5 p. Undated. Unpublished typescript. Double spaced.

• **Summary:** “To find the origins of Arkady ADM Iberica we have to go back eighty years or more. Our story begins in the United States of America where Mr. George S. Ward had begun to build up what was to become the most important group of bakeries in that country.” Ward was unable, even after extensive tests, to get bread of a standardized quality from his various bakeries. One bakery gave persistently better results than the rest. To find a solution he sought the help of the Mellon Institute of Industrial Research at the Univ. of Pittsburgh [Pennsylvania]. Its director was Robert Kennedy Duncan, who formerly held the chair of Industrial Chemistry at the Univ. of Kansas. The ensuing investigation showed surprisingly that the quality of the bread was dependant on the quality of the water used to make the dough. Small amounts of dissolved minerals could have a big effect on the activity of the yeast in the dough and the ultimate bread quality. So Ward developed a ‘magic powder,’ a simple mixture of mineral salts, and added it to standardize the quality of water in all his bakeries. Soon he was producing the best bread in America.

“By way of a tribute and in gratitude to a great scientist,

George S. Ward asked permission of Robert Kennedy Duncan to name the powder after him or rather after the initials of his name R-K-D. So Arkady bread improver was born.”

Eventually Ward allowed the Fleischman Yeast Co. to make Arkady powder and to distribute it with their yeast. This was an excellent commercial arrangement and soon it was well known to bakers throughout America. All this happened before 1913.

During World War I Robert Whymper, a major in the British Army and in charge of all British bakeries in France, noticed that American soldiers were enjoying bread of much better quality than the British soldiers and that the reason for the difference was the magical Arkady powder... In 1920 production of Arkady began in a tiny section of the Baker Perkins factory in Willesden in London.

“The product was excellent, bakers liked it, soon there was the need to build an entirely new factory with increased production capacity. This was established in Old Trafford, Manchester (near the home of the celebrated Manchester United Football team) in 1923. This growth was rapid, the size of the factory doubled in 1929 and again in 1936 and there has been continuous expansion right up to the present day.

“Sales were not just confined to England, the Arkady product was so good that their use quickly spread to other countries. From the technological and information center in Manchester grew up a number of thriving satellite companies. In the years between 1930 and 1939, the British Arkady Company established ‘Arkady’ companies in France, Scandinavia and Germany. Only the Deutsche Arkady Company survived the trauma of the 1939-45 war eventually leaving the ownership of the British Arkady Company. Later the Deutsche Arkady Company joined with Ireks to become Ireks-Arkady. There is only this historical connection between Ireks-Arkady and the British Arkady Company. No commercial contacts exist today and indeed the companies actively compete in some parts of the world...

“Arkady-ADM-Iberica is a joint company bringing together the knowledge and experience of three great companies: ADM—a giant among food processing companies world wide and manufacturers of Arkady products in America; RIBA—established in Barcelona for years, intimate knowledge of Spanish cereal technology; British Arkady—the company which brought the first Arkady product to Europe 65 years ago, and has been in the forefront of bakery technology ever since.” Address: Manchester, England. Phone: 061-872-7161.

1125. **Product Name:** Tofeata Tofu Spicy Burgers.

**Manufacturer’s Name:** Haldane Foods Ltd.

**Manufacturer’s Address:** Unit 25, Hayhill Industrial Estate, Sibley Rd., Barrow-Upon-Soar, Leicester, England.

**Date of Introduction:** 1985?

**Ingredients:** Water, tofu (soybean curd), wheat germ, bulgur wheat, rolled oats, sesame seeds, tomatoes, sunflower seed oil, hydrolysed vegetable protein, sea salt, paprika, chili powder, spices.

**Wt/Vol., Packaging, Price:** 2 burgers weigh 8 oz (227.2 gm).

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987, undated. 4 x 7.5 inch box. Color photo with red, yellow, and black design on white. “A blend of tofu (soybean curd) with wheat germ, cereals and spices. By Hera. A ready to eat vegetarian meal. Keep chilled.” *Soya Bluebook*. 1987. p. 96. “Tofeata Tofu and Tofu Burgers.”

1126. *Family Circle (British edition)*. 1986. I’ve never claimed that it’s a magic diet. I can only say what’s happened to me. Jan. p. 51-52.

• **Summary:** “Twelve years ago, Sonia Newhouse suffered from chronic arthritis and believed she would end her life in a wheelchair. Within months of becoming a vegetarian, she was mobile, and now runs her own successful food business.” Discusses the path of her recovery and the establishment of Vegetable Feasts.

1127. **Product Name:** [Tofu Ravioli (with Bolognese Sauce, or with Cheese Cream Sauce)].

**Foreign Name:** Tofu-Ravioli (an Sauce Bolognese, or an Kaese Rahmsauce).

**Manufacturer’s Name:** Soyana.

**Manufacturer’s Address:** Friedensgasse 3, Postfach 8039, CH-8002 Zurich, Switzerland. Phone: 01-202-8997.

**Date of Introduction:** 1986 February.

**Wt/Vol., Packaging, Price:** 400 gm.

**New Product–Documentation:** Letter from Michael Karlen. 1986. Feb. 16. They now sell soymilk. Brochure. 1986. Soyana. The Future has begun. 10 panels. Blue and white. In German. Tofu Ravioli. Without flesh. Ready to eat; just warm in a pan. Keeps without refrigeration. Whole-grain, organically grown. Two varieties. The sauce Bolognese is made with tomatoes and Soyana soy protein [TVP].

1128. Jones, Paul. 1986. On Michael Cole and his many soyfoods successes in England (Interview). *SoyaScan Notes*. March 4. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Cole started in late 1984. His partner, who has all the risk and 51% equity, is Mr. Arora, a Sikh from India. Cole has 30% equity and the finance company has 19%. Cole spent years in Los Angeles, and is a bit of a hype artist. He launched a soymilk ice cream for the Regular Tofu Co. He now has an inexpensive Japanese tofu plant with a continuous roller extractor. He tanks the milk to a spray drier or Tetra Pack machine. He has had big success with soymilk

in the supermarkets. Before him all soymilk came from Vandemoortele/Alpro in Belgium. He produces private label Tetra Pak soymilks for 3-5 national supermarket chains. He is also doing an organic soymilk. His ice cream looks like it will be very successful. It is made under license for him by Bayvilles, a big company. He has made genuine inroads into the mainstream market. Last year his total sales were \$525,000. He also has okara burgers. He tried a soy yogurt made from thin soymilk but it fell flat on its face. Address: Owner, Paul’s Tofu, England.

1129. Duxbury, Dean D. 1986. Soy protein isolates in restructured/injected meats increase cooking yield 35%. Also improves raw or cooked seafoods. *Food Processing (Chicago)* 47(3):28, 30. March.

• **Summary:** Adding the ADM isolate increases yield of restructured or injected meats by 35%.

1130. *Wall Street Journal*. 1986. Archer-Daniels, Unilever pact. April 10. p. 10, col. 1.

• **Summary:** “Archer-Daniels Midland Co. said it agreed to acquire three European oilseed processing facilities from Unilever PLC. Terms weren’t disclosed.

“The plants include a soybean facility in Europoort, the Netherlands; and oilseed operation in Spyck, West Germany, and an oilseed and vegetable oil refinery in Hamburg, West Germany.”

1131. Andres, C. 1986. High quality tofu made with dairy equipment: Base for frozen desserts, yogurt-type product, imitation sour cream [from ADM]. *Food Processing (Chicago)* 47(4):108-09. April.

• **Summary:** Coagulums made of isolated soy protein, vegetable oil, lecithin, corn sweetener, buffering agent, and glucono delta-lactone. From ADM Research Dept., 1825 N. Laramie Ave., Chicago, Illinois 60639. Address: Editorial Director.

1132. Archer Daniels Midland Co. 1986. Archer Daniels Midland to assume European oilseed processing and refinery operations on May 1st [from Unilever] (News release). Box 1470, Decatur, Illinois. 1 p. April.

• **Summary:** ADM today reached an agreement with Unilever for ADM to acquire three European oilseed processing facilities on 30 April 1986. These are Unilever’s soybean plant at Europoort (Rotterdam), the Netherlands, the oilseed plant at Spyck, West Germany, and the oilseed plant and vegetable oil refinery at Hamburg, West Germany. ADM has already established its European oilseed operation headquarters in Hamburg as ADM Oelmuehlen GmbH.

A related story in JAOCS (Feb. 1986, p. 190) adds: The three crushing plants, with an estimated annual capacity of 3 million tons, represent about 50% of Unilever’s crushing capacity. The plants provide ADM with its first crushing

facilities in Europe. Addition of the European plants apparently gave ADM the largest worldwide crush capacity among private corporations. Address: Decatur, Illinois.

**1133. Product Name:** Genice Ice Delight [Vanilla, Strawberry, Raspberry Ripple, Hazelnut, and Pistachio & Almond].

**Manufacturer's Name:** Genice Foods Ltd.

**Manufacturer's Address:** Pinfold Lane, Llay Industrial Estate, Wrexham, Clwyd LL12 0PX, Wales, UK. Phone: 0978-853-787.

**Date of Introduction:** 1986 April.

**Ingredients:** Vanilla: Soya milk [spray dried soymilk], raw cane sugar, corn syrup, vegetable oil, soya protein, vanilla bean extract, vegetable gums (guar, locust bean gum), lecithin, natural colour (annatto).

**Wt/Vol., Packaging, Price:** 1 litre tub.

**How Stored:** Frozen.

**New Product–Documentation:** Note: The Haldane Foods Group acquired Genice Foods Ltd. in March 1989. Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. This non-dairy frozen dessert was Genice's first product, launched in April 1986 in five flavors. Initially the main soy ingredient was powdered soymilk obtained from Michael Cole of Soya Health Foods Ltd., which probably imported it. But soon Genice switched to using soy protein isolates because they were less expensive and seemed to give a better product.

At that time Genice bought the isolates from Macauley-Edwards (in Peterborough, eastern England), which later somehow became Purina Protein. Genice developed this product largely because they needed an actual product to show potential customers, but they never put much effort into marketing the product because they had already decided that Genice wanted to be a product development and manufacturing company and leave sales and marketing to other companies. By Jan. 1993 the product was seen as extraneous and was even competing with other soy ice creams made by Genice, so it was discontinued as part of the company's "rationalization" program.

Labels sent by Genice Foods Ltd. 1994. Feb. 18. The labels (vanilla, or raspberry ripple) for 1 liter tubs are 6.75 by 4.25 inches. A color photo shows a dish of this soy ice cream next to fruits or flowers with a brown background photo of woven reeds. "Naturally delicious. Non-dairy frozen dessert. Contains no salt, lactose, artificial colourings, emulsifiers, or flavourings." With UPC indicia.

**1134. Wilkinson, Ralph. 1986. Soy fiber: types and sources (Interview). *SoyaScan Notes*. May 2. Conducted by William Shurtleff of Soyfoods Center.**

• **Summary:** Soy fiber is classified into three basic types: (1) Soy bran or soy bran fiber: It is cleaned, finely pulverized soybean hulls.

(2) Okara or soy pulp: The residue left after making tofu

or soymilk. It contains some natural oils and protein, and has a very high protein quality (as measured by PER).

(3) Soy cotyledon fiber (SCF) or defatted soy cotyledon fiber: The residue left after making isolated soy proteins. It contains almost no fat (since isolates are made from defatted soybean flakes), but it still contains quite a lot of high-quality fiber. It binds a great deal of water.

Who sells what?

(1) ADM introduced soy bran in about 1977. Their 1983 catalog (from the IFT show) lists “Nutrisoy Fiber (Soy Bran).”

(2) Ralston Purina now makes SCF which they call “soy polysaccharides.” Ross Laboratories and Mead Johnson use this in small amounts for geriatric foods, sort of like an infant formula for the aged.

(3) Grain Processing Corp. plans to introduce a SCF in mid-1986, i.e. later this year.

(4) Dawson Mills made SCF 5-6 years ago as a by-product of their soy protein isolate operations. It was on the market for only 1-2 months before they got out of the isolate business. Note: The product was named Fi-Trate / Fitrade Soy Fiber Concentrate. On 1 March 1980 the merger of Dawson Mills and Land O’Lakes was officially announced. Address: Grain Processing Corp., Muscatine, Iowa.

1135. **Product Name:** White Waves (Soymilk). Soon renamed White Wave Soya Milk (Plain/Unsweetened, or Sweetened with Raw Cane Sugar).

**Manufacturer’s Name:** Unisoy Milk ‘n By-Products Ltd.

**Manufacturer’s Address:** Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire, England. Phone: 061-430 6329.

**Date of Introduction:** 1986 May.

**Ingredients:** Soya beans, purified water, raw cane sugar.

**Wt/Vol., Packaging, Price:** Both: 500 ml Tetra Brik Aseptic carton. 29 pence (10/86). Unsweetened also in 1 liter Tetra Brik carton.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Spot in *The Vegetarian*.

1986. Sept/Oct. “Making Waves.” “There’s a new, very economical soya milk on the market. White Waves is a completely natural product. A real bargain at only 29 pence for 500 ml, 52 pence per litre.”

Simon Bailey. 1988. *Natural Choice*. Aug. 15. “Soya-Based Products.” A photo shows the label. “White Wave Soya Milk–Sugar Free.” On the front (large) and top (small) of the brick-shaped 500 ml aseptic package is a square logo, with one corner at the top—so that it looks like two triangles, one facing up and one down. In the top triangle is an illustration of a breaking wave, and in the bottom half are the words “White Wave.” Note: This combined brand name and logo is strikingly similar to that used for many years by White Wave in Boulder, Colorado, USA.

CSP form filled out by Simon Bailey. 1988. Sept. 28.

Gives date of introduction as spring 1986 and product name as White Wave Soya Milk. *The Vegan*. 1989. Spring. p. 12. Mentions the product. Talk with Neil Rabheru of Unisoy. 1990. July 3. This soymilk, in 2 flavors, was the company’s first product. Production began in May of 1986. Inorganic soya beans were used. The name has always been White Wave Soya Milk; it was never named “White Waves.”

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. He exported some of this soyamilk to Crivellaro in Italy, packaged under their own brand/label.

1136. Thomas, Susan. 1986. Nutrition and profit in balance. *Financial Guardian*. June 20.

• **Summary:** Two years ago Sonia Newhouse began to market her Vegetarian Feasts—tasty, additive-free, nutritionally balanced frozen meals. Now she has an annual turnover in excess of £500,000 and a staff of 25 turning out 6,000 microwaveable units a day. The products are found in Safeways and Co-op supermarkets.

“Twelve years ago she was virtually crippled with arthritis. No amount of traditional medicine helped until a vegetarian practitioner made her give up animal products, refined food, stimulants and artificial additives. Within days she was walking without pain.”

1137. **Product Name:** Genice Ice Delight Cones [Vanilla and Hazelnut with Carob Coating, Strawberry and Hazelnut with Carob Coating, Vanilla with Raspberry Ripple and Carob Coating].

**Manufacturer’s Name:** Genice Foods Ltd.

**Manufacturer’s Address:** Pinfold Lane, Llay Industrial Estate, Wrexham, Clwyd LL12 0PX, Wales, UK. Phone: 0978-853-787.

**Date of Introduction:** 1986 June.

**Ingredients:** Raspberry Ripple: Soya milk [spray dried soymilk], raw cane sugar, corn syrup, vegetable oil, vanilla bean extract, carob, raspberries, stabilisers (guar gum, locust bean gum), emulsifier (vegetable mono diglycerides), natural raspberry flavour, natural colours (annatto, beetroot red).

**Wt/Vol., Packaging, Price:** 100 ml cone.

**How Stored:** Frozen.

**New Product–Documentation:** Label and leaflet sent by Genice Foods Ltd. 1994. Feb. 18. The small round label reads “Genice Ice Delight Cone–Raspberry Ripple flavour. All natural non dairy vanilla with raspberry and carob.” 2½ inch diameter. Black on pink. The 8½ by 11 inch color leaflet reads: “New from Genice. Ice Delight Cones: The non-dairy alternative to ice cream. Lactose free. All natural ingredients. Available in three delicious flavors.” Three colorful cones, with gold foil as part of each design, are shown against a blue background.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 23.

**1138. Product Name:** Light Tofu Brownies, Sausage Style (Meatless Sausage).  
**Manufacturer's Name:** Light Foods Inc.  
**Manufacturer's Address:** St. Louis, MO 63017.  
**Date of Introduction:** 1986 June.  
**Ingredients:** Water, tofu, TVP (textured vegetable protein), soyoil, egg whites, salt, natural herbs and spices, honey, tamari, wheat gluten, malt powder.  
**New Product–Documentation:** Poster. 1986. “No cholesterol, no MSG, no sugar, no meat.” Spot in Natural Foods Merchandiser. 1987. March. p. 99. Adweek East. 1987. April 6. Soya Newsletter. 1988. Sept/Dec. A new smaller size, (8 links in a 12-oz. package) was introduced in late 1988. Address is now 613c Broadmoor, St. Louis, Missouri 63107. Ingredients include water, tofu, TVP, soy oil, salt, honey, soy isolate, malt powder, and natural herbs and spices.

**1139. Product Name:** Dayvilles N'ice Day (Soya Ice Cream) [Hazelnut, Pistachio & Almond, Strawberry, or Vanilla].  
**Manufacturer's Name:** Dayville Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.  
**Manufacturer's Address:** 78 Stamford Rd., London N15 4PQ, England. Phone: 01-801 7331.  
**Date of Introduction:** 1986 July.  
**Ingredients:** 1994: Soya milk, raw can sugar, raw cane syrup, vegetable oil, soya protein [isolates], flaked almonds, natural stabilisers (guar gum, carob gum), natural emulsifier (lecithin), pistachio extract.  
**Wt/Vol., Packaging, Price:** 3/4 liter (750 ml) rectangular plastic tub.  
**How Stored:** Frozen.  
**Nutrition:** Per 100 ml.: Energy 88 kcal (calories; 370 Kilojoules), protein 2.0 gm, fat 3.2 gm, carbohydrate 10 gm.  
**New Product–Documentation:** Grocer (London). 1986. July 19. p. 40. The product is based on soy protein and comes in one of 5 flavors. European New Product Report/Food. 1986. Aug. 1. p. 21. International Product Alert. 1987. March 18. Letter from Simon Bailey. 1988. Oct. Gives full details. Only four flavors. Dennis Wheatley is in sales.

Health Food Business (England). 1990. June. p. 22-23. “Health Food Business retailer guide to ice creams.” “Dayvilles say have a n’ice day.” These are all natural soya based frozen desserts.

Health Food Business (London). 1992. May. p. 34. “Frozen desserts. Dayvilles Original American Ice Cream. Dayvilles Original American ‘N’ice Day’ is a non-dairy alternative to ice cream, an all-natural soya-based frozen dessert which looks and tastes like premium quality ice cream but which contains no milk or dairy products, no artificial colours, flavours or preservatives, and is cholesterol and gluten-free. Suitable for vegetarians and vegans, it is also appealing to those on cholesterol-free diets or a diet free from milk protein, and is available in Vanilla, Strawberry, Hazelnut and Pistachio/Almond flavors in 750 ml packs. Foundation Foods are the distributors for the South East of England.”

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. In 1986 Dayville Ltd. asked Genice if they could make a non-dairy frozen dessert intended to appeal more to the general grocery sector of the market than health food stores where Ice Delight and Ice Dream were sold. The product N’ice Day, was launched for Dayville in July 1986, sold in 3/4 litre packs in four flavors—vanilla, hazelnut, strawberry, and pistachio & almond. The soy ingredient was soy protein isolates.

Label (Pistachio & Almond) sent by Genice Foods Ltd. 1994. Feb. 18. 6 by 4.5 inches. Label fits into the top of a 750 ml rectangular plastic tub. Light green on white.

Overhead photo of 3 scoops of white ice cream in a light green octagonal dish garnished by 3 cherries and 3 pineapple wedges. "All natural. Made only with natural ingredients. No artificial colors, flavors, or preservatives." A round red seal states: "Dayvilles seal of quality. Non dairy frozen dessert. Low fat, gluten free." UPC indicia.

1140. Realeat Company (The). 1986. Meat in decline. The 1986 Realeat Survey (News release). London. 2 p. July. [2 ref]

• **Summary:** A three year look at Great Britain's changing attitudes to meat eating. A survey conducted for Realeat Co. by Gallup (Social Surveys) Ltd. polled 3,881 adults age 16 and over at 200 points across the British Isles. Realeat Co. is a natural foods firm that introduced the popular VegeBurger in 1983. The percentage of Britishers who are vegetarian grew to 2.7% in 1986 from 2.1% in 1984. An additional 3.1% avoided red meat in 1986, up from 1.9% in 1984. Students aged 16 and over are now 4 times as likely as the rest of the population to be vegetarian. In 1986, 18.2% of students ate no meat (11% ate no meat, fish or poultry), up from 9.8% and 4.8% respectively in 1985. 7.3% of all women eat no meat versus 4.2% of all men. Of those eating less meat, the upper classes are cutting back the most (mainly for health reasons) and the lower classes the least (if so, more for cost reasons). Address: Gregory Sams, 2, Trevelyan Gardens, London NW10 3JY, England.

1141. *Food Engineering*. 1986. Sea and soy proteins spark analogs, blends. 58(8):91. Aug.

• **Summary:** "By acquiring the Griffith soy protein concentrate line (April 1985) and the Staley concentrate line (Feb. 1986), Central Soya is now the nation's only supplier of soy protein concentrates." Also discusses Ralston Purina custom isolated soy proteins, Grain Processing Corp.'s Frostline tofu mix, Dreamy Tofu from Giant Foods, Tofu For You (a non-dairy frozen dessert based on powdered tofu) from the Ingredient Systems Div. of ITC, spray dried tofu from St. Peter Creamery and Clofine Dairy Products, creamy tofu dressings and Nasoyanaise from Nasoya Foods.

1142. *Windsor Star (Essex County, Ontario, Canada)*. 1986. New dryers expected to end fire hazards. Sept. 23. p. A5.

• **Summary:** "Maple Leaf Monarch Company says new grain dryers to be installed in about 8 weeks should eliminate the nagging problems the company has had with fires." The local labor union leader said he had records of 200 to 300 fires at the plant during 1983 and 1984, although most were small and quickly extinguished by the workers. A photo shows puff of smoke seen coming from a recent Maple Leaf Monarch fire.

1143. Archer Daniels Midland Co. 1986. Annual report 1986. P.O. Box 1470, Decatur, IL 62525. 37 p.

Ships as large as 200,000 tons can unload soybeans for processing at ADM's Europeport plant in the Netherlands. Loadout facilities for ships, barges, trucks and railroad cars give us access to virtually every European market via the best suited transportation system for that market.

3

• **Summary:** See previous page. Net sales for 1986 were \$5,336 million, up 16.8% from 1985, and up 252% from 1977. Earnings for 1986 (before extraordinary loss) were \$239 million, up 46% from 1985. Assets totalled \$3,315 million, up 11.7% from 1985. A three-for-two stock split was declared in June 1986.

“In many ways, 1986 will be remembered as the year Archer Daniels Midland Company stepped up its efforts to meet the growing demands of an increasingly hungry world... Food is a growth business. Globally there are 85 million more mouths to feed each year; the equivalent of the current population of Mexico or more than one-third of the U.S. population...

“In the United States, we entered into a joint agreement with Growmark, Inc., a major Midwest farmer-owned cooperative.” ADM purchased three European oilseed plants this year, including one, the world’s largest (a color photo of which is shown), in the Europoort area of Rotterdam, the Netherlands. The others were at Hamburg and Spyck (on the Rhine River), West Germany. ADM’s partnership in Alfred C. Toepfer International, an international trading company in Hamburg, will also provide new strength in Europe.

In England, Direct Foods Ltd. has been operating successfully for 16 months under the ownership of The British Arkady Co. Ltd. During the year, Arkady acquired Vegetarian Feasts Ltd., a pioneer and market leader in oven-ready frozen meals. “On the average given day, over 100 ships are on the seas with agricultural cargoes sold by Toepfer and/or ADM.” Address: Decatur, Illinois.

1144. Audrain County Historical Society. comp. and pub. 1986. *History of Audrain County, Missouri: An update 1936-1986*. 1st ed. Mexico, Missouri: ACHS. vi + 599 p. Illust. Index. 29 cm.

• **Summary:** The section titled “Active history” notes (p. 9) that one of major fires during the half century covered by this book “destroyed the main feed mill and elevator building of the MFA (Missouri Farmers Association) at 400 East Holt Street on March 17, 1944.” Flames and sparks, rising 150 feet into the night sky, were seen from nearby towns, whose firemen helped to fight the fire. “Loss of the former W.W. Pollock Mill, remodeled by the MFA for soybean processing, was estimated at \$280,000. MFA rebuilt, and the location is now operated by Archer-Daniels-Midland.”

An updated history of the MFA (which started on 10 March 1914) (p. 252-52) states that one of the first cooperative soybean processing plants in the USA was located in Mexico, Missouri, owned and operated by the MFA. On 21 May 1943 the MFA purchased the W.W. Pollock Milling and Elevator Company of Mexico, Missouri. “It consisted of a 60,000 bushel wooden elevator and a 4 story brick building that housed flour milling machinery. The M.F.A. immediately began converting the mill into a soybean processing and feed manufacturing plant. They had installed

all the feed mixing equipment and about half of the soybean processing equipment when it was destroyed by fire on March 17, 1944. By the end of the year plans for rebuilding were progressing.

“The new M.F.A. Soybean Mill was dedicated on November 2, 1946. It was the only such plant in outstate Missouri. With the completion of this plant was born a brand new industry in the northeast quarter of the state where soybean production had been expanding during the past five years with no suitable markets at hand.

“In a radio broadcast at the dedication ceremonies, F.V. Heinkel pointed out that fourteen counties in Northeast Missouri, all within a radius of 50 miles of the Mexico Mill, produced a half-million bushels of soybeans in 1941, worth \$752,000. But this year (1946), he disclosed, the same counties increased production of soybeans to 3,600,000 bushels [up 7.2 fold] valued at approximately \$9 million [up 12.0 fold]. (Revised government figures for that year show production of 3,109,700 bushels, valued at \$7,929,735.) The counties he named were Audrain, Randolph, Montgomery, Callaway, Boone, Howard, Warren, Shelby, Marion and Macon. Until 1946 practically the only markets afforded this new crop were at Quincy, Illinois and St. Louis [Missouri].

In his speech, Heinkel said “We dedicate this plant in the name of progress and advancement to the rendering of service to the soybean producers, livestock feeders, and poultry raisers of this fine agricultural area with the objective of increased prosperity for the farmers and townspeople of Audrain and surrounding counties.”

Heinkel then introduced E.W. Lierheimer, who produced soybeans in Audrain County and who helped raise money to build the new plant. “Lierheimer recalled the late William Hirth had often told him that he had longed to have a major M.F.A. plant located in Mexico, county seat of his home county... Lierheimer also said that this plant didn’t grow up or wasn’t built overnight. ‘It is the result of longrange thinking and careful planning on the part of a lot of people.’”

The Mayor of Mexico, Missouri, Hon. Robert Finley, also appeared on the program and welcomed the new mill. Several days before the dedication ceremonies, the *Mexico Ledger* published a special edition devoted to the MFA, and especially telling all about the new soybean mill. Mitchell White, the editor of this newspaper—published both daily and weekly—appeared on the program. He “recalled a time many years ago when County Agent, Earl Rusk, began to talk of soybeans and their possibilities, and of a mill to process them.” Today, he declared, “this dream has become a reality through the splendid plant of the M.F.A.”

The section titled “Agriculture: A history of agriculture in Audrain County—Emphasis 1933-43” (p. 280-83, by Glen Mutti), begins with an excellent analysis of the effects of the Great Depression on local farmers. Surpluses of agricultural products, low farm prices for these products, terrible summer droughts (1930, 1934, 1936), plagues of grasshoppers

and chinch bugs, heavy debt, many farm foreclosures, and almost no agricultural credit. “The year 1933 ushered in the first huge U.S. government farm program, The Agricultural Adjustment Administration” (called The Triple A or AAA); its goal was to reduce acreages of basic crops thereby reducing production in that hope that depressed farm prices would improve. It was followed by a host of other government programs designed to help farmers. By 1939 the Rural Electrification Administration (REA) and farm mechanization (tractors and combines) had begun to transform farm life. “Rural Electrification and Soybeans, for Processing have probably had more impact than anything else on the Agriculture and standard of living of rural Audrain Countians.

“Soybeans introduced in the 1920s were first used mostly for hay. the crop was harvested with a grain binder tying the beans into bundles, which were shocked up in the field,” and left until they were hauled to the farmstead and fed to cattle. “A few farmers fed threshed soybeans to hogs as a protein supplement to corn. The result was soft pork and a lower price to the farmer for his hogs.

There became a demand for both oil and meal from processed yellow soybeans. In 1936 experimental test plots were set up by the Extension Service on seven Audrain County farms using the best known soybean varieties to determine those which were superior. The Alton Railroad cooperated with the Audrain County Agricultural Agent by furnishing farmers with seed beans. The work was continued into the early 1940s, then in March 1942, meetings were held at Laddonia, Vandalia, and Mexico [cities in Audrain Co.] to discuss the possible establishment of a commercial plant for processing (extraction of oil and meal) of soybeans.

“In 1945 the M.F.A. completed construction of the first soybean processing plant in northeast Missouri. The plant, now A.D.M., is still operative in 1985.

“One third of the land area of Audrain Co., about 145,000 acres, has been planted to soybeans—1974-1984. For more than 25 years soybeans have been the largest crop of the county.”

“The use of agricultural lime in Audrain increased from 180 tons in 1934 to 55,000 tons in 1942.” This expanded use had the most important impact of farming practices during this period.

After World War II began, it was “impossible to replace worn out farm machinery with new equipment. It was patch it up and try to keep it running.” As farmers’ sons entered the military, there was a shortage of farm labor. Many older farmers and their wives shouldered the burden, becoming a “loyal, patriotic, and dedicated work force.” The slogan was “Food for Freedom.” Fortunately the years from 1940 to 1955 were outstanding one for farmers, with record highs in farm income, crop prices, and general prosperity.

Contains detailed federal time series data for each of the following in Audrain County: Number of farms, average

size of farm, land prices per acre, percentage of land tenants (renters), number of horses and mules (work and draft), tractors, combines, yields of corn, soybeans, and wheat (p. 282).

The section on “Irrigation” (p. 283) discusses the importance of irrigation to first crop and double crop soybean yields in Audrain Co., and gives yield statistics. Address: 501 South Muldrow, Mexico, Audrain Co., Missouri.

1145. Benedickt, G. 1986. Verwendung von Sojaerzeugnissen zur Herstellung von Backwaren [Use of soy products in the production of baked goods]. *Schriftenreihe aus de Fachgebiet Getreidetechnologie* No. 8. p. 115-25. Sojaprodukte: Herstellung und Verwendung. [21 ref. Ger]

• **Summary:** Contents: Introduction. Reasons for using soy products: Technical purposes (effect of soy products on baking), nutritional purposes. Summary. Tables (the source for all is Ireks-Arkady): 1. Composition of full-fat toasted soybean meal (*Sojaschrot*). 2. Composition of full-fat, enzyme-active soy flour (*Sojamehl*). 3. Composition of defatted, enzyme-active soy flour. 4. Composition of toasted soy hulls (*getoasteten Sojaschalen*, also called *Sojaspeisekleie*) (Crude fiber is 45.2% of total solids TS); Bulk—by Thomas enzyme method 71.9% of TS; Bulk—by neutral detergent fiber (NDF) method 71.6%.

Note: This is the earliest German-language document seen that mentions soy bran, which it calls *Sojaschalen* (soy + hulls or husks) or *Sojaspeisekeie* (soya + edible + bran) (one of two documents). Address: Ireks-Arkady GmbH, Kulmbach, West Germany.

1146. Barrett, Mariclare. 1986. The cook’s glossary of soyfoods. *Vegetarian Times*. Nov. p. 28-35. [10 ref]

• **Summary:** Gives good definitions, with a full-page color illustration by Emily Soltanoff, of: Soybeans, soynuts, soy flour and grits, soy oil, textured vegetable protein, soymilk, okara (“the pulp that remains after the soymilk has been strained”), soy yogurt and soy cheese, tofu, fermented soyfoods, tempeh, miso, natto, soy sauce.

The article begins: “For 60 seconds on a national television commercial, a small, round soybean rolls past a lineup of infant formula, bread, pizza, chili, salad dressing, ice cream [Tofutti], soymilk and cubes of tofu; meanwhile the narrator intones, ‘The newest development in nutrition is actually one of the oldest foods known to man.’ Through advertising, the concept of soyfoods is brought home to millions of Americans by the soy giant, Archer-Daniels-Midland Company.” Address: Staff.

1147. Dacosta, Yves. 1986. Le gluten de ble et ses applications [Wheat gluten and its applications]. Paris: Association pour la Promotion Industrie Agriculture [APRIA]. iii + 130 p. Nov. Illust. 30 cm. [82 ref. Fre]

• **Summary:** Contents: 1. Composition of the wheat grain. 2. The solubility of the wheat proteins and their classification by Osborne. 3. Composition of the proteins of wheat flour. 4. Interaction among the proteins, the carbohydrates (comprising both the glycoses and the glycosides), and the lipids. 5. The soluble proteins. 6. The gliadines. 7. The glutenins. 8. The characteristics of wheat gluten. 9. Relationship between the constituents in wheat flour and their value in baking. 10. Industrial processes for the extraction of gluten. 11. Modified glutes. 12. The use of gluten to improve the baking quality of wheats weak in gluten (in 1984 some 70% of the gluten produced worldwide was used in leavened baked goods). 13. Other food applications of gluten: Biscuits, pasta, breakfast cereals, nutritious snacks, fritters (deep-fried products), spreads for breads or sandwiches, chewing gum, meat products (extenders and analogs/substitutes), edible wrapping films, protein drinks, aromas (hydrolyzed gluten), aquaculture, feeds for domestic animals (dogs, cats, etc.), and other (such as pharmaceutical tablets). 14. Non-food applications of gluten: Films for wrapping, adhesives, paper coatings, textiles, cosmetics and pharmaceutical creams, other. 15. Economic data: France, the EEC the world. Bibliography. Chart showing the structure of CDIUPA (Commission Internationale des Industries Agricoles et Alimentaires).

Concerning economic data: Table 20 shows, for France, that imports of wheat used by millers rose from 88,000 tonnes (metric tons) in 1974/75 to 116,200 tonnes 1984/85. During the same period, imports of gluten rose from 974 tonnes 4,952 tonnes, and gluten exports grew from 83 tonnes to 4,198 tonnes. Recorded production of gluten began in 1983/84 with 10,288 tonnes, rising to 12,254 tonnes in 1984/85. There are 4 main manufacturers of gluten-and-wheat starch in France: 1. Roquette, in Cambrai (Nord dept.), in Vecquemont (Somme), and in Lestrem (Pas-de-Calais). 2. Tenstar Aquitaine in Bordeaux (Gironde). 3. Paul Doittau in Haussimont (Marne; made about 500 tonnes in 1984). 4. Cooperative of Vic-sur-Aisne in Vic-sur-Aisne (Aisne; began production in 1985). The two largest of these are Roquette and Tenstar Aquitaine; they produce about equal amounts but these amounts are secret.

APRIA is located at 30 rue du Général-Foy-75008, Paris. Phone: (1) 42.93.19.24. The tonnage of wheat milled in the EEC has grown from 207,000 tonnes in 1976/77 to 384,000 tonnes in 1981/82, to 952,000 tonnes in 1984/85. Note the rapid growth after 1982. The top European users (in tonnes) of this milled wheat are: The UK 307,000, West Germany 283,000, France 142,000, Belgium 113,000, Netherlands 58,000, Belgium 113,000, Ireland 45,000, and Italy 4,000.

There are 19 manufacturers of gluten-and-wheat starch in the EEC as follows by country: West Germany 7, UK 5, France 2, Italy 2, Belgium 1, Ireland 1, and Netherlands 1. Outside of France, the largest manufacturers are: Amylum in

Belgium. Grespel & Deiter, and Emsland (both in Germany), Latenstein in Netherlands, Tenstar Products, and Tunnel Refiners (both in the UK).

In 1979, according to the International Wheat Gluten Association (IWGA), 5 companies produced wheat gluten in Australia (Allied Mills Starches, Bunge, Fielder Gillespie, George Weston Foods, and Manildra Starches Pty. Ltd.), 4 in the USA (ADM Milling Co., Centennial Mills, Henkel Corp., and Midwest Solvents Co.), and 1 in Canada (Industrial Grain Products). Japan is also an important producer. In 1984/85, world production of wheat gluten was estimated at 150,000 to 180,000 tonnes. Address: Conseiller d'Entreprises, France: 47, rue Guersant-7015 Paris, France.

1148. **Product Name:** Granose Soya Dessert [Vanilla, Chocolate, or Strawberry].

**Manufacturer's Name:** Granose Foods Ltd. (Marketer). Made in West Germany by DE-VAU-GE Gesundheitswerk GmbH in West Germany.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1986 November.

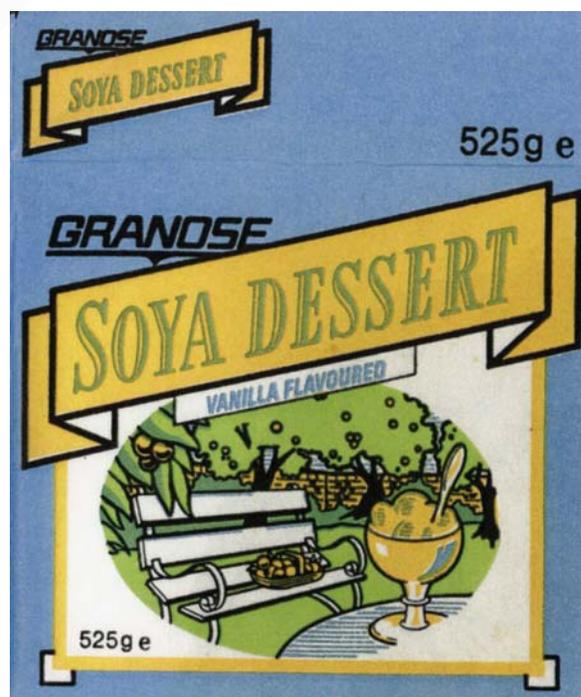

**Ingredients:** Water, dehulled soya beans, raw cane sugar, maize starch, seaweed, sea salt, natural vanilla flavourings.

**Wt/Vol., Packaging, Price:** 525 gm Tetra Brik Aseptic carton retails for £0.45.

**How Stored:** Shelf stable.

**Nutrition:** Per 100 gm: 72 calories. Fat fractions: polyunsaturates 58%, saturates 15%.

**New Product-Documentation:** Labels and color photo sent by STS. 1987. Blue, yellow, black, and green. Illustration of a bench in the park with glass of dessert on nearby table.

Lindner. 1987. *The World Soymilk Market*.

1149. *Soybean Update*. 1986. Central Soya buys plants [from Bunge]. 10(46):3. Dec. 8.

• **Summary:** Central Soya plans to buy 7 of Bunge's 9 soybean processing plants, allowing Central Soya to control 20% of U.S. crushing capacity, while ADM controls 30% and Cargill 25%. Bunge plants to be sold: Cairo, Illinois; Decatur, Alabama; Emporia, Kansas; Jackson, Mississippi; Marks, Mississippi; Vicksburg, Mississippi; Logansport, Indiana.

1150. *SoyaScan Notes*. 1986. Chronology of soybeans, soyfoods and natural foods in the United States 1986 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Jan.—The first major soy cheese to hit the market is Soya Kaas—a landmark product. It was developed and introduced by Richard McIntyre of Soya Kaas Inc., a subsidiary of Swan Gardens Inc. Marketed exclusively by American Natural Snacks of Florida, it long remain America's most popular cheese alternative.

Jan. Ron Ishida, an attorney with no previous knowledge of tofu, working for Azumaya Inc. (South San Francisco, California), rewrites the Tofu Standards without authorization. They have already gone through 8 drafts. This creates a crisis.

Jan. *Soyfoods: The Journal of the European Soyfoods Association (ESFA)* begins publication from Paris. Philippe Vandemoortele of Alpro is president of the association and Guy Coudert is editor of the periodical. The association plans to organize a soyfoods conference every 2 years. But the journal is discontinued after 3 issues.

Jan. Tomsun Foods is reorganized, changing its name (for the fourth time) to Tomsun Foods International. The firm's new chairman is Juan Metzger, founder of Dannon Yogurt. The company produces nearly 3 million lb. of tofu a year.

Jan. First Tofutti Shop opened in Japan by Daiei Co. Inc., Japan's largest retailer. Shop sells non-dairy soy-based ice cream and related snacks.

Feb. 7. Fire destroys Island Spring tofu plant in Vashon, Washington, with an estimated \$1 million loss.

Feb. Soya Kaas, an imitation cheese containing soymilk and casein, launched by American Natural Snacks, a marketer. The manufacturer is Swan Gardens of Georgia.

Feb. Jofu, a tofu-based, non-dairy, nonfermented, yogurt-like product, sweetened with fruits, launched by Tomsun Foods International of Greenfield, Massachusetts. The product is a hit, grossing nearly \$400,000 in its first 32 weeks on the market.

Feb. Barricini Foods has its first public stock offering. Raises \$1.5 million, gross to use in marketing Tofulite and Ice Bean soy ice creams.

Feb. Central Soya purchases Staley's protein line, including Mira-Tex, Procon [soy protein concentrate], and Textured Procon brands.

Feb. ASA hires Jim Guinn as technical director of soybean quality programs. Soybean quality is an area of growing interest, with two parts: 1. The traditional area of soybean condition, concerning grades, damage, foreign material, etc. 2. The newly emerging area of soybean composition and its relation to grades. New measurement technologies make it likely that soybeans may soon be sold based on their composition of oil and protein. Both effect exports and price.

March 5. Pesticide control now tops the Environmental Protection Agency's list of most pressing problems, announces *The New York Times* (and *Soybean Digest*, June/July). Stricter pesticide laws are enacted.

March 7. Richard E. Lyng of California becomes U.S. Secretary of Agriculture, replacing John R. Block. Policies remain unchanged.

April 18. Wm. Shurtleff, in charge of compiling the original tofu standards, submits a strong criticism of the illegitimate Ishida draft in the form of a detailed chronology of the development of the tofu standards.

April. Tofu cheesecake revolution in New York City profiled by *Whole Life*. Thirteen restaurants now offer them.

May. Tofutti Love Drops (chocolate covered graham cookie drops) launched by Tofutti Brands with much fanfare.

May. Nasoya's new million-dollar automatic tofu-making system, imported from Sato Shoji in Japan, begins operation.

June. Increasing consumer deception by "soy cheese" manufacturers. *Whole Life* publishes "Whole Frauds in the News: Will the Real Soy Mozzarella Please Stand Up (That is, If There is One)," an exposé of mislabeling involving Soyarella, Tofu Mozzarella, and Soya Kaas (though the latter brand is not at fault). Argues that it is deceptive for health food stores to call a product "non-dairy" if it contains casein (milk protein), even though FDA rules allows such a designation. In Oct. *Whole Life* reports that "Independent lab tests prove Soyarella hoax; Large quantities of casein [19.6%] found in so-called soy cheese." Soyarella had previously been marketed as casein free.

July. Ralston Purina Co. starts publication of *Nutrition Overview*, a newsletter focusing on soy protein and fiber.

July. Soyfoods win big in 7th Annual Natural Foods Merchandiser merchandising awards: Gold: San-J tamari and shoyu. Silver: Fantastic Foods' Tofu Scrambler and Tofu Burger, Westbrae Natural miso soups. Honorable mention: Walker & Wilks frozen entrees, White Wave boxed tofu.

July. Vitasoy reintroduces its line of reformulated and repackaged soymilk products, originally launched in 1984. They contain more solids and nutrients, and are sweetened with barley malt instead of maple syrup.

July. A Roper poll in the U.S. finds that tofu is the "most

hated" food. 35% of a sample of 2,000 adults checked it on a list of foods said to be disliked, ahead of liver (34%), yogurt (29%), Brussels sprouts (28%), and prunes (24%). Results do not vary significantly by age, but tofu dislike is somewhat less among those with higher incomes. The poll results are very widely publicized, and are even the subject of a question on the TV program Jeopardy (in early 1988)—and its rerun! These findings suggest both a widespread awareness of tofu and a split image: Some like it and others don't.

Aug. Kikkoman's new shoyu plant starts operation in Chitose, Hokkaido, in northern Japan. The first product was shipped on 30 Jan. 1987.

Sept. 9. American Soy Products Inc. plant dedicated in Clinton, Michigan. A \$10 million joint venture between Eden Foods and four Japanese companies (Kawasho, Marusan, Muso, Seikensha), construction on the plant began in Oct. 1985. It will make Edensoy soymilk in Tetra Brik cartons. The first products are shipped in November.

Sept. 19. Tofu standards passed by Tofu Standards Committee in San Francisco, after all committee members except Shurtleff agree to start with a blank slate in drafting new standards—thus erasing years of work by hundreds of people. Shurtleff resigns in protest, arguing that this is a violation due process. Shortly thereafter Barricini and Ralston Purina also refuse to give final approval. Tofu standards are stalled indefinitely after many years of hard work.

Sept. 24. First International Tofu Products Expo, Seminar, and Soyfoods Buffet, held in Munich, West Germany. Sponsored by Bernd Lehmann International Consultants. 100 people attend.

Oct. Supersoy brand soymilk introduced to America by Mitoku USA. It is made by Kibun Health Foods Co. in Japan.

Oct. Ralston Purina sells its domestic agricultural products business, Purina Mills. Total sales for 1986 were \$5.5 billion.

Nov. Island Spring announces \$6.5 million investment from Edward Lynch Co. to finance an expansion plan. Construction of a new 30,000 square foot factory is now underway on Vashon Island.

Dec. 1. White Wave of Boulder, Colorado, acquires Soyfoods Unlimited, a tempeh manufacturer of San Leandro, California. This makes White Wave America's largest tempeh manufacturer.

Dec. 8. Central Soya purchases 7 of 9 Bunge's soybean crushing plants. ADM is now estimated to control 30% of U.S. crushing capacity followed by Cargill (25%), Central Soya (20%), and other (25%).

Dec. Tomsun Foods International nets about \$3.45 million in its first public stock offering (IPO). Most of the funds will be used for sales and marketing of Jofu, and to repay \$800,000 in debts. Total Tomsun sales in 1986 were about \$3.1 million.

Dec. Haagen-Dazs will drop Tofutti and start distributing Barricini Tofulite, a non-dairy frozen dessert.

Dec. Brightsong Foods is named as one of the top ten food innovators for 1986 by Food & Beverage Marketing magazine. In fact, Brightsong is listed first!

Dec. Tofruzen Inc., a soy ice cream marketer from Englewood, Colorado, raises \$1.6 million in a public stock offering. Sales of Tofruzen in fiscal 1986 were \$91,000, rising to \$158,000 in 1987, and \$213,000 in the first quarter of 1988.

Dec. Edible Soy Products in Hudson Iowa is sold to Solnuts of Tilburg, The Netherlands, and renamed Solnuts, Inc. The Hudson and Tilburg plants are the only ones in the world that dry roast soybeans to make soynuts.

Dec. More than 60,000 Italian farmers harvested nearly 25,000 hectares (61,700 acres) of soybeans this year. Italy is now Europe's largest soybean producing country, followed by France. Five years ago, Italy produced virtually no soybeans. The Ferruzzi Group is the leading promoter, helped by hefty subsidies from the EEC.

1986 New Trends:

So Called Tofu Cheeses. Eight new soy cheeses were launched during 1986, many with the term "Tofu" in the product name. Many have been shrouded in mystery, with the names of the manufacturer and ingredients often not disclosed. There has been much consumer deception, mislabeling, and several attempts to conceal the fact that they usually contain casein, the protein in cow's milk.

Soy Yogurts and Yogurt-Style Products. The leader in this exciting new category is Jofu from Tomsun Foods. The two basic types are fermented soymilk products (e.g. Cream of the Bean, Soy-O), and non-fermented tofu-fruit blends (e.g. Jofu).

Move to Manufacturing Soymilk in America. The rising cost of soymilk imports is making them unprofitable. Domestic production, which obviates shipping U.S. soybeans to Japan, then shipping the beans and water back, will have major, beneficial long-term effects on Edensoy, Ah Soy, and Westbrae Malted. Still imported are Vitasoy (from Hong Kong, whose exchange rate is tied to the dollar) and Sunsoy (from Belgium).

The declining value of the dollar against the yen starting in late 1985 led to a steady rise in soymilk prices. But the combination of domestic production and larger size packages (see below) has led to a drop in soymilk prices during 1986. For example, Edensoy, selling for 6 times the price of dairy milk per unit volume in early 1984, was selling for only 3.5 to 4.1 times as much in late 1986, a drop of about 37%.

Soymilk Switches to Tetra Brik Cartons and Liters or Quarts. Edensoy, Westsoy, and Ah Soy have all switched to Tetra Brik cartons this year. Lower total manufacturing and shipping cost is the main reason. The liter/quart size was pioneered in the U.S. by Alpro/Vamo Foods/Sunsoy, and followed by Edensoy, Ah Soy, and Vitasoy. These

counterparts of dairy milk in quarts suit the needs of regular soymilk users by offering a more economical price per unit volume plus greater convenience. Soymilk may be the first liter-size Tetra Brik product to succeed in America.

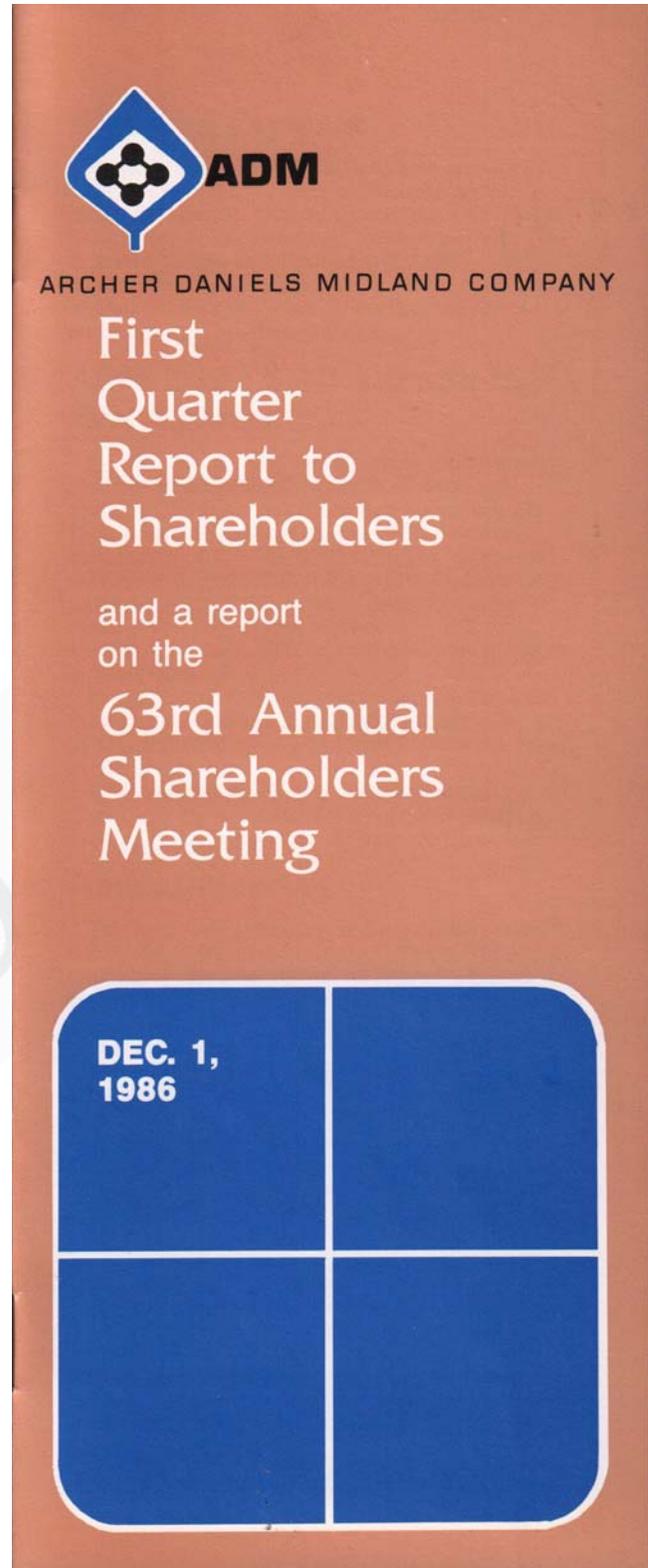

INTSOY is doing outstanding, pioneering work with soyfoods and soybean utilization in the Third World and America. Research is focusing on extrusion cooking, extruder-exPELLER processing for small-scale oil expression, and fresh green soybeans. Since April 1987 the INTSOY Newsletter has become one of the best soy-related publications available.

Morinaga Long-life Silken Tofu becomes a major force in the U.S. tofu market. Traditional manufacturers consider the product a major threat to their markets. Azumaya has hired an attorney who spends considerable time causing troubles for Morinaga.

1151. Archer Daniels Midland Co. 1986. First quarter report to shareholders. Box 1470, Decatur, IL 62525. 8 p. Dec. 1. • **Summary:** In the President's Report, page 1: "Our purchase of the three European Unilever plants was completed on May 1st. The Rotterdam crushing plant is the largest in the world with a daily capacity of 166,000 bushels of soybeans. We are in the process of adding a fluid bed dehulling system to enable the plant to run 100% high protein meal. The Hamburg plant can crush 4,000 tons of soybeans and softseeds daily, and refine the oil from a major portion of that crush. We are planning several modernization projects, including cogeneration, at Hamburg that will cut our processing costs in half. The third plant, located in Spych on the German-Holland border, crushes rapeseed, sunflower seed and flax.

"The former Staley crushing plants leased a year earlier along with our newly acquired crushing plant at Windsor, Canada, were thoroughly modernized and processing costs were reduced substantially. Our Augusta plant was modified to crush peanuts. At the close of this fiscal year, we had the ability to crush 1,875,000 bushels per day of soybeans, rapeseed, sunflower seed, cottonseed, corn germ, and peanuts in 38 crushing plants."

Pages 3-5: A graph shows the value of ADM stock from 1970 (\$1.25) to 1986 (\$18). Dwayne Andreas notes: "Why do we think of ADM stock as a zero based bond? Because our shareholders have elected over the years to reinvest most of the earnings to modernize existing facilities, adapt new technology and acquire additional processing and handling operations. We have constantly reinvested. In spite of the fact that ADM shares, adjusted, have gone from \$1 in 1970 to almost \$20 today, we have not been spectacular earners. We have had some good years and some not so good, but we have constantly reinvested earnings and we know about compound interest. My father taught me about compound interest when I was about 7 years old and fortunately I never forgot it. He said "You've got to know about compound

interest and here is the way it works. You take any interest rate and divide it into 72 and that will tell you how long it takes you to double your money". Well, that made me one greedy boy. If we can make 12% on your capital, 12%

divided into 72 is 6. That means we double your money every 6 years. That's the magic of compound interest when we reinvest your earnings. Our shareholders have endorsed that principal for the last 20 years and we will keep on doing it as long as we can find the right investments. Of course we strive to earn more than 12%.

Also that ADM purchased three Unilever oilseed crushing plants at Rotterdam (Netherlands), and Hamburg (West Germany), and Spych/Spyck (on the West German-Netherlands border). The plants were acquired in April and ADM took over operations on May 1. "The Rotterdam crushing plant is the largest in the world with a daily capacity of 166,000 bushels of soybeans... The Hamburg plant can crush 4,000 tons of soybeans and softseeds daily, and refine the oil from a major portion of that crush. The plant at Spych crushes rapeseed, sunflower seed and flax." Address: Decatur, Illinois.

**1152. Product Name:** ADM Veggie Burger (Dry Mix with Textured Soy Protein Concentrate) [Meat Style, Curry Style, Gyros Style, and Herbs & Spices Style].

**Manufacturer's Name:** Archer Daniels Midland Company.

**Manufacturer's Address:** Box 1470, Decatur, IL 62525.

**Date of Introduction:** 1986.

**Ingredients:** Meat Style: Textured soy protein concentrate, partially hydrogenated corn, and/or soybean and cottonseed oils, soy protein isolate, wheat gluten, methylcellulose, natural flavor, onion powder, salt, dehydrated worcestershire sauce (no anchovies), malt extract, beet powder, black pepper, zinc oxide, niacinamide, ferrous sulfate, copper gluconate, vitamin A palmitate, calcium pantothenate, thiamine mononitrate (vitamin B1), pyridoxine hydrochloride (vitamin B6), riboflavin (vitamin B2), cyanocobalamin (vitamin B12).

**Wt/Vol., Packaging, Price:** 170 gm plastic or foil bag.

**How Stored:** Shelf stable.

**Nutrition:** Per 34 gm.: Calories 140, protein 16 gm, carbohydrates 7 gm, total dietary fiber 4 gm, fat 4.5 gm (Saturates 1.3, Monounsaturates 2.7, Polyunsaturates 0.5), cholesterol 0 mg, sodium 350 mg, potassium 425 mg.

**New Product–Documentation:** Talk with Clyde Boismenu of Basic Foods Co. 1990. Nov. 13. ADM's Veggie Burger comes in 4 flavors in dry form: Meat Style, Curry Style, Gyros Style, and Herbs & Spices Style. They were introduced about 4 years ago. ADM also makes pre-cooked, frozen patties.

Labels sent by Clyde Boismenu. 1990. Nov. 18. 5 by 3 inches. Self adhesive. Black on white. Meat Style: "A delicious vegetarian entree that is based upon a savory blend of textured soy protein concentrate with natural flavorings. The veggie burger can be used in a multitude of recipes. In addition to a grilled patty, the veggie burger can be baked, steamed, poached, or cooked in a variety of ways. Cooking instructions: Empty the contents of the package [it is gray

chunks and flour] into a bowl and add 1¼ cups (290 ml) cold water. Mix well and allow to stand 15 minutes. Form into desired shape and fry in vegetable oil until golden brown or bake in an oven at 375°F for 20-25 minutes. For best results, serve immediately after cooking... One packet make five 3.2 ounce burgers or about 1 pound of finished product."

Soyfoods Center product evaluation of Meat Style. 1990 Dec. 4. CW: Beef flavor. Texture very much like ground meat, both to feel and to eye. Fries up nicely; holds together, browns. Little taste except for slightly unpleasant aftertaste, so needs addition of spices. Excellent in flavorful sauces. Convenient for travel and backpacking. WS: Gyros flavor. When served as pan-fried patties the flavor is not very good (tastes slightly like dog-food), the texture is dry, not juicy, with some hard pieces reminiscent of gristle. It tastes much better when the patties served as chunks in a tomato or spaghetti sauce. AA: Easy and quick to make. CW: Curry. "I think people who are switching from a meat to a vegetarian diet would go for this. It has the right look and feel, and is easy to fix. The curry flavor was very mild (I added more curry powder); the flavor was a C+."

**1153. Product Name:** Protoveg Sizzles [Smokey Bacon Flavour].

**Manufacturer's Name:** Direct Foods Ltd.

**Manufacturer's Address:** Petersfield, Hampshire, England.

**Date of Introduction:** 1986.

**Wt/Vol., Packaging, Price:** 175 gm bag.

**New Product–Documentation:** Color photo of package in *Linda McCartney's Home Cooking*. 1990. p. 18. Upright paper bag. Illustration shows two round patties sizzling in a skillet. "Contains no meat or animal fat."

**1154. Product Name:** Protoveg 5 Grain Burgamix.

**Manufacturer's Name:** Direct Foods Ltd.

**Manufacturer's Address:** Petersfield, Hampshire, England.

**Date of Introduction:** 1986.

**Wt/Vol., Packaging, Price:** Bag.

**How Stored:** Shelf stable.

**New Product–Documentation:** Color photo of package in *Linda McCartney's Home Cooking*. 1990. p. 18. Upright paper bag. Illustration shows two burger patties in buns. A vegetable mix with blended whole grains. Package is brown and gold on white.

**1155. Product Name:** Sojal Light Dairy Free Frozen Dessert [Strawberry, Carob, Hazelnut, or Vanilla].

**Manufacturer's Name:** Haldane Foods Ltd.

**Manufacturer's Address:** Hayhill Industries Estate, Unit 25, Sileby Rd., Barrow Upon Soar, Leicestershire LE12 8LD, England.

**Date of Introduction:** 1986.

**How Stored:** Frozen.

**New Product–Documentation:** Soya Bluebook. 1986. p.

104. Product originally launched by The Regular Tofu Co.

Letter from Peter Fitch. 1990. March 26. The Regular Tofu Co. was acquired by Haldane Foods in Aug. 1987.

1156. **Product Name:** Yoga (Soy Yogurt).

**Manufacturer's Name:** Regular Tofu Company Ltd. (Marketer). Made in Leicester, England, by Rossa Ltd. Made since 1989 in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer's Address:** Hayhill Industrial Estate, Unit 25, Barrow Upon Soar, Leicester, Leicestershire, England.

**Date of Introduction:** 1986.

**How Stored:** Refrigerated.

**New Product–Documentation:** Soya Bluebook. 1986. p. 111.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4, 8, and 16. Ray is quite sure that the Regular Tofu Company has this soy yogurt made for them by Rossa Ltd., a very small ice cream company in Leicester (pronounced LES-tur). Not long after April 1989, when Genice joined the Haldane Foods Group, they started to make Haldane Yoga, a chilled soy yogurt owned by the Haldane Group, but originally launched by the Regular Tofu Company in 1986. This and all subsequent soy yogurts made by Genice were cultured products. Haldane Yoga product sold at the rate of about 500 to 1,000 cases per week, continuing until early 1990 when Genice developed a unique process for making pasteurized yogurts that have a 4-month shelf life at ambient temperatures.

1157. **Product Name:** Tofeata Tofu Burgers, and Patties.

**Manufacturer's Name:** Regular Tofu Company Ltd.

**Manufacturer's Address:** Hayhill Industrial Estate, Unit 25, Barrow-Upon-Soar, Leicester, Leicestershire, England.

**Date of Introduction:** 1986.

**New Product–Documentation:** Soya Bluebook. 1986. p. 92. Letter from Simon Bailey. 1988. Sept. 28. This company is now owned by Haldane Foods.

1158. **Product Name:** Tofeata Tofu, and Tofeata Smoked Tofu.

**Manufacturer's Name:** Regular Tofu Company Ltd.

**Manufacturer's Address:** Hayhill Industrial Estate, Unit 25, Barrow Upon Soar, Leicester, Leicestershire, England.

**Date of Introduction:** 1986.

**Ingredients:** Water, dehulled organic soybeans, calcium

sulphate (natural coagulant).

**Wt/Vol., Packaging, Price:** 9 oz paperboard box. Vacuum packed.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm: Energy 78.5 kCal, Protein 7.8 gm, Fat 4.3 gm, Carbohydrate 2.3 gm.

**New Product–Documentation:** Soya Bluebook. 1986. p. 107. Label. Best before 27 Jan. 1988. Paperboard box. 5.25 by 3.25 by 1.38 inches. Red, yellow, black, and green on white. "Fresh, light. A non-dairy meat alternative. Tofeta Tofu–Soya bean curd. Made from organic soya beans." By Hera. Recommended by Kenneth Lo. Front panel contains color photos of deep fried tofu cubes in a salad and a stir-fry, and a whipped tofu dessert. Manufacturer is now Haldane Foods Ltd., Unit 25, Hayhill Industrial Estate, Sileby Rd., Barrow-Upon Soar, Leicestershire, England. Recipes on back for Kenneth Lo's Summer Cold-Tossed Tofeta, Tofu Burgers, Tofu Nut Loaf.

1159. **Product Name:** [Boulangage {Soya Bread Mix}].

**Manufacturer's Name:** Societe Industrielle des Oleagineux (SIO).

**Manufacturer's Address:** Main Office: 30 Rue des Peupliers, 92000 Nanterre, France.

**Date of Introduction:** 1986.

**New Product–Documentation:** Soya Bluebook. 1986. p. 111. Contact: Guy Deneck, Proteins Dir.

1160. Goddard, Susan. 1986. Focus on soya. Hove, E. Sussex, England: Wayland (Publishers) Ltd. 48 p. Illust. Index. 21 x 22 cm. Series: Focus on Resources. [3 ref]  
 • **Summary:** This is a brief introduction to the subject with many color photos. Contents: 1. The importance of soya. 2. The beginnings of soya. 3. Where soya beans are grown. 4. The beginnings of soya processing. 5. The soya plant. 6. Planting. 7. Harvesting. 8. Threshing and storage. 9. At the processing plant. 10. Extracting and refining the oil. 11. Making margarine. 12. Animal feed. 13. Soya protein products. 14. Textured vegetable protein. 15. Other soya products. 16. The nutritional importance of soya. 18. Soya as a world commodity. 19. The future. Facts and figures. Glossary. Books to read. Sources of further information.

Numerous large color photos show commercial soya products. Page 23: Granny Ann High Fibre Cooked Soya-Bran, Bilsons Fibrefit, Nature's Way Soya Flour. 1161. Hunt, Janet. 1986. The compassionate gourmet: The best of international vegan cuisine. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 160 p. Illust. Index. 22 cm.

• **Summary:** An excellent vegan cookbook, written for animal lovers. Soy-related recipes include: Avocado tofu pâté (p. 31). Celery miso pâté (p. 36). French bean salad with tofu dressing (p. 66). Tofu curry (Thailand; p. 74). Tofu and vegetable pakora (p. 86). Tofu layered casserole (p. 96). Tomato flan with tofu (p. 104). Tofu Lemon flan (p. 137). Yogurt dessert (made with cultured soya milk, p. 140). Rhubarb fool (dessert in soya milk, p. 141). Maple pancakes (with soya flour, p. 149). Walnut tofu balls (p. 156).

At least one recipe uses Holbrook's Worcester Sauce—a Worcestershire-type sauce without animal products.

Many recipes call for soy sauce or soya milk, and some for canned soy or nut "sausage." Page 9 lists a number of special ingredients including Direct Foods Protoveg (soya "meat"), Infinity Foods (distributors [in Brighton, at Sussex University]) Soya mayonnaise, Lotus Foods TVP (soya "meats" in a varieties of forms and flavors), Plamil concentrated soya milk (use diluted as a milk, undiluted as a cream), and Tomor Margarine (the author's favorite of the many vegan margarines now available in the UK). In all recipes, each ingredient is listed twice in side-by-side columns: once in its Imperial (metric) form and once in its American form, e.g. 385 ml soya milk, 1 1/3 cup soya milk. A number of recipes call for the use of alcohol (whiskey, brandy, etc.). The author has written at least 14 other books on vegetarian or wholefood cookery. Address: England.

1162. McDougall, Mary A. 1986. The McDougall health-supporting cookbook. Vol. 2. Piscataway, New Jersey: New Century Publishers. iii + 157 p. Index. 23 cm.

• **Summary:** This is a vegan cookbook whose 250 original recipes are designed to support The McDougall Plan, which is a diet low in fat and sodium, high in complex carbohydrates. Since soyfoods are relatively high in fat, they are used sparingly and the recipes are marked by a symbol of a crown. Low sodium soy sauce is used in many recipes. Soy-related recipes include: Scrambled tofu (p. 2-3). Tofu salad dressing (p. 7-8). Dijon tofu dip (p. 9). Onion soup dip (with tofu, p. 9). Dilly tofu dip (p. 9-10). Miso soup (p. 39). Creamed tofu soup (p. 41). Tempeh Creole (p. 62-63). Rice-tofu stuffing mix (p. 88). Tempeh and grain casserole (p. 91). Tofu loaf (p. 96-97). Baked tofu cubes (p. 97-98). Spinach-tofu burgers (p. 99-100). Where's the meat loaf? (with tofu, p. 101-02). Oat burgers (with tofu, p. 102-03). TVP stuffing mix (p. 109). Okara cookies (p. 126). Tofu banana pudding (p. 132). The section titled "Update on ingredients" (p. 133-35) includes a description of: Worcestershire sauce (Sharwood's—natural and without anchovies), umeboshi plum sauce, tamari or soy sauce, okara, tempeh, kombu, and tahini. A portrait photo on the back cover shows Mary McDougall.

Note: Not long after this book was published, New Century Publishers changed its name to New Win Publishing, Inc. and moved to Clinton, New Jersey. As of 2000 this book is published by Putnam/Penguin. Address: P.O. 14039, Santa Rosa, California 95402.

1163. **Product Name:** Living Foods Organic Soy Drink. **Manufacturer's Name:** Unisoy Milk 'n' By-Products Ltd. **Manufacturer's Address:** Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430-6329.

**Date of Introduction:** 1987 January.

**Ingredients:** Incl. barley malt.

**New Product–Documentation:** Talk with Neil Rabheru of Unisoy. 1990. July 2. This product was launched by Living Foods in early 1986. It is exported to the Netherlands. It contains barley malt. It was made as a private label brand for a company named Living Foods, but after that company went into liquidation (bankruptcy), Unisoy decided to continue making the product and marketing it themselves. It is not selling very well because the product concept is wrong. But it has potential.

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. This product was introduced after White Wave Soya Milk. It contained a little organic barley malt and pearl barley. The product originally belonged to a company named Living Foods (in Brighton, England), founded by David White. Living Foods was an importer-marketer, not a manufacturer. They imported products (such as tofu from the Netherlands) and sold it under the Living Foods brand. They were an agent for Lima Foods, and imported Lima rice cakes. This soyamilk was originally made by Soya Health Foods (Sunrise), but Living Foods was not happy with the price and quality, so they asked Unisoy to make the product, starting in late 1986 or Jan. 1987. In the process, Living Foods went bankrupt, so Unisoy bought the Living Foods brand to use for soyamilk.

1164. Kahn, E.J., Jr. 1987. Profiles: The absolute beginning [Dwayne Orville Andreas and ADM]. *New Yorker* 62:41-68. Feb. 16.

• **Summary:** The best biography seen of Dwayne Andreas, with emphasis on his work with soy. On the first page is a long discussion of Nutri-Bev, a soy-based milk substitute.

Contains a nice portrait (illustration, line drawing) of Andreas on the first page. Address: New York.

1165. **Product Name:** Pasties (With Tofu Filling) [Regular, or Curry].

**Manufacturer's Name:** Bean Machine.

**Manufacturer's Address:** Grymlich, Wales, UK.

**Date of Introduction:** 1987 April.

**Ingredients:** Dough: Incl. wholemeal flour. Filling: Incl. tofu, vegetables, soy sauce, spices.

**How Stored:** Frozen or refrigerated.

**New Product–Documentation:** Carolyn Rees. 1987. April. Soyfoods (ESFA). "The Bean Machine story." Pasties can be sold in different forms such as cooked and then frozen, raw and frozen, or fresh baked. They are ready to eat, and are mainly bought by cafes.

1166. Hannigan, Kevin J. 1987. Vegetable protein use shifts gears: The market for vegetable proteins has changed radically in the past few years with the emphasis shifting from nutrition to function. *Food Engineering* 59(5):155-58, 160, 162-63. May.

• **Summary:** Suppliers who proudly announced a "Protein

Division" a few years ago have quietly folded their tent or changed its name. A consolidation and reorganization is taking place, product by product. About 2 years ago, Central Soya bought Griffith's protein line, although Griffith is still a distributor and continues to serve former customers. Last year Central Soya acquired Staley's concentrate line. Central Soya says its concentrates are "beating isolates to a pulp."

Three vegetable proteins (soy isolates, whey solids, and yeast) are now typical building blocks in over half the food in the American diet, found in more than 2,500 products. These proteins were worth \$579 million in 1985, according to Frost & Sullivan, Inc. Soy and whey each have about 45% of the market, yeast about 10%. By 1989 says the F&S study, about 879 million lb of soy products will be sold annually. ADM sells mostly isolates, Cargill mostly soy flour and grits and textured products. Soy isolate is widely used as a binder at the 2% level to reduce ground meat patty breakage. Address: Features editor.

1167. LaBell, Fran. 1987. Tofu & Tofu Products. *Food Processing (Chicago)* 48(5):Ingredient Handbook insert. May.

• **Summary:** Discusses tofu standards, Brightsong Foods, Nasoya Foods, Clofine Dairy & Food Products, Soyco Foods (Div. of Galaxy Cheese, P.O. Box 5181, New Castle, Pennsylvania 16105), St. Peter Creamery Inc. (Div. of Oberg Foods, 119 W. Broadway, St. Peter, Minnesota). Makes spray dried tofu powder from soymilk coagulated by adding calcium sulfate. Its protein level is 38% and moisture is 5% maximum. pH is 6.7–7.0% in a 10% solution. Fat is about 18%. ADM, Ralston Purina, Rose International, Soyatech.

Soyco Foods makes Soymage, "a new cheese alternative," which is casein free and non-dairy. It is sold in four flavors: Cheddar, Mozzarella, Monterey Jack, and Jalapeno. "It has a light texture and shreds and slices readily." The ingredients and packaging information are given. The company has been making a cheese substitute named Fromage™, based on casein and soy oil, which comes in about 20 flavors. Soymage was developed for people who want a completely non-dairy cheese substitute.

Photos show: Tomsun Jofu (in the carton and in a dish ready to eat). Nasoya creamy tofu dressing (3 flavors in bottles). Address: Chicago, Illinois.

1168. **Product Name:** White Wave Soya Yogart [Raspberry, Strawberry, Black Cherry, Honey & Muesli]. Renamed Unisoy Soya Yogart in Aug. 1989.

**Manufacturer's Name:** Unisoy Milk 'n' By-Products Ltd.

**Manufacturer's Address:** Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire, England. Phone: 061-430 6329.

**Date of Introduction:** 1987 May.

**Wt/Vol., Packaging, Price:** 120 gm cup.

**How Stored:** Refrigerated.

**New Product–Documentation:** Simon Bailey. 1988. *Natural Choice*. Aug. 15. “Soya-Based Products.” A photo shows the label. “Dairy Free. Yogurt-style Cultured Soya Milk.” On the top of each cup is a square logo, with one corner at the top—so that it looks like two triangles, one facing up and one down. In the top triangle is an illustration of a breaking wave, and in the bottom half are the words “White Wave.” CSP form filled out by Simon Bailey. 1988. Sept. 28. Gives date of introduction as Autumn 1986. Neil Rabheru is in charge of production and Martyn Webster of sales.

SoyaFoods (ASA, Europe). 1990. 1(1):3. New products from UnisoY include Soya Yogart in 4 flavors. It is made with fresh organic soya milk and sweetened with pure apple juice.

Talk with Neil Rabheru of UnisoY. 1990. July 2. Followed by letter (fax) of July 9. This product was launched in May 1987 and was renamed UnisoY Soya Yogart in Aug. 1989. The original yogurt was made with ordinary inorganic soyamilk and sweetened with raw cane sugar. “This was the first ever extended shelf life [soy] yogart in Europe. It was also the first to be made from fresh soya milk.” All the previous soy yogurts in the UK had contained soy protein isolates, since the manufacturers did not know how to make soymilk with a high protein level.

In Aug. 1989 the company launched a new soy yogurt, UnisoY Soya Yogart, which had the fruit (such as raspberry) preserved in apple juice (instead of sugar), used organic soyamilk, and was sweetened with pure apple juice, which see.

Talk with Neil Rabheru of UnisoY. 1991. Sept. 16. They started with four flavors shown above. When they switched over to the UnisoY brand, they dropped the Honey & Muesli flavors and replaced it with Peach Melba.

1169. *Milling and Baking News*. 1987. ADM acquires Gold Kist soybean processing facility. 66(19):1. July 7.

• **Summary:** On July 2, Archer Daniels Midland Co. acquired the Valdosta, Georgia, soybean processing plant of Gold Kist, Inc. a farmer’s cooperative. The plant produces soybean meal and crude oil. Gold Kist is one of several cooperatives holding an ownership interest in Toepfer International Group, a grain trading firm in Hamburg, West Germany. ADM owns 45% of that group and thus controls it.

1170. Gleason, Jane E. 1987. Re: Soybean research in Sri Lanka. Letter to William Shurtleff at Soyfoods Center, July 15. 1 p. Typed, with signature on letterhead.

• **Summary:** “Dear Bill: I have checked the library at the University of Peradeniya but have not been successful in finding the journal articles you need... I’ll keep looking.

“This study is turning out to be something like detective work—What happened to the missing soybean? I have begun a survey of soyfood consumption among those who were

trained in home-level processing at SFRC.” It appears “that soy would be very popular if it were commercially available in Sri Lanka. Those who live close to SFRC and thereby can purchase soy products from its small store, eat soy on a regular basis. Unfortunately, however, SFRC is the only place in the entire country that has some of the more interesting and affordable products, hence those who live far from the Centre are confined to eating TVP. Very few people process soy in their homes.

“I have been contacting local business people with the idea of introducing them to products which I believe would have significant demand. I would like to know if you have any suggestions regarding who might be interested in investing in soyfoods in Sri Lanka... Enclosed is the first monthly report.” Address: Agricultural Economist, INTSOY / Soyabean Foods Research Centre, Gannoruwa, Peradeniya, Sri Lanka.

1171. *Clwyd Connection (Clwyd, Wales)*. 1987. Newtech helps ice cream company [Genice]. July. p. 4.

• **Summary:** A large color photo shows Managing Director Ray Pierce and Technical Director Irene Barclay with many 1-liter tubs of Genice Ice Delight, a non-dairy soy ice cream. Genice started developing their product range in April 1986 and began production in March 1987. “Turnover is expected to total £250,000 this year and will treble fairly quickly. Smaller health food shops buy Genice products under the Ice Delight name but the company has also made a major breakthrough in securing own-label business with suppliers to supermarket chains [Soya Health Foods Ltd., marketers of Sunrise Ice Dream]. Up to 7 million people in the UK alone cannot eat dairy related products.

A company named Newtech, located nearby in the Deeside Industrial Park, helped Genice to get started. In May 1987 Newtech was designated as an official Business and Innovation Centre of the European Community. Address: UK.

1172. Gleason, Jane. 1987. Survey of consumers and extension personnel who have been trained in home-level soy processing. *Soybean Marketing in Sri Lanka, Monthly Report*. July. p. 1.

• **Summary:** Soyfoods are desired by many vegetarians and because they are less expensive than fish, eggs, and meat, for which they are seen as an alternative. They are not seen as a substitute for other legumes. Every person interviewed purchases TVP (or Soya Meat) on a regular basis. Those with low incomes purchase it for its economy and taste, and even those with more money who can afford fish and meat buy it for its taste. “This product has become very well integrated into Sri Lankan diets.” The soyfoods taught at the SFRC training program are not as often consumed on a regular basis. The soyfoods most often prepared at home by extension workers are pittu, roti, and the soy mixture; tofu,

tempeh, and soymilk are less likely to be prepared. Regular consumers are less likely to prepare soyfoods at home. For rural people the major constraint on soyfood preparation is inaccessibility of ingredients. Soy flour and soy splits are not available anywhere outside of Gannoruwa. Products in which there is the most interest if they were available are soy-fortified kola kanda (an indigenous drink made of rice flour, green leaves, and coconut), soy dhal, and snack foods. Soy flour is liked in roti and string hoppers.

1173. Holt, John. 1987. Character sketch of Michael Cole (Interview). *SoyaScan Notes*. Aug. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** John Holt was the first to sell soy ice cream in England, starting in 1984. Michael Cole was his salesman, then he left and started his own ice cream company. Cole is a very nice guy, charismatic but he sometimes uses people badly and is not too honest. He was a miniguru on the West Coast of the USA, into self help. Dynamic, pushy, accomplishes a lot. Famous and good with money. Wrote a book. Address: England.

1174. Holt, John. 1987. Soy ice cream in England and Michael Cole (Interview). *SoyaScan Notes*. Aug. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** John Holt was the first to sell soy ice cream in England, starting in 1984. The product was probably named Sojal? Frozen Non-Dairy Dessert. Michael Cole was his salesman, then he left and started his own ice cream company.

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. The last he heard of John Holt, John was a consultant for some firm in Coventry, but Neil thinks he is no longer there. Neil is absolutely certain that Michael Cole has never been involved with John Holt. Neil thinks that Michael Cole's first involvement with soyfoods in the UK was with Soya Health Foods (Sunrise). Sojal was the first ice cream to be sweetened with honey; it is now Haldane Foods brand because John's tofu company was purchased by Brian Welsby of Haldane Foods, before it was purchased by British Arkady. Address: England.

1175. Golbitz, Peter. 1987. Isolated soy proteins play increasing role in new foods development. Demand for healthful foods and highly functional ingredients spurs market forward. *Soya Newsletter (Bar Harbor, Maine)*. July/Aug. p. 1, 10-11.

• **Summary:** The four major isolate producers today are Ralston Purina's new subsidiary Protein Technologies International (St. Louis, Missouri), ADM (Decatur, Illinois), Grain Processing Corp. (Muscatine, Iowa), and Gunther Products (Galesburg, Illinois; Div. of A.E. Staley Mfg. Co.). ADM entered the isolate market when it purchased Central Soya's plant in 1980. GPC has been making isolates since

the early 1970s. Golbitz describes in detail the process for manufacturing soy protein isolates but completely/carefully omits reference to the hexane solvent extraction step.

Note: This is the earliest document seen that mentions "Protein Technologies International." Address: Bar Harbor, Maine.

1176. *Soybean Digest*. 1987. Tropical fats face the nation. Aug. p. 39.

• **Summary:** "ASA [American Soybean Association] and Archer Daniels Midland Co. (ADM) are developing a 60-second commercial for television to educate consumers about risks in using tropical fats. The commercial promotes domestic vegetable oils. You'll see the commercial this fall on the ADM-sponsored TV program Face the Nation. ADM will also make the commercial available to agribusinesses willing to purchase air time as a service to farmers."

1177. American Soybean Assoc. 1987. Overseas soy products donation program from the Dominican Republic. P.O. Box 27300, St. Louis, Missouri. 12 p. Special edition by Dr. Hyadee Rondon de Zadrunga and Ruth S. Orellana. [10 ref. Eng; Spa]

• **Summary:** In Jan. 1985 ASA contacted the Soy Protein Council to suggest a joint soy protein feeding program in the Dominican Republic. The trial was conducted between Jan. and June of 1986. Dr. Haydee Rondon de Zadrunga was program director. "The objective of the sponsors of this important research, was to demonstrate that soy protein has a prominent place in the daily diet, and that food products manufactured with soy protein do not cause any acceptance problem in pre-school age infants, that they are easy to acquire, and that they can be bought at popular prices."

"In 1984 the area planted of soybeans in the Dominican Republic was of 10,000 acres and in 1985 the acreage planted was of 25,000 acres. The program consisted of the donation of 2 tonnes of soy products to be used in a fortification feeding program."

The following products were donated: 250 kg Procon fortified soy protein concentrate by A.E. Staley Mfg Co.; 250 kg Response 4342 fortified soy protein concentrate chunks by Central Soya Co. 500 kg Textured 16328 textured fortified soy flour (50% protein), and 500 kg Bakers Nutrisoy 63100, fortified defatted soy flour (50% protein) by ADM, and 500 kg defatted soy flour (50% protein) by Cargill. Address: St. Louis, Missouri.

1178. *Journal (Clinton, Illinois)*. 1987. Bean Bits: Booster training schedule. Oct. 20.

• **Summary:** Dr. Alexander Zholobov, head of the row crops division of Gosagraprom (The Soviet Union's Ministry of Agriculture), said one goal of Gosagraprom is to increase protein content of foods and production of lean meat. "The Soviets believe that greater meat production can be acquired

through high protein feed rations. Technical help from the U.S. on expanding soybean protein consumption is a good basis for continued cooperation. As Soviet soy protein demand increases, the Soviet Union will need to import [more] soybeans. Soviet climatic conditions limit soybean acreage to about 2.2 million acres and sunflower acreage to 11 million acres, Zholobov said.” Dick Burket, vice president and assistant to the chairman of ADM, announced that ADM is currently negotiating the possibility of a joint venture with the Soviets on oilseed processing.

1179. Lindner, Anders. 1987. The world soymilk market and Soya Technology Systems (STS) (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 7 p. transcript.

• **Summary:** “On 21 Oct. 1987 Anders Lindner, on a trip of the USA, visited the Soyfoods Center (SC). The following interview was conducted by William Shurtleff.

“SC: STS started five years ago, and in that time you have traveled the world, visiting every potential customer, and sold four soymilk plants. What major changes or trends have you seen in the world soymilk market during that time?”

“STS: You must look at one region at a time. In the United States there is definitely an increased interest in and awareness of soymilk. Soyfoods are relatively well known. In Europe there has been a big increase in the number of enquiries about soymilk from all countries. The number of larger companies that have contacted us has also increased.

“Africa is still a dark continent as far as soymilk goes, with the possible exception of Nigeria, where we have a number of quotations pending, awaiting approval for foreign currency. This could take time.

“Looking at Asia, in India there was almost a frenzy of interest several years ago and we still get enquiries every week. The government gave permission to build many new soybean crushing plants. Soybean production is now over a million tons, and it is still not enough. So the price of soybeans is rising, which raises soymilk prices. But I’m not as optimistic about the future of soymilk in India today as I was 6 months ago. India’s first major soymilk plant, established by the Noble Soya House group in Bhopal, has not been as successful as everyone had hoped it would be. Two of India’s best known companies, the Great Eastern Shipping Company (also called the Bhiwandiwalla Group) and Godrej, backed the new company, which greatly bolstered public confidence in the project. Each owned 24% of the private limited company and the rest was publicly owned. Great Eastern provided financing and put a number of their very best people in the top management positions. Godrej, which is *the* marketing company in India par excellence, provided distribution and marketing. They specialize in soaps. Alfa-Laval supplied the plant and Kibun sold their technology know how. Production began in January 1987 and it had all the signs of being a very, very

good project. Their soymilk, named Noble House Great Shake, comes in four flavors (chocolate, strawberry, mango, and American ice cream flavor, basically a vanilla) in 200 ml Tetra Brik cartons. I have heard it said that the products were not well formulated, the timing was poor, the prices were too high, and the products were marketed as a clearly Western-style or foreign product. The project got lots of big media publicity, but much of it was not favorable, we are sorry to say. Today the plant runs only about 2 hours a day.

“We have sold a plant to Amrit Soya and Protein Foods Ltd., owned by the Amrit Company, an old company. They are in Ghaziabad, Uttar Pradesh, on the outskirts of New Delhi and are expected to start production in mid-1988. This will be India’s largest soymilk plant with a capacity of 6,000 liters/hour.

“Back to Asia, when we established STS we located ourselves in Southeast Asia, thinking that with the large consumption of soybean drinks there it would be quite simple to sell plants to make soybean milk as well. But that has not been the case. I find the food processing companies there extremely conservative. Our strategy now is to show the companies in East Asia that our concept works in the USA and Europe.

“China has been a disappointment. They seemed to be more interested in soymilk plants a few years ago.

“So generally speaking, the climate has gotten better, especially in Europe and the United States.

“SC: Has your strategy or basic approach for selling STS soymilk plants changed during this period?”

“STS: Yes, it is changing now. We are expanding our product range by offering processes for other soymilk-based foods. Formerly we thought of ourselves as selling primarily liquid soymilk. Now we are offering process lines for tofu, ice cream, dressings, dips, spreads and other dairy analogs, plus what we call ‘semi-products.’ These are non-consumer, industrial food type products such as concentrated soymilk or curds for use as ingredients by food processors. We are investing in R&D on these. I think we will find new uses for our soymilk base, including new ways of making traditional products, dairy analogs, powdered products, and truly new products.

“SC: Have you made any major technological developments?”

“STS: Yes. we are now offering an ultrafiltration system as part of our soymilk system. This is an important technological innovation. It allows you to concentrate soymilk by removing water without adding heat (thus preserving the good flavor of the product) or to remove certain components from the soymilk, such as oligosaccharides or perhaps trypsin inhibitors or lipoxxygenase enzymes, using membranes. More important, it can help in automating tofu production. The soymilk base goes into the ultrafiltration plant, where it is concentrated. Coagulant is injected into the line and mixed. Rectangular

cakes of tofu are chopped off as they come out the exit end. Luke Lukoskie at Island Spring has been a pioneer in developing these processes using a pilot plant, with an ultrafiltration unit, that we loaned him. This technology seems to have a very promising future for processing soymilk in the West, and for making soya panir (fresh curds) in India. There is not enough cow's milk in India to go around, and most of it is sold in the cities. I think soya panir will undersell dairy panir in India.

“SC: Which company do you feel is your strongest competitor?”

“STS: Our main competitor everywhere is Alfa-Laval. After that, but much less, some of the Japanese companies such as Marusan-Seikensha and Mitsubishi. Given that we had just installed the largest soymilk plant in the Western world for De-Vau-Ge in Germany, I was surprised to note that Eden Foods in America chose Marusan-Seikensha without ever contacting us at all. Marusan seems to have only one English speaking person in the entire company, Mr. Tominaga. Mitsubishi competed with us selling systems in India and Nepal. Takai never seems to be in competition with us. Vandemoortele is no longer supplying systems, though the huge plant they built in Ambatolampy, Madagascar (35 million liters/year capacity) is still in operation. The company, Lalaso SA (Societe Anonym) is run by a woman named Regina.

“SC: Could you tell us a little about the four plants that you have sold?”

“STS: Our biggest and most successful plant was sold to De-Vau-Ge, a Seventh-day Adventist food company in Lueneburg (near Hamburg), Germany. They started production in August 1985 and make Granose and Granovita brands soymilk, sold mainly in the UK and West Germany, but also in Scandinavia and France. The plant is running at full capacity, which is 3,000 liters per hour of soymilk base (4.7% protein). This is 4,000 liters per hour of finished soymilk (3.5% protein), or 50,000 liters a day. They currently only make two products. Labels for the UK market read Granose Soya Milk (4 flavors) and Granose Soya Dessert (3 flavors of custard puddings gelled with natural carrageenan, a seaweed extract). Both products are packed in half liter or liter aseptic Tetra Brik cartons. The plant is doing very well, selling all it can make. This is the only one of the four that has started operation. We have also sold a plant to Island Spring (Vashon, Washington), which may be the next to start production. The capacity is also 3,000 liters/hour of soymilk base. Amrit in India should be in production by mid-1988. Their plant has the same basic capacity as the plant in Germany, but since their soymilk will contain only 2.25% protein, the actual output will be 6,000 liters per hour which is larger than Germany. They will make both beverages and foods, mainly a panir type cheese. The beverages will contain Indian flavorings.” (Continued). Address: STS, Singapore.

1180. Demos, Steve. 1987. History of White Wave, Inc. (Interview) (Continued—Document part III). Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** (Continued): White Wave's tofu production was growing nicely. It rose from 120,000 lb. in 1978 (2,308 lb/week), to 179,000 lb. in 1979 (3,442 lb/week, up 49%), to 279,000 lb. in 1980 (5,365 lb/week, up 56% over 1979).

In February 1979 a major new product line was started: tempeh. Chip McIntosh was the first tempeh maker, followed by Chris O'Riley. An old kitchen refrigerator, warmed by light bulbs, was used as the incubator. The first two products were Soy Tempeh and Soya Rice Tempeh, the latter being America's first multi-ingredient, soy-and-grain tempeh.

At about the same time, a third new product was launched: Polar Bean. It was a soymilk based non-dairy frozen dessert, made in a soft serve machine but sold in hard-pack pints. The first flavor was Banana-carob. Later strawberry, chocolate, carob mint, and orange flavors were added. In about 1984 a soft serve version called Polar Softie was introduced but did not prove successful.

Also in 1979 Richard Leviton visited White wave and the Cow of China, and did an in-depth study of their operations and products, published in the 1979 issue of *Soycraft* magazine. Soyfoods sold both at “The Cow” and for wholesale distribution to other retailers included: Organic Nigari Tofu, Soymilk (Honey-Vanilla or Carob-Maple), Soysage, Tempeh, Missing Egg Salad, Tofu Mayo, Baked Savory Tofu Cutlets, Sweet Bean Tofu Pie, Miso Salad Dressings (Mellow or Hearty), and Tofu Treats or Creamies (Banana-Coconut, Peanut Carob, or Carob-Mint; squares of creamy baked tofu blend on a healthful oats-coconut-flour crust).

Other ready-to-eat items sold only at “The Cow” included Soysage Pate, “Macro” Pizza (with tofu), Tofu Spinach Dill Turnovers, Tofu Cinnamon Rolls, Hot Tofu Meatballs and Meatball Sandwiches, Sloppy Joe Sandwich (made with TVP), Tofu Cream Cheese & Black Olive Sandwich, Tofuna Sandwich (like tunafish), Strawberry Tofu Pie, Soy Sesame Bars, and Tofu Butternut Squash Pie. In mid-1979 bulk recipes for about ten of these products were published, with permission, in *Tofu & Soymilk Production* by Shurtleff and Aoyagi.

Leviton noted: “The Cow of China is surely one of the nation's most ambitious and energetic soyfoods companies.” It was just about breaking even with weekly gross retail sales of \$1,000, three-fourths of which came from soyfoods. Concerning the growth of the still totally unmechanized little company Demos, now the self-styled “beneficent dictator,” always frank and candid, added:

“It was a hell of a struggle, especially for an undercapitalized small business. But I certainly wouldn't discourage anybody because we started with nothing, and we've been going since then, and we've been able to make it

all meet. We've just rigged, we've improvised, we've done everything imaginable, as I'm sure many other people in this industry have. We cut our salaries back, we did without a lot, but its own momentum kicked in. I suppose we consider ourselves alchemists in turning sweat into money. So, let me express my gratitude to everybody and everything, seen and unseen, who have helped us pull this together."

In August 1979 Gary and Chandri Barat arrived in Boulder and spent several days studying the Cow of China. They had met Demos at the Second Annual Soyfoods Conference in Amherst, Massachusetts (July 26-29, 1979). They were driving around the country, studying tofu and developing a business plan in preparation for starting a soyfoods company, which later became Nature's Inn, then Legume. As they studied The Cow of China and Demos invited them for dinner several times. He and his wife, Ginny, served a tofu spinach feta pie and mushroom caps stuffed with tofu. Later Barat told Demos more than once how much this visit has influenced him in starting a company based on tofu entrees. The lineage of Legume's early products (Tofu Cream Pies, Tofu Spinach Pies) can be traced back to The Cow of China.

Barat encouraged White Wave to do a feasibility study on converting The Cow of China into a fast food restaurant named The Family Diner and moving into a vacated A & W root beer stand three blocks from The Cow in a very attractive location. The study was done, a potential menu was developed, but financial backing did not come through.

A White Wave catalog published in December 1979 included several new products: Doufu (extra firm Chinese style tofu), Savory Baked Tofu, and Tamarind Nuts and Seeds (Almonds, Cashews, Spanish Peanuts, Sunflower Seeds, Nut Mix).

The Cow of China deli was doing well. By February 1980 sales were \$1,700 to \$2,000 a week and there were often lines out the door. By the summer of 1980, according to *Soyfoods* magazine, the Cow of China had been renamed the Good Belly Deli, with the slogan "Real Food, Real Fast" and White Wave was producing 7,500 pounds of tofu and tofu products a week. The new deli, an expanded and Americanized version of "The Cow," continued to serve as an excellent showcase for the White Wave's innovative ready-to-eat soyfood products. Working with a friend who was an advertising agent, Demos had dropped the line of assorted health foods (miso, sea vegetables, etc.), expanded the deli items, and installed a stand-up counter bar to eat at and a few tables and chairs. Formerly it had been all takeout. Hot and cold fast food was served. The deli attracted lots of business (there was still usually a line out the door), the products were very innovative and they were praised by the natural foods community in Boulder. Address: Lafayette, California.

1181. *INTSOY Newsletter (Urbana, Illinois)*. 1987.

Zimbabwe and Zambia move ahead on expanded use of soybeans. No. 37. Oct. p. 2-3.

• **Summary:** Describes the many exciting new developments in these two countries, and the organizations responsible for them. In Zimbabwe soybean production topped 100,000 tonnes in 1986-87 and is expected to be 125,000 tonnes next year. The driving force behind the expansion has been the Cooperative Oilseed Producers Association (COPA). Production increases have been stimulated by higher government prices. Nutresco Foods in Harare has recently begun using a new INSTA PRO 600 extruder to make TVP and other soyfoods.

In Zambia the soybean industry is one of the bright spots in the economy. Production has increased from 5,000 ha in 1982 to 25,000 ha in 1987. It could reach 100,000 tonnes by 1990. A previous visit in 1985 by Prof. A.I. Nelson of INTSOY helped spark introduction of extrusion cooking by several private companies: Lee Yeast Co. in Lusaka and the Soy Nutrients Co. The National Milling Co. is eager to use soy flour in maize meal and bread. A soy recipe book was recently published. Soybean experts in Zambia include Fred Javaheri, Joe Temba, Joseph Malwe, Kathryn Siandweza, and Chabala Malwe.

1182. *SoyaScan Notes*. 1987. New Trend: Europe's hottest new soyfood product, smoked tofu, is almost unknown in America (Overview). Oct. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Recent European visitors and letters to the Soyfoods Center have praised the new varieties of smoked tofu made by many European tofu companies. They are surprised that this product is not better known in America. The earliest known commercial smoked tofu was produced in France in 1911 by Chinese soyfoods pioneer Li Yu-ying. In 1974 Komatsugawa Tofu in Japan made a smoked tofu inside a deep-fried tofu pouch, sold in oil in a sardine can. The earliest known smoked tofu in the Western world was introduced in June 1984 by L'Herberie in Montreal, Quebec, Canada. All of the recent European brands have been introduced since 1986. They are made in England (Caldron Foods, Regular Tofu Co., Full of Beans Soyfoods), Germany (Soyastern, Morgenland Pflanzenkost, Christian Nagel Tofumanufaktur), Netherlands (Manna Natuurvoeding, Heuschen-Schrouff B.V.).

1183. Drosihn, Bernd. 1987. The German and European tofu markets. Soyastern and its products (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 30. 2 p. transcript.

• **Summary:** A rare insight into the European tofu market. The largest tofu manufacturers in Germany, with estimated production statistics, are Soyastern (4,000 kg/week), Yamato Tofuhaus GmbH (3,500), TKW GmbH (3,500), KMK (2,500; a dairy company in Kassel that makes the

Hensel brand for Schoenenberger Pflanzensaeft GmbH\*), Svadesha (1,500), Tofu Manufaktur Hamburg (1,000), Tiefental Tofuhaus (1,000), Byodo Naturkost GmbH (400), Morgenland Tofu (200), and Atlantis Tofu (200). All of these companies are run by native Germans, none by Asian Germans. The largest tofu company in Europe by far is Heuschen-Schrouff in the Netherlands (40,000). They make tofu, tofu with herbs, and smoked tofu. They are also a major food importer and European-wide distributor, and perhaps the world's largest manufacturer of mung bean sprouts.

Another larger manufacturer in the Netherlands is Linn (Lin) Oriental Products (10,000 kg/week). The big tofu makers in Switzerland are Galactina (3,000; Dr. Peter Speck) and Soyana (3,000; Walter Daenzer). In England: Dragon & Phoenix, Cauldron Foods, Regular Tofu Co., and Paul's Tofu. In France: Société Soy, Sojadoc, and Sojalpe.

Note 1. This is the earliest document seen (Feb. 2013) that mentions Sojalpe, which later became part of Innoval.

Note 2. Schoenenberger is the mother company of Hensel; they do not make soyfoods. Address: Soyastern Naturkost GmbH, Osteratherstr. 26, 5000 Cologne/Koeln 60, West Germany.

1184. ADM—Archer Daniels Midland Co. 1987. Look where soybeans go. Box 1470, Decatur, IL 62525. 18 p. Catalog.

• **Summary:** A color photo on the cover shows one huge, green soybean pod hanging downward, against a dark green and black background. It is lit from behind, making the hairs on the pod look bright yellow. There is a one inch orange border around the photo, with the title written across the bottom.

This is basically an ADM products catalog. Contents: Miracle of the soybean. Soy ingredients processing. Soybeans—A rich source of protein. TVP brand Textured Vegetable Protein, Soy protein isolate (Ardex). Soy protein concentrate (Arcon). Soy fiber & bran (Nutrisoy Fiber E and Arsoy Fiber). Two page color spread photo of about 100 supermarket products containing soy ingredients. Nutrisoy soy flour & soy grits. Soybean oil. Lecithin (Yelkin). The world's needs. ADM products. Address: Decatur, Illinois.

1185. Gleason, Jane; Weliwita, S.M.A. 1987. Home and village level soyabean utilization training in Sri Lanka: Accomplishments, constraints and potential. INTSOY/DARP/SFRC, Sri Lanka. 14 p. Unpublished manuscript.

• **Summary:** A detailed analysis with many summary statistics. This paper argues that because of the large amount of time and fuel required, and general difficulties of making foods at home from whole soybeans, they will not be widely made there. From 1978 to Nov. 1987 SFRC trainers have directly trained over 30,000 people in soya utilization. Of these, almost 27,000 were trained at outstation demonstrations, while over 4,000 were trained at SFRC.

However, because of processing difficulties and time

requirements, it questions the premise that widespread home level utilization of whole soyabean will occur.

The instructors were asked what types of soyafoods are most likely to be integrated into Sri Lankan diets. Soya-fortified kola kenda, a traditional drink made from coconut, rice flour, and leaves of a variety of herbs was most often mentioned as 21 of 48 respondents placed kola kenda in their top three choices. After kenda, the instructors ranked soya-fortified pittu (18), roti (13), snacks (13), waddhi (12), and curry (11) as foods most apt to be part of Sri Lankan diets. Ten respondents stated that soymilk could easily become popular.

The responses of the instructors show that soya will most likely be integrated into local diets through fortification of already popular foods. Many commented that soya flour should be made available for this purpose. Traditional soyafoods from other parts of Asia, for example, tofu in East Asia and tempeh in Indonesia, were not highly ranked as foods easily accepted by Sri Lankans. Only four respondents thought that tofu and none of the respondents thought that tempeh could become important in Sri Lanka.

Table 6 indicates “What characteristic makes soya appropriate for villagers”—Nutrition, 42 respondents; Low cost, 20 respondents; Taste, 5 respondents. Table 7 indicates “Price per unit protein of common foods in Sri Lanka”—Soyabean, 0.04; Chicken, 0.21; Dried fish (fat poor), 0.11; TVP, 0.16. Table 7 also indicates “What constrains soya consumption”—Unreliable supply of soya, 23 respondents; Odd flavour, 22 respondents; Lack of preparation knowledge, 18 respondents; Difficult to prepare, 14 respondents.

Interpretation of the evidence—Three important points can be gleaned from the information provided by the extension workers and the villagers: 1. Thousands of Sri Lankans are aware of the benefits of soya. For the average consumer, the most important consideration when purchasing food is taste, not nutrition. 2. Therefore, soya will most likely be consumed in a form that is already familiar to villagers. 3. It is significant that more instructors consumed TVP than all other types of soya products. Conclusion—The best method of making soya products available to consumers is to work towards greater commercial application of soya utilization technologies.

Training should, therefore, emphasize extension to entrepreneurs. Address: Sri Lanka.

1186. Realeat Company (The). 1987. The 1987 Realeat survey of meat eating and vegetarianism [in Great Britain]. London. 19 p.

• **Summary:** This fourth consecutive study, conducted by Social Surveys (Gallup Poll) Ltd. is based on 3,027 interviews with people aged 16 and older. For the first time it looked at the incidence of vegetarianism among children. Roughly 1/9 of all children in the UK are vegetarians. For adults, health is still the main reason for cutting down on

meat consumption. Students still represent the largest group of vegetarians. Women are twice as likely as men to be non-meat eating. Children are more likely than adults not to eat meat, mainly because they find it unpalatable. Parental influence plays little part in this.

Trends in vegetarianism: Adults: Vegetarians now represent 3% of the adult population (1.3 million people), a growth of 11% over 1986 and 43% since 1984. Those avoiding red meat represent 3.6% of the adult population (1.6 million people), a rise of 16% over 1986 and 89% since 1984. The combined adult group of vegetarians and those avoiding red meat represents 2.9 million, 1 in 15. The total population that avoids red meat or is vegetarian is 4.3 million. 33% of the population claim to be “eating less meat”. Non-meat eating—the trend towards vegetarianism: The combined group of those who eat red meat rarely or not at all represents 6.6% of the adult population or 2.9 million people. The number of ABs (managerial and professional) who have become vegetarian has increased, and they now account for 3%.

Of the 33% of the population who are eating less meat, the dominant reasons for the change are health (13% in 1987 vs. 8.8% in 1985) and expense. 40% of women and 26% of men claim to be eating less meat in 1987. Children and vegetarianism: 11% of those who had children between 6 months and 16 years said that their child was vegetarian or beginning to avoid meat products in their meals. It seems clear that the children are deciding to avoid meat for themselves. The reasons for children avoiding meat/stopping eating it altogether include: ‘unpalatable’, 39.8% [50% of children in the 6-month to 4 year group dislike the taste or texture of meat]; dislike the thought of animals being killed, 17%; don’t like additives; difficult to chew; influenced by friends; Chernobyl radioactive pollution (in Kiev, Ukraine). Address: Gregory Sams, 2, Trevelyan Gardens, London NW10 3JY, England. Phone: 01-459-7354.

1187. Caton, Greg. 1987. Lumen and its future (Interview). *SoyaScan Notes*. Dec. 14. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Lumen was founded in Feb. 1986 and started production in October. Presently the company’s sales are about \$50,000 a month and production is about 15,000 lb. The best seller is Cajun Jerky (\$30,000/month). The company is growing rapidly since he just got three big new distributors: Tree of Life, Akin, and Balanced Foods. Lumen is doing a joint venture with MJ Exports in Bombay to build a Lumen plant in India. MJ will own 51%. Greg worked for years with ADM. He also owned Richland Foods in Fairland, Iowa, which sold flavored TVP that was flavored before being extruded. This greatly lowered the quality of the flavors. He found that it is much better to flavor after extrusion. This was a major innovation, giving improved flavor and texture.

He also reduces stachyose and raffinose by extracting them using a centrifuge from the flour or the already extruded piece. Galactosidase is the only enzyme that will hydrolyze both raffinose and stachyose. Coating and flavoring are his specialties. He makes the jerky for Al Jacobson’s Garden of Eatin’. It used to be made by a company in Los Angeles. Address: Louisiana.

1188. Archer Daniels Midland Co. 1987. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p.

• **Summary:** Net sales for 1987 were \$5,775 million, up 8% from 1986, and up 310% from 1978. Earnings for 1987 were \$265 million, up 10.8% from 1986. Assets totalled \$3,862 million, up 16.5% from 1986. “With the world population growing to over 5,000 million during 1987, and estimated to increase by 80 million a year for the near future, the global food business will continue to grow... In ADM’s Oilseed Processing Division, greater use of soy protein isolates in the production of commercial and retail seafood products was the leading contributor to continued growth for protein products. ADM continues to be the largest producer of specialty soy products. R&D facilities for soy protein products were relocated to Decatur [from Chicago] during the year.

“The British Arkady Co. Ltd. (in Manchester, England)... expanded its marketing of ingredients and prepared mixes to the baking industry. Direct Foods Ltd., a prime supplier of vegetarian foods throughout the UK, had a significant sales increase during the year, mainly due to new soy-related products having a high textured vegetable protein content using TVP. Vegetarian Feasts Ltd., a market leader in oven-ready frozen meals... added new burger forming machines. This company is participating in the growth and demand for vegetarian and health foods. In June, British Arkady purchased Societe Industrielle des Oléagineux, better known as S.I.O. This long established French company has a factory in Aras and offices in Paris. Its principal activities include the milling of full-fat and defatted soy flours, and the manufacture of specialty oils for the food industry.” Address: Decatur, Illinois.

1189. **Product Name:** [Soy Flour].

**Manufacturer’s Name:** A.D.M. Europort. Affiliate of Archer Daniels Midland Co. USA.

**Manufacturer’s Address:** Elbeweg 125, Europort Rd., 3198 LC Europort, Netherlands.

**Date of Introduction:** 1987.

**New Product–Documentation:** Soya Bluebook. 1987. p. 78.

1190. **Product Name:** [Lecithin].

**Manufacturer’s Name:** A.D.M. Europort. Affiliate of Archer Daniels Midland Co. USA.

**Manufacturer’s Address:** Elbeweg 125, Europort Rd.,

3198 LC Europoort, Netherlands.

**Date of Introduction:** 1987.

**New Product–Documentation:** *Soya Bluebook*. 1987. p. 69.

1191. **Product Name:** Soybean Oil, and Soybean Meal.

**Manufacturer's Name:** Archer Daniels Midland Co. (ADM).

**Manufacturer's Address:** Cameron, South Carolina.

**Date of Introduction:** 1987.

**Ingredients:** Soybeans.

**How Stored:** Shelf stable.

**New Product–Documentation:** *Soya Bluebook*. 1985 (p. 54). Continental Grain Co. is operating the soybean crushing plant at Cameron, South Carolina.

*Soya Bluebook*. 1986 (p. 57). Continental is still operating this plant at Cameron. Solvent crush capacity 1,000 metric tons/day. Soybean storage capacity 2,000,000 bu. 1988 (p. 77). Continental is still operating this plant at Cameron. Processing and storage capacity are both unchanged.

*Soya Bluebook*. 1989 (p. 54). Neither Continental, nor Central Soya nor ADM are shown as operating a soybean processing plant at Cameron, South Carolina. However ADM operated a plant at Kershaw, South Carolina. Ditto for the 1990 Bluebook.

Bullard. Everett. 2005. Nov. 29. Interview. Everett thinks Continental sold the plant (located at Highway 33 & Cemetery Rd.) to ADM in late 1987. ADM, which operated a plant in Kershaw, South Carolina, never operated their plant in Cameron; Everett thinks they bought it in order to shut it down and thus to get rid of excess processing capacity in South Carolina. Also, he thinks anti-trust law prevented ADM from operating it.

1192. **Product Name:** Soy Flour Mixes, Vegetarian Burger Mixes, and Arcadian Meal Makers.

**Manufacturer's Name:** British Arkady Co. Ltd. Affiliate of Archer Daniels Midland Co., USA.

**Manufacturer's Address:** Skerton Rd., Old Trafford, Manchester, M16 0NJ, England.

**Date of Introduction:** 1987.

**New Product–Documentation:** *Soya Bluebook*. 1987. p. 100.

1193. **Product Name:** Granose Vegetable Margarine (Dairy Free; Low in Salt).

**Manufacturer's Name:** Granose Foods Ltd. (Marketer-Distributor). Made in England by Eilers & Wheelers.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1987.

**Ingredients:** Soyabean oil (minimum 65%), vegetable oils partly hydrogenated, water, salt, emulsifiers, soya lecithin,

mono and di-glycerides extracted from palm oil, flavouring, citric acid, vitamin A, colour, beta-carotene, vitamin D (vegetable source).

**Wt/Vol., Packaging, Price:** 250 gm plastic tub.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm.: Energy 750 kcal (calories), oils, partly hydrogenated, minimum 80 gm, polyunsaturates min. 36 gm–45%, saturates max. 16 gm–20%, salt max 1 gm.

**New Product–Documentation:** Form filled out and Label sent by Adrian Peck of Granose Foods Ltd. 1990. June 13. States that the product, made by Eilers & Wheelers, was introduced in 1987. “Soya” is not mentioned on front panel. Label. Green on ivory. “High in polyunsaturates. Low in saturates. Low in cholesterol. Contains no animal products. Lactose free. Low in sodium.”

1194. Navarro, Luis A. 1987. Trends in the production of soyabean (*Glycine max*) during the 1971-1985 period in Sri Lanka. Dept. of Agriculture, Division of Agricultural Economics and Policy, Diversified Agriculture Research Project, Royal Botanical Gardens, Peradeniya, Sri Lanka. \*

• **Summary:** In 1986 Sri Lanka imported 333.1 tonnes of soy oil, 15,499 tonnes of soybean meal, 267.2 tonnes of TVP, and 757.4 tonnes of soybeans. Address: Peradeniya, Sri Lanka.

1195. **Product Name:** [Lecithin].

**Manufacturer's Name:** Oelmuehlen (Thoerl) GmbH.

Affiliate of Archer Daniels Midland Co., Decatur, Illinois.

**Manufacturer's Address:** 1 Hafenstrasse 15, P.O. Box 901440, D-2100 Hamburg 90, West Germany.

**Date of Introduction:** 1987.

**New Product–Documentation:** *Soya Bluebook*. 1987. p. 68.

1196. **Product Name:** Honest to Goodness Soup. Make-in-the cup (Dry Mix) [Tomato, Onion, or Mulligatawny].

**Manufacturer's Name:** Realeat Company (The).

**Manufacturer's Address:** 2 Trevelyan Gardens, London NW10 3JY, England. Phone: 01-459-3401.

**Date of Introduction:** 1987.

**Ingredients:** Brown rice, miso and soy sauce powder, vegetable bouillon powder, and spices. Varietal ingredients include tomato, onion, curry, garlic, and celery salt.

**Wt/Vol., Packaging, Price:** 16 gm in nitrogen-flushed foil sachet.

**How Stored:** Shelf stable.

**Nutrition:** Per 15 gm dry: Protein 10%, carbohydrate 68%, vegetable fat 4%, calories 50.

**New Product–Documentation:** Letter from Gregory Sams. 1988. March 30. Leaflet, undated. “A Recipe for success.” Gives detailed product information. “A truly unique range of additive-free Instant Soups with Real Flavor. They are made only with natural ingredients and thickened with nourishing brown rice.”

1197. **Product Name:** VegeBurger, and VegeBanger (Frozen Meatless Burger and Sausage).

**Manufacturer's Name:** Realeat Company (The).

**Manufacturer's Address:** 2 Trevelyan Gardens, London NW10 3JY, England. Phone: 01-459-3401.

**Date of Introduction:** 1987.

**Wt/Vol., Packaging, Price:** Retail: 4 x 2 oz burger, or 10 x 1 oz banger (sausage). Catering: Various sizes and packs.

**How Stored:** Frozen.

**New Product–Documentation:** Letter from Gregory Sams. 1988. March 30. Leaflet, undated. "A Recipe for success." The frozen range (line) is marketed by Adams Marketing, 31 Bell St., Shaftesbury, Dorset, England. Phone: 0747-51561.

Talk with Kees Touw of ADM. 1991. Sept. 4. In the UK, British Arkady produces the Veggie Burger for a doctor, who is in his late '70s. The doctor developed the product based on TVP during the 1970s, he owns the name, and he licensed the rights to make the product to British Arkady, which pays him a royalty. The product is still made with TVP. Peter Fitch knows the whole story. It is not clear whether that product is different from the VegeBurger developed by Gregory Sams.

1198. **Product Name:** VegeMenu (for the Caterer).

**Manufacturer's Name:** Realeat Company (The).

**Manufacturer's Address:** 2 Trevelyan Gardens, London NW10 3JY, England. Phone: 01-459-3401.

**Date of Introduction:** 1987.

**New Product–Documentation:** Letter from Gregory Sams. 1988. March 30. Leaflet, undated. "A Recipe for success." VegeMenu, and the accompanying 36-page color recipe book, provide the basis for a wide range of meat-free and wholesome main course menu items. It is ideal for the caterer who is seeking to provide dishes more in keeping with today's changing consumer needs. VegeMenu comes in outers of either 3 or 6 x one kilo pack.

1199. **Product Name:** [Persoya, Soyasol, and F.C.B.S. {Full Fat Soy Flours}].

**Manufacturer's Name:** Societe Industrielle des Oleagineux (SIO).

**Manufacturer's Address:** Main Office: 30 Rue des Peupliers, 92000 Nanterre, France.

**Date of Introduction:** 1987.

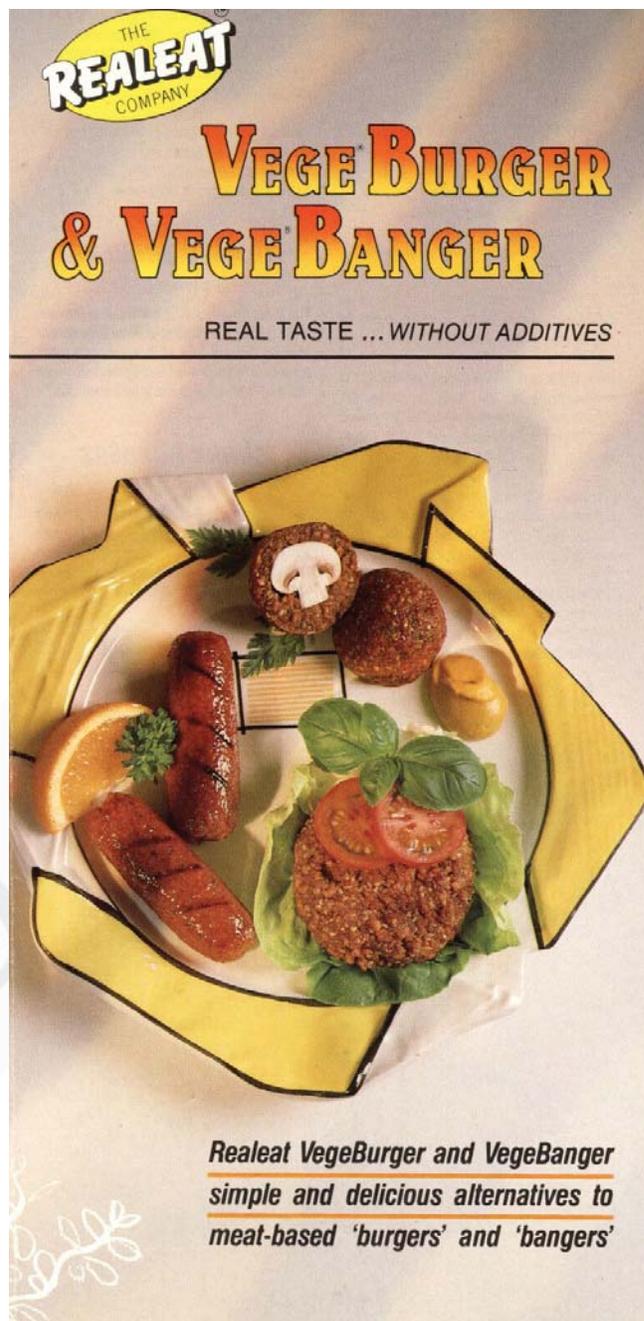

**New Product–Documentation:** Soya Bluebook. 1987. p. 76.

1200. **Product Name:** S&E Lankasoy Protein Rich Soya Meat.

**Manufacturer's Name:** Spices & Essences (Ceylon) Ltd. Forbes & Walker Group (Importer & Marketer).

**Manufacturer's Address:** S&E, 29 Braybrooke St., Colombo 2, Sri Lanka.

**Date of Introduction:** 1987.

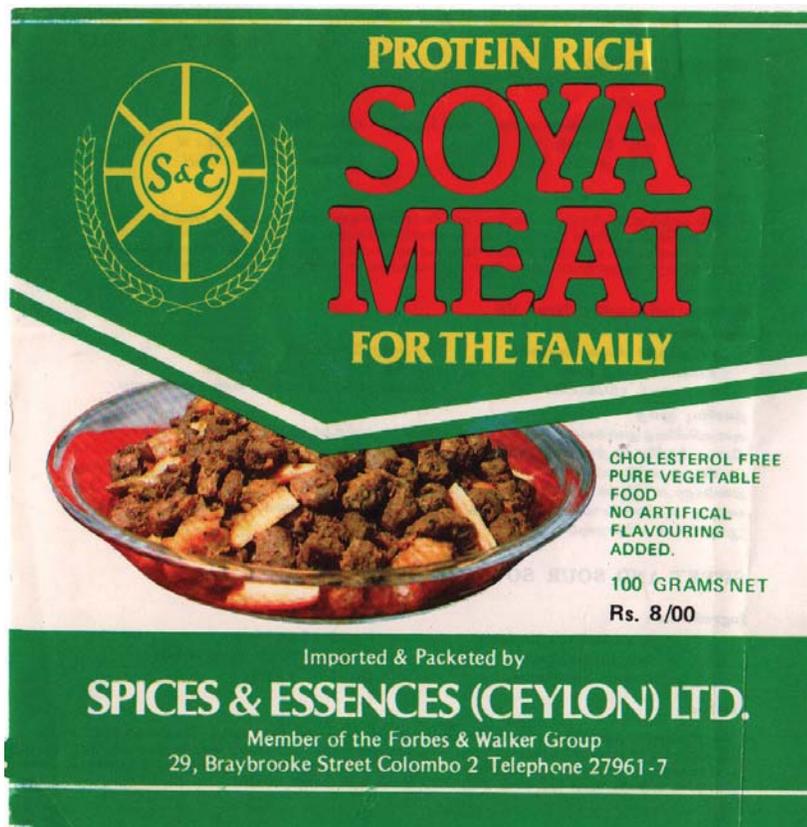

**Ingredients:** Soybeans, spices.

**Wt/Vol., Packaging, Price:** 100 gm retails for Rs. 8/00.

**How Stored:** Shelf stable.

**New Product–Documentation:** Label/Leaflet. 1987. 5.5 inches square. Green, red, yellow and black with photo of a dish of rehydrated TVP. "For the family. Cholesterol free. Pure vegetable food. No artificial flavouring added." Recipes for Soya Meat Curry, and Sweet and Sour Soyameat. Distributed by Darley Butler & Co. Ltd. "How to use Lankasoy Soya Meat. Soak in water for 15 minutes, adding a teaspoon of salt or vinegar. Drain well, add spices, chillie/curry powder and cook just as you would cook Beef or

Mutton. Cooking time 5 minutes.”

1201. Bates, Dorothy R. 1987. Kids can cook: Vegetarian recipes kitchen-tested by kids for kids. Summertown, Tennessee: The Book Publishing Co. 120 p. Illust. Index. 23 cm. Spiral bound.

• **Summary:** The index of this vegetarian cookbook contains listings for 4 tofu recipes and 1 miso recipe, plus definitions at the Ingredients sections of tofu, TVP (Texturized Vegetable Protein), tempeh, and miso. Dorothy Bates is the mother of Albert Bates, a lawyer at The Farm, and a patron of The Book Publishing Co. Address: Tennessee.

Ontario, Canada. 4 panels each side. Each panel: 22 x 10 cm. Undated.

• **Summary:** Contents: Who we are. What we do: Research, market development, government relations, market information, advance payment program. Pricing. How soys are used (soybeans are crushed at plants in Toronto, Hamilton, and Windsor). Marketing channels.

“Established in 1949, the Ontario Soya-Bean Growers' Marketing Board is an elected group of farmers from across Ontario, that represents the specific interests of the province's soybean producers. The Board works with processors, grain elevators and the government to create a fair return to the grower for his soybean crop.

“The Board's office is located in Chatham, where it is surrounded by the five counties that produce 76% of Ontario's soybeans.” A map shows the soybean growing regions in Ontario. Address: Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

1204. Soy Protein Council. 1987. Soy protein products: Characteristics, nutritional aspects and utilization. Washington, DC. vii + 43 p. No index. 28 cm. [96 ref]

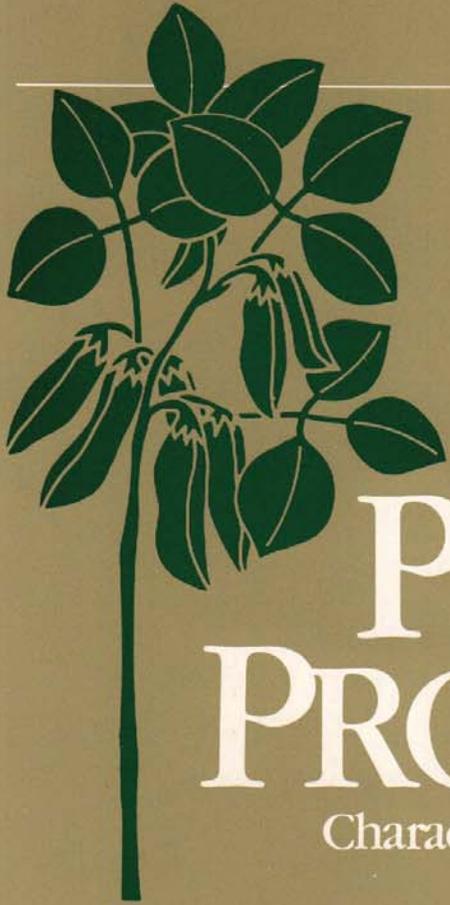

• **Summary:** See next page. Contents: Preface.

Introduction: Historical aspects. Importance of soy protein products. Definitions and methods of preparation. Protein quality and human nutrition. Health and soy protein. Functionality. Uses in food systems. Regulations regarding usage. Economics. Future considerations. Bibliography.

Provides an overview of the key benefits of soy protein products. The Soy Protein Council (named Food Protein Council from 1971-1981) is a trade association representing three processors of soy protein products: Archer Daniels Midland Co. (Decatur, Illinois), Cargill, Inc. (Minneapolis, Minnesota), and Central Soya Co. Inc. (Fort Wayne, Indiana). The Council acknowledges with gratitude comments received from the following specialists in this field: John Erdman, Lawrence A. Johnson, Irvin E. Liener, Edmund W. Lusas, Walter J. Wolf, Endre F. Sipos, and Keith J. Smith.

“The industry that produces soy protein products for human consumption has grown enormously since the late 1950s. Current production is about 1 billion [1,000,000,000] pounds of protein products for human consumption per year in the United States—or about 4-5 pounds per person.” This includes soy flours and grits. Address: 1255 Twenty-Third St., N.W., Washington, DC 20037. Phone: 202-467-6610.

1205. Rose, Richard. 1988. The U.S. soyfoods industry and market today and tomorrow (Interview). Conducted by William Shurtleff of Soyfoods Center, Jan. 6. 4 p.

# SOY PROTEIN PRODUCTS

Characteristics, Nutritional Aspects  
and Utilization

**soy protein  
council**

FORMERLY FOOD PROTEIN COUNCIL 1971-1981

---

• **Summary:** “President of Rose International in Petaluma, California (and formerly of Brightsong Light Foods), Richard Rose began making tofu and soymilk products in 1978. His forte is product development and marketing, which is the focus of his present company. He has been responsible for the development of over 75 commercial soyfood products.

“Shurtleff: What do you see as the most important events and trends in the soyfoods market during 1987?”

“Rose: First, the growth and marketing of Jofu, then the subsequent apparent leveling off or decline of sales or profits, although I am not sure of that. One source says that they have more demand for the product than they can handle. My understanding is that they were going to do a natural food Jofu and introduce it at the Natural Foods Expo at Philadelphia in October. Apparently it never happened; Tomsun didn’t even have a booth at the Expo.

“That ties into the inability that I see of soy yogurts to take hold in both the mass market and the natural foods market. I think there are good reasons for that. The difference between ice creams and non-dairy frozen desserts is substantial. There’s a large benefit for the consumer of non-dairy products. But that same range of difference does not exist between dairy and non-dairy yogurts. In fact, dairy yogurt is seen as a healthful food, low in cholesterol, fat, and often calories. So there is not as much benefit from eating the non-dairy product.

“Second, the continued domestication of production of aseptic soymilks by Westbrae, Great Eastern Sun, and Vitasoy.

“Third, the decline of sales and fortunes of Tofutti, linked to the decline in sales of non-dairy soy frozen desserts in general. I think Bob Tepper leaving Farm Foods was important. He’d been with them for a long time and has had a lot to do with the great progress they have made over the past eight years. That is quite a story. Farm Foods did things right and they had good luck as well. I’m really happy for them.

“Fourth, the increase and proliferation of soy cheeses. Last year Cemac and Galaxy got into the market in a big way. Soymage was the first truly non-dairy soy-based cheese containing no casein. I think what is more significant is large companies that have no other interest in soyfoods or natural foods are entering the industry. Galaxy went public in about August of 1987. I think their stock started at 5 and last I saw it was 10.25. They are very good at hype. They are to cheeses what Tofutti is to ice cream. I was watching some late night show on TV and their spokesperson Don King came out and began hyping Galaxy products (he had samples with him) against the insistence of the host! These larger companies see a new market and they go after it. But they really have no interest in or history with natural food or soyfoods. It’s a problem for the industry and a potentially dangerous trend. If people are going to make money in this

industry we need to make sure they do it fairly, without consumer deception, etc.

“Fifth, the increased legitimization of soyfoods in the mass market and in general. There is definitely growing interest. A few years ago tofu was snickered upon whereas now it’s more likely to stimulate enquiry and interest. That probably has a lot to do with Tofutti and tofu being recognized for special diets. Likewise, a similar growth of interest in soyfoods internationally, especially in Europe and Australia.

“Shurtleff: What do you think when you read that in a poll of the most hated foods in the USA, tofu was at the top of the list.

“Rose: I suspect they are right. I think that 95% of the Caucasian population does not buy tofu even occasionally.

“Shurtleff: Which products launched during 1987 did you feel were the best quality?”

“Rose: The Barat Bar is very good. In fact, I buy those, even though they are so darned expensive. You don’t get a sugar rush, there is no dairy, and they taste good.

“The ToChip, those corn chips, were good but I don’t think much has happened with it.

“There are more salad dressings out and they are getting better, and have better shelf life and packaging. Golden Soy and Nasoya come to mind first.

“Of the soy cheeses, I think they are all about the same in quality. I frankly consider them all a wash. I think the Soyco and the Cemac product are slightly better than the Soya Kaas. They all have casein. Our product FREE has no casein.

“Shurtleff: What major changes have taken place in our industry and market during the past ten years?”

“Rose: I think we have begun to develop our own individual identity, separate from the earlier Asian influence. That includes American equipment, American products, supplies, and suppliers. Instead of silken tofu, doufu-gan, and age, we have developed non-dairy frozen desserts, puddings, and salads. There is a great breadth of uniquely American products. In fact, an Americanization of all aspects of the industry.

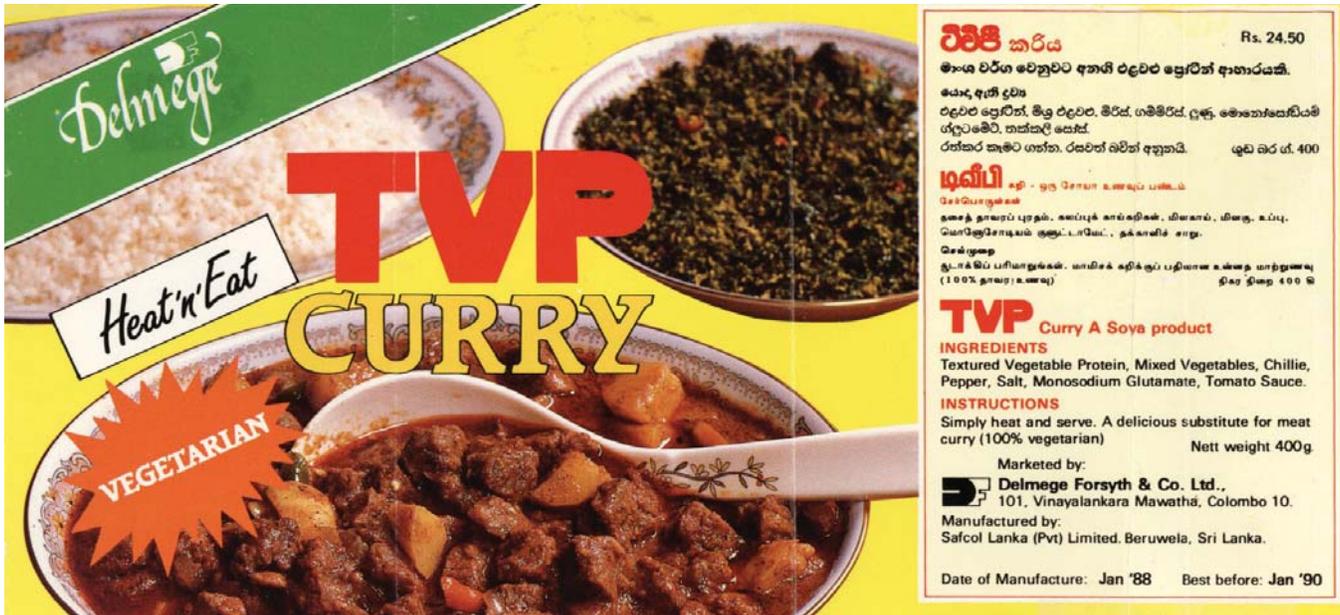

“Development of domestic processing equipment, such as Bean Machines has done, is an important trend.

“Shurtleff: What predictions would you make for the future.

“Rose: Growth in the use of aseptic tofu by consumers. Morinaga has a U.S. patent on the process of making tofu aseptically.

“More and better U.S. equipment, and the development of better processing methods.

“The use and recommendation of soyfoods in special diets by traditional groups like the AMA, dietitians, and perhaps even the government. I think eventually soyfoods (other than TVP) will be able to be used in government programs, such as school lunch programs. But that may take

a while.

“I still see a breadth and depth of new products. In breadth, I think we’ll see it in baked goods (brownies, cookies, muffins, breads) and confections (candies). Also refinement of current products. Many of the products that have been out for a while aren’t that great; they still need more improvement. But because they have been around for a while, people are less likely to improve them. But I think we will see, because of competition, improvement in current products. New products will tend to be more fully developed.

“Big Food will be getting into soyfoods more, probably to use tofu’s functionality. For example, replacing ricotta with tofu for nutrition and cost reasons. But up until now, I think its been too weird for them, and they are not sure how it relates to them and their mission. They are conservative and slow by nature. The market for tofu (not including second generation products) in 1987 is probably only \$70-90 million, which is still pretty small. They would probably want to see it 4-6 times that size before they make a big move. They are reluctant to do ‘missionary marketing.’ Then there is the perishability aspect of the product. I think Big Food will enter the industry with a product where perishability is less of a problem.

“At some point I think it will make a lot of sense to give tofu a national marketing identity, with regional manufacturers getting together and marketing the same brand and jointly funding national marketing efforts. The dairy companies do that with co-ops and with regional licensing, such as for making Popsicles or bottling soft drinks.

“I also think we’ll see an influx of new types of people into the industry, bringing with them sharp new ideas. Technical people and marketing people. Perhaps some great new processes or patents. Marketing ideas and product development.

“I think we’ll see a lot more use of soyfoods, such as tofu, in foodservice applications. That is really a great, untapped, fertile ground for soyfoods. The problem is, most of the people just don’t know what to do with it.

“Shurtleff: Imagine that you have just been hired by a major American food company and given a \$50 million budget and a research staff. They ask you to develop and market a line of at least three products. What would you do?

“Rose; I would probably do a line of salad dressings, a line of creamy soups, and a line of frozen entrees (such as lasagna), each using tofu and having no cholesterol. The tofu curds would replace ricotta or cheese. I might also do a line of baked goods (such as brownies and muffins), using tofu to replace eggs and milk. I’d also look seriously at a line of cholesterol-free foodservice items, something they could pop into a steam table or microwave and serve without any other preparations. Perhaps some nouvelle cuisine, or an Italian or Mexican dish, or a tofu-based imitation cheese or tofu sour cream or cream cheese. Anything that could replace a product that is currently high in fats and cholesterol so that the tofu product provided a clear alternative.” Address: President, Rose International, P.O. Box 2687, Petaluma, California 94953-2687. Phone: 707-778-7721.

1206. **Product Name:** TVP Curry.

**Manufacturer’s Name:** Delmege Forsyth & Co, Ltd. (Marketer). Made in Sri Lanka by Safcol Lanka (Pvt) Ltd. **Manufacturer’s Address:** Delemge: 101, Vinayalankara Mawatha, Colombo 10, Sri Lanka. Safcol: Beruwela, Sri Lanka.

**Date of Introduction:** 1988 January.

**Ingredients:** Textured vegetable protein, mixed vegetables, chillie [chili], pepper, salt, monosodium glutamate, tomato sauce.

**Wt/Vol., Packaging, Price:** 400 gm tin can with label. Retail for Rs. 24/50.

**How Stored:** Shelf stable, 12 month shelf life.

**New Product–Documentation:** See previous page. Label. 1988. Jan. 10.5 by 4 inches. Full color with brown, red, green, and orange on yellow. Photo shows a dish of curry flanked by dishes of white rice and topping. “Vegetarian. Heat ‘n Eat.” Form filled out by Jane Gleason. She called Delmenge on 14 March 1988. The TVP is imported in bulk by Delmenge from the USA and England, then packaged in Sri Lanka. Also importing TVP are Forbes & Walker, and McSoy Lanka.

1207. Albert, Lawrence. 1988. Global Foods tries to save Royal American Food Co. (Interview). *SoyaScan Notes*. Feb. 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Royal American filed for Chapter 11 reorganization / bankruptcy in May 1987. They had debts of \$1.4 million. Global Foods, the original manufacturer of many Royal American textured soy flour products, is now running the company out of its plant. Albert was appointed by the court to try to make the company work. They have stopped losing money and have paid back \$15,000 of the \$50,000 post debt. He wishes he had just let the company die and had pushed in Global products in place of the Royal American. He wanted the many people in their sales network. The future of his efforts to save Royal American does not look too promising. The bills are too high, unless the court will let him pay \$0.25 on the dollar. Their tofu failed because it was not a quality product. He is now shipping Globalite Tofu, which is a better product. It jells better, less soy flavor. He still has the mousses and was the original manufacturer. They were just a multi-level marketing company, not a manufacturer. He thinks they could have succeeded with better management. His company needs sales badly. His best sellers are his meals, which he sells in America. They are not exported. He founded Global Foods on 3 Jan. 1983. First product was Globalite meals that contain textured soy flour.

Note: Global Foods is located near ADM in Decatur, Illinois. Are they related? Address: Global Foods, 2881 Parkway Dr., Decatur, Illinois 62526.

1208. Newhouse, Sonia. 1988. Vegetarian Feasts, Direct Foods, soy ice cream, and the tofu industry in England (Interview). *SoyaScan Notes*. Feb. 25 and March 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In 1974 she was crippled with osteo-arthritis and was told by her doctor she would be in a wheel chair in a few years and spend the rest of her life there. She was a hearty meat eater. She visited Dr. Gordon Latto, a specialist in nutrition and president of the Vegetarian Society (now in his 70s and living at 4 Darby Rd., Caversham, Berkshire). He put her on a vegetarian diet, with no refined foods,

stimulants, or additives, plus cold showers each morning. “After about 3 days I began to feel better. And amazingly after about 10 days I was able to stand up straight without pain or stiffness in my joints.” She sold her guesthouse and started a firm in London named Vegetarian Feasts Ltd. specializing in vegetarian frozen meals without additives. The first products went on the market in March 1984. The media took up her story in a big way. In September 1984 she introduced two entrees with TVP as the major ingredient: Chile Sin Carne and Stroganoff. “We stole so much freezer space that all the big boys decided to jump into the vegetarian field, but they didn’t do it with whole foods.” Her pioneering products did so well in supermarkets that many health food shops in their “frozen food cabinets” first began to carry them. By June 1986 (see Financial Guardian, June 20; Family Circle, UK ed., Jan. 1986) she had an annual turnover in excess of £500,000 and a staff of 25, producing 6,000 microwaveable units a day and selling in major food chains (Safeways, Co-op supermarkets, Holland & Barrett health food stores, Europe, etc.).

It is well known that 30% of British university students are vegetarian, so the catering side of the vegetarian industry is enormous. But in 1986 about 75% of her products were sold through retail outlets. The majority were sold in supermarkets rather than health food shops. Realeat came out with a set of meals after hers, but they were discontinued in the supermarkets. It is not clear whether or not they contained soy protein.

In February 1986 she sold the company to British Arkady (owned by ADM), which wanted to get into the frozen foods business; about a year before they had purchased Direct Foods (in Petersfield, Hampshire), which made all dry foods, including some soy products. Direct Foods was started by a husband and wife who were farmers and who didn’t like selling their animals to slaughter. They bought TVP from a manufacturer and sold it direct to health food shops. One of their products was Sosmix; you add water and make a sort of spaghetti sauce.

About 20 years ago Sonia developed a tofu ice cream (no isolates) for her daughter who was allergic to cow’s milk protein. She still feels this product has commercial potential.

She thinks the four largest tofu manufacturers in England, in descending order of size, are Paul’s Tofu, Dragon & Phoenix, Regular Tofu Co., and Cauldron Foods. Cauldron might be biggest; they put out the most finished products. Dragon and Phoenix, serves mostly the Chinese quarter of London. Sonia has been in their plant. They breed fish in tanks in their tofu plant, which is walled with red tile.

Update: Letter from Sonia Newhouse. 1989. April 3. She is now at the Ultimate Life Center, Inc., 3760 Sports Arena Boulevard, Suite 10, San Diego, California 92110. Phone (619) 224-0608. She and her friend, Rosemary Feldd, are in the process of opening “a metaphysical / new age bookstore here.” “Long term we both have the same plans to open a

residential holistic center where alternative therapies will be available.” Address: 27 Carlton Rd., East Sheen, London SW14 7RJ. Phone: 01-392-1852.

1209. *Grocer (The) (England)*. 1988. 4.3m [million] consumers are avoiding red meat. Feb. 27. p. 64.

• **Summary:** The 1987 Realeat survey of meat and vegetarianism revealed that 4.3 million of the UK population are vegetarian or are consciously avoiding red meat. Almost one third of these are aged under 16. Perhaps more surprisingly, 18 million consumers claim to be eating less red meat, with health most commonly cited as the principal reason. Gregory Sams opened Britain’s first macrobiotic healthfood restaurant in London in swinging 1967. The Vegeburger dates from 1982. The frozen ready formed burgers have been better received in the grocery trade than the dry mix. Realeat’s frozen lines are marketed by Vincent Adams of Adams Marketing. He says: “Vegeburgers are now the fastest selling meat free burgers. I estimate the frozen meat free burger market to be around £3 million to £4 million in value and the frozen Vegeburger has nearly half of this figure.” There are also Cheese Vegeburgers and a soup which retails for around 20p per sachet.

1210. Archer Daniels Midland Co. 1988. Second quarter report to stockholders. Box 1470, Decatur, IL 62525. 8 p.

• **Summary:** On 19 Jan. 1988 ADM common stock began trading on the Tokyo Stock Exchange. ADM was the 62nd U.S. company and the 90th foreign company accorded listing privileges by the Tokyo Exchange. Tracing its history to the establishment of the Tokyo Stock Exchange Co., Ltd. in 1878, the Tokyo Stock Exchange in its present form was founded in 1949. It is now one of the most active and influential markets in the financial world.

ADM is now actively developing degradable plastic bags from corn starch. Address: Decatur, Illinois.

1211. *Soyanews (Sri Lanka)*. 1988. Consumers prefer processed soya foods. 10(1):1-2. Jan/March.

• **Summary:** Jane E. Gleason and S.M.A. Weliwita of International Soybean Program, University of Illinois (USA) and the Soybean Food Research Centre, Peradeniya (Sri Lanka) are convinced that the promotion of pre-processed soyafoods should replace the home utilization of whole soyabeans if the soyafoods industry is to make progress in Sri Lanka. They came to this conclusion after a survey of the home and village level Soybean Utilization Training Program, which has been in operation since 1978. Even though the program had conducted 3668 training sessions attended by 76,363 trainees, mostly housewives, it was found that the utilization of soyabeans in local cuisine was negligible. Several reasons have been adduced for this, but it would appear that the main barrier to greater soya consumption is that it is not available in processed forms

acceptable to consumers.

To assess the market potential for pre-processed soya foods, a soya foods marketing experiment has been initiated in a village near Peradeniya. A single family in this village has been marketing a variety of soya-foods. The six best selling products were coffee, Kola Kenda, chilli snacks, sweet snacks, fried nuts, and dried tempeh, in that order. The price per unit of common foods in Sri Lanka is as follows (in rupiahs): Soyabean, 0.04; ground nut, 0.05; cowpea, 0.07; green gram, 0.07; dried fish (fat poor), 0.11; TVP, 0.16; lean beef, 0.16; chicken, 0.21. In a survey on what constrains soya consumption the top 5 answers were, in order: Unreliable supply of soya, 23 respondents; odd flavor, 22; lack of preparation knowledge, 18; difficult to prepare, 14; unaware of benefits, 10.

1212. Miller, John; Ledur Brito, Luiz A. 1988. SANBRA, SAMRIG, and Soybean Crushing in Brazil (Interview). *SoyaScan Notes*. May 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** SANBRA and SAMRIG are two closely related companies in Brazil, often collectively known as SANBRA. Their main activities are oilseed crushing (at 5 plants, the biggest of which at Ponto Grosso has 3,000 tonnes/day capacity), oil refining, production of finished oil products (such as margarine, shortening, mayonnaise), and exporting. Their total sales in Brazil are about \$1,000 million dollars a year. Both companies have the same management; the various entities are largely for tax and legal purposes. Both are part of the multinational commodities group Bunge and Born, which is a family owned group with many independent companies worldwide. Actually the Bunge family left the group many years ago. The companies are not tied in to one central organization but are all owned by the same people. The company keeps a low profile, and even more since the famous Born kidnapping and ransom case in Argentina.

Brazil’s soybean crushing industry has Ceval as the largest crusher (they have only been crushing for several years, but plan to crush 2 million tonnes in 1988), followed by SANBRA and Cargill, which are about equal in size. SANBRA has about 33% of the Brazilian margarine market.

SANBRA started in Brazil about 50-60 years ago in cottonseed trading and processing. In about 1957-58 SAMRIG started its first soybean crushing plant in Rio Grande do Sul, Brazil’s southernmost state. The company then began to play a pioneering role in getting Brazil involved with soybeans. They encouraged farmers to start growing beans because the capacity of their plant (220 tonnes/day) was more than the total soybean production in that state. As a true multinational company, SANBRA could see the success of the soybean worldwide, which gave them confidence in its future in Brazil. Historically, soybeans have expanded steadily from south to north in Brazil. In about 1973 SANBRA built the first big soybean crushing plant in

the state of Parana, city of Ponto Grosso. Cargill, Anderson-Clayton, and Continental Grain Co. soon followed suit in this same strategic location.

SANBRA has also been a leader in soy proteins in Brazil. In late 1969 in RGS they started a modern soy protein products plant that began by making isolates, then later expanded into concentrates, and textured soy flour. This is the only plant in Brazil to make isolates and concentrates. Many companies make textured soy flour (TVP). SANBRA also produces various soy lecithin products. The products are sold in Brazil and also exported. This business has grown a lot.

ITAL does basic research, with not as much emphasis on applying that research. There is not a strong link between them and industry. They also do some training. Address: SANBRA, Centro Empresario de Sao Paulo, Av. Maria Coelho Aguiar, 215 Bloco D, 5\* Andar, Sao Paulo—CEP 05804—Brazil. Phone: 545-5459.

1213. Andreas, Dwayne O. 1988. The dilemma of protectionism. *International Agriculture Newsletter (Univ. of Illinois)*. May. p. 1-2.

• **Summary:** If a history of the grain industry in the United States were written today, some people might characterize the period from 1979 to 1982 as the golden age of agricultural exports, never to be obtained again. Before 1979, a combination of events had been at work to enhance the competitiveness and availability of U.S. exports. The stimuli for the growth of world export markets were in part climatological and in part institutional. Shortfalls due to weather forced several countries with centrally controlled economies to import large quantities of grain and food. At the same time, a move away from the gold standard and the floating of the U.S. dollar against world currencies weakened the dollar and enhanced the competitive positions of U.S. exports. These factors coincided with dramatic increases in the price of petroleum, followed by rapid inflation and a pronounced increase in lending to many developing countries. This combination of events induced many countries to produce for the lucrative export market.

Production increased as world prices for commodities climbed higher and higher. Farm support prices in the United States also rose, a move that, in retrospect, many would deem flawed. The price supports not only provided an attractive safety net for U.S. farmers, but also insured sharp production increases in many areas of the world. With U.S. support levels as a backstop, world production and export subsidies proliferated into the 1980s—a proliferation that would send the United States into an extended period of export retrenchment.

For the past several years, U.S. agricultural policy has been a battleground over burdensome grain stocks, a strained—if not broken—budget, and subsidy levels in competing countries that threaten to escalate trade

competition into trade war. Address: Chairman, ADM, Decatur, Illinois.

1214. Haumann, Barbara F.; Baldwin, A.R. 1988. Feature. Update: Fats and oils industry changes. *J. of the American Oil Chemists' Society* 65(5):702-04, 706, 708, 710-13. May. • **Summary:** Dramatic changes have occurred in the world's fats and oils industry during the past 25 years. U.S. soybeans, the major factor in world fats and oils trade in 1961, have encountered increasing competition from soybeans produced in South America as well as from palm oil, sunflowerseed and rapeseed. U.S. soybean dominance of world oilseed trade during the 1950s and 1960s began to crack in the 1970s. U.S. embargoes on soybean exports in 1973 and 1980 led Europeans, the Soviets and the Japanese to look for alternate sources of supply. They found Brazil and Argentina willing to learn how to grow soybeans for the export market. Ohio State University researcher Norman Rask has estimated total costs of producing a bushel of soybeans at \$6.62 in the U.S., \$5.39 in Brazil and \$4.06 in Argentina.

In the world soybean market, Brazil's share of international trade has grown from 3% in 1981/82 to 14% in 1984/85; in the same time span, Argentina's market share rose from 6% to 13%. Meanwhile, the U.S. share declined from 82% to 65%. In world soybean oil markets, Argentina's share has grown from 3% in 1981/82 to 14% in 1984/85. Brazil's share has increased from 24% to 27%; the U.S. share has fallen from 27% to 20%. U.S. soybean growing area peaked in 1980 at 70 million acres. In recent years, it has declined, with only 56.4 million acres harvested in 1987. U.S. soybean accounted for 65.9% of all world oilseed trade volume in 1979/80. By 1986/87, its share had dropped to 55%. The 1982 Census of Manufactures counted 243 vegetable oil mills operating in the U.S. in 1982. Of these, soybean oil mills had increased to 137 establishments, versus 121 in 1977.

The U.S. Food and Drug Administration (FDA) in 1985 ruled that low erucic acid rapeseed oil could be used in food products in the U.S. The first company to act on this was Procter & Gamble, which in 1986 reformulated its Puritan cooking oil to contain 100% canola oil. The phenomenal increase in corn oil production has been due to enzymatic processes for high fructose corn syrup and a gas tax subsidy on fuel alcohol. Consolidation, mergers, buyouts, and restructurings have led to increasing concentration of capacity in the hands of a few international companies whose operations range from seed cultivation through shipping and export to complete processing. This has led to fewer locations that process larger quantities of oilseeds.

U.S. based soybean processors are expanding their foreign investments in an attempt to escape relatively high U.S. soybean prices as well as to circumvent trade barriers. These include Archer Daniels Midland Co. (ADM), Bunge, Cargill, and Continental Grain. Since 1982, ADM also has

held a 45% interest in Alfred C. Toepfer International, a large commodities trading firm with headquarters in Hamburg, West Germany. In 1984, a National Institutes of Health panel recommended that Americans limit their cholesterol intake to less than 300 mg/day, fat intake to 30% of total calories in their diet, saturated fat intake to less than 10% of calories, and polyunsaturated fat intake to a maximum of 10% of calories.

There are a number of possible developments to watch during the next 20 years, including: Soybeans with low or zero linolenic acid; soybeans with higher yields (possibly hybrids) with broader adaptability to increase overall production; increased consolidation of oilseed processing. As world markets for oilseeds and oilseed products increase, market shares for soybeans and soybean products will decline. Address: JAOCS.

1215. Grain Processing Corp. 1988. Sale of protein business to ADM (News release). 1600 Oregon St., Muscatine, IA 52761. 1 p. June 30.

• **Summary:** The business was sold to ADM on 23 June 1988. "Grain Processing (GPC), Muscatine, Iowa, a U.S. corn wet miller, has announced the sale of its soy protein business to Archer Daniels Midland Company (ADM), Decatur, Illinois, on June 23, 1988. The sale included GPC's soy isolate technology, patents, trademarks, and product inventory. Archer Daniels Midland Company will transfer production of these soy products to their manufacturing facilities in Decatur, Illinois, as soon as possible.

"Grain Processing Corporation continues to be a major manufacture and worldwide marketer of grain neutral spirits, unmodified and modified corn starches, MALTRIN maltodextrins, corn syrup solids and feed recovery products." Address: Muscatine, Iowa. Phone: 319-264-4265.

1216. Golbitz, Peter. 1988. Soybean prices rise sharply. *Soya Newsletter (Bar Harbor, Maine)*. May/June. p. 1, 12-13.

• **Summary:** Amid the possibly the worst drought to hit America since the Dust Bowl years, prices for soybeans have risen from \$5.30 per bushel last November to just under \$10.00 per bushel now, with prices have reached a high of nearly \$11.00 in June. The recent price increases are attributable directly to the drought; and, a greatly reduced soybean supply, which resulted from increased exports due to a cheaper dollar overseas. History has shown that soybean prices don't have much of an impact on food prices in general. "In 1983, when soybean prices increased 37% from the prior year, food price inflation increased about 1%. Beef prices were up a mere 0.8% and pork prices actually decreased by 1.3%. The fact is, most of the costs food manufacturers incur are related to marketing. Farm products represent only 20% of the total price of food."

Archer Daniels Midland, Cargill, and Central Soya have all raised prices for their soy flour and soy concentrate

products by 20% to 30% over the past few months. Of all the food categories affected, the rising price of soybeans may have a more pronounced effect on soyfood products than any other. The effect of rising prices will be felt the greatest in the Oriental markets, where tofu prices have traditionally run 40% to 50% lower than in the supermarkets due to greater competition. Address: Soyatech, Bar Harbor, Maine.

1217. *J. of the American Oil Chemists' Society*. 1988. Plant closing [ADM plant in West Germany]. 65(6):856. June.

• **Summary:** "ADM Oelmuehlen GmbH, a subsidiary of the Archer Daniels Midland Co. (ADM), has announced it will close its Hamburg, West Germany, oil mill by mid-1988. The plant has been unprofitable primarily because it is not located directly on the seaport." ADM's Hamburg facility has processed approximately 800,000 tonnes of soybeans and 400,000 tonnes of rapeseed annually. It was one of the mills ADM purchased from the Unilever group in 1986. ADM's Spycyk mill on the lower Rhine will continue to operate.

1218. Peluso, Michael R. 1988. The nutritional value of soy. *Health World (Burlingame, California)* 2(4):26-28. May/June.

• **Summary:** This introductory article discusses whole soybeans, soy flour, soy protein products (isolates, spun fibers, TVP), soy milk, soy cheese (tofu), tempeh, miso, and soy sauce. Table I shows the composition of most of these is given. The author is especially interested in soy oil as a good source of vitamin E and of the essential fatty acids, linoleic and alpha linolenic acids. He is critical of the hydrogenation process. Table II gives a nutritive comparison of soy oil and selected food fats. Table III gives a nutritive comparison of soy foods and selected animal foods. Address: P.O. Box 606, Occidental, California 95465.

1219. *Vegan (The) (England)*. 1988. Pass it on! Haldane Foods. Summer. p. 17.

• **Summary:** "Haldane Foods' Tofeata Tofu—one of the best around in my opinion—is currently being sold with an excellent free recipe leaflet. With the exception of honey in a few cases, all 20 recipes are vegan. If you're a regular user of this brand, keep any spare copies and pass them on to friends.

"The same company has a new range of ready-to-mix meals called 'Easy Cuisine' comprising: Vegetable Curry & Brown Rice Mix, Vegetable Goulash & Potato Mix, Spaghetti Vegetable Bolognese Mix, Vegetable Ragout & Dumpling Mix, Vegetable Cottage Pie Mix, and Vegetable Burger & Couscous Mix. All are quick and easy to prepare and very useful to have in the larder. They provide enough for one generous serving, but by using some of the recipe ideas on the back of the packets would easily stretch to two."

Note: A new Vegetable & Tofu Burger from Cauldron Foods is also mentioned.

1220. Bailey, Simon. 1988. Soya-based products. *Natural Choice*. Aug. 15.

• **Summary:** “The food of the future. The soya bean is a protein-packed food which is increasingly used as a dairy or food substitute in today’s search for a healthier diet.” Discusses soya milk, dairy free desserts, tofu, tofu-based foods, soya flour, soya sprouts, tempeh, soya sauce, miso, and high-tech soya foods including TVP and soya protein isolates. Address: 138 Randolph Ave., London W9 1PG, England. Phone: 01-289-7364.

1221. Steffens, Ken. 1988. Farmland, Far-Mar-Co., and PMS Foods, Inc. (Interview). *SoyaScan Notes*. Aug. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Far-Mar-Co merged with Farmland in the late 1970s. Farmland then started losing money in a big way, so they wanted to divest some of their assets and get out of the business of making TVP. So three of the personnel bought Far-Mar-Co in 1983 in a leveraged buyout. The new company was called PMS Foods Inc., standing for Parke, Major and Shoup. They are still in Hutchinson, Kansas, making TVP. Farmland is a mere shadow of its former self, a manufacturer in Kansas City.

PMS paid ADM a licensing fee to make TVP. It goes for another 3 years. Four companies made TVP: ADM, PMS, Cargill, and Central Soya (in that order of size). The latter three all license the process from ADM. Ken, who worked for Ralston, says that Ralston is also named on the original patent and they get lots of licensing money. They litigated against all the producers of TVP. There were three different rights: process, chemical, and one other. ADM, Ralston, and Staley were co-holders of the patent—not just ADM. Ralston is no longer in the business.

Update. 1998. April. PMS Foods, Inc. is listed in the 1998 Soya Bluebook Plus on p. 192. Location: 2701 E. 11th, P.O. Box 1099, Hutchinson, Kansas 67504-1099. Phone: 316-663-5711. Fax: 316-663-7195. e-mail: sales@pmsfoods.com. Internet: www.pmsfoods.com. Contact: Derek Park, President. Plant manager: Floyd Shoup. Facility: Extrusion, served by rail & truck. Edible products: Meat analogs, textured soy flour. Address: PMS Foods, Inc., 2701 East 11th St., Hutchinson, Kansas 67501. Phone: 316-663-5711 (Oct. 1995).

1222. Archer Daniels Midland Co. 1988. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p.

• **Summary:** Net sales for 1988 were \$6,798 million, up 17.7% over 1987. Earnings for 1987 were \$353 million, up 33% over 1987. The British Arkady Co. Ltd.: During the year, Haldane Foods Ltd. was purchased. This company is similar to Direct Foods Ltd., supplying the health food market.

Note: On 31 Dec. 1987 ADM acquired the rest of

Arkady Holdings Ltd. so that it now owned 100%. Both dates (15 Jan. 1973 and 31 Dec. 1987) were confirmed by Dick Burket of ADM on 25 April 1991. Arkady Holdings Ltd. is the important company because it is the parent company for all of the different Arkady companies such as the Haldane Group, etc. Address: Decatur, Illinois.

1223. **Product Name:** Unisoy Carob & Banana Organic Drink.

**Manufacturer’s Name:** Unisoy Milk ‘n’ By-Products Ltd.  
**Manufacturer’s Address:** Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430-6329.

**Date of Introduction:** 1988 August.

**New Product–Documentation:** Talk with Neil Rabheru of Unisoy. 1990. July 2. Followed by letter (fax) of July 9. This product was launched in Aug. 1988. “It was and probably still is the only organic soya drink to contain pure carob syrup; the other products on the market still use carob powder.”

1224. **Product Name:** Granose Soya Yogert (Soy milk Yoghurt) [Peach Melba, Blackcurrant & Apple, Apricot, and Strawberry].

**Manufacturer’s Name:** Granose Foods Ltd. (Marketer). Made in southern England by Bridge Farm Dairies. Made since late 1990 in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1988 September.

**Ingredients:** Peach melba: Soya milk (Water, dehulled soya beans, sea salt), Mauritian raw cane sugar, peaches, raspberries, stabilisers, maize starch, guar gum, pectin, Bulgarian cultures, natural flavouring.

**Wt/Vol., Packaging, Price:** 125 gm plastic cup with foil lid.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm.: Energy 73 Kcal (calories) or 288 k.J., protein 3.0 gm, carbohydrate 11.45 gm, fat 1.8 gm, cholesterol 0.0 gm.

**New Product–Documentation:** The Vegan. 1988. Summer. p. 16. The product launch has been delayed until early July by a change of name—from Soya Yogart—following a challenge from a competitor. A black-and-white photo shows the label of Granose Soya Yogart.

Form filled out and four Labels (cups & tops) sent by Granose Foods Ltd. 1990. June 13. States that the product (spelled Yogert), made by Bridge Farm Dairies, was introduced in Sept. 1988. It has never been made by DE-VAU-GE. It is Ultra Heat Treated The shelf life is 15 weeks. The product is sold mainly to the health food trade. It now comes in the four flavors shown above. A color illustration on the foil lid shows the main fruit used in a white square with a blue border against a pastel background. The name of the fruit is written along the bottom of the square. A “Best

before” date is stamped atop each lid. The front of the cup contains a similar but more elaborate drawing. “Best served chilled.”

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. Granose Soya Yogert was made by Genice starting in late 1990 in 4 flavors—peach melba, strawberry, apricot, and blackcurrant & apple. Granose became part of the Haldane Foods Group in Jan. 1991.

1225. *Cedar Rapids Gazette (Iowa)*. 1988. Deaths: Joseph M. Sinaiko. Oct. 4.

• **Summary:** Joseph M. Sinaiko, age 97, of 3322 Terry Dr., SE, died on Oct. 3, early Monday morning, at Mercy

Medical Center, following a long illness. He was born on 4 March 1891 in Minsk, Russia. He married Freda Fine on 8 Feb. 1922. They later divorced. Then he married Janet Epstein in 1958 at New York City. She died in 1985.

In 1921 he moved from Madison, Wisconsin, to Cedar Rapids, Iowa, where he founded the Iowa Milling Company, “a general feed mill which later became one of the first soybean processing plants in the country.” The company, of which he was president, was located at 411 Sixth St. NE; in 1967 it was sold to Cargill.

In the early 1960s Mr. Sinaiko also founded Corn Starch and Syrup Co., a wet corn milling plant; in 1967 it was sold to Archer-Daniels-Midland Co.

His memberships in many organizations are listed. He is survived by: Three daughters—Arlene Oberndorf of Los Altos, California; Nadine Cole of Palo Alto, California, and Sally Dogon of Wellesley Hills, Massachusetts; a son, William Sinaiko, of Marina Del Rey, California; a sister, Leila Shapiro, of Hollywood, Florida; nine grandchildren and two great-grandchildren.

Memorial services will be at 11 a.m. Thursday, at Temple Judah, by Rabbi Edward Chesman of Temple Judah and Rabbi David Shapiro of Hollywood, Florida. There will be no visitation at the funeral home. A family prayer and graveside service will be held at 11:30 a.m. Friday in Forest Hill Cemetery, Madison, Wisconsin, by Rabbi David Shapiro. Memorial donations may be made to a charity of the donor’s choice.

A small portrait photo shows Joe Sinaiko at an advanced age.

1226. Bailey, Simon. 1988. Re: New developments with soyfoods in the UK: British Arkady, Haldane, Realeat, and The Regular Tofu Co. Letter to William Shurtleff at Soyfoods Center, Oct. 10. 2 p. Handwritten with signature on letterhead.

• **Summary:** In Feb. 1988 Haldane was acquired by British Arkady’s Health Food Division. Brian Welsby and Peter Fitch are joint managing directors. Haldane brings in the Hera, Realeat, and Direct Foods lines. Brian Welsby is the key man at Haldane.

The Realeat Company, maker of the VegeBurger and Vegebanger, formerly owned by Gregory Sams, no longer exists. In the summer of 1988 Haldane acquired the Realeat brand. Gregory Sams retains interest in the company, but purely as a consultant, without controlling interest. The Regular Tofu Co. is now also part of Haldane Foods. John Holt, the founder of RTC, is no longer involved. Address: 138 Randolph Ave., London W9 1PG, England. Phone: 01-289-7364.

1227. Mrkvicka, Mike. 1988. Ag industry pioneer was quiet giant: C.R.’s [Cedar Rapids] soybean, corn processing industry begun by Joe Sinaiko. *Cedar Rapids Gazette (Iowa)*.

Oct. 16. Sunday.

• **Summary:** This is a long obituary of Joe Sinaiko, who died on Oct. 3 at age 97. He was a pioneer in the soybean and corn processing industries. Yet praise and public attention made him uncomfortable, so he avoided the limelight. Yet when he died his remarkable achievements and contributions were largely unknown, even in Cedar Rapids where he lived most of his life.

A pioneer in the soybean industry, he began processing soybeans in 1928 at his plant at 411 Sixth St. NE.

His family and friends remember how he built up his business traveling door-to-door in rural Iowa, encouraging farmers to grow soybeans and explaining to them how best to do so. Then he'd buy the beans, process them into oil and meal, go back to the farmers, and persuade them to buy his soybean meal as a livestock feed ingredient. The farmers thought he was crazy at first, but they later became his best customers.

He was also a major player in corn processing in Cedar Rapids, where he started the Corn Starch and Syrup Co. ADM and Cargill would not be so important in Cedar Rapids today were it not for Joe Sinaiko.

Discusses his birth in Russia and immigration to the USA where his family settled in Madison, Wisconsin. Speaking no English, he entered school for the first time in his life, entering the fifth grade. His first teacher gave him English lessons after class. He later spoke fondly of her and the profound impact she had on his life.

Six years later he entered the nearby University of Wisconsin—but he had to negotiate. Using skills that served him well in later life, he persuaded the bursar to delay payment of the \$30 tuition until the next summer, when he could earn the money working at his father's feed business. After two years of college, Joe quit to help support the family by delivering hay and oats for his father's store. In 1917 he joined the army and spent World War I in Texas. He caught influenza during the deadly epidemic of 1918, spent months in the hospital, received an honorable discharge, and considered himself lucky to survive.

Returning to Madison, he soon longed to get into business for himself. Cedar Rapids seemed like an excellent location. In the early 1960s [sic, 2 Dec. 1957] Joe granted a rare interview, published in the Cedar Rapids Gazette, in which he recalled: "I wanted a location where railroad facilities were more adapted to milling. In 1921 I found Cedar Rapids was well suited for both buying grain and shipping. So I moved."

In Cedar Rapids, his first job was delivering hay and oats to stables. Within four years, however, he had negotiated the purchase of the old Jackson Milling Co., a run-down six-story building on Sixth Street NE. He paid no money down—another tribute to his negotiating skills.

He renamed it Iowa Milling Co. and, willing to work hard, began to run it as a one-man, hand-to-mouth operation.

He soon developed a reputation for honesty and was able to convince farmers that they should wait a week to be paid for their grain—long enough for him to mill it, sell it, and pay them back.

In 1928 Sinaiko began processing soybeans—after learning from a Quaker Oats salesman that a few farmers in Illinois had planted the crop. He began by purchasing a few hundred bushels. The A.E. Staley Manufacturing Co. was already processing soybeans on a small scale in Decatur, Illinois.

Then came the stock market crash of 1929 and the Great Depression of the 1930s. Sinaiko's mill barely survived. His creditors pressed him to declare bankruptcy, but again he negotiated his way out. They were terribly hard times. He even tried peddling a soap named Royal Gold, made from soybean oil. Then, in the early 1930s, the soybean producing and processing industries started to grow. Sinaiko was well positioned to take advantage of this growth, and before long his Iowa Milling Co. was thriving, selling soybean meal for both livestock feeds and human foods.

Then in 1941 [sic, June 1944] he decided to sell the company. He was unhappy with the excessive government regulation of his business. So Cargill bought him out that year. But as soon as he sold his company, Sinaiko realized he had made a mistake. He deeply regretted his decision.

Joe returned to the milling business by building two smaller mills in Fairfield, Iowa, and Washington, Iowa. But he still longed to get Iowa Milling Co. back. After World War II, he saw his chance. Cargill agreed to trade Iowa Milling Co. for the two plants in Fairfield and Washington. Sinaiko quickly agreed to the deal.

He was also developing plants outside of Iowa—in Springfield and Decatur, Illinois; Norwalk, California; and Minneapolis, Minnesota. He and his close relatives managed these businesses.

Sinaiko was keenly interested in new technologies that could make his mills more efficient. In 1951 he installed new solvent processing equipment for his soybeans at the Iowa Milling Co.

By the 1960s, his interest in new technologies led him into the field of wet corn milling. In 1964 he founded the Corn Starch and Syrup Co. and began construction of a large and very modern plant in Cedar Rapids. Competing corn processors scoffed at his audacity. When his plant began production in 1965, the competitors cut their prices for corn starch and syrup by 50%. Sinaiko was forced to follow suit. But his plant was so efficient that he could make a profit even at that low price—a remarkable achievement. His competitors could not. Cargill, the agribusiness giant, looking for a way to enter the wet corn milling industry, offered Sinaiko a deal he couldn't refuse. In 1967 Cargill purchased the Corn Starch and Syrup Co. and (for the second time) the Iowa Milling Co.

Again Sinaiko has second thoughts about the sale—this

time of the corn processing plant. So at age 79 he decided to invest in another corn processing company—Corn Sweeteners. In May 1970 he announced the groundbreaking in Cedar Rapids.

But problems arose. Many of the engineers and management team for the new company came from the corn processing plant that Cargill had bought from Sinaiko in 1967. These defections upset Cargill and raised questions of business ethics. Sinaiko, who placed a high value on his ethical integrity in both business and personal matters, acknowledged the problem. Moreover, the new plant was too big for the personal, informal management style that he preferred. So in 1971 he sold his interest in Corn Sweeteners to Archer Daniels Midland Co., which used the plant to enter the corn processing industry.

After 1971 Joe never really retired. He kept an office in Executive Plaza, dabbled in real estate, kept an eye on his investment portfolio, and maintained a keen interest in world affairs and soybean prices.

He was a quiet philanthropist who donated to hospitals and to Coe College in Cedar Rapids, to the University of Wisconsin, and to a wide range of Jewish causes and many others.

Although Joe Sinaiko's accomplishments were largely unsung, he left a rich legacy to the vitality (economic and otherwise) of Cedar Rapids.

An excellent illustration by the Gazette's Chris Wolf shows a portrait of Joe Sinaiko. A 1964 photo shows his Corn Starch and Syrup Co. under construction. Address: Gazette staff writer.

1228. Byrne, Maureen. 1988. Whatever happened to new protein? *Food Manufacture (London)* 63(10):51-52, 54, 57. Oct.

• **Summary:** According to Interfood, 3,000 tonnes of soy protein isolate and 6,000 tonnes of concentrate are used in the UK every year. In the UK, British Arkady was the first company to manufacture TVP after its takeover by ADM. Lucas Ingredients is another large manufacturer in the UK. A smaller maker is GMB Proteins, which is part of Bush Boake Allen. Also discusses Bontrae, Kesp, Beanfeast, and Quorn.

“The most exciting new protein food to have emerged in recent years is undoubtedly mycoprotein, developed by RHM [Rank, Hovis, McDougall] in the UK, which is the result of nearly 20 years of research... Called Quorn, this protein-rich food, with a texture very similar to that of meat, is now produced and marketed by Marlow Foods (formerly New Era Foods), a company jointly owned by RHM and ICI.” The ideal source material for Quorn is “a microscopic plant called *Fusarium graminearum*, which is similar to the mushroom and which was eventually discovered not far from RHM's development centre near Marlow, Bucks (hence the name Marlow Foods). Marlow has now been producing Quorn at its factory in Stokesley in the North

East of England for two years.” They are grown in a sterile fermenter on liquid glucose produced by hydrolysing cereal starch. Nitrogen in the form of ammonia is added for protein development, with essential minerals and oxygen. Quorn is discussed in detail, and a large photo (p. 57) shows a chicken analogue made from Quorn.

Note 1. This is the earliest document seen (Oct. 2014) that mentions Quorn, a meat alternative made from mycoprotein (*Fusarium graminearum*) by Marlow Foods in Stokesley (a small market town), North Yorkshire, in northern England.

Note 2. This is the earliest document seen (Jan. 2010) that mentions RHM in connection with Quorn or as the company that developed Quorn. Address: England.

1229. Oilseeds Division, Grain Marketing Bureau, Grains and Oilseeds Branch, Agriculture Canada. 1988. Oilseed sector profile. Ottawa, Ontario, Canada. 65 p. Oct. 28 cm. [3 ref]

• **Summary:** Contents: Foreword. Introduction. The production subsector. The processing subsector: Background, industry structure, industry performance. The marketing subsector: Oilseeds marketing, processed oilseed products marketing, hedging. The marketing environment: Domestic, international markets. A look into the future. Appendix A: The role of the federal government in the Canadian oilseed industry. Appendix B: Oilseed industry directory, industry associations, oilseed processing companies, oilseed trading companies & coops, research / educational institutions, government, others. Appendix C: Tables. Address: 930 Carling Ave., Ottawa, ONT K1A 0C5, Canada. Phone: (613) 995-8374.

1230. Caton, Greg. 1988. Early work with textured soy products: ADM, Ralston, Purina, and Swift & Co. (Interview). *SoyaScan Notes*. Nov. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** ADM and Ralston Purina filed for independent patents related to texturization of soy flour at about the same time. There was a suit and counter-suit, then Swift & Co. and Staley jumped in on the counter-suit. After a lengthy and very expensive trial, there was an out of court settlement. Then Ralston Purina was granted the process patent and ADM got the product patent.

Jim Beyers has the whole, fascinating story and a wealth of related information. He testified at many depositions. He is with Westward Industries Inc., 1819 S. Meridian Ave., Wichita, Kansas 67213 (Phone: 316-942-8387). Another knowledgeable person is Chuck Harwood, a consultant in the Chicago area.

Also contact Dr. Tom Futch of Manna International in New Orleans, Louisiana, for info on TVP. He is a born again Christian of the best type. Phone: 504-254-3333. A PhD in food science, he worked with Staley in extrusion of soy

protein concentrates. Address: President, Lumen Food Corp., 409 Scott St., Lake Charles, Louisiana 70602-0350. Phone: 318-436-6748.

1231. Archer Daniels Midland Co. 1988. First quarter report to shareholders. Box 1470, Decatur, IL 62525. 16 p.

• **Summary:** President Randall's Report—stated that the greatest concern of Americans in the 1990s will be the environment. 1. ADM now has in operation eleven large fluid bed boilers for cogeneration of power and process steam. 2. Worldwide technology has been licensed for using a special grade of starch to render disposable plastics degradable. 3. Ethanol is a third contribution to clean environment. Ethanol fuels have a high oxygen content, a major factor in reducing carbon monoxide poisoning of the atmosphere.

“There is a tremendous demand all over the world for soy protein products to replace subsidized milk powder. Our soy protein concentrate plant is completed and is now operational. We will double its size in early 1989 and are making plans to double it again before 1990, in response to the new demand.

“We are also doubling the size of our edible soy protein isolate plant, with plans for further increases in 1989 and beyond. We are constructing a plant for industrial isolates for the paper industry, to be sold in conjunction with our corn starches.

ADM now produces soybean flour, grits, TVP, concentrate and isolate, the most complete line of edible soy products of any producer.

Chairman Andreas' Report—The U.S. Government has more control over what the farmers plan and the prices they receive today than they have ever had in history.

Government imposed embargoes cause massive restructuring of world trade and processing. Examples: Immediately after the 1980 embargo, the following fundamental permanent adjustments in world trade occurred:

1. The EEC, in emergency meetings, alarmed that the U.S. would cut off exports for political reasons, resolved to become self-sufficient, particularly in oilseeds, with the result that they increased production of wheat and have become a large surplus producer of wheat. 2. Japan, equally alarmed, immediately made \$1,000 million available to Brazil to expand soybean production 300%. 3. The Soviet Union took its order book to Brazil, Canada, Argentina, Australia, and the EEC, cutting the U.S. from a 75% supplier to a 25% supplier. 4. Canada and Australia responded with 20% increases in production. Address: Decatur, Illinois.

1232. Cunningham, N.L.; Bonkowski, A.T.; Tuley, W.B. 1988. Soy protein use in meat, seafood. *J. of the American Oil Chemists' Society* 65(12):1871-73. Dec. [4 ref]

• **Summary:** Textured soy proteins. “The first form of soy protein to be textured for commercial application was soy flour. Archer Daniels Midland Co. (ADM) patented this

technology in 1970.

“Soy protein concentrates have provided the base for a second generation of textured proteins.”

Functional soy concentrates are produced by 2 major companies—ADM and Central Soya Co. Inc.

Discusses isolated soy proteins, diet meat analogs, and isolated soy proteins in fish. Address: ADM, Decatur, Illinois.

1233. Realeat Company (The). 1988. The 1988 Realeat survey into meat eating and vegetarianism [in Great Britain]. London. 10 p.

• **Summary:** This fifth consecutive study, conducted by Social Surveys (Gallup Poll) Ltd. is based on 2,481 interviews with people aged 16 and older. Nearly a million more people in Britain now avoid red meat in their diet than in 1987. “Vegetarians now represent 3.0% of the adult population, or 1.3 million people. This figure is the same as in 1987.

“Those avoiding Red Meat represent 5.5% of the adult population, or 2.4 million people. This is treble the 1984 figure.

“The Combined Group, (vegetarian and those avoiding red meat) therefore represents 3.7 million people, one in twelve of the adult population (8.5%). This is an increase of 29% over 1987 and 113% over 1984.

“Children—9.3% (1.2 million) children are said by their parents to be vegetarian or beginning to avoid red meat.

“Total Population—The total number of people, adults and children, who avoid red meat or are vegetarian is 4.9 million.

“A full 35% of the adult population is now claiming to be ‘eating less meat’ and the main reason for this was health, cited by half of the category.” Address: Gregory Sams, 2, Trevelyan Gardens, London NW10 3JY, England. Phone: 01-459-3401.

1234. **Product Name:** Granose Vegetarian Wholefood Kitchen: Soya and Mushroom Burgers.

**Manufacturer's Name:** Granose Foods Ltd. (Distributor). Made in Denmark by Nutana Helsekost.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1988.

**Ingredients:** Soya protein, maize oil, mushrooms, water, wholemeal breadcrumbs, egg protein, onions, wheat flour, sea salt, vegetable flavouring.

**Wt/Vol., Packaging, Price:** 225 gm paperboard box.

**How Stored:** Frozen.

**Nutrition:** Per 100 gm.: Energy 250 Kcal (calories), protein 11.5 gm, carbohydrate 23.6 gm, fat 12.8 gm, cholesterol 0.0 gm.

**New Product—Documentation:** Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that the

frozen product, made by Nutana, was introduced in 1988 and uses soya flour as the main protein ingredient. Label. 8.5 by 4.25 by 1 inch. Paperboard box. Blue and white on gray. Photo on front panel shows a sliced, ready-to-eat burger on a plate with ketchup, green beans, and fried potatoes. "No artificial colours or preservatives... Do not re-freeze once thawed." Back panel: "Cooking instructions: Direct from freezer, shallow fry in oil for 4 minutes each side or grill for 10 minutes each side. Serving suggestion: Serve with sauteed potatoes and vegetables or garnish in a wholemeal bun."

**1235. Product Name:** Granose Soya Margarine (Dairy Free).

**Manufacturer's Name:** Granose Foods Ltd. (Distributor). Made in Denmark by Nutana Helsekost.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1988.

**New Product-Documentation:** Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Nutana, was introduced in 1988.

**1236. Product Name:** Granose Soyagen: Soya Milk Powder (For Adults).

**Manufacturer's Name:** Granose Foods Ltd. (Importer-Marketer). Made in West Germany by DE-VAU-GE.

**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England. Phone: 0923-672281/2.

**Date of Introduction:** 1988.

**Ingredients:** (1990): Soya proteins (instant), corn oil, malt, starch, calcium carbonate, vegetable emulsifier: lecithin, sea salt, natural flavourings, vitamins E, B-1, B-2, B-12.

**Wt/Vol., Packaging, Price:** 350 gm box.

**How Stored:** Shelf stable.

**Nutrition:** Per 100 gm.: Protein 21 gm, fat 26 gm, carbohydrate 45 gm, calcium 420 mg, phosphorous 200 mg, iron 3.5 mg.

**New Product-Documentation:** Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that product was introduced in 1967. Made by DE-VAU-GE. Address on label is Stanborough Park. Label. 1990. 5.5 by 8 by 1.75 inches. Paperboard box. Black, red, yellow, and dark green on white and light green background."Contains no animal produce. Lactose free. Gluten Free. The vegetable Lactose-free composition of Granose 'Soyagen' Soya Milk Powder makes it easy to digest and suitable for people with an allergy to cows' milk." Illustration on front panel shows a glass of milk in front of green soybean leaves and pods. Side panel: "Preparation: Granose Soya Milk Powder dissolves instantly in hot or cold water. Standard Mix 1 part powder to 6 parts water (40 gm powder to ¼ litre water). Suitable for use in: Puddings, Custard, Yogurts, Soups, Sauces, etc." Note: This was the earliest known soymilk made in Europe for adults that was fortified with calcium.

**1237. Product Name:** Vege-Grill.

**Manufacturer's Name:** Realeat Company (The).

**Manufacturer's Address:** 2 Trevelyan Gardens, London NW10 3JY, England. Phone: 01-459-3401.

**Date of Introduction:** 1988.

**Ingredients:** Textured "soys" with some wheat gluten.

**New Product-Documentation:** Letter from Gregory Sams. 1988. March 30. The product will be launched this year.

**1238. Bodis, Laszlo; Kralovansky, U. Pal. 1988. A szoja: Elelmiszter es takarmany [The soybean: Food and feed]. Budapest, Hungary: Mezogazdasagi Kiado (Agricultural Publisher). 186 p. [37 ref. Hun]**

• **Summary:** Contents: Introduction. The soybean, our five thousand year old crop. Up to date technology of soybean production. Soybean processing methods: Basic operations. Soy products: Soy flour, soy protein concentrate, soy protein isolate, TVP (textured soy flour), soy oil, soy lecithin. The soybean as food. Soy protein in feeding. The economics of soybean production, processing, and use.

The conclusion states: "We hope that on account of the growing interest in health and nutrition, a growing number of consumers will be interested in soy-based foods."

The back cover states: What kind of crop is the soybean? Where and how can it be grown with success? What are the most important processing methods? How can it be utilized as food and as feed? These are the questions answered in this book.

Dr. Bodis notes in a letter of 4 June 1990 that the co-author, Kralovansky, until the time of his retirement, was the most knowledgeable figure on all aspects of soybeans and protein in Hungary. Address: Director, Feherjetechnologiai Tudomanyos Termelesi Egyesules, Budapest XII., Goldmark K. u. 3. Budapest Pf: 340 1536, Hungary. Phone: 155-5202.

**1239. Ewoldt, Harold F. 1988. Cedar Rapids [Iowa]: The magnificent century. Northridge, California: Windsor Publications. 136 p. See p. 26, 33, 128. Illust. Index. 29 cm. [18 ref]**

• **Summary:** "Cargill Inc., headquartered in Minneapolis [Minnesota], entered the milling community of Cedar Rapids very quietly. It had opened a grain marketing office in the city in the 1930s. In 1945 its feed division, Nutrena, started manufacturing animal nutrition products. Also during the 1940s it operated the Iowa Milling Company, a soybean processing operation.

"In May 1967 a lease arrangement with Joseph Sinaiko provided Cargill with its first corn-milling operation in the Cedar Rapids area. Cargill acquired the corn-processing facilities of Corn Starch and Syrup Company plus other Sinaiko interests in Cedar Rapids. The corn plant, located at 1710 Sixteenth Street S.E., had the capacity to process 14,000 bushels of corn per day into starch syrup and gluten

feed products. This arrangement gave Cargill processing facilities for soybeans and animal feeds” (p. 26).

“In 1936 Honeymead [owned by the Andreas family] transferred its manufacturing base to Cedar Rapids, taking over the facilities of the Mesquakie Mills at 1120 Twelfth Avenue S.W. There it pioneered pellet feeds, an innovation that revolutionized the feed industry. This facility was eventually leased to the Nutrena Division of Cargill.” The Honeymead facility became Cargill’s west-side soybean plant.

“The Iowa Milling Co. entered the livestock-feed business in Cedar Rapids in 1923. It manufactured a feed known as Vitamo, which included a complete line of poultry feed, plus high protein feed supplements for cattle and hogs. Iowa Milling’s soybean processing operation brought it to the attention of Cargill, which eventually purchased the company” (p. 33).

A page titled “Cargill, Inc.” notes that Cargill began in 1865 as a small grain warehouse in northeastern Iowa. In 1943 Cargill arrived in Cedar Rapids when it purchased a soybean processing plant. Today in Cedar Rapids, Cargill employs a total of 337 people at two soybean processing plants, a corn wet-milling plant, and an analytical testing laboratory. The three processing plants provide markets for 50 million bushels/year of Iowa corn and soybeans.

Cargill’s East Plant, at 411 Sixth Street Northeast, is the larger of the two soybean processing plants. An aerial photo shows this plant. The West Plant, at 1010-10th Avenue Southwest, makes special soy ingredients such as soy flour and textured vegetable protein products such as imitation bacon-, beef-, and chicken-flavored chips. These are used as salad toppings or as ingredients by food manufacturers.

In 1967 Cargill entered the corn wet-milling industry in Cedar Rapids with the purchase of a mill near the Cedar River at 1710-16th Street Southwest. An aerial photo shows this plant. Address: Cedar Rapids, Iowa.

1240. Wood, Rebecca T. 1988. *The whole foods encyclopedia: A shopper’s guide*. New York, NY: Prentice Hall Press (Simon & Schuster). xv + 218 p. Foreword by Michio Kushi. Illust. 28 cm. [200\* ref]

• **Summary:** This book is mistitled. It should be titled “Rebecca Wood’s Macrobiotic Views on Natural Foods.” The parts on quinoa, teff, amaranth, and many “macrobiotic foods” provide good information. There is extensive information on soyfoods, all from a macrobiotic viewpoint, but with many errors or undocumented controversial assertions never seen before in the literature, such as the following: “Cold Tofu. Foods that are cooling, like tofu, tend to reduce the fire in the lower organs. This explains why tofu was eaten by Buddhist monks to abate their sexual desires. This is not a prescription against tofu. Well-cooked tofu is less cooling. For optimum health, we need a balance of warming as well as cooling foods. However, if you are

feeling cold, or if it is a cold day, or if you have strenuous activities planned, then you may opt for salmon over tofu.”

Foods discussed are: Cheese (imitation soy), ice cream and frozen desserts (soy or tofu ice cream), miso, natto, nigari, soybeans (black, yellow, and “just harvested green soy”), soy flour, soy protein isolate, soy milk, soy nut (“Those oversalted, beggarly little crunches found in everything from trail mix to salads are soynuts,...”), soy oil, soy sauce (“Also known as *Shoyu* and *Tamari*), and soy yogurt, tempeh, tofu, and TVP (texturized vegetable protein {textured soy flour}).

Note: This is the earliest English-language document seen (Feb. 2005) that contains the term “cooling food.” Address: P.O. Box 30, Crestone, Colorado 81131. Phone: 303 (or 719) -256-4939.

1241. Archer Daniels Midland Co. 1989. New trademarks: Arcon. *Official Gazette Trademarks (Washington, DC)*. Jan. 24.

• **Summary:** Filed 1-20-1988. For soy protein concentrate for use in manufacture of food products and dietary supplements (U.S. CL 6). First use 10-0-1981. In commerce 10-0-1981. Address: Decatur, Illinois.

1242. **Product Name:** Arcon T (Textured Soy Protein Concentrate).

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** Decatur, Illinois.

**Date of Introduction:** 1989 January.

**New Product–Documentation:** Talk with Ed Meyer of Central Soya. 1993. April 7. ADM makes a textured soy protein concentrate named Arcon T. It is used in their veggie burgers.

Talk with Karen Bachman at ADM. 1993. April 7. This product was introduced in Jan. 1989. It first appeared in her catalog of 31 Jan. 1989. It is made at Decatur, Illinois.

• **Summary:** A nice portrait illustration (dot-style) shows

**ADM**

## Taking Iowa Crops to Market

Archer Daniels Midland is fostering the Iowa economy by unfolding new technologies that utilize Iowa-grown products.

Corn is being refined for use in degradable plastics. These plastics will degrade if they are buried in a landfill, immersed in water, or discarded in the open.

The development of ethanol-blended fuels produced from corn has reduced air pollution in many areas of the country and given Iowa's corn growers a significant boost. Ethanol's part in improving air quality is becoming more accepted as its use continues to grow.

Soybean processing for oil and feeds also contributes significantly to the Iowa economy. As Iowa grows, so grows ADM: supermarket to the world.

Dwayne Andreas. In 1985 the Chicago Board of Trade accused ADM, America's largest soybean processor, of manipulating soy oil prices. Andreas refused to appear before a disciplinary committee and ADM was fined \$25,000. Within months, ADM agreed with federal prosecutors to train and employ 2 undercover agents, wired for sound, to infiltrate the trading pits of the nation's largest futures exchange. A major scandal has erupted when the investigators alleged fraud.

"The senior Mr. Andreas not only plays hardball in the marketplace, he consistently charts an idiosyncratic course for his company, shunning the popular wisdom of the food industry and Wall Street alike. Through ruthless cost cutting, among other things, he has built the Decatur, Illinois, company from a bedraggled also-ran to the nation's biggest commodity processor, one with \$6.8 billion in annual sales and a balance sheet one analyst describes as 'awesome.' ...

"The 69-year-old head of ADM has carved out an image as a kind of senior statesman of agriculture, traveling in his personal plane to Moscow for meetings with Mikhail Gorbachev and courting favor in Washington, DC, for his innovative company's latest idea. A master of the grand gesture, Mr. Andreas even offered recently to have a trade group he heads purchase the bugged U.S. Embassy in Moscow...

"Mr. Andreas has never shown much regard for the conventions of the financial markets. He releases, for instance, only bare-bones financial data... One of Mr. Andreas's first acts when he took over as ADM's chief executive 19 years ago was to gut the company's 27-member public-relations staff; today a vice president, Richard Burket, says he handles 'public relations, advertising, government relations—you name it.' ... Bucking another Wall Street trend—the heavy leveraging of assets—he keeps ADM's balance sheet sloshing with surplus cash; ADM has about \$1 billion on hand in cash and marketable securities, and only \$800 million in debt.

"Despite this pot of cash, Mr. Andreas has shunned the big-name takeover game. Instead, reflecting his zeal for controlling costs, he has been on a prolonged shopping quest for mills, plants, barges and other mundane assets that can be had at bargain-basement prices...

"In 1985, after decades of nose-to-nose competition, ADM's giant crosstown rival in Decatur, A.E. Staley Mfg. Co., threw in the towel and sold its soybean-processing business... Ultimately Staley was acquired by Tate & Lyle PLC, the big British company." Address: Staff reporter.

1245. Archer Daniels Midland Co. 1989. Second quarter report to shareholders. 8 p.

• **Summary:** The section titled "ADM expands soy protein operations" (p. 3, 6) notes: "ADM's new soy protein concentrate plant at Decatur East became operational in the December, 1988 Quarter. This facility is producing powdered and granular concentrate products for the food industry and for specialty foods.

"Already the market leader in the production and sale of textured soy protein products, ADM now has a full line of textured soy protein concentrates being marketed under the Company's TVP brand. The addition of these concentrate products makes ADM the only full line soy protein supplier... An expansion of the concentrate plant is already underway and the edible isolated soy protein is also being expanded. A new isolated soy protein plant for industrial products is under construction at Decatur East and is scheduled for completion by the end of 1989.

“The growing demand for soy protein products has been aided by the reduction in dried milk supplies resulting from reduced government support programs for milk in the U.S. and in the European Community.” Address: Decatur, Illinois.

1246. Archer Daniels Midland Co. 1989. New trademarks: Ardex. *Official Gazette Trademarks (Washington, DC)*. March 28.

• **Summary:** Filed 1-20-1988. For soy protein concentrate for use in manufacture of food products and dietary supplements. (U.S. CL 6). First use 1-0-1981. In commerce 1-0-1981. Address: Decatur, Illinois.

1247. Kohn, Florrie. 1989. Is canola coming? *Soybean Digest*. March. p. 8-10.

• **Summary:** An estimated 65,000 acres of canola are now planted in the U.S. Rapeseed now ranks as the world’s third most widely grown oilseed. “Most rapeseed oils contain more than 40% erucic acid, which health experts link to heart disease. Canadian plant breeders created canola just over 20 years ago when they developed a rapeseed containing less than 5% erucic acid. Since then, they’ve trimmed the erucic acid in most canola to less than 2%...”

“Four years ago FDA granted canola GRAS status. And in 1988, it stopped requiring food companies to identify canola oil as ‘low erucic acid rapeseed oil’ (LEAR) on food labels... Calgene, a California company that’s invested heavily in developing canola varieties tailored to the U.S...”

“ASA [American Soybean Assoc.] needs to think about bringing U.S. canola growers under its umbrella... Farmers see canola as an alternative to planting winter wheat...”

“In addition to handling canola at its facility in Windsor, Canada [ADM Agri-Industries Ltd.], Archer Daniels Midland Co. (ADM) is switching its newly purchased processing plant in Velva, North Dakota, to canola...”

“Several years ago, Procter & Gamble (P&G) switched its Puritan brand cooking oil from a soy/sunflower blend to 100% canola.” A sidebar notes, “Canola oil in Canada accounts for more than 60% of the vegetable oil products, including over 80% of all salad oils. Canada grows more canola than any other country in the world...”

“The European Community (EC) encourages its farmers to grow double zero (00) rapeseed, equivalent to canola.”

1248. **Product Name:** Unisoy Gold Soya Milk (Enriched with Calcium and Vitamins. Made with Organic Soya Beans).

**Manufacturer’s Name:** Unisoy Milk ‘n’ By-Products Ltd.

**Manufacturer’s Address:** Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430-6329.

**Date of Introduction:** 1989 March.

**Ingredients:** Water, whole organic soya beans, pure apple juice (Alar free), calcium, magnesium, emulsifier, lecithin,

vitamins B-12, A, and D-2.

**Wt/Vol., Packaging, Price:** 500 ml Tetra Brik Aseptic carton. Retails for 0.42p (5/91, London).

**How Stored:** Shelf stable; refrigerate after opening.

**Nutrition:** Per 100 ml: Energy 45 kcal (calories), protein 3.3 gm, carbohydrate 4.1 gm, total fat 1.9 gm, saturated fat 0.25 gm, cholesterol 0.0 gm, calcium 95 mg, magnesium 20 mg, vitamin 53 mcg, vitamin D-2 0.03 mcg, vitamin B-12 0.6 mcg.

**New Product–Documentation:** Talk with Neil Rabheru of Unisoy. 1990. July 2. Followed by letter (fax) of July 9. This product was launched in March 1989. It is a liquid (ready to use, not concentrated) soyamilk enriched with minerals (calcium, magnesium), and vitamins (A, D, B-12), made with organic soya beans. It was developed to bridge the nutritional gap between cow’s milk and soyamilk, and try to bring the taste closer to cow’s milk. “This product is the closest match to cow’s milk in terms of nutrition in the ready-to-use form on the European market.” The level of vitamin B-12 was deliberately made higher than that of cow’s milk since it can be difficult for people on non-dairy diets to obtain a sufficient amount of this vitamin.

This new product, which led to the gradual phasing out of the White Wave sweetened soya milk, has been a phenomenal success for Unisoy. It was developed in response to the hundreds of letters they used to get every month asking about the calcium and vitamin content of White Waves Soya Milk. Unisoy was the first company in Europe to launch a ready-to-use, calcium-fortified soyamilk for adults (not including infant formulas). [Note: Earlier calcium fortified soymilks made in Europe for adults included: Granose Soyagen (Powdered, 1967), Plamil Soya Plantmilk (Concentrated, 1981), Semper Soja Dryck (Ready to drink in plain and chocolate flavors, Jan. 1988)]. Alpro’s calcium-fortified soymilk, which appeared on the UK market in Jan. 1990, was developed in response to the success of Unisoy Gold.

Label sent by Heather Paine of SoyaFoods in London. 1991. May. 3.75 by 3.5 by 1.25 inches. Tetra Brik carton. Gold, black, red, and blue on light yellow. “Gold must be shaken well before use. Non-dairy. Tea and coffee: Enjoy the excellent taste of Gold in tea & coffee, by putting milk in the cup first and allowing the beverage to cool slightly before pouring. Refrigerate after opening. Use within 3 days of opening.”

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. The type(s) of calcium used to fortify this product is very critical; Neil figured it out by himself. He uses a combination of calcium types, and this is a trade secret, but neither is calcium sulfate (which would cause coagulation) nor calcium lactate (which would make the product non-vegan).

1249. Continental Grain Company. 1989. U.S. soybean processor consolidation: Capacity by major processor. New

York, NY. 1 p. Unpublished manuscript. Internal report. April 11.

• **Summary:** The table gives figures for 1975, 1983, and 1989. The following April 1989 figures list ranking, percentage of total capacity, number of plants, and capacity in short tons/day (TPD).

1. ADM, 31%, 17 plants, 37,300 TPD.
2. Cargill, 26%, 16 plants, 31,300 TPD.
3. Bunge, 10%, 7 plants, 12,000 TPD.
4. Central Soya, 9%, 7 plants, 11,000 TPD.
5. Ag Processing, 9%, 6 plants, 11,000 TPD.
6. Quincy, 5.8%, 2 plants, 7,000 TPD.
7. Owensboro, 2.5%, 1 plant, 3,000 TPD.
8. Continental, 0.6%, 1 plant, 1,800 TPD.
9. All others, 5%, 6 plants, 6,000 TPD.

Total: 63 plants, 120,400 TPD.

Note that the top 5 companies controlled 85% of capacity in 1989, but only 64% in 1983 and 45% in 1975. The total number of plants in 1989 was 63, compared with 88 in 1983 and 103 in 1975. The total capacity was 120,400 TPD, down from 123,025 in 1983 but up from 92,600 in 1975. Address: Continental Grain Co., World Processing Div., 277 Park Ave., New York, NY 10172.

1250. Harrison, Gilford R. 1989. Ruth Orellana and work with soyfoods in Mexico (Interview). *SoyaScan Notes*. April 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ruth S. Orellana, who did pioneering work with soyfoods in Mexico, is an American, born in Long Island, New York. Now living in Houston, Texas, she is age 73 this year. She married a Mexican, and worked for 12-15 years as a nutritionist for the ABC Hospital in Mexico City. Gil hired her in 1975 as a part time consultant to set up the American Soybean Association's Human Nutrition Center and to develop a booklet of soy recipes. She learned how to use soybeans from ASA. She was most successful in developing soy-based recipes and menus (such as banana-soy cake, 100% TVP sevicehe [usually made with raw fish marinated in lime or lemon juice with olive oil and spices], bacalao [very expensive dried codfish], and chorizo type sausages, hamburger, etc.). She did a marvelous job, training people in restaurants and institutions. She started the original work on the soy-enriched tortilla. ASA's best cooperator on this project was Joaquin Galicia ("La Quina"), director of the PEMEX labor union. He wanted to get better nutrition at lower cost for workers in the union. But recently he crossed the president of the country and was put in jail; all of his soy programs have been discontinued. The greatest use of soy in foods was the use of full-fat soy flour in baked goods (such as the bollilo or Mexican bun) as a milk and egg substitute; it saved money in the formula and extended the shelf life of products. Some companies make soy flour & milk/why blends to sell to bakers. Pan Bimbo, the biggest commercial baker, is still using 3% full-fat soy flour in all of their sweet/

dessert breads. No baker is interested in nutrition, only in improving quality and profits. With each 1% soy flour in a bread, you add 1% more water, which increases profits. As long as you use less than 10% soy flour (3-6% is best) you don't need to add SSL dough conditioner. No one will know the soy is there.

Ruth's soy recipes were published as a 42-page booklet by ASA, first in 1975 in a book titled *Cocinando y Comiendo Con Soya*. The book was reprinted 10-12 times, and in Nov. 1978 the title was changed to *Viva Recetas Con Soya*. ASA in Mexico City also has dozens of loose-leaf institutional soy recipes, with 100-serving portions, distributed free of charge. Address: American Soybean Assoc., Division manager, Latin America, St. Louis, Missouri.

1251. Faga, Betsy. 1989. History and activities of Protein Grain Products International (Interview). *SoyaScan Notes*. April 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** This is a trade association representing manufacturers of 7 processed and blended foods, 5 of which are fortified with soy. One other product, Instant Corn Soy Milk, was dropped about 2 years ago when government surpluses of nonfat dry milk ran out. She considers Corn Soy Milk (CSM) and Corn Soy Blend (CSB) to be one and the same, because the government tends to order either one or the other, based on the availability of nonfat dry milk. Likewise with Wheat Soy Blend (WSB) and Wheat Soy Milk (WSM).

Betsy has been with the organization for 16 years. Six companies (all millers) make P.L. 480 products, and 5 of these are members. Only Lincoln Grain Co., recently purchased by ConAgra, is not. Members include the 5 millers plus 15-20 associate members. PGPI publishes a directory (which is available only to members) that lists members and the products they make, plus related non-proprietary statistics. During the period 1984-86 shipments of P.L. 480 foods increased because of the emergency in Ethiopia. After 1986, shipments were returned to normal and it looks like they will remain steady during the next few years. An up-trend looks unlikely. The program now permits monetization, which allows voluntary agencies, in a certain percentage of the program, to order Title II commodities, then sell it within a country (as to a business, such as a bakery), and use the funds to further food aid in that country (such as enhancing a school lunch program). The cereal-soy blends are not widely monetized, so this decreases demand for them. Demand rises for the basics, such as wheat flour and cornmeal.

Food for Peace started in 1954. The forerunner of PGPI, named Bulgur Associates, was founded in 1963. Their main thrust was to do market development work for bulgur wheat overseas. Betsy began in 1969. Soy fortification of cereal commodities began in the late 1960s by the NRRC in Peoria, Illinois, and the milling companies that are now

members PGPI. Initially only wheat products were fortified (Soy Fortified Bulgur, Wheat Soy Blend), so in 1970 the name was changed to Protein Cereal Products International (PCPI). Then in 1974 the name was changed to Protein Grain Products International as corn and sorghum products were included and the Corn Millers' Export Institute merged with PCPI. They still do market development and focus on P.L. 480 Title II.

The five members who are millers are ADM, Cargill, Cereal Food Processors (Kansas City; wheat flour), Illinois Cereal Mills (large corn millers), and Lauhoff Grain Co. (now a subsidiary of Bunge). In the title II program, Lauhoff is the largest, closely followed by ADM. Associate members make the bags in which the products are shipped, or make the vitamin-mineral premixes or tricalcium phosphate. Address: President, Protein Grain Products Council, 6707 Old Dominion Dr. #240, McLean, Virginia 22101. Phone: 703-821-3717.

1252. DeSilver, Drew. 1989. More Britons just saying no to meat: Survey says. *Vegetarian Times*. April. p. 8. [3 ref]  
 • **Summary:** The percentage of British population age 16 and over who are avoiding meat has risen from 4% in 1984, to 5.8% in 1986, to 8.5% in 1988, according to a poll commissioned by Realeat. The survey shows that women are far more likely to not eat meat or be cutting back than men.

1253. **Product Name:** Granose Sweet Sensation (Soy Ice Cream) [Vanilla, Raspberry Ripple, Tutti Fruitti, Black Cherry].

**Manufacturer's Name:** Granose Foods Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire, MK16 9PY, England. Phone: (0908) 211311.

**Date of Introduction:** 1989 April.

**Ingredients:** Organic soya milk (water, dehulled organic soya beans); raw can sugar; corn syrup; vegetable oil; vanilla bean extract; emulsifier; vegetable mono-diglycerides; Stabilisers: locust bean gum, guar gum, xanthan gum; Natural colour: Annatto.

**Wt/Vol., Packaging, Price:** 750 gm paperboard box.

**How Stored:** Frozen.

**New Product–Documentation:** Form filled out and 4

Labels sent by Granose Foods Ltd. 1990. June 13. In Jan. 1989 Granose's entire factory and offices were moved from Stanborough Park in Watford, to Howard Way in Newport Pagnell. The frozen product, made by Genice Ltd., was introduced in 1989. Label. 7.5 by 5 by 2.5 inches. Paperboard box. Photo of product in a wavy-edged glass next to fruit or flowers on front panel. The box background is white printed with diagonal colored lines. "A delicious non dairy frozen dessert, made with organic soya milk and other natural ingredients." Side panel: "Contains no artificial colours or preservatives." Talk with Neil Rabheru of Uniso. 1990. July 2. Much of Genice's success comes from products sold under brands other than its own.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. In April 1989 Sweet Sensation, another non-dairy frozen dessert, was launched for Granose Foods in a 3/4 liter pack composed of a rectangular plastic tub in a cardboard sleeve, in 4 flavors—tutti fruitti, black cherry, raspberry ripple, and vanilla. Genice made this product for Granose before and after Granose was acquired by the Haldane Group.

1254. Langley, Gill. 1989. Aluminium and soya milks. *Vegan (The) (England)*. Spring. p. 12. [3 ref]

• **Summary:** Dr. Langley cites articles in *The Sunday Times* (Nov. 20), *The Manchester Guardian* (Jan. 4) and *New Scientist* (Jan. 21) that reported on the presence of aluminum in food and its effect on health. "Scientists presently believe that there may be a link between the gradual build-up of aluminum in the bones, brain and blood, and conditions ranging from a softening of the bones, senile dementia (or Alzheimer's disease), and anaemia. Higher levels of

aluminum in soya-based infant formula feeds were reported in some of these articles...

“There is no legal requirement for manufacturers of baby milk powders or soya milks to state the level of aluminium in their products, nor is there an established maximum for these products. Normally, we would not absorb very much of the aluminium that finds its way into our digestive systems—between 75 and 95% of the average 4-8 milligrams of aluminium a day most people eat goes straight through their bodies undigested.

“However, patients with kidney disease are less able to excrete aluminium. In newborn infants during the first week of life (and longer for premature babies) the gut is more permeable, and the likelihood of aluminium being absorbed into the bloodstream is higher; such infants, and particularly underweight babies, have less effective kidneys and may also be deficient in zinc, which puts them at higher risk. These two groups, and possibly old people whose kidneys are not too efficient, are most at risk from aluminium poisoning.”

“Plamil Foods Ltd. estimate that Plamil soya milk in the ready-to-use form contains not more than 780 micrograms of aluminum per litre... Vandemoortele reported that Provamel milk contains ‘less than 5,000 micrograms’ of aluminum per litre... “Unisoy’s soya milk has 50 micrograms per litre... Farley is currently reformulating its OsterSoy powdered infant feed so that it is acceptable to vegans (by replacing animal derived vitamin D-3 with vitamin D-2). This will be available some time later this year. [Ed. See News, ‘Ostersoy Update’.] The amount of aluminum in OsterSoy powder is 2,000 micrograms per kg, but when made up with water the level is about 400 micrograms per litre...

“Those who are concerned to minimize their consumption of aluminum could avoid the use of aluminum pans and antacid medicines.” Address: England.

**1255. Product Name:** Sunrise Iced Yoghert (Non-Dairy Frozen Dessert) [Black Cherry, or Strawberry].

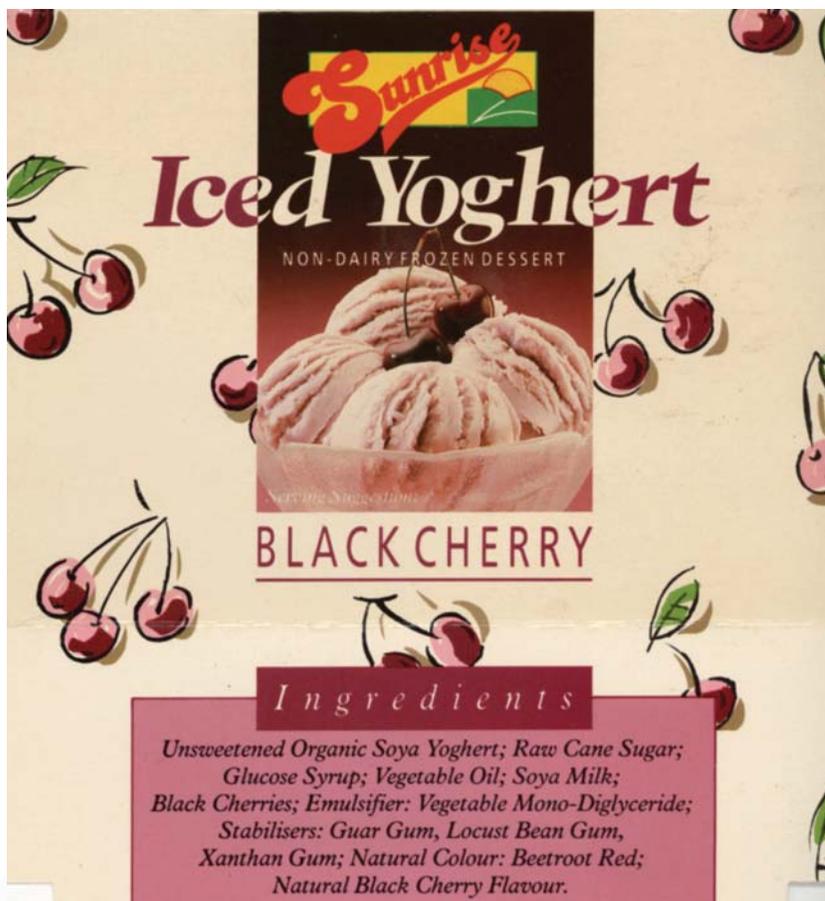

**Manufacturer’s Name:** Soya Health Foods, Ltd.

(Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** Unit 4, Guinness Road, Trafford Park, Manchester M17 1AU, England.

**Date of Introduction:** 1989 May.

**Ingredients:** Unsweetened organic soya yoghurt, raw cane sugar, glucose syrup, vegetable oil, soya milk, black cherries, emulsifier (vegetable mono-diglyceride), stabilisers (guar gum, locust bean gum, xanthan gum), natural colour

(beetroot red), natural black cherry flavour.

**Wt/Vol., Packaging, Price:** 500 ml.

**How Stored:** Frozen.

**New Product—Documentation:** Label (paperboard sleeve that fits over package) sent by Leah Leneman of Edinburgh, Scotland. 1993. Sept. 4. 6 by 12.5 inches. Cherry red, pink, green, bright red, and yellow on white. A photo shows a frosted dish filled with 4 scoops of this soy-based frozen yogurt, topped with 2 cherries. Taste test by Leah Leneman. “Dreadful.” Note: This may be the world’s first soy-based frozen yogurt.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 10. This is a non-dairy soy-based frozen yogurt—resembling ice cream. It was first launched in May 1989, made by Genice, in black cherry and strawberry flavors.

**1256. Product Name:** Maranellis Ice Supreme (Non-Dairy Soy Ice Cream Sweetened with Apple Juice) [Vanilla, Chocolate, Raspberry Ripple].

**Manufacturer’s Name:** Unisoy Milk ‘n’ By-Products Ltd.

(Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430-6329.

**Date of Introduction:** 1989 May.

**Ingredients:** Vanilla (1994): Organic soya milk, apple juice, vegetable oil, cocoa powder, guar gum, locust bean gum, vegetable mono-diglyceride.

**Wt/Vol., Packaging, Price:** 500 ml rectangular plastic tub.

**How Stored:** Frozen.

**Nutrition:** Per 100 ml.: Energy 86.0 calories, carbohydrate 10.8 gm, fat 4.6 gm, protein 1.6 gm.

**New Product–Documentation:**

SoyaFoods (ASA, Europe). 1990.

1(1):3. Made with fresh organic soya milk and sweetened with pure apple juice. Manufacturer's leaflet (8.5 by 11 inches, full-color). 1990. "Maranellis Ice Supreme." A photo shows a long-stemmed glass chock full of soy ice cream topped with 2 red raspberries and a wedge of wafer. Text lauds the product as innovative and delicious. "Made from the very best ingredients, Ice Supreme tastes every bit as good as top quality dairy ice cream. With the flavour, taste and smooth texture of Ice Supreme, you will be amazed to find that it is a Non-Dairy product... Supported by an extensive consumer advertising campaign... You can't stock them all, but there's got to be room for the best." Color photos show the front panel of the label for each flavor. The photo on the leaflet appears on the right side of each label.

Talk with Neil Rabheru of Unisoy. 1990. July 2. Followed by letter (fax) of July 9. This product was launched in May 1989. The Raspberry Ripple is a vanilla base rippled with raspberry puree. "This product broke ground on three fronts compared to products available on the market at the time it was introduced: 1. It was made with fresh soya milk as opposed to soya isolates; 2. It was made with organic soya milk; 3. It was sweetened with pure fruit juice (apple)." Previous manufacturers had used isolates because they did not know how to make soymilk with a high protein levels. Even today, all the soy ice creams in the UK are made from soya isolates. Unisoy makes a special rich soymilk used specially for making their ice cream. He developed the product as if it were a protein-rich sorbet.

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. The manufacture of this product has been transferred from Unisoy to Genice. The Haldane Foods Group has about 99% of the soy ice cream market in the UK.

Health Food Business (UK). 1992. May. p. 33. "Frozen Desserts. Maranelli's: Maranelli's Soya Supreme (organic) available in Chocolate, Raspberry Ripple and Vanilla Wobbler, all with a rrp [or RRP = recommended retail price] of £1.25 for 500ml, trade price £4.80 for 6 x 500ml. Made with organic soya milk and sweetened with apple juice, non-dairy and suitable for vegans."

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. In 1987 Genice began to work with Unisoy to develop Maranellis Ice Supreme (before Unisoy was acquired by Haldane). The product was launched in May 1989 in a ½-liter format, sweetened with fruit juice, in 3 flavors—raspberry ripple, vanilla, and chocolate. The product was made from fresh soya milk, delivered to Genice by Unisoy.

Labels (Vanilla, Chocolate) sent by Genice Foods Ltd. 1994. Feb. 18. 5.25 by 3.5 inches. Fits in the lid of a rectangular plastic tub. Chocolate flavor: Orange, red, white, and black on chocolate brown and yellow. Photo of a cone-shaped stemmed glass filled with ice cream, topped with nuts and a wafer wedge. "Alar free. Made with organic soya milk." UPC indicia.

1257. *Vegan (The) (England)*. 1989. Vegepoll. Spring. p. 7. • **Summary:** The Realeat/Gallup Poll 1988—the 5th such poll to date—has estimated the UK vegetarian population at 13 million—the same as 1987. [Note: The total population of the UK in 1989 was 56.65 million. Thus vegetarians comprised 22.9% of the population]. Further details from: The Realeat Company, (now part of the British Arkady Group), 2 Trevelyan Gardens, London, NW10 3JY. Phone: 01-459-7354. Address: England.

1258. Golbitz, Peter. 1989. Mexican soyfoods producers form association. *Soya Newsletter (Bar Harbor, Maine)*. May/June. p. 7.

• **Summary:** "Representatives of Industrial de Alimentos, Nutricasa, Productos Alimentarios Delicias, Nutrimex, Alimentos Proteínicos S.A., Arancia Purina Proteínas, Archer Daniels Midland, Laboratorios Abbot, Mead Johnson and Nestlé have been meeting with Dr. Susana Dehesa de Manjarrez and Adela Perez of the American Soybean Association's Technical Assistance Center to plan joint

activities targeted at expanding the market of edible soy protein products. The first project is to launch a generic soy advertising campaign directed at 3 market segments: food industry, medical and nutrition community, and food service and consumers.”

“A net result of the program has been the establishment of a new mind set—the reality that with soy, you can feed the same amount of people with less money.” Address: Soyatech, Bar Harbor, Maine.

**1259. Product Name:** Sunrise Ice Dream (Non-Dairy Frozen Dessert) [Mint Carob Chip Flavour, Fruit Cocktail Flavour, Mango & Apricot, Raspberry, Vanilla, or Pistachio Almond].

**Manufacturer’s Name:** Soya Health Foods, Ltd.

(Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** Unit 4, Guinness Road, Trafford Park, Manchester M17 1AU, England.

**Date of Introduction:** 1989 June.

**Ingredients:** Mint Carob Chip: Soya milk, corn syrup, vegetable oil, fructose, carob flour, emulsifier (vegetable mono-diglyceride), stabilisers (guar gum, locust bean gum, xanthan gum), natural mint flavour.

**Wt/Vol., Packaging, Price:** 125 ml plastic cup.

**How Stored:** Frozen.

**New Product–Documentation:** Letter and Labels sent by Genice Foods Ltd. 1994. Feb. 10. These 125 ml small pots of Ice Dream, made by Genice, were launched in mid-1989. In mid-1990 this product was launched with a Dutch label; named Soja Ijs, it was sold in at least one flavor—raspberry (*frambozen smaak*). Label is 3 inches diameter. Paper, fits down into plastic lid. Red, yellow, and green on grey. Color photo shows vanilla colored scoops of ice cream next to fruits and green leaves.

1260. Gibson, Richard; Colby, L. 1989. Man behind soybean stir is a risk taker. *Wall Street Journal*. July 13. p. C1. Western ed.

• **Summary:** Industrialist Raul Gardini, head of Ferruzzi Finanzia S.p.A. in Ravenna, Italy, relishes the unconventional. Under his brash, risk-taking guidance, Ferruzzi has grown into one of Europe’s largest concerns. “Some Italian cartoonists draw him as an eye-patched pirate, an allusion not only to his drooping eyelid and bravado business style, but also his passion for yachting.

“Since assuming control of the once-secretive company on the death of his father-in-law in a 1979 plane crash, Mr. Gardini has turned the agricultural concern into an \$18,000 million business with interests in agriculture, foodstuffs, chemicals, cement, insurance and publishing. It now ranks as Italy’s second-largest private-sector company. While its stock is traded on the Milan exchange, Ferruzzi is still controlled by the Ferruzzi family.”

Mr. Gardini “has become a passionate advocate of the

soybean, and is credited for its introduction and growth in Europe. Because of that, the Italian has been called the Dwayne Andreas of Europe, a reference to the chairman of Archer-Daniels-Midland Co. who has long preached the virtues of the protein-rich crop.

“But some think his advocacy of the soybean as an ‘ecological’ crop that requires fewer pesticides puts him in a box. While he describes himself as an environmentalist, the Montedison S.p.A. chemicals company the family controls is considered one of Italy’s biggest polluters.”

“The 56-year-old industrialist likes to give the impression of being an executive who thinks of society’s greater good: He claims to vote for Italy’s environmentalist Greens Party.”

1261. *Time*. 1989. Ferruzzi’s big pot of beans. 134(4):41. July 24.

• **Summary:** “Clamor is the usual condition in the commodities pits. Last week, however, the soy-bean trading floor of the Chicago Board of Trade erupted in pandemonium as the C.B.O.T. issued an emergency order, its first in a decade, that July futures contracts in excess of 1 million bushels be liquidated. In one day soybean-futures prices plunged 5%, to \$6.86 per bushel. Traders speculated that a single buyer was trying to corner the market or drive up prices. The suspected culprit: Ferruzzi Finanzia, Italy’s second largest privately held company and the third largest U.S. soybean processor since it bought Indiana-based Central Soya in 1987.

“Ferruzzi says its purchases—a reported 30 million bushels of soybeans in the past 18 months—were a legal effort to ensure adequate supplies for its customers. Many traders believe Ferruzzi’s two largest U.S. rivals, Archer Daniels Midland of Decatur, Illinois, and Cargill of Minneapolis, Minnesota, felt the pinch from rising prices and complained to the C.B.O.T. Said one trader: ‘Older, established firms ganged up on the new, foreign kid on the block.’ With prices taking a near panic dive, Ferruzzi has already lost an estimated \$10 million. Harder hit may be U.S. soybean farmers, who last week saw the value of their total crop fall an estimated \$500 million.”

1262. Bonkowski, Alexander T. 1989. The utilization of soy proteins from hot dogs to haramaki. In: T.H. Applewhite, ed. 1989. *Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs*. Champaign, IL: American Oil Chemists’ Society. xii + 575 p. See p. 430-38. [10 ref]

• **Summary:** Contents: Abstract. Introduction. The meat systems: Meat preservation. The emulsion system: Protein, example. Restructured meats: Procedures (preparation of the brine, preparation of hams for pumping, injection of soy protein brines into whole muscle tissue, coarse-ground blends, beef, pork or poultry patties), performance, other

products (dry sausage), semi-dry sausage formulations (basic semi-dry processing schedule, important factors to be watched), smoking and cooking, the basic steps for finishing meat products (reddening, preheating and equalization, hot air processing, baking, roasting, drying, drying [gentle mode], cooking, steaming and scalding, steps for problem-free heat processing). Address: Archer Daniels Midland Co., P.O. Box 1470, Decatur, Illinois 62525.

Non-organic soynuts in bulk (same 4 flavors as page 67). Page 73. Bulk defatted soy flour, and soybeans (organic or non-organic). Ad for Vetara Vegetable Bouillon, which probably contains soy. Address: Harderwijk, Netherlands. Phone: 03410-23240.

1264. Noguchi, Akinori; Isobe, S. 1989. New food proteins, extrusion processes and products in Japan. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists’ Society. xii + 575 p. See p. 375-81. Contains 5 tables and 9 figures. [9 ref]

• **Summary:** Contents: Abstract. Introduction. Wet extrusion cooking of defatted soy flour: Influence of barrel temperature and pH on the extrudate strength, thermoelasticity of soy protein and application of injection molding, possible model of texturization process of DSF [defatted soy flour] in extruder. Some examples related to TVP [textured vegetable protein] research by the Association of Research and Development on Extrusion Cooking: Preparation of very porous TVP from soy protein concentrate, sterilization and granulation of wet okara for making “Tenpei” and culture media for mushroom. A photo shows one of the authors.

Figure 1 shows Japanese production of vegetable protein products (ingredients made from wheat or soy protein) in 1975, and yearly from 1983 to 1987. It increased from 37,000 tonnes in 1975 to 60,000 tonnes in 1987, but growth was static from 1983 to 1987. In 1987 59% of the total was soy protein and 41% was wheat protein.

Figure 2 shows Japanese 1987 production of four types of vegetable protein ingredients: Soy flour 18,000 tonnes, Soy fiber or granules (90% is frozen) 17,000 tonnes; Wheat fiber or granule (2% is frozen) 15,000 tonnes; wheat protein flour 8,000 tonnes. Address: Food Engineering Lab., National Food Research Inst., 2-1-2, Kannondai, Tsukuba, Ibaraki 305 Japan.

1265. Smouse, Thomas H. 1989. Preparation and uses of dietary fiber food ingredients. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 334-40. Contains 8 tables and 2 charts. [47 ref]

• **Summary:** "Although dietary fiber has been an important ingredient in human nutrition since life began, recently it has become the subject of many studies and much research. Only about ten published articles per year appeared in the early 1970's, growing to over 400/year in the early 1980's."

Peter Cleave of Great Britain has received international fame as the father of the dietary fiber hypothesis. Another pioneer in the field is Hugh Trowell, also of the UK. Nutritionally dietary fiber has been associated with weight control, diverticulitis, duodenal ulcers, colon cancer, cholesterol reduction, and diabetes mellitus. A photo shows Thomas Smouse. Address: Archer Daniels Midland Co., 1001 Brush College Rd., Decatur, Illinois 62525.

1266. National Oilseed Processors Association. 1989. Yearbook and trading rules 1989-1990. Washington, DC. [iv] + 123 + 11 p. 23 cm.

• **Summary:** On the cover (but not the title page) is written: Effective August 1, 1989. Contents: Constitution and by-laws. Officers and directors. Executive office. Members. Associate members. Standing committees. Trading rules on soybean meal. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}), sampling of soybean meal {at origin} (automatic mechanic sampler, pneumatic probe sampler, probe sampler), sampling of soybean meal (at barge loading transfer facilities), official weighmaster application, semi-annual scale report, certification of installation of automatic sampler & mechanical divider (at origin), semi-annual certification of automatic sampler & mechanical divider (at origin), certification of installation of automatic sampler & mechanical divider (at barge loading transfer facility), semi-annual certification of automatic sampler & mechanical divider (at barge loading transfer facility), official referee laboratories (meal), official NSPA soybean meal sample bag. Soybean meal export trading rules: Minimum blending procedures for export meal blended at ports, sampling of soybean meal (at vessel loading facilities), weighing of soybean meal (at vessel loading facilities), certification of installation of automatic sampler & mechanical divider (at vessel loading facility), semi-annual certification of automatic sampler & mechanical divider (at vessel loading facility), semi-annual certification of scales at vessel loading facilities. Trading rules on soybean oil. Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, grading soybean oil for color (NSPA tentative method), methods of analysis (A.O.C.S. official

methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed), official weighmaster application, semi-annual scale report, official referee chemists (oil). Soybean oil export trading rules. Uniform soybean oil export contract. Foreign trade definitions (for information purposes only) Appendix 1.

The section on officers, executive committee, and board of directors (p. 7-8) gives the name, company affiliation, and phone number of each person. Officers (executive committee)—Chairman: James W. Lindsay, Ag Processing Inc a cooperative [AGP], Vice Chairman: C. Lockwood Marine, Central Soya Co., Inc. Secretary: John March, Cargill, Inc. Treasurer: John Burritt, National Sun Industries, Inc. Immediate past chairman: John G. Reed, Jr., Archer Daniels Midland Co.

Executive staff: President: Sheldon J. Hauck. Executive vice president: Brose A. McVey.

Board of directors (alphabetically by company; each member company may have up to two representatives on the board; only the first of these may vote): James W. Lindsay & William C. Lester, Ag Processing Inc a cooperative. John G. Reed, Jr. & Michael D. Andreas, Archer Daniels Midland Co. John March & Thomas O. Palmby, Cargill, Inc. C. Lockwood Marine & David H. Swanson, Central Soya Co., Inc. David B. Mulhollem & Bernard Steinweg, Continental Grain Co. Ian White & Donald G. Foster, Elders Oilseeds Inc. Merritt E. Petersen & Stan Eichten, Honeymead Products Co. John Burritt & Jeff Berkow, National Sun Industries, Inc. John M. Wright & Henry E. O'Bryan, Owensboro Grain Co., Inc. Sewell L. Spedden & William Bohan, Perdue Incorporated. Paul D. Otto & J. Richard Galloway, Quincy Soybean Co. James K. Smith & Richard E. Bell, Riceland Foods, Inc. Thomas L. Harper, Southern Soya Corp. D. Daryl Houghton & P. Coleman Townsend, Townsends, Inc.

Executive office, Washington, DC: President, Sheldon J. Hauck. Executive vice president: Brose A. McVey. Administrative asst.: Steven C. Kemp. Legislative asst.: Elizabeth A. Loudy. General counsel: Elroy H. Wolff, Sidley & Austin. Special counsel: Richard O. Cunningham, Steptoe & Johnson.

Members (listed alphabetically by company; within each company, first the name of the official Association representative {who is on the Board and votes}, followed by the other personal members listed alphabetically by surname. For example, Archer Daniels Midland Co., the company with the most personal members, has 34. After the name of each personal member is given with his address and phone number. In the listing below, the number of personal members is shown in parentheses after the name of each company, followed by city and state of the various locations): Ag Processing Inc a cooperative (21); Van Buren,

Arkansas; Eagle Grove, Iowa; Manning, Iowa; Mason City, Iowa; Sergeant Bluff, Iowa; Sheldon, Iowa; Dawson, Minnesota; St. Joseph, Missouri. Omaha, Nebraska. Archer Daniels Midland Co. (23); Archer Daniels Midland Co. (24); Little Rock, Arkansas; Augusta, Georgia; Valdosta, Georgia; Decatur, Illinois; Galesburg, Illinois; Granite City, Illinois; Taylorville, Illinois; Frankfort, Indiana; Des Moines, Iowa; Fredonia, Kansas; Destrehan, Louisiana; Mankato, Minnesota; Red Wing, Minnesota; Kansas City, Missouri; Mexico, Missouri; Clarksdale, Mississippi; Fremont, Nebraska; Lincoln, Nebraska; Fostoria, Ohio; Kershaw, South Carolina; Memphis, Tennessee. Cargill, Inc. (20); Osceola, Arkansas; Gainesville, Georgia; Lafayette, Indiana; Cedar Rapids, Iowa; Des Moines, Iowa; Iowa Falls, Iowa; Sioux City, Iowa; Washington, Iowa; Bloomington, Illinois; Chicago, Illinois; Wichita, Kansas; Burnsville, Minnesota; Minneapolis, Minnesota; South Savage, Minnesota; Wayzata, Minnesota; Kansas City, Missouri; Fayetteville, North Carolina; Raleigh, North Carolina; Sidney, Ohio; Memphis, Tennessee; Chesapeake, Virginia. Central Soya Co., Inc. (13); Gibson City, Illinois; Decatur, Indiana; Fort Wayne, Indiana; Indianapolis, Indiana; Belmond, Iowa; Bellevue, Ohio; Marion, Ohio; Delphos, Ohio; Chattanooga, Tennessee. Continental Grain Co. (8); Guntersville, Alabama; Chicago, Illinois; New York City, New York. Elders Oilseeds Inc. (3); Culbertson, Montana; Blaine, Washington. Honeymead Products Co. (3); Mankato, Minnesota. National Sun Industries, Inc. (3); Minneapolis, Minnesota. Owensboro Grain Co., Inc. (4); Owensboro, Kentucky. Perdue Incorporated (4); Salisbury, Maryland; Cofield, North Carolina. Quincy Soybean Co. (6); Helena, Arkansas, Quincy, Illinois. Riceland Foods, Inc. (7); Stuttgart, Arkansas. Southern Soya Corp. (2); Estill, South Carolina. Townsend's Inc. (2); Millsboro, Delaware.

Associate Members: ADM Agri-Industries Ltd., Windsor, Ontario, Canada. Beatrice / Hunt-Wesson, Fullerton, California. Best Foods, a Unit of CPC International Inc., Englewood Cliffs, New Jersey. 1267. **Product Name:** Unisoy Soya Yogart [Raspberry, Strawberry, Black Cherry, Peach Melba].

**Manufacturer's Name:** Unisoy Milk 'n' By-Products Ltd. (Marketer). Made in southern England by Bridge Farm Dairies. Made since late 1990 in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer's Address:** Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire, England. Phone: 061-430 6329.

**Date of Introduction:** 1989 August.

**Ingredients:** Raspberry (1994): Soya milk, apple juice, raspberries, vegetable oil, emulsifier (vegetable monodiglycerides), stabiliser (pectin), natural raspberry flavour, Bulgarian cultures, colour (beetroot red).

**Wt/Vol., Packaging, Price:** 125 gm plastic cup.

**How Stored:** Shelf stable, 4-month shelf life at room temperature. Refrigerate after opening.

**Nutrition:** Per 100 gm.: Energy 266 Kjoules / 63 Kcal (calories), protein 2.7 gm, carbohydrate 10.5 gm, fat 1.4 gm, cholesterol 0.0 gm.

**New Product—Documentation:** Talk with Neil Rabheru of Unisoy. 1990. July 2. Followed by letter (fax) of July 9. "This product was launched in Aug. 1989 to replace White Wave Soya Yogart. It is now offered in 125 gm servings. Again it is the first product on the market which had the fruit (such as raspberry) preserved in apple juice (instead of sugar), used organic soyamilk, and was sweetened with pure apple juice. Note that the original Honey & Muesli flavor has been dropped and replaced by Peach Melba flavor.

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. The Haldane Foods Group has about 100% of the soy yogurt market in the UK. These products are still on the market and doing well. Archer Daniels Midland Co. 1991. Annual Report. Sept. Page 12 states: "Genice Limited added more yogurts and non-dairy ice creams to its product range."

Interview with Neil Rabheru of Unisoy. 1991. Sept. Unisoy was acquired by the Haldane Foods Group on 21 Dec. 1990. This has proved to be a very positive development for Unisoy. The company now makes only soyomilk. Other companies in the Haldane Foods Group now

make the other soy products that Unisoy used to make—which is more efficient. For example, Genice Foods Ltd. makes soy margarine, yogurts, and ice creams.

Archer Daniels Midland Co. 1992. Annual Report. Sept. Page 8 states: “Genice Ltd.—Wales: Manufactures non-dairy ice cream, soya yogurt, yogice soya cream and specialty margarines.”

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. Unisoy Soya Yogurt was made by Genice starting in late 1990 in 3 flavors—raspberry, peach melba, and black cherry. Genice made these yogurt products for Unisoy before they joined the Haldane Group; before that, they were made by Bridge Farm Dairies in southern England—which attempted to make a shelf-stable product using dairy technology.

Label (cup for Raspberry) sent by Genice. 1994. Feb. 18. 120 gm plastic cup. Red, pink, green, and blue on white. Illustration of strawberries. “Naturally sweetened with apple juice. Non-dairy.” Haldane Foods Group, Cromwell Rd., Bredbury, Stockport, SK6 2RF England. The word “organic” does not appear on this container.

1268. United States District Court—Central District of Illinois. 1989. Ralston Purina Company, a corporation, Plaintiff, v. A.E. Staley Manufacturing Company, a corporation, Defendant. Supplemental findings of fact and conclusions of law pursuant to Rule 52. Case No. 84-1378. 5 p. Decided Sept. 6, 1989. Unpublished manuscript.

• **Summary:** Ralston has sued A.E. Staley for infringement of patent number 3,940,495, which was issued from the application of Ronald Flier (the “Flier application”). The Flier application was filed initially in 1964; a continuation-in-part application was filed in 1966 and a continuation was filed in 1973. The patent was issued in 1976. Staley asserted the defense of inequitable conduct.

The ADM Dutch Patent Application No. 6506477 was a printed publication, with a publication date of 22 Nov. 1965. “A reasonable examiner would have considered it highly material in determining whether to allow the 1966 Flier application or the 1973 Flier application issue as a patent.”

The record establishes by clear and convincing evidence that Robert Brukart, the manager of Ralston’s patent department, knew of the publication date of the ADM Dutch application and knew that the ADM Dutch application constituted a statutory bar to subject matter in the 1966 and 1973 Flier applications that was not supported in the 1964 Flier application. It is clear that Brukart knew the materiality of the ADM Dutch application and intended to conceal that information from the Examiner. “Further, the record demonstrates by clear and convincing evidence that Mr. Brukart intended to deceive, and did deceive the Examiner as to the ADM Dutch application in 1973.”

The court finds no evidence whatsoever that the Examiner considered the Dutch application. The Examiner

expressly informed Ralston on three occasions that he would not consider the prior art until only the most pertinent prior art was presented as was required by the PTO rules. Ralston’s submission of prior art never conformed to the required format. In addition, the ADM Dutch application is not listed among the cited art on the face of the patent. The court rules that patent no. 3,940,495 (the Flier patent) “is held to be unenforceable by virtue of inequitable conduct.”

1269. *SoyaScan Notes*. 1989. Pioneers in vacuum packaging tofu. Its pros and cons (Overview). Sept. 19. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** In late 1977 Redwood Natural Foods Inc. in Santa Rosa, California, became the world’s first company to vacuum package tofu. The pioneer there was Greg Hartman (whose photo appears in the Sept. 1983 issue of *Health Foods Business*, p. 80). Redwood used tofu made by Quong Hop & Co. and distributed and sold the organic tofu under their own brand. An illustration of the machine and description of the process is given in *Tofu & Soymilk Production* by Shurtleff & Aoyagi (1984, pp. 23 & 72; In about 1978 Shurtleff & Aoyagi visited Hartman at Redwood Natural Foods and observed his packaging process).

Since that time, many companies have switched to vacuum packaging their tofu. Pioneers in the USA included: Quong Hop & Co. Jan. 1979, Summercorn Foods Sept. 1979, Nasoya Foods 1981, Zakhi Soyfoods 1981, Pacific Trading Co. 1981, Lecanto Tofu 1981, Swan Gardens 1982, White Wave 1983, Farm Soy Dairy 1985, Island Spring 1985.

Pioneers in Europe included: Aros Sojaprodukter in Sweden 1982, Manna Natuurvoeding in the Netherlands 1982, Auenland Tofu in West Germany 1983, Tofuhaus Tiefenthal in West Germany 1983, and Haldane Foods in England 1985.

A few companies (such as Nasoya) have even dropped vacuum packing and switched back to water pack. Companies using relatively small chamber-bag batch-type machines seem happiest with the technology and have had few problems. Companies using larger, continuous process roll-stock machines have often had ongoing, serious problems.

Advantages of vacuum packaging, in approximate order of importance, are: (1) The package is familiar to consumers and it makes tofu look quite similar to cheese, a related and popular food product; first-time tofu users are not turned off by a cake tofu floating in a pale yellow liquid (which reminds some consumers of a fetus floating in formaldehyde in a biology lab). No other food in the western world besides tofu is sold floating in water. Yet the water that surrounds the tofu inside the vacuum pack detracts from its appearance. Some have even said that the resulting package reminds them of a used condom! (2) Because the tofu is packaged without water, it is much lighter and less bulky, which cuts shipping costs and can expand market areas; (3) Nigari-type tofu

retains most of its natural sweetness, which is leached off in water-pack tofu; (4) Vacuum packaging is generally thought to give the product a longer shelf life than water pack. Typical companies date their tofu for an 18-21 day shelf life; (5) The cost of the package itself is less for vacuum packing, BUT the additional labor required for packaging and labeling with a batch-type machine may make the total packaging cost more than for water pack.

Disadvantages of vacuum packaging, in approximate order of importance, are: (1) Most Asian-Americans, especially first generation Asian-Americans, strongly prefer water pack, to which they are accustomed; (2) Vacuum packed tofu is much more susceptible to damage than water-packed tofu in a rigid plastic tub, unless the vacuum pack is surrounded by a fairly rigid box; (3) It is difficult to vacuum pack soft tofu, which is the texture preferred by many Japanese; (4) Unless the tofu is immersed in chilled water for 6-12 hours before vacuum packing, the yellow whey in the tofu may leech out and collect inside the package, giving the tofu a unappealing yellow hue.

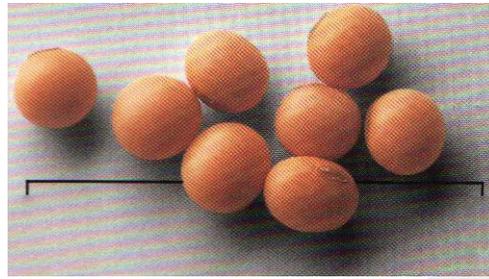

One example of a company that has had problems is White Wave Inc. in Boulder, Colorado, which in May 1983 bought a used Tiromat vacuum packager. Thereafter everything went wrong, so much so that that one machine “almost broke the company’s back.” President Steve Demos later called it “the curse of the Devil,” and his production manager would sometimes ask, only half in jest, “Do you think we are sitting in vacuum packaging hell?” Demos notes: “Tofu is a very difficult product to vacuum pack, though firm tofu is easier than soft. In our case, about 30% of the problems have been caused by the machine, 30% by the product, 30% by the operator, and the rest is absolute bad karma. The process was unforgiving, as was the Tiromat’s maker, which gave White Wave almost no help.” But by Oct. 1989 White Wave had worked the bugs out of their vacuum packing system and now prefers it to water pack.

1270. Archer Daniels Midland Co. 1989. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p.

• **Summary:** Net sales for 1989 were \$7,929 million, up 16.6% over 1988. Net earnings for 1989 were \$424 million, up 20.1% over 1988.

Page 5: Under “Oilseed Processing Operations” is a color photo of eight soybeans and a list of “Products made from soybeans.” The last paragraph (p. 5) reads: “A number of new lecithin products were introduced this year by ADM Ross & Rowe, a volume leader in lecithin since 1926. Ross & Rowe is a vertically integrated processor / refiner marketing quality lecithin products worldwide. Five locations in the United States and one in Canada combine to market large volumes of a wide selection of lecithins.”

A full-page color photo (p. 6) shows soy sausages and soyburgers. A caption notes: “The soy foods operations of British Arkady last year sold enough frozen soyburgers, soy

sausages and mixes to provide over 50 million servings.” Address: Decatur, Illinois.

1271. Leatherhead Food Research Assoc. 1989. Vegetarianism and the consumer: Implications for the UK food industry. Leatherhead Food Research Assoc., Randalls Rd., Leatherhead, Surrey, England. vi + 118 p. Oct. No index. 30 cm. Price: £2,700. [2 ref]

• **Summary:** Contents: Foreword. List of 27 tables. List of 16 figures. Management summary. 1. Introduction: Scope of the research, aims, objectives, research method. 2. Profile of consumers reducing / excluding meat / meat and fish from their diet: Definitions, levels of reduction/exclusion of meat/meat and fish consumption, demographic profile, length of time following current eating pattern. 3. Reasons for reduction/exclusion of meat consumption: Summary of reasons for change amongst adults, reasons for change by demographic profile of adult consumers, summary of reasons for change amongst children, reasons for change by eating pattern of consumers. 4. Future potential of vegetarianism and reduced meat consumption: Consumer intentions, reasons for change. 5. Implications for food consumption habits of the exclusion of/reduction in meat and fish consumption: Changes made to in-home consumption patterns by consumers avoiding meat completely, changes made to in-home consumption patterns by consumers reducing consumption of meat, changes made to out-of-home food consumption patterns by consumers avoiding meat, changes made to out-of-home food consumption patterns by consumers who had reduced meat consumption. 6. Trends in consumption of meat and fish: Introduction, meat, fish. 7. Trends in consumption of meat and fish alternatives: Introduction, vegetables, salad and fruit, alternative protein sources, animal-derivative-free products, overview of vegetarian product introductions to the UK, development of vegetarian products within the catering market, development of novel vegetarian products worldwide. 8. Consumer purchasing criteria for vegetarian food: Introduction, distinctiveness of product, retailer and manufacturer preferences, level of healthy eating concern, level of reaction to food ‘scares’, level of environmental concern. 9. Conclusions.

In the section on “Alternative protein sources” the subsection on “Meat imitations” states that Realeat Vegebangers, Cauldron Foods Tofu Burgers, Granose Soya

Franks and Spicy Links, Protoveg Sosmix, Direct Foods Smokey Snaps, Marks & Spencer Vegetable Cutlets are all on the market (p. 72). Realeat was the pioneer in introducing vegetable burgers (Vegeburgers) and frozen burgers to the health-food trade; they were introduced to supermarkets in about 1986/87. The Vegeburger brand, now owned by Haldane Foods, includes Cheese Vegeburger, Vegebangers, and ready meals. Companies that have introduced vegetable burgers in the last four years include Direct Foods, Vegetarian Feasts, Granose Foods, Tivall, Cauldron Foods, Booker Health Foods, Brewhurst, The Dietburger Company, Realeat, Birds Eye Walls, and supermarket brands. In 1987 Cauldron Foods launched a range of three varieties of tofu burger in vacuum packs; cheeseburgers were launched by both Realeat and The Dietburger Company. In April 1988 Birds Eye Walls launched its Steakhouse vegetable burger and Granose Foods launched four varieties of frozen burgers, incl. Soya & Mushroom, and Nut & Sesame varieties. Tesco introduced a vegetarian burger under its own brand; it was made by Tivall from soya and wheat. In 1989 Realeat (Haldane Foods) introduced a microwaveable Quarter Pounder Burger. In 1985 Granose Foods launched Soya Franks, a meatless sausage. Realeat launched Vegebanger, which includes soya. In 1986 Direct Foods launched a soya-based Sausage Slice and Tivall introduced vegetable protein sausages. In 1987 The Dietburger Company launched an all-vegetable frozen dietbanger and Granose Foods launched Vegetarian Spicy Links. In 1988 Goodlife Whole Foods launched Herb Bean Bangers and Spicy Bean Bangers; Buss Foods introduced a vegetarian sausage, Realeat introduced a frozen Vegebanger, and Granose Foods added a vegetarian sausage to its Wholefoods Kitchen range (p. 76). Address: Leatherhead, Surrey, England.

1272. Ferrari, Ronald. 1989. ADM's new Advanced Nutrition concept and consumer retail soy products (Interview). *SoyaScan Notes*. Nov. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron has been hired away from SRI (formerly Stanford Research Inst.) in Palo Alto to be the market development manager of a new department at ADM under the Protein Specialties Division. He hopes to develop a new line of consumer soyfood products for ADM, which has traditionally focused on commodities. These new products will probably not be based on TVP. This could be an development of major importance to the soyfoods industry. Address: Market Development Manager, Advanced Nutrition Dep., ADM, Decatur, Illinois.

1273. Golbitz, Peter. 1989. Soya Newsletter to change to a quarterly magazine in January, 1990 (Interview). *SoyaScan Notes*. Nov. 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The new publication, which will be called

Soya International, is projected to be 28-32 pages long. The last issue of this year will be a "double issue." There is too much to report on and too little space in a small format. The newsletter is not coming out quickly enough to be a "hot news" publication. And they want to make the focus more international in scope. He has connections in various parts of the world to gather more information. He wants to cover more of the modern soy processing end to broaden the publication's market, but still limit the scope to human edible products. He will guarantee a circulation of at least 1,000 per issue, even if there are not that many subscribers. He may have limited trial subscriptions to major soy companies. For example, ADM buys 53 copies of the *Soya Bluebook* but only 2-3 newsletters. The magazine, which is still in an early, maturing stage, will be near a break-even proposition for the next few years at least; the *Bluebook* is doing great.

One upcoming story will be on Innoval, a continuous tofu-making system that uses ultrafiltration, developed by Alfa-Laval, STS/DTD, etc. Address: Bar Harbor, Maine.

1274. Fitch, Peter. 1989. Re: Haldane Foods Group Ltd. Letter to William Shurtleff at Soyfoods Center, Nov. 27. 1 p. Typed, with signature on letterhead.

• **Summary:** The Haldane Foods Group consists of Direct Foods Ltd., Haldane Foods Ltd., Realeat Foods Ltd., Regular Tofu Co. Ltd., Vegetarian Cuisine Ltd., and Vegetarian Feasts Ltd. Haldane became part of the British Arkady Group in January 1988. Brian Welsby has left the company.

Fitch gives a phone number for Michael Cole in the UK. He also encloses a catalog (and price list) titled Haldane Foods Group, which lists and contains color photos of all products made by the six member companies. The catalog subtitle is "Europe's leading healthier food group." Address: Managing Director, Haldane Foods Group Ltd., 25 Hayhill, Sibley Rd., Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611. Fax 050981-6381.

1275. Haldane Foods Group Ltd. 1989. Haldane Foods Group. 25 Hayhill, Sibley Rd., Barrow upon Soar, Leicestershire LE12 8LD, England. 6 p. Manufacturer's catalog. Full color.

• **Summary:** The Haldane Foods Group consists of Direct Foods Ltd., Haldane Foods Ltd., Realeat Foods Ltd., Regular Tofu Co. Ltd., Vegetarian Cuisine Ltd., and Vegetarian Feasts Ltd. The catalog, subtitled "Europe's leading healthier food group," lists and contains color photos of all products made by the six member companies. A UK trade price list (effective 2 Oct. 1989), attached separately, gives product size, case size, and trade and retail prices in British pounds. Address: Leicestershire, England. Phone: 050981-6611. Fax 050981-6381.

1276. McElfresh, Dinah. 1989. Recent developments at the Soy Protein Council (Interview). *SoyaScan Notes*. Dec. 27.

Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Soy Protein Council now has only 3 members: ADM, Cargill, and Central Soya. The last to leave was Grain Processing Corp. in 1987. Ralston Purina left because they wanted to focus on isolates and dues dollars were being spent more on generic promotion. They had previously been very active. SPC is on good terms with Ralston and still works with them occasionally on regulatory issues. Before the recent spate of mergers and acquisitions, the board had directed SPC to do some promotional activities. Now with the limited membership the board has advised that they want to focus on monitoring and tracking regulatory issues, mainly in the USA and mainly on labeling of consumer products. They are working with USDA and FDA on review. The institutional market continues to be strong and acceptability is high.

SPC is now totally independent of NSPA/NOPA and has been for many years. It used to be a committee of NSPA and she thinks it became independent in 1971 at the time the committee became the Food Protein Council. The last news release by SPC was when FNS (USDA's Food & Nutrition Service) opened the School Lunch Program to all vegetable proteins.

There used to be Associate Members like Lipton and Quaker Oats and others that used the products. They were not voting members but they participated in meetings. This was discontinued in the 1970s. Address: 1255 Twenty-Third St., N.W., Washington, DC 20037. Phone: 202-467-6610.

1277. *Soya Newsletter (Bar Harbor, Maine)*. 1989. ADM plans to expand soy protein facility. Sept/Dec. p. 12.

• **Summary:** "Archer Daniels Midland Company announced that they will be building a \$70 million soy protein complex at its soybean processing plant in Europoort, Holland. Construction of the complex will begin when necessary permits are issued, and officials expect the complex to be in operation by the end of 1990, or very soon thereafter.

"The expansion will provide facilities to produce soy flour, soy protein concentrate, isolated soy protein, and textured soy products... 'Europe has lowered the support for dairy products and consequently the supply of milk and other dairy products has dropped, making prices higher, and creating a market for soy proteins...'

"The processing plant at Europoort has been used for oil extraction to date, but with the continued growth of the European market, and new possibilities developing in the Soviet Union, this expansion holds great promise for ADM."

1278. *SoyaScan Notes*. 1989. Major soy-related company acquisitions and mergers worldwide 1970-1989 (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1970 March—Miles Laboratories of Elkhart, Indiana (most famous as the maker of Alka-Seltzer) acquires Worthington Foods of Worthington, Ohio (most famous for

its Morningstar Farms line of meat alternatives), making it a wholly owned subsidiary.

1973 Jan. 15—ADM acquires 50% of British Arkady Holdings Ltd. and its subsidiary British Arkady Co. Ltd. of Old Trafford, Manchester, England.

1977 (late)—Bayer A.G. of Germany (makers of Aspirin) acquires Miles Laboratories of Elkhart, Indiana; as part of the deal they Worthington Foods, a subsidiary of Miles.

1979—Bunge Corp. acquires Lauhoff Grain Co. of Danville, Illinois.

1982 Oct. 15—Worthington Foods is repurchased from Miles Laboratories by a group of three Seventh-day Adventist investors in a leveraged buyout. During the 12 years under Miles, sales increased five-fold. Sales volume in 1983 was an all-time high. The company employed 250 people.

1983 April 21—Hybritech Seed International, Inc., a wholly-owned subsidiary of Monsanto Company, purchases the Jacob Hartz Seed Co. of Stuttgart, Arkansas.

1983—House Food Industrial Co., Ltd. of Japan purchases 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company is renamed House Foods & Yamauchi, Inc.

1985 May 31—Barricini Foods Inc. acquires Farm Foods (makers of Ice Bean soy ice cream) of Summertown, Tennessee.

1985 March—British Arkady acquires Direct Foods Ltd.  
1986 Feb.—British Arkady acquires Vegetarian Feasts Ltd.

1986 Dec. 1—White Wave acquires Soyfoods Unlimited, Inc. of San Leandro, California. It is White Wave's first acquisition.

1987 Aug.—British Arkady acquires Haldane Foods Ltd. and Regular Tofu Co. Ltd. It also acquires Vegetarian Cuisine Ltd. in 1987.

1987 Oct.—The Ferruzzi Group in Ravenna, Italy, acquires Central Soya Co. in Ft. Wayne, Indiana.

1987 Dec. 31—ADM acquires the rest of British Arkady Holdings Ltd. so that it now owns 100%.

1988 Jan.—The British Arkady Group acquires Haldane Foods.

1988 Feb.—Westbrae Natural Foods (of Berkeley, California, maker of soymilk) is merged with and becomes a wholly-owned subsidiary of Vestro Foods, a publicly traded company in City of Commerce, Southern California. Most of Westbrae's top management decides not to stay with the company.

1988 Sept.—Haldane Foods Group acquires Realeat Foods Ltd.

1989 Feb.—Haldane Foods Group acquires Saucemasters Ltd. It also acquires Genice Foods Ltd. in March 1989.

1989 Feb. 16—Edward Lowe of Michigan, the inventor of Kitty Litter, purchases the majority of shares in INARI

Ltd. from Len and Irene Stuttman; but they kept a minority ownership in the company.

1989 April–Huegli Naehrmittel A.G. acquires Yamato Tofuhaus Sojaprodukte of Tuebingen, Hirschau, West Germany. Note: This is the earliest record seen (Feb. 2013) that mentions Huegli in connection with soy.

1989 April 22–Lima Foods of Belgium acquires Jonathan P.V.B.A. of Belgium.

1989 Sept.–Lima Foods of Belgium is purchased from Vibec by Euronature (pronounced as in French, YU-ro nA-TYUR), a large international food company headquartered in Paris, France.

1279. *Yearbook and Trading Rules*. 1989-2000. Serial/periodical. National Oilseed Processors Association. Annual. • **Summary:** Preceded by: Year Book and Trading Rules. Issued annually to all members of the association. The 1981-82 Year Book, for example, was spiral bound and 23 cm high. The last published yearbook was 2000-2001. Thereafter, most of the information appeared on the association's website nopa.org.

Letter (e-mail) from Kathy Pennington, office administrator of NOPA. 2005. Aug. 15. NOPA no longer publishes the Yearbook & Trading Rules. In 2003, when she joined NOPA, it was available online only with purchase. Beginning in 2004 NOPA made the trading rules available to all on its website. Names and contact information for the officers and board members, are listed under "About us–Board and staff. The member companies names, headquarter addresses, headquarter phone numbers, and weblinks are under Membership." The detailed membership roster (contact information, committee membership, etc.) is available to Members Only. HOPA has no extra printed copies at all; they have only one copy of each Yearbook for their records. Address: 1800 M. St., N.W., Washington, DC 20036.

1280. **Product Name:** [Soya Flakes, Soya Granules, Soynuts (Curry, Herbs, or Spices), Soy Coffee].

**Foreign Name:** Soja Flocken, Soja Granulat, Soja Knabbers, Soja Kaffee.

**Manufacturer's Name:** Die Sojabohne.

**Manufacturer's Address:** Goltsteinstr. 43a, D-5000 Cologne 51, West Germany.

**Date of Introduction:** 1989.

**New Product–Documentation:** Brochure. 1989. "Rezepte & Informationen zu unseren Soja Produkten" [Recipes and information on our soy products]. 8.5 by 11 inches. Black on green. 6 panels. A black-and-white photo on the front panel shows packages of the company's various soy products. The soy flakes are used to make Muesli, Sauerkraut Patties (Puffer), Soya & Mushroom Soufflé, Soya Corn Pudding, and Soya Cabbage. The granulat is probably TVP.

1281. Doborjan, Karolyne; Goenczi, Ildiko. comps. 1989. *Eteleink szojaval. Masodik kiadas* [Our soya foods. 2nd ed.]. Budapest, Hungary: Feherjetechnologiai Tudomanyos Termelesi Egyesules (Association for Protein Research Technology and Production). 48 p. [Hun]

• **Summary:** This is a soyfoods cookbook, compiled by two Hungarian women, with recipes using tofu, soymilk, and TVP.

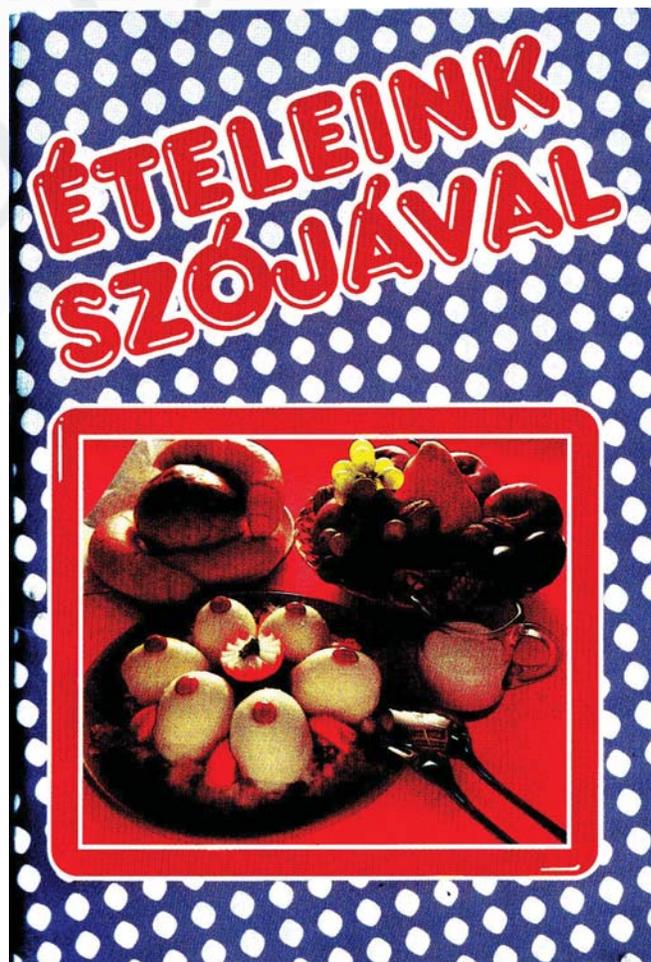

Contents: Introduction. I have prepared it and enjoyed it: List of products and first courses. Soups. Main courses. Desserts, candies and cakes. Beverages. The introduction gives a short account of the aim of the booklet: to serve as a guide for the reader to the use of different soy products. Address: Budapest XII., Goldmark K. u. 3. Budapest Pf: 340 1536, Hungary. Phone: 155-52-02.

1282. **Product Name:** So Good Soya Milk [Regular, or Sugar-Free Organic].

**Manufacturer's Name:** Haldane Foods Ltd. (Importer-Distributor). Made in Australia by Sanitarium Foods.

**Manufacturer's Address:** 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611.

**Date of Introduction:** 1989.

**Wt/Vol., Packaging, Price:** 1 liter Tetra Brik Aseptic carton. Retail for £0.69.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Haldane Foods Group catalog and price list. 1989. Oct. 2. This product is listed in both documents under the Haldane Foods Ltd. product line. A color photo in the catalog shows the label (1 liter carton). It has black lettering and vertical stripes on a white background. On the front panel is an impressionistic sketch of a snow-capped mountain in the distance with several soybean plants growing in the immediate foreground.

Talk with Philip Marshall of Cauldron Foods. 1990. July 9. Haldane's soymilk used to be called Sojal. They may have lost the fight over the name. It is very likely that the Haldane group has this product made by some company outside of the group. They do not have the equipment needed to make a quality soymilk. There is no connection with Sanitarium Foods in Australia.

1283. Leneman, Leah. 1989. *Slimming the vegetarian way*. Revised and reset ed. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 144 p. Index. 20 cm. 1st. ed. 1980.

• **Summary:** The menus in this natural-foods, vegan cookbook are designed for 1 person and the daily calories intake is kept at about 1,000 calories. The book takes a positive attitude toward dieting by focusing on those foods you can eat, rather than those you should avoid. Each "menu" consists of breakfast, lunch, and dinner for 1 day. For each meal there is one column for Imperial (Metric) measurements, one for American measurements, and one for calories, with a calories for each meal and for the day. There are menus for each of the four seasons plus chapters on crash diets, desserts, and a vegetarian wholefood calorie chart.

The preface to the new edition notes: "The greatest change which has occurred since the first edition of this book appeared has been the phenomenal proliferation of soya foods (soyfoods in American parlance). Tofu is arguably the best friend a slimmer ever had, for no other food so low in calories and high in protein is as versatile as tofu. Tempeh is another fine soya food for slimmers, though as it is not as readily available as tofu, I have confined its use to only one recipe. Since soya milk and yogurt are now so easy to obtain, I have given them as alternatives to the dairy versions, so that vegans, and others trying to cut down on dairy produce, will be able to use the book in the same way as lacto-vegetarians."

Soy-related recipes include: Pineapple tofu salad (p. 36). Tofu celery loaf (p. 39). Tofu-stuffed aubergine (eggplant, p. 66). Scrambled egg or tofu, sausalata and tomato (p. 89, 118). Tofu slices on toast with creamy gravy (p. 98). Miso soup with tofu (p. 102). Spaghetti with tempeh and mushroom sauce (p. 127). Vegetable charlotte with smoked tofu (p. 129). Soya milk and soya yogurt are always listed as

alternatives to skim milk or yogurt from cows. TVP is used as an ingredient in many recipes, and "Tamari (soy sauce)" is widely used as a seasoning. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

1284. Metcalfe de Plata, Edith. 1989. *Mexican vegetarian cooking*. Rochester, Vermont: Healing Arts Press, a division of Inner Traditions International, Ltd. 128 p. Illust. by Clive Birch. Index. 22 cm.

• **Summary:** Chapter 7, titled "Soybeans" begins: "Soybeans are full of vitamins A, E, K, B-1, B-2, potassium and lecithin." They are processed into many forms: "grits, meal, powder, flour, nuts, tofu, pastas, and are also made-up to resemble different types of meat (Tvp)."

Soy related recipes include: Boiled soybeans (with "½ pound {1 cup} dry soybeans, p. 101). Soybean patties (*Empanadas de frijoles soyas*, with "2 cups soybeans, cooked and mashed," p. 102). Dry-roasted soybeans (*Frijoles soyas asadas*, with "cooked soybeans," p. 103). Fried soybeans (*Frijoles soyas fritas*, with "2 cups soybeans, cooked," p. 104). Soybean casserole (*Cazuela de frijoles soyas*, with "2½ cups soybeans, cooked," p. 105).

Note: This 1989 edition is the same, page for page, as the 1984 edition. Address: Manager of a vegetarian restaurant, Guadalajara, Mexico.

1285. Alimentos Granix. 1989? *Granix por excelencia* [Granix for excellence]. Av. San Martin 4625 (C.P. 1602), Florida, Prov. de Buenos Aires, Argentina. 8 p. Undated. Manufacturer's catalog. 25 x 19 cm. [Spa]

• **Summary:** This full-color undated catalog describes the Granix line of health foods, and many color photos show the inside and outside of the plant plus individual products in their packages. Soyfoods include: Galletitas con Soja (crackers with soya), Nutrisoja (TVP granules), Nutrisoja para Milanese (TVP in Italian/Milano Sauce), and Porotos de Soja (soybeans). On the cover of the 1990 edition of this brochure is a special seal that states: "Granix, 50 years of excellence with foods." Address: Buenos Aires, Argentina. Phone: 760-0307/7292/5676.

1286. **Product Name:** TVP2 Textured Soya Concentrate. **Manufacturer's Name:** British Arkady Co. Ltd. **Manufacturer's Address:** Old Trafford, Manchester, M16 0NJ, England. Phone: 061-872 7161.

**Date of Introduction:** 1989?

**Wt/Vol., Packaging, Price:** 25 kg multi-ply paper sacks with a protective moisture-proofed layer.

**How Stored:** Shelf stable.

**New Product–Documentation:** Manufacturer's brochure. 1989? TVP2 Textured Soya Concentrate (70% protein). 4 p. Discusses: How the product is made into TVP2 chunks, strips, and mince. Applications: Manufactured meat products, ready meals/institutional catering, health and vegetarian

products. It offers quality, economy, and nutrition. Methods of use. Nutritional analysis. Packaging and storage.

1287. **Product Name:** Arkady Sparkle: Granular Soya Protein Concentrate.

**Manufacturer's Name:** British Arkady Co. Ltd.

**Manufacturer's Address:** Old Trafford, Manchester, M16 0NJ, England. Phone: 061-872 7161.

**Date of Introduction:** 1989?

**Wt/Vol., Packaging, Price:** 25 kg multi-ply paper sacks with a protective moisture-proofed layer.

**How Stored:** Shelf stable.

**New Product–Documentation:** Manufacturer's brochure. 1989? Sparkle. 2 p. Discusses: Basic product description. Application: Added to chopped meats. Typical nutritional analysis. Packaging and storage.

1288. British Arkady Co. Ltd. 1989? A guide to British Arkady bakery products. Old Trafford, Manchester, M16 0NJ, England. 8 p. Undated. Catalog. 30 cm.

• **Summary:** This booklet comes inside a portfolio titled "Arkady ingredients for the food industry." On the cover are color photos of mostly breads and other baked goods, plus some meats. On the mailing label is stamped "Bakery products. Soya proteins."

On page 4, "Other products in our range are: Dosoy: Enzyme active flour for use in all types of bread process to give improved crumb softness, color and yield. Hisoy: Full fat soya flour used as a quality improver in cake and pastry goods. Use Hisoy for richer color and eating quality... Soylec C15: Lecithinated soya flour (15% lecithin)... TVP: Textured vegetable protein. Use alongside meat in savory goods for dramatic improvements in quality and economy." Address: Manchester, England. Phone: 061-872 7161.

1289. **Product Name:** [Natura–Naturana Patty Mix, and Bolognese Spaghetti Sauce Mix].

**Foreign Name:** Natura–Naturana Soja Bratlingsmischung, und Naturana Soja Bolognese.

**Manufacturer's Name:** Gebr. Hiller GmbH & Co. KG. [Naturawerk].

**Manufacturer's Address:** Neanderstr. 5, D-3000 Hannover 1, West Germany. Phone: (0511) 66 20 20 / 29.

**Date of Introduction:** 1989?

**New Product–Documentation:** Booklet. 1989? Ach So-Ja. This booklet, with many color photos, shows the manufacturer's products and recipes using them. The emphasis is on these two TVP-based soy products. Small photos show both Labels. Each has a color photo on the cover against an orange and yellow background. Bratling: "Already seasoned. Made purely from plants (*rein pflanzlich*)." Bolognese: "With all ingredients needed for 200 gm of spaghetti–made purely from plants."

Label for Naturana Soja-Ragout sent by Anthony

Marrese. 1990. Dec. 12. The name of this company now seems to be Naturawerk, located at D-3000 Hannover. The brand is both Naturana (most prominent) and Natural. On the label is shown small color photos of the labels for Naturana Soja-Bolognese, and Naturana Soja-Bratlinge.

Label for Soja-Bratlinge–Fertigmischung sent by Heather Paine of SoyaFoods in London. 1993. Nov. Note that the name of this product has changed slightly. The name of the company seems to be Naturawerk, D-3000 Hamburg. Ingredients: Soya protein, fine bread crumbs, unheated (*ungeh.*) vegetable oil, spices, starch, oat bran, salt, caramel. Retail for DM 5.15. Makes 9 patties.

1290. Gebr. Hiller GmbH & Co. KG. 1989? Ach so-ja. Die besten Menues mit Naturana: Herzhaft, raffiniert, aromatisch [Ach so-ja. The best menus with Naturana: Hearty, refined, aromatic]. Neanderstr. 5, D-3000 Hannover 1, West Germany. 12 p. Undated. 15 x 11 cm. [Ger]  
• **Summary:** This booklet, with many color photos, shows the manufacturer's products and recipes using them. The emphasis is on TVP-based soy products, especially Naturana Soja Bratlingsmischung, and Naturana Soja Bolognese (Spaghetti Sauce). Address: Hannover, West Germany. Phone: (0511) 66 20 20 / 29.

1291. Granose Foods Ltd. 1989? A selection of recipes using Granose delicious health foods. Stanborough Park, Watford, Herts. WD2 6JR, England. 28 p. Undated.

• **Summary:** Contents: Main meal entrées. Dinner party entrees. Supper dishes. Party and picnic fare. Miscellany. Each recipe calls for the use of a Granose food product. The booklet contains some color photos. On the front cover is a color photo of fruits, grains, bread, milk, eggs, etc. Address: Watford, Herts., England.

1292. Sanitarium Health Food Co. 1989? Sanitarium: The people who believe food should not only taste good, it should be good for you! 148 Fox Valley Rd., Wahroonga, NSW 2076, Australia. 8 p. Undated. Manufacturer's catalog.

• **Summary:** Contents: Background. Manufacture. Retail. Export. Products.

In the late 1800s a group of immigrants from the USA, all of whom were members of the Seventh-day Adventist Church, decided to make their living by distributing health foods. At first they imported a selection of products from Battle Creek, Michigan, then famous for its sanitarium. The first products arrived in Melbourne in 1897. They included Granola, Caramel Cereal, and gluten products. But when demand outstripped supply, in late 1897 a baker, E.C. Halsey, was persuaded to migrate to Australia to start up a manufacturing plant similar to the one he had operated in Battle Creek. On Nov. 8 he arrived in Sydney en route to Melbourne, totally unaware of what he was starting. The records show that the St. George's Bakery was rented in

Melbourne in 1898. The production of Caramel Cereal and Granola commenced immediately.

In 1898 the group moved to larger premises in Coorانبong, a rural area south of Newcastle in New South Wales, and adopted the name Sanitarium Health Food Company. With Halsey in charge, production commenced in a large defunct sawmill in 1899. After a period of uncertainty, the Company grew and expanded until today, it has manufacturing plants in all states of Australia, in both islands of New Zealand, and in Papua New Guinea. In about 1906 the company's first retail shop opened in the Royal Arcade, Sydney. Many of the early shops included a vegetarian restaurant. Today the company operates some 70 retail shops. It also has an export division in Sydney. In 1935 the Australasian Food Research Laboratories were started. Located on the spacious grounds of the Coorانبong plant, they now employ a staff of nearly 40 people. Photos show the original Coorانبong factory, early products (incl. Nut Meat, Protose, Weet-Bix, Corn Flakes, and Marmite yeast extract), and today's food factories at Coorانبong, Victoria, and Palmerston, North New Zealand.

Product lines include Cereals (The company's leading product is Weet-Bix, the most popular breakfast cereal in Australia and New Zealand. It was first manufactured under the Sanitarium name in the mid-1920s, and comes in the shape of little biscuits. Other well known brands are Granose, Bran-Bix, and Sanitarium Skippy Cornflakes), Juices and Drinks (So Good, a non-dairy soy drink, is the newest introduction), Spreads (such as peanut butter and Marmite), Muesli Bars, Specialty Lines (such as dried fruits), Canned Protein Foods (all vegetarian, such as B-B-Q Links, Tender Bits, Vegetarian Redburger, and Nut Meat), and Sundried (incl. TVP products, and Caffex coffee substitute); a color photo shows all of these.

The name and address of the company's head office, export division, and various food factories and retail outlets is given. Address: Wahroonga, NSW, Australia.

1293. Realeat Company (The). 1990. The 1990 Realeat survey 1984-1990: Changing attitudes to meat consumption [in Great Britain]. London. 9 p.

• **Summary:** This seventh consecutive study, conducted by Social Surveys (Gallup) Ltd. is based on 4,162 interviews with people aged 16 and older. "The trend away from meat: Vegetarians now represent 3.7% of the adult population, an increase... of 76% since the survey began in 1984, when vegetarians registered 2.1%.

"Those Avoiding Red Meat, not totally abstaining, represent 6.3% of the adult population, an increase... of 232% since the survey began in 1984, when those avoiding red meat made up just 1.9% of the population.

"The Combined Group of non meat-eaters (vegetarian and those avoiding red meat) therefore represents one in ten of the adult population (10.0%). This is an increase of...

150% over 1984 (4.0%).

"Total population—The total number of people who avoid red meat or are vegetarians is 5.6 million, up from... 2.24 million in 1984.

"Eating less meat—A full 43% of the adult population are now claiming to be 'eating less meat' (or none at all) and the main reason for this is health, cited by four in ten in the category.

"Women & men: Women are far more likely to be non meat-eating than men. Whereas 7.1% of men (1984 3.3%) claim to eat meat rarely or not at all, the figure for women is 12.8% (1984 4.8%)... For the seventh year, women in the 16-24 year age group are the most likely to eat little or no meat, with 22.4% in the combined vegetarian or avoiding red meat group.

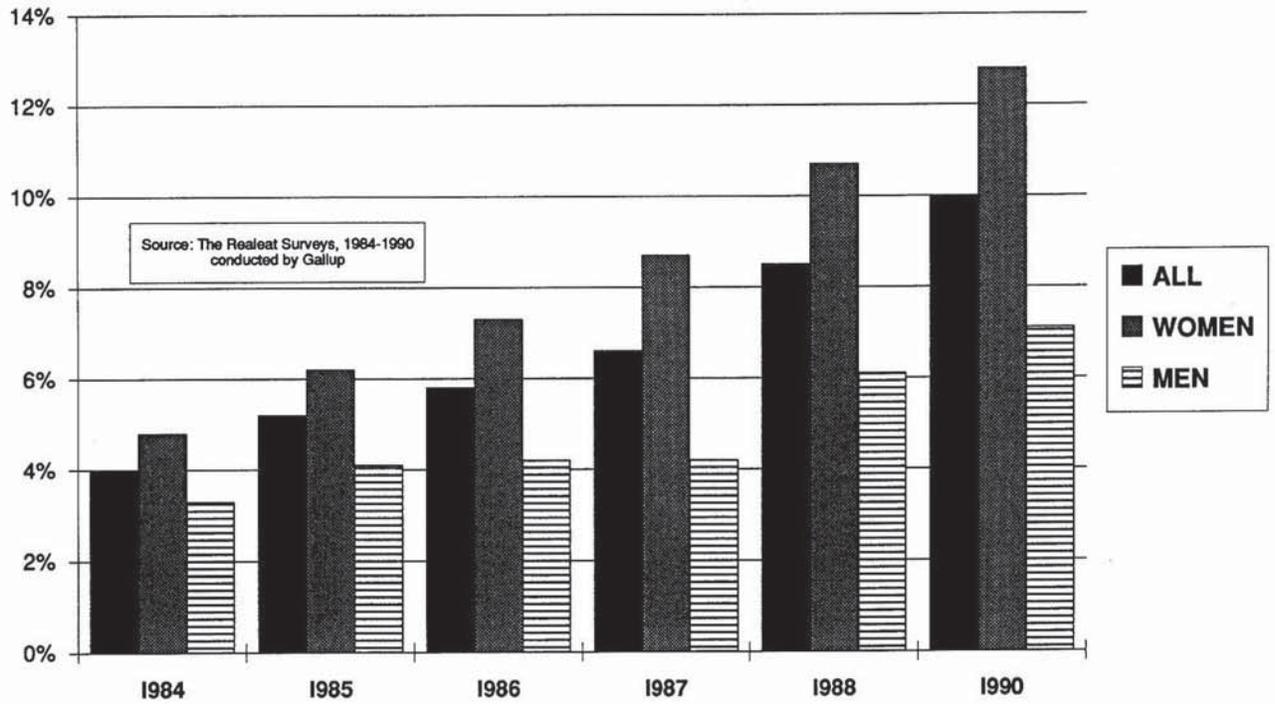

"Region: Most of those becoming vegetarian, or cutting red meat out of their diet, seemed to be doing so in the south of England"—as opposed to the Midlands, North, or Scotland. "In the South a whopping 37% more people knocked meat out of their food chain over the past two years,..."

The report contains many useful charts and graphs. Two bar charts are shown here. Address: 2 Trevelyan Gardens, London NW10 3JY, England. Phone: 01-459-3401.

1294. Fehlberg, Eric C. 1990. Seventh-day Adventist health food companies in Europe (Interview). *SoyaScan Notes*. March 7. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter dated 24 May 1990 clarifying details.

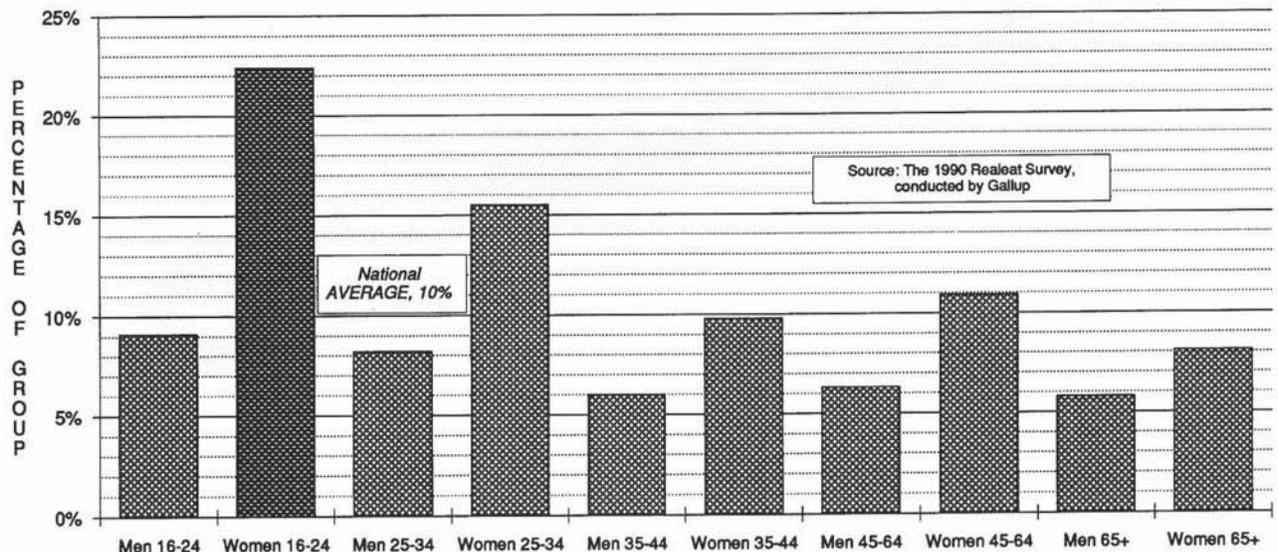

• **Summary:** There are three major Seventh-day Adventist (SDA) food factories in Europe, each owned by the church: DE-VAU-GE in West Germany, Nutana in Denmark, and Granose in England. There are smaller factories in Spain, and Switzerland. All these companies are owned by the SDA church. The leading Adventist food companies, ranked in descending order of annual sales, are: 1. DE-VAU-GE, established 1899 in West Germany. They are by far the biggest in Europe. They manufacture a total of 257 products. DE-VAU-GE began making its own tofu in Jan. 1986; before that it purchased tofu from a Belgian soymilk company [Note: actually from Heuschen-Schrouff in the Netherlands]. When Michael Makowski took over as managing director in about 1972-73, company sales were about US\$3-4 million. By 1983 sales were about \$18 million. Since then growth has been fantastic. 1989 turnover was DM 84 million (US\$49 million). This is due to both excellent management and the German interest in natural, health, and vegetarian foods. 2. Nutana, est. 1898 in Denmark. They are about half the size of DE-VAU-GE. Under the management of Bent Nielsen, who was there until 3 years ago, the company grew rapidly. Since 1987 growth has flattened, but there is great potential for future growth. 3. Nutana in Norway (Nutana Norge), formerly Dagens Kost, est. 1970. They were established as a marketing company for Nutana, Denmark, and they

### NON MEAT-EATERS. by sex 1984-1990

NOTE: There was no survey conducted in 1989

### NON MEAT-EATERS, by age and sex - 1990

Respondents declared themselves to be vegetarian, vegan, or avoiding red meat in their diet.

sell all the soyfoods made by Nutana, Denmark. They also manufacture 55 products, but they import and wholesale 321 products. All of the imports come from European Adventist companies. 4. Granose Foods, est. 1899 in England. They manufacture 39 products and distribute 98 more (mostly from Nutana or DE-VAU-GE). They have been a manufacturer since 1899, and they built a new food plant in 1989. Their business is now growing rapidly. 5. Nutana in Sweden (AB Svenska Nutana) was renamed in 1987. It was formerly named Edakost Food Company, Sweden, est. 1970. 6. Nutana in Finland, formerly Finn-Nutana, est. 1979. 7. Pur-Aliment, est. 1928 in France. They are not a food manufacturer; purely marketing. 8. PHAG Food Factory (Fabrique de Produits Dietetiques), est. 1895 in Switzerland. The small factory produces 40-50 tons of food a month. 9. Granovita Spain, was founded and began manufacturing in about Aug. 1985 in Valencia, Spain. They do not produce any soyfoods at all, but they market soy products made by DE-VAU-GE in West Germany and by Nutana in Denmark. 10. Nutana in the Netherlands, founded in 1986. They are presently selling all the products produced by Nutana of Denmark as well as 5 other products: Vitanex (Sandwich cream), Rondolettes (Chickenlike or beeflike flavor), Snackers (Soy sausages), Boulettes (Dinner balls).

The Austrian Food Company, founded in 1976, was a restaurant rather than a food manufacturer; it was closed in 1987.

Granose and DE-VAU-GE were both importing foods from Loma Linda in the USA. But now that Loma Linda has been sold to Worthington Foods, it is not clear what will happen to these imports. Today, the various Nutana companies are independent, but there is much talk of bringing Nutana in Norway and Holland together with Denmark. Nutana has always been behind the expansion of SDA food work in the Scandinavian countries. Using the common name Nutana greatly facilitates marketing.

The European food companies have grown at different rates, largely dependent on the effectiveness of each company's management. The trend has been generally up. The highest growth rates in the past 5 years have been shown by Granose in England (though it started from a smaller base), followed by DE-VAU-GE in West Germany. Pur-Aliment and Nutana have had a bit of a struggle.

All of these companies pay a portion of their profits back to the church. They are encouraged to pay about 20% of profits back to the church, but some pay almost 50%. This is similar to the dividends paid by secular companies. Fehlberg believes that tofu will be the growth food of the future; it has great growth potential that has not yet begun to be realized. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

1295. Fitch, Peter. 1990. Re: The Haldane Foods Group. Letter (fax) to William Shurtleff at Soyfoods Center, March 26. 3 p.

• **Summary:** The Haldane Foods Group is composed of Direct Foods Ltd. (founded 1980, acquired by the Group in March 1985), Vegetarian Feasts Ltd. (founded 1984, acquired Feb. 1986), Haldane Foods Ltd. (founded 1983, acquired Aug. 1987), Regular Tofu Co. Ltd. (founded 1983, acquired Aug. 1987 since it was owned by Haldane), Vegetarian Cuisine Ltd. (founded 1985, acquired 1987), Realeat Foods Ltd. (founded 1984, acquired Sept. 1988), Saucemasters Ltd. (founded 1988, acquired Feb. 1989), and Genice Foods Ltd. (founded 1988, acquired March 1989).

Genice (pronounced gen-AIS) makes non-dairy frozen desserts (ice creams). Saucemasters makes a vegetarian mayonnaise, free of eggs and dairy products.

“Between them, the companies encompass a wide range of ‘Healthy Foods’ including chilled, frozen, dry, sauces, desserts and non-dairy ices.

“Although the individual companies have separate identities and sites, they share a common sales and marketing team and enjoy business in all market sectors including health food stores, supermarkets and catering.

“The group is very active in new product development, believing that the life blood of the health food market lies in innovation.

“Customer and market requirements are constantly changing and a great deal of effort is put into keeping pace with these changes in demand.”

Note: At Helfex 90 in April 1990 in England the Haldane Foods Group launched of 21 new products. This was NOT in celebration of its 21st birthday. Address: Managing Director, Haldane Foods Group Ltd., 25 Hayhill, Sibley Rd., Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981 6611.

1296. Marshall, Philip. 1990. The tofu industry and market in the UK (Interview). *SoyaScan Notes*. March 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The largest tofu manufacturer in the UK is probably Dragon & Phoenix in London. They do not reveal anything about their production or sales statistics. In 1984 they were producing an estimated 10,000 kg/week. Now they may be producing roughly 20,000. Second largest is Cauldron Foods, which now produces about 15,000 kg/week, working long shifts and using a completely continuous process that includes a Takai roller extractor (Philip does not like Takai's equipment, and will soon replace it; he feels that it is poorly built, low-quality parts and materials, stainless steel is magnetic, cast iron pumps, etc. He had to completely take their machine apart and rebuild it).

A distant third is Regular Tofu Co., now owned by the Haldane Foods Group. They use a Takai hydraulic press. As a very rough guess, they might be making 4,000 kg/week.

Paul's Tofu is probably the fourth largest tofu maker in the U.K. Paul is an old, good friend of Philip's. His product is excellent, and he supplies the organic, natural nigari market. He might make 3,500 kg/week. Dragonfly is a small company at Totnes, Devon, that probably makes less than 1 tonne/week of organic tofu. In addition there are probably a number of Chinese tofu companies that are largely invisible except to the Asian community. There are also some in Birmingham, England. Birchwood Health Products (Clwyd, Wales) is no longer in business. Philip does not know when they stopped. They never really surfaced.

The total market size is probably about 45,000 to 50,000 kg/week.

The future looks good and the market is growing, but only due to hard work. Cauldron Foods is spending quite a lot of money on PR, marketing, education, and new product development. Cauldron's production and sales have more than doubled during the past year. About half of his sales come from his 3 types of basic tofu, and half from second generation products, especially burgers. The vegetarian market is an increasingly important one in the UK, and many non-vegetarians are reducing their consumption of meat, becoming more adventurous eaters, and looking to try new products. There is a general heightening of awareness of food and the variety of food. Cauldron is launching a line of frozen "ready meals." Address: Owner, Cauldron Foods Ltd., 149 South Liberty Lane, Ashton Vale Trading Estate, Bedminster, Bristol BS3 2TL, England. Phone: (0272) 632835.

1297. Welters, Sjon. 1990. Heuschen-Schrouff, the largest tofu and tempeh company in Europe and the Netherlands (Interview). *SoyaScan Notes*. March 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The largest tofu manufacturer in Europe and the Netherlands is Heuschen-Schrouff (pronounced HEW-shun Shrooff; "HEW" rhymes with "who" and "Schrouff" rhymes with "roof"). They make an estimated 35,000 to 40,000 kg/week (75-90,000 lb/week) of tofu. The company's production manager or director of operations, Han van der Hayden, visited Sjon in 1989 (Sjon took him through Nasoya's plant in Massachusetts and spent quite some time with him) and told him these figures. At the time, Heuschen-Schrouff wanted to upgrade their tofu production line from one they built themselves to a Takai or a Sato system. Sjon recommended Sato. They have not yet bought the new system.

Mr. Schrouff is the company's owner. In the early 1960s, Mr. Heuschen had a tofu company and Mr. Schrouff had a tempeh company (or perhaps vice versa). Sjon thinks they merged, then split up, then Mr. Schrouff bought Mr. Heuschen's business. Mr. Heuschen is no longer an owner, but he became the tofu production manager. Later Han became his supervisor.

Prior to the mid-1980s, Heuschen-Schrouff concentrated almost solely on the Indonesian market. After that time they started to make tofu for natural foods companies. They make tofu for Natufood, which is one of the largest distributors of natural foods in Holland. Natufood then created a separate division named Vetara which makes and sells a line of vegetarian protein products, such as TVP, Soy Schnitzels, mixes containing TVP used to make meat analogs—plus their Vetara Tofu. Natufood has a little newsletter, which they are expanding into a magazine for natural foods retailers in Holland. It is a good source of information on soyfoods.

In late 1989 Heuschen-Schrouff hired a new president and also bought another large tempeh company, perhaps Van Dappern's Tempeh Production Inc. So now Heuschen-Schrouff is Europe's largest manufacturer of both tofu and tempeh. Heuschen-Schrouff does a lot of private labeling for other companies; their tofu is sold under ten different brand names. They also export a lot of tofu from the Netherlands. Their biggest market is West Germany, followed by Belgium. Heuschen-Schrouff does not yet make second-generation tofu products; they may make some in the future or they may focus on making basic tofu. The next time Sjon goes to the Netherlands, he will probably be able to see the inside of the company. Address: Craft International Consultants, 21 Wetherbee St., Acton, Massachusetts 01720. Phone: 508-264-9511.

1298. Midwest Association of State Departments of Agriculture (MASDA) Industrial Uses. 1990. Commercializing industrial uses for ag commodities. c/o Wisconsin Dep. of Agriculture, 801 W. Badger Rd., Madison, WI 53713. 32 p. Illust. Proceedings of a conference held 14-16 March 1990 at the Ramada Renaissance Hotel, Washington, DC. 28 cm.

• **Summary:** This is a summary of the proceedings of a conference which seems to be about reviving the idea of chemurgy. About 300 people attended. A major goal was to get a subtitle on industrial uses into the 1990 Farm Bill. Contents: Letter from Sam Brownback (Conference chairman and secretary, Kansas Board of Agriculture). Conference co-sponsors (23 organizations). Committees (9). Policy statement. End-users report. Plan of action. A historical perspective (speech by 97-year old Wheeler McMillen, who chaired the first such session in 1935, and chaired the Farm Chemurgic Council). Foreword. Plenary sessions program. Concurrent sessions guide. Conference proceedings (summary of each session, incl. a speech by Dr. Kenneth Bader, CEO, American Soybean Assoc.). Recommendations. Distinguished faculty of speakers & moderators. Contains many photos, including Sam Brownback, Wheeler McMillen, Kenneth Bader, Marty Andreas of ADM, E. Kika de la Garza, and Clayton Yeutter.

Note: A follow-up meeting was held on 21-22 June 1990 in St. Louis, Missouri at the Airport-Marriot. 51 people

representing 40 organizations attended. MASDA (The Midwest Association of State Departments of Agriculture) will provide support services while organizational and fund raising activities get underway. Irwin A. "Bud" Sholts, Director, Agricultural Development and Diversification, Marketing Div., Wisconsin Dept. of Agriculture is coordinating activities. A new organization named "New Uses Council, Inc." is being created. Address: Madison, Wisconsin. Phone: 608-266-1300.

1299. *Soyanews (Sri Lanka)*. 1990. Soya food processors [in Sri Lanka]. 12(1):4. Jan/March.

• **Summary:** A directory of the 13 small scale soyfood manufacturers, 10 medium scale, and 5 large scale in Sri Lanka. The company name, address, and name of the products made is given for each.

The medium scale processors are: (1) Plenty Canada, Kandy and Colombo, wide range of Soya products. Soya Food Centre, 88A, Kotugodella Vidya, Kandy. Soya Food Centre, G11, Mihindu Mawatha, Colombo-12. (2) Mr. P. Weerasekara (Soya Biscuits, Bakery Products, Dry Products), Regal Bake House, Fort Matara. (3) Chinese Style Bean Curd, 106 Jawatte, Colombo-5. (4) Eastern Food Products, 209/4 Union Place, Colombo -2. (5) MacSoy Pvt. Ltd., 51 Layards Rd., Colombo-5. (6) R.M.R. Manufacturers, 14/1 Aponso Ave., Dehiwala. (7) Soya House (U.N. Gunasekera and Co.), 128 Kitulwatta Rd., Colombo-6. (8) Yung Hwa and Company, 10 Guader Place, Dehiwala. (9) F.H. Chong, 33 Union Lane, Colombo-2. (10) New Edinborough Products [New Edinburgh?], 19A 5th Lane, Nawala Rd., Rajagiriya.

The large scale processors are: (1) CARE Thripasha Nutrition Programme, Colombo-5. (2) Paddy Marketing Board-(soya fortified rice flour). (3) Spices and Essence (Ceylon) Ltd.-(soya products including TVP). (4) Kundasale Cereal Products Factory-(soya flour, soya flakes). (5) Soya Food Research Centre, Gannoruwa-(flour, dhal and wide range of products).

1300. Bodis, Laszlo. 1990. Re: The work of FTTE with tofu, soymilk, and soy protein products in Hungary. Letter to William Shurtleff at Soyfoods Center, April 2-in reply to inquiry of Jan. 25. 2 p. Typed, with signature on letterhead. [Eng]

• **Summary:** "FTTE is an engineering, research, and development enterprise rather than a manufacturing one. Technologies worked out by our technicians for producing feed and food products are then tried and used by companies producing food or feeds. Thus in the introduction and spread of tofu, we did all the initial work (conceiving the idea, drawing up the technology, sizing up demand, 'digging out' consumption, etc.) except for direct manufacturing... At present the manufacturer of the tofu developed by FTTE is Pest-Budai Vendeglato-Ipari Vallalat. We are talking with

other companies about scaling up production.

Besides tofu, we cooperate in the production of a soymilk and sour cherry beverage mixture, soybean flakes, soy-cubes, TVP, soy-meal, lecithin, and UNIPRO—a feed made from whole (non-defatted) soybeans.

An undated 4-page color leaflet accompanying this letter, titled "FTTE—a bridge between research and application," notes that FTTE stands for "The Association for Protein Research Technology and Production." It was founded by OMFb (the National Technical Development Board) in 1983.

Also accompanying the letter are photocopies of pages from a publication: Unipro—a high-energy feed made from whole cooked soybean. Vetomag—a new variety of soybean. OMFb advisory service for growing pulses. Feherje (Protein) a quarterly magazine published in Budapest by 3 organizations. The chief editor is Kralovansky U. Pal. Dr. Laszlo Bodis is on the editorial board. It covers all aspects of proteins. Pronutti, soy-based products for food from Proteinvest. Szoja feldolgozas soybean processing. Takarmanygyar feed mixing plant. Szolnok Megyei (a company that produces and distributes soybean meal). KEKI (Kozponti Elelmszeripari Kutato Intezet; the Central Institute for Food Research in Budapest) provides expertise for developing soybean applications. Address: Director, Feherjetechnologiai Tudomanyos Termelesi Egyesules, Budapest XII., Goldmark K. u. 3. Budapest Pf: 340 1536, Hungary. Phone: 155-5202.

1301. Lindner, Anders. 1990. Re: The soymilk market in Europe. Letter (fax) to William Shurtleff at Soyfoods Center, April 4 and April 26. 3 p. [Eng]

• **Summary:** The following figures contain many guesstimates. The only countries in western and eastern Europe where significant amounts of soymilk are produced are Belgium, West Germany, France, England, and Switzerland. The following are the seven largest soymilk manufacturers in Europe, ranked in descending order of size:

1. Alpro/Vandemoortele, Belgium. Capacity: 35 million liters/year. Present output: 25 million liters/year. Growth: Believe so, but don't know how much.

2. DE-VAU-GE (DVG), West Germany. Capacity: 20 million liters/year. They are running their plant at full capacity, but as Adventists I think they don't work on Friday afternoon or Saturday, they close down during the summer, and they send one road tanker of soymilk each week to Granose in England, where it is made into soy yogurt. So they probably end up making about 12 million liters a year of soymilk in long life packs. Soon some of their soymilk will be made into tofu. Growth: Would if they could, but they can't with the line they have, which they bought from DTD/STS for DM 4 million. DVG is making an excellent profit on their soymilk products, that's for sure. This is in part because they have the Neufarm chain at their disposal.

3. Cacoja, France. Capacity: 11 million liters/year. Believed to be running at full capacity. Growth: Planning a new line but no decision yet as far as I know. I think that Cacoja produces more than 1 million liters/year. They visited DTD/STS a year ago to discuss a second line. The first one had a capacity of 2,000 liters/hour or approximately 5 million liters/year.

4. Soya Health Foods Ltd., Manchester, England (Sunrise Soya Milk). Capacity estimated at 8 million liters/year. Actual production not known.

5. Soyana, Switzerland. Capacity and production not known. Soyana has consistently refused to allow us to visit them. Even our Indian client who wanted to discuss purchase of their Dahi dessert recipe was given the cold shoulder. I think that they have their own soymilk plant, but I'm not sure. Why shouldn't they, when they have plenty of products in Swiss shops.

6. Galactina, Switzerland. Capacity estimated at 6 million liters/year. Most is used for products other than liquid soymilk. They sell limited amounts of soymilk, definitely less than 1 million liters/year packed in Tetra Brik Aseptic at the Thun Dairy in Switzerland.

7. Schoeller in Nuremberg, West Germany. Capacity not known. Soymilk used in ice cream production. There are also soymilk producers in Italy [Crivellaro], and Spain [Proti].

"Total size of European soymilk market in 1989 estimated at 50 million liters. Some is in the form of dairy analog products. Alpro and DE-VAU-GE have about 70% of the market, including bulk distributed product. Growth rate over the past few years 10–15%.

"General observations of the European soymilk industry and market: The dairy industry in France was the first to go into soymilk to offer alternatives to consumers who prefer 'non-dairy dairy type products'. The soymilk-based ice cream of West Germany's Schoeller may start a trend for the rest of the European ice cream industry. There has been no equivalent to the U.S. Tofutti boom in Europe so far. Major liquid food companies do not at present see soymilk as a significant product for Europe but follow the trends and do some development, just in case.

"The future? It is necessary to make a distinction between Eastern and Western Europe. Western Europe has a surplus food production in general and surplus dairy milk production in particular. The health aspect alone, i.e. soymilk without improved palatability, will not significantly increase soymilk sales in Western Europe. The removal of dairy production subsidies in the EEC in the years to come, especially after 1992, may give an incentive to the big names in the food industry to develop soymilk into mainstream market products. There is EEC legislation on imitation dairy products and soymilk is mentioned as an example, but currently different member countries use their own laws.

"Many Eastern European countries have food shortages but lack money and entrepreneurship to venture into an

unknown product like soymilk on their own. Furthermore, in these difficult markets, western companies with soymilk technology do not seem to find it worth the effort to first educate on the advantages and uses of soymilk and then to promote and arrange financing before they can hope to sell a soymilk processing plant. The new Eastern Europe with market economies now evolving gives hope for the future in general, but I couldn't make any guesses about soymilk.

"It is the aim of EEC to dismantle the agricultural subsidies. This will effect dairy production and new cheaper protein sources will be sought by the food industry. Soymilk definitely has a chance of 'growing up' when this happens.

"STS-Soya Technology Systems Limited no longer exists. It was the decision of APV's CEO to close it down as an independent company when the big APV reorganization took place. When we moved to Denmark we became DTD-Soya Technology Division. Now Danish Turnkey Dairies has itself become a division of the APV Pasilac Ltd and the official name is DTD-APV Pasilac Ltd (the result of mergers and takeovers!). Asger Somer Hansen now handles soymilk activities within the APV group and works in DTD-APV Pasilac Ltd.

"John Wilson still works at Alfa-Laval in Lund as far as I know—at least he did 2 years ago. Alfa-Laval also has another soymilk person, a young woman.

Note: Lindner, the managing director of Soya Technology Systems from May 1982 until Nov. 1989, has a good grasp of the world soymilk market. Address: P.O. Box 19002, S-250 09 Helsingborg, Sweden. Phone: 42-92776.

1302. Marshall, Philip. 1990. The soymilk industry and market in the UK (Interview). *SoyaScan Notes*. April 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The two brands of soymilk with the largest shares of the UK soymilk market are both imported: Provamel, the best-seller, is imported from Alpro in Belgium. Granose Soya Milk is imported from DE-VAU-GE in West Germany.

There are four soymilk manufacturers in the UK. The largest is probably Unisoy Milk 'n' By-Products Co. in Stockport (Cheshire County near Manchester). Their quality is excellent, almost as good as Alpro's. The people who founded Unisoy were formerly involved with Soya Health Foods Ltd. The founder, who had the money, died before production started. [Note: Neil Rabheru (see interview, 1990 July 2), founder of Unisoy, says the previous 2 statements are not true.] Unisoy started making soymilk about 4 years ago, and today their biggest product is own-label soymilk, packed in Tetra Brik by a contract packer, and sold to Sainsbury, a large chain/multiple retailer in the UK. Unisoy does not and will not make tofu. The company is not very strong. The person in charge is Neil Rabheru, of Indian extraction, a very nice man. He recently sold the company for a relatively small sum.

Second largest soymilk manufacturer is Soya Health Foods in Trafford (Sunrise brand, founded by Michael Cole and Mr. Arora, a Sikh / Indian). It was the Indian connection that resulted in the formation of Unisoy some years ago. Third may be the Regular Tofu Co., a division of Haldane Foods (Arkady/ADM), which produces Sojal Soya Milk. The Sojal brand was the property of another company in France, which originally produced the product for them using a soymilk powder made in Sao Paulo, Brazil (by Norsul, Agro-Nippo Productos, or ITAL?). Haldane no longer has the product produced in France but they still use the Sojal brand, and still has the product produced by another company (in what country is not known) and it is probably now made from whole soybeans rather than soymilk powder. [Note: The only soymilk listed in Haldane's Oct. 1989 catalog is So Good Soya Milk (organic or non-organic); Sanitarium Foods in Australia makes a product by the same name].

Fourth is Plamil, which contracts with some other company to have its soymilk made from soy protein isolates. They are quite a small company, ethically based, into vegan foods and marketing strategies from the 1960s and 1970s. Fifth is Itona (pronounced ai-TOW-nuh), which makes a soya milk of some description, but they are not really in the mainstream of the soymilk market. They probably make their soymilk from soy protein isolates and it is sold in cans—every other brand is in Tetra Pak or Combibloc. Address: Owner, Cauldron Foods Ltd., 149 South Liberty Lane, Ashton Vale Trading Estate, Bedminster, Bristol BS3 2TL, England. Phone: (0272) 632835.

1303. Vandemoortele, Philippe. 1990. The soymilk industry and market in Europe (Interview). *SoyaScan Notes*. April 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Philippe estimates that Alpro has about 70% of the fluid soymilk market (not including infant formulas) in Europe. In 1984 in Brussels Michael Martin of the American Soybean Association estimated the size of the European soymilk market to be 9-10 million liters/year. Philippe thinks that figure was too high; it was probably about 6 million liters. Now it is about 30 million liters/year in all of western Europe. The growth rate for soymilk production over the past 2 years has been about 20% a year.

The second largest soymilk manufacturer in Europe is DE-VAU-GE, with roughly 15-20% of the market. The rest are very small, with a combined percentage of only 10-15%. Third may be Triballat and fourth may be Cacoja. Together these two may be producing 1 million liters per year, but that is just a very rough guess. Innoval just started so they have not had time to do anything. Unisoy in England is very small. Soya Health Foods Ltd. (Sunrise brand) is almost out of business in soymilk. Galactina is limited to Switzerland, and they produce mainly tofu, not soymilk.

Looking at Cacoja and Triballat, they are completely different types of companies. Cacoja is a classical

cooperative that has no experience in or organization for commercializing consumer products. So they have to co-pack, i.e. make products for other companies. Triballat is a small but very active dairy company, with a good sales and marketing organization in France. They are used to making and selling their own consumer products. Their Sojasoy yogurt is a good-tasting, fresh product. It has been quite successful for a soya food, although compared with dairy products it is nothing.

There are always been many negative things about soymilk in Europe. 1. The retail price of soymilk is very high compared to basic cow's milk, usually 2-3 times as high. In the USA the price of both cow's milk and soymilk are higher, but the ratio is similar. 2. The taste of soymilk is a big problem, although it is steadily getting better. 3. Cow's milk is a very traditional, widely accepted product in Europe. 4. The dairy lobby and its employees are very powerful in Europe and recently they have been attacking soymilk on issues such as its calcium content being lower than that of cow's milk. Doctors have been taught and teach their patients that cow's milk is a perfect product. Only a minority, but a growing minority, are opposed to the use of cow's milk. 5. The many European government regulations hurt soymilk. There are many taxes, such as a Value Added Tax (VAT) on soymilk that are not imposed on cow's milk since soymilk is considered in some countries to be a juice. Every country has a VAT system. The Netherlands, Belgium, and France had an 18% VAT on soymilk versus 6% on milk, but that changed 1 year ago so it is no longer a basic problem. In Belgium there is now a 6% VAT on both soymilk and cow's milk.

The two things needed to make the soymilk market grow are better taste and a better image of soymilk (compared to cow's milk) as a food that is good for one's health, and dissemination of the information showing the health benefits of soymilk over cow's milk. The quality of soymilk products is steadily improving and should continue to do so, not through discovery of any new basic principles but through many small adjustments.

The opening of Europe in 1992 will have little or no effect on soymilk. Competition is already international. The need for a multitude of packages in the various languages will not change; Alpro presently packs soymilk in more than 100 different Tetra Brik cartons! This includes both their own brands and those of companies for which Alpro private labels. This is both complicated and expensive. One possible change may be that governments will work faster to establish soymilk terminology. Now soymilk has no name! It can be called "soya juice, soya drink, soya beverage," but it cannot be called "soymilk." As long as it has no name, no regulations or standards can be made that effect it. Philippe would like to see the term "soya drink" or "soya milk" adopted. The latter was tolerated in the UK but it will probably be forbidden.

Philippe sums up the overall situation as follows: "I

always repeat, there is more enthusiasm about soyafoods than turnover and certainly no profit. Alpro has lost money every year that it has been in business.” He thinks DE-VAU-GE must also be losing money on its soymilk operation. “How can you make money when you invest \$3-4 million in a factory that is making only a few million liters of soymilk a year? DE-VAU-GE is a very large company and they do well largely because they have a sort of monopoly in the German Neuform (Reform House) organization. An organization controls all of the Neuform stores, and it is linked with both the producers and the sales people. They all together pay money for this organization to help each other. If you want to make soymilk in Germany and deliver it to these stores, you cannot, because everything is protected. The competition now comes from the independent *Biolaeden*.” Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8610 Wevelgem, Belgium. Phone: (056) 43 22 11.

1304. Vandemoortele, Philippe. 1990. Early history and recent developments at Alpro N.V. in Belgium (Interview). *SoyaScan Notes*. April 17. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter (fax) on 30 May. 1990.

• **Summary:** N.V. Vandemoortele (the N.V. is written first in Flemish, but often last in English) began research on new soy products (mostly soy protein isolates and concentrates) in 1973. The goal was to find a way to bring soya beans to the consumer. They bought and sold soy protein products but never manufactured any. In May 1975 research on soymilk began. From 1975 to 1979 they were basically doing pioneer research. In Dec. 1979 they began production of soymilk, but they did not pack or sell it; it was just to get their new plant running. Famalac was a potential/fictitious product name that was described in a brochure, but the product was never sold commercially. This soymilk was produced at a plant located at Zuidkaai 33 in Izegem on a piece of land located next door to the main N.V. Vandemoortele facilities (whose official address was Prins Albertlaan 12). In Jan. 1980 Vandemoortele began to make its first commercial soymilk product (GranoVita Soja Drink in plain and carob flavors, packed in 500 ml Tetra Brik cartons) which was private labeled (co-packed) for DE-VAU-GE, a large Seventh-day Adventist health food manufacturer in West Germany. This was Alpro’s first customer.

N.V. Alpro (named simply Alpro in English), was founded in June 1980. Alpro then purchased the land on which it was located from N.V. Vandemoortele. During 1980 Alpro became a truly independent producer, now also doing their own sterilization and packaging. It was Philippe Vandemoortele’s idea to start Alpro.

His grandfather began to import soybeans in 1934 from Manchuria, and he started a small crushing plant. Philippe has always been interested in soya (he read a lot) and he wanted to go back to the use of soybeans for human

consumption in the form of soyfoods rather than as isolates, concentrates, etc. While researching new developments in soymilk processing, he learned that new methods for making soymilk had been developed in other countries such as the USA [at Cornell University and University of Illinois], Brazil, etc. His company, which had many engineers and R&D staff, was the first soymilk manufacturer in the western world to invest in a pilot plant and then in a factory to make soymilk using the new technique. In the beginning, Alpro designed and built its own soymilk equipment.

At that time it looked like Alpro’s main business would be selling this equipment to Third World countries to provide a practical solution to their nutritional and protein problems, especially for infants. In 1982 Alpro signed a contract to sell a soymilk plant to Lalaso SA in Madagascar. The plant, which cost US\$11 million, began operation in Jan. 1984 and it is still in operation. This was the only plant Alpro ever sold to a Third World country.

[Note: Alfa-Laval, which developed soymilk equipment, sold its first major piece of soymilk equipment (a VTIS sterilizer) to Yeo Hiap Seng in 1967, and its first complete soymilk line to Lam Soon (Ace Canning) in Kuala Lumpur, Malaysia. The latter began making soymilk in Dec. 1979, exactly the same year and month that Alpro began.]

The reason for the lack of sales of soymilk plants to Third World countries was mostly politics and lack of organization in those countries. It was not a problem of the resulting soymilk being too expensive. Another problem was that Alpro had only a single product to promote (the turnkey plant). So in Aug. 1984 the company decided to return to its basic business, producing foods, rather than idealistically trying to sell technology (soymilk plants) to the Third World. “In the beginning, we at Alpro had never imagined that there would be a market for soymilk in Europe. Almost nobody wanted the product. There was no interest, except among motivated health-food people. Everybody else in Europe thought the product tasted lousy.”

In the early 1980s, while focusing on its Third World plants, Alpro also made soymilk for the European market. The main reason for making this soymilk was to demonstrate what the Alpro equipment could do. In Jan. 1981 Alpro began making and private-labeling Granose Soya Drink in plain and carob flavors for Granose, a Seventh-day Adventist food manufacturer and distributor in England. In March 1981 Alpro launched Soyamel (plain with vitamins), the first of its own soymilk brands, sold only in drug stores and pharmacies (chemie stores). It was followed in Dec. 1982 by Provamel plain and chocolate drinks, and the company’s first pudding-like dessert (in chocolate flavor); the Provamel line was sold in health food stores. Next, in March 1984, came Alpro Soya Drink in plain and chocolate flavors, sold only in supermarkets (multiples). All the above were sold in 500 ml Tetra Brik cartons. Then in Nov. 1984 Alpro launched Sunsoy for the export market. It was sold in both

250 ml (plain, carob, or strawberry) and 1 liter (plain) Tetra Brik cartons. All four brands still exist, although Soyamel sales are small. Statistics on the sales of each brand are confidential. Alpro launched its first pudding-like soymilk dessert under the Provamel brand in about 1984, in chocolate and vanilla flavors. The concept, though based on a similar dairy product, was a first for soymilk.

Alpro continues to private label soymilk for anyone who can pay for it. The company's philosophy on this point has not changed over the years. "We are a producer, and as such we try to produce as much as possible, otherwise we could not pay for our research and fixed costs. We would like to sell as much of our own brands as possible, but if we do not private label for other companies, our competitors will do so instead."

In 1984 Alpro had planned to build a new soymilk plant in Ghent with a capacity of 40 million liters/year, but this plan was delayed. Instead they ended up building a new soybean cleaning and dehulling system. Finally Alpro did build a new plant at Vlamingstraat 28, in Wevelgem, near the French border. They started construction in June 1988 and they plan to be moved in completely by June 1990. The plant cost about US\$15 million and its capacity is about 45 million liters/year, which is more than the present total European and American soymilk markets. It is a complete plant with packaging, sterilizing, and several lines. It is the biggest soymilk plant in the western world. Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8610 Wevelgem, Belgium. Phone: (056) 43 22 11.

1305. Anderson, Jim. 1990. Lowell Andreas tells of start in Kato. *Mankato Free Press (Minnesota)*. April 28. p. 3.

• **Summary:** A speech to the Venture Capital Club, Lowell Andreas carried important business lessons. Dwayne and Lowell Andreas, brothers, arrived in Mankato (Minnesota) from Iowa in 1947. For nearly two decades they ran the Honeymead Products Co. In 1947, when they bought the expeller plant, it could process 1,500 bushels of soybeans a day. After a disastrous fire, the plant was rebuilt to a capacity of 3,500 bushels a day. During the 1950s this grew to 50,000 bushels.

In 1960 the Farmers Union Grain Terminal Association (GTA) bought the plant; Lowell agreed to manage the plant for 10 years for a share of the profits.

After a 1965 flood, dikes were built around the plant and surrounding residential area.

In 1966 the brothers were approached by ADM—then based in Minneapolis—and invited to buy controlling stock and run the company. As competitors, the Andreas brothers knew what was wrong with ADM from the outside. They could see all the dumb things the company was doing so they knew what needed to be done to correct the situation. For example, they unloaded ADM's unprofitable chemical division.

One of the toughest decisions was to move ADM's headquarters to Decatur, Illinois, where its biggest plant was located. During a trip to the Grand Cayman Islands, Lowell recalls how he sat in the bow of his sailboat alone, mulling over this problem. Finally he called to his wife, Nadine—who thought he was being romantic. When she sat down next to him, he asked her how she would like to live in Decatur, Illinois.

In 1965 ADM was a struggling company with sales of \$323 million; in 1989 it had sales of more than \$8 billion.

A portrait photo shows Lowell Andreas. Address: Staff writer.

1306. Genice Foods Ltd. 1990. Genice (Leaflet). Llay near Wrexham, Clwyd, Wales, UK. 1 p. Single sided. 30 cm.

• **Summary:** "Today's public, with their growing awareness of the benefits of healthy eating, are increasingly shunning products high in saturated fats, artificial colourings, emulsifiers and preservatives." Genice Foods Ltd., a company based in north Wales, has demonstrated its concern by removing such artificial ingredients from its products—with no loss of flavor or enjoyment of the products. Genice has also introduced no less than five completely natural non-dairy frozen dessert products under the brand label 'Ice Delight.'

"The two directors of Genice are highly experienced in the frozen dessert industry at the top level. Ray Pierce, Managing Director, was a founder director of Classic Ices and formerly [1979-1982] General Manager of Pendletons Ice Cream, while Irene Barclay, the Technical Director, was previously Technical Manager for Classic Ices and prior to that was product Development Manager at Dale Farm Dairies Ltd., Belfast [Ireland]." Address: Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK.

1307. **Product Name:** Granose Country Delight: Organic Soya Dessert [Orange, Apricot & Nectarine, Peach & Papaya, or Strawberry & Guava].

**Manufacturer's Name:** Granose Foods Ltd. (Marketer). Made in southern England by Bridge Farm Dairies.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire, MK16 9PY, England. Phone: (0908) 211311.

**Date of Introduction:** 1990 April.

**Ingredients:** Peach & papaya: Organic soya milk (Water, dehulled soya beans, sea salt), raw cane sugar, peaches, vegetable oil, papaya, stabilisers, modified starch, guar gum, pectin, agar, citric acid, natural flavouring, colour (Annatto).

**Wt/Vol., Packaging, Price:** 125 gm plastic cup with foil lid.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm.: Energy 398kJ/95 kcal (calories), protein 1.3 gm, carbohydrate 14.7 gm, fat 3.8 gm.

**New Product—Documentation:** SoyaFoods (ASA, Europe).

1990 1(1):3. “Granose too are introducing a soya dessert called Country Delight in 3 flavours...”

Form filled out and four Labels (cups & tops) sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Bridge Farm Dairies, was introduced in 1990. It is now sold in the four flavors shown above. A color illustration on the foil lid shows the main fruits used against an ivory background. The name of the fruits is written in a banner rectangle below the word “Granose” and above the term “Country Delight.” A “Best before” date is stamped atop each lid. The front of the cup contains a similar but more elaborate drawing. “Best served chilled.”

Granose leaflet distributed at Helfex. 1990. April. “Ingredients list for new products.”

Letter from Granose. 1990. July 11. This is an Ultra Heat Treated product with a 15-week shelf life. It was launched in April 1990 and is not an ice cream.

**1308. Product Name:** Brazil Roast Mix.

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire, MK16 9PY, England. Phone: (0908) 211311.

**Date of Introduction:** 1990 April.

**Ingredients:** Brazil nuts, textured soya protein, rolled oats, oat flour, pea bran, potato flour, dried onion, hydrolysed vegetable protein, spices, dried mushrooms, sea salt, chives.

**New Product–Documentation:** Granose leaflet distributed at Helfex. 1990. April. “Ingredients list for new products.”

**1309. Product Name:** So Good Soya Yoghert (Peach & Passion Fruit, Black Cherry, Strawberry).

**Manufacturer’s Name:** Haldane Foods Group Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611.

**Date of Introduction:** 1990 April.

**Ingredients:** Black Cherry: Soya milk, fruit juice, black cherries, vegetable oil, emulsifier (vegetable mono-diglycerides), stabiliser (pectin), natural flavour, Bulgarian cultures, natural colour (beetroot red).

**Wt/Vol., Packaging, Price:** 120 gm plastic cup. Retail for £0.32.

**How Stored:** Shelf stable, 4-month shelf life at room temperature. Refrigerate after opening.

**New Product–Documentation:** SoyaFoods (ASA, Europe). 1990. 1(1):3.

Haldane Foods Group. 1990. “Twenty-one Today. Twenty-new and exciting products launched at Helfex alone.” At least 12 of these are soyfood products. “Yogherts made with organic soya milk and no added sugar. Sweetened with pear juice.”

Note: This product may be made by a subcontractor

dairy. The source of the soymilk is not known.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. So Good Yoghert made by Genice, was launched in early 1990 in 3 flavors—strawberry, black cherry, and peach & passion fruit; this is the Haldane brand. The So Good brand name has no connection with the same name used by Sanitarium Foods in Australia. The soymilk used as the main ingredient in this product is made by Unisoy (a member of the Haldane Foods Group) in Stockport.

Label (cup for Black Cherry) sent by Genice Foods Ltd. 1994. Feb. 18. Cherry red, green, and blue on white. Illustration of 4 black cherries hanging below 2 cherry leaves. “Hera. New yoghurt style dessert made of soya milk, real fruit and sweetened with fruit juice, free from artificial colouring and preservatives.” The address is now: Newport, Pagnell, Bucks. Note: “Hera” was a brand of Haldane Foods Ltd. of Leicester as early as 1982.

Label (cup) for Peach & Passion Fruit sent by Anthony Marrese. 1994. May. It retails for £0.45. On the foil lid is written: “Made with organic soyamilk. No added sugar. Contains real fruit. Sweetened with fruit juice.”

**1310. Product Name:** So Good Strawberry Bombes (Non-Dairy Frozen Dessert Confections).

**Manufacturer’s Name:** Haldane Foods Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611.

**Date of Introduction:** 1990 April.

**Ingredients:** Incl. tofu.

**Wt/Vol., Packaging, Price:** 110 ml each, 4 per pack. Retail for £1.99.

**How Stored:** Frozen.

**New Product–Documentation:** SoyaFoods (ASA, Europe). 1990. 1(1):3. “Helfex ‘90.” The Haldane Foods Group celebrated its 21st birthday with the launch of 21 new products at the Helfex show in Birmingham. England.

Haldane Foods Group. 1990. “Twenty-one Today. Twenty-new and exciting products launched at Helfex alone.” At least 12 of these are soyfood products. “Iced soya dessert with a centre of strawberry sauce enrobed in carob coating.”

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. Following the acquisition of Genice by the Haldane Group, a small soya milk plant was installed at Genice with the ability to produce limited quantities of tofu also. With the new availability of tofu, two new non-dairy frozen products were launched, including So Good Strawberry Bombes for the Haldane Group, a 100 ml vanilla flavored base with a strawberry puree center, coated with carob couverture, and sold in retail packs of four.

**1311. Product Name:** So Good Tofu Dessert (Ice Cream

Style) [Tofu and Wild Blackberry, or Tofu and Strawberry & Vanilla].

**Manufacturer's Name:** Haldane Foods Ltd. (Marketer).  
Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer's Address:** 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611.

**Date of Introduction:** 1990 April.

**Ingredients:** Incl. tofu.

**Wt/Vol., Packaging, Price:** 750 ml (3/4 liter) round paperboard tub. Retail for £1.59 incl. V.A.T. (Value added tax).

**How Stored:** Frozen.

**New Product–Documentation:** SoyaFoods (ASA, Europe). 1990. 1(1):3. "Helfex '90." The Haldane Foods Group celebrated its 21st birthday with the launch of 21 new products at the Helfex show in Birmingham. England.

Haldane Foods Group. 1990. "Twenty-one Today. Twenty-new and exciting products launched at Helfex alone." At least 12 of these are soyfood products. Made from tofu.

Talk with Philip Marshall of Cauldron Foods. 1990. July 9. The Haldane Foods Group owns about 50% of Genice [pronounced jen-AIS]. Up until now, Genice has been almost the sole manufacturer of non-dairy ice creams for companies in the UK (including Sunrise and Unisoy). They were probably the first manufacturer of soymilk in the UK. Cauldron Foods does not have his made by them because he thinks there are better sources and because they are a competitor.

Comment from a recent visitor to the UK on the flavor of So Good Ice Cream Style. 1990. July 16. "I find it to be a bit like eating beany tasting water."

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. This product is made by Genice, which has a pilot plant to make soya milk and tofu (for Direct Foods). Now the soya milk is made by Unisoy. The Haldane Foods Group has about 99% of the soy ice cream market in the UK. The Sunrise Ice Dream is now actually made by Genice Foods, in the Haldane Foods Group. Sunrise has never made its own ice cream.

Health Food Business (UK). 1992. May. p. 33. "Frozen Desserts. Haldane Foods Group. So Good range of non dairy soya ice products from Haldane, with no lactose or animal fats to worry about. Smartly packaged, the So Good range is available as Tofu Desserts in Vanilla & Strawberry and Wild Blackberry, Tofu Delight Bars (choc ice equivalents) and Strawberry Bombes Soya Carob Dessert."

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. Following the acquisition of Genice by the Haldane Group, a small soya milk plant was installed at Genice with the ability to produce limited quantities of tofu also. With the new availability of tofu, two new non-dairy frozen products were launched, including So Good Tofu Dessert for the

Haldane Group, a 3/4 litre pack in a round cardboard tub flavored as a strawberry/vanilla split, or as wild blackberry.

1312. **Product Name:** So Good Cheshor Cheese Style (Casein Free).

**Manufacturer's Name:** Haldane Foods.

**Manufacturer's Address:** 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611.

**Date of Introduction:** 1990 April.

**Wt/Vol., Packaging, Price:** 250 gm.

**New Product–Documentation:** SoyaFoods (ASA, Europe). 1990. 1(1):3.

Haldane Foods Group. 1990. "Twenty-one Today. Twenty-new and exciting products launched at Helfex alone." At least 12 of these are soyfood products. "Free from all animal products and no casein."

1313. **Product Name:** [Parma Soia Soy Drink (Chocolate, Strawberry, and 1 Other Flavor)].

**Foreign Name:** Parma Soia Soidrink (Al Cioccolata, Alla Fragola).

**Manufacturer's Name:** Parma Soia (Marketer-Distributor). Made in England by Unisoy.

**Manufacturer's Address:** Strada Logheretto 2, 43010 Corcagnano (Parma), Italy. Phone: 0521-639-148.

**Date of Introduction:** 1990 April.

**Ingredients:** Water, soya, cane sugar, strawberry puree.

**Wt/Vol., Packaging, Price:** 500 ml plastic bottles with foil lid.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Talk with Xavier Karis in Italy. 1990. June 13. About 2 months ago this company, located in Parma, started a line of soya products, including soya milk (Soilat) in plain and chocolate flavors (which they probably do not make themselves). Because this is a small company, nobody has made any trouble yet over the Italian name of their soymilk, but if they get bigger, they are bound to get in trouble because Italian law forbids use of the terms "soia" and "latte" together. Their phone is 0521-639-148.

Parma Soia brochure. 1990. Photo shows aseptic package.

Letter from Xavier Karis. 1990. June 15. On the plastic Soidrink bottle is written: "Produced in England." Talk with Neil Rabheru of Unisoy. 1990. July 2. Unisoy makes this soymilk.

Label (for strawberry) sent by Xavier Karis. 1990. June 27. 9 by 2.5 inches. Red, gold, green, black, and orange on white. The semicircular logo on the front panel shows a large field with long rows of soybeans. Across the top in large letters is written: "Campi di Soia" (Fields of Soya), while across the bottom, in the same letters is written Parma Soia. There are three groups of soybean leaves at the bottom two corners and the bottom middle of the logo. And below

that, an illustration of many ripe strawberries. “An energy beverage ideal for those who like sports, who study, and who live an active life. A Natural product, without preservatives or colorings. Shelf stable; Refrigerate after opening and consume within 3-6 days.”

**1314. Product Name:** Realeat Vege ¼lb Burger with Cheese, Vegebites, Chilli Vegeburgers.

**Manufacturer’s Name:** Realeat Company Ltd. Div. of Haldane Foods Group.

**Manufacturer’s Address:** 2 Trevelyan Gardens, London NW10 3JY, England. Phone: 01-459-3401.

**How Stored:** Frozen.

**New Product–Documentation:** SoyaFoods (ASA, Europe). 1990. 1(1):3.

Haldane Foods Group. 1990. “Twenty-one Today. Twenty-new and exciting products launched at Helfex alone.” At least 12 of these are soyfood products.

**1315. Product Name:** Tofu Burgers (Tandoori, Tikka, and Teriyaki).

**Manufacturer’s Name:** Regular Tofu Co. Div. of Haldane Foods Group.

**Manufacturer’s Address:** 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611.

**Date of Introduction:** 1990 April.

**Wt/Vol., Packaging, Price:** Two x 3 oz burgers per unit. 12 units per case. Wholesales for £6.75. Retail for £0.75 per unit.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** SoyaFoods (ASA, Europe). 1990. 1(1):3.

Haldane Foods Group. 1990. “Twenty-one Today. Twenty-new and exciting products launched at Helfex alone.” At least 12 of these are soyfood products.

**1316. Product Name:** Silken Tofu.

**Manufacturer’s Name:** Regular Tofu Co. Ltd. Div. of Haldane Foods Group.

**Manufacturer’s Address:** Hayhill Industrial Estate, Unit 25, Barrow-Upon-Soar, Leicester, Leicestershire, England.

**Date of Introduction:** 1990 April.

**Wt/Vol., Packaging, Price:** 135 gm. Retail for £0.39.

**How Stored:** Refrigerated.

**New Product–Documentation:** Haldane Foods Group.

1990. “Twenty-one Today. Twenty-new and exciting products launched at Helfex alone.” At least 12 of these are soyfood products. SoyaFoods. 1990. 1(2):5. Dec. “Silken Tofu.” The Haldane Foods Group has launched the first British made silken tofu. It contains organic soya milk and Welsh mountain water, and is sold in 135g pots at £0.39 recommended retail price.

**1317. SoyaScan Notes.** 1990. New Trend: Large European food companies, and agricultural- and dairy cooperatives now launching and actively promoting innovative new tofu and soymilk products: Mostly dairylike and meatlike products (Overview). May 8. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** In Jan. 1980 Vandemoortele N.V., one of Europe’s largest oilseed crushers, located at Izezem, Belgium, began to make its first commercial soymilk product (GranoVita Soja Drink in plain and carob flavors, packed in 500 ml Tetra Brik cartons) which was private labeled (co-packed) for DE-VAU-GE, a large Seventh-day Adventist health food manufacturer in West Germany. This was Alpro’s first customer. In June 1980 Vandemoortele created Alpro N.V. to take over this production. The company quickly became Europe’s leading soymilk producer and by 1990 had about 70% of the European soymilk market. Their new soymilk plant, costing about US\$15 million and having a capacity of 45 million liters a year, opened in Wevelgem in June 1990.

In June 1984 Migros, Switzerland’s leading retail food chain, launched 5 tofu products: Natural Tofu, Tofu Snack with Spices, Spicy Tofu Spread, Diced Tofu with Cream, and Tofu Bolognese. In 1985 they introduced Tofu with Mushrooms and Gravy, followed in 1986 by Canned Tofu Kashmir (with Curry and Fruits), Tofu Spread with Cheese (in a Tube), Tofu Chocolate Crème, and Tofunaise (in a Tube), then in 1987 by Seasoned Tofu. In 1986 Migros, a 61 year old cooperative with 1.4 million members, had net sales of 3,166 million Swiss francs. The tofu was made by a Migros company named Conserves Estavayer in Estavayer-le-Lac, near Zurich.

Galactina is a well established Swiss company (located in Belp) that has made a soymilk named Naga Sonda for enteral tube feeding since 1980. In 1981 they launched the product in liquid Tetra Pack. They entered the tofu market in 1984 with Galactina Tofu, then in 1985 added three types of Seasoned Tofu (Gourmet Diced with Soy Sauce & Spices, Provencale with Herbs, and Jardiniere with Vegetables), followed in 1987 with Tofu Spread and 1988 with Tofu Burger and Tofu Salads. All were marketed very attractively.

In Aug. 1985 DE-VAU-GE, one of Europe’s oldest and largest producers of vegetarian health foods, began operation of its new soymilk plant (purchased from STS/DTD) in Lueneburg, West Germany. By 1990 they were Europe’s second largest soymilk manufacturer, with 15-20% of the market. They also sold many tofu products and were planning to produce tofu in the near future.

In 1985 Laiteries Triballat, a large French dairy products company (mostly cheese, located at Noyal-sur-Vilaine, Brittany) introduced Sojasun, an innovative cultured soymilk yogurt in 4 flavors, two with bits of fruit and two with fruit puree. In Oct. 1988 and early 1989 they promoted the

product extensively on French television and in German print media. Sales in several western European countries were said to be good.

In 1986 Parmalat, the Italian dairy giant, introduced a soymilk named Soialat. By 1989 they had created a subsidiary named Parma Soia, which sold three lines of more than 20 soy products. The Campi di Soia line (containing soymilk, soy pasta, sauce, and sprouts) was sold at supermarkets. The Nature Soy line was imported, and the Erboristeria line was for the health food market.

In Jan. 1987 Cacoja, a newly-formed affiliate of the Coopérative Agricole de Colmar (CAC), began production of soymilk and soy desserts at its new, fully-automated plant (with an ultrafiltration system) at Issenheim, France. Purchased from Alfa-Laval, the plant cost 11 million French francs and had a capacity of 1,500 liters/hour of soymilk containing 4% protein. By 1990 Cacoja was Europe's third largest soymilk producer.

In Sept. 1987 Rayner Burgess Ltd., a large British Food company that specializes in an array of unique condiments, purchased Cauldron Foods Ltd., Britain's second largest tofu manufacturer, and the largest marketing its products to the Caucasian and health-food trades.

In Jan. 1988 British Arkady, a large British food conglomerate owned by Archer Daniels Midland Co. (Decatur, Illinois) acquired the Haldane Foods Group, and made it part of British Arkady's Health Foods Div. The Haldane Foods Group was put together by acquisition of Direct Foods Ltd. (founded 1980, acquired by the Group in 1985), Vegetarian Feasts Ltd. (founded 1984, acquired 1986), Haldane Foods Ltd. (founded 1983, acquired Aug. 1987), Vegetarian Cuisine Ltd. (founded 1985, acquired 1987), Regular Tofu Co. Ltd. (founded 1983, acquired Aug. 1987), Realeat Foods Ltd. (founded 1984, acquired Sept. 1988), Saucemasters Ltd. (founded 1988, acquired Feb. 1989), and Genice Foods Ltd. (founded 1988, acquired March 1989). Self-proclaimed as "Europe's leading healthier food group, most of these companies make tofu or soyfood products.

In April 1989 Huegli AG, a leading Swiss food company, purchased 75% ownership in Yamato Tofuhaus GmbH, one of West Germany's leading tofu manufacturers. At about the same time, Huegli purchased Horst Heirler, the country's leading distributor of fresh products.

Also in April 1989 Lima N.V. of Belgium, one of Europe's earliest natural foods companies, purchased Jonathan PVBA, Belgium's leading tofu manufacturer.

In Sept. 1989 Innoval (formerly Sojalpe), an acquired affiliate of Les Silos de Valence (a large 5,000-member cereal cooperative in Rhone Alpes, France), began to produce tofu, soymilk, and liquid soy concentrate (with an ultrafiltration unit) at a modern new plant, with a capacity of 2,000 liters/hour, purchased from Alfa-Laval at a cost of 20-21 million French francs.

In Feb. 1990 Euro-Nature, a French investment fund,

purchased 97% Lima N.V. of Belgium.

In early 1990 Avo Feinkost GmbH, a large West German spice from Osnabrueck, launched the Sofit line of soy products, including various meatlike products, dressings, and salads.

1318. *SoyaScan Notes*. 1990. Brief history of British Arkady Co. Ltd. (Overview). May 11. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1921. British Arkady starts doing business.

1923. The *Arkady Review* starts publication.

1929. The company introduces Super Arkady, its first soy product. An ingredient used for breadmaking, it contained enzyme-active full-fat soy flour as its main ingredient.

1965. TVP brand textured soy flour starts to be sold by the company under license from Archer Daniels Midland Co. (ADM) in the USA.

1973. TVP starts to be produced by British Arkady in England.

1974. ADM acquires British Arkady Co.

1987 June. Societe Industrielle des Oléagineux (S.I.O.) acquired by British Arkady.

1988 Jan. Haldane Foods acquired by British Arkady.

Note: The company name is pronounced AR-kuh-dee.

1319. Nordquist, Ted. 1990. Soy ice cream in Sweden and Europe (Interview). *SoyaScan Notes*. May 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** This week Ted introduced the "absolutely best-tasting soymilk-based ice cream in the world. Called Tofu Line Glass in vanilla and chocolate flavors, it tastes like old fashioned ice cream made from cream. The vanilla is better than its dairy counterpart." Four-color brochures and labels have been printed. Ted makes the soymilk at the rate of 4,000 liters/hour at Trensums Musteri, a juice company located in Tingsryd, located 20 or 30 minutes miles to the north of the southern seaside city of Karlshamn. Both Tingsryd and Karlshamn are located in Blekinge County. It's a very high-tech soymilk. This is the first product to come out of Ted's years of collaboration with Trensums. Ted buys the soy base from Trensums and ships it by tank truck to Winner (pronounced Vinner), one of Sweden's largest ice cream producers; it is a division of Karlshamn in Karlshamn. He sells the soy base to Winner. Winner makes the ice cream, and sells it back to Ted. It is hard-packed in 3/4 liter octagonal cartons (each has 8 sides with the top and bottom flat). Ted then sells the ice cream to AB Svenska Nutana, a Seventh-day Adventist distributor and marketer in Rimbo, Sweden. Nutana has exclusive sales rights in Sweden. Ted is now working on exports to Finland and Japan.

Ted and his coworkers are only interested in high-volume products. He hopes to sell in Sweden at least 400,000 liters/year of the new ice cream, made from 200,000 liters

of the liquid mix. This is 9,000 liters/week, or 30 pallets/week. In addition, he hopes to export the product to other Scandinavian countries and to Japan and perhaps the continent.

It is quite surprising that, whereas there are many soy ice creams in America, there are only 2 others in Europe. One is made by Schoeller, which is one of Europe's largest ice cream producers. They bought an Alfa-Laval system that transforms whole soybeans (using the Illinois method, without separation of okara) into soymilk which they then spray dry and use to make a soy ice cream. "The samples of the ice cream and powder that they sent to Semper in Sweden were a total catastrophe."

Unisoy in England, run by Neil Rabheru, an Indian man, also makes a soymilk named Unisoy Gold and a soymilk ice cream named Maranellis Ice Supreme. They have been out since about mid-1989. It is fortified with calcium and vitamins to be as close as possible to dairy milk. Ted thinks it tastes fantastic, but the ice cream doesn't come close to Ted's. The owner of the company came to Sweden and tried to sell Ted his ice cream and aseptically packed soy base. Address: Aros Sojaprodukter, Bergsvagen 1, S-19063 Orsundsbro, Sweden. Phone: 0171-604 56.

1320. Fehlberg, Eric C. 1990. Re: List and activities of Seventh-day Adventist health food companies worldwide. Letter to William Shurtleff at Soyfoods Center, May 24. 6 p. Typed, with signature on letterhead.

• **Summary:** For each of the following companies is given the date of founding, date manufacturing started, and the soy products presently manufactured: Granovita, Spain. Nutana, Holland. Nutana, Norway. Nutana name changes. Austrian Food Company. DE-VAU-GE, West Germany. Sahm Yook Foods, Korea. Sanitarium Health Food Company, Australia (3 pages).

Lists (with addresses) the following companies: Sanitarium Health Food Company in Wahroonga, NSW, Australia; DE-VAU-GE Gesundheitswerk GmbH in Lueneburg, West Germany; San-iku Foods in Sodegauramachi, Kimitsu-gun, Chiba-ken, Japan; Korean Food Factory (Sahm Yook Foods) in Choongchungnam-do, South Korea; Alimentos Integronaturales y Panificadora la Carlota in Montemorelos, N.L., Mexico; Produtos Alimenticios

Superbom Industria e Comercio Ltda. in Sao Paulo, Brazil; Alimentos Granix in Florida, Buenos Aires, Argentina; Nutana Health Food Company in Bjaeverskov, Denmark; AB Svenska Nutana in Rimbo, Sweden; Granose Foods Ltd. in Newport Pagnell, Bucks, England; Pur-Aliment Food Factory in Clichy-Cedex, France; PHAG Food Factory in Gland, Switzerland (Note: PHAG is an acronym for Produits Hygiéniques Alimentaires Gland); Egypt Food Factory in Heliopolis, Cairo, Egypt; Glaxo India Limited in Bombay, India; Westico Foods Ltd. in Mandeville, Jamaica; Industrias Covac S.A. in Alajuela, Costa Rica; South China Island Union Mission in Hong Kong (3 pages). Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

1321. Pringle, William. 1990. Re: History and present activities of The British Arkady Company Ltd. Letter to William Shurtleff at Soyfoods Center, May 30. 2 p. Typed, with signature on letterhead.

• **Summary:** This company, founded in Sept. 1921, is now a member of the Arkady ADM Group. "The British Arkady (pronounced AR-kuh-day) was originally a joint company between The Ward Baking Co. in the U.S.A. and Baker Perkins of Willesden, London, a bakery machine company. The original purpose of the company was to sell the Arkady product... The original address was Willesden, London, England."

"Arkady Soya mills is not a separate entity. It is simply a name we have used in advertising and promotion. The mills making full fat soya flour belong to British Arkady and are on our premises here.

"British Arkady began to sell T.V.P. in 1965, but we did not produce on this site until 1973. The product we sold was ADM's, and we were their agent in the UK.

In 1974 ADM acquired British Arkady.

Concerning soymilk: "Our company had a joint venture for the production of soya milk dating back to the early 70's. We were the providers of technology and our partners made and sold the product. It was based on the use of full fat soya flour (dehulled ground soya beans) which was extracted with water. The milk was sold in cans. We no longer have a commercial interest in this product, but I believe it is still on

sale. We have never sold soya milk based on isolated soya protein, but we have given other companies the technology and some of these products are still for sale.

“Haldane Food Group and S.I.O. are fully owned subsidiaries of The British Arkady Co. Ltd.

“British Arkady’s three best-selling products that contain soy as a major ingredient, ranked in descending order of annual sales, are Full-fat Soya Flour, Textured Vegetable Protein, and Bakery ingredients.

Information on number of employees and annual sales is confidential. Address: Director-General Manager, The British Arkady Co. Ltd., Skerton Rd., Old Trafford, Manchester M16 0NJ, England. Phone: 061-872-7161.

1322. Shurtleff, William; Aoyagi, Akiko. 1990. The tofu market in Europe. Lafayette, California: Soyfoods Center. 137 p. 28 cm. [600+ ref]

• **Summary:** Contents: Introduction and overview: Production of tofu in Europe—Totals by country, Europe’s largest tofu manufacturers, trends in the tofu market in Western Europe (9 p.). The tofu market in the United Kingdom (Ranking of companies, production statistics, details on individual companies 10 p.). The tofu market in the Netherlands (10 p.). The tofu market in the West Germany (21 p.). The tofu market in the France (19 p.). The tofu market in the Belgium (10 p.). The tofu market in the other European countries (16 p.). Index. List of tofu manufacturers in Europe (sorted by country, and within each country by company name, 9 p.). Update on the tofu market in Europe. April 1991 (28 p.).

Production of tofu in Europe—Totals by country: United Kingdom 47,500 kg/week, started 1966, 35% share of five leading countries. Growth rate: 10%. Netherlands 44,500 kg/week, started 1964, 33% share of five leading countries. Growth rate: 8%. West Germany 24,650 kg/week, started 1981, 18% share of five leading countries. Growth rate: 10%. France 14,750 kg/week, started 1982, 11% share of five leading countries. Growth rate: 35%. Belgium 5,000 kg/week, started 1977, 4% share of five leading countries. Growth rate: unknown.

Europe’s largest tofu manufacturers: 1. Heuschen-Schrouff, Netherlands, started 1964, makes 37,500 kg/week. 2. Dragon & Phoenix, UK, started 1966, makes 20,000 kg/week. 3. Cauldron Foods, UK, started 1981, makes 15,000 kg/week. 4. Société Soy, France, started 1982, makes 12,500 kg/week. 5. Soyastern / Dorstener Tofu, West Germany, started 1982, makes 7,000 kg/week. 6. Jonathan PVBA (Div. of Lima Foods), Belgium, started 1977, makes 4,500 kg/week. 7. Regular Tofu Co. (Haldane Foods), UK, started 1981, makes 4,000 kg/week. 8. Paul’s Tofu, UK, started 1981, makes 3,500 kg/week. 9. Geestland, West Germany, started 1985, makes 3,250 kg/week. 10. Yamato/Huegli, West Germany, started 1982, makes 3,000 kg/week. 11. Galactina, Switzerland, started 1984, makes 3,000 kg/week. 12.

Galactina, Switzerland, started 1984, makes 3,000 kg/week. 13. Soyana, Switzerland, started 1982, makes 3,000 kg/week. Total: 116,250 kg/week. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

1323. *SoyaFoods (ASA, Europe)*. 1990. ADM expansion. 1(1):2. Spring/Summer.

• **Summary:** “A \$70 million soya protein complex is to be built by the Archer Daniels Midland Company at its soyabean processing plant in Europoort, Holland. ADM plans for the plant to be in operation by the end of 1990 and the complex will have facilities to produce soya flour, concentrates, isolates and textured soya products. The recent reduction of EC support schemes for dairy products was one of the reasons behind the expansion. ADM believes that now that dairy products have increased in price, soyaproteins are more competitive and with the growth of the European Market and the new possibilities in the Soviet Union, this expansion has great potential.”

Note: This is the earliest English-language document seen (Jan. 2016) that contains the term “soyaproteins” (or “soyaprotein”).

1324. *SoyaFoods (ASA, Europe)*. 1990. Helfex 90: SoyaFoods products. 1(1):3. Spring/Summer.

• **Summary:** Gives a very brief (and frustratingly incomplete) description of the many new soyfood products introduced at Helfex 90, held 8-9 April 1990 at Birmingham, England. The statement “The *Haldane Foods Group* celebrating its 21st birthday with the launch of 21 new products at the show...” is incorrect, according to a letter (fax) from Peter Fitch, head of the Haldane Foods Group (dated 16 July 1990). Twenty-one new products were launched and a leaflet described them, but this was NOT the company’s 21st birthday.

1325. Lindner, Anders. 1990. Re: Consumption of soymilk in Europe, by country and per capita. Letter (fax) to William Shurtleff at Soyfoods Center, June 19. 1 p.

• **Summary:** The following figures are my guesstimates for the amount of soymilk consumed in major European countries. Most of the soymilk produced in Belgium [by Alpro] and Germany [by DE-VAU-GE] is consumed in other countries. Note: The large consumption in the U.K. is due to both its large total population and its large population of vegetarians and vegans. The latter do not consume milk or other animal products.

Country (Population)—Soymilk consumption in million liters—% of total—liters per capita per year

United Kingdom (56.7 million)—20 million liters\*—40% of total—0.35

West Germany (60.2 million)—10 million liters—20% of total—0.17

France (55.8 million)—6 million liters\*\*—12% of total—0.11

Belgium (9.9 million)–3 million liters–6% of total–0.30  
Netherlands (14.7 million)–2 million liters–4% of  
total–0.14

Switzerland (6.5 million)–2 million liters–4% of  
total–0.31

Scandinavia\*\*\* (22.8 million)–2 million liters–4% of  
total–0.088

Italy (57.4 million)–1 million liters–2% of total–0.017

Austria (7.6 million)–1 million liters–2% of total–0.13

Spain (39.8 million)–1 million liters–2% of total–0.025

Others\*\*\*\* (24.3 million)–2 million liters–4% of  
total–0.082

Total (355.7 million)–50 million liters–100%–0.14

\* Neil Rabheru, founder and director of Unisoy, the  
largest soymilk manufacturer in the UK, estimates that 18-  
20 million liters/year of soymilk are consumed in the UK.

\*\* Bernard Sturup of Société Soy, a large soymilk maker  
in France, estimates consumption of soymilk in France to  
be much higher, about 11 million liters. Sturup's estimate  
is probably more accurate. \*\*\* Scandinavia = Sweden (8.3  
million), Denmark (5.0 million), Finland (5.0 million),  
Norway (4.2 million), Iceland (0.25 million).

\*\*\*\* Others = Portugal (10.2 million), Greece (10.0  
million), Ireland (3.7 million), Luxembourg (0.369 million),  
Malta (0.358 million).

Highest per capita consumption: United Kingdom  
0.35, Switzerland 0.31, Belgium 0.30, West Germany 0.17,  
Netherlands 0.14, Austria 0.13, France 0.11. Lowest per  
capita consumption: Italy 0.017, Spain 0.025. Address: P.O.  
Box 19002, S-250 09 Helsingborg, Sweden. Phone: 42-  
92776.

1326. *SoyaScan Notes*. 1990. Unisoy Milk 'n' By-Products  
Ltd. (Interview). June 29. Conducted by William Shurtleff of  
Soyfoods Center.

• **Summary:** The company, which is basically a soymilk  
company, now makes 6 products: White Wave Soya Milk  
(in sugar free and sweetened varieties), Unisoy Gold (a  
soymilk reinforced with calcium and vitamins), Soya Yogart,  
Maranellis (Organic soya ice cream, sweetened with fruit  
juice; it is delicious), Carob and Banana Drink (organic).  
They plan to soon launch some organic pancakes called  
Crêpolettes. Neil Rabheru founded the company, but the  
idea came from John Patel. Jan Freeman was also involved.  
Mr. Arora, who Neil knows, has never been involved in this  
company. Address: Stockport, Cheshire SK6 2RF, England.  
Phone: 061-430-6329.

1327. **Product Name:** Veggie Burger (Shipped from the  
USA to the Soviet Union as a Dry Mix).

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** 4666 Faries Parkway, Box 1470,  
Decatur, IL 62525. Phone: 800-637-5850.

**Date of Introduction:** 1990 June.

**Ingredients:** Textured soy protein concentrate, natural  
flavors, seasonings.

**How Stored:** Shelf stable.

**New Product–Documentation:** Peter Golbitz. 1990.

Soya International. April/June. p. 10-12. "Soya Interview:  
Dwayne Andreas, CEO Archer Daniels Midland: Soybean  
Ambassador." Peter Golbitz. 1990. Soya International. April/  
June. p. 14. "ADM unveils new veggie burger: Over 50  
million served." "Originally developed by ADM's wholly-  
owned subsidiary in the United Kingdom, British Arkady,  
over fifty million servings of the veggie burger, along with  
soy sausages and meat analog mixes, were sold in the  
U.K. last year. According to Ron Ferrari, sales manager of  
ADM's Protein Specialties Division, the veggie burger was  
developed to meet the demands of vegetarians..."

Archer Daniels Midland Co. 1990. "Annual report."  
"ADM has introduced its veggie burger, an all-vegetable  
protein food product based on soy protein concentrate.  
This innovative, cholesterol-free, reduced calorie product  
also contains dietary fiber and appeals to the vegetarian  
market. Early indications of good acceptance in the U.S. and  
U.S.S.R. suggest that this product has global potential..."

Stewart Reeve. 1991. *Soybean Digest*. Dec. p. 40a.  
"Fast food delight." "The product has already proven itself  
in an export market. ADM introduced a similar product  
trademarked as the Veggie Burger to the Soviet Union in  
October 1989 at a food trade show in Moscow. Shipped as  
only the dry mix, Veggie Burgers are sold in Soviet grocery  
stores as the mix or served in restaurants as burgers. The  
Petina restaurant in Moscow now sells 4,500 Veggie Burgers  
a day, Lensch reports. The Veggie Burger is tailored to the  
tastes of Soviet consumers. 'For example, the Soviet Union  
product has 10% fat content rather than the 5% the U.S. has.  
They're looking for calories,' he explains."

Talk with Lee Lensch of ADM. 1991. Dec. 16. Initial  
commercial sales began in June 1990. Although Realeat and  
British Arkady developed the Vegeburger in the UK using  
TVP (textured soy flour), ADM reformulated it in the USA  
using textured soy protein concentrate. Worthington Foods  
has a registered trademark on the name Veggie Burger in the  
USA only, so that is why ADM named its product Harvest  
Burger–after extensive talks with Worthington in the spring  
of 1990. The Veggie Burger made in the USA with textured  
soy protein concentrate is not currently sold in the UK. Kees  
Touw, who is in charge of all international sales for this  
product, would know why it is not sold–but it is probably  
because British Arkady or Haldane has their own line of  
products. Maybe one of their products is now made with  
textured concentrates.

1328. Golbitz, Peter. 1990. ADM unveils new veggie burger:  
Over 50 million served. *Soya International (Bar Harbor,  
Maine)*. April/June. p. 14.

• **Summary:** "What vegetarian burger can make the claim

'Over 50 million sold?' Archer Daniels Midland's (ADM) new soy protein-based burger! Made from ADM's own formula of textured soy protein concentrate and other vegetable-based ingredients, this is the same burger that Soviet officials were caught stuffing in their pockets at a recent U.S. trade fair exhibit in Moscow.

"Originally developed by ADM's wholly-owned subsidiary in the United Kingdom, British Arkady, over fifty million servings of the veggie burger, along with soy sausages and meat analog mixes, were sold in the U.K. last year. According to Ron Ferrari, sales manager of ADM's Protein Specialties Division, the veggie burger was developed to meet the demands of vegetarians... 'This cholesterol-free product contains dietary fiber, half the fat, 20% fewer calories, and similar protein levels of beef.'

"ADM, because it is not a consumer food products company, is currently looking for marketing companies to distribute the product to supermarkets, natural food stores and supermarkets. 'We would like to see the product sold in fast-food outlets as well, as it would be a natural alternative to meat,' says Ferrari...

"Dwayne Andreas, ADM's illustrious chairman, has dubbed the burger the 'ninth wonder of the world' because it has the ability to relieve extreme malnutrition for over 500 million people." Address: Soyatech, Bar Harbor, Maine.

1329. Golbitz, Peter. 1990. Soya Interview: Dwayne Andreas, CEO Archer Daniels Midland: Soybean Ambassador. *Soya International (Bar Harbor, Maine)*. April/June. p. 10-12.

• **Summary:** "Dwayne Orville Andreas has often been called the Soybean King. But perhaps an even more apt title would be the Soybean Ambassador. As Chairman of the Board and Chief Executive of Archer Daniels Midland Company (ADM), Andreas finds himself not only at the helm of one of the largest agribusiness concerns in the world, but also as a chief promoter of soybeans and their potential to feed the world.

"And he's not talking beans with just anyone. Andreas' friends and associates include, among others, former presidents Ronald Reagan and Richard Nixon; his late, long time friend Hubert Humphrey; Mrs. Nelson (Happy) Rockefeller, Senator Bob Dole, and, as of late, he has been seen with the likes of none other than Soviet leader Mikhail Gorbachev. And this is where his zeal for soybeans and soyfoods comes in. As he discusses in the following interview, humankind can no longer afford to feed itself on the spoils of a meat-centered economy. If we are to survive as a race, he believes, there needs to be a radical shifting of priorities in food production.

"As chairman of ADM, an \$8 billion a year soybean and grain processing giant, Dwayne Andreas could just be one of the architects of the future world of soyfoods, where veggie burgers replace hamburgers at home and in fast-food

restaurants, and where milk will come from soybeans instead of cows.

"Peter Golbitz: Archer Daniels Midland is one of the largest soybean processors in the world and has a tremendous amount of influence on the U.S. and world soybean markets. As you are aware, of course, the U.S. has been steadily losing market share as a soybean producer over the past decade and this trend is expected to continue through the '90s. What impact will this have on ADM's role in the market and the U.S.'s role as a leading agricultural producer?"

"Dwayne Andreas: In the first place, I'd say it's manifest that ADM doesn't have much influence, or we wouldn't have this situation developing. It's due to the government programs which have made it much more profitable for farmers to raise corn than to raise soybeans—this has caused the decline in soybean production in the United States. And of course the Brazilians and Argentines have stepped in to fill this gap and have increased their soybean production considerably. Now, as far as the repercussion on ADM, what we have had to do is close five plants in the United States and to buy three very large plants in Europe where we can process Brazilian and Argentine beans instead of American beans. So as far as ADM is concerned, we have been able to cope. Unfortunately for the farmers, they are not able to move their farms to Brazil or to Argentina and therefore they are just losing the soybean market which was built up largely by the ambition, and the farsightedness of the American farmers during the 60's and 70's.

"P.G.: Could world markets absorb increased U.S. soybean production right now, even though South American production has increased so much, or would a larger supply drive soybean prices downward?"

"D.A.: If the U.S. had not drastically reduced its acreage devoted to soybeans, then Brazil and Argentina would not have expanded as rapidly as they have. However, that is water over the dam.

"In answer to your questions, yes, the U.S. could now start producing more soybeans in order to take advantage of the increased demand which is growing all over the world as the use of margarine increases, as the production of chickens increases.

"Yes, we could regain our position, but we have to have realistic, market oriented government policies in order to do that.

"P.G.: There have been a number of comments attributed to you in which you state that in order to feed the world's burgeoning population, soybeans are going to have to play a more direct role in the feeding of people. What kind of role will ADM play in this and do you envision a shifting of priorities within your company to fit this role?"

"D.A.: We have been researching and selling edible soybean products for forty years. We now are by far the largest producer of edible soybean products. We make a burger, a patty, which is very much like a hamburger but

which has no cholesterol. Its very high in protein, high in fiber and contains only vegetable oil and vegetable protein.

“We also make a wide variety of other edible products out of soy flour and soy concentrate. That business is growing rather rapidly, but if you want to look over the long pull, in the U.S., we are keeping four times as many tons of animals alive as people in order to eat meat. As the population increases, as it will by one billion people between now and the year 2000, that balance is going to have to change in order to feed the human race.

“To feed protein to the animal and then eat the animal is fine for very rich Western countries, but eventually it will be too expensive to feed the added population of the world that way. Edible products made from soy proteins are bound to grow in use rapidly over the years.

“P.G.: Would you even advocate the move towards a more vegetarian-type diet in Western, developed nations as well?

“D.A.: I’m not talking about giving up meat because that certainly will not happen in the next few decades.

“But many people, because of health reasons, are becoming vegetarians and the soybean protein is the logical product for vegetarians to eat.

“For example, we’ve sold 50 million of these soy protein burgers last year and they went to people who would probably not be eating meat anyway, so I can’t say that it is competing with meat at this point.

“P.G.: As Eastern European nations and the Soviet Union begin to open up their economies in order to improve their standards of living, especially in regard to the availability of food, there are obviously great opportunities for those companies already in position to service those needs.

“Is ADM planning to build any new plants in the Soviet Union or other Eastern European countries? And, if so, what products would be produced there?

“D.A.: Well yes, through our affiliate company called ACTI (Alfred C. Toepfer International), which is successor to the Toepfer company in Hamburg, ADM does a total of about 6 billion dollars worth of business and 1.5 billion of it is in those Eastern European areas and Russia. So we probably do more business than any other company in commodities in that area.

“There are many questions to answer as that area gets reorganized economically and the standard of living will start to rise. That will mean that they will be using considerably more margarine and there will be a rapid growth in chicken production.

“We will be able to participate in that because we are now a majority owner in the principal soybean plant in Hamburg, Germany which services that area and also one in Europoort at Rotterdam. So we are in a position to benefit from the opening of that market.

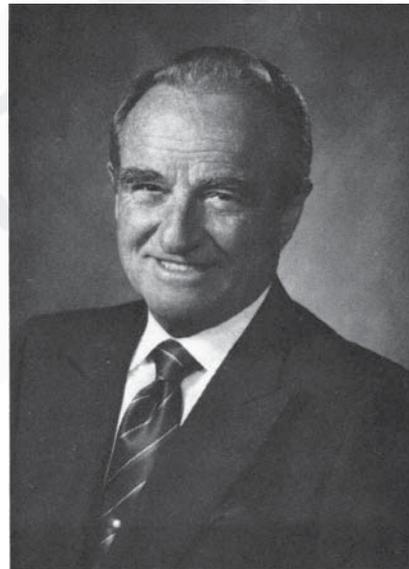

“As far as building plants is concerned, those countries

can buy soybean meal cheaper than they can make it because there are many ways to buy soybean meal that is indirectly subsidized.

“They also can buy subsidized vegetable oil, like palm oil and heavily subsidized soybean oil from Brazil and Argentina, so it is not likely that they are going to build up an oilseed industry to process imported oilseeds. However, what I do expect is that they will rapidly increase their rape seed crop in order to help fill the increased demand for protein and cooking oil.

“There will be plants built there to process rape seed, and I wouldn’t be surprised if ADM would participate in that” (Continued). Address: Soyatech, Bar Harbor, Maine.

1330. Golbitz, Peter. 1990. Soya Interview: Dwayne Andreas, CEO Archer Daniels Midland: Soybean Ambassador (Continued–Document part II). *Soya International (Bar Harbor, Maine)*. April/June. p. 10-12.

• **Summary:** (Continued): “P.G.: With the Soviet Union moving towards relieving chronic food shortages, wouldn’t the introduction of soyfoods be the quickest and most efficient means to accomplish this?”

“And wouldn’t it also be healthier than expanding their consumption of meat and dairy products?”

“D.A.: Well, yes. If you would look at the *New York Times* (May 6, 1990) of this Sunday, *The Week in Review* section has a large article about how the cow has got to be replaced over time by soybeans because of several reasons.

“The economics of it—margarine can be produced through soybeans far cheaper than butter can be produced through cows; and also, meat-like products can be made from soybean protein that is better than, and serves a purpose other than, that of cow’s meat.

“Now the Soviets, if they wanted to, and if they understood this matter and concentrated on it, could triple

their milk consumption by simply making soybean milk out of soy protein. And they could add a million tons equivalent of meat to their consumption with soybean patties, at approximately one fourth the cost of adding to their meat production.

“Not only that, but they would vastly improve the health of their people by reducing their cholesterol intake and increasing their intake of vegetable protein.

“Yes, I would say that the Soviet Union is in a unique position to take advantage of this new technology and they are very likely to do so.

“P.G.: Are the people who are in the decision making positions in the Soviet Union aware of these products?

“D.A.: Yes they are.

“P.G.: What role does ADM plan to have in the soyfoods industry as it further develops and becomes a regular part of the mainstream American diet?

“D.A.: We are fundamental producers of isolated soy protein, which is 90% protein, and edible soybean concentrate which is 70% protein. We are also the largest producer of edible soy flour for the bakery trade. We are already in that business and I would say, I don't know exactly what percentage we hold, but we are probably the largest producer of edible soy products by far in the world and we will undoubtedly continue to be.

“We are building an edible soy plant in Europoort which will produce soybean flour, isolated soy protein and soybean concentrate for the entire European and Eastern Europe and Russian market.

“P.G.: How much is ADM involved in food giveaway programs that use soy-based foods and does ADM plan to expand its participation in these programs?

“D.A.: We participate like all other companies on a competitive basis for the PL 480 and school lunch and other programs with quite a number of products.

“In addition to that, and quite apart from that, we donate a good deal of edible soy products to Mother Theresa who distributes it all over the world to hungry people with great success. We also contribute a good deal of edible soy material to Operation Blessing which is a very aggressive program to distribute food to the poor and the hungry managed by Pat Robertson and his television group.

“P.G.: Will this decade, with people's acutely developing environmental awareness and increasing sensitivity to basic human needs, usher in a new era for soyfoods around the globe?

“D.A.: Yes, there is no question about it. The trend is unmistakable and very strong.”

A portrait photo shows Dwayne Andreas. Address: Soyatech, Bar Harbor, Maine.

1331. Shurtleff, William; Aoyagi, Akiko. comps. 1990. *Bibliography of soy flour and cereal-soy blends: 3,085 references from the 3rd century B.C. to 1990, extensively*

annotated. Lafayette, California: Soyfoods Center. 427 p. Subject/geographical index. Author/company index. Language index. Printed June 6. 28 cm. [3085 ref]

• **Summary:** This is the most comprehensive bibliography ever published on soy flour and cereal-soy blends. It is also the single most current and useful source of information on this subject available today, since 56% of all references (and most of the current ones) contain a summary/abstract averaging 84 words in length.

One of more than 40 bibliographies on soybeans and soyfoods being published by the Soyfoods Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 32 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 15 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 653 commercial soy flour products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included.

The price of this 427 page spiral bound book (ISBN: 0-933332-66-1) is \$213. All orders must be prepaid in U.S. dollars.

1332. Rabheru, Neil. 1990. Brief history of Unisoy Milk 'n' By-Products Ltd. (Interview). *SoyaScan Notes*. July 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Neil, who founded this company, was born in Tanzania. One of his parents was of Indian origin (born

in India). He arrived in the UK in 1972 and went to work for a very large electronics company. By the mid-1980s he had cornered himself into a very specialized field of environmental testing and performance of defence equipment. The next step up in the organization was a long way away, so having run out of excitement in life, he began to look for more rewarding work. While doing a little import/export work he met an Indian named Mr. John Patel [pronounced puh-TEL] who suggested to him that they start a company to make soymilk, soy ice cream, and burgers. Mr. Patel did not have any money. The company was founded in June 1985. Before anything else happened, Neil became very concerned over irregularities in Mr. Patel's financial activities, and decided to discontinue his involvement with Mr. Patel. A few days later Mr. Patel died unexpectedly on 5 Nov. 1985. On Nov. 10-12 Neil selected the location for his new plant, then he raised the necessary startup capital from five venture capitalists in high tax brackets, but he was the company's only executive. Neil was never in any way involved with Michael Cole or with Soya Health Foods Ltd. (which is still owned by Mr. Arora, a Sikh) despite what others have said. Jan Freeman is presently involved with Unisoy.

In May 1986 Unisoy began to make its first product, White Wave Soya Milk (plain/unsweetened, or sweetened with raw cane sugar) at their present address. Before this time, the soymilk market in the UK was "very stagnant and boring, with limited growth. There was a very high price differential between dairy milk and soya milk. Soymilk packaging was poor. The ratio of the volume of business to the number of brands on the market was too high. Too many brands were fighting for too small a market. There was tremendous brand loyalty, promoted in part by the wide range of product tastes. That was Unisoy's biggest problem. So Unisoy decided to crash the price barrier, and develop some nice packaging and a better tasting, much creamier product." To learn how to make soymilk, Rabheru did an extensive study of the literature. He found many conflicting opinions but agreement on some basic points. To help resolve these, he consulted with Dr. H.L. Wang at the USDA Northern Regional Research Center in Peoria, Illinois. He developed a unique process, purchased a soymilk plant from Taiwan, modified it with steam injection and instrumentation to suit his application (he has an engineering background), developed soymilk products, ran taste tests, and continued improving his process. Unisoy's main competitors in the soymilk market at that time (and still today) were Alpro/Vandemoortele and Granose. Unisoy has taken over virtually all of the market share of Soya Health Foods Ltd., mostly because of better quality and lower price.

In May 1987 Unisoy introduced White Wave Soya Yogart, a line of products were yogurt-like desserts in fruit flavors with a shelf-life of 10-11 weeks with aseptic packaging. This was followed by Unisoy Carob & Banana

Organic Drink (Aug. 1988), Unisoy Gold soymilk (March 1989), Maranellis Ice Supreme (soy ice cream, May 1989), and Unisoy Soy Yogart (Aug. 1989). All the previous soy ice creams and yogurts in the UK had contained soy protein isolates, since the manufacturers did not know how to make soymilk with a high protein levels. Even today, all the soy ice creams in the UK are made from soya isolates. Unisoy makes a special rich soymilk used specially for making their ice cream.

Over the years Unisoy steadily improved its soymilk process with numerous innovations. They now make excellent quality soymilk without dehulling the soybeans, without adding any oil or lecithin, and using only 1-2 people to operate the largely automated plant.

In Dec. 1988 Neil sold the company to Daisy Dairies Ltd. This cooperative group of companies has their head office in Hyde, Cheshire, and they also have fresh milk, UHT, catering, and ice cream manufacturing divisions, plus now Unisoy. He would prefer not to comment on the effects/results of the sale. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

1333. Rabheru, Neil. 1990. The soymilk industry and market in the United Kingdom (Interview). *SoyaScan Notes*. July 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** There are only two significant manufacturers of soymilk from soybeans in the U.K.; Unisoy and Soya Health Foods Ltd. Plamil Foods Ltd. buys soy protein isolates from Protein Technologies International, then subcontracts with a dairy to have these mixed with water and other ingredients, according to Plamil's formula, to make a soymilk. As far as he knows, Plamil has never purchased soybeans to make soymilk and has never had their own plant. Haldane used to import its soymilk from France. This soymilk was made, not from soybeans but from some kind of a spray-dried formulation. Then Unisoy started supplying Haldane, but that contract came to an end when Haldane was acquired by another company. Neil thinks they are now importing again, probably from France, not from Australia. Haldane's imports are very small. Neil has never heard of Itona Products Ltd. in Wigan, Lancashire [although they are still in business in 1990].

Of the soymilk made in the Unisoy produces well over 50%. Approximately 18-20 million liters of soymilk are sold and consumed in the UK each year. It is the biggest soymilk market in Europe, and it is growing at the rate of roughly 15-26% a year. "The growth has been phenomenal, and the bulk of the growth in the European soymilk market seems to have been in the UK." But he doubts very much that it is growing faster than 26% a year. The estimated market shares by company are: Alpro/Vandemoortele 51%, Granose 15-17%, Unisoy 15-17%, and others (Plamil, Soya Health Foods, Haldane, etc.) 15-19%.

In terms of outlets, Granose is sold only in health food outlets. Unisoy's best-selling and most profitable line is its four soyamilk products. White Waves sugar free has long been the best selling single product, but it is rapidly being overtaken by Unisoy Gold (fortified with vitamins and minerals), which has been a phenomenal success. The bulk of Unisoy's soyamilk sales is in national multiples/grocery chains. Of all Unisoy's products, about 65% of sales is in multiples and 35% in health food stores. Plamil has its own clientele; its products are very popular among vegans. Soya Health Foods Ltd. has been able to survive largely because of their soy ice cream, which was one of the first ones on the market in the UK [after Sojal and SoyBoy Soymilk Ices from the Regular Tofu Co.] and the most widely available brand for a long time. Soyamilk is a very small product for Soya Health Foods Ltd. now.

Alpro/Vandemoortele did the pioneering work in getting soymilk into British multiples (supermarkets). In about 1982 Safeway (which has its origins in America), became the first multiple (supermarket chain) to sell soymilk in the UK. They sold the Alpro/Vandemoortele line but they sold only a small quantity. Safeway has always purchased its soymilk from Vandemoortele. Michael Cole of Soya Health Foods Ltd. also deserves a good deal of credit for the growth of soymilk in the UK. He did the early work in getting British-based supermarkets, large chain stores, and normal grocery stores interested in carrying soymilk. By late 1985 Cole was selling large amounts of his aseptically packed Sunrise Soya Milk to multiples, including Tesco. "Cole did the solid job of marketing and bringing soymilk into the perspective it is in now. Then he left Soya Health Foods in mid- to late-1987." He started his own consulting company. Today every multiple in the country, including the large chemist chains (drug stores) are now offering soymilk to the consumer.

Unisoy exports their soymilk to the Netherlands, Italy (to Parma Soia), and Ireland. It is also sold in Portugal. It used to be sold in Belgium. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

1334. United States Court of Appeals for the Federal Circuit. 1990. Ralston Purina Company, Plaintiff-Appellant, v. A.E. Staley Manufacturing Company, Defendant/Cross-Appellant. Court Decicion 90-1019, -1045. 3 p. Decided July 5, 1990. Unpublished manuscript.

• **Summary:** "Decision: Ralston Purina Company (Ralston) appeals from a judgment of the United States District Court for the Central District of Illinois, No. 84-1378 (July 27, 1989), holding the United States Patent No. 3,940,495 ('495) unenforceable for inequitable conduct. A.E. Staley Manufacturing Company (Staley) cross-appeals denial of its motion to amend the judgment to include an award of attorney fees. We affirm."

"Opinion: Evidence that Ralston intended to deceive the

Patent and Trademark Office (PTO) includes: (1) Brukardt and Price knew of the Archer-Daniels-Midland (ADM) Dutch application no later than 1968; (2) Ralston made no disclosure of the ADM Dutch application until 1973; (3) Ralston's disclosure of the ADM Dutch application appeared in an 18 page statement discussing 118 references; and (4) when the PTO examiner said that he had not fully considered the cited references and objected to the statement, citing Manual of Patent Examining Procedure 707.05(b), Ralston refused to limit the statement to the five most pertinent references... Ralston did not and could not contest the finding that the ADM Dutch Patent application was material. The findings are not clearly erroneous and support the inferences drawn.

"Ralston's reliance on *Ralston Purina Co. v. Far-Mar-Co, Inc.*, 772 F.2d 1570, 227 USPQ 177 (Fed. Cir. 1985) is misplaced. Inequitable conduct was neither at issue nor considered in that case.

"In denying Staley's motion for attorney fees, the district court considered all relevant factors (Ralston's inequitable conduct, that 'the issues in the case were very hotly contested and the case was vigorously litigated,' and our holdings on validity and infringement in *Far-Mar-Co*). We cannot say the district court abused its discretion in denying Staley's motion."

Before Markey and Michel, Circuit Judges, and Brewster, District Judge.

"Note: This opinion has not been prepared for publication in a printed volume because it does not add significantly to the body of law and is not of widespread legal interest."

1335. Marshall, Philip. 1990. Brief history of the Regular Tofu Co. (Interview). *SoyaScan Notes*. July 9. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** This company was started by John Holt. [It began production in Dec. 1981.] Holt learned how to make tofu, in about 2 days, from Philip Marshall of Cauldron Foods Ltd. [which started tofu production in Sept. 1981], and Paul Jones of Paul's Tofu & Tempeh [which started tofu production Jan. 1981]. Before that he was involved in a spiritual practice, perhaps with Divine Light Mission. He and a girl, who was into the same spiritual tradition, got together and started the company. It was a very small, kitchen-based operation. It went through various growing pains, and eventually Holt ended up owning the company himself. He got into some financial difficulty and in about 1983-84 he got refinancing when a fairly large percentage of his shares were purchased by an entrepreneur, who formerly had owned a medium-sized tailoring business. He then got involved with Haldane when they bought the company. They either asked him to leave or he left on his own. Philip has no idea where he is now.

Regular Tofu Co. now may be nothing but a name.

There is a plant, a very early/antique Takai plant, where Haldane has their tofu made. They have a 50% holding in an ice cream company and the product is actually made at that factory. The address of Regular Tofu Co. is now the same as Haldane. Address: Owner, Cauldron Foods Ltd., 149 South Liberty Lane, Ashton Vale Trading Estate, Bedminster, Bristol BS3 2TL, England. Phone: (0272) 632835.

1336. Marshall, Philip. 1990. Early work with soyfoods in the UK: Direct Foods, Whole Earth, Harmony Foods Ltd., and Haldane (Interview). *SoyaScan Notes*. July 9. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Brian Welsby founded Haldane Foods in 1983. But he was active with health foods long before 1980. He used to do the product mixing for a company named Direct Foods Ltd. (in Petersfield, Hampshire), which was owned by Peter and Anna Roberts, a very nice, committed pair of vegans. They were among the first people to market dried soya products, particularly TVP, in the UK. And they were certainly the first people to develop the market for composite dry soya products—like burger mixes. Philip has no idea when Direct Foods started, but it may have been in the late 1960s. [Note: It started in Aug. 1969.] They were one of the pioneers of vegetarianism and veganism in England.

Greg and Craig Sams are brothers, both American. Both are very talented guys, excellent at marketing. Greg is in a wheelchair. In the early days, both were the key figures/principals at Whole Earth with the early events at Portobello Road. Whole Earth, which started as a bakery, became Harmony Foods, a large health food wholesaling company. [Note: In 1980 Harmony Foods Ltd. was at 12 Orpheus St., Camberwell, London S.E., England.] Harmony had some of its own Harmony Foods brands and was one of the first companies in the UK to import Japanese miso, shoyu, etc. At some point, Whole Earth was sold off as a health food wholesaler, and its still going with such popular brands as Whole Earth jams, sauce, etc.

Peter Fitch was responsible for putting together the Haldane Foods Group, which incorporates Direct Foods, Haldane Foods, and Realeat. Address: Owner, Cauldron Foods Ltd., 149 South Liberty Lane, Ashton Vale Trading Estate, Bedminster, Bristol BS3 2TL, England. Phone: (0272) 632835.

1337. Svejgard, Torben. 1990. Soy protein concentrates in Europe (Interview). *SoyaScan Notes*. July 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Central Soya is building a soy protein concentrate plant in Italy, south of Venice. They also have a joint venture with a Yugoslavian company named Preduzce Sojaprotein Becej, which is building a functional concentrate plant in Yugoslavia. The plant in Italy will provide the raw material for the plant in Yugoslavia. He is quite sure that ADM will soon start to build a concentrate

plant in Rotterdam. He feels that these two U.S. companies are overestimating the potential demand for concentrates in Europe. They probably made their market studies in 1989 when there was an enormous demand for concentrates to be used in calf milk replacers, due to a lack of nonfat dry milk. But now the situation is more normal and the demand for and production of calf milk replacers has fallen off sharply. The American companies think that when it becomes legal in Germany to use soya proteins with meat, there will be an explosion in demand, but Torben thinks that this will grow only very slowly because German consumers do not presently want soy in their meats. Europeans are much less concerned than Americans about cholesterol intake; calorie intake is a bigger issue in Europe.

Loders Croklaan (pronounced krok-LAAN) and Aarhus are the two biggest European manufacturers of soy protein concentrates. They are about the same size [Loders says that Loders is bigger]. Loders started making concentrates in the mid-1970s [1976], at about the same time as Aarhus. Loders is a subsidiary of Unilever, in the same division as the oil and fats specialty division. In the USA the division is called Van den Berg. They make Soycomil K and P (calf milk replacer and piglet milk replacer). They also sell a concentrate for food use (Unico) but they are much bigger in the feed area. They do not make textured concentrates. They also have Unisoy, a regular defatted soy flour sold in small amounts. In addition, they are a soybean crusher.

Note: Aat Visser, sales and marketing manager for Loders notes in a letter of 6 Aug. 1990: "Loders Croklaan is substantially larger than Aarhus and continues to be the largest European manufacturer of soya protein concentrate. Loders Croklaan (at that time Unimills) started to produce concentrates on a pilot plant scale in 1973. In Jan. 1976 the full-size plant was completed. Although the main sales of Soycomil K and P are to the specialty feed industry, the sales of Unico for food use are becoming more and more important. A textured soy protein concentrate is produced on the basis of Unico and marketed under the name Unibit. Unisoy is sold mainly in flour, grit, and flake form. The grit is used as a raw material for extrusion, and the flakes for solvent extraction processes." Address: Marketing Manager, Aarhus Oliefabrik A/S, 27 M.P. Bruunsgade, P.O. Box 50, DH-8100 Aarhus C, Denmark. Phone: 45 86 19 62 52.

1338. Ontario Ministry of Agriculture and Food. 1990. Soybean buyers mission from new markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. 30 cm. Saddle stitched. [Eng]

• **Summary:** This conference took place in Ontario, Canada. On the mission were two buyers each from Indonesia (P.T. Indofood Interna Corp., BULOG), Philippines (Universal Robina Corp., Paritas Trading Corp.), and Taiwan (Sun Ford Mfg. Corp., Great Wall Enterprise Co.). Michael Loh of OMAF/Tokyo was the mission leader. Contents: Background

and purpose. Mission members. Itinerary. Seminar agenda. Canada's soybean industry, by Fred Brandenburg of OSGMB. An overview of export opportunities in the new markets (Korea, Taiwan, Philippines, Indonesia), by Michael Loh of OMAF, Tokyo. Role of Taiwan Soybean Importers, by Laurence Hsiao of Sun Ford Conglomerate Corp. Soybean market in Indonesia, by A. Saifullah of BULOG, Indonesia. The market prospective for tempeh in the year 2000, by Ms. Susani K. Karta, manager, P.T. Indofood Interna Corp. (Indonesia). Appendix: 1. Ontario soybean suppliers (directory of 15 exporters). 2. Useful contacts. 3. Ontario soybean oil crushers (ADM, Victory Soya Mills, Central Soya of Canada). 4. Role of the Ontario Soybean Growers' Marketing Board. 5. Development of soybean varieties (incl. Harovinton for tofu; Canatto, Nattawa, and Nattosan for natto). 6. Market trends in the development of traditional soyfood, by Susani K. Karta (ASA, Singapore; Originally presented at the ASEAN Food Conference, Oct. 1988, Bangkok, Thailand). 7. Reference materials for doing business in Asia/Pacific.

"Natto soybean variety development at Agriculture Canada in Ottawa has also received considerable support from the OSGMB. Ottawa's Dr. Harvey Voldeng has been extremely successful at breeding Canada's top natto varieties (Canatto, Nattawa, and Nattosan) as well as incorporating higher protein levels into other early maturing varieties."

"Soybean breeders are selecting for high protein and white hilum whenever possible" (p. 40). Address: Tokyo, Japan.

1339. Shurtleff, William; Aoyagi, Akiko. 1990. *Soy milk in Europe: The industry and market, commercial products, publications, and history*. Lafayette, California: Soyfoods Center. 261 p. July 17. Indexes. 28 cm. [763 ref]

• **Summary:** Since the mid-1980s, the soy milk industry and market in Western Europe has been booming, and the future looks very bright. Many large companies with plenty of capital and marketing expertise are entering the market, product quality and diversity is steadily improving, and consumers are showing an increased interest in nutritional protein beverages that are free of cholesterol and lactose, and low in saturated fats.

**Soy milk production and growth rate:** Production of soy milk in western Europe as a whole is estimated to have grown to 30–42.5 million liters/year (7.9–11.2 million gallons/year) in 1990, up from only 6–10 million liters/year (1.59–2.64 million gallons/year) in 1984, a roughly fivefold increase in 6 years. This represents an average compound growth rate of about 30% a year.

**Estimates of total market size (not including infant formulas):** Philippe Vandemoortele, managing director of Alpro, Europe's largest soy milk manufacturer, estimates the adult soy milk market in Europe to be 30 million liters/year. Asger Somer Hansen, managing director of DTD/STS, one

of Europe's two largest suppliers of soy milk plants, estimates 35–40 million liters/year. Anders Lindner, managing director of DTD/STS until late 1989, estimates 42.5 million liters/year, plus an additional 7.5 million liters/year that are made into dairylike products such as soy puddings, yogurts, ice creams, and cheeses.

**Leading countries:** The largest soy milk market in Europe is clearly in the UK, because of its large population of vegetarians and vegans (vegans do not consume milk or any other animal products), its large total population, its large number of soy milk manufacturers and marketers, the fact that soy milk is now sold in many UK multiples/supermarkets, its relatively long history of soy milk production, and the fact that many soy milk products bear the generic name "Soya Milk" on the front panel. The first commercial soy milk in England was Solac, launched in 1912 with great fanfare and publicity by the Solac Company/Synthetic Milk Syndicate. Roughly 40% of all soy milk consumed in Europe is consumed in the UK, and per capita consumption is also highest there. The second largest market is probably France, with West Germany a very close third.

**Leading manufacturers:** Two companies (Alpro in Belgium and DE-VAU-GE in West Germany) dominate the market with an estimated 70% market share, and that percentage is not likely to decrease. Competition is fierce and increasing. Alpro, which began making soy milk in 1979 and now produces about 21 million liters/year, is building a new plant at Wevelgem, Belgium, which is scheduled to begin operation in June 1990. Costing about US\$15 million, it will have a capacity of 45 million liters/year. DE-VAU-GE's plant, which was built by DTD/STS and began operation in August 1985, now produces about 12 million liters/year but has a capacity of 3,000 to 4,000 liters/hour of finished soy milk. Other manufacturers with the year they started making soy milk and their current estimated annual production in liters/year: Unisoy (UK, 1986) 3 million; Cacoja (France, 1987) 3 million; Soyana (Switzerland, 1985) 2.5 million; Société Soy (France, 1975) 1.2 million; Soya Health Foods (UK, 1985) 1 million; Galactina (Switzerland, 1969) 1 million; Triballat (France, 1989) 0.5 million; Innoval (France, 1987) 0.5 million; Crivellaro (Italy, 1989) 0.5 million. Other smaller producers include Plamil (UK, 1965), Haldane (UK, 1984), Itona (UK, 1964), and Ralston Purina España (Spain 1984).

**Price:** The retail price of soy milk is 2–3 times as high as that of cow's milk.

**Packaging:** Virtually all European soy milk and soy milk-based products are now sold in Tetra Brik Aseptic cartons. But with the growing concern about and legislation concerning disposal of solid wastes, one very big potential danger lies on the horizon for soy milk—that aseptic packaging will be increasingly banned, as it already has been in the state of Maine in the USA after Sept. 1990. If the manufacturers of aseptic packaging do not find a truly

recyclable package or establish a workable system to recycle their current packages, soymilk could be in for hard times.

**Soymilk trends in Europe:** Though soymilk production has increased fivefold since 1984, it is still minuscule compared to cow's milk. The flavor of soymilk continues to be a major problem for most Europeans. Features/benefits attracting Europeans to soymilk are its freedom from cholesterol and lactose, and the fact that its production places less of a burden on the environment and on factory-farmed dairy cows. Most of the soymilk in Europe is sold to the natural/health food trades via health food stores and (in German speaking countries) Reform House chains. Only in France and the UK (plus a little in Belgium) is it also marketed as a mainstream product through supermarkets. A small amount is consumed by Asian-Europeans and Seventh-day Adventists. Organically grown soybeans are used in a large and increasing percentage of European soymilk. In the UK, innovative natural sweeteners (such as apple juice) have also started to be used. Private labeling: Many large European natural/health food manufacturers and/or distributors now sell soymilk under their own brand. Alpro produces many private-label brands. This practice is much more common in Europe than in the USA. Medical Soy and Parma Soia in Italy are two recent additions to this growing list. Soymilk is widely exported across national boundaries within Europe. This will probably not change much after 1992. Many large companies have entered the market since 1985 with large automated plants, but many of these are running at a small percentage of their capacity—and thus are losing money. Because of the surpluses of cow's milk in Europe, there are many regulations (including value added taxes and labeling restrictions) against “imitation dairy products.” These differ from country to country and will probably become less severe after 1992. These practices are much more restrictive in Europe than in the USA, although also in the USA soymilk is not allowed to be labeled “soymilk.” European dairy magazines (unlike their counterparts in America) continue to view soymilk with fear and criticism, even ridicule, at the same time that many large European dairy companies are jumping into this new market that shows future promise—which the European cow's milk market seems not to. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1340. **Product Name:** Sunrise Ice Dream (Non-Dairy Frozen Dessert) [Cassata, Coconut].

**Manufacturer's Name:** Soya Health Foods, Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer's Address:** Unit 4, Guinness Road, Trafford Park, Manchester M17 1AU, England.

**Date of Introduction:** 1990 July.

**Ingredients:** Soya milk (made with purified water), corn syrup, vegetable oil, fructose, vanilla bean extract, emulsifier (vegetable mono-diglyceride), stabilisers (guar gum, locust

bean gum, pectin), mixed fruits (pineapple, raisins, cherries, green melon, gold melon, orange & lemon peel, ginger, grapes), natural colours (beta carotene, beetroot red), chlorophyllins.

**Wt/Vol., Packaging, Price:** 1 liter plastic tub (rectangular).

**How Stored:** Frozen.

**New Product–Documentation:** Letter and Label sent by Genice Foods Ltd. 1994. Feb. 10. Cassata and Coconut were launched in July 1990. Label is 6.75 by 4.5 inches. Paperboard, fits down into plastic lid. Yellow, red, green, and brown. Color photo shows vanilla colored scoops of ice cream in a glass bowl with two wafers stuck into them, and surrounded by sliced and whole fruits. “Made from natural ingredients. Lactose free.”

1341. Visser, Aat. 1990. Re: Brief history of UniMills B.V., Croklaan, and Loders Croklaan B.V., now subsidiaries of Unilever. Letter (fax) to William Shurtleff at Soyfoods Center, Aug. 6 and Aug. 27. 4 p. [Eng]

• **Summary:** In 1910 a company named VOZ (Verenigde Oliefabrieken Zwijndrecht) was founded at Zwijndrecht, the Netherlands. Unimills was part of this company, founded by Van de Bergh & Jurgens, and later joined the Margarine Union, which was one of the roots of Unilever. Unimills was part of Unilever from the start in 1930.

In Nov. 1971 Croklaan was acquired by Unilever. Before Nov. 1971 this company's name was Unimills B.V., based in Wormerveer, Netherlands? In Jan. 1973 the name was changed to Unimills. Unimills International (which does not exist any more) was formed by the factory in Mannheim, Germany, the factory in Erith [on the River Thames just east of London], UK, and the factory in Zwijndrecht, Netherlands. Note: The only Unimills left now is Zwijndrecht. Unimills was part of the Unilever Oil Milling Division, which had factories in the Netherlands, United Kingdom, and West Germany.

In 1973 Unimills started to produce soya protein concentrates on a pilot plant scale. In Jan. 1976 Unimills introduced Soycomil K and P, soy protein concentrates for young animals, and Unico. Production was (and still is) at Lindtsedijk 8, 3336 LE Zwijndrecht, Netherlands.

In Sept. 1986 the spelling of Unimills was changed to UniMills. At that time, Loders Croklaan was created from Croklaan (already owned by Unilever), and from Loders & Nucoline (a division of Croklaan in the United Kingdom). Loders Croklaan was and is located at Cairn Mills Silverton, near London, England. Immediately thereafter, Loders Croklaan took over responsibility for operating the protein division of UniMills. Loders Croklaan is substantially larger than Aarhus Oliefabrik; it has been and continues to be the largest manufacturer of soya protein concentrate in Europe. Although the main sales of Soycomil K and P are to the specialty feed industry, the sales of Unico for food are becoming more and more important.

Also in Sept. 1986, three of the oil mills were sold to ADM. These were European oilseed processing facilities on 30 April 1986. These are Unilever's soybean plant at Europoort (Rotterdam), the Netherlands, the oilseed plant at Spycyk, West Germany, and the oilseed plant and vegetable oil refinery at Hamburg, West Germany. In June 1988 the name of UniMills GmbH Hamburg was changed to UniMills International; its head office was at Bonadiestrasse 3-4, D-6800 Mannheim-Industriehafen, West Germany.

In Sept. 1990 the oil mill at Erith in the United Kingdom will be sold to ADM, and UniMills International? at Mannheim in West Germany will be sold to Ferruzzi of Italy. After these sales, Unimills will have only one production unit left, at Zwijndrecht.

Today UniMills Zwijndrecht produces protein products, lecithins, emulsifiers, and fractionated fats, and has refining and hardening facilities for fats and oils. Unilever's world headquarters are: Unilever N.V., Burgemeester Jacobpl. 1, 3015 CA, Rotterdam, Netherlands. Address: Hogeweg 1, 1521 AZ Wormerveer (P.O. Box 4, 1520 AA Wormerveer), Netherlands. Phone: (0)75-292911 or 292404.

1342. Fehlberg, Eric C. 1990. Re: Seventh-day Adventist health food companies worldwide. Letter to William Shurtleff at Soyfoods Center, Aug. 17. 4 p. Typed, with signature on letterhead.

• **Summary:** "Nutana of Holland do not manufacture the five products that are listed in my letter of May 24. Each of the products does contain soya as an ingredient, and it is my understanding that they are manufactured by Nutana of Denmark.

"Nutana of Norway, established in 1970, and you are right, it was formerly known Dagens Kost, but was renamed Nutana Norge, in 1982. In Norway they are strictly a marketing branch and do not manufacture any foods at all."

Sahm Yook Foods is the official name of the Korean Food Factory.

Alimentos Colpac is the official name of the food factory in Navojoa, Sonora, Mexico; it was established in 1969. The Montemorelos Branch is known as Alimentos Integronaturales y Panificadora la Carlota; it was established in 1981.

Granose Foods Ltd. of England moved from Stanborough Park, Watford, Herts, to Howard Way, Newport Pagnell, Bucks., in Jan. 1989. The official opening date was 9 July 1989.

PHAG (of Switzerland) is written in all upper-case letters; it is not an abbreviation of anything.

Glaxo Ltd. India has nothing to do with the Seventh-day Adventist church.

DE-VAU-GE was primarily responsible for setting up the Adventist food industry in Spain and the Kolett's brand is packed specifically for the Spanish market. DVG has two brand names which are manufactured for the reform or

natural foods market in Europe: Granovita and Bosen. The products under the Bosen label were originally made in their bakery.

Pan American Health Service in Honduras still produces soymilk. Mountain View College in the Philippines is still making meat analogues and perhaps soya milk—but only for their own use. Bandung College (now called Bandung Academy) in Indonesia is still in operation and they may be making soya products. Two years ago they wanted very much to start a food factory, but it did not happen. The Hong Kong Hospital is still operating and they still manufacture small amounts of food, basically for their own use. South China College has a long history. It was established in 1903 as Bethel Girls' School, but underwent several name changes and changes of location due to political turmoil and the Sino-Japanese war of 1937, followed by the violence of the Second World War.

"Eventually it was re-established at Clear Water Bay in Kowloon, in 1958 and a college curriculum introduced in 1962. Its name was changed to South China Union College in 1964. In 1981 they officially adopted its name and has been called Hong Kong Adventist College since then. It still operates today, and possibly manufactures small quantities of food, basically for their own use." Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904.

1343. Sand, Avraham. 1990. Pioneering soyfoods and natural foods in Israel (Interview). *SoyaScan Notes*. Sept. 9. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Avraham first went to Israel in 1975 and stayed for about a year. During this time he and Avraham Leider and one other person founded Israel's first natural foods company, named Amud Ha Shachar (Pillar of Dawn) and located in Jerusalem. The first product they made was granola, followed by whole wheat flour, bulgur wheat, brown rice (which they packaged), and date bars. With this company established, a number of Americans and other westerners who had recently immigrated to Israel and were connected with the company approached the Sachnut, the Jewish government agency which helps finance Jewish cooperative settlements. They asked to be given a moshav. A moshav is like a kibbutz (a cooperative agrarian, rural settlement) except that the families have their own homes and land, and the children live at home. In 1976 the Sachnut gave the group a piece of land, infested with scorpions, upon which nine other groups had tried and failed since 1948 to establish a successful community. The Sachnut also financed a small natural foods factory and bakery on the moshav, complete with an oven and a packaging machine. The moshav was named Moshav Me'or Modi'im, located at Doar Na Hamercas, in the Judean Hills between Jerusalem and Tel Aviv, Israel.

Avraham returned to North America for several years. While living in a community of 5-6 people in Nova Scotia, Canada, he was introduced to tofu by people who made tofu for the community, but he did not make tofu there himself.

Between 1975 and 1990 Avraham has spent a total of 8 years in Israel. The rest of the time he was in the USA or Canada or travelling. Avraham returned to the moshav in 1978 and that year he established Israel's earliest known tofu shop as part of Pillar of Dawn. The tofu was made in the same bakery room as the granola, especially in the evenings when the granola wasn't being made. Originally the community scale shop was established solely to make tofu for the 25 or so families living on the Moshav. Tofu production was small, averaging 50 lb/day of tofu one day a week, using a Corona mill grinder powered by a washing machine motor. The tofu was curded using bittern (nigari) from a salt factory on the Dead Sea. The Moshav owned the tofu company collectively and financed it. Avraham was the motivating force that got the operation started with temporary help initially from Yaacov Sack and Moshe Reuben. About 3-6 months after tofu production began, they started to make tempeh. Then Ben Zion Solomon joined Avraham 6-12 months after the company started and they worked together like equal partners for several years as the tofu and tempeh makers. Solomon was also making quite a bit of miso on the moshav (with a little help from Sand). They also introduced soymilk. At some point, they began to sell their tofu and miso at a few health food stores in Jerusalem. As far as Avraham knows, his was the first company to make tofu, tempeh, miso, or soymilk in Israel. They developed a 1-page informational pamphlet, written in Hebrew on one side and English on the other, explaining what tofu was and how it was made, plus some recipes. At that time Israelis, other than recent immigrants from America, didn't know what tofu was.

They reached the point where they decided to buy large scale equipment (from Takai) and set up a real commercial shop on the moshav that could produce 500 to 1,000 lb/day of tofu. The Sachnut indicated that they would be willing to help set up this new business. So in about 1979 or 1980 Avraham traveled to the USA and did a lot of study to learn about tofu equipment, products, and processes in small to medium sized shops. He visited about 20 tofu shops nationwide (most were very open and helpful) and collected information in a notebook. He worked at the Soy Plant in Ann Arbor, Michigan, for approximately a year in about 1980. From time to time he shared information with his father, Ralph Sand, who was doing research on non-dairy cheese and tofu at Anderson Clayton at the time. At the last minute the Sachnut pulled out and decided not to finance the project, so the expansion never took place. They continued to make tofu on a small scale. But the moshav was suffering economically so in about 1981 Avraham and his wife, unable to make a living there, left and returned to the USA.

The little soyfoods plant dissolved but shortly thereafter a commercial operation (probably Golden Jerusalem Tofu) started in Jerusalem and the people on the moshav bought their tofu from Jerusalem.

During the time that Avraham made soyfoods in Israel (1978-81) there was a lot happening with soya. There was a man called the "Soya King" ("Hamelech Soya," probably Eliahu Navot) who was famous in Israel as the country's soybean pioneer. Avraham thinks he lived in Herzlia/Herzliyya, just north of Tel Aviv, but he died in about 1979 or 1980 several months before Avraham was able to meet him. Avraham went to his home town and met his widow, who told him a little about her husband's work with soya.

The most popular food use of soybeans in the late 1970s was in textured soy flour (like TVP). These products were made in Israel by 1 or 2 big companies and sold in supermarkets in very stylish packages indicating that the manufacturers were well established. There were several flavors and large amounts were sold. He does not know the name or address of the manufacturer, but he got the feeling that Eliahu Navot had at least helped inspire these products; he may have helped to develop them.

In America, Avraham set up a soy deli named Sand-Munches in Madison, Wisconsin. They bought tofu from Bountiful Bean in Madison and made and sold tofu sandwiches, nori rolls, tofu salad, tempeh salad, various tofu spreads. They sold to health food stores and had a sandwich cart on the campus.

Avraham was in on the soyfoods wave at the very beginning, but after it became more established and mainstream he felt that his work had been done in that area, so he moved into the field of aroma therapy, inhaling aromatic essential oils from herbs, where he has been working for the last 8-9 years. It is a very powerful form of herbal medicine. He has developed several product lines under the Tiferet brand (a term taken from the Tree of Life in the Cabala) which he markets in health food stores in the USA and overseas. Address: 210 Crest Dr., Eugene, Oregon 97405. Phone: 503-344-7019.

1344. Archer Daniels Midland Co. 1990. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p.

• **Summary:** Net sales for 1990 were \$7,751 million, down 2.3% from 1989. Earnings for 1990 were \$483.5 million, up 13.9% from 1989. Shareholders' equity (net worth) is \$3,573 million, up 17.8% from 1989. "This fifth straight year of record earnings showed good contributions from the Company's core businesses of oilseed, corn, and wheat processing and was aided by initial contributions from some of the new value-added operations... The company operates 121 processing plants in the U.S. and owns, or has an ownership interest in, 25 foreign plants..."

"The protein specialties division expanded both in terms of output and facilities this year. The production of

edible soy protein isolates more than doubled this year due to greater market penetration in both domestic and export markets. The production of soy protein concentrates also increased as this product demonstrated its adaptability in food and animal feed products.

“A new facility for the production of industrial soy protein isolates was brought on line in February. These products are used in a variety of markets worldwide, including the paper coating industry. ADM is the only company which produces a complete line of value-added soy proteins.

“ADM has introduced its veggie burger, an all-vegetable protein food product based on soy protein concentrate. This innovative, cholesterol-free, reduced calorie product also contains dietary fiber and appeals to the vegetarian market. Early indications of good acceptance in the U.S. and U.S.S.R. suggest that this product has global potential...

“ADM Ross & Rowe expanded its facilities this year with the completion of a new lecithin production plant in Decatur, Illinois. The division is now capable of producing modified, enzyme hydrolyzed, complexed and microbiologically pure lecithins” (p. 4-5).

From page 8 to page 15 are four 2-page color photo spreads, each concerning ADM’s new Vege Burgers. The text of each reads: London: “Due to the trend toward healthier eating, many restaurants in Great Britain, including the Hard Rock Cafe in London, offer Vege Burgers as a popular menu choice.” Moscow: “Cafe Vege Burger opened in Moscow in early spring and sales have far exceeded expectations.” Great Britain: “Vege Burgers are sold in a variety of flavors in many retail grocery and health food stores throughout Great Britain.” Decatur, Illinois: “In the Decatur area, several grocery stores and employee cafeterias are now selling veggie burgers to the growing number of health-conscious consumers looking for nutritious, good-tasting food.”

“Haldane Food Group has benefitted from the ongoing trend toward a healthier and more varied diet. A recent Gallup poll which indicates a 150% increase in vegetarians since 1984 helps to explain the emergence of Vege Burger and other TVP products as market leaders. Over 60 million servings of Vege Burgers were sold by Arkady Group companies last year. Production capacity at the Coventry frozen food factory has been supplemented with off-site storage and additional burger manufacturing machinery. Kwaliti Foods, now renamed Saucemasters Ltd., has enjoyed increased sales in a potential growth market, especially with private label businesses. The company’s manufacturing capacity has been expanded with the addition of bottle and jar fillers, labellers, and more off-site storage. Genice Ltd. has introduced an extended range of non-dairy ice creams based on soya isolate, soya milk, or tofu. Yogurt-based ice creams are now being marketed.” Address: Decatur, Illinois.

1345. **Product Name:** Midland Harvest Harvest Burgers (Frozen) [Original, Taco, Italian-Style, or Sausage-Style].

**Manufacturer’s Name:** Harvest Direct, Inc. Made in Decatur, Illinois, by Archer Daniels Midland Co.

**Manufacturer’s Address:** P.O. Box 4514, Decatur, Illinois 62525. Phone: 800-637-5850.

**Date of Introduction:** 1990 September.

**Ingredients:** Water, soy protein concentrate, partially hydrogenated corn and/or soybean and cottonseed oils, isolated soy protein, methylcellulose, natural flavors, onion powder, salt, maltodextrin, modified corn starch, corn syrup solids,...

**Wt/Vol., Packaging, Price:** Four 3.2 oz patties per 12.8 oz pack. Retail for \$1.99 (12/91, Illinois).

**How Stored:** Frozen.

**Nutrition:** Per 3.2 oz.: Calories 140, protein 16 gm, carbohydrate 7 gm, dietary fiber 4 gm, fat 4.5 gm, cholesterol 0 mg, sodium 350 mg, potassium 450 mg.

**New Product–Documentation:** Talk with Richard Gross, owner of Nature’s Oven, Florida. 1991. Sept. 3. Concerning ADM’s new Harvest Burger (a name used only in the USA, called Vege Burger in the USSR and Veggie Burger, made by British Arkady in the UK and sold elsewhere in Europe), Richard finds its texture too tough and chewy (like the sole of a shoe), the flavor a little bit off, and he dislikes their use of methylcellulose as an ingredient (a binder) in the product; it is wood pulp processed with caustic soda and other chemicals, and there is a residue—it is not really natural as ADM claims.

Note 1. This is the earliest English-language document seen (July 2020) that contains the term “Harvest Burgers” (or “Harvest Burger”).

Stewart Reeve. 1991. *Soybean Digest*. Dec. p. 40a. “Fast food delight.” The first test market for this product began in April 1990 in 7 grocery stores, 2 cafeterias, 2 restaurants, and a hospital in four cities in central Illinois.

Two leaflets distributed at Natural Products Expo East in Baltimore, Maryland. 1993. Oct. “How vegetarian are they...?” A color bar chart shows that Harvest Burger contains no animal-based ingredients, Garden Burger from Wholesome & Hearty contains four (low-fat Mozzarella, cottage cheese, egg white blend, cheddar cheese), and Griller from Morningstar Farms (Worthington Foods) contains two (egg white, calcium caseinate). “How do ‘vegetarian’ patties stack up?” Comparing the 3 types of burgers mentioned above (90 gm serving), Harvest Burger is lowest in fat (4.5 gm), in calories (140 gm), and in cholesterol (0; tied with Griller). Garden Burger has the lowest percentage of calories from fat (26%) and the most cholesterol (11.4 mg). Griller contains the most fat (9.8 gm), the most calories (197), the highest percentage of calories from fat (45%), and the most fiber.

Talk with Lee Lensch of ADM. 1994. March 4. In April 1990 ADM started its first “public tasting” of the Harvest

Burgers (as frozen patties) in Decatur, Illinois. It took until September 1990 to get packaging for the product, and that month ADM made its first shipment, to Super Value supermarkets in Minneapolis, Minnesota, with Indianapolis being the real focus test market. So ADM sold directly to a supermarket chain, not to a food distributor. In Jan. 1991 the four frozen Midland Harvest products first really hit the grocery store shelves in Indianapolis as a test market. For details, see interview with Lensch (4 March 1994).

Package with Label sent by Dr. Walter Wolf of Peoria, Illinois. 2000. Aug. 5. The package is copyrighted "ADM 1990."

1346. Ornish, Dean. 1990. Dr. Dean Ornish's program for reversing heart disease: The only system scientifically proven to reverse heart disease without drugs or surgery. New York, NY: Random House. xxxi + 638 p. Sept. Index and recipe index. 17 cm. [288\* ref]

• **Summary:** This is a landmark, pioneering book—indeed a classic. In addition to carefully documented information on how to reverse heart disease, it offers 100 pages of vegan recipes, including a 21-day menu. It focuses on a low-fat, low-cholesterol diet, regular moderate exercise, stopping smoking, stress management through meditation and yoga, and (ideally) a support group.

Contents: Author's note. Foreword. Introduction—Heart and soul. Part one: Opening your heart. Part two: The opening your heart program. Part three: Opening your heart recipes. Introduction to the recipes by Shirley Elizabeth Brown, M.D., and Martha Rose Shulman. Twenty-one days of menus. The recipes. Epilogue. Appendix: Nutrient analysis of common foods. Selected references.

In the chapter titled "Introduction to the recipes" a long section on "Soybean products" gives basic information about the following: Whole soybeans, soy flour, soy milk ("It is much higher in fat, lower in vitamin B-12, and lower in calcium than nonfat cow's milk."), soy sauce, tamari, miso, soy cheeses, tempeh, textured vegetable protein (TVP), isolated soy protein, and tofu ("Tofu is a miracle food; it is very easy to digest, very high in protein, low in calories and fat, economical, and extremely versatile").

In the chapter titled "Recipes" is a long section on "Tofu Dishes," which begins with a good introduction: "Tofu is one of the most versatile foods." "Tofu is very high in protein and the perfect substitute for cheese and eggs." Eleven recipes follow: Tofu cheese with fresh herbs. Marinated tofu. Scrambled tofu and vegetables. Lydia's Mexican casserole. Tofu stew with miso. Sweet and sour wok-cooked vegetables with tofu. Chinese eggplant and tofu. Steamed fresh vegetables and tofu with soba noodles (and Misoyaki sauce). Stuffed manicotti (with Marinara sauce).

At the start of each chapter are great quotations. The 288 selected references, listed chapter by chapter at the back, are a valuable addition. As early as 1972 Dr. Ornish

was learning meditation and yoga techniques from Swami Satchidananda; these evolved into the stress management program described in chapters 7-9. In 1975 he first became interested in conducting research on heart disease, when he was a medical student at Baylor College of Medicine in Houston, Texas. In 1977 he had the privilege of studying with Dr. Michael DeBakey, assisting in the operating room when he performed bypass surgery. Though his surgical skill was amazing, Ornish began to see the "limitations of technological approaches that literally and figuratively *bypassed* the underlying causes of the problem. It was the difference between temporizing and healing." Most bypass patients "would go home and continue to do the same things that led to the problem in the first place. They would smoke, eat a high-fat, high-cholesterol diet, manage stress poorly, and lead sedentary lives."

For details on this book and its significance, see MacNeil/Lehrer Newshour. 1990. Dec. Address: M.D., Preventive Medicine Research Inst., Sausalito, California 33658. Phone: 415-332-2525.

1347. Shurtleff, William; Aoyagi, Akiko. comps. 1990. Bibliography of lecithin: 683 references from 1793 to 1990, extensively annotated. Lafayette, California: Soyfoods Center. 133 p. Subject/geographical index. Author/company index. Language index. Printed Sept. 12. 28 cm. [683 ref]

• **Summary:** Note: A comprehensive, greatly expanded edition of this book was published in free digital format on Goggle Books in 2016.

This comprehensive bibliography on lecithin focuses on lecithin derived from the soybean. Starting with the early literature, it shows how and why the soybean has become the world's most popular lecithin source. It concludes with the vast body of literature published since World War II. Thus it is one of the most comprehensive, current, and useful sources of information on lecithin available today, since 67% of all references (and most of the current ones) contain a summary/abstract averaging 84 words in length.

One of more than 40 bibliographies on soybeans and soyfoods being published by the Soyfoods Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 26 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 17 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first

author's first name (if given).

It also includes details on 178 commercial soy lecithin products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

1348. American Soybean Assoc.; Archer Daniels Midland Co. 1990. One in a billion: The world of soybeans (Color videotape). P.O. Box 27300, St. Louis, MO 63141; 4666 Faries Parkway, Decatur, IL 62525. 14:13 minutes.

• **Summary:** Contents: 1. History: Photos show William Morse and Henry Ford. 2. Production: It grew from 9 million bushels in 1929, to 91 million in 1939, to 2,000 million today. 61% of today's crop is crushed to yield soy oil and soybean meal, 34% is exported as whole soybeans, and 5% is used for planting, animal food, and other uses. 3. Processing: Shows the ADM crushing plant at Decatur, Illinois, which can convert 170 truckloads/day of soybeans into oil and meal. The crushing process is shown. "Oil is drawn from the crushed beans by using a special solvent." Crushing yields oil and meal.

4. Health and economic benefits: States that "clearly the most important source of energy known to man is protein, the energy that fuels basic human existence. Soybeans are the most efficient and abundant source of protein in the world." This soy protein is used mainly to produce animal products, but it can also be used directly in foods. "Soy flours are also popular in developing countries because pound for pound they contain twice as much protein as cheese, three times the protein of meat and fish, and four times the protein of eggs. Soybeans are also the highest natural source of dietary fiber." John W. Erdman discusses the health benefits of soy protein isolate. "Soybeans are good for the environment and help preserve precious natural resources. No other food produces more edible protein per acre than soybeans. As a comparison, cattle, which graze on land unsuitable for soybean production, can produce 58 lb of edible protein per acre, while soybeans furnish 584 lb of edible protein from a single acre. Emphasis is placed on the health benefits of soy oil and the problems of cholesterol and saturated fats; the rest of the video is basically a promotion for soy oil. 5. The Soy Mark: Used to identify "SoyOil" to an increasingly health

conscious public. 6. Industrial uses: Soy oil has been used in printing inks since 1987, and is also used to control grain dust. It can also make feed more palatable, digestible, and nutritious for the animals they feed, In fact, research shows, as a dietary supplement, each percent of soybean oil added to a hog's diet will result in a 1% improvement in daily gain and a 2% improvement in feed efficiency." 7. Environmental benefits: Especially from replacing the volatile organic petroleum compounds in printing inks with soy oil. 8. The Soy Seal: Used to identify industrial products containing soy oil.

This video is directed at teachers, community groups, and consumers who may not be familiar with the soybean industry. Address: St. Louis, Missouri; Decatur, Illinois. Phone: 314-576-1770.

1349. Boismenu, Clyde. 1990. The market for soy protein isolates, concentrates, textured soy protein products, and soy flour in America today (Interview). *SoyaScan Notes*. Nov. 13. With follow-up on 22 Jan. 1992. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Soy protein isolates have been the big unfulfilled promise in the U.S. food industry during the last 2 decades. Since 1975 Clyde has been a wholesale distributor for ADM. Today only 2 companies in America make regular isolates: ADM and Protein Technologies International. ADM was weakest in isolates until they purchased the Central Soya line. ADM also bought Grain Processing Corporation's Pro-Fam line and closed it down to get rid of excess industry capacity. Then ADM hired Roger Kilburn away from Ralston Purina to improve the flavor of ADM's isolates. This upset Ralston greatly. Ralston Purina spun off Protein Technologies International primarily to make it available for sale; everyone in the industry knows this.

In recent years there has been a little resurgence in isolates for several reasons largely related to the rise in casein prices: (1) With the rise of free enterprise and economic flux in Eastern European countries, they are being used increasingly to extend meats; the problem for western suppliers is getting paid. (2) The Chernobyl nuclear disaster, which took place on 26 April 1986 in the Ukrainian SSR, wiped out the Polish dairy industry. Casein prices rose and isolates filled part of the void. (3) Worldwide, the price of nonfat dry milk (NFD) and casein has been very high since about 1986 due to short supplies. Casein has traditionally been more expensive than isolated soy protein, in part because it is more functional (it melts and binds water well) and most people like the taste better. Within a period of several years, the price of casein rose from \$0.90/lb to \$2.50/lb. Egg protein costs \$4 to \$5 per pound. All of these things helped the U.S. isolate industry. In the U.S. the main problem is the obnoxious meat labelling requirements. For example, if isolates are injected into ham, it must be sold as "Smoked pork ham with soy protein isolate product." The

labeling problems are caused in part by the fact that USDA is staffed largely by veterinarians.

The main applications for soy protein isolates in America are in infant formulas (roughly 50% of the total), muscle powders (35%), diet beverages that are supposed to suppress appetite, and other (health food candy bars, etc., 15%). The use of isolates in meat products is very small.

Most isolates are not very bland and not very functional. PTI's are more bland than ADM's. The bulk of Clyde's isolate sales are for muscle powders, which are used to make shakes. The only isolate thick enough to work in a shake is the one with the most sodium proteinates, which has the poorest flavor.

Even textured soy flour (TSF/TVP) has not been very successful in food uses; Clyde sells several million pounds a year of it, but the industry is very sleepy. It is used mostly in spicy Mexican foods (mainly burritos, to add chunky texture), and pizza toppings (since labeling is not a problem). It is used in school lunch programs and by the military in meatloaf and braised beef. Seventh-day Adventist food companies buy quite a bit and repackage it. By far the biggest use of TSF is in pet foods. In California, what is commonly called the "Brigg's Amendment" (Food, Drug and Cosmetic Law, California code, Article 7, Section 26595-26599, "Hamburger and imitation hamburger," became effective in July 1974), effectively prevents the use of TSP in hamburger, even in restaurants. Ground beef or hamburger containing any extenders (such as TSP), binders, or added water must be called "imitation hamburger." If imitation hamburger is sold or served in a restaurant, a list of its ingredients must appear on the menu. Mr. Briggs, a state legislator from Orange County, had a friend with some hamburger stands. This law is enforced, in practice, only with respect to hamburger patties, and especially when the price of hamburger rises; 80-85% of all ground beef is sold in the form of patties. It is not enforced when the ground beef is "cooked in a recipe" as in spaghetti sauce, taco filling, meat loaf, and sloppy joe mix. In these cases regulators do not enforce the law that requires the product to be called "imitation hamburger" if bread crumbs, rolled oats, or a soy protein product are added.

Concerning ADM's Veggie Burger, there are 4 kinds that come in dry form: Herbs & Spices Style, Curry, Meat-Style, and Gyros-Style. They were introduced about 4 years ago. ADM also makes pre-cooked, frozen patties.

Soy flour has two main applications: (1) As a replacer for non-fat dry milk (NFDM), usually sold mixed with whey and used in baked goods. Kraft makes one popular brand. (2) In calf milk replacers (CMR). Calva in Modesto makes lots of CMR using soy flour; not much soy protein concentrate is used in CMR. The key consideration is the "per pound protein basis." Meat protein costs \$6/lb and soy flour protein costs \$0.35/lb. Labeling regulations are the main barrier to more widespread use. Not much NFDM is used in breads

today in America. Soy flour is more expensive than wheat flour, but it holds more water, and slows staling—two major sales points. Address: Basic Foods Co., 1211 E. Olympic Blvd. #204, Los Angeles, California 90021. Phone: 213-623-6686.

1350. Shurtleff, William; Aoyagi, Akiko. comps. 1990. *Bibliography of soybean crushing, soy oil, and soybean meal: 4,183 references A.D. 980 to 1990, extensively annotated.* Lafayette, California: Soyfoods Center. 647 p. Subject/geographical index. Author/company index. Language index. Printed Nov. 9. 28 cm. [4183 ref]  
**• Summary:** This is the most comprehensive bibliography ever published on soybean crushing, soy oil, and soybean meal. Its scope also includes: Statistics on the soybean oil and meal industries, use of soybean meal in feeds, use of soybean cake or meal as a fertilizer, and the efficiency of animals in converting feeds into human foods. It is one of the most useful sources of information on this subject available today, since 53% of all references (and most of the early and current ones) contain a summary/abstract averaging 121 words in length.

One of more than 40 bibliographies on soybeans and soyfoods being published by the Soyfoods Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 36 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 17 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 54 commercial soy products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234,

Lafayette, California 94549. Phone: 510-283-2991.

1351. Roberts, Peter. 1990. History of Direct Foods Ltd. and Compassion in World Farming. Part I (Interview). *SoyaScan Notes*. Dec. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Peter was born in 1924 in the UK. His father was a doctor. By the 1950s, while he and his wife Anna were running a dairy and chicken farm, Little Barnett Farm, in the village of Froxfield, Hampshire, England, they became increasingly concerned with the cruelties inherent in both intensive factory farming, and traditional dairy farming—the separation of the calf from the cow, the marketing of the unwanted bull calves and the worn-out dairy cows, etc. So in about 1958 he and his wife stopped eating meat. They switched to a lacto-vegetarian diet, which they still practice. Their 3 children are now also vegetarians.

As they changed their farming practices to treat their animals more kindly, they found that farming became more and more uneconomical. Peter wrote an article for a local paper, the *Squeaker*, concerning the many problems with factory farming. He received many favorable replies, stating that the animal welfare organizations in the UK seemed to be concerned mostly with dogs and cats, but that much work needed to be done to protect factory farm animals. So in about 1961 they sold their farm. Peter worked briefly as a lime quarrier, then in 1967 he and Anna founded a pioneering organization named Compassion in World Farming (CIWF) to address the increasing problems with factory farming that he had experienced first-hand, and to get some decent standards for farm animals. Their main goals were to get rid of: (1) battery cages for chickens, (2) dry sow stalls (known in America as “gestation stalls”) for pigs, and (3) veal crates for veal calves. Their strategy was to educate consumers as to how the food they were eating had been produced. They encouraged consumers either to switch from animal products grown on factory farms to those raised by free range farming methods, or to become vegetarians. Many members got upset as they learned about factory farming, decided to stop eating meat, and began to ask CIWF about alternatives. So the Roberts began to search for a good-tasting, nutritious, and reasonably priced protein alternative to meat sold in a convenient form. They got 3 samples of modern soy protein products (all dried) from the USA and found TVP made by ADM to be the best. When they wrote to ADM enquiring about marketing rights in the UK, the reply asked “How many million dollars can you put into it? We foresee a big future in Britain.” That response killed the project temporarily. In 1965 The British Arkady Co. Ltd. (Arkady Soya Mills) had started to sell ADM’s TVP in the United Kingdom, but Peter hadn’t heard of Arkady at the time. About 4-6 months later a sales rep from British Arkady approached Peter, said he had been referred by ADM, and asked what Peter had in mind. Peter said he would like to

retail TVP, especially in the health food area, especially in Britain but not restricted to Britain. Arkady offered to supply Peter but would not offer any exclusive arrangement. Arkady agreed not to compete with Peter, saying they were interested only in selling to food manufacturers, not to the retail market. Peter accepted and in 1969 placed a trial order of about 10 lb of beef chunks or mince. The Roberts called their product Protoveg (pronounced PRO-toe-vej), registered the trademark (though the registration was unsuccessfully challenged by Mapleton’s Foods, a large British health food company), and sold it in 9 different flavors and textures: beef chunks, beef mince, ham chunks, ham mince, pork chunks, pork mince, natural (unflavored) chunks, natural mince, and Smokey Snaps (which resembled bacon bits). They packed it in 4.5 oz. double cellophane bags with a label between the two bags, developed a recipe leaflet and order form, and distributed it via their Compassion in World Farming and via Beauty Without Cruelty (Lady Dowding’s anti-fur-trapping group). The 4.5 ounces yielded 1 pound of hydrated product; the mince hydrated in 2 minutes and the chunks in 15-20 minutes.

The product was instantly successful, which surprised the Roberts. The trustees of CIWF decided it would not be possible (for legal and financial reasons) to establish a commercial branch of the organization, so the Roberts used the money they had left after selling their farm then buying a house, and in Aug. 1969 established Direct Foods Ltd., a private company owned by Peter and Anna and run as a mail order business out of their new home in Greatham (5 miles from Petersfield), Hampshire. The health food shops in the UK were selling alternatives to meat, such as canned meatlike products made by Worthington Foods and Granose, but textured soya proteins were not available. TVP was tasty and nutritious, it looked and tasted like meat, and it was much less expensive than the canned products or meat. Direct Foods started advertising in some magazines, such as *The Vegetarian* and various health food publications. Next they began to sell to health food shops. Continued. Address: Compassion in World Farming, 20 Lavant St., Petersfield, Haunts (Hampshire) GU32 3EW, England. Phone: 0730 64208.

1352. Roberts, Peter. 1990. Early activities with whole foods in England (Interview). *SoyaScan Notes*. Dec. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Whole Earth ran a big warehouse where people could buy whole foods on a cash-and-carry basis. He thinks it may have been located on Portobello Road, and Gregory Sams may have been in charge. Greg started with macrobiotic foods. He is a very nice man, who is restricted to a wheelchair. A similar company was named Community Supplies. Starting in about 1980 he would buy whole food supplies at these two companies in London for his health food shop named his Bran Tub. As he recalls,

at the beginning neither of these companies carried any soy products since they were rather opposed to the idea of imitating meat. One segment of the vegetarian movement felt strongly that it was wrong to imitate meat, and they therefore opposed the products sold by Direct Foods Ltd. But another segment supported any method or product which (without slaughter or cruelty) would help other people to give up eating meat. Peter believes firmly that human beings were vegetarians as a species until the ice age came along. Address: Compassion in World Farming, 20 Lavant St., Petersfield, Haunts (Hampshire) GU32 3EW, England. Phone: 0730 64208.

1353. Roberts, Peter. 1990. History of Direct Foods Ltd. and Compassion in World Farming. Part II (Interview). *SoyaScan Notes*. Dec. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In about 1970 Direct Foods launched 20 more convenience (add water, cook, and serve) vegetarian protein products, all were TVP-based alternatives to meat sold under the Ranch House brand. These included Curry, Stew, Goulash, Bolognese, Vegetable Mince, Soysage, Seasavour, Sizzleberg, Sosmix, Savoury Macaroni Mix. etc. All were vegan products except the bolognese, which contained milk powder, but even the milk was soon eliminated, so that all products were vegan. etc. Anna wrote three cookbooks, with even more recipes: (1) *The Earth Shall Feed Us* (1976; now out of print); (2) *The Protoveg Cookbook* (1984, which sold about 8,000 copies via mail order and health food shops; now out of print); and (3) *The Magic Bean* (April 1985, published and distributed more widely by Thorsons). These were sold in both health food stores and regular bookstores.

At this time British Arkady was making a product named Banger Mix (a “banger” is a sausage), made with soya protein and pig fat. Peter asked them to replace the pig fat with a hardened vegetable oil. The Roberts named the resulting product Sosmix. Introduced in about 1970, it was a dry sausage mix and soon became their best-seller. Because Sosmix became such a success, British Arkady invited Direct Foods to market Arkady’s new vegetarian Burger Mix. Direct Foods accepted and again the product did well. Shortly after that, in about 1972, Brewhurst Health Food Supplies Ltd., the biggest health food distributor in the UK, asked if they could distribute the Direct Foods line of products. Direct Foods appointed Brewhurst as their first distributor, but did not give them an exclusive distributorship. This was a major breakthrough; sales tripled almost immediately. Soon Direct Foods appointed other distributors, and exporters, that exported to Jamaica, Malta, and Greece. So Direct Foods remained a product developer, marketer, and mail-order house.

In 1973 British Arkady started making TVP in England, then in 1974 they were acquired by ADM, largely because ADM had seen the rapid growth of the European TVP

market, especially among food manufacturers. Most of Arkady’s TVP was being sold to food manufacturers (for use in canned stews, etc.) and institutional foodservice, not to retailers.

The Roberts continue to run their growing business out of their home. The kitchen was the weighing room, the lounge was the dispatch room, and the rest of the house became the warehouse. There was no room left for the Roberts. Moreover, with a steady stream of delivery trucks coming down their narrow country dead-end road, they began to have problems with the town planning authorities. So in about 1974 they rented a warehouse for Direct Foods in Petersfield, about 5 miles away from Greatham—and breathed a sigh of relief at home. At this time their best-selling products were Sosmix, Protoveg Beef Chunks, and Beef Mince. Sales began to grow rapidly. For a short while, Brian Welsby’s Haldane Foods did the mixing of the Ranch House line of products under contract.

In about 1976 and 1977 Direct Foods participated in its first exhibition, the huge Ideal Home Exhibition, which runs for a month every spring at Olympia in London. They served samples of Sosmix, which was an entirely new product for the British public, and it was a great success. Long lines of people were attracted by the smell, then won over by the ease of preparation, low price (less than half the price of eat sausage), and health benefits of this meatless sausage.

Direct Foods’ first competitor was Itona (pronounced ai-TOE-nuh), which by 1978 had started buying TVP from Arkady and selling it as Itona TVP. Itona had purchased other soy products (probably soy flour) from Arkady before this. At one stage, they tried to make an agreement with Arkady which would have forced Direct Foods to buy from Itona, but this did not work.

Another strong competitor was Real Foods in Edinburgh, Scotland. They sold flavored TVP in 50 kg paper sacks to health food shops so that the shops could weigh out any amount the customer desired. This approach lowers the price of TVP to the consumer but in the end hurts the market due to lack of recipe information. After a while Real Foods disappeared.

In about 1979 the Roberts started their own health food store, named The Bran Tub, in Petersfield. In England a “bran tub” is sort of like a “lucky dip” where kids dive for presents.

Over the years Direct Foods had many problems with local regulators concerning labeling—but won in every case. One thought Protoveg was misbranded because the label said it was a vegetarian product but it contained salt—which was a mineral not a vegetable! Another tried to outlaw the term Sosmix because it sounded too much like sausage. The most important was when the public health authority took Direct Foods to court claiming that the term “Vegetable Goulash” was a contradiction in terms since “goulash” typically contained meat. Peter argued the 4-hour case himself and his

victory set a major precedent. Representatives from many large food companies were present in the courtroom, and they congratulated Peter afterwards.

In March 1985 the Roberts sold Direct Foods (which was making good money) to British Arkady. Arkady had tried to sell their Arkady TVP to the retail trade through the Cash and Carry chain but had failed—at considerable expense to Arkady. Now Arkady wanted to buy either a majority share in Direct Foods or buy the entire company. Peter knew that if he said “no,” Arkady was in a position to undercut Direct Foods and take away much of their market share. A major loss of market share would be a disaster, since Direct Foods’ sales would then drop below the steadily rising threshold needed to cover their overhead and make a profit. Moreover, the Roberts wanted to spend more time concentrating on their animal welfare work through Compassion in World Farming. During the period from 1969 to 1985 Peter had devoted about 2/3 of his work time to CIWF and 1/3 to Direct Foods. Direct Foods was run mainly by Anna Roberts (who put in about the same amount of time as Peter), her sister, and her sister’s husband, Bob Howe, who was production manager at the mixing and packaging warehouse. At the time of the sale Direct Foods had 18 employees and was buying 30 tons a week of TVP from British Arkady.

**Note:** In 2002 Peter Roberts was honored with an MBE (Most Excellent Member of the British Empire) for his founding of and work with Compassion in World Farming. Address: Compassion in World Farming, 20 Lavant St., Petersfield, Haunts (Hampshire) GU32 3EW, England. Phone: 0730 64208.

1354. *SoyaScan Notes*. 1990. Europe’s 20 largest tofu and soymilk companies (Overview). Dec. 23. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The following summary is a combination of information from two sources: First, numerous interviews conducted by William Shurtleff of Soyfoods Center during 1990. And second, informed estimates by one of Europe’s most knowledgeable soyfoods industry insiders. We give the ranking, company name, country, products (Tofu, Milk = Soymilk, Other), and number of metric tons of soybeans used per month.

1. Alpro. Belgium. Milk. Unknown.
2. Sojinal. France, Milk & Other. 417.
3. Heuschen-Schrouff. Netherlands. Tofu. 200.
4. DE-VAU-GE. Germany. Milk & Tofu. 100.
5. Aros Sojaprodukter. Sweden. Tofu, Milk & Other. 92.2.
6. Unisoy. England. Milk. 47.0.
7. Soya Health Foods. England, Milk. 45.0.
8. Soyana. Switzerland. Tofu & Milk. 32.0.
9. Société Soy. France. Tofu & Milk. 30.0.
10. Cauldron Foods. England. Tofu. 20.0.

11. Haldane Foods/Regular Tofu Co. England. Tofu & Milk. 10.9.
12. Galactina. Switzerland. Tofu, Milk & Other. 10.0.
13. Soyastern / Dorstener Tofu. Germany. Tofu. 9.3.
14. Dragon & Phoenix. England. Tofu. 8.0.
15. Jonathan P.V.B.A. / Lima Foods. Belgium. Tofu. 6.0.
16. Triballat. France. Milk & Other. 5.6.
17. Innoval. France. Milk. 5.6.
- Crivellaro. Italy. Milk. 5.6.
- Plamil. England. Milk. 5.6.
- Paul’s Tofu. England. Tofu. 4.7.

1355. **Product Name:** Berrydales Special Ices [Berry, Maple & Walnut, Ginger and Honey, Bitter Chocolate, Honey Vanilla].

**Manufacturer’s Name:** Berrydales Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** 5 Lawn Road, London NW3 2XS, England. Phone: 071-722-2866.

**Date of Introduction:** 1990 December.

**Ingredients:** Berry: Soya milk, tofu, honey, apple concentrate, raspberries, blackcurrants.

**Wt/Vol., Packaging, Price:** 100 ml, 500 ml, and 2 liter biodegradable paperboard tubs.

**How Stored:** Frozen.

**Nutrition:** Berry: Per 100 ml.: Energy 75 kcal (calories; 313 Kilojoules), protein 1.02 gm, total fat 0.79 gm (saturated fat 0.12 gm, polyunsaturated 0.45 gm), carbohydrate 17.12 gm, salt 0.8 gm.

**New Product–Documentation:** Health Food Business (England). 1990. June. p. 21. “Health Food Business retailer guide to ice creams.” Berrydales Special Ices, available in 5 flavors, are a delectable refreshing cross between an ice cream and a sorbet, and all based on tofu.

Soya International. 1990. July/Sept. p. 5. Lists 5 flavors. Says that the products are made from organic tofu

and soymilk. Note that the company leaflets below do not mention organic ingredients.

Three leaflets sent by Heather Paine from London. 1991.

April 23. The first, titled “Berrydales” notes that “Berrydales Special Ices, based on the ancient Chinese and Japanese food tofu, are a delectably refreshing cross between an ice cream and a sorbet. They are unique, delicious, and good for you. Berrydales ices use only the highest quality natural ingredients. They contain no animal products, no emulsifiers or stabilisers, are lactose free, low in fats and cholesterol and relatively low in calories.” They are “currently available in four flavours: Berry, Maple & Walnut, Ginger & Honey, and Bitter Chocolate. In April we introduced our new Honey Vanilla.” They are sold in bio-degradable paperboard packs in 100 ml, 500 ml, and 2 liter sizes. They are available nationwide in delicatessens and health food stores (including the Holland and Barrett chain), in selected Europa stores in London, and in selected branches of Tescos nationwide. For further information contact Michelle Berriedale-Johnson, Berrydales’ founder and well-known food writer.

The second, titled “Nutritional breakdown of Berrydales Special Ices,” gives a nutritional analysis and list of ingredients for 5 flavors. Ingredients for the new Honey Vanilla are: Soya milk, tofu, honey, raw can sugar, lemon juice, natural vanilla essence. All 5 flavors use soya milk and tofu as the first two ingredients.

The third, titled “Berrydales no-cream ices: Ices in

your postbag,” notes that the company has a new mail order service. It will ship 5 packs (100 ml each) or 2 packs (500 ml each) of any of its five flavors in polystyrene boxes.

Health Food Business (London). 1992. May. p. 34.

“Frozen desserts. Berrydales. Berrydales ices—made from the highest quality natural ingredients, are a cross between an ice cream and a sorbet. They come in five flavours: Honey Vanilla, Chocolate, Maple & Walnut, Ginger & Honey and Berry. Low in calories, ultra low in fat, low in cholesterol, they are based on organic fresh tofu and are dairy-free and vegetarian. The Chocolate ice is also totally vegan and all the ices are kosher. Sizes include 100ml, 500ml, and 2 litre. From May a new four-pack is available with individual tubs of Hone Vanilla, Maple & Walnut, Chocolate and Finger & Honey (rrp [or RRP = recommended retail price] £2.99).”

Spot in SoyaFoods. 1991. Spring. p. 4. “Berrydales no-cream ices by mail order.” “Berrydales Special Ices are made from soyamilk and tofu. Described as a cross between an ice cream and a sorbet, they contain no animal products no emulsifiers or stabilisers and are lactose free, low in fats and cholesterol and relatively low in calories. Five flavors are currently available.”

Original Labels with the original ingredients (Berry, Ginger and Honey, Honey Vanilla) sent by Genice Foods Ltd. 1994. Feb. 18. 3.75 inch round lid. 500 ml. Illustration of a flower against a light wood-grain background. “Lactose free. No animal products. Low cholesterol.”

1356. Dacosta, Yves. 1990. Lait de soja et tofu [Soy milk and tofu]. APRIA/CDIUPA, 1 avenue des Olympiades, 91300 Massy, France. 102 p. Dec. No index. 30 cm. Series: Actualités Scientifiques et Techniques en Industries Agro-Alimentaires. No. 45. [85 ref. Fre]

• **Summary:** Contents: Preliminary remarks. 1. Production of soy milk and tofu: Principles of production, the soybeans, cleaning/washing, soaking, grinding, cooking the slurry (*bouillie*), extraction of the soy milk, coagulation, separation of curds and whey, pressing the curds, removal of the tofu from the mold, cutting and packing the tofu, the need for water in a tofu ship, variations in production, storage and preservation of soy milk and tofu after their production, yuba, production of tofu from seeds other than soybeans.

2. Applications/uses of soy milk and tofu: Products: Soy milk and soy milk products (soy milk, sweetened soy beverages, dairylike soy milks, soy-based infant formulas, powdered soy milk, concentrated soy milks, soy milk mixed with other animal or vegetable milks, soy ice creams and frozen desserts, fermented soy milk products such as soy yogurt, various soy milk desserts [such as custards], sauces, dressings, and mayonnaises made from soy milk), tofu and tofu products (smoked tofu, fried tofu [*tofu frit*], marinated tofu, fermented tofu, breaded tofu, tofu mayonnaise and sauces, tofu spreads for bread, tofu sausages, pâtés, or biscuits/pancakes [*galettes*], tofu quenelles, quiches, fritters,

raviolis, pizzas, mixed salads, prepared dishes (*plats cuisinés*), or sandwiches, tofu cakes, cheesecakes, or tarts, tofu desserts, ice creams, or chocolate bars), preparations based on okara (sausages, pâtés, croquettes, burgers, special breads or biscuits), the nutritional arguments for soy milk and tofu (rich in proteins, lipids, absence of cholesterol and lactose, low in sodium, an excellent ingredient in “light foods” [aliments allégés]).

3. A quick look at the major enterprises making and or selling soy milk, tofu, or their products in selected countries: France (Cacoja, Innoval, Soy [Société Soy], Sojadoc, Triballat, Celia, Celnat, Lima-Andiran, Maho Distribution, France-Proteines-Services), Great Britain (Plamil Foods Ltd., Itona Products Ltd., Soya Health Foods Ltd., British Arkady Co. Ltd. [subsidiary of ADM; incl. Haldane Foods Ltd., Regular Tofu Co., Tofeata Tofu], Granose Foods Ltd., Cauldron Foods, Dragon and Phoenix, Paul Jones (Tofu Shop), Full of Beans Soyfoods, Birchwood Health Products, White Waves, The Bean Machine Co-op Ltd., St. Ivel, St. Giles Foods Ltd., Yu’s Tofu Shop, Tousoy Ltd., Allied Foods Ice Cream Co., Nexus Foods, Vegetarian Feasts, Unisoy Milk and By-Products Ltd.), Germany (DE-VAU-GE Gesundkostwerk GmbH, Soyastern Naturkost GmbH, Nuxo-Werke Rothfritz), Netherlands (Heuschen-Schrouff, Linn Oriental Products, Solnuts B.V., Manna Natuurvoeding), Belgium (Alpro, Jonathan P.V.B.A., Lima Foods, De Hobbit, Seven Arrows), Switzerland (Conserves Estavayer S.A., Soyana, Galactina), Sweden (Trensums Musteri, Aros Sojaprodukter), Italy (Crivellaro), Spain (Zuaitzo), USA, Japan, Hong Kong, Taiwan, Singapore. Bibliography.

Note: A great deal of the information in this report is taken, without permission or adequate citation, from books published by the Soyfoods Center in California. The statistics and dates given for the European, American, and Asian markets are taken almost completely from Soyfoods Center books. In some cases where the author relied on these books published more than 2 years ago, the information is presented as if it were current, whereas it is actually out of date and no longer correct. Dacosta’s book, which might be called a “review of the literature,” contains little or no new information. However his bibliography, based largely on a search of the CDIUPA database, with some original references, is quite good.

APRIA stands for Association pour la Promotion Industrie Agricole. APRIA administers CDIUPA. Address: Conseiller d’Entreprises, France: 47, rue Guersant–7015 Paris, France.

1357. **Product Name:** So Good Tofu Delights: Chunky Bars of Vanilla Flavoured Iced Soya Dessert in a Thick Carob Coating.

**Manufacturer’s Name:** Haldane Foods Group Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** 25 Hayhill, Sileby Road, Barrow

upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611.

**Date of Introduction:** 1990 December.

**Ingredients:** Tofu (organic soya beans, calcium sulphate), raw cane sugar, vegetable oil, carob flour, vanilla bean extract, emulsifier (vegetable mono diglycerides, lecithin), stabilisers (guar gum, locust bean gum, xanthan gum), colouring (beta carotene).

**Wt/Vol., Packaging, Price:** 6 x 75 ml foil-wrapped bars in a paperboard box. Retail for £1.69 (4/91, London).

**How Stored:** Frozen.

**New Product–Documentation:** Haldane Foods Group. 1990. "Twenty-one Today. Twenty-new and exciting products launched at Helfex alone." At least 12 of these are soyfood products. "A dairy free choc ice made with tofu and enrobed with carob."

Soya International. 1990. July/Sept. p. 5. "A vanilla flavored carob coated iced soya dessert launched as the tofu 'choc-ice.' They contain no animal products and are suitable for vegans."

Article in Health Food Business (England). 1990. June. p. 30. "Product news: Tofu 'choc-ice.'" A color photo shows 2 boxes of Tofu Delights. Each box contains 6 individually wrapped 75 ml bars.

Label sent by Heather Paine of SoyaFoods in London. 1991. April 23. 7 by 3.5 by 2 inch box. Dark brown, blue, pink, and green on beige. Color photo of one bar, cut crosswise into halves, on top of box. "Soya carob dessert. 100% natural ingredients. Dairy free. No animal produce. Store below 18°C/0°F." Purchased at Lifecycle. UPC indicia. Two kosher symbols.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 10. At the time this product was launched, Haldane was promoting So Good as their brand. They are no longer doing this as much.

1358. **Product Name:** Midland Harvest Taco Filling 'n Dip (Dry Taco Mix Based on Textured Soy Protein Concentrate).

**Manufacturer's Name:** Harvest Direct, Inc. Made in Decatur, Illinois, by Archer Daniels Midland Co.

**Manufacturer's Address:** P.O. Box 4514, Decatur, Illinois 62525. Phone: 800-637-5850.

**Date of Introduction:** 1990 December.

**Ingredients:** Soy protein concentrate [textured], corn starch, dried onion, partially hydrogenated corn and/or soybean and cottonseed oils, maltodextrin, tomato paste, spices, salt, hydrolyzed vegetable protein, garlic powder, natural flavor, malt extract, zinc oxide, niacinamide, ferrous sulfate, copper gluconate, vitamin A palmitate, calcium pantothenate, thiamine mononitrate (vitamin B-1), pyridoxine hydrochloride (vitamin B-6), riboflavin (vitamin B-2), cyanocobalamin (vitamin B-12).

**Wt/Vol., Packaging, Price:** 4 oz foil pouch.

**How Stored:** Shelf stable.

**Nutrition:** Original: Per 21.25 gm dry (5 servings per packet): Calories 100, protein 8 gm, carbohydrates 8 gm, total dietary fiber 1 gm, fat (total) 1.7 gm (saturates 0.5 gm, monounsaturates 1.0 gm, polyunsaturates 0.2 gm), cholesterol 0 mg, sodium 280 mg, potassium 390 mg.

**New Product–Documentation:** Stewart Reeve. 1991. *Soybean Digest*. Dec. p. 40a. "Fast food delight." Talk with Lee Lensch, 1991, Dec. 16. This product is sold only through ADM's direct mail company named Harvest Direct. The company sells only ADM's dry mixes. The company began operation in Dec. 1990, and this product was introduced at that time. The 4 oz of dry mix makes 16 oz (1 lb) of finished product—just add water and mix.

Ad in Vegetarian Times. 1992. Jan. p. 16. "Harvest's got it!" "Midland Harvest now comes in seven flavors: Original, Taco, Herbs and Spice, Curry, Italian, Sloppy Joe Fixin's, and Chili Fixin's. Call Harvest Direct at 1-800-835-2867 for a free 16-page catalog."

Label sent by ADM. 1991. Dec. 17. 5.25 by 3.75 inches. Self adhesive. Red on white. "Cholesterol free. Low fat. All-vegetable protein. Microwaveable. A delicious Taco entree, based on a savory blend of textured soy protein concentrate and traditional taco flavors. The only ingredients you add are water and your imagination for variations. The result is tasty loose "ground meat" type Taco filling. The Taco filling can be used for tacos, enchiladas, tostados, dips, sauces, chili, sloppy Joes, and many other dishes."

1359. **Product Name:** Midland Harvest Burger 'n Loaf (Dry Mix Based on Textured Soy Protein Concentrate) [Original, Herb and Spices Style, Italian Style].

**Manufacturer's Name:** Harvest Direct, Inc. Made in Decatur, Illinois, by Archer Daniels Midland Co.

**Manufacturer's Address:** P.O. Box 4514, Decatur, Illinois 62525. Phone: 800-637-5850.

**Date of Introduction:** 1990 December.

**Ingredients:** Original: Soy protein concentrate [textured], partially hydrogenated corn and/or soybean and cottonseed oils, isolated soy protein, natural flavors, methylcellulose, malt extract, dried onion, salt, dried garlic, black pepper, beet powder, spices, zinc oxide, niacinamide, ferrous sulfate, copper gluconate, vitamin A palmitate, calcium pantothenate, thiamine mononitrate (vitamin B-1), pyridoxine hydrochloride (vitamin B-6), riboflavin (vitamin B-2), cyanocobalamin (vitamin B-12).

**Wt/Vol., Packaging, Price:** 6 oz foil pouch.

**How Stored:** Shelf stable.

**Nutrition:** Original: Per 34 gm dry (5 servings per packet): Calories 140, protein 16 gm, carbohydrates 7 gm, total dietary fiber 4 gm, fat (total) 4.5 gm (saturates 1.3 gm, monounsaturates 2.7 gm, polyunsaturates 0.5 gm), cholesterol 0 mg, sodium 350 mg, potassium 450 mg.

**New Product–Documentation:** Stewart Reeve. 1991.

Lee Lensch, 1991, Dec. 16. This product is sold only through ADM's direct mail company named Harvest Direct. The company sells only ADM's dry mixes. The company began operation in Dec. 1990, and this product was introduced at that time. ADM hopes to also sell it through retail stores, but there is no firm timetable. The 6 oz of dry mix makes 16 oz (1 lb) of finished product—just add water and mix.

Ad in *Vegetarian Times*. 1992. Jan. p. 16. "Harvest's got it!" "Midland Harvest now comes in seven flavors: Original, Taco, Herbs and Spice, Curry, Italian, Sloppy Joe Fixin's, and Chili Fixin's. Call Harvest Direct at 1-800-835-2867 for a free 16-page catalog."

Labels for Original, Italian Style, and Herb and Spices Style sent by ADM. 1991. Dec. 17. 5.25 by 3.75 inches. Self adhesive. Original: Blue and black on white. "Cholesterol free. Low fat. All-vegetable protein. Microwaveable. A delicious cholesterol-free entree that is based on a savory blend of textured soy protein concentrate with natural flavorings. The Burger 'n Loaf mix can be used in a multitude of recipes: make burgers, loafs, spaghetti balls, or any recipe where ground meat is used."

**1360. Product Name:** Granose Vegetarian Spicy Links.  
**Manufacturer's Name:** Granose Foods Ltd.  
**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.  
**Date of Introduction:** 1990.  
**Wt/Vol., Packaging, Price:** Glass jar.  
**How Stored:** Shelf stable; refrigerate after opening.  
**New Product–Documentation:** Color photo of package in *Linda McCartney's Home Cooking*. 1990. p. 18. The label is red, white, and black on green.

**1361. Product Name:** Granose Vegelinks.  
**Manufacturer's Name:** Granose Foods Ltd.  
**Manufacturer's Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.  
**Date of Introduction:** 1990.  
**Wt/Vol., Packaging, Price:** Can.  
**How Stored:** Shelf stable; refrigerate after opening.  
**New Product–Documentation:** Color photo of package in *Linda McCartney's Home Cooking*. 1990. p. 18. "Wheat protein frankfurters and sausages in brine." A photo shows numerous frankfurters in a bowl.

**1362. Product Name:** So Good Soycreem: Non-Dairy Cream Alternative.  
**Manufacturer's Name:** Haldane Foods Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.  
**Manufacturer's Address:** 25 Hayhill, Sibley Road, Barrow upon Soar, Leicestershire LE12 8LD, England.  
**Date of Introduction:** 1990.  
**Ingredients:** Organic soya milk, vegetable oils, corn syrup, emulsifier (vegetable mono-diglycerides), stabilisers

(xanthan gum, locust bean gum, guar gum), natural colour (beta-carotene).

**Wt/Vol., Packaging, Price:** 120 gm plastic cup.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm.: Energy 1827 Kjoules / 437 Kcal (calories), protein 3 gm, carbohydrate 12 gm, fat 36 gm (of which polyunsaturates 47%, and saturates 23%), sodium 0.1%.

**New Product–Documentation:** Label sent by Leah Leneman of Scotland. 1992. Jan. 2. 2.75 inch diameter foil cup lid and 2.5 inch high cup. Yellow, white, gold and light green on green. Illustrations of yellow daffodils and a butterfly on foil lid. Lid: "High in polyunsaturates. Low in saturates. Cholesterol free." Cup: "Soycreem is a new, cholesterol-free alternative to cream, made without animal fats or milk derivatives. Pour over desserts in the same way as fresh cream. (Not recommended for use in coffee.) Suitable for vegetarians and vegans."

Talk with Ray Pierce of Genice. 1994. Feb. 10. In 1990 chilled So Good Soycreem was launched as a non-dairy alternative to dairy double cream, but low in cholesterol, high in polyunsaturates, and low in saturates. It was made for Haldane in a little beige plastic pot with a green foil lid, packed at the Genice plant. It contains a trace of cholesterol because law requires that it contain 36% oil, including some palm oil. In 1991 a shelf-stable UHT version (completely sterilized, with a 9-month shelf life), now named Granose Soya Creem, was launched in a 225 ml Combibloc pack, made for Genice by a large dairy in Ireland which had Combibloc packaging equipment. The chilled So Good Soycreem was discontinued.

**1363. Haldane Foods Group Ltd.** 1990. They've every occasion to choose So-Good (Leaflet). Newport Pagnell, Bucks., England. 1 p. Single sided. 29 cm.

• **Summary:** See next page. On the top half of this attractive color leaflet, a photo shows a So Good brand Strawberry Bombe next to a whole strawberry on a black lacquerware surface. On the bottom half, accompanied by text, photos show four products (each launched in 1990) in the center: Strawberry Bombes, Tofu Delights (non-dairy frozen dessert bars), and two flavors of Tofu Dessert (ice cream style). The text reads: "From teatime afters, to exotic desserts, to treats. The So-Good range of non-dairy soya ice products from Haldane gives your customers every occasion to buy. Especially as the packaging is so appealing, the reputation so tasty and the products being so well advertised to your market..." Address: Howard Way, Newport Pagnell, Bucks MK16 9PY, England.

**1364. Lundin, Vernard E.; Berg, Ken.** 1990. At the bend in the river: An illustrated history of Mankato and North Mankato [Minnesota]. Chatsworth, California: Windsor Publications, Inc. 128 p. See p. 103. Illust. Index. 29 cm. [1

**THEY'VE EVERY OCCASION  
TO CHOOSE SO-GOOD.**

From teatime afters, to exotic desserts, to treats.

The So-Good range of non-dairy soya ice products from Haldane gives your customers every occasion to buy.

Especially as the packaging is so appealing, the reputation so tasty and the products being so well-advertised to your market.

Then of course, they know that they can indulge in So-Good ices as often as

they like because there's no lactose or animal fat to worry about. So they'll buy more, and come back for more, on more occasions.

Of course, they'll also be buying So-Good brands from you because they think they're absolutely delicious.

In every event, we're sure they'll be your most successful frozen assets.

**SO GOOD**

Haldane Foods Group Ltd, Howard Way, Newport Pagnell, Bucks MK16 9PY

soy ref]

• **Summary:** Contains a very good 1-page history of Mankato Soybean Products, Inc., which was renamed Honeymead Products Co. in 1947. The first half of this history is very similar to (but shorter than) that which appears in the following article: Torgerson, Susan. 1980. "Mankato No. 2 in nation in soy processing: 40 years ago industry didn't amount to a hill of beans." *Land (The)* (Southern Minnesota) 4(10):1, 13, 38. April 24.

The second half adds: In 1947, when the Andreas family bought the company from the Washington Egg and Poultry Association, the family had feed mills [and soybean crushing plants] in Iowa under the name Honeymead; so they decided to rename their Mankato company Honeymead Products Co.

Lowell Andreas introduced modern solvent extraction technology to the Mankato plant to replace the old-fashioned expeller that pressed out the oil.

In 1960 Honeymead was sold to the Farmers Union Grain Terminal Association, a grain marketing cooperative based in St. Paul, Minnesota. In 1964 Honeymead expanded into hydrogenating the soybean oil it extracted from soybeans; this "hardened" soybean oil was sold to companies making margarine or shortening.

In 1968 Lowell Rasmussen was named president and continued the growth initiated by the Andreas family.

During the past 25 years—from 1965 to 1990—production has expanded markedly, from a soybean processing capacity of 50,000 bushels, five railroad tank cars of refined oil, and four tank cars of hydrogenated oil per day, to 80,000 bushels, 12 cars of refined oil, and 18 cars of hydrogenated oil daily.

Rasmussen retired in 1984 and Merritt Petersen succeeded him as president. "Honeymead Products Co. and its 185 employees continue to serve Minnesota, the United States, and several foreign countries." A large glossy black-and-white aerial photo shows the present Honeymead plant in Mankato. Address: Mankato, Minnesota.

1365. McCartney, Linda. 1990. Linda McCartney's home cooking. New York, NY: Arcade Publishing, Inc. (a Little, Brown company). England: Bloomsbury. 174 p. Illust. Index. 25 cm.

• **Summary:** As of 1994 this is said to be the world's best-selling vegetarian cookbook. It contains more than 200 recipes and many full-page color photos, uses TVP (both chunk and granular styles) in at least 22 recipes, mostly main dishes, including: Turnovers (p. 65). Beefless pie (p. 85). Beefless rice casserole (p. 86). Beefless stew (p. 86). Burgers bourguignonne (p. 89). Chili non carne (p. 94-95). Festive roast with savoury stuffing (p. 98). Lentil and steaklets stew (p. 104). Linda's lasagna (p. 104-05). Madras onion curry (p. 105). Maine sauerkraut (p. 105). Meatless loaf (p. 106). Mexican loaf (p. 108). Mince and aubergine casserole (p. 109). Moussaka (p. 109-10). Oriental beefless casserole (p. 115). Shepherd's pie (p. 120). Simple beefless hash (p.

120). Sour cream steaklet chunks (p. 121). Spaghetti sauce bolognese (p. 149). Stuffed and broiled mushrooms (p. 125). Stuffed peppers (p. 126).

Linda and Paul (of Beatles fame) McCartney have been married since March 12, 1969, are vegetarians and very active in the field of animal welfare. Linda, born in Scarsdale, New York, USA, has been a committed vegetarian for twenty years, during which time she has lived in England. She is also a world-famous photographer. Her color photo appears on the cover. TVP is more popular among consumers in the UK than in the USA. Pages 18-19 show a color photo of many meatlike products and their packages—including Protoveg Sizzles, Protoveg 5 Grain Burgamix, Tivall Vegetarian Schnitzel, Sausage, and Burger, Fritini Vegetable Pattie Mix, Realeat Vege Burger Mix, Dietade Low-Salt Vegetarian Gravy Mix, Granose Vegetarian Spicy Links, Sausalatas, Vegelinks, and Sausfry, Friggs Vegetable Gravy Powder, and Worthington Wham, Bolono, GranBurger, Vegetarian Fillets [fish alternatives], Stakelets, and Stripples. Page 43 gives a brief description of soya beans and soyfoods. Address: England.

1366. Smartt, J. 1990. Grain legumes: evolution and genetic resources. Cambridge, England: Cambridge University Press. x + 379 p. Illust. Index. 24 cm.

• **Summary:** Strictly speaking, grain legumes are those from which the seed is used directly for human consumption. Legume grain provides a protein-rich source of food which is an essential part of the diet in many parts of the tropics, particularly where meat is scarce. Grain legumes play an important nutritional role in supplying those essential amino acids (particularly lysine) that are not present in sufficient quantities in staple cereal crops, so enabling a balanced diet to be maintained even in the absence of a high intake of animal products. This is particularly important in regions, for example parts of southern India, where religious practices ensure that a majority of the population are strictly vegetarian and grain legumes can provide up to 70% of their dietary protein intake.

Page 28: The section on fermented products notes that soy is fermented in Indonesia as a cottage industry, and in Japan on an industrial scale to make tempe, soy sauce, soybean paste [miso], and natto. The fermenting organisms are very useful in breaking down toxic materials (lectins) and anti-metabolites (protease inhibitors).

Extracted [nonfermented] pulse proteins include soyabean curd ('tofu') and soyabean milk. Textured vegetable proteins (TVP) can be made from the residue of oil extraction.

"1.4—The future for legumes as protein. Since the publication of the joint FAO-WHO report (1973) in which estimates of minimum protein requirements for adequate nutrition were drastically revised downwards, there has been a tendency to consider that it is sufficient to ensure adequacy

of carbohydrate food supplies and that proteins will take care of themselves.” Protein is now much less of a burning issue than it was prior to 1973 (Payne 1978).

In Chapter 7, “The other oilseed legumes,” is a section on the soyabean (p. 246-57) followed by a section on the winged bean (p. 258-61, containing a nice illustrations of all the main parts of a winged bean, from Verdcourt and Halliday 1978). Address: Dep. of Biology, Univ. of Southampton, UK.

1367. Sanitarium Health Food Co. 1990? Product range. 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia. 6 p. Catalog. Undated. 30 cm.

• **Summary:** Product lines include: Flake biscuit range (incl. Weet-Bix [“Australia’s favourite whole wheat malted breakfast biscuits”], Corn Flakes, and Muesli). Loose cereal range. Sundry cereal range. Drinks and beverages (incl. So Good soymilk). Spreads (peanut butter and marmite). Legumes, grains, seeds (incl. soya beans in 500 gm bag). Dried fruits. Nuts. Mixes (such as nuts & raisins). Canned vegetarian meals (24 meatlike products, 3 of which are dry TVP in boxes). Misc. foods (incl. natural lecithin and lecithin granules).

The company also has an export division at Hudson Ave., Castle Hill, NSW 2154. Address: Wahroonga, Australia. Phone: (02) 487 1711.

1368. Agriculture Canada, Oilseeds Division, Grain Marketing Bureau, Grains and Oilseeds Branch. 1991. Oilseed sector profile. Ottawa, Ontario, Canada. 18 + 1 + 8 p. Jan. 28 cm. Spiral bound. [3 ref]

• **Summary:** Contents: Foreword. 1. Introduction. 2. The seed production subsector: Canola, soybeans, flaxseed, sunflower, mustard, composition, subsector performance. 3. The processing subsector: Background, processes, industry structure, production, subsector performance. 4. The marketing subsector: Oilseeds marketing, hedging, processed oilseed products marketing. 5. The marketing environment: Domestic, international markets.

1371. **Product Name:** 2 Quarter Pounders (100% Vegetable Meatfree Burgers).

**Manufacturer’s Name:** Realeat Company Ltd.

**Manufacturer’s Address:** Hayhill Industrial Estate, Barrow on Soar, Leics., England.

**Date of Introduction:** 1991 February.

**Ingredients:** Water, textured soya flour, vegetable oil (hydrogenated), onions, wheat gluten, wholewheat rusk, cellulose gum, natural flavors, sea salt, malt extract, spices, beetroot.

**Wt/Vol., Packaging, Price:** 227 gm paperboard box.

**How Stored:** Frozen.

**Nutrition:** Per 100 gm.: Energy 183 kCal (calories) / 767 kJoules, protein 12.0 gm, carbohydrate 6.3 gm, fat 12.4 gm, dietary fibre 6.8 gm.

**New Product—Documentation:** Label (carton) sent by Leah Leneman of Scotland. 1992. July. 4.5 by 9.5 by 1.1 inches. Reddish brown, orange, yellow, green, and black. Large color photo of the burger with buns and trimmings at bottom of front panel. “New recipe.” Back panel: “Also available: Vegetable Bangers. Realeat Quarterpounders are a delicious and nutritious alternative to meat burgers. They have more protein, higher fibre and less fat than ordinary burgers and are free from artificial colours and preservatives. Quarterpounders are quick and easy to grill or fry and will not shrink when cooked. Guarantee: If for any reason you are dissatisfied with our product, please return the carton, stating

why and where purchased, for a full no-quibble refund. Your statutory rights are not affected.” 4 small color photos show the 2 burgers on plates with other foods ready to serve. UPC indicia.

1372. **Product Name:** Sunburger.

**Manufacturer’s Name:** Sunfood Products.

**Manufacturer’s Address:** Fort Lauderdale, Florida.

**Date of Introduction:** 1991 February.

**Ingredients:** Textured soy protein concentrate, vital wheat gluten (powdered, 75% protein, serves as a binder), natural flavorings, natural spices, fresh onion.

**New Product–Documentation:** Talk with Richard Gross. 1991. Sept. 3. He first developed the Sunburger in 1974 (which see). He bought the name back from one of the surviving parties who makes rugalach. He had been supplying the Sunburger to Tree of Life in boxes, and to other foodservice accounts. The new products uses soy protein concentrate instead of TVP; it is baked rather than fried. It has “no fat” (i.e. less than ½ gm of fat per serving). The quality and acceptance are good. Now he has only one variety (plain), but he will add another flavor (like breakfast sausage) within the next week.

1373. Bertin, Oliver. 1991. Two Toronto terminals closing: Move will hurt soybean farmers. *Globe & Mail (Toronto, ONT, Canada)*. March 16. p. B9. Metro edition.

• **Summary:** The Canada Malting Co. Ltd. and Victory Soya Mills Ltd., “two of Canada’s most important grain terminals, are closing, in moves industry experts say will have major ramifications for farmers, consumers and the port of Toronto.”

The “Victory Soya Mills Ltd. plant was closed this week and the 80 employees are cleaning out the last of the soybeans, a process that will take about 6 weeks. The plant has not yet been sold. Victory’s general manager, Murray Davis, said the closing will have ‘major, major ramifications’ for farmers, consumers and industry because it was the largest and most important soybean crusher in Canada. ‘When you take a 15- or 20-million-bushel crush out of the system you have to feel the impact,’ he said...

“Ontario soybean farmers, however, said they were ‘reeling at the news’ that the plant would close. ‘It’s as though our worst nightmare has come to life,’ said Larry Miehl, president of the Ontario Soybean Growers Marketing Board. ‘Our whole industry is being turned upside down.’

“Mr. Miehl said the closing will threaten the viability of Canada’s soybean industry and reduce competition because there were only three crushers in Canada, and Victory was the largest. Farmers will now have to ship their beans to U.S. crushers—an expensive proposition—or risk getting a lower price from the two crushers left in Canada. Both of these plants are foreign owned. Central Soya Inc. has a plant in Hamilton that it bought some years ago from Toronto-based

Canada Packers Inc., while Archer-Daniels-Midland Co. of Decatur, Illinois owns a plant in Windsor, Ontario [ADM Agri-Industries Ltd.]...

“Soybeans are grown by more than 25,000 farmers, or one-third of all the farmers in Ontario. Moreover, it is one of Ontario’s most important crops, with sales last year of about \$350-million...”

“Mr. Davis said the Victory plant was closed for many reasons. It was becoming increasingly difficult to get soybean trucks into downtown Toronto, municipal taxes were too high and the Harbourfront development was getting closer. But the soybean industry has also suffered as a result of government policies. The federal government subsidizes the shipment of a competing product, canola seed, from Western Canada, but does not subsidize soybean crushing. Victory has also suffered under the Canada-U.S. free-trade agreement. The U.S. levies an 18-per-cent tariff on soybean oil imports, while Canada charges only 5 per cent on oil coming in. This, industry officials said, has made it difficult for Canadian crushers to compete.

“The closing of the two installations marks the end of an era for Toronto as a major grain port. The giant grain freighters that carried barley and soybeans through the Great Lakes have stopped coming, and the last of the grain elevators that marked the Toronto skyline for decades will eventually be torn down, said Toronto Harbourmaster James Brewster.” Address: Agriculture & Food Reporter, Canada.

1374. Burns, Howard. 1991. Plant closing upsets soybean producers: The only other two soybean processing plants in Ontario can’t handle all the beans processed in the province. *London Free Press (Ontario, Canada)*. March 19.

• **Summary:** Central Soya of Canada has closed its soybean processing plant in Toronto. According to Larry Miehl, head of the Ontario Soybean Growers’ Marketing Board “The shutdown adds to the uncertainty of farmers preparing to plant what was to have been the largest soybean crop in Ontario history... The marketing board may be forced to look for new export buyers to make up for the loss but there’s a down side to that. Miehl said the price farmers get is usually better at home than abroad. The closing also eliminates about two million bushels of storage space badly needed at harvest time. ‘What are we going to do with our beans?’ The two remaining plants, one in Windsor [ADM Agri-Industries Ltd.] and the other in Hamilton, can’t handle all the soybeans produced in Ontario, he said.”

1375. *Windsor Star (Essex County, Ontario, Canada)*. 1991. Windsor firm may gain from plant closure. March 22. p. 8B.

• **Summary:** “Windsor’s ADM Agri Industries Ltd. [also known as Maple Leaf Monarch] became one of only two soybean processors left in Canada this week when a soybean crushing plant in Toronto [Victory Soya Mills Ltd.] closed its doors.” Soybean farmers said “the closure is just another

sign of their industry in crisis... Prior to the closing, all three Ontario processing plants were operating at 60-percent capacity, so the other two plants [including a plant in Hamilton run by Central Soya of Canada] should be able to take up the slack.”

Larry Miehls, chairman of the Ontario Soybean Growers' Marketing Board, said: “We've known for several years that the soybean processing industry has been having major problems, but we were hoping that they could hang on until market conditions improve.” Miehls complained that western Canadian canola, which competes with soybean oil and meal, is supported with government subsidies, making it hard for soy farmers to compete. In addition, Ottawa has been slow to achieve free trade in soybean oil with the U.S., he said, and the Toronto plant closing makes the situation worse.” John Davidse of the OSGMB added that “Growers need to become more efficient or work to develop export markets.”

Note: Windsor is the southernmost of these three ports, located in the heart of Ontario's soybean growing area at the southwest end of Lake Erie across from Detroit, Michigan. Hamilton is the next farthest north, almost 200 miles to the northeast, on the southwestern end of Lake Ontario. Toronto, the farthest north, is also on Lake Ontario, about 40 miles northeast of Hamilton, and the furthest from the center of Ontario's soybean growing area.

1376. CSP Foods Ltd.; Central Soya of Canada Ltd. 1991. CSP Foods Ltd. and Central Soya of Canada Ltd. have signed a letter of intent to purchase the edible oils business of Canada Packers Inc. (News release). Canada. 7 p. March 27.

• **Summary:** “The purchase includes edible oil refineries in Montreal, Toronto and Wainwright, Alberta, and an oilseed crushing business at Fort Saskatchewan, Alberta, and a seed gathering station at Humboldt, Saskatchewan. A 50% ownership in Prairie Margarine Inc. of Edmonton is also part of the deal... The edible oil business of Canada Packers employs 400 people and generated consolidated sales of approximately \$250-million in the fiscal year ended March 31, 1990.

“CSP Foods Ltd. is jointly owned by Saskatchewan Wheat Pool and Manitoba Pool Elevators and is the major processor of canola and sunflower seed in western Canada. It operates crushing and refining facilities at Altona, Manitoba and Nipawin, Saskatchewan. CSP Foods has a crush plant at Harrowby, Manitoba, a refinery at Dundas, Ontario and a 50% ownership in Prairie Margarine Inc. of Edmonton, Alberta.

“CSP Foods is a leading marketer of canola oil and meal products into the North American marketplace. CSP Foods employs 290 people and generated consolidated sales of approximately \$200 million in the fiscal year ended March 31, 1991.

“Central Soya of Canada Limited operates a soya/canola crush plant at Hamilton, Ontario and is a subsidiary of Central Soya Company Inc.”

“This acquisition will combine three Canadian companies into one. On a North American basis, the new company is estimated to have three percent of the Edible Oils market. This compares to US market shares for ADM, Cargill and Bunge of 33, 20 and 12 percent, respectively...”

“Canola is Canada's major oilseed crop, accounting for 65-70 percent of Canadian oilseed production. It is second only to wheat in terms of gross farm revenue, averaging \$850-900 million per year. Japan is the predominant export market for canola seed, taking up to 90 percent of total exports and up to 60 percent of canola production. The balance of the crop is sold to the domestic crushing sector, most of which is located in Western Canada.”

“Central Soya of Canada Ltd. operates a soy/canola crush plant at Hamilton, Ontario with a soya crush of 365,000 tonnes a year (1,270 tonnes a day) and a canola crush of 227,000 tonnes a year (700 tonnes a day). The crushing canola and soya can take place simultaneously.”

Also gives details on: The agreement in principle. Canada Packers Ltd. Assets. CSP Foods Ltd. current operations. Central Soya of Canada Ltd. current operations. New company structure (CSP Foods and Central Soya will each own 50% of the new company and both will provide three Board members or partners to the new company). Rationale for the purchase and merger. The impact on the market place. The impact on producers. Chart of assets of the 3 companies. One map shows the new company's oilseed refineries in Canada, and another map shows its oilseed crushing plants.

1377. Sklar, Ronit (Mrs.). 1991. Brief history of Shefa Protein Industries, Ltd. Subsidiary of Israel Edible Products Ltd. (Interview). *SoyaScan Notes*. March 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Shefa Protein Industries Ltd. was founded in 1967 in Arad, Israel by Mr. Sid Katzin [Katzen] and his brother Dr. Sol Katzin [Katzen]. Arad is a town in southeastern Israel near the Dead Sea. The Hebrew adjective “Shefa” means plentiful or bountiful. The company was Israel's first manufacturer of soy products. Their first product was SVP, a structured vegetable protein made from extruded defatted soy flour, similar to TVP, but not under license from any other company. In the early days, most of the product was sold to Iran, then headed by the Shah. Only small quantities were sold in Israel, both to food manufacturers and (usually in plain small plastic bags) via retail food stores. Other early products were a Schnitzel and a Soya Hamburger.

In 1976 the company was purchased by Israel Edible Products, Ltd. (IEP), a major Israeli food manufacturer and conglomerate, whose main offices are located near Haifa.

Shefa became a subsidiary of the parent company and its products started to be sold under the Telma brand. Telma is a subsidiary of IEP that produced mayonnaise, margarine, various powdered soups, etc. At this time Shefa began to make new extruded products (such as snack foods, breakfast cereals, crisp breads, pet foods, etc.) from various other commodities in addition to soya. Moreover, new textured soy products were introduced, including textured soy concentrates and new flavors of textured soy flour. Shefa became the extrusion division of Israel Edible Products.

In 1978 Mrs. Sklar, a food technologist, began to work for Shefa. (She has not heard of Eliahu Navot and does not think he was involved in starting Shefa.) Shortly thereafter, in 1978 the conflict began with Iran, which led in Jan. 1979 to the Shah fleeing the country and the Ayatollah Khomeini coming to power. This crisis led to the end of Shefa's sales of their soy protein products to Iran. Until 1988, Shefa was the only manufacturer of soy products in Israel.

Today Shefa makes about 6 different extruded soy products, from defatted flour, soy protein concentrates, and cereal-soy blends, in various sizes and flavors. All are still sold under the Telma brand. Soy products are now a very small part of Shefa's total business; most of these textured soy products are sold to food manufacturers in Israel, including Tivall. Tivall is a customer, not a competitor. Tivall, Israel's largest seller of vegetarian protein foods, makes excellent quality products. Shefa's products are used as both meat extenders and in meatless vegetarian products. The factory has expanded, but it is still at the same location in Arad. One lady, Jenny Kozocar, has been with the company since it started. Shefa is the main producer of breakfast cereals in Israel. IEP has 5-6 subsidiaries, including Telma and Shefa.

Note: From 1972 to 1975 Stanley Scharf was employed as a chemist for Shefa Protein Industries in Arad, Israel. As of April 2012 he lives in Ithaca, New York. Address: Plant Manager, Shefa Protein Industries Ltd., P.O. Box 39, Arad 80700, Israel. Phone: 57-957860, 953555, 955286, 955416. Fax: 57-958049.

1378. *SoyaScan Notes*. 1991. Global Harvest (Overview). April 4. Compiled by William Shurtleff of Soyfoods Center. • **Summary:** Global Harvest (located at 1420 Sams Ave., Jefferson [a suburb of New Orleans], Louisiana) was started in Jan. 1991 by Tom Futch, a brilliant PhD and food scientist, who formerly worked with many large food companies and just before this with a soyfoods company in Louisiana that is now in bankruptcy [probably Manna International]. The former company was founded in 1983, but there were management problems so Tom left in early 1991 and started his own new company. Tom buys soy protein products [textured concentrates] from ADM and blends them with other ingredients to make meatless meals. Global Harvest's biggest market is to prison systems (correctional

institutions); their budgets are being cut and they want more nutrition for their dollar. The company has 10-12 soy products on the market, plus some other products (mainly beverages) that do not contain soy. They also have a soymilk product at the R&D stage. Tom has a strong personal interest in soyfoods. The company is now trying to raise new capital.

In an interview with Greg Caton of Lumen Food Corp. in Louisiana on 1 Nov. 1988, he noted: Contact Dr. Tom Futch of Manna International in New Orleans, Louisiana, for info on TVP. He is a born-again Christian of the best type. A PhD in food science, he worked with Staley in extrusion of soy protein concentrates. Phone: 504-254-3333.

1379. Yakabushi, Konrad. 1991. Ontario soybean growers crushed by plant closing. *Toronto Star (Ontario, Canada)*. April 11. p. C1, C10.

• **Summary:** Last month Victory Soya Mills, Ontario's largest soybean crusher, ceased operations and padlocked the doors of its plant on Lakeshore Blvd. East, thus closing a chapter in Toronto's history.

For almost 50 years, "convoys of trucks had converged on Queen's Quay during the dying days of Indian summer to unload" the harvest of many Ontario farms at the soybean crushing facility.

While some Toronto residents will hardly miss the mile-long traffic snarls, "the closure has left many others with a wistful sense that an annual rite of autumn and a historic Toronto landmark, are soon to be lost forever."

But for many of Ontario's 25,000 soybean farmers, whose crops were crushed by Victory Soya Mills, the plant closure raises more serious issues; where will they sell their crops in the future? Central Soya Co. Inc. (Fort Wayne, Indiana), the plant's owner blames the demise "on several factors, including high municipal taxes, traffic problems and encroaching development on the city's waterfront." Bill Campbell, vice-president of processing at Central Soya, says the basic problem was that "the plant was unable to operate profitably in that environment." The larger problem is that there is an excess of soybean crushing capacity in North America.

Soybean farmers point to federal policies aimed at promoting production of canola, a competing oilseed grown on the Prairies to the west. Even today, "Ottawa subsidizes the shipment of canola to Eastern Canada and, during the 1970s, handed out grants to encourage the construction of canola crushers in the West. Central Soya told the Ontario Soybean Growers' Marketing Board that the plant might be spared if the Board could get the government to change some of those policies.

Built in 1944 during World War II, the plant was a key factor in the birth and development of Ontario's (and Canada's) soybean industry. Production rose rapidly during the 1970s "as continent-wide health concerns sparked a move away from animal fats to vegetable oils." Soybeans

even found their way onto Canadian dining tables in the form of margarine, salad and cooking oils, soyburgers, tofu, and soy flour in baked goods. Moreover, soybeans were increasingly used in industrial applications from printing inks to paints, and soybean meal became the standard protein source in livestock and poultry feeds.

Today Ontario grows 95% of Canada's soybeans and 70% of these are grown in southwestern Ontario, which stretches further south than Detroit or Ann Arbor, Michigan.

Until last year, about 85% of Ontario's soybean crop was crushed in Canada yielding two value-added products: crude soybean oil and protein-rich soybean meal. But with the closure of Victory Soya Mills, about one-third of Canada's soybean crushing capacity and roughly 2 million bushels of soybean storage space have been eliminated, farmers will have to sell their soybeans anywhere they can.

Central Soya, which owns a smaller soybean crushing plant in Hamilton, Ontario, "says it is considering expanding that plant to make up for the lost capacity in Toronto.

The only other Canadian plant that crushes soybeans is ADM Agri-Industries, Ltd. (dba Maple Leaf Monarch), in Windsor, Ontario, owned by ADM of Decatur, Illinois.

It seems clear that the plant closure will hurt Ontario soybean farmers, in both the short and long terms. They may end up having more of their soybeans crushed in the United States and they will surely have to expand their markets overseas.

Photos show: (1) The Victory Soya Mills plant and silos. (2) Jim Allin, a soybean grower, standing next to a large sack of Pioneer brand soybean seed.

1380. Burket, Richard E. 1991. ADM, British Arkady, Dwayne Andreas, and soy protein concentrates (Interview). *SoyaScan Notes*. April 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** On 15 Jan. 1973 ADM acquired 50% of British Arkady Holdings Ltd. which simultaneously acquired its subsidiary British Arkady Co. Ltd. On 31 Dec. 1987 ADM acquired the rest of British Arkady Holdings Ltd. so that it now owned 100%. Arkady Holdings Ltd. is the important company because it is the parent company for all of the different Arkady companies such as the Haldane Group, etc. Dwayne Andreas is probably as true a believer in the potential of soybeans for food uses as anybody in the business. And he is willing to put his money where his mouth is. Dick worked with both Glidden and Central Soya, but they were not willing to put their money where their mouth was; they didn't really believe in it. Dwayne does. Yet it wasn't until ADM got into soy protein concentrates that the food uses really took off. Address: VP and Asst. to the Chairman, ADM, Decatur, Illinois 35022. Phone: 800-637-5843.

1381. Fehlberg, Eric C. 1991. The sale of Granose Foods

to the Haldane Foods Group and British Arkady Ltd. (Interview). *SoyaScan Notes*. April 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The sale of Granose took effect from 1 Jan. 1991. At the time of the sale, Granose was doing very well financially. The only year that they didn't break even or make a profit was 1990. At the beginning of 1990 they moved from their old building into the new one; the expenses connected with the move took up most of their profits. In all other recent years they have been making good money, and a portion of that money has been contributed to the church. Mr. Fehlberg cannot understand why the church would sell such a thriving company.

But the board of the directors of the British Union of the Seventh-day Adventist church got an offer (which was a little bit of back-door work) that was too good to refuse, so they looked at it in their committee meeting and decided to accept it. They have a good understanding of all aspects of the company. This is the second long-established Seventh-day Adventist food company that has been sold by the church during the last 2 years. Loma Linda Foods was sold to Worthington Foods in Jan. 1990. Most of the employees of Granose have stayed with the company after the sale. Peter Archer, the former general manager, has stayed but is no longer the general manager. He is now marketing manager. The church no longer has any involvement with Granose at all.

We cannot say that these two sales are the start of a trend, but he is quite sure that the four Scandinavian Adventist food companies (Nutana in Denmark, Sweden, Norway, and Finland) will be the next to be sold. Nutana-Sweden is in considerably better financial shape than the other three, and Nutana-Finland is in pretty good shape. Nutana in Denmark and Norway are losing money and are very much in trouble. But he thinks that can easily be corrected if they get their costing straight and price their products based on their real costs. The man who has gone in to make these changes, Jan Paulsen, has as good a chance of succeeding as anyone, but he works out of London, England and does not have a much time for the health food work. He feels that the church should not be in the business of selling healthy foods. He influenced the board of the British Union in their decision to sell of Granose.

After the Scandinavian Nutana companies, the Egypt Food Factory, run by Mokhtar Nashed in Helipolois, Cairo, Egypt may well be the next to go, probably within the next few months. They used to make soymilk but he thinks they no longer are making it. Their products are "sub-standard" but still good. Superbom in Brazil is also having a hard time because of the adverse exchange rate and the desire to borrow money from the church. Superbom Chile is also having some problems.

But many of the Adventist food companies definitely will not be sold by the church in the foreseeable future.

In fact, in the Far Eastern Division, a new food company in Hong Kong, run by Mr. Menzies, is scheduled to start selling products in early June of 1991. A new company is also starting in Thailand. Sahm Yook in Korea is also very successful, as is DE-VAU-GE in Germany and Sanitarium Foods in Australia. The food companies in Central America (Mexico, Costa Rica) and the Caribbean (Trinidad) are all doing well.

There are various administrative “Unions” within the Seventh-day Adventist Church. There are 4-5 unions in North America, 4 in Australia, many in South America, etc. The South American ones report to one central office in Brasilia, Brazil. The Central American food companies report to Miami, Florida. Sometimes a company manager and the head of the Union (a church official to whom he reports) have different ideas of what needs to be done at the company. These two men live in two different worlds, yet both have input in running the company. This can be a cause of business problems. The Mormon church owns some food companies and has the same type of problems. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

1382. Harvest Direct, Inc. 1991. We couldn't keep the lid on taste this great! Introducing Midland Harvest (Ad). *Vegetarian Times*. April. Inside front cover.

• **Summary:** See next page. This full-page color ad introduces the all-new Midland Harvest Burger 'n Loaf and Taco Filling 'n Dip, both made with 100% vegetable protein. Three photos show the products used in favorite dishes. “100% Vegetable Protein.”

This ad also appeared in *East West* (July/Aug. 1991, p. 37). Address: P.O. Box 4514, Decatur, Illinois 62525. Phone: 800-835-2867.

1383. *Ontario Soybean Growers' Marketing Board Newsletter*. 1991. Victory Soya Mills closes—permanently. April. p. 1.

• **Summary:** “The cornerstone of Canada's soybean industry was shattered in mid-March when Central Soya of Canada Ltd. announced that they were permanently closing their Toronto soybean crushing plant. Built in 1944 during World War II and called ‘Victory Soy Mills’, the plant effectively established the soybean industry in this country with a massive public relations campaign to encourage Ontario farmers to grow soybeans.

“The Toronto plant was purchased by Central Soya in 1985. They invested millions of dollars to upgrade it and make it one of their most efficient soybean crushing facilities. Central Soya also owns the soybean and canola crushing facility in Hamilton, Ontario and is owned itself by Gruppo Ferruzzi SpA of Italy. Ontario has one other soy/canola crushing plant located at Windsor, which is owned by

Archer Daniels Midland [ADM Agri-Industries Ltd.].

“Several reasons have been cited for closing Victory Soya Mills including a number of federal and provincial programs which have benefited the canola industry at the expense of the soybean industry. These include grants to build canola crushing facilities during the 1970's and transportation subsidies which still help to ship canola seed and canola products to eastern Canadian markets. The plant's location on the harbourfront of Toronto was also a factor. In addition to high real estate value and high taxes, truck access has become difficult in recent years.

“Closing the plant means that Canada will lose more than one third of its soybean processing capacity, over two million bushels of storage and 80 jobs. This comes at a time when Ontario farmers are expected to plant their biggest-ever soybean crop.” Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

1384. Eichberg, Joseph. 1991. The lecithin industry and market worldwide (Interview). *SoyaScan Notes*. May 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** There are basically two types of lecithin companies: Soybean crushing companies that produce crude lecithin from soy oil (e.g. Ferruzzi/Central Soya, ADM, Honeymead), and lecithin companies that buy crude lecithin from soybean crushers and fractionate it to make various products (e.g. Lucas Meyer, Nattermann Phospholipid GmbH). These lecithin products can be further classified into two broad types: those used in foods, and those used in pharmaceutical and cosmetic products.

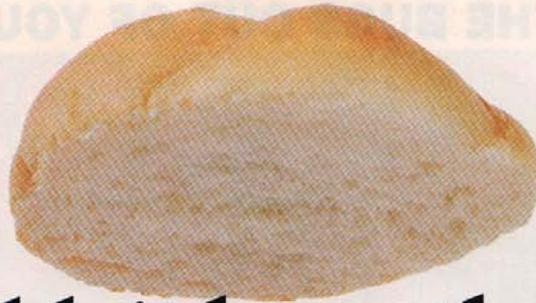

A ranking of lecithin companies worldwide by sales of lecithin products (i.e. total monetary value) would look something like this: 1. Ferruzzi/Central Soya. 2. Nattermann Phospholipid GmbH. 3. Lucas Meyer. 4. Archer Daniels Midland Co. (ADM). 5. Honeymead Products Co.

It is not clear whether Nattermann or Lucas Meyer is the second largest in sales. Lucas Meyer probably moves a larger volume by weight, but Nattermann sells mostly pharmaceutical and cosmetic products with a very high price per unit weight.

Note: This is the earliest English-language document seen (March 2016) that contains the word “fractionate” in connection with lecithin. Address: American Lecithin Co., P.O. Box 4056, Atlanta, Georgia 30302.

VEGETABLE  
PROTEIN

# We couldn't keep the lid on taste this great!

introducing

## Midland Harvest

The secret is out. All-new Midland Harvest Burger 'n Loaf and Taco Filling 'n Dip will really surprise your taste buds.

Who'd have thought something this tasty could be so healthy, too? With 100% vegetable protein, Midland Harvest is cholesterol-free, low in fat, and low in calories, and it contains dietary fiber to boot. That's why we call it the great taste of good health.

Midland Harvest is available in Original, Italian, Herbs & Spice, and Taco flavors. Try some versatile Midland Harvest today. Once you've had a taste of a taste this great, you won't be able to keep it to yourself.

Call 1-800-8FLAVOR (800-835-2867) to have Midland Harvest Burger 'n Loaf and Taco Filling 'n Dip delivered right to your door, exclusively from Harvest Direct. Satisfaction guaranteed.

Easy to use in your favorite  
recipes—just add water!

1386. MacNeil/Lehrer Newshour. 1991. Dwayne Andreas, ADM, Vege Burgers, and investing in the Soviet Union. Television broadcast. PBS. July 15. Based on a report by Paul Solman. [1 ref]\*

• **Summary:** The Café Grill in Moscow, one of the hottest restaurants east of Sweden, sells 4,500 Vege Burgers a day. Both the owners and the customers are Soviet, but the burgers are shipped from America's heartland. "The fabulously successful, cholesterol-free Vege Burger. Behind it stands a huge U.S. firm that could invest hundreds of millions of dollars in the USSR. You look at the success of a Vege Burger in the Soviet Union and you can imagine Mikhail Gorbachev thinking that his could look like ours here in the U.S. some day. All he needs is some time to turn the system around and enough capital. So as Gorbachev makes the rounds at the Economic Summit in London this week he's thinking about capital and how to raise it..."

"We went to see someone whom Gorbachev has turned to for advice since his days as Agriculture Minister, the head of the \$8,000 million Archer Daniels Midland Corporation, and incidentally the man behind the Vege Burger, known as Mr. Agribusiness, Dwayne Andreas," who has built an empire on the soybean. Its cheap, plentiful, and thus (he thinks) an ideal food for a hungry Soviet Union. He is actually selling Vege Burgers in the USSR. He notes that "we have shipped enough to the Soviet Union, and most of it is already sold, to make 14 million patties." And he has noticed, contrary to what is generally believed in this country, that the Soviet people have a lot of money on their pockets and a lot of savings, partly because they have not had a lot of goods to buy. So there is a ready market for Vege Burgers and the rubles are available. To avoid getting stuck with lots of rubles that are not readily convertible to dollars, Andreas has set up a tricky bartering arrangement, essentially trading his Vege Burgers for petroleum, which will then be sold for dollars. Andreas hopes to put a patty freezing machine in literally every major Soviet city. Plus, he wants to build a processing plant like the one at corporate headquarters in Decatur, Illinois, that would be a \$100 million dollar investment all by itself. The main obstacle to Andreas is getting the Soviet Union to recognize the right of private ownership. That is the key. Once he has that right, he would

keep the money in the Soviet Union rather than taking it out. The Soviets have got to make their country as comfortable as California for investors, "then we'll all be glad to have assets there." Andreas' first small step in that direction is the Vege Burger, a staple at the ADM executive dining room in Decatur. The boss (Andreas) eats them at least 3 times a week. Solman remarks that his Vege Burger doesn't taste any different from the hamburgers sold at McDonald's, just a little smoother consistency. What does Andreas think are other main problems with the Soviet economy? It is far too centrally controlled. Fixed prices distort the market, created a black market, and cause farmers and housewives to hoard. The answer is a market economy. And the time to help the Soviets is now—while the window of opportunity is open. If it closes and things slide backwards, the West might have to wait another 70 years.

1387. Pringle, W. 1991. Soya protein, past experience & future potential. In: F. Meuser and P. Suckow, eds. 1991. Soja in Lebensmitteln: Vortraege 2. Hamburger Soja-Tagung. Berlin: Technische Universitaet Berlin, Institut fuer Lebensmitteltechnologie und Gaerungstechnologie-Getreidetechnologie. 171 p. See p. 153-59. [4 ref]

• **Summary:** Contents: Introduction. Potential uses of soya bean. Past product launches. Soya product as a foodstuff.

A certain Mr. Robert Whympier was probably the first person to show Europeans how the functional character of soya proteins could be exploited. He returned to England in 1923 after a trip to Japan with a suitcase full of soya beans and a head full of ideas. He carried out a series of experiments using soya flour as an ingredient of the dough in the breadmaking process. This work culminated in the granting of a British Patent in 1926. The patent described conditions of unusually vigorous dough mixing which allowed for the maximum inclusion of air. Very substantial improvements in the colour of the bread crumb and the volume and quality of the bread were observed. We now know that this bleaching and improving effect is a direct result of a coupled oxidation reaction involving the lipoxygenase enzyme present in the soya flour. The breadmaking industry of Europe now uses thousands of tonnes of enzyme-active soya flour every year as a bread improver.

"The work of Whympier and his associates continued and in the early 1930's a heat processed full fat soya flour appeared on the market."

Henry Ford, a man of vision, initiated the next phase in the development of soya proteins for human food. In the early 1950's [sic, mid-1930s] he put together a team to work on the isolation of pure protein from soya and the subsequent spinning of this protein into a stable fibre." After his scientific team was disbanded, the expertise was not lost, for the scientists found places in food companies and began to look at the use of isolated soya proteins in the

food industry. It is now well established that isolated soya proteins have functional uses for binding and emulsification, and for improving nutritional value. “More controversial and newsworthy was the attempt by the old Ford researchers to produce textured protein products to simulate meat and other traditional protein foods. They did this by two processes: (1) The spinning of isolate into fibres, using technology from the textile industry; (2) The extrusion of soya bean meal under conditions of high temperature and pressure... Branded food products based on these textured soya proteins were launched on the market in the late 1960s and all during the decade 1970-1980.”

During the early 1970s the future looked a little bleak due to the world population explosion, the world energy crisis (precipitated by OPEC), and the world food crisis (which was more specifically a protein crisis). The first World Soy Protein Conference, held in Munich in 1973 with over 1,000 delegates, was a very important affair. “The U.S. Secretary of Agriculture, Mr. Earl L. Butz, opened the conference. Senator Hubert Humphrey made a memorable inspirational address... I was there and I can tell you we all thought we could make a big impact on the world’s on the world’s problems by supplying textured soya protein.”

Against this background, many such products were launched in the U.K. in the mid-1970s by major food companies. All but Kesp were based on textured soya flour: 1975 Feb.–Mince Savour by Nestle; 1975 May–Country Meadow by Brooke Bond Oxo; 1976 Jan.–Soya Choice by Cadbury; 1976 April–Economince by Spillers; 1976 Sept.–Kesp by Courtaulds (made from spun soy protein fiber).

“All of the products enjoyed real success for a period of time. In particular Cadbury’s Soya Choice sold well for about three years in every area of the U.K. Sad to relate, however, all of them quietly and gradually lost sales and finally disappeared from the market. It is important to know why... People did not want a substitute food; this was a challenge to their security, a threat to the comfortable familiar world.” The consumers of today have become more “green.” “It is clear to me, the emotional conditioning that sees security in the consumption of traditional animal foods is being replaced by the more logical attitudes of a new generation. The young people of today want to find ways to preserve the environment and they have an increased perception of health problems that may be caused by the consumption of animal products, especially animal fat. These and other factors are making vegetarianism more attractive.

“A recent Gallup poll has shown, in the U.K., that 3% of the total population are vegetarians. A total of 8.5% are either totally vegetarian or avoid red meat, and 9.3% of children are vegetarian. Vegetarianism has moved from being a refuge of cranks to being fashionable.”

A new product popular among yuppies is Quorn, a textured fungal protein, marketed by ICI and RHM via Sainsburys and other selected suppliers. Address: The British

Arkady Co. Ltd., Manchester, England.

1388. Tara, Bill. 1991. Pioneering macrobiotics and soyfoods in London (Interview). *SoyaScan Notes*. Aug. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Starting in the late 1960s, the pioneering work with soyfoods in London was done by Craig and Gregory Sams. They and their parents were Americans, and they had gone to college in America. Their father was employed by the U.S. armed forces as an historian; they spent a lot of their time growing up between America and England. Greg fell out of a tree while going to college in Berkeley in the late 1960s and was paralyzed from the waist down, so he was confined to a wheelchair, but was still very active and innovative. In the late 1960s they set up a macrobiotic natural foods cafe / restaurant on Portobello Road in London, then changed it into Ceres Grain Shop, a natural foods retail store. As volume increased, they began to distribute their products out of the back of their shop, and in about 1971 founded Harmony Foods Ltd. as a distribution company located in a warehouse on Ladbroke [sic, Latimer] Road. The model and evolution was similar to that of Erewhon in Boston. Harmony Foods was the first natural foods distributor in England, and probably the second in Europe after Lima Foods of Belgium. Soon they were importing macrobiotic foods from Japan, and distributing organically grown grains from England and from The Camargue (a marshy island in the delta of the Rhone River in the south of France), etc.

Among their early Japanese imports were bulk miso and “tamari” (actually shoyu), imported from Muso in wooden kegs. They repackaged the miso and shoyu in glass bottles under the Harmony Foods label in London. This was the first Japanese miso and shoyu sold in England. In about 1972, as soon as Erewhon started having miso and shoyu packed in Japan, the Sams had the same thing done with theirs, then they applied their own labels in London. But they continued to import in bulk as well. A Chinese company in London made tofu and [mung] bean sprouts, then sold the tofu to the Sams brothers; they sold it unpackaged in open trays in water. At that time, tofu was not emphasized much in macrobiotic circles so not much was sold; it was considered too yin. The Sams also sold deep-fried Rissoles filled with TVP instead of meat; as early as 1970 the Rissoles were being made by an Israeli guy (name?) who owned a shop (name?) by the Hempstead Heath. Marigold Foods also used TVP in the mid-1970s.

In 1970 Bill Tara, then a vice president at Erewhon in Boston, passed through London on his way to India. One purpose of his trip was to scout out the possibility of Erewhon setting up a distribution point or center in England. Paul Hawken was president of Erewhon at the time, and Erewhon was importing miso and tamari from both Muso and Mitoku in Japan. Bill and Paul had been roommates

in a warehouse in San Francisco, then they took over the Erewhon food store from Evan Root, Paul starting 2-3 months before Bill. In London, the Sams brothers were just opening a new natural foods restaurant in the Notting Hill area so Bill and Paul Petrofsky spent 2 weeks fixing it up. Paul later started Baldwin Hill Bakery with Hy Lerner. Bill stayed in London 2-3 months during this first visit.

In about 1972 Bill returned to London with Russel Demerais, on the Erewhon payroll, again to start an Erewhon distribution center. But Erewhon went through a cash crisis and Harmony foods had grown dramatically. So Bill and Peter Bradford (an Englishman who had come to America in about 1970 and worked for Erewhon doing organic agriculture at Erewhon Farms near Keene, New Hampshire) began to work for the Sams brothers both at Ceres Grain Shop (the retail store) and Harmony Foods (in the warehouse). Bradford, who now has a very successful natural food store in England named Clearwater Natural Grocer, has been one of the most important promoters of soyfoods in the UK. At this time, Craig Sams set up a bakery. By now, miso and tamari sales had increased; Harmony was still affixing its own label to unlabeled packs.

In 1974 Bill and Peter established Sunwheel as a natural food/macrobiotic distributor. They picked up exotic Japanese imports that Harmony found unprofitable and wanted to drop—so there was little or no competitive feeling with the Sams. By late 1974 Sunwheel Hatcho Miso, Mugi Miso, and Tamari were on the market, imported from Muso (Yuko Okada) in Japan. Sunwheel also made granola and peanut butter. Sunwheel never sold any other soyfood products; they had very limited warehouse space and no refrigeration.

Note: On 17 Aug. 1975 Renée Tara wrote William Shurtleff in California. She was living at 30 B Market St., Bradford-on-Avon, Wilts., England. She is writing a European Macrobiotic Cookbook. She requests information on miso and invites Shurtleff to visit.

In about 1977 Sunwheel acquired a retail store that had been started in and by the Community Health Foundation. By 1979 Sunwheel was very successful, but it needed to be recapitalized or sold. So the partners decided to sell it to a larger health food company; Peter kept the retail store.

In Nov. 1975 Bill established the Self Health Center which by 1976 grew into the Community Health Foundation (CHF). By 1976 CHF was offering classes in soyfoods. Paul Jones was the key man with tofu; he taught classes and started making tofu out of his home in the Highgate area. Paul Jones was definitely the first Caucasian to pioneer tofu in England. Simon Bailey, a baker who was originally with one of the first natural foods stores in England, located in Bath, taught about tempeh. These people were experimenting in the kitchen with soyfoods and taught in a sort of an apprenticeship program. Jon Sandifer, who is still with CHF, learned tempeh from Simon Bailey. CHF sold some tofu and tempeh through its own sit-down restaurant named

The Seven Sheaves, then renamed The Natural Snack and changed to a cafeteria. A few people did experiments with miso but it never got to a commercial scale in part because of persistent rumors that Lima Foods was going to start making it.

By the late 1970s soyfoods were growing in popularity in the UK. Two separate groups promoted them; the vegetarians and animal rights people (who liked TVP), and the natural foods and macrobiotic people. Marigold Foods also used TVP in the mid-1970s.

Much of important pioneering commercial work with soyfoods in Europe was done by macrobiotic groups in the Netherlands and Belgium. Bill often went there to teach in 1974-79. Tofu, and later tempeh, were emphasized by groups such as Manna in Amsterdam and De Brandnetel in Antwerp. Macrobiotics was much more active in the Lowlands than in England.

The Sams brothers later started Whole Earth as a marketing company for their jams. They sold it fairly soon. Gregory Sams (disabled) is no longer in the food business; he runs The Chaos Shop in London which sells photographic reproductions of computer-generated chaos patterns. Greg started Realeat Co. and now may be with the Haldane Foods Group. Address: Director, Nova Inst., P.O. Box 4648, Estes Park, Colorado 80517. Phone: 303-586-6265.

1389. Peterson, Greg; Barnes, Stephen. 1991. Genistein inhibition of the growth of human breast cancer cells: Independence from estrogen receptors and the multi-drug resistance gene. *Biochemical and Biophysical Research Communications* 179(1):661-67. Aug. 30. [22 ref]

• **Summary:** Genistein was found to be a potent inhibitor (in test tubes) of the growth of all 3 human breast cancer cell lines examined; biochanin A and daidzein were found to be weaker growth inhibitors. The isoflavone Beta-glucosides, genistin and daidzin, have little effect on growth.

The “soy molasses” used in this experiment was a gift of ADM. Genistin and daidzin were isolated from soy molasses by fractional crystallization and by adsorption chromatography, respectively. Their aglucones, genistein and daidzein, were prepared by hydrolysis (with hydrochloric acid) in methanol.

Note: This is the earliest soy-related document seen (May 2017) with the term “estrogen receptors” (or “estrogen receptor”) in the title. Address: Depts. of Biochemistry and Pharmacology, Univ. of Alabama at Birmingham, Birmingham, Alabama 35294.

1390. **Product Name:** Granose Vegetarian Wholefood Kitchen Vegetarian Sausages.

**Manufacturer’s Name:** Granose Foods Ltd.

**Manufacturer’s Address:** Stanborough Park, Watford, Herts., WD2 6JR, England.

**Date of Introduction:** 1991 August.

**Ingredients:** Water, textured defatted soya flour (defatted soya flour, iron, thiamin, riboflavin, vitamin B-12), hydrogenated vegetable oil, rusk, stabiliser (methyl cellulose, of plant origin), sea salt, hydrolysed vegetable protein, herbs, spices, colour (beetroot red).

**Wt/Vol., Packaging, Price:** 270 gm paperboard box.

**How Stored:** Frozen.

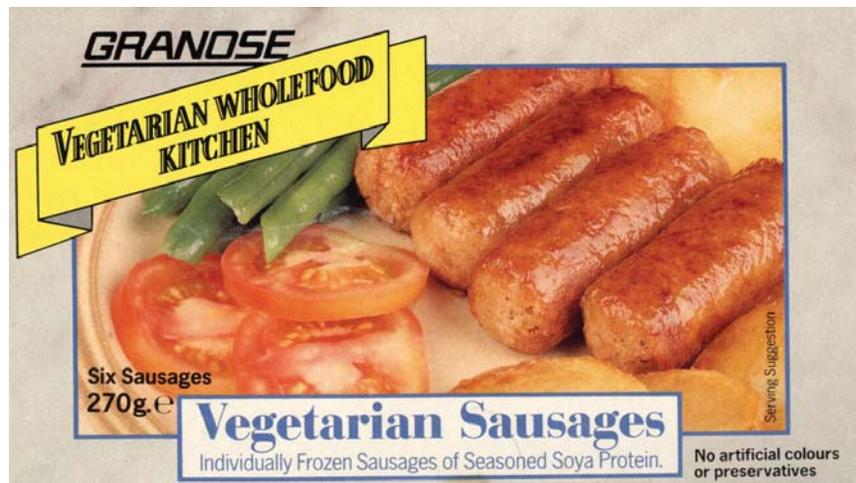

**Nutrition:** Per 100 gm.: Energy 190 kcal (calories; 790 kJ), protein 6.9 gm, carbohydrate 12 gm, fibre 4.5 gm, fat 13 gm.

**New Product–Documentation:** Part of label sent by Leah Leneman. 1992. Jan. 2. 6.5 by 3.75 by 1.12 inches. Black, blue, white, and yellow on gray. Color photo of browned sausages on a plate with sliced tomatoes, green beans, and sliced browned potatoes. “Individually frozen sausages of seasoned soya protein. Six sausages. No artificial colours or preservatives.”

1391. Rabheru, Neil. 1991. New developments with Unisoy, soymilk, and Haldane Foods in England (Interview). *SoyaScan Notes*. Sept. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Unisoy was acquired by the Haldane Foods Group on 21 Dec. 1990. This has proved to be a very positive development for Unisoy. It is a great honor and very satisfying for Neil to be part of the same team with Dwayne Andreas and Peter Fitch, because both are very forward looking, energetic, and supportive men. The company now makes only soymilk. Other companies in the Haldane Foods Group now make the other soy products that Unisoy used to make—which is more efficient. For example, Genice Foods Ltd. makes soy margarine, yogurts, and ice creams. Unisoy plans to expand into a larger plant, probably at a new location. That phase, which will begin within 12 months, will involve an investment of £3 to £4 million. He is presently meeting with APV in connection with a new soymilk plant. Unisoy has not launched any new products since mid-1990. Neil has been too busy absorbing the Granose line into his production. Unisoy is now making all the soymilk that Granose used to buy from DE-VAU-GE [in Germany], to use in continuing the Granose line of products that contain soymilk. Thus the Unisoy/Haldane now makes the profit that DE-VAU-GE used to make.

The acquisition of Granose by the Haldane Foods group was the most brilliant move one can imagine. 90% of the products that Granose was buying from other companies can be manufactured within the Haldane Foods Group. Granose’s best products included their margarine, soymilk, ice cream, and yogurt. Peter Fitch deserves the credit for this stroke of genius.

The Haldane Foods Group now sells 4 soymilk brands, all now made by Unisoy: So Good (which used to be purchased from DE-VAU-GE; Sanitarium Foods in Australia only registered their brand in Australia and New Zealand), Granose, Unisoy, and White Wave. Neil believes that Unisoy makes the best-tasting soymilk in Europe today. Recently there was an independent magazine survey of all soymilks on the market and the Granose brand made by Unisoy won first, second, sixth, and ninth places. The UK soymilk market is extremely competitive and the prices are much lower relative to cow’s milk than they are in the USA. On average at all retail outlets, cow’s milk retails for about £0.50 per liter versus £0.59 to £0.79 per liter for soymilk. Thus soymilk in the UK retails for about 38% more than cow’s milk.

Note: In the USA, cow’s milk retails for about \$0.72/liter and soymilk retails for about \$1.86/liter or about 2.6 times as much as cow’s milk. The current exchange rate is 1.79 U.S. dollars = 1 British pound. Thus U.S. cow’s milk would sell for £0.40/liter (20% less than British cow’s milk) and soymilk would sell for £1.04/liter (about 45% more than British soymilk).

In the UK most of the soymilk is sold in the multiples (supermarkets) in half liters (500 ml) cartons, and that is where the greatest growth is. There, soymilk is only about 20% more expensive than cow’s milk. (Note: In the USA very little soymilk is sold in supermarkets.)

In the UK, Provamel (made by Alpro in Belgium) has about 42% of the total soymilk market. The four brands made by Unisoy have about 35-37%. The remaining 21-23% is divided among Sunrise, Plamil, and a few others. There is very strong soymilk brand loyalty in the UK.

Unisoy increasingly refers to itself as “the soymilk division of Haldane Foods Group.” The “Milk ‘n’ By-Products Ltd.” part of the name will be dropped very shortly.

The last part of the soyfoods market that the Haldane Foods Group will attempt to capture is tofu, since Cauldron Foods has a very big lead on Haldane in this market. The Granose line of dry mixes used to compete directly with the

Haldane Food Group's Hera line. Now all these products are made at one location.

The relationship between ADM, British Arkady, and the Haldane Foods Group has changed. The Haldane Foods Group is no longer part of British Arkady; both are now on the same level on the organization chart, and both report directly to ADM's European headquarters (ADM International Ltd. in England; John R. Mahlich, managing director). Peter Fitch used to work for British Arkady before the Haldane Foods Group was formed. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

1392. Rabheru, Neil. 1991. The early days of the soymilk market in England, Soya Health Foods and Michael Cole (Interview). *SoyaScan Notes*. Sept. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Michael Cole deserves full credit for getting soyamilk into supermarkets (multiples) in the UK. Vandemoortele was smart in capitalizing on his work to put themselves in their present strong position. It is sad that Soya Health Foods did not support Michael by investing in better technology to give a better quality product. In the early days, Soya Health Foods had everything in their grasp. If they had played their cards right, Unisoy would not be here today, and Vandemoortele might not even be in the UK. The principal(s) of Soya Health Foods were either too hesitant or not smart enough to take the necessary risks. He was content making money milking the cow (so to speak), never mind when the cow drops dead. Michael left the company out of frustration. Michael is an outstanding salesman.

Neil is absolutely certain that Michael Cole has never been involved with John Holt. Neil thinks that Michael Cole's first involvement with soyfoods in the UK was with Soya Health Foods (Sunrise). Neil spoke with Michael Cole 3 weeks ago; he is back in the UK trying to market some spray-dried organic tofu and soymilk. Neil does not know the source. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

1393. Archer Daniels Midland Co. 1991. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p. Sept.

• **Summary:** Net sales and other operating income for 1991 (year ended June 30) were \$8,468 million, up 9.2% from 1990. Net earnings for 1991 were \$466.7 million, down 3.5% from 1990. Shareholders' equity (net worth) is \$3,922 million, up 9.8% from 1990.

"Foreign oilseeds operations were strengthened with the acquisition of a major softseed plant in Erith, U.K., and several plants in Canada. Soy protein facilities currently being added to the Europoort plant in The Netherlands should be in operation by year's end and a marketing

arrangement to supply Loders Croklaan, B.V., with soy protein concentrate gives the plant a good production base to begin operations."

"ADM now operates 136 U.S. processing plants and owns, or has an ownership interest in, 34 foreign plants in seven countries. The Company 149 terminal, country, and river grain elevators." A 2-page color photo (p. 2-3) shows "ADM's Europoort plant, near Rotterdam, the world's largest soybean processing facility. Construction is underway for the addition of a vegetable oil refinery, soy protein plants and a second cogeneration unit." ADM's "oilseed processing operations operated at lower profit levels. Export margins were reduced due to heavily subsidized South American and European oilseed product sales."

"The protein specialties division expanded its position as the world's largest supplier of value-added soy proteins this year. Construction began on a facility at Europoort to produce soy protein concentrates, isolated soy proteins and the specialized raw material from which these products are formulated. The facility will serve the growing demand in Europe and the USSR for food and animal feed ingredients.

"ADM will produce a line of soy protein concentrates which Loders Croklaan will market to the animal feed industry in Western Europe. The combination of ADM's production technology and Loders Croklaan's leadership position in the animal feed ingredient market will provide a major improvement in efficiency. Products will be supplied from the Europoort facility.

"Consumer acceptance of the all-vegetable protein food item, Midland Harvest's Harvest Burger, has been encouraging and exceeds expectations. This low-fat, cholesterol-free, reduced calorie product is being sold in selected U.S. markets and in several international markets, notably England and other European Community countries, the USSR, Czechoslovakia, Finland, Mexico and Canada.

"Haldane Food Groups acquired two additional companies: Granose Foods Ltd., a pioneer in the health food industry, and Unisoya [on 21 Dec. 1990], a soya milk production company. Additional bottling capacity was installed at Saucemasters Limited when the company moved operations to a larger facility shared with Snackmasters Limited, a newly formed company manufacturing snack meals. These TVP-based products are used with either noodles or rice and are sold through supermarkets and health food stores. Genice Limited added more yogurts and non-dairy ice creams to its product range. Frozen meals from both Vegetarian Cuisine Limited and Vegetarian Feasts Limited increased their market share. Production at the leased Coventry factory was transferred to the Granose factory at Newport Pagnell, where additional land is available for further expansion."

Page 32 lists the many ADM divisions worldwide. In Europe, key soyfoods-related divisions are: The British Arkady Co. Ltd. (William Pringle, Division Director),

and ADM International Ltd. (John R. Mahlich, Managing Director). Both are located in the UK. Note: The Haldane Foods Group (Peter Fitch, Managing Director), which is currently under British Arkady, will soon become an independent division. Since 1985 Peter Fitch and John Mahlich have skillfully acquired 11 of England's most important natural-, vegetarian-, and soyfood manufacturing companies to make the Haldane Foods Group unique in the world as a professional, efficient, and innovative group with a very promising future in a rapidly growing market.

Note: In Dec. 1990, ADM started making soy protein concentrates at its plant in Europoort, Netherlands. Address: Decatur, Illinois.

1394. Archer Daniels Midland Co. 1991. Introducing Midland Harvest: The great taste of good health! (Leaflet). Decatur, Illinois. 28 x 11 cm. Catalog.

• **Summary:** This full-color dome-shaped leaflet describing the Midland Harvest products comes in the shape of a vertically-oriented rectangle that is rounded at the top. It is not a mail order catalog. Color photos (p. 1) show a Harvest Burger, Taco Filling 'n Dip, and Burger 'n Loaf. At the bottom are written: Cholesterol free. Low fat. High protein. Low calories. Dietary fiber. Microwaveable.

The two inside panels show the four frozen and four shelf stable dry mix Midland Harvest products. Frozen: Harvest Burgers in Original, Italian Style, and Taco Flavors plus Breakfast Patties—Sausage style. Shelf Stable: Burger 'n Loaf in Original, Italian Style, and Herbs & Spice, plus Taco Filling 'n Dip. "Consumers are buying healthier foods: 4 out of 10 consumers have changed their eating habits because of nutritional concerns. 98 million Americans have a cholesterol count over 200." In these healthy products, less than 30% of the calories come from fat. "Complete marketing support: An \$18 million national television advertising campaign. Professional in-store demonstrations. Trade and merchandising allowances available. Colorful, eye-catching, free-standing POP pieces that sell, sell, sell! Newspaper ROP (Run of Press = newspaper ad), Sunday FSI (free standing insert), and demo coupons.

The back panel explains the products that are available in food service packs, by mail order, or for the retail trade, with phone numbers for the last two categories.

Talk with Lee Lensch of ADM. 1994. March 4. This promotional piece was developed by ADM for use as a handout at trade shows to give to supermarket and foodservice buyers who came by the ADM booth. This unrelated to Harvest Direct. Address: Decatur, Illinois. Phone: 1-800-637-5850.

1395. Bates, Dorothy R. 1991. The TVP cookbook: Using the quick-cooking meat substitute. Summertown, Tennessee: The Book Publishing Co. 96 p. Illust. Index. Sept. 22 cm.

• **Summary:** Contents: Introduction. Nutritional information.

Ingredients. Breakfast. Appetizers. Soups. Sandwiches. Main dishes. Desert.

This vegan cookbook is devoted exclusively to TVP, which is quick and easy to prepare, and has all the healthful qualities of other soyfoods—but without the fat. TVP (which stands for "textured vegetable protein") is a registered trademark of the Archer Daniels Midland Company, Decatur, Illinois. TVP comes in two textures: small granules and larger chunks. Note: The publisher got ADM's permission to use the TVP trademark, and ADM is now very excited with the book. Address: Summertown, Tennessee.

1396. Kahn, E.J., Jr. 1991. Supermarketer to the world: The story of Dwayne Andreas, CEO of Archer Daniels Midland. New York, NY: Warner Books. viii + 320 p. Illust. Index. 24 cm.

• **Summary:** The colorful, carefully researched story of Dwayne Andreas, the 73-year old CEO of the largest agricultural processor in the USA. The success he has made of ADM makes "the better-known success stories of Xerox and IBM look like kid's stuff. Andreas has multiplied revenues 25 times over (from \$323 million to \$7.9 billion) since taking the Archer Daniels Midland helm in 1965—en route converting his own \$1,500 investment into \$180 million. His sales staff produce at an annual rate of three quarters of a million each. He doubles ADM profits every five years with the regularity of a Swiss clock. And since the Bush election, he's hoisted revenues by about a billion dollars a year. All of this with long-term debt 30 percent less than cash on hand...

"But there's a lot more than numbers to Dwayne Andreas. He's known by insiders as the new Armand Hammer. When Mikhail Gorbachev met Tip O'Neill, the Soviet premier greeted him with, 'I hear you know my friend Dwayne Andreas.' He is an almost mystical guru to the power elite, yet he is little understood by professional analysts."

Page 59: "Dwayne's father and mother, Reuben Peter Andreas and Lydia Barbara Stoltz, were both born in 1882 to strict Mennonite families, a couple of months apart and in Illinois towns—he in Mideville, she in Sterling—a few miles apart. They were married in Sterling on Nov. 27, 1902, and not long afterward moved to Minnesota. She was... small in stature. The tallest of her five sons stood at five feet eight inches... While raising the boys and a single girl—Dwayne, born on March 4, 1918, was next to the last of the lot..." Lydia Andreas died in 1938 on Mother's Day [the second Sunday in May].

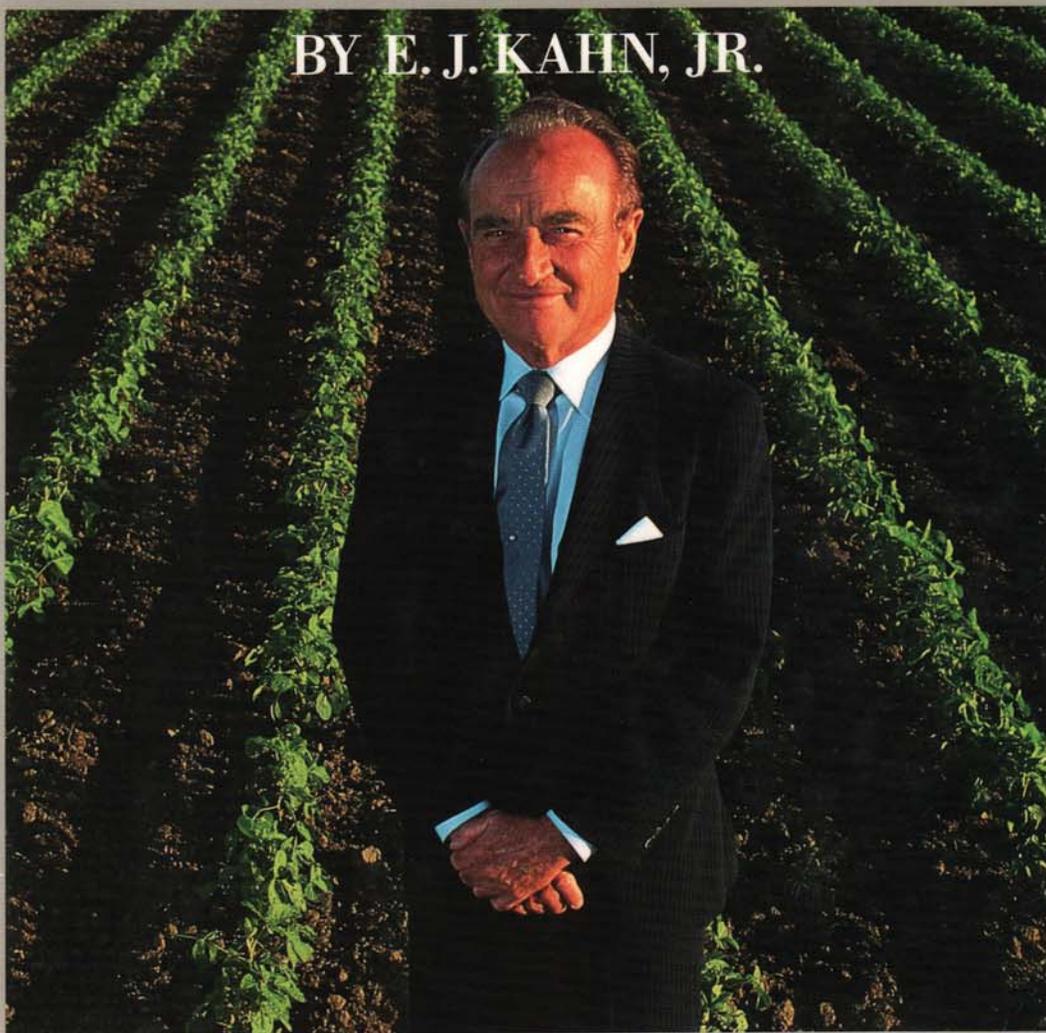

Page 70: In 1935 Dwayne entered Wheaton College in Illinois. But near the end of his sophomore year he dropped out, concluding his formal education. Moreover he got married when he was 18 [ca. 1937] and she 3 years older, to Bertha Benedict, whom he met at Wheaton. "That youthful union was short-lived and ended in divorce, but it

**“ANDREAS IS AN UNSUNG AMERICAN HERO.”—Thomas P. “Tip” O’Neill**

**THE STORY OF DWAYNE ANDREAS  
CEO OF ARCHER DANIELS MIDLAND**

# **SUPERMARKETER TO THE WORLD**

**BY E. J. KAHN, JR.**

did produce daughter Sandra, later McMurtrie and Mother Teresa's faithful acolyte." Note: Sandra first went to India in 1981 with a friend who worked for Catholic Relief Services. In Calcutta they met Mother Teresa—the celebrated Catholic nun.

Note 2. After Bertha and Dwayne Andreas were divorced, Bertha later married B.C. Kruidenier, to whom she remained married until her death—as shown by her obituary (cited elsewhere).

Page 71: Another and ultimately more important reason for dropping out of college was to go into business with his father. Since 1927 the firm's name had been "Reuben's & Son" [or "R.P. Andreas & Son" the son being Albert]. In the mid-1930s, Reuben took in 3 more sons, Osborn, Glenn and Dwayne and the company was renamed. Lowell, the youngest of the sons, who was still in high school, came in later. "Dwayne, not yet twenty, was put in charge of sales promotion," and soon annual sales reached \$1 million.

In 1936 the Andreas moved their family milling company (named R.P. Andreas & Sons) to Cedar Rapids, Iowa (from Lisbon, Iowa), and renamed it Honeymead Products Co. Dwayne "came under the tutelary spell of one of his Jewish mentors, Joseph Sinaiko, a leading soybean processor." The two became close personal friends. Joe, who was 27 years older than Dwayne, owned Iowa Milling Co. in Cedar Rapids. Years later Andreas said of Sinaiko: "A very classy guy, and the best soybean processor of that era."

In 1936, Lowell Andreas was in charge of soybean processing at Honeymead and Dwayne ran sales and transportation. But Dwayne soon became executive officer.

In Aug. 1937 the Iowa Securities Commission authorized Honeymead to do a public stock offering. The company's net worth was appraised at \$24,200. The Andreas kept most of the stock for themselves—but the value rose rapidly. Also in 1937 Dwayne got a pilot's license and bought a Ercoupe plane—so he could expand his sales territory and decrease the time it took him to cover it.

Page 78: From 1938 to 1945 Honeymead grew steadily, with Dwayne at the helm. Then in June 1945 Dwayne's draft classification was changed to 1A. In anticipation of being called into the military, he sold 60% of the family's Honeymead holdings to Cargill. Dwayne was now age 27 and his personal sale of the proceeds from the sale was about \$1.5 million. Soon the war ended and Dwayne was not drafted, so Cargill invited him to become general manager of the former Honeymead plant at Cedar Rapids, Iowa—with a salary of \$25,000 a year. Dwayne accepted the offer and ended up working for Cargill for seven years, eventually rising to vice president in charge of soybean and linseed-oil operations.

Andreas has said that "Except for nuclear war, world hunger is the world's biggest threat to peace."

Page 80: "Cargill was based in Minneapolis and, while there Andreas, by now separated from his [first] wife,

became an increasing well known bachelor about town." He met and began to court Inez Snyder, a diminutive (5'2") blonde from Earlham, Iowa. Her first marriage broke up and she had a five-year-old daughter named Terry. Before the year was out [year not given, around 1947] Dwayne was divorced and Inez and he were married.

Page 129: Michael Andreas is the only child of Dwayne and Inez, who by 1991 had been married for a little more than 40 years. By 1990 Dwayne and Inez had nine grandchildren [p. 123].

On the cover is a nice color photo of Andreas standing in front of a field of soybeans. Andreas was born in 1918. The author, Ely Jacques Kahn, was born in 1916. Portions of this book appeared, in considerably, different form, in *The New Yorker*. Address: Writer for The New Yorker.

1397. **Product Name:** Granose Tofu Paté [Tomato, Herb, or Mushroom]. Relaunched and renamed Granose Vegetarian Patés in late 1992.

**Manufacturer's Name:** Granose Foods Ltd.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire, MK16 9PY, England. Phone: (0908) 211311.

**Date of Introduction:** 1991 October.

**Ingredients:** Incl. organic tofu, vegetable oils and fats, spices and seasonings.

**Wt/Vol., Packaging, Price:** 200 gm squeezable tubes.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product—Documentation:** SoyaFoods (ASA, Europe). 1991 2(2):7. "Tofu paté's from Granose." The patés have a shelf life of 9 months unopened and will keep for up to 4 weeks refrigerated after being opened.

Spot in SoyaFoods. 1992. Autumn. p. 5. "Vegetarian Cheese Spreads and Patés in a Tube." The launch of Granose's 3 new cheese spreads "coincides with the relaunch of Granose Vegetarian Patés, with improved recipes and smoother textures." Soya flour is now used in place of tofu. The name of one of the three flavors has been changed to Italian Style Tomato, and the tube has been reduced in size to 150 gm. One tube retails for £1.15.

1398. **Product Name:** Midland Harvest Sloppy Joe Fixin's.

**Manufacturer's Name:** Harvest Direct, Inc. Made in Decatur, Illinois, by Archer Daniels Midland Co.

**Manufacturer's Address:** P.O. Box 4514, Decatur, Illinois 62525. Phone: 800-637-5850.

**Date of Introduction:** 1991 October.

**Ingredients:** Soy protein concentrate [textured], vinegar powder (maltodextrin, distilled vinegar), dry onions, partially hydrogenated corn oil, modified food starch, dry red and green peppers, spices, sugar, dry worcestershire sauce, dry molasses, natural flavor, natural smoke flavor (maltodextrin, salt, natural flavors, modified food starch, corn syrup solids), garlic powder, citric acid, zinc oxide, niacinamide,

ferrous sulfate, copper gluconate, vitamin A palmitate, calcium pantothenate, thiamine mononitrate (vitamin B-1), pyridoxine hydrochloride (vitamin B-6), riboflavin (vitamin B-2), cyanocobalamin (vitamin B-12).

**Wt/Vol., Packaging, Price:** 4 oz foil pouch.

**How Stored:** Shelf stable.

**Nutrition:** Original: Per 0.8 oz dry (5 servings per packet): Calories 80, protein 8 gm, carbohydrates 8.8 gm, total dietary fiber 1 gm, fat (total) 1.7 gm (saturates 0.5 gm, monounsaturates 1.1 gm, polyunsaturates 0.1 gm), % calories from fat 19, cholesterol 0 mg, sodium 165 mg, potassium 360 mg.

**New Product–Documentation:** Talk with Lee Lensch of ADM. 1991. Dec. 16. This product is sold only through ADM's direct mail company named Harvest Direct. The company sells only ADM's dry mixes. This product was introduced in Oct. 1991. The 4 oz of dry mix makes about 16 oz (1 lb) of finished product. Add water plus 4 oz tomato sauce.

Ad in *Vegetarian Times*. 1992. Jan. p. 16. "Harvest's got it!" "Midland Harvest now comes in seven flavors: Original, Taco, Herbs and Spice, Curry, Italian, Sloppy Joe Fixin's, and Chili Fixin's. Call Harvest Direct at 1-800-835-2867 for a free 16-page catalog."

Label sent by ADM. 1991. Dec. 17. 5.25 by 3.75 inches. Self adhesive. Reddish brown on white. "Cholesterol free. Low fat. All-vegetable protein. Microwaveable. A delicious, healthy Sloppy Joe based on a savory blend of vegetable protein concentrate and traditional Sloppy Joe flavors. The only ingredients you add are water and tomato sauce. The result is a tasty 'ground meat' type Sloppy Joe."

1399. **Product Name:** Midland Harvest Chili Fixin's.

**Manufacturer's Name:** Harvest Direct, Inc. Made in Decatur, Illinois, by Archer Daniels Midland Co.

**Manufacturer's Address:** P.O. Box 4514, Decatur, Illinois 62525. Phone: 800-637-5850.

**Date of Introduction:** 1991 October.

**Ingredients:** Soy protein concentrate [textured], spices, partially hydrogenated corn oil, dry onions, masa flour, maltodextrin, hydrolyzed vegetable protein, natural flavor, paprika, salt, dry garlic, zinc oxide, niacinamide, ferrous sulfate, copper gluconate, vitamin A palmitate, calcium pantothenate, thiamine mononitrate (vitamin B-1), pyridoxine hydrochloride (vitamin B-6), riboflavin (vitamin B-2), cyanocobalamin (vitamin B-12).

**Wt/Vol., Packaging, Price:** 4 oz foil pouch.

**How Stored:** Shelf stable.

**Nutrition:** Original: Per 0.8 oz dry (5 servings per packet): Calories 88, protein 8.8 gm, carbohydrates 7.2 gm, total dietary fiber 1.6 gm, fat (total) 2.5 gm (saturates 0.8 gm, monounsaturates 1.6 gm, polyunsaturates 0.1 gm), % calories from fat 25.4, cholesterol 0 mg, sodium 225 mg, potassium 425 mg.

**New Product–Documentation:** Talk with Lee Lensch, 1991, Dec. 16. This product is sold only through ADM's direct mail company named Harvest Direct. The company sells only ADM's dry mixes. This product was introduced in Oct. 1991. To the 4 oz of dry mix, add water, 8 oz of tomato sauce, and 16 oz of kidney (or other) beans to make 2½ pounds of chili.

Label sent by ADM. 1991. Dec. 17. 5.25 by 3.75 inches. Self adhesive. Brown on white. "Cholesterol free. Low fat. All-vegetable protein. Microwaveable. A delicious, healthy Chili based on a savory blend of vegetable protein concentrate and traditional chili flavors. The only ingredients you add are water, tomato sauce, and kidney beans. The result is a tasty 'ground meat' type chili with beans."

1400. Hinman, Bobbie; Snyder, Millie. 1991. *Lean and luscious and meatless*. Prima Publishing, P.O. Box 1260, Rocklin, CA 95677. xv + 463 p. Foreword by Benjamin Caballero, MD, PhD, Director, Center for Human Nutrition, The Johns Hopkins University. Illust. by Vonnie Crist. Index. 22 cm.

• **Summary:** This is the third book by the producers of the best-selling *Lean and Luscious* series of meatless cookbooks. Each of the recipes is simple and straightforward, and accompanied by a nutritional analysis. The book's main theme is: Eat less fat and more fiber.

The section titled "Cooking legumes" (p. 144) states that after soaking whole soy beans overnight and then draining, they should be cooked for 2 to 3 hours.

The index contains 24 entries for tofu and 2 entries for miso. Tempeh and TVP (textured vegetable protein) are not mentioned. Address: 1. Pioneer in the field of low-fat cooking; 2. Helper of people with weight control problems.

1401. *SoyaFoods (ASA, Europe)*. 1991. ADM targets Europe. 2(2):3. Autumn.

• **Summary:** "The Archer Daniels Midland Company has announced the reorganisation of its European corporate headquarters to the ADM offices in Erith, Kent, near London. ADM International Ltd has been formed to coordinate the company's European sales of specialty industrial food and feed ingredients. Corporate activities will be centralised at Erith [on the River Thames just east of London] with administration activities relocating from offices in Rotterdam, Netherlands and Hamburg, Germany."

1402. *SoyaFoods (ASA, Europe)*. 1991. Changes for Haldane Foods. 2(2):2. Autumn.

• **Summary:** The Haldane Foods Group has acquired Unisoy Milk 'n By Products Ltd. of Stockport, UK, the manufacturers of soymilk, soy yogurts, and Maranellis soy ice cream. Following the Group's other recent acquisition of Granose Foods, the Haldane Group's headquarters have been moved to Granose Foods' premises at Howard Way, Newport

Pagnell, Bucks, UK. Phone: 0908 211311. The move integrates the administration, sales, and accounts functions. Production at the Haldane factory is unaffected. Note: The Haldane Foods Group had formerly been located at Barrow Upon Soar, in Leicestershire.

1403. Harvest Direct, Inc. 1991. Harvest Direct winter catalog, 1991-92: All natural products and unique gifts for the vegetarian lifestyle (Mail order catalog). Decatur, Illinois. 22 cm.

• **Summary:** The front cover shows a lady in a blue shirt against a purple background holding a plate containing a vegetarian burger with all the trimmings. Additional cover text reads: "Harvest Burgers, vegetarian gift baskets, and more! Three new flavors of Harvest Burger [Sloppy Joe Fixin's, Italian Burger 'n Loaf, and Chili Fixin's], the great taste of good health, page 3. Call 1-800-8-Flavor for home delivery! Midland Harvest, Midland Harvest Burger, Midland Harvest Burger 'n Loaf, Midland Harvest Fixin's and TVP are the registered trademarks of Archer Daniels Midland Company, and are used herein with its consent."

On the inside front cover, "A letter to our friends," from Lea Stutkins, business manager, states: "This is the first issue of a rather unconventional catalog that we hope you'll come to rely on for foods and other items that fit the health-conscious lifestyle. We specialize in gourmet vegetarian foods." Recipes for using the products are scattered throughout the catalog. Address: P.O. Box 4514, Decatur, Illinois 62525-4514. Phone: 1-800-835-2867 (1-80-8-FLAVOR).

1404. Bolduc, Bill. 1991. Current work with organic foods and soyfoods (Interview). *SoyaScan Notes*. Dec. 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** His company is in the process of developing an organic TVP. It is presently produced in Illinois under contract (on a test basis) and he hopes to have the product ready for sale by early 1992. He is in serious discussion with a major player in the grain industry, who he hopes will become his partner. Bill's company will do the R&D and marketing, not the manufacturing. No name for the product has yet been determined, but he generally refers to it as "Organic TSP" or "Organic Textured Soya Protein." He doesn't like the letters "TSP," which remind many people in the food industry of trisodium phosphate (a crystalline compound used especially in cleaning compositions). (Shurtleff suggests that Bolduc consider licensing the rights to call it "Organic TVP" from ADM via Richard Burket.) He is talking with Health Valley about the product and has a major player in England that will be ready by early 1992. The texture is similar to ADM's mince (granules).

His company is limiting itself to basic processing of the four major grain commodities grown organically in Ohio and neighboring states: soybeans, soft wheat, corn, and

oats. OPC which was just incorporated on 19 Sept. 1991, is already active and has products on the market. Before that, Bill was a broker. In Dec. 1990 OPC shipped its first truckload of organic wheat flour to Barbara's bakery—under the Organic Marketing label. He is now supplying Health Valley with all of the flour that is going into their fat-free products. He does not yet have any soy products on the market. But he is also looking at doing something with soymilk in Ohio.

Update: 1992 March 14. The development of organic TVP is coming along nicely. Bill has visited ADM in Decatur, and talked by phone with Roger Kilburn (who is head of Protein Specialties at ADM; a very nice man with a background similar to Bill's). He hopes to license TVP under the name "Organic TVP." They invited him to introduce the Midland Harvest line to the natural foods industry. Bill declined because of problems with ingredients but offered to help ADM improve their ingredients for the natural food market. Address: President, Organic Processing Corp., 3307 Clifton Ave., Cincinnati, Ohio 45220. Phone: 800-647-2326.

1405. **Product Name:** Berrydales Special Ices [Bitter Chocolate (Totally Vegan)].

**Manufacturer's Name:** Berrydales Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer's Address:** 5 Lawn Road, London NW3 2XS, England. Phone: 071-722-2866. Fax 071-722-7685.

**Date of Introduction:** 1991 December.

**Ingredients:** Soya milk, tofu, honey, apple concentrate, chocolate chips, cocoa.

**Wt/Vol., Packaging, Price:** 500 ml.

**How Stored:** Frozen.

**Nutrition:** Per 100 ml.: Energy 104 kcal (calories; 446 Kilojoules), protein 1.90 gm, total fat 2.71 gm (saturated fat 1.12 gm, polyunsaturated 0.73 gm), carbohydrate 18.4 gm including total sugar 17.19 gm.

**New Product—Documentation:** Berrydales newsletter. 1991. Dec. p. 3. "Berrydales no-cream ices—deliciously refreshing dairy free ices based on organic fresh tofu and soya milk. Low fat, low cholesterol, low calorie and vegetarian, in five exotic flavors—Honey Vanilla, Berry, Maple & Walnut, Ginger & Honey and—now totally vegan—Bitter Chocolate. Available in health food stores, delicatessens & selected Sainsburys nationwide."

Label sent by Genice Foods Ltd. 1994. Feb. 18. 3.75 inch round lid. 500 ml. Illustration of a flower against a light wood-grain background. "Lactose free. No animal products. Low cholesterol."

1406. Reeve, Stewart. 1991. Fast food delight: ADM's soy protein burger provides cholesterol-free, tasty treat. *Soybean Digest*. Dec. p. 40a.

• **Summary:** The first test market for ADM's Midland Harvest brand Harvest Burger began in April 1990 in 7

grocery stores, 2 cafeterias, 2 restaurants, and a hospital in four cities in central Illinois. The product is based on textured soy protein concentrate, to which are added various natural flavors and seasonings. The product comes in three forms: (1) Harvest Burgers are sold as frozen 3.2 oz patties in Original, Taco, Italian-style, and Sausage-Style flavors; (2) A dry mix, named Burger 'n Loaf, is sold in Original, Herb and Spice, and Italian flavors; and (3) a taco mix named Taco Filling 'n Dip. The products have the texture of ground meat. The big selling point is that all of these products are free of cholesterol. ADM then expanded its test market to Indiana, and is now expanding to Wisconsin and Minnesota. The product manager is Lee Lensch, ADM marketing specialist, who says "If the response is anything like in Illinois and Indiana, we're planning to go nationwide."

"The product has already proven itself in an export market. ADM introduced a similar product trademarked as the Veggie Burger to the Soviet Union in October 1989 at a food trade show in Moscow. Shipped as only the dry mix, Veggie Burgers are sold in Soviet grocery stores as the mix or served in restaurants as burgers. The Petina restaurant in Moscow now sells 4,500 Veggie Burgers a day, Lensch reports.

"The Veggie Burger is tailored to the tastes of Soviet consumers. 'For example, the Soviet Union product has 10% fat content rather than the 5% the U.S. has. They're looking for calories,' he explains."

1407. Hesseltine, C.W. 1991. Peoria, an international center of fermentation excellence. *Transactions of the Illinois State Academy of Science* 84(1-2):1-11. [11 ref]

• **Summary:** This paper was presented on 28 Sept. 1989 as the after-dinner address for the 50th Anniversary Celebration of the Peoria (Illinois) Branch of the American Chemical Society. Contents: First fermentations. Hiram Walker Co. (1816-1899; for many years they operated the world's largest bourbon whiskey plant in Peoria). Takamine. Northern Regional Research Center. Penicillin & Dr. Andrew Moyer. Penicillin—others (incl. Dr. Kenneth Raper). USDA's Agricultural Research Service (ARS) culture collection (which dates back to 1904). Polysaccharides. Mycotoxins. Fermented foods (especially soyfoods such as miso, shoyu, and tempeh). Fermentation in Peoria today (ADM uses the old Hiram Walker distillery to make fuel alcohol from corn). Honors and awards. References.

"Dr. Jokichi Takamine was the father of commercial enzymology and one of the pioneers of biotechnology. He was born in 1854 in Japan and received his Doctor of Pharmacology and Ph.D. in Engineering. He became very interested in Western concepts that would be useful to the Japanese but he also was interested in Japanese contributions to the West in science, industry and culture. In 1884 he married an American girl whose father helped him financially start the Takamine Ferment Company in Peoria

in 1890. This company's business was to produce 'diastase,' a mixture of glucoamylase and  $\alpha$ -amylase. This mixture of amylases was produced by the koji molds (*Aspergillus oryzae* and *A. soyae*) and it was here in Peoria that fungal amylase was first introduced to the West. In the production of alcohol from grain it is necessary to break down the starch to sugar, which is then fermented to alcohol. Up to this time the starch conversion step of grain was brought about by the use of malt produced by the germination of grains.

"In the Takamine process the malt was replaced by fungal  $\alpha$ -amylase and, therefore, was a process in direct competition with malt utilization. Apparently this new innovation was greeted with apprehension by the malt manufacturers. There was labor agitation and a propaganda campaign against Takamine. In 1894 the distillery where he worked was burned to the ground. Arson was suspected but never proven. The distillery which used fungal amylase was rebuilt, but the company dissolved the Takamine corporation and Takamine left Peoria in 1894. In 1894 Takamine obtained a U.S. patent on his enzyme diastase preparation called Taka-diastase.

"Later Takamine founded the Takamine Laboratories in the East [Clifton, New Jersey] and the Sankyo Pharmaceutical Company of Tokyo. He also isolated crystallized adrenaline at the same time that this was done by J. Abel at Johns Hopkins. Takamine obtained patents on adrenaline. He is also known for arranging for three thousand cherry trees for planting at the Tidal Basin in Washington. Recently a book on Dr. Takamine was prepared and printed by the Miles Company, which some years ago bought the Takamine Laboratories. The book contains his writings translated into English along side the original Japanese."

"The ARS Culture Collection is one of only two large culture collections in the USA, and its primary function is to find and maintain useful or potentially useful microbial and genetic taxonomic material. This collection dates back to 1904 when Charles Thom was hired by the USDA to investigate the mold cheeses. In making these studies, Thom secured several hundred strains of *Penicillium* and *Aspergillus* which became the nucleus of the ARS Culture Collection. At first Thom was at the Connecticut Agricultural Experiment Station, but in 1913 he moved to Washington, DC, taking his cultures with him. The oldest mold culture in the Collection is a strain of *Actinomucor elegans* isolated in 1892. Thom's collection had no formal recognition, and the story is told how Thom worked in the Laboratory on weekends to transfer his collection. In 1940 when the Fermentation Laboratory was established at NRRC, the Thom Collection was moved from Washington, DC, to Peoria and was formally recognized as one of the fermentation groups with Dr. K. Raper in charge. Dr. J. Wickerham joined the group to be curator of the Yeast Collection, and W.C. Haynes was selected to maintain a Bacterial Collection. Since then the number of curators has

increased from 3 to 6. Some famous private collections were added in 1940, including the Harvard Collection which had strains isolated before 1900." Address: 5407 Isabell, Peoria, Illinois 61614.

1408. Pelosi, Bruno; Christmann, Volker; Aepli, Beatrice. 1991. *Fantasievolle Sojakueche* [Imaginative soya cookery]. Kuettigen/Aarau, Switzerland: Midena Verlag. 94 p. Illust. (color photos). 21 cm. [Ger]

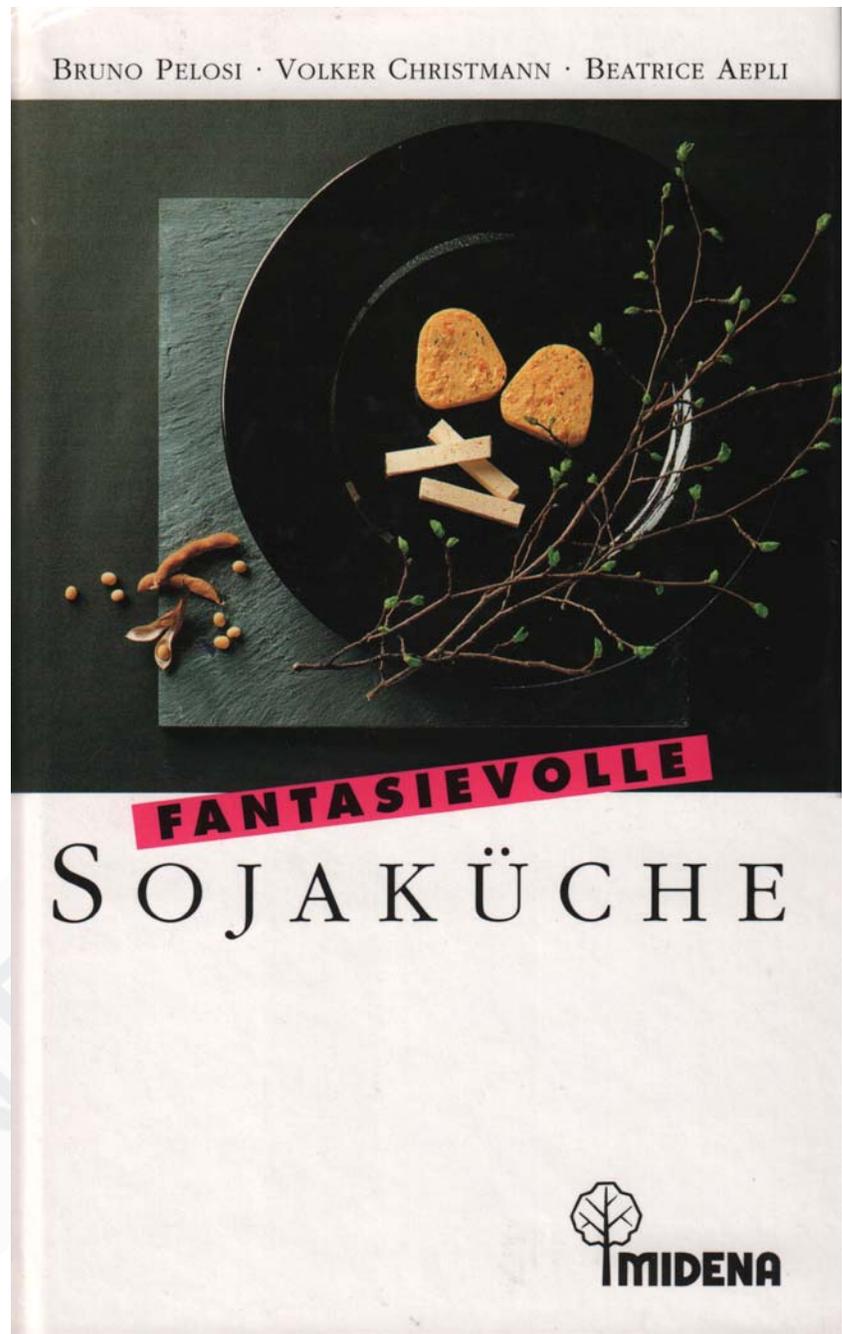

• **Summary:** This is a hardcover vegetarian cookbook. On almost every right-hand page facing a recipe is a glossy color photo of the finished dish.

Contents: What shall we eat tomorrow? Tofu and Yasoya (a sort of tofu burger developed by Baer Weichkaeserei AG in Kuessnacht am Rigi, Switzerland). Recipe table of contents: Salads, appetizers, soups, main dishes, desserts. A word about the recipes: tips and other information. Note: Each recipe is divided into ingredients, preparation, and a tip. Who dares, enjoys. Its been here for 4,983 years [the soybean has, supposedly; plus nutritional information]. Graph showing world population from 1650 to 2150; the soybean gives humans a chance. Meat or no meat; that is the definitive question. How the soybean came to the West (a history starting with Engelbert Kaempfer). A royal product: Liu An of Huainan, China. How to make tofu at home. The nutritional composition of tofu. Tofu contains practically no fat [sic]. It is easy to digest, a great diet food. The main tofu companies in Switzerland (only the company name and city are given). Tofu makers in Germany. Tofu makers in Austria. Yasoya, The tofu market. Why tofu products? Other types of soyfoods: Soy sprouts, fresh green soybeans, soy nuts, tempeh, miso, soy sauce, soymilk, soy flakes, whole soy flour, soy grits, texturized soy protein or TVP, soy oil.

Atop the rear cover: The future belongs to the soybean. Address: Switzerland.

1409. The Mail Order Catalog. Fall–winter 1991-2. Quality books. Vegetarian food products. 1991. P.O. Box 180, Summertown, TN 38483. Catalog.

• **Summary:** The book section of this mail order catalog contains listings for an excellent selection of vegetarian cookbooks, and books on animal rights, diet and nutrition, ecology, and native American cultures.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), soy powder (powdered soymilk), tempeh starter, nutritional yeast, and instant gluten flour. Address: Summertown, Tennessee. Phone: 800-695-2241.

1410. *Health Food Business* (London). 1992. Haldane Foods is facing a German food invasion. Jan. p. 5.

• **Summary:** Haldane Foods finds itself battling with the very church from which it purchased Granose Foods in Jan. (or Feb.) 1991. With that multi-million pound deal, Haldane

established itself overnight as Britain's major health food manufacturer. At the time, Peter Archer was managing director of Granose. "But now the German equivalent of Granose Foods [DE-VAU-GE], owned by the German branch of the Seventh Day Adventists, is launching itself in the UK against Granose with a range of similar products.

"The Germans have not only set up a UK company, but have also convinced Nigel Phillips, the Haldane Foods marketing and sales director, to become its managing director!"

A large color photo shows Graham Keen in front of the Granose offices and sign. He has joined the Haldane Foods Group as Sales and Marketing Director. For the previous 14 years he was sales director of Northumbrian Fine Foods.

1411. *Health Food Business (London)*. 1992. GranoVita launches 34 products and signs exclusive six-month deal with Brewhurst. Jan. p. 5.

• **Summary:** GranoVita UK will be launching 34 products in its first wave in Dec. 1991. In Jan. or Feb. 1992 they plan to add another dozen or so products to their line. Nigel Phillips, the company's managing director, is putting soya milk products at the forefront of GranoVita's launch. "The majority of the business Granose used to do with Germany was soya milk based. Once this was switched to the UK (after Haldane purchased Unisoy), then GranoVita felt they must compete in the UK." GranoVita has given sole distribution rights to the independent health food trade to Brewhurst for 6 months.

1412. *Health Food Business (London)*. 1992. Haldane Foods—the giant at the heart of the soya beanstalk. Jan. p. 12.

• **Summary:** "The Haldane Foods Group owes its existence to the invention of textured soya protein, which was first extruded in the United States back in the 60's.

"The patent was owned by ADM, and Haldane's present general manager Peter Fitch was their man in the UK, selling soya protein to British companies.

"Our biggest customer in those days was Direct Foods, down in Petersfield in Hampshire,' says Peter Fitch. 'When Direct Foods came up for sale in the early '80's, we bought it to develop beyond being just a supplier. We wanted to be part of not just growing the bean, but also developing healthy consumer products with it.'

"This initial purchase led to the acquisition of another company—Vegetable Feasts, who were making ready-made frozen vegetarian convenience foods.

"And then a bigger fish arrived on the market, with Haldane Foods of Loughborough. This had been set up by Brian Welsby to produce concentrated dried ready meals, again soya based.

"In Coventry, Vegetarian Cuisine were bedeviled with low sales but a skilled labour force, so this too was acquired and Vegetarian Feasts incorporated in it, as both companies

were producing similar lines.

"Thus was born the Haldane Foods Group, which now had two sites, Coventry supplying frozen foods and Loughborough dry goods.

"When Gregory Sams sold Realeat to Haldane, there was still surplus manufacturing capacity, but this quickly became less so, particularly at Coventry.

"With the acquisitions of Genice in North Wales, (producing non-dairy soy-based ices) and Kwaliti Foods in South Wales (producing Sauce and Snack Masters dishes such as pot noodles), Haldane moved into 'wet' food production.

"Shortly after this, Granose Foods, who had moved into a large new factory at Newport Pagnell, were finding trading difficult from their own premises, and so searched for one of their suppliers to acquire the business. Another, even larger, mouthful for Haldane to swallow.

"Over three-quarters of the Granose products were being made by outside suppliers, much of this abroad. By purchasing Unisoy at the same time as Granose, with a capacity of 5 million litres of soya milk a year, we were able to see that we could manufacture virtually everything ourselves,' said Peter Fitch.

"We closed Coventry and put it into Granose, and we still bus twelve staff back and forth from there each day. We now were able to concentrate all wet production at Newport Pagnell, and all dry at Loughborough, with 13,000 square feet there and 42,000 square feet at Granose.'"

"Peter Fitch admits taking on Granose caused Haldane's supply problems. 'We reeled for six months, but we are now out of our troubles. Our staff has settled in and our supply problems have been solved.'"

1413. **Product Name:** Crêpolette (Organic Pancakes) [Vegetable, Madras Curry, Leek, and Cheese].

**Manufacturer's Name:** Unisoy Milk 'n' By-Products Ltd. (Distributor).

**Manufacturer's Address:** Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire, England. Phone: 061-430 6329.

**Date of Introduction:** 1992 February.

**How Stored:** Refrigerated.

**New Product–Documentation:** SoyaFoods (ASA, Europe). 1990. 1(1):3. These products are scheduled to be launched in May 1990. Talk with Neil Rabheru of Unisoy. 1990. July 2. This product has not yet been launched. It is made by another company located in continental Europe. Unisoy has been appointed sole distributors in the U.K. It contains no Unisoy products and is not really a soya-based product, containing only 2-3% of soyamilk.

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. This product is scheduled to be launched in Feb. 1992 by the Haldane Foods Group; it is not yet ready and it is not known which brand it will bear. The artwork is ready.

1414. Whiteman-Jones, Michael. 1992. Soyfoods poised for growth: New mass-market interest, product development and consumer interest are driving sales higher than ever. *Natural Foods Merchandiser*. Feb. p. 18-19.

• **Summary:** Last year soyfoods were introduced to mass-market consumers by two of America's corporate giants. (1) Archer Daniels Midland Co. (ADM of Decatur, Illinois) introduced the vegeburger to show that a delicious food product could be made from soy. ADM marketing specialist Lee Lensch says the soy burger is doing very well in test markets in Indiana, Illinois, and Minnesota. Versions of the product are being advertised nationally in corporate TV spots and on local TV in test markets. Buyers who gave the products shelf space at chains such as Kroger, SuperValue and Cub Foods now report brisk sales. (2) Protein Technologies International in St. Louis, Missouri, a subsidiary of Ralston Purina, is test marketing a soy-based beverage named First Alternative in Phoenix, Arizona.

Peter Golbitz, president of Soyatech Inc., a consulting company in Bar Harbor, Maine, notes that since the 1980s, Japanese companies (such as Nichii Co.) have invested at least \$50 million in soyfoods manufacturing plants in the U.S.

"Retail sales of soyfoods are growing in America by about 5 to 7 percent a year, increasing to about \$657 million in 1990, Golbitz says. The most rapid expansion is for soy milk, which is growing at a rate of about 20% a year, and second-generation soyfoods which are growing at a rate of about 15%... Soy milk consumption in Australia, where it is sold in grocery stores like milk, is about 10 times what it is in this country."

Worldwide, consumption of soyfoods now averages about 1.7 kg/person/year, and is expected to rise to 2 kg or more by the year 2000. Taiwan is the world leader with 15.5 kg/capita/year of soy, followed by Japan at 11.1 kg. A world map and table (largely compiled from FAO Food Balance Sheets) shows "Soyfood consumption: Yearly average per capita (Amount of change from 1979 to 1988)." The following countries are listed in descending order of consumption in kg/capita: Korea 17.1 kg (2.4%). Taiwan 13.0 (37.0%). Japan 10.8 (6.7%). Indonesia 6.3 (57.4%). Hong Kong 3.8 (-22.0%). Saudi Arabia 3.6 (342.9%). China 3.4 (-5.6%). Paraguay 2.8 (50.0%). Malaysia 2.3 (102.2%). Thailand 1.6 (162.5%). Zimbabwe 1.6 (22.2%). United States 1.4 (33.3%).

1415. Associated Press (AP). 1992. Proposed Cargill plant with compete with AGP operation. *Sioux City Journal (Iowa)*. March 12. p. A14.

• **Summary:** Cargill's corn-milling division plans to build a corn processing plant (its 5th) in western Iowa or Eastern Nebraska. It would produce high fructose corn syrup and polymers used in biodegradable products. AGP of Omaha,

Nebraska, is considering building a \$300 million corn wet-milling plant in extreme southeastern South Dakota. Cargill and ADM are the two biggest U.S. corn processors.

1416. Nebraska Soybean Development, Utilization and Marketing Board. 1992. Meeting agenda. Jefferson City, Missouri. 2 + 4 p. March.

• **Summary:** This meeting took place on March 17-18, 1992 at the Cornhusker Hotel, Lincoln, Nebraska. Soy Diesel was on the agenda in four sessions. Present at dinner on March 17 were: John Campbell, AGP; Marc Berg, South Dakota, American Soybean Association Board of Directors; Scott Frederickson, ADM.

Attached is the following 4-page document (which see): Requested report to United Soybean Board on Soy Diesel, by Kenlon Johannes (March 1992). Address: Jefferson City, Missouri.

1417. Weissman, John. 1992. Pioneering work with seitan, Wheatmeal, and Tan Pops in America, 1974 to mid-1976 (Interview). *SoyaScan Notes*. March 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** John was probably the second person to make seitan commercially in the USA. He was working in a health food store named Panacea in the middle of Manhattan in New York City. He and his girlfriend baked homemade buckwheat-crust pies, and they could see that homemade foods sold very quickly at the store. He saw freshly made, unique foods as a potential market. On 13 June 1974 John turned 26 years old. That fall he moved to Boston and began to live with a macrobiotic couple who were his friends, Sakee (or Ronald) Israel and his wife, Fern Ross-Israel. John recalls that Fern was pregnant. [Note: Fern and Sakee had been married on 19 Oct. 1974 in West Roxbury, Massachusetts. Their first child, Kate, was born at home on 3 May 1975.] Sakee was a musician, who drove a taxi cab to make money. John was a dabbler with macrobiotics—and still is. Several months after John arrived in Boston, Fern told him that several people from the Erewhon retail store had told her that if someone were to make seitan, they thought it would sell well at the store. Fern had learned to make seitan either in a macrobiotic cooking class or from another woman in a study house. She knew seitan was hard to make, so she taught John and her husband how to make it in the form of little salty, gingery meatball-like chunks.

At the time, John had never heard of seitan before, but he does recall that an early seitan product named Tan Pops (seitan skewered on a bamboo stick and deep-fried in a breaded tempura batter) had been on the market in Boston, but was no longer; they were probably America's first commercial seitan product. John does not know who made Tan Pops nor when they were introduced. [Note: Tan Pops were introduced in March 1972 by Nik and Joanne Amartseff in Brookline, Massachusetts.] They had been sold

at the Erewhon retail store on Newbury St., but had been on the market for only about 6 months. John recalls hearing that the maker moved to Maine or New Hampshire after discontinuing Tan Pups in Boston.

John was a blues musician at the time, painting houses as a source of income. John had just been let go from a house painting job and he was desperate for money. Soon in late 1974 he and Sakee, as business partners, began making seitan in their apartment at 17 Dent Street in West Roxbury, and selling it in bulk (5-10 lb of chunks) to one macrobiotic study house where Pat Murray lived. She bought 5-10 pounds at a time. (She later owned a health food store in Newburyport, Massachusetts.) For fun, as a sort of joke, they named their fledgling business Gimme Some Food Co. but after a month or two, when their products began to sell, they changed the name to the Wheatmeat Company—since in late 1974 John coined the term “Wheatmeat” to refer to their seitan. His trademark registration says he first made seitan in May 1976, but he was making it commercially before that. Within a few weeks, in late 1974, he and Sakee began selling Wheatmeat in bulk to the Erewhon retail store and then to other health food stores (such as Organic Food Cellar). It was sold refrigerated, in the form of rather salty little gingery meatball-like chunks in a large glass jar. A customer or the store clerk would lift out the chunks with tongs. By early 1975 the Wheatmeat Co. introduced “Wheatmeat Sandwiches,” stuffed in pita bread in two flavors—one with homemade cole slaw (but no mayonnaise, using grapefruit juice instead of vinegar; Fern showed them how), another with tomatoes and lettuce; each had a sauce and was Saran-wrapped with a little paper label. John felt the sandwiches would have a broader appeal than plain macrobiotic Wheatmeat (seitan), but their main drawback was a short shelf life—only several days. Fairly soon they also began to sell Wheatmeat Cutlets in about 8-ounce polyethylene bags. Each piece was rolled flat. Later (about 1979) he introduced an unflavored, unsalted slab of wheat gluten, also labeled Wheatmeat, but with a different label and appearance (it was light tan instead of dark brown). It wasn't on the market for long because the shelf life was too short.

Next, in the spring of 1975, came Solar Burgers (although the name was not introduced until 1976). Based on information about protein combining in *Diet for a Small Planet* by Frances Moore Lappé, John began grinding cooked soybeans into the wheat gluten and selling the burger-like patties.

Then came Tan Pops, pieces of seitan that were skewered, breaded and deep-fried. In the spring of 1975, several months after they introduced the Wheatmeat Sandwiches to Erewhon, Fern recalls John and Sakee began to make Tan Pops in their home kitchen at 17 Dent Street and sell them in Boston. John only vaguely recalls making Tan Pops at Dent Street. Concerning the name of this product, John Weissman recalls (he is more than 50% sure) that he

coined the name Tan Pops (based on Tan Pups, a similar earlier product, of which John had tasted one or two) after he separated from Sakee Israel, had met the owners of Baby Watson Cheesecake Co., and was working with Robert Allen. The “Tan” came from sei-tan (*tan* means “protein” in Japanese), and the “Pop” referred to something on a stick, like a Popsicle. He also recalls that many people did not like the name Tan Pops, which they said reminded them of Tampons (the female hygiene product). But he does not recall what this deep-fried skewered seitan product was named while it was made at 17 Dent St. before he named it Tan Pops. [Fern Israel is not sure when this product was first named Tan Pops, but she thinks it may have been so named from the day it was introduced; this is the only name she can recall that it had.]

In the spring of 1975, at about the time of the birth of Fern's first child, John moved out of Fern and Sakee's home, and he and Sakee went their separate ways in terms of their business; it was a very amicable separation. John had moved in with his girlfriend at 51 Oak Ave. in West Newton. At that time there was a company named Baby Watson Cheesecake Co., owned by two men named Peter and Kenny. One of the owners of Baby Watson had tasted a Tan Pup formerly sold at Erewhon (but no longer available) and liked it very much. He talked to John and suggested that, since he was already making seitan, he start deep-frying it to make a product like the Tan Pup. Baby Watson was already carrying the Wheatmeat Sandwiches, but they thought a product like the Tan Pup would sell even better. At this point, John either developed or renamed the Tan Pop. He recalls that the Tan Pup was breaded with a typical (soggy and thin) tempura batter based on wheat flour. John developed a thick batter using coarse corn meal and sesame seeds; it became delightfully crunchy after deep frying. John and a friend, Rob Allen, were soon making the seitan and deep-frying the rectangular Tan Pops out of John's home. The Tan Pops were sold first at Erewhon and then at Baby Watson; They were incredibly successful, in part because of the innovation of dipping the seitan in the corn batter before it was fried. To make the Tan Pops, slab or steaks of seitan were cut to size (approximately 3 inches wide, 4 inches long, and 3/4 inch thick) and placed on a tray. Each was dusted with a dry mixture of wheat and coarse corn flour, then an 8-inch long stick was pushed into one end so that it looked like the famous old New England Corn Dog. Then he dipped the skewered cylinder into a seasoned batter (with cinnamon, basil, powdered garlic and onion, plus sesame seeds) and deep-fried it. He put each store's order of Tan Pops in a brown paper bag. At the store he would line one or more wooden bowls with paper towels, arrange the hot Tan Pops in the bowl like spokes on a wheel, then place them near the cash register. He was soon selling to 3 Erewhon stores, Baby Watson, and 1-2 organic food sellers, plus a few others totaling 10-12 outlets for the Tan Pops.

In the spring of 1976 John moved the kitchen to a location behind a bar in Waltham, Massachusetts. With friend Robert Allen, they introduced a new line of smaller seitan sandwiches, in hamburger-sized pita pockets. They were named after people he knew, like the “Billy Biggins,” a Wheatmeat sandwich with grated carrots and tahini sauce, etc. Billy Biggins owned the bar. Then they rented space in a basement “mall” in Central Square, Cambridge, to begin a restaurant featuring Wheatmeat, Tan Pops and waffles. The developers ran away after somehow failing. John named another pee-wee sandwich the “Weymouth Whitney,” after the construction manager. It contained Wheatmeat, sauerkraut, caraway seeds, and Russian dressing made with Hain eggless mayo. These little sandwiches didn’t sell very well.

He also named the burger “Solar Burger” and reformulated it with TVP. Robert Allen suggested that their company might sell the Solar Burger to other, competing sandwich makers—which they did. Shortly thereafter they stopped making their own sandwiches. John also sold wheatmeat in bulk to other sandwich-makers. While at Waltham, John conceived a new company name—Vegetable Protein Company. Continued... Address: VegPro Co., 133 Nottinghill Rd., Brighton, Massachusetts 02135.

1418. Weissman, John. 1992. Pioneering work with seitan, Wheatmeat, and Tan Pops in America, mid-1976 to 1992 (Interview). *SoyaScan Notes*. March 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: In the fall of 1976 John formally founded the Vegetable Protein Company, registered with the city of Cambridge, and moved his operation out of his home into a commercial shop in Central Square at 140 River St. in Cambridge. Robert Allen left the company to begin a new career in the field of men’s clothing. In 1976-77 John tried to get a trademark for Wheatmeat but was unable to because I.T.T. (Wonderbread) owned the trademark for a bread product. With Tan Pops as the main cash product from 1976-1978, the business became a real commercial business and began to grow. Selling as many as 85 Tan Pops a day at Erewhon alone, he began to earn a modest living. For the first time, John began to use machines to help him in making his products. In 1977 he developed a portion-control method for the Tan Pops, running the seitan through a meat grinder, and forming them into cylinders, like a fat sausage, rather than the former slabs. John also began to experiment with new ingredients in the Wheatmeat and Tan Pops—such as vital wheat gluten, which he purchased from Ogilvie Ltd. in Montreal, Quebec, Canada. Other ingredients used included oat bran and oat flour mixed with wheat, whole toasted soy flour. The formula was constantly changing. At one point the main ingredients in the Tan Pop were vital wheat gluten and whole wheat flour. Neither Wheatmeat or Tan Pops were ever made entirely from vital wheat gluten.

In addition to the Wheatmeat Tan Pop, John developed and made a Tofu Pop, introducing it in the spring of 1977. He bought squares of plain pressed tofu (3 inches on a side and 3/4 inch thick) from a Chinese retail food store in Boston’s Chinatown—he does not recall the company’s name and he is not sure if they made the tofu or bought it from elsewhere. Later he bought tofu from Yah Kee, a Chinese tofu maker. He skewered the pressed tofu squares, coated them with his dry flour mix and corn batter, and deep-fried them. He first sold these at the very first Bread & Circus natural food store purchased by Anthony Harnett in Brookline. The product was introduced just after Anthony bought the store—but it was discontinued after a month or so, because it sold slowly; the unflavored tofu was too bland.

One day in the spring of 1979 he realized that deep-frying was unhealthy, and that day he and an employee moved his Pitco deep-fryer down to the basement, thus starting the “Vegetable Protein Museum of Natural History”—and stopped making Tan Pops. At that point he reformulated the Solar Burgers by adding TVP (they were made from a mixture of seitan and soy in various forms, incl. soynuts and TVP). He also made a TVP chili, which he thinks was called Vegetarian Chili.

In about 1978-79 John introduced another new product to salad bars around Boston. Named Smoky Soy Bits, it was a combination of TVP and gluten (produced by Ogilvie Ltd. in Canada) made into bacon-like bits, but without hydrogenated oils or salt (he used tamari instead). It was an “all natural” product—to the extent that TVP is natural.

In Nov. 1980 John introduced Weissman’s Original Tofu Sausage, which tasted like bologna. A 6-ounce mixture of spices and tofu in a cellulose casing, it was cooked in a smokehouse. His company made it for the first 4 years and it eventually became his best-selling item. As its popularity increased, he phased out retail sales of Wheatmeat and Solar Burgers, and sold these Tofu Sausages to restaurants in bulk. After this period he invented only tofu products.

In 1983 John invented Pasta Pals, a tofu-gluten meatball. He discontinued it when Lipton Tea Inc. brought the trademark from him in late 1984. Lipton still owns the registered trademark.

In May 1984 John had to leave his food plant at 140 River Street in Cambridge. So he arranged with Michael Cohen to make the Tofu Sausage at his plant in Greenfield, Massachusetts. This was disastrous for John, since the product’s new poor quality almost ended any reputation it had left in the marketplace. But it was quite an education for John. In January 1985 he took back the product and began making it for himself again.

In the fall of 1984 John arranged with Ademar Reis, owner of Season’s Harvest (a sandwich maker who was John’s first customer for bulk-packed Solar Burgers in 1976) to have the Solar Burger made at Ademar’s shop. John also wanted him to make Smoky Soy Bits and showed him

how. Reis made the products for John briefly in late 1984, however this situation did not work out for John either. But it did for Ademar, who to this day makes soy “bacon” after the manner John showed him, using textured soy flour or concentrate, and flavorings similar to or the same as those from raw material sources which John supplied to him. Reis now also makes a tofu meatball.

In 1985 John changed the company name to VegPro. He continued to make Solar Burgers and Wheatmeat, but from then on he only invented and worked on tofu products. In about 1986, based on the success of his Weissman’s Original Tofu Sausage (6 oz), he introduced a new Tofu Savvy line of products (starting with a 3-lb Boloney), each in a 2-3 lb loaf shape like a meatloaf, and sold to delis. He buys his tofu from a tofu maker in Massachusetts. With names like Tofu Salsa Savvy (bulgur and tofu), Curry (with brown rice and veggies), Spice-Seed, and Boloney, these are offshoots of the tofu sausage, but they involve a highly proprietary process that John has developed. Delis sell the sliced loaves for use in sandwiches.

In 1990 he began to test market (in one Bread & Circus store) two new types of tofu franks: Good Dogs, and Bad Good Dogs (hot & spicy), each with a registered trademark. They were only on the market for 1-2 months because they didn’t keep well—but he still feels they are excellent products. He made them himself because he doesn’t like to have them made on meat processing machines.

Today John works as a very creative solo craftsman and a chef, still making a line of food products himself, including the Weissman’s Original Tofu Sausage (6 oz), and the Tofu Savvy line. His products are sold at about 10 outlets, including five Bread & Circus stores, plus some co-ops, restaurants, and health-food stores.

He no longer makes Solar Burgers, but someone from California is making another product with that name.

On 19 April 1988 John received federal trademark #1,485,401 for Wheatmeat. He knows of people in Utah and Pennsylvania who are using his registered trademark, Wheatmeat, illegally.

John, now age 43, is a musician, selling foods he has developed, and writing a novel. He is almost a vegetarian, but he eats some fish. Address: VegPro Co., 133 Nottinghill Rd., Brighton, Massachusetts 02135.

1419. ADM–Archer Daniels Midland Co. 1992. Look where soybeans go. Box 1470, Decatur, IL 62525. 8 p. Catalog. 28 cm.

• **Summary:** This an updated and condensed version of a 1987, 18-page ADM products catalog. Contents: Soybeans—A rich source of protein. Soybean processing. Soy protein isolates (Ardex and Pro-Fam for food use, and Apro industrial isolates). Soy protein concentrates (Arcon S, G, F, VF, and T for food use, and Calf-Pro and Pig-Pro for calves and baby pigs). Soy flour and grits (Nutrisoy 74, Baker’s

Nutrisoy, Soylec, Toasted Nutrisoy grits, and Nutrisoy MR). Soy fibers (Arbran, Superb Fiber, and Nutrifiber) Soybean oil. Lecithin phospholipids (Yelkin, Thermolec, Breakin, Griddle E-Z, Stablec). Along the bottom of four pages are shown about 100 supermarket products containing soy ingredients.

Talk with Lee Lensch of ADM. 1994. March 4. This brochure was introduced about 2 years ago. Address: Decatur, Illinois.

1420. Bounds, Sarah. 1992. The subject of soya. *BBC Vegetarian Good Food (England)*. Spring. p. 28-29, 31-32.

• **Summary:** An introduction, with many color photos, to soyfoods, including TVP, tofu, soya milk, soya flour, soya oil, soy sauce, miso, tempeh, fresh soya [green vegetable soybeans; “soya beans can be eaten fresh straight from the pod, served green and tender...”], and whole dry soybeans. Contains considerable incorrect information.

1421. Johnson, Lawrence A.; Myers, D.J.; Burden, D.J. 1992. Early uses of soy protein in the Far East, U.S. *INFORM (AOCS)* 3(3):282-88, 290. March. [54 ref]

• **Summary:** A nice history of the subject based on a review of the literature. Contents: Introduction. China—birthplace of the soybean (industrial uses, chiang and miso, natto, tempeh, soymilk, tofu, shoyu). Emergence of U.S. soybeans (early soybean mills, ADM, Glidden). Chemical understanding of soybean protein (major components/fractions). First industrial applications (oil and meal, paints). Soy protein-based plastics (Henry Ford). Chemurgic movement (U.S. Regional Soybean Industrial Products Laboratory, Northern Regional Research Center, Glidden). Soy protein adhesives (I.F. Laucks). Paper coatings and sizings (Glidden). Soy fiber spinning (Ford, Azlon, Drackett). Other industrial uses (fertilizers, soy foam for fire fighting, Spraysoy “sticker and spreader”). Address: Center for Crops Utilization Research, Iowa State Univ., Ames, Iowa 50111.

1422. Boysen, Hans-Juergen. 1992. Soja [Soya]. *Schrot & Korn (Germany)*. April. p. 16-20. [Ger]

• **Summary:** An introduction to soybeans and soyfoods, including whole dry soybeans, soy oil, soymilk, soya meat (Sojafleisch, TVP), Whole soy flour, tempeh, and soy sprouts.

Note: This magazine is sold in German natural food stores (Naturkost-Laden).

1423. **Product Name:** Granose Soya Creem: Non-Dairy Cream Alternative.

**Manufacturer’s Name:** Granose Foods Ltd. Div. of Haldane Foods Ltd.

**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England.

**Date of Introduction:** 1992 April.

**Ingredients:** Soya milk, vegetable oils, corn syrup, emulsifiers (vegetable mono-diglycerides), stabilisers (xanthan gum, locust bean gum, guar gum), natural color (beta-carotene).

**Wt/Vol., Packaging, Price:** 225 gm Combibloc Aseptic carton. Retail for 69 pence (7/92).

**How Stored:** Shelf stable; refrigerate after opening.

**Nutrition:** Per 100 gm.: Energy 1827 Kjoules / 437 Kcal (calories), protein 3 gm, carbohydrate 12 gm (of which sugar 5 gm), fat 36 gm (of which polyunsaturates 47%, and saturates 23%), sodium 0.1%.

**New Product–Documentation:** Spot in SoyaFoods. 1992. Spring. p. 4, 5. Ad in Health Food Business (England). 1992. July. p. 5. “Put Creem on top of Granose soya milk sales.” A color photo shows the carton and label. The Granose logo now reads: “Granose: A history of good health.”

Label (carton) sent by Leah Leneman of Scotland, purchased at Real Foods. 1992. July. 3 by 3 by 1.9 inches. Combibloc carton. Red, dark blue, and light blue on white. Front panel: “High in polyunsaturates. Low in saturates. Cholesterol free.” Other panels: V logo. “Suitable for vegetarians and vegans. Enjoy Soya Creem poured over your favorite fruits or desserts... Made without animal fats and milk derivatives. (Not recommended for use in coffee.)” Note: This product is basically identical to So Good Soycream (1991).

Label sent by Genice Foods Ltd. 1994. Feb. 18. Same product name but in a 225 Tetra Brik Aseptic pack, and the first ingredient is now Organic soya milk.

1424. **Product Name:** Granose Light Soya Milk (Less than 1% Fat).

**Manufacturer’s Name:** Granose Foods Ltd. Div. of Haldane Foods Ltd.

**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England.

**Date of Introduction:** 1992 April.

**Wt/Vol., Packaging, Price:** 1 liter. Retail for 91 pence (5/92).

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Spot in SoyaFoods. 1992. Spring. p. 4, 5. “New Low Fat Soya Milk.” “With less than half the fat of ordinary soya milk, it has a lower fat content than any other low-fat soya milk. In the UK it is estimated that 48% of all dairy milk sales are low-fat (skimmed or semi-skimmed).” A photo shows the package and label.

1425. **Product Name:** Protoveg Burgamix with Onion and Chives.

**Manufacturer’s Name:** Haldane Foods Group.

**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: 0908 211311.

**Date of Introduction:** 1992 April.

**Wt/Vol., Packaging, Price:** 330 gm foil packets. Retail for £1.69 (5/92).

**How Stored:** Shelf stable.

**New Product–Documentation:** Spot in SoyaFoods. 1992. Spring. p. 4. “New Flavors for Burgamix and Sosmix.” Note: Burgamix was originally developed by Direct Foods.

1426. **Product Name:** Protoveg Sosmix [With Country Herbs, or With Cheese and Onion].

**Manufacturer’s Name:** Haldane Foods Group.

**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: 0908 211311.

**Date of Introduction:** 1992 April.

**Wt/Vol., Packaging, Price:** 330 gm foil packets. Retail for £1.59 (5/92).

**How Stored:** Shelf stable.

**New Product–Documentation:** Spot in SoyaFoods. 1992. Spring. p. 4. “New Flavors for Burgamix and Sosmix.” “Also new from Haldane is Protoveg Sosmix with Cheese and Onion which joins the existing range of Sosmix, and Sosmix with Country Herbs as a complete premix requiring only the addition of water. The meat-free sausages are made from textured vegetable protein.” Note: Burgamix was originally developed by Direct Foods Ltd.

1427. Johnson, Lawrence A.; Meyers, D.J.; Burden, D.J. 1992. Soy protein’s history, prospects in food, feed. *INFORM (AOCS)* 3(4):429-30, 432, 434, 437, 438, 440, 442-44. April. [54 ref]

• **Summary:** “This is the second part of a review that chronicles the individuals and the historical and economic factors noteworthy in the development of soy protein as food and feed ingredients.” Contents: Introduction. Early Western food uses (whole and defatted soy flour, enzyme-modified isolated soy proteins as whipping agents, whipped

toppings, cereal-soy blends). Soy flour and grits. Protein concentrates and isolates (Griffith Laboratories, Central Soya Co., Mead Johnson and Co., Central Soya). Dairy analogs (Dr. Harry W. Miller, Loma Linda Foods, Mull-Soy and Borden, Vitasoy, Edensoy, Worthington Foods and Soyamel, Prosoabee and Mead Johnson, Rich Products and Chill-Zert, Tofutti). Spun fibers (Robert Boyer and the Ford Motor Co., Temptein, Worthington Foods, Bontrae, Bac\*O's, Bac-O-Bits, Miles Laboratories, Morningstar Farms). Textured soy protein and meat analogs (W. Atkinson, ADM and TVP, General Mills and frozen Bontrae, the U.S. School Lunch Program). Nutritional advances in soy products. Today's world soybean and soy protein production (consolidation among manufacturers of modern soy protein ingredients: ADM, Cargill, Central Soya Co., Protein Technologies International, A.E. Staley Mfg. Co.). Future of soy protein products.

Tables show: (1) Soy meal consumption in the USA by type of animal: Poultry 41.1% of total 18.9 million metric tons, swine 27.4%, beef cattle 9.0%, dairy cattle 9.0%, other livestock 9.5%, human food 3.2%, industrial 0.5%. Thus, industrial (nonfood, nonfeed) uses for soybeans presently comprise no more than 0.5% of the protein produced from soybeans grown in the United States. (3) U.S. companies supplying protein in 1948-50 versus 1990 (industrial and edible flours, concentrates, and isolates). 23 companies then vs. 5 in 1990.

Note: Talk with Ed Milligan of EMI by phone. 1992. May 5. This article contains some misleading information. It refers to an article by Ken Becker written in 1971. In 1958-59 USDA developed a laboratory prototype of flash desolventizing. In 1959 they contacted EMI corporation in Des Plaines to commercialize the flash desolventizing system for production of light-colored, edible soybean flakes, for soy flour and grits, with a maximum PDI (protein dispersibility index). At that time Ed Milligan was just a newly hired member EMI, which undertook the project. Ed designed and installed the world's first commercial flash desolventizing system for Honeyamead Products Corp. in Mankato, Minnesota, in 1960. Note that this system was used to make food, rather than feed. All but 2 systems have been used exclusively to make foods. All such systems produce a flake with a very light color and controlled PDI, whereas a DT (desolventizer-toaster) produces a golden colored flake. He is leaving for India in a few weeks to commission EMI's 22nd such unit. He has designed, installed, and started every one of the 22. Address: Center for Crops Utilization Research, Iowa State Univ., Ames, Iowa 50111.

1428. Muir, Karen. 1992. Forbes & Walker establishes a subsidiary in Sri Lanka named Soyfoods Ltd. to manufacture textured soy flour (Interview). *SoyaScan Notes*. May 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Up until now, Forbes & Walker has imported

TVP to Sri Lanka; now they want to manufacture it in Sri Lanka. Address: International Executive Service Corps. (IESC).

1429. Hall, Trish. 1992. Turkey, tuna or soy: The post-modern burger. *New York Times*. May 20. p. C1, C6. Living section.

• **Summary:** "Vegetable burgers," which are becoming more popular, have a dual audience: those who have health concerns and those who avoid meat for other reasons. ADM has begun selling a Harvest Burger, both in frozen ready-made form and as a dry mix; 29% if its calories come from fat, about half the fat content of a regular hamburger. The burger has become so popular that Harvest Direct, a small mail order company, has begun selling it in dried form. The company has had to expand its staff to 15 people, up from only 2 people when it began 18 months ago. Surveys by ADM show that only 20% of the customers are vegetarians.

1430. Archer Daniels Midland Co. 1992. Third quarter report to shareholders. 8 p.

• **Summary:** One section titled "Mr. and Mrs. Dwayne Andreas host Mikhail Gorbachev family in Decatur" notes: "On Tuesday, May 5, Mr. and Mrs. Dwayne Andreas hosted a visit to Decatur, Illinois by former Soviet leader Mikhail Gorbachev, his wife Raisa, and daughter, Irina. Mr. Andreas and Mr. Gorbachev have been friends since they met about eight years ago in the Soviet Union. The Gorbachev's had dinner, reminisced about old times and spent the night in the Andreas' home."

"The main purpose of Mr. Gorbachev's ADM visit, which was arranged by Mr. Andreas for the following day, focused on the production of ADM's brand of vegetable burgers. Already, more than 10,000 soybean-based vegetable burgers a day are being sold in Moscow. Mr. Gorbachev will return home with hopes ADM will build a vegetable burger plant in Russia, much like the one he saw in Decatur."

Five color photos show Gorbachev at ADM; one of these shows him and his wife, Illinois governor Jim Edgar, and Mrs. Nelson Rockefeller watching as frozen patties are being made in the vegetable burger plant. Address: Decatur, Illinois.

1431. Frost & Sullivan Inc. 1992. The European market for protein ingredients. New York, NY: F&S. 383 p. #E1712/P. 98 tables. 6 figures.

• **Summary:** "Sales of protein ingredients to the food industry in Western Europe in 1991 amounted to \$1.3 billion. This is expected to increase to \$1.5 billion by 1996." Contents: Executive summary. 1. Introduction, scope and methodology. 2. Protein ingredients—Technology, economics and trends: Introduction, vegetable proteins (soy flour and grits, soy protein concentrates, soy protein isolates, textured soy proteins, wheat gluten), animal proteins (milk-

based, egg-based, other, single cell proteins incl. yeast and mycoproteins). 3. End-user markets for protein ingredients—Industry requirements, historical and future developments: Introduction, nutrition claims, the food industry (meat and meat products, dairy products and desserts, bakery and cereal products, specialty infant and health food, pet foods, miscellaneous foods). 4. The markets for protein ingredients in Western Europe: Germany (For each country is given: The food industry, protein ingredients off-take by the food industry, sales of protein ingredients to the food industry, volume off-take of protein ingredients by the food industry, sales of protein ingredients by type), United Kingdom, France, Italy, The Benelux countries, Spain and Portugal, other EC countries, other Western European countries. 5. Profiles of major suppliers of protein ingredients in Western Europe: Includes Aarhus Oliefabrik, Archer Daniels Midland Co., British Arkady Co., BSN, Cargill, Central Soya, Dalgety, Danmark Protein, Eridania/Beghin-Sey [sic, Say], Loders Croklaan, Lucas Meyer, Nattermann Phospholipid, Nestle, Protein Technologies, International, RHM Ingredients Ltd., Solnuts BV, Unilever Group. Appendices. A. Names and addresses of suppliers of protein ingredients in Western Europe. B. Company index. Address: 106 Fulton St., New York, NY 10038. Phone: 212-233-1080.

1432. *Hm News (Honeymead Newsletter)*. 1992.

Honeymead's history dates back to 1938. No. 26. Spring, p. 1.

• **Summary:** An excellent 1-page history of Honeymead Products Co.

1939—Mankato Soybean Products Inc. is formed on the site of the abandoned Minnesota Pipe and Tile Co. The key man is William Blethen, a young lawyer. The principal piece of equipment was a single expeller. Riley Lewis was the first plant manager.

1942—Washington Egg and Poultry Association, a cooperative, purchased the company and operated it until...

1949—The company is purchased by the Andreas family, which had feed mills in Iowa under the name Honeymead. As a result, Mankato Soybean Products Co. became known as Honeymead Products Co. Lowell Andreas, Honeymead's chief officer, soon introduced solvent extraction equipment from Europe.

1960—Honeymead is sold to the Farmers Union Grain Terminal Association (GTA), a grain marketing terminal based in St. Paul.

1963—Honeymead expands into hydrogenating soybean oil.

1968—Lowell Rasmussen is named president; he continues the growth initiated by the Andreas family.

1984—Rasmussen retires as president and is succeeded by Merrit Peterson.

1992—Today Honeymead Products Company has 200 employees. Its present capacity is 80,000 bushels, 12 railroad

tank cars of refined oil, and 18 cars of hydrogenated oil.

An aerial photo shows the huge plant, next to a river, next to a freeway. Address: [Mankato, Minnesota].

1433. *SoyaFoods (ASA, Europe)*. 1992. Helfex '92. 3(2):4. Spring.

• **Summary:** "The International Health Food Exhibition, Helfex '92, was held at Wembley, London on 26 and 27 April. Over 160 companies concerned with health, diet, fitness and nutrition exhibited and several new soya products were launched.

"The Haldane Foods Group displayed their new range including a new Light Soya Milk, a new Soya Creem, a vegetarian cheese spread, burger and sausage mixes, and 6 new varieties of tinned products. JRJ Trading (The Redwood Company) had an interesting and tasty range of tempeh-based products including dips, spreads, patés and vegetarian rashers. Soya milks and desserts from Granovita, Haldane, Sojasun (Triballat), Vitasoy were also on display. Berrydales' No Cream Ices, made from fresh organic tofu and soya milk, introduced their new 4-pack which will allow consumers to purchase four different ices in one pack. Plamil Foods launched a new non-dairy chocolate bar, *Martello* and Marigold Health Food, manufacturers of canned braised tofu and other delicacies, also had a stand."

1434. *SoyaFoods (ASA, Europe)*. 1992. Soy protein burgers in Russia. 3(2):3. Spring.

• **Summary:** "The Archer Daniels Midland Co. (ADM) has been successfully marketing a soya protein concentrate patty in the Soviet Union for nearly two years and a similar product, the Harvest Burger is on test market in the US... It is estimated that one restaurant in Moscow now sells 4500 of these burgers a day."

1435. Chajuss, Daniel. 1992. Re: History of Hayes Ashdod Ltd., Israel. Letter to Drs. L.A. Johnson, D.J. Myers and Daniel J. Burden, Center for Crops Utilization Research, Iowa State University, Ames, Iowa, June 23. 1 p. Typed, with signature on letterhead.

• **Summary:** Daniel read with interest the article on titled "Soy protein's history, prospects in food, feed," by Johnson, Myers and Burden, published in *INFORM* 3(4):429 (1992). Since the article focused mainly on the production of soy protein concentrates, Chajuss would like to add some information.

In 1963 Chajuss established and owned the first soy protein concentrate factory (Hayes Ashdod Ltd., Ashdod, Israel) which was using a counter current aqueous alcohol extraction system. A system of aqueous alcohol immersion extraction was already in use commercially by Central Soya Company (and is still used by Central Soya in the USA).

In 1966 Hayes Ashdod Ltd. introduced texturized soya protein concentrates under the brand names Hayprotex and

Contex.

In 1968 Hayes started producing a special soy protein concentrate, free of trypsin inhibition and free of antigenicity, for use in calf milk replacers as a substitute of milk proteins.

In 1969 Hayes started to produce more functional and soluble soy protein concentrates, by further treatment of the aqueous alcohol extracted soy protein concentrate, for use as substitutes for soy protein isolates and for sodium caseinates in various food systems, especially in the meat processing industries.

In 1973 Chajuss sold know-how and complete engineering designs to Aarhus Oliefabrik A/S, Aarhus, Denmark, to make powdered and textured soy protein concentrates for human consumption, pet foods and calves milk replacers.

All the soy protein concentrate facilities worldwide, which were established since 1973 and which are still in operation today (including ADM {USA}, Bunge-SOGIP {France}, etc., with the exception of Central Soya's USA plants) employ Chajuss' technology and engineering designs, and are mainly based on the know-how and technology developed by Chajuss.

About 90% of the total world production of soy protein concentrates today is made by aqueous alcohol extraction. Most of the protein concentrates are used in the form of powder or grits, some are further texturized, and some are further treated to provide various "functionalities."

"A few years ago we sold Hayes Ashdod Ltd., which was renamed 'Solbar Hatzor Ltd.,' being a joint venture of the German Soya Mainz Company and Kibutz Hatzor of Israel."—Best Regards, Daniel Chajuss. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

1436. Bergh, Barbara. 1992. The Canadian oilseed processing sector: A profile. In: Statistics Canada. 1992. Grain Trade of Canada 1990-91. Ottawa, ONT, Canada: Statistics Canada. See p. 23-32. [Eng; Fre]

• **Summary:** Contents: Oilseed situation. Crushing industry. Vegetable oils. Vegetable oilmeals. Economic value of the industry. Policy issues and recommendations by the Canola Marketing Task Force. "The main oilseed crops produced in Canada are [in descending order of the amount produced], canola, soybeans, flaxseed and sunflower seed. There has been an almost continuous increase in the production of oilseeds since 1950, with the largest increase being in canola production which will reach a record 4.3 million tonnes in 1988/89. There was a record 1.3 million tonnes of soybeans produced in 1990/91. A bar chart shows the amount of Canada's four major oilseeds produced every 5 years from 1950 to 1990. "Only small amounts of oilseeds are imported into Canada, but significant amounts are

exported. In 1990/91, 99% of canola exports went to Japan, while soybean exports were destined mainly for the U.S., Netherlands, Portugal, Hong Kong, Japan and Singapore."

One of Canada's three soybean crushing plants closed in 1991 causing a drop in soybean crush capacity from 3,700 to 2,500 tonnes per day. Of this, CanAmera Foods in Hamilton, Ontario, has 1,270 tonnes, and ADM Agri-Industries Ltd. [in Windsor, Ontario] has 1,250.

"The two major oilseeds processed in Canada are canola and soybeans, with small amounts of sunflower seed and flaxseed also being crushed. Canola is crushed mainly for its oil as its seed yields about 40% oil and 60% meal. Soybeans are crushed more for the meal since they yield about 78% meal and only 17.5% oil. Sunflower seed yields 42% oil and 35.5% meal, while flaxseed yields 34% oil and 63% meal..."

"In 1990/91, 44% of the domestic canola crop was crushed, compared with 72% for soybeans, 70% for sunflower seed and 1% for flaxseed."

"In 1990/91, 0.8 million tons of crude vegetable oils were produced in Canada... Canola oil accounted for 74% of total vegetable oil production in Canada, followed by soybean oil at 21%, sunflower oil at 4% and linseed oil at 1%. In addition, approximately 25.0 thousand tonnes of corn oil are produced annually."

"Soybean meal is the major vegetable oilmeal used in Canada, accounting for 76% of the total oilmeal consumption in 1990/91. Canola meal is next, accounting for 22% of total domestic use, followed by sunflower and linseed meals which accounted for 1% or less." Soybean meal contains 48% protein, whereas canola meal contains only 36-37% protein; it contains more fiber than soybean meal and has less digestible energy.

As of 1 Jan. 1992, Canadian soybeans, crude soybean oil, soybean meal, canola seed, crude and refined canola oil and meal all have tariff-free access to the USA. Refined soybean oil will be duty free as of 1 Jan. 1995. Address: Market Analyst, Canadian Oilseed Processors Assoc., 1010-360 Main St., Winnipeg, Manitoba R3C 3Z3, Canada. Phone: 204-942-3408.

1437. Weissman, John. 1992. Natural foods sandwich companies in and around Boston, Massachusetts (Interview). *SoyaScan Notes*. July 4. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The two main sandwich companies are Season's Harvest (in Somerville, Massachusetts; owned by Ademar Reis, pronounced REES) and New World Natural Foods (in Brighton, Massachusetts; owned by Emily Merghart; Phone: 617-232-5973). Emily started the company herself under the name New World Enterprises in 1979, and has since run it herself. Her husband, Errol, was a dancer. The idea for the business came from a previous business that Paul Duchesne had started and left. Season's Harvest products are distributed widely, down to New York and Connecticut,

and possibly up into New Hampshire. New World sells only locally. Both use tofu and seitan in their sandwiches. New World uses seitan made by The Bridge in their sandwiches. They sell tofu burgers made by 21st Century, etc. Admar makes Bacon Bits out of TVP, a process he learned from John; then he waited 5 years and did it on his own. He also makes vegetarian burgers out of chickpeas and rice, etc. When stores such as Bread & Circus installed their own delis, it greatly hurt both of these sandwich companies. Address: VegPro Co., 133 Nottinghill Rd., Brighton, MA 02135.

1438. Horgan, Karin. 1992. Brits aren't necessarily beefeaters. *Vegetarian Times*. July. p. 11. [1 ref]  
 • **Summary:** Currently 28,000 British adults are becoming vegetarians each week, according to a 1991 survey that the Vegetarian Society of the UK commissioned from the University of Bradford, plus earlier Realeat surveys which are annual Gallup Polls conducted since 1984. "The Bradford study found that 3.1 million British adults, or 7 percent of the adult population, described themselves as vegetarians, a 94 percent increase over figures from the 1990 Realeat survey. Figures for children are even higher, with 8 percent of 11- to 18-year-olds reporting they are vegetarians..."

"Ten percent of British women and 4 percent of British men say they don't eat meat. The Bradford survey found that people in the middle class were twice as likely to be vegetarian than those in the upper class."

1439. Eichberg, Joseph. 1992. Re: History of American Lecithin Co. Letter to Mr. Randall E. Zigmont, President, American Lecithin Co., 33 Turner Rd., Danbury, CT 06810, Aug. 3. 3 p. Typed, with signature on letterhead.

• **Summary:** This typewritten document consists of a 1 page cover letter (on Amico, inc. letterhead) followed by a 2-page history.

"Dear Randy, With further reference to your fax of July 24th concerning the history of American Lecithin Company, for use in a brochure you plan to prepare, I am enclosing herewith material which I trust will be helpful.

"Let me know if I can be of further assistance. With kindest regards,..."

"Historical data on American Lecithin Company, for Randy Zigmont.

"In 1923 little was being done with soybeans in the United States. Soybeans from Manchuria were going to Europe in considerable quantities where Hausa Muehle in Germany, Aarhus Oliefabrik and Dansk Soyakage Fabrik [Dansk Sojakagefabrik] in Denmark were the principle processors. Hausa Muehle had a patented process developed by Hermann Bollmann whereby instead of simple extraction of the beans with alcohol, a combination of alcohol with a small amount of benzol was used for better recovery. The oil, and especially the lecithin recovered, exhibited a bitter

taste, and in 1935, American Lecithin Company was granted a patent covering essentially the use of hexane to obtain phosphatides substantially free from bitter taste.

"As early as 1923, our group [AAC = American Associated Companies] in Atlanta learned of Hausa Muehle's activities, and in 1927, we first visited them in Hamburg with a view to obtaining information and their representation in the U.S.A. where no commercial lecithin was available. In 1928 [sic, late 1929], Dr. Bruno Rewald, who handled much of the laboratory and applications research on lecithin, and Mr. Adolph Schneider on the business end, came to this country for joint discussions on development, and Dr. Rewald and the writer visited Staley and others in an attempt to encourage their interest in lecithin, and provide a base for domestic production. Subsequently, with participation of Hausa Muehle, American Lecithin Company (Delaware) was formed in 1930.

Note: In 1929 American Lecithin Company was first incorporated in Atlanta, Georgia (See brochure "First in Lecithin since 1929).

"The three European producers mentioned had a cartel arrangement among themselves, and while they had large inventories of lecithin on hand, prices to us were maintained making introductory work difficult. Lecithin in Europe was being mainly used in the production of margarine. Margarine production, at the time in the U.S., was being hampered by the power of the dairy industry, and margarine was regulated by three government agencies—F.D.A., U.S.D.A., and the Treasury for collection of a tax. The sale of margarine in colored form (yellow) was not permitted. American Lecithin's work on lecithin in chocolate, in 1929, opened a new and important market for lecithin in this country and abroad. Since chocolate had to be made with cocoa butter, and since commercial lecithin contained soybean oil, we arranged with Hausa Muehle for the production of 'cocoa butter lecithin,' in which acetone extraction was used to remove the soybean oil, after which cocoa butter was added as the carrier, and use of the acetone purification process later resulted in the development of granular and powdered lecithin.

"At that stage, soybean cultivation in the U.S.A. was rapidly increasing, and domestic processing of soybean oil was in prospect, and we approached the Glidden Company who were becoming increasingly interested in the processing of soybeans, planning for the solvent extraction of soybeans at a plant in Chicago [Illinois]. It so happened that at about the same time, ADM was scheduling construction and operation of a soybean processing plant in Chicago to use hexane as the extraction solvent. ADM were in touch with Aarhus Oliefabrik through Fries Bros. / Ross & Rowe, and in order to facilitate the introduction of commercial lecithin on a large scale and simplify a complicated patent situation, it was deemed advisable to concentrate efforts, and the American Lecithin Company, an Ohio Corporation, was

formed in 1934, with joint stock ownership by the principals, and with Ross & Rowe functioning as a selling agent to augment the new company's own efforts.

"Patented in 1940 and licensed to the industry, American Lecithin Company's research came up with an improvement in lecithin production and use, an important step forward, by using a simple method to convert the variable non-uniform soybean lecithin oil-containing plastic consistency material to a uniform, much more easily handled fluid consistency, by the use of a small percentage of free fatty acid. There has been virtually universal use of this method.

"Some years later, the Justice Department objected to the concentration of promotion in a small group and the parties separated, and it was at that time that American Lecithin Company, Inc. was incorporated in Georgia, and continued its independent operations until acquired by Nattermann" [in 1989].

Note 1. With this original history, Eichberg encloses photocopies of pages 483-88 from: Wittcoff, H. 1951. *The Phosphatides*. American Lecithin Co. is discussed at length on these pages.

Note 2. Amico apparently also has an office in New York, for at the top right of their letter is printed: 32-34 61st Street, Woodside, L.I. [Long Island], N.Y. 11377. Telephone: (718) 274-4350. Address: Amico, Inc., P.O. Box 4056, Atlanta, Georgia 30302 U.S.A. Phone: (404) 522-7060. Fax (404) 581-0116.

1440. Brieser, Carla. 1992. Pizza chain extols benefits of soy flour. *Illinois Agri-News (La Salle, Illinois)*. Aug. 28.

• **Summary:** Ralph Senn and Joe Ream, otherwise known as the Flying Tomato Brothers from Garcia's Pizza in a Pan, fortified their pizza crust with 12% soy flour during a weekend-long pilot program at their store in Champaign, Illinois. "It was all a part of a weekend-long pilot program with the University of Illinois / INTSOY, Land of Lincoln Soybean Association and Archer Daniels Midland Co. to show the benefits of soy flour," a press release said.

"Soy flour greatly increases the nutritional benefits of pizza. By blending soy flour into the dough, the protein content of one slice increases by 50 percent and dietary fiber increases 400 percent. And, being made from soybeans, its use will help the local farm economy."

A photo shows Ralph Senn and Joe Ream at their store.

1441. Archer Daniels Midland Co. 1992. Annual report. P.O. Box 1470, Decatur, IL 62525. 41 p. Sept.

• **Summary:** A cover photo shows three men and a woman seated around a table that looks like a map of the world. Across the bottom is written (for the first time in its annual report): "Supermarket to the World."

Net sales and other operating income for 1992 (year ended June 30) were \$9,232 million, up 9.0% from 1991. Net earnings for 1992 were \$503.8 million, up 7.9% from 1991.

Shareholders' equity (net worth) is \$4,492 million, up 14.5% from 1991. Net earnings per common share: \$1.54. Number of shareholders: 32,377.

"The last two fiscal year have been years of rapid growth and a broadening of the Company's profit base. During this period investment in plant and equipment amounted to \$1.5 billion, consisting of \$1 billion of capital expenditures for new plants and equipment, using mostly new technology, and acquisitions of \$500 million...

"ADM takes seriously its commitment as the 'supermarket to the world.' With millions of starving people in Asia and Africa, the Company has the technology, through soy milk, Harvest Burger and wheat gluten, to provide an individual with a proper level of healthy protein for as little as 12.5¢ per day."

A 2-page foldout between pages 4 and 5 shows ADM's international corporate structure. In Europe, under ADM International Holdings, are British Arkady Company UK, Haldane Granose Food Group UK, and Arkady Feeds Ireland. Under British Arkady Company UK are S.I.O. France, InaNahrmittel Germany, and Happidog Petfoods UK. Under Haldane Granose Food Group UK are Genice UK, Vegetarian Feasts & Cuisine UK, Snackmasters UK, Direct Foods UK, and Saucemasters UK.

British Arkady Company-England: Manufactures, markets and distributes full fat soya flours, TVP, bakery ingredients, frozen dough products. S.I.O.-France: Manufactures and markets specialty oils and fats for food and pharmaceutical use. Soya flour millers.

Haldane Granose Food Group-England: Factories at Barrow and Newport Pagnell, manufacture and marketing health foods, dry mixers, TVP mixers, burger mixes, dry mix and frozen vegeburgers, canned vegetarian products, spreads, soya milk. Genice Ltd.-Wales: Manufactures non-dairy ice cream, soya yogurt, yogice soya cream and specialty margarines. Direct Foods Ltd.-England: Protoveg range of TVP mixers, including Sosmix and Burgamix, marketed and distributed by Haldane/Granose. Snackmasters Ltd.-Wales: Manufactures and markets a range of snackmeals. Saucemasters Ltd.-Wales: Manufactures and markets sauces, dips, spreads and relishes packed in glass jars or sachets. Vegetarian Feasts & Vegetarian Cuisine-England: Manufactures and markets frozen vegetarian meals, retailed through food shops and supermarkets.

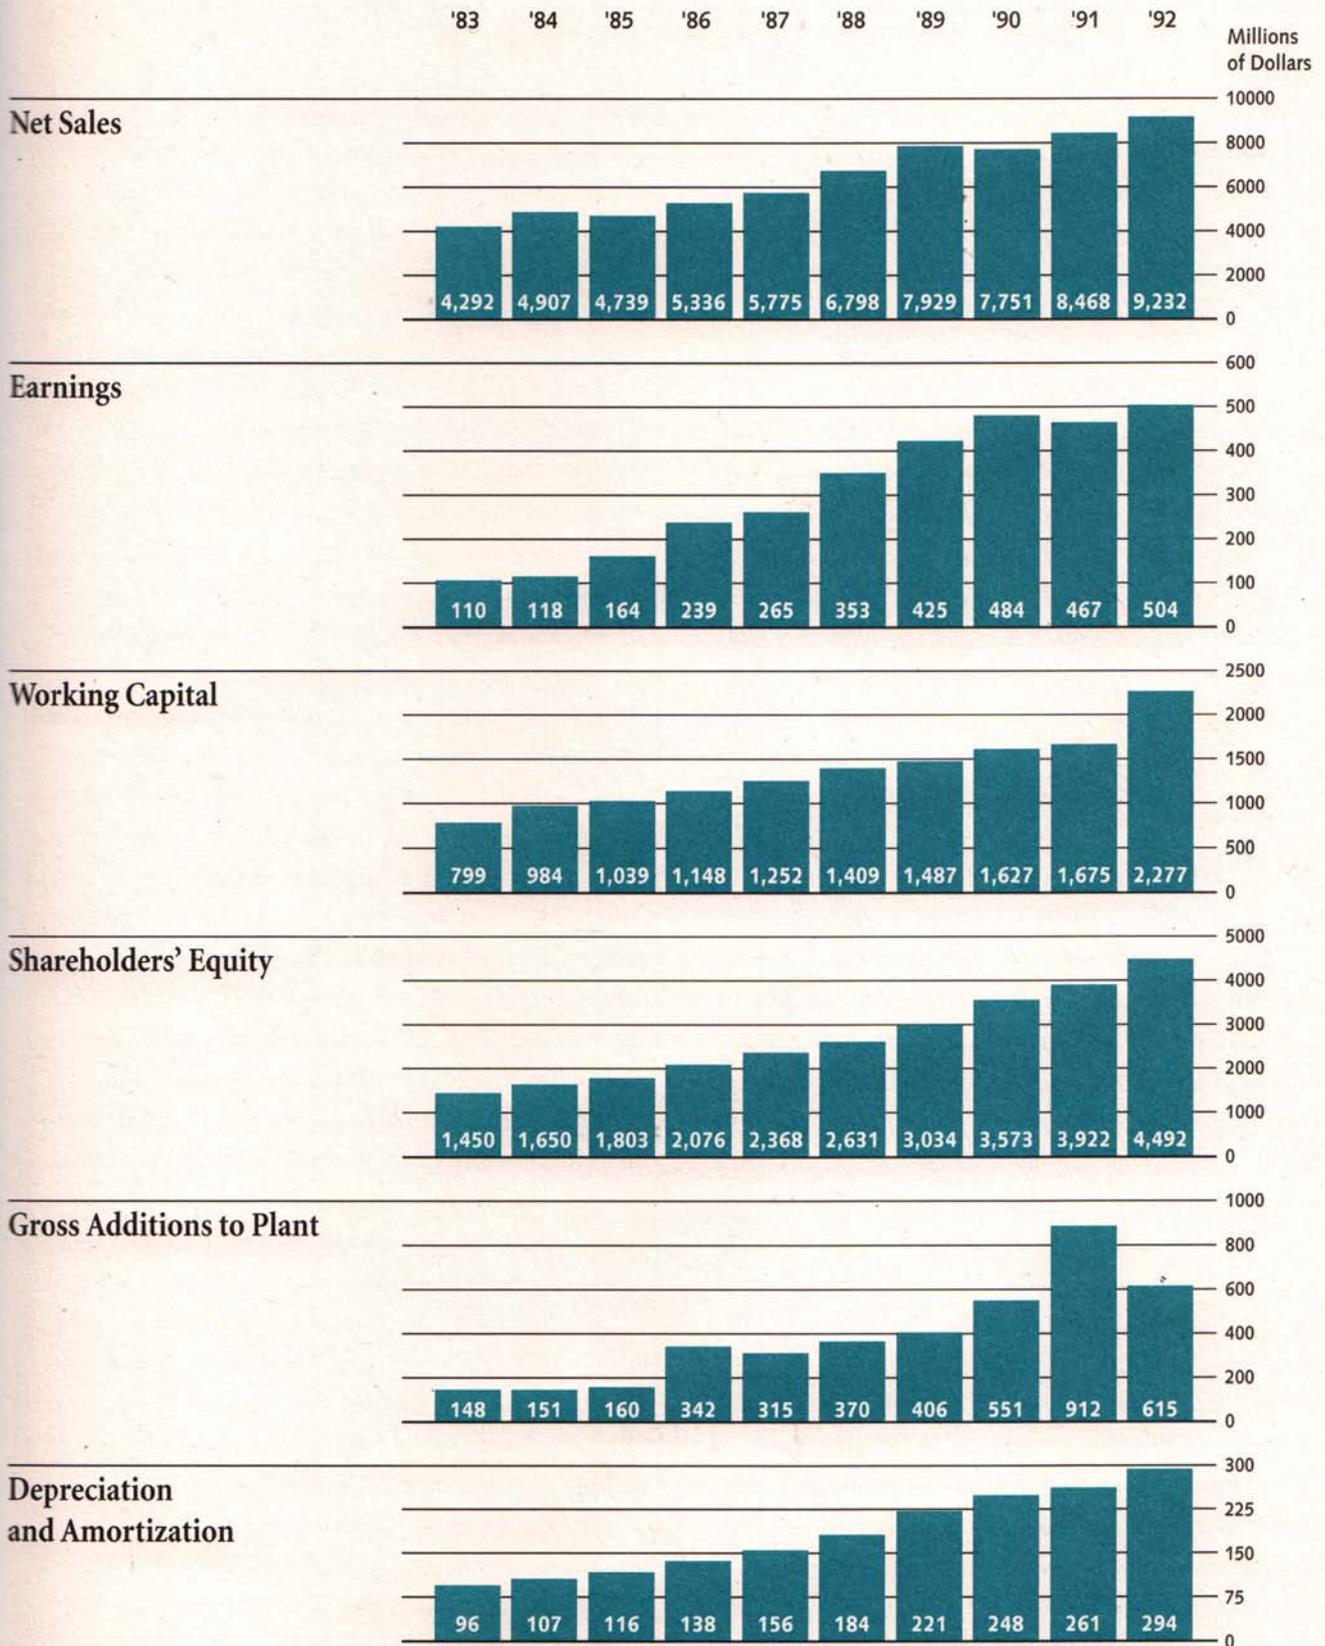

"Haldane Foods Group is now well established as the leading supplier to the U.K. health food industry. Nineteen products were added to an already extensive sales list. Snackmasters, Ltd. experienced rapid growth in snackmeals and increased efficiency by installing fully automatic process equipment. Two products that capitalized on the growing trend toward good health were the low-fat Granose 'Light' soya milk and the high-polyunsaturate cholesterol-free Granose Soya Cream.

"Vegeburgers remain a market leader and three new

ARCHER DANIELS MIDLAND COMPANY  
ANNUAL REPORT 1992

*SUPERMARKET  
TO THE WORLD*

relishes were introduced under that brand name. Granose Foods is rapidly building market share with both vegetable and TVP-based vegetarian sausages. Genice Ltd. continued to innovate with the introduction of low-fat yogice.”

Pages 20-21: A bar chart shows ten-year statistics for net sales, earnings, working capital shareholders equity, gross additions to plant, depreciation and amortization. Net earnings grew from \$110 million in 1983 to \$504 million in 1992. Address: Decatur, Illinois.

**1442. Product Name:** Vegetable Ravioli–With Whole Grains [With Carrot Pasta, With Spinach Pasta].

**Manufacturer’s Name:** D’Alterio Foods.

**Manufacturer’s Address:** 109-18 Northern Blvd., Corona, NY 11368. Phone: 718-779-4770..

**Date of Introduction:** 1992 September.

**Ingredients:** Ravioli: Certified organically grown: Whole wheat durum flour, whole wheat flour, carrots, spinach, tomatoes, tofu, cooked wild rice, cooked brown rice, onion, peas, corn, canola oil, garlic, oat bran, wheat bran, amaranth. Natural: Filtered water, sea salt, herbs and spices.

**Wt/Vol., Packaging, Price:** 9 oz. (225 gm) tray.

**How Stored:** Frozen.

**New Product–Documentation:** Article in *Food Business* (Chicago, Illinois–Putman). 1992. Nov. 23. “Pasta with a heart–D’Alterio Vegetable Ravioli.” “Joe D’Alterio’s story is reminiscent of ConAgra chairman Mike Harper’s bout with heart problems that inspired Healthy Choice. Five years ago, D’Alterio, owner of D’Alterio Pasta, Corona, New York, had chest pains. Instead of going through with the angiogram his doctor recommended, D’Alterio decided to follow Dr. Dean Ornish’s program and, as he recalls, ‘I went cold turkey.’ He changed his diet, eliminated meat, meditated and exercised.

“Two months later, he said, his cholesterol level dropped from 250 to 165. ‘My doctor couldn’t believe it,’ said D’Alterio.

“The results inspired D’Alterio to begin work on a line of vegetarian pastas. Today, the line he has come up with tastes as good as–if not better than–its meat-laden counterparts.

“D’Alterio’s whole-wheat pastas are vegetarian as well as organic. Spinach ravioli, for instance, includes carrots, tomatoes, tofu, rice, onions, peas, corn, oat bran, wheat bran and amaranth. End result: Fifteen percent of calories from fat, 9.3 grams of protein, 7.5 grams of fiber and no cholesterol.”

A large photo shows the label, with ingredients.

Ad (half page, color) in *Vegetarian Times*. 1993. April. p. 21. “Premium Organic Pastas: Delicious tasting pasta has never been this healthy before.” Shows a large color photo of the label, with a 50¢ off coupon. Send it to: P.O. Box 880145, El Paso, Texas 88588-0145 (The address of a coupon redemption company).

Talk with Alberto Olavarria of D’Alterio. 1998. Feb. 17.

In 1992 the company began making meatless products for the natural foods industry. Their first product that contained soy (tofu) was the Vegetable Ravioli, introduced in Sept. 1992 at the Natural Products Expo in Baltimore, Maryland. In 1992 they started making products for the natural foods industry, started using organic ingredients, and introduced their first two meatless products: Vegetable Ravioli (with tofu), and Vegetable Tortellini (without soy). Also in 1992 they introduced Beef Cannelloni and Beef Empanada (like a meat turnover); both contained a mixture of TVP and beef. The company started in 1972. The Healthy Cuisine name started to be used in about 1995. The address has always been 109-18 Northern Blvd., Corona, New York 11368. Phone: 718-779-4770.

1443. Davis, Susan. 1992. Tank up with SoyDiesel: Clean Air Act pumps interest in alternative fuel. *Soybean Digest*. Aug/Sept. p. 10-11.

• **Summary:** Leon Schumacher of the University of Missouri–Columbia, tests and drives a Dodge pickup with “Powered by Soybean Oil” printed on the tailgate. It turns plenty of heads and evokes the “thumbs up” sign. What started as a simple research project has exploded into a national campaign. “SoyDiesel is made by esterifying degummed soybean oil. As requirements of the Clean Air Act of 1990 start to take effect, “everything from boats to buses will be required to reduce emissions.” Tests have shown that SoyDiesel can cut pollution by up to 86%.

Bill Ayres, vice president of Interchem Industries, has a pilot plant manufacturing SoyDiesel at Leawood, Kansas. It sells for \$2.50/gallon compared to \$1 for regular diesel. “Interchem has 15 million gallons of SoyDiesel available and plans to build a new plant for additional production. Cargill, ADM, and Ag Processing [AGP] are exploring building esterification plants near soybean processing plants.”

One problem with SoyDiesel is that it jells at 28 degrees F, according to Bill Ayres.

Ferruzzi-Montedison is building a plant in Livorno, Italy, to make 18 million gallons a year of Diesel-Bi.

A sidebar, titled “Projects hit the road,” discusses: Sunrider: United Soybean Board is “providing 17,500 gallons of 100% SoyDiesel and funding a \$60,000 educational program.” Ferruzzi-Montedison is testing two buses in Sioux Falls, South Dakota. During the summer Olympics in Barcelona, Spain, vehicles will use Diesel-Bi. Bi-State Industries fuels 60 buses in the greater St. Louis, Missouri, area with a blend of 25% soy and 75% diesel. MSMC is funding a project with five tractors. “More than 100 maintenance vehicles at Lambert International Airport in St. Louis, Missouri, run on a 30% methyl soyate blend. Missouri, Ohio, Michigan, and Nebraska use SoyDiesel in demonstration vehicles.”

A photo shows Kenlon Johannes standing by the rear of a Ford pickup truck. The license plate reads “Soy-Oil.”

1444. AGP–Ag Processing Inc a cooperative. 1992. Annual report: Partners in food production. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 24 p. 28 cm.

- **Summary:** Net sales for 1992 (year ended Aug. 31) were \$1,126.667 million, up 30.0% from \$864.675 million in 1991. Earnings before income taxes: \$43.236 million, up 0.5% from the \$43.016 million in 1991. Contains a 9-year summary of consolidated operating and financial statistics.

AGP is the largest cooperative soybean processing company in the world. “On December 2, 1991 AGP entered into a partnership agreement with Archer Daniels Midland [ADM] to purchase International Multifoods’ North American Ag Operations which included Supersweet Feeds, Supersweet Agri Centers, the Supersweet Research Farms, a Grain Division, and Masterfeeds in Canada. In conjunction with this came the acquisition of ADM Feed Corp. with its formula feed mills and pet food operations. The two U.S. feed divisions have been merged into one under Supersweet Feeds... Pet Foods was set up as a separate division in 1991.” AGP manages all these operations for the partnership [of which it is the majority partner] under the name AGP, L.P.; it “operates 19 feed manufacturing plants, 3 pet food plants and 29 Agri Centers located throughout the midwest.” The Agri Centers are “retail stores selling feed and other farm supplies.”

AGP tells the story of its origins in the book *Soybeans, Cooperatives, and Ag Processing Inc.*, by Margaret Finnerty, which is published in 1992. Address: Omaha, Nebraska.

1445. **Product Name:** Granose Hi Fruit Soya Yogert (Soymilk Yoghurt) [Nectarine & Pineapple, Fruits of the Forest, or Kiwi & Passionfruit].

**Manufacturer’s Name:** Haldane Foods Group Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 908 211311.

**Date of Introduction:** 1992 October.

**Ingredients:** Nectarine & Pineapple: Soya milk, raw cane sugar, kiwi fruit, passion fruit, vegetable oil, emulsifier (vegetable mono-diglycerides), stabiliser (pectin), Bulgarian cultures, natural flavouring, natural colour (beta carotene).

**Wt/Vol., Packaging, Price:** 160 gm plastic pot. Retail for £0.49.

**How Stored:** Shelf stable, 4-month shelf life at room temperature. Refrigerate after opening.

**Nutrition:** Per 100 gm.: Energy 340 Kjoules / 81 Kcal (calories), protein 3.0 gm, carbohydrate 14.4 gm, fat 1.9 gm.

**New Product–Documentation:** Spot in SoyaFoods. 1993. Winter. p. 5. Granose, whose Soya Yogerts are brand leaders in the UK, has extended their line with 3 products containing 20% fruit and thicker, chunkier pieces. The 3 flavors are low in fat, cholesterol-free, and 100% non-dairy. They are

approved by the Vegetarian Society.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. Granose Hi-Fruit Premium Yogert, made by Genice, was launched in late 1992, with double the fruit content, 20%, in 3 flavors—kiwi & passionfruit, nectarine and pineapple, and fruits of the forest.

Labels (cups for Kiwi & Passionfruit, and Nectarine & Pineapple) sent by Genice Foods Ltd. 1994. Feb. 18. Kiwi is purple, green, and yellow on white cup. UPC indicia. Circled V logo. “Approved by the Vegetarian Society.”

1446. *Food Business (Chicago, Illinois)*. 1992. Meatless goes mainstream. Nov. 23. \*

- **Summary:** This cover story discusses the trend toward vegetarianism among mainstream Americans. It notes that: Morningstar Farms Grillers, a meatless burger made by Worthington Foods, are sold in 95% of U.S. grocery stores and supermarkets. Sales of soyfoods are expected to top \$1.4 billion by the year 2000. In a survey of what is “in” among teens, 28% of respondents said that vegetarianism is “in,” compared with 22% a year ago. A National Restaurant Association study found that the trend toward reducing meat consumption peaked in the over-65 age group. In a 1992 poll, 12.4 million adult Americans considered themselves vegetarians, almost double the number in 1985. One in five restaurant patrons won’t even go to a restaurant unless there is a vegetarian option on the menu. One British company [Haldane Foods] sells 70 million packaged soyburgers a year in the U.K.

1447. Archer Daniels Midland Co. 1992. First quarter report to shareholders, and a report on the 69th annual shareholders meeting. Decatur, Illinois. 8 p.

- **Summary:** “Your company continues to build for the future. Last year our capital expenditures exceeded \$900 million; this year we spent an additional \$600 million. In the last three years our capital expenditures exceeded two billion dollars, and that was still well below our cash flow for the same period...”

“Ogilvie Mills of Canada was acquired, along with a joint venture partnership to operate Pillsbury’s four U.S. mills. The Ogilvie acquisition also made ADM one of the largest producers of wheat starch and vital wheat gluten, a major product for the baking industry...”

“Our oilseed crushing division purchased a canola crushing plant in western Canada, further consolidating our position as the world’s leading crusher of canola... Our crushing division now operates 45 plants, crushing soybeans, cottonseed, corn germ, flax, canola, and sunflower seed, and refines the oil in 14 refineries.

“Our edible soy protein business continues to grow. A large, ultra-modern soy protein concentrate plant was commissioned at Rotterdam [Netherlands]. Our edible soy protein business—concentrate, isolate, and soy flour products—

increased 25 percent for the year. Production of Harvest Burger, our soy concentrate-based meat substitute, is selling at record levels in the U.S., Russia, and England...

“We are in a growth industry. Feeding people is our business. Each year there are nearly 100 million more people to feed on the face of the earth...

“We consistently lead the charts in sales per employee in our industry. People often ask me how we do so much business with so few people. My answer is that it’s our culture, central to everything we do. Every company has a personality, just like every person. The basis of our culture, or personality, is very simple: we stay in the business we know. We concentrate on one major objective, and that is the return to our stockholders. We remain entrepreneurial, concentrating on only those matters essential to running a successful business... We keep meetings, memos, policies, and procedures to a minimum. We treat everyone as an individual, giving him or her the tools and the authority to do the job. We don’t second-guess, and we don’t criticize for honest mistakes.”

“ADM is a company with no fixed management committees, no organizational charts, no bells, no whistles, and no gimmicks—just good pay and hard work.” Address: Decatur, Illinois.

1448. **Product Name:** [Alisana Soya Yogert (Peach & Passion Fruit, Black Cherry, Strawberry, Orange, or Natural)].

**Manufacturer’s Name:** Arkady ADM Iberica S.A. Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer’s Address:** Carretera de Hosplatalet 42, Cornellà de Llobregat, Barcelona, Spain. Phone: 050981-6611.

**Date of Introduction:** 1992 November.

**Ingredients:** Black cherry: Habas de soya descascarillada, starter *Bulgarius*, pulpa de cerezas, y zumo de fruta.

**Wt/Vol., Packaging, Price:** 4 x 120 gm cups packed under

a long paperboard sleeve.

**How Stored:** Shelf stable, 4-month shelf life at room temperature. Refrigerate after opening.

**New Product–Documentation:** Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. Starting in 1992 Genice started to sell its soy yogurts outside the UK. First in 1992 the So Good line of soy yogurts was launched in Spain (for Arkady Iberica, an ADM-owned company located in Barcelona) with the addition of two new flavors—orange and natural. In late 1992 the Spaniards requested their own brand, so So Good was changed to Alisana; Four Soya Yogerts (120 gm each) were sold in each pack.

Label (sleeve and cup for cherry flavor) sent by Ray Pierce. 1994. Feb. 18. This colorful sleeve is 11.25 by 4.5 inches. A color illustration in orange, red, purple, green and peach on white shows scattered fruits on a white background. The lettering, which is blue and black, reads “Alisana: 4 Soya Yogerts.” The cup is cherry red and blue on white.

1449. **Product Name:** Granose {Canned Vegetarian Entrees} [Bolognese, Curry, Chilli, Bourgignonne, Italienne].

**Manufacturer’s Name:** Granose Foods Ltd. Div. of Haldane Foods Ltd.

**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: 0908 211311.

**Date of Introduction:** 1992 November.

**Wt/Vol., Packaging, Price:** 420 gm cans. Retail for £1.39 each (11/92).

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Spot in SoyaFoods.

1992. Autumn. p. 5. “New Vegetarian Canned Products.”

“Produced from soya chunks or mince in sauces made from traditional recipes.” A photo shows the 6 cans. Note: Several products with names similar to these were introduced by Granose years ago. For example: Granose Curry Sauce (1978). Granose Bolognese Sauce (1980).

1450. **Product Name:** Granose {Vegetarian Cheese Spreads} [Cheese Spread, Cheese Spread with Chives, Cheese Spread with Tomato and Bacon Flavour].

**Manufacturer's Name:** Granose Foods Ltd. Div. of Haldane Foods Ltd.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: 0908 211311.

**Date of Introduction:** 1992 November.

**Wt/Vol., Packaging, Price:** 150 gm tubes. Retail for £1.15 per tube.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Spot in SoyaFoods. 1992. Autumn. p. 5. “Vegetarian Cheese Spreads and Patés in a Tube.” These products are “all made from vegetarian cheese [probably cheese made with cow’s milk but without rennet], reconstituted skimmed milk/whey powder, butter, textured vegetable protein and other natural ingredients... This launch coincides with the relaunch of Granose Vegetarian Patés.”

1451. **Product Name:** Cajun Burrito.

**Manufacturer's Name:** Season's Harvest.

**Manufacturer's Address:** 52 Broadway, Somerville, MA 02145. Phone: 617-628-1182.

**Date of Introduction:** 1992 November.

**New Product–Documentation:** Talk with Ademar Reis. 1993. Nov. 29. He introduced this consumer retail product in Nov. 1992. He makes a whole line of vegetarian burritos, but this is the only type that contains soy. He uses TVP from ADM.

1452. **Product Name:** Realeat Vegebangers (Frozen Frankfurters) [Meaty Style, or Vegetable Style].

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 908 211311.

**Date of Introduction:** 1992 December.

**Wt/Vol., Packaging, Price:** 1 lb and 1½ lb bags. Retail for £1.39 and £1.99 respectively.

**How Stored:** Frozen.

**New Product–Documentation:** Spot in SoyaFoods. 1993. Winter. p. 5. “More Vegebangers from Realeat.” Two new varieties of frozen Vegebangers were launched in Dec. 1992 by Haldane Foods. Both contain no meat, but the Meaty Style products have a more meaty flavor, being made from a seasoned blend of vegetable proteins.

1453. **Product Name:** [So Good Soya Frutty {Soy Yogurt} (Peach & Passion Fruit, Strawberry, Black Cherry)].

**Manufacturer's Name:** Genice Foods Ltd.

**Manufacturer's Address:** Made in Clywd, Wales, UK. Distributed in Sweden, Norway, and Denmark (see below).

**Date of Introduction:** 1992.

**Wt/Vol., Packaging, Price:** 120 gm plastic cup.

**How Stored:** Shelf stable, 4-month shelf life at room temperature. Refrigerate after opening.

**New Product–Documentation:** Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 10. In late 1992 the So Good line was launched in Sweden, Norway, and Denmark using, in part, the pre-existing Granose distribution network. One product, named So Good Soya Frutty, was sold to all 3 Scandinavian countries. The label was in Swedish and the names of all 3 distributors were on it. The distributors are: (1) Kung Markatta AB, Hjalmsberg, S-705 95 Orero, Sweden (this is Genice’s second largest export market); (2) Alternative Mat A/S, AVD Import, Kubben, 2150 Arnes, Norway; (3) Grön Distribution, Hoje Gladsaxe Torv 2, 2860 Soborg, Denmark (Genice has not dealt with Grön since 1992).

1454. Barnard, Neal D. 1992. A physician’s slimming guide: for permanent weight control. Summertown, Tennessee: The Book Publishing Co. 79 Illust. Index. 22 cm. [4 ref]

• **Summary:** This is a plant-based (vegan) program for weight loss and increased energy. It calls for as little salt, oil, and sugar (SOS) as possible. One should eat plenty of complex carbohydrates (which are found only in plants) and a moderate amount of protein. Oils and fats contain twice as many calories per gram as carbohydrates or protein (9 vs. 4). Examples of complex carbohydrates are brown rice, whole-grain bread or toast, oatmeal, kernels of corn, black beans, potatoes, etc.

“The rate at which your body burns calories is called *the metabolic rate*.” Different people have different metabolic rates. Dieting slows down your metabolism and makes it harder to lose weight. Therefore dieting is not a good approach to losing weight. A better way is to have a good diet and get plenty of exercise. One should also aim to loose excess weight slowly—which helps to keep it off.

This is not a cookbook; it contains only two recipes. The only soyfoods called for in this book are soymilk and TVP®. Address: M.D., President, Physicians Committee for Responsible Medicine, Washington, DC.

1455. Broehl, Wayne G., Jr. 1992. Cargill: Trading the world’s grain. Hanover, New Hampshire, and London: University Press of New England (Dartmouth College). xx + 1007 p. Illust. Index. 24 cm. [500+\* ref]

• **Summary:** Cargill, one of the world’s great multinational commodity trading companies, is one of the largest corporations in the USA, with annual sales of over \$44 billion. It is the largest privately owned U.S. company, with almost all ownership in the hands of the Cargill and MacMillan families. In descending order of size in this industry are Cargill, Continental Grain, Louis Dreyfus, and Bunge y Born. All are privately owned, each by a dominant

family. Only Cargill has been in the USA from its birth. Though it is now 125 years old, Cargill has had only five CEOs (p. xvii).

The soybean arrives: Cargill purchased and stored some soybeans in 1935 and continued the same small transactions in 1936, though none remained in inventory at the year's end. Cargill began to take notice of soybeans in mid-1936 when the Chicago Board of Trade initiated a soybean futures contract as a new source of revenue. Cargill leadership expressed little interest in soybean processing, which was already in the hands of "big fellows" like ADM, Staley, Allied Mills, Glidden, and Spencer Kellogg & Sons (p. 447).

Cargill's work with soybeans is discussed extensively, starting with Chapter 15, "Cargill in World War II" (p. 617+). In 1942 President Roosevelt persuaded Congress to pass price-control legislation, creating the powerful OPA, the Office of Price Administration. It had a dramatic effect on U.S. agriculture. Meat and poultry were increasingly in short supply, so feed grains took priority over food grains. Corn and even surplus wheat was used as feed. Labor shortages in agriculture led to more mechanization and fertilizer use rose dramatically (p. 618). Soybeans became a key ingredient in animal feeds, and Cargill began purchasing in larger quantities. The OPA ceilings on soybean meal were so low that it was much more profitable for crushers to put their meal into their own feeds, rather than sell it. Against this background, in Jan. 1943, Cargill announced the purchase (for \$300,000) of a soybean mill and feed plant, the Iowa Milling Co., in Cedar Rapids, Iowa [from Joe Sinaiko]; the initial push came from Julius Hendel.

Then in Oct. 1943 additional soybean crushing capacity was acquired through the purchase of the Plymouth Processing Mills (capacity: 75 tons/day of soybean meal) of Fort Dodge, Iowa.

Later that same month another soybean crushing plant was purchased—the Illinois Soy Products Company (soybean crushing capacity: 3,900 bushels/day) of Springfield, Illinois. These were small facilities and none used solvent extraction, but they represented a beginning; soybean crushing soon became a major part of for Cargill as the company worked to diversify (p. 665-66).

In May 1945, again with Hendel's leadership, Cargill purchased the Honeymead Products Co. in Cedar Rapids, Iowa. It had a feed plant with a capacity of 300 tons/day and a soybean solvent extraction plant (designed by Allis-Chalmers Co.) which initially had a capacity of 50 tons/day, expanded to 130 tons/day. Cargill called Honeymead their "West Side Plant"—but they forgot to buy the Honeymead name. The Andreas family sold the company because Dwayne Andreas had been classified 1-A in the draft (the highest priority for being drafted). The Andreas family owned the property and Dwayne agreed to join Cargill. Cargill asked the draft board for and received a 3-month deferment. At the end of that time the Pacific war was

over. Andreas soon became a vice president of Cargill, the youngest in the company's history. "He thought like an owner" (p. 682, 687). Later, other Andreas family members resurrected the Honeymead name for their new oilseed crushing plant at Mankato, Minnesota (p. 683).

Rocky reconversion after World War II. During World War II there was a major increase in scientific livestock feeding, using nutritionally balanced feeds—in response to the shortage of all feeds. Cargill already owned the profitable Blue Square feed operation, but they wanted to expand it. So in Oct. 1945 Cargill purchased (for \$1.6 million) the entire capital stock of Nutrena Mills Inc., a leading Midwest feed manufacturer with three mills (Kansas City and Coffeeyville [Coffeyville], Kansas; and Sioux City, Iowa) and a combined capacity of 23,000 tons/month. Nutrena, now 25 years old, was one of the industry pioneers in both feeds and feed sacks (p. 688).

During World War II, the all-out agricultural production in the USA led to record output. Total production of soybeans increased from 78 million bushels in 1943 to 193 million bushels in 1945. Yet Cargill and others had great difficulty in obtaining the soybeans they needed. Gilbert C. Fite describes the agricultural revolution that took place during the war (p. 695-96). There was great pressure on government price administrators to loosen or remove controls; when they finally started to do, in May 1946, inflation followed. Julius Hendel wisely remarked: "The cure for high prices is high prices." The ceiling price on soybeans was not removed until 17 Oct. 1946 (p. 703).

Dwayne Andreas has a good idea and receives a \$10,000 bonus (p. 704). Nutrena and Honeymead cause organizational problems. Centralization vs. decentralization. Tension between the Grain Division and the Oil Division—especially over soybean purchasing. The Alfred P. Sloan model of decentralized management at General Motors is widely imitated. By the early 1950s Cargill was decentralized (p. 707-712).

Chapter 17, "Korean War and Tradax beginnings." After World War II came the cold war, Truman Doctrine, NATO, and the Korean War. In agriculture, the New Deal policies of the 1930s continued essentially unchanged (p. 737-38). In 1950 Cargill purchased a new oilseed / soybean processing plant (capacity: 700 tons/day) in Chicago for more than \$2 million. By 1951 the Oil Division was renamed the Vegetable Oil Division (p. 745). The Cargill Oats Case of May 1954. In Oct. 1954 ADM pleads guilty to CCC allegations. Selling oat futures vs. soybean futures (p. 761). 1952—Dwayne Andreas "resignation" after his unauthorized trip to Russia in April. He went on to an outstanding career, first with his family's company, then as an executive with the company that bought it, the Grain Terminal Association (later called Farmers Union Grain Terminal Association), and finally as CEO and a major owner of ADM. He was replaced by M.D. "Pete" McVay as head of the Oil Division (p. 762-

64).

1954—Cargill begins international trading with the move to Montreal of Kerrgill, a subsidiary of Cargill Internacional. It was soon renamed Tradax Canada Ltd. Cargill's headquarters on Lake Wayzata, Minnetonka, Minnesota (p. 774-75).

1953 Jan.—Dwight D. Eisenhower is inaugurated as president. In July 1953 he settled the Korean war. Ezra Taft Benson advocates a new farm policy, a return to a free market economy and flexible price supports (p. 776-77). 1955 Sept.—Julius Hendel retires. He was considered the “dean of grain trading.” He had pioneered Cargill's grain laboratory in the 1920s, introduced scientific mixed feeds in the 1940s, and designed Cargill's renowned training program. (p. 782-85).

Eisenhower's second term in office (1956-60) is an era of farm surpluses. The P.L. 480 or “Food for Peace” shipments were an “heroic attempt to insulate some of this production from commercial channels.” They totaled over \$1 billion each year from 1956 into the 1960s. In 1959 Cargill had sales of \$1.089 billion, making it the 34th largest company in the USA (p. 786-87). The Chase Manhattan Bank's consulting report and analysis of Cargill is blunt, credible, very positive but with many important suggestions for change; the soybean was the star of the Oil Division (p. 868-71). Summary of Cargill, 1963-1991 (p. 874-75).

Photos show: (1) Dwayne Andreas ca. 1950 (p. 682). Address: Dartmouth College, Hanover, New Hampshire.

1456. Cardenas, Danilo C.; Legaspi, Benjamin M. 1992. The status of soybean production and utilization in the Philippines. In: Increasing Soybean Production in Asia: Proceedings of a Workshop. 1992. Bogor, Indonesia: CGPRT Centre. 187 p. See p. 119-35. Held 21-24 Aug. 1990 at Phitsanulok, Thailand. [8 ref]

• **Summary:** Contents: Introduction. Production situation: Production trends, economics of soybean production, price trends, marketing of soybean. Philippine foreign trade situation: Soybean imports, soybean exports. Soybean utilization. Government policies/programs affecting the industry: Policies, programs. Major problems besetting the local soybean industry. Conclusions.

The soybean, also known locally as “utao,” has become an increasingly important economic crop in the Philippines. Yet in 1987 (the latest year for which figures are given) only 5,698 tonnes (metric tons) were harvested from 6,490 hectares, having a value of 45,169,000 pesos. This represented only 0.02% of the total Philippine quantity of agricultural production, and only 0.05% of total farm area and value. Philippine soybean production peaked at 11,466 tonnes in 1982. Most of the country's soybeans are grown in the southern Mindanao region (72.1%), followed by northern Mindanao (10.0%) and central Mindanao (9.4%). Imports of soybeans and products have steadily increased

since Philippine farmers do not produce enough soybeans to meet local demands; the value (FOB US\$) rising from \$61,989,000 in 1980 to \$127,981,000 in 1988. The main imports are soybean meal (accounting for 86.87% of total import value), refined soybean oil (5.19%), soybeans (4.18%), and crude soybean oil (22.3%). Before March 1986 the National Food Authority (NFA) had the sole authority to import soybeans, but with the introduction of the trade liberalization program, importation has reverted to private firms. In 1989 the country's major sources of imported soybeans were China (which supplied 42% of total imports), Brazil (34%), and the USA (15%). Exports, which are negligible, have grown from \$136,000 to 1,123,000 during the same period. The main exports are soy sauce (accounting for 91.03% of total value), salted and fermented soybeans [fermented black soybeans] (*tausi*, 3.34%), and soybeans (2.65%).

Table 7 lists and describes “Soybean-based food products popularly used in the Philippines.” Fermented products include soy sauce, salted and fermented soybean (*tausi*), tempe (tempeh), soybean paste (miso), and soybean curd (fermented tofu cubes; a soft cheese-type product with a salty but mild flavor, eaten as a relish or cooked with meat and vegetables). Non-fermented products include soybean sprouts (*toge*), soybean cheese (*tokwa* [tofu]), Geerlings cheese (taho, soymilk curds; a sweet dessert or snack food for children), soybean milk, and roasted soybean (soy coffee).

“In terms of food usage, Filipinos, unlike other Asians, have not developed a taste for soya-based products... Most of the soy products available in the market are either made at home or in family-operated shops.

“It is interesting to note from the report of Co (1987) that small scale food processors engaged in manufacture of taho and tokwa preferred locally grown beans to imported ones. They claimed that local soybeans have a distinctive ‘fresh’ quality which imparts a finer and smoother texture to their finished products providing a longer shelf life than that produced from imported beans.

“Recently, several developments in the local economy have signaled a revival of interest in the use of soybean as food. In 1980 Nestle Philippines Incorporated began commercial production of powdered soymilk products and later a baby soya-cereal food formulation and a soya-based meat extender which is produced primarily for export to other Asian countries. Today Nestle Philippines, in co-operation with the Land Bank of the Philippines, the Regional Offices of the Department of Agriculture and PCARRD is encouraging local production of soybean and had adopted a no importation policy.

“Some years ago, the use of TVP also gained a permanent foothold in the local processing industry. It is used in the manufacture of ground meat products and as a meat extender. Almost all TVP used in the country is

imported except for the locally manufactured full-fat TVP which is being produced by the Vitarich Corporation, one of the biggest feed millers in the country. The company has built a full-fat soya processing plant capable of utilizing 900 MT [metric tons] of soybean per month. Unfortunately, all its raw soybean requirements are imported from the U.S. and China.

“Soybean flour, protein concentrate and protein isolates are the newest soya-based products and are now used extensively in the country for the formulation of meat emulsion products. All raw materials are imported and there is no local manufacturing capability at present.”

“Programmes: As early as the 1970s, the government tried to involve itself to some degree in boosting national soybean output, despite the low priority it accorded to soybean in general. It was an involvement borne out of an urgent need to meet the growing requirements of the local feed milling and livestock industry, rather than of a need to address the high incidence of malnutrition among Filipinos. Accordingly, the government launched a number of programmes to improve soybean production, most of which failed to achieve their goals. At present, only the PCARRD-coordinated Soybean Pilot Production Programme continues to function. This programme was initiated in late 1983.” Address: 1. Supervising Science Research Specialist, Philippine Council for Agriculture, Forestry, and Natural Resources Research and Development (PCARRD); 2. Dep. of Agriculture Bureau of Plant Industry, Los Baños National Crop Research and Development Centre. Both: The Philippines.

1457. Cox, Peter. 1992. Why you don't need meat. Revised ed. London: Bloomsbury Publishing Ltd. [ix] + 278 p. Foreword by Linda McCartney. Illust. Index. 24 cm. [373\* ref]

• **Summary:** A convincing argument against meat after the advent of Mad Cow Disease in the UK.

Contents: Acknowledgements. Foreword by Linda McCartney. 1. Everything you're not supposed to know. 2. Apocalypse cow! 3. Pigtales. 4. The A to Z of good health. 5. Greener cuisine. 6. Everything you really need to know. 7. The composition of vegetarian foods.

Table of food groups for a vegan diet (p. 171), designed by Dr. Michael Klaper; the section on Legumes in this table mentions “Soy products (milk, tofu, tempeh, Textured Vegetable Protein, etc.). Recipes include: Scrambled tofu (with “1 x 297 gm {10½ oz} carton tofu, drained,” p. 189). Tempeh marinade (p. 190). Tofu marinade (p. 191-92).

In Chapter 6, the subsection on beans states that they “are a marvelous source of protein, fibre, iron, the B vitamins and, when sprouted, vitamin C... beans can either look like beans or they can be transformed into one of the many delicious and nutritious bean products which supply the food value but not the same beany experience. Among these are

soya milk, tofu, TVP (textured vegetable protein), tempeh, soya yogurt and ice cream, marinated tofu and soya cheeses of every description.

“Second, beans can be a musical vegetable if you don't follow the three golden rules of cooking them:” (1) Let them soak overnight in water. (2) “Don't cook beans in the soaking water, and never cook them without rinsing them.” (3) Don't under-cook beans. They should be soft enough to squash against the roof of your mouth using normal pressure from your tongue. Address: First Chief Executive of the Vegetarian Society of the UK, England.

1458. Brandenburg, Fred. 1993. Update on soybean crushing in Canada (Interview). *SoyaScan Notes*. Jan. 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In recent years, Canada's crushing industry has undergone an extensive rationalization and American companies have become major players. ADM has a crush plant in Ontario which crushes canola and soybeans, and a crushing plant in Alberta which crushes canola. Central Soya is now a partner in CanAmera, which has crush plants on Ontario, Manitoba, and several other places.

In Aug. 1984 Central Soya Co. bought Victory Soya Mills (built in 1944) in Toronto, then shut it down in March 1991. The buildings have been standing inactive for several years on the Toronto waterfront. Central Soya would like to have the property rezoned as residential, tear down the mill buildings, then sell the property and make a lot of money. They would use that money to upgrade their plant in Hamilton, Ontario, which has both a soybean crushing line and separate canola crushing line.

What used to be the CVOP soybean crushing plant in Hamilton (formerly owned by Canada Packers, Inc.) was sold to Central Soya Co., Inc. in Sept. 1989. The plant came to be named Central Soya of Canada Ltd. In March 1992 Central Soya of Canada Ltd. and CSP Foods formed CanAmera Foods, a joint venture, combining their crushing and refining operations, and together bought all the crushing and refining interests of Maple Leaf Foods (formerly Canada Packers Inc., including refineries in Toronto and Montreal, and a crush plant and refinery in western Canada). CSP had several crush plants. Address: Secretary/Manager, Ontario Soybean Growers' Marketing Board, Box 1199, 175 Keil Dr., S., Chatham, ONT, N7M 5L8, Canada. Phone: 519-352-7730.

1459. **Product Name:** Organic Textured Soy Flour [Chunks, Pieces, or Bits].

**Manufacturer's Name:** Great Lakes Organics. Renamed Organic Processing Corporation.

**Manufacturer's Address:** 1430 Clifton Rd., Xenia, OH 45835. Phone: 1-800-647-2326.

**Date of Introduction:** 1993 February.

**Ingredients:** Organically grown soybeans.

**Wt/Vol., Packaging, Price:** 25 lb bags.

**New Product–Documentation:** Talk with Stuart Sapadin of Atlanta, Georgia. 1992. Sept. 18. This company (whose ad he saw in *Vegetarian Times*) makes a TVP-like product from expeller pressed, organically grown soybeans. No solvents are used in the extraction process. Note: This is the same phone number as that owned by Bill Bolduc of Organic Processing Corp., 1430 Clifton Rd., Xenia, OH 45385.

Talk with Jim Leuba who grows soybeans organically near Dayton, Ohio. 1993. Feb. 12. He sells some of his soybeans to Bill Bolduc for his organic TVP—which is on the market. Bolduc also brokers some of Jim’s organic soybeans to ADM; they are used to make tofu in England by a company owned by ADM.

Talk with Bill Bolduc, president of Organic Processing Corporation, 305 N. Walnut St., Yellow Springs, Ohio 45387. 1993. Aug. 16. Bill just returned from visiting with his cousin David Bolduc, who owns a bookstore in Boulder, Colorado. Bill’s business is going well. Originally he wanted to call his product “Organic TVP” but ADM (which owns the TVP trademark) would not agree to let him use or license this term. So he has decided to call his product Organic Textured Soy Flour. The term “hexane free” appears on the label. Bill thinks (and Soyfoods Center agrees) that this is the first commercial organic textured soy flour made without hexane solvent processing. Another company makes the product for him; the first production run was on 15 Jan. 1993, yielding 20,000 pounds. At his warehouse, his company does the screening into 3 sizes: chunks (the biggest, thumb-nail size), pieces (the size of a kernel of corn), and bits (the smallest, granules). He will be sharing a booth with several other Midwest natural foods at the NFM show on the East Coast this fall. The product is on the market and interest in the product has been outstanding. He has not been able to produce enough to supply some of the larger accounts that want to handle the product. But he expects to be able to have sufficient capacity in September/October. He is waiting for a twin-screw extrusion cooker right now. Most of the product is sold retail. Stow Mills (in Chesterfield, New Hampshire) is the product’s largest distributor. They sell it in bulk to natural- and health food stores in the northeast. Some is also sold wholesale to Little Bear / Westbrae, which uses it in their new burritos-brand Vegetarian Chili; they label it as Textured Organic Soy Flour.

1460. Murphy, Patricia A.; Wang, Huei-ju. 1993. Total genistein and daidzein content of soy foods. *FASEB Journal* 7(4, Part II):A742 (Abst. #4283).

• **Summary:** “The major soy isoflavones, genistein and daidzein, inhibit tyrosine protein kinase, are weakly estrogenic, have moderate antioxidant activity and may have an anticarcinogenic effect by preventing oxidative damage.” Heat processing changes the distribution of glucosides but not the total isoflavone content. Twenty commercial soyfoods

and 10 institutionally prepared foods were evaluated for isoflavone content by HPLC photodiode array detection. Total genistein and daidzein ranged from 20 to 1,550 ppm and 0 to 750 ppm (dry weight basis), respectively. High protein soyfoods, such as whole dry soybeans, textured soy flour (TVP), tempeh, and soymilk yielded total isoflavone contents that may provide an anticarcinogenic dose (0.7 to 2.0 mg per gm of food). Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ., Ames, Iowa 50011.

1461. Shurtleff, William; Aoyagi, Akiko. comps. 1993. *Soya in Canada—Bibliography and sourcebook 1855-1993: Detailed information on 780 published documents (extensively annotated bibliography), 221 commercial soy products, 115 original interviews (many full text) and overviews, 93 unpublished archival documents.* Lafayette, California: Soyfoods Center. 305 p. Subject/geographical index. Author/company index. Language index. Printed March 9. 28 cm. [1098 ref]

• **Summary:** This is the most comprehensive book ever published about soybeans and soyfoods in Canada. Its scope includes all aspects of the subject from 1855 to the present. It is also the single most current and useful source of information on this subject, since 90% of all records contain a summary/abstract averaging 164 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 39 different document types, both published and unpublished; every known publication on the subject in every language—including many in French; 115 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of soybeans and soyfoods in Canada from their earliest beginnings to the present.

Compiled one record at a time over a period of 17 years, the bibliographic records in this book feature (in addition to the typical author, date, title, volume and pages information) the author’s address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author’s first name (if given).

It also includes details on 221 commercial soy products, including the product name, date of introduction, manufacturer’s name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete

subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

1462. *SoyaFoods (ASA, Europe)*. 1993. Profile of Haldane Foods. 4(1):6-7. Winter.

• **Summary:** “The Haldane Foods Group is the largest specialist health food manufacturer in the UK and Europe and has a long history of producing soya foods. With 12 companies in the Group, Haldane has grown steadily over the past 10 years, acquiring new companies to complement its product range.

“Its parent company, Archer Daniel Midlands of Decatur, Illinois, is the world’s largest soya processor and was the first company to patent the process for producing textured soya protein. Seven years ago, ADM’s British arm, British Arkady bought its biggest customer, Direct Foods of Petersfield, Hampshire, known for its Protoveg brand. It then went on to acquire Haldane Foods of Leicester, which produced dry mixes and burger mixes and from which it took its name.

“More acquisitions followed including Vegetarian Feasts, Vegetarian Cuisine, Realeat Foods, Genice Foods, Saucemasters, Snackmasters, Granose Foods, Regular Tofu, Unisoy Milk ‘n’ By-Products, and The Dietburger Company.

“The company’s headquarters is now in Newport Pagnell the site of Granose Foods, but there are five factories in all. The site at Leicester continues to produce dry goods, soya milk is produced at Stockport, vegetarian margarines, ices and yogurts are produced at Wrexham, North Wales, snack meals and sauces in Newport, South Wales, and frozen and canned products at the Granose Factory in Newport Pagnell.

“However, it was the acquisition of Granose Foods which had a major impact on the business. Granose, or the London Health Company as it was then called, was founded 100 years ago by a group of businessmen who were members of the 7th Day Adventist Church. The main products were wheat cereals, health biscuits and nut-based foods. Even today many of the staff at Newport Pagnell are still committed 7th Day Adventists and the factory still works to a pattern to accommodate their Sabbath, which is a Saturday.

“A total of 200 people work for Haldane. All the factories are animal free and many products are Vegetarian Society approved. The company has recently attained BS 5750, the British Standards Institution Certificate of Quality Assurance (ISO 9000). Stock control is fully computerised with all incoming raw materials, factory production and dispatches from warehouses carefully recorded and controlled using hand-held ‘Psion’ units to read bar codes.

“As a result of its acquisitions Haldane’s product range is extensive with over 200 products. But the core of the business is vegetarian with soya products featuring high on the list. One of the company’s best selling product is Sosmix, a dry sausage mix based on textured vegetable protein, which is suitable for vegetarians. Sosmix contains no cholesterol and is free from artificial colours and preservatives and is available in three varieties, plain, Country Herb, Cheese and Onion. Over 1 tonne of Sosmix is sold every day, equivalent to over 12 million sausages per year.

“Last year Haldane launched over 50 new products, including two new Realeat frozen VegeBangers® Meaty and Vegetable Style. The Meaty Style VegeBanger® is a seasoned blend of vegetable proteins whilst Vegetable Style is a blend of fresh vegetables. These products meet the needs of different vegetarians. Both are completely meat free and carry the Vegetarian Society seal of approval.

“The new VegeBangers® owe part of their success to the installation, at the Newport Pagnell site, of a new sausage making machine capable of producing up to 50 million vegetarian sausages per year. This machine, of which there are only 10 in the world and only two in the UK, can produce skinless sausages which have the body and texture of a normal sausages. Normally, skinless sausages are made in a skin or casing, which can be animal based or synthetic, and which is then removed after cooking, but this machine does not need skins or casings. The sausages are moulded into shape under pressure and are then forced out of the machine before freezing. Up to 8000 sausages can be produced per hour. Peter Fitch, who has been Haldane’s General Manager and guiding force since the very beginning is proud of the company’s achievements and sees a bright future.

“Some time ago we recognised that there are two types of vegetarians—the moral and ethical ones and those concerned with healthy eating. The purists prefer products which do not mimic meat, whilst others want a tasty alternative to traditional meat meals. Fears about BSE [bovine spongiform encephalopathy = mad cow disease] and other aspects of animal farming mean that the trend to vegetarian alternatives is likely to continue. We hope to meet that need and we are keen to expand more into the mainstream grocery market, without compromising our principles’

“Haldane appears to have no shortage of ideas for new products. Last year also saw the launch of a new Light Soya Milk and Soya Creem and Hi-Fruit Soya Yogerts. About two thirds of its products are sold in specialist health food shops as branded products, and the remaining one third, often own label, in supermarkets. In Europe, Haldane has a limited presence at the moment, selling soya yogurts in Spain, and a small range in Scandinavia, France and Holland.

“For further information please contact Mr Peter Fitch or Sarah Batten, Haldane Foods Group, Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, UK, tel: (+44) 0908

**HALDANE FOODS GROUP - SOYA PRODUCT RANGE****DIRECT FOODS**

**Protoveg dry mixes:** Beef Style Chunky, Beef Style, Mince, Natural Mince Unflavoured, Smokey Mince Snaps

**Protoveg Menu:** Sosmix\* (3 varieties), Burgermix\*

(2 varieties), Sizzles (smokey bacon flavour), Minced Soya and Onion Mix, Soya Bolognese Mix, Soya Mince with Vegetables, 5 Grain Burgermix\*, Jumbo Grills, Chicken Style Savoury Bake, Nut & Grain Bake, Lentil & Bean Bake, Mushroom Bake, Nutburger

**Healthy Snax, Wholemeals (3 varieties)**

**UNISOY**

Soya Milk (2 varieties), Soya Yogart (3 varieties)

**HERA**

**Meals (10 varieties eg vegetable curry, Vegetable Chilli)**

**Soups (Farmhouse Vegetable and Goulash)**

**REALEAT**

**Dry mix:** VegeBurgers® (3 varieties), VegeBangers® (2 varieties)

**Frozen foods:** VegeGrills®, VegeBangers® Economy, VegeBangers® (Meaty Style and Vegetable Style)

**GRANOSE**

Soya Margarine, Soya Milk (4 varieties including Light and Calcium Enriched), Soya Creem, Soya Yogert (4 varieties), Hi-Fruit Yogert (3 varieties).

**Frozen foods:** Nut & Sesame Burger, Soya Frankies, Vegetable Grills, Vegetarian Sausages, Sweet Sensation Ice Cream (4 varieties), Vegetable Chilli, Toad in the Hole

**Dry mixes:** Nut Roast Mix\* and Cashew Roast Mix\*, Lentil Roast Mix, Brazil Roast Mix, Sausfry.

**Canned products:** Bologna, Mock Duck, Sausalats, Goulash, Ravioli, Soyapro (Beef, Chicken and Weiners), Dinner Balls, Mexican Bean Stew, Chinese Tofu, Bolognese, Chilli, Curry, Parisienne, Italienne, Bourguignonne.

**Spreads:** Hazelnut Paté, Soya Bean Paste, Cheese Spread (tomato and bacon flavour)

**SO GOOD**

**Yogarts (4 varieties)**

**Frozen desserts:** Tofu Dessert (2 varieties), Strawberry Bombes, Tofu Delight Bars.

1463. *SoyaFoods (ASA, Europe)*. 1993. Exhibition report [SIAL in Paris]. 4(1):7. Winter.

• **Summary:** “SIAL in Paris is always one of the biggest and best attended food product exhibitions and 1992 was no exception. Soya foods were well represented and some new products were launched including Celia’s new *Biostar Blinis* pancake mix; a new soya and rice dessert from Laiterie Ladhuie, frozen soya based meat analogues from Phytikos, Germasoja from Abbaye de Sept-Fons (see p. 5 for details of these products).

“Other companies presenting soya foods included: Sojinal, France—a range of soya products including soya paste, milks, desserts, meals; Zonnatura, Netherlands—soya milks, desserts and vegetarian meal replacements; Tonputs, Netherlands—frozen Soyaschnitzel, Soyaburger and Soyasausage; Bakker Lekkerkerk, Netherlands—the *Vivera* range of chilled and frozen meat alternatives; l’Abbé Bisson, France—biscuits with soya, raisins or chocolate; Vitagermine, France—Soya bars and biscuits; Yeo Hiap Seng Ltd. Singapore—Soyasauce, soya drinks and salted soya beans; Minerve SA, France—*Soja Plaisir* range of soya based sauces, bean sprouts and bean sprout salads; Céréral, Wander, France—Soya based drinks, desserts, pastas, sauces, Pains Grillé, biscuits; FPS, France—vegetable protein ingredients; Distriborg—soya drinks, desserts, sauces, meals, biscuits and pastes; and Tivall Vegetarian Food Products, Israel—vegetarian meat alternatives.

“Dusseldorf, Germany was the venue for FIE 92. Of the 451 international companies present several major soya protein companies exhibited including: Solnuts, Netherlands—showing their new range of custom-made food ingredients; Worlée GmbH, a German company, specialising in dried ingredients and soya products; Edelsoja, Germany—soya protein ingredients; Dutch Proteins and Services, Netherlands—soya protein products; Protein Technologies International, Germany—isolated soya proteins; A.E. Staley Manufacturing Co., US—Gunther range of soya ingredients; Mandarin Soy Sauce, Inc., US—liquid and dried soyasaues; ADM Ingredients Ltd., UK—flours, flakes, grits, concentrates, isolates and textured products; Solbar Hatzor, Germany—*Contex* textured soya concentrates; Celia Technologies, France—dehydrated soya milk; GMB Proteins, UK—Bontrae textured soya proteins; Central Soya Aarhus, Denmark—soya protein concentrates; Cargill, Netherlands—defatted soya flours, grits and textured soya proteins; Alternative Food Ingredients (AFI), France—soya proteins and fibres; Sogip, France—soya flours, concentrates and textured soya products; Stern, Germany—full fat soya flours, grits, concentrates,

isolates, textured proteins, soya bran, full fat soybean snacks (expanded with hulls) and *Sternpur* lecithin.”

1464. Pinault, Pascal. 1993. Re: Work with tofu and tofu products in Martinique. Update on soyfoods in the Caribbean. Letters to William Shurtleff at Soyfoods Center, April 2 and 27. 4 p. and 5 p. Handwritten, with signature. Plus list of his products and prices, resumé, and photos of his home, equipment, and Morne-Vert.

• **Summary:** Pascal saw and ate tofu for the first time in May 1980 when he was living in India, while visiting some friends in Poona (Maharashtra). He bought 1 pound of tofu at a tofu shop but he is not sure if they were making the tofu in a back room of the shop or at some other place. “I suppose this tofu manufacturing plant in Poona was an offshoot of the Rajneesh Ashram, which was very active at that time and place.” Pascal lived in Goa, south of Bombay, from 1976-1980; there he baked bread leavened with palm wine. He learned most of what he knows about soyfoods while living and working, mostly in health food stores or health farms (see attached resume), in the Catskill Mountains area of New York from 1981 to 1987. There he learned to make tofu for his personal use (not for sale) by adding lemon juice to hot soymilk then pressing it in a cloth. During two other trips to India in 1982-83 and 1986 he found and bought chunks of a dry soy protein product resembling TVP which must be cooked in water. He found this soy protein product very interesting for a country like India which has such a shortage of protein, however the price was high—about 10 rupees/kg compared with 2½ rupees/kg for wheat.

In Jan. 1988 he and his family moved to Martinique. “I was compelled to make tofu for myself and my family because there was no other vegetable protein available in Martinique, except for this chunky TVP. I was still using lemon juice instead of nigari and making 2 pounds of tofu at a time. Then in 1991, as I started to import Japanese food products from France (umeboshi, seaweeds, amasaké, etc.), I ordered a small booklet on making tofu using nigari. Plus I had an excellent book (*Les Aliments Fermentés Traditionnels*, by Claude Aubert [1985]) in which I found recipes and nutritional details on many foods like tofu, okara, sufu, tempeh, amasaké, and, in general, all the foods subjected to lactic acid fermentation. In Martinique he has been making an average of 12 to 20 pounds of tofu every week since Oct. 1991 when he moved with his family to mountainous Morne Vert. Occasionally he makes larger amounts for a health food store that sells it or when he caters for groups. His main work is to introduce and popular tofu and soyfoods in Martinique. He would like to expand his tofu and vegetarian “traiteur” (catering) business; his main problem is lack of funds, so he plans to apply for financial aid.

The water he uses to make his tofu comes straight from a spring a mile up in a beautiful mahogany forest. He

also makes sprouts—mostly alfalfa, mung bean, and clover, but sometimes wheat grass. He uses most of the tofu he makes to produce second generation products such as tofu mayonnaise, hot squash pies with miso-tofu topping, tofu & cocoa (or carob) sweet pie, tofu salad, spring rolls (*Nems*).

“I know of two vegetarian restaurants in town (Fort-de-France) that make their own tofu and serve it to customers, but no one in Martinique uses tofu as extensively as I do, thanks to my 7 years’ stay in the Catskill Mountains. In fact, it takes a long time to get people used to tofu in an island where Creole culinary habits are still well-established.”

One of the restaurants that makes tofu is Le Second Souffle, owned by Mr. Gerard Sainte-Rose (27 Rue Blenac, 97200 Fort-de-France, Martinique, FWI 0033. Phone (596) 63-44-11). He has owned this vegetarian restaurant for quite a while now and is mostly interested in reviving the consumption of local fruits and vegetables. “Gerard is the only person in Martinique that I actually saw growing and harvesting soy beans. That was 2 years ago. He had grown soybeans on a piece of agricultural land in Ducos, a town near Le Lamentin, which is not far from the capital city of Fort-de-France (Martinique). He got the soybean seeds from a friend in St. Lucia (a Caribbean island just south of Martinique). Mr. Sainte-Rose harvested only a few soybeans; they were small but healthy looking. He is an organic gardener who sells his products out of his restaurant. He presently has a 6 hectare farm where he grows organic vegetables for his restaurant. Two years ago we had an agreement to set up a tofu plant together in his restaurant. He promised me a job (that’s when I gave him my recipes), and he even started to acquire some material for making tofu. But he never followed through. That’s when I started making tofu by myself, even without the proper material setting. He even bought some of my tofu. I think he would probably be interested in growing more soy, if approached very tactfully, and if he sees financial interest without having to pay a counterpart. He is an interesting person with a lot of good ideas,” but he tends to be hard to work with as a partner.

On St. Lucia one can find the “Soy Place” in Castries, the main town in St. Lucia. They make tofu there, sell it, and cook it for the food-counter [take-out] part of the shop. People grow soy beans on St. Lucia and on Dominica, maybe with help from Canadians. They make tofu and cook it. One “Ital” rastafarian restaurant in Roseau, Dominica, serves tofu pâté and deep-fried, plus “accras” (fried okara dumplings). “In Dominica I heard of two other places where they make and serve tofu. Ital food, which has absolutely nothing to do with Italian food, is the name that the Rastafarians give to the main dish of their mostly vegetarian diet (except for fish). In this main dish, chunky textured vegetable protein is sometimes used in place of fish. “In the Caribbean, including Martinique, Ital food is available in quite a few Rastafarian places, which they call their ‘ghetto.’ These are restaurants open day and night that include reggae ‘sound systems. The

chunky TVP remains the main vegetable protein they use; they also use it in other dishes such as vegetarian cous-cous, etc. They are, in my experience, a bit hostile to tofu, seitan, or other such new foods, at least in Martinique; maybe when it comes from a white person they presume it is not vegetarian.” He has heard of (but has not seen or tasted) smoked tofu dried over a fire using green banana leaves.

Pascal is interested in vegetarianism and macrobiotics. He likes tempeh and would like to start now to make and introduce it to Martinique, where it is totally unknown.

Concerning seitan: “I first started to make seitan in Martinique under the same circumstances as tofu—lack of vegetable proteins other than beans. Not having ready-made gluten, I first made it by washing white-flour wheat dough. That was a very long and messy process but was well worth it. Then I found wheat gluten in the Tama catalogue—the company I mentioned that specializes in Japanese products. That’s when I started to sell seitan—though there is not much demand for it. I learned to make seitan while living in the Catskill mountains of New York from a macrobiotic British girl friend who also taught me how to make amazake.

Update of April 27, 1993. “Since my family sent me tempeh starter (thanks for giving them the address), I have started small-scale production.”

Update of July 17, 1993. “I first made amazaké, in Martinique, in 1992. Even though I gave samples to quite a few people, nobody has seemed to be interested in this product, or to realize the versatility of it! So, I keep ordering it from Tama, packed in glass jars, and make my own once in a while, using ‘Cold Mountain’ starter. I’ve been a bit disappointed by this non-reaction. Amasaké being one of my favorite sweeteners, which I value more than any breakfast or desert cereal. My youngest daughter ate it as a first ‘solid’ food when she was only 5 months old, along with bananas.”

“If you allow me a personal remark about my work in Martinique, I find it extremely ungratifying. The public here is highly suspicious of anything new and foreign. My little business doesn’t allow me to assume my financial obligations, and I sometimes consider going back to the U.S. But I still want to try harder, at least for a few months.”

Note: This is the earliest English-language document seen (Oct. 2010) that uses the term “amasaké” to refer to amazake. Address: “Caplet,” 97226 Morne Vert, Martinique, French West Indies 0033. Phone: 596 55-56-57.

1465. *Grocer (The) (London)*. 1993. Mince alternative to beef up veggie sales—Haldane Foods. April 3. p. 33. \*

1466. Meyer, Edwin W. 1993. Development of the world’s first food-grade soy protein concentrate, Dr. Sidney Circle, and textured soy flour (Interview). *SoyaScan Notes*. April 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The first two commercial food-grade soy protein concentrates were Promax and Promosoy. Promax

was developed by Lou Sair at Griffith Laboratories. Promosoy was developed mainly by Sidney Circle, first noncommercially at the Glidden Co., where it was called Protein 70, since it contained 70% protein on a moisture free basis, and then commercially at Central Soya. Promax and Promosoy were made by different processes. Promax was made by the acidulated water leach process (also called water leach or aqueous acid leach), whereas Promosoy was made by the aqueous alcohol leach process (also called aqueous ethanol leach), which takes out the low molecular weight materials. The latter process, which is only used for making concentrates, was developed at the Northern Regional Research Laboratory by Dr. Allan K. Smith's group after Dr. Circle left the group. Today, virtually all concentrates are still made by one of these two processes. To the best of Ed's knowledge, Promax was on the market 6-12 months before Promosoy. Sid Circle was head of all protein research at Glidden and at Central Soya during the 1950s. Promosoy was introduced on a small commercial basis in about 1960-61; it was first made at a large pilot plant on Laramie Avenue in Chicago, then by 1962-63 at a real food plant at Gibson City, Illinois.

Glidden's uncommercialized concentrate was always called either Protein-70 or Pro-70. That name may have also been used by Circle at Central Soya until shortly before it was commercialized as Promosoy. Circle was at Central Soya at the time the product was commercialized. At the time, Ed was director of Research at Central Soya and Circle was Assistant Director of Research in charge of all research on proteins.

Circle left Central Soya in 1967 to go to Anderson Clayton Foods in Richardson, Texas, where he was Director of Protein Research from 1967-75. Anderson Clayton recruited Dr. Circle with a very attractive offer because they wanted to get into the soy protein business; they wanted a casein replacer to make imitation cheese, but the latter never worked out largely because they could never figure out how to make soy protein melt. Kraft tried to do the same thing. In 1972 Dr. Ralph Sand went to work at Anderson Clayton on the same imitation cheese project.

But there was another reason Circle left Central Soya. Ed had hired a very brilliant and rather independent young protein chemist, Nicholas Catsimpoolas. "If you knew Sidney, you had to be with him for a while to love him. He was a guy who would take your report and dot the i's, cross the t's, and that kind of stuff. He and Nicholas did not get along too well." So Circle (who is no longer living) left of his own volition.

Concerning textured soy protein concentrate: William Atkinson at ADM had developed a good process for texturing soy flour, so Central Soya decided to try texturing their soy protein concentrate, Promosoy. This research was done under Ed's direction because in 1968, Central Soya changed the laboratory over to corporate research and Ed

became director of protein research; prior to that he had been director of all research reporting to a vice president of the Chemurgy Division. L.D. Williams now became director of all research, and he reported to Dr. Windsor W. Cravens, a vice president. Promosoy was successfully texturized using a Wenger extrusion cooker and the resulting product, Response, was launched in 1975. Response went on to become one of Central Soya's two most important soy protein products—the other being textured soy flour. Ed does not feel that textured soy flour will gradually loose ground to and be replaced by textured soy protein concentrates—because of economic factors. The main market for textured soy flour now is as an extender for ground beef; it is also used in chicken products and pizza toppings. It is most widely used in places where you have to eat what you are served—such as school lunch programs and the military. It is not used in retail products.

ADM also makes a textured soy protein concentrate named Arcon T. It is used in their veggie burgers, which Ed has seen promoted on TV.

Ed talked with Walter Wolf recently and he verified that Danny Chajuss was at the NRRL in Peoria, working in Allen Smith's group on soy protein concentrates, for about 3-4 months. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

1467. Meyer, Edwin W. 1993. The soy protein isolate industry and market (Interview). *SoyaScan Notes*. April 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Dr. Meyer, who has been a leading soy protein researcher for The Glidden Co. and Central Soya for about 50 years, would estimate that Protein Technologies International (PTI) manufactures about 60% of the soy protein isolates in the USA and ADM makes the remaining 40%. There are no other significant manufacturers of soy isolates in the USA.

Bob Boyer and Frank Calvert played a major role in convincing Ralston Purina to get heavily involved with soy protein isolates. Before Boyer and Calvert arrived in 1962, Central Soya was America's only manufacturer of edible isolates with their Promine—which was launched in late 1959.

In mid-1980 ADM entered the soy protein isolate business when they bought the Central Soya chemurgy plant at Chicago. They operated it for a few years, then found out that it wasn't profitable to operate in Chicago. So they moved the equipment down to Decatur, Illinois. He has heard that half the equipment was in mothballs. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

1468. Meyer, Edwin W. 1993. The declining role of research at Central Soya and ADM (Interview). *SoyaScan Notes*. April 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Central Soya has downsized their staff a bit, rearranged their research staff, and has become much more

oriented toward sales and much less interested in research. It almost looks as if Ferruzzi and the younger “figure-pushing types” are looking at the company for what cash it can bring in now. It is a very short-term approach, with little thought for the future. Ed’s contract with Central Soya ends on 31 April 1993.

A researcher with decades of experience, Ed feels that ADM has also de-emphasized research; he would not be at all interested in working for them. “They have run roughshod over their research operation until it no longer amounts to much.” The man who heads up their research department, Edward Campbell, is really an oil marketing man—and a very good one. They had a good research at ADM until Frank Horan retired as director of research; William Atkinson was also there during that period. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

1469. McDermott, Ron. 1993. Increasing use of wheat gluten in foods in America (Interview). *SoyaScan Notes*. April 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron sees the use of wheat gluten increasing in the USA. Steve Demos of White Wave is starting to use more gluten. [Note: In June 1989 White Wave launched Meatless Healthy Franks, a tofu hot dog which had wheat gluten as the third ingredient. In Sept. 1990 White Wave introduced Meatless Healthy Bologna, a tofu-based product which also had wheat gluten as the third ingredient. In Feb. 1993 White Wave launched Traditional Style Seitan, in which wheat gluten was the main ingredient.] Ivy Foods also makes some nice gluten products. There are a number of advantages of using wheat gluten and soya together. The wheat gluten often improves the texture and flavor in meat alternatives, while sometimes lowering the fat content of the combination. The soya generally reduces the cost of the combination.

About a year ago ADM (Archer Daniels Midland Co.) purchased Ogilvie (pronounced OH-gul-vee) Mills in Keokuk, Iowa. So now ADM is one of the world’s largest manufacturers of wheat gluten, but most of this gluten is going into the bread baking industry. Address: Vice President Research & Technology, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

1470. Perkins, Dave. 1993. Update on The Drackett Co. (Interview). *SoyaScan Notes*. April 14. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter of April 16.

• **Summary:** The Drackett Co. was organized in 1910; its founder and first president was Philip Drackett. The second president was Harry R. Drackett, who died in March 1948. His son, Philip, became the third president shortly after H.R.’s death. Drackett has a number of significant “firsts” to its credit. Drano was America’s first commercially successful drain opener. Windex created the glass cleaner business. Drackett commercialized the first textile fiber (named

Drackett Soybean Azlon) made from plant proteins. The Azlon Research Facility was probably closed in about 1949. In the “Notes to Financial Statements” section of the 1950 Annual Report, there is confirmation that the Azlon Research Equipment was idle for a year.

The Drackett Co. still exists in Cincinnati, Ohio (as a subsidiary of S.C. Johnson Wax) at 2 locations. The original 5020 Spring Grove Ave. location is an R&D and administrative facility. Dave is located at 201 East 4th St. in downtown Cincinnati, at executive headquarters. The company was sold to Bristol-Myers in Nov. 1965. On 31 Dec. 1992 it was sold to its present owner S.C. Johnson & Son, Inc. (Racine, Wisconsin), whose products include Johnson’s Wax, Pledge furniture polish, Glade air fresheners, and Gel shaving cream. People who would know more about The Drackett Company’s work with soya are Fred Wilson (who came from the Ford Motor Co., was manufacturing vice president for many years, and is now retired in Florida), and Chuck Butke (in R&D, retired in Cincinnati).

Perkins notes that one main reason that Drackett sold its agricultural operations to ADM in 1957 is that they were making a major push to advertise their consumer products (especially Windex and Drano) on television. In 1957 they sponsored a show that became Wagon Train, then after that Maverick. Some of the funds that came from their sale to ADM were invested in this TV advertising program.

The Drackett Co. has both annual reports and a periodical titled “The Drackett Dotted Line” for the period 1936-1957 during which Drackett was involved with soybeans.

Presently S.C. Johnson & Son, Inc. is shutting down all Drackett operations in Cincinnati; before the end of the summer of 1993 there won’t be any Drackett people left in Cincinnati, but about 70 of those people will be “hired” by Johnson to move up to Racine. There haven’t been any Drackett manufacturing operations in Cincinnati since the late 1970s or early 1980s. They had plants at Urbana, Ohio and Franklin, Kentucky—both of which are also being phased out. The name Drackett will cease to exist by about the end of 1993.

Concerning Sharonville and Evendale, Evendale became a city in 1951. When Drackett originally moved into this area in the 1940s, they moved onto property in Hamilton County that was very near Sharonville—the nearest local post office. In reality, it was probably just unincorporated property that officially became the city of Evendale in 1951. Address: Director, Public Relations, 201 East 4th St., Cincinnati, Ohio 45202-4178. Phone: 513-632-1800.

1471. Butke, Charles “Chuck.” 1993. The Drackett Company’s work with soy proteins (Interview). *SoyaScan Notes*. April 15 and May 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** When the Ford Motor Co. sold its soy protein

operations to The Drackett Co. in Nov. 1943, Robert Boyer, Frank Calvert, William Atkinson, and Charles Robinette went to Drackett as part of the deal. Charles (now age 71) started working for Drackett in 1946 in the R&D lab at Cincinnati as a chemist and chemical engineer; he had never worked for the Ford Motor Co. For the first 6 months, Fred Wilson from Ford worked in the same lab with him; then Fred moved out to production. His work was to try to increase the amount of protein extracted from the defatted soybean meal.

There was a man named J.F. Johnson who was a very well educated and competent man. He was one of the first graduates of MIT [Massachusetts Institute of Technology, Cambridge, Massachusetts]. From Procter & Gamble, he came to work for Mr. H.R. Drackett, the company's president. He designed Drackett's original soybean crushing and protein extraction plant on Spring Grove Ave. in Cincinnati. His design and process was different from that used previously by Ford. At this plant Drackett processed soybean oil meal, oil, and Drackett Soybean Lecithin (in 55 gallon drums by 1945). Johnson designed a system whereby the oil was extracted from the soybeans using hexane solvent, and the crude soy oil was run into huge tanks and allowed to settle for 7 days. The good oil was decanted off the top and the foots on the bottom were reprocessed and yielded lecithin. Johnson's good soy oil was good enough to use in home cooking; it was used in consumer sampling but it was never sold commercially.

When Ford's soy protein operations went up for sale, H.R. Drackett thought that his soybean crushing operations and Ford's technology for spinning soy proteins would make a perfect marriage.

First Drackett set up an experimental soy protein plant at Spring Grove, then they made it into a commercial plant next to their soybean extraction plant at Sharonville, Ohio, which was crushing about 55,000 bushels/day of soybeans. This plant was later said to be at Evendale (even though it never moved) either for tax purposes or because city boundaries moved.

Charles had a spiral-bound catalog titled "Drackett Proteins" (which he sent to Bob Griffin at Drackett about 6 weeks ago in response to an enquiry related to Drackett company history) that described the three types of industrial isolated soy proteins made and sold by Drackett when he arrived in 1945—Protein 110, Protein 112, and Protein 220. The first two were low-viscosity proteins of low molecular weight used in paper coatings and sizings. The Protein 220 was used very widely in water-based paints. The names of these proteins were later changed to Ortho Protein—of which there may have been different types. A man named Sam Wise (now deceased) held one of the original patents for making water-based paints. Mr. Drackett sold that patent to a big paint company so that they could get into the water-based paint business.

Drackett made and sold Soybean Azlon (spun soy protein fibers) from about 1946 to 1949. Their main customer was the American Hat Corporation (in Connecticut), which used it in felt hats. Chuck is absolutely certain that the Azlon was sold commercially because he was in charge of approving the shipments to go out. It had very good felting properties. Drackett made about 1,000 to 1,500 lb/day of Soybean Azlon, cut the fibers into lengths of about 2½-3½ inches as desired by the hatter, tied them into loose uncovered bales with cord, and shipped them. There were also two other smaller companies that used Azlon. At the time, H.R. Drackett had suits and hats made for his sales force that contained Azlon.

Drackett also had a small operation that made plastics, and he is sure that they received 1-2 orders for these in the form of 3-foot diameter bases for large industrial fans. Not much of the plastic was sold and Butke thinks this was the only application for which it was sold commercially. He does not recall which company ordered the plastic bases.

In 1949 Drackett shut down its plant that was manufacturing Azlon, quit making isolated soy protein, and also shut down some of its soy protein research. Charles was moved out of soybean research into the laboratory doing research on soybean oil. Bob Boyer left Drackett, then rewrote the patents for making Azlon to make them suitable for production of edible soy protein fibers. When Boyer left, Frank Calvert became director of research for Drackett.

Drackett did considerable work on edible soy protein products—a fact that is not well known. Bill Atkinson's TVP grew out of this work. It started when a group of Seventh-day Adventists from Worthington Foods of Worthington, Ohio (located just north of Columbus, Ohio) came to Drackett (in Cincinnati, Ohio) and asked if Drackett could develop an edible soy protein—because they didn't eat meat. They even gave Drackett some seed money to work on the project. Bill Atkinson took charge of the project in about 1956; he worked with Ed Lankheit (pronounced LANG-kite, he is now age 76 and lives in Park Hills, Kentucky) and a lady researcher. Drackett sold granules all the time. To make these granules they took the flakes from the solvent extraction plant, ran them through an alkali extraction process to extract the protein, which is then precipitated with an acid. It is filtered and dried to make small and hard granules of isolated soy protein. They then used a hot water or steam extraction on the granules to try to get rid of their raw beany flavor—to no avail. So they mixed the granules with beans and chili sauce to mask the beany flavor. The texture of the cooked granules closely resembled that of ground meat, but the flavor was pretty poor. This product was never commercialized, but it did evolve into the TVP developed later by Atkinson at ADM.

In mid-1957 Drackett sold its soybean operations to ADM. ADM wanted Drackett's two industrial soy protein products, Atkinson's work with edible textured soy proteins,

and the other people and expertise in the edible area. ADM also bought Drackett's library, laboratory notebooks, etc. Roger Drackett had hired a group from Ohio State University survey the future potential of soy proteins. They concluded that another 25 years of R&D would be needed to make the soy protein operations financially successful. Drackett took the money from the sale to ADM and invested it in TV ads for consumer products like Windex and Drano.

Charles went to ADM as part of the deal—along with about 9 other researchers, including William Atkinson. Charles worked for ADM at the plant in Evendale from 1957 to 1960. The soybean crushing and soy protein operations were continued as before except that ADM added a new Ortho Protein product—which was less expensive because it was not bleached as much with hydrogen peroxide. Bleaching was one of the most expensive steps in the process. In 1960 Charles left ADM and went back to work for Drackett at their plant in Spring Grove, where they made Windex, Drano, etc. At some point ADM moved the soybean crushing and protein equipment out of the plant in Evendale but he does not know where they took it. They sold the soybean and grain storage facilities to Central Soya, and they sold the many empty buildings to other small industries. Address: 9541 Flick Rd., Cincinnati, Ohio 45247. Phone: 513-741-4289.

1472. Wilson, Fred. 1993. Work with the Ford Motor Company and The Drackett Company on soy proteins (Interview). *SoyaScan Notes*. April 16 and 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Fred started working for Henry Ford in 1933; he was a guide in Greenfield Village and museum, while he was in high school. In 1935 he went to work as a research chemist for Robert Boyer at the research lab. in Dearborn, Michigan. They were extracting oil on a small scale from soybeans, breaking it down into various derivatives, converting it to stearic acid, and also extracting the protein. He also did some work in the soybean fields. He worked on the “plastic car” whose body was made from phenolic resin (made from carbolic acid) plus some soy protein and fiber. In late 1941, Mr. Ford gave Boyer's group part of an air-frame building (about 120 by 250 feet, located opposite the Ford airport) to use as a pilot plant, they expanded their work on spun soy protein fibers. Mr. Ford bought the group some Saca Lowell spinning equipment (pilot plant size), carding mills and frames, felting machines, even looms so they could make carpets and upholstery, mixing the fiber with rayon (mostly) and some cotton. Then he supervised the production of the spun soy protein fibers. Bill Atkinson, an excellent chemist, worked with him, mixed the spinning solution that was run through spinnerettes. Charles Robinette handled the spinning lines. Walter Jenks was a research chemist, who later went to Drackett. But Boyer was the man most responsible for developing the spun soy protein fibers. Ford's

main use of soybeans was for oil. Much of the remaining defatted soybean meal was sold for use in feeds, mostly to the poultry industry.

The group produced about 1,000 lb/day of soy fiber and all of it was used experimentally. Fred does not recall any of this fiber ever being used in any automobiles sold by the Ford Motor Co. But the fiber was used in “service cars” owned by the Ford Motor Co. for its own use. The soy fiber was mixed with sisal (a coarse fiber), then the mixture was formed into a pad and sprayed with latex to hold the pad's form. This material was used as padding under the seats of the service cars. Fred does not recall that this fiber was ever used in any type of upholstery for any cars. During World War II, the spun soy fiber was mixed with rabbit fur and made into experimental hats by some hat company. They did some work with Munsing, which blended the soy fiber with other materials to make underwear. Henry Ford and Bob Boyer each had some of this underwear.

In 1943 The Drackett Co. purchased all of Ford's soy protein operations and Fred went to Drackett at that time. He started as technical supervisor in the soy protein plant at Sharonville (the correct city name; not Evendale) making Ortho Protein, whereas Chuck Butke and Robert Boyer worked at the lab in Cincinnati. The protein was coagulated, drum dried and oven dried, then ground to a fine powder and bagged in 100-lb bags. Some of the Ortho Protein was sold to Sherwin Williams for use in water-based paints. Eventually Fred became superintendent of the entire Sharonville facility (both solvent extraction and protein).

Fred does not recall any of the soy protein fiber (Azlon) ever being sold by Drackett for use in commercial products. Specifically he does not recall its ever being used in commercial felt hats by the Hat Company of America—but he admits that Chuck Butke (who is younger and has a better memory) may well be correct in his recollection that it was sold for use in hats. The problem with the fiber was that it had poor tensile strength, was brittle, and had no elasticity. A large amount of the soy oil that Drackett produced was sold to Procter & Gamble for use in margarine.

Concerning the plastic molding compound and preforms, they were made from phenolic resin with rayon cord plus some soybean fiber (a filler, left over after the soy protein was extracted from soybean meal) and some soybean hulls. The basic concept came from Ford.

When Drackett sold its soybean operations to ADM in 1957, Fred stayed with Drackett and worked on consumer products. ADM ran the soybean crushing plant and protein plant for about 5 years, then they shut it down; they sold the silos and grain storage facilities and cleaning or reconditioning equipment to Central Soya.

After Boyer left Drackett he and his wife, Betty [Elizabeth Szabo Boyer], continued to live in Cincinnati (on North College Hill St.). Then Betty died in Cincinnati [in Feb. 1963]. Fred thinks he remarried later [April 1965] to a

lady [Nancy Ann Miller] who worked in a bank in St. Louis, Missouri.

For more information about Drackett, contact Jean Drackett (Mrs. Roger Drackett) in Naples, Florida, or Cincinnati, Ohio (Phone: 513-561-7418), or their daughter, Cecil (Phone: 513-561-2627). Address: Florida. Phone: 813-784-6560.

1473. Meyer, Edwin W. 1993. Historical notes on textured soy flour (Interview). *SoyaScan Notes*. May 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Glidden Co. sold a textured soybean meal mainly to John Morrell & Co. for use in pet (especially dog) foods—but also to some other dog food companies. Morrell was a big meat processing firm with headquarters in Chicago and a big plant in Ottumwa, Iowa. At that time all dog food was canned (no dry or semi-moist) and this textured soy flour kept a certain amount of its integrity during retorting—so the dog-food people liked it.

The solvent defatted soybean meal was run through an expeller (also called a screw press) to give it texture, then the resulting cake was broken up into bits or grits. No die was used. Glidden's early texturizing process, dating from the late 1930s, was covered by a 1939 patent issued to Arthur Levinson and James Dickinson. These two inventors never got much credit for their invention (in part because they unfortunately did not use the term "texturize") and it played no role in the subsequent technology based on extrusion. If Levinson and Dickinson had used the key term "texturize," their patent would have been "prior art" making it more difficult for people to subsequently be issued patents on extruded materials or texturizing. An expeller, which was designed to press the oil from oilseeds, is less well suited to texturization than an extruder—which has no openings along the barrel and which gives more sheer working and alignment of the protein to create that meatlike texture.

Many people think (incorrectly) that William Atkinson was the original inventor of textured soy flour, but the Atkinson patent (issued Jan. 1970; No. 3,488,770) does not dominate the industry—even though Atkinson's patent was a very early, creative, and important one, and ADM did a very good job getting TVP on the market early. Ed is quite sure that Atkinson developed his patent independently and with no knowledge of Flier's work. However the dominant U.S. patent now is the one issued to Flier (pronounced FLEER) of Ralston Purina Co. on 24 Feb. 1976 (No. 3,940,495). There was a long time between application date and issuance date for the Flier patent. The Flier patent expires in 1993.

Part of the following is based on Ed's first-hand knowledge and part on second-hand knowledge (hearsay). After the Flier patent was issued, Ralston Purina filed a lawsuit against ADM in a federal court in southern Illinois. Swift (who was also extruding soy flour) may have been included in the suit. Sometime after the filing of the suit,

Ralston Purina and ADM settled out of court. Ed thinks that as part of the settlement, they cross-licensed each other (so that each could use the best parts of the other's patent). After the ADM settlement, Ralston Purina went after all others in the industry who were extruding to take licenses. If they didn't take a license, Ralston could charge them with infringement, and the cost of the infringement can be very high. So Cargill and A.E. Staley each took a license. Then Ralston Purina sued Far-Mar-Co. Wenger supported Far-Mar-Co because Wenger felt that patent would curtail the sale of their machinery. Ed was subpoenaed by Far-Mar-Co to give testimony under oath. Far-Mar-Co people learned, via Wenger, that there was a man in Decatur, Indiana, who was using a Sprout-Waldron extruder in the early 1960s to produce mixed, extruded feeds. Ed and his coworkers (Steve Frank and Bud Campbell) examined that extruded material in their lab at Central Soya. After some time that case was decided in court and Far-Mar-Co lost it [in mid-1984].

Then Ralston Purina went after Central Soya—which had its own patent issued to Gabor Pusski in 1976. Ed Armstrong, an internal attorney, suggested that Ed Meyer and Art Konwinski (Central Soya's extrusion man), take a very close look at the process by gathering detailed data. Based on that the attorneys concluded that Central Soya was infringing on Ralston Purina's patent. So Joe Gillespe, a vice president at Central Soya, made a deal with Ralston, that Central would sell Ralston several feed operations they had in Brazil at a very attractive price, plus several patents on industrial proteins. In exchange, Central Soya got a non-exclusive royalty-free license in perpetuity.

Ed has long wondered why the patent examiner didn't cite an "interference," which applies when two inventors make claims that overlap or are on the same subject. Then the patent office must conduct an investigation to see who has priority. This story does not appear in the history books and Ed is not sure that it should be.

"Over the years I have learned to be very skeptical of what I read because so much is said in an advertising mode rather than in a definitive or factual mode." People say that their products are used in various applications when they are not—which is wishful thinking in the hope that new customers will try the product. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

1474. Shurtleff, William; Aoyagi, Akiko. comps. 1993. The Drackett Company's work with soybeans and soy proteins: Bibliography and sourcebook. Lafayette, California: Soyfoods Center. 79 p. Subject/geographical index. Author/company index. Language index. Printed June 25. 28 cm. [81 ref]

• **Summary:** This is the most comprehensive bibliography ever published about The Drackett Company's work with soybeans and soy proteins. It has been compiled one record at a time over a period of 18 years, in an attempt to document

the history of this subject. It is also the single most current and useful source of information on this subject available today, since 99% of all records contain a summary/abstract averaging 341 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 17 different document types, both published and unpublished, every known publication on the subject, and 10 original Soyfoods Center interviews. Thus it is a powerful tool for understanding the development of Drackett's work with soya.

The bibliographic records in this book feature (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 7 commercial soy products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a histogram by year are also included.

Brief Chronology of The Drackett Company's Pioneering Work with Soybeans and Soy Proteins:

1910. The Drackett Co. is organized as a partnership. Its main business is distributing a line of bulk chemicals to industrial users. In 1933 the company adopted its present name.

1918-1928. Drackett is America's leading manufacturer and seller of U.S.P. grade Epsom salts.

1923. Drackett starts production of Drano (a chemical composition used to clear clogged drains), which soon becomes its first major consumer product.

1934-36. Drackett starts production of Windex (a spray that cleans windows without water), which soon becomes its second major consumer product. Both products are made at Drackett's plant at 5020 Spring Grove Ave. in Cincinnati, Ohio.

1935-36. Laboratory studies at Drackett lead to the design of an original pilot plant process for oil extraction by the solvent method. Laboratory research is also conducted on the extraction of soy protein from defatted soybean flakes.

1935, fall. Drackett submits samples of industrial soy protein to the Champion Coated Paper and Fiber Co. for examination as to use in paper coatings in place of milk

casein.

1936. A pilot plant for making industrial soy protein begins operation at 5020 Spring Grove Ave. in Cincinnati, Ohio.

1937 Feb. A solvent extraction pilot plant begins operation on Spring Grove Ave. and continues for 3 years.

1938 April. The world's first soy protein fiber (and the first experimental textile fiber made from a plant protein) is exhibited by Robert Boyer of the Ford Motor Co. at the Fourth Annual Conference of the Farm Chemurgic Council in Omaha, Nebraska.

1938. Drackett purchases 60-75 acres of farmland at Sharonville, Ohio (several miles north of the Spring Grove Ave. headquarters), for a solvent extraction plant. Ground is broken in Sept. 1939.

1940, first quarter. Drackett starts to work cooperatively with the Ford Motor Co. to develop a soybean protein suitable for spinning into fiber from which upholstery cloth could be made.

1941 Jan. Soybean oil extraction begins at the Sharonville plant. Drackett's initial investment was about \$1.5 million. The plant has an annual capacity of 35,000 tons of soybean meal and 15 million lb of soybean oil.

1941. Drackett's first industrial soy protein isolate is sold commercially. 15,018 lb were produced and 7,039 lb were sold during the year. By 1942 this soy protein isolate was brand-named Alysol. Some of it was sold to the Ford Motor Co. to make experimental soy protein fibers.

1943 Nov. Drackett purchases the Ford Motor Company's soy protein and soybean fiber spinning operations. Robert Boyer, Francis (Frank) Calvert, and William Atkinson go to Drackett from Ford as part of the deal.

1943 Dec. 2. Drackett starts commercial production of Soybean Azlon, the world's first commercial fiber made from plant proteins. The fibers were used mainly in felt hats by the America Hat Corporation.

1944? Drackett is now making a new line of industrial soy proteins named Drackett Protein 110, 112, and 220. The first 2 are for use in paper coatings and sizings, the latter for water-based paints.

1945. The Drackett Co. is the largest soybean processor in Ohio.

1946. Drackett finishes construction of 18 new silos at Sharonville, costing \$500,000, to house 1 million bushels of soybeans.

1947, mid. Drackett's plant making industrial soy protein isolates begins operation at Sharonville. It also makes Ortho Protein and Impact Plastic Molding Compounds.

1948 March. Harry R. Drackett, the company's second president, dies. His son, Roger Drackett, is elected president of the company.

1949 July 12. Drackett's soybean plastics operations are discontinued completely.

1949. Robert Boyer leaves The Drackett Co. when it shut down its Azlon fiber spinning plant. He begins research on developing the world's first edible soy protein fibers.

1949 Sept. Drackett introduces Charge Candy for Dogs, which contains soya bean flour as a major ingredient.

1957 July 1. Drackett sells its entire isolated soy protein business to the Archer Daniels Midland Co. (ADM). William Atkinson goes to ADM as part of the deal. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

1475. Shurtleff, William; Aoyagi, Akiko. comps. 1993. Henry Ford and his researchers' work with soybeans, soyfoods, and chemurgy—Bibliography and sourcebook, 1921 to 1993: Detailed information on 439 published documents (extensively annotated bibliography), 79 unpublished archival documents, 71 original interviews (many full text) and overviews, 13 commercial soy products. Lafayette, California: Soyfoods Center. 249 p. Subject/geographical index. Author/company index. Language index. Printed May 19. 28 cm. [567 ref]

• **Summary:** This is the most comprehensive book ever published about the work of Henry Ford and his researchers with soybeans and soyfoods. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of this subject. It is also the single most current and useful source of information on this subject, since 96% of all records contain a summary/abstract averaging 286 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 30 different document types, both published and unpublished; every known publication on the subject in every language; 66 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding this subject from its earliest beginnings to the present.

The bibliographic records in this book include 439 published documents and 79 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 13 commercial soy products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information

on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

1476. Leiss, Richard S. 1993. History of the use of spun soy protein fibers at Worthington Foods (Interview). *SoyaScan Notes*. June 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Richard (whose last name is pronounced like "lease," as in "to lease a house") has worked for Worthington Foods in R&D for 28 years, from Aug. 1962 to 1968, then from 1971 to the present. He thinks that small amounts of the first commercial Worthington product to contain spun soy protein fibers were probably sold by late 1962 and definitely by 1963. These meatlike products were probably frozen at first, and then canned later. The first such product may have been the Minute Entree Fried Chicken Style in frozen form. Fri-Chik, which was canned and widely sold to Seventh-day Adventist food outlets, came a little later. The next 3 products that contained spun fibers (White-Chik, Beef Like, and Prosage) were all frozen and were introduced at about the same time (by Oct. 1963), but many Adventist food outlets did not have a frozen food case in those days so Worthington had to supply them with one. Following these, some additional products were made under the Worthington label, including Smoked Beef Style, Wham.

"When I first came to Worthington in 1962 there was a small R&D lab attached to the main food processing building; we didn't have a research facility like we have now. I recall that a new R&D building was completed in October 1964. Prior to Oct. 1964, I recall seeing a Fried Chicken Style product, containing spun fibers, being canned. After Oct. 1964 time, we began to spin our own soy protein for the first time using a pilot plant line in this building. Full-scale spinning of Worthington's Fibroprotein soy fibers probably began in about 1965. Prior to that time my recollection is that Worthington purchased most of its spun protein from Ralston Purina Co.; it was manufactured in their Louisville [Kentucky] plant. But Worthington also purchased some spun soy fiber from General Mills; it was made at their James Ford Bell Research Center and was very experimental. I don't recall the name of that product.

"In the early 1960s, about 95% of Worthington's sales were through either the church or through stores in communities where there were heavy concentrations of Adventists. So it really wasn't a very big thing. One very big thing for the company was the first IFT meeting it attended

in Kansas City [Missouri] in about 1963 or 1964. It was the first time that Worthington had demonstrated products at a national convention, and there was a lot of interest in these products.

In 1974 the first 3 Morningstar Farms products were introduced: Breakfast Patties, Breakfast Links, and Breakfast Slices. He is quite sure that initially they all contained spun soy protein fibers. However several years after they were launched, the decision was made to remove the spun soy fibers for two main reasons: (1) Making the fibers was an expensive, high-tech process which added too much to the price of each product; (2) Worthington was concerned that if, as anticipated, the Morningstar Farms line became very popular in mainstream national markets, their one spinning line would not be able to produce enough fibers to meet the demand. The “wet spun fiber” was replaced by textured soy concentrates and vital wheat gluten to give similar textures. In 1979 four more Morningstar Farms products were launched: Grillers (meatless burgers), Breakfast Strips (meatless bacon), Luncheon Slices (a new version of the 1974 Breakfast Slices), and Leanies (meatless hot dogs). None of these 4 products contained spun soy protein fibers. Thus, for most of their commercial lives, the Morningstar Farms products have not contained spun soy protein fibers.

Worthington has always had only one line for spinning soy protein fibers—located at their plant in Worthington, Ohio. This line was set it so that a second spinning table could be added to increase its capacity, but that has never been done. Even during the years when the company had a second plant at Schaumburg, Illinois (after Miles Laboratories took over Worthington in 1970), that plant never had its own spinning line.

At one point Worthington sold its Fibroprotein spun soy protein fiber to an Adventist company outside the USA. Worthington never sold it to Loma Linda Foods. Initially Loma Linda may have purchased it from Ralston Purina or General Mills; then they got their own spinning line later, in the 1970s; they bought the equipment from Dawson Mills.

Concerning the total amount of spun soy protein fiber used in Worthington food products, it increased rapidly from 1965 to about 1975, then it fell somewhat after the first three Morningstar Farms products were reformulated in the mid-1970s—but it did not fall dramatically because the 3 products were still at the introductory stage. After the amount then stabilized, and remained fairly constant until recent years when the demand for vegetarian products has increased, and with it production of spun soy protein fibers. Today, about 15-20% of Worthington’s meat alternatives contain spun soy protein fibers.

In Richard’s opinion, the legacy that Henry Ford and his researchers left in terms of food uses of soybeans is mainly in the areas of soy protein isolates (especially functional isolates; the work done by Frank Calvert and Bob Boyer at Ralston Purina) and textured soy flour (the work done by

William Atkinson at ADM). While spinning was certainly the most novel of the technologies, spun soy protein fibers are not nearly as important commercially as food-grade isolates and textured soy flour.

Richard remembers fondly the pioneering days when Bob Boyer had a lab next to his office at Worthington Foods. Boyer told Richard many anecdotes about the times he worked for Henry Ford and Richard wrote them down in his journal. “Bob Boyer was truly a gentleman. I really enjoyed him a lot.”

Richard does not recall any commercial product containing spun soy protein fibers that Ralston Purina launched during that time. They sold all their spun fibers as such to Worthington Foods.

“I’m kind of the keeper of the archives and unfortunately a lot of material has gotten out because during the years that Worthington was owned by Miles Laboratories past history was not considered to be very important.” Perhaps a record might have appeared in the *Chopletter* (an internal newsletter published by Worthington Foods). Address: Director, R&D, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

1477. Rich, Robert. 1993. Re: Rich Products Corporation. Letter to William Shurtleff at Soyfoods Center, July 26—in reply to inquiry. 2 p. Typed, with signature on letterhead.  
 • **Summary:** It is immaterial to Mr. Rich whether he is referred to as Bob or Robert. He started work in the Food Section of the War Production Board in February 1942 and transferred to the War Food Administration (WFA) when that came into existence 4 or 5 months later. He resigned from the WFA in Oct. 1944.

In the early years, when Rich Products Corp. used soy protein as the protein source in its non-dairy products, it obtained the protein from defatted soybean flakes purchased from the Archer-Daniels-Midland Co. (ADM).

Bob thinks that Reddi-Whip (a dairy-based whipping cream in a pressurized can) was first sold in early 1948. Super Whip Valve Company was also a distributor of Super Whip Dairy Topping and it was owned by Illinois Creamery Supply Company. When Rich Products Corp. tried to use its Whip Topping in the pressurized can, the valve leaked; this problem was solved by reformulating the product to reduce the amount of an ingredient that was clogging the valve.

The big lawsuit between Mitchell Foods and Rich Products Corp. (Mitchell sued Rich) began in 1959 and lasted 7 years, with Rich Products winning the case in its entirety on 31 December 1966. Rich Products spent about \$500,000 defending itself in this lawsuit. Bob Rich considered this defense a matter of principle.

Rich Products Corp. did not construct Rich Stadium in Buffalo, New York, but it did purchase the naming rights in May 1973 for \$1.5 million. The facility’s first game was played on 7 Aug. 1973.

Bettercreme is a very successful new product based on the Freeze Flo process. It was first sold commercially in April 1977.

“I am enclosing several of Rich’s magazines, as well as other product booklets, that will give you information about the history of our company which started with frozen Whip Topping. The initial batches of Whip Topping were test marketed at the end of 1944 and we went into production on March 31, 1945. Our frozen Bake-Off business, which we started with an acquisition in 1969, has outgrown our frozen non-dairy business. Along the way we purchased the SeaPak Company from the W.R. Grace Company and Rich-SeaPak is now the largest breaded shrimp processor in the country. We also purchased the Casa DiBertacchi Company, manufacturers of frozen meatballs and pasta items; Byrons Frozen Foods, the country’s leading barbecue manufacturer, as well as other acquisitions including 2 radio stations and 3 professional minor league baseball franchises totaling 32 acquisitions. We will pass the billion dollar figure next year as we will be very close to that sales figure this year and we will celebrate it at our 50th Anniversary. Incidentally, we sold our milk business in 1967 which, at the time, was the largest solely owned milk company in the country.” Address: Chairman of the Board, Rich Products Corp., P.O. Box 245 (1150 Niagara St.), Buffalo, New York 14240. Phone: 716-878-8000.

1478. **Product Name:** Native Tempeh (With Soy & Millet).  
**Manufacturer’s Name:** Native Foods.  
**Manufacturer’s Address:** 71485 Painted Canyon Rd., Palm Desert, CA 92260. Phone: 619-346-2939.  
**Date of Introduction:** 1993 July.  
**Ingredients:** Organic soybeans, organic millet, water, rice starter, vinegar.  
**Wt/Vol., Packaging, Price:** 1 lb plastic bag.  
**New Product–Documentation:** Talk with (call from) Tanya Malch. 1994. Feb. 4. She started commercial production of Soy and Millet Tempeh at this new company which she founded. She sells mostly to restaurants and is looking for packaging and sealing equipment. Soy Power distributes Lightlife tempeh in the Los Angeles area and offers bulk discount, but White Wave is the main brand. Tanya used to run a restaurant named The MT Plate.

Label sent by Tanya Malch. 1994. Feb. 4. 5.5 by 8 inches. Photocopy black ink on chartreuse paper. An illustration of two natives, flying at a 45 degree angle above 3 palm trees, one with a spear, both with rings in ears and nose. One is saying “A native food from Bali,” the other “Save our Earth!” The text below the product name reads: “A clean, controlled, ‘come on’ food.” Another flyer notes that under the name Chef Tanya Petrovna she teaches cooking classes using TVP, tempeh, and seitan in southern California.

Spot in Vegetarian Times. 1996. March p. 112. Amy O’Connor writes that Tanya Petrovna is owner of Native

Foods, Smoke Tree Village, 1775 E. Palm Canyon Dr., Palm Springs, California. Phone: 619-416-0070. She makes her own tempeh, seitan, and TVP.

1479. Bolduc, Bill. 1993. Current work with soymilk and organically-grown soybeans (Interview). *SoyaScan Notes*. Aug. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bill Shurtleff tells Bill Bolduc that he has heard that Bolduc’s company is now making soymilk for Westbrae Natural Foods. Bolduc admits that this is correct. Shurtleff says that he cannot imagine how Bolduc is doing this, since a modern soymilk plant typically costs about \$1.5 million. Bolduc answers that he purchased the soymilk plant owned by Grove Country Foods in an auction on 4 April 1993. This plant used the University of Illinois process for making soymilk.

Note: Grove Country Foods, USA, is located at 720 S. Main St., Columbus Grove, Ohio. Phone: 419-659-5636 (office) or -2920 (plant). The two main people involved in the company were Dr. Carl Hastings and Prof. Alvin I. Nelson, both food scientists from the University of Illinois. The basic idea of the company was to commercialize new soy products and processes (such as soynuts, soy yogurt, soy ice cream, and soymilk) developed at the University of Illinois. By December 1988 they were in test production of several products but were in need of funds for commercial production and marketing. In early 1989 Grove Country Foods Canada Inc. (located in Ridgetown, Ontario, Canada) introduced Astronuts, a type of soynuts apparently made by some other company, but the company went bankrupt after 1-2 years.

Bill has modified the Illinois process for making soymilk extensively. For example, he removes the okara from the soymilk. Completing these modifications has taken several months, and his company is “now in a start-up mode making soymilk.” Their refrigeration was under-sized so they lost several loads of product to spoilage. This week they are installing another compressor, etc. The system now works very well if they go slowly, but they need to be able to produce twice as much soymilk as they presently can before he will be satisfied. Now it takes several days to produce a tanker full of soymilk. Westbrae is being patient and supportive even though the process is “a bit bumpy.”

Bill is only making Westbrae’s regular soymilks—not their Malted, which he thinks are still made by Hinoichi in Los Angeles. The only soymilk Bill makes is Westbrae’s. He ships this soymilk in a tanker to a separate facility nearby in the Midwest that packages the soymilk in Tetra Brik Aseptic cartons for Westbrae. Westbrae now has their regular soymilk (the same product sold under the same brand) made by two companies (Pacific Foods of Oregon and Bill’s Organic Processing Corp.) using two different processes. Bill started because Pacific ran out of capacity. Westbrae likes the flavor

of Bill's soymilk as well as they like Pacific's—even though Pacific's technology is much more expensive than Bill's. Bill has dramatically altered the Illinois process but he has decided not to try to patent his altered process.

Within about 2 months Bill expects to have a new soymilk product on the market with another partner (similar to Westbrae, but whose name is confidential) in a new package [perhaps an extended shelf-life (ESL) gable top carton]. After that, Bill hopes to diversify his customer base and his product mix. To do that he hopes to start by making a fresh, UHT Processed, refrigerated soy-based frozen dessert mix (for soft-serve soy ice cream) packaged at another facility, located very nearby, in 2-gallon bags with a 60-day shelf life.

Bill sees the future of soymilk packaging as being in the relatively new extended shelf life gable top carton that is sold refrigerated. This package, which is made by Tetra Pak and Evergreen, is significantly less expensive than the traditional Tetra Brik carton. It is now becoming quite popular in the Midwest and the East Coast because of its lower cost. It can cut at least \$1.00 off the wholesale price of a case (12 quarts) of soymilk, which leads to even bigger savings at the retail level. And the product has a shelf life of 60-90 days refrigerated. Co-packers nearby own the new gable-top packaging equipment. Most of America's major soymilk companies are looking carefully at this package, it requires a whole new distribution system—refrigerated trucks. Bill knows that there will be a soymilk product on the market in the extended shelf life gable top package by this fall. Bill will make it for another company. The rest is confidential. He just ran the first test batch last Thursday, and now he is doing shelf-life tests. His smaller company has several advantages over the bigger soymilk companies; his company is very lean and can move very quickly. He is not controlled by any multinational corporations.

Bill has a separate company named Organic Marketing that exports organically grown soybeans to Europe; he started Organic Marketing in about 1989 and it was the precursor to Organic Processing. Bill was acting as marketing coordinator for the Ohio Ecological Food and Farm Association (the organic growers of Ohio). First he sold a lot of organically grown soybeans to Dan Burke of Pacific Soybean & Grain, then he started exporting. He met Jerry Fowler, a British-born man who has a company named Manna International in Ontario, Canada. Bill likes very much to do business with Jerry because he has a very good overview of the market, is cooperative with the growers, and pays good money to the growers for organic soybeans. Bill exports his organic soybeans via Montreal to England, where they are used by the Haldane Foods Group (which is owned by ADM).

Update: Talk with Ron Roller, CEO of American Soy Products (ASP). 1993. Sept. 4. Bill Bolduc is making plain soymilk and shipping it up to Grand Rapids, Michigan, for

formulation and Tetra Brik packaging for Westbrae. ASP negotiated with Westbrae for a long time, but Westbrae finally went with Pacific Foods and Bolduc; there were many reasons for this but they are mostly political. Address: President, Organic Processing Corp., 305 N. Walnut St., Yellow Springs, Ohio 45387. Phone: 800-647-2326 OF.

1480. Gain, Jeff. 1993. The origins and history of the New Uses Movement. Part II (Interview). *SoyaScan Notes*. Aug. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: Now enter the New Uses Council. "In 1987 a small group of us that had been involved in the New Farm and Forest Products Task Force decided we didn't want this report to die like so many government reports do. I had some calls from people like Sam Brownback (secretary of agriculture in Kansas) and Paul O'Connell (on the staff of Asst. Secretary for Science & Education, Orville Bentley)—most of whom were not on the Task Force. We talked with one another and had a few very small meetings. This was very much a small, closed group. We decided we could move our idea politically by each of us taking our own organizations and contacts and creating some interest in congress. So after we presented the Task Force Report to secretary Lyng, several of us testified before the senate and the house on the contents of this report and its recommendations, and we encouraged the congress to develop legislation to implement it. During this time Cooper Evans, a congressman from Iowa, retired, and was soon hired as the agriculture policy man on the White House staff. Some of us knew Cooper (he was a farmer from Iowa) and we asked him if he would be interested in working with us in the White House to get support for this idea. He convened at least 3 meetings in the old executive office building, where a small group of us (who shall go unnamed) talked with Cooper about potential obstacles. Some of the biggest obstacles were within the USDA because the Agricultural Research Service (ARS) wanted to take over the recommendations our Task Force had made and control it. Yet the Task Force had recommended creation of a separate entity, similar to the National Science Foundation, that would concentrate strictly on new industrial uses of farm crops and not traditional research. We were concerned that if ARS took it over, it would quickly be gobbled up and in 2-5 years would bear little resemblance to what we had intended. As a result, Bill Tallent (former head of the NRRC at Peoria, Illinois), Charlie Hess (of California, head of USDA Science and Education), and some of the others from USDA that we had grown to know and love over the years became, oddly enough, our biggest rivals. In short, we won, and got our ideas put in the 1990 Farm Bill [which was signed into law in Dec. 1990] as subtitle G in the research section."

The first goal of the New Uses Council was to set up an Alternative Agriculture Research and Commercialization (AARC) Center Board and make it a reality. The Council was

a voluntary group with no outside funding. The key early people in the New Uses Council included Dr. Paul O'Connell (of USDA), Dr. Shelby Thames (polymer scientist at Univ. of Southern Mississippi, Hattiesburg), Martin Andreas (ADM), Sam Brownback (Kansas Secretary of Agriculture), Alan Tracy (Wisconsin Secretary of Agriculture), Jack Firkins (A.E. Staley Mfg. Co.), and Jeff. By that time members of the Council had learned about the chemurgy movement and they were determined to move this idea forward on the public policy agenda. The Council's present agenda is to create a National Renewable Resource Energy Policy. Jeff testified recently before South Dakota Senator Dashchle's subcommittee of the U.S. Senate Agriculture Committee on the goals, activities, and effectiveness of the AARC Board.

The funds from subtitle G of the 1990 Farm Bill (\$10 million total, including \$4 million initially) were used to set up the AARC Board. This 9-member public board was appointed by the Secretary of Agriculture. This board worked closely with the board of the New Uses Council. Edward Madigan of Illinois was now secretary of agriculture (he served Feb. 1991–Feb. 1993), and he appointed the first board of 9 members. The New Uses Council was now in existence, working behind the scenes, putting all the pieces in place, getting the guidelines written once the law was passed, pushing USDA leaders to move in the right direction, etc.

The primary goal of the AARC Center is to commercialize new products from existing or new crops. They have presented much new technology, such as biomass conversion to make ethanol. They have approved 25 projects with funding of about \$6 million. They require a match in the form of money and services from the proposer of each project. And there is a payback provision—which the New Farm and Forests Task Force recommended. The Task Force recommended initially that a \$1,000 million trust fund be set up for use in this process, and that it be funded by \$200 million a year for 5 years from the sale of CCC commodities, which is an off-budget process, so it would be very painless. This Task Force recommendation was, unfortunately, never implemented. As one of dozens of examples of the payback from AARC funding, one project has developed an environmentally friendly product that replaces methanol with ethanol in windshield wiper solvent. Many large retail chains have agreed to sell the product. If it is successful, the federal government will be getting royalties back for the money they loaned us to commercialize the new product.

“In the New Uses Movement, the real power in terms of setting policy lies with the New Uses Council—which (like its predecessor the Farm Chemurgic Council) is a non-governmental organization. This policy is intended to influence the direction of government programs. The Council does not lobby, but its members have many high-level connections which they use to make things happen. The Council is a membership organization. Jeff is its chair and

Mark Dungan is its executive director [he was president and CEO by 1994]; he was one of the original 9 AARC board members. and Jeff was involved in hiring him for the New Uses Council. AARC is a public body whose members are appointed by the secretary of agriculture, with terms that rotate.

“In 1934, when the secretary of agriculture tried to mandate the use of ethanol mixed in with American gasoline, the American Petroleum Institute reared up and defeated the measure—leading to the current programs of set-aside, in which taxpayers pay farmers not to grow crops that are in surplus. The Corn Growers Association still fights them every day over the issue of ethanol. But now we're about to beat them.”

Concerning legislation that created funding for new uses that began to appear in about 1987, it was probably connected with the Office of Critical Materials (OCM), which was authorized in the 1985 Farm Bill. OCM was headed by Dr. Paul O'Connell, who is now the chief staff man for the AARC Board and was also a member of the New Farm and Forests Task Force. Paul is also the father of the LISA (Low Input Sustainable Agriculture) programs, which came under USDA's CSRS (Cooperative State Research Service). As part of CSRS Paul wrote the legislation, set it up, and administered it. At the time he was on Orville Bentley's staff as a special assistant to Bentley when he was Assistant Secretary for Science and Education of USDA. There is now growing interest in LISA among the USDA leadership. “Paul is someone you really need to talk with about LISA and the New Uses Movement.” OCM was part of the CSRS program; it was a special agency designed to find critical materials coming from agriculture in which we were not self-sufficient. One critical material was guayule, a shrub which was grown in dry areas in America during World War II to replace natural imported rubber from *Hevea* trees. The air force is now making tires from guayule—the viable seed of which would have been lost but for the OCM. Also in about 1987 Harkin had a bill in on some biotech research money for Ames, Iowa. Continued. Address: Chairman, New Uses Council, c/o National Corn Growers Assoc., 1000 Executive Parkway #105, St. Louis, Missouri 63141. Phone: 314-275-9915.

1481. Johnson, Lawrence. 1993. The origins and development of the New Uses Movement. Part II (Interview). *SoyaScan Notes*. Aug. 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Question: Why did the New Uses Movement start now, as a sort of reincarnation of the chemurgic movement, which had been dormant since the 1960s? During the 1940s, stable supplies of inexpensive petroleum began to displace agricultural commodities that were being used to make industrial product. Moreover the products derived from petroleum usually performed better than their agricultural

counterparts. In the 1950s there were huge farm surpluses and interest in chemurgy revived. In the 1960s we believed there was a protein crisis and a food crisis worldwide. We moved from a “surplus mentality” to a “shortage mentality” and we created new foods outlets for farm crops, as in Food for Peace programs overseas. In 1971 one bushel of corn sold for about the same price as a barrel of oil. But after the first OPEC oil embargo in 1973, 14 bushels of corn sold for about the same price as one barrel. Now about 8-10 bushels of corn equal 1 barrel of oil. We have leveled off at a ten-fold change. This opens up many new opportunities for industrial uses of farm crops—but the petroleum industry is fighting this trend every inch of the way. When 15 bushels of corn are worth the price of 1 barrel of oil, the scales will tilt strongly in favor of farm crops over petroleum. In addition, we understand and know how to manipulate the chemical constituents of plant materials far better than we did in the 1930s and 1940s. Also through biotechnology, we can now redesign any crop as we like to get the performance we want. Finally the Green/Environmental Movement believes (right or wrong) that products derived from plants are biodegradable and less harmful to the environment. One example of a sad experience in this area was ADM’s attempt to produce biodegradable plastics by incorporating corn starch. They got hurt so badly and got so much bad publicity by a misunderstanding of what they had done (environmental groups said the products wouldn’t biodegrade), that now they “won’t touch the product with a 10-foot pole.” It biodegrades, but very, very slowly. Address: Director, Center for Crops Utilization Research, Iowa State Univ., Dairy Industry Building, Ames, IA 50011. Phone: 515-294-4365.

1482. Messina, Mark. ed. 1993. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease (Leaflet). Libertytown, Maryland. 4 panels each side. Each panel: 22 x 9 cm.

• **Summary:** This symposium, scheduled to be held on 20-23 Feb. 1994 in Mesa, Arizona, is being organized by Mark Messina, PhD, and sponsored by the United Soybean Board as well as soybean growers from Nebraska and Indiana. Each session contains a number of speakers and, in some cases, a panel discussion. Agenda: I. Soyfoods and heart disease: Opening remarks and overview. 1. Overview of soybean processing and products. Moderator—Rasik Daftara, Archer Daniels Midland Co. 2. Soy intake and cholesterol reduction. Moderator—John Erdman, Univ. of Illinois. 3. Soy and cholesterol reduction: Hypothesized mechanisms. Moderator—Doyle Waggle, Protein Technologies International. 4. Soy and heart disease prevention: Potential mechanisms unrelated to cholesterol reduction. Moderator—Penny Kris-Etherton, Pennsylvania State Univ. 5. Potential public health impact of soy protein. Moderator—Lynn Scott, Methodist Hospital, Baylor College of Medicine [Texas].

II. Soyfoods and Cancer. 6. Overview of diet and

cancer. Moderator—John Potter, Univ. of Minnesota. 7. Soy intake and cancer risk: Animal and epidemiologic studies. Moderator—Daniel W. Nixon, American Cancer Society. 8. Non-isoflavone soybean anticarcinogens. Moderator—Bernard Szuhaj, Central Soya Co. 9. Soybean isoflavones and cancer risk. Moderator—Kenneth Setchell, Children’s Hospital and Medical Center. 10. Anticancer effects of genistein. Moderator—Stephen Barnes, Univ. of Alabama.

The registration fees are: Regular: \$195.00. Student \$75.00.

Note: This in the earliest document seen (March 2019) with the word “soy” in the title referring to the general concept of soy; previously “soy” had referred to soy sauce. Address: Soyfoods & Chronic Disease Symposium, P.O. Box 178, Libertytown, Maryland 21762-0178.

1483. Bjornson, Sheri. 1993. Tempting tofu and tempeh: Health benefits, versatility help popularize soyfoods. *Daily Ledger-Post Dispatch (Antioch, California)*. Sept. 21. p. 21-22.

• **Summary:** Ron and Nancy Hoskins of Oakley, California, are vegetarians and they teach vegetarian cooking classes. One is titled “Introduction to tofu and tempeh,” and another is “Introduction to TVP and gluten.” Ron learned about soyfoods when he lived at The Farm in Summertown, Tennessee. Contains recipes for: Greek salad with tofu. Tofu-dill dip. Hawaiian tempeh kabobs with pineapple and peppers. A color photo shows Ron and Nancy at a table with tofu and some books from The Farm’s Book Publishing Co.

1484. ADM Protein Specialties Div. 1993. Harvest Burgers. As good for your customers as they are for your sales (Ad). *Health Foods Business*. Sept. p. 37.

• **Summary:** “Cholesterol free. Low in fat. Versatile—can be fried or microwaved. High in protein... For a closer look at Harvest Burgers, stop by booth 1154 at ExpoEast in Baltimore, September 10-12.” Address: Box 1470, Decatur, Illinois 62525.

1485. Archer Daniels Midland Co. 1993. Annual report. P.O. Box 1470, Decatur, IL 62525. 42 p. Sept.

• **Summary:** Net sales and other operating income for 1993 (year ended June 30) were \$9,811 million, up 6.2% from 1992. Net earnings for 1993 were \$567.5 million, up 12.7% from 1992. Shareholders’ equity (net worth) is \$4,883 million, up 8.7% from 1992. Net earnings per common share: \$1.66, up 12.9% from 1992. Number of shareholders: 33,654.

New ADM products from soybeans include Soy Milk (dry mix) and Harvest Burgers (also named Veggie Burgers). Opposite a full-page color photo of soy milk being poured from a pitcher into a glass, we read: “A new line of soy-based milk products was introduced that are nutritionally equivalent to milk but less expensive to produce, allowing

countries to expand their supply of needed protein at minimal cost.

“The all-vegetable protein food, Harvest Burger, is being actively marketed in the U.S. where 12% of the stores frozen food sections stock the product.

“Haldane Food Group continues to develop as the leading U.K. supplier to the health food industry. From a well-established domestic base and with an ever increasing product range the Group’s commercial thrust is extending to Continental Europe. Of the many new products introduced during the year ‘Vegemince’ commands attention as a direct TVP/wheat gluten non-meat alternative to ground beef. The prototype plant is fully committed to production and line extension is in progress.

“‘Vegeburger’ continues as a market leader with other burger products being added to the range. The realized growth and market potential for convenience foods has brought about the relocation of Snackmasters Limited to a new factory at Sibley adjacent to the Haldane site. The automated production line is currently at 60 % capacity and the introduction of new products should fill the plant within twelve months.

“Genice Limited continues to pioneer the growth of non-dairy soya based ice cream and yogurts with an increasing market share in Continental Europe... Soya milk sales remain stable and we hope to excite the market by introducing a bottled soya milk that will complement the existing Tetra pack products.”

“Currently operating at 80% capacity, ADM can produce 350,000,000 Harvest Burgers a year. ADM introduced the product in 1989, and soon will be selling as many burgers as some fast food chains” (p. 19). Address: Decatur, Illinois.

1486. August, Amanda. 1993. Soya far, soya good. *Vegetarian Living*. Sept. p. 37-38.

• **Summary:** “For many vegetarians the decision to drop dairy products from their diet is a natural progression—whether it be for ethical or health reasons... The dairy cow has been described as the most hard-worked of all farm animals. Normally, she would only produce 5 to 7 litres of milk a day for her calf but intensive farming means that the quantity can now be anything from 25 to 40 litres. To keep the milk flowing, the cow is subjected to yearly pregnancies, each lasting 9 months. After giving birth she will be milked for 10 months, but in the third month she will be put in calf [inseminated] again. So for 6 to 7 months of each year the cow is milked whilst pregnant.

“Calves are taken away from their mothers after 2 to 3 days, causing much distress to both mother and baby. Some calves are kept for dairy herd replacement (25%), some are exported to Continental veal crates, and the rest are fattened up to produce beef. Although cows have a lifespan of around 20 years, most are worn out after only 5 years. At this stage they are killed for meat.”

“Soya milk is a wonderful alternative to cow’s milk... Many brands are fortified with calcium (some containing more than dairy milk) and the vitamins B-12 and D... Soya milk doesn’t taste like dairy milk. If trying it for the first time it’s worth knowing that its an acquired taste. You may find it to be quite floury, with a strange after-taste and a strong aroma. But there are many who swear by it and whose altered palates find dairy milk cloying, fatty and oversweet.

“The first soya milk came onto the market in 1965, prior to which there had been no alternative to cow’s milk. It was launched by one of today’s leading producers, Plamil. Other companies began to follow suit in the 1970s.

“The market is still growing. In 1991 soya milk manufacturers produced 10.5 million litres and it’s estimated that by the year 2000 Britain will be consuming over 20 million litres per year. Supermarkets even have their own brands now. The Soya Milk Information Bureau’s 1991 annual poll found that 39% of respondents were buying more soya milk than in 1990.”

Color photos (p. 38) show 3 brands (Granose liter plastic bottles, Plamil 500 ml can, Provamel aseptic cartons), each with the words “Soya Milk” appearing as the product name on the front panel. The following brands are now available: Sainsbury, Safeway, Tesco, Waitrose, Co-op, Granovita, Granose, Sunrise, Plamil, Holland and Barrett, Uniso, and Provamel [made by Alpro in Belgium]. Address: England.

1487. Neal, Mollie. 1993. Reaping the rewards of skillful marketing—While helping humanity. *Direct Marketing*. Sept. p. 23-26.

• **Summary:** The long subtitle reads: “Archer Daniels Midland Co. has developed a product it believes can cure the world’s hunger problem. At the same time, the business has found a novel approach to marketing the product here in the United States directly to consumers.”

“(The following article was compiled from front video interviews conducted by Direct Marketing magazine’s Chairman of the Board, Henry ‘Pete’ Hoke, with Dwayne Andreas, chairman and CEO of Archer Daniels Midland and also Phil Jones of Jones + Thomas.)

“When you’re in business and you see the world headed for disaster and you understand how to correct it, it makes you uneasy if you don’t do something about it—if you’re going to have a sense of achievement.

“These words of wisdom come from Dwayne Andreas, a man who grew up in a Mennonite farming household in Lisbon, Iowa, in a home with no indoor plumbing, and has spent the last 20+ years as chief executive of Archer Daniels Midland Company (ADM), a major processor, transporter and marketer of agricultural products—a great achievement unto itself.

“The successful 74-year-old Andreas is not ready to relinquish his work: he continues to be a visionary and remains expeditious at the ADM headquarters in Decatur,

Illinois.

“Andreas’ ADM is the country’s largest processor of agricultural commodities and is respected around the world. He often holds court with the likes of former U.S. presidents Nixon, Reagan and Bush and former House Speaker Tip O’Neill. He also has strong ties with Gorbachev, Mulroney, Pope John Paul II and Mother Teresa. Five of nine postwar presidents, beginning with Harry Truman, have turned to Andreas for help on international trade issues.”

“But the company’s soy-based products are the ones that are quietly having the greatest affect on the world.

“Andreas’ soy product caught the eye of Mother Teresa; Andreas’ daughter has worked with the world leader for a number of years. After learning that Andreas was working in a lab on the product, she approached him and said, ‘The single biggest problem I have in feeding people around the world is milk and meat,’ because of the lack of refrigeration. ‘God is asking you to develop that product so I can use it in my feeding projects around the world,’ she told Andreas. Andreas instructed his crew in England to perfect the soy product, which, when mixed with water, left to rise and then cooked tastes similar to any meat product sold on the shelves. but at a much lower cost than similar edibles. Andreas is now selling the meatlike product to Russia, Italy, Finland, Hungary and many other countries.

“In Kiev, where meat and milk shortages are also one of the biggest problems. officials ordered \$100 million worth of the product in the belief that it would eliminate the need for 13 million cows.

“You can feed 20 times as many people off of an acre of land by raising soy alone, than growing soy and feeding it to an animal and then eating that animal. This means it has an enormous economic impact in a world where in the next century there’ll be 30 percent less acreage and 300 percent more people... You can see why we believe this is the most important food development of this century.”

“ADM began working with Jones + Thomas, an advertising and PR agency in Decatur. Jones + Thomas’ fulfillment center was charged with sending samples of ADM products across the world, per the request of ADM salespeople, according to Phil Jones, who runs both his agency and the fulfillment operation of Harvest Direct. For example, a baker in Denmark may have requested two pounds of soy isolate to sample in his or her test kitchen.

“During the past few years ADM began receiving consumer inquiries about the Harvest Burger® brand even though the company had not advertised the product, which has 75 percent less fat, 40 percent fewer calories and less than 30 percent of the cholesterol found in a typical hamburger. Consumers were tracking down ADM after reading bits of information about the soy-based product in trade journals, health food publications, newspapers and the like. In turn, ADM asked Jones + Thomas to be their retail outlet, a nice fit for Harvest Direct with a toll-free line, says

Jones.

“Next, Jones + Thomas designed a catalog featuring the Harvest Burger® product and began using it as a fulfillment device.

“TV ads were launched for Harvest Burgers® during David Brinkley’s ‘This Week’ program on Sunday mornings along with ADM’s other spots for its various causes (ethanol, no-till farming, environmentalism and others). The corporate tagline is becoming identifiable on TV these days: ‘ADM-Supermarket to the World.’

“Originally the purpose of the ads was twofold: To identify the product. since Harvest Burger® was ADM’s first consumer product and bound to be an enormous selling product, says Andreas. Secondly, the ads were designed to help ADM in its search for a packaged goods manufacturer to partner with—an interesting use of direct response advertising.

“Harvesting The Rewards: Each of these goals have been reached. Anywhere from 400 to 600 people call 800/8-FLAVOR each time the ads run, with more than 15,000 calls ringing Harvest Direct each month. Many people are requesting the catalog: others are purchasing the product.

“During the first year business increased 250 percent, and this year sales are expected to double since some complimentary, companion products have been added to the catalog to fit the health-oriented, vegetarian niche, according to Jones.

“The 10½ by 6-inch, four-color catalog features Harvest Burgers®; textured vegetable protein (TVP), a food product made from soybeans;...”

“While ADM had tried to get the national food companies interested, many did not want to come out with a ‘healthy,’ low-fat product, which would make their products look inferior, says Andreas. The supermarkets didn’t want it, since they already have hamburger, which is a commodity, taking up their shelf-space.

“Now, Pillsbury is taking over the supermarket retailing of Harvest Burger®. With Pillsbury’s supermarket muscle. Andreas expects the product to be in 150,000 grocery stores within the next six months. This is the first real merchandising breakthrough, boasts Andreas.”

“More than 4,000 Harvest Burgers® are gobbled up in a Moscow cafe each day and they are now available to American consumers via mail order and shortly, retail.

Photos show: (1) Mother Teresa; (2) The cover of a Harvest Direct catalog titled “Vegetarian Lifestyle.”

1488. Lowe, Frederick H. 1993. Business can breathe easier. *Sun-Times (Chicago, Illinois)*. Oct. 6.

• **Summary:** Boris Yeltsin’s defeat of Russian hard-line opponents will help Midwest companies doing business in Russia. Decatur-based Archer Daniels Midland Co. sells soybean-based food products to Russia and Ukraine. These

include vegetarian burgers and soy-based milk products, according to company executive Howard Buffett, assistant to ADM Chairman and CEO Dwayne O. Andreas. "We sell 5,000 vegetarian patties a day to a restaurant we jointly operate in Moscow. The burgers are also sold throughout Moscow at Kiosks."

1489. Poninski, Piotr. 1993. Re: Tofu in Poland. Letter to William Shurtleff at Soyfoods Center, Oct. 10. 2 p. Typed, with signature on letterhead.

• **Summary:** After giving details about the tofu made by his company, Piotr notes: "We think that second generation products are absolutely the best way to popularize this kind of new food. We will soon be working on tofu with various spices and other additions such as vegetables, grains, nuts etc. as well as on dressings and spreads."

"As far as other soyfoods are concerned, both soymilk and TVP are available on the Polish market but in a rather modest way. If you want to find them you can, but since they are all imported from Western Europe, or from Hungary (TVP) and not generally known, they are not widely available. Our plan is to import and popularize TVP. You can also get some retail packaged soybeans and soy meal."

"I think we are the first company to make and sell tofu in the Warsaw area, but I know a little about other companies which make or are planning to make tofu in Poland: (1) Vietnamese immigrants make firm tofu (*Dau Phu*), probably coagulated with vinegar, and sell it only to other Vietnamese people. Their general opinion is that Poles will not eat it and it is not worthwhile to try to popularize it; (2) A 'district dairy cooperative' in Szczytno (Northeastern Poland) makes tofu and tries to sell it somewhere in Warsaw. A professor from the department of food technology at the Main School of Agriculture in Warsaw is involved in this project and probably has set up the whole technical process. We contacted with him but he refused to cooperate with us. I have not had a chance to eat their tofu but one of our customers who tried it says it has a taste inferior to ours; (3) A Polish-Chinese enterprise which presently sells soybean sprouts is planning to manufacture and sell tofu in the Warsaw area." Address: Founder and owner, Polsoja, ul. Hetmanska 61, 05-120 Legionowo (near Warsaw), Poland. Phone: (48 22) 18 21 11.

1490. Pendleton, Nicki. 1993. The cook, her book, and textured vegetable protein. *Banner (Nashville, Tennessee)*. Oct. 13. [1 ref]

• **Summary:** Dorothy Bates of Summertown, Tennessee, believes so firmly in fat-free TVP that she wrote a cookbook about it, *The TVP Cookbook*. After retiring from her career as a real estate broker, Ms. Bates moved to Summertown to be near her children and grandchildren at The Farm. They were vegetarians, so Ms. Bates set about learning to cook meatless meals. She overhauled many of her old favorite recipes,

using TVP instead of meat. A photo shows Ms. Bates at the stove.

1491. **Product Name:** Green Giant Harvest Burger (Meatless Burger based on Textured Soy Protein Concentrates) [Original, Southwestern style, Italian style].

**Manufacturer's Name:** Green Giant Div., The Pillsbury Company (Marketer-Distributor). Made in Decatur, Illinois, by ADM.

**Manufacturer's Address:** Pillsbury: 2866 Pillsbury Center, Minneapolis, MN 55402-1464. Phone: 1-800-998-9996.

**Date of Introduction:** 1993 October.

**Ingredients:** Original flavor: Water, soy protein concentrate, hydrogenated vegetable oil (corn, soybean, cottonseed), isolated soy protein, methylcellulose, natural flavor, salt, hydrolyzed wheat protein, malt extract, dried onion, dried garlic, spice, beet powder, autolyzed yeast, zinc oxide, niacinamide, ferrous sulfate, copper gluconate, vitamin A palmitate, calcium pantothenate, thiamine mononitrate, vitamin B-6, hydrochloride, riboflavin, vitamin B-12.

**Wt/Vol., Packaging, Price:** 12.8 oz. 4 burgers in a paperboard box. Retail for \$2.99 (5/94, California).

**How Stored:** Frozen.

**Nutrition:** Per 3.2 oz burger: Calories 140, protein 16 gm, carbohydrate 7 gm, fat 5 gm (polyunsaturated less than 1 gm, saturated 2 gm), cholesterol 0 mg, sodium 380 mg, potassium 450 mg.

**New Product-Documentation:** Spot in Health Foods Business. 1993. Oct. p. 17. "Green Giant Unveils its own Veggie Burger."

*Soybean Digest*. 1993. Dec. p. 53. "Green Giant adds soybean burgers."

Talk with product manager at ADM. 1994. Feb. 18. The product was launched under the Green Giant label on 1 Feb. 1994. Shipments have been made to the San Francisco Bay area and the product should be sold at Safeway or Lucky chains now or in the near future. It may go into a supermarket either via the frozen foods section or the meat department (look in the frozen meat case, which also contains frozen fish, frozen hamburger patties, frozen entrees, etc.).

Product (3 flavors of burgers) with Label purchased at Safeway supermarket in Lafayette, California. 1994. May 18. Price: \$2.99. Frozen. Label. 8.5 by 4.25 by 1.12 inches thick. Dark green, light green, white, and yellow. A color photo shows a patty on a bun, topped with lettuce, a slice of tomato, and two onion rings, with a second bun behind them. "Healthier Eating Made Easy. 79% less fat than ground beef. All vegetable. Zero cholesterol." On back panel: "Quit beefing! Enjoy Green Giant Harvest Burgers. Finally a burger that's good for you!"

Talk with Green Giant consumer information person. 1995. July 31. Green Giant Harvest Burgers were launched in a ten-city test market on 4 Oct. 1993. This was expanded

to about 20 cities on 15 Feb. 1994. Then they went to full national distribution in the fall of 1994.

**1492. Product Name:** Realeat VegeMince (Meatless Minced Beef).

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 908 211311.

**Date of Introduction:** 1993 October.

**Ingredients:** Incl. wheat gluten, soy protein.

**Wt/Vol., Packaging, Price:** 1 lb bag. Retail for £1.99 (10/93, England). Also in 3 lb catering bags.

**How Stored:** Frozen.

**New Product–Documentation:** Ad (full-page, color) in BBC Vegetarian. 1993. Oct. p. 3. "Realeat VegeMince. Make a meal of it! New" A photo on the top half of the page shows a plate of spaghetti topped with a minced meat sauce. The text reads: "How would you like to enjoy your favorite dishes, but without meat? Well now you can. Simply use new Realeat VegeMince straight from the freezer instead of beef mince to create a wide variety of dishes with a really authentic taste and texture." The product has the Vegetarian Society seal of approval.

Spot in SoyaFoods. 1993. Autumn. p. 5. "Haldane launches Vegemince." This meatless blend of vegetable proteins is based mainly on wheat protein (gluten) plus some soy protein. It has been created from a new process developed by Haldane (patent pending) to give the taste and texture of minced beef. It comes pre-cooked and frozen in a 1 lb pack and provides 32 gm of protein per 100 gm.

1493. *Health Foods Business*. 1993. Green Giant unveils its own veggie burger. Oct. p. 17.

• **Summary:** "Pillsbury and Archer Daniels Midland (ADM) announced jointly that Green Giant, a Pillsbury Division, will become the exclusive marketer of a low-fat, no-cholesterol, all-vegetable patty that has been developed by ADM. The alliance stems from what both companies perceive as a growing demand from consumers for healthful foods that provide taste and convenience.

"As part of the agreement between ADM and Pillsbury, Green Giant Harvest Burgers, an alternative to meat-based burgers, will undergo significantly expanded distribution—from 9 cities presently to over 50 percent of the United States by the end of September 1994. ADM has marketed the product selectively since its introduction in 1991, and the company approached Pillsbury to create greater grocery store distribution and higher consumer awareness.

"Green Giant Harvest Burgers will be sold in frozen form in grocery stores. The line will include four varieties—original, Southwest style, Italian style, and breakfast patties."

1494. Wasserman, Debra. 1993. What's happening on The

Farm? A vegetarian community in rural southern Tennessee. *Vegetarian Journal* (Baltimore, Maryland). Sept/Oct. p. 28-31.

• **Summary:** "I finally had an opportunity to visit The Farm, a vegetarian community in rural Southern Tennessee. Some of you may be familiar with *The Farm Vegetarian Cookbook* or *Tofu Cookery*, two of the many vegetarian books published by The Book Publishing Company located on The Farm. Others may have eaten Ice Bean, one of the first soy ice creams to appear in health food stores. Ice Bean was first produced on The Farm in its Soy Dairy and later bought out by a larger company. And some readers may know that The Farm is in the forefront of advocating home births and the use of midwives, promoting Native American rights, developing solar energy technology, and even encouraging poor farmers to grow Shitake mushrooms. These activities and many more are occurring on The Farm today.

"Situated on over 1,700 acres in Summertown, Tennessee, The Farm is home to many vegetarian families. The community first formed in 1971 as a commune. Several hundred 'hippies' boarded old school buses in California and made the trek to rural Tennessee. Originally their plan was to live off the land; however, few of them had any real farming experience (many had grown up in cities) and they soon realized that they did not know how to survive off the land. In fact, today there are a small orchard and vineyard and many large organic gardens maintained by families, but there is no large-scale organic farming.

"By the mid-1980's The Farm community members decided that it was in their best interest financially to mandate that each family be responsible for its own income. (The land on which The Farm is situated still is communally owned.) When this change was initiated many people living on The Farm decided to leave, since they were unable to figure out how to earn a living in rural Southern Tennessee.

"The families that remained have had to be quite creative. Remember, this is a very poor area in the United States. Other than a nearby Saturn Car Company plant and some fast food restaurants, there is really not much employment opportunity in this area. Indeed, the most pressing issue on The Farm today is how to create more job opportunities for the children and anyone else wanting to live on The Farm. The nearest city is Nashville, about an hour and a half drive each way.

"For a while many individuals on The Farm began doing construction work in nearby towns. Some still do this type of work. Others started small businesses on The Farm, including a tie-dye clothing operation, a grocery store that offers many vegetarian items, a private school that has won many awards from the state of Tennessee for outstanding performance by its students, a vegetarian deli offering items such as soysage, plus many other enterprises, some of which I will now describe in detail.

"The Book Publishing Company: Cynthia and Robert

Holzappel are key players in the operation of The Book Publishing Company (a Farm community-owned business) and co-owners of the Mail Order Catalog, which offers books (many with a vegetarian theme) to the public. The Book Publishing Company predates The Farm in that it first started in San Francisco, California. Their first published book was *Monday Night Class*, which consisted of a compilation of Steven Gaskin's talks. Gaskin was then a professor at San Francisco State and later became the 'leader' of The Farm community when it began.

"I spoke at length with Cynthia Holzappel and she told me that they set up a press on The Farm so as to have the freedom to say what they wanted to say. Indeed, their second book called *Hey Beatnik*, published in 1974, was about the people living on The Farm. In 1975 The Book Publishing Company produced its first vegetarian cookbook called *The Farm Vegetarian Cookbook*. This book not only encouraged vegetarian eating, but also promoted a vegetarian lifestyle. And in 1976 they published *Spiritual Midwifery* which advocates home births and the use of midwives. Today The Book Publishing Company has several full-time and part-time employees. It certainly is one of the most successful businesses located on The Farm. Pictured below are two workers in the production area.

"Cynthia and Bob Holzappel took over management of The Book Publishing Company in 1985. With hard work and excellent co-workers, they have highly developed this business. Most of the books published today are written by authors who do not live on The Farm, but obviously share the community's values. Since this company is community-owned, there is an editorial board of directors which reviews manuscript offers. The company is primarily interested in two areas—one being lifestyle-oriented including vegetarianism, ecology, and alternative health, and the other being Native American-oriented, with books written by Native Americans so as to keep their culture alive and allow them to speak with their own voices.

"In 1993 The Book Publishing Company produced twelve books—reaching a goal they first set in 1985. By all means, this is a huge accomplishment for the company since only two years ago they were producing an average of four books per year, and not long before that they were publishing only one book per year. Today about 75% of their books fall under the vegetarian lifestyle category. (Some books are offered in *Vegetarian Journal's Catalog* on pages 33-34.)

"When I asked Cynthia if she noticed any new trends related to vegetarian book publishing she quickly said yes—the need for low-fat cookbooks. She hears from many 50- to 60-year-old-women whose husbands' doctors have told them to drastically change their diet and as a result they are looking for low-fat vegetarian recipes, especially ones using meat analogs or alternatives. Texturized Vegetable Protein (TVP), gluten, tofu, tempeh and other meat substitutes are right up their ally.

"Cynthia said that the market for vegetarian books is definitely growing despite the poor national economy. After all, she believes that nutritious and inexpensive food is recession-proof. Her motivation is not to change someone's beliefs, but rather to change their activity or actions, which in turn will lead to changed beliefs. She strongly believes in what Gandhi advocated—lead by example. In fact, Cynthia says she is for something, not against something, when she promotes vegetarianism. Cynthia personally became vegetarian because she felt that more people could be fed if we were all vegetarian. In her opinion the United States sets standards for other people around the world, eating habits included.

"According to Cynthia, protest is important to make change, but you must also be tolerant of people's differences. Individuals on The Farm come from a wide variety of backgrounds and have learned to tolerate one another's views. In fact, Cynthia says that, 'there are gray areas where we argue all the time—for example, should we allow fishing in our pond?' (Not everyone living on The Farm today is a strict vegetarian and they do not force their children to be vegetarian.)

"All the employees of The Book Publishing Company live on The Farm. No one has had formal training in publishing, and yet the company is certainly quite successful today. Readers who would like to receive a catalog from The Mail Order Catalog Company which distributes books published by The Book Publishing Company, as well as other publishers (including The Vegetarian Resource Group) can call (800) 695-2241 to request a catalog.

"Soy Dairy: Another small, but fascinating, business located on The Farm is the Soy Dairy. Here about 1500 pounds of tofu is produced in one day, some of which is distributed by the Kroger supermarkets in Nashville. No one else in the area manufactures tofu. The Soy Dairy also produces some soymilk and tempeh for members of The Farm community. I had the opportunity to try a delicious tofu spread that they produce when I purchased bagels at the Nashville Bagel Company in downtown Nashville.

"Thomas Elliot recently took over ownership of the Soy Dairy. He's lived on The Farm for twenty years and, believe it or not, grew up on a dairy farm as a child. He hopes to expand their business in the near future, since the demand for soy products continues to climb."

This article also discusses: (1) Mushroom People, a Farm business which encourages the production of shiitake mushrooms. They do not actually grow shiitake mushrooms, but rather produce a spawn medium needed to grow the mushrooms on cut logs." (2) The Farm Education Conference Center.

Photos show: (1) Most of the cover of the books *Tofu Cookery* and *The New Farm Vegetarian Cookbook*.

1495. *SoyaScan Notes*. 1993. Manufacture and sale of

soyfoods in Poland (Overview). Nov. 11. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The following information about soyfoods companies in Poland was provided by the Polish consulate, the American Soybean Assoc., and a Westerner traveling in Europe:

Polsoja was started in early 1993 by Piotr Poninski and three partners. It is probably the first tofu shop in Warsaw, Poland, and the only tofu shop in Poland that makes and sells tofu on a regular basis. Five people work at the company. Address: ul. Hetmanska 61, 05-120 Legionowo (near Warsaw), Poland. Phone/fax: (48 22) 18 21 11

Solida Sp. z o. o. is a Chinese-owned company founded in 1992 by two Chinese partners: Mr. Lu Shihua (president) and Mr. Liu Zhonghua. The sales manager is Mr. Bugosiaw Zwadzki. They make and sell soy sprouts. They plan to sell tofu. Address: ul. Kmicica 1/212, 02-728 Warszawa (Warsaw), Poland. Phone/fax: (48 22) 47 23 09.

Okregowa Spoldzielnia Mleczarska is a dairy co-operative that supposedly makes or used to make tofu. They were taught how by Prof. Stanislaw Gwiazda. Polsoja has never seen or eaten their tofu. They probably started in 1992. Probably nobody speaks English there. Address: ul. Chopina 2, 12-100 Szczytno, Poland. Phone: (48 889 89) 22 11.

Prof. Stanislaw Gwiazda is said to have traveled in East Asia and claims to know tofu technology. He works in the faculty of food technology at the main School of Agriculture in Warsaw, where he specializes in proteins and fats. He helped the Szczytno start or try to start making tofu. Address: Szkola Glowna Gospodarstwa Wiejskiego, Katedra Produktow Biaikowych i Tuszczowych, ul. Grochowska 272, 03-849 Warszawa, Poland. Phone: (48-22) 10 18 42.

Polgrunt Sp z o. o. makes soy pâtés and soy flour. They also sell soybeans, TVP (imported from Serbia via Hungary), soy sauce, and maybe other soy products. They may start making tofu in the future. They probably started in 1991 or 1992. Address: ul. Pabianicka 17/19, 97-400 Beichatow, Poland. Phone: (48 841 83) 255 64.

There is also an unknown Vietnamese man who is making tofu for the Vietnamese community in Warsaw. He probably does everything in his kitchen for just a few people.

1496. Reis, Ademar. 1993. History of his work with soyfoods, seitan, and gluten (Interview). *SoyaScan Notes*. Nov. 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ademar, age 46, was born on 2 May 1947 in Santos, Sao Paulo, Brazil. In the early 1950s Brazil started growing more soybeans. His mother was a very well educated person and she liked to read; she also had many children and the family was rather poor, so they could not afford to buy meat, milk, or other animal products. Not far from their home was an agricultural department. His mother would send him there, and they would give him free

soybeans, which he and his mother would cook or use to make soymilk.

He entered law school in Brazil in the early 1970s, but upon graduation he became an actor and had a theater group. At the time, life in Brazil was very hard and repressive due to the military government. He went against the government and he had to flee the country in June 1973. Since he had several Brazilian friends living in Los Angeles, he went to live with them there. One day while shopping at Erewhon on Beverly Blvd. in Los Angeles he learned about the East West Center.

He moved into the East West Center, a macrobiotic commune on [7357] Franklin Ave. in Hollywood, California 90028. At that point his girlfriend, Iseti, joined him from Brazil; they were married in America in Oct. 1975. First he started working as Roy Steevensz' assistant making foods. Then in late 1973 or early 1974 he started a company named East West Cookery, where he made Soy Burgers, which he sold to many health food stores in and around Los Angeles, including the Erewhon retail store. To make the burgers he would soak whole soybeans, pressure cook them until soft, then cool and mash them for use as a binding agent. He would mix the mashed soybeans with cooked brown rice and fresh onions, parsley, and carrots. He would shape the mixture into patties, which he baked in an oven. He made the burgers in the kitchen of the big East West Center. In terms of logistics, he would wake up at 4:00 in the morning, cook the soybeans and let them cool. Later, after others had finished breakfast in the kitchen, he would shape and bake the burgers. He would put these between buns, with lettuce, tomatoes, etc. and distribute them to stores.

After several years he decided that he wanted to move to Boston to be close to Michio Kushi. He and his wife, Iseti, went to live at the Kushi macrobiotic study house in Newton, Massachusetts. In Newton he tried to support his wife (who was pregnant) and himself by doing some translation of articles from a Brazilian newspaper. After a few months, they realized they could not make a living doing translation, so Ademar decided to move to Somerville, re-activate East West Cookery, and start making Soya Burgers again—just about the same time his son was born (in October). After making the down payment on the apartment, they found themselves out of money. So they went to see Aveline Kushi (who he met when she lectured in California) at her home in Brookline. She gave him \$500 to get his business started and she put only one condition on the gift: “Don’t put too much garlic in the food.” He has kept in touch with her over the years.

The Seventh Inn made the bread for Ademar’s burgers’ buns. First he made the burgers out of his home in Somerville, Massachusetts, but he was caught by the Board of Health, so he had to move to a commercial kitchen.

One day a young man named David came from San Diego (where he had been a lifeguard), tasted Ademar’s

product, and ended up working with the company for a year. Tom was also an artist, and before he left, he drew a logo, wrote “Season’s Harvest” in it, and gave it to Ademar as a present. In 1977 decided to rename his company Season’s Harvest. Between the late 1970s and the early 1990s Ademar developed a line of about 20 different types of sandwiches (including Solar Burger sandwiches [with Wheatmeat made from Seitan], in 1976), many different burritos (including and a Tofu and Brown Rice Burrito, in about 1978), 20 different types of salads, and carrot juice. In about 1980 Season’s Harvest introduced Tuna Salad and Chicken Salad, each containing textured soy protein concentrate; these are the only two products in his line that are not vegetarian.

Until 1987 Season’s Harvest did its own distribution throughout the area (Massachusetts, Connecticut, New York, Philadelphia [Pennsylvania], etc.). Then from 1987 to 1990 the company turned over part of its distribution to a natural foods distributor named Country Barn. In 1990 Country Barn went out of business, with large unpaid debts to Season’s Harvest. Ademar picked up two distributors in New York: Craig Coester and Ed Wolf.

Looking for a bigger market, in the winter of 1991 Ademar contacted a little company in Massachusetts named Idyllwild Farms, which prepares food and puts food together for major airlines. He made a presentation but nothing developed. One day Continental Airlines contacted Idyllwild saying, “Look, we’re having a lot of requests for vegetarian meals, what can you come up with?” Idyllwild spent a great deal of time trying to find meals that were acceptable to Continental’s headquarters in Texas, but to no avail. As a last resort, in about December 1992, they went to Ademar. He set to work modifying the Dream Burger. It was an instant hit at Continental—so they asked for more vegetarian products and a dish with mushrooms and onions. Ademar designed the Vegetable Patty. Then they wanted something for breakfast, so he made the Veggie Breakfast Sausage. The first order from Idyllwild arrived in March 1993—the last arrived on 29 July 1993. Idyllwild declared bankruptcy, and Ademar lost \$12,000 that Idyllwild owed his company. It was a small disaster. Fortunately, Ademar was able (by great good fortune) to reestablish his contact with Continental and today they are still ordering from him. Idyllwild had hidden the names of its suppliers. Subsequent soy- or gluten-related products included: Dream Burger (1991, June, to be renamed Dreamburger in 1994), Vegetarian Meatball, and Vegetarian Bacon Bits (1992, Feb.), Seitan (1992, June), Cajun Burrito (1992, Nov.), Vegetable Patty (1993, March), and Veggie Breakfast Sausage (1993, March).

Ademar is now looking for a plant or company to make his Veggie Breakfast Sausage. He met Ernie Mucke, who is a fourth-generation sausage maker and who owns a traditional sausage company named Mucke’s. Ernie, who is in his late 30s, grew up working in the plant and knows every detail of the machinery. His 4-year-old son has many allergies so his

wife started cooking vegetarian meals, which Ernie likes, so now he is very open to vegetarianism. Ernie’s wife’s brother, who had spiritual powers and lived in Arizona, was Ernie’s spiritual guide. Just before he died, this spiritual guide told Ernie that someone would come into his (Ernie’s) life and his sausage plant would be transformed, and he would end up making vegetarian foods. Ademar and Ernie are now working out plans together.

In about mid-1992 Sysco, America’s largest food distributor, began to carry Ademar’s products; he is with their Hallsmith Sysco division. About 6 months ago he also got into J.P. Food Services (Monarch); Harvard University buys his products. The last few months, in working with Protein Technologies International, ADM, and Central Soya, Ademar has learned many new things about food technology and product formulation. So now he is reformulating many of his products. Currently his best-selling products are Bean & Cheese Burrito, Hoomus [Hummus], Tabouleh [Tabbouleh], and Dream Burger—in that order. He now owns the largest natural-food sandwich company in New England—followed by New World.

Ademar has kept good records of his years of pioneering work with natural foods; his files may be able to add more detail and accurate dates and names to this story. He still uses macrobiotic principles in formulating his recipes to balance yin and yang, but he is not as strict as he used to be; he now eats tomatoes and eggplants. Address: Founder and owner, Season’s Harvest, 52 Broadway, Somerville, Massachusetts 02145. Phone: 617-628-1182.

1497. Willemse, Jan; Eaton, Eleanor. 1993. *Cooking for Henry: The memories and recipes of Chef Jan Willemse, former pastry chef at Dearborn Inn and personal party chef for Henry Ford*. Virginia Beach, Virginia: The Donning Company / Publishers. 160 p. Illust. Recipe index. 26 cm. Autographed by Willemse and Eaton.

• **Summary:** Contents: Foreword. 1. I’m discovered by Edsel Ford: Bread, pastries. 1. Henry Ford introduces me to the soybean: Soybean recipes. 3. I help open the Clinton Inn Restaurant to the public: Soups, salads, finger food. How you can be as healthy as Mr. Ford: Entrees, sauces, vegetables.

Mr. Willemse selected and downscaled his recipes while Mrs. Eaton wrote the biographical text and selected the photos. The book was published just after Mr. Willemse’s 93rd birthday. A photo on the cover shows Fair Lane, the last and most famous home of Henry and Clara Ford, located on the banks of the Rouge River in Dearborn, Michigan. Completed in 1915, the mansion has 56 rooms and is situated on 1,346 acres. After Mr. Ford’s death, Fair Lane was given to the University of Michigan at Dearborn by the Ford Motor Co.

In the Preface, Jan’s three children write: “The qualities our father and we admired most in Henry Ford were his simple manner, his genuine interest in his employees and

their families, and his many kindnesses to them.”

Born in Holland, Jan’s training as a cook began at age 12 in his home town of Hilversum. He came to America in 1919 settling in Boston where he met and married his wife Annie. He first came in contact with the Ford family in 1931 when he was cooking at the Nautilus Hotel in Miami Beach, Florida. He took food to Edsel Ford and the crew of his yacht, which was moored at the marina. Edsel thought Jan was a good cook. Henry Ford had just opened the Dearborn Inn in Dearborn, Michigan, and Edsel thought Jan would be a good executive chef. Henry Ford wrote Jan asking if he’s come to Dearborn and take the job of head chef. After a while, Jan accepted. Mr. Ford didn’t want any alcohol served at the inn and he was very much against smoking. Jan soon met Edsel Ruddiman, Henry Ford’s chemist. Jan never cooked at Fair Lane, the Ford’s home and mansion, while the Fords lived there.

In 1934, at Mr. Ford’s request, Jan started experimenting with soybeans. Dr. Ruddiman had the miller send him samples of soybean flour. He started by making soft rolls, and then began experimenting with many different foods. Whatever Jan made had to be approved by Dr. Ruddiman before he could send it to the Ford family. However, it could be served at the Dearborn Inn without his approval. He made many recipes in the next 5 or 6 months, and as far as he knows no other soy recipes were around.

While Jan researched food recipes with soybeans, Dr. Ruddiman and chemist Bob Smith experimented with making a substitute for milk and ice cream from the beans (p. 47). The first products were served at the Dearborn Inn, but weren’t well liked. Several other soybean researchers Jan remembers were R.H. McCarroll and Harold Joyce.

Jan worked as pastry chef at the Dearborn Inn until 1932. Then he went into Dr. Ruddiman’s laboratory in Greenfield Village. “This soybean experiment was a sideline, you might say. It started small but grew to be very important to Mr. Ford. He wanted more and more food made with the soybean. Clara Ford was not as interested in the soybean as her husband, but she especially liked some soybean food such as cookies made with white chocolate chips, and soy bread. She wanted the bread sent to the mansion every day. A favorite of Mr. Ford’s was a soybean cracker that he named the Model T...” A recipe for “Model T. Crackers” is given.

The section titled “Soybean Recipes” (p. 51-72) contains 42 such recipes. The main soy ingredients used in these recipes are soybean flour (used in 18 recipes), soybean margarine (in 17 recipes), soybean milk (10), whole soybeans (cooked, 9), soybean oil (8), roasted soybeans [soy nuts] (5), soy sprouts (1), TVP (textured soy flour, 1), and canned green soybeans (1). There are also two recipes for making soybean milk (one from soybean flour and 1 from whole soybeans), and one recipe each for making roasted soybeans (salted and baked) and homemade soybean coffee.

A photo (p. 66, supplied by Willemse) shows the “Menu

of Dinner Served at Ford Exhibit, Century of Progress, August 17, 1934.” The names of 17 dishes, each containing soya, are listed. The text on the facing page states: “I planned this menu of all soybean food...” served at The Ford Exhibit in Chicago, Illinois.

When Henry Ford ceased to be active in the Ford Motor Co., Jan left the company and started a catering business on his own. The Clinton Inn (pictured) was the first building Henry Ford acquired for Greenfield Village in 1927. Jan helped to open it to the public. Of the various friends of Henry Ford that Jan met, the one who impressed him most was George Washington Carver. “Of all the people I met, the prince of them all was Henry Ford. He was a wonderful man. He was so interested in everything and everybody. He loved children. He helped them, and the poor too, whenever he could.” Jan also thought a lot of Dr. Ruddiman, who told him many times that “you are what you eat... Well, I’ve eaten soybean foods ever since I started experimenting with them.”

“It used to be everyone thought soybeans were just food for animals. Mr. Ford helped people realize that they are perfect food for human beings. He once said that, next to the Model T, he considered his soybean research to be his greatest work.”

This book contains many fine old photos including the following: The Carver Laboratory interior (p. 46; it was used for soybean research), The Carver Laboratory exterior in 1942 (p. 50). Henry Ford standing by George Washington Carver (p. 65). Austin W. Curtis Jr., Jan Willemse, and Bob Smith sampling soybean foods that Jan served at a soybean brunch at the Henry Ford Estate–Fair Lane in 1988 (p. 138). Two giant pressurized cans of Presto Whip which attracted the attention of passers-by on Telegraph Road, south of Michigan Ave. in Dearborn for many years. Stored inside the structures were soybean oil and sugar used to make the soy-based non-dairy whip topping developed by Robert Smith, food chemist, at the request of Henry Ford (p. 144). Photos on the last page, titled “About the Authors” (autobiographical) show both Willemse and Eaton. Jan still bakes soybean cookies (recipe p. 61). Address: Willsemse: 130 Nightingale, Dearborn, Michigan 48128. Phone: 313-561-4088.

1498. Cole, Sidney J. 1993. Changes at DE-VAU-GE (Interview). *SoyaScan Notes*. Dec. 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** DE-VAU-GE (DVG) has stopped making soymilk [actually they plan to stop in early 1994] and therefore also tofu. It was an economic decision. When the Adventist church sold Granose Foods in England, that cost DVG about 40-50% of their soymilk market. DVG still sells and distributes both soymilk and tofu under their GranoVita brand, but they buy the products from other manufacturers. The soymilk may be made by Alpro in Belgium. DVG still manufactures many other soyfoods, such as the soy protein

foods, the canned meatlike products, etc.

DVG is still a strong company that is growing rapidly and Michael Makowski is still the general manager. He calculated that he can do better financially by using his factory space to make Corn Flakes rather than soymilk. If DVG keeps up their current growth rate, they may soon pass Australia's Sanitarium Foods as the leading Seventh-day Adventist food company in terms of sales. The church has no plans to sell DVG, and in fact the church is looking to support its food industries quite strongly now.

The decision to sell Granose was made at the local division level, not at the General Conference level. Sidney personally would have preferred that the church not sell Granose, but at least they did sell it at the right time and to a good buyer—the Haldane Foods Group. The products, the company, and the philosophy are all in good hands.

Eric Fehlberg retired about 2 years ago as director of the Seventh-day Adventist International Health Food Assoc. Dr. Cole took his place, and he has also kept his job in Miami at the Inter-American Division. Address: Director, International Health Food Assoc., P.O. Box 140760, Miami, Florida 33114-0760. Phone: 305-443-7471.

1499. Makowski, Michael. 1993. Soymilk at DE-VAU-GE and in Europe (Interview). *SoyaScan Notes*. Dec. 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** DE-VAU-GE (DVG) has not yet stopped making soymilk; they had planned to stop during late 1993 and they hope to definitely stop during 1994. They stopped making tofu and Tofu Cream 2 months ago, but they continue to sell tofu; they now buy it from another company [Heuschen-Schrouff in the Netherlands]. DGV decided to stop soymilk production because of the large drop in demand after Granose was sold.

Their problem is to find a partner to produce soymilk for them. This other company must make a good quality product at a reasonable price, must have a large enough capacity to supply their needs (they plan to continue to sell the same soymilk products they are selling now), and must be willing to buy their used soymilk equipment at a reasonable price (this is the main sticking point).

There are not many large soymilk manufacturers in Europe. Alpro in Belgium makes and sells about 32 million liters/year in all the different sizes and flavors. Sojinal in France makes about 5½ million liters/year, and DE-VA-GE makes about 4 million liters/year. Other active soymilk manufacturers include Liquats Vegetal S.A. in Viladrau (near Girona), Spain (which started about 1 year ago and makes their soymilk from whole soybeans; they are a private company), several small manufacturers in England (but their quality is not acceptable), and Soyana in Switzerland. In Michael's opinion, the quality of the soymilk made by Alpro and DVG are more or less the same.

The British market for soymilk is by far the biggest in

Europe, comprising about 50-60% of the total European market. Belgium, France, and Germany come next and are all about the same size. Then come Italy and Spain.

In Europe, 80% of all soymilk is sold plain—unsweetened and unflavored; it contains only soybeans and water. Then there are the sweetened types, which are sweetened with sugar, honey, or grape juice. The main flavored types are chocolate, vanilla, or strawberry. Then there are three flavors of dessert puddings: Chocolate, vanilla, and strawberry. That's all. Address: General Manager, DE-VAU-GE Gesundkostwerk GmbH, Postfach 1660, Luener Rennbahn 18, D-2120 Lueneburg. Phone: (04131)-303-145.

1500. Ruggles, Kristi. 1993. Schools put veggie burger on their menu: ADM to supply three Decatur high schools. *Herald and Review (Decatur, Illinois)*. Dec. 8. p. 15.

• **Summary:** “Decatur—Students at Decatur's three public high schools will sink their teeth into a new sort of burger today; a vegetable burger.”

ADM's sales are picking up to The Pillsbury Co. and to Ukraine.

“The burger is being promoted as a healthy and tasty alternative to meat.”

The British eat 70 million veggie burgers a year.

1501. *Food Production / Management (Baltimore, Maryland)*. 1993. Pillsbury and ADM to market Giant Green frozen Harvest Burgers. Dec.

• **Summary:** ADM has marketed this product selectively since its introduction in 1991. Harvest Burgers are presently marketed in Minneapolis, Minnesota; Chicago, Illinois; Indianapolis, Indiana; St. Louis, Missouri; Milwaukee, Wisconsin; Houston, Dallas, and San Antonio, Texas; and Louisville, Kentucky.

Pillsbury is a subsidiary of the Food Sector of Grand Metropolitan PLC, one of the largest international companies in the United Kingdom and a world leader in drinks, retailing and food. GrandMet sales are in excess of \$14,000 million. Other U.S. subsidiaries include Burger King, Carillon Importers, GrandMet Foodservice Inc., Haagen-Dazs, Heublein, the Paddington Corporation, and Pearl Inc.

1502. *Soybean Digest*. 1993. Green Giant adds soybean burgers. Dec. p. 53.

• **Summary:** In October 1993, Green Giant, a division of Pillsbury, became the exclusive marketer of Harvest Burgers, developed by ADM in 1991. ADM has been producing the burgers in Decatur, Illinois, and marketing them in only 10 cities. Because ADM does not have the sales and distribution networks in place to handle a frozen product, the company teamed up with Pillsbury. Pillsbury plans to dramatically expand distribution to over 50% of the U.S. by the end of 1994. Annual sales are projected to reach \$40-60 million within 3 years. So packages of frozen soy burgers are now

adorned by the famous face of the Jolly Green Giant. Green Giant Harvest Burgers are sold in four varieties: Original, Southwestern Style, Italian, and breakfast. A package of four patties retails for about \$2.69. Pillsbury will target its product toward America's nearly 12 million vegetarians.

1503. Wittenburg, Bonnie. 1993. Archer Daniels Midland Company: NYSE-ADM. Minneapolis, Minnesota: Dain Bosworth. 36 p. 28 cm.

• **Summary:** Contents: Summary and recommendation: Valuation. Company profile. Operating review. Corn refining: High fructose corn syrup (HFCS), ethanol, bioproducts. Oilseed processing (soybeans, soy meal, soy oil): Edible soy proteins (soy protein concentrates, isolates, soy flour, and textured soy flour). Wheat milling. Other products and businesses. International trade: NAFTA and GATT. Financials. Recent results. Outlook and conclusion.

Index of exhibits. ADM sales by segment in 1988 and 1993 (p. 5; In 1993: Oilseed processing 50%, corn refining 28%, wheat milling 13%, other 9%). U.S. oilseed processing capacity (p. 20; ADM 28% of U.S. capacity, Cargill 25%, Bunge 16%, Ag Processors 14%, Central Soya 10%, Other 7%). World oilseed production by crop (p. 20; Soybeans account for 52% of the 227.3 million metric tons [tonnes] total). World soybean production by country (p. 20; Total 116.9 million tonnes, of which the U.S. produces 51%, Brazil 19%, Argentina 10%, China 9%, Other 11%). World vegetable oil consumption 1992 by crop (p. 21; Total 584. million tonnes, of which soybean is 30%, palm 21%, rapeseed 15%, sunseed [sunflowerseed] 14%, peanut 6%, cottonseed 6%, other 3%). Soybean meal use by livestock (p. 20; Poultry 51%, swine 27%, beef 8%, dairy cows 7%, other 7%). Largest exporters of soybean meal: 1990-1994 (tonnes in 1993/94 EC-12 8,830, Brazil 6,550, USA 4,944). Largest importers of soybean meal: 1990-1994 (tonnes in 1993/94 EC-12 13,630, Asia and Oceania 4,936, Middle East and North Africa 2,443).

This "Dain Bosworth Research Report" is "A fundamental appraisal of investment value." "ADM is so big and efficient, and its product lines are so diverse, that it can benefit from almost any positive trend impacting agriculture worldwide. ADM is believed to be the largest corn refiner, oilseed processor and flour miller in the United States... We recommend purchase of ADM shares based on our expectations of improved earnings momentum beginning in the fourth fiscal quarter of fiscal 1994."

Concerning edible soy proteins (p. 23-24): The entire U.S. meat substitute market is estimated at \$50-100 million annually today, and growing at 5-8% a year. The Green Giant Division of Pillsbury is marketing ADM's burgers under the name Green Giant Harvest Burger. Worthington Foods of Ohio is the leader in the meat substitute category. Their Morningstar Farms burgers are precooked whereas ADM's burgers require cooking. ADM sold 70 million veggie

burgers in fiscal 1993 and is now building capacity to triple production. A company named Aton, said to be one of the largest private enterprises in Ukraine, has an agreement with ADM whereby ADM will be shipping \$100 million of soy-based food ingredients to Ukraine by the summer of 1994.

Toepfer, which was started in Germany in 1919, handles approximately 9% of the total world grain trade and about 35% of the world trade in feedstuffs. ADM owns 50% of Toepfer; the other half is owned by 14 cooperatives from 7 countries including Gold Kist, Agway, Harvest States, AGP, etc. in the USA.

"We continue to believe that the long-term story for ADM is among the best of the companies we follow." "In our opinion, ADM is among the best positioned, best managed, and financially sound ag processing companies around" (p. 35). Address: 60 South Sixth St., Minneapolis, Minnesota 55402-4422. Phone: (612) 371-2728.

1504. Siriwardana, T.R.W. 1993. Country report 13-Sri Lanka. In: N. Chomchalow & P. Narong, eds. 1993. Soybean in Asia: Proceedings of the Planning Workshop for the Establishment of the Asian Component of a Global Network on Tropical and Subtropical Soybeans. Bangkok, Thailand: FAO Regional Office for Asia and the Pacific. viii + 218 p. See p. 119-127. RAPA Publication (FAO), No. 1993/6. [11 ref]

• **Summary:** Contents: (1) Introduction. (2) Production: Status, major growing seasons and cropping systems, constraints, resolving constraints. (3) Processing, utilization and marketing: status, supply and demand, constraints to processing, utilization, and marketing, resolving constraints. (4) Resources: Personnel, seeds. (5) On-going research projects. (6) Information required.

Tables: (1) Production of soy bean in Sri Lanka in the 1970's and 80's. (2) Average climatic data for the wet and dry seasons in soybean growing areas. (3) Imports of soybean meal to Sri Lanka. (4) Imports of Textured Vegetable Protein (TVP) into Sri Lanka.

Maha, the rainy season, is from Oct. to March. Yala, the dry season, is from April to Aug. and requires irrigation for soybeans.

Area planted to soybeans in Sri Lanka grew from 611 ha in 1974 to a peak of 12,244 ha in 1983, then decreased to 3,823 ha in 1989. Soybean production grew from 600 tonnes (metric tons) in 1974 to a peak of 9,100 tonnes in 1988, then decreased to 1,500 tons in 1989. Soybean yields grew from 980 kg/ha in 1974 to a peak of 1,490 kg/ha in 1987, then decreased to 0.38 kg/ha in 1989.

Imports of soybean meal into Sri Lanka grew from 3,113 tonnes in 1980 to 31,320 tonnes in 1990.

Imports of TVP into Sri Lanka grew from 206 tonnes in 1980 to 835 tonnes in 1990. Address: Head, Soybean Foods Research Centre, Dep. of Agriculture, Peradeniya, Sri Lanka.

1505. Howard, Robert B. 1994. Archer Daniels Midland Company. *Positive Patterns (Rogersville, Missouri)* No. 23. p. 1, 5-6. Jan. 29.

• **Summary:** This is an analysis of ADM stock and its potential based on earnings and charts. The author sees a very bright future for the company. He believes that “ADM will deliver superior returns to shareholders.” Mr. Andreas is a big-vision person who has a long range plan. Key products are lysine, tryptophan, and threonine for animal feeds, soy milk and Harvest Burgers (ADM Predicts these two products are likely to be the most important for ADM over the next 10 years), biological insecticides (ADM is the world’s largest producer), xanthan gums, and ethanol. ADM is an excellent cash generator. Every year they wisely acquire other companies, and they have an acquisition team that is second to none. They have made dozens of acquisitions during the past decade. Their balance sheet sparkles and is very straight forward and honest. ADM takes the long view. Address: Route 2, Box 248, Rogersville, Missouri 65742. Phone: 417-887-4486.

1506. Creager, Sue. 1994. New developments at Central Soya, Premiere Agri Technologies (Interview). *SoyaScan Notes*. Jan. 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Eridania/Beghin-Say is still Central Soya’s parent company. David Swanson resigned Central Soya (he was chairman, president, and CEO) last July to lead a group of investors to buy out Central Soya’s feed company. That fell through, so then he started working with ADM. Last Friday Central Soya sold its feed business (Master Mix feeds), including all its feed plants, to a subsidiary of ADM. David Swanson is now CEO of the new feed company, which is called Premiere Agri Technologists and is a wholly-owned subsidiary of ADM. They are still located in Ft. Wayne, Indiana (P.O. Box 2508, Zip 46801. Physical address: 8515 Bluffton Rd., Zip 46809. Phone: 219-479-5000).

Raul Gardini, who had already resigned from Ferruzzi, committed suicide on 23 July 1993, in Milan, using a pistol shot to the head, at age 60. The story was widely publicized, with good accounts in the Wall Street Journal, and the Financial Times. It was a result of the big, ongoing government investigation that is taking place in Italy. Ferruzzi is now trying to adjust its debt with banks. Gardini’s suicide had no effect on Central Soya or Eridania/Beghin-Say.

She knows nothing about Central Soya relocating near Salt Point, New York. Address: Public Relations, Central Soya Co., Indiana. Phone: 219-425-5591.

1507. Agriculture Canada, Oilseeds Division, International Markets Bureau, Markets and Industry Services Branch. 1994. Oilseed sector profile. Ottawa, Ontario, Canada. [iv] +

23 + 1 + 12 p. Jan. 28 cm. Spiral bound. [3 ref]

• **Summary:** Contents: Foreword. 1. Introduction. 2. The seed production subsector: Canola, soybeans, flaxseed, sunflower, mustard, safflower, composition.

3. The processing subsector: Background, crushing plants, industry statistics, methods of processing, oilseed crushings, vegetable oils, vegetable oilmeals, economic value of the industry. 4. The marketing subsector: Oilseeds marketing, hedging, processed oilseed products marketing.

5. Organizations: Canola, soybeans, flaxseed, crushers. 6. The environment: Domestic, international.

Appendix A: Role of the federal government in the Canadian oilseeds industry: Research, regulation, marketing. Appendix B. Oilseed industry directory: Industry association, oilseed processing companies, oilseed sector trading companies, research / education institutions, government, others.

Soybeans (p. 3): “Soybeans were introduced into Canada in 1893; however they did not become a commercial oilseed crop until the late 1920’s. In that year [sic, about March 1930], the first soybean crushing plant [Milton Oil Refineries, Ltd.] was built in Milton, Ontario. The introduction of modern crushing mills occurred in the late 1930s. Increased demand for vegetable oil and protein meal during the early 1940’s firmly established the crop and by 1950, soybeans had become a major cash crop in Ontario. Strong promotional efforts by the crushing industry assisted in continued expansion of the crop. During the 1980s, soybeans were introduced into Québec, the Maritimes and Manitoba as a source of livestock feed... In Québec, whole soybeans have become a viable alternative feed source. In other regions, whole soybeans are only a minor ingredient for livestock.”

The soybean growers, like their canola counterparts, have shown a high degree of cohesion and organizational ability. In 1949, the Ontario Soybean Growers’ Marketing Board was founded. The Board represents 25,000 producers and negotiates the pricing arrangements for Ontario soybeans. Its functions are discussed in more detail further in this report. The handling, crushing, and exporting of soybeans and soybean products is handled by private companies.

“Canadian soybean production has increased sharply from the late 1970’s when up to 60 percent of Canadian soybean requirements had to be imported. In 1987, domestic production reached a level capable of supplying most internal demands for crushing (Table 3). Although some soybeans are still being imported from the U.S., Canada exports a larger volume of high quality white hilum soybeans for food utilization in Asian and European markets.

Domestic crush of these larger crops has made Canada self-sufficient in soyoil production; however, soy meal is still in a deficit position. About 600,000 tonnes representing close to 50 percent of domestic soy meal utilization requirements

needs to be imported yearly.

“Up to 1991, the soybean crushing industry was operating below capacity.” In that year, Victory Soya Mills in Toronto was closed. “The result is that the crushing capacity now meets the production of soybeans for crushing. Therefore, without an increase in crushing capacity, Canada will remain a net importer of oilmeals. Nevertheless, increasing the crush is economically questionable until a viable market outlet is found to absorb the additional soyoil produced. The 1992 elimination of the U.S. crude soyoil tariff (18%) could ease the situation. The two companies crushing soybeans in Canada are corporately linked to large multinational corporations, with major U.S. operations. Therefore, without tariff, the unrestricted movement of soyoil between the two countries is a possibility.”

“Economic value of the industry (p. 12): The oilseed crushing industry makes a large and positive contribution to the Canadian economy. It is a processing industry and as such it provides enhanced strength to the economy through value-added contributions and the financial multiplier effect. In 1992 (table 16) the direct economic benefits were \$1,810 million, and the contribution to the Canadian balance of payments was \$599 million in total import replacement and \$322 million in export earnings for a total contribution of \$921 million.

Tables show: (3) Canadian supply and disposition of soybeans, soyoil and soymeal, 1988-1993. (5) Oilseed crushing facilities in Canada. Owners and their soybean crushing plants are: ADM Agri-Industries Ltd. (Windsor, Ontario): 1,250 tonnes capacity per 24 hours. CanAmara Foods (Hamilton, Ontario): 1270 tonnes capacity per 24 hours.

(7) Oilseed crushings in Canada: The soybean crush was #2 largest in Canada after canola and ahead of sunflower seed. The soybean crush was 908,200 tonnes in 1988, then 916,000 tonnes in 1989, then 1,083,500 tonnes in 1990, then 943,600 tonnes in 1991, and 995,200 tonnes in 1992.

(8) Vegetable oil production in Canada. Soybean oil is #2, far behind canola oil and far ahead of sunflower oil. During these 5 years, soybean oil production ranged from a low of 159,000 tonnes in 1988 to a high of 194,800 tonnes in 1990.

(9) Vegetable oil trade. During these 5 years, soybean oil imports to Canada were very small, ranging from a low of 4,000 tonnes in 1989 to a high of 16,000 tonnes in 1990. Soybean oil exports from Canada were even smaller, ranging from a low of 1,000 tonnes in 1989 to a high of 5,300 tonnes in 1991. Both soybean crushers also have their own soy oil refineries. The capacity of the ADM Agri-Industries Ltd. refinery (Windsor, Ontario) is 159,000 tonnes per year, whereas that of CanAmara Foods (Toronto) is 147,000 tonnes per year.

(13) Vegetable oilmeal production: Soybean meal is #2, behind canola meal but far ahead of sunflower meal. During

these 5 years, soybean meal production ranged from a low of 698,300 tonnes in 1988 to a high of 835,800 tonnes in 1990.

(14) Vegetable oilmeal trade. During these 5 years, soybean oil imports to Canada were large, and vastly larger than any other oilmeal, ranging from a low of 565,400 tonnes in 1990 to a high of 692,100 tonnes in 1988. Soybean meal exports from Canada were very small, ranging from a low of 200 tonnes in 1989 to a high of 33,100 tonnes in 1992. By contrast, large amounts of canola meal (about half of the total amount produced each year) were exported.

(18) Soymeal imports by province. The top 3 in 1988 were: Ontario 326,026 tonnes. Manitoba 169,687 tonnes.

(19) Soybean exports by major markets: The top 8 in 1992 were: USA 69,135 tonnes. Portugal 62,515 tonnes. Netherlands 27,349 tonnes. Former USSR 20,752 tonnes. Hong Kong 19,376 tonnes. Singapore 17,268 tonnes. Japan 11,306 tonnes. Malaysia 10,687 tonnes. Quebec 137,365 tonnes. Total 1992 245,668 tonnes.

(24) EC-12 production of major oilseeds, 1989-1993. In 1992-93 the leading oilseeds produced in the European Community were: Rapeseed 6,217,000 tonnes. Sunflowerseed 3,940,000 tonnes. Soybeans 1,294,000 tonnes. Cottonseed 606 tonnes. Linseed 316 tonnes. Address: 930 Carling Ave., Ottawa, ONT K1A 0C5, Canada. Phone: (613) 995-8324.

1508. Agriculture Canada, Oilseeds Division, International Markets Bureau, Markets and Industry Services Branch. 1994. Oilseed sector profile: Organizations (Document part). Ottawa, Ontario, Canada. [iv] + 23 + 1 + 12 p. See p. 18-19. Jan. [3 ref]

• **Summary:** “Soybeans: The producer marketing organization for soybeans is the Ontario Soybean Growers’ Marketing Board (OSGMB). Its objective is ‘to enhance the marketing of Ontario soybeans.’ The Board’s powers include licensing [soybean] producers, dealers and grain merchandisers and brokers; establishing license fees and negotiating with dealers and handlers charges for handling, cleaning and drying. The OSGMB has the power to purchase and sell soybeans but has not yet exercised this right. Minimum prices are not negotiable with buyers. Processors, crushers or brokers have agreed instead to pay to the producer the U.S. soybean price adjusting for quality, transport, handling, insurance and monetary exchange. The OSGMB negotiates the factors involved in these activities. All trading for the domestic, export and seed markets is done via private companies at current prices based on the price establishment methodology agreed to with the OSGMB.

“The OSGMB provides several important services. On behalf of the producer, the Board gathers and disseminates market and price information. It administers the Advance Payment Program of Agriculture and Agri-Food Canada for producers meeting the Program’s requirements. The OSGMB maintains marketing records from which it compiles an

average price to the producers by crop year. It gathers the information from which federal and provincial stabilization payments are determined. The OSGMB promotes the use of soybeans and soy products domestically and in key markets abroad. Through the Board, producer funds are channeled into research for improved soybean varieties or for new uses, such as roasted beans for animal rations. Finally, the OSGMB is an active lobbyist of the federal and provincial government on a variety of issues of concern to the industry.”

“Crushers: The Canadian Oilseed Processors Association is a non-profit industry association which represents all of the oilseed processing [crushing] companies in Canada. The association was formed in 1992 by the amalgamation of the Canola Crushers of Western Canada [founded in about 1979] and the Ontario Oilseed Industry Association [founded in about 1989]. The Association’s members include: ADM Agri-Industries Ltd., CanAmera Foods, Canbra Foods Ltd. and Northern Lite Canola Ltd.”

A list of eight of the Association’s main objectives is given. Address: 930 Carling Ave., Ottawa, ONT K1A 0C5, Canada. Phone: (613) 995-8324.

1509. Shurtleff, William; Aoyagi, Akiko. comps. 1994. *Soyfoods industry and market—Bibliography and sourcebook, 1985 to 1993*. Lafayette, California: Soyfoods Center. 361 p. Subject/geographical index. Author/company index. Language index. Printed 11 Jan. 1994. Published Jan. 1995. 28 cm. [1985 ref]

• **Summary:** This is the second of the two most comprehensive books ever published on the soyfoods industry and market worldwide.

In May 1982 the first study of the burgeoning soyfoods industry in the Western world was compiled by Shurtleff and Aoyagi, and published by Soyfoods Center. In April 1985 the fifth edition of that book, titled *Soyfoods Industry and Market: Directory and Databook* (220 pages), was published. It contained statistics through 1984, the market size and growth rate for each soyfood type, rankings of leading soyfoods manufacturers of each soyfood type and the amount each produced, analyses, trends, and projections. This book is published to update the 1985 market study.

In the decade since 1984 the soyfoods market has continued to grow at a very healthy rate, with some soyfood types (such as soymilk) growing at a truly astonishing sustained rate—in both the USA and western Europe—as the statistics in this book show so vividly. In 1975 only 75 new commercial soyfood products were introduced in the USA, yet that number skyrocketed to 217 in 1979, reaching an amazing 422 new products in 1987.

During the decade from 1984 to 1994, Soyfoods Center has invested most of its time and resources in the production of SoyaScan, the world’s largest computerized database on soyfoods, which contains more than 44,500 records as of Jan. 1994. This database also includes a wealth of carefully

researched statistics and analyses of the soyfoods market; those from the start of 1985 to the end of 1993 are contained in this book. Its scope includes all known information on this subject, worldwide. Its focus, however, is statistics, analyses, and trends concerning the soyfoods industry and market in the United States and Europe.

In May 1990 Soyfoods Center conducted an in-depth study of the tofu market in Europe (137 pages), and in July 1990 of the soymilk market in Europe (261 pages). All original interviews and published records from both of these market studies, plus a summary of each study, are included in the present book.

The SoyaScan database is composed of individual records. One record might be an original interview with the head of the largest soymilk company in Europe, on the size and growth of the soymilk market in Europe, and new trends in that market, conducted by William Shurtleff of Soyfoods Center. Another might be a published article or an unpublished document concerning the growth of the market for soy yogurts or soy sauce in America.

This book documents the growth of each product category in every country worldwide. The book contains three extensive and easy-to-use indexes: A subject/geographical index, an author/company index, and a language index. These allow you to find the exact information you need on the soyfoods industry and market quickly and easily. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

1510. British Consulate General. 1994. Haldane Foods Group Ltd. (Interview). *SoyaScan Notes*. Feb. 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Haldane Foods Group has annual sales of about \$3 million (£2 million). Address: San Francisco, California.

1511. Pierce, Ray. 1994. A brief history of Genice Foods Ltd. and their work with soy ice creams, yogurts, creams, and margarine. Part I (Interview). *SoyaScan Notes*. Feb. 4, 8, 10, and 16. Conducted by William Shurtleff of Soyfoods Center. Followed by an 8-page fax on 7 Feb. 1994.

• **Summary:** From 1979 to 1982 Ray, a native of Wales, was general manager of Pendeltons Ice Cream. In March 1982, at age 41, he started a company named Classic Ices, which was primarily a dairy ice cream company. Located in Rhydymwyn (pronounced REED-uh-MOO-un), Clwyd (pronounced KLU-ud) County, Wales, the company began trading (making and selling products) in July 1982. In early 1984 Ray sold all but 10% of his shares in Classic Ices to the Hilldown Holdings Group but continued to work at the company. Then in May 1984 Irene Barclay joined Classic Ices as technical manager. In April 1985 Ray saw an article in *The Grocer* (April 6, p. 23) stating that Michael Cole of Soya Health Foods Ltd. had started making soya milk

and was planning to make related non-dairy products—such as soya ice cream. Ray called Michael Cole and asked if Classic Ices could develop and make a soy ice cream for him. Michael was interested, he came to visit Ray at Classic Ices, and that is how Ray's interest in soya ice creams began. Irene Barclay of Classic Ices worked closely with Michael Cole to develop the product. In about July 1985 Classic Ices started making Sunrise Ice Dream and selling it to Cole, who marketed it very successfully. Before this, Classic Ices had never made any non-dairy products. But Classic Ices was not particularly interested in non-dairy products, so Ray and Irene Barclay decided to leave Classic Ices in 1985 and start their own small company in Clwyd, Wales, about 10 miles from Classic Ices, at the same location they now occupy. The two business partners believed they saw a new market with great potential. Moreover, Irene was lactose intolerant so she could not consume dairy products. So Ray sold his remaining shares (10%) in Classic Ices to Hillside Holdings, then he and Irene established their company to develop and manufacture non-dairy dessert specialties—starting with soya ice cream.

They named the company Genice Foods Ltd. (short for "Genuine Ice Cream" and pronounced JEN-ais), but today many people pronounce the name jen-EES, which has come to be preferred by the company. In late 1985 Genice Foods moved into a brand new, small custom-designed, purpose-built factory unit in the Llay Industrial Estate. The unit was 5,000 square feet in size, but initially Genice used only half of that space—for manufacturing, cold storage/warehousing, and offices. In early April 1986 Genice was officially established and registered as a company and that same month, about two weeks later, they began trading. Today Ray's title is Director General Manager and Irene is the Technical Director. Genice's first product, launched in April 1986, was Genice Ice Delight, a non-dairy frozen dessert in 5 flavors (vanilla, strawberry, raspberry ripple, hazelnut, and pistachio & almond). Initially the main soy ingredient was powdered soymilk obtained from Michael Cole of Soya Health Foods, which probably imported it. But soon Genice switched to using soy protein isolates because they were less expensive and seemed to give a better product. At that time Genice bought the isolates from Macauley-Edwards (in Peterborough, eastern England), which later somehow became Purina Protein; today Genice buys most of its isolates from ADM (SP6, imported from the USA), but a little from Protein Technologies International for "old time's sake." Genice developed this product largely because they needed an actual product to show potential customers, but they never put much effort into marketing the product because they had already decided that Genice wanted to be a product development and manufacturing company and leave sales and marketing to other companies. Later in 1986 the manufacture of Sunrise Ice Dream was transferred to Genice from Classic Ices. It was now sold in four flavors—

vanilla, wildberry, hazelnut, and carob. Genice worked out an agreement with Cole that they would not compete by entering markets where Cole's product was established.

In 1986 Dayville Ltd. asked Genice if they could make a non-dairy frozen dessert intended to appeal more to the general grocery sector of the market than health food stores where Ice Delight and Ice Dream were sold. The product N'ice Day, was launched for Dayville in July 1986, sold in 3/4 litre packs in four flavors—vanilla, hazelnut, strawberry, and pistachio & almond. The soy ingredient was soy protein isolates. Continued. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

1512. Pierce, Ray. 1994. A brief history of Genice Foods Ltd. and their work with soy ice creams, yogurts, creams, and margarine. Part II (Interview). *SoyaScan Notes*. Feb. 4, 8, 10 and 16. Conducted by William Shurtleff of Soyfoods Center. Followed by an 8-page fax on 7 Feb. 1994.

• **Summary:** Continued: At this time, Genice Foods was the only company in Europe manufacturing non-dairy frozen desserts, but the market in Europe was not expanding as rapidly as the market in the USA. Possibly the main reason for this was a greater perceived differentiation in the U.S. between dairy ice creams, containing up to 15% butter, and healthier non-dairy, lower-fat frozen desserts such as Tofutti and McQueens. By contrast, ice creams in the UK generally contained palm oil instead of butter and at a much lower level—around 6-8%. Other reasons for the rapid growth of the U.S. market could be: Greater awareness of lactose intolerance, a larger number of vegetarians, larger ethnic communities, and cost consciousness. With Genice being the only manufacturer of non-dairy frozen desserts, it was difficult to satisfy existing and potential customers without some duplication of products in the market place. However Genice was also attempting to help these companies avoid competing directly with one another by suggesting different package sizes, flavors, package shapes, etc. Hence in 1987 Maranellis Ice Supreme was launched for Unisoy (before Unisoy was acquired by Haldane), in a ½-liter format, sweetened with fruit juice, in 3 flavors—raspberry ripple, vanilla, and chocolate. The product was made from fresh soya milk, delivered to Genice by Unisoy. Another non-dairy frozen dessert launched in 1987 was Sunrise Carob Ice, a frozen soya vanilla-flavored bar covered with a carob coating, made for Soya Health Foods Ltd., Michael Cole's former company; the product sold extremely well.

In March 1989, the Haldane Foods Group Ltd., part of the Archer Daniels Midland Co. (ADM), acquired a 70% interest in Genice. Genice Foods approached the Haldane Group since Genice needed both cash and access to bigger markets in order to develop properly. Peter Fitch, head of the Haldane Group, has told Ray many times he didn't really

want to acquire Genice; Ray had to court him for 9 months before he agreed to acquire Genice. Haldane was an ideal partner, being one of the biggest health food manufacturers in Europe (they made mostly vegetarian main courses), but having no dessert products. Genice made mostly non-dairy frozen and chilled desserts. Also the cash backing from ADM was equally important in creating and developing new markets. ADM and the Haldane Group gave Genice the freedom to continue to develop and make products for companies (such as Soya Health Foods and Dayville Ltd.) outside the Haldane Group.

In April 1989 Sweet Sensation, another non-dairy frozen dessert, was launched for Granose Foods in a 3/4 liter pack composed of a rectangular plastic tub in a cardboard sleeve, in 4 flavors—tutti frutti, black cherry, raspberry ripple, and vanilla. Genice made this product for Granose before and after Granose was acquired by the Haldane Group. Another non-dairy frozen dessert products launched in 1989 was Vegedine Mousse a frozen mousse dessert in two flavors—carob & walnut, and strawberry. Vegedine was a very small company in Bournemouth, sales to health food shops were small, and the company soon went out of business.

Following the acquisition by Haldane, the pace of development speeded up at Genice. Previously, products had been produced from either powdered soya milk and soy protein isolates, or soya milk imported from Unisoy. In late 1989 a small soya milk plant was installed at Genice with the ability to produce limited quantities of tofu also. With the new availability of tofu, two new non-dairy frozen products were launched: (1) So Good Tofu Dessert for the Haldane Group, a 3/4 litre pack in a round cardboard tub flavored as a strawberry/vanilla split, or as wild blackberry; and (2) So Good Strawberry Bombes for the Haldane Group, a 100 ml vanilla flavored base with a strawberry puree center, coated with carob couverture, and sold in retail packs of four. Because of Haldane's extensive contacts throughout Europe, Genice products are now sold in 7 European countries. The company also made a brief foray into the kosher market in America, when they sold some So Good Strawberry Bombes to a distributor named Quality Foods in Long Island, New York, but Genice had a bad experience and ended up with an unpaid debt on their first shipment. About 4 years ago Ray exhibited some of his soya products for 2 years in a row at one of the New York Kosher Fests. There he met David Mintz of Tofutti fame. Ray would like to try to enter the New York market again some day; it's a big market.

Genice uses fresh soymilk (produced by Unisoy) to make the majority of its total volume of soy ice cream, and isolated soy protein to make rest. Powdered soymilk is not used because it is very expensive and too hard to obtain. Ray now feels that fresh soymilk gives a better soy ice cream. Genice is now producing a range of development samples for Dayville Ltd., which is going to re-launch their soy ice creams this year and they have picked the one made with

soymilk as being the best. From the production viewpoint, isolates are much easier to use, but product taste and overall quality is the key point. Moreover, organic soymilk can be used to make an organic soy ice cream, but there are no organic soy isolates.

Genice is still the only manufacturer of soya frozen desserts in the UK. However two strong, competing products are now being imported: Winner's Swedish Glace from Sweden and Tofutti from the USA. Three years ago Genice made more than 90% of the soy ice creams sold in the UK, but today that figure has dropped to an estimated 50%, with Winner in second place, followed by Tofutti. Ray is concerned that Winner could overtake Genice in soy ice creams this year. During 1994 Genice plans to rationalize and reformulate its soy ice cream product line in order to concentrate its marketing efforts more on its best products, to eliminate or merge its own brands of the same type that compete with one another, and to put more effort into sales of soy ice creams. Continued. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

1513. Pierce, Ray. 1994. A brief history of Genice Foods Ltd. and their work with soy ice creams, yogurts, creams, and margarine. Part III (Interview). *SoyaScan Notes*. Feb. 4, 8, 10, and 16. Conducted by William Shurtleff of Soyfoods Center. Followed by an 8-page fax on 7 Feb. 1994.

• **Summary:** Continued: Genice developed its first soy yogurt in 1988; it was a chilled/refrigerated product that the company never actually launched. Genice has never made or sold a soy yogurt under the Genice brand, for reasons mentioned earlier—that the company wants to focus on product development and manufacturing, not marketing. Not long after April 1989, when Genice joined the Haldane Foods Group, they started to make Haldane Yoga, a chilled soy yogurt owned by the Haldane Group, but originally launched by the Regular Tofu Company in 1986. This and all subsequent soy yogurts made by Genice have been cultured products. Haldane Yoga product sold at the rate of about 500 to 1,000 cases per week, continuing until early 1990 when Genice developed a unique process for making pasteurized yogurts that have a 4-month shelf life at ambient temperatures. One other dairy company in the UK [Bridge Farm Dairies] was already producing an ambient stable product, but it suffered from protein degradation and did not contain large pieces of fruit. Genice attacked the problem from two directions—process design and product development. The process design concentrated on the necessity of pasteurizing the yogurt containing large chunks of fruit without degrading the soya protein. The product development consisted of producing a product with heat-stable natural flavors and colors at low pH (range: 3.6 to 3.8 when done). The results were highly successful.

The secret to the Genice process for making shelf-stable products is the “protein protection.” If the process is not done correctly, all the protein precipitates, resulting in a very poor lumpy product that looks like porridge. The TVC (total viable count) is less than 10 in each soy yogurt product right after packaging, so they are almost as sterile as if they had been treated by UHT. The pH ranges from about 3.8 to 4.0, which gives added protection. This allows them to sell their yogurts using unrefrigerated distribution, which is much more economical. In the UK, most refrigerated distribution is done only by very large food companies.

Genice now makes 4 different brands of non-dairy soya yogurts for sale in the UK in 12 flavors. (1) So Good Yoghert (launched in early 1990 in 3 flavors—strawberry, black cherry, and peach & passion fruit; this is the Haldane brand; the So Good name has no connection with the same name used by Sanitarium Foods in Australia); (2) Unisoy Soya Yogart (launched in late 1990 in 3 flavors- raspberry, peach melba, and black cherry; Genice made these yogurt products for Unisoy before they joined the Haldane Group; before that, they were made by Bridge Farm Dairies in southern England—which attempted to make a shelf-stable product using dairy technology); and (3) Granose Soya Yogert (launched in late 1990 in 4 flavors—peach melba, strawberry, apricot, and blackcurrant & apple; Granose became part of the Haldane Group in Jan. 1991); (4) Granose Hi-Fruit Premium Yogert (launched in late 1992, with double the fruit content, 20%, in 3 flavors—kiwi & passion fruit, nectarine and pineapple, and fruits of the forest). Note that there is some duplication of flavors among different brands.

Starting in 1992 Genice started to sell its soy yogurts outside the UK. First in 1992 the So Good line of soy yogurts was launched in Spain, in cups printed in Spanish, for ADM-owned Arkady ADM Iberica S.A. (Carretera de Hospitalet 42, Cornellà de Llobregat, Barcelona, Spain) with the addition of two new flavors—orange and natural. In late 1992 the Spaniards requested their own brand, so So Good was changed to Alisana; Four Soya Yogerts (120 gm each) were sold in each pack. The Spaniards are apparently becoming very health conscious, because Spain is now Genice’s biggest export market, taking about 20% of all the soy yogurt that Genice makes. In late 1992 the So Good line was launched in Sweden, Norway, and Denmark using, in part, the pre-existing Granose distribution network. One product, named So Good Soya Frutty, was sold to all 3 Scandinavian countries. The label was in Swedish and the names of all 3 distributors were on it. The distributors are: (1) Kung Markatta AB, Hjalmsberg, S-705 95 Örebro, Sweden (this is Genice’s second largest export market); (2) Alternative Mat A/S, AVD Import, Kubben, 2150 Arnes, Norway; (3) Grön Distribution, Hoje Gladsaxe Torv 2, 2860 Soborg, Denmark (Genice has not dealt with Grön since 1992). At about the same time the So Good Yoghert (with its regular English label) was introduced to Finland, distributed

by Oy Makrobios AB, Leksvall, 10600 Ekenas, Finland.

Then in early 1993 Genice’s So Good soy yogurt was launched in Italy, in English with a sticker applied by Genice, thru a company partly owned by ADM named AFG Italy S.r.l. (Via S. Cassiano 76, Trecate, Novara 28069, Italy) and in mid-1993 in Portugal with an English label through another ADM subsidiary, Natiris (Centro Dietetico Lda., Rua de Santo Antonia, Estrela No. 31-B, 1300 Lisbon, Portugal). Italy is one of the two fastest growing yogurt markets in Europe, and it may soon pass Sweden to become Genice’s second largest export market. Continued. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

1514. Pierce, Ray. 1994. A brief history of Genice Foods Ltd. and their work with soy ice creams, yogurts, creams, and margarine. Part IV (Interview). *SoyaScan Notes*. Feb. 4, 8, 10, and 16. Conducted by William Shurtleff of Soyfoods Center. Followed by an 8-page fax on 7 Feb. 1994.

• **Summary:** Ray feels that these soy yogurts are excellent products. Consumers must have the same opinion since the market is growing very rapidly. “In retail terms, this soya yoghurt market is now worth around £2 million sterling (\$3 million), whereas it was worth only about £30,000 sterling in 1985.” The market was almost totally created in the last four years—since Genice started making soy yogurt using its unique process that gives a shelf-stable product.

Today Genice now sells about ten times as much soy yogurt as soy ice cream. Moreover, sales of soy ice cream are fairly static, while sales of soy yogurt are leaping ahead. Genice makes at least 90% of the soy yogurts sold in the UK. In short, Genice started as a non-dairy ice cream company, which has in fact turned into a non-dairy yogurt company! “The soy yogurts really sold themselves. It was amazing how they took off so well.” There are about 1,500 health food shops in the UK, and no more than half of those have a freezer, so they cannot sell ice cream. Even those with a freezer, usually have very limited frozen storage capacity and the competition for that small space (as from dairy ice creams) is intense. Almost all of those with no freezer also have no refrigerated storage; they sell mainly “pills and potions” etc.” So a refrigerated or frozen product can be sold in less than half of all health food stores. This gives shelf-stable products, such as Genice’s soy yogurts, a big advantage. Genice is moving its soy yogurts into Italy and Portugal in a bigger way, and is launching two new yogurts for Spain this year (competing soy yogurts are sold on a small scale in Spain). Other concepts and flavours will be introduced into the yoghurt area in 1994, together with the quest for other export markets continuing both in Europe and the rest of the world.

Genice uses fresh soymilk (produced by Unisoy) to make about 50% of its total volume of soy yogurt, and

isolated soy proteins to make the other 50%. Powdered soymilk is not used because it is very expensive and too hard to obtain. Isolates are more convenient to use but Ray now feels that fresh soymilk gives a slightly better product—though this is very subjective and different people have different opinions. Isolates also give an excellent soy yogurt.

One of the markets that Genice has not yet entered—and would like to—is Germany, where there are large sales of soymilk and twice as many health shops (Reform Houses) as in the UK. Since most of the Reform Houses do not have chilled or frozen cabinets, Genice's shelf-stable products would fit perfectly; they could be sold on the shelf next to the Muesli. In the smaller health food shops in the UK, Genice's shelf-stable soy products are usually sold unchilled, but in the bigger shops, like Holland & Barrett, they sold chilled, since they taste better after being chilled.

Other dairylike non-dairy products that Genice has made are as follows: In 1990 chilled So Good Soycream was launched as a non-dairy alternative to dairy double cream, but low in cholesterol, high in polyunsaturates, and low in saturates. It was made for Haldane in a little beige plastic pot with a green foil lid, packed at the Genice plant. It contains a trace of cholesterol because law requires that it contain 36% oil, including some palm oil. In 1991 a shelf-stable UHT version (completely sterilized, with a 9-month shelf life), now named Granose Soya Cream, was launched in a 225 ml Combibloc pack, made for Genice by a large dairy in Ireland which had Combibloc packaging equipment. The chilled So Good Soycream was discontinued. In 1992 Genice installed a vegetarian margarine plant, which also makes Granose Soya Margarine that is sold chilled. This margarine was developed in Germany, so they took over the business and reformulated the product.

Genice is doing very well. The plant has expanded to 15,000 square feet from its original 2,500—a 6-fold increase. Their turnover (gross sales) has doubled virtually every year since they have been in business. Being owned by ADM has been of great benefit to Genice because ADM has been extremely generous in providing the money that Genice needs for its ongoing expansion and implementation of new ideas. Genice would eventually like to enter the U.S. market (starting in New York) with its shelf-stable non-dairy yogurt products, since there are no such products in America.

When yogurt is pasteurized, the beneficial effects of the yogurt bacteria are nullified. But Ray was just told by Dr. Glen Gibson that oligofructose, a sugar, has the effect of promoting the growth of the small quantities of Bifidobacteria in the human digestive system. Thus a pasteurized soy yogurt could be made into an even healthier product if it were sweetened by oligofructose.

Ray is a native of Wales and his wife is a teacher who often teaches in Welsh. Both are happy to see the revival of the Welsh language. Ray is not a vegetarian, but he has a good feeling and high regard for vegetarianism, he likes

vegetarian food, and he has some vegetarian ideals but they go beyond the food to more ethical issues. He finds that many of the people in other companies that he deals with are more ethical people. He would estimate that 85-90% of the consumers who buy products made by Genice are vegetarians or vegans. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

1515. Bahner, Benedict. 1994. Varied growth: In the steroids industry, the large-volume sector is not expected to show significant gains, but specialty steroids' future looks bright. *Chemical Marketing Reporter* 245(6):SR8. Feb. 7. In 22-page section titled "Intermediates '94—A CMR Special Report."

• **Summary:** Steroid production is based on a number of raw materials, among them several "soysterols" (soy sterols). The size of the world market for bulk steroids is estimated to be \$600 million, with about 50% of that figure representing corticosteroids (primarily hydrocortisone, hydrocortisone acetate, prednisolone, prednisolone acetate, and prednisone) and about 40% being specialty steroids (typically used as intermediaries for various drugs; produced on a company-to-company basis as building blocks for particular patented drugs, they never reach the open market). Major specialty steroids include dexamethazone and triamcinolone; this sector may be growing at 10-12% a year. But in terms of volume, corticosteroids make up about 75% of the bulk steroid market.

The four major players in bulk steroid production are Upjohn (USA), Roussel-Uclaf (France), Schering AG (Germany), and Akzo's Diosynth business unit (Netherlands). These companies belong to the Pharmaceutical Manufacturers Association (PMA).

In December 1993 Upjohn's \$60 million streamlining of its plant in Kalamazoo, Michigan, came on line; there it produces corticosteroids, two estrogen products (estradiol and estradiol cypionate), and some testosterone.

Sitosterol is a byproduct of natural vitamin E, of which Henkel is the largest maker. Last year the vitamin E market posted a unit sales growth of 35%; as long as it stays strong, the supply of sterols to the marketplace should be adequate.

But the entry of Archer Daniels Midland (ADM) into production of vitamin E (expected to take place in 1995) could raise the issue of sitosterol pricing. It is currently priced at about \$6/kg, up 50% from 1991. If prices move over \$7/kg, steroid producers will start to look for other raw materials for steroid manufacturing. Prices for hydrocortisone remain high, between \$900 and \$1,000/kg.

Unlike corticoids, the market for estrogens and progestins is growing, driven by increasing acceptance of estrogen replacement therapy in post-menopausal women. "Estrogens, which fell out of favor in the mid-70s because

of cancer fears, have made a comeback... and the popularity of estrogens is driving growth in progestins, which are being prescribed more frequently alongside estrogens.”

The leader in consumer products, Premarin, made by Wyeth-Ayerst Laboratories, has estimated sales of nearly \$1,000 million (\$1 billion); 80-90% of these sales are in the USA.

The market for androgens and anabolics (anabolic steroids) fell sharply following the decision of the DEA (Drug Enforcement Agency) to crackdown on illegal use of anabolic steroids. The main legal producer is Organon, a subsidiary of Akzo, in West Orange, New Jersey.

Note 1. This is the earliest document seen (Sept. 2001) that mentions Premarin in connection with soy—although it is not made from soy. According to a June 1998 news report on prescription drugs in America, Premarin is the most prescribed drug in America, with over \$1 billion a year in sales. It is used by older women for menopause and osteoporosis.

Note 2. This is the earliest document seen (Sept. 2001) that contains statistics about the estrogen industry and market—even though these estrogen products are not made from soybeans.

1516. Pierce, Ray. 1994. The origins of the Haldane Foods Group (Interview). *SoyaScan Notes*. Feb. 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Two men were instrumental in conceiving of and putting together the Haldane Foods Group: John Mahlich of British Arkady and Peter Fitch. Ray knows both men well and respects them greatly. Peter does a lot of the leg work, whereas John is the man who actually goes to ADM and requests the money. Ray sees John about twice a year and he is located nearby. John, who is about age 66, is an extremely alert and competent person—one of the most competent men Ray has ever met and, moreover, a very approachable gentleman. John has no particular personal interest in vegetarianism but he definitely understands it, sees its potential, has a strong commercial interest in that potential.

Peter Fitch has told Ray many times he didn't really want to acquire Genice; Ray had to court him for 9 months before he agreed to acquire Genice. Both British Arkady and the Haldane Foods Group report to ADM, but Ray thinks John Mahlich is responsible for both. John actually works at and is the top man at British Arkady. Bill Pringle worked for John, but Ray thinks Bill is now retired.

Brian Wellsby started Haldane Foods, and after his company was acquired by the Haldane Foods Group, he went to work for the Group for a while and then he left the Group in late 1989, after Genice was acquired.

A number of the heads of the companies in the Haldane Foods Group are not vegetarians. Of these companies, Granose and its top people are probably the most strongly committed to vegetarianism—in part because of its origins as

a Seventh-day Adventist company. Some people at Haldane are also committed to vegetarianism. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

1517. Lensch, Lee. 1994. ADM's involvement with Midland Harvest and Harvest Direct (Interview). *SoyaScan Notes*. March 4. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** ADM's Soy Protein Division produces the Harvest Burger and Harvest Burger products. Harvest Direct is a separate company that has no affiliation with ADM, but that sells various food products (including ADM dry mixes) by direct mail. They buy products from ADM for their mail order business. ADM helped Harvest Direct to get started but ADM did not want to have or own a mail order company. ADM is glad they exist. They have many products in their mail order catalog that are not from ADM.

ADM also makes and sells 4 frozen products that Harvest Direct does not handle. These consist of 3 meatless Midland Harvest Harvest Burgers (Original Flavor, Taco Flavor, and Italian Style) and Midland Harvest Breakfast Patties. These were first produced in Jan. 1991, retail ready. ADM rarely sells foods retail but they have long sold some retail products in the Great Plains made by Martha Gooch / Gooch Foods (a milling and pasta company owned by ADM). The 4 Midland Harvest products was ADM's second retail line. In April 1990, before Harvest Direct was established, ADM started its first “public tasting” of the Harvest Burgers (as frozen patties) in Decatur. It took until September 1990 to get packaging for the product, and that month ADM made its first shipment, to Super Value supermarkets in Minneapolis, Minnesota, with Indianapolis being the real focus test market. So ADM sold directly to a supermarket chain, not to a food distributor. In Jan. 1991 the four frozen Midland Harvest products first really hit the grocery store shelves in Indianapolis as a test market. Since Jan. 1991 ADM has continued to expand the test market from Indianapolis to include Minneapolis, St. Louis, Chicago, Dallas, Fort Worth, Houston, San Antonio, Milwaukee, and Louisville. The purpose of this expanding test market was to see how the product would sell. As ADM saw how well it did sell, and kept getting more and more requests to expand, they expanded production and distribution. At the same time, they began to look for a company that could handle the product better than ADM could—since ADM is not really in the retail foods business. In mid- to late 1991 Safeway in California called ADM to enquire about the product; ADM said they were not yet ready to sell Harvest Burgers in California. Finally ADM signed an agreement with Pillsbury to distribute and sell these 4 products under the Green Giant brand.

Pillsbury started with the products in October and to

date they have increased their sales forecast for the year once and they are contemplating another increased forecast. Pillsbury noted: "Acceptance is quicker and wider than we anticipated which should allow us increased sales for fiscal 1994." So ADM is back in the position it likes to be in, as a manufacturer rather than a distributor to the retail trade.

Harvest Direct is also doing very well; they keep expanding their business. Address: Harvest Burger Manager, ADM, Decatur, Illinois. Phone: 217-424-2492.

1518. Mahlich, John. 1994. History and development of the Haldane Foods Group Ltd. Part I (Interview). *SoyaScan Notes*. March 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Several people have been involved in the evolution of the Haldane-Granose Division. Archer Daniels Midland Co. (ADM, headquartered in Decatur, Illinois) bought The British Arkady Co. Ltd. about 20 years ago. At that time Arkady had been in existence in the UK for about 35 years, was a large supplier of bakery ingredients, but also was a miller of full-fat soya flour. "Arkady was in the soya business and this was the prime reason why ADM was interested in us, other than, of course, the nature and shape of our company. The original decision to buy Arkady was Dwayne Andreas's, so Dwayne Andreas has always been there, behind everything that we have done, and usually, if not always, has basically approved any acquisition that we have made."

After ADM bought Arkady, Arkady installed textured vegetable protein (TVP) plants in Manchester to ADM's design. Arkady sold textured vegetable protein principally to the meat industry as part of a meat system (an analog, a sausage, etc.). They also sold some TVP to the pet food industry. Anna and Peter Roberts, the founders and owners of Direct Foods, Ltd. were buying Arkady's TVP in bulk, then packing it into small domestic retail packs. At about that time (John does not remember whether it was the Roberts' idea or Arkady's idea), Arkady developed the Sosmix and the Burgamix using Arkady's technology, and manufactured those products for Direct Foods. Because Direct Foods had become a reasonably sizeable company, and Arkady was selling them quite a percentage of their TVP, John (who was then the managing director of Arkady) and Bill Pringle (Arkady's technical director) thought that Arkady should buy Direct Foods; that would guarantee the continuity of Arkady's large sales of TVP to them. "We could run Direct Foods and we would have the profit that they were making out of our product as well as our own margins." John and Bill approached Anna and Peter, who had worked incredibly hard to build their small business and they were of an age where John felt they thought Arkady's offer was fair and they should take the money and just retain their health food shop in Petersfield and enjoy the fruits of their years of work. So the sale was a happy event of both parties. So in March

1985 Direct Foods became the first member of what would become the Haldane Foods Group.

At that time Peter Fitch was a development chemist with Arkady. He is a food technologist by training. John asked Peter if he would become General Manager of Direct Foods. Having gotten into this business, Arkady liked what they were doing, so they began to look at other ways of adding value to textured protein. John happened to be at a health food exhibition, where he met the woman who was running a company named Vegetarian Feasts. John already knew a little about this company, and shortly after the exhibition John approached her and offered to buy her business. He saw an opportunity to put a lot of textured protein into her range of frozen meals and to add value to textured protein in that way. That purchase was completed in Feb. 1986. Peter Fitch took on the general management of that company as well, and Sonia Newhouse (the founder and former owner) became a consultant. This was a small company and it was not very profitable—but it put Arkady in the frozen food business. So they then started to make a range of frozen vegetable burgers containing vegetable protein and various grains.

John then heard about a company named Vegetarian Cuisine Ltd. which basically was doing the same sorts of things as Vegetarian Feasts. Vegetarian Cuisine had a nice factory in Coventry, whereas Vegetarian Feasts had a factory in London that was very expensive. John saw the opportunity to put the two into one manufacturing unit and to reduce costs by sharing them. So British Arkady bought Vegetarian Cuisine in 1987.

By this time Arkady was on the treadmill toward developing a "group" of companies, but they did not yet have a clear vision of the nature of this group. "It was because we were playing the game on a hand's on basis that we saw the opportunities. But as our plans evolved, they became more and more clear."

Next Arkady bought Haldane Foods Ltd., which owned The Regular Tofu Company. The acquisition was finalized in August 1987. Haldane Foods had the best factory and offices in the still nameless group, and it was the biggest of the companies Arkady had acquired, and the one with the nicest sounding name. So British Arkady coined the name Haldane Foods Group Ltd., and began to use it as the first name for the new group of companies. With each new acquisition, Peter Fitch continued to be the Director General Manager leading the Group. Sometimes it was decided to keep the past management of individual companies on board, maybe as directorships or maybe as consultants, but in a variety of positions.

By late 1987 Arkady was getting fairly excited about production of frozen vegetable burgers. As they got into that market they found there was company named the Realeat Company, which was the dominant player in the frozen vegeburger business at that time, and which had been started "by a very capable and likeable man named Gregory Sams."

It seemed to John that he could advance the new Group's cause by buying Realeat. So they approached Gregory Sams and in September 1988 bought his business. That had great benefits for Arkady and the Haldane Foods Group because Realeat had no factory and no sales organization. One company was making the sachet mix, another company was selling it, another company was buying bulk mix from his sachet packer, and still another company was making it frozen; all in all a lot of people were taking a cut. So by tidying that all up and bringing it in house, Arkady had the chance to improve Realeat's financial status. Continued. Address: The British Arkady Co. Ltd., Skerton Road, Old Trafford, Manchester M16 0NJ, England, UK. Phone: 061-872-7161. Fax: 61-873-8083.

1519. Mahlich, John. 1994. History and development of the Haldane Foods Group Ltd. Part II (Interview). *SoyaScan Notes*. March 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: Next, in Feb. 1989, the Haldane Foods Group purchased a company named Kwaliti Foods. They made sauces, spreads, and dips. John liked the management, their products, and the price at which they offered to sell the company, which had a financial problem—they had run out of money. The Group subsequently changed the name of Kwaliti Foods into Saucemasters Ltd.

While owning Saucemasters, the Group started another company named Snackmasters Ltd., which was wholly owned by Saucemasters. Then in 1993 the Group sold Saucemasters, but retained ownership of Snackmasters, which they relocated in a new factory adjacent to the Haldane factory. It basically makes noodle- or rice-based vegetarian snack meals that contain textured protein and dried vegetables with a sauce sachet in each plastic cup. You pour hot water into the cup, leave for 4 minutes, and you have a very convenient and nutritious meal. This type of product is a big business in England; one company, Golden Wonder, dominates the market. But Snackmasters has carved out a niche by making ethnic vegetarian meals (Chinese, Indian, etc.), and using their sauce company to make the sachet of sauce. They have taken the product up-market by some ingenious developments and the company is thriving.

In March 1989, a month after buying Kwaliti Foods, the Haldane Group purchased Genice (pronounced JEN-ais) Foods, which makes non-dairy ice creams, yogurts, and margarines. "By this time we were deeply into the healthy food, health food, vegetarian business." Though this was the Group's first company to make non-dairy products, it fit well because their products were basically made from soya—either soymilk or soya protein isolates. "Not only were we developing a group of interesting companies that can make some profit, but we were also signaling to a very large audience that maybe others (such as the many food manufacturers who have been hesitant to use soya) should

get into the soya business. And ADM likes that, because the more it is obvious that soya is here to stay and that it has multitudinous uses, the more Dwayne Andreas's dream will come true. Truthfully, we do not fear competition; the more that are in the business, the merrier. If you can get companies like Unilever to start using soya, then you get good publicity on a global basis.

"Genice is doing a very good job, but I have to say truthfully that selling non-dairy ice cream is missionary work. You need converts, and if you don't get them you're not a happy missionary. It's just a fact that most people want products with more and more cream. But at Genice we were going in the opposite direction—but successfully, though with slow growth. That's a tough number but we are hanging in and more and more will be sold. The non-dairy yogurts, incidentally, are going exceedingly well. That's good business."

ADM is a very acquisitive organization. For this reason, John and Peter Fitch were always looking for promising companies to add to the group. In the 20 years that John has worked for them, he has bought more than companies—with many outside the Haldane Group. Dwayne Andreas was aware of each of the Haldane Group's purchases as they took place. "He was totally aware of what we were doing and obviously was approving as we went. "You have to remember that Dwayne Andreas is very much committed to the evolution of the soyabean. He certainly has shown the keenest of interest in everything that we have done. I report directly to ADM and I could not buy a business without the approval of Dwayne Andreas (or Jim Randall) and finally the ADM board of directors, which meets quarterly... Yet ADM is a very fast-moving animal, and you can't contain its dynamism by quarterly meetings. The whole thing is designed to move with speed. So some acquisitions have been made before the board meeting; the contract simply reads 'Subject to board approval.'"

In those days John used to go to the USA quite a lot because he was running the ADM-Arkady business there for ADM; it was a manufacturing business in Chicago, Illinois—it's now in Kansas.

In December 1990 the Haldane Group purchased Unisoy, a small soya company which was for sale and which made soymilk. In the early 1990s a situation developed where the Haldane Foods Group had a sales director who had been a previous employee of Granose Foods. He suggested that the Group might be able to buy the Granose Foods company. "He had a key to open that particular door. It was with his basic introduction that we approached Granose, and subsequently we bought all of Granose. Granose had built a brand new and beautiful factory which was about 40 miles north of London, and that fit it very well to the growth and pattern that we were following." So the Haldane Group moved the center of their operations out of the Haldane factory and into the Granose factory, where it now is. The

group still usually calls itself the Haldane Foods Group Ltd., but under some circumstances other names may also be used—such as the Granose Foods Group.

Granose was selling soyamilk that was being imported from a German manufacturer [DE-VAU-GE]. The Haldane Group decided to discontinue these imports, and now Unisoym is making all of the soyamilk for Granose that used to be imported from Germany. The quality of Unisoym's soyamilk is definitely as good as the German-made product, and now Granose has added many new soyamilk products to its range, with vitamin enrichment, etc. However, it seems like the total soyamilk market in the UK is no longer growing. Continued. Address: The British Arkady Co. Ltd., Skerton Road, Old Trafford, Manchester M16 0NJ, England, UK. Phone: 061-872-7161. Fax: 61-873-8083.

1520. Mahlich, John. 1994. History and development of the Haldane Foods Group Ltd. Part III (Interview). *SoyaScan Notes*. March 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: Perhaps the key concept that governed the formation of the Haldane Group was adding value to soya—even though that policy was never clearly spelled out. In one sense, each company was acquired, one by one, without any overarching plan, on its own merits. Yet all companies in the group (except Saucemasters) make value-added foods from soya. The Group is fundamentally a “healthy foods” company that makes only vegetarian foods (i.e. those which contain no meat, fish, or poultry). Most of the foods are also vegan in that they contain no animal products.

The Group has bought about 13 companies and each had its own niche, name and reputation. Each company had its own brands, each of which had a reputation, and the Group has tried to keep these and promote them.

The Haldane Group could not have developed without the very strong health food market in the UK, where there are more than 2,000 health food retail shops. Equally important is the strong interest in vegetarian foods in the UK. When British Arkady bought Direct Foods in 1985, supermarkets in the UK had no space at all for healthier foods or vegetarian foods. Now they all have a separate health food section and that section is steadily growing.

Companies like Birds Eye (owned by Unilever) stand like a praying mantis and wait until the Haldane Group has built the market for Vegebürgers to such a size that they can enter the market with their own vege burger backed by all of their marketing clout; they will try to push out competing products and steal your market. “They come into the supermarkets with their overriding discounts and they say ‘We’re already selling you £20 million. Put this product in and then you get another million pounds, plus you get a preferential discount, etc.’” This is a real concern as the Haldane Group becomes more of a force in the UK

market. Fortunately there are 350 million people in the entire European Community. Moreover the Haldane Group has a bright future because they are “extremely inventive” and they have many loyal customers. They are leaders and other companies are following.

“Most all of these companies that we bought were started by devotees of healthier foods or vegetarians.” They all started small but most did not realize what a big, expensive step it is to get into food processing. So many of the companies were founded on good ideas but were crippled because their founders lacked business experience and were undercapitalized.

The various products sold by the companies in the Haldane Group are being made in five factories: the Unisoym factory (soyamilk), the Genice factory (non-dairy yogurts, ice creams, and margarine), the Haldane factory (which makes all dry mixes), and the Granose factory (which makes frozen burgers and many other non-dry products).

The Group now sells a large amount of frozen vegetarian sausages. If you make a conventional skinless sausage, you must first make it in the skin, then case harden it, then finally remove the skin. But removing the skin costs you money. So the Group has gotten a unique machine (they were the first to get it, but there are now a few others in other companies) that makes skinless sausages from the start. The machine was invented by another British company of which John used to be a director. These skinless sausages have become a big business and the product is of excellent quality. The Group plans to introduce this sausage product in new forms, such as sausage roles in pastry.

The Haldane Group is also doing a lot of private labeling for supermarket chains. The big food companies in the UK spend many millions of pounds on advertising, and they can slip in a vegetarian product under a known brand name. An example is ADM's Harvest Burger sold under the Green Giant label in the USA, which led to a big increase Harvest Burger sales. The Haldane Group cannot afford to spend huge sums of money advertising its own brands. So they are finding that it is in their own interest to develop their own brands but at the same time to go to some of the supermarket chains and offer to make products under the supermarket's brand. This is one way the Haldane Group can find new growth. Continued. Address: The British Arkady Co. Ltd., Skerton Road, Old Trafford, Manchester M16 0NJ, England, UK. Phone: 061-872-7161. Fax: 61-873-8083.

1521. Mahlich, John. 1994. History and development of the Haldane Foods Group Ltd. Part IV (Interview). *SoyaScan Notes*. March 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Group has an annual turnover (sales) of about US\$20 million. It is still looking for new business, but there are not many left to buy in the UK. The Group's UK operations are well organized and running well, with

good factories, product development, distribution. Now they have decided to take their products into continental Europe. “If you can’t get it right at home, you don’t want to take it abroad.” The Germans are the most health conscious eaters on the continent. This is a complex business because of a host of different conditions (laws, flavors, terminology, etc.) in each country, but the Group is presently trying to find its position in each of these markets. The Arkady Food Group (consisting of 7 companies that supply the baking industry with products) has manufacturing companies in Germany, France, Spain, Portugal, and Italy. Some of those are acting as distributors or agents for products from the Haldane-Granose Group. For example, in Spain, where there is a company named Arkady ADM Iberica, they have started a new division within that company called Alisana, which is selling the Haldane Group’s products. But each product and its promotional materials must usually be modified for each market. Eventually, when tonnage warrants it, the Group hopes to start production in the various countries because transportation costs are very high—especially for frozen products.

Concerning possible entry into the U.S. market, John emphasizes the difference between selling commodities and selling specialties. You must think big in selling commodities and think small in selling specialties. John thinks that ADM is committed to much the same vision as he is “but their day to day work causes them to think in megatons.” Yet the Harvest Burger may be changing that. ADM has recently employed Larry Cunningham to run their protein division. He has grown up in the business and he is extremely interested in the Haldane Group’s activities. John thinks that as time passes ADM will embrace more and more of the activities that the Haldane Group has been involved with since its beginning. Yet John does not see a separate group, like the Haldane Group, starting in the USA. Rather he thinks that the Haldane Group has at least six world-class products, and that these will be sold in the USA. The Harvest Burger is, in fact, based on some of British Arkady’s technology.

The Group has recently launched a new vegetarian product named Vegemince that John thinks has great potential in replacing what Americans call “ground beef” and what Britons call “mincemeat.” Made at the Granose plant, it is based on textured vegetable proteins, including wheat gluten. “It is an extremely ingenious product that we’ve got patents filed for. It has an excellent texture that gives the mouth pleasure.” The Group plans to sell it to other companies that manufacture meatless products. The Group is developing many new products, even though it now has more products than he wants.

To summarize: “We have a ‘healthy food’ Group. We have five excellent factories. We have a good product range that’s enlarging. We have some good developments coming up the line. We’ve got something that we can take

into Europe that I think can be taken worldwide. The more successful we are, the more competition there will be. “Many people have been involved in creating this group of companies. Peter Fitch is a good source of information because he really lives the Group every day of the week. His official title is Director General Manager. Peter reports to John, who is responsible for many other companies including British Arkady (in Manchester), the European Arkady companies, 3 feed mills and a trading company in Ireland, etc. John was the Group Managing Director of ADM International Holdings, which has been restructured and is now named ADM International Ltd.; under it are British Arkady Company UK, Haldane Granose Food Group UK, and Arkady Feeds Ireland. The five-person board of ADM International Ltd. consists Dwayne Andreas, James R. Randall, Michael D. “Mick” Andreas, G. Allen Andreas, Jr., and John (the only Englishman).

“The main thing to remember is that this is all part of ADM, it has all been approved by Dwayne Andreas and the ADM board, and its very much in line with ADM’s philosophy.” Dwayne believes that soy products will play a key role in feeding this world. “To Dwayne, that is a mission.” John hopes that the work of the many people in the Haldane Group may help Dwayne realize his dream. Address: The British Arkady Co. Ltd., Skerton Road, Old Trafford, Manchester M16 0NJ, England, UK. Phone: 061-872-7161. Fax: 61-873-8083.

1522. Dafarty, Rasik. 1994. Current prices of soy protein products (Interview). *SoyaScan Notes*. March 15. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.

• **Summary:** Soy flours 14-16 cents/lb. Soy protein concentrates, alcohol process 50-60 cents/lb. Soy protein concentrates, acid process 70-80 cents/lb. Soy protein isolates 130-160 cents/lb. Address: Archer Daniels Midland Co., Decatur, Illinois. Phone: (217) 424-5414.

1523. **Product Name:** WMR4 (lactose free, all vegetable, nutritional powder product) and NutriBev (Dry Soy-Based Milk Alternative).

**Manufacturer’s Name:** Archer Daniels Midland Co.

**Manufacturer’s Address:** 4666 Faries Parkway, Box 1470, Decatur, IL 62525. Phone: 800-637-5850.

**Date of Introduction:** 1994 March.

**Ingredients:** WMR4: Corn syrup solids, isolated soy protein, partially hydrogenated soybean oil, sugar, tricalcium phosphate, maltodextrin, sodium hexametaphosphate, salt, artificial flavors, mono and diglycerides, sodium stearoyl lactylate, magnesium sulfate, vitamin C (ascorbic acid), vitamin A (palmitate), iron (ferric orthophosphate), vitamin D, zinc oxide, calcium pantothenate, vitamin B-2 (riboflavin), niacinamide, vitamin B-6 (pyridoxine hydrochloride), vitamin B-12, vitamin B-1 (thiamine mononitrate), folic acid.

**Wt/Vol., Packaging, Price:** 25 kg or 144 gm.

**How Stored:** Shelf stable.

**New Product–Documentation:** Kahn, E.J., Jr. 1987.

“Profiles: The absolute beginning” [Dwayne Orville Andreas and ADM]. *New Yorker* 62:41-68. Feb. 16. See p. 41. A soy-based milk substitute called Nutri-Bev is a food supplement for Third World children. Nutri-Bev isn’t sold. It comes in six flavors and it’s given away. ADM has been doing research on it for 25 years, and now they are improving it even more with fructose, which is thought to improve its mouth feel. It costs only 1/10th as much as cow’s milk and it’s nutritionally better. After all, says Dwayne Andreas, “some millions of people can’t tolerate cows’ milk. We’ve been frustrated every time we’ve tried to push this product. Do you realize that for a mere twenty-five billion dollars you could give a quart of this drink every day of the year to five hundred million people, and—presto!—you’d have the end of hunger? And there are enough soybeans in United States government storage right now to do the job. This is the most exciting long-range product we have. It’s to milk what margarine turned out to be to butter. I draw some comfort from reminding myself that it took margarine twenty-five years to get off the ground.”

ADM annual report. 1994. p. 14. NutriBev is a new milk alternative made largely from soy protein isolates and concentrates; it has the same nutritional value as milk but can be produced free of lactose.

Talk with Phil Fass, product manager. 1994. Oct. 4 and 14. WMR4 was launched in March 1994; it is one and the same with NutriBev. WMR4 was not a stand-alone product before the NutriBev program was conceived. At present, there is no product on the market with a NutriBev label. Some people are looking at test marketing various products. WMR4 has been sold commercially to make a milklike product that has no name in Third World feeding programs. So NutriBev is still a concept that is waiting to happen. The registered trademark for NutriBev has no hyphen.

Brochure titled “Nutri-Bev & WMR4 as Presented by ADM,” sent by Phil Fass of ADM. 1994. Oct. 10. WMR4 [whole milk replacer] is a lactose free, all vegetable, nutritional powder product. It is a free-flowing white powder that has been specially processed to dissolve very quickly in water. Using water at 45°C (warm) will facilitate mixing. The resulting product has the appearance and mouthfeel of normal whole milk. WMR4 can generally be substituted on a one for one basis for whole milk liquid or powder. Mix 130 gm WMR4 powder with 900 gm water to make 1 liter of finished product. It contains protein, fat, carbohydrates, calories, minerals, and vitamins equal to whole milk. It contains no lactose or cholesterol, making it a healthy alternative beverage. WMR4 can be used to make milklike products, hot chocolate drink, frozen desserts, yogurt, soft cheese (Ricotta, Quark, Queso Fresco, Farmers Cheese, etc.)

The Nutri-Bev Program is an exciting marketing

program specifically developed for foreign countries interested in marketing a liquid, soy-based, flavored children’s drink. ADM will license the Nutri-Bev label for a nominal fee [or an organization can use its own brand name and label]. ADM supplies the base product, WMR4, in a powdered, stable form. The base will be used in conjunction with a sweetener, flavor, and stabilizer to make a finished liquid product. Technical assistance will be supplied by ADM as needed. WMR4 does not contain any dairy fat and therefore will not develop the rancid off-flavors which are commonly associated with products containing dairy fat (whole milk powder). It has much better flavor stability than whole milk powder; the latter declines very rapidly at 50°C.

Technical Data. 1994. Jan/Feb. Gives nutritional analyses of Nutri-Bev drink and Chocolate drink. Gives formulas for using WMR4 to make: Frozen dessert. Fudge chocolate pudding. Cooked custard. Cultured yogurt (Swiss-style with fruit on top, or fruit on bottom).

Spot in Soyafoods (ASA, Europe). 1995. Spring. p. 4. “ADM launches lactose free and low cholesterol whole milk replacer.” WMR4 is available in the UK from ADM Ingredients Ltd., Church Manorway, Erith [on the River Thames just east of London], Kent DA8 1DL, England. Phone: +44 1322 443000.

Dixie Diner’s Club Official Newsletter and Catalog. 1996. Jan. Vol. 2, issue 1, p. 3. “NutriBev Soy Beverage: Delicious and satisfying—a drink that is soy-based and offers all the goodness of a quart of *whole milk* without cholesterol and lactose... and 30% of your daily calcium in a prepared cup.” The 5 oz package (makes about 1 quart of liquid soy beverage) sells for \$1.98 plus at least \$4.99 postage. 12 packages are \$1.79 each. A color photo shows the package. The name of the manufacturer is not given.

1524. Hayhow, Sally; Messina, Mark. 1994. The soy solution: Might this humble bean have a critical role in preventing heart disease and cancer? *Vegetarian Times*. March. p. 77-78, 80, 82-84.

• **Summary:** A growing body of scientific evidence indicates that soyfoods can help in preventing heart disease and cancer. Soy protein has been shown to reduce the “bad” type of cholesterol, known as low-density lipoproteins (LDL). But the public is largely unaware that eating soyfoods may lower blood cholesterol markedly, thereby reducing heart disease risk. As a result of the lack of publicity given to these important scientific studies, a powerful, palatable form of preventive medicine is not being used.

One long section discusses isoflavones, which are plant estrogens that are only about 1/100,000th as potent as human estrogen. This weak estrogen activity may be responsible for their anticancer effects in hormone-related cancers such as breast cancer. Estrogen increases cancer risk by binding to receptors in breast cells. Isoflavones mimic estrogen, attaching to the receptors, and effectively blocking

human estrogen. The most widely used drug in breast cancer treatment, tamoxifen, works in a similar way. Soyfoods are one of the only plentiful food sources of isoflavones.

Six little “sidebar” illustrations explain: Add a quarter pound of cubed, firm tofu to your stir fry: 13 gm of soy protein + 40 mg isoflavones. Pour half a cup of soymilk on your morning cereal: 10 gm soy protein + 20 mg isoflavones. Replace ¼ of the wheat flour in your bread with soy flour: 3 gm soy protein + 5 mg isoflavones (assuming a 3-cup loaf cut into 16 slices). Snack on a quarter cup roasted soynuts instead of peanuts: 18 gm soy protein + 50 mg isoflavones. Add a quarter cup TVP per person to chili: 11 gm soy protein + 35 mg isoflavones. Mix a tablespoon of miso into a cup of water for a warming broth: 1 gm soy protein + 5 mg isoflavones.

1525. Kevin, Kitty. 1994. Analogs: Fabulous fakes. How five companies make the all-American burger meatless. *Food Processing (Chicago)* 55(4):39-40, 42, 44. April.

• **Summary:** This article leads off the “Foods of Tomorrow” section. “Meatless burgers are going mainstream—sort of.” The five companies are Worthington Foods (Worthington, Ohio—Grillers), Wholesome & Hearty Foods, Inc. (Portland, Oregon), Fantastic Foods, Inc. (Petaluma, California), Archer Daniels Midland/Pillsbury (Decatur, Illinois), Sharon’s Finest (Santa Rosa, California). Green Giant Harvest Burgers are made by ADM and distributed by Pillsbury. The basic ADM ingredient is texturized soy protein concentrate. A color photo shows four flavors of frozen Harvest Burgers.

Note: This is the earliest English-language document seen (Nov. 2015) that contains the term “texturized soy protein concentrate.” Address: Associate editor.

1526. National Corn Growers Association. 1994. The world of corn. St. Louis, Missouri. 40 p. 22 x 22 cm.

• **Summary:** A factbook about corn in the USA. Page 17 shows the value of major U.S. crops in 1993. Corn is worth \$16,597 million, soybeans \$11,735 million, hay \$10,909 million, wheat 7,713 million, cotton \$4,220 million, and tobacco 2,837 million. The two states with the biggest corn acreage are Iowa and Illinois (p. 19). The main products made from corn are starches, syrups, dextrose (incl. ethanol), solubles, gluten and hulls (incl. corn gluten feed, corn gluten meal, and corn germ meal), and germ (p. 20-22). The main food and industrial uses for corn in 1993 are fuel alcohol (426 million bushels), beverages (as HFCS; 346,000 bu), and industrial starch (178 million bu). Use of corn in fuel ethanol production has grown from 25 million bushels in 1975 (the first year recorded) to 460 million bu in 1993. Illinois and Iowa are by far the leading ethanol producing states. Use of corn in corn sweetener production has grown from 207 million bushels in 1975 (the first year recorded) to 640 million bu in 1993. More than 60% of all corn is used as livestock feed. “A bushel of corn fed to livestock

produces 5.6 pounds of retail beef, 13 pounds of retail pork, 19.6 pounds of chicken, and 28 pounds of catfish.” There is a corn checkoff program but the rates vary from state to state. Address: 1000 Executive Parkway #105, St. Louis, Missouri 63141. Phone: (314) 275-9915.

1527. *Soyfoods (ASA, Europe)*. 1994. News from ADM. 5(1):2. Spring.

• **Summary:** “Hidde van der Wal has been appointed Sales Director of ADM’s Protein Division. He is based at ADM Europoort and his responsibility is to promote ADM’S major brands of soya isolates, concentrates and textured vegetable proteins throughout Europe.

“ADM has recently won a \$100 million contract with a Ukraine company. ATON (a large private company) for the supply of food ingredients, including soya proteins, soya-based milk powders and 135 million servings of Harvest Burger—ADM’s proprietary vegetarian burger.”

1528. *Soyfoods (ASA, Europe)*. 1994. The Nutresco Foods story. 5(1):6-7. Spring.

• **Summary:** Nutresco Foods was founded in Harare, Southern Rhodesia (in today’s Zimbabwe) in 1962, as a result of work carried on by the United Nations (UN) in Guatemala. Many of the Indian tribes there used a root resembling the manioc or cassava as their staple food. Since this crop contained only 3% protein, many of the people suffered from severe protein shortages. The World Health Organization concluded that their diet needed to be enriched, and they selected soybeans to provide the enrichment. Then, with the help of the Food and Agricultural Organization (FAO), the local tribal leaders were persuaded to cooperate in growing soybeans. They were taught the agricultural techniques, and the processes for making soy flour—which was subsequently mixed with cassava meal. The health of the people improved dramatically.

The story of the experiment with soya in Guatemala was presented in a paper by Dr. Barry Lewis of the then University of Rhodesia. He became interested in the idea of enriching maize (corn) meal with soya flour. He managed to persuade two retired businessmen to set up a small factory [Nutresco] in Salisbury specifically to process soybeans and to mix the full-fat flour with maize. “Tests showed that the product was acceptable from a taste point of view but when it was distributed by the Ministry of Health, it was not well received because the people of the area were suspicious that the product had been ‘doctored’ because of the slight difference in color.

After Nutresco’s unsuccessful attempt to enrich “mealie meal,” the company turned its attention to a traditional local beverage known in Zimbabwe as Mahewu—based on fermented corn, millet, and sugar. By adding pre-cooked soybean meal to the corn flour (mealie meal), a highly nutritious beverage was produced. When used in a relief

feeding program in Zimbabwe, the effect on the people's health was dramatic. This success led to the development of a number of different types of soy-fortified mahewu.

"Other low-cost nutritious foodstuffs have been developed over the years, mainly geared towards the bulk food supplier, the needs of famine relief organisations, and selected supermarket and health food lines. Emphasis has been placed on utilising, as far as possible, locally produced or manufactured ingredients. Products include: Hypro-beans (pre-cooked soybeans), pre-cooked full-fat, low-fat and defatted soya meal/flour, pre-cooked maize meal, hi-protein biscuits, peanut butter/spread, powdered soups, fortified health and convalescent drinks, textured vegetable protein (TVP), relishes and instant dog meal. Nutresco's most recent product is a soya based 'bread improver' which has considerable potential in Zimbabwe and surrounding countries. Where necessary independent nutritional analysis has been carried out on Nutresco products and further details of all products are available on request.

"Currently Nutresco Foods 75 permanent employees (including five management and staff and four supervisors) and 33 contract workers on its 2700 square metre factory site. Its shareholders are the Commercial Oilseed Producers' Association of Zimbabwe and the Cerin Investment Company Ltd (a shareholding company of commercial cereal producers). Current growth is 20% and future policy is to diversify into bulk feeding mainly looking at the export market.

"Since 1990, Nutresco Foods has been a United Nations High Commission for Refugees 'Approved Supplier'.

"For further information contact The General Manager, Nutresco Foods P/L, P.O. Box St. 61, Southerton, Harare, Zimbabwe. Tel. +263(4)63697/8/9, 65915, 62644."

1529. Duggan, David. 1994. Problems with the Flier patent assigned to Ralston Purina (Interview). *SoyaScan Notes*. June 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** David is an anti-trust attorney, not a patent attorney. On 5 July 1990 the federal circuit court of appeals, which hears appeals concerning patent cases in the United States, ruled that Ralston Purina Company had procured the famous Flier patent (No. 3,940,495. Feb. 24, 1976. Application filed 17 Jan. 1973) by fraud on the patent office. The case is number 909 F.2D 1494 (Staley vs. Ralston Purina).

Price Heneveld (a law firm of patent lawyers in Grand Rapids, Michigan) apparently represented Ralston Purina on both the original application and in subsequent litigation.

There was apparently earlier litigation involving Far-Mar-Co, Staley, Cargill, etc. The first case was apparently Ralston Purina vs. Far-Mar-Co of Kansas. He believes that Ralston Purina filed the lawsuit in Oct. 1976. The judgment was in or about 1981—showing the slow pace of federal litigation. The case was tried in the 10th federal judicial

circuit (district of Kansas), which is statistically the worst, in the sense that more cases are later overturned from that circuit by the U.S. Supreme Court. He finds it interesting that Ralston chose to file its first case in that circuit. There is law to the effect that if you engage in fraud on the patent office and then use that fraud in an attempt to control or monopolize the relevant market, that is illegal, and may be the basis for a anti-trust lawsuit.

In 1976, after Ralston Purina won the case against Far-Mar-Co in Kansas, Ralston started sending demand letters to many other companies that were supposedly infringing this patent—including Staley, Cargill, Central Soya, Griffith Laboratories, Miles Laboratories, Nabisco, Anderson Clayton, General Mills, Nestle, Riceland Foods, Dawson Mills, General Foods, Grain Processing Corp., etc. Ralston was protecting its rights.

In 1985 the Far-Mar-Co case was upheld, saying that Ralston Purina indeed had the rights to the Flier patent (Case no. 772 F.2D 1570). However Far-Mar-Co did not raise the issue of fraud. So it took another 5 years for the court to reach that question—which it decided in 1990.

David's main questions are: (1) Is textured vegetable protein [actually textured soy flour] a distinct segment of some relevant market? (2) Did Ralston Purina try to exclude other competitors from that market. (3) Were there substitutes for the product on which Ralston Purina had a patent? David's firm is in the process of representing a former player in the industry, a major trading company; they may represent a consortium of companies that were effected by the Ralston Purina's "ill gotten gains."

Update: Talk with David Duggan. 1996. April 26. His firm was representing the Lauhoff Residuary Trust in a case against Ralston Purina Co. Lauhoff is a grain company in Danville, Illinois. They were sued by Ralston, which claimed that they had infringed the patent without paying royalties. Lauhoff initially disregard the demand letter threatening a suit. Then they sold the company, but did not properly disclose to the buyers that a lawsuit was pending or had been threatened. Lauhoff then lost the case against Ralston in about 1986 or 1987. So the new owners sued the formers owners for failure to disclose. David argued that the amount paid by Lauhoff to settle the lawsuit was fraudulently paid. The case, which was very complex and convoluted, was thrown out of court by the judge because the statute of limitations had expired—they brought the case too late. Moreover, the patent was nearing its expiration date, or had expired. David believes that there was some pretty serious frauds on the courts in litigation to enforce the patent. David tried to present a RICO (Racketeering Influenced and Corrupt Organizations) Act argument. It provides for triple damages. David tried to approach some of the smaller players like Far-Mar-Co but he did not approach ADM. The patent law was recently changed to 20 years from the point of application; formerly it was 17 years from the point of

grant. Address: 321 S. Plymouth Court, Suite 800, Chicago, Illinois 60604. Phone: 312-663-0670.

**1530. Product Name:** Beef(Not) (Textured Soy Flour).

**Manufacturer's Name:** Dixie USA, Inc. (Marketer-Distributor).

**Manufacturer's Address:** P.O. Box 55549, Houston, TX 77255. Phone: 1-800-347-3494.

**Date of Introduction:** 1994 June.

**Wt/Vol., Packaging, Price:** 8 oz package or 2 lb cannister.

**How Stored:** Shelf stable.

**New Product–Documentation:** Dixie Diner's Club Official Newsletter and Catalog. 1996. Jan. Vol. 2, issue 1.

Holly McCord. 1996. *Prevention* (Emmaus, Pennsylvania). Aug. p. 67. "Menopause naturally: Got hot flashes? get soy!" Beef(Not) textured soy protein granules contains 62 mg of isoflavones per ¼ cup dry.

Talk with then letter (fax) from Robert A. Beeley, chairman of Dixie USA Inc. 1996. July 31. Beef(Not) was introduced in June 1994. It is basically ADM TVP.

**1531. Product Name:** Realeat Fishless Fish Cakes.

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 908 211311.

**Date of Introduction:** 1994 July.

**Ingredients:** Soy protein.

**Wt/Vol., Packaging, Price:** 320 gm box of four. Retail for £1.19 (7/94, England).

**How Stored:** Frozen.

**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1994. Summer. p. 5. "Haldane launches Fishless Fish Cakes." The product is made from a blend of vegetable proteins (including soya) and potato with a golden crumb coating. Free of all animal products and additives, they are suitable for vegetarians and vegans.

**1532. Product Name:** Realeat Vege Menu (Dry Mix).

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 908 211311.

**Date of Introduction:** 1994 July.

**Ingredients:** Soy protein.

**Wt/Vol., Packaging, Price:** 125 gm pillow pack. Retail for £0.79 (7/94, England).

**How Stored:** Frozen.

**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1994. Summer. p. 5. "Haldane launches Fishless Fish Cakes." Haldane has also extended its line of dry products with this dry mix made from textured vegetable protein blended with herbs and spices. It has a 12 month shelf life.

1533. Kelley, Ann J. 1994. They're meatless wonders but Harvest Burgers reap praise from taste-testers. *Florida Times-Union (Jacksonville)*. Aug. 11.

• **Summary:** Members of this newspaper's consumer panel were asked this week to prepare some Green Giant all vegetable Harvest Burgers for their families. Most of the panelists rated the product's flavor as "good." Assorted favorable comments: "I thought they were great." "You couldn't tell it wasn't meat."

1534. Ono, Yumiko. 1994. Catering to part-time vegetarians' tastes. *Wall Street Journal*. Aug. 24. p. B1, col. 3; p. B2, col. 5.

• **Summary:** "There are only about 12 million self-professed vegetarians in America who shun all meat, but companies believe the vegetarian pitch appeals to any nutritious-conscious consumer..." More than 75% of Americans eat meatless meals twice a week, according to a survey by HealthFocus, Inc., a market research firm in Des Mines, Iowa. *Vegetarian Times*, a monthly magazine, says its circulation has doubled in two years to 340,000 in 1993, in part because part-time vegetarians started buying it. And 14 out of 67 varieties of Lean Cuisine dinners are now meatless. In April Linda McCartney, wife of rock star Paul McCartney, introduced to the USA a line of frozen dinners called Linda McCartney's Home Style Cooking Meatless Entrees. Fairmont Foods of Minnesota makes the products. Worthington Foods, of Worthington, Ohio, makes a wide variety of meatless products. And Pillsbury markets Green Giant Harvest Burgers, made by ADM. Address: Staff reporter.

1535. Organic Processing Corp. 1994. The organic industry's ingredient supplier (Ad). *Natural Foods Merchandiser*. Aug. p. 22.

• **Summary:** "Whole soybeans. Meal & flour. TVP & soy oil. Liquid soy extract. Protein concentrate. Whole wheat & unbleached flour. Degermed corn flour & grits. Corn malt syrup." Note: No address is given, but the company is located in Ohio.

1536. Wang, Huei-ju; Murphy, Patricia A. 1994. Isoflavone content in commercial soybean foods. *J. of Agricultural and Food Chemistry* 42(8):1666-73. Aug. [28 ref]

• **Summary:** Analysis of the isoflavone contents in commercial soybean foods revealed that non-fermented soybean foods had greater levels of glucosides, while fermented soybean foods had greater levels of aglycones.

Isoflavones are one class of phytochemicals and are found in soybeans in large amounts. Twelve isomers of isoflavones were quantified: three aglycons and nine glucosides. Soybeans contain two major isoflavone aglycons, genistein and daidzein, and a minor one, glycitein. In

the seed, the isoflavones are present primarily as Beta-glucosides. The nine glucosides are: daidzin, genistin, glycitin; 6"-O-acetyldaidzin, -genistin, or -glycitin; and 6"-O-malonyldaidzin, -genistin, or -glycitin.

This paper gives data on the concentration and distribution of isoflavones in 29 commercial soybean foods, grouped into three types: Soy ingredients, traditional East Asian soy foods, and second-generation soyfoods. Four values are given for each product in micrograms per gram, on an "as is" basis: daidzein, genistein, glycitein, and total isoflavones.

(1) Soy ingredients: Vinton 81 90: 600, 954, 82, 1636. Vinton 8191: 240, 648, 107, 995. Green vegetable soybeans: 546, 729, 79, 1354. Soy flour: 226, 810, 88, 1124. TVP #1: 473, 707, 202, 1382. TVP #1: 484, 702, 156, 1342. Soy isolate #1: 77, 273, 115, 466. Soy isolate #2: 115, 392, 102, 610. Soy isolate #3: 122, 393, 99, 615. Soy concentrate: trace, 13, 42, 56.

(2) Traditional soy foods: Roasted soybeans: 563, 869, 193, 1625. Instant soy beverage #1: 311, 617, 109, 1037. Instant soy beverage #4: 407, 665, 111, 1183. Tofu (73% moisture): 146, 162, 29, 337. Tempeh: 273, 320, 32, 625. Bean paste (ko chu jang in Korea): 272, 245, 77, 593. Fermented tofu: 143, 224, 23, 390. Honzukuri miso (rice and soybeans): 79, 177, 38, 294.

(3) Second generation soyfoods: Soy hot dog: 34, 82, 34, 150. Soy bacon: 28, 69, 24, 122. Tempeh burger: 64, 196, 30, 289. Tofu yogurt: 57, 94, 12, 164. Soy Parmesan: 15, 8, 41, 65. Soy Cheddar cheese #1: 2, 5, 27, 34. Soy Cheddar cheese #1: 34, 40, 35, 109. Soy mozzarella cheese: 11, 36, 30, 76. Flat soy noodle: 9, 37, 39, 85.

Some manufacturers use ethyl alcohol extraction to prepare soy protein concentrates; this process removes a substantial portion of the isoflavones. The products examined for this paper which had the lowest content of isoflavones (all less than 100 micrograms per gram) were: soy cheddar cheese A 34, soy protein concentrate 56, soy Parmesan 65, soy mozzarella cheese 76, flat noodle 85.

"Proposed anticarcinogenic doses of soybean isoflavones range from 1.5 to 2.0 mg per kg of body weight per day (Hendrick et al, 1994). There are a number of soy food choices that will fit this dose requirement without the need to consume unusual amounts of these soy foods."

Isoflavone standards and extraction of isoflavones: Authentic standards of daidzein and genistein were obtained from commercial sources (ICN Pharmaceuticals, Plainview, New York, and Calbiochem Corp., San Diego, California). Daidzein and genistein were from previous work in the laboratory (Murphy 1981). The starting material for extracting isoflavones was defatted soybean flour. It was, in turn, extracted with acetonitrile (ACN) and 0.1 N HCl [hydrochloric acid] (1:5:1 w/v/v) according to the procedure of Murphy 1981. Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ.,

Ames, Iowa 50011.

1537. Webber, John. 1994. Soybean gets new president: Larry Horn will move to Quincy from his job as a senior vice president of a Canadian company that processes oilseed. *Herald-Whig (Quincy, Illinois)*. Sept. 8. p. 1A.

• **Summary:** Larry Horn, a Mississippi native and graduate of Mississippi State University, has been "senior vice president of CanAmera Foods, which crushes soybeans and canola seed, and processes the oil and meal. The firm is a joint venture involving Central Soya, Saskatchewan Wheat Pool and Manitoba Pool Elevators." Horn helped organize the Ontario Oilseed Association, and is a former chairman of the Canadian Oilseed Processors Association. He is also a director of the U.S. Canola Association.

Horn will become president of Quincy Soybean on Oct. 1, succeeding Mike Foster, according to Thomas McKenna, president and CEO of Moorman Manufacturing Co. Foster was named president of Moorman's feed business on July 1.

"MoorMan's, Quincy Soybean, and Quincy Design and Manufacturing Inc. are the three core firms under the Moorman Manufacturing Co. corporate umbrella. The arrangement is the result of a corporate restructuring program that began several years ago.

"Quincy Soybean employs about 340 at its storage and crushing facility on Gardner Expressway."

Talk with Mike Foster, former president of Quincy Soybean Co. 2005. Sept. 17. Of the 3 divisions of Moorman Manufacturing Co. listed above, MoorMan's refers to a relatively new name for the feed company, and Quincy Design and Manufacturing Inc. refers to a sheet metal design and fabrication plant, which made equipment, especially feeders for livestock. It was a very small division; when Moorman's total sales were around \$1 billion, the sheet metal business was only \$5-10 million. At some time after 1994 Moorman sold that division. Moorman Manufacturing Co. had these 3 divisions before it purchased Quincy Agri Sales, which is now Seedwest, a division of ADM Edible Bean Specialties.

When Mike returned to Moorman Mfg. Co. from Quincy Soybean in 1994, the feed division and the holding company were one and the same. People often referred to both as "Moorman's" for short. Shortly after returning, Mike was involved in establishing the holding company, still named Moorman Manufacturing Co., and separating it from the feed division, which was named MoorMan's, Inc. Address: H-W staff writer.

1538. Sinclair, Jim. 1994. New developments at the National Soybean Research Laboratory (Interview). *SoyaScan Notes*. Sept. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Jim's boss, Dr. Donald Holt, wants him to write a generic draft of a proposal to seek funding for the

database of the NSRL–VertSoy. It will be made up of a number of components—such as seeking funding for SIRIC (they will probably go to a different type of funding agency). They are also working on StratSoy, whose funding has already been guaranteed. The project is well on its way; they have been working on the proposal and they have a video to be shown to the United Soybean Board (USB) at their next meeting. StratSoy is an expert system-type program for assisting soybean checkoff boards in their decision-making process on how to award competitive grants so that their money is put to its best use.

Note: This is the earliest English-language document seen (March 2019) that mentions StratSoy.

Darin Duval is a bright, young, well-trained person in computers and databases. Barton Clark is in his 60s and he represents the library administration. He will be involved in planning the new ag library. Duval, Jim, and Paul Hickson will start preparing the generic proposal. Agricultural Library at U of I has an 800-square-foot room to house documents. The college of agriculture is going through a major reorganization. As soon as the approval for reorganization is given by the faculty senate, later this year, a master plan kicks in.

On Sept. 28, Martin L. Andreas, Senior Vice President at ADM and Dwayne Andreas' nephew, is coming to the University of Illinois to present the second annual George A. Fluegel memorial lecture, sponsored by NSRL and the University of Illinois College of Agriculture. His subject will be “‘New uses’ for soybeans and agriculture.” The Dean has told Jim that he can informally present to Martin the plans for the lab and its potential, but he cannot directly ask him for funding. Marty is in charge of new uses at ADM. Most of the ADM Foundation money goes to public activities, such as supporting PBS programs, local boy scouts, Millikin University in Decatur, etc.

Bill thinks: The key concept is a Soybean Information Center, consisting of the best databases on the subject, an extensive library of books and journal articles, and an archives. We want to establish an information center where any person who is looking for information on soybeans will find it all in one place.

Jim is interim director of NSRL for 3 years; his tenure ends in the fall of 1995. He will be age 67 this year. He works half time for NSRL and half time for the plant pathology department. NSRL's annual budget is \$50,000 not including his salary and that of his secretary. Address: Acting Director, National Soybean Research Lab. (NSRL), 170 NSRL, 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: 217-244-1706.

1539. Archer Daniels Midland Co. 1994. Annual report. P.O. Box 1470, Decatur, IL 62525. 42 p. Sept.

• **Summary:** Net sales and other operating income for 1994 (year ended June 30) were \$11,374 million, up 15.9%

from 1993. Net earnings for 1994 were \$484.1 million, down 14.8% from 1993. Shareholders' equity (net worth) is \$5,045 million, up 3.3% from 1993. Net earnings per common share: \$1.40, down 11.4% from 1993. Number of shareholders: 33,940.

ADM's decline in profits was due largely to the great Midwestern flood of 1993 and rise in corn costs. Today ADM has 165 operating plants, 300 grain elevators, 2,000 barges, and 10,000 railroad cars. On any given day, together with affiliates in Europe, the company has 100 cargo ships on the high seas.

ADM Began processing corn in 1971, with a single wet-milling plant that had an annual processing capacity of 104,000 tons. Today ADM has an annual wet and dry corn processing capacity of 14.2 million tons. Corn is the origin of ADM's river of dextrose, from which is made HFCS, sorbitol, cornstarch, and ethanol. It is fermented to yield lysine, threonine, lactic acid, citric acid, and MSG. New products from corn fermentation scheduled for production by ADM in late 1994 include xanthan gum (a high-performance stabilizer in syrups, salad dressings, etc.), tryptophan, and vitamin C.

In recent years the U.S. government “has been providing strong incentives for farmers to grow more corn and fewer soybeans, thus turning the oilseed growing business over to Canada, Brazil, Argentina, India and the European Union (EU)—all while U.S. acreage shrank by 10 million acres... Consumers all over the world got a major setback when trade negotiators in Paris sat around a shiny table quarreling over which one should take the biggest cut in the production of oilseeds. The result was that the United States gave up its policy of being competitive in world markets for vegetable oil and the EU agreed to drastically reduce oilseed production. French farmers, proud of their productivity, protested.” Many countries are in dire need of more cooking oil. “It was agreed that Europe would first idle several million acres and then be allowed to produce oilseeds on those acres for industrial purposes only. The result is obscene. The EU is requiring processors to take perfectly good cooking oil worth \$1.65 a gallon and turn it into diesel fuel worth perhaps 40 cents.

A sidebar on p. 13 gives ADM's views opposing the U.S. government's efforts to reduce the amount of cropland, mainly to reduce surpluses but also for soil conservation. A graph shows that world oilseed acreage has risen dramatically since 1967, while that in the USA rose slowly from 1967 to 1982, then fell thereafter.

NutriBev is a new milk alternative made largely from soy protein isolates and concentrates; it has the same nutritional value as milk but can be produced free of lactose. The Harvest Burger plant is being greatly expanded to meet the product's rapid growth in sales. “The USDA's new school lunch regulations will soon make it possible for school districts to be reimbursed for using 100% soy

products such as Harvest Burger. In addition, schools will be required to reduce average fat levels in meals. A number of fat-reduced products contain ADM soy isolates. ADM's soy products are thus well positioned as extenders or a stand-alone products. Before the new regulations were announced, ADM provided testimony on the benefits of soy protein at a number of USDA hearings. We have put increased emphasis on increased soy protein research. We are also isolating some of the components in soy that are said by many scientists to inhibit cancer and some types of diabetes." A half-page color photo shows the Green Giant Harvest Burger and its package. A new lecithin plant was fully integrated into the existing oil refinery at Europoort, Netherlands, increasing efficiency substantially.

Pages 16-18 discuss ADM's worldwide procurement network and its unique partnership with A.C. Topfer.

Page 41 shows the officers of ADM's subsidiaries and divisions: David H. Swanson is chairman of Premiere Agri-Technologies, Inc. Larry H. Cunningham is president of ADM Protein Specialties Division. John R. Mahlich is managing director of The British Arkady Co., Ltd.

Update: March 1995. The Republican congress is now downsizing the U.S. government and trying to balance the federal budget. Yet ADM is quite dependent on government subsidies, especially for their most profitable products such as ethanol and PL-480 food products. How vulnerable does this make ADM, which is the largest manufacturer of ethyl alcohol in the world? One cannot tell from reading ADM's annual report. Address: Decatur, Illinois.

1540. NSRL. 1994. The National Soybean Research Laboratory and the University of Illinois College of Agriculture present the second annual George A. Fluegel Memorial Lecture: 'New Uses' for Soybeans and Agriculture, by Martin L. Andreas of the Archer Daniels Midland Co. (Leaflet). Urbana, Illinois. 1 p. Single sided. 28 cm.

• **Summary:** The lecture will be held on 28 Sept. 1994, at 2:00 p.m. in the National Soybean Research Laboratory Auditorium, Room 149, Environmental and Agricultural Sciences Building, 1101 W. Peabody Drive, Urbana.

Mr. Martin L. Andreas serves as Senior Vice President and Executive Assistant to the Chief Executive of Archer Daniels Midland Company. He also holds active positions with the Corn Refiners Association, the Renewable Fuels Association, the American Sugar Alliance, the Alternative Agricultural Research and Commercialization Center, and the Illinois Agricultural Leadership Foundation. Address: Urbana, Illinois.

1541. AGP-Ag Processing Inc a cooperative. 1994. Annual report: Partners in food production. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 20 p. 28 cm.

• **Summary:** Net sales for 1994 (year ended Aug. 31) were

\$1,377.370 million, up 13.0% from \$1,218.614 million in 1993. Earnings before income taxes: \$42.727 million, down 4.4% from the \$44.659 million in 1993. On the inside front cover is a brief essay about the "150th anniversary of the Co-operative Movement 1844-1894." AGP is owned by 380,000 farmers and 351 local cooperatives. "Today 700 million people around the world share the cooperative form of business. In the U.S., 120 million people are members of over 47,000 cooperatives."

This year AGP's board of directors "declared a patronage payment of \$35,786,000. Additionally the board declared a revolvment of stockholders' equity of \$14,280,000, bringing AGP current into the 1989 equity balances."

"The combined capacity of our seven [soybean] processing plants ranks AGP fourth in the U.S. in terms of soybean processing capacity." The plants purchase the equivalent of 250,000 acres of soybeans each month for processing. Each day, AGP merchandisers sell 8,000 tons of soybean meal to cooperatives and other companies for the manufacture of feeds."

"In August 1994 AGP purchased all of Maple Leaf Foods Inc.'s Western Canadian deed plants" in Alberta, Canada.

In Nov. 1994, AGP and ADM formed a new company named Consolidated Nutrition, L.C., owned 50-50 by AGP and ADM. It consists of the combined assets of AGP, L.P. and Master Mix Feeds (which was founded in 1935 by Central Soya Inc.) "In July 1994, ADM purchased most of Central Soya's feed and nutrition operations, including Master Mix Feeds."

A color map (p. 18), with 9 symbols, shows all of AGP's business locations in the United States, Canada, and the Caribbean. Another color map (p. 20) show where all of AGP's shareholders are located. Color portrait photos show (1) Knobbe and Lindsay. (2) The towering desolventizer-toaster at the Mason City, Iowa, plant. (3) Aerial view of the St. Joseph, Missouri, plant. (4) The towering 1.7 million bushel capacity grain storage terminal at Lincoln, Nebraska, now leased by AGP. (5) A barge leaving AGP Grain's 4.2 million bushel grain terminal at Duluth, Minnesota. (6) A man holding a small pink pig. (7) The Farmers Cooperative Elevator Co. at Everly, Iowa. (8) Each of the nine members of the board of directors. Address: Omaha, Nebraska. Phone: (402) 496-7809.

1542. Joachim, David. 1994. The joy of soy: Welcome to the kitchen of Dorothy Bates—soyfoods pioneer. *Vegetarian Gourmet (Montrose, Pennsylvania)* No. 11. Autumn. p. 28-33.

• **Summary:** Dorothy, age 73, graduated from Iowa State University with a degree in food, nutrition, and journalism. Then she began her career as a home economist for Swift & Company, a Chicago-based food company. In 1945 she

married and moved to Hawaii, where her two children were born. In 1968 [actually about 1973 or 1974] her daughter-in-law Cynthia prepared a few simple dishes at Dorothy's home in Connecticut using tofu, tempeh, soy sauce, and textured vegetable protein. This had a profound effect on the direction of Dorothy's life. Sensing a story, Dorothy called the food editor from the local newspaper [Elizabeth Squires of the *Wilton Bulletin* in Wilton, Connecticut] to photograph the dishes and write about soy products. Now age 50, and a lover of the rich desserts of French cuisine, Dorothy had little idea that she would eventually be writing vegetarian cookbooks—such as *The Tempeh Cookbook*, and *The TVP Cookbook*.

Contains 9 soyfoods recipes, including: Super-easy chocolate mousse (with silken tofu), and Whipped topping (with firm tofu).

A sidebar (p. 31-32) discusses soybeans, diet, disease prevention, and genistein.

1543. *SoyaScan Notes*. 1994. What is the Dietary Supplements Health Education Act (DSHEA, also called the Hatch Act) (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** DSHEA (pronounced du-SHAY) is the Dietary Supplements Health Education Act (also called the Hatch Act, after Senator Orrin Hatch, Republican of Utah). When it was passed on 15 Oct. 1994, the whole world of nutraceuticals was revolutionized, and the number of products has continued to increase dramatically. This Act made it much easier to sell dietary supplements without FDA approval. It essentially put the burden of proof on the FDA. The law allowed food and beverage manufacturers to add anything from creatine to chromium to their products as long as they don't claim to "diagnose, prevent, mitigate, treat, or cure a specific disease." Before Oct. 1994 the manufacturer of a supplement had to prove that it was safe. But after that date the FDA has to prove that it is harmful before they can require a company to withdraw or recall the product. The actual language of the Act makes "amazing reading. The Act is a watershed event for the health food industry in the USA—and particularly for the nutritional supplement industry. During the next few years it will lead to the introduction of many new soy products, most notably soy isoflavone pills—such as ADM's Novasoy, which was first sold commercially in Nov. 1997.

Update: By 1998 some people found it "totally unbelievable" that any company could market any supplement, herb, or herbal mixture (even if it was unsafe or in unsafe doses) without prior FDA approval. The FDA has only about three scientists working in the supplement field and there are some 50,000 supplements on the market. There is a long history of mutual antagonism and distrust between the supplement industry and the FDA (see *More Than One Slingshot: How the Health Food Industry Is Changing America*, by Frank Murray and Jon Tarr (1984)). The

supplement industry applied considerable political pressure to get the FDA out of the business of regulating supplements such as vitamins and minerals, most of which were perfectly safe. The FDA realized it did not have the resources to monitor and regulate this large and burgeoning industry, so they largely stopped all regulation. With supplements, the rule became "buyer beware." The problem has become much more complex and acute because of the advent of nutraceuticals, which blur the line between traditional drugs (medicines, which must be safe and effective) and traditional supplements (such as vitamins and minerals). By 1998 the pendulum had begun to swing the other way, and the supplement industry began to come under increasing criticism from health professionals. On 17 September 1998 the prestigious *New England Journal of Medicine* (NEJM) ran three articles and an editorial on this subject. The editorial said that it is time for scientists to stand up to the supplement industry. On Sept. 19 the *New York Times* wrote an editorial in response to the NEJM editorial titled "Unregulated dietary supplements" and Jane Brody wrote an article on the same subject.

Ipriflavone, which is regulated and sold as a drug in Asia and Europe, is now being sold in the USA as a supplement. A synthetic compound, it has been researched for 20 years, thousands of women have taken it, and it has many properties similar to isoflavones. The advocates of ipriflavone note that it is just like the natural compounds in soybeans, so it is safe. Likewise, the soy isoflavone advocates refer to the extensive research data on ipriflavone to argue that the soy isoflavones are both safe and effective.

1544. Archer Daniels Midland Co. 1994. First quarter report to shareholders, and a report on the 71st Annual Shareholders Meeting. Box 1470, Decatur, IL 62525. 16 p. 20 x 9 cm.

• **Summary:** Comments by president James R. Randall. ADM is a growth company that continues to grow in three basic ways. First, by continuing to expand the basic businesses: crushing, refining, milling, etc. Second, to grow vertically and upgrade basic products into higher margin items. Central Soya's feed division was purchased along with a worldwide network of premix plants to give ADM excellent distribution of its amino acids and vitamins for animal feeds. By the end of 1995, ADM will be producing all three of the vitamins known as antioxidants. "Our soy protein businesses also continue to grow. Our European concentrate plant is now at full capacity and is being expanded. Our U.S. isolate and concentrate business is well ahead of previous years." Pillsbury's sales of ADM's vegeburgers are "up nearly 900 percent over a year ago. Our third growth area is to grow internationally. There are 94 million new people added to the face of the globe annually and feeding people is our business." These people are being added in "Asia, Africa, Central and South America, places where we have little or no presence, and we need to be there.

In the past year we have formed partnerships and have plants in Turkey, Greece, Bulgaria, Hungary, and Czechoslovakia in Eastern Europe. ADM is forming new alliances in Asia.

Comments by Michael Andreas, vice chairman of the board and executive vice president. There is no free trade in today's world. "Twenty years ago soybean farmers in the U.S. couldn't agree on a program for soybeans because the cost to produce them varied so widely from north to south. So they opted for so-called free trade with a low loan rate as a safety net. It all sounded pretty good. Over the last 15 years, however, I observed the following. Ten million acres of soybeans disappeared from the U.S., while areas in Argentina and Brazil increased 14 million acres where land was cheaper and subsidized credits were available. An additional 18.7 million oilseed acres were planted in Canada and Europe, again with heavy subsidies. Twenty-two soybean factories [crushing plants] were closed in our country, while fifty sprung up in South America and Europe. Our share of the world market in soybean products was cut in half. In fact, over 20,000 soybean farmers left the business, and 50,000 jobs were lost at home. And you know we still have the same program today.

"Let's look at Japan. They are truly the masters of managed trade. After the war, Japan put an extremely high tariff on imported vegetable oil but none on raw materials like soybeans and canola, so they could create jobs at home. Factories sprung up in the '50s and '60s like wildfire when they set their systems in place. Canada responded by growing more and more oilseeds and subsidizing exports with cheap freight to the ports. Canada became a colony again. They got no factories, no jobs. Why not?"

"Japan had all the factories because they could pay a premium for raw materials (in this case subsidized raw materials), run their factories, and charge the consumers double the market for their products. Taxes on the profits were collected by the government and used to help subsidize automobile exports. Sound complicated? As I said, this was managed trade, and it worked like a charm.

"And don't think for a minute that China hasn't learned from these tricks of the trade. They're putting the same systems in place as fast as they can."

Comments by Dwayne O. Andreas, chairman of the board and chief executive. He discusses the many accomplishments of the Clinton administration, including opening up trade with China. "The second thing he did that is absolutely super for agriculture and ADM is that he got NAFTA through the Congress over the opposition of his labor constituency, one of the greatest achievements for trade of this century. Our exports to Mexico have tripled just since NAFTA, and they are going to triple again." Address: Decatur, Illinois.

1545. *Soyfoods (ASA, Europe)*. 1994. People on the move. 5(3):3. Autumn.

• **Summary:** Philip Gaffney has been appointed National Accounts Manager for Cauldron Foods in Bristol, UK. A member of the Hero Group, Cauldron is Britain's largest producer of tofu and a variety of chilled and frozen healthy meatless products.

John G. Reed, Jr., has been named ADM's Vice President and Chief Executive in Europe. In 1982 Reed joined ADM in the U.S. as Vice President. He will relocate at ADM's European Headquarters in Erith [on the River Thames just east of London], Kent, England.

1546. *Soyfoods (ASA, Europe)*. 1994. In depth: Food Ingredients Europe. 5(3):6-7. Autumn.

• **Summary:** Food Ingredients Europe, the international exhibition of food ingredients, was held this year on Oct. 4-6 in London, England, at Earl's Court. This was the biggest FIE in its 9-year history, with more than 500 exhibitors. The American Soybean Association (ASA) had a very successful booth at the U.S. Pavilion. One of the most interesting new products was Befine, from a company named VPS Europe. This unique, patented soya-based granule, sold fresh or frozen, mimics the texture of ground meat but it is not TVP or textured soy protein concentrate. Made from organic whole soybeans, it contains 18% protein. ADM Protein Specialties Division introduced their new WMR4, a dry soymilk based on soy protein isolate. Protein Technologies International exhibited Supro brand Isolated Soy Protein and Fibrin brand soy fiber. A line of texturized Danprotex (H-29, B-39, and F) and functional Danpro (DS) soy protein concentrates were launched by Central Soya Aarhus A/S, a member of the Eridania/Beghin-Say agro-industrial group. Kikkoman Trading Europe exhibited their naturally fermented soy sauces in liquid and dehydrated forms. Other soy sauce exhibitors included Henry Lamotte GmbH and Mandarin Soy Sauce Inc. Loders Croklaan exhibited a new soya concentrate line. Alsace-based Sojinal, which supplies soy products to the food industry, exhibited along with their new sister company, Sevenday. SFI Netherlands BV (SFI = Special Food Ingredients, formerly Solnuts Inc.) exhibited their line of dry roasted soynuts. Also present were Stern Lecithin and Soja GmbH & Co. KG, Sapa and Dafa Associès (makers of Dafasoy for the food, dietetic, and pharmaceutical industries), Soya Mainz & Co. KG and Solbar Hatzor (soy protein concentrates), Dalgety Food Ingredients International (with the former Spillers Premier Products), Lucas Meyer GmbH (with a phosphatidyl choline lecithin powder and a de-oiled lecithin for frozen doughs), Edelsoja GmbH, Celia SA, Freeze-Dry Foods GmbH, and GMB Proteins (a division of Bush Boake Allen Ltd.). The address and fax number of each company is given.

1547. Soyfoods Association of America. 1994. Get the soy edge (Ad). *Vegetarian Times*. Nov. p. 71-74.

• **Summary:** This 4-page advertorial, with 17 color photos, is

sponsored by the following organizations: ADM, DevanSoy Farms, Inc., Eden Foods, Inc., Lightlife Foods, Lumen Food Corp., Morinaga Nutritional Foods Inc., Soyfoods Association of America, Tofutti Brands Inc., Worthington Foods.

“Did you know you can fit soy into your diet without giving up your favorite foods? Try soy burgers, soy ice cream, soy yogurt, soy hot dogs, soy flour, soy cream cheese, soy sausage, soy chili, soy frozen juice bars, soy margarine, soy milk, soy tacos, soy sour cream, soy sloppy joes, soy ‘chicken’ patties...” Address: Palo Alto, California. Phone: 415-327-1444.

1548. Limpert, Bill. 1994. The Soy Protein Council and Cargill, Inc. (Interview). *SoyaScan Notes*. Dec. 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** For the last 8-10 years the Soy Protein Council (which was founded in 1971) has had only 3 full members: ADM, Cargill, and Central Soya. As the number of members has decreased, the dues that each member company pays has increased. Protein Technologies International does not belong and pays no dues. He does not know why PTI does not belong, yet they participate in some meetings when there is specific legislation that affects them, and they also participate in lobbying on behalf of soy proteins.

The only soy protein products that Cargill makes are defatted soy flour, textured soy flour, and flavored textured soy flour (as for Schilling or McCormack). These products, which are all produced at one plant in Cedar Rapids, Iowa, often end up as ingredients in consumer food products, but Cargill (like ADM) does not sell any consumer products. Very little Cargill products end up in pet foods any more.

A company that makes full-fat soy flour is HiPro Food Products, Inc., 775 Colorado Ave. South, Minneapolis, Minnesota 55416 (Phone: 612-545-0151; Bob Cross, president). They have a plant in New Germany, Minnesota.

Update: 1997 Oct. 16. The Soy Protein Council still only has the same three full members. PTI still has not joined. Address: Research Chemist, Technical Services Manager, Cargill, Inc., Research Dep., P.O. Box 5699, Minneapolis, Minnesota 55440.

1549. *Soybean Quarterly (Nebraska Soybean Board, Lincoln, Nebraska)*. 1994. Award winning conditioning program relies on soy power. 1(1):1, 4.

• **Summary:** “Athletes who dine at the University of Nebraska training table are getting some of their power and energy from soybeans. UNL (University of Nebraska at Lincoln) strength and conditioning coach Boyd Epley serves a powdered drink mix called Energy Balance to athletes who want to increase their energy, endurance and strength. The primary ingredient in the mix is isolated soybean protein.” Note: Energy Balance is made in Syracuse, Nebraska, by Pharma Chemie, run by Miak Pieloch. It contains soy protein

isolate purchased from ADM.

1550. **Product Name:** Supreme, Number 1, and Eezee.

**Manufacturer’s Name:** Sasko International.

**Manufacturer’s Address:** P.O. Box 4315, Luipardsvlei 1743, South Africa. Phone: +27 11762 5300 x-116.

**Date of Introduction:** 1994.

**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1995. Spring. p. 4. “Sasko International at Sial ‘94.” Sasko makes and supplies foods, from consumer goods to nutritional assistance programs. “Under the brand names Supreme, Number 1, and Eezee they produce a range of soya products, such as flavoured, cubed TVP, flavoured minced TVP, soups and gravy powders. In addition they manufacture soya milk powder and other high protein drink powders. The TVP based products are available in a number of flavours including ‘monkey gland’! whilst a range of fruit flavors are used for the high protein drink powders. The company also produces cereal mixes and batter mixes using soya, and a protein, mineral and vitamin enriched drink also based on soya.”

1551. Egerstrom, Lee. 1994. Make no small plans: A cooperative revival for rural America. Rochester, Minnesota: Lone Oak Press, Ltd. 294 p. Illust. Index. 23 cm. [200\* + 242 footnotes]

• **Summary:** Journalist Egerstrom argues for a “new generation” of farmer-owned cooperatives based on value-added processing. A quotation on the back cover by reviewer Michael Boehlje of Purdue Univ. (Indiana) summarizes it well: “Agriculture is changing from a way of life to a business, and a business that manufactures food products rather than raises commodities. Egerstrom has documented this change... His fundamental theme, that farmers through collective activities and specifically through cooperatives can shape this transformation of the food system and rural communities is not only interesting and enjoyable reading, but should stimulate and challenge farm leaders to become more pro-active in guiding and directing the industrialization of agriculture.” An appendix (p. 245-48) lists 50 “New Generation” cooperatives.

Contents: Foreword, by Bob Bergland (U.S. Secretary of Agriculture, 1977-1981; Congressman from Minnesota 1971-1977). Preface. 1. Agrarian myths & the Northwest culture. 2. Reviving the “good old days” after everything’s changed. 3. Observing change. 4. The Netherlands experience. 5. American experience. 6. Technology & knowledge transfer. 7. The more things change. 8. The need for a new approach to development. 9. Cooperatives: The new wave movement for community development. Afterword, by C.T. (Terry) Frederickson. Acknowledgments.

At the end of many chapters are “Notes,” for example (p. 248-49) “The top ten basic questions you should ask before you [a local or state government] approve or are

involved in an economic development project.” A good project brings real, durable benefits to the community; it must offer more than the single goal of creating jobs.

The title of this book is based on “Howard Cowden’s business motto for building Farmland Industries [headquartered in Kansas City, Missouri] into a modern agribusiness and petroleum giant.” Engraved in the cooperative’s boardroom wall, it reads: “Make no little plans; they have not the power to stir men’s souls” (p. 10-11).

“Governments have lost both the legal authority to intervene in farm markets and arbitrarily raise farm incomes by raising prices, and the budgetary means to do so. International trade agreements [e.g., WTO, NAFTA] ban the former; political support and government budget priorities limit the latter.” In Feb. 1994 U.S. Secretary of Agriculture said: “I have seen the handwriting on the wall... U.S. budget support for agriculture will continue to decline” (p. 11-12). There is now bipartisan consensus on this key point.

The following (mostly soybean crushing cooperatives) are mentioned or discussed: AGRI Industries, Inc. (p. 237). Cenex (89-91, 128, 141-43, 138, 150, 173, 193, 219, 222, 234-36, 257). ConAgra Inc. (p. 129, 131, 133, 144). Dean Foods (p. 131). Farmers Union Grain Terminal Association (GTA) (p. 133, 170). Farmland Industries (13, 52, 115, 128-30, 134, 136, 173, 229, 235, 258). Far-Mar-Co (p. 130). Gold Kist, Inc. (p. 51, 134). Honeymead (p. 133-34). Land O’Lakes (p. 115, 128, 130, 134, 138-40, 150, 154, 165, 169, 190, 219, 222, 235). Monsanto (p. 165).

Note 2. The title of this book is taken from a quotation attributed to the great American city planner and architect Daniel Burnham (1846-1912), who is quoted as saying: “Make no little plans. They have no magic to stir men’s blood and probably will not themselves be realized” (Moore 1921).

Note 2. Farmland Industries was the largest agricultural cooperative in North America when it declared bankruptcy in 2002. Address: Maplewood, Minnesota.

1552. Kilburn, Roger. 1994. My favorite TVP recipes. Decatur, Illinois: Harvest Direct, Inc. vii + 56 p. No index. 25 cm.

• **Summary:** Contents: TVP (a registered trademark of the Archer Daniels Midland Co., Decatur, Illinois). Foreword. More about TVP. Main dishes. Soups and stews. Luncheon. Appetizers and side dishes. Snacks. A color photo on the cover shows Roger Kilburn (wearing glasses, short hair, and a short beard) by a table with his favorite TVP dishes. Address: President, Harvest Direct, P.O. Box 4514, Decatur, Illinois 62525. Phone: 1-800-835-2867.

1553. Leng, Vikki. 1994. Earthly delights: Everyday vegetarian cooking. Over 750 simple and delicious recipes for everyday meals and special occasions. Sydney, Australia: Thorsons. 352 p. Illust. (color). Index. 29 cm.

• **Summary:** This attractive cookbook, containing many large color photos printed on glossy paper, contains many recipes for and much information about soyfoods throughout the book. One chapter titled “Tofu and soy products” (p. 283-89) includes: Basic tofu (a recipe for making tofu at home). Quick tofu. Frozen tofu. Parboiled tofu. Textured vegetable protein (TVP, made from frozen tofu). Spicy textured vegetable protein (TVP, made from frozen tofu). Mediterranean style TVP (made from frozen tofu). Marinated tofu. Tofu paprika. Spicy grilled tofu. Tiny tofu parcels. Spicy tofu. Tofu foccacia bake. Tofu and sesame balls. Roasted okara. Curry flavoured okara. Soy and ginger balls (with 2 cups cooked soy beans {p. 124}, ground to a pulp or 3 cups okara). Okara felafels.

The glossary (p. 341-46) includes: Miso, nigari, nori, okara, sesame seeds, soy flour, soy milk, soy sauce, tahini, tempeh, textured vegetable protein (TVP), and tofu.

See also: Miso (p. 28), okara (p. 124, 265), soy beans, cooked (p. 124), soy bean sprouts (p. 257).

Part III of this book is titled “The vegetarian diet” (p. 334-40). On the inside rear dust jacket is portrait photo of Vikki Leng and a brief biography. She first came to public attention over ten years ago as “Vikki the Vego,” the “amusing and well-informed advocate for eating for health and pleasure with a special love for vegetarian cuisine.” Address: Melbourne, Australia.

1554. Much, Marilyn. 1995. Seeds bear fruit at Archer Daniels Midland: Profits surge at huge grain processor thanks to growing sales of higher margin additives. *Investor’s Business Daily*. Jan. 5.

• **Summary:** A photo shows ADM Chairman and CEO Dwayne Andreas who said that his company’s business has doubled every six years for the past 20 years. In 1994 ADM had bad luck because of the great Midwest floods; earnings dropped 11% even as revenues rose 16% to \$11.4 billion. ADM’s strategy is to nurture core businesses, like milling of corn, wheat, and soybeans, while expanding and upgrading products into higher margin items.

Over the past few years ADM has used new technologies to extract amino acids from corn. Today ADM is a leader in the production of amino acids like lysine and threonine, which are used as livestock feed supplements. It will soon start making tryptophan for use in livestock feeding. Andreas estimates that consumption of such value-added products is growing anywhere from 6% to 25% a year. That explains why he has invested several hundred million dollars in making these items. “This investment includes the January acquisition of Central Soya Co., one of the largest global distributors of multivitamin products.” [Note: In Jan. 1994 (not 1995) a subsidiary of ADM acquired Central Soya’s feed division—but not the entire Central Soya company].

Analyst David Nelson of NatWest Securities predicts that ADM’s earnings overall will grow at a compound annual

rate of 9% to 12% over the next 5 years as the firm reaps the benefits of its wise investments, and as agricultural trade becomes more liberalized. That's up from only 3% from 1990-1994. For example, the market for ADM fructose has exploded. ADM plans to diversify into new bioproduct categories. Long-term, Andreas plans to produce all six antioxidant vitamins from natural sources—and penicillin.

ADM's soy protein business is growing rapidly. Six years ago the company invented a new way to isolate [concentrate?] soy protein and make a product similar in taste and texture to meat. This is used as an ingredient in the Harvest Burger patties marketed at retail by Pillsbury's Green Giant.

Andreas has found that liberalization of agricultural trade through NAFTA and GATT has been of tremendous benefit to ADM and similar companies. ADM is now shipping to China vastly increased amounts of vegetable oil. "The company has shipped \$26 million of a total \$100 million order from Ukraine for soy protein to be used in milk. And the former Soviet Union has asked ADM if it can supply it with 3 million tons of milk from soy protein in the future, says Andreas." Address: Staff reporter.

**1555. Product Name:** Green Giant Breakfast Patties [Sausage Style].

**Manufacturer's Name:** Green Giant Div., The Pillsbury Company (Marketer-Distributor). Made in Decatur, Illinois, by ADM.

**Manufacturer's Address:** Pillsbury: 2866 Pillsbury Center, Minneapolis, MN 55402-1464. Phone: 1-800-998-9996.

**Date of Introduction:** 1995 January.

**How Stored:** Frozen.

**New Product–Documentation:** Ad with coupon (1/3 page,

color) in Vegetarian Times. 1995. March. p. 22. A photo shows the front of each package/label. The patties contain "81% less fat" than comparable meat patties. They are "All vegetable. Cholesterol free."

Talk with Doug Schmalz of ADM. 1995. July 19. This product is now on the market.

Talk with Green Giant consumer information person. 1995. July 31. The Green Giant Breakfast Patties were launched on 1 Jan. 1995.

**1556. Product Name:** Green Giant Breakfast Links [Sausage Style].

**Manufacturer's Name:** Green Giant Div., The Pillsbury Company (Marketer-Distributor). Made in Decatur, Illinois, by ADM.

**Manufacturer's Address:** Pillsbury: 2866 Pillsbury Center, Minneapolis, MN 55402-1464. Phone: 1-800-998-9996.

**Date of Introduction:** 1995 January.

**Ingredients:** Water, soy protein concentrate, corn oil, isolated soy protein, methylcellulose, hydrolyzed protein (made from soy protein, wheat gluten, corn gluten), natural flavor, spice, salt, malt extract, autolyzed yeast extract, maltodextrin, beet powder, zinc oxide, niacinamide, ferrous sulfate, copper gluconate, vitamin A palmitate, calcium pantothenate, thiamine mononitrate, vitamin B-6 hydrochloride, riboflavin, vitamin B-12.

**Wt/Vol., Packaging, Price:** 8 oz paperboard box. Retail for \$2.19 (8/95, California).

**How Stored:** Frozen.

**Nutrition:** Per 3 links (85 gm): Calories 110, calories from fat 45, total fat 5 gm (8% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 340 mg (14%), total carbohydrate 5 gm (dietary fiber 4 gm, sugars <1 gm), protein 12 gm.

Vitamin A 0%, niacin 15%, vitamin B-12 15%, zinc 30%, copper 10%, calcium 6%, vitamin C 0%, iron 10%, riboflavin 6%, Percent daily values are based on a 2,000 calorie diet.

**New Product–Documentation:** See previous page. Ad with coupon (1/3 page, color) in *Vegetarian Times*. 1995. March. p. 22. A photo shows the front of each package/label. The links contain “81% less fat” than comparable meat sausages. They are “All vegetable. Cholesterol free.”

Talk with Green Giant consumer information person. 1995. July 31. The Green Giant Breakfast Links were launched on 1 Jan. 1995.

Product with Label purchased at Safeway supermarket in Lafayette, California. 1995. Aug. 1. 8½ by 4¼ by 1 inch paperboard box. Green, dark green, white, and purple. Color photo of 3 links next to pancakes and 3 raspberries on a plate. Green Giant logo. On front panel: “81% less fat than pork sausage. All-vegetable. Zero cholesterol. 10 links.” Back panel: Have a hearty breakfast that’s good for you! Questions or comments? 1-800-998-9996. A table compares the nutritional composition of 68 gm uncooked Green Giant Links and pork sausage: Fat: 5 gm vs. 27 gm. Saturated fat: 0.5 gm vs. 10 gm. Cholesterol: 0 mg vs. 45 mg. Calories: 119 vs. 280.

1557. Pillsbury Company. 1995. Like any guy, he occasionally craves a burger (Ad). *Vegetarian Times*. Jan. p. 25.

• **Summary:** The top half of this full-page color ad contains an illustration of the jolly Green Giant. The bottom half tells about Green Giant Harvest Burgers, with a photo of the package and of a burger between buns with all the trimmings. Green Giant is a registered trademark of The Pillsbury Company. Harvest Burgers is a registered trademark of ADM.

1558. Soglowek, Eli. 1995. Soglowek–Israel’s biggest meat processor has been making meatlike products for 8 years (Interview). *SoyaScan Notes*. Feb. 14. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Eli is the son of one of the owners of this family-owned business, which started processing meat in Israel 55 years ago (i.e. in 1940) and is today the country’s largest meat processor, making sausages, pizza, dough, pasta, etc. The family came to Israel from Germany. Soglowek (also spelled Zoglabeck or Zoglovek or Zoglowek) is located at 8 Ha Gatton Blvd., P.O. Box 70, Naharya, Israel–10 minute’s drive from Tivall. Soglowek started making meat alternatives after Tivall and today they are Tivall’s main competitor in Israel. The CEO of Tivall today is Gazi Kaplen, and the man who developed Tivall’s products is Michael Shemer, who studied in the USA, wrote his PhD thesis in 1973 on soy protein at the University of Illinois, learned about meatlike products there, then later worked for

General Mills.

Tivall started making meatlike products in 1985 and Soglowek started 1-2 years later, making their products under the brand Zoglo’s mainly from textured soy protein concentrates and wheat gluten. Their main products are Veggie Burgers and Veggie Cutlets (a kind of schnitzel). They buy their textured concentrates from both ADM and Central Soya, and their wheat gluten probably in Israel. Soglowek sells some of its meatlike products in Israel, but also exports large quantities to Europe and the United States. Address: 300 East 90th St., Apt. 4B, New York, NY 10128.

1559. Arnold, Kathryn. 1995. The joy of soy. *Delicious! (Boulder, Colorado)*. Feb. p. 34-36. [3 ref]

• **Summary:** The soybean “has long been revered by vegetarians as a nutritional powerhouse. However, the real secret is that soyfoods may help prevent disease.” They are cancer fighters and good for the heart. A table (p. 36) lists 12 different types of soyfoods and their uses: Tofu, tempeh, okara, miso, natto, TVP, soymilk, soy grits, soy flour, soy cheese, soy sauce, soy yogurt.

Note: This periodical, which began publication in about 1983, is published for natural products consumers by New Hope Communications in Boulder, Colorado. As of March 1998 some 425,000 copies of *Delicious!* are distributed each month to over 900 health food retail stores throughout the United States.

1560. Messina, Mark; Messina, Virginia. 1995. Soybeans linked to health benefits. *Vegetarian Voice (Dolgeville, New York)* 20(4):10-11. Winter.

• **Summary:** Contents: Introduction. Soy and heart disease. Soy and cancer. Other roles for soy. What if you can’t tolerate soy. The whole diet approach.

A table shows the isoflavone content of selected foods: Soymilk (1 cup) 40 mg. Tofu (½ cup) 40 mg. Tempeh (½ cup) 40 mg. Miso (½ cup) 40 mg. TVP, cooked (½ cup) 35 mg. Soy flour (½ cup) 50 mg. Soybeans, cooked (½ cup) 35 mg. Soy nuts (1 ounce) 40 mg. Isoflavones (unlike vitamins) are not destroyed in conventional cooking methods.

1561. Gruenwald, R. Jay. 1995. Update on The Simple Soyman, The Bountiful Bean, Long Life Foods in Minnesota, and Kyoto Food Corp. (Terre Haute, Indiana) (Interview). *SoyaScan Notes*. March 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Jay has been with The Simple Soyman for 12 years. On 23 Sept. 1994 The Simple Soyman bought The Bountiful Bean, moved it from Ridgeway to Milwaukee, and merged it into The Simple Soyman. In Dec. 1994 he moved the new larger company to a new address: 3901 North 35th St. (P.O. Box 16677), Milwaukee, Wisconsin 53216. Phone: 414-444-TOFU. Simple Soyman still produces Hummus and Taboolie [both contain tofu], tempeh, and tofu under the

Bountiful Bean brand. The Simple Soyman will continue to make its Deepockets (Calzone-style [Italian] and Empanada-style [Mexican]; both contain frozen tofu), dips, spreads, etc. Most are made with soy. The company does a lot with frozen tofu, using it in place of TVP, which causes intestinal gas. The business is still struggling, “but hopefully with the addition of The Bountiful Bean business and distribution in Madison, we’ll get going. Being in this for 12 years now, we’ve got to start making a living at it pretty soon. Basic tofu is still not very profitable. We started working out of the Magic Bean’s kitchen with one product. When they went bankrupt we basically bought their equipment and moved to 4877 N. Green Bay Ave., Milwaukee, Wisconsin. The building we are in now is 4,500 square feet. The factory is nicely laid out.”

R. Jay has heard from a packaging company that a new tofu company named Long Life Foods is scheduled to start in Perham, Minnesota. They are said to be using a special type of package (not water pack) which gives the tofu a very long shelf life.

Kyoto Food Corp. (KFC) in Terre Haute, Indiana, declared bankruptcy in about May or June 1994. He heard that KFC had a verbal agreement from a big chain like Kroger to carry their tofu, then Azumaya, which was the brand Kroger was carrying, lowered their price. So Kroger stayed with Azumaya and that dealt the death blow to KFC [not true; see March 1995 interview with William Roach]. They were trying to sell their building and plant (which they owned and designed to make tofu) for about \$1.3 million. He thinks that the company was run by a couple, an American man and a Japanese woman [William and Toni Roach]. Bruce Rose is thinking of buying the company. Address: Owner, The Simple Soyman, 3901 North 35th St. (P.O. Box 16677), Milwaukee, Wisconsin 53216. Phone: 414-444-8638.

1562. *Wall Street Journal*. 1995. Cargill Inc. names Ernest Micek to post of chief executive. March 29.

• **Summary:** Ernest S. Micek, age 59, was named chief executive officer of Cargill Inc. effective Aug. 8 [1994], and will succeed Whitney MacMillan, age 65, who is retiring from management but will continue as chairman. Mr. MacMillan has been Cargill’s chief executive for almost 18 years. The great-grandson of the founder, W.W. MacMillan, his retirement will end that family’s direct management of the company.

The largest closely held firm, Cargill had sales / revenues of \$47.1 billion during the fiscal year ended 31 May 1994.

Micek, already a director, was elevated last year to the president’s office from his position as the executive vice president of Cargill’s vast food sector. Since Mr. Micek has a degree in chemical engineering, the move is widely seen as a sign that Cargill might increasingly emphasize refining new

products and “so-called biochemicals from grain: a booming business that arch-rival Archer-Daniels-Midland largely pioneered.” Mr. Micek has directed Cargill’s moves into refining sweetener (high fructose corn syrup) from corn, and (more recently) ethanol fuel and plastics from corn. Address: Staff Reporter, *Wall Street Journal*.

1563. Anderson, Robert L.; Wolf, Walter J. 1995.

Compositional changes in trypsin inhibitors, phytic acid, saponins and isoflavones related to soybean processing. *J. of Nutrition* 125(3S):581S-588S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease. [57 ref]

• **Summary:** Contents: Introduction. Proteins. Trypsin inhibitors. Phytic acid. Saponins. Isoflavones. Conclusions.

“This review discusses the changes in content of trypsin inhibitors, phytic acid, saponins and isoflavones as soybeans are processed into the conventional protein ingredients, flours, concentrates and isolates, as well as some of the traditional Oriental soybean foods.”

The latter include soy sauce, miso, tofu, soymilk, okara (residue from soymilk), tempeh, fermented bean curd [sufu]. Also discussed are soy infant formula, dehydrated soymilk, wheat-soy pancake mix, raw soy flour, full-fat soy flour, texturized / textured soy flour, TVP, texturized soy protein concentrates, soybeans, soybean hulls (seed coat), soybean hypocotyl (radicle), spun soy protein isolate fiber, defatted soy flour, soy hot dog, soy bacon (tempeh bacon), tempeh burger, tofu yogurt, soy Parmesan. Address: Bipolymer Research, NCAUR, ARS/USDA, Peoria, Illinois 61604.

1564. Hendrich, S.; Xu, X.; Wang, H.-J.; Murphy, P.A. 1995. Neither diet selection or type of soy food significantly affect bioavailability of isoflavones fed in a single meal to young adult females (Abstract). *J. of Nutrition* 125(3S):805S-806S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.

• **Summary:** “To characterize soybean isoflavone bioavailability, 10 adult females, ages 19-33 y, were fed 0.9 mg/kg body weight in soymilk at breakfast in time-controlled basic foods, time-controlled self-selected, or ad libitum diets. In a second study, isoflavone doses of 0.8-1.2 mg/kg were given at breakfast as tofu, tempeh, soybeans and TVP.” The various foods and diets were fed to all subjects in random order.

“Urinary recovery of daidzein was significantly greater than that of genistein, and the recovery did not vary with soyfood or diet.” Address: Food Science Dep. and Human Nutrition, Iowa State Univ., Ames, IA 50011.

1565. Smith, Michelle. 1995. Minutes of Soyfoods Association of America general meeting. Held March 11 at the Anaheim Convention Center. San Francisco, California. 3 p. Unpublished typescript.

• **Summary:** The general meeting, which lasted from 8:30 to 10:00 a.m., was followed by a board of directors meeting (10:00 to 11:30). Mark Messina reports that the United Soybean Board (USB) is sponsoring dietitian seminars in 26 cities across the USA. The budget for each seminar is \$8,000. Manufacturers can exhibit products at seminars for a fee of \$75 per table. The 2nd Annual Soyfoods Symposium will be held in Brussels in 1996. The \$200,000 needed to fund the project will hopefully be raised mostly through the private sector.

Tim Redmond notes that SAA has budgeted \$16,000 to conduct a nationwide consumer survey on soyfoods. The first portion of the survey was sent to 20,000 consumers. Of the 15,000 that responded, 2,000 people (13.3%) said they eat soyfoods at least once a week. The second portion of the survey, consisting of a 4-page legal-size questionnaire, will be sent out by mid-March to 1,000 of the 2,000 regular soyfood consumers. Responses should be back in 4 weeks, and will be tabulated. The report will be written by Starr Track [Sarah & Peter Starr]. The survey committee will review and finalize the report which will then be available to the public.

New people and companies present at the meeting were Myron Cooper of Westbrae, Allan Routh and Raquel Supallo of SunRich, Gil Garcia of Tofu Shop, Ed Pedrick and Elmer Schettler of Devansoy, Richard Eluk of Clofine, Jack Painter of ADM, Yvonne Lo and Jan Remak of Vitasoy, Sarah and Peter Starr of Starr Track, and Suzanne Shelton Foley of the Shelton Foley Group. Address: Executive Director, Soyfoods Assoc. of America, One Sutter St. #300, San Francisco, California 94104. Phone: 415-393-9697.

1566. Wittenburg, Bonnie. 1995. Archer Daniels Midland Company: NYSE-ADM. Minneapolis, Minnesota: Dain Bosworth. 38 p. 28 cm.

• **Summary:** This is an updated and expanded edition of the excellent original report published in Dec. 1993. Concerning ADM management and board of directors: Chairman Dwayne Andreas is now age 77 and president James Randall is 70. It is uncertain when either will retire. Michael (Mick) Andreas, age 45, vice chairman of the board and executive vice president, is Dwayne Andreas' son and heir apparent. All operating divisions of ADM have reported to Mick Andreas for the past 3 years, and he apparently has major input on expansion plans and capital investment. A workaholic, he "joined ADM in 1971 after receiving a bachelor's degree in business from Northwestern University. At ADM he has worked as a commodity merchandiser in the United States and in Brussels, Belgium. He is said to love trading and he continues to keep a desk on the trading floor at ADM; it is not unusual to spot him there. Mick Andreas is past president of ADM's soybean processing division and has generally supervised ADM's commodity trading and marketing worldwide since 1980."

The market value of his ADM stock is approximately \$10.1 billion, compared with \$408 million for Dwayne Andreas' stock and \$102 million for Lowell Andreas'. Address: 60 South Sixth St., Minneapolis, Minnesota 55402-4422. Phone: (612) 371-2728.

1567. Allen, Andrea Horwich. 1995. Can isoflavones give soy mainstream acceptance? *Food Product Design*. May. p. 20-21.

• **Summary:** Researchers now believe that a family of phytochemicals present in soy, called isoflavones, may actually reduce the risk of atherosclerosis by preventing the formation of plaque on artery walls. One isoflavone, genistein, which is present only in soy, also fights cancer by inhibiting the growth of cancer cells. Genistein appears to mimic the effects of estrogen so that the body produces less of that hormone, thus reducing the risk of estrogen-dependent cancers, especially breast cancer. One study of Japanese men suggests that those who eat a diet high in soy protein have a lower incidence of prostate cancer.

Representatives from Morinaga Nutritional Foods, Westbrae, and Pillsbury Green Giant are trying to take advantage of the new discoveries by educating their customers. The FDA seems unlikely to be ready to approve a soy-related health claim such as "Includes your daily intake of soy." ADM, who makes the Green Giant frozen burgers, is said to retain Mark Messina, PhD, as a consultant. A large photo shows a carton of WestSoy Low Fat Soy Drink (Vanilla). Address: Assoc. Editor.

1568. Archer Daniels Midland Co. 1995. Third quarter report to shareholders. Decatur, Illinois: ADM. 4 p.

• **Summary:** Enclosed with this quarterly report is a research report on ADM written by Bonnie Wittenburg of the Dain Bosworth investment firm. "We do feel that Ms. Wittenburg has done a thorough job of describing our business and the markets in which we operate. We also thought the abundance of information herein would be of interest to you." Signed, Dwayne O. Andreas, Chairman.

ADM's net sales were up 9% for the quarter, and net earnings were up 50.2%. ADM earned \$0.38 a share. "This is ADM's 274th cash dividend and 254th consecutive quarterly payment, a record of 63 years of uninterrupted dividends. There are 516,072,234 shares of ADM stock outstanding." Address: Decatur, Illinois.

1569. *Bluebook Update (Bar Harbor, Maine)*. 1995. UK Soya Milk Alliance petitions EU. 2(2):3. April/June.

• **Summary:** Three leading soymilk manufacturers in the UK (Vandemoortele (UK) Ltd., Haldane Foods Group, and Plamil Foods Ltd.), have formed the Soya Milk Alliance in order to petition the European Union (EU) to accept the term "soya milk." This decision followed a ruling on 16 June 1994 by the EU Milk Management Committee that the term

“soya milk” could not be used on soymilk packages in the UK or Europe. The basis of the Committee’s decision is EC Regulation 1898/87 of July 2, 1987, which states that the term “milk” is prohibited from use when the food does not contain any dairy ingredient. However the UK government has repeatedly drawn the Commission’s attention to clause 3.1 which grants exemptions for foods “the exact nature of which is clear from traditional usage.”

The campaign to save the term “soya milk” has gained considerable momentum as 23 ministers have already signed a petition addressed to the Commission. According to the Alliance, many more ministers have agreed to sign the petition.

1570. Packaged Facts. 1995. The meat and dairy alternatives market. New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.

• **Summary:** In 1994 retail sales of these products reached an all-time high of \$286 million, and these sales are projected to top \$660 million in 1999. This very interesting report can be ordered from Packaged Facts, 625 Avenue of the Americas, New York, NY 10011. Phone: 212-627-3228. Price: \$2,150. The authors were Sarah and Peter Starr, though their names do not appear in the report. The product director was David Lumis.

Contents: Part I: The products. Scope of the report (Vegetarian products sold as meat or dairy alternatives, products not covered), history of the industry (an emerging market, part of the vegetarian movement, soybeans—an ancient food of Asia, soybeans arrive in the new world in the 18th century, Kellogg family starts health foods industry, makes first meat analogs, Seventh-day Adventists and others produce tofu and meat alternatives in the 1920s, Henry Ford early proponent of soybeans, meat analogs commercially developed in the United States in the 1940s, non-dairy beverages, growth of “Americanized” meat and dairy analogs booming), product definition (foods used to replace meat or dairy products, description of ingredients—tofu, tempeh, soymilk, okara, soy protein concentrates and isolates, textured vegetable protein, wheat gluten and seitan), product categories (three main categories of meat and dairy alternative products, meat alternatives, dairy alternatives, prepared meals), government regulations (the FDA and FTC, NLEA labeling considerations {went into effect in May 1994, making the USA the world’s first country to have mandatory nutrition labeling}, soy protein allowed in meat products without special labeling, bovine growth hormone), industry associations (the Soyfoods Association of America, the American Soybean Association, the Vegetarian Awareness Network).

Part II: The Market. Introduction (Retail sales of meat and dairy alternative products by category—1989-94—graph, retail sales of dairy alternatives products by segment—1989-94—graph), market size and growth (market

is difficult to monitor, 1994 retail sales estimated at \$286 million, dairy alternatives surpass \$142 million, meat alternatives soar to \$132 million, prepared meals grow steadily to over \$12 million, estimated retail sales of meat and dairy alternative products by category—1989-1994—table, growth in milk substitutes segment leveling off but still in double digits, cheese alternatives segment also experiences slight slow-down in 1994, non-dairy desserts—a slow-growth segment, estimated retail sales of dairy alternative products by segment—1989-1994—table), factors in market growth—overall market (maturing population and interest in nutrition, new dietary guidelines, medical community accepts plant-based diet, studies show vegetarian diet equals a healthier—longer life, soy might help to prevent heart disease and cancer, consumers now approve of vegetarian diets, increased demand for vegetarian foods, youth adopts meatless meals, exposure through foodservice, mass market begins to support meat and dairy alternatives, products in wider distribution, innovative new products, improved technology equals better taste, increased funding for soyfoods through foreign capital, pricing continues to limit market, image—taste and texture still a problem), factors in market growth—meat alternatives (concern about health hazards of meat, fat calories targeted by labeling law, an alternative to chicken and fish, ecological and social considerations will propel meatless meals, meatless meals difficult to handle by foodservice), factors in market growth—dairy alternatives (milk substitutes enter dairy case, awareness of lactose intolerance on the rise, taste profile limits acceptance, cheese alternatives—are they healthier?, projected retail sales of meat and dairy alternative products by category—1994-1999—graph {p. 34}, projected retail sales of dairy alternative products by segment—1994-1999—graph {p. 35}), projected market growth (overall market to reach \$662 million in 1999, meat alternatives and prepared meals to lead growth, projected retail sales of meat and dairy alternative products by category—1994-1999—table, growth of milk substitutes and other dairy alternatives expected to slow somewhat by 1999, projected retail sales of dairy alternative products by segment—1994-1999—table), market composition (meat alternatives will outsell dairy alternatives, share of sales by product category—meat and dairy alternatives—graph, soy-based ingredients most frequently used in meat-like products, protein ingredients used in meat-like products by number of products made with ingredient—1990-1992—table, bulk of dairy alternative sales from milk substitutes, share of sales by product segment—1989 vs. 1994—graph, sales by retail outlet, share of sales by retail outlet—meat and dairy alternatives—1994—graph).

Part III: The marketers. The marketers (About 30 significant marketers—most small, major companies move into the market, meat alternatives—other mass-market players, meat alternatives—natural foods players, the leaders in milk substitutes, cheese alternative market leaders, the

leaders in non-dairy desserts, prepared meals market leaders, selected marketers and brands of meat and dairy alternative products—chart), market and brand shares (mass-market leader Worthington Foods challenged by ADM/Pillsbury Green Giant Harvest Burger, wholesome and hearty growing fast, Boca Burger boogies by the Bystanders, marketer and brand shares of meat alternative products sold through supermarkets—1993 vs. 1994—table, natural foods sales of meat alternatives more fragmented, Worthington is leader in natural foods stores, White Wave and Lightlife hold second and third place, estimated marketer and brand shares of meat alternative products sold through natural foods stores—1994—table, many small regional players capture local markets, Eden Foods leads in milk substitutes, estimated marketer and brand shares of milk substitute products mass-market and natural foods stores—1994—table, Imagine Foods' Rice Dream is leading rice beverage, other vegetable beverages, Tree of Life's Soya Kaas holds leading share of cheese alternatives market, estimated marketer and brand shares of cheese alternative products sold through natural foods stores—1994—table, Tofutti holds top market share in frozen desserts, Fairmont Foods establishes lead in supermarkets, marketer and brand shares of prepared meals sold through supermarkets—1994—table, natural foods prepared meals—many brands and no one leader), competitive situation—overall market (marketers compete primarily through new product introductions, growth through mergers and acquisitions). Continued.

1571. Packaged Facts. 1995. The meat and dairy alternatives market (Continued—Document part II). New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.

• **Summary:** Contents: Continued from p. vi. Part III: The Marketers. Competitive situation—meat alternatives (Worthington pioneers Seventh-day Adventist vegetarian market, Miles Laboratories acquires Worthington—places Morningstar Farms in mass market, tofu drives natural foods market, soy frank marketers exploit tofu opportunities, tempeh—another meat alternative ingredient gains interest, wheat-based alternative seitan expands presence, Worthington places tofu patties in natural foods stores—changes hands again, Wholesome and Hearty develops foodservice distribution, meatless burger market heats up, patty competition fierce in natural foods arena, ADM/Pillsbury alliance brings soy burgers to mass market, Worthington fights back, category differentiates in the early 1990s, soy attacked by soy-free burger companies, meat alternative marketers cut the fat, low-fat sausages and franks, tightly targeted vegetarian fun foods and snacks, mass-market companies introduce ground meat analogs, natural product companies follow suit, Wholesome and Hearty seeks retail growth, others seek lucrative foodservice market), competitive situation—milk substitutes (early market limited to ethnic community, Edensoy a big hit—Vitasoy responds,

new lines introduced, competition—domestic manufacturing and larger containers bring down soy beverage prices, flavors and packaging distinguish early products, Westbrae introduces first low-fat soymilk, fortification has become key selling point, Eden's fortified product suits strict vegetarians, new package sizes expand market, re-closable—easy to pour, rice beverages—line extensions grab shelf space, Wholesome and Hearty's almond beverage, 100% organic products, a fresh—new market—some products shift to dairy case, mass-market interest), competitive situation—cheese alternatives (Seventh-day Adventists start category, first natural foods cheese alternative, Soyarella, not dairy-free, handful of marketers compete on price in natural foods arena {Soya Kaas, TofuRella by Brightsong / Sharon's Finest, Cemac Foods, Galaxy Foods, White Wave}, new products parallel dairy-based mass market, a move toward lower fat and fat-free, seeking the most melt-able cheese, Sharon's finest finds innovative ingredients, marketers target vegan market), competitive situation—non-dairy desserts (Tofutti dominates, dairy-free puddings—one major player {Imagine Foods sells a rice-based non-dairy pudding}, non-dairy yogurt has yet to catch on—but White Wave's Dairyless, a non-dairy soy yogurt, seems to be the only major natural foods brand in this category), competitive situation—prepared meals (flavored tofu and seitan expanded into meals, Legume is early innovator, cheese alternatives in prepared meals, other companies dive into prepared meals, action has been in natural foods, supermarket products have not succeeded), competitive profiles (The Archer Daniels Midland Co.—Grand Metropolitan PLC—Pillsbury division partnership, Amy's Kitchen Inc., A&A Amazing Foods Inc., Boca Burger Co.—Sun Foods, Eden Foods Inc., Fairmont Foods of Minnesota Inc., Fantastic Foods Inc., The Hain Food Group Inc., Imagine Foods Inc., Lightlife Foods Inc., Sharon's Finest, Tofutti Brands Inc., Vestro Natural Foods Inc., Vitasoy—USA Inc., White Wave Inc., Wholesome and Hearty Foods Inc., Worthington Foods Inc., Yves Veggie Cuisine Inc.), marketing trends (updated packaging, burger market segmenting into natural and mass market, Worthington—a master at working both markets, hamburger look-alikes crossing back into natural foods, veggie patties crossing into mass market, nostalgia—creating brand loyalty, marketers expanding into other categories, moving into the frozen breakfast section, retail displays, pushing into new distribution channels), new product trends (new—improved packaging, light and healthy, product names emphasize healthy, fat-reversal—mass-market burger-substitutes gaining fat, ground meat alternatives, new flavors and varieties—many gourmet and upscale, ethnic—especially Mexican and Southwestern, convenience, technology produces better mimics, mixing soy with grains and other ingredients, mainstreaming health foods, natural ingredients preferred—organic even better, selected new product introductions—meat and dairy alternatives—1994-March

1995–chart), advertising expenditures (most advertising not measured, specialty magazines are preferred medium, radio is another alternative, little consumer advertising, Worthington outspends competition, ADM-Pillsbury spends millions to launch Harvest Burger in 1994, Eden Foods targets mass market, Fantastic Foods' first major spending), advertising positioning (good health is overlying theme, and fat is prime concern, vegetables are a solution to a bad diet, milk substitutes advertised to lactose-intolerant market, highlighting a sense of the familiar, foods children love, traditional burger images used to woo mass market, vegetarian appeal used for meatless patties, organic is important feature in natural foods, examples of consumer advertising), consumer advertising (consumer promotions not heavily used, money-off coupons from several companies, new lines offer more generous rebates, recipes and books educate consumers, in-store promotions—the White Wave Center, marketers join forces in advertorial, sponsoring sports events—a healthy fit, 25 years of earth day, non-profit tie-ins, Turtle Island's recycling program, other types of promotions, examples of consumer promotions), trade advertising and promotions (three key trade publications, trade ads also used as consumer ads, trade ads scheduled to run in convention issues, trade ads announce growing business, editorial promotions, reaching retailers, example of trade ads). (Continued).

1572. Packaged Facts. 1995. Retail sales of meat alternatives: 1989-1994 (in million dollars) (Document part). In: Packaged Facts. 1995. The Meat and Dairy Alternatives Market. New York, NY: Packaged Facts. 162 + 42 + 6 p. See p. 17, 19, 51-52. May. 28 cm.

• **Summary:** A graph (p. 17) shows that sales of meat alternatives (in million dollars) rose from \$69.8 in 1989 to \$85.7 in 1991 to \$115.5 in 1993 and \$131.6 in 1994. The average annual sales growth for this period was 13.6%. In the past two years, however, sales of meat alternatives have increased by 15.2 and 18.0%.

Concerning the accuracy of these figures, page 19 notes that sales in these markets are difficult to quantify because a large share of retail dollar volume moves through natural foods stores, where sales are mostly untracked, and because various information sources define meat and dairy alternatives products differently. Therefore these “estimates are based on information provided by Soyatech, Inc., the Soyfoods Center, Information Resources, Inc., the natural foods trade, and various manufacturers.”

A table (p. 51) shows the market shares of major manufacturers of meat alternatives sold through supermarkets (NOT including natural food stores) in 1993 and 1994. The 1994 market shares were as follows: Worthington Foods 64.5% (Morningstar Farms brand 63.8% and Natural Touch brand 0.7%). ADM/Pillsbury 21.8% (up from only 8.0% in 1993). Wholesome & Hearty Foods

(Garden products) 7.9%. Yves Veggie Cuisine 2.1%. Sun Foods (Boca Burger) 1.4%. Other 2.3%. Source: Information Resources, Inc.; Packaged Facts.

A second table (p. 52) shows estimated market shares of major manufacturers of meat alternatives sold through natural food stores in 1994: Worthington Foods 30.4% (Natural Touch, Loma Linda, Worthington brands). White Wave 9.8%. Lightlife Foods 6.5%. Yves Veggie Cuisine 5.8%. Wholesome & Hearty Foods (Garden products) 4.8%. Fantastic Foods (Nature's Burger) 3.9%. Sun Foods (Boca Burger) 3.0%. Other 35.8%. Source: Packaged Facts.

Wholesome & Hearty Foods (Portland, Oregon): In March 1985 this company introduced the Gardenburger, a non-soy vegetarian patty into natural foods restaurants and college cafeterias. Foodservice remains Wholesome & Hearty's core business and accounts for about 70% of the company's sales. Today, over 22,000 foodservice outlets offer the company's various meatless patties (p. 59). In 1992 Wholesome & Hearty began an aggressive drive to introduce its Garden products line into retail stores—both natural foods and mass market.

1573. *Natural Foods Merchandiser*. 1995. Soyfoods Association elects officers. June. p. 14.

• **Summary:** The SAA recently announced the results of elections held at Expo West in Anaheim last March. Rick McKelvey of Lightlife Foods (Greenfield, Massachusetts) was elected president, Myron Cooper of Westbrae Natural Foods (Gardena, California) was elected vice president, and Dan Burke of Pacific Soybean & Grain (San Francisco) was re-elected treasurer. Continuing on the board are: Peter Golbitz of Soyatech, Inc.; Yvonne Lo of Vitasoy, U.S.A.; Tom Redmond of American Soy Products; Jack Painter of Archer Daniels Midland; Mark Messina, PhD; Harry Tanikawa for House Foods America; Lester Wilson, PhD, of Iowa State University; and Mike Rohan of the American Soybean Association.

An executive becomes informant for FBI, stunning giant ADM: Price fixing in agribusiness is focus of major probe; other firms subpoenaed. A microphone in the briefcase. *Wall Street Journal*. July 10. p. A1, col. 6; p. A8, col. 1. Monday.

• **Summary:** Mark E. Whitacre, age, 38, is a biochemist at ADM, considered by many a boy wonder of American agriculture. But for the past 3 years he has been leading a double life—He is also an undercover operative for the FBI—spying on his own company. In 1992 he went to federal investigators to blow the whistle on officials of his own company.

1575. *Mankato Free Press (Minnesota)*. 1995. Archer Daniels Midland stock plunges after investigation. July 10.

p. 5-6.

• **Summary:** “Decatur, Illinois (AP)—A widening Justice Department criminal investigation into the nation’s corn processors is causing Wall Street to shed stock in targets Archer Daniels Midland Co.” and CPC.

The companies being investigated have received search warrants or subpoenas for documents and testimony before a federal grand jury sitting in Chicago.

The probe, which is “international in scope,” involves price-fixing and predatory pricing of lysine, citric acid, and high-fructose corn syrup.

ADM’s shares 5.9% on Friday to close at \$17.75, the lowest since October.

1576. Edwards, Cliff. 1995. Grain, soybean giant may be investigated. *Albuquerque Journal*. July 11. p. D8. [1 ref]

• **Summary:** This Associated Press report relies heavily on a story published in *The Wall Street Journal* on July 10. ADM processes about one-third of America’s grain and soybeans. In 1992 Mark E. Whitacre, a high-ranking official at ADM, went to the FBI to report irregularities. Working for the FBI he went undercover and, using a briefcase rigged with a recorder, he secretly taped meetings between ADM and other agribusiness companies. ADM stock lost about \$2 billion in one week, falling to \$15.87½ on the NYSE. The BioProducts Division of ADM is said to have lost money in the last 3-4 years as the company launches new products. ADM and competitors Cargill Inc., A.E. Staley Manufacturing Co., and CPC International Inc. have said a federal grand jury in Chicago has either subpoenaed their records or executives or was expected to. Address: Associated Press.

1577. Quintanilla, Carl; Wilde, Anna D. 1995. You dirty rat, says Decatur, Ill., of mole at Archer-Daniels: People think Mark Whitacre betrayed them and ask why he turned to FBI. *Wall Street Journal*. July 13. p. 1. Thursday.

• **Summary:** The humorous story begins: “How could Mark. E. Whitacre do such a thing?” For the past 3 years the 38-year-old Mr. Whitacre, president of ADM’s Bio-Products Division and a model citizen, has been a secret FBI informant, taping conversations of his colleagues as part of a criminal price fixing investigation. No charges have yet been filed against ADM. ADM is very popular in Decatur, Illinois, and the mood in town seems to have turned decidedly against Mr. Whitacre—even among church-goers. Mr. Whitacre lives in the tiny town of Moweaqua, 17 miles from Decatur, in the palatial estate (complete with stables and swimming pool) once owned by ADM Chairman Dwayne O. Andreas. There he has always been considered a model citizen and nice person. He is a Rotary Club speaker, a new trustee of Millikin University, and known for adopting troubled kids.

Many citizens in town “would rather judge Mr. Whitacre a rat” than contemplate that ADM might be fixing prices. Says one 70-year-old retiree: “Mr. Whitacre’s not furthering

his career much, but he’s certainly a man of his convictions.”

The price of ADM stock has fallen 15% since last Friday. A photo-like sketch shows Mr. Whitacre. Address: Staff reporters.

1578. Archer Daniels Midland Co. 1995. ADM reports unaudited earnings of \$0.44 a share in fourth quarter and \$1.55 a share in fiscal year (News release). Decatur, Illinois. 1 p. July 17.

• **Summary:** “Net earnings for the year ended June 30, 1995 were \$795,915,000 equal to \$1.55 per share based on 514,967,000 average shares outstanding. Net earnings for the same period a year ago were \$484,069,000 equal to \$0.93 per share on 520,295,000 average shares outstanding, as adjusted above. Thus net earnings were up by 64.4% over the previous year.

“Results of the current year quarter and year included a gain of \$0.07 per share on the sale of the Company’s British Arkady bakery ingredient business.”

For more information contact D.J. Schmalz at ADM. Phone: 217-424-5413. Address: Decatur, Illinois. Phone: 217-454-5200.

1579. Schmalz, Doug J. 1995. ADM sells its British Arkady bakery ingredient business, but keeps Haldane Food Group and other parts of British Arkady (Interview). *SoyaScan Notes*. July 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** ADM sold British Arkady’s core business, which was basically dough and improvers, to Unilever. This core business in Manchester represented about half of British Arkady’s total business. ADM kept the following parts of British Arkady: S.I.O. (a fats and oils company in France), the feed businesses in Ireland (they do some grinding but do not crush soybeans), and the entire Haldane Foods Group Ltd. (located midway between Oxford and Cambridge in Newport Pagnell, Buckinghamshire, England). The machines (extruders) that make TVP are still located in the old British Arkady plant in Manchester because they were an integral part of the plant. Unilever is now tolling (producing) the product for ADM, but eventually ADM will probably take its extruders out of the Manchester factory and move it to one of their other plants.

The amount of money involved in the sale was relatively small. This story will probably not be discussed in detail in ADM’s annual report.

Follow-up talk with Mr. Garton of British Arkady in Manchester. The deal to sell British Arkady’s bakery ingredient business was finalized on June 12. As far as he knows, the only story was a very brief one in the *Manchester Evening News* on about June 13, based on a Unilever press release. There might be a story in the *Financial Times* (London) on about June 13th. Address: Vice President, ADM, Decatur, Illinois. Phone: 217-424-5413.

1580. Stoneback, Diane. 1995. Veggie burgers enter mainstream market. *Sun-Times (Chicago, Illinois)*. July 19.  
 • **Summary:** “Can America’s love affair with the all-beef patty be shaken? It won’t be easy, but the Jolly Green Giant may be big enough to do the job.” A large photo shows packages of Green Giant Harvest Burgers (meatless) in three flavors: Southwestern Style, Italian Style, and Original Flavor. The caption: “When mighty Green Giant introduced its Harvest Burgers into supermarkets, it signaled vegetarian burgers’ entry into Middle America’s diet.” Address: Food Editor, Morning Call (Allentown, Pennsylvania).

1581. Burton, Thomas M.; Kilman, Scott; Gibson, Richard. 1995. Corn plot. Investigators suspect a global conspiracy in Archer-Daniels case: They see signs of collusion with firms in Europe, Japan on grain products. Let’s go to the videotape. *Wall Street Journal*. July 28. p. A1, A5. Friday (West).  
 • **Summary:** It looks like an international conspiracy, complete with videotapes and hundreds of audio tapes of key meetings—thanks in large part to the help of whistle-blower and top ADM executive Mark E. Whitacre, age 38, who headed the fast-growing BioProducts division and reported to Michael Andreas. Since his undercover role was disclosed, Mr. Whitacre has been barred from ADM facilities, but he remains on the company payroll.

Federal investigators are working with a Chicago federal grand jury. The investigation is focusing on: ADM executives—Vice President Michael D. Andreas and Group Vice President Terrance S. Wilson (head of ADM’s corn processing division). Andreas, age 46, who runs many of the daily operations of the \$12.5 billion-a-year grain processing giant, has long been considered the heir apparent to his father, 77-year-old Dwayne Andreas, chairman and CEO. Although Michael Andreas has a reputation as a super-salesman and has long been groomed for the top post, he has stayed out of the public spotlight.

One key subject of the investigation is lysine, a fermented by-product of corn processing. It is made by feeding corn-derived dextrose to microorganisms. A videotape appears to show collaboration among competitors to limit the supply of lysine in order to keep prices high. Lysine, an amino acid, is added to the feed of hogs and chickens to speed growth of their lean muscle. Other possible evidence of a conspiracy comes from internal company documents obtained by the government during the past 3 years. They show lysine target sales and actual monthly sales of each manufacturer including Ajinomoto Inc. and Kyowa Hakko’s BioKyowa unit (both of Japan), and ADM itself. Though not well known, lysine is a big profit-maker and a key ingredient in the feed industry. About 500 lb/year are made and keeping the price high is worth millions of dollars to manufacturers. The Japanese were the first to make lysine commercially in the 1960s. ADM, which calls itself

“supermarket to the world” has a reputation for entering a new market in a big way. It did that in the case of lysine, constructing what is believed to be the biggest fermentation plant in the world at its sprawling complex at Decatur, Illinois. ADM entered the lysine market in 1991 and today can produce about 250 million lb/year of lysine, about half the world’s total output.

ADM’s market entry triggered a slide in lysine prices for well over \$1 a pound to nearly 60 cents. Then in 1992, for reasons that aren’t clear, prices rebounded sharply to about \$1 a pound—despite the much larger supply of product. This area is of special interest to investigators. Some lysine users believe their ability to switch to soybean meal, a natural source of lysine, keeps synthetic lysine prices in check. However poultry growers are more dependent on synthetic lysine because birds each much less feed, making soybean meal a less effective source of lysine.

ADM is believed to have spent roughly \$1,500 million establishing its BioProducts division, which Mr. Whitacre ran during the 3 years he surreptitiously helped the U.S. government gather information about possible ADM price collusion. Products made by the BioProducts division, in addition to lysine and citric acid, include lactic acid, monosodium glutamate, and xanthan gum. They are believed to generate some of the company’s highest profit margins and about 15% of ADM earnings.

Another key subject is citric acid, also derived from corn processing, which is used in the detergent, food, and beverage industries. ADM entered the citric acid market in 1991 when it bought a thriving manufacturing plant from Pfizer Inc.—and today it is the leading U.S. maker of citric acid. ADM is said to have documents showing citric acid sales targets and actual sales for ADM, the Hoffman-LaRoche Inc. U.S. unit of Switzerland’s Roche Holdings Ltd. and Germany’s Bayer AG (which makes citric acid at its plant in Elkhart, Indiana).

Besides studying lysine and citric acid, federal investigators are also looking at high-fructose corn syrup and possible violations of antitrust laws in connection with its sale. ADM is one of the biggest manufacturers in the \$3 billion-a-year worldwide market. 75% of the product is used to sweeten soft drinks.

The federal investigation is now 3 years old. Investigators are still examining documents they seized from ADM headquarters in late June. Other companies are still handing over to the government documents subpoenaed by the grand jury.

1582. **Product Name:** Harvest Direct Protean (Dry Mix—Alternative to Ground Meat) [Original Flavor, Taco Mix, Cheeseburger Flavor, Garden Herb Flavor, Chili Mix, Italian Flavor, Grill Flavor, Barbecue Mix, Sausage Flavor].  
**Manufacturer’s Name:** Harvest Direct, Inc.  
**Manufacturer’s Address:** P.O. Box 4514, Decatur, Illinois

62525. Phone: 800-637-5850.

**Date of Introduction:** 1995 July.

**Ingredients:** Taco mix: Soy protein concentrate, textured soy flour, tomato powder, corn starch, dehydrated onion, modified oat flour, maltodextrin, spices and spice extractives, hydrolyzed soy protein, salt, onion powder, garlic powder, paprika (for color), malt extract, caramel color, natural flavor, cocoa powder, citric acid.

**Wt/Vol., Packaging, Price:** 4 oz foil pouch.

**How Stored:** Shelf stable.

**New Product–Documentation:** Talk with Monty Kilburn, Catalog Director of Harvest Direct. 1996. Sept. 17. These products, made by Harvest Direct (not by ADM), were introduced in July 1995 and now are sold to health food stores nationwide. Leaflet (color, 8½ by 11 inches) sent by Monty Kilburn. 1996. Sept. 18. The front shows color labels of the 9 products. The back gives a general description of the products. “New product features: Fat free. Cholesterol free. Vegetarian. Complete dry mix. Just add water. New foil pack. Nine great flavors.”

Sample products with Labels of Taco Mix and Barbecue Mix sent by Harvest Direct. 1997. March 11. 5¼ by 7½ inches. Foil pouch. 4 oz (113 gm). A color photo on the front panel shows the prepared recipe. “Fat free. Cholesterol free. The all-vegetable alternative to meat.”

1583. Kilman, Scott; Burton, Thomas M. 1995. Archer fires informant, charges theft. *Wall Street Journal*. Aug. 8. p. A3, col. 4; p. A14, col. 1.

• **Summary:** ADM fired Mark E. Whitacre, president of the company’s BioProducts division, for allegedly stealing at least \$2.5 million from the firm. An illustration (dot-style) shows Whitacre. The Justice Department relied on Mr. Whitacre for 3 years to secretly record meetings between senior ADM officials and executives of competing producers of lysine and citric acid. Address: Staff reporters.

1584. Poppe, George. 1995. Current prices and types of soy protein products (Interview). *SoyaScan Notes*. Aug. 9. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.

• **Summary:** Edible soy protein isolates are 130-135 cents/lb. Industrial soy protein isolates are 100 cents/lb. Edible casein is 225 cents/lb (price quoted in current issue of *Chemical Marketing Report*).

Types of industrial isolates available: (1) Unhydrolyzed, high viscosity. Not used much. (2) Hydrolyzed, lower viscosity. Used extensively. (3) Hydrolyzed, chemically modified. Reacted with phthalic anhydride or other anhydrides. ADM has a new product available. It is ‘more hydrolyzed and chemically modified and gives brighter coatings.’ It apparently is used for coatings used on six pack cartons for beer and Coke, etc.

“The main use of industrial soy isolates is in paper coating. Soy flour isolates are no longer used in the plywood

industry. That application has been completely displaced by phenolic resins, etc. Some isolate is also being used to glue the laminated paper cones used by the textile industry for winding of yarns.” Address: Archer Daniels Midland Co., Decatur, Illinois. Phone: (217) 424-2471.

1585. Kilman, Scott; Burton, T.M.; Gibson, R. 1995. Ever more serious—ADM informant faces widening allegations; he attempts suicide. U.S., told by corn processor of forged checks, now is investigating Whitacre. Discovered in closed garage. *Wall Street Journal*. Aug. 14. p. 1, A4.

• **Summary:** “The government’s high-level informant in the Archer-Daniels-Midland Co. antitrust investigation, Mark E. Whitacre, is hospitalized after trying to kill himself at his home south of the company’s” headquarters in Decatur, Illinois.

Mr. Whitacre was fired earlier last week after the company accused him of stealing \$2.5 million. ADM now believes Mr. Whitacre may have stolen \$5 million.

A dot-style illustration shows Mark E. Whitacre.

1586. Kilman, Scott. 1995. Archer 10-K filing shows 28 lawsuits by shareholders. *Wall Street Journal*. Aug. 18. p. B3B. Friday (West).

• **Summary:** In its annual 10-K filing, ADM stated that the suits were filed against the company or its officers and directors in the wake of the antitrust investigation by the U.S. Department of Justice. The lawsuits were triggered by the drop in ADM stock after Wall Street learned in late June that ADM is the focus of an industry-wide investigation on possible price-fixing related to 3 corn-derived products: high-fructose corn syrup, lysine and citric acid. Nobody has yet been charged as a result of the antitrust investigation.

1587. Burton, Thomas M.; Kilman, Scott; Gibson, Richard. 1995. ADM asserts ex-official diverted over \$9 million. *Wall Street Journal*. Aug. 21. p. A2, A6. Monday (West).

• **Summary:** ADM officials say former ADM executive Mark Whitacre, age 38, diverted more than \$9 million to a Swiss bank account through a phony contract with a Swedish agricultural company named ABP International in Lund, Sweden.

1588. Burros, Marian. 1995. Fresh tofu: Safe cooks buy carefully. *New York Times*. Aug. 23. p. C1, C8.

• **Summary:** “Eight containers of tofu were purchased recently from six corner markets in New York City. Two of the containers were commercially packaged and sealed; six had tofu that was floating in water and required a store employee or a customer to pick it up by hand, with tongs or with a plastic bag. The tofu was analyzed by Certified Analytical Group Inc. of Plainview, Long Island, for the total level of bacteria; for coliform, which is indicative of unsanitary handling and storage conditions; for E. coli,

which indicates fecal contamination, and for yersinia, a food-poisoning organism historically associated with tofu.

“None of the samples contained yersinia. Both of the prepackaged containers of tofu—Kinugoshi and Mori Nu brands—had relatively low levels of total bacteria and no *E. coli*. Mori Nu had a level of coliform high enough to indicate unsanitary conditions... But all the tofu that was floating in water had extremely high levels of total bacteria and very high levels of coliform; four contained *E. coli*.”

“Consumers can protect themselves by buying tofu only in sealed packages and by cooking it at high temperatures, until it reaches 160 degrees internally—in other words very hot.” Contains two recipes, incl. Ma-Po bean curd. A photo shows tofu being sold loose from open tubs of water.

**1589. Product Name:** Soy Manna (Textured Soy Protein).  
**Manufacturer’s Name:** American Health & Nutrition, Inc.  
**Manufacturer’s Address:** 508 Waymarket Dr., Ann Arbor, Michigan 48103. Phone: 313-994-7400.

**Date of Introduction:** 1995 August.

**Ingredients:** Incl. organic soybeans.

**Wt/Vol., Packaging, Price:** Bulk.

**How Stored:** Shelf stable.

**New Product–Documentation:** Ad in Organic Food Business News (Altamonte Springs, Florida). 1995. Aug. p. 8. “Certified organic. Made without hexane and other solvents used in all non organic TVP. Wholesome nutty flavor. Easily digestible. 45% high quality protein. Versatile food uses such as burgers, breakfast and entree mixes.” In an article accompanying this ad, David Singsank, co-owner, says his company is now selling an organic soy protein product named Manna to wholesalers for use in bulk bins in co-ops and natural food stores. It has a chewy texture and will cost wholesalers \$0.75 to \$0.90/lb.

1590. Minnesota Soybean Research & Promotion Council. 1995. Welcome to Minnesota, the land of 10,000 lakes and 35,000 soybean producers! Where agriculture is the leading industry and soybeans are the number one cash crop! (Leaflet). North Mankato, Minnesota. 1 p. Single sided. Aug. 28 cm.

• **Summary:** This 1-page leaflet signed by Donald Nickel (Chair of the Minnesota Soybean Research & Promotion Council) and Kevin Paap (President of the Minnesota Soybean Growers Association) begins: “Minnesota has had a long and prosperous history of producing soybeans, which many people refer to as ‘The Miracle Crop.’ Soybeans first came to Minnesota back in the early 1930s as a ‘plow down’ crop to add nitrogen to the soil for other crops. Since that time, Minnesota has continued to increase its soybean production from a mere 30,000 bushels in 1934 to 230,000,000 bushels in 1994. The 1994 harvest was valued at just over 1 billion dollars. Minnesota is third in the nation in soybean production.” Note: Soybeans were actually

first being grown in Minnesota by January 1900 (See W.H. Stoddard, 1900).

“More interesting facts: Soybeans are grown in 75 of Minnesota’s 87 counties. Over 40% of the soybeans grown in Minnesota are exported throughout the world... Mankato, Minnesota, home of two major soybean processors [Honeymead Products Co. and Archer Daniels Midland Co.—ADM] with an overall crushing capacity of nearly 180,000 bushels per day, is the largest soybean processing city in all of North America... Minnesota ranks 2nd in the nation in turkey production, 4th in the production of pork, 5th in milk production, and 6th in overall red meat production... We’re also proud to report that 96 percent of Minnesota’s newspapers are printed with soy ink.” Address: 360 Pierce Ave., Suite 110, North Mankato, Minnesota 56003. Phone: 507-388-1635.

1591. Kilman, Scott; Burton, Thomas M. 1995. Archer-Daniels inside inquiry triggers departure or suspension of managers. *Wall Street Journal*. Sept. 22. p. A4, col. 2.  
• **Summary:** “An internal investigation by Archer-Daniels-Midland Co. has triggered the departure or suspension of three prominent managers with ties to Mark E. Whitacre, the former-executive-turned-federal informant in a government antitrust investigation.

“Archer-Daniels’ internal inquiry has uncovered evidence suggesting that some managers, including the head of its Mexican operations, received questionable payments from the company through the use of phony invoices, people familiar with the events say...” Address: Staff reporters.

1592. Bovard, James. 1995. Archer Daniels Midland: A case study in corporate welfare. Cato Institute Policy Analysis No. 241. Washington, DC: Cato Institute. 27 p. [138\* ref]  
• **Summary:** Executive summary: “... “ADM has cost the American economy billions of dollars since 1980 and has indirectly cost Americans tens of billions of dollars in higher prices and higher taxes over that same period. At least 43 percent of ADM’s annual profits are from products heavily subsidized or protected by the American government. Moreover, every \$1 of profits earned by ADM’s corn sweetener operation costs consumers \$10, and every \$1 of profits earned by its ethanol operation costs taxpayers \$30.”

Note: Cato Institute is a libertarian think tank.

“Perhaps the most honest and thorough analysis of the effect of ethanol on farm income and taxpayers and consumers was done by the USDA’s Office of Energy in 1986.”

“Since the USDA report came out, the amount of corn used for ethanol production has increased by more than 300 million bushels a year. Going on the report’s assumptions, that means that soybean prices have been 12 cents a bushel lower than they otherwise would have been—a loss of \$300 million to soybean farmers on their 1994 harvest of 2.5

billion bushels.[51]

“A more recent USDA analysis, published in November 1993, concluded that increased ethanol production would decrease soybean prices, boost variable production costs for livestock by \$462 million, and result in an overall loss of \$133 million for farmers outside the northern plains, the Corn Belt, and the Great Lakes states.[52].”

Notes: [51] “Agriculture Dept. New Crop Estimates,” *Journal of Commerce*, November 10, 1994, p. 8.

[52] Mark Peters, “The Clean Air Act Amendments of 1990 and Agriculture,” *Feed Situation and Outlook*, U.S. Department of Agriculture, November 1993, p. 27. Address: Associate Policy Analyst, Cato Institute.

1593. Archer Daniels Midland Co. 1995. Annual report. P.O. Box 1470, Decatur, IL 62525. 42 p. Sept.

• **Summary:** Net sales and other operating income for 1995 (year ended June 30) were \$12,671 million, up 11.4% from 1994. Net earnings for 1995 were \$795.9 million, up 64.4% from 1994. Shareholders’ equity (net worth) is \$5,854 million, up 16% from 1994. Net earnings per common share: \$1.47, up 65.2% from 1994. Number of shareholders: 34,385.

On the cover is an American flag and a photo of President John F. Kennedy with the famous quotation from his 1961 inaugural address, “Ask not what your country can do for you—ask what you can do for your country.” ADM contributed \$6.5 billion last year to America’s balance of trade.

On page 3 are graphs showing rising global consumption of soybean meal and vegetable oils from 1964 to 2004, and lysine from 1975 to 2004. For lysine, the equivalent of ten more ADMs will be needed in the next 10 years, for vegetable oil 5 more ADMs, and for soybean meal one more ADM.

On pages 4-5 is a speech delivered by President Eisenhower in 1953 urging the USA to export more food and fewer weapons. Ike’s program [Public Law 480 or Food for Peace] resulted in \$50 billion in exports to needy countries from 1954 to 1994.

“While the whole of ADM’s business can be divided into families of products and services, virtually all can be summarized in a single thought: value-added.” ADM makes peanut oil at a mill in Augusta, Georgia. “Soybean oil: Our Europoort facility in the Netherlands remains the world’s busiest soybean processor, while in the United Kingdom plans are underway to install a new state-of-the-art vegetable oil refinery and packaging plant at Erith [on the River Thames about 13 miles east of the center of London]. Crushing and refining operations are also being modernized in Hamburg, Germany. These terminals give us access to the three most important rivers in Europe—the Rhine, Elbe and Danube—all the way to the Black Sea” (p. 7).

ADM makes vitamin E from soybean oil distillate. With

the completion of a new state-of-the art facility in Decatur, Illinois, ADM has begin to make distilled monoglycerides from soybeans (p. 9).

“BioProducts: ADM BioProducts traditionally introduces at least one new fermentation product each year: in the past year the newcomer was xanthan gum for both food and industrial applications. In 1996 ADM BioProducts expects to add ascorbic acid (vitamin C), astaxanthin and biotin to a lineup that includes monosodium glutamate, sorbitol, citric and lactic acids and their salts. ADM’s vitamin C will be produced in a brand-new world-class facility in Decatur. Other products planned for the near future include penicillin, vitamin B-12 and beta-carotene.

“Amino acids for the feed industry remain a major focus of ADM BioProducts. Units to produce threonine and tryptophan are now in full production. This, along with our interest in a methionine plant, makes ADM the only company offering all four leading amino acids: lysine, methionine, tryptophan and threonine” (p. 13).

Isolated soy protein: Construction of increased isolate capacity has begun at Europoort (Netherlands) and in the USA. “Low nitrite ProFam 781 was successfully introduced into the European infant formula market during the past year. The Pacific Rim and former Soviet Union are growing markets for isolates.” Harvest Burgers: “Since the beginning of our joint venture with Pillsbury 46 million Harvest Burgers have been sold under the Green Giant label... In Europe Harvest Burger products are now being carried by a German supermarket chain with over 2,300 stores. Another German firm is introducing a line of Harvest Burger frozen entrees that will eventually be marketed in seven EC countries” (p. 15).

“Other soy-based foods: Work is underway on a soy-based dry mix that is the nutritional equivalent of milk. This product would be distributed at little expense wherever starvation exists or powdered milk is too expensive. The product has a shelf life of over a year, requires no refrigeration and is made by adding water.

“A similar product is being developed as a milk alternative for North America. This flavored cholesterol-free product would be carried in the refrigerated dairy section of supermarkets and would appeal to the lactose-intolerant (31% of Americans) and other health-conscious consumers. A frozen dessert version of this product is also being developed. In the United Kingdom Haldane Foods offers the soy-based Vege Mince, Vege Bites, Vege Steaks, yogurt and ‘pot noodles’” (p. 15). A full-page color photo (p. 14) shows rich soymilk being poured onto a bowl of cereal and fruits.

“Cogeneration is an efficient low-cost source of energy and steam and is the source of power for our seven largest plants in the U.S., the U.K., Ireland, Germany, and the Netherlands. Our cogeneration system is decades ahead of most U.S. technology, and offers substantial savings over traditional power sources. The key is ADM’s fluidized bed

technology which enables the cogeneration plants to run on an unusual mixture of high-sulfur coal, discarded tires and limestone” (p. 21).

“Note 11—Antitrust investigation and related litigation: The Company, along with a number of other domestic and foreign companies, is the subject of a grand jury investigation into possible related crimes in the food additives industry. The investigation is directed towards possible price-fixing with respect to lysine, citric acid and high fructose corn syrup. Neither the Company nor any director, officer or employee has been charged in connection with the investigation.”

Stephen Yu, managing director of ADM Asia Pacific, Ltd. is unrelated to the Stephen Yu who was a tofu pioneer and founder of Victor Food Products, Ltd. (of Toronto, Ontario, once Canada’s largest tofu manufacturer). Address: Decatur, Illinois.

1594. Archer Daniels Midland Co. 1995. 95-96 food ingredient catalog. Supermarket to the world. P.O. Box 1470, Decatur, IL 62525. 43 p.

• **Summary:** A quotation by David Brinkley on the cover states: “Farmers are the only indispensable people in this planet.”

ADM Arkady (p. 8, Olathe, Kansas)—Wheat gluters: Provim ESP vital wheat gluten, Whetpro-75 vital wheat gluten, Whetpro-80 vital wheat gluten, SQ-48 meat emulsion binder, Meatbind-3000 meat emulsion binder.

ADM lecithin (p. 16-18). Basic types are: Standard lecithins (4 Yelkin products), Capsule grade lecithins (8 Capsulec products), Complexed lecithins (6 Beakin, 2 Performix, and 4 TLV products), Purified lecithin (Yelkin Gold). Modified lecithins (1 Yelkin and 4 Thermolec products), Deoiled lecithins (3 Yelkin products).

ADM Milling (p. 21, Overland Park, Kansas). Do-Pep vital wheat gluten, Soy fortified bulgur, Soy fortified sorghum grits, Wheat soy blend.

ADM Packaged Oils—Refined packaged vegetable oils (p. 26-33): Soybean oil is used in many of these products. Product categories: Liquid shortening, salad oil, cube margarine, puff pastry, butter flavored oil, popcorn oil, cube shortening, butter blends and spreads.

ADM Protein Specialties (p. 34): Isolated soy proteins. Ardex D & Ardex D Dispersible, Ardex D-HD, Ardex DHV Dispersible, Ardex R, Ardex F & Ardex F Dispersible, Ardex FR.

powder. Applications: Protein supplement meat systems”), Arcon S & Fortified S. (“High PDI, free flowing flour. Applications: Protein supplement meat systems emulsion stabilizer”). Arcon T (Textured soy protein concentrates): Arcon T & Fortified Arcon T (“Variety of textures, sizes, colors. Applications: Ground meats, fish, poultry”). TVP (Textured vegetable protein): TVP & Fortified TVP (“Variety of textures, sizes, colors. Applications: Ground meat in beef patties, sausage, vegetarian foods, meatloaf mix, etc.”). Bacon Bits (Bacon like flavor, color, texture. Applications: Salad toppings, garnish item”). Nutrisoy flours/grits (defatted soy flour & grits): Nutrisoy defatted soy flakes, Toasted Nutrisoy grits, Nutrisoy 7B flour, Bakers Nutrisoy, Nutrisoy flour, Toasted Nutrisoy flour. Note: This is the earliest English-language document seen (Dec. 2007) that uses the term “Arcon T” to refer to textured soy protein concentrate. ADM says the product was introduced in Jan. 1989.

Page 37: Soylec (lecithinated) and refatted soy flours: Nutrisoy 220T, 15% refatted Bakers Nutrisoy, Soylec C-15, Soylec C-6, Soylec T-15. Soy Milk: WMR1 (whole milk extender), WMR4 (contains no lactose, cholesterol, or animal fats). Address: Decatur, Illinois.

1595. Archer Daniels Midland Co. 1995. Notice of annual meeting. P.O. Box 1470, Decatur, IL 62525. 15 p. Sept.

• **Summary:** Proxy statement: On pages 3-4 is a table showing, for each member of the ADM board of directors, the person’s name, age, principal occupation or position, and directorships of other publicly owned companies, year first elected as director, shares of ADM common stock owned, and percent of this class of stock owned. For example, Dwayne O. Andreas, age 77, is chairman of the board and CEO, and is a director of Salomon Inc. He was first elected as a director in 1966 and now owns 23.8 million shares, or 4.72% of the class.

Other major shareholders are: H.D. Hale, age 70, 13.8 million shares. J.K. Vanier, age 67, 9.1 million shares. L.W. Andreas, age 73, 6.1 million shares. Michael D. Andreas, age 46, 6.0 million shares. G.O. Coan, age 59, 2.7 million shares. O.G. Webb, age 59, 2.0 million shares. Martin L. Andreas, age 56, 1.5 million shares. S.M. Archer, Jr., age 72, 1.4 million shares. J.R. Randall, age 70, 1.1 million shares.

Dwayne O. Andreas and L.W. Andreas are brothers. Martin L. Andreas is their nephew. Michael D. Andreas is the son of Dwayne O. Andreas.

The 1995 salaries of some of the top executives are: Dwayne O. Andreas \$3,612,171. J.R. Randall \$1,686,004. Michael D. Andreas \$1,136,004. H.D. Hale \$887,521. Address: Decatur, Illinois.

1596. Pillsbury Company. 1995. Great summer grilling! Like any guy, he occasionally craves a burger (Ad). *Vegetarian Times*. Sept. p. 20-21.

• **Summary:** This ad appears on two facing pages. On the

left side of the left page is a tall one-third page ad titled “Great summer grilling!” A color photo shows a package of Green Giant Harvest Burgers, with a recipe for Primavera Picnic Patties, using 4 Harvest Burgers. The full right pages is devoted to the ad (which first appeared in this magazine in Jan. 1995) titled “Like any guy, he occasionally craves a burger.”

1597. Kilman, Scott; Ingersoll, B.; Abramson, J. 1995. Risk averse. How Dwayne Andreas rules Archer-Daniels by hedging his bets: CEO works with rivals, gives to both parties and invests in the media. Soy meatballs on the menu. *Wall Street Journal*. Oct. 27. p. 1, A8.

• **Summary:** A very well researched and written profile of Dwayne Andreas and how he applies the concept of hedging to every aspect of ADM’s business life. Andreas was born on 4 March 1918 in Worthington, Minnesota, the son of a Mennonite farmer. From 1936 to 1938 he attended Wheaton College in Illinois. From 1938 to 1945 he was executive officer of Honeymead Products, a family-owned company. From 1945 to 1952 he was vice president of Cargill.

In [Nov.] 1947, when ADM Chairman Shreve Archer died after choking on a chicken bone, Dwayne Andreas was age 29 and vice president of a rival firm. For the next 18 years, Mr. Andreas built a name for himself in the grain industry and became a millionaire in the process. He left Cargill and returned to Honeymead, where from 1953 to 1960 he was an executive and the chief shareholder. From 1960 to 1966 he was executive vice president of Farmers Union Grain Terminal Association, a cooperative. By 1965 ADM was foundering (it had never quite recovered from the loss of its leader) and the founding families were ready to sell a sizeable share to Mr. Andreas, to make him a director, and to groom him for the top job. So in 1966 Andreas accepted the offer, joining ADM as a director and member of the executive committee. He spent the rest of his career leaving as little as possible to chance. Now age 77 and a diminutive 5 feet four inches tall, he “runs the giant publicly-trade grain-processing company like a private family concern. Secrecy is so tight that ADM doesn’t even release quarterly revenues. Mr. Andreas once proudly told analysts, “Getting information from me is like frisking a seal.” In 1970 Andreas was named ADM chief executive officer, and in 1972 he was elected chairman of the board.

ADM is now America’s largest commodity processor, with annual revenues of \$12.7 billion. Including stock dividends, ADM’s stock value has climbed at an average annual rate of 17% over the past decade—outpacing the stock market’s annual return of roughly 15%, as measured by the Wilshire 5000 Equity Index. ADM earnings soared 64% during the last fiscal year to a record \$795.9 million.

Notwithstanding criticism that ADM’s board is dominated by Mr. Andreas plus his family and friends, Wall Street sees no possibility of a serious battle for corporate

control, and little chance that any other company could pay at least \$8.7 billion (ADM’s market capitalization) to buy the company.

ADM is a major beneficiary of federal price supports for sugar (they make ADM’s high-fructose corn sugar an economical product) and of the 54-cent-a-gallon excise tax break on ethanol (since ADM is the dominant producer of the corn-based fuel additive). Mr. Andreas helps preserve these twin towers of legislative largesse by hedging. ADM leads corporate America in contributing to both political parties. “Since 1981, the company has given more than \$800,000 to the Democratic Party and more than 1.5 million to the GOP” (Republican Party).

Pie charts show that ADM is the market leader in four major U.S. markets, controlling an estimated 35% of all corn refining (followed by Staley, Cargill, and CPC International), 31% of high-fructose corn syrup (again followed by Staley, Cargill, and CPC), 28% of oilseed processing (followed by Cargill 25%, Bunge 16%, Ag Processors 14%, Central Soya 10%, and others 7%), and 26% of wheat milling (followed by ConAgra 25%, Cargill 12%, Cereal Processors 6%, and others 31%).

Doing business with competitors has long been one of Mr. Andreas’s hallmarks. As he likes to say, “Keep your friends close and your enemies closer.” In 1992 ADM built a 3.5-mile pipeline to neighboring A.E. Staley Mfg. Co., one of its biggest rivals in the high-fructose corn syrup business. (Together the two companies control half of the \$3 billion market.) The pipeline allows either company to call on its neighbor in an emergency for raw material, thus reducing risk.

Four ADM board members are Andreas, and an additional six of the 17 directors are ADM executives, retired executives, or relatives of senior managers. At ADM major decisions are made at the very top, mainly by three men: Dwayne Andreas, his son Michael Andreas (who is in charge of many day-to-day operations), and James R. Randall, who has been president of ADM for 20 years. Top managers operate without budgets or much paperwork. “Decisions are often made in the executive dining room over a lunch of Archer-Daniels soybean cuisine.”

“Once Mr. Whitacre helped arrange a luncheon between Mr. Andreas and visiting executives of a company participating in the lysine meetings in hopes of taping them discussing price fixing. But Mr. Andreas spent the entire lunch talking to his bewildered guests about his favorite product, soy-based meat substitute, then sent them off with a big bag of the stuff.

In August 1994 he told this story concerning his views on competition: “The gazelle must run faster than the fastest lion or be eaten. And the lion must outrun the slowest gazelle or starve. It doesn’t matter whether you are a lion or a gazelle; when the sun comes up, you’d better be running.”

“He delights in being the most powerful man in

American agriculture, regaling his guests over soy meatballs and catfish with stories of his back-channel diplomacy for American presidents... But Mr. Andreas's enjoyment of *Realpolitik* shouldn't be confused with a lack of conviction friends and associates say. He is passionate about the virtue of spreading soy-based food around the world.—albeit generally at a tidy profit—and about the perils of soil erosion. His uncle was an evangelist and young Dwayne spent hours in revivalist tents listening to the preachers. Mr. Andreas preserves some of that fervor in his own speeches about government and business policy.”

In recent years ADM has been sued by Ralston Purina Co. for alleged technology theft. Ralston claimed patent infringement and misappropriation of trade secrets involving a soy protein product. This case is now entering the pretrial discovery phase.

Mr. Whitacre has alleged that ADM pays some top executives through illegal channels. ADM in turn has accused Mr. Whitacre of stealing more than \$9 million from the company.

Meanwhile ADM has continued its upbeat institutional ads that have blanketed the television networks and many publications for years. In a sort of ratings hedge, the company also spent millions advertising on ABC's "This Week with David Brinkley," NBC's "Meet the Press," and CBS's "Face the Nation." From Jan. 1994 to April 1995 ADM spent \$4.7 million advertising on "Meet the Press" and \$4.3 million on "Face the Nation." ADM is also the leading corporate underwriter for the PBS MacNeil/Lehrer Newshour, providing \$6.8 million or 27% of the program's annual budget.

A point-style portrait illustration shows Dwayne O. Andreas. Address: 1. Decatur, Illinois; 2-3. Washington, DC.

1598. Archer Daniels Midland Co. 1995. First quarter report to shareholders, and a report on the 72nd Shareholders Meeting. Box 1470, Decatur, IL 62525. 16 p. 20 x 9 cm.

• **Summary:** This is the first quarterly report since Mark Whitacre made various allegations against ADM and since the Department of Justice announced its investigation of alleged price fixing. The 72nd shareholders meeting was held on 19 Oct. 1995 in Decatur. Brief introductory remarks of Dwayne O. Andreas: He is "personally outraged that the apparent misconduct of one, two, or more individuals has cast such a cloud over this great corporation, which has more than 70 years of unblemished history." Mr Andreas has asked ADM's counsel, Richard P. Reising, to make a statement at this time which Mr. Andreas fully endorses.

Remarks of Mr Reising: On August 4, 1995 ADM terminated Mr Whitacre for the theft of at least \$2.5 million of Company property. ADM reported information concerning this theft to the Department of Justice, which convened a grand jury in the Central District of Illinois to investigate the alleged thefts. "The grand jury has received documents from

ADM relating to Mr Whitacre's thefts of up to \$9 million of ADM funds. The Department of Justice has confirmed that there is *no credible evidence* that Mr Whitacre's thefts were part of any plan by ADM to funnel compensation to its executives. ADM traced some of the funds that Mr Whitacre stole from ADM to a Whitacre Swiss bank account... The Swiss authorities instituted a criminal investigation of Mr Whitacre, and... froze Mr. Whitacre's accounts.”

Long statement by Honorable Brian Mulroney about the Justice Department investigation and ADM's response.

Consolidated statements of earnings. ADM's net sales and net earnings for the 3 months ended SEpt. 30 were up slightly compared with comparable figures from the same period one year ago.

Comments By James R. Randall, President, who notes that ADM's net worth has been doubling about every six years. How does ADM do it? By adhering to a few basic fundamentals of business. They stay lean and work hard to improve productivity. They stay in the one business they know: transporting, storing, processing, and merchandising of agricultural commodities and products. They invest heavily in their plants, making sure they have the most modern equipment and latest technologies to ensure their position as the lowest cost producer. They keep a good balance sheet with sufficient cash on hand to take advantage of any good business opportunities that may come their way. They make great efforts to recruit and train top management talent. "The best days for ADM are still ahead of us. Here are a few reasons. The world is starting the biggest surge in food demand in its history. Asia will go from 3 billion people eating 15 grams a day of meat, milk, and eggs to 4 billion people eating 55 grams of animal protein. China is increasing its meat consumption by 3 million tons per year. The same is true for much of the rest of the world... Our total daily processing capacity for all products is now nearly 6,000,000 bushels per day, of 160,000 tons per day. Partnerships in the U.S. and abroad will add another 15,000 tons." A graph shows the rapid growth in ADM's total processing capacity from about 90,000 short tons/day in 1986 to 175,000 tons/day in 1995 (with affiliations). During the last 5 years, ADM spent \$3.4 billion for construction of new plants, expansion of existing plants, and acquisition of new businesses. ADM is the world's largest producer of soy protein, and the only company that produces all the soy products: flour, grits, concentrate, and isolate. ADM is now doubling its isolate capacity with plants in the United States and Europe.

Comments by Dwayne O. Andreas, chairman of the board and CEO, at the 1995 annual meeting. He discusses ADM's recent history, growth, acquisitions, and alliances. Address: Decatur, Illinois.

1599. Jordaan, Elizabeth M.S. 1995. The use of soya beans in South African feeding schemes. Paper presented at the Third Bi-Annual SoyAfrica Conference. 3 p. Held 3-5 Oct.

1995 at Johannesburg, South Africa. Organized by Aproma.  
 • **Summary:** The paper begins: “The humble soya bean is known as the little giant of protein foods. It contains nutrients that make a poor diet good and a good diet better. It is indeed regarded as the wonder food of the future.” Yet it also possesses disadvantages: trypsin inhibitors, the polysaccharides raffinose and stachyose that cause flatulence, and “that unpleasant beany taste.” To make use of the good in soya beans, and eliminate the negative, “modern technology has come forward with new products—textured vegetable protein (TVP) and textured soya concentrate.”

“With a texture and appearance similar to that of animal foods, these soya products can be used as an extender or substitute for meat, fish and poultry.”

1. Ordinary households: The use of dried legumes, including soya bean products, has always been advocated by the Department. This is the one and only way for many households for many households to make ends meet.

2. Farming communities: Similar to that of ordinary households. 3. Industry: Soya is used in pies, polonies (like sausages) and spreads. 4. Institutions: Experience has taught that soya products are not very popular in the Western diet. The beany taste is probably the most important disadvantage.” It is best to use no more than 25% in any dish. “In the Correctional Services use is made of equal parts of mince and chunks in stews and other combined dishes. In the Defence Force the approach is to make use of fresh foods to as large an extent as possible. Soup powders are used as sauces in the non-Westernized diet and for soup dishes in the Westernized diet.” Soya products are also use in school boarding houses, provincial hospitals and in mining hostels.

5. Feeding schemes of the Department of health: Three programmes are discussed. “It is concluded that emphasis should once again be placed on the first category of users, namely the ordinary household. If children and young children are educated about the use of soya products at home, the chances are that these products would be much better accepted by the youth when offered in institutions as well as at a later stage in life.” Address: Dep. of Health, Pretoria.

1600. *Ontario Soybean Growers' Marketing Board Newsletter*. 1995. Soy crush expands. Oct. p. 4.

• **Summary:** There are only two soybean crushers in Canada, CanAmera Foods (in Hamilton, Ontario) and ADM Agri-Industries (in Windsor, Ontario). Both are investing millions of dollars to expand and upgrade their facilities. It is predicted that soybean crushing capacity in Canada will increase by 25%, to approximately 50 million bushels/year, when these improvements are finished in 1996. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1601. Roberts, Justin J. 1995. Trends in soybean processing and utilization. Paper presented at the Third Bi-Annual SoyAfrica Conference. 43 unnumbered pages. Held 3-5 Oct.

1995 at Johannesburg, South Africa. Organized by Aproma.  
 • **Summary:** This paper consists entirely of graphics (prints of overhead transparencies showing many charts and tables).

Background with regards to soy products in general: Healthy and nutritious, protein rich with all essential amino acids, rich in fibre, rich in vitamins and minerals, low in sodium and potassium, cholesterol free and low in fat, probiotic.

Typical soy products available in the RSA [Republic of South Africa]: soybeans, untoasted full fat soya flour, toasted full fat soya flour, micro-milled soya flour (100 mesh), soya mince (coloured or uncoloured)—tvp, textured soya concentrate—tsc (red crumble frozen), uncoloured frozen (coloured and uncoloured frozen chunks), soya chunks (coloured and uncoloured), soya isolate (90% protein), soya concentrate (70% protein).

Typical soya applications in the RSA (many are listed).

Soyabeans (defatted flake products): Food uses, industrial uses of soya flour and grits, soyabean meal (feed uses, industrial uses), soy isolate (edible uses, industrial uses).

Soyabeans (natural full fat products): baked soyabeans, seed, soyabean sprouts, stock feeds. Full fat soya flour (8 uses), roasted soyabeans (8 uses), soyabean derivatives (soymilk, tofu, miso, tempeh, etc.).

Oil products: crude soyabean oil (glycerol, fatty acids, sterols {stigmasterol, sitosterol, tocopherol, hormones}), refined soyabean oil (edible uses {9 uses listed}, medicinals, technical [industrial] uses {12 uses listed}), soyabean lecithin (edible uses {emulsifying agent, nutritional, stabilizing agent, surface active agents, anti-spattering agents, pan grease}, technical [industrial] uses {9 uses are listed}).

Soy products (7 benefits listed). Typical soy products available in South Africa (18 are listed again). Soya applications (Baking industry {7 benefits listed}). Appropriate technology (8 examples). Research needs (12 needs). Soybean research in the Department of Food Science, University of Pretoria (12 areas of research). Modified Intsoy method of making soymilk (to reduce oligosaccharides and urease, lipoxxygenase, and trypsin inhibitors). Small / micro and small to medium food enterprises (SMEs, problems and opportunities). Oligosaccharides are probiotic? (7 types of health promotion, 3 unknowns). Soya protein isolate by ultrafiltration (requires less water than usual isoelectric method). Future developments in the soya industry in RSA (turnkey soymilk plants, soy sprout mince, milk and flour, canned soybean products, okara in standard white or brown bread and/or biscuits, tofu).

Mopane or mopani from caterpillars / worms of *Gonimbrasia belina*. Address: Dep. of Food Science, Univ. of Pretoria, South Africa.

1602. Rocher, Joseph. 1995. A chronicle of the USA-Europe

conflict. What place for African producers? Paper presented at the Third Bi-Annual SoyAfrica Conference. 5 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma.

• **Summary:** Contents: Background. Europe vs. USA: the “Compromise.” The conflict within GATT. The world price for soya and indirect dumping. Developing soya production in Africa: actions at the macro level (1. Redefinition of Article IV of the GATT/WTO dealing with “dumping.” 2. Reform of the Common Agricultural Policy in the year 2004. 3. Right policies and agricultural protection in Africa).

This is a fascinating article expressing a viewpoint rarely heard in the USA by an expert on GATT; he has written in book titled *GATT in Practice* (1994).

“During the 1950’s European countries were rebuilding their few processing plants; they were also looking for alternatives to American soya. The Europeans continued to allow US imports, but only as a compromise, a trade-off which would allow the EEC to give better protection to Europe’s cereal production. In 1962, the six European member countries accepted a zero tariff on all US soya imports. as a direct result, the American pattern of protein consumption was allowed to penetrate European agriculture.”

“It was not until July 1973 that the US embargo on soya exports was announced with the Gatt permission: the Article XI of the agreement defines conditions under which quantitative restrictions on imports or exports are allowed. Under this article, a country facing a drastic reduction in agriculture production (due to a drought, for example) is permitted to forbid exports (impose an embargo), in order to maintain national market prices at a level acceptable to the consumer.”

“Towards the end of the 1970’s the European Community felt that it had made a mistake. In 1979, Brussels put a mechanism in place—a major new support programme for oilseed production within the Community which was designed to reverse the trend of growing dependency on American and, by now, Brazilian soya. The mechanism, rather than erecting import barriers, gave incentives to the processing industry to use European-grown raw materials. At the same time, the US dollar rose on the international currency markets. Cargill and other US-based traders (ADM, Central Soya, ConAgra, Anderson Clayton) tried to maintain downward pressure on the price paid to North American farmers. This resulted in tension within the producers lobbying organisation, the American Soybean Association (Southern US farmers, whose costs are higher, sought a ‘marketing loan’ which would cover the difference between the market price and a higher, subsidised price).

“In 1987, the American Soybean Association with government backing lodged a complaint in GATT (a second dispute panel on soya) in an attempt to condemn the EC practice of giving subsidies for oilseed crushing; the US

considered this a violation of the GATT Article III (National Treatment) which states that national and imported products must be treated on an equal basis.”

The EC responded again by making adjustments acceptable to the USA.

“In 1991, the EC proposed a new oilseed’s regime, based on direct compensatory payments to farmers, a subsidy mechanism inspired by US ‘deficiency payments.’ But Washington [DC] attacked the proposal on two counts: it was deemed to be a support to production, rather than an income support; and it was considered contrary to the concession granted to the US back in 1962 by the EC during the Kennedy Round of GATT... of zero tariffs for soya sold into Europe.”

“Finally, the ‘Washington Compromise’ (or ‘Blair House agreement’) of 20 November 1992, limiting the amount of European land for oilseeds to 5,128,000 hectares, seemed a solution to the soya dispute. The ‘Compromise’ also included a ceiling of 1 million tonnes of EC oilseeds for industrial use.”

“A major issue not properly treated during the Uruguay Round is the question of ‘indirect’ dumping. Soya is produced in the USA without subsidies. However, it is part of a crop rotation with two products (wheat and corn) which receive subsidies (deficiency payments). This situation creates an indirect subsidy system which puts soya on the world market at a price lower than the real cost of production. So we can consider that acceptance by the GATT/WTO of the deficiency payment has two major effects on African countries for their agriculture in general, for soya production in particular: deficiency system means that a major part of the agriculture policy is paid by the taxpayer (i.e., state budget) rather than by the consumer.”

However the article contains a number of errors concerning the history of soybean production in the USA. Address: Director of Rongead, 14 rue Antoine Dumont, Lyon Cedex 08, France. Phone: (33) 72 71 66 70.

1603. Bovard, James. 1995. Dole, Gingrich and the big ethanol boondoggle. *Wall Street Journal*. Nov. 2. p. A18, col. 3. Editorial page.

• **Summary:** Federal ethanol policy has long been driven by one company—Archer Daniels Midland. Ethanol is made by distilling corn into alcohol. It can also be mixed with gasoline to make gasohol, “a fourth rate fuel and federal and state subsidy magnet. Ethanol subsidies cost the federal government \$770 million a year in direct revenue losses. Ethanol producers have received a de facto subsidy of roughly \$10 billion since 1980. Senator Robert Dole is known in Washington, DC, as “Senator Ethanol,” but Colin Powell recently labeled ethanol a prime example of corporate welfare. Ethanol is first and foremost a farm welfare program, which inflates corn prices by about 22 cents a bushel.

“Ethanol also penalizes soybean farmers, who receive scant federal subsidies, because corn byproducts from ethanol production compete directly with soybeans.” Based on 1986 USDA estimates, the ethanol program currently depresses soybean prices by 12 cents a bushel—a loss of \$300 million to soybean farmers on their 1994 harvest.

A 1986 USDA report concluded: “Consumers would be much better off if they burned straight gasoline in their automobiles and paid a direct cash subsidy to farmers in the amount that net farm income would be increased by ethanol production.”

Ethanol has long been hyped as part of a national strategy of energy independence. But it routinely requires more energy to produce than it generates as a vehicle fuel. Moreover, since ethanol contains only about two-thirds as much fuel energy as gasoline, it guarantees worse gas mileage—leading drivers to buy more gasoline.

Supporters now tout ethanol as a substance which promotes clean air. But 1978 EPA and Department of Energy tests showed “substantial increases in evaporative hydrocarbon emissions” in cars using gasohol.

ADM produces roughly 60% of America’s ethanol, and roughly \$32 million (4.0%) of ADM’s fiscal 1995 profits of \$796 million came from ethanol. Last month Republican Bill Archer, chairman of the House Ways and Means Committee, sought to reduce and cap ethanol subsidies. However House Speaker Newt Gingrich loudly intervened and forbid any limit on ethanol handouts—thus making a mockery of his fervent promises to slash wasteful federal spending. “(Rep. Gingrich’s political [fund raising] organization, GOPAC, has received more than \$70,000 from ADM’s chairman, Dwayne Andreas.)

“The ethanol issue could win Iowa for Sen. Dole—and cost him much of the rest of the nation. He has received more than \$80,000 from Dwayne Andreas’s family and ADM since 1980, and is increasingly perceived as Mr. Andreas’ prize lapdog.”

1604. *Herald and Review (Decatur, Illinois)*. 1995. Obituaries: Macon County. William T. Atkinson. Nov. 9. p. A4. Central Illinois.

• **Summary:** “Decatur—William T. Atkinson, 84, of Decatur, died on Tuesday, Nov. 7, in St. Mary’s Hospital. “Funeral Mass will be 10 a.m. in Our Lady of Lourdes Catholic Church... Burial will be in Fairlawn Cemetery.

William Thomas was born Oct. 18, 1911, in Ontario, Canada, the son of Thomas P. and Eva Parson Atkinson. He retired in 1976 from Archer Daniels Midland Co. where he was senior research chemist. He was awarded the Food for Peace Award in Paris for the invention of Textured Vegetable Protein for ADM in 1968. He was a member of Our Lady of Lourdes and the 55 Club of the church and was past active member of the St. Vincent DePaul Society. He married Elizabeth Ann Scott in 1938.

“Surviving are his beloved wife, Elizabeth; son, Dennis W. Atkinson of Port Townsend, Washington; daughters, Mrs. Robert (Lois) Kessling of Cincinnati, Ohio; Mrs. Ralph (Mary Beth) Brock of Westchester; Mrs. Claude (Carol) Jones of Decatur; sisters, Mrs. George (Ruth) Sell of Palatine; Grace Korman of Booneville, New York. 14 grandchildren and one great-grandchild.

“He was preceded in death by his parents, daughter, Judith Ann Atkinson in 1939, brother, Fred Atkinson, and grandson Jerry Atkinson.”

A portrait photo shows William Atkinson.

1605. Blaze, Marci. 1995. Current prices of soy protein products (Interview). *SoyaScan Notes*. Nov. 13. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.

• **Summary:** Soy flour and grits 18-37 cents/lb. Textured soy flours 36-48 cents/lb. Soy protein concentrates 65-77 cents/lb. Textured soy protein concentrates 72-84 cents/lb. Soy protein isolates 132-169 cents/lb.

Note: ADM formerly made a soy isolate fiber product similar to PTI’s Fibrin but discontinued production in about 1993. Address: Archer Daniels Midland Co., Decatur, Illinois. Phone: (217) 424-7408.

1606. Gordon, Jonathan. 1995. Work with soyfoods in England and Australia (Interview). *SoyaScan Notes*. Nov. 16. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• **Summary:** Jonathan’s PhD thesis was titled “Improved lactic fermentation of soymilk for the preparation of soya bean curd,” a subject closely related to soy yogurt. He submitted this thesis in 1992 at the University of Strathclyde [Glasgow, Scotland], working under Brian Wood. When he was midway through writing his thesis, he won a *Monbusho* [Ministry of Education] scholarship to Japan. Just as he was preparing to go, he and his wife had a baby and he decided not to go. Prior to that the University of Strathclyde had applied for a patent on the process he discovered in his thesis. When he didn’t go to Japan, the university did not finish the patent application process. Its present status is unclear. He discovered how to do a lactic fermentation of soymilk that gave a good, low pH in a reasonable period of time. Brian Wood was an expert in lactic acid fermentations; he developed a 6-week miso and soy sauce process which he sold to Nestle. He was very unhappy with the outcome of this sale, because Nestle shut him out of involvement with the company. He expected to be actively involved with the company.

Jonathan’s interest in tofu goes back to the late 1970s. A native of England, he spent two years (1979-1981) at Findhorn, a spiritual community in Scotland, where he first heard of tofu and he helped to make tofu once a week. Jonathan thinks that Jacques (a French Canadian) started the tofu operation in Findhorn, before Jonathan arrived. Jacques and Allen (British) were making tofu in 1979 when Jonathan

was there. Each Thursday after dinner they would take over the kitchen and make about 30-40 lb of tofu, which was served in the communal dining room the next day. Jonathan left Findhorn in March 1981 and arrived in Australia in about July or August 1981. He traveled in Australia with a girlfriend (Karen James of California, who had just finished a professorship at UCLA) and they lived together at the Homeland Foundation in Upper Thora, Bellingen, New South Wales, where they made tofu with other members of the community. Karen also made tempeh. Upper Thora is a little town in the Bellingen (pronounced BEL-ing-un) valley. Some community members had already been making tofu for a long time before he arrived; the tofu company was a completely established local business, with customers and delivery routes, when he arrived. They made about 300 lb/week of tofu and delivered it themselves to nearby communities in insulated cold boxes (called “Eskis,” short for Eskimos) in a van. Homeland was also making tempeh at the time, but Jonathan was not a tempeh maker. He left Australia in 1982 to return to England.

In 1982 Jonathan became the foreman and tofu maker for The Regular Tofu Company (RTC) Ltd. in England, owned by John Holt. Jonathan was not with RTC when it started. John Holt was a “Premmie,” a disciple of Guru Maraji, the young guru from India. His tofu shop was located in a house adjacent to the Premmie community house or ashram. He converted the small community kitchen (about 14 feet square) into a tofu shop. It had 2 cauldrons and a grinder. This was John Holt’s private business; it was not a source of food and income for the Premmie community. John had a family at the time and he employed Premmies to do his work. At this time the tofu was made in a caldron. Guru Maraji came to that part of England many times. Leicester is one of the “Asian centers” of England; it has the largest immigrant population of any city in the country and there were 2 or 3 “Premmie” houses there. Maraji has a large Indian following, in addition to his Western disciples.

Jonathan also helped John Holt design his new factory in at Hayhill Industrial Estate (Unit 25, Sibley Rd., Barrow Upon Soar, Leicestershire LE12 8LD, England). into which Holt moved in about 1984. John Holt lived in Sibley, the town adjacent to Barrow Upon Soar.

Note: This company began making tofu in Dec. 1981 at 75 Chandos St., Leicester, LE2 1BU, England. In June 1984 (now located at 16 The Halcroft, Syston, Leicester, England LE7 8LD) they introduced 4 soy products under the Soyboy brand. John Holt had venture capital in the business, but they weren’t getting a sufficient return on their money so John had to sell the company to another rather small company named something like Rainbow (they were making soup and burger dry mixes), which later sold it to Haldane.

Jonathan probably has John Holt’s home address in Leicestershire. After Holt sold his business, he bought a franchise in a restaurant business (something like a pancake

house) in Northampton or Nottingham, England. Jonathan has heard of Michael Cole of Manchester, but he does not know whether or not Michael ever worked for John Holt. Cole won the Entrepreneur Award of something like £50,000, and that enabled him to build a factory. In the early days only two companies in England were distributing semi-nationally—John Holt’s and Michael Cole’s. Address: Director of Operations, White Wave Inc., Boulder, Colorado. Phone: 303-443-3917.

1607. Lang, Paul. 1995. Natural Products, Inc. in Grinnell, Iowa: History, products, and competition (Interview). *SoyaScan Notes*. Nov. 27 and 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Paul started making soy products in Grinnell, Iowa, in August 1995. His family, which owns a 3,000 acre farm there, also now owns this business. They hope to use it as a way of adding value to the soybeans they grow. They do not presently make the roasted soy fiber or the enzyme active soy fiber shown in their ad in *Soya Bluebook Plus*. These two products were basically unground soy hulls, and some bagel companies used them. Some American bakers buy soy hulls to add dietary fiber to their baked goods. He cannot begin to compete with Fibrim made by Ralston Purina. The oil crushers in his area are dumping semi loads of soy fiber on the market for about \$0.05 to \$0.08 per pound. Paul’s family bought a Cargill animal feed mill in Grinnell; it was worth \$700,000 (for just the buildings) but Cargill had abandoned it, so they were able to buy it for \$52,000. Paul is very interested in identity-preserved soybeans and he has 34 different bins to keep each variety separate. He thinks the future of soyfoods lies in identity preservation. For example, he now uses a low-flatulence soybean to make his soy flour—and his is the only company doing this.

Clofine, located just outside of New York City, buys Paul’s products (both enzyme active and inactive roasted whole soy flours) and re-sells them. They are almost like a broker. Using a patented process, Clofine slurries the enzyme active (raw) flour with water (probably hot water) then spray dries it, under high pressure through a small orifice. Ed Pedrick helped to develop this method. After that, Paul does not know how the product is processed, and how they get from soy flour to “spray-dried tofu.” He does not know if any coagulant is added, and what is the justification for calling it tofu. He views it as simply a water-soluble soybean flour, with a low PDI. It will hold up in suspension when mixed with water to make soymilk. Paul also sells to Devansoy, where Mr. Pedrick now works full time and makes the same spray-dried product. Devansoy sells the product both under their own trademark and as a raw material for use by other food processors. Both Clofine and Devansoy sell these spray-dried products for about \$1.35 per pound; they buy the flour from Paul for about \$0.35/pound. If Paul developed a very finely ground soy flour, he could probably take away that

market. They sell the roasted flour to bakers in New York City.

In terms of particle size, the smallest is flour, then meal, then grits, then granulers [he coined this phrase], then splits. The big crushers such as ADM and Cargill sell fairly coarse “grits.” Generically, the grits go to bagel companies—and he does not know why. The granulers and splits are not presently being sold. His main products are the enzyme active full fat flour, and the lightly roasted inactivated full-fat flour. Paul is working closely with the American Institute of Baking (AIB). Paul also sees a huge potential export market. Address: Natural Products, Inc., 798 Hwy 6, Grinnell, Iowa 50112. Phone: 515-236-0852.

**1608. Product Name:** Realeat VegeSteak.  
**Manufacturer’s Name:** Haldane Foods Group.  
**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.  
**Date of Introduction:** 1995 November.  
**Ingredients:** Soy protein.  
**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1996. Spring. p. 4. “New products from Haldane Foods Group.”

**1609. Product Name:** Realeat Meatless Chili, Meatless Bolognese, or Meatless Curry.  
**Manufacturer’s Name:** Haldane Foods Group.  
**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.  
**Date of Introduction:** 1995 November.  
**Ingredients:** Soy protein.  
**Wt/Vol., Packaging, Price:** 300 gm tub. Retail for £0.99 (11/95 England).  
**How Stored:** Frozen.  
**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1996. Spring. p. 4. “New products from Haldane Foods Group.” This is a new range of microwaveable frozen ready meals in tubs, based on VegeMince and VegeSteak.

**1610. Product Name:** Realeat VegeBites.  
**Manufacturer’s Name:** Haldane Foods Group.  
**Manufacturer’s Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.  
**Date of Introduction:** 1995 November.  
**Ingredients:** Soy protein.  
**Wt/Vol., Packaging, Price:** 454 gm bag. Retail for £2.49 (11/95 England).  
**How Stored:** Frozen.  
**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1996. Spring. p. 4. “New products from Haldane Foods Group.” This is a non-meat version of chicken

nuggets.

1611. Caton, Greg. 1995. New developments at Lumen Foods (Interview). *SoyaScan Notes*. Dec. 6. Conducted by William Shurtleff of Soyfoods Center.  
**• Summary:** In Oct. 1995 Greg started his own TVP plant, which is making his new “Reverence” line of products. He used to buy the extrudite (textured soy flour) from either ADM or Central Soya. He would wash it to remove all of the oligosaccharides (which usually cause flatulence), then flavor it, oil it, cook it, dry it, mix it, etc. He does not use organic soybeans, because he finds that customers are not willing to pay for the end product, which is about twice as expensive. However by putting the product through a multiple washing cycle and using purified water than has been ionized and run through a carbon filter, he partially compensates for the non-organic soybeans.

Greg has at least two private label customers: Spice of Life in California, and Dr. Marvin Goldberg, an M.D. in Michigan who buys in container loads. Greg uses a slightly different formula when making these products for Spice of Life. In place of soy sauce he uses Bragg’s Aminos, which is powdered HVP supplied by A.E. Staley Mfg. Co. in Decatur, Illinois, reconstituted in water by Paul Bragg’s daughter in Santa Barbara, California, and sold at high prices as Bragg’s Aminos. Greg admired Paul Bragg, who had an impeccable reputation. Bragg died tragically roughly 5 years ago at about age 95 while swimming off the coast of Florida; he was caught in an undercurrent and drowned. He was Jack LaLanne’s mentor and he followed Vivekananda.

Last year meat analogs [alternatives] were the single fastest growing category in the health food trade. For the last three years Lumen has experienced a growth rate of 50% a year in their mail order business. Mail order is currently about 40% of the company’s total business; it used to be about 5%. His company is almost becoming a mail-order company, like Harvest Direct.

Greg is a computer programmer and he designed his own site on the World Wide Web. He is a “webmaster” and knows HTML and Java script, which allows things to move on a Web page. He is now spending a great deal of time developing Veggie Net as part of his web site; it will contain pictures with accompanying quotations related to vegetarianism. Address: President, Lumen Food Corp., 409 Scott St., Lake Charles, Louisiana 70602-0350. Phone: 318-436-6748.

1612. Straus, Karen Cope. 1995. At home with the McCartneys: Share the season’s best with Paul and Linda. *Vegetarian Times*. Dec. p. 41-45.

**• Summary:** This is largely a selection of lacto-vegetarian recipes from two of Linda McCartney’s popular vegetarian cookbooks. Ingredients include TVP granules, soymilk, and soy sauce. Her first cookbook, *Linda McCartney’s*

*Home Cooking*, remains “one of the best-selling vegetarian cookbooks published to date.” Several nice color photos show Paul and Linda.

1613. Nguyenle, T.; Wang, W.; Cheung, A.P. 1995. An investigation on the extraction and concentration of isoflavones in soy-based products. *J. of Pharmaceutical and Biomedical Analysis (Oxford)* 14:221-32. \*

• **Summary:** Gives levels of daidzein and genistein in Infant formulas: Isomil (ready to feed), Nursoy (liquid concentrate), Prosobee (liquid concentrate). Soy flours (Central Soya–Soyaffuffy), Centex, Promax, Promax plus, ADM–Nutrisoy, TVP, Acron-F, Acron-S, Cargill Protein Products -200/20, 200/70, Arrowhead, Molly Farm, Sun Ridge Farm, Soy drink, Tempeh, Soy protein concentrates (Procon, Promine), TVP (Response).

1614. Wendel, Armin. 1995. Lecithin. In: Martin Grayson, executive editor. 1995. Kirk-Othmer: Encyclopedia of Chemical Technology, 4th ed. New York: John Wiley & Sons. See Vol. 15, p. 192-210. A Wiley-Interscience Publication. [51 ref]

• **Summary:** A comprehensive treatment of lecithin. Contents: Introduction. Physical properties. Chemical properties: Hydrolysis, acyl side-chain reactions (hydrogenation, hydroxylation, autoxidation), browning reactions, other reactions of phospholipids. Manufacture and processing (Crude soy lecithin is a by-product of the degumming process of soy oil: The phosphorus-containing compounds are removed to improve the stability of the oil. Only a small percentage of the total lecithin that is potentially available in plant-oil processing is actually produced). Purification processes. Commercial grades. Economic aspects. Specifications and standards: Food Chemical Codex, U.S. Pharmacopeia (USP XXII), European Community. Analytical and test methods. Health and safety factors. Uses: Animal feed, baking products, candy / confections (incl. chocolate), cosmetics and soaps, food (dehydrated foods, ice cream, macaroni and noodles, margarine, edible oils and fats, inks and dyes), liposomes (See Note 2), paints, petroleum products, pharmaceuticals, plant protection, plastics, release / antisticking agents, elastomers (in rubber), textiles. Bibliography.

Tables: (1) Categories of commercial lecithin, Broadly divided into natural, refined, and modified. And into plastic and fluid. Within the natural category is unbleached, bleached, and double-bleached. Within the refined category is deoiled and fractionated (subdivided into oil-soluble and alcohol-soluble). Within the modified category, lecithin can be physically, chemically, or enzymatically modified.

(2) Compositions of lecithins, oil-free basis, %. The phospholipid composition of 7 types of lecithin is given: Soybean lecithin, corn lecithin, sunflower seed lecithin, rapeseed lecithin, peanut lecithin, egg lecithin, bovine

brain lecithin. Egg lecithin has the highest content of phosphatidylcholine (PC) at 69% compared with only 21% for soybean lecithin. Soybean lecithin [the most widely used commercially worldwide] contains:

phosphatidylcholine (PC) 21%  
phosphatidylethanolamine (PE) 22%  
phosphatidylinositol (PI) 19%  
phosphatidic acid 10%  
phosphatidylserine 1%  
sphingomyelin 0%  
glycolipids 12%

(3) Fatty acid composition of oil-free lecithins, %.

Soybean lecithin is 58.0% linoleic acid.

(4) Composition of commercial soy lecithin and egg lecithin. In addition to diluted percentages of the basic phospholipids such as PC 10-15%, PE 9-12%, PI 8-10% etc it also contains:

lysophosphatidylcholine 1-2%  
lysophosphatidylethanolamine 1-2%  
phytyglycolipids 4-7%  
phytostearines 0.5-2%  
other phosphorus-containing lipids 5-8%  
sphingomyelin 0%  
saccharose 2-3%  
free fatty acids max 1%  
mono-, diglycerides max 1%  
water max 1.5%  
triglycerides [soybean oil] 35-40%.

(5) Solubility of lecithin and various phospholipids.

Shows which of six are soluble or insoluble in hexane, benzene, ethanol, and acetone. All but the last are *not* soluble in acetone, which is why acetone is used to separate out lecithin from soy oil. The six are:

lecithin  
phosphatidylcholine  
phosphatidylethanolamine  
phosphatidylinositol  
phytyglycolipid  
lysophospholipids. Note: lysophospholipids are soluble in water; the others are dispersible in water.

(6) Commercial lecithins, % composition. The six commercial lecithins are: Crude, deoiled, alcohol-soluble fraction, alcohol-insoluble fraction, PC 70%, PC 90%. Various trademarks for each are given, owned by ADM, America Lecithin Co. (ALC), Central Soya, Nattermann Phospholipid GmbH, and Riceland.

(7) Commercial lecithin potential from vegetable oils. The 6 vegetable oils are soybean, sunflower seed, rapeseed, cottonseed, peanut, corn. The 3 columns for each type of oil are: World production (million tons, 1991-92), hydratable lecithin %, lecithin yield (metric tons). For soybean oil the 3 columns are: 16.44 million tons, 2.2%, 361,680 tons lecithin yield.

(8) Lecithin world production. The 6 types of lecithin

are: crude lecithin, deoiled lecithin, phospholipid fraction PC 35, phospholipid fraction PC 70, phosphatidylcholine > 90. They are ranked from the least expensive to the most. For each is given: World capacity (metric tons). Average sales price, \$/kg. Crude lecithin sells for \$0.62 vs. deoiled lecithin for \$4.40 (7 times as expensive).

(9) U.S., British, Japanese, and European specifications for lecithin purity.

Figures: (1) Chemical structure of phosphatidylcholine (PC) and other related phospholipids.

(2) Flow sheet for a lecithin production unit; each step is described.

(3) Flow sheet for continuous deoiling of soy lecithin (with acetone); each step is described. (4) Flow sheet for batch process for producing phosphatidylcholine fractions; each step is described. (5) Flow sheet for continuous process for producing phosphatidylcholine; each step is described.

Note 1. Rhône-Poulenc was a French chemical and pharmaceutical company founded in 1928. In 1999 it merged with Hoechst AG to form Aventis. As of 2015, the pharmaceutical operations of Rhône-Poulenc are part of Sanofi and the chemicals divisions are part of Solvay group and Bayer Crop Science.

Note 2. A liposome is a spherical vesicle having at least one lipid bilayer. The liposome can be used as a vehicle for administration of nutrients and pharmaceutical drugs. Liposomes are most often composed of phospholipids, especially phosphatidylcholine. Address: Rhône-Poulenc Rorer, Germany.

1615. Eichenwald, Kurt. 1996. Big board room shift will bring in outsiders. *New York Times*. Jan. 16. p. C1, C4. Business section.

• **Summary:** ADM is responding to widespread criticism of insider domination of the company's board by approval of a series of proposals that would turn majority control of the board over to a group of outside directors.

The proposals stipulate that several of the current 17 directors would not be able to stand for re-election at the next annual meeting of ADM in the fall.

But some large investors have said that such changes do not go far enough. "The recommendations were presented in a report by a corporate governance committee formed at the last annual meeting in October."

Said Ray A. Goldberg, professor of business at Harvard University, who helped lead the governance committee, "The board has accepted the report unanimously and approved every proposal without exception. This makes A.D.M. consistent with the best governance procedures of all major corporations in the United States."

"Still little change is expected anytime soon at the company..." because of its strong-willed chairman, Dwayne Andreas. Yet Mr. Andreas said clearly that the report and recommendations have his "strong support."

1616. Weiner, Tim. 1996. It's Dwayne's world: Archer-Daniels' influence is wide and deep. *New York Times*. Jan. 16. p. C1, C4. Business section.

• **Summary:** Contents: Introduction: Tax breaks and subsidies. Congress questions ethanol subsidy. A market created by the government (corn syrup). A hard competitor under scrutiny. A staunch capitalist in a 'Socialist' milieu (referring to farm programs). "Washington, DC, Jan. 15–Lately, Dwayne O. Andreas and the Archer-Daniels-Midland Company have been through a hailstorm of bad news—price-fixing investigations, corruption charges, shareholders' wrath. But the agricultural giant's feisty chairman pays it no more mind than a Kansas farmer does a passing squall.

"Mr. Andreas shouted down dissident investors at Archer-Daniels's annual meeting last fall and ignored inquiries about allegations of embezzlement at the company's highest levels. When a questioner cited Robert's Rules of Order, Mr. Andreas cut him off, saying, 'The meeting, sir, runs according to my rules.'

"Here in Washington, Mr. Andreas has been making his own rules ever since he walked into the Nixon White House in 1972 with an envelope stuffed with one thousand \$100 bills. At 77, he is an acknowledged master at the art of amassing political influence. That, along with Archer-Daniels's growing mastery of the agricultural marketplace, has been a shelter in the storm."

A large photo shows Dwayne Andreas. An illustrated diagram shows how federal policies create an artificial market for corn sweetener, which is used as a substitute for sugar. These quotas and price supports costs the U.S. about \$3 billion a year.

A table shows ADM's political contributions from Jan. 1991 to June 1995. Total: About \$3 million.

1617. McCord, Holly. 1996. Savor the new white-hot superfood. Way, way beyond the usual tofu: 7 easy, tasty ways to get "soying." *Prevention (Emmaus, Pennsylvania)*. Jan. p. 79-83.

• **Summary:** The article begins: "Finally, soy's so hot it's smokin'! After years of neglect, mounting studies now suggest that soy foods help us dodge the big ones—heart disease and breast and prostate cancer. Maybe even osteoporosis... But in the United States, where we grow half the world's soybeans and then feed 'em mostly to chickens, the idea of soy for dinner somehow doesn't cut it. Fear of tofu—a white, spongy, soybean curd that most of us don't have a clue how to cook with—runs deep.

"If this describes you, relax! We've discovered seven surprisingly gentle ways to get you started with soy. They're all delicious and supereasy—foods even soybean sissies can relate to." 1. Pour soy milk on your cereal. 2. Whip up tofu blender smoothies (using Mori-Nu Silken Lite Firm Tofu—aseptic pack). 3. Make chocolate pudding no one can resist

(using Mori-Nu Silken Lite Extra Firm Tofu). 4. Add “Sweet Beans” [green vegetable soybeans] to your repertoire. 5. Indulge in healthy Sloppy Joes (add TVP to a can of Sloppy Joe sauce and serve on a bun). 6. Go Nutlettes! The only ready to eat soy breakfast cereal made from a TVP you don’t rehydrate. Order by phone from Dixie USA, Inc. 1-800-347-3494. 7. Drink soy protein beverages (such as Take Care. Order by phone from Nutritious Foods, Inc., 1-800-445-3350).

A sidebar discusses why soy is white-hot: Soy protein lowers high cholesterol. Soy isoflavones may beat breast and prostate cancer. Because soy protein causes less calcium excretion from the body than does animal protein, it may reduce osteoporosis. “Also, soy isoflavones may help slow down bone loss after menopause and relieve symptoms such as night sweats and hot flashes.” Address: R.D.

1618. Ornish, Dean. 1996. *Everyday cooking with Dr. Dean Ornish: 150 easy low-fat high-flavor recipes*. New York, NY: HarperCollins Publishers. xix + 344 p. Index. 24 cm. [6 ref] • **Summary:** This is Dr. Ornish’s 4th book. Recommends low-fat vegetarian meals. Organized into 45 seasonal menus with “recipes that use inexpensive, commonly found ingredients and follow easy time-saving steps.”

The opening chapter, “Choices made easy,” has the following contents: Why I wrote this book (in response to thousands of letters he receives each year). Delicious and nutritious. Low fat, high flavor (He has commissioned some of America’s most celebrated chefs to work within his guidelines and see what they can create. Dr. Ornish and his team have “trained the chefs at the White House, Camp David, the Navy Mess, and on *Air Force One* who cook for President and Mrs. Clinton. We’ve learned what works”). Beyond heart disease (to improving the quality of your life right now; you will feel so much better!). Good nutrition is easy (If you drink, limit it to one drink per day. “Reducing salt is a good idea for everyone, but its most important if you have high blood pressure, kidney disease, or heart failure”) The Life Choice Program (“which also includes moderate exercise, stress management training (stretching, breathing, meditation, visualization, and relaxation techniques), smoking cessation, and psychosocial support... this is a diet and lifestyle program based on (1) the joy of life, not the fear of death, and (2) choice, not coercion”). Why a plant-based diet? (“Cholesterol is found only in animal products, which also tend to be high in saturated fats”). Eat more complex carbohydrates, weigh less. Why 10 percent fat? (recommends 10% of calories from fat. The average American diet has about 40% of its calories from fat. You can eat nonfat dairy, egg whites, but no added oil). Why so little cholesterol? (Your dietary requirement for cholesterol is zero). What is the cause? (His program addresses the cause of the problem rather than trying to get rid of the symptoms). Big changes are easier than small ones (First, you fell so much better

so quickly. Second, your palate adjusts quickly so that you prefer low-fat foods. Fat is an acquired taste, not one of the four basic tastes).

Soy related recipes: Vegetable broth (“Experiment with salad dressings made with soft tofu or nonfat yogurt,” p. 18-19). Roasted onions (For heightened taste, use soy sauce, Japanese miso, etc., p. 22). Supermarket tips and traps (“Tofu is sometimes in the produce section, sometimes in the dairy case.” Take it from the dairy case if you have a choice; the colder temperature keeps tofu fresher, p. 35). Miscellaneous (“Soymilk in aseptic cartons has a long shelf life before its opened. Use it as a cholesterol-free alternative to nonfat cow’s milk,” p. 39). How to cook legumes (Soybeans contain about twice as much protein as other beans and are a good source of omega-3 fatty acids. Their protein is complete protein, and has been show to lower blood cholesterol levels. For smart ways to incorporate more soy foods into your diet, see p. 313. Two servings a day {½ cup each} from the legume group are ideal, p. 41). Section on “Meat substitutes” (p. 56-57) mentions soy protein, wheat gluten, tofu, etc. “One of the most popular meat substitutes is Textured Vegetable Protein, or TVP.” It is made from defatted soy flour and is sold in various flavors and shapes. “The Boca Burger ‘No Fat Original’ used in some recipes in this book is made from defatted soy protein...” The section on Miso (p. 57) notes that it “adds nutty flavor to soups, stews, and dressings.” The section on tofu (p. 58) describes the many types, their uses and nutritional value. Creamy coleslaw (with “Creamy tofu dressing,” p. 164-65).

The section on “Commonly asked questions about the Reversal Diet” (p. 306+) has a subsection titled “Since soy products are high in fat, how much can I have?” which begins (p. 313): “Soybean products have no cholesterol and supply essential fatty acids and are an exception to the guideline of no more than 3 grams of fat per serving. However use good judgment... a good rule of thumb is to stay within 4 ounces tofu or 2 cups soy milk per day. Soy milk—the rich creamy product of soybeans ground with water—is an excellent cholesterol-free alternative to cow’s milk. It is available plain and flavored, in a range of fat contents.”

“Will I get enough protein on the Reversal Diet?” (p. 314-15) begins: “Americans tend to be overly concerned about getting enough protein. In fact, meat eaters tend to get too much. Eating too much protein, especially animal protein, can increase your risk of cancer, diabetes, and heart disease... and may lead to osteoporosis.”

“Where do I get protein on the Reversal Diet?” (p. 315) begins: “The body’s protein requirement is about 50 grams per day for women and about 60 grams for men.” “Good sources include beans and peas, including soy milk and tofu.”

On the same page under “combining proteins”: “(The soybean is the only plant food with enough of all the

essential amino acids to be considered a complete protein).”

The recipes in this book were developed by Janet Fletcher, Jean-Marc Fullsack, and Helen Roe. The Boca Burger is called for in many recipes (p. 57, 177-78, 194-95, 237-38). Address: M.D., President and Director, Preventive Medicine Research Inst., 900 Bridgeway, Suite One, Sausalito, California 94965; Asst. Clinical Prof. of Medicine, School of Medicine, Univ. of California, San Francisco. Phone: 415-332-2525.

1619. The Mail Order Catalog. Spring-summer 1996. Catalog of books and food. 1996. P.O. Box 180, Summertown, TN 38483. 24 p.

• **Summary:** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, plus books on food nutrition & health, alternative healthcare, women’s healthcare, native Americans and their cultures, and animal rights.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called “Response TVP flakes”), Harvest Direct vegetarian broth, and Protean, instant gluten flour (regular or flavored), seitan “chicken” or “sausage” mix, Mori-Nu silken tofu, Soja instant soy beverage, organic low-fat soymilk powder, Red Star nutritional yeast, Beano, and tempeh starter. Address: Summertown, Tennessee. Phone: 800-695-2241.

1620. Holt, Stephen. 1996. New developments with commercialization of soy isoflavones (Interview). *SoyaScan Notes*. March 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Dr. Holt’s first soy product, Genista (pronounced juh-NIS-tuh), is now on the market. It is basically a soy protein isolate that contains about 2 mg/gm of isoflavones; no isoflavones are added to the product. Genista was just presented yesterday to a large meeting of Midwest cardiologists, and there was enormous interest in the product. The soy protein is much better than Mevacor, a drug used to lower cholesterol, that has many undesirable side effects. Combining James Anderson’s meta-analysis studies and his own research, Dr. Holt decided that 30 gm of Genista would lower blood cholesterol by 20-30% over a period of 3-6 months as an adjunct to a low-cholesterol diet. His company is trying to be very responsible in the way they market the product, together with lifestyle changes. They market a health plan, so as not to give consumers a false sense of security.

Take Care, sold by Protein Technologies International, contains anywhere from 0.68 to 2.39 mg/gm of isoflavones; no isoflavones are added. But PTI has not come out with a recommended dose in a format that will lower blood cholesterol. Bodybuilders consume up to 6 gm of protein per kg of body mass. Apparently if they take this protein as

soy protein it seems to be efficiently handled, which is quite interesting. Protein Technologies International is conducting a study with Romanian athletes; they are measuring urinary mucoproteins, which are some indicator of efficiency of renal handling.

Genista is based on his own research and that of Dr. James Anderson, which says that if you consume 30 gm of a soy protein isolate containing a standardized amount of isoflavone, you will lower your cholesterol. He has quite good early success. He has a joint venture with Charles Day, PhD, of Kentucky who has developed an agricultural process for making almost pure isoflavones from soybeans. They have just received investment money from Japan to turn this into a large-scale commercial process. The cost of the key piece of equipment is about \$6-8 million. They use a proprietary technique and a patented heat-tank solvent extraction process to process partially defatted lightly heat treated soybean meal (usually used for chicken feed) to extract the isoflavones, which are lipophilic. From 4 tons of the meal he can extract 1 kg of isoflavones of 85% purity; they are composed mainly of genistein. As far as he knows, his is the only company in the extracting isoflavones commercially, and enriching products with isoflavones. He has about \$6 million of orders on paper for isoflavones from a variety of nutraceutical manufacturers. Why isn’t a big company like ADM doing this? “They are looking at it, but they haven’t got the science right or the process; we have.”

His second product will be Genista-Plus, which will contain 20 mg/gm of isoflavones and will be enriched with isoflavones. Another product, Phyto-Est, will contain 25 mg/gm of isoflavones; it has come out of the joint-venture agreement with Charles Day and the Japanese. It will on the market as soon as they can get a label on it. These products will be sold in double-oh capsules. The capsules of Phyto-Est are already made.

The Italian National Health Service has been giving out soy protein isolate as a free item in their health care preventive approach, mostly to people with kidney (renal) failure who tend to have high cholesterol levels. It has been shown repeatedly in that experience to be quite effective. In addition, soy proteins lower blood pressure, improve renal efficiency and renal handling, and promote calcium retention—which in turns lowers blood pressure.

Dr. Holt says Twin Laboratories is now selling a product named “Twinlab Genistein.” In Jan. 1996 Dr. Holt began publication of a new periodical titled *Nutraceutical News International: An information source on natural remedies*. He is Editor in Chief and president of Natus, Inc., New York. His portrait appears on the front page. Stephen Yaskin, M.S., is editorial editor. To subscribe, send \$19.95 for 6 issues, payable to Natus, Inc., 200 Clearbrook Rd., Elmsford, NY 10523.

Note: This is the earliest document seen (Sept. 2001) that contains statistics about the soy estrogen industry and

market. Address: M.D., Natus Inc., 2388 28th Street, Long Island City, New York 11105. Phone: 718-721-1496.

1621. Feder, Barnaby J. 1996. Out of the lab, a revolution on the farm: New genetic weapons to battle bugs and weeds. *New York Times*. March 3. Section 3 (Money & Business). p. 1, 11. Sunday.

• **Summary:** “Biotechnology is leading to a revolution in farming by allowing genetic characteristics to be transferred selectively from one species to another.” A petunia gene now protects soybean plants from Monsanto’s powerful Roundup herbicide, allowing farmers to spray more Roundup herbicide on “Roundup-Ready” genetically engineered soybeans. (Note: Roundup has been used and recommended for use on soybeans since the early 1980s). Farmers pay a licensing fee of \$5 a bag—in addition to the cost of the seeds. Limited varieties are available from Asgrow Seed Company. Farmers are hoping that Roundup-resistant soybeans will reduce their reliance on costlier and more hazardous chemicals. Under the licensing agreement, farmers must promise not to sell or give away any seed or to save any for planting next year. They must use Roundup herbicide (made by Monsanto) and allow inspections by Monsanto officials. Monsanto and Asgrow are working together closely on the project. But many soybean farmers are worried about planting Roundup-resistant soybeans because the European Union has not yet agreed to allow them to be imported. Trade negotiators and major exporters such as ADM are confident the problem will disappear by harvest time, in part because they have the backing of European scientific reviews.

Similar goals are being pursued using traditional breeding technologies. Selective breeding of mutant soybeans, for example, allowed Du Pont and scores of seed companies to develop popular soybean lines that tolerate Du Pont’s powerful Synchrony herbicides, such as Asgrow’s soybeans tolerate Roundup. First marketed in 1993, Synchrony-resistant crops could cover as many as 5 million of acres of farmland this year.

The genetic engineering revolution began in the mid-1970s when scientists discovered an easy way to make copies of the genes, and then to move them among species. The results of genetic engineering, known as “transgenic” products, first showed up as niche items like Calgene Inc.’s Flav’r Sav’r tomatoes that were designed to ripen more slowly and thus arrive fresher at supermarkets, and a bacterially produced version of an enzyme used in cheese production that previously had to be extracted from a calf’s stomach. “This spring, though, the gene-shifting technologies will finally burst out of the nation’s laboratories and test plots and into everyday farming of crops like corn, soybeans, and cotton.” Now the payoff begins. Ciba-Geigy and Mycogen have spliced a gene from the common bacteria *Bacillus thuringiensis*—known as Bt—into Maximizer brand corn seeds. The seed then produces a protein hitherto found

only in bacteria, and this protein kills the European corn borer. Cotton seeds containing the BT gene kill bollworms and tobacco budworm while raising crop yields 15-20%. “Coming soon will be corn or soybeans with higher oil or protein content to make them more valuable as animal feed, and colored cotton that will reduce the need for chemical dyeing.”

The spread of genetic engineering into big commodity crops will be a major test of its potential to help feed a world that is expected to double its population over the next 40 years. “Experts say at least half of the acreage of the nation’s major crops will be covered with plants harboring a foreign gene early in the next century.” Executives at Pioneer Hi-Bred International, America’s largest seed company, think the new developments may be as important for agriculture as the first plow. Pioneer expects transgenic product to account for one-third to one-half of its product lines by the year 2000. “Other powerful new technologies are also converging on farming, like computerized mapping of soils and yields, and the use of satellites to precisely position planters’ sprayers and other equipment.”

But critics fear that the nation is lurching recklessly toward a series of giant environmental experiments that could backfire. The hottest area of debate is insect-resistant crops. The worry is that insects and weeds will quickly build up resistance to the transgenic plants and pesticides used in conjunction with them, possibly leaving farmers worse off than before—after a short burst of productivity.

1622. Smith, Michelle. 1996. Re: Membership letter for Soyfoods Association of America. Letter to William Shurtleff at Soyfoods Center, March 6. 3 p. Typed, with signature on letterhead.

• **Summary:** The letter begins: “The demand for soyfoods continues to rise and the top certainly isn’t in sight.” Discusses two main marketing projects undertaken by SAA in 1995: A 125+-page market study titled *A Consumer Profile of the Soyfoods Shopper*; and preparations for National Soyfoods Month in April 1996. “The concept of Soyfoods Month has been carefully researched and developed over the past year by a special committee of representatives from Archer Daniels Midland, Vitasoy, Nasoya, the American Soybean Association, and our public relations firm, the Shelton Foley Group.”

What’s in store for 1996? Programs that promote soyfoods to a broader, mass market audience. SAA exhibit at the American Dietetic Association Annual Meeting for the third year in a row. “We are pursuing opportunities to exhibit soyfoods at supermarket, foodservice, and restaurant trade shows. Our public relations firm will continue to aggressively target the natural foods and mass media trade.”

There are three member categories with a range of dues: Producers and marketers: \$3,000 to \$250. Suppliers: \$450. Industrial/professional: \$350. Address: P.O. Box 3179,

Walnut Creek, California 94598. Phone: 510-935-9764.

1623. Andreas, Dwayne. 1996. Re: Proposed changes in Board of Directors. Letter to shareholders, March 21. 2 p. Typed, with signature on letterhead.

• **Summary:** Last year, in response to a crisis in the company, ADM formed a special committee of outside directors to thoroughly review ADM's corporate governance. "In January, as previously announced, ADM adopted the committee's recommendations that the full Board, as well as committees, should be made up of at least a majority of outside directors."

"Accordingly, the members of management, including James R. Randall, President, H.D. Hale, Chairman, ADM Milling Company, Martin L. Andreas, Senior Vice President, and Michael D. Andreas, Executive Vice President, who are now Directors will not stand for reelection to the board this year. This will create four vacancies which will be filled with independent outside Directors in due course. In addition, two or more current directors may choose not to stand for reelection, and ADM will have the option to replace them at some future time or reduce the size of the Board." Address: CEO, Archer Daniels Midland Co., P.O. Box 1470, Decatur, Illinois 62525.

1624. Burton, Thomas M.; Kilman, Scott. 1996. FBI videotapes are part of evidence in antitrust inquiry on Archer-Daniels. *Wall Street Journal*. March 27. p. A6. Monday (West).

• **Summary:** The two videotapes, recorded secretly, show senior agricultural-company executives, meeting in Los Angeles (California) and Hawaiian hotel rooms.

1625. Cohen, Laurie P. 1996. Feed fight—Tough battle looms as ADM lawyers plot price-fixing defenses: Prosecutors have videotapes but few live witnesses against Andreas's firm. 'Can't afford to plea guilty.' *Wall Street Journal*. March 27. p. A1, A6. Monday (West).

• **Summary:** The government has told ADM lawyers that Dwayne Andreas, age 77 and ADM's chairman, is not currently a target of this investigation. One of the key suspects is Michael D. Andreas, son of Dwayne Andreas and, "at least until recently, his likely successor.

An illustration shows Michael D. Andreas.

1626. **Product Name:** GranoVita Deluxe Soya Yoghurt [Natural, Black Cherry, Strawberry, or Peach & Apricot]. **Manufacturer's Name:** GranoVita UK Ltd. (Marketer-Distributor). Made in Germany by DE-VAU-GE Gesundkostwerk GmbH.

**Manufacturer's Address:** Granovita UK Ltd., Ambron House, Eastfield Road, Wellingborough, Northants NN8 1QX, UK. DE-VAU-GE, Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.

**Date of Introduction:** 1996 March.

**Wt/Vol., Packaging, Price:** 125 gm plastic cup with peel-off foil lid. Retail for £0.37.

**How Stored:** Refrigerated.

**New Product—Documentation:** Soyafoods (ASA, Europe). 1996. Spring. p. 4. "Granovita launches Soya Yogharts." These are ambient stable products with a shelf life of 4 months. They contain real fruit with no added sugar, artificial color, or preservatives. A photo shows cups (and labels) of the four different flavored products.

Note: In late 1990, DE-VAU-GE, a Seventh-day Adventist health food company in Germany, set up GranoVita UK Ltd. as a UK subsidiary after the Haldane Foods Group purchased their UK distributor, Granose Foods Ltd.

1627. **Product Name:** So Good Natural Yoghert.

**Manufacturer's Name:** Haldane Foods Group Ltd.

(Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.

**Date of Introduction:** 1996 March.

**Ingredients:** Incl. soya milk.

**Wt/Vol., Packaging, Price:** 360 gm resealable pot. Retail for £0.89 (4/96, England).

**How Stored:** Shelf stable, 4-month shelf life at room temperature. Refrigerate after opening.

**New Product—Documentation:** Spot in Soyafoods (ASA, Europe). 1996. Spring. p. 4. "New products from Haldane Foods Group." This product was launched in a family size (360 gm) resealable pot.

1628. **Product Name:** Direct Foods Chicken Burgamix.

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.

**Date of Introduction:** 1996 March.

**Ingredients:** Soy protein.

**Wt/Vol., Packaging, Price:** 300 gm box. Retail for £1.89 (4/96, England).

**New Product—Documentation:** Spot in Soyafoods (ASA, Europe). 1996. Spring. p. 4. "New products from Haldane Foods Group." This is the latest addition to the Sosmix / Burgamix range of dry mixes in resealable boxes.

1629. **Product Name:** Direct Foods Natural Soya Mince, and Natural Soya Chunks.

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.

**Date of Introduction:** 1996 March.

**Ingredients:** Soy protein.

**Wt/Vol., Packaging, Price:** 175 gm sachet. Retail for £0.75 (4/96, England).

**How Stored:** Shelf stable.

**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1996. Spring. p. 4. “New products from Haldane Foods Group.” These dry mixes are available in sachets.

1630. Day, Charles E. 1996. Commercial development by Audax of soy isoflavone products (Interview). *SoyaScan Notes*. April 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Charles worked for Upjohn for many years and from them he learned how to do research and to make drugs. He first got interested in soybeans in 1993 when he happened to read the now famous article titled “Genistein, a dietary-derived inhibitor of *in vitro* angiogenesis,” by Fotsis, Adlercreutz, and others published in the April 1993 issue of the *Proceedings of the American Academy of Sciences* (90:2690-94). Both of his parents, who lived in Kentucky, had been stricken with cancer and he was trying to help them. He had set up a laboratory nearby, and he immediately tried to extract genistein from soybeans in this lab. But he simply couldn’t make the quantities he needed. By the time he had a little pilot plant set up, it was too late. His father died in July 1993 and his mother died in October 1993, the same week he had enough genistein to give to her.

As far as Charles knows, his is the only company extracting isoflavones from soybeans. His is a small, family-owned business (the employees are himself, his wife, his son, and one new outside person), but he believes it has great potential for growth. ADM keeps saying they are going to. He has had several meetings and discussions with all of the ADM executives in charge of that division. A plane load of them have come to Kentucky to visit him, and his team has gone to Decatur, Illinois, to meet with them several times. He does not know what ADM is thinking and why they are not moving forward in this area. They would have no trouble developing a good, large-scale process for extracting and purifying the various soy isoflavones. He has also talked to some other big soy processors. One reason for their hesitation is the fear of a big lawsuit, if someone overdoses and gets sick.

Charles hesitated to move forward with his manufacturing plans for fear that if ADM started extracting isoflavones, he would not be able to compete. Then a company came to Charles and said they wanted it so badly they were willing to buy it at virtually any price and wanted to sign a contract on the spot. That company was Natus, owned by Dr. Stephen Holt.

One of Charles’ major concerns is the regulatory aspects of introducing such a product. With the passage of the Dietary Supplements Health Education Act (DSHEA, pronounced duh-SHEE-uh, also called the Hatch Act, after

Senator Orrin Hatch, Republican of Utah) in 15 Oct. 1994, the whole world of nutraceuticals was revolutionized. This Act made it much easier to sell dietary supplements without FDA approval. It essentially put the burden of proof on the FDA. The actual language of the Act makes “amazing reading. The Act is a watershed event for the health food industry in the USA. “If the soybean isoflavones are handled correctly (and I am not divulging exactly what that means), the regulatory and safety issues will be greatly minimized. It becomes feasible to make and market the product. A company’s risk is diminished, for example, by appropriate use of warning statements.

Audax is fully booked at this point. He has more orders than he can handle. Up to this time, he has been making only pilot plant quantities. If all goes well, Audax will be making commercial quantities within the next 4 months. At that time he will be looking for new customers. Their first product will be Genistone, which is a soy extract; approximately 50% of the content of the product is soy isoflavones. Of those isoflavones, approximately 80% contain genistin. It will be sold as a dry powder and sell for about \$2,000 per kg of isoflavone content. At his price, the 25 mg of total isoflavones in a typical serving of tofu would be worth about \$0.05 (5 cents). He feels that this price can drop quite a bit if he is processing hundreds of tons a day of defatted soybean meal. He thinks he will have the capacity to do that, because he is now working with a large, local soybean crusher.

His main plan for marketing the product is to sell it to food processors who would add it to food products (such as soy yogurt or tofu) at levels with valuable biological benefits; he does not plan to sell it as a supplement to avoid the risks of people overdosing. One problem with adding soy isoflavones to other products is that they have a bitter flavor. However since very small amounts will be added to foods, they may not be noticeable in the final product.

He is using defatted soybean meal as his starting material from which to extract the soy isoflavones. Thus he is using the protein fraction of the soybean rather than the lipid fraction (incl. soy molasses). Isoflavones are closely bound with proteins. The reason he is not using the lipid fraction or soy molasses is proprietary. He has noticed that his by-product (defatted soybean flour containing no isoflavones) has a better taste than most soy flour (and maybe better stability) and he is looking for ways to sell it as a value-added product. He is currently adding it to chicken feed.

If you look at all the isoflavones in the whole soybean, 50-60% is daidzin. But genistein has the greatest biological activity. So he set out to make a product that is rich in genistin. However his product, Genistone, contains genistin as its largest constituent. This is because genistin is hydrolyzed in the gut to genistein, which is then absorbed into the bloodstream.

Charles believes that genistein, at a high enough dose, can stop the growth of cancer in humans. There is

scientific evidence that genistein has cytotoxic activity at a high enough dose; all the major anti-cancer medicines (chemotherapeutic agents) these days are cytotoxins. Put in the right place, they kill both cancer- and non-cancer cells. Genistein has some other properties that make it attractive therapeutically; at a very low dose, it may stop the growth of cancer without killing the cancer cells. This dose is roughly that obtained by eating 6 servings of tofu per day. There is also some evidence of anti-metastatic activity, i.e. it may prevent the cancer from metastasizing, or spreading to other parts of the body—at much lower doses than the cytotoxic activity.

Soy isoflavones have some very potent biological activities. They are an inhibitor of a group of cell transduction proteins called the protein tyrosine kinases, which modify cell division, cell signalling mechanisms, etc. At a high dose (e.g. ten times the desirable dose) there could be some problems. Look at the market for estrogen replacement therapy. Estrogens are great; they do everything that genistein does except they cause cancer instead of preventing it. Genistein does all the things that estrogens do and it prevents cancer. About 6 months ago Merck introduced a drug named Fosamax that prevents osteoporosis and increases bone density. They billed it as one of their big blockbuster drugs for the future, with sales projected at \$1.5 billion a year. It was selling very well, but just last week Merck sent out a “Dear doctor” letter to 150,000 physicians notifying them that one serious side effect was extreme abdominal pain. 36 women have been hospitalized. Sales have started to drop.

What will prevent companies like ADM, Merck, or Sandoz/Novartis from competing with Audax? Nothing.

Talk with Steve Buchheim, marketing manager for soy applications at ADM. 1998. March 6. Steve thinks that Audax never brought their product to market because they were unable to get the soy solids they needed. It was NOT because of any problems or potential problems related to the FDA or regulation. Address: Director of Research, Audax, Inc., 1385 Bear Creek Road, Leitchfield, Kentucky 42754. Phone: 502-242-3791.

1631. Cohen, Laurie; Burton, Thomas M.; Kilman, Scott. 1996. Bargain at the bar. Archer-Daniels cuts surprisingly good deal in price-fixing suit: Proposed settlement follows judge’s unusual move to seek bids by lawyers. \$25 million for its customers. *Wall Street Journal*. April 12. p. A1, A6. Friday (West).

• **Summary:** ADM is prepared to pay \$25 million to settle the most difficult of its civil-litigation problems. The proposed settlement would deal with the class-action allegations of roughly 150 lysine buyers (most of them feed companies) that ADM and competitors manipulated the \$600 million market for lysine, a livestock-feed supplement. ADM controls about 40% of the U.S. lysine market. There

are incriminating videotapes of meetings between officials of ADM and its competitors in this market. This would not affect civil suits pending over alleged price fixing in markets for citric acid and high-fructose corn syrup.

Other major lysine makers, the U.S. units of Japan’s Ajinomoto Co. and the BioKyowa Inc. U.S. unit of Kyowa Hakko Ltd., would each pay \$10.2 million to settle their portion of the lysine case—giving a total settlement of more than \$45 million.

1632. Mehra, Vinod K. 1996. Re: History of Maple Leaf Mills and ADM Agri-Industries Ltd. Letter to William Shurtleff at Soyfoods Center, April 16—in reply to inquiry. 2 p. Typed, with signature on letterhead.

• **Summary:** During World War II, in about 1942-43 [sic], a company named Toronto Elevators began crushing flaxseed, primarily for the linseed meal. [Note: Toronto Elevators. Ltd. began crushing soybeans in Toronto in 1938]. At the end of the war [in 1944 in Toronto], Victory Mills built a solvent extraction plant for soybeans, then in 1951 Maple Leaf Mills also built a soybean crushing plant; that year Maple Leaf first began crushing soybeans. ADM acquired Maple Leaf Monarch in July 1985 [on about July 19].

Note: Mr. Mehra’s letterhead reads “ADM Agri-Industries Ltd.” The company name printed on the envelope is the same. Maple Leaf Monarch is not mentioned in either place. But in the 1994-95 Soya Bluebook Plus (p. 94) the company’s entry reads: “A.D.M. Agri-Industries Ltd. Affiliate of Archer Daniels Midland Company d/b/a Maple Leaf Monarch.”

Note: A review (in May 1996) of Windsor newspaper articles shows that Maple Leaf Monarch opened in Windsor (Ontario, Canada) at 5550 Maplewood in July 1979. This Windsor plant replaced an aging Maple Leaf Mills crushing plant on the Toronto waterfront. The latter plant may have been the original Toronto Elevators Ltd. Address: ADM Agri-Industries Ltd., P.O. Box 7128, 5550 Maplewood Drive, Windsor, ONT Canada N9C 4G9. Phone: 519-972-8100.

1633. *Biodiesel Report (NBB, Jefferson City, Missouri)*. 1996. European Biodiesel Board formed, new plant inaugurated. April. p. 2.

• **Summary:** “Key biodiesel producers in Europe, representing an annual production capacity of more than 150 million gallons of vegetable oil methyl esters, joined forces to form the European Biodiesel Board (EBB). Novaol Company’s Claudio Rochietta, which has affiliates in Italy and France, will serve as president.”

“In addition to Novaol, Diester Industries in France, Oelmuhle Conneman in Germany, BME / VNR in Germany, Oelmuhle Bruck in Austria and SISAS in Belgium also became charter members last November.

“The EBB met April 24 to help inaugurate a new 24

million gallon biodiesel plant in Germany. The plant is operated by Oelmuhle Leer Conneman GmbH & Co., one of EBB's charter members. The company is also an affiliate of Oelmuhle Hamburg AG, in Hamburg, which belongs to Archer Daniels Midland Company, based in Decatur, Illinois."

1634. Carney, Dan. 1996. The Mother Jones 400–Welfare king: Dwayne & Inez Andreas (#3). *Mother Jones* March/April. p. 44.

• **Summary:** "Dwayne & Inez Andreas, Decatur, Illinois. Donated \$348,950 since 1993. Party: Both. They gave \$254,500 in soft money to the Democrats, and \$30,000 to the GOP. They also gave \$22,950 to 25 candidates, nearly all Republican."

Click on the link to view Andreas' itemized contributions according to the MoJo 400 searchable database.

"But Andreas' closest political ties are to Bob Dole, a longtime ethanol champion."

1635. Goulart, Frances Sheridan. 1996. Oh, soy! *Fit* (New York). March/April. p. 77-79.

• **Summary:** On the section titled "A nutritional wonder," the authors notes that soymilk has 15 times more iron than dairy milk, 50% less fat, and no cholesterol. Tofu is one of the two best sources of calcium (yogurt is the other) recommended by the Osteoporosis Foundation for meeting adult calcium needs (1,000 mg/daily). One 4-oz. serving of tofu provides twice as much calcium as one cup of plain yogurt. Soybeans provide the antioxidant vitamins A and E.

A sidebar titled "Your soy shopping list" gives brief definitions of tofu, tempeh, miso, natto, soy milk, soy cheese, soy sauce, and textured vegetable protein (TVP). Address: Connecticut.

1636. *Ontario Soybean Growers' Marketing Board Newsletter*. 1996. Profiles: CanAmera. April. p. 7.

• **Summary:** CanAmera is Canada's largest oilseed processor, with five crushing plants and five refineries strategically located across Canada. Most Canadians eat CanAmera products (such as margarine or vegetable oils) at every meal. "Canadians don't see the name CanAmera. Instead, they see the brand names of a long list of industry leading products, which are actually made and packaged at CanAmera plants... For Ontario's soybean growers, however, CanAmera is a big name. The Hamilton plant processes 45% of Canada's soybean crush... A major expansion project that is under construction will boost soybean capacity by nearly 25% in the first stage with a further 25% increase in 1997." Ontario's only other large-scale crushing plant is the ADM facility at Windsor. The two facilities are expected to crush 1.6 to 1.7 million tonnes (59 to 62 million bushels) of Ontario's forecasted 1.9 million tonne harvests in upcoming years.

A photo shows Murray Davis, Senior Vice President of Trading and Marketing. "Davis would like to see Ontario soybean growers shift more of their focus towards the domestic crush market instead of exports." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1637. Robertson, Robin. 1996. 366 healthful ways to cook tofu and other meat alternatives. New York, NY: Penguin/Dutton. 406 p. Index. 24 cm. A Plume book. Nutritional analyses provided by Ed Blonz, PhD.

• **Summary:** Contents: Introduction. 1. Appetizers, hors d'oeuvres, and sandwiches. 2. Stews and hearty soups. 3. Pasta dishes. 4. Casseroles, gratins, and risottos. 5. Stir-fries. 6. Burgers, loaves, and savory pies. 7. Under wraps, stuffed, and skewered. 8. Sautéed, seared, and grilled. 9. Main-dish salads. 10. One-dish meals.

The three main meat alternatives used in the recipes in this book are tofu, tempeh, and seitan. Other soy and related foods are used in recipes are: Adzuki beans, soy milk, and TVP. The author is a woman. Address: Professional chef and cooking instructor, Virginia Beach, Virginia.

1638. *Soyfoods* (ASA, Europe). 1996. New products from Haldane Foods Group. 7(1):4. Spring.

• **Summary:** "At last year's International Food and Drink Exhibition in London, Haldane Foods launched no less than thirteen new products. Apart from the Realeat VegeSteak (See Soyfoods, Vol. 6, No. 3), and a new range of 300 gm microwaveable frozen ready meals in tubs (Realeat Meatless Chili, Realeat Meatless Bolognese, Realeat Meatless Curry—300 gm tub for £0.99) based on VegeMince and VegeSteak, the company launched Realeat VegeBites, a non-meat version of chicken nuggets (454 gm bag—£2.49)."

1639. *Soybean Quarterly* (Nebraska Soybean Board, Lincoln, Nebraska). 1996. Baking with soy: Variety reference guide. 2(2):6. Insert.

• **Summary:** A full-page table shows products used in baking that are now on the market from the following companies: ADM (6 products), AGP (4 types of Agsoy flour and grits), Cargill (5), Central Soya (4), and Protein Technologies International (5).

1640. Riddle, Kitty. 1996. Re: Maple Leaf Monarch and the soybean industry in Windsor and Essex County, Ontario, Canada. Letter to William Shurtleff at Soyfoods Center, May 2—in reply to inquiry. 2 p. Typed, with signature. [2 ref]

• **Summary:** Kitty photocopied 16 articles on soybeans and Maple Leaf Monarch from the *Windsor (Daily) Star* from 20 Jan. 1948 to 23 Sept. 1986. These articles indicate that: (1) Maple Leaf Monarch opened in Windsor (Ontario, Canada) at 5550 Maplewood in July 1979; (2) This Windsor plant replaced 'an aging Maple Leaf Mills crushing plant on the Toronto waterfront'; and (3) Maple Leaf Mills became active

in oilseed processing in 1941.

“I did not locate any references to Toronto Elevator or Maple Leaf Mills in our holdings of Windsor City Directories beginning in 1891. There was a Maple Leaf Milling Co. on Montreuil Avenue beginning in 1929 to 1958 and on Crawford Avenue from 1959 to 1966 but they were agents of flour and cake mixes.” Address: Literature & History Div., Windsor Public Library, 850 Ouellette Ave., Windsor ONT N9A 4MB, Canada. Phone: (519) 255-6770.

1641. Henkoff, Ronald. 1996. The ADM tale gets even stranger: Theft. Extortion. Sabotage. Even phone calls to the CIA. These guys just can't stop slinging mud at each other. *Fortune* 133(9):113-14, 116, 118, 120. May 13.

• **Summary:** “As Bonnie Wittenburg, a security analyst at Dain Bosworth in Minneapolis, says, ‘If this investigation were just about lysine, who would care? From an investment point of view, things would be worked out. But to me, there are signs that we’ve got a corporate culture problem here.’

“No matter what kinds of deals it strikes in court, then, ADM will still have to clear the heavy clouds surrounding the way it prices products, acquires technology, pays executives, and deals with government officials. At the least, the events of the past ten months threaten the legacy of Chairman and Chief Executive Dwayne Andreas, 78, the man who built ADM into a global agribusiness. At the worst, they could lead to the indictment and possible imprisonment of his son and onetime heir apparent, Michael Andreas.”

1642. Kuhn, Mary Ellen. 1996. Soy in the spotlight: Disease-fighting benefits may change the image of the once-lowly bean. *Food Processing (Chicago)*. May. p. 52-53, 55, 58.

• **Summary:** This is a cover story; on the cover is written: “Unlocking the secrets of soy,” with four large color photos. The article begins: “What a difference a couple of decades make.” Twenty or 30 years ago, most foodservice operators and consumers used soy with hesitation, sometimes scornful comments. “Today, however, the once-maligned soy protein has a much better image, thanks to a fast-mounting stack of research data suggesting it may help prevent and treat high blood cholesterol, cancer, osteoporosis, and symptoms of menopause.” And this good news has begun to reach health and nutrition professionals. With better products on the market, “soyfoods marketers may soon be dealing with a new generation of mainstream consumers who—far from spurning soy-based products—actively seek them out.

“Much of the current soy research is focused on isoflavones, a unique class of phytoestrogens or plant hormones found primarily in soy protein.” The main soy isoflavone is genistein. Now soyfoods manufacturers are starting to take isoflavone content into consideration when they formulate, label, and promote their products. The isoflavone content of unprocessed soybeans can vary considerably among varieties, years, and place of harvest.

Heat treatment does not appear to significantly reduce isoflavone content, but an alcohol wash (used with most soy protein concentrates and isolated soy proteins) removes most isoflavones in the product. The well-known Supro brand of isolated soy proteins are not subject to an alcohol wash, which helps preserve their isoflavone content.

Rick McKelvey, president of the Soyfoods Association of America, has attended the American Dietetic Association show for the past two years. Last year, most of the questions he heard were: “What is this soy stuff that I’m hearing about?” This year’s questions concerned the level of isoflavones in specific products. “This shows how far we’ve come in the last year,” he observes.

ADM, which could easily extract isoflavones from soybeans and sell them has decided not to do so. Jerry Weigel, PhD, who is ADM’s vice president of corporate nutrition and regulatory affairs thinks it is probably not legal to sell isoflavones because they do not have GRAS (Generally Recognized as Safe) status or food additive status. Few soyfoods marketers are presently publicizing the isoflavone or genistein content of their products or making specific health or disease-prevention claims.

William Helferich, PhD, an associate professor at Michigan State University’s Department of Food Science and Human Nutrition, has been studying dietary phytoestrogens in laboratory animals for 3 years. He has found that “genistein can stimulate estrogen-responsive breast cancer-cell growth in cultured cells and in animals implanted with these cells. He believes that women at risk for estrogen-dependent forms of breast cancer should not consume high levels of phytoestrogens.” Most researchers are concerned about consumers taking isoflavone supplements or pills. Yet such products are now on the market and they acknowledge that some consumers will be attracted to them, instead of simply increasing the level of soyfoods in their diet, eating a healthful, balanced diet, and living a healthy lifestyle. Photos show: A jar of Morningstar Farms Roasted Soy Butter (soynut butter) which will be introduced this spring. Jan Remak, president of marketing for Vitasoy U.S.A.

One sidebar, titled “Probing the soy/health connection,” discusses the research of Dr. James Anderson and Mark Messina, PhD. “Scientists theorize that phytoestrogens in soy might help compensate for the loss of hormonal estrogen women experience at menopause.”

Another sidebar, “Boom times for the bean,” notes that starting soon after the research study by Dr. James Anderson was published in August 1995, many soyfoods companies experienced a substantial increase in sales. Peter Golbitz notes that “After years of steady 10% to 15% annual growth, soyfood sales have soared by about 30% in the past year... Many marketers of meat and dairy analogs are reporting sales increases of more than 100%.” A 1995 study by the Soyfoods Association of America found that 75% of Americans have heard of tofu, 55% of soymilk, and 50% of

soy burgers. Golbitz adds that in Australia, where soymilk based on soy protein isolates is widely available, per capita soymilk consumption is at least three times what it is in the USA. Vitasoy has adopted a niche-market approach to selling its soymilk; it adjusts the amount beany taste according to the taste preferences of each market. Address: Senior Editor.

1643. Ohio Soybean Council / Soy Ohio. 1996. Creative cooking with soy. Columbus, Ohio. 20 p. May. 24 cm.  
 • **Summary:** This attractive cookbooklet contains many large color photos on thick glossy paper. The recipes are: Heartland burgers (with TVP). Golden baked beans (with 2 cups cooked soybeans). Creamy tomato soup (with soy milk, silken tofu, and soy oil). Chicken raspberry salad (with silken tofu in the sauce, and reduced sodium soy sauce). Easy day vegetable lasagna (with silken tofu). All-American twice-baked potatoes (with silken tofu). Primo veggie pasta (with silken tofu in the sauce). Oatmeal bread (with soy milk and soy flour). Better bran muffin (with soy milk and soy flour). Super crunchy caramel corn (with soy margarine). Fruit smoothie (with silken tofu). Sweetheart cinnamon rolls (with silken tofu and lite soy margarine). Chocolate silk dessert (with silken tofu and soy margarine). Buckeye surprise (with silken tofu and soy margarine). The last two pages are “Working with soyfoods” (soy flour, soy oil, tofu), and “Soyfoods resources” (a directory of organizations, books, and web sites providing information about soyfoods and nutrition).

Talk with Kelly Ollwine, executive secretary for the Ohio Soybean Council. 1996. June 7. This booklet, published in May 1996, was developed by Jim Kapp of Yoder, Sullivan & Kapp, a consulting firm in Columbus, Ohio. He also developed another such book titled “Cooking American Favorites with Soy,” published in 1994.

Talk with Jim Kapp. 1996. June 7. The recipes in both these books were developed by two Ohio home economists, Connie Cahill and Melody Leidheiser. Address: P.O. Box 479, Columbus, Ohio 43216-0479.

1644. Raymond, Jennifer. 1996. The peaceful palate: Fine vegetarian cuisine. Revised ed. Calistoga, California: Heart & Soul Publications. 159 p. Illust. Index. 28 cm. [5 ref]  
 • **Summary:** A vegan cookbook, with a substantial section on vegan nutrition. Contains 11 tofu recipes and 1 recipe for tempeh sandwich.

Contents: Acknowledgements. Introduction (most Americans eat too much protein and far too much fat). Choosing food for optimum health. Protein. Calcium. Protein myths and facts. Putting fat in its place. Cutting the fat. Dairy products and eggs (why each is cruel to animals; soy and rice milks are excellent alternatives to cow’s milk; tofu can be scrambled in place of eggs. Five good books about factory farming. Contact information for three organizations “working to end the horrors of factory farming”). A note

about sweeteners. Cooking dried beans. Equipping your kitchen. Stocking your pantry for healthful eating. What to eat when you don’t eat meat. Foods which may be new to you [glossary] (includes aseptically packaged tofu, barley malt, low-sodium soy sauce, mirin, miso, Nayonaise {eggless, dairyless, cholesterol-free mayonnaise}, non-dairy frozen dessert, non-dairy yogurt, reduced-fat tofu, rice milk, rice syrup, seitan, silken tofu, soy milk, Spectrum Natural Spread {similar to soft margarine but made without hydrogenated fats}, tempeh, textured vegetable protein {TVP}).

“Until he extends the circle of his compassion to all living things, man will not himself find peace”—Albert Schweitzer.

Recipes: Breakfasts. Breads. Sandwiches. Salads & salad dressings, etc. A portrait photo (p. 159) shows Jennifer Raymond. “She works as a chef and nutrition specialist with Dean Ornish, M.D. in his ‘Open your heart program,’ teaching patients how a delicious, easily prepared vegetarian diet can reverse heart disease.” “Her first cookbook, *The Best of Jenny’s Kitchen*, was published by Avon books in 1981 and was followed closely by her television series *Cooking Naturally!* Jennifer lives in Calistoga, California, with her husband Stephen Avis and their five dogs.”

The tofu and tempeh recipes are: Scrambled tofu (p. 27). Missing egg sandwich (p. 42). Tempeh salad sandwich (p. 44). Tofu, lettuce & tomato sandwich (TLT, p. 45). Broiled tofu (p. 48). Pasta with creamy tofu (p. 109). Lasagna (with tofu, p. 113). Tofu burgers (p. 125). Tofu croquettes (p. 126). Tofu pot pie (p. 127). Tofu cream frosting (p. 148). Tofu cheesecake (p. 150).

Talk with Jennifer Raymond. 1996. May 30. The new enlarged edition was available on 2 May 1996. There are new recipes and with each recipe is a nutritional analysis. The book is still available from the author, as well as nationwide because it is distributed by The Book Publishing Company in Summertown, Tennessee. She is now working closely with Dr. Dean Ornish, and adds: "He is at the center of where things are happening related to vegetarianism, diet, and health. His work has had a more profound impact on the way that the medical profession and people in general view vegetarianism than that of almost any other person. It has allowed vegetarianism to turn a really big corner." Address: 1418 Cedar St., Calistoga, California 94515. Phone: 707-942-2180.

1645. Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease: September 15-18, 1996. Brussels Conference Center, Brussels–Belgium. 1996. American Soybean Assoc., Rue du Commerce 20-22 Box 4, 1010 Brussels, Belgium. 23 p. 30 cm.

• **Summary:** The cover of this attractive booklet has dark green ink on natural beige paper, with a square photo of soybeans in the middle. Contents: Invitation from the chairperson. The Second International Symposium On the Role of Soy in Preventing and Treating Chronic Disease: agenda. Satellite Symposium: agenda. Important deadlines and addresses. Instructions for abstracts. General information. Introducing Belgium and Brussels. Registration. Hotel accommodation. Social program. Symposium registration form. Hotel accommodation form. Social program form.

This symposium is being organized by Mark Messina, PhD (Chairman, USA), Roger Leysen, PhD (Secretary, Belgium), and Koen Descheemaeker, PhD (Scientific coordinator, Belgium). The international scientific advisory board consists of 12 members: Herman Adlercreutz, M.D. (Finland); Guiseppe D'Amico, M.D. (Italy); Stephen Barnes, PhD (USA); John Erdman, PhD (USA); Bernard Guy-Grand, M.D. (France); Takemichi Kanazawa, M.D. (Japan); Jean-Michel Lecerf, M.D. (France); Erik Muls, M.D. (Belgium); Marcel Roberfroid, PhD (Belgium); Risto Santti, M.D. (Finland); Cesare Sirtori, M.D. (Italy); Kurt Widhalm, M.D. (Austria).

Tentative agenda: Sunday, Sept. 15. Welcome and opening remarks. Overview of diet and cancer. Biotechnology of the soybean. Monday, Sept. 16. Soy and kidney function. Soy and bone health. Soy and heart disease:

Hypocholesterolemic effects of soy (basic, mechanisms). Tuesday, Sept. 17. Soy and heart disease: Effects of independent cholesterol reduction. Soy and cancer: Animal studies, soybean anticarcinogens / anticancer mechanisms. Wednesday, Sept. 18. Soy and cancer: Human studies. Hormonal effects of soy.

Satellite symposium: A special satellite symposium will be held on Thursday, September 19, at the Sheraton Hotel, Place Rogier, Brussels; it will focus on two areas. The morning session on "Current understanding of soy and infant health" has been organized to better understand the effects of soy protein formula in infants and soyfoods in infants and young children—with particular emphasis on soybean isoflavones. The afternoon session on "Soybean isoflavones: measurement, levels in foods, and pharmacokinetics," will focus on isoflavone absorption and metabolism, and methodology for quantifying isoflavones in food and biological matrices.

The cost of both symposia, including lunches but hotel accommodations, for a non-student paid before Aug. 1 is about \$439.

Sponsors contributing more than \$15,000: Alpro natural soyfoods, American Soybean Association, Protein Technologies International, Nebraska Soybean Board, Sojaja (The French Association for Soyfoods Promotion—Active members: Alpro, Nutrition et Soja, Sojasun, Sojinal), U.S. Foreign Agricultural Service, United Soybean Board, Ohio Soybean Board, Central Soya, ADM, Wyeth Nutrition International, Indiana Soybean Development Council.

Other sponsors: Illinois Soybean Association and Illinois Soybean Program Operating Board, American Institute for Cancer Research, Monsanto Company, Ontario Soybean Growers' Marketing Board, Soyfoods Association of America, Minnesota Soybean Research and Promotion Council, Iowa Soybean Promotion Board, Michigan Soybean Promotion Committee, Indiana Soybean Development Council, Morinaga Nutritional Foods, Inc., and Functional Foods for Health Program. Address: Brussels, Belgium.

1646. Demos, Steve. 1996. Recent trip to Europe. What is vegetarianism? Cause marketing (Interview). *SoyaScan Notes*. June 5. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Steve greatly enjoyed meeting Bernard Storup of *Nutrition et Soja* in France, and discussing soyfoods. Steve was especially impressed with his soymilk production and packaging line. Bernard is making some interesting soy/dairy blends. Bernard's long term plan is not to stay with Sandoz. Now Bernard gets a bonus of \$100,000 a year in addition to his salary just to stay with Sandoz.

In the UK, Steve met with Graham Keene, head of marketing and sales for the Haldane Group. Haldane makes yogurt under 3 brands, and one of them was the best soy yogurt Steve has ever tasted anywhere. Their yogurt has a

pH of 3.8 to 4.0 which gives it a shelf life of 3-4 weeks; there appeared to be no special tricks involved. Steve would soon like to travel to East Asia to take a closer look at Okinawan fermented tofu (*Tofu*). Steve spent \$100,000 to find out what people mean when they say "I am a vegetarian." They mean: "I avoid red meat."

Cause marketing is where a company puts its advertising dollars into a cause, such as saving the rain forests or promoting vegetarianism.

The largest investor in White Wave has the surname "Demos," and it is not Steve. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

**1647. Product Name:** Green Giant Harvest Burgers for Recipes: Prebrowned all vegetable protein crumbles.

**Manufacturer's Name:** Green Giant Div., The Pillsbury Company (Marketer-Distributor). Made in Decatur, Illinois, by ADM.

**Manufacturer's Address:** Pillsbury: 2866 Pillsbury Center, Minneapolis, MN 55402-1464. Phone: 1-800-998-9996.

**Date of Introduction:** 1996 June.

**Ingredients:** Water, soy protein concentrate, isolated

soy protein, methylcellulose, malt extract, corn starch, salt, natural flavor, autolyzed yeast extract, maltodextrin, dextrose, beet powder, dried onion, spice, dried garlic, modified corn starch, corn syrup solids. Vitamins and minerals: zinc oxide, niacinamide, ferrous sulfate, copper gluconate, vitamin A palmitate, calcium pantothenate, thiamine mononitrate, vitamin B-6 hydrochloride, riboflavin, vitamin B-12.

**Wt/Vol., Packaging, Price:** 12 oz printed plastic bag. Retail for \$3.09 (Dec. 1996, California).

**How Stored:** Frozen.

**Nutrition:** Per 2/3 cup (about 61 gm): Calories 90, calories from fat 0, total fat 0 gm), cholesterol 0 mg, sodium 270 mg (11%), potassium 370 mg (11%), total carbohydrate 5 gm (dietary fiber 4 gm, sugars <1 gm), protein 14 gm. Vitamin A 0%, niacin 15%, vitamin B-12 15%, zinc 35%, copper 10%, calcium 8%, vitamin C 0%, iron 10%, riboflavin 6%. Percent daily values are based on a 2,000 calorie diet.

**New Product-Documentation:** Product with Label purchased at Safeway Supermarket in Lafayette, California. 1996. Dec. 15. Label. 10 by 7¼ inches. Dark green, light green, white, yellow, and red. A large color photo shows the

crumbles being poured into a skillet of tomato sauce. "Use instead of browned ground beef. Fat free. Zero cholesterol. Good source of fiber. 12 ounces goes as far as 1½ lb. ground beef. 2/3 cup frozen crumbles equals ¼ cup ground beef, browned and drained.

Talk with Nicole, customer service representative from Green Giant. 1996. Dec. 19. This product was introduced in June 1996.

1648. Harvest Direct, Inc. 1996. Harvest Direct: Food you can live with [mail order catalog]. Knoxville, Tennessee. 16 p. 27 x 16 cm.

• **Summary:** Contents: Salad dressings. Meals in a minute (Fantastic Foods). Ground meat alternatives (Protean—The versatile replacement for ground meat, Harvest Direct). Soups, spices, condiments. TVP. Ribs, tofu & tofu meals (Fantastic Foods, Mori-Nu, Arrowhead Mills). Meat Alternatives (Worthington Foods, Fantastic Foods). Soup & meal cups. Beans & Beano. Pasta & sauces. Breads & baked goods. Substitutes for sugar, eggs & fat. Dairy alternatives. Baby foods. Glassware. Gift baskets.

On the cover are nine round, dark brown patties arranged in a circle on a blue and white plate. In the center is a sliced red grapefruit, with a strawberry at its center, blueberries scattered around the periphery, and one sprig of celery. Address: P.O. Box 988, Knoxville, Tennessee 37917. Phone: 1-800-835-2867.

1649. Beeley, Robert A. 1996. A brief history of Dixie USA and the company philosophy (Interview). *SoyaScan Notes*. July 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Forty some years ago, Robert started out with a burning interest in emergency medicine. This continued into the Air Force, where he was in the medical corps, teaching for the American Heart Association, etc. About 20 years ago he started Dixie USA as an emergency medical supply company. The company has done very well and Robert is still in that business, but it is tapering off for many reasons, none the least of which is the consolidation in the medical industry, etc.

About 15 years ago Brenda Oswalt, joined the company as an equal partner with Robert—primarily for her artistic, writing, and publishing skills. She was raised a Seventh-day Adventist and was trained at the Cordon Bleu in France as a chef. About 2-3 years ago they saw the handwriting on the wall as far as the medical part of their business is concerned, so they said: "We've been treating these poor people all this time, why don't we start trying to help prevent their problems." One thing led to another and now they are very much into the preventive food business by mail order. They kept the same company, Dixie USA, but now have two product lines and two catalogs. But their approach is quite different from most others who are in the so-called health food business. They have a couple of key rules: (1) "If it

doesn't taste excellent, we will not get involved with it." People should enjoy eating and shouldn't have to look at it as some kind of task they have to endure. Meal time should be an enjoyable time with family and friends—a glass of wine if you want. (2) "Once a week you can go out and blow the whole thing if you want to. Eat a big steak if you must. We're trying to tell people that you can have a healthier lifestyle and still enjoy life. Splurging one day a week won't hurt you at all. Eating soy the next day will help you flush out whatever toxins are left in there. We're very pragmatic people here.

They have developed a lot of their own recipes and today they have almost new 10,000 customers on their food mailing list. After they started the company, Mark Messina's book, *The Simple Soybean and Your Health* was quite influential in focusing their interests on soy. Dixie USA now sells quite a few of Mark's books. Brenda talks with Mark at length about once a week, sharing information. Fat Not! Crème It (Soy Powder) is a tofu powder made by Clofine. Brenda developed a great recipe for using it and now it is one of the company's best sellers. They also sell Mori-Nu Tofu. Beef (not!) is ADM TVP. Address: Chairman, Dixie USA Inc., P.O. Box 55549, Houston, Texas 77255. Phone: 713-688-4993 or 1-800-233-3668.

1650. ADM; Dixie USA. 1996. Skewers with style: Entertaining is easy with the Midland Harvest family of savory and satisfying all-vegetable entrees (Ad). *Vegetarian Times*. July. p. 13.

• **Summary:** This full-page color ad shows skewered meatless kabobs on a bed of rice in a silver tray. Contains a recipe for Stone-ground mustard and jalapeño kebabs—using 1 package Original Burger 'n Loaf. The six dry mixes, whose packages are shown, are: Burger 'n Loaf (Original, Herbs & Spice, or Italian Style). Chili Fixin's. Sloppy Joe Fixin's. Taco filling 'n dip. The products contain only 0-5% fat, are cholesterol free, and "Contain fiber."

Bold text near the bottom of the ad states: "Midland Harvest Mixes—The delicious way to get the great nutrition and high protein of soyfoods in all your favorite dishes. Made by ADM, Supermarket to the World.

"For more information about Midland Harvest products or for direct mail ordering, call Dixie USA 1-800-347-3494."

1651. **Product Name:** Granose Non-Dairy Custard.

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.

**Date of Introduction:** 1996 July.

**Ingredients:** Soymilk.

**Wt/Vol., Packaging, Price:** 70 gm sachet. Retails for £0.49 (7/96, England).

**New Product—Documentation:** Spot in Soyfoods (ASA,

Europe). 1996. Summer. p. 4. "Six new products from Haldane Foods." This is a vegan product, containing no dairy products. A black-and-white photo shows the package.

1652. **Product Name:** Sosmix Light.

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.

**Date of Introduction:** 1996 July.

**Ingredients:** Textured soy protein.

**Wt/Vol., Packaging, Price:** 125 gm sachet. Retail for £0.95 (7/96, England).

**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1996. Summer. p. 4. "Six new products from Haldane Foods." This product contains only 5% fat, dropping to less than 1% when reconstituted. A black-and-white photo shows the package.

1653. **Product Name:** Spicy Beanburger Mix.

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.

**Date of Introduction:** 1996 July.

**Ingredients:** Textured soy protein.

**Wt/Vol., Packaging, Price:** 150 gm sachet. Retail for £0.95 (7/96, England).

**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1996. Summer. p. 4. "Six new products from Haldane Foods." This meatless product is suitable for catering and fast-food outlets. A black-and-white photo shows the package.

1654. **Product Name:** Granose Meatless Steak & Onions.

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.

**Date of Introduction:** 1996 July.

**Ingredients:** Textured soy protein.

**Wt/Vol., Packaging, Price:** 400 gm can. Retail for £1.19 (7/96, England).

**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1996. Summer. p. 4. "Six new products from Haldane Foods." This product is made with VegeSteak. A black-and-white photo shows the package.

1655. **Product Name:** Granose Meatless Bolognese Balls.

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.

**Date of Introduction:** 1996 July.

**Ingredients:** Textured soy protein.

**Wt/Vol., Packaging, Price:** 400 gm can. Retail for £1.49 (7/96, England).

**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1996. Summer. p. 4. "Six new products from Haldane Foods." This product is made with VegeMince. A black-and-white photo shows the package.

1656. **Product Name:** Granose Meatless Frankfurters.

**Manufacturer's Name:** Haldane Foods Group.

**Manufacturer's Address:** Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.

**Date of Introduction:** 1996 July.

**Ingredients:** Textured soy protein.

**Wt/Vol., Packaging, Price:** 400 gm can. Retail for £1.49 (7/96, England).

**New Product–Documentation:** Spot in Soyfoods (ASA, Europe). 1996. Summer. p. 4. "Six new products from Haldane Foods." A black-and-white photo shows the package.

1657. Kessler, Jon. 1996. Re: Report on visit to Alfa Bio in Slovakia. Letter to William Shurtleff at Soyfoods Center, July. 2 p. Typed, without signature.

• **Summary:** This company is located in Banska Bystrica, Slovakia. Phone: 004288 761 863 or 862. Fax: 004288 763 675. Owner/manager: Jan Lunter. "I visited Alfa Bio around April 15, 1996. They are now making about 7,000 kg of tofu per week. They make regular firm plain tofu, smoked tofu, marinated tofu, and have just started using a large and expensive sausage stuffer to package okara. They plan to package *tresca* (a local fish salad—not sure if theirs is fish flavored or actually has fish), spaghetti, as well as tofu eventually. They currently make four spreads—parsley, dill, prepared peppers and vegetable.

"Equipment: As much as possible it seems they have fabricated equipment themselves due to limited capital and high cost of equipment from outside the country. They have a gas-fired boiler, 4 large bean bins in shop for soaking, with an inverted pyramid cone at the bottom. They were in the process of installing an auger to move the bean to the grinder–disintegrator type—when I visited. The slurry is heated in 3 pressure cookers that are set up in line to produce a continuous flow of slurry. The slurry is separated in a centrifuge designed by Jan Lunter, with some kind of squeezing mechanism. He said it took 1 year to perfect. The resulting soymilk is curded in round rolling barrels, pressed in three part boxes (the standard sides, base and lid) using filter fabric. The presses are lever presses. They had about 6 to 8. They press about 5 minutes. The tofu is cooled in rolling bins which are then rolled to a pair of pouch-type vacuum packaging machines from the Netherlands. The packaged tofu is weighed and labeled with its weight and

date at a different station.

“Product quality: They do not use organic soybeans, and use a mix of calcium chloride and some other curding agents. The tofu is perhaps a bit softer than nigari tofu, not as sweet and slightly crumbly. They were trying to get the tofu to bend when you take a thin slice from a 16 oz. block (as a nearby Austrian maker did) and theirs breaks. Their marinated tofu is excellent. Smoked was good too. They were not yet making the ‘tresca’ and spaghetti products in their sausage-type casing, and I did to have a chance to sample the okara.

“Market outlook: They are rightly concerned about possible shipments of tofu from Heuschen-Schrouff coming in from the Netherlands. Their price is fairly high and the Dutch company would be competitive probably. I think the Heuschen-Schrouff quality was a bit better as well, though they could probably improve by either pressing a bit more and/or changing coagulants. They might save a lot of labor if they are successful in using their stuffer to package tofu. I was impressed at the rapidity of their growth in sales. Slovakia seems to be very accepting of soy protein—I noticed a lot of TVP/TSP in many restaurants as well as markets. Perhaps this is due to both the affordability of soy protein as well as availability of alternatives, both now and in the past. Another advantage is that Slovaks are not used to prepared foods and expect to spend some time in flavoring and preparing their foods at home.” Address: Twin Oaks Community Foods, 138 Twin Oaks Road, Louisa, Virginia 23093. Phone: 540-894-5126.

1658. *Soyfoods (ASA, Europe)*. 1996. New UK distributor for ADM proteins and lecithins. 7(2):3. Summer.

• **Summary:** The Archer Daniels Midland Co. (ADM) has appointed Droitwich Specialty Products (DSP, 5a St. Andrews St., St. Andrews Square, Droitwich Spa, Worcs. WR9 8HE, UK. Phone: +44 1905 797837) as distributor in the UK for all of its soy protein and lecithin products. This brings the UK in line with the ADM Protein and Lecithin Division policy of supplying its products to the European market through specially selected distributors.

1659. Fleckenstein, Mike. 1996. Water-wash versus alcohol-wash soy protein concentrates (regular and textured) and their isoflavone levels at ADM (Interview). *SoyaScan Notes*. Aug. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Soy protein concentrates are made by two basic processes: Alcohol wash and water wash. At ADM, Arcon F is alcohol washed / extracted and Arcon S is water washed. You can think of F as standing for Fast and S for Slow. ADM’s textured soy protein concentrate is named Arcon T, which is made by texturing Arcon F (alcohol washed). Mike is quite sure that neither ADM nor any other company in the world is making a textured water-washed concentrate.

The alcohol wash process is preferred for a variety of reasons: It is a very fast, inexpensive process, which involves

extracting/washing defatted soy meal with aqueous alcohol (a mixture of ethanol and water), then desolventizing the mixture to give a fine, white powder. The water wash is much, much slower, with several tanks for water washing; the process requires spray drying (very expensive) at the end—which the alcohol wash does not. In small amounts (2,000 lb or more), the price of Arcon F is \$0.75/lb versus \$0.95/lb for Arcon S, so about 27% more. Organoleptically, Arcon F is a better product. It has about 98% of the flatulence factors removed, compared with about 85% for Arcon and 0% for TVP. The flavor of Arcon F is only slightly better than that of Arcon S, and the two is equally good. Arcon S is a functional concentrate which, in this respect behaves quite like a soy protein isolate, and is also made in much the same way as an isolate. It is used mostly in emulsified meat products (especially hot dogs, sausages, and hamburgers) as a fat emulsifier and water binder. Arcon S will do the job roughly as well as a soy protein isolate and it is much less expensive, in part because it contains fiber. Many customers use products in combination, such as textured soy concentrate + Arcon S as a binder in a meat formulation.

Mike has daily enquiries about the isoflavones level of ADM’s soy protein concentrates from both consumers and food processors. ADM has discussed introducing a textured, water-washed concentrate but it probably won’t happen for quite a while—at least until some big company places an order for at least 1-2 million pounds. Several of the big cereal companies are very interested in fortifying their cereals with soy protein concentrates. They are well aware of the differences and the excitement about the isoflavones, but the demand is not there yet. Six months ago they did texturize some water-washed concentrate and they are now doing a human feeding (probably with WHO) study comparing texturized Arcon S with texturized Arcon F. Another option is to fortify Arcon F with isolated, extracted isoflavones—just like they now fortify other foods with vitamins. One of their researchers has applied for a patent on the process. One interesting question that recently led to a big debate among ADM researchers is this: If Arcon F were fortified with isoflavones only to the level that they existed in the natural product, would it have to be so labelled, and would it require FDA approval as a food additive. Address: Technical Manager, Textured Proteins, ADM, Decatur, Illinois. Phone: 217-424-5386.

1660. ADM. 1996. ADM stock splits and stock dividends from 1945 to Aug. 1996. Decatur, Illinois: ADM 1 p. Jan. 29. With cover letter.

• **Summary:** This report was faxed by ADM to Wm. Shurtleff at Soyfoods Center on 29 Jan. 1997 at his request.

A 3 for 2–50% split means that a shareholder who owned 100 shares now has 150 shares. His or her number of shares has increased by 50%. Address: Decatur, Illinois.

1661. Roberts, Paul Craig. 1996. Fear in FBI's arsenal of inquiry. *Washington Times (DC)*. Aug. 27.

• **Summary:** The author argues that the FBI has suffered great damage to its reputation, and become a political arm of the Clinton administration. A case in point is the FBI's three-year investigation of agribusiness giant ADM. In Nov. 1992 ADM notified the FBI of an illicit offer, reported by one of its executives, Mark Whitacre, from an employee of a Japanese firm to sell information to ADM for \$10 million. "When ADM's top management informed the FBI, Mr. Whitacre, then head of ADM's BioProducts Division, had a fit of consternation, and objected to being interviewed by the FBI." Mr. Whitacre was later accused by ADM of embezzling millions of dollars from the company. "In retrospect, ADM executives believe the Japanese competitor's offer reported by Mr. Whitacre was in fact one of his own schemes to bilk the company. Mr. Whitacre might have feared that the FBI would find this out..."

"His protests notwithstanding, Mr. Whitacre was forced to meet with the FBI. Less than two months later he signed a secret agreement with the U.S. Attorney of the Central District of Illinois 'to act in a covert capacity' as an agent against ADM 'solely at the direction and under the supervision of the FBI and this office.' In exchange, Mr. Whitacre was granted immunity.

"No one but the FBI and Mr. Whitacre knows why his story of the purported Japanese offer resulted in this secret agreement to create evidence against ADM."

"Mr. Whitacre agreed to orchestrate 'price-fixing' meetings that the FBI could secretly videotape. The FBI's case rests on these tapes." Address: Columnist, nationally syndicated.

1662. Messina, Mark. 1996. Soyfoods and soy pills. *Soy Connection (The) (Jefferson City, Missouri)* 4(3):1. Summer. [4 ref]

• **Summary:** Makes the case convincingly that, in most cases, it is better to eat soyfoods as part of a healthy, balanced diet, than to take soy pills. "Without question the one group of phytochemical, in particular the isoflavones, is responsible for most of the recent research focus on soy. This is because of the observed biological properties of isoflavones (such as the estrogenic activity) and because, for practical purposes, soyfoods are the only natural dietary sources of these compounds." However since several companies are now marketing soy/isoflavone pills, one need no longer eat soyfoods to get isoflavones.

"Individual pills provide as much as 20 mg of isoflavones; that's quite a bit considering that there are about 30-40 mg of isoflavones per serving of soyfood. As the research spotlight continues to shine on isoflavones, it is probable that these soy pills will find an enthusiastic market.

"Of course, there are at least two obvious reasons for

promoting soyfoods, rather than soy pills. One, is that there are other phytochemicals in soyfoods, such as phenolic acids and saponins that may exert beneficial effects and that are not present in significant amounts in the pills. Two, for most people, incorporating soyfoods into the diet will lead to diet lower in saturated fats and cholesterol and higher in fiber (in the case of soybeans, tempeh, TVP). Taking pills does nothing to encourage a change in overall eating, but eating soyfoods does. There is another consideration—there are potentially critical differences in isoflavone composition between the soy pills and soyfoods. The health implications of these differences need to be addressed.

"But what if, for example, research establishes that isoflavones are directly responsible for inhibiting bone resorption [osteoporosis] and relieving menopause symptoms (night sweats, hot flashes)? What then should be the response of a woman who consumes a healthy diet and who wishes to use soy pills to relieve menopausal symptoms? I don't think there are any easy answers to such questions. As a general approach, foods are always preferred, but in specific situations phytochemical pills may be an alternative that has some merits." Address: PhD.

1663. Roberts, Paul Craig. 1996. Abetting U.S. competition. *Washington Times (DC)*. Sept. 5 p. A15.

• **Summary:** The author alleges that the FBI has teamed up with ADM's competitors in the market for lysine, a feed additive. "Prior to ADM entering the business in 1990, the market was dominated by Japanese firms, Ajinomoto Co. and Kyowa Hakko Kogyo Co. In 1989 the price per pound was \$1.73. ADM discovered a cheaper way to make lysine, and the company's entry into the market resulted in prices falling roughly in half. During the five-year period, 1991-1995, the purchasers of lysine enjoyed cumulative savings of more than \$500 million dollars [sic]. ADM gained 40 percent of an expanded market and the big Japanese firms are licking their wounds."

The evidence shows a collapse in lysine prices, to \$1.08/b in 1991, down to \$0.82 in 1992, up a little to \$0.90 in 1993, up to \$1.14 in 1994, and down to \$1.05 in 1995. "As ADM is the low cost producer, it can undersell its competitors and has nothing to gain from a price-fixing agreement that would limit its market share." Address: Columnist, nationally syndicated.

1664. Kilburn, Monty. 1996. A brief history of Harvest Direct (Interview). *SoyaScan Notes*. Sept. 16 and 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Harvest Direct Inc. is a separate mail order company that has never been owned or even partially owned by ADM. Originally Harvest Direct was established as an arm of Jones and Thomas, an advertising firm in Decatur, Illinois, that did work for ADM (such as ADM's annual report). Jones and Thomas developed the first Harvest Direct

Catalog. In 1993 Jones and Thomas sold Harvest Direct to Roger Kilburn (Monty's father), who had been President of ADM's Soy Protein Division. Roger was kind of tired of working for a big corporation; he wanted to do something that was a little more flexible, where he didn't have to wear a suit to work every day.

In May 1995 ADM notified Harvest Direct that they were planning to remove the hydrogenated oil from their dry-mixed products; they planned to change only the ingredient listing and add one line asking consumers to add oil at home—more oil than was contained in the original product. Kilburn thought that this might confuse long-time customers, so he asked ADM if they would be willing to just continue the old formulation and private label the product for Harvest Direct—which had spent years promoting ADM's products. ADM had private labeled frozen burgers for Pillsbury's Green Giant but they refused to private label for Harvest Direct. ADM has also private labeled many of their other products, such as flours and oils. Kilburn's main concern that he had used his own money to promote ADM products for years, yet ADM was free at any time to sell these same products to Harvest Direct's competitors. So Kilburn decided to stop buying ADM's mixes, and instead buy only textured soy protein products (he now uses 3 types of textured concentrates and flours) from ADM and start making the mixes himself. He also decided to devote more energy to promoting the Harvest Direct brand and not promoting ADM—which wasn't too happy with this change.

After Kilburn had developed his own line of products, he had a taste panel test conducted at the University of Kentucky; the new Harvest Direct products were preferred to the former ADM products. By May or June 1995 Harvest Direct was selling the new line of products it was formulating, blending, and packaging "in house."

In Nov. 1995 Kilburn moved the company to Knoxville, Tennessee, where his son and daughter-in-law, Monty, and his wife, lived. Roger lives in southeastern Kentucky, which is about 1 hour's drive from Knoxville. Monty now handles the catalog side of the business and Roger handles the food manufacturing and other things. In July 1995 they introduced their own line of Harvest Direct "Protean" vegetarian burger mixes, which they are now marketing to health food stores across America. They have plans to manufacture an increasing percentage of the products they sell. An article was published in *Backpacker Magazine* on the advent of the company. Address: Catalog Director, Harvest Direct Inc., 505 West Depot Ave., Knoxville, Tennessee 37917. Phone: 1-800-835-2867.

1665. Sheridan, Margaret. 1996. Is tofu ready for the big leagues? *Los Angeles Times*. Sept. 26. p. H8, H10, H11.

• **Summary:** The article begins: "Tofu, the spongy off-white soybean cake that spells B-O-R-I-N-G for so many people, is about to get a marketing makeover. Slick packaging, toll-free

consumer hotlines, new products, and a blitz of cookbooks created by chefs rather than earnest vegetarian activists are some of the strategies tofu companies plan to use to bring tofu into the mainstream." A number of second generation tofu products found in supermarkets, and forthcoming cookbooks are listed.

"But some advertising and marketing professionals say that's not enough." The author talks with many such people who dislike tofu for various reasons: "Tofu is a joke... Tofu is a sissy. Bland, white, boring. It needs to take a stand. Become something. And that name! Its terrible." "Tofu goes against the American palate... Very little in American food, except baby food or gelatin, has that texture. Even buying tofu is alien. What else do you buy floating in water? And Americans love convenience. Bean curd is anything but. It's not an open-and-eat product." "I buy tofu but it just sits there, floating in my refrigerator. It makes me feel stupid and guilty. What do you do with it? I end up tossing it out." Hinoichi is America's largest tofu manufacturer. In March 1997 the company plans to move from its present 50,000 square foot plant in Los Angeles to a facility three times that size in Garden Grove. Harry Tanikawa, Hinoichi sales manager, notes that tofu and soy have been helped by good research and press from the medical community. He adds: "When you see fast-food places such as Panda Express in the shopping malls adding more tofu items to the menu, when you can buy a tofu hot dog at Dodger Stadium, you know tofu has arrived." Note: Dodger Stadium is a major league baseball park in Los Angeles.

Worthington Foods has experienced a sales rush in meat alternatives; the category went from nothing four years ago to \$150 million a year. The company's best-selling items, sold under the Morningstar Farms brand, are breakfast patties, sausage links, garden burgers, and spicy black bean burgers—according to Don Burke, executive vice president of sales and marketing. The people who buy Worthington products are "the masses, people who want to cut down a little on meat and saturated fat. Most are aging baby boomers who want taste, convenience, and a health benefit."

Tofu "recipes for the mainstream" include: Red flannel hash. Mushroom scrambler. Tofu-stuffed French toast. Tofu slaw. Tofu citrus shake. Tofu cheesecake (p. H11).

The article ends with two sidebars: 16 "Tofu do's and don'ts." Soy food: Its many looks (p. H11)—Defines different soyfoods: Tempeh, miso, textured vegetable protein (TVP), soy milk, soy flour, soy cheese, soy sauce, tamari. Address: Times staff/food writer.

1666. Harty, Rosalynne. 1996. ADM is bulking up: Company growing stronger with grain-based vitamins. *Journal-Register (Springfield, Illinois)*. Sept. 29. p. 47-48.

• **Summary:** ADM is now the world's largest processor of oilseeds and cereal grains, with 200 plants around the world, and a network of more than 200 grain elevators in the United

States. It also owns the largest private transportation system in North America, comprised of about 13,000 railcars, 2,000 barges, and 800 trucks.

In late 1995 at Decatur, Illinois, ADM started to mass-produce natural vitamin E, using a new, low-cost method that starts with soybean distillate—a product recently considered a liability since they had to pay to get rid of it; the company is now the world's largest manufacturer of this valuable vitamin. A single 55-gallon drum of pure vitamin E is worth about \$15,000.

1667. Archer Daniels Midland Co. 1996. Annual report. P.O. Box 1470, Decatur, IL 62525. 44 p. Sept.

• **Summary:** Net sales and other operating income for 1996 (year ended June 30) were \$13,314 million, up 5.1% from 1995. Net earnings for 1996 were \$695.9 million, down 12.6% from 1995. Shareholders' equity (net worth) is \$6,145 million, up 5.0% from 1995. Net earnings per common share: \$1.27, down 9.3% from 1995. Number of shareholders: 35,431.

On the cover of the report is color illustration of a stylized family farm. ADM now has a Web site at <http://www.admworld.com>. Page 4: A quotation by David Brinkley states: "Farmers are the only indispensable people in this planet."

"The American farmer is the most efficient [and most productive] in the world. which is why we enjoy the world's safest, most abundant and most affordable food supply. He is also the most productive. One American farmer feeds 212 people.

"In 1996, the U.S. will export \$65 billion worth of agricultural products, approximately 10% of which are exported by ADM and its affiliates, helping to generate over \$100 billion in economic activity and about one million jobs. The productivity of the farmer can help ensure world peace... Thanks to the 1996 farm bill, U.S. farmers will be able to respond to market conditions instead of government orders."

Soy protein is a fast growing area for ADM. Currently ADM is building plants in Decatur, Illinois, and Europoort, Netherlands, to make improved soy protein isolates. "Isoflavones are another exciting area. Isoflavones are trace components in plants (particularly soybeans) that are believed to have positive health effects. This is a promising new area, so this research group is seeing its share of exciting developments. Programs are in place to purify these components for future production" (p. 6).

"Natural-source vitamin E: ADM produces this antioxidant from soybeans and other oilseeds. Research shows that natural-source vitamin E is 36% more potent than synthetic vitamin E" (p. 6).

"ADM value-added products from soybeans: (1) Derived from soy protein: Concentrates, isolates, isoflavones, TVP\*, flour/grits, soy milk, Harvest Burgers\*, Harvest Burgers for Recipes\*, NutriBev\*; (2) Derived from soybean

oil: Vitamin E, lecithin, distilled monoglycerides, mono- and diglycerides, sterols." \* = Registered trademark (p. 7). Note: Each of these products is discussed in detail on pages 13-14.

"Isoflavones: Soybeans contain isoflavones, powerful phytochemicals that appear to be able to block the multiple processes that lead to cancer, heart disease, and other chronic degenerative diseases" (p. 12).

"Value-added products from soybeans:... Vegetarians have long been using soy as a protein source, but in light of the mounting evidence that soy foods have significant health benefits, Americans from all walks of life are trying to incorporate soy into their diets... Every day, ADM plants worldwide process over 2.6 million bushels of oilseeds, and with value-added soy products gaining in popularity in a number of industries, these products will continue to be in demand" (p. 13).

These soy products include: (1) "Distilled monoglycerides, derived from soybeans or other oilseeds, are used primarily as emulsifiers or as starch complexing agents in a variety of food applications. ADM monoglycerides are often used in baked goods, confections, extruded products and margarines to bring about or enhance desired characteristics" (p. 13).

(2) "Isoflavones: A relatively new area of interest is isoflavones (part of a group of substances called phytochemicals). The two predominant isoflavones found in soybeans are genistein and daidzein. Researchers at ADM and around the world are conducting studies that strongly suggest that isoflavones have significant health benefits. ADM is scaling up research and processing for the future production of this product" (p. 13).

(3) Lecithin: "Interest in lecithin has escalated worldwide due to recent research investigating its health benefits. Lecithin is most recently being touted as a nutraceutical, since the linoleic acid in lecithin is believed to possess health benefits. Expansions have been completed in both the Windsor (Ontario, Canada) and Europoort (Holland) facilities. Improvements are scheduled for the Hamburg, Germany plant and construction is progressing on the new deoiled lecithin plant in Decatur, Illinois. As the leading producer of lecithin, ADM is positioned to meet the world's growing demand."

(4) Natural-source vitamin E: "An antioxidant, vitamin E is reported to help protect cells from free radical damage, the type of damage that can lead to an array of degenerative diseases. A study in the *Lancet* [a prestigious British medical journal]... concluded that a dime's worth of natural-source vitamin E could reduce heart attacks by 75% when taken daily by those with bad hearts. The *New England Journal of Medicine* reported that postmenopausal women who ate a moderate amount of foods rich in vitamin E cut their chance of heart disease by almost two thirds." In order to keep up with the rising demand, ADM is increasing its natural-source vitamin E plant capacity by fifty percent. ADM is one of the

world's largest producers of natural-source vitamin E and also processes products that are good sources of vitamin E, including corn, canola, soy, sunflower, and peanut oils... By 1997, we will have the capacity to supply 300 million people with the current recommended daily allowance of vitamin E."

(5) "Soy protein: One of ADM's most important and versatile value-added products is soy protein. With increasing evidence of health evidence associated with soy foods, an increasing demand for soy protein products seems likely. To meet this rising demand, ADM is expanding its soy concentrate and isolate plants in Decatur, Illinois, and Europoort, Holland... Soy protein is finding success abroad in the consumer marketplace. In Canada, soy frozen desserts are being sold at Safeway grocery stores under the Lucerne Dairy label. In the U.K., a new soy milk plant is under construction to meet demand for a good tasting nutritious non-dairy beverage [probably made from isolated soy protein]. In Europe, VegeMince, VegeBites and VegeSteaks are being introduced by Haldane Foods, an ADM subsidiary. German consumers will be introduced to Frosta Medallions, soy protein and vegetable frozen patties available in four varieties." A large color photo shows a package of Green Giant Harvest Burgers for Recipes (p. 15).

"ADM European Overview: ADM owns the three largest tidewater oilseed plants in the world. They are located in Erith [on the River Thames just east of London], England; Rotterdam, Holland; and Hamburg, Germany."

Pages 22-23 contain maps of the USA and the world, with each of ADM's many locations clearly marked.

Page 37 discusses "Antitrust investigation and related litigation."

Pages 40-41: "Ten year summary of operating, financial and other data." Net earnings and net sales have more than doubled. Address: Decatur, Illinois.

1668. Callanan, Bob. 1996. *Soya Bluebook: Celebrating 50 years of service to the soybean industry (Ad)*. *Soya Bluebook Plus* 1997. p. 13-21.

• **Summary:** On the top two-thirds of each page is a brief history of the soybean in America from 1900 to the present, with emphasis on the work of the American Soybean Association, which was founded on 3 Sept. 1920 as the National Soybean Growers' Association by more than 1,000 people who attended the first "Cornbelt Soybean Conference" on a farm owned by the three Fouts brothers near Camden, Indiana. It was renamed the American Soybean Association in 1929.

To the left and right of this story on each page are two reproductions of full-page advertisements from existing companies that appeared in the Bluebook. The first four ads are from Anderson International (1947), Archer Daniels Midland Co. (1947), French Oil Mill Machinery Co. (1947), and Ross & Rowe, Inc. (1947, now ADM Lecithin).

The story contains many photos related to the ASA and soybean production and trade. For example: (1) A farmer on a horse-drawn cultivator in a soybean field from the early 1900s. (2) The front of the ASA offices in Hudson, Iowa. (3) Henry Ford in 1940 testing the strength of a soy-based plastic trunk lid on a Ford car by swinging an ax against it. (4) Mr. & Mrs. George Strayer in Oct. 1955 leaving for Japan by air from Waterloo, Iowa. (5) The floor of the Chicago Board of Trade in Oct. 1936 as the new soybean futures market opens. (6) An oceangoing freighter in the 1940s docked next to Central Soya Company's elevators in Chicago. (7) W.L. Burlison and C.M. Woodworth inspecting soybean variety demonstration plots at the University of Illinois.

Accompanying this history, on the bottom one-third of each page is a chronology from 1900 to 1997 that highlights major events of the companies that advertise in the *Soya Bluebook Plus*—even though those events may be of relatively little importance in soybean history. For example: 1905—H.R. Williams Mill Supply Inc., Kansas City, Missouri is founded by Harry Richard Williams. 1914—Universal Oil Products Co. (UOP), Des Plaines, Illinois, is established. Address: Communications Director, American Soybean Assoc. Phone: 314-576-1770.

1669. The Mail Order Catalog. Fall-winter 1996. Catalog of books and food. 1996. P.O. Box 180, Summertown, TN 38483. 24 p.

• **Summary:** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, and animal rights.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), Harvest Direct vegetarian broth, and Protean, instant gluten flour (regular or flavored), seitan "chicken" or "sausage" mix, Mori-Nu silken tofu, Soja instant soy beverage, organic low-fat soymilk powder, Red Star nutritional yeast, Beano, and tempeh starter. Address: Summertown, Tennessee. Phone: 800-695-2241.

1670. Andreas, Dwayne. 1996. Re: Encourages stockholders to participate in election of Board of Directors plus several non-routine proposals. Letter to shareholders, Oct. 7. 2 p. Typed, with signature on letterhead.

• **Summary:** "In particular, the proposal dealing with board independence is a matter of great importance to ADM and its stockholders." Address: CEO, Archer Daniels Midland Co., P.O. Box 1470, Decatur, Illinois 62525.

1671. Caton, Greg. 1996. New developments at Lumen Foods (Interview). *SoyaScan Notes*. Oct. 8. Conducted by

William Shurtleff of Soyfoods Center.

• **Summary:** Greg is working closely with Dr. Suzanne Paxton, a doctor of pharmacy, of PNC–Preventive Nutrition Consultants. Her late husband, Herb Pierson, worked with the National Cancer Institute and is credited with coining the term “Nutraceuticals.” He was a pure scientist—not a promoter; he died at age 43, just 6 months ago—probably because of the many cancer-causing substances he was working with. He was especially interested in finding plant-based materials that were effective in curing cancer. On the health and medical benefits of garlic alone, he had something like 20,000 references. Many other people have come in and taken credit for his work. Herb and Suzanne’s research “made Wakanaga, and their Kyolic garlic supplement.” Wakanaga is a \$200 million a year garlic company headquartered in Japan.

For Lumen Foods Suzanne has just written a 29-page booklet on the latest developments in soy phytopharmacology. “She was one of the first to publicize the benefits of soy in treating menopausal symptoms. I don’t know anybody who knows more about phytopharmacology and the effects of soy and many other different vegetables. She is a world class authority—a very impressive person.”

Greg has just run a full-page color ad for Heartline Meatless Meats in the September 16 issue of *Time* magazine, which was mailed to 1 million women. Nine years ago he ran a one-third page ad in the December 1987 issue of *Prevention* magazine that reached 4 million readers. It barely paid for itself.

Greg’s business is still small, with sales projected to be about \$1 million in 1996. But during his first year in business, in about 1986, the company grossed about \$40,000. In the last few years the company’s sales have grown for \$350,000 to \$782,000 last year. Most of his growth in sales is from mail order. Now mail order accounts for about half of his sales; it used to be much smaller.

His low-fat Heartline products (named Heartline Lite) do not sell nearly as well as their regular counterparts; a 2 ounce serving of the latter, reconstituted, contains 83 calories (with 27 calories from fat) and 3 grams of vegetable oil, with no saturated fat or cholesterol. Thus, 32.5% of the calories come from fat. There is a very low rate of repeat sales for the low-fat or nonfat products.

Greg was motivated to start his own business because ADM (with whom he worked from 1981 to 1983) denied that there was any problem with flatulence from their TVP products. This was long before soy protein concentrates became popular. GNC (General Nutrition Corp.) created many dinners using TVP at their plant in Fargo, North Dakota, but after several years they realized that consumers were complaining a lot about the gas; so GNC dropped ADM, who at that time was doing a promotional titled “Uncle Archie’s”—which Greg was involved with. So Greg left ADM, did research on new soy products in 1985, then

founded the company in 1986.

Greg’s fastest growing product now, Stonewall’s Jerquee, is a deep-fried product, which has much of the fat subsequently removed by centrifuging. “People who eat a snack want to be wowed. They are looking for an experience. More and more we realize that we are in the experience business. This in the only product we make that is purchased by meat-eaters as well as vegetarians.

Greg now owns five companies; one of these designs and develops Web pages. “If you have to work for a living, your life should be an adventure.” Address: President, Lumen Food Corp., 409 Scott St., Lake Charles, Louisiana 70602-0350. Phone: 318-436-6748.

1672. Kilman, Scott; Burton, Thomas M. 1996. ADM’s guilty plea could doom Andreas reign. *Wall Street Journal*. Oct. 15. p. A3, A6. Western ed.

• **Summary:** ADM’s “agreement to plead guilty to two criminal charges and to pay \$100 million in penalties puts the government’s sweeping antitrust investigation behind it, but the arrangement could signal the end of the Andreas family’s reign over the grain-processing giant.” This fine is the largest ever in a criminal antitrust case. The two price-fixing charges involve lysine and citric acid. In total, including civil suits related to the price-fixing matter, ADM has agreed to pay a total of \$190 million in fines and civil settlements.”

The plea deal darkens the outlook for Michael D. Andreas (age 47; a dot-style illustration shows his portrait), the son of CEO and chairman Dwayne Andreas, age 78. The Justice Department is said to still be pursuing its case against the younger Mr. Andreas. His task of clearing his name is made harder by ADM’s pleas agreement, which requires the company to cooperate with federal investigators.

Yesterday ADM stock climbed to \$1.125 or 5.5%, to \$21.75, a record high, in large part because the \$100 million fine is much less than some Wall Street analysts thought it might be. As part of the plea agreement, the government agreed to close its price-fixing investigation of ADM’s high-fructose corn-syrup business, the biggest of the ADM products under government scrutiny. However, prosecutors are continuing their inquiry into the \$3 billion corn-syrup market.

Dwayne Andreas controls about 4.8% of ADM, valued at about \$520 million. He has a brother on the ADM board and two nephews who are senior ADM executives. ADM’s annual shareholders meeting is in Decatur, Illinois, this Thursday. Industry analysts speculate that Dwayne Andreas’s advanced age will force the new board to look outside ADM for a successor. Address: Staff reporters.

1673. Kilman, Scott. 1996. Two ADM officials targeted in probe, including Andreas’s son, leaving posts. *Wall Street Journal*. Oct. 18.

• **Summary:** Michael D. [“Mick”] Andreas, ADM’s 47-year-

old executive vice president, long groomed to eventually succeed his father as head of the company, is taking what the company called “temporary administrative leave.” ADM wouldn’t comment on whether Mr. Andreas would continue to collect his \$1.3 million annual salary.

Head of ADM corn processing, Terrance S. Wilson, age 58, is also retiring due to “progressive heart disease.”

These moves were announced after a sometimes contentious annual shareholders meeting yesterday. A company opposed resolution urging ADM to adopt a more independent board lost by a surprisingly close 58 to 42% vote. “The board’s independence became a hot issue at last year’s annual meeting, because the board’s close ties to Dwayne Andreas were widely blamed for an initially tepid response to the government’s price-fixing investigation. The board has long been dominated by insiders, Andreas’s relatives and longtime friends.” The new board, consisting of only 12 members, is seen as being more independent. Earlier this week top Justice Department officials had called ADM’s actions “shameful.”

CEO Dwayne Andreas, age 78, who has been chairman of ADM since 1972, has not been implicated in the price-fixing investigation. “The elder Andreas, who has brushed off the gravity of the scandal in past comments, apologized briefly to shareholders yesterday. ‘I consider this a serious matter which I, of course, deeply regret,’ he said. ‘The buck stops with me. You have my apology and my commitment that things are arranged so that this will never happen again.’”

Nevertheless these events severely restrict Dwayne Andreas’s plans to continue the Andreas family’s three-decade-long reign at ADM.

On the New York Stock Exchange, ADM stock fell 25 cents to \$20.875 a share. An illustration (dot-style) shows Michael D. Andreas. Address: Staff reporters.

1674. Moore, David. 1996. Shareholders react favorably to board proposal. *Herald and Review (Decatur, Illinois)*. Oct. 18. p. A1, A4.

• **Summary:** A summary of ADM’s annual shareholder’s meeting. “In January, a corporate governance committee recommended ADM bring more outsiders to its board and exclude executives’ relatives and people with substantial business dealings with the company. As a result, four ADM executives did not seek reelection on Thursday.” The names of ADM’s new board members are given, with a biographical sketch of each. Address: H&R staff writer.

(1995 photo). Union protesters in front of the company’s Lakeview office. Address: H&R Business Editor.

1676. Jenkins, Holman W., Jr. 1996. Business World: Hey Joel, this is the land of the free, remember? *Wall Street Journal*. Oct. 29. p. A23.

• **Summary:** This half-page editorial argues that ADM did nothing wrong in colluding with its competitors on lysine price and production. ADM had built a big, efficient lysine plant that added about 50% to world output. As expected, prices fell and nobody was making any money. The collusion simply made the industry more efficient. “If there is a lesson here, it’s that a narrow, fetishist focus on ‘competition’ for its own sake is misconceived. What makes any market economy work is freedom of contract and property rights.”

An illustration (dot-style) shows Michael Andreas.

Note: Holman W. Jenkins, Jr. is a member of the Wall Street Journal editorial board. He writes the twice-weekly “Business World” column. “Joel” refers to Joel Klein, the antitrust chief of the U.S. Department of Justice.

1677. ADM; Dixie USA. 1996. Mix up some meatless magic: Explore the delicious, versatile world of soyfoods with the Midland Harvest family of all-vegetable entrées (Ad). *Vegetarian Times*. Oct. p. 93.

• **Summary:** This full-page color ad shows Sloppy Joe Fixin’s mounded between two buns. A recipe for Southwest Bar-B-W Joe is given. The six dry mixes, whose packages are shown, are: Burger ‘n Loaf (Original, Herbs & Spice, or Italian Style). Chili Fixin’s. Sloppy Joe Fixin’s. Taco filling ‘n dip. The products contain only 0-5% fat, are cholesterol free, and “Contains fiber.”

“Easy to get the great nutrition and high protein of soyfoods into all your favorite dishes. Celebrate the great taste of soyfoods with Midland Harvest—Made by ADM, Supermarket to the World. For more information about Midland Harvest, refer to the Info Center page in this issue (p. 123) or for direct mail ordering, call Dixie USA 1-800-347-3494.”

1678. Jacobi, Dana. 1996. The natural kitchen: Soy! 75 delicious ways to enjoy nature’s miracle food. Rocklin, California: Prima Publishing. xii + 244 p. Oct. Index. 22 cm. Series: The natural kitchen. [16 ref]

• **Summary:** Contents: Preface. Acknowledgments. Introduction: Soy and health. All about soyfoods: Traditional soyfoods (tofu, miso, tempeh, soy sauce, soymilk), other Asian soyfoods (okara, yuba, kinako, natto), second-generation soyfoods (soy dairy products, soy deli foods, textured vegetable protein {TVP}, textured soy protein {TSP}, soy isolate (isolated soy protein)), more soy choices (fresh soybeans, dried black soybeans, soy flour, soy grits, soy flakes, soy nuts), cooking with soyfoods (tofu {pressing, freezing, marinating, sautéing and pan-crisping, frying,

braising, pureeing, parboiling, storing and handling tofu), miso, tempeh, soymilk, other soy dairy foods), cook's notes (herbs, spices and flavorings, nuts, oils, produce, stock, sweeteners).

Soups, appetizers, and first courses. Main dishes. Pasta and light dishes. Side dishes and sauces. Salads, burgers, and kebabs. Desserts. Breakfast and beverages. Mail order sources.

The Preface states: "If you are new to soy, you will find descriptions of soyfoods, from tofu to soymilk... If you already cook with soyfoods, the approximately 75 recipes in this book and their variations will expand your repertoire. These recipes will take you across lines that people who cook with soy rarely approach. The dishes bring familiar and satisfying textures along with flavors that are full and deep. Whether ethnic or classic, they are dishes with verve and elegance." The author first tasted tofu, with her parents, in 1953, "at the precocious age of eight," at The Great Shanghai on 125th St. in Manhattan, New York City. Address: Food writer, New York, NY.

1679. *Ontario Soybean Growers' Marketing Board Newsletter*. 1996. Record soybean crush. Oct. p. 9.

• **Summary:** "Ontario's two soybean processors crushed a record 1,252,300 tonnes (46,000,000 bushels) of soybeans during the 1995 crop-year (September 1995 to August 1996). This is 12% higher than the 1994 crop-year crush of 1,121,900 tonnes and 14% more than any crop-year in the 1980's when three processing plants were in operation.

"Both ADM Agri-Industries Ltd. in Windsor and CanAmera Foods Ltd. in Hamilton have invested heavily in upgrading their soybean processing plants in recent years. Soybean crush capacity will increase further this winter as CanAmera brings additional new equipment on line." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1680. *ASA Today (St. Louis, Missouri)*. 1996. Q&A with ASA: Interview with Marty Andreas, Senior Vice President, ADM. 3(2):2, 5. Dec.

• **Summary:** Q: "What is the market outlook for edible protein products and commercial and industrial application for soybean meal and oil?"

Ans: "We think a couple of things will drive the continued growth of the soy protein business. First, the population growth throughout the world plays a big part in the expanded use of soy protein. The statistics on increased population are staggering. Last year, the world's population increased by 100 million people. Most parts of the world have fat sources available, such as palm or coconut oil, and many parts of the world have carbohydrate sources available such as rice, maize and wheat. The thing they're most lacking is protein. A second issue to consider is the trend toward healthier diets. When it comes to providing large volumes of nutritious foods for the expected population

increase, we think soy protein has a very big role to play. In developed countries, much emphasis has been focused on improved nutrition. Cholesterol and fat are public enemy number one—and our soy proteins will allow us to come up with consumer products where the protein has replaced the animal fat in the product."

Q: "ADM's style of management is similar to the Walt Disney approach of excitement and a vision for the future. What is your vision for agriculture's future?"

Ans: "I'd like to say that 25 years ago we had the vision to see what was on the horizon, but in all honesty, we didn't. In fact, what we have done is look at the new developments as they relate to agriculture and try to build plants and bring new value-added products from these crops that weren't available five years ago. We deal with all avenues of consumer consumption, whether its energy for the body in the form of food, or energy for an automobile in the form of fuel. One of our visions is the tremendous opportunities in Asia—particularly in China. With a country that has a population of 1.2 billion people—and growing at the rate equal to one Australia per year, or two Canada's every 20 months—we're talking about something the world has never seen before. The Chinese economy has grown 10 to 12 percent in the last three years, which is creating a huge machine that needs to be fed. That is very good news for American soybean and corn growers."

Three small photos show Marty Andreas.

1681. Holin, Fae. 1996. Getting sneaky with soy: How to use tofu without a family strike. *Soybean Digest*. Dec. p. 23, 27. In "Soyfoods Special Report" section.

• **Summary:** Describes how registered dietitian Anne Patterson slowly introduced tofu to her family, starting with desserts. She and her husband, Jim, own corn and soybean acreage in Illinois. Jim "doesn't really like to see white tofu," so Anne always disguises it—as by putting it in lasagna in place of ricotta cheese, or in other baked or main dishes to reduce the amount of oil or eggs used. She notes that the new lite or low-fat tofus are excellent. Also describes how to use tempeh, soy flour, soy beverage (soy milk) and TSP (TVP). Her family also likes the commercial soy burgers now widely sold in mainstream grocery stores.

Contains recipes for: Strawberry tofu fruit dip. Tofu basil pasta sauce on fettuccine.

1682. McCracken, Christine L.; Shimoda, Sano M. 1996. Archer Daniels Midland Company (NYSE: ADM). Orinda, California: BioScience Securities, Inc. 36 p. Dec. 12. 28 cm.

• **Summary:** This financial analysis of ADM recommends that investors "Buy" the stock. The analysts believe that ADM is poised to move to a new level of earnings growth led by strong international growth and expansion of their value-added product line. They believe ADM stock has the potential to appreciate 25-35%, to \$26-30 per share on the

next 12-18 months. Over the longer term of 24-36 months the stock could increase in value by 50-60%, to \$30-35 per share. Address: 2 Theatre Square, Suite 210, Orinda, California 94563. Phone: 510-253-9520.

1683. Frontline. 1996. So you want to buy a president? Television broadcast. PBS \*

• **Summary:** Investigates the expected \$500 million flowing into the 1996 presidential campaign. Correspondent Robert Krulwich examines the generosity of the major players; one of these is Dwayne Andreas of ADM.

Contents: Editor's note: The Players. The Interviews. A citizen's guide. Money charts. Tapes & transcripts. Produced by WGBH, Boston.

1684. Gelles, Carol. 1996. 1,000 vegetarian recipes. New York, NY: MacMillan. [vii] + 598 p. Index. 24 cm.

• **Summary:** In the Introduction, a section titled "Soy products" (p. 17-18) includes brief definitions of soybeans, bean curd (tofu), miso, seitan, soy flour, soy milk, soy nuts, soy sauce and tamari, soy sprouts, tempeh, and textured vegetable protein (TVP).

In the chapter on "Entrees" is a section (p. 217-27) is titled: "Tofu, tempeh, seitan, and textured vegetable protein (TVP)."

The index contains 20 entries for tofu, 5 each for tempeh and soybeans, 4 for textured vegetable protein (TVP), 3 for seitan, and 1 for miso.

A table (p. 14) gives the time to cook various types of beans (that have been soaked overnight, the soak water discarded, and fresh water added) in a pot or saucepan (not in a pressure cooker); the adzuki bean takes the shortest time (45 to 90 minutes) while the soybean takes by far the longest time (2½ to 3½ hours [which is not nearly long enough]). Herein lies one key reason that Asians strongly prefer soyfoods to whole soybeans. Address: Author, food stylist and recipe tester, New York City.

1685. Harvest States Cooperatives. 1996. Yesterday, today & tomorrow. St. Paul, Minnesota. 21 p. 28 cm.

• **Summary:** Contents: Our mission. Forward. The beginnings. The 1930s. The 1940s. The 1950s. The 1960s. The 1970s. The 1980s. The 1990s. And beyond. "When the best leader's work is done, the people say, 'We did it ourselves!'"

The page titled "The Beginnings" notes that at the turn of the 20th century, "after years of battling grain merchants, bankers, and railroads, farmers in the Midwest and Pacific Northwest took important organizational steps in their quest for fair prices for their commodities and more control over how they were marketed."

In 1908, farmers came together in Minneapolis, Minnesota, to form the Equity Cooperative Exchange as a grain terminal marketing agency. The Exchange, whose

headquarters were later moved to St. Paul, had but a short life." In 1923, after a series of operating losses, its directors voted to place the cooperative in receivership.

"From the Exchange's ashes in 1926 rose the Farmers Union Terminal Association (FUTA)..." It survived until the hard years of the Great Depression in the 1930s. The Farmers Union Grain Terminal Association (also called GTA) was incorporated by FUTA in anticipation of the demise of Farmers National Grain Corporation, a nationwide cooperative. GTA officially opened for business on 1 June 1938 at 1923 University Avenue in St. Paul, Minnesota. "Headed by M. W. Thatcher as general manager, the new organization listed 121 local associations as members. Its facilities consisted of one terminal elevator (Elevator 1 in St. Paul) and two branch offices." Photos show Elevator 1 and GTA's original headquarters in St. Paul.

The sections titled "The 1940s" and "The 1950s" describe the growth and expansion of GTA. "In 1942, GTA made its entry into the value-added arena by purchasing Amber Milling (see photo) in Rush City, Minnesota, a maker of durum wheat flour and semolina." a

The page, titled "The 1960s, begins: "GTA opened the new decade on a fast track The 1960 purchase of the Honeymead soybean processing plant at Mankato, Minnesota, and the ADM Commander elevator line in Southern Minnesota marked a major expansion for the cooperative. The acquisition of the Honeymead facility was just the start of what has proved to be an almost continuous expansion of the cooperative's presence in value-added operations.

"Also in 1960, GTA Feeds began building feed plants to increase service to patrons in North and South Dakota and opened its research farm and main office in Sioux Falls, South Dakota.

"Installation of the first electronic computer at GTA's headquarters was another important addition to the organization as the decade began.

"In 1961, GTA purchased the Minnesota Linseed Oil Co. at Fridley. Later made part of the Honeymead operation, the plant processed flaxseed into linseed oil and sunflower seed into sun oil.

"For NPGG, the early part of the decade brought a new member investment program aimed at financing the cooperative's expanded presence in grain exports. The 1962 dedication of the new export terminal at Kalama, Washington, on the lower Columbia River, culminated years of effort to give Northwest producers more marketing strength by providing a farmer-owned gateway to the rapidly expanding Pacific Rim market."

"With the decade's emphasis on exports, GTA joined with six other regionals to begin construction on a five million bushel export elevator at the port of New Orleans [Louisiana] on the lower Mississippi River. The operation, known as Farmers Export Co. (FEC), provided an important

new export artery to its farmer-owners in time for the Fall 1968 harvest.” One photo shows an oil tanker on wheels. On the side is written, in large letters, Honeymead Products Company: Mankato, Minnesota.

“The 1980s.” “June 1, 1983, marked a major milestone in the history of cooperative grain marketing in the United States with the combination of GTA and NPGG [Northern Pacific Grain Growers] in Harvest States Cooperatives.” Address: [Mankato, Minnesota].

1686. Melina, Vesanto; Forest, Joseph. 1996. *Cooking vegetarian*. Toronto, Canada: Macmillan Canada. xi+ 212 p. + 8 unnumbered pages of color plates. Illust. (some color). Index. 25 cm. [9 ref]

• **Summary:** The index contains 14 entries for tofu, 2 each for tempeh, for textured vegetable protein (TVP), and for miso soup, and 1 each for soy milk and for teriyaki sauce.

On page 3 is a “Vegetarian food guide” in the form of a series of four arcs. The largest, outside arc is for grain products, the next largest is for vegetables & fruits, the third largest is milk and alternatives which includes tofu, dairy products (milk, yogurt, and cheese), and beverages [such as soy milk] fortified with 150 mg of calcium per serving, the fourth and smallest arc is beans & alternatives, which includes legumes, tofu, meat substitutes, tempeh, nuts and seeds, and soy milk.

On the back cover is a brief biography and portrait photo of each author. This book generally advocates a plant-based (vegan) diet but does include milk, milk products and eggs as alternatives. Melina Vesanto, whose “way of eating has now become totally plant-based (vegan)” was born in 1942. Address: 1. Dietitian, university and college teacher, and government consultant; 2. Chef and food consultant based in Vancouver.

1687. Kilman, Scott. 1997. Bountiful harvest: Giant Cargill resists pressure to go public as it pursues growth. Largest private firm in U.S. has quietly succeeded as a global presence: Some heirs want to cash in. *Wall Street Journal*. Jan. 9. p. A1, A4.

• **Summary:** Cargill executives have learned that it takes patience and long-term thinking and planning to succeed in commodities trading and processing. They don’t want to “worry about some analysts’ expectations for the next quarter.” Cargill is an excellent example of the benefits of being private. It is often difficult to explain long-term plans to investors, especially after years of losses. Yet in the end many pay off in a big way—such as developing demand for fertilizer overseas. Cargill can take risks a publicly held company dare not take. The largest U.S. closely held company, and the 9th largest U.S. company overall, Cargill has annual revenue approaching \$60 billion. Cargill is active worldwide; it has assets of \$8 billion in 65 foreign nations and it trades with nearly 100 more. About 40% of the firm’s

assets are overseas—compared to only about 18% for arch-rival ADM, which nevertheless calls itself “Supermarket to the World.” Today Cargill is riding a boom in global demand for food, and is the only U.S. company that can rival the huge old trading houses of Japan and Europe. It controls 25% of U.S. grain exports.

Most of Cargill’s stock is owned by about 80 members of the MacMillan and Cargill families, which were united by marriage a century ago. But now a contingent led in part by heir Austen S. Cargill is forcefully advocating taking the company public so they can sell their shares; the market value is estimated at \$12 billion. They have little interest in the family tradition of toiling in obscurity. In 1865 William Wallace Cargill, son of a Scottish sea captain, founded Cargill as a frontier grain elevator. His descendants have generally devoted their lives to the company, often starting at the bottom in obscure places.

Micek wants to keep Cargill private. He gives many good reasons. An illustration (dot-style) shows Ernest S. Micek. Three graphs show figures from 1986 to 1996: (1) Cargill sales have grown from \$32 billion to \$57 billion. (2) Net income has increased from \$230 million to \$870 million. (3) Employees have risen from 45,000 to 79,000. Address: Staff Reporter, Wall Street Journal.

1688. Standard & Poor’s (S&P). 1997. Stock report: Archer-Daniels-Midland (ADM). New York, NY. 5 p. [9 ref]

• **Summary:** Contents: An interesting and complex graph shows ADM stock performance on the Standard & Poor’s stock index. The stock has risen from about 13 in Aug. 1993 to 22¼ at present. The S&P opinion is “Hold (\*\*\*)” Overview. Valuation. Key stock statistics. Business summary. Important developments. Capitalization. Table of key financial and operating statistics from 1987 to 1997. This includes: (1) Per share data. (2) Income analysis. (3) Balance sheet and other financial data. Wall Street consensus: Analysts’ recommendations. Industry outlook. Other industry participants. News headlines—from 16 July 1996 to 23 Dec. 1996. The latter largely involve the U.S. Department of Justice antitrust investigation of ADM for price fixing. ADM’s stock continued to rise during and after this investigation.

1690. Kilman, Scott. 1997. Who's news: ADM's Andreas gives up CEO post to nephew. *Wall Street Journal*. April 18. p. B17 (West). Or p. B2 (East).

• **Summary:** Dwayne Andreas, age 79, is surrendering his long-held post as CEO to a nephew, G. Allen Andreas, age 53. Andreas will continue as chairman but ADM officials expect him to play a much diminished role in the company he has run since 1970. Mr. Andreas said he was willing to give up this position in part because he hasn't directly supervised ADM's daily operations for years; rather he has concentrated on mapping ADM's long term strategy.

A lawyer, the younger Andreas was treasurer of ADM before he was chosen to run ADM's vast London-based European operations. Michael D. Andreas, long groomed to become CEO, took a leave of absence from ADM in October 1996 after he was identified as the prime target of federal antitrust and price-fixing investigations. He is now awaiting trial in May 1998. That scandal has cost ADM \$190 million.

"ADM announced yesterday that Andrew Young, former U.S. Ambassador to the United Nations and former mayor of Atlanta [Georgia], was named director. Mr. Young, 65, fills a vacancy created by the retirement of Lowell Andreas, 74, a brother of Dwayne Andreas.

"ADM said its directors increased the number of shares to be repurchased under the company's buyback program to 45 million shares from 25 million, and extended the buyback program until October 1999.

"In New York Stock Exchange composite trading, ADM rose from 12.5 cents to \$17.625 a share." Address: Staff reporter.

1691. Kilman, Scott. 1997. ADM seeking more acquisitions; Michael Andreas is still on payroll. *Wall Street Journal*. April 22. p. B4 (East).

• **Summary:** G. Allen Andreas said he expects ADM increasingly to buy the commodity processing plants that are being divested by cost-cutting branded food companies.

Some of these purchases will be overseas. Recently ADM paid \$258 million for a 22% share of Gruma SA, the largest tortilla maker in Mexico.

Mr. Andreas said that his cousin, Michael D. Andreas, is still working for ADM as a consultant at his old annual salary of \$1.3 million, even though he is on a leave of absence while awaiting trial on a price-fixing charge. The company also plans to reimburse Michael Andreas for any legal expenses.

ADM's profits have been down for a year because of high grain prices, but they are expected to recover in the fiscal year ending in June 1998. ADM's profits on its synthetic lysine are soaring due to strong interest from Asian livestock producers. The price has doubled since this time last year, to \$2.30 a pound. The stock price closed at \$18. Address: Staff reporter.

1692. Golbitz, Peter. 1997. Agricultural biotechnology still a hot topic. *Bluebook Update (Bar Harbor, Maine)* 4(2):1-2. April/June.

• **Summary:** "It's been five months now since the first crops of genetically engineered soybeans, corn and cotton were harvested from U.S. fields. Although the dust has certainly settled by now, the debate over this technology's effectiveness and safety has yet to be resolved.

"The Crop Is In: 1996 was a pivotal year in the evolution of agricultural biotechnology. After years of research and development, government approval was finally received and genetically engineered seeds for three of the world's most important crops were planted in the United States.

"Perhaps the most highly publicized of these has been Monsanto Company's Roundup Ready (RR) soybeans. These seeds are genetically altered to be resistant to the company's popular glyphosate-based herbicide Roundup. According to Monsanto, roughly one million acres were planted in the U.S. last year. Now that the harvest is completed, Monsanto has been able to evaluate the performance of RR soybeans.

"First Year's Report Card: Numerous factors will affect soybean yield including variety, location and environmental factors. According to preliminary data collected from more than 75 locations in the Midwest, soybeans growers who planted RR soybean varieties and used Roundup as a weed control agent, experienced a yield advantage of approximately 5 percent, or nearly two bushels per acre.

"In addition to the crop yield data, Monsanto surveyed more than 1,000 farmers in November who used RR soybeans. These soybeans met or exceeded the expectations of 90 percent of the growers. More good news for the company was the finding that 79 percent said Roundup Ready soybeans represented a 'good' or 'very good' value and that 88 percent will either 'probably' or 'definitely' replant them next year.

"Monsanto expects 8 to 10 million acres of RR soybeans

to be planted in the U.S. in 1997. That figure represents 13 to 16 percent of the estimated 64 million acre crop. In addition, 300,000 acres of RR soybeans have been planted in Argentina and field trials are scheduled to begin in Brazil later this year.

“Monsanto had also predicted that planting RR beans would significantly reduce the total amount of herbicide needed per acre to resist weeds. This result was confirmed in a report prepared for Monsanto by the independent agricultural market research firm, Sparks Companies, Inc. Records of RR soybean fields when compared to records of soybean fields with other herbicide programs, testified to reductions in herbicide usage which ‘ranged from a high of 39 percent in the Southeast to a low of 9 percent in the East Central region of the United States. In the West Central region, herbicide usage was reduced by 16 percent, and in the Mid-South by 31 percent.’

“Opposition Still Strong: This environmentally positive result will likely do little to reduce the opposition for this technology by groups such as Greenpeace and The Pure Food Campaign, which are calling for a complete ban of all genetically engineered crops and food products. The ‘Genetic Engineering Briefing Pack’ published by Greenpeace in January 1997, contains a detailed list of their reasons for opposition to genetically engineered seeds. This report, based on their perceptions of the environmental costs of this technology, states a fear that ‘the world as we know it will end.

“Many of Greenpeace’s reasons are based on valid concerns for the environment, however, in the view of some onlookers, the credibility of their message has been diminished by their radical demonstrations. Last November, Greenpeace launched a series of protests in the U.S. against grain giants Cargill and Archer Daniels Midland which included actions such as blocking cargo ships and chaining themselves to barges at an unloading facility.

“An editorial entitled, ‘Unpalatable’ in the *Wall Street Journal* of November 21, 1996 described these and other ‘lobby’ methods as a basis for labeling the group as ‘crazies.’ In direct reference to the same type of ‘emotional’ Greenpeace activities *Soybean Digest* editor, Syl Marking asked, ‘Will Science Win Over Crackpots?’ in his editorial of January 1997.

“In Europe, there have been widely publicized actions by Greenpeace, as well as by certain European country governments. Responding to consumer concerns and pressure, Austria and Luxembourg have currently placed a ban on the importation of Bt corn from Novartis (formerly Ciba-Geigy). France has lifted its restriction on the importation of the corn, but prohibited the planting of gene modified seed in France.

“There is widespread debate in Europe regarding the labeling of foods which contain genetically modified material. This discussion washed back on U.S. shores when a

major natural food retail chain asked its suppliers to specify which of their products were made from genetically modified ingredients.

“All of the issues surrounding biotechnology will take time to sort out and resolve but one point seems to be clear—genetically engineered crops will play an ever increasing role in U.S. and world agriculture and food production.

“There are many references on the Internet for information on biotechnology—here are a few.”

1693. *Healthy & Natural Journal* (Sarasota, Florida). 1997. Creative cooking with soy: Flash! Even kids like soy foods! 4(2):58-59. April.

• **Summary:** These six recipes and three color photos are courtesy of the Indiana Soybean Development Council. For a brochure featuring these and other soy recipes, contact them at 1-800-735-0195. Recipes call for: Silken tofu (3). Soy milk. Roasted soy nuts. TVP textured vegetable protein. Cooked whole soybeans.

A sidebar titled “Flash! Even kids like soy foods!” is compiled from the American Dietetic Association and other sources.

1694. Buchheim, Steve. 1997. New developments at ADM. Thoughts on the use of genetically engineered soybeans in foods (Interview). *SoyaScan Notes*. May 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** About 3 weeks ago ADM announced that G. Allen Andreas (a nephew of Dwayne Andreas) is the new CEO of ADM. Dwayne Andreas, who had been CEO for many years, will continue to be chairman of the board. As a result of this change, Dwayne Andreas’ activities and involvement with ADM are not likely to decrease at all. A good article appeared in the *Wall Street Journal*. The main contribution of G. Allen “Allen” Andreas is that he understands “Wall Street,” and he understands that investors are not attracted by ADM’s perennially small dividend. Dividends may go up, as ADM pays more attention to Wall Street. ADM has never liked to borrow money—perhaps

because of Dwayne's Mennonite background. That may change. ADM has authorized a big "buyback" of ADM stock to raise the price. The family wants stock prices to go higher. Allen was in Europe for 15 years and he grew that part of ADM's business at an impressive rate. He is soft spoken, intelligent, and a "people person."

Concerning the price-fixing charges, lysine was \$1.40 a pound when ADM got into the business and \$1.08, when the government went after ADM for price fixing. Michael "Mick" Andreas, Dwayne's son, no longer works at ADM. He is apparently on "administrative leave," but still on the ADM payroll. He has an office in downtown Decatur; Steve has no idea what he is doing.

Steve does not agree with the criticism that ADM is a company that is run for the ownership, rather than for the shareholders. It is rather a question of management having free reign to make the decisions that are best for the company. Dwayne Andreas does not want others trying to force him and the board to do something to the company that he does not want to do. ADM uses its profits to build the company and expand assets. A buyer recently came from China and told top ADM management that he could give them orders for soybean meal and soy protein isolates that are ten times their corporate crushing capacity. ADM is just now finishing their fifth plant [its in Europe] to manufacture isolates; all of the production is sold out for two years. It is well known that Dwayne is one of the wealthiest Americans. What is less well known that his ADM holdings (shares) account for only about one-fifth of what he is worth. He was the largest single individual shareholder in Nabisco and they have been bought out twice. Dwayne doesn't operate for money; he now cares very much about his legacy.

Concerning genetically engineered soybeans: Almost all companies in the soybean industry are sitting on the fence and waiting to see what happens. By making non-GMO products available, you encourage and abet the whole process of diving the soy protein business into GMO and non-GMO, and you negatively affect all the other businesses that are contemplating going into genetic engineering.

Shurtleff argues: But the alternate position is not to do anything until there is a crisis and/or the voices demanding labeling of GMO ingredients get louder and louder. If you start soon to offer non-GMO soybean meal, isolates, and TVP, there are many huge benefits. You become the first company worldwide to do so. You diffuse criticism of genetic engineering in general and gain large amounts of goodwill (which ADM now needs) and free publicity as the leader in this area. As you offer these non-GMO products (responding to consumer demand) you make it very clear that you agree with consumers' right to know what is in their food, but that you also believe that GMO products are completely safe. Note: Soyfoods Center has recently received a number of calls from companies which use large amounts of soy protein isolates in soymilk, tofu, and other

food products, and which are in urgent need of an isolate that is guaranteed by the manufacturer to contain no genetically engineered soybeans.

Steve agrees with many of these ideas. ADM's position has always been that they are consumer driven and market driven; they respond quickly to demand. All smart businesses know they are consumer driven. If it is soy, ADM should be making it available in both GMO and non-GMO forms. One way to do this would be to create a new corporation (named, for example, New World Proteins), which is a subsidiary of ADM. They lease existing excess capacity from ADM, using facilities that crush soybeans and make soy protein products such as isolates and TVP. The new corporation says to ADM: "You will agree under contract to clean these facilities thoroughly and certify that they will be used only for non-GMO soy products. We will separately contract for the purchase of soybeans. You will crush and process them for me to my specifications, and we will market them. Nothing moves. Its very simple. The new corporation could be run by people who wouldn't even have to move their desks. It makes a lot of sense from a pure commercial/profit standpoint. It is the right and the smart and the responsible thing to do. Then we can follow the market whichever way the wind blows. We can take a position where we win either way. ADM could become the first in the world to take an enlightened, consumer-driven position on this issue. I personally believe deeply that consumers have the right to know what is in their food. It is a fundamental right. ADM has always been on the side of the consumer's right to know. Now we're putting our money where our mouth is.

There is a major problem out there, and this would be a solution that makes sense for ADM at this time. Steve is going to start talking with his superiors at ADM (such as Larry Cunningham, who has assumed Michael Andreas' responsibilities) about this, and he will keep in touch on new developments.

Much of ADM's current activity is in China, where the company has many joint ventures, and is building factories, teaching the Chinese new ways of using soybeans, etc. Address: Marketing Manager, Soy Protein Applications, Archer Daniels Midland Co., P.O. Box 1470, Decatur, Illinois 62525. Phone: 1-800-637-5824 X-5394.

1695. Walker, Ian. 1997. Soymilk and soybean crushing in Canada (Interview). *SoyaScan Notes*. May 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** It is quite the fashion now for big dairy companies (such as Neilson) to be selling soymilk under their own private labels. It is widely available in Canadian supermarkets—much more so than in U.S. supermarkets.

There are only two major soybean crushers left in Canada: ADM Agri-Industries Ltd. (Windsor, Ontario) and CanAmera Foods. But there are also about 4 "micro-crushers" who make "cold pressed" [mechanically pressed]

soybean oil, and low-fat meal (which they sell to ADM). Address: Colledge d'Alfred-Formation/soya, C.P. 580, 31 St. Paul, Alfred, ON K0B 1A0, Canada. Phone: 613-679-2218 X-309.

1696. Kilman, Scott. 1997. European food retailers want notice of genetically engineered U.S. crops. *Wall Street Journal*. May 30. p. A2, A6.

• **Summary:** "Several of Europe's largest food retailers are pressing U.S. grain shippers to identify genetically engineered [GE] crops—a demand that some traders worry might jeopardize two big U.S. exports to Europe: soybeans and corn." The British Retail Consortium and other retail trade associations have signed an open letter to U.S. grain exporters such as ADM and Continental Grain. If the U.S. companies don't act voluntarily, the letter warns, several EU member nations might require the complete segregation of GE crops from their traditional counterparts. Signatories include groups from Denmark, Finland, France, Germany, Sweden and the UK—incl. J. Sainsbury PLC, the UK's 2nd largest supermarket chain.

In March 1996 the European Union [EU] began permitting imports of U.S. GE crops. But Norway, which is not a member of the EU, has stopped importing U.S. soybeans.

Major U.S. exporters say it would be too expensive to segregate GE soybeans and corn, and it isn't necessary since the food from these plants is nutritionally the same as that from traditional plants. But the EU retailers want consumers to have freedom of choice. Address: Staff reporter.

1697. Brenner, Kyd D. 1997. Corn sweeteners—An American success story. *Executive Feedback—The Journal of Agriculture (Huntsville, Alabama)* 2(1):28. May.

• **Summary:** Corn was first processed for starch in 1847. "Corn sweeteners, in the form of a crude glucose syrup, were introduced in America in the late 1800s... While the introduction of purified, crystallized dextrose in the 1920s opened up new markets for corn sweeteners, it still did not bridge the sweetness gap with sucrose... These trends came together with the introduction of high fructose corn syrup (HFCS) in 1967." Address: Vice President, Corn Refiners Assoc., Inc.

1698. Haumann, Barbara Fitch. 1997. Soy protein foods gain store space. *INFORM (AOCS)* 8(6):588-596. June.

• **Summary:** Contents: Introduction. Nutritional drive. Meat alternatives. Soymilk and tofu markets. Soybeans as vegetables. Emerging products. Products consumers want. Hurdles. Possible health claim? ("there have been discussions by soy interests of pursuing a health claim [from the FDA] on food labels"). School lunch opportunities (federal school lunch program). Product promotion. Nutraceuticals.

Soy protein foods sold in supermarkets are no longer targeted at only vegetarians; they're becoming mainstream products. Many U.S. consumers are decreasing their consumption of meat. USDA food intake surveys show that from 1977 to 1994 per capita beef consumption decreased 54% and pork consumption dropped 45%.

The leader in meat alternatives is Worthington Foods, which has seen sales rise approximately 20% in each of the past 3 years. Its Morningstar Farms brand, sold in frozen food sections in supermarkets and geared for mainstream consumers, represents 75% of the company's offerings.

PMS Foods, Inc. in Hutchinson, Kansas, is among the companies that make meat alternatives, including soy-based beef, chicken, ham, pepperoni, bacon, sausage-flavored crumble, sloppy joe mix, soy-based taco mix, and soy-based chili mix—which it sells wholesale, primarily to foodservice operations. Some of its products are used as ingredients in supermarket products—such as bacon bits and salad dressing mixes.

Steve Demos, founder and president of White Wave, jokes: "We're primarily a dairy without a cow. We 'milk' soybeans. Founded in 1977, the company now sells 54 retail products and produces about 125 tons a week of soy proteins via aqueous extraction. White Wave has up to 30 linear feet in the refrigerated sections in some natural food stores. White Wave has experienced 25-30% sales increases per year over the past decade.

The Soy Protein Council in Washington, DC, now has 3 members: ADM, Cargill Inc., and Central Soya; all produce soy protein concentrates, isolates, and soy flours. The council promotes the growth of the soy protein industry and works to broaden the acceptance of soy products in foods. The council's Web site is <http://www.spcouncil.org>.

Fourteen state soybean boards, the United Soybean Board, and the Soy Protein Council gave joined together to form the "Soy Protein Partnership," whose goal is to promote domestic soy protein use in human foods. Seven members of the partnership—the state soybean boards from Indiana, Iowa, Kansas, Michigan, Nebraska, Ohio, and South Dakota—are providing \$270,000 to fund the partnership's first project, a "Food Manufacturer's Initiative." The group is using the slogan "New Food, New Uses: How soy protein can expand your business, to reach food marketing executives and food technologists and to increase their awareness of the demand for soy products and their use in food products.

Surveys by Wiese Research Associates have shown that consumer awareness concerning soy protein increased from 55% of consumers polled in 1991 to 79% in 1996. Likewise, those saying they were likely to purchase a product if they knew it contained soy protein increased from 20% in 1988 to 32% in 1996.

In addition, a national Gallup survey conducted in 1996 for the Nebraska Soybean Board showed that 56% of the 600 school foodservice directors polled currently use soy

products. And studies by the National Restaurant Association indicate that 97% of colleges and universities and 80% of restaurants have incorporated meatless entrees into their daily menus.

Schouten USA Inc. of Minnesota, whose parent company is the Schouten Group in the Netherlands, manufactures SoyLife, a soybean [sprout] extract containing 25-30 mg of isoflavones per gram. According to Laurent Leduc, Schouten USA's international marketing manager, it is presently used as an ingredient by more than 40 different vitamin and supplement companies as a source of isoflavones in their products, and is being incorporated into "functional foods" around the world. Leduc notes that research has indicated that consuming 60-80 mg of isoflavones a day may provide health benefits. He adds: "The only other way to get that much is by eating 8-9 ounces of tofu or drinking two-thirds of a liter of soymilk a day. The average American is not going to do that."

William Shurtleff of Soyfoods Center "said it currently is no longer usual to field questions from consumers in Midwestern states who would like to know how to incorporate soy as part of their diets to lower cholesterol.

"I credit much of this to the state soybean checkoff boards that are promoting interest in soyfoods, particularly in the heartland. This is changing the demographics for the market throughout the United States. Within the past two years, these boards have collectively become the single biggest force promoting soyfoods in America." Address: Senior editor/writer for INFORM.

1699. *SoyaScan Notes*. 1997. The soy protein concentrate industry and market worldwide (Overview). July 14. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The following statistics were compiled, with permission, from one or more very reliable sources, which have asked to remain anonymous. Soy protein concentrates are produced by three different processes. The main one is the aqueous-alcohol wash. It gives "functional concentrates" which are more soluble in water, and have a higher water- and fat-holding capacity. The main manufacturers using this aqueous-alcohol wash process are: ADM in the USA—60,000 tonnes/year. ADM in the Netherlands 60,000 tonnes. Central Soya in the USA—60,000 tonnes. Central Soya at Aarhus, Denmark—27,000 tonnes. Sogip in France—12,000 tonnes. Solbar Hatzor Ltd. (formerly Hayes Ashdod) in Israel 10,000 tonnes. Subtotal: 229,000 tonnes/year.

The second process is the acid wash. The main manufacturers using this process are: Lucas Ingredients in the United Kingdom—3,000 tonnes/year. ADM in the USA—3,000 tonnes. Sanbra in Brazil—5,000 tonnes. Subtotal: 11,000 tonnes/year.

The third process is the acid leach: The only manufacturer is Sopropeche (*Sopropêche*) in France (Boulogne Sur Mer; the company also extracts protein from

fish)—6,000 tonnes/year.

Total of all three processes: 246,000 tonnes/year.

This market is expected to double in 4 to 5 years. It is the fastest growing of all the modern soy protein markets; by comparison, the market for soy protein isolates is almost stagnant. Central Soya, whose Promine brand of soy protein isolates used to be the market leader, no longer makes isolates, and now makes only soy protein concentrates.

1700. *SoyaScan Notes*. 1997. The soy protein isolate industry and market worldwide (Overview). July 14. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The following statistics were compiled, with permission, from one or more very reliable sources, which have asked to remain anonymous.

Protein Technologies International (PTI) in the USA—70,000 tonnes/year.

PTI in Belgium—15,000 tonnes.

ADM—15,000-20,000 tonnes.

Fuji-PTI in Japan—10,000 tonnes.

Sanbra in Brazil—8,000 tonnes.

Others worldwide: 6,000 tonnes.

Total worldwide: 124,000 to 129,000 tonnes/year.

The soy protein isolate market worldwide is pretty stagnant—growing quite slowly. By contrast, the soy protein concentrate market is growing very rapidly, and is expected to double in the next 4-5 years.

1701. Kilman, Scott; Warren, Susan. 1997. DuPont to buy Ralston-Purina unit in building 'dirt-to-dinner' biotech line. *Wall Street Journal*. Aug. 25. p. A4, C2 (p. A8 East).

• **Summary:** DuPont signed a letter of intent to buy Ralston Purina's soybean processing unit, Protein Technologies International (PTI), for \$1.5 billion in DuPont stock. PTI makes high-protein powder from soybeans, "a hot-selling ingredient for everything from infant formula to supplemental nutritional drinks for senior citizens. Recent medical studies suggesting that soybean compounds inhibit growth of some cancer cells and reduce the risk of osteoporosis are fanning strong interest in them for use in 'nutraceuticals.'" DuPont, a giant chemical company, wants PTI to process the soybeans genetically engineered by the biotech joint venture it recently formed with Pioneer Hi-Bred International Inc. of Des Moines, Iowa, the nation's largest seed company; DuPont purchased a 20% stake in Pioneer for \$1.7 billion.

"Officials of the joint venture hope to design a soybean from which it is easier to extract isoflavones, a chemical with estrogen-like properties some researchers believe eases menopause symptoms." Industry observers were surprised at the high price (announced Friday) that DuPont offered to pay for PTI; it is more than 3 times the annual revenue of PTI, which last year had \$421 million in sales and \$85 million in operating profit. High offer fueled speculation that DuPont

had to outbid its biggest biotech rival, Monsanto Co., which is spinning off its flagship chemicals business as it gobbles up seed and biotech companies. Some Wall Street analysts think Friday's developments put pressure on Monsanto to form some sort of alliance with ADM to process its genetically engineered crops into food ingredients.

Although the soy protein market that PTI helped to create is growing at about 10% a year, Ralston says it is selling the unit because it doesn't have the biotechnology resources to take it to the next level. DuPont said it expects to reach a final agreement with Ralston this fall, subject to corporate and regulatory approval.

Ralston's stock advanced \$3.44 to \$91.68 with the sale. ADM stock rose \$0.94 to \$21.875.

Note: As of 16 Oct. 1998, PTI has decided to remain at its former offices at the Ralston Purina building in St. Louis, Missouri. It still uses the Ralston Purina library, etc.

1702. National Oilseed Processors Association. 1997. Yearbook and trading rules 1997-1998. Washington, DC. [iv] + 127 + 11 p. No index. 23 cm.

• **Summary:** On the cover (but not the title page) is written: Effective August 1, 1997. Contents: Constitution and by-laws. Officers and directors. Executive office. Members. Standing committees. Trading rules on soybean meal. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}), sampling of soybean meal {at origin} (automatic mechanic sampler, pneumatic probe sampler, probe sampler), sampling of soybean meal (at barge loading transfer facilities), official weighmaster application, semi-annual scale report, certification of installation of automatic sampler & mechanical divider (at origin), semi-annual certification of automatic sampler & mechanical divider (at origin), voluntary checklist for semi-annual certification of sampler & divider (at origin), certification of installation of automatic sampler & mechanical divider (at barge loading transfer facility), semi-annual certification of automatic sampler & mechanical divider (at barge loading transfer facility), voluntary checklist for semi-annual certification of sampler & divider (at barge loading transfer facility), official referee laboratories (meal), official NOPA soybean meal sample bag. Soybean meal export trading rules: Minimum blending procedures for export meal blended at ports, sampling of soybean meal (at vessel loading facilities), weighing of soybean meal (at vessel loading facilities), certification of installation of automatic sampler & mechanical divider (at vessel loading facility), semi-annual certification of automatic sampler & mechanical divider (at vessel loading facility), semi-annual certification of scales at vessel loading facilities. Trading rules on soybean oil. Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, grading soybean oil for color (NOPA

tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses (iodine value, unsaponifiable, break test); refining byproduct lipid, acidulated (refining byproduct lipid and tank bottoms), official weighmaster application, semi-annual scale report, official referee chemists (oil). Soybean oil export trading rules. Uniform soybean oil export contract. Foreign trade definitions (for information purposes only) Appendix 1.

The section on officers, executive committee, and board of directors (p. 7-8) gives the name, company affiliation, and phone number of each person. Officers (executive committee)—Chairman: William B. Campbell, Central Soya Company, Inc. Chairman-elect: Richard Galloway, Quincy Soybean Company. Secretary / Treasurer: Albert J. Ambrose, Harvest States / Honeymead Processing and Refining. Immediate past chairman: John A. Burritt, Ag Processing Inc a cooperative.

Executive staff: President: Sheldon J. Hauck. Executive vice president: Alen F. Johnson.

Board of directors (alphabetically by company; each member company may have up to two representatives on the board; only the first of these may vote): James W. Lindsay & John A. Burritt, Ag Processing Inc a cooperative. John G. Reed, Jr. & John D. McNamara, Archer Daniels Midland Co. Archie Gwathmey & Charles Bussey, Bunge Corporation. Wayne Teddy & John March, Cargill, Inc. William B. Campbell & Carl Hausmann, Central Soya Co., Inc. James D. Tibbets & Al Ambrose, Harvest States / Honeymead Processing and Refining. Patrick E. Wright & Henry E. O'Bryan Owensboro Grain Co., Inc. Richard L. Wiley & L. Weldon Sander, Perdue Farms, Inc. Richard Galloway & Larry Horn, Quincy Soybean Co. Gerard A. Delatte & Richard E. Bell, Riceland Foods, Inc. Thomas L. Harper, Southern Soya Corp. Rodney Christianson & David Thompson, South Dakota Soybean Processors, D. Daryl Houghton & George C. White, Townsends, Inc. Cliff Meeuwsen & Arlen Meeuwsen, Zealand Farm Soya.

Executive office, Washington, DC: President, Sheldon J. Hauck (Email: shauck@nopa.org). Executive vice president: Allen F. Johnson. Director of regulatory affairs: David C. Allor. Executive asst.: Hady J. Nash. General counsel: Elroy H. Wolff, Sidley & Austin. Special consultant: C. Lockwood Marine, Ft. Wayne, Indiana.

Members (listed alphabetically by company; within each company, first the name of the official Association representative {who is on the Board and votes}, followed by the other personal members listed alphabetically by surname. For example, Archer Daniels Midland Co., the company with the most personal members, has 34. After the name of each personal member is given with his address and phone number. In the listing below, the number of personal members is shown in parentheses after the name of each company, followed by city and state of the various locations):

Ag Processing Inc a cooperative (25); Eagle Grove, Iowa; Manning, Iowa; Mason City, Iowa; Sergeant Bluff, Iowa; Sheldon, Iowa; Dawson, Minnesota; St. Joseph, Missouri. Omaha, Nebraska. Archer Daniels Midland Co. (23); Archer Daniels Midland Co. (34); Little Rock, Arkansas; Augusta, Georgia; Valdosta, Georgia; Decatur, Illinois; Galesburg, Illinois; Granite City, Illinois; Taylorville, Illinois; Frankfort, Indiana; Des Moines, Iowa; Fredonia, Kansas; Destrehan, Louisiana; Mankato, Minnesota; Red Wing, Minnesota; Kansas City, Missouri; Mexico, Missouri; Clarksdale, Mississippi; Fremont, Nebraska; Lincoln, Nebraska; Fostoria, Ohio; Kershaw, South Carolina; Memphis, Tennessee. Bunge Corp. (16); Decatur, Alabama; Cairo, Illinois; Danville, Illinois; Emporia, Kansas; Destrehan, Louisiana; St. Marks, Mississippi; Vicksburg, Mississippi; St. Louis, Missouri. Cargill, Inc. (19); Guntersville, Alabama Osceola, Arkansas; Gainesville, Georgia; Lafayette, Indiana; Cedar Rapids, Iowa; Des Moines, Iowa; Iowa Falls, Iowa; Sioux City, Iowa; Washington, Iowa; Bloomington, Illinois; Chicago, Illinois; Wichita, Kansas; Burnsville, Minnesota; Minneapolis, Minnesota; South Savage, Minnesota; Wayzata, Minnesota; Kansas City, Missouri; Fayetteville, North Carolina; Raleigh, North Carolina; Sidney, Ohio; Memphis, Tennessee; Chesapeake, Virginia. Central Soya Co., Inc. (11); Gibson City, Illinois; Decatur, Indiana; Fort Wayne, Indiana; Indianapolis, Indiana; Belmond, Iowa; Bellevue, Ohio; Marion, Ohio; Delphos, Ohio; Chattanooga, Tennessee. Harvest States / Honeymead Processing and Refining. (5); Mankato, Minnesota. Owensboro Grain Co., Inc. (4); Owensboro, Kentucky. Perdue Farms, Inc. (4); Salisbury, Maryland; Cofield, North Carolina. Quincy Soybean Co. (4); Helena, Arkansas, Quincy, Illinois. Riceland Foods, Inc. (5); Stuttgart, Arkansas. South Dakota Soybean Processors (3); Volga, South Dakota. Southern Soya Corp. (2); Estill, South Carolina. Townsend's Inc. (2); Millsboro, Delaware. Zealand Farm Soya (3); Zealand, Michigan.

Associate Members: AC Humco, Memphis, Tennessee. ADM Agri-Industries Ltd., Windsor, Ontario, Canada. Alfred C. Toepfer International, Inc., Minneapolis, Minnesota. Amber, Inc., Tarrytown, New York. C&T Quincy, Richmond, Virginia. CanAmera Foods, Oakville, Ontario, Canada. Columbia Grain & Ingredients, Inc., Wellborn, Florida. Commodity Specialists Company, Minneapolis, Minnesota. Con Agra Poultry Co., El Dorado, Arkansas. Continental Grain Co., Chicago, Illinois. ContiQuincyBunge, New York City, New York. Garnac Grain Co., Overland Park, Kansas. Hunt-Wesson, Inc., Fullerton, California. Iowa Select Farms, Iowa Falls, Iowa. Lipton, Englewood Cliffs, New Jersey. Louis Dreyfus, Wilton, Connecticut. Noga Commodities (Overseas), Inc., New York City. Oleostates, Inc., Tucson, Arizona. Pilgrim's Pride Corp., Pittsburg, Texas. Procter & Gamble Co., Cincinnati, Ohio. Schouten USA Inc., Minneapolis, Minnesota.

Standing committees: For each committee, the function of the committee, the names of all members (with the chairman designated), with the company and company address of each are given—Crusher committees: Canola, flaxseed, safflower seed, sunflower seed. International trade committee. Government and public relations committee. Industry and grower relations committee. Soybean meal trading rules committee. Soybean oil trading rules committee. Technical, research, environmental, and safety, health, and loss prevention (TESH) committee. Technical. Address: 1255 Twenty-Third St., N.W., Washington, DC 20037. Phone: 202/452-8040. Fax: 202/835-0400.

1703. *GMF—Genetically Modified Foods Market Intelligence (Genetic ID, Fairfield, Iowa)*. 1997. DuPont next big player in ag biotech. No. 12. Sept. 1. p. 1.

• **Summary:** “In a bid to join Monsanto and Novartis in the top tier of developers of new genetically engineered crops, Wilmington, Delaware-based DuPont Co. is building a biotech food empire through acquisitions.

“DuPont has acquired a 20% stake in seed producer Pioneer Hi-Bred International of Des Moines, Iowa, which will give it a marketing outlet for its new seeds that are genetically engineered for special nutritional attributes. Pioneer had previously turned down purchase offers from Monsanto.

“As part of a strategy to create a vertically integrated structure to deliver its products, DuPont is also acquiring the Protein Technologies International (PTI) unit of Ralston Purina Co. PTI is a leading producer of soy protein powders that are ingredients in a wide range of nutritional products from infant formula to soy burgers. PTI will be the vehicle for processing and selling DuPont's soybeans engineered to contain altered nutritional components such as proteins and fats.

“The *Wall Street Journal* of August 25 reported that some Wall Street analysts are now expecting an alliance between Monsanto and Archer Daniels Midland Co. to process Monsanto's genetically modified crops into food products.”

1704. Marcial, Gene G. 1997. Inside Wall Street: ADM isn't staying down on the farm. *Business Week*. Sept. 1. p. 83.

• **Summary:** Investment manager Wayne Nordberg, head of equity investing at Lord Abbett, which manages \$25 billion, believes that ADM stock will soon start to rise. The company is a good value, but it has fallen on hard times and is bereft of friends. He believes it will earn \$1.35 a share in the year ending 30 June 1998, and \$2 in 1999, and that it will be worth \$40/share in 12 to 18 months.

Why? 1. ADM has settled most of the big lawsuits brought by the justice department. 2. A turn-around in earnings is just 6 months away. 3. A joint venture with Monsanto is rumored to be in the works. Monsanto, with

sales of \$9.2 billion last year, could buy a stake in ADM. Nordberg says ADM's entry into bio-products (in which it has invested \$1.5 billion) fueled these rumors. Margins on bio-products such as vitamin E, beta carotene, and lysine are high, and return on assets could reach 20%. ADM has 60% of the \$600 million lysine market. 4. ADM has a "clean balance sheet and cash on hand of about \$2 billion." This gives ADM opportunities to invest more in its own businesses.

1705. Skiff, James. 1997. Update on INTSOY (Interview). *SoyaScan Notes*. Sept. 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Wilmot Wijeratne, director of INTSOY, left about 1½ to 2 months ago to take a private-sector job in Iowa. As far as Jim knows, no new director has been named.

Karl Weingartner of INTSOY sent Jim an e-mail stating that 6 million bushels of soybeans are used to make foods in the United States, and 20% of these are organically grown. Jim does not know how Karl arrived at these numbers, or what the definition of "foods" is. It probably does not include soy oil, and probably does include all the modern soy protein products such as TVP, soy protein isolates and concentrates, etc.

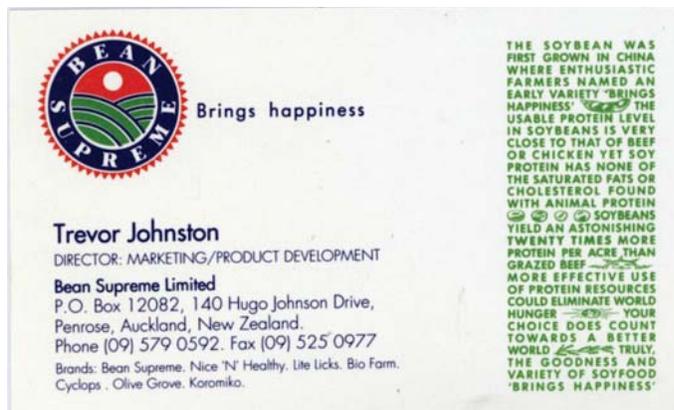

Note that in the book *Soyfoods Industry and Market, 5th edition* (1985, p. 41) Shurtleff and Aoyagi give a full-page table showing exactly how many metric tons of soybeans are used for each of the different types of soyfoods made in the USA. The total (not including soy oil) is 663,823 metric tons. Since there are 36.75 bushels per metric ton, this comes out to 24.4 million bushels. This figure from 1985 is more than 6 times larger than Weingartner's figure. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

1706. Associated Press (AP). 1997. Company news: Archer Daniels to pay \$296 million for Moorman. *New York Times*. Sept. 13. p. 37.

• **Summary:** Yesterday the Archer-Daniels-Midland Co. (ADM, Decatur, Illinois) agreed to acquire the Moorman Manufacturing Co., a privately held agribusiness firm based in Quincy, Illinois, for at least \$296 million in ADM stock. Moorman said the precise number of shares to be exchanged would not be determined until three days before the close of the transaction. A spokeswoman for ADM confirmed that a deal had been struck but declined additional comment.

ADM "is an agribusiness giant with 1996 revenues of \$13.3 billion. Moorman has annual revenue of \$1.2 billion and employs 2,700 people in 35 states."

1707. Johnston, Trevor. 1997. Re: Update on Bean Supreme and genetically modified foods. Letter to William Shurtleff at Soyfoods Center, Sept. 22. 3 p. Handwritten, with signature on letterhead (fax).

• **Summary:** "The anti soy people are still alive and seem to appear in print as soon as there is any significant promotion of soy—even when it means rehashing old news (see enclosed).

"The parrot man [Richard James of Whangarei, New Zealand] still sends me hate mail—without stamps so my secretary unwittingly has to pay for the stamp.

"On a personal note—I remain very passionate about soy and grateful for your continued mentorship in this regard—albeit from a distance. Kind regards..."

On Trevor's business card is the colorful "Bean Supreme" logo followed by the words "Brings Happiness." Address: Marketing director, Bean Supreme Ltd., Box 12082, Penrose, Auckland, New Zealand]. Phone: 64 9 579-0592.

1708. Lightlife Foods, Inc. 1997. Eating healthy can be soy easy (Brochure). Greenfield, Massachusetts. 12 p. 22 cm.

• **Summary:** On the cover of this full-color, glossy brochure is a color photo of a meatless burger (between buns, with onion, tomato, and lettuce), a hot dog (in a bun, with a bead of mustard on top), and a plate of stir-fried tempeh with veggies. In the background are rolling soybean fields. In the foreground are three pods of green vegetable soybeans, and 15 whole dry soybeans.

Contents: Ten reasons to include soyfoods and soy protein in your diet (p. 2-3): 1. You will be in good company. 2. Lower your cholesterol. 3. Lower your risk of cancer. 4. Menopausal symptoms. 5. Soyfoods are nutritious. 6. A quality protein source. 7. Save our precious resources. 8. A variety of alternatives and greater availability. 9. Better quality. 10. Soyfoods are "in."

Glossary of common vegetable protein foods (p. 4-5): Tofu, tempeh, meat analogs, soymilk, soy cheese, soy flour, soy protein, textured vegetable protein (TVP), seitan, miso. A table shows each Lightlife product, serving size, and grams of soy protein (soy tempeh has the most at 24 gm per 4 oz serving, followed by Gimme Lean at 18 gm per 4 oz).

Products (with a brief definition of each) and mission statement (p. 6-7): Smart dogs. Tofu pups. Wonderdogs (The first low-fat vegetarian hot dog just for kids). Smart

deli slices (fat free). Foney baloney (Kids love it). Lean links sausages. Gimme lean (fat free). Marinated smoky tempeh strips (“Fakin’ Bacon”). Fakin’ bacon bits. Marinated tempeh “grilles” (soy tempeh patties in Tamari, Lemon, and Barbecue flavors). Lightburgers (fat free). Lightsausages (fat free). Tempeh (in 5 varieties–Soy, Three Grain {millet, brown rice, barley}, Garden Vegetable, Quinoa-Sesame, and Wild Rice), Savory seitan, Vegetarian request (100% vegetarian, all-natural entrees). A color photo shows many products in their packages.

Getting started (p. 8-10; how to use key products). About Lightlife (since 1979). Address: P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 1-800-274-6001 Ext. 129.

1709. Ontario Soybean Growers’ Marketing Board (OSGMB). 1997. Overview of the Canadian soyfoods market. Chatham, Ontario, Canada: OSGMB. 44 p. 28 cm.  
 • **Summary:** This excellent, complete, and accurate market study was compiled by the Collège d’Alfred of the University of Guelph, under contract with the Ontario Soybean Growers’ Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The field research was conducted between Jan. 15 and Aug. 31, 1997. The first study of the Canadian soyfoods market was published in March 1990 (vi + 40 pages).

Contents: Acknowledgments. Summary. Introduction. Research procedures: Methodology, limitations (of the 100 companies in this study, over 75% were visited, interviews were conducted in person, and product samples were collected). The Canadian soyfoods market: History, structure of the Canadian soyfood industry, market highlights by region (The Maritimes, Quebec, Ontario, the Prairies {Manitoba, Saskatchewan, and Alberta}, British Columbia), factors influencing the soyfoods market (A closer look at Canadian demographic trends, a closer look at Canadian immigration trends, a closer look at vegetarianism and family food expenditure trends, research on soyfoods and their health benefits, the American influence). Supply and demand of soybeans for use in soyfoods: Soybean production in Ontario, imports and exports of soybeans, imports and exports of soy products, the soybean crushing industry in Ontario, consumption of whole soybeans by soyfood processors. Opportunities in the Canadian soyfoods market. Soyfood processors and their needs. Market opportunities for food-grade soybeans. Summary comments. Bibliography.

Tables show: (1) Major soyfood companies established in the province of Quebec (p. 13). (2) Major soyfood companies established in the province of Ontario (p. 16). (3) Major soyfood companies established in the province of British Columbia (p. 19).

(4) Percentage of change in units and sales of soyfoods by product in grocery stores in Canada between 1994 and 1996 (soy sauce, soy flour, soy oil, soymilk, tofu and meat

analogues). (p. 21). (5) Percentage distribution of population in Canada by province (p. 22. In 1996, 37.5% lived in Ontario and 24.6% in Quebec). (6) Percentage distribution of age groups–Canada (p. 22; In the 15-24 age group, 19% did not eat meat in 1992, down from 23% in 1986).

(7) Percentage of population who do not eat meat & share of budget spent on meat, Canada 1986 and 1992 (p. 28). (8) Canadian soybean: Supply and disposition (September–August crop year)–in metric tons (p. 31). (9) Canadian soybean exports by country of destination (p. 32. In 1997-98 some 325,000 tonnes went to the European Union, 145,000 to the USA, 85,000 to Japan, 40,000 to Hong Kong, 75,000 to other Asia, and 15,000 to other places).

(10) Imports and exports–All countries, dollar values (p. 33. The leading imports are soybean meal \$202.7 million, crude soybean oil \$16.75 million, and whole soybeans for oil extraction \$12.59 million. The leading exports are protein concentrates and textured protein substances \$9.1 million, soybean meal 6.5 million, and brans, sharps and other residues \$4.3 million).

(11) Soybean crushing facilities in Canada (p. 34. All are located in Ontario province; ADM Agri-Industries Ltd., Windsor. Capacity: 3,600 tonnes/day of raw soybeans. CanAmera Foods, Hamilton, 3,000. Helin Oil Packers, Whitby, 250. Started crushing in 1997. Cold Springs Farm Ltd., Thamesford, 100. Started 1995. Sunfield Oil Seeds, Wingham, 100. Started 1994. Dennis Jackson Seeds Services Ltd., Dresden, 40. Started 1994. Tri County Protein Corporation, Iroquois, 100. Not in operation yet).

(12) Estimated quantities of soybean utilized by soyfood processors–1996–metric tons (p. 35. Total volume of whole soybeans consumed: 9,650 tonnes, of which 4,780 are for soymilk, 4,775 are for tofu, and 95 are for other soyfood products). Total volume of whole soybeans consumed by province (by soyfood processors): British Columbia 3,825 tonnes, Ontario 3,050 (excluding crushing plants), the Maritimes and Quebec 2,535, and the Prairies 240.

(13) Major foreign companies in the Canadian soyfood market (p. 37. Soy cheese: Soyco Foods, Sharon’s Finest, Cemac Foods Corp. {Nu-Tofu}. Frozen desserts: Tofutti Brands Inc. Tempeh: Turtle Island Foods Inc. Tetra Pak packaged soymilk: Westbrae Natural Foods, Cenat, Pacific Select, Vitasoy USA Inc., Eden Food Inc. Tofu: Mori-Nu, Vitasoy USA Inc. Prepared dishes: Amy’s, Sharon’s Finest. Meat analogues: Fantastic Food Inc. MGM Brands, Northern Soy, Soy Boy, Turtle Island Foods Inc. Salad dressing: Nasoya Foods. Soy sauce: Eden Foods Inc., Kikkoman Foods Inc.).

The Prairie Provinces (Manitoba, Saskatchewan, and Alberta) contained about 16.6% of Canada’s population (4.5 million persons) in 1995. “The province of Alberta [Capital = Edmonton] is different from the other two Prairie provinces, due mainly to its larger population base, its growing Oriental population and its proximity to Vancouver.

Calgary [a large city in Alberta province] and Edmonton have their own Chinatowns, including small Oriental-owned tofu and soymilk production facilities.” Note: According to the Canadian Soyfoods Directory (1997, p. 14), there are 7 soyfoods companies in Alberta province, 2 in Manitoba, and none in Saskatchewan. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

1710. *Ontario Soybean Growers' Marketing Board Newsletter*. 1997. Profile: ADM. Sept. p. 15.

• **Summary:** In 1997 ADM was successful in acquiring up to 45% interest in United Grain Growers (UGG), Canada's largest farm co-op. Martin Andreas, Senior Vice President at ADM's headquarters in Decatur, Illinois, says that ADM plans further investments in Canada. The company already has 10 flour mills there, in addition to its soybean and canola business, and now its association with UGG.

Ontario soybean growers are most familiar with ADM through its Windsor elevator and crush complex, and through its elevators in the southwest, including elevators at Essex and Maidstone. While the company does not disclose its crush volumes, industry watchers estimate that ADM is processing approximately 25 million bushels of oilseeds a year at its recently expanded and modernized plant in Windsor, Ontario.

“Windsor's two extraction plants can crush either soybeans or canola, and it makes little difference in terms of plant operation whether the soybeans are grown in Ontario or the U.S.”

“ADM is more closely allied to farmers and elevators than its competitors. Andreas agrees. ‘In the U.S. alone, we need 9.5 million bushels of grains and oilseeds a day to meet our processing and export requirements,’ he explains. ‘We must be closely allied with the people who are the producers of our raw materials.’”

“ADM's recent investment in Saskatchewan-based UGG reflects its policy around the world. ADM has agreements in place in the U.S. with the 175,000-member Growmark co-op, as well as with Countrymark and Riceland. It also has a one-third interest in the peanut co-op, Golden Peanut.”

“Internationally, ADM has a 50 percent equity position in Europe's A.C. Toepfer, which with 2.5 million members, is the largest farm cooperative in the world.” Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1711. *Ontario Soybean Growers' Marketing Board Newsletter*. 1997. Arbitration award imposes radical changes. Sept. p. 1, 11-14.

• **Summary:** In December 1996, ADM Agri-Industries and CanAmera Foods (Canada's two largest soybean crushers) announced that, for all soybeans they purchase for delivery after 1 Sept. 1997, they would implement a 13% moisture standard, with an allowance of 1% for dockage and foreign

material. The previous moisture standard had been 14%. Thus after Sept. 1 soybeans that contain more than 13% moisture when delivered, will be assessed a percent discount—based on the price of the soybeans at the time of sale. This discount is intended to cover drying charges, invisible loss, and moisture shrink. Tables show: Sample calculations (p. 12). The percentage discount for different moisture rates (p. 13). Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1712. Soyatech, Inc. 1997. *Soya Bluebook Plus 1998: The annual directory of the world oilseed industry*. Bar Harbor, Maine: Soyatech. 400 p. Sept. Comprehensive index. Brand name index. Advertiser index. 28 cm.

• **Summary:** On the cover is a jigsaw puzzle map of the world on a blue background. The inside front cover and next two pages contain full page color ads from Lucas Meyer, “The Lecithin People” and “Edelsoja: The Protein People.” On the back cover is color ad from “ADM: Supermarket to the world.”

The Forward begins: “In the ten years since Soyatech began producing the Soya Bluebook, many things have changed in the world and the oilseeds industry.” Democracy and free markets have spread, the Berlin Wall has tumbled, and international markets have been created. “This book contains information on over 3,000 companies in more than 100 countries, including hundreds of new E-mail and Internet addresses.” Also, a limited edition of the directory is available at no cost on the World Wide Web at <http://soyatech.com>. In the reference section, “pages 368 to 373 provide detailed nutritional information on the major oilseeds and their products.” The statistical section has been completely updated and the glossary has been revised. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207/288-4969.

1713. Woolsey, R. James. 1997. Alcohol and driving *can* mix. *Wall Street Journal*. Oct. 24. p. A-22 (East).

• **Summary:** New genetically engineered microorganisms and biocatalysts are now able to produce ethyl alcohol (ethanol) not just from feed grains but also from any other plants and common organic wastes. “The production of ethyl alcohol from biomass may turn out to be as revolutionary as the production of integrated circuits from silicon, vastly affecting the world's distribution of wealth and the fundamentals of international security. Replacing gasoline with biomass-derived ethyl alcohol would greatly reduce man-made greenhouse-gas emissions...”

The real question is the cost of producing ethyl-alcohol. Over the past 15 years the cost of producing a gallon of ethanol from corn—the main feedstock—has been cut in half, to about \$1 a gallon. But if the feedstock were to change to any biomass, ADM would probably end up losing its current near monopoly of the ethanol market. Address: Attorney,

Washington, DC (Director of the CIA–Central Intelligence Agency, 1993-95).

1714. Golbitz, Peter. 1997. Soyfoods Expo '97 in Mexico City, 21-23 Oct. 1997 (Interview). *SoyaScan Notes*. Oct. 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The American Soybean Association (ASA) sponsored this expo and hired Peter and Soyatech to recruit American companies to participate. 824 people attended (many more than the last soyfoods expo in Mexico in 1994) and 28 companies exhibited at the U.S. Trade Center in Mexico City. The event started Tuesday, October 21, with a briefing by the Trade Center on how to import products into Mexico. Tuesday evening there was an opening VIP cocktail, attended by about 300 people. The booths were all set up; it and ended Thursday Oct. 23. One Wednesday and Thursday the Expo hall was open from 12:00 noon until 8:00 p.m. each day. The U.S. Trade Center arranged appointments for people, from 9-12 o'clock each morning, linking potential buyers and sellers. A great deal of business was conducted. In addition there were five seminars each day, from 12:30 to 6:00 p.m., with the speakers being mostly Americans, talking about new technologies, marketing, soymilk standards, products, etc. There was one seminar about current developments with soy in Guatemala. ASA put together a beautiful little color catalog as part of a big packet on the Expo, with all the seminars, speakers, attendees, etc. Peter will send a 5-page faxed recruitment packet announcing the event.

Cuba has exported an excellent soymilk plant to Mexico; the company, Biotek, owned by Dr. Javier Sandoval Pierres, is now in operation at: Km. 9 Carreterra Celaya, San Miquel Allende, Guanajuato state (GTO, south of Mexico City), Mexico. Phone: +91 415 5-0347 or 0348. Fax: 4-0349. The soymilk is delicious. The company is beginning to work with the Mexican government to get this soymilk into schools.

Mexico is now the third largest importer of U.S. soybeans after the Netherlands (#1) and Japan (#2; see *Soya Bluebook*, p. 348). This is largely attributed to NAFTA, the proximity of Mexico to the USA, and the fact that as imports from the USA have increased, Mexican soybean production has decreased. In addition, China is now exporting good quality food soybeans to importing nations in Asia.

ASA Mexico now produces a quarterly Spanish-language magazine titled *Soya*. For more information contact Adela Perez and Viki Braverman at ASA Mexico.

Note: A photo in *Bluebook Update* (March 1998, p. 6) shows U.S. participants in the Expo: Matt Renkoski of Optimum Quality Grains; Deb Wycoff of Devansoy; Rick Eluk of Clofine Food & Dairy; Teresa Isakson of SunRich; Lorne Broten of International ProSoya; Alberto Pico of ADM; and Peter Golbitz of Soyatech, Inc. Also shown are Adela Perez of ASA (Mexico) and some of her staff. Address: Soyatech, P.O. Box 84, Bar Harbor, Maine 04609.

Phone: 207-288-4969.

1715. Archer Daniels Midland Co. 1997. Annual report. P.O. Box 1470, Decatur, IL 62525. 44 p. Oct.

• **Summary:** Net sales and other operating income for 1997 (year ended June 30) were \$13,853 million, up 1.05% from 1996. Net earnings for 1997 were \$337.3 million, down 45.8% from 1996. Shareholders' equity (net worth) is \$6,050 million, down 1.5% from 1996. Net earnings per common share: \$0.66, down 45% from 1996. Number of shareholders: 33,834. ADM spent \$1,127 million on additions to plant in 1997, compared with 801 million in 1996 and 658 million in 1995.

On the cover of the report is color illustration of a purple planetary globe. James R. Randall, who has been President of ADM for the past 22 years, has retired but continues advise the company. At ADM's website ([admworld.com](http://admworld.com)) a counter displays the world's population, now at 5.859 billion. "Every second of every day, the world gains 3 new mouths to feed." "The earth's population is projected to double in the next 50 years, hitting ten billion by the year 2050. Yet there will be no increase in the land available for growing food" (p. 5).

In the section titled "Discover the benefits of ADM's health products" (p. 6-7) are subsections on natural vitamin E, lecithin granules, soy protein, and isoflavones. The latter section states: "Isoflavones are special compounds called phytochemicals that occur naturally in soybeans. (Phytochemicals are different from vitamins or nutrients, but are thought to have and impact on health.) The two main types of isoflavones are genistein and daidzein. ADM is currently constructing the world's largest plant to make isoflavones in concentrated form.

"Initial research indicates that isoflavones may work in several ways to fight a range of diseases, including heart disease and cancer. They may also help relieve menopause symptoms, promote bone health and protect against osteoporosis.

In addition to the concentrated products, ADM makes a number of soy products that are naturally rich in isoflavones, such as soy milk, soy flour and Harvest Burgers products."

More than 100 million Green Giant Harvest Burgers have been sold (p. 19). The section on Haldane Foods (p. 20), a large producer of vegetarian foods in England, shows a half-page color photo of their products. It states: "A recent survey shows that 5.4% of the U.K. population is vegetarian and almost half are now actively eating less meat." ADM has just completed a fourfold increase in the capacity of its plant in Newport Pagnell—which produces many of these products.

Sales of oilseed products in 1997 increased 10% to 8.9 billion (p. 24). ADM sold its British Arkady bakery ingredient business (p. 25). Among the corporate officers, G. Allen Andreas is President and CEO. Address: Decatur, Illinois.

1716. Book Publishing Co. 1997. Complete '97 fall catalog (Mail order). Summertown, Tennessee. 48 p. 22 cm.

• **Summary:** Contains many books about vegetarian cookery (p. 14-29), including books on TVP, gluten and seitan, tempeh, soyfoods, and tofu. Address: P.O. Box 99, 156 Drakes Lane, Summertown, Tennessee 38483. Phone: 1-800-695-2241 or 615-964-3571.

1717. Newshour with Jim Lehrer. 1997. ADM—Feeding the world. Television broadcast. PBS. Oct. 1.

• **Summary:** The following three new ADM ads began to be aired on the Newshour in early October, 1997. (1) “Feeding the world is the biggest challenge of the new century. Outside of the U.S. you’ll find 96% of the world’s population. Inside, you’ll find the means to feed them. ADM—Supermarket to the world.”

(2) “Feeding the world is the biggest challenge of the new century. By the time this baby is old enough to vote, the world will have nearly 2 billion new mouths to feed. ADM—Supermarket to the world.”

(3) “Feeding the world is the biggest challenge of the new century. In fifty years the world must have room at the table for ten billion people. We’re setting new places every day. ADM—Supermarket to the world.”

Note: These ads may be the opening salvo in an effort to persuade American consumers that genetically engineered foods are necessary and a good idea.

At about this same time, ADM also began to air three more ads: (4) “Feeding the world is the biggest challenge of the new century. That’s why ADM is promoting soil conservation—so history doesn’t repeat itself. ADM—Supermarket to the world.” (5) “Feeding the world is the biggest challenge of the new century, which is why ADM promotes satellite technology to help the American farmer be even more productive. ADM—Supermarket to the world.” (6) “Feeding the world is the biggest challenge of the new century, which is why ADM is conducting research into aquaculture and other new food sources. ADM—Supermarket to the world.”

1718. *Ontario Soybean Growers’ Marketing Board Newsletter*. 1997. Profiles: Helin Oil Packers, Phil Iocavedes, and Jim Papadopoulos. Oct. p. 7.

• **Summary:** Helin Oil is a new oilseed crushing company, located on Hopkins Street in Whitby, Ontario, just east of Toronto—the site of a former Ralston Purina feed mill. By mid-winter Helin plans to buy 2 million bushels a year of Ontario soybeans, which it will convert into “high-quality partial-fat soymeal for dairy farmers in Ontario and nearby states,” and a variety of soybean oil products to be sold in Canada and overseas.

Phil Iocavedes (whose photo is shown) “will manage the plant, reporting to Jim Papadopoulos, director of operations

for Helin Oil and one of the principals in Empire Foods Ltd., the Markham wholesale food and paper company that three years ago decided the time was ripe to build a vegetable oil business in the province. Both Helin Oil and Empire Foods are now owned by Helin Industries Ltd., which will be traded publicly starting in mid-October on the Alberta Stock Exchange.

“Ontario’s oilseed crushing industry may be dominated by international giants CanAmera Foods and Archer Daniels Midlands, which crush nearly 60 million bushels of soybeans a year at their Hamilton and Windsor locations, with a value in round terms of \$500 million.”

“Papadopoulos was born in Greece and moved to Canada at the age of 17 years.”

“The company is considering becoming Canada’s first marketer of mechanically pressed crude oil

“With a staff of 35, the Whitby plant will be running its four expellers and six extruders 24 hours a day, seven days a week to crush 200 to 240 tonnes of cold-press oil per day.” Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1719. Upbin, Bruce. 1997. Vindication: A year ago the news was filled with scandal stories about Archer-Daniels-Midland. A classic case of media overreaction. *Forbes*. Nov. 17. p. 52-53, 56.

• **Summary:** A pie chart (p. 56) shows the market shares of major U.S. soybean crushers: ADM 31%, Cargill 24%, Bunge 13%, AGP 10%, Central Soya 7%, Others 15%. Other pie charts show that ADM is also the single largest cocoa processor, grain miller, and high fructose corn syrup maker in the U.S.

A graph, titled “ADM’s spending spree,” shows gross additions to plant from 1988-1997. Spending hit \$1 billion in 1997.

ADM is spending its money in the areas where its growth is greatest—in emerging markets—such as China, which will become the world’s 4th largest soybean importer by the end of next year, projected to import about 2.7 million tons of soybeans and 3.4 million tons of soybean meal. The more meat and poultry the Chinese consume, the more soybeans they will need.

A large color photo shows Allen Andreas, standing in a corn field, dressed in coat and tie, waving 3 ears of corn and smiling. He notes that China has no chance of being self sufficient in soybeans.

In Sept. 1997, ADM swapped \$300 million of its stock for Moorman Manufacturing Co., a soybean processor in Quincy, Illinois, with \$1.2 billion in annual sales. This is ADM’s first soybean crushing plant on the Mississippi River. It costs only \$2 per ton to ship soybean meal by barge from Quincy to St. Louis (Missouri) versus \$6 per ton from ADM’s big plant in Decatur, Illinois, to St. Louis.

ADM stock has rebounded from a low of \$13 in mid-1995 to \$24 at present.

1720. Limpert, Bill. 1997. Functional and nonfunctional soy protein concentrates. Isoflavones in soy protein products (Interview). *SoyaScan Notes*. Nov. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Cargill does not presently make soy protein concentrates; the two big manufacturers worldwide are ADM and Central Soya. Bill would guess that Central Soya may have a slightly larger market share—it is their flagship soy protein product. They each use two different methods to make these concentrates: the aqueous alcohol wash (for non-functional concentrates, which have high levels of denatured proteins) and the isoelectric wash (for functional concentrates, which have water absorption, higher solubility, etc.). Of the three major soy protein products (flour, concentrates, and isolates), soy flour has the highest level of all the different isoflavones. Since isoflavones are soluble in alcohol, they are absent in concentrates made using the aqueous alcohol wash. The normal way to get a *functional* soy protein concentrate is to use the an isoelectric wash—where only water (no alcohol) is used, at a pH of 4.2 to 4.5. A concentrate made in this way will have a fairly low level of isoflavones, but not as low as the level in soy protein isolates—even though not made using an alcohol wash. Bill is sure that PTI has far more people working on isolates than ADM.

One important, basic question is: Can you produce a functional soy protein concentrate using the aqueous alcohol wash system? The resulting product would not contain isoflavones.

ADM now pulls off one of their extraction streams to get concentrated isoflavones—which they plan to market as a separate product. They have all the pieces in place to make commercial isoflavones. At the IFT show they even had isoflavones on the front page of their catalog, even though they didn't offer the product inside! ADM's strength is that they offer all the soy protein products—and now they are offering “nutraceuticals” as well! Address: Research Chemist, Technical Services Manager, Cargill, Inc., Research Dep., P.O. Box 5699, Minneapolis, Minnesota 55440. Phone: 612-742-5365.

1721. Archer Daniels Midland Co. 1997. First quarter report to shareholders. Box 1470, Decatur, IL 62525. 4 p. 28 cm.

• **Summary:** This quarterly report comes in a new and much more attractive 8½ by 11 inch format, printed in full color on glossy paper. Includes: Excerpts from G. Allen Andreas's address at the 1997 annual shareholders meeting. Financial statements (gross profit and net earnings were down, in part because of litigation settlements), reprint of an article from *Vanity Fair* magazine, and a graph showing the prices per share of ADM stock from July 1980 (\$2.5) to July 1997 (\$24). Address: Decatur, Illinois.

1722. **Product Name:** Novasoy (Soybean Isoflavones).

**Manufacturer's Name:** Archer Daniels Midland Co.

**Manufacturer's Address:** P.O. Box 1470, Decatur, Illinois 62525. Phone: 217-424-5228.

**Date of Introduction:** 1997 November.

**Ingredients:** Soy isoflavones.

**Wt/Vol., Packaging, Price:** 20 kg paperboard drum.

Product wholesales for \$1,000/drum, which is \$500/kg (1998/03, Decatur, Illinois).

**New Product–Documentation:** Talk with Mark Messina of Nutrition Matters. 1998. This product was introduced in Nov. 1997. Ad (8½ by 11 inches, color) in *Natural Foods Merchandiser*. 1998. March. p. 110. “ADM Novasoy isoflavones. A natural reflection of soy.”

Talk with Steve Buchheim, marketing manager for soy applications at ADM. 1998. March 5. This product was first sold commercially in Nov. 1997 to Life Extension Institute in Florida. The pilot plant, in which it was made and is still being made, began operation in July 1997, and during that month a sample was sold to Bayer (USA) for their internal use. The full-scale plant in Decatur should be in operation by August or September 1998. ADM does not sell this product to consumers; it sells only to other companies and strongly advises them to follow DSHEA (pronounced du-SHAY), because of which ADM does not need FDA approval to sell Novasoy (soy isoflavones) as a food supplement; however FDA approval will be required before Novasoy can be used as a food additive, i.e. added to other foods.

Note: This is the Dietary Supplements Health Education Act (also called the Hatch Act, after Senator Orrin Hatch, Republican of Utah). When it was passed on 15 Oct. 1994, the whole world of nutraceuticals was revolutionized. This Act made it much easier to sell dietary supplements without FDA approval. It essentially put the burden of proof on the FDA. The actual language of the Act makes “amazing reading. The Act is a watershed event for the health food industry in the USA—a particularly for the nutritional supplement industry.

A typical tablet would be 50 mg, which is a daily dose. The product is a light beige powder, of very fine texture, which flows so nicely it almost seems slippery. Isoflavones are basically sugars. In Novasoy, the oil, protein, and fiber have all been removed, but many other micronutrients remain. There have been very complimentary articles about ADM's product in *USA Today* and *The New York Times* (2-part article by Jane Brody).

1723. Liebowitz, Annie; et al. 1997. A portrait of world power: The 65 men and women who shape and rule the world today... *Vanity Fair*. Nov. p. 217-75. See p. 262.

• **Summary:** Dwayne O. Andreas, Chairman of Archer Daniels Midland Co., is one of the 65 men and women profiled with a half-page photo and brief biography (p. 262). The Chairman of Archer Daniels Midland Company was

photographed by Nigel Parry on 1 May 197 at his apartment in New York City.

Born in Worthington, Minnesota, he “attended Wheaton College (Illinois) before leaving to join his father and brothers in a soybean processing business.” He married Dorothy Inez; they have three children.

Others include President Bill Clinton, The Dalai Lama, Her Majesty Queen Elizabeth II, Pope John Paul II, Bill Gates (Microsoft), Al Gore, Alan Greenspan, Andrew S. Grove (Intel), etc. A color photo shows Andreas, together with 1 page of information about him.

**1724. Product Name:** Prolongevity Mega Soy Extract (Soy Isoflavones).

**Manufacturer’s Name:** Life Extension (Marketer). Made in Decatur, Illinois by ADM (Archer Daniels Midland Co.).

**Manufacturer’s Address:** 1881 N.E. 26th St., Suite 221, Wilton Manors, FL 33305. Phone: 1-800-841-5433.

**Date of Introduction:** 1997 November.

**Ingredients:** Soy isoflavones in concentrated form.

**Wt/Vol., Packaging, Price:** 60 capsules x 135 mg each retails for \$30.38. 600 capsules x 700 mg each retails for \$590.00.

**How Stored:** Shelf stable.

**New Product–Documentation:** Talk with Mark Messina. 1997. Dec. 8. This product is now on the market. Talk with manager of Life Extension retail store near Ft. Lauderdale, Florida. 1998. Jan. 22. Mega Soy Extract was on the shelves of this store in about Nov. 1997. Talk with Life Extension toll-free order line. 1998. Jan. 22. This product is back-ordered; it should be available next Friday. A recent issue of the Life Extension magazine was largely devoted to this new product. Talk with Mike Friedman of Life Extension Foundation (LEF). 1998. Jan. 23. He just talked with Gary Prader, manager of the Life Extension retail store, who said that Mega Soy Extract has been in the store for about 2 months. This foundation is a not-for-profit organization with about 25,000 members and 100,000 regular buyers. It was founded by Saul Kent and Bill Faloon, who are still the principals. They pioneered new therapies and supplements, and they still fund extensive research in the field of life extension. Durk Pearson and Sandy Shaw, who wrote a very popular book titled *Life Extension* (1982) have never been connected with the foundation. At one point the FDA used a battering ram to break down the doors of the foundation. The case went to court and LEF was found not-guilty; all 40 charges were dropped. LEF filed a counter-suit against the FDA and won.

**1725. SoyaScan Notes.** 1997. Chronology of major soy-related events and trends during 1997 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Jan. 1–Novartis Seeds (headquartered in Golden Valley, Minnesota) is formed through the blockbuster merger

of Ciba Seeds and Northrup King Co. That merger was possible because of the mid-1996 merger of pharmaceutical giants Sandoz and Ciba-Geigy. Novartis Seeds is now America’s second largest seed company after Pioneer Hi-Bred International.

Feb. 3–Monsanto completes its acquisition of Asgrow Seed Co. of Kalamazoo, Michigan, for \$240 million. From May 1968 to 1994 Asgrow had been owned by The Upjohn Co., which built the company into one of America’s largest soybean seed companies. When Monsanto bought Asgrow it was called the Asgrow Agronomics business of Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM), a multi-national agricultural company based out of Monterey, Mexico. of Mexico.

March 4–Morinaga Nutritional Foods’ new tofu plant in Tualatin, Oregon holds its official grand opening. Mori-Nu Tofu, previously made in Japan, starts to be made in America for the first time. The plant, 65,000 square feet worth about \$15 million, is on the same property as Pacific Foods of Oregon, but in a separate building.

March 12–House Foods America Corporation holds the opening ceremony for America’s largest tofu factory, in Garden Grove, California; the company closes its tofu plant in central Los Angeles. The new fully automated, state-of-the-art, 130,000 square foot plant cost \$21 million, and will more than double the company’s tofu production capacity to 150,000 pounds/day, from 70,000 in the old plant. The old factory has been operating at full capacity for years. The new plant will have three tofu production lines, and is located on 5 acres of land—which gives plenty of room for expansion.

Sept. Nasoya Foods (owned by Vitasoy) finishes moving into a much larger, state-of-the-art \$13.5 million plant (125,000 square feet) in Ayer, Massachusetts, from its former location in Leominster. The first Vitasoy brand soymilk ever made in America starts to be shipped from the plant in mid-September. Nasoya’s offices have now been moved to Ayer from Leominster, but tofu is still being made at the plant in Leominster.

Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc. Westbrae’s new name becomes Hain Food Group–Westbrae. Westbrae will continue to be headquartered in Carson, California.

Dec. 1–Phytoestrogens / isoflavones extracted from soybeans by ADM start to be sold commercially in the USA in pill form by supplement companies. ADM’s name for the product is Mega Soy.

Dec. 3–DuPont purchases Protein Technologies International (PTI—the world’s leading manufacturer of soy protein isolates), a wholly-owned subsidiary of the Ralston Purina Co. DuPont signed a letter of intent to acquire PTI on Aug. 24. PTI, which has offices worldwide, will continue to be headquartered in St. Louis, Missouri.

“How can I get more soy into my diet?” is the question most frequently asked by callers to Soyfoods Center. Soy

appears to have a bright future.

1726. *Bluebook Update (Bar Harbor, Maine)*. 1997. ADM to offer isoflavone concentrate. 4(4):2. Oct/Dec.

• **Summary:** Archer Daniels Midland Co. has started pilot plant production of the isoflavone concentrate and by early 1998 plans to have commercial quantities available from a new plant in Decatur, Illinois, in a range of concentrations.

The name of the new food concentrate is not given.

1727. *Ontario Soybean Growers' Marketing Board Newsletter*. 1997. Ontario soybean crush continues to increase. Dec. p. 5.

• **Summary:** The soybean crush has increased from 1,040,000 tonnes in crop year 1992/93 (Sept. 1 to Aug. 31) to 1,451,700 tonnes in 1996/97. Source: Canadian Oilseed Processors' Association. The biggest annual percentage increases were in 1996/97 (15.9%) and 1995/96 (11.6%). "The two large crushers in Ontario, ADM and CanAmera, have recently increased their crush capacity and oil/meal production. Ontario's four other crushers, Cold Spring Farms, Dennis Jackson Seeds, Helin Oil Packers, and Sunfield Oilseeds, also continue to expand." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1728. *Ontario Soybean Growers' Marketing Board Newsletter*. 1997. Profiles: La Cooperative de Pointe-aux-Roches—also known as Stoney Point Co-op. Dec. p. 10.

• **Summary:** This co-op, established almost 50 years ago—in 1948, has seven elevator locations and handles about 7 million bushels of oilseeds and grains a year; of this roughly 40% is soybeans. The majority of these go to the ADM crush plant in Windsor, "but sales of food-grade export soybeans are climbing rapidly and account for about one third of all sales, both in bags through a half-dozen Canadian exporters and in bulk via CP Rail to the Farmers Grain Dealers Inc. terminal at Mobile, Alabama.

"Today, the Co-op has 940 members and annual sales of \$56 million." A photo shows Chuck Desmarais, the Co-op's manager. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1729. **Product Name:** Flavored Textured Soy Items—Crispy Texture [New Improved Bacon, Type Q Bacon, Pepperoni, Italian Sausage, Breakfast Sausage, Bacon Flavored Chips, Beef Strips, Chicken Strips, Taco Flavored Granules] Soft and Chewy [Bacums I, Bacums III, Pepperoni, Italian Sausage, Breakfast Sausage, Bacon Flavored Chips, Beef Strips, Chicken Strips, Taco Flavored Granules].

**Manufacturer's Name:** Westwind Industries, Inc.

**Manufacturer's Address:** 3930 W. 29th St. South, Suite 55, Wichita, KS 67217. Phone: 316-943-3212.

**Date of Introduction:** 1997 December.

**Ingredients:** Textured soy flour plus flavorings.

**How Stored:** Shelf stable.

**New Product—Documentation:** U.S. Soyfoods Directory. 1999. p. 44-45. Talk with wife of Jim Beyers. 1999. May 3. Jim worked for ADM in R&D for 6-8 years, then worked for Westward Industries for 18 years making bacon bits. Talk with Jim Beyers. 1999. May 3. In late 1997 Jim bought Westward from its founder, Ken Towers, renamed it to Westwind Industries, and started his own production. The company makes two types of textured (extruded) soy flour: Crisp texture (about 5% moisture), and Soft and Chewy (these products are shelf stable, unrefrigerated for about 2 years). The Soft and Chewy line is made by a secret process that does not involve adding oil. It is not patented. Jim has written four patents and he never plans to write another one. "It's the fastest way to educate the planet." He sends a letter (fax), a sheet containing the names of each product in his two lines of textured soy items.

1730. **Product Name:** Terra Nuts (Dry Roasted Soynuts) [Nutty Flavor, Walnut Flavor, Pecan Flavor].

**Manufacturer's Name:** Westwind Industries, Inc.

**Manufacturer's Address:** 3930 W. 29th St. South, Suite 55, Wichita, KS 67217. Phone: 316-943-3212.

**Date of Introduction:** 1997 December.

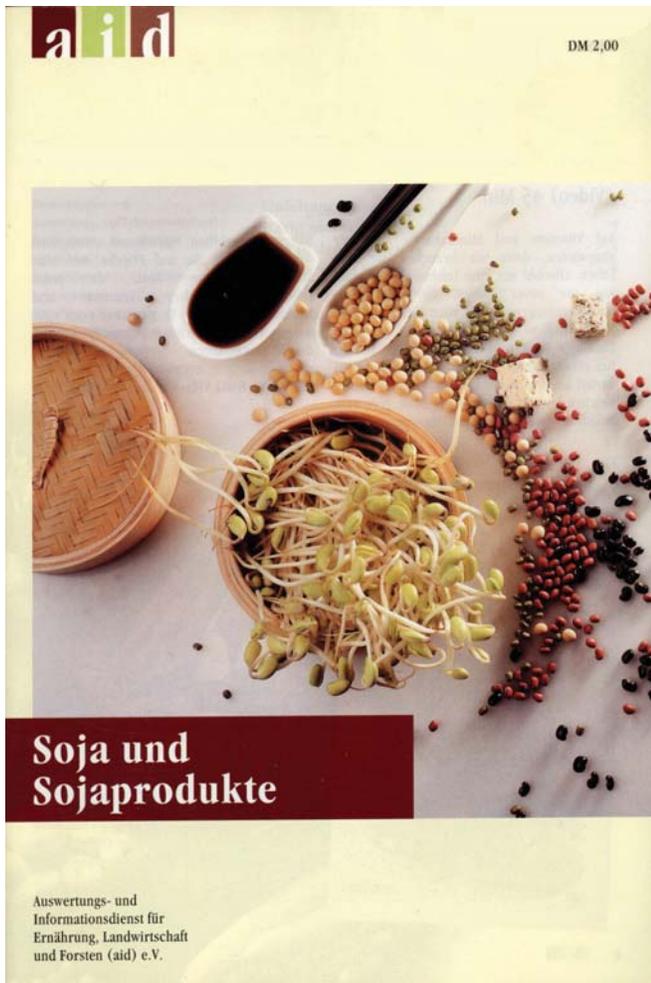

**Ingredients:** Whole soybeans + flavorings.

**How Stored:** Shelf stable.

**New Product—Documentation:** U.S. Soyfoods Directory. 1999. p. 44-45. Talk with wife of Jim Beyers. 1999. May 3. Jim worked for ADM in R&D for 6-8 years, then worked for Westward Industries for 18 years making bacon bits. Talk with Jim Beyers. 1999. May 3. In late 1997 Jim bought Westward from its founder, Ken Towers, renamed it to Westwind Industries, and started his own production. "The nut replacements that we manufacture are based on basically whole soybeans. Known by their trade name 'Terra Nuts,' they are based on the whole soybean principle, processed as either pecan replacements or walnut replacements. They are pressure cooked, then dry roasted." They come in three flavors.

1731. Keussink, Ruth. 1997. *Soja und Sojaprodukte* [Soybeans and soy products]. Bonn, Germany: Auswertungs- und Informationsdienst fuer Ernaehrung, Landwirtschaft und Forsten (aid) e.V. 28 p. Illust. (Color photos). 21 cm. [14 ref. Ger]

• **Summary:** Contents: Introduction. Market and utilization. Soya in the diet: Protein, fat, carbohydrates, minerals and trace minerals, vitamins. Overview—Soy products: Whole soybeans, soy sprouts, soy oil, soy beverage, tofu, natto, sufu, tempeh, soy sauces, miso, soy lecithin, soy sausages, TVP. Processing soybeans. Soy ingredients and additives: Soy protein isolate, concentrate, soy bulk / fiber (*sojaballastoffe*), fatty acids, lecithin, vitamin E (tocopherol). Product safety. Genetically engineered soybeans. Tips for

buying and storing. Recipes. Address: Konstantinstr. 124, 53179, Bonn, Germany.

1732. Klingel, Brigitta. 1997. *Soja und Tofu: 100 koestliche und gesunde Rezepte—Mit den Wirkstoffen der Sojabohne; Erkrankungen natuerlich vorbeugen; mit einfachen, schmackhaften Rezepten* [Soya and tofu: 100 tasty and healthful recipes. With soybean phytoestrogens. Prevent illnesses naturally. With simple, delicious recipes]. Munich, Germany: München Südwest Verlag GmbH & Co. 95 p. Illust. (color photos). Recipe index. Subject index. 20 x 18 cm. [Ger]

• **Summary:** A small but attractive book, containing many color photos on glossy paper. Soya, the food of the future? Favorable use of land using soya. New industrial uses of soybeans (paints, lacquer, soap, etc.). History of the soybean: East and West. World soybean production, yesterday and today. Soy in modern times: Henry Ford, two basic ways of using soybeans (as food or as livestock feed and oil), the sad story of genetically engineered (*genmanipuliertes*) soybeans. Soya: The power packet: Nutritional composition, a source of B-vitamins, magnesium, calcium and fiber, the world's best source of protein. Soya in medicine: Preventing

cancer, plant estrogens, isoflavones, prostate cancer, fiber and stomach cancer, effect on female hormones, men, medicine and soya, lowering cholesterol, help with diabetes, healthy nutrition.

Food products and buying tips: Yellow soybeans, black soybeans, green mungbeans (dehulled and not), azuki beans, glossary of soyfoods (miso, okara, soy flakes, dry soymilk powder, soy lecithin, Sojamark {TVP}, soy flour, soymilk, soy oil, soy protein, soy sauce, soy sprouts, tempeh, tofu, dry tofu, yuba).

Cooking with tofu—for a healthy kitchen, cooking with soy is easy. Infant and child nutrition. Recipe ideas: Basic recipes. Cooking whole soybeans. Homemade soymilk. Homemade soy cream. Soy mayonnaise. Homemade soy sprouts. Soya butter. Classical meat alternative with soya. Okara specialties. International tofu cuisine. Quick and easy recipes with soy and tofu. Healthy recipes for two. Desserts. Baked recipes. Address: Germany.

1733. Messina, Virginia Kisch; Messina, Mark. 1997. Soy to the world. In: 1997 Medical and Health Annual. Published by Encyclopedia Britannica, Inc. See p. 197-202.

• **Summary:** In the section titled "Diet and Nutrition" is a long subsection on "Soy to the world." Contents: Introduction. Sacred crop (history). Varied and versatile: Whole soybeans (incl. green vegetable soybeans), traditional soyfoods (soymilk, tofu, okara, yuba, tempeh, miso, soy sauce or shoyu), modern soy products (textured soy flour or TVP), "second-generation" soyfoods. One of nature's most nutritious foods. Health benefits: the evidence so far: Cancer, heart disease, osteoporosis, kidney disease, menopause. Tofu on your table (how to incorporate soy into American diets; incl. TVP, soymilk, soy flour, soy nuts). Address: 1. M.P.H., R.D.; 2. Ph.D. Both: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

1734. Nutrition Education Service, Sanitarium Health Food Company. 1997. *Sensational soy cookbook*. Sydney, London, Vancouver, New York: Murdock Books. 64 p. Illust. Index. 20 cm. [32 ref]

• **Summary:** A saddle-stitched vegetarian cookbook on glossy paper loaded with color photos and lightweight text. The author and nutritionist is Cathy McDonald of Sanitarium. Recipes developed by Wendy van der Veer of Sanitarium. Contents: The story of soy. The soy family: Miso, soy beans, soy breads & cereals, soy cheese, soy drink, soy flour, soy grits & soy flakes, soy 'meats,' soy pasta, soy sauce, soy snacks, tempeh, TVP, tofu, tofu desserts (ice cream and yoghurt). Breakfasts. Soy for health (isoflavones, menopause, breast cancer, osteoporosis, prostate cancer, heart disease). Light meals. The secrets of soy. Main meals. Soy in perspective. Desserts. Sensational soy (sample menus). Snacks. Know your nutrients. Bibliography. Estimated isoflavones in soy foods (table). Address: 1

Sanitarium Drive, Berkeley Vale, NSW 2261, Australia.

1735. People for the Ethical Treatment of Animals. ed. 1997. *Cooking with PETA: great vegan recipes for a compassionate kitchen*. Summertown, Tennessee: The Book Publishing Co. 221 p. Introduction by Ingrid E. Newkirk, President, PETA. 21 cm. [47 ref]

• **Summary:** Tofu is mentioned on 53 pages in this cookbook, soymilk on 7 pages, tempeh on 7 pages, soy flour on 3 pages, miso on 1 page, soy-free cream cheese on 1 page, and TVP on 1 page. Address: 501 Front St., Norfolk, VA 23510.

1736. Saio, K. 1997. Soybean foods: Nutritionally and industrially valuable. In: Banpot Napompeth, ed. 1997. *World Soybean Research Conference V: Proceedings. Soybean Feeds the World*. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 521-26. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [10 ref]

• **Summary:** Contents: Abstract. Introduction. Localization of the components seeds and foods. Roles and behavior of the components in soybean food. Physical functionalities of the components. Nutrition and physiological functionalities of the components. Conclusion.

Contains 4 figures (incl. 11 photos and 1 graph) and 4 tables. Table 3, "Chemical composition of main soybean foods (in 100 gm)" includes tofu (regular), abura-age, kori-tofu, yuba, kinako, soybean sprouts, natto, miso (dark yellow), soy sauce (common), TVP [textured soy flour], soy protein isolate, soybeans (Japanese). Address: National Agricultural Research Center, 1-1-3 Kannondai, Tsukuba, Ibaraki, Japan 305.

1737. Shintani, Terry. 1997. *Hawaii diet cookbook*. Honolulu, Hawaii: Health Foundation Press. xxii + 266 p. No index. 22 cm. [15 ref]

• **Summary:** This weight-loss book advocates a vegetarian diet but allows small amounts of fish. But Dr. Shintani "encourages a whole-food plant-based diet as ideal for optimal health, except under unusual circumstances" (p. xxix). Dr. Shintani, being a Japanese-Hawaiian professional, is naturally very positive about soyfoods. In the glossary of this book, the following soyfoods are defined (alphabetically):

"Aburage: Japanese deep-fried tofu skin that is often used as a 'cone' sushi wrap."

"Black Bean Paste: Salty fermented [soy] beans used in Chinese cooking."

"Miso: A thick, fermented soybean paste product which has a savory flavor, often used in soups and sauces."

"Soy Milk: Whitish creamy drink is made from soybeans. "Tamari: Genuine tamari is soy sauce made naturally without wheat as a by-product of miso making. However, it is commonly used as a term simply describing naturally brewed soy sauce."

"Tempeh: A whole soybean food that is a good meat substitute. It is fermented, which minimizes its 'beany' flavor and gassiness."

"Texturized Vegetable Protein (TVP): Usually referred to by the abbreviation of 'TVP.' A textured soy product made from extruded soy flour. Used for making sauces, it has the texture of ground meat. Available at natural food stores in minced, granule, and chunk form."

"Tofu: Fermented [sic] soybean curd."

The glossary also includes: Arame, azuki beans, hijiki, konbu, ogo, seitan, umeboshi, wakame, vegan diet [eliminates all animal products].

About the author: Terry Shintani, M.D., J.D., M.P.H., received his Master's degree in nutrition at Harvard University, and both his medical degree and law degree from the University of Hawaii. He is on the clinical faculty at the University of Hawaii School of Medicine and School of Public Health, and is the Director of Preventive Medicine at the Waianae Coast Comprehensive Health Center. His award-winning program has been featured in Newsweek, CNN, CBS, NBC and in the Encyclopedia Britannica. A color portrait photo shows Dr. Shintani.

Note 1. He published several popular weight-loss books in the mid-1990s.

Note 2. This book is crippled by lack of an index, Address: M.D., Hawaii Health Foundation.

1738. Spittler, Sue; Yoakam, Linda R. 1997. *1001 Low-fat vegetarian recipes*. Chicago, Illinois: Surrey Books. xii + 839 p. Index. 23 cm. Reprinted in 2000.

• **Summary:** The index contains 20 entries for tofu, 17 for tempeh, 3 for soybean (cooked soybeans, coarsely pureed; cooked dried soybeans, or canned soybeans), and 1 for TVP [textured soy flour]. Address: 1. Long Beach, Indiana; 2. R.D., M.S., dietitian and nutritional expert, Chicago, Illinois.

1739. Messina, Mark J. 1998. Soy phytoestrogen pills—The biggest soy-related story of the year (Interview). *SoyaScan Notes*. Jan. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Phytoestrogens extracted from soybeans, made by ADM and sold in pill form, went on the market in the USA in about November 1997. The first company to sell them was the Life Extension Institute in Wilton Manors, Florida. They call the product Mega Soy Extract; in their catalog it is listed under the category Soy Supplements. They sell the capsules in two sizes: 135 mg and 700 mg. ADM is not mentioned in the catalog, but they have their own ADM brand name for the product: Novasoy. Two research scientists to talk to at ADM are Eric Gugger (phone 1-800-637-5850 X-4380) and Rasik Daftary. Mark has the highest regard for these two men as scientists. They are dedicated to the facts as shown by scientific research.

Central Soya is now also making and selling the same

kind of soy phytoestrogen pills, but ADM's were on the market first. What would happen if a person (such as a teenage girl wanting larger breasts) took 60 of these 135 mg pills at once? Mark has no idea; you'd have to know more about the absorption and blood levels. Many studies now suggest that a person needs to consume 70 to 100 mg/day of these soy isoflavones (equivalent to about 2 servings of tofu or 2 cups of soymilk) to derive the benefits. This is clearly much more than most Americans would be willing to consume day after day. So the supplements make it much easier for people to get their isoflavones. The average intake of these isoflavones among people in Asia is actually quite low, probably about 15-25 mg/day; this is much lower than was formerly thought to be the case, yet epidemiologic studies suggest that even these low levels confer benefits.

Solid studies increasingly show that these isoflavones give benefits in the areas of bone health (osteoporosis), reduced risk of heart disease, and reduction of menopausal symptoms. The benefits appear to be dose related—though there may be a threshold. There seem to be more benefits to women than to men, and little or no danger of any harm if taken at the recommended doses. Though the results are not yet definitive, there may be reduced prostate cancer risk for men. Some studies have also looked at the individual isoflavones. So Mark believes that many Americans will want to try these pills. They may take their place on the dining room table next to vitamins, minerals, and other supplements.

The area of greatest controversy concerns the effect of these isoflavones on breast cancer. Mark thinks it is very unlikely that they would increase the risk of breast cancer—even though some studies do seem to indicate that, and therefore further research is needed. Many difficult ethical questions are raised by how information in this area is presented to consumers.

Concerning soy and bone health, a 2-year study of monkeys without ovaries found that soy did not favorably affect bone health, even though estrogen did. That was one of the best studies conducted to date, yet it is never mentioned at any of the soy meetings. Mark is very concerned that there is a real bias in the way this information is being presented. This is such a “hot” area right now. There are so many fortunes to be made, so many researchers with patents, and so many trying to establish their careers on the basis of soy right now. Clinics all over the USA are now doing studies with isoflavones and with soy. Discussion groups on soy and breast cancer are taking place. “This is as hot as it gets.”

A big-name researcher in this field, with a reputation in nutrition research going back 20 years, recently proposed the “soy protein hypothesis” in a scientific paper. It had to do with the possibly favorable effects of protein on kidney function, with no acknowledgment of previous research in this area. But this idea/hypothesis was out 4-6 years ago, and a summary in *The Simple Soybean and Your Health*

(published April 1994) concluded that soy protein favorably affected kidney function. This appears to be but one of many examples where researchers are trying to establish their niche in soy and ride it to fame—and sometimes fortune. Now in nearly every major university in America, there is at least one researcher who is seriously interested in soy. That is really good for the field, and will help its progress.

The biggest event of 1997 is ADM starting to make soy isoflavone pills and thus taking soy isoflavones to the next level. These isoflavone pills are even sold on TV, in home shopping clubs—an amazing development. Many new books are being written on this subject by well-known authors, and soy plays a leading role. “There is a soy bandwagon here and everyone is jumping on it. The pills will take soy to the next level because there is more money to be made, and they are accessible to everyone. Now anyone can get the benefits (whatever they may turn out to be) without having to eat tofu or drink soymilk. Even with a bland soy powder, it was difficult for most people to consume enough of it (60 gm/day) to get benefits. Now that the soy isoflavones are available as pills, many researchers will now do clinical studies with them. Even now, there are studies underway all over the country. Three years ago, few people were aware of soy isoflavones. Now the research is almost one step removed from mainstream medicine. Virtually all researches involved with progressive health and nutrition, or with women's health, known about soy and phytoestrogens. It's just incredible. Being able to give out two placebo pills and two ‘soy pills’ a day makes it much easier to conduct controlled studies.” People used to think of soy as strongly connected with tofu. Then they began to think of the isoflavones separately and independently. Isoflavones are a type of phytoestrogens, but when the word “phytoestrogens” began to replace the word “isoflavones” a quantum leap took place. Every physician knows what estrogens are, and the word has a power that resonates. For example, Mark recently gave a talk last year at a meeting of the American Dietetic Association (ADA). He titled it: “Soybean phytoestrogens: Possible alternatives to hormone replacement therapy.”

So, in the field of soy, ADM and their soy pills is the big story of late 1997 and early 1998. ADM is a huge, respected company, and they plan strong promotion for these soy pills. Granted there were soy isoflavone pills available last year, but because they were made from the ground sprouts (hypocotyls) of soybeans, they had very low levels of genistein and they weren't nearly as potent as ADM's pills. Moreover, ADM is learning ways of processing soybeans to further concentrate the isoflavones, which will make the pills even more potent. Mark believes that the “halo effect” of these soy pills will soon benefit the whole category of soyfoods as well.

Mark has no plans to take these pills; he gets plenty of isoflavones from his natural diet, which contains lots of soymilk, plus some tofu, and other soyfoods.

An Australian newspaper reported that Protein Technologies International (PTI) recently paid \$15-20 million to Novagen, an Australian pharmaceutical company that will be marketing Promensil (made of isoflavones from red clover). Note: As of 3 Feb. 1998 Novagen is not listed in the text of any article in the *Wall Street Journal* since March 1984. It is not clear to Mark exactly what PTI got for this large amount of money (perhaps patent right to claims about a product containing isoflavones). This last weekend, PTI helped to sponsor a symposium at UCLA, attended by only about 45 people, but with good press coverage that made the wire services. The point is, a lot of money is being spent on this subject. Whereas ADM does not live or die by its new isoflavone business, some smaller companies do.

The proceedings of the Brussels symposium have been in the hands of editors at the *American Journal of Clinical Nutrition* since Sept. 1997; they have been reviewed, the comments have gone out, but they will not be published before Sept. 1998. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

1740. Behling, Ann. 1998. ADM to market isoflavone concentrate. *Soybean Digest*. Jan. p. 52.

• **Summary:** Early in 1998 ADM will begin producing a new isoflavone concentrate, derived from soybeans, at a plant in Decatur, Illinois. The product will be targeted at the fast-growing vitamin and supplement market.

1741. Greenberg, Patricia; Hartung, Helen Newton. 1998. The whole soy cookbook: 175 delicious, nutritious, easy-to-prepare recipes featuring tofu, tempeh, and various forms of nature's healthiest bean. New York, NY: Three Rivers Press (Crown Publishers / Random House). ix + 221 p. Illust. Index. 24 cm.

• **Summary:** Contents: Acknowledgments. Introduction. All about soy: Health benefits of soy (reduces the risk of heart disease, lowers the risk of breast cancer, eases the symptoms of menopause, protects against prostate cancer, prevents digestive disorders {when using whole soybeans or soy products containing high levels of fiber}, eliminates the problem of lactose intolerance, prevents the problems of milk allergy, beneficial in diabetic diets), cooking with soy products (meat analogs or meat substitutes {soy sausage, soy bacon, hamburgers and hot dogs}, miso, okara, soy cheese, soy milk, soy sour cream, soy yogurt, soy flour, whole soybeans, soybeans-green, soybeans-roasted, tempeh, textured vegetable protein (TVP), tofu & silken tofu; Soy-based foods (containing little or no protein): Egg replacers, soy margarine, soy mayonnaise, soybean oil, soy sauce) how to get optimum nutrition from soy (protein, carbohydrates, fat, cholesterol, fiber, sodium), nutrition information. Sample menus (for 3 meals a day, 7 days a week). Recipes: 1. Appetizers, dips, and spreads. 2. Salads and vegetables. 3. Brunch and breads. 4. Pizza and sandwiches. 5. Soups and

stews. 6. Main dishes. 7. Pastas and grains. 8. Desserts.

This book contains almost 200 delicious and easy ways to add that essential 25 grams of soy protein to your diet. These recipes (each of which includes a nutritional analysis) are based on more than ten years of experience and experimenting (p. 2). Address: P.O. Box 10853, Beverly Hills, California 90213. Phone: (310) 474-4539.

1742. Mitchell, Paulette. 1998. The complete soy cookbook: More than 150 simple recipes for good health and great taste. New York, NY: Macmillan Publishing (A Simon & Schuster Macmillan Co.). xlix + 270 p. Illust. Index. 24 cm.

• **Summary:** A very attractive vegetarian cookbook. Each recipe is marked with one of three symbols: V = vegan, lo = lacto-ovo vegetarian, and l = lacto vegetarian. Contents: Preface: An ancient Asian secret isn't a secret anymore. Introduction: The whys (cancer, heart disease, osteoporosis, menopause, diabetes), the hows, soy food ingredients (soybeans, sweet beans {edamame}, tofu, tempeh, textured vegetable protein {TVP}, soy milk, soy flour, soy oil, soy sauce), other soybean products (soybean sprouts, okara, miso, roasted soynuts, isolated soy protein {ISP}, dairy and meat analogs), a note on food allergies. Soy success: Stocking your refrigerator and pantry, using the recipes, kitchen equipment. 1. Appetizers. 2. Soups. 3. Salads. 4. Entrees. 5. Desserts. Appendix: Recipes listed by soy food categories (and within each category by recipe type—such as salads, soups, desserts): Whole soybeans (32 recipes), sweet beans (green vegetable soybeans, 7 recipes), tofu (96), frozen and thawed tofu (14, all entrées), pressed tofu (12), tempeh (14), textured vegetable protein (TVP, 4), soy milk (14). Note that tofu was used in by far the most recipes (96), followed by whole soybeans (32).

Paulette, who lives in Minneapolis, Minnesota, is a cooking instructor, restaurant consultant, and lecturer. Paulette is the author of many Macmillan books, including *The 15-Minute Vegetarian Gourmet*, *The 15-Minute Single Gourmet*, and *The Complete Book of Dressings*. This book is dedicated to her 14-year-old son, Brett. Address: Minneapolis, Minnesota. Phone: 612-941-7576.

1743. Empie, Mark W. 1998. Re: GRAS notification for isoflavones derived from soy beans. Letter to Dr. Alan M. Rulis, Ph.D., Director, Office of Premarket Approval (HFS-200), Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C St. SW, Washington, DC 20204, Feb. 4. 2 p. Typed, with signature on letterhead. [4 ref]

• **Summary:** "Dear Dr. Rulis: The Archer Daniels Midland Company ("ADM"), by this letter and enclosed documents, is providing the Food and Drug Administration ("FDA") notice in accordance with the FDA proposed regulation at 62 Fed. Reg. 18938, 18950 (April 17, 1997), that it has determined, based on a review of the data referenced in

the enclosed summary, that the substance, soy isoflavone, is generally recognized as safe ('GRAS') for use as a micronutrient in food. This substance is a naturally occurring constituent of soybean products and has been a part of the Asian diet for thousands of years. Published epidemiology and feeding studies referenced in the summary in both animals and humans indicate no toxic effects at dietary levels." Address: Director, Regulatory Affairs, Archer Daniels Midland Company, Decatur, Illinois.

1744. Eichenwald, Kurt. 1998. Court is told of suicide try as ex-Archer aide is absent. *New York Times*. Feb. 27. p. C3 (National ed.).

• **Summary:** Mark E. Whitacre, who now lives in Chapel Hill, North Carolina, tried to kill himself today hours before he was scheduled to be sentenced in Urbana, Illinois, on charges of embezzling millions of dollars from grain giant ADM. Mr. Whitacre admitted taking the money but said that it was part of a corporation-wide scheme at ADM to provide under-the-table payments to senior executives. Prosecutors have since concluded that his allegations were not true.

1745. Soyfoods Association of North America. 1998. Soyfoods Once a Day for Life (Portfolio). Washington, DC. 21 inserts. Feb. 15. 28 cm.

• **Summary:** The following three news releases are from the Soyfoods Association: (1) Soy the subject of serious research. (2) Soyfoods Association of North American proclaims April is Soyfoods Month. (3) Once a day for life. Also contains the following leaflets on SANA letterhead: (1) Names and addresses of researchers studying health impacts of soy. (2) Table of member companies, type of soy products made, brand, sales channel, market area. (3) Soyfoods menu plans. Brochures from member companies and "Soy facts" leaflets. Nancy Chapman is executive director. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

1746. Sakthi Soyas (A Division of Sakthi Sugars Ltd.). 1998. Classified ad: DGM-marketing. *Times of India (The Bombay)*. March 23. p. IV.

• **Summary:** "Sakthi Soyas, a division of Sakthi Sugars Ltd., is a pioneer of Soya revolution in the south. The company has successfully launched branded and value added soya products- Soyabite (TVP), Trishul (Refined Soya Oil), Aquaforte (Shrimp feed) besides marketing Soya flour, Oil, Meal, Lecithin, Acid Oil, etc. This division requires a DGM-marketing.

"The ideal person should be a Management graduate with specialization in Marketing. Responsibilities involve Strategic planning for the brand, Launch of new products, Strengthening distribution network, liaisoning with advertising agencies to achieve overall marketing objective.

Candidates with 7-10 years experience in a similar

capacity and possessing clarity in thinking, creative flair, excellent communication and interpersonal skills would fit the bill.

"Attractive remuneration and perks comparable to the best in the industry. Apply in full confidence within 10 days to... The General Manager-Admn." Address: 180 Race Course Road, Coimbatore-641 018, Tamil Nadu.

1747. Soyfoods Association of North America. 1998. Membership lists (as of March 1998). Washington, DC. 1 p. March 23. Unpublished typescript.

• **Summary:** The Association has 34 paid members; 7 past members have not yet paid for 1998. The paid members are: ADM, American Health & Nutrition, American Soy Products, Central Soya Co., Clofine Dairy & Food Products, Corn Belt Foods, Devansoy Farms, EMB Partners, ExSeed Genetics, Galaxy Foods, GeniSoy (MLO) Products, Highland Equipment, Iowa Soy Specialties, Iowa Soybean Assoc., Kentucky Soybean Assoc., Lightlife Foods, Monsanto, MYCAL, Natural Health Magazine (Boston Common Press), Natural Products, Inc., Nebraska Soybean Board, Nutrition Advantage, Optimum Quality Grains [DuPont], P.J. Lisac & Associates, Pacific Soybean & Grain, Sacramento Tofu (California), Soyatech, Sun Rich, Sunrise Markets, Tofu Shop Specialty, Vitasoy (USA), White Wave, Wildwood Natural Foods, Worthington Foods.

The biggest paid members are ADM, Central Soya Co., and Monsanto. Address: N. Chapman Associates, 1723 U. Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

1748. James, Richard F.; James, V.A. 1998. Re: Oppose petition by ADM for soy isoflavones to be generally recognised as safe (GRAS). Letter to Dr. Alan M. Rulis, Ph.D., Director, Office of Premarket Approval (HFS-200), Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C St. SW, Washington, DC 20204, March 25. 2 p. Handwritten, with signature. [10 ref]

• **Summary:** "The thrust of our submission will be the biological effects demonstrated in the following published papers:" Ten scientific studies are cited. Address: R.D.4, Whangarei, New Zealand.

1749. Skiff, James. 1998. Impressions from the Natural Products Expo West at Anaheim this month (Interview). *SoyaScan Notes*. March 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Jim finds that the soymilk made by Ted Nordquist (White Wave's Silk) is by far the best tasting—much better than SoNice from Canada. Both companies had booths at Anaheim. Jim has always liked Ted's soymilk the best. In fact, he and Howard Weiner were ready to set Ted up in business with a soymilk processing plant, but they could never come to terms. Ted wanted to control everything. Ted did not have a booth at Anaheim.

Dusty Cunningham of International ProSoya Corp. (IPC) was at the show, having come from England. She said that GMO-free soybeans are very big in the UK (where new labeling laws have been passed), and to a somewhat lesser extent throughout the rest of Europe. There was some interest in GMO-free soybeans at Anaheim, but it was still a bit reserved. This may be in part because Monsanto and ADM are working so hard to push things in the other direction.

In the past, most of the soy-related companies have been in the same general area at Anaheim. This year they were spread out over many buildings and on various floors so they were hard to find. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

1750. Archer Daniels Midland Co. (ADM). 1998. ADM Novasoy isoflavones: A natural reflection of soy (Ad). *Natural Foods Merchandiser*. March. p. 110.

• **Summary:** The left half of this 8½ by 11 inch color ad shows the shadows of two runners on a cliff made golden by the sunlight. The right half explains ADM's new product. "Novasoy isoflavones are the product of top-grade soybeans and a careful extraction process, so they retain the healthful qualities of soy, nature's isoflavone source." ADM operates "the world's largest soy isoflavones production and research facility..." The logo, with a green leaf, reads: "Novasoy—The Power of Soy." Address: P.O. Box 1470, Decatur, Illinois 62525. Phone: 217-424-5228.

1751. Book Publishing Co. 1998. Catalog—1998 (Mail order). Summertown, Tennessee. 48 p. 23 cm.

• **Summary:** This catalog has a glossy color cover with five books pictured on a gold background. In the center is Tofu Cookery. Contains many books about vegetarian cookery (p. 14-29), including books on TVP, gluten and seitan, tempeh, soyfoods, and tofu. Address: P.O. Box 99, 156 Drakes Lane, Summertown, Tennessee 38483. Phone: 1-888-260-8458.

1752. *Food Magazine (The) (UK)*. 1998. FDA caught in battle over phytoestrogen safety. March. [4 ref]

• **Summary:** "The controversy over the safety of oestrogen-like compounds in soybeans (see previous issues of the *Food Magazine*) has been brought to a head following an extraordinary move by US soya processing giant Archer Daniels Midland (ADM), which has petitioned the USA Food and Drug Administration (FDA) to have soy isoflavones generally recognised as safe (GRAS) for use as a food supplement and a micronutrient added to foods."

1753. James, Richard F. 1998. Work to expose the dangers of toxic substances in soybeans (Interview). *SoyaScan Notes*. April 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Richard James, who was born and raised

in New Zealand and still speaks with a "down under" accent, lives with his wife Valerie and many exotic birds in Whangarei, a fairly large city near the northern tip of New Zealand's North Island, about 80 miles north of Auckland. Before he moved to New Zealand, he was a lawyer and real estate agent in the San Francisco Bay area.

After many of Richard and Valerie's parrots began to die, Richard started to notice that a number of different animal species, including humans, were having some adverse reactions to the consumption of soy products. First he spent a considerable amount of his own money phoning around New Zealand, starting with agricultural people who were having trouble with their birds. It turned out, bit by bit, that rabbits, guinea pigs, pet hamsters, race horses—indeed everything being fed soy products was having some really nasty problems. And yet we couldn't quite put our finger on exactly what it was. We noticed that it was also affecting the reproductive capacity; we were getting deformed babies and infertile eggs. Valerie, apart from being distraught at watching all her lovely friends dying in miserable ways, spent a lot of time talking to Rob Shaw, the technical manager of a health food company—whose phone number Richard would be glad to share. Because the end results are so diverse, because these bloody soybeans have so many levels of toxicity, you almost couldn't put your finger on what was happening. Ultimately Valerie mentioned to Rob that the bird food was being advertised as producing 11-week-old baby birds that had the sexual characteristics of 2-year-old birds. At this point Richard and Valerie had no idea what an estrogen was, but Rob had enough biochemistry (and he really is quite a brilliant fellow) that he said immediately: Oh! That's premature maturation. Not many people in this part of the world would have known about that. Other good men are Dan Sheehan (of the USA) and Glen Plymate (616 Westland Dr., Alameda, CA; a personal friend of Richard's to whom Richard has sent many documents implicating the toxicity of soy).

Sheehan's revenge: Two important scientific papers have been published. The most recent was published in Nov. 1997 in *Biochemical Pharmacology*. The significance of these two is that they did basically what Richard suggested to Sheehan and his co-workers. They examined the huge number of thyroid cases that are reported in the medical literature. Note that one of the first places the effects of the estrogenic chemicals (like DDT, the dioxins, cadmium, mercury, etc.) shows up is in the thyroid gland. Having discovered that, see if you can prove the link between that and soy. The soy industry's defense has always been that their processing gets all the toxins out; that's why nobody else ever complained. In response to that, we have produced all these published research papers about prostate tumors in dogs, and liver cancer and infertility in cheetahs, mice, rats, hamsters, etc. Richard and his research team has the best library of this type of research in the world. Richard offers to send Shurtleff

copies of page 1 and the bibliography of many of these key papers.

Back to Sheehan's revenge: They set out to prove that flavonoid compounds cause thyroid cancer. Again, there were two key papers.

There has been a major cover-up. When Rob Shaw looked at the early literature Richard and his team were collecting on their literature review, he was very upset: He said the U.S. government must have known (for at least 20 years) the estrogenic content of soy infant formulas, and that that in some cases little girls fed soy infant formula show premature breast development, premature menstruation, premature menopause (at about age 22), etc. It doesn't show up until the kids reach puberty. Then (according to the dosage) the thyroid deficiency and the problems mentioned above start up; the evidence is unequivocal.

Another thing that has never been revealed properly or has been propagandized, like the premature thelarche in Puerto Rico: The only food correlation they found was with soy infant formula. The Centers for Disease Control (CDC) went off and did another search and absolutely, completely ignored soy infant formula, the foods fed after infant formula, and they ignored boys—so they came up with the answer that there is no incidence of anything—no problems. Basically, they defined the scope of their study so narrowly, that they defined away the problem. But even in this limited definition of girls who had problems, they were 2¼ times as likely to have been fed soy formula as anything else.

The other two epidemiologies were on Long Island, New York, where the North Shore Community Hospital went looking for a reason for the high incidence of auto-immune thyroid disease in children age 10 plus or minus 4 years. This occurs when the immune system has gone berserk and is actually attacking the thyroid gland. This is a permanent debilitating disease; its manageable, but chances of early death are fairly high. Kids with that syndrome were 2½ times as likely to have been fed soy formula. The same North Shore Community Hospital also found that kids with insulin-dependant diabetes—which is another auto-immune disease—were twice as likely to have been raised on soy formula. Moreover, some kids with this type of diabetes also had the auto-immune thyroid disease—and no one looked at abnormal breast development in these two groups of kids.

ADM stated to the FDA that they had determined that the soy isoflavones they are now selling [Novasoy pill with 70 mg of soy isoflavones in a softgel form] were safe to be used as a general additive to all foodstuffs. This is “totally toxic.”

In 1966 the National Academy of Sciences, National Research Council, Food and Nutrition Board, Food Protection Committee, compiled a very important book titled *Toxicants Occurring Naturally in Foods* (Washington, DC: NRC Press, 301 p.). A greatly expanded 2nd edition was published in 1973 (vii + 624 p.). Their basic approach was:

Gee whiz, isn't it great that we have these analytical methods so that we can detect when these toxicants are getting into our foodstuffs. They concluded that the main source of estrogens in foodstuffs is the isoflavones in soy products. Hormone replacement therapy isn't necessarily the same as the chemicals that are in soy; they both mimic hormones but they may not have the same biochemical effects.

“I could go on weeks talking like this but I'll tell you the basics that we can document... We were absolutely 'monstered' by some of the biggest and nastiest companies in the world. But also by certain arms of the U.S. government, particularly the U.S. Department of Agriculture.” A professional journalist is now writing a book about this. The small things were late night phone calls. But the pitch that was made all over New Zealand was: “We can buy TV channels. We can divert medical schools. We can influence governments. And we have millions of dollars and teams of lawyers—and we crush nutters like you. You won't last six months. We will destroy your credibility. We do this to 20 or 30 like you every year. “I am not a retired bird raiser. My professional training was as a lawyer. I practiced in New Zealand, in London, and in San Francisco—all quite successfully—until the California Bar Association lowered the boom on lawyers who hadn't passed the California Bar. I had an office at Bechtel Corporation in the legal department on the 20th floor, the corner office, facing out towards the Ferry Building.” He also got an MBA at Golden Gate University in San Francisco (part time; it took about 5-7 years). “Right now I am the soy industry's biggest friggin' pain in the ass.” After I quit Bechtel, we were in the real estate business in Walnut Creek, directly east of San Francisco. We hit the boom in 1976, invested quite carefully in California real estate, and made a few million dollars. Returned to New Zealand and decided to do what the liked—raising exotic birds. His wife has dual citizenship (U.S. and New Zealand).

Dr. Clifford Irvine was (Richard believes) the “chairman of the governing board of Lincoln University in Canterbury, New Zealand. He was also dean of the Dep. of Animal Sciences. His secretary intercepted so many terrifying phone calls—death threats and whatever—that she finally left and went home. She broke down. Cliff was told that if he went to the USA to Dan Sheehan's conference, he should wear body armor and travel on a separate plane from Mike Fitzpatrick—which he did. Mike also was told to wear body armor and to watch out. This was not very nice stuff. Mike's employer was driven out of his mind. I've got it documented from Bill Grayson, who owned Grayson Laboratories, that the pressure was coming from Bean Supreme and Nestlé. If you phone somebody three times a bloody day and tell him the whole New Zealand Food Industry is going to take their business away from his laboratory, you'll frighten the sh\*t out of him.

“The soy boys pick a pinch hitter in some country. They started with Bean Supreme, then dumped him, and they've been using a fairly big Seventh-day Adventist owned health

company—the most corrupt, dishonest company in the world—and I can document that for sure.” They have been putting incredible pressure on Richard and the others in his group. Continued. Address: 1868 Whangarei Heads Road, Rural Delivery 4, Whangarei. Phone: +64 9 434 0564.

1754. Lang, Paul. 1998. Membership in the Soyfoods Association of North America: Some big new companies have joined (Interview). *SoyaScan Notes*. April 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Paul has been in charge of Soyfoods Association membership for the last 3 years. When he arrived the Association had about 22 members. During this year, the number of members has increased from about 33 in Feb. 1997 to 34 at present (as of 23 March 1998). Three large soy companies, each of which paid \$3,000 in annual membership dues, are now members: ADM, Protein Technologies International (PTI), and Central Soya. DuPont joined under the name “Optimum Quality Grains” for a much lower fee. Nancy Chapman was largely responsible for bringing on Central Soya and PTI. Paul Lang brought on DuPont and 6-7 smaller new members.

Update: 1998 July 8. The Board of the Soyfoods Association is not happy that Nancy Chapman & Associates is charging the Association so much per hour. Some board members are wondering “Is this worth it?” When they went to Peter Golbitz and said the work was going to take more time and money, Peter said he was not willing to change the written agreement. “If they are not doing a good job for the Association and bringing in new members, they will be out in a year.” Address: Natural Products, Inc., 798 Hwy 6, Grinnell, Iowa 50112. Phone: 515-236-0852.

1755. Sheehan, Daniel M. 1998. Re: Oppose petition by ADM for soy isoflavones, such as genistein, to be generally recognized as safe (GRAS). Letter to Linda Kahl, PhD, Div. of Product Policy, Mail Code HFS-205, FDA, 200 “C” St. SW, Washington, DC 20204, April 22. 2 p. Typed, with signature on letterhead.

• **Summary:** “I oppose this application because there is abundant evidence that some of the isoflavones, including genistein and equol, are toxicants. I enclose several reprints from my lab showing the developmental toxicology of equol, but other labs have also published data for the isoflavones.”

“In the meantime, Dr. Dan Doerge, a colleague here at NCTR, and I have agreed to write a review of this subject. We would also like this to be considered as you evaluate the FDA’s response to ADM...” Address: PhD, Director, Estrogen Base Program, Div. of Genetic and Reproductive Toxicology, National Center for Toxicological Research, 3900 NCTR Road, Jefferson, Arkansas 72079-9502.

1756. Dibb, Sue. 1998. Re: Petition by ADM for soy isoflavones to be generally recognised as safe (GRAS).

Letter to Linda S. Kahl, PhD, Regulatory Policy Branch HFS-206, Office of Premarket Approval, Center for Food Safety and Applied Nutrition, 200 C St. SW, Washington, DC 20204, April 28. 2 p. Typed, with signature on letterhead. [4 ref]

• **Summary:** “The Food Commission is a consumer organisation which campaigns for safer, healthier food. We publish a quarterly journal, *The Food Magazine*, and are well respected as a source of independent information and food policy analysis. We have taken an interest in phytoestrogens in the human diet and the debate around their potential health benefits and risks and have published a number of articles in our journal on the subject.”

“We are concerned that the FDA is considering a petition by Archer Daniels Midland for soy isoflavones to be generally recognised as safe (GRAS). Given the conflicting and controversial nature of the research on the health risks and benefits of isoflavones we request that the FDA rejects this petition.” Address: Co-director, The Food Commission (UK) Ltd., 94 White Lion St., London N1 9PF, England. Phone: 0171 837 2250.

1757. Golbitz, Peter. 1998. It’s morning in Brazil’s soy industry. *Bluebook Update (Bar Harbor, Maine)* 5(2):1, 4-5. April/June.

• **Summary:** “Brazil, the sleeping giant, is stirring. And as it awakens from a long and restful slumber, the largest country in the South American continent appears to be rejuvenated, strong, and ready to enter the 21st century as a world-class soybean producer.

“Although some lethargy still exists from years of governmental problems, rampant inflation and an inefficient and inadequate transportation system, recent investments in Brazil have quickly transformed this sleepy giant into the second largest soybean producer in the world—and there is still room to grow. Since 1960, Brazil’s annual production of soy beans has grown from 206 thousand metric tons to a projected record of 30,700 thousand metric tons, or 30.7 million tons, for the 1998 marketing year (February–January), according to a recent report from Safras & Mercado. This is the second year in a row that Brazil has produced a record crop. The country now produces 20 percent of the world’s soybeans and is second only to the United States which harvested 74.5 million tons of soybeans last year, according to the USDA.

“There are a number of factors responsible for the growth of the industry in Brazil during the past 38 years. Not only has there been a sharp increase in overall demand for soybeans, but Brazilian government subsidies and policies have favored increased production and development of a domestic crushing industry.

“The country is also blessed with ideal soil and climate conditions, abundant water reserves and an expanding agricultural frontier that would be the envy of

any developing nation. This frontier has been made even more valuable of late with improvements being made in the country's transportation infrastructure and the development of a number of new waterway systems which rival the important and valuable Mississippi River system in the United States. As new transportation corridors open up, freight costs will go down, and more land will be committed to soybean production in established growing areas and in new areas to the North as well. And just recently, Brazil eliminated its ICMS value added tax on exports of unprocessed soybeans, helping to improve the country's ability to compete with exports from other countries.

"Brazil's future potential is not news to those already deeply involved in the soybean trade. Recently, there has been a wave of new investments made by large multinational companies like the Decatur, Illinois-based Archer Daniels Midland Company (ADM) and The Bunge Group in Brazil. These deals, along with a series of other mergers and acquisitions occurring in the country, should help to further consolidate, and most likely strengthen, Brazil's soybean processing industry.

"Mergers and Acquisitions: In an effort to gain a stronger foothold on both supply and processing, ADM last year purchased Glencore Grain Holding's grain handling facilities in Brazil and Paraguay, and acquired Brazil's number three soybean crusher, Sadia Concordia S.A.

"With these deals, ADM now has 130 barges and 25 tow boats plying South American waterways, two major terminal elevators, 104 grain elevators and a four percent share of the Brazilian crushing industry with Sadia's soybean plants and oil refineries.

"We see Brazil as a major origination point for beans for ADM," says Martin Andreas, senior vice president of ADM. "The facilities we have acquired with Sadia and Glencore allow us to procure beans down there for Asia and Europe, and to export directly to China."

"One advantage of having facilities in both North and South America is that the harvesting dates of the two continents compliment each other. In the North, sales of soybeans begin in September and October while in the South, sales commence in March and April.

"We purchase roughly 20% of Brazil's export beans and have been doing that for a while," reports Mr. Andreas. "Part of the year we get American beans for our European operations in Hamburg [German] and Rotterdam [Netherlands], and part of the year you can't due to seasonality factors. So with the two, Brazil fills that gap for us."

"South American-based Bunge has also been busy shoring up its position in soybean processing by first purchasing the fifth largest processor in Brazil, INCOBRASA, in April of last year. They followed that move by acquiring the number one processor, Ceval Alimentos S.A., in November. Santista Alimentos S.A., the number two

soybean processor in Brazil was already owned by Bunge. Bunge is now in the process of combining the crushing and refining operations of Santista within Ceval, and will use Santista solely as a consumer products company.

"With this merger, Ceval's plans are 'to be and continue to be, the leading crushing company in South America,' says Jose Zilio, the director of the company's functional food division.

"While remarking on the entry of ADM into South America with a quick comment that 'ADM obviously wants to participate,' Mr. Zilio adds that it is quite obvious where most of the new growth in the industry is going to happen. 'The new growing areas in the world are in Brazil. In the U.S., 90% of the available farm land is already in use; in Argentina, 70 to 80 percent is currently being used. When you look at Brazil, less than 50% of the agricultural area is being used. We have tremendous potential.'

"Development of Waters: But in order for Brazil to fully utilize these new growing areas, efficient transportation systems need to be developed to reduce the extra 'Brazilian cost' which results from moving beans long distances by truck over rough roads. One way the country is doing this is by developing efficient transportation systems utilizing their many rivers, tributaries and ocean ports.

"Last year, it was reported that 320,000 tons of soybeans were exported via the new Northwestern Corridor, a waterway which connects the Madeira River to the Amazon River port of Itacoatiara. This year, a projected 600,000 tons of soybeans will most likely take the same route. In addition, the Center-North Corridor, which connects eastern Mato Grosso to the port of Ponta da Madeira in Sao Luis, Maranhao, will begin operations this year with shipments expected to reach 40,000 tons along that route.

"Continuing investments in the Tiete-Parana waterway will help to further reduce freight costs for soybeans cultivated in the heavy production areas of the Center-West region. For example, the recent opening of a lock at Jupia, on the Parana River at the border between the states of Sao Paulo and Mato Grosso do Sul, increased the useful length of this waterway from 1,100 to 2,400 kilometers (683 to 1,491 miles).

"The Parana River system is the third largest in the world, covering 1.7 million square miles with 2,350 principal channel miles. By comparison, the Missouri and Mississippi River system is the world's fifth largest, encompassing 1.2 million square miles and 3,900 principal channel miles.

"Investments in these systems, as well as a move to improve roads and the privatization of railways, will certainly help to stimulate soybean expansion over the next five years, as reductions in freight costs will make Brazilian soybean farmers increasingly more competitive in international markets.

"We hope that the crop in both the U.S. and Brazil grows, as they have been," says Mr. Andreas. "The good news

is that it is going to require both U.S. soybean production to go up and the Brazilian as well to meet projected demand.”

A large map shows Brazil and its larger rivers.

A graph shows Brazilian soybean production from 1960 (206,000 MT) to 1998 (30,700,000 MT)—an almost 150-fold increase in 39 years.

1759. Messina, Mark J.; Messina, Virginia. 1998. Does consumption of soy increase or decrease a woman's risk of breast cancer (Interview). *SoyaScan Notes*. May 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mark: In the area of possible adverse effects of soy (especially soy isoflavones), Mark's greatest concern is with soy and breast cancer. "It still bothers me tremendously." There have been 3-4 animal studies in which soybeans or isoflavones have been fed to animals and then they have been given a breast carcinogen. In none of these studies have scientists found an increase in the number of tumors or in the incidence of breast cancer. Several of the studies show "modest protective effects" from soy. So this is good news. The epidemiologic studies are not that supportive of the hypothesis that soy reduces the risk of breast cancer, but none of them have suggested that soy increases breast cancer risk. There were one or two studies showing that fried tofu increased risk of breast cancer, but that nonfried tofu did not. So within an individual study, one soyfood might pop up as being problematic. "But overall, you would not look at those kinds of studies and conclude that soy is risk factor for breast cancer." The fact that Japanese women have about one-fourth the incidence and mortality of breast cancer compared with American women is worth noting. Several basic facts about soy must be kept in mind. (1) It is clearly estrogenic, containing phytoestrogens. (2) When you add genistein to cancer cells that are estrogen receptor positive, it will stimulate their growth over the typical physiologic concentration, but at higher levels it will inhibit their growth. In the range at which it stimulates growth, this is probably due to an estrogenic effect, but at the higher range, genistein is probably inhibiting one of the enzymes that cause the

cancer cells to stop growing. At least ten scientific papers have raised the question of what is happening with these isoflavones, and they sound a little cautionary note. The criticism of these studies, where a little genistein is added to cells growing in a petri dish, is that there is absolutely no estrogen in the medium, and that even in post-menopausal women estrogen is present. So some people would say the petri dish does not represent a physiologic condition—you need to add some estrogen. Mark has heard that a researcher in Minnesota has added estrogen to the medium and she still gets a 20% increase in breast cancer cell growth. So genistein may still be an estrogen in that situation. One animal study showed that if you implant estrogen receptor positive cancer cells into rats who don't have ovaries, then you give them a significant amount of genistein, it will stimulate the growth of those cancer cells (tumors). But one criticism of this design is that there is very little estrogen in these rats and fairly high doses of genistein were used.

It is the three human studies (two of which have been published) which are troubling, and cannot be ignored. One is "Stimulatory Influence of Soy Protein," by Nicholas Petrakis at UCSF (1996) in *Cancer Epidemiology, Biomarkers, and Prevention* (5:785). A second is an abstract from the 1997 Brussels symposium by McMichael Phillips. Third, McMichael Phillips told Mark about a study in England that was 4 months in duration. They looked at nipple aspirate fluid and also got an increase in estrogen-regulated gene products. Mark has not seen the actual study and it is a long way from being published. These studies are troubling not because they are scary, but because they do not make sense. Malcolm Pike, from UCLA, a leading endocrinologist, said after studying McMichael Phillips' actual paper (not the abstract), that his must be a short-term effect, because that kind of stimulus would cause an increase in breast cancer, as (for example) in the Japanese population. Given that the other epidemiology does not suggest that soy increases risk, and given that the animal studies don't either, and given that the Japanese have a low breast cancer mortality rate, there is probably something else that could explain this phenomenon. Again, it could be a short-term effect that is actually preventive in the long run. But if it was a short-term effect, it still might be possible that soy should not be given to a person who already had estrogen-receptor positive cancer. So Mark is very reluctant to think that soy could increase risk of breast cancer risk; for one thing, it is very hard to identify any kind of food that increases or decreases breast cancer risk. And it is so unlikely that such a food would be soy, because there is very little supporting evidence. Nevertheless, Mark has about 25 scientific studies at the end of which the authors have expressed a cautionary note. The latter range from "Wow! These soy isoflavones are stimulatory; we've got to find out what is going on here," to "It's clear that we need to understand more about the estrogenic / antiestrogenic effects of these compounds before

we recommend them to the public.”

Mark does not differentiate between soyfoods such as tofu and isoflavone pills in terms of toxicity. He asks: “Would anyone use the above studies to recommend that people stop consuming tofu? No! When you look at the data collectively, it’s hard to conclude that soy would increase the risk of breast cancer—especially for normal women. On the other hand, if it weren’t for the low breast cancer mortality rate in Japan, and we just had the animal studies and the individual case control studies (neither of which show that soy increases breast cancer risk) plus the human studies, there would be more of a movement to look into this.” When Nick Petrakis’ study was published, it didn’t get much attention; Mark thinks there is a built-in bias to assume that soy is either beneficial or (at the worst) has no effect. It will be interesting to see what the response will be when McMichael Phillips’ paper is published as a full paper as part of the proceedings of the Brussels symposium (in Sept. in a supplement to the *American J. of Clinical Nutrition*). It is quite powerful; they actually took biopsies and found an increase in DNA synthesis.

Virginia: Ginny is well aware of the research showing possible adverse effects of soy (especially soy isoflavones) on breast cancer. She definitely thinks about this in planning her diet—in part because she has a fairly high risk for breast cancer; she has had two biopsies. “This is uppermost in my mind almost every day.” Ginny wasn’t eating a lot of soy products before this new research was published (she probably ate them 3-4 times a week), so she has not reduced her consumption based on the new information. Because of the concern with soy and breast cancer, Ginny would not eat soy products 2 or 3 times a day. “I certainly still eat soy products and I do not feel that I need to avoid them.”

Ginny eats soyfoods because she is a vegetarian, because she likes them, they are easy to include in the diet, and they are generally good, healthy foods. Ginny has never calculated how many milligrams of isoflavones she is consuming per day. “I’m really into food, into good, healthy, whole food, with lots of fruits and vegetables, and whole grains. I don’t think about things like isoflavones, vitamin C. I just figure I eat a really good diet.” Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

1760. Messina, Virginia. 1998. Soy and breast cancer (Interview). *SoyaScan Notes*. May 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ginny is well aware of the research showing possible adverse effects of soy (especially soy isoflavones) on breast cancer. (See today’s interview with her husband, Mark Messina, PhD). She definitely thinks about this in planning her diet—in part because she has a fairly high risk for breast cancer; she has had two biopsies. “This is uppermost in my mind almost every day.” Ginny wasn’t

eating a lot of soy products before this new research was published (she probably ate them 3-4 times a week), so she has not reduced her consumption based on the new information. Because of the concern with soy and breast cancer, Ginny would not eat soy products 2 or 3 times a day. “I certainly still eat soy products and I do not feel that I need to avoid them.”

Ginny eats soyfoods because she is a vegetarian, because she likes them, they are easy to include in the diet, and they are generally good, healthy foods. Ginny has never calculated how many milligrams of isoflavones she is consuming per day. “I’m really into food, into good, healthy, whole food, with lots of fruits and vegetables, and whole grains. I don’t think about things like isoflavones, vitamin C. I just figure I eat a really good diet.” Address: MPH and RD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

1761. Roblin, Lynn. 1998. Asian staple soy good for you. *Toronto Star (Ontario, Canada)*. May 20.

• **Summary:** Discusses the health benefits of soyfoods, which may be caused by their rich content of isoflavones, soy sterols, and soy protein. Various soyfoods are discussed: Tofu, soy beverages (brands include So Good and ProSoya So Nice), soy cheese, texturized soy protein (TSP, such as So Soya made by Bay Hill Impex Ltd. and TVP Meatfree made by Health Haven: A Vegetarian Place), tempeh, and most soy flours.

1762. Smith, Rod. 1998. Bunge International to accelerate soybean strategy. *Feedstuffs*. June 1. p. 5, 8.

• **Summary:** Bunge International (BI) Ltd., founded in 1818 and headquartered in Sao Paulo, Brazil, is the third largest soybean processor in the world and the largest exporter of soybean meal and oil. Bunge Corp. based in St. Louis, Missouri, is the third largest soybean processor in the USA. The International company is the controlling holder of Ceval Alimentos, based in Gaspar, Brazil, the largest soybean processor in Latin America, and a subsidiary of Guipeba. Bunge is also a major processor in Argentina, and a partner in Moyresa, based in Barcelona, Spain, the largest oilseed processor in Spain.

The three largest soybean processors worldwide are Archer Daniels Midland (24%), Cargill, Inc. (21%), and Bunge International (15%).

In 1994 BI began a restructuring strategy to sell non-agriculture and non-food businesses in order to concentrate on its core segment in grain marketing, oilseed processing, and fertilizer production—according to Oscar Bernardes, the CEO of Bunge International. In 1997 the company had total sales of \$13 billion, of which \$9 billion (about two-thirds) came from agriculture businesses. Over the next 5 years, BI plans to invest more than \$1 billion in agribusinesses, mainly in Argentina and Brazil, two countries with acreage

available for soybean planting. It will also invest in fertilizer production. Address: Staff Editor.

1763. Archer Daniels Midland Co. 1998. ADM this quarter: Third quarter report to shareholders. Decatur, Illinois: ADM. 2 p.

• **Summary:** A quarter-page article titled “Soy isoflavones now in production” states: “ADM is now producing soy-derived isoflavones for use in the rapidly growing vitamin and supplement market.”

“A recent University of Illinois study, in fact, described isoflavones as ‘dietary components that are effective in decreasing the risk of cardiovascular disease and cancer.’

“The study also found that soy isoflavones inhibit bone breakdown and may even stimulate bone formation. Isoflavones may thus play a role in preventing osteoporosis, a major public health threat to 25 million Americans, 80 percent of whom are women.

“ADM is now producing commercial quantities of isoflavones at its pilot plant. The world’s first commercial plant will be completed by ADM later this year. Based on demographics, incidence of disease, and the growing acceptance of vitamins and supplements, the potential number of world-wide users could be as high as 100 million.” Address: Decatur, Illinois.

1764. Chajuss, Daniel. 1998. Soy protein concentrate: Current status. *Oils & Fats International* 14(3):35-36. June.

• **Summary:** The three main commercial soy products are (1) Full fat and defatted soya flours and textured soya flour—current world production and sales about 80,000 tonnes (metric tons). (2) Soya protein isolates—current world production and sales about 130,000 tonnes. (3) Soya protein concentrates—current world production and sales about 284,000 tonnes, and growing at about 15% a year. More than 75% of all concentrates are now used for human consumption, the rest being used in pet and animal feeds. In human foods, concentrates are used mainly in meat alternatives or extenders. In animal feed they are used in formulations for calves and piglets as a milk replacer, in pet foods and in special feedstuffs such as ‘fish-flavour-free’ bland fish feeds, and for mink and other animal feeds. Concentrates are devoid of the antigenic protein components present in most other soya products.

Production of soy protein concentrates worldwide is presently concentrated in the hands of two companies: ADM and Eridania Béghin-Say (Central Soya). About 95% of all soy protein concentrates worldwide are now made by the counter-current aqueous alcohol wash system, originally developed in the late 1950s by the Hayes Company of Israel. A table shows estimates of world production (in metric tons) by company and country in 1998:

ADM, Netherlands 70,000 AAW (Aqueous alcohol wash).

ADM, USA 60,000 AAW.

Central Soya, USA (several factories) 60,000 AAW.

Central Soya, Aarhus, Denmark 50,000 AAW.

Sogip (Central Soya group), France 15,000 AAW.

Solbar Hatzor (formerly named Hayes Ashdod) (with Soya Mainz, an ADM subsidiary), Israel 15,000 AAW.

Sopropech, France 6,000 AWL (Acid/water leach).

Sanbra (Bunge), Brazil 5,000 Acid wash.

ADM, USA 3,000 Acid wash.

Lucas Ingredients, UK 2,000 (unconfirmed, Acid wash).

Total worldwide 284,000 metric tons.

The margins on soy protein concentrates are much more attractive than those from crushing soybeans into oil and meal—which in recent years have been either small or negative. The cost of making a tonne of concentrates ranges from US\$459 to \$600. For food applications, the sales price obtained by manufacturers for powder and small grits forms ranges from \$1,200 to \$1,600 per tonne, but for textured or functional forms this increases to \$1,500 to \$3,000 per tonne. The sales price for the pet food, milk replacer, and special feed industries ranges from \$1,000 to \$1,200.

Another high-value product, a potential source of additional income, is soya molasses, a by-product of making soy protein concentrates. It is a rich source of soya phytochemicals and soya oligosaccharides.

A second table shows estimates of world production (in metric tons) of soy protein isolates, with estimates for 1997 and forecasts for 1998.

Protein Technologies International (PTI, USA) 60,000 in 1997, 70,000 in 1998.

ADM, USA 15,000, 25,000.

PTI Belgium 15,000, 15,000.

Fuji-PTI Japan 10,000, 10,000.

Sanbra (Bunge) Brazil 5,000, 10,000.

Others worldwide 6,000, 8,000. Total worldwide 110,000, 138,000. Address: Managing Director, Hayes General Technology Co. Ltd., Misgav Dov 19, Mobile Post, Emek Sorek, 76867 Israel. Phone: +972-8-8592925.

1765. *Leaders Magazine*. 1998. This is really a growing business! An interview with G. Allen Andreas, President and Chief Executive Officer, Archer Daniels Midland Company, Decatur, Illinois. 21(2): April/June.

• **Summary:** Last year G. Allen Andreas succeeded Dwayne Andreas as CEO and president of ADM, while Dwayne remained chairman. ADM has been a pioneer in the soy protein industry. They are with the greatest potential “includes the value-added products that can be derived from the further processing of the farmer’s crop. Vitamin E, vitamin C, isoflavones, and new nutraceuticals [sic, nutraceuticals] that are being developed and researched across the world generate health benefits that will enable our citizens to enjoy longer, happier, and more successful lives. They are the keys to our company’s growth and ADM’s

growth in profitability over the coming years.” Address: ADM, Decatur, Illinois.

1766. *Soybean Digest*. 1998. Soy-based vitamin E plant to expand. May/June. p. 13.

• **Summary:** ADM is expanding by one-third its production of vitamin E, made from soybeans. With the expansion, the company will be able to supply 600 million people with the vitamin.

1767. Messina, Mark J. 1998. Problems with the media hyping soy: Concerns about Alzheimer’s disease, breast cancer, and thyroid function (Interview). *SoyaScan Notes*. July 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mark feels that, when presenting an overview of the scientific research concerning health benefits of soy, he is the only person who is presenting a balanced and accurate picture; the media is clearly hyping the subject and many of the scientists are going along with the media—even though they know better. Much of what the media is saying is not supported by the scientific evidence. “It’s just getting carried away, and I feel it is very unfortunate. The exaggeration on the positive side, will probably come around to hurt you when they hype the negative side on the second time around. All of this is only interesting because people are now very excited about soy.”

Shurtleff notes that he agrees completely with Mark’s position and analysis, and that he too refuses to go along with the hype. The difference, however, is that Mark is in a more difficult position, because he is “doing the rubber chicken circuit” where he is paid to give lectures on the health benefits of soy.

For three years, Mark has been trying to explain this problem to the United Soybean Board’s (USB) PR firm in Seattle (EvansGroup, now renamed something like Publiciste) and to encourage them to conduct a workshop to deal with and refute the growing number of concerns about soy (Alzheimer’s, thyroid function, etc.). They haven’t been interested, then recently they learned that a woman’s magazine plans to do a story on soy that is negative for breast cancer. So now they are really concerned, and Mark will meet with them next Monday to try to plan a workshop, with 10-12 professionals present to deal with Alzheimer’s disease, breast cancer, and thyroid function as they relate to soy. For the Alzheimer’s disease, hopefully they could get Lon White from Hawaii, and the person in Seattle who is doing the study to present their data. He would also invite 3-4 people who are doing animal studies, to summarize what we know about soy and Alzheimer’s disease. Then two things from that: (1) To make research recommendations to the USB to try to resolve the situation—if that is possible, and (2) from a PR standpoint, to prepare a statement that would put as much of a positive spin as possible on the Honolulu data.

Steve Barnes (in Mark’s opinion) knows more about isoflavones than anyone else in the USA. When Mark has a question about them, he calls Steve. In a recent speech, Steve dismissed the papers on thyroid function from the NCTR (National Center for Toxicological Research). He noted simply that a large proportion of the polyphenolics and flavonoids (pronounced FLAY-vuh-noids) have the same effects of isoflavones in vitro, and we are supposed to be eating foods that contain these substances. But the scientists at NCTR are not stupid; they know that and they even discussed it in their papers. Moreover, in Mark’s opinion, the last three epidemiologic studies have found, at least in Europe, that the average flavonoid intake is 40-50 mg/day. So if anyone recommends 100 mg/day of isoflavones, that is doubling the average flavonoid intake. This is a big deal—at least theoretically. The NCTR researchers found an effect on thyroid function at a concentration of 1 micromolar; that is a lower concentration than is used to inhibit the growth of cancer cells and all the other wonder beneficial effects.

The NCTR is rarely completely objective, because they are always looking for funds to do more research. The FDA may be the only organization can look at these matters in an objective and balanced way—since their mandate is to safeguard the public health. So FDA is looking for a clear understanding of the situation, but much of the information they are getting may be biased. Hopefully, they know these biases and can take them into account.

One new area, which is a complete surprise and broadens our perspective—Several studies show that the effect of genistein is sometimes different from the effect of a complex mix of isoflavones, and that in turn could be different from the effect of a whole soy food (such as soy flour). Scientists realize that soy contains much more than isoflavones, but nowadays many focus solely on the isoflavones—especially genistein.

Mark likes ADM’s pills because he believes that the amounts people need may be very difficult for most people to consume without pills. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

1768. Kilman, Scott. 1998. Cargill searches for a corporate identity: Advertising. *Wall Street Journal*. July 23. p. B-11.

• **Summary:** “Cargill Inc., the biggest American company without an image, wants one.”

Cargill is the largest privately owned company in America, with fiscal 1997 revenues of more than \$56 billion. Cargill operates 25% of America’s oilseed crushing plants. But most Americans have never heard of Cargill and don’t know what the company does. Its name doesn’t even show up in supermarkets. The commodity processing giant, based in Minneapolis, has hired hometown ad agency Martin/Williams Advertising to create an image for the company. With the number of farmers in America steadily decreasing, and farm size swelling, Cargill is competing with other

grain and oilseed processors for the loyalty of increasingly sophisticated farm operators. Cargill's rival, ADM, is well recognized because of its ongoing "Supermarket to the World" campaign. But Cargill must be careful not to confuse itself with ADM, which has been embroiled in a price-fixing scandal for the past three years.

Cargill is probably the largest U.S. company that Americans know the least about—"even though its businesses handle much of what ends up on their dining plates each day."

"Cargill executives and family have preferred to stay out of the spotlight"—in part "because the commodity business is cyclical, and profits often swing wildly from year to year." And in part to avoid the impatience of Wall Street analysts and of shareholders who may expect regular dividends.

Address: Staff reporters.

1769. **Product Name:** Perfect Soy: Super Concentrated Soy Isoflavones.

**Manufacturer's Name:** MetaGenics—Ethical Nutrients Div.

**Manufacturer's Address:** 971 Calle Negocio, San Clemente, CA 92673. Phone: 1-800-668-8743.

**Date of Introduction:** 1998 July.

**Ingredients:** Soy isoflavones.

**Wt/Vol., Packaging, Price:** 30 or 90 tablets in bottle. 30 tablets retails for \$15.95, and 90 tablets for \$36.95.

**How Stored:** Shelf stable.

**New Product—Documentation:** Ad (full page, color) in Natural Foods Merchandiser. 1998. Sept. p. 59. "Take better care of your customers with some of the most innovative nutritional supplements you can buy: Women's Health." A photo shows a box and bottle of Perfect Soy. Talk with Patricia Wise at Metagenics. 1998. Sept. 21. This product was first sold in July 1998. It is based on Novasoy (from ADM). The retail price of 30 tablets (take one a day) is \$15.95, and of 90 tablets is \$36.95. One tablet contains 45 mg of total isoflavones, including 21.6 mg of genistein and 19.4 mg of daidzein.

1770. Robertson, Robin. 1998. The soy gourmet: Improve your health the natural way with 75 delicious recipes. New York, NY: Penguin/Putnam/Dutton. xv + 191 p. July. Introduction by James W. Anderson, M.D. Index. 21 cm. A Plume book.

• **Summary:** Contents: Foreword. Introduction: Health benefits of soy protein, by James W. Anderson, M.D. 1. The soy solution. 2. Soy what? (soybeans, tofu, tempeh, textured soy protein or TVP, soy milk, miso, soy sauce, soy flour, dry-roasted soybeans or soy nuts, soy convenience foods, egg replacers). 3. Making soy protein work for you. 4. Breakfasts. 5. Let's do lunch. 6. What's for dinner? 7. Desserts. 8. Shakes and more. 9. Sample menus. Glossary (In addition to the soy foods described at Chapter 2: Gomasio, soy cheese, soy protein powder, and tamari soy sauce).

The author, who is a woman, worked as a professional chef during the 1980s, when she used large quantities of meat, eggs, and dairy products to prepare dishes in classic cuisines, such as French and Italian. In 1987 she made a dramatic change in her life, when she decided to stop working in professional kitchens, and start to pursue a healthier lifestyle, becoming a vegetarian, eliminating all meat and dairy products from her diet. Having lost both parents to heart disease and stroke, she had a personal interest in helping people learn how to cook and eat properly. Using soy products such as tofu, tempeh, and soy milk, she was able to recreate her favorite old recipes—sautéed dishes with cream sauces, rich pasta dishes, and even delicious cheesecakes—all without cholesterol. But these soy foods actually offered a double benefit, for recent scientific studies show that they actually reduce cholesterol levels.

1771. Zind, Tom. 1998. Making the case for soy: Soy protein merges into the fast lane as a functional food ingredient. *Food Processing (Chicago)* 59(7):31-32. July. Foods of Tomorrow section.

• **Summary:** Soy protein is getting more attention in the budding functional foods/nutraceuticals arena in large part because of the isoflavones in soy which have many health benefits. A number of companies have developed isoflavone-rich extracts—such as Novasoy from ADM. Big companies like General Foods and Nabisco are now working with soy and see a bright future ahead. ConAgra Frozen Foods is promoting soy in its Advantage\10 line, recommended by Dean Ornish, M.D. A color photo shows the front of one package. ADM markets a powdered soy drink named Nutribev and is test marketing a soy-based frozen dessert, named Dairylike, in Southern California. Protein Technologies International says it has found new scientific evidence that soy isoflavones can control cholesterol.

1772. Ndungi Khotu, Aubry. 1998. Contribution a l'avant-projet d'une usine de production de lait de soja en poudre a Lubumbashi [Contribution to the rough draft for a factory for the production of soymilk at Lubumbashi, Congo]. Civil Engineer thesis, University of Lubumbashi, Polytechnic Faculty, Dep. of Industrial Chemistry. v + 154 + 16 p. Illust. 30 cm. [73 ref. Fre]

• **Summary:** Preface and dedication. Introduction. Part I: Review of the literature. 1. General information about soya and proteins: 1.1. The soybean (Botanical, origin and history, soybean production and commerce worldwide, soya in the Democratic Republic Republic of the Congo {Congo, formerly Zaire}, structure and composition of soybean seeds, utilization of soybeans {with diagram}, food uses of soybeans {oil and meal, soy flour (4 types), soy concentrates and isolates, textured soy proteins {TVP, thermoplastic extrusion, spun fibers}, soymilk, tofu, other uses (shoyu, miso, tempeh, yuba)}, industrial uses of soybeans {linoleum,

plastics, paints, varnishes, etc.}). 1.2. Proteins (in the human body, in foods), the structure of proteins (amino acids, ionization and acid-base properties of amino acids), protein bonds, denaturation. 1.3. Soya proteins (glycinin or globulin 11S, globulin 7S, hemagglutinins or lectins, protein inhibitors and other antinutritional factors, amino acid composition of soy protein). 1.4 Factors affecting the food value of soya: Acceptability problem (food value of raw soybeans), intolerance to soy proteins, off-flavors in soya and their source, inactivation of lipoxygenase, other treatments affecting the food value of soya: Alkalis.

2. Preparation and properties of soymilk. 2.1. Properties. 2.2. Advantages and disadvantages of soymilk compared with cow's milk. 2.3. Preparation. 2.4. Commercial / industrial production using the Alfa-Laval process.

3. Reminder of certain operations required for the preparation of soymilk powder: 3.1. Homogenization. 3.2. pasteurization and sterilization. 3.3. Concentration by evaporation. 3.4. Drying by atomization. 3.5. economies of energy in dewatering operations.

4. Some ideas on the methods of sensory evaluation: 4.1. The different methods. 4.2. Results and interpretations.

5. Important ideas in the study of the market, in determining the capacity of production, and in the economic evaluation of a project: 5.1. Study of the market. 5.2. Determining the capacity of production. 5.3. Economic evaluation of a project, incl. estimating fixed capital by adding capital costs.

Part II: Experimental, industrial calculations, economic calculations. Introduction. 6. Origin and characterization of the raw materials, trials for inactivation of lipoxygenase. 7. Determination of the optimal conditions for the preparation of soymilk. 8. Results of pilot plant trials. 9. Market study and determination of the capacity of production. 10. Description and calculations for the installation. 11. Economic evaluation of the project. General conclusion.

Tables show: (1) Number of people that can be supported for 1 year by the production from one acre devoted to certain crops and animals. Fewest: Beef 190. Pork 319. Poultry 457. Most: Potatoes 5,329. Split peas 6,901. Soybeans 9,075. Algae 43,200–154,000. Yeast 3,275,000.

(1.1) Leading soya producing countries in 1985 (worldwide, with area, production, and yield; USA, Brazil, China, Argentina, India). (1.2) Leading soya producing continents in 1985 (North and Central America, South America, Asia, USSR, Europe, Africa, Oceania). (1.3) Leading soya trading countries in 1985. Importers: Japan, Netherlands, R.F.A. (Republique Federal Allemagne = Germany), Spain, Italy. Exporters: USA, Brazil, Argentina, China, Paraguay. (1.4) Production of soya in the Congo, by province 1970-1978 (the leading producer by far in 1978 was Western Kasai). (1.5) Production of soya in Katanga [formerly Shaba, before that Elisabethville] (1990-1994; by far the leading producer is Tanganyika). 1.6 Total production of soya in the Congo

(1,000 metric tons) from 1970-1995 (increased from 1.7 in 1970-74 to 18 in 1995). (1.7) Average composition of different parts of the soybean seed. (1.8) Physico-chemical composition of soybean seed (ranges and average). (1.9). Mineral content of soybeans. (1.10). Vitamin content of mature soybean seeds and soybean meal. (1.11) Fatty acid composition of soybean oil. (1.11A) Enzymes in the soybean: Lipoxidase, urease, lipases, beta-amylase. (1.12) Properties and characteristics of the water-soluble fractions of soybean seeds. (1.12A) Variations in the solubility of proteins from defatted soy flour at various pH levels. (1.12B) Amino acid composition of soybean protein. Address: Lubumbashi, Katanga Province, Congo.

1773. Kilman, Scott. 1998. Jury convicts ex-executives in ADM case. *Wall Street Journal*. Sept. 18. p. A3-A4. Western ed.

• **Summary:** A federal jury in Chicago found Michael D. Andreas (son of ADM CEO Dwayne Andreas) and two other former Archer-Daniels-Midland Co. executives guilty in a landmark price-fixing case. James M. Griffin, chief of the Justice Department's antitrust office in Chicago, helped lead the prosecution; Scott R. Lassar was the U.S. attorney on the case.

The unanimous decision by the six-man, six-woman jury, was reached after a week of deliberations following the two-month trial. The decision was a blow to the Andreas family, one of the Midwest's wealthiest and politically most influential families. ADM generated revenue of \$16.1 billion during the fiscal year ended June 30.

The verdicts also give the Justice Department major convictions in its legal push to stop illegal global cartels. The department has 30 grand juries around the country considering international price-fixing cases, and more are expected.

The government had to rebuild its case after its informant at ADM [Mark E. Whitacre, president of the company's BioProducts division] turned out to have embezzled money from the company. Yet Whitacre provided the government with hundreds of undercover tapes he made during the 2½ year investigation. Before the scandal, Michael Andreas, age 49, was earning \$1.3 million a year as the No. 2 executive at ADM and was being groomed to succeed his 80-year-old father, Dwayne. Michael Andreas is the most prominent American executive ever convicted for international price fixing. The jury determined that he helped organize a cartel with four Asian companies to rig the \$650 million world market for lysine, a livestock feed additive that increases the growth rate of chickens and hogs. Also found guilty were Terrence M. Wilson and Mark. E. Whitacre, both formerly of ADM. Whitacre became an informant for the FBI in late 1992; but the government stripped him of his immunity in the price-fixing case when prosecutors learned that he had embezzled millions of dollars from ADM, an

offense for which he is now serving 9 years in federal prison. In addition to ADM, four Asian lysine makers (incl. Ajinomoto and Kyowa Hakko of Japan) and four European citric acid makers (incl. Haarmann & Reimer {a New Jersey Unit of Bayer AG of Germany} and F. Hoffmann-La Roche Ltd. of Switzerland) have pleaded guilty to rigging prices with ADM. Two tables show the companies and individuals involved in the lysine and citric acid price fixing, and the fines paid by each.

ADM's financial liability was capped by its 1996 guilty plea to two criminal charges of rigging prices of lysine and citric acid. ADM paid \$100 million in criminal fines and nearly that amount to settle lawsuits by customers and investors. Moreover, ADM's legal woes are not yet over. Former ADM employees may be charged with trying to rig citric acid prices. ADM also faces a price-fixing lawsuit in Illinois by buyers of its high-fructose corn syrup.

The man likely to take Michael Andreas' place at ADM is how elder cousin, lawyer G. Allen Andreas. He became CEO of ADM in 1997. He faces sentencing January 7. Prosecutors said they will seek the maximum sentence of three years in prison for violating the Sherman Antitrust Act. Address: Staff Reporter.

1774. Archer Daniels Midland Co. (ADM). 1998. Novasoy: Our isoflavones are a natural reflection of soy (Ad). *Natural Foods Merchandiser*. Sept. p. 64.

• **Summary:** The top half of this full-page color ad shows two stylized leaves, each on front of billowing clouds in the sky. On each leaf is written "Novasoy." The bottom half is a reflection of the top half. The text reads: "It's easy to understand why the demand for isoflavones is growing. Studies have shown that isoflavones may reduce the risk of osteoporosis, provide dietary support during and after menopause, and even inhibit the growth of certain cancer cells.

"But not all isoflavones are alike. Novasoy brand isoflavones are derived from soy, and thanks to ADM's careful production process, Novasoy reflects the same percentage of genistein and daidzein as the soybean—one of nature's most nutritious foods." Address: ADM Protein Specialties, P.O. Box 1470, Decatur, Illinois 62525. Phone: 217-424-5228.

1775. Archer Daniels Midland Co. 1998. Mother Nature comes through again. Vitamin E—Health (Ad). *Soybean Digest*. Sept. Back cover.

• **Summary:** The letter "E" in the word "Health" is written very large and in red. All the text appears against the background of an evening sky over a farm landscape, with a small crescent moon at the top. "When it comes to health, natural solutions are often best. Now doctors around the world are discovering that naturally produced Vitamin E, extracted from soybeans, may be one of the best remedies for

some of our most dreaded diseases, including heart disease, prostate cancer, diabetes, and Alzheimer's.

"With a multimillion-dollar investment in natural-source Vitamin E processing, Archer Daniels Midland Company is working to help all Americans live longer, healthier lives. Naturally."

Note: This ad also appeared on the back cover of the *Soya & Oilseed Bluebook* 1999 (shipped in Sept. 1998). Address: Box 1470, Decatur, Illinois 62525. Phone: 217-424-5200.

1776. Fisher, Kate. 1998. Soybeans pack powerful health punch: New research shows. *Soybean Digest*. Aug/Sept. p. 18, 20.

• **Summary:** Vitamin E, extracted from soybean oil, is a powerful antioxidant and a nutritional hero. It can reduce the risk of heart disease and lower the chance of a heart attack by as much as 75%.

It can reduce the probability of developing prostate cancer and the risk of dying from it by 40%.

It can significantly reduce menopausal symptoms without the use of hormones.

It can help control diabetes and its complications.

It can strengthen one's immune system, especially in people over age 65—increasing antibodies by 65%.

Reduce chances of developing cataracts.

Cut the risk of colon cancer by 75%.

Protect against getting Parkinson's disease.

Slows the deterioration of some types of Parkinson's disease by 25%. Vitamin D from natural sources (such as soybeans) is 36% more potent than its synthetic counterpart.

These are the results of numerous scientific studies from around the world.

Companies like ADM make vitamin E. It takes 1.5 billion bushels of soybeans to meet the production capacity of ADM's vitamin E plant.

Color photos show: Three soybeans in an open pod. A bottle of natural-source vitamin E.

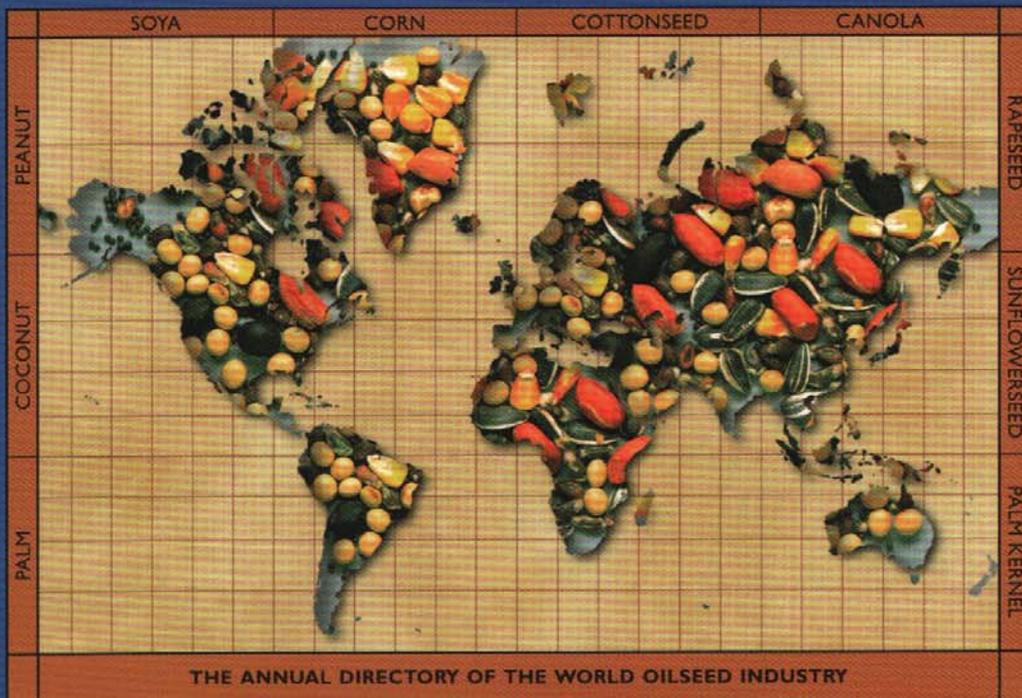

1777. Golbitz, Peter. 1998. Interview: Martin L. Andreas, Senior Vice President, Archer Daniels Midland Company. *Bluebook Update (Bar Harbor, Maine)* 5(3):4-5. July/Sept.

• **Summary:** A photo shows Martin Andreas, who joined ADM in 1970 as Executive Price President of Corn Sweeteners in Cedar Rapids, Iowa.

1778. Soyatech, Inc. 1998. Soya & Oilseed Bluebook 1999: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 424 p. Sept. Comprehensive index. Internet address index. Brand name index. Advertiser index. 28 cm.

• **Summary:** The Bluebook has a new title (see separate "serials" record). On the cover is a rectangular [Mercator projection] map of the world made of the different oilseeds

# Soya & Oilseed BLUEBOOK

# 1999

A SOYATECH PUBLICATION

now included in the Bluebook: Soya, corn, cottonseed, canola, rapeseed, sunflowerseed, palm kernel, palm, coconut, and peanut. The inside front cover and first page contain full page color ads from Lucas Meyer, “The Lecithin People” and “Edelsoja: The Protein People.” On the back cover is a color ad from ADM promoting their vitamin E.

The Foreword begins: “The next millennium is just around the corner. A new age, perhaps, in which increased interdependence and trade are coupled with the free flow of information. A new era where the efficient utilization of the Earth’s resources is a key factor in all activities of business and daily life.

“One of Soyatech, Inc.’s founding principles is the dictum that, ‘the world would be a better place if it used its agricultural resources more efficiently—for food, for animals and as a renewable industrial product source.’ We continue to see this as a primary goal of our publication and information services.”

The Bluebook’s new title “more aptly describes the directory’s continuing evolution to encompass the expanding field of plant-based proteins and oils.”

Another new section, near the front of the book, titled “Translations of oilseed terminology” (p. 9-15), includes over 300 terms related to oilseeds translated from English into German, French, Spanish, and Portuguese.

Note: This is the earliest English-language document seen (Nov. 2014) that contains the term “plant-based proteins” (or “plant-based protein”). Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

1779. Horvath, Jeffrey M. 1998. Re: Biodiesel progress during FY 1998. Letter to Mike Youngerberg, Minnesota Soybean Research & Promotion Council, North Mankato, MN 56003, Oct. 23. 1 + 7 p. Typed, with signature on letterhead.

• **Summary:** “Fiscal Year 1998 has been the most significant and eventful year yet for the farmer’s biodiesel commercialization effort... Five products (SoyShield, SoyGuard, Soy Power, Agri-Guard and Soy Gold) are now being marketed to and by the petroleum industry. Congress has passed legislation designed to *sell* biodiesel fuel. President Clinton included biodiesel in his National Alternative Fuels Week proclamation and Missouri’s Governor Carnahan declared the third week in May as National Biodiesel Week.” Both ADM and Cargill “are in the pre-planning stages of biodiesel production.”

Attached are the following reports: (1) National Biodiesel Board FY98 Final Report (3 p.). (2) Petroleum Alliance Program final report (3 p.). (3) Final report for Petroleum Partnership and Alliance Project (6 p.). Address: Chief Executive Officer, National Biodiesel Board [Jefferson City, Missouri].

1780. Stewart, Chuck. 1998. Update on work toward restoration of Henry Ford’s chemical plant and soybean laboratory—and new ideas (Interview). *SoyaScan Notes*. Oct. 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Iowa Soybean Association and the Michigan Soybean Association contributed \$80,000 to fund a feasibility study on refurbishing Henry Ford’s Soybean Lab. Then they put together a proposal, that has now been presented to the Central States Soybean Group—which consists of the major soybean producing states, of which Iowa and Illinois are the top two. They had a second meeting with Steven J. Hamp, president of the Henry Ford Museum. They are now talking about going beyond the Soybean Lab and presenting the “big picture of agriculture through the lens of the soybean.” The Soybean Lab would be the historical component, the “look back.” Part of the new picture would be the big idea of moving from a carbon-based society to a carbohydrate-based society.

Note: In a week or so, Chuck Stewart and representatives of the Illinois and Iowa Soybean Associations will meet with representatives (including Martin Andreas of ADM) to discuss funding. Address: Chuck Stewart & Associates, 4949 Pleasant St., Suite 204, West Des Moines, Iowa 50266. Phone: 515-226-0358.

1781. Archer Daniels Midland Co. 1998. Annual report: The nature of our business. P.O. Box 1470, Decatur, IL 62525. 40 p. Oct.

• **Summary:** Net sales and other operating income for 1998 (year ended June 30) were \$16,109 million, up 16.3% from 1997. Net earnings for 1998 were \$403.6 million, up 7.0% from 1997, but far below the recent peak of \$796 million in 1995. Shareholders’ equity (net worth) is \$6,505 million, up 7.5% from 1997. Net earnings per common share: \$0.68, up 7.9% from 1997. Number of shareholders: 32,539.

“We have moved rapidly toward a borderless world... Globalization of trade has changed the face of agriculture. The central focus for agriculture today is the emergence of consumer power. Consumer demand drives the entire food and fiber system” (p. 1).

One half-page color photo (p. 2) shows the factory where ADM makes isoflavones at Decatur, Illinois. High on one side is the huge green and black logo: “Novasoy—The power of soy.” This is the world’s first commercial isoflavone plant. A larger photo (p. 3) shows a bottle of Novasoy Soy isoflavones—a co-branded ingredient found in leading nutritional supplement products. “ADM is meeting the needs of health-conscious consumers by offering a wide range of health and nutrition products, including nutraceuticals, also known as functional foods.

“Among our nutraceutical products are soy-derived isoflavones, which have been shown in initial studies to stimulate bone formation (thus boosting the body’s natural defenses against osteoporosis), to inhibit the growth of

cancer cells, and to contribute to lower cholesterol levels. In addition, isoflavones are thought to play a role in alleviating the symptoms of menopause. ADM produces Novasoy isoflavones in the world's first commercial isoflavones plant."

ADM now has a major presence in the South American soybean market, with five crushing plants (that crush 5,600 tonnes/day), two Atlantic coast export facilities (incl. a new one at Tubarao, southern Santa Catarina state, Brazil), and nearly two million metric tons of storage capacity (p. 5).

A world map (p. 6-7) titled "ADM's global network" shows ADM processing plants, partnerships, grain elevators, and A.C. Toepfer trading offices. The company owns 800 trucks, 13,000 railcars, and 2,250 river barges (p. 11).

"ADM Lecithin: Early in 1998, the Food and Nutrition Board of the Institute of Medicine established for the first time a Dietary Reference Intake (DRI) for choline, the principal component of lecithin. Ultralec, a deoiled lecithin made from an innovative ultrafiltration technology exclusive to ADM, is an excellent source of dietary choline. This plant has been completed in Decatur, Illinois. Acquisitions brought significant increases to production capacities in the past year. In the U.S. the acquisition of Moorman Manufacturing Co. included their lecithin production facilities at Quincy, Illinois and Helena, Arkansas. Production capacity was gained in Mainz, Germany through the acquisition of Soya Mainz GmbH" (p. 16). Note: Moorman Manufacturing Co. bought the Quincy Soybean Processing Co. (Quincy, Illinois) from Irving Rosen in 1961.

"ADM Research: Nutraceuticals (or 'functional foods') now in production include vitamin E, vitamin C, isoflavones, granular lecithin, and sterols (from vitamin E). Among ADM's forthcoming health and nutrition products are the antioxidants beta-carotene, oligosaccharides, and tocotrienols. Already in use in Japan, oligosaccharides are complex sugars that belong to the nutritional category of prebiotics that have been proven to decrease the risk of colon cancer and perhaps increase life expectancy" (p. 16).

Haldane Foods has four factories in England that make a variety of "meat and dairy alternatives... New products include meatless slices, including chicken, ham, and 'Vege-Bacon.'" Haldane also makes an outstanding dairy-free ice cream (p. 17).

Color photos show: (1) Dwayne Andreas shaking hands with Shimon Perez (facing p. 1). (2) A white plastic bottle of NovaSoy Soy Isoflavones (p. 3). (3) ADM's dock and export facility in the Atlantic port city of Tubarao, Brazil (p. 5).

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders." Address: Decatur, Illinois.

1782. Worthington Foods, Inc. 1998. Third quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.

• **Summary:** Net sales increased 21% to \$35 million for

the third quarter vs. 29 million a year ago. Net sales are up 18% for the first 9 months of 1998 compared with the same period one year ago. "Despite Gardenburger's concentrated efforts in the veggie burger category, including a \$17 million TV campaign, 5 national FSI drops in Sunday newspapers, and very aggressive trade support for shelf space and retail price reductions, Morningstar Farms Veggie Burger sales for the past nine months are up over 13 percent. However, the veggie burger category is only 40 percent of Morningstar Farms meat substitute business! The other 60 percent of our meat alternative business has increased nearly 40 percent during the past 3 quarters."

"On October 16, 1998, Worthington Foods, Inc., closed on the purchase of the Harvest Burger brand of meat alternative products from the Archer-Daniels-Midland Company (ADM). The purchase price of \$9.3 million was paid with 488,750 shares of common stock from Worthington Foods, Inc., approximately 4.1 percent of the outstanding shares of stock... Sales of Harvest Burger branded meat alternative products have been approximately \$15 million over the past 12 months with approximately 8 percent market share. Now sold under the Green Giant brand, the Harvest Burger Original has the 3rd highest sales-per-point of distribution of all burgers. These same Harvest Burger products will begin appearing under the Morningstar Farms brand beginning January 1, 1999. Foodservice sales were up 34% for the third quarter of this year compared to 1997 and increased 37% for the first nine months of the year." Address: Worthington, Ohio. Phone: (614) 885-9511.

1783. **Product Name:** Morningstar Farms Harvest Burgers [Original Flavor, Southwestern-Style, or Italian, plus pre-cooked Crumbles for Recipes].

**Manufacturer's Name:** Worthington Foods, Inc.

**Manufacturer's Address:** 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.

**Date of Introduction:** 1998 October.

**Wt/Vol., Packaging, Price:** 4 Corn Dogs weigh 10.0 oz (284 gm). Paperboard box.

**How Stored:** Frozen.

**New Product-Documentation:** Worthington Foods annual report. 1999. March. p. 4-5. On 16 Oct. 1998 Worthington purchased the Harvest Burger product line from ADM. As part of the agreement ADM continues to produce the Harvest Burgers—previously marketed by Pillsbury under the Green Giant label—at its Illinois plant. A color photo shows the label.

1784. *Bluebook Update (Bar Harbor, Maine)*. 1998. ADM to manufacture soy and palm nutraceuticals. 5(4):2. Oct/Dec.

• **Summary:** ADM is introducing two new products: Novasoy, an isoflavone product with various health benefits, and tocotrienols, which come from palm oil will be marketed as nutritional supplements.

1785. Fisher, Kate. 1998. Soy isoflavones charge onto supplement scene: Disease-preventing compounds are available in tablets. *Soybean Digest*. Nov. p. 24.

• **Summary:** Soy isoflavone tablets are now available from many supplement companies. Novasoy, a soy isoflavone compound made by Archer Daniels Midland Co., is the active ingredient in many of them. While many studies have shown the health benefits of soyfoods and soy protein products, few studies have been done using isoflavone tablets as supplements.

Soy isoflavones are fairly stable and able to withstand normal cooking without breaking down. There is presently no recommended daily allowance, but 30-50 mg per day seems to be beneficial, especially for post-menopausal women.

A bar chart from the University of Kentucky shows the isoflavone content of soybeans and various soyfoods (in mg per serving (svg)): Mature soybeans (170), roasted soybeans (165), green soybeans (70), tempeh (60), soy isolate (57), soy flour (45), tofu (35), textured soy protein (30), soy beverage (20), and soy concentrate (15).

1786. *Nutrition Business Journal* (San Diego, California). 1998. Haldane leads U.K. market for vegetarian and non-dairy foods. 3(10/11):26. Oct/Nov.

• **Summary:** The Haldane Foods Group is owned by agribusiness giant Archer Daniels Midland Co., based in Decatur, Illinois. ADM group vice president Larry Cunningham says Haldane has revenues of under 50 million British pounds, from sales of 350 products sporting such well-known brands as Vegemince (the company's brand leader; a soy-based minced meat alternative), Realeat, Direct Foods, Dietburger, So Good, and Hera.

The *Linda McCartney* line of vegetarian foods, launched in 1991, has become a leader in its category, with retail sales of about 50 million pounds in 1998. Haldane's newest line, launched in April, is *Linda McCartney's Dairylike*, non-dairy desserts developed by Haldane and marketed under a licensing agreement to use the Linda McCartney brand name. The line includes cultured and frozen vegan desserts which are free of lactose and cholesterol and fortified with calcium and minerals. Haldane is promoting the new Dairylike line using national TV and print ads. ADM is test marketing Dairylike in Southern California under the name Dairyless.

About one-third of Haldane's sales come from products made by third party manufacturers such as Asda and McVities.

During the last year Haldane has faced two big challenges: (1) In the spring of 1998 EU food labeling legislation required companies to stop using the term "soya milk" or "yoghurt" or any misspelling of it. Haldane reformulated, renamed, and relaunched its line of non-dairy products. (2) In Sept. 1998 a EU regulation which came into

effect requiring products containing genetically modified soy protein to be labelled appropriately. Haldane guaranteed that all its soy products are GMO-free, made from identity preserved soybeans.

Haldane's "Realeat Survey," now in its 15th year, studies attitudes toward meat eating in the British Isles. Each survey is conducted by The Gallup Organization. The 1997 Realeat Survey showed that a record 5.4% of the British population now chooses a vegetarian diet, up 20% over 1995. Thus, Britain now has more than 3 million vegetarians. And 14.3% of the population no longer eats red meat—over 8 million people. Many Britishers avoid red meat because of fear of BSE or Mad Cow Disease. In the 1995 Survey 7% mentioned BSE as their main health concern; this figure rose to nearly 22% in the 1997 survey. The 1998 Survey showed that 13% (over 7 million people) never or almost never eat dairy products. Today roughly half of the British population is actively reducing consumption of meat, especially red meat, and one-third is doing the same with dairy products.

1787. *SoyaScan Notes*. 1998. Chronology of major soy-related events and trends during 1998 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** June—WholeSoy Co. of San Francisco (Ted Nordquist) launches Creamy Cultured Soy (soy yogurt) in 3 flavors. In about 2001 the product is renamed WholeSoy Soy Yogurt.

June—Britain's Prince Charles, who practices organic farming and is a patron of the Soil Association, writes an article attacking genetically modified food that is published in Britain's *Daily Telegraph*. Explaining that he wouldn't eat such food or knowingly give it to his family or guests, he concludes, "I happen to believe that this kind of genetic engineering takes mankind into realms that belong to God and God alone." The prince's surprise article helped unleash a wave of anti-GMO activity and sentiment, that continued for weeks in the British press and carried over to the Continent.

Sept.—New European Union (EU) labeling laws, requiring labeling of genetically modified ingredients, go into effect. However the regulation exempts foods which contain no soy protein but do contain soy oil or soy lecithin.

Sept.—Imagine Foods of Palo Alto, California, the natural foods leader in nondairy beverages, launches Soy Dream (soymilk), the company's first soy product. They support the product with an extensive and very creative advertising campaign.

Sept.—Protein Technologies International starts to offer certified non-GMO soy protein isolates.

Oct.—The Hain Food Group (which owns Westbrae) has announced that it will start to label some of its products as GMO-Free (i.e. free of genetically modified / engineered organisms). It has developed a "Pure Food" logo and a "Just Say No to GEOs" slogan.

Oct. 16–Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

Nov. 1-2–Conference titled “Estrogen, phytoestrogens and cognitive function” held in Seattle, Washington (organized by Mark Messina), largely to learn more about the research of Lon White on tofu and dementia/Alzheimer’s disease.

Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

Major trends: (1) The steady expansion of genetically engineered Roundup Ready soybeans. This year an estimated 30% of America’s soybean acreage was planted to genetically engineered soybeans. This is one of the hottest and most controversial stories in most countries of the world—except the United States, where it gets unbelievably little media coverage. (2) The hype about the health benefits of soyfoods continues to increase. There are definitely some health benefits, but the exaggerated statements that now routinely appear in articles and advertisements go far beyond what can be supported by scientific evidence. The media seems intent on making as much money as possible as it whips up the story of soy’s health benefits. The bigger the story it becomes, the more money they can make later debunking it. (3) The natural foods industry is changing into a supplements industry because of the higher profit margin on supplements. Many consumers are being misled into thinking that supplements are more important than healthy foods in determining good health. (4) Among commercial soy products this year, the ratio of supplements to foods has increased sharply.

Areas of potential danger on the horizon: (1) Lon White of Hawaii and his data on tofu and dementia/Alzheimer’s disease. (2) Young girls discovering that overdoses of soy isoflavones could be useful in growing breasts, then publicizing that information using the Internet and World Wide Web. (3) The danger that the media will start to debunk its own hyped story of the health benefits of soy. (4) The concern that the FDA health label claim for soy will not include traditional soy products—such as tofu and soymilk—which contain too much fat. Therefore manufacturers will be tempted to add soy protein isolates to raise the protein to a level that will trigger the health claim.

1788. Allison, Karen Hubert. 1998. *The vegetarian compass: New directions in vegetarian cooking*. Boston, Massachusetts: Little, Brown & Co. xiii + 383 p. Illust. Index. 24 x 20 cm.

• **Summary:** One chapter (p. 163-210) is titled “Tofu, tempeh, and seitan.” The index contains 28 entries for tofu, 23 for tempeh, 17 for seitan, 2 each for miso and for texturized vegetable protein (TVP), and 1 each for milk–nondairy and for soy grits.

On the inside rear dust jacket is a portrait photo of the author and a brief biography. Karen “was the former owner, with her husband, Len Allison, of the three-star New York City restaurant Huberts. She taught at the Culinary Institute of America and was the author of the novel *How I Gave My Heart to the Restaurant Business* (1997). She lived in New York and Maui until her death in 1997.” She is the mother of three children. Address: New York and Maui.

1789. Campbell, Regina. 1998. *Regina’s vegetarian table: your invitation to flavor, freshness, and health*. Roclin, California: Prima Health. A Div. of Prima Publishing. xx + 336 p. Illust. (some color). Index. 24 x 19 cm. Reprinted in 2002.

• **Summary:** The list of “uncommon foods commonly used in vegetarian cooking” (p. xiv-xvi) includes descriptions of miso, soy milk, shoyu, tahini, tempeh, tofu, and vegetarian worcestershire sauce.

A table (p. xix) compares the nutritional composition of 5 types of cheddar cheese made with cow’s milk (whole), cow’s milk (nonfat), goat’s milk (whole), soy milk (whole), and soy milk (nonfat).

Soy-related recipes: Teriyaki and pineapple cheese spread (p. 8). Silky caesar dip (with “10 ounces soft tofu” and “1½ teaspoons Worcestershire sauce,” p. 14). Tofu vs. sour cream vs. yogurt (sidebar; a table compares nutritional composition, p. 16). Gourmet teriyaki sauce (with “1 cup shoyu {or soy sauce}” plus honey, sesame seeds, minced onion, pressed garlic, sesame oil, and finely grated fresh ginger, p. 52). Chinese eggdrop soup with tofu (p. 66). Scorched teriyaki green beans (p. 188). No need to soak beans (sidebar, p. 190).

The section titled “Soy dishes” (p. 237-52) includes: Tofu and broccoli in peanut sauce. Honey-mustard tofu salad. Tempeh con queso. Mexican tofu. Chilled lemon-rice soup. Faux beef spaghetti sauce (with “1 cup beef- or chicken flavored TVP {optional}”). Spanish rice with tempeh. Stuffed peppers with tempeh and rice. Vitamin B-12 in the diet (sidebar). Not-so-Sloppy Joes (with tempeh and Worcestershire sauce). Tempeh tacos. Barbecue tofu with caramelized onions. Lentil loaf (with tempeh). Teriyaki eggplant and tofu.

Vegurritos (vegetarian burritos, with 2-3 tablespoon imitation bacon bits, p. 257). A color photo of Regina appears on the front cover. Address: Cook, columnist, television producer, writer, and on-air personality, Sacramento, California.

1790. Melina, Vesanto; Forest, Joseph. 1998. *Cooking vegetarian: healthy, delicious and easy vegetarian cuisine*. Minneapolis, Minnesota: Chronimed Press. 239 p. + 8 unnumbered pages of plates. Foreword by Graham Kerr. Illust (some color). Index. 25 cm. [9 ref]

• **Summary:** This is a vegan cookbook, originally published

in Canada by Macmillan, Canada in 1996.

The index contains 14 entries for tofu, 2 each for tempeh, for textured vegetable protein (TVP), and for miso soup, and 1 each for soy milk and for teriyaki sauce. Melina Vesanto was born in 1942. Address: 1. Registered Dietician, Canada; 2. Chef and food consultant, Vancouver.

1791. Cooper, Kim. 1999. New developments with soybeans in Canada (Interview). *SoyaScan Notes*. Jan. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The term “food-grade soybeans” is increasingly widely used by Canadian soybean exporters and their Asian customers to refer to all soybeans developed specifically for food use. Many are large seeded, but some are also small seeded—developed for sprouting (to have high germination) or natto. All have a white hilum. The biggest problem with this term is that all soybeans can be used for human food. About 5-10% of the soybeans exported from Canada are “food-grade.”

Most overseas buyers of Canadian food-grade soybeans want them to be GMO-free. In addition, some overseas crushers now also want soybeans that are GMO-free, though they need not be food grade.

The genetically engineered soybeans grown in Canada are generally handled in two different ways. The great majority, which are used by Canada’s two major soybean crushers (owned by the American companies ADM and Central Soya) are given no special treatment; they are simply sold by farmers to their local elevator, where they get mixed with other soybeans in “the stream.” These two crushers have made it very clear that they do not want these GMO soybeans to be segregated or given any special treatment. However the genetically engineered soybeans purchased by soybean exporters are handled like any other identity preserved (IP) crop, primarily so that buyers in foreign countries who want GMO-free can be guaranteed what they want. For the past ten years, the Canadian soybean trade has been developing its system of IP varieties, especially to serve Japanese customers—who usually like specific varieties. Exporters would contract with farmers to grow these special varieties, then at harvest they would be stored in their own elevator, silo, tank, etc. and shipped with their identity preserved. Organically grown soybeans are handled in a quite similar way. So when GMO soybeans arrived, the export trade decided to handle them just like IP varieties—actually more like organic soybeans than like IP. Setting up such an IP system has that added benefit that if and when, in the future, consumer benefits are genetically engineered into soybeans, their identity will have to be preserved. An increasing percentage of the soybeans grown in Canada are grown under contract—perhaps about 10% at present.

Shurtleff notes: The U.S. soybean distribution system is based on bulk shipments; its ability to handle IP shipments is much less advanced than the Canadian system. For

this reason, the U.S. exports of soybeans to Europe have decreased dramatically over the past year. In America, GMO soybeans simply took over the main soybean distribution system; they did so with hardly any discussion and probably based on the assumption that hardly anyone would care. It is the latter assumption that is highly questionable.

Kim: U.S. soybean exporters went to Europe several years ago and told their customers: “We have these genetically modified soybeans and we’re going to be shipping them to you starting this fall.” The European buyers explained that European consumers are different from American consumers, and may want to think about and discuss this new matter. The American’s said, “Sorry, we can’t wait. The soybeans are coming.” The Europeans felt upset, like the Americans were trying to shove something down their throats.

In Canada, the problem is far from resolved. Consumers in Canada are starting to become aware of this issue, and they are just starting to sound the alarm. But more and more genetically modified products are coming onto store shelves, so Kim believes consumers will gradually develop confidence in them—but not in the next 1-2 years. Kim believes that there is essentially no chance that most consumers will reject genetically modified foods in the long run.

The international conference in Canada last September was attended by about 200 people; there would have been more but for an airline strike in Canada. Peter Golbitz presented an excellent keynote address. His paper and some others are posted on the OSGMB website. Address: Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

1794. *Milling and Baking News*. 1999. Dwayne Andreas as creator and builder. Feb. 9. [1 ref]

• **Summary:** An excellent evaluation of the career and contribution of Dwayne Andreas, longtime president and CEO of Archer Daniels Midland Co. Andreas and the word “agribusiness” are inextricably linked. He played a major role in creating and interpreting modern agribusiness. He has built a publicly owned company into to the best in the world, even though most of his competitors can operate in secret.

1795. Archer Daniels Midland Co. 1999. Do what comes naturally [Vitamin E] (Ad). *Soybean Digest*. Mid-Feb. Back cover.

• **Summary:** At the top half of the ad is a sepia photo showing an elderly man and woman dancing on a pier over a body of water. The text below the photo states: “The best things in life just seem to come naturally. Like natural Vitamin E from ADM. Made from the healthy goodness of soybeans, natural Vitamin E is significantly more effective than synthetic brands. In fact, studies have shown it can help you maintain cardiovascular health as well as a health cholesterol level. Natural Vitamin E also helps support the immune system, strengthening your body’s own disease-fighting abilities. And some say it can even help you feel younger, longer. Look for natural Vitamin E in leading brands of dietary supplements. It might just be the most natural choice you’ll ever make.”

Below the text is the ADM logo: “Supermarket to the world.” [www.admworld.com](http://www.admworld.com).

The text flows around two small photos which show: (1) A person’s hand reaching into dry soybeans. (2) Three vitamin E gelcaps. Address: Box 1470, Decatur, Illinois 62525. Phone: 217-424-5200.

1796. *Soybean Digest*. 1999. ADM donates soy beverage to Cuba. Mid-Feb. p. 93.

• **Summary:** Archer Daniels Midland Co. is donating 100 metric tons of powdered soy beverage for distribution to children in Cuba. This is one of the biggest donations of food ever made to Cuba, according to the U.S. Dep. of Commerce. ADM chair Dwayne Andreas says that this donation is a gift to the children of Cuba from the 23,000 employees of ADM.

1797. Soyfoods Association of North America. 1999.

Soyfoods Association of North America celebrates April as Soyfoods Month (News release). Washington, DC. 2 p. Feb. 15. 28 cm.

• **Summary:** According to HealthFocus, a research firm located in Des Moines, Iowa, that tracks consumer trends: (1) In 1998 some 16% of U.S. shoppers use soyfoods such as tofu, tempeh, tofu hot dogs, etc.—up from 13% in 1996. (2) 10% of shoppers in 1998 are eating more soy specifically because they believe it will reduce their risk of disease—this is an increase of 3% from 1996 data.

What forces are driving this increased interest in soyfoods? (1) The double-digit increase of Asians in America. (2) Baby boomers (now in their 50s and more interested in longevity and health) fighting death, disease, and aging. (3) More and more teens and young adults are vegetarians or partial vegetarians, choosing more plant-based foods. An ADM survey found that 97% of colleges and universities now offer meatless entrees on their menu. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

1798. **Product Name:** Easy Soy Gold [Soy Isoflavones].

**Manufacturer’s Name:** Carlson (J.R.) Laboratories, Inc.

**Manufacturer’s Address:** Arlington Heights, Illinois.

Phone: 1-888-234-5656.

**Date of Introduction:** 1999 February.

**Wt/Vol., Packaging, Price:** Bottle.

**New Product—Documentation:** Spot in Healthy & Natural Product News 1999. April. p. 12. A color photo shows the bottle and label. “An easy, reliable way to get soy! One tablet of Easy Soy Gold provides more powerful isoflavones than 2½ cups of soy milk.”

## Soyfoods Association of North America Celebrates April As Soyfoods Month

WASHINGTON, D.C. — The Soyfoods Association of North America celebrates April 1999, as Soyfoods Month. It's time for all Americans to enjoy "Soyfoods Once a Day for Life." Many people have learned they can't live without soy.

product is pure soy isoflavones, such as the type made by ADM. It was introduced about 2 months ago. The company got involved with soy products about 2 years ago.

1799. Lamp, Greg. 1999. Soyfoods health claim nears FDA okay: Heart-risk labeling should boost soybean demand. *Soybean Digest*. Feb. p. 68.

• **Summary:** Funds from the soybean checkoff helped generate the research and information that was submitted to the FDA. The process began in 1995 with financial assistance from the Illinois Checkoff Board and the United Soybean Board (USB). Roughly \$1 million in soybean checkoff funds were invested in the project. "A coalition to develop the soy health claim involved ASA [American Soybean Association], USB, state checkoff boards and industry partners, such as Protein Technologies International, Central Soya and the Archer Daniels Midland Company."

An estimated 20% of all Americans (54.2 million adults) have high blood cholesterol levels—over 240. ASA predicts that if each of these people consumed 25 grams (less than 1 ounce) of soy protein each day, annual demand for soybeans would increase by more than 55.2 million bushels.

Consumption of U.S. soybeans in the United States now totals about 1.2 billion bushels a year.

A color photo shows two 3-shelf racks of American foods. Those on the left rack already contain soy protein: Mori-Nu Tofu, Take Care, GeniSoy bars, Harvest Burgers, Galaxy Veggie Slices, SoNice soymilk, Edensoy, Morningstar Farms [Worthington Foods] meat alternatives, etc. Those on the right rack are foods with potential to have soy protein added: Cream of Wheat, Raisin Bran, puddings, Snackwell's cookies, etc.

1800. Soyfoods Association of North America. 1999. Soyfoods Once a Day for Life (Portfolio). Washington, DC. 21 inserts. Feb. 15. 28 cm.

• **Summary:** The following eight news releases are from the Soyfoods Association: (1) Soyfoods Association of North America celebrates April as Soyfoods Month (2 p.). (2) Soyfoods sales soar with increased consumer acceptance (2 p.). (3) Soyfoods Association of North America—Industry insiders (ask the experts, 1 p.). (4) Start young enjoying soy (ideas for kids, 1 p.). (5) 1999 Soyfoods Month sponsors (a half-page profile of 11 companies: Archer Daniels Midland, Galaxy Foods Co., Hain Food Group, Lightlife Foods, Inc., P.J. Lisac & Associates, Inc., SunRich, Inc., Tetra Pak, Vitasoy USA Inc., White Wave, Inc., Worthington Foods, Inc., Yves Veggie Cuisine; 6 p.) (6) Soyfoods Association of North America product list (lists soyfood products of 15 companies, many of whom are sponsors of "April is Soyfoods Month," 11 p.). (7) Soyfoods Association of North America member list (52 companies, 1 p.). (8) Dear member of the press, from Allan Routh, President, SANA (1 p.).

Product brochures from the following companies are also included: (9) Sweet Soybeans—Hearty & Natural Edamame, from SunRich. (10) Vitasoy soymilk, (11) Fresh, ready to heat entrées, from Yves Veggie Cuisine. (12) Go Veggie (dairy alternatives), from Galaxy Foods. (13) Lisanatti—The good health cheese alternative, from P.J. Lisac & Associates (Clackamas, Oregon). (14) Trust the protein authority, from ADM. (15) Fact sheet, from White Wave. (16) Nasoya tofu. (17) Veggie recipes, from Galaxy Foods. (18) Westsoy recipes, from Westbrae Natural. (19) Eating healthy can be soy easy, from Lightlife. (20) The change will do you good, from Morningstar Farms. (21) Sweet beans—Vegetable soybeans, from Sno Pac. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

1801. Butts, Jennifer. 1999. Charitable donations: life-long giving illustrates generosity. *Herald and Review (Decatur, Illinois)*. March 7. p. 60. Sunday.

• **Summary:** A photo shows: "Charitable meeting: Mrs. Inez

Andreas (left) greets Mother Teresa as Dwayne Andreas and an unidentified Sister of Charity look on.”

A sidebar titled “Memorable comments” states: “The following quote comes from comments by Dwayne O. Andreas, Chairman of the Board and Chief Executive, at the 69th annual ADM shareholders meeting in early 1993.

“The following quote was spoken by President Dwight David Eisenhower in 1953, and when I heard it I asked for a transcript, which I have carried with me ever since.

“Every gun that is made, every warship launched, every rocket fired signifies, in the final sense, a theft from those who hunger and are not fed, those who are cold and are not clothed.

“This world in arms is not spending money alone. It is spending the sweat of its laborers, the genius of its scientists, the hopes of its children. ... This is not a way of life at all in any sense. Under the cloud of threatening war, it is humanity hanging from a cross of iron.”

“The nations are spending more than \$1 trillion a year on destructive weapons—more than \$3 million every minute, day and night, including Sundays and holidays. The cost of one Trident submarine would pay for immunization and basic health care for all the needy children in the world. The cost of 10 bombers or two submarines would pay for all the food needed to arrest the starvation of 100,000,000 people for one year—long enough to let them start to earn a living.

“Shortly after Ike made that statement he sponsored Public Law 480, a law designed in 1954 to distribute U.S. Food abundance to the hungry around the world. In recent months Public Law 480 has been revived to help Somalia and other countries feed their people, because, thank God, we couldn’t stand to see the faces of these starving children on television.

“That is why I believe that in years to come ADM technology can help save the world.

“Shareholders, you underwrite these great enterprises by permitting your capital and its proceeds to spawn ADM’s endless growth. You make it possible, and we aspire to continue to merit your confidence.

“Think about it. Ike had it right.” Address: Special projects writer.

1802. Butts, Jennifer. 1999. Lisbon [Iowa] classmates remember Dwayne Andreas as ‘special’ student. *Herald and Review (Decatur, Illinois)*. March 7. p. 68 [newspaper page 14]. Sunday.

• **Summary:** Dwayne Andreas attended school in Lisbon, Iowa. One building housed first grade through 12th grade. “He was a whiz at math. He would have his four columns of addition problems done before we even solved the first problem.”

His father was “a very well respected president of the Lisbon school board.” Dwayne had a long walk from his farm on the other side of town to school and back. And he

had to walk home and back for lunch.

Dwayne gave a “stirring send-off speech” as he and his class graduated from high school. He finished high school in an accelerated three years. His fellow classmates in high school recognized his “talents and his vision... we all thought he was something special.”

Many of the memories are from Eleanor Meyers Butterfield, a student classmate of Dwayne Andreas. Photos show: (1) “Fourth Grade: In May 1927, Dwayne Andreas was in fourth grade. Pictured here are (back row, from left) Miss Eva Floyd (teacher), Floyd Leinbaugh, Orion Owens, Dwayne Andreas, Marvin Brokel, John Thayer and Gordon Bridges; (front row, from left) Helen Graver, Eleanor Van Fossen and Eleanor Meyers (Butterfield).” (2) Eleanor Meyers Butterfield (in 1935 and in 1997). (3) “School Days: Here is the school Dwayne Andreas attended in Lisbon, Iowa. The building, pictured here in 1938, housed first grade through 12th grade. An auditorium and basketball court were downtown in the old ‘Opera House.’ Even his fellow students recognized his talents and his vision, especially in high school.” Address: Special Projects Writer.

1803. Dawson, Linda. 1999. Family ties: Andreas’ children always knew ‘Dad’ as a special guy. *Herald and Review (Decatur, Illinois)*. March 7. p. 59. Sunday.

• **Summary:** A photo shows the Andreas family (left to right): Sandy McMurtrie, Inez Andreas, Michael Andreas, Dwayne Andreas, and Terry Andreas.

Note: Inez is Dwayne’s 2nd wife. Sandy has worked with Mother Teresa and her Missionaries of Charity in Calcutta, India. Dwayne and his first wife Bertha Benedict (they were married in 1935 in Florida) had two children: Terry Lynn Andreas (born about 1943) and Sandra Ann Andreas. Address: Special projects coordinator.

1804. *Herald and Review (Decatur, Illinois)*. 1999. The Andreas’ legacy: his children reminisce on life with Dad. March 7. p. 58. Sunday.

• **Summary:** Photos show: (1) Brothers: Glenn (left) and Dwayne Andreas, about 1920.

(2) Family portrait: This photo of the family in which Dwayne was a child was taken in about 1930. Dwayne Andreas is pictured seated on the floor, holding the dog. Other family members, from left, are Albert Andreas; his wife, Dorothy; their son, Perry; Lowell Andreas (Dwayne’s younger brother); Lydia Andreas (Dwayne’s mother); Reuben Andreas (Dwayne’s father); Lenore Andreas (Dwayne’s sister); and Glenn Andreas (Dwayne’s older brother).

(3) Young children: The Andreas children, about 1923 (from left): Lenore, Glenn, Dwayne and Lowell. Address: Special projects coordinator.

1805. *Herald and Review (Decatur, Illinois)*. 1999. Photo

gallery. March 7. p. 62. Sunday.

• **Summary:** Clockwise from upper left, four photos show Dwayne Andreas and: (1) Senator Hubert Humphrey, President John F. Kennedy and John Thatcher, chairman of the Farmers Union Terminal Association (1964); (2) President Jimmy Carter and Rosalyn; (3) President Harry S. Truman and Mrs. Inez Andreas; (4) Senator Humphrey and staff members with Pope John XXIII.

1806. *Herald and Review (Decatur, Illinois)*. 1999. Memories. March 7. p. 63. Sunday.

• **Summary:** Clockwise from upper left, four photos show Dwayne Andreas and: (1) USSR President Mikhail Gorbachev, an interpreter and Armand Hammer; (2) Senator Hubert Humphrey, William Thatcher and President Lyndon B. Johnson; (3) Senator Bob Dole and President Richard Nixon; (4) Nancy Reagan and President Ronald Reagan.

1807. *Herald and Review (Decatur, Illinois)*. 1999. More memories. March 7. p. 65. Sunday.

• **Summary:** Clockwise from upper left, four photos show: (1) Dwayne Andreas, front left, conferring with Mikhail Gorbachev, across the table, at a Dec. 3, 1984, meeting in Moscow; (2) Dining with Patriarch Alesky II of the Russian Orthodox Church; (3) Conferring with Boris Yeltsin of Russia at the Andreas' Sea View home in Florida; (4) Greeting President George Bush. Address: Special to the H&R.

1808. *Herald and Review (Decatur, Illinois)*. 1999. Photo memories and a poem. March 7. p. 66 [newspaper p. 12]. Sunday.

• **Summary:** Photos: (1) Dwayne and Lowell with a swordfish and several smaller fish they caught at Miami Beach, Florida. (2) Dwayne poses with Supreme Court Justice Warren Burger and President Ronald Reagan. (3) Twenty-seven students in Lisbon pose for a school picture with Dwayne second from right in the bottom (front) row. Address: Special to the H&R.

1809. *Herald and Review (Decatur, Illinois)*. 1999. [ADM by the numbers]. March 7. p. 70 [newspaper page 15]. Sunday.

• **Summary:** "Number of employees added since Dwayne Andreas assumed chairmanship of ADM in 1970: 20,052.

"Number of locations added: 234.

"Increase in shareholder's equity: \$6.4 billion [= \$6,400 million].

"Value of Dwayne Andreas' leadership: Priceless."

1810. Reeve, Stuart. 1999. Agriculture's man of the century: a salute to Dwayne O. Andreas for a lifetime of contributions to agriculture and humanity. It's been an amazing career: legend in agriculture praises influence of others. *Herald and Review (Decatur, Illinois)*. March 7. p. 55, 69. Sunday.

• **Summary:** This outstanding story has many parts. On the right of page 55 is "Life Line," a chronology of Dwayne Andreas' life and work. Other stories include:

Page 1: "Five 'accidents' have great impact." "Life line" (timeline / chronology of Dwayne's life).

Page 2: "Andreas, ADM prove strong allies of U.S. farmers."

Page 4: "The Andreas legacy: His children reminisce on life with dad." Family has always been an important part of Dwayne Andreas' life.

Page 5: "Family ties: Andreas' children always knew 'Dad' as a special guy.

Page 6: "Charitable donations: Life-long giving illustrates generosity." Mother Teresa found a friend and helper in Dwayne Andreas. A photo shows Mrs. Inez Andreas greeting Mother Teresa as Dwayne Andreas (5'5" tall) looks on. Dwayne's daughter, Sandy McMurtie, has worked with Mother Teresa and her Sisters of Charity, and Dwayne has generously supported her work with food and money.

Page 7: ADM has been a major source of support to Decatur, Illinois and its economy. One way is by adding so many new jobs, but also by generous financial help. Since his arrival at ADM in 1965, Dwayne Andreas has made his mark on agribusiness. A photo shows a bottle of Novasoy isoflavones. G. Allen Andreas is the new CEO and president of ADM.

Page 8: Photos of Dwayne Andreas with "Sen. Hubert Humphrey, President John F. Kennedy and John Thatcher, chairman of the Farmers Union Terminal Association (1964); President Jimmy Carter and Rosalyn; President Harry S. Truman and Mrs. Inez. Andreas; Sen. Humphrey and staff members with Pope John XXIII."

Page 10: "Dwayne Andreas has made fighting hunger his mission in life." "In 1946 he helped develop the federal school lunch program that now feeds 26 million children annually." "In the late 1960s, he helped Sen. Bob Dole and Sen. Hubert Humphrey develop the federal Food Stamp Program."

Page 11: More photos of Dwayne with famous people, including Mikhail Gorbachev in 1984 in Moscow, Patriarch Aleksey II, of the Russian Orthodox Church, President Boris Yeltsin of Russia and President George Bush.

Page 12. Photos.

Page 14: Dwayne Andreas attended school in Lisbon, Iowa.

A.E. Staley gave Dwayne Andreas a key piece of advice which was one of five events (all accidents) that changed his life. Andreas was sent to the Staley Company in Decatur to

buy a year's supply of soybean meal. After completing the deal, he was getting into the elevator on the 7th floor when Mr. Staley, who was about 80 years old at the time, reached right into the elevator, grabbed his arm and said "Come back." Later, Dwayne often wondered what would have happened if the elevator doors had closed just three seconds sooner.

They had lunch together and Mr. Staley said, "Young man, it's foolish for you to come down here to buy soybean meal. You should build your own plant in Iowa." Dwayne said, "Mr. Staley, I don't have that kind of money." He replied, "Go to Allis-Chalmers (the equipment manufacturer) in Milwaukee and they'll send you a soybean plant 5% down. Give them my name as a reference."

Three days later Dwayne was starting to build a soybean processing plant.

Last page [70]: From the employees of ADM: "Value of Dwayne Andreas' leadership: Priceless. Thank you for 28 years of wisdom, humanitarianism, and leadership." "Number of employees added since Dwayne Andreas assumed chairmanship of ADM: 20,052. Number of locations added: 234. Increase in shareholder's equity: \$6.4 billion."

1811. Reeve, Stuart. 1999. Banking on ADM: 'quiet giant' supports major portion of Decatur economy. *Herald and Review (Decatur, Illinois)*. March 7. p. 61. Sunday.

• **Summary:** Photos show: (1) "In the cart: Novasoy™ isoflavones have proven successful as one of ADM's initial entries into the burgeoning nutraceutical market."

(2) "On the river: ADM products are transported along inland waterways on their journey to countless international export markets."

(3) "At home: The horizon is constantly changing at ADM's corporate headquarters on the east side of Decatur, as new plants and processes pop up to help meet the growing global demand for ADM ingredients." Address: Special to the H&R.

1812. Reeve, Stewart. 1999. Dwayne Andreas has made fighting hunger his mission in life: Andreas campaigns against hunger like it was devil's work. *Herald and Review (Decatur, Illinois)*. March 7. p. 64. Sunday.

• **Summary:** A portrait photo shows Dwayne Andreas.

A sidebar is titled: "Employee also spreads the word: here's why Gary Keltner says he's a walking advertisement for ADM and the Andreas family." Address: Special to the H&R.

1813. Archer Daniels Midland Co. 1999. ADM this quarter: Second quarter report to shareholders. Decatur, Illinois: ADM. 4 p.

• **Summary:** Dwayne Andreas has stepped down as ADM Chairman after 28 years at the helm. He will remain on the

Board as Chairman Emeritus. G. Allen Andreas will be his successor as Chairman and CEO. John D. McNamara was elected president of the company. Color photos all three men. Address: Decatur, Illinois.

1814. Archer Daniels Midland Co. 1999. Do what comes naturally. And keep your heart healthy (Ad). *Soybean Digest*. March. p. 57.

• **Summary:** At the top half of the ad is a sepia photo showing a man and a child having fun swinging on a rope swing. The text below the photo states: Being true to yourself means listening to your heart. And if you listen close enough, you'll hear about natural Vitamin E from ADM. Made from soybeans, natural Vitamin E is a powerful antioxidant that can help you maintain cardiovascular health, as well as a healthy cholesterol level. Which is good news for everyone who's looking out for their heart. Look for natural Vitamin E in leading brands of dietary supplements. Because if you don't listen to your heart, who will?"

Below the text is the ADM logo: "Supermarket to the world." [www.admworld.com](http://www.admworld.com).

The text flows around two small color photos which show: (1) Three vitamin E gencaps. (2) Several mature soybean plants growing in a field. Address: Box 1470, Decatur, Illinois 62525. Phone: 217-424-5200.

1815. *Food Magazine (Food Commission, London)*. 1999. Soya safety questions. Jan/March. p. 8. No. 44.

• **Summary:** This magazine has expressed considerable doubts about the safety of soya-based infant formula, given the high levels of oestrogen-like chemicals found in such products, and the small body weights of babies. The soy industry has continued to deny any problems, but food giant Archer Daniels Midland Co. (ADM) has withdrawn its application to the US Food and Drug Administration to have its soya isoflavone products given a Generally Recognized as Safe (GRAS) status.

The company said it is "in the process of incorporating additional information to update the file." The FDA has been deluged by letters from campaigners in New Zealand and the UK, including the Food Commission, pointing out the scientific evidence for a potential hazard.

1816. INTSOY. 1999. Strategies for success: Processing and utilizing soybeans for global markets—1999 INTSOY Course July 28 to August 7 (Leaflet). Urbana, Illinois. 3 panels each side. Each panel: 22 x 9 cm.

• **Summary:** This glossy leaflet (green and black on white) announces the INTSOY course, which now runs for only 11 days and costs \$3,750. Of the 11 days, only 4½ are classroom instruction, one is an excursion to ADM, and the last 4 are attendance at the Global Soy Forum 99 in Chicago, Illinois. Classes are scheduled to be held at the National Soybean Research Laboratory. The fee does NOT

cover the cost of accommodation at the University of Illinois and the conference in Chicago. Address: Attn: Dr. Karl E. Weingartner, INTSOY, Univ. of Illinois, 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 333-6422.

1817. Worthington Foods, Inc. 1999. Annual report 1998: Celebrating 60 years, 1939-1999. 900 Proprietors Rd., Worthington, OH 43085. 20 p. 28 cm.

• **Summary:** For the fifth consecutive year, Worthington Foods has achieved record earnings and record sales. Net sales rose to \$139.5 million in 1998, up 18.2% from \$117.9 million in 1997. Net income (profit) rose to \$8.021 million in 1998, up 0.2% from \$8.006 million in 1997. Earnings per share (diluted) fell to \$0.66 in 1998, from \$0.67 in 1997. Gross profit as a percentage of net sales increased to 43.2% in 1998 from 41.3% in 1997. Foodservice sales rose nearly 33% in 1998 compared with the prior year.

Contains a nice, full-page story honoring Allan R. Buller—visionary, leader, and friend, who steps down after 53 years of service to the company. When he arrived in Dec. 1945 “the company had sales of less than \$250,000 and had only recently moved its manufacturing from a two-story white frame house to a newly-built plant. Distribution consisted largely of mailing its most popular product, gluten-based *Choplets*, to households across the country at a price of three cans for a dollar.” In the 1950s he helped to make “Worthington the first company in the world to offer frozen vegetarian foods.” The company reached its first million-dollar sales year in 1960. In 1982, at age 65, Buller withdrew his retirement savings and refinanced his house to further the pursuit of his lifelong dream. “To make healthful vegetarian foods readily available to mainstream consumers.” He and a handful of other investors—including Dr. George Harding IV and James Hagle—raised \$9.5 million to buy back the assets of Worthington Foods from Miles Laboratories. “The deal closed on Friday [in October]; and the reorganized company—with Buller as president—started production the next Monday without missing a single order or shipment.” Buller retired as president of Worthington Foods in 1986, when Dale Twomley was named to the post. He became chairman of the board in 1989; now, a decade later, he steps down from that post, succeeded by Twomley. He joins other fellow Worthington visionaries, Jim Hagle and George Harding, in seeing a brilliant future for vegetarian foods. “‘When I was growing up, vegetarianism was accepted largely on faith,’ he recalls. ‘But today, we have strong scientific evidence to support the benefits of this dietary approach. That can only mean a continually growing market for our products.’”

“Morningstar Farms (including *Harvest Burgers*) leads the meat alternative market category in supermarkets across the U.S., capturing a 52% market share. As the only brand with meat alternative products for every meal occasion, Morningstar Farms continues to provide customers with the largest variety of products and tastes.

“Shoppers can find the Morningstar Farms brand in more than 96% of the nation’s supermarkets. The line now includes more than two dozen frozen and refrigerated food items to replace whole eggs and processed meats. Most of these meat alternatives are made from high quality soy protein,…”

New products introduced during 1998 include MeatFree Corn Dogs (batter-dipped on a stick), MeatFree Buffalo Wings (a fun food, great for kids, spicy vegetarian drumettes), and Hard Rock Café Veggie Burgers (a partnership with Hard Rock Cafe restaurants worldwide), and Morningstar Farms Harvest Burgers (On 16 Oct. 1998 Worthington purchased the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant). Two new refrigerated products were introduced in “modified atmosphere packaging” (MAP): Chick Nuggets and Breakfast Patties. MAP products are sold in the grocer’s meat case.

Color photos show: Dale E. Twomley. Allan R. Buller. Three new product labels. An aerial view of Worthington’s manufacturing facility at Zanesville, Ohio.

Includes a 27-page “Notice of Annual Shareholders Meeting.” Address: Worthington, Ohio. Phone: (614) 885-9511.

1818. Buchheim, Steve. 1999. The success of ADM’s Novasoy soy isoflavone pills (Interview). *SoyaScan Notes*. April 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Consumer acceptance of Novasoy has been very positive. The product is doing very well, and has definitely met ADM’s expectations. Steve is glad that ADM makes a completely natural soy product in pills that contain 50 mg of soy isoflavones. One initial problem was the price: ADM’s customers pushed for a lower price, arguing that consumers were generally not willing to pay more than \$10/month for any one supplement, so in about May or June 1998 cut its wholesale price to half of what it had been.

Two big changes have taken place in the market during the past 12-18 months. First, two other companies now extract and sell pure soy isoflavones, one from the Netherlands and the other from Israel. Steve has heard that Central Soya—through Henkel Corp. (LaGrange, Illinois)—is also planning to start extracting and selling soy isoflavones. Second, consumers are now faced with many more supplement choices than before.

Steve receives many calls from satisfied consumers who simply want to tell him how the product has changed their lives. Most of these calls are from women who have gotten relief from menopausal symptoms. Shurtleff suggests that ADM start collecting specific information from women who call concerning menopause, such as: Age of caller. Educational level. Daily dosage and its effects on symptoms. Are you also consuming other soy products? If yes, how

much of each per day on average. Have you used Novasoy to replace ERT (estrogen replacement therapy) or Premarin? Address: Marketing Manager, Soy Protein Applications, Archer Daniels Midland Co., P.O. Box 1470, Decatur, Illinois 62525. Phone: 1-800-637-5824 X-5394.

1819. Buchheim, Steve. 1999. Thinking about GMO-free soybeans at ADM (Interview). *SoyaScan Notes*. April 13. Conducted by William Shurtleff of Soyfoods Center.  
 • **Summary:** GMO-free soybeans are currently the subject of a great deal of official discussion at ADM—in part because ADM has strong corporate relationships with many soy companies in the UK, where the GMO issue is now very hot. Steve has not heard that ADM may have established a new department to deal with GMO-free beans but he is very sure that no organization has yet developed a reliable test to determine whether a given sample of soybeans contains any beans that are genetically modified. He has seen many conflicting results from the same sample coming from Genetic ID and from a company in Germany. He is not sure whether the problem is in the test itself or in the sampling procedure. If a company does guarantee that a shipment of soybeans is GMO-free, it must do so with some statistically valid margin of error. But the key point is this: Before ADM or any other company starts selling GMO-free beans, they must do so in conjunction with a reliable test and with an acceptable margin of error.

Note: Things have not changed much at ADM since Dwayne Andreas officially retired. He still comes into work each day and seems to be as busy and involved as ever. He is greatly admired by those who work with and for him. Address: Marketing Manager, Soy Protein Applications, Archer Daniels Midland Co., P.O. Box 1470, Decatur, Illinois 62525. Phone: 1-800-637-5824 X-5394.

1820. Jacobson, Jim. 1999. Agribusiness flourished with Sinaiko, Andreas. *Cedar Rapids Gazette (Iowa)*. April 25.  
 • **Summary:** The subtitle reads: “This story is part of a yearlong series that looks at the impact that Iowans and Iowa institutions made on the world during the 20th century.” Discusses and compares Joe Sinaiko and Dwayne Andreas, with a small portrait photo of each. Sinaiko was one of America’s first soy millionaires. “At one time he was the king of soybeans” says Forbes Olberg (retired chairman of the board of Banks) of Sinaiko. Les Liabo [pronounced LAI-bo], who managed the Iowa Milling Co. plant for twenty years recalls that Joe was “truly a pioneer in the soy business.” Joe always believed that there was a better way of doing things, and he introduced new milling technologies before his competitors. In the early 1950s Sinaiko built a plant that used chemical solvents to extract more oil from soybeans.

In 1928, a salesman from Quaker Oats told him about some farmers in Illinois who were growing a new crop

called soybeans. Joe decided to turn his mill into a soybean processing plant.

To have enough soybeans to mill and sell, Joe traveled the back roads of Iowa, persuading farmers to grow the crop. After extracting the oil from the soybeans, he’d go back to the same farmers and sell them the protein-rich meal for livestock feed.

After the oil shortage of the early 1970s, Andreas spent \$20 million to build a plant that would convert corn into ethanol. But it proved too expensive as a gasoline additive until 1979, when the Iranian oil crisis hit and the federal government exempted ethanol—called gasohol at the time—from excise taxes. Address: Gazette Assoc. financial editor.

1821. **Product Name:** Pro Fam 891 Isolated Soy Proteins. **Manufacturer’s Name:** Archer Daniels Midland Co. **Manufacturer’s Address:** P.O. Box 1470, Decatur, IL 62525.

**Date of Introduction:** 1999 April.

**New Product–Documentation:** Note and product specification sheet sent by Clyde Boismenu of Basic Foods Co. in Los Angeles, California. 1999. May 27. “This is the first of a new generation of purified soy protein products. Very low flavor, very low odor, and protein functionality greater by a magnitude than anything else available.” Spec sheet (undated). “Pro Fam 891 isolated soy protein is specially produced for food systems where a dispersible, highly soluble, low viscosity protein is required. Because of its unique functional characteristics, Pro Fam 891 may be used in various food products as both an effective emulsifier and moisture binder.”

1822. Gower, Elaine Ruth. 1999. Cost comparison of traditional and soy foods planned for a long term care facility cycle menu. MSc thesis, Southern Illinois University at Carbondale. v + 121 p. 28 cm. [49 ref]

• **Summary:** Conclusion: This study indicates that soy protein ingredients planned on a long term care facility (LTCF) menu can be substituted for traditional meat products with no significant difference in cost, but with the addition of significant amounts of protein to the diet. These ingredients include soy protein isolate, soy protein concentrate, and soy flour. As of Nov. 1998, the prices of basic soy protein products from ADM are as follows: Isolate \$1.55/lb. Concentrate \$0.72/lb. Soy flour \$0.40/lb.

Ruth earned her BSc degree at Southern Illinois University at Carbondale in 1997. This research paper was submitted in partial fulfillment of the requirements for the Master of Science degree—in the Food and Nutrition Program, Dep. of Animal Science, Food and Nutrition, in the Graduate School, Southern Illinois University. Address: 1233 Orchard Ave., Apt. I, Springfield, Illinois 62702. Phone: (217) 726-7118.

1823. Jacobi, Dana. 1999. Buono appetito! Soy makes hearty Italian classics healthy. *Vegetarian Times*. April. p. 36, 38-40, 42. No. 260.

• **Summary:** Recipes using eight soyfoods to make one Italian dinner—a veritable soy feast. The recipes are: Herb pesto (with white miso, dairy-free). Soy minestrone (with edamame). Sicilian stuffed squash (with TVP flakes and grated soy Parmesan cheese). Pasta al forno (with fat-free Italian sausage, and white miso). Chocolate almond biscotti (with soy flour). Italian ‘cheese’ pie (with extra-firm tofu and soy margarine). Address: Food writer, New York, NY.

1824. *Ontario Soybean Growers’ Marketing Board Newsletter*. 1999. New president for ADM. April. p. 3.

• **Summary:** Archer Daniels Midland Co. recently elected John McNamara as president. This promotion took place less than two years after John was promoted from ADM’s Canadian operations to assume the position of company vice-president responsible for oilseed crushing operations. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1825. Beyers, Jim. 1999. Work with ADM and Westward Industries, Inc. making textured soy protein (Interview). *SoyaScan Notes*. May 3. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In 1969, when Jim graduated from Southern Illinois University, he was hired by ADM to work on extruding soy protein. He worked with Bill Atkinson, who was using an old vintage extruder to make TVP, which was used primarily for pet food. Jim was hired to do research on adding value to the pet food by making it fit for human consumption, and to diversify the product catalog to include meat analogs. They soon were testing beef, ham, and chicken flavors in different sizes, shapes, and colors. Before long they were experimenting with some “wild and crazy things” such as fruit replacements, vegetable replacement, and nut replacements—all with TVP. At the beginning, only Beyers and Atkinson were working on this project. This was before the settlement of the big patent dispute between ADM and Ralston Purina in 1970. That dispute grew out of the fact that Atkinson and Robert Boyer (both of whom once worked together for Henry Ford) both came up with the idea of extrusion at about the same time. Bill Atkinson was extruding 50% protein soy flour and Ralston apparently said they were extruding soy flour. Atkinson fortunately kept the little desktop extruder that he used to make his first trials; it made a little rope of TVP about the size of an ink pen refill [about one-eighth inch in diameter]. “We reenacted those early experiments of his time and time again for the courts—to the point where we had miles of this little bitty TVP rope piled up.” Each company thought that it had invented the extrusion process first. “So they went to war with each other. They spent at least several hundred thousand dollars on attorney’s fees, until they finally resolved it out

of court. Swift and Staley were just standing on the side lines in the last half of the battle waiting for the judge to tell them who to pay the royalty checks to. Finally, the process patent was awarded to Ralston Purina and the product patent to ADM—which is kind of ludicrous. How can you have a process without a product, or a product without a process.” Ralston Purina went out to everyone they could find who was extruding a 50% soy protein product (for pet food or human food) and asked them to buy a license on the process; the license fees were quite high, because the life of the patent was half gone, so they decided to charge twice what they would have ordinarily charged. Ralston Purina made a great deal of money from PMS Foods in Hutchinson, Kansas. Swift paid the fees for a while, then stopped making the product. Cargill was a big manufacturer of a TVP-type product; they have a plant in Cedar Rapids, Iowa. Jim does not know anything about the fees they paid. Ralston Purina itself never made much extruded soy using its patented process. Ralston had two extrusion lines in Memphis, Tennessee, for several years, making mostly human foods—but they were never price competitive and the quality was not very good. ADM could have done the same thing, but they didn’t. Jim does not know why ADM didn’t pursue this.

Today ADM is by far the world’s biggest manufacturer of extruded, textured soy flour. “ADM has an extrusion capacity to generate the entire world’s supply of TVP. I know that for a fact because I put those extruders in place myself.” ADM runs on high volume and low margins. They won’t enter a field unless they can generate enough capacity to dominate. They streamline and automate the process until they are the low-cost producer. This has long been the philosophy of Jim Randall, the retired president. He was the engineer for ADM for many, many years. “The commodity mind-set has always been trainloads, truckloads, and shiploads. When I was at ADM we made one type of bacon bit, packed it in 50-pound boxes with ADM’s labels on it, sold it at 20,000 pounds minimum order. That was it.” Jim’s present company works on smaller volumes and higher margins. “We don’t want to compete with the commodity processors. We have a nice little specialty niche that ADM and Cargill can’t mess with. Generic bacon bits are becoming a commodity, but it is private labeling that keeps some of them in the specialty field. The big processors won’t put in a label room for 70 different private labels.”

Jim worked for ADM in R&D for about ten years. He worked very closely with Bill Atkinson, a very bright man and an excellent inventor, but he also came on like a raging bull—a cantankerous man. “But he and I got along great! I never knew for sure why. I used to enjoy listening to him talking about Henry Ford and his years of work there with soy. At one time Ford thought people were being gouged [paying too much] for eye glasses. So he set up a bank of grinding machines, to crank out glasses for a nickel each.” Ford and ADM both liked to operate on the principle of high

volume, low margin. In his Later years, Atkinson began to suffer from Alzheimer's disease. But until just before he retired, his memory was crystal clear, with 100% total recall. In Jan. 1979 he left ADM and went to work for Westward Industries, where for the next 18 years he made bacon bits. Ken Towers was the original owner of Westward Industries; he and his researchers developed a lot of new technology for flavoring systems in-house. When he went to and helped to start Westward Industries, it would take any order from 50 cases on up, and put the but the customer's label on it if so desired. Initially Westward bought its TVP from ADM, then added its own flavoring system. Later, they bought a license to produce the TVP-type base then added their own unique flavors by their own system.

In Jan. 1979 Westward Industries started making standard textured soy protein products in Kansas at 1819 S. Meridian, Wichita. Westward didn't sell any products under its own brand; it was either sold in bulk to foodservice or private labeled for all the glass-packers in the country like John R. Sexton, Durkee Foods, R.T. French, McCormick, Safeway, CFS-Continental, Ponderosa Steak Houses, Pizza Hut—any company that sold bacon-bits in jars. “We were the largest processor of imitation bacon bits in North America, probably for about ten years.” The company still makes and sells these products. At one point, they got rid of the extruders and made rice crispies for 15 years.

In about 1984 or 1985 Westward introduced the Soft and Chewy concept, with many of the old flavors, but a few new ones—such as Bacums. In late 1997 he bought Westward from its founder, Ken Towers, renamed it to Westwind Industries, and started his own production. He did not buy the corporate charter from Ken; rather he filed his own corporate charter, which required a new name. Westward Industries still exists, and Jim's manufacturing plant is at a new location. The company makes two types of textured soy flour (crisp texture, and Soft and Chewy) and a line of nut replacements (Terra Nuts, which are pressure cooked, then dry roasted, and used to replace pecans and walnuts).

Greg Caton is an interesting guy. He's exuberant, energetic, and very innovative. He needs to stop, settle down for about ten minutes, and think things through just a little bit. Jim thinks Greg will take his business worldwide “when he finally gets his focus on what he's doing. This non-GMO is really a big thing in Europe these days; it'll never make a splash here in the States. Greg believes that's where his new-found wealth will be.” Jim believes that GMO foods will not become widely accepted in the USA during our lifetime. “World-wide it's really catching on, and I think later on it may be somewhat important. What's more important now with soy is if you can process it hexane-free. Even though the residual hexane is in the parts per billion, there are enough folks around here that say ‘A little bit's too much.’ I think that'll get more mileage than whether it's Roundup Ready or not. Anyway, those are foreign markets that Greg is

looking at.” Address: Owner, Westwind Industries, Inc., 3930 W. 29th St. South, Suite 55, Wichita, Kansas 67217. Phone: 316-943-3212.

1826. Archer Daniels Midland Co. 1999. ADM to offer premium to grow non-genetic soy (News release). Decatur, Illinois. 1 p. May 5.

• **Summary:** ADM said Wednesday that it will pay farmers an 18-cent per bushel premium price for soybeans grown with a certain non-genetically engineered variety of seed. This seed, named Synchrony Treated Soybeans (STS) is produced by DuPont Co. and bred to resist Synchrony herbicide, also produced by DuPont. STS soybeans are not genetically engineered. The program took effect on 27 April 1999, according to Martin Andreas, senior vice-president of ADM. Designed to benefit farmers, it is also a way to avoid the recent problems related to genetically-modified crops, especially in Europe and Asia. According to Andreas, DuPont expects to offer contracts to plant STS on 9-10 million acres this year. Total U.S. soybean acreage this year is expected to be about 73 million acres. Address: Decatur, Illinois. Phone: 217-454-5200.

1827. Thompson, Wes. 1999. Brief history of W.G. Thompson & Sons' work with soybeans, and current thoughts (Interview). *SoyaScan Notes*. May 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Since this year is the Thompson's 75th anniversary, Wes is interested in learning more about the company's history. They have been in the grain business since 1924. They ran an elevator business, and he thinks that, through it, they got involved with soybeans is about the late 1930s or early 1940s. They probably received soybeans from farmers and shipped them to a crusher. The first soybean crusher in Ontario province that he is aware of was Victory Soya Mills [which began operation in late 1944]. In the 1950s Thompson's got into the seed business in a “brown bagger” way. In 1972 they started exporting and selling food type soybeans into Asia. And in 1975 they started a research group to breed soybeans; that was when they really got involved with soybeans in a big way. Over the years, the soybean exports and breeding have both grown nicely.

In the future, the company plans to focus more on food processing than on commodities—where the competition is fierce and the margins are small.

For the last few years, Thompson has supplied the European market with contracted non-GMO soybeans. So Wes is very sensitive to the changes in European attitudes to GMO that have taken place over the last few years. Thompson sells the soybeans as “GMO-free” and they get a premium for that, but they do not guarantee that these soybeans are GMO-free. Rather, they guarantee their “due diligence.” They contract the production, then march the fields and inspect them.

As for the future of GMO: The first traits benefited the farmer rather than the consumer. Consumers will begin to show more interest and be less critical when new traits benefit them. Another problem in Europe was that industry and government did not take the concerns of consumers seriously. Wes is not afraid of labeling GMO products. “Let it happen. Keeping consumers in the dark is just asking for trouble.”

A few days ago ADM came to farmers in the Blenheim area offering an 18 cent per bushel premium to farmers who grow non-genetically-modified soybeans. Their news release on the subject is dated May 5th. That seemed like a very important change of policy for a company as big as ADM. It seems like they believe that this will become a bigger issue before it becomes a smaller issue in North America. They defined what they considered non-GMO to be STS soybeans—which have herbicide resistance but the trait was developed through conventional breeding. Most of the soybeans ADM ships overseas are in the form of meal and other; a relatively small percentage is shipped as whole soybeans.

Wes’ company is “a slave to two masters.” They started out and continue to be focused on what their Canadian farmer customers want—which tends to be genetically modified. But in order to stay in business, over the last few years they have shifted their focus to food uses and consumers—both in Canada and in Asia. Address: President, W.G. Thompson & Sons, Limited, 122 George St., Box 250, Blenheim, ONT Canada N0P 1A0. Phone: 519-676-5411.

1828. Boismenu, Clyde. 1999. Soy protein isolates: ADM has some excellent new products and PTI is concerned (Interview). *SoyaScan Notes*. May 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** ADM got into the isolate business by buying two existing product lines. In the mid-1980s they bought the Promine line from Central Soya; these products were made at an aging plant in Chicago, Illinois. ADM replaced the Promine brand with Ardex, and cleaned up the production process and product consistency, but never did much to improve the somewhat beany flavor or to market the product. In the early 1990s ADM purchased the ProFam isolate line from Grain Processing Corp., which was a company that focused on corn processing, and especially on making maltodextrins. ADM shut down both of those early plants and built its own plant in Decatur.

During the 1980s most of the isolates made in the USA were sold to Eastern Europe, where they were added to sausages, but often did not appear on product labels. The second largest use was in infant formulas.

ADM’s new line of isolates, introduced about 1 year ago, is sold under the ProFam brand. ADM has built two big plants in Decatur, Illinois, and a third huge plant in Brussels, Belgium, will come on line later this year. The product

named ProFam 891 is completely new—unlike anything that PTI has. It is made from alcohol-washed concentrates. It has good solubility, great viscosity (very much like casein), almost no beany flavor, but a beige (not pure white) color. Of course, it will not melt like the casein in cheese does. Both ADM and PTI “tweak” their isolates—they set aside isoflavones at one step of the process then add them back later—to raise the isoflavone level. In this way they can say that they are not actually adding isoflavones, so they do not have to list isoflavones as an ingredient on the label. ADM guarantees 2 mg of isoflavones per gram of product, whereas PTI guarantees only 2 mg of isoflavones per gram of protein. Address: Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

1829. Boismenu, Clyde. 1999. Food uses of TVP or textured soy flour (Interview). *SoyaScan Notes*. May 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Demand for food uses of TVP dropped off years ago. Today the main use is in commercial burritos, in part because the standard of identity of a burrito requires very little meat. High-end or upscale burritos are made with 100% meat—and plenty of it in big chunks. But the less expensive burritos generally contain TVP mixed with ground beef. These products are often sold frozen in supermarkets, or they may go into school lunch programs or other foodservice meals. Address: Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

1830. Boismenu, Clyde. 1999. ADM recently purchased Soya Mainz GmbH, which owned at least part of Solbar Hatzor Ltd. (formerly Hayes Ashdod) in Israel (Interview). *SoyaScan Notes*. May 27. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In 1998, ADM purchased Soya Mainz GmbH & Co. Kommanditgesellschaft, which is located in Mainz, Germany (see 1998 ADM Annual Report). Soya Mainz crushes soybeans (processing capacity 2,500 tonnes/day) and makes refined soy oil, edible soy lecithin, and industrial soybean fatty acids. In 1991 Soya Mainz purchased a 25% equity in Solbar Hatzor. Solbar Hatzor Ltd. (formerly Hayes Ashdod) in Ashdod, Israel, is also a soybean crusher with a processing capacity of 700 tonnes/day. Note: Solbar has a capacity to make about 10,000 tonnes/year of soy protein concentrates. They also make textured soy flour and soy fiber. Address: Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

1831. Frahm, Gail. 1999. What is the Soy Protein Partners Group? (Interview). *SoyaScan Notes*. June 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** This group was formed about 5 years ago to fund 1-800-Talksoy, the toll free number. It consists of about ten of the state soybean boards, members of the Soy Protein

Council (ADM, Cargill, etc.), and the Soyfoods Association of North America.

Note: Soy Protein Partners also paid most of the costs of publishing the Soyfoods Guide in 1999, 2000, and 2001, and in keeping the Soyfoods Directory (at Soyfoods.com on the Web) up to date. 117,000 copies of the Guide were printed in April 2001. The Guide and Directory are both under the direction of Stevens & Associates (Roger & Jane Ade Stevens) in Indianapolis, Indiana. Address: Michigan Soybean Board.

1832. Messina, Mark J. 1999. Soy isoflavones in new commercial products (Interview). *SoyaScan Notes*. June 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Indena (pronounced in-DEE-nuh) is now making isoflavones in Italy; Johnson and Johnson is probably using these Italian-made isoflavones in a new supplement product.

Whitehall-Robbins, a division of American Home Products, recently introduced a new isoflavone product as part of their Centrum line of vitamins. It will be calcium plus soy plus vitamin D. Mark visited this company recently and they had collected some 15 products that contained isoflavones and were aimed at women experiencing menopausal symptoms. Whitehall-Robbins buys its isoflavones from ADM.

What is the size of the isoflavone market? Mark believes that the answer depends largely on how the science pans out. If scientific data can show a significant effect of isoflavones on reducing menopausal symptoms or reducing the risk of prostate cancer (where the data look better and better), the potential market is huge. But if it turns out that Lon White is correct, or that isoflavones are shown to cause breast cell proliferation, then the market could be zero. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

1833. ADM. 1999. Des Moines, Iowa, USA: i am growing new ways to fight disease (Ad). *Soybean Digest*. June. Back cover.

• **Summary:** The top three-fourths of this full-page color ad shows a farmer, wearing a blue denim coat and a dark blue hat, and holding blue work gloves, with a blue sky and bluish corn plants in the background. The text on the bottom reads: "What the world needs is a growing interest in the health of our growing population. So, after years of working with the American farmer to help feed the world, ADM has developed new ways to make it a more healthy place, too. Like turning soybeans into natural vitamin E and isoflavones. And future plans that include using corn to make natural vitamin C.

"New ideas. New choices. New weapons in the fight against disease. That's what the world needs now. ADM—Supermarket to the world. www.admworld.com."

1834. *ASA Today* (St. Louis, Missouri). 1999. Non-GMO niche markets may offer premium opportunities. 5(8):4. June.

• **Summary:** Since 1997, Brazilian suppliers have received a premium of up to 50% for non-GMO soybeans. Countries importing non-GMO soybeans include Norway, Korea, and Japan. Last year ADM and other processors paid fairly substantial premiums for non-GMO beans. Farmers who want these premiums and plant both GMO and non-GMO beans must clean their combines and bins.

1835. *Bluebook Update* (Bar Harbor, Maine). 1999. ADM announces new president. 6(2):3. April/June.

• **Summary:** He is John D. McNamara, who joined ADM in 1985.

1836. Messina, Virginia; Schumann, Kate. 1999. The convenient vegetarian: quick-and-easy meatless cooking. New York, NY: Macmillan USA. viii + 184 p. Illust. Index. 24 cm.

• **Summary:** This is a vegan cookbook. The index contains 9 entries for tofu, 9 for textured vegetable protein (TVP), 3 for soy food products (soy foods) 3 for soybeans, 2 for tempeh, 1 each for miso, soy cheese, soymilk, soynuts, and soy yogurt. Address: 1. MPH, RD, coauthor of *The Vegetarian Way*.

1837. Kilman, Scott. 1999. ADM ex-officials get 2 years in jail in sign of tougher antitrust penalties. *Wall Street Journal*. July 12. p. A4.

• **Summary:** The two sentenced by a federal jury were Michael D. Andreas, age 50 (and son of ADM CEO Dwayne Andreas), and Terrance S. Wilson, age 62. Both were also fined \$350,000 each. Traditionally only half the people convicted of price fixing in the U.S. are sent to jail, and the average time for this crime in the 1990s was just 10 months. Mark Whitacre, convicted of embezzling millions of dollars from ADM, is now serving time at a federal prison in Edgewater, South Carolina.

Note 1. Michael Andreas' term was later extended by a year after the government appealed. Before his conviction, Andreas was considered the heir apparent to his father, ADM chairman, Dwayne Andreas (*Chicago Tribune*. 2001. Dec. 20. "Andreas released to halfway house").

Note 2. As July 2020 it is not clear how long Michael Andreas was in a federal prison [minimum-security in Duluth, Minnesota] and how long he was confined to a halfway house. On 8 July 2008 a high-level ADM spokesperson said that the company definitely had no plans to rehire "Michael Andreas, who had just been released from federal prison early Wednesday after serving time on price-fixing charges." Address: Staff Reporter.

1838. *ADM Nutrition & Health Update* (Decatur, Illinois). 1999. Soy protein, soybean isoflavones and coronary heart

disease. 1(2):1, 3-4. Winter. [3 ref]

• **Summary:** Soy protein lowers blood cholesterol—a fact now accepted by the scientific community. This effect is unrelated to the low saturated fat content of soyfoods.

1839. **Product Name:** NutriSoy 949, NutriSoy 942 (Soy Protein Isolates). Renamed Pro Fam by April 2000.

**Manufacturer's Name:** ADM Protein Specialties.

**Manufacturer's Address:** Decatur, Illinois. Phone: 217-424-7453.

**Date of Introduction:** 1999 July.

**Ingredients:** Defatted soybeans.

**How Stored:** Shelf stable.

**New Product–Documentation:** *ADM Nutrition & Health Update* (Decatur, Illinois). 1999. Summer. p. 2. “NutriSoy proteins for the healthy foods market.” These two new soy isolates deliver levels of dispersing and solubility never before seen. NutriSoy 940 has a very bland flavor, unsurpassed dispersibility, and “excellent stability when put into solution. It delivers a minimum of 2 mg/gm of isoflavones. NutriSoy 942 is the calcium-fortified version...”

Talk with Phil Fass, head of NutriSoy branding program and marketing at ADM. 2000. April 28. ADM introduced two soy protein isolates under the NutriSoy name, but then they were withdrawn. They are now under the Pro Fam name.

1840. National Oilseed Processors Association. 1999. Yearbook and trading rules 1999-2000. Washington, DC. ii + 126 + 11 p. 22 cm.

• **Summary:** On the cover (but not the title page) is written: Effective August 1, 1999. Contents: Constitution and by-laws. Officers and directors. Executive office. Members. Standing committees. Trading rules on soybean meal. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}), sampling of soybean meal {at origin} (automatic mechanical sampler, pneumatic probe sampler, probe sampler), sampling of soybean meal (at barge loading transfer facilities), official weighmaster application, semi-annual scale report, certification of installation of automatic sampler & mechanical divider (at origin), semi-annual certification of automatic sampler & mechanical divider (at origin), voluntary checklist for semi-annual certification of sampler & divider (at origin), certification of installation of automatic sampler & mechanical divider (at barge loading transfer facility), semi-annual certification of automatic sampler & mechanical divider (at barge loading transfer facility), voluntary checklist for semi-annual certification of sampler & divider (at barge loading transfer facility), official referee laboratories (meal), official NOPA soybean meal sample bag.

Soybean meal export trading rules: Minimum blending procedures for export meal blended at ports, sampling of soybean meal (at vessel loading facilities), weighing of

soybean meal (at vessel loading facilities), certification of installation of automatic sampler & mechanical divider (at vessel loading facility), semi-annual certification of automatic sampler & mechanical divider (at vessel loading facility), voluntary checklist for semi-annual certification of sampler & divider (at vessel loading facility), semi-annual certification of scales at vessel loading facilities. Trading rules on soybean oil. Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, methods of analysis: (AOCS official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses (iodine value, unsaponifiable, break test), refining byproduct lipid, acidulated refining byproduct lipid and tank bottoms. Official weighmaster application, semi-annual scale and flowmeter report, official referee chemists (oil). Soybean oil export trading rules. Uniform soybean oil export contract. Foreign trade definitions (for information purposes only) Appendix 1.

The section on officers, executive staff, board of directors, and executive office (Washington, DC), (p. 8-9) gives the name, company affiliation, and phone number of each person. Members (p. 10-19) (listed alphabetically by company; within each company, first the name of the official Association representative {who is on the Board and votes}, followed by the other personal members listed alphabetically by surname). Standing committees: For each committee, the function of the committee, the names of all members (with the chairman designated), with the company and company address of each are given. Address: 1255 Twenty-Third St., N.W., Washington, DC 20037. Phone: (202) 452-8040. Fax (202) 835-04000. E-mail nopa@nopa.org. Website: www.nopa.org.

1841. South Dakota Soybean Research & Promotion Council. 1999. Favorites from the heartland. Sioux Falls, South Dakota. 81 p. Illust. Recipe index. 22 cm. [1 ref]

• **Summary:** A full-color, glossy and very original spiral-bound cookbook—loaded with full-page color photos of dishes prepared from recipes. Contents: Why eat soy? Practical ways to incorporate soy into your diet. How to cook soybeans. Breads (incl. prize-winning Carrot tofu muffins, and Tofu herb bread). Soy flour tips. Main dishes. Green soybean (Sweet Bean [green vegetable soybean]) tips. Salads. Desserts (incl. prize-winning Glistening cheesecake, and Pineapple cake). Beverages and snacks (incl. prize-winning Tofu shake). Soy products: Dried soybeans, tofu, soy milk, soy flour, fresh green soybeans, textured vegetable protein (TVP). Soyfoods substitutions (from meat and animal products). For more information: 1-800-talk-soy, or www.soyfoods.com.

Talk with Betty Hansen at South Dakota Soybean Board. 2000. May 15. This cookbook (which is undated) was first published in the summer of 1999. Many of the recipes were

adapted from local favorites, and all these were tested in the office. Some also came from the winners of a recipe contest sponsored by the South Dakota Soybean Board. Address: Sioux Falls, South Dakota. Phone: 605-330-9942.

1842. *Hamburger Abendblatt (Hamburg, Germany)*. 1999. 25 Millionen Mark fuer weiteres Kraftwerk und eine "Bio-Diesel"-Anlage am Standort Neuhof Oelmuehle Hamburg AG investiert [Oelmuehle Hamburg AG has invested 25 million Marks for more power plant and a biodiesel plant in Neuhof]. Sept. 1. 1 p. [Ger]

• **Summary:** The biodiesel will be made mostly from rapeseed oil methyl esters (RME). Dr. Klaus Thiemann is the lead officer at Oelmuehle Hamburg and Hans Thiem is the project director.

1843. *Investor's Business Daily*. 1999. Hard times. 16(65):A1. July 12.

• **Summary:** Photos show Michael Andreas, age 49, son of ADM chairman emeritus Dwayne Andreas, Terrance Wilson, age 60, and Mark Whitacre, age 41—all of ADM. The first two men were sentenced to two years in prison and were fined \$350,000 each for conspiring to fix the price of lysine, an animal feed additive. Biochemist Whitacre was previously sentenced to 2½ years in jail.

1844. ADM. 1999. The next century belongs to soy (Ad). *Soya Bluebook Plus 2000*. Back cover.

• **Summary:** In the center of this imaginative full-page color ad is a huge light yellow soybean against a blue background, with the ad title written across the upper one-third of it. Below it: "The research is in: New studies indicate that 25 grams of soy protein per day may lower cholesterol and help prevent heart disease. Two-thirds of American consumers are aware of soy's health benefits, and are ready to increase their soy intake.

"No wonder the next century belongs to soy.

"ADM has been in the forefront of soy research for decades. We're the only full-lie soy supplier in the industry. And frankly, as the next century unfolds, we can't wait to see where this little bean is going to take us next."

In the lower right corner is ADM's ellipse-shaped logo: "Supermarket to the world." No address or phone number are given, only the website. Address: [www.admworld.com](http://www.admworld.com).

1845. Froding, Joy. 1999. Key ingredient of success: Isoflavones are opening doors in the nutraceutical and food industries. *Bluebook Update (Bar Harbor, Maine)* 6(3):4-5. July/Sept.

• **Summary:** Schouten USA Inc. in Minneapolis, Minnesota, (a division of the Royal Schouten Group in the Netherlands) and ADM are major suppliers of soy isoflavones. Laurent Leduc, International Marketing Manager for Schouten USA, says his company was the first that saw an emerging

market for isoflavones because of their health benefits. In the early 1990s a Schouten researcher perfected a unique method for capturing soy isoflavones to produce a 100% natural concentrate. Introduced in 1995 to the vitamin and supplement industry, SoyLife was the first product of its type. Schouten sells two different soy isoflavone products, each with a different concentration: SoyLife 25 (containing 3% isoflavones) and the more potent SoyLife 150 (containing 15% isoflavones). The latter product is presently used in about 300 supplement applications in Europe, North America, Asia, and Australia.

In Sept. 1998 ADM introduced NovaSoy isoflavone concentrate. It is made by washing soybean flakes with alcohol to give soy molasses and soy protein concentrate. The isoflavones are then extracted from the soy molasses. NovaSoy contains 40% isoflavones with the same proportions of genistein, daidzein, and glycitein as found in soybeans or soyfoods like tofu. A photo shows a bottle of NovaSoy soy isoflavones (30 tablets).

1846. Soyatech, Inc. 1999. Advertiser index. *Soya Bluebook Plus 2000*. p. 431.

• **Summary:** Ag Processing Inc. Allocco S.A. American Health & Nutrition Inc. AMG Inc. Anderson International Corp. ADM Lecithin. Archer Daniels Midland Co. B.N.W. Industries. Baker Process. 1847. Soyatech, Inc. 1999. *Soya & Oilseed Bluebook 2000*: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 432 p. Sept. Comprehensive index. Internet address index. Brand name index. Advertiser index. 28 cm.

• **Summary:** On the cover is a color photo of rare and beautiful soybeans of variegated colors, including various shades of purple, red, blue, etc. The background is solid soybeans made to appear blue. The inside front cover and first page contain full page color ads from Lucas Meyer, "The Lecithin People." On the back cover is color ad from ADM titled "The next century belongs to soy," written over a huge yellow soybean with a prominent hilum.

To celebrate the year 2000, a special supplement has been included near the front of the book, titled "2000 and beyond: The future of soy. Soyatech brings together a panel of key individuals in the soybean industry to talk about the future" (p. 9-16). Its contents: Introduction, by Peter Golbitz. The introduction of biotechnology. The blossoming demand for identity preserved soybeans. Soyfoods and health benefits. Organic farming has become a growing \$4.2 billion dollar industry. Soybean products improve as technology continues to evolve. Alternative technologies for a developing world industry: The world produces 150 million metric tons of soybeans, of which less than 10 percent is used directly for human food. Growth of world markets shaped by American soybean farmers investments (American Soybean Association and United Soybean Board). Soybeans find fertile ground in South America. Soyfoods past, present, and future (incl. Vitasoy and Yvonne Lo). Beyond 2000.

Note that Soyatech has moved to a new address. Address: 7 Pleasant St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

1848. Archer Daniels Midland Co. 1999. Annual report: Globalization for the 21st century. P.O. Box 1470, Decatur,

IL 62525. 42 p. Oct.

• **Summary:** Net sales and other operating income for 1999 (year ended June 30) were \$14,283 million, down 11.4% from 1998. Net earnings for 1999 were \$265.9 million, down 34.2% from 1998, and far below the recent peak of \$796 million in 1995. Shareholders' equity (net worth) is \$6,240 million, down 4.1% from 1998. Net earnings per common share: \$0.43, down 36.9% from 1998. Number of shareholders: 31,764.

On p. 16 are photos and brief discussions of Harvest Burgers (now marketed by Worthington Foods), NutriSoy (a new generation of soy protein), and NovaSoy (isoflavones). Page 17 discusses ADM's partnership with DuPont using the latter's STS soybeans. This year the annual report came in a slip cover with another report titled "Archer Daniels Midland: An overview."

Also accompanying the annual report is a "Notice of Annual Meeting." G. Allen Andreas, age 56, Chairman of the Board and CEO, had a 1999 salary of \$2,437,698, up from \$803,282 in 1997. John D. McNamara, President, had a 1999 salary of \$625,243, up from \$147,672 in 1997. Address: Decatur, Illinois.

1849. Archer Daniels Midland Co. 1999. Archer Daniels Midland: An overview. P.O. Box 1470, Decatur, IL 62525. 20 p. Oct. 28 cm.

• **Summary:** This report came in a slip cover with ADM's disappointing annual report. Contents: The world food economy. The big picture. Oilseed processing. Corn Processing. ADM Milling. Grain Merchandising. BioProducts. Nutraceuticals. Food additives. ADM Cocoa. Other Processing Operations. Transportation. ADM and the Environment. Aquaculture and Hydroponics.

The section on "Aquaculture and Hydroponics" states: "What began as a small research project to see if fish could be raised in ADM's Decatur greenhouse has become one of the Midwest's premier aquaculture facilities. Aquaculture helps reduce the depletion of the fish supply from the world's oceans, and is a highly energy-efficient means of producing food.

"The primary stock for our aquaculture project is tilapia, a fish from the perch family known for its rapid growth and tasty meat. Tilapia reproduce copiously and grow to maturity quickly, which means they have the potential to play a role in alleviating world hunger. ADM lysine and soybean meal comprise the bulk of the tilapia's diet.

"The nutrient-rich waters of ADM's aquaculture facility also serve the hydroponics facility at our Decatur plant. ADM uses this water along with waste heat from our corn processing operation to grow vegetables, herbs, and other produce. This full-production hydrofarm produces 150,000 heads of lettuce and 20,000 cucumbers a month, allowing ADM to provide consumers with fresh, nutritious, attractive products all year round." Address: Decatur, Illinois.

1850. *Ontario Soybean Growers' Marketing Board Newsletter*. 1999. The GMO issue—Tough choices for producers. Oct. p. 5.

• **Summary:** “Last year approximately 5% of the total soybean acreage in Canada were GMO varieties, while this year that number was between 15-20% of total soybean acreage. Next year will be very interesting to see producers' response to the consumer backlash of GMO's.”

“When Archer Daniels Midland (ADM) urged, even warned their U.S. suppliers last month to begin segregating GMO soybeans, corn and other grains from conventional crops, it sent shudders through the U.S. farming community.”

“This is not an issue of right or wrong, it is an issue of consumer demands, and the consumer is demanding non-GMO products.” Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

1851. *Delta Farm Press (Clarksdale, Mississippi)*. 1999. Biotech crop segregation complicates 2000: if other buyers follow Archer Daniels Midland's move, will farmers change use of GMO varieties. Nov. 17.

• **Summary:** On Aug. 31 ADM announced that it plans to require that genetically modified crops, such as Roundup Ready soybeans and Bt corn, be segregated from conventional varieties in trade channels.

1852. *Nutrition Business Journal (San Diego, California)*. 1999. Sales of soy protein isolate set to grow. 4(10/11):21-22. Oct/Nov.

• **Summary:** The market for soy protein isolate is dominated by two manufacturers: Protein Technologies International Inc. (PTI, St. Louis, Missouri, a business of DuPont) and Archer Daniels Midland. PTI claims to have sales of \$500 million in 1999 and to have captured about 75% of the soy protein isolates market. By extrapolation, this implies a U.S. market of \$700 million/year.

About 40% of PTI's isolate sales are to meat and fish processors, 16% to nutritional and sports beverages, 10% to infant formulas, 9% to the paper industry, 5% to young animal feed (milk replacers), and 20% to “developing opportunities.”

Other manufacturers of soy protein isolates are Santista of Brazil, and Fuji Oil of Japan.

A new PTI product is Supro XG, an isolate enriched with genistein. Top customers include Ross Laboratories (Ensure), Nestle, SlimFast, and Weider.

The second half of the article discusses ADM's efforts to educate mainstream consumers—in part is using the umbrella brand, Nutrisoy. This tradename will start appearing on supermarket shelves during the first quarter of 2000. Del Cahill, North American manager for ADM's specialty proteins, sees a new trend. The mainstream food industry, recognizing that the U.S. has an aging population, believes

that the easiest way to prevent long-term chronic disease is through diet. These companies are now trying to develop and market better food choices.

1853. *Nutrition Business Journal (San Diego, California)*. 1999. Central Soya dominates soy concentrates: Lecithin gets new lease on life. 4(10/11):22-23. Oct/Nov.

• **Summary:** Soy protein concentrates wholesale for about \$0.60/lb compared with \$1.00 for soy protein isolates. The leading maker is Central Soya, followed by ADM. Solbar of Israel [owned by Soya Mainz which is now owned by ADM] is another major maker. Industry-wide, the market for concentrates is growing at about 15% a year. Concentrates go into products like veggie burgers. There are more than 40 different types of soy protein concentrates; one of the newest, which retains its natural isoflavone levels, contains more isoflavones than any isolate on the market.

The role of soy protein concentrates has changed over the years. From the 1940s to the 1970s they were an inexpensive substitute for meat. The earliest soyburgers tasted pretty bad. In the 1980s they served as a functional ingredient in foods. In the early 1990s they were an important ingredient in low-fat/no-fat food products and in energy bars. Now they are going mainstream. Earlier this year Central Soya expanded its concentrate manufacturing facility in Remington, Indiana; in large part they were anticipating the FDA health claim.

Central Soya has total annual sales of \$1.5 billion from soy oil, soybean meal, soy concentrates, and lecithin. The company is also a worldwide leader in lecithin. A major competitor is Lucas Meyer (Decatur, Illinois), now owned by SKW Trostberg. The price of nutritional lecithin ranges from \$1-\$1.25 per pound wholesale. Last year the federal government's health and nutrition board (which sets the RDAs) recognized (contained in lecithin) as an essential human nutrient, assigning it daily reference intake status—one step down from RDA. This was a major development, and contributed to a resurgence in sales.

1854. *Soybean Digest*. 1999. Soyfoods are gaining favor. Nov. p. 26.

• **Summary:** The Iowa Soybean Promotion Board sponsored a checkoff-funded survey in 1998 which showed that 67% of consumers believe soyfood products are healthy, up from 59% in 1997.

Another study by HealthFocus, Inc., Des Moines, Iowa, found that 16% of shoppers used soyfoods in 1998, up from 13% in 1996.

Among the factors driving these increases in demand: (1) The number of Asian-Americans has increased dramatically. (2) More young people are vegetarians. (3) Some 97% of colleges and universities now offer meatless [vegetarian] entrees on their menus, according to a survey by Archer Daniels Midland Co.

1855. Stewart, Chuck. 1999. Update on work toward restoration of Henry Ford's chemical plant and soybean laboratory—and new ideas (Interview). *SoyaScan Notes*. Dec. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Iowa Soybean Association (ISA) is still interested in this renovation project but little progress has been made during the past year. On 21 Jan. 2000 representatives of ISA have an appointment to meet with Steven Hamp, president of the Henry Ford Museum, and their fund-raising department, to talk about the major players and prospective donors. About \$2 million is needed to complete the project as it is now envisioned—concept study titled “Feasibility Study for a Soybean Research Laboratory Experience at Henry Ford Museum (HFM) in Greenfield Village,” by Christian Overland (director of public and school programs, HFM), dated 8 May 1998 (30-40 pages, incl. drawings). The Iowa and Michigan soybean associations put up the funds and HFM provided the staff to develop the feasibility study. It discusses: Objective, market feasibility, structural feasibility, program feasibility, and budget. ISA has committed to some funding, but the amount has not been determined. ADM showed no interest. One question is alternative projects that are less expensive. Chuck thinks some type of project will eventually happen; the questions are when and on what scale.

The Henry Ford people are not very interested in having any food served in the Soybean Lab; it would be more like going into a museum than going into a restaurant. They already have several other restaurants and bookstores in Greenfield Village; they might be willing to add a soyfoods menu to an existing restaurant. Serving food causes a lot of complications and hassle. It's too much trouble. The Henry Ford people, at a minimum, want to do something with the Soybean Lab—at least fix up the building, which is now unused and unattractive. They want to give some recognition that it was a Soybean Lab and that Henry Ford was actively interested in soybeans and soyfoods. If the funding can be found, they might get interested in a fairly large soy project. Address: Chuck Stewart & Associates, 4949 Pleasant St., Suite 204, West Des Moines, Iowa 50266. Phone: 515-226-0358.

1856. *SoyaScan Notes*. 1999. Chronology of soy protein isolates for food use. Dec. 9. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1939—The Glidden Company in Chicago, Illinois, becomes the world's first company to manufacture a soy protein isolate for use in food. Named Albusoy and called “soy albumen,” it is an enzyme-modified isolate used as a whipping agent to replace egg whites. 1950—Gunther Products of Galesburg, Illinois, introduces an enzyme-modified soy protein isolate. By 1967 roughly 1 million lb/year of enzyme-modified soy protein isolates were being

made in the USA.

1957—The Glidden Company in Chicago becomes the world's first company to start large-scale production of today's regular (non-enzyme modified) food grade soy protein isolate. Their \$4 million plant at Indianapolis, Indiana, makes Promine brand isolated soy protein.

1957 July—ADM purchases The Drackett Company (Evendale, Ohio), which makes commercial industrial soy protein isolates and is experimenting with edible isolates.

1958—The Glidden isolate plant at Indianapolis is purchased by Central Soya—which now enters the isolate business.

1958-1959—ADM starts to sell small amounts edible isolates to Consolidated Foods in Texas. William Atkinson developed the product, which was quite satisfactory and practical. But the patent was about to expire, so ADM turned its attention elsewhere.

1959 Oct.—Central Soya opens a huge new plant to produce their Promine brand of soy protein isolate. By 1966 Central Soya is making 30 million lb/year of soy protein isolates.

1962 Oct.—Ralston Purina starts making food grade soy protein isolates in Louisville, Kentucky, under the Edi-Pro brand, using technology largely developed by Frank Calvert and Robert Boyer when they worked as researchers for Henry Ford. Anderson Clayton and Carnation started to make soy protein isolates soon thereafter.

1964—The USDA allows the use of soy protein isolates in meat sausages at the 2% level by weight.

1965 Oct. Skippy Peanut Butter with Smoky Crisps introduced. The “Smoky Crisps” are bacon-like bits made by General Mills from spun soy protein fiber.

1965 Dec.—General Mills introduces Bac\*O's, meatless fried bacon bits made from spun soy protein fiber in several test markets.

1966 May—General Mills introduces its Bontrae line of meat analogs based on spun soy protein fibers, including Ground Beef Analog, Diced Ham Analog, and Diced Poultry Analog.

1969 Dec.—Bac\*Os, meatless bacon bits, are now available nationwide.

1970 Dec.—Bontrae spun soy protein fiber starts to be made at General Mills' new plant in Cedar Rapids, Iowa.

1973 March—Hamburger prices reach all-time highs. Hamburger extended with 25% Bontrae (spun soy protein fiber) goes on sales at Red Owl Stores in Minnesota.

1973 summer—Grain Processing Corp. of Muscatine, Iowa, starts making soy protein isolates under the Pro-Fam brand.

1974 Oct.—General Mills introduces meatless Country Cuts, made from spun soy protein fiber, in ham or chicken flavors.

1976—Ralston Purina has become the world's leading manufacturer of edible soy protein isolates. Their flagship

plant is still in Louisville. 1977 May–Dawson Foods buys (for about \$10 million) the Bontrae spinning line, plus exclusive rights to General Mills' soy isolate and patented spinning technology, equipment, and frozen spun products marketed to food processors and institutional customers. Dawson moved the equipment to Minnesota, and broke ground for a new plant in Feb. 1978.

1979 March 31–Dawson Mills' soy protein isolate plant opens 1½ miles east of Dawson, Minnesota, on a 220-acre site.

1980 May–Dawson Mills introduces its Anaprime line of meat analogs based on spun soy protein fibers and technology purchased from General Mills; they are very similar to the Bontrae line.

1980 Aug.–Central Soya sells all of its soy protein isolate operations to Archer Daniels Midland Co. With this purchase, ADM enters the edible isolate business, and Central Soya gets out. ADM names its first four edible isolates Ardex D, Ardex DHV, Ardex F, and Ardex SP-6—simply replacing Central Soya's brand "Promine" by the brand "Ardex."

1982–ADM demonstrated Ardex isolated soy protein sweetened with CornSweet 42 high-fructose corn syrup, at a major Food Expo.

1985–ADM moves its soy isolate plant from Chicago to Decatur, Illinois.

1986–ADM doubles the size of its soy isolate plant in Decatur.

1987-1988–ADM builds a second isolate plant in Decatur.

1988 June 23–ADM buys from Grain Processing Corp. (GPC) their soy protein isolate technology, brand names (Pro-Fam), and customers—but not their equipment. ADM soon begins to produce the Pro-Fam line of isolates in Decatur, Illinois.

1988–The price of imported casein rises above the price of soy isolates—and stays there due to loss of subsidies by foreign governments.

1988–ADM starts to make industrial soy protein isolates in Decatur.

1995–ADM builds a third edible isolate plant in Decatur, adjacent to its other two plants.

1997–ADM sells its industrial isolate business in Decatur to PTI (Protein Technologies International).

1997 June–ADM starts producing soy protein isolates at its plant in Europoort, Netherlands.

1857. Newshour with Jim Lehrer. 1999. The soybean and ADM—Feeding the world. Television broadcast. PBS. Dec. 14.

• **Summary:** The following new ADM ad began to be aired on the Newshour on 14 Dec. 1999: "The soybean—rich in proteins. With it we can feed more people with the same amount of land. Who is committed to this nutritional source

that is helping to feed the world? ADM."

1858. Sanitarium Health Food Company. 1999. Sanitarium (Portfolio). Berkeley Vale, NSW, Australia. 27 inserts. 30 cm.

• **Summary:** This is simply a collection of colorful documents (each in full color) without a portfolio cover, sent with a cover letter by Melissa Harris, Nutritionist. The documents include: (1) Eight nutrition fact sheets. Subjects include wholegrains, fibre, heart health, etc. (2) Seven product sell-sheets, incl. SoyHealthy, So Good Now, Soyaccino, etc. (3) Three small recipe booklets. (4) 10 tips for healthy eating for the family. (5) Now there's an easy way to lower your cholesterol. (6) Six food cards with recipes. (7) Two booklets in "A taste for health" series. (8) List of available publications and videos.

(9) Sanitarium product range—Australia: Cereals (19 products, incl. Soy Tasty, Weet-Bix Hi Bran Soy & Linseed, Up & Go). Beverages (6 products, all based on So Good, incl. yoghurts and ice cream). Meals (19 products, incl. 5 types of Soy Healthy Frozen, 9 types of Soy Healthy Chilled, Soya Beans in Tomato Sauce, Sanitarium Soya Mince/TVP, BBQ Soya Sausages). Spreads (4 products incl. Marmite and many types of peanut butter). Specialty Foods (incl. many nuts & seeds, dried fruits, legumes, pulses & seeds, fruit snacks, and juices). (10) Leaflet (1999; color, front and back) titled "Soya beans, good health & you." Contents: Introduction. What are phytoestrogens. Protecting hearts. Combating cancer. Managing menopause. Promoting healthy bones. Soy foods for children. Putting the good news into practice. Address: 1 Sanitarium Drive, Berkeley Vale, NSW 2261, Australia. Phone: (02) 4348 7777.

1859. *SoyaScan Notes*. 1999. Major soy-related company acquisitions and mergers worldwide 1990-1999 (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1990 Jan.—Worthington Foods acquires La Loma Foods of Riverside, California (formerly Loma Linda Foods, owned by the Seventh-day Adventist Church).

1990 (early)—Daniel Gevaert purchases the Lima Andiran site at Andiran (near Mezin) in southern France from Lima Foods—but not the Lima trademark. In June 1990 Daniel and his wife, Valerie, established Danival.

1990 Aug. 3—Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy soymilk) acquires Nasoya Foods of Leominster, Massachusetts.

1990 Dec. 21—The Haldane Foods Group (a subsidiary of British Arkady Ltd., which is in turn owned by ADM) acquires Unisoymilk 'n' By-Products Ltd. of Cheshire, England.

1991 Jan. 1—The Haldane Foods Group acquires Granose Foods Ltd. of Watford, Hertfordshire, England (formerly owned by the Seventh-day Adventist Church).

1991 Jan. 28—Tetra Pak International acquires Alfa-

Laval AB.

1991 April–Huegli Naehrmittel A.G. acquires Soyastern Naturkost GmbH / Dorstener Tofu Produktions GmbH.

1991 Dec.–Specialty Food Ingredients (SFI) Europe BV acquires Solnuts BV (Netherlands) and Solnuts Inc. (Hudson, Iowa).

1992 Oct.–Central Soya Co. acquires the Protein Division of Aarhus Oliefabrik in Denmark.

1993 June–Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California, for an estimated \$4-\$5 million. Vitasoy is now in the tofu business.

1993 June–21st Century Foods acquires Farm Foods from Barricini Foods.

1993–House Foods of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is named House Foods American Corporation.

1993 July–Nutrition et Santé (part of the Sandoz Group) acquires Société Soy of Saint-Chamond, France. The latter company was renamed Nutrition et Soja, and on 15 Oct. 1994 it moved into a new factory at Revel (near Toulouse), France.

1993 (mid)–B & K Holdings of Switzerland acquires Sojinal of Issenheim, France.

1993?–Kineret (pronounced kuh-NAIR-et) Acquisition Group acquires Farm Foods from 21st Century Foods, then in Nov. 1993 the Hain Food Group acquires Kineret plus some assets of Barricini Foods Inc.

1996 April 22–Alpro (Belgium) purchases Sojinal (France).

1995 April 21–Irene and Len Stuttman buy back control of their company, INARI Ltd. (dba. Sycamore Creek) from J. Charles Follett (former CEO) and Peter L. Pairitz (accountant).

1995 April–Quest International, a unit of Unilever, acquires A.E. Staley's Gunther Products Division.

1997 Feb. 3–Monsanto purchases Asgrow Seed Co. from Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM).

1997 Aug. 24–DuPont signs a letter of intent to acquire Protein Technologies International, a wholly-owned subsidiary of Ralston Purina Co.

1997 Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc., makers of soymilk. Westbrae's new name becomes Hain Food Group–Westbrae. 1997 Dec. 3–DuPont finalizes its purchase of Protein Technologies International (PTI–the world's leading manufacturer of soy protein isolates).

1998 Oct. 16–Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

1998 Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are

located in Germany.

1999 Jan. 4–W.G. Thompson & Sons Ltd. of Blenheim, Ontario, Canada, purchases Sycamore Creek Co., a maker of soynuts and soynut butter (located in Mason, Michigan).

1999 Oct. 4–The Kellogg Co. (famous maker of breakfast cereals, Battle Creek, Michigan) buys Worthington Foods Inc., America's leading maker of meat alternatives.

1860. *SoyaScan Notes*. 1999. Hot soy-related topics in 1999 (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1. Genetic engineering of soybeans. This is now a major issue in Europe, and starting to become one in the USA. Will “non-GMO soybeans” ever become as important to some consumers as “Organically grown soybeans”?

2. What will be the effect of the FDA announcement concerning health claims for soyfoods on small producers of traditional soyfoods? Will they benefit from the claim without changing their formulations? Should they mention “With natural isoflavones” on their labels? Should they state how many grams of isoflavones per serving. 3. Beware the dangers of the media hype of the health benefits of soyfoods. Don't overdo your own advertising claims. The media may later start to debunk all the hype. 4. Beware the potential dangers to the soyfoods industry of concentrated isoflavones, such as the pills made by ADM. These could be marketed (over the Internet, for example) as pills to give small girls big breasts.

5. Take advantage of the publicity that will be created by big dairy companies getting into the soymilk market.

6. Lon White's cardiac research in Hawaii which indicate that tofu consumption is correlated with cognitive disorders.

1861. Wendel, Armin. 1999. 150 Jahre Lecithin [150 years of lecithin]. Cologne, Germany. 9 p. Unpublished typescript. Jan. 16. 28 cm. [5 ref. Ger]

• **Summary:** An excellent history of lecithin in German. This unpublished draft was written several months before his first two articles in *INFORM* magazine about the first 150 years of lecithin history, and about 7 months before his article in *Inform* about lecithin in chocolate.

Armin writes (July 2015): My idea was to bring more attention to phospholipids using the discovery of Lecithin by Goble in 1850 (2000 = 150 years).

All materials were used for the publication “Lecithin the first 150 years,” in *Inform* August 2000.

The corrections in 2001 were made for a presentation in May 2001 at an AOCS meeting (Award lecture).

“I also collected material for reviews: Staley, Central Soya, ADM, Lucas Meyer, American Lecithin, Eichberg, Nattermann, Riceland, Unilever, Stern-Wywiol etc.

“It planned to publish a book but I never had the time– and will not have the time.”

Foreword: The attempt to outline the history of lecithin that is being made here is not to be a synopsis of scientific know-how. There are more than enough scientific explanations. I would like to make the attempt to trace the industrial development.

Lecithin does not represent a product with sales in the billions each year, such as the automobile, the television, the telephone, or beer. For that reason, it is not so easy to obtain the corresponding information. But as is the case with all discoveries and inventions, there are individual people who take the idea and create a product out of it which is then used or consumed by many people.

Let us briefly go into the origins of lecithin. Maurice Gobley, who coined the term “lecithin” in 1850 from the Greek word *lekithos* for egg yolk, only set one milestone. The components of lecithin had of course long been known. According to Gobley, lecithin is a lipid that contains phospholipids (lipids consisting of a glycerol backbone with fatty acids, a phosphoric acid group, and a base) which, in addition to other phospholipids, is a membrane component of the cells of all living things, be they plants, animals, or people. Many researchers both before and after Gobley had already occupied themselves with this group of substances. Hensing discovered phosphorus in the brain for the first time in 1719. Vauquelin confirmed that in 1811. The research on brain matter had been accelerated in a macabre sort of way by the French Revolution, as the following quotation shows: (1)

An unusual period with unusual methods. The countless political victims offered the anatomists welcome material for studies, as long as they themselves still remained alive. What was swept away were scruples and prejudices which had stood in the way of the natural sciences for so long. Lavoisier’s contemporary, the famous physician Thouret, went to the cemeteries. With exhumations at the Holy Innocents’ Cemetery, there were surprising finds. Some skulls demonstrated well-preserved brain matter. Thouret studied them in detail, in search of the phosphorus in the brain that had already been discovered by Hensing, a German doctoral candidate, in 1719. The French doctor analyzed a fat-like substance. Somewhat later, in 1811, he received the confirmation from his colleague Vauquelin, who established organically bound phosphorus in the fatty material of the brain.

That was the beginning of the search for lipids containing phosphorus in the brain and other organs. Researchers such as Vauquelin, Fourcroy, Couërbe, Fémy, Valencienne, Töpler, Strecker, Diakonow, Liebreich and Thudichum, who coined the terms cephalin and phosphatide, dealt intensely with this material. Gobley did not study any human or animal organs; he found this substance in the egg. In so doing, that blazed the trail to isolate that substance or the substance from the egg and to provide a therapeutic application.

With the onset of industrialization and the beginning of the pharmaceutical industry came the technical isolation of egg yolk lecithin (lecithin ex ovo). Not only did companies such as Riedel, Promonta, and Merck-Darmstadt manufacture this lecithin, they also began to produce pharmaceutical compounds. As early as the first years of the twentieth century, many products of this sort were already on the market. But they were expensive and in short supply, since the necessary egg yolk was primarily imported from China.

But then the value of the soybean for food was discovered in Europe. In China and other Asian countries, the soybean had already been an important provider of nutrients for millennia. But the entire harvest was also consumed in those countries. One incentive for the increase in production resulted at the end of the 19th century from the Russo-Japanese War. Soy was suddenly a canned food for the military and was consumed in large quantities. A turning point occurred in 1908 when, as a result of cotton crop failures, the Japanese firm Mitsui & Co. brought a lot of soybeans to the European market for the first time for the purpose of oil extraction. The results of the oil extraction and the use of the oil for food and industry as well as the use of the pressing residues in agriculture were so outstanding that right away, a demand occurred that rose constantly.

Thus in the port cities of Europe, soybeans were soon processed as a source of protein and oil. This occurred in particular in Hamburg and Stettin (today’s Szczecin, Poland), Aarhus in Denmark, Hull in England, and Marseilles in France.

But a technical push was still required. That was provided by Hermann Bollmann. He developed a process for the solvent extraction of the soybean. This process went down in the annals of history as the “Bollmann process”. With this process, though, lecithin accumulated as a by-product. Bollmann hired Bruno Rewald, who then occupied himself with the possibilities for applications for soy lecithin. This lecithin was a mixture of various phospholipids with triglycerides, sugar, and sterols. The amount of phosphatidylcholine was between 12 and 18%. The term “lecithin” for this product that was obtained from soybean extraction—for producing soybean oil—caught on.

Along with Bollmann and the Hansamühle (Hanseatic Mill Works) that was founded by Bollmann, Rewald laid the cornerstone for the general application of lecithin. Bollmann and, in particular, Rewald, as well, were the ones who supplied the lecithin to H.C. Buer, from which Buer developed the product which is still known today as “buerlecithin”. An extensive advertising campaign made buerlecithin well known. Buerlecithin, which was introduced in the 1930s, was nearly synonymous with lecithin for the application of the improvement of performance and memory. Its fame continued into literature and the cinema. For example, in his book *Die Verteidigung der Kindheit* [The

Defense of Childhood] (2), Martin Walser wrote, “What he experienced in West Berlin was not to be avoided by shaving and taking lecithin” and “Just don’t always throw in the towel right away, man! Take lecithin!”

Or Edgar Noske who, in his detective novel *Nacht über Nippes* [Night over Knickknacks] (3) wrote, “A big Hanomag truck with a Buerlecithin inscription blocked the right lane.” In the 1977 American film *The Goodbye Girl*, Elliot (Richard Dreyfuss) constantly needs his lecithin.

Prof. Kaufmann of the University of Münster, on the other hand, used the extraction of lecithin at the *Hansmühle* in his lectures as an example of industrial application. His students also included Hermann Pardun and Hans Eikermann, who later went on to further develop lecithin in different ways: Pardun at Unilever for the food industry and Eikermann at Nattermann for the pharmaceutical industry.

Rewald ran into Joseph Eichberg in the USA. Together, they attempted to convince the nascent soy industry in the USA of the Bollmann process and the application of lecithin. This led to the founding of the American Lecithin Company which, for Percy L. Julian at the Glidden company, became the point of germination for lecithin in the USA.

The actual initiators, Bollmann and Rewald, did not enjoy the privilege of reaping the fruits of their labors. Bollmann was, as one would put it today, an entrepreneur. But was he also a good businessman? The First World War and the accompanying inflation pushed him out of his own company. He did not make any further connections and died in 1935 as he was applying for a patent for his last invention, a seaplane. In his diary, Bollmann wrote in March 1934:

“It is not the big corporations, those mammoth constructions of industry, but rather quiet brain work through which all more or less revolutionary innovations or inventions will create patents. These productively creating spirits are to be divided into two groups: (1) Those that are in the service of corporations; (2) Those in independent professions who get far too little attention, those actual creators of progress. The best inventions go to the service of the big corporations which, on the basis of the patents that have been acquired for little money, demand high prices and ensure for themselves enormous profits, while the creator himself for the most part received meager wages and often has a bleak old age.” Continued. Address: Managing Director, Nattermann Phospholipid GmbH, Cologne, Germany.
